Production of many commodities, including gold and copper, declined after World War I. Rich, shallow placer gold deposits that built towns like Fairbanks and Nome were finally depleted of easily won deposits, and materials and manpower shortages caused by the war began to have their effect. The great 1917 Treadwell cave-in that eliminated three of five large mining ventures in the Juneau gold belt seriously affected the Juneau economy. By 1920, copper production was only half that of the peak war years, primarily because of declining market conditions. Nevertheless, positive developments conducive to mineral development were on the horizon. Completion of the Alaska Railroad resulted in the first significant Alaskan coal exploitation in the Matanuska and Healy coal fields. The latter produced coal generated electricity for the large power plant that energized Fairbanks Exploration Company (F. E.) bucket-line gold dredges in the Fairbanks district. Larger companies throughout the territory acquired large tracts of ground and installed dredges in similar fashion. Successful development of the Alaska Juneau Gold Mine stimulated gold production in the Panhandle.

Erratic high prices of strategic metals in the late 1920s stimulated mercury and antimony production. Platinum was discovered at Goodnews Bay in 1926. Eventually, a bucket-line dredge that operated continuously for 40 years was installed. Much of Alaska's silver production has been derived as a byproduct of copper and gold refining; however, high silver prices following World War I stimulated development of primary lodes in the Hyder, Kantishna, Kaiyuh Hills, and various interior Alaska mineral belts.

The effect of the worldwide depression of the 1930s on the Alaskan mineral industry was mixed. Many metals prices (including copper) declined so dramatically that even the rich Kennicott lodes in the Chitina Valley were out of production for much of 1932 and 1933. Most copper mines in Prince William Sound closed permanently. Tin, antimony, mercury, and industrial-minerals extraction also suffered. However, Franklin Roosevelt nearly doubled the price of gold in 1934 (to $35/ounce), which resulted 'in an enormous increase in gold-mining activities. By 1940, Alaska led the nation in gold production, with numerous gold lodes and over 50 dredges recovering over $25 million in gold; 7,500 people were employed by the mining industry throughout the territory.

World War II greatly affected the Alaskan mineral industry. Increasing costs, high defense priorities, and military needs for manpower caused gold production to slip dramatically. Executive order L-208 closed all gold mines in the United States, because gold extraction was considered nonessential to the war effort. Mines like the Alaska-Juneau were reopened on a permit basis because of their importance to local economies. Wartime needs led to modest production of antimony, mercury, tungsten, chromium, and asbestos. Platinum at Goodnews Bay was produced throughout the war. The military buildup stimulated the need for coal, sand, and gravel, and these industries expanded enormously.

After World War II, high operating costs and a changing Alaskan economy negatively affected the industry as a whole. By 1950, severe increases in the cost of metallic-lode production resulted in the closure of most operations. However, low-priced, military-surplus heavy equipment was readily adaptable to the small-scale placer mine, and resumption of dredging activities by larger companies resulted in a partial recovery of the placer industry by 1950. Strategic-mineral production declined after 1945, but increased with the onset of the Korean War. Coal production continued at high levels because of a large Alaskan military presence. Sand and gravel extraction reached new highs and by 1950, outstripped all other minerals in value. In 1951, 2,500 people were involved in the mineral industry.

Federal strategic-mineral stockpiling programs ceased in the late 1950s and with them, most Alaskan strategic minerals production. However, commodities such as platinum, mercury, and tin were mined because of their high unit value on the free market in 1955. In 1957, mercury production from southwest Alaska amounted to almost 20 percent of the United States requirements, and this high level of production continued until 1963. The need for uranium in nuclear weapons and for peaceful energy applications led to the discovery and development of the Bokan Mountain uranium-thorium mine near Ketchikan. This mine was operated intermittently from 1955 to 1971. From 1959-68, Fairbanks Exploration (F E) recovered gold with a dredge near Chicken. Likewise in 1957, F E commenced large-scale dredging activities near Hog River in western Alaska.

The fixed price of gold led to the eventual demise of the gold-mining industry, and a slow but steady fall off in activity was evident in the 1950s and 1960s. By 1964, most large-scale dredging activities of the FE and other companies had ceased. More resilient small mining companies continued operations, but at reduced scales.

Discovery of oil and gas on the Kenai Peninsula spurred sand and gravel production in the late 1950s and early 1960s; similar discoveries of petroleum at Prudhoe Bay and subsequent construction of the trans-Alaska Pipeline System had an even larger effect. In 1974, Alaska was second only to populous California in sand and gravel production. As Alaska's urban areas expanded, increasing amounts of sand, gravel, and building stone were quarried.

Needs for local sources of petroleum drilling muds resulted in the development of a barite mine near Petersburg. The Vietnam War caused prices of antimony, mercury, and tungsten to climb, and significant quantities of all three commodities were produced in Alaska during this period. However, changing industrial applications and environmental issues concerning mercury caused serious declines in their development in Alaska throughout most of the 1970s.

Gold production continued to decline and dropped to 15,000 ounces in 1971 -the lowest since 1880. Employees in Alaska's mines numbered less than 300. However, the gold price was decontrolled in 1972, and there was a steady increase in production since that time. Several large floating bucket-line dredges were reactivated, and many new operations surfaced

throughout the state in the late 1970s. Gold production in 1981 was 134,200 ounces at a value of $55.2 million. The Valdez Creek Mine, a placer gold mine using standard open pit mining methods, produced 459,162 ounces of refined gold during operations from 1984 to 1995.

Throughout the 1970s and early 1980s, the sand and gravel industry dominated mineral production. The platinum dredge at Goodnews Bay ceased operations in 1976, after 41 years of continuous operation, but resumed in 1981 under new ownership and continued sporadically until 1996. Antimony and mercury were last produced in 1986 and 1988 respectively. Small amounts of silver, jade, copper, tungsten, and tin continue to be shipped from Alaskan mines.

Hard-rock (lode) mineral exploration based on systematic stream-sediment, soil and rock sampling, as well as deposit models, began in the mid-a950s as helicopters became more common and overcame the age-old problem of access. Mineral exploration flourished from 1974 to 1983, with peak expenditures adjusted to 2009 dollars of $225 million in 1979. The Red Dog (1968), Greens Creek (1979), Ambler mineral belt (1970s) and Quartz Hill (1974) deposits were all discovered during this time.

Alaska's mineral industry entered a new phase with the development of large lode mines in the 1980s. The Red Dog Mine in northwestern Alaska began producing zinc, lead, and silver in 1989 and was the largest zinc mine in the world for many years. Mining is by open-pit methods. The Red Dog Mine began a new phase of mining in 2010 with first production from the Aqqaluk deposit. The Aqqaluk deposit is expected to be the main ore supply for the mine for the next 25 years.

The Greens Creek Mine, on Admiralty Island near Juneau, also began production in 1989. Zinc, lead, silver and gold are produced from this massive sulfide deposit by underground mining methods and the mine is considered the fifth-largest primary silver producer in the world. Exploration at and near the mine has continued to add to the mine's reserves.

Usibelli Coal Mine near Healy has been in continuous operation since 1943 as a surface coal mining operation. By 1970 Usibelli Coal Mine was the only commercial coal mine operating in Alaska and supplied Alaska customers. The first overseas coal shipment from the mine was in 1985 and since that time about 50 percent of the mine production is consumed in Alaska by six power plants and about 50 percent of the production is shipped to customers in South Korea and other Pacific Rim destinations. Production in 2010 exceeded 2 million tons.

The Fort Knox Mine near Fairbanks was discovered in 1987 and initial production began in 1996. Gold mineralization is low-grade, hosted in a granitic body, and mined by open-pit methods. The Fort Knox Mine was the largest gold mine in Alaska from 1997 to 2007. Total production from 1996 to 2010 exceeded 4.9 million ounces of gold. Heap-leach operations begun in 2009 will extend the mine life by producing gold from stockpiled low-grade ore.

The Pogo Mine near Delta Junction began mining gold in 2006 after being discovered in 1995. The underground mine produced almost 1.5 million ounces of gold from 2006 to 2010. The current mine life extends to 2017, but an active exploration program has made discoveries that will likely extend the mine life.

The Kensington Mine near Juneau began modern gold production in 2010 by underground mining methods. The current mine connects the historic Kensington and Jualin gold mines. Gold production in 2010 was 43,119 ounces of gold, but planned annual gold production is 120,000 ounces and the mine currently has a 12-year mine life.

Mineral exploration continues at a robust pace in Alaska. Many discoveries have been made over the past several decades and the larger discoveries may one day become mines. These projects span Alaska. Some of the projects that are in the advanced exploration phase include the Pebble copper-gold-molybdenum project near Lake Illiamna, the 40-million-ounce Donlin Creek gold project near Aniak, the Niblack copper-zinc-gold-silver project near Ketchikan, the Livengood gold project near Livengood, and the Palmer copper-zinc-gold-silver project near Haines.

The Economic Benefits of Alaska's Mining Industry

Mining is a growing force in Alaska's economy . . .

providing jobs for thousands of Alaskans and millions of dollars of personal income throughout Alaska. Alaska's mining industry includes exploration, mine development, and mineral production. Alaska's mines produce zinc, lead, gold, silver, platinum, coal, as well as construction materials, such as sand, gravel, and rock.

In 2010, Alaska's mining industry provided:

- **3,500 direct** mining **jobs** in Alaska.
- **5,500 total** direct and indirect **jobs** attributed to Alaska mining industry.
- **$350 million** in total direct and indirect **payroll**.
- Some of Alaska's highest paying jobs with an estimated **average annual wage of $95,000**, double the state average for all sectors of the economy.
- **$13 million** in **local government revenue** through property taxes and payments in lieu of taxes.
- **$58.9 million** in **state government revenue** through rents, royalties, fees, and taxes, up 40% from 2009.
- **$145.9 million** in payments to **Alaska Native corporations**, more than triple 2009 levels.
- **Mostly year-round jobs for residents** of more than **120 communities** throughout Alaska, half of which are found in rural Alaska where few other jobs are available.

2010 Economic Benefits

estimated

Exploration

- **$225 million** spent on exploration, up 25% from 2009.
- **50 exploration projects** spending more than $100,000, of which **24 projects spent more than $1 million**.
- **$2.3 billion** spent on exploration since 1981.

Development

- **$250 million** spent on **mine construction,** down 24% from 2009, on 8 existing mines and development projects.

Production

- **$3 billion** in **gross mineral production value** from Red Dog, Greens Creek, Fort Knox, Pogo, Kensington, and Usibelli Coal mines, placer mines, and rock, sand, and gravel operations, up 24% from 2009.
- More than **200 placer mines** produced **60,000 ounces** of gold, as well as platinum.
- **$106 million in production value** from more than 120 active rock quarries, and sand and gravel operations.
- Export value of **$925 million**, or **28%** of Alaska's **total exports** (2009).

Strengthening Local Economies and Communities

Mining companies strengthen Alaska's local economies by employing Alaska residents from more than 120 Alaska communities. The industry also purchases supplies and services from hundreds of Alaska businesses.

These mining companies are also an important source of stable revenue for local governments, as well as significant state government revenue.

In 2010, Alaska's mining industry paid an estimated total of **$13 million to local governments,** including:

- $6.7 million in payment in lieu of taxes (PILT) by Red Dog to the Northwest Arctic Borough.
- $4.6 million in property taxes paid by Fort Knox to the Fairbanks North Star Borough.
- $1.7 million in property taxes paid by Greens Creek and Kensington to the City and Borough of Juneau. Now in production, Kensington may become the largest taxpayer in Juneau.
- Tax payments to other local governments, including Denali and Matanuska-Susitna boroughs, City of Nome and others.
- Mining industry employees also pay local property and sales taxes.

Mining companies paid an estimated **$58.9 million to state government** in royalties, rents, fees, and taxes, up 40% from 2009.

The mining industry also paid over $54.5 million in other state government-related revenues, including:

- $25.2 million to the Alaska Railroad Corporation – $17.9 million for moving coal and $7.3 million for moving sand and gravel.
- $29.3 million to Alaska Industrial Development & Export Authority for the use of state-owned facilities.
- $1.0 million to the Alaska Mental Health Trust for rents and royalty payments, and construction material sales.

Partnering with Alaska Native Corporations

All Alaska Native corporations benefit from mining industry activity – in 7(i) and (j) **royalty sharing payments**, in **jobs** for shareholders, or **through business partnerships**.

- **$145.9 million in royalties** paid by Red Dog to NANA; of which $83.4 million was redistributed to other Alaska Native regional and village corporations.
- **56%** of the **550 year-round jobs** at Red Dog are filled by **NANA shareholders**, including Teck Cominco, NANA Lynden and NANA Management Services jobs.
- Calista Corporation anticipates **$2 million in royalties for mineral agreements**, including lode exploration, placer gold production, and construction material sales.
- **83%** of the **on-site jobs** at Donlin Creek filled by **Calista shareholders**.
- Coeur Alaska works with Central Council Tlinglit & Haida Indian Tribes of Alaska and the Berners Bay Consortium (Goldbelt, Inc., Kake Tribal Corporation, and Klukwan, Inc.) to provide training, employment, and contracting opportunities for Alaska Natives at Kensington.

Alaska's Mineral Industry 2009

D.J. Szumigala[1], L.A. Harbo[2] and R.A. Hughes[3]

INTRODUCTION

Alaska has long been considered a frontier compared to most of North America and it still maintains that status with regard to mineral resources. The state's abundance of natural resources has drawn explorers for the past two centuries and remains the driving force in its economy. Juneau, Nome, Fairbanks, and other towns across the state were built around early mining camps, and mining remains a significant local source of employment, infrastructure, and government revenue. The unmatched geologic diversity of Alaska hosts a wide range of metallogenic settings and mineral commodities. The great mineral potential of the state is evident in past production from world-class deposits—placer gold from the Fairbanks and Nome mining districts; copper from the Jumbo, Bonanza, Erie, Mother Lode, and Green Butte mines in the Kennecott district; gold from the Alaska–Juneau and Treadwell mines near Juneau; and placer platinum from the Goodnews Bay mining district. Alaska's world-class deposits currently in production are Red Dog, Greens Creek, and Fort Knox mines. The Pebble, Donlin Creek, and Money Knob deposits indicate that there are still extremely large mineral deposits to be developed in Alaska; undoubtedly other world-class Alaska mineral deposits remain to be discovered.

Alaska is strategically located along the Pacific Rim and offers prospective land, sanctity of title, a state-sponsored geological and geophysical mapping effort, a reasonable permitting process, capable workforce, exploration incentives, and inventive infrastructure equity-sharing programs. More than 190 million acres of federal, state, and Native lands are open for mineral-related activities and mining. It is the policy of the State of Alaska to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest.

The total value of Alaska's mineral industry in 2009 was $2.964 billion, $204.2 million and 6.5 percent lower than the 2008 value of $3.1706 billion. The decline in total value primarily is explained by lower metal prices, increased operating costs, and a worldwide economic slowdown. Table 1 shows the estimated annual value of the mineral industry in Alaska from 1981 through 2009, as divided between exploration and development investments, and the gross value of the mineral products. This total value, although it is a combination of expenses and receipts, is an effective way of tracking the annual strength of the mineral industry and reflects the amount of capital invested in Alaska. The year 2009 was the 14th consecutive year with a total value exceeding $1 billion and the fourth consecutive year with production value above $2 billion.

Exploration activities continued for a wide variety of commodities across all regions of Alaska, with new discoveries and expansion of recently announced mineral resources. Exploration expenditures were $180.0 million in 2009, a 48 percent decrease from the $347.3 million expended in 2008. The year 2009 was the fifth consecutive year with expenditures of more than $100 million. Development expenditures in Alaska declined in 2009 to approximately $330.8 million from $396.2 million in 2008, a nearly 17 percent decrease, and 2009 was the sixth year with development expenditures above $200 million. Mineral production volumes increased for most metals; however, declining prices for most metals subdued production values. The value of mineral production in 2009 increased more than 1 percent, to $2,455.6 million, from $2,427.1 million in 2008.

Figure 1 shows the regions of the state as defined for this report. Table 1 and figure 2 show the estimated value of the mineral industry in Alaska per year from 1981 through 2009, as divided between exploration and development investments, and the gross value of mineral products. Company information is generally used to define the exploration and development parameters. Average metal prices are calculated from the daily London PM closing price for gold, and from the average weekly spot price on the London Metal Exchange for the other metals. It is important to note that these prices are used to calculate the value of metals produced in the state, but do not take into account the costs of min-

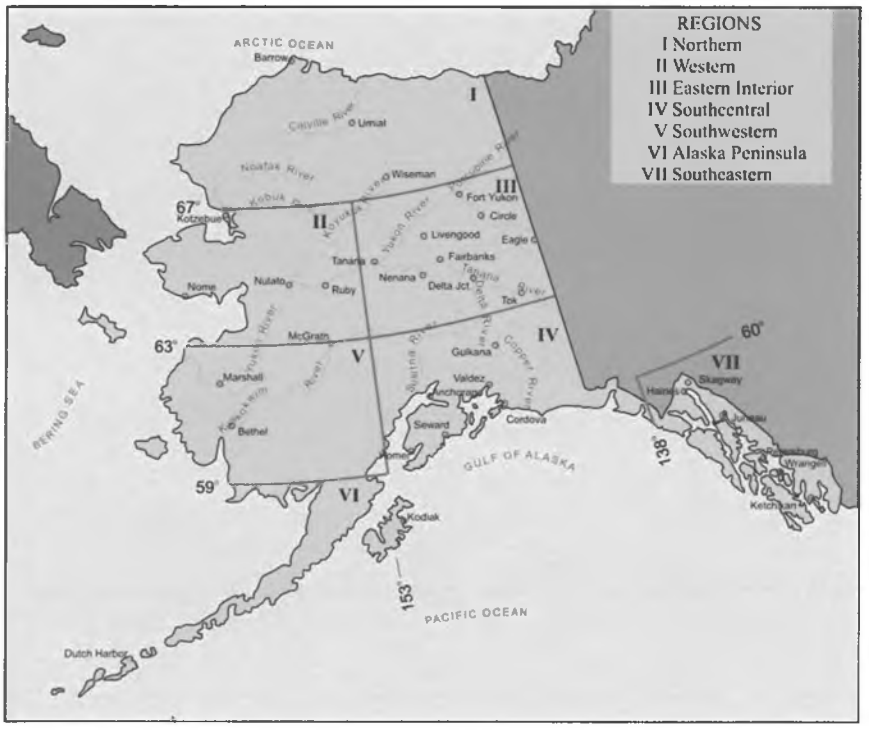

Figure 1. Regions of mineral activity as described in this report.

ing or transportation, or smelter charges and penalties. Coal prices are estimated from average coal prices for similar grade material around the Pacific Rim. Industrial material prices are based on regional rates provided by some operators.

Please note that the formatting and presentation of data in some tables has changed compared to previous editions of this report, reflecting changes in data collected and accounting practices by the mining industry. Whenever possible, the authors have worked to maintain consistency of data for seamless year-to-year comparisons. Most changes are noted in footnotes in the affected tables.

This summary of Alaska's mineral industry activity for 2009 is the 29th in the series of annual reports, and is made possible by information provided through press releases, company annual and financial reports, phone interviews, other research, and replies to questionnaires mailed by the Alaska Division of Geological & Geophysical Surveys (DGGS). This report is part of a cooperative venture between DGGS and the Division of Economic Development in the Department of Commerce, Community and Economic Development (Commerce). Commerce provides the funding to print the report. Information in this report supersedes data previously published in DGGS Information Circular 60.

EMPLOYMENT

Figure 3 displays employment within various segments of Alaska's mineral industry. Table 2 lists estimated employment in the Alaska minerals industry for the past nine years and figure 4 shows the trends in that employment from 2000 through 2009. Total minerals industry employment in 2009 is estimated to be 3,280 full-time-equivalent jobs, a decrease of 112 jobs (3.3 percent) from the estimated 2008 total of 3,392 full-time-equivalent jobs. The largest change in employment compared to 2008 was the drop in mineral development jobs from 516 to 371, a 28 percent decrease. Exploration jobs also decreased from 546 jobs in 2008 to 422 in 2009, a 23 percent decrease.

Mineral production employment increased significantly in 2009, with 2,487 jobs across all production sectors in 2009 compared to 2,330 jobs in 2008. Lode gold mining jobs increased 13 percent in 2009, adding 93 jobs. Placer gold mining employment also increased significantly in 2009, with 123 full-time-equivalent jobs added to the 312 jobs estimated for 2008, a 39 percent increase. The high price of gold was the most significant factor in the increase in gold miners and likely influenced the increase in recreational miners reported from 2008 to 2009. Full-time-equivalent jobs decreased in the base-metals sector by 62 jobs, or 13 percent, from 2008 to 2009. Modest employment increases were seen in the polymetallic, and sand and gravel mining sectors.

The average monthly wage for mining in Alaska during 2009 was $7,588, according to the Alaska Department of Labor & Workforce Development (DLWD), compared to an average monthly wage for all industries in Alaska of $3,886. Mining jobs in Alaska have higher

Table 1. Total value of the mineral industry in Alaska by year (in millions of U.S. dollars).

Year	Exploration (expenditure)	Development (expenditure)	Production (value)	Total (calculated)
1981	$ 76.3	$ 24.7	$ 188.6	$ 289.6
1982	45.6	41.6	196.4	283.6

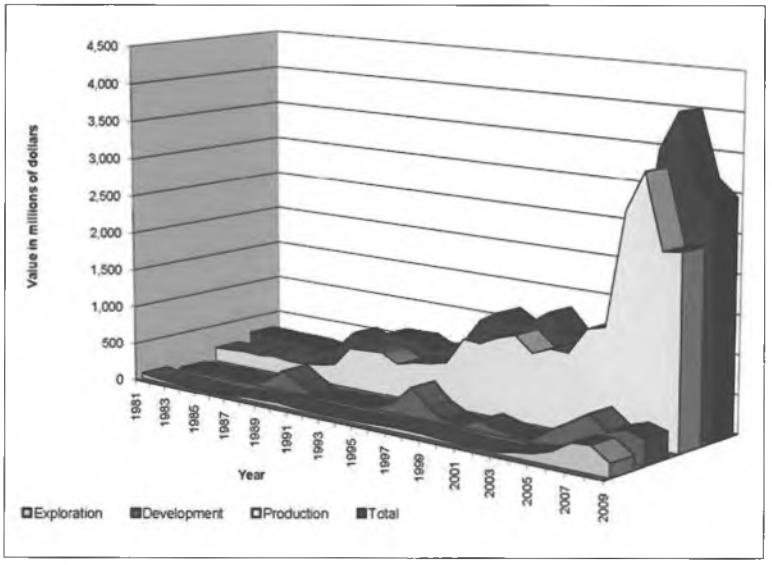

Figure 2. Alaska's mineral industry total value, 1981–2009.

wages than any other industry except oil and gas. The average annual earnings for a mining job were $91,100 in 2009, according to DLWD. Mining jobs pay nearly twice the Alaskan average annual earnings of $46,600. Mining wages in Alaska totaled $183,375,314 in 2009. The agency reported that there were 2,126 mining jobs in Alaska in 2009, with total employment in all industries in Alaska during 2009 at 320,265 jobs. Mining employment was reported in most regions of Alaska, with 685 jobs in the Fairbanks North Star Borough, 380 jobs in the Anchorage municipality, and 281 jobs in the City and Borough of Juneau. During the last 10 years, according to the DLWD, employment growth by Alaska's mining industry has outpaced growth of the United States' aggregate mining industry employment by nearly 40 percent; expansions in Alaska's mining industry employment have also eclipsed employment growth in most of Alaska's other private industries. The DLWD statistics do not include the self employed, such as the majority of placer operators; their employment data also does not often include jobs in the exploration and development phases of mining. Jobs in these mining phases are often grouped by the DLWD in the engineering, environmental, or construction industries. Consequently, mining's contributions to employment and earnings in Alaska could be underestimated.

The average monthly wage for metal mining in Alaska during 2009 was $7,795, according to the DLWD. They also report that the average employment during 2009 was 1,767 full-time-equivalent jobs in metal mining, more than 300 in coal mining and nonmetallic mineral mining and quarrying, and 9,321 in support activities for mining, oil, and gas.

[a]Reported man-days are calculated on a 260-day work year to obtain average annual employment unless actual average annual employment numbers are provided.
[b]This figure does not include all of the man-days associated with peat operations; most of those man-days are included in sand and gravel numbers.
[c]Coal and peat figures were combined in 2009 to maintain confidentiality.
- - = Not reported.

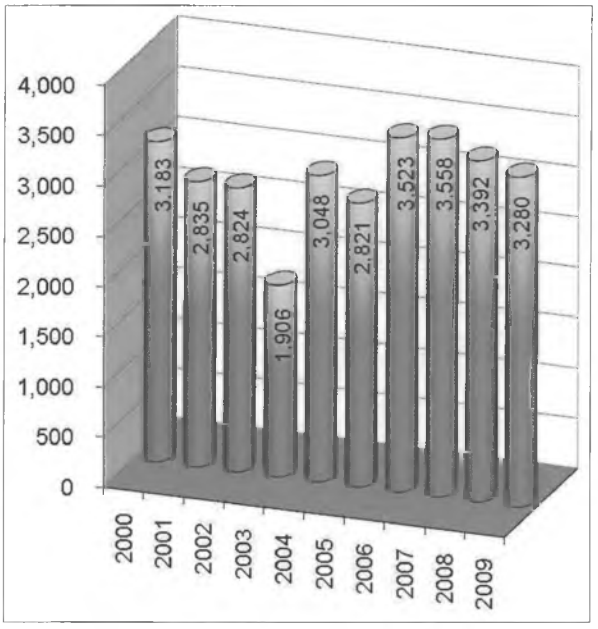

Figure 4. Total mineral industry employment in Alaska from 2000 through 2009.

Nonmetallic mineral product manufacturing provided 328 jobs, including an average of 315 jobs in cement and concrete manufacturing for 2009. Primary metal manufacturing provided 23 full-time-equivalent jobs, while metal and mineral merchant wholesalers provided an average of 114 jobs during 2009.

Nearly three-quarters of all wage and salary earnings from mining stay within the state, according to the DLWD, because Alaska residents comprise three-quarters of all workers in the mining industry. Mining wages for Alaska residents totaled more than $145.3 million in 2009. Workers in the mining industry live in 26 of Alaska's 29 boroughs and census areas, and they often reside in a different borough or census area than where they work. Mines are often the largest, or among the largest, employers in their borough or census area. Mines are also located in remote areas of the state where other employment opportunities are scarce, with half of all mining jobs, as tabulated by the DLWD, located in rural Alaska (fig. 5).

Labor & Workforce Development statistics are collected using different methods than the employment figures collected for this report; thus there is no direct correlation between the two sets of employment figures. For example, the DLWD mining employment and wage statistics are based on 77 reporting units (companies) consisting of one coal, 42 metal ore, and 34 nonmetallic mineral, quarrying units.

In 2009, Greens Creek, Red Dog, and Pogo mines were the largest employers in Juneau, the Northwest Arctic Borough, and Southeast Fairbanks Census Area, respectively. Fort Knox Mine and Usibelli Coal Mine are both the third-largest employers in their respective boroughs. Kensington Mine will likely become one of the top ten private employers in Juneau by 2011.

The Alaska mining industry also created an estimated 1,900 indirect jobs, according to a 2009 study prepared for the Alaska Miners Association Inc. by the McDowell Group Inc. Mining companies strengthen Alaska's local economies by employing Alaska residents from more than 120 Alaska communities and by purchasing supplies and services from hundreds of Alaska businesses.

GOVERNMENT REVENUES FROM ALASKA'S MINERAL INDUSTRY

Revenues are paid to the State of Alaska by the minerals industry through a number of instruments. Those instruments include State claim rentals, production royalties, annual labor, coal land rentals, coal royalties, material (rock, sand, and gravel) sales from state and mental health trust and State Pipeline Coordinator's Office managed lands, miscellaneous fees, state fuel taxes, corporate income taxes, and mining license taxes. Municipalities also receive revenues from the minerals industry for property taxes, payments in lieu of taxes (PILT), severance taxes, and sales taxes. The total revenues paid to the state and municipalities for 2009 amounted to more than $70.2 million (this number will be revised by the figure for State corporate income tax; that figure was not available at time of printing), an increase from the $67.9 million paid in 2008. See table 3 for an itemized listing of revenues paid. The 2009 revenues are incomplete because 2009 corporate income tax data was not available for this publication.

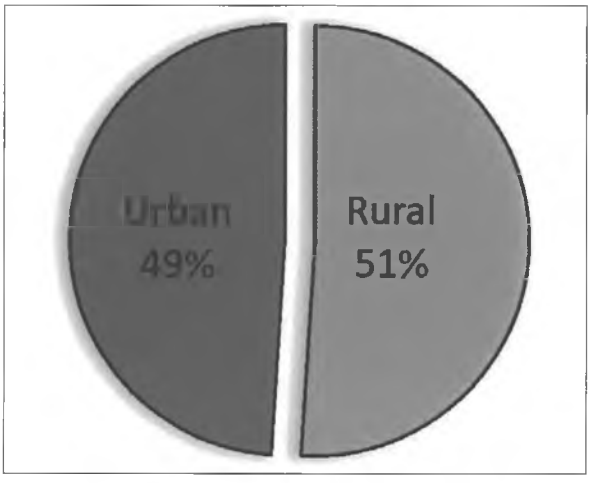

Figure 5. Alaska mining employment, 2009. Note Urban Alaska includes Anchorage, Fairbanks North Star Borough, and Juneau. Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section.

Revenues to the State of Alaska and municipalities from mineral-industry-specific fees, rent, sales, royalties, and taxes are shown in figure 6.

State mineral and coal rents and royalties amounted to $6,441,734 during 2009 compared to $6,629,451 for 2008. Details of the payments by item are shown in table 3. The State of Alaska mining laws grant the holder of a mining claim exclusive right to the locatable minerals in the ground covered by that mining claim. State mining claims have recording, rental, and other fees associated with them. Mining claim location certificates and recording fees must be recorded in the recording district office in which the claim is located within 45 days of the posting date. Recording fees change from time to time and

Table 3. Revenues paid to the State of Alaska and municipalities by Alaska's mineral industry, 2004–2009.

[a]Includes upland lease and offshore lease rentals.
[b]Reported on a cash basis - payments actually received during the given year.
[c]Preliminary data not available for 2009.
► Only subchapter C corporations pay income tax.
► This report may not reflect 100% of the returns received in a year.
► Data from 2004 through 2008 has been updated to reflect revenue to the state for the succeeding fiscal year; ex.: FY 07 receipts are shown in calendar year 2006.
[d]Includes metals, coal, and material.
[e]Mining license tax has been adjusted to reflect actual receipts for the succeeding fiscal year for the period 2003 to 2008; see note for income tax above.
[f]2009 numbers are preliminary and are subject to revision.
[g]2009 total is incomplete and will be revised.

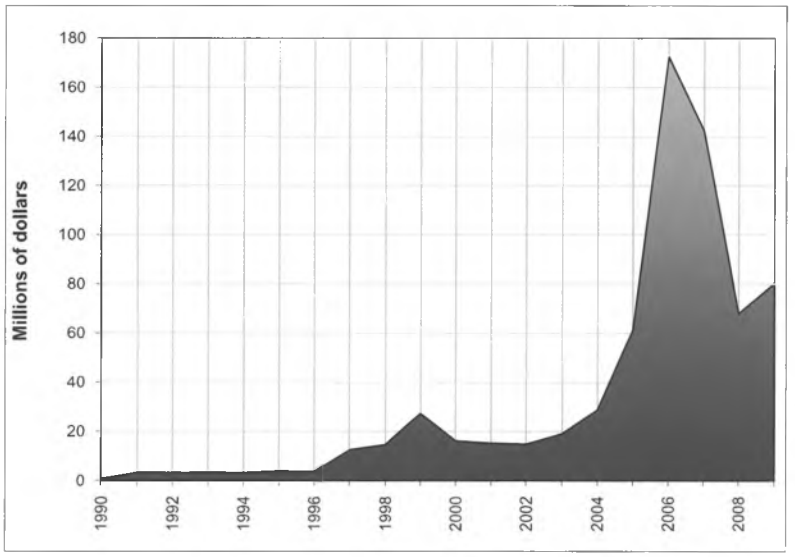

Figure 6. Mining industry revenue to State of Alaska and municipalities from 1990 to 2009.

the Recorder's Office should be contacted for the correct fee; recording fees are also posted at the following web site address: http://dnr.alaska.gov/ssd/recoff/fees.cfm. Rental fees under regulation 11 AAC 86.215 are shown in table 4, and must be paid according to the instructions on the back of the certificate form.

Annual rental fees for State mining claims, leasehold locations, upland mining leases, offshore mining leases, and prospecting sites increased in 2009. Alaska Statute directs DNR to revise the annual rental rates to match the changes in the Consumer Price Index (CPI) for Anchorage as compiled by the U.S. Department of Labor. The statute requires DNR to make the revisions every ten years, so the more than 60 percent increase in 2009 represents ten years increase to the CPI. The new rates began for mining claim payments due November 30, 2009, which cover mining claims for the "mining fiscal year" that runs September 1, 2009, through August 31, 2010. The first rental payment covers the period from the date of posting the claim to the following September 1st. Annual labor must be performed on a mining claim each year. The annual lease rate for coal properties is $3.00 per acre. The rental payments may be credited against royalties to the extent that they do not exceed the royalties.

In 1989, the Alaska State Legislature enacted a new production royalty law, Alaska Statute 38.05.212, which requires holders of state mining locations to pay a production royalty on all revenues received from minerals produced on state land. The production royalty requirement applies to all revenues received from minerals produced from a state mining claim or mining lease during each calendar year. Payment of royalty is in exchange for and to preserve the right to extract and possess the minerals produced. The production royalty is 3 percent of the net income as determined under the Mining License Tax Law AS 43.65 and regulation 15 AAC 65. Department of Natural Resources regulations 11 AAC 86.760–796 provide details regarding the production royalty requirements.

The state sells rock, sand, and gravel from its lands at a prescribed rate for use in construction. Lands involved in those sales include Mental Health Land Trust, Division of Lands, and State Pipeline Coordinator's Office (SPCO). Sales of these materials generated $4,674,472 during 2009, compared to $3,038,078 during 2008. Other common variety minerals that could be involved in this category include riprap, limestone, slate, peat, and any other substances from the ground that are not designated through the location system for mining claims

Table 4. Alaska state annual claim rental rates by size and maturity. Rental rates were adjusted in 2009 in accordance with the Consumer Price Index for Anchorage as prescribed by statute AS 38.05.211.

Years Since Location	Rental Per Quarter Section Size Claim	Rental Per Traditional Quarter–Quarter Section Size Claim	Rental for All Leases (per acre fee)
0–5	$140	$ 35	$0.88
6–10	$280	$ 70	$1.75
11 or more	$680	$170	$4.25

(for example, gold, silver, and other metals) or leasing (for example, energy minerals such as coal, oil, and gas). Materials are measured and sold by the cubic yard. The price charged for materials depends on the type, or size, of sale, but prices are based on a competitive or fair market price of material in the area. Contact the DNR information office for further information (see Appendix F for contact information).

Claim and leaseholders on state land are assessed miscellaneous fees; these amounted to $209,473 in 2009 compared to $87,889 in 2008. Miscellaneous fees are segregated in table 3 and comprise filing fees, penalties, exploration incentive application fees, bond pool payments, surface coal mining application fees, and Annual Placer Mining Application (APMA) fees.

Fuel tax collected by the State for 2009 amounted to $877,952, compared to $428,214 during 2008. These numbers were collected from mining companies and are likely not entirely complete. The motor fuel tax was suspended for one year on September 1, 2008. The motor fuel tax is $0.08/gallon and is collected for all fuel for mining operations. Fuel used for heating and stationary power plant is not taxable and application for refund of the full amount may be made to the State of Alaska. Off-highway fuel use for equipment and vehicles, mobile power plants, pumps, and unlicensed vehicle operation is partially refundable at the rate of $0.06/gallon of gasoline or diesel fuel.

The Mining License Tax was established by statute (AS 43.65) to collect taxes on net income from mining operations after a 3.5 year initial production grace period provided to taxpayers to help return their initial investment. The rates on mining net income are as follows: No tax if net income is $40,000 or less; $1,200 plus 3 percent if over $40,000; $1,500 plus 5 percent if over $50,000; and $4,000 plus 7 percent if over $100,000. The total Mining License Tax collected for 2009 was $29,725,100, compared to $16,044,139 in 2008. Mining License Tax returns are confidential and cannot be reported by individual/entity.

Corporate income taxes are assessed on all corporations having net income from mining operations in the state. The preliminary total for corporate income tax collected by the state during 2009 from mining operations was not available at press time. The corporate income taxes collected from mining in 2008 amounted to $12,919,787. Corporate income taxes are confidential and can't be reported by individual corporation. The corporate income tax rate is set by statute and is shown in table 5.

Mining companies were the largest taxpayers in the City and Borough of Juneau and the Fairbanks North Star Borough. Red Dog Mine paid $6.7 million to the Northwest Arctic Borough in 2009 as Payment in Lieu of Taxes. Mining companies contributed to the Denali Borough through PILT and severance tax payments. The Alaska Industrial Development & Export Authority (AIDEA) was paid annual user fees of $15.9 million for use of the State-owned road and port, the DeLong Mountain Regional Transportation System, by Teck Alaska Inc., operator of the Red Dog Mine, and for use of the Skagway Ore Terminal by Minto Explorations Ltd., subsidiary of Capstone Mining Corp. (formerly Sherwood Copper Corp.).

Table 5. State corporate income tax rate.

Net Income	Base Tax	Plus %	Of Amount Over
<$10,000	$ --	1%	$ --
10,000–20,000	100	2%	10,000
20,000–30,000	300	3%	20,000
30,000–40,000	600	4%	30,000
40,000–50,000	1,000	5%	40,000
50,000–60,000	1,500	6%	50,000
60,000–70,000	2,100	7%	60,000
70,000–80,000	2,800	8%	70,000
80,000–90,000	3,600	9%	80,000
>$90,000	$ 4,500	9.40%	$ 90,000

ACKNOWLEDGMENTS

This report on Alaska's mineral industry is intended to provide current, accurate, and technically reliable information. The authors wish to thank all companies, agencies, and individuals that responded to the questionnaires or phone calls and provided information about their activities and operations. Without their voluntary and timely information this report would not be possible. DGGS mailed and emailed more than 700 questionnaires in December 2009 and continued sending additional questionnaires through 2010. We received 115 responses and followed questionnaire requests with phone calls and other means of contact. Dave Szumigala (DGGS), Rich Hughes (Commerce), and Lisa Harbo (Commerce) prepared the body of the text, tables, graphic illustrations, and appendices with information supplied by many individuals. Some photos and images used in this report were provided by members of the public; these contributions are greatly appreciated. Where appropriate, these people have been acknowledged in the text. Information and text previously compiled for DGGS Information Circular 60 were used extensively.

The booklet's design, layout, and cover are by Joni Robinson (DGGS); Paula Davis (DGGS) edited the final version. Commerce's Division of Economic Development paid printing costs.

Attachment D

"Structural Analysis of the Alaska Economy," (Mining section), March 2012, Dr. Scott Goldsmith, UAA and ISER

D. MINING

The mining sector consists of three different activities: (1) hard rock mining for export, (2) coal mining that serves both local and export markets, and (3) production of construction materials—sand, gravel, and rocks—for the local market. Hard rock mining and about half of the coal mining activity comprise the economic base portion of this sector.

The economic base, in turn can be divided into three components: exploration and development of new mineral prospects (Donlin Creek and Pebble); production of zinc, lead, gold, and silver from large-scale mines (Red Dog, Fort Knox, Pogo, and Greens Creek and Kensington); and production of a variety of minerals from smaller operations that include both business and recreational operations. Most direct employment is associated with operations of the large-scale mines although exploration and development employment, which varies considerably from year-to-year, can be significant when a large prospect, such as a Donlin Creek or Pebble, is under investigation or development. Only primary processing of minerals occurs within the state.

VALUE OF OUTPUT

In 2010 the estimated market value of the four most important products of the mining industry—zinc, lead, gold, and silver—was $3.00 billion, based on world prices.[18] Zinc, produced at the Red Dog Mine, was the most valuable product, closely followed by gold.

The value of coal production in 2010 was $73 million, and the value of production of construction materials was $52 million. Aside from the export of a portion of coal production, these products are for the Alaska market and, consequently, not considered part of the economic base of the mining industry.

[18] The values reported by the State of Alaska, Department of Natural Resources are based on the prices of refined metals. The values at the mine mouth are considerably lower, particularly for metals requiring significant refining.

Table III.D1. Value of Mining Production

Part A:

Calendar Year	1990	1995	2000	2001	2002	2003	2004	2005	2006
Annual Production									
Zinc (000 tons)	181	360	669	635	718	715	680	684	675

Value of production is based on market price.
Other includes mercury, tin, antimony, platinum, copper, chromium.

PERSPECTIVE

Alaska ranked 5th among states in 2011 in the value of production.

Table III.D2. Non-Fuel Mineral Production in the U.S., 2011

Rank	State	Value (Billion $)	Percent of U.S.
1	Nevada	$10.4	14.0%
2	Arizona	$8.2	11.2%
3	Minnesota	$5.1	6.9%
4	Utah	$4.6	6.2%
5	**Alaska**	**$3.8**	**5.1%**
6	Florida	$3.2	4.4%
Total US		$74.00	

Source: U.S. Geological Survey, Mineral Commodity Summaries 2012.

DIRECT JOBS

There were 2.254 thousand direct annual average wage and salary jobs in mining in 2005. In addition, there were about 700 self-employed engaged in mining for a total of 4.1 thousand. Although there are a small number of employees in the mining support sector associated with metal mining, we have included them all in the petroleum production sector.

Table III.D3. Mining—Wage and Salary and Total Jobs (Thousand)

Part A:

	1990	1995	2000	2001	2002	2003	2004	2005
Wage and Salary (212) (Annual Average)				NA	1.47	1.45	1.38	1.57

Total	2.64	3.7	3.7	3.5	4.1

Source: USDC BEA Regional Economic Accounts Web site, wage and salary employment—Table SA27, total employment—Table SA25.
NAICS codes in parentheses.

A separate employment estimate for the mining industry prepared by the Alaska Department of Natural Resources is slightly higher. This higher estimate is largely due to the inclusion of mining exploration support activities (part of NAICS code 213) as well as some construction employment associated with the development of new mines. This data source shows considerable variation from year-to-year in exploration and development, as one would expect. However, it also shows more variation in the categories of sand and gravel and rock than one might expect.

Table III.D4. Mining—Wage and Salary Employment, Alaska DNR

Part A:

DIRECT EARNINGS

Wage and salary payroll for the mining industry in 2010 was $221 million and including benefits total compensation was $277 million. Proprietor income was modest and total earnings totaled $279 million. This amount excludes any payroll associated with mining support (NAICS 213) or construction employment engaged in development of new mines.

SOURCE OF ECONOMIC CONTRIBUTION

The economic contribution of the mining industry comes from a combination of payroll and procurement associated with production of minerals, expenditures associated with exploration and development, and royalties paid to resource

owners. Exploration and development expenditures fluctuate considerably from year-to-year.

Table III.D7. Mineral Exploration and Development Expenditures

(Million $)

Source: State of Alaska, Department of Natural Resources, Alaska's Mineral Industry.

Several large producing and proposed mines located on private and Native land pay royalties to the landowners. In particular, the Red Dog mine (the largest zinc mine in the world) pays royalties to the NANA Regional Native Corporation, and under the terms of ANCSA (Alaska Native Claims Settlement Act), shares 62% of those royalties with the other Regional Native Corporations. Red Dog mine royalty payments have increased from $17 million in 2005 to $170 million in 2011, due to both the increase in the price of zinc and the terms of the royalty agreement. Of this total $82 million was shared with the other Native Corporations pursuant to the 7(i) sharing provision of ANCSA. The royalty is calculated as a share of profits, and the rate jumped to 25% after the development costs of the mine were paid off. It will eventually rise to 50%.

STATE AND LOCAL GOVERNMENT REVENUES

The mining license tax and the corporate income tax have been the largest components of state revenues from mining in recent years, followed by rents and royalties, sales, and fees. State revenues increased rapidly after 2000 to peak at $173.4 million in 2006 but have since moderated. Total state revenue in 2010, based on information from the Alaska Department of Natural Resources (ADNR), was $72.2 million (excluding income tax revenues). (Mining revenue reported by the Alaska Department of Revenue is smaller, partly because they do not separately identify all categories of revenues paid by the mining industry.)

Local government revenues from mining activity (including payments in lieu of taxes) were $14.22 million in 2010 (ADNR).

Table III.D8. Mining State and Local Revenues (Million $)

GROSS DOMESTIC PRODUCT

Gross Domestic Product in 2009 was $933 million. It is small relative to the value of output because mining is very capital-intensive with a relatively small labor component.

Table III.D9. Mining--Gross Domestic Product (Million $)

1990	1995	2000	2001	2002	2003	2004	2005
		$380	$265	$236	$248	$404	$590

MEASUREMENT ISSUES

This sector has good data contained in the annual Alaska's Mineral Industry report. However, information on proprietor activity—participants, income, value of output, residence—is very limited. Construction employment associated with the development of mineral prospects and transportation employment associated

with shipping of inputs and products should be included when calculating the importance of the sector.

Jennifer Murrell
Natural Resource Specialist II
SOA-DNR-SCRO-Leasing Unit
550 W 7th Avenue Ste 900c
Anchorage, AK 99501-3577

Dear Ms. Murrell,

The Glacier Ranger District supports the Glacier Winner Creek Mineral Closing Order. Withdrawal of this area is important to the continued investment in recreational development by businesses in the Girdwood Community; including Alyeska Resort and Chugach Powder Guides. In addition, withdrawal provides certainty to other small businesses which provide recreational services on both these state lands and the adjacent federal lands of the Chugach National Forest. Lastly, withdrawal offers the best form of protection for the existing Winner Creek and Upper Winner Creek trails, both are trail segments of the significant and historic National Iditarod Trail.

Sincerely,

/s/ Tim Charnon

The Hon. Cathy Giessel
The. Hon. Bill Hawker
State Capital
Juneau, Alaska

Re: SB181 and HB285

Dear Senator Giessel and Representative Hawker;

As you both are aware, the Alaska Miners Association is a long established group dedicated to promoting the responsible development of Alaska's mineral resources. The Alaska Miners Association is a non-profit membership organization established in 1939 to represent the mining industry in Alaska. The AMA is composed of more than 1400 individual prospectors, geologists and engineers, vendors, suction dredge miners, small family mines, junior mining companies, and major mining companies. Our members look for and produce gold, silver, platinum, diamonds, lead, zinc, copper, coal, limestone, sand and gravel, crushed stone, armor rock, and other materials. Our members live and work throughout the state.

We recently took up the questions that are addressed in your respective bills as identified above, regarding a mineral closure order in the Glacier and Winter Creek drainages in the Girdwood area. We are specifically appreciative of the process followed by DNR, in evaluating the proposed areas as to their mineral potential and other values. We support the closure orders and agree with the assessment that these lands are properly suitable for expansion of the recreation uses. We would note that should such use cease, we would like to see the closure orders reversed and the areas reopened to mineral development.

Again, we appreciate the chance to comment and support the effort to accomplish these particular withdrawals. Thanks to you both for all of the hard work and dedication you provide to the citizens of Alaska in your roles as legislators.

Please feel free to contact me if you have further questions or need additional information.

Cordially,

Fred Parady
Executive Director

MEMORANDUM

To: Senators Wagoner and Paskvan
Co-Chairs, Senate Resources Committee

From: Senator Wagoner

Date: February 4, 2012

Re: SB 145 Oil/Gas Production Tax Credits: Nenana

I respectfully request a hearing on SB 145 before the Senate Resources Committee to be scheduled at your earliest convenience.

SB 145 is designed to incentivize exploration drilling in the underexplored Nenana Basin by offering tax credits for the first three wells drilled in the basin that meet certain requirements.

Attached please find supporting documentation including:

- SB 145 Oil/Gas Production Tax Credits: Nenana (LS1078\M)
- Sponsor Statement
- Sectional, explaining the changes SB 145 would make to current law
- CS for SB 145 (LS1078\B)
- Explanation of Changes Made by CS for SB 145

Sponsor Statement

SB 145 ***"An Act providing for a credit against the oil and gas production tax for costs incurred in drilling certain oil or natural gas exploration wells in the Nenana Basin"***

SB 145 is designed to attract exploration drilling in the underexplored Nenana Basin through tax credit incentives. The Nenana Basin has shown great potential, but has remained underdeveloped due to complications associated with its remote location. At a time when economic growth and development in the Interior is crippled by high energy prices and the lack of reliable energy supplies, this legislation will strongly encourage companies to invest in this high potential, frontier basin, located just 50 miles from Fairbanks. SB 145 has the potential to not only benefit the Interior but, at a time when the state is struggling to supply natural gas to Alaskans along the railbelt and oil to the pipeline, SB 145 has the potential to benefit all Alaskans.

SB 145 is intended to quicken the pace of exploration by rewarding the credits to the first three persons to drill an exploration well to a depth greater than 8,000 feet. The credits are structured as follows:

- The first person that drills an exploration well is credited 100 percent of costs, or $25 million, whichever is less;
- The second exploration well drilled is entitled to a credit of 90 percent, or up to $22.5 million, whichever is less;
- The third exploration well is credited at 80 percent, or up to $20 million, whichever is less.

If the exploration results in sustained oil and/or gas production from a reservoir discovered by the drilling, then 50 percent of the credits awarded will be repaid to the state.

The Nenana basin has a high potential for production of gas and possibly oil. SB 145 provides the incentives needed for exploration in this basin. Should a discovery be made, the new resource will benefit the regional economy and support businesses and families who are suffering from high energy costs and unreliable supplies.

Sectional

SB 145 "An Act providing for a credit against the oil and gas production tax for costs incurred in drilling certain oil or natural gas exploration wells in the Nenana Basin."

Section 1. Amends AS 43.55.025(a) to add reference to a new subsection "n"

Section 2. Adds a new subsection to AS 43.55.025, which provides that the first three drillers, who may be affiliated, that drill an exploration well for the purpose of discovering oil or gas in the Nenana Basin are eligible for tax credits. The well depth must be greater than 8,000 feet, but a shallower well of no less than 5,000 feet may be authorized by the commissioner of natural resources before drilling commences. The new subsection includes a payback provision, which is triggered upon sustained production from a reservoir discovered by the exploration well, and structures the tax credits as follows:

- The first person that drills an exploration well is credited 100 percent of costs, or $25 million, whichever is less;
- The second exploration well drilled is entitled to a credit of 90 percent, or up to $22.5 million, whichever is less;
- The third exploration well is credited at 80 percent, or up to $20 million, whichever is less.

CS FOR SENATE BILL NO. 145( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS WAGONER AND COGHILL, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act providing for a credit against the oil and gas production tax for costs incurred for conducting seismic exploration and drilling certain oil or natural gas exploration wells in certain basins; and providing a special tax rate for new oil or gas production south of 68 degrees North latitude."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.55.011(e) is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), [AND] (o)**, and (p)** of this section, the tax is equal to the sum of

(1) the annual production tax value of the taxable oil and gas as calculated under AS 43.55.160(a)(1) multiplied by 25 percent; and

(2) the sum, over all months of the calendar year, of the tax amounts

determined under (g) of this section.

* **Sec. 2.** AS 43.55.011 is amended by adding a new subsection to read:

(p) After December 31, 2012, for the seven years immediately following the commencement of commercial production from a lease or property or unit that did not have oil or gas production before January 1, 2013, the levy of tax under this section for oil and gas produced south of 68 degrees North latitude, other than gas subject to (i) or (j) of this section, gas subject to (o) of this section, or oil subject to (k) of this section, is four percent of the gross value at the point of production.

* **Sec. 3.** AS 43.55.025(a) is amended to read:

(a) Subject to the terms and conditions of this section, a credit against the production tax levied by AS 43.55.011(e) is allowed for exploration expenditures that qualify under (b) of this section in an amount equal to one of the following:

(1) 30 percent of the total exploration expenditures that qualify only under (b) and (c) of this section;

(2) 30 percent of the total exploration expenditures that qualify only under (b) and (d) of this section;

(3) 40 percent of the total exploration expenditures that qualify under (b), (c), and (d) of this section;

(4) 40 percent of the total exploration expenditures that qualify only under (b) and (e) of this section; [OR]

(5) 80, 90, or 100 percent, or a lesser amount described in (*l*) of this section, of the total exploration expenditures described in (b)(1) and (2) of this section and not excluded by (b)(3) and (4) of this section that qualify only under (*l*) of this section;

(6) the lesser of $22,500,000 or 80 percent of the total exploration drilling expenditures described in (n) of this section and that qualify under (b) and (c) of this section; or

(7) the lesser of $7,500,000 or 75 percent of the total seismic exploration expenditures described in (o) of this section and that qualify under (b) of this section.

* **Sec. 4.** AS 43.55.025(c) is amended to read:

(c) To be eligible for **a** [THE 30 PERCENT] production tax credit authorized by (a)(1)**, (3), or (6)** of this section [OR THE 40 PERCENT PRODUCTION TAX CREDIT AUTHORIZED BY (a)(3) OF THIS SECTION], exploration expenditures must

(1) qualify under (b) of this section; and

(2) be for an exploration well, subject to the following:

(A) before the well is spudded,

(i) the explorer shall submit to the commissioner of natural resources the information necessary to determine whether the geological objective of the well is a potential oil or gas trap that is distinctly separate from any trap that has been tested by a preexisting well;

(ii) at the time of the submittal of information under (i) of this subparagraph, the commissioner of natural resources may request from the explorer that specific data sets, ancillary data, and reports including all results, and copies of well data collected and data analyses for the well be provided to the Department of Natural Resources upon completion of the drilling; in this sub-subparagraph, well data include all analyses conducted on physical material, and well logs collected from the well and sample analyses; testing geophysical and velocity data including vertical seismic profiles and check shot surveys; testing data and analyses; age data; geochemical analyses; and access to tangible material; and

(iii) the commissioner of natural resources must make an affirmative determination as to whether the geological objective of the well is a potential oil or gas trap that is distinctly separate from any trap that has been tested by a preexisting well and what information under (ii) of this subparagraph must be submitted by the explorer after completion, abandonment, or suspension under AS 31.05.030; the commissioner of natural resources shall make that determination within 60 days after receiving all the necessary information from the explorer

based on the information received and on other information the commissioner of natural resources considers relevant;

(B) for an exploration well other than a well to explore a Cook Inlet prospect, the well must be located and drilled in such a manner that the bottom hole is located not less than three miles away from the bottom hole of a preexisting well drilled for oil or gas, irrespective of whether the preexisting well has been completed, suspended, or abandoned;

(C) after completion, suspension, or abandonment under AS 31.05.030 of the exploration well, the commissioner of natural resources must determine that the well was consistent with achieving the explorer's stated geological objective.

* **Sec. 5.** AS 43.55.025 is amended by adding new subsections to read:

(n) The persons that drill the first four exploration wells in the state and within the areas described in (p) of this section on state or private lands for the purpose of discovering oil or gas that penetrate and evaluate a prospect in a basin described in (p) of this section are eligible for a credit under (a)(6) of this section. A credit under this subsection may not be taken for more than two exploration wells in a single area described in (p)(1) - (6) of this section. Exploration expenditures eligible for the credit in this subsection must be incurred for work performed after June 1, 2012. A person planning to drill an exploration well on private land and to apply for a credit under this subsection shall obtain written consent from the owner of the oil and gas interest for the full public release of all well data after the expiration of the confidentiality period applicable to information collected under (f) of this section and in conjunction with and compliance with the data submission requirements in (f)(2) of this section. The written consent of the owner of the oil and gas interest must be submitted to the commissioner of natural resources before approval of the proposed exploration well. In addition to the requirements in (c) of this section and submission of the written consent of the owner of the oil and gas interest, a person planning to drill an exploration well shall obtain approval from the commissioner of natural resources before the well is spudded. The commissioner of natural resources shall make a written determination approving or rejecting an exploration well within 60 days after

receiving the request for approval or as soon as is practicable thereafter. Before approving the exploration well, the commissioner of natural resources shall consider the following: the location of the well; the proximity to a community in need of a local energy source; the proximity of existing infrastructure; the experience and safety record of the explorer in conducting operations in remote or roadless areas; the projected cost schedule; whether seismic mapping and seismic data sufficiently identify a particular trap for exploration; whether the targeted and planned depth and range are designed to penetrate and fully evaluate the hydrocarbon potential of the proposed prospect and reach the level below which economic hydrocarbon reservoirs are likely to be found, or reach 12,000 feet or more true vertical depth; and whether the exploration plan provides for a full evaluation of the wellbore below surface casing to the depth of the well. Whether the exploration well for which a credit is requested under this subsection is located within an area and a basin described under (p) of this section shall be determined by the commissioner of natural resources and reported to the commissioner. A taxpayer that obtains a credit under this subsection may not claim a tax credit under AS 43.55.023 or another provision in this section for the same exploration expenditure.

(o) The persons that conduct the first four seismic exploration projects in the state and within the areas described in (p) of this section for the purpose of discovering oil or gas in a basin are eligible for the credit under (a)(7) of this section. A credit under this subsection may not be taken for more than one seismic exploration project in a single area described in (p)(1) - (6) of this section. Exploration expenditures eligible for the credit in this subsection must be incurred for work performed after June 1, 2012. A person planning to conduct a seismic exploration project on private land and to apply for a credit under this subsection shall obtain written consent from the owner of the oil and gas interest for the full public release of all geophysical data and compliance with the data submission requirements in (f)(2) of this section. Notwithstanding (f)(2)(C)(ii) of this section, to qualify for a credit under this subsection, a person shall submit the written consent of the owner of the oil and gas interest for the release of data if applicable, and all data required under (f)(2) of this section to the Department of Natural Resources and shall agree in writing that all

seismic data requirements submitted under the requirements of (f)(2) of this section may be made public two years after receiving a credit under this subsection. A person intending to qualify for the tax credit under this subsection shall obtain approval from the commissioner of natural resources before the commencement of the seismic exploration activities. The commissioner of natural resources shall make a written determination approving or rejecting a seismic project within 60 days after receiving the request for approval or as soon as is practicable thereafter. Before approving a seismic exploration project, the commissioner shall consider the following: the location of the project; the projected cost schedule; the data acquisition and data processing plan; the reasons for choosing the particular area for seismic exploration; and the experience and safety record of the person in conducting seismic exploration operations in remote or roadless areas. Whether the seismic exploration project for which a credit is requested under this subsection is located in a basin described in (p) of this section shall be determined by the commissioner of natural resources and reported to the commissioner. A taxpayer that obtains a credit under this subsection may not claim a tax credit under AS 43.55.023 or another provision in this section for the same exploration expenditure.

(p) The activity that is the basis for a credit claimed under (a)(6) and (n) of this section or (a)(7) and (o) of this section must be for the exploration of a basin and within the following areas whose central points are determined using the World Geographic System of 1984 datum,

(1) 100 miles from 66.896128 degrees North, -162.598187 degrees West;

(2) 150 miles from 64.839474 degrees North, -147.72094 degrees West;

(3) 50 miles from 62.776428 degrees North, -164.495201 degrees West;

(4) 50 miles from 62.110357 degrees North, -145.530551 degrees West;

(5) 100 miles from 58.189868 degrees North, -157.371104 degrees West;

(6) 100 miles from 56.005988 degrees North, -160.56083 degrees West.

SB 145

Cost of Energy in Northwest Alaska

The following table shows prices residents are paying for energy, including gasoline, stove oil and propane to heat their homes, and for diesel-generated electricity, as of February, 2012:

Village	Gasoline/gallon	Stove Oil/gallon	Propane/23 gallon	Electric/Kwh
Kotzebue	$7.35	$7.50	$186.79	$.4144
Ambler	$8.95	$9.50	$285	$.6805
Kobuk	$10.46	$9.30	$270	$.87
Shungnak	$9.59	$9.59	$330	$.9235
Kiana	$7.50	$7.00	$270	$.6835
Noorvik	$8.07	$7.31	$278	$.6489
Selawik	$7.00	$6.80	$264.55	$.6567
Buckland	$6.25	$7.00	$271	$.4741
Deering	$6.30	$6.25	$285	$.7047
Kivalina	$6.72	$6.55	$285	$.6785
Noatak	$8.99	$8.99	$311	$.7826

The average cost of one gallon of gas in our region is **$7.92**. The village of Kobuk has the highest price at **$10.46 per gallon**. Buckland enjoys the least costly rate at **$6.25 per gallon**.

Sponsor Statement

CSSB 145 (Res) ***"An Act providing for a credit against the oil and gas production tax for costs incurred for conducting seismic exploration and drilling certain oil or natural gas exploration wells in certain basins."***

CSSB 145 is designed to attract exploration drilling and seismic exploration in remote areas of Alaska with some proximity to communities in need of a local energy source. These remote areas show promise of holding hydrocarbons, but are underexplored due to complications and costs associated with accessing and developing these remote locations. Because they are underexplored, or even unexplored, they have provided scant geological information to either the state or possible investors. At a time when economic growth and development in many regions of Alaska are crippled by high energy prices and the lack of reliable energy supplies, this legislation will provide needed encouragement to independent companies and landowners otherwise hesitant to invest in exploration projects near energy challenged communities. For example, the Fairbanks community spends over $660 million per year on space heating, yet is located just 50 miles away from the Nenana Basin, a geologic basin that has shown strong potential to be a source for oil and gas. All that is needed to develop this potential resource is investors. Like tax credits used in other regions in the state, CSSB 145 tax credits for frontier basins will attract those needed investors.

CSSB 145 provides to the first four persons that perform seismic exploration in four different areas identified in the bill a credit in the amount of $7,500,000 or 75% of the total seismic exploration expenditures, whichever is less. The first four exploration well drillers to drill within the areas described in the bill will receive $22,500,000 or 80% of the total exploration drilling expenses, whichever is less. No more than two wells in a single designated area may qualify for the credit. In exchange for the tax credit, explorers must agree to meet certain criteria before commencing exploration that will assure the state that the project is sound, and they must agree to provide to the state specific data acquired through the project.

By providing meaningful tax credits to the first four exploration drillers to drill in these remote areas, and the first four seismic projects to be completed, CSSB 145 will hasten exploration in specific remote basins that the Department of Natural Resources has identified may hold oil and gas reserves. The exploration incentives in CSSB 145 will benefit the Interior and other regions of the state faced with crippling high-energy costs and benefit the state by providing information needed to better define potential resources and further attract investment and exploration in these remote areas.

CS FOR SENATE BILL NO. 145( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS WAGONER AND COGHILL, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act providing for a credit against the oil and gas production tax for costs incurred for conducting seismic exploration and drilling certain oil or natural gas exploration wells in certain basins; and providing a special tax rate for new oil or gas production south of 68 degrees North latitude."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.55.011(e) is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), [AND] (o)**, and (p)** of this section, the tax is equal to the sum of

(1) the annual production tax value of the taxable oil and gas as calculated under AS 43.55.160(a)(1) multiplied by 25 percent; and

(2) the sum, over all months of the calendar year, of the tax amounts

determined under (g) of this section.

*** Sec. 2.** AS 43.55.011 is amended by adding a new subsection to read:

(p) After December 31, 2012, for the seven years immediately following the commencement of commercial production from a lease or property or unit that did not have oil or gas production before January 1, 2013, the levy of tax under this section for oil and gas produced south of 68 degrees North latitude, other than gas subject to (i) or (j) of this section, gas subject to (o) of this section, or oil subject to (k) of this section, is four percent of the gross value at the point of production.

*** Sec. 3.** AS 43.55.025(a) is amended to read:

(a) Subject to the terms and conditions of this section, a credit against the production tax levied by AS 43.55.011(e) is allowed for exploration expenditures that qualify under (b) of this section in an amount equal to one of the following:

(1) 30 percent of the total exploration expenditures that qualify only under (b) and (c) of this section;

(2) 30 percent of the total exploration expenditures that qualify only under (b) and (d) of this section;

(3) 40 percent of the total exploration expenditures that qualify under (b), (c), and (d) of this section;

(4) 40 percent of the total exploration expenditures that qualify only under (b) and (e) of this section; [OR]

(5) 80, 90, or 100 percent, or a lesser amount described in (*l*) of this section, of the total exploration expenditures described in (b)(1) and (2) of this section and not excluded by (b)(3) and (4) of this section that qualify only under (*l*) of this section**;**

(6) the lesser of $22,500,000 or 80 percent of the total exploration drilling expenditures described in (n) of this section and that qualify under (b) and (c) of this section; or

(7) the lesser of $7,500,000 or 75 percent of the total seismic exploration expenditures described in (o) of this section and that qualify under (b) of this section.

*** Sec. 4.** AS 43.55.025(c) is amended to read:

(c) To be eligible for **a** [THE 30 PERCENT] production tax credit authorized by (a)(1)**, (3), or (6)** of this section [OR THE 40 PERCENT PRODUCTION TAX CREDIT AUTHORIZED BY (a)(3) OF THIS SECTION], exploration expenditures must

(1) qualify under (b) of this section; and

(2) be for an exploration well, subject to the following:

(A) before the well is spudded,

(i) the explorer shall submit to the commissioner of natural resources the information necessary to determine whether the geological objective of the well is a potential oil or gas trap that is distinctly separate from any trap that has been tested by a preexisting well;

(ii) at the time of the submittal of information under (i) of this subparagraph, the commissioner of natural resources may request from the explorer that specific data sets, ancillary data, and reports including all results, and copies of well data collected and data analyses for the well be provided to the Department of Natural Resources upon completion of the drilling; in this sub-subparagraph, well data include all analyses conducted on physical material, and well logs collected from the well and sample analyses; testing geophysical and velocity data including vertical seismic profiles and check shot surveys; testing data and analyses; age data; geochemical analyses; and access to tangible material; and

(iii) the commissioner of natural resources must make an affirmative determination as to whether the geological objective of the well is a potential oil or gas trap that is distinctly separate from any trap that has been tested by a preexisting well and what information under (ii) of this subparagraph must be submitted by the explorer after completion, abandonment, or suspension under AS 31.05.030; the commissioner of natural resources shall make that determination within 60 days after receiving all the necessary information from the explorer

based on the information received and on other information the commissioner of natural resources considers relevant;

(B) for an exploration well other than a well to explore a Cook Inlet prospect, the well must be located and drilled in such a manner that the bottom hole is located not less than three miles away from the bottom hole of a preexisting well drilled for oil or gas, irrespective of whether the preexisting well has been completed, suspended, or abandoned;

(C) after completion, suspension, or abandonment under AS 31.05.030 of the exploration well, the commissioner of natural resources must determine that the well was consistent with achieving the explorer's stated geological objective.

*** Sec. 5.** AS 43.55.025 is amended by adding new subsections to read:

(n) The persons that drill the first four exploration wells in the state and within the areas described in (p) of this section on state or private lands for the purpose of discovering oil or gas that penetrate and evaluate a prospect in a basin described in (p) of this section are eligible for a credit under (a)(6) of this section. A credit under this subsection may not be taken for more than two exploration wells in a single area described in (p)(1) - (6) of this section. Exploration expenditures eligible for the credit in this subsection must be incurred for work performed after June 1, 2012. A person planning to drill an exploration well on private land and to obtain a credit under this subsection shall obtain written consent from the owner of the oil and gas interest for the full public release of all well data after the expiration of the confidentiality period applicable to information collected under (f) of this section and in conjunction with and compliance with the data submission requirements in (f)(2) of this section. The written consent of the owner of the oil and gas interest must be submitted to the commissioner of natural resources before approval of the proposed exploration well. In addition to the requirements in (c) of this section and submission of the written consent of the owner of the oil and gas interest, a person planning to drill an exploration well shall obtain approval from the commissioner of natural resources before the well is spudded. The commissioner of natural resources shall approve or reject an exploration well within 60 days after receiving the request for approval or as

soon as is practicable thereafter. Before approving the exploration well, the commissioner of natural resources shall consider the following: the location of the well; the proximity to a community in need of a local energy source; the proximity of existing infrastructure; the experience and safety record of the explorer in conducting operations in remote or roadless areas; the projected cost schedule; whether seismic mapping and seismic data sufficiently identify a particular trap for exploration; whether the targeted and planned depth and range are designed to penetrate and fully evaluate the hydrocarbon potential of the proposed prospect and reach the level below which economic hydrocarbon reservoirs are likely to be found, or reach 12,000 feet or more true vertical depth; and whether the exploration plan provides for a full evaluation of the wellbore below surface casing to the depth of the well. Whether the exploration well for which a credit is requested under this subsection is located within an area and a basin described under (p) of this section shall be determined by the commissioner of natural resources and reported to the commissioner. A taxpayer that obtains a credit under this subsection may not claim a tax credit under AS 43.55.023 or another provision in this section for the same exploration expenditure.

(o) The persons that conduct the first four seismic exploration projects in the state and within the areas described in (p) of this section for the purpose of discovering oil or gas in a basin are eligible for the credit under (a)(7) of this section. A credit under this subsection may not be taken for more than one seismic exploration project in a single area described in (p)(1) - (6) of this section. Exploration expenditures eligible for the credit in this subsection must be incurred for work performed after June 1, 2012. A person planning to conduct a seismic exploration project on private land and to obtain a credit under this subsection shall obtain written consent from the owner of the oil and gas interest for the full public release of all geophysical data and compliance with the data submission requirements in (f)(2) of this section. To qualify for a credit under this subsection, a person shall submit the written consent of the owner of the oil and gas interest for the release of data if applicable, and all data required under (f)(2) of this section to the Department of Natural Resources and shall agree in writing that all seismic data requirements submitted under the requirements of (f)(2) of this section may be made public after the expiration of the confidentiality

period applicable to information collected under (f)(2) of this section. A person intending to qualify for the tax credit under this subsection shall obtain approval from the commissioner of natural resources before the commencement of the seismic exploration activities. The commissioner of natural resources shall approve or reject a seismic project within 60 days after receiving the request for approval or as soon as is practicable thereafter. Before approving a seismic exploration project, the commissioner shall consider the following: the location of the project; the projected cost schedule; the data acquisition and data processing plan; the reasons for choosing the particular area for seismic exploration; and the experience and safety record of the person in conducting seismic exploration operations in remote or roadless areas. Whether the seismic exploration project for which a credit is requested under this subsection is located in a basin described in (p) of this section shall be determined by the commissioner of natural resources and reported to the commissioner. A taxpayer that obtains a credit under this subsection may not claim a tax credit under AS 43.55.023 or another provision in this section for the same exploration expenditure.

(p) The activity that is the basis for a credit claimed under (a)(6) and (n) of this section or (a)(7) and (o) of this section must be for the exploration of a basin and within the following areas whose central points are determined using the World Geographic System of 1984 datum,

(1) 100 miles from 66.896128 degrees North, -162.598187 degrees West;

(2) 150 miles from 64.839474 degrees North, -147.72094 degrees West;

(3) 50 miles from 62.776428 degrees North, -164.495201 degrees West;

(4) 50 miles from 62.110357 degrees North, -145.530551 degrees West;

(5) 100 miles from 58.189868 degrees North, -157.371104 degrees West;

(6) 100 miles from 56.005988 degrees North, -160.56083 degrees

West.

SB 145 ***"An Act providing for a credit against the oil and gas production tax for costs incurred for conducting seismic exploration and drilling certain oil or natural gas exploration wells in certain basins; and providing a special tax rate for new oil or gas production south of 68 degrees North latitude."***

Section 1. Amends AS 43.55.011(e) to add reference to a new subsection (p).

Section 2. Adds a new subsection(p) to AS 43.55.011 that provides a four percent of the gross value at the point of production tax rate after December 31, 2012 for the seven years immediately following the commencement of commercial production from a lease of property or a unit that did not have oil or gas production before January 1, 2013, and that is not gas subject to AS 43.55.011 (i), (j) or (o) or oil subject to (k).

Section 3. Amends AS 43.55.025(a) to add a new subsection (6) that allows a production tax credit for exploration drilling expenditures, described in a new subsection (n), that qualify under (b) and (c) of AS 43.55.025 in the amount of 80% of the total expenditures or $22.5 million, whichever is less; and adds a new subsection (7) that allows a production tax credit for seismic exploration expenditures, described in a new subsection (o), that qualify under (b) of AS 43.55.025 in the amount of 75% of the total seismic exploration expenditures or $7.5 million, whichever is less.

Section 4. Makes a conforming change to AS 43.55.025(c) to include the new subsection (6)

Section 5. Adds a new subsection (n) to AS 43.55.025 providing that the first four exploration drillers that drill an exploration well on state or private land, within the areas identified in subsection (p), are eligible for tax credits described under (a)(6). Specifies that a credit may not be taken for more than two wells in a single area described in (p) and work must be performed after June 1, 2012. Provides that if the well is on private land, the driller shall obtain written consent from the owner of the oil and gas interest for the full public release of all well data after the expiration of the confidentiality period provided under subsection (f) and submit that consent to DNR before approval of the proposed well.

In addition to the requirements of (c), adds that the explorer shall obtain approval from DNR before the well is spudded, and gives the commissioner 60 days to

approve the request, based on consideration of certain factors that will help validate the soundness of the proposed exploration plan and its likelihood of success.

Clarifies that a taxpayer taking a credit under this section may not stack the credit with other credits allowed under AS 43.55.023.

Adds a new subsection (o) to AS 43.55.025 providing that the first four seismic exploration projects in the state that are within the areas identified in (p) are eligible for the credits under (a)(7). Specifies that a credit may not be taken for more than one seismic project in a single area described in (p) and work must be performed after June 1, 2012. Provides that if the seismic is on private land, the driller shall obtain written consent from the owner of the oil and gas interest for the full public release of all seismic data after the expiration of the confidentiality period provided under subsection (f)(2) and submit that consent to DNR before approval of the proposed seismic project.

Further provides that the explorer shall obtain approval from DNR before the seismic exploration project commences, and gives the commissioner 60 days to approve the request, based on consideration of certain factors that will help validate the soundness of the proposed exploration plan and its likelihood of success.

Clarifies that a taxpayer taking a credit under this section may not stack the credit with other credits allowed under AS 43.55.023.

Adds a new subsection (p) that lists six areas within the state where exploration projects may be conducted and qualify for the tax credits under (a)(6) and (a)(7).

Why this fiscal note differs from previous version (if initial version, please note as such)

The Senate Resources committee substitute for SB 145 includes 5 more areas eligible for tax incentives program for exploration activities. Seismic exploration activities were also added to the exploration wells as eligible activities for tax credits. CSSB145 also adds a new section on production tax for commercial finds of oil or gas production south of 68 degrees, other than Cook Inlet.

Prepared by: William C. Barron, Director — Phone (907) 269-8800

(Revised 1/17/2012 OMB)

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB145(RES)

Analysis

The impact of CSSB 145(RES) on state royalties is indeterminate. The impact is dependent on a commercial discovery being made on state lands, and the frontier areas contain lands for which the State owns the mineral rights.

Section 2 of CSSB 145(RES) would put a four percent gross tax ceiling on the current net tax for the first seven years of production from a field that is not on the North Slope, nor in the Cook Inlet, nor selling gas for use in-state. The impact of this section on state royalty revenue is indeterminate. Depending on the field's profitability, the four percent gross tax might be less than the current net tax. Despite the tax liability under current tax law for such a field already being reduced by the non-transferable tax credits available under AS 43.55.024(a) and (c) (if applicable), the four percent ceiling might improve the economics of field development.

Section 3 establishes for exploration activity within six frontier areas in Alaska two new credits: a credit for seismic work and a credit for drilling exploration wells. The credit for seismic activity provides for a credit equal to 75% of the cost of the seismic work or $7.5 million, whichever is less, for the first four seismic exploration projects in those frontier areas. Not more than one seismic program can be undertaken for a given frontier area. The credit for exploration well drilling provides a credit equal to 80% of the cost of the well or $22.5 million, whichever is less, for the four wells drilled in the six frontier areas. Not more than two wells can be drilled in a given frontier area. These two credits cannot be taken in conjunction with the qualified capital expenditure credit or carried-forward annual loss credit. The credit applies to exploration on state, private lands and onshore federal lands.

The 75% seismic and 80% well exploration credits provides a more generous tax benefit than is currently available for new entrant explorers in Alaska. Now, the new entrant explorer could receive at most a 65% tax benefit comprised of a 40% credit for a remote well drilled (or for seismic of a remote area) and a carried-forward annual loss credit of 25% under AS 43.55.023(b). This higher up-front tax benefit, all else equal, should encourage exploration by new entrants in some of the six frontier areas identified in the bill.

In the frontier areas denoted by the new AS 43.55.025(p)(5) and (p)(6), the Egegik and Port Moller basins, DNR holds annual Alaska Peninsula area lease sales. The area has moderate to high potential for gas and low to moderate potential for oil. The State has not received any bids for leases in this area over the last three lease sales. To the extent the more generous tax benefits there encourage lease bidding, drilling, and seismic work in the Alaska Peninsula, the State might eventually receive more revenue from bonus bids and royalties from that area.

The frontier area denoted by (p)(2), or the Fairbanks area, includes the Nenana basin, where Doyon currently has an exploration license with the State. To the extent the more generous tax benefits there encourage drilling and seismic work in the Nenana basin, the State may eventually receive more royalty revenue as the exploration licenses there are converted to leases.

Some of the frontier areas contain land whose mineral rights are owned by private landowners or the federal government. The prospective acreage in the Yukon Flats basin contained in the Fairbanks frontier area is on land owned by Native corporations. Similarly, while the State has a mineral interest in offshore lands up to the three mile limit for frontier areas denoted by (p)(1), Kotzebue, and (p)(3), Emmonak, the State lacks a substantial mineral interest on-shore in these frontier areas.

The Copper River basin is also identified and although there is a significant state land base, the area is mostly federal US Park Service lands. There are no state exploration licenses in the area; however, approximately ten to twelve exploration wells have been drilled in the area.

Analysis Continued

Section 5 of the bill provides for some administrative responsibilities for DNR. A person wanting to receive a credit must obtain the approval of DNR for undertaking the seismic or drilling program, and DNR has 60 days or as soon as practical to evaluate the proposed expenditure. DNR's written evaluation must take into account a number of factors concerning the operator and proposed exploration. DNR must also find that the proposed work is located in a specified frontier basin. DNR must also ensure that data is collected on the exploration work, and, if applicable, obtain the agreement of a private landowner for public release of the data under AS 43.55.025(i).

DNR must make a best interests finding regarding the proposed work program after examining a variety of factors. DNR must also find that the proposed work is located in a specified frontier basin. The division is requesting two new NRS III positions (range 18, step C) to address the anticipated increase in well drilling and seismic activities in frontier areas and a potential influx in processing of exploration licenses. Other budgeted items include mandatory position costs, office equipment, and office space expenses.

Resource evaluation work such as serving as contacts for several stages of necessary correspondence between the operator, Division of Oil and Gas, and Department of Revenue; inventorying and checking completeness of data submitted; assisting in loading and conducting quality control on seismic and well data; monitoring release schedule; and helping coordinate the transfer of DNR data to Alaska Oil and Gas Conservation Commission for public distribution would also be required. Assuming this program is not amended or extended, the staffing increases could be reduced in FY17 and 18.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 145 (RES)

Analysis

The revenue impact of this bill is indeterminate.

This bill adds new subsections (a)(6), (a)(7), (n), (o), and (p) to AS 43.55.025. Subsections (n) and (o) authorize production tax credits for drilling 4 exploration wells and conducting 4 seismic exploration projects in the 6 areas, or basins, indentified in new subsection (p) of the bill. The new credit amounts are defined in subsections (a)(6) and (a)(7). Subsection (a)(6) authorizes a credit which is the lesser of $22.5 million or 80% of the exploration drilling expenditures for each well described in subsection (n) that qualify under subsections (b), (c) and (p) of AS 43.55.025. Subsection (a)(7) authorizes a credit which is the lesser of $7.5 million or 75% of each seismic exploration project described in (o) that qualify under subsections (b) and (p) of AS 43.55.025. Only expenditures occurring after June 1, 2012 and before July 1, 2016 qualify under the bill.

The bill also adds a new subsection (p) to AS 43.55.011. This new subsection states that, for a period of seven years following the commencement of commercial production from a lease or property or unit south of 68 degrees North latitude (but not including Cook Inlet) that did not have oil or gas production prior to January 1, 2013, the tax rate for any new production in these areas would be 4% of the gross value at the point of production.

The fiscal impact of this bill is indeterminate. If four qualifying wells are drilled for the maximum allowed credit for each well of $22.5 million, the financial impact to the state would be $90 million. If four qualifying seismic exploration projects are conducted at the maximum allowed credit of $7.5 million, the financial impact to the state would be $30 million for a total of impact of $120 million if all credits proposed in the bill are earned.

The Department of Revenue could administer the provisions of this bill with existing resources.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB 145
2012 LEGISLATIVE SESSION

Analysis

The revenue impact of this bill is indeterminate.

The bill amends subsection (a)(5) of AS 43.55.025 by adding reference to new section (n).

Section (n) establishes tax credits for drilling 3 oil or natural gas exploration wells in the Nenana Basin. This bill rewards to the first three persons that qualify, tax credits equaling 100%, 90% and 80% of the first $25 million in exploration well expenditures.

The language states that the first person to drill the well qualifies for the credit. One person or affiliate can obtain all three credits.

The Commissioner of Natural Resources has to authorize a well less than 8,000 feet but not less than 5,000 feet.

The bill does contain some provisions for payback of 50% of the credit for any well resulting in sustained production.

A taxpayer claiming a tax credit under this subsection may not claim a tax credit under AS 43.55.023 or another provision in this section for the same exploration expenditure.

This bill authorizes credits up to $67.5 million maximum, for all three wells.

The Department of Revenue can administer the provisions of this bill with existing resources.

RE: Final Committee Bills – SB 145 & SB 219

The Senate Resources Committee met on April 2 and acted on SB 145 and SB 219.

Please provide a CS for those bills, per the Committee's actions, as follows:

SB 145 – adopted the following amendments to Draft CS SB 145 version \D:
27-LS1078\D.3 offered by Wielechowski & French (Amend #1)
27-LS1078\D.5 offered by French
French amended from "four" years to "five" years, no objection by committee. Amended amendment was no objection.

SB 219 – adopted the following amendments to version \A
27-GS2717\A.1 offered by Wagoner
27-GS2717\A.2 offered by French
27-GS2717\A.4 offered by French
27-GS2717\A.6 offered by Wielechowski

The Honorable Joe Paskvan
The Honorable Tom Wagoner
Co-Chairs, Senate Resources Committee
Alaska State Legislature
Juneau AK, 99801

March 30, 2012

SUBJECT: Response to March 26, 2012 email from Senator Wielechowski's office

Dear Senators Paskvan and Wagoner:

Thank you for the opportunity to provide the Senate Resources Committee our response to the question received by Senator Wielechowski's office. The question and response follows.

> **Can a combination of tax deduction plus credit plus reduction of tax rate on other profits (due to reduced per-barrel profits reducing statewide progressivity) be more than 100%? Is that allowable under statute or is there some limit on how much benefit a producer can accrue from increased investment?**

In order to properly respond to the question, I believe it is necessary to consider two different scenarios regarding additional investment dollars. The first scenario will involve a producer that currently has production from an existing "segment" within the state and the second will address the question from the perspective of a producer/explorer with activities from a "segment" within the state that currently has no production.

Scenario 1- Costs Incurred from a Segment Currently in Production:
First, recall if you will, that Alaska's oil and gas production tax liability is calculated on a "lease or property" basis which is sometimes referred to as "segments". For a segment that is currently in production, and, if under a "net tax" system (as compared to a "gross tax" system), one considers allowable and deductible lease expenditures to be a "tax benefit", then I believe that it is possible that the combined effect of lease expenditure deductions, a lower progressivity rate, and tax credits could result in a tax benefit that is greater than the amount invested. However, it should be noted that this effect would be somewhat offset by the additional revenues created from the investment and the state's increasing take as the price of oil or gas rises.

Scenario 2- Costs Incurred from a Segment that is not Currently Producing:
Under Alaska oil & gas production tax laws, expenditures for a segment are "ring-fenced" to each particular segment, i.e., those expenditures associated with a particular segment cannot be

used outside the segment. Therefore, in regards to expenditures made under the language as proposed in both HB 276 and SB 145 the costs potentially incurred would apply only to those basins described in the proposed legislation. Additionally, the costs incurred would be confined to the segments in which those expenditures were made, specifically to the "Middle Earth" area that is south of 68 degrees North Latitude and no part of which includes the Cook Inlet Sedimentary basin.

For a segment that is not yet in production there would be no revenues against which to offset the lease expenditures. The lease expenditures in this scenario would essentially be "lost" as (i) not applicable against any revenues from the segment, (ii) not "re-locatable" or able to be applied against a different segment, and (iii) not eligible for any additional credits, including the carried-forward annual loss credit under AS 43.55.023(b). Note that the language as proposed in both bills specifically excludes the realization of any additional credits under either "AS 43.55.023 or another provision in this section" [AS 43.55.025]. Therefore, a company's "tax benefit" from a segment that currently has no production would be limited to the amount of the credit as proposed in either HB 276 or SB 145.

We hope our response fully addresses the question.

Sincerely,

Bruce Tangeman
Deputy Commissioner

RE: Support for SB 145 – Tax Credit for Nenana Basin Exploration

Dear Senator Wagoner:

I am writing to support SB 145 which would extend a tax credit to the Nenana Basin to make exploration more affordable. The Nenana Traditional Council is supportive of the bill because it will potentially create local jobs and economic development for the community.

Our mission for the Tanana Chiefs Conference region is to provide a unified voice advancing tribal governments, *economic and social development*, promote physical and mental wellness, education opportunities and protect language, traditional and cultural values.

In order for our communities to thrive in the future, we must take advantage of opportunities today that will increase employment and economic stability. Our villages are in a financial crisis as the cost of living goes up exponentially and the per capita income remains the same. We must aggressively seek economic development opportunities in our region, especially if they are in rural areas. Of course, we support development only when our subsistence resources will not be harmed.

Senator Wagoner, you explained the potential impact very well in your sponsor statement: "SB 145 provides the incentives needed for exploration in this basin. Should a discovery be made, the new resource will benefit the regional economy and support businesses and families who are suffering from high energy costs and unreliable supplies."

On behalf of the Tanana Chiefs Conference region, I offer my support for SB 145. I hope your colleagues in the Alaska State Legislature will realize the importance of this bill and pass it without delay.

Thank you for your work to extend opportunities to rural Alaska.

Sincerely,

TANANA CHIEFS CONFERENCE

Jerry Isaac
President

Members of the Alaska Interior Delegation
Alaska State Capitol
Juneau, Alaska 99801

RE: High Cost of Energy

Dear Members of the Interior Delegation,

The Board of Directors of the Greater Fairbanks Chamber of Commerce appreciates the work that you are doing to address the high cost of energy in the Interior, the Chamber's number one priority this legislative session. Our bi-weekly teleconferences have ensured that the Chamber is informed and engaged regarding the multiple and occasionally conflicting legislative activities taking place in Juneau that impact our community.

The purpose of this letter is to **emphasize and clarify the collective priorities** of the Chamber in reducing the high cost of energy that is severely impacting our residential and business communities. After thorough review of the bills and appropriations currently being addressed this session, the Chamber provides the following recommendations for your consideration.

For the near term (less than 5 years) gas trucking project(s) from the North Slope and gas storage tax credits are the quickest approaches to bring affordable natural gas to the Interior. Immediate actions for longer term solutions include House Bill 9 and exploration tax credits. The top recommendations are summarized below:

1. Capital funding for liquefaction and vaporization facilities that are necessary to supply natural gas to the Interior of Alaska.

2. Legislation providing gas storage tax credits are critical components of supplying gas to the Interior. This methodology has been used in the South-central region to meet storage needs. The same approach and parity should be used for Interior storage needs.

3. The new version of House Bill 9 aligns with the Chamber's ongoing priority for getting reasonably priced gas to the Interior. We strongly support the work being done on a gas pipeline and will work diligently to ensure the issues, such as fair tariffs, will be addressed without preventing passage of the bill.

4. Legislation that provides tax credits for oil and gas exploration in frontier basins is an important piece of the long term energy picture for the Interior.

5. The expansion of a distribution system, as well as low cost energy conversion loans, will prove to be valuable once movement has occurred addressing the supply of natural gas.

In addition to the above recommendations, the Chamber continues to support forward movement on the Susitna/Watana Dam project and the re-start of the Healy Clean Coal Plant (HCCP). Specifically, the hydroelectric energy project is a valuable investment for the state to ensure stable electric rates for the next 100 years. The scope of the project however, should be designed for maximum benefit for the ratepayers of the Interior. Both the Susitna/Watana Dam project and HCCP would provide significant energy relief for the Interior.

We respectfully urge the Interior Delegation to act collectively in support of our recommendations.

Thank you again for your hard work,

Re: House Resources Hearing on CS HB 276 – Oil and Gas Tax Credits

Dear Co-Chairs Feige and Seaton and Members of House Resources:

The Resource Development Council (RDC) writes to express support for CS HB 276, oil and gas tax credits in areas south of the Brooks Range to outside the Cook Inlet basin, including the Nenana and Selawik basins.

RDC is a statewide business association comprised of individuals and companies from Alaska's oil and gas, mining, forest products, tourism and fisheries industries. RDC's membership includes Alaska Native Corporations, local communities, organized labor, and industry support firms. RDC's purpose is to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

RDC supports the much needed development of oil and gas resources in Interior and western Alaska, regions that relies heavily on high priced heating fuel. Much of the area under consideration is near existing infrastructure, and Fairbanks, which could be a practical market for the oil and gas.

Not only is it a top priority for RDC to advocate for tax policy and incentives that enhance the State of Alaska's competitiveness for all industries, but also to support measures to reverse the Alaska oil and gas production decline. This includes legislation that results in new exploration and development.

Additionally, oil and gas exploration and production in Interior and rural Alaska would provide other benefits, such as new, well-paying jobs, and increased tax and royalty income to the state.

Thank you for the opportunity to comment.

Sincerely,

Marleanna Hall

Subject: followup to concerns with SB145\D (frontier areas)

Senators
Following-up the email I sent you all yesterday, I want to offer a couple of small corrections based on what came from the hearing. There's always something new to learn about the tax statutes.

I was listening to the testimony of the person from Revenue (was that John Larson?) and a couple of things weren't quite clear.

The way the "production tax value" statute is written (43.55.160), taxable PTV is already broken into "areas" of the state:

A) Oil and gas from the North Slope, excluding gas used in-state
B) Oil and gas from outside both the North Slope and Cook Inlet, excluding gas used in state
C) Oil from Cook Inlet
D) Gas from Cook Inlet
E) Gas from outside Cook Inlet but used in state

Mr. Larson is correct, the PTV is calculated separately for each of these areas, and lease expenditures can't migrate from one to another.
In each of the "areas", PTV can't be less than zero.
But for purposes of calculating progressivity, the five PTV's are combined to create a single, average per-barrel PTV. (AS 43.55.011(g)).

If in any individual "area," PTV would be less than zero, zero is used in the "averaging" calculation and the lease expenditures that would have made the calculation negative can instead be turned into the loss-carry-forward 25% credit.

So- revisiting my explanation from yesterday:

1) The $80 million Cook Inlet Gas subsidy is not precisely due to Cook Inlet costs being deducted from North Slope PTV.

It's actually due to Cook Inlet Gas PTV diluting the per-barrel North Slope PTV. Even though the Cook Inlet oil and gas are paying the alternative "ELF" tax, PTV is still calculated for purposes of averaging it into the statewide progressivity calculation. And because of the low value to the gas, there is a significant dilution effect.

2) The Doyon / Nenana 10,000 bbl/day example doesn't change much. The ACES scenario is the same:

$110 oil price, $10 transport, $20 opex, $20 capex for $60 /bbl PTV.
Under ACES, they would pay production taxes of about $70 million on production tax value of about $190 million.
($60 x 10,000 x 365 x 0.875 to exempt the royalty oil x 37% tax rate.
From this we subtract capital credits of $14 million, so $56 million total in production tax.
They would be eligible for the small producer and middle earth credit ($18 million between them), so in the end would pay about $38 million.

The 4% gross tax scenario starts out the same, with $13 million.
($100 gross value at the point of production x 10,000 x 365 x 0.875 to remove the royalty oil x 4%).

The small producer, etc. credits would bring this to zero.
What changes is: $128 million in lease expenditures (not $146 million as I said yesterday because I forgot to exclude the royalty barrels) could not be deducted against profits elsewhere, but could be used for a 25% loss-carry-forward credit of $32 million, and
capital credits of $14 million could be converted to tax credit certificates.
It would still be a severe negative to the treasury, $46 million in this example.

I think it's a matter of wording the question to Revenue:
"Despite the alternative gross tax, could lease expenditures on that field be turned into a loss-carry-forward credit?"
If he says, no, ask where in statute it says that.
"Despite the alternative gross tax, would the producers be eligible for qualified capital expenditure credits, and would they be able to use them to apply for transferrable tax credit certificates?"

One additional point- the $45 million royalty I calculated would not necessarily be the state's revenue. If the development was on private or native corporation land, royalty would go to the landowners. The state does, however, collect a 5% tax on private oil royalties, or about $2.25 million (AS 43.55.011(i)) in this scenario.

Another question had to do with provisions being limited to "south of 68 degrees."
The 4% "new field" tax would only apply south of 68, so new North Slope developments such as Repsol or Great Bear are pursuing would not be impacted by the provision. They would, however, apply to new Cook Inlet fields including, for example, Furie's Kitchen Lights discoveries (the "jack up rig gas.")
Again, the ELF-based alternative tax for Cook Inlet is scheduled to sunset in 2022.

Regards
-Ken

Subject: concerns with SB145\D (frontier areas)

Senators
I've just had the opportunity to read the work draft CS for the "frontier areas tax credits" bill.

I'm not going to address my concerns with the frontier credits themselves, although I believe there is the possibility that they could be "stacked" with a tax deduction, leading to state participation of greater than 100% of a producer's costs (this is also true of the existing "stampede" credit in Cook Inlet.)

Senators
I've just had the opportunity to read the work draft CS for the "frontier areas tax credits" bill.

I'm not going to address my concerns with the frontier credits themselves, although I believe there is the possibility that they could be "stacked" with a tax deduction, leading to state participation of greater than 100% of a producer's costs (this is also true of the existing "stampede" credit in Cook Inlet.)

What I want to bring your attention to is the 4% "alternative gross tax" described in Section 2 of the bill.
The problem here is, oil that would fall into that category would still be subject to other portions of the ACES statute.
Specifically, lease expenditures would still be deductible from a company's taxable income elsewhere in the state, and
qualified capital expenditures would still be eligible for the standard 20% capital credit.
In real terms, this means that we would almost without question be paying these companies to produce oil.

The current alternative lower tax for Cook Inlet, described in AS 43.55.011(j) and (k), suffers from this same problem.
I have in-hand a memo from Commissioner Butcher to Senator Stedman that quantifies the value of Cook Inlet gas production costs being deducted from North Slope oil taxes; the current cost to the state is $80 million / year.
This is the reason why the "decoupling" bills combined both Cook Inlet gas and oil into the "oil" side of the decouple, so as not to inadvertently raise taxes on ConocoPhillips.
It should also be noted that the alternative Cook Inlet tax rates are scheduled to sunset in 2022; this new 4% gross rate does not have a sunset.

You should also note that the bill is written to include any new field, not just fields in a so-called "frontier" area. I recall Mr. Armstrong from Armstrong Oil was lobbying a couple of years ago for a 7% gross tax on his new fields, currently being explored by Repsol. This provision would give him 4%.

Also, any "new" producer would likely be eligible for the "small producer credit" (AS 43.55.024(c) and (d)) and, if in a frontier area, the "middle earth" credit (AS 43.55.024(a) and (b)).
These are non-transferrable and must be used in one year, but would likely more than zero-out a 4% gross tax on a small field in the interior such as Doyon is hoping to develop.

To use a rough example: Assume Doyon finds 10,000 / day field in Nenana.
It will cost them a bit more to develop and ship than oil on the North Slope, so assume in the projected price environment they profit $60 / barrel.
($110 value, $10 transport, $20 opex, $20 capex)
Under ACES, they would pay production taxes of about $70 million on production tax value of about $190 million.
($60 x 10,000 x 365 x 0.875 to exempt the royalty oil x 37% tax rate.
From this we subtract capital credits of $14 million, so $56 million total in production tax.
They would be eligible for the small producer and middle earth credit ($18 million between them), so in the end would pay about $38 million.

Under the 4% gross tax scenario, that same field would pay taxes of $13 million.

($100 gross value at the point of production x 10,000 x 365 x 0.875 to remove the royalty oil).
The small producer, etc. credits would bring this to zero.
$146 million in lease expenditures could be deducted against profits elsewhere or used for a 25% loss-carry-forward credit of $36 million, and
capital credits of $14 million could be sold to the state.
It would be severe negative to the treasury, $50 million in this example.

(In either example, royalty income would be about $45 million).

If the Senate truly wants to go with an alternative tax rate for new fields, I would strongly recommend that the bill be clearly written to disqualify any associated lease expenditures and capital expenditures from their statewide tax calculations.
However, this approach opens the problem that arose with the Governor's HB110 (which has a 15% base net tax rate for new field for the first seven years). Namely- the difficulty of cost allocation among fields for the purpose of calculating production tax value.
Recall that our lack of any "ringfence" is widely cited as one of the strongest and most welcoming provisions of our production tax code.

Thank you for your time.
I am at your service if you want any additional information or analysis.

Jeff Stepp

From: Michelle Sydeman
Sent: Thursday, March 29, 2012 6:33 PM
To: Sen. Bill Wielechowski; Sen. Hollis French
Cc: Lisa Weissler; Ken Alper; Jeff Stepp
Subject: SB 145: No need to provide an in-state rate for local use of gas

If gas from Nenana or other "frontier areas" were to be used in-state, it would already enjoy an extremely low tax rate. The rate would be about $.18/mcf. (This is the rate gas was taxed at in Cook Inlet under ELF in 2006, before PPT passed.) So there is no need to provide a special in-state tax rate for frontier areas as it exists already.

There are other problems with the proposed 4% gross tax in SB 145, which Ken Alper will send you an email about. It could result in a negative tax (as exists in Cook Inlet) because companies could write off frontier area costs against taxes elsewhere in the state and claim the 20% capital credit. Ken will be more articulate on this topic.

Given that Bert is working on incentives for new oil development, this idea is looking increasingly bad.

Michelle

Subject: RE: Quick question re ACES

Michelle/Senator Wielechowski

As I'm sure we're all aware, there are not many easy answers to what may even appear to be rather "simple" questions regarding Alaska's oil and gas tax structure. I just want you to know that I have discussed your question(s) internally with Deputy Commissioner Tangeman and we are working on a providing a response that we hope will address your concerns. I cannot currently commit to a time but hope to have this to you by sometime tomorrow morning.

Respectfully,

n

Subject: FW: Quick question re ACES

Hi John,

This is to follow-up on our brief conversation.

The question essentially is if a company invests an additional $100 in an exploration project with today's oil prices, could that company see a reduction in its taxes of more than $100 through the combined effects of tax deductions, a lower progressivity rate, and tax credits? Is that possible under our current tax system?

Senator Wielechowski is hoping for a clear answer to this question and is more grateful for your upcoming response.

Michelle

To: john.larsen@alaska.gov
Subject: FW: Quick question re ACES

John,

should probably clarify my question:

Can a combination of tax deduction plus credit plus reduction of tax rate on other profits (due to reduced per-barrel profits reducing statewide progressivity) be more than 100%? Is that allowable under statute or is there some limit on how much benefit a producer can accrue from increased investment?

Thanks,

Michelle

Subject: Quick question re ACES

Hi john,

Can a producer's tax liability be reduced by more than 100% of the cost of a particular investment by combining a large tax credit with deductions for expenditures when oil prices are high? In other words, if there's an 80% exploration credit taken by a producer during a time when the production tax rate is 45%, ...uld that producer get tax relief equal to more than their investment?

Thanks,

Michelle Sydeman

A HUNT FOR GIANT OIL AND GAS RESERVES

Northwest Alaska, LLC & NANA Regional Corp.

NORTHWEST ALASKA OIL AND GAS PLAY

Southern Chukchi Sea – *Onshore* Kotzebue Basin

~2.2 million mineral acres (NANA fee)
~30 prospects: 3,000-9,000' depth
Most-likely risked reserves of 9 premier prospects:
3.1 billion barrels oil-equivalent
READY TO DRILL 2012

NW ALASKA LLC: Office 661-324-3916: ESCHNER@TRIOPETROLEUM.COM, ROWLEE@TRIOPETROLEUM.COM, TBESCHNER@AOL.COM

Northwest Alaska, LLC & NANA Regional Corp.

Project Summary

The Kotzebue Basin may contain giant oil and gas reserves. Located offshore under the southern Chukchi Sea and onshore in northwest Alaska, it is one of the major sedimentary basins of North America, with 20,000 feet or more of Tertiary and Cretaceous basin-fill. The basin is about the same size as the prolific Alaska Cooke Inlet Basin (cumulative 10 TCFG) and is interpreted to have a petroleum system similar to that of the Cooke, including:

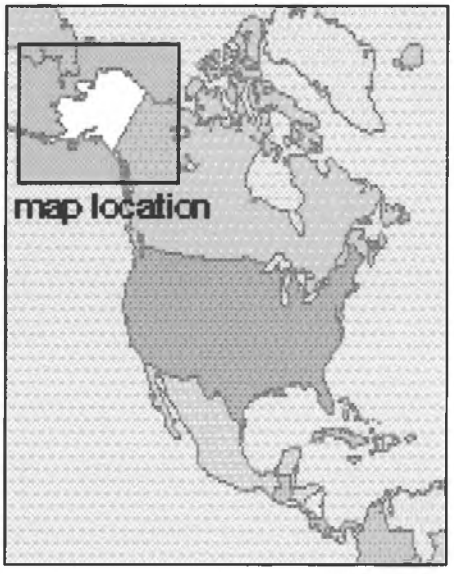
•a self-sourcing biogenic (microbial) gas system associated with thick Tertiary nonmarine coals and carbonaceous mudstones that are in the present-day biogenic gas window at 0-6,000 feet, and
•a thermogenic oil-gas system in deeper basinal source areas between 6,000-20,000+ feet

In the 1970s, SOCAL collected a vast amount of data in the area and drilled two stratigraphic test wells that encountered thick, highly-prospective sequences of interbedded sandstone, conglomerate, mudstone and coal, with oil and gas shows. These stratigraphic test wells did not evaluate prospects, but did demonstrate that hydrocarbons are present and that the components critical for major hydrocarbon accumulations are also present – thick and highly porous and permeable reservoirs (sandstone and conglomerate), source (mudstone and coal), seal (mudstone), and large potential traps (structural and stratigraphic). There is also potential in fractured and weathered basement reservoirs, and in shallow traps sealed by permafrost.

Approximately thirty prospects are identified, some of which are immense, potential giants. The Cape Espenberg Prospect, located near the cape, is a shallow anticlinal dome with approximately 70 square miles of structural closure. The Amaouk Creek Prospect, located north of the Kobuk Delta, is an anticline with approximately 30 square miles of structural closure. These two prospects are assigned most-likely risked recoverable reserves of 1.65 billion barrels oil equivalent.

NANA Regional Corporation controls the onshore portion of the basin (mineral interests covering 2.2 million acres) and is working jointly with NW Alaska, LLC to advance the exploration and development project. These companies are seeking one or more additional significant partners to join the project.

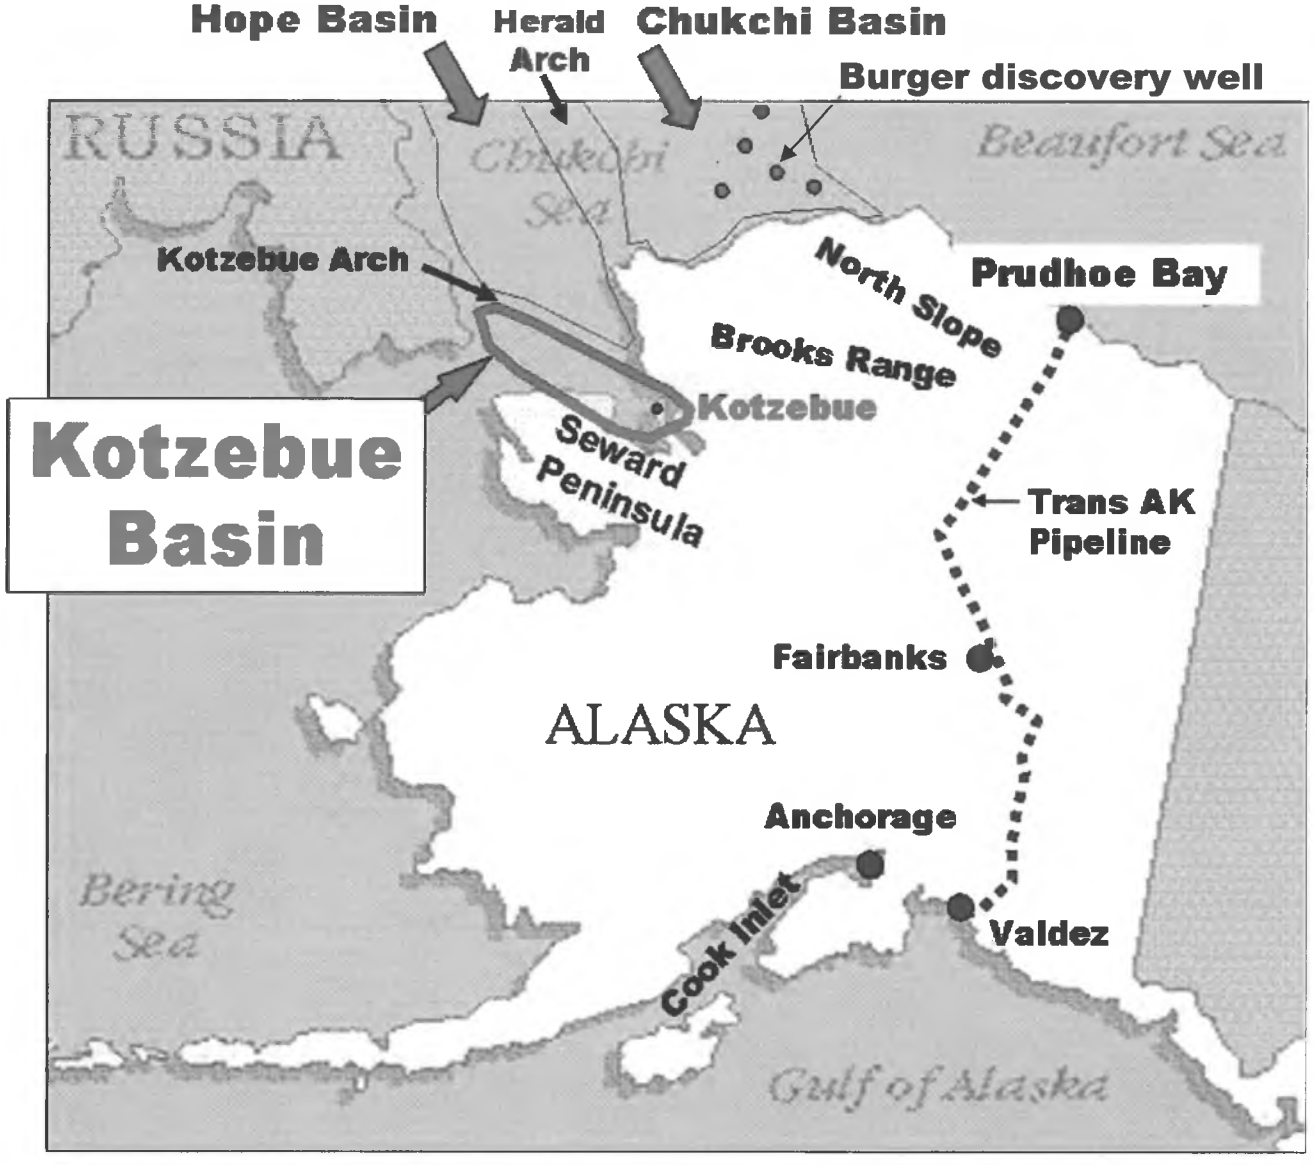
Important Notice: The data provided here are believed to be valid, and the interpretations are considered to represent reasonable judgment. However, NW Alaska LLC, NANA Regional Corporation and their associates, advisors and consultants, do not warrant the validity of the data and interpretations and shall not be liable for any losses or damages that stem from their use. Oil and gas exploration projects have intrinsic risks, including but not limited to loss of an entire investment. Actual project results may be substantially different from those postulated here. This oil and gas play is appropriate for sophisticated companies and individuals with significant experience in the petroleum industry, who should conduct their own evaluation of the data and risks. This is a nonexclusive offering, subject to prior sale, and may be withdrawn by the presenting parties at any time.



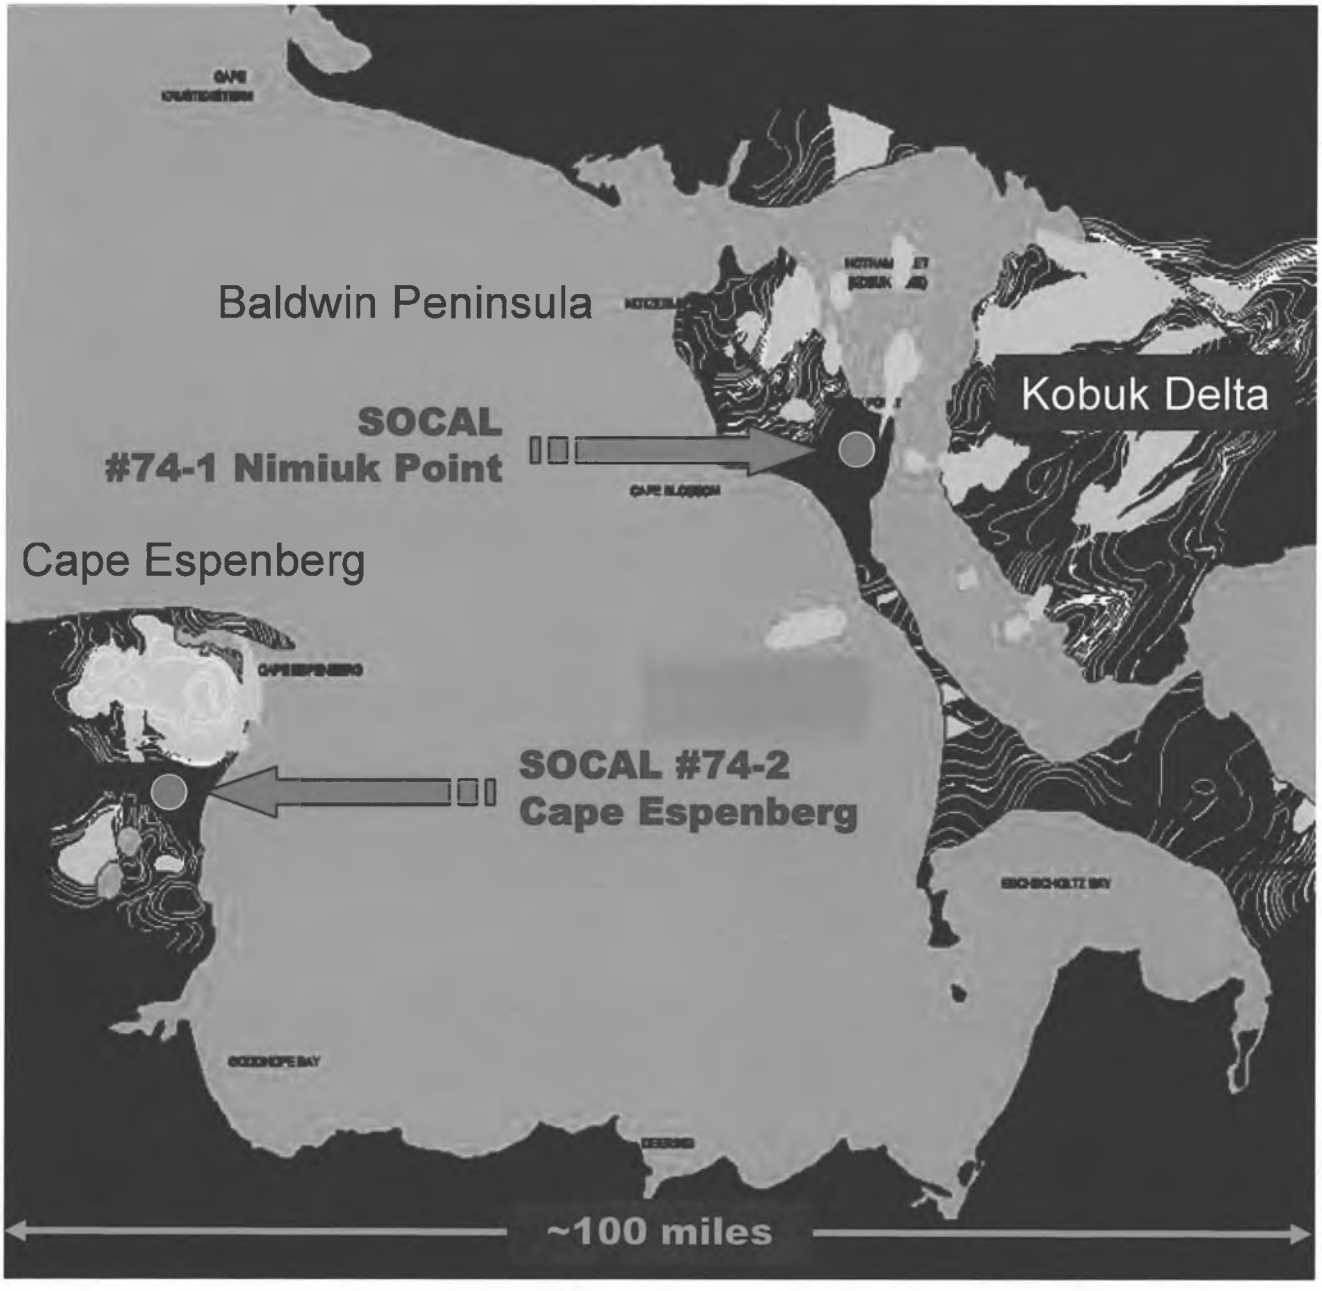
Northwest Alaska, LLC & NANA Regional Corp.

The Kotzebue Basin is located primarily offshore under the southern Chukchi Sea, and also onshore under the lands of the NANA Regional Corporation. The oil and gas play is onshore, under NANA's 2.2 million mineral acres.

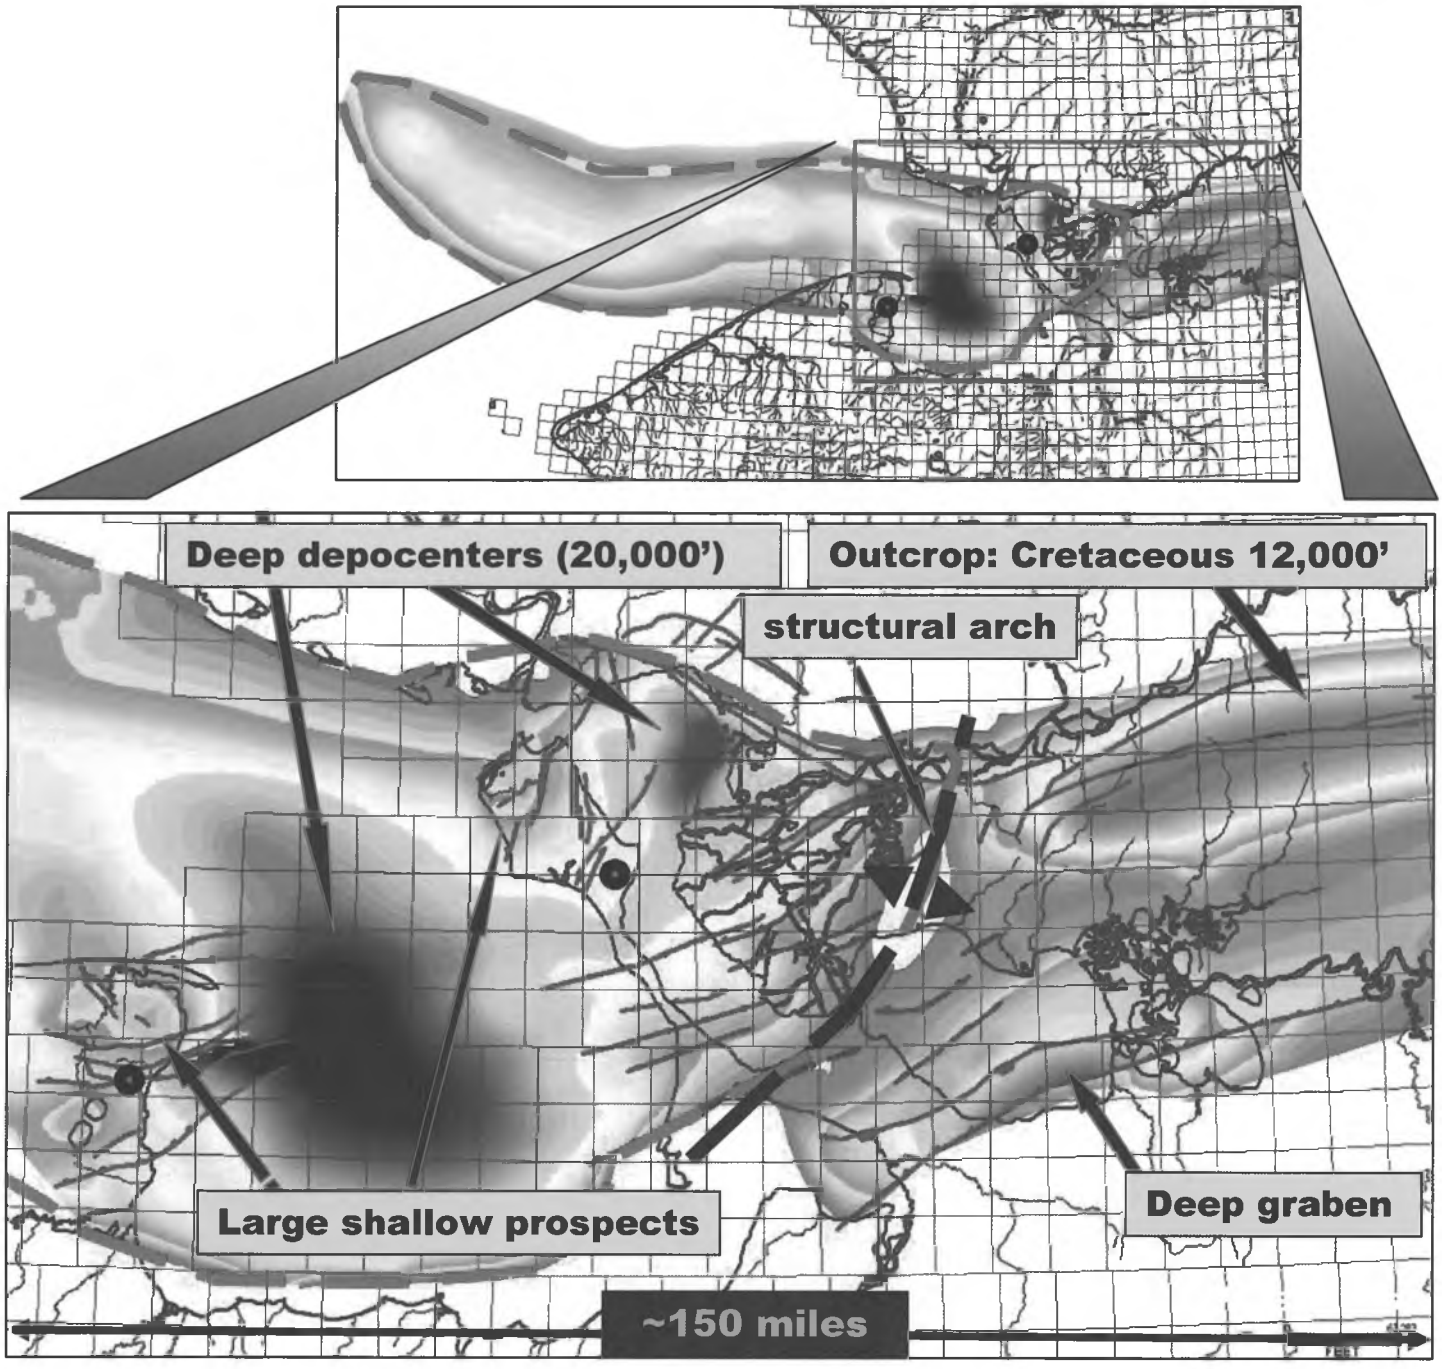
The basin is 350 miles long by 80 miles wide, and it contains 20,000 feet or more of Tertiary and Cretaceous basin-fill. Structural arches and sub-basins separate the Kotzebue Basin from the greater Chukchi Basin to the north, where significant oil-gas reserves have been discovered and billions of dollars spent on federal leases.



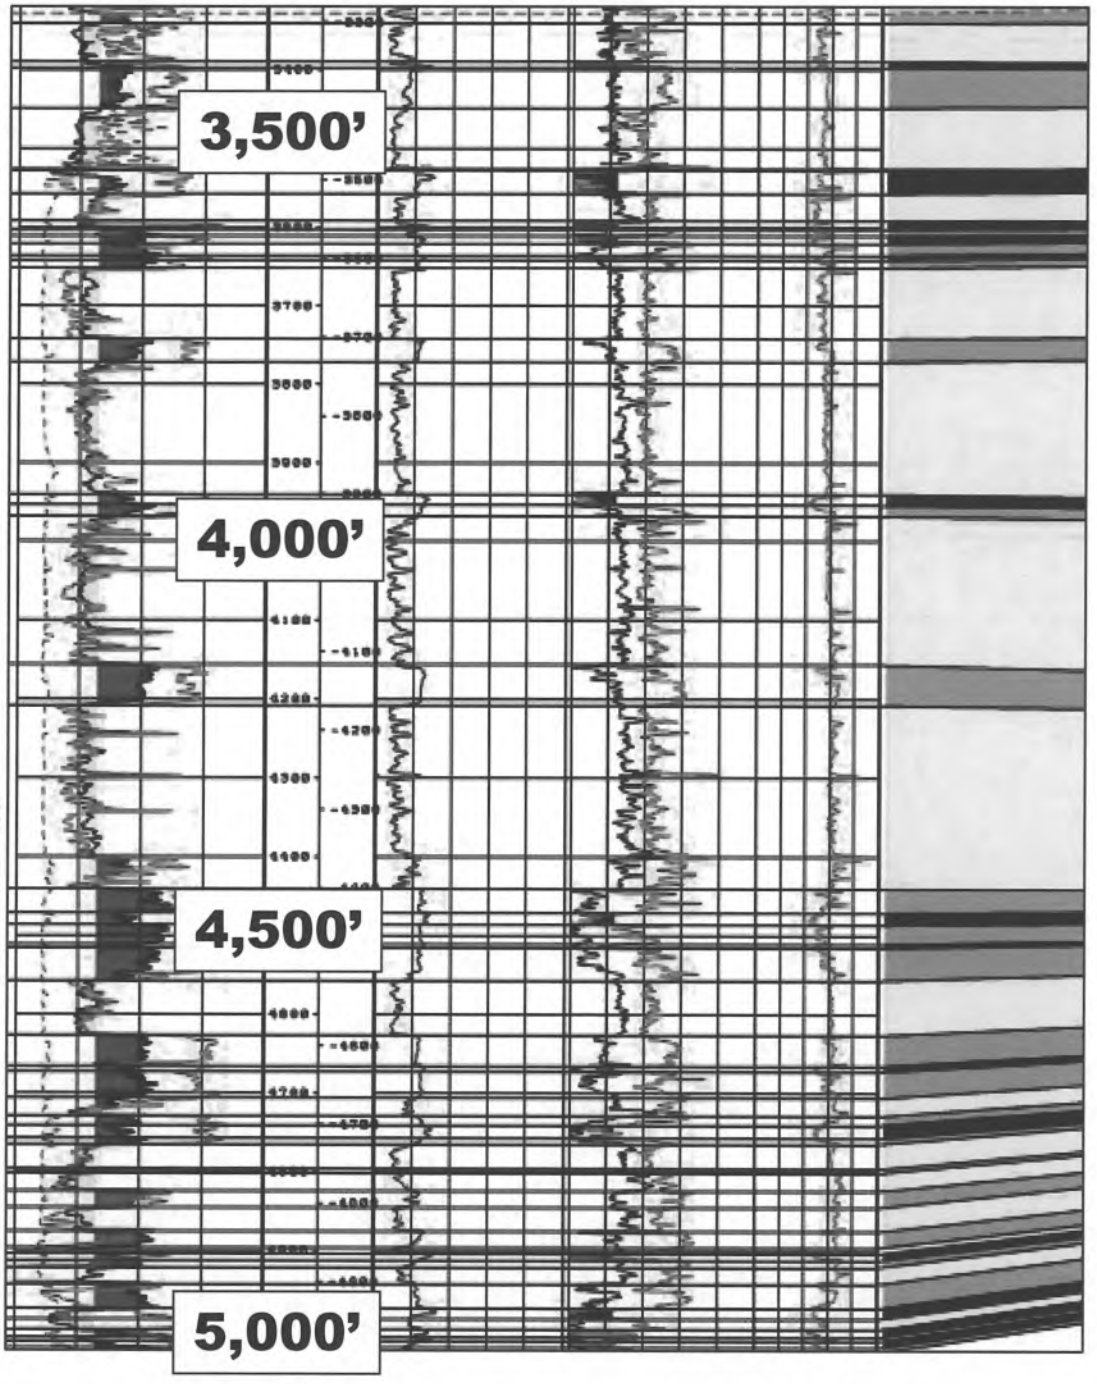
NW ALASKA LLC: Office 661-324-3916: ESCHNER@TRIOPETROLEUM.COM, ROWLEE@TRIOPETROLEUM.COM, TBESCHNER@AOL.COM



Shown here are areas of land (black), water (blue), petroleum prospects (orange) and the locations of the two stratigraphic test wells (red dots). Note that prospects occur primarily in three land areas: Cape Espenberg, the Kobuk Delta and the Baldwin Peninsula.



Shown here is a Time Structure Map of Top Acoustic Basement (Paleozoic). Dark blue areas have approximately 20,000 feet of Tertiary and probably Cretaceous basin-fill above basement, grading to shallow areas in dark red. Note locations of large shallow prospects at Cape Espenberg and the Baldwin Peninsula, two major deep depocenters, a shallow structural arch on the east flank of the basin, and location of outcrops of 12,000' of Cretaceous. Locations of the two stratigraphic test wells also shown.



100 ft

Shown here is an example of a highly-prospective interval that was drilled in one of the stratigraphic test wells. It is a 1,700 foot thick interval of Eocene-Oligocene strata, comprised of thick, stacked sandstone reservoir targets (yellow), stacked layers of mudstone source and seal beds (brown), and layers of coal source rocks (black). There are about 15 distinct sand bodies (reservoir targets), 10-200 feet thick each. This is a primarily nonmarine fluvial sequence, probably a mixture of low sinuosity braided and high sinuosity meandering systems.

Northwest Alaska, LLC
& NANA Regional Corp.

Approximately 12,000 feet of Cretaceous sedimentary rocks are present in outcrops located about 12 miles east of the Kotzebue Basin (e.g., in the Hockley Hill area). The Cretaceous outcrops occur primarily on the down-dropped, southern side of the major right-lateral Kobuk fault and, based on seismic interpretation, also occur in the Kotzebue Basin. Cretaceous strata provide reservoir targets (sandstone and conglomerate), oil and gas source rocks (mudstone, shale, limestone, coal) and seals (shale and mudstone). Photos are of local outcrops of Cretaceous rocks.

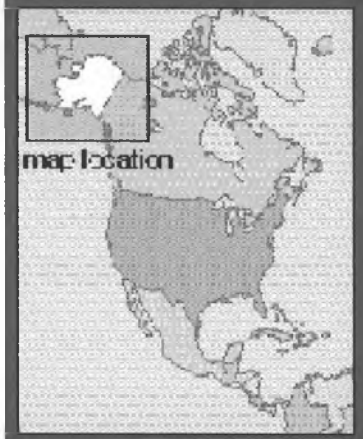
Geology and Hydrocarbon Potential of the Kotzebue (including Selawik) Basin, Northwest Alaska

Lance Kilvagiaq Miller and Elizabeth Saagulik Hensley
NANA Regional Corporation, Inc.

Kotzebue Basin Location



- Basin 350 x 80 miles
- Onshore NW AK and offshore Chukchi Sea
- Separated from Hope Basin by Kotzebue Arch
- Depocenters ~ 20,000 ft Tertiary & probably Cretaceous

Basin Comparison

Key Points

- Major unexplored deep (20,000') sedimentary basin
  - similar in size to Cook Inlet & San Joaquin-Sacramento Basins
- Potential significant petroleum producing province
- Favorable hydrocarbon system
- Many large targets – structural and stratigraphic
- Has proved difficult to attract exploration financing
- This is a wildcat play
- Incentives will help with local, regional and perhaps statewide energy solutions

SB 153

<TARGET><BILL>SB 153</BILL><SUBJECT>SB 153</SUBJECT><COMM>SRES27</COMM></TARGET>

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 153:

"An Act relating to a gas storage facility; relating to the tax credit for a gas storage facility; relating to the powers and duties of the Alaska Oil and Gas Conservation Commission; relating to the regulation of natural gas storage as a utility; relating to the powers and duties of the director of the division of lands and to lease fees for a gas storage facility on state land; and providing for an effective date."

The cost of energy is crippling Interior Alaska's economy. The ever increasing expense of heating homes and operating businesses during the long, cold, dark winter hurts the ability of Interior Alaskans to put food on the table today and plan for the future. The Fairbanks community spends over $600 million per year on space heating, pays the highest natural gas prices in the country and does not receive the state energy incentives or subsidies available to residents and communities in other regions of our state.

Senate Bill 153 incents the private sector's delivery of lower cost natural gas to Interior Alaska by extending tax credits available for natural gas storage in Cook Inlet to a liquid natural gas trucking project for the Interior. A new credit for construction of gas storage tanks makes this program more flexible to fit the varying needs of gas delivery throughout the state. This legislation applies to tanked storage with a minimum volume of one million gallons. The amount of the credit is limited to 50% of construction costs up to $15 million. This allows areas of Alaska that do not have depleted gas reservoirs available, as Cook Inlet does, to still receive the same monetary incentive as Southcentral despite the higher capital costs per volume associated with constructing above ground tanks for storing LNG.

SB 153 would allow Golden Valley Electric Association, Flint Hills Refinery or another gas supplier to take concrete steps toward delivering sizeable volumes of trucked natural gas to the Interior. All money from these credits for tanked storage would be under the oversight of the Regulatory Commission of Alaska, ensuring that any savings are passed along to the rate payer thereby lowering costs and keeping more dollars in the local community.

I urge you to join me in lowering Interior Alaska's energy costs by supporting Senate Bill 153.

CS FOR SENATE BILL NO. 153( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS THOMAS, Coghill

A BILL

FOR AN ACT ENTITLED

"An Act relating to a gas storage facility; relating to the tax credit for a gas storage facility and the expansion of a gas storage facility; relating to the powers and duties of the Alaska Oil and Gas Conservation Commission; relating to the regulation of natural gas storage as a utility; relating to the powers and duties of the director of the division of lands and to lease fees for a gas storage facility on state land; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 31.05.032(b) is amended to read:

(b) Within six months after receiving an application under (a) of this section, the commission shall determine and certify

(1) the working gas storage capacity of the facility on the date the facility commences commercial operation **or the increase in working gas storage capacity established after December 31, 2010, for a gas storage facility that was in**

operation before January 1, 2011, on the date the increased capacity commences commercial operation, rounded to the nearest

(A) 500,000,000 cubic feet **for nontank storage; or**

(B) 1,000,000 gallons for tank storage;

(2) whether the gas storage facility is capable of withdrawing a minimum of 10,000,000 cubic feet of gas a day; and

(3) that the facility qualifies as a gas storage facility for the purposes of this section.

*** Sec. 2.** AS 38.05 is amended by adding a new section to read:

Sec. 38.05.096. Exemption from rental payments on land leased for certain gas storage facilities. (a) A person leasing state land for a gas storage facility other than a gas storage facility subject to AS 38.05.180(u) may request an exemption from lease payments as provided in this section. The exemption is applicable for the periods described in (b) of this section.

(b) The exemption is available for the calendar year in which the gas storage facility commences commercial operation and for each of the nine calendar years immediately following the first year of commercial operation. However, an exemption is not applicable for the calendar year after the facility ceases commercial operation or for any subsequent calendar year.

(c) The lessee shall provide the director with any information the director requests to determine whether the lessee qualifies for the exemption.

(d) Information related to state land leased for a gas storage facility qualifying for the exemption in this section is public information and may be furnished to the Regulatory Commission of Alaska. On request, the director shall provide the name of each person using state land leased for a gas storage facility, the years for which an exemption was granted, and the amount of the exemption.

(e) A person receiving an exemption for a payment under this section that contracts to store gas for a utility regulated under AS 42.05 shall reduce the storage price to reflect the value of the exemption.

(f) In this section, "ceases commercial operation," "commences commercial operation," and "gas storage facility" have the meanings given in AS 31.05.032.

* **Sec. 3.** AS 42.05.990(3) is amended to read:

(3) "natural gas storage facility" means a facility that receives natural gas volumes from customers, holds the gas volumes in a reservoir, **tank, or depleted or nearly depleted pool,** and delivers the gas volumes to the customer; in this paragraph, "facility" includes

(A) all parts of the facility from the point at which the natural gas volumes are received by the facility from the customer to the point at which the natural gas volumes are delivered by the facility to the customer; **and**

(B) [A FACILITY CONSISTING OF A RESERVOIR, EITHER UNDERGROUND OR ABOVEGROUND, AND] one or more of the following components of the facility:

(i) pipe;

(ii) compressor stations;

(iii) station equipment;

(iv) injection and extraction wells;

(v) on-site or remote monitoring, supervision, and control facilities;

(vi) gas processing plants and gas treatment plants, but not including a liquefied natural gas or manufacturing plant or facility;

(vii) other equipment necessary to receive, place into **storage** [THE RESERVOIR], monitor, remove from **storage** [THE RESERVOIR, PROCESS], and deliver natural gas;

* **Sec. 4.** AS 43.20.046(a) is amended to read:

(a) **Except as provided in (m) of this section, a** [A] person that is an owner of a gas storage facility described in (b) of this section that commences commercial operation after December 31, 2010, and before January 1, 2016, may apply a refundable credit against a tax liability that may be imposed on the person under this chapter for the taxable year in which the gas storage facility commences commercial operation. **A tax credit under this section is in addition to any other credit under this chapter for which the person is eligible.** The tax credit under this section **for a**

(1) nontank storage facility shall be an amount equal to $1.50 for each 1,000 cubic feet of working gas storage capacity that is certified under AS 31.05.032 less any amount of credit received under this section taken in earlier tax years for that capacity**; the** [. THE] total amount of the credit that may be received for a single **nontank** [GAS] storage facility under this section may not exceed the lesser of $15,000,000 or 25 percent of the costs incurred to establish the gas storage facility**;**

(2) tank storage facility shall be the lesser of $15,000,000 or 50 percent of the cost incurred to establish the tank storage facility [. THE TAX CREDIT IN THIS SECTION IS IN ADDITION TO ANY OTHER CREDIT UNDER THIS CHAPTER FOR WHICH THE PERSON IS ELIGIBLE].

*** Sec. 5.** AS 43.20.046(b) is amended to read:

(b) A gas storage facility qualifying for the credit in this section

(1) must have a working gas storage capacity of at least

(A) 500,000,000 cubic feet of gas other than cushion gas **for nontank storage; or**

(B) 1,000,000 gallons for tank storage;

(2) must have a minimum withdrawal capability of 10,000,000 cubic feet a day as certified by the Alaska Oil and Gas Conservation Commission under AS 31.05.032;

(3) may not have been in operation as a gas storage facility before January 1, 2011**, unless the credit is based on the expansion of a gas storage facility under (m) of this section**;

(4) must be regulated under AS 42.05 as a utility and be available to furnish the service of natural gas storage to the public for compensation; in this paragraph, "service of natural gas storage" has the meaning given in AS 42.05.990; and

(5) if located on state land and leased or subject to a lease under **AS 38** [AS 38.05.180], must be in compliance with the terms of the lease.

*** Sec. 6.** AS 43.20.046(d) is amended to read:

(d) A person entitled to a tax credit under this section that is greater than the person's tax liability under this chapter may request a refund **or payment** in the

amount of the unused portion of the tax credit.

*** Sec. 7.** AS 43.20.046(e) is amended to read:

(e) The department may use available money in the oil and gas tax credit fund established in AS 43.55.028 to make the refund **or payment** applied for under (d) of this section in whole or in part if the department finds that (1) the claimant does not have an outstanding liability to the state for unpaid delinquent taxes under this title; and (2) after application of all available tax credits, the claimant's total tax liability under this chapter for the calendar year in which the claim is made is zero. In this subsection, "unpaid delinquent tax" means an amount of tax for which the department has issued an assessment that has not been paid and, if contested, has not been finally resolved in the taxpayer's favor.

*** Sec. 8.** AS 43.20.046(h) is amended to read:

(h) If the gas storage facility **or the expanded portion of the gas storage facility** for which a credit was received under this section ceases commercial operation during the nine calendar years immediately following the calendar year in which the gas storage facility **or the expanded portion of the gas storage facility** commences commercial operation, the tax liability under this chapter of the person who claimed the credit shall be increased**, and a person not subject to the tax under this chapter that received a payment under (d) of this section shall be liable to the state in the amount determined in this subsection**. The amount of the increase in tax liability **or liability to the state**

(1) **for a person subject to the tax under this chapter,** shall be determined and assessed for the taxable year in which the gas storage facility ceases commercial operation, regardless of whether the gas storage facility subsequently resumes commercial operation; [AND]

(2) **for a person not subject to the tax due under this chapter, shall be determined and assessed as of December 31 of the calendar year in which the gas storage facility or the expanded portion of the gas storage facility ceases commercial operation, regardless of whether the gas storage facility or the expanded portion of the gas storage facility subsequently resumes commercial operation; and**

(3) is equal to the total amount of the credit taken **or received as a payment under (d) of this section, as applicable,** multiplied by a fraction, the numerator of which is the difference between 10 and the number of calendar years for which the gas storage facility **or the expanded portion of the gas storage facility** was eligible for a tax credit under this section and the denominator of which is 10.

*** Sec. 9.** AS 43.20.046(i) is amended to read:

(i) The issuance of a refund **or payment** under this section does not limit the department's ability to later audit or adjust the claim if the department determines, as a result of the audit, that the person that claimed the credit was not entitled to the amount of the credit. The tax liability of the person receiving the credit under this chapter **and that is subject to the tax imposed under this chapter** is increased by the amount of the credit that exceeds that to which the person was entitled**; a person that receives the credit and that is not subject to the tax imposed under this chapter is liable to the state for the amount of the credit that exceeds that to which the person was entitled**. If the tax liability is increased **or a person not subject to the tax imposed under this chapter is liable to the state** under this subsection, the increase **in tax liability or the liability to the state** bears interest under AS 43.05.225 from the date the refund **or payment** was issued.

*** Sec. 10.** AS 43.20.046(j) is amended to read:

(j) A person **taking a tax credit under this section or receiving a payment under (d) of** [CLAIMING A TAX CREDIT UNDER] this section for a gas storage facility **or expanded portion of a gas storage facility** that ceases commercial operation within nine calendar years immediately following the calendar year in which the gas storage facility **or expanded portion of the gas storage facility** commences commercial operation shall notify the department in writing of the date the gas storage facility **or expanded portion of the gas storage facility** ceased commercial operation. The notice must be filed with the return for the taxable year in which the gas storage facility ceases commercial operation.

*** Sec. 11.** AS 43.20.046(k) is amended to read:

(k) A refund **or payment** under this section does not bear interest.

*** Sec. 12.** AS 43.20.046 is amended by adding new subsections to read:

(m) Notwithstanding (a) of this section, a person that is an owner of a gas storage facility that commenced commercial operation before January 1, 2011, that expanded the gas storage facility after December 31, 2010, and that commences commercial operations after December 31, 2010, and before January 1, 2016, in the expanded portion of the gas storage facility may apply a refundable credit against a tax liability that may be imposed on the person under this chapter for the taxable year in which the expanded portion of the gas storage facility commences commercial operation. The amount of the credit shall be determined under (a)(1) and (2) of this section, but shall be based only on the capacity in the expanded portion of the gas storage facility and cost incurred to expand the gas storage facility after December 31, 2010.

(n) In this section, "expanded portion of the gas storage facility" means the increase in capacity after December 31, 2010, of a gas storage facility that commenced commercial operations before January 1, 2011.

*** Sec. 13.** AS 43.55.028(a) is amended to read:

(a) The oil and gas tax credit fund is established as a separate fund of the state. The purpose of the fund is to purchase transferable tax credit certificates issued under AS 43.55.023 and production tax credit certificates issued under AS 43.55.025 and to pay refunds **and payments** claimed under AS 43.20.046.

*** Sec. 14.** AS 43.55.028(g) is amended to read:

(g) The department may adopt regulations to carry out the purposes of this section, including standards and procedures to allocate available money among applications for purchases under this chapter and claims for refunds **and payments** under AS 43.20.046 when the total amount of the applications for purchase and claims for refund exceed the amount of available money in the fund. The regulations adopted by the department may not, when allocating available money in the fund under this section, distinguish an application for the purchase of a credit certificate issued under AS 43.55.023(m) or a claim for refund under AS 43.20.046.

*** Sec. 15.** This Act takes effect immediately under AS 01.10.070(c).

Rcvd 2/7/12

Sectional Analysis for Committee Substitute for SB 153\I

Section 1. Amends AS 31.05.032(b) to create as new 1,000,000 gallon threshold for new or expanded above ground natural gas tank storage that can be certified by the AOGCC as eligible to apply for the credit under 43.20.046.

Section 2. Creates a new section under AS 38.05.096 that allows eligible above ground natural gas tank storage facilities, sited on state lands, to request an exemption from rental payments. To qualify, the tank must be have a storage capacity of at least 1,000,000 gallons. The exemption could extend for up to ten years following the commencement of commercial operations as long as the facility continues to operate. Information regarding the rental exemption is deemed to be "public" and is available to the RCA upon request. A person receiving a rental exemption must adjust the storage charge downward to reflect this state benefit and pass it through to the storage customers. The intent of this new section of law is to mirror the existing benefit offered to natural gas storage operations that eligible to apply for a rental payment exemption under AS 38.05.180(u).

Section 3. Amends the definition of "natural gas storage facility" and "facility" in AS 42.05.990(3) to assure that tank storage, or storage in a depleted or nearly depleted pool are afforded the same benefit that geologic natural gas storage already enjoys.

Section 4. Amends the existing gas storage facility tax credit in AS 43.20.046 by bifurcating it into two separate credits. The first will apply to non-tank facilities (geologic storage). This benefit is capped at fifteen million dollars or 25 percent of the facility development cost whichever is less. The second is a new credit for a tank storage facility which will be capped at fifteen million dollars or 50 percent of the development cost whichever is less. This restructuring retains existing language that assures that a tax credit under AS 43.20.046 is in addition to any other credits for which the storage facility is eligible for under this chapter.

Section 5. Amends the terms of what storage qualifies for a tax credit or payment under AS 43.20.046(b) by adding a 1,000,000 gallon threshold for above ground storage similar to the language in in section 1 of the legislation and including the potential for expansion of a new facility allowing for flexibility of who and how this project moves forward.

Sections 6 and 7. Amends AS 43.20.046(d)-(e) to add "or payment" for non-profit companies that are not subject to tax under this chapter. Legislative Legal expressed concern that there could be some question whether a "tax credit" would work for tax exempt storage operators. Addition of the words "or payment" extinguishes this ambiguity.

Section 8. Amends 43.20.046(h) to set forth how a company not subject to tax under this chapter, but received payments under this chapter shall be assessed for liability if its gas storage facility ceases commercial operations during the nine calendar years immediately following the calendar year in which the gas storage facility commenced commercial operations.

Section 9. Amends 43.20.046(i) to clarify that a person that receives a payment under AS 42.20.046 that the person was not entitled to must repay the state with interest determined under AS 43.05.225. This interest shall be calculated from the date the erroneous payment was made. The restructured language assures that storage operators that are subject to state corporate income tax and non-profit storage operators that are exempt from state income tax are treated equally.

Sections 10-14 make a number of conforming language changes to accommodate addition of the word "payment" in section 6 of the legislation for a new or expanded LNG storage facility..

Section 15. Established an immediate effective date for the legislation.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB153

Analysis

This bill will provide an exemption/tax credit/refund/payment of liabilities on land leased for certain gas storage facilities, under certain criteria.

There would be a minimial amount of additional work for the Alaska Oil and Gas Conservation Commission (AOGCC) resulting from this bill and it could be managed with existing funds and staff members. Therefore, the AOGCC submits a zero fiscal note.

Trucking Liquid Natural Gas to Interior Alaska
Project Overview

Golden Valley Electric Association is teaming with Flint Hills Resources to investigate the potential of transporting liquid natural gas from the North Slope to Interior Alaska. The natural gas feedstock for this project is to come from a long-term supply contract on the North Slope. This raw gas would be processed and liquefied at a new facility on the North Slope. It would briefly be stored in a 1,000,000 gallon tank before being trucked to Interior Alaska via specialty trailers. The LNG product will be delivered to a 2,000,000 gallon storage tank located adjacent to the Flint Hills Refinery and the Golden Valley generation plant in North Pole. Here the product will be stored until it is warmed in a new re-gas facility and then made available as natural gas to end users.

The primary initial demand will come from GVEA's new gas turbine and the Flint Hills Refinery to heat North Slope crude oil obtained from the Trans Alaska Pipeline. **This primary demand equals roughly 7 billion cubic feet of gas per year.**

The partners on this project are looking into the possibility of running the delivery trucks off of LNG instead of diesel to bring additional cost savings to the project.

GVEA is reaching out to potential customers to determine if availability of this new resource can be used to help to reduce energy costs further in Interior Alaska**. Through additional capacity available under the gas supply contract from the North Slope producer, space heating and industrial uses could be addressed.**

To help refine the initial project cost numbers, GVEA and Flint Hills have secured the services of CB&I. **The initial work of this firm indicates that the total project cost will be roughly $220,000,000 to $245,000,000.** The project estimate currently contains historical cost data that has a margin of error of plus or minus 50 percent.

The current price range is between $12 and $17 dollars per mcf of gas. Additional work to reduce this uncertainty and thus narrow the range of the expected delivered price.

GVEA is very supportive of a pipeline eventually delivering natural gas to the Interior, the LNG trucking project can be developed immediately and with more certainty.

The current schedule calls for first gas from the project to be delivered in early 2015. As GVEA and Flint Hills continue to advance engineering on the concept, there is a possibility that delivery date can be moved forward.

Availability of additional LNG in Interior Alaska will also allow for an expansion of the current piped distribution system as well as initiation of other customer growth. This dynamic will improve the net present value calculations on a future pipeline operation since a larger customer base will be present to take gas off a pipeline immediately.

The main provisions of SB 153 are:

1. The quantitative description for working gas storage eligible for state assistance is modified in AS 31.05.032 and AS 43.20.046 to include a 1,000,000 gallon threshold for above ground LNG tankage.

   Rationale – As HB 280 was debated and passed in 2010, strong statements were made that the bill was designed to assist the creation of natural gas storage statewide, although Cook Inlet and Interior Alaska were mentioned specifically.

   As the legislation progressed, similar statements were made supporting the future need for storage in Fairbanks including comments from agency personnel.

   > Marsha Davis – *"Well Senator Wielechowski, I am sensitive to the comment that Representative Hawker made that we obviously don't want to harm the interests in Fairbanks. But obviously if you've got gas, I guess the question would be would you ever store gas on the North Slope and then move it to* ***Fairbanks*** *or would the storage facilities physically be located someplace around* ***Fairbanks*** *for use by the utilities around* ***Fairbanks****, so you know we would be open to discussion as to how to work that issue with Representative Hawker." (transcribed from the audio record at 04:24:00 pm of the Senate Resources Audio links for 4/5/2010)*

   Although the legislation described a Gas Storage Facility as a "tank or a depleted or nearly depleted reservoir or pool in the state that is available for storage of gas" the quantitative description was written with only geologic storage in mind. As a result, the existing 500,000,000 cubic feet capacity requirement is far bigger than what a reasonable tank needs to be to support a LNG trucking operation to serve the Interior. In order to qualify for the credit under the existing law, GVEA would have to overbuild the LNG storage tank at considerable expense. Under Alaska regulatory law this added expense would be passed on to utility customers who already suffer from extremely high energy costs. Such an outcome would be counter to the intent of HB 280 which was to mitigate the cost of adding storage to the energy supply chain and assure that benefit flows through to Alaska consumers.

2. The ten year lease payment waiver provision of AS 38.05.180(u) is duplicated with the intent that it will also apply to state land leased for a natural gas storage operation under AS 38.35.120.

   Rationale – At the time HB 280 was debated, the yearly lease cost for natural gas storage, built on state land, was a cost legislators felt they could reduce to relieve the financial burden of storage on consumers. At the time, legislators were not aware that a LNG trucking operation on the North Slope could secure land under AS 38.35. GVEA has since been advised by the State Pipeline Coordinator's Office that AS 38.35 is available for this purpose and may assist with the timely construction of Interior related gas infrastructure by offering a preferable permitting process. Making the lease payment waiver provision applicable to AS 38.35 honors the intent of HB 280 by lowering the cost of storage resulting in savings that will be passed on to Interior residents.

3. The existing refundable tax credit applicable to eligible gas storage is modified to allow a "payment" to offset the cost of developing storage by an owner that is tax exempt.

   Rationale – HB 280 established a tax credit to offset the cost of gas storage development that would be applied against the state income tax owed by the gas storage owner. Unfortunately the existing language is cumbersome for not-for-profit utilities that develop the gas storage themselves since they are exempt from state income tax. However, the legislative record indicates that utility ownership of storage was expected. Testimony was given to clarify that the following three storage scenarios were anticipated with the first two qualifying for the credit program and the third receiving no state benefit.

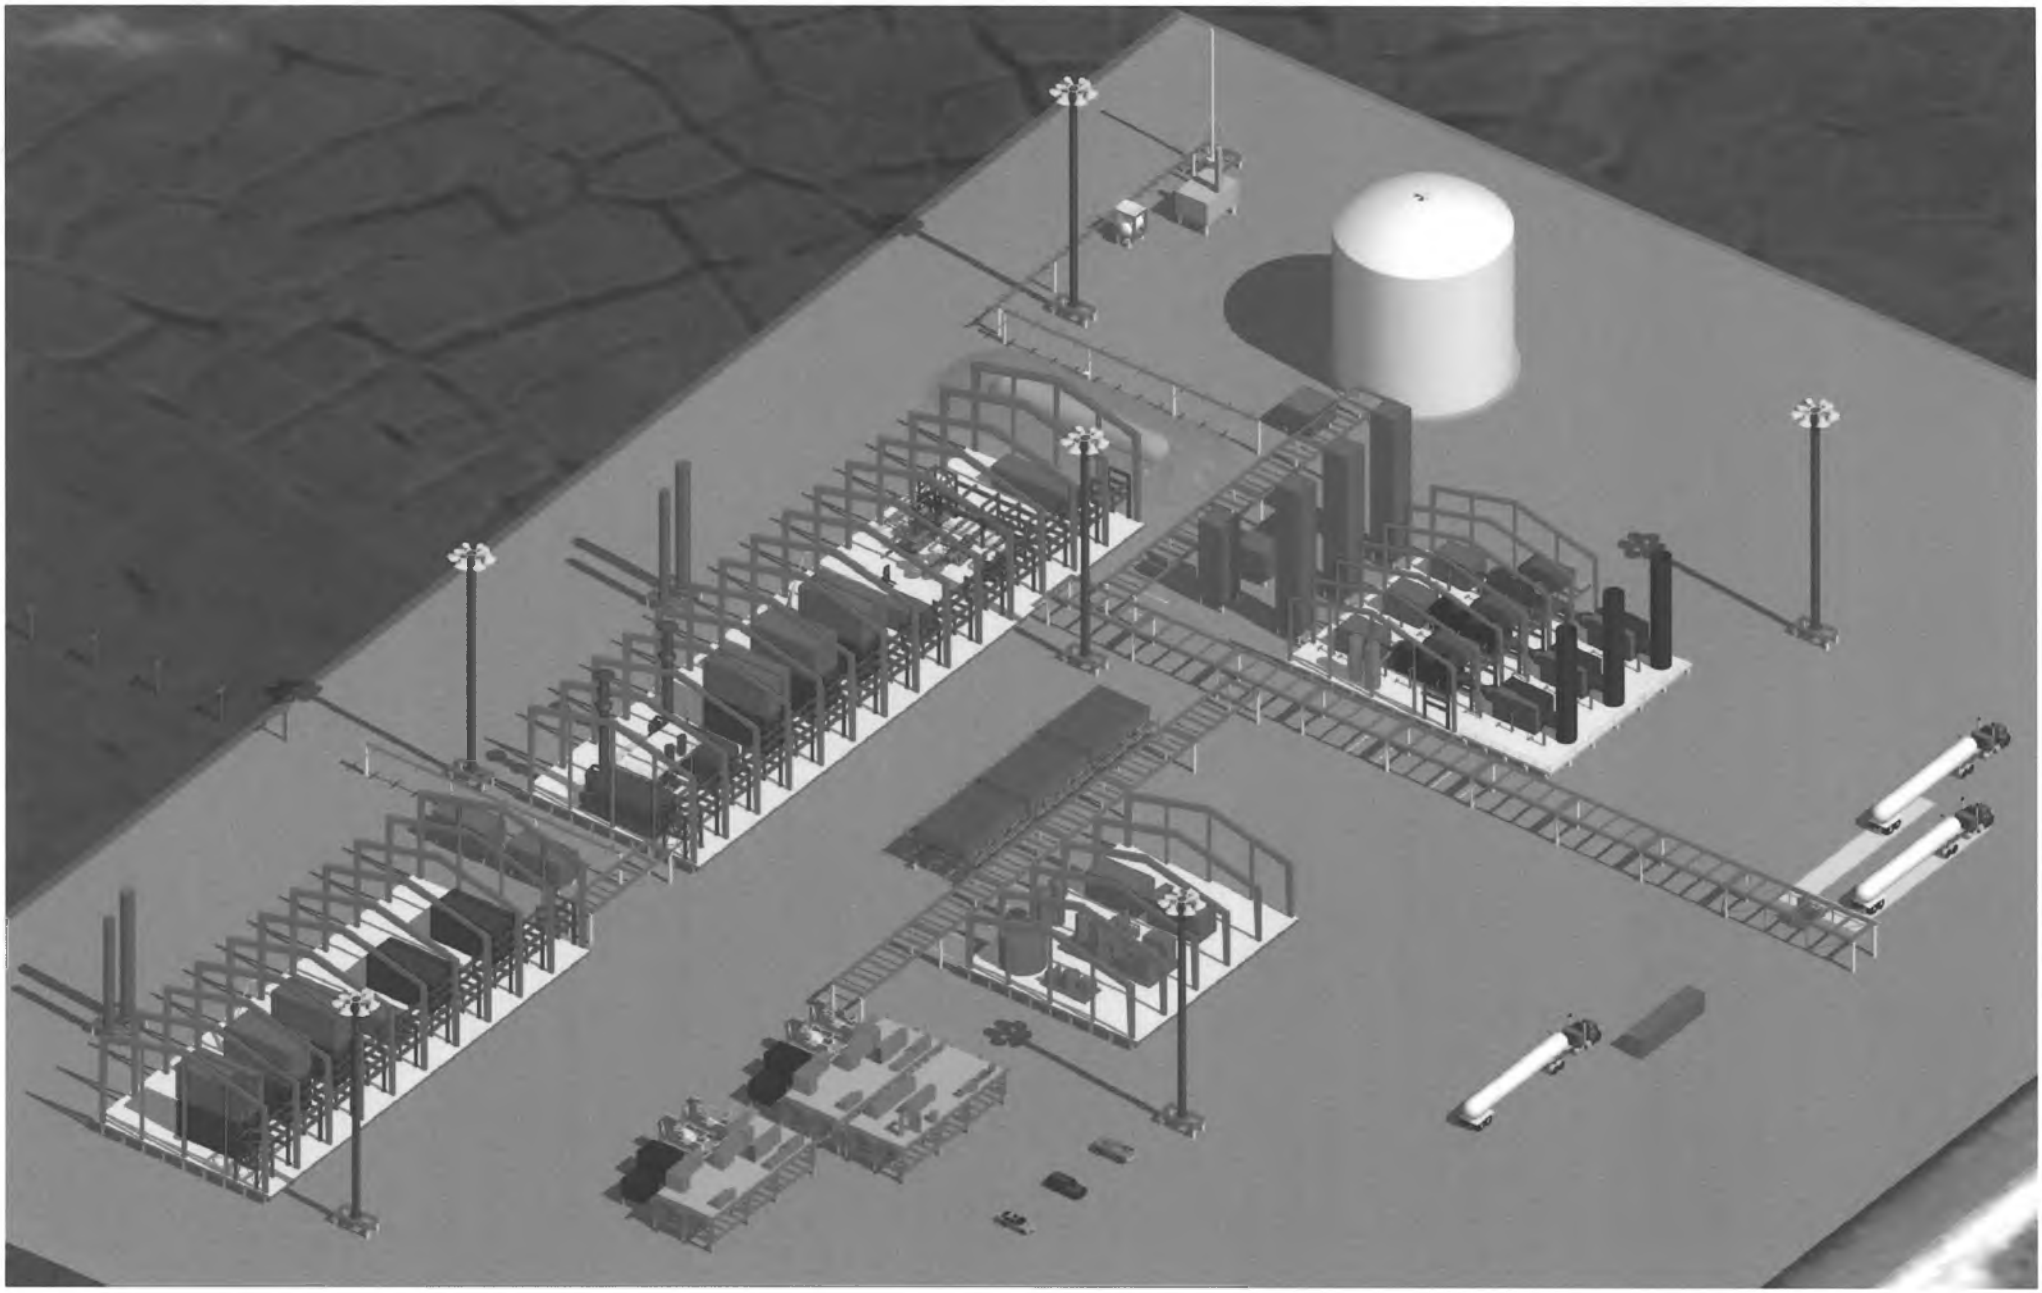
   a. A regulated public utility owns and operates storage.
   b. Open-access third-party storage is offered for a price.
   c. An investor builds storage for their own benefit which is not available on a third-party basis.

   To fulfill this legislative intent it may be possible for a utility owned storage facility to qualify under existing Alaska law which states:

   > AS 43.20.046(d) A person entitled to a tax credit under this section that is greater than the person's tax liability under this chapter may request a refund in the amount of the unused portion of the tax credit.

   However, the Legislative Division of Legal and Research Services suggested modifications to the tax credit provision that clarify any ambiguity on this issue.

4. Senator Thomas and Representative Thompson intend to propose a change to the bill that would limit the potential state storage credit or payment to $15,000,000 or 50% of the infrastructure cost; whichever is less.



Facility Description: Sour gas pipeline to facility, gas pretreatment, heavies separation and storage, LNG liquefaction and storage, LNG truck loading, LNG truck fueling, LPG truck loading, gas blending, power generation and associated systems -- building, structural supports, piping, electrical, instrumentation & controls, all adequate for arctic climate conditions.

Facility Description: LNG truck receiving and offloading, LNG storage, LNG truck fueling, HP & LP vaporization and sendout for separate users (usage) and associated systems -- building, structural supports, piping, electrical, instrumentation & controls adequate for the environmental conditions expected.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB153
2012 LEGISLATIVE SESSION

Analysis

This bill will provide an exemption/tax credit/refund/payment of liabilities on land leased for certain gas storage facilities, under certain criteria.

There would be a minimial amount of additional work for the Alaska Oil and Gas Conservation Commission (AOGCC) resulting from this bill and it could be managed with existing funds and staff members. Therefore, the AOGCC submits a zero fiscal note.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB 153
2012 LEGISLATIVE SESSION

Analysis

***The revenue impact of this bill is indeterminate.

This bill makes several amendments to the corporate income tax credit authorized at AS 43.20.046 and exempts certain gas storage facilities from lease rental payments. Significant amendments include the following:

1. A new section is added that exempts from lease rental payments the gas storage facilities identified in this bill. Therefore, the revenue impact should include only the additional natural gas storage facilities that may be added under this bill. The revenue impact of this provision is indeterminate at this time.

2. The definition of "natural gas storage facility" has been changed to differentiate tanks and depleted or nearly depleted pools, and distinctions have been made in the volumes that qualify for each type of storage facility. Nontank storage must have a working capacity of at least 500 million cubic feet of gas and tank storage must have a capacity of at least 1 million gallons. One cubic foot of gas equals about 7.4805 gallons; therefore 1 million gallons equals 133,681 cubic feet (or 133.681 thousand cubic feet) of gas.

3. The basis for the maximum tax credit has been changed from the lesser of $15 million or 25% of the costs to incurred to establish a gas facility, to a maximum of $15 million, earned at a rate of $1.50 per 1,000 cubic feet of working gas storage capacity. With this change, a 10 million gallon storage facility would earn a tax credit of approximately $2,000, regardless of how much it cost to establish the facility (10 million gallons divided by 7.4805 gallons per cubic foot, divided by 1,000, times $1.50.

4. In the case of a gas storage facility ceasing commercial operation during the nine calendar years following the year that the facility commences commercial operation, the liability to the state must be assessed as of December 31 of the year that the facility ceases operation. For practical purposes, this means that audits must be completed on the facility operations in the year that the operation is ceased. As written, a change of this nature would place a greater burden on the auditors to initiate and conclude an audit in a much shorter timeframe for these operations.

The bill has an immediate effective date.

The Department of Revenue anticipates that it would be able to administer the provisions of this bill with existing resources.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 153

Analysis

SB 153 extends provisions encouraging gas storage in subsurface gas storage to also cover tank storage. Section 2 provides that the lessee of a surface lease for gas storage can receive a 10 year exemption from making lease payments. Sections 4 and 5 extend the Alaska corporate income tax credit for subsurface gas storage facilities to tank storage, requiring that a tank be able to store 1,000,000 gallons of gas to qualify.

There is no anticipated fiscal impact to the Division of Oil and Gas. The application of tax credits will have an indeterminate impact on the revenues acquired by the Division.

SB 153 also allows a business entity not subject to the Alaska Corporate Income tax to receive the credit in the form of a cash payment. In addition, for both surface and subsurface storage, the credit under AS 43.20.046(a) can also now exceed 25% of the storage facility cost as long as the total credit for a single facility does not exceed $15 million.

To the extent new markets are not accessed, the impact of the credit is indeterminate. The credit might not increase the netback value of the gas for royalty purposes because a gas storage facility is regulated under this section, with the value of the credit likely passed on to the consumer. The State's royalty value also might be more or less for gas removed from a lease and put into storage versus gas removed from the lease and sold.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 153

Analysis

SB 153 creates an exemption from land lease payments(for leases issued under AS 38.05.070-105), for up to ten calendar years from date of issuance, for lands leased for gas storage facilities (other than under AS 38.05.180(u)).

This lease payment exemption will reduce revenues equal to the lease payments due to the state related to these types of leases for the years the exemption is allowed. Currently there is one qualifying lease with an annual rent of $12,500 based on the fair market value of the land leased. The total fiscal impact of this proposed legislation after FY 13 is indeterminate because the number of gas storage leases that may be issued in the future is unknown. Future leases may be issued under oil and gas leases issued under AS 38.05.180.

The legislation will no effect the lease issuance or maintenance operations of the department .

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 153:

"An Act relating to a gas storage facility; relating to the tax credit for a gas storage facility; relating to the powers and duties of the Alaska Oil and Gas Conservation Commission; relating to the regulation of natural gas storage as a utility; relating to the powers and duties of the director of the division of lands and to lease fees for a gas storage facility on state land; and providing for an effective date."

The cost of energy is crippling Interior Alaska's economy. The ever increasing expense of heating homes and operating businesses during the long, cold, dark winter hurts the ability of Interior Alaskans to put food on the table today and plan for the future. The Fairbanks community spends over $600 million per year on space heating, pays the highest natural gas prices in the country and does not receive the state energy incentives or subsidies available to residents and communities in other regions of our state.

Senate Bill 153 incents the private sector's delivery of lower cost natural gas to Interior Alaska by extending tax credits available for natural gas storage in Cook Inlet to a liquid natural gas trucking project for the Interior. A new credit for construction of gas storage tanks makes this program more flexible to fit the varying needs of gas delivery throughout the state. This legislation applies to tanked storage with a minimum volume of one million gallons. The amount of the credit is limited to 50% of construction costs up to $15 million. This allows areas of Alaska that do not have depleted gas reservoirs available, as Cook Inlet does, to still receive the same monetary incentive as Southcentral despite the higher capital costs per volume associated with constructing above ground tanks for storing LNG.

SB 153 would allow Golden Valley Electric Association, Flint Hills Refinery or another gas supplier to take concrete steps toward delivering sizeable volumes of trucked natural gas to the Interior. All money from these credits for tanked storage would be under the oversight of the Regulatory Commission of Alaska, ensuring that any savings are passed along to the rate payer thereby lowering costs and keeping more dollars in the local community.

I urge you to join me in lowering Interior Alaska's energy costs by supporting Senate Bill 153.

January – May: State Capitol – Juneau, Alaska 99801 – (907) 465-2327 – 1 (800) 336-7383 – Fax (907) 465-5241
June – December: 1292 Sadler Way Ste 203 – Fairbanks, Alaska 99701 – (907) 456-8161 – Fax (907) 456-8163
Senator.Joe.Thomas@legis.state.ak.us

The main provisions of HB 289 and SB 153 are:

1. The quantitative description for working gas storage eligible for state assistance is modified in AS 31.05.032 and AS 43.20.046 to include a 1,000,000 gallon threshold for above ground LNG tankage.

   Rationale – As HB 280 was debated and passed in 2010, strong statements were made that the bill was designed to assist the creation of natural gas storage statewide, although Cook Inlet and Interior Alaska were mentioned specifically.

   As the legislation progressed, similar statements were made supporting the future need for storage in Fairbanks including comments from agency personnel.

   > Marsha Davis – *"Well Senator Wielechowski, I am sensitive to the comment that Representative Hawker made that we obviously don't want to harm the interests in Fairbanks. But obviously if you've got gas, I guess the question would be would you ever store gas on the North Slope and then move it to* ***Fairbanks*** *or would the storage facilities physically be located someplace around* ***Fairbanks*** *for use by the utilities around* ***Fairbanks****, so you know we would be open to discussion as to how to work that issue with Representative Hawker." (transcribed from the audio record at 04:24:00 pm of the Senate Resources Audio links for 4/5/2010)*

   Although the legislation described a Gas Storage Facility as a "tank or a depleted or nearly depleted reservoir or pool in the state that is available for storage of gas" the quantitative description was written with only geologic storage in mind. As a result, the existing 500,000,000 cubic feet capacity requirement is far bigger than what a reasonable tank needs to be to support a LNG trucking operation to serve the Interior. In order to qualify for the credit under the existing law, GVEA would have to overbuild the LNG storage tank at considerable expense. Under Alaska regulatory law this added expense would be passed on to utility customers who already suffer from extremely high energy costs. Such an outcome would be counter to the intent of HB 280 which was to mitigate the cost of adding storage to the energy supply chain and assure that benefit flows through to Alaska consumers.

2. The ten year lease payment waiver provision of AS 38.05.180(u) is duplicated with the intent that it will also apply to state land leased for a natural gas storage operation under AS 38.35.120.

   Rationale – At the time HB 280 was debated, the yearly lease cost for natural gas storage, built on state land, was a cost legislators felt they could reduce to relieve the financial burden of storage on consumers. At the time, legislators were not aware that a LNG trucking operation on the North Slope could secure land under AS 38.35. GVEA has since been advised by the State Pipeline Coordinator's Office that AS 38.35 is available for this purpose and may assist with the timely construction of Interior related gas infrastructure by offering a preferable permitting process. Making the lease payment waiver provision applicable to AS 38.35 honors the intent of HB 280 by lowering the cost of storage resulting in savings that will be passed on to Interior residents.

3. The existing refundable tax credit applicable to eligible gas storage is modified to allow a "payment" to offset the cost of developing storage by an owner that is tax exempt.

   Rationale – HB 280 established a tax credit to offset the cost of gas storage development that would be applied against the state income tax owed by the gas storage owner. Unfortunately the existing language is cumbersome for not-for-profit utilities that develop the gas storage themselves since they are exempt from state income tax. However, the legislative record indicates that utility ownership of storage was expected. Testimony was given to clarify that the following three storage scenarios were anticipated with the first two qualifying for the credit program and the third receiving no state benefit.

   a. A regulated public utility owns and operates storage.
   b. Open-access third-party storage is offered for a price.
   c. An investor builds storage for their own benefit which is not available on a third-party basis.

   To fulfill this legislative intent it may be possible for a utility owned storage facility to qualify under existing Alaska law which states:

   > AS 43.20.046(d) A person entitled to a tax credit under this section that is greater than the person's tax liability under this chapter may request a refund in the amount of the unused portion of the tax credit.

   However, the Legislative Division of Legal and Research Services suggested modifications to the tax credit provision that clarify any ambiguity on this issue.

4. Senator Thomas and Representative Thompson intend to propose a change to the bill that would limit the potential state storage credit or payment to $15,000,000 or 50% of the infrastructure cost; whichever is less.

Sectional Analysis for Sponsor Substitute for SB 153
\B version dated 1.16.12

Section 1. Amends AS 31.05.032(b) to create as new 1,000,000 gallon threshold for above ground natural gas tank storage that can be certified by the AOGCC as eligible to apply for exemptions from land lease payments under AS 38.05.096 or AS 38.05.180(u) and tax credits or payments under AS 43.20.046.

Section 2. Creates a new section under AS 38.05.096 that allows eligible above ground natural gas tank storage facilities, sited on state lands, to request an exemption from rental payments. To qualify, the tank must be have a storage capacity of at least 1,000,000 gallons. The exemption could extend for up to ten years following the commencement of commercial operations as long as the facility continues to operate. Information regarding the rental exemption is deemed to be "public" and is available to the RCA upon request. A person receiving a rental exemption must adjust the storage charge downward to reflect this state benefit and pass it through to the storage customers. The intent of this new section of law is to mirror the existing benefit offered to natural gas storage operations that eligible to apply for a rental payment exemption under AS 38.05.180(u).

Section 3. Amends the definition of "natural gas storage facility" and "facility" in AS 42.05.990(3) to assure that tank storage, or storage in a depleted or nearly depleted pool are afforded the same benefit that geologic natural gas storage already enjoys.

Section 4. Amends the existing gas storage facility tax credit in AS 43.20.046 by bifurcating it into two separate credits. The first will apply to non-tank facilities (geologic storage). This benefit is capped at fifteen million dollars or 25 percent of the facility development cost whichever is less. The second is a new credit for a tank storage facility which will be capped at fifteen million dollars or 50 percent of the development cost whichever is less. This restructuring retains existing language that assures that a tax credit under AS 43.20.046 is in addition to any other credits for which the storage facility is eligible for under this chapter.

Section 5. Amends the terms of what storage qualifies for a tax credit or payment under AS 43.20.046(b) by adding a 1,000,000 gallon threshold for above ground storage similar to the language in in section 1 of the legislation.

Sections 6 and 7. Amends AS 43.20.046(d)-(e) to add "or payment" for non-profit companies that are not subject to tax under this chapter. Legislative Legal expressed concern that there could be some question whether a "tax credit" would work for tax exempt storage operators. Addition of the words "or payment" extinguishes this ambiguity.

Section 8. Amends 43.20.046(h) to set forth how a company not subject to tax under this chapter, but received payments under this chapter shall be assessed for liability if its gas storage facility ceases commercial operations during the nine calendar years immediately following the calendar year in which the gas storage facility commenced commercial operations.

Section 9. Amends 43.20.046(i) to clarify that a person that receives a payment under AS 42.20.046 that the person was not entitled to must repay the state with interest determined under AS 43.05.225. This interest shall be calculated from the date the erroneous payment was made. The restructured language assures that storage operators that are subject to state corporate income tax and non-profit storage operators that are exempt from state income tax are treated equally.

Sections 10-13 make a number of conforming language changes to accommodate addition of the word "payment" in section 6 of the legislation.

Section 14. Established an immediate effective date for the legislation.

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 153

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY SENATOR THOMAS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to a gas storage facility; relating to the tax credit for a gas storage facility; relating to the powers and duties of the Alaska Oil and Gas Conservation Commission; relating to the regulation of natural gas storage as a utility; relating to the powers and duties of the director of the division of lands and to lease fees for a gas storage facility on state land; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 31.05.032(b) is amended to read:

(b) Within six months after receiving an application under (a) of this section, the commission shall determine and certify

(1) the working gas storage capacity of the facility on the date the facility commences commercial operation rounded to the nearest

(A) 500,000,000 cubic feet **for nontank storage; or**

(B) 1,000,000 gallons for tank storage;

New Text Underlined [DELETED TEXT BRACKETED]

(2) whether the gas storage facility is capable of withdrawing a minimum of 10,000,000 cubic feet of gas a day; and

(3) that the facility qualifies as a gas storage facility for the purposes of this section.

*** Sec. 2.** AS 38.05 is amended by adding a new section to read:

Sec. 38.05.096. Exemption from rental payments on land leased for certain gas storage facilities. (a) A person leasing state land for a gas storage facility other than a gas storage facility subject to AS 38.05.180(u) may request an exemption from lease payments as provided in this section. The exemption is applicable for the periods described in (b) of this section.

(b) The exemption is available for the calendar year in which the gas storage facility commences commercial operation and for each of the nine calendar years immediately following the first year of commercial operation. However, an exemption is not applicable for the calendar year after the facility ceases commercial operation or for any subsequent calendar year.

(c) The lessee shall provide the director with any information the director requests to determine whether the lessee qualifies for the exemption.

(d) Information related to state land leased for a gas storage facility qualifying for the exemption in this section is public information and may be furnished to the Regulatory Commission of Alaska. On request, the director shall provide the name of each person using state land leased for a gas storage facility, the years for which an exemption was granted, and the amount of the exemption.

(e) A person receiving an exemption for a payment under this section that contracts to store gas for a utility regulated under AS 42.05 shall reduce the storage price to reflect the value of the exemption.

(f) In this section, "ceases commercial operation," "commences commercial operation," and "gas storage facility" have the meanings given in AS 31.05.032.

*** Sec. 3.** AS 42.05.990(3) is amended to read:

(3) "natural gas storage facility" means a facility that receives natural gas volumes from customers, holds the gas volumes in a reservoir, **tank, or depleted or nearly depleted pool,** and delivers the gas volumes to the customer; in this

paragraph, "facility" includes

(A) all parts of the facility from the point at which the natural gas volumes are received by the facility from the customer to the point at which the natural gas volumes are delivered by the facility to the customer; **and**

(B) [A FACILITY CONSISTING OF A RESERVOIR, EITHER UNDERGROUND OR ABOVEGROUND, AND] one or more of the following components of the facility:

(i) pipe;

(ii) compressor stations;

(iii) station equipment;

(iv) injection and extraction wells;

(v) on-site or remote monitoring, supervision, and control facilities;

(vi) gas processing plants and gas treatment plants, but not including a liquefied natural gas or manufacturing plant or facility;

(vii) other equipment necessary to receive, place into **storage** [THE RESERVOIR], monitor, remove from **storage** [THE RESERVOIR, PROCESS], and deliver natural gas;

*** Sec. 4.** AS 43.20.046(a) is amended to read:

(a) A person that is an owner of a gas storage facility described in (b) of this section that commences commercial operation after December 31, 2010, and before January 1, 2016, may apply a refundable credit against a tax liability that may be imposed on the person under this chapter for the taxable year in which the gas storage facility commences commercial operation. **A tax credit under this section is in addition to any other credit under this chapter for which the person is eligible.** The tax credit under this section **for a**

(1) nontank storage facility shall be an amount equal to $1.50 for each 1,000 cubic feet of working gas storage capacity that is certified under AS 31.05.032 less any amount of credit received under this section taken in earlier tax years for that capacity**; the** [. THE] total amount of the credit that may be received for

a single **nontank** [GAS] storage facility under this section may not exceed the lesser of $15,000,000 or 25 percent of the costs incurred to establish the gas storage facility**;**

(2) tank storage facility shall be the lesser of $15,000,000 or 50 percent of the cost incurred to establish the tank storage facility [. THE TAX CREDIT IN THIS SECTION IS IN ADDITION TO ANY OTHER CREDIT UNDER THIS CHAPTER FOR WHICH THE PERSON IS ELIGIBLE].

*** Sec. 5.** AS 43.20.046(b) is amended to read:

(b) A gas storage facility qualifying for the credit in this section

(1) must have a working gas storage capacity of at least

(A) 500,000,000 cubic feet of gas other than cushion gas **for nontank storage; or**

(B) 1,000,000 gallons for tank storage;

(2) must have a minimum withdrawal capability of 10,000,000 cubic feet a day as certified by the Alaska Oil and Gas Conservation Commission under AS 31.05.032;

(3) may not have been in operation as a gas storage facility before January 1, 2011;

(4) must be regulated under AS 42.05 as a utility and be available to furnish the service of natural gas storage to the public for compensation; in this paragraph, "service of natural gas storage" has the meaning given in AS 42.05.990; and

(5) if located on state land and leased or subject to a lease under **AS 38** [AS 38.05.180], must be in compliance with the terms of the lease.

*** Sec. 6.** AS 43.20.046(d) is amended to read:

(d) A person entitled to a tax credit under this section that is greater than the person's tax liability under this chapter may request a refund **or payment** in the amount of the unused portion of the tax credit.

*** Sec. 7.** AS 43.20.046(e) is amended to read:

(e) The department may use available money in the oil and gas tax credit fund established in AS 43.55.028 to make the refund **or payment** applied for under (d) of this section in whole or in part if the department finds that (1) the claimant does not

have an outstanding liability to the state for unpaid delinquent taxes under this title; and (2) after application of all available tax credits, the claimant's total tax liability under this chapter for the calendar year in which the claim is made is zero. In this subsection, "unpaid delinquent tax" means an amount of tax for which the department has issued an assessment that has not been paid and, if contested, has not been finally resolved in the taxpayer's favor.

*** Sec. 8.** AS 43.20.046(h) is amended to read:

(h) If the gas storage facility for which a credit was received under this section ceases commercial operation during the nine calendar years immediately following the calendar year in which the gas storage facility commences commercial operation, the tax liability under this chapter of the person who claimed the credit shall be increased**, and a person not subject to the tax under this chapter that received a payment under (d) of this section shall be liable to the state in the amount determined in this subsection**. The amount of the increase in tax liability **or liability to the state**

(1) **for a person subject to the tax under this chapter,** shall be determined and assessed for the taxable year in which the gas storage facility ceases commercial operation, regardless of whether the gas storage facility subsequently resumes commercial operation; [AND]

(2) **for a person not subject to the tax due under this chapter, shall be determined and assessed as of December 31 of the calendar year in which the gas storage facility ceases commercial operation, regardless of whether the gas storage facility subsequently resumes commercial operation; and**

(3) is equal to the total amount of the credit taken **or received as a payment under (d) of this section, as applicable,** multiplied by a fraction, the numerator of which is the difference between 10 and the number of calendar years for which the gas storage facility was eligible for a tax credit under this section and the denominator of which is 10.

*** Sec. 9.** AS 43.20.046(i) is amended to read:

(i) The issuance of a refund **or payment** under this section does not limit the department's ability to later audit or adjust the claim if the department determines, as a result of the audit, that the person that claimed the credit was not entitled to the

amount of the credit. The tax liability of the person receiving the credit under this chapter **and that is subject to the tax imposed under this chapter** is increased by the amount of the credit that exceeds that to which the person was entitled**; a person that receives the credit and that is not subject to the tax imposed under this chapter is liable to the state for the amount of the credit that exceeds that to which the person was entitled**. If the tax liability is increased **or a person not subject to the tax imposed under this chapter is liable to the state** under this subsection, the increase **in tax liability or the liability to the state** bears interest under AS 43.05.225 from the date the refund **or payment** was issued.

*** Sec. 10.** AS 43.20.046(j) is amended to read:

(j) A person **taking a tax credit under this section or receiving a payment under (d) of** [CLAIMING A TAX CREDIT UNDER] this section for a gas storage facility that ceases commercial operation within nine calendar years immediately following the calendar year in which the gas storage facility commences commercial operation shall notify the department in writing of the date the gas storage facility ceased commercial operation. The notice must be filed with the return for the taxable year in which the gas storage facility ceases commercial operation.

*** Sec. 11.** AS 43.20.046(k) is amended to read:

(k) A refund **or payment** under this section does not bear interest.

*** Sec. 12.** AS 43.55.028(a) is amended to read:

(a) The oil and gas tax credit fund is established as a separate fund of the state. The purpose of the fund is to purchase transferable tax credit certificates issued under AS 43.55.023 and production tax credit certificates issued under AS 43.55.025 and to pay refunds **and payments** claimed under AS 43.20.046.

*** Sec. 13.** AS 43.55.028(g) is amended to read:

(g) The department may adopt regulations to carry out the purposes of this section, including standards and procedures to allocate available money among applications for purchases under this chapter and claims for refunds **and payments** under AS 43.20.046 when the total amount of the applications for purchase and claims for refund exceed the amount of available money in the fund. The regulations adopted by the department may not, when allocating available money in the fund under this

section, distinguish an application for the purchase of a credit certificate issued under AS 43.55.023(m) or a claim for refund under AS 43.20.046.

*** Sec. 14.** This Act takes effect immediately under AS 01.10.070(c).

CS FOR SENATE BILL NO. 153( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS THOMAS, Coghill

A BILL

FOR AN ACT ENTITLED

"An Act relating to an above-ground liquefied natural gas storage facility; relating to the tax credit for an investment in an above-ground liquefied natural gas storage facility; relating to the regulation of gas storage as a utility; relating to the powers and duties of the director of the division of lands and to lease fees for a liquefied natural gas storage facility on state land; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 38.05 is amended by adding a new section to read:

Sec. 38.05.096. Exemption from rental payments on land leased for certain liquefied natural gas storage facilities. (a) A person leasing state land for a liquefied natural gas storage facility other than a gas storage facility subject to AS 38.05.180(u) may request an exemption from lease payments as provided in this section. The exemption is applicable for the periods described in (b) of this section.

(b) The exemption is available for the calendar year in which the liquefied

natural gas storage facility commences commercial operation and for each of the nine calendar years immediately following the first year of commercial operation. However, an exemption is not applicable for the calendar year after the facility ceases commercial operation or for any subsequent calendar year.

(c) The lessee shall provide the director with any information the director requests to determine whether the lessee qualifies for the exemption.

(d) Information related to state land leased for a liquefied natural gas storage facility qualifying for the exemption in this section is public information and may be furnished to the Regulatory Commission of Alaska. On request, the director shall provide the name of each person using state land leased for a liquefied natural gas storage facility, the years for which an exemption was granted, and the amount of the exemption.

(e) A person receiving an exemption for a payment under this section that contracts to store liquefied natural gas for a utility regulated under AS 42.05 shall reduce the storage price to reflect the value of the exemption.

(f) In this section,

(1) "ceases commercial operation" and "commences commercial operation" have the meanings given in AS 31.05.032;

(2) "liquefied natural gas storage facility" means a tank that is available for the storage of liquefied natural gas.

*** Sec. 2.** AS 42.05.990(3) is amended to read:

(3) "natural gas storage facility" means a facility that receives natural gas volumes **either as gas or liquefied natural gas** from customers, holds the gas volumes in a reservoir, **tank, depleted or nearly depleted pool, or other above-ground containment structure,** and delivers the gas volumes to the customer; in this paragraph, "facility" includes

(A) all parts of the facility from the point at which the natural gas volumes are received by the facility from the customer to the point at which the natural gas volumes are delivered by the facility to the customer; **and**

(B) [A FACILITY CONSISTING OF A RESERVOIR,

EITHER UNDERGROUND OR ABOVEGROUND, AND] one or more of the following components of the facility:

(i) pipe;

(ii) compressor stations;

(iii) station equipment;

(iv) injection and extraction wells;

(v) on-site or remote monitoring, supervision, and control facilities;

(vi) gas processing plants and gas treatment plants, but not including a liquefied natural gas or manufacturing plant or facility;

(vii) other equipment necessary to receive, place into **storage** [THE RESERVOIR], monitor, remove from **storage** [THE RESERVOIR], process, and deliver natural gas;

* **Sec. 3.** AS 43.20 is amended by adding a new section to article 1 to read:

Sec. 43.20.047. Above-ground liquefied natural gas storage facility tax credit. (a) A person that is an owner of an above-ground liquefied natural gas storage facility described in (b) of this section that commences commercial operation before January 1, 2020, may apply a refundable credit against a tax liability that may be imposed on the person under this chapter or receive the amount of the credit in the form of a payment for the taxable year in which the liquefied natural gas storage facility commences commercial operation. The tax credit or payment under this section may not exceed the lesser of $15,000,000 or 50 percent of the costs incurred to establish or expand the above-ground liquefied natural gas storage facility. The tax credit in this section is in addition to any other credit under this chapter for which the person is eligible.

(b) To qualify for the credit in this section, an above-ground liquefied natural gas storage facility

(1) must have a liquefied natural gas storage volume of not less than 25,000 gallons of liquefied natural gas, or, if the credit is claimed for an expansion, the expansion must have increased the capacity of an existing above-ground liquefied natural gas storage facility by more than 25,000 gallons;

(2) may not have been in operation as an above-ground liquefied natural gas storage facility before January 1, 2011, unless the tax credit in this section is based on the expansion of the above-ground liquefied natural gas storage facility after December 31, 2011;

(3) must be regulated under AS 42.05 as a utility and be available to furnish the service of natural gas storage to customers, utilities, or industrial facilities; in this paragraph, "service of natural gas storage" has the meaning given in AS 42.05.990, except that, in this paragraph, the natural gas storage is limited to the service of liquefied natural gas storage;

(4) if located on state land and leased or subject to a lease under AS 38.05, must be in compliance with the terms of the lease; and

(5) must have commenced commercial operation on or before the date the person takes a credit under (a) of this section or applies for a payment under (a) of this section.

(c) To claim the credit or request a payment, a person shall submit to the department a certification of the capacity of the above-ground liquefied natural gas storage facility measured in gallons or the capacity of an expansion to an existing above-ground liquefied natural gas storage facility measured in gallons, the date that the liquefied natural gas storage facility commenced commercial operation, the date that any expansion to the facility commenced commercial operation, and other information required by the department.

(d) A person applying the credit under this section against a liability under this chapter shall claim the credit on the person's return. A person entitled to a tax credit under this section that is greater than the person's tax liability under this chapter may request a refund or payment in the amount of the unused portion of the tax credit.

(e) The department may use money available in the oil and gas tax credit fund established in AS 43.55.028 to make a refund or payment under (d) of this section in whole or in part if the department finds that (1) the claimant does not have an outstanding liability to the state for unpaid delinquent taxes under this title; and (2) after application of all available tax credits, the claimant's total tax liability under this chapter for the calendar year in which the claim is made is zero. In this subsection,

"unpaid delinquent tax" means an amount of tax for which the department has issued an assessment that has not been paid and, if contested, has not been finally resolved in the taxpayer's favor.

(f) For the purpose of determining the amount of the credit under this section, the costs incurred to establish an above-ground liquefied natural gas storage facility or to expand an above-ground liquefied natural gas storage facility shall be submitted to the department with verification by an independent certified public accountant, licensed in the state. The volume of working liquefied natural gas storage or volume of the expansion to an existing above-ground liquefied natural gas storage facility shall be verified by a professional engineer licensed in the state with relevant experience.

(g) A person may not receive a credit under this section for the acquisition of an above-ground liquefied natural gas storage facility for which a credit has been taken under this section.

(h) If the above-ground liquefied natural gas storage facility for which a credit was received under this section ceases commercial operation during the nine calendar years immediately following the calendar year in which the liquefied natural gas storage facility commences commercial operation, the tax liability under this chapter of the person who claimed the credit shall be increased, and a person not subject to the tax under this chapter that received a payment under (d) and (e) of this section shall be liable to the state in the amount determined in this subsection. The amount of the increase in tax liability or liability to the state

(1) for a person subject to the tax under this chapter, shall be determined and assessed for the taxable year in which the liquefied natural gas storage facility ceases commercial operation, regardless of whether the liquefied natural gas storage facility subsequently resumes commercial operation;

(2) for a person not subject to the tax due under this chapter, shall be determined and assessed as of December 31 of the calendar year in which the liquefied natural gas storage facility ceases commercial operation, regardless of whether the liquefied natural gas storage facility subsequently resumes commercial operation; and

(3) is equal to the total amount of the credit taken or received as a payment under (d) of this section, as applicable, multiplied by a fraction, the

numerator of which is the difference between 10 and the number of calendar years for which the liquefied natural gas storage facility was eligible for a tax credit under this section and the denominator of which is 10.

(i) The issuance of a refund under this section does not limit the department's ability to later audit or adjust the claim if the department determines, as a result of the audit, that the person that claimed the credit was not entitled to the amount of the credit. The tax liability of the person receiving the credit under this chapter is increased by the amount of the credit that exceeds that to which the person was entitled. If the tax liability is increased under this subsection, the increase bears interest at the rate set by AS 43.05.225 from the date the refund was issued.

(j) A person claiming a tax credit under this section for a liquefied natural gas storage facility that ceases commercial operation within nine calendar years immediately following the calendar year in which the liquefied natural gas storage facility commences commercial operation shall notify the department in writing of the date the liquefied natural gas storage facility ceased commercial operation. The notice must be filed with the return for the taxable year in which the liquefied natural gas storage facility ceases commercial operation.

(k) A refund under this section does not bear interest.

(*l*) In this section,

(1) "ceases commercial operation" means that the above-ground liquefied natural gas storage facility fails to add or withdraw 20 percent or more of its working capacity of liquefied natural gas during a calendar year after the calendar year in which the above-ground liquefied natural gas storage facility commences commercial operation;

(2) "commences commercial operation" means the first input of liquefied natural gas into a liquefied natural gas storage facility for purposes other than testing;

(3) "liquefied natural gas storage facility" means a gas storage facility in which liquefied natural gas is stored in a tank or other above-ground containment structure.

*** Sec. 4.** AS 43.55.028(a) is amended to read:

(a) The oil and gas tax credit fund is established as a separate fund of the state. The purpose of the fund is to purchase transferable tax credit certificates issued under AS 43.55.023 and production tax credit certificates issued under AS 43.55.025 and to pay refunds **and payments** claimed under AS 43.20.046 **or 43.20.047**.

*** Sec. 5.** AS 43.55.028(g) is amended to read:

(g) The department may adopt regulations to carry out the purposes of this section, including standards and procedures to allocate available money among applications for purchases under this chapter and claims for refunds **and payments** under AS 43.20.046 **or 43.20.047** when the total amount of the applications for purchase and claims for refund exceed the amount of available money in the fund. The regulations adopted by the department may not, when allocating available money in the fund under this section, distinguish an application for the purchase of a credit certificate issued under AS 43.55.023(m) or a claim for refund under AS 43.20.046 **or AS 43.20.047**.

*** Sec. 6.** This Act takes effect immediately under AS 01.10.070(c).

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

January 18, 2012

Senate Bill 153:

"An Act relating to a gas storage facility; relating to the tax credit for a gas storage facility; relating to the powers and duties of the Alaska Oil and Gas Conservation Commission; relating to the regulation of natural gas storage as a utility; relating to the powers and duties of the director of the division of lands and to lease fees for a gas storage facility on state land; and providing for an effective date."

Dear Senator Paskvan,

I respectfully request that you schedule "Senate Bill 153: An Act relating to a gas storage facility; relating to the tax credit for a gas storage facility; relating to the powers and duties of the Alaska Oil and Gas Conservation Commission; relating to the regulation of natural gas storage as a utility; relating to the powers and duties of the director of the division of lands and to lease fees for a gas storage facility on state land; and providing for an effective date." for a hearing before the Senate Resources Committee.

Senate Bill 153 incents the private sector's delivery of lower cost natural gas to Interior Alaska by extending tax credits available for natural gas storage in Cook Inlet to a liquid natural gas trucking project for the Interior. A new credit for construction of gas storage tanks makes this program more flexible to fit the varying needs of gas delivery around Alaska. This legislation applies to tanked storage with a minimum volume of one million gallons. The amount of the credit is limited to 50% of construction costs up to $15 million. This allows areas of Alaska that do not have depleted gas reservoirs available, as Southcentral does, to still receive the same monetary incentive as Cook Inlet despite the higher capital costs per volume involved with constructing above ground tanks for storing LNG.

Thank you for your attention to this matter and quick scheduling. If you have any questions, please do not hesitate to contact my staff member, Grier Hopkins, at 465-3802.

Sincerely,

Senator Joe Thomas

SB 153 Testimony

February 9, 2012

- Brian Newton, CEO, Golden Valley Electric Association (GVEA)
- Luke Hopkins, Mayor, Fairbanks North Star Borough
- Doug Isaacson, Mayor, City of North Pole
- Jim Dodson, Fairbanks Economic Development Corporation
- Dan Britton, Fairbanks Natural Gas

Senate Resources Committee
Joe Paskvan, Co-Chair / March 12, 2012

Let's call the meeting to order.

Let the record reflect that it is _____ p.m. on Monday, March 12.

Let the record reflect that there is a quorum. Present are

- Co-Chair Wagoner -- excused
- Senator Stedman
- Senator Stevens
- Senator Wielechowski
- Senator French
- Senator McGuire
- And myself, Senator Paskvan

During this hearing, the Committee has a full agenda.

First, we will hear a brief update from Senator Thomas and accept public testimony on Committee Substitute for Senate Bill 153, relating to NATURAL GAS STORAGE TAX CREDIT/REGULATION. The committee considered this legislation during two previous hearings – on February 9 and March 5. If it is the will of the Committee, it is my intent to move CSSB 153 from this committee today.

We will also hear, for the first time, four other pieces of legislation:

- SB 123 Alaska Mining Day (by Senator Giessel)
- SB 159 Susitna State Forest (by Senator Menard)
- SB 181 Closing Certain Land to Mineral Entry (by Senator Giessel)
- SB 205 Chinook Research and Restoration Endowment (by Senator Olson)

It is my intent to hear from the bill sponsors and invited testimony, allow for Committee questions, and then set these bills aside. We will begin public testimony on these bills Wednesday and Friday.

Welcome, Senator Thomas (and/or Grier Hopkins).

Senate Resources Committee
Joe Paskvan, Co-Chair
Monday, March 5, 2012

[After HB 185, Senator Wagoner will take an "at ease" to pass the gavel.]

The Senate Resources Committee first heard Senate Bill 153, relating to NATURAL GAS STORAGE TAX CREDIT and REGULATION, on February 9, 2012.

During that hearing, Senator Thomas presented the merits of the bill and supportive testimony was provided by:

- Brian Newton, CEO, Golden Valley Electric Association (GVEA)
- Luke Hopkins, Mayor, Fairbanks North Star Borough
- Doug Isaacson, Mayor, City of North Pole
- Jim Dodson, CEO, Fairbanks Economic Development Corporation
- Dan Britton, CEO, Fairbanks Natural Gas (FNG)

On February 9, the bill was heard, held, and set aside for additional work.

Today, we will have a new CS before the Committee.

May I please have a motion to bring the Committee Substitute for Senate Bill 153, Version D, before the Committee?

[MOVED]

Seeing no objection, Version D is now before the Senate Resources Committee.

It is my intent to hear the bill sponsor explain the changes to the bill and then set it aside. During the next hearing of this bill, the Committee will open public testimony and then, if it's the will of the committee, move it to the next committee of referral.

Welcome Senator Thomas and Mr. Hopkins. Please identify yourselves for the record and provide your testimony, beginning with an explanation of the changes in this Committee Substitute.

Current Statutes

43.20.046. Gas storage facility tax credit.

(a) A person that is an owner of a gas storage facility described in (b) of this section that commences commercial operation after December 31, 2010, and before January 1, 2016, may apply a refundable credit against a tax liability that may be imposed on the person under this chapter for the taxable year in which the gas storage facility commences commercial operation. The tax credit under this section shall be an amount equal to $1.50 for each 1,000 cubic feet of working gas storage capacity that is certified under AS 31.05.032 less any amount of credit received under this section taken in earlier tax years for that capacity. The total amount of the credit that may be received for a single gas storage facility under this section may not exceed the lesser of $15,000,000 or 25 percent of the costs incurred to establish the gas storage facility. The tax credit in this section is in addition to any other credit under this chapter for which the person is eligible.

(b) A gas storage facility qualifying for the credit in this section

(1) must have a working gas storage capacity of at least 500,000,000 cubic feet of gas other than cushion gas;

(2) must have a minimum withdrawal capability of 10,000,000 cubic feet a day as certified by the Alaska Oil and Gas Conservation Commission under AS 31.05.032;

(3) may not have been in operation as a gas storage facility before January 1, 2011;

(4) must be regulated under AS 42.05 as a utility and be available to furnish the service of natural gas storage to the public for compensation; in this paragraph, "service of natural gas storage" has the meaning given in AS 42.05.990; and

(5) if located on state land and leased or subject to a lease under AS 38.05.180, must be in compliance with the terms of the lease.

(c) To claim the credit, the person shall submit to the department a copy of the certification of working gas storage capacity and withdrawal capability issued under AS 31.05.032, the date that the gas storage facility commenced commercial operation, and other information required by the department. A person applying the credit against a liability under this chapter shall claim the credit on the person's return.

(d) A person entitled to a tax credit under this section that is greater than the person's tax liability under this chapter may request a refund in the amount of the unused portion of the tax credit.

(e) The department may use available money in the oil and gas tax credit fund established in AS 43.55.028 to make the refund applied for under (d) of this section in whole or in part if the department finds that (1) the claimant does not have an outstanding liability to the state for unpaid delinquent taxes under this title; and (2) after application of all available tax credits, the claimant's total tax liability under this chapter for the calendar year in which the claim is made is zero. In this subsection, "unpaid delinquent tax" means an amount of tax for which the department has issued an assessment that has not been paid and, if contested, has not been finally resolved in the taxpayer's favor.

(f) For the purpose of determining the amount of the credit under this section, the working gas storage capacity on which the credit is based shall be the capacity certified by the Alaska Oil and Gas Conservation Commission under AS 31.05.032.

(g) A person may not receive a credit under this section for the acquisition of a gas storage facility for which a credit has been granted under this section.

(h) If the gas storage facility for which a credit was received under this section ceases commercial operation during the nine calendar years immediately following the calendar year in which the gas storage facility commences commercial operation, the tax liability under this chapter of the person who claimed the credit shall be increased. The amount of the increase in tax liability

(1) shall be determined and assessed for the taxable year in which the gas storage facility ceases commercial operation, regardless of whether the gas storage facility subsequently resumes commercial operation; and

(2) is equal to the total amount of the credit taken multiplied by a fraction, the numerator of which is the difference between 10 and the number of calendar years for which the gas storage facility was eligible for a tax credit under this section and the denominator of which is 10.

(i) The issuance of a refund under this section does not limit the department's ability to later audit or adjust the claim if the department determines, as a result of the audit, that the person that claimed the credit was not entitled to the amount of the credit. The tax liability of the person receiving the credit under this chapter is increased by the amount of the credit that exceeds that to which the person was entitled. If the tax liability is increased under this subsection, the increase bears interest under AS 43.05.225 from the date the refund was issued.

(j) A person claiming a tax credit under this section for a gas storage facility that ceases commercial operation within nine calendar years immediately following the calendar year in which the gas storage facility commences commercial operation shall notify the department in writing of the date the gas storage facility ceased commercial operation. The notice must be filed with the return for the taxable year in which the gas storage facility ceases commercial operation.

(k) A refund under this section does not bear interest.

(l) In this section, "ceases commercial operation," "commences commercial operation," "gas storage facility," and "working gas storage capacity" have the meanings given in AS 31.05.032.

History -

(Sec. 12 ch 16 SLA 2010)

Effective Date Notes -

Section 22, ch. 16, SLA 2010 makes this section effective May 13, 2010, in accordance with AS 01.10.070(c).

Alaska State Legislature

Sponsor Statement
Senate Bill 159

Senate Bill 159 will establish a new Susitna State Forest from state lands presently used for timber harvest. The Division of Forestry will be able to manage the state forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple uses. The Susitna State Forest would be the fourth state forest established in Alaska, joining the Haines State Forest, the Tanana Valley State Forest and the Southeast State Forest.

The proposed Susitna State Forest includes **33 parcels totaling approximately 763,200 acres**. The parcels are Forestry classified lands located in 14 large management blocks listed below. The Division of Forestry worked with the Division of Mining, Land, and Water Management to identify and exclude lands that are priorities for the state land disposal program.

In the region where the State Forest is proposed, timber sales and personal use sales for fuelwood are growing steadily. Local mills depend on state timber for their raw material supply, and there is a growing interest in the use of wood in the form of roundwood, chips or wood pellets for both commercial and residential space heating.

The state is committed to long-term management solutions by:

- maximizing the sustainable supply of timber from the state timber base;
- developing access and encouraging a broad range of multiple uses on state forest lands including motorized uses;
- providing economic opportunities to the communities, businesses and residents of the region.

Legislatively designating a State Forest would ensure that some land will remain available for long-term forest management and the region will retain large open spaces of public lands for the range of benefits residents of the region currently enjoy. It will also allow for mining on state forest land.

The Susitna State Forest would be managed as part of the State Forest System under AS 41.17.200-.230. Lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities.

MEMORANDUM January 17, 2012

SUBJECT: Sectional summary for SB 159 (Work Order No. 27-LS1179\M)

TO: Senator Linda Menard
Attn: Michael Rovito

FROM: Donald M. Bullock Jr.
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Designates state-owned or acquired land and water lying within the listed parcels as the Susitna State Forest. Requires the commissioner of natural resources to prepare a management plan for the forest, and authorizes the commissioner to establish transportation corridors within the forest.

Section 2. Provides a July 1, 2012 effective date for the Act.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB159
2012 LEGISLATIVE SESSION

Analysis

This bill would establish a new Susitna State Forest in the Matanuska and Susitna Valleys from state lands presently classified for forestry management by the two Area Plans for the region. These lands are currently managed by the Division of Forestry for timber harvest and other multiple uses. Designation of these lands as a state forest will ensure the long-term availability of a timber supply to local commercial and personal use customers, support economic opportunities for the region's communities, improve access to the parcels and retain the land in state ownership for multiple uses. The state forest will also directly support a growing interest in wood energy space heating projects by local communities. These projects require a long-term, sustainable supply of wood.

The proposed State Forest includes 33 parcels totaling approximately 763,200 acres and are located in 14 large management blocks. The Susitna State Forest would become part of the State Forest System under AS 41.17.010 - .230 and will continue to be managed under the provisions of the State Forest Resources and Practices Act (FRPA) which is designed to protect fish habitat and water quality. The forest management plan for the region would be updated via a public process per AS 41.17.230.

Implementation of this bill will not require new positions or funding.

The bill will have no short-term impact to the revenue stream, but will provide for long-term increases in forest productivity and subsequent increased timber revenues.

SB 159
Susitna State Forest

The proposed Susitna State Forest includes 14 management blocks totaling approximately 760,000 acres. The blocks have previously been classified Forestry in the Susitna Matanuska and the Southeast Susitna Area Plans. The Division of Forestry worked with the Division of Mining, Land, and Water Management to identify and exclude lands that are priorities for the state land disposal program.

The effect of legislatively designating these lands as State Forest is as follows:

Current Condition	Proposed State Forest
Lands may be designated for disposal through agency action.	This would provide for long term forest management planning. Lands would need to be withdrawn from the State Forest system through legislative action.
Revised area plans may further subdivide the existing forest.	Existing private inholdings would remain. All state land designated for settlement in the current Area Plans would remain available for purchase by the public. Any changes in land classification or use would be addressed in the Susitna State Forest Management Plan.
Reluctance by forest managers to invest public funds if the lands are subject to disposal.	Forest Managers would have the opportunity to invest in long term land management projects without having the lands converted to other uses. For example, the DOF would have the opportunity to collaborate with the Department of Fish and Game on long term wildlife enhancement projects, silvicultural treatments for stand improvement, and other activities that show benefits over time.
Lands are managed for multiple use.	No Change.
Existing mineral entry rights.	The lands would be managed for multiple use and would be open for mineral development as it currently exists.
The Susitna Forestry Guidelines, adopted over 20	The Alaska Forest Resources and Practices Act and

years ago and prior to the final revision of the Alaska Forest Resources and Practices Act (AS 41.17), are used for planning timber harvests in the Susitna Valley.	other guidelines will be incorporated into the Susitna State Forest Management Plan and after adoption will be the basis for timber harvests in the State Forest.
Forests are managed on a sustained yield.	AS 41.17.220 requires the management of State Forests occur on the sustained yield principle.
Access for recreation is limited.	A forest management plan would include a transportation plan that addresses recreational opportunities as roads are developed.
Multiple Area Plans are used for the current management of State land.	A Forest Management Plan as required under AS. 41.17.230 must be adopted within 3 years of the establishment of a state forest. The plan requires a forest inventory and must consider other uses such as mineral extraction, recreation, fish and wildlife, and other traditional uses.

Public Briefing: SB-159

Susitna State Forest

DEPARTMENT OF NATURAL RESOURCES -- DIVISION OF FORESTRY

Alaska Department of NATURAL RESOURCES

January, 2012

Background. The state Department of Natural Resources manages over 9.5 million acres of forest land in the Matanuska and Susitna Valleys. Of this land, timber management is allowed on approximately 2.1 million acres. The state actively manages this timber base to supply wood to local processors. Remaining land is designated primarily for other uses including land sales, recreation, water resources, and fish and wildlife habitat, including over 3.1 million acres of legislatively designated state parks, refuges, and public use areas.

In the region, demand for state timber sales is steady and growing and personal use sales for fuelwood have also increased. Local mills depend heavily on state timber for their raw material supply and there is a growing interest in the use of wood in the form of roundwood, chips or wood pellets for both commercial and residential space heating.

There is also a need to more actively manage lands and vegetation to promote a variety of forest ages to provide for diverse and healthy habitats for wildlife. At the same time, active management will also help reduce wildland fire risk by breaking up large fuel types and encouraging initial regeneration by hardwood species.

The state is committed to long-term management solutions by:

- maximizing the sustainable supply of timber from the state timber base;
- developing access and encouraging a broad range of multiple uses on state forest lands including motorized uses;
- providing economic opportunities to the communities, businesses and residents of the region.

Legislatively designating a State Forest would ensure that some land will remain available for long-term forest management and the region will retain large open spaces of public lands for the range of benefits residents of the region currently enjoy.

Purpose. This bill would establish a new Susitna State Forest from state lands presently used for timber harvest. The Division of Forestry will be able to manage the State Forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple uses.

Proposed State Forest Land. The proposed Susitna State Forest includes 33 parcels totaling approximately 763,200 acres (see chart). The parcels are Forestry classified lands located in 14 large management blocks listed below. The Division of Forestry worked with the Division of Mining, Land, and Water (DML&W) management to identify and exclude lands that are priorities for the state land disposal program.

State Forest Management. The Susitna State Forest would be managed as part of the State Forest System under AS 41.17.200-.230. Lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities. State Forest lands would be managed consistent with the management intent under the current Susitna Matanuska and the Southeast Susitna Area Plans. Changes to management intent would require public and interagency review through adoption of a State Forest Management Plan under AS 41.17.230. The States Forest Resources Practices Act (FRPA) would apply to management activities on the forest and is designed to protect both fish habitat and water quality. (AS 41. 17.010 - .955.) A forestry inventory was completed in 2010 for approximately 75% of the acreage and work is ongoing to complete the project. An interim forest inventory report is available.

Expanded Bullets on area plan public processes related to the new Susitna State Forest [1/30/12]

- 1985 Susitna Area Plan identified Forestry designated lands for consideration as legislatively designated areas (LDAs).

- State lands under consideration for a Susitna State Forest are addressed by two area plans: the Susitna Matanuska Area Plan (2011), and the Southeast Susitna Area Plan (2008). These two plans supersede the 1985 Susitna Area Plan.

- The Commissioner of DNR adopted the Southeast Susitna Area Plan (SSAP) on April 28, 2008, following a year-long planning process that included two rounds of public meetings. This plan applies to about 255,000 acres of state land formerly managed by the 1982 Willow Sub-Basin Area Plan and the original 1985 Susitna Area Plan. The SSAP designates 74,855 acres of state land for Forestry. The Division of Forestry actively manages these lands in the Houston and Kashwitna areas for timber production.

A recurring theme during the following processes was the idea of a Susitna State Forest.

- In 2009, DOF engaged in a revision process for the 1991 Susitna Forestry Guidelines (SFG). A citizens' advisory committee and an inter-agency planning team were established and several meetings held. In addition, the SFG process held joint public scoping meetings with the DMLW-led SMAP planning process.

- 1n 2009, DOF's planner mentioned the Susitna State Forest during his presentation to the Mat-Su Salmon Science and Conservation Symposium in Wasilla.

- During annual (2008-2011) Winter Trails User's meetings between timber operators and Willow area dog mushers, the concept of a state forest in the Susitna was discussed, with broad support for the idea expressed by those attending. Dog mushers enjoy the use of state lands and the associated improved access from logging activities.

- Following a two year planning process, the Commissioner of the Department of Natural Resources (DNR) adopted the Susitna Matanuska Area Plan (SMAP) on August 11, 2011, with a date of issuance of August 17th. The SMAP applies to nine million acres of state land formerly managed under the Susitna Area Plan. About 700,000 acres of these state lands are classified Forestry. This area plan recommends establishment of a legislatively designated State Forest for those lands designated or co-designated Forestry in the SMAP and the 2008 Southeast Susitna Area Plan. Public input received at a series of community meetings held throughout the planning area and during a three and a half month public review (February – May 2011) of the draft SMAP supported the concept of a Susitna State Forest.

- DOF coordinated the public scoping efforts for the SFG with DMLW's area plan scoping and the Matanuska-Susitna Borough's land use planning. During April of 2009, six joint open houses were held in communities in the Mat-Su area, and one in Anchorage. An

open house planned for Skwentna in late March was cancelled due to an ash fall in the area from the volcanic eruption of Mt. Redoubt. Approximately 80 people attended the public meetings, and DOF received 22 written scoping comments through the end of July. Many of the written comments supported maintaining or strengthening the Susitna Forestry Guidelines as they are presently written, and keeping its original purpose statement intact. The public comments were generally supportive of forestry. The issues most frequently mentioned were regeneration, timber road access after harvesting, harvest design, riparian standards, and herbicides. Other public outreach efforts that occurred during this period included briefings with the Alaska Outdoor Council, Friends of the Mat-Su, and WACO Trail's Committee.

- The Mat-Su Area Forester reported on the interest in the Susitna State Forest to the Board of Forestry during their August 30-31, 2011 meeting.

Alaska Trappers Association
PO Box 82177
Fairbanks, AK 99708

Linda Menard
Alaska State Senator
State Capitol, Room 9
Juneau, AK 99801

February 2, 2012

Re: SB 159 – Susitna State Forest

Dear Senator Menard:

The Alaska Trappers Association is a statewide organization with nearly one thousand members. We are active in Alaska wildlife issues and other resource conservation efforts. We support a very active trapper education program.

ATA supports the CONCEPT of a fourth state forest, but we have serious concerns about how this might affect other consumptive resource use, particularly trapping. Our concern stems primarily from experience with the way that the planning process for the Tanana Valley State Forest (TVSF) in Interior Alaska was politically manipulated by Governor Knowles.

Title 41 (specifically AS 41.17.200) makes it quite clear that the primary purpose of any state forest is to provide a timber base and the opportunity for active forest management and timber harvest. We support and applaud this goal. However, the TVSF Citizens Advisory Committee (a quasi-public agency) was stacked with non-consumptive users and allowed to corrupt and control the planning process to minimize logging, hunting, trapping and motorized access. That serious and systemic problem was exactly what happened when the TVSF Management Plan was rewritten. Environmental groups (enabled, supported and encouraged by the Governor's Office) tied up the planning process for years and manipulated the process. The Governor's Office, rather than the State Forester's

Office, controlled which specific individuals were appointed to the Citizens' Advisory Committee.

Thus, before we can wholeheartedly support your bill, we would prefer to see included some language to prevent or at least minimize this type of political manipulation of the planning process and attempts to preclude the very consumptive uses the State Forest was established to protect. This might entail a slight change to AS 41.17.200. Or perhaps it could be handled with a very clear statement of legislative intent. At a minimum, public discussion during the legislative process regarding this bill should thoroughly air and review the process that took place during the rewriting of the TVSF Management Plan.

Once this concern is addressed, we will be glad to comment on specific acreages and areas proposed for inclusion. However, until we can be sure that trapping (and timber harvest, for that matter) are really protected, we support only the CONCEPT of establishing the Susitna State Forest.

Thank you for the opportunity to comment on your proposal to establish a Susitna State Forest in South-Central Alaska.

Sincerely,

Joe Letarte

January 18, 2012

The Honorable Senator Linda Menard
Alaska State Capitol
Room 9
Juneau, Alaska 99801

Dear Senator Menard,

I am very pleased to send a letter of support for Senate Bill 159 which will establish the Susitna State Forest. This bill will establish a new State Forest from state lands presently used for timber harvest. The Division of Forestry will be able to manage the State Forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple uses.

The Mat-Su Borough and its residents will benefit from a state forest in the form of an economic boost from a sustainable supply of timber from the state timber base. The Susitna State Forest would be managed as part of the State Forest System and would be open for multiple uses, including wildlife habitat, harvest, and recreational activities.

Demand for state timber sales is steady and growing, and personal use sales for fuel wood have also increased. Local mills depend heavily on state timber for their raw material supply and there is a growing interest in the use of wood in the form of round wood, chips or wood pellets for both commercial and residential space heating. At the same time, active management will also help reduce wild land fire risk by breaking up large fuel types and encouraging initial regeneration by hardwood species.

Thank you for the opportunity to endorse this project. Should you have any questions, please do not hesitate to contact my office.

Sincerely,

John M. Moosey
Borough Manager

RE: Senate Bill 159, Susitna State Forest

Dear Senators Paskvan and Wagoner:

The Resource Development Council (RDC) is writing to support Senate Bill 159, which would create the Susitna State Forest over 763,200 acres of state land west of the Parks Highway.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

The Alaska Department of Natural Resources currently manages 9.5 million acres of forest land in the Matanuska and Susitna Valleys. Of this land, timber management is allowed on approximately 2.1 million acres. Remaining land is designated for other uses, including land sales, recreation, water resources, and fish and wildlife habitat. Over 3.1 million acres is protected in legislatively-designated state parks, refuges, and public use areas.

The establishment of the Susitna State Forest would ensure that some land would remain available for long-term forest management. It would allow the Division of Forestry to more actively manage lands and vegetation to promote a variety of forest ages, which in turn would maximize the sustainable supply of timber from the state timber base and provide for more diverse and healthy habitats for wildlife. In addition, active management would also help reduce wildfire risk.

The Division of Forestry would manage the state forest for a long-term supply of timber to local processors and retain land in state ownership for other multiple uses. An enhanced long-term timber supply would help support the forest products industry, provide fuel for sustainable biomass energy projects, and create new jobs. It would also benefit the recreational sector as the state intends to develop access to the new state forest and encourage a broad range of multiple uses. These multiple uses, including annual timber harvests, would provide important economic opportunities to local communities, businesses, and residents.

It is important to keep in mind that SB 159 would establish a new state forest from state lands presently designated for forest management. The Susitna State Forest would be managed consistent with the management intent under the current Susitna Matanuska and the Southeast Susitna Area Plans. Alaska's Forest Resources Practices Act would apply to management activities on the forest and is designed to protect both fish habitat and water quality.

established, the Susitna State Forest would be the fourth state forest in Alaska. RDC supports SB 159 and believes the proposed state forest will be of much benefit to the local economy – creating and sustaining much needed jobs in the forest products industry while providing many other opportunities. We urge the committee to pass SB 159.

Sincerely,

Carl Portman
Deputy Director

Cc: Senator Linda Menard

February 9, 2012

The Honorable Linda Menard
State Capitol Room 9
Juneau, Alaska 99801

Dear Senator Menard,

The South Central Alaska Chapter of The Ruffed Grouse Society would like to thank you for submitting Senate Bill 159, creating a State Forest west of the Susitna River. We support creation of this Forest for a multitude of reasons not the least of which is the ability to manage our forest resources for wildlife.

The area west of the Susitna is one of the last remaining large blocks of state land in Southcentral Alaska. Establishing a state forest will ensure that the ever increasing population of this area has access to the outdoor recreation for which our state is famous and that our timber, land and wildlife resources can be managed for the benefit of all Alaskans. A state forest will also help establish and solidify a timber industry for this area. Managed timber harvests benefit wildlife that needs an age diversified forest to thrive and would help reduce the potential for devastating fires such as the Miller Reach catastrophe.

Designation as a State Forest is, we believe, one of the least restrictive land categories possible. It allows for most uses, but would require planning and thought before implementing changes such as roads, mining, campgrounds, etc. The one restriction we know of is transfer of land into private ownership. In the past, the State has been able to meet the recreational needs of the Southcentral population through land transfers to individuals. However, the population is growing and most land with easy access, such as that bordering lakes and rivers, has already been transferred. The net effect is to block access to the remaining area. We realize there are access corridors reserved, but these are not particularly effective when it means parking your plane in front of someone's cabin to walk the right of way to a stream. Land owners tend to view such as an intrusion and clashes ensue. Additionally, owners of private land tend to want to manage all lands within view of their property. This leads to conflict when trying to manage resources on state land. In the Matanuska Valley it has hobbled the ability of Forestry to conduct timber sales and ADF&G to implement habitat improvement projects.

As currently described in SB 159, the State Forest is a convoluted collection of detached parcels taking 16 pages to describe the boundaries. A person out for recreation will have a difficult time trying to determine if they are in or out of the forest. Future disposal of land surrounding these parcels could complicate road development and access to proposed timber sales. Private ownership bounding the forest could result in the NIMBY problems we are already dealing with in other parts of Southcentral.

Email: rgs@ruffedgrousesociety.org www. ruffedgrousesociety.org

We would encourage you to expand the proposed boundaries to incorporate all unencumbered state land west of the Susitna River, south of the Denali Park Boundaries, North of Beluga Lake/Beluga River draining into Cook Inlet. As a minimum, the forest boundaries need to be simplified and expanded to create a buffer against treats to proper forest management by private ownership and to ensure reasonable access to the forest is available. This would preserve public access, ensure multiple use of our land, and enhance our wildlife resources for all Alaskans, now and in the future, while encouraging development of a comprehensive timber industry.

This forest will complement the three other state forests that have been successfully established. We urge the legislature to expand and pass SB 159 this session.

Sincerely,

Michael W. Griffin
President, SAC RGS

Alaska Chapter SCI

February 9, 2012

The Honorable Linda Menard
Alaska State Senate
120 4th St. Rm 9
Juneau, AK 99801

Dear Senator Menard:

The Alaska Chapter of SCI is in support of SB 159 and commends you for your foresight in introducing this necessary piece of legislation.

As you may or may not know, SCI Alaska Chapter is not only the leading hunter-conservationist organization in Alaska, but is also SCI's leading chapter throughout the SCI network which includes over 105 countries and 260 chapters. Our mission is to protect the freedom to hunt through political advocacy and action, support for sound, science based conservation and wildlife management, and through humanitarian services.

In reviewing SB 159 and the applicable statutory guidelines in Title 41, we may wish to suggest amendments as this bill works its way through the process. We have some concerns as to whether the simple set aside of lands into a state forest will bring about desired results.

Our first concern is that suitable habitat is maintained for wildlife upon which rests one of the primary impetuses for recreation in Alaska. This concern leads us to believe that the bill does not go far enough in sequestering the necessary habitat to sustain wildlife populations through the establishment of contiguous parcels of land.

Our other major concern involves management practices. Although some lands may not be suitable for the growth of marketable timber, we maintain that those lands are nonetheless important for this state forest designation. Most of Alaska's wildlife depends heavily upon successional plant life. 'Climax forests do not provide the same level of benefit as does new forest lands. Since we do not encourage the proliferation of fire any longer in this area due to a variety of concerns, it is important that harvest of climax forests be allowed to produce suitable habitat for wildlife.

We look forward to working with you on this legislation and thank you again for introducing it.

Sincerely,

Eddie Grasser
Director of Government Affairs

Senate Resources Committee
RE: SB-159, Susitna State Forest

Dear Senator Paskvan and Senator Wagoner,

My name is Dave Poppert and I own and operate Poppert Milling Inc. along with my wife Cathy and son Michael. Poppert Milling has been doing business in the Mat-Su Valley for almost 50 years.

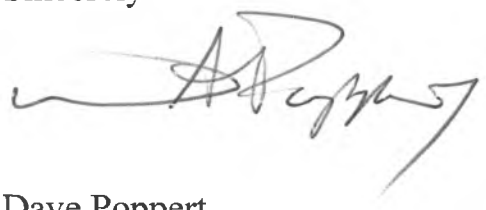
I am writing in support of Senate Bill 159, which would create a state forest in the Susitna Valley, and also to express concerns of access to the area.

As a timber user it is in our best interest to do what we can to ensure a viable long-term timber supply. My Grandfather started our company in downtown Wasilla and my son is already trying to give me the "boot", but I am hesitant to let him take the reins with an unknown future for a timber supply. A state forest in the Susitna Valley could ensure a supply. But, it does no good to have a sustainable timber supply if it is not economically feasible to access it. Most of the 763,000 acres that would be included is west of the Big Susitna River, which currently can only be accessed via Petersville Road. It would be approximately 200 miles round trip for 1 load of logs to get to our facility at mp. 48.5 on the Parks Hwy. The value of the timber would be less than the cost to get it to market. Year round, closer to the user access would certainly do a lot for the timber industry in our area.

We currently do a very high value added to our timer from 3-sided "D"-logs to kiln dried architectural mouldings to tongue and groove flooring and wall paneling. With a sustainable timber supply our company would be able to expand it's operation which in turn means more jobs.

We urge the Legislature to pass Senate Bill 159 and hope that some provision can be made with regards to reasonable access so that possibly someday my grandchildren may know they can continue our business without worry of the resource

Sincerely



Dave Poppert

CS FOR SENATE BILL NO. 159( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS MENARD, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act establishing the Susitna State Forest; urging the Governor to acquire forest land that is currently in the Tongass National Forest; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 41.17 is amended by adding a new section to read:

Sec. 41.17.600. Susitna State Forest. (a) Subject to valid existing rights, the state-owned or acquired land and water lying within the parcels described in (d) of this section is designated as the Susitna State Forest.

(b) The commissioner shall prepare a management plan for the Susitna State Forest under AS 41.17.230.

(c) The commissioner may establish transportation corridors within the Susitna State Forest.

(d) The Susitna State Forest includes the state-owned or acquired land within the following described parcels:

(1) Township 14 North, Range 10 West, Seward Meridian
Section 3;
(2) Township 15 North, Range 8 West, Seward Meridian
Section 3
Section 4: E1/2, E1/2NW1/4, SW1/4SW1/4, SW1/4
Section 5: S1/2NE1/4, S1/2
Section 6: SE1/4
Section 7: E1/2, S1/2NW1/4, SW1/4;
(3) Township 16 North, Range 8 West, Seward Meridian
Section 1: excluding ASLS 75-36 (Tracts A - I), ASLS 75-38, ASLS 78-83 (Tracts A and B)
Section 2
Section 3: E1/2, E1/2NW1/4
Section 10: E1/2NE1/4, E1/2SE1/4
Section 11
Section 12: excluding ASLS 75-39, ASLS 81-2, ASLS 82-110 (Tracts A - C)
Section 13: excluding ASLS 74-190 (Tracts A - V), ASLS 78-16 (Tracts A and B), ASLS 80-92 (Tracts A and B), ASLS 82-11, ASLS 83-113

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ACQUISITION OF FOREST LAND IN THE TONGASS NATIONAL FOREST. (a) The legislature urges the governor to negotiate or renegotiate state land entitlements under sec. 6 of the Alaska Statehood Act (P.L. 85-508, 72 Stat. 339) or work to amend the Alaska Statehood Act for the purpose of acquiring on behalf of the state forest land currently in the Tongass National Forest.

(b) If the state fails to acquire forest land under (a) of this section, the legislature urges the governor to negotiate the purchase from the federal government of forest land currently in the Tongass National Forest.

(c) In this section, "forest land" has the meaning given in AS 41.17.950.

*** Sec. 3.** This Act takes effect July 1, 2012.

Re: Request for hearing for Senate Bill 159

Honorable Senators Joe Paskvan and Tom Wagoner

I respectfully request a hearing of the Senate Resources Committee for Senate Bill 159.

Senate Bill 159 is an establishing the Susitna State Forest.

Thank you for your consideration.

Linda Menard

Sen. Linda Menard

Senator_Linda_Menard@legis.state.ak.us

Expanded Bullets on area plan public processes related to the new Susitna State Forest [1/30/12]

- 1985 Susitna Area Plan identified Forestry designated lands for consideration as legislatively designated areas (LDAs).

- State lands under consideration for a Susitna State Forest are addressed by two area plans: the Susitna Matanuska Area Plan (2011), and the Southeast Susitna Area Plan (2008). These two plans supersede the 1985 Susitna Area Plan.

- The Commissioner of DNR adopted the Southeast Susitna Area Plan (SSAP) on April 28, 2008, following a year-long planning process that included two rounds of public meetings. This plan applies to about 255,000 acres of state land formerly managed by the 1982 Willow Sub-Basin Area Plan and the original 1985 Susitna Area Plan. The SSAP designates 74,855 acres of state land for Forestry. The Division of Forestry actively manages these lands in the Houston and Kashwitna areas for timber production.

A recurring theme during the following processes was the idea of a Susitna State Forest.

- In 2009, DOF engaged in a revision process for the 1991 Susitna Forestry Guidelines (SFG). A citizens' advisory committee and an inter-agency planning team were established and several meetings held. In addition, the SFG process held joint public scoping meetings with the DMLW-led SMAP planning process.

- 1n 2009, DOF's planner mentioned the Susitna State Forest during his presentation to the Mat-Su Salmon Science and Conservation Symposium in Wasilla.

- During annual (2008-2011) Winter Trails User's meetings between timber operators and Willow area dog mushers, the concept of a state forest in the Susitna was discussed, with broad support for the idea expressed by those attending. Dog mushers enjoy the use of state lands and the associated improved access from logging activities.

- Following a two year planning process, the Commissioner of the Department of Natural Resources (DNR) adopted the Susitna Matanuska Area Plan (SMAP) on August 11, 2011, with a date of issuance of August 17th. The SMAP applies to nine million acres of state land formerly managed under the Susitna Area Plan. About 700,000 acres of these state lands are classified Forestry. This area plan recommends establishment of a legislatively designated State Forest for those lands designated or co-designated Forestry in the SMAP and the 2008 Southeast Susitna Area Plan. Public input received at a series of community meetings held throughout the planning area and during a three and a half month public review (February – May 2011) of the draft SMAP supported the concept of a Susitna State Forest.

- DOF coordinated the public scoping efforts for the SFG with DMLW's area plan scoping and the Matanuska-Susitna Borough's land use planning. During April of 2009, six joint open houses were held in communities in the Mat-Su area, and one in Anchorage. An

open house planned for Skwentna in late March was cancelled due to an ash fall in the area from the volcanic eruption of Mt. Redoubt. Approximately 80 people attended the public meetings, and DOF received 22 written scoping comments through the end of July. Many of the written comments supported maintaining or strengthening the Susitna Forestry Guidelines as they are presently written, and keeping its original purpose statement intact. The public comments were generally supportive of forestry. The issues most frequently mentioned were regeneration, timber road access after harvesting, harvest design, riparian standards, and herbicides. Other public outreach efforts that occurred during this period included briefings with the Alaska Outdoor Council, Friends of the Mat-Su, and WACO Trail's Committee.

- The Mat-Su Area Forester reported on the interest in the Susitna State Forest to the Board of Forestry during their August 30-31, 2011 meeting.

*Provided by Division of Forestry.

Co-Chairs, Senate Resources Committee

From: Senator Wagoner

Date: February 2, 2012

Re: SB 176 An Act exempting sand and gravel operations and marketable earth mining operations from the mining license tax; and providing for an effective date.

I respectfully request a hearing on SB 176 before the Senate Resources Committee to be scheduled at your earliest convenience.

SB 176 eliminates sand and gravel operators and related marketable earth from the definition of mining and thereby eliminates the state tax on those operations.

Attached please find supporting documentation including:

- SB 176 Exemptions From Mining Tax
- Sponsor Statement
- Sectional, explaining the changes SB 176 would make to current law

SB 176 ***An Act exempting sand and gravel and marketable earth mining operations from the mining license tax; and providing for an effective date***

SB 176 eliminates the mining license tax on sand and gravel operations. Collecting the tax is costly to the state and industry, yet generates very little tax revenue for the state. In fiscal year 2011 the Department of Revenue collected $221,364 in taxes from sand and gravel operations, and it put another $100,000 into the Constitutional Budget Reserve Fund, which was generated from audits and other assessments that covered filings for previous years. The state's cost to collect this revenue was roughly $170,000.

The cost to business is also significant. Sand and gravel operators manufacture a wide variety of products: Aggregate pavers for gardens and concrete blocks for construction, bulk and retail sacks of concrete, asphalt, pit-run, and many grades of aggregate. Preparing annual tax returns is costly because sand and gravel operators must track all expenses associated with each product, from extraction through product delivery. They must also track the type and volume of material used in each product, further compounding the complexity of record keeping. In addition, if an operator owns more than one pit, the operator's tax return must include a separate schedule for each pit with calculations tracking costs, materials, and product income. Even if an operation is so small that it qualifies for an exemption to the tax, it still must file a tax return with the state each year. According to industry representatives, preparing tax returns and complying with audit requests costs the sand and gravel operators about $1 million a year in record keeping, tax return preparation and related administrative and accountant services time.

SB 176 also removes "marketable earth" from the mining license tax to address Department of Revenue and industry concern that after sand and gravel is removed from the mining tax, future regulators and the public could become confused about whether "marketable earth" includes sand and gravel.

Sectional Analysis

SB 176 ***An Act exempting sand and gravel and marketable earth mining operations from the mining license tax; and providing for an effective date***

Section 1. Amends AS 43.65.010(a) to conform to the removal of sand and gravel mining from the mining tax by eliminated the exclusion of sand and gravel operations from the three and one-half year exemption of taxes for new mining operations.

Section 2. Amends the definition of mining in AS 43.65.060(2) by removing "marketable earth" from the list of materials to which mining refers and by adding "marketable earth" and "sand and gravel" to the exclusions to mining.

Section 3. Adds a new section clarifying that sections 1 and 2 of the Act apply to taxes levied on or after the effective date of the Act.

Section 4. Provides an effective date of July 1, 2012.

CS FOR SENATE BILL NO. 176( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR WAGONER

A BILL

FOR AN ACT ENTITLED

"An Act exempting quarry rock, sand and gravel, and marketable earth mining operations from the mining license tax; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.65.010(a) is amended to read:

(a) A person prosecuting or attempting to prosecute, or engaging in the business of mining in the state shall obtain a license from the department. All new mining operations are exempt from the tax levied by this chapter for three and one-half years after production begins. [THE TAX EXEMPTION GRANTED TO NEW MINING OPERATIONS DOES NOT EXTEND OR APPLY TO THE MINING OF SAND AND GRAVEL.]

*** Sec. 2.** AS 43.65.060(2) is amended to read:

(2) "mining" means an operation by which valuable metals, ores, minerals, asbestos, gypsum, coal, [MARKETABLE EARTH,] or stone, or any of them are extracted, mined, or taken from the earth; "mining" includes the ordinary treatment

processes normally applied by mine owners or operators to obtain the commercially marketable product, but does not include the extraction or production of oil and gas**, marketable earth, quarry rock, or sand and gravel**;

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY. Sections 1 and 2 of this Act are retroactive to January 1, 2012.

*** Sec. 4.** This Act takes effect immediately under AS 01.10.070(c).

CS for SB 176 ( ) *Exemptions from Mining License Tax*

CSSB 176 eliminates the mining license tax on sand and gravel operations. Collecting the tax is costly to the state and industry, yet generates very little tax revenue for the state. In fiscal year 2011 the Department of Revenue collected $221,364 in taxes from sand and gravel operations, and it put another $100,000 into the Constitutional Budget Reserve Fund, which was generated from audits and other assessments that covered filings for previous years. The state's cost to collect this revenue was roughly $170,000.

The cost to business is also significant. Sand and gravel operators manufacture a wide variety of products: Aggregate pavers for gardens and concrete blocks for construction, bulk and retail sacks of concrete, asphalt, pit-run, and many grades of aggregate. Preparing annual tax returns is costly because sand and gravel operators must track all expenses associated with each product, from extraction through product delivery. They must also track the type and volume of material used in each product, further compounding the complexity of record keeping. In addition, if an operator owns more than one pit, the operator's tax return must include a separate schedule for each pit with calculations tracking costs, materials, and product income. Even if an operation is so small that it qualifies for an exemption to the tax, it still must file a tax return with the state each year. According to industry representatives, preparing tax returns and complying with audit requests costs the sand and gravel operators about $1 million a year in record keeping, tax return preparation and related administrative and accountant services time.

CSSB 176 also removes "marketable earth" from the mining license tax to address Department of Revenue and industry concern that after sand and gravel is removed from the mining tax, future regulators and the public could become confused about whether "marketable earth" includes sand and gravel. In addition, the committee substitute added "quarry rock" because they are included in Department of Revenue's totals and represent an extremely small portion of the sand and gravel taxes collected. On Department of Revenue's request, the committee substitute changes the bill's effective date from July 2012 and makes it retroactive to January 2012. With this change the department and industry need not administer a 6 month return.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB176

Analysis

Section 1 of SB176 removes a sentence from AS 43.65 which effectively exempts mining of sand and gravel from the mining license tax.

Section 2 of SB176 also amends the definition of mining under AS 43.65 to exclude "marketable earth" as a product that is extracted, mined, or taken from the earth. It also excludes marketable earth, sand and gravel from the definition of mining as the ordinary treatment processes applied by mine owners or operators to obtain the commercially marketable product. In Section 3, it states that by removing the mining of sand, gravel and marketable earth from the previous sections, the mining of these products are exempt from the mining license tax.

If enacted, this bill takes into effect July 1, 2012. This bill is expected to have zero fiscal impact on the Department of Natural Resources.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB 176
2012 LEGISLATIVE SESSION

Analysis

Bill Language:
This bill would exempt sand and gravel and marketable earth from the mining license tax. During FY 2011, the Department received 182 mining license tax returns from sand and gravel operators. Included in those tax returns was activity from the extraction of other marketable earth such as peat, top soil, and the like. Only 17 of those 182 taxpayers paid tax. Under the current mining license tax structure, taxpayers do not pay tax if their current year net mining license taxable income is less than $40,000. Most sand and gravel taxpayers do not have more than $40,000 in net income annually and, therefore, do not pay tax. They are, however, required to obtain a mining license and file a mining license tax return each year.

Revenues:
During the past five years, the state has received the following amount of mining license tax revenue from sand and gravel operations:

Fiscal Year	# of Licensees	Sand & Gravel Tax	Total Mining Tax Revenue	Sand & Gravel Tax (Percent of Total)
2007	11	$267,592	$79,141,526	.3%
2008	38	$285,314	$54,408,228	.5%
2009	140	$260,355	$16,044,139	1.6%
2010	131	$206,830	$29,725,100	.7%
2011	189	$320,360	$43,338,119	.7%

Based on previous filings, the Department expects that total mining license tax revenues will decrease each year by approximately $300,000. This bill has an effective date of July 1, 2012, which would result in decreased revenue in FY 2013 of approximately $150,000 as taxpayers, which file on a calendar year basis, would report and pay tax on 6 months of activity (January 1, 2012 through June 30, 2012).

Sand and gravel operators that currently use their mining license in lieu of a business license will be required to obtain a business license each year. The state could see a small increase in business license revenue as a result of this bill.

Expenditures:
During the past five years , the Department has expended approximately $150,000 each fiscal year on the examination and audit of sand and gravel tax returns. Staff used to conduct those examinations were diverted from other excise tax programs to focus on sand and gravel taxpayers as the Department was aware that there was a significant number of non-filers in this tax type. As you can see from the above data, compliance efforts by the Department which started in FY 2007 resulted in the number of licensees increasing dramatically from only 11 in FY 2007 to 189 in FY 2011. However, there was not a dramatic increase in revenues as most taxpayers brought into compliance had less than $40,000 in mining license net income and, therefore, paid no tax. The Department does not expect to reduce staff as a result of this legislation as most resources that currently focus on sand and gravel mining have been re-assigned to compliance activities and audits of other excise taxes.

Subject: RE: Exemptions from Mining Tax - Bill Number SB176

Colaska, Inc. operates as an integrated construction business that owns and leases multiple sand and gravel pits throughout Alaska. Our activities include extracting sand & gravel and processing these extracts into different marketable products. These products are either sold externally to third-party customers or utilized internally in making redi-mix concrete, asphalt hot mix, or on road construction projects.

The Mining License Tax law as it currently exists places an undue hardship and burden on sand and gravel operations to comply with for several reasons.

Firstly, as an integrated business that has some operations considered 'mining activities' and others that are not, it has proven to be difficult to carve out our mining activities from our integrated activities to file a meaningful mining income tax return on an annual basis. This carving requires us to spend much more time to prepare and create the mining income tax return than it does to prepare our corporate income tax return for the IRS and the State of Alaska.

Secondly, we are currently being audited by the Department of Revenue (DOR) for two years of our mining tax returns. The audit process started more than a year ago and is now just coming towards an end. Because of our integrated operations, it has been difficult for the DOR to apply the mining tax law as it currently exists to our situation. Again having integrated activities, it has proven to be very onerous for the DOR to audit a carved out piece of our entire business. To date we have spent well in excess of a combined 800 hours in our organization complying with the audit and responding to audit requests. This is in addition to the hours and costs expended by the DOR on this audit.

Thirdly, the ultimate consumer of our products is the government. In 2011, 78% of our revenues came from public sources. The cost of the mining tax itself, as well as our internal costs to comply with this tax are being passed on to our customers, which the majority is coming from government funds.

In summary, as the Vice President of Finance of a company that must comply with the Mining License Tax, I whole heartedly support Senate Bill No. 176 to exempt sand and gravel and marketable earth mining operations. My support comes from direct experience in the cost and efforts to comply with the current law which by far exceed the tax revenue generated from it.

Subject: Senate Bill 176

Senators Paskvan and Senator Wagoner -
As the Construction Project Manager for Twin Peaks Construction, I would like to speak on behalf of Senate Bill 176, for which I understand that a hearing is taking place next Wednesday, Feb. 15, 2012. Twin Peaks is a relatively small civil construction company providing work on public projects throughout the State for a variety of entities.
We strongly support this bill exempting sand and gravel sales from the State mining tax. As it stands now, as mentioned most of our projects are for public entities, including the state of Alaska. This tax effectively adds to the cost of construction for our company, and thus needs to be accounted for in our bid. Thus this tax currently causes the costs of public construction projects to increase. Furthermore, current law essentially takes the money out of one pocket in the State and puts it in another, as it costs additional monies to contracting entities such as the Department of Transportation, but provides revenue for the Department of Revenue. However, with all bids and projects we do, we add on markup and overhead costs to any actual costs we anticipate, which can run up to 20%. So, in essence, the State is taking money out of one pocket and only getting 80% of that money back, not to mention the administrative costs incurred by the Department of Revenue to review and process these tax returns.
Thanks much for your consideration of this information in your decision.
Take care,
Matt

Subject: SB 176: Exemptions From Mining Tax

The Mining License Tax law puts a lot of burden on businesses that extract sand and gravel to build roads and infrastructure in Alaska. The Mining License Tax Return (MLTR) requires us to segregate the mining activities of our business and that has proven to be very difficult for Colaska because of the way we track our sand and gravel activities. We spend an inordinate amount of time preparing this data every year to comply with the MLTR as well as preparing mining license renewals every year for gravel pits that we infrequently use.

Additionally, we have been going through a Dept of Revenue MLTR Audit for the past year and it also has proven to be an very arduous experience. As Corporate Controller and gatherer of the data from our Regional Controllers and staff, we collectively have spent hundreds of hours preparing schedules, pulling invoices and answering a plethora of questions regarding the MLTR and we still haven't come to the end of the audit.

Finally, the ironic part of this whole ordeal is that almost 80% of our sand and gravel production eventually gets sold to the State of Alaska DOT and local governments in the form of new and/or improved roads via the contracts that were awarded to Colaska. The bottom line is that any additional costs acquired to generate the sales of these sand gravel products translate to additional costs to our customers, mainly the State of Alaska and local governments.

In summary, as the Corporate Controller of a company that must comply with the Mining License Tax, I whole heartedly support Senate Bill No. 176 to exempt sand and gravel and marketable earth mining operations. My support comes from direct experience in the cost and efforts to comply with the current law which by far exceed the tax revenue generated from it.

Capitol Building

Re: HB 298 and SB 176

Dear House and Senate Members:

I am writing this letter to request your support for HB 298 and SB 176.

Sheep Creek Development and one of our individual members own substantial parcels of patented mining claims which were purchased with millions of cubic yards of stacked and processed tailings and fines produced as a byproduct of gold dredge and placer mining operations performed by the former owners.

During 2008, the State of Alaska, Department of Revenue attempted to incorrectly impose the MLT and its requirements on our company. We spent significant sums retaining legal and mining tax professionals, and hundreds of uncompensated hours of personal time, to document and assert our position that we were and are not miners. While it appears DOR informally agreed with our position, it is certainly possible that they could revisit the matter at a future date. Passage of this bill would provide certainty for us and the many other companies who purchased old mining claims with tailings on them which DOR has incorrectly asserted or asserts are subject to the MLT.

Unlike other minerals taxed under the MLT which are combusted or shipped out of state, sand and gravel and the tailings and fines we sell are used and still remain in Alaska. Our largest sales are to publicly funded projects for roads, sidings, etc. but we also sell to homeowners trying to build their driveway or a pad for their new home. Passage will lower the cost of infrastructure for all Alaskans, level the playing field between sand and gravel companies and eliminate the type of burdensome defense costs we have experienced.

Please vote to pass this legislation and do not hesitate to email or call me should you have any further questions regarding this matter.

Sincerely,

Jon Cook

RE: Senate Bill 176 Exemptions from Mining Tax

Dear Senator Wagoner,

Thank you for your support of this important piece of legislation. Though this bill is short, it will remove a burdensome tax and benefit the citizens of Alaska.

Secon is an integrated business, and the mining activities we undertake are a very small part of our operations. However, segregating the mining activities to prepare the State of Alaska mining tax return takes almost as much time as it does to prepare our Federal and State income tax returns.

The audit of two years of our mining tax returns by the Department of Revenue (DOR) has been overwhelming to say the least. Secon has spent approximately 200 hours gathering information and preparing schedules, two DOR auditors were on site in our offices in 2011 for five days each – and the audit is still not complete. Our corporate offices in Anchorage have spent considerable more time than this compiling and consolidating the information for the audit.

All of the sand, rock, and gravel that we mine stays here in Alaska. The majority of it is used in government public works projects (roads, bridges, sidewalks, airports, etc.) along with private projects (driveways, home foundations, gravel for icy roads, etc.) The costs of preparing the mining license tax return and complying with DOR audit requests is passed on the end user of products, which is the State Alaska and the citizens of Alaska.

Thank you again for your time and support of this bill and for your service to our wonderful state.

Sincerely,

Re: SB 176. "Exemptions from Mining Tax"

Dear Senator Paskvan,

Eklutna, Inc. wishes to express its support for Senate Bill 176 as it addresses an onerous administrative burden on gravel extraction operations for both private business and the Alaska Department of Revenue. This bill will exempt sand and gravel operations from the mining license tax.

The present mining tax costs more to collect than the revenues realized. When you consider that about half of all sand and gravel products are used for public projects, it is really the public that is paying an extra tax without a good reason. Mining taxes are more appropriate for minerals, not sand and gravel products.

The audits that need to be performed to calculate the taxes are time-consuming for both the state and operators. The amount of mining license tax paid by the sand and gravel industry is miniscule compared with other taxed minerals. The end result is that the system is inefficient and not cost effective for any party.

Repealing the mining tax for sand and gravel will remove an unnecessary burden for private businesses and allow the Department of Revenue to redirect their activities to revenue producing activities on high value mineral mining operations.

If you have any questions regarding this matter, please do not hesitate to contact me.

Re: Senate Bill 176 "An Act exempting sand and gravel and marketable earth mining operations from the mining license tax; and providing for an effective date."

Dear Senator Paskvan and Senator Wagoner,

Next week, on Wednesday, Feb 15th, you will be receiving testimony on SB 176 regarding the taxation of sand and gravel operations in the State of Alaska. Please consider the following comments as you discuss the numerous merits of this bill.

Sand & Gravel tax return

There is no clear guidance on how to comply with the mining return. While this is manifested in many ways, from a sand & gravel standpoint – and especially for a company engaged in additional processing or use of the aggregate - there are some calculations / allocations that don't make economic sense. These sometimes work in the state's favor and other times in the company's.

Sand & Gravel tax return audits

The state's resources that were spent in auditing our returns (labor, airfare, hotels etc) could have had a much bigger impact auditing different areas. For the years in question there was much less use or sale of aggregates than the current years which in turn would reduce the chance of collecting enough additional revenue to justify the cost of the audit.
The company also suffers financially in complying with the filing of the return and any subsequent audits. We have spent over 150 hours searching for and copying documents, preparing schedules and answering

questions. The cost to the company has included labor, postage, office supplies (paper) and the opportunity cost of the employee's time that would have been better spent elsewhere.

The current taxation system requires a company to report based upon their tax year. Our financial statements are prepared by calendar year and our state and federal taxes are reported with a year end of March 31st. While our current accounting system is configured to accommodate the "routine" filings for state and local corporate taxes, it is not customized to provide the data required by the mining tax return, which must be extracted from our financial statements. This therefore requires that significant additional time be spent reconciling the two financial reporting periods in order to comply with the return requirements. Internally, the best solution would be to keep separate ledgers but this is cost prohibitive with our current set-up.

If the tax for sand & gravel is not abolished it should at the very least be simplified so that compliance is no longer burdensome.

Sand & Gravel tax paid by DOT

While we could focus merely on the fact that administering this tax costs more than it raises, that doesn't address the core issue of who is paying most of the tax – the State of Alaska Department of Transportation. The majority of the aggregates removed from our Interior pits finds its way into a state road or airport project, which means the state is actually taxing itself, and costing itself additional administrative expense in the process.

Our state economy is in a precarious state. It is of utmost importance that we get the most bang for our buck in all areas of state government. The sand and gravel tax system works against that end. Please support SB 176.

Respectfully,

John Godzina

I am Ben Simmons, Vice President – Controller, of Anchorage Sand and Gravel Co., Inc. I have been employed in this capacity for the past 37 years. I have extensive experience with Chapter 43.65 Mining License Tax, filing required tax returns and responding to audits. Based upon my experience and knowledge of the Mining License Tax statute, the following testimony is respectfully submitted.

- **Ambiguous.** The Mining License Tax Statute as it pertains to sand and gravel is very ambiguous and difficult to apply to sand and gravel operations. All mining operations covered by the statute is basically one item (ie. Gold, silver, coal, etc.), with the exception of sand and gravel which can be between 20-30 products. Therefore, applying the statute to sand and gravel requires analysis of 20-30 different items instead of one. In the past 30 years I have been involved in three audits which included 1-3 years of tax returns each. Each audit was handled differently than the previous and final dispositions were settlement agreements with no real guidance for future return filings. The major points of contention are always "fair market value" and "ordinary treatment process" and value of sand and gravel used internally. The statute contains definitions of each, but each is difficult to apply to sand and gravel operators. For instance, operators in vertically integrated companies (typically suppliers) have very different processes from operators who are general contractors. AS&G is a vertically integrated company (supplier) which sells approximately 70% of its mined product to third parties and uses 30% internally. Mining operators who are general contractors sell approximately 30% of their mined product to third parties and use 70% internally (for asphalt, road beds, building pads, etc.). Suppliers' internal sales would include aggregates for asphalt, ready mix concrete, concrete block, sacked goods, etc.
- **Inconsistent application of tax and No "market price" for sand and gravel.** The statute requires internal sales to be valued at "fair market value after they have been subjected to ordinary treatment processes". Unlike gold, silver, lead, zinc, etc., there is no exchange or commodities board one can go to and get the "market or field price" for sand and gravel. So when determining the value to be used for internal use of sand and gravel auditors generally rely on the average sales price by product to third parties. This approach does not take into account bid prices for large quantities, high prices for hard to make specs or simple value added for additional handling. These prices are determined on a product by product basis from one producer to another, so the amount of tax paid by one producer can vary greatly from another

on exactly the same product. Therefore, fair application of the tax is not consistent from one taxpayer to the next.

- **Burdensome.** A great deal of time is required to gather and generate the necessary information for filing a tax return. The current thinking at the Department of Revenue Auditing Division is that "fair market price" should be determined on a product by product basis. AS&G currently makes and inventories between 20-30 aggregate products, so gathering information is very time consuming. In addition, if audited the time requirement and expense grows significantly. Our last audit for tax years 2005-2006 took almost 18 months and costs to AS&G in time and attorney expenses were well over $50,000.00 just complying with requests for information and meetings.
- **Non-productive tax.** It is my belief that the amount of taxes collected from sand and gravel producers is insignificant compared to the cost to the state. During previous audits through discovery it was determined that the state had collected slightly more than $200,000 in mining taxes and AS&G accounted for approximately 50% of this. I can only assume that audit costs are greater than revenue.

In summary, ambiguity as it pertains to sand and gravel, inconsistent application of tax, no markets or indexes for sand and gravel, burdensome and time consuming to comply and non-productive tax are reasons why sand and gravel should be exempted from the Mining License Tax statute. Government (local, state and federal) is the end customer for the majority of our products and ultimately pays this tax and our expense. I estimate that between 60 to 75% of aggregates produced by AS&G are used public or governmental projects. An exemption from this tax for sand and gravel producers should reflect lower costs of materials to construction projects. It will not be readily identifiable due to the competitive nature of the construction industry, but costs of construction materials should be lower.

Respectfully,

Ben D. Simmons

Senate Resources Committee

Re: SB 176: Exemptions from Mining Tax / Companion House Bill 298

Dear Senator,

Thank you for giving me the opportunity to address you regarding Senate Bill 176. My name is Wes Vander Martin; I am the Vice President/General Manager of Anchorage Sand & Gravel where I have worked for the past 20 years. Anchorage Sand & Gravel is a vertically integrated company that mines and sales sand and gravel related products, such as concrete, asphalt aggregates, block, precast concrete, cement, and a host of other construction related products and activities. AS&G has been in doing business in Alaska since 1938. Our products are used on a wide variety projects in the greater Anchorage area and over the whole state from residential to Military and State DOT projects.

AS&G is in favor of the passage of Senate Bill 176 that would exempt the tax on income, related to the mining of sand, gravel, quarry rock, and other marketable earth products, for the following reasons.

1st – The amount of revenue that the State is receiving from collecting this tax is less than, or at best equal to, what it is costing the state to collect it. Therefore it is a neutral tax at best. According to information reported, the State only received about $200,000 in tax revenue in 2010, from all the numerous sand & gravel producers. The state over the years has performed many audits, some individual audits lasting more than 2 years to complete. This has cause a great strain on the states auditing department with little results to show for it.

2nd - The tax is burdensome. A great deal of time is required to gather and generate the necessary information for filing a tax return. The current thinking of the department of revenue auditing division is that "fair market price" should be determined on each product to help calculate revenue. In AS&G case we make over 20-30 different sand and gravel products, so gathering information is very time consuming. If we are audited the time

AS&G a subsidiary of Alaska Basic Industries
ANCHORAGE SAND and GRAVEL CO., INC.
1040 O'Malley Road • Anchorage, Alaska 99515 • (907) 349-3333 • FAX (907) 344-2844 • www.anchsand.com

requirement and expense grows significantly. Our last audit took almost 18 month and cost AS&G in time and attorney fees will over $50,000 just complying with request for information and meetings.

3rd – The mining tax, as it relates to sand and gravel, is very ambiguous and inconsistent. As I have already mentioned AS&G for example is required to try and figure out what the "fair market value" is for 20 to 30 different products. Other mining operations such as gold, silver, zinc, or coal for example are indexed, and the values are well known and easily traceable. This is not the case for sand and gravel. The various gravel producers in the state have very different processes and markets, thus making it difficult to determine a "fair market price". For example AS&G is strictly a supplier of materials, were other producers lean more towards construction and use their products on their own projects? Defining a "fair market value" that is fair and easy to determined is at the root of the problem. This is what the auditors and producers struggle with, thus making the application of the tax inconsistent across the board. The amount of tax paid by one producer can vary greatly from another even on exactly the same product.

4th – Governments (local, state, and federal) are the end customer for a majority of our products, and are ultimately the ones paying for this tax, because the producers are just passing on the costs. AS&G sells about 65% of their products to government projects. It seems to me that the government is really just adding unnecessary cost to their own projects.

In summary, this is a nonproductive tax, it is burdensome and time consuming for both the producers and the state auditing department, and it is inconsistent because there are no markets or indexes for sand and gravel. For these reasons sand and gravel should be exempted from the Mining License Tax statute.

Thank You,

Wes Vander Martin
Vice President/General Manager

COLASKA

February 10, 2012

Dear Senator Paskvan:

As President of one of Alaska's large, road construction companies that must comply with the Mining License Tax, I am informing you that **Senate Bill 176: Exemptions from Mining Tax**, has my full support, and I encourage you to vote for its passage.

Colaska, Inc. operates as an integrated construction business that owns and leases multiple sand and gravel pits throughout Alaska. Our activities include extracting sand & gravel and processing these extracts into different marketable products. These products are either sold externally to third-party customers or utilized internally in making redi-mix concrete, asphalt hot mix, or on road construction projects, the majority of which are public works projects.

We are currently being audited by the State of Alaska, Department of Revenue (DOR) for two years of our mining tax returns. The audit process started more than a year ago and is now just coming towards an end. It has been difficult for the DOR to apply the mining tax law as it currently exists to a company like ours that performs integrated activities. To date we have spent well in excess of a combined 800 hours in our organization complying with the audit and responding to audit requests. This is in addition to the hours and costs expended by the DOR on this audit with a minimal revenue result.

At a time when we are trying to encourage business and growth in our great State of Alaska, I believe there are much better places to spend our time and energy than trying to resurrect a "make work" program that probably does not cover its own costs.

Please vote for Senate Bill 176.

Sincerely,

COLASKA, INC.

Ben A. Northey, CPC

Reference: Exemptions from Mining License Tax – SB176

I believe the Mining License Tax law places an undue hardship and burden on all sand and gravel operations.

Colaska, Inc. owns and leases many sand and gravel pits throughout Alaska. We extract sand & gravel and process these extracts into different marketable products. These products are either sold externally to third-party customers or utilized internally in making redi-mix concrete, asphalt hot mix, or on our road construction projects, the majority of which are public works projects.

We have some operations that are considered 'mining activities' and others that are not. The time we have spent to prepare and create the mining income tax return is more time than we have spent to prepare our corporate income tax return for the IRS and the State of Alaska. The end result is that it will add to the cost of all construction.

As the Vice President of Operations of a company that must comply with the Mining License Tax, **I whole heartedly support Senate Bill 176 to exempt sand and gravel and marketable earth mining operations.** My support comes from direct experience in the cost and efforts to comply with the current law which by far exceed the tax revenue generated from it.

Yours truly,

COLASKA, INC.

Re: SB 176

Dear ~~Senator Paskvan~~ Joe:

On behalf of the Associated General Contractors of Alaska, a construction trade association of over 650 business members, representing the majority of the construction industry in Alaska, thank you for hearing SB 176.

Working with our affected companies last spring, we realized that the present mining license tax structure was poorly applied to aggregate production in the construction industry. Last summer we approached the Department of Revenue about the problems with the present tax as it applies to quarry rock and sand and gravel operations in Alaska and how the present requirements could be simplified. After researching the issue it was recommended that the simple solution was to exempt quarry rock and sand and gravel operations requirements.

This has been a cooperative effort between industry and the administration. We quickly recognized that this was a true nuisance tax. For the State, it is a lot of effort to administer. For the construction industry, it is very complicated to calculate and even more complicated to audit, for relatively little revenue to the state and many times more expense to industry. When you consider that the majority of the mined and processed product goes into public works projects, government is paying most of the associated costs and the tax, at the expense of our projects.

Thank you again for your consideration and support for SB 176 and this exemption for the aggregate business from the mining license tax.

Sincerely,

John MacKinnon

To: Senator Joe Paskvan

Re. HB298 Mining Tax

Senator Paskvan:

Our companies are engaged in construction of roads, and building sites locally around Fairbanks utilizing our owned gravel sources.
We have been reporting and paying the mining tax.
November 24, 2009 the State of Alaska Department of Revenue requested and audit of our records. A request for extension by the Department of Revenue was received July, 2011. Over 2 years have passed without resolution.

This process is costly and burdensome:

1. The rules are not clearly defined leaving determination of the rules open to interpretation.
2. The audit process is time consuming, burdensome, frustration and costly for companies to comply. Records are voluminous and have to be transferred by mail. It is as if we are in a legal suit rather than regulation compliance.

Most of H C Contractors work is public work. This will only increase the cost of doing work on those contracts. The extra cost will be added to the contracts so the government dollars will pay the tax back to the government through the increase. This is a futile process.

The mining tax on local gravel sources needs to be repealed. These are not mineral resources. This will save money for all of us.
Thank you.

Sincerely,

William Hoople
President, H C Contractors, Inc.

RE: House Bill 298

Dear Honorable Legislators:

I would like to express my support for House Bill 298, in the Legislature of the State of Alaska, Twenty-Seventh Legislature – Second Session.

The above referenced House Bill, as introduced on January 25, 2012, would exempt sand and gravel mines from the requirement to calculate and pay the annual mining license tax. I am supportive of removing the requirement that sand and gravel mines be subject to the mining license tax as the law currently reads.

Current statutes and regulations are vague and difficult to understand. I have had many conversations with State of Alaska employees at the Department of Revenue regarding this tax. It is my belief that each person reading the regulations could reasonably draw different conclusions with respect to similar fact patterns making the calculations of the tax difficult and expensive for the mining operations.

Please vote in favor of removing this burdensome tax requirement from sand and gravel operators as the costs of preparing, reviewing and filing the mining tax returns are greater than the benefits derived from the tax for both the operators and the State of Alaska.

Thank you for your kind attention to this matter. Please feel free to contact me should you have further questions.

Respectfully,

S. Trotzke

Ref: Senate Bill No. 176: Exemptions From Mining Tax

Dear Senate Resource Committee Members:

Thank you for your support of SB 176. This bill will remove a burdensome tax to the benefit of the citizens of Alaska.

Brice Companies are based in Fairbanks, AK and include Browns Hill Quarry located on Badger Road between North Pole and Fairbanks. Browns Hill Quarry provides quarry rock and sand and gravel products for sale to the public as well as a majority of the public works projects in the area for roads, driveways, erosion control and landscaping. In the recent past, we have had to comply with an onerous audit of the Mining License Tax by the Department of Revenue (DOR). This audit required us to spend a significant amount of additional time with our staff and the hiring of an outside CPA firm over a two year period to finalize our response. The cost of this audit by the DOR to our company was significant and does not correlate with the amount of tax revenue generated. Our Mining License payments during the 2 year audit would not have covered the costs of the DOR auditors to the State for the hours of effort expended.

All of the quarry rock, sand and gravel products we mine at Browns Hill Quarry stay in Alaska. Costs to prepare and pay the Mining License Tax and audit expenses are passed on to our customers, Alaskans.

Thank you for your time and support of this bill.

Sincerely,

Sam Robert Brice

Re: Request for Hearing – SB 181Closing Certain Land To Mineral Entry

I respectfully request Senate Bill 181 be scheduled for hearing before the Senate Resources Committee at your earliest convenience.

Senate Bill 181 closes certain land within the Glacier Creek and Winner Creek drainage to new mineral entry. It also amends sec. 2, ch. 8, SLA 2003, to reference and exclude two federal mining claims that were inadvertently missed in the legal description in Section 34 of the original legislation.

Please contact myself or Sharon Long in my office for any questions you may have.

Senate Bill 181
Sponsor Statement

"An Act approving an interim classification by the commissioner of natural resources closing certain land within the Glacier Creek and Winner Creek drainages to new mineral entry; amending the mineral entry closure in sec. 2, ch. 8 SLA 2003, for certain land within the Glacier and Winner Creek drainages; and providing for an effective date."

SB 181 closes presently state-owned and state-selected lands in the Glacier and Winner Creek drainages of the Girdwood area to new mineral entry. For both residents and tourists, the development and expansion of Girdwood's potential as a year-round destination for myriad recreational activities will lead to more private sector jobs, opportunities for new business, and an enriched community and state.

In January 2011, Department of Natural Resources Commissioner Dan Sullivan, issued an interim classification (Mineral Order 1121) which closed state subsurface lands and state-selected lands to mineral entry within Glacier Creek and Winner Creek drainages in the Girdwood area. SB 181 approves this mineral order and amends sec. 2, ch. 8, SLA 2003, to exclude two federal mining claims that were inadvertently missed within Section 34 in the original legislation.

A Mineral Closing Order was issued in 1992 for this area and became necessary when numerous mining claims were staked at the same time that the federal government was in the process of conveying this land to the State of Alaska. The Municipality of Anchorage purchased the claims so that these lands could be developed for recreational use and to prevent conflict between surface and subsurface users. The Commissioner of the Department of Natural Resources closed this area to mineral entry on state-owned, state-selected, and municipal lands in the Upper Girdwood Valley under Mineral Closing Order 593. The closure had a limit of ten years unless the commissioner certified to the governor and the legislature that recreational land use and development plans had begun in this area. In 2003, the commissioner extended the mineral closing order for another ten-year term through Mineral Closing Order 593 Amendment 3. This extension was set to expire in April of 2012.

Senator Cathy Giessel

Senate District P

Closing these lands to mineral entry supports the Department of Natural Resources findings that:

- Mining in this area is inconsistent with recreation and tourism development.
- It is important to protect current and future development including: Alyeska Resort, expanding Nordic ski trails, the upgraded Winner Creek Trail system, and commercial snowcat and helicopter skiing activities.
- A mineral closure in this area would be consistent with the Turnagain Arm Management Plan, Alaska Statehood Act, Alaska State law, and various natural resource court decisions.

Alyeska Resort commissioned and paid for a detailed analysis and technical feasibility study. The study concluded that expansion of skier based facilities into the area is feasible. Additionally, community interests in expanding recreational opportunities within the Girdwood Valley have increased significantly in the last decade. SB 181 mitigates future conflict between competing, potentially incompatible, interests.

Senator_Cathy_Giessel@legis.state.ak.us

Senate Bill 181
Closing Certain Land To Mineral Entry
Sectional Analysis

Section 1: States the purpose of Senate Bill 181. This Act approves the interim classification contained in Commissioner of Natural Resources' Mineral Order 1121 and in Amendment 3 to Mineral Closing Order 593, closing state land in the Glacier and Winner Creek drainages in the Girdwood area to new mineral entry. Closing these state-owned lands to mineral claims will enable continued recreational developments in accordance with area land use plans.

Section 2: Identifies the land in the Glacier Creek and Winner Creek drainages that is closed to new mineral entry.

Section 3: Amends the description of land in the Glacier Creek and Winner Creek drainages that were closed to mineral entry and approved by the legislature in sec. 2, ch. 8, SLA 2003 by excluding two additional federal mining claims lying east of Crow Creek Road that should have been listed in the original mineral closure order.

Section 4: Provides for an immediate effective date.

Prepared by Senator Cathy Giessel's Office 1/30/12

SENATE BILL NO. 181

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY SENATOR GIESSEL

Introduced: 1/27/12
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act approving an interim classification by the commissioner of natural resources closing certain land within the Glacier Creek and Winner Creek drainages to new mineral entry; amending the mineral entry closure in sec. 2, ch. 8, SLA 2003, for certain land within the Glacier Creek and Winner Creek drainages; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PURPOSE. The purpose of this Act is to approve the interim classifications contained in Mineral Order No. 1121 and in Amendment 3 to Mineral Closing Order 593, issued by the commissioner of natural resources, to close state land within the upper Glacier Creek and Winner Creek drainages near Girdwood to new mineral entry. The legislature recognizes that mineral entry would be incompatible with the existing and proposed development of

significant surface-based recreational facilities and infrastructure in the Glacier Creek and Winner Creek drainages. The legislature finds that closure of the state-owned mineral estate to new mineral entry will reserve those lands for recreational development opportunities as provided in the land use plans of the state and the Municipality of Anchorage.

* **Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

MINERAL ENTRY CLOSURE. Under AS 38.05.300(c), and subject to existing valid rights, the following state-owned land, and all land acquired in the future by the state, laying within the Glacier Creek and Winner Creek drainages, is closed to new mineral entry:

(1) Township 10 North, Range 2 East, Seward Meridian

Section 9: E1/2SE1/4NE1/4 within the Chugach National Forest, E1/2SE1/4 within the Chugach National Forest

Section 10: SW1/4, SW1/4SW1/4NE1/4, S1/2NW1/4 except for the N1/2NE1/4SE1/4NW1/4, W1/2SE1/4, W1/2SW1/4NE1/4SE1/4, SE1/4SE1/4 except for the NE1/4SE1/4SE1/4

Section 12

Section 13: N1/2

Section 14: W1/2

Section 15

Section 16: E1/2E1/2 within the Chugach National Forest

Section 21: E1/2NE1/4NE1/4 within the Chugach National Forest

Section 22: N1/2N1/2

(2) Township 10 North, Range 3 East, Seward Meridian

Section 5: NW1/4, S1/2

Section 6: SE1/4, S1/2SW1/4

Section 7: SW1/4, N1/2

Section 8: NW1/4

Section 18: N1/2NW1/4

(3) Township 11 North, Range 2 East, Seward Meridian

Section 25: S1/2SE1/4

(4) Township 11 North, Range 3 East, Seward Meridian

Section 20: SE1/4
Section 21: W1/2SW1/4
Section 28: W1/2W1/2
Section 29
Section 30: S1/2
Section 32: NE1/4
Section 33: NW1/4NW1/4

* **Sec. 3.** The uncodified law of the State of Alaska enacted in sec. 2, ch. 8, SLA 2003, is amended to read:

Sec. 2. MINERAL ENTRY CLOSURE. Under AS 38.05.300(c), and subject to existing valid rights, the following described state-owned land in the Glacier Creek and Winner Creek drainages, totaling approximately 5,740 acres, is closed to new mineral entry:

Township 10 North, Range 2 East, Seward Meridian
Sections 1-3 [: ALL]
Section 4: N1/2NE1/4 east of Crow Creek Road, and those portions of SE1/4NE1/4 and E1/2SE1/4 within the Chugach National Forest
Section 9: E1/2NE1/4NE1/4 within the Chugach National Forest
Section 10: N1/2N1/2, N1/2NE1/4SE1/4NW1/4, N1/2SW1/4NE1/4, SE1/4SW1/4NE1/4, SE1/4NE1/4, N1/2NE1/4SE1/4, E1/2SW1/4NE1/4SE1/4, SE1/4NE1/4SE1/4, NE1/4SE1/4SE1/4
Section 11 [: ALL]
Township 10 North, Range 3 East, Seward Meridian
Section 6: N1/2, N1/2SW1/4
Township 11 North, Range 2 East, Seward Meridian
Section 33: SE1/4SE1/4 All land lying southeast of Crow Creek Road
Section 34: SW1/4 All land lying east of Crow Creek Road, SE1/4; excluding mining claim recordations **AA 56277, AA 56278,** AA 56282 and AA 56283 and U.S. Survey 11872
Section 35: All, excluding the N1/2NE1/4, NE1/4NW1/4

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 181

Analysis

SB 181 amends uncodified law to approve the interim classifications contained in Mineral Order #1121 and in Amendment 3 to mineral Closing order #593, issued by the commissioner of DNR to close state land within the upper Glacier Creek and Winner Creek drainages near Girdwood to new mineral entry.

This proposed legislation will not result in any additional fiscal impact to the department or measurable loss of revenue to the state.

Juneau, Alaska 99811

Re: Certification Letter –Mineral Closing Order 593, Amendment 3

Dear Governor Parnell and Ms. Finley:

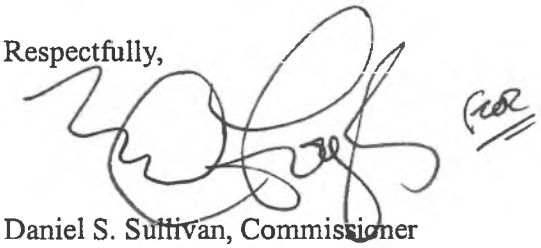
The purpose of this letter is to certify, pursuant to sec. 4, ch. 8, SLA 2003, that development of a resort within the Glacier and Winner Creek drainages near Girdwood has begun, with the effect of terminating Mineral Opening Order No. 603. Under sec. 2, ch. 8, SLA 2003, the Legislature closed state-owned land within the Glacier and Winner Creek drainages to mineral entry. Sec. 3 of the Act repeals the mineral closure effective April 3, 2012, unless the Commissioner of Natural Resources certifies to the Governor and the Revisor of Statutes on or before April 2, 2012 that development of a resort as described in sec. 1, ch. 8, SLA 2003 and as provided in state and Municipality of Anchorage land use plans has begun in the area closed to mineral entry.

Community interest in expanding recreational opportunities within the Girdwood Valley has increased significantly within the last decade. The original development vision of a new four season resort has expanded to include a variety of recreational development opportunities. Local interest groups, private businesses, and governmental agencies have developed Nordic ski trails, expanded backcountry helicopter and snowcat skiing opportunities, and upgraded local trails including the Winner Creek Trail system, and the owner of Alyeska Resort has commissioned the development of a Master Development Plan to promote skier based recreational facilities within the Glacier and Winner Creek drainages. This continued development was further supported by the administration's approval of 3.5 million dollars to the Municipality of Anchorage to extend Arlberg Road to secure access into the Winner Creek area. This road extension project will encourage additional recreational infrastructure and support a variety of recreational opportunities.

As the Commissioner of the Department of Natural Resources, I hereby certify that development of a resort as provided in State and Municipality of Anchorage land use plans has begun in the Glacier and Winner Creek drainages. Therefore, by operation of sec. 4, ch. 8, SLA 2003, Mineral Opening

Order No. 603 is terminated and the mineral entry closure of all land described within Mineral Closing Order 593, Amendment 3, remains in effect.

Respectfully,



Daniel S. Sullivan, Commissioner
Alaska Department of Natural Resources

Cc: Hon. Gary Stevens, Senate President
Hon. Mike Chenault, Speaker of the House of Representatives
John Burns, Attorney General
John Byrne, Alyeska Resort President

State of Alaska
Department of Natural Resources
Division of Mining, Land, and Water

FINDING OF THE COMMISSIONER
AS 38.05.185(a) and 38.05.300(c)

MINERAL ORDER (Closing) 1121
Glacier-Winner Creek Drainages

The Southcentral Regional Manager of the State of Alaska, Department of Natural Resources, Division of Mining, Land, and Water recommends thru the Director's Office that the Commissioner close to new mineral entry approximately 5,580 acres of state and state selected lands within the Upper Girdwood Valley (see Attachment A) in accordance with AS 38.05.185(a) and 38.05.300(c). The purpose of this closure is to support and promote additional recreational development in the Glacier and Winner Creek drainages near Girdwood, Alaska.

Mineral Order (MO) 1121 compliments Mineral Closing Order 593, Amendments 1, 2, and 3.

Background:
The need for a Mineral Closing Order in this area became apparent some time ago when numerous federal mining claims were staked while the federal government was in the processes of conveying these lands to the State of Alaska. As the Municipality of Anchorage was interested in these lands for recreational development, they purchased the claims so that there would be no conflict between surface and sub-surface users. During the formulation of the Turnagain Arm Management Plan, the Anchorage Assembly requested that the State close the area to new mineral staking. In the early 1990's the Commissioner of the Department of Natural Resources closed this area to mineral entry on approximately 10,000 acres of state, state selected, and municipal lands in the Girdwood Valley under Mineral Closing Orders 593 (including amendments 1 and 2). This closure had a term limit of ten years. In 2002, the Commissioner extended the mineral closing order for another ten year term through MCO 593 Amendment 3 (MCO 593 A3). This extension will expire on April 2, 2012.

In accordance with AS 38.05.300(c), MCO 593 A3 was presented to the 2003 Alaska State Legislature for approval. That approval was granted through House Bill (HB) 139 which enacted as ch. 8, SLA 2003. Sec. 4 of that act provides that should the DNR Commissioner certify to the governor and the revisor of statutes on or before April 2, 2012, that development of a resort as described in sec. 1 of the act and as provided in

and Municipality of Anchorage land use plans has begun, the expiration of the closing order would not take effect.

Originally, DNR public noticed that all mineral closing actions for this area would be conducted under MO 1121. It was the intent of DNR to bundle all of the MCOs together and eliminate the confusion the various amendments have caused. However, after consulting with the Department of Law, it was determined that the best course of action was to certify that recreational development has occurred per legislative requirements outlined within ch. 8, SLA 2003. Therefore, a separate process of certifying development has already occurred will parallel this finding, thus eliminating the expiration date for those lands affected by the third amendment of MCO 593 and negating the need to include them within MO 1121.

Recommended Actions under this Finding:

1. Issue Mineral Order 1121 (closure) per AS 38.05.185(a) as mineral entry (mining) is incompatible with the significant surface use development activities occurring within the Glacier and Winner Creek drainages near Girdwood.

2. Transmit and introduce Mineral Order 1121 within the first 10 days of the 2012 legislative session for legislative approval per AS 38.05.300(c).

Rationale for Mineral Closures within the Glacier and Winner Creek Drainages:
Community interest in expanding recreational opportunities within the Girdwood Valley has increased significantly within the last decade. Local interest groups, private businesses, and governmental agencies have developed Nordic ski trails, expanded backcountry helicopter and snowcat skiing opportunities, upgraded local trails including the Winner Creek Trail system, and Alyeska Resort has commissioned the development of a Master Development Plan to promote skier based recreational facilities within the Glacier and Winner Creek drainages. Furthermore, in July 2011 a legislative appropriation of 3.5 million dollars to extend Arlberg Road was approved to fund the necessary road development project to secure access into the Winner Creek area. This extension project is designed to encourage additional recreational infrastructure including, a Nordic trail facility; expanding the existing Nordic trail systems; additional parking areas; and land necessary for additional lodging and real estate opportunities.

If the lands in the Girdwood area were to open to mineral entry and claims staked, it would interfere with the planned, orderly development of the area and could interfere with attempts of developers to obtain financing. Additionally mining activity in this area would be incompatible with the management intent for Management Units 3a and 3b described in the Turnagain Arm Management Plan, which recognizes that this area should be closed to mineral entry. By not taking action to close this area to mineral entry, the possibility exists that mineral staking could occur, in the same way that it did previously with the Municipality of Anchorage. This approach is inconsistent with the intent of AS 38.05.185 which provides for the closure of areas where an apparent incompatibility exists. Substantial recreational development has already occurred and a

development plan has been drafted that provides for recreational use and infrastructure development of this area. The reopening of this area to mineral entry would be incompatible with these existing and planned recreational activities.

Term Length:
The previous mineral orders in this area have been subject to a term limit, in large part based on the stipulation in the area plan that the closures be of ten year duration. However, in its entirety the area plan states "This closure is in effect until ten years from the date of conveyance of this land to the state, at which time the land may be re-opened to mineral entry *if resort development is not likely to occur."* Until recently, it was not apparent when and how this type of development would occur, but this aspect has changed and development on a long-term basis is now much more probable.

One large factor in favor of vacating the "termed" MCO approach is a recent change in ownership of Alyeska Resort. When the first mineral closure was instituted over 20 years ago, the then owner of Alyeska Resort strongly indicated no desire to expand ski area facilities beyond its current boundary, stating that any such expansion of ski area facilities would have to be addressed by a third party. That situation alone made it very difficult for a third party to find it financially feasible to create new skier services in the area which would meet the requirement for a long-term mineral closure.

The current owner of Alyeska Resort is committed to extensive upgrades of equipment and facilities at the resort and to the development of increasingly diverse recreation opportunities within the area of closure. In fact, this change in ownership has resulted in millions of dollars being spent for recreational and infrastructure development to date. Additionally, continued upgrades are planned for the resort, including new lift systems. Forecasted lift upgrades at the Alyeska Resort within the next several years will cost millions of dollars for which public and private financing is available. However, if the Glacier and Winner Creek drainages are subjected to another Mineral Order with a term limit imposed, investment in new lift systems – as well as other important infrastructure improvements—are not likely to occur due to the absence of long term certainty. Alyeska Resort has stated that it is committed to investing capital dollars into infrastructure but not if the area is open to mineral entry.

There is significance to the condition of new ownership at the resort that goes beyond the financial realities. This owner is a highly skilled owner/operator in the ski resort business and is acutely aware of the importance and significance of the resource values in this area. Not just for the opportunity to expand recreational services beyond the current resort's boundary, but for the values development in the surrounding area offer his existing operation at the resort. Increasing the diversity of recreational choices in the surrounding backcountry increases the value of Alyeska Resort as a destination. A diversity of attractions in the area as a whole will lead to increased demand for services, development of jobs, and opportunity for new entrepreneurs. Expansion of recreational based facilities into the Glacier Winner Creek Valley is shown to be feasible by a detailed analysis and technical feasibility study commissioned and paid for by Alyeska Resort. When such an expansion might occur is more closely related to economic conditions.

Agency Review:
An Interagency Review was initiated on January 6, 2011 and concluded on January 18, 2011. Included in the review were Alaska Department of Transportation and Public Facilities, Alaska Department of Environmental Conservation, Alaska Department of Fish and Game, Bureau of Land Management, U. S. Forest Service, Municipality of Anchorage, and Cook Inlet Region Incorporated. Within the Department of Natural Resources, the Divisions of Mining, Land, and Water; Parks and Outdoor Recreation; and the Geological & Geophysical Surveys were included in the review. In total, one "no objection" comment and three agency comments were received.

Agency Comments:

U.S. Forest Service/Glacier Ranger District

Supports the mineral closure in favor of the recreational development in the Girdwood area. Closure is in accordance with current U.S. Forest Service management intents.

MOA Heritage Land Bank

Fully supportive of the mineral closure. MOA lands in the upper Girdwood Valley have a mix of commercial, residential, and recreational values which are inconsistent with mineral entry. They would prefer if the closure was permanent.

ADGGS

The Alaska Division of Geological & Geophysical Surveys reviewed the lands within MO 1121 for mineral resources. They have reported that the USGS and BLM reports are good and thorough summaries for the potential of locatable minerals in this area and that there are no known mineral prospects within the closure area.

Public Notice:
Pursuant to AS 38.05.945, a draft Commissioner's Finding was advertised for a 30 day public comment period, starting on January 20, 2011. This notice was run in both the Anchorage Daily News and the Turnagain Times. Courtesy notices were mailed to interested parties located in and around the mineral closure area on January 19, 2011. The deadline to submit comments was set for February 21, 2011. However, as that date turned out to be a state holiday, the deadline was extended to February 22 so as to accommodate those who tried to submit comments on the last day.

Public Comment Summary:
During the public notice period, DNR received ten public comments in favor of the mineral closure. Below is a summary of those submitted reasons:

- Important for the continued sustainability and viability of the Alyeska resort.
- Important for any possible expansion of the Alyeska Resort.
- Important to maintain the natural view shed for locals and tourist alike.

- Mining is inconsistent with recreation and tourism development and only benefits a few while recreation is available for everyone's enjoyment.
- Several residents did not want to live next to "full blown mining" but also felt that recreational gold panning was acceptable.
- Important to protect current and future recreational development including;
    - Alyeska Resort
    - Expanding Nordic ski trails
    - The upgraded Winner Creek trail system
    - Commercial snowcat and helicopter skiing activities
- A mineral closure in this area would be consistent with the Turnagain Arm Management Plan, Alaska Statehood Act, Alaska state law, and various natural resource court decisions.

Furthermore, nine of the commenters stated that they wanted the mineral closure to either be indefinite or permanent. One comment was submitted by Crow Creek Mine which stated that they supported the intent of the mineral closure, but they recommended instituting a term limit of 10 to 15 years on lands not under a recreational lease so as to prevent a "permanent" closure.

- **DNR Response**: The State of Alaska has the ability to open or close land to new mineral entry through mineral orders. Typically these mineral orders do not have an expiration date. The State of Alaska does not have the ability to make a mineral order permanent. This was purposely set up this way so that future generations can address changes in land use. The Girdwood mineral orders which were established in 1991 were unusual in that the orders had a termination date. This was purposely done so as to trigger a review of land use patterns in the upper Girdwood Valley every ten years. At this time, DNR has determined that sufficient recreational development has begun in the Girdwood area and in order to protect current recreational activities and promote further development, DNR will not place an expiration date on this mineral closure order.

Crow Creek Mine recommended including land within Township 11 North Range 2 East, Seward Meridian: Section 33: SE1/4 SW1/4 All lands lying SE of Crow Creek Road, and Section 34: SE1/4SW1/4 all lands lying East of Crow Creek Road within MO 1121. According to Crow Creek Mine, this would exclude and not impact the U.S. Survey 11872 and federal mining claim recordations AA 56277, AA 56278, AA 56282 and AA 56283.

- **DNR Response**: Mineral Order 1121 (MO 1121) does not include the area described above. Instead, this area is already covered under Mineral Closing Order 593, Amendment 3 (MCO 593A3). It is important to recognize, neither mineral closing order has any effect on U.S. Survey 11872 and federal mining claim recordations AA 56277, AA 56278, AA 56282 and AA 56283 as they are not state owned lands. So long as Crow Creek Mine's federal mining claims are active, these lands are not eligible to be conveyed to the state. If at some point in

time this area is conveyed to the state, MCO 593A3 will then affect the area described.

During the adjudication of MO 1121, an error in the Tentative Approval (TA) for this area was discovered in which two federal mining claims (AA 56277 and AA 56278) were inadvertently excluded from the TA. For this reason, DNR will pursue an amendment to the legal description for MCO 593A3 to read as follows: Township 11 North, Range 2 East, Section 34: SW1/4 all land lying east of Crow Creek Road, SE1/4; excluding mining claim recordations AA 56277, AA 56278, AA 56282 and AA 56283 and U.S. Survey 11872.

Signature page follows:

Commissioner's Decision:
In accordance with of AS 38.05.185(a) and AS 38.05.300(c), I find that the best interest of the State of Alaska and its residents are served by issuing Mineral Order 1121 for closure to mineral entry the described lands within Attachment A. The closure is necessary and proper in order to protect current recreational activities and to promote further development in the Girdwood area. This Administrative Finding determines that mining would be incompatible with the significant surface uses on state land, including potential land disposals such as a recreational development lease (AS 38.05.073), and does not place any term limit on the closure.

The effective date of this closure is to be 30 days after the approval of Mineral Order 1121 by the Commissioner of the Department of Natural Resources. Mineral Order 1121 closes all state land described in Attachment A until such time that the Department determines that they are no longer required for this function. The described state selected lands within Mineral Order 1121 will automatically take effect upon conveyance to the state.

Request for Reconsideration:
A person affected by this decision may request reconsideration, in accordance with 11 AAC 02. Any reconsideration request must be received by 5:00 pm on November 1, 2011 and may be mailed or delivered to Daniel S. Sullivan, Commissioner, Department of Natural Resources, 550 W. 7th Avenue, Suite 1400, Anchorage, Alaska 99501; faxed to 1-907-269-8918, or sent by electronic mail to dnr.appeals@alaska.gov. If reconsideration is not requested by that date or if the commissioner does not order reconsideration on his own motion, this decision goes into effect as a final order and decision on November 14, 2011. Failure of the commissioner to act on a request for reconsideration within 30 days after issuance of this decision is a denial of reconsideration and is a final administrative order and decision for purposes of an appeal to Superior Court. The decision may then be appealed to Superior Court within a further 30 days in accordance with the rules of the court, and to the extent permitted by applicable law. An eligible person must first request reconsideration of this decision in accordance with 11 AAC 02 before appealing this decision to Superior Court. A copy of 11 AAC 02 may be obtained from any regional information office of the Department of Natural Resources.

CHUGACH
POWDER GUIDES

To whom it may concern:

On behalf of Chugach Powder Guides I am sending a letter requesting an indefinite closure of mining in the Upper Winner Creek/Glacier Creek drainages. I believe opening this area to mining would be a detriment to my business. This area represents a critical element of both our heli ski and snowcat skiing activities. This area is our most commonly used terrain and is also necessary for the safe access of our other terrain areas. We believe that mining in this area would substantially disrupt our ability to effectively use this area in a safe and enjoyable manner for our clients. The attached maps show our permitted area of operation around the Upper Winner Creek / Glacier Creek drainages. We have been an established business in operation in this area for 15 years. We have made substantial investments in the development of our product and necessary infrastructure to deliver it in this area.

I am making this request for purposes of the public record. Feel free to contact me at owens@chugachpowderguides.com or 907-783-4354.

Respectfully,

Christopher J. Owens

Comments of Cynthia Pickering Christianson
In support of Proposed Mineral Order Number 1121
Closing Lands In the Upper Girdwood Valley to Mineral Entry

I. Personal Comments:

My husband, our three sons, and I have had a home in Girdwood for over 20 years. Our Girdwood cabin was the center of our family's life while our children were growing up. It still is the place our kids want to go as soon as they come home to Alaska-- from college, ski racing events or working Outside. (They are now age 30, 26 and 18).

From our front door step in Girdwood, depending on the season, we are only minutes away from skiing or hiking the slopes at Alyeska Resort, skiing around Moose Meadow while dog teams whiz by, exploring the upper meadows of Glacier Valley on foot or on skis, skiing with skins up the cat track to the backcountry, mountain biking on the newly created bike trails at the Resort or on other trails through the forest, hiking or mountain biking the Winner Creek trail, berry-picking, fishing at Glacier Creek, backpacking up Winner Creek trail with a pack raft and tent into the neighboring Twenty Mile valley, taking a helicopter to a nearby ridge and hiking back home, going out to a gourmet restaurant (or maybe a down-home one), getting a massage at the spa at the Resort, enjoying a festival, attending a ski club event.....the list goes on. What is unique about Girdwood is the accessibility of these activities, and the mix.

Our family has spent countless hours, in summer and in winter, exploring the trails, experiencing the pristine wilderness and enjoying the amazingly beautiful backcountry of the Glacier-Winner Creek Valley. All of us are alpine skiers, and some of us enjoy the Nordic trails as well. Our sons grew up spending every free minute on the mountain skiing during ski season --beginning with lessons at the Alyeska Resort's ski school, progressing through the Alyeska Ski Club's race programs, and chasing each other and their friends down the mountain free skiing when their lessons, training or racing were done for the day. One of our sons went on to become a 4 time NCAA All American alpine ski racer who represented the United States twice at World University Games, and another is currently on the U.S. Ski Team and won the U-15 (Children's) World Alpine Ski Championship in Italy in 2007.

Alyeska Resort has a lot of great alpine skiing terrain for its relatively small size. Its chutes on the North Face are world class. It has hosted U.S. National Alpine Ski Championships three times in the last 10 years, and many other types of ski competitions as well. It's a great mountain, but frankly it needs to expand its skiable terrain and update its lifts to attract more winter visitors from Outside and position itself as a top destination ski resort. One of the benefits of having kids who

ski race is that we travel to ski resorts all over the world, and we are always peppered with questions by people who want to know what Alyeska Resort is like and whether they should come to visit in winter.

We feel incredibly lucky to have had the opportunity to spend our free time and raise our sons in Girdwood. I know of no other place that offers what Girdwood offers in the way of outdoor recreation and community, less than an hour from a major metropolitan area. Girdwood's location has allowed us to have the best of both worlds---challenging work in the major urban center of the State, and a great place to be together the rest of the time, away from town, in the outdoors, in our cabin and on the mountain. Visitors to the State can likewise have easy access to Girdwood's unique mix ---the beauty of the Alaska wilderness, the developed trail system in the Glacier-Winner Creek Valleys, great restaurants, and choices in accommodations ranging from a luxury hotel with spa to good camping--- less than an hour from the Anchorage International Airport.

On any summer day, one is likely to run into tourists from all over the world walking from the Hotel toward Winner Creek, on the recently upgraded Winner Creek Trail. My husband and I hike it often, usually to get to the more remote Upper Winner Creek valley, which we love for its wilderness and amazing vistas. Nearly every time I hike the trail in the Upper Winner Creek Valley, I say something like --- "I cannot believe this spectacular valley is just an hour from a city. There cannot be a more beautiful trail anywhere. We are so lucky." That trail, and the joy of hiking it, would be destroyed if the Glacier-Winner Creek Drainages are opened to mining. In fact, opening the Glacier-Winner Creek area to mining would most likely wreck a lot of the Girdwood we know and enjoy.

Mining, today, is not done by a prospector with a pick and shovel and a gold pan. That romantic icon of the Gold Rush is long gone, and mining today is anything but romantic.

Mining is a full-blown industrial activity. For the State of Alaska to open Girdwood's ski and hiking trails, and the area designated for proposed expansion of the Resort ski area, to industrial development would be completely misguided. It is not as though there are proven mineral reserves in the Glacier-Winner Creek Drainages and/or that development of world class resort and recreational facilities is just a pipe dream. Just the opposite. There are no proven reserves and there is a world class resort developer in place.

Mining in Glacier-Winner Creek Drainages would directly conflict with existing and proposed recreational and tourism uses of state lands in Girdwood. Making it an industrial area would destroy the Girdwood we love---- both as it is, and what we hope it will become.

The mine run by Girdwood Mining Company mine at about Mile 5 on Crow Creek Road hints, in a minor way, at what mining in the Glacier-Winner Creek area

would be like---the natural site at the GMC mine has been irrevocably scarred, the riverbed has been reduced to enormous piles of gravel and rubble, and heavy equipment is scattered about. The GMC mine is an eyesore, and it blocks the public's access to public lands. And, notwithstanding the extent of surface disturbance which that mine has already caused, from what I understand it is not even really operating at this point.

At least the GMC mine is on an established road system. Most new mining operations in the Glacier-Winner Creek valleys would likely require the construction of access roads and, or the use of 6x6 vehicles, through pristine forest, riverbeds and wetlands. The ecological ramifications of gaining access for a mining location, or even for prospecting and sampling necessary to establish a mineral discovery, could be horrendous in these drainages. Thus, just to ascertain the scope of minerals available would require roads and extensive disturbance of the area with heavy machinery. Thus, the effects of mining in the Glacier-Winner Creek drainages would extend beyond the specific lands covered by the proposed DNR Order.

Heavy and extensive industrial activity in the Glacier Valley would negatively affect Girdwood's character and desirability as a place to recreate and visit.

II. Professional Comments:

I practiced public lands and natural resources law in Alaska for thirty years.

I am very familiar with the difficult legal and practical problems presented by mining in recreational areas. I was the lead trial attorney stationed in Alaska within the Land and Natural Resources Division of the U.S. Department of Justice for nearly 7 years, during which time I had the opportunity to handle a number of cases involving conflicts among miners or would-be miners and recreationists/environmentalists. In private practice, representing a bankruptcy trustee of a gold mine, I spearheaded the federal buyout of mining claims in Kantishna in Denali National Park, and to that end worked to get three Congressional appropriations passed, and participated in contentious negotiations and vitriolic litigation for more than a decade. In the case of Kantishna, the point was to get pre-existing mining claims bought out of lands that had been added into Denali National Park in 1980 with passage of ANILCA. It was kind of like trying to put the genie back in a bottle. DNR is well-advised to close the Glacier-Winner Creek Drainages to mineral entry and avoid the obvious user and legal conflicts that would surely develop. Indeed, opening those lands to mining would virtually guarantee the conflicts which are endemic when split estates in public lands are conveyed to or used by different parties for different uses---especially mineral development and recreation. To open public lands to mining in a well-used recreation area, and perhaps the middle of a successful resort, would be unimaginably shortsighted.

Furthermore, it is appropriate that DNR uphold the state and municipal public land planning process. This result is accomplished by issuance of Mineral Order 1121. The Turnagain Arm Management Plan ("Plan"), which recommends that the area in question be closed to mineral entry in light of recreational use and development in the area, was the result of public input and professional expertise that should be respected and incorporated in state land use decisions. It also appears that although previous state mineral orders affecting the lands in question have had a ten year term "in large part based on the stipulation in the area plan that closures be of ten year duration", (see Proposed Finding of the Commissioner, p.2, second full paragraph), said plan stipulation actually says that the mineral closure "may" be reopened "if resort development is not likely to occur", i.e. that reopening the land to mineral entry is not mandatory under the plan.

Finally, closure of the Glacier-Winner Creek Drainages to mineral entry by Proposed Mineral Order 1121 is consistent with Section 6(a) of the Alaska Statehood Act, which is the legislative authority pursuant to which the State has, or will, obtain title to the lands in question from the federal government as part of its statehood entitlement. These lands were at one point (or still are), part of the national forest. Section 6(a) governs selection and conveyance of lands out of the National forests to the State of Alaska. Section 6(a) states in relevant part:

> For the purpose of furthering the development of and expansion of communities, the State of Alaska is hereby granted and shall be entitled to select, within thirty-five years after the date of the admission of the State of Alaska into the Union, from lands within national forests in Alaska which are vacant and unappropriated at the time of their selection not to exceed four hundred thousand acres of land . . . all of which shall be adjacent to established communities or suitable for prospective community centers and recreation areas. Such lands shall be selected by the State of Alaska with the approval of the Secretary of Agriculture as to national forest lands . . .

The Ninth Circuit Court of Appeals upheld the Forest Service's more restrictive interpretation of the statute requiring a community nexus, and an expectancy that that the lands would be used for development of communities and recreation areas, in litigation between the State of Alaska and the United States entitled Alaska v. Lyng, 797 F.2d 1479 (9th Cir. 1986). (I represented the Forest Service in this case at the trial level). While it is easy to see how resort and recreational development would be consistent with development of community centers and recreation areas consistent with the intent of Section 6(a), in my opinion opening the lands to mineral entry and development would be inconsistent with such intent.

AS 38.05.275 provides that mining locations on state land acquire for the locator mining rights, "subject to . . . any . . restriction in the tentative approval of state selection or patent of the land to the state ." Thus, Section 275 recognizes that any

conditions in title obtained from the federal government flow through to the mineral locator, and may limit mining rights obtained by a mineral locator. Section 6(a) imposes conditions on the conveyances authorized by it by limiting state land selections from the national forest to lands chosen for community and recreational development purposes. The U.S. Secretary of Agriculture had to have approved conveyance of the lands within Glacier-Winner Creek Drainages to the State based on their suitability for community and recreational development. Proposed Mineral Order 1121 is consistent with those conditions.

III. For the foregoing reasons, I support the Proposed Finding of the Commissioner and Mineral Order 1121.

Southcentral Region Land Office
550 West Seventh Avenue, Suite 900C
Anchorage, AK 99501-3577

Subject: Girdwood 2020 Supports Proposed Finding of the Commissioner Mineral Order 1121

Mr. Thompson:

Thank you for this opportunity to comment in support of the referenced Proposed Finding of the Commissioner, Mineral Order 1121. Girdwood 2020 is a citizen's group that advocates for thoughtful resort, recreation and community development in the Girdwood Valley. We also advocate for the region's natural setting and the mountain gateway community lifestyle this area offers. Our organization realizes that a healthy community has a good economy, and to that end we support wise valley infrastructure as well as education and employment consistent with a mountain resort community. Our membership includes both Girdwood residents and non-resident property owners, and other interested parties, all committed to the area.

Girdwood 2020 recognizes the importance of mineral resources to the State of Alaska and the role mining played in the origins of our community, so we did not arrive at our position lightly. Natural resource revenues are the backbone of our State and we all enjoy the job and infrastructure benefits provided by mineral revenues. However, most of the Girdwood area has been under mineral closure for the past decade based on its potential for a recreation-based economy. During that time significant progress has been made towards the recreational development proposed in the Girdwood Area Plan completed in 1994.

The Girdwood Area Plan is the best guide for land use in this area. The plan recognizes the potential for a variety of recreational uses, and acknowledges that the area could eventually become a high quality four season development of international scope.

In its present configuration, the Girdwood area is an economic generator that provides activities to Alaska residents and visitors. Improvements of the past ten years include trail enhancement, a major overhaul of Alyeska Resort's ski and support facilities, and new biking and hiking venues. A public visitor center focusing on the Girdwood Valley's history has been opened at the top of the Alyeska Resort Tram.

Under construction today is a major multi-use Nordic all season loop in the Girdwood upper valley. The first 5K is nearly completed and when opened will accommodate Nordic activities, hikers, bikers and other trail users, at all times of the year. When the full trail design is realized we expect it to attract more major winter events and visitors to Alaska.

The present owner of Alyeska Resort embraces the vision contemplated in the Girdwood Area Plan. In addition to many resort improvements, the owner is providing real estate opportunities that will enhance commercial and visitor related business in the area.

Over the past ten years, Girdwood 2020 has confirmed widespread support for the concept of four season recreation development in the area. Numerous statewide organizations, leaders and government agencies came together to sign a memorandum of understanding in support of the concept. We have conducted two independent surveys that found overwhelming support for recreational development among the residents of Girdwood and Anchorage. Furthermore, the State and Federal governments have funded significant infrastructure and road improvements that support the growth of the community and recreational development.

I say with certainty that this letter of support expresses the convictions of Girdwood 2020's membership that the portions of the Girdwood Valley now closed to mining activity should continue to be closed.

You may contact me for clarification and further information. Thank you.

Sincerely,

Diana Stone Livingston, Chair

Mr. Rick Thompson, Regional Land Manager
550 W 7th Avenue, Suite 900c
Anchorage, AK 99501-3577

Dear Rick:

I recently received and have reviewed the Proposed Finding of the Commissioner (Mineral Order 1121) ("Proposed Finding"). I find the Proposed Finding necessary and appropriate. The closure of the lands described in the Proposed Finding to mining is important for the continued sustainability and viability of Alyeska Resort. I expect Alyeska Resort and the community of Girdwood to continue to grow and expand as an important recreational resource of both the Municipality of Anchorage and the State of Alaska. I fully support the Proposed Finding as currently drafted.

Sincerely

John Byrne

Mineral Order 1121

Feb. 12, 2011

Dear Mr. Smith,

I would like to go on record as supporting the planned closure of Winner Creek and surrounding State lands to mineral entry. The State of Alaska and before that, the US Forrest Service, has had this important recreational area closed to mineral entry for many years. This restriction should continue for the foreseeable future.

Sincerely,

Re: Mineral Order 1121

I am a full-time resident of Girdwood Alaska. I support a continued closure to new mineral entry in the Glacier and Winner Creek drainages as described in your public notice dated 20 January, 2011.

While I support the mining industry in the State of Alaska, mineral entry in this area is inconsistent with the recreational and tourism development of the Girdwood valley. The area under consideration in the Glacier and Winner Creek drainages offers more potential for increased recreational and tourism development, which helps diversify the Alaskan economy.

I would also support a permanent closure of this area to mineral entry on the basis that future recreational and tourism development may be hampered by the risk that the area may be opened to mineral entry.

Regards,
Mark Yezbick

Mayor Dan Sullivan

January 14, 2011

Mr. Adam Smith
Natural Resources Manager
DNR, Southcentral Region
550 W 7th Avenue, # 900c
Anchorage, AK 99501

RE: Mineral Order 1121

Dear Mr. Smith:

The Municipality of Anchorage (MOA) Real Estate Department appreciates the opportunity to comment on the Mineral Order 1121 regarding the State's subsurface estate lands in the Girdwood Valley. We are interested in providing comments in regard to the Department of Natural Resources' notice of Agency Review on closure of several Mineral Orders and have the following comments.

The MOA Heritage Land Bank is fully supportive of DNR's proposal to continue the existing closure to mineral entry. This includes support of the new Mineral Order 1121 which would supersede and rescind MCO 593, MCO 603 and MOO 942 and related amendments. The MOA lands in the upper Girdwood Valley have a mix of residential, commercial and recreational values which are inconsistent with a policy of open subsurface mineral entry. We agree that mineral entry in this area is incompatible with these values and with current and planned use of the lands. Only the term causes us concern; we would prefer DNR permanently close the subject lands to entry.

To reiterate, the MOA fully supports DNR's proposed closure of the above lands to mineral entry and supports approval of Mineral Order 1121, and hope that you consider permanent closure.

Please contact Alison L. Smith at 343-7531 or smithal@muni.org if you have any questions.

Sincerely,

Tammy R. Oswald
Acting Director

Subject: Re:Closure of Mining in Girdwood

Hi Adam,

As a 10 yr. resident of Girdwood, I am in favor of closing commercial mining. I believe that Girdwood is successfully transitioning into a recreational area and that should be our focus in the future. If activities don't bring in tourists, than they should be done elsewhere. Small scale personal mining is acceptable and can be a tourism draw. However, large scale commercial operations cause more destruction of our natural resources and only benefit a few people.

Best Regards,

Simon Evans, P.E.

Anchorage, AK 99501-3577

Dear Ms. Murrell,

The Glacier Ranger District supports the Glacier Winner Creek Mineral Closing Order. Withdrawal of this area is important to the continued investment in recreational development by businesses in the Girdwood Community; including Alyeska Resort and Chugach Powder Guides. In addition, withdrawal provides certainty to other small businesses which provide recreational services on both these state lands and the adjacent federal lands of the Chugach National Forest. Lastly, withdrawal offers the best form of protection for the existing Winner Creek and Upper Winner Creek trails, both are trail segments of the significant and historic National Iditarod Trail.

Sincerely,

/s/ Tim Charnon

February 6, 2012

The Hon. Cathy Giessel
The. Hon. Bill Hawker
State Capital
Juneau, Alaska

Re: SB181 and HB285

Dear Senator Giessel and Representative Hawker;

As you both are aware, the Alaska Miners Association is a long established group dedicated to promoting the responsible development of Alaska's mineral resources. The Alaska Miners Association is a non-profit membership organization established in 1939 to represent the mining industry in Alaska. The AMA is composed of more than 1400 individual prospectors, geologists and engineers, vendors, suction dredge miners, small family mines, junior mining companies, and major mining companies. Our members look for and produce gold, silver, platinum, diamonds, lead, zinc, copper, coal, limestone, sand and gravel, crushed stone, arrnor rock, and other materials. Our members live and work throughout the state.

We recently took up the questions that are addressed in your respective bills as identified above, regarding a mineral closure order in the Glacier and Winter Creek drainages in the Girdwood area. We are specifically appreciative of the process followed by DNR, in evaluating the proposed areas as to their mineral potential and other values. We support the closure orders and agree with the assessment that these lands are properly suitable for expansion of the recreation uses. We would note that should such use cease, we would like to see the closure orders reversed and the areas reopened to mineral development.

Again, we appreciate the chance to comment and support the effort to accomplish these particular withdrawals. Thanks to you both for all of the hard work and dedication you provide to the citizens of Alaska in your roles as legislators.

Please feel free to contact me if you have further questions or need additional information.

Cordially,

Fred Parady
Executive Director

SB 192

<TARGET><BILL>SB 192</BILL><SUBJECT>SB 192 (FILE 1)</SUBJECT><COMM>SRES27</COMM></TARGET>

SENATE BILL NO. 192

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE RESOURCES COMMITTEE

Introduced: 2/8/12
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to the oil and gas production tax; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.55.011(g) is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2) **for a** [PER] BTU equivalent barrel of the taxable oil and gas is more than $30, the amount of tax for purposes of (e)(2) of this section is [DETERMINED BY MULTIPLYING THE MONTHLY PRODUCTION TAX VALUE OF THE TAXABLE OIL AND GAS PRODUCED DURING THE MONTH BY THE TAX RATE CALCULATED AS FOLLOWS:

(1) IF THE PRODUCER'S AVERAGE MONTHLY PRODUCTION TAX VALUE PER BTU EQUIVALENT BARREL OF THE TAXABLE OIL AND GAS FOR THE MONTH IS NOT MORE THAN $92.50, THE TAX RATE IS] 0.4 percent multiplied by the number that represents the difference between that average monthly production tax value **for a** [PER] BTU equivalent barrel and $30 [; OR

(2) IF THE PRODUCER'S AVERAGE MONTHLY PRODUCTION

TAX VALUE PER BTU EQUIVALENT BARREL OF THE TAXABLE OIL AND GAS FOR THE MONTH IS MORE THAN $92.50, THE TAX RATE IS THE SUM OF 25 PERCENT AND THE PRODUCT OF 0.1 PERCENT MULTIPLIED BY THE NUMBER THAT REPRESENTS THE DIFFERENCE BETWEEN THE AVERAGE MONTHLY PRODUCTION TAX VALUE PER BTU EQUIVALENT BARREL AND $92.50, EXCEPT THAT THE SUM DETERMINED UNDER THIS PARAGRAPH MAY NOT EXCEED 50 PERCENT].

* **Sec. 2.** This Act takes effect January 1, 2013.

(Revised 11/18/2011 OMB)

Analysis

This bill makes a change to the progressive tax rate portion of the production tax at AS 43.55.011(g) by removing the second trigger of the progressive tax rate calculation that lowers the progressive tax rate to 0.1% on production tax values of $92.50 and greater. The bill also removes the statutory maximum tax rate of 75% under the production tax statutes. The bill retains the initial trigger of $30 in production tax value at which point the progressive tax rate is calculated as 0.4% per dollar increase in production tax value.

Given the Fall 2011 oil price, production, and lease expenditure forecast through FY 2017, the tax rate changes from this bill are not projected to have a direct revenue impact. The Fall 2011 forecast through the time period covered by this fiscal note (FY 2017) range from $106 per barrel to close to $110 per barrel for Alaska North Slope crude oil. Combined with anticipated production levels and lease expenditure projections, our forecast does not anticipate production tax values meeting or exceeding $92.50 per barrel. Therefore, based on our most recent forecast, the progressivity rate changes in this bill will not impact revenue expectations.

If oil prices were to increase, or if production were to increase with no corresponding increase in lease expenditures, production tax rates, and therefore revenue, could be increased from this bill. With current production levels, and current transport costs and lease expenditure levels, much of North Slope crude oil would be subject to a production tax increase at $120 - $130 per barrel (ANS WC) and above. Without a maximum production tax rate, tax rates could continue to escalate until they exceed 100%. Marginal government take exceeds 100% at approximately $140 per barrel, when holding all other assumptions constant. This means that at $140 per barrel, the government would take more than 100% of every dollar that the oil price increases.

The bill has an effective date of January 1, 2013.

The following two graphs show nominal production tax rates and marginal tax rates at a range of oil prices given current transport and lease expenditure assumptions for ACES (current law) and SB 192. Nominal production tax rates are the ACES statutory production tax rates as calculated by taxpayers; marginal tax rates are the rates that the government collects of each additional dollar that the oil price increases. The marginal tax rate graph includes all major federal and state taxes and royalties.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CS SB 192 (RES)

Analysis

The revenue impact of this bill is indeterminate.

This bill makes several changes to the oil and gas production tax system. Each of the major changes, along with its potential revenue impact, is discussed below.

1. **Makes changes to the progressive surcharge.** The "progressive surcharge" applies when the Production Tax Value (PTV) of all oil and gas produced in the state exceeds $30 per barrel of oil equivalent (BOE). Under current law, the surcharge is 0.4% per $1 of PTV between $30 and $92.50 per BOE, and it is 0.1% per $1 of PTV between $92.50 and $342.50 per BOE, for a maximum surcharge rate of 50%. The surcharge rate is not bracketed: it applies to the entire PTV, not just the incremental value. Under this bill, the surcharge rate is changed to 0.35% per $1 of PTV between $30 and $101.43, plus 0.1% per $1 of PTV between $101.43 and $201.43, for a maximum surcharge rate of 35%. The surcharge rate continues to apply to the entire PTV, not just the incremental value. The effective date of this provision is January 1, 2013. Under Fall 2011 forecast assumptions, this change would reduce revenue by $125 million in FY 2013, $230 million in FY 2014, and approximately $200 million per year in FY 2015- FY 2018.

2. **Creates a $10 per barrel allowance for production increases**. This provision of the bill creates an allowance, by effectively reducing the production tax value by $10 per barrel, for each barrel sent down the Trans Alaska Pipeline System (TAPS) by a company above their prior year level. The allowance is applicable only against the base tax rate of 25% and therefore the monetary value to the company is $2.50 per barrel. The allowance is calculated and refunded by the Department independent of the tax and progressivity calculation and therefore does not impact the tax and progressivity rates applied. Under the Fall 2011 production forecast, several companies would receive this allowance in certain years during the time horizon of this fiscal note, but the total tax revenue impact (and therefore benefit to producers) is less than $25 million total for all companies for all years.

3. **Implements a 10% gross minimum tax for units with over 1 billion barrels cumulative production and over 100,000 barrels per day production in the most recent year**. This provision of the bill creates a minimum tax of 10% of gross value for certain units, and deductions and credits cannot reduce the net tax for those units below 10% of gross value. Currently, the only units for which this provision would apply would be Prudhoe and Kuparuk. Under Fall 2011 revenue forecast assumptions, this provision would result in a tax increase for certain companies in certain years during the time horizon of this fiscal note, increasing state revenue by less than $25 million per year. At lower oil prices, this provision would result in a significant increase in revenue to the state, amounting to over $400 million per year increased revenue at a $40 oil price.

As part of the minimum tax language, this bill makes changes to the calculation of the community revenue sharing fund provision at AS 29.60.850. This bill changes the calculation of the community revenue sharing fund appropriation to be the lesser of 20% of the progressivity for oil and gas for the previous year or the difference between the amount of revenue received under the minimum tax and 25% of the production tax value for oil and gas subject to the minimum tax in the previous year. The bill retains the maximum appropriation provisions. This provision, as currently written, increases the complexity of the calculation, but will likely not materially impact the amount of revenue appropriated.

4. **Provides for a new petroleum information management system, to be implemented by the Alaska Oil and Gas Conservation Commission (AOGCC)**. This provision of the bill provides for a new information management system for publicly available oil and gas information, to be operational before January 1, 2014. The only responsibility of the Department of Revenue would be to provide certain information to AOGCC on a regular basis. These responsibilities could be implemented using existing resources.

5. "Decouples" Some Oil and Gas for Progressivity. This bill separates some oil and natural gas for purposes of calculating the progressivity portion of the production tax under AS 43.55 (also known as "decoupling"). Currently, all oil and gas are combined for purposes of calculating a single progressivity rate. Under this bill, two progressivity rates would be calculated. The first progressivity surcharge would be based on oil, Cook Inlet gas, and gas used in state. The second progressivity surcharge would be calculated based on gas other than Cook Inlet gas and gas used in state. The bill instructs the Department of Revenue , to the extent possible, to provide for the allocation of lease expenditures in proportion to the gross value at the point of production for the oil and gas produced.

Analysis Continued

For purposes of the tax calculation, exploration expenditures and development expenditures for non-producing leases or units would be allocated within geographic areas based on the gross value at the point of production of existing oil and gas production.

There would be minimal revenue impact during the time period included in this fiscal note as gas that is produced in Cook Inlet or used in state is not impacted by this bill. Small amounts of gas sales that would be decoupled prior to a major gas sale are expected to impact revenue to the state by less than $10 million per year.

Under the current ACES system without the separate progressivity calculations, the state may receive less tax revenue with oil production and major gas sales, compared to oil production alone. This effect is due primarily to lower value gas diluting the progressivity surcharge on higher value oil under a combined tax. Under this bill, once major North Slope gas sales begin, exported gas will be subject to the separate progressivity calculation. Our modeling suggests that under this bill, and with addition of major gas sales to oil production, state revenue would be equal to or higher than revenue with oil only.

Additionally, this provision would generally increase tax revenue to the state, compared to the current tax system with a combined progressivity calculation, from major gas sales along with oil production. The amount of tax revenue increase is primarily dependent on oil and gas price and volume assumptions, along with some minor assumptions regarding expenditures and tariffs, but could be in excess of $1 billion per year.

Costs to Implement

With the change in tax structure with decoupling, the department will need to develop comprehensive regulations. Significant regulations work would also be required to implement the other provisions of this bill, with some interrelations between the various provisions of the bill. The Department would require an additional $495,000 for regulatory work and public participation in regulations for the package of regulations. With passage of this bill in the 2012 legislative session, the workshop and public forum process would likely begin in the summer or fall of 2012, and the majority of the regulation costs would be incurred in FY 13.

Specific costs for each major regulation project include the following:
$75,000 for contracted professional services for regulation consulting.
$270,000 for regulations costs including Department of Law, public notice and registry.
$150,000 for public forums for education of taxpayers and public participation, including preparation materials and legal support, and possibly travel.

In addition to the one-time costs, the provisions of this bill will require two additional positions to handle the increased complexity of the tax law created by this legislation, in particular the increased workload associated with the gross floor, additional production allowance, and reporting requirements of this bill. The positions would be an Oil and Gas Revenue Auditor IV (Range 24) and a Tax Technician III (Range 14), at an annual cost of $235,200.

Why this fiscal note differs from previous version (if initial version, please note as such)

The committee substitute has added a provision to create a petroleum information management system. The Division of Oil and Gas develops, stores, and maintains much of the information identified for inclusion in the system.

Prepared by: William C. Barron, Director — Phone: 907-269-8800

FISCAL NOTE

STATE OF ALASKA **BILL NO.** CSSB192(RES)
2012 LEGISLATIVE SESSION

Analysis

Sections 2 and 3 amend AS 31.05 by adding a new section (AS 31.05.031) which requires the Alaska Oil and Gas Conservation Commission (AOGCC) to develop and maintain an electronic petroleum information management system (PIMS) to archive state oil and gas information. The system will only include non-confidential information identified in this bill and other information AOGCC determines "necessary and relevant" to oil and gas exploration, development, and production. The Division of Oil and Gas (DOG) collects and maintains much of the information and materials listed in the proposed bill.

DOG will be a major contributor to the petroleum management system - likely designing, developing, and maintaining the system and associated materials. DOG currently houses the following information on: 1) unit and joint operating agreements, 2) state oil and gas exploration licenses and oil and gas leases, 3) exploration activities including seismic data, drilling reports, logs, geological models and maps, 4) development activities including development plans minus expenditure projections and reservoir characteristics, 5) facility maps and studies, and 6) abandonment plans and progress reports. DOG will conceivably have a role in contributing other information AOGCC deems "necessary and relevant" to oil and gas exploration, development, and production. DOG stores and maintains more than 40 years of information from Alaska's oil and gas activities. We find the directives in the proposed bill to initiate a significant undertaking by our department and others involved in supplying the requested information.

The committee substitute calls for providing information "in a form that is suitable for the commission to include in the petroleum information management system." Without sufficient knowledge of what will be construed to be "suitable" for the commission, it is assumed our information will need to re-integrated into new formats compatible with a sophisticated system easily navigated by the public. The AOGCC and DOG data collection and management systems are different in scale and scope, and synchronizing the systems will take considerable resources. In some cases, information could be linked or transferred to the PIMS site quickly; however, the information requested in the bill will demand extensive time and resources to adapt, redact, and restructure records and materials before inclusion in the PIMS.

Developing and maintaining a petroleum information management system will not likely provide any more information to the public than is currently available from our division. Non-confidential oil and gas information is currently available on DOG's website or upon request in electronic and hard copy formats. We estimate the proposed bill will initially require eight new FTEs with supporting costs and lease space expense in the division and funds necessary to hire contractors for information technology work.

The division would need five new natural resources specialists (2 NRS II and 3 NRS III) with one administrative assistant (range 12) and two analysts (range 20) for IT functions during build-out starting in FY13. In addition to staff increases, supporting costs and leased space, approximately $75,000 in funding for software, licenses, and back-up systems is needed in FY 13. After the system build-out and population, we should be able to maintain the system with 4-5 FTEs. We project roughly $75,000 for IT contract services in FY13 and FY 14, $35,000 in FY15, and potentially no funds thereafter. Since we are not forecasting additional state revenue for these sections of the proposed bill, the significant costs incurred in developing and maintaining a new location for DOG information results in a negative fiscal impact to the state for years to come.

Storage for DOG seismic data (2-3 terrabytes) is too large to be stored in existing storage and therefore the division anticipates needing to contract with an electronic storage provider which could cost hundreds of thousands of dollars annually. This could happen as soon as the start of the system in FY 2013 and would be triggered by the need to segregate and store existing data within DNR. The Division has not yet formally priced this cost of data storage but DNR internal IT managers estimate a significant cost.

Analysis Continued

CSSB192(RES) will also have impacts on oil production which impacts royalty revenue tracked by DO&G. Section 6 imposes a hard minimum tax (a minimum tax that cannot be reduced by credits) of 10% on production from large legacy fields (cumulative production over a billion barrels and current production over 100,000 barrels a day). Currently, the only fields that would qualify are the Prudhoe Bay and Kuparuk Units. Section 6 would substitute this tax for a minimum tax of 4% (when the West Coast ANS price exceeds $25 per barrel) on the gross value at the point of production for the North Slope. This minimum can be reduced by credits.

The proposed hard minimum tax on production tax value at the Prudhoe Bay and Kuparuk Units will tend to discourage investment by Unit owners if those owners perceive the possibility of the minimum tax applying. If the minimum tax applies then the owners lose the tax benefits associated with the ability to deduct additional spending in both fields. All else equal, this will have an indeterminate negative impact on royalty revenue at Prudhoe Bay and Kuparuk.

Section 7 lowers the rate of increase in the production tax rate from 0.4% to 0.35% per dollar of production tax value per barrel above $30 until the total tax rate (the base 25% plus the index based or progressive rate) equals 50%.

This bill also requires a separate production tax value per barrel calculation for gas sold outside the State. Section 14 would have the Department of Revenue issue regulations allocating costs to exported gas based on the gross value at the point of production for that gas versus that of other oil and gas production. Requiring a separate production tax value per barrel calculation for gas sold outside the State will have an indeterminate impact on royalty revenue. This impact will depend upon the anticipated relative profitability on a per unit basis of oil and gas production from the North Slope a decade or more from now.

(Revised 11/18/2011 OMB)

Analysis

The AOGCC, an independent quasi-judicial State agency, is the State's permitting and regulatory authority over hydrocarbon and geothermal wells. The Commission's duties include ensuring the maximum recovery of hydrocarbon and geothermal resources, preventing hydrocarbon and geothermal waste, ensuring well safety, and protecting underground sources of drinking water and correlative rights. Given the nature of the Commission's duties and responsibilities, apart from support personnel, it is staffed by expert petroleum engineers and petroleum geologists. Because its expertise is so carefully tailored to its statutory duties and responsibilities, the Commission functions well and Alaska has an unrivaled record with regard to well safety and production.

Section 3 of the committee substitute for SB 192 seeks to effectuate a substantial change in the AOGCC by requiring the Commission to establish, operate and maintain an electronic petroleum information management system comprised of available and non-confidential information. The vast majority of the information the Commission must include in the petroleum information management system has nothing to do with the Commission's mission or function – "unit and joint operating agreements," exploration licenses and leases, "work programs and budgets," "development plans," operating and capital expenditures and projections, "oil and gas sales, revenue and pricing," transportation agreements, abandonment plans and budgets, resident and non-resident hiring information, training opportunities, and other information "the commission determines necessary and relevant to the oil and gas production tax and to the exploration, development, and production of oil and gas resources." Much of this information is currently already gathered and maintained by other state agencies or is not available to any state agency.

After careful review and consideration of Section 3, the AOGCC is of the view that Section 3 radically changes the AOGCC's longstanding role as the State's petroleum technology and geology experts and jeopardizes the Commission's ability to discharge its primary duties and responsibilities in those realms. The Commission has neither the expertise nor the infrastructure to construct, maintain and operate information management systems, computer systems, and the gathering of information on other subjects not related to the safe, efficient production of hydrocarbon resources from wells. Implementation of Section 3 will create – at a substantial fiscal outlay – an additional distinct state bureaucracy within the AOGCC which duplicates functions currently performed by other state agencies.

The AOGCC's non-confidential information is already publically available on its website. Other agencies are currently working to provide similar web availability of their data. Once those agencies do so, the information will be far more readily accessible to the public on those websites and at a substantially reduced cost.

Analysis Continued

Breakdown of costs:

Position	Annual Salary and Benefits
Deputy Director	$145.0
Petroleum Facilities Engineer	$236.0
Petroleum Geologist II	$145.0

February 15, 2012

The Honorable Joe Paskvan
Co-Chairman, Senate Resources Committee
State Capitol Building, Room 115
Juneau, AK 99801-1182

Dear Senator Paskvan:

Thank you for the invitation to testify before the Senate Resources Committee and please accept my apologies as work commitments require me to be out of the country this week.

BP Exploration (Alaska), Inc. (BPXA), as operator of the Prudhoe Bay Unit, Northstar Unit, Milne Point Unit and Duck Island Unit (Endicott), conducts unit operations under Plans of Development (POD) approved by the State of Alaska, Department of Natural Resources (DNR). The requirements for a POD are set forth in the Alaska Administrative Code and the applicable Unit agreements. The POD is approved at or shortly after formation of each Unit, and each Participating Area (PA) within a Unit.

PODs are generally updated on an annual basis. BPXA, as Operator of the above mentioned Units, files approximately 15 POD updates annually following POD reviews with the DNR and other interested agencies (e.g. AOGCC and BOEMRE). These reviews are generally scheduled just prior to submittal of the POD and give the agencies and the unit operator a chance to review and discuss the POD. Following the submission of each PA POD, the DNR will respond stating whether the POD is deemed complete. Once the POD is deemed complete, the commissioner has 60 days to consider the POD update for approval.

The development plans submitted by BPXA on behalf of the working interest owners of the fields we operate have laid the foundation for a track record of success. As a case in point, total cumulative production from the Prudhoe Bay Unit initial participating area has already substantially exceeded the ultimate recovery that was projected when the field began operation. But that success is becoming more difficult to sustain. North Slope production is declining at an annual rate of approximately six percent. As we have indicated in the past, a revised fiscal environment will facilitate progression of more projects that will have an impact on the expected decline rate.

BPXA appreciates the opportunity to illustrate the POD process we follow for our operated North Slope units. We look forward to continued dialogue on the critical question of how to stem production decline and improve the investment climate on the North Slope.

Regards,

ExxonMobil Production

February 15, 2012

The Honorable Joe Paskvan
Co-Chairman, Senate Resources Committee
State Capital Building, Room 115
Juneau, AK 99801-1182

Dear Senator Paskvan:

ExxonMobil appreciates the Resource Committee's attention to production tax reform. We understand that your committee is seeking comments on the need to reform Alaska's Clear and Equitable Share (ACES) production tax rather than on Senate Bill 192. Let me respectfully offer you ExxonMobil's views on this topic for the record and direct you to recent testimony and perspectives that we've provided.

We believe that meaningful tax reform is critical for Alaska's economic future. While I am unable to join you in person on such short notice, I do feel that the work you are undertaking is important.

ExxonMobil continues to support Governor Parnell's efforts toward substantive reform of the current production tax. It is apparent that Alaska's production tax since 2005 has had a deleterious impact on business activity and investment in the state. Simply put, the current production tax is too high to stimulate the additional investment necessary to fully develop Alaska's oil and gas resources in the decades ahead. It is essential to have a tax structure in place that encourages long-term, material development of Alaska's potential to significantly grow state revenues, secure jobs and stem the production decline.

During the 2011 legislative session, I appeared before the House Resources Committee and testified on this topic. I am attaching a copy of that testimony as well as an op-ed letter signed by Rich Kruger, ExxonMobil Production Company President, which underscores the need for production tax reform. We continue to stand by the positions stated in these two documents.

Thank you again for the opportunity to provide input and be part of the ongoing debate during the 2012 sitting of the legislature. ExxonMobil is committed to Alaska and we look forward to working with you and your colleagues during this legislative session to develop a tax regime that will allow the resources of this great state to be developed for the benefit of all stakeholders.

Sincerely,

Dale Pittman

TESTIMONY OF DALE PITTMAN
ON PROPOSED HB 110
TO THE ALASKA HOUSE RESOURCES COMMITTEE
February 16, 2011

INTRODUCTION

Mister Chairman, members of the committee:

Good afternoon. For the record, my name is Dale Pittman. I am the Alaska Production Manager for ExxonMobil, based in Anchorage. I want to thank the committee for the opportunity to express ExxonMobil's views regarding HB 110, the Governor's proposed amendments to Alaska's oil and gas production tax or ACES.

Let me start by saying that Alaska has been and continues to be an important component of ExxonMobil's world-wide investment portfolio. We have had a presence in Alaska for over 50 years and have been a key player in Alaska's oil industry development, investing over $12 billion dollars to date. We are the operator of Point Thomson, hold the largest working interest at Prudhoe Bay (36.4%) and the largest lease holder of discovered Alaska gas resources. We expect to be involved in Alaska for many years to come and will continue to evaluate potential development opportunities.

At the outset, so our position is clear, let me say that ExxonMobil supports the presentation you heard today from the Alaska Oil and Gas Association. I do not intend to repeat the thorough technical comments from that testimony.

As for our specific comments, I would like to state, consistent with our prior testimony during the hearings on both the PPT and ACES, and on the proposed tax reform legislation last session, that ExxonMobil believes the changes made to Alaska's oil and gas production tax since 2005 have had a negative impact on business activity in Alaska and Alaska's overall investment climate. Alaska's current production taxes are simply too high to stimulate the additional investment required to fully develop Alaska's oil and gas resources.

It is for this reason ExxonMobil is pleased to see that the Administration recognizes the need for material change to Alaska's current oil and gas production tax system. We are encouraged by Governor Parnell's desire to see increased investments and further oil and gas development. We support his efforts to reform ACES and believe HB 110 is a good first step towards what we hope is a thorough review and revision of Alaska's production tax regime to allow the state to fully develop its vast resources.

ExxonMobil supports HB 110, and if enacted in its current form, we would expect investment activity in Alaska to increase, resulting in a corresponding benefit of more work for Alaskans. With passage of the Governor's proposed changes to ACES in its current form, we anticipate that industry will reexamine the inventory of Alaska North Slope opportunities and move forward with those projects that are made competitive by the reduced production tax burden. For example, the

proposed enhanced in-field drilling tax credits and reduction to the progressivity tax would allow us to consider additional drilling and well work activity at the Prudhoe Bay Unit. This kind of developmental drilling in the core field on the North Slope is critical to Alaska's future, particularly over the next five to ten years. Production decline must be stemmed until new developments can be discovered, progressed and brought on production.

While the enhanced in-field drilling tax credits and reduction to the progressivity tax are much needed revisions to ACES, we would urge earlier effective dates to accelerate the resulting ramp up in investment activity, Alaskan jobs and future state revenues.

However, merely providing additional tax credits while keeping the overall effective rate of the ACES tax too high is not the long term solution to improving Alaska's investment climate. While the system of tax credits under ACES does provide significant incentives for investing in capital assets to explore for, develop, and produce more oil and gas, the deduction of lease expenditures or the allowance of a tax credit is simply part of the calculation about how much tax a producer owes. The bottom line is that, between PPT and ACES, the industry's production tax obligations have more than tripled over the past five years.

ExxonMobil supports the Governor's proposal as an important first step, but additional reform of ACES is needed.

Additional reforms are needed to improve Alaska's overall investment climate over the long term. Evaluation of a further reduction in the production tax rates should also be considered. Even with the Governor's proposal, Alaska's production taxes are high in comparison to other investment alternatives, making Alaska one of the most expensive states in which the oil and gas industry does business.

As you have heard in prior testimony or may have read in recent newspaper articles, spending on the North Slope has remained relatively flat since the enactment of ACES. But what needs to be clarified is that the majority of that investment has been for maintenance or production enhancement efforts for existing operations, not for new exploration and development opportunities that would bring on new production. It is also worth noting that costs for this investment activity have gone up, so while some may argue there has been additional investment, it doesn't necessarily translate into more activity. For example costs to drill a well have increased over the years, so higher spend on drilling does not necessarily mean more wells are being drilled.

Alaska is currently producing approximately 600,000 barrels of oil per day from the North Slope. Industry currently invests more than $1 billion per year just to

maintain current North Slope oil production decline at six to seven percent. Without that continued investment, the annual production decline would be in the range of 12 to 15 percent annually.

The Alaska Department of Revenue is forecasting the production from Alaska's currently producing fields to decline by 60,000 barrels of oil per day this year. It goes on to predict that current field production will decline to half of its current 600,000 barrels of oil per day rate in just seven years, a decline of over 300,000 barrels of oil per day. Allow me to put the challenge of stemming that decline in perspective.

Alaska's newest development, the Nikaitchuq field, is scheduled to produce first oil early this year. The field has been more than six years in planning, development and construction and carries a total cost of over $2 billion dollars. The field is forecasted to reach peak production of about 25,000 barrels per day four years from now. So using this as an example, it would take the startup of two to three Nikaitchuq equivalent fields every year in perpetuity just to hold North Slope production at 600,000 barrels of oil per day. Pioneer's Oooguruk field is another example. It would take three to four fields the size of Oooguruk every year to match the forecasted North Slope production decline.
Clearly, the current outlook for development falls far short, and new fields are urgently needed to stem this decline.

Such development will only occur if there is an improvement in the Alaska investment climate. Alaska production tax policy is key to fostering a favorable investment climate.

Alaska's overall high production tax rates discourage investment. Companies like ExxonMobil are willing to accept the risks of long-term, capital intensive investments when there is a stable and competitive tax structure that encourages investment and ensures a corresponding opportunity for upside potential. When you take away the upside potential through a high progressivity tax you reduce the overall attractiveness of those capital intensive investments, which in turn could lead to reduced investment and resource recovery and, in the long-term, diminished state revenues. Let me reemphasize this point, while higher taxes may bring additional revenues in the short-term, it's reasonable to anticipate that any reduction in investment will decrease production and significantly reduce those revenues in the longer term.

As many of you heard me testify last year, time in the oil and gas industry is not measured in business cycles. It is measured in decades and in generations. Today's production rates are the product of government policies, technical work, and investment decisions made years ago. Increasing production rates in the decades to come will be a direct result from sound policies, decisions, and commitments that are made today. The Governor's proposed ACES changes

are clearly a significant step in the right direction towards much needed reform of Alaska's high oil and gas production tax system.

Alaska needs a long-term resource development policy that will encourage increasing investment to maximize its resource potential while receiving a fair share of the resource revenues; addressing its high level of government take is a start. The reform of ACES needs to result in a competitive, stable and predictable fiscal environment that will encourage investment, recognize that the remaining resources are economically challenged, including both new fields and resource development opportunities in existing fields. The primary driver of Alaska's long-term resource development policy should be to maximize the development of its resource base, not just maximize short-term state revenues.

Let me conclude my testimony by reiterating that while we hope to continue to pursue investment opportunities in Alaska in the future, the resource and cost structure in Alaska is becoming increasingly challenging. Governor Parnell's proposed changes to ACES are a good start to needed fiscal reform - but more is still needed.

ExxonMobil looks forward to working with the Administration, the legislators, industry and the people of Alaska in the future pursuit and development of Alaska's oil and gas resources.

Thank you again Mister Chairman for the opportunity to testify today.

APS Endorsed 041411

UNITE FOR A BRIGHT ALASKAN FUTURE

Alaska remains full of opportunity and promise. From the very first Native Alaskans to all the citizens who live and work in the state today, Alaska's challenges have been met by those willing to look beyond the horizon.

Despite challenging environmental conditions, Alaska has achieved a remarkable and enviable position in the world by responsibly developing its natural resources – hard work that has fueled an engine of progress for the state and its people. Today, Alaska's oil and gas production accounts for more than 34,000 jobs across the state and nearly 90 percent of its general revenue.

Unfortunately, the engine is not firing on all cylinders.

Since 2007, Alaska's Clear and Equitable Share (ACES) tax regime has failed to be either clear or equitable. Under ACES, nearly every measure of progress has declined, including investments and production. And as oil volumes flowing through the TransAlaska Pipeline (TAPS) continue to decline, the engine of progress is in very real danger of stalling.

Governor Parnell has recognized the detrimental effect of ACES on Alaska's future and is leading real changes to improve the state's competitiveness. His proposals offer an important step in the right direction toward a brighter economic future for Alaska. It is our firm belief that passage of the Governor's proposed changes to ACES, in its current form, will support additional investments in Alaska that will lead to greater development and production.

Over the past several weeks there has been much discussion regarding Governor Parnell's ideas for ACES reform. Most of the talk has focused on winners and losers in the near-term. In fact, the Governor is looking beyond the horizon to long-term solutions in which everyone wins.

ExxonMobil is committed to Alaska's future. We have worked here for more than 90 years, investing more than $12 billion to date and providing jobs for Alaskans. Currently, we are working with the state to bring the Point Thomson Project on line to produce additional oil and gas volumes in the near term. Going forward, we have joined with TransCanada to help bring a new gas pipeline to Alaska. Progressing these multi-billion dollar projects underscores ExxonMobil's continued commitment to Alaska.

Governor Parnell's proposal provides a foundation to build on the opportunity and promise of the state's vast natural resources and the indomitable spirit of its people.

Whether you are a proponent or critic of ACES reform, we all seek the same goal – a strong and prosperous Alaska. We encourage all state legislators to work together to provide industry with an investment environment that will help secure a promising future for the people of Alaska.

Rich Kruger, President
ExxonMobil Production Company

Alaska's Production Tax: Defining the Problem

Presentation to the
Senate Resources Committee
February 10, 2012
Alaska Department of Revenue

Facts to Begin the Conversation

1. Oil Prices began climb to all-time highs starting mid-2000's
2. TAPS throughput continues steady decline
3. Other oil producing regions enjoy production and employment booms
4. Competition is high - many other areas to invest around the world

According to the USGS, It's Not a Resource Issue

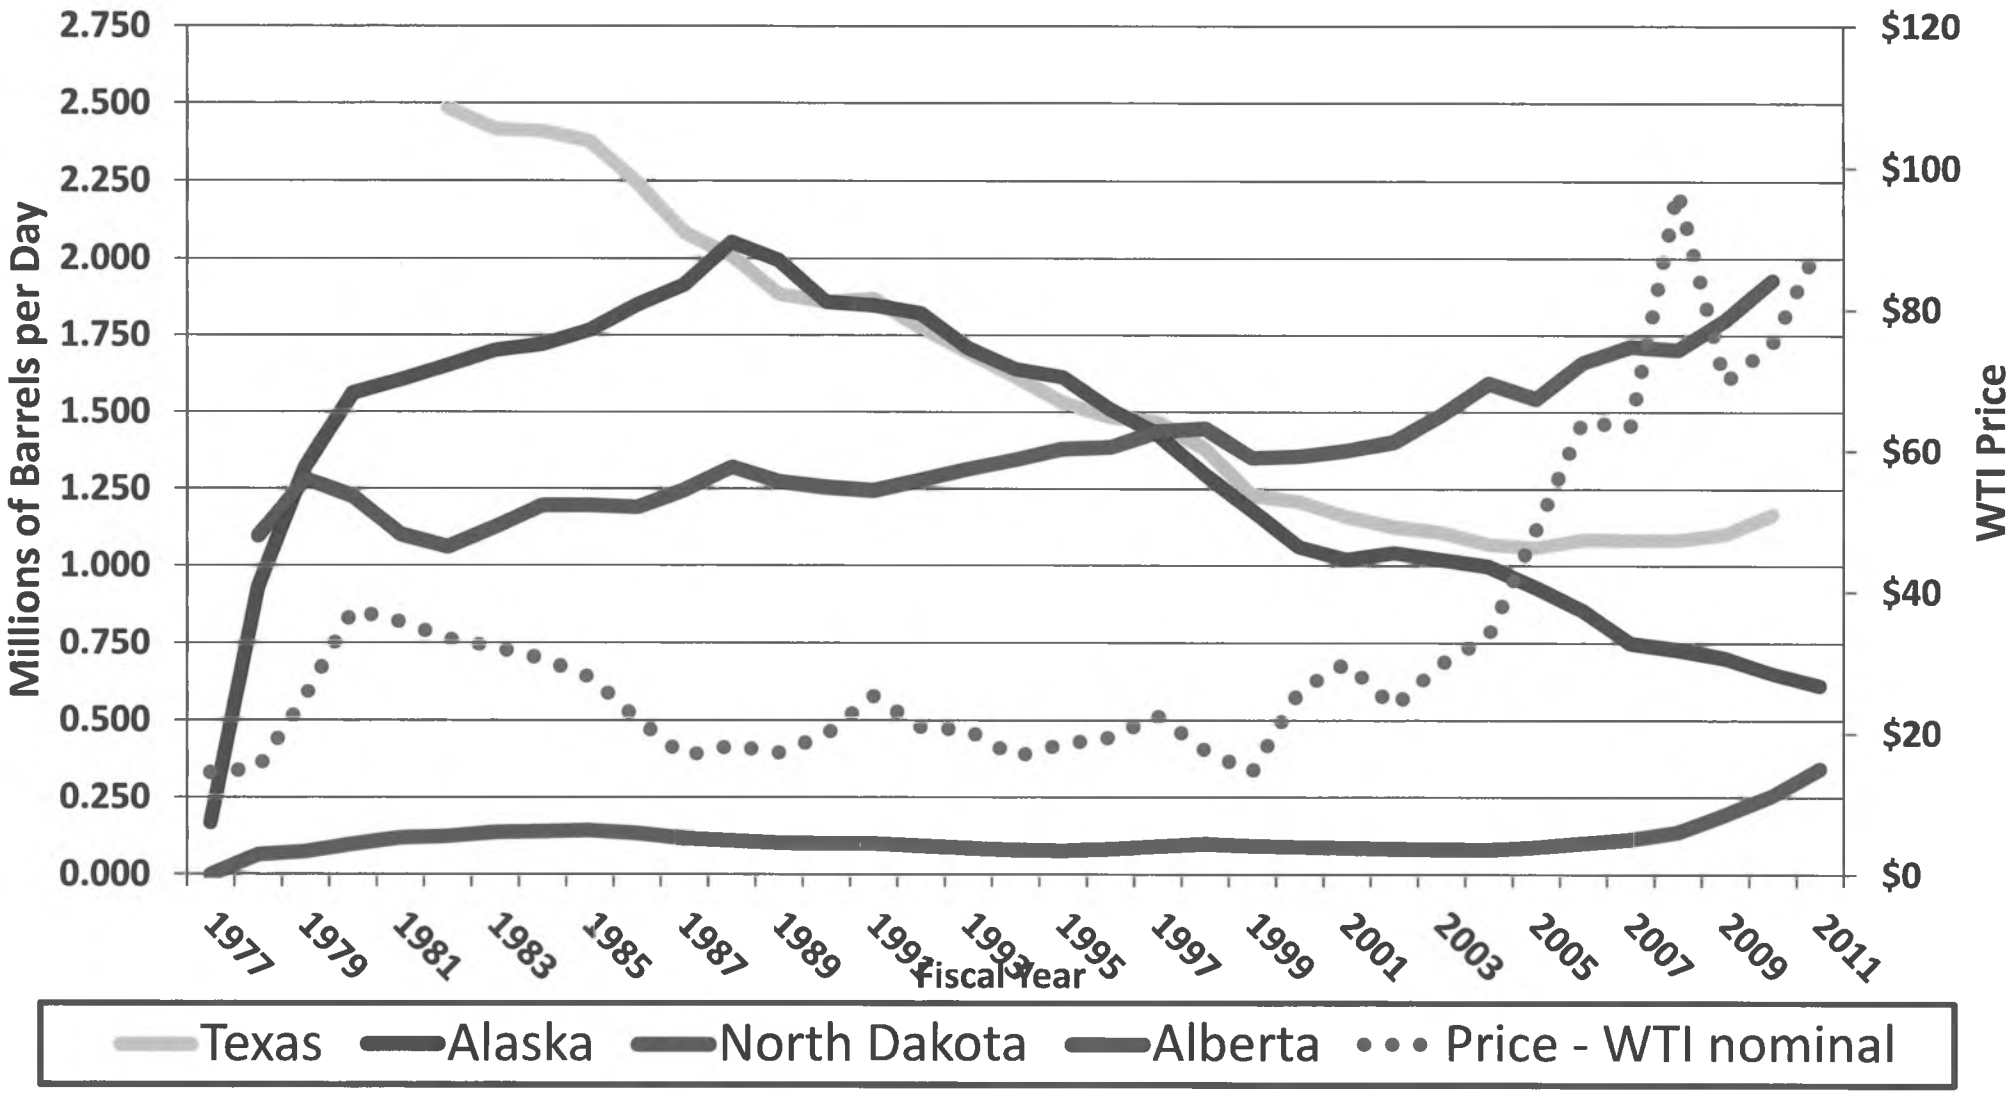
- There's no debating…..Alaska is a world-class energy basin
- Cumulative production through 2010 over 16B barrels
- Oil: Estimated to have 40B barrels of conventional oil
- Gas: Estimated to have 236 TCF of conventional natural gas
- Plus tens of billions of barrels of heavy & viscous oil as well as shale oil & gas

More Important Points

1. As a State, we are in a position we've never been in before
2. PPT/ACES Debate: "Actual" information utilized? Unfortunately No……was not available
3. Decision makers, through no fault of their own, had to rely on modeling, forecasts, projections, theoretical assumptions
4. We now have the luxury to look back and see what actually happened over the past 5 years
5. What do we see? Record high oil prices lead to oil & employment booms in competing oil producing regions
6. And Alaska continues to decline……..

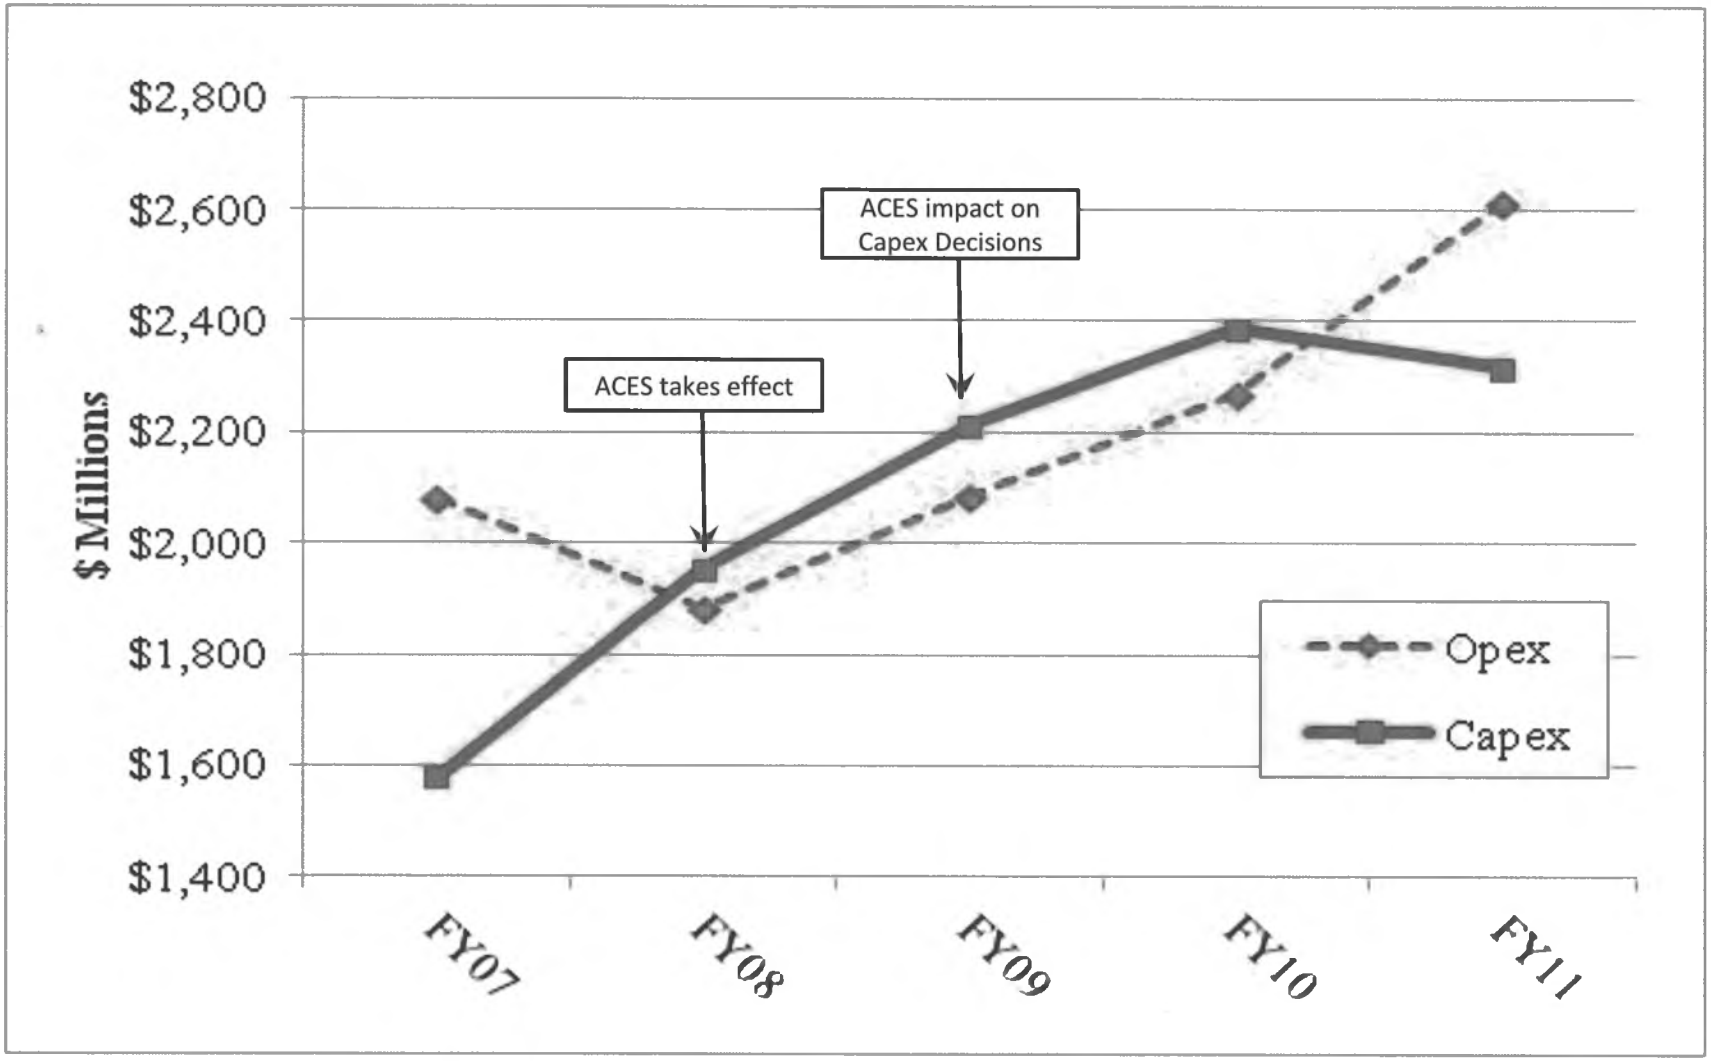
Historical Oil Production:

How Did Our Competition Fare When Prices Spiked?



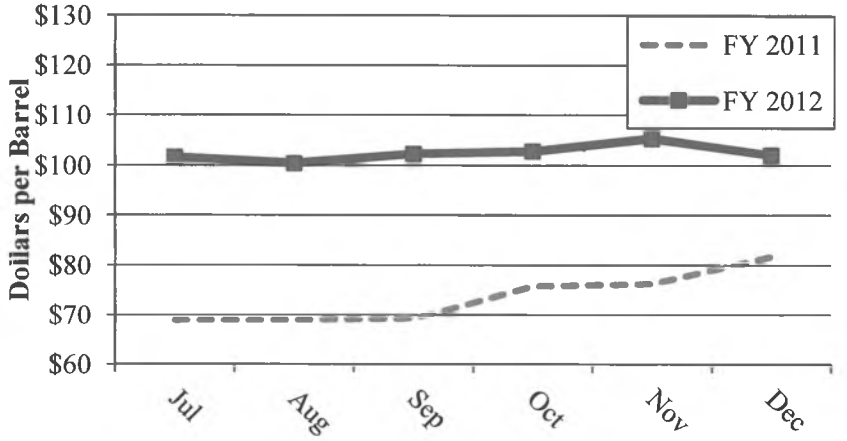
Alaska Department of Revenue

Historical Actual Expenditures, FY 2007 – FY 2011



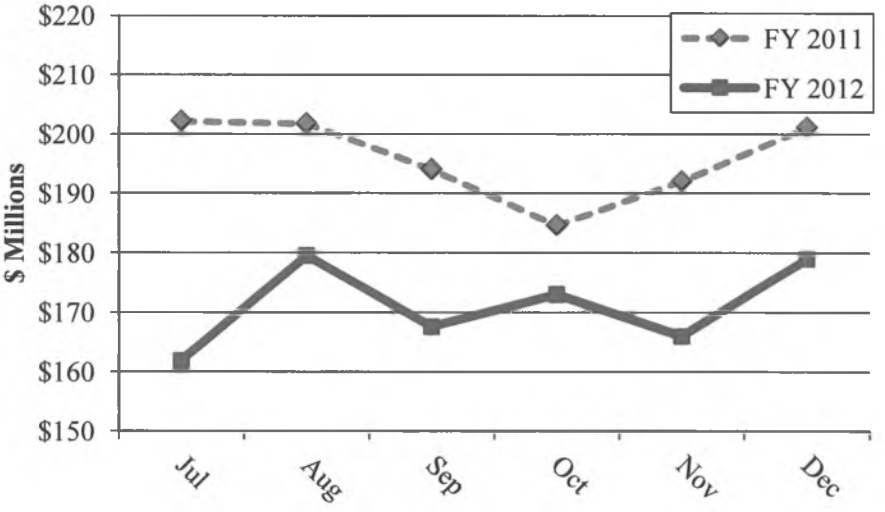
FY 2011 & FY 2012 Wellhead Values, North Slope Capex and Opex

ANS Wellhead Value



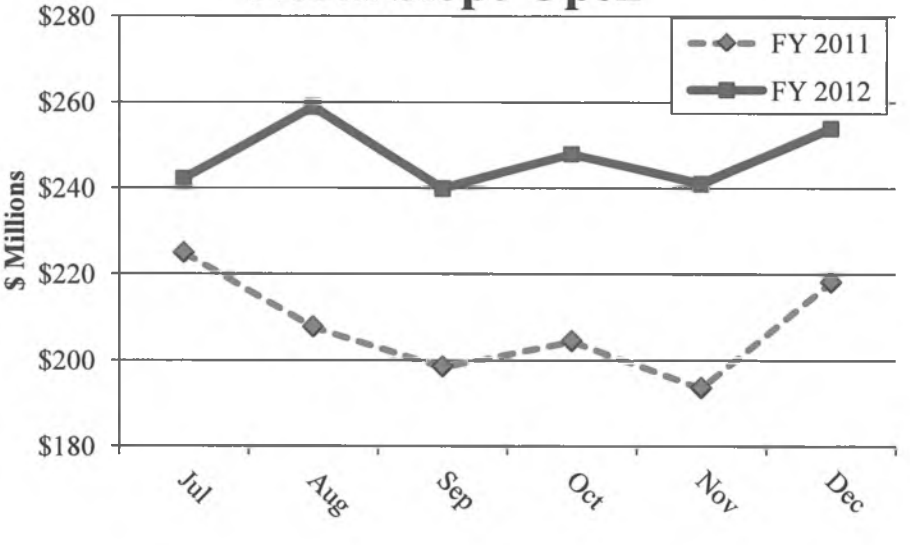
FY12 avg up 39% through 6 months

North Slope Capex



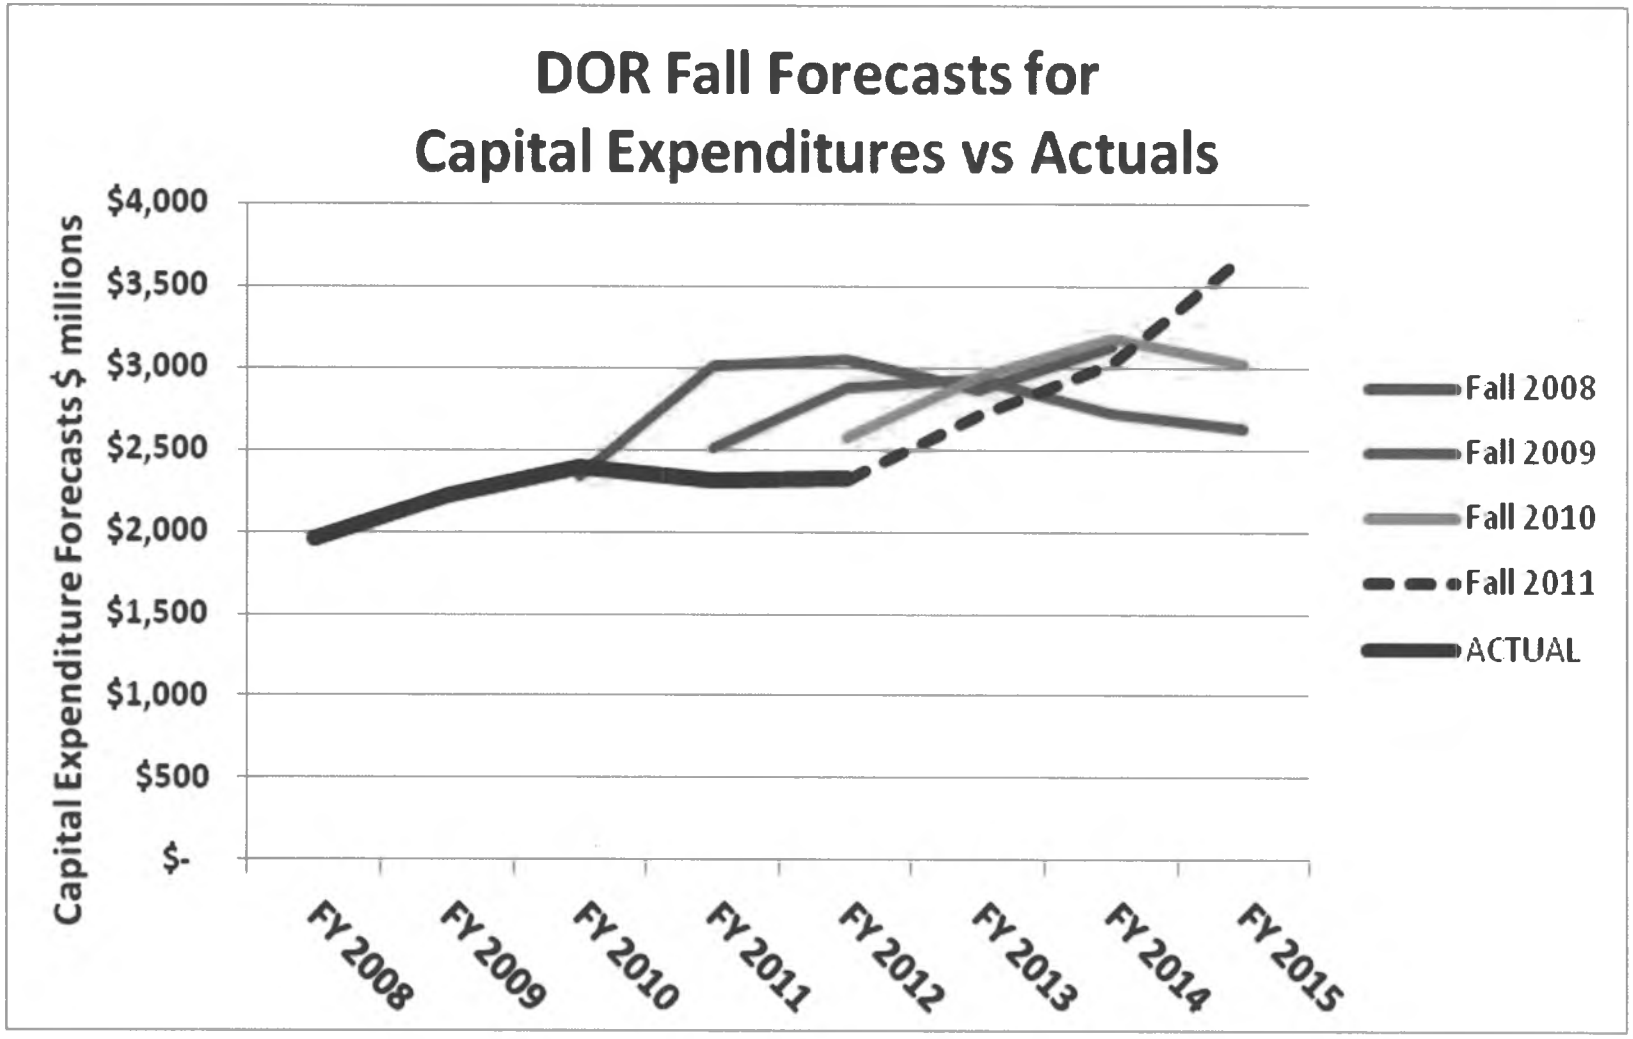
FY12 down 13% through 6 months

North Slope Opex



FY12 up 19% through 6 months

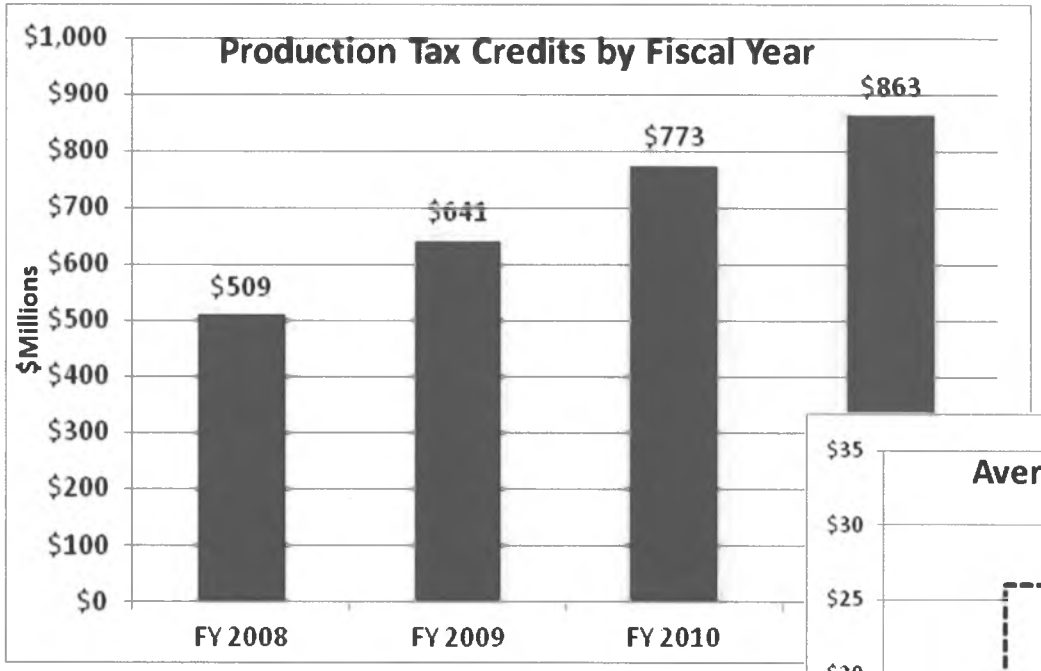
Capex Forecast vs Actual

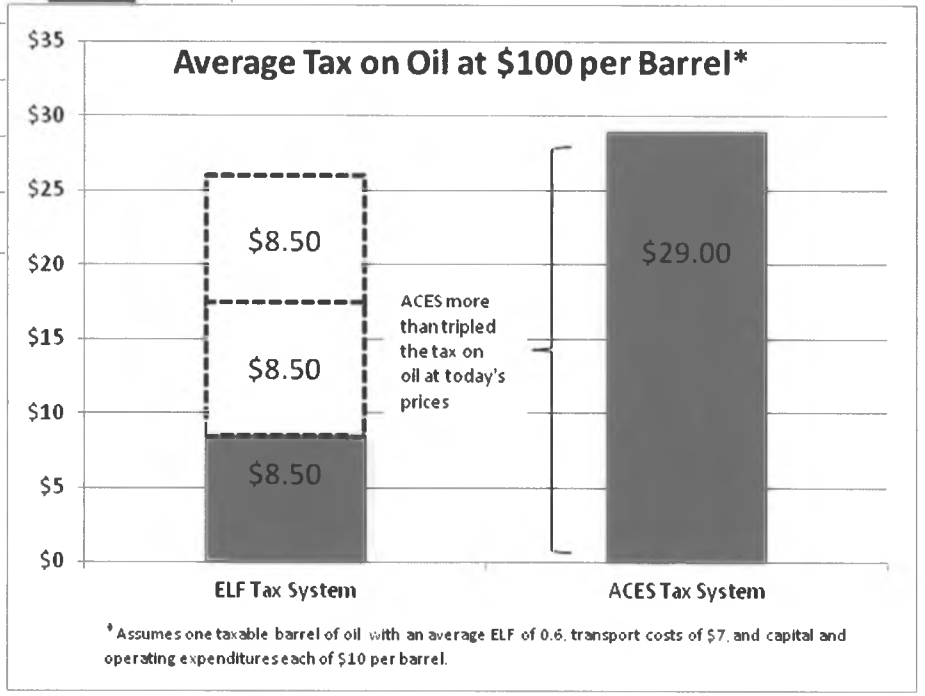


Two Distinct Elements of ACES: Can't discuss one without the other

1. Tax Credits:
   - Very generous tax credits made available over past several years help spur the anticipated exploration
   - Enthusiasm of explorers encouraging but they will eventually need to become or partner with producer
2. Progressivity:
   - Very progressive at high oil prices which makes AK not as attractive when compared to other world-wide options
   - This "windfall tax", while filling AK state coffers during the short term, is contributing to competitiveness issue long term

Alaska Tax Credits are up, but so are Alaska Taxes





How Do Other States Rank Alaska?

Effective Tax Rates for Oil and Natural Gas in 14 Major Oil Producing States: FY2008				
	Value of Oil and Natural Gas Produced	Oil and Gas Revenue Collected	Effective Tax Rate	Maximum Statutory Rate
Alaska	$25,741,800,390	$6,900,000,000	26.80%	25%
California	$21,858,237,067	$0	0.00%	No severance tax
Colorado	$11,834,689,515	$139,550,829	1.18%	5%
Kansas	$6,248,188,250	$159,574,935	2.55%	8.00%
Louisiana	$19,289,935,515	$703,116,080	3.64%	12.5% oil, $0.331 per 1,000 cu. ft. natural gas
Michigan	$2,129,981,470	$101,232,000	4.75%	6.6% oil, 5% natural gas
Mississippi	$2,949,110,665	$29,847,271	1.01%	6.00%
Montana	**$3,682,179,800**	**$166,279,021**	**4.52%**	**15.06%**
New Mexico	$17,884,451,790	$1,374,233,960	7.68%	3.75%
North Dakota	$6,218,744,947	$391,823,087	6.30%	11.50%
Oklahoma	$20,650,142,263	$493,986,142	2.39%	7.00%
South Dakota	$161,169,059	$5,526,990	3.43%	4.50%
Texas	$64,669,070,628	$4,121,526,666	6.37%	4.6% oil, 7.5% natural gas
Utah	$4,568,953,793	$65,510,506	1.43%	5% oil, $1.51 per 1000 cu. ft. of natural gas
Wyoming	$20,136,769,013	$873,558,284	4.34%	6.00%

Questions ?

Presentation to the Senate Resources Committee February 13, 2012 Alaska Department of Revenue

What We'll Be Discussing.....

- Purpose of Tax Credit Provisions
- Purpose of 5 Year Look Back
- Process of 5 Year Look Back
- Capital Cost Categories
- Historical Capex Charts
- Conclusions
- Process for 2011 and Going Forward

Purpose of Tax Credit Provisions

2003 SB 185 (RES)

AS 43.55.025 became law when Alaska had a gross tax, therefore there was no need to consider upstream deductions. The original bill provided for a reduction in royalty on certain oil produced from Cook Inlet in addition to the tax credit provisions. The goals were to increase exploration and increase the State's knowledge of the natural resource base.

5/13/2003, Senate Finance Committee

- Royalty reduction provisions were to help field economics and allow producers to maximize production and continue employment
- Regarding the tax credit provision, a sponsor commented the tax credits are more applicable to exploration than discovery
- Intent was to encourage companies to drill more wells so that the possibility of both discovery and production could be "substantially" increased
- Bill was part of Governor's long range plan and ultimate goal was to increase pipeline throughput
- Drilling within an existing unit would not qualify, nor would wells under current development and exploration plans

Purpose of Tax Credit Provisions, cont'd

- The fiscal impact of the tax credits was an investment incentive that the state must offer to secure "a long-term stream of oil"
- Exploration credits *were* limited to the exploration side, and were amended to include testing but not development costs
- Clearly the focus of the legislation was to encourage exploratory work by the industry and increase the State's understanding of resource base e.g. lease sales
- The credit was set up to encourage wildcat, high risk exploration and State shares in this risk via credit program

5/14/2003, Senate Finance Committee

- Once a well is successful, the State would stop "recovering the cost" because it is assumed that a producer would continue development.
- Wildcat exploration would qualify for a 40% credit, but the explorer must submit information about state geology and resource base during the exploration activities to DNR.

Purpose of 5 Year Look Back

- To provide informative cost information to decision makers
- To answer capital expenditure questions relating to credits
- To understand benefits and impacts of current statutes and regulation
- To create a process and reporting mechanism to collect and compile expenditure information submitted to DOR in non-standard formats
- To catch up on years of data collection
- To create standardized cost categories for reporting and data gathering to State agencies
- To establish the historical basis for future analysis and comparisons

Process of Information Gathering

- As part of the Data Assessment Project, conducted in-house discussion and review
- Conducted 4 workshops with industry
- Participation averaged 15 companies per workshop
- Industry was responsive in both active participation and written comments
- Established capital cost expenditure categories
- Developed both the 5 Year Look Back and forward-looking reporting categories

Use of Cost Expenditure Categories

- Compiled 5 Year Look back of CapEx (2006 to 2010)
- Compiling more detailed look forward of CapEx only – Effective 2011 return to be reported 3/31/12
- Look forward of CapEx & OpEx in progress – Effective 2012 return to be reported 3/31/13
- Will be submitted with annual production tax returns
- As supplemental information supporting the tax return
- Based on confidential information

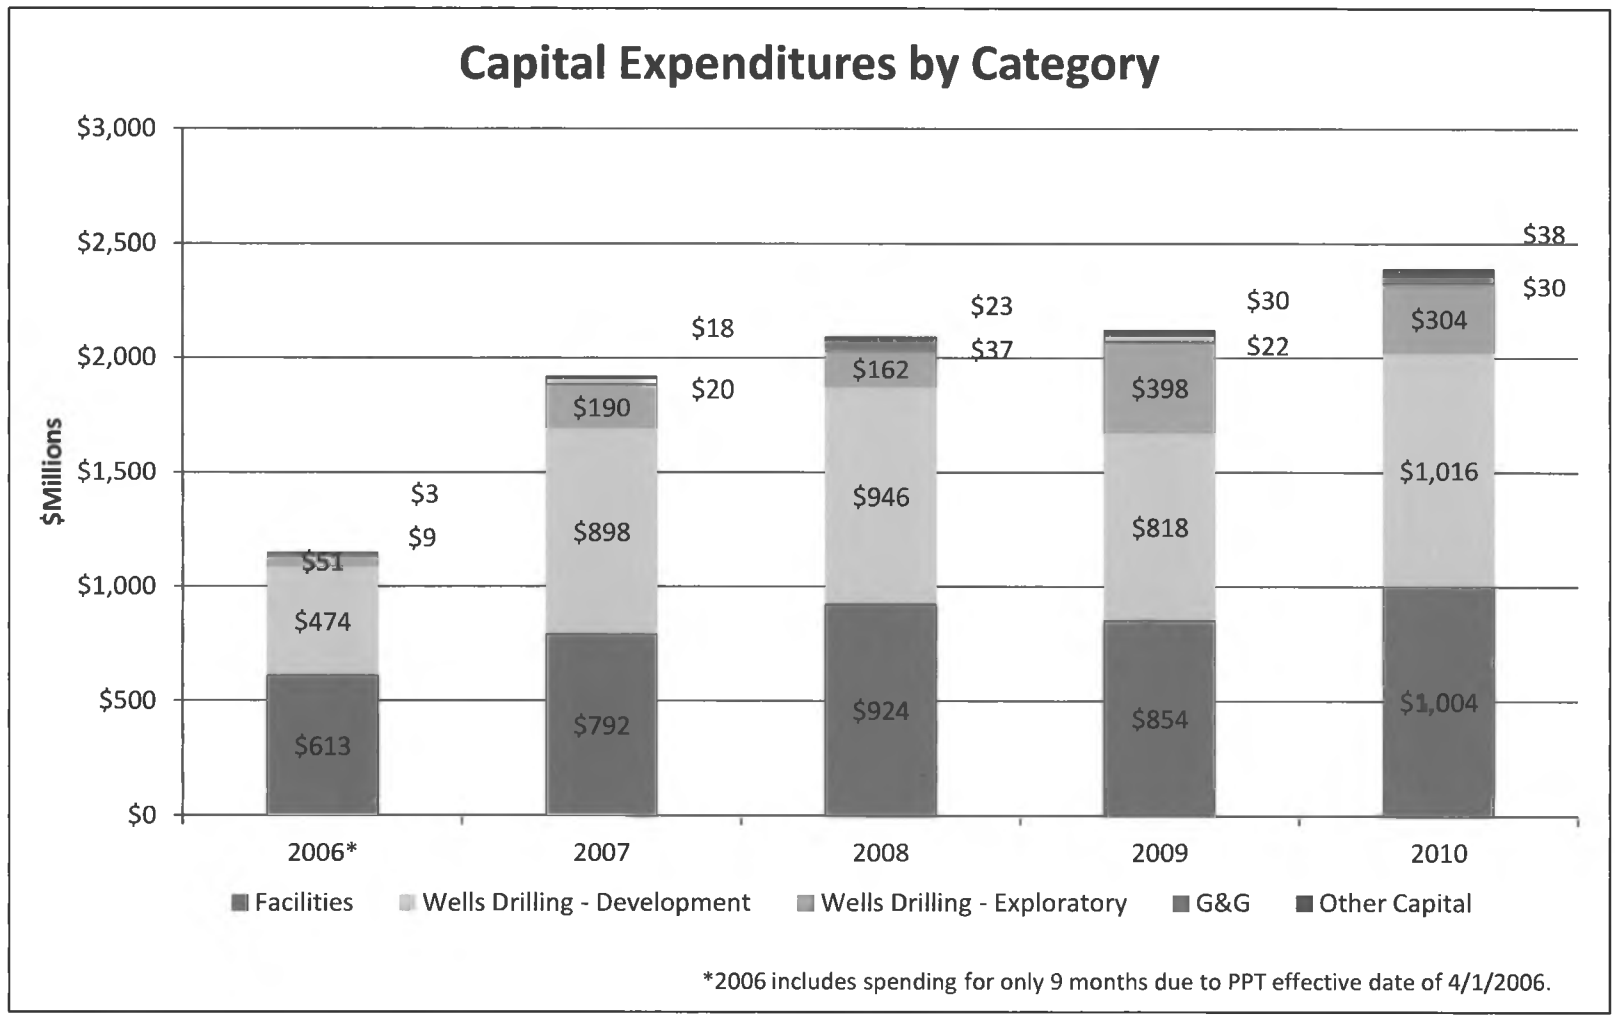
Capital Expenditure Categories

Look-back Categories For Years 2006 – 2010

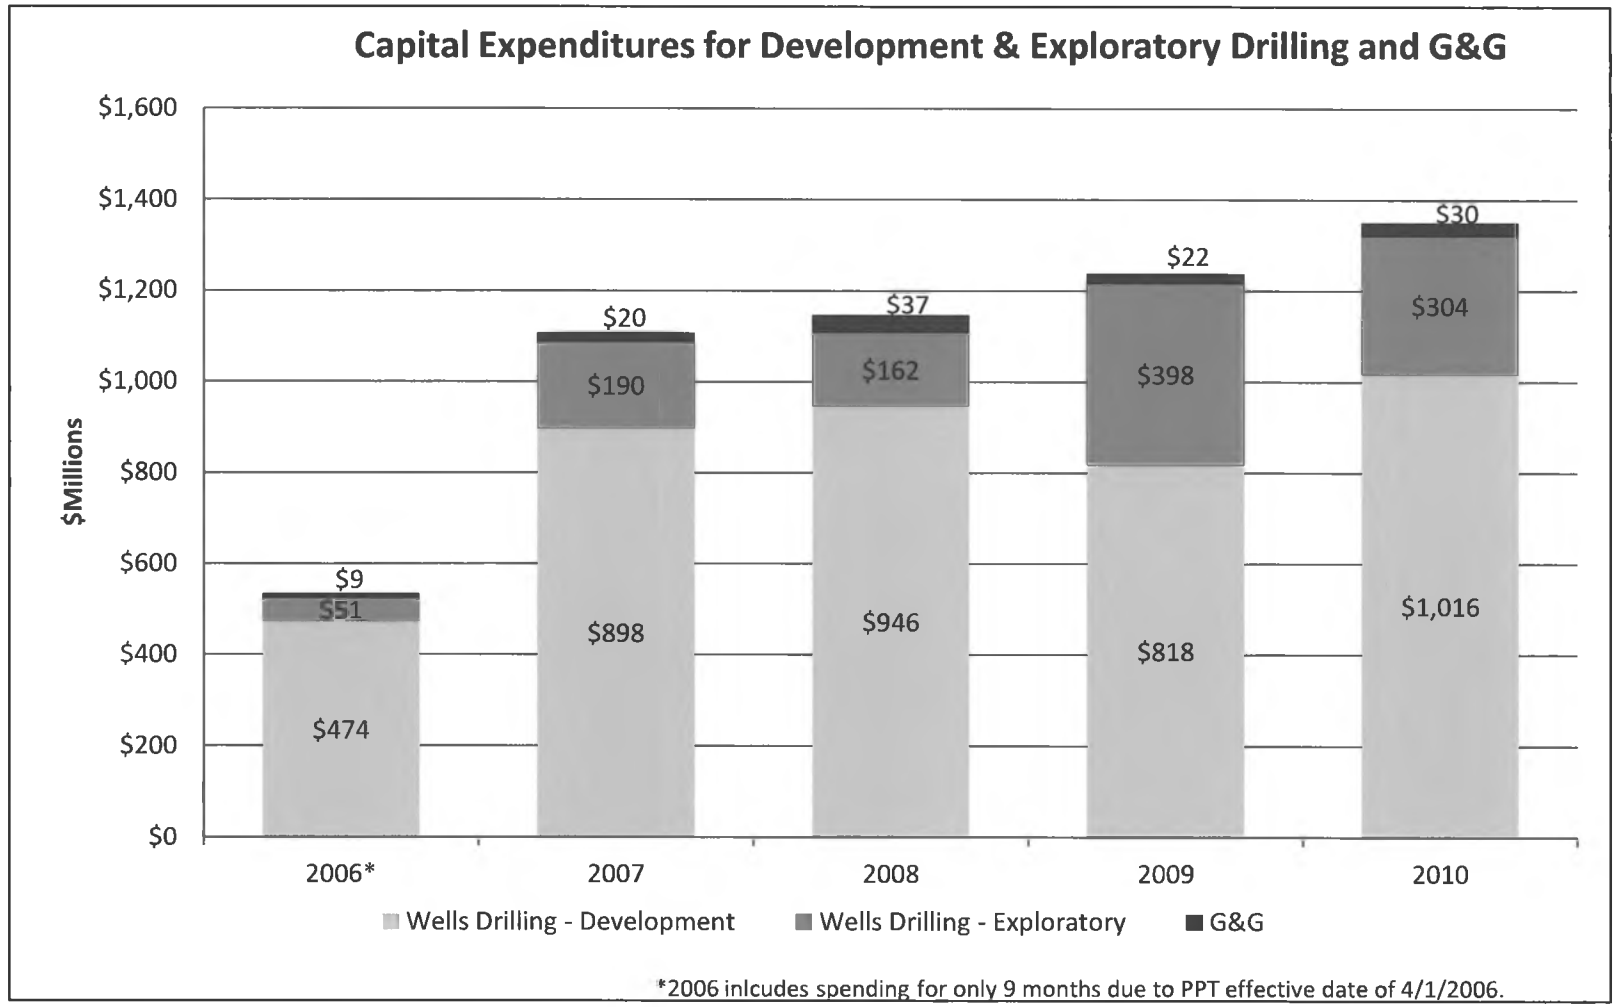
- Geological & Geophysical Work (G&G)
- Exploration Drilling
- Development Drilling
- Facilities
- Other Capital

Categorized capital expenditure data represent 90% of costs related to credit applications

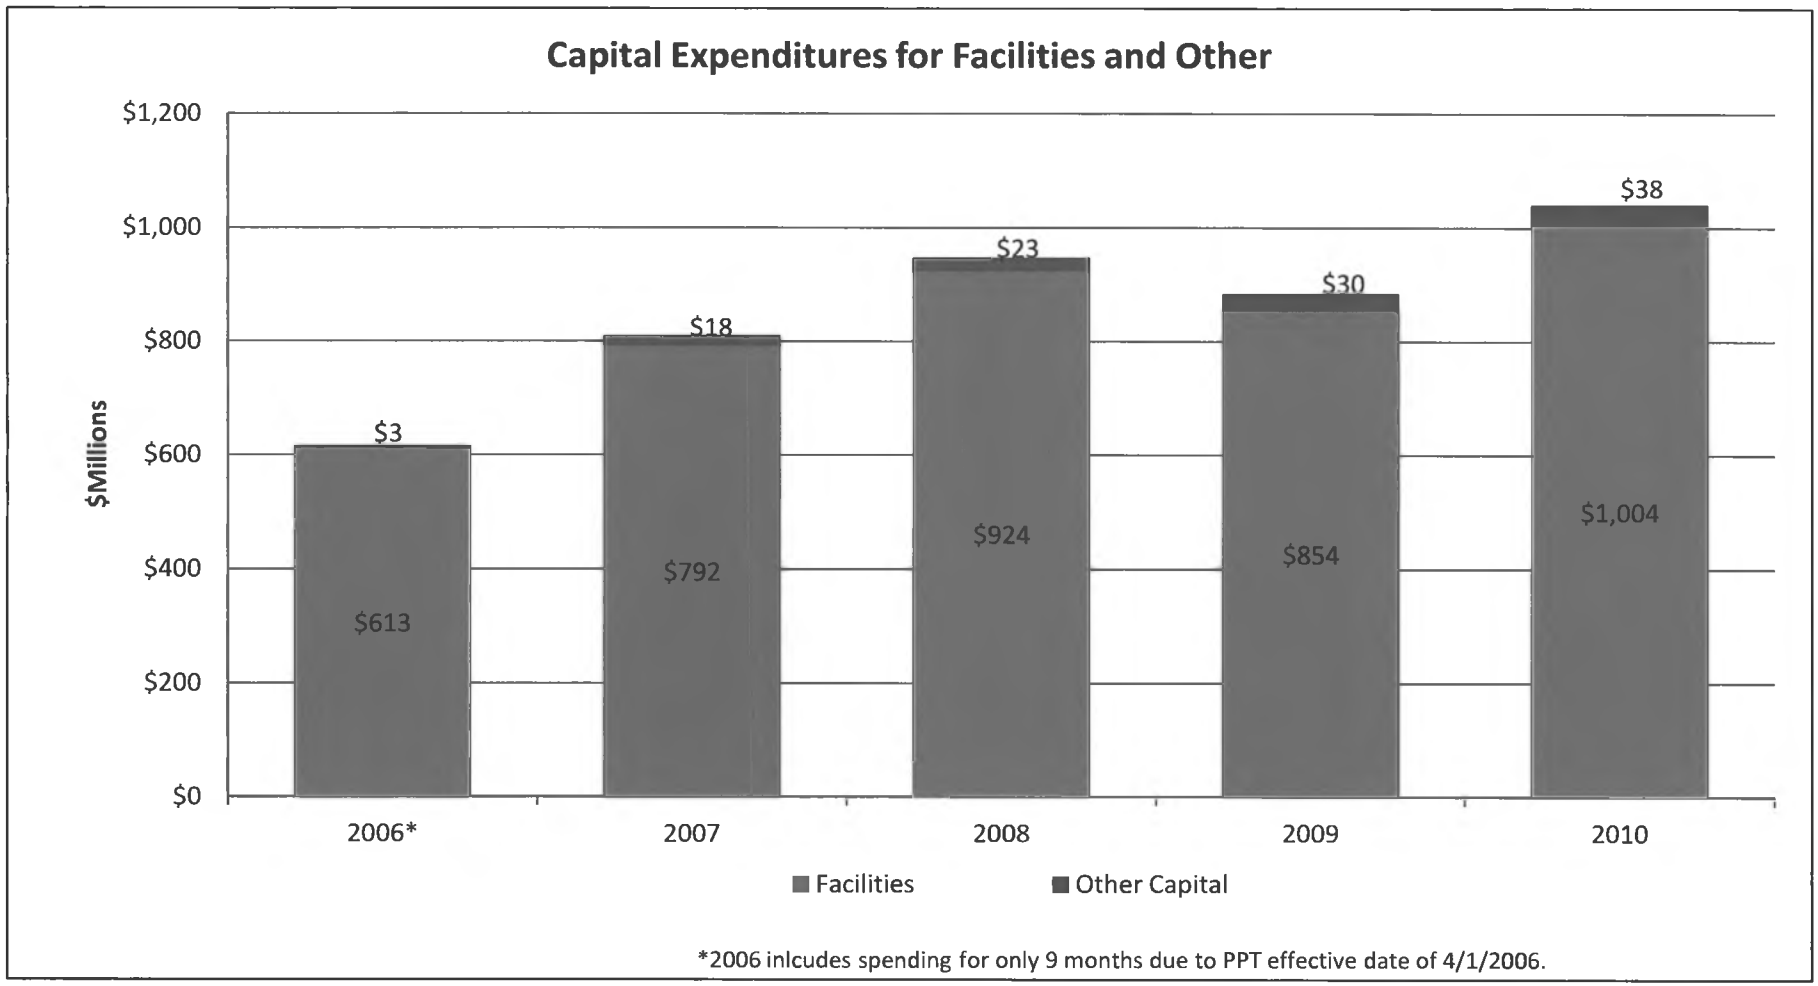
Historical CAPEX by Category (CY)



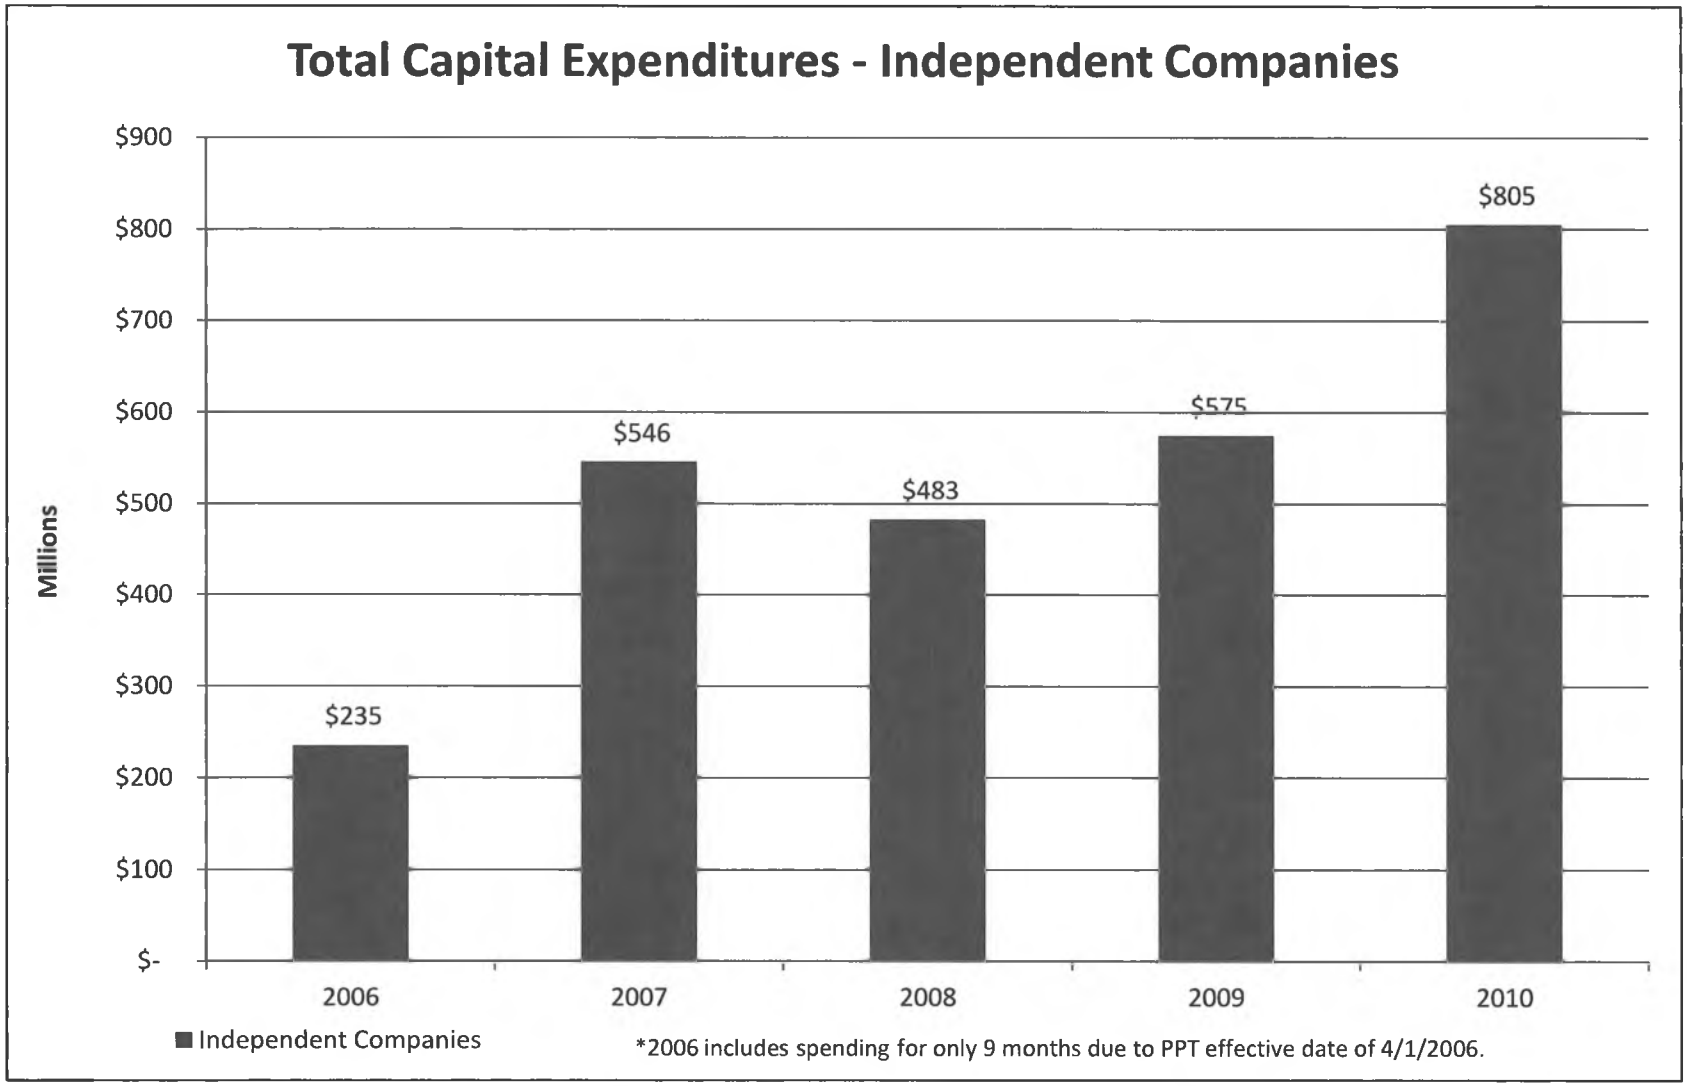
Historical CAPEX for Drilling and G&G (CY)



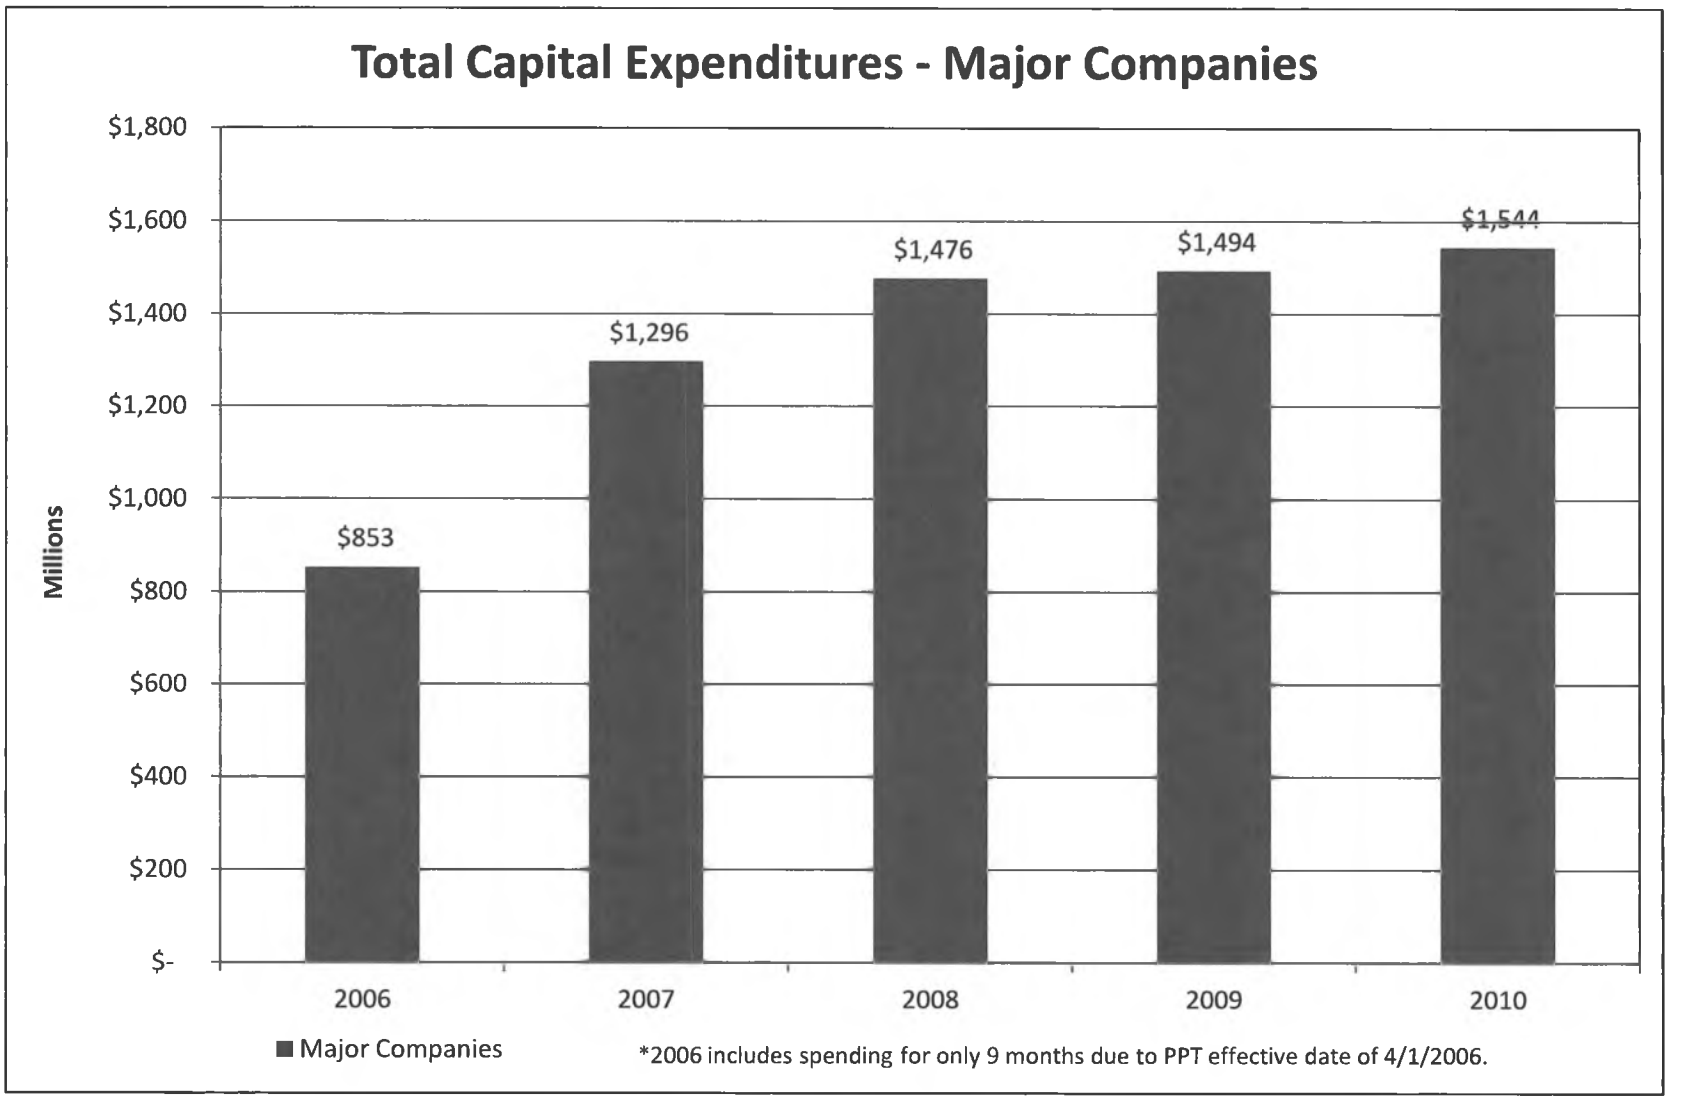
Historical CAPEX for Facilities & Other (CY)



Historical CAPEX (CY)



Historical CAPEX (CY)



2006-2010 Conclusions

- We now have more **actual** information regarding O&G spending habits than ever before available to the State of Alaska
- More **actual** information in this presentation alone than available during PPT/ACES debates combined
- Capital Expenditures in 2007 - 2010 increased from ~$2.0B to ~$2.4B
- Explorers spent money on drilling wells and G&G
- Companies in the development stage spent money on development drilling and facilities
- Companies in transition spent money in multiple areas depending on the stage they entered a project
- Companies in mature production phase spent money on maintenance and upgrade of facilities and development wells
- Now have more players active in the field
- Two fields planned and developed prior to PPT/ACES benefited from the tax credit provisions

Prospective Cost Information Look Forward

Proposed Annual Cost Supplemental Information Report

For calendar year 2011 (reporting due March 31, 2012):

- Use Look back CAPEX categories
- Filed by producers and explorers

For calendar year 2012 (reporting due March 31, 2013):

- Use more detailed categories following additional workshops with Industry
- Filed by producers and explorers

Questions?

Policy Options for Alaska Oil and Gas

Pedro van Meurs

Monday – Tuesday, February 13-14, 2012

Presentation
Alaska Senate Finance Committee

Van Meurs Corporation
Nassau, Bahamas
Tel: (242) 324-4438
e-mail: info@vanmeurs.org

Introductory Comment

The objective of Governor Parnell is to achieve a TAPS throughput of 1 million barrels per day.

Can this objective be achieved from State of Alaska resources by 2025? Yes

How?

It will require major policy and fiscal changes as will be discussed during the seminar.

These changes need to induce an increase in investment of about $ 7.5 billion per year over current levels.

Introductory Comment

Such major policy and fiscal changes could also induce significant exports of LNG prior to 2025.

Four Sessions

The seminar will develop in four sessions:

1. **New policy framework required**
2. **International competitive environment**
3. **Proposed terms for existing and new light oil**
4. **Proposed terms for heavy oil, shale oil and natural gas**

Session 1

New policy framework required

World Rating of Oil and Gas Terms

Much of the material to be presented during the seminar is derived from a large international study being done by Van Meurs Corporation entitled:

World Rating of Oil and Gas Terms

In this study oil and gas fiscal systems of more than 140 countries and jurisdictions, such as Alaska, are being compared and analyzed in order to determine their favorability for investors.

Information about the study is available on:

www.petrocash.com

World Rating of Oil and Gas Terms

The 2011-2012 ratings of fiscal terms will cover 6 volumes.

Four volumes have been completed:

- **North American wells and shale plays**
- **Deep water**
- **Arctic**
- **Shallow water**

Two volumes still to be completed:

- **Onshore fields and shale plays**
- **Summary**

Alaska fiscal terms

During the seminar specific new fiscal terms will be proposed for Alaska oil and gas.

The purpose of these terms is to demonstrate how a new fiscal system can be created and to indicate the order of magnitude of the amounts and rates that would need to be adopted.

Concept of Government Take

During the seminar the concept of "government take" will be used frequently. Following is an example of the calculation of the government take for a 10% royalty.

Gross Revenues	**$ 100 per barrel**
Costs	**$ 20 per barrel**
Divisible Income	**$ 80 per barrel**
Royalty 10%	**$ 10 per barrel**

Government Take: ($ 10 / $ 80) x 100% = 12.5%

The Government Take in this seminar is presented on an undiscounted and real basis using an escalation and inflation rate of 2% and is based on price and cost data as contained in Volume 3 of World Rating of Oil and Gas Terms.

Policy Change required

Alaska will not be able to reverse the decline in oil production from State of Alaska leases unless Alaska encourages major investment in:

- **Heavy oil,**
- **Potentially Shale Oil, if technically and economically viable, and**
- **Maybe some GTL production**

Policy Change required

If Alaska wants to attract investment in a major way for the important new resources (heavy oil, gas and potentially shale oil), significant political change is required in Alaska.

These changes are:

1. **Alaska has to define competitive fiscal terms for the entire range of oil and gas resources, so investors know what the terms are.**
2. **Alaska has to offer fiscal stability on these terms for large new projects, so investors know that Alaska will honor these terms for a significant duration.**

Policy Change required

Alaska is only jurisdiction in the world without defined fiscal terms for major oil and gas resources within its jurisdiction.

Alaska has no fiscal terms designed for heavy oil.

Alaska has no fiscal terms designed for shale oil.

Alaska has no implementable fiscal terms for natural gas.

This is a major obstacle for new investment.

Alaska political climate

It will be very difficult to introduce such changes in the current somewhat unfavorable political climate in Alaska.

The unfavorable political climate in Alaska is "structural"; in other words it is unlikely to change.

It is created by two factors:

- **The small size of the Alaska population creates a particular way of developing fiscal policy, and**
- **An dependency relationship of Alaska on three major oil companies for most of their government budget, which creates resentment among some Alaskans. "Standing up for Alaska" is politically popular.**

Political climate:

Small size of population

Jurisdictions with small populations (<2 million) develop oil and gas fiscal systems differently than jurisdictions with large populations (> 2 million) .

Small jurisdictions are often "project driven". They tend to wait for someone to propose a project before deciding on detailed terms. Often terms are complex because many local interests need to be dealt with and terms are tailored for specific conditions.

Examples with population in millions: Alaska (0.7), Newfoundland & Labrador (0.5), Trinidad and Tobago (1.3), Equatorial Guinea (0.7) and Qatar (1.7).

Political climate:

Large populations

Jurisdictions with large populations of have generic petroleum codes and tax laws which deal with all petroleum resources. Terms are identical for all investors. Terms may be adjusted for each bid round. Often petroleum fiscal terms are relatively simple.

Examples with population in millions: United States (Federal onshore and OCS) (312.1), Norway (5.0), Alberta (3.7), the United Kingdom (62.3) and Australia (22.8).

Competitive Framework for Alaska: 1997

Petroleum economic environment:

- **Oil price low**
- **European and Asian gas prices low**
- **LNG trade limited**
- **Focus on conventional oil and gas**
- **Conventional oil production in US declining**

Competitors of Alaska:

- **Latin American, African and Asian developing countries**
- **Main LNG competitor: Qatar**

Method of determining fiscal terms by competitors:

- **Negotiations of production sharing contracts resulting typically in tough terms**

Competitive Framework for Alaska: 2012

Petroleum economic environment:

- **High oil prices**
- **High European and Asian gas prices**
- **Booming LNG trade**
- **Focus on unconventional oil and gas**
- **Oil production in US and Canada increasing**

Competitors of Alaska:

- **Lower 48 USA, Canada, Russia and Brazil**
- **Main LNG competitor: Australia**

Method of determining fiscal terms by competitors:

- **Fixed and usually attractive fiscal terms.**

Alaska Political climate:

Negative experience

The fact that fiscal terms in Alaska are being defined once a project is identified has already resulted twice in the loss of a major gas export project:

- **Under Governor Knowles in 1996 there were realistic opportunities for LNG exports to Asia. Yet, the process of having first to develop the "Stranded Gas Development Act" in order to enter in negotiations resulted in a situation where Asian buyers went elsewhere.**
- **Under Governor Murkowski in 2003 there was a significant opportunity to built a gas line to Alberta. Yet, strong opposition within government and from Alaskans delayed negotiations and resulted in a disapproval of the project.**

These experiences create a negative environment for the proposal of new projects by major companies in Alaska.

Policy change required

If Alaska wants to attract major new investment in the new competitive environment of 2012 and achieve a million bopd target and LNG exports, it has to establish competitive and fixed terms for all its resources:

- **Existing light oil**
- **New light oil**
- **Heavy oil**
- **Ultra heavy oil**
- **Shale oil**
- **New natural gas**
- **Associated natural gas**

What Alaska needs is a "we are open for business" brochure that sets out all terms for investing in oil and gas in Alaska.

Implementation of new terms.

With respect to light oil for existing and new production it seems that no particular implementation measures need to be taken. It is likely that investors will respond positively to the new terms and make the necessary investments, unless the project involves major new investments, such as the development of Point Thomson.

With respect to heavy oil, shale oil, natural gas and GTL it is unlikely that investors will commit to large multi-billion dollar programs unless there is a degree of fiscal stability in a contractual framework.

Contractual relationship.

If investors feel that fiscal stability is required for their investments, the Government of Alaska should be authorized to sign contracts, without further legislative approval. In other words the process would be similar to the approval of an oil sands plant in Alberta.

The fiscal stability period could range from 10 – 25 years from the start of the contract, depending on the nature of the investment.

In exchange for being offered fiscal stability, the investor would have to commit to a substantive work program.

It is understood that the matter of whether or not Alaska can offer fiscal stability, is an issue to be decided by the Alaska Supreme Court.

Difficulties in achieving Alaska production increases

Increasing Alaska oil production and initiation of gas exports will face other major difficulties.

The main difficulty is that the three major oil companies are in a "harvesting mode", which means their main objective is drawing cash out of Alaska to invest elsewhere. The reasons for this are:

- **No large and attractive projects available in Alaska under current fiscal terms for major oil companies**
- **Attractive opportunities outside Alaska.**

No attractive projects in Alaska
for major oil companies

Current fiscal terms are designed for *low cost light oil*.

There is possibly about one billion barrels of new *high cost light oil* production available through:

- **Discoveries as a result of new exploration**
- **Small discovered fields, which have not yet been brought on stream**
- **Infill drilling of existing fields.**

Major oil companies are already infill drilling, other projects do not compare well in attractiveness with international opportunities.

As a result, the main focus of major oil companies is to draw cash out of Alaska for investment elsewhere.

Session 2

International competitive framework

Attractive terms outside Alaska
for major oil companies

In the following slides the international competitive position for Alaska will be evaluated for the following resources:

- **Existing light oil production**
- **New light oil production**
- **Heavy oil**
- **Shale oil, and**
- **Natural Gas**

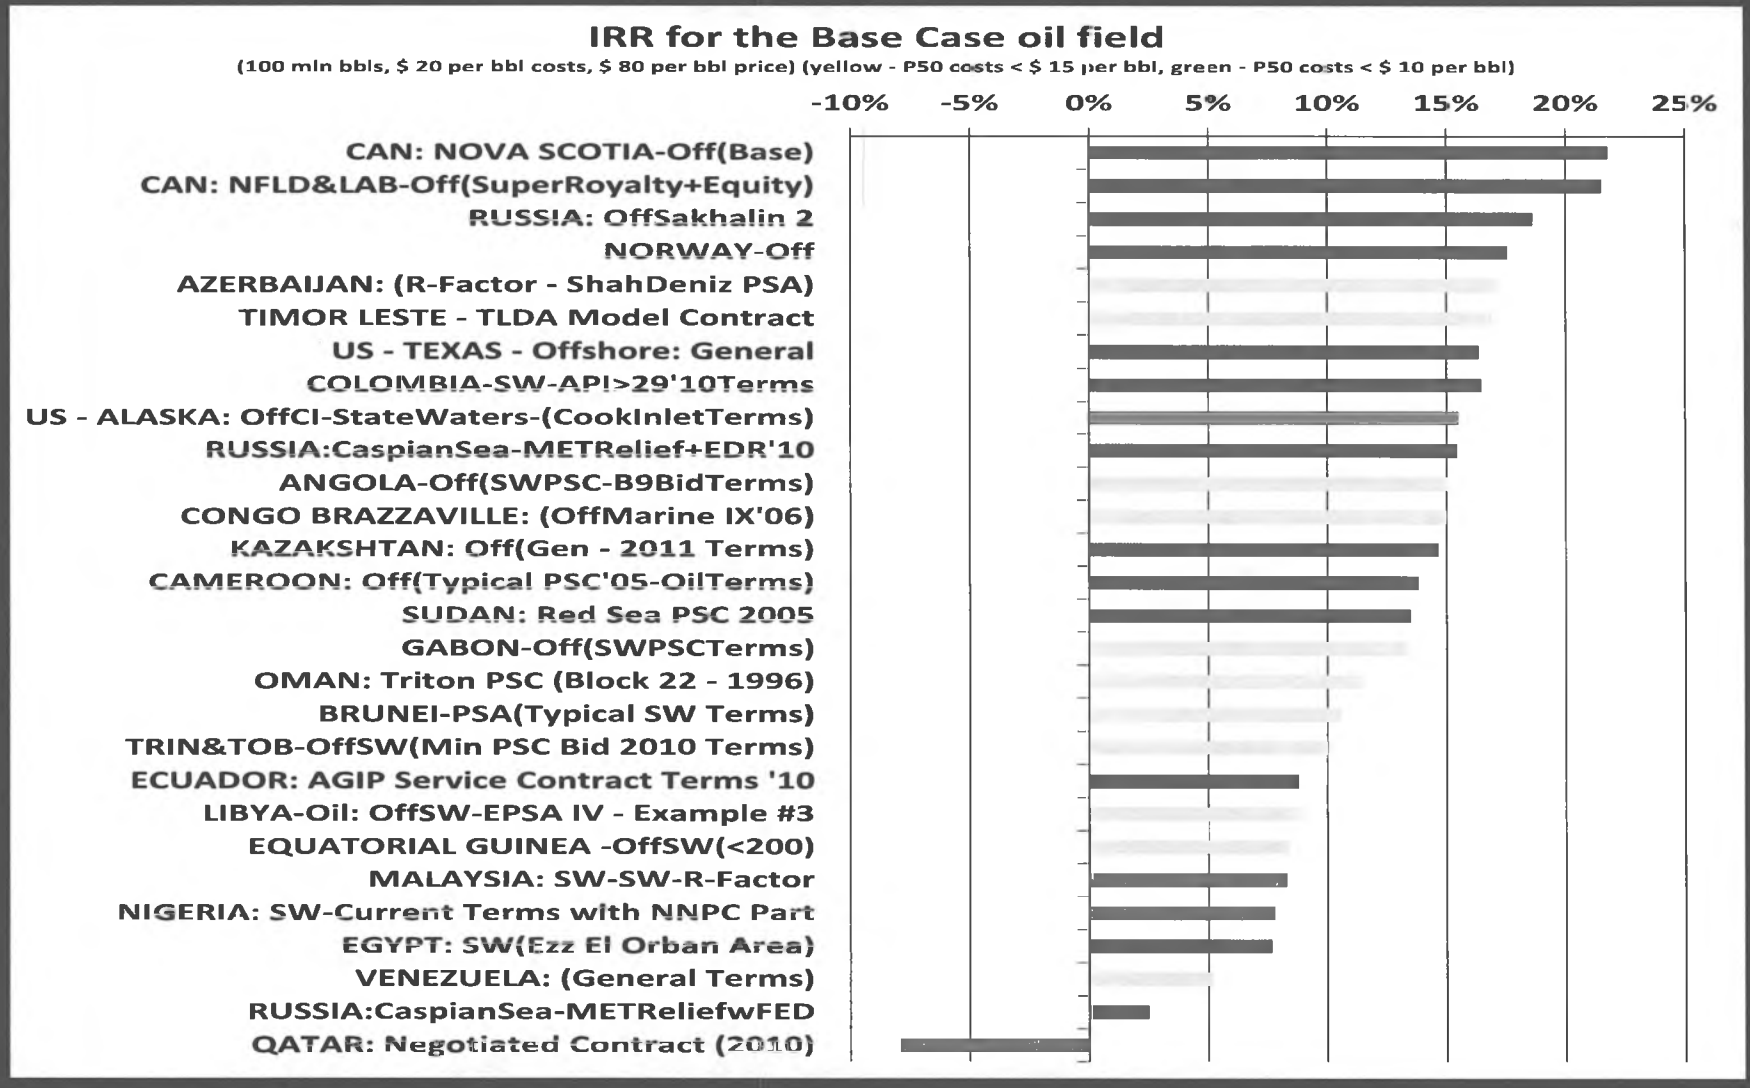
International competition:
Existing oil production

The Shallow Water results of World Rating of Oil and Gas Terms permit a comparison with the largest "peer group". The largest peer group for Alaska are the exporting jurisdictions. The following charts provide the results for a selection of 28 exporters of oil.

The Arctic Report permits a comparison with other Arctic jurisdictions.

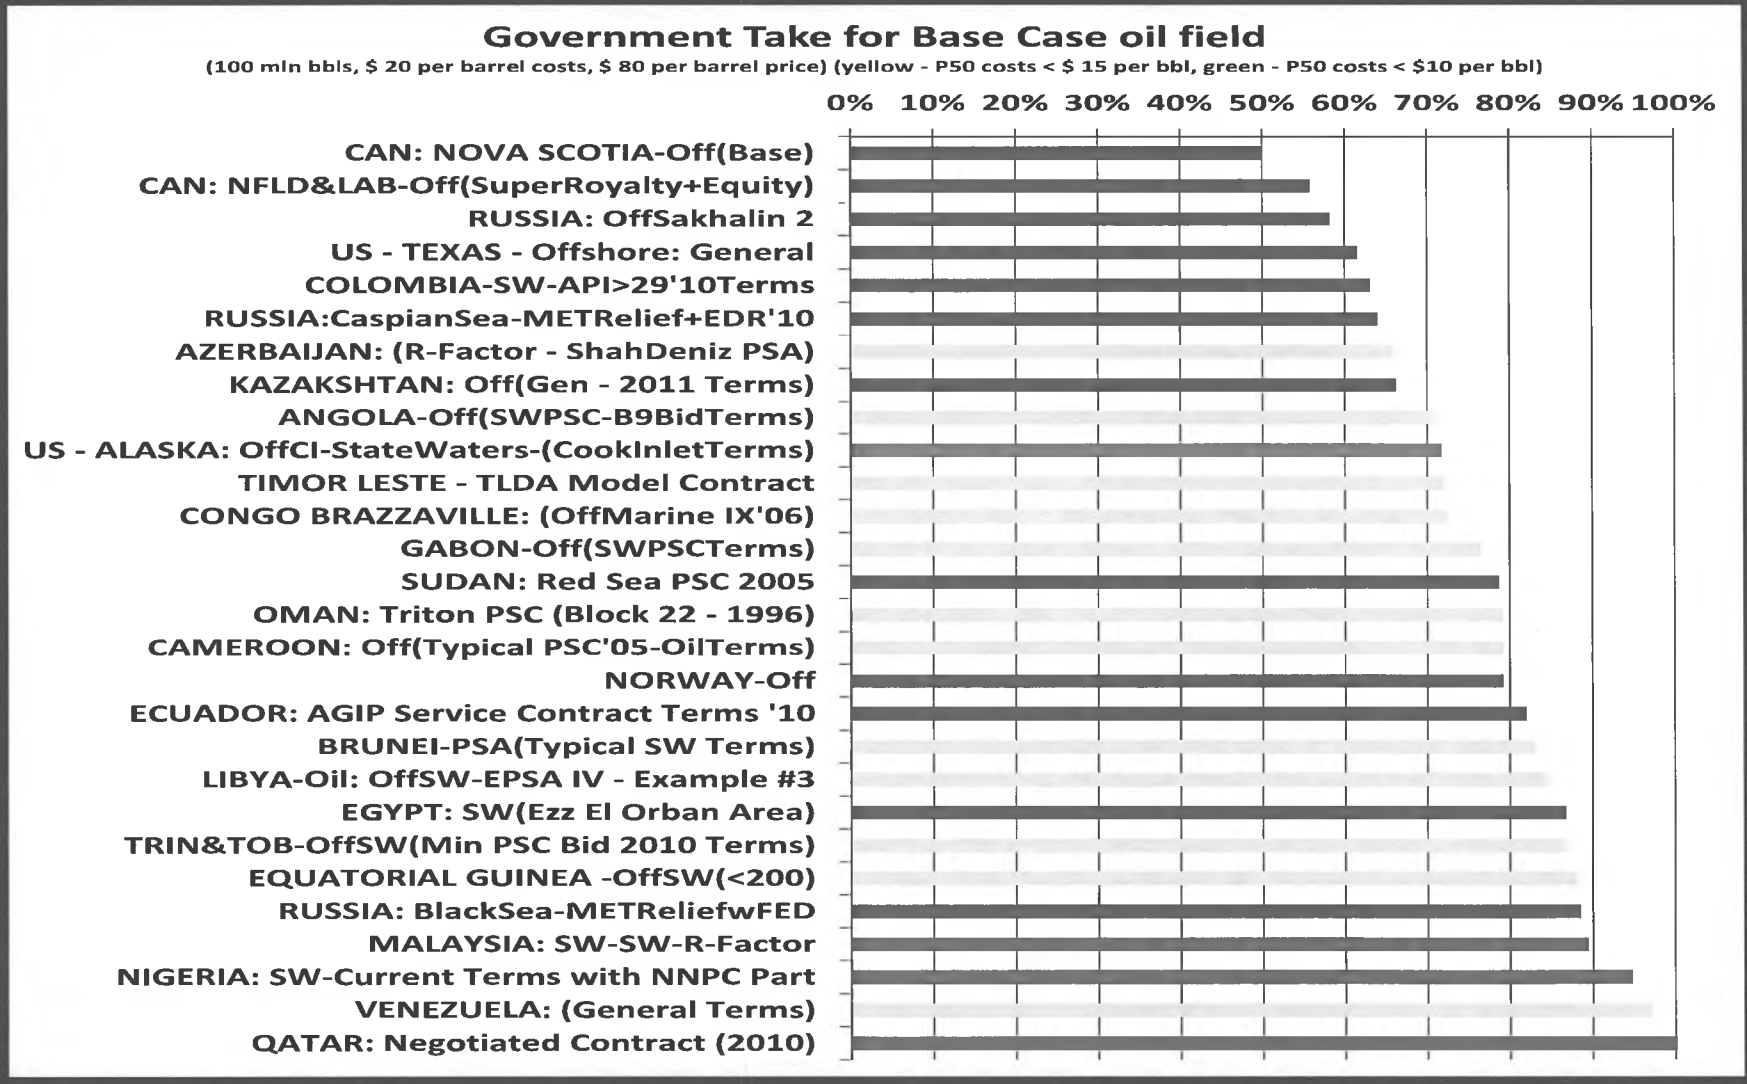
Following is an overview of the results.

Shallow water exporters (Oil)



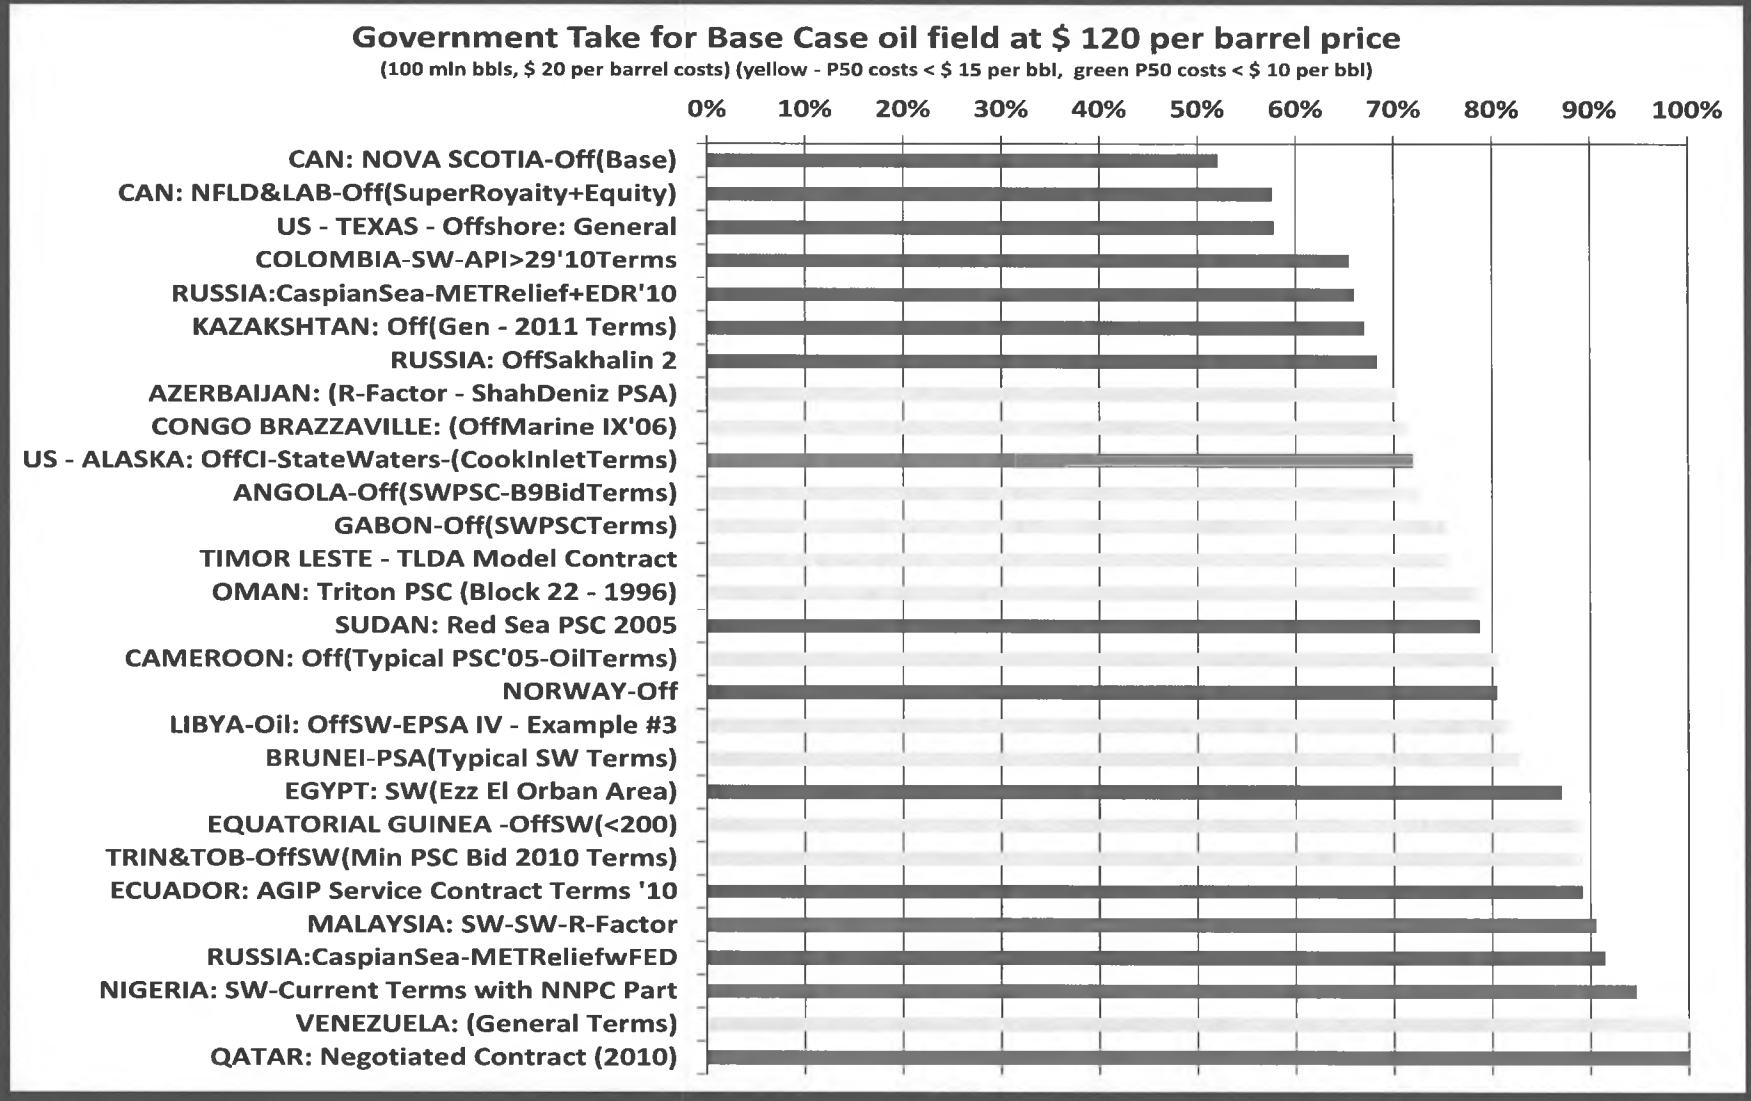
IRR: Alaska terms rate # 9 out of 28 exporters.

Shallow water exporters (Oil) - $ 80



Undiscounted Government Take: Alaska terms rate # 10 out of 28 exporters.

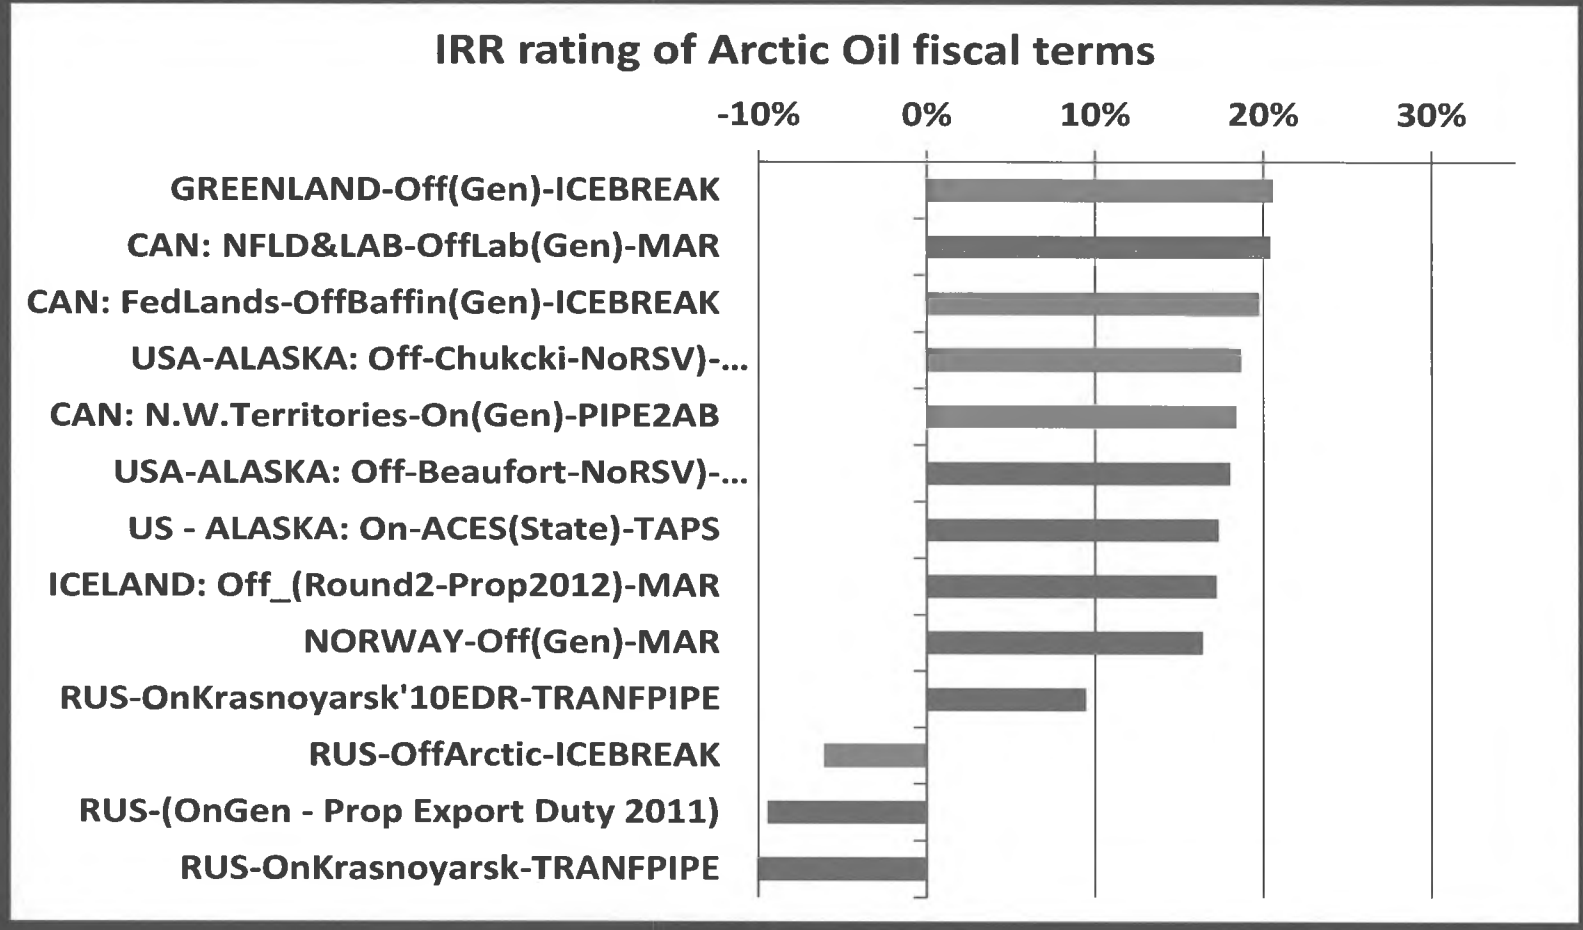
Shallow water exporters (Oil) - $ 120



Undiscounted Government Take at $ 120 per barrel: Alaska terms also rate # 10 out of 28 exporters.

Arctic (Oil)

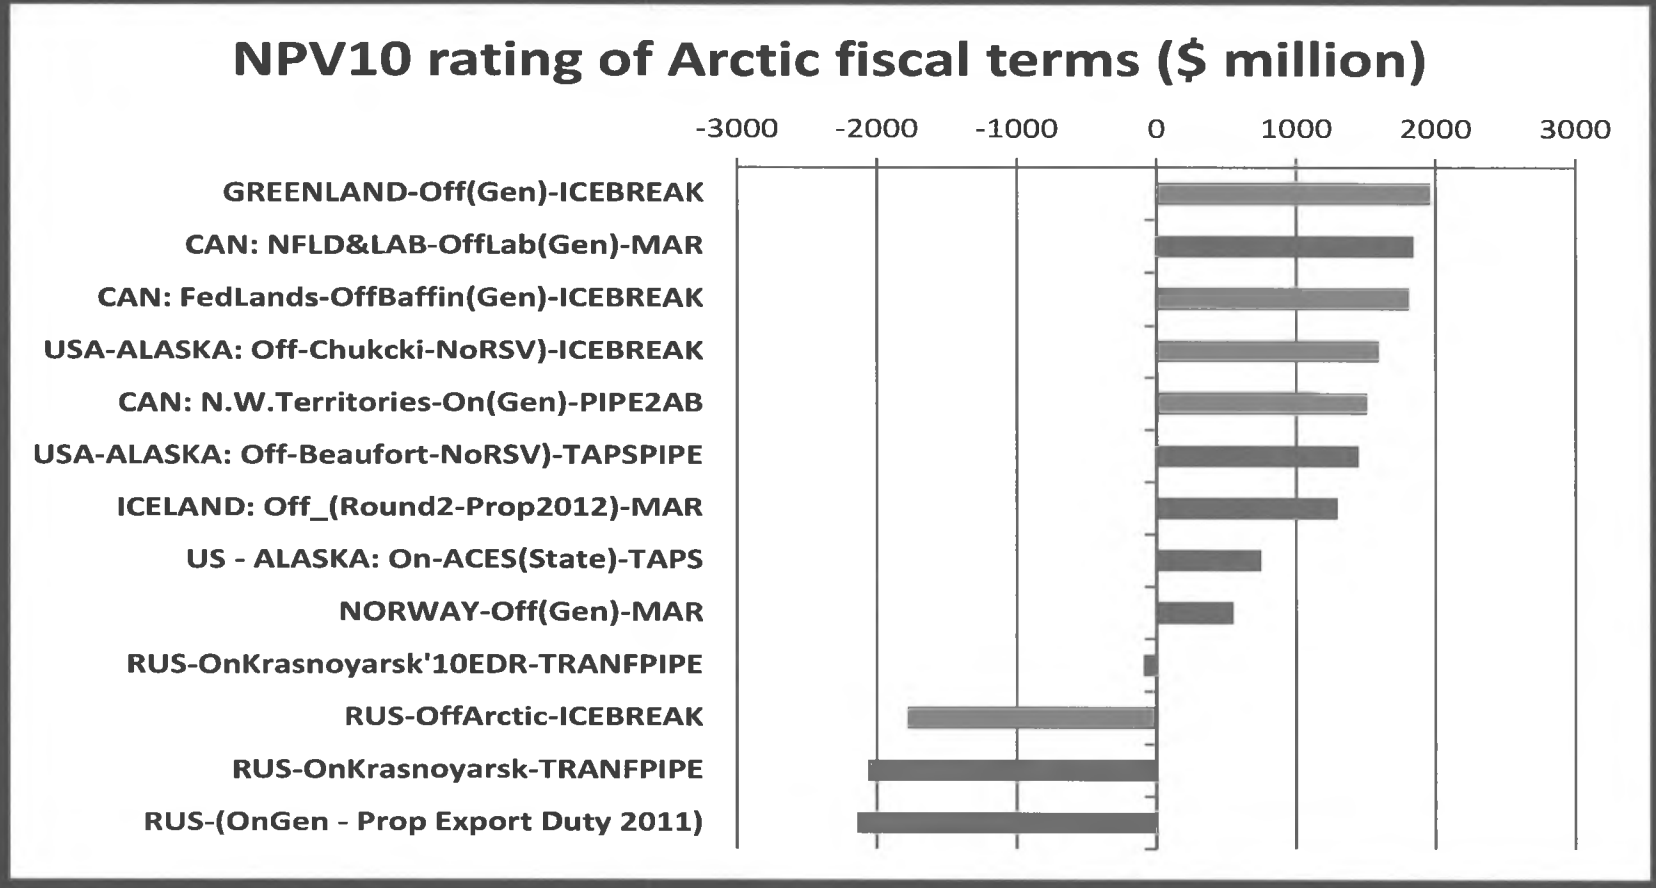
(red – no transport system available)



Alaska ACES IRR compares favorably with other Arctic jurisdictions. Russia still very tough under high cost and slow development conditions. Russian terms are rather attractive under lower cost conditions.

Arctic (Oil)

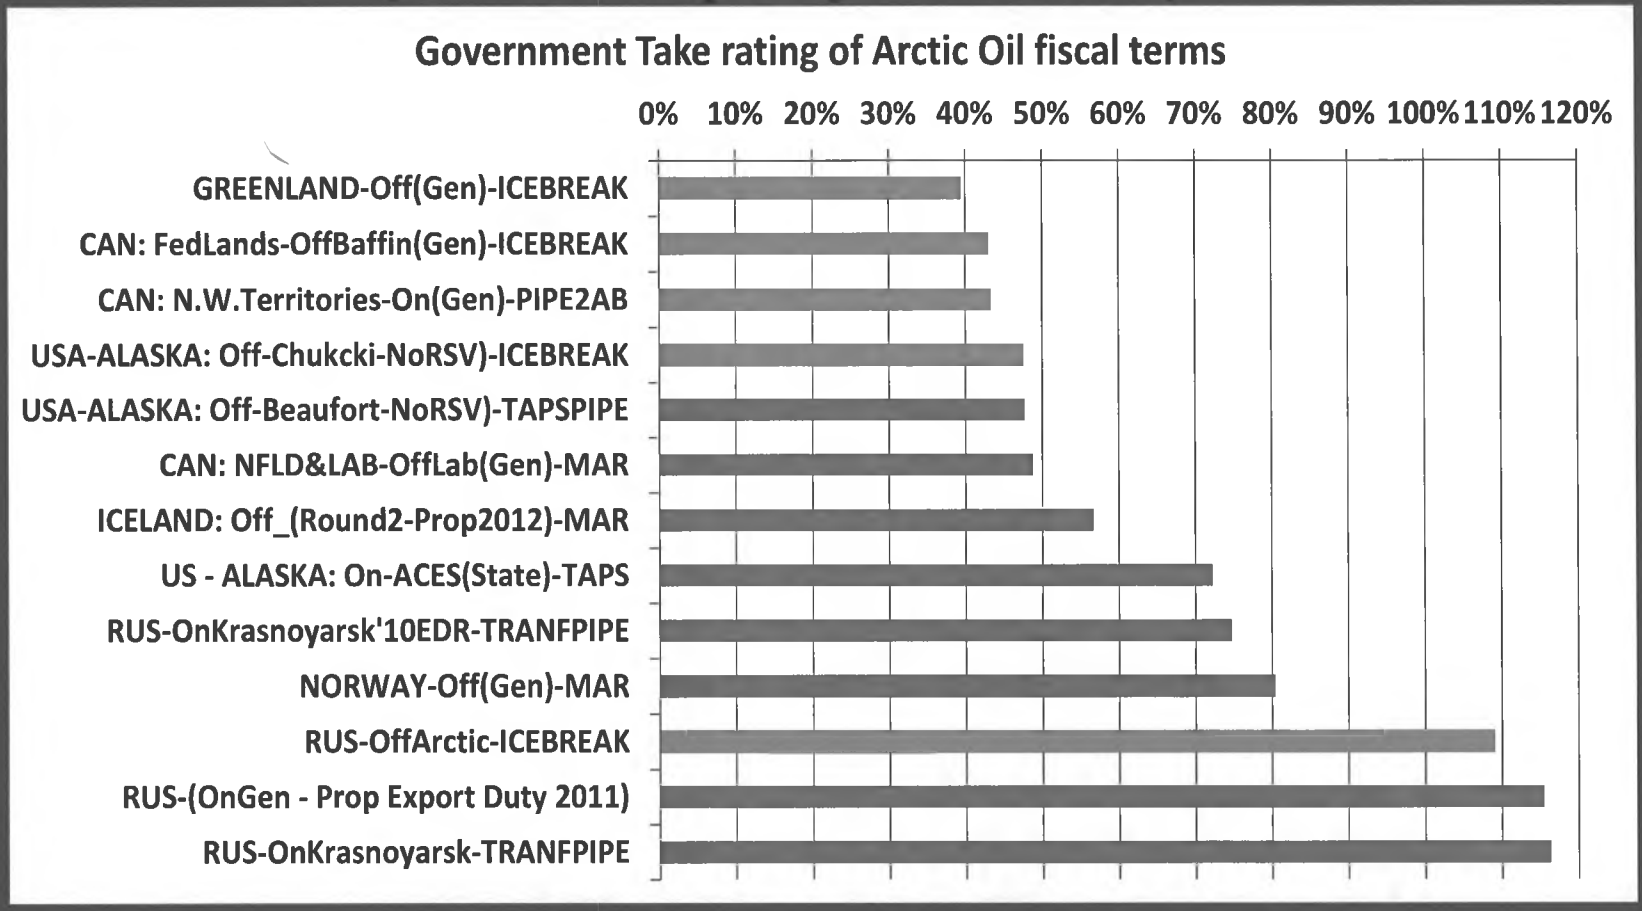
(red – no transport system available)



Alaska ACES NPV10 seems OK compared to other jurisdictions, but is somewhat meager. Note how Federal Beaufort and Chukchi acreage is attractive. Russia still very tough.

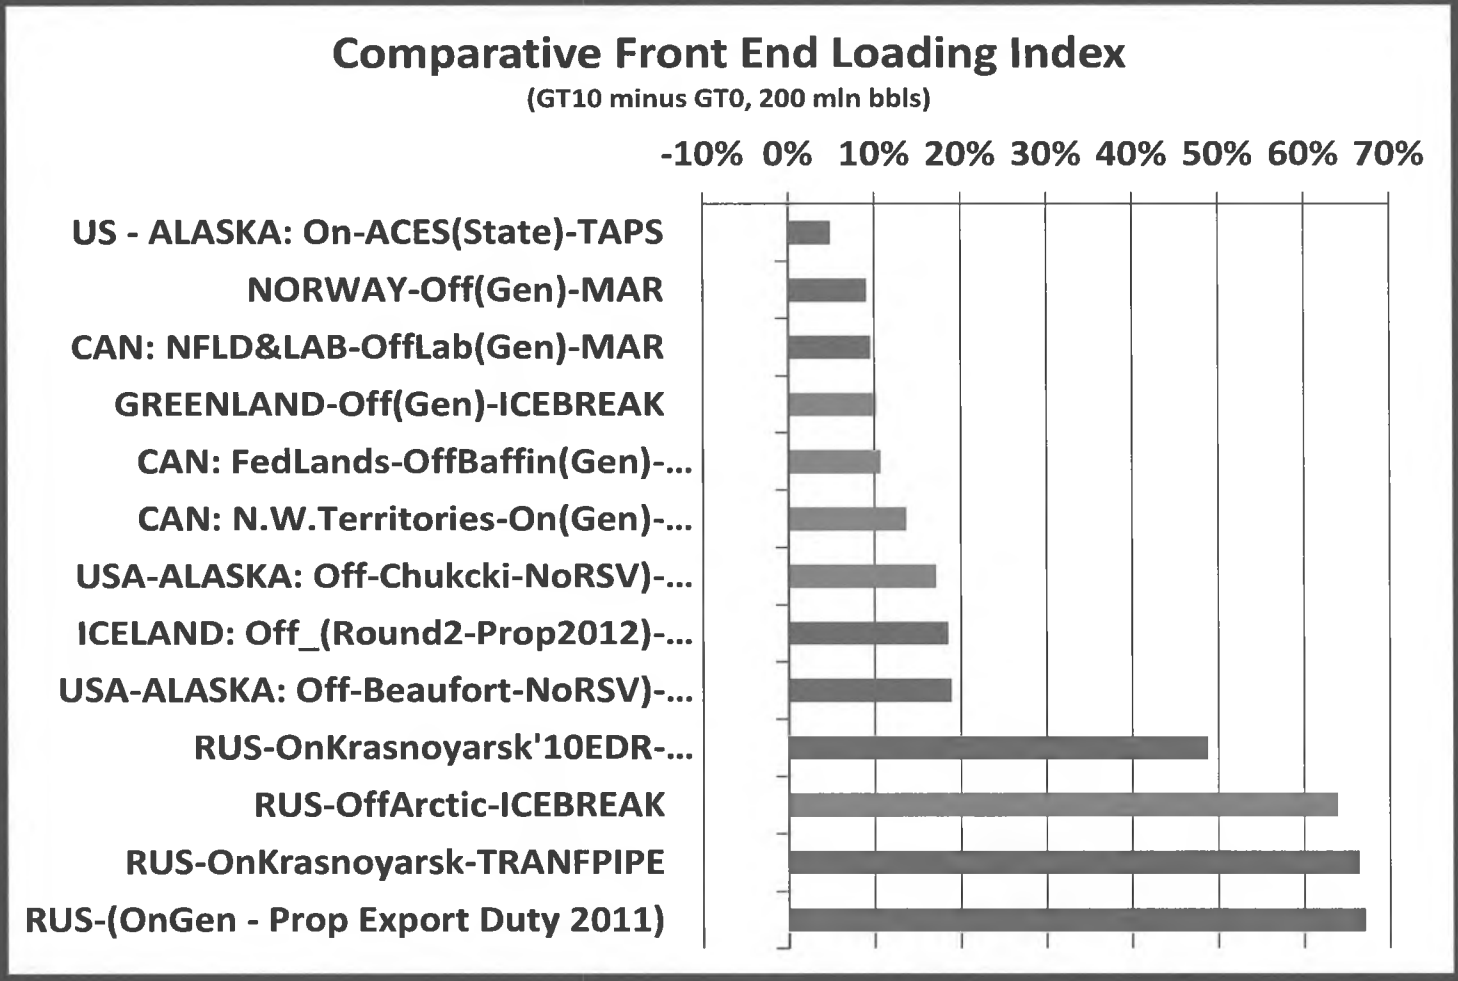
Arctic (Oil)

(red – no transport system available)



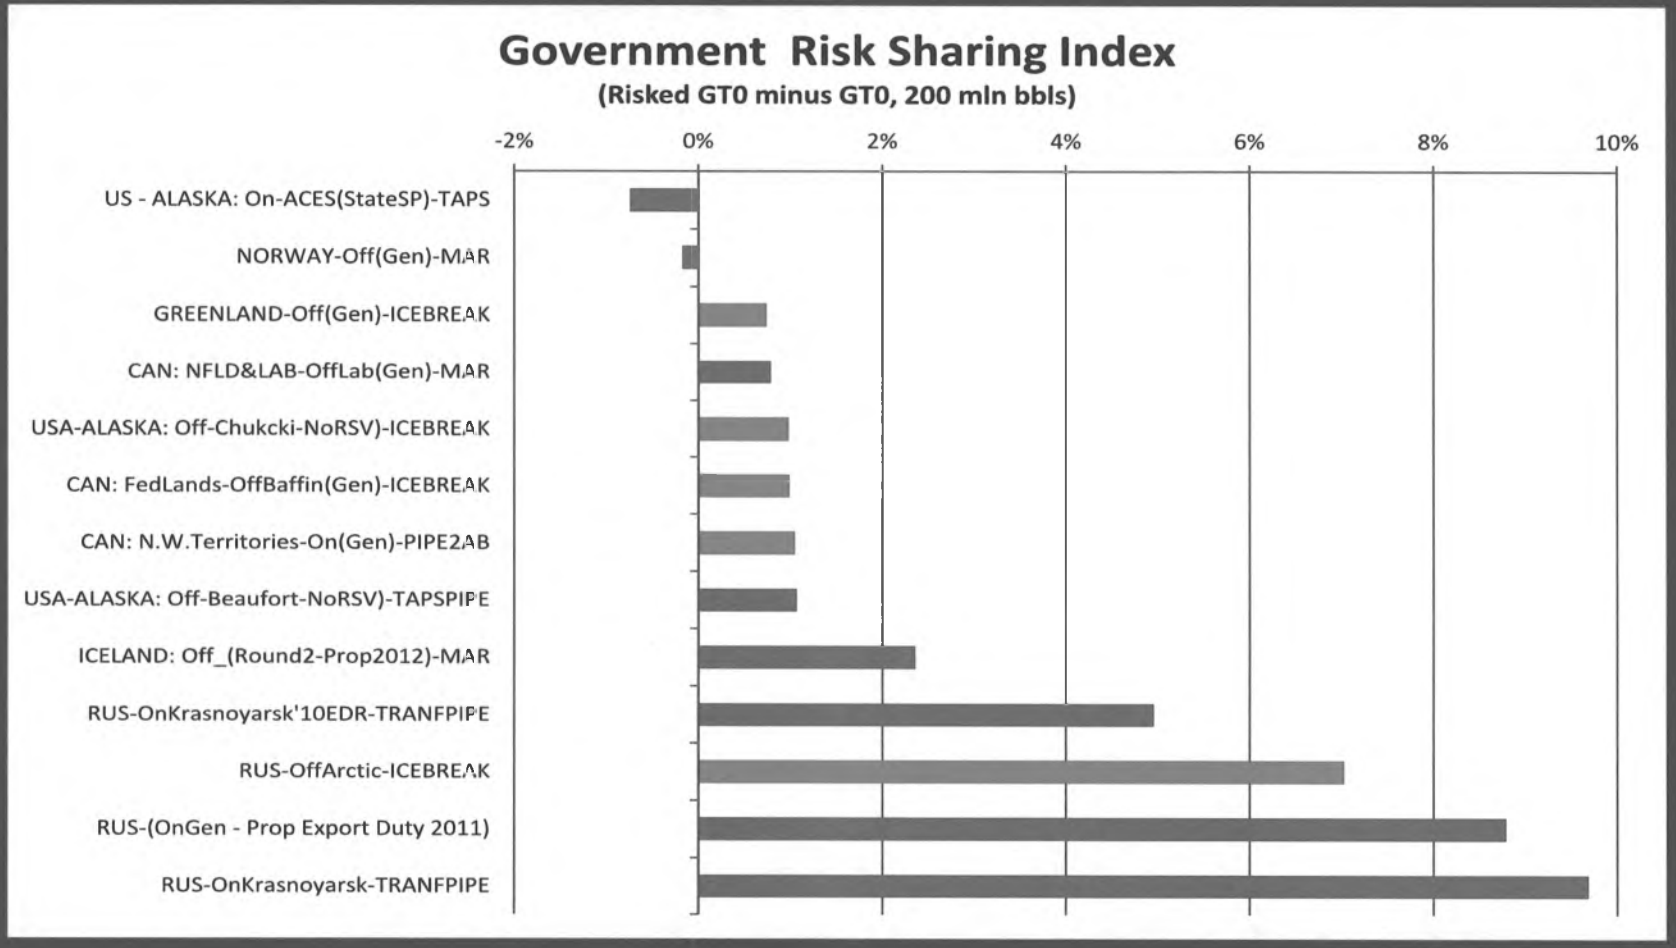
Alaska ACES government take is attractive from a government point of view and approximately at the right level for existing operations for investors. Interestingly new Russian terms compare with Alaska and Norway government take.

Arctic (Oil)



Alaska ACES government take is relatively well balanced compared to other Arctic jurisdictions in terms of the time distribution of the government take.

Arctic (Oil)



Under Alaska ACES the Alaska government is one of the few governments which shares disproportionately in the geological risk, indicating very strong support for exploration. In fact, with South Africa, Alaska rates the highest in the world in this respect.

International competition
Existing Production

The government take of about 70%-75% for Alaska is reasonable compared to the other exporters for existing operations. It is maybe slightly on the high side.

Alaska also offers a favorable time distribution of the government take and very favorable sharing of geological risk.

International competition
Existing Production

Both House Bill proposals lower the government take below 65% for existing as well as for new operations.

Although some improvements could be made in the existing terms, the results of the reports indicate that a significant lowering of government take (below the 70 – 75% range) for existing operations is not necessary.

SB 192 retains significant revenues on existing production in the 74 – 76% government take range.

International competition
New Production

The Alaska light oil production is rapidly declining at about 5% per year.

As stated earlier, there may be about one billion barrels of possible new production under more favorable fiscal terms. The production costs of this new oil is likely high on a per barrel basis.

The World Rating for Oil and Gas Terms provides information as to a reasonable government take for new production from the Deep Water report and the North American report.

Deep Water results

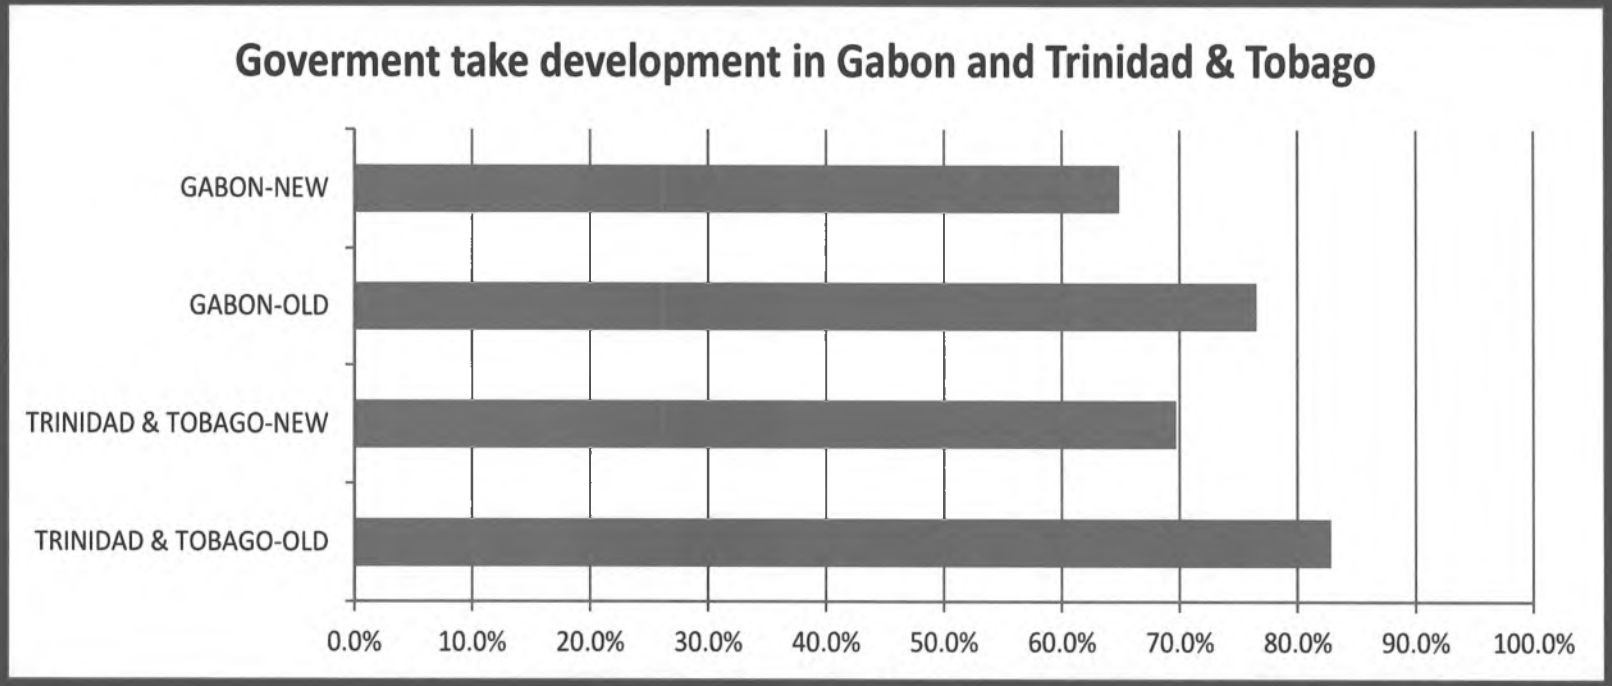
An important "peer group" for Alaska would be exporting jurisdictions with a declining conventional oil production.

There are not many jurisdictions in this group, but examples are Alberta, Gabon, Trinidad & Tobago, Malaysia.

Both Gabon and Trinidad applied about a 12 percent drop in order to attract new investment in an effort to offset declining production.

Both in Gabon and Trinidad this only applies to new blocks. Terms and conditions on old blocs remain unchanged.

Deep Water results



Gabon and Trinidad and Tobago are exporters with a declining oil production and have recently reduced their terms by about 12 percentage points.

North American Wells

Fiscal terms

Another way of competing with a fiscal system is to design the system for a wide range of economic conditions.

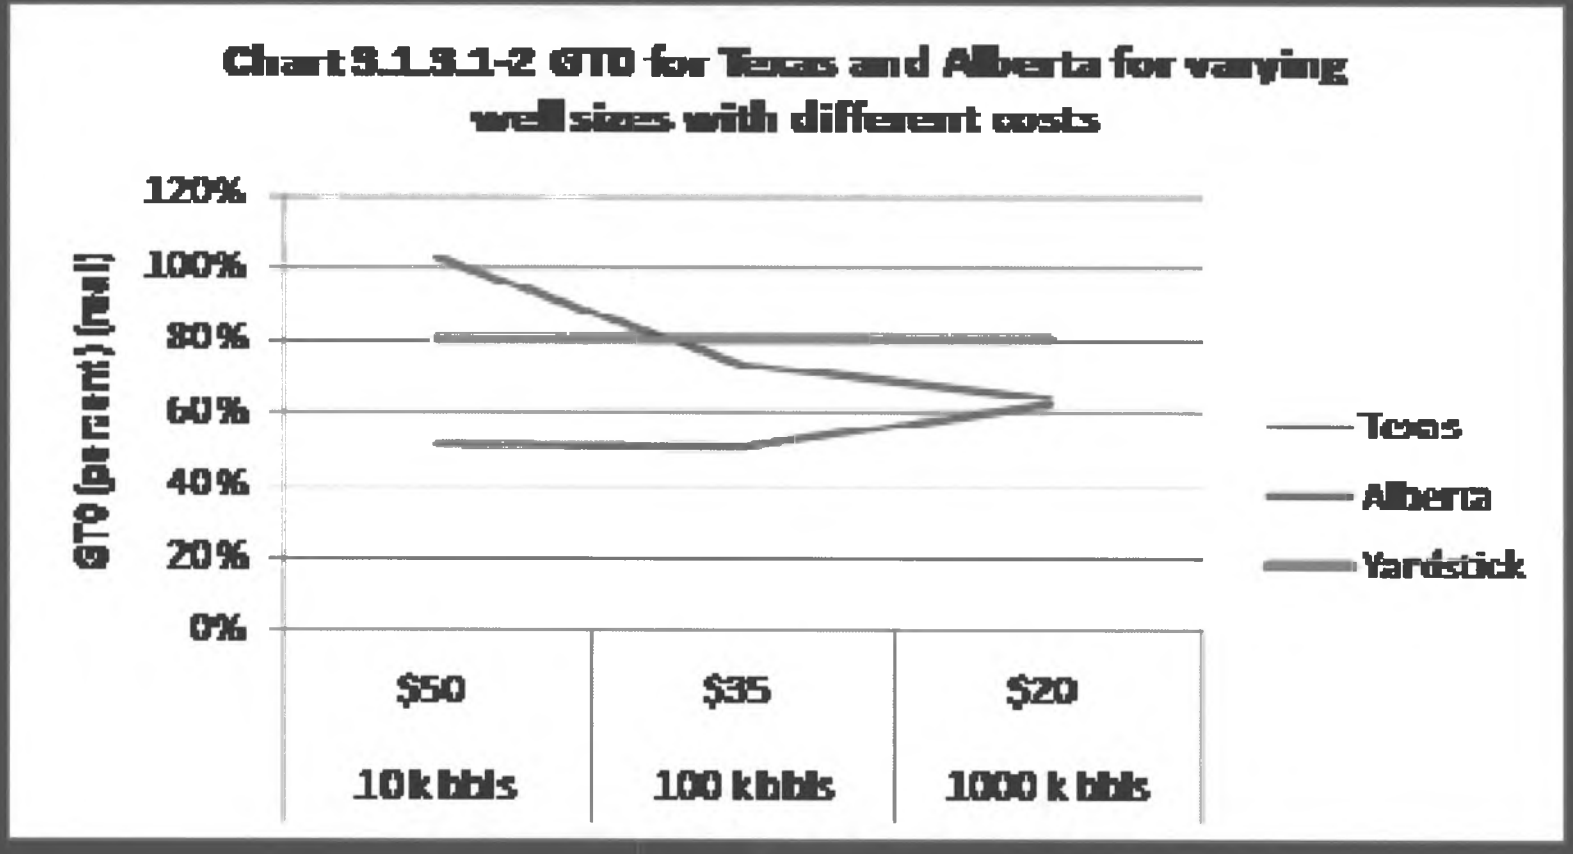
In Canada the fiscal systems consist of:

- Royalties, based usually on formulas
- Federal and provincial corporate income tax

In the United States the fiscal systems consist of:

- Royalties, usually a fixed percentage
- Federal and often state corporate income tax
- Severance (production) taxes
- Property taxes

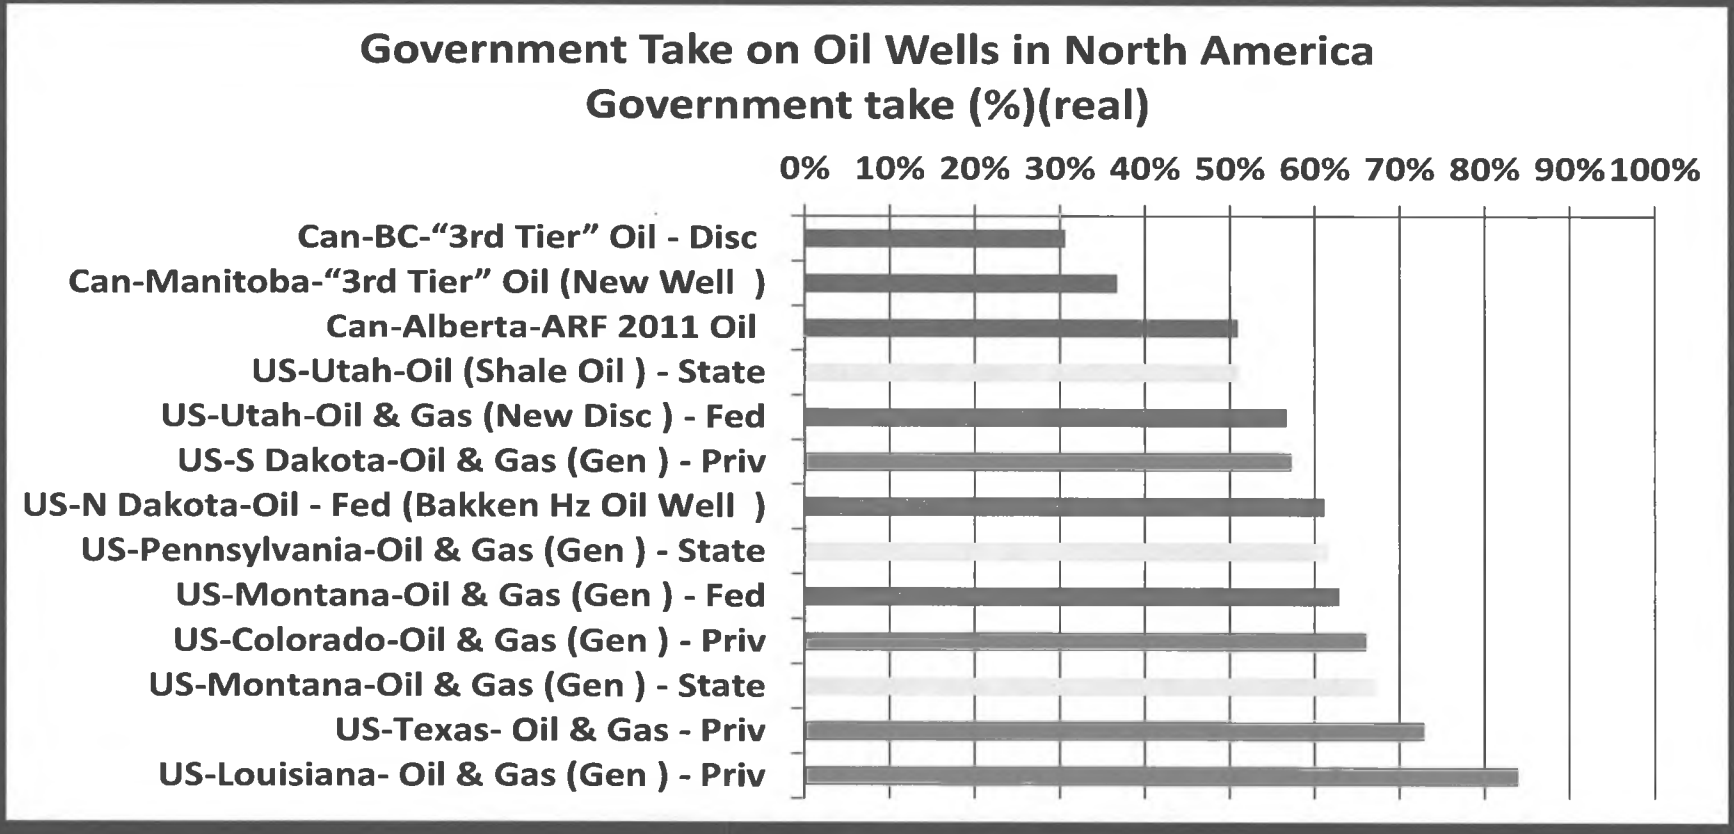
North American Wells (Oil)



In Canada the government take usually goes up and in the United States the government take goes down with higher level of production per well or with higher prices (or both).

North America Wells (Oil)

Typical Well: 100,000 barrels, $ 35 costs, $ 80 price



The government take on oil wells varies between 30% and 83% in North America and depends very much on the resource owner: Canadian provinces (blue), US Federal lands (green), US State lands (yellow) and US private lands (red)

North American Wells

Fiscal terms

Since 1997 Canada has lowered government take considerably, while the government take in the United States stayed the same.

The combined federal- provincial tax rate in Canada declined from about 45% to 25%.

Due to declining conventional oil production, the major Canadian oil producing provinces promote strongly new activity with more attractive royalties formulas which compete over a wider cost range.

International competition
New Production

International examples indicate that dropping the government take by about 10% for new production is reasonable once the jurisdiction faces a declining production.

The experience of Alberta, which faces a declining conventional oil production, indicates that designing lower fiscal terms in the 50 to 65% range of government take for higher cost resources is a viable strategy to increase investment.

International competition
New Production

The 60 – 65% government take for more costly "new" light oil resources as proposed in HB 110 and HB 17 is a reasonable level from an international perspective.

SB 192 terms are to tough to encourage costly new production.

International competition
Heavy Oil

Heavy Oil can be separated in two groups:

- **Heavy Oil: 15 – 22 degrees API. This oil can typically be produced with conventional production methods, since oil flows to the wells. The oil can also be transported by pipeline and in marine tankers**
- **Ultra Heavy Oil or Bitumen: 8 – 15 degrees API. This oil which needs to be produced with special production methods. The oil cannot be transported by pipeline or marine tanker. It needs to be mixed with condensate or it needs to be converted in an upgrader to synthetic crude oil.**

Heavy Oil

Alaska has significant heavy oil potential, probably in excess of 5 billion barrels. Alaska heavy oils range from 10 to 22 degrees API.

The most important deposits are:

- **Heavy Oil - 15 – 22 degrees API – West Sak, Schrader Bluff, Orion, Polaris, Nikaitchuq.**
- **Ultra Heavy Oil – 10 – 15 degrees API – Ugnu**

Separate fiscal terms are required for these two groups.

Alberta Oil Sands

The most important competitor for heavy oils in North America is Alberta with the oil sand deposits which may well contain in excess of 500 billion barrels of recoverable oil.

For Alberta oil sands, at 10 degrees API, government takes are in the range of 43% - 55% depending on the oil price.

In order to compete the government take for ultra heavy oil in Alaska may has to be similar to Alberta.

For heavy oil the terms could be between ultra heavy oil and new light oil production.

International competition
Heavy Oil

In order to be competitive Alaska would have to offer the following government takes for heavy oil:

- **Heavy oil: 55 – 60%**
- **Ultra heavy Oil: 45 – 55%**

International Competition
Shale Oil

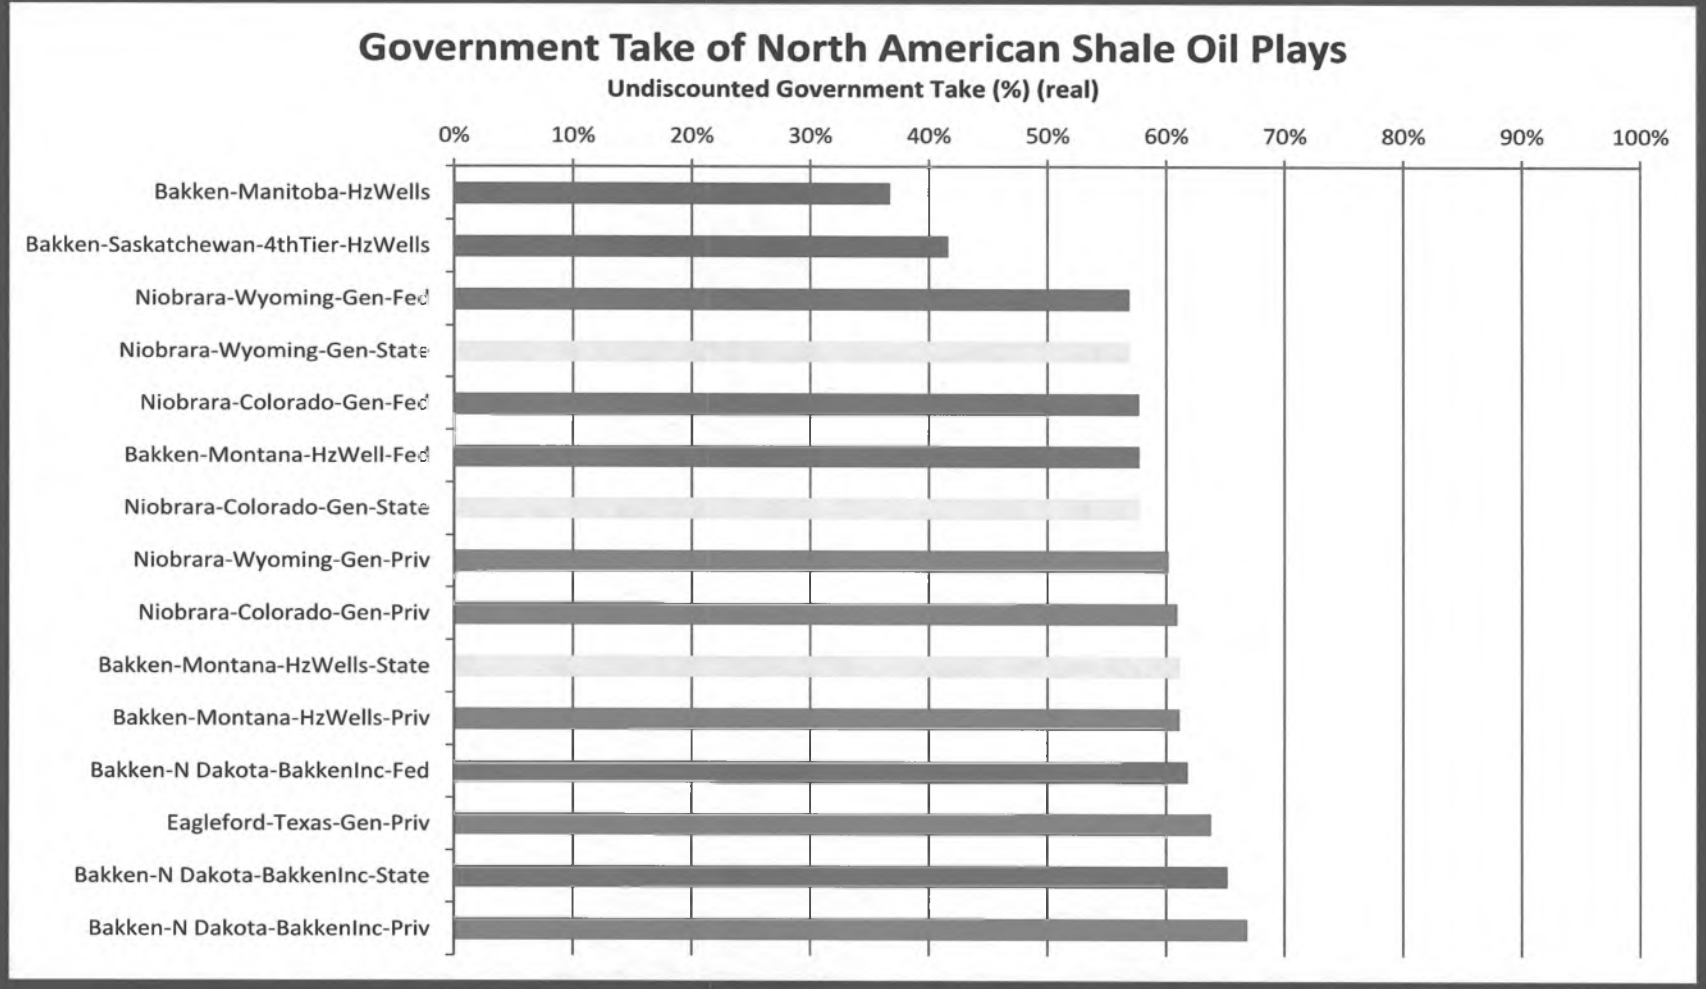
At this time it is not known whether shale oil production will be possible in Alaska. Pilot projects will be required to identify whether reservoir characteristics are of a nature that would permit fracking and would result in a sufficient flow of oil to make shale oil economic.

If shale oil would be economic, the resources may be quite considerable, for instance, in excess of several billion barrels. It is therefore very important for Alaska to identify whether shale oil is economic or not.

New shale oil developments will likely require major new infrastructure. The Federal permitting of this infrastructure and related environmental concerns could be a major stumbling block.

North American Wells (Shale Oil)

Government Take



Shale Oil plays in the United States are typically subject to a government take of about 60% and in Canada 40%.

International competition
Shale Oil

Alaska may have significant shale oil potential.

However, given the fact that the formations are relatively deep, operating conditions are severe and infrastructure is lacking, the costs per barrel would very likely be higher than in Canada and the Lower 48 States.

It is unlikely that large capital investments can be attracted unless the government take is in the 45 – 55% range.

International competition
Natural Gas

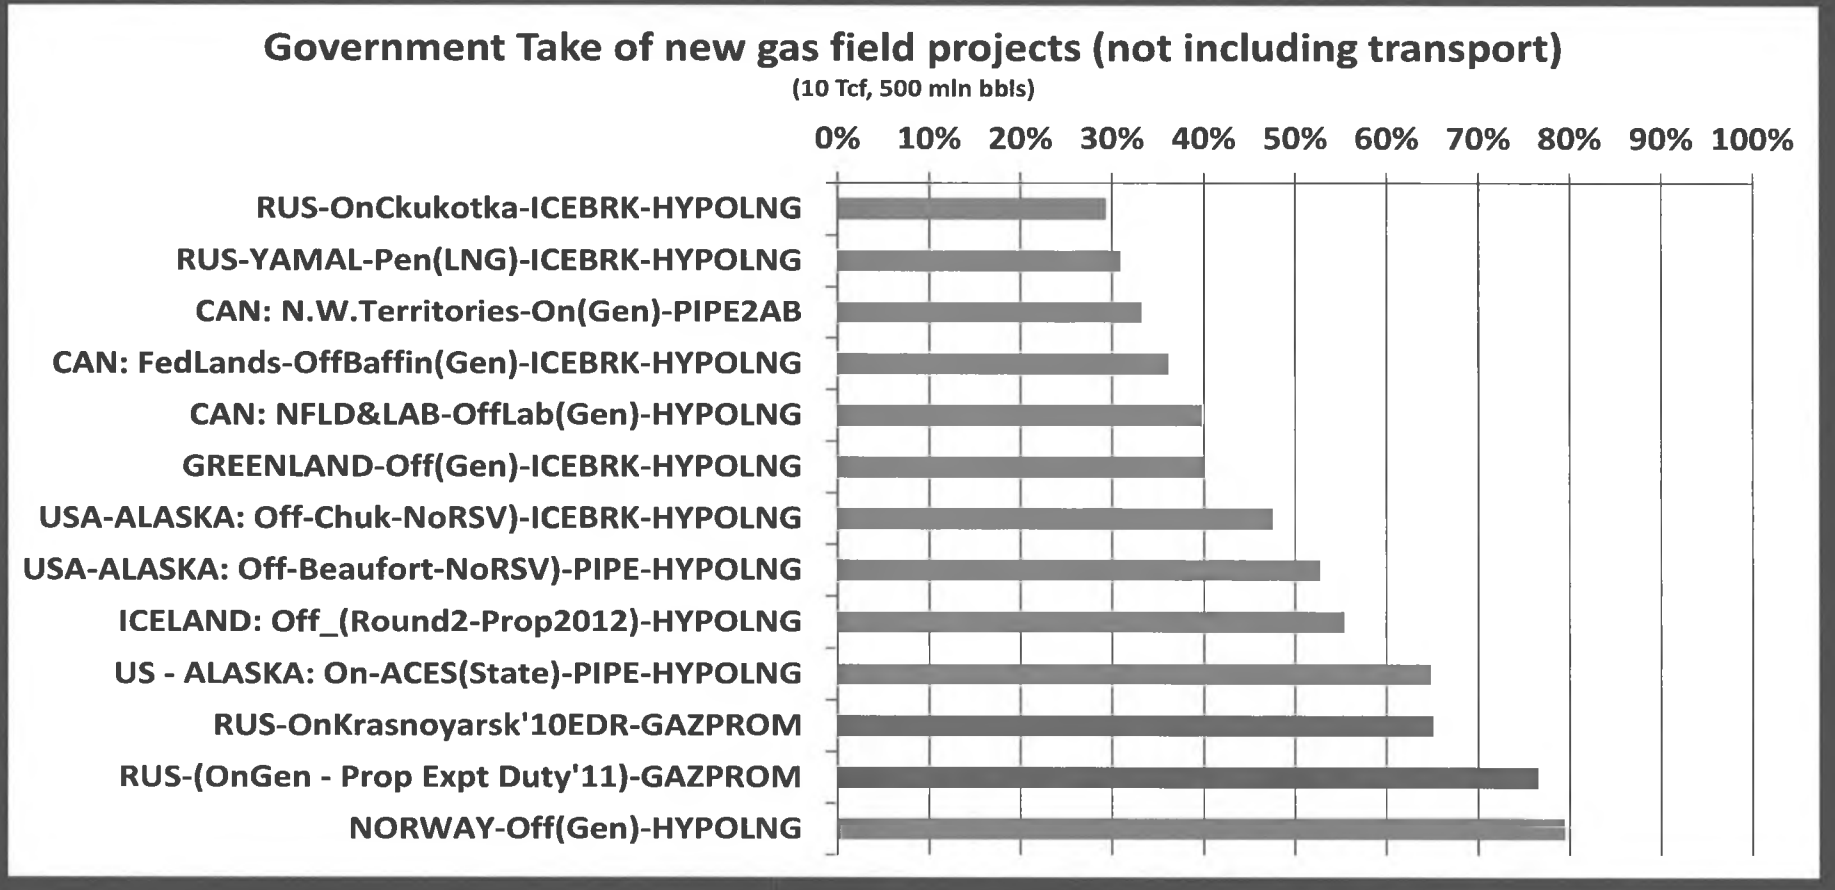
The Pacific market is very competitive

Current major *new* LNG suppliers in the Pacific LNG market are Australia and Papua New Guinea. Government take is less than 50% for dry gas.

Offshore and onshore conventional gas production in China is also significant. Chinese owned companies often benefit from a system where China does not participate on a carried basis, resulting in a government take of 42% for dry gas.

In addition to the conventional gas resources, China has in situ 1300 Tcf of coal bed methane gas and 1100 Tcf of shale gas.

Arctic (Gas)



Alaska government take for gas aimed at Pacific LNG markets is about 25% to 30% too high compared to strong Russian competition.

International competition
Natural Gas

Given the strong challenges of Russia, Australia, PNG and Chinese producers themselves, Alaska would have to offer a government take in the range of 45-55% in order to be competitive for the production of gas from new gas fields such as Point Thomson.

For gas from Prudhoe Bay, whereby most of the production costs have already been absorbed by oil production, a government take in the range of 55 – 60% may be appropriate.

International competition
Summary

In order to be competitive, Alaska needs to develop a fiscal system that offers the following government takes for the various resources:

- **Existing light oil production: 70 – 75%**
- **New light oil production: 60 – 65%**
- **Heavy Oil: 55 – 60%**
- **Ultra Heavy Oil: 45 – 55%**
- **Shale Oil: 45 – 55%**
- **Natural Gas – new gas fields: 45 – 55%**
- **Natural Gas – Prudhoe Bay: 55 – 60%**

Session 3

Proposed terms for existing and new light oil

Overall framework for a new PPT

A new PPT should preferably structured in such a manner that it deals with the following important issues:

1. **The current ACES system has serious deficiencies. A new PPT should remove these problems.**
2. **A new "architecture" for the PPT needs to be created to permit a greater variety of terms for the different oil and gas resources.**
3. **The system should be made simpler.**

Complexity

An important other issue is complexity.

The production tax is far too complex - The current complexity of the production tax is a strong disincentive for investment.

It can be strongly recommended to review the tax to see what changes can be made to reduce complexity.

Deficiencies in the current ACES system

The current ACES system has five main deficiencies:

1. **PPT tax rates up to 75% in addition to 41% corporate income tax are too high to stimulate efficiency in operations.**
2. **The price based sliding scales and result in a situation where under high prices the producer is actually better off with a lower price.**
3. **The excessive tax credits result in a situation where Alaska may pay all of the costs of a well.**
4. **The BOE concept results in a situation where new gas production could lead to massive losses of oil based revenues.**
5. **Under marginal circumstances the ACES system actually creates a negative PPT, in other words the government will loose PPT on certain fields.**

Deficiencies
Excessive Tax rates

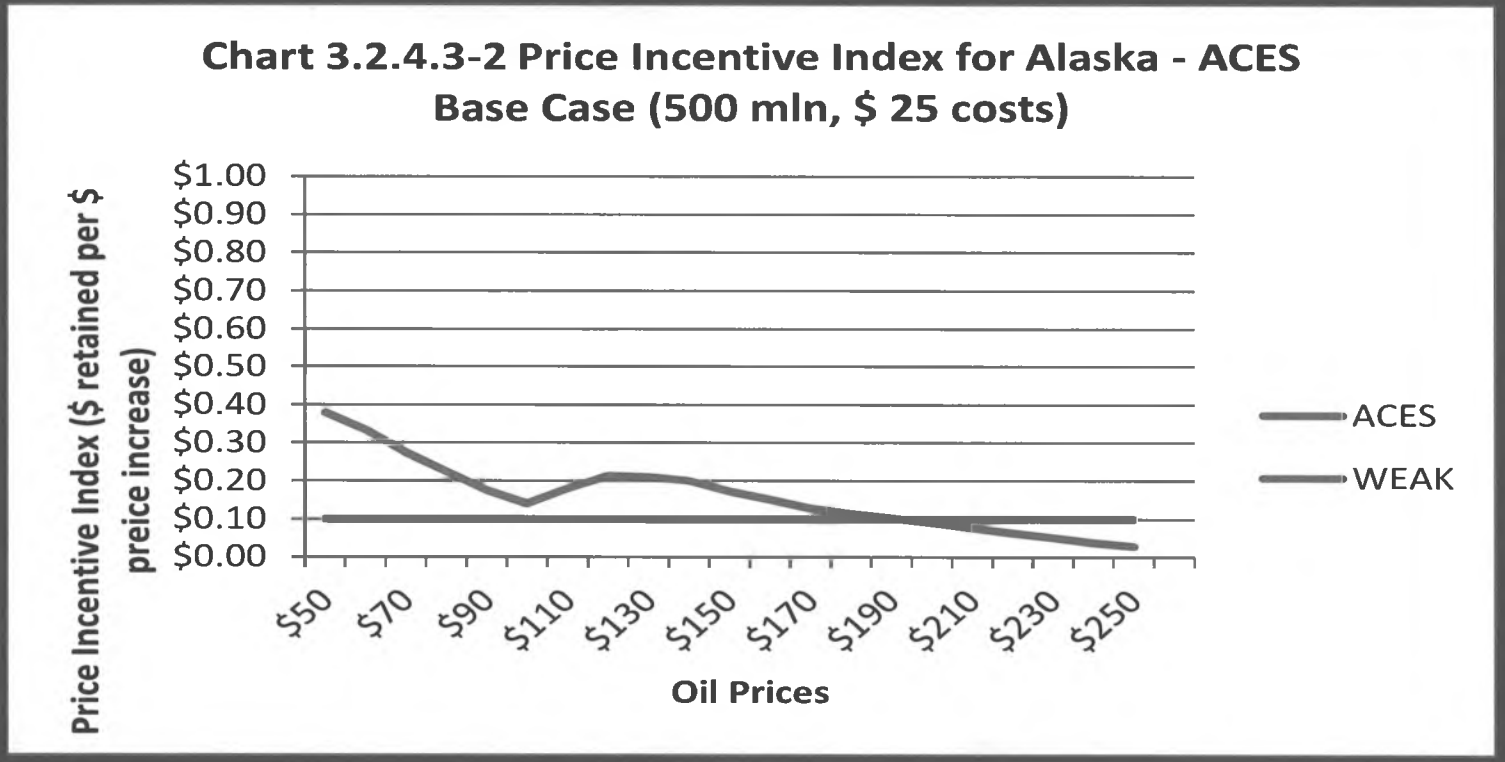
The combination of the maximum ACES rate of 75% and the normal corporate income tax rate (state and federal) of 41% creates a combined tax rate of 85.25% under high prices.

Such an excessive tax rate reduces significantly the incentive for companies to be efficient because they can only keep $ 0.1475 of every dollar saved. This means the cost savings index is only 14.75%.

This is well below the cost savings index of most countries. Usually, it is recommended to have a cost savings index well over 20%.

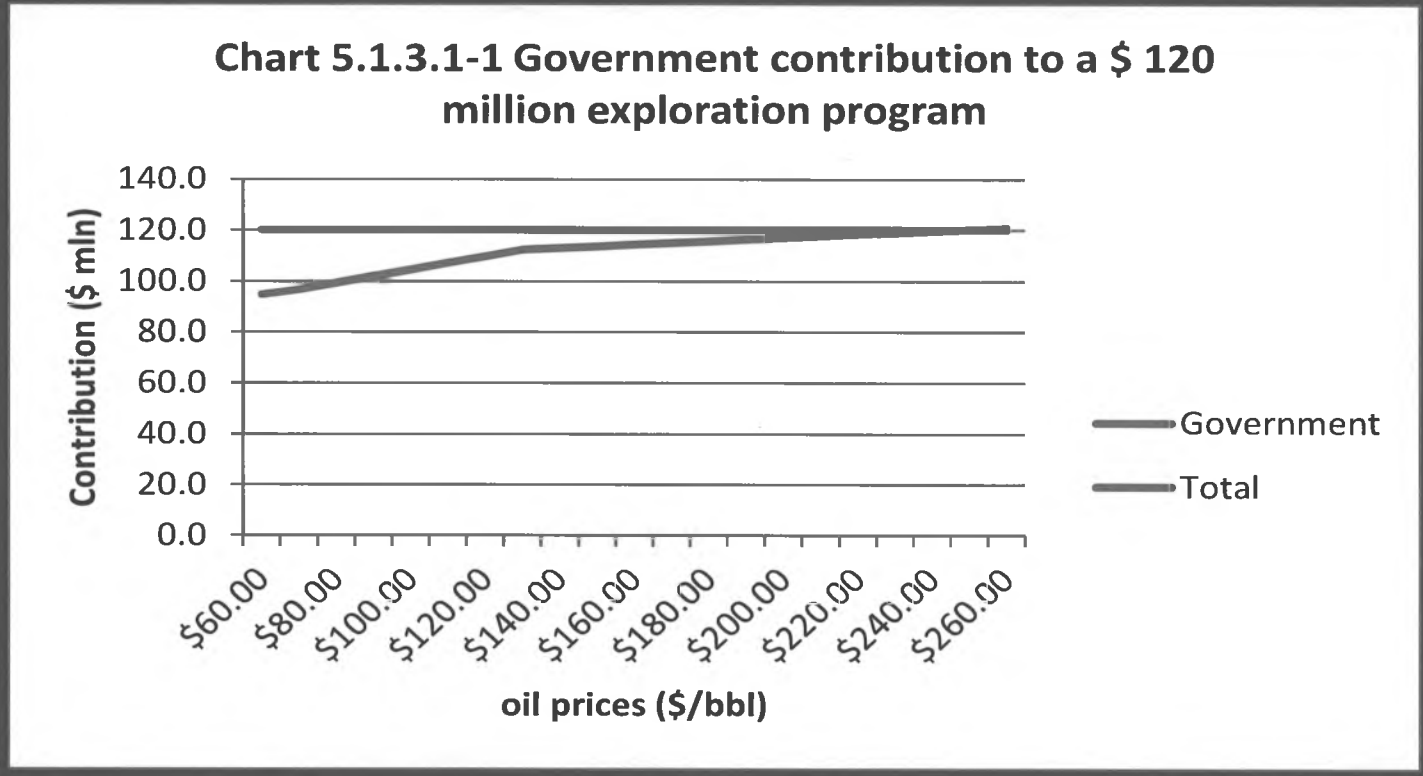
It should be noted that the combined tax rate of 85.25% is in addition to the regular royalties.

Deficiencies
Excessive price progressivity



For ACES, at high prices, the combined tax rate becomes so high that there is the price incentive performance becomes very weak by international standards. This leads to lack of interest in achieving the highest prices on an arms length basis and strong incentives to try to "transfer price".

Deficiencies
Excessive exploration support



Existing producers under ACES are entitled to the 40% tax credit as well as all normal deductions of the exploration expenditures. This means that at $ 111 per barrel, the Alaska contributes 90% of the exploration costs. At $ 245 per barrel Alaska contributes 100%.

Deficiencies

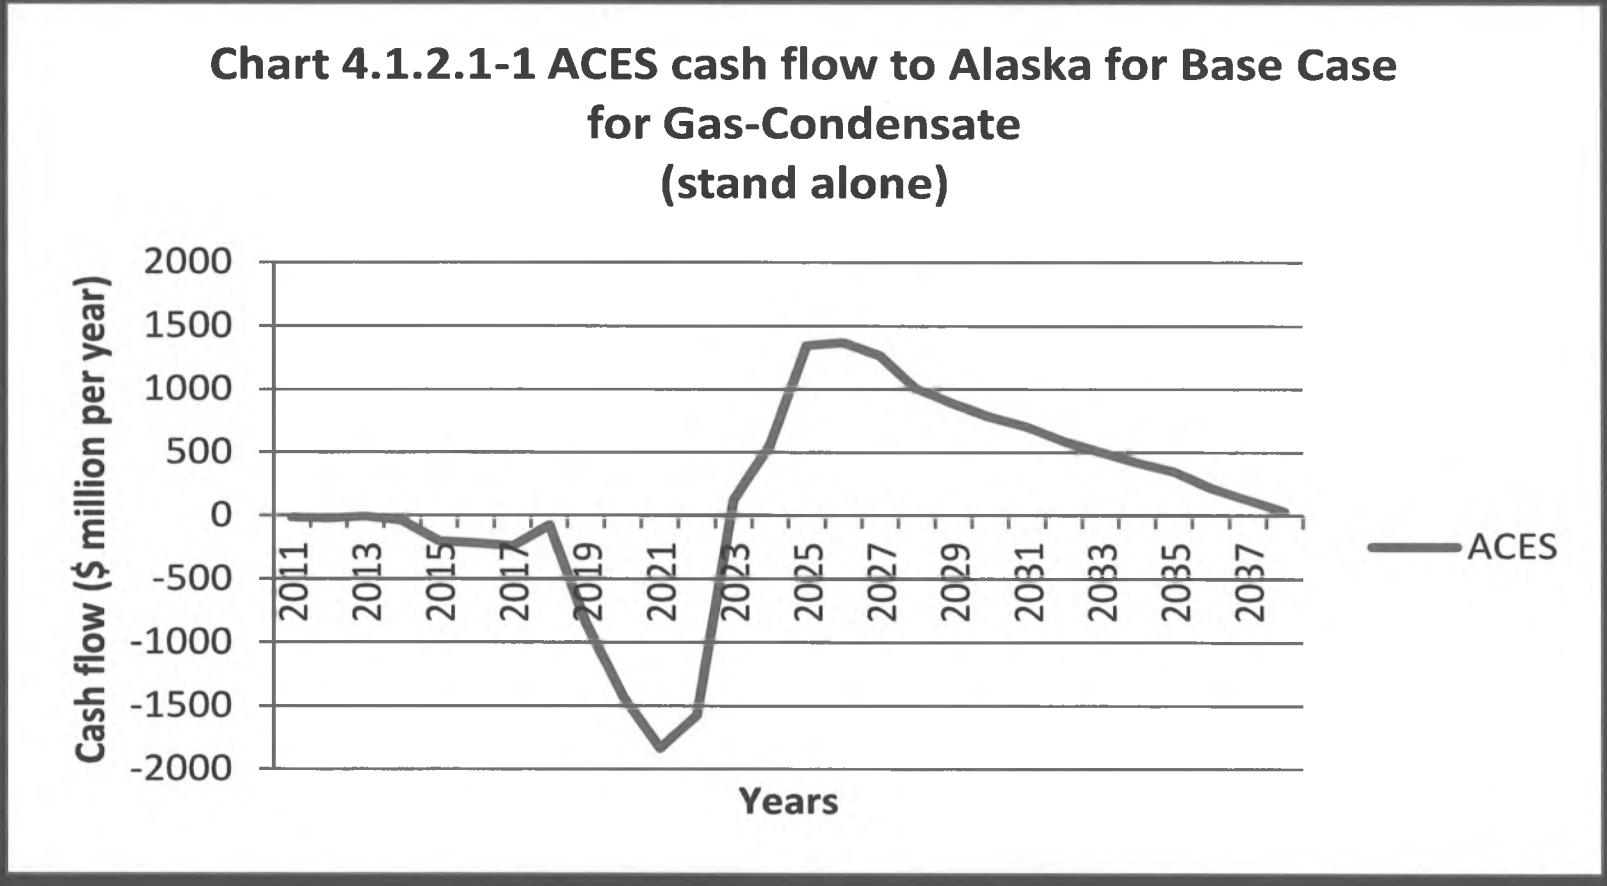
Nonsensical cross subsidization of gas

Table 5.1.3.1-1 Incremental Gas Economics for ACES in Alaska
(Country Incremental, Real)

	Oil only	Oil + Gas	Incremental
Oil production (mln bbls)	500	500	0
Gas production (Bcf)	0	10000	10000
Oil price ($/bbl) North Slope	100	100	100
Gas Price ($/MMBtu) North Slope		1.0	1.0
Gross Revenues ($ mln)	50000	60000	10000
Total Production (Mln BOE)	500	2167	1667
Capital Expenditures ($ mln)	7500	11000	3500
Operating Expenditures ($ mln)	5000	7500	2500
Divisible Income ($ mln)	37500	41500	4000
Royalties ($ mln)	6250	7500	1250
Property Tax, other	852	1504	652
Production Tax Value	30398	32496	2098
Production Tax Value per BOE	60.80	15.00	-46
PPT ($ mln)	15186	6900	-8286
Corp Income Tax (State) ($ mln)	1466	2474	1008
Total State Revenues ($ mln)	23754	18378	-5376
Corporate Income Tax (Fed) ($ mln)	4942	8340	3398
Total Government Revenues ($ mln)	28696	26719	-1977
Undiscounted Government Take	76.50%	64.40%	-49.3%
IRR	21.10%	19.30%	17.3%

The BOE concept would result in massive government revenue losses on oil production if incrementally also gas would be developed. This does not make any sense. It is clear that Alaska would not accept such unnecessary losses. This in turn impedes gas project development.

Deficiencies
Negative PPT



By definition, for a marginal project the total negative ACES cash flow to government as a result of tax credits and tax deductions becomes (almost) identical to the positive cash flow. In other words the net government receipts are low or even negative.

Deficiencies
Negative PPT

With the existence of a tax credit, there are always economic conditions under which the government may loose more in credits and deductions than it receives in income.

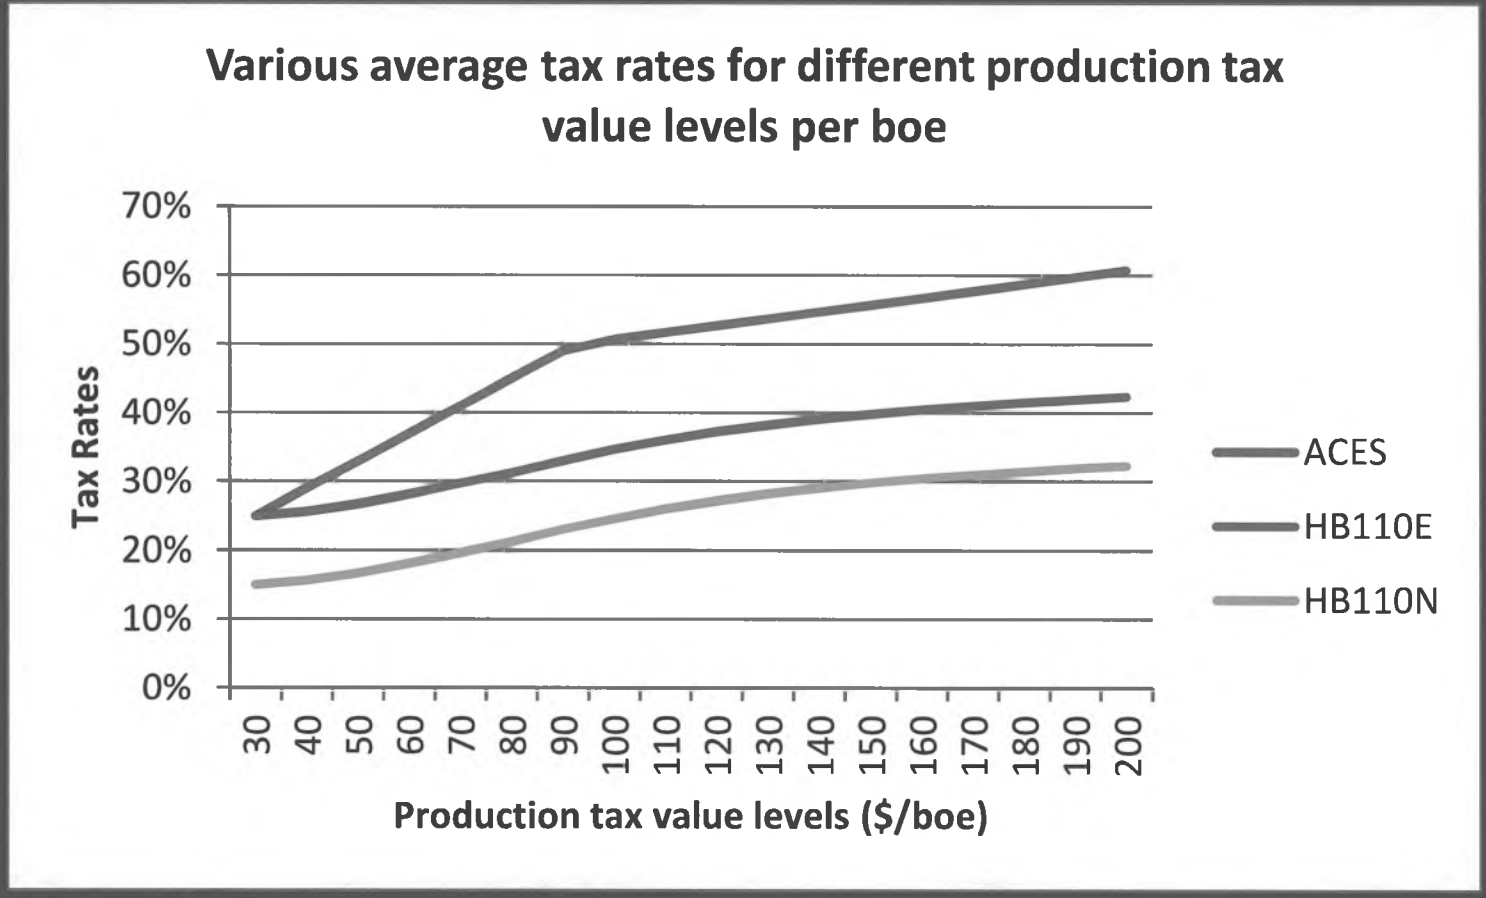
However, this effect should be minimized in the fiscal design. This is not done under ACES.

Proposals for light oil

Proposals for light oil production will be discussed first, based on this discussion the variation for other resources can be introduced

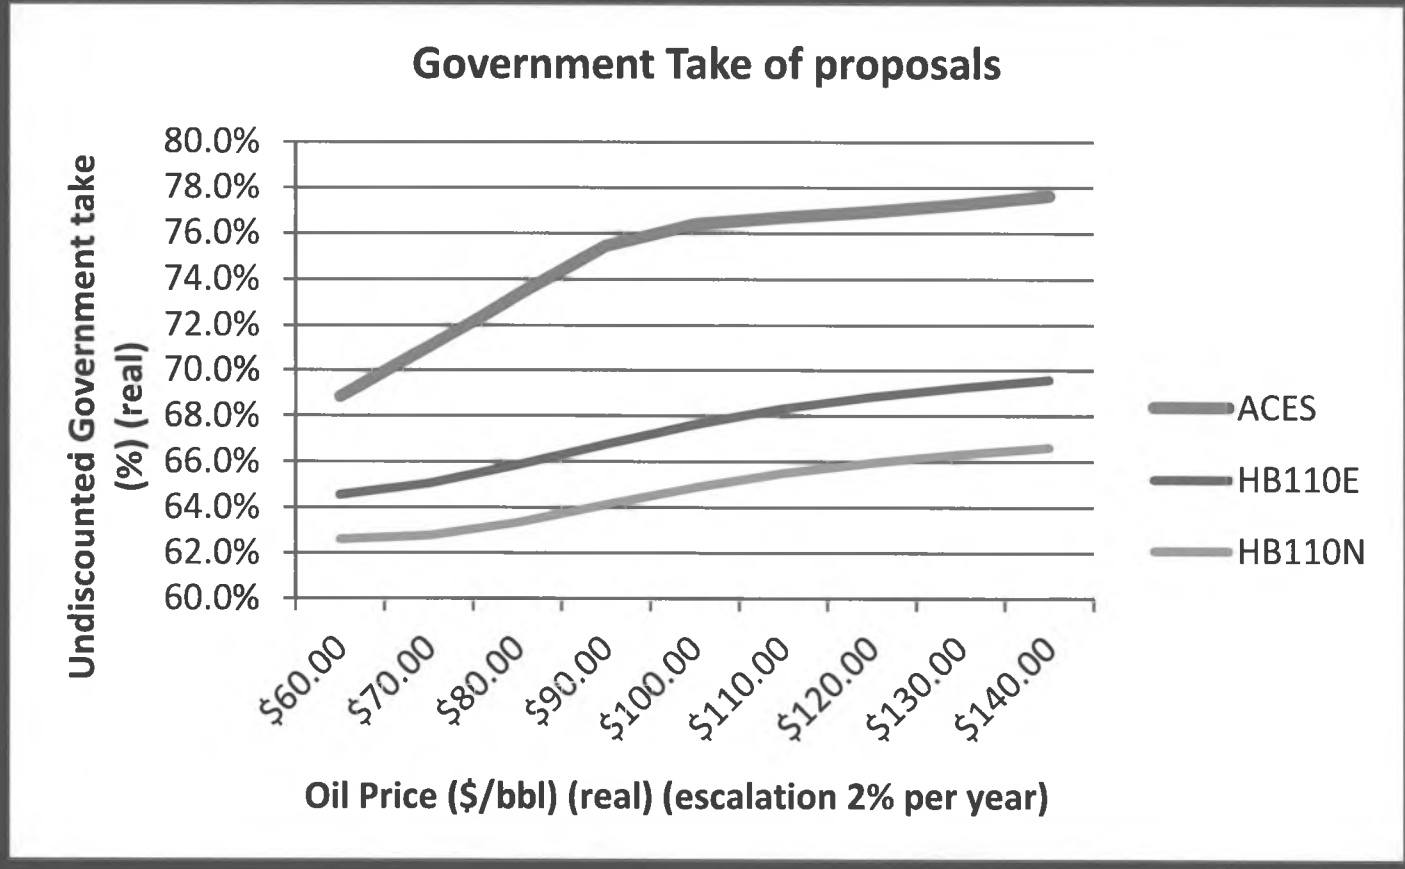
HB 110 has been introduced modify ACES.

Proposals for light oil: HB110Analysis: PPT rates



The bracketing procedure creates a significant lowering of the average PPT rates. The HB 110 N rates apply only for 7 years from the start of production for new production.

Proposals for light oil: HB110 Analysis: Government take



At $ 100 per barrel, the government take of ACES would be 76.4%, HB 110 (Existing) 67.6% and HB 110 (New) 64.9%

HB 110: Existing Production

The HB 110 proposal is relatively complex. It is based on so-called "bracketing". Following is the scale:

< $ 30.00	25.0%
< $ 42.50	27.5%
< $ 55.00	32.5%
< $ 67.50	37.5%
< $ 80.00	42.5%
< $ 92.50	47.5%
> $ 92.50	50%

Bracketing means that the final average rate is based on the weighted average of all the brackets. This means the rate will never be 50%.

HB 110: New production

For new production the rates will be lowered by 10% for the first 7 years of production.

This means that new production has to be "ring fenced". All production and all revenues and costs will have to be allocated to "existing" and to "new" production.

This is complex from an administrative point of view.

Deficiencies in HB 110

HB 110 deals with only two of the deficiencies of ACES:

1. **PPT tax rates up to 75% in addition to 41% corporate income tax are too high to stimulate efficiency in operations.**
2. **The price based sliding scales and result in a situation where under high prices the producer is actually better off with a lower price.**
3. **The excessive tax credits result in a situation where Alaska may pay all of the costs of a well.**
4. **The BOE concept results in a situation where new gas production could lead to massive losses of oil based revenues.**
5. **Under marginal circumstances the ACES system actually creates a negative PPT, in other words the government will loose PPT on certain fields.**

Deficiencies in HB 110

In addition HB 110 creates an entirely new problem.

Specifying different tax rates for Existing and New Production requires tax payers to submit different tax returns for these two classes of production. This is called ring fencing.

This in turn means that all revenues and costs need to be allocated to "existing" and "new". This is complex to administer and could lead to significant revenue losses for the State. HB 110 does not specify how this process would have to take place.

HB 110 is therefore not a viable alternative to ACES.

BOE complications

An important drawback of ACES is the BOE problem.

This means that in case major oil companies would propose a new Alaska LNG export project to the Pacific, the entire fiscal system has to be revised again. This is an unnecessary obstacle to the introduction of a new gas project.

It is therefore essential that in any revision of ACES this problem is also dealt with in advance. This would permit to add gas terms to the package later (or immediately) without having to change oil terms again.

PVM Proposal: Existing and New Production

The PVM Proposal is going further than merely creating new levels of government take for existing and new production. The proposal also:

- Creates a new "architecture" to which terms for heavy oil , shale oil and natural gas can be easily added, and
- Resolves all the deficiencies associated with ACES.

PVM Proposal for New Production

At $ 100 per barrel, the HB 110 for New Production is equal to a much simpler concept, which is:

- **25% flat PPT**
- **20% tax credit, plus a**
- **2.25% severance feature.**

The severance tax feature is no different from the way the severance tax used to be calculated in Alaska. The severance tax is a percentage of the value of the gross production less the royalty. For instance, with a royalty of 12.5% and an oil price of $ 100, a 2.25% severance feature would be equal to:

2.25% * 87.5% * $ 100 = $ 1.96875 per barrel

PVM Proposal for New Production

In order to make the severance feature match the government take of HB 110 for new production, the following price sensitive sliding scale is proposed:

- **The sliding scale starts at an oil price of $ 60 per barrel,**
- **Between an oil price of $ 60 and $ 180 per barrel, the severance feature would increase with 0.05% per dollar increase, reaching a value of 6% at $ 180 per barrel**
- **Thereafter, the sliding scale would increase 0.1% in order to reach a maximum of 15% at $ 270 per barrel.**

New "architecture"

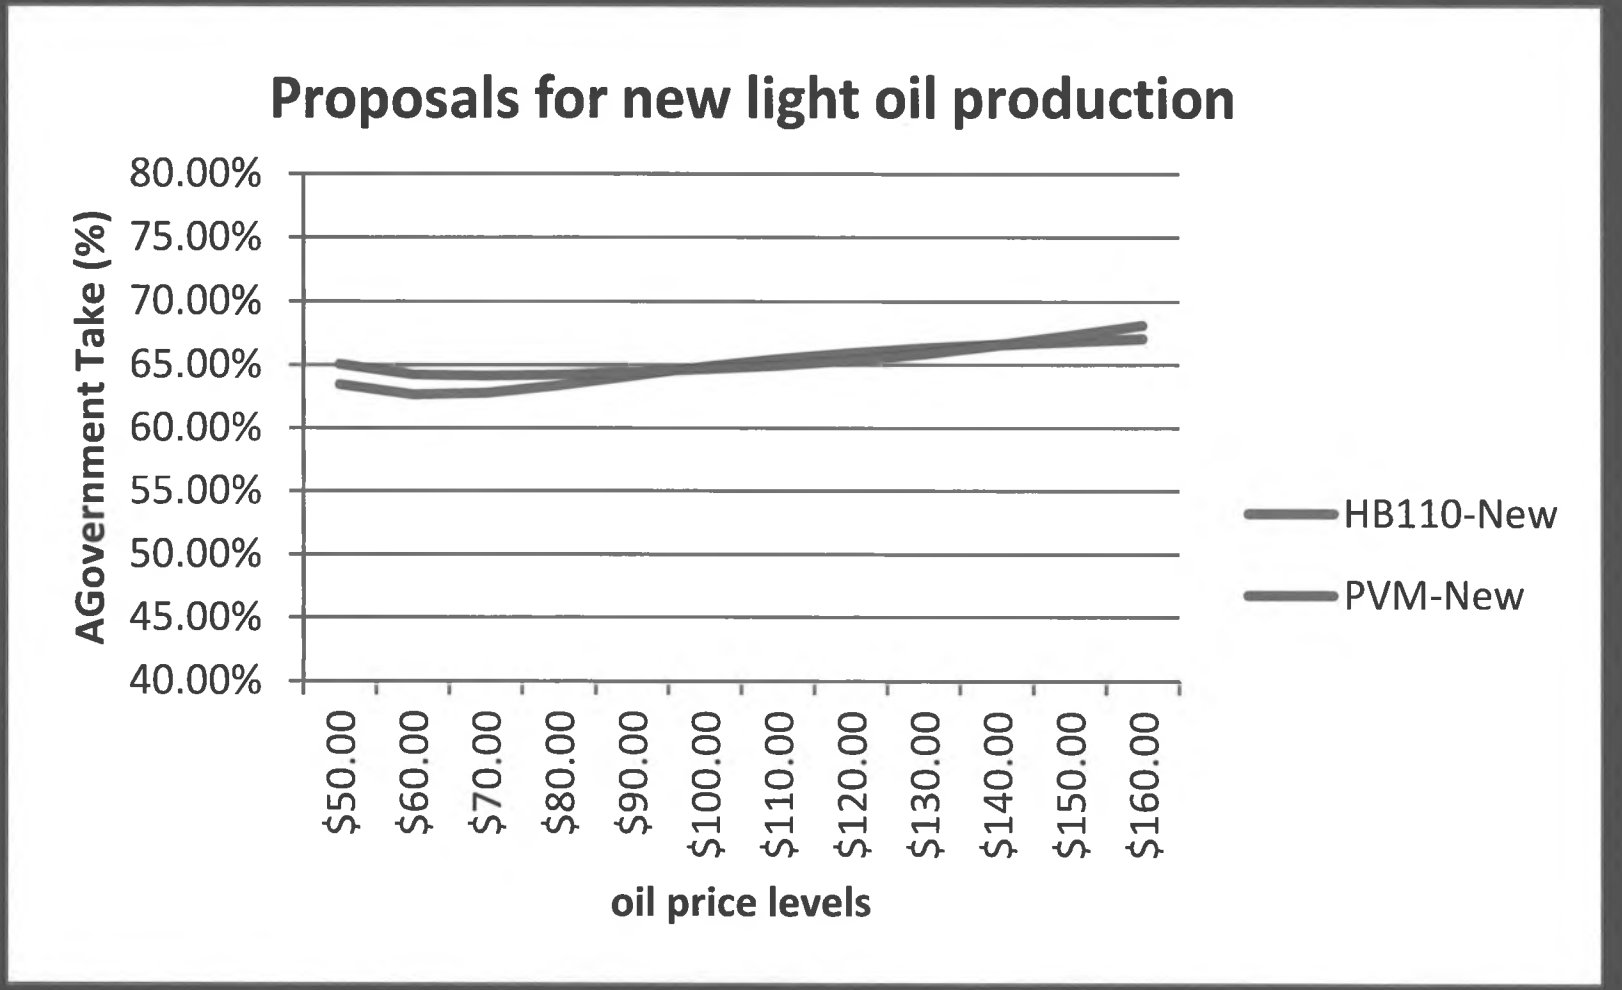
The PVM Proposal creates a new "architecture" which is not BOE based. The severance feature is simply gross revenue based for oil (after the royalty) and therefore it does not apply to gas.

As a result PPT revenues from oil remain the same if also gas is produced. This solves a major deficiency of ACES.

Also excessive exploration support is eliminated because:

- **It is proposed to limit tax credits to 20% and not increase tax credits to 40% for certain exploration expenditures, and**
- **By creating a maximum PPT tax rate of 25% and corporate income tax rate of 41.1%, for a total maximum of 55.75%.**

PVM Proposal for New Production



The PVM proposal results in almost exactly the same government take as HB 110 for new production for the entire price range from $ 60 to $ 160.

PVM Proposal for New Production

The main advantages of the PVM Proposal are:

- **Much easier to administer**
- **Can be consolidated with existing production, so no need for ring fencing**
- **An "architecture" which permits other resources to be added to the fiscal terms**
- **No excessive tax rates, in fact a combined rate of 55.75%.**
- **No excessive price progressivity**
- **No excessive exploration support**
- **No nonsensical cross subsidization of gas based on BOE values**
- **Reduced negative PPT characteristics**

Alternative Proposal for Existing Production

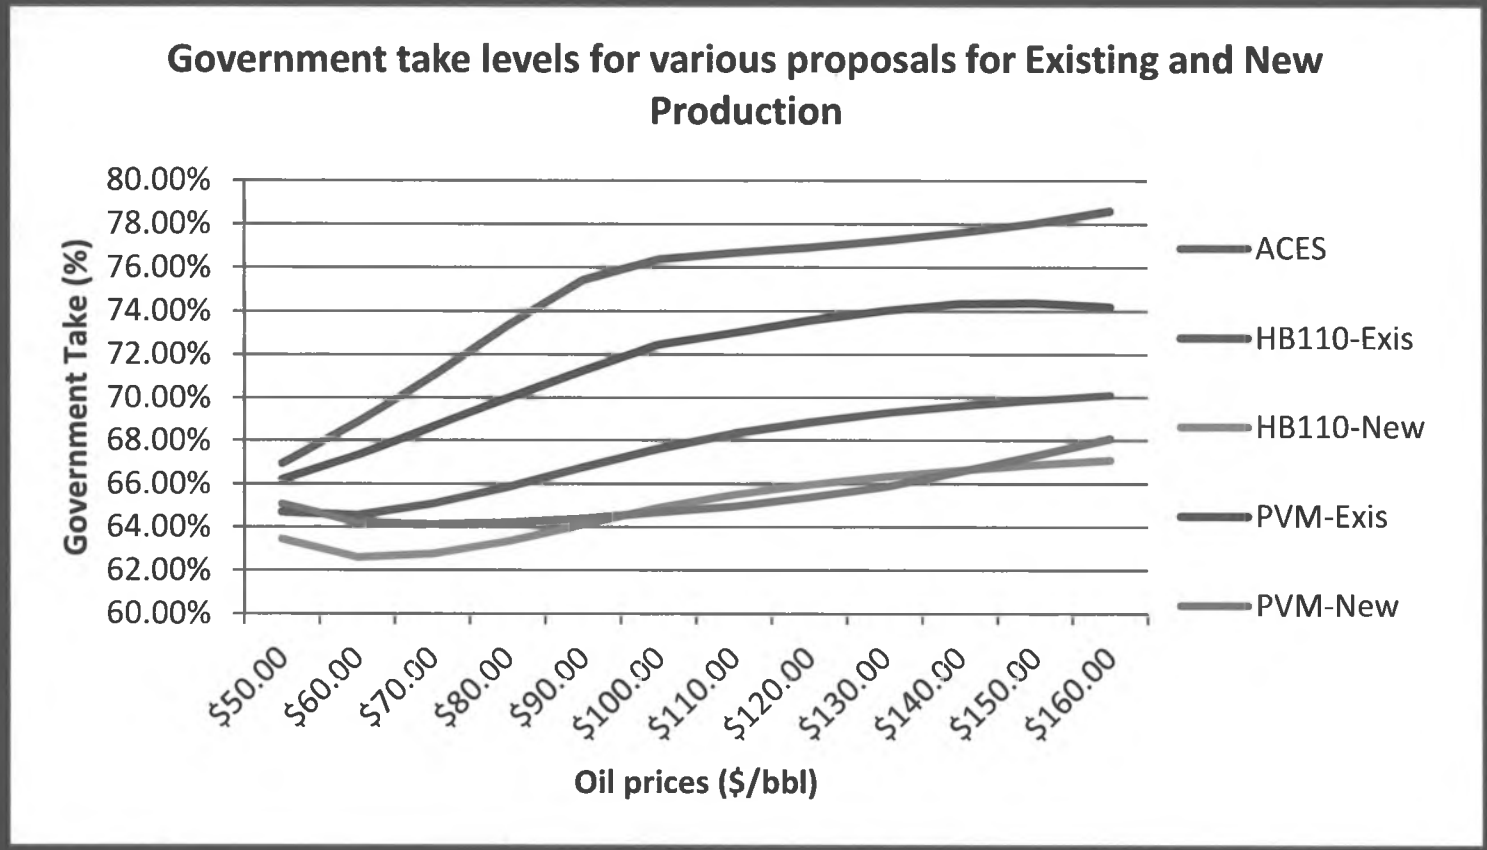
It is now easy to add a proposal for existing production.

Terms for existing production could be close to the current government take levels of ACES. It is not necessary to give up significant revenues.

Existing production terms could also be based on:

- **A flat 25% PPT**
- **20% tax credits**
- **A severance feature starting a $ 60 with 0.2% increases per dollar increase in price up to $ 130 per barrel and from there 0.1% up to a maximum of 20%.**

All Proposals for Existing and New Production



The PVM Proposal for existing production would be result in a much higher government take than HB 110 for existing production. The PVM proposal for new production is about equal to HB 110 for new production.

Old and New Production

HB 110 does not determine how to distinguish between new oil and existing oil. It is proposed to use the following methods:

Decline curve method.

With the decline curve method Alaska would establish the average production for each company in 2011. An exponential decline curve would be established per company. For instance one could use 6% per year for all companies for light production. Any production over the decline curve per company would qualify as "new".

The main advantage of the method is that is goes to the essence of the problem in Alaska. It also strongly stimulates investment by new companies. It is easy to administer. The main disadvantage is that existing companies may be rather differently affected. Therefore, this method needs to be complemented with other options.

Old and New Production

New non-producing lease method.

Another simple method is to consider "new" production, as production from leases which were not in production prior to December 31, 2011.

The main advantage of the method is that it is easy to administer and is a well established international practice. It would encourage new investment in new leases with fields which maybe more expensive.

New approved program method.

In principle it is possible for existing producers to make specific comprehensive proposals to the Alaska Government for new investments that will increase production from existing fields. This would relate to programs that would be in excess of ongoing investments.

Old and New Production

These programs could include:

- The drilling of new more expensive deeper or shallower reservoirs,
- Enhanced recovery projects
- Horizontal well drilling projects in thin reservoirs,
- Extensive new infill drilling beyond current rates, or
- Any application of new technology.

DNR would establish the base line production above which production would be considered "new" on a year by year basis, based on reservoir and other studies.

Old and New Production Summary

"New" light oil production (higher than 22 degrees API) would be:

- the higher off:
  - New production from programs specifically approved by the administration, and
  - New production above a pre-determined decline curve for light oil production of 6%.
- production from non-producing leases.

Based on these definitions it is easy to apply the differences in the severance features between existing and new production.

Session 4

Proposed terms for heavy oil, shale oil and natural gas

Terms for Heavy Oil
General

Major heavy oil development may face significant challenges, since a mixture in the TAPS line of too much heavy oil may cause operational problems.

Major heavy oil development may have to be stimulated in conjunction with expansion of light oil projects, with possible condensate and liquid stripping projects from gas fields (such as Point Thomson) and/or a construction of GTL plant(s) (with subsequent cracking of waxy components).

Alternatively, one could build upgraders fueled by cheap natural gas on the North Slope in order to upgrade heavy crudes to lighter crudes. It is not known at this time whether construction of upgraders would be a viable possibility.

Terms for Heavy Oil
Proposed Terms

With the new "architecture" in place for light oil production it is now easy to add terms for heavy oil.

At this point in time only 40,000 bopd of heavy oil is being produced.

It is not recommended to divide heavy oil in "existing" and "new".

Firstly, because it would be difficult to determine a fair decline curve at this time.

Secondly, the volume is too small to make unnecessary complications in the fiscal terms.

Terms for Heavy Oil
Proposed Terms

For heavy oil the fiscal system could be based on the same PPT as follows:

- **PPT based on a flat rate of 25%**
- **20% tax credit**
- **A 15% allowance based on the gross value of the heavy oil as special deduction for the determination of the PPT**
- **A severance feature starting at $ 160 per barrel at 0.05% per barrel increase up to $ 200 and thereafter 0.1% per barrel increase up to a maximum of 10%**
- **A floor price for the purpose of calculating PPT of $ 55 per barrel escalated with inflation.**

Terms for Ultra Heavy Oil
Proposed Terms

For heavy oil the fiscal system could be based on the same PPT as follows:

- **PPT based on a flat rate of 25%**
- **20% tax credit**
- **A 25% allowance based on the gross value of the heavy oil as special deduction for the determination of the PPT**
- **A severance feature starting at $ 160 per barrel at 0.05% per barrel increase up to $ 200 and thereafter 0.1% per barrel increase up to a maximum of 10%**
- **A floor price for the purpose of calculating PPT of $ 55 per barrel escalated with inflation.**

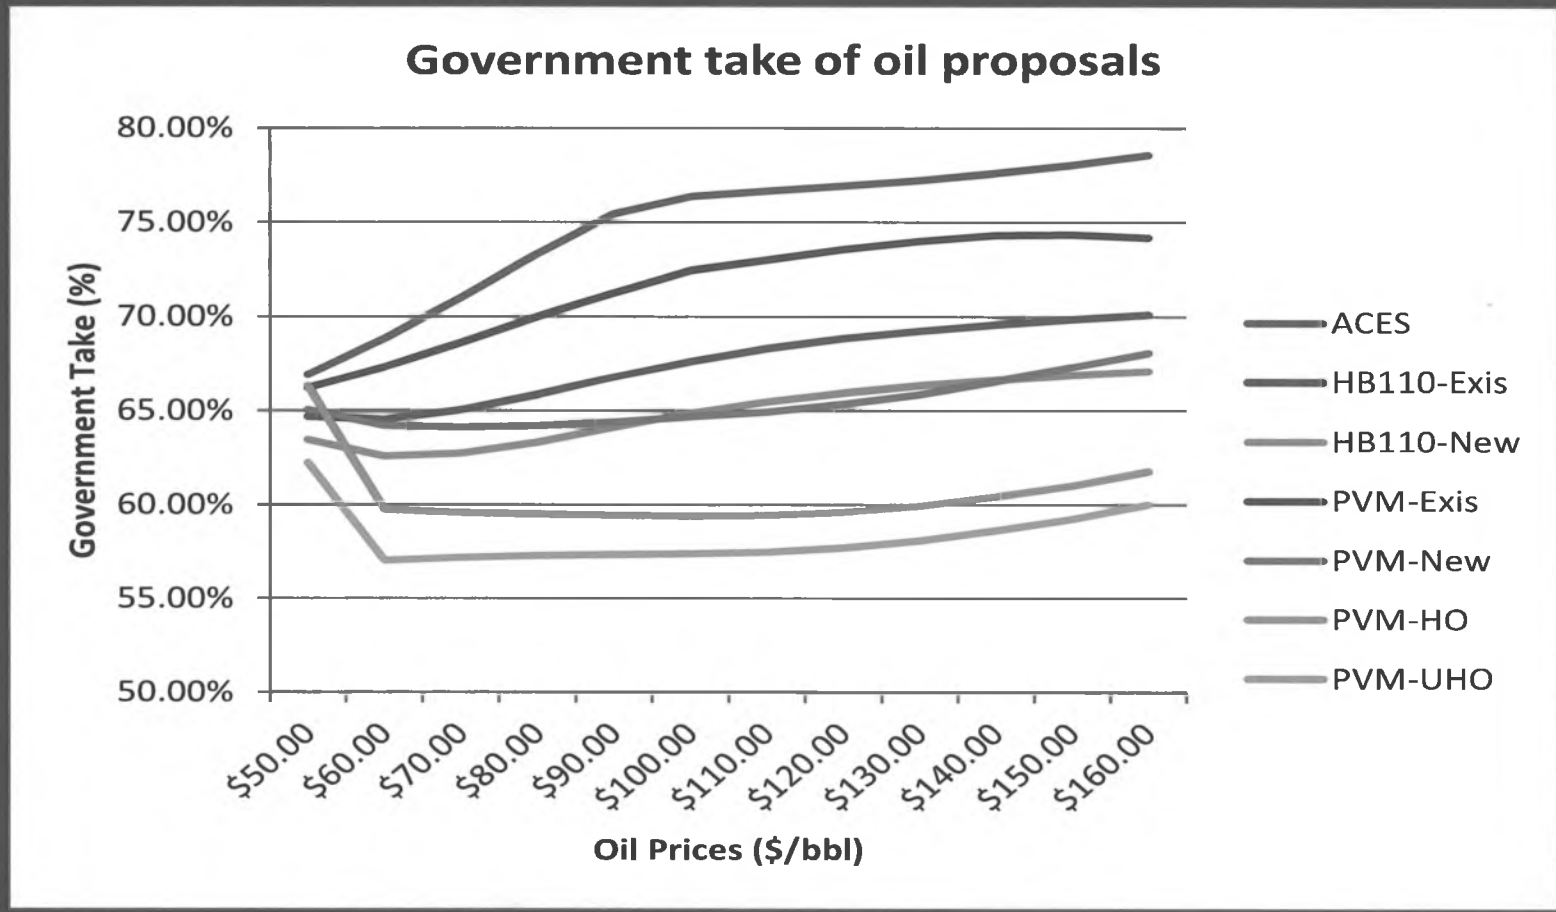
Terms for Ultra Heavy Oil
Proposed Terms

It is very important for Alaska to upgrade ultra heavy oil. This would create additional value added in the State and would make the operations of the oil line much easier.

It can therefore be suggested that producers are given the option to have a "feed price" into the upgrader for ultra-heavy oil which would be equal to 65% of the value of the synthetic oil that would be produced. The feed price would be the basis for royalties and PPT.

It would allow companies to only pay corporate income tax on the upgrader, since this is in fact a mid-stream type operation. This same concept is applied in Alberta for oil sands or refineries in Alaska.

Terms Overview



The PVM terms for existing light oil, new light oil, heavy oil and ultra heavy oil would be a simple overall scheme that would be easy to administer and implement and would not have the deficiencies of the current ACES system.

Terms for Shale Oil

The Shale Oil terms could be the same as the terms for ultra heavy oil.

However, there is a small probability that the shale oil operations may turn out to be rather profitable if fracking operations are very successful and primarily light oil is being produced.

So, it is possible to make the allowance of 20% more flexible and reduce the percentage in case shale oil production proves to be rather profitable.

This can be done with a so-called R-factor. The 20% could be reduced if the ratio between cumulative revenues and cumulative costs for a project become very profitable.

Terms for Natural Gas
New Gas Fields

Any condensates and other liquids from natural gas production could be dealt with as new light oil production.

For gas the fiscal package could be:

- **Flat 25% PPT**
- **20% tax credit**
- **25% allowance of the gross value of the gas revenues**
- **Severance feature starting at $ 8/MMBtu at 0.05% per $1 per MMBtu, and after $ 20/MMBtu at 0.1% (which means that on a Btu equivalent the severance feature is much stronger for gas than for oil)**
- **A floor net back gas price of $ 3.00 per MMBtu for PPT purposes and a floor price for liquids and condensates of $ 70 per barrel.**

Terms for Natural Gas
Gas from fields with existing oil production

Any condensates and other liquids from natural gas production could be dealt with as new light oil production.

For gas the fiscal package could be:

- **Flat 25% PPT**
- **20% tax credit**
- **15% allowance of the gross value of the gas revenues**
- **Severance feature starting at $ 8/MMBtu at 0.05% per $1 per MMBtu, and after $ 20/MMBtu at 0.1% (which means that on a Btu equivalent the severance feature is much stronger for gas than for oil)**
- **A floor net back gas price of $ 3.00 per MMBtu for PPT purposes and a floor price for liquids and condensates of $ 70 per barrel.**

Government Take issues

As a first step it can be recommended to bring the government take down to higher levels than indicated by international competition for:

- **Ultra heavy oil**
- **Shale oil**
- **Natural gas**

The reason is that international competitive levels cannot be reached unless Alaska would lower the royalties. It seems prudent to first "test the market" on the packages proposed in this seminar.

New fiscal terms

	Light-Exist	Light-New	HO	UHO	Shale Oil	Gas-Exist	Gas-New
PPT Rate	25%	25%	25%	25%	25%	25%	25%
Tax Credit Rate	20%	20%	20%	20%	20%	20%	20%
Sev Feature - Base Price	$60	$60	$160	$160	$160	$8	$8
Sev Feature - Initial Increment	0.20%	0.05%	0.05%	0.05%	0.05%	0.05%	0.05%
Sev Feature - Change Price	$130	$180	$200	$200	$200	$20	$20
Sev Feature - Increment 2	0.10%	0.10%	0.10%	0.10%	0.10%	0.10%	0.10%
Sev Feature - Max Rate	20%	15%	10%	10%	10%	15%	15%
Allowance - % gross rev	0	0	15%	25%	25%	15%	25%
Floor price - oil	no	no	$55	$55	$55	$70	$70
Floor price - gas	no	no	no	no	no	$3	$3
R-factor	no	no	no	no	yes	no	no

The proposed fiscal terms would provide for a simple to administer overall system and would set terms for all possible oil and gas investments. Significant investment may occur as a result of these terms.

Failure to achieve goals

What would happen if Alaska adopts these terms and no significant new investment takes place in Alaska, while oil production continues to decline:

1. **Alaska would not have lost anything compared to the current situation.**
2. **A very valuable benchmark would be established as to how fiscal terms may have to be changed further in order to eventually attract the investment in these resources.**

Summary

With the appropriate fiscal and contractual framework Alaska can achieve:

- **1 million barrel per day throughput through the TAPS line, and**
- **Significant LNG exports to the Pacific market**

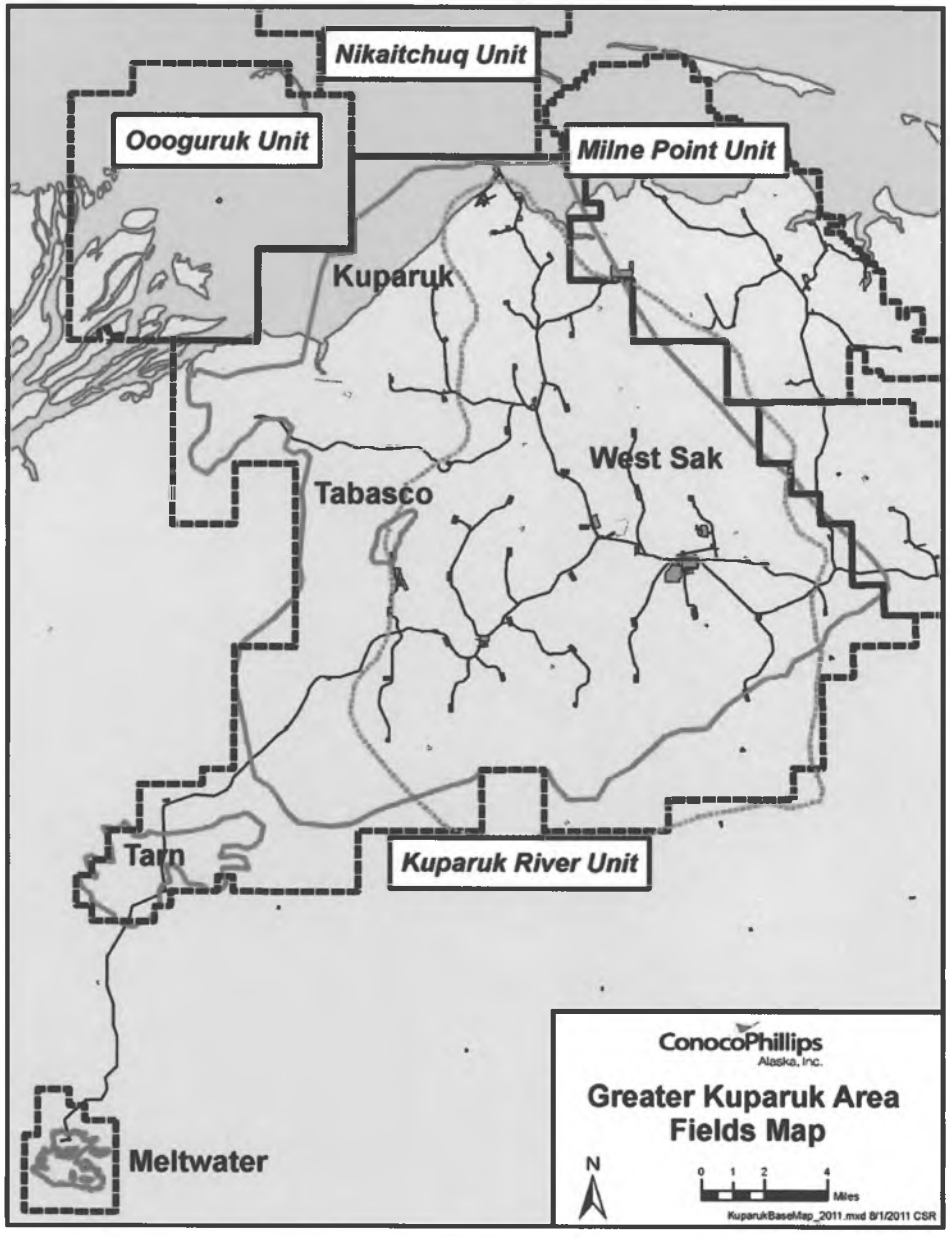
However major political and fiscal change is required.

The sooner the process starts to encourage these changes the better the future of Alaska will be secured.

Greater Kuparuk Area (GKA)

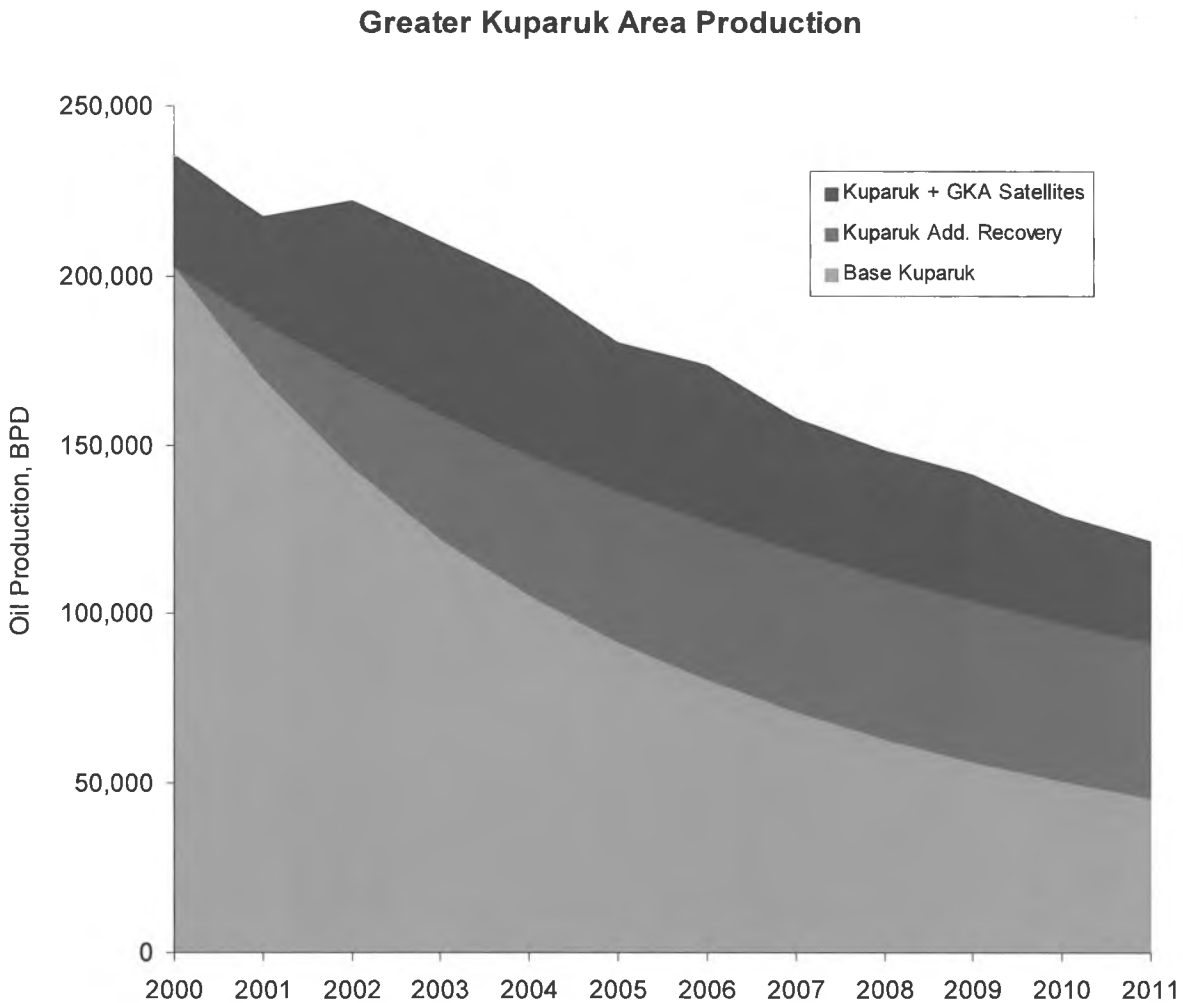
ConocoPhillips Alaska

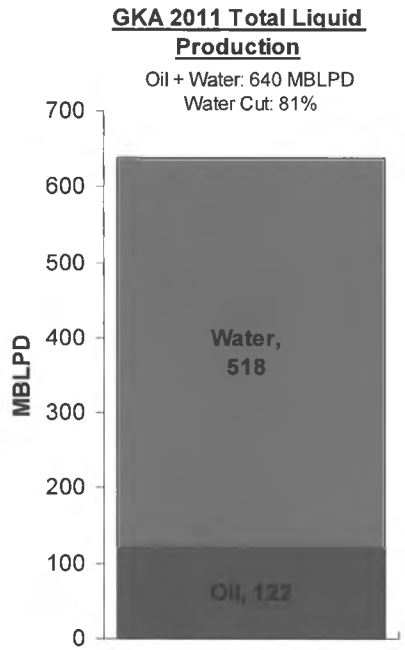
- Field start-up 1981
- 5 producing fields; COP operated
  - Kuparuk (waterflood, EOR)
  - West Sak (waterflood, VRWAG pilot)
  - Tarn (waterflood, EOR)
  - Tabasco (waterflood)
  - Meltwater (waterflood, EOR)
- 3 production facilities, 47 drill sites, ~1140 wells
- >2.4 billion barrels produced to date
- 3rd party processing of Pioneer's Oooguruk Field
- Current production: ~121 MBOPD



GKA Production

ConocoPhillips Alaska





2011 Production	Oil STB/d	Water B/d	Gas Mscf/d
KRU	91,391	480,630	203,578
Meltwater	2,671	589	9,873
Tabasco	1,608	14,238	253

Vol. 17, No. 7 **Week of February 12, 2012**

ConocoPhillips joins North Slope winter explorers

Kay Cashman

Petroleum News

As it turns out, ConocoPhillips' Shark Tooth 1 well in the Kuparuk River unit is an exploration well, per the drilling permit issued by the Alaska Oil and Gas Conservation Commission.

This brings the total number of 2012 North Slope explorers to six and the total oil exploration wells to between 23 and 27. The record was 35 in 1969, following the Prudhoe Bay discovery.

The explorers and the wells they expect to drill are: ConocoPhillips 1; Pioneer Natural Resources 2; Repsol 9; Savant 1; Brooks Range Petroleum 2; Great Bear Petroleum 4-6 verticals plus 4-6 horizontals.

All exploration involves ice roads and pads except Great Bear's proof of concept program, which is in the Dalton Highway's transportation corridor, meaning the company can drill year-round from gravel roads and pads.

Doyon rig 141 is almost finished drilling ConocoPhillips' Shark Tooth 1, which is "critical" for "future development of this part of the Kuparuk reservoir," the company said in agency filings.

As of Feb. 8, Nabors rig 9ES was at Repsol's K-1 ice pad and expected to begin drilling in the next day or two. Nabors 105AC was on Repsol's Q-2 ice pad, with drilling to begin soon. Nabors 2ES was headed out to Repsol's Q-1 ice pad. Doyon's Arctic Fox has not been moved to Q-4, Repsol's ice island, because it

can't begin drilling until 9ES is finished at K-1, as the North Slope Borough is only allowing Repsol to operate three rigs at one time.

Around March 1, 9ES will travel to Badami to drill Savant's Red Wolf 2.

Nabors rig 27E is drilling the first of two Pioneer Natural Resources' wells, Nuna 1 and Sikumi 1, which target the Torok formation in the Oooguruk unit.

Brooks Range is drilling the first of two Mustang wells.

Great Bear will start drilling 8-12 wells in May.

Also part of this winter's exploration is Anadarko Petroleum's rig-less testing of its Chandler 1 gas well. The test, under way by Expro, includes hydraulic fracture stimulation by Schlumberger. (In last week's issue PN erroneously reported Schlumberger was doing the testing.)

January 2012

Vol. 17, No. 5 **Week of January 29, 2012**

CPAI earns $1.9B in 2011

A 34 percent jump in oil prices helped offset a 6.5 percent decline in production

Eric Lidji

For Petroleum News

A steep rise in oil prices last year helped ConocoPhillips earn nearly $2 billion in Alaska, an increase over 2010 earning despite falling oil and natural gas production in the state.

ConocoPhillips earned $1.9 billion in Alaska last year, up from $1.7 billion in 2010.

While ConocoPhillips' annual earnings in Alaska rose, its quarterly earnings fell.

The company earned $443 million in the fourth quarter, down 11 percent from the third quarter ($501 million) and 7 percent from the fourth quarter of 2010 ($476 million).

ConocoPhillips earned $1.2 billion from its Lower 48 E&P operations in 2011, up from around $1 billion in 2010, while maintain roughly level production throughout the year.

Companywide, the company earned $12.4 billion in 2011, up from $11.3 billion in 2010.

Rising Lower 48 oil

While ConocoPhillips continues to earn more from its upstream operations in Alaska than from its upstream operations in the Lower 48, that balance could start

to shift this year.

The company plans to ramp up its activities in the oil-rich Eagle Ford and Bakken Shales this year to take advantage of high oil prices and, conversely, shut-in around 100 million cubic feet of North American natural gas production due to chronically depressed prices.

In Alaska, ConocoPhillips produced 215,000 barrels of oil and natural gas liquids per day in 2011, a 6.5 percent decline from the 230,000 bpd of liquids the company produced in 2010. ConocoPhillips produced 61 million cubic feet of natural gas per day in the state last year, down roughly 25 percent from the 82 mmcf per day the company produced in 2010.

In the Lower 48, ConocoPhillips produced 168,000 bpd of liquids in 2011, up slightly from 160,000 bpd in 2010, and 1.5 billion cubic feet of gas per day, down from 1.7 bcf in 2010.

Significantly higher oil prices in Alaska continue to offset gradual production declines for ConocoPhillips. The company realized an average oil price of $105.95 per barrel for Alaska last year, up from $78.61 in 2010. By comparison, the company realized an average price of $74.09 per barrel for Lower 48 liquids in 2011, up from $57.69 in 2010.

While oil jumped, natural gas prices remained relatively flat year-over-year for ConocoPhillips, from $4.62 per thousand cubic feet in 2010 to $4.56 per mcf in 2010. By comparison, Lower 48 gas prices fell from $4.25 per mcf in 2011 to $3.99 per mcf in 2010.

Liquefied natural gas sales declined considerably in 2011, as ConocoPhillips began the process of closing its nearly 45-year-old facility on the Kenai Peninsula. The company sold 26 mmcf per day in 2011, down nearly 45 percent from 47 mmcf per day in 2010.

While mentioning recent discussions about a proposal to market North Slope natural gas as LNG, ConocoPhillips' executives made no noteworthy comments about the project.

Tax debate continues

ConocoPhillips has released its year-end earnings as Alaska lawmakers are once again considering changes in the state's production tax code.

In his recent state-of-the-state address, Gov. Sean Parnell tied tax reform to his goal of increasing throughput in the trans-Alaska oil pipeline to 1 million barrels per day over the coming decade. Because it is the only major oil producer to break out financial figures for Alaska on a quarterly basis, something BP only does annually and Exxon does not do at all, ConocoPhillips' earnings often become a wedge in those debates, something Parnell seemed to anticipate by

asking, "Do we have enough will to give up short-term gains for long-term growth?"

With tax reform, the industry is willing to invest $5 billion in legacy fields, Parnell said.

Rep. Les Gara, an Anchorage Democrat, is promoting an alternative bill designed to create incentives for companies to explore and develop new fields in the state.

ConocoPhillips doesn't release its complete annual report until late February. The filing typically includes Alaska-specific taxation, spending and budgetary information.

Pumping Up TAPS: A change in direction for ConocoPhillips?

ConocoPhillips' participation in the State of Alaska's Dec. 7 North Slope and Beaufort Sea areawide lease sales raised eyebrows since by 2002 the newly merged ConocoPhillips, which had picked up ARCO's Alaska assets two years earlier through Phillips, had begun concentrating on finding "new" oil in its legacy units in the state, such as Prudhoe and Kuparuk. The company was still exploring, but on federal acreage, looking for big fields and dropping its state exploration acreage unless it was close to one of its producing units.

Over the next decade ConocoPhillips dropped even its Beaufort Sea federal leases and pulled back from wildcat exploration in the National Petroleum Reserve-Alaska, concentrating on its step-out development of the Colville River unit into NPR-A.

It looked to its federal leases in the Chukchi Sea for its next giant oil discovery in Alaska.

So, given its position on Alaska's current production tax, ConocoPhillips participation in the latest lease sales was a bit of a shocker.

The company bid unsuccessfully in partnership with Exxon on just one tract in the Beaufort Sea sale, but was high bidder on 35 tracts in the North Slope sale, with the bulk of the tracts in a large block south of Point Thomson and Badami on the eastern North Slope in the Slugger/Jacob's Ladder area. (In October, Alaska Venture Capital Group, or AVCG, relinquished a number of leases in the area from its proposed Greater Bullen unit, and some Anadarko leases in the area expired this year.)

Subject to economic evaluation

Although some of the bidders in the sale appear to have been consolidating

existing lease positions, ConocoPhillips was clearly establishing a new position in known, but undeveloped, areas of interest.

"That's acreage that we have looked at in the past and when it became available we chose to bid on it," ConocoPhillips Exploration Manager Michael Faust told Petroleum News senior reporter Alan Bailey after the lease sale.

The region is prospective for oil — to the north of ConocoPhillips' new leases AVCG's operating company, Brooks Range Petroleum, is hoping to develop some known oil resources between the Point Thomson and Badami oil fields.

But Faust said the acquisition of state onshore leases to the east of Prudhoe Bay does not mark some new strategic direction for ConocoPhillips — the lease purchase was simply a case of snapping up some attractive acreage that became available.

The company will now evaluate the leases, identifying drillable prospects that can be added to the company's worldwide portfolio of exploration opportunities, Faust said.

The company already owns 3-D seismic data for the area, ConocoPhillips Land Manager David Brown told Bailey.

Faust said that funding to drill would depend on how the prospects in the leases compare with exploration opportunities elsewhere, and that the state's ACES production tax would be a factor in that comparison — ConocoPhillips wants to see changes in the progressivity elements of ACES.

—Kay Cashman

Editor's note: The Dec. 7 lease sale brought three new players to the North Slope, and added acreage to existing leaseholders' portfolios. In addition to ConocoPhillips' surprising exploration acreage grab, Shell picked up a substantial block of leases in state waters on the west side of Harrison Bay — the first state leases in recent history that Shell has owned offshore the North Slope. The tracts were previously leased by Talisman subsidiary FEX and will likely not go into production in the next decade because they are too far west of existing infrastructure. See articles and a map in the Dec. 11 edition of Petroleum News.

Pumping Up TAPS: Fastest source: legacy fields

BP, Conoco operated oil fields have 4.2 billion barrels of oil left in producing units

Kay Cashman

Petroleum News

There are approximately 4.2 billion barrels of recoverable oil in northern Alaska's legacy fields — specifically those fields that are currently producing oil and operated by BP and ConocoPhillips.

Fields operated by those two companies represent about 98 percent of all current oil production from the North Slope. (For simplicity's sake, in this article the "North Slope" includes all oil fields north of the Brooks Range in Alaska, including offshore pools.)

Heavy oil and oil from source rocks is not in included in the 4.2 billion barrels, but some lighter viscous oil, already in production, is included with conventional crude.

A 4.2 billion barrel field qualifies as a super-giant by world standards, and would be the second largest field in Alaska.

The number came from remaining recoverable oil reserves based on the sum of Alaska Department Revenue forecasted production from 2010 through 2050 — based on year-end 2006 reporting, which is bound to be more accurate than forecasts from later years because it reflects very few of the cutbacks BP and ConocoPhillips have made as a result of Alaska's production tax.

It also does not include Badami, which was operated by BP in 2007 but in warm shut down. Today Badami is operated by Savant. Nor does it include any Alpine West oil from the National Petroleum Reserve-Alaska, because the State of Alaska has very little control as to when that oil can be accessed. It does include Northstar because it's in production, but excludes Liberty because it is not in production — and is in federal waters.

Because the legacy operators and their partners invested in technologies such as horizontal drilling, miscible gas injection and gas cap water injection their recovery rates at Prudhoe, Kuparuk, Alpine and others fields are between 50 and 60 percent, as compared to a 35 percent average worldwide.

With continued investments in new technology, that percentage can only rise.

But continued investment — i.e. increasing amounts of oil in the trans-Alaska oil pipeline — the two companies say, will not happen from their fields without passage of Gov. Sean Parnell's legislation to reform the state's production tax. (House Bill 110 passed the House not the Senate; SB 49 will be up for discussion when the Alaska Legislature convenes in January).

More important, enough of the 4.2 billion barrels can be quickly drilled and put in the pipeline to level out North Slope production — probably before explorers Repsol, Brooks Range Petroleum, UltraStar and ASRC Energy can get most of their fields online.

Also to be considered is the fact that not all the explorers will find fields which justify standalone production facilities: Some will need to get BP or ConocoPhillips to allow them to use existing facilities in legacy fields.

Or perhaps truckable/portable production skids, which are being considered by several companies, will work, along with new production facilities that can be shared.

Observations, arguments, promises

Let's look at some of the observations, arguments and promises BP and ConocoPhillips' executives have made in the last two years:

• Alaska's current oil tax system is the biggest impediment to getting more oil into the trans-Alaska oil pipeline —Trond-Erik Johansen, president of ConocoPhillips Alaska, and Claire Fitzpatrick, chief financial officer for the Alaska region and senior vice president of BP Exploration (Alaska).

• The "easy oil" has been drilled. The sweet spots were drilled when the fields were developed — when you put them online, they produced a lot of oil. There is a lot of light oil left on the North Slope, but it's not as easily accessible. And while early water production was low, 3 million barrels a day of water are now being produced: "We're more a water production company than an oil production

company," and that water has to be managed. —Johansen

• In many parts of the Prudhoe Bay field liquids production is constrained by the volume of gas being produced. Gas partial processing would remove a production bottleneck so that more oil could be produced. I Pad and a gas partial processing project represent an investment of about $2 billion; investments BP will not make without the tax breaks in HB 110. —John Minge, president of BP Exploration (Alaska) Inc.

• Some of the investments BP has held off sanctioning in its fields have had enough work done on them that they are ready for consideration when the investment climate becomes more competitive. Among those are I Pad development at Prudhoe Bay; western region development at Prudhoe; S pad expansion with low salinity water flooding; and Sag River reservoir development at Milne Point. If those projects had moved forward over the past four years, the projected 25 percent decline between 2011 and 2020 "would be essentially flat." —Fitzpatrick

• Using inflation-adjusted figures, relative drilling costs in the early wells in Kuparuk, West Sak and Tarn cost about $2-4 million a well and took about 10 to 15 days to drill. Today it costs four times as much and it takes four times as long, because wells are no longer vertical or near vertical, but are horizontal. And those wells produce less. —Johansen

• There will be "significant investments in infrastructure and pipeline upgrades," but capital spending on activities that produce more oil, such as drilling and pad expansion, are "limited or on hold" without tax changes. —Fitzpatrick

• Production has dropped more than 140,000 barrels per day since ACES passed. —Fitzpatrick

• I Pad alone will result in drilling some 50 new wells to access about 80 million barrels of additional reserves. That is … like finding another small oilfield. BP does not lack opportunities in a new fiscal environment. —Minge

• ConocoPhillips is prepared to spend $5 billion over the next three to five years to generate 90,000 barrels per day if the governor's tax bill becomes law. —Jim Mulva, ConocoPhillips chairman and CEO

• In the Lower 48, oil production grew 3 percent from 2003 to 2010; Alaska production declined 36 percent over the same period. —Johansen

• Oil at $50 a barrel in 2008 doesn't compare to similar prices in 2005 because "the fundamental cost of our business has changed." Producing a barrel of oil in the Arctic costs between $25-50 today (early 2010). —former ConocoPhillips Alaska President Jim Bowles

• In previous exploration activities BP identified more than 5 billion barrels of

resources. These resources can be unlocked with a competitive fiscal policy. — Minge

• BP recently approved two seismic acquisition programs, one at Milne Point and one at Point McIntyre, "in anticipation that the tax law will change." The seismic will be shot in 2012 and 2013, cost $100 million, and yield "at least 20 to 40 extra wells, if governor's tax bill is passed." —Minge

Pumping Up TAPS: Less about pumping up than stabilizing flow

Kay Cashman

Executive editor & publisher of Petroleum News

This magazine started out as an attempt to identify the potential sources of oil that could meet Gov. Sean Parnell's goal of getting 1 million barrels of North Slope oil per day in the Trans Alaska Pipeline System, or TAPS, within 10 years.

But it soon became more about whether it was possible to stem the decline from an expected average production in 2011 of 605,000 bpd to 530,000 bpd in 2020, as projected in the Alaska Department of Revenue's spring 2011 forecast.

What I learned in my research was that it might be possible to meet the governor's goal in a 10-year period, but only if production from Alaska's source rocks and offshore comes off without any major hitches or delays.

Not wanting to bet on something exciting, but completely untried on the North Slope, and with geologic, technical, economic and political challenges, I decided not to include shale oil in production numbers for the next decade.

Shell, the lead company in northern Alaska's offshore development, could conceivably have one or two Beaufort Sea fields in production in 2021, but even Shell predicts the start of its outer continental shelf Chukchi oil production is at least 10 years out IF it can drill in the open water season of 2012 and there are no more permitting, lawsuit or other delays.

That's more than a long shot, so I excluded the OCS.

Explorers such as Repsol and Brooks Range Petroleum will certainly play a part in putting new oil in the pipeline, so they were included — sort of, as it's not

clear they will develop and produce all their discoveries without a change in Alaska's production tax.

BP and ConocoPhillips, which operate the fields currently producing 98 percent of the oil going into TAPS, could step up production in their legacy fields and increase investment in heavy oil, but the opposite is actually happening — both companies are unwilling to increase their capital investment because they say Alaska's production tax, commonly known as ACES, is a disincentive. Until it is changed —until the governor's legislation, House Bill 110, has passed into law — the companies say they will not be stepping up investment.

Worse, BP predicts the decline in North Slope production will be greater than Revenue projected because 52 percent of the oil between 2011 and 2020 in the state's spring 2011 forecast was from projects not yet sanctioned, and many of those were BP or ConocoPhillips projects that are now on hold. Revenue's fall forecast was due out after all pages except the On Deadline section of this magazine had gone to press. I expected output of 474,000 bpd in 2020, which was the last year in the spring forecast, but you can find out for sure by checking page 8.

Increase in tariff would hurt investment

Less oil in TAPS means less revenue for the state and possible mechanical problems in the line.

But trying to keep production flat at 605,000 bpd is not just about protecting state revenues or avoiding unexpected flow problems; it's also about the trans-Alaska pipeline tariff for non-TAPS owners, such as Repsol, Pioneer Natural Resources, Savant, Brooks Range, Eni, Linc, UltraStar, Great Bear, Shell, Statoil, ASRC Exploration and others. The tariff will undoubtedly go up as system costs are shared among fewer and fewer barrels of oil, which is a disincentive for non-TAPS owners to produce oil on the North Slope.

And if TAPS operator Alyeska Pipeline Service Co.'s low flow impact study is correct (see story on page 23), there is a whole list of mitigation measures that Alyeska will have to implement to keep the pipeline operating as throughput drops below 600,000 barrels a day — costly mitigations that could also raise the tariff.

Subsidiaries of the North Slope's largest producers, BP, ConocoPhillips and ExxonMobil, own large chunks of TAPS, so a higher tariff is not going to necessarily sour them on Alaska. But it has driven off other operators in the past, including Conoco before it was ConocoPhillips and owned ARCO Alaska's share of TAPS — just as a drop in the tariff due to agency and court decisions helped attract new players to Alaska, starting in 2000.

So, this magazine became more about investigating whether the decline in North Slope oil production can be halted, especially without the cooperation of BP and

ConocoPhillips, than it did about achieving the governor's goal.

The first article, an analysis by me, is titled, "First, can the decline be halted? BP, Conoco operate 98 percent of northern Alaska oil production: can it be done without them?"

The next three articles deal with related subjects — oil prices, drilling rig shortages, and TAPS potential low-flow issues.

The next article is about the governor's five-point strategy to achieve his goal, followed by articles about the various sources of oil that could help stem the decline and/or reach the 1 million bpd target.

Finally, there is a group of opinion and analysis pieces that cover everything from impediments to filling TAPS by Jim Weeks, to Rep. Les Gara's position that HB 110 is a giveaway, to Dan Dickinson's five not-so easy pieces to put 1 million barrels in the pipeline, and more.

In the end, we have a photo layout about TAPS, from construction, to start-up, and snapshots of the last 34 years of operation.

I hope you enjoy this magazine, and find it helpful in understanding the incredible challenge in pumping up TAPS.

Pumping Up TAPS: First, can the decline be halted?

BP, Conoco operate 98% of northern Alaska oil production: can it be done without them?

Analysis by Kay Cashman

Petroleum News

Before determining if it's possible to increase flow in the trans-Alaska oil pipeline from projected 2011 levels of about 605,000 barrels a day to 1 million barrels, the governor's goal, it's important to first determine if the decline in North Slope production can be halted — specifically, stabilized without increases in investment from the region's two major operators, BP and ConocoPhillips, which with ExxonMobil and their smaller partners account for almost 98 percent of the liquids in the pipeline.

Executives from BP and ConocoPhillips say they do not expect to increase their capital spending in Alaska until the state's production tax is reduced.

BP, ConocoPhillips and ExxonMobil, the largest producers in the fields BP and ConocoPhillips operate, say the state's production tax — Alaska's Clear and Equitable Share, or ACES — takes away the incentive to invest at high oil prices, which they are ably demonstrating is true by not increasing capital investment in their North Slope legacy fields.

All three producers support Gov. Sean Parnell's proposed legislation to, as they describe it, "reform" ACES. House Bill 110 reduces the tax by changing how progressivity is applied, capping it and establishing a lower base rate for new fields.

HB 110's companion bill in the Senate, SB 49, went nowhere during the first regular session of this two-year legislative term, but is expected to be the major focus of that body in January, when the Legislature convenes.

Detractors of HB 110 say ACES is working, BP and ConocoPhillips are making big profits in Alaska, and that the two largest operators are holding the state hostage with the tax bill.

It doesn't matter who's right

I say, it doesn't matter who is right.

The fact is, without added investment by the three largest producers on the North Slope, their production, at least, is going to fall.

But if there are "improvements in the fiscal regime" in Alaska, ConocoPhillips Alaska President Trond-Erik Johansen said Nov. 16, "you will see more action. … You will see more drilling; you will see more projects. … That's just the way capitalism works."

So, let's look at current and projected oil production for the North Slope. (For simplicity's sake, in this article the "North Slope" includes all oil fields north of the Brooks Range in Alaska, including offshore pools.)

State says 12.4%; BP says 25%

In November, North Slope production averaged 624,687 barrels per day, down 6,850 barrels from the 631,537 bpd in November 2010, which is slightly more than a 1 percent drop, month to month. Over the last year throughput in the trans-Alaska oil pipeline dropped 7-8 percent, Johansen said.

The Alaska Department of Revenue's spring 2011 forecast predicts production will drop from a daily average of 605,000 barrels a day in 2011 to 530,000 barrels a day by 2020, a decline of 12.4 percent.

But Claire Fitzpatrick, chief financial officer and senior vice president of BP Exploration (Alaska), predicts a 25 percent drop in oil production between now and 2020 for BP-operated fields on the North Slope, and a 7-8 percent decline in the next couple of years.

Fitzpatrick reminded attendees of the mid-November Resource Development Council conference that fields operated by BP account for about two-thirds of current North Slope production, meaning she's in a position to know how much oil is likely to be produced.

What's the difference?

Why the big difference between the Department of Revenue and BP's production

estimates for 2020?

According to Fitzpatrick, Revenue's estimates include some "big buts" — that 52 percent of the department's forecast for 2020 is from projects under development or evaluation, including projects in existing producing fields. (See figures 6, 7, and 9 from Revenue's spring 2011 forecast, which support what she says.)

A lot of the "under development" has not yet had final investment decisions from the owner companies, she says.

So, Fitzpatrick concludes, more than half the oil the state is banking on in 2020 comes with a big "If."

That means that more than half the production in the spring forecast — and therefore a big chunk of projected state revenues — depends on investments yet to be made.

"I don't know what the next DOR forecast is going to show in terms of decline over that timeframe. I do know what my forecast shows, and we are showing a steeper decline over that period than I was at this time last year," Fitzpatrick says.

"We've reviewed our plans and activities much more rigorously in terms of what's possible versus what's realistic in the current business climate," she says, meaning some of the projects BP talked to Revenue about prior to the spring forecast are now off the table.

On Dec. 1, Revenue officials confirmed that the latest Revenue forecast, due to be released in mid-December, will reflect a much lower production rate in 2020. (Pumping up TAPS goes to press on Dec. 9, but we're holding space in the On Deadline section near the beginning of this magazine to report on Revenue's latest forecast.)

Still, some new oil will most certainly be produced, with or without, a tax change. The ExxonMobil-operated Point Thomson field, for example, will likely be produced under a settlement agreement with the state of Alaska — that's 2,000 barrels a day in 2015 and 9,000 barrels thereafter, per Revenue's spring 2011 forecast.

And after all ConocoPhillips' work to get approval to build a bridge across the Colville River in order to start producing oil from CD5 in the National Petroleum Reserve-Alaska, where it is eligible for ACES tax credits, it's safe to assume ConocoPhillips will move forward with NPR-A exploration and development. In Revenue's spring 2011 forecast, that's 10,000 barrels a day in 2015, 65,000 barrels by 2020, including production from Linc Energy's Umiat oil field.

Even BP expects to proceed with its Liberty project in federal waters, which Revenue shows at 5,000 barrels a day in 2013, then peaking in 2014 at 39,000 barrels, and dropping to 14,000 barrels in 2020.

Still, a 25 percent drop in two-thirds of 98 percent of North Slope production by 2020 is considerable. And BP, remember, has to approve most of the investments in the ConocoPhillips-operated fields because it's a working interest owner in many of them. ("Has to approve" is not a legal mandate; but the unit owner relationship is much like a marriage. "Sure you can buy that pool table, honey, but....")

Oil BP, Revenue not including

Production from the only oil fields not operated by BP or ConocoPhillips on the North Slope — Eni's Nikaitchuq unit, Pioneer Natural Resources' Oooguruk unit and Savant's Badami unit — are included in the Department of Revenue's forecast.

Revenue's projections put Oooguruk and Nikaitchuq at a combined daily average of 19,000 barrels in 2012, up from 12,258 in November, and peaking at 38,000 barrels a day in 2014.

But Pioneer's Nuna development, which is inside the Oooguruk unit, and Savant's Red Wolf prospect, part of the Badami unit, are not in the forecast.

More important, not a drop of oil from the North Slope's active explorers — Repsol, Brooks Range Petroleum, UltraStar Exploration, ASRC Exploration and Great Bear Petroleum — is included in Revenue's forecast, per Victoria Ferguson, a petroleum economist with the department.

With the exception of ASRC, all these companies are planning to drill exploration wells this winter; although as of Dec. 1, two of the explorers will probably not be able to find drilling rigs, bumping their wells to the winter season of 2012-13.

Potential production from these seven companies' projects, some of which are unitized and have been previously drilled, do not meet Revenue's standards for inclusion in its forecasts, Ferguson says, providing a list of those standards:

A. Reservoir delineation through new penetrations, drill stem testing and seismic.

B. The reservoir should be fairly well defined and proved to have productive capabilities

C. The operator should have fairly concrete development plans in place.

Great Bear production excluded

Despite the Parnell administration's enthusiasm for Great Bear's source rock exploitation plans, the company has to prove it can produce oil from the formations on the North Slope, Ferguson says.

"Since production from source rock is considered unconventional, we will wait

for some extensive, definitive production data from a pilot project before we forecast any significant production from the Great Bear properties," she says.

Those standards make sense when you're looking for absolutes. Even ignoring Great Bear's very bold production estimates makes sense, although its project could potentially reverse the decline on its own, and more, within the 2015 to 2020 timeframe.

Still, Great Bear is proposing to produce oil from source rock; something that has never before been done on the North Slope. And given the difference in the cost of operating in northern Alaska versus in North Dakota's Bakken or Texas' Eagle Ford shale plays, Great Bear might need the tax breaks in the governor's bill to make its Alaska project economic.

Ed Duncan, Great Bear's president and chief operating officer, told legislators in February that competition for capital is on a global scale, and while Alaska presents an opportunity for oil and gas investment, "we also see a great opportunity for Alaska to improve its position globally" by making the tax changes proposed in HB 110.

Alaska is prospective for development because "it has some of the best rocks in one of the best petroleum provinces in the world." But, Duncan says, "it also has some fiscal terms that are suppressing development."

The risk in Great Bear's source rock exploitation plans is not technical but "commercial viability in competition for capital (because it) requires capital to make this play really happen," he says, describing the play as both capital intensive and labor intensive.

"This is an opportunity to deliver a play that has long-lived production; manageable risk; allows the state to forecast forward revenue; (and) has tremendous job growth associated with it — if we can make it happen."

The objective of Great Bear's exploration and evaluation program is to run short tests on at least four wells, with those tests potentially leading to the sanctioning of a pilot plant to more fully determine the production characteristics of the rocks, Duncan told Petroleum News in November.

It will be necessary to obtain at least a one-year production profile, determining parameters such as production decay characteristics, as well as assessing the economic feasibility of oil production from the rocks, before making a decision to move to full field development, which he says could occur in 2015.

A 123,000 barrel a day difference

If you're looking to leave ACES as is, you have to know whether the other explorers, all of which have access to adequate funding and two of which are already producing oil in the region, have a chance of filling the gap between

2011's projected average of 605,000 barrels of oil flowing through the Trans-Alaska Pipeline System, or TAPS, and what will be running through it daily in 2020.

Cutting another 8 percent off 605,000 barrels a day in deference to Fitzpatrick, another 48,000 barrels are deducted from Revenue's projected 530,000 barrels, for a drop to 482,000 barrels a day between now and 2020.

That's a difference of about 123,000 barrels a day. (Maybe more, maybe less: Remember to check out the On Deadline section at the front of this magazine with Revenue's latest forecast.)

In 10 years, Alaska might see some federal outer continental shelf production from Shell, but Shell says that's only if nothing goes wrong between now and then, and it can drill in 2012. It would be foolish to count on Beaufort and Chukchi OCS oil in the next decade, but if Shell picks up Beaufort Sea leases in the Dec. 7 state sale, as rumored, then it's possible (see On Deadline).

And trying to keep production flat is not just about state revenues; it's also about the trans-Alaska pipeline tariff for non-TAPS owners, such as Repsol, Brooks Range Petroleum, Linc, Great Bear and others. The tariff will undoubtedly go up as the cost of the system is shared among fewer and fewer barrels of oil, another disincentive for non-TAPS owners to produce oil on the North Slope.

And if TAPS operator Alyeska Pipeline Service Co.'s low flow impact study is correct (see story on page 23), there is a whole list of mitigation measures that Alyeska will have to implement to keep the pipeline operating as throughput drops below 600,000 barrels a day — costly mitigations that could also raise the tariff.

BP, ConocoPhillips and ExxonMobil own the largest percentages of TAPS, so a higher tariff is not going to sour them on Alaska, as a pumped up tariff has in the past with several oil companies, including Conoco before it merged with Phillips, which in turn purchased the assets of ARCO Alaska.

Repsol hoping for 119,000 bpd

So, excluding Great Bear's potential production, let's look at possible production in the next 10 years from other explorers, starting with Repsol, which has about 20 prospects on just under 500,000 acres that were identified by minority partners Armstrong Oil & Gas's North Slope subsidiary 70 & 148 and GMT Exploration.

Oil production from Repsol's first five exploration projects is scheduled to come online between 2015 and 2018, peaking at 119,000 barrels a day in 2017 or 2018.

The company appears to be drilling its low-to-moderate risk prospects first, although one of the initial five drilling sites was switched out for another where several leases are set to expire.

If the company is only able to permit and drill four of those projects this winter, it is likely to drill the prospect it dropped next winter, along with several others, delaying one project's production by a year.

Armstrong expects changes in ACES

With at least 119,000 barrels a day in the pipe by 2018 or 2019, it appears Repsol will nearly singlehandedly save the day for Alaska.

But what wasn't said in Repsol's March 7 press release announcing its deal with Armstrong and GMT was a single word about ACES, although the company did say one of the reasons it entered into the $768 million transaction is because the Parnell administration is looking at ways to make the state more for attractive for oil and gas investment versus trying to squeeze more tax dollars from industry.

Just three weeks before the long-awaited deal closed Armstrong Vice President Ed Kerr submitted a letter to the co-chairs of the Alaska Legislature's House Resources Committee, saying that the governor's bill, "HB 110 will have a significant impact on our capital expenditures and future activities in Alaska. The improved fiscal terms as proposed by HB 110, particularly the portions of the bill that apply to activities outside of existing units, will give us the needed incentive to not only drill multiple new wildcat and delineation wells, but the motivation to drive certain projects to development."

Kerr said Armstrong has "more than a dozen ideas outside of existing producing units" on its project list, ideas it hopes to drill and test.

"In many cases we know the oil is in place. The improved fiscal terms as provided in HB 110 will greatly affect whether these projects will get developed."

Presumably the bigger finds will have the best rate of return, so they would get developed under ACES as it is today.

Pioneer's Nuna Development

Also not included in Revenue's spring 2011 forecast was Pioneer's Nuna Development within the newly expanded Oooguruk unit. Its primary target is the Torok formation (see page 41).

Original oil in place is estimated to be 340 million barrels in the Oooguruk offshore drill site area and the core area of the unit — the planned initial development area where the Oooguruk-Torok reservoir is completely filled with oil. That oil would be included in Revenue's projections.

In the prospective Nuna area, the Oooguruk-Torok reservoir appears to be only partially filled with oil; the original oil in place is estimated at 690 million barrels. Pioneer estimates that it can produce up to 25 percent of that through primary and secondary recovery methods, for a net 173 million barrels.

The Alaska Oil and Gas Commission, looking at primary recovery of 20 percent, or 138 million barrels, says the production rate for the Oooguruk-Torok oil pool over an expected 20-30 year project life is expected to average 4,000 to 9,000 bpd, with peak production of about 8,000 to 15,000 bpd, plus natural gas.

Production could conceivably start in 2017, so it would have some bearing in the next 10 years.

A lot depends on appraisal and exploration drilling into the Torok this winter and next.

And on the economic competitiveness of the project with Pioneer's oil and gas assets outside Alaska.

At a Feb. 16, 2011, House Resources Committee meeting in Juneau, Ken Sheffield, at the time president of Pioneer in Alaska, said the company supports HB 110. He said Pioneer's challenge is finding the next opportunity to grow its business. The company might have the opportunity to expand its Oooguruk project to produce the Torok accumulation, but a half a billion dollars for Torok would have to compete for funding against other opportunities in the Lower 48 in fiscal regimes where the tax burden is not so high.

So, another question mark.

If BP and ConocoPhillips elect not to increase investment and all the stars align for Repsol, the Madrid-based major stands to produce the most new oil from the North Slope in the next 10 years.

Armfield's plan 2050

But there is one other explorer whose production could make a dent in arresting the decline, and that's Brooks Range Petroleum Corp. An active explorer on the North Slope (see page 40), BRPC has drilled five wells and several sidetracks since 2007. It tends to target known, but untapped, fields between 25 million and 50 million barrels close to infrastructure.

Again if all the stars align, it might have two or three fields online in the next 10 years, producing between 5,000 and 12,000 barrels each (numbers not confirmed by BRPC).

In February testimony to House Resources in favor of HB 110, Bart Armfield, vice president of operations for BRPC, talked about his "plan 2050," which takes an incremental look at what would be required to keep the trans-Alaska oil pipeline flowing at 600,000 bpd through that time.

It's a phased approach, he said, requiring the cooperation of the state, majors and independents.

If 10 new fields averaging 12,000 bpd are brought on in the next 12 years, that would increase recoverable reserves by half a billion barrels, and require in excess of $6.3 billion in investment.

"History demonstrates that we can" do this, Armfield said, based on what has occurred over the last 12 years with Alpine, Northstar, Oooguruk and Nikaitchuq coming online and Badami restarted.

That isn't 10 fields, he said, "but collectively they represent the equivalent of 10, 12,000-barrel-of-oil-per-day field projects."

To get to the next level, 20 years out, requires 22 more fields be brought online.

Armfield said unconventional resource plays and technology developments in the Lower 48 demonstrate what can happen, and said that in the very near future that may be applicable to the North Slope.

By the end of the day, in "plan 2050," 44 new developments have occurred, requiring more than $18 billion in new investment.

Armfield said the new fields are a combination of developments within existing units and grassroots developments. In the first 12-year phase, if existing units supported four new developments "then new players would support six grassroots developments."

But the $18 billion to bring on that much new development really requires $36 billion in investment, Armfield said, because "not every project is going to be successful on the North Slope." He said he used the 50-50 rule, with half failures and half successes, "which is probably very aggressive."

To get $36 billion of new investment capital coming into the state requires "the positive adjustment through HB 110," Armfield said.

Other companies agree with BP, Conoco

The questions posed at the beginning of this article were, Can the decline be halted? And since BP and ConocoPhillips operate 98 percent of northern Alaska oil production, can it be done without them?

Maybe. If most of the companies exploring, or set to explore this winter, on the North Slope are successful, there might be enough production to halt the decline in the next 10 years, especially if I'm right about Revenue's fall forecast, so compare the numbers on page 14 with those in the page 8 On Deadline article about Revenue's fall forecast, which came out after all but those pages went to press.

But, the next question is, will those explorers develop their discoveries under ACES?

Not all of them have answered that question.

But they have all said they need HB 110 to make producing oil in Alaska competitive with investments elsewhere.

Natural Gas – The Gift
Remarks by Jim Mulva
CERA Conference
March 9, 2010

I remember 20 years ago when a bright young man wrote a book about oil. He named it "The Prize" – and the rest is history. "The Prize" captured a fundamental truth, oil is a precious commodity that powers the world economy.

There was little mention of natural gas. Historically, it never matched oil in importance. But look at gas today – the world's third-leading energy source, with room to grow.

In fact, if oil is "The Prize," then natural gas is "The Gift." Nature's gift to the people of the world. For many outside our industry, it is an unexpected gift. They believe that renewable energy will quickly and easily replace hydrocarbons, and cure all that ails us.

But it is clear from the experts that carbon-based fuels, though in cleaner forms, must keep carrying the load. Renewables just can not ramp up fast enough to replace them. But where will this energy come from? Fortunately, Mother Nature, human ingenuity and technology have provided the answer. That is, if we are allowed to unwrap the gift.

Let's consider what gas can mean for the future. The real future, not the pipe dreams of the "hydrocarbon deniers." These are the well-intentioned people who support renewables at any cost, and oppose hydrocarbons at any consequence. They seem not to realize that platitudes are not BTUs. That it will take abundant and affordable energy to enable further human progress.

Let's spin the clock forward 40 years, to 2050, and look at a possible future if government chooses the right policies.

By then, it will be a different world, with 9.2 billion people, 35% more than today. It will need more energy, not less, despite higher efficiency and conservation. And tomorrow's energy must remain affordable.

The idea that all forms of energy are needed will long be accepted. So will a sense of shared responsibility for environmental stewardship. Many people will drive electric cars. Fleet vehicles, trucks, buses and trains, will use natural gas to reduce both emissions and maintenance. Housing will use active and passive solar power, and smart meters. Living "off the grid" will be popular.

In our industry, we will drill wells with, who knows, perhaps laser beams. There will be technological advances that would seem inconceivable today.

Vast arrays of wind-powered turbines will be online. So will solar and nuclear power. But they will not be the biggest electricity sources. After all, there are only so many places

where massive development is economical, and publicly acceptable. And only so much government funding to subsidize the renewable sources.

Natural gas will remain a leading base-load power generation and heating source, due to its cleanliness, abundance and reasonable cost. Through its flexible reserve capacity, when the wind dies or the skies are cloudy, gas will backstop wind and solar power.

Here in the U.S., gas production will be more national in scope. New York, Pennsylvania, Virginia and other states will join the major producers. They will gain the job creation and industrial development for which Texas is known today.

On the oceans, an expanded fleet of liquefied natural gas tankers will tie the world together. Neither remote supplies nor consumers will remain stranded.

Coal will remain essential too, through its abundance and low cost. But it will be used in more advanced ways. Among them, through oil industry technology, it will be converted into gas or liquid fuels.

Oil will continue as a transportation fuel, wherever alternatives are impractical. And it will be essential for lubricants and petrochemicals. Supply will largely come from unconventional sources, like Canada's oil sands, and shale rock in Colorado, Utah and Wyoming. To facilitate recovery, natural gas will provide clean heat and power.

And everywhere, new technologies will reduce greenhouse gas emissions, with processes in place to capture and sequester carbon.

So by 2050, natural gas will have potentially helped meet four great energy challenges:

- First, achieving both national and world energy supply security.
- Second, providing consumers with affordable energy.
- Third, driving economic prosperity and job creation.
- And finally, reducing greenhouse gas emissions.

Now, the first question the hydrocarbon deniers would ask is, "Where will all that gas come from?"

The Natural Gas Resource Base

To answer, let's consider the rebirth of a once-dying U.S. industry. Natural gas consumption here peaked nearly 40 years ago. Over the next three decades, it fell by 25%, and reserves fell by nearly half. Conflicting, changing and short-sighted government policies played a major role. As recently as 2003, the National Petroleum Council as well as others warned that imported LNG would be increasingly necessary.

But since then, the entire market has turned:

- Production capacity is rising,
- Prices are down,
- Reserves are growing, and

- We foresee a century of domestic supply.

Some people even forecast the U.S. becoming an LNG exporter. What happened? Never underestimate the power of technology to drive human progress.

There are few remaining conventional gas prospects here. At least, not in the areas where we are allowed to drill. So the industry turned to the less-desirable unconventional reservoirs. These typically have "tight" rock, which does not flow nearly as well.

To make this rock productive, over a 60-year span we developed new and sophisticated technology. Completion techniques, hydraulic fracturing, drilling and seismic imaging all advanced. As a result, unconventional gas is now a key part of U.S. reserves.

Then in the 1980s, we realized that coal formations, which often contain so-called "mine gas", might be made productive. A new process called "cavitation" enabled the gas to flow. We also became better at finding the best sites to drill.

As a result of all these steps, unconventional gas and coalbed methane helped stop the decline in U.S. gas reserves during the 1990s. Demand began to grow. ConocoPhillips increased our North American gas exposure, and so did others.

Meanwhile, another technology came along – horizontal drilling. Today, lateral extensions up to 8 miles are possible. A single well can have several, spread like the fingers of your hand.

These techniques are expensive, and feasible only in certain situations. But again, technology opened new horizons.

Now, another truism. Never underestimate human ingenuity. It occurred to the industry to reexamine shale – a common source rock that was too tight for production. But horizontal drilling exposed more rock to the wellbore. And fracturing enabled gas to flow. This opened new drilling trends and revolutionized the industry. And rather than being expensive, shale gas is often the low-cost source, commercial at $4 to $7 per Mcf.

The same success now appears possible in Canada. And these technologies can be applied elsewhere. Exploration for tight gas, coalbed methane and shale gas is under way in more than a dozen other countries. More will follow.

Consider the ramifications. The world uses 107 trillion cubic feet of gas a year. Proven conventional reserves are 6,500 TCF, a 60-year supply. With undeveloped conventional resources, there is potentially more than a century of supply. Now, adding unconventional gas expands total resources to more than 38,000 TCF, or multiple centuries of supply.

But this may only be the beginning. Up to 700,000 TCF of methane hydrates lie beneath the ocean floor and the Arctic. They have never been produced commercially, but

research is getting us closer. It may even be possible to liberate the methane by pumping carbon dioxide into the formations. That would be a dual energy and carbon storage solution. ConocoPhillips is in the early stages of researching this.

The full magnitude of nature's gift is now apparent. Natural gas is more than a bridge fuel. It is part of the long-term energy solution. There is an old U.S. saying, "Don't look a gift horse in the mouth." It basically means, "Appreciate what you have been given." But we face two big obstacles in delivering the gift of natural gas. We must overcome the opposition of the hydrocarbon deniers. And government must find the political will to address long-term energy needs pragmatically.

Answering the Hydrocarbon Deniers

The idea that gas is abundant challenges beliefs that fossil fuels are running out. So the deniers raise the warning flags of price volatility, environmental impact and greenhouse gas emissions. These may sound compelling. But every energy source poses challenges.

Wind and solar power have their own problems: cost, reliability, visual impact, land and water use, bird strikes and massive power-line rights of way. Current-generation biofuels require a lot of land and water, impact food prices, can increase greenhouse gas emissions, are vulnerable to crop failure, and require subsidies. Coal is carbon-intensive. Nuclear faces waste disposal, proliferation and public acceptance issues.

So let's look realistically at the objections to natural gas. During the recent severe winter, U.S. prices hardly reacted. The rising abundance of gas reduces the risk of long-term price volatility. Short-term volatility has also moderated, due to several factors. The industry has added new storage facilities and supply pipelines. The nine LNG terminals now in service can quickly increase deliveries. Also, shale gas is developed through highly repeatable long-term drilling programs, in virtually a manufacturing-type approach. This raises efficiency and lowers costs, and thus enables low prices. And drilling can ramp up quickly in response to any change in the market.

Another advantage offered by gas is that development requires a small land-use footprint. It's only $1/20^{th}$ that of equivalent wind or solar power. Gas-fired combined-cycle power plants have low water consumption, particularly compared to some renewable sources.

Yes, gas is carbon-based. But it burns cleanly, and produces practically no nitrogen oxide, sulfur dioxide or particulates. So there is less threat of acid rain and smog. In terms of climate change, gas-fired power plants produce half the carbon dioxide of coal-fired units. Their waste heat can be captured to produce steam for industrial applications. This further reduces the carbon footprint.

Also, substituting gas for other fuels is the fastest and most cost-effective way to reduce greenhouse gas emissions. Cost matters. Or at least it should.

Now, let's address the final obstacle, government vision.

Government Vision

The U.S. needs coordinated policies on energy and climate. Policies that establish certainty through the years, regardless of who is in office. And that encourage development of all energy sources. Otherwise, energy initiatives ping-pong back and forth whenever the political pendulum swings.

Currently, the U.S. government strongly supports renewable energy. Unfortunately, it also proposes higher taxes on the natural gas industry, and is tightening resource access. Perhaps it has not yet learned that if you tax something, you get less of it. Less supply security, fewer jobs and lower reinvestment.

Another concern is the mandated use of renewable energy for electricity generation. This could prove very expensive. Why not instead implement clean electricity standards. Then let renewable energy, natural gas, clean coal and nuclear power compete.

Look at China. Yes, they support renewable energy. But they are also pragmatic. They recognize that all sources are needed. They do not oppose fossil fuels. They believe in technology. They will soon begin assessing their shale gas potential. With assistance, I might add, from the same U.S. government that has ignored the shale potential here.

U.S. energy policy brings to mind a famous Winston Churchill quote, "A riddle wrapped in a mystery inside an enigma."

For example, the U.S. government holds 2.4 billion acres of mineral estate. That is larger than the land area of any of the world's countries, except Russia and Canada. Of this, 3%, yes, only 3%, has been leased for energy development.

Like our parents told us, "It's not what you say, but what you do that counts."

The shale gas revolution here occurred on private and state land, not federal land. Think of the economic development and job creation potential if more land was opened. And if less red tape tied up the acreage that is leased.

In closing, I want to emphasize that ConocoPhillips supports development of all energy sources. We recognize that in order for the world to prosper, energy must be abundant and affordable. Our core businesses are carbon-based because these are the only sources that currently meet these criteria. We also support legislative enactment of a sound, mandatory federal climate policy.

For all these reasons, we are aggressively pointing out the benefits of greater use of natural gas. It truly is nature's gift to the people.

- Gas can enhance energy supply security through its abundance. There is enough to meet industrial, residential, commercial and power generation needs.
- Gas should remain very affordable to consumers.
- Gas offers the energy base upon which to build economic development and job creation.

- And gas offers a viable and cost-efficient way to reduce greenhouse gas emissions.

Thank you.

END

Oil & Money Conference
Panel Discussion – CEO Forum: Global Upstream Challenges
The IOC Response to Turbulent Times and Challenges
Remarks by James J. Mulva
October 20, 2009 – London

Well, we in the oil industry certainly know about turbulent times.

In discussing our upstream challenges, I'll start with the obvious – the world economic downturn. It has caused the largest decline in energy demand in 25 years. Oil prices that took eight years to reach $147 per barrel – after stagnating for two decades – lost more than two-thirds of that value in eight months. Today, they are $70 – but may not hold.

Compounding this are government fiscal takes. A number of countries raised their takes during the boom, assuming that prices would remain high. Now, most have not lowered them. Also, reserve replacement costs are more than double their 2003 levels. They are not falling as fast as prices did.

All these factors challenge the economics of new investments. Government seems to assume that we will invest anyway. But perhaps the screws have now been tightened too much. World upstream investments are down by $100 billion this year, or 21%, according to the IEA.

There are other challenges, like restricted access. In many resource-rich countries, the best, if not all, opportunities go to NOCs. IOCs are left out, despite their expertise and access to capital and markets.

There is also climate change legislation pending in key countries. This creates uncertainty over what the rules and costs will be. Investment flees uncertainty. We need the world to decide what it will or will not do.

And finally, we face political hostility. Fossil fuels are unpopular because of their price volatility and perceived carbon impact. So governments are promoting renewable sources. At best, they are ignoring oil and gas policy – while overlooking how natural gas could ease the transition to a low-carbon economy. Since fossil fuels must provide 80% or more of world energy even by 2030, this is like Nero fiddling while Rome burns.

These challenges and flawed policies have serious implications. They could lead to new energy price spikes once the world economy recovers.

Further, today's energy downturn is not like the 1980s. We are unlikely to have a long production surplus and weak oil prices this time. The drop in oil demand then was three times today's decline. Conventional non-OPEC crude production was rising then, thanks to the North Sea and Mexico. Now, it is falling. And unlike then, world demand now is primarily driven by the rising prosperity of the developing world's 5.6 billion people.

They outnumber the population of the OECD countries by nearly five to one, and the margin is growing.

So demand growth will inevitably resume, and renewable energy cannot meet it alone. Unless our industry is ready, and governments have the right policies, supply could fall short. This would damage the world economy and undermine living standards.

At ConocoPhillips, we are dealing with these challenges today, while also anticipating tomorrow's needs.

- We have adjusted our operating and capital programs to live within our means. The best projects continue, while others have been deferred.
- We are working with suppliers to reduce costs.
- We are maintaining balance sheet strength by managing our debt.
- We are engaging in the public debate over climate change, energy security and taxation.
- But despite these immediate steps, we are maintaining our long-term strategy. We are funding our commitments and preserving optionality. We continue spending through the cycle in our resource-play drilling programs. And we are focusing on our core businesses, while continuing renewable energy R&D, but at a measured pace.

Obviously, there is much government must do.

First is improving access. The world has ample oil and gas. We can produce it efficiently while protecting the environment. We just need access.

- Second, government must stop viewing our industry as a cash cow. Some $12 trillion in global oil and gas investment is needed by 2030 to ensure adequate supply. These investments cannot occur if our funds are taxed away. Third, government must encourage development of all energy sources, and not pick "winning" technologies. The public, through the market, can determine the best sources far more efficiently than government.
- And finally, government must coordinate its policies on energy and climate. Otherwise, policy conflicts could undermine both.

So there are solutions to our challenges, provided that we, and most importantly government, take the right steps.

Thank you.

END

The Realities of the U.S. Energy Future: A Producer Perspective
Detroit Economic Club – National Summit Energy Town Hall
Remarks by Jim Mulva
June 16, 2009

Introduction – the basic realities
I want to thank the Detroit Economic Club for putting together a challenging agenda with a diversity of views.

It was only a year and a half ago that I spoke here about the shared future of the energy and auto industries. Of course, we did not know what was ahead. The world economic upheaval. Millions of jobs lost. And severe impacts on the people of America.

The past year has proven that we all depend on each other. In that spirit, we seek common ground on some of the key issues of our times. Specifically energy and climate policy, and their role in economic prosperity.

History shows that when energy is readily available, reliable and affordable, it encourages high economic growth. But when supplies are short and prices are higher, economic growth lags. You know the saying – those who forget history are doomed to repeat it. We will need energy in the future, just as in the past – in high volumes, and at reasonable cost. But this simple statement comes with a set of hard realities.

The future energy situation
First among these is that future energy demand will grow. Why? Because world population will expand by one-third, reaching 9 billion people by 2030. Also, the developing world is catching up economically. More people are building homes, electrifying them, and buying cars and appliances. The U.S., long the world's largest energy consumer, also has a growing, energy-hungry population.

Second, modern society is inherently energy intensive. We can learn to use less energy, but there are practical limits. After all, you can't fly a 747 on Piper Cub engines.

These first two realities dictate a third – we must develop a more diverse "basket" of energy supplies. This includes alternative and renewable energy. But it also includes more fossil fuels. Fortunately for all of us, we benefit from a massive, efficient and highly successful energy infrastructure. It is based on fossil fuels. Building it required 150 years, trillions of dollars in investments, and generations of work – by untold millions of people. They drilled wells, and constructed oil and gas pipelines, fleets of tankers, coal mines and electric power plants. Their work transformed society, created affluence, and improved our quality of life. Replacing this energy foundation would take an unimaginable effort. It could not be done quickly, despite the desire to do so. There simply is not enough investment capital, skilled labor and materials available. And much of the technology needed is still being developed. So building sufficient capacity to replace fossil fuels will take – who knows, decades, perhaps even a century.

The fourth reality is that alternative energy has its own issues and detractors – just like fossil fuels. Every energy source poses unique challenges. They may be in terms of the environmental impact, the economic considerations, the regulatory requirements, or even just public acceptability. There are "not in my back yard" objections to wind turbines, just as there are to oil wells and power plants. There are hazardous chemical concerns associated with solar panels. Nuclear energy creates tremendous concern. Biofuels impact food production. And so on.

The fifth reality is that the advantages of fossil fuels are too often overlooked. They generally cost less than alternatives – which is why they are the market leaders. You will pay a lot more for "green energy" – either in utility bills, or at tax time due to the heavy subsidies it requires. Also, fossil fuels are generally more reliable. They don't tail off when the wind dies or the sun goes down.

Altogether, these realities mean that Washington's apparent belief – that we can choose between renewable energy and fossil fuels – is mistaken. We will need more of <u>all</u> energy sources. So our path forward must include five steps …

- One, encouraging conservation,
- Two, diversifying our energy supplies by developing alternative and renewable energy,
- Three, developing our domestic oil and gas resources,
- Four, encouraging imports from secure producers,
- And last but not least, addressing climate change.

With these points, I've just committed blasphemy in some people's minds. As an oil and gas producer, I've endorsed conservation and supply diversity. I've referred to the "inconvenient secret" that the U.S. still has a lot of undeveloped oil and gas. I've touched the third rail by suggesting that we will still need imports. And also by acknowledging that climate change is a serious issue.

Now, let's get down to the policies needed, beginning with what our industry must do.

What industry must do

We and our peers are already investing heavily to develop new supplies – and new technologies to make our products cleaner. This must continue. We are researching ways to reduce the cost and facilitate development of alternative and renewable energy.

ConocoPhillips has already produced renewable diesel fuel, made from vegetable oil and byproduct animal fats. We are researching new biofuels made from agricultural waste and algae. We are evaluating investments in other areas, such as wind power. In the meantime, we are improving our own energy efficiency, which will help reduce our carbon intensity.

Altogether, we are investing tens of billions of dollars in our energy businesses – despite the most challenging economic environment of my lifetime. We have seen oil and gas prices fall below replacement cost at times.

Also, we are facing severe restrictions on our access to energy resources. In the U.S., drilling is banned in many areas due to environmental objections. Overseas, some of the best areas are reserved for national oil companies. These trends force us to concentrate in the mature producing basins where we do have access. But these have been picked over for years, so they are generally more expensive and offer less potential. We must do a better job of making our case to government for expanded access.

There are other financial pressures – such as higher taxes. A number of countries jumped on the tax bandwagon to get a bigger cut when prices were high. Now, they want to keep it despite today's harder times. Here too, we are working to inform these countries of the economic realities of today's energy market.

What government must do

Next, there is much that the U.S. government must do to ensure that our country remains competitive in the global race for energy. Unfortunately, we are running this race while dragging anchors behind us.

First, it must encourage greater efficiency, by setting energy performance standards throughout the economy. Its actions must be cost effective, since they would increase the cost of cars, buildings and appliances. But conservation alone is not enough.

We've said for decades that the U.S. needs an inclusive national energy policy. One that supports investment in all forms of energy, including fossil fuels. The U.S. remains the world's third-largest oil producing country. We do that with less than 4% of our 2.4 billion acres of federal acreage under lease for development. Too many unexplored areas are off limits – like the Atlantic and most of the Pacific offshore, parts of the West, and large parts of Alaska.

These resources belong to the public. But the same government that tells us to get off foreign oil is blocking development – needlessly. The industry has a good environmental record, and it can explore these areas responsibly.

Also, there is a natural gas renaissance under way. But government appears not to have noticed. Since 2005, estimated recoverable gas resources have more than doubled. This is thanks to new technology to produce from shale rock. So Lower 48 supplies are up, and prices are down. And we still have huge resources in Alaska awaiting pipeline construction.

Consider too the benefits to the environment. In power applications, gas emits half the CO_2 of coal. So we should be relying on gas as a bridging fuel while we build a low-carbon economy. Unfortunately, proposed tax increases and regulations are threatening to marginalize gas. For example, one proposal would impose standards for electricity

produced from renewable fuels. It sounds good, but it would likely force greater cutbacks in the use of gas, than coal.

Another point. Since we can not produce all the energy we need, we should encourage imports from secure and friendly sources. Like Canada. Its oil sands are one of the world's largest hydrocarbon deposits, with 8 times current U.S. oil reserves. We already process this oil here, creating U.S. jobs, income and tax revenue. It puts the Midwest at the front of the line for oil supplies.

But there is fierce opposition to importing this oil. It is based on objections to surface mining, and the oil's carbon intensity. But most new developments are not surface mines, but wells. And although the carbon intensity is slightly higher than for conventional or heavy oil, we are working to reduce the impact.

Of course, the concern over carbon intensity relates to the climate impact. We believe that government should address climate change. But it should balance its approach with the need for energy supply security. For example, climate change should not serve as an excuse to halt imports from the oil sands. That would only cause increased imports from less reliable areas – or even oil shortages.

ConocoPhillips has closely tracked the climate issue. In 2007, we joined the U.S. Climate Action Partnership. This is a group of diverse businesses and environmental NGOs that share our desire for a balanced approach. It supports legislation to set a price for carbon avoidance, linked to international agreements. This would be more efficient and less expensive than regulating carbon under existing statutes designed for other purposes. Such as the Clean Air Act, or the Endangered Species Act.

Federal legislation would hopefully preempt the current patchwork of state regulations. But it must not create new conflicts by imposing overlapping requirements. For example, current standards already mandate the greater use of renewable fuels. So a pending proposal to require the use of low-carbon fuels is redundant.

We believe too that all sectors of the economy must be treated equitably. Under current climate proposals, electricity consumers would have 83% of their carbon costs mitigated. But transportation fuel consumers would bear the full cost on day one. Meanwhile, coal-fired electricity generators would receive free allowances for half of their emissions. But cleaner-burning gas-fired generators would receive no allowances. So use of coal would be encouraged, while gas would be penalized. This is nuts.

Also, refiners would be accountable for the greenhouse gas emissions that result from use of all oil-based products. This is one-third of the U.S. total. But refiners would receive only 2% of the available allowances. So they would have to purchase credits, and then pass the costs along to consumers. This means higher gasoline prices. But competing imported fuel products would not have this cost burden. This could put domestic refiners out of business. It would also force both jobs and emissions to leak overseas. So the Administration should grant refiners allocations for any costs they can't pass on. And it

should help consumers of transportation fuel, just as it would help those in the other energy sectors.

One final area in which government can help is by encouraging innovation. It can provide incentives for technology R&D, and greater support for education. This could ease the shortage of technical personnel we see in many American industries, including energy.

What government must not do

While there is much that government can do, it should resolve first to do no harm.

It must not create unrealistic expectations for new energy sources. Neither should it attempt to pay for them at the expense of fossil fuels. After all, more fossil fuels also will be needed. The oil industry must be able to continue developing the energy needed to keep the economy going.

Further, government should not try to pick "winning" technologies. Its job is encouraging overall progress. Then, to let the market decide the best and most cost-effective sources. Consumers and investors are very good at that.

Government must also resist a fallacy. And that is that so-called "green jobs," created by alternative energy development, will drive an economic recovery. In reality, since these sources will cost more than fossil fuels, energy prices will rise. This could actually hurt the economy and cost jobs by making the U.S. less competitive against countries with cheaper energy.

Further, government must resist the "raise taxes" mentality. Our industry already pays a U.S. income tax rate of over 40%, compared to less than 27% for all manufacturing. Last year, ConocoPhillips paid $13 billion in income taxes, $5 billion in other taxes, and several billion in royalties to government. The Administration's proposed 2010 budget contains tax provisions that will reduce our ability to invest in increasing production. This would cause greater oil and gas imports, higher fuel prices, and reduced competitiveness. It could also cost many of the 6 million direct and indirect jobs supported by our industry.

We caution too against enacting unnecessary regulations. We believe that fair, balanced and well-coordinated regulatory processes are necessary and appropriate. However, the benefits of proposed regulations should equal or exceed their cost to the public in terms of making domestic energy more expensive.

Conclusion

In conclusion, the U.S. is at a crossroads. Government action is needed on energy and climate policy. And some form of legislation seems likely to pass. We hope that it is realistically based on the hard energy facts I've mentioned and not on politically popular hot air.

The availability of energy at reasonable cost underpins the U.S. economy. So the decisions made in the months ahead will deeply affect all of us.

We urge government to adopt wise, carefully crafted, and balanced policies. Good policies will facilitate our enduring economic health and quality of life. Bad policies will do the opposite.

None of this will be easy. We would hope that the views of energy producers are heard and considered – along with those of other constituencies.

Thank you.

ConocoPhillips Added About 738 Million Barrels To Reserves In 2011

Published January 23, 2012 | Dow Jones Newswires

HOUSTON – ConocoPhillips (COP) said it added about 738 million barrels of oil equivalent to its proved reserves in 2011, allowing the oil giant to more than replace oil reserves lost from production.

Acquisitions and dispositions reduced reserves by 45 million of oil equivalent, primarily from the dilution of the company's interest in an Australia Pacific liquefied natural gas project and sale of North American natural gas assets, the company said in a press release.

Reserves and reserve-replacement ratios are considered two of the oil-and-gas company's most significant assets and are used by Wall Street analysts to measure a company's performance.

Conoco said its production for 2011 is expected to be 617 million barrel oil equivalent per day, or 1.69 million barrel of oil equivalent per day, including fuel gas. The company also expected to end 2011 with 8.4 billion barrels of oil equivalent of proved reserves.

It is positive Conoco replaced its production, but until it files its annual report with details about the mix of oil and gas of the added reserves it is early too early to read much into the company's announcement, say Alan Good, an analyst with Morningstar.

Conoco, the third-largest U.S. oil company by market value, said it expects to file its 10-K with the Securities and Exchange Commission in late February.

Houston-based Conoco said 2011 reserves were added across the portfolio, including at the company's Canadian oil sands properties at Christina Lake and Surmont.

The company said it also added reserves in liquids-rich U.S. shale areas, such as Eagle Ford and Bakken; in the North Sea, through expansion projects in the Ekofisk, Eldfisk and Clair developments; and in Malaysia, with sanctioning of the Kebabangan project and ongoing development of the Gumusut Field. Reserve additions were also delivered across the company's North American conventional asset portfolio, the company said.

Conoco is in the midst of a three-year repositioning aimed at shoring up finances and making itself more attractive to investors. The plan includes the sale of $15 billion to $20 billion in assets, large-scale share buybacks and the spin off of its refining arm, expected to be completed this year.

The company is set to report fourth-quarter earnings Wednesday.

Shares were recently down 0.9% at $70.50. As of Friday's close, the stock was down 5.4% over the past six months.

A tale of two ConocoPhillips presentations with Alaska comments

by Dermot Cole/ cole@newsminer.com
02.03.12 - 11:53 pm

FAIRBANKS — The Make Alaska Competitive Coalition has a PowerPoint presentation on its website from Marianne Kah of ConocoPhillips titled "Alaska's Role in World Energy Supplies."

The contents are in keeping with the message the coalition repeats in its ad campaign — Alaska should cut oil taxes by billions of dollars or else.

On pages 20 to 22 of her presentation, Kah, the chief economist of the company, has slides on the general topic of "A Tale of Two States," showing how oil production and GDP growth are climbing fast in North Dakota, but oil production is falling in Alaska and GDP growth is not as high in Alaska as North Dakota. Job growth in Alaska is not as high as North Dakota, it says.

The Jan. 6 presentation also has a slide that says, "Alaska Progessivity — Least Attractive Among OECD Countries at Current Prices," while the next says, "And its marginal take is one of the Highest Globally."

The tax rate is "limiting investment and production in Alaska," Kah concludes. The state has the "highest cost structure" in the portfolio of ConocoPhillips investments.

"Alaska has the highest tax rate of any of the developed countries that ConocoPhillips might operate in. And of course that tax rate goes up substantially as the oil price goes up. So there is no upside for investment in Alaska," the coalition quotes Kah as saying.

The one big plus mentioned in the presentation is the "Strong rule of law/political stability" and the "permitting/regulatory environment."

The overall thrust was that these aren't the best of times in Alaska.

But ConocoPhillips executives have been known to say that these aren't the worst of times in Alaska for the third largest energy company in the U.S.

In a third-quarter conference call last year, the company CFO referred to Alaska as one of the places with "higher than average margins."

And on March 23, 2011, another executive of ConocoPhillips offered remarks that were anything but gloom and doom.

One slide from the March presentation to stock analysts said the "strong cash margins" in Alaska are noteworthy and that future growth will be driven by in-field drilling, Western North Slope satellite fields, unlocking the 1.7 billion barrels of heavy oil reserves the company has and doing something about natural

gas.

Granted, the presentation covered the company's diverse worldwide operations and highlighted many profitable prospects, including North Dakota and points south, but there was no mention made of Alaska tax rates stifling investment.

Greg Garland, the senior vice president of exploration and production in the Americas, said this about Alaska as part of a discussion about future growth for the company, according to the transcript:

"Talk about Alaska, we like Alaska. We've been in Alaska a long time. We're the largest producer in Alaska. Last year 240,000 BOE (barrel of oil equivalent) a day, strong cash margins in this area and we have a significant infrastructure position, we've built an extensive operating capability. We have a strong culture of safety and environmental excellence in Alaska and we think we have a strong competitive advantage here. Reserves at 1.6 billion BOE resources, 5.7 billion BOE. We'll invest $350 million in exploitation this year, all at very good returns. We're targeting sanction of our West Alpine project which is CD-5 if we can get the permits this year. And longer term, there's other opportunities. West of Alpine, we've got the heavy oil that we've talked about. We'd like to take a look and see what's in the Chukchi Sea if we can get permits to drill. And then, longer term is North Slope gas. ..."

Garland is not an unimportant figure in the giant oil firm. He is in line to become the chairman and CEO of the new Phillips 66, the downstream company that is being spun off this year to become a stand-alone corporation.

In every walk of life, speeches and presentations are tailored to appeal to the audience that the speaker wants to reach and accomplish the goals the speaker has in mind. There is a selection process about what to leave in and what to leave out.

You have one set of goals when the idea is to build support for a local tax cut that will make Alaska operations more profitable. You have another set when you are talking to analysts who follow the company's fortunes on a global basis.

It's a normal process, one that makes it hard to unravel situations where complex tales are presented as simple truths.

Oil company executive says Alaska offers 'strong cash margins'

by dermotcole
04.08.11 - 08:23 am

Company presentations to stock market analysts invariably stick to the sunny side of the street.

But policy makers in Alaska operating with eyes wide open instead of half-closed need to have a working knowledge of the international self-portraits offered by the oil companies to these specialized audiences.

On March 23 in New York, eight leaders of ConocoPhillips held their annual meeting and conference call with 16 Wall Street analysts, competitive critics who are hired to make informed judgments about profit and loss potential. The account makes for informative reading.

The news coverage about the meeting dealt largely with the company plan to sell $5 billion to $10 billion worth of "noncore assets" over the next two years, using most of the money to buy back $10 billion in stock and invest in its business. Over the last two years, the stock of ConocoPhillips is up more than 80 percent, beating BP and ExxonMobil, the New York Times said.

While the most glowing language in the presentation was about such prospects as the Eagle Ford shale deposits in East Texas, the Permian Basin in West Texas, ("The gift that keeps on giving"), North Dakota, the Alberta tar sands, Australia and other locations, the ConocoPhillips Alaska situation was also given a positive spin.

The company said the Alpine West (CD5) project is expected to go ahead in 2013-2015 along with the Lookout (CD6) project. Alaska North Slope natural gas and the Ugnu heavy oil resources are among the projects set for 2016 or later. There was next to nothing said about onshore exploration in Alaska.

Future growth in Alaska will be driven by "in-field drilling opportunities, Western North Slope satellites, unlocking heavy oil potential and ANS (Alaska North Slope) gas commercialization," a slide shown to analysts said. The Alaska drilling program for 2011 is expected to increase somewhat over 2009 and 2010 with a cost approaching $340 million or so, according to the slide.

Greg Garland, the senior vice president of exploration and production in the Americas, said this about Alaska:

Talk about Alaska, we like Alaska. We've been in Alaska a long time. We're the largest producer in Alaska. Last year 240,000 BOE (barrel of oil equivalent) a day, strong cash margins in this area and we have a significant infrastructure position, we've built an extensive operating capability. We have a strong culture of safety and environmental excellence in Alaska and we think we have a strong

competitive advantage here. Reserves at 1.6 billion BOE resources, 5.7 billion BOE. We'll invest $350 million in exploitation this year, all at very good returns. We're targeting sanction of our West Alpine project which is CD-5 if we can get the permits this year. And longer term, there's other opportunities. West of Alpine, we've got the heavy oil that we've talked about. We'd like to take a look and see what's in the Chukchi Sea if we can get permits to drill. And then, longer term is North Slope gas and we have 10 Bcf gas.

Regarding the offshore potential in the Chukchi Sea, another leading ConocoPhillips executive said the company is in a better position than some of its competitors. He didn't mention Shell, but it's clear that is the company he was talking about when he said another company was "burning" cash with its Chukchi plan.

Larry Archibald, a senior vice president of exploration and business development, said the Chukchi Sea prospects face regulatory hurdles. CEO Jim Mulva said he thinks his company's premise is that nothing is going to happen there before 2013.

"Yes, 2013 at the earliest," said Archibald. "We're actually in a, I guess, enviable position. We're not burning any cash on that operation as we wait for their regulator environment to be sorted out, unlike at least one of our competitors. We're not pregnant in an Arctic drilling fleet. And we're going to wait and see what develops there. And in the meantime, we're getting tolling, extension on our leases there. So we would like to get after it, but it's not urgent. In the meantime, we're going to park things until we see regulatory certainty. "

When the subject turned to North Slope natural gas, a stock analyst asked this: "On transportation capacity and political factors, you've had this Alaskan gas for a long time and dealing with the Alaskan government has been difficult. In the past few weeks the energy picture has changed a little bit with the tragic accident in Japan. And you could make a much stronger case today that we would have thought a few years ago for LNG on the Alaskan coast and sending it to Japan. So that the case for the Alaskan pipeline might be a lot better today than it was a year ago. Can you give us any comment on how do you think the government of Alaska is going to be more helpful in developing that kind of a project?"

Mulva responded:

"Well, it's a -- I'll ask Al to comment here in a moment, his thoughts on this. But it's an indigenous resource. We know that it's been there. It's probably going to be a high cost to the market. We'd like to get it developed, we know Alaska would, but it's going to take some fiscal certainty, maybe some incentives to make this happen. We have and along with other producers up the North Slope, who have looked at certainly a pipeline down the lower 48 or connect a manifold into the Lower 48 to the Canadian system.

I think that gas long-term is a real winner but still Alaska is going to be pretty high cost. We have looked at, as the other producers, we looked ourselves at LNG export. So whether that changes and leads to the development of our Salt gas, who knows."

PRESENTATION

Clayton Reasor - *ConocoPhillips - VP - Corporate Affairs*

Great. Well, good morning to everybody. We're certainly glad to be here. I welcome you to ConocoPhillips 2011 Analyst Meeting. Welcome to those of you here in the room in New York as well as those listening on the Web.

Safety is the most important thing that we do at ConocoPhillips. And this meeting is no exception, so we'd like you to please locate your nearest exit. And in case of emergency, we'll have somebody from the staff direct you to a safe location.

Of course, I need to remind you that we'll be making forward-looking statements in response to questions and also part of our prepared remarks. The actual results may differ from -- from what we're saying today. And the sources of these differences can be found in our filings with the SEC.

So, again, welcome. We think we've got a great agenda. We're going to cover some specifics this morning on -- on our operating and our financial as well as our strategic objectives. We think we've got some specifics you'll find interesting. And it's really a continuation on our approach to create value through improving returns, growing our profitable production and increasing distribution. And there's no one better to start the discussion than our Chairman and CEO, Jim Mulva. Jim?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay. Clayton, thank you very much and good morning. I'd like to welcome all of you here present in our analyst meeting here in New York City. It's good to see a lot of new friends, but particularly a lot of the old faces and friends that I've known for a long period of time. So I welcome you. And it's good to see you. As well as -- as Clayton said -- welcome all those who are participating in the worldwide webcast.

To get started, I think it was about 18 months ago, in the October time period or so of 2009, we assessed our company and we looked at the business environment and we looked at our portfolio and our investment opportunities, and given the environment that we saw, we said, you know, we think there's a better way for us to create value for our shareholders.

And so we announced a program that, essentially, Clayton just enumerated, which was we were going to have far more constraint with respect to how we invested our money, improve our returns in our portfolio, in which certain assets would be sold; and invest only in the best projects; and have a lot of emphasis on E&P, less on the refining side; and have a strong balance sheet, but get more aggressive on distributions to our shareholders in the form of dividends and share repurchase.

So then a year ago at this time, we had our 2010 Analyst Meeting. And in my first slide, essentially, this is what we said that as we look forward for 2010-2011, this is what we want to do. We want to improve the value of our portfolio, our returns, mostly on a financial basis and a cash basis, with the emphasis on more upstream, less downstream, invest only in the best projects. We want to have a stronger balance sheet, so some debt reduction and the emphasis on -- we have a lot of resources -- not that

THOMSON REUTERS

we have enough resources, but we want to take the resources that we have and let's really emphasize conversion of those resources to proven reserves and production.

And if we do this efficiently then we can replace our production at competitive finding and development costs, then we can create a lot of value for the shareholders. And the emphasis was not just on absolute volume growth, but really the metrics is on the per-share metrics -- the metrics in terms of reserves, production, income, cash per barrel of oil equivalent, whether it's upstream or downstream, again, as you see the emphasis on increasing distributions to our shareholders.

So that's what we said we were going to do last year. So what did we actually do this past year? Well, in many regards, we outlined it as a two-year program, 2010 and 2011. And, actually, a lot of the things that we said we were going to do over a two-year period of time, a great deal has been accomplished in this past year. We had a really good 2010. But, you know, that's a good year. What's most important is we got to keep going and keep this up not only in 2011, in subsequent years.

So what did we do? Well, we improved the return on capital employed. What we have found in our experiences about, whatever the improvement that comes in this metric, about two-thirds comes from commodity prices, our crack spreads. About one-third of the improvement comes from self-help in terms of how we invest, how we operate our cost structure.

Constraint on capital program, we said we were going to sell $10 billion in assets over a three-period of time. We sold $7 billion in 2010. It's not a -- it's not an issue with respect to completing this program this year. In fact, we're going to announce here this morning that we have aggressively new numbers of what we're going to do over the next two-year period of time.

When we came last year, we said we'd like to lighten up our investment in LUKOIL. And then we moved that up to say, well, given what we see in Russia and where we can re-deploy the funds and buy our shares in, we essentially said we're going to sell all of our interest in LUKOIL.

We essentially did most of that last year. And then we completed all of our sales in the early part of this year. And so we had good reserve replacement last year and in presentations this morning you're going to hear that we -- we intend and we have the plans to continue to do that. We started out pretty aggressive on share repurchase and the importance of increasing our dividends.

So as we assess our company today, and where we are and where we're going, we think we're pretty unique -- unique in terms of we're a little bit different, right? In other words, we look at our company in the environment and we do what we think is right for our company. Other companies can do -- have a different approach, but, for us, we think we have unique -- a unique position because we have a strong portfolio of legacy assets that are going to continue to deliver a lot of value for decades to come.

We have legacy opportunities and a -- and we're going to fund the best opportunities. And, again, the emphasis is on exploration and production. We continue to prune the portfolio, sell assets that are more mature, have more value to someone else, but do it in a way that we don't give value away from the shareholders. It's got to be tax efficient.

You'll see on the pie chart on the right-hand side of the slide, the Company was built, and we feel pretty strong on OECD presence -- OECD in terms of our cash flow, our portfolio. You'll see on the pie chart there on portfolio, the emphasis will be growing the upstream part of -- the percentage of the portfolio, less in the downstream.

And in our presentations this -- this morning, you'll hear about our pipeline of growth, the projects that we're going to be investing on -- in, and that's particularly in the E&P side of the business. Value creation comes from always operating excellence, cost constraint, but let's make sure when -- what we produce and what we run through our downstream refineries that we're improving the metrics per barrel equivalent, and the emphasis, ultimately, the bottom line is how we're going to bring value to -- for our shareholders.

THOMSON REUTERS

So the strategic objectives of the Company that we outlined in the past year or two continue to be the same. We really think we have the right plan for the next number of years that fit our company and fit the business environment we see. So how are we going to continue to improve the returns? You know, you don't just do this overnight. It's a journey that we're on. So to do this, it's -- how do we improve the portfolio, how do we invest our funds and shareholder distributions?

A lot of emphasis as I said on the metrics per share, and we want to always expand and improve those metrics per barrel equivalent of income and cash flow. We want to do even better. And you'll hear presentations this morning on how we can grow and develop our -- the exploration side of our -- of our company. And, again, so the emphasis is on making sure that we're pretty aggressive with respect to shareholder distribution.

So since we accomplished a great deal in 2010, we really felt that it was pertinent coming to our analyst meeting today that we look at the two-year period of time going forward. So, we said, okay, let's build on what we did in 2010. What -- indeed more granular to you -- to you, what do we -- can you expect of us at 2011 and 2012? Well, continue to discipline on our capital spending. I've got a slide here of what we have in mind for the next several years. And then in the presentations, you'll get more information on this.

Additional asset sales for the next two years of $5 billion to $10 billion. Now, this $5 billion to $10 billion is on top of the $7 billion that we did in 2010. And it's on top of the disposition of the LUKOIL shares. So, I just want to make that very clear when we talk about $5 billion to $10 billion, it's on top of what we did selling LUKOIL, and what the $7 billion we sold last year.

$10 billion plus in share repurchase, I've got another comment or two in the subsequent slide. Really watch carefully and closely at the presentation of how we're going to replace our reserves via organic means. And we really have the resources to do that over the next five-year period of time. We always look at five years. And gets a little more gray obviously as you go beyond five years up towards ten years, and reducing our exposure on the refining side of the Company.

We -- as you know, we indicated and felt that we don't want to just part with assets and not create value that we thought that we could improve our performance in the downstream. And the downstream has had better crack spreads. But there is a better opportunity for us to lighten our position in the downstream, not in 2010, but looking more in 2011, 2012 and 2013.

So let's talk now for a moment about asset sales. Well, you could see, we announced $10 billion. We get $7 billion. So, no -- you add the $5 billion to $10 billion. So over this three-year period of time, '10, '11, and '12, our plans are somewhere between $12 billion and $17 billion of asset sales.

You see in the upper right-hand side of the slide, it just gives you some metrics of what we've already sold which is primarily the more mature things in the upstream side of the Company because we're going to do refining side a little bit later when we thought the market would be better to do this.

And we feel that we've created value for what we sold. And we did it in a pretty tax efficient way. The selection criteria for what we're selling does not change. We got really good values. It's got to be tax efficient. And we're not interested in selling or parting with any real strong legacy asset positions in the Company.

Take a look at our capital program. Well, you can see over the last several years what we've been spending in capital. And we have announced a $13.5 billion program for 2011. And about 90% of that is going toward E&P, going forward somewhere in the $14 billion to $15 billion level.

And we're going to go see metrics that we feel that the spend at finding development cost and the mid to high teens, why, we can fund our projects and replace our -- our reserves. So, to give you an order of magnitude, $13.5 billion this year and maybe $14 billion to $15 billion, maybe $14.5 billion in 2012. So, that's our thought process and then longer period of time, $14 billion, or $15 billion. It's not, $16 billion, $17 billion, or $18 billion. It's more in the $14 to $15 billion kind of level.

THOMSON REUTERS

Then as I said earlier slide, a lot of emphasis on the metrics per share. For our company just absolute growth in volume is not as important as the metrics per share because we're pretty aggressive in terms of our share repurchase.

So, this just shows production per share growth. Now, if we look at our company and the presentations by Greg Garland, Ryan Lance, and Larry Archibald, what you're going to hear about our production levels is before assets dispositions.

Our production level is about 1.7 million BOE a day. So then, we sell our assets. Before selling our assets, our production will decline. Somewhere in the neighborhood of 1% or 2% for '11 and '12 and then it starts to grow 2% to 3% absolute terms from 2013 to subsequent periods of time. And that comes from bringing on the large legacy investments and projects that we're doing.

Now, frankly, whether -- we're not that good to hit it within 1% or 2% because a lot depends on weather, operating excellence, how well we really run our assets, whether all of these different things. But all I want you to know is that production that is kind of flat, down 1% or 2% for two years and then it starts to up 2% or 3%. So, then to the extent that we're pretty aggressive buying our shares over the next several years, well, we really lever up. We're improving the production per share.

And then when we really add in the organic growth of absolute increases in production, you can see how it ramps up. So we really think this is the important metric is reserves, production per share and you want your production to be really valuable. And we think our -- in today's world, critical risk and everything -- OECD presence makes a lot of sense. Sometimes the cost structure is higher but the bottom line fiscal return is quite a bit better in the OECD type countries.

We're not too interested for our company in being a service provider or a contractor. We really like to have equity interest. Shareholder distributions -- changing the subject here -- annual dividend increases, well, we think it's really important, the discipline of increases in dividends, you can just see our track record from the time of the merger going back to 2002, it's around 14% a year.

When you start increasing dividends at that rate, you essentially double your dividends in the neighborhood of five years, a little bit more than five years. When we raised our dividend this past month or so by 20%, and then you can argue 12%, 14% or something like that but we can afford pretty substantial increases in dividend each year. So our -- it really is a statement when we increase the dividends 20%. It's a statement to the shareholders that we're very serious about the cash return to our shareholders.

As you can see on the slide, we certainly feel that we can afford it. So let's just in a summary way take a look then at what does the financial cash, source and use of funds look like over this next two-year period of time? It's a waterfall and the numbers that we have in this cash source and use of funds really come from First Call and some of our own numbers that we crank in. And so I'll start on the left hand side of the slide.

We ended the year, 2010, with $10 billion of cash. Now, that comes from pretty good commodity prices, assets sales but primarily it comes from the sale, a pretty aggressive sale of LUKOIL ownership shares. Now, it does have an impact carrying that much cash. We don't want to carry that much cash because the return is not that great and we have $10 billion in cash. It does have an impact on return on capital employed.

So we start with $10 billion cash from operation, First Call says over this two-year period time about $38 billion. Then we sell as we just updated you another $5 billion or $10 billion in asset sales so you can see the green, there's the sources of funds. The $28 billion in solid blue means average about $14 billion of capital spending for the two years '11 and '12.

And then our dividends, we increase each year adds up to about $7 billion debt reduction. We think we are in a sweet spot in our balance sheet; Jeff Sheets will go through that. The reason we pay off $2 billion is to require repayment that comes along. So we figured well, we'll just reduce anything that comes along in debt repayments. And Jeff will show you that our debt is essentially all fixed rate with very long duration.

THOMSON REUTERS

Share reepurchase. Well, we -- before we announced the most recently the additional $10 billion of share repurchase we did $4 billion of a $5 billion program by the end of 2010 so come up with $11 billion by $1 billion left in the old program and $10 billion of the new program. And I think you can assume that a substantial portion of this $11 billion is going to get done this year.

So that leaves us -- you can see on the far right hand side of the slide we're at $5 billion to $10 billion in cash. Now we're going to have more or less depending on commodity prices. I don't think you're going to see the capital spend move dramatically. It can be up or down $1 billion or $2 billion by opportunities where we can get into discovered resources or exploration acreage, things like that.

But -- so we have the opportunity to ramp up share repurchase more or fund some additional capital spending. So it gives you a feel for how we look at our sources and uses of funds and we think the application, allocation of capital fits very consistent with the strategy that we've outlined and continue to follow.

Growth in returns. Well, we feel that our approach and strategy is the right one for our company, the right one for the business environment we see. As I said earlier, the improvement about -- from 2009 to 2011, that -- about one third comes from self-help improvement, about 2/3 from the commodity priceS. But then when you go from '11 to '13, a little bit more than maybe a third comes from self-help and how we change the portfolio.

So we've always been pretty competitive on cash return on capital employed but we're really working hard to close the gap with respect to our ROCE and as I said it's a journey that we're on through -- do this in the right way. I'm going to go to one of my last slides to just give you this -- the metrics associated with the investment, the strategy, the operating plan of the Company.

So the top line well, we always look over a multiple period of time but generally a five-year period of time is a -- is a good proxy however we're doing a reserve replacement, we've done pretty well if you look back over the last five years. But you're going to hear in our presentations that we see that over the next five years we're going to more than replace our reserves.

I gave you -- won't go through this again -- the metrics associated what's going to happen with production over the next several years. And then ultimately we're at 2% to 3% organic growth. You see what happens per share if you got 2% to 3% organic growth and then you do some share repurchase. Share repurchase after 2012 probably won't be as aggressive as what you've seen in 2010, '11, '12.

So that's why we rely more in the future on our portfolio of investments than just share repurchase. You're going to hear in our presentation, we think we can replace our reserves, investments we're making, we have the finding and development cost for projects, we're going to give you metrics on many of the projects, $16 to $18, reducing our capacity in refining and marketing, we're committed to this, particularly the smaller, less sophisticated refineries. We look at all the alternatives, I know that question will come up.

But we want to make sure that when we reduce our refining exposure that we do it in a way to create value for the shareholders. Competitive returns, we think distributions when you look at dividend and share repurchase for our company, our industry about 40% makes a lot of sense.

Debt to capital ratio improves in the later time periods because we probably aren't as aggressive on share repurchase after the next two-year period of time. And you don't pay out all of your earnings in the form of dividends. So, the last slide that I have, that pretty well covered all of this.

The strategy and approach of the Company is entirely absolutely consistent from what we said last year and 18 months ago. This is the plan over the next number of years. We think that certainly it fits the environment that we see. It fits the assets and opportunities that we have; the emphasis is on improving the returns to the shareholder. And that comes from selling the more mature things to those who want to pay more value to it than we see in our assets.

THOMSON REUTERS

Emphasis is going to be on the upstream, less downstream. We think we are in a sweet spot in our balance sheet. Obviously be real aggressive in operating well, safety performance, cost structure, but we are quite convinced that it's most important to keep our distributions up to our shareholders and that's in the form of share repurchase but particularly pretty significant increases in our dividends each year.

So that gives you the overview and so we're going to go through the presentations and those, the lineup making the presentations for the Company, this is -- we want to showcase. This is the leadership team of our company today but it's the leadership team of our company in the future.

So hopefully, you'll see more granularity behind this overview and this plan. And then later, at the end of the morning session, I'll come up and try to respond to the questions and observations that you may have of the Company. So I think, Al, you're next up. Thank you.

Al Hirshberg - *ConocoPhillips - SVP - Planning and Strategy*

Thanks, Jim. Good morning, everyone. Jim talked about our strategic objectives and the benefits that they bring to our corporate results. So the next question is how are we going to go about achieving those objectives.

So that's what we want to spend the rest of the morning talk about -- talking about is the execution of the strategy that Jim just articulated. So I'm going to start out with two topics, first to provide some context to the rest of this morning's discussion, I'm going to talk for a few minutes about ConocoPhillips' view of the current business environment.

And than second, I'm going to talk about some corporate level initiatives that we've had underway that we think are good enablers to help us to execute our strategy more effectively. First, I'm sure it will come as no surprise to everyone in this room when I say that hydrocarbons are the dominant source of the world's energy supply and that we believe that that will continue to be the case for decades into the future.

We also believe that as the world's demand for oil and gas continues to grow over coming decades, that the world suppliers of oil and gas are going to be challenged to keep up. In the nearer term, we've seen that the world's economic recovery, particularly in the world's growing nations is causing an increase in demand for oil, for gas and for our refined products.

The one area around the world where we have a bit of a weak spot in the supply and demand picture, of course, is in North America natural gas. As you know, the large increases that we've had in production, unconventional gas production in the US, has left us with an oversupplied market in the US and relatively weak prices.

We also expect to see a continued tough political environment going forward, continued increases in geopolitical risk, difficulties with resource access. In fact, we see more in the past year that even in areas where we already have resource access, more difficulty getting permits to drill, to construct, for resources that we thought we already had access to, but hard to actually get the work done -- get the work done.

In addition, we also see continuing threats with increased fiscal take attempts by governments around the world and also continuing uncertainty in the regulatory environment. Overall though, we think that the strategy that Jim just got finished talking about is responsive to and will stand us in good stead in this business environment going forward.

We see over the coming decades, say 25 years from now out to 2035, about a 50% increase in the world's demand for energy. And as you could see in the plot, fossil fuels today make up about 80% of that demand and we expect that will still be the case several decades from now.

THOMSON REUTERS

We -- you could see from the plot that we expect the highest growth rate out of the segments we show here to be in renewables with encouragement and subsidies from governments around the world, renewables, we expect will have the highest growth rate. But still starting from the small base even with the high growth rate, the world is still going to need growth in oil and gas production in order to meet demand.

We showed you this plot last year of world oil demand on a year-over-year basis. And at that point in time the blue area was just beginning to poke above the zero line. So we had experienced 2.5 million barrels per day of demand destruction at the height of the recession. And we're just beginning to see a little bit of growth in demand.

Now, one year later, we look at this plot and we see that the growth in oil, world oil demand has more than offset the demand destruction that we had at the height of the recession. And we're now setting new highs going forward for world oil demand.

ConocoPhillips has a number of significant potential LNG projects in our resource base. And so we pay close attention to the world situation, supply and demand for LNG. The red curve shows you our projection of forward world LNG demand. And you could see that we're expecting a pretty high growth rate. I should mention that this curve was put together before the recent tragic events in Japan.

And so we're reassessing this curve now and I expect that it's going to move up as Japan uses more LNG to generate power to replace the power generation loss from the nuclear plants that are off line and that are expected to stay offline for some time to come. So we expect to see an impact there in the near and medium term on that curve.

In addition, you can see the world's governments and investors starting to reconsider some of their forward plans for nuclear power, and to the extent that those plans change, that could also increase the longer term demand for LNG versus what we show here. Then at the bottom part of the plot, we're showing you the global LNG supply from approved projects and they're organized by the year in which the project started up.

So you could see that the older projects along the bottom in this time period are starting to decline. So we show you it this way to illustrate the point that the industry not only needs to increase LNG supply to supply our projected future growth, but also to offset decline from some of the industry's older LNG projects.

These older LNG projects are declining both because they're running out of gas supply as they get toward the end of their life and also because increased domestic demand in host countries for natural gas is starving some of these plants of supply that they need to make more LNG.

If you look at what the industry has been able to do over the past five or six years, we have only approved new LNG projects at a pace of about 1 billion cubic feet per day per year of new projects approved. Going forward, if you're going to meet the gap that we show here, that will have to increase by about 2.5 times to 2.5 billion cubic feet per day of new LNG projects approved each year in order to fill that gap.

ConocoPhillips has been reducing our investment in North American natural gas over the past year or two -- when we look at this plot, we'll see the reason why. In the bottom, in green, is existing gas production in the US on about a 10% decline. The new story, of course, is in the blue, the large increases in production from unconventional gas in the US.

And as a result there's been essentially no need for LNG in the US to meet demand and so with that lack of LNG import in the US, it has left the US market disconnected from the rest of the world's natural gas markets and left us with low prices.

And we expect that situation to continue for some time into the future, assuming no new legislation in the US. Of course, new legislation in the US could have a significant impact on the supply side, the demand -- the demand side or both and change the supply demand balance in the US.

THOMSON REUTERS

So with all of that supply-demand data, what do we think about forward prices? We show here a summary of consensus forecasts. First, for crude oil on a WTI basis, in the near term, $90 to a $105 a barrel and in the longer term, a little bit wider range. Natural gas on a Henry Hub Basis, $4 to $5 per million BTU, although in recent weeks we've seen a lot of time in the upper threes kind of territory, and then in longer term, about $1 more.

Gulf Coast cracks spreads on an LOS basis, $4.50 to $6.50 a barrel. Recently, we've also have been on the low end or below that range for LOS crack spread; longer term, about a $1 more. So that's -- that's the range of forecast that we see a consensus around in the industry. Our view of forward pricing is in that similar kind of range.

ConocoPhillips replaced 138% of our production last year with organic reserves replacement. So the -- but the question for us next is how are we going to continue to do that going forward? And, more importantly, how are we going to do that efficiently at a competitive finding and development cost?

So what I'd like to spend a little time talking about in the next segment of this discussion is some of the corporate level improvement initiatives that we've had underway to enhance our ability to do exactly that. So I'm going to talk next a little bit about capital allocation, project execution, our efforts in procurement, and integration of new technology, and how these impact our ability to convert resources into reserves. Then a little later this morning, Larry Archibald will be up and he's going to talk about our plans in the exploration arena.

We've put into place a set of capital allocation principles in ConocoPhillips. The first one is that we -- the first is it recognizes that we operate in an industry that's got inherent risks that must be managed. And we don't want to put at risk our people, the communities that we operate in, our assets or, even potentially our company or the environment with the way we operate.

And so our first priority in setting our capital budget is to ensure that our maintenance and our asset integrity needs are taken care of first. So that's the first priority in our principles. Next is that we want to fund our high return exploitation projects. So these are the new ideas that our engineering and geoscience teams come up with each year for increasing recovery, increasing production in and around our existing assets.

So this tends to be high return stuff and, in 2011, we expect to have a significant increase in the amount of this work that we'll be investing in. In fact, if you look at the numbers, we expect that in 2011, we will invest almost twice as much money in this piece of the upstream exploitation as we will in the entire downstream segment in 2011.

I'd like to say two things about the way that we're funding major projects. First is that we're enforcing a worldwide priority list in how we look at all of our investment opportunities that are in our portfolio to ensure that we're investing in the highest return opportunities.

Second is that we're being rigorous about not investing in any projects, not going to sanction any projects until they are fully mature. And by mature, I mean from a technical standpoint with respect to the regulatory situation and, even most importantly, the commercial side of these projects.

And so a good example of this is the APLNG project. At this same meeting one year ago, we told you that we expected to take FID on the APLNG project by the end of last year. And we didn't do that. And the reason is exactly what I've just have been talking about is that we -- we could have taken it to FID, but we felt that we could improve the return on that asset by taking more time to improve our commercial position. And you've seen some of the things that we've announced since that point in time that do in fact improve our commercial situation on APLNG.

Jim talked earlier about our objective to convert 10 billion oil equivalent barrels from our resource base into proved reserves over the next ten years. So, obviously, as we do that, we also need to have a significant effort underway to reload our resource base as we go. And so we also want to consistently fund our exploration work. And you'll see in the numbers that I'll show in a minute that were increasing our budget for exploration in 2011.

©2011 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

In addition to that, we're also considering targeted asset acquisitions were appropriate. And you've heard us talk about the deepwater for as an example where we would like to increase the size of our deepwater portfolio. And this is one way that we can -- can do that.

Then this last principle that I show here is just to remind us that we do recognize that we have to live within our means in setting our capital budget. So where are we going to spend our money in 2011? You can see that we expect 90% upstream, 10% downstream, no big surprise there, about half the money being spent in North America. And then on the right, you see the split of the $13.5 billion for 2011 in refining, maintenance, exploration, the exploitation that I was talking about, and then the biggest wedge is major projects.

So this and this is where most of the growth is in our budget from 2010 to 2011 is upstream major projects and it is primarily in three categories. First is long life, long reserve projects like APLNG, the oil sands SAGD projects in Canada. The second category is increasing unconventional liquids production in the US And the biggest area there where we're going to spend money into 2011 is the Eagle Ford.

And then the third category where we're increasing our investment in 2011 on major projects is in new major projects that are high return projects in and around our existing infrastructure. Most of this increase in 2011 will be in Norway, the UK and Malaysia.

So with all of this increase in upstream project spending, how do we feel about our ability to spend that money efficiently? Well, in 2006, ConocoPhillips put into place a worldwide upstream-downstream project management function to guide our work there and to ensure that we use best practices in the way that we go about executing our projects.

At the same point in time, we also put in place a rigorous gated project management system to help our practitioners more effectively execute our projects. And the results are shown in the bar charts. If you look at all of the projects that we sanctioned since the merger of ConocoPhillips and through to the end of 2006 prior to putting this new system in place, on average, we were 21% over the budget that we had set for those projects and we took 16% longer to get to startup versus what we had expected at the time we budgeted the projects.

If you look at all the projects that we have sanctioned from 2007 on, from the time of this new system forward, we've got -- had a significant improvement. On average, we've been 5% under the budget that we set at the time of sanction, although, we have still been about 5% over on the schedule to startup versus what we had budgeted.

We've also looked at these data, comparing them to industry benchmarks, and we've seen similar progress over this period of time versus cost and schedule on an industry-wide basis. But we still have some challenges here. In particular, we're -- we're seeing some upward cost challenges in various places around the world and, particularly, in places where we have competition for resources.

We have a number of areas where we are trying to execute major projects where the industry also has a lot of activity. I think you'll hear about the Alberta Oil Sands, the Queensland coal seam gas and, also, on Curtis Island, the LNG plants that are going to be built. In addition, the Eagle Ford, the Bakken, these are all places where the industry has a lot of activity over the coming years and we're in competition for resources.

So we have some special programs in place to ensure that we capture the most effective execution resources that we can for these projects. And, of course, a key part of the Company where we do that sort of work is in our procurement organization. We've been working hard to strengthen over the last few years our procurement efforts and to expand the scope of what we're doing. And during the downturn, that allowed us to capture some significant savings.

THOMSON REUTERS

And then in 2010, we were able to improve the cost structure even further by broadening the scope of our procurement capabilities. You could see in the data down at the bottom that we estimate -- we saved about $600 million on an annualized basis through these efforts last year.

The last area I'd like to talk about is new technology. This is one of my favorite areas to discuss because I started my career in research. And I've been pleased to see, since I've come across to ConocoPhillips, the strength of our technology program and the benefits that we've been getting from it. And it's really that view that's causing us to want to increase the size of our technology work. And so you could see from the bar chart that we're working right now to increase the scope and increase the benefits that we get from integrating new technology into our work.

I'll mention some examples in two particular areas where we're working in technology. First, in a broad bucket of work that we're doing that's designed to improve the profitability of our existing production or near-term projects, I'll mention an example in the oil sands. As you know, the oil sands make up a very large part of our resource base. And so it's -- it's a very large part of our R&D effort as well.

Our work so far in research on oil sands has allowed us to reduce our steam oil ratios, which, of course, saves us operating costs, reduces our energy usage, reduces our greenhouse gas emissions. We've also have been able to reduce our water usage through our research efforts. That's an important environmental criterion for the oil sands development.

We also have an integrated upstream-downstream research effort, a fully integrated team that has allowed us to fully exploit the full value chain, as that heavy oil produced in Canada makes its way south into the US and is processed in our mid-continent refineries. We have a research effort underway that's allowed us to improve our profitability from that full value chain.

Next, I'll mention a little bit about some of our research effort that's focused on more challenged resources -- resources that really aren't economic yet, aren't ready to develop, but we're working with new technology to try to get them there. A good example there is our work in the Arctic.

We have a number of new concepts that we've been working on that are at varying stages of maturity, but which have the potential to make a step change reduction in the cost to develop our Arctic resources. A good example of this is the work that we're doing on floating drilling rigs in ice-prone waters.

Right now, the industry is only able to drill from floaters in ice-prone waters for a very short season of the year that makes it difficult to do exploration or development drilling. And so we have concepts that we've advanced that will allow us to significantly extend that drilling season. You could see how that would have a big impact on our ability to develop those resources.

One of the most important jobs of our management team is to translate strategy into an effective execution plan. And so that's what I've tried to spend a little time talking about this morning is how we go about doing that. And I've discussed our improvement initiatives on capital allocation, project execution.

I also talked about our -- our efforts to expand procurement and our integration of new technology and the impact, the ability of these -- these efforts to enhance our ability to convert resources over to proved reserves. So we -- and also allow us to maximize the value of our reinvested capital. So next up to continue that discussion and talk about it on a segment level is Ryan Lance, who's going to kick off the E&P discussion.

Ryan Lance - *ConocoPhillips - SVP - Exploration & Production International*

Thank you, Al, and good morning. I'd like to go ahead and kick off the E&P part of the presentation as Al said. And I know we get some questions about our portfolio from many of you in the room here today. They ask is it -- is it deep enough? Does it

THOMSON REUTERS

have the projects that we expect to grow -- organically grow our production and reserves over time? And then we get questions about the portfolio. Does it have the cash flow? Does it generate the cash flow to be able to fund those projects over time?

So what myself and Larry and Greg would like to do today is talk through the E&P portfolio and talk about the opportunities we have for investment that we think that are going to – the projects we're investing in will show organic growth in both our reserves and our production going forward.

Let me start with our strategy. As Jim described, it largely is unchanged, it's probably been a little bit different than maybe some of our competition over the last couple of years. We're pretty focused on trying to invest in those things that are going to improve the returns, improve the returns of the portfolio and, ultimately, the returns to the shareholders as we go forward.

And we're not just chasing growth for growth's sake. And we could do some of that. An example of that might be the North American gas market that Al described. We have a fairly large position in North America. We're blessed with a position, though, that doesn't force us to drill into the low North American gas prices that we see today, and we're just not going to do that. So we're not going to invest in that, but we believe over the longer term that prices will recover a little bit and we're prepared to invest when those prices do recover.

And we've been making some high grading decisions selectively within the portfolio to improve it through our divestiture plans that we've had over the last couple of years and that Jim announced going forward over the next couple. But we can't forget about what makes a great E&P portfolio. It is about replacing your reserves. It's about growing your production. It's about doing it safely and efficiently; and it's really about adding new opportunities through -- through exploration as well that Larry will talk about here in a little bit.

A few takeaways from today, I hope you'd leave with today. You know, we're running well. We're running safely and we're running efficiently. And we're progressing a number of very key projects. We've got a number of project sanctions coming this year that will add 500,000 barrels a day of production by 2015.

And we're also very focused on our North American shale gas plays. And you can see here that we'll be adding 170,000 barrels a day by 2013 from the Lower 48 alone. And as I mentioned, we're maintaining our optionality in North America. We do see the low North American gas prices, but we feel like they'll recover with time as demand picks up following the recession and we're prepared to invest in that when that happens. And then, again, you'll see us high grading the exploration portfolio and adding new material opportunities to the portfolio as we go forward.

Our success starts and stops with the safety and efficiency of our operations. 2010 was kind of a year to remember with the Macondo incident and the impact that an incident like that can have on a company. We're improving. We're improving, but we're not where we want to be. We'll never get there until zero, until we reach zero across all our operated upstream locations. But we are improving and we're getting better and it's showing up in our bottom lines through increased uptime and lower injuries to both our contractor and our employees.

We don't have a large deepwater Gulf of Mexico position, operated position today, but, certainly, have aspirations to grow in that particular area as Larry and Jim have talked about. But we did notice through the Macondo incident there was a capability gap in the industry. And we felt it was important to be a founding member of the Marine Well Containment Company to improve on that capability within the industry. And we announced that at the end of last year.

So let's talk a little bit about our portfolio. Today, we produce a little over 1.7 million barrels per day. It's a global, but a large OECD asset base as Jim talked about. We have a growing position in the Asia Pacific region. We're a global and diverse and growing exploration portfolio as shown by the dots on this diagram. But, more importantly, we have the size, we have the scale, we have the skills and we have the workforce to compete for unconventional and conventional resources around the world.

THOMSON REUTERS

That OECD position provides us with a leading cash margin relative to our peer group. We don't have a large exposure to the PSC contracts, so as commodity prices rise over time, we're able to bring that into the portfolio and capture those increases over time. Some of those maybe high cost as Jim described a little bit, but with a commodity price rises, we're able to capture that in the portfolio today.

You'll see on the right hand side, our portfolio generates a $23-a-barrel cash margin, a pretty modest oil price as shown there on the thing -- on the chart. And our plan as we've -- as we said is the projects will show you that we'll go through in a little bit more detail, are a higher cash margin than this average portfolio. So, over time, we're going to be improving the returns in the portfolio relative to where we stand today.

Today, we enjoy a 43-billion-barrel resource space. It's 75% liquids and LNG. And it's -- those -- those LNG reserves are also tied to liquid oil price type contracts. It's unchanged despite selling 1.2 billion barrels of resources over the last couple of years. And as Jim said, and now maintain our job is to take those 10 billion barrels of resources, move them to reserves and then, ultimately, to production over the next ten years. That's the game we're in.

Our focus on organic growth is delivering results. If you look over the last five years, these are our proved reserve additions which we've enjoyed over 100% proved reserve additions over the last five years. And that's our intention going forward in the portfolio. We'll deliver that going forward over the next five years.

You can see 50% of those adds come from -- the chart on the right -- come from APLNG from the SAGD and Qatargas, but the rest of the world is contributing as well. We're seeing additions from our Lower 48 and Canadian shale gas positions, from Asia Pacific and Russia Caspian as well.

When we talk about the 100% reserve replacement, that's fueling the production growth that you see here on this slide. These projects are real. They're over on the right hand side. They're in various states of development today. And we're going to talk about these projects and show you what kind of margins that they're delivering and that they are adding to this production, organic production growth that we're showing here on this slide today.

And, of course, the absolute level of that production may vary a little bit, as Jim described, depending on the assets that we choose to divest to high grade the portfolio going forward. But the growth is there, the growth is real and the projects are real.

I'm a petroleum engineer by a degree and training. And I spent all my life fighting decline in these natural resources. And this is what really gets us excited going forward. It's these kinds of projects that show this kind of ramp up and provide this kind of growth and development for the Company.

You see that they're geographically dispersed around the world. And then you can see what kind of margins that each one of these projects provide. And remember to compare that back to the $23 a barrel average margin in our portfolio today. So what we want to show you and talk about today is some of the projects that make up this curve. And it described where we're heading and how we're organically growing our production and, ultimately, our rate and reserves as we go forward in our portfolio.

E&P will spend $12 billion in 2011. That's about $2.5 billion more than we spent last year. And you can see the major increase that Al described as coming from that green wedge in the major projects. So, you see, it's pretty geographically dispersed on that right hand doughnut chart there.

The exploitation wedge in yellow is increasing as well. And that's largely driven by our North American shale gas investments in the Eagle Ford, the Bakken and the Barnett. Surprisingly, even the 100-year-old Permian Basin is generating very competitive investment opportunities for us going forward. And we're looking at investing in every one of those, all the opportunities we have even in the Permian.

THOMSON REUTERS

Al described the maintenance capital of $1.5 billion at the bottom of the stacked bars. And that's important. We have to keep investing in our legacy assets. We have to improve the efficiency. We have to keep them safe, keep them reliable and keep them running for many years to come as we exploit the surrounding opportunities.

So we're investing $12 billion. We're replacing our reserves and we're growing our production. So what are the projects that underpin that growth? Let me talk about a few of those in my part of the world and the international part of E&P.

Let me start with the Qatargas project that we got started up in November of last year. Got it to 80,000 barrels per day net to ConocoPhillips. We're now up and running at the design throughput for the facility at 7.8 million tons per annum.

Most of our effort right now is focused on maximizing the value chain. So when this project was originally envisioned and sanctioned, all the volume was destined for the North American market. At that time, gas prices were $10 million to $12 million a BTU and it looked like the most favorable place to send the LNG. Fast forward a good five or six years, and, of course, we're seeing the shale gas renaissance and the increase in supply in North America and lower prices, so most of our effort right now is focused on diverting those volumes and sending them to the higher price markets in Europe and in Asia Pacific.

And, certainly, with the recent Japanese crisis, we're trying to satisfy our customers in that part of the world, too, with additional LNG. And, of course, these are very competitive finding and development costs and great returns to the Company. We can take many more of these kinds of opportunities.

Let me talk a little bit about Asia Pacific, a growing area in our portfolio. We maybe don't spend near enough time talking about this, but, you know, we have a leading legacy position there. We intend to invest $2.4 billion in 2011. And you can see the pretty significant production growth that we're going to experience across this whole region and the margins that we think our investments in this particular region are providing. And this is underpinned by growth in China, in Indonesia, in Malaysia and in Australia.

And let me talk a little bit about that and start with our Asia Pacific LNG project. Al talked a little bit about this and I'll kind of follow on with a couple more slides. So we have a leading -- we've talked about this -- a leading resource in reserves position at APLNG.

So nearly 12 TCF today a proven P1 and P2 reserves which is twice what the rest of the competition in the Queensland basin coal bed methane assets have. So we have a very compelling and large resource position that is the Premier 1 in the Queensland state.

As Al talked about, we are focused on how to reduce the capital and optimize the project going forward. We're not going to rush it, but we're going to do what's right. We're looking for opportunities to cooperate with everybody in the region. And we know that there's going to be competing projects built on Curtis Island. And so we're doing everything we can to make sure that ours is moving along as fast as it can, but as efficiently as we can as well.

And as we see, the recent events in Japan have underpinned that there is a growing amount of LNG demand in Asia now probably more than there was even two weeks ago. And you see that we've announced Heads of Agreement with a customer, Sinopec, that will underpin and purchase the first full train of LNG off of our APLNG project. And we've done that in an oil linked contract and we've done that at competitive prices for what CSG is selling into Asia today so we haven't had to discount the price in order to place the LNG in to the market.

We're the largest domestic supplier of CSG gas in the Queensland state today. Why is that important? Well, we're going to build two 4.5-million-ton trains of LNG capacity on Curtis Island. And when those trains are built and ready to go, we're going to need an immediate supply of almost 600 million cubic feet of gas a day to feed those plants. You got to dewater the coals. You got to get them ready. You got to get the production ready to go and up and available for those plants.

©2011 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

So the fact that we're the largest domestic producer today -- we produce 250 million cubic feet a day into the domestic market -- we're able to play with our wells a little bit and get them prepared for that ramp up. So the minute that plant is available to us, we can ramp up the gas and quickly get it up to full capacity. And that's an important economic enabler for these projects.

And then, finally, I would say that this project is not unlike other LNG or even SAGD projects that have long life reserves. They don't have as good a return as some of our exploitation investments in our portfolio, but these are important projects in the portfolio. They are going to be a steady source of long-term net income and cash flow into the portfolio over 20, 30 years. They -- they increase our RTP. They have low finding and development cost and they're a source of reserve adds for a very, very long period of time.

So in this business of very competing metrics, these are important projects in the portfolio to have. And then our job over time with the self-help that we can do and the capital reductions we can make and maybe some improvements in the commodity price markets, these are going to be very attractive and competitive projects going forward. And that's what we're trying to do on APLNG.

A little bit more on APLNG, we'll invest $1.4 billion in 2011. These are the metrics, the finding and development costs that we see for APLNG. We're on track for a mid-year FID at this point. You'll see we had our permits approved in February. And we did some commercial realignment with our partner, Origin, and they're on track for FID this year and then first delivery of LNG in 2015.

Let me look across some of the other areas -- places in Asia Pacific. So in Malaysia, we're in the midst of execution in four projects. We have four additional projects in the queue that we're studying as well. We're on track for 80,000 barrels a day of net peak production in the next couple of years. You can see it's a very competitive finding and development cost and a very attractive investment and organic growth story for the Company and for our E&P portfolio.

Moving to the right, in Indonesia, we're executing projects offshore, Block B, and in South Sumatra. These are typically gas projects with very competitive finding and development cost, but they're also going to the high valued gas markets that we're exporting to in both Singapore and Malaysia. And, in fact, some of the domestic Indonesian gas markets are improving pretty dramatically as well. So this is a very attractive investment in exploitation and projects for our E&P portfolio.

When you look across the North Sea, 2011 will represent one of the strongest investment years that we've had in quite some time in the North Sea. So our Jasmine discovery reached sanction last year. And we're on track for a 2012 startup, and even the large Ekofisk field is still yielding some fabulous new exploitation opportunities with the EKo-South addition and the Eldfisk 2 project.

And, in fact, we see future projects going out into the -- into the future that are going to help alleviate the decline in Norway, as we show from the production plot in the lower right hand portion. So these are the bread and butter of our business. This is really what makes the difference. It's really what drives performance. It helps offset decline. It's the high margin opportunities that help fuel our other projects around the world.

So what makes a compelling E&P portfolio? Well, it's certainly a rich and a deep set of opportunities like the ones that are shown here. It begins with legacy assets and exploitation opportunities and new projects that will continue to organically grow your production and your reserve base. And, more importantly, what do these have in common? They're good rocks. They got low finding and development costs and a low cost to supply; and they're feeding markets that are in need of this demand.

So I've talked a little bit about the international projects that make up this portfolio and that are fueling this organic production and reserves growth. Now, let me turn it over to Greg Garland. He's going to talk about what we're doing in the Americas side of the business that also is helping to fuel organic production and reserves growth.

THOMSON REUTERS

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

Thanks, Ryan, and good morning, everyone. Has your view on the North American E&P business changed? Is this a business that you think maybe is just old and tired or perhaps it's just a continuing story of acquiring gas assets with limited upside. Or maybe your view is like ours, that this is really a story about technology and an innovation unlocking growth, opportunity and value creation.

So here today we want to talk about our North America E&P proposition. We're going to focus on value, not volume. The fact is we complete our portfolio reset through our asset dispositions and as we preferentially fund liquids devolvement over gas, near term production is going to decline in the Americas, 1% to 2%, but growth will return post 2012 and the interim, the value uplift from the margin of liquids over gas is value creation in the portfolio.

We think we're very well positioned in the unconventional plays in North America. In fact in the past two years we've watched while major IOCs have bought their way back into the oil-sand projects. They've joint ventured and bought assets into the shale plays. But you know what? We were already there, quietly going about our business, fine tuning, honing our skills and our expertise and building and capturing value.

When you consider the unconventional resources, we're number one in North America in coalbed methane and we have some of the very best parts of the play. We have the largest acreage position in the Canadian SAGD and we're the second largest SAGD producer.

We think we have enviable positions in the liquid-rich shale plays like the Eagle Ford, the Bakken, the Barnett and then we have a strong foundation from which we can grow conventional and unconventional in that hundred-year old Permian that Ryan was talking about.

We think we have a terrific opportunity here in the Americas. We have 22 million acres, 5 billion BOE of reserves, 30 billion BOE of resources. Three quarters of our company's opportunity is right here in the Americas, so our leverage to this large, secure and attractive opportunity is going to be a significant portion of the value growth of our company over the next couple of years.

The bottom line is we think we have a portfolio that will deliver improved competitive returns and long-term growth that will offset normal fuel decline. We plan to invest $6 billion in the Americas this year, which is about 50% more than what we spent last year.

If you look at Lower 48 and Western Canada and look at the drilling program, about $3 billion, 75% of that is going to be focused towards conventional oil and the liquids-rich shale plays. If you rewind back to just 2008, about 80% of our spend was on gas development. So you can see a significant shift in how we're allocating capital here in the Americas.

The balance of our portfolio spend this year will go to other competitive opportunities like Western Canada and the San Juan basin. As you can see, both of these areas will have a significant part of our portfolio volumes in 2011, but we're going to show you on some subsequent slides where we're going to let volumes decline in these two large areas which are mostly gas over the next couple of years.

Here's our Lower 48 drilling plan for this year. We plan to drill 450 gross wells in the liquid rich areas, the Eagle Ford, Bakken and the North Barnett and the Permian. We're drilling another 240 gross wells in other competitive areas, 195 wells in the San Juan might surprise you a little bit but we think this is a competitive set.

We'll talk more about the San Juan. This is significantly less than what we've done in past years and we're comfortable with this level of activity. And then if we can get the permits we'd like to drill four wells in the Gulf of Mexico this year.

THOMSON REUTERS

Talk about the Eagle Ford, the Eagle Ford is a game-changer. It's a game changer for the industry and for our company. We expect to have a total discovered resource approaching a billion BOE in the Eagle Ford. We think we're in the very heart of the play with 220,000 acres.

Forty-five dollar a barrel cash margins last year, the Eagle Ford margins were about twice the average of the global portfolio. The $80 oil leases are all 25% plus wells. So you can see why we really like this play.

We're planning to spend $1.4 billion in the Eagle Ford this year and drill 144 wells. As you know, the resources in these areas are stretched thin, but we entered 2011 with 13 rigs, three dedicated frac crews. We have the resources in place today to execute our 2011 plan in the Eagle Ford.

Since January of last year, drilling costs have come down 40%, so drilling days are coming down. We're increasing our frac efficiencies. We're fine tuning our completions here in the Eagle Ford. And so we're very pleased, you can see the latest five well results. We will put this up against some of the best in the industry and what's being done in the Eagle Ford.

2011 production, 30,000 barrels a day, 75% liquids content. Another important shale play for us is the Bakken. We have an advantage position of 460,000 acres here in the Bakken, 400 million BOE of resource and over 1,700 high-value drilling opportunities. Our recent well tests here continue to confirm this is a very attractive play for our company.

We're completing our latest wells, the 10,000 foot horizontals plus 20 stages of fracs. You can see our EORs have increased significantly. Our drilling times are coming down, frac efficiency is coming up, so total cycle times are coming down in this area.

The cash margins here in the Bakken, like the Eagle Ford, are very strong and accretive to the portfolio. We expect 2011 production to be at 40% versus last year at 20,000 BOE a day.

Move and talk about the Permian and the Barnett for just a minute. We call the Permian the gift that keeps on giving. Like a 122% reserve replacements over the last four years, like the 5% increase in production in this 100-year-old asset. We have a million acres in the Permian, 700 million BOE and we have greater than 5,000 new well opportunities here, so material net cash flow generator to our company in high liquids production. We expect 2011 production levels to be 50,000 barrels a day.

You know, last year in the Permian we saw for the first time since 1972 a 5,000 barrel a day increase in our operated properties. So horizontal drilling, these advanced fracturing techniques are literally breathing new life into some of these old fields. Some of these fields like the Howard Glasscock have been on production since the 1920s and we've seen year-over-year production coming up. We're also pursuing new resource plays in the Permian like the Avalon shale and there's some others that we're interested in prosecuting this year.

Just think about the Barnett for just a minute. We exited the South Barnett last year to focus and concentrate on the North Barnett. We just like it better, higher liquids content, high working interest so we can control the pace of development in the North Barnett.

We have 65,000 acres and about 200 million BOE of resource here. We expect 2011 production to be 15,000 BOE a day. So between the Permian and the Barnett we'll invest $400 million in these areas this year on exploitation. Good solid cash margins, accretive to the portfolio, a little lower than what we see in the Eagle Ford and the Bakken. Why is that?

Well, the Barnett, a little lower liquids content, the Permian across a lot of that production is older production, high EOR cost, lower margins but still significant margins, very attractive return projects in these areas.

So we're building a portfolio in these liquid rich areas that will move our margins, will improve our returns. We have an early mover advantage in the Eagle Ford. We got in for $350 an acre. We've seen offers north of $14,000 an acre and that just confirms what we already know and the rest of the industry thinks that Eagle Ford is a good place to be.

THOMSON REUTERS

In all these basins we have a large presence so we can leverage our expertise, our skills and we can leverage our costs. We think from a sub-surface perspective we're in some of the very best parts of these plays. We added 140,000 acres last year around these key areas and other areas that we're chasing and you'd expect us to do similar things this year.

We plan to spend $2 billion in 2011 developing these plays and by 2013 production of up to 170,000 barrels a day. So the question is, is it material? Does it make a difference? So this will move the North American E&P ROCE at normalized prices by 1.5%. So, yes, it's material, yes, it makes a difference.

I promised you we'd talk about the San Juan just a little bit. We are the largest producer in the San Juan. We are the largest acreage holder in the San Juan and lowest cost producer in the basin.

Last year we produced 180,000 BOE a day, 27% liquids yield. This represents about 40% of the Lower 48 production and about 10% of the Global E&P production. So it's a significant source of our production.

Total discovered resource, 1.7 billion BOE and even in this low price gas environment we have greater than 3,000 economic drilling opportunities. So this would be 20% return wells for us. So we can sustain a strong and ongoing development program here. You can see from a production chart we're going to let production drift down over the next four years. We've gone from 14 rigs in 2008 to four rigs last year. We're going to run four rigs in the basin this year.

We have a cash break even in the San Juan of about $2 an M, so positive income, positive cash and good solid returns here. We're progressing horizontal well developments in the basin, we think there's a lot of up room with 1.7 billion BOE. The message today, the critical part of our portfolio, you should expect the San Juan to continue to be a viable part of our portfolio for many years to come.

Talking about Western Canada, Western Canada is a strong cash flow generator for our company. We think we're advantaged in this area. We're the only major player in all the key fairways. We own and operate a lot of our own infrastructure which we think is a major competitive advantage. We're going to reduce our capital spend in 2011 in response to low gas prices. In fact reduce it significantly. You can see production is going to come down over the next four years.

We have some exciting things going on in the Deep Basin. We're drilling some horizontals with very encouraging results. One of the areas we've very enthusiastic about is the Cardium. We have 137,000 acres in the Cardium. We drilled eight horizontals there so far this year. What I can tell you is the initial results are encouraging, they look a lot like the North Barnett in terms of the production and the liquids content.

So 1.7 billion BOE in this area, a lot of upside running room. As Ryan talked depending on where gas prices go we have a lot of optionality of what we can do in this area.

So today we purposely peeled back the Americas for you. We stripped out the oil sands. We stripped out Alaska to give you a view directly in what we're trying to do in the Lower 48 and Western Canada. These areas have historically been focused on gas development.

We want to materially shift the portfolio into production. You can see in 2010 we were about 30% liquids yield in these two areas. By 2013 we expect to be about 40% liquids yield and about the same level of production. The Lower 48 by 2013 will be approaching 50-50 on liquids.

Another unconventional opportunity that we have with liquids is the Canadian SAGD. We have just world class position here, a million acres, 15 billion barrels of resource. We're exclusively in situ in our development and we like this better and we think over in the long term we can generate the best returns here.

THOMSON REUTERS

We're going to invest $1.2 [billion](company corrected after call) in Foster Creek, Christina Lake and Surmont this year. And we're going to invest $1 billion to $1.5 billion a year for the foreseeable future in the oil sands. We talked about steam oil ratio, it's key metric in looking to profitability and comparing projects. So we've shown you Christina Lake, Foster Creek and Surmont. You can see they're very attractive in terms of steam oil ratio.

Al talked about our technology and trying to drive that. We plan to spend $100 million a year driving technology improvement. So we want to reduce our environmental footprint, that's land, water, drive down greenhouse gas but it's also about improving efficiencies and recoveries, driving down CapEx, driving down OpEx.

These projects are very capital intensive but we really like these projects. They're long lived. They have a low F&D cost, low decline rates. We're going to be producing in the sands for the next 30 to 40 years. In addition to FCCL, and Surmont we have other heavy oil interests.

In Canada we have Thornbury, Clyden and Saleski, 100% working owned, we'll be delineating those opportunities over the next couple of years. Within Alaska we have 1.7 BOE of heavy oil resource.

We said we'd spend a billion dollars a year in the oil sands, here's how you do it. You have deep portfolio projects, some preparing for execution, some moving through the gates, some working in terms of their environmental projects, some in the delineation phases. But we've planned four major sanctions this year at FCCL.

You can see we plan to grow our production by 10% to 15% a year through 2020 and we'll continue to grow for the next decade. Thank you. So by 2020, 250,000 barrels a day of production and we're going to grow for another 20 years beyond that, so by 2040 we should be approaching 500,000 barrels a day.

Talk about Alaska, we like Alaska. We've been in Alaska a long time. We're the largest producer in Alaska. Last year 240,000 BOE a day, strong cash margins in this area and we have a significant infrastructure position, we've built an extensive operating capability. We have a strong culture of safety and environmental excellence in Alaska and we think we have a strong competitive advantage here. Reserves at 1.6 billion BOE resources, 5.7 billion BOE. We'll invest $350 million in exploitation this year, all at very good returns.

We're targeting sanction of our West Alpine project which is CD-5 if we can get the permits this year. And longer term, there's other opportunities. West of Alpine, we've got the heavy oil that we've talked about. We'd like to take a look and see what's in the Chukchi Sea if we can get permits to drill. And then, longer term is North Slope gas and we have 10 Bcf gas.

So our focus on value, our portfolio reset, our shift from liquids or shift to liquids from gas is going to drive value creation in North America. We expect the cash from operations will be up 40%, 2010 to 2015.

During that same period of time, return on capital employed up 5 percentage points, 40% from anticipated price improvement, 60% for portfolio improvements. We believe that we're well-positioned in the unconventional. We think that the opportunity set is compelling. It's real. It's material. We have the technology, the expertise, human capacity to execute.

We think our focus on liquids development is clear. And importantly, we have the resource and projects to drive liquids growth. So the bottom line is we think our portfolio is capable of delivering improved, competitive returns and value growth and this is the real heart of our opportunity.

So we have to continue to reload the resource phase. We do that through Exploration and Business Development and, Larry Archibald, the Senior Vice-President of Exploration and Business Development will cover that.

THOMSON REUTERS

Larry Archibald - *ConocoPhillips - SVP - Exploration & Business Development*

Thanks, Greg. Now, let's talk about the fun stuff -- exploration. As we've been telling you for some time, we're emphasizing organic growth much more than we did the previous decade. And I'm pleased to tell you that we're seeing good results from our higher impact exploration program both on the conventional and the unconventional sides of that portfolio.

2010 was another good year. You may not know that. We don't explore via press release. But I'll tell you briefly about it. We discovered more than we produced again. We have about a 90% success rate in our exploration and appraisal program. About 108 out of 120 wells we participated in. A lot of those were successful delineation wells in our Lower 48 in Canada shale programs.

But in addition to these very successful Lower 48 and Canada shale programs, we participated in discoveries in Kazakhstan, Australia, Libya, Nigeria and China. One of the 2010 highlights had to be that Lower 48 program in the shale plays. We participated in 80 wells, a lot of them delineation wells, all of them successful in Lower 48. In fact, 41 of those were drilled to expand our footprint and test the limits of our core Eagle Ford position and results there just continue to exceed our earlier expectations.

And more importantly, for exploration in 2010 and 2011, we continue to add both and depth and quality to the exploration portfolio both in the conventional and unconventional plays. That includes plays we accessed in deepwater settings and shelf settings, in arctic environments and in various onshore environments.

So what are we spending in exploration, how are we allocating that capital? Well, in 2010, in spite of lower than anticipated spending on wildcats, as I mentioned, we discovered more than we produced and more importantly, we discovered primarily high-margin values in plays such as that liquids rich Eagle Ford play.

As you know, 2010, the exploration program in the Gulf of Mexico was delayed due to the moratorium. But although we spent less on the high-impact Gulf of Mexico wildcats, we picked up the pace of leasing on some very attractive plays in shale plays. We also picked up the pace of delineating prior year successes.

And in 2011, we're going to increase the budget substantially for exploration and appraisal. We're going to continue a heavy emphasis on improving the portfolio, accessing some quality acreage positions and delineating prior successes. But on the exploration side, we also have plans to drill some large wildcats in the Gulf of Mexico, the Caspian, Norway and Indonesia. Equally important, we plan some new shale pilot wells, several new pilots in North America, both in the US and Canada, as well as overseas in Poland.

And this next slide helps to illustrate the breadth of our activity. As you can see, we're increasingly geographically diversified. We continue to high-grade and prioritize globally. We continue to drive more of our spend into higher impact plays and I include material positions in shale as every bit high-impact as material wildcats.

We're adding good acreage in both proven and frontier basins. Proven plays like in the Gulf of Mexico, sectors of the North Sea. Proven shale plays, we're consolidating expanding positions whether it's Northern Barnett, Muskwa, Canada and others. Frontier plays, we're adding new frontier shale positions. We're also adding conventional frontier acreage in places as far north as Baffin Bay in the Arctic and the Angola subsalt.

So speaking of Angola, the deepwater Kwanza basin is one of the more interesting wildcat opportunities we're in the process of adding to our portfolio. We're currently negotiating PSCs for a 30% working interest in operatorship of two blocks, 36 and 37. These are the two blocks. The only two blocks we high-graded and targeted in the recent Angola bid round.

Some of you know, seismic and geologic studies suggest this Angolan subsalt play analogous to the Brazilians - successful Brazilians Santos Basin subsalt play on the conjugate Atlantic margin and we certainly hope it is.

THOMSON REUTERS

After completing PSC negotiations, we plan some extensive 3D seismic in the remainder of 2011 and 2012. We could be drilling wildcats here as early as 2013. We're among the early movers in this play and we're very pleased to be given the chance to operate both of the blocks we targeted.

This is an example of how we're doing exploration these days. We intend to be among the early birds getting the juiciest worms, metaphorically speaking, whether it's shale plays like the Eagle Ford or new deepwater provinces such as this one in the Kwanza Basin. Let's move to another world-class petroleum system. There are several sectors in the Caspian that are clearly way under-explored and we believe have some very good exploration running room.

In 2010, we drilled the Rok More discovery in Block N Kazakhstan. This well encountered both oil and gas pay zones. So we're making plans for a future appraisal drilling and testing. To inform that future appraisal drilling, we're first going to acquire a 3D survey over this large Rok More structure to better understand it.

In the meantime, our joint venture on Block N is planning a second wildcat which may spud as early as fourth quarter of this year to test the very large Nursultan structure which is due west of the Rok More discovery.

We really like the geology of the Caspian and we intend to pursue other opportunities there. For example, we're in the midst of the PSC negotiations along with our partner Mubadala for block 19 offshore Turkmenistan.

Now, let's move to a great exploration arena with good potential closer to home. We continue to focus our Gulf of Mexico studies on the emerging lower tertiary play where we see a great deal of running room. As you know, activity levels in the Gulf of Mexico were impacted by post Macondo regulation. So our ultimate 2011 and 2012 activity is going to depend on large part on the pace of permitting there.

We do hope though that we'll see the Coronado wildcat spud the second half of this year as well we had hoped to drill in 2010 already. Coronado is a large lower tertiary prospect in the vicinity of our 2009 Shenandoah discovery. And based on what we learned from Shenandoah, we believe Coronado is in the right zip code, not only for very good fluids, but good reservoir quality.

In addition, operators of our 2009 Shenandoah and Tiber discoveries are anxious to get after appraising those and we are, too. So we're hoping to start appraisal of one or both of those either in late 2011 or latest 2012.

Now, Jim stated several times, we'd like to expand our footprint in the deepwater Gulf of Mexico at the right price and at the right time and we're actively evaluating opportunities to do that.

In addition, as Ryan mentioned in his talk, we're a founding member of the Marine Well Containment Company and this helps underpin our commitment of becoming an increasingly active operator in the future in the deepwater Gulf of Mexico.

Now, we're also a very experienced operator of high pressure, high temperature wells or HPHT wells is what we call them shorthand. And we see a great deal of running room for HPHT wells in certain sectors of the North Sea.

For example, we paid a number of large Triassic HPHT discoveries in the UK's central Graben J-block. We think similar perspective of Triassic geology extends right across the border in the Norway where we've got plans for at least two more HPHT Triassic wildcats in the near term. And in fact, we're in the process of serving up a sizzling Peking Duck wildcat. It's going to spud this week. And we're making tentative plans to follow that up with an even deeper and hotter Pelican wildcat in 2012.

Let's move down under. We followed up our large 2009 Poseidon discovery in the Browse Basin of Australia with the 2010 Kronos discovery. Kronos proved up material volumes of gas in a large fault block adjacent to Poseidon. And more importantly, a DST of the Kronos well demonstrated the quality of the Jurassic Plover reservoirs here and the capability of those Jurassic Plover reservoirs to flow at commercial rates.

THOMSON REUTERS

We're also quite pleased with the results of a 3D survey we acquired in this area in the last year or two. The survey reveals more prospects than we've seen before. So we're finalizing plans now for a five to seven well exploration and appraisal program in this part of the Browse that we'd like to kickoff at the second part of this year if we can get permits in the timely fashion.

Now, as you just heard Greg talk about, we continue to focus on the shale plays with higher liquid yields in North America in order to generate the better returns. In fact, we continue to appraise, delineate and expand the footprint of the oil and condensate rich windows in some of these profitable Barnett, Bakken and Eagle Ford plays.

In addition to these proven plays, our new exploration access of new shale plays has been biased more heavily towards the shale oil types of plays than the shale gas types of place in North America.

In our early identification in leasing of some of these best shale plays such as the Eagle Ford has enabled low-cost access relative to our peers. And more importantly, access to some of the sweet spots in these plays. As you guys know, just about everybody claims to have an Eagle Ford position these days, but location really matters. And what with delineation drilling we've done this year, we're pretty proud of our position on that play.

So now, we've continued that early access. We continue to add acreage in a variety of new shale plays across North America for what we believe will be a fraction of the cost late entrants are paying.

Now, many of you know, we've also been leveraging that considerable North American unconventional expertise to both screen and access shale plays overseas. We can talk about this one as we've been active in this plan Poland for a while. We've got the option for a 70% working interest in operatorship on about a million acres in the Baltic Depression in Northern Poland. We've been leading the way in this emerging play and, in fact, we participated in two of the first wells targeting shale in this basin in 2010.

These first two pilot wells were vertical holes designed to collect basic rock, fluid and gas content data. Initial results were encouraging. We're going to follow that up with a more extensive pilot program starting in 2011. In fact we're going to spud the Lebian horizontal well in May and follow that up with the Damnica horizontal well later in the year. Both of these are going to be completed and tested with multi-stage fracs.

With that -- I'm going too fast. Here we go. With that, I'll finish up by reinforcing a few of our upstream messages. First of all, as I've been telling you, we are seeing success from that high-impact exploration program. We're adding large volumes of high-margin barrels both from the conventional and the unconventional plays. We got a great pipeline of projects that are going to deliver both volume and value over the next year.

In North America, we're aggressively expanding our footprint, several very profitable liquid rich plays while retaining optionality on a primarily held by production vast portfolio of gas opportunities. You've heard us talk about our dispositions. I've mentioned a few of our recent exploration acreage acquisitions. This underpins our commitment to constantly upgrade and high-grade the portfolio.

However, we think it's really important to stress, we think we already have a unique and very competitive portfolio, comprised largely of long-lived, high-margin assets in stable OECD countries.

So with that, I hope you could see why we're excited about in our upstream portfolio and our direction. We look forward to updating you throughout the year.

And now, I'd like to introduce my colleague, Senior Vice-President, refining, marketing, transportation and commercial, Willie Chiang. Willie's going to update you on performance and outlook for our downstream and commercial organizations. Willie?

THOMSON REUTERS

Willie Chiang - *ConocoPhillips - SVP - Refining, Marketing, Transportation and Commercial*

Thank you, Larry. Good morning. Well, what a difference a year has made in the downstream. Last year, I was in front of you and we were talking about coming off a very difficult 2009. We were talking about tightening our belts, controlling CapEx, and trying to shrink our downstream in order to protect our cash position.

Well, this year, the belt is still very tight. We're still controlling CapEx. You're aware we exited our Yanbu project in Saudi Arabia and we cancelled the Wilhelmshaven project in Germany. And we're continuing to strive to reduce our footprint to 15% of ConocoPhillips asset base as Jim shared earlier. The key to do that is at the right value.

Now, the big difference is the markets have been much stronger than we anticipated. And when you combine that with the self-help that we've generated ourselves, we've really been in a better position cash flow-wise and generated positive cash flow for the Company.

So today, I'm going to talk about how we are going to continue to improve our business going forward and how we intend to be smaller, stronger, have a higher return business which will allow us to generate better margins in cash flow per barrel as we go forward.

So you've seen this slide before. It's our strategy and it's very consistent. We based our business on a strong foundation of operating excellence, safe, reliable and efficient operations allow us to capture more utilization. And in the US, we've been able to capture 5% more than the average of 90% and that allows us to capture market opportunities.

We're also very proud of our safety performance, in 2010 we finished at the best year since the merger. So our real focus is how do we improve return on capital employed and also get our cash flow stronger. And you're going to see in my slide as I talk more today about how we intend to reduce our refining footprint to ultimately under 2 million barrels a day and how do we get our return on capital employed up to the mid teens.

Now, we value integration pretty strongly. There's been a lot of news lately about spinning off entire down streams and we feel that we create much more value as an integrated company both in being able to deliver higher returns and value to the corporation.

There's the obvious benefits of having economies of scale on overhead, financial strength and having a deep talent pool of people across the company. But let me give you a few examples of where upstream and downstream can help each other as we've seen in the past. It's given us some great partner opportunities. If you think about our Cenovus joint venture with the Canadian oil sands, that's allowed Cenovus to get into a great refining asset in the US, avoiding upgrade expenditures. And it's really allowed us to get into a great position and probably, the best SAGD position in Canada.

As Ryan talked about growth plans in Malaysia, our Melaka refinery allows us to avoid a 10% crude export duty as we run equity barrels into our own refinery. There's a few good examples of partner opportunities.

Technology and best practice sharing is often understated, but there's a lot of value there whether it's finding logistic solutions for Bakken or Eagle Ford, or sharing best practice on sulfur plants, gas plants, and refineries. So the value is real. And even with the smaller downstream, we think we can gain the benefits of that and still generate positive cash flow back to the corporation to grow our upstream.

So this slide shows our performance against our peers and then highlights our RM&T business in the US And you can see, for all market cycles, we performed well. We've got a competitive model. We've got strong reliable refineries and we've got cost efficient – cost efficient in transportation and marketing channels to get our products to market. We also focus very, very heavily on value chain optimization. Since 2003, we've averaged a 14% return on capital employed for the system and we've returned $17 billion of cash to the corporation.

THOMSON REUTERS

So the past is great, but we always talk about what we like to do going forward, and this slide will tell you how we improved our return on capital employed. Last year, I talked about a $500 million bogey of self-improvement that we had. And we delivered on that in 2010. So we ended '10 with a return on capital employed of about 5%, and these were areas of improving ourselves in cost, yield and optimization. Larry Archibald talks about the juicy worms in the downstream business. You know, all those are our juicy worms.

And as you move from left to right, in 2011, we've ground in another 2% of self-help into our return on capital employed improvements. The yellow bar shows what our restructuring and further improvements will give us. That's worth 4%, and that involves taking 500,000 barrels a day refining capacity out of our system and continued real business improvements.

And then longer term, as the economy grows and the world recovers, we expect to get some benefits from market improvements. And you can see how that actually takes us to the mid teens on return on capital employed. So let's talk a little bit more about these areas. Specifically for 2011, you can see this slide highlights what we're going to do.

Obviously, we're going to continue the relentless pursuit of operating excellence which really allows us to capture market opportunities when they present themselves. I talked about our $400 million of improvements or the 2% that we've ground into our budget this year. And this again is in the area of costs, yields and optimization.

If you look at the top right-hand side of the chart, you'll see the yield improvement of almost 1% for this year. And just to remind you, 1% of yield is a $100 million of net income for our business a year.

We also are going to take the opportunity of better diesel and gasoline selectivity and allow us to make the higher value product when the market demands. And on the lower right, we're going to continue to work hard at maximizing our advantaged crude to our assets. Now, typically, we run about 40% of advantaged crudes, and that's comprised of heavy and sour -- which is shown in the green and the red bars.

And, today, as you know, WTI has actually become advantaged. And when you combine the WTI end, we're just over 50% of advantaged crude to our assets. Now, we joke a little bit about using planes, trains and automobiles to get -- distressed crudes to our refineries, but it's not too far from the truth. We do have barges. We've got trucks and we've got railcars moving barrels to our assets and getting it to market. And we've been able to place over 50,000 barrels a day more than our budget of being able to get some of these crudes into our assets.

So this is our operating initiatives. Let me shift to the portfolio side. We continue to try to improve our portfolio in a couple of ways. We've got asset sales and capital -- which I'll talk about on a later slide. And since the merger, we've averaged $750 million of asset sales a year and we've totaled $6 billion since the merger of sales.

In 2011, we planned to have a $1 billion worth of asset sales in our systems. And these sales are all part of that $17 billion I talked about of cash flow back to the corporation since the merger. And these have been traditionally been non-strategic or lower return assets that we've been trying to dispose of.

Now, moving forward, the big challenge is how do we reduce our refining footprint. And there are a number of ways we do that. There's obviously the sale, the outright sale, which we're going through right now with Wilhelmshaven in Germany. If the sales aren't successful, there is the conversion to the terminals. But we're pursuing a number of other options as well. And that is joint ventures with either a strategic crude partner, such as Cenovus, as we've done with Cenovus, or someone that needs product and, perhaps, having a joint venture to be able to facilitate both of those.

We also have been looking hard at multi-refinery options. And this is where you have refineries that are nearby each other and the opportunity of optimizing those two refineries, avoiding CapEx, creates a lot of potential value.

THOMSON REUTERS

Now, we've actually done this before. We've got a number of systems in our portfolio that are multi-site facilities. Our Los Angeles refinery is the Wilmington and Carson plants. Our San Francisco refinery is Santa Maria and the Bay Area San Francisco refinery. And you'll recall, Wood River, we bought the Hartford coker years ago and integrated that in. So it's something we're very familiar with.

So, of course, the key to do this is you got to do it the right time and you got to get the right value and it's got to be tax efficient. So let me share a bit more on the criteria on how we look at our portfolio. We do have a very disciplined methodology as we try to shed our 500,000 barrels a day. And you can see the criteria includes integration, both upstream and downstream; financial performance and competitive position in the regions that we operate in.

This chart shows our refining assets. And you can see right is good on this because it's competitive. And you can see most of our assets are pretty competitive in the regions we operate in. On the up and down axis, you can see that we do have a range of strategic value to the corporation. So the dark green dots show assets that are heavily integrated in with upstream -- perhaps, the Canadian Oil Sands -- and, as you move further down, these are assets that don't have as much specific integration to us and may have more value to others and would be more sustainable.

So we're chasing all these opportunities in gray. And it's the ways that I talked about on the previous page in many of those different ways that we're looking at trying to monetize the assets. The other way we look at this is how do we improve our return on capital employed.

And if you look at the lower right hand side of this chart, what we're really trying to do is to take the lower return tail and improve that, ultimately returning the return capital employed of the entire portfolio. And with this framework, this really allows us to get towards that 15% of the ConocoPhillips asset base and all the financial metrics that we talked about.

Al Hirshberg talked about the market outlook. And, really, the point I wanted to bring out on this slide is that we're well-positioned to capture market improvements as they occur. Long term, we feel crack spreads will follow global recovery. And as they strengthen and light heavy spreads strengthen with Canadian crude production, we benefit from that. So every dollar of light oil spread is worth $500 million a year to us and the light heavy spreads are worth $80 million a year.

We invest in our assets. The integrity is sound and we feel that we're very well-positioned to meet ongoing challenges and legislative and regulatory changes. And we also have a strong commercial group that allows us to respond to global events to be able to get fuel and products, to the right places in the world as well as to capitalize on potential market dislocations. Some examples of this, when we had the Canadian pipeline outages late last year, we have a space on the Keystone Pipeline and we were able to take in more Canadian crudes into our system in the mid-continent.

And we do expect more rationalization in refining, particularly around the Atlantic basin. If you look at the current capacity that's out, it's about 1.5 million barrels a day. And we think there'll be another 1.5 million barrels a day of capacity that will be rationalized going forward.

Now, shifting to capital, we remain very, very disciplined on capital. We've got $1.2 billion in the 2011 plan for downstream. I've already talked about Wilhelmshaven and Yanbu, but just to give you the context of that, that freed up over $5 billion of commitments that we had going forward. So you can see the significant impact of not doing those projects for us.

Most of our CapEx is focused on asset integrity, reliability, clean fuels projects, equipment replacement, infrastructure improvements. We talked about meeting our consent decree requirements as well as improving the quality of fuels -- benzene and sulfur to be specific.

Now, just because these are must-do projects, it doesn't mean that we don't get a return out of them. Every time we have an expenditure, we always look hard at how can we convert these to a payout project. And I'll give you a few examples of that.

THOMSON REUTERS

We have an emissions control project that we had to put in our Bayway Refinery in New York Harbor on the stack to reduce emissions. By the time that we had to make the changes on the stack and the heater, it was actually more cost-effective for us to replace the entire heater. We got energy benefits and yield improvements in the unit. And that generated over a 20% return for us.

A few other examples in some of our plants, in Alliance in Wood River, it makes more sense to meet the benzene specs. Rather than saturating the benzene, we actually extract the benzene and are able to sell it for a higher price. And we have another good, low cost, high return project at our Whitegate Refinery in Ireland. We are putting a sulfur recovery unit in there that allows us to run lower sulfur -- higher sulfur crudes at lower cost which improves that facility, and that's a 25% plus return project.

So you can see our target. We want to get our capex spend below our DD&A levels. We think by doing this it really distinguishes us against the peers. And it's a very, very good disciplined approach for us. So on the subject of capex, I would be remiss if I didn't talk about our Wood River core project. This project is our project at the Wood River refinery, which is 50-50 owned with our joint venture partner Cenovus.

This is another excellent example of upstream integration with a downstream asset. The project is a $3.7 billion project, and it's a project built around a coking complex. And, essentially, what it allows us to do is to take what used to be asphalt and upgrade it into gasoline, jet and diesel. And that improves our yield by 5%, improves the net income earnings on the refinery by $300 million a year gross, and $4 a barrel improvement.

By doing this, Wood River will be one of the top competitive refineries in the Pad 2 region. The project is 90% complete. And we expect full operation fourth quarter of this year. So I've shared our story on how we're really trying to be excellent at everything we do. I hope you can see the many ways that we've tried to attack this through operating excellence, maximizing our realized yields, working the value chain to capture market opportunities and finding innovative ways to reduce our refining footprint.

We look forward to keeping you abreast of our progress of this through the years. And while we're getting smaller, we're going to be a stronger downstream asset and we're going to always be a key contributor to our integrated company both strategically and financially.

So you've heard a lot of challenges from my colleagues and I about our business. And I'll tell you, this is tough stuff, but it is what we do. So, at this point, I think I'll introduce Jeff Sheets, our CFO, who will tie it all together for you.

Jeff Sheets - *ConocoPhillips - SVP - Finance, CFO*

Thanks, Willie. Well, the shareholders in the room would probably agree with me when I say that creating shareholder value is a matter of combining strong operational strategies like what we've been talking about this morning with the right financial strategy.

And I'm going to talk about our financial strategy. Before I do that though, I'm going to spend just a few minutes rounding up the operational side with a few words about our chemicals and our midstream business. As you're probably aware, we participate in both of these businesses through 50-50 joint ventures that we started more than a decade ago. And both of these are very strong competitors in their respective businesses.

But first, a few words about DCP Midstream, our 50-50 joint venture with Spectra Energy. DCP is a really strong competitor in the gas gathering and processing business. You can kind of -- the proof point there, the fact that it's the largest NGL producer in the United States.

It's an interesting time for DCP right now. If you think about what's going on in the Lower 48 in terms of the shale gas revolution and all the requirements for natural gas infrastructure, DCP is well-positioned to take advantage of the investment opportunities

©2011 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

that are there, both by virtue of their existing footprint of assets and their financial capabilities and operational capabilities. There is a lot of interesting investment opportunities for growth for DCP going forward.

If you kind of look at what they've done for us in the past though, it's been a consistent cash contributor back to ConocoPhillips. In the last five years, distributions have averaged $500 million a year back to ConocoPhillips. If you think about that in terms of return on capital employed, if you look at we have invested in the midstream business and the income we get back from it, the ROCE of this business is more than 30% for us.

So, likewise, we've got a very strong joint venture on the chemical side in our CPChem joint venture with Chevron. Chevron Phillips has also got very strong growth opportunities, a lot of big projects coming to the startup phase now. They started up the Q-Chem II Project in Qatar in 2010, so it's ramping up in 2011.

And in 2011, they'll start up the Saudi Polymers project, which is a large integrated chemical -- world-scale chemicals complex in Saudi. They've got that growth coming on, but they also have a very strong environment for chemicals currently. If you think the combination of high crude oil prices, low natural gas prices, for a company that's pretty much a natural gas liquids feedstock company, that has created an environment where 2010 was actually the strongest year that CPChem has had since they were formed back in 2000, nearly 500 million of income back to ConocoPhillips in 2010.

Like DCP, CPChem is a consistent cash contributor back to ConocoPhillips, averaging 300 million a year of distributions over the last five years. And, likewise, the return on capital, if you look at what we have invested, the ROCEs are quite strong, greater than 20% for this business.

So that wraps up the operational discussion. Now I want to move back and talk about financial strategy. So when we were here a year ago in this room, we talked about all the things we wanted to do to try to improve shareholder value. On the operational side, we talked about improving production per share and production levels. We talked about driving higher margins for that production. We talked about the things we're going to in the downstream side to try to improve that business.

And on the financial side, we talked about how we needed to make sure that that improved earnings and cash flow stream will be better valued in the marketplace. We had kind of three particular areas where we felt like we needed to make improvements. The first one was on strengthening our balance sheet. The second one was on showing that we could improve our returns on capital, and the third one was on the area of shareholder distributions.

So, likewise, this morning, what you've heard, you heard from Greg Garland and Ryan Lance about our E&P portfolio to show you where that production growth is going to come from. They spent quite a bit of time talking in some detail about how that production growth is coming at higher margins than what we've seen in the past. So we'll have kind of an improved profitability for BOE.

And Willie just got done talking about the things he's going to be doing on the downstream side to drive improvements there. So we hope you can visualize how that's going to mean to improved earnings and improve cash flow for us. So on the finance side, we need to make sure that that's -- that we're doing the things to make sure that those earnings and cash flow are properly valued by the marketplace. So, again, it's the same kind of emphasis going forward, making sure we maintain a strong balance sheet, higher capital efficiency and continued improvement in the shareholder distributions.

Now, a big part of our being able to make that happen is the asset sales program that we've been talking about. So Jim talked earlier this morning about the fact that we're going to take from what we said last year $10 billion of asset sales over 2010 and 2011 and expand that to an additional 5 to 10 on top of the 7 we did last year to where we're going to be $12 billion to $17 billion of asset sales over a three-year time period.

Now, last year when we got up here, we were pretty specific about what was going to be in the 2010 asset sales program. You're not going to see that same level of specificity from us going forward on asset sales. It's more likely that you'll see us talk about

'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

transactions as they occur. But let me give you just a little bit of guidance on what would be in our 2011 and 2012 asset sales program.

You'll see us continue to do things like what we've done in the past where we look at more mature areas of our portfolio like in the North Sea and North America and take a portion of that portfolio, the more mature assets, the non-strategic parts of our portfolio and continue to make reductions there.

You heard us earlier announce that in conjunction with the sale of LNG from the APLNG project, it would be selling a 15% interest between us and our partners selling a 15% interest. So we'll go from 50% down to 42.5% in that project. As we look around the world this year and next, there are some countries that we're in which would probably determine our non-strategic; and if we can get good value for the assets we have in those countries there may be certain countries that we'll exit going forward.

Willie talked about the things we're going to be doing on the downstream side as that market is now -- it looks like it's picking up to divest the non-core assets there. And then there will be other producing and non-producing assets, that could become part of the asset sales going forward.

So what does all that mean in terms of impact? You know, we can't give you a real precise guidance, but just some general thoughts on that. It's probably 50,000 to 100,000 barrels a day in production and something like 200 million to 400 million barrels of reserves.

So with that discussion on the assets, I wanted to turn back and talk about some of the financial factors. And the first one is where do we want to be in our balance sheet? Jim talked earlier today about how we really feel like, as far as our capital structure, we're pretty much in the sweet spot currently. We took $5 billion from our asset sales program last year and used that to reduce our debt from $28 billion down to around $23 billion. That brings us right into our target debt-cap range at 20% to 25%.

If you look at kind of how we stacked up compared to a lot of the peer group, it's a pretty similar capital structure to a lot of our peers as well. If you look at kind of the cost of our debt, the maturity profile of our debt, it's all very manageable. And we don't really see any compelling reason to bring our debt balance down substantially from where it is today. So it may drift down a little bit as things mature but we're pretty happy with where we are today. So we think in terms of strengthening our balance sheet, we're pretty well -- we are done with where we think we need to be on this.

So next thing I want to talk about is the question of improving returns. So lots of things that go in to improving returns and let me just highlight three of them in the -- in the few minutes. The first one is we need to always be sure we're controlling our operating cost. We need to make sure we maintain capital discipline. And we need to continue to invest in things that are -- have higher returns and move our portfolio away from things that have low returns. So there's a portfolio shift going on.

First on the controllable cost side, we've had -- we've seen quite an uptick in commodity prices lately. We think that that is probably going to bring upward cost pressure on prices going forward. But despite that upward cost pressure, we want to continue to decrease our overall controllable cost levels.

For 2011, we'd like to see our controllable costs to be a couple of percent lower than they were in 2010. You know, part of that is going to happen because of some high cost properties that will be disposed off in 2010 and things that we might do in 2011. Al talked earlier about some of the initiatives we have in the procurement side to continue to be as effective as we can at driving cost down in that area.

And then just as you've heard others talk about this morning, it's just part of our business to continually optimize our operations and drive cost down. So the overall picture on controllable cost is continued discipline in driving those costs downward despite the upward pressure we're likely to see in the marketplace.

THOMSON REUTERS

The second area on improving returns is continued capital discipline. If you look at our level of capital employed last year and going forward, it's basically flat capital employed. I think everybody here knows how you calculate ROCEs, that's denominator of calculations so that's basically flat. If you can grow income, you're going to have improving ROCE.

And that's where we think we're going to be going forward. It's basically flat capital employed and improving income. So, you know, how could we make that happen? A lot of it has to do with the fact we've moved from a phase of rapid growth, accumulating a lot of resource to a phase of exploiting the resource base that we have which is what you've heard our E&P folks talk about earlier today.

So we think that this is a recipe for improving returns by holding capital relatively flat and driving higher income going forward. And the last thing I want to talk about on improving returns on capital is the portfolio shift we have going on. So when we were here last year, we talked about the fact that about half of our portfolio was earning basically, you know, 1% or no return. And that being our North American natural gas business and our refining business which made up about half of our capital employed.

Now as we roll forward in time, we think that as we invest most of our money in upstream and most of our money in liquids rich parts of upstream, well that portfolio is going to shift from being for those components make up around 50% to closer to 40%. And that's going to help drive our returns as that portfolio shift happens.

But as important as the portfolio shift going on in that part of our business, it's also what you heard Greg Garland talking about on how we're driving returns higher in North America through the shift away from gas and to liquid in the higher margin plays that we have there. And you heard Willie just get done talking about the things were going downstream.

So it's not just the shift but the fact that we're going to be improving the portions of our portfolio that have lower returns. And finally on the finance side, I want to talk about the subject of shareholder distributions. I don't know -- let me wrap up a little bit on getting ahead of -- wrapped up a little bit on returns. We're going to tie this all together with everything we've done so far with the portfolio shift, improving cash margins. We think we're going to get help from the marketplace. They're all going to do these things that help drive our returns higher.

But another thing to keep in mind is that we ended 2010 with $10 billion in cash. And as we go through 2011 and 2012, the majority of that cash is going to share repurchase. So you can think of that as something that's also going to help accelerate improvement in returns on the capital employed.

So in 2009, we had a return on capital employed at around 7%. We can see that being nearly twice that in 2013. And similarly, we think we can have very strong improvements in cash returns on capital employed. So now let me shift to talking about shareholder distribution. Jim talked earlier this morning about the fact that we've increased our dividend every year since the merger at an average compounded growth rate of 14%. And that we increased our dividend earlier this year by 20%.

If you look over time, we've also been spending a fair bit of cash on putting money back to our shareholders in terms of share repurchase. You focus on 2010 in particular, we paid out $3 billion roughly in dividends and $4 billion in share repurchase. You add that together and you compare that to our market cap and that's something like a 6% or 7% cash yield back to our shareholders.

Looking forward to 2011 with the 20% dividend increase that we had earlier this year, that's $3.5 billion to $4 billion going out to our shareholders in terms of dividends. We've talked about the increase share repurchase; let's just say that's going to be in the range of $5 billion to $10 billion in 2011. You combine the dividend and share repurchase for this year and you're looking at something it's more like an 8% to a 12% cash yield back to our shareholders. So we're going to be quite aggressive on shareholder distributions in 2011.

So how does that compare to what we've done in the past -- in the past and compared to what the peer group is doing, last year when you looked at the comparison -- that's what's on the left hand side of this chart -- we found that while we've been

©2011 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

aggressive on increasing dividends and we had been a participant in share repurchases, compared to our peer group we are relatively not as aggressive as they were.

You contrast that to where we were in 2010 to where we distributed nearly 40% of our cash flow in either dividend or share repurchases and that puts us right at the top of the peer group. So this 40% cash flow a Jim mentioned earlier, it's kind of where we think we need to be going forward in terms of shareholder distributions.

So what do we want you to take away from the meeting today about ConocoPhillips? ConocoPhillips is well positioned to continue to create shareholder value and in some ways we're kind of uniquely positioned to do that. You think in terms of the cash flow that we generate from our assets coming from strong cash flow coming from OECD countries primarily.

Going forward, we're going to augment that strong cash flow with continued proceeds from asset dispositions. We've got a strong pipeline of projects that we can reinvest that cash flow in where we're going to continue to be disciplined about the rate at which we reinvest the shareholders' funds.

We recognize that there are parts of our portfolio where the returns aren't as good as they should be and we're taking steps to address that. So you take that disposition and that approach and we think that's going to get us going forward. You've heard us talking about continue 100% reserve replacement going forward.

Our production per share growth short term, absolute production growth longer term, that production growth is coming at higher margins than what we've seen in the past. That's going to drive higher returns. You put higher production growth together with higher margins, that's a recipe for increased earnings, increased cash flow.

And as we go forward, we want to make sure that we're sharing those earnings and our cash flow with our shareholders. That means continuing to be aggressive on shareholder distributions. So we were here a year ago and outlined the steps that we were taking to increase shareholder value. I think the general feedback we got right away was, it's a good plan but we need to see it executed. I grew up in Missouri, I kind of understand the show-me attitude for that.

And as the year goes -- went on and we demonstrated that we were doing what we said we're going to do, the market reacted very well. And we had a very good year in terms of shareholder return in 2010. Now we know you didn't come here to hear us talk about what we're going to do in -- what we did in 2010. It's all about what we're going to do going forward.

So this morning, we've outlined what steps we're going to take to build on the success that we had in 2010. And we believe that this plan is going to continue to drive higher shareholder value going forward. That wraps what we're going to talk about today. We've tried to talk to you quite a bit of detail about our plans; we realize that there may be questions that you're going to have so we're going to take about a 15-minute break and then we'll come back and take those questions so thank you for your time and attention this morning.

(BREAK)

QUESTIONS AND ANSWERS

Clayton Reasor - *ConocoPhillips - VP - Corporate Affairs*

If people can find their seats, we'll start the Q&A session, please. So if people could find their seats, we'll start the Q&A. Thank you. Okay, I thought the presentations went very well. And I think we gave a lot of good information out and I know that there may be some questions that have come up as a result. So I think Jim's going to come up and take your questions and then to the extent that he wants to supplement his answers, well he'll redirect to some of the presenters. So, I'll turn it over to Jim Mulva.

©2011 Thomson Reuters. All rights reserved. THOMSON REUTERS

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, Clayton, thank you and so let's just start with Doug.

Doug Terreson - - *Analyst*

Jim, You got (inaudible - microphone inaccessible) okay. Okay, [Doug Terreson], Jim you got (inaudible - microphone inaccessible) pretty considerable improvement in growth and return profile over the last couple of years. And when you think about the production per share plan that you have which is obviously dependent upon repurchase plan, that that figure is something around 5%, you know, per share annually through '15.

But at the same time, the growth rate really doesn't appear to use much free cash flow or repurchases beyond 2011 which appears pretty conservative to me. So my question is, what repurchases are included in the 5% growth rate through '15 and what are the implications for dividend policy in this longer term scenario?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, Doug, one of the things we tried to do is makes sure that we -- to some extent I agree with what your basic premise or your question you're asking -- is maybe we're a little bit conservative. We try to under-promise and over-deliver, quite bullish myself on oil prices for all different reasons.

I like to think the long term -- long term natural gas is going to be a real winner. It's going to take a while to get there though and so if you look at our company, I think there's opportunities to really ramp up share repurchase more than maybe what you see in the slides.

So if we probably are a bit conservative in that regard in terms of our capital spending, now $14 billion, $15 billion, you know, can go up a little bit, down a little bit, that's pretty much ballpark. Dividends, we like to be aggressive on dividends. Double digit growth in dividends each year, we think that's really good discipline. It's quite a signal to our shareholders. So when we build in, we're not thinking 5% and 6% we're saying double digit.

So double digit what does that mean to people, well demonstrated can be 10%, 15% and 20%. But then given the strength of what we see our legacy assets and our investments and our position of adding production like production per share, we look at -- there's probably a lot more opportunity beyond what we're saying that we could allocate more money towards share repurchase.

But then the question becomes, you know, how much -- how many shares do you buy in order to find shares of $50 or $70 or $80 a share certainly has impact with respect to per share growth. So we won't buy shares just at any price but on the other hand I agree with you as we look beyond this year into 2012, '13, '14 I think it's good opportunity to see growth in terms of share repurchase and metrics in terms of growth of production per share to be even better than what we've demonstrated. So there's a bit of under promise and over deliver here.

Jason Gammel - *Macquarie Research Equities - Analyst*

I'm Jason Gammel from Macquarie. Jim, a few specific questions about the divestiture program. First of all, are there any of the refineries that are on the market outside of Wilhemshaven? Or would you expect a billion in downstream divestitures to be made up of marketing terminals, et cetera?

©2011 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

Second, is the REX pipeline still a component of the divestiture program? And third, the equity divestment in APLNG, would you expect that to be -- to a strategic off-taker? Or would you expect that to be another industry player?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

First, APLNG, that is our partner, Sinopec. So they bought in what -- taking a full train. They want an equity participation to full chain. In terms of the divestitures on a -- on the downstream side of the Company, we are -- we are looking at selling refineries, we're looking at terminals, everything in it. Maybe, Willie, you might want to comment just what you can see and foresee.

Look, the market is a little bit better, assets are starting to move, so our premise by waiting a year or two, we think, is the right thing. But on the other hand, it's not like we're not doing anything. We sold our precision LUKOIL, a substantial sale of our asset disposition. We want to make sure that when we sell refineries or we venture them or whatever we do with them that reduce our participation that we're really creating value for the shareholders. So, Willie, do you want to comment on REX pipeline and some of the refineries?

Willie Chiang - *ConocoPhillips - SVP - Refining, Marketing, Transportation and Commercial*

So, Jason, right now, it is only Wilhemshaven that's up for sale. That's only one that's out there. The answer on the billion dollars, it's -- it's a mixture of all three. It's refining marketing and transportation asset -- refining and mostly transportation assets. And we will be more specific as we -- and as we kind of go through the year there.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

But Willie said it's the only refinery that's technically on the market, we're talking to many people about everything that we have on a downstream. So you -- but a formal process where you get an investment banker and to help you sell an asset, that's really -- it's Wilhemshaven. But the discussions with strategic players that should want to own a given asset or a competitor in the business while we -- those discussions are on going. Arjun?

Arjun Murti - *Goldman Sachs - Analyst*

Thanks, Jim. It's Arjun Murti with Goldman Sachs. Jim, your team highlighted the large amount of unbooked resources you have in your portfolio. And I know you're focused on developing those internal options. I was wondering if you could comment at all in your latest thinking on acquisitions what role they'll play in using some of the -- the free cash load Doug had mentioned earlier. Should we expect tactical deals like the APLNG? Would you still consider larger transactions? Just run in your latest thoughts on the acquisition at what role that plays? Thank you.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, come back on the REX pipeline. We didn't answer the question. But strategically, we would like to part with our interest in REX pipeline. We felt that the offers we were given, say, a year ago or whatever, we're not good enough, but we said we're going to revisit this at some point in the future and we will. So we haven't changed our mind in terms of what we want to do in the REX pipeline.

Arjun, on acquisitions, I could be wrong about this. But I just see the environment for buying at making substantial investment to buy another company or something like that. Consolidations may take place, but I don't see it in the next several years. So our concentration really is on organic growth and our ability -- I want ask Greg and Ryan to give their comments on what they see as opportunities for, I'll say, acquisitions.

©2011 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

But it's going to be directed more into positions, discovered resources, how can we complement hundreds of millions of dollars or a billion or two, that sort of thing, but I don't see the acquisition in the M&A market over the next three to five years or whatever time period it is like we've seen in the past decade. That doesn't seem to be available of the cost, whatever, political reasons or a fit really for what we're doing with our -- with our company. So, I'll start with Ryan. Do you want to say something and try to respond to Arjun?

Ryan Lance - *ConocoPhillips - SVP - Exploration & Production International*

Yes, Arjun. So we're looking -- you saw Larry talk about growing the exploration portfolio, looking for new opportunities like Angola. But we still – we call them DROs, Discovered Resource Opportunity. We are still out there looking for good opportunities in the areas that will complement our existing portfolio, and we think fit going a long term.

So Asian gas, we think it's going to be pretty strong, so some of the opportunities that present some stuff out there you'll see us looking at some of that kind of stuff. So we continue to look. It's a hard business. You got to keep reloading the inventory. Bringing more resources in.

We're going to do a lot through our own portfolio. We're going to do it through exploration. But we continue to look at discovered resource opportunities around the world as well.

Arjun Murti - *Goldman Sachs - Analyst*

Is shale all part of that as well?

Ryan Lance - *ConocoPhillips - SVP - Exploration & Production International*

Sure. I think Greg can comment on and Larry both, but well look for shale opportunities and nonconvetionals as much as conventionals.

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

So, Arjun, I think we have said with $1 billion, $2 billion, $3 billion in the Gulf for opportunities, and we'd like to continue to look at that. Anything around our core areas we're interested in adding positions there, but, you know, I know weren't looking at companies or we're looking at assets and land mostly. So, Larry, do you want to anything?

Larry Archibald - *ConocoPhillips - SVP - Exploration & Business Development*

No, I think it's been pretty said. But, yes, we want balance between unconventional and the conventional, obviously, and I always prefer to grow those unconventional positions organically rather than doing the multibillion dollar late entry acquisitions and spin offs from Chesapeake and others that many of our competitors have done. But if we see exceptional value out there that's a good fit, we're going to jump on it whether it's discovered resource or exploration acreage.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

As Larry said earlier in his presentation, we're putting the money, the financial resources, the technology in the people side to find the next Eagle Ford, and if not just in one or two areas, multiple areas in the Americas, as well as Ryan said internationally, we'd like to take what we know and what we've learned and go to other place and see the world.

THOMSON REUTERS

Stan Harbison - *Hudson River Global Energy - Analyst*

I'm [Stan Harbison] from [Hudson River Global Energy]. In terms of incremental opportunities that would seem to me sort of following from what you said would be selling not buying. When you have KNOC, Chinese companies, two of which you have strong relationships with, Reliance and whomever else, we seem to be paying a premium over the industry estimates of value. Wouldn't that be great a way to channel cash through into more share repurchase?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

In other words, sell refining more aggressively?

Stan Harbison - *Hudson River Global Energy - Analyst*

No, upstream. Upstream is getting huge -- huge premiums I think.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, obviously, we have done some of that. We talked to all of those companies. And there is an interest, but yet we also want to make sure that when we look at selling upstream assets that they're fact sufficient. You can take some of -- I'll just give you an example. You could take some of our very large positions that we have in the North Sea and you could sell an asset and you'd get an incredible price for it.

I don't know what the numbers are, but you get 50% to 60% back to the government, the shareholders, what do they get? So what really drives us, you know, we're not in love forever with everything. But we got to make sure that we -- that we say we'll sell something, we'll look at anything and everything, and we recognize and agree with what you're saying. But we got to make sure it translates into cash that's available to give ultimately the reinvestment are back to shareholder. Ed?

Ed Westlake - *Credit Suisse - Analyst*

Yes, maybe two upstream questions. It's Ed Westlake with Credit Suisse. Firstly, Greg, you've got strong liquids growth out to 2013. Can you talk about where in the Lower 48, specifically, how confident you are that you can continue to drive the liquids growth higher beyond that? And then a question in the Arctic, obviously, that's a contentious subject, but it's shallower water. How confident are you that we can get back to drilling, say, in Chukchi Sea and what timescale?

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

Is it on? It is on, okay. Okay, so first question, I think as we continue to build around our core areas that will deliver liquids growth beyond the 2013 timeframe Lower 48, there's no questions the SAGD is going to continue to drive liquids growth for very, very long period of time.

The second question is a lot harder to answer because I'm not sure we really know when we're going to get to start drilling again in the Arctic. You saw the comments in the commission's report about the Arctic and really forecasting that we should exercise caution before we go back into the Arctic.

So that's a question that I think is difficult to answer. We're starting to get back into the Gulf of Mexico. I think Shell just got a permit recently in the deepwater well to start prosecuting that. But I think that will come with time. But there are some -- but I think there's big challenges remain in the Arctic.

THOMSON REUTERS

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Our premise says that we are scheduled on our plan, I think, Larry, is to get going in Chukchi, 2013.

Larry Archibald - *ConocoPhillips - SVP - Exploration & Business Development*

Yes, 2013 at the earliest. We're actually in a, I guess, enviable position. We're not burning any cash on that operation as we wait for their regulator environment to be sorted out, unlike at least one of our competitors. We're not pregnant in an Arctic drilling fleet. And we're going to wait and see what develops there. And in the meantime, we're getting tolling, extension on our leases there. So we would like to get after it, but it's not urgent. In the meantime, we're going to park things until we see regulatory certainty.

Kevin Kelly - *Morgan Stanley - Analyst*

Yes, Kevin Kelly from Morgan Stanley. You know, clearly, the view and the significance in North American unconventional liquids has changed for Conoco as well as the industry. How do you view your organizational limits for reinvestment? And then it's clear that -- appear to have more running room in the Bakken or some other place. How does it -- how do you balance an impact of a buyback versus an opportunity for reinvestment at high returns?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, I thought you were leading first, and, Greg, you can comment here in a moment, that we had organizational bottlenecks or people or issues, you know, how can we have the people to do everything we want to. And I think one of the things we -- in the past year when we said no to some of the major projects like Yanbu, Shah, Wilhemshaven, this allowed us to redirect our available people and all to do the projects even better than we thought.

That was -- what Al Hirshberg was talking about. In terms of our projects where we invest, first and foremost, we look at what good opportunities do we have to invest capital on our basic business. And we do all the best projects, then after that, we look at giving it back to the shareholders, but I'll ask Greg and all of you, do you want to comment on this question?

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

I'd be happy to do that. So in terms of organizational limits, I think that we've got human capacity, subsurface drilling to execute it. There are limits in terms of the services. And one of the things we have with our size and our scale, you know, we can lever that size and scale, for instance, like in the Eagle Ford, you know, we were able to get three dedicated frac crews. They're signed up. We'll have them in place.

And so, we're not waiting on any capacity. I think that the limits that we see in the Bakken and we would like to do more for sure, they're more related to takeaway capacity. And we don't want to over drill the existing takeaway capacity. So, you know, there are pipelines being built and so as those come up, we can accelerate there, the same thing in the Eagle Ford. We don't want to over run that takeaway capacity.

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

I guess, I just might add that we -- you can see from the cash position that we showed earlier that we've got quite a bit of flexibility on our balance sheet. So to the extent that we can find attractive enough work to do, we may go spend more money

THOMSON REUTERS

doing it. But we -- what we don't want to do is lose our discipline, our focus on returns and chase too far down the list. And so, to the extent that those opportunities are there, then we'll invest in them.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, the other point is we don't want to lose the optionality of that opportunity. So we can do it today, we can do it next year, but always an optionality. It's just a question of how quickly we move on. Paul?

Paul Sankey - *Duetsche Bank - Analyst*

Jim, you've outlined a plan through 2013, which would encompass your retirement age. Could you -- in the past you said you might continue to be on that age. I just wanted what your current feelings are on that? And secondly, to what extent would a way of bowing out for you to be to sell or merge ConocoPhillips? Thanks.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, that's great. First of all, the inferences, I plan to be alive beyond 2013, that's the first. But in a serious way, look, in terms of secession and retirement and all of that, we -- that's a decision by our board of directors. We have a pretty robust secession plan and development of our people.

You see the -- as I said this morning that this is the leadership team of today and tomorrow. So you can -- the plans are that I will retire sometime during the year 2012. The 2013, when we have numbers up there, is convenient for driving with respect to what is an expression of what the Company, or the business line, or what the capital spending, or the balance sheet will look like just to give you a manifestation or expression what to lays ahead. It has nothing to do with respect to my time in the Company.

But the plans are to sometime in 2012, I will retire and, you know, the Company is in really good shape. We really like our strategies and our plans, and we've got the people to do it. And so, you know, it makes a lot of sense to -- at that point in time.

Now, your -- I think you're second question was, you know, some big transaction or some kind of a strategic change in the Company as a final action before I retire. And you really directed it, I think, more towards to the downstream I think. Was that right?

Paul Sankey - *Duetsche Bank - Analyst*

No, I think you got the whole ConocoPhillips lock, stock and barrel. But I also had the idea that you might spin out the downstream and the way that Marathon has --

---

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, Paul, you have two, two unique things. One, you think big. And the second is you have a way of always asking more than one question or so.

So the first is from the whole idea of, as I just said, I think as Arjun, mergers, acquisitions, consolidations, we really think we've got a great plan. I don't think this is the business environment to do things like that. I don't think we'd be creating value for our shareholder. So the Company you see in the plans that we have, that is our approach and our direction now.

©2011 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. THOMSON REUTERS

Now, but you raised an interesting thing on the second question, which is the refining side of the business. As you see in our plans and approaches, one, we're pretty good at the business. So, as Willie outlined it, we're doing things that are further going to improve, less capital employed in it, less of our portfolio but improved our pretty strong position that we have in the refining side.

I think that historically we did the right thing. We got out of the marketing side pretty much, so it's really the refining side. And we're going to be [lessening] our volumes and whatever. We looked at selling. We looked at venturing. Willie said. Maybe someone has a facility next to ours. Can we do something with cost capital investment, improve efficiencies.

Now, what you're really suggesting is do we look at or should we consider doing something like Marathon. And you know, for us, I don't think so. But on the other hand, I watch what Marathon has done and the market response has been pretty good. On the other hand, you have to ask yourselves if things are done just in the short-term. How sustainable? How much real value creation? What are you doing to the nature of the Company, because it's really not just in the short-term, it's the medium and the long-term, are you really creating value for the shareholders.

So I applaud what Marathon has done. I think for them, they've decided it seems to make sense and work for them. Whether that's something that we should do, I don't think so. But we are certainly going to take a good look at it to see whether it does or doesn't make sense for us. Okay? Sorry, I can't see the name.

Doug Leggate - *Bank of America Merrill Lynch - Analyst*

Thanks, Jim. It's Doug Leggate, Merrill Lynch. A couple of quick ones. As we look at the production that you've laid out today, the disposals take you to I think you said 1.65 million barrels per day. And then you talked about 2-3 percent production growth, but there's a 0.50 million barrels of new projects coming online.

Either the decline is getting a little faster or that you're being very conservative on the targets. Can you elaborate a little bit on how you see the visibility and perhaps what you think our production could look like under the current plan? Another follow-up, please.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay. Well, it's difficult for us to try to give some bands on production because it depends on what we sell. Jeff indicated that there are mature assets like maybe in the North Sea that we part with and the Americas. And then he indicated that there's potential smaller country interest that we have. So it's kind of hard for us.

Our commitment to selling an additional 5 to 10 certainly is there. On the other hand, making it happen, we don't know for sure because we're just not going to part with something just to part with it, we got to make sure we're getting value. So that's why we gave you this little bit of gray area in that respect in terms of this is what's going to happen.

In terms of our decline rates, I'll let Ryan talk about this because Ryan, what -- I think we're about 5% after we spend money to arrest our decline. But go ahead, Ryan. Why don't you –

Ryan Lance - *ConocoPhillips - SVP - Exploration & Production International*

Yes, just right. We are kind of unabated decline, we run at about 11%. When we exploit the assets, we cut that in half down to about 5% decline rate. And the projects that we're adding, you saw the profile going forward, it is 500,000 barrels a day. You add that to the decline. And the uncertainty around the 2% to 3% long-term growth rate is just trying to put all that together, trying to put that decline rate together.

THOMSON REUTERS

The level of exploitation investment, you saw Greg talk about our North American portfolio. We're not investing in some of those. The San Juan and some of those other properties are declining because we're not going to invest against those low gas prices. We're ready to ramp up that investment, that impacts some of our decline going forward, so we draw that together and it generates the kind of perspective that you saw today.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

But as the portfolio going forward, if we have more oil sands, more LNG projects, that natural decline would probably be less. And then the other thing is we can make that number pretty much what we want because we have available prospects. We think -- I think, longer term, natural gas is a real winner. Well, we're going to be able, we don't know. We're not premising a real significant improvement to natural gas prices. But once it starts moving about $5 an MCF on a sustained basis, we said longer term, 5 to 7. Well, we've got a lot we can do to add production and that certainly is going to have an impact on that decline rate.

Doug Leggate - *Bank of America Merrill Lynch - Analyst*

Thanks. But my follow-up is really just a philosophical question on the share buybacks. Clearly a terrific strategy for the Company, but buying back stock at $60 versus buying back stock 30% higher. How do you think about in terms of shareholder return on that investment if you like versus Arjun's earlier point about the 40% to 50% returns you can get in reinvesting in the business. Thanks.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, yes, so we get to keep our eye always first on what returns can we get to redeploy whatever cash we have back into the business. That comes first, we'll do that. The other is right with it, we want increases in dividends every year. A share repurchase. We have the cash. I think we, as per Doug's question, I think we might be on the conservative side in terms of the amount of a share repurchase. But on the other hand, you just don't buy shares irrespective of the price. So, hopefully, as the share price continues to move up like we've experienced, we have to ask ourselves, you know, is it the best use of our cash.

Historically, over the last -- a long period of time, anywhere from five to ten years past, our component return to our shareholders has been share price appreciation and dividend of about 13%. So we've got to always keep figuring in the short, medium and long-term how we're going to continue to do 13%.

And if our share price gets to a point where it's not supportive of that then at some point you ask yourself how do you give it back to the shareholders, maybe more dividends or obviously be looking at can we do more than spending. So there's not at any price that we just keep aggressively buying our shares. That's really the answer.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Mark?

Mark Gilman - *The Benchmark Company - Analyst*

Jim, thanks. Mark Gilman, The Benchmark Company. Two questions, I think there was mention earlier on in the presentation of 12 anticipated upstream project sanctions in 2011. I can get to six based upon things that were said, four in FCCL, APLNG, and the West Alpine satellite project, and I was hoping that the upstream team could give me some insight as to what the other six are.

THOMSON REUTERS

The second question relates to, in part, the divestiture activity. You still have a meaningful Canadian liquids conventional position. Does that pass the acid tests in terms of maturity, tax efficiency even though it kind of cuts against the grain a little bit from an oil versus gas perspective? Thanks.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay. So I'm going to let Greg. You can address the second one, the second question of Mark.

I'm not surprised at your first question, Mark. You always will count to see whether it's 12 or it's 13 or it's 11. I'm pretty sure it is 12. And maybe I'll just ask Al and there's someone after or if could come back and just go through what the 12 are and to try to go through it. Right now I'm pretty sure you've counted properly, but we've got the 12 to respond. So, Greg, do you want to try to address Mark's question?

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

I was finding Ryan his 12 projects there. So he's ready to do it. So your question is about Western Canadian Gas and is that an opportunity, all the liquids in WCG? Yes, so there are some. We talked about the Cardium today. And so when we're thinking about our focus and where we're going to drill in WCG over the next couple of years, we're going to pursue the liquids piece of that. So we're not taking our spending to zero in Canada, Western Canada. We're spending about --

---

Mark Gilman - *The Benchmark Company - Analyst*

(inaudible question - microphone inaccessible)

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

Oh, a divestment? I missed that. I'm sorry. Will we divest it? I think that any asset we have, if someone's willing to pay us more value than what we see in the asset, we'd be happy to sell it. And I think that we'll just -- everything is for sale in the portfolio.

Mark Gilman - *The Benchmark Company - Analyst*

(inaudible question - microphone inaccessible)

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

Yes. So you go back to this criteria for any asset sale, it's got to bring value to us. It has to be tax-efficient for us. And if it doesn't pass those criteria, we won't do it.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

I don't know on this specific question that Mark has. I don't know if Jeff or Al has any question. Because I know you're pretty familiar with the tax side of Canada.

THOMSON REUTERS

Jeff Sheets - *ConocoPhillips - SVP - Finance, CFO*

It's really a property by property thing, and you can't think of generalizations, how things are structured, can you do things as sale of a partnership interest or sale of a company interest as opposed to sale of an asset. So it's hard to say just categorically that something is tax-efficient or something is not tax-efficient. So it's really a case by case thing, and that's the kind of thing we looking at when it comes to time to do an asset sales to try to drive that tax efficiency we've been talking about.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

That really was our experience at Syncrude. We had a unique asset, highly desired, and we had a way that we could very efficiently sell it. Other questions? I think there's one over here.

Blake Fernandez - *Howard Weil*

I believe this is a question maybe for Willie. Willie, you mentioned the opportunity to barge truck and rail crude presumably away from Cushing. Can you give us an idea of the cost per barrel range on that, which you believe a kind of a more normalized spread between WTI Brent would be? And, Jim, maybe if you have any comments on reversing Seaway? Thank you.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Willie, you can answer the second question as well.

Willie Chiang - *ConocoPhillips - SVP - Refining, Marketing, Transportation and Commercial*

Your question around moving barrels out, I don't have an exact number on the barging cost. I can tell you on the trucking cost, it's about $10 a barrel. But the constraints that we've seen really haven't been dollars, it's actually been the barge or the train or the truck, to be able to move it. And I think if you look at the spread that's between WTI, and I'll just say Brent today, at $15, and you would think if there were available equipment, everything would move. But I think just that fact that we haven't been able to move all the barrel shows that there's a limit of logistics constraints and equipment. The question on Seaway, you know, I've gotten that, you really want me to answer that one, Jim?

Okay. Seaway, the issue there is we have a mid-continent refining center in Ponca City, and we also want crudes that allow us to make what we call "premium coke" at Ponca. So if there's a need for us to bring crudes into the mid-continent, the other piece on it, everyone talks about reversing Seaway as being a very quick solution. And I would tell you that it's not, you can't do it overnight. The timeframe could be six months, it could be a year. The dollars are not free either, it costs money to be able to reverse it.

And so we're looking at that with our partner. But conceptually, you've got to look at other ways -- you know, that you got TransCanada's pipeline that's going to come through Cushing and you have to ask yourself when will that come to fruition from Cushing to the Gulf Coast. I think TransCanada just came out and said that there may be some delays with regulatory approval and they're pushing this back to, at the earliest, probably 2013. So that pushes it back.

But you've also got additional capacity of tankage that's being built in Cushing to the tune of 20 million barrels plus. So you have to factor all those things in. And what we wouldn't want to do is to spend money to reverse seaway, impact the refining capacity and then not have it generate cash back for us for the joint venture seaway or hurt our refining production capabilities.

THOMSON REUTERS

Jim Mulva - *ConocoPhillips - Chairman, CEO*

You know, that brings up TransCanada, the pipeline, coming down where its infrastructure that's well-known, that is really required. It's a good example. You know, we talked frequently over the years, that our country does not have an energy policy. I'd go a little further, the policy is no. They just say no to everything. Because this TransCanada pipeline needs to be built and it's just a good example of its expression of no energy -- and that we don't have an energy -- that it's policy is no to everything.

Our industry feels where you have the technology and the capabilities to get going on exploring in the Gulf of Mexico, with Chuckchi Sea infrastructure, there are so many things. But to get through and getting the permits and essentially when you say we don't have energy policy, all we really have is a policy of saying no, no, and that's really not good for jobs, investment or energy security. So, you know, as a country we've got to turn this thing around. Paul?

Paul Cheng - *Barclays Capital - Analyst*

Thank you, Jim. Paul Cheng, Barclays Capital. Jim, since we're talking about logistics, you've been selling so much in the logistics side but you still quite a lot pipeline and terminal and all that. And while you said your stock has already gone up a lot over the last 12 months. But comparing to what some of the MLP can trade, that it's still very low. So, I mean, you just continue to sell some of the assets. Does it make sense that you look at whether making an MLP out of your logistics systems will perhaps create even better value for the shareholders.

And also that talking about logistics, do you -- adding production from Bakken from Eagle Point and knowing that is just going to just increase quite rapidly. So are you just relying on the industry that to build out the infrastructure, to allow those oil out or that you actively and what step you're taking to ensure that you get the best max (inaudible) in comparison to your competitors in those areas? Thank you.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, I'll just talk around these two questions and then I'll ask Jeff to respond to MLP and then others who ever want to on the evacuation.

Generally, we tend -- I think it's unique by area or whatever the opportunity is, to let others build that, the evacuation capacity. If it's not, then it's really impacting just us, why we obviously would get into spending the money to doing that.

So others on the E&P side can comment on that. But, Jeff, you want to say something on MLP because we have studied MLPs for 20 years and they seem to sometimes and then sometimes not. Yet, on the other hand, we really haven't done much in this regard.

Jeff Sheets - *ConocoPhillips - SVP - Finance, CFO*

Yes. And then we've studied MLPs backwards and forwards the last, you know, like Jim said, 20 years. I mean, we do participate in the MLP market through DCP and midstream and that midstream company has an MLP. So we're very familiar with how the market works.

When we look at it, we think of it, what's the potential source of capital. It's somewhere between debt capital and equity capital. It's not just like issuing equity. We don't think of that. When we think about all of our sources and capitals being a particularly efficient source of capital for a company of our size, I think it makes a lot of sense for smaller companies who may have some constraints on their access to capital. And we don't really see that. And also, when we look at the types of logistics assets that remain in our portfolio, you know, all of our midstream businesses is done in DCP, so there's no midstream asset of any size to put in there.

©2011 Thomson Reuters. All rights reserved. Republication or redistribution of Thomson Reuters content, including by framing or similar means, is prohibited without the prior written consent of Thomson Reuters. 'Thomson Reuters' and the Thomson Reuters logo are registered trademarks of Thomson Reuters and its affiliated companies.

THOMSON REUTERS

We have a few downstream assets, but a lot of our downstream assets which might be an MLP or things that are kind of 100% used by our proprietary systems and there are things that we have a real strategic interest in keeping longer term. So as we look at it, there's not -- we don't think there's really critical mass in our company to create a really strong MLP. So it's not likely to be something that we do going forward.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

In terms of Bakken evacuation, you want to say something, Greg?

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

So I think we have to look at each of these areas on a case by case basis. For instance, Eagle Ford. We're going to lay some backbone infrastructure in Eagle Ford that will allow us to connect to multiple parties. One of our preferred connects will be DCC obviously, our midstream company.

In Bakken, we're taking the approach we're going to connect to multiple people but we're not going to make investment and take away capacity. We don't think it's required in this case. And so we're working with multiple parties to ensure that we can take the capacity weight.

The same thing with the oil sands. You know, take away issues from the oil sands. We're working with our partner Cenovus in developing a holistic transportation strategy. So we make sure that we can get those barrels evacuated out of that area.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Kurt

Kurt Wulff - *McDep LLC*

Thank you, Jim. On transportation capacity and political factors, you've had this Alaskan gas for a long time and dealing with the Alaskan government has been difficult. In the past few weeks the energy picture has changed a little bit with the tragic accident in Japan. And you could make a much stronger case today that we would have thought a few years ago for LNG on the Alaskan coast and sending it to Japan. So that the case for the Alaskan pipeline might be a lot better today than it was a year ago. Can you give us any comment on how do you think the government of Alaska is going to be more helpful in developing that kind of a project?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, it's a -- I'll ask Al to comment here in a moment, his thoughts on this. But it's an indigenous resource. We know that it's been there. It's probably going to be a high cost to the market. We'd like to get it developed, we know Alaska would, but it's going to take some fiscal certainty, maybe some incentives to make this happen. We have and along with other producers up the North Slope, who have looked at certainly a pipeline down the lower 48 or connect a manifold into the lower 48 to the Canadian system.

I think that gas long-term is a real winner but still Alaska is going to be pretty high cost. We have looked at, as the other producers, we looked ourselves at LNG export. So whether that changes and leads to the development of our Salt gas, who knows? Al, you want to make a comment? Oh, I was trying to get you to talk while I'm trying --

THOMSON REUTERS

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, let's go to the next question. I know, Mark, you got your head raised, but I want to get around to everyone else.

Faisal Khan - *Citigroup - Analyst*

As I'm looking through slide 39, it looks like liquids production is relatively flat from 2010 to 2015 and I just suspect that's because you've got a ramp-up in unconventional liquids and the decline in some of your legacy portfolio. But can you give us an idea of how the margin per barrel trends over that timeframe? Are these going to be more profitable barrels on the liquid side in 2015 or roughly the same, all else being equal?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, I don't have the slide in front of me. But I think what you heard from us is we're really driving through not only -- or to improve the returns, meaning the income and the cash per barrel. And I'd like to -- maybe, Jeff, you can comment, or Al, that we are growing in those margins if we self-help, not just through the commodity-price expectation. So, either Al or Jeff, do you want to comment?

Al Hirshberg - *ConocoPhillips - SVP - Planning and Strategy*

If you go through all the other pages that are in here and all the data on cash margins the E&P guy showed you, you can piece together pretty well the answer to your question of how we expect to see -- that it's really two parts.

First, is that the volumes and the areas that we're growing, we showed you the 2010 cash margin. So without any improvement, what we've made last year from those areas and what you'll notice is all the areas where we're growing volumes, the cash margins last year were higher than the corporate average. And the areas where volumes are shrinking like US gas, for example, over the next few years, is where we have cash margins at 2010 that were lower than the corporate average. So you can do the math from there.

But in addition, we talked about all of things that we're doing so that forward margins from self-help initiatives will be better than the 2010 margins. Greg mentioned, for example, the dramatic reductions we had in drilling cost in several of the unconventional areas, those sorts of things.

So in addition to any increase in realizations that you might assume, it will obviously also improve cash margins. We've got a lot going on in the self-help arena too. So those two factors together should significantly improve our returns going forward.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, next?

Iain Reid - *Jefferies International*

I've got a couple of questions about Australia. Is it possible to say on the Sinopec divestment what you realized from that and how we should think about that relative to your entry cost into APL&G?

THOMSON REUTERS

And secondly, on Poseidon, you saw that's commercial now. Can you give us some idea of what the resource is now, Matt, and how the Browse getting going as a project. Do you intend to try and utilize that with Browse or do you have another development scheme in mind?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, Ryan, you want to address those questions?

Ryan Lance - *ConocoPhillips - SVP - Exploration & Production International*

Yes. So the first question on APL&G, we have signed the contract with Sinopec and sold a 15% equity and sell that first trade and gas. Unfortunately, we can't talk specifically about how much we sold the equity for nor the gas prices. The terms and conditions of that contract still remain confidential until we take FID later this year. So it will be some time before we can potentially talk a little bit more about it, we can't today.

On the barrels, when Larry mentioned commerciality, what he meant was that an important part of the Plover and in that part of the world is making sure that Plover can produce at commercial quantities. So we had to -- as our road test of the opportunity and the discovery there, what we learned was pretty important is that we can get commercial flow rates out of the wells.

We haven't declared commerciality in terms of meeting our minimum size. We have more exploration and appraisal to do in the area before we've met up by resource size that we think is sufficient to launch the project. So we still have some more appraisal to do on the field. So the commerciality was, with respect to the Plover, can floor commercial rates of gas.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, next question?

Kate Lucas - *JP Morgan*

In looking at your long-term production growth rate of 2% to 3%, can you talk a little bit about how much of that is contingent on the resumption of activity in North America natural gas and then how much of it would be contingent on exploration success in new areas? And then to the latter, how soon would you need t see some success in your exploration program in order to be sure that you've kind of backfilled the projects late? Thanks.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Well, I think -- and others should get ready to comment -- but in terms of our growth rates in our production levels over the next five years, we're really not assuming anything from exploration success. That we don't already have and factored in. The others want to speak and address to the questions?

Greg Garland - *ConocoPhillips - SVP - Exploration & Production Americas*

2013, really, gas is going to be declining in our portfolio. As we start moving out to 2015, you can see Al talk about it, we see price expectations kind of in the $5, $6, $7 range. As it starts going above $5, then we'll start reengaging. And so you'll see gas start being a more important component in terms of the forward look. But clearly, you know, the oil sands and the shale plays for the first two or three years are going to be the big part of driving the liquids area.

THOMSON REUTERS

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, two more questions. Way in the back.

Elias Palacios - *Maxim Group*

Thank you. This is Elias Palacios with Maxim Group. A question about LNG, what is your -- can you come under interest to expanding your footprint there in various regions whether it's in liquefaction or regasification or even participation in the spots market?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay. Our participation, we like LNG projects and I think that was one of your questions, if we've got the right resource, a good resource, we feel that we've got the technology and the transportation capability, we can get to the market. I don't know if, Ryan, you want to say anything to that?

Ryan Lance - *ConocoPhillips - SVP - Exploration & Production International*

No, I think Jim is right. We enjoyed the cascade technology that we use. It's pretty efficient. It's low-cost. It's very fit for purpose for multiple different applications. That these are large projects, they do require contracts to underpin the risk associated with developing these projects. So we still like the contract, but I think Willie can comment. I think we have aspirations too to increase our exposure to the spot sales and the marketing of LNG as well. So as we grow their equity position, our supply position, that's going to lead to new opportunities for us on the commercial side as well.

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, Willie. Is that -- okay, one last question anyone? Okay, Mark, you get it.

Mark Gilman - *The Benchmark Company - Analyst*

Thanks, Jim. Since the DCP and CPChem joint ventures were created, the industry environment, to say the least, has changed rather dramatically from the chemical side at least for the time being anyway, creating considerable advantage as opposed to disadvantage for gas-based feed stocks.

In terms of the DCP side, as I think your colleagues alluded to with the changes in the distribution framework, if you will, within North America, there's a significant opportunity set that is now in place that was probably not in place at the time the joint ventures were created. I'm wondering how well those structures -- and I'm not just speaking about MLP -- those structures serve would you believe to be the Company's best long-term interest as we go forward?

Jim Mulva - *ConocoPhillips - Chairman, CEO*

Okay, let's talk about the chemical joint venture that we have with Chevron. It's -- you know, several years ago, we felt that we are very disadvantaged with a lot of our capacity in North America. There was natural gas, ethane and propane drive for the chemical business that's why we went to the Mid East. We had access to whole cross-feed stock, did not access the new low cost feedstock. Really plentiful availability in the Middle East in terms have changed at lot on the loan availability, but we got into the ground floor in chemical business in the Middle East and we've really got a great position.

THOMSON REUTERS

But what has turned around is, you know, the chemical business, and you might argue, to some extent the oil cross-feed stock sources in North America, so it has changed pretty dramatically. So from a chemical point of view, ourselves and Chevron, we're very supportive of our chemical company to really grow and develop it. The other aspect, if you could step back and say and look at this business and say, well, if you're a producer, you can also participate as a user of gas. So you kind of had your balance naturally to businesses, you are in, by being a producer versus you as a consumer of natural gas.

So we really like the chemical business. It doesn't represent a big part of our portfolio, but it's an incredible contributor of cash. Cash doesn't go to it, it just comes one way. And I know Chevron feels the same way. The midstream business, we're good at it. They're aggressive, they've got a great team. To try to do with anything with our midstream joint venture would be very tax inefficient. And to some extent, the chemicals, the same way, but the midstream joint venture, very tax efficient.

So what you see, our participation, we really like our joint ventures in midstream and chemicals. And we are encouraged and supporting them through our board participation to aggressively grow. So that completes our story and the messages today. And I very much appreciate everyone who has participated with us this morning here in New York as well as all those on the webcast. Our team is still here, so any questions that you may have, come up and talk with members of our team. And those who are participating by webcast can always come in by email and submit your questions or whatever. So thank you very much for being with us here this morning.

CAUTIONARY STATEMENT FOR THE PURPOSES OF THE "SAFE HARBOR" PROVISIONS OF THE PRIVATE SECURITIES LITIGATION REFORM ACT OF 1995

This transcript contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbors created thereby. Forward-looking statements relate to future events and anticipated results of operations, business strategies, and other aspects of our operations or operating results. In many cases you can identify forward-looking statements by terminology such as "anticipate," "estimate," "believe," "continue," "could," "intend," "may," "plan," "potential," "predict," "should," "will," "expect," "objective," "projection," "forecast," "goal," "guidance," "outlook," "effort," "target" and other similar words. However, the absence of these words does not mean that the statements are not forward-looking. Where, in any forward-looking statement, the company expresses an expectation or belief as to future results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, there can be no assurance that such expectation or belief will result or be achieved. The actual results of operations can and will be affected by a variety of risks and other matters including, but not limited to, crude oil and natural gas prices; refining and marketing margins; potential failure to achieve, and potential delays in achieving, expected reserves or production levels from existing and future oil and gas development projects due to operating hazards, drilling risks, and the inherent uncertainties in interpreting engineering data relating to underground accumulations of oil and gas; unsuccessful exploratory activities; potential disruption or unexpected technical difficulties in developing new products and manufacturing processes; potential failure of new products to achieve acceptance in the market; unexpected cost increases or technical difficulties in constructing or modifying company manufacturing or refining facilities; unexpected difficulties in manufacturing, transporting or refining synthetic crude oil; international monetary conditions and exchange controls; potential liability for remedial actions under existing or future environmental regulations; potential liability resulting from pending or future litigation; limited access to capital or significantly higher cost of capital related to illiquidity or uncertainty in the domestic or international financial markets; and general domestic and international economic and political conditions; as well as changes in tax, environmental and other laws applicable to our business. Other factors that could cause actual results to differ materially from those described in the forward-looking statements include other economic, business, competitive and/or regulatory factors affecting our business generally as set forth in our filings with the Securities and Exchange Commission (SEC). Unless legally required, ConocoPhillips undertakes no obligation to update publicly any forward-looking statements, whether as a result of new information, future events or otherwise.

This transcript includes certain non-GAAP financial measures. Such non-GAAP measures are intended to supplement, not substitute for, comparable GAAP measures. Investors are urged to consider closely the GAAP reconciliation tables provided in the Appendix or on our website at www.conocophillips.com.

DISCLAIMER

Thomson Reuters reserves the right to make changes to documents, content, or other information on this web site without obligation to notify any person of such changes.

In the conference calls upon which Event Transcripts are based, companies may make projections or other forward-looking statements regarding a variety of items. Such forward-looking statements are based upon current expectations and involve risks and uncertainties. Actual results may differ materially from those stated in any forward-looking statement based on a number of important factors and risks, which are more specifically identified in the companies' most recent SEC filings. Although the companies may indicate and believe that the assumptions underlying the forward-looking statements are reasonable, any of the assumptions could prove inaccurate or incorrect and, therefore, there can be no assurance that the results contemplated in the forward-looking statements will be realized.

THE INFORMATION CONTAINED IN EVENT TRANSCRIPTS IS A TEXTUAL REPRESENTATION OF THE APPLICABLE COMPANY'S CONFERENCE CALL AND WHILE EFFORTS ARE MADE TO PROVIDE AN ACCURATE TRANSCRIPTION, THERE MAY BE MATERIAL ERRORS, OMISSIONS, OR INACCURACIES IN THE REPORTING OF THE SUBSTANCE OF THE CONFERENCE CALLS. IN NO WAY DOES THOMSON REUTERS OR THE APPLICABLE COMPANY ASSUME ANY RESPONSIBILITY FOR ANY INVESTMENT OR OTHER DECISIONS MADE BASED UPON THE INFORMATION PROVIDED ON THIS WEB SITE OR IN ANY EVENT TRANSCRIPT. USERS ARE ADVISED TO REVIEW THE APPLICABLE COMPANY'S CONFERENCE CALL ITSELF AND THE APPLICABLE COMPANY'S SEC FILINGS BEFORE MAKING ANY INVESTMENT OR OTHER DECISIONS.

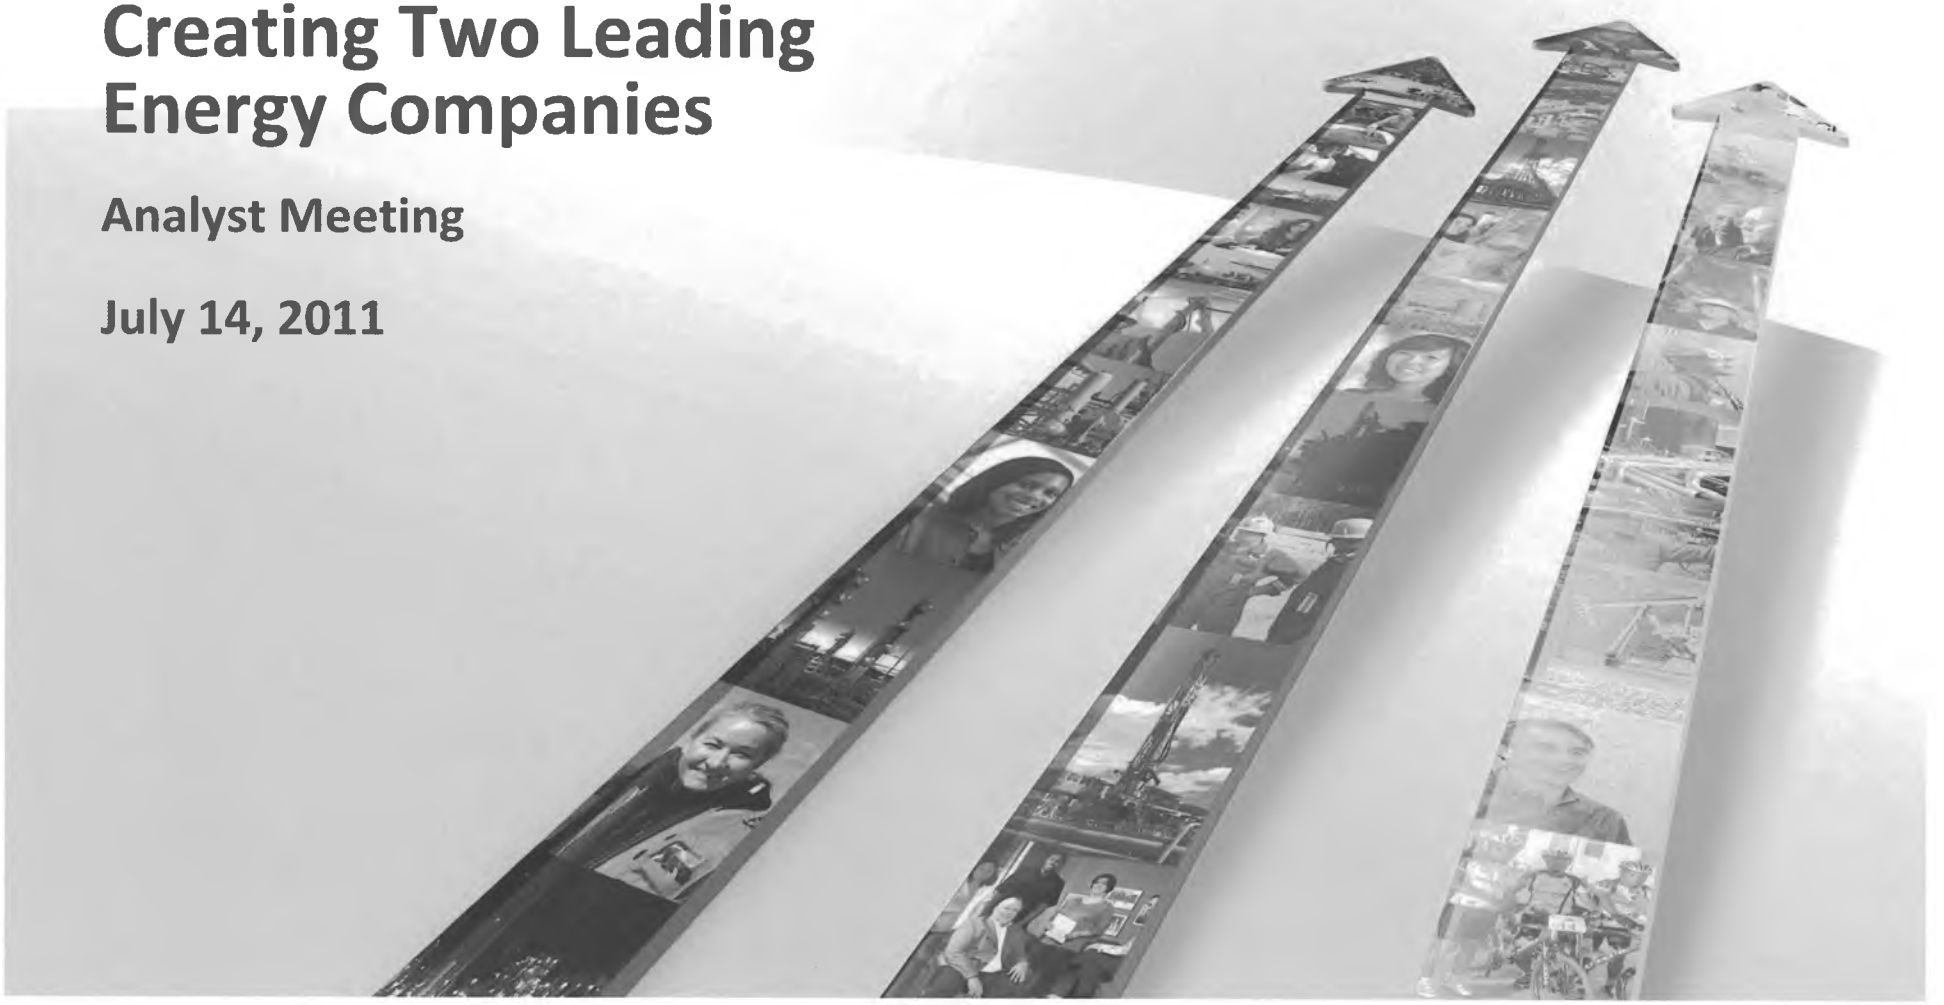
ConocoPhillips

Creating Two Leading Energy Companies

Analyst Meeting

July 14, 2011



Cautionary Statement

ConocoPhillips

FOR THE PURPOSES OF THE "SAFE HARBOR" PROVISIONS OF THE PRIVATE SECURITIES LITIGATION REFORM ACT OF 1995

The following presentation includes forward-looking statements. These statements relate to future events, such as anticipated revenues, earnings, business strategies, competitive position or other aspects of our operations or operating results. Actual outcomes and results may differ materially from what is expressed or forecast in such forward-looking statements. These statements are not guarantees of future performance and involve certain risks, uncertainties and assumptions that are difficult to predict such as oil and gas prices; refining and marketing margins; operational hazards and drilling risks; potential failure to achieve, and potential delays in achieving expected reserves or production levels from existing and future oil and gas development projects; unsuccessful exploratory activities; unexpected cost increases or technical difficulties in constructing, maintaining or modifying company facilities; international monetary conditions and exchange controls; potential liability for remedial actions under existing or future environmental regulations or from pending or future litigation; limited access to capital or significantly higher cost of capital related to illiquidity or uncertainty in the domestic or international financial markets; general domestic and international economic and political conditions, as well as changes in tax, environmental and other laws applicable to ConocoPhillips' business and other economic, business, competitive and/or regulatory factors affecting ConocoPhillips' business generally as set forth in ConocoPhillips' filings with the Securities and Exchange Commission (SEC).

Historical Strategy

ConocoPhillips

- **Key Premises**
  - Integration creates value
  - Scale and scope needed to compete
  - Growth in hydrocarbon demand
  - Resource capture will be more difficult and expensive

- **Execution**
  - Positioned each business line to compete effectively
    - E&P, R&M, Midstream and Chemicals
  - Quality assets – but portfolio optimization needed
  - M&A integration and cost synergies captured

Led to significant value creation

Current Focus

ConocoPhillips

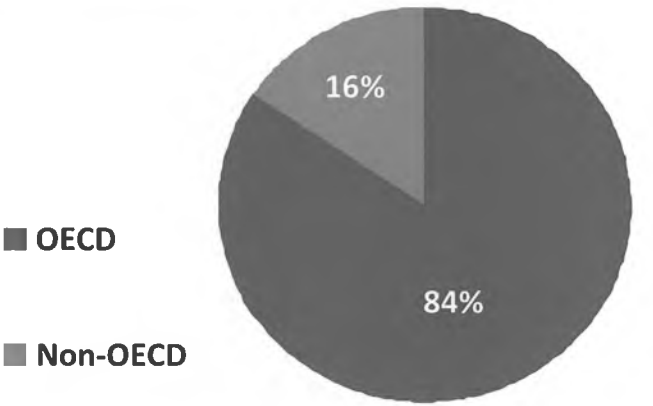
ROCE improvement

Margin enhancement

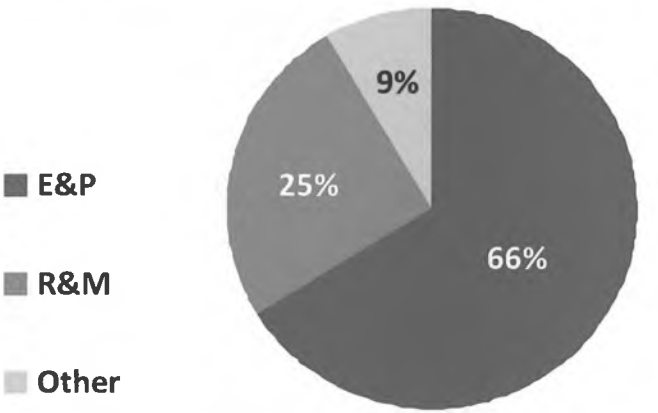
Per share growth

Shareholder distributions

Cash from Operations



$92 B Capital Employed



Increasing shareholder value

2010 cash from operations and average capital employed. Corporate capital employed distributed across segments.

Current Strategic Objectives

ConocoPhillips

- **Improve ROCE**
  - Expand margins per BOE
  - Maintain capital discipline
  - Portfolio optimization
- **Grow per share**
  - Reserves and production
  - Earnings and cash flow
- **Increase distributions**
  - Annual dividend increases
  - Share repurchases

Creating shareholder value

Key 2011 / 2012 Initiatives

ConocoPhillips

- Disciplined $28 B capital program
- Additional $5-10 B in asset sales
- $10+ B in share repurchases
- 100%+ reserve replacement
- Reduce refining capacity

Improve ROCE

Strategy Assessment

ConocoPhillips

- **Integrated Strategy has been effective**
  - Increased reserves and production
  - Generated competitive shareholder returns
- **Environment has changed**
  - Downstream capability not key to resource access
  - Resource Nationalism and NOC competition
  - Movement to "service" agreements
- **Value of IOC assets not reflected in equity value**
  - Transparency and potential of businesses not as clear as pure plays
  - Increasingly difficult to create differential value to larger Integrateds
  - Emphasis on additional volumes not always value creating

Continually testing and assessing execution of strategy

Transaction Summary

ConocoPhillips

- Pursuing tax free spin of Downstream business
- New independent pure-play publicly-held Downstream company
- ConocoPhillips becomes leading pure-play E&P company
- Expect transaction completion in first half 2012

Creates two strong independent companies

Strategic Rationale

ConocoPhillips

- **Create two profitable and independent companies**
  - E&P Strategy unchanged
  - Downstream given opportunity to add value through portfolio optimization
- **Greatest opportunity to create differential value**
  - Independent but consistent strategies
  - Both companies continue to benefit from size and scale
  - Both companies to have strong financial flexibility
  - Transparency of pure play over integrated business model
  - Management focus
  - Ability to attract and retain talent

New ConocoPhillips Description

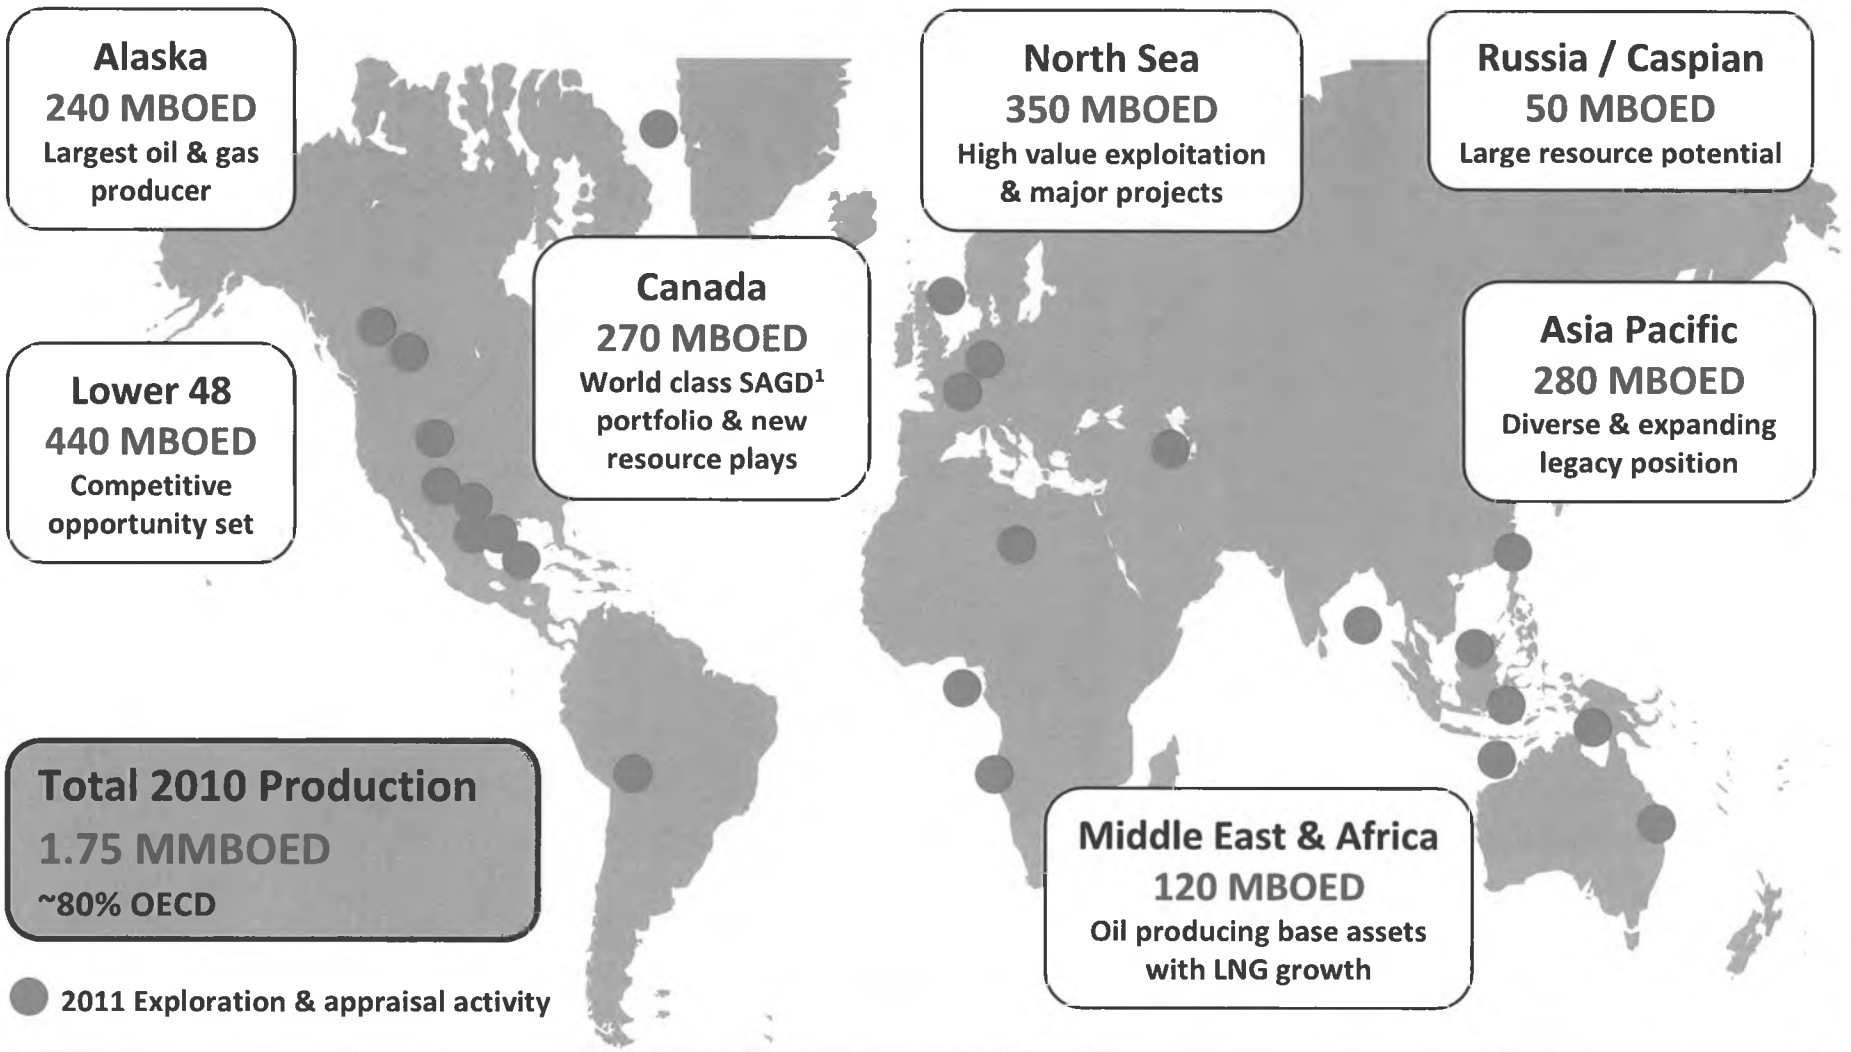
ConocoPhillips

- **Largest U.S. pure-play E&P company**
  - 1.7 MM BOED 2011 production
  - 8.5 B BOE reserves / 43 B BOE captured resource
  - Strong OECD position
- **Financial and technical capability on par with larger integrated majors**
- **No change in upstream strategy**
  - Improve ROCE
  - Per share growth in production and reserves
  - Complete portfolio strengthening
  - Capital discipline
  - Competitive F&D
  - Improve margins per BOE

Asset disposition and share repurchase plans unchanged

E&P Overview

ConocoPhillips



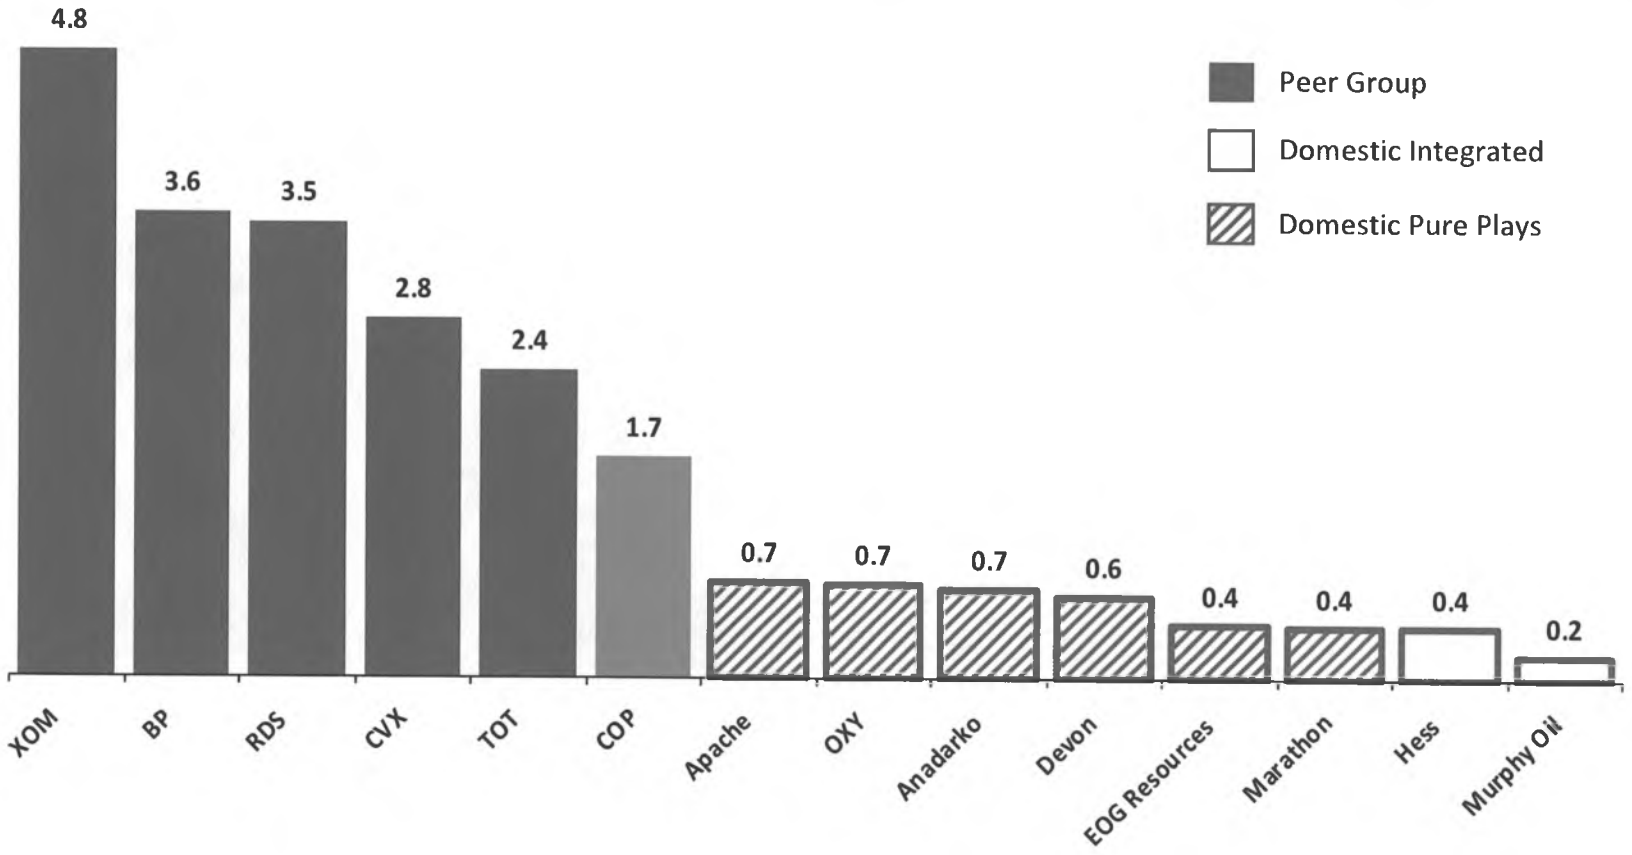
International growth opportunities underpinned by OECD position

[1] Steam Assisted Gravity Drainage

ConocoPhillips Production

ConocoPhillips

Q1 2011 Worldwide Production - MMBD

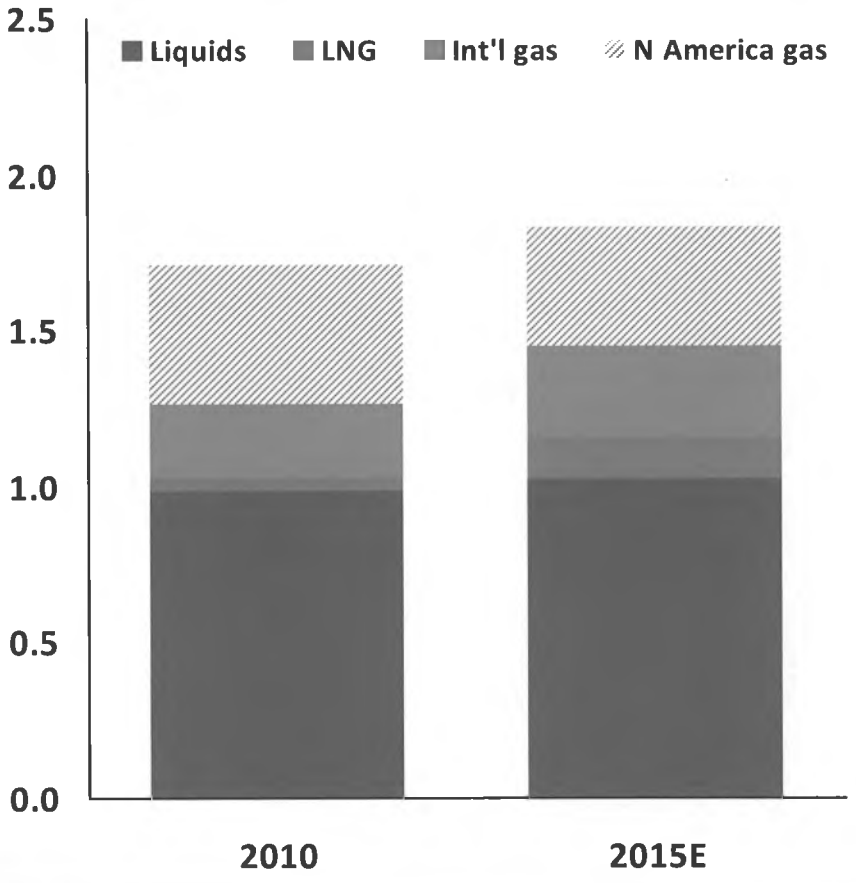


Source: Company reports

Production Outlook

ConocoPhillips

Production by Product - MMBOED



Sources of Growth

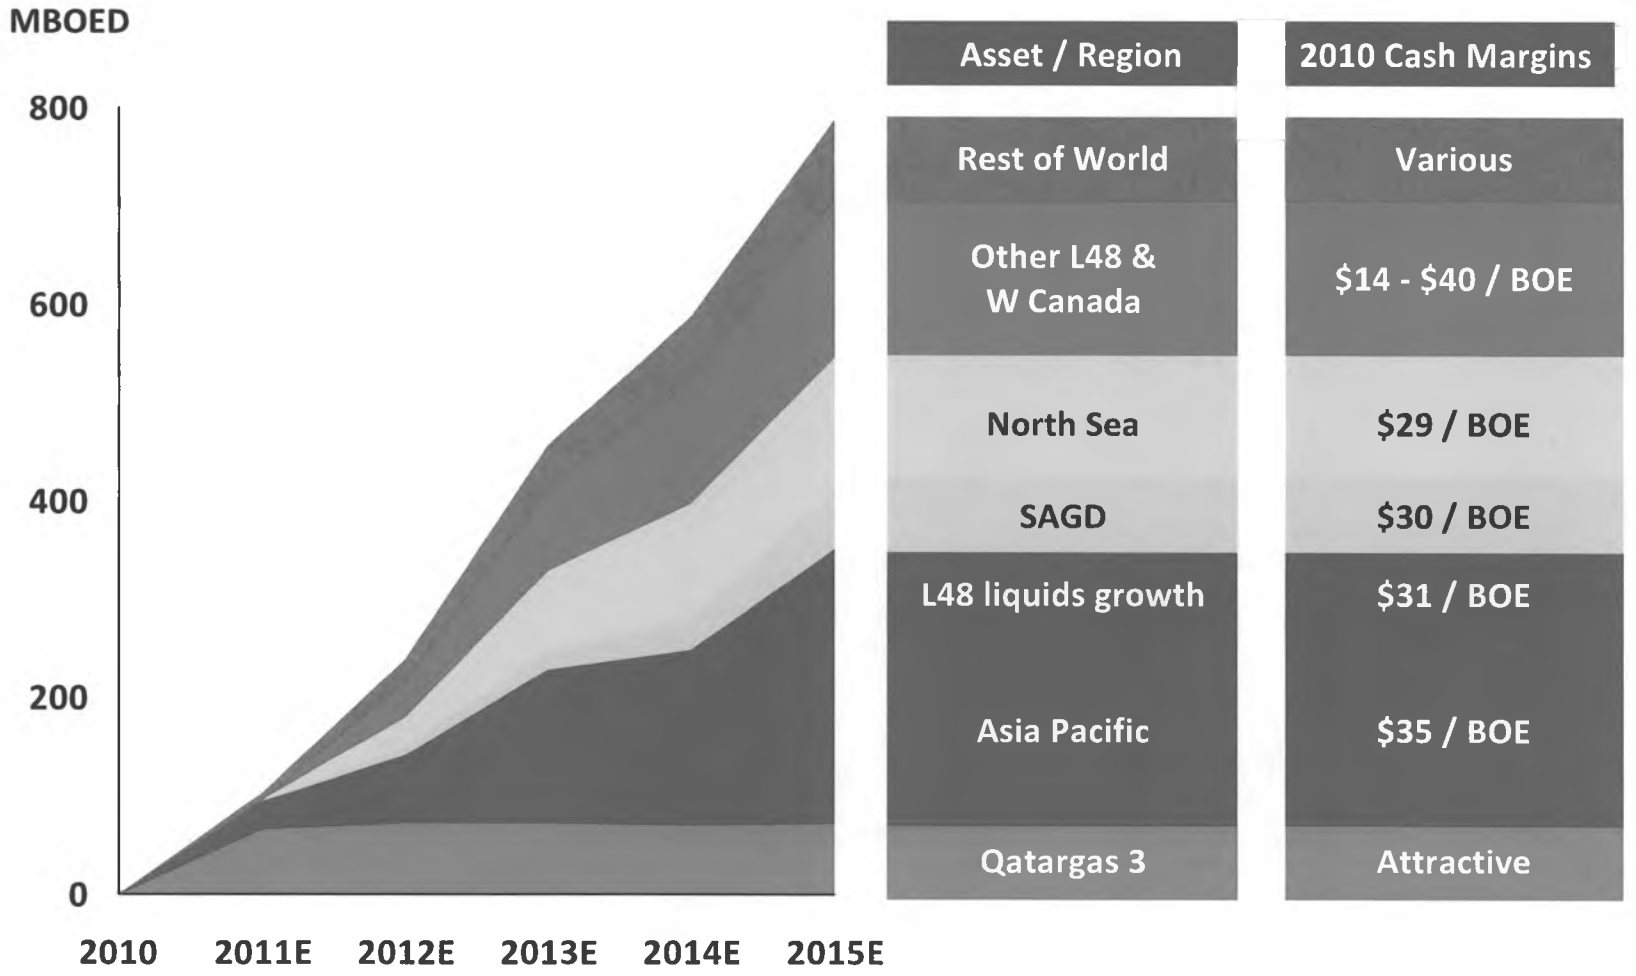
- **Asia Pacific**
  - APLNG, Malaysia, Indonesia
- **North Sea**
  - Jasmine, Clair, Ekofisk, Eldfisk
- **Caspian**
  - Kashagan
- **L48 liquids**
  - Eagle Ford, Bakken, Barnett, Permian
- **Canada SAGD**
  - FCCL, Surmont

Strong portfolio of investments leads to production growth

Excludes impact of future dispositions.

2011-2015 New Production

ConocoPhillips

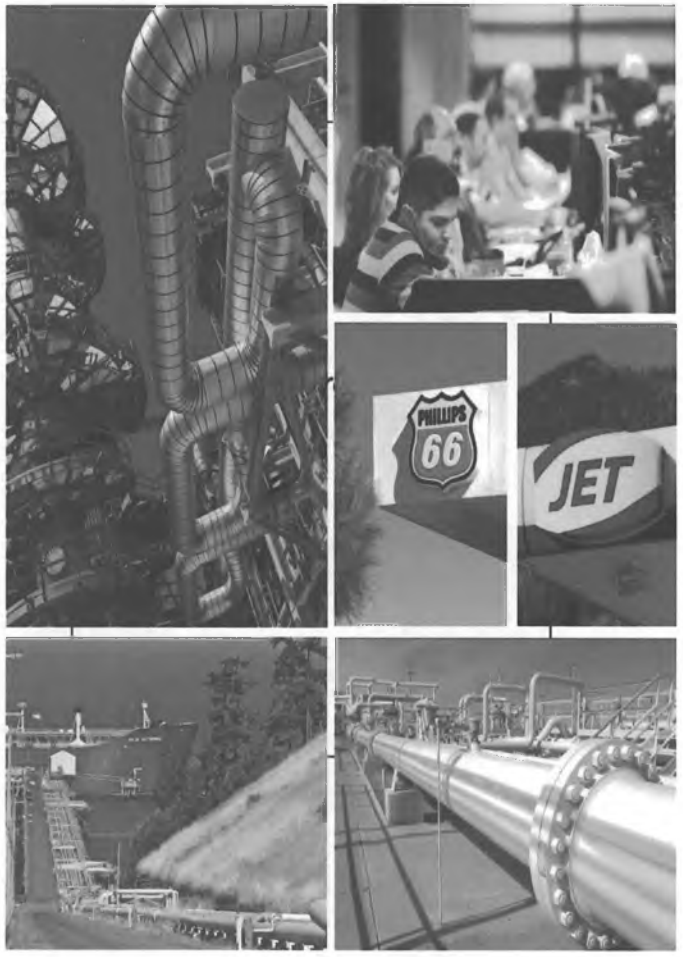


Improving margins through major projects and exploitation

New Downstream Company

ConocoPhillips

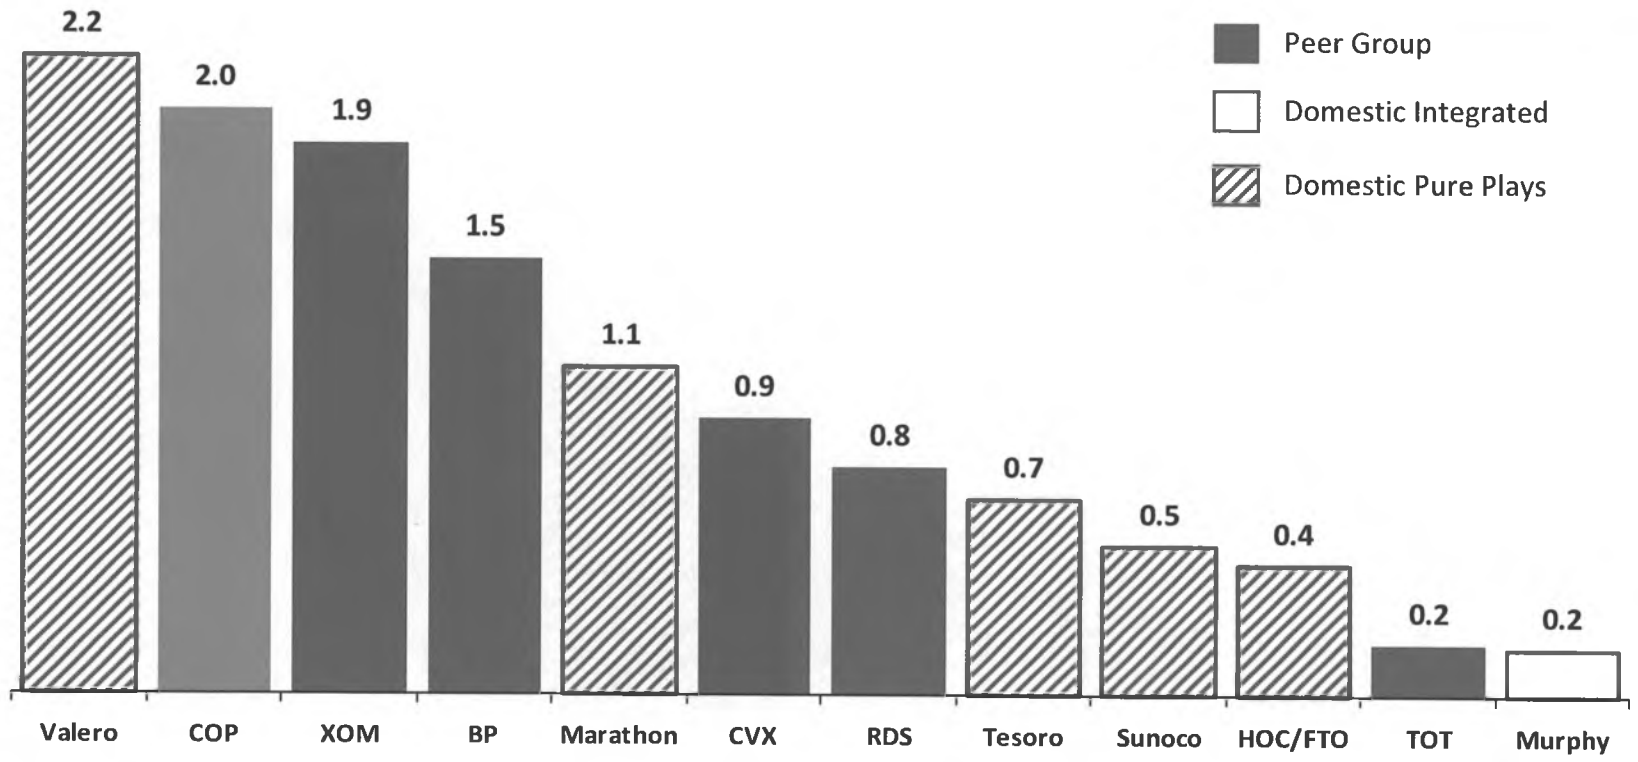
- **Global Refining & Marketing leader**
  - 2.4 MM BPD worldwide refining capacity
  - Low cost, integrated Marketing and Transportation
  - 2 MM BPD domestic capacity
    - Significant position in mid-continent
    - Exposure to all PADDs
- **Strong investment grade credit with significant financial flexibility**
- **Strategy focused on value creation**
  - Improve ROCE to mid-teens
  - Sell or joint venture less competitive assets
  - Disciplined reinvestment of free cash flow
  - Competitive shareholder distributions
  - Earnings and cash flow growth potential
  - Operating excellence



U.S. Refining

ConocoPhillips

Q1 2011 U.S. Refining Capacity - MMBD



Leading domestic refining company with portfolio of top quartile assets

Source: Company reports

Downstream ROCE Improvement

ConocoPhillips

- Selective asset sales
- Finalization of Wood River CORE project
- Capital discipline
  - Implementing selective high return projects
- Optimization initiatives
  - Increase utilization and clean product yield
  - Lower cost structure
  - Capture feedstock advantage

Generate mid-teens returns and free cash flow

Key Milestones

ConocoPhillips

- Detailed separation planning followed by IRS tax ruling request
- Announcement of new board and leadership teams
- Favorable IRS ruling
- Final COP Board approval
- Expected closing first half of 2012

Delivering Shareholder Value

ConocoPhillips

Continued asset sales

Strong OECD-based cash flow

Enhanced queue of growth projects

Disciplined capital investment

Strengthened portfolio

- 100%+ reserves replacement
- Production per share growth
- Improved returns
- EPS/CFPS growth
- Increased distributions

Restructuring consistent with commitment to shareholder returns

SB 192 (FILE 2) AMENDMENTS AND ANALYSIS

<TARGET><BILL>SB 192</BILL><SUBJECT>SB 192 (FILE 2) AMENDMENTS AND ANALYSIS</SUBJECT><COMM>SRES27</COMM></TARGET>

Senate Resources Committee

SB192 Amendments

Jeff Stepp, Office of Senator Paskvan

Simple Bracketed Progressivity Example

The following example takes the PTV for FY 2012 from the Fall 2011 Revenue Sources Book and calculates the severance taxes levied and the nominal rate under amendments B.4 and B.5. Note: The tax levied, and nominal rates under B.4 and B.5 are the same because the PTV is not high enough to trigger the additional brackets added by amendment B.4.

ANS Oil Price $109.33
Production Tax Value $75.98
*Source: Fall 2011 Revenue Sources Book p. 103

	Tax Rate	Tax Levied
Base Tax	25%	$19.00
Progressive Tax	18.40%	$13.98
Brackets		
30-42.50	2.50%	$0.31
42.50-55.00	7.50%	$0.94
55.00-67.50	12.50%	$1.56
67.50-80.00	17.50%	$1.48
80-92.50	22.50%	NA
92.50-105.00	25%	NA
105-117.50	30%	NA
Above 117.50	35%	NA
Total		$4.30

Amendment Progressive Tax Rate	5.65%
Amendment Nominal Tax Rate	30.65%
ACES Progressive Tax Rate	18.40%
ACES Nominal Tax Rate	43.40%

Prepared by Michael Pawlowski, Aide to Senator McGuire
Feb. 25, 2012

DRAFT — Prepared as Draft by Dept. of Revenue

Amendment 27-LS1305\M.14 – Bullock 2/21/12

- Tax rate is changed to use bracketed progressivity.
- The tax rates under the amendment are bracketed and only the increment of production tax value (PTV) within each bracket is taxed at that bracket's rate. The brackets range from 25% for PTV up to $30 per barrel to 60% for PTV over $117.50 per barrel. The maximum total production tax rate is 60%. The effective date of this provision is 1/1/2013.
- Same rates as HB 110 for existing production, with two additional brackets added: 55% for PTV from $105 to $117.50 / barrel, and 60% for PTV over $117.50 / barrel.
- No distinction between existing units and "new" production
- Under our Fall 2011 forecast assumptions, the addition of the 2 additional brackets would have NO CHANGE on revenue this decade compared to bracketing with a 50% maximum rate, because our forecast prices and production tax values are expected to be below $92.50 each year. We are forecasting PTV per taxable barrel in the $65-$70 range over this time period.
- The following presents the estimated fiscal impact, based on Fall 2011 forecast assumptions and no change in production.

Fiscal Year	Revenue Impact ($ millions)
FY 2013*	($700)
FY 2014	($1,300)
FY 2015	($1,100)
FY 2016	($1,150)
FY 2017	($1,050)
FY 2018	($1,150)

*provisions in place for half of FY 2013

CS FOR SENATE BILL NO. 192(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RESOURCES COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act relating to the oil and gas production tax; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.55.011(g) is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2) **for a** [PER] BTU equivalent barrel of the taxable oil and gas is more than $30, the amount of tax for purposes of (e)(2) of this section is determined by multiplying the monthly production tax value of the taxable oil and gas produced during the month by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value **for a** [PER] BTU equivalent barrel of the taxable oil and gas for the month is not more than **$101.43** [$92.50], the tax rate is **0.35** [0.4] percent multiplied by the number that represents the difference between that average monthly production tax value **for a** [PER] BTU equivalent barrel and $30; or

(2) if the producer's average monthly production tax value **for a** [PER]

BTU equivalent barrel of the taxable oil and gas for the month is more than **$101.43** [$92.50], the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the average monthly production tax value **for a** [PER] BTU equivalent barrel and **$101.43** [$92.50], except that the sum determined under this paragraph may not exceed **35** [50] percent.

*** Sec. 2.** This Act takes effect January 1, 2013.

ALASKA STATE LEGISLATURE

Senate Bipartisan Working Group

Press Release

For Immediate Release: February 24, 2012

Senate Bipartisan Working Group Principles on Oil Development

Group issues statement as members begin discussions on amending Senate Bill 192

JUNEAU- To clarify our objectives, the Senate Bipartisan Working Group has developed the following statement as members begin discussions on how to amend Senate Bill 192 in the Senate Resources Committee today at 3:30pm:

- **We Want**
  - Increased Oil Production
  - More Jobs for Alaskans
  - Sustainable State Revenue Over the Long Term

- **We Believe**
  - Alaska's oil profits ***must*** be shared fairly between industry and the State across a wide range of oil prices, geologies, and viscosities
  - Any significant reduction to Alaska's current share of oil profits ***must*** directly induce commercial investment, increase oil production, and create a competitive investment environment
  - Industry and the State ***must*** work in partnership to recruit, train, and hire more Alaska residents
  - Factual evidence and analysis ***must*** guide our debate

###

Senate Resources Committee
Joe Paskvan, Co-Chair / February 24, 2012

Let's call the meeting to order.

Let the record reflect that it is _____ p.m. on Friday, February 24.

Let the record reflect that there is a quorum. Present are

- Co-Chair Wagoner
- Senator Stedman
- Senator Stevens
- Senator Wielechowski
- Senator French
- Senator McGuire
- And myself, Senator Paskvan

During this hearing, the Senate Resources Committee will first adopt a Committee Substitute for Senate Bill 192 which relates to the Oil and Gas Production Tax Rates.

We will also begin to hear the amendments that are being proposed by the Committee members. Today and tomorrow at 1pm, the amendments will be discussed conceptually. This will be an open and transparent process. There will be no motion to move an amendment there will be no vote on any amendment, either today or tomorrow. After additional consideration and discussion, amendments may or may not be included in a forthcoming CS.

I have not asked the Administration to prepare an analysis of any of these amendments, at this time.

I have reviewed the amendments and very much appreciate the dedication and effort displayed by the Committee members. The ideas that we will hear are interesting and have merit. Ultimately, we are required to determine what legislation will advance from this Committee and I look forward to an informative dialogue for the next couple of days.

Let me begin by presenting the Committee Substitute for Senate Bill 192.

May I please have a motion to bring the CS for SB 192, Version B, before this Committee?

MEMORANDUM February 24, 2012

SUBJECT: Amendments received for SB 192 now drafted for CSSB 192(RES), draft version B (Work Order Nos. 27-LS1305\B.1 - B.16)

TO: Senator Joe Paskvan
Chair of the Senate Resources Committee
Attn: Jeff Stepp

FROM: Donald M. Bullock Jr.
Legislative Counsel
and
Emily Nauman
Legislative Counsel

You have a draft version of CSSB 192(RES), Work Order No. 27-LS1305\B. The previous version of the bill, the introduced version, is SB 192, Work Order No. 27-LS1305\M. Sixteen amendments were filed with you in preparation for the Senate Resources Committee meeting today, February 24, 2012 at 3:30 p.m. We understand you may introduce CSSB 192(RES), draft version B as the committee's working draft.

Today we reviewed the list of amendments that had been submitted to you that were prepared to SB 192. To facilitate the work of the committee and in consultation with you, the amendments that you have in your possession have been redrafted to amend CSSB 192(RES), draft version B. Because you may not request that an amendment be drafted for another member of the legislature without his or her consent, the enclosed amendments are blank where the name of the sponsor would normally appear.

Therefore, to assist the committee and the Senators that have provided you with the amendments for the original version of the bill, the table below lists the work order for each amendment as drafted to SB 192 and the new work order number for the same amendment as drafted to CSSB 192(RES), draft version B. There are no substantive changes in the amendments to the CS; however, each amendment now is identified as an amendment to the CS, and page and line numbers referenced in the amendments have been changed as necessary.

The list below does not include the names of the sponsors that submitted the amendments for SB 192. You may wish to distribute the new amendments to each sponsor after CSSB 192(RES), draft version B is adopted as the working draft for the committee. It

would be helpful if the sponsors had time to look at the new versions of the amendments to ensure that they are satisfied with the new version and to add each sponsor's name.

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1, following "**tax;**":

Insert "**establishing the Oil and Gas Competitiveness Review Board;**"

Page 2, following line 5:

Insert new bill sections to read:

"*** Sec. 2.** AS 44.99 is amended by adding new sections to read:

Article 6. Oil and Gas Competitiveness Review Board.

Sec. 44.99.600. Oil and Gas Competitiveness Review Board established. (a) The Oil and Gas Competitiveness Review Board is established.

(b) The board shall consist of nine members as follows:

(1) one senator appointed by the president of the senate;

(2) one representative appointed by the speaker of the house of representatives;

(3) five members of the public appointed by the governor, including one member who is a petroleum engineer, one member who is a geologist, one member who is an economist, and one member who is a member of an environmental or conservation group;

(4) the commissioner of natural resources or the commissioner's designee; and

(5) the commissioner of revenue or the commissioner's designee.

(c) The senator and representative appointed to the board under (b)(1) and (2) of this section shall be cochairs.

(d) Each legislative member serves for the duration of the legislature during

which the member is appointed. Each public member serves for three years. An individual who has served on the board may be reappointed.

(e) A vacancy on the board shall be filled in the manner of the original appointment.

(f) A member of the board may be removed and replaced at the discretion of the person appointing that member.

(g) The public members of the board serve without compensation but shall receive per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

(h) The board may enter into contracts for professional services and may employ staff for administrative support for the board.

Sec. 44.99.610. Duties. The duties of the board include the following:

(1) review historical, current, and potential levels of investment in the state's oil and gas sector;

(2) identify factors that affect investment in oil and gas exploration, development, and production in the state, including tax structure, rates, and credits; royalty requirements; infrastructure; workforce availability; and regulatory requirements;

(3) review the competitive position of the state to attract and maintain investment in the oil and gas sector in the state as compared to the competitive position of other regions with oil and gas resources;

(4) in order to facilitate the work of the board, establish procedures to accept and keep confidential information that is beneficial to the work of the board, including the creation of a secure data room and confidentiality agreements to be signed by individuals having access to the confidential information;

(5) make written findings and recommendations, together with suggested legislation, to the Alaska State Legislature before December 1 of each year, or as soon thereafter as practicable, regarding

(A) changes to the state's regulatory environment that would be conducive to encouraging increased investment while protecting the interests of the people of the state and the environment;

(B) changes to the state's fiscal regime that would be conducive to increased and ongoing long-term investment in and development of the state's oil and gas resources; and

(C) alternative means for increasing the state's ability to attract and maintain investment in and development of the state's oil and gas resources.

Sec. 44.99.620. Information to be provided to board. (a) The commissioner of natural resources, the commissioner of revenue, the commissioner of environmental conservation, and other commissioners and state agencies that have responsibility for and maintain information related to oil and gas investment and activity in the state shall, at the request of the board, provide information required by the board to carry out the duties described in AS 44.99.610.

(b) At the request of the board, and except for information that is confidential under AS 43.05.230, a commissioner may disclose to the board information that is otherwise confidential after each member of the board and each staff member for the board with access to the information signs a confidentiality agreement prepared by the commissioner making the disclosure. Information that is confidential under AS 43.05.230 may not be disclosed to the board.

Sec. 44.99.630. Definition. In AS 44.99.600 - 44.99.630, "board" means the Oil and Gas Competitiveness Review Board.

*** Sec. 3.** AS 44.99.600, 44.99.610, 44.99.620, and 44.99.630 are repealed June 30, 2021."

"* **Sec. 2.** AS 43.55.011 is amended by adding a new subsection to read:

(p) For a calendar year after 2013, the $30 amount in (g) of this section shall be adjusted by the commissioner as soon as practicable before the start of the calendar year for which the tax will be determined according to changes in the Consumer Price Index for all urban consumers for the Anchorage metropolitan area compiled by the United States Department of Labor, Bureau of Labor Statistics. The $30 amount in (g) of this section shall be adjusted based on the increase, if any, between the consumer price index for January through June of 2011 and for January through June of the year immediately preceding the year for which the $30 amount in (g) of this section is being adjusted."

Renumber the following bill section accordingly.

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1, following "**Act**":

Insert "**relating to oil and gas or gas only leasing; requiring that a minimum work commitment be included in each oil and gas and gas only lease and that a proposed plan of development be included in an application for an oil and gas or gas only lease;**"

Page 1, following line 2:

Insert new bill sections to read:

"* **Section 1.** AS 38.05.180(h) is amended to read:

(h) The commissioner **shall** [MAY] include terms in **a** [ANY] lease **that impose** [IMPOSING] a minimum work commitment on the lessee **to implement the plan of development submitted by the lessee with a bid for an oil and gas or gas only lease. The terms of the minimum work commitment must** [. THESE TERMS SHALL BE MADE PUBLIC BEFORE THE SALE, AND MAY] include appropriate penalty provisions to take effect in the event the lessee does not fulfill the minimum work commitment. If it is demonstrated that a lease has been proven unproductive by actions of adjacent lease holders, the commissioner may set aside a work commitment. The commissioner may waive for a period not to exceed one two-year period any term of a minimum work commitment if the commissioner makes a written finding either that conditions preventing drilling or exploration were beyond the lessee's reasonable ability to foresee or control or that the lessee has demonstrated through good faith efforts an intent and ability to drill or develop the lease during the term of the waiver.

* **Sec. 2.** AS 38.05.180(x) is amended to read:

(x) A lessee conducting or permitting any exploration for, or development or

production of, oil or gas on state land shall provide the commissioner access to all noninterpretive data obtained from that lease**; shall provide the commissioner access to all information necessary to perform an economic analysis under (ii)(2) of this section, including the capital, operating, production, and development costs and an estimate of total reserves;** and shall provide copies of that data **and information**, as the commissioner may request. The confidentiality provisions of AS 38.05.035 apply to the information obtained under this subsection.

*** Sec. 3.** AS 38.05.180 is amended by adding new subsections to read:

(hh) The commissioner shall require each bidder for an oil and gas lease or gas only lease and each lessee applying for an extension or renewal of an oil and gas lease or gas only lease to submit a plan of development for exploring, developing, and producing from the lease within the period of the lease or the extension or renewal of the lease. The commissioner shall review each plan of development and determine if the proposed plan of development is reasonably expected to develop the lease in the best interest of the state. The plan of development shall be included in a lease along with penalties for failing to comply with the plan of development and other terms of the lease. A bidder may not be a "qualified bidder" for the purposes of (f)(1) of this section if the commissioner finds that the bidder has not submitted a proposed plan of development that is in the best interest of the state or that the person that submitted the plan of development is not reasonably capable of implementing the plan.

(ii) The commissioner shall

(1) review each oil and gas lease or gas only lease each year for the purpose of determining whether a lease is being developed in the best interest of the state, whether the lessee is complying with the plan of development applicable to the lease, and whether revision of a development plan, including the planned rate of development, would provide the maximum benefit to the people of the state;

(2) every five years, perform an economic analysis on each participating area and determine whether the participating area is capable of increased production in paying quantities over the current rate of production or plan of development;

(3) enforce the terms of each oil and gas lease or gas only lease,

including imposing any applicable penalty or other remedy for noncompliance, within a reasonable time after finding that a lessee is out of compliance with the terms of the lease;

(4) submit a report to the legislature before the first day of each regular session that lists each oil and gas or gas only lessee that is found to be out of compliance and the action by the commissioner to bring the lessee back into compliance or to terminate the lease.

(jj) For the purposes of (hh) and (ii) of this section, a plan of development for a cooperative or unit under (p) of this section is the plan of development for a lease within the cooperative or unit, except where a different plan of development is established for a lease within the cooperative or unit.

(kk) For purposes of (ii) of this section,

(1) "participating area" means that part of an oil and gas lease unit area to which production is allocated in the manner described in a unit agreement;

(2) "production in paying quantities" means production in quantities sufficient to yield a return in excess of drilling, development, and operating costs."

"* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. Section 1 of this Act and AS 38.085.180(hh), enacted by sec. 3 of this Act, apply to a proposed lease sale and the renewal or extension of a lease on or after the effective date of secs. 1 and 3 of this Act.

* **Sec. 6.** Section 4 of this Act takes effect January 1, 2013.

* **Sec. 7.** Except as provided in sec. 6 of this Act, this Act takes effect July 1, 2013."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1, following "**tax;**":

Insert "**relating to participation by the Alaska Industrial Development and Export Authority in the development of oil and gas resources in the state;**"

Page 2, following line 5:

Insert new bill sections to read:

"* **Sec. 2.** AS 44.88.080 is amended by adding a new paragraph to read:

(32) to acquire an interest in a project as necessary or appropriate to provide working or venture capital for an oil or natural gas development project under AS 44.88.650 - 44.88.660, whether by purchase, gift, or lease;

* **Sec. 3.** AS 44.88 is amended by adding new sections to read:

Sec. 44.88.650. Acquisition of interest in businesses. (a) The authority may acquire, through purchase or other means, an interest in an in-state asset of a corporation or other business entity that has a lease interest in an oil or natural gas field in the state that has been explored, but only if the authority determines the leaseholder has made reasonable efforts to obtain financing from the private sector to develop the lease and those efforts have, in whole or part, been unsuccessful. The authority shall exercise due diligence in acquiring an interest in an in-state asset of a business entity under this section.

(b) If the authority acquires an interest in an in-state asset of a business entity under this section, the authority may use the authority's assets, as appropriate, to aid in the development of the oil or natural gas field in which the business entity has a lease interest.

Sec. 44.88.660. Alaska resource development fund. (a) The Alaska resource development fund is established in the authority for the purpose of developing oil and gas resources, and consists of appropriations to the fund. The authority shall manage the fund and may create separate accounts within it. Income of the fund or of enterprises of the authority shall be separately accounted for and may be appropriated to the fund.

(b) The authority may use money from the fund to carry out the fund's purposes set out in (a) of this section.

* **Sec. 4.** AS 44.88.900(9) is amended to read:

(9) "project" means

(A) a plant or facility used or intended for use in connection with making, processing, preparing, transporting, or producing in any manner, goods, products, or substances of any kind or nature or in connection with developing or utilizing a natural resource, or extracting, smelting, transporting, converting, assembling, or producing in any manner, minerals, raw materials, chemicals, compounds, alloys, fibers, commodities and materials, products, or substances of any kind or nature;

(B) a plant or facility used or intended for use in connection with a business enterprise;

(C) commercial activity by a business enterprise;

(D) a plant or facility demonstrating technological advances of new methods and procedures and prototype commercial applications for the exploration, development, production, transportation, conversion, and use of energy resources;

(E) infrastructure for a new tourism destination facility or for the expansion of a tourism destination facility; in this subparagraph, "tourism destination facility" does not include a hotel or other overnight lodging facility;

(F) a plant or facility, other than a plant or facility described in (D) of this paragraph, for the generation, transmission, development, transportation, conversion, or use of energy resources;

(G) a plant or facility that enhances, provides for, or promotes

economic development with respect to transportation, communications, community public purposes, technical innovations, prototype commercial applications of intellectual property, or research;

(H) a plant or facility used or intended for use as a federal facility, including a United States military, national guard, or coast guard facility;

(I) development of an oil and gas lease by providing working or venture capital in exchange for an equity interest;

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ANALYSIS AND REPORT ON ALASKA RESIDENT INVESTMENT PROGRAM. The Alaska Industrial Development and Export Authority shall research the possibility of creating a program through which a resident of the state could invest the resident's permanent fund dividend or other funds in an in-state oil or gas asset acquired by the authority under AS 44.88.650 and report its findings to the legislature on December 31, 2012."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1 following "**tax;**":

Insert "**relating to the oil and gas corporate income tax; relating to the credits against the oil and gas corporate income tax; making conforming amendments;**"

Page 1, following line 2:

Insert new bill sections to read:

"* **Section 1.** AS 29.60.599(1) is amended to read:

(1) "barrel," when used with reference to oil**, means the quantity of oil contained in 42 United States gallons of 231 cubic inches each, measured at a temperature of 60 degrees Fahrenheit and an absolute pressure of 14.65 pounds a square inch** [HAS THE MEANING GIVEN IN AS 43.20.072];

* **Sec. 2.** AS 41.09.010(b) is amended to read:

(b) An exploration incentive credit extended under (a) of this section may be applied against

(1) a payment or obligation against which a credit authorized by AS 38.05.180(i) may be claimed;

(2) taxes payable under AS 43.20 **or AS 43.21, as applicable**; and

(3) oil and gas bonus payments due the state under AS 38.05.180(f).

* **Sec. 3.** AS 43.20.011 is amended by adding a new subsection to read:

(g) For purposes of calculating the tax under (e) of this section, the taxable income of a corporation engaged in the production or transportation of crude oil or natural gas shall be determined in accordance with AS 43.21.

* **Sec. 4.** AS 43.20.073(f) is amended to read:

(f) This section does not apply to taxpayers subject to **AS 43.21** [AS 43.20.072 ENGAGED IN

(1) THE PRODUCTION OF OIL OR GAS FROM A LEASE OR PROPERTY IN THE STATE; OR

(2) THE TRANSPORTATION OF OIL OR GAS BY REGULATED PIPELINE IN THE STATE].

* **Sec. 5.** AS 43.21 is amended by adding new sections to read:

Article 1. Determination of Taxable Income.

Sec. 43.21.200. Application. This chapter applies to every corporation doing business in the state that derives income from the production of oil or gas from a lease or property in the state or from the pipeline transportation of oil or gas in the state. The tax calculated under this chapter is measured by the total taxable income of the corporation during the tax period as defined by AS 43.21.210 - 43.21.240 and is calculated at the rates established under AS 43.20.011(e).

Sec. 43.21.210. Determination of taxable income from oil and gas production. (a) The taxable income of a corporation from the production of oil and gas from a lease or property in the state is the corporation's net income as calculated by the department in accordance with this section.

(b) Gross income of a corporation from oil and gas production is the gross value at the point of production of oil or gas produced from a lease or property in the state. The department shall by regulation determine a uniform method of establishing the gross value at the point of production. For the purpose of determining the gross value at the point of production under this subsection, the department shall use AS 43.55.150 for the determination of transportation costs.

(c) Net income from oil and gas production shall be determined by the department by deducting from gross income the following:

(1) royalties paid in kind or in value;

(2) taxes imposed under AS 43.55 that are actually paid or incurred by the corporation on the production from a lease or property in the state;

(3) taxes imposed under AS 29.45.080 - 29.45.090 and AS 43.56 that are actually paid or incurred by the corporation on property used directly in the

production of oil or gas from a lease or property in the state, including property used in production, gathering, treatment, or preparation of the oil or gas for pipeline transportation, but only if those property tax payments were due and payable only after the date of commercial production from the lease or property with which the property was associated;

(4) the direct costs incurred by or for the corporation in operating the lease or property, including the direct costs of producing, gathering, treating, or preparing the oil or gas for pipeline transportation, but net of any payments received for those activities and not including any indirect cost or overhead expense;

(5) depreciation, using the percentage depletion basis under 26 U.S.C. 613 (Internal Revenue Code) or another reasonable method as the department may by regulation establish, on property used directly in the production, gathering, treatment, or preparation of the oil or gas for pipeline transportation, including amortization of capitalized interest for investments in that property at a rate not to exceed the average cost to the taxpayer of borrowed capital during the year in which the interest is capitalized;

(6) the amortization of lease acquisition payments and taxes paid or incurred under AS 29.45.080, 29.45.090, or AS 43.56, including capitalized interest, for or on producing properties before the commencement of commercial production from the lease or property for which the property is being used;

(7) interest expense of the corporation, not capitalized during construction, that was paid or incurred in connection with property in the state; however, unless (f) of this section applies, the interest expense may not exceed that portion of the total interest paid by the consolidated business of which the corporation is a part, determined by multiplying the total interest by a fraction, the numerator of which is the value of the corporation's real and tangible personal property used directly in the production of oil or gas from a lease or property in the state and the denominator of which is the value of all real and tangible personal property of the consolidated business; in this paragraph, "total interest paid by the consolidated business" does not include interest expense arising from intercompany obligations within the consolidated business except to the extent that the interest expense reflects a

pass-through of interest on a third-party borrowing by the parent or other member of the consolidated business with the purpose, expressed at the time of the third-party borrowing, of financing Alaska business activity of the taxpayer corporation;

(8) expenses incurred by the corporation after December 31, 2012, of unsuccessful exploration of oil or gas in the state, including the acquisition costs of abandoned properties, dry hole costs, and the costs of geologic and geophysical exploration related to those abandoned properties;

(9) general overhead or administrative expense incurred by the corporation attributable to deriving income from the production of oil or gas from a lease or property in the state to the extent, except as provided in (f) of this section, that the general overhead or administrative expense does not exceed that portion of the total general overhead or administrative expense incurred by the consolidated business of which the corporation is a part, determined by multiplying the total general overhead or administrative expense by a fraction, the numerator of which is the value of the corporation's real and tangible personal property used directly in the production of oil or gas from a lease or property in the state and the denominator of which is the value of all real and tangible personal property of the consolidated business;

(10) the amount of income from the production of oil and gas from a lease or property that is divided among the regional Native corporations under 43 U.S.C. 1606(i) (sec. 7(i), Alaska Native Claims Settlement Act, P.L. 92-203).

(d) Deductions from gross income under this section may not include expenses previously deducted on a return filed under AS 43.20.

(e) If a corporation subject to this chapter shares the production or proceeds of the production from a lease or property through a working interest, royalty interest, overriding royalty interest, production payment, net profit interest, joint venture, or other agreement, the department shall allocate the deductions from gross income between the corporation and the persons with whom the corporation has the agreement in accordance with the terms of the agreement.

(f) If a corporation demonstrates to the satisfaction of the department that the corporation paid or incurred actual expenses for interest or for general overhead or administration attributable to deriving income from the production of oil or gas from a

lease or property in the state in an amount greater than the amount determined under (c)(7) or (9) of this section, the department may allow the corporation to deduct the greater amount.

Sec. 43.21.220. Determination of income from oil and gas pipeline transportation. (a) Except as provided in (c) of this section, taxable income attributable to the transportation of oil in a pipeline engaged in interstate commerce in this state shall be determined by the department and shall be the amount reported or that would be required to be reported to the Federal Energy Regulatory Commission or its successors as net operating income, less those portions of interest and general overhead or administrative expense attributable to the pipeline transportation of oil in the state, except that taxable income shall also include taxes on or measured by income. The department shall establish regulations governing the determination of interest and general overhead or administrative expense attributable to pipeline transportation of oil in the state.

(b) Except as provided in (c) of this section, taxable income attributable to the transportation of natural gas in a pipeline engaged in interstate commerce in this state shall be determined by the department and shall be the amount reported or that would be required to be reported to the Federal Energy Regulatory Commission as net operating income, less that portion of interest and general overhead or administrative expense attributable to pipeline transportation in the state, except that the taxable income shall also include taxes on or measured by income. The department shall establish regulations governing the determination of interest and general overhead or administrative expense attributable to pipeline transportation of natural gas in the state.

(c) Taxable income attributable to the transportation of oil or natural gas in this state of a corporation not under the jurisdiction of the Federal Energy Regulatory Commission, or of a corporation under the jurisdiction of the Federal Energy Regulatory Commission but not reporting the operation of pipelines in the state separately from the operation of pipelines elsewhere, shall be determined by the department and shall be based on an amount equal to the amount that would have been reported to the Federal Energy Regulatory Commission under (a) of this section in the

case of oil pipelines, or under (b) of this section, in the case of natural gas pipelines, had the corporation been, in fact, under the jurisdiction of the Federal Energy Regulatory Commission for the taxable year and required to report on the operation of pipelines in the state separately from the operation of pipelines elsewhere.

Sec. 43.21.230. Determination of income from activities other than oil and gas production or pipeline transportation. (a) Taxable income of a corporation subject to this chapter from activities in this state other than the production of oil or gas from a lease or property in the state or the pipeline transportation of oil or gas in the state shall be determined in accordance with the method established in art. IV of AS 43.19.010 and in AS 43.20.071, as modified by (b) - (d) of this section.

(b) The total taxable income of a consolidated business is its entire income less the portion of that entire income attributable to worldwide production and pipeline transportation of oil and gas. In this subsection, for a member of a consolidated business who is

(1) required to file under the Internal Revenue Code, "entire income" means the taxpayer's taxable income as the term is used in AS 43.20.011 - 43.20.065;

(2) not required to file under the Internal Revenue Code, "entire income" means an income determination prepared in accordance with generally accepted accounting principles, except that a taxpayer may elect to report income as the income would be determined under (1) of this subsection.

(c) The numerator and denominator of the property factor, of the payroll factor, and of the sales factor shall be calculated without reference to that portion of property, payroll, or sales directly related to the production of oil or gas from a lease of property in the state or the pipeline transportation of oil or gas in the state.

(d) The value attributed to vessels transporting Alaska oil or gas of a consolidated business that are not owned or effectively owned by the consolidated business shall be excluded from the property factor.

Sec. 43.21.240. Applicability of tax to a consolidated business. The provisions of this chapter apply to a consolidated business whether or not the taxpayer is the parent or controlling corporation.

Article 2. Calculation of Tax; Returns.

Sec. 43.21.300. Assessment of income and tax. (a) The department shall assess taxable income and the amount of tax payable on that taxable income. The amount of the tax payable shall be determined using the tax rates in AS 43.20.011(e).

(b) On or before August 15 of each year, the department shall send to every corporation taxable under this chapter a notice of assessment showing the amount of income taxable under this chapter for the previous year and the amount of tax payable on that taxable income.

(c) For purposes of this chapter, the department may combine taxable income of corporations subject to tax under this chapter who are part of the same consolidated business.

(d) If the methods of allocation and apportionment provided in this chapter do not fairly represent the extent of a corporation's business activity in the state, the corporation may petition for or the department may require, in respect to all or any part of the corporation's business activity, if reasonable, the employment of any method authorized under art. IV, sec. 18, AS 43.19.010 (Multistate Tax Compact), to carry out an equitable allocation and apportionment of the corporation's income. The commissioner shall include in the annual report required in AS 43.21.410 a report on all relief granted under this subsection, including, for each case, a statement of the changes in tax liability resulting from the granting of relief, the tax years involved, and a description of the method of determining taxable income that was substituted for the methods provided in this chapter.

Sec. 43.21.320. Credits. A credit under AS 43.20.043, 43.20.044, or 43.20.046 may also be applied against the tax levied under this chapter, unless a credit for the same expenditure has been taken against a tax levied under AS 43.20 or AS 43.55.

Sec. 43.21.330. Returns. On or before April 15 of each year, a corporation subject to tax under this chapter shall submit a return in a form prescribed by the department setting out information required by the department to determine taxable income. For purposes of this chapter, the department may require corporations subject to tax under this chapter that are part of the same consolidated business to file a single return.

Sec. 43.21.340. Payment of tax. The tax levied under this chapter is payable

to the department on or before September 30 of each year or in installments, including prepayments of estimated tax, at the times and under the conditions the department may by regulation require. The tax is payable on the due date set out in this section even though the assessment is under appeal or the validity, enforceability, or application of this chapter or any provision of this chapter is challenged before the department or in the courts.

Article 3. Administrative Matters.

Sec. 43.21.400. Regulations. The department shall adopt regulations in accordance with AS 44.62 (Administrative Procedure Act) as appropriate to administer and enforce this chapter.

Sec. 43.21.410. Public reporting. (a) The commissioner shall compile and transmit to the legislature an annual report of state revenue and the implementation of taxation policies under this chapter. The report must include total aggregate income tax paid by corporations subject to this chapter and aggregate income and deductions by category, classified so as to prevent the identification of particular returns or reports.

(b) The legislative auditor shall notify the legislature on or before the first day of each regular session that the annual report reviewing the actions of the department in administering this chapter is available.

Sec. 43.21.420. Information disclosure. Notwithstanding AS 43.05.320, the department shall disclose to a legislator, on request, information collected from a taxpayer to the extent that

(1) the taxpayer is a publicly traded company;

(2) the information has been filed in a quarterly, annual, or other periodic report to the United States Securities Exchange Commission; and

(3) the information has been made public by the United States Securities Exchange Commission.

Sec. 43.21.499. Definitions. Unless the context requires otherwise, the definitions contained in AS 43.55.900 are applicable to this chapter. In addition, in this chapter,

(1) "consolidated business" means a corporation or group of

corporations having more than 50 percent common ownership, direct or indirect, or a group of corporations in which there is common control, either direct or indirect, as evidenced by an arrangement, contract, or agreement;

(2) "Internal Revenue Code" has the meaning given in AS 43.20.340."

"* **Sec. 7.** AS 43.82.210(a) is amended to read:

(a) If the commissioner approves an application and proposed project plan under AS 43.82.140, the commissioner may develop proposed terms for inclusion in a contract under AS 43.82.020 for periodic payment in lieu of one or more of the following taxes that otherwise would be imposed by the state or a municipality on the qualified sponsor or member of a qualified sponsor group as a consequence of participating in an approved qualified project:

(1) oil and gas production taxes and oil surcharges under AS 43.55;

(2) oil and gas exploration, production, and pipeline transportation property taxes under AS 43.56;

(3) **oil and gas corporate income tax under AS 43.21;** [REPEALED]

(4) Alaska net income tax under AS 43.20;

(5) municipal sales and use tax under AS 29.45.650 - 29.45.710;

(6) municipal property tax under AS 29.45.010 - 29.45.250 or 29.45.550 - 29.45.600;

(7) municipal special assessments under AS 29.46;

(8) a comparable tax or levy imposed by the state or a municipality after June 18, 1998;

(9) other state or municipal taxes or categories of taxes identified by the commissioner.

* **Sec. 8.** AS 43.20.072 is repealed.

* **Sec. 9.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. AS 43.21, added by sec. 5 of this Act, applies to taxable income earned or received after December 31, 2012.

* **Sec. 10.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REGULATIONS. (a) The Department of Revenue may adopt regulations necessary to implement AS 43.21, added by sec. 5 of this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the law implemented by regulation.

(b) The Department of Revenue shall provide by regulation for a transition for a corporation subject to tax under AS 43.20 before December 31, 2012, to avoid double taxation of the same income or double deduction of the same expense of the corporation as a result of becoming subject to tax under AS 43.21, added by sec. 5 of this Act.

* **Sec. 11.** Section 10 of this Act takes effect immediately under AS 01.10.070(c).

* **Sec. 12.** Except as provided in sec. 11 of this Act, this Act takes effect January 1, 2013."

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1, following "**Act**":

Insert "**relating to the duties of the Alaska Oil and Gas Conservation Commission; relating to a petroleum information management system; relating to the duties of the Department of Natural Resources, the Department of Revenue, and the Department of Labor and Workforce Development that relate to providing the Alaska Oil and Gas Conservation Commission with certain information relating to oil and gas;**"

Page 1, following line 2:

Insert new bill sections to read:

* **Section 1.** AS 31.05.030 is amended by adding a new subsection to read:

(n) The commission shall develop and maintain the petroleum information management system required under AS 31.05.031.

* **Sec. 2.** AS 31.05 is amended by adding a new section to read:

Sec. 31.05.031. Petroleum information management system. (a) The commission shall develop and maintain an electronic petroleum information management system to collect, secure, distribute, store, retrieve, and archive information related to oil and gas exploration, development, and production in the state. The purposes of the petroleum information management system are to improve the administration of the oil and gas production tax and to facilitate exploration, development, and production of oil and gas resources. The petroleum information management system shall be accessible by the public.

(b) To the extent the information is available and is not confidential, the petroleum information management system must include the following information:

(1) unit and joint operating agreements;

(2) state oil and gas exploration licenses and oil and gas leases;

(3) for exploration activities,

(A) exploration work programs and budgets;

(B) seismic data;

(C) drilling reports;

(D) logs;

(E) well tests;

(F) geological models and maps;

(4) for development activities,

(A) development plans with operating and capital expenditure projections;

(B) construction progress reports;

(C) drilling reports;

(D) reservoir characterization;

(5) for production activities,

(A) production work programs and budgets;

(B) oil and gas sales, revenue, and pricing;

(C) transportation agreements;

(D) production data;

(E) injection data;

(F) operating and capital expenditures;

(G) facility maps and studies;

(6) for abandonment of oil and gas wells, leases, and production and transportation facilities,

(A) abandonment plans and budgets;

(B) progress reports;

(7) for oil and gas related employment information,

(A) the number of resident and nonresident hires for each year;

(B) training opportunities; and

(8) other information the commission determines necessary and

relevant to the oil and gas production tax and to the exploration, development, and production of oil and gas resources.

(c) The Department of Natural Resources, the Department of Revenue, and the Department of Labor and Workforce Development, in consultation with the commission, shall provide information described in (b) of this section that is not confidential and within each department's control to the commission for inclusion in the petroleum information management system. The information provided by a department under this subsection shall be in a form suitable for the commission to include in the petroleum information management system.

*** Sec. 3.** AS 31.05.093(c) is amended to read:

(c) The commission shall determine the regulatory cost charges levied under this section so that the total amount to be collected approximately equals the appropriations made for the operating costs of the commission under this chapter for the fiscal year. **For the purpose of determining the regulatory costs charges under this subsection, the operating costs for the petroleum information management system (AS 31.05.031) may not be included in the operating costs of the commission.**"

"* **Section 1.** AS 43.55.011(g) is repealed and reenacted to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2) for each BTU equivalent barrel of the taxable oil and gas is more than $30, the amount of tax for purposes of (e)(2) of this section is determined by multiplying the monthly production tax value of the taxable oil and gas produced during the month by the following tax rates, as applicable:

(1) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is not more than $42.50, the tax rate is 2.5 percent of the difference between that average monthly production tax value of a BTU equivalent barrel and $30;

(2) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $42.50 but not more than $55, the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30; and

(B) 7.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $42.50;

(3) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $55 but not more than $67.50, the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(C) 12.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $55;

(4) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $67.50 but not more than $80, the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $67.50;

(5) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $80 but not more than $92.50, the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(E) 22.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $80;

(6) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $92.50 but not more than $105, the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(E) 22.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(F) 25 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $92.50;

(7) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $105 but not more than $117.50, the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(E) 22.5 percent of the next higher $12.50 of monthly

production tax value for each BTU equivalent barrel;

(F) 25 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(G) 30 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $105;

(8) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $117.50, the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(E) 22.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(F) 25 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(G) 30 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(H) 35 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $117.50.

* **Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. Section 1 of this Act applies to oil and gas produced after December 31, 2012.

TRANSITION: REGULATIONS. The Department of Revenue may adopt regulations to implement this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the provision of this Act implemented by the regulation.

* **Sec. 4.** Section 1 of this Act takes effect January 1, 2013.

* **Sec. 5.** Except as provided in sec. 4 of this Act, this Act takes effect immediately under

AS 01.10.070(c)."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1, following "**tax**":

Insert "**rate; relating to monthly installment payments of the oil and gas production tax; relating to oil and gas production tax credits, including qualified capital credits for exploration, development, and production**"

Page 1, line 3, through page 2, line 6:

Delete all material and insert:

"* **Section 1.** AS 43.55.011(e) is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), and (o) of this section, the tax is equal to the sum of

[(1)] the annual production tax value of the taxable oil and gas

(1) produced from a lease or property not described in (2) of this subsection as calculated under AS 43.55.160(a)(1) multiplied by 25 percent**, and the sum, over all months of the calendar year, of the tax amounts determined under (g)(1) of this section**; and

(2) **produced during the first seven consecutive years after the start of sustained production or produced during the first seven years after the effective date of this bill section, whichever is later, from a lease or property containing land that was not or previously had not been within a unit or in commercial production as of December 31, 2008, as calculated under**

AS 43.55.160(a)(1) multiplied by 15 percent, and the sum, over all months of the calendar year, of the tax amounts determined under **(g)(2)** [(g)] of this section**; in this paragraph, "sustained production" has the meaning given in AS 43.55.025(*l*)**.

*** Sec. 2.** AS 43.55.011(g) is repealed and reenacted to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2) for each BTU equivalent barrel of the taxable oil and gas is more than $30, the amount of tax for purposes

(1) of (e)(1) of this section is determined by multiplying the monthly production tax value of the taxable oil and gas produced during the month by the tax rate calculated as follows:

(A) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between that average monthly production tax value of a BTU equivalent barrel and $30; or

(B) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the average monthly production tax value of a BTU equivalent barrel and $92.50, except that the sum determined under this subparagraph may not exceed 50 percent;

(2) of (e)(2) of this section is determined by multiplying the monthly production tax value of the taxable oil and gas produced during the month by the following tax rates, as applicable:

(A) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is not more than $42.50, the tax rate is 2.5 percent of the difference between that average monthly production tax value of a BTU equivalent barrel and $30;

(B) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $42.50 but not more than $55, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30; and

(ii) 7.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $42.50;

(C) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $55 but not more than $67.50, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(ii) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(iii) 12.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $55;

(D) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $67.50 but not more than $80, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(ii) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(iii) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(iv) 17.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $67.50;

(E) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $80 but not more than $92.50, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(ii) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(iii) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(iv) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(v) 22.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $80;

(F) if the producer's average monthly production tax value of a BTU equivalent barrel of the taxable oil and gas for the month is more than $92.50, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(ii) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(iii) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(iv) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(v) 22.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(vi) 25 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $92.50.

* **Sec. 3.** AS 43.55.020(a) is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) the **applicable tax rates in AS 43.55.011(e) and (g) applied to** [SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g) MULTIPLIED BY] the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the gross value at the point of production of the oil and gas produced from the leases or properties during the month for which the installment payment is calculated;

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the greatest of

(i) zero;

(ii) zero percent, one percent, two percent, three percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) the **applicable tax rates in AS 43.55.011(e) and (g) applied to** [SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g) MULTIPLIED BY] the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 from the gross value at the point of production of the oil and gas produced from those leases or properties during the month for which the installment payment is

calculated;

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) the **applicable tax rates in AS 43.55.011(e) and (g) applied to** [SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g) MULTIPLIED BY] the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil or gas, respectively, produced from the lease or property from the gross value at the point of production of the oil or gas, respectively, produced from the lease or property during the month for which the installment payment is calculated;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property

during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the calendar year of production.

*** Sec. 4.** AS 43.55.023(g) is amended to read:

(g) The issuance of a transferable tax credit certificate under (d) **of this section** or **former** (m) of this section or the purchase of a certificate under AS 43.55.028 does not limit the department's ability to later audit a tax credit claim to which the certificate relates or to adjust the claim if the department determines, as a result of the audit, that the applicant was not entitled to the amount of the credit for which the certificate was issued. The tax liability of the applicant under AS 43.55.011(e) and 43.55.017 - 43.55.180 is increased by the amount of the credit that exceeds that to which the applicant was entitled, or the applicant's available valid outstanding credits applicable against the tax levied by AS 43.55.011(e) are reduced by that amount. If the applicant's tax liability is increased under this subsection, the increase bears interest under AS 43.05.225 from the date the transferable tax credit certificate was issued. For purposes of this subsection, an applicant that is an explorer is considered a producer subject to the tax levied by AS 43.55.011(e).

*** Sec. 5.** AS 43.55.023(*l*) is amended to read:

(*l*) A producer or explorer may apply for a tax credit for a well lease expenditure incurred in the state [SOUTH OF 68 DEGREES NORTH LATITUDE] after **December 31, 2012, and before January 1, 2023** [JUNE 30, 2010], as follows:

(1) notwithstanding that a well lease expenditure incurred in the state

(A) south of 68 degrees North latitude may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken

under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well lease expenditure in the state south of 68 degrees North latitude may elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 40 percent of that expenditure;

(B) north of 68 degrees North latitude and outside of a unit or in commercial production before December 31, 2008, may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well lease expenditure in the state north of 68 degrees North latitude and outside of a unit or in commercial production before December 31, 2008, may elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 40 percent of that expenditure; [A TAX CREDIT UNDER THIS PARAGRAPH MAY BE APPLIED FOR A SINGLE CALENDAR YEAR;]

(2) a producer or explorer may take a credit for a well lease expenditure **under this subsection** incurred [IN THE STATE SOUTH OF 68 DEGREES NORTH LATITUDE] in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

*** Sec. 6.** AS 43.55.023(*l*) is repealed and reenacted to read:

(*l*) A producer or explorer may apply for a tax credit for a well lease expenditure incurred in the state south of 68 degrees North latitude after December 31, 2022, as follows:

(1) notwithstanding that a well lease expenditure incurred in the state south of 68 degrees North latitude may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a

credit for that expenditure is taken under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well lease expenditure in the state south of 68 degrees North latitude may elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 40 percent of that expenditure; a tax credit under this paragraph may be applied for a single calendar year;

(2) a producer or explorer may take a credit for a well lease expenditure incurred in the state south of 68 degrees North latitude in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

* **Sec. 7.** AS 43.55.023(n) is amended to read:

(n) For the purposes of (*l*) [AND (m)] of this section, a well lease expenditure [INCURRED IN THE STATE SOUTH OF 68 DEGREES NORTH LATITUDE] is a lease expenditure that is

(1) directly related to an exploration well, a stratigraphic test well, a producing well, or an injection well other than a disposal well, [LOCATED IN THE STATE SOUTH OF 68 DEGREES NORTH LATITUDE,] if the expenditure is a qualified capital expenditure and an intangible drilling and development cost authorized under 26 U.S.C. (Internal Revenue Code), as amended, and 26 C.F.R. 1.612-4, regardless of the elections made under 26 U.S.C. 263(c); in this paragraph, an expenditure directly related to a well includes an expenditure for well sidetracking, well deepening, well completion or recompletion, or well workover, regardless of whether the well is or has been a producing well; or

(2) an expense for seismic work conducted within the boundaries of a production or exploration unit.

* **Sec. 8.** AS 43.55.028(e) is amended to read:

(e) The department, on the written application of a person to whom a

transferable tax credit certificate has been issued under AS 43.55.023(d) or **former AS 43.55.023(m)** [(m)] or to whom a production tax credit certificate has been issued under AS 43.55.025(f), may use available money in the oil and gas tax credit fund to purchase, in whole or in part, the certificate if the department finds that

(1) the calendar year of the purchase is not earlier than the first calendar year for which the credit shown on the certificate would otherwise be allowed to be applied against a tax;

(2) [REPEALED

(3) REPEALED

(4)] the applicant does not have an outstanding liability to the state for unpaid delinquent taxes under this title;

(3) [(5)] the applicant's total tax liability under AS 43.55.011(e), after application of all available tax credits, for the calendar year in which the application is made is zero;

(4) [(6)] the applicant's average daily production of oil and gas taxable under AS 43.55.011(e) during the calendar year preceding the calendar year in which the application is made was not more than 50,000 BTU equivalent barrels; and

(5) [(7)] the purchase is consistent with this section and regulations adopted under this section.

* **Sec. 9.** AS 43.55.028(g) is amended to read:

(g) The department may adopt regulations to carry out the purposes of this section, including standards and procedures to allocate available money among applications for purchases under this chapter and claims for refunds under AS 43.20.046 when the total amount of the applications for purchase and claims for refund exceed the amount of available money in the fund. The regulations adopted by the department may not, when allocating available money in the fund under this section, distinguish an application for the purchase of a credit certificate issued under **former** AS 43.55.023(m) or a claim for refund under AS 43.20.046.

* **Sec. 10.** AS 43.55.023(m) is repealed.

* **Sec. 11.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. (a) Sections 4, 5, 7, and 10 of this Act apply to expenditures incurred after December 31, 2012.

(b) Sections 1 - 3 of this Act apply to oil and gas produced after December 31, 2012.

(c) Section 6 of this Act applies to expenditures incurred after December 31, 2022.

* **Sec. 12.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Revenue may adopt regulations to implement this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the provision of this Act implemented by the regulation.

* **Sec. 13.** Sections 1 - 5, 7 - 10, and 11(a) and (b) of this Act take effect January 1, 2013.

* **Sec. 14.** Sections 6 and 11(c) of this Act take effect January 1, 2023.

* **Sec. 15.** Except as provided in secs. 13 and 14 of this Act, this Act takes effect immediately under AS 01.10.070(c)."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 3, through page 2, line 5:

Delete all material and insert:

"* **Section 1.** AS 43.55.011(g) is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2) **for a** [PER] BTU equivalent barrel of the taxable oil and gas is more than $30, the amount of tax for purposes of (e)(2) of this section is determined by multiplying the monthly production tax value of the taxable oil and gas produced during the month by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value **for a** [PER] BTU equivalent barrel of the taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between that average monthly production tax value **for a** [PER] BTU equivalent barrel and $30; or

(2) if the producer's average monthly production tax value **for a** [PER] BTU equivalent barrel of the taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the average monthly production tax value **for a** [PER] BTU equivalent barrel and $92.50, except that the sum determined under this paragraph may not exceed **35** [50] percent."

"* **Sec. 2.** AS 43.55.160(a) is amended to read:

(a) Except as provided in (b) of this section **and subject to an adjustment under AS 43.55.162**, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil and gas produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(B) oil and gas produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and

gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(2) AS 43.55.011(g), the monthly production tax value of the taxable

(A) oil and gas produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(B) oil and gas produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170.

* **Sec. 3.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.162. Adjustment to production tax value for increasing oil production. (a) The production tax value of oil delivered to and transported by the

Trans Alaska Pipeline System, as calculated under AS 43.55.160(a)(1)(A) and (B) and AS 43.66.160(a)(2)(A) and (B), may be reduced by an amount determined by the department under this section.

(b) A producer shall report to the department the total adjusted amount of annual oil production and adjusted amount of the average daily statewide oil production delivered by the producer for transport to the Trans Alaska Pipeline System for both the calendar year immediately preceding the year for which the tax is being determined and the year for which the tax is being determined. The report shall be filed at the time the statement required under AS 43.55.030(a) is filed.

(c) When calculating the

(1) adjusted amount of the average daily statewide production under (b) of this section, the producer shall exclude from the calculation the days on which the rate of production is significantly reduced and the volume of production on those days for which the rate of production is significantly reduced; for the purposes of this paragraph, the rate of production is significantly reduced when the production of oil delivered by the producer to the Trans Alaska Pipeline System for the day is less than one-half of the average daily production for the year calculated by dividing the total oil production that is produced by the producer and delivered to the Trans Alaska Pipeline System for the year by the number of days in the year;

(2) adjusted amount of total annual oil production that is delivered by the producer to the Trans Alaska Pipeline System, the producer shall multiply the adjusted amount of average daily production determined under (1) of this subsection by the number of days in the applicable calendar year; and

(3) adjusted amount of total annual oil production that is delivered by the producer to the Trans Alaska Pipeline System for the year for which the tax is being determined under (2) of this subsection, the producer may not include the amount of production resulting from the purchase, merger, or other acquisition of another producer and any production attributable to the producer from a unit in which the producer did not participate in the calendar year immediately preceding the year for which the tax is being determined; however, the increased production that may not be included by a producer under this paragraph may be included in the adjusted

amount of total annual oil production for the year when determining the amount by which production increases in the next succeeding year.

(d) After receiving a report by the producer under (b) of this section, the department may reduce the production tax value determined under

(1) AS 43.55.160(a)(1)(A) and (B) by $10 for each barrel of oil delivered by the producer to the Trans Alaska Pipeline system during the year for which the tax is being determined that exceeds the adjusted total annual production for the calendar year immediately preceding the year for which the tax is being determined; and

(2) AS 43.55.160(a)(2)(A) and (B) by $10 for each barrel of oil delivered to the Trans Alaska Pipeline System for each month in the year for which the tax is being determined that exceeds 1/12 of the number of barrels by which the adjusted total annual production for the year for which the tax is being determined exceeds the adjusted total annual production for the calendar year immediately preceding the year for which the tax is being determined.

(e) The department shall notify the producer of the amount of tax reduction allowed as a result of a reduction in production tax value determined by the department under (d) of this section. At the request of the producer, the department may refund any amount due to the producer as a result of the reduction in production tax value or credit the amount of the tax reduction against the liability of the taxpayer for a tax due under this title.

(f) A tax reduction that results from a reduction in the production tax value under this section may not be considered when a producer is required to calculate and pay any amount due under AS 43.55.020(a). However, at the request of the producer, a credit allowed under (e) of this section may be applied against a payment due under AS 43.55.020(a) for a period after the department determines the amount of reduction in the production tax value.

(g) The department may adopt regulations specifying the information that must be included in the report filed by a producer under (b) of this section and other regulations necessary for the administration of this section.

* **Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to

read:

APPLICABILITY. The reduction in production tax value under AS 43.55.162, enacted by sec. 10 of this Act, applies to qualifying oil produced after December 31, 2012. In this section, "qualifying oil" means oil delivered to the Trans Alaska Pipeline System the production tax value of which is calculated under AS 43.55.160(a)(1)(A) and (B) and 43.55.160(a)(2)(A) and (B)."

Renumber the following bill section accordingly.

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1, following "**tax;**":

Insert "**limiting the amount of certain tax credits applicable to the oil and gas production tax;**"

Page 2, following line 5:

Insert new bill sections to read:

"* **Sec. 2.** AS 43.55.023(a) is amended to read:

(a) A producer or explorer may take a tax credit for a qualified capital expenditure as follows:

(1) **except as limited by (p) of this section,** notwithstanding that a qualified capital expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a qualified capital expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 20 percent of that expenditure; however, not more than half of the tax credit may be applied for a single calendar year;

(2) a producer or explorer may take a credit for a qualified capital expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data

that would be required to be submitted under AS 43.55.025(f)(2).

* **Sec. 3.** AS 43.55.023(d) is amended to read:

(d) Except as limited by (i) **and (p)** of this section, a person that is entitled to take a tax credit under this section that wishes to transfer the unused credit to another person or obtain a cash payment under AS 43.55.028 may apply to the department for transferable tax credit certificates. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny an application, or grant an application as to a lesser amount than that claimed and deny it as to the excess, not later than 120 days after the latest of (1) March 31 of the year following the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; (2) the date the statement required under AS 43.55.030(a) or (e) was filed for the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; or (3) the date the application was received by the department. If, based on the information then available to it, the department is reasonably satisfied that the applicant is entitled to a credit, the department shall issue the applicant two transferable tax credit certificates, each for half of the amount of the credit. The credit shown on one of the two certificates is available for immediate use. The credit shown on the second of the two certificates may not be applied against a tax for a calendar year earlier than the calendar year following the calendar year in which the certificate is issued, and the certificate must contain a conspicuous statement to that effect. A certificate issued under this subsection does not expire.

* **Sec. 4.** AS 43.55.023(*l*) is amended to read:

(*l*) **Except as limited by (p) of this section, a** [A] producer or explorer may apply for a tax credit for a well lease expenditure incurred in the state south of 68 degrees North latitude after June 30, 2010, as follows:

(1) notwithstanding that a well lease expenditure incurred in the state south of 68 degrees North latitude may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under (a) of this section, AS 38.05.180(i),

AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well lease expenditure in the state south of 68 degrees North latitude may elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 40 percent of that expenditure; a tax credit under this paragraph may be applied for a single calendar year;

(2) a producer or explorer may take a credit for a well lease expenditure incurred in the state south of 68 degrees North latitude in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

* **Sec. 5.** AS 43.55.023 is amended by adding a new subsection to read:

(p) The amount of credit for a capital expenditure under (a) or (*l*) of this section for an expenditure that is also a lease expenditure under AS 43.55.165 is reduced by the amount necessary so that the tax benefit percentage is not more than 65 percent of the capital expenditure. The amount of credit for a capital expenditure under (a) or (*l*) of this section that may not be taken because of the limitation in this subsection may not be applied in a later calendar year under (c) of this section and may not be included in an application for a tax credit certificate under (d) of this section. In this subsection, "tax benefit percentage" means the sum of the average monthly tax rate under AS 43.55.011(e) and (g) for the calendar year in which the credit is taken and the percentage of the capital expenditure that may be taken as a credit under (a) or (*l*) of this section.

* **Sec. 6.** AS 43.55.025(a) is amended to read:

(a) Subject to the terms and conditions of this section **and except as limited by (n) of this section**, a credit against the production tax levied by AS 43.55.011(e) is allowed for exploration expenditures that qualify under (b) of this section in an amount equal to one of the following:

(1) 30 percent of the total exploration expenditures that qualify only

under (b) and (c) of this section;

(2) 30 percent of the total exploration expenditures that qualify only under (b) and (d) of this section;

(3) 40 percent of the total exploration expenditures that qualify under (b), (c), and (d) of this section;

(4) 40 percent of the total exploration expenditures that qualify only under (b) and (e) of this section; or

(5) 80, 90, or 100 percent, or a lesser amount described in (*l*) of this section, of the total exploration expenditures described in (b)(1) and (2) of this section and not excluded by (b)(3) and (4) of this section that qualify only under (*l*) of this section.

*** Sec. 7.** AS 43.55.025 is amended by adding a new subsection to read:

(n) The amount of credit for an exploration expenditure under (a)(1) - (4) of this section for an expenditure that is also a lease expenditure under AS 43.55.165 is reduced by the amount necessary so that the tax benefit percentage is not more than 65 percent of the exploration expenditure. The amount of credit for an exploration expenditure under (a)(1) - (4) of this section that may not be taken because of the limitation in this subsection may not be transferred, conveyed, or sold under (g) of this section. In this subsection, "tax benefit percentage" means the sum of the average monthly tax rate under AS 43.55.011(e) and (g) for the calendar year in which the credit is taken and the percentage of the exploration expenditure that may be taken as a credit under (a)(1) - (4) of this section."

Renumber the following bill section accordingly.

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1, following "**tax;**":

Insert "**relating to the minimum tax on oil and gas production; relating to the availability of funds from the oil and gas production tax for appropriation to the community revenue sharing fund;**"

Page 1, following line 2:

Insert new bill sections to read:

"* **Section 1.** AS 29.60.850(b) is amended to read:

(b) Each fiscal year, the legislature may appropriate to the community revenue sharing fund an amount equal to **the lesser of** 20 percent of the money received by the state during the previous calendar year under AS 43.55.011(g) **or the difference between the amount of money received by the state during the previous calendar for oil and gas production subject to AS 43.55.011(f) and 25 percent of the production tax value determined under AS 43.55.160 for oil and gas production subject to AS 43.55.011(f) produced during the previous calendar year, except the difference may not be less than zero**. The amount **appropriated** may not exceed

(1) $60,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $180,000,000.

* **Sec. 2.** AS 43.55.011(f) is repealed and reenacted to read:

(f) Except for oil and gas subject to (i) of this section and gas subject to (o) of this section, the provisions of this subsection apply to oil and gas produced from each lease or property within a unit or nonunitized reservoir that has cumulatively produced

1,000,000,000 BTU equivalent barrels of oil or gas by the close of the most recent calendar year and from which the average daily oil and gas production from the unit or nonunitized reservoir during the most recent calendar year exceeded 100,000 BTU equivalent barrels. Notwithstanding any contrary provision of law, a producer may not apply tax credits to reduce its total tax liability under (e) and (g) of this section for oil and gas produced from all leases or properties within the unit or nonunitized reservoir below 10 percent of the total gross value at the point of production of that oil and gas. If the amount of tax calculated by multiplying the tax rates in (e) and (g) of this section by the total production tax value of the oil and gas taxable under (e) and (g) of this section produced from all of the producer's leases or properties within the unit or nonunitized reservoir is less than 10 percent of the total gross value at the point of production of that oil and gas, the tax levied by (e) and (g) of this section for that oil and gas is equal to 10 percent of the total gross value at the point of production of that oil and gas."

Insert "**Sec. 3**"

Renumber the following bill sections accordingly.

Page 2, following line 5:

Insert a new bill section to read:

"* **Sec. 4.** AS 43.55.020(a) is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be

applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the gross value at the point of production of the oil and gas produced from the leases or properties during the month for which the installment payment is calculated;

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), **10 percent of the gross value at the point of production of that oil and gas** [THE GREATEST OF

(i) ZERO;

(ii) ZERO PERCENT, ONE PERCENT, TWO PERCENT, THREE PERCENT, OR FOUR PERCENT, AS APPLICABLE, OF THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE OIL AND GAS PRODUCED FROM ALL LEASES OR PROPERTIES DURING THE MONTH FOR WHICH THE INSTALLMENT PAYMENT IS CALCULATED; OR

(iii) THE SUM OF 25 PERCENT AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g) MULTIPLIED BY THE REMAINDER OBTAINED BY SUBTRACTING 1/12 OF THE PRODUCER'S ADJUSTED LEASE EXPENDITURES FOR THE CALENDAR YEAR OF PRODUCTION UNDER AS 43.55.165 AND 43.55.170 THAT ARE DEDUCTIBLE

FOR THOSE LEASES OR PROPERTIES UNDER AS 43.55.160 FROM THE GROSS VALUE AT THE POINT OF PRODUCTION OF THE OIL AND GAS PRODUCED FROM THOSE LEASES OR PROPERTIES DURING THE MONTH FOR WHICH THE INSTALLMENT PAYMENT IS CALCULATED];

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil or gas, respectively, produced from the lease or property from the gross value at the point of production of the oil or gas, respectively, produced from the lease or property during the month for which the installment payment is calculated;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the calendar year of production."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, line 1, following "**tax;**":

Insert "**relating to an adjustment to the gross value at the point of production for oil production from certain leases or properties; relating to the determination of the production tax value of oil and gas;**"

Page 2, following line 5:

Insert new bill sections to read:

"* **Sec. 2.** AS 43.55.160(a) is amended to read:

(a) Except as provided in (b) of this section **and subject to an adjustment under AS 43.55.162**, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil and gas produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(B) oil and gas produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by

the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(2) AS 43.55.011(g), the monthly production tax value of the taxable

(A) oil and gas produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from

those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(B) oil and gas produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to AS 43.55.011(o);

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170.

* **Sec. 3.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.162. Adjustments to the gross value at the point of production for certain oil. (a) If the volume of taxable oil produced by a producer during a calendar year from leases or properties described in AS 43.55.160(a)(1)(A) is greater than the annual target volume of taxable oil production determined under this section for the calendar year, the gross value at the point of production for the taxable oil produced during

(1) the calendar year for the purpose of determining the annual production tax value under AS 43.55.160(a)(1), shall be reduced by a percentage equal to the percentage by which the volume of taxable oil produced during the calendar year exceeds the target volume of production for the calendar year; and

(2) a calendar month for the purpose of determining the production tax value for the calendar month under AS 43.55.160(a)(2), shall be reduced by a percentage equal to the percentage by which the volume of taxable oil produced during the calendar month exceeds the target volume of production for the calendar month.

(b) Subject to adjustment under (e) of this section, the target volume of taxable oil production by a producer for a calendar year equals the volume of taxable oil produced by the producer from leases or properties described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined, multiplied by the applicable factor determined under (c)(1) - (4) of this section.

(c) For the purpose of determining the target volume of taxable oil production under (b) of this section, for a producer having taxable oil production from a lease or property described in AS 43.55.160(a)(1)(A)

(1) during the calendar year immediately preceding the calendar year for which the tax is being determined and the fourth calendar year preceding the calendar year for which the tax is being determined, the factor is equal to the cube root of the ratio of the volume of taxable oil produced by the producer from the leases or properties described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined to the volume of taxable oil produced from the leases or properties described in AS 43.55.160(a)(1)(A)

during the fourth calendar year preceding the year for which the tax is being determined;

(2) during the calendar year immediately preceding the calendar year for which the tax is being determined and the third calendar year preceding the calendar year for which the tax is being determined, but not during the fourth year preceding the calendar year for which the tax is being determined, the factor is equal to the square root of the ratio of the volume of taxable oil produced by the producer from the leases or properties described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the year for which the tax is being determined to the volume of taxable oil produced from the leases or properties described in AS 43.55.160(a)(1)(A) during the third calendar year preceding the calendar year for which the tax is being determined;

(3) during the calendar year immediately preceding the calendar year for which the tax is being determined and the second calendar year preceding the year for which the tax is being determined, but not during the third or fourth calendar years preceding the year for which the tax is being determined, the factor is equal to the ratio of the volume of taxable oil produced by the producer from the leases or properties described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined to the volume of taxable oil produced from the leases or properties described in AS 43.55.160(a)(1)(A) during the second calendar year preceding the calendar year for which the tax is being determined;

(4) during the calendar year immediately preceding the year for which the tax is being determined but not during the second, third, or fourth calendar years preceding the calendar year for which the tax is being determined, the factor is equal to one.

(d) The target volume of taxable oil production by a producer for a calendar month is equal to 1/12 of the annual target volume of taxable oil production for the calendar year, except as otherwise provided in (e)(4) of this section.

(e) For purposes of this section, for a producer that produced taxable oil during a calendar year from a lease or property described in AS 43.55.160(a)(1)(A),

(1) if the producer did not produce taxable oil from a lease or property described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined, there is no target volume of taxable oil production for the calendar year or calendar month during the year and no reduction in the gross value at the point of production for that oil production for the purposes of AS 43.55.160(a)(1) for the year for which the tax is being determined, unless the production of taxable oil during the entire calendar year was interrupted because of force majeure;

(2) if the producer did not produce taxable oil from a lease or property described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined because the production of taxable oil during the entire calendar year was interrupted because of force majeure, the target volume of taxable oil production for the current year must be determined under (c) of this section based on the fourth, third, or second preceding calendar year, as applicable, in which the producer produced taxable oil from a lease or property described in AS 43.55.160(a)(1)(A);

(3) for a producer that produced taxable oil from leases or properties described in AS 43.55.160(a)(1)(A) during a prior year that would have been used in the applicable calculation under (b) of this section, except that there was no taxable oil production for 30 days or more during that calendar year because the producer first produced taxable oil from those leases or properties during that calendar year or because production from the leases or properties was interrupted by force majeure for 30 days or more during that calendar year, the producer's volume of taxable oil production from leases or properties described in AS 43.55.160(a)(1)(A) during that prior year is multiplied by a fraction, the numerator of which is the number of days during that prior year and the denominator of which is the number of days during that prior year on which the producer had oil production from a lease or property described in AS 43.55.160(a)(1)(A);

(4) for a producer that has production of taxable oil that is interrupted by force majeure for 30 days or more during the year for which the tax is being determined, the target volume of taxable oil production for the current year that would

otherwise be applicable shall be reduced by a percentage equal to the percentage of days during the year that the production was interrupted, and the producer's monthly target volume of taxable oil production for the current year is the target volume of taxable oil production for the current year determined under this paragraph divided by a fraction, the numerator of which is the number of days during the year when the producer had production from leases or properties described in AS 43.55.160(a)(1)(A), and the denominator of which is 30.4375.

(f) The determination of the adjustment to the gross value at the point of production in this section is based on the location of a lease or property within the area described in AS 43.55.160(a)(1)(A) and is made without regard as to whether taxable oil is produced from a particular lease or property during more than one year.

(g) The negligence or recklessness of a producer or operator that prevents the production of taxable oil does not constitute force majeure. However, if there is a sufficient cause for the cessation of production because of force majeure, the negligence or recklessness of the producer, the operator, or the producer and operator does not prohibit treating the inability to produce oil or the suspension of oil production as having been caused by force majeure for the purposes of this section.

(h) In this section, "force majeure" means a cause beyond the reasonable ability of a producer, an operator, or a producer and operator of a lease or property to avoid or control that prevents the producer from producing oil or having oil produced for the producer from the lease or property for a period of 24 or more consecutive hours; "force majeure" includes an act of God, war, martial law, insurrection, terrorism, sabotage, government restriction, order of a court or an administrative or regulatory body having jurisdiction over the lease or property or production from the lease or property, a strike or other labor action, or a failure or omission on the part of a third-party supplier, contractor, subcontractor, carrier, or other third party."

Renumber the following bill section accordingly.

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "B"

Page 1, following "**tax;**":

Insert "**providing for a tax credit applicable to the oil and gas production tax based on the capital cost of developing new oil and gas production;**"

Page 1, following line 2:

Insert a new bill section to read:

"*** Section 1.** AS 43.20.043(g) is amended to read:

(g) A taxpayer that obtains a credit for a qualified capital investment or cost incurred for qualified services under this section may not also claim a tax credit or royalty modification for the same qualified capital investment or cost incurred for qualified services under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**. However, a taxpayer may elect not to obtain a credit under this section in order to qualify for a credit provided under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**."

Page 1, line 3:

Delete "**Section 1**"

Insert "**Sec. 2**"

Page 2, line 6:

Delete all material and insert:

"*** Sec. 3.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.026. Development cost credit. (a) This section applies to a credit

for a qualified development expenditure incurred before 2018 and before the start of sustained production that is taxable under AS 43.55.011(e). The qualified development expenditure must be incurred for development outside of the Cook Inlet sedimentary basin and outside of the Point Thomson unit established under AS 38.05.180(p) as the area of the Point Thomson unit existed on December 31, 2010. The qualified development expenditure must be for the development of a

(1) lease or property that, as of December 31, 2010, contains land that is not or previously had not been within a unit or is not or had not previously been involved directly in sustained production; or

(2) pool that, as of December 31, 2010, is not directly involved in or had not previously been involved directly in sustained production.

(b) The total amount of the credits under this section is equal to 100 percent of the qualified development expenditures that are incurred after the completion of the first well drilled that discovers a pool capable of commercial production from the lease or property and before the start of sustained production, less the amount of credits taken under AS 43.55.023(a) and (b). In consultation with the Alaska Oil and Gas Conservation Commission, the department shall determine the date

(1) on which the first well drilled discovered a pool capable of production; and

(2) of the start of sustained production from the pool, lease, or property.

(c) A credit under this section may be applied against the tax levied by AS 43.55.011(e) for the pool, lease, or property that is the basis for the credit until the credit for qualified development expenditures has been fully applied.

(d) A qualified development expenditure that is taken as a credit under this section may not be used as an expenditure for which a credit may be taken under AS 43.20.043. A credit under AS 43.55.023 may not be taken against the tax levied by AS 43.55.011(e) for the pool, lease, or property that is the basis for a credit during the same month in which a credit is taken under this section.

(e) A credit or portion of a credit under this section is not transferable and may not be used to reduce a person's tax liability under AS 43.55.011(e) to below zero for

any calendar year.

(f) The department shall adopt regulations describing the procedures for determining the amount of the credit, record keeping, verification of the accuracy of the credit claimed, allocating expenditures to a pool eligible for a credit under (a)(2) of this section, and other regulations necessary to administer this section.

(g) If a pool, lease, or property for which a credit may be taken under this section subsequently becomes a part of a unit, or a pool that is in a unit first begins sustained production after December 31, 2010, the credit may be applied only against the tax levied by AS 43.55.011(e) for the production of oil and gas attributable to the pool, lease, or property that qualified for the credit. For the purpose of applying the credit, the tax shall be allocated to the pool, lease, or property that qualified for the credit in proportion to the volume of production from that pool lease or property within the unit.

(h) In this section,

(1) "pool" has the meaning given in AS 31.05.170;

(2) "qualified development expenditure" means an expenditure, other than an expenditure for exploring for new oil or gas reserves, that may be recognized as a qualified capital expenditure as defined in AS 43.55.023;

(3) "sustained production" has the meaning given in AS 43.55.025(*l*).

* **Sec. 4.** AS 43.55.180(a) is amended to read:

(a) The department shall study

(1) the effects of the provisions of this chapter on oil and gas exploration, development, and production in the state, on investment expenditures for oil and gas exploration, development, and production in the state, on the entry of new producers into the oil and gas industry in the state, on state revenue, and on tax administration and compliance, giving particular attention to the tax rates provided under AS 43.55.011, the tax credits provided under **AS 43.55.023 - 43.55.026** [AS 43.55.023 - 43.55.025], and the deductions for and adjustments to lease expenditures provided under AS 43.55.160 - 43.55.170; and

(2) the effects of the tax rates under AS 43.55.011(i) on state revenue and on oil and gas exploration, development, and production on private land, and the

fairness of those tax rates for private landowners.

* **Sec. 5.** Section 2 of this Act takes effect January 1, 2013.

* **Sec. 6.** Except as provided in sec. 5 of this Act, this Act takes effect immediately under AS 01.10.070(c)."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "E"

Page 17, line 28, through page 20, line 1:

Delete all material and insert:

"* **Sec. 13.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.162. Adjustments to the gross value at the point of production for certain oil. (a) If the volume of taxable oil produced by a producer during a calendar year from leases or properties described in AS 43.55.160(a)(1)(A) is greater than the annual target volume of taxable oil production determined under this section for the calendar year, the gross value at the point of production for the taxable oil produced during

(1) the calendar year for the purpose of determining the annual production tax value under AS 43.55.160(a)(1), shall be reduced by a percentage equal to the percentage by which the volume of taxable oil produced during the calendar year exceeds the target volume of production for the calendar year; and

(2) a calendar month for the purpose of determining the production tax value for the calendar month under AS 43.55.160(a)(2), shall be reduced by a percentage equal to the percentage by which the volume of taxable oil produced during the calendar month exceeds the target volume of production for the calendar month.

(b) Subject to adjustment under (e) of this section, the target volume of taxable oil production by a producer for a calendar year equals the volume of taxable oil produced by the producer from leases or properties described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined, multiplied by the applicable factor

determined under (c)(1) - (4) of this section.

(c) For the purpose of determining the target volume of taxable oil production under (b) of this section, for a producer having taxable oil production from a lease or property described in AS 43.55.160(a)(1)(A)

(1) during the calendar year immediately preceding the calendar year for which the tax is being determined and the fourth calendar year preceding the calendar year for which the tax is being determined, the factor is equal to the cube root of the ratio of the volume of taxable oil produced by the producer from the leases or properties described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined to the volume of taxable oil produced from the leases or properties described in AS 43.55.160(a)(1)(A) during the fourth calendar year preceding the year for which the tax is being determined;

(2) during the calendar year immediately preceding the calendar year for which the tax is being determined and the third calendar year preceding the calendar year for which the tax is being determined, but not during the fourth year preceding the calendar year for which the tax is being determined, the factor is equal to the square root of the ratio of the volume of taxable oil produced by the producer from the leases or properties described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the year for which the tax is being determined to the volume of taxable oil produced from the leases or properties described in AS 43.55.160(a)(1)(A) during the third calendar year preceding the calendar year for which the tax is being determined;

(3) during the calendar year immediately preceding the calendar year for which the tax is being determined and the second calendar year preceding the year for which the tax is being determined, but not during the third or fourth calendar years preceding the year for which the tax is being determined, the factor is equal to the ratio of the volume of taxable oil produced by the producer from the leases or properties described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined to the volume of taxable oil produced from the leases or properties described in AS 43.55.160(a)(1)(A) during the

second calendar year preceding the calendar year for which the tax is being determined;

(4) during the calendar year immediately preceding the year for which the tax is being determined but not during the second, third, or fourth calendar years preceding the calendar year for which the tax is being determined, the factor is equal to one.

(d) The target volume of taxable oil production by a producer for a calendar month is equal to 1/12 of the annual target volume of taxable oil production for the calendar year, except as otherwise provided in (e)(4) of this section.

(e) For purposes of this section, for a producer that produced taxable oil during a calendar year from a lease or property described in AS 43.55.160(a)(1)(A),

(1) if the producer did not produce taxable oil from a lease or property described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined, there is no target volume of taxable oil production for the calendar year or calendar month during the year and no reduction in the gross value at the point of production for that oil production for the purposes of AS 43.55.160(a)(1) for the year for which the tax is being determined, unless the production of taxable oil during the entire calendar year was interrupted because of force majeure;

(2) if the producer did not produce taxable oil from a lease or property described in AS 43.55.160(a)(1)(A) during the calendar year immediately preceding the calendar year for which the tax is being determined because the production of taxable oil during the entire calendar year was interrupted because of force majeure, the target volume of taxable oil production for the current year must be determined under (c) of this section based on the fourth, third, or second preceding calendar year, as applicable, in which the producer produced taxable oil from a lease or property described in AS 43.55.160(a)(1)(A);

(3) for a producer that produced taxable oil from leases or properties described in AS 43.55.160(a)(1)(A) during a prior year that would have been used in the applicable calculation under (b) of this section, except that there was no taxable oil production for 30 days or more during that calendar year because the producer first

produced taxable oil from those leases or properties during that calendar year or because production from the leases or properties was interrupted by force majeure for 30 days or more during that calendar year, the producer's volume of taxable oil production from leases or properties described in AS 43.55.160(a)(1)(A) during that prior year is multiplied by a fraction, the numerator of which is the number of days during that prior year and the denominator of which is the number of days during that prior year on which the producer had oil production from a lease or property described in AS 43.55.160(a)(1)(A);

(4) for a producer that has production of taxable oil that is interrupted by force majeure for 30 days or more during the year for which the tax is being determined, the target volume of taxable oil production for the current year that would otherwise be applicable shall be reduced by a percentage equal to the percentage of days during the year that the production was interrupted, and the producer's monthly target volume of taxable oil production for the current year is the target volume of taxable oil production for the current year determined under this paragraph divided by a fraction, the numerator of which is the number of days during the year when the producer had production from leases or properties described in AS 43.55.160(a)(1)(A), and the denominator of which is 30.4375.

(f) The determination of the adjustment to the gross value at the point of production in this section is based on the location of a lease or property within the area described in AS 43.55.160(a)(1)(A) and is made without regard as to whether taxable oil is produced from a particular lease or property during more than one year.

(g) The negligence or recklessness of a producer or operator that prevents the production of taxable oil does not constitute force majeure. However, if there is a sufficient cause for the cessation of production because of force majeure, the negligence or recklessness of the producer, the operator, or the producer and operator does not prohibit treating the inability to produce oil or the suspension of oil production as having been caused by force majeure for the purposes of this section.

(h) In this section, "force majeure" means a cause beyond the reasonable ability of a producer, an operator, or a producer and operator of a lease or property to avoid or control that prevents the producer from producing oil or having oil produced

for the producer from the lease or property for a period of 24 or more consecutive hours; "force majeure" includes an act of God, war, martial law, insurrection, terrorism, sabotage, government restriction, order of a court or an administrative or regulatory body having jurisdiction over the lease or property or production from the lease or property, a strike or other labor action, or a failure or omission on the part of a third-party supplier, contractor, subcontractor, carrier, or other third party."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "E"

Page 1, following "**tax;**":

Insert "**providing for a tax credit applicable to the oil and gas production tax based on the capital cost of developing new oil and gas production;**"

Page 4, following line 28:

Insert a new bill section to read:

"* **Sec. 5.** AS 43.20.043(g) is amended to read:

(g) A taxpayer that obtains a credit for a qualified capital investment or cost incurred for qualified services under this section may not also claim a tax credit or royalty modification for the same qualified capital investment or cost incurred for qualified services under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**. However, a taxpayer may elect not to obtain a credit under this section in order to qualify for a credit provided under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, [OR] 43.55.025**, or 43.55.026**."

Renumber the following bill sections accordingly.

Page 10, following line 22:

Insert a new bill section to read:

"* **Sec. 12.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.026. Development cost credit. (a) This section applies to a credit for a qualified development expenditure incurred before 2018 and before the start of sustained production that is taxable under AS 43.55.011(e). The qualified development

expenditure must be incurred for development outside of the Cook Inlet sedimentary basin and outside of the Point Thomson unit established under AS 38.05.180(p) as the area of the Point Thomson unit existed on December 31, 2010. The qualified development expenditure must be for the development of a

(1) lease or property that, as of December 31, 2010, contains land that is not or previously had not been within a unit or is not or had not previously been involved directly in sustained production; or

(2) pool that, as of December 31, 2010, is not directly involved in or had not previously been involved directly in sustained production.

(b) The total amount of the credits under this section is equal to 100 percent of the qualified development expenditures that are incurred after the completion of the first well drilled that discovers a pool capable of commercial production from the lease or property and before the start of sustained production, less the amount of credits taken under AS 43.55.023(a) and (b). In consultation with the Alaska Oil and Gas Conservation Commission, the department shall determine the date

(1) on which the first well drilled discovered a pool capable of production; and

(2) of the start of sustained production from the pool, lease, or property.

(c) A credit under this section may be applied against the tax levied by AS 43.55.011(e) for the pool, lease, or property that is the basis for the credit until the credit for qualified development expenditures has been fully applied.

(d) A qualified development expenditure that is taken as a credit under this section may not be used as an expenditure for which a credit may be taken under AS 43.20.043. A credit under AS 43.55.023 may not be taken against the tax levied by AS 43.55.011(e) for the pool, lease, or property that is the basis for a credit during the same month in which a credit is taken under this section.

(e) A credit or portion of a credit under this section is not transferable and may not be used to reduce a person's tax liability under AS 43.55.011(e) to below zero for any calendar year.

(f) The department shall adopt regulations describing the procedures for

determining the amount of the credit, record keeping, verification of the accuracy of the credit claimed, allocating expenditures to a pool eligible for a credit under (a)(2) of this section, and other regulations necessary to administer this section.

(g) If a pool, lease, or property for which a credit may be taken under this section subsequently becomes a part of a unit, or a pool that is in a unit first begins sustained production after December 31, 2010, the credit may be applied only against the tax levied by AS 43.55.011(e) for the production of oil and gas attributable to the pool, lease, or property that qualified for the credit. For the purpose of applying the credit, the tax shall be allocated to the pool, lease, or property that qualified for the credit in proportion to the volume of production from that pool lease or property within the unit.

(h) In this section,

(1) "pool" has the meaning given in AS 31.05.170;

(2) "qualified development expenditure" means an expenditure, other than an expenditure for exploring for new oil or gas reserves, that may be recognized as a qualified capital expenditure as defined in AS 43.55.023;

(3) "sustained production" has the meaning given in AS 43.55.025(*l*)."

Renumber the following bill sections accordingly.

(a) A producer or explorer may take a tax credit for a qualified capital expenditure as follows:

(1) **except as limited by (p) of this section,** notwithstanding that a qualified capital expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a qualified capital expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 20 percent of that expenditure; however, not more than half of the tax credit may be applied for a single calendar year;

(2) a producer or explorer may take a credit for a qualified capital expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data

that would be required to be submitted under AS 43.55.025(f)(2).

* **Sec. 12.** AS 43.55.023(d) is amended to read:

(d) Except as limited by (i) **and (p)** of this section, a person that is entitled to take a tax credit under this section that wishes to transfer the unused credit to another person or obtain a cash payment under AS 43.55.028 may apply to the department for transferable tax credit certificates. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny an application, or grant an application as to a lesser amount than that claimed and deny it as to the excess, not later than 120 days after the latest of (1) March 31 of the year following the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; (2) the date the statement required under AS 43.55.030(a) or (e) was filed for the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; or (3) the date the application was received by the department. If, based on the information then available to it, the department is reasonably satisfied that the applicant is entitled to a credit, the department shall issue the applicant two transferable tax credit certificates, each for half of the amount of the credit. The credit shown on one of the two certificates is available for immediate use. The credit shown on the second of the two certificates may not be applied against a tax for a calendar year earlier than the calendar year following the calendar year in which the certificate is issued, and the certificate must contain a conspicuous statement to that effect. A certificate issued under this subsection does not expire.

* **Sec. 13.** AS 43.55.023(*l*) is amended to read:

(*l*) **Except as limited by (p) of this section, a** [A] producer or explorer may apply for a tax credit for a well lease expenditure incurred in the state south of 68 degrees North latitude after June 30, 2010, as follows:

(1) notwithstanding that a well lease expenditure incurred in the state south of 68 degrees North latitude may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under (a) of this section, AS 38.05.180(i),

AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well lease expenditure in the state south of 68 degrees North latitude may elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 40 percent of that expenditure; a tax credit under this paragraph may be applied for a single calendar year;

(2) a producer or explorer may take a credit for a well lease expenditure incurred in the state south of 68 degrees North latitude in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

*** Sec. 14.** AS 43.55.023 is amended by adding a new subsection to read:

(p) The amount of credit for a capital expenditure under (a) or (*l*) of this section for an expenditure that is also a lease expenditure under AS 43.55.165 is reduced by the amount necessary so that the tax benefit percentage is not more than 65 percent of the capital expenditure. The amount of credit for a capital expenditure under (a) or (*l*) of this section that may not be taken because of the limitation in this subsection may not be applied in a later calendar year under (c) of this section and may not be included in an application for a tax credit certificate under (d) of this section. In this subsection, "tax benefit percentage" means the sum of the average monthly tax rate under AS 43.55.011(e) and (g) for the calendar year in which the credit is taken and the percentage of the capital expenditure that may be taken as a credit under (a) or (*l*) of this section.

*** Sec. 15.** AS 43.55.025(a) is amended to read:

(a) Subject to the terms and conditions of this section **and except as limited by (n) of this section**, a credit against the production tax levied by AS 43.55.011(e) is allowed for exploration expenditures that qualify under (b) of this section in an amount equal to one of the following:

(1) 30 percent of the total exploration expenditures that qualify only

under (b) and (c) of this section;

(2) 30 percent of the total exploration expenditures that qualify only under (b) and (d) of this section;

(3) 40 percent of the total exploration expenditures that qualify under (b), (c), and (d) of this section;

(4) 40 percent of the total exploration expenditures that qualify only under (b) and (e) of this section; or

(5) 80, 90, or 100 percent, or a lesser amount described in (*l*) of this section, of the total exploration expenditures described in (b)(1) and (2) of this section and not excluded by (b)(3) and (4) of this section that qualify only under (*l*) of this section.

* **Sec. 16.** AS 43.55.025 is amended by adding a new subsection to read:

(n) The amount of credit for an exploration expenditure under (a)(1) - (4) of this section for an expenditure that is also a lease expenditure under AS 43.55.165 is reduced by the amount necessary so that the tax benefit percentage is not more than 65 percent of the exploration expenditure. The amount of credit for an exploration expenditure under (a)(1) - (4) of this section that may not be taken because of the limitation in this subsection may not be transferred, conveyed, or sold under (g) of this section. In this subsection, "tax benefit percentage" means the sum of the average monthly tax rate under AS 43.55.011(e) and (g) for the calendar year in which the credit is taken and the percentage of the exploration expenditure that may be taken as a credit under (a)(1) - (4) of this section."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "E"

Page 1, line 1, following "**tax;**":

Insert "**relating to oil and gas or gas only leasing; requiring that a minimum work commitment be included in each oil and gas and gas only lease and that a proposed plan of development be included in an application for an oil and gas or gas only lease;**"

Page 4, following line 28:

Insert new bill sections to read:

"* **Sec. 5.** AS 38.05.180(h) is amended to read:

(h) The commissioner **shall** [MAY] include terms in **a** [ANY] lease **that impose** [IMPOSING] a minimum work commitment on the lessee **to implement the plan of development submitted by the lessee with a bid for an oil and gas or gas only lease. The terms of the minimum work commitment must** [. THESE TERMS SHALL BE MADE PUBLIC BEFORE THE SALE, AND MAY] include appropriate penalty provisions to take effect in the event the lessee does not fulfill the minimum work commitment. If it is demonstrated that a lease has been proven unproductive by actions of adjacent lease holders, the commissioner may set aside a work commitment. The commissioner may waive for a period not to exceed one two-year period any term of a minimum work commitment if the commissioner makes a written finding either that conditions preventing drilling or exploration were beyond the lessee's reasonable ability to foresee or control or that the lessee has demonstrated through good faith efforts an intent and ability to drill or develop the lease during the term of the waiver.

* **Sec. 6.** AS 38.05.180(x) is amended to read:

(x) A lessee conducting or permitting any exploration for, or development or

production of, oil or gas on state land shall provide the commissioner access to all noninterpretive data obtained from that lease**; shall provide the commissioner access to all information necessary to perform an economic analysis under (ii)(2) of this section, including the capital, operating, production, and development costs and an estimate of total reserves;** and shall provide copies of that data **and information**, as the commissioner may request. The confidentiality provisions of AS 38.05.035 apply to the information obtained under this subsection.

*** Sec. 7.** AS 38.05.180 is amended by adding new subsections to read:

(hh) The commissioner shall require each bidder for an oil and gas lease or gas only lease and each lessee applying for an extension or renewal of an oil and gas lease or gas only lease to submit a plan of development for exploring, developing, and producing from the lease within the period of the lease or the extension or renewal of the lease. The commissioner shall review each plan of development and determine if the proposed plan of development is reasonably expected to develop the lease in the best interest of the state. The plan of development shall be included in a lease along with penalties for failing to comply with the plan of development and other terms of the lease. A bidder may not be a "qualified bidder" for the purposes of (f)(1) of this section if the commissioner finds that the bidder has not submitted a proposed plan of development that is in the best interest of the state or that the person that submitted the plan of development is not reasonably capable of implementing the plan.

(ii) The commissioner shall

(1) review each oil and gas lease or gas only lease each year for the purpose of determining whether a lease is being developed in the best interest of the state, whether the lessee is complying with the plan of development applicable to the lease, and whether revision of a development plan, including the planned rate of development, would provide the maximum benefit to the people of the state;

(2) every five years, perform an economic analysis on each participating area and determine whether the participating area is capable of increased production in paying quantities over the current rate of production or plan of development;

(3) enforce the terms of each oil and gas lease or gas only lease,

including imposing any applicable penalty or other remedy for noncompliance, within a reasonable time after finding that a lessee is out of compliance with the terms of the lease;

(4) submit a report to the legislature before the first day of each regular session that lists each oil and gas or gas only lessee that is found to be out of compliance and the action by the commissioner to bring the lessee back into compliance or to terminate the lease.

(jj) For the purposes of (hh) and (ii) of this section, a plan of development for a cooperative or unit under (p) of this section is the plan of development for a lease within the cooperative or unit, except where a different plan of development is established for a lease within the cooperative or unit.

(kk) For purposes of (ii) of this section,

(1) "participating area" means that part of an oil and gas lease unit area to which production is allocated in the manner described in a unit agreement;

(2) "production in paying quantities" means production in quantities sufficient to yield a return in excess of drilling, development, and operating costs."

"* **Sec. 16.** AS 44.88.080 is amended by adding a new paragraph to read:

(32) to acquire an interest in a project as necessary or appropriate to provide working or venture capital for an oil or natural gas development project under AS 44.88.650 - 44.88.660, whether by purchase, gift, or lease.

* **Sec. 17.** AS 44.88 is amended by adding new sections to read:

Sec. 44.88.650. Acquisition of interest in businesses. (a) The authority may acquire, through purchase or other means, an interest in an in-state asset of a corporation or other business entity that has a lease interest in an oil or natural gas field in the state that has been explored, but only if the authority determines the leaseholder has made reasonable efforts to obtain financing from the private sector to develop the lease and those efforts have, in whole or part, been unsuccessful. The authority shall exercise due diligence in acquiring an interest in an in-state asset of a business entity under this section.

(b) If the authority acquires an interest in an in-state asset of a business entity under this section, the authority may use the authority's assets, as appropriate, to aid in the development of the oil or natural gas field in which the business entity has a lease interest.

Sec. 44.88.660. Alaska resource development fund. (a) The Alaska resource development fund is established in the authority for the purpose of developing oil and gas resources, and consists of appropriations to the fund. The authority shall manage the fund and may create separate accounts within it. Income of the fund or of enterprises of the authority shall be separately accounted for and may be appropriated to the fund.

(b) The authority may use money from the fund to carry out the fund's purposes set out in (a) of this section.

* **Sec. 18.** AS 44.88.900(9) is amended to read:

(9) "project" means

(A) a plant or facility used or intended for use in connection with making, processing, preparing, transporting, or producing in any manner, goods, products, or substances of any kind or nature or in connection with developing or utilizing a natural resource, or extracting, smelting, transporting, converting, assembling, or producing in any manner, minerals, raw materials, chemicals, compounds, alloys, fibers, commodities and materials, products, or substances of any kind or nature;

(B) a plant or facility used or intended for use in connection with a business enterprise;

(C) commercial activity by a business enterprise;

(D) a plant or facility demonstrating technological advances of new methods and procedures and prototype commercial applications for the exploration, development, production, transportation, conversion, and use of energy resources;

(E) infrastructure for a new tourism destination facility or for the expansion of a tourism destination facility; in this subparagraph, "tourism destination facility" does not include a hotel or other overnight lodging facility;

(F) a plant or facility, other than a plant or facility described in (D) of this paragraph, for the generation, transmission, development, transportation, conversion, or use of energy resources;

(G) a plant or facility that enhances, provides for, or promotes

economic development with respect to transportation, communications, community public purposes, technical innovations, prototype commercial applications of intellectual property, or research;

(H) a plant or facility used or intended for use as a federal facility, including a United States military, national guard, or coast guard facility;

(I) development of an oil and gas lease by providing working or venture capital in exchange for an equity interest;

*** Sec. 19.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ANALYSIS AND REPORT ON ALASKA RESIDENT INVESTMENT PROGRAM. The Alaska Industrial Development and Export Authority shall research the possibility of creating a program through which a resident of the state could invest the resident's permanent fund dividend or other funds in an in-state oil or gas asset acquired by the authority under AS 44.88.650 and report its findings to the legislature on December 31, 2012."

(b) An exploration incentive credit extended under (a) of this section may be applied against

(1) a payment or obligation against which a credit authorized by AS 38.05.180(i) may be claimed;

(2) taxes payable under AS 43.20 **or AS 43.21, as applicable**; and

(3) oil and gas bonus payments due the state under AS 38.05.180(f).

* **Sec. 7.** AS 43.20.011 is amended by adding a new subsection to read:

(g) For purposes of calculating the tax under (e) of this section, the taxable income of a corporation engaged in the production or transportation of crude oil or natural gas shall be determined in accordance with AS 43.21.

* **Sec. 8.** AS 43.20.073(f) is amended to read:

(f) This section does not apply to taxpayers subject to **AS 43.21** [AS 43.20.072 ENGAGED IN

(1) THE PRODUCTION OF OIL OR GAS FROM A LEASE OR PROPERTY IN THE STATE; OR

(2) THE TRANSPORTATION OF OIL OR GAS BY REGULATED PIPELINE IN THE STATE].

* **Sec. 9.** AS 43.21 is amended by adding new sections to read:

Article 1. Determination of Taxable Income.

Sec. 43.21.200. Application. This chapter applies to every corporation doing business in the state that derives income from the production of oil or gas from a lease or property in the state or from the pipeline transportation of oil or gas in the state. The tax calculated under this chapter is measured by the total taxable income of the corporation during the tax period as defined by AS 43.21.210 - 43.21.240 and is calculated at the rates established under AS 43.20.011(e).

Sec. 43.21.210. Determination of taxable income from oil and gas production. (a) The taxable income of a corporation from the production of oil and gas from a lease or property in the state is the corporation's net income as calculated by the department in accordance with this section.

(b) Gross income of a corporation from oil and gas production is the gross value at the point of production of oil or gas produced from a lease or property in the state. The department shall by regulation determine a uniform method of establishing the gross value at the point of production. For the purpose of determining the gross

value at the point of production under this subsection, the department shall use AS 43.55.150 for the determination of transportation costs.

(c) Net income from oil and gas production shall be determined by the department by deducting from gross income the following:

(1) royalties paid in kind or in value;

(2) taxes imposed under AS 43.55 that are actually paid or incurred by the corporation on the production from a lease or property in the state;

(3) taxes imposed under AS 29.45.080 - 29.45.090 and AS 43.56 that are actually paid or incurred by the corporation on property used directly in the production of oil or gas from a lease or property in the state, including property used in production, gathering, treatment, or preparation of the oil or gas for pipeline transportation, but only if those property tax payments were due and payable only after the date of commercial production from the lease or property with which the property was associated;

(4) the direct costs incurred by or for the corporation in operating the lease or property, including the direct costs of producing, gathering, treating, or preparing the oil or gas for pipeline transportation, but net of any payments received for those activities and not including any indirect cost or overhead expense;

(5) depreciation, using the percentage depletion basis under 26 U.S.C. 613 (Internal Revenue Code) or another reasonable method as the department may by regulation establish, on property used directly in the production, gathering, treatment, or preparation of the oil or gas for pipeline transportation, including amortization of capitalized interest for investments in that property at a rate not to exceed the average cost to the taxpayer of borrowed capital during the year in which the interest is capitalized;

(6) the amortization of lease acquisition payments and taxes paid or incurred under AS 29.45.080, 29.45.090, or AS 43.56, including capitalized interest, for or on producing properties before the commencement of commercial production from the lease or property for which the property is being used;

(7) interest expense of the corporation, not capitalized during construction, that was paid or incurred in connection with property in the state;

however, unless (f) of this section applies, the interest expense may not exceed that portion of the total interest paid by the consolidated business of which the corporation is a part, determined by multiplying the total interest by a fraction, the numerator of which is the value of the corporation's real and tangible personal property used directly in the production of oil or gas from a lease or property in the state and the denominator of which is the value of all real and tangible personal property of the consolidated business; in this paragraph, "total interest paid by the consolidated business" does not include interest expense arising from intercompany obligations within the consolidated business except to the extent that the interest expense reflects a pass-through of interest on a third-party borrowing by the parent or other member of the consolidated business with the purpose, expressed at the time of the third-party borrowing, of financing Alaska business activity of the taxpayer corporation;

(8) expenses incurred by the corporation after December 31, 2012, of unsuccessful exploration of oil or gas in the state, including the acquisition costs of abandoned properties, dry hole costs, and the costs of geologic and geophysical exploration related to those abandoned properties;

(9) general overhead or administrative expense incurred by the corporation attributable to deriving income from the production of oil or gas from a lease or property in the state to the extent, except as provided in (f) of this section, that the general overhead or administrative expense does not exceed that portion of the total general overhead or administrative expense incurred by the consolidated business of which the corporation is a part, determined by multiplying the total general overhead or administrative expense by a fraction, the numerator of which is the value of the corporation's real and tangible personal property used directly in the production of oil or gas from a lease or property in the state and the denominator of which is the value of all real and tangible personal property of the consolidated business;

(10) the amount of income from the production of oil and gas from a lease or property that is divided among the regional Native corporations under 43 U.S.C. 1606(i) (sec. 7(i), Alaska Native Claims Settlement Act, P.L. 92-203).

(d) Deductions from gross income under this section may not include expenses previously deducted on a return filed under AS 43.20.

(e) If a corporation subject to this chapter shares the production or proceeds of the production from a lease or property through a working interest, royalty interest, overriding royalty interest, production payment, net profit interest, joint venture, or other agreement, the department shall allocate the deductions from gross income between the corporation and the persons with whom the corporation has the agreement in accordance with the terms of the agreement.

(f) If a corporation demonstrates to the satisfaction of the department that the corporation paid or incurred actual expenses for interest or for general overhead or administration attributable to deriving income from the production of oil or gas from a lease or property in the state in an amount greater than the amount determined under (c)(7) or (9) of this section, the department may allow the corporation to deduct the greater amount.

Sec. 43.21.220. Determination of income from oil and gas pipeline transportation. (a) Except as provided in (c) of this section, taxable income attributable to the transportation of oil in a pipeline engaged in interstate commerce in this state shall be determined by the department and shall be the amount reported or that would be required to be reported to the Federal Energy Regulatory Commission or its successors as net operating income, less those portions of interest and general overhead or administrative expense attributable to the pipeline transportation of oil in the state, except that taxable income shall also include taxes on or measured by income. The department shall establish regulations governing the determination of interest and general overhead or administrative expense attributable to pipeline transportation of oil in the state.

(b) Except as provided in (c) of this section, taxable income attributable to the transportation of natural gas in a pipeline engaged in interstate commerce in this state shall be determined by the department and shall be the amount reported or that would be required to be reported to the Federal Energy Regulatory Commission as net operating income, less that portion of interest and general overhead or administrative expense attributable to pipeline transportation in the state, except that the taxable income shall also include taxes on or measured by income. The department shall establish regulations governing the determination of interest and general overhead or

administrative expense attributable to pipeline transportation of natural gas in the state.

(c) Taxable income attributable to the transportation of oil or natural gas in this state of a corporation not under the jurisdiction of the Federal Energy Regulatory Commission, or of a corporation under the jurisdiction of the Federal Energy Regulatory Commission but not reporting the operation of pipelines in the state separately from the operation of pipelines elsewhere, shall be determined by the department and shall be based on an amount equal to the amount that would have been reported to the Federal Energy Regulatory Commission under (a) of this section in the case of oil pipelines, or under (b) of this section, in the case of natural gas pipelines, had the corporation been, in fact, under the jurisdiction of the Federal Energy Regulatory Commission for the taxable year and required to report on the operation of pipelines in the state separately from the operation of pipelines elsewhere.

Sec. 43.21.230. Determination of income from activities other than oil and gas production or pipeline transportation. (a) Taxable income of a corporation subject to this chapter from activities in this state other than the production of oil or gas from a lease or property in the state or the pipeline transportation of oil or gas in the state shall be determined in accordance with the method established in art. IV of AS 43.19.010 and in AS 43.20.071, as modified by (b) - (d) of this section.

(b) The total taxable income of a consolidated business is its entire income less the portion of that entire income attributable to worldwide production and pipeline transportation of oil and gas. In this subsection, for a member of a consolidated business who is

(1) required to file under the Internal Revenue Code, "entire income" means the taxpayer's taxable income as the term is used in AS 43.20.011 - 43.20.065;

(2) not required to file under the Internal Revenue Code, "entire income" means an income determination prepared in accordance with generally accepted accounting principles, except that a taxpayer may elect to report income as the income would be determined under (1) of this subsection.

(c) The numerator and denominator of the property factor, of the payroll factor, and of the sales factor shall be calculated without reference to that portion of

property, payroll, or sales directly related to the production of oil or gas from a lease of property in the state or the pipeline transportation of oil or gas in the state.

(d) The value attributed to vessels transporting Alaska oil or gas of a consolidated business that are not owned or effectively owned by the consolidated business shall be excluded from the property factor.

Sec. 43.21.240. Applicability of tax to a consolidated business. The provisions of this chapter apply to a consolidated business whether or not the taxpayer is the parent or controlling corporation.

Article 2. Calculation of Tax; Returns.

Sec. 43.21.300. Assessment of income and tax. (a) The department shall assess taxable income and the amount of tax payable on that taxable income. The amount of the tax payable shall be determined using the tax rates in AS 43.20.011(e).

(b) On or before August 15 of each year, the department shall send to every corporation taxable under this chapter a notice of assessment showing the amount of income taxable under this chapter for the previous year and the amount of tax payable on that taxable income.

(c) For purposes of this chapter, the department may combine taxable income of corporations subject to tax under this chapter who are part of the same consolidated business.

(d) If the methods of allocation and apportionment provided in this chapter do not fairly represent the extent of a corporation's business activity in the state, the corporation may petition for or the department may require, in respect to all or any part of the corporation's business activity, if reasonable, the employment of any method authorized under art. IV, sec. 18, AS 43.19.010 (Multistate Tax Compact), to carry out an equitable allocation and apportionment of the corporation's income. The commissioner shall include in the annual report required in AS 43.21.410 a report on all relief granted under this subsection, including, for each case, a statement of the changes in tax liability resulting from the granting of relief, the tax years involved, and a description of the method of determining taxable income that was substituted for the methods provided in this chapter.

Sec. 43.21.320. Credits. A credit under AS 43.20.043, 43.20.044, or 43.20.046

may also be applied against the tax levied under this chapter, unless a credit for the same expenditure has been taken against a tax levied under AS 43.20 or AS 43.55.

Sec. 43.21.330. Returns. On or before April 15 of each year, a corporation subject to tax under this chapter shall submit a return in a form prescribed by the department setting out information required by the department to determine taxable income. For purposes of this chapter, the department may require corporations subject to tax under this chapter that are part of the same consolidated business to file a single return.

Sec. 43.21.340. Payment of tax. The tax levied under this chapter is payable to the department on or before September 30 of each year or in installments, including prepayments of estimated tax, at the times and under the conditions the department may by regulation require. The tax is payable on the due date set out in this section even though the assessment is under appeal or the validity, enforceability, or application of this chapter or any provision of this chapter is challenged before the department or in the courts.

Article 3. Administrative Matters.

Sec. 43.21.400. Regulations. The department shall adopt regulations in accordance with AS 44.62 (Administrative Procedure Act) as appropriate to administer and enforce this chapter.

Sec. 43.21.410. Public reporting. (a) The commissioner shall compile and transmit to the legislature an annual report of state revenue and the implementation of taxation policies under this chapter. The report must include total aggregate income tax paid by corporations subject to this chapter and aggregate income and deductions by category, classified so as to prevent the identification of particular returns or reports.

(b) The legislative auditor shall notify the legislature on or before the first day of each regular session that the annual report reviewing the actions of the department in administering this chapter is available.

Sec. 43.21.420. Information disclosure. Notwithstanding AS 43.05.320, the department shall disclose to a legislator, on request, information collected from a taxpayer to the extent that

(1) the taxpayer is a publicly traded company;

(2) the information has been filed in a quarterly, annual, or other periodic report to the United States Securities Exchange Commission; and

(3) the information has been made public by the United States Securities Exchange Commission.

Sec. 43.21.499. Definitions. Unless the context requires otherwise, the definitions contained in AS 43.55.900 are applicable to this chapter. In addition, in this chapter,

(1) "consolidated business" means a corporation or group of corporations having more than 50 percent common ownership, direct or indirect, or a group of corporations in which there is common control, either direct or indirect, as evidenced by an arrangement, contract, or agreement;

(2) "Internal Revenue Code" has the meaning given in AS 43.20.340."

Renumber the following sections accordingly.

"* **Sec. 16.** AS 44.99 is amended by adding new sections to read:

Article 6. Oil and Gas Competitiveness Review Board.

Sec. 44.99.600. Oil and Gas Competitiveness Review Board established. (a) The Oil and Gas Competitiveness Review Board is established.

(b) The board shall consist of nine members as follows:

(1) one senator appointed by the president of the senate;

(2) one representative appointed by the speaker of the house of representatives;

(3) five members of the public appointed by the governor, including one member who is a petroleum engineer, one member who is a geologist, one member who is an economist, and one member who is a member of an environmental or conservation group;

(4) the commissioner of natural resources or the commissioner's designee; and

(5) the commissioner of revenue or the commissioner's designee.

(c) The senator and representative appointed to the board under (b)(1) and (2) of this section shall be cochairs.

(d) Each legislative member serves for the duration of the legislature during

which the member is appointed. Each public member serves for three years. An individual who has served on the board may be reappointed.

(e) A vacancy on the board shall be filled in the manner of the original appointment.

(f) A member of the board may be removed and replaced at the discretion of the person appointing that member.

(g) The public members of the board serve without compensation but shall receive per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

(h) The board may enter into contracts for professional services and may employ staff for administrative support for the board.

Sec. 44.99.610. Duties. The duties of the board include the following:

(1) review historical, current, and potential levels of investment in the state's oil and gas sector;

(2) identify factors that affect investment in oil and gas exploration, development, and production in the state, including tax structure, rates, and credits; royalty requirements; infrastructure; workforce availability; and regulatory requirements;

(3) review the competitive position of the state to attract and maintain investment in the oil and gas sector in the state as compared to the competitive position of other regions with oil and gas resources;

(4) in order to facilitate the work of the board, establish procedures to accept and keep confidential information that is beneficial to the work of the board, including the creation of a secure data room and confidentiality agreements to be signed by individuals having access to the confidential information;

(5) make written findings and recommendations, together with suggested legislation, to the Alaska State Legislature before December 1 of each year, or as soon thereafter as practicable, regarding

(A) changes to the state's regulatory environment that would be conducive to encouraging increased investment while protecting the interests of the people of the state and the environment;

(B) changes to the state's fiscal regime that would be conducive to increased and ongoing long-term investment in and development of the state's oil and gas resources; and

(C) alternative means for increasing the state's ability to attract and maintain investment in and development of the state's oil and gas resources.

Sec. 44.99.620. Information to be provided to board. (a) The commissioner of natural resources, the commissioner of revenue, the commissioner of environmental conservation, and other commissioners and state agencies that have responsibility for and maintain information related to oil and gas investment and activity in the state shall, at the request of the board, provide information required by the board to carry out the duties described in AS 44.99.610.

(b) At the request of the board, and except for information that is confidential under AS 43.05.230, a commissioner may disclose to the board information that is otherwise confidential after each member of the board and each staff member for the board with access to the information signs a confidentiality agreement prepared by the commissioner making the disclosure. Information that is confidential under AS 43.05.230 may not be disclosed to the board.

Sec. 44.99.630. Definition. In AS 44.99.600 - 44.99.630, "board" means the Oil and Gas Competitiveness Review Board.

*** Sec. 17.** AS 44.99.600, 44.99.610, 44.99.620, and 44.99.630 are repealed June 30, 2021."

"* **Sec. 7.** AS 43.55.011(g) is repealed and reenacted to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of taxable oil and gas is more than $30, the amount of tax for purposes of (e)(2)(A) of this section is determined by multiplying the monthly production tax value of the taxable oil produced during the month, gas produced during the month from a lease or property in the Cook Inlet sedimentary basin, and gas produced during

the month from a lease or property outside the Cook Inlet sedimentary basin and used in the state by the following tax rates, as applicable:

(1) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of taxable oil and gas for the month is not more than $42.50 under AS 43.55.160(a)(2)(A) - (E), the tax rate is 2.5 percent of the difference between that average monthly production tax value of a BTU equivalent barrel and $30;

(2) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $42.50 but not more than $55 under AS 43.55.160(a)(2)(A) - (E), the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30; and

(B) 7.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $42.50;

(3) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $55 but not more than $67.50 under AS 43.55.160(a)(2)(A) - (E), the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(C) 12.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $55;

(4) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $67.50 but not more than $80 under AS 43.55.160(a)(2)(A) - (E), the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(D) 17.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $67.50;

(5) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $80 but not more than $92.50 under AS 43.55.160(a)(2)(A) - (E), the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(E) 22.5 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $80;

(6) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $92.50 but not more than $105 under AS 43.55.160(a)(2)(A) - (E), the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the next higher $12.50 of monthly

production tax value for each BTU equivalent barrel;

(E) 22.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(F) 25 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $92.50;

(7) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $105 but not more than $117.50 under AS 43.55.160(a)(2)(A) - (E), the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(E) 22.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(F) 25 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(G) 30 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $105;

(8) if the producer's average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $117.50 under AS 43.55.160(a)(2)(A) - (E), the tax rates are

(A) 2.5 percent on the first $12.50 of monthly production tax value for each BTU equivalent barrel that is greater than $30;

(B) 7.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(C) 12.5 percent of the next higher $12.50 of monthly

production tax value for each BTU equivalent barrel;

(D) 17.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(E) 22.5 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(F) 25 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel;

(G) 30 percent of the next higher $12.50 of monthly production tax value for each BTU equivalent barrel; and

(H) 35 percent of the monthly production tax value for each BTU equivalent barrel that is greater than $117.50;

(9) for purposes of this subsection, the average monthly production tax value under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of taxable oil and gas is calculated by

(A) adding all of the monthly production tax values determined under AS 43.55.160(a)(2)(A) - (E); and

(B) dividing the sum calculated under (A) of this paragraph by the total amount, in BTU equivalent barrels, of

(i) taxable oil produced by the producer during the month;

(ii) taxable gas produced by the producer during the month from a lease or property in the Cook Inlet sedimentary basin; and

(iii) taxable gas produced by the producer during the month from a lease or property outside the Cook Inlet sedimentary basin and used in the state."

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 192(RES), Draft Version "E"

Page 2, line 1, following "**tax**":

Insert "**rate; relating to oil and gas production tax credits, including qualified credits for exploration, development and production**"

Page 4, line 29, through page 5, line 9:

Delete all material and insert:

"*** Sec. 5.** AS 43.55.011(e) is repealed and reenacted to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under (f), (j), (k), and (o) of this section, the tax is equal to the sum of the annual production tax value of the taxable oil and gas

(1) produced from a lease or property not described in (2) of this subsection as calculated under AS 43.55.160(a)(1) multiplied by 25 percent, and the sum, over all months of the calendar year, of the tax amounts determined under (g)(1) and (p) of this section, as applicable; and

(2) produced during the first seven consecutive years after the start of sustained production or produced during the first seven years after the effective date of this subsection, whichever is later, from a lease or property containing land that was not or previously had not been within a unit or in commercial production as of December 31, 2008, as calculated under AS 43.55.160(a)(1) multiplied by 15 percent, and the sum, over all months of the calendar year, of the tax amounts determined

under (g)(2) and (p) of this section, as applicable; in this paragraph, "sustained production" has the meaning given in AS 43.55.025(*l*)."

Page 5, line 28, through page 7, line 5:

Delete all material and insert:

"* **Sec. 7.** AS 43.55.011(g) is repealed and reenacted to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of taxable oil produced during the month, gas produced during the month from a lease or property in the Cook Inlet sedimentary basin, and gas produced during the month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is more than $30, the tax is calculated as follows:

(1) the amount of tax for purposes of (e)(1) of this section is determined by multiplying the value calculated under AS 43.55.160(a)(2)(A) - (E) by the tax rate calculated as follows:

(A) if the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between that average monthly production tax value of a BTU equivalent barrel and $30; or

(B) if the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel and $92.50, except that the sum determined under this subparagraph may not exceed 50 percent;

(2) the amount of tax for purposes of (e)(2) of this section is determined by multiplying the monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of the taxable oil and gas produced during the month by

the following tax rates, as applicable:

(A) if the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is not more than $42.50, the tax rate is 2.5 percent of the difference between that average monthly production tax value of a BTU equivalent barrel and $30;

(B) if the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $42.50 but not more than $55, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $30; and

(ii) 7.5 percent of the monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $42.50;

(C) if the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $55 but not more than $67.50, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $30;

(ii) 7.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel; and

(iii) 12.5 percent of the monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $55;

(D) if the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the

taxable oil and gas for the month is more than $67.50 but not more than $80, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $30;

(ii) 7.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel;

(iii) 12.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel;

(iv) 17.5 percent of the monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $67.50;

(E) if the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $80 but not more than $92.50, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $30;

(ii) 7.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel;

(iii) 12.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel;

(iv) 17.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel; and

(v) 22.5 percent of the monthly production tax value

calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $80;

(F) if the producer's average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of the taxable oil and gas for the month is more than $92.50, the tax rates are

(i) 2.5 percent on the first $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $30;

(ii) 7.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel;

(iii) 12.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel;

(iv) 17.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel;

(v) 22.5 percent of the next higher $12.50 of monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel; and

(vi) 25 percent of the monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) for each BTU equivalent barrel that is greater than $92.50;

(3) for purposes of this subsection, the average monthly production tax value calculated under AS 43.55.160(a)(2)(A) - (E) of a BTU equivalent barrel of taxable oil and gas is calculated by

(A) adding all of the monthly production tax values determined calculated under AS 43.55.160(a)(2)(A) - (E); and

(B) dividing the sum calculated under (A) of this paragraph by the total amount, in BTU equivalent barrels, of

(i) taxable oil produced by the producer during the

month;

(ii) taxable gas produced by the producer during the month from a lease or property in the Cook Inlet sedimentary basin; and

(iii) taxable gas produced by the producer during the month from a lease or property outside the Cook Inlet sedimentary basin and used in the state."

CSSB 192\B and Proposed Amendments

Presentation to the
Senate Resources Committee
Department of Revenue
February 27, 2012

Presentation Organization

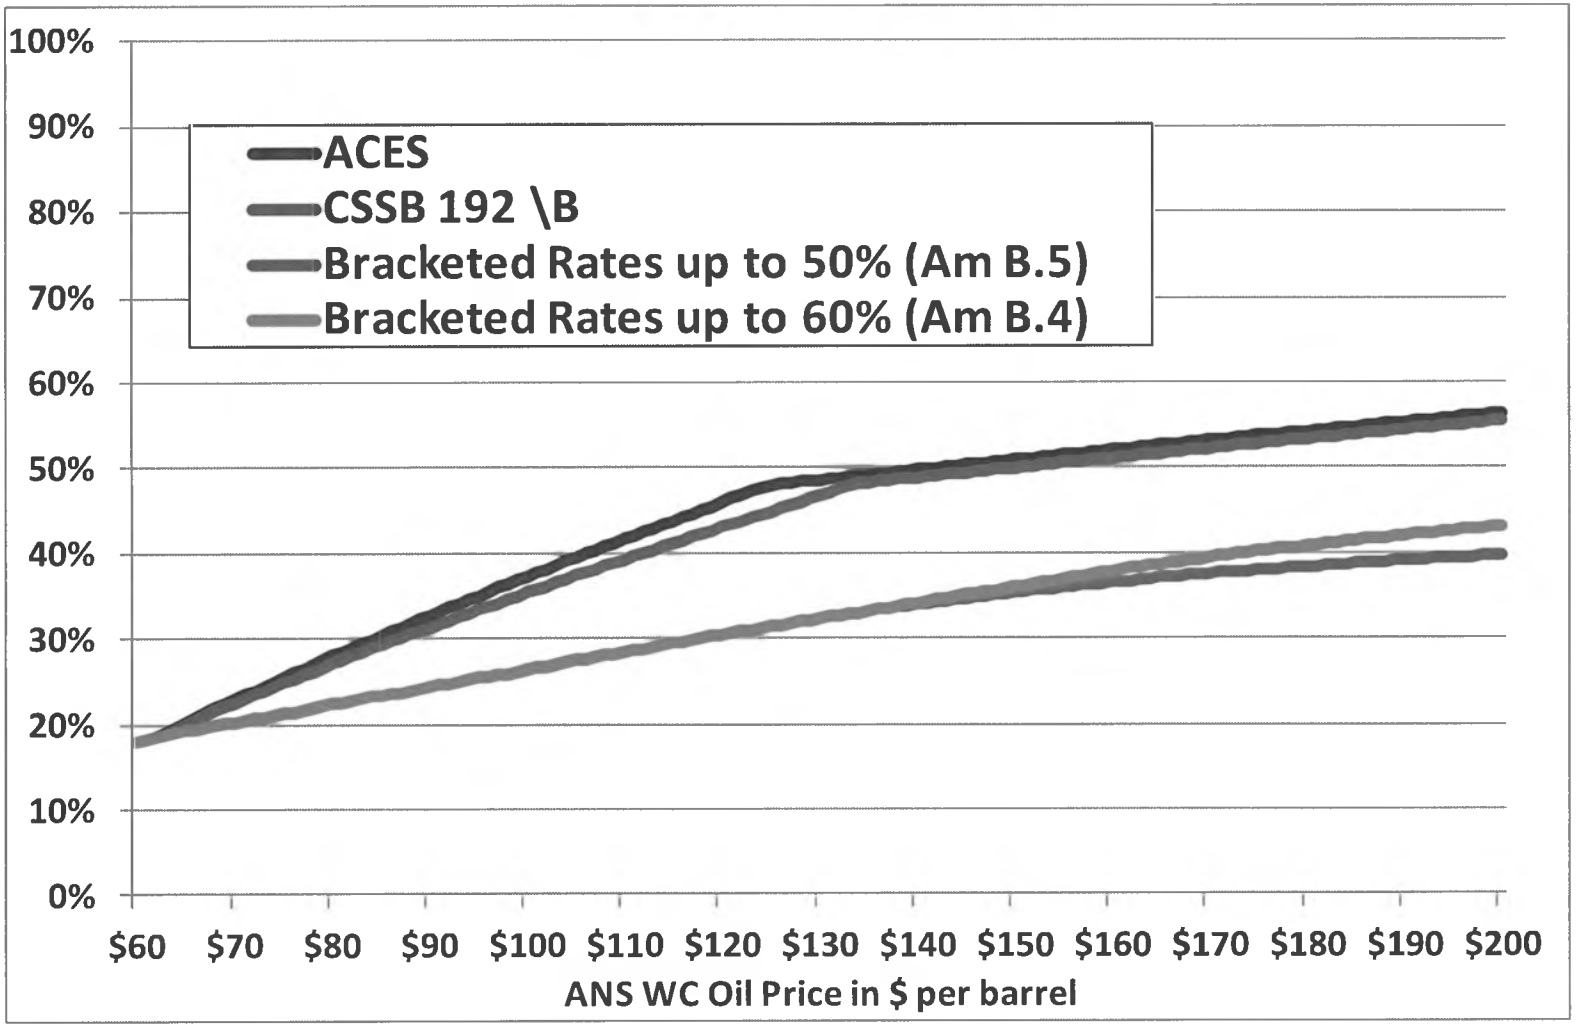
- Modeling and discussion of CSSB 192\B
- Modeling and discussion of amendments

CS SB 192\B

What the CS does as currently written

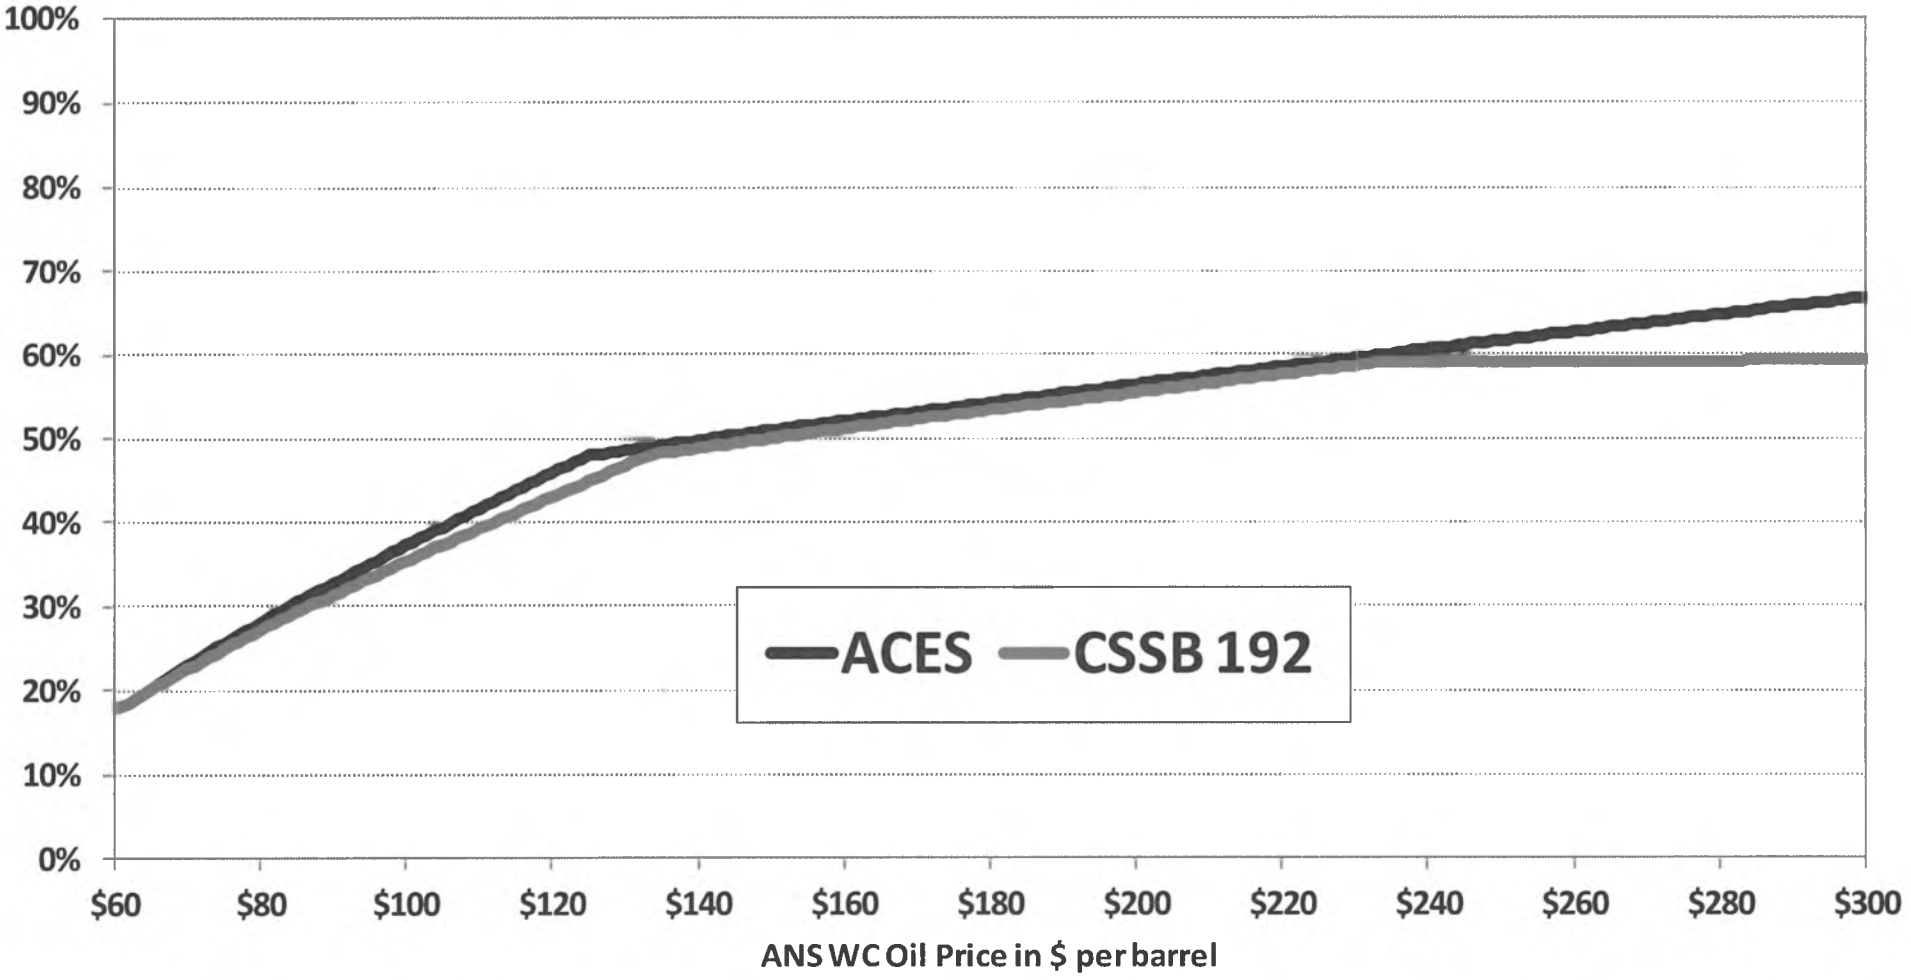
1. Changes the progressivity rate over $30 / barrel production tax value from 0.4% to 0.35%
2. Changes the trigger point that slows the rate of progressivity to 0.1%, from $92.50 to $101.43 / barrel production tax value
3. Changes the maximum production tax rate from 75% to 60% (would apply over $201.43 / barrel production tax value)
4. Provides a modest reduction in taxes compared to our Fall 2011 forecast

Effective Production Tax Rates: Comparisons



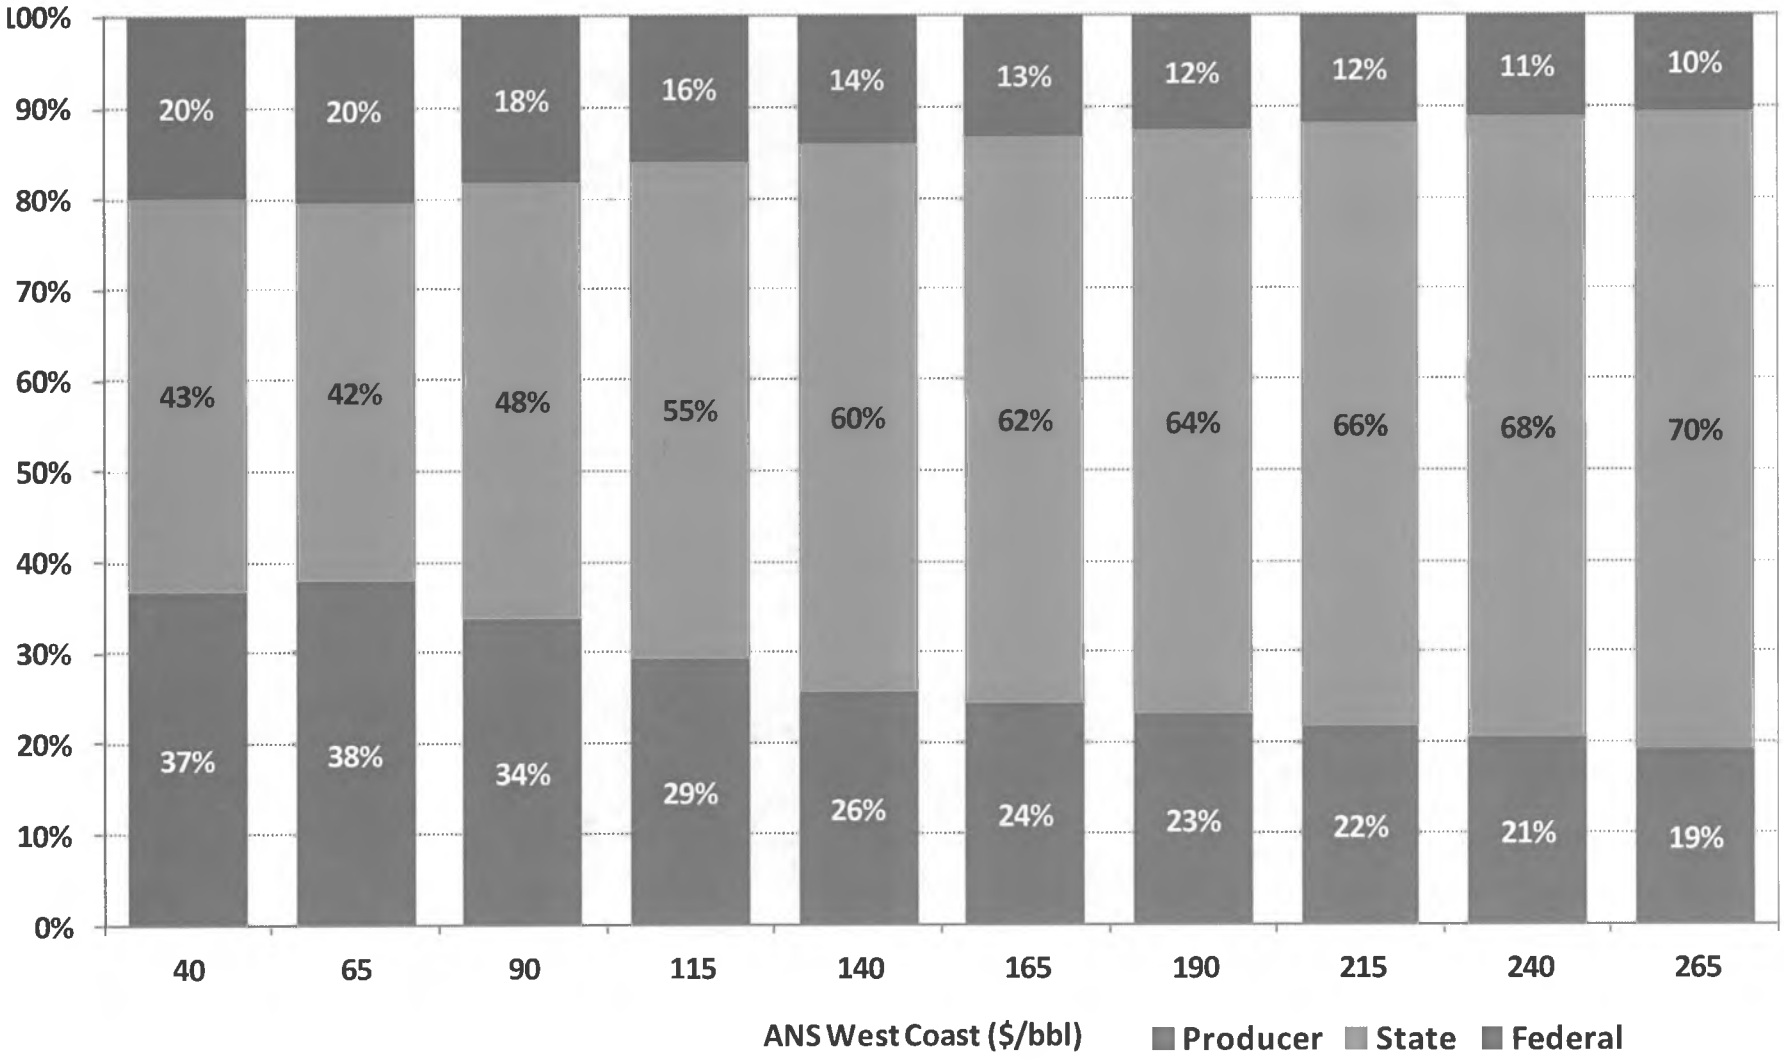
Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Effective Production Tax Rates: ACES and CSSB 192\B



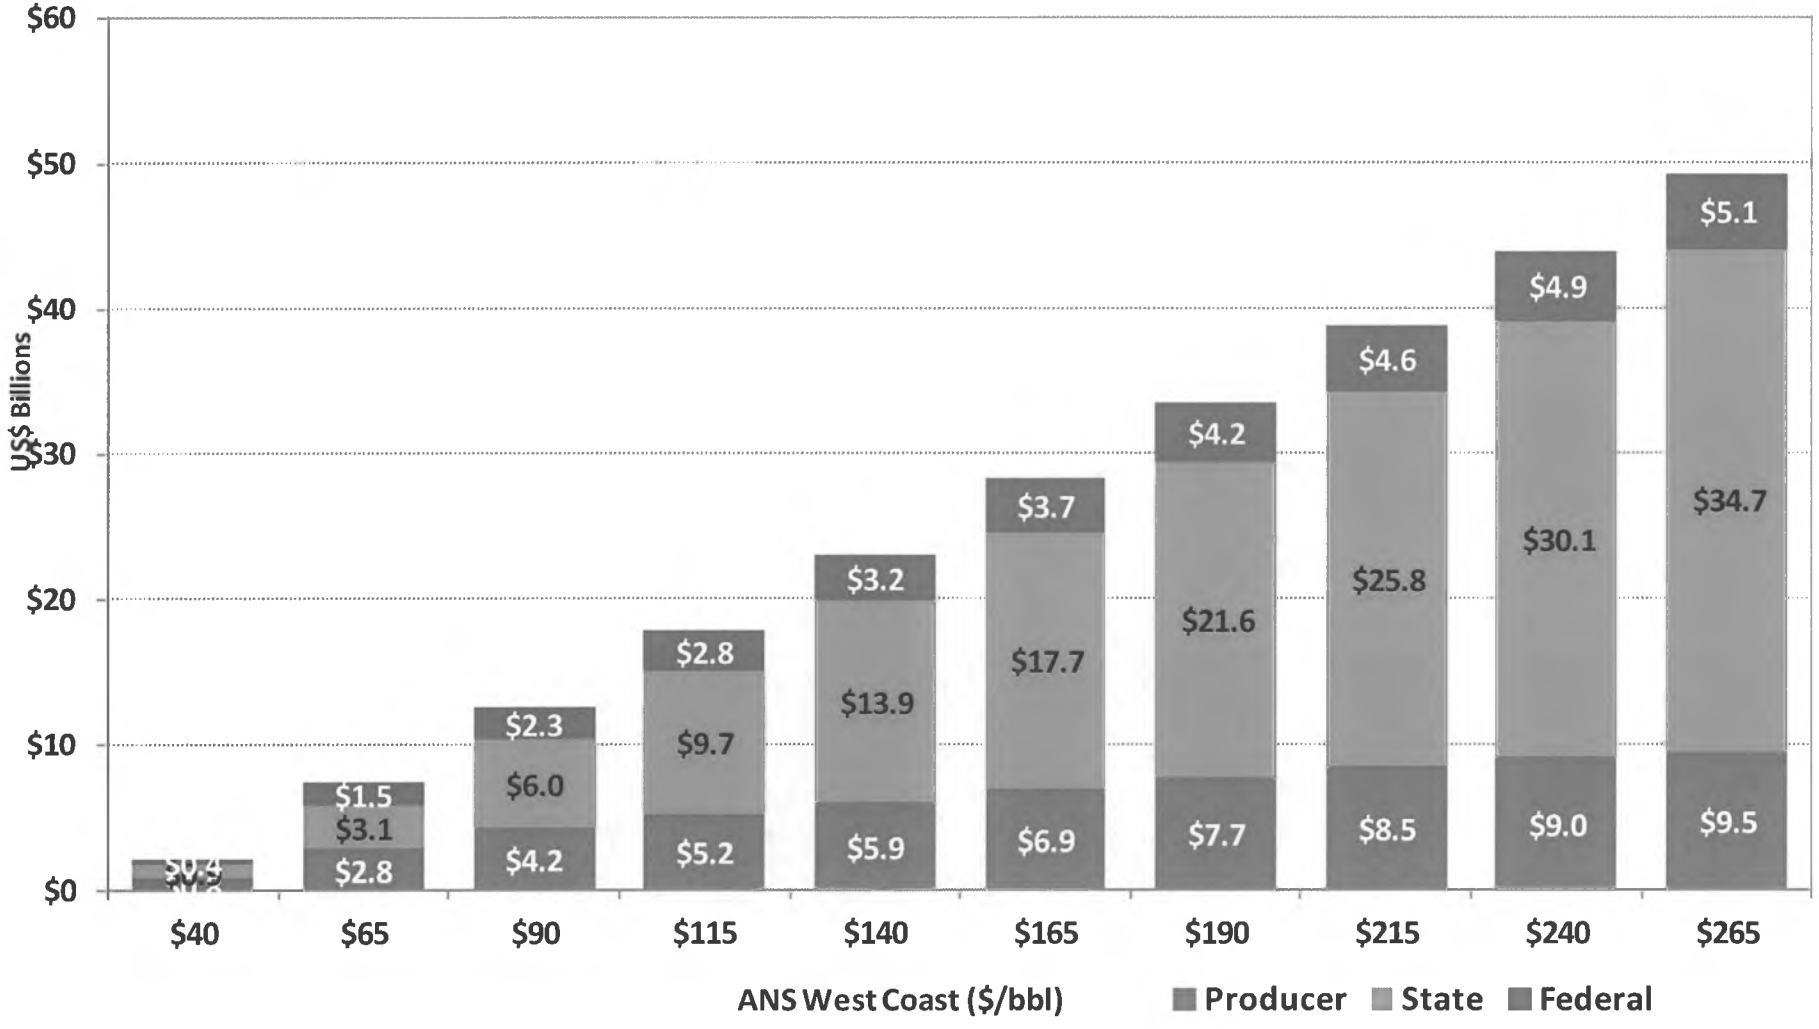
Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Share of Profit under CSSB 192\B



Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Absolute Profit under CSSB 192\B



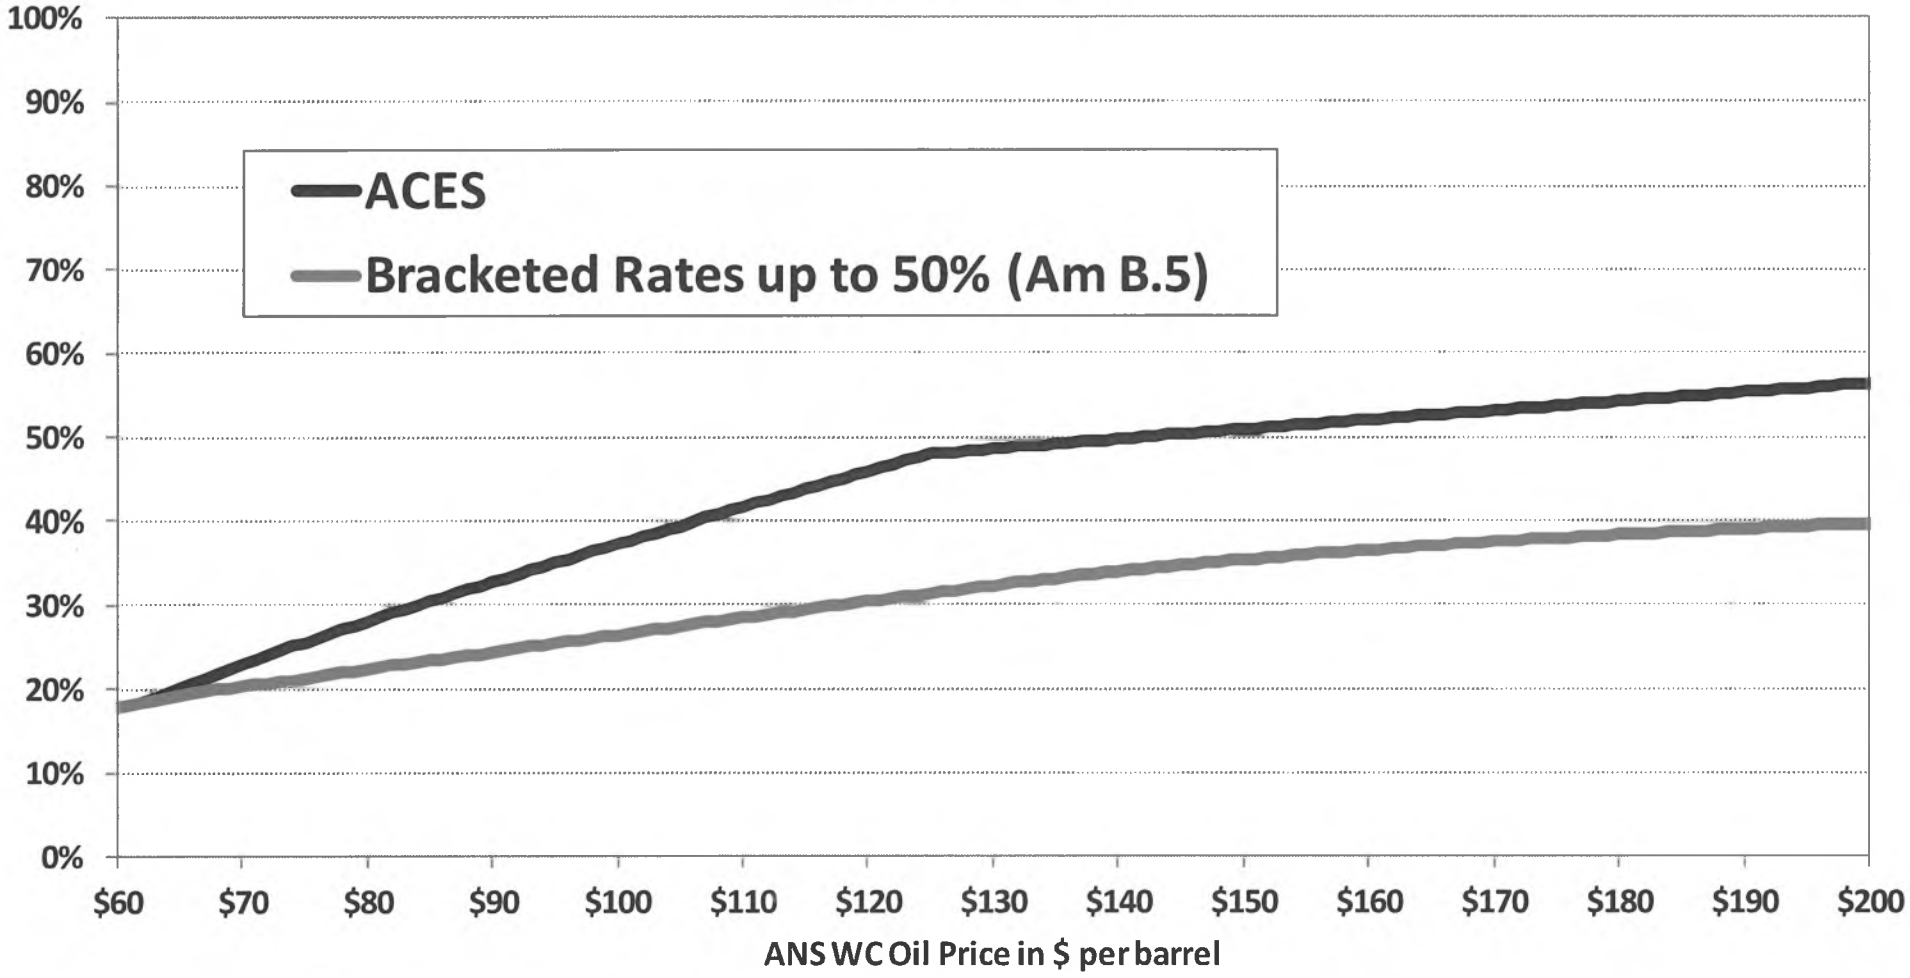
Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Amendment B.5

Progressivity bracketed – 25% top bracket

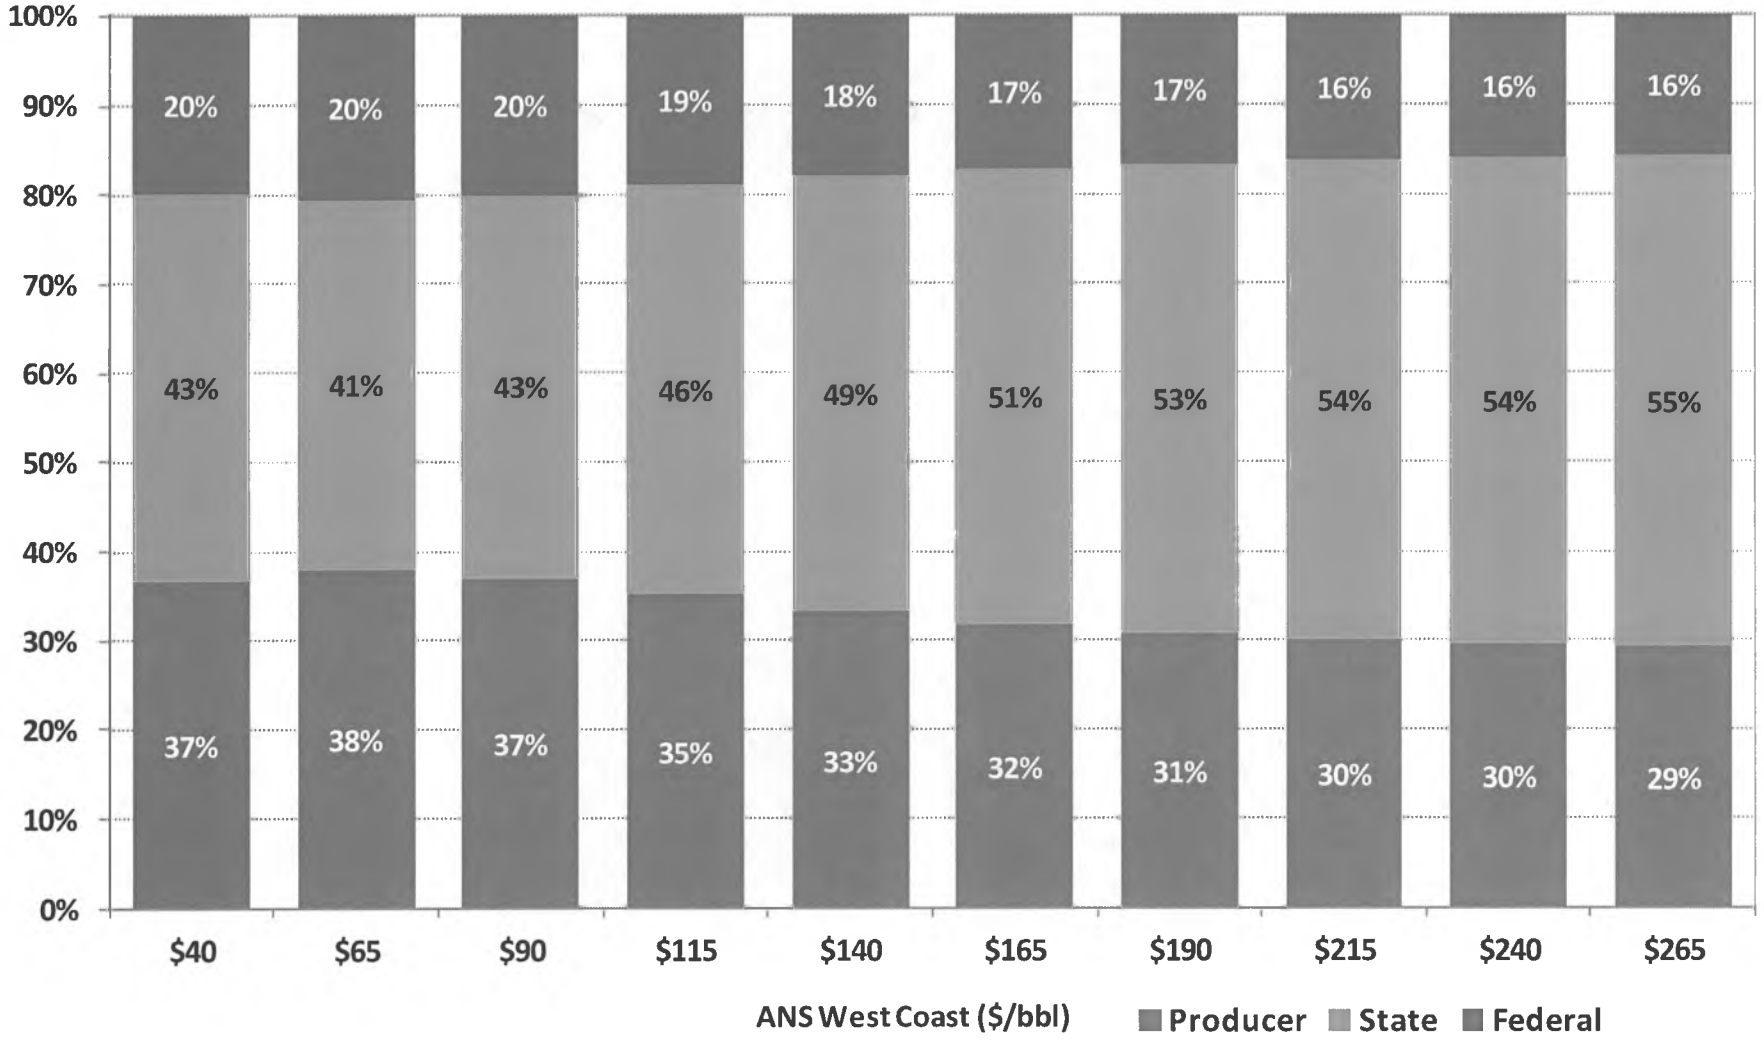
1. Provides "tax brackets" for progressivity, with the progressively higher rate only applying to the value within that tax bracket
2. Generally follows existing progressivity slope
3. Top bracket is 25% progressivity (50% tax rate)
4. Maximum production tax rate of 50% (would apply over $92.50 / barrel production tax value)

Effective Production Tax Rates: ACES and Bracketed Rates up to 50% (Am B.5)



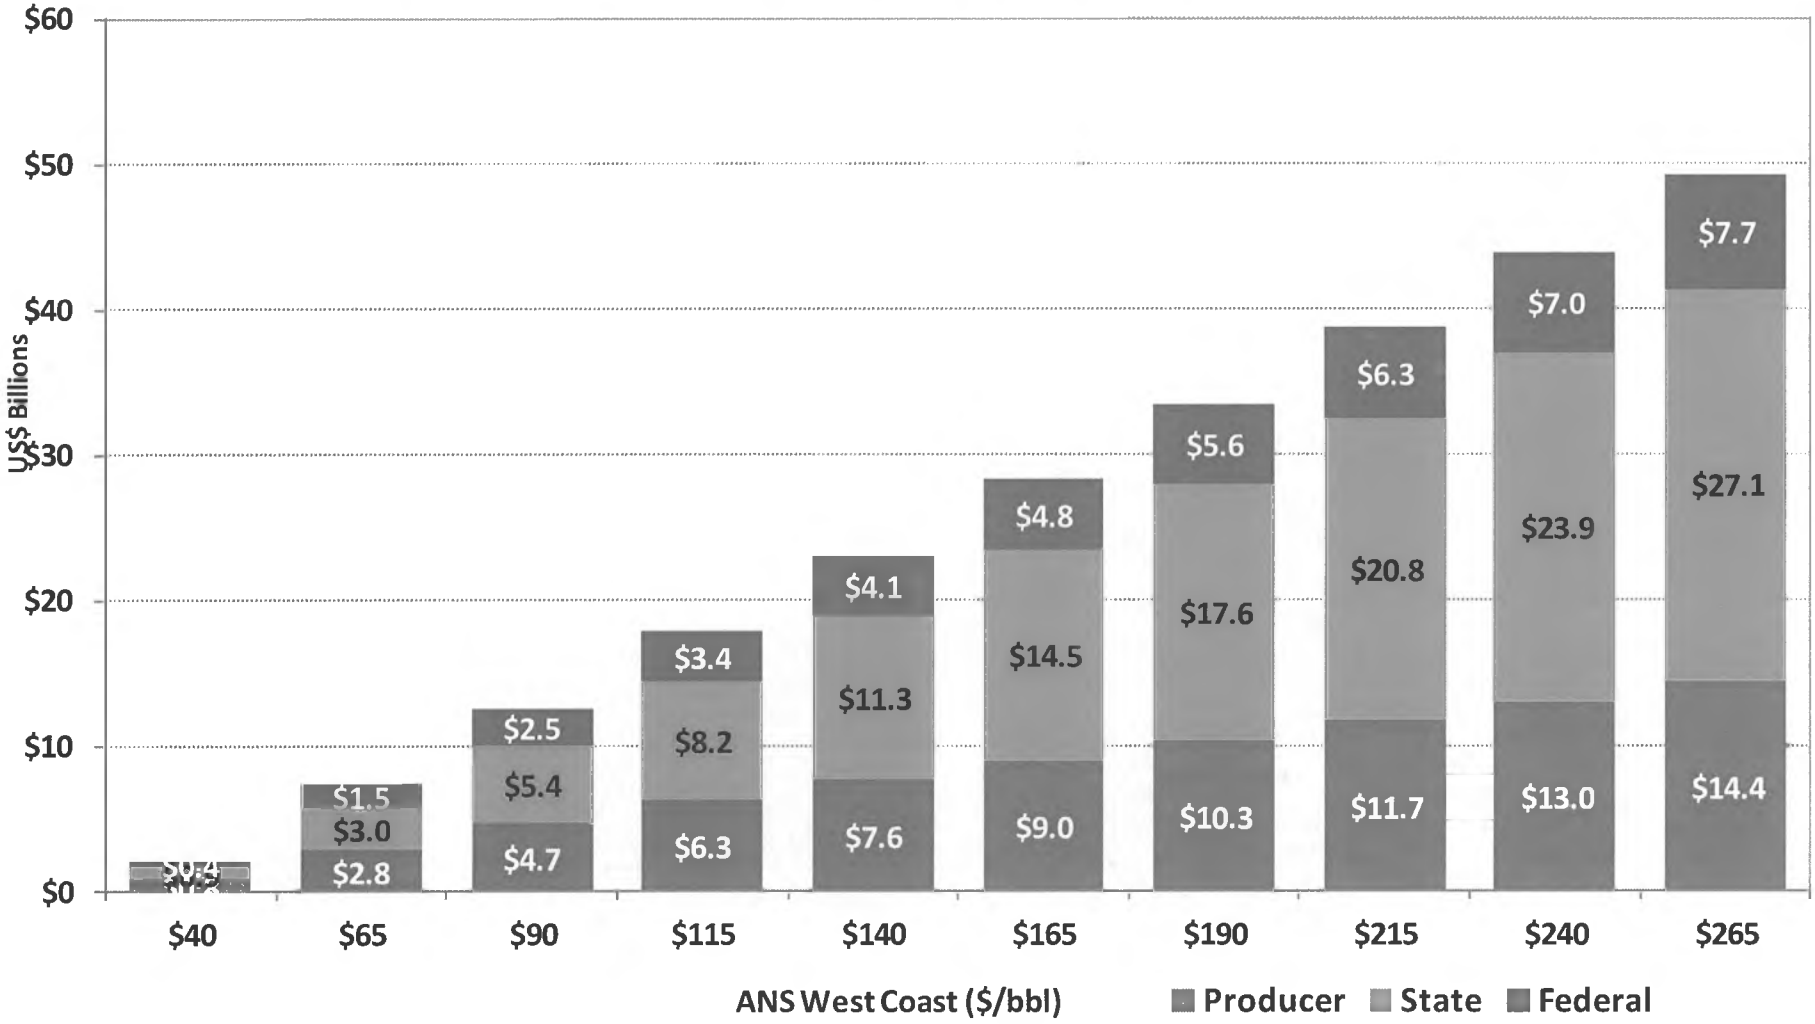
Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Share of Profit under Bracketed Rates up to 50% (Am B.5)



Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Absolute Profit under Bracketed Rates up to 50% (Am B.5)



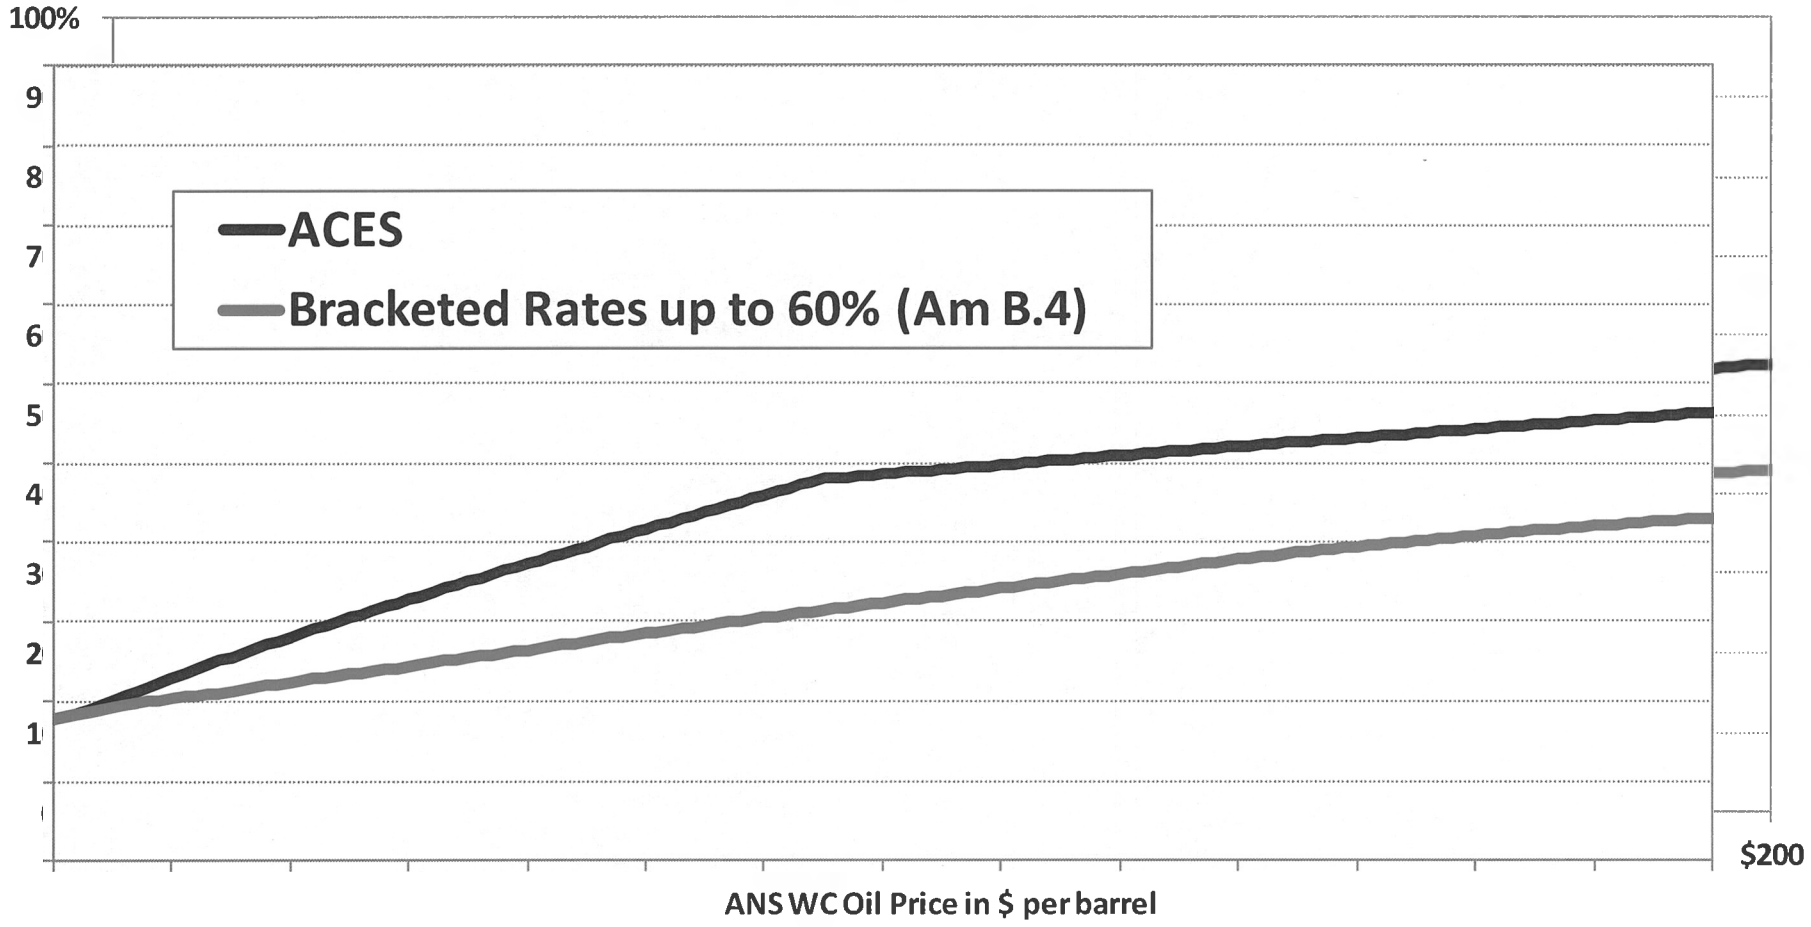
Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Amendment B.4

Progressivity bracketed – 35% top bracket

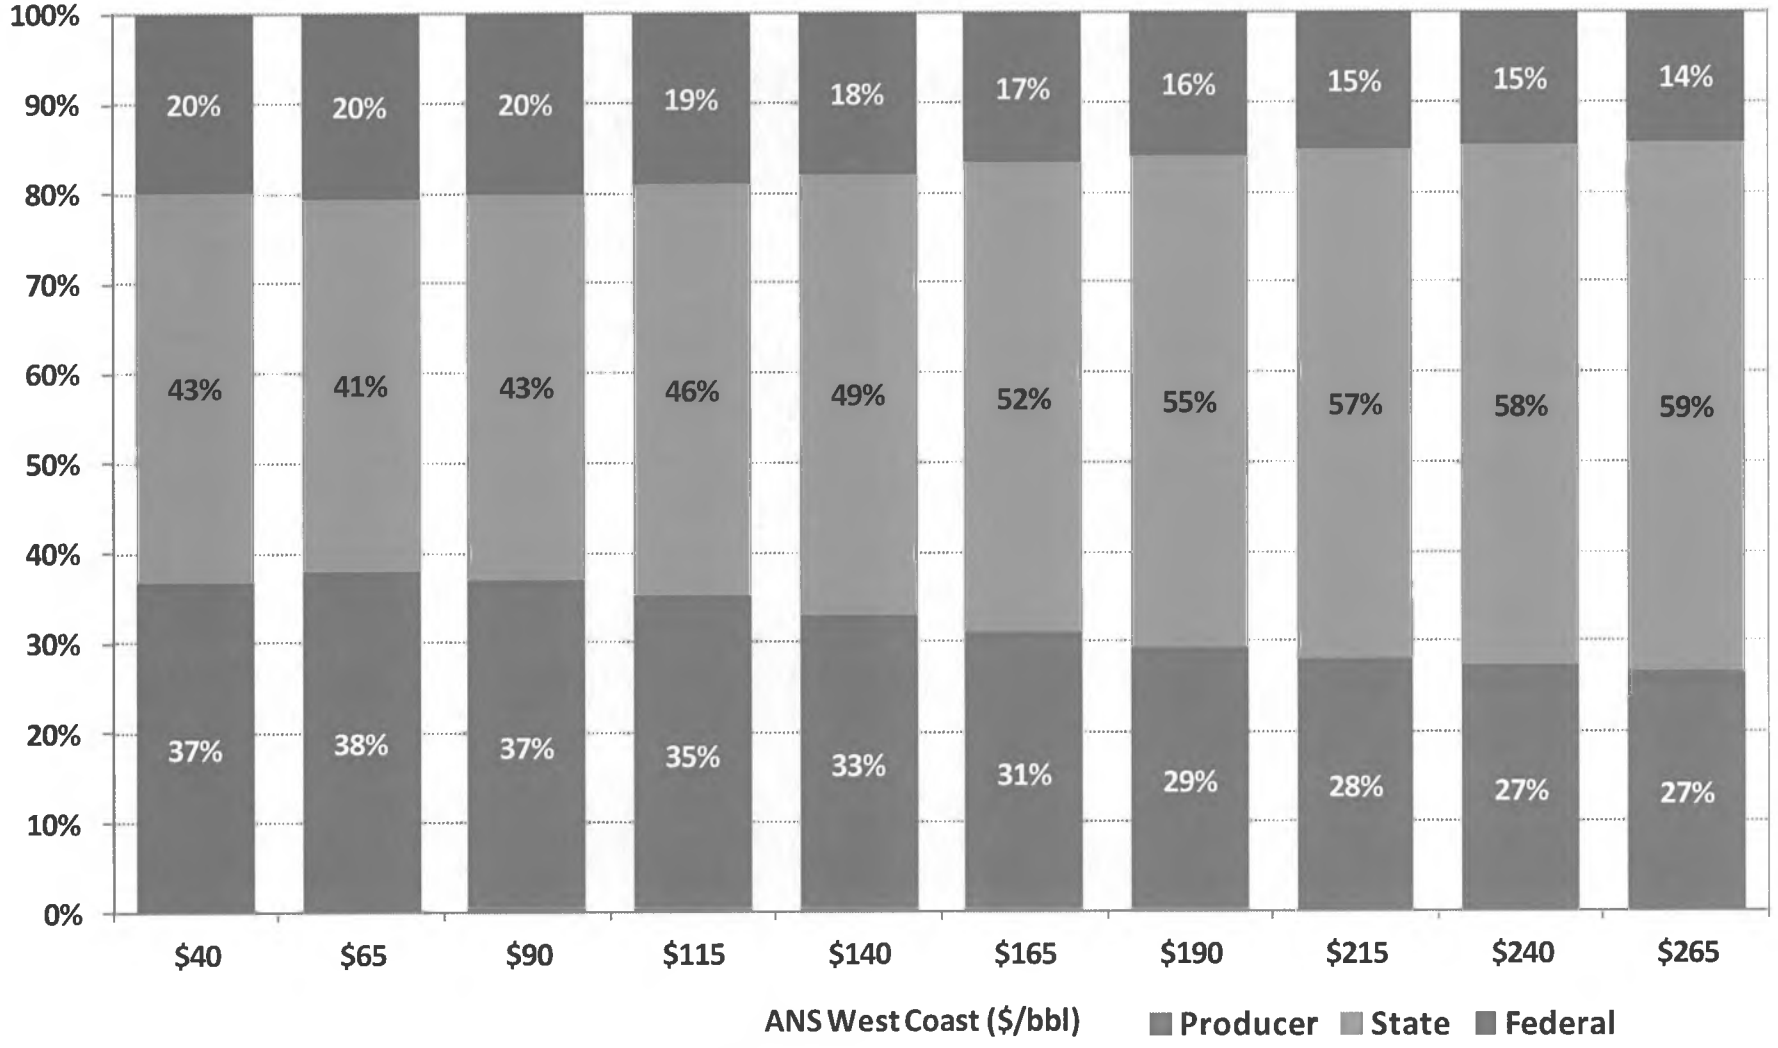
1. Provides "tax brackets" for progressivity, with the progressively higher rate only applying to the value within that tax bracket
2. Generally follows existing progressivity slope
3. Top bracket is 35% progressivity (60% tax rate)
4. Maximum production tax rate of 60% (would apply over $92.50 / barrel production tax value)

Effective Production Tax Rates: ACES and Bracketed Rates up to 60% (Am B.4)



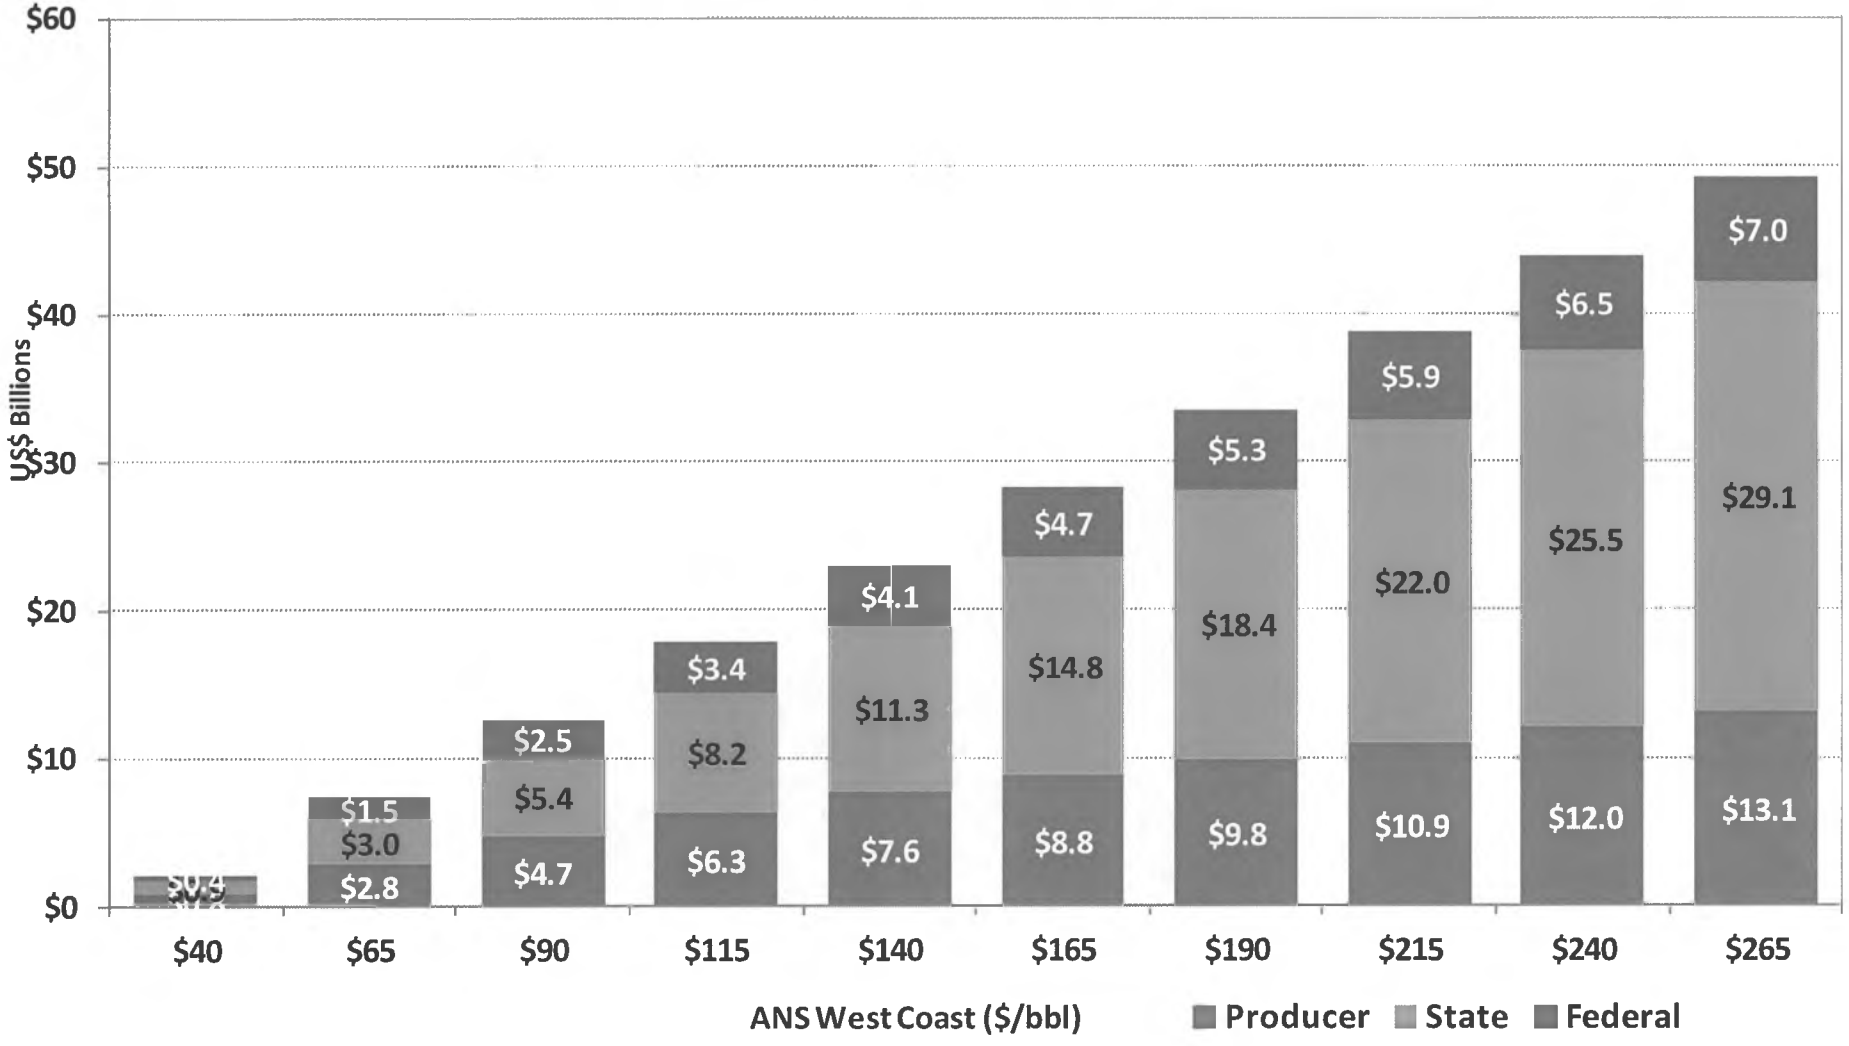
Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Share of Profit under Bracketed Rates up to 60% (Am B.4)



Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Absolute Profit under Bracketed Rates up to 60% (Am B.4)



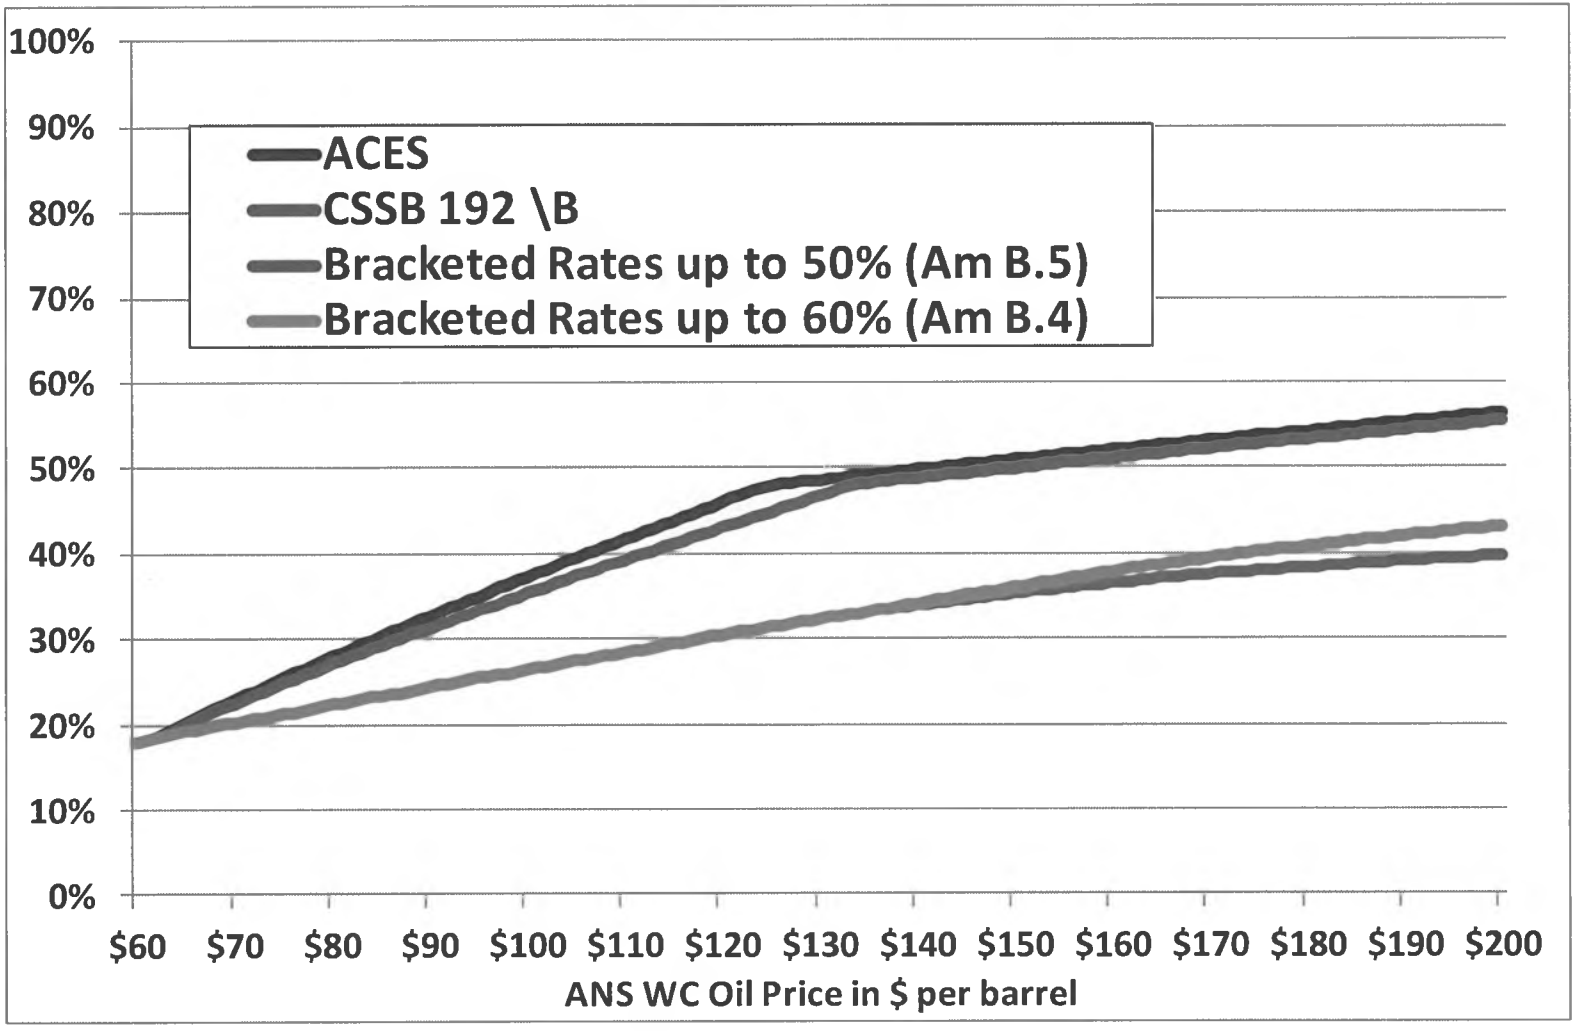
Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Bracketed progressivity

Bracket	Base Rate	Progressivity Rate	Total Rate
$0-$30	25%	0%	25%
$30-$42.50	25%	2.5%	27.5%
$42.50-$55	25%	7.5%	32.5%
$55-$67.50	25%	12.5%	37.5%
$67.50-$80	25%	17.5%	42.5%
$80-$92.50	25%	22.5%	47.5%
$92.50-$105*	25%	25%	50%
$105-$117.50	25%	30%	55%
$117.50+*	25%	35%	60%

* Under Amendment B.5, 25% is the maximum progressivity rate for a total production tax rate of 50%. Under amendment B.4, 35% is the maximum progressivity rate for a total production tax rate of 60%.

Effective Production Tax Rates: Comparisons



Assumes FY 2012 Transport costs of $8.72/ bbl, Opex of $14.03 per taxable barrel, and Capex of $10.25 per taxable bbl.

Alaska Senate Resources Committee:

Analysis of CSSB192 and Amendments

February 27, 2012

Janak Mayer
Manager, Upstream & Gas
PFC Energy

PFC Energy

Senate Resources Committee
Joe Paskvan, Co-Chair / February 29, 2012

Let's call the meeting to order.

Let the record reflect that it is _____ p.m. on Wednesday, February 29.

Let the record reflect that there is a quorum. Present are

- Co-Chair Wagoner
- Senator Stedman
- Senator Stevens
- Senator Wielechowski
- Senator French
- Senator McGuire
- And myself, Senator Paskvan

During this hearing, we are joined again by PFC Energy.

According to their website, "PFC Energy is a global consulting firm specializing in the oil and gas industry. Our clients are oil and gas operators, national oil companies, service companies, investors, governments and other stakeholders."

PFC Energy presented testimony – focusing mostly on progressivity – to the Senate Resources Committee on February 16 and 17.

Subsequently, the Committee requested additional information and modeling from PFC – and we are pleased that Janak and Jerry were able to join us today.

The Committee acknowledges that a significant amount of information was requested and we appreciate that the work was completed in time for today's hearing.

Welcome back, Janak Meyer, and welcome also Jerry Kepes (keppus). Please introduce yourselves for the public record and then begin your testimony.

Committee Substitute for Senate Bill 192 Oil and Gas Production Tax Values

Amendments

1. B.17 (McGuire) Competitiveness Review Board
2. B.6 (McGuire) Inflation Adjusting the $30
3. B.11 (Wielechowski/French) Changes to Oil and Gas Leasing Laws
4. B.12 (Wielechowski/French) State Directed Financial Investment (SDFI)
5. B.14 (Wielechowski) Re-instituting Separate Accounting
6. B.15 (Wielechowski/French) Requiring Info About Use of Tax Credits
7. B.16 (French) Oil Information System
8. B.4 (McGuire) Progressivity Bracketed – 35% top bracket
9. B.5 (McGuire) Progressivity Bracketed – 25% top bracket
10. B.7 (McGuire) Adjusted base rate plus bracketed progressivity and in-field development credit for new fields
11. B.8 (Wielechowski/French) Simple Progressivity
12. B.9 (Wielechowski/French) Rewarding Increased Production
13. B.10 (Wielechowski/French) Capping Credits to Avoid Gold Plating
14. B.13 (Wielechowski/French) Establishing a Gross Minimum Tax
15. B.1 (Wagoner) Extends the Sunset of the Small Producer/New Area Development Credit from 2016 to 2021
16. B.2 (Wagoner) Gross Value at the Point of Production Tax Holiday
17. B.3 (Wagoner) Tax Credit Based on the Capital Cost of Developing New Oil and Gas Production

18. B.18 Simple Progressivity II

Distributed by Office of Senator Joe Paskvan

PFC Presentation: Requested Analysis on Progressivity Caps

Slide #9: If they use a higher production forecast (e.g, the Spring 2011 forecast), how does that impact these projections?

Production Sensitivity Analysis:

1. Are FY13 cost forecasts sensitive to production volumes?
2. Can you run the charts with Spring '11 forecast numbers?
3. How much would these tax rates change, based on your best estimate, with different cost and production forecasts?

PFC Presentation: Analysis of CS SB 192 and Amendments

Slide #5: Is this telling us that Ugnu, as a high cost development, needs $95/bbl to breakeven (blue line) under ACES?

My recollection is that a year ago, under ACES, BP was saying Ugnu needed $60/bbl to breakeven. That number increased to $70-75/bbl as a result of the pilot test. Why $95?

Cost Assumptions Underlying Development-Forward Analysis

- Development-forward analysis has been undertaken by looking economics for a generic example **low-cost field development**. Cost examples underpinning the modeled scenarios are:
  - $10 per flowing bbl operating expenditures
  - $5 per bbl reserves initial development capital expenditures
  - $5 per flowing bbl ongoing capital expenditures
  - $7.40 per flowing bbl transportation costs
- These assumptions are broadly in keeping with actual reported costs for lower-cost production from the North Slope. They are in total higher than the calendar year 2010 costs reported by DOR for the Prudhoe Bay Unit, which are:
  - 1,314mm operating expenditures (~$11.89 per flowing bbl)
  - $561mm capital expenditures (includes both maintenance and additional new development ~$5.08 per flowing bbl)
- Development-forward analysis has also been undertaken by looking economics for a generic example **high-cost field development**. Cost examples underpinning the modeled scenarios are:
  - $17 per flowing bbl operating expenditures
  - $15 per bbl reserves initial development capital expenditures
  - $1 per flowing bbl ongoing capital expenditures
  - $7.40 per flowing bbl transportation costs

Analysis Using DOR FY2013 Estimated Average Costs

- As requested, an alternate analysis of ACES and the various potential maximum production tax rates has also been performed using DOR FY2013 forecast North Slope cost and production figures
  - By using a 'snapshot' of costs and production for a given year, the analysis inherently no longer presents a development-forward lifecycle analysis, since it combines initial development capex for some projects with ongoing spending on others
  - As a result, such an analysis should be performed only as a snapshot of a single year
  - As such, such an analysis represents a high-level approximation of Government Take in that particular year, not over the actual lifecycle of a particular asset type
  - Such an analysis also does not account for the 'bracket-creep' or 'stealth-tax' effect of inflation over time
- DOR FY2013 cost forecasts are:
  - $13.75 per taxable barrel operating expenditures
  - $15.36 per taxable barrel capital expenditures
  - $8.56 per taxable barrel transportation costs
- On a per-flowing-barrel basis, these equate to:
  - $11.71 /bbl operating expenditures
  - $13.07 /bbl capital expenditures
  - $7.29 /bbl transportation costs
- On the following slides, the ACES system, along with ACES with maximum production tax levels set at 50%, 55%, 60%, 65% and 70% has been analyzed, using these cost figures

Summary of ACES, CSSB192 and Analyzed Amendments

ACES				
Is Production Tax Bracketed?		No		
Are oil and gas assessed separately?		No		
Rates for non-bracketed system:			75%	maximum
<= 30	$ 30.00	PTV/BOE	25%	base
> 30 but <= 92.5	$ 92.50	PTV/BOE	0.40%	progressivity
> 92.5			0.10%	progressivity

CSSB 192				
Is Production Tax Bracketed?		No		
Are oil and gas assessed separately?		No		
Rates for non-bracketed system:			60%	maximum
<= 30	$ 30.00	PTV/BOE	25%	base
> 30 but <= 101.43	$ 101.43	PTV/BOE	0.35%	progressivity
> 101.43			0.10%	progressivity

Amendment B8				
Is Production Tax Bracketed?		No		
Are oil and gas assessed separately?		No		
Rates for non-bracketed system:			60%	maximum
<= 30	$ 30.00	PTV/BOE	25%	base
> 30 but <= 92.5	$ 92.50	PTV/BOE	0.40%	progressivity
> 92.5			0.10%	progressivity

Amendment B18				
Is Production Tax Bracketed?		No		
Are oil and gas assessed separately?		No		
Rates for non-bracketed system:			60%	maximum
<= 30	$ 30.00	PTV/BOE	25%	base
> 30 but <= 67.5	$ 67.50	PTV/BOE	0.40%	progressivity
> 67.5 but <= 92.5	$ 92.50	PTV/BOE	0.35%	progressivity
> 92.5			0.10%	progressivity

Amendment B4				
Is Production Tax Bracketed?		Yes		
Are oil and gas assessed separately?		No		
Rates for bracketed system:				
	25% base			
<= 30.00	$ 30.00	PTV/BOE	0.0%	
> 30.00 but <= 42.50	$ 42.50	PTV/BOE	2.5%	
> 42.50 but <= 55.00	$ 55.00	PTV/BOE	7.5%	
> 55.00 but <= 67.50	$ 67.50	PTV/BOE	12.5%	
> 67.50 but <= 80.00	$ 80.00	PTV/BOE	17.5%	
> 80.00 but <= 92.50	$ 92.50	PTV/BOE	22.5%	
> 92.50 but <= 105.00	$ 105.00	PTV/BOE	25.0%	
> 105.00 but <= 117.50	$ 117.50	PTV/BOE	30.0%	
> 117.50			35.0%	

Amendment B5				
Is Production Tax Bracketed?		Yes		
Are oil and gas assessed separately?		No		
Rates for bracketed system:				
	25% base			
<= 30.00	$ 30.00	PTV/BOE	0.0%	
> 30.00 but <= 42.50	$ 42.50	PTV/BOE	2.5%	
> 42.50 but <= 55.00	$ 55.00	PTV/BOE	7.5%	
> 55.00 but <= 67.50	$ 67.50	PTV/BOE	12.5%	
> 67.50 but <= 80.00	$ 80.00	PTV/BOE	17.5%	
> 80.00 but <= 92.50	$ 92.50	PTV/BOE	22.5%	
> 92.50		PTV/BOE	25.0%

Alaska Senate Resources Committee:

Requested Analysis of Possible ACES Progressivity Caps Under Different Cost Assumptions

February 27, 2012

Janak Mayer
Manager, Upstream & Gas
PFC Energy

PFC Energy

Cost Assumptions Underlying Development-Forward Analysis

- Development-forward analysis has been undertaken by looking economics for a generic example low-cost field development. Cost examples underpinning the modeled scenarios are:
  - $10 per flowing bbl operating expenditures
  - $5 per bbl reserves initial development capital expenditures
  - $5 per flowing bbl ongoing capital expenditures
  - $7.40 per flowing bbl transportation costs
- These assumptions are broadly in keeping with actual reported costs for lower-cost production from the North Slope. They are in total higher than the calendar year 2010 costs reported by DOR for the Prudhoe Bay Unit, which are:
  - 1,314mm operating expenditures (~$11.89 per flowing bbl)
  - $561mm capital expenditures (includes both maintenance and additional new development ~$5.08 per flowing bbl)
- On the following slides, the original analyses from the February 17 presentation to Senate Resources Committee have been reproduced, with some minor revisions, and with the addition analysis of production tax caps at 55% and 65%

Analysis Using DOR FY2013 Estimated Average Costs

- As requested, an alternate analysis of ACES and the various potential maximum production tax rates has also been performed using DOR FY2013 forecast North Slope cost and production figures
  - By using a 'snapshot' of costs and production for a given year, the analysis inherently no longer presents a development-forward lifecycle analysis, since it combines initial development capex for some projects with ongoing spending on others
  - As a result, such an analysis should be performed only as a snapshot of a single year
  - As such, such an analysis represents a high-level approximation of Government Take in that particular year, not over the actual lifecycle of a particular asset type
  - Such an analysis also does not account for the 'bracket-creep' or 'stealth-tax' effect of inflation over time
- DOR FY2013 cost forecasts are:
  - $13.75 per taxable barrel operating expenditures
  - $15.36 per taxable barrel capital expenditures
  - $8.56 per taxable barrel transportation costs
- On a per-flowing-barrel basis, these equate to:
  - $11.71 /bbl operating expenditures
  - $13.07 /bbl capital expenditures
  - $7.29 /bbl transportation costs
- On the following slides, the ACES system, along with ACES with maximum production tax levels set at 50%, 55%, 60%, 65% and 70% has been analyzed, using these cost figures

The Art of Taxation

"The art of taxation consists in so plucking the goose as to get the most feathers with the least hissing."

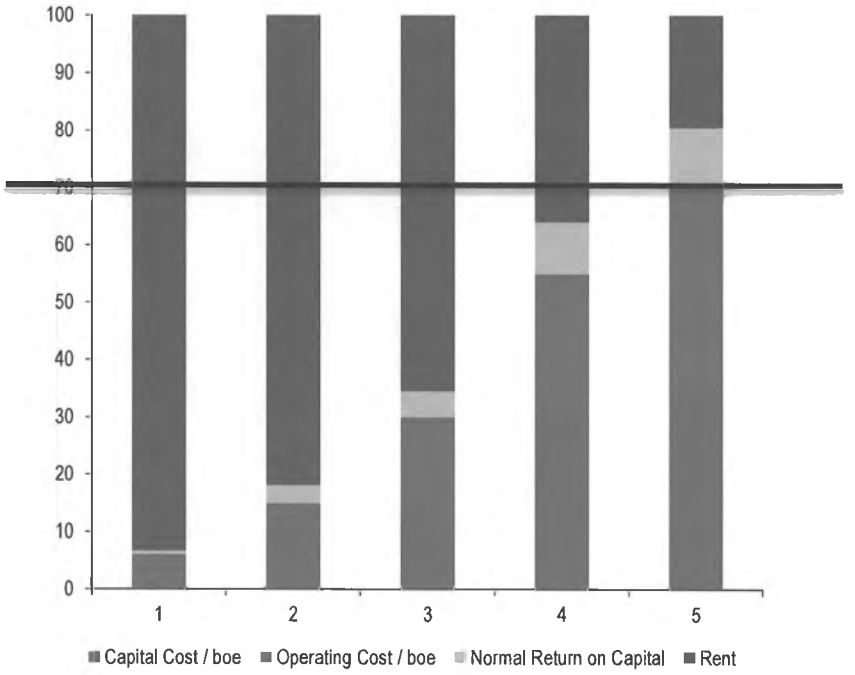
Jean Baptiste Colbert - Economist and Minister of Finance under King Louis XIV of France, 1619

…or, in more contemporary terms

- The art of taxation consists in maximizing revenues, subject to two important constraints
  - **Efficiency:** Not distorting investment choices, or preventing marginal investments that would otherwise have been made from occurring
  - **Competitiveness:** Ensuring that in the real world, which is characterized by limited capital with competing uses

Efficiency: Conclusions on a Fixed Percentage Royalty

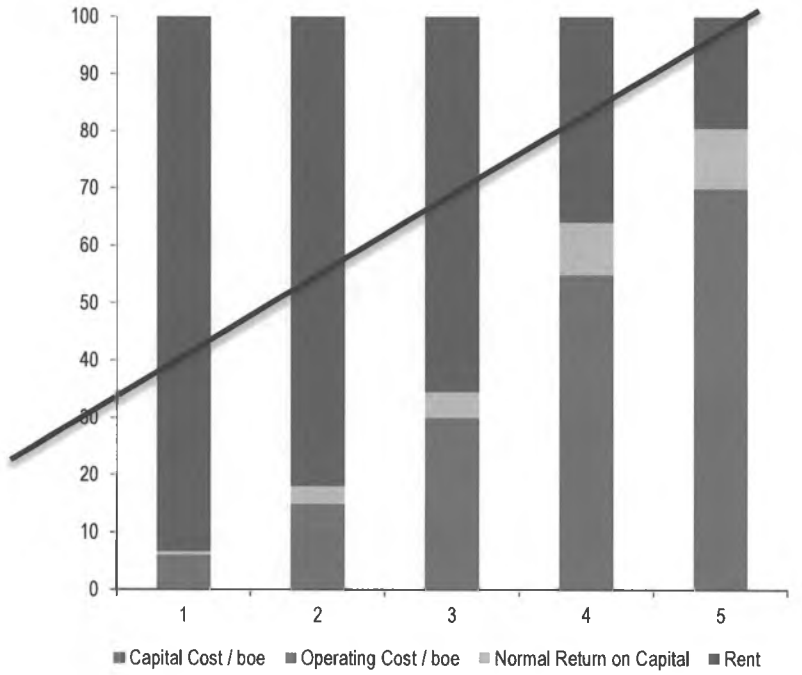
- The fixed royalty is **inefficient** because it distorts investment, making previously marginal projects uneconomic at a given price
- It is highly **regressive** with regard to both price and cost, because Relative Government Take falls as prices rise, and as costs fall
- This also increases **sovereign risk** – since when prices rise, governments will be tempted to set a new rate, even though investments have been made on the basis of the current one
- It has only one major strength – it is very **simple to administer**, requiring knowledge of only 2 variables - production and price



PFC Energy

Efficiency: Targeting Economic Rent

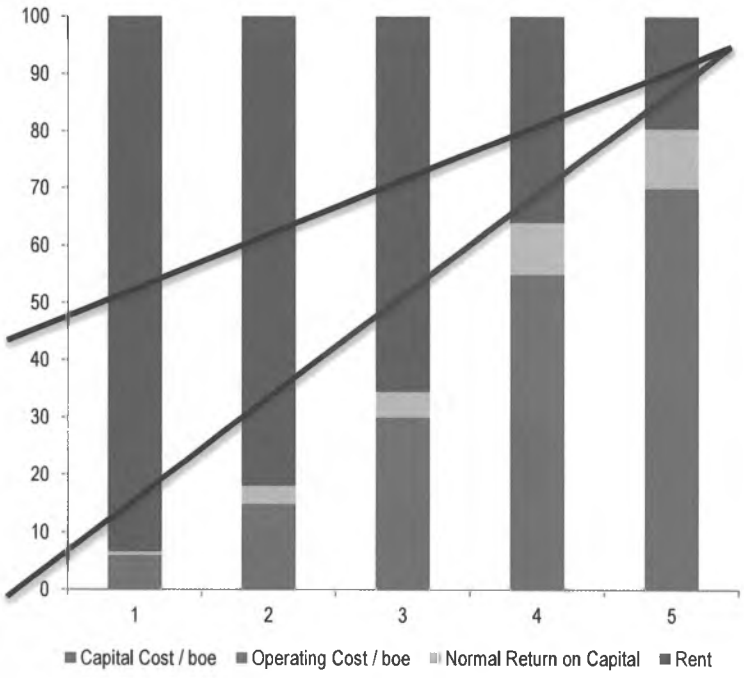
- What we would like to do instead is to tax the red bars – the Economic Rent – directly
- That way, we could *pluck more feathers*, with less *hissing*
- What are the different ways, over time, that governments have attempted to do this?



PFC Energy

Progressivity

- Progressivity may be used for a range of different purposes in a fiscal regime
  - In some cases, used to counterbalance the inherent regressivity of other elements of the regime
  - In other cases, a deliberate policy to gain not only a steady share of the rents, but to capture ever more as economics improve
- Implemented properly (ie taxing only economic rents), both of these approaches can be efficient – ie non-distorting of relative investment opportunities at the margin
- Regimes that use both high levels of relative government take, in addition to high progressivity to capture most or all of the upside of high price environments will not necessarily be competitive



PFC Energy

Different Implementations of Progressivity: Production Levels

- One of the earliest and still commonest metrics used to progressively increase rates of government take for projects that produce more economic rent has been the use of sliding scales for the split of profit oil or the setting of a royalty, based on levels of production, as is the case in Vietnam's PSC fiscal system
- Brazil similarly applies a production-level-based windfall profits tax in its tax-royalty system
- Such systems are almost always bracketed, so the higher rate applies only to production above a given threshold
- Production-based progressivity uses production levels as a proxy for profitability – and it is an imperfect proxy at best
  - The Vietnam example here attempts to improve here by setting different tiers, based on project cost
  - British Columbia, Canada uses a combination of Price and Production Quantity in its progressive Royalty rate

Vietnam Fiscal Terms			Pre-2010	Post-2010 with Incentives	Post-2010 without Incentives	Deepwater/ Frontier
Oil Royalty		mb/d				
	<=	20.00	8%	7%	10%	6%
	>20 <=	50.00	10%	9%	12%	8%
	>50 <=	75.00	10%	11%	14%	8%
	>75 <=	100.00	15%	13%	19%	10%
	>100 <=	150.00	20%	18%	24%	15%
	>150		25%	23%	29%	20%
Gas Royalty		mmcf/d				
	<=	176.55	0%	1%	2%	0%
	>176.55 <=	350.00	5%	3%	5%	3%
	>350		25%	6%	10%	6%
Cost Oil Limit			35%	35%	35%	50%
Cost Gas Limit			60%	60%	60%	70%
Profit Oil Split to Gov.		mb/d				
	<=	75.00	50%	50%	50%	50%
	>75 <=	100.00	55%	55%	55%	55%
	>100 <=	150.00	60%	60%	60%	60%
	>150		70%	70%	70%	70%
Profit Gas Split			50%	50%	50%	50%
Corporate Tax Rate		32%				

PFC Energy

Different Implementations of Progressivity: Price

- A number of regimes are progressive explicitly on price
- This approach is particularly common in setting "windfall profits" taxes
- China and Venezuela both use a price-progressive windfall profits tax to capture progressive shares of economic rent in high price environments
- Such systems are almost always bracketed, taxing only profits resulting from the higher price bracket at the higher rate
- Alaska's ACES system is an exception to this rule

Thresholds for Venezuela's Windfall Profits Tax

Oil Price	Rate
< $40	0%
$ 40 - $70	20%
$ 70 - $90	80%
$ 90 - $100	90%
> $100	95%

PFC Energy

Different Implementations of Progressivity: Cost Recovery

- A more sophisticated approach to targeting economic rent more directly is for a regime to be progressive using the extent to which a project has recovered its costs as a metric by which to set the tax or profit sharing rate
- Malaysia's current PSC model, introduced in 1997, uses "R-Factor", the ratio of cumulative revenues to cumulative costs, to set its profit split and its cost limit
- Once a project has recovered its costs, profit share to the IOC is progressively reduced

Malaysia Fiscal Terms						
Oil Royalty	10%					
	R Factor					
1997 PSC Parameters	R<=1.0	R<=1.4	R<=2.0	R<=2.5	R<=3.0	R>3
Cost Oil/Gas Limit	70%	60%	50%	30%	30%	30%
Unutilized Cost Oil/Gas Split (below TH	0%	80%	70%	60%	50%	40%
Unutilized Cost Oil/Gas Split (above TH	0%	40%	40%	40%	40%	20%
Profit Oil/Gas Split (below THV)	80%	70%	60%	50%	40%	30%
Profit Oil/Gas Split (above THV)	40%	30%	30%	30%	30%	10%
Threshold Value (THV) - Oil	30	mmbbls				
Threshold Value (THV) - Gas	0.75	tcf				

PFC Energy

Different Implementations of Progressivity: Rates of Return

- Similarly, some regimes seek to target "super-profits" more directly by linking progressivity to the Internal Rate of Return (IRR) that a project has accomplished by any point in time
  - Angola's PSC regime uses IRR to set the profit oil split
    - Onshore and Shallow Water

IRR	Contractor's Share
< 20%	60%
20 – 25%	50%
25 – 30%	40%
> 30%	30%

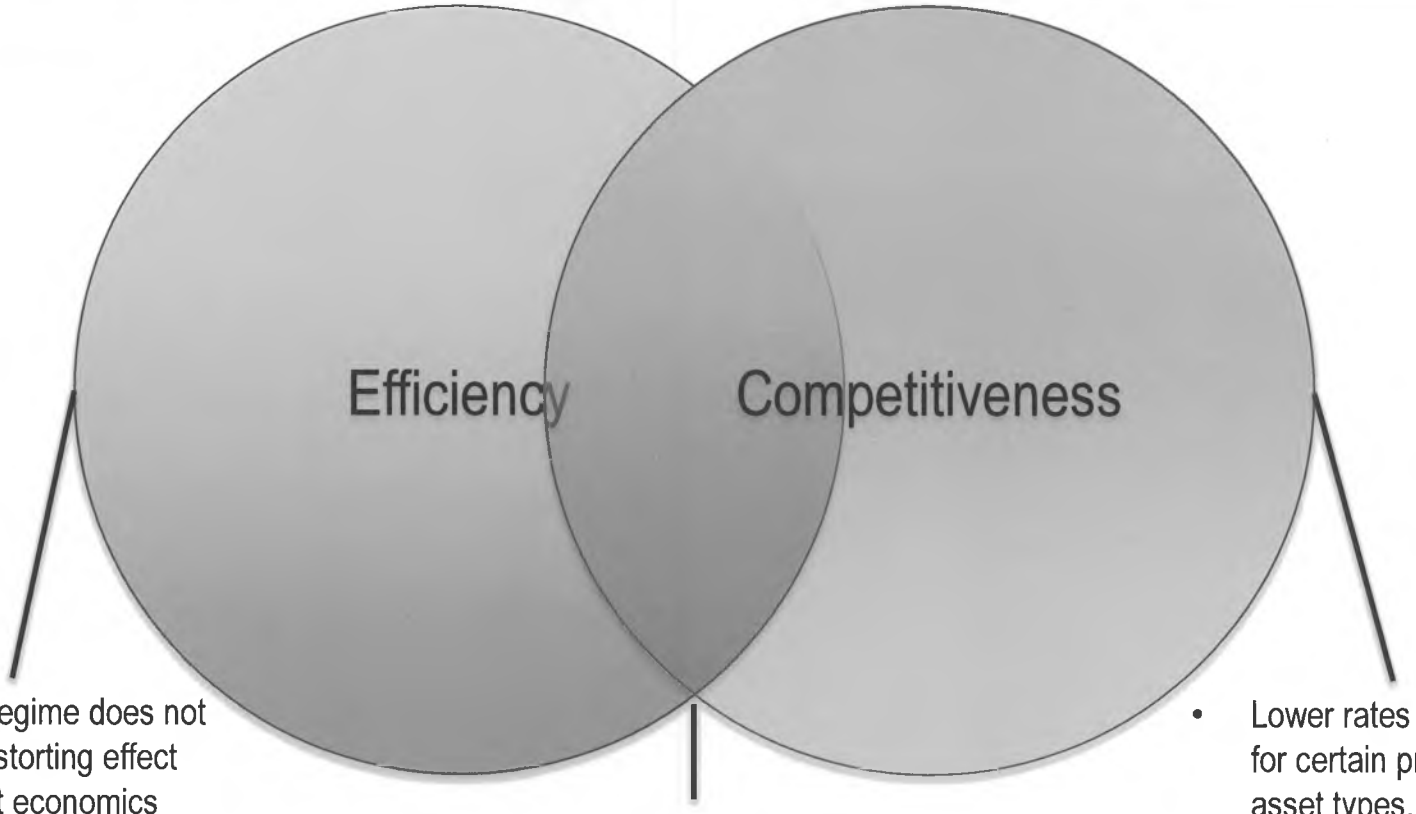
    - Deepwater

IRR	Contractor's Share
< 15%	80%
15 – 25%	60%
25 – 30%	40%
> 30%	20%

Different Implementations of Progressivity: Taxing Rent Directly

- Many of these regimes are highly complex, and use highly imperfect proxies for targeting economic rent
- Australia's Petroleum Resource Rent Tax, by contrast, is unusual in being both very simple in design, and in seeking to tax economic rent directly
- The tax seeks to replicate the economics of a 40% direct participation by the state, by taxing net cashflow at a rate of 40%
- All losses, however, are carried forward indefinitely, and maintain present value since they are inflated each year by a rate similar to the corporate cost of capital
- The ultimate economics are as if government is paying a 40% share of the cost of development, and taking a 40% share of the resulting cashflow
- With no royalty, and no other taxes in the system other than Corporate Income Tax, this is one of the simplest fiscal designs anywhere, but also one of the most efficient – because it taxes rent directly

Finding the Intersection



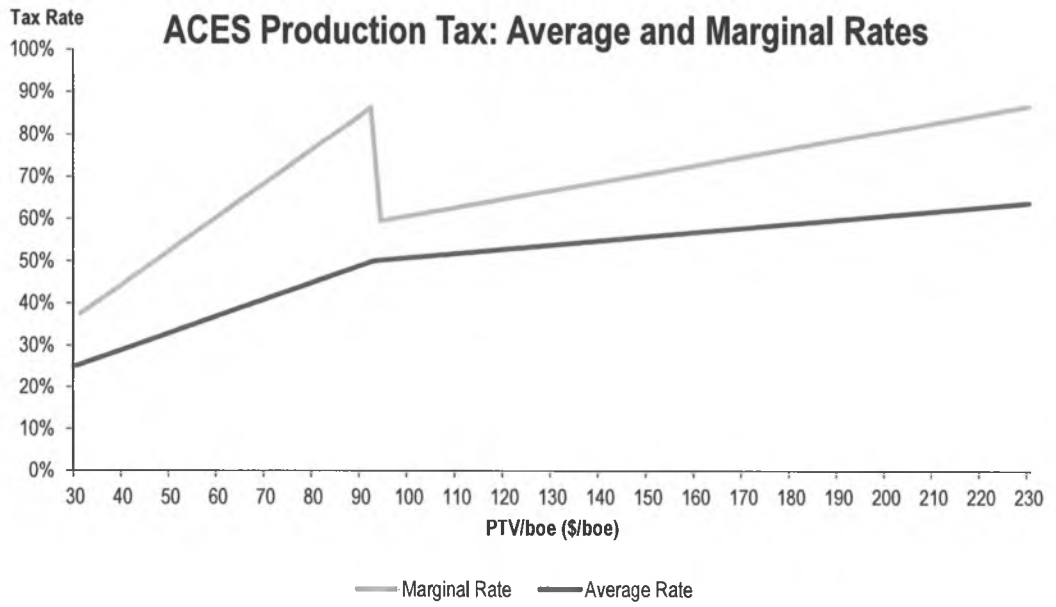
- Efficient regime does not have a distorting effect on project economics
- But rates are too high, and other jurisdictions are more successful in attracting capital as a result

- Regime does not distort investment
- Rates are internationally competitive, given fundamental attractiveness of the opportunity

- Lower rates may mean for certain projects or asset types, the regime is highly internationally competitive
- But distorting structure means certain otherwise marginal projects are unviable

PFC Energy

Average vs Marginal Rates



- It is average or effective rates, not marginal rates that drive project economics at a given price level
- Marginal rates remain, however, a useful metric for understanding key aspects of a regime
- The **difference between marginal and average** rates enable us to understand **how progressive a regime** is on a comparative basis
- Marginal rates represent the combination of high average rates with high progressivity
- In a profit-based system, high marginal rates may create perverse incentives with regard to cost control, encouraging "gold-plating"

PFC Energy

Conclusions

- There are a wide range of forms of progressivity, and metrics on which it may be based
- Sometimes progressivity may be used to counterbalance regressive elements of a regime, and at other times, it may simply be about taking as large a share of the economic rent as possible
- A well-designed highly progressive regime may be efficient, but it will not necessarily be competitive
- Alaska is one of the more progressive regimes in the world, and has a relatively high level of Government Take (GT)
  - In the OECD, only Norway has a higher level of GT, and Alaska GT is equal to Norway's at $140 oil
  - Higher GT regimes tend to be PSC regimes in some of the highest take regimes in the world
- PPT as it was proposed was a progressive component that counterbalanced other regressive elements, to create a fairly neutral regime
- PPT as enacted was highly progressive, and ACES is even more so.

I. INTRODUCTION AND BACKGROUND

A. Introduction

On October 16, 2007, Eni US Operating Co. Inc. (Eni), as operator of the Nikaitchuq Unit (NU), on behalf of its affiliate Eni Petroleum US LLC, 100 percent working interest owner of the subject leases, submitted an application to the commissioner of the State of Alaska Department of Natural Resources (ADNR) for modification of royalty under AS 38.05.180(j)(1)(A) (Attachment 1). On November 30, 2007, ADNR issued a Preliminary Findings and Determination to respond to Eni's royalty modification application. The public was invited to comment on the preliminary decision for 30 days ending January 7, 2008. ADNR hereby issues its Final Findings and Determination as required under AS 38.05.

Eni has applied for royalty modification on 12 leases which overlie the Schrader Bluff and the Sag River reservoirs. However, the Sag River reservoir was withdrawn from the application at the request of Eni. Eni requests that the fixed royalty rates of

- 12.5 percent on the Net Profit Share (NPS) lease, ADL 391283, and
- 16.66667 percent on the 11 leases (ADLs 388571, 388572, 388574, 388575, 388577, 388580, 388581, 388582, 388583, 390615, and 390616)

be reduced to the minimum rate allowed, 5.0 percent, with an annual sliding-scale royalty percentage adjustment based on the level of Alaska North Slope West Coast (ANSWC) crude oil price. The 30 percent net profit share rate on ADL 391283 is to remain unchanged. Attachment 2 depicts the Nikaitchuq Unit boundaries and leases subject to this royalty modification application.

This Final Findings and Determination responds to the royalty modification application as required under AS 38.05.180(j)(8). Part I summarizes the royalty modification application and process. Part II reviews the history of the Nikaitchuq Unit formation and development, and Eni's royalty modification application. Part III reviews the state's authority to carry out royalty modification. Part IV reviews the requirements and terms of royalty modification pursuant to this application. Part V contains ADNR's analysis of the application under the royalty modification criteria. Part VI is the Final Findings and Determination.

B. Royalty Modification Procedure

This Final Findings and Determination is the first step in a process contemplated in AS 38.05.180(j) that could result in an authorization to modify the royalty terms for certain leases. The commissioner published the Preliminary Findings and Determination, gave public notice of a 30-day public comment period (Attachments 3 and 4), and offered to appear before the Legislative Budget and Audit Committee to provide a review of the

Findings and Determination and the administrative process. The commissioner will keep the submitted data confidential under AS 38.05.035(a)(9) at the request of the lessee or lessees making application for the royalty reduction. This Final Findings and Determination by ADNR regarding royalty modification is final and not appealable. With the Applicant's concurrence, ADNR will amend the subject leases to conform to the terms of this royalty modification Final Findings and Determination.

II. SUMMARY OF ENI'S APPLICATION FOR ROYALTY MODIFICATION

A. Unit and Lease Summary

ADNR approved the formation of the Nikaitchuq Unit effective April 29, 2004. At that time, Kerr-McGee Oil & Gas Corp. (KMG) held 70 percent of the working interest and Armstrong Oil & Gas Inc. (Armstrong) held 30 percent. The unit originally consisted of eight leases covering 12,968 offshore acres in the shallow waters of Harrison Bay in the Beaufort Sea, approximately three miles north of Oliktok Point. The Kuparuk River Unit (KRU) lies to the south, and the Milne Point Unit (MPU) lies to the east of the Nikaitchuq Unit. The Tuvaaq Unit, formed in August 2004, was adjacent to the western boundary of the original Nikaitchuq Unit. Effective October 5, 2007, ADNR approved the first expansion of the Nikaitchuq Unit, termination of the Tuvaaq Unit and the contraction of the Kuparuk River Unit. The Nikaitchuq Unit expanded to include all of the Tuvaaq Unit leases, the Kigun lease, formerly committed to the KRU, and two additional leases acquired by ENI at the 2004 Beaufort Sea Sale.

All 12 leases in the Eni royalty modification application are committed to the expanded Nikaitchuq Unit. (See lease map in Attachment 2.)

The ownership of the Nikaitchuq Unit has changed significantly since formation. Eni acquired Armstrong's 30 percent WIO of Nikaitchuq Unit in August 2005. In August 2006, Anadarko Petroleum Co. (Anadarko) acquired KMG, including KMG's 70 percent WIO in Nikaitchuq Unit, and became Nikaitchuq Unit operator. Eni subsequently acquired the remaining 70 percent Nikaitchuq Unit ownership from the operator, Anadarko, in March 2007, and became the 100 percent WIO and operator of Nikaitchuq Unit.

On January 11, 2006, KMG submitted an application for royalty modification under AS 38.05.180(j)(1)(A) for 14 leases of which 12 are the subject of this application.[1] KMG's application requested that the royalty rate for the 14 leases be modified from their respective existing fixed royalty rates of 16.67 percent and 12.5 percent to a fixed royalty rate of 5 percent. Effective October 31, 2006, the ADNR issued the Final Findings and Determination of the Commissioner of the Department of Natural Resources for the Nikaitchuq Development Royalty Modification Application denying KMG's application for royalty modification.

[1] The KMG application included ADLs 355021, 355024, 388571, 388572, 388574, 388575, 388577, 388578, 388580, 388581, 388582, 388583, 390615, and 390616.

B. Project Development History

In the 2003-2004 and 2004-2005 exploration/appraisal drilling programs KMG/Armstrong encountered accumulations of hydrocarbons in the area of the then-proposed Nikaitchuq Unit. A total of six wells were drilled in the Nikaitchuq area in the 2004 and 2005 winter drilling seasons; two additional wells were drilled in 2006.

The planned development includes:

- Construction of a gravel pad with drilling, gathering and production facilities on Oliktok Point near the existing ConocoPhillips Alaska Inc. seawater treatment facility.
- Construction of a gravel drilling island near Spy Island tied back via a 3.8-mile subsea flow line and utility bundle to Oliktok Point for fluid processing.
- Construction of a +/-14-mile pipeline from Oliktok Point to a tie-in near KRU DS-1Y pad for connection to the Kuparuk Transportation common carrier pipeline.
- Consideration of future modifications required to adjust facility configuration to accommodate actual results of well performance.
- A total of 73 wells drilled between 2008 and 2011, of which 31 are expected to be producers.
- First oil expected in 2010.

Development studies indicate that extended reach horizontal producing and injection wells required for pressure maintenance are needed to economically recover the hydrocarbons in place. The planned development would permit a relatively small "footprint" for centralized facilities and minimal well pads, thereby reducing environmental impacts to the region. Initial drilling will be from a 313,000-square-foot pad to be constructed at Oliktok Point. Existing roads will be utilized for access. The production facilities will be located on the same pad. Later, a small gravel island is to be constructed within the barrier islands for future drilling. A subsea bundle containing a three-phase production line and multiple utility lines will be constructed to connect the gravel island to Oliktok Point to transport production and provide fuel, secondary recovery fluid, and power to the gravel island.

C. Eni Royalty Modification Request

On October 16, 2007, Eni submitted an application (Attachment 3) to the ADNR commissioner for modification of royalty on 12 leases, ADLs: 388571, 388572, 388574, 388575, 388577, 388580, 388581, 388582, 388583, 390615, and 390616 and ADL 391283 under AS 38.05.180(j)(1)(A). In accordance with 11 AAC 88.105, 11 AAC 83.185, and 11 AAC 05.010(a)(10)(H) Eni submitted a complete application with the required $250.00 filing fee.

The Eni application for royalty modification submitted on October 16, 2007, requests a 5.0 percent fixed royalty if the Alaska North Slope West Coast (ANSWC) crude oil price falls below an ANSWC price equivalent to the U.S. Department of Interior, Minerals Management Service (MMS) NYMEX West Texas Intermediate (WTI) oil price threshold for royalty modification for OCS August 2004-2006 deepwater oil leases in the Gulf of Mexico (GOM).[2] Eni proposes a sliding-scale royalty rate in any month after production start-up (expected in 2010) that would range between 5.0 and 16.6667 percent, depending on the average monthly price of ANSWC crude oil. An ANSWC monthly (nominal) price below the Alaska Department of Revenue (ADOR) *Spring 2007 Revenue Sources* forecast between 2010 (the year of first production) and 2017 shown in Figure II.1 (below) would trigger a reduced royalty rate from original fixed lease rates of 12.5 percent and 16.6667 percent, respectively. The amount of the reduction in royalty percentage would depend on (a) the original lease rate (either 12.5 percent or 16.6667 percent) and (b) the extent to which the actual future oil price falls below the ADOR forecast threshold.[3]

The original fixed royalty rate of 16.6667 percent for ADLs 388571, 388572, 388574, 388575, 388577, 388581, 388582, 388583, 390615, and 390616 and 12.5 percent with 30 percent net profit for ADL 391283 would be subject to the sliding scale modification in a low commodity price environment to a level at or above a floor of 5 percent. The 30 percent net profit share to the State attached to ADL 391283 would be unchanged under the Eni royalty modification proposal.

The Eni application also would provide full royalty relief at a reduced rate of 5 percent for all leases regardless of oil price if monthly production is below 4,000 barrels of oil per day for the first 10 years following the effective date of the royalty modification decision.

---

[2] ADNR estimates threshold to be $42.53 per barrel in 2010 based on a 2007 NYMEX WTI price of $42.64 assuming a 94 percent basis adjustment to ANSWC and 2 percent price escalation pursuant to the ENI proposal. See: MMS, *Price Thresholds and Annual Market Prices for MMS Deepwater and Deep Depth Oil and Gas Royalty Relief Programs*, Deep Water Oil, Economics Division at www.mms.gov/econ/DWRRAPrice1.htm.

[3] Under the Eni proposal, the royalty percentage rate adjustment would be approximately ¾ percentage point per $1 change in ANSWC price for leases with a 16.6667 percent base royalty rate and ½ percentage point per $1 change in ANSWC price for leases with a 12.5 percent base royalty rate. After 2017, the ADOR ANSWC price forecast is inflated by the monthly change in the Producer Price Index (PPI).

III. SUMMARY OF ROYALTY MODIFICATION AUTHORITY AS 38.05.180(j)(1)(A), (2), (3), (4)(A), (5)

A. General Royalty Modification Requirements

AS 38.05.180(j)(1)(A) authorizes the DNR commissioner to provide for royalty modification on individual leases, leases unitized as described in (p) of this section (AS 38.05.180), leases subject to an agreement described in (s) or (t) of this section (AS 38.05.180), or interests unitized under AS 31.05 to allow for production from an oil or gas field or pool if:

1. the oil or gas field or pool has been sufficiently delineated to the satisfaction of the commissioner;
2. the field or pool has not previously produced oil or gas for sale; and
3. oil or gas production from the field or pool would not otherwise be economically feasible.
4. Under AS 38.05.180(j)(2), the commissioner may not grant a royalty modification unless the lessee or lessees requesting the royalty modification make a clear and convincing showing that a royalty modification meets the three requirements set out above and is in the best interests of the state.

B. General Royalty Modification Terms

1. Under AS 38.05.180(j)(3) the royalty modification terms must provide for an increase or decrease or other modification of the state's royalty share by a sliding-scale royalty or other mechanism that shall be based on a change in the price of oil or gas and may also be based on other relevant factors such as a change in production rate, projected ultimate recovery, development costs, and operating costs.
2. Under AS 38.05.180(j)(4)(A) a modification to royalty may not be granted for the field or pool if the royalty modification would result in a royalty rate of less than 5 percent in amount or value of the production removed or sold from a lease or leases covering the field or pool.
3. Under AS 38.05.180(j)(5) a royalty reduction must include an explicit condition that the royalty reduction is not assignable without the prior written approval, which may not be unreasonably withheld, by the commissioner. The commissioner shall, in the preliminary and final findings and determinations, set out the conditions under which the royalty reduction may be assigned and may not grant a royalty reduction without an explicit condition that the royalty reduction is not transferable.

IV. DISCUSSION OF ROYALTY MODIFICATION CRITERIA

A. Leases Are Eligible For Consideration

The leases meet the requirements for consideration and all eleven subject leases proposed for royalty modification are committed in entirety to the Nikaitchuq Unit. AS 38.05.180(j)(1) allows modification of royalty for individual leases and unitized leases.

B. Reservoir Delineation: Discussion of Reservoir Geology and Engineering

1. Introduction to reservoir delineation.

The commissioner may grant royalty modification to allow for production from an oil or gas field or pool if the oil or gas field or pool has been sufficiently delineated to the satisfaction of the commissioner.

The area within the Nikaitchuq Unit for which royalty relief is sought lies offshore in the Beaufort Sea in the vicinity of Spy Island, approximately three miles north of Oliktok Point. The Nikaitchuq Unit is north of and contiguous with the northern edge of the KRU and the Milne Point Unit (MPU). The KRU is operated by ConocoPhillips and produces from the Cretaceous Kuparuk River Formation and shallower Schrader Bluff Formation. The BP-operated MPU field lies to the south-southeast of the Nikaitchuq Unit and produces oil from the Schrader Bluff, Kuparuk, and Triassic Sag River formations. The western edge of the proposed Nikaitchuq Unit is adjacent to the recently expanded Oooguruk Unit (OU) operated by Pioneer. Production from the OU is expected from the Kuparuk and Jurassic Nuiqsut sandstones.

Within the Nikaitchuq Unit, potential commercially recoverable reserves have been tested in both the Cretaceous Schrader Bluff and the Triassic Sag River formations.

Based upon the submitted application and the planned initial development, the request for royalty modification at Nikaitchuq is limited to the OA sand of the Schrader Bluff Formation. For the purpose of this application, the OA sand is defined in Kerr McGee Nikaitchuq #1 (API No. 50629231930000), completed in 2004, as the interval between 5034 feet measured depth (4127 feet subsea true vertical depth) and 5090 feet measured depth (4170 feet subsea true vertical depth).

ENI has adequately delineated the OA sand of the Schrader Bluff Formation in the Nikaitchuq area. Their drilling, testing, and evaluation programs appear to have highlighted the obvious risks inherent to developing viscous oil and identified the possible upside potential available through use of extended reach drilling and advanced completion technologies.

Although upside potential may also exist within the shallower Schrader Bluff N sand interval, the current lack of core, well test, or fluid data from this interval increases the risk and precludes it from being deemed delineated and included as part of this application. ENI plans to gather more data to thoroughly evaluate the N sand during the course of developing the deeper OA sand.

The Sag River Formation contains lighter oil than the Schrader; however, it is plagued with poor quality reservoir rock. The development potential is marginal at best unless there are significant advances in stimulation or enhanced oil recovery technology. Delineation of the Sag River Formation at Nikaitchuq to date has revealed limited reserves and similar test results to the analog at MPU where wells within the Sag River Formation consistently show initial flush production followed by steep decline within the first year. ENI is still evaluating the development potential of this interval and, as such, it has been excluded from this application.

2. Exploration History of the Area

Two key early exploration wells lie within several miles of the Nikaitchuq development area. The Unocal East Harrison Bay State #1 well lies near the northwest corner of the KRU, to the southwest of the Nikaitchuq Unit. The well was drilled in February 1977 to a measured depth of 9,809 feet, bottoming in argillite basement. The East Harrison Bay State #1 well logs appear to contain about 15 feet of oil-bearing Kuparuk Formation that appears cemented in the upper half. The Jurassic section looks silty on logs. The ARCO Kalubik #3 well, drilled in February 1998, lies to the south-southwest of the Nikaitchuq area. The well bottomed in the Jurassic at a measured depth of 7,000 feet. The well encountered a 40-foot-thick measured depth (MD) interval of Kuparuk C sandstone that appears on electric logs as oil-bearing, but siderite cemented in the upper 10 feet of the interval. On well logs the Jurassic interval contains silt with a 12-foot silty sand developed around 6,565 feet MD. The well was plugged and abandoned on March 6, 1998.

3. Drilling History

The first major exploration activity in the area in the early 1970s targeted the Ivishak Formation following the discovery of the prolific Ivishak Formation in Prudhoe Bay State #1 in 1967. The Hamilton Brothers Milne Point #18-1 was one of the early wells drilled on the Milne Point structure in 1970 in search of Ivishak and Lisburne objectives. This well encountered about 50 feet of tight oil-saturated sandstone that was not tested and a section of Kuparuk sandstone that tested at a rate of 875 BOPD. This discovery led to increased industry interest in the Milne Point area and led to exploration and delineation drilling for Kuparuk reserves. In the early 1980s the Sag River was cored in the Conoco Milne Point Unit #C-1 well and contained bleeding oil and gas. The Sag River Sandstone was also cored in the MPU #L-1 well and contained no visible porosity or staining and appeared tight on wire line logs.

In the early 1990s about a dozen wells were drilled to the west-southwest of the Nikaitchuq area with Jurassic sandstones and Kuparuk C sandstones as targets. The ARCO Kalubik #1 well encountered approximately 160 feet of productive Nuiqsut and Nechelik sandstone that tested approximately 336 BOPD (un-stimulated). In addition, the well penetrated an 85-foot section of Sag River Sandstone with calculated log porosities in the range of 15 to 22 percent. The Thetis Island #1 well also encountered an 80-foot section of porous Sag River sandstone with log-calculated porosities in the range of 16-24 percent. A pay section of Nuiqsut sandstone was also encountered that tested at an average rate of 120 BOPD with a high rate of 650 BOPD. Both the Kalubik #1 well and Thetis Island #1 well drilled through Brookian sandstones that contained mud log hydrocarbon shows.

In the late 1990s BP drilled several dedicated Sag River Sandstone test wells, including MPU #C-23, #K-33, #E-13A, 3F-33, #F-33A, and #F-73A. Alaska Oil and Gas Conservation Commission (AOGCC) production data indicate that several Milne Point wells have produced oil out of the Sag River Sandstone and two oil producing wells MPU F-33A and K-33, are currently shut-in. MPU #C-23 produced 378,012 barrels of oil between 1996 and 2001. MPU #F-33 produced 314,276 barrels of oil between September 1996 and May 1999 and was subsequently plugged and abandoned. MPU #K-33 has produced approximately 93,241 barrels of oil since 1997. MPU #E-13A produced 366,665 barrels of oil between 1995 and April 2001. MPU #F-33A produced approximately 661,099 barrels of oil since April of 2001. MPU #F-73A produced 13,430 and is now a water-alternating-gas injection (WAGIN) well. BP estimated the original oil-in-place (OOIP) at 62 MM STB oil and the reservoir area about 8500 acres based upon seismic and log data during an AOGCC Conservation Order hearing in May 1998. AOGCC reservoir data indicate that the oil commonly recovered from the Sag River sandstone has an API oil gravity of about 37 degrees. Total production from the MPU Sag River Sandstone has been 1,834,131 barrels of oil and 1,875,668 MSCF gas through October 2007. MPU Sag River recovery is less than 3 percent to date based on OOIP. The original GOR ranged from 784 – 974 SCF/STB. Production from the Sag River pool at MPU has been intermittent with extended shut-in periods since June 1999.

Between 2004 and 2005, Kerr McGee (KMG) drilled six wells in the Nikaitchuq and Tuvaaq Units. Initially, the primary exploration target was the Sag River Formation; the Kuparuk Formation was a secondary target. Although the wells did not encounter reservoir quality sand in the Kuparuk, the well logs indicated that sands in the shallower Schrader Bluff Formation were prospective. KMG then adjusted the exploration program to thoroughly evaluate the Schrader Bluff Formation. Three of the six wells tested oil from the viscous Schrader Bluff or Sag River formations. In 2006/2007 KMG drilled two additional pre-development wells from Oliktok Point to further delineate and test the Schrader Bluff sandstone. The two wells are currently suspended.

4. Schrader Bluff Formation Tests

KMG Nikaitchuq #4

Approximately 3,000 feet of gross horizontal Schrader Bluff OA sand was drilled in this well, with approximately 2,270 feet of horizontal or lateral net pay, from a 30-foot true-vertical-depth net pay thickness. A two-week production test was performed on the well using an electric submersible pump (ESP) to aid in producing the 16–17 API crude. The well tested at rates up to 1,200 barrels of oil per day during periods of the initial test. Permeability estimated from the test was greater than 350 millidarcies and was confirmed from the analysis of the flow tests conducted on a whole core obtained from the well.

KMG Tuvaaq #1

The well was not tested. It penetrated 30 feet net pay Schrader Bluff OA Sand and 12 feet net Schrader Bluff N sand. There were no cores taken at Tuvaaq. Schrader Bluff N sand was interpreted to be oil-filled here and at Kigun #1 appeared unconsolidated with permeability estimated from 100-1000 millidarcies and porosity 25-35 percent.

KMG Kigun #1

The well was not tested. It penetrated 29 feet net pay Schrader Bluff OA sand and 30 feet net N sand. An MDT tool run sampled the Schrader Bluff OA fluids which were 18 degree API, GOR 59 SCF/STB and viscosity of 82 cp at 87 degree reservoir temperature. (Contamination of the samples with oil-based mud caused concern about the reliability of the sample estimates and properties.) Schrader Bluff OA sand core data indicated 25 percent to 38 percent porosity and up to 1,000 millidarcies permeability in the sandstone intervals.

KMG Oliktok Point I-1 KMG Oliktok Point I-2

These two wells were drilled by KMG during the 2006/2007 drilling season as pre-development wells to further test and delineate the Schrader Bluff reservoir. These wells have been suspended. Results from these wells are currently held confidential under AS 38.05.035(a)(9).

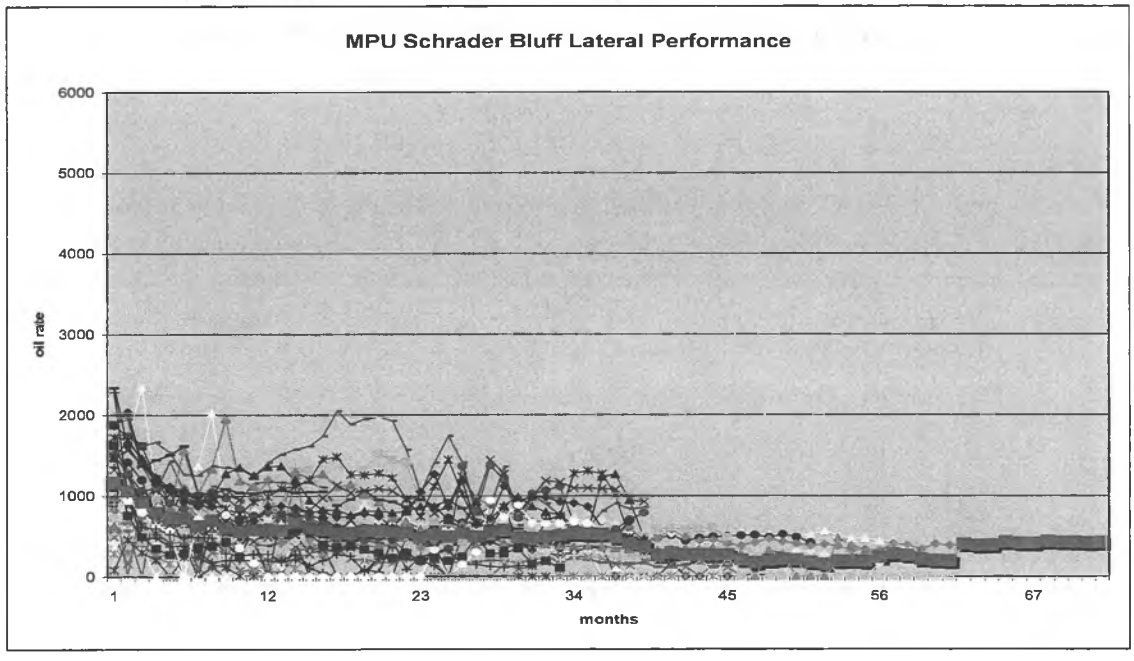
5. Analog Schrader Bluff Formation Performance

Milne Point Unit (MPU) Schrader Bluff Pool (Figure 1), Kuparuk River Unit (KRU) West Sak Pool (Figure 2) and Prudhoe Bay Unit (PBU) Polaris and Orion pools – Figure 3, represent analog Schrader Bluff Formation horizontal well performance. Each of the pools was developed initially with vertical or slanted completions. More recently a number of horizontal lateral and multi-lateral wells have been completed in each of these pools. MPU and KRU Schrader Bluff wells show a distinct, lower rate performance than the newer developed Polaris and Orion Pool wells. A significant portion of the performance difference is likely due to differences in fluid quality. Within the Schrader Bluff Formation / West Sak, developments oil gravities can vary between 15-24 degrees API and viscosity can vary between 5-130 centipoise. To date, development has been limited to those areas with higher API Gravity and lower viscosity. Later Schrader Bluff Formation developments are building on earlier techniques by going from vertical to

horizontal and multilaterals wells. The horizontal and multilaterals should consistently outperform the older wells because more formation is exposed and the completions are more efficient.

The wells in each Schrader Bluff Formation pool exhibit early flush production for six to 12 months. The PBU Schrader Bluff completions show slightly higher initial rate profiles followed by relatively steep decline. The average MPU Schrader Bluff completion (heavy bright green points and line) declined from 1200 bopd to 500 bopd at 12 to 40 months. KRU West Sak lateral completions have performed similar to MPU Schrader Bluff.

Figure 1. MPU Schrader Bluff Formation lateral performance and average performance (heavy green).



6. Reservoir delineation determination.

ENI has adequately delineated the OA sand of the Schrader Bluff Formation in the Nikaitchuq area. Their drilling, testing, and evaluation programs appear to have highlighted the obvious risks inherent to developing viscous oil and identified the possible upside potential available through use of extended reach drilling and advanced completion technologies.

Figure 2. KRU West Sak sands lateral performance and average performance (heavy orange).

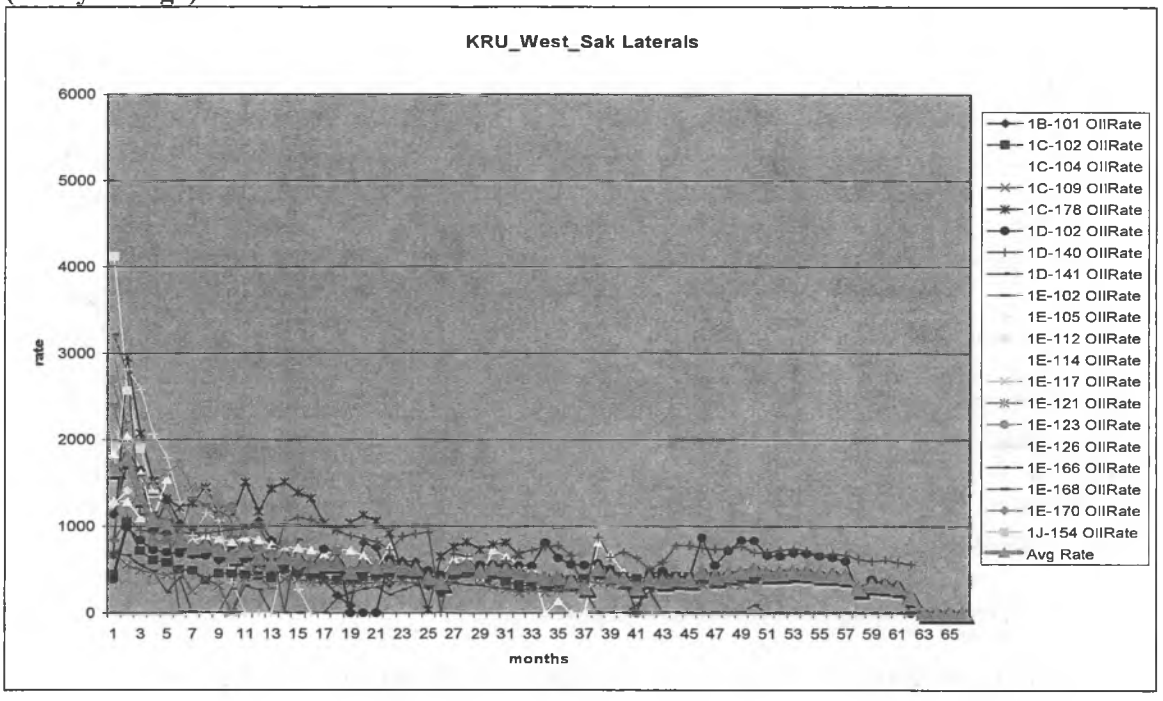


Figure 3. PBU Polaris and Orion Schrader Bluff Formation initial performance.

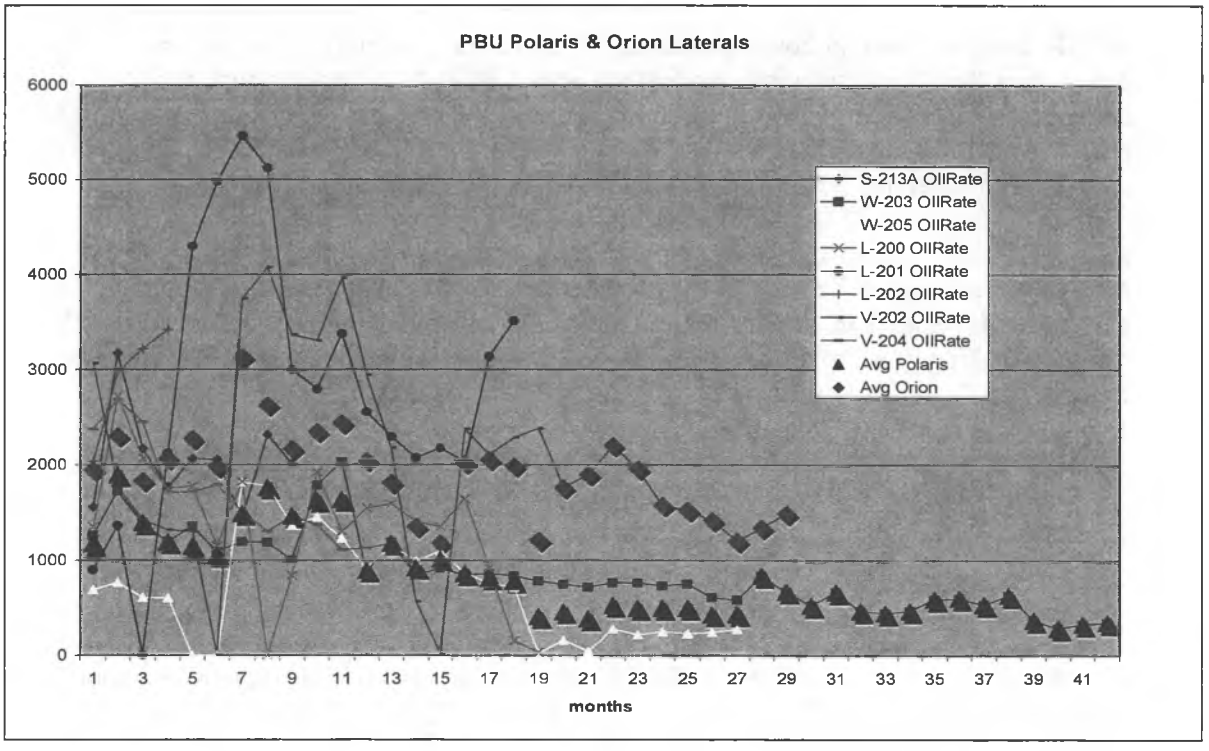

ENI stated that their plan is to develop Nikaitchuq Schrader Bluff Formation with horizontal wells. Their prognosis of performance can be compared to the analogs by evaluating average Schrader Bluff well performance from initial completion to date. There are up to seven years of production history for the various Schrader Bluff Formation horizontal and lateral wells. Orion appears to be more productive so far but the long term performance has yet to be defined. ENI appears to estimate their development will improve on the previous KRU and MPU Schrader Bluff completions by using the latest technology, namely very long horizontal and or multi-lateral completions. ENI's cases align reasonably with the MPU Schrader Bluff and KRU West Sak and PBU Polaris average performance. PBU Orion performance is notably better than ENI's high case average rates. Analyses of oil samples taken within the OA sand in the Nikaitchuq area demonstrate measured oil viscosities of 95–188 centipoise. This is heavier than the average viscosity of production from existing KRU, MPU and PBU Schrader Bluff developments. In addition, the Nikaitchuq development will include construction of a new standalone facility. The KRU, MPU, and PBU Schrader Bluff pools had existing infrastructure and production from other formations to support the additional development. Both of these factors increase the risk and make this project more economically challenged compared to existing heavy oil developments.

C. No Previous Sale of Produced Oil or Gas

The pools underlying the leases have not previously produced oil or gas for sale.

D. Economic Analysis

ADNR used its own in-house probabilistic economic model (ADNR Model) for the Nikaitchuq development to independently assess the financial performance and ultimate economic effects of a royalty modification for both Eni and for the State of Alaska. Eni shared with the state portions of its proprietary economic model, but the state chose to use its own model that incorporated many input assumptions provided by Eni.[4]

ADNR closely examined the assumptions and methods currently in use by the U.S. Minerals Management Service (MMS) for the Deep Water Royalty Relief Program. The MMS has developed an in-house proprietary probabilistic economic model for Royalty Suspension Viability Program. ADNR adopted an approach similar to that of the MMS by applying the quantitative results from the ADNR model to a prudent-investor decision framework. The ADNR decision framework is confidential. It is designed to replicate the kind of analytical framework used by industry for making prudent oil and gas investment decisions under uncertain conditions involving significant capital outlays and lengthy project life cycles.

[4] Eni has submitted financial and technical data and analyses and requested that they be held confidential in accordance with AS 38.05.035(a)(9). Thus this section does not discuss any confidential information concerning Eni's geologic, engineering and cost data. These documents are included and discussed in detail in the confidential *Economic Analysis and Internal Decision Process*, (Attachment 6).

The prudent investor standard is maintained throughout the project evaluation process. Under this standard, ADNR incorporates a collection of project performance benchmarks that are consistent with industry norms.

To obtain royalty relief the applicant must show by clear and convincing evidence that without royalty modification the project is not economically feasible. Nikaitchuq is an offshore, heavy oil prospect with relatively high expected exploration and development costs and low expected production possibilities. The final analysis of Nikaitchuq project development conducted by ADNR pursuant to the Eni royalty modification application suggests that, under reasonable assumptions about future oil prices and without some form of royalty relief, this project would not be sanctioned for funding and development.

In its simplest form, the ADNR Model describes project cash-flows for the Nikaitchuq development over a 50-year time horizon. The ADNR Model incorporates expected investment, production, price, revenue, and cost. It incorporates fiscal system attributes, including state and federal tax, state production tax (including the recent ACES legislation)[5], and royalty obligations, as well as other important commercial relationships, such as facility sharing and pipeline transportation charges.

The ADNR in-house model is flexible enough to allow ADNR to evaluate the effects of changes to the fiscal system. The model provides a platform for systematic evaluation of the effect of a change to the royalty rate. The model calculates the changes to the various financial metrics that result from a change in the royalty rate. These metrics include annual and cumulative discounted and undiscounted cash flow, years to payout, net present value (NPV), expected monetary value (EMV), and internal rate of return (IRR) on investment, as well as state revenues. Also, ADNR used its model to carry out sensitivity analysis of key driver assumptions and to characterize certain price, production, and cost variables in terms of probability distributions to evaluate how uncertainty among these drivers affects key project metrics and state revenues.

Eni furnished ADNR with 200 realizations of project production that depict the range of values and probabilities for the many reservoir factors that that determine ultimate reservoir recovery (e.g., aerial and vertical extent, rock characteristics, fluid composition and properties). These 200 Eni realizations represent the universe of possible resource recovery outcomes for ADNR's Monte Carlo analysis that fit the well-test data. The ADNR model samples repeatedly from this universe of production realizations, as well as from volatility inherent in price formation, as characterized in the mean reversion price model (see below), to generate a distribution of net present value (NPV) outcomes for the Nikaitchuq project. The central tendency (mean and median) and dispersion (variance) of the NPV outcomes depict project performance uncertainty and speak to the dimensions of ADNR's prudent-investor decision framework mentioned above.

ADNR incorporated the applicant's input data into its model along with its own assumptions about the path of uncertain future prices to derive independent results for the

[5] See HB2001 (11/15/2007).

economic feasibility of the Nikaitchuq project. The ADNR Model examines a range of possible inputs to derive a P50, or median, outcome from a Monte Carlo simulation. The P50 result is the value where 50 percent of the outcomes lay below this point and 50 percent of the outcomes lay above the P50 outcome. The ADNR Model uses Palisades Software's "@Risk" Monte Carlo software application to run the simulations and determine risk-weighted outcomes reported in the confidential supplement to this *Final Findings and Determination* (Attachment 7).

Calculating risk weighted outcomes is critical to a full analysis of a project. The probabilistic rate profile, determined based on the applicant's reservoir simulation results, is combined with pricing to determine the project revenue stream. Annual Alaska North Slope West Coast (ANSWC) crude oil prices were generated from an Ornstein-Uhlenbech type Mean-Reversion price model[6] with parameters estimated as described by Schwartz, (1997)[7] using annual price data for ANSWC crude as reported by Platt's. The starting ANSWC delivered price used in the model is $67 per barrel, the average price for 2007. The risk weighted cost profiles are then matched to the revenue stream generated by the probabilistic price and production models. This yields an NPV distribution. The mean of the NPV distribution is the EMV for the entire project that incorporates uncertainty and can be compared "apples-to-apples" with other versions of the project.

ADNR analyzed various senarios to explore Nikaitchuq project performance with and without royalty modification. DNR approves royalty modification only when it believes a project will not go forward without it. This means that the impact to royalty revenues to the state is the difference between the royalty revenues with royalty modification as was prescribed in the DNR decision and zero. Even under low price scenarios, ADNR determined that the state can expect to receive an additional $100 million over the life of the project.

If it is assumed that the project could have gone forward without royalty modification (again, not what ADNR assumes) the impact would be as indicated in Table 1. This table presents several possible price scenarios and the indicated change to the state royalty cash flow stream.

In Table 1 the scenarios labeled "$43 and Above (Sustained)" and "$40 Sustained" simply use a flat price deck for "Alaska North Slope West Coast" (ANSWC) crude oil (before inflation) for the life of the project, the price does not vary from year-to-year. An oil price of $40 is always just below the $42.64 royalty modification threshold and thus results in 5 percent royalty rates for every barrel of oil produced from the reservoir for the life of the project and the greatest negative impact to overall state royalty revenues.

---

[6] Dixit & Pindyck, 1994, http://www.puc-rio.br/marco.ind/sim_stoc_proc.html#mc-mrd.

[7] The Stochastic Behavior of Commodity Prices: Implications for Valuation and Hedging", Schwartz, E., Journal of Finance, 1997, Volume 52, issue 3, 923-973

Table 1. Change in Alaska royalty revenues if royalty modification were not necessary and project produced oil without royalty modification.

Price Scenario	Impact on State of Alaska Royalty Revenue ("With Royalty Modification Per Decision" Minus "Without Royalty Modification", 5% discount rate)
$43 and Above (Sustained)	$0 million
DNR Price Model	($39 million)
$40 Sustained	($160 million)

The "DNR Price Model" scenario does not use a constant or "sustained" price for the life of the project (i.e. flat price deck) as is the case with the other two scenarios in Table 1. We use a forward-looking, Monte Carlo-based "mean-reversion" model, as discussed above. This price model creates a price forecast where oil price fluctuates over time, simulating real-life price variability similar to what history has shown. The price for 2007, $67 per barrel ANSWC, was taken from U.S. Energy Information Agency's most recent price projection for West Texas Intermediate (WTI) crude, and adjusted for ANS-WTI basis by taking the previous 12-month average difference between these two prices. The model reverts to DNR's expected mean value of $53 per barrel, over time.

The ADNR has determined that under ADNR's price and discounting assumptions, the project attributes furnished by Eni, and the existing lease royalty rates in effect prior to this *Final Finding and Determination* (16.6667 percent fixed royalty rate and the 12.5 percent fixed royalty with 30 percent NPS for ADL 391283), the Nikaitchuq project does not meet prudent-investor standards for economic feasibility. ADNR concludes further that the royalty modification terms and conditions stipulated in Section IV.B would improve project economics. Eni represents that royalty modification would make project sanction more likely.

V. PUBLIC COMMENTS

On November 30, 2007, ADNR issued a Preliminary Findings and Determination to respond to Eni's royalty modification application. The public was invited to comment on the preliminary decision for thirty days, ending January 7, 2008 (Attachments 3 and 4).

No comments were received from the public.

VI. STATE'S PROPOSED ROYALTY MODIFICATION

A. Royalty Modification Requirements for the Nikaitchuq Project

1. Eni's application for royalty modification on ADLs 388571, 388572, 388574, 388575, 388577, 388580, 388581, 388582, 388583, 390615, and 390616, and ADL 391283 meets the requirements for consideration under AS 38.05.180(j)(1). Eni has paid the filing fee and submitted a complete application for the royalty modification including financial and technical data that meet the requirements of 11 AAC 88.105, 11 AAC 83.185, 11 AAC 05.010(a)(10)(H), and AS 38.05.180(j)(6).

2. The Schrader Bluff pool has been sufficiently delineated to the satisfaction of the commissioner for the purpose of considering royalty modification; this pool has not previously produced oil or gas for sale.

3. Eni has shown that oil or gas production from the Schrader Bluff pool would not otherwise be economically feasible.

4. Eni has made a clear and convincing showing that a modification of royalty meets the requirements of 38.05.180(j)(1)(A), and is in the best interests of the state.

B. Royalty Modification Terms for the Nikaitchuq Project

1. Royalty modification pursuant to the terms herein is granted to Eni US Operating Co. Inc. (Eni), as operator and 100 percent working interest owner of the Nikaitchuq project (Project), on ADLs 388571, 388572, 388575, 388574, 388577, 388581, 388582, 388583, 390615, 390616, and 391283. Royalty modification is denied for ADL 388580 because there was no apparent resource allocated to this lease.

2. Only production from Nikaitchuq Unit's Schrader Bluff OA reservoir, as delineated under this Findings and Determination, shall be eligible for royalty modification. To receive royalty modification on production, the lease must be committed to an approved participating area within six years of the date of Project sanction. After six years, any subject lease or portion of a subject lease not committed to an approved participating area for the Nikaitchuq Schrader Bluff OA reservoir shall revert to the respective individual lease royalty rates that were in effect immediately prior to this Findings and Determination.

3. If the Project, not materially changed from that set out in the October 16, 2007, royalty modification application, is not sanctioned by all working interest owners by February 28, 2008, this royalty modification decision is rescinded.

4. Within 30 days following the date of Project sanction, the working interest owners shall provide ADNR with the Project sanction documents, approvals for expenditure, and other documents supporting the technical and financial data submitted with Project sanction documents excluding any proprietary data. ADNR agrees to keep all such data confidential.

5. If six years following the date of Project sanction total actual Project spending starting December 1, 2007, does not meet $822 million in nominal dollars, then this royalty modification is rescinded. If 11 years following the date of Project sanction total actual Project spending does not meet $1.398 billion in nominal dollars, then this royalty modification is rescinded. The ADNR may audit the working interest owners' spending on this Project to determine compliance any time between the sixth and the 13th year following Project sanction. If at either cost threshold juncture this royalty modification is rescinded, then Eni will refund to the State of Alaska the difference between the royalty which would have been due at the royalty rates that were in effect immediately prior to the effective date of this Findings and Determination and the royalty due at the modified royalty rate, with interest as set forth in AS 38.05.135(d).

6. The NPS lease regulations set out in 11 AAC 83.201 – 11 AAC 83.295 remain in full force and effect for ADL 391283, except that the cost to the applicant for the application for royalty modification will not be included in any NPS lease Development Account balance.

7. (a) Nikaitchuq royalty modification mechanism implemented as follows:

   i. Original lease rates are 12.5 percent for ADL 391283 and 16.67 percent for ADLs 388571, 388572, 388575, 388574, 388577, 388581, 388582, 388583, 390615, and 390616.

   ii. For the first 25 years following the date of first sustained production, when Alaska North Slope West Coast ("ANS WC") delivered crude prices are below the threshold price per barrel as adjusted by inflation, then production from the Nikaitchuq Schrader Bluff OA reservoir on the subject lease will pay a 5 percent royalty. The ANS WC crude price for the month of production is the average assessment by Platt's Oilgram Price Report and Reuters online data providing service, of the spot price for ANS delivered on the West Coast. The average assessment of the spot price for ANS by each reporting service is the average of the midpoints of the high and low closing assessments for the spot price for ANS for all days during the month of production for which closing assessments are

reported. The threshold price shall start at $42.64 per barrel. This threshold price will be adjusted annually for inflation starting on May 1, 2008, and shall be adjusted on each May 1 thereafter. The inflation adjustment shall be (1 + inflation rate) multiplied by the previous year's inflation-adjusted threshold price. The inflation rate shall be determined by taking the previous year's annual implicit price deflator for GDP (initially, for the year 2007) as reported by the end of April of each year, dividing that deflator by the two-years-previous annual implicit price deflator (initially, for the year 2006), and then subtracting 1. The source of the inflation data shall be the Department of Commerce Bureau of Analysis (BEA) U.S. Economic Accounts-GDP. National Income and Productions Account (NIPA) Table 1.1.9. When the monthly ANS WC oil price is above the threshold, royalty rates for production attributable to such month(s) shall return to the original lease royalty rates.

iii. This royalty modification shall be terminated 25 years following the date of first sustained production and at that time royalty rates shall revert to the respective individual lease royalty rates that were in effect immediately prior to this Findings and Determination.

(b) For the 18th through the 120th months after first commercial production from the Nikaitchuq Schrader Bluff OA reservoir, if production from all of the subject leases averages below 4,000 barrels of oil per day for any previous twelve month period, full royalty modification rates of 5 percent shall be in effect for all production from the Nikaitchuq Schrader Bluff OA reservoir, regardless of oil price. Provided, however, nothing in this provision shall prevent Eni from applying for royalty modification under AS 38.05.180 (j)(1)(B)or (C).

8. In the determination of royalty value of oil or gas from any of its properties, Eni shall waive any rights to a transportation deduction for the pipeline constructed pursuant to the Easement granted on ADL 417493. This waiver shall remain in effect even if such pipeline is converted to a common carrier.

9. If any working interest owner should contract to use any processing facilities at any time for production from the reservoirs delineated and leases covered in this Findings and Determination, that working interest owner shall furnish ADNR the facilities contract, including information regarding the fee structure and volumes processed unless such contract prevents disclosure of such information. This information will be kept confidential by ADNR. The working interest owner shall also furnish produced oil, water, and gas volumes on a monthly basis broken down by individual working interest owner.

10. Should any third party petition the Nikaitchuq Unit facility owners to contract for use of any unit facilities, the cost of use shall be based on market rates. Any

resulting contract covering facilities access or use shall be shared with the ADNR. ADNR agrees to keep all such information confidential.

11. This royalty modification is not assignable without prior written approval of the ADNR commissioner, which shall not be unreasonably withheld. The assignee must be fit, willing, and able to satisfy all of the duties and obligations attached to this royalty modification and all other lease terms.

12. If at any time royalty modification is rescinded, the terms and conditions of this Findings and Determination shall terminate, with two exceptions. First, the provisions of Term 8 shall survive the termination of royalty modification. Second, all obligations to keep information confidential that was submitted pursuant to this Findings and Determination shall survive the termination of royalty modification.

VI. PROPOSED FINDINGS AND DETERMINATION

After detailed consideration where all the materials presented by the applicant were reviewed and incorporated into our analysis, the ADNR has determined that Eni meets the necessary requirements and that royalty modification for the Nikaitchuq development project is warranted under the terms established in Section IV of this finding and determination.

Thomas E. Irwin
Commissioner

Jeff Landry, Department of Law

Senate Resources Committee
Joe Paskvan, Co-Chair / March 1, 2012

Let's call the meeting to order.

Let the record reflect that it is _____ p.m. on Thursday, March 1.

Let the record reflect that there is a quorum. Present are

- Co-Chair Wagoner
- Senator Stedman
- Senator Stevens
- Senator Wielechowski
- Senator French
- Senator McGuire
- And myself, Senator Paskvan

During this hearing, we are joined by BP and ConocoPhillips, who will offer comments on the Committee Substitute for Senate Bill 192, relating to Oil and Gas Production Tax Rates.

ExxonMobile, Pioneer Natural Resources, and the Arctic Slope Regional Corporation have also submitted letters in the past couple of days. Those were subsequently distributed to Committee members and posted on BASIS.

For the record, approximately 140 Alaskans offered public testimony to the Resources Committee on Tuesday and Wednesday evenings. We very much appreciate the input of each and every Alaskan in the public process.

Additionally, each of us has also been receiving dozens of emails from around the State; in fact, we have been communicating with Alaskans about the oil tax issue almost daily for the past year. Today, I gathered all of the email messages that I have received this week and distributed those to each Committee member. They will be submitted as part of the public record. Again, the Committee welcomes and appreciates the thoughts of all Alaskans.

CS SB 192: Summary

- Preserves Deductions of Capital Expenditures, Operating Expenditures, and Transportation Costs (i.e., net profits tax)
- Preserves Tax Credits
- Preserves Royalty Rate
- Preserves Royalty Modification
- Reduces Progressivity
  - Reduces the Slope of Progressivity
  - Lowers the Cap on Progressivity

CS SB 192: Preserves Tax Credits

- Credits which may be taken against oil and gas production taxes include:
  - Capital Expenditure Credits
  - Alternative Tax Credits for Oil and Gas Exploration
  - Net Operating Loss ("NOL") Carry Forward Credits
  - Transitional Investment Expenditure ("TIE") Credits
  - Well Lease Expenditure Credit
  - Cook Inlet Jack-Up Rig Credit

(Source: "Production Tax Credits," DOR Presentation to the Sen Res Committee; March 16, 2011)
(See also: "Tax Credit Update," DOR Presentation to the Senate Resources Committee; January 27, 2012)

CS SB 192: Preserves Low Royalty

- Alaska: Owner of a World Class Resource
  - 12.5% to 16.67%
- Comparison States
  - Texas: Private Lands
    - "Average assumed to be 25%"
  - North Dakota: The majority of production is from private lands
    - "Most production pays at 18.75%"

(Source: *Alaska's Oil and Gas Fiscal Regime: A Closer Look From A Global Perspective*, DOR, Jan 2012)

CS SB 192:
Preserves Royalty Modification

- Allows commissioner to modify royalty to allow for production from a field or pool under three conditions/scenarios:
  - Not in production
    - Field or pool must be sufficiently delineated
    - Field that would not otherwise be economically feasible
    - Royalty shall never be lower than 5%
  - Prolong economic life
    - As costs increase or price decreases… to make future production uneconomic
    - Royalty shall never be lower than 3%
  - Re-establish production
    - Royalty shall never be lower than 3%

(Source: Presentation to Senate Resources Committee by Bill Barron, Director, DNR Division of Oil and Gas; Feb 21, 2012)

CS SB 192: Lowers Progressivity

- The Committee Substitute retains the original trigger of $30 in Production Tax Value (PTV); at which point the progressive tax rate is calculated at .35% per dollar increase in PTV up to 50% ($101.43);

- At 50% ($101.43), the CS adds a second trigger on the progressive tax rate calculation that lowers the progressive tax rate to .1% on PTV up to 60% ($201.43);

- Adds a statutory maximum tax rate of 60% under the production tax statutes.

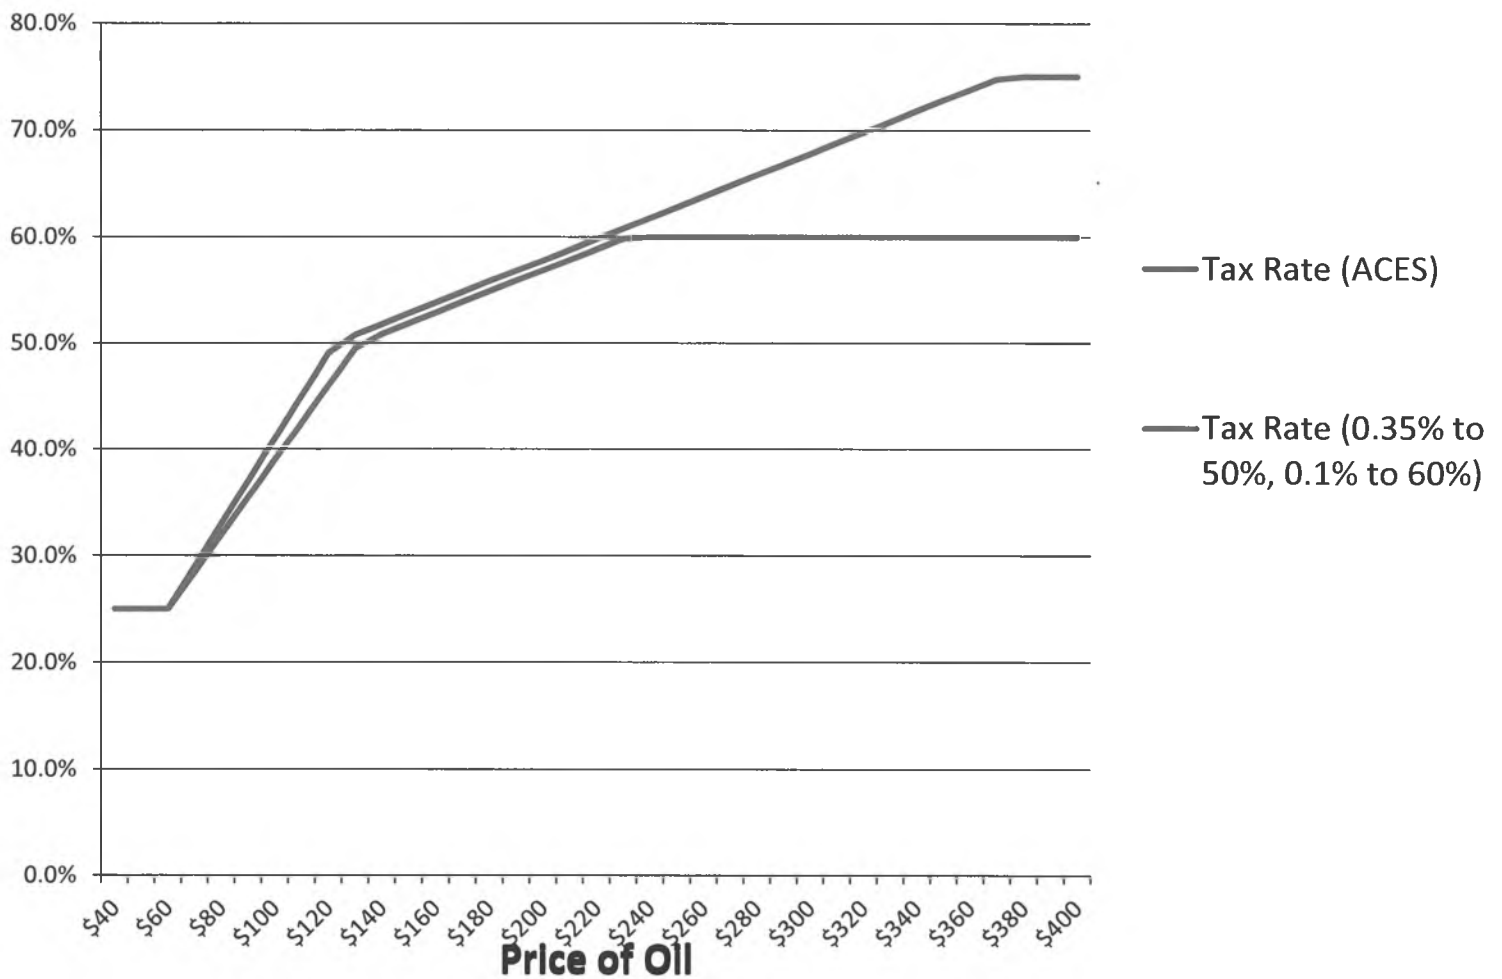
Before we get started with the testimony, I want to summarize – briefly – the CS for SB 192 for those who might be tuning in for the first time. I think that it's important for the public to understand what we are discussing today.

[SEE SUMMARY ATTACHED]

Now, we welcome Damian Bilboa from BP, to be followed by ConocoPhillips.

Tax Rate: ACES vs Proposed CS
$40 to $400

Assume costs $30 / barrel



Tax Rate: ACES vs Proposed CS

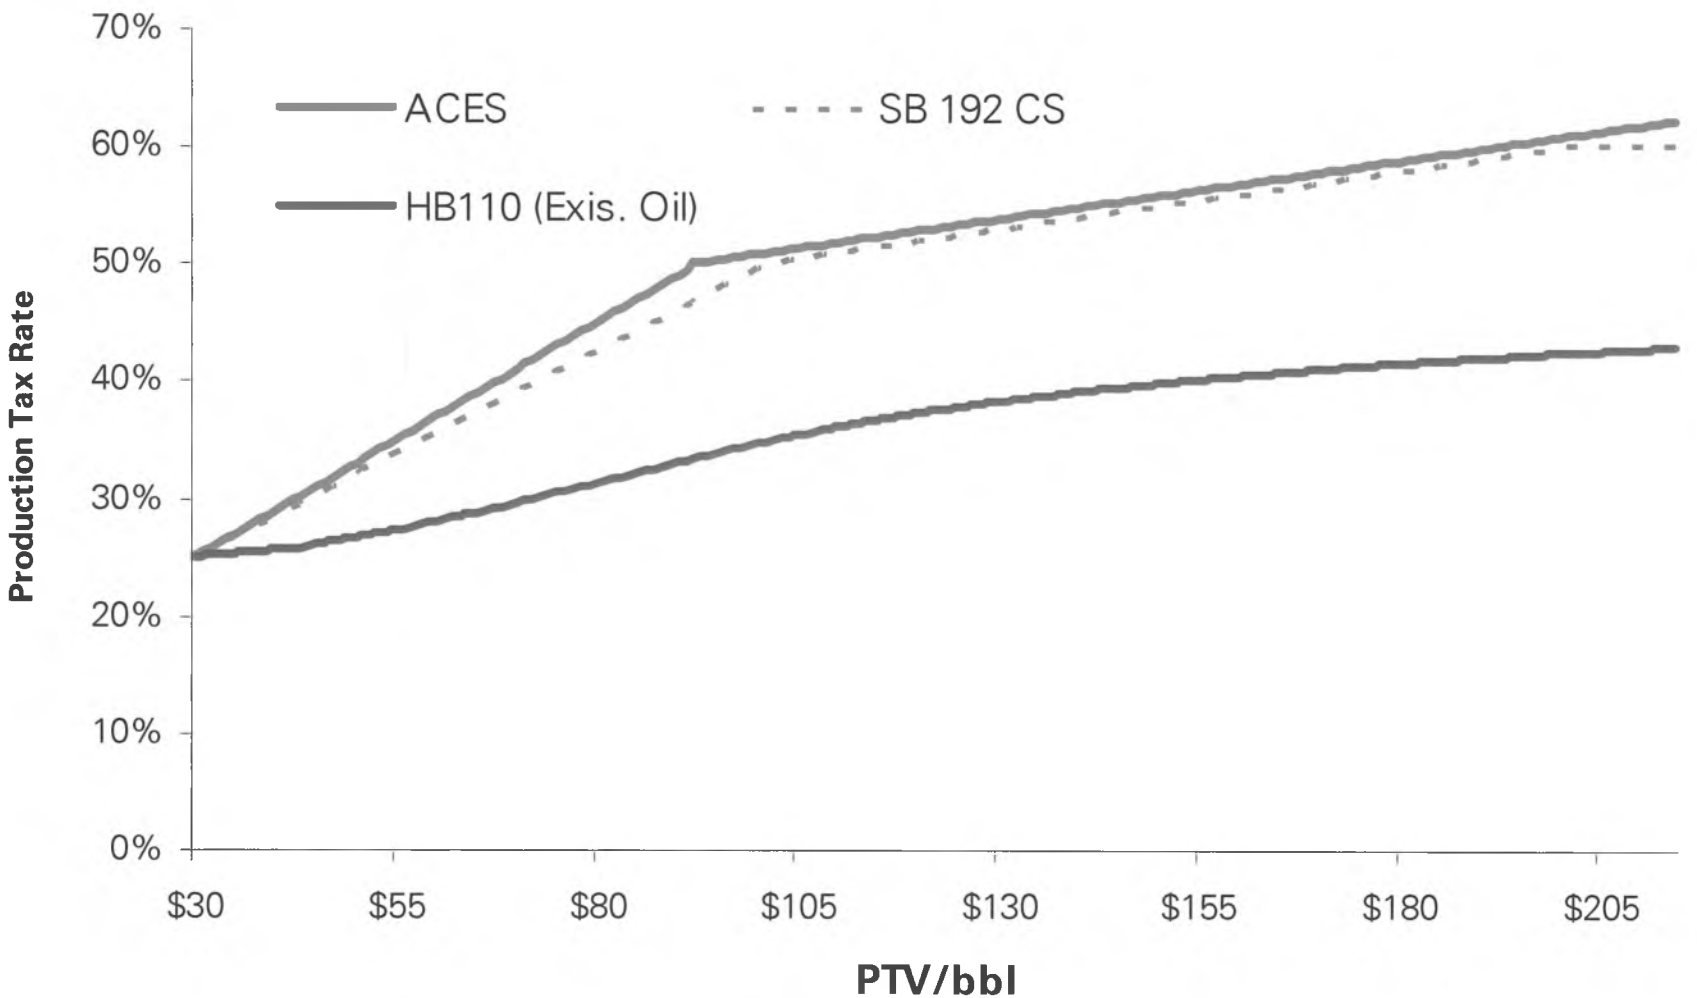
Meaningful Change Drives Investment

Technology+Efficiency+Tax Change=Production



Proposed Master Expenditures Categories List

CAPEX Expenditure Categories	Category Definition
G&G	Includes work and or costs associated with the performance or acquisition of seismic and/or geological and geophysical data.
Exploration Drilling	Includes drilling an exploration well, drilling an appraisal well that is post discovery and prior to development and including side tracks on a discovery well, appraisal costs including coring and testing discovery wells.
Development Drilling	Includes costs associated with well drilling, completions, planned multilaterals of development wells, including costs upstream of the christmas tree.
Well Workovers	The process of performing major maintenance or remedial treatments on an oil or gas well to increase production. In many cases, workover implies the removal and replacement of the production tubing string after the well has been killed and a workover rig has been placed on location.
Production Facilities – Rate Increasing	Includes well tie-in costs, increases to choke capacity, expansions of existing facilities such as increasing oil, gas or water handling, debottlenecking, or processing facilities.
Production Facilities – Non-rate Increasing	Includes improvements to reliability or reduced operational costs, costs that do not contribute to the choke capacity of a production facility, and production control system upgrades.
Support Facilities	Includes costs for IT, communications equipment, non-production control systems, camp sites or accommodation facilities, medical facility, laboratories, warehouses, and maintenance buildings.
Transit and gathering/flow lines	Includes transit lines, gathering lines, and flow lines, or the addition of new production lines and/or pumps to trunk or downstream lines.
Transit and gathering/flow lines – Replacement	Includes replacement of transit lines, gathering lines, and flow lines to trunk or downstream lines. Does not include repairs to such lines.

CAPEX Expenditure Categories	Category Definition
Other Capital	Includes significant capital equipment, health, safety, environment, and other non-drilling related costs not captured in other categories.
Exclusions (AS 43.55.165(e))	Include total amount of exclusions as described under AS 43.55.165(e).

OPEX Expenditure Categories	Category Definition
G&G (Geological & Geophysical Work)	Includes work and or costs associated with the performance or acquisition of seismic and/or geological and geophysical data that is not included in CAPEX "G&G" expenditures.
Wellwork	The process of performing major maintenance or remedial treatments on an oil or gas well to restore or maintain production. In many cases, workover implies the removal and replacement of the production tubing string after the well has been killed and a workover rig has been placed on location.
Platforms Operations	Includes operation, maintenance and repair expenditures for platforms and platform facilities for oil and gas production from marine platform operations. This should include lifting, gathering, treating, field processing, on site staff and support facilities, and other services.
Facility - Production – Operations & Maintenance	Includes operation, maintenance and repair expenditures for on-shore facilities for oil and gas production. This should include lifting, gathering, treating, field processing, on-site staff and support facilities, and other services.
Facility - Production – Major Repairs	Includes major repairs of facilities associated with oil and gas production operations. This should include major repair of lifting, gathering, treating, and field processing activities.

OPEX Expenditure Categories	Category Definition
Facility - Support – Operations	Includes on-site housing, medical facilities, testing facilities, warehouse and workshop facilities, emergency services, and equipment fueling facilities, and their maintenance and repairs.
Transit Lines - Operation	Includes all in-field and connecting lines receiving oil or gas from gathering lines and transporting such to trunk and or sales points beyond gathering lines and centers.
Transit Lines - Major Repairs	Includes major repairs of transit and flow lines not covered by CAPEX pipeline expenditures.
Gathering Lines - Operation	Includes all in-field connecting, gathering, and flow lines delivering oil and/or gas to transit/flow lines, trunk lines or sales points.
Gathering Lines – Major Repairs	Includes major repairs of gathering lines and systems delivering oil and/or gas to transit/flow lines, trunk lines or sales points.
Fuel	The volume of gas purchased and used on the producing leases injected for reservoir maintenance or used as gas lift.
Roads, Pads & Runway Maintenance	Includes maintenance and repairs to access roads, pads used in those operations, and heliport or aircraft runway and facility maintenance within the area of oil and gas exploration, development and production activities.
Health, Safety & Environmental	Includes staff, facilities, and activities associated with personnel health, operations safety preservation and support, and maintaining environmental integrity.
Other Operating Expenses	Total other costs incurred in operations that are not included in any of the other categories defined in this list of OPEX expenditures, not to exceed 155 of the total OPEX expenditures.
Taxes - Property	Total ad valorem taxes paid to state and local government entities for facilities and property assessments.

OPEX Expenditure Categories	Category Definition
Taxes - PILT - Payments in Lieu of Taxes	Total payments to a government that are not production or income taxes.
Net-Profit-Share Lease Payments	Total of all net-profit-share lease payments made during the calendar year.
Adjustments - Payments Under 43.55.170 (a)(1) Reimbursed Facility Charges & (a)(2) Reimbursed Lease Expenditures	List a total amount of all payments that were received during the calendar year for the calendar year being report that would be included as described in AS 43.55.170 (a)(1) & (a)(2).
Adjustments - Payments Under 43.55.170 (a)(3) Sale or Transfer of Asset or Oil or Gas	List a total amount of all payments were received during the calendar year for the calendar year being reported that would be included as described in AS 43.55.170(a)(3).
Exclusions - Under 15 AAC 55.520(f)(4)(G) which are the Exclusions under AS 43.44.165 (e)(19)	List a total amount of all expenditures made during the calendar year for the calendar year being reported that would be excluded as described under 15 AAC 55.520(f)(4)(G) that are the Exclusions under AS 43.44.165 (e)(19).

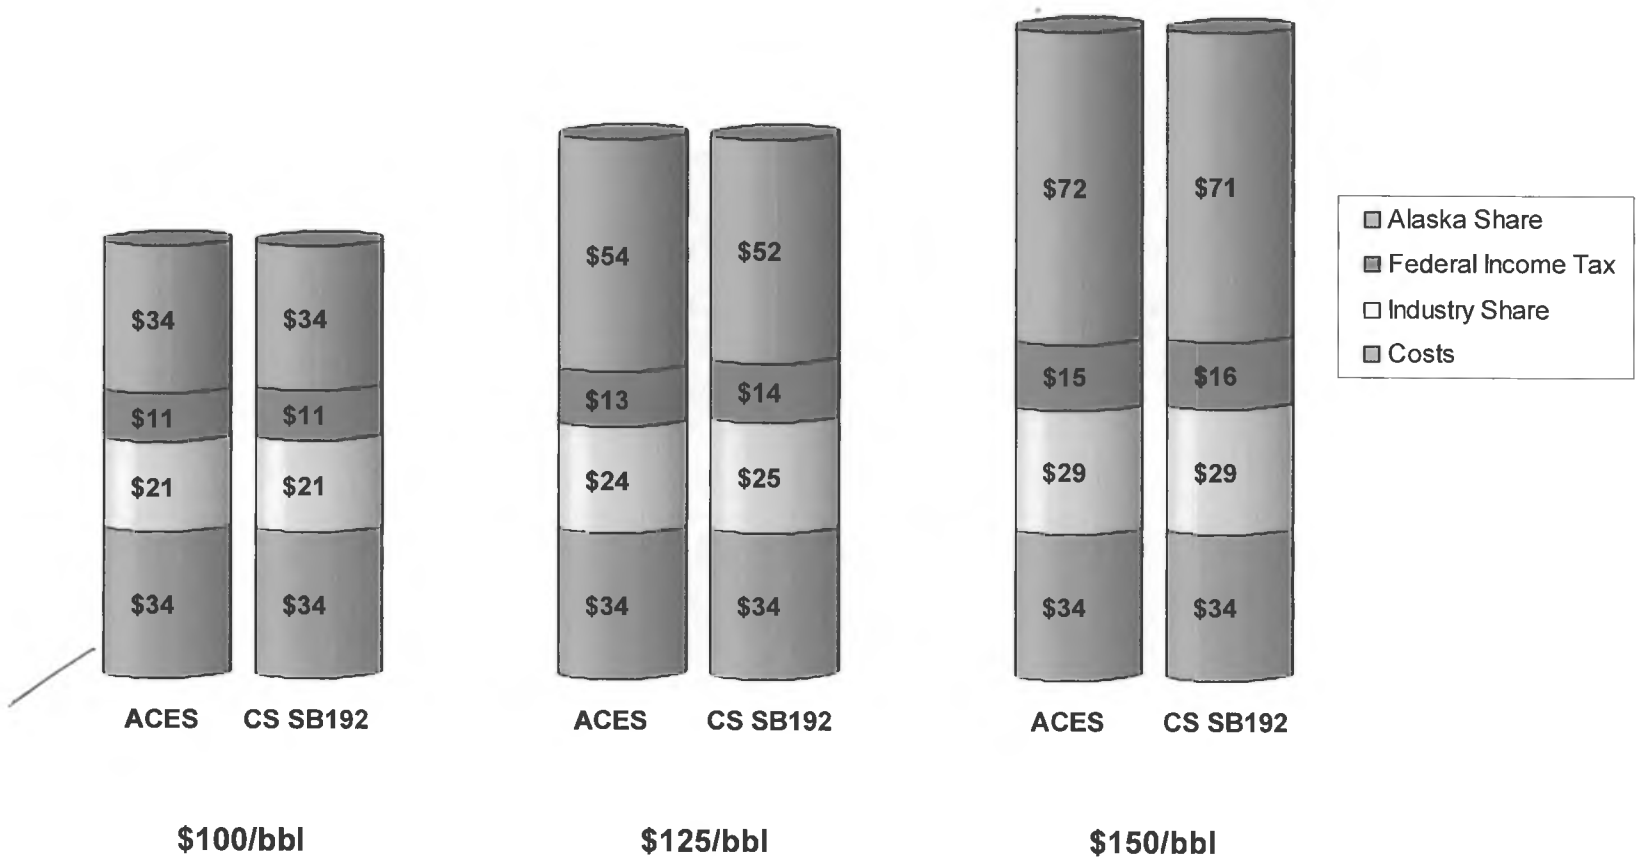
CS SB192 and Potential Amendments

Bob Heinrich, VP Finance
Scott Jepsen, VP External Affairs
ConocoPhillips Alaska

March 1, 2012

CS SB192 has Minimal Impact

ConocoPhillips Alaska



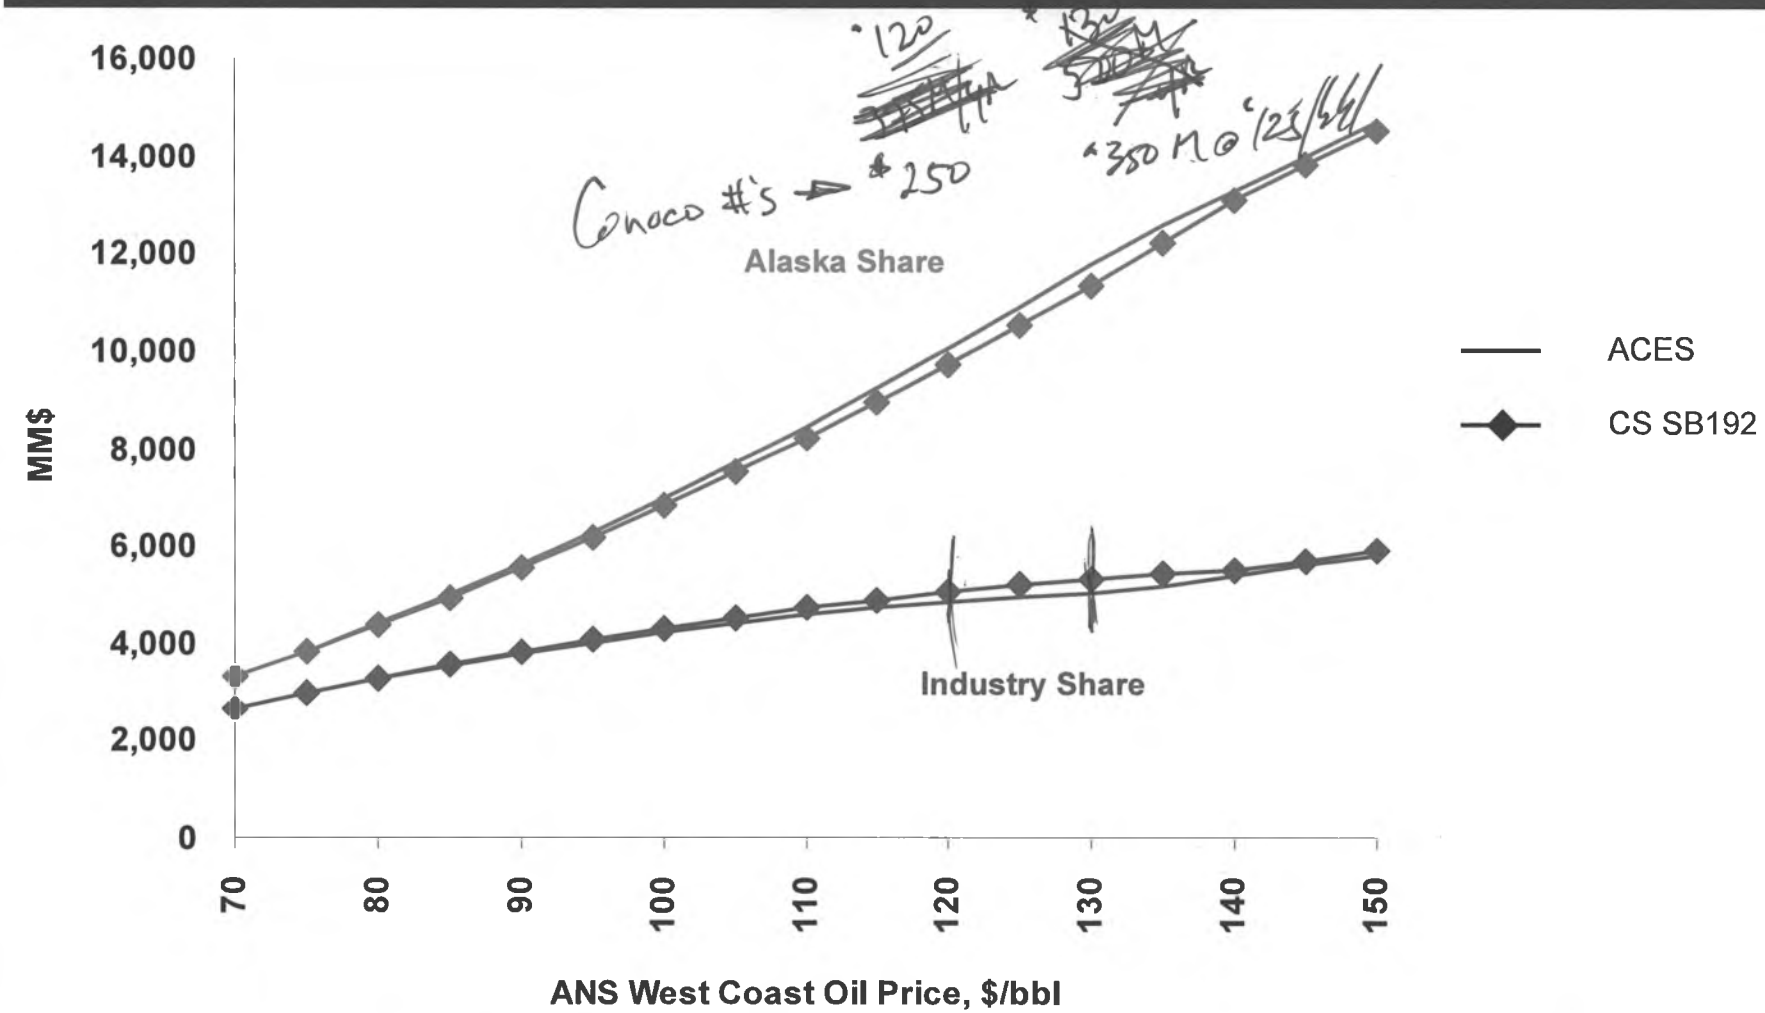
ANS West Coast Oil Price

Based on Fall 2011 RSB for FY2013
Assume 35% federal tax rate, 9.4% SIT rate

Alaska Share includes royalty, severance tax, income tax, and property tax

Alaska / Industry Share

ConocoPhillips Alaska



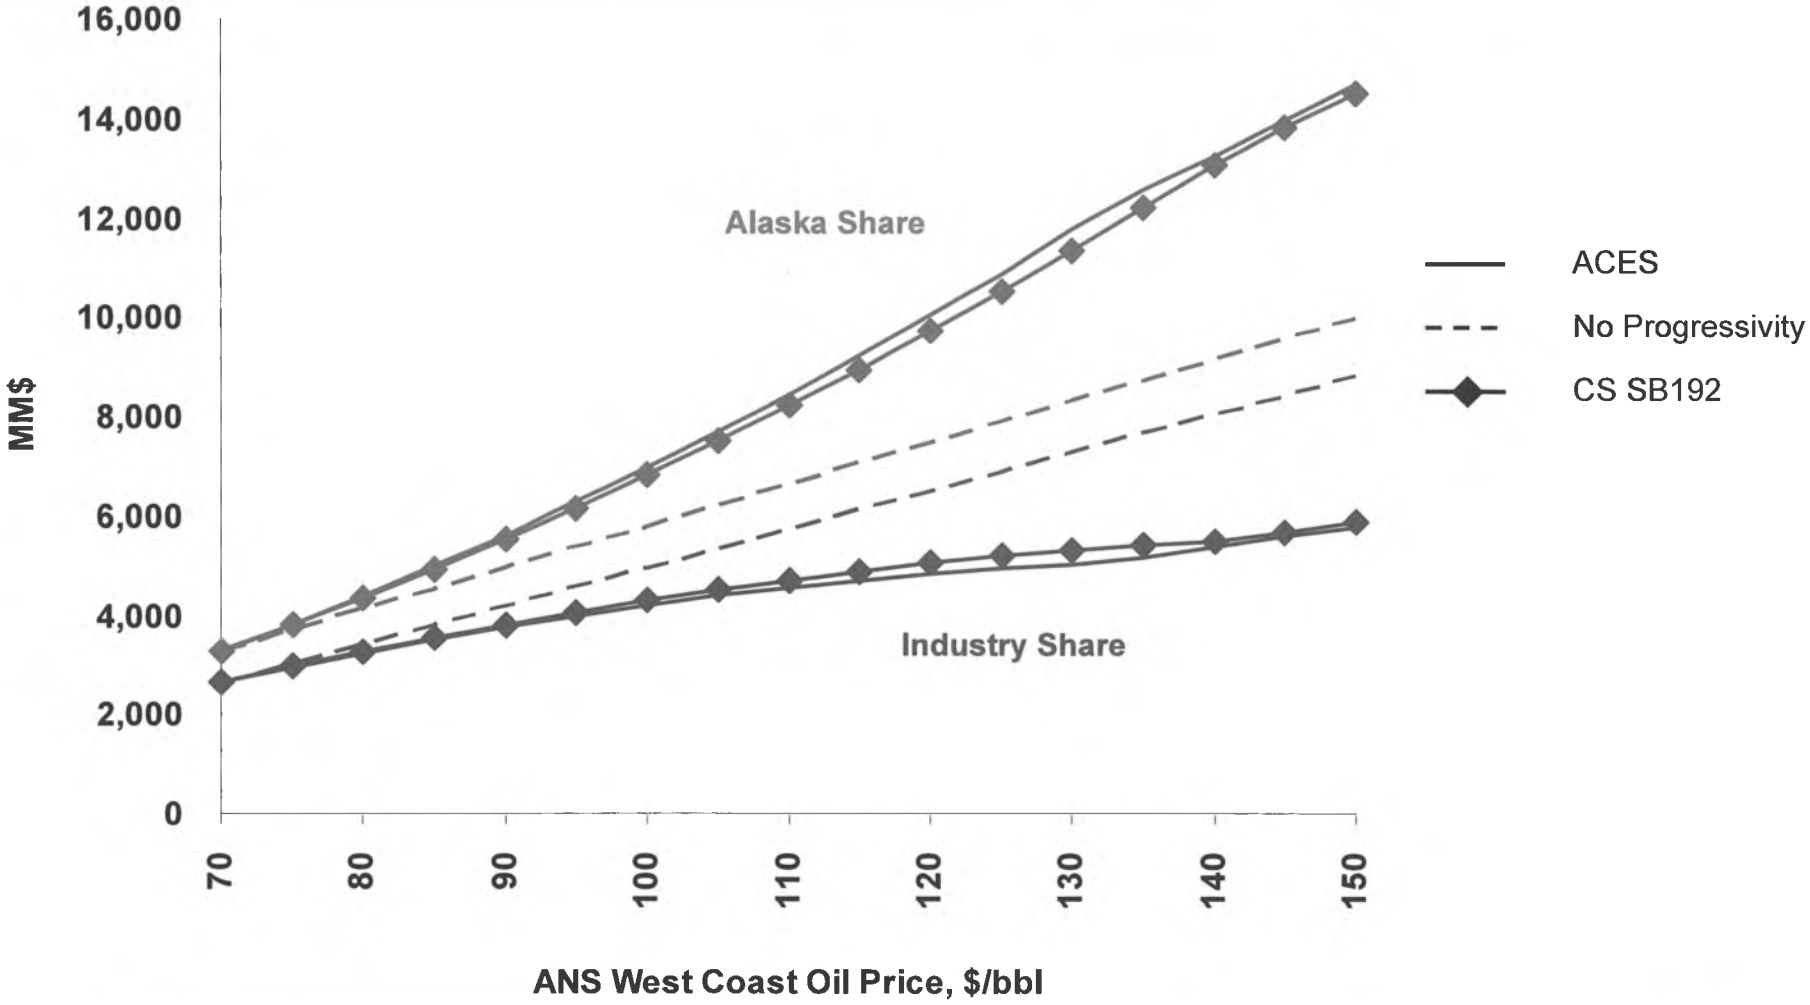
CS SB192 has minimal impact

Based on Fall 2011 RSB for FY2013
Assume 35% federal tax rate, 9.4% SIT rate

Alaska Share includes royalty, severance tax, income tax, and property tax

Alaska / Industry Share

ConocoPhillips Alaska



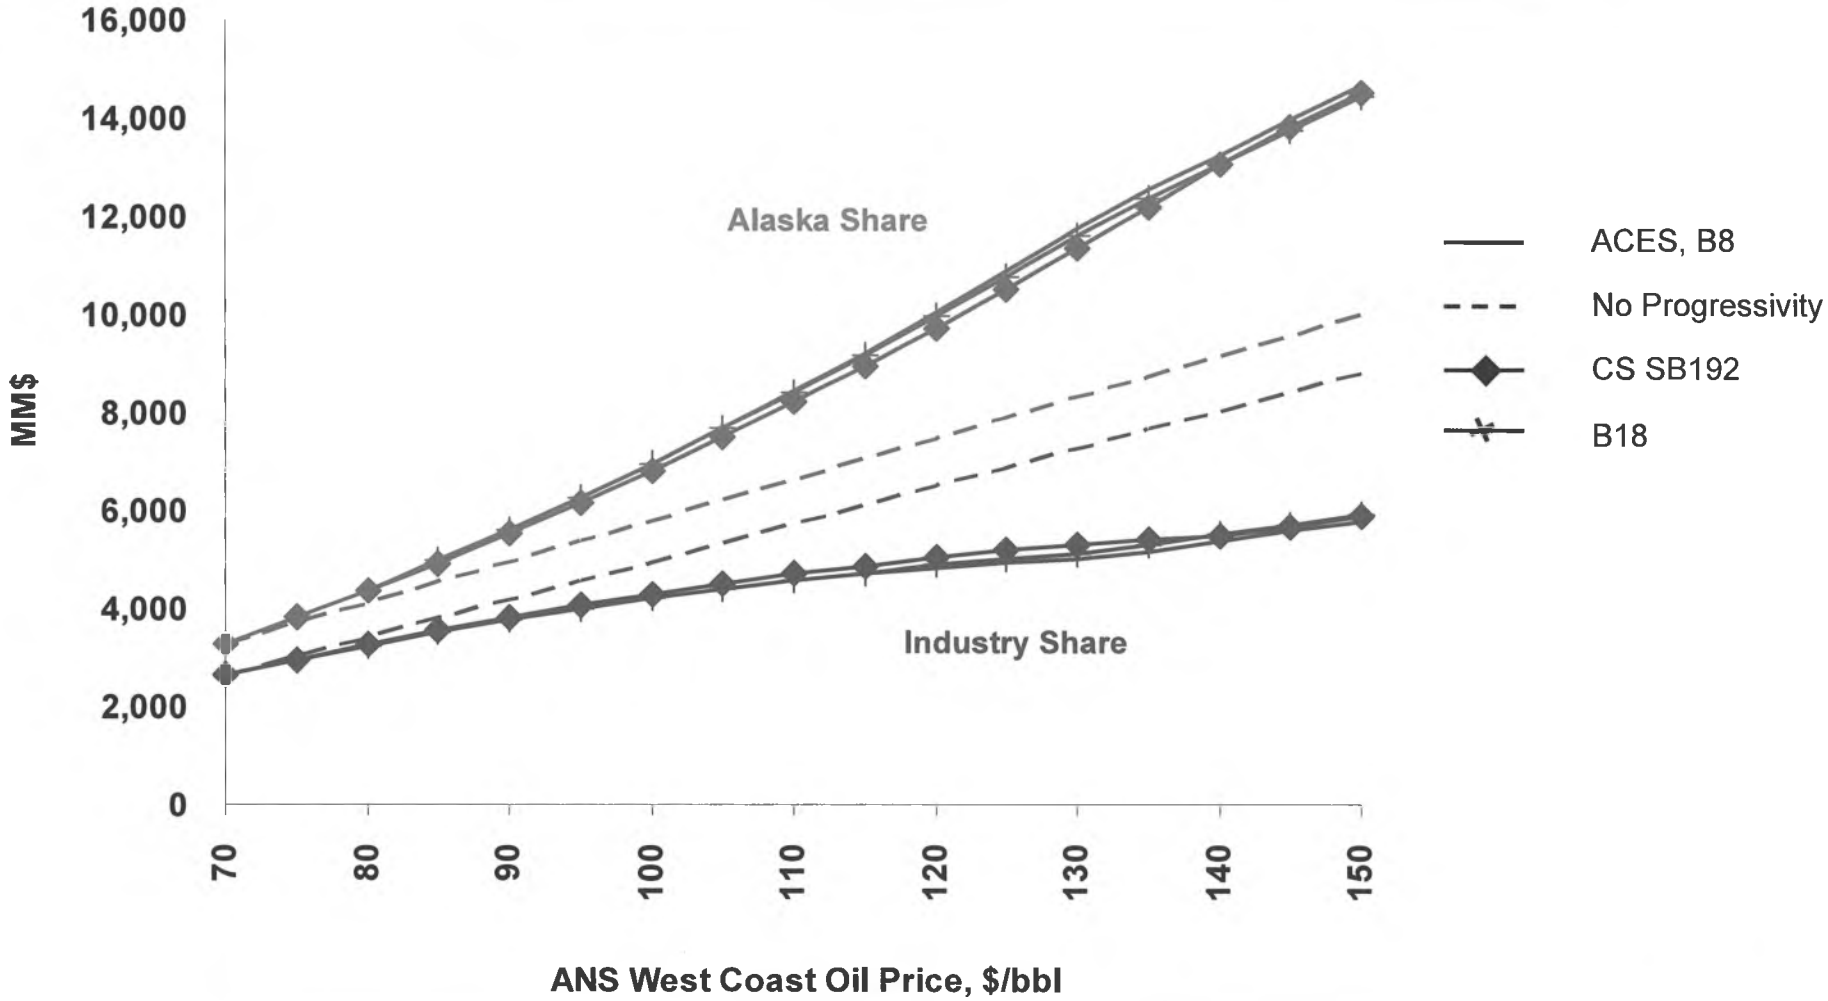
Both Alaska and industry share in the upside with no progressivity

Based on Fall 2011 RSB for FY2013
Assume 35% federal tax rate, 9.4% SIT rate

Alaska Share includes royalty, severance tax, income tax, and property tax

Alaska / Industry Share

ConocoPhillips Alaska



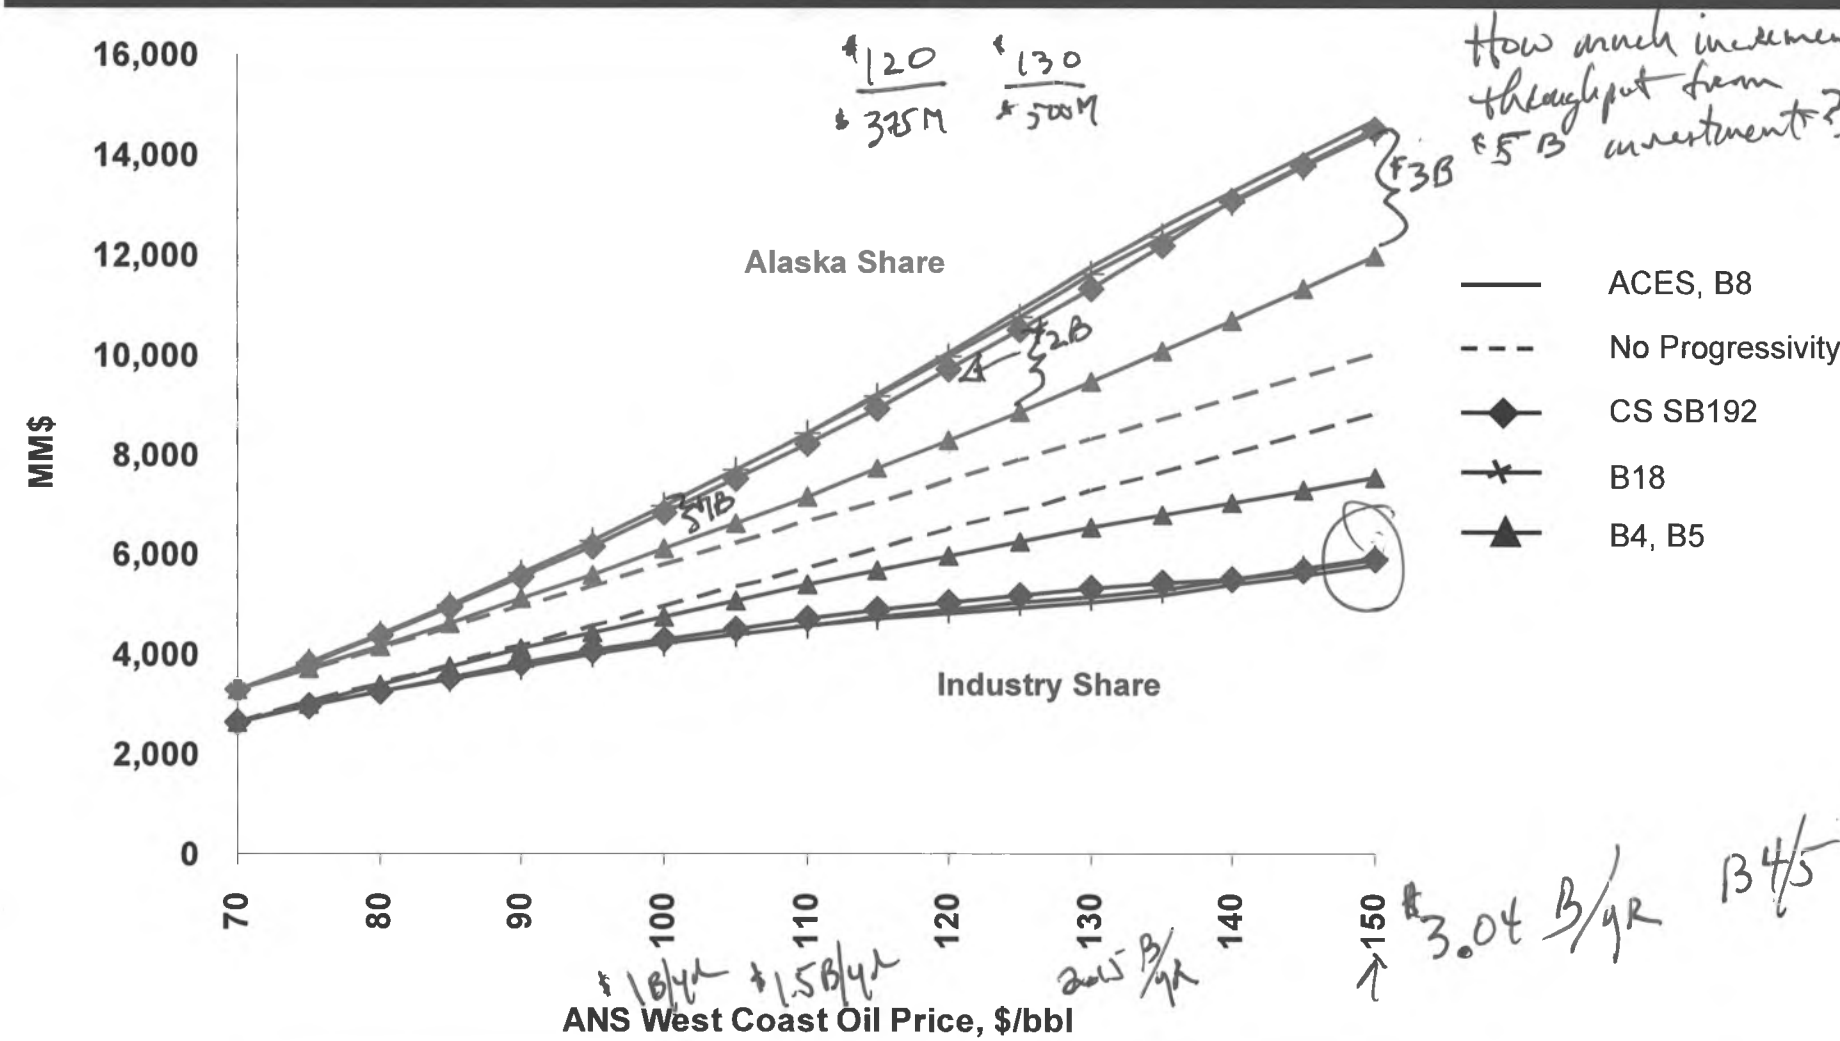
B8 and B18 amendments have negligible impact

Based on Fall 2011 RSB for FY2013
Assume 35% federal tax rate, 9.4% SIT rate

Alaska Share includes royalty, severance tax, income tax, and property tax

Alaska / Industry Share

ConocoPhillips
Alaska



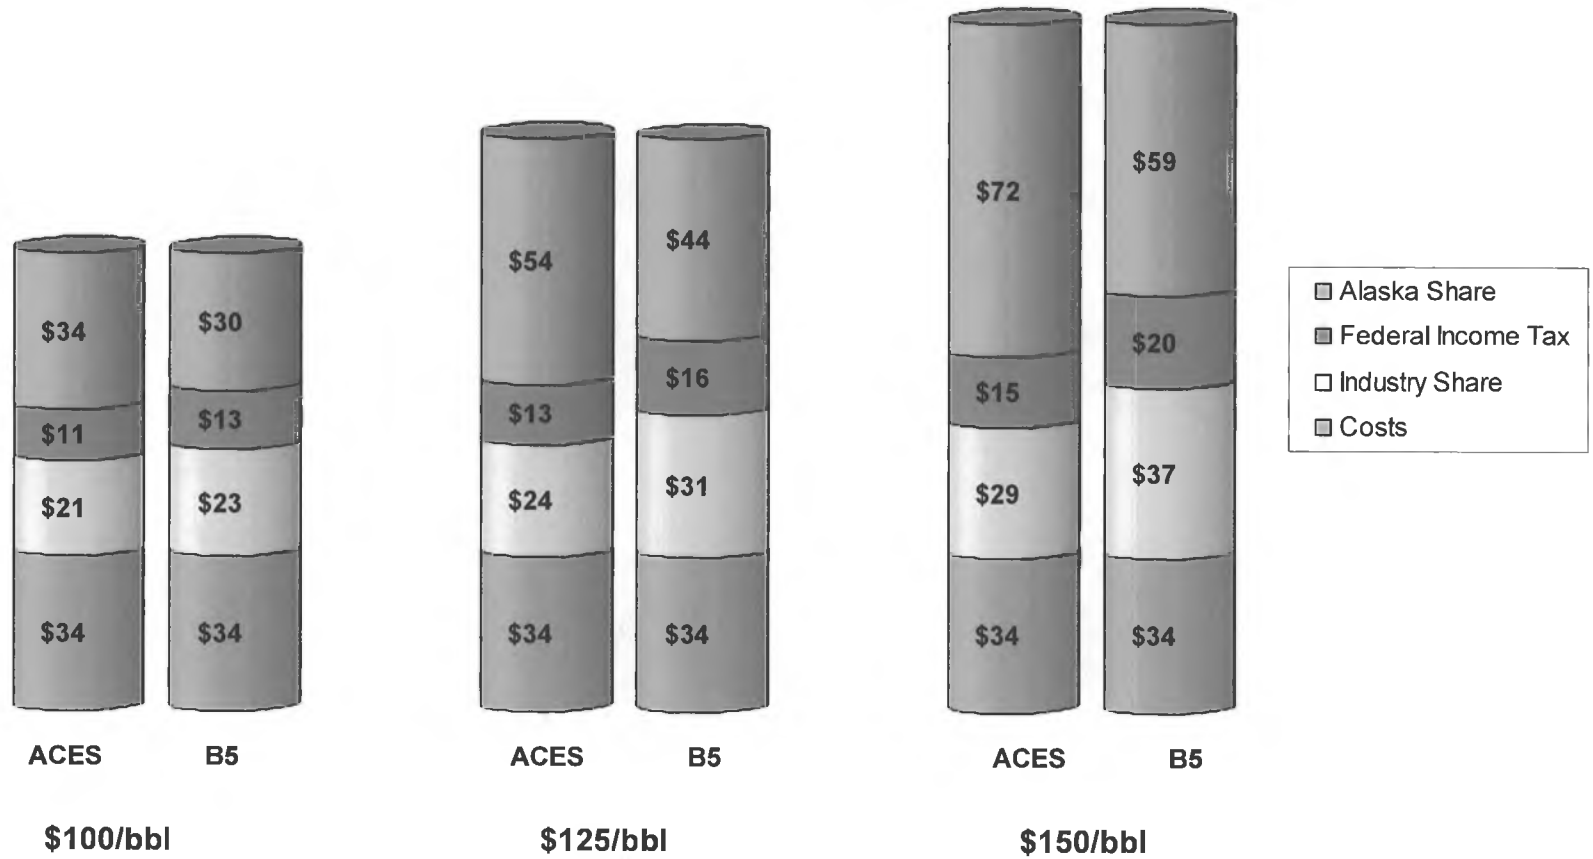
Bracketed progressivity makes a meaningful impact

Based on Fall 2011 RSB for FY2013
Assume 35% federal tax rate, 9.4% SIT rate

Alaska Share includes royalty, severance tax, income tax, and property tax

Bracketed Progressivity is Meaningful

ConocoPhillips Alaska



ANS West Coast Oil Price

Based on Fall 2011 RSB for FY2013
Assume 35% federal tax rate, 9.4% SIT rate

Alaska Share includes royalty, severance tax, income tax, and property tax

Summary

ConocoPhillips
Alaska

- Bracketed progressivity has the potential to have a positive, material impact on severance tax
- Inflation indexing progressivity trigger points makes sense
- Progressivity is the problem - the other proposed amendments do not fix the problem
- CS SB192 as currently proposed will not change investment climate

ExxonMobil Production

March 1, 2012

The Honorable Joe Paskvan
Co-Chairman, Senate Resources Committee
State Capitol Building, Room 115
Juneau, Alaska 99801-1182

Dear Senator Paskvan:

ExxonMobil continues to follow the progress of the tax reform debate with great interest. While some discussions in the Committee have been encouraging, we are concerned with the proposed Committee Substitute to Senate Bill 192 and the apparent lack of urgency in the Committee in making meaningful tax reform necessary to attract new investments. The proposed Committee Substitute, while a small step in the right direction, will not significantly improve Alaska's overall uncompetitive fiscal regime or attract the necessary investments to enable the state to reach its goal of increased oil production.

Oil and gas investors depend on economic upside potential in order to accept the inherent downside risks of long-term, capital-intensive investments. As experts have testified before your Committee and during other hearings throughout this deliberative process, with Alaska's Clear and Equitable Share (ACES) production tax, the State has one of the highest progressive tax structures in the world. Simply put, Alaska's total government take is too high to fully develop its vast resources.

Without meaningful tax reform Alaska should expect to continue at or likely below the Department of Revenue production forecasts.

It was also disappointing to review many of the amendments discussed in the Committee for consideration. While a few of the proposed amendments, like those offering needed brackets to the progressivity tax and incentives to new production, would have meaningful impacts on investment decisions, others were actually tax increases. We fail to understand how proposals to increase industry's tax burden would serve to improve Alaska's already uncompetitive fiscal regime.

ExxonMobil remains hopeful that the dialogue in your Committee and with the entire Legislature for needed meaningful tax reform will continue and will ultimately lead to the development of a competitive, stable fiscal regime to attract the unprecedented investments that Alaska's North Slope requires. It is ExxonMobil's firm belief that passage of meaningful changes to ACES this year, aligned with those proposed by the Governor's office, will support additional investments in Alaska that will lead to greater development and production.

Thank you again for the opportunity to provide input on the Committee Substitute to Senate Bill 192 and the need for meaningful tax reform.

Sincerely,

DDP:jpc

RECEIVED
FEB 29 2012

February 29, 2012

The Honorable Joe Paskvan
Co-Chairman, Senate Resources Committee
Alaska State Legislature
Alaska State Capitol, Room 115
Juneau, AK 99801-1182

Dear Senator Paskvan:

Thank you for your letter dated February 22, 2012. We are happy to clarify the statements that we made regarding the net income and payments to governmental authorities for ConocoPhillips Company and its wholly owned subsidiaries (including ConocoPhillips Alaska, Inc.) operating in Alaska ("CPA"), as well as our analysis of the data in the Alaska Department of Revenue Fall 2011 Revenue Source Book (RSB).

Let me first address CPA's tax and royalty payments in comparison to our reported net income. For the years 2007 through 2011, CPA earned total net income of $9.83 billion. During that same time period, we paid a total of approximately $21 billion in royalties and taxes (taxes include payments to local governments, the State of Alaska, and the federal government). For the year 2011, CPA earned $1.98 billion and paid a total of approximately $5 billion in taxes and royalties. Of this $5 billion, approximately $4 billion (taxes and royalties) was paid to the State of Alaska alone. All of the tax numbers come directly from the 10-K forms that CPA has filed with the Securities and Exchange Commission. The value of the royalty payments has been estimated using our actual royalty rate of 13.6%. These figures form the basis for our statement that in Alaska, we pay approximately twice as much in taxes and royalties as we earn.

Your letter also attempts to understand our comments in the context of the industry as a whole as portrayed by the RSB for FY2011. I believe that the following discussion will help in understanding why industry earnings as a whole track CPA's government payments to earnings ratio.

When we consider the tax burden in Alaska, we take into account all of the taxes we pay. The additional burdens that were excluded in your analysis do make a significant difference with respect to the industry's tax burden as well as the tax revenue for state and local

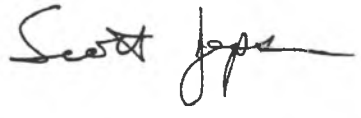
governments. Using the RSB, the industry paid $542 million in state income taxes and $476 million in property taxes (state share $110 million, local share $366 million). The total of these additional burdens is over $1 billion more in taxes to the industry than in your analysis.

There are two other areas that differ between our analysis and yours. First, we have used a federal tax rate of 35% which corresponds to our federal tax rate. Second, it appears that $850 million of tax credits were deducted from the calculated production tax to determine the production tax paid after credits. From the large producer perspective, $400MM applies to the producers' tax liability. The other $450 million is identified as "Credits for Potential Purchase" earned by those parties who do not generate sufficient production tax liability to utilize the credits. The production tax paying producers do not receive the benefit of the "Credits for Potential Purchase" unless the credits are purchased at some nominal discount, in which case the value realized by the purchaser is a small fraction of the tax credit itself. Including these adjustments, the production tax paying producers paid approximately $11 billion dollars in taxes and royalties with after tax cash flow of approximately $4.7 billion dollars. This results in a ratio of tax and royalty payments to earnings of about 2.3. Excluding federal tax payments, the ratio of state taxes and royalty to earnings is about 1.8.

As a sensitivity, we have looked at the case where ANS crude is priced at $120/bbl (versus $94.49/bbl in the RSB) with all other assumptions in the RSB remaining the same. The $120/bbl case demonstrates one of the key problems with ACES – as prices increase, industry sees very little of the uplift. At $120/bbl, our model estimates total government share and royalties is about 3 times industry's share, and state severance tax alone is about 1.5 times the industry total share. In absolute terms, with a price increase from $94.49/bbl to $120/bbl, we estimate industry's share increases about $700MM while the state's share (taxes and royalties) increases by approximately $4.5 billion.

I appreciate your desire to understand the basis for our statements as well as to understand our perspective regarding the reasons that we believe substantial changes are needed to ACES to attract more investment by the industry. I hope this response to your letter has helped in this regard as well as in understanding the basis for our comments regarding the ratio of taxes and royalties to profits. Please feel free to contact me if you have additional questions.

Respectfully,



J. Scott Jepsen

Effectiveness of Severance Tax Incentives in the U.S. Oil Industry

MITCH KUNCE mkunce@uwyo.edu
Department of Economics and Finance, University of Wyoming, Laramie, WY 82071-3985, USA

Abstract

This paper develops a dynamic empirical framework that can be used to test the effectiveness of state-level severance tax incentives in the U.S. oil industry. The framework embeds U.S. state-level panel data estimates into Pindyck's (1978) widely received theoretical model of exhaustible resource supply and can be applied to any of 20 states that produce significant quantities of oil. The model allows for interactions between taxes levied by different levels of government and for the first time addresses potential interstate differences in exploration costs, extraction costs, and reserve additions. In general, results show that severance tax incentives (in the form of tax rate reductions) substantially reduce state tax revenue collected, but yield moderate to little change in oil drilling and production activity. This outcome suggests that states should be wary of arguments asserting that large swings in oil field activity can be obtained from changes in severance tax rates.

Keywords: state taxation, nonrenewable resources

JEL Code: H71, Q32

1. Introduction

For roughly twenty years, major oil and gas producing states have granted severance tax exemptions, reductions, incentives, and credits to oil and gas producers for the purpose of stimulating exploration, field development, production, and job creation.[1] For example, to date 2000, Alaska, Kansas, and Louisiana have offered 13 such incentive programs, Texas has granted 12, Oklahoma 10, New Mexico 8, and Wyoming 8 (Interstate Oil and Gas Compact Commission, 2001). Incentive programs, generally, involve across the board cuts in nominal severance tax rates levied or discounts against existing severance tax liabilities for special situations faced by producers. The inherent tradeoff state governments must consider when offering incentives involves the potential loss of tax revenue for purported gains in exploration and production activity. A key question then arises: Are severance tax incentives effective in this regard? Surprisingly, very little empirical evidence exists regarding this question despite the heavy reliance on taxation of oil, gas, and/or coal production in many states to fund public goods.

This paper develops a dynamic empirical framework that can be used to test the effectiveness of state-level severance tax incentives in the U.S. oil industry. The framework embeds U.S. state-level panel data estimates into Pindyck's (1978) widely received theoretical model of exhaustible resource supply and can be applied to any of 20 states that produce significant

quantities of oil. The model allows for interactions between taxes levied by different levels of government and for the first time addresses potential interstate differences in exploration costs, extraction costs, and reserve additions. As shown, costs, reserve additions, and tax structures vary considerably across states. Thus, this adapted model is arguably superior to and more comprehensive than previous efforts to develop general econometric and/or simulation models of taxation and natural resource exploration and production. Specifically, Deacon et al. (1990) and Moroney (1997) focus only on one state (California and Texas, respectively), and estimate econometric equations that may not be entirely consistent with a dynamic profit-maximizing framework. Pesaran (1990) estimates an econometric model of offshore oil production in the UK that can be better justified theoretically, but does not consider the role of taxes and estimates of the shadow price of oil in the ground are not always positive. Favero (1992) adds taxes to Pesaran's analysis, but again, estimates of the shadow price of oil in the ground are sometimes negative, suggesting that the model overstates the impact of taxation on profit. The Pindyck based simulation studies conducted by Yücel (1989) and Deacon (1993) examine effects of various types of tax changes on exploration and production but do not consider interactions between tax bases claimed by different levels of government, as well as possible interstate differences in exploration costs, extraction costs, and reserve additions. Also, these studies are aimed mainly at assessing the generality of theoretical results obtained in more limited settings rather than analyzing possible outcomes of changes in state tax policies.

Use of the modeling framework developed here is illustrated by simulating effects of reductions in *existing* state severance tax rates. Thus, results presented have the advantage of showing potential effects of specific state tax policy changes. Examining optimal tax regimes is beyond the scope of this analysis. In general, results show that severance tax rate cuts substantially reduce state tax revenue collected, but yield moderate to little change in oil drilling and production activity. This outcome suggests that states should be wary of arguments asserting that large swings in oil field activity can be obtained from changes in severance tax rates.

The remainder of the paper is divided into four sections. Section 2 presents the theoretical model used in the study. Section 3 presents empirical estimates of the model's parameters. Key estimates are obtained using panel data from the 20 most important oil-producing states over the period 1970–2000. Section 4 presents simulation results showing how oil exploration, reserves and production in Wyoming vary in response to severance tax reductions. Although the model developed can be applied to any of 20 states that produce significant quantities of oil, Wyoming is singled out because the estimates developed are likely to be at least broadly representative of what would be obtained for other states. Moreover, focusing on Wyoming highlights the state's heavy reliance on energy production taxes to fund public services. Implications and conclusions of this analysis are drawn out in Section 5.

2. Conceptual Framework and Model

The analysis presented in this paper extends Pindyck's (1978) model of nonrenewable resource development to incorporate key aspects of federal, state and local taxes facing the U.S. oil industry. Because the theoretical model is familiar, discussion later in this

section is kept to a minimum. Perfectly competitive producers are assumed to maximize the discounted present value of future operating profits from the sale of resources. The firm's problem is to take known future output prices and taxes as given and then choose optimal time paths for exploration and production. This assumption parallels the basic tax competition models, reviewed by Wilson (1999), where governments commit to a tax regime and then perfectly competitive firms react treating the structure as exogenous.[2] Whereas the studies reviewed by Wilson model firms that are to some extent geographically mobile, firms extracting nonrenewable resources are tied to an immobile reserve base that represents the key component of their capital stock. In consequence, extractive firms view time, rather than space, as the most important dimension over which to substitute in response to changes in tax policy. Substitutions over time, of course, alter relative rates of exploration and production occurring at different locations. Yet, timing of activities is the most important aspect of the extractive firm's problem and information about location choice can be recovered as a by-product simply by comparing rates of development for particular reserves. A single firm is used to represent the industry, so the common pool problem and well spacing regulations are ignored (McDonald, 1994). For simplicity and because of data constraints discussed in the next section, exploration is defined to include resource development, although the two activities clearly are not the same (Adelman, 1990). The aim of exploration is to add to the reserve base, which in the model represents a form of immobile capital.

Institutional features of taxation facing oil producers are complex, however, incorporating these aspects into the model is not difficult conceptually and distinctly separates it from previous efforts mentioned in the introduction. Tax structures vary considerably among states and tax bases interact, particularly between the state and federal level. For example, among the eight states responsible for about 89% of 2000 U.S. oil production (Alaska, California, Kansas, Louisiana, New Mexico, Oklahoma, Texas, and Wyoming), all states except California levy severance taxes against the value of output. Severance taxes dominate other forms of local taxation in Alaska, Wyoming, and Louisiana. Most states do not levy property taxes on the value of reserves in the ground (Texas and California do). Most states treat royalty payments (computed as a percentage of gross value of production) for production on public land as deductible items in computing severance tax liabilities (Louisiana does not). Public land royalties are prominent in Alaska, New Mexico, and Wyoming due to the large shares of publicly owned land. Most states levy a corporate income tax that applies to oil operators (Wyoming and Texas do not). Also, states have granted innumerable exemptions and credits (which differ by state) against various tax liabilities for special situations that may be encountered by operators. Hence, effective rather than nominal rates are incorporated in the model developed below. Within states, counties apply their own mill levies to compute property taxes on above-ground and down-hole equipment at different rates. However, taxation of structures and equipment are usually less important than other sources of revenue and are not treated in the model below.

Regarding federal taxes, all incorporated producers file federal corporate income tax returns that allow deductions for various types of operating costs and for state and local tax payments. Independent producers (those without downstream refining or retail interests) are permitted to take a percentage depletion allowance, while major producers are allowed only cost depletion, which is significantly less generous. Both major and independent

incorporated producers can expense intangible drilling costs incurred on their federal corporate income tax returns. The fact that some smaller producers are not incorporated and may therefore face alternative state and federal tax treatment is not treated here.

The firm's maximization problem now becomes

$$\max_{q,w} \quad \Omega = \int_{\circ}^{\infty} [qp - C(q, R) - D(w) - \gamma R]e^{-rt}\, dt \tag{1}$$

subject to

$$\dot{R} = \dot{x} - q \tag{2}$$

$$\dot{x} = f(w, x) \tag{3}$$

$$q \geq 0, \quad w \geq 0, \quad R \geq 0, \quad x \geq 0 \tag{4}$$

where a dot over a variable denotes a time rate of change, q denotes the quantity of oil extracted measured in barrels, p denotes the exogenous market price per barrel net of all taxes, $C(q, R)$ denotes the total cost net of taxes of extracting the resource, which is assumed to depend on production (q) and reserve levels(R), $D(w)$ denotes total cost of exploration for additional reserves net of taxes, w denotes exploratory effort, γ denotes the net of all tax constant effective property tax rate on reserves, r denotes the discount rate which represents the risk-free real rate of long-term borrowing, x denotes cumulative reserve additions (discoveries), $f(w, x)$ denotes the production function for gross reserve additions ($\dot{x}$) which is assumed to depend on current exploratory effort (w) and cumulative discoveries (x), and $\dot{R}$ denotes reserve additions net of production (q).[3] In this formulation, the net-of-tax price per barrel is related to the wellhead (pre-tax) price (p^*) according to $p = \alpha_p p^*$, where α_p is a constant comprised of federal, state, and local effective tax rates such that $0 < \alpha_p < 1$. Correspondingly, $C(q, R) = \alpha_c C^*(q, R)$ and $D(w) = \alpha_D D^*(w)$, where α_c and α_D also are constants generated from effective tax rates and lie on the unit interval. A more complete discussion of the tax policy parameters follows below in Section 3.3.

The Hamiltonian for this problem is

$$H = qpe^{-rt} - C(q, R)e^{-rt} - D(w)e^{-rt} - \gamma Re^{-rt} + \lambda_1[f(w, x) - q] + \lambda_2[f(w, x)]. \tag{5}$$

Differentiating H with respect to R, q, x, and w yields the maximum principle conditions

$$\dot{\lambda}_1 = (C_R + \gamma)e^{-rt} \tag{6}$$

$$pe^{-rt} - C_q e^{-rt} - \lambda_1 = 0 \tag{7}$$

$$\dot{\lambda}_2 = -f_x(\lambda_1 + \lambda_2) \tag{8}$$

$$-D_w e^{-rt} + f_w(\lambda_1 + \lambda_2) = 0. \tag{9}$$

From equation (7), operators will produce if the discounted net-of-tax price exceeds discounted extraction costs. A severance tax decrease will increase the net-of-tax price which could affect the production decision. In equations (6)–(9), λ_1 is the discounted shadow price of the reserve state, λ_2 is the discounted shadow price of cumulative reserve additions, and letter subscripts represent partial derivatives. The shadow price of cumulative reserve additions, λ_2, is expected to be negative (and small relative to λ_1) for oil because current reserve

discoveries will increase the amount of exploration needed in the future. From equations (8) and (9), the term $(\lambda_1 + \lambda_2)$ equals the discounted value of the marginal cost of adding another unit of reserves by exploration $[D_w/f_w]e^{-rt}$. Because $0 < \alpha_D < 1$, this net marginal cost is lower than in the pretax case.

The evolution of q is obtained by differentiating equation (7) with respect to time and setting the result equal to equation (6) to eliminate $\dot{\lambda}_1$. This yields

$$\dot{q} = \frac{-r(p - C_q) + \dot{p} - C_{qR}\dot{R} - (C_R + \gamma)}{C_{qq}}. \tag{10}$$

The optimal time path of w, can be determined using equation (7) and equation (9) to solve for λ_2, differentiating with respect to time to obtain an expression for $\dot{\lambda}_2$, equating the result to equation (8) and rearranging terms:[4]

$$\dot{w} = \frac{D_w[(f_{wx}/f_w)\cdot f - f_x + r] + (C_R + \gamma)f_w}{[-D_w(f_{ww}/f_w)]} \tag{11}$$

Equation (11) shows that the trajectory of exploratory effort is determined by a tradeoff between the cost of finding new reserves and the extraction cost savings this new level of reserves yields. As specified in this model, a severance tax incentive (rate decrease) could increase incentives to explore and enhance reserves due to the subsequent increase in the net-of-tax price. This effect is discussed in more detail in Section 4. The numerator of equation (10) emphasizes the role reserves play in the optimal extraction path. If reserves rise, marginal extraction costs fall, thus increasing production. While general suppositions such as these can be drawn analytically, the complexity of the dynamic process just described may be best examined with simulation as developed below.

Boundary conditions can be established by first assuming that $D_w/f_w = 0$ when $w = 0$ (see Pindyck, 1978, pp. 846–847). In this situation, when production ceases at some terminal time T, exploration ceases at the same time because it is of no further value. Also, $\lambda_2(T) = 0$ as long as there are no terminal costs associated with cumulative discoveries. In consequence, from equation (9), $\lambda_1(T) = 0$ implies that operating profit on the last unit of reserves extracted is zero, $p = C_q$. An alternative terminal state centers on the case where $D_w/f_w = \Phi > 0$, when $w = 0$. In this situation, production will continue after exploratory effort ceases. Let $T_1 < T$ denote the time when $w = 0$. If exploratory effort is zero, $f_x = 0$, hence $\lambda_2(T_1) = 0$ and $\dot{\lambda}_2(T_1) = 0$. From (7) and (9), $p - C_q = \lambda_1(T_1)e^{rt} = \Phi = D_w/f_w$ which indicates that exploration will stop just as $p - C_q$ approaches marginal discovery cost, Φ. These two alternative terminal conditions are discussed in the next section as well as in connection with the simulations presented in Section 4.

3. Estimation

As shown in equations (10) and (11), the evolutions of w and q are nonlinear functions of both the levels of these variables and the previously defined tax parameters. Estimating these equations directly poses certain econometric issues (see Pesaran, 1990) and it is unclear how information from the transversality conditions would be incorporated. In consequence, rather than attempt to obtain econometric estimates of these two equations directly, equations

for exploration costs (D^*), production of reserve additions (f), and extraction costs (C^*) are estimated and then substituted into the model along with estimates of the tax policy parameters α_p, α_c, α_D, and γ (see Yücel, 1989; Deacon, 1993 for similar treatments). Effects of severance tax changes then are obtained by simulation. State-specific estimates of equations for D^* and f are treated together in Section 3.1 because they are used to compute the marginal cost of reserve additions (D^*_w/f_w) which is a crucial function of the model described above. The equation for C^* is treated in Section 3.2 and the tax parameters are derived in Section 3.3. Key interstate differences regarding all estimates are highlighted throughout the discussion below.

3.1. Marginal Cost of Reserve Additions

The before-tax marginal cost of reserve additions (D^*_w/f_w) is computed from estimates of equations for drilling costs and for the production of reserve additions. Drilling costs are modeled in equation (12) as proportional to drilling effort.

$$D^*(w) = \phi w e^u \tag{12}$$

This approach ensures that the objective function (see equation (1)) represents a perfectly competitive firm ($D_{ww} = 0$). In equation (12), ϕ is the parameter to be estimated, and the disturbance term e^u is lognormally distributed with mean of unity and variance σ_u^2. Data by state and over time on labor, capital, and other primary inputs to drilling are unavailable, so the annual number of wells drilled in a state is used as a measure of drilling effort (w). Data on footage drilled also could be used as a measure of w (see Deacon, 1993). However, in the data set applied (see below) the number of wells drilled is positively correlated with total footage drilled (Pearson correlation = .98). Also, total drilling cost is approximately proportional to both footage and the number of wells, so to some extent the two variables measure the same thing. As discussed in Section 2, cumulative reserve discovery (x) appears as an argument in the production function for new reserves (see equation (13) below). A proxy for x can be constructed from available data (American Petroleum Institute, 1971) on the total number of wells drilled by state since 1859 (when the first oil well was drilled in Pennsylvania), whereas corresponding data on total footage drilled since that date are not available. Thus, use of number of wells as a measure of drilling effort simplifies the simulations presented in Section 4 and eliminates the need for arbitrary assumptions about historical average depth per well.

The production function for reserve additions is specified as

$$f(w, x) = A w^{\rho} e^{-\beta x} e^{v} \tag{13}$$

where A, ρ, and β are parameters to be estimated and the multiplicative disturbance e^v is assumed lognormally distributed with mean of unity and variance σ_v^2. The functional form selected for f is similar to the equation describing the discovery process proposed by Uhler (1976) and later adopted and estimated by Pindyck (1978) and Pesaran (1990). The idea behind this equation is that the marginal product of exploration declines as reserve discoveries cumulate. As previously discussed, data on cumulative reserve discoveries of oil are unavailable, so the cumulative number of wells drilled by state was used as a proxy.

As in the drilling cost function, the annual number of wells drilled is used as a measure of w.

Drilling cost and reserve production functions are estimated using annual data from 20 U.S. states for which complete information on wells drilled, drilling costs, reserve additions, and cumulative drilling could be assembled for the period 1970–2000.[5] Regarding costs, operators report the total cost (both tangible and intangible) of each well completed (including dry holes) via the Joint Association Survey on Drilling Costs.[6] Oil reserve additions are comprised of extensions, new field discoveries and new reservoir discoveries in old fields as defined by the U.S. Department of Energy, Energy Information Administration (DOE/EIA). The 20 states included in the data set accounted for 98.5% of the total U.S. oil production over 1970–2000.

Data sources, definitions, and sample means of variables used in the analysis are presented in Table 1. All nominal costs are converted to year 2000 dollars using the GDP deflator. Equations (12) and (13) were estimated in natural logarithms. An instrument for the natural logarithm of *WELLS* was used in equation (13) because w is an endogenous variable in the model presented in Section 2 and a Durbin-Wu-Hausman test (see Davidson and MacKinnon, 1993, pp. 389–393) rejected the exogeneity of w at the 5% level. An instrument for w was obtained by predicting the natural logarithm of the number of wells drilled from the one-way fixed-effects regression reported in Table 2. Time-specific effects tested insignificant at conventional levels. *PRICE* and *CWELLS* were included as explanatory variables because they are exogenous variables in the model. *PRICE2*, *CWELLS2*, and *PRICE*CWELLS* were included to account for non-linearities expected in light of relationships in the model. All estimated coefficients are significantly different from zero at conventional levels. The marginal effect of *WELLS* with respect to *PRICE* increases at a decreasing rate. The Pearson correlation between the actual values of *LN(WELLS)* and the corresponding predicted values, *LN(PREDWELLS)*, is 0.96.

Estimates of the drilling cost equation (12) are obtained by regressing the natural log of drilling costs minus the natural log of wells on dummy variables for states and years. This two-way fixed effects approach is a simple way to control for heterogeneity across states and over time. Examples of state-specific effects include geologic conditions, geographic remoteness of on-shore oil and gas resources, and whether drilling occurs in off-shore coastal waters (note that most states in the data set are landlocked). Time varying factors common to all states may include technological advancement and macroeconomic cycles. For this equation, each state-specific effect for a given year, conveniently, becomes the state-specific estimate of ϕ.

Estimates of equation (13) are obtained in a one-way fixed effects framework that yields common estimates of the slope coefficients across states and corrects for first-order serial correlation.[7] The one-way fixed effects estimation with correction for serial correlation is used for four interrelated reasons. First, this approach is a simple way to control for, yet avoid enumerating, unique aspects of states that affect reserve additions, but do not change over time. Second, time-specific effects are not jointly significant at conventional levels, making estimation in a two-way fixed effects framework unnecessary. Third, the random-effects specification, in which state-specific effects are treated as error components, is rejected by a Hausman (1978) test at the 5% level of significance. Moreover, conditional estimates of

the effects on reserve additions obtained from fixed-effects are thought to be of greater interest than corresponding unconditional estimates obtained using random effects. Fourth, the null hypothesis of no serial correlation is rejected at the 5% level, hence, the equation was re-estimated with correction for first-order serial correlation.

Table 3 reports estimates of the drilling cost equation for 8 major producing states. The 2000 state-specific estimates of ϕ have been corrected for the fact that the equation was estimated in logarithmic form (see Greene, 1997, p. 279). As shown, R^2 is 0.93 with state- and time-specific effects jointly significant under the appropriate F-test. State-specific estimates of ϕ test different from each other, except for Texas and Oklahoma, at the 5% level. Results suggest that total drilling costs increase with w and that constant marginal drilling

costs (D^*_{wi}) differ substantially across the 8 states shown. Estimates of the reserve addition equation are shown in Tables 4 and 5. The coefficient of *LN(PREDWELLS)* is 0.56 and this estimate is significantly different from one and zero at conventional levels. The value of R^2 is 0.63 and the state-specific effects are jointly significant under the appropriate F-test. Also, the negative coefficient of *CWELLS*, though insignificant at conventional levels, suggests that reserve additions decline with the passage of time as new reserves become more difficult to identify. Table 5 shows the corrected state-specific intercept terms (A) for 8 major producing states. Results suggest that the marginal product of drilling (f_w) decreases with wells drilled and this marginal product would vary between states even if the number of wells drilled were the same in each.

Estimates of the two equations combined suggest that marginal cost of reserve additions (D^*_{wi}/f_w) increases with drilling activity. As w increases, the marginal cost of drilling is constant, but the marginal product of drilling in finding new reserves (f_w) falls. Table 6 shows how pre-tax values of D^*_{wi}, f_w, and D^*_{wi}/f_w differ by state for 8 of the major producing states, assuming that the 2000 level of wells are drilled in each. Estimates of drilling cost per well (D^*_{wi}) range from $132,907 in Kansas, where wells tend to be shallow, to $3,881,600 in Alaska, where the drilling experience is very different as compared to the lower 48 states. Marginal reserve additions from drilling (f_w) range from 11,051 barrels per well

in Kansas to 177,067 barrels per well in Alaska. Thus, while drilling a well in Alaska is markedly more expensive than in Kansas, Alaska experiences a greater payoff from these more costly exploration and development efforts. In fact, estimates of the marginal cost of reserve additions, D^*_w/f_w, reflect somewhat less variation across states than do estimates of either D^*_w or f_w, ranging from a low of \$11.24 per barrel in Louisiana to a high of \$21.92 in Alaska. Although relatively little variation in D^*_w/f_w would be expected when operators are familiar with costs and payoffs from drilling in alternative locations, values of the marginal cost of reserve additions are not expected to be equal across states. For example, aside from random factors introduced in estimation, variation in D^*_w/f_w between states could be due to differences in oil quality, transportation costs, as well as other factors that can cause wellhead prices of oil to differ across states

3.2. *Extraction Costs*

Direct operating (lifting) cost for oil by region at depths of 2,000, 4,000, 8,000, and 12,000 feet are available from annual cost index studies published by the DOE/EIA for the period

1970–2000. However, these data are of limited value for two reasons. First, cost estimates are not always disaggregated to the state level and cost estimates for other states may not be representative of all production. Second, through the mid-1980s, price controls on oil and/or gas distorted production incentives, making historical extraction costs difficult to compare with extraction costs in more recent years. As a compromise, following Deacon (1993), values of extraction cost parameters are calibrated for the following Cobb-Douglas function,

$$C(q, R) = \kappa q^{\varepsilon} R^{1-\varepsilon}, \tag{14}$$

where $\varepsilon = 1/\mu$, μ is the production share of non-reserve inputs, and κ is a constant that drives the production cost modeled to an average level of *lifting costs* representative of the 2000 DOA/EIA surveyed estimates described above. State-specific estimates for μ are established from the data on operating cost, drilling cost, production, reserve additions, and reserve levels described above (see Deacon, 1993 for specific calibration methods). Table 7

Table 7. Non-reserve production input share μ, and pre-tax marginal extraction cost for major producing states.

shows the pre-tax marginal extraction costs (C_q^*) and the non-reserve input shares (μ) for 7 major producing states. The DOE/EIA does not estimate lifting costs for Alaska. As shown, real marginal extraction costs range from a low of \$4.99 per barrel in Kansas to a high of \$9.11 per barrel in Louisiana. The Cobb-Douglas form for extraction costs insures that these costs will rise without limit as reserves approach zero. This condition implies that a positive level of reserves will remain at any terminal time, denoted T_1. Likewise, the functional form invokes a strictly positive level of production given any positive level of reserves. Thus, simulations reported in Section 4 are based on the second of the two alternative boundary conditions discussed in Section 2. This condition implies that production continues after incentives for further exploration vanish and that the terminal date for maximizing discounted operating profits must be set arbitrarily. This fixed program period could be interpreted as the producer's relevant planning horizon.

3.3. Tax Policy Parameters

For most states in most years, γ and $\alpha_j (j = p, C, D)$ can be specified by noting whether reserves are subject to a property tax (see text equation (1)) and then evaluating the following equations:

$$\gamma = \{(1 - \tau_{us})(1 - \tau_s)\tau_R\} \tag{15}$$

$$\alpha_p = \{(1 - \tau_{us})(1 - \tau_s)(1 - \tau_r)(1 - \tau_p) + \tau_{us}(1 - \tau_r)\delta\} \tag{16}$$

$$\alpha_C = \{(1 - \tau_{us})(1 - \tau_s)\} \tag{17}$$

$$\alpha_D = \{(1 - \tau_{us})(1 - \tau_s)\eta\} \tag{18}$$

The derivation of equations (15)–(18) can be found in Appendix A. In (15)–(18), τ_{us} denotes the federal corporate income tax rate, τ_s denotes the state corporate income tax rate, τ_R denotes the property tax rate on reserves weighted by the per unit assessed value, τ_r denotes the royalty rate on production from public (state and federal) land, τ_p denotes the production (severance) tax rate, δ denotes the federal percentage depletion allowance weighted by the percentage of production attributable to eligible producers (nonintegrated independents), and η denotes the expensed portion of current and capitalized drilling costs attributable to current period revenues. The parameter η is made up of two components: (1) the percentage of current period drilling costs expensed and (2) the estimated present value of cost depletion deductions for the capitalized portion of current and past drilling expenditures. Producers are allowed to expense costs associated with drilling dry holes along with certain intangible costs (e.g., labor and fuel) for completed wells as they are incurred. All direct (tangible) expenditures for completed wells must be capitalized then depleted over the life of the producing well.

This formulation captures several aspects of the U.S. tax structure as it applies to the oil industry. (1) Federal royalty payments are deductible in computing state production tax liabilities. (2) Federal royalty payments, state production taxes, state property taxes on reserves, extraction costs, and certain drilling costs (described above) are deductible in computing both state and federal corporate income tax liabilities. (3) State corporate income taxes are deductible against federal corporate income tax liabilities. As noted in

Section 2, state tax treatment of the oil industry is not uniform and there are a number of situations in which these equations would have to be modified. Notice that this treatment of taxes in the model highlights the interaction between tax bases and is more detailed than the corresponding treatment given by Moroney (1997) and Deacon et al. (1990). Also, the entire tax structure is incorporated into the model, rather than simply analyzing one tax at a time as in Deacon (1993).

All tax parameters in equations (15)–(18) are effective rather than nominal rates. States grant numerous credits and exemptions against taxes levied, so nominal rates generally overstate amounts actually paid. State and local data required for these effective rate calculations are neither available from a central source nor compiled in a common format, so they were obtained directly from tax officials in each state. Royalty rates are computed as the sum of state and federal royalty payments divided by the gross value of production. Production tax rates are computed as total production tax collections divided by the gross value of production net of public land royalties. At the federal level, data from Statistics of Income (U.S. Department of Treasury, 1999–2000) for the oil and gas sector show that federal corporate taxes paid averaged about 11% of *net operating* income in 2000. The ratio of the federal effective to marginal rate was also applied to each state's top marginal corporate income tax rate to obtain an effective estimate. The current nominal percentage depletion rate is 15% and it applies to each state's percentage of non-integrated producers. Also, the expensed portion of current period drilling costs is approximately 42% for the industry and the present value of depletion deductions for capitalized drilling cost can be approximated by $(q/R)/(r + (q/R))$, assuming that the ratio of production to reserves is constant (see U.S. Department of Commerce, Bureau of the Census, 2000; Deacon, 1993). The ratio of production to reserves (q/R) varies across states but the industry expense share (42%) applies to all states.

4. Simulation Results

The model presented in Section 2 can be simulated for any of the 20 oil-producing states to obtain responses of exploration and production to reductions in severance taxes. The discussion below focuses mainly on severance tax rate reductions in just one state, Wyoming, for four reasons. First, this approach substantially reduces the amount of institutional detail that must be presented. Second, despite the large interstate differences in costs, reserve additions, and tax structures shown above, changes in severance taxes turn out to have quite similar comparative effects in each of the major oil producing states. Therefore, estimates for Wyoming are likely to be broadly representative of what would be obtained for other states. Third, simulation results reported are based on the assumption that severance tax reductions in one state do not affect the wellhead price of oil seen by operators in other states. This assumption is warranted in view of the fact that oil prices are determined in a world market. Also, as shown below, tax rate cuts considered appear to lead to comparatively small changes in output, so cross border effects are unlikely to be important in any case. Finally, taxation of oil extraction is a long-standing, contentious public policy issue in Wyoming partly because of heavy reliance on energy production taxes to fund public services.

Simulations for Wyoming were performed using the estimates of equations (12) and (13), the calibrated production cost parameters ($\varepsilon = 2.93$, $\kappa = 150$) of equation (14), and the tax parameters ($\alpha_p = 0.72$, $\alpha_c = 0.89$, $\alpha_D = 0.75$, $\gamma = 0$ as derived in Appendix A. As shown, severance tax changes will affect the price tax parameter, α_p. The discount rate, r, was set at 4% to reflect the risk-free real rate of long-term borrowing and the future price path was fixed at $25.00 per barrel each year reflecting the real sample mean for all 20 states. Other price trajectories (rising or falling) were simulated, but the alternative paths have little or no effect on the comparative results presented below. The initial value of reserves and cumulative wells drilled are fixed to year-end 2000 levels at 561 million barrels and 39,993 wells, respectively. To obtain numerical solutions for the time paths of drilling, production, and reserves, difference equation approximations are derived for the time rates of change in production and exploratory effort (equations (10) and (11) and for the state variable evolution equations (2) and (3)). For example, the evolution of reserves, equation (2), is approximated by the difference, $R_{t+1} - R_t = f_t - q_t$. The model is solved recursively by iterating over the initial values of the control variables, $q$and w, until transversality conditions are satisfied. Under these base case conditions, exploratory effort approaches zero after approximately 40 years, thus the terminal time (T_1) is set to 40 periods. The Solver algorithm in Microsoft Excel was used to generate numerical solutions.

Before the simulation results are discussed, a historical analysis of Wyoming's oil experience is warranted. Figure 1 depicts the actual time paths of real price, wells drilled, production, and reserves for Wyoming from 1970–2000. In this figure, the vertical axis shows wellhead price (dotted line) in year 2000 dollars × 10, wells drilled (dashed line) in

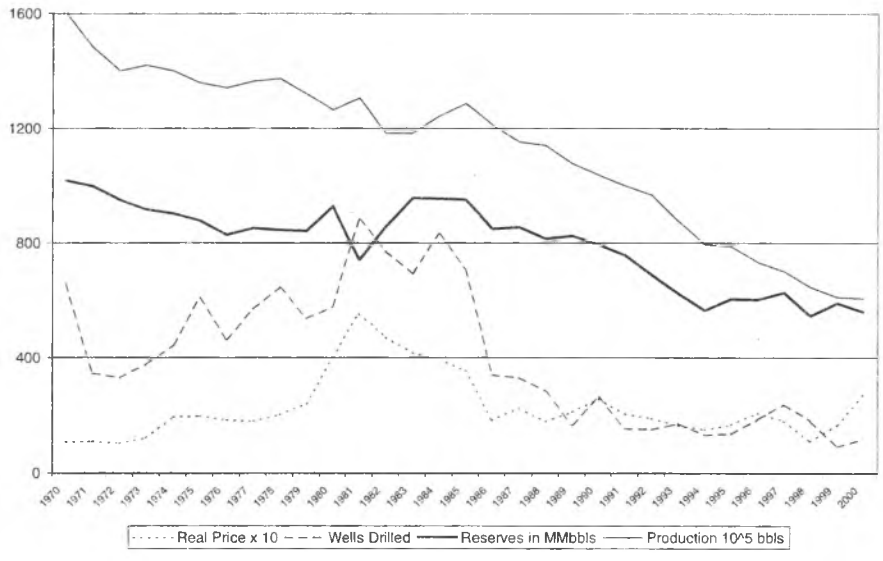

Figure 1. Wyoming oil 1970–2000.

total wells, production (solid line) in bbls $\times 10^5$, and reserves (bold line) in millions of barrels (MMbbls). In reviewing these data, several observations are noteworthy. Historical drilling appears sensitive to price. Oil wells drilled increased markedly during the high price period of the early 1980s. Extraction activity, however, appears to map the declining proved reserve level in the state. In fact, oil production continued to decline during the late 1970s and early 1980s even though real prices increased roughly 3 fold. As shown, the increased drilling effort of the early to mid 1980s failed to replenish the depleting oil reserves in the state.

As depicted in Figure 1, the low real prices for oil in the 1990's provided the oil industry incentive to lobby state legislatures for tax breaks intended to stimulate exploration and production. In 1999, both Wyoming and Oklahoma enacted oil producer recovery acts which lowered state level nominal severance taxes by approximately 25–35% on all oil production, provided that oil prices remain below a certain level.[8] Using this scenario as a back-drop, the comparative simulation below shows the results of a once-and-for-all reduction in Wyoming's effective severance tax on oil production by 2 percentage-points. Results presented have the advantage of showing how exploration and production might be expected to change over time in response to an *actual* constant policy change.

The solid lines in Figures 2–4 show the evolution of drilling, reserves, and production under the base case assumptions outlined above. Wells drilled fall steadily over time from

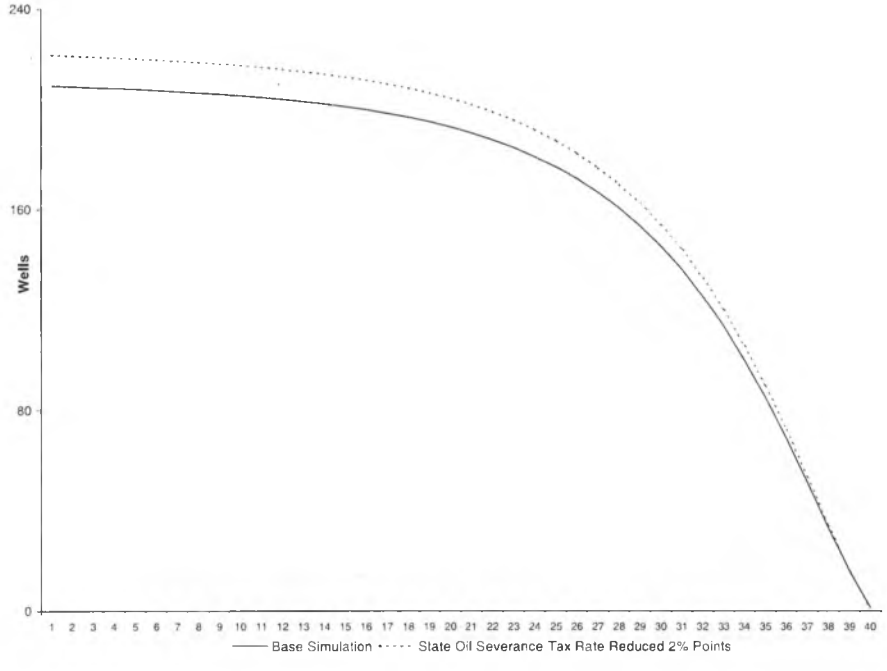

Figure 2. Wyoming oil (drilling).

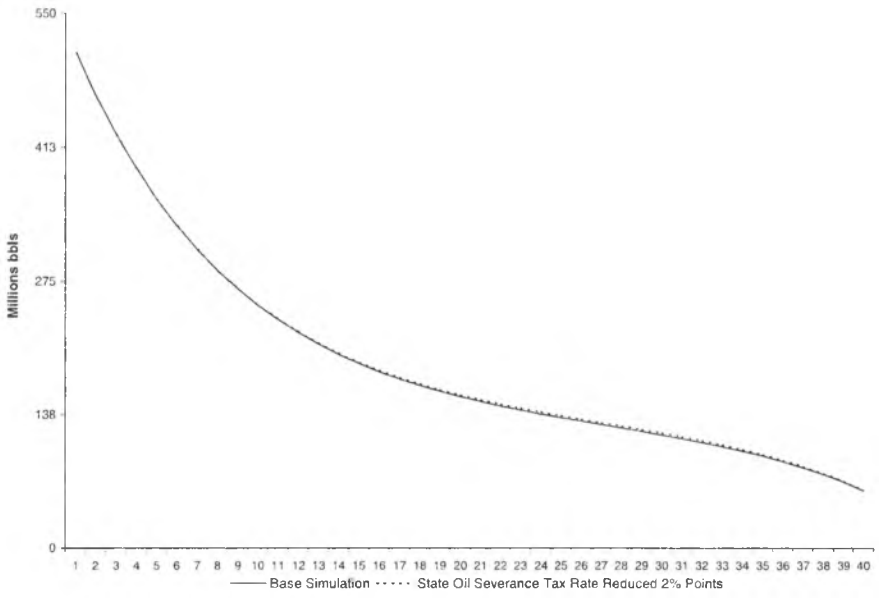

Figure 3. Wyoming oil (reserves).

209 in year 1 (2001) to 1 in year 40 (2040). Reserves also decline over this period from 510 MMbbls to 59 MMbbls with production declining from 59 MMbbls to 11 MMbbls. The dotted lines in these figures show the effects of a once-and-for-all reduction in the state oil severance tax by 2 percentage-points, which reduces the state effective rate from 5.8 to 3.8% and increases net-of-tax price by 40 cents (α_p increases by 0.016). As shown in Figure 2, the tax decrease increases drilling in the early years of the program when compared to the base simulation. Overall, drilling increases by 378 wells or 5.8% above the 40-year program base. With increased drilling in the early years, additional reserves are identified (15 million barrels more) and, as shown in Figure 3, proved reserves slightly rise in the out years.

Through the life of the program, the tax decrease results in increased production by about 14.9 million barrels, about 1.6% above the base solution. As Figure 4 depicts, this difference is roughly equal to the 15 million barrel increase in reserve additions that comes about because of the tax decrease. Also, the increase in output reflects a relatively low elasticity of production with respect to severance tax rate changes. Over the life of the program, this elasticity is approximately 0.05. Intuitively, while a decrease in the severance tax stimulates drilling activity, the additional drilling has a comparatively small effect on reserve levels. Given that over 63,000 wells (oil and gas) have been drilled in Wyoming to date 2000, prospects of a significant oil discovery are unlikely and the marginal product of drilling in finding new reserves is lower than in the past. As a consequence, reserve additions also respond inelastically to the severance tax decrease. Moreover, such small increases in

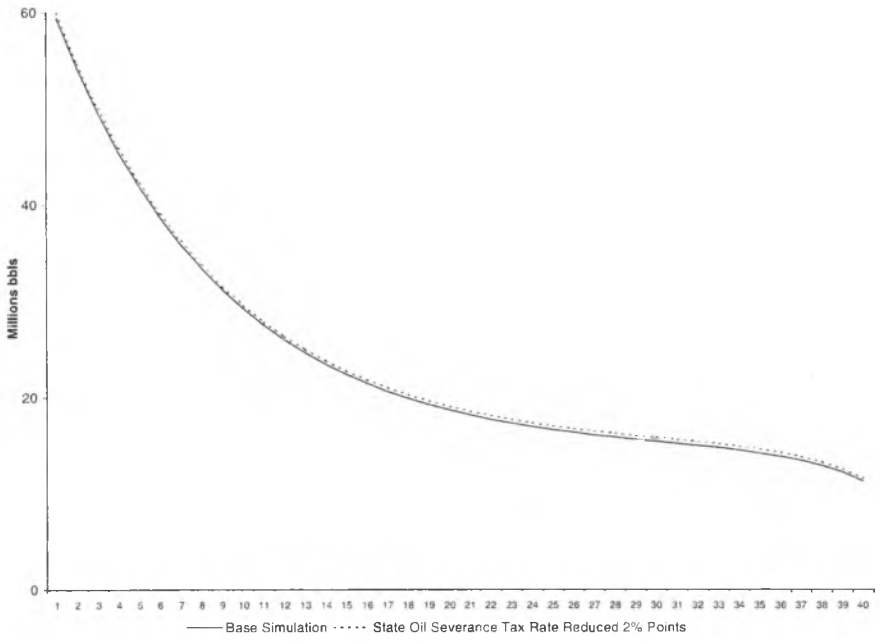

Figure 4. Wyoming oil (production).

net price (e.g., 40 cents per barrel) will unlikely affect production from existing wells and provides little incentive to reopen 'shut-in' wells.

The largest change associated with the 2 percentage-point reduction in state oil severance taxes is found in state production tax collections. Applying the discount rate of 4%, the tax change results in a decline in the present value of Wyoming *state* severance tax collections from $751 million to $498 million, a decline of over 33%. Alternatively stated, Wyoming would forego $669,312 in present value of severance tax revenue for each of the additional 378 wells drilled. Certainly, the incentive enhanced drilling effort may provide the state other forms of benefits (i.e., short-term rig employment and sales tax collections) but these additional benefits would have to be considerable in order to offset what appears to be an insurmountable loss of state tax revenue.

Because severance taxes are deductible in computing federal corporate income tax liabilities, tax payments to the federal government increase by $27 million (3.6% above the base case). Also, the 2 percentage-point severance tax decrease transfers state revenue to local governments because of the production stimulus. Discounted local production taxes increase by $12 million or 2% above the base case. The same can be said for discounted public land royalties which increase by 1.9% ($18 million) because of the increase in production. These results highlight the importance of the tax interactions described in Section 2 above.

The key result of this analysis is that oil reserve additions and production respond quite inelastically to reductions in severance tax rates. In the case at hand, a constant 2 percentage-point rate reduction increases overall simulated production by 1.6%—but decreases state severance tax revenue substantially in present value terms, by over 33%. This general outcome also applies to the other major oil producing states that levy a severance tax. In any case, oil-producing states should be wary of arguments promising large increases in oil exploration and production in response to cuts in severance tax rates.

5. Conclusions

This paper has adapted Pindyck's (1978) model of nonrenewable natural resource production to allow for an empirical test of the effectiveness of state oil severance tax incentives. Equations of the model are estimated econometrically from panel data on production, exploration and reserve additions for 20 states over the period 1970–00. The model is designed so that effects of changes in existing state severance tax rates on the evolution of exploration, reserves and production can be simulated into the mid-21st century. In general, results show that severance tax rate reductions result in a substantial loss of tax revenue, moderate increases in drilling, but little change in reserve additions and production. A key question regarding this general result is: Why does output of oil respond so grudgingly to changes in severance taxes? There appears to be four reasons why this is so. First, a reduction in severance taxes offers no *direct* stimulus for reserve exploration. A cut in the severance tax, as modeled, does nothing to directly stimulate reserve additions—operators get the future benefits of this tax incentive only if they drill *and only if they are successful*. In general, "upstream" incentives given at the beginning of the exploration-development-production process may provide a greater stimulus to production than "downstream" incentives given at the end of the process—e.g., cuts in severance taxes.

Second, operators do not see the full effect of state severance tax changes because of the many tax base and rate interactions at all levels. For example, severance taxes are deductible against federal corporate income tax liabilities. Therefore, when severance tax rates fall, federal corporate income tax liabilities rise and vice-versa. In fact, results herein suggest taxes should not be analyzed independently without reference to the entire tax structure applied by all levels of government; for example, a tax discount granted at one level may be partially offset by increased liabilities at another level. Therefore, operators do not receive the full value of tax reductions that may be granted by Wyoming and other states. Third, and in a related vein, a reduction in severance tax rates by 2 percentage-points has only a small impact on the net-of-tax price received by operators. The tax reduction simulated above increases the constant net-of-tax price by only 40 cents per barrel. This small Third, cannot be expected to generate much in the way of *new* oil production.

Fourth, and most importantly, production of (as contrasted with exploration for) oil is driven mainly by reserves, not by prices, severance tax rates, or tax discounts. This is a basic fact of geology and is easily illustrated by reexamining Wyoming's own history of oil production. Since 1970, Wyoming oil reserves steadily declined from 1 billion barrels to 561 million barrels in 2000 (see Figure 1). In other words, despite much exploration over the past 31 years (over 12,300 wells drilled), production has drawn down reserves faster

than new discoveries have added to them. This implies that for states like Texas, Oklahoma, and Wyoming the prospect of major exploratory success is not particularly promising (see Moroney, 1997 for a similar analysis of Texas). Moreover, during the past 31 years, oil production declined from 160 million barrels in 1970 to 61 million barrels in 2000. In fact, oil production continued to decline during the late 1970s and early 1980s even though real (year 2000 dollars) oil prices rose by a factor of more than 3, from about $18/bbl. to more than $55/bbl. Thus, even comparatively large price increases are not expected to call forth much additional output.

The general conclusion that severance tax changes appear to be unimportant may be problematic to public officials in oil producing states hoping to stimulate local economic activity by lowering such rates. The prospect of modest increases in exploration and production comes at a considerable cost, the loss of substantial state tax revenue that must be offset. Rather, state officials may have the incentive to raise severance tax rates risking little in the way of loss to future oil field activity.

Appendix A

This appendix derives the (generalized) constant tax parameters numbered (15)–(18) in the text. Restating the producer's problem (bracketed terms in text equation (1)) accounting for all tax effects yields

$$\begin{aligned} qp^* &- qp^*\tau_r - qp^*(1-\tau_r)\tau_p - C^* - \eta D^* - \tau_R R - \tau_s[qp^* - qp^*\tau_r \\ &- qp^*(1-\tau_r)\tau_p - C^* - \eta D^* - \tau_R R] - \tau_{us}\{qp^* - qp^*\tau_r - qp^*(1-\tau_r)\tau_p \\ &- qp^*(1-\tau_r)\delta - C^* - \eta D^* - \tau_R R - \tau_s[qp^* - qp^*\tau_r \\ &- qp^*(1-\tau_r)\tau_p - C^* - \eta D^* - \tau_R R]\}. \end{aligned} \tag{A.1}$$

Collecting terms from (A.1) gives

$$(1-\tau_{us})(1-\tau_s)[qp^* - qp^*\tau_r - qp^*(1-\tau_r)\tau_p - C^* - \eta D^* - \tau_R R] + \tau_{us}qp^*(1-\tau_r)\delta \tag{A.2}$$

which reduces to

$$\begin{aligned} &qp^*\{(1-\tau_{us})(1-\tau_s)(1-\tau_r)(1-\tau_p) + \tau_{us}(1-\tau_r)\delta\} - C^*\{(1-\tau_{us})(1-\tau_s)\} \\ &- \eta D^*\{(1-\tau_{us})(1-\tau_s)\} - \tau_R R\{(1-\tau_{us})(1-\tau_s)\}. \end{aligned} \tag{A.3}$$

For a single barrel of q and R, (A.3) becomes

$$\alpha_p p^* - \alpha_c C^* - \alpha_D D^* - \gamma. \tag{A.4}$$

where

$$\gamma = \{(1-\tau_{us})(1-\tau_s)\tau_R\} \tag{A.5}$$

$$\alpha_p = \{(1-\tau_{us})(1-\tau_s)(1-\tau_r)(1-\tau_p) + \tau_{us}(1-\tau_r)\delta\} \tag{A.6}$$

$$\alpha_c = \{(1-\tau_{us})(1-\tau_s)\} \tag{A.7}$$

$$\alpha_D = \{(1-\tau_{us})(1-\tau_s)\eta\} \tag{A.8}$$

equate to equations (15)–(18) in the text.

Wyoming Tax Parameters

In developing a base simulation solution, equations (A.5)–(A.8) can be simplified because Wyoming does not have a state corporate income tax ($\tau_s = 0$) and does not levy a property tax against reserves in the ground ($\tau_R = 0$). For Wyoming, royalty rates are computed as the sum of state and federal royalty payments divided by the gross value of production and averaged 9.1% for oil in 2000. This percentage is higher than for other oil producing states because of the comparatively large share of Wyoming's production on public lands. Production tax rates are computed as total production tax collections divided by the gross value of production net of public land royalties. In Wyoming, there are both local and state levies against this net value of production. Local ad valorum taxes are based on the prior year's production value. The sum of the two average effective rates in 2000 totaled approximately 12.3% (local 6.5% and state 5.8%). Also, the current nominal percentage depletion rate of 15% applied to about 52% of Wyoming oil producers in 2000, thus $\delta = 7.8\%$. Also, the expensed portion of current period drilling costs is approximately 42% for the industry and the present value of depletion deductions for capitalized drilling cost can be approximated by $(q/R)/(r + (q/R))$, assuming that the ratio of production to reserves is constant (see Deacon, 1993). Wyoming's mean value of q/R was approximately 11% for the sample period, therefore $\eta = 0.42 + (1 - 0.42) * (0.11/(0.04 + 0.11)) = 0.84$. The base tax policy parameters for Wyoming are $\alpha_p = 0.72$, $\alpha_c = 0.89$, $\alpha_D = 0.75$, $\gamma = 0$.

Acknowledgments

This research is supported by an appropriation from the Wyoming Legislature (1999 Wyoming Session Laws, Chapter 168, Section 3). However, this paper may or may not reflect the views of public officials in the state. Thanks to John Livernois, editor John Wilson, and two anonymous referees for a number of constructive suggestions that improved this paper.

Notes

1. Severance or production taxes are typically ad valorem taxes levied on the net production value (or volume) of a resource as it is extracted from the ground or at the final point of sale.
2. Making tax rates endogenous to the problem considered here would be a logical and important extension of this research.
3. Pindyck's (1978) original specification of the extraction cost function is retained here in spite of the logical inconsistencies discussed by Livernois and Uhler (1987), Livernois (1987, 1988) and Swierzbinski and Mendelsohn (1989). These authors argue that Pindyck's extraction cost function is defensible when reserves are of uniform quality but in the presence of exploration, reserves must be treated as heterogeneous because the most accessible deposits are added to the reserve base first. They show that aggregation of extraction costs across heterogeneous deposits is not valid except under special circumstances. Another problem with this function is that extraction costs should be a function of γ. The extraction cost function derived from profit-maximization at a point in time subject to a production constraint would have γ as an argument because the reserve base is an input to oil and gas production. These complications are not treated in the analysis below because of severe data constraints on estimating the extraction cost function (see Section 3.2).

4. Equation (11) can be simplified by choosing a functional form for reserve additions such as the one used in Section 3 (see equation (13)). In this case, $(f_{xw}/f_w) \cdot f - f_x = 0$.
5. The Energy Information Administration and the American Petroleum Institute (2000) report annual production data for 31 states over this period, but data on reserve additions, cumulative drilling, and drilling costs are not available in all years for the 11 smallest producing states. The 20 states included are AK, AL, AR, CA, CO, IL, IN, KS, KY, LA, MI, MS, MT, ND, NE, NM, OK, TX, UT, and WY.
6. Major cost items are for labor, materials, supplies, machinery and tools, water, transportation, fuels, power, and direct overhead for operations such as permitting and preparation, road building, drilling pit construction, erecting and dismantling derricks/drilling rigs, drilling hole, casing, hauling and disposal of waste materials and site restoration. For additional details, see Joint Association Survey on Drilling Costs, Appendix A (1998).
7. Equation (13) was also estimated allowing for both state-specific intercepts and state-specific coefficients for ρ and β. This strategy was unsuccessful as it yielded mostly insignificant estimates of state-specific slope interactions.
8. Wyoming rescinded this legislation in 2000.

SB 205 – CHINOOK RESEARCH & RESTORATION ENDOWMENT
SPONSOR STATEMENT

SB 205 creates the Alaska Chinook salmon research and restoration endowment fund. Grants from the fund would be issued to qualifying organizations. A 7-member board, including the Commissioner of Fish & Game and 6 public members from across the state, would administer the grants.

Chinook salmon, the state fish of Alaska, is an important staple food for Native villages of Alaska. Moreover, they are an economically important species for a number of commercial fisheries and a prized sport fishery resource. Nowhere else are wild Chinook salmon stocks more valued and essential to the basic way of life than in Alaska.

Chinook salmon populations in Alaska have undergone significant shifts in abundance during the past 40 years, yet little is known about the factors influencing these shifts. Eight of the 14 currently listed "stocks of concern" are Chinook salmon stocks.

Recent declines of salmon abundance have caused severe hardship in some areas and anxiety for the fishery-dependent communities of Alaska. Limited commercial fishing on Chinook salmon has occurred in recent years and earnings have deteriorated sharply. Poor Chinook salmon returns can exacerbate allocation tension and conflict between fishery user groups competing for a fully allocated fishery resource.

Over the past twenty-five years, there has been considerable variability in Yukon Chinook salmon population dynamics. Available harvest data show a thirty-six year period of sustained abundance early on, with significant declines during the past fifteen years.

To understand the trends and causes of variation in abundance of Chinook salmon, information concerning population biology, freshwater ecology, marine ecology, and population dynamics are needed to understand the variables controlling population abundance and trends.

Knowledge gaps remain across the State of Alaska indicating that a multi-disciplinary research effort is needed to investigate the role of physical habitat, climate induced environmental variability, and biological response in Chinook salmon populations if we are to meet the needs of Alaskans that depend upon this resource.

This legislation would create a stable, long-term source of funding to support high quality interdisciplinary research. The Alaska Chinook Salmon Research and Restoration Endowment Fund stakeholder board would, along with the Alaska Department of Fish and Game, direct research monies to priority areas and topics based on an adopted Chinook Salmon Action Plan.

These funds may also be used to leverage additional funding by providing necessary matching funds.

With this legislation, Alaska can demonstrate we have the best-managed resources in the world. I urge your support.

STATE OF ALASKA **BILL NO.** SB 205
2012 LEGISLATIVE SESSION

Analysis

This bill establishes an endowment fund with the purpose of funding research and restoration projects for Chinook salmon stocks located in the state. Earnings from the fund may be used for block grants to Alaska organizations for projects, as matching funds for private and federal grants, and to reimburse the Departments of Revenue and Commerce for costs associated with program administration.

The bill also establishes a seven member board consisting of the Commissioner of Fish and Game and six public members from various regions of the state.

The Department of Commerce, Community, and Economic Development is responsible for administration of the board and disbursal of funds through grants or reimbursements. The Department will be required to adopt regulations enacting a block grant program outlined in the bill.

Travel includes costs for seven board members for two face to face meetings per year, and department staff board support and grant monitoring visits.

Services include the costs for board teleconferences.

Commodities costs include preparing and publishing the public notice for the regulations one-time, and preparing applications solicitations and reports on a yearly basis.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB 205 \A
2012 LEGISLATIVE SESSION

Analysis

Senate Bill 205 creates the Chinook Salmon Research and Restoration Endowment Fund and the Alaska Chinook Salmon Research and Restoration Endowment Fund Board. The endowment fund will provide the funding that the board will utilize to administer grants for Chinook salmon research and restoration.

The Department of Fish and Game anticipates no additional funding needed to carry out our duties as laid out in Senate Bill 205.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB205
2012 LEGISLATIVE SESSION

Analysis

This bill provides for the Chinook research and restoration endowment fund to be established as a separate account and managed by the Commissioner of Revenue. This fiscal notes assumes a fund balance of $50 million in order to estimate costs and therefore that total earnings of the fund for the previous fiscal year can be appropriated to the grant account in the general fund (as per Sec 37.14.660 (a) (3)). Services expenditures represent the incremental external management fees for managing this fund, based on an asset allocation of 41% fixed income, 27% domestic equity and 32% international equity. Note that this bill establishes that the grant fund , an account fund to be established in the general fund, will pay for the costs of establishing and managing the fund which will include the services expenditures above as well as its share of other Treasury costs as identified through the Treasury cost allocation plan.

YUKON RIVER DRAINAGE FISHERIES ASSOCIATION

February 27, 2012

State Capitol, Room 411
Juneau, AK 99801-1182

Re: Support for House Bill 332

Dear Representative Herron:

The Yukon River Drainage Fisheries Association (YRDFA) appreciates the opportunity to support House Bill 332 establishing the Alaska Chinook research and restoration endowment fund. YRDFA is an association of commercial and subsistence fishermen and women on the Yukon River in Alaska with a mission of promoting healthy, wild fisheries and cultures on the Yukon River. The region we represent is home to some of the world's most magnificent salmon resources, and the world's furthest migrating salmon runs on the Yukon River. These salmon provide a primary source of food and are essential to the continued viability of the subsistence way of life in Western Alaska. For many residents the commercial salmon harvest also provides the only means of income for those who live in the remote villages of the Yukon River. Salmon represents an essential part of the culture, diet and economy in our region.

The Chinook salmon which are such a critical foundation for cultures, communities and economies along the Yukon River have declined dramatically in recent years. Yukon River Chinook salmon runs declined to disaster levels from 1998 to 2002. After a brief improvement from 2003 to 2006, runs have declined since, with escapement goals to Canada not met in 2007, 2008, or 2010, and subsistence harvests restricted. Overall, "mean run size of Canadian-origin Chinook for the period 1998-2010 declined 45% compared to the period 1982-1997."[1]

Subsistence harvest opportunities have been severely reduced in recent years, and in 2008, 2009, and 2010 (2011 data not yet available) harvests were below the BOF-determined Amounts Reasonably Necessary for Subsistence (ANS). To protect king salmon, directed commercial fishing for king salmon was eliminated, commercial chum salmon fishing was restricted, and sale of king salmon caught in the chum salmon fishery was at times prohibited. Even when escapement goals have been met, subsequent returns from these escapements have been poor. While the direct cause is unknown, poor runs have low recruits-per-spawner.

Declines in Chinook salmon runs have had dramatic effects on Yukon River communities. Subsistence fisheries have been greatly reduced, disrupting the culturally important practices of going to fish camp in

[1] Spaeder, J. and M. Catalano, Compilation of Evidence for Long-term Decline and Periodic Low Returns of AYK Region Chinook Populations, Report to Arctic-Yukon-Kuskokwim Sustainable Salmon Initiative Chinook Expert Panel, Oct. 15, 2011.

725 CHRISTENSEN DRIVE, SUITE 3-B • ANCHORAGE, ALASKA 99501
TELEPHONE: 907-272-3141 • 1-877-99YUKON(9-8566)
FAX: 907-272-3142 • EMAIL:info@yukonsalmon.org
WWW.YUKONSALMON.ORG

the summer. The commercial Chinook salmon fishery—one of the only sources of cash income in many of these communities—has been virtually eliminated.

While we know that all of these reductions in harvest have been necessary to meet escapements and protect the Yukon River Chinook salmon stock, very little information is available to indicate the reason for these huge declines in run sizes. Theories on causation abound, but much additional research is needed to determine the cause and either reverse the decline or plan for future run sizes.

To investigate the causes of these declines it is critical that there is a dedicated and consistent source of funding for Chinook salmon research. This type of research needs to be well-coordinated and funded over an extended time-period. To study and understand the impacts and effects of population biology and dynamics, freshwater and marine ecology, physical habitat and the many other factors impacting Chinook salmon populations it is essential that long-term funding is dedicated to these purposes.

We are well aware that there have been recent efforts to work toward understanding the trends in variability and we are grateful for the federal funds that were made available to achieve that goal. However, there are extensive gaps in Alaska, and while these recent efforts contributed very valuable information, much more research is needed to understand and reverse these trends. In addition, recent efforts have been focused on only a portion of the state, and a statewide approach to this issue is important. A statewide effort, such as HB332, would be an important step towards providing Alaska's residents with a better understanding of our Chinook salmon stocks and the security of knowing that the State of Alaska is thoroughly engaged in investigating the current declines. It is critical that we take this kind of proactive approach to addressing our stock declines now.

There is no fish more iconic to Alaskans than the Chinook salmon. On the Yukon River this fish is not merely an icon, but a critical component of physical and cultural survival. It is vital and essential that the State of Alaska invest in understanding and recovering our Chinook salmon runs by establishing a dedicated research and restoration endowment fund via House Bill 332.

Thank you for your consideration of our comments. If you have any questions or would like additional information please feel free to contact me.

Sincerely,

Jill Klein

RE: Letter of Support for the bill that creates the ALASKA CHINOOK SALMON RESEARCH AND RESTORATION ENDOWMENT FUND

To Whom It May Concern:

On behalf of the Bristol Bay Native Association (BBNA), it is with great pleasure I provide a letter of support for the ALASKA CHINOOK SALMON RESEARCH AND RESTORATION ENDOWMENT FUND. BBNA is a Tribal consortium of 31 Bristol Bay Tribes. BBNA has much in common with its neighbors to the north and partners and supports its counterparts in the Arctic, Yukon, and Kuskokwim regions.

Chinook salmon is an important staple food for the Alaska Native people and others in the Western Alaska. They are also an economically important species for a number of commercial fisheries and a prized sport fishing resource. Chinook salmon stocks are highly valued and essential to the basic way of life in Western Alaska.

Chinook salmon populations have suffered significant fluctuations in abundance during the past 40 years, yet little is known about the factors influencing their populations. Eight of the 14 currently listed "stocks of concern" are Chinook salmon stocks.

A decline in Chinook salmon causes severe hardship and anxiety for the salmon-dependent people in Western Alaska. Limited commercial fishing on Chinook salmon has occurred in recent years and earnings have declined significantly. Poor Chinook salmon returns produce tension and conflict between fishery user groups competing for the same fishery resource.

The bill creates a stable, long-term source of funding for high quality interdisciplinary research such as the Arctic-Yukon-Kuskokwim Sustainable Salmon Initiative (AYK SSI). AYK SSI Research results and information is being utilized in a wide variety of ways to support sustainable salmon management. It analyses escapement goals and helps to gain better an understanding of marine ecosystems. It helps to provide fisheries managers with better forecasts and improved responses to changing environmental conditions.

BBNA fully endorses the Alaska Chinook Salmon Research and Restoration Endowment Fund. I respectfully request your support of the bill when it comes before your legislative body.

Sincerely,

Ralph Anderson
President & Chief Executive Officer
Bristol Bay Native Association

February 6, 2012

Senator Donny Olson
Representative Neal Foster
Representative Reggie Joule

Dear Senator Olson, Representatives Foster and Joule:

On behalf of Kawerak Incorporated, I am writing to express our support for Senator Hoffman, Olson and Representative Herron's bill which would create the **ALASKA CHINOOK SALMON RESEARCH AND RESTORATION ENDOWMENT FUND (ACSRRF).**

I am enclosing a spread sheet which shows the return of Chinook and other salmon to the Seward Peninsula. Two years ago, we sought to have a Chinook and Chum disaster declared by the Department of Commerce for the stocks in the Norton Sound. We were not successful because while the Chinook return was way down, commercial fishermen in southern Norton Sound were able to offset their losses by fishing other stocks, therefore no economic loss occurred. Here in Northern Norton Sound, our commercial fisheries have been closed for so long; an economic disaster declaration is not possible, since a disaster is determined by the decline over the previous 5 years average fishing income.

This is not an "income" issue. Our stocks are so depressed that we wonder if the stocks themselves will survive. Yet there does not seem to be a sense of urgency on the part of the department to turn this situation around.

We fully support the funding and creation of the ACSRRF as a means to help ensure sustainable uses of wild salmon for future generations.

Sincerely,

KAWERAK INCORPORATED

Loretta Bullard
President

Alaska State Legislature
Juneau, Alaska 99801

Sent via e-mail

Dear Senator Lyman Hoffman, Senator Donny Olson, Representative Bryce Edgmon, and Representative Bob Herron:

On behalf of the Association of Village Council President, a tribal consortium consisting of 56 federally-recognized Indian Tribes in the Lower Yukon and Kuskokwim Rivers, I am writing to express our support for House Bill 332: Alaska Chinook Salmon Research and Restoration Endowment Fund (ACSRRF).

In our region, we have seen a precipitous decline in the abundance of Chinook salmon in both the Yukon and Kuskokwim Rivers. In the Lower Yukon River state salmon fisheries management districts of Y-1, Y-2, and Y-3, an economically vibrant commercial fishery existed until 1998 when salmon populations dropped to near non-existence. This Chinook salmon-directed fishery supported up to seven salmon processors and employed hundreds of local residents paying out the necessary dollars to provide the much needed income to pay bills and feed their families. Today, only one processor operates on the entire Lower Yukon River. This once-economically vibrant fishery is near complete extinction.

Within the last several years, fishermen have not been allowed to sell incidentally-harvested Chinook salmon in the legitimate commercial fisheries in Y1,2 & 3. We have seen a decline in the commercial fishermen participation to near fifty-percent of historical averages. This is compounded by high gasoline and transportation costs. More importantly, subsistence fisheries are near non-existence. Recent publications by the Alaska Department of Fish & Game indicate that subsistence fishermen, in more recent times, have not achieved their statutory *Amounts Necessary for Subsistence* for Chinook salmon on the Yukon River. Moreover, the early symptoms of the Yukon River are starting to appear on the Kuskokwim River.

Since the crash of 1998, the runs on the Kuskokwim River have been sporadic. In some years, we have seen evidence of *Ichthyophonus Hoferi,* a fish disease more common to herring populations in our Chinook salmon runs. In more recent years, several Chinook salmon spawning streams are failing to meet their regulatory established escapement goals, and we are seeing a decline in sizes.

The bottom line is we do not know nor understand what is happening to our precious resource. Further, this phenomenon is not only limited to our region. Chinook salmon populations around Alaska have undergone shifts in abundance during the past 40 years, yet little is known about the factors influencing these shifts. Eight of the 14 currently listed "stocks of concern" are Chinook salmon stocks, as defined by the Alaska Board of Fisheries in 5AAC 39.222.

While we know that reductions in harvest have been necessary to meet escapements and protect the Chinook salmon stocks, very little information is available to indicate the reason for these changes in run sizes. Theories on causation abound, but additional research is needed to determine the cause and either reverse the decline or plan for future run sizes.

To investigate the causes of these declines, it is critical that there is a dedicated and consistent source of funding for Chinook salmon research. This will allow a thorough study of the impacts and effects of population biology and dynamics, freshwater and marine ecology, physical habitat and the many other factors impacting Chinook salmon populations.

There is no fish more iconic to Alaskans than the Chinook salmon. This fish is not merely an icon, but a critical component of physical and cultural survival of Alaskans. It is vital and essential that the State of Alaska invest in understanding and recovering our Chinook salmon runs.

We fully support the funding and creation of ACSRRF as a means to help ensure sustainable uses of wild salmon for future generations.

Sincerely,
Raymond Watson, Chairman
Association of Village Council Presidents

Myron P. Naneng Sr., President

CC: Mr. Rob Earl, Mr. Tim Grussendorf, Mr. David Scott, Mr. Mike Nizich

Regional Fish and Game Councils

Section

200. Establishment of a regional fish and game council system.

210. Fish and game resource management regions.

220. Regional fish and game councils.

230. (Repealed).

240. (Repealed).

245. Non-voting member.

250. Functions of regional fish and game councils.

260. Uniform rules of operation.

270. (Repealed).

280. Attendance at meetings.

5 AAC 96.200. Establishment of a regional fish and game council system

A system of regional fish and game councils is established to provide a regional forum for the collection and expression of opinions and recommendations on matters relating to fish and wildlife resources, to assist the boards in deliberations concerning regulations, and to provide for public participation in the regulatory process to help adequately protect subsistence uses.

History: In effect before 1982; am 6/2/82, Register 82; am 10/9/83, Register 88

Authority: AS 16.05.260

5 AAC 96.210. Fish and game resource management regions

(a) For the purposes of conservation and management of the fish and wildlife resources of the state, the following fish and game resource management regions are created:

(1) Southeast Alaska, consisting of all lands and waters of Game Management Units 1 - 5, that part of Unit 6 east of Cape Suckling, and adjacent marine waters;

(2) Southcentral Alaska, consisting of all lands and waters of Game Management Units 6 west of Cape Suckling, 7, 9A, 11, 13 - 16, and adjacent marine waters;

(3) Southwest Alaska, consisting of all lands and waters of Game Management Units 8, 9B - E, 10, 17, and adjacent marine waters;

(4) Western Alaska, consisting of all lands and waters of Game Management Unit 18 and that portion of the Kuskokwim River drainage in Game Management Unit 19 downstream from, and including, the George River drainage and the Hoholitna River drainage, and adjacent marine waters;

(5) Arctic Alaska, consisting of all lands and waters of Game Management Units 22, 23, 26, and adjacent marine waters; and

(6) Interior Alaska, consisting of all lands and waters of Game Management Units 12, 20, 21, 24, 25, and that portion of the Kuskokwim River drainage in Unit 19 upstream from the George River drainage and the Hoholitna River drainage.

(b) The Game Management Units listed in (a) of this section are described in 5 AAC 90.010.

(c) A board will, in its discretion, temporarily change the boundaries of regions for individual resource issues.

History: In effect before 1982; am 6/2/82, Register 82; am 10/9/83, Register 88

Authority: AS 16.05.260

5 AAC 96.220. Regional fish and game councils

The joint board will establish a council within each region described in 5 AAC 96.210. Each council will consist of the chairmen, or their designees, of the active committees established within the region. Any committee member who is a member of a council must be a resident of the region.

History: In effect before 1983; am 10/9/83, Register 88; am 9/22/85, Register 95

Authority: AS 16.05.260

5 AAC 96.230. Qualifications for membership

Repealed 10/9/83.

5 AAC 96.240. Non-voting members

Repealed 10/9/83.

5 AAC 96.245. Non-voting member

Each regional council may establish two seats for non-voting members if necessary to perform the functions set out in 5 AAC 96.250.

History: Eff. 9/22/85, Register 95

Authority: AS 16.05.260

5 AAC 96.250. Functions of regional fish and game councils

(a) Each council is authorized to:

(1) hold public meetings on fish and wildlife matters;

(2) elect officers;

(3) in consultation with the local fish and game advisory committees in its region and with the department, review, evaluate, and make a recommendation to a board on any existing or proposed regulation, policy, or management plan, or any other matter relating to the use of fish and wildlife, including any matter related to fish and wildlife habitat, within its region;

(4) perform other duties specified by a board; and

(5) submit to the joint board, the department, and the Secretary of Interior of the United States, by November 15 of each year, an annual report, containing:

(A) an identification of current and anticipated subsistence uses of fish and wildlife populations within the region, and other fish and wildlife uses that the council identifies;

(B) an evaluation of current and anticipated subsistence needs for use of fish and wildlife populations within the region, and of other fish and wildlife needs that the council identifies;

(C) a recommended strategy for the management of fish and wildlife populations within the region to accommodate the identified fish and wildlife uses and needs; and

(D) recommendations concerning policies, standards, guidelines, and regulations to implement the strategy.

(b) A council shall provide a forum for, and assist its local fish and game advisory committees in, obtaining the opinions and recommendations of people interested in fish and wildlife matters so as to achieve the greatest possible local participation in the decision-making process. If differences of opinion exist among the committees, the council shall attempt to develop areas of compromise and to reach a regional consensus on matters of controversy.

(c) A council will, in its discretion, present recommendations concerning the conservation, regulation, management, and use of fish and wildlife resources within its region, along with the evidence upon which the recommendations are based, to the appropriate board.

(d) A council may make recommendations to the joint board on the creation, consolidation, distribution, or operation of the committee system.

History: In effect before 1982; am 6/2/82, Register 82; am 10/9/83, Register 88; am 9/22/85, Register 95

Authority: AS 16.05.260

5 AAC 96.260. Uniform rules of operation

(a) **Rules.** Every action taken by a council must comply with the uniform rules of operation for committees set out in 5 AAC 96.060(j) , (k), (m), and (q) - (s). The rules in (b) - (d) of this section supersede the corresponding rules in 5 AAC 96.060(c) , (e), (*o*), and (t).

(b) **Responsibilities.** A council shall perform the functions described in 5 AAC 96.250 in accordance with the provisions of 5 AAC 96 and 97.

(c) **Membership.** Membership on a council is as provided in 5 AAC 96.220.

(d) **Meetings.** Each council shall hold regular meetings at times appropriate to the process described in 5 AAC 96.610. The chairman or a majority of a council's members may call a special meeting at which any interested person may submit statements to the council on any matter related to the purposes for which the meeting is called. Council meetings are public meetings under AS 44.62.310 and 44.62.312 and must be advertised in the region. The council shall allow public testimony at every council meeting.

(e) **Recommendations.** A council must convey any recommendation to the appropriate board in writing and with a justification or explanation before the start of the board meeting.

History: In effect before 1982; am 6/2/82, Register 82; am 10/9/83, Register 88; am 9/26/90, Register 115

Authority: AS 16.05.260

Editor's note: An amendment to 5 AAC 96.260(e) was adopted jointly by the Board of Fisheries and Board of Game in 1990, took effect 9/26/90, and should have appeared in Register 115, October 1990. The amendment, however, was inadvertently omitted when Register 115 was published, and did not appear in print until Register 122, July 1992.

5 AAC 96.270. Report of activities

Repealed 10/9/83.

5 AAC 96.280. Attendance at meetings

When adequate funding exists, the chairman, or his designee, shall attend regulatory meetings of the boards. Each council shall cooperate with other councils on matters of mutual interest and concern, and will, in its discretion, hold joint meetings, authorized by the boards, to accomplish this purpose.

History: In effect before 1983; am 10/9/83, Register 88

Authority: AS 16.05.260

Article 3
Administration of Local Fish and Game Committees

Section

400. (Repealed).

410. Distribution of local fish and game advisory committees.

420. Review of requests for local fish and game advisory committees.

430. (Repealed).

440. Board assistance.

450. Committee status and change of status.

460. Attendance at meetings.

5 AAC 96.400. Operation of local fish and game advisory committee system

Repealed 10/9/83.

5 AAC 96.410. Distribution of local fish and game advisory committees

The joint board will, to the extent feasible, establish and locate committees to allow an opportunity for all citizens of the state to participate in the regulatory system.

Adopted

Stock Status of Chinook Salmon in Alaska

Alaska State Senate Finance, Fish & Game Sub-Committee Briefing Report

prepared by the
Alaska Department of Fish and Game

Long-term Abundance Trends of Chinook Salmon Stocks in Alaska

- Prior to 2007 there was no consistent statewide trend in abundance, with some areas in Alaska experiencing above average abundance while other areas experiencing below average abundance.
- From 2007-2011 there was a consistent statewide trend in abundance, with all areas in Alaska experiencing below average abundance.

Run abundance (annual catch plus escapement) of most Chinook salmon stocks in Alaska is currently below the long term average. Although patterns of Chinook salmon abundance differ over time between areas of Alaska, between 2007 and 2011 all stocks experienced a coherent and marked decrease in run abundance. Figures 1 through 5 depict summaries of long term run abundance of 21 major Chinook salmon stocks in five geographic areas of Alaska, with recent run abundances by stock in tables 1 through 5.

Prior to 2007, there appeared to be no coherent statewide pattern in run abundance of Chinook salmon. Chinook salmon stocks in the southeast Alaska and Prince William Sound area had steadily increasing abundance through 1997, with stable abundance during 1998 through 2006 (Figure 1). This is in contrast to the pattern of abundance seen in the Cook Inlet area where abundance peaked during 1987 through 1989 and 2003 through 2006 (Figure 2). The Kodiak and Chignik area showed high and steady abundance of Chinook salmon between 1983 and 2004 (Figure 3), whereas the Bristol Bay, North Peninsula, Kuskokwim Bay area showed repeated peaks in abundance during 1981 through 1983, 1994, 1998, and 2004 through 2006 (Figure 4). The Arctic-Yukon-Kuskokwim (AYK) area showed peaks in abundance during 1994 through 1997 and again in 2004 through 2006 (Figure 5). This information lead us to believe that production trends of Chinook salmon differed by geographic area depending on the nearshore habitats of ocean basins that juvenile Chinook salmon first enter as smolt (i.e., northern and eastern Bering Sea; and, western, central, and eastern Gulf of Alaska).

Although declines in abundance of some stocks of Chinook salmon began in earlier years, from 2007 through 2011 declines in abundance to below average were seen throughout the state (Figures 1-5 and Tables 1-5). Some stocks of Chinook salmon increased abundance during 2010 and 2011, however these runs were still below the long term average. We believe that poor nearshore ocean conditions that persisted from 2000 through 2005 throughout the Bering Sea and

Gulf of Alaska, resulted in poor survival rates and below average run abundances returning to Alaska rivers during 2007-2011.

There are indications that survival rate of Chinook salmon may be improving. An abundance index is calculated for Chinook salmon stocks from southeast Alaska south to Canada and the Lower 48 as part of the Pacific Salmon Treaty process. This abundance index is indicating that survival rate of southeast Alaska stocks is improving and should result in increases in Chinook salmon abundance in the next few years. We are unsure if this pattern of improving survival rates will be experienced by stocks in regions north and west of southeast Alaska.

Escapement Goal Management of Chinook Salmon Stocks in Alaska

There are currently 70 established escapement goals for Chinook salmon in Alaska. Using a variety of assessment methods, ADF&G monitors the performance of Chinook salmon escapements against these goals to assess the health of Chinook stocks and ensure sustainability in future years. Figures 6 through 10 summarize results of escapement assessments statewide and for each commercial fisheries division region, compared to goals. Using available data from the last decade, it is apparent that success in meeting established escapement goals has declined in all regions (escapement data for many Chinook stocks in Central and Westward regions is not yet available for 2011). When comparing the time periods 2001-2006 versus 2007-2011, average success at meeting escapement goals has declined from 91% to 69% in southeast region (11 established goals); from 89% to 51% in central region (29 established goals); from 70% to 57% in AYK region (26 established goals); and from 92% to 56% in westward region (4 established goals). Statewide, performance between the two time periods has declined from 83% to 58% success in achieving goals.

Chinook Salmon Stocks of Concern

Where salmon escapements chronically fail to meet expectations for harvestable yield or spawning escapements, the department may recommend, and the Board of Fisheries may adopt a stock of concern designation for those under-performing stocks. The sustainable salmon fisheries policy (5 AAC 39.222) provides specific definitions for stocks of concern. Yield concerns arise from a chronic inability to maintain expected yields or harvestable surpluses above escapement needs. Management concerns are precipitated by a chronic failure to maintain escapements within the bounds, or above the lower bound of the established goal. When salmon stocks are identified as a specific concern, a plan is developed by the department to address those concerns, with specific management and research actions aimed at reducing exploitation, improving assessment, and initiating programs to better understand and address the decline. There are currently nine Chinook stocks of concern designated by the Alaska Board of Fisheries between 2000 and 2010, summarized in the table below. Five stocks are designated management concerns

and four are yield concerns. All but two have recently been established during the 2010/2011 board cycle. Summaries of action plans for each stock of concern are in tables 6 through 11.

Statewide summary of Chinook salmon stocks of concern in Alaska.

Region	System	Year Designated	Level of Concern	Year Last Reviewed
Central	Chuitna River	2010	Management	2010
	Theodore River	2010	Management	2010
	Lewis River	2010	Management	2010
	Alexander Creek	2010	Management	2010
	Willow Creek	2010	Yield	2010
	Goose Creek	2010	Yield	2010
Westward	Karluk River	2010	Management	2010
Arctic-Yukon-Kuskokwim	Yukon River	2000	Yield	2009
	Norton Sound Sub-district 5 & 6	2003	Yield	2009

Managing Alaska's Chinook Salmon Fisheries for Sustained Yield

Management for Sustained Yields of Chinook salmon

As mandated by the Alaska Constitution, Alaska Statute, and policies for the management of sustainable salmon fisheries and statewide escapement goals, ADF&G achieves sustained yields by managing directed salmon fisheries for scientifically based escapement goals and by protecting salmon habitats in Alaska waters. Because the migratory pathways of Chinook salmon take them offshore of state waters, ADF&G also advocates for reductions in bycatch of Chinook salmon in groundfish fisheries and protection of salmon habitats in the federal waters through the various federal Fishery Management Plans that are under North Pacific Fishery Management Council (NPFMC) direction as mandated by the Magnuson-Stevens Fishery Conservation and Management Act. Measures to specifically account for Chinook salmon mortalities in groundfish fisheries, such as census sampling and genetic stock identification, provide valuable information for more accurately assessing Chinook run strengths in the Bering Sea and Gulf of Alaska. Accounting for age-specific Chinook salmon mortalities as by-catch provides a more complete picture of stock productivity, a key to effective management for sustained yield.

Review of Bycatch Measures in the Bering Sea

In April 2009, the NPFMC approved a Chinook salmon bycatch hard cap for each Bering Sea pollock fishery season which, if reached, would require all directed pollock fishing to cease for that season. This action was implemented by the NMFS in January 2011. The hard cap is 60,000 Chinook salmon if an incentive plan is in place and 47,591 Chinook salmon if there is no incentive plan in place. The action was intended to reduce Chinook salmon bycatch under any

condition of pollock and salmon abundance, on an individual vessel level, by combining the hard cap with a system of penalties implemented through the incentive plans. The action also includes requirements for at least 100% observer coverage on all pollock vessels, and a 'census' approach to sampling, to account for all salmon bycatch. Bycatch of Chinook salmon in the 2011 pollock fishery was 25,500 fish, well below either of these hard caps and well below peak levels of bycatch taken by the pollock fishery during 2005 (67,361 fish) through 2007 (121,757 fish). Bycatch of Chinook salmon in the Bering Sea pollock fishery since 2001 is shown in Table 12.

Review of Bycatch Measures in the Gulf of Alaska (GOA)

In June 2011, the NPFMC took final action to establish a hard cap for the Central and Western GOA pollock fisheries of 25,000 Chinook salmon. A provision was made for NMFS to implement the new limits as soon as possible; thus, they will first be effective in mid-2012. Additional provisions of the NPFMC motion ensure observer coverage on all vessels fishing for pollock no later than 2013, and require full retention of salmon taken in the pollock trawl fishery, in order to allow for a robust sampling protocol and genetic stock identification of Chinook salmon bycatch. Although not yet implemented, bycatch of Chinook salmon during the 2011 pollock fishery was 13,832 fish, well below the hard cap of 25,000 fish. The NPFMC is also working on measures to cap Chinook salmon bycatch in non-pollock groundfish fisheries in the GOA. Bycatch of Chinook salmon in the GOA pollock fishery since 2001 is shown in Table 13.

Collaborative Chinook Salmon Marine Research

Biologists in the AYK region are actively involved in collaborative research studies with NOAA with two specific objectives:

1) Develop a preseason forecast model for Yukon River salmon stocks that incorporates information on juvenile status.
2) Evaluate changes in marine survival of juvenile Yukon River salmon stocks and potential contributors to recent declines of Yukon Chinook salmon related to migratory behavior, freshwater life history strategies, diet, energetic condition, and size selective mortality.

This work is being accomplished by utilizing methodologies developed by NOAA, integrating existing NOAA data with ADF&G data, and building upon previous efforts to address issues affecting AYK fishery management. NOAA provides support for this research through staff time during juvenile salmon surveys and laboratory analyses, logistics, and administrative support. ADF&G provides support for this research through staff time of an AYK research fishery biologist who actively participates in this collaborative work. Funds for operation of the northern Bering Shelf juvenile salmon surveys and laboratory analyses are currently provided by grant funding that will expire after the 2013 research season. Long-term monitoring is necessary for this research to be effective, particularly for preseason forecast model development and utilization. Stock-specific juvenile distribution and mortality mechanisms in the first year of

Chinook salmon marine life represent an important information gap in understanding declines in productivity and will likely provide critical information for improving forecast capabilities.

Salmon Fishery Enhancement Program in Alaska

In 1971, the State of Alaska initiated its modern salmon fishery enhancement program in response to severely depressed salmon fisheries. Protection of wild stocks has been foremost since the inception of the program and statutes, regulations and policies are in place to provide for this priority. Today there are 35 active salmon hatcheries and research facilities in the State of Alaska, and the success of the program is illustrated by hatchery produced fish providing approximately 27% of the annual common property harvest of salmon over the past ten years, while having little or no demonstrable detrimental effects on natural salmon production.

Alaska's modern salmon fishery enhancement program is stakeholder-driven, with provisions for planning and oversight by representatives of regional user groups. The state is divided into several Salmon Planning Regions and all salmon fishery enhancement efforts in Alaska are guided by Regional Comprehensive Salmon Plans, which are prepared by each region's Regional Planning Teams. The first step in developing a fishery enhancement program is the drafting of a Regional Comprehensive Salmon Plan. This ensures that enhancement activities are developed and supported locally, utilizing local and traditional knowledge, and based on meeting the needs of the region. These plans also document enhancement efforts, set production goals, and identify potential for new projects.

An example of this stakeholder-driven planning process can be seen happening currently in the Norton Sound area. The Norton Sound/Bering Strait Regional Planning Team (RPT), at its January 23, 2012, meeting in Nome, initiated the process of updating their Regional Comprehensive Salmon Plan (CSP) which was approved in 1996. The process will include updating the 1996 plans proposed projects with the results of those projects; soliciting public input regarding new desired production levels and proposed projects by area through correspondence and public meetings; assimilating the public input into an updated draft plan and providing that to the public for review and comment; and providing the completed draft to the Commissioner of ADF&G for review, and finally approval. Following the approval of the updated CSP, stakeholders within the region desiring to provide for additional harvest will have a suite of preferred projects to work with, and a roadmap to guide fishery enhancement activities.

Although not the only option, hatcheries are one of the most effective salmon fishery enhancement tools, and there are several models of operation. Regardless of the model, the development and operation of a non-governmental salmon hatchery requires a PNP Hatchery Permit issued by the ADF&G. The permit application process is rigorous and includes an RPT review and a public hearing. After a hatchery is permitted, fish transport permits are required and annual management plans must be approved by the department.

It is also important to note that PNP hatcheries are self supporting. Funding for the construction and operation of a hatchery may be provided by several sources (grants, loans, salmon enhancement taxes, or others), but most funding comes from the cost recovery harvest of returning fish produced by the hatchery.

Alternatively, small scale, experimental, salmon fishery enhancement projects may be permitted through fish resource permits (FRP) rather than full scale hatchery permits. However, fish produced in this way may not be harvested by the producer for cost recovery.

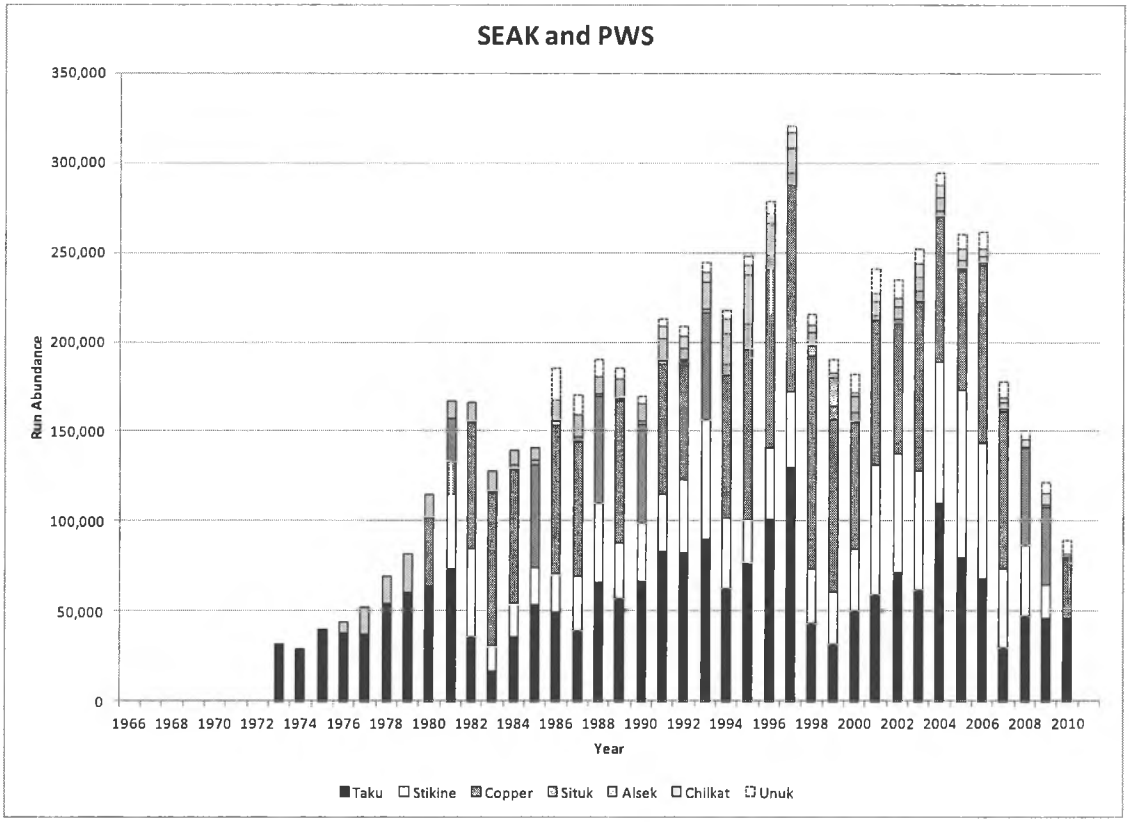

Figure 1. Run abundance of 7 Chinook salmon stocks in the southeast and Prince William Sound area of Alaska, 1973-2010.

Table 1. Run abundance of Chinook salmon in the Taku, Stikine, Copper, Situk, Alsek, Chilkat, and Unuk rivers, 2001-2010 and the long term average.

Year	Taku	Stikine	Copper	Situk	Alsek	Chilkat	Unuk
2001	59,202	71,799	81,155	2,345	7,542	5,272	13,306

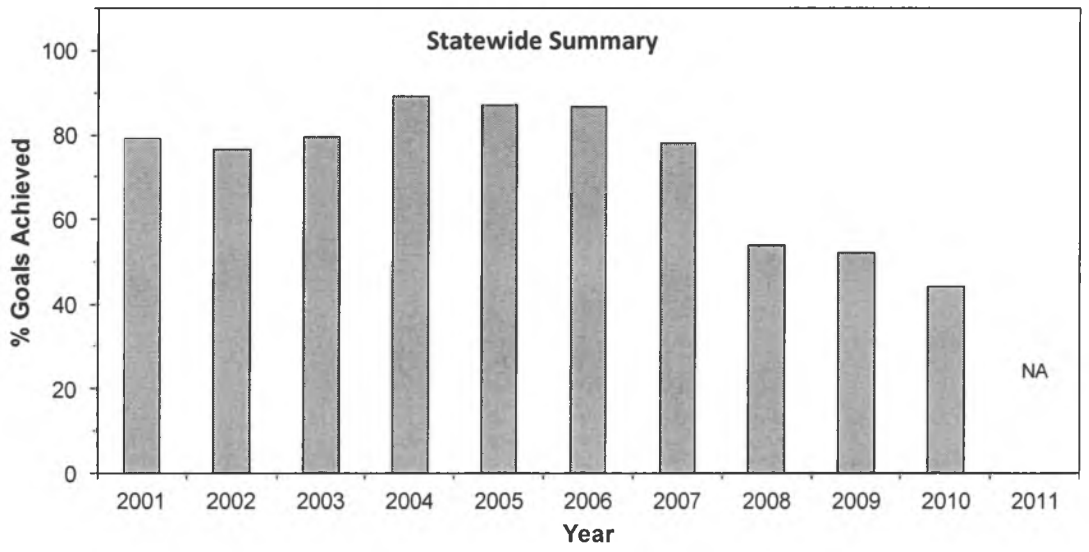

Figure 6: Percent of Chinook salmon escapement goals achieved (i.e. met or exceeded) statewide between 2001 and 2011. The number of Chinook salmon escapement goals throughout Alaska was 66 from 2001 to 2004, 68 in 2005 and 2006, 71 from 2007 to 2009 and 70 in 2010 and 2011. NA = estimates of escapement are not available for all Chinook salmon stocks with goals at this time.

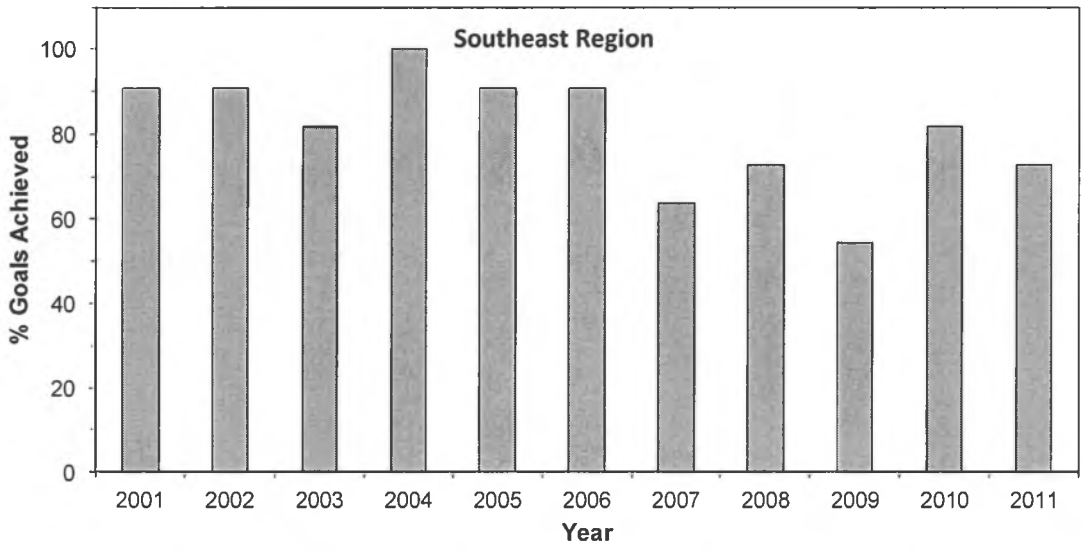

Figure 7: Percent of Chinook salmon escapement goals achieved (i.e. met or exceeded) in Southeast Region between 2001 and 2011. Southeast Region has had 11 Chinook salmon escapement goals since 2001.

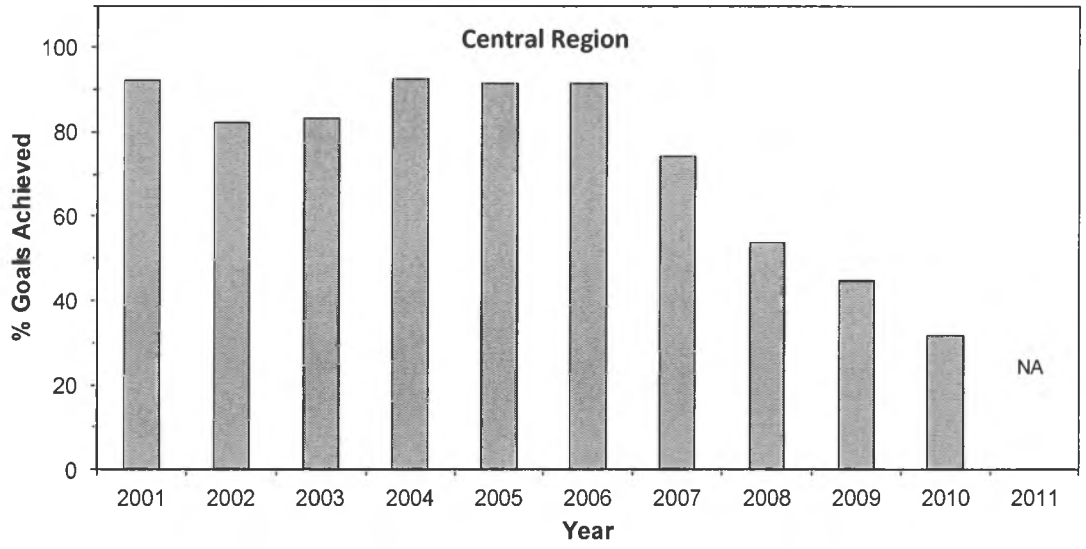

Figure 8: Percent of Chinook salmon escapement goals achieved (i.e. met or exceeded) in Central Region between 2001 and 2011. The number of Chinook salmon escapement goals in Central Region increased from 28 in 2001 to 29 in 2007. NA = estimates of escapement are not available for all Chinook salmon stocks with goals at this time.

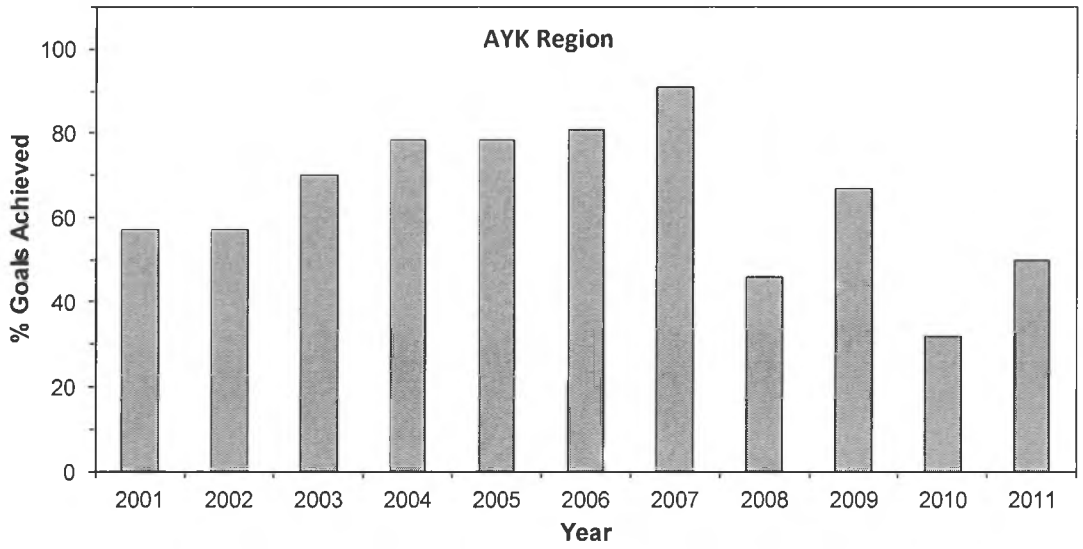

Figure 9: Percent of Chinook salmon escapement goals achieved (i.e. met or exceeded) in Arctic-Yukon-Kuskokwim Region between 2001 and 2011. The number of Chinook salmon escapement goals in Arctic-Yukon-Kuskokwim Region was 23 from 2001 to 2004, 25 in 2005 and 2006, 27 from 2007 to 2009 and 26 in 2010 and 2011.

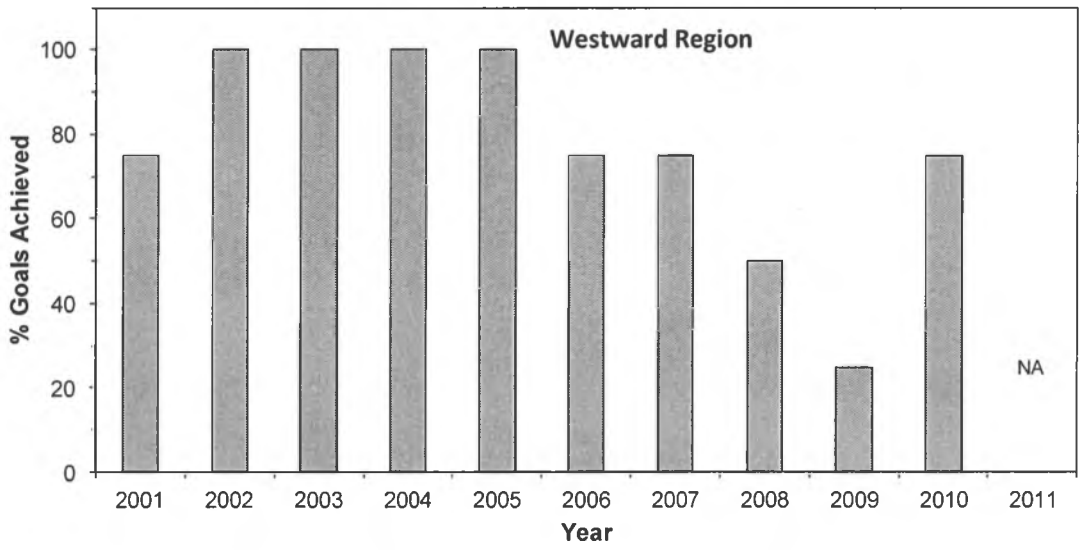

Figure 10: Percent of Chinook salmon escapement goals achieved (i.e. met or exceeded) in Westward Region between 2001 and 2011. Westward Region has had 4 Chinook salmon escapement goals since 2001. NA = estimates of escapement are not available for all Chinook salmon stocks with goals at this time.

Table 6. **Action Plan to address Chuitna, Lewis, and Theodore Rivers Chinook Stocks of Concern**

Escapement Summary

Chuitna River

- Escapement goal not achieved 2007-2010
- Average escapement 1979-2009; 1900 fish
- Average escapement 2007-2010; 900 fish

Theodore River

- Escapement goal not achieved 2007-2010
- Average escapement 1979-2005; 1090 fish
- Average escapement 2006-2010; 470 fish

Lewis River

- Escapement goal not achieved 2007-2010
- Average escapement 1979-2005; 560 fish
- Average escapement 2006-2010; 126 fish

Management Objectives

- Reduce commercial, sport, and subsistence harvest of Chinook salmon and reduce catch-and-release mortality of sport-caught Chinook salmon.

Research Objectives

- Develop West Cook Inlet King salmon genetic baseline
- Continue aerial escapement surveys
- Installation of weirs on Chuitna and Theodore Rivers
- Marine harvest sampling in Northern Cook Inlet for genetic stock identification

Table 7. **Action Plan to address Alexander Creek Chinook Stock of Concern**

Escapement Summary

- Escapement goal not achieved 2006-2010
- Average escapement 1979-1999; 3700 fish
- Average escapement 2001-2010; 1300 fish

Management Objectives

- Reduce Northern Pike abundance
- Reduce subsistence and commercial harvest of Chinook salmon

Research Objectives

- Long-term Northern Pike suppression
- Northern Pike Radio-telemetry studies
- Salmonid monitoring to determine success of pike suppression
- Aerial survey escapement monitoring
- Marine harvest sampling for genetic stock identification

Table 8. **Action Plan to address Willow and Goose Creeks Chinook Stock of Concern**

Escapement Summary

Willow Creek

- Escapement goal not achieved 2007-2010
- Average escapement 1979-2009; 2300 fish
- Average escapement 2007-2010; 1200 fish

Goose Creek

- Escapement goal not achieved 2007-2010
- Average escapement 1979-2009; 405 fish
- Average escapement 2007-2010; 91 fish

Management Objectives

- Reduce commercial, sport, and subsistence harvest of Chinook salmon

Research Objectives

- Include samples from Willow and Goose Creeks in Chinook salmon genetic baseline
- Continue aerial survey escapement estimates
- Monitor contribution of hatchery fish to Willow Creek escapements
- Marine harvest sampling for genetic stock identification

Table 9. **Action Plan to address Karluk Lake Chinook Stock of Concern**

Escapement Summary

- Escapement goal not achieved 2007-2011
- Average escapement 1976-1999; 9,130 fish
- Average escapement 2000-2009; 4,430 fish

Management Objectives

- Prohibit retention of commercially caught Chinook salmon > 28 inches in Inner and Outer Karluk and Ayakulik Sections, and adjacent sections
- In-season sport and subsistence restrictions by EO authority when runs are weak.

Research Objectives

- Maintain adult counting weir on Karluk River
- Opportunistically sample length, weight, and age of Chinook salmon smolts at sockeye smolt weir
- Fund king salmon smolt weir for quantitative estimates of smolt abundance
- Complete king salmon genetic baseline for Westward Region including Karluk Lake
- Develop watershed model for Karluk Lake watershed to estimate carrying capacity for Chinook salmon and escapements most likely to produce MSY

Table 10. **Action Plan to address Yukon River Chinook Stock of Concern**

Escapement Summary

- There are multiple escapement goals for the aggregate Yukon River Chinook run. Six escapement goals in Alaska (East and West Fork Andreavsky, Anvik, Nulato, Chena, Salcha) have generally been met over the past decade.
- Objectives for mainstem Chinook salmon passing into Canada have been met in two of the last five years, however, only with severe restrictions to subsistence and commercial harvest

Management Objectives

- Restrict or eliminate directed commercial fishing during weak runs
- Restrict subsistence fishing during weak runs
- Reduce exploitation of largest and oldest Chinook

Research Objectives

- Continued operation of test fishery, sonar projects, fish wheels, and weirs for abundance estimation
- Continued in-season genetic analyses to assess run components
- Collaborative near-shore marine research with NOAA
    - Develop a preseason forecast model for Yukon River Chinook salmon stocks that incorporates information on juvenile status. This research may have application to other Yukon salmon species
    - Evaluate changes in marine survival of juvenile Yukon River salmon stocks and potential contributors to recent declines of Yukon Chinook salmon related to: migratory behavior, freshwater life history strategies, diet, energetic condition, and size selective mortality.

Table 11. **Action Plan to address Norton Sound Sub-districts 5 and 6 Chinook Stocks of Concern**

Escapement Summary

- Escapements for these sub-districts are assessed with a peak aerial survey on the Shaktoolik River (sub-district 5) and a counting tower on the North River (sub-district 6), a tributary to the Unalakleet River
- Escapement goals for Shaktoolik Chinook have rarely been met during the past decade, however, aerial survey assessments are often viewed as incomplete due to poor visibility, abundant pink salmon, or survey timing in advance of peak spawning.
- Goals for the Unalakleet (N. River tower) have been met in 50% of years in the last decade, however this has sometimes been aided by subsistence harvest restrictions

Management Objectives

- Open directed pink and chum commercial fishery only if impacts to Chinook are minimized, and not before July 1.
- Restrict subsistence and sport harvest of Chinook salmon during weak runs

Research Objectives

- Analyze data from two year radio-telemetry study to determine reliability of North River as an indicator for drainage wide escapement.
- Continue operation of floating weir on Unalakleet River to assess escapement to mainstem
- Continue building Chinook genetic baselines for determining stock proportions in marine harvest.

Table 12. Bycatch of Chinook salmon in the pollock-directed fisheries of the Bering Sea, 2001-2011 and the long term average (1991-2011).

Year	Chinook salmon bycatch
2001	33,444
2002	34,495
2003	45,586
2004	51,696

STATE OF ALASKA

SEAN PARNELL, GOVERNOR

DEPARTMENT OF FISH AND GAME

OFFICE OF THE COMMISSIONER

P.O. BOX 115526
JUNEAU, AK 99811-5526
PHONE: (907) 465-4100
FAX: (907) 465-2332

March 13, 2012

The Honorable Donald Olson
Alaska State Legislature
State Capitol, Room 508
Juneau, Alaska 99801-1182

Dear Senator Olson:

I am writing in response to the letter dated February 28, 2012 from the Senate Finance subcommittee for the Department of Fish and Game regarding statewide Chinook salmon stocks.

After significant declines in Chinook salmon runs statewide during 2008 through 2010, the department moved to address gaps in our understanding of patterns and trends in production in Chinook salmon stocks around the state. To that end the department initiated a comprehensive analysis of Chinook salmon production data to determine if there are patterns in survival, growth, and/or maturation rates that might help explain why declines occurred and to help in development of a statewide outlook and forecast of Chinook salmon runs for the future. This effort is being conducted by department scientists in collaboration with a similar effort directed at Arctic-Yukon-Kuskokwim (AYK) Chinook salmon stocks by the AYK Sustainable Salmon Initiative.

Another ongoing effort in the AYK region is the update of the Comprehensive Salmon Plan by the Norton Sound/Bering Strait Regional Planning Team. This stakeholder-driven program ensures that any enhancement activities are developed and supported locally, utilizing local and traditional knowledge, and based on meeting the needs of the region. The resultant plan will document enhancement efforts, set production goals, and identify potential new projects. Development of additional planning teams could be an option in other areas of the region.

Department staff put together the attached report to address questions raised in your letter. As requested, this report provides a review of Chinook salmon stocks of concern, and presents the associated action plan. Like you, I recognize the importance of the resource to Alaskans. For that reason, in addition to funding for Chinook management already in the department's base budget, we have proposed several items in the FY13 operating and capital budget that will bolster our efforts in this area:

FY13 Operating Budget

Match for Southeast Chinook Salmon Work	$500.0
Pacific Salmon Treaty Chinook Technical Committee Support	$190.0
Tanana River Sonar Project (one-time equipment plus operating costs)	$590.0

FY13 Capital Budget

Kenai River King Salmon Sonar Assessment Program	$1,813.0
Upper Cook Inlet ESSN Chinook Salmon Harvest Patterns	$789.0

You also expressed concern about bycatch measures to protect Chinook salmon while at sea. Through the State of Alaska's seat on the North Pacific Fishery Management Council (council) we have been successful in securing a cap on the bycatch of Chinook salmon in Gulf of Alaska pollock trawl fisheries and have also begun evaluation of Chinook salmon bycatch control in non-pollock trawl fisheries in the Gulf. The council also continues work on measures to control chum salmon bycatch in the Bering Sea pollock trawl fishery.

Chinook salmon bycatch in the Bering Sea pollock trawl fishery has been reduced from recent highs but remains a concern to many Alaskans. We are currently gathering additional data on the location and seasonality of stocks of greatest concern in the bycatch and the council will receive reports this month on how the cap and incentive plans operated in the first year. Further refinements to the Chinook salmon bycatch control measures to better protect stocks of concern may be necessary as a result of improved data on bycatch and fishery performance.

If you have further questions or require additional information, please contact me.

Sincerely,

Cora Campbell

Cora Campbell
Commissioner

RE: SB 205 Hearing Request

Chinook salmon are an important staple food of Alaska Native Villages, an economically important species for a number of commercial fisheries, and a prized sport fish.

The state fish of Alaska has undergone significant shifts in abundance during the past 40 years, yet little is known about the factors influencing these shifts. Eight of the 14 "stocks of concern" are Chinook salmon stocks.

SB 205 would create an endowment fund administered by a 7-member board consisting of the Commissioner of the Department of Fish & Game and six members from across the state. Grants from the fund would only be issued to qualifying organizations.

This legislation would create a stable, long-term source of funding to support high quality interdisciplinary research.

I would appreciate your hearing this bill at your earliest convenience.

Please direct questions to my staff, David Scott.

CS FOR SENATE BILL NO. 205( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS OLSON, Wagoner, Hoffman, Stevens

A BILL

FOR AN ACT ENTITLED

"An Act establishing the Alaska Chinook research and restoration endowment fund and relating to grants from the fund."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 37.14 is amended by adding new sections to read:

Article 7A. Alaska Chinook Salmon Research and Restoration Endowment Fund.

Sec. 37.14.650. Fund established. (a) The Alaska Chinook salmon research and restoration endowment fund is established as a separate endowment trust fund of the state consisting of

(1) appropriations to the fund;

(2) donations to the fund; and

(3) income earned on investments of fund assets appropriated by the legislature to the fund.

(b) The commissioner of revenue shall manage the fund as an endowment, with the goal that the purchasing power of the fund will not diminish over time

New Text Underlined [DELETED TEXT BRACKETED]

without regard to additional contributions that may be made to the fund. The commissioner shall invest the assets of the fund in a manner likely to yield at least a five percent real rate of return over time. The commissioner may comingle the assets of the fund with other public funds for purposes of investment.

(c) In carrying out the investment duties for the fund, the commissioner of revenue has the powers and duties set out in AS 37.10.071. The commissioner shall

(1) provide annual reports to the board on the condition and investment performance of the fund;

(2) maintain records for all donations to the fund; the records must reflect, for each donation, the amount of the donation, the date of the donation, and the donor's intent, if any, with respect to how the donation is to be used; and

(3) monitor use of money by the board.

(d) Nothing in this section creates a dedicated fund.

Sec. 37.14.655. Grant account established. The Alaska Chinook salmon research and restoration grant account is established as an account in the general fund.

Sec. 37.14.660. Appropriations to the grant account. (a) As soon as practicable after July 1 of each year, the commissioner of revenue shall identify as available for appropriation to the Alaska Chinook salmon research and restoration grant account, from which the board may award grants, and for other allowed expenses, the greater of

(1) five percent of the average of the market values of the fund on June 30 for the immediately preceding three fiscal years;

(2) one-half of the earnings of the fund as averaged annually over the immediately preceding three fiscal years; and

(3) if the principal of the fund is valued at over $50,000,000 based on the market value of the fund on June 30 for the immediately preceding fiscal year, the total earnings of the fund for that fiscal year.

(b) The legislature may appropriate funds to the grant account

(1) from

(A) the fund in the amount calculated under (a)(1) of this section; or

(B) the earnings of the fund under (a)(2) or (3) of this section; and

(2) from any other source.

Sec. 37.14.665. Use of the grant account. (a) Appropriations to the grant account established by AS 37.14.655 may be used for

(1) grants for research and restoration projects for Chinook salmon stocks located in the state, including block grants to Alaska organizations identifying and administering research and restoration projects for Chinook salmon stocks, if the project is consistent with a research and restoration plan adopted by the organization and the plan has been approved by the Department of Fish and Game;

(2) reimbursement of the Department of Revenue for the costs of establishing and managing the fund;

(3) reimbursement of the Department of Commerce, Community, and Economic Development for the costs of establishing, maintaining, and administering the board and the grant program;

(4) matching funds for private and federal grants; and

(5) solicitation of contributions for purposes consistent with establishment of the fund.

(b) The board may expend private donations for Chinook salmon research and restorations projects and other uses consistent with the purposes of the fund and in conformity with the donor's restrictions.

Sec. 37.14.670. Board established. The Alaska Chinook Salmon Research and Restoration Endowment Fund Board is established in the Department of Commerce, Community, and Economic Development.

Sec. 37.14.675. Board members. The board consists of the following members appointed by the governor:

(1) the commissioner of fish and game or the commissioner's designee; and

(2) six public members, one residing in each of the following regions who is engaged in subsistence, personal, commercial, or sport use of Chinook salmon stocks in the region:

(A) Southeast Alaska, consisting of all land and water between (Palm Point near Katalla) and Dixon Entrance that are Gulf of Alaska or mainland drainages; the Guyot Hills; islands in Stephens Passage and Lynn Canal; Coronation Island, Kuiu Island, Kupreanof Island, Mitkof Island, Zarembo Island, Kashevarof Island, Woronkofski Island, Etolin Island, Wrangell Island, Deer Island, Admiralty Island, Baranof Island, Chichagof Island, Yakobi Island, Inian Island, Lemesurier Island, Pleasant Island, (Kanak Island, Wingham Island, and Kayak Island) and adjacent marine water and land within three miles of the coastline;

(B) Southcentral Alaska, consisting of all land and water in those drainages south and east of the Alaska Range that drain into the Gulf of Alaska, Cook Inlet, and Prince William Sound between (Palm Point near Katalla) and Cook Inlet; the drainage between Redoubt Creek and the northern boundary of Katmai National Preserve that flows into Shelikof Strait; the Chitina drainage east to the Canadian border; the drainages into the Delta River upstream from Falls Creek and Black Rapids Glacier; and adjacent marine water and land within three miles of the coastline;

(C) Southwest Alaska, consisting of all land and water between Kennedy Entrance and Cape Newenham that drain into Bristol Bay and the Bering Sea; the Alaska Peninsula; Hagemeister Island, Walrus Island, Kodiak Island, Barren Island, Pribilof Island, Unimak Island, and Aleutian Islands; and adjacent marine water and land within three miles of the coastline;

(D) Western Alaska, consisting of all land and water between Cape Newenham and the Pastolik River near Kotlik that drain into the Bering Sea from the Yukon River downstream from a straight line drawn between Lower Kalskag and Kotlik; the George River drainage; the Kuskokwim River drainage downstream from the George River drainage; the Holitna River drainage; the Hoholitna River drainage; and adjacent marine water and land within three miles of the coastline;

(E) Arctic Alaska, consisting of all land and water between the Pastolik River near Kotlik and Harrison Bay west of the Ilkillik River drainage

that drain into the Arctic Ocean, the Chukchi Sea, Kotzebue Sound, or Norton Sound; Saint Lawrence Island and adjacent islands; and the adjacent marine water and land within three miles of the coastline;

(F) Interior Alaska, consisting of all land and water of the Kuskokwim River drainage upstream from the George River drainage; all drainages into the east bank of the Robertson River; White River drainage to the Canadian border; Tozitna River drainage; Yukon River drainage upstream from the Tozitna River drainage; Hamlin Creek drainage; all drainages into the south bank of the Yukon River upstream from and including the Charley River drainage; the Ladue River drainage; Fortymile River drainage; Tanana River drainage north of the Alaska Range; and the Koyukuk River drainage.

Sec. 37.14.680. Duties of the board. (a) The Alaska Chinook Salmon Research and Restoration Endowment Fund Board shall administer the grant program.

(b) The board shall

(1) within 90 days after the appointment of the seventh board member, adopt bylaws governing the board's operation and identify an organization incorporated in Alaska to support the board in performing its duties;

(2) monitor approved projects for compliance with specific grant conditions;

(3) keep electronic recordings of each meeting of the board to be made available on request; and

(4) adopt regulations creating a process for soliciting, awarding, and monitoring research and restoration grants and ensuring peer review for grant projects; the board shall consider the process and structure of the North Pacific Research Board in adopting its regulations.

(c) On February 1 of each year following the calendar year grants are first awarded, the board shall prepare and submit a report to the governor and make the report available to the legislature. The report must include, for the last calendar year,

(1) the number of applicants and the number and type of grants awarded;

(2) the dollar amount of grants awarded;

(3) the research and restoration projects funded and the results of those projects;

(4) the expense to administer the fund, the grants, and the board; and

(5) private contributions, if any, to the fund and how those contributions were used.

Sec. 37.14.685. Review of grants. (a) When reviewing grant applications, the board shall give weight to the following factors:

(1) whether the Chinook salmon stocks targeted in the grant application provide a significant commercial, subsistence, sport, or personal use fishery for Alaska residents;

(2) the importance of the Chinook salmon stocks targeted in the grant application and the fisheries those stocks support, based on the dependence of Alaska residents on the stocks for nutritional, economic, social, and cultural well-being;

(3) whether the applicant has experience in administering research or restoration projects for Chinook salmon;

(4) recommendations of state agencies or organizations involved in Chinook salmon management in the state.

(b) The board shall give priority to grant applications for research or restoration projects targeting Chinook salmon stocks that, within the preceding 10 years,

(1) were listed by the Department of Fish and Game as stocks of concern; ? numbers too low to be listed ?

(2) were the subject of a state or federal fisheries disaster declaration;

(3) were closed or significantly restricted for commercial, sport, or personal use, or restricted for subsistence uses; or

(4) declined significantly from historic yield levels.

Sec. 37.14.695. Definitions. In AS 37.14.650 - 37.14.695,

(1) "board" means the Alaska Chinook Salmon Research and Restoration Endowment Fund Board established under ~~AS 37.14.670~~;

(2) "Chinook salmon" means Alaska king salmon of the genus Oncorhynchus, species tshawytscha;

latin

(3) "fund" means the Alaska Chinook salmon research and restoration endowment fund established under AS 37.14.650;

(4) "grant account" means the Alaska Chinook salmon research and restoration grant account established under AS 37.14.655.

SECTIONAL ANALYSIS

SB 205 version D – ALASKA CHINOOK SALMON RESEARCH AND RESTORATION ENDOWMENT FUND

Section 37.14.650 Establishes the Alaska Chinook salmon research and restoration fund (hereafter: "the Fund") in the Dept. of Revenue. The Fund includes appropriations and donations to the Fund, and income earned on investments of Fund assets. Commissioner of Revenue manages the Fund sustainably, with a goal of 5% real rate of return. Nothing in this section creates a dedicated fund.

Section 37.14.655 Establishes the Alaska Chinook salmon research and restoration grant account (hereafter: "the Grant Account") in the general fund.

Section 37.14.660 After July 1 each year, the Commissioner of Revenue identifies as available for appropriation to the grant account established under the previous section the greater of: 5% of the Fund averaged over the 3 preceding years; ½ the Fund's earnings averaged over the 3 preceding years; or, if the Fund is valued at over $50,000,000, the total earnings of the Fund for that year. The legislature may then appropriate to the Grant Account amounts from any of the 3 preceding calculations or from any other source.

Section 37.14.665 Appropriations to the Grant Account may be used for: grants for research and restoration projects for Alaska Chinook salmon stocks; reimbursement to the Dept. of Revenue for the costs of establishing or managing the Fund; reimbursement to DCCED for the costs of establishing and administering the Board and the grant program; matching funds for private and federal grants; and solicitation of contributions for purposes consistent with establishment of the Fund. The Board may also expend private donations for uses consistent with purposes of the Fund.

Section 37.14.670 Establishes the Alaska Chinook Salmon Research and Restoration Endowment Fund Board (before and hereafter: "the Board") in DCCED.

Section 37.14.675 Board members appointed by the Governor include: the Commissioner of Fish & Game; six public members, one each residing in Alaska's Southeast, Southcentral, Southwest, Western, Arctic, and Interior regions, who are engaged in subsistence, personal, commercial, or sport use of Chinook salmon.

Section 37.14.680 The Board shall administer the Grant Program. Within 90 days after the appointment of the last Board member, the Board shall adopt bylaws governing its operation and identify an organization incorporated in Alaska to support the Board in performing its duties. The Board shall also: monitor projects for compliance; keep electronic recordings of each meeting; and adopt regulations creating a process for soliciting, awarding, and monitoring grants (the Board shall consider the North Pacific Research Board while adopting these regulations).

On February 1 of each year, the Board shall prepare a report for the Governor and Legislature that includes: the number of applicants and types of grants awarded; dollar amount of grants awarded; projects funded and results of those projects; expense to administer the Fund, the grants, and the Board; and how any private contributions were expended.

Section 37.14.685 When reviewing grant applications, the Board shall consider: whether the Chinook salmon targeted in the grant are significant to Alaskans; whether the applicant has appropriate experience; and the recommendations of state agencies or organizations involved in Chinook salmon management.

The Board shall give priority to grants that target Chinook salmon stocks that were, within the previous ten years: listed by Dept. of Fish & Game as stocks of concern; subject to a state or federal fisheries disaster declaration; closed or significantly restricted; or declined significantly from historic yields.

Section 37.14.695 Lists four definitions that are already apparent in the foregoing.

Subject: SRES hearing today

Hi Jeff,

Just a FYI, we'll have a few people available for questions on a few bills up today.

For SB 181, we'll have Wyn Menefee, Dep. Director of Mining, Land and Water available in person. Online, we would like to have Adam Smith available for technical questions in case they come up. He is the Natural Resource Manager of the South-central Region Land Office. Can I give him the teleconference number?

For SB 158, we'll have Chris Maisch, Director of Forestry available in person.

Thanks a lot!

Memo

To: Senator Tom Wagoner, Co-Chair of Senate Resources Committee

From: Senator Joe Paskvan, Co-Chair of Senate Resources Committee

Re: Hearing request for Senate Bill 207: Resident Hunt and Sport Fish License Exemption

---

I respectfully request that Senate Bill 207, "An Act relating to exemptions for a resident hunting and sport fishing license and to taking fish and game by proxy for a person with mental or physical disabilities," be scheduled for a hearing in the Senate Resources Committee.

Senate Bill 207 seeks to preserve and improve access for a population who may experience difficulties securing the opportunity to experience Alaska's great outdoors. Specifically, SB 207 provides for free resident hunting and fishing licenses for individuals who have a mental or physical disability. The bill further allows for mentally disabled persons to have a proxy hunt or fish in their stead.

Many Alaskans, who have a significant physical or mental disability, already receive State or Federal services or financial assistance and it is estimated that individuals with disabilities are twice as likely to live in poverty as those without disabilities. Alaskans with physical and mental disabilities already face higher logistical and financial hurdles to participating in hunting and fishing activities. Senate Bill 207 is one step towards providing one less hurdle for Alaskans with disabilities to be able to participate in these traditional and enriching activities.

Please feel free to contact myself or my staff, Anna Sorensen, at 465-3709 or AnnaMarie_Sorensen@legis.state.ak.us with any questions you may have.

Thank you for your consideration.

SB 207: Resident Hunt and Sport Fish License Exemption

"An Act relating to exemptions for a resident hunting and sport fishing license and to taking fish and game by proxy for a person with mental or physical disabilities."

For many Alaskans hunting and fishing are an honored tradition and way of life. Alaskans of all ages find great fulfillment while exploring the beautiful, wild spaces Alaska has to offer and sense of purpose in providing food for their families and community.

Senate Bill 207 seeks to preserve and improve access for a population who may experience difficulties securing the opportunity to experience Alaska's great outdoors. Specifically, SB 207 provides for free resident hunting and fishing licenses for individuals who have a mental or physical disability. The bill further allows for mentally disabled persons to have a proxy hunt or fish in their stead. This consideration is already provided for individuals who are physically disabled, blind, or 65+ years of age. Statute also currently allows for free resident hunting and fishing licenses for seniors (60+ y/o), disabled veterans, Alaska National Guard members, and Alaska Military Reserves members.

Many Alaskans, who have a significant physical or mental disability, already receive State or Federal services or financial assistance and it is estimated that individuals with disabilities are twice as likely to live in poverty as those without disabilities. Alaskans with physical and mental disabilities already face higher logistical and financial hurdles to participating in hunting and fishing activities. Senate Bill 207 is one step towards providing one less hurdle for Alaskans with disabilities to be able to participate in these traditional and enriching activities.

Thank you for your consideration of SB 207. I urge you to support this important legislation that will ensure that Alaskans with physical and mental disabilities can more readily enjoy hunting and fishing.

MEMORANDUM February 24, 2012

SUBJECT: Sectional Summary of SB 207 (Work Order No. 27-LS0718\I)

TO: Senator Joe Paskvan
Attn: Anna Sorensen

FROM: Alpheus Bullard
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds a legislative intent provision to the uncodified law of the state relating to the manner in which section 4 of the bill should be implemented.

Section 2. Conforms AS 16.05.340(a)(17) to AS 16.05.341(b) added by section 4 of the bill.

Section 3. Conforms AS 16.05.340(a)(23) to AS 16.05.341(b) added by section 4 of the bill.

Section 4. Provides that a person with certain mental or physical disabilities may receive a resident hunting and sport fishing license without charge.

Section 5. Permits certain persons to take game on behalf of a person with mental disabilities.

Section 6. Permits certain persons to take fish on behalf of a person with mental disabilities.

Section 7. Provides a definition of "person with mental disabilities" for AS 16.05 (Fish and Game Code).

Section 8. Provides an instruction to the Revisor of Statutes to change the catch line (title) of AS 16.05.341.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB 207 \A
2012 LEGISLATIVE SESSION

Analysis

According to the 2010 census approximately 11% of Alaskans are disabled. Of the 464,000 Alaska residents age 16-59 (April 2010 census), 51,000 (11 percent) would qualify as disabled. The divsion of Administrative Services believes 25,500, approximately 50% of eligible disabled persons, would take advantage of a free license at the beginning of the program and it is possible that percentage could increase once word of a free license gets out.

Based on the Licensing section's years of experience in administering the existing 8,400 free annual licenses to Alaska seniors, disabled veterans and military reserves, a free disabled person's license would add to the section's administrative costs.

Personal Services:
The Licensing section would need to hire a full time Office Assistant II for the duration of the program. Salary and benefits would amount to $75,900 in the first year.

Commodities:
Like the other free licenses, Licensing would need to provide a unique license in order to differentiate the form from the regular fishing and hunting licenses. It is estimated that the initial cost of a free disabled license would cost $1 each for a total of $25,500. This would cover the costs for the application form, special license, envelope and postage. This cost would increase slightly each year.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB 207 \A
2012 LEGISLATIVE SESSION

Analysis

According to the 2010 census approximately 11% of Alaskans are disabled. Of the 464,000 Alaska residents age 16-59 (April 2010 census), 51,000 (11 percent) would qualify as disabled. The divsion of Administrative Services believes 19,890, approximately 39% of eligible disabled persons, would take advantage of a free license at the beginning of the program and it is possible that percentage could increase once word of a free license gets out.

The Division of Wildilfe Conservation estimates that it's revenues will decrease by the value of the 19,890 free licenses that previously sold for $25.00. This equates to a loss of $497.3 of revenue into the Fish & Game Fund for Wildlife Conservation. An estimated 10% of those who bought a hunting license also bought a waterfowl conservation stamp for $5.00. The loss of revenue from waterfowl conservation stamps is $9.9. The total between the loss of license sales and waterfowl conservation stamps is $507.2

The loss of licensing revenue for Wildilfe Conservation could jeopardize the division's ability to have sufficient match funding for federal Pittman-Robertson Wildlife Restoration funding. State's must match the PR funding on a 3:1 basis (75%/25%). If $507.2 is not available for matching, then $1,531.5 of available federal funds can not be earned and used for wildlife managment. The overall loss of revenue would be $2,028.2.

The loss of revenue toward wildlife management represents 6.4% of the available budget to manage wildlife across the state. A potential reduction of staff between 15 and 18 positions could be required if an alternate source of matching funds is not identified.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 207 \A

Analysis

According to the 2010 census approximately 11% of Alaskans are disabled. Of the 464,000 Alaska residents 16-59 in age (April 2010 census), 51,000 (11 percent) would qualify as disabled. The Division of Administrative Services, Licensing Section estimates 19,890, approximately 39% of eligible disabled persons, would take advantage of a free license at the beginning of the program and possibility could increase once word of the program becomes common place.

39% eligible=19,890 licensee's
19,890 x $15 = **$298,350** (resident license revenue without the hatchery surcharge);
19,890 x $9 = **$179,010** (lost hatchery surcharge revenue can only be used to pay down hatchery bond debt);

In 2011 69% of resident license holders purchased a king salmon stamp
19,890 x 69% = 13,724 king salmon stamps sold @$10/stamp = **$137,240** in lost stamp revenue.

Total lost revenue for licenses, surcharge and king salmon stamps = **$614,600**
Foregone Federal Aid due to lost or nonexistent match 75%(Federal-Sport Fish Restoration Fund)/25%(license revenue-state) match ratio = $298,350 + 137,240 = $435,590 (25% Fish and Game Fund match) = $1,306,770 (75% in lost federal funds).

The Division of Sport Fish relies on license sales and Federal Sport Fish Restoration funds for about 74% of our annual division revenue. If there are 19,890 eligible applicants for this free license we project: $298,350 in foregone license sale revenue; $179,010 in lost license hatchery construction surcharge revenue; and $137,241 in lost king salmon stamp revenue. The revenue collected from the sale of sport fishing licenses is used as matching funds for securing federal aid funds which would result in an estimated loss of $1,306,770 in federal revenue.

The Division of Sport Fish has absorbed substantial losses of revenue (approximately $6.5 million dollars) over the last several years owing to the national economy and manifest in the loss of about 75,000 non resident fishing licenses and king salmon stamps . Further decline in revenues will affect core services for the division on multiple fronts and impact our ability to provide protection for recreational sport fishing opportunity.

To: Senators Tom Wagoner and Joe Paskvan
Co-Chairs, Senate Resources Committee

From: Senator Bill Wielechowski

Date: March 6, 2011

Subject: Hearing request for SB 209

I am writing to request a hearing on SB 209, which would encourage greater and timelier development of the state's oil and gas resources, consistent with Alaska's constitutional mandate to develop the state's natural resources for the maximum benefits of its people.

This bill was developed in response to concerns that some oil companies are winning exclusive leases of state lands with high oil and gas potential, then delaying development of those leases, effectively warehousing Alaska's resources.

To address this concern, SB 209 requires:

1) companies interested in acquiring an exclusive lease of state petroleum lands to submit a plan of exploration or development for those lands;

2) the Department of Natural Resources (DNR) to review each plan and determine if it will develop the state's resources in the best interest of the state before "qualifying" the company to bid on a lease;

3) DNR to include work plans submitted by winning bidders within the terms of their leases; and

4) DNR to annually review leases to ensure that lease holders are developing state lands consistent with their plans of exploration or development.

Sponsor Statement

SB 209: Spurring Greater Oil and Gas Production Through Improved Leasing Procedures

The purpose of SB 209 is to encourage greater and timelier development of the state's oil and gas resources, consistent with our constitutional mandate to develop the state's natural resources for the maximum benefits of Alaskans.

It was developed in response to concerns that some oil companies are winning exclusive leases of oil-rich state lands, then sitting on those leases and warehousing Alaska's resources, while investing elsewhere. For example, some state lands with vast quantities of oil and gas were leased more than three decades ago and have yet to be developed.

To address this concern, SB 209 requires:

1) companies interested in acquiring an exclusive lease of state petroleum lands to submit a plan of exploration or development for those lands;

2) the Department of Natural Resources (DNR) to review each plan and determine if it will develop the state's resources in the best interest of the state before "qualifying" the company to bid on a lease;

3) DNR to include work plans submitted by winning bidders within the terms of their leases; and

4) DNR to annually review leases to ensure that lease holders are developing state lands consistent with their plans of exploration or development.

SB 209 also provides a process for the Commissioner of DNR to waive a work commitment if conditions outside the lessee's control prevent the work from being carried out.

Please join me in supporting SB 209.

SB 209: Oil and Gas Leasing

Fact Sheet

- One way to address declining oil production is to ensure that oil and gas leases go to companies that will develop leases expeditiously and efficiently.

- Last year the Department of Natural Resources reported that of 1,320 leases, 578 were part of production units or were producing oil or gas, 404 had been sold in the preceding three years (so might still be in the planning stages), and 338 could be "idle," as lessees had not applied for any permits to explore or develop them.

- This means more than 25% of existing leases could be sitting idle, effectively warehousing Alaska's resources.

- Under existing statutes, the DNR commissioner has the option of including a minimum work commitment in a lease, along with a penalty provision in the event the lessee does not fulfill the work commitment.

- This bill requires that work commitments be part of a lease, consistent with the Alaska Constitution's mandate to develop our natural resources for the maximum benefit of the people.

- The bill has the following provisions:

    - requires bidders for an oil and gas lease to submit a plan of development for exploring, developing, and/or producing from the lease;

    - requires the commissioner to review each bidder's plan of development and determine if the plan is "reasonably expected to develop the lease in the best interest of the state";

    - a bidder may not be a "qualified bidder" if the commissioner finds the bidder has not submitted a plan that is in the state's best interest or the bidder is not "reasonably capable" of implementing the plan;

    - requires that these plans be included in leases and that DNR review leases annually to ensure that plans are being implemented;

    - allows the commissioner to waive a work commitment if conditions preventing drilling or exploration were beyond the lessee's reasonable ability to foresee or control or the lessee demonstrates through good faith efforts an intent to drill or develop the lease in the following two years;

Provided by the Office of Senator Wielechowski

- requires DNR to analyze the economics of each Participating Area (a unitized reservoir where sustained production is occurring) every five years to determine whether the Area is capable of increased production; and

- requires DNR to annually submit a report to the legislature that lists each lease found to be out of compliance and the action taken by the commissioner to bring the lessee back into compliance.

Provided by the Office of Senator Wielechowski

FORM NO. DL-1
(Revised May, 1973)

STATE OF ALASKA
DEPARTMENT OF NATURAL RESOURCES
Division of Lands

LEASE NO. ADL -63059

Competitive Oil and Gas Lease

THIS LEASE is made by and between the State of Alaska, acting by and through the Director of the Division of Lands, Department of Natural Resources or his authorized agent, hereinafter called 'Lessor', and

Union Oil Company of California

909 W. 9th Avenue, Anchorage, Alaska 99501

hereinafter called 'Lessee', whether one or more.

1. GRANT. For and in consideration of a cash bonus and the first year's rental, the receipt of which is hereby acknowledged, and of the rentals, royalties, covenants, and conditions herein contained on the part of the Lessee to be paid, kept and performed, and subject to the conditions and reservations herein contained, Lessor does hereby grant and lease unto Lessee, exclusively, without warranty, for the sole and only purposes of exploration, development, production, processing and marketing of oil, gas, and associated substances produced therewith, and of installing pipe lines and structures thereon to find, produce, save, store, treat, process, transport, take care of and market all such substances, and for housing and boarding employees in its operation thereon, the following described tract of land in Alaska:

T2N, R12W, S.M.

Section 4: Protracted remainder only
Section 5: All

containing 756.38 acres, more or less, hereinafter called 'said land'.

For the purposes of this lease, said land contains the legal subdivisions, as shown on the plat of said land attached hereto, marked Exhibit A and by this reference made a part of this lease.

If said land is described above by protracted legal subdivision and Lessor hereafter causes said land to be surveyed under the public land rectangular system, the boundaries of said land shall be those established by such survey, when approved, subject, however, to the provisions of the regulations relating o such surveys.

2. 'OIL AND GAS'. 'Oil' means crude petroleum oil and other hydrocarbons regardless of gravity which are produced and saved in liquid form at the well by ordinary production methods. 'Gas' means all natural gas and all hydrocarbons produced at the well not defined herein as oil. 'Associated substances' mean all substances produced in association with oil or gas and not definnd herein as oil or gas.

3. TERM. This lease is issued for an initial primary term of 10 years from date hereof, subject to extension as provided in Paragraph 4 hereof, and shall continue so long thereafter as oil and gas or either or any of them are produced in paying quantities from said land: provided, that this lease may be extended beyond its primary term as provided in Paragraph 5 hereof and shall not expire under the conditions set forth in Paragraphs 6, 7, and 8 hereof.

4. EXTENSION BY SUSPENSION OF OPERATIONS. If, prior to the expiration of the primary term, Lessor, in the interest of conservation, directs or assents to the suspension of all operations and production, if any, hereunder, the primary term will be extended by adding the period of suspension thereto.

5. EXTENSION BY UNIT PRODUCTION. (a) This lease shall without application be extended beyond its primary term if upon or prior to the expiration date of such term the lease is committed to a unit agreement approved or prescribed by Lessor as provided in the regulations, production of oil or gas is had in paying quantities under the agreement, and a portion of such production is allocated to said land under the agreement. In such event this lease shall continue in effect so long as it remains subject to such agreement and actual production under said agreement is allocated to said land; (b) The commissioner may, in his discretion provide for the extension of the term of this lease, if such lease is on the expiration date thereof included in an approved unit plan or if it is included in a program of secondary recovery operation designed to bring about or restore production, provided, however, that if any lease or portion thereof is eliminated from such unit plan or recovery program, or if such unit plan or recovery program is terminated, then any such lease or portion thereof shall continue in full force and effect for ninety (90) days from the date of such elimination or termination and so long thereafter as drilling or redrilling operations are being conducted thereon and so long thereafter as oil or gas is produced in paying quantities.

6. EXTENSION BY DRILLING. (a) If production shall have been obtained in paying quantities during the primary term, and if, at the end of the primary term, or at any time prior to the end of the primary term, such production shall have ceased from any cause, or in the event production shall at any time or times after the expiration of the primary term cease from any cause, then this lease shall not terminate if the Lessee commences drilling or reworking operations (either in a well from which such production has ceased or in a new well) within sixty days after the cessation of production, and the lease shall remain in full force and effect so long as such operations are prosecuted with reasonable diligence or are suspended under Paragraph 25 hereof; and, if such drilling or reworking operations result in the production of oil or gas, the lease shall remain in full force and effect so long as oil or gas is produced therefrom in paying quantities; (b) if actual drilling has commenced on the expiration date of the primary term of the lease and is continued with reasonable diligence, such operations to include redrilling, sidetracking or other means necessary to reach the originally proposed bottom hole location, the lease shall continue in full force and effect until ninety (90) days after such drilling had ceased and for so long thereafter as oil or gas is produced in paying quantities.

7. EXTENSION BY SHUT-IN PRODUCTION. If, upon the expiration of the primary term or at any time or times thereafter, there is on said land a well capable of producing oil or gas in paying quantities, this lease shall not expire because Lessee fails to produce the same unless Lessor gives notice to Lessee allowing a reasonable time, which shall not be less than sixty days, after such notice to place the well on a producing status, and Lessee fails to do so; provided, that after such status is established such production shall continue on the said land unless and until suspension of production is allowed by Lessor.

8. EXTENSION BY SUSPENSION OF PRODUCTION. This lease shall not expire because of any suspension of operations in or upon or production from said land if such suspension is made under any order or with the consent of Lessor.

9. RENTAL. This lease shall terminate on any anniversary date hereof prior to the completion on said land of a well capable of producing oil or gas in paying quantities, unless on or before said anniversary date Lessee shall pay or tender to Lessor as annual rental a sum equal to $1.00 per acre, or fraction therof, then included in this lease, or unless such annual rental has been waived or suspended as provided in Paragraph 12 of this lease. If Lessor's office is not open for business on the anniversary date, the time for payment is extended to include the next day on which said office is open for business.

10. MINIMUM ROYALTY. Commencing with the lease year beginning on or after completion on said land of a well capable of producing oil or gas in paying quantities, Lessee shall pay Lessor, at the expiration of each lease year, in lieu of rental a minimum royalty equal to $1.00 per acre, or fraction thereof, then included in this lease, or the difference between the actual royalty paid on production during the year if less than $1.00 per acre and the rescribed minimum royalty.

11. ROYALTY ON PRODUCTION. Except for oil and gas used on said land for development and production or unavoidably lost, Lessee shall pay Lessor as royalty the following:

(a) On oil 16-2/3 per cent in amount or value of the oil produced and saved and removed or sold from said land.

(b) On gas 16-2/3 per cent in amount or value of the gas produced and saved and sold or used off said land or used for the extraction of natural gasoline or other products therefrom.

(c) On associated substances 16-2/3 per cent in amount or value of such substances produced and saved and removed or sold from said lands.

12. REDUCTION OF RENTAL AND ROYALTY. Rental or minimum royalty may be waived, suspended, or reduced, or royalty may be reduced on all of said land or any tract or portion thereof segregated for royalty purposes if Lessor finds that such relief is necessary for the purpose of encouraging the greatest ultimate recovery of oil or gas and is in the interest of conservation of natural resources and either that such relief is necessary in order to promote

13. ROYALTY IN KIND. Whenever, at the option of Lessor, which may be exercised from time to time upon not less than six months notice to Lessee, Lessor elects to take its royalty in kind, Lessee shall deliver free of charge (on said land or at such place as Lessor and Lessee mutually agree upon) to Lessor or to such individual, firm, or corporation as Lessor may designate all royalty oil and/or gas produced and saved from said land. Such oil and/or gas shall be in good and merchantable condition. Lessee shall, if necessary, furnish storage for royalty oil free of charge for thirty days after the end of the calendar month in which the oil is produced from said land; provided, that Lessee shall not be held liable for loss or destruction of royalty oil and/or gas from causes beyond Lessee's reasonable control. Should Lessee dehydrate or clean the oil or gas produced from said land, Lessee shall be entitled to an allowance of the actual cost of dehydrating or cleaning said royalty oil or gas.

14. ROYALTY IN VALUE. At the option of Lessor, which may be exercised from time to time upon not less than six months notice to Lessee, and in lieu of royalty in kind, Lessee shall pay to Lessor the field market price or value at the well of all royalty oil and/or gas. All royalty that may become payable in money to Lessor shall be paid on or before the last day of the calendar month following the month in which the oil or gas is produced. The payments shall be accompanied by copies of run tickets or other satisfactory evidence of sales, shipments, and amounts of gross production.

15. PRICE. The field market price or value of royalty oil or gas shall not be less than the highest of: (1) The price actually paid or agreed to be paid to Lessee at the well by the purchaser thereof, if any; or (2) The posted price of Lessee in the field for such oil or gas at the well, if any, or, (3) The prevailing price received by other producers in the field at the well for oil of like grade and gravity or gas of like kind and quality at the time such oil or gas is removed from said land or run into storage, or such gas is delivered to an extraction plant.

16. PAYMENTS. All payments to Lessor under this lease shall be made payable to the Department of Revenue of the State of Alaska and shall be tendered to Lessor at the place designated under Paragraph 44 for giving notices to Lessor.

17. OFFSET WELLS. Lessee shall drill such wells as a reasonably prudent operator would drill to protect Lessor adequately from loss by reason of drainage resulting from production on other land. Without limiting the generality of the foregoing sentence, if oil or gas should be produced in a well on other land not owned by Lessor or on which Lessor receives a lower rate of royalty than the royalty under this lease, which well is within 500 feet in the case of an oil well or 1,500 feet in the case of a gas well of lands then subject to this lease, and such well shall produce oil or gas in paying quantities for a period of thirty consecutive days, and if, after notice to Lessee and an opportunity to be heard, Lessor finds that production from such well is draining lands then subject to this lease, Lessee shall within 120 days after written demand by Lessor begin in good faith and prosecute diligently drilling operations for an offset well on said land. In lieu of drilling any well required by this paragraph, Lessee may with Lessor's consent compensate Lessor in full each month for the estimated loss of royalty through drainage in the amount determined by Lessor.

18. OTHER WELLS. This lease contemplates the reasonable development of said land for oil and gas as the facts may justify. Upon discovery of oil or gas in paying quantities on said land, Lessee shall drill such wells as a reasonably prudent operator would drill having due regard for the interests of Lessor as well as the interest of Lessee.

19. DILIGENCE; PREVENTION OF WASTE. Lessee shall exercise reasonable diligence in drilling, producing, and operating wells on said land unless consent to suspend operations temporarily is granted by Lessor; shall carry on all operations hereunder in a good and workmanlike manner in accordance with approved methods and practices, having due regard for the prevention of waste of oil and gas and the entrance of water to the oil and gas bearing sands or strata to the destruction or injury of such deposits and the preservation and conservation of the property for the future productive operations; shall use reasonable care and all proper safeguards to prevent the pollution of water; shall plug securely in an approved manner any well before abandoning it; shall allow Lessor to inspect all operations at any time; shall carry out at Lessee's expense all reasonable orders and requirements of Lessor relative to the prevention of waste and the preservation of said land, and on failure of Lessee so to do, Lessor shall have the right together with any other recourse available to it to enter on said land to repair damage or prevent waste at Lessee's expense; and shall, abide by and conform to valid applicable rules and regulations of the Alaska Oil and Gas Conservation Committee and the regulations of Lessor relating to the matters covered by this paragraph in effect on the effective date hereof or hereafter in effect if not inconsistent with any specific provisions of this lease.

20. APPROVAL OF PLANS. Lessee shall not place into actual operation any plan or method for the purpose of stimulating or increasing production on said land other than plans and methods in common use without first having obtained the written approval of Lessor.

21. LOGS AND RECORDS. An electric log or radioactive log, if taken, and a descriptive geologic sample log, if taken, and a record of all tests run for each well drilled on said land, together with a plat showing the exact location of each such well, shall be filed with Lessor within thirty (30) days after such well has been completed, suspended, or abandoned. Any and all information filed by Lessee with Lessor in connection with this lease shall be available at all times for the confidential use of Lessor for the purpose of enforcing compliance with the terms, covenants, and conditions of this lease and the regulations of the Lessor but shall not be open for inspection by any person other than officers, or employees of Lessor and persons performing any function or work assigned to them by Lessor for a period of twenty-four (24) months after the thirty (30) day filing period, except upon written consent of Lessee. Notwithstanding any other provision hereof, said information may be disclosed to any person where such disclosure is reasonably necessary for the administration of the functions, responsibilities, and duties vested by law in the Commissioner of the Department of Natural Resources or in the Division of Lands or the Director thereof, including but not limited to functions, responsibilities, and duties arising in connection with any litigation or administrative adjudication relating to this lease or to the rights, duties, and obligations arising hereunder.

22. RECORDS. Lessee shall keep and have in its possession books and records showing the production and disposition of all oil and gas produced from said land and shall permit Lessor or its agents at all reasonable hours to examine the same. Such records and reports of production shall be based upon such methods and techniques as shall insure the most accurate figures reasonably available without requiring the Lessee to provide separate tankage for each well.

23. DAMAGES. AS 38.05.130 provides in part that no rights under reservations contained in certain leases or grants of Alaska land shall be exercised by Lessor or its Lessee until provision has been made to pay the owner of the land upon which the reserved rights are sought to be exercised full payment for all damages sustained by said owner by reason of entering on said land; provided, that if said owner for any cause whatever refuses or neglects to settle said damages, Lessor or its Lessee shall have the right to institute such legal proceeding in a court of competent jurisdiction wherein the land is situated as may be necessary to determine the damage which the owner of such land may suffer. Lessee hereby agrees to pay any damage that may become payable under said statutory provisions and to indemnify Lessor and hold it harmless from and against any claims, demands, liabilities, and expenses arising from or in connection with such damage. The furnishing of a bond in compliance with this Lease will be regarded by Lessor as a sufficient provision for the payment of all damage that may become payable under said statutory provisions.

24. BONDS.

(a) If required by Lessor, Lessee shall furnish a bond prior to the issuance of this lease in an amount equal to at least $2.00 per acre or fraction thereof contained in said land but not less than $1,000.00 and shall maintain said bond as long as required by Lessor.

(b) Before beginning drilling operations on said land Lessee must have furnished and shall maintain a bond in an amount of at least $5,000.00.

(c) Lessee may, in lieu of the foregoing, furnish and maintain a statewide bond in the amount of $100,000.00.

(d) Lessor may, after notice to Lessee and an opportunity to be heard, require a bond in a reasonable amount greater than the amount specified above in this paragraph where such greater amount is justified by the nature of the surface and its uses and improvements in the vicinity of said land and the degree of the risks involved in the types of operations being or to be carried out under this lease. A statewide bond will not satisfy any requirement of a bond imposed under this subparagraph but will be considered by Lessor in determining the need for and the amount of any additional bond under this subparagraph.

(e) If said land is committed in whole or in part to a cooperative or unit agreement approved or prescribed by Lessor pursuant to law and the regulations and a unit bond is furnished in accordance with the regulations, Lessee need not thereafter maintain any bond with respect to the portion of said land so committed to such agreement.

25. ACTS OF GOD. Should Lessee be prevented from complying with any expressed or implied covenant of this lease, from conducting drilling operations thereon, or from producing or marketing oil or gas from said land after efforts made in good faith, by reason of war, riots, acts of God, severe weather in the area of said land, acts of governmental authorities, failure or lack of adequate transportation facilities, or any other cause beyond Lessee's reasonable control whether similar to those enumerated or not, then while so prevented and for a reasonable time thereafter within which to resume operations, Lessee's obligation to comply with such covenant shall be suspended and Lessee shall not be liable for damages for failure to comply therewith. If drilling or reworking operations are suspended by virtue of this paragraph and the prosecution of such operations would have had the effect of preventing the expiration or termination of this lease, then this lease shall not terminate during the period which the obligation to perform such operations is suspended under this paragraph; provided, however, that nothing in this paragraph shall be construed to suspend the payment of rentals or of minimum royalties.

26. SUSPENSION. Lessor may from time to time direct or assent to the suspension of production or other operations or both under this lease if such action is necessary or justified in the interest of conservation.

27. RESERVATIONS. Lessor reserves the right to dispose of the surface of said land to others subject to this lease, and the right to authorize others by grant, lease, or permit subject to this lease and under such conditions as will prevent unnecessary or unreasonable interference with the rights of Lessee and operations under this lease, to enter upon and use said land:

(a) To explore for oil or gas by geological or geophysical means including the drilling of shallow core holes or stratigraphic tests to a depth of not more than 1,000 feet.

(b) To explore for, develop and remove natural resources other than oil, gas, and associated substances on or from said land.

AMENDMENT TO LEASE FORM # 2

(1) REGULATIONS: (a) This lease is subject to all applicable and valid regulations of the Department of Natural Resources in effect on the effective date hereof or hereafter in effect if not inconsistent with any express and specific provision of the lease. (b) The term "regulations" as used herein, unless otherwise specified, means applicable and valid regulations of the Department of Natural Resources, now or hereafter adopted, when not inconsistent with any express and specific provision herein.

(2) LOCAL HIRE UNDER STATE LEASES: Lessee shall comply with all valid and applicable laws and regulations with regard to hire of Alaska residents. Qualified Alaska residents shall be hired as required in AS 38.40; lessee shall not discriminate against Alaska residents, as prohibited by AS 38.40 and other applicable laws and regulations of the State of Alaska.

(c) For nonexclusive easements and rights of way for any lawful purpose including shafts and tunnels necessary or appropriate for the working of said land or other lands for natural resources other than oil, gas or associated substances.

(d) For well sites and well bores of wells drilled from or through said land to explore for or produce oil, gas, and associated substances in and from other lands.

(e) For any other purpose now or hereafter authorized by law and not inconsistent with the rights of Lessee under this lease.

28. UNDERGROUND STORAGE. This lease does not authorize the subsurface storage of oil or gas except as a necessary incident to recycling pressure maintenance, repressuring, or other similar operation designed to increase the ultimate recovery of oil or gas or prevent the waste of oil or gas produced from said land or from any unit area of which the said land is a part. Lessor reserves the right to authorize the subsurface storage of oil or gas in said land by Lessee or by others in order to avoid waste or to promote conservation of natural resources and upon such conditions as will prevent unnecessary or unreasonable interference with the rights and operations of Lessee under this lease, including conditions prohibiting the storage of oil or gas without the consent of Lessee in any reservoir covered by this lease capable of producing oil or gas in paying quantities.

29. ASSIGNMENTS. This lease or any undivided interest herein may with the approval of Lessor be assigned or subleased as to said land or any one or more legal subdivisions included therein, or any separate and distinct zone or geological horizon underlying said land or such one or more legal subdivisions, to any person or persons qualified to hold a lease. No transfer of any interest in this lease including assignments of working or royalty interests and operating agreements and subleases shall be binding upon Lessor unless approved by Lessor. Lessee shall remain liable for all obligations under this lease accruing prior to the approval of such transfer. Approval of transfer of this lease or an interest therein will not be denied except (1) for failure to comply with the regulations, (2) in the discretion of Lessor, where the transfer covers any distinct zone or geological horizon, or (3) where Lessor determines that the best interests of Lessor justify such action. Applications for approval of transfer under this paragraph must comply with the regulations and must be filed within ninety days after the date of final execution of the instrument of transfer. Where a transfer is made of all or a part of Lessee's interest in and to a portion of the acreage in said land the assigned acreage shall, at the option of Lessor, or may upon request of the transferee and with the approval of Lessor be segregated into a separate and distinct lease having the same effective date as this lease.

30. UNITIZATION. Whenever determined and certified by Lessor to be necessary or advisable in the public interest for the purpose of properly conserving the natural resources of any oil or gas pool, field or like area or any part thereof, which includes or underlies said land or any part thereof, Lessee may unite with other Lessees of Lessor or with others owning or operating lands not belonging to Lessor including lands belonging to the United States and with others, jointly or separately, in collectively adopting and operating under a cooperative or unit agreement for the development or operation of the pool or field or like area or part thereof. Lessee shall within thirty days after demand by Lessor subscribe to such a cooperative or unit agreement, which agreement shall be reasonable and shall adequately protect all parties in interest including Lessor. Lessor may with the consent of Lessee establish, alter, change, or revoke drilling, producing, rental, minimum royalty, and royalty requirements of this lease if committed to any such cooperative or unit agreement and may make such regulations with reference to this lease with the like consent of Lessee in connection with the institution and operation of any such cooperative or unit agreement as Lessor may determine to be necessary or proper to secure the proper protection of the public interest. If a portion of said land is committed to an approved or prescribed unit agreement, the committed acreage shall at the option of Lessor and may upon the request of Lessee and with the approval of Lessor be segregated into a separate and distinct lease having the same effective date as this lease.

31. SURRENDER. Lessee may at any time make and file with Lessor a written surrender of all rights under this lease or any portion thereof comprising one or more legal subdivisions or, with the consent of Lessor, of any separate and distinct zone or geological horizon underlying said lands or such one or more legal subdivisions thereof. Such a surrender shall be effective as of the date of filing subject to the continued obligations of Lessee and his surety to make payment of all royalties theretofore accrued and to place all wells on the surrendered land or in the surrendered zones or horizons in condition satisfactory to Lessor for suspension or abandonment; thereupon, Lessee shall be released from all other obligations accrued or to accrue under this lease with respect to the surrendered lands, zones, or horizons.

32. DEFAULT; TERMINATION. Whenever Lessee fails to comply with any of the provisions of this lease other than the payment of rental and Lessee fails within sixty days after written notice of such default to commence to remedy and thereafter prosecute diligently operations to remedy such default, Lessor may cancel this lease if at that time there is no well on said land capable of producing oil or gas in paying quantities. If at such time there is on said land a well capable of producing oil or gas in paying quantities, this lease may be cancelled only by judicial proceedings. In the event of any cancellation under this paragraph, Lessee shall have the right to retain under this lease any and all drilling or producing wells as to which no default exists together with a parcel of land surrounding each such well or wells and such rights of way through said land as may be reasonably necessary to enable Lessee to drill and operate such retained well or wells.

33. EXCESS AREA. If for any reason said land includes more acreage than the maximum permitted under applicable laws and/or regulations, this lease shall not be void but the acreage included in said land shall be reduced to the permitted maximum. Whenever Lessor determines that this lease so exceeds the permitted acreage and notifies Lessee stating the amount of acreage that must be eliminated, Lessee may within sixty days after such notice surrender one or more legal subdivisions included in said lands comprising at least the amount of acreage that must be eliminated. If such a surrender is not filed within such sixty days Lessor may terminate this lease as to the acreage that must be eliminated by mailing notice of such termination to Lessee describing the parcel or parcels eliminated. Such a notice shall have the effect of terminating this lease as to the parcel or parcels described in such notice.

34. RIGHTS ON TERMINATION. Upon the expiration or earlier termination of this lease as to all or any portion of said lands, Lessee shall have the privilege at any time within a period of six months thereafter, or such extension thereof as may be granted Lessor, of removing from said land or portion thereof all machinery, equipment, tools, and materials other than improvements needed for producing wells. Any materials, tools, appliances, machinery, structures, and equipment subject to removal as above provided which are allowed to remain on said land or portion thereof shall become the property of Lessor upon expiration of such period; provided, that Lessee shall remove any and all of such properties when so directed by Lessor. Subject to the foregoing, Lessee shall deliver up said lands or such portion or portions thereof in good order and condition.

35. INTEREST IN LAND. It is the intention of the parties that the rights vested in Lessee by this lease shall constitute an interest in real property in said land.

36. LESSER INTEREST. If ~~Lessor~~ owns a lesser interest in the oil and gas deposits in said land than the entire and undivided fee simple estate, then the royalties and rentals herein ~~provided~~ shall be paid Lessor only in the proportion which its interest bears to the whole and undivided fee.

37. CONDITIONAL LEASE. If all or a part of said land is land that has been selected by the Lessor under laws of the United States granting lands to Lessor, but such land has not been patented to Lessor by the United States, then this lease is a conditional lease as provided by law until such patent becomes effective. If for any reason such a selection is not finally approved or such a patent does not become effective, any rental, royalty or minimum royalty payments made to Lessor under this lease will not be refunded.

38. DRILLING OPERATIONS. As used in this lease 'drilling operations' mean any work or actual operations undertaken or commenced in good faith for the purpose of carrying out any of the rights, privileges or duties of Lessee under this lease, followed diligently and in due course by the construction of a road or derrick and/or other necessary structures for the drilling of an oil or gas well, and by the actual operation of drilling in the ground. Any such work or operations preliminary to drilling in the ground may be undertaken either on said land or in the vicinity of said land in any order Lessee shall see fit.

39. ACTUAL DRILLING. As used in this lease, 'actual drilling' means any and all operations necessary or convenient to the drilling of a well in the ground after the first drilling or spudding with equipment of sufficient size and capacity to drill to the total depth proposed for the well.

40. DIRECTIONAL DRILLING. This lease may be maintained in force by directional wells drilled under the leased area from surface locations on adjacent or adjoining lands or on other premises not covered by this lease. In such circumstances, drilling shall be considered to have commenced on the leased area when actual drilling is commenced on the adjacent or adjoining lands or on lands other than the leased premises for the purpose of directionally drilling under the leased area, and production of oil or gas from the leased area through any directional well surfaced on adjacent or adjoining lands or lands other than the leased premises, or drilling or re-working of such directional well shall be considered production or drilling or re-working operations (as the case may be) on the leased area for all purposes of this lease. Nothing contained in this paragraph is intended or shall be construed as granting to the lessee any leasehold interest, licenses, easements, or other rights in or with respect to such adjacent or adjoining land in addition to any such leasehold interest, censes, easements, or other rights which the lessee may have lawfully acquired from the lessor or from others. However, the Director, Alaska Division of Lands, may in his discretion and upon proper application by the lessee, grant a surface permit for the location of a directional well site upon and through adjoining, adjacent, or other state lands other than the leasehold premises.

42. INTERPRETATION. As used in this lease words which are defined in the regulations have the meaning assigned by such definition except where the context clearly requires a different meaning. The paragraph headings are not a part of this lease and are inserted only for convenience.

43. EMPLOYMENT. Lessee shall be required to furnish the Department of Labor a quarterly report regarding the employment on the leased property of state residents in compliance with regulations adopted by the Commissioner of Labor under AS 38.05.180(t).

44. NOTICES. Any notice required or permitted under this lease shall be in writing and shall be given by registered or certified mail, return receipt requested, addressed as follows:

To Lessor:

Director, Division of Lands
State of Alaska
323 East Fourth Avenue
Anchorage, Alaska 99501

To Lessee:

Union Oil Company of California
909 W. 9th Avenue
Anchorage, Alaska 99501

Any such notice shall be deemed given when delivered to the foregoing address. Either party may change the address to which such notices are to be sent, by a notice given in accordance with this paragraph.

45. HEIRS AND ASSIGNS. Subject to the other provisions of this lease, the covenants, conditions, and agreements contained in this lease shall extend to and be binding upon the heirs, executors, administrators, successors, or assigns of Lessor and Lessee.

46. WILDLIFE STIPULATIONS. This lease is subject to such stipulations as are attached.

IN WITNESS WHEREOF the parties have executed this lease effective as of the 1st day of February 19 74

UNION OIL COMPANY OF CALIFORNIA

STATE OF ALASKA)

This certifies that on the 23rd day of January, 19 74, before me, a notary public in and for the State of Alaska, duly commissioned and sworn, personally appeared Pedro Denton to me known and known to me to be the person described in and who executed the foregoing lease on behalf of the State of Alaska as Director of the Division of Lands, Department of Natural Resources, or his authorized agent. The said Pedro Denton executed said lease in my presence and, after being duly sworn according to law, stated to me under oath that he is the Director of the Division of Lands, Department of Natural Resources, or his authorized agent, and has authority pursuant to law to execute the foregoing lease as such Director, or authorized agent, on behalf of the State of Alaska, acting through the Division of Lands, Department of Natural Resources and that he executed the same freely and voluntarily as the free and voluntary act and deed of the said State of Alaska and for the Division of Lands, Department of Natural Resources.

WITNESS my hand and official seal of the day and year in this certificate above written.

[signature] Notary Public in and for Alaska. My Commission expires 10/15/77

SUBJECT TO ATTACHMENT 1, 2 & 3

STATE OF ALASKA
DEPARTMENT OF NATURAL RESOURCES

Competitive Oil and Gas Lease **ADL No.**

THIS LEASE is entered into , between the State of Alaska, "the state," and

"the lessee," whether one or more, whose sole address for purposes of notification is under Paragraph 25.

In consideration of the cash payment made by the lessee to the state, which payment includes the first year's rental and any required cash bonus, and subject to the provisions of this lease, including applicable stipulation(s) and mitigating measures attached to this lease and by this reference incorporated in this lease, the state and the lessee agree as follows:

1. GRANT. (a) Subject to the provisions in this lease, the state grants and leases to the lessee, without warranty, the exclusive right to drill for, extract, remove, clean, process, and dispose of oil, gas, and associated substances in or under the following described tract of land:

containing approximately acres, more or less (referred to in this lease as the "leased area"); the nonexclusive right to conduct within the leased area geological and geophysical exploration for oil, gas, and associated substances; and the nonexclusive right to install pipelines and build structures on the leased area to find, produce, save, store, treat, process, transport, take care of, and market all oil, gas, and associated substances and to house and board employees in its operations on the leased area. The rights granted by this lease are to be exercised in a manner which will not unreasonably interfere with the rights of any permittee, lessee or grantee of the state consistent with the principle of reasonable concurrent uses as set out in Article VIII, Section 8 of the Alaska Constitution.

(b) For the purposes of this lease, the leased area contains the legal subdivisions as shown on the attached plat marked Exhibit A.

(c) If the leased area is described by protracted legal subdivisions and, after the effective date of this lease, the leased area is surveyed under the public land rectangular system, the boundaries of the leased area are those established by that survey, when approved, subject, however, to the provisions of applicable regulations relating to those surveys. If for any reason the leased area includes more acreage than the maximum permitted under applicable law (including the "rule of approximation" authorized in AS 38.05.145 and defined in AS 38.05.965 (18)), this lease is not void and the acreage included in the leased area must be reduced to the permitted maximum. If the state determines that the leased area exceeds the permitted acreage and notifies the lessee in writing of the amount of acreage that must be eliminated, the lessee has 60 days after that notice to surrender one or more legal subdivisions included in the leased area comprising at least the amount of acreage that must be eliminated. Any subdivision surrendered must be located on the perimeter of the leased area as originally described. If a surrender is not filed within 60 days, the state may terminate this lease as to the acreage that must be eliminated by mailing notice of the termination to the lessee describing the subdivision eliminated.

(d) If the State of Alaska's ownership interest in the oil, gas, and associated substances in the leased area is less than an entire and undivided interest, the grant under this lease is effective only as to the state's interest in that oil, gas, and associated substances, and the royalties and rentals provided in this lease must be paid to the state in the proportion that the state's interest bears to the entire undivided fee.

(e) The state makes no representations or warranties, express or implied, as to title, or access to, or quiet enjoyment of, the leased area. The state is not liable to the lessee for any deficiency in title to the leased area, nor is the lessee or any successor in interest to the lessee entitled to any refund due to deficiency in title for any rentals, bonuses, or royalties paid under this lease.

2. RESERVED RIGHTS. (a) The state, for itself and others, reserves all rights not expressly granted to the lessee by this lease. These reserved rights include, but are not limited to:

(1) the right to explore for oil, gas, and associated substances by geological and geophysical means;

(2) the right to explore for, develop, and remove natural resources other than oil, gas, and associated substances on or from the leased area;

(3) the right to establish or grant easements and rights-of-way for any lawful purpose, including without limitation for shafts and tunnels necessary or appropriate for the working of the leased area or other lands for natural resources other than oil, gas, and associated substances;

(4) the right to dispose of land within the leased area for well sites and well bores of wells drilled from or through the leased area to explore for or produce oil, gas, and associated substances in and from lands not within the leased area; and

(5) the right otherwise to manage and dispose of the surface of the leased area or interests in that land by grant, lease, permit, or otherwise to third parties.

(b) The rights reserved may be exercised by the state, or by any other person or entity acting under authority of the state, in any manner that does not unreasonably interfere with or endanger the lessee's operations under this lease.

3. TERM. This lease is issued for an initial primary term of 7 years from the effective date of this lease. The term may be extended as provided in Paragraph 4 below.

4. EXTENSION. (a) This lease will be extended automatically if and for so long as oil or gas is produced in paying quantities from the leased area.

(b) This lease will be extended automatically if it is committed to a unit agreement approved or prescribed by the state, and will remain in effect for so long as it remains committed to that unit agreement.

(c) (1) If the drilling of a well whose bottom hole location is in the leased area has commenced as of the date on which the lease otherwise would expire and is continued with reasonable diligence, this lease will continue in effect until 90 days after cessation of that drilling and for so long as oil or gas is produced in paying quantities from the leased area.

(2) If oil or gas in paying quantities is produced from the leased area, and if that production ceases at any time, this lease will not terminate if drilling or reworking operations are commenced on the leased area within six months after cessation of production and are prosecuted with reasonable diligence; if those drilling or reworking operations result in the production of oil or gas, this lease will remain in effect for so long as oil or gas is produced in paying quantities from the leased area.

(d) If there is a well capable of producing oil or gas in paying quantities on the leased area, this lease will not expire because the lessee fails to produce that oil or gas unless the state gives notice to the lessee, allowing a reasonable time, which will not be less than six months after notice, to place the well into production, and the lessee fails

to do so. If production is established within the time allowed, this lease is extended only for so long as oil or gas is produced in paying quantities from the leased area.

(e) If the state directs or approves in writing a suspension of all operations on or production from the leased area (except for a suspension necessitated by the lessee's negligence), or if a suspension of all operations on or production from the leased area has been ordered under federal, state, or local law, the lessee's obligation to comply with any express or implied provision of this lease requiring operations or production will be suspended, but not voided, and the lessee shall not be liable for damages for failure to comply with that provision. If the suspension occurs before the expiration of the primary term, the primary term will be extended at the end of the period of the suspension by adding the period of time lost under the primary term because of the suspension. If the suspension occurs during an extension of the primary term under this paragraph, upon removal of that suspension, the lessee will have a reasonable time, which will not be less than six months after notice that the suspension has been removed, to resume operations or production. For the purposes of this subparagraph, any suspension of operations or production specifically required or imposed as a term of sale or by any stipulation made a part of this lease will not be considered a suspension ordered by law.

(f) If the state determines that the lessee has been prevented by force majeure, after efforts made in good faith, from performing any act that would extend the lease beyond the primary term, this lease will not expire during the period of force majeure. If the force majeure occurs before the expiration of the primary term, the primary term will be extended at the end of the period of force majeure by adding the period of time lost under the primary term because of the force majeure. If the force majeure occurs during an extension of the primary term under this paragraph, this lease will not expire during the period of force majeure plus a reasonable time after that period, which will not be less than 60 days, for the lessee to resume operations or production.

(g) Nothing in subparagraphs (e) or (f) suspends the obligation to pay royalties or other production or profit-based payments to the state from operations on the leased area that are not affected by any suspension or force majeure, or suspends the obligation to pay rentals.

5. RENTALS. (a) The lessee shall pay annual rental to the state in accordance with the following rental schedule:

(1) For the first year, $1.00 per acre or fraction of an acre;
(2) For the second year, $1.50 per acre or fraction of an acre;
(3) For the third year, $2.00 per acre or fraction of an acre;
(4) For the fourth year, $2.50 per acre or fraction of an acre;
(5) For the fifth year and following years, $3.00 per acre or fraction of an acre; provided that the state may increase the annual rental rate as provided by law upon extension of this lease beyond the primary term.

(b) Annual rental paid in advance is a credit on the royalty or net profit share due under this lease for that year.

(c) The lessee shall pay the annual rental to the State of Alaska (or any depository designated by the state with at least 60 days notice to the lessee) in advance, on or before the annual anniversary date of this lease. The state is not required to give notice that rentals are due by billing the lessee. If the state's (or depository's) office is not open for business on the annual anniversary date of this lease, the time for payment is extended to include the next day on which that office is open for business. If the annual rental is not paid timely, this lease automatically terminates as to both parties at 11:59 p.m., Alaska Standard Time, on the date by which the rental payment was to have been made.

6. RECORDS. The lessee shall keep and have in its possession books and records showing the development and production (including records of development and production expenses) and disposition (including records of sale prices, volumes, and purchasers) of all oil, gas, and associated substances produced from the leased area. The lessee shall permit the State of Alaska or its agents to examine these books and records at all reasonable times. Upon request by the state, the lessee's books and records shall be made available to the state at the state office designated by the state. These books and records of development, production, and disposition must employ methods and techniques that will ensure the most accurate figures reasonably available without requiring the lessee to provide separate tankage or meters for each well. The lessee shall use generally accepted accounting procedures consistently applied.

7. APPORTIONMENT OF ROYALTY FROM APPROVED UNIT. The landowners' royalty share of the unit production allocated to each separately owned tract shall be regarded as royalty to be distributed to and among, or the proceeds of it paid to, the landowners, free and clear of all unit expense and free of any lien for it. Under this provision, the state's royalty share of any unit production allocated to the leased area will be regarded as royalty to be distributed to, or the proceeds of it paid to, the state, free and clear of all unit expenses (and any portion of those expenses incurred away from the unit area), including, but not limited to, expenses for separating, cleaning, dehydration, gathering,

saltwater disposal, and preparing oil, gas, or associated substances for transportation off the unit area, and free of any lien for them.

8. PAYMENTS. All payments to the State of Alaska under this lease must be made payable to the state in the manner directed by the state, and unless otherwise specified, must be tendered to the state at:

DEPARTMENT OF NATURAL RESOURCES
550 WEST 7TH AVENUE, SUITE 1410
ANCHORAGE, ALASKA 99501-3561
ATTENTION: FINANCIAL SERVICES SECTION

or in person at either of the Department's Public Information Centers located at

550 W. 7th Ave., Suite 1260
Anchorage, Alaska

3700 Airport Way
Fairbanks, Alaska

or to any depository designated by the state with at least 60 days notice to the lessee.

9. PLAN OF OPERATIONS. (a) Except as provided in (b) of this section, a plan of operations for all or part of the leased area must be approved by the commissioner before any operations may be undertaken on or in the leased area.

(b) A plan of operations is not required for:

(1) activities that would not require a land use permit; or

(2) operations undertaken under an approved unit plan of operations.

(c) Before undertaking operations on or in the leased area, the lessee shall provide for full payment of all damages sustained by the owner of the surface estate as well as by the surface owner's lessees and permittees, by reason of entering the land.

(d) An application for approval of a plan of operations must contain sufficient information, based on data reasonably available at the time the plan is submitted for approval, for the commissioner to determine the surface use requirements and impacts directly associated with the proposed operations. An application must include statements and maps or drawings setting out the following:

(1) the sequence and schedule of the operations to be conducted on or in the leased area, including the date operations are proposed to begin and their proposed duration;

(2) projected use requirements directly associated with the proposed operations, including the location and design of well sites, material sites, water supplies, solid waste sites, buildings, roads, utilities, airstrips, and all other facilities and equipment necessary to conduct the proposed operations;

(3) plans for rehabilitation of the affected leased area after completion of operations or phases of those operations; and

(4) a description of operating procedures designed to prevent or minimize adverse effects on other natural resources and other uses of the leased area and adjacent areas, including fish and wildlife habitats, historic and archeological sites, and public use areas.

(e) In approving a lease plan of operations or an amendment of a plan, the commissioner will require amendments that the commissioner determines necessary to protect the state's interest. The commissioner will not require an amendment that would be inconsistent with the terms of sale under which the lease was obtained, or with the terms of the lease itself, or which would deprive the lessee of reasonable use of the leasehold interest.

(f) The lessee may, with the approval of the commissioner, amend an approved plan of operations.

(g) Upon completion of operations, the lessee shall inspect the area of operations and submit a report indicating the completion date of operations and stating any noncompliance of which the lessee knows, or should reasonably know, with requirements imposed as a condition of approval of the plan.

(h) In submitting a proposed plan of operations for approval, the lessee shall provide ten copies of the plan if activities proposed are within the coastal zone, and five copies if activities proposed are not within the coastal zone.

10. PLAN OF DEVELOPMENT. (a) Except as provided in subparagraph (d) below, within 12 months after certification of a well capable of producing oil, gas, or associated substances in paying quantities, the lessee shall file two copies of an application for approval by the state of an initial plan of development that must describe the lessee's plans

for developing the leased area. No development of the leased area may occur until a plan of development has been approved by the state.

(b) The plan of development must be revised, updated, and submitted to the state for approval annually before or on the anniversary date of the previously approved plan. If no changes from an approved plan are contemplated for the following year, a statement to that effect must be filed for approval in lieu of the required revision and update.

(c) The lessee may, with the approval of the state, subsequently modify an approved plan of development.

(d) If the leased area is included in an approved unit, the lessee will not be required to submit a separate lease plan of development for unit activities.

11. INFORMATION ACQUIRED FROM OPERATIONS. (a) The lessee shall submit to the state all geological, geophysical and engineering data and analyses obtained from the lease within 30 days following the completion of a well. The lessee shall submit to the state data and analyses acquired subsequent to well completion within 30 days following acquisition of that data. The state may waive receipt of operational data from some development, service or injection wells. The state will inform the operator of the waiver prior to well completion. The lessee shall submit the data and analyses to the Division of Oil and Gas, Department of Natural Resources, at the location specified in paragraph 25 of this lease. The data and analyses shall include the following:

(1) a copy of the completion report (AOGCC form 10-407) with an attached well summary, including daily drilling reports, formation tops encountered, a full synopsis of drillstem and formation testing data, an identification of zones of abnormal pressure, oil and gas shows and cored intervals;

(2) latitudinal and longitudinal coordinates for the completed surface and bottom hole locations;

(3) a copy of the permit to drill (AOGCC form 10-401 only, additional documentation not required) and the survey plat of the well location;

(4) a paper copy (no sepia copies) of all final 2-inch open hole and cased hole logs, including measured depth and true-vertical depth versions, specialty logs (such as Schlumberger's cyberlook, formation microscanners and dipmeter logs), composite mud or lithology log and report, measured-while-drilling (MWD) and logged-while-drilling (LWD) logs, velocity and directional surveys;

(5) a digital version of well logs in LAS, LIS or ASCII format on IBM format floppy disks, a digital version of velocity surveys in SEG Y format, a digital version of directional surveys in ASCII format (other formats may be acceptable upon agreement with the Division of Oil and Gas); and

(6) a paper copy of all available well analyses, including geochemical analyses, core analyses (porosity, permeability, capillary pressure, photos, and descriptions), paleontologic and palynologic analyses, thermal maturation analyses, pressure build up analyses, and fluid PVT analyses (an ASCII format digital version of the above information shall also be submitted, if available). The state may require the lessee to submit additional information in accordance with the applicable statutes and regulations in effect at the time of the completion date of the well.

(b) Any information submitted to the state by the lessee in connection with this lease will be available at all times for use by the state and its agents. The state will keep information confidential as provided in AS 38.05.035(a)(9) and its applicable regulations. In accordance with AS 38.05.035(a)(9)(C), in order for geological, geophysical and engineering information submitted under paragraph 11(a) of this lease to be held confidential, the lessee must request confidentiality at the time the information is submitted. The information must be marked **CONFIDENTIAL.**

12. DIRECTIONAL DRILLING. This lease may be maintained in effect by directional wells whose bottom hole location is on the leased area but that are drilled from locations on other lands not covered by this lease. In those circumstances, drilling will be considered to have commenced on the leased area when actual drilling is commenced on those other lands for the purpose of directionally drilling into the leased area. Production of oil or gas from the leased area through any directional well surfaced on those other lands, or drilling or reworking of that directional well, will be considered production or drilling or reworking operations on the leased area for all purposes of this lease. Nothing contained in this paragraph is intended or will be construed as granting to the lessee any interest, license, easement, or other right in or with respect to those lands in addition to any interest, license, easement, or other right that the lessee may have lawfully acquired from the state or from others.

13. DILIGENCE AND PREVENTION OF WASTE. (a) The lessee shall exercise reasonable diligence in drilling, producing, and operating wells on the leased area unless consent to suspend operations temporarily is granted by the state.

(b) Upon discovery of oil or gas on the leased area in quantities that would appear to a reasonable and prudent operator to be sufficient to recover ordinary costs of drilling, completing, and producing an additional well in

the same geologic structure at another location with a reasonable profit to the operator, the lessee must drill those wells as a reasonable and prudent operator would drill, having due regard for the interest of the state as well as the interest of the lessee.

(c) The lessee shall perform all operations under this lease in a good and workmanlike manner in accordance with the methods and practices set out in the approved plan of operations and plan of development, with due regard for the prevention of waste of oil, gas, and associated substances and the entrance of water to the oil and gas-bearing sands or strata to the destruction or injury of those sands or strata, and to the preservation and conservation of the property for future productive operations. The lessee shall carry out at the lessee's expense all orders and requirements of the State of Alaska relative to the prevention of waste and to the preservation of the leased area. If the lessee fails to carry out these orders, the state will have the right, together with any other available legal recourse, to enter the leased area to repair damage or prevent waste at the lessee's expense.

(d) The lessee shall securely plug in an approved manner any well before abandoning it.

14. OFFSET WELLS. The lessee shall drill such wells as a reasonable and prudent operator would drill to protect the state from loss by reason of drainage resulting from production on other land. Without limiting the generality of the foregoing sentence, if oil or gas is produced in a well on other land not owned by the State of Alaska or on which the State of Alaska receives a lower rate of royalty than under this lease, and that well is within 500 feet in the case of an oil well or 1,500 feet in the case of a gas well of lands then subject to this lease, and that well produces oil or gas for a period of 30 consecutive days in quantities that would appear to a reasonable and prudent operator to be sufficient to recover ordinary costs of drilling, completing, and producing an additional well in the same geological structure at an offset location with a reasonable profit to the operator, and if, after notice to the lessee and an opportunity to be heard, the state finds that production from that well is draining lands then subject to this lease, the lessee shall within 30 days after written demand by the state begin in good faith and diligently prosecute drilling operations for an offset well on the leased area. In lieu of drilling any well required by this paragraph, the lessee may, with the state's consent, compensate the state in full each month for the estimated loss of royalty through drainage in the amount determined by the state.

15. UNITIZATION. (a) The lessee may unite with others, jointly or separately, in collectively adopting and operating under a cooperative or unit agreement for the exploration, development, or operation of the pool, field, or like area or part of the pool, field, or like area that includes or underlies the leased area or any part of the leased area whenever the state determines and certifies that the cooperative or unit agreement is in the public interest.

(b) The lessee agrees, within six months after demand by the state, to subscribe to a reasonable cooperative or unit agreement that will adequately protect all parties in interest, including the state. The state reserves the right to prescribe such an agreement.

(c) With the consent of the lessee, and if the leased area is committed to a unit agreement approved by the state, the state may establish, alter, change, or revoke drilling, producing, and royalty requirements of this lease as the state determines necessary or proper to secure the proper protection of the public interest.

(d) Except as otherwise provided in this subparagraph, where only a portion of the leased area is committed to a unit agreement approved or prescribed by the state, that commitment constitutes a severance of this lease as to the unitized and nonunitized portions of the leased area. The portion of the leased area not committed to the unit will be treated as a separate and distinct lease having the same effective date and term as this lease and may be maintained only in accordance with the terms and conditions of this lease, statutes, and regulations. Any portion of the leased area not committed to the unit agreement will not be affected by the unitization or pooling of any other portion of the leased area, by operations in the unit, or by suspension approved or ordered for the unit. If the leased area has a well certified as capable of production in paying quantities on it before commitment to a unit agreement, this lease will not be severed. If any portion of this lease is included in a participating area formed under a unit agreement, the entire leased area will remain committed to the unit and this lease will not be severed.

16. INSPECTION. The lessee shall keep open at all reasonable times, for inspection by any duly authorized representative of the State of Alaska, the leased area, all wells, improvements, machinery, and fixtures on the leased area, and all reports and records relative to operations and surveys or investigations on or with regard to the leased area or under this lease. Upon request, the lessee shall furnish the State of Alaska with copies of and extracts from any such reports and records.

17. SUSPENSION. The state may from time to time direct or approve in writing suspension of production or other operations under this lease.

18. ASSIGNMENT, PARTITION, AND CONVERSION. This lease, or an interest in this lease, may, with the approval of the state, be assigned, subleased, or otherwise transferred to any person or persons qualified to hold a lease. No assignment, sublease, or other transfer of an interest in this lease, including assignments of working or royalty interests and operating agreements and subleases, will be binding upon the state unless approved by the state. The lessee shall remain liable for all obligations under this lease accruing prior to the approval by the state of any assignment, sublease, or other transfer of an interest in this lease. All provisions of this lease will extend to and be binding upon the heirs, administrators, successors, and assigns of the state and the lessee. Applications for approval of an assignment, sublease, or other transfer must comply with all applicable regulations and must be filed within 90 days after the date of final execution of the instrument of transfer. The state will approve a transfer of an undivided interest in this lease unless the transfer would adversely affect the interests of Alaska or the application does not comply with applicable regulations. The state will disapprove a transfer of a divided interest in this lease if the transfer covers only a portion of the lease or a separate and distinct zone or geological horizon unless the lessee demonstrates that the proposed transfer of a divided interest is reasonably necessary to accomplish exploration or development of the lease, the lease is committed to an approved unit agreement, the lease is allocated production within an approved participating area, or the lease has a well certified as capable of production in paying quantities. The state will make a written finding stating the reasons for disapproval of a transfer of a divided interest. Where an assignment, sublease, or other transfer is made of all or a part of the lessee's interest in a portion of the leased area, this lease may, at the option of the state or upon request of the transferee and with the approval of the state, be severed, and a separate and distinct lease will be issued to the transferee having the same effective date and terms as this lease.

19. SURRENDER. The lessee at any time may file with the state a written surrender of all rights under this lease or any portion of the leased area comprising one or more legal subdivisions or, with the consent of the state, any separate and distinct zone or geological horizon underlying the leased area or one or more legal subdivisions of the leased area. That surrender will be effective as of the date of filing, subject to the continued obligations of the lessee and its surety to make payment of all accrued royalties and to place all wells and surface facilities on the surrendered land or in the surrendered zones or horizons in condition satisfactory to the state for suspension or abandonment. After that, the lessee will be released from all obligations under this lease with respect to the surrendered lands, zones, or horizons.

20. DEFAULT AND TERMINATION; CANCELLATION. (a) The failure of the lessee to perform timely its obligations under this lease, or the failure of the lessee otherwise to abide by all express and implied provisions of this lease, is a default of the lessee's obligations under this lease. Whenever the lessee fails to comply with any of the provisions of this lease (other than a provision which, by its terms, provides for automatic termination), and fails within 60 days after written notice of that default to begin and diligently prosecute operations to remedy that default, the state may terminate this lease if at the time of termination there is no well on the leased area capable of producing oil or gas in paying quantities. If there is a well on the leased area capable of producing oil or gas in paying quantities, this lease may be terminated by an appropriate judicial proceeding. In the event of any termination under this subparagraph, the lessee shall have the right to retain under this lease any and all drilling or producing wells for which no default exists, together with a parcel of land surrounding each well or wells and rights-of-way through the leased area that are reasonably necessary to enable the lessee to drill, operate, and transport oil or gas from the retained well or wells.

(b) The state may cancel this lease at any time if the state determines, after the lessee has been given notice and a reasonable opportunity to be heard, that:

(1) continued operations pursuant to this lease probably will cause serious harm or damage to biological resources, to property, to mineral resources, or to the environment (including the human environment);

(2) the threat of harm or damage will not disappear or decrease to an acceptable extent within a reasonable period of time; and

(3) the advantages of cancellation outweigh the advantages of continuing this lease in effect.

Any cancellation under this subparagraph will not occur unless and until operations under this lease have been under suspension or temporary prohibition by the state, with due extension of the term of this lease, continuously for a period of five years or for a lesser period upon request of the lessee.

(c) Any cancellation under subparagraph (b) will entitle the lessee to receive compensation as the lessee demonstrates to the state is equal to the lesser of:

(1) the value of the cancelled rights as of the date of cancellation, with due consideration being given to both anticipated revenues from this lease and anticipated costs, including costs of compliance with all applicable regulations and stipulations, liability for clean-up costs or damages, or both, in the case of an oil spill, and all other costs reasonably anticipated under this lease; or

(2) the excess, if any, over the lessee's revenues from this lease (plus interest on the excess from the date of receipt to date of reimbursement) of all consideration paid for this lease and all direct expenditures made by the lessee after the effective date of this lease and in connection with exploration or development, or both, under this lease, plus interest on that consideration and those expenditures from the date of payment to the date of reimbursement.

21. RIGHTS UPON TERMINATION. Upon the expiration or earlier termination of this lease as to all or any portion of the leased area, the lessee will be directed in writing by the state and will have the right at any time within a period of one year after the termination, or any extension of that period as may be granted by the state, to remove from the leased area or portion of the leased area all machinery, equipment, tools, and materials. Upon the expiration of that period or extension of that period and at the option of the state, any machinery, equipment, tools, and materials that the lessee has not removed from the leased area or portion of the leased area become the property of the state or may be removed by the state at the lessee's expense. At the option of the state, all improvements such as roads, pads, and wells must either be abandoned and the sites rehabilitated by the lessee to the satisfaction of the state, or be left intact and the lessee absolved of all further responsibility as to their maintenance, repair, and eventual abandonment and rehabilitation. Subject to the above conditions, the lessee shall deliver up the leased area or those portions of the leased area in good condition.

22. DAMAGES AND INDEMNIFICATION. (a) No rights under the AS 38.05.125 reservation may be exercised by the lessee until the lessee has provided to pay the owner of the land, his lessees and permittees, upon which the AS 38.05.125 reserved rights are sought to be exercised, full payment for all damage sustained by the owner by reason of entering the land. If the owner for any reason does not settle the damages, the lessee may enter the land after posting a surety bond determined by the state, after notice and an opportunity to be heard, to be sufficient as to form, amount, and security to secure to the owner, his lessees and permittees, payment for damages, and may institute legal proceedings in a court of competent jurisdiction where the land is located to determine the damages which the owner of the land may suffer. The lessee agrees to pay for any damages that may become payable under AS 38.05.130 and to indemnify the state and hold it harmless from and against any claims, demands, liabilities, and expenses arising from or in connection with such damages. The furnishing of a bond in compliance with this paragraph will be regarded by the state as sufficient provision for the payment of all damages that may become payable under AS 38.05.130 by virtue of this lease.

(b) The lessee shall indemnify the state for, and hold it harmless from, any claim, including claims for loss or damage to property or injury to any person caused by or resulting from any act or omission committed under this lease by or on behalf of the lessee. The lessee is not responsible to the state under this subparagraph for any loss, damage, or injury caused by or resulting from the sole negligence of the state.

(c) The lessee expressly waives any defense to an action for breach of a provision of this lease or for damages resulting from an oil spill or other harm to the environment that is based on an act or omission committed by an independent contractor in the lessee's employ. The lessee expressly agrees to assume responsibility for all actions of its independent contractors.

23. BONDS. (a) If required by the state, the lessee shall furnish a bond prior to the issuance of this lease in an amount equal to at least $5 per acre or fraction of an acre contained in the leased area, but no less than $10,000, and must maintain that bond as long as required by the state.

(b) The lessee may, in lieu of the bond required under (a) above, furnish and maintain a statewide bond in accordance with applicable regulations.

(c) The state may, after notice to the lessee and a reasonable opportunity to be heard, require a bond in a reasonable amount greater than the amount specified in (a) above where a greater amount is justified by the nature of the surface and its uses and the degree of risk involved in the types of operations being or to be carried out under this lease. A statewide bond will not satisfy any requirement of a bond imposed under this subparagraph, but will be considered by the state in determining the need for and the amount of any additional bond under this subparagraph.

(d) If the leased area is committed in whole or in part to a cooperative or unit agreement approved or prescribed by the state, and the unit operator furnishes a statewide bond, the lessee need not maintain any bond with respect to the portion of the leased area committed to the cooperative or unit agreement.

24. AUTHORIZED REPRESENTATIVES. The Director of the Division of Oil and Gas, Department of Natural Resources, State of Alaska, and the person executing this lease on behalf of the lessee shall be authorized representatives for their respective principals for the purposes of administering this lease. The state or the lessee may change the designation of its authorized representative or the address to which notices to that representative are to be sent by a notice given in accordance with Paragraph 25 below. Where activities pursuant to a plan of operations are

underway, the lessee shall also designate, pursuant to a notice under Paragraph 25 below, by name, job title, and address, an agent who will be present in the state during all lease activities.

25. NOTICES; PROTEST. (a) Any notices required or permitted under this lease must be by electronic media producing a permanent record or in writing and must be given personally or by registered or certified mail, return receipt requested, addressed as follows:

TO THE STATE:

DIRECTOR, DIVISION OF OIL AND GAS
DEPARTMENT OF NATURAL RESOURCES
550 WEST 7TH AVENUE, SUITE 800
ANCHORAGE, ALASKA 99501-3560

TO THE LESSEE:

(b) Any notice given under this paragraph will be effective when delivered to the above authorized representative.

(c) A lessee who wishes to protest the amount of money due the state under the lease or any action of the state regarding a provision of this lease must file a written protest with the Division of Oil and Gas within 30 days after the mailing date of the state's notice or bill. A lessee who fails to file a protest within the required time waives any further right to protest. The state will establish the administrative appeal procedure to be followed and will inform the lessee of the procedure no later than 30 days after the filing of the written protest.

26. STATUTES AND REGULATIONS. This lease is subject to all applicable state and federal statutes and regulations in effect on the effective date of this lease, and insofar as is constitutionally permissible, to all statutes and regulations placed in effect after the effective date of this lease. A reference to a statute or regulation in this lease includes any change in that statute or regulation whether by amendment, repeal and replacement, or other means. This lease does not limit the power of the State of Alaska or the United States of America to enact and enforce legislation or to promulgate and enforce regulations affecting, directly or indirectly, the activities of the lessee or its agents in connection with this lease or the value of the interest held under this lease. In case of conflicting provisions, statutes and regulations take precedence over this lease.

27. INTERPRETATION. This lease is to be interpreted in accordance with the rules applicable to the interpretation of contracts made in the State of Alaska. The paragraph headings are not part of this lease and are inserted only for convenience. The state and the lessee expressly agree that the law of the State of Alaska will apply in any judicial proceeding affecting this lease.

28. INTEREST IN REAL PROPERTY. It is the intention of the parties that the rights granted to the lessee by this lease constitute an interest in real property in the leased area.

29. WAIVER OF CONDITIONS. The state reserves the right to waive any breach of a provision of this lease, but any such waiver extends only to the particular breach so waived and does not limit the rights of the state with respect to any future breach; nor will the waiver of a particular breach prevent cancellation of this lease for any other cause or for the same cause occurring at another time. Notwithstanding the foregoing, the state will not be deemed to have waived a provision of this lease unless it does so in writing.

30. SEVERABILITY. If it is finally determined in any judicial proceeding that any provision of this lease is invalid, the state and the lessee may jointly agree by a written amendment to this lease that, in consideration of the provisions in that written amendment, the invalid portion will be treated as severed from this lease and that the remainder of this lease, as amended, will remain in effect.

31. LOCAL HIRE. The lessee is encouraged to hire and employ local and Alaska residents and companies, to the extent they are available and qualified, for work performed on the leased area. Lessees shall submit, with the plans

of operations, a proposal detailing the means by which the lessee will comply with this measure. The lessee is encouraged, in formulating this proposal, to coordinate with employment services offered by the State of Alaska and local communities and to recruit employees from local communities.

32. CONDITIONAL LEASE. If all or a part of the leased area is land that has been selected by the state under laws of the United States granting lands to the state, but the land has not been patented to the state by the United States, then this lease is a conditional lease as provided by law until the patent becomes effective. If for any reason the selection is not finally approved, or the patent does not become effective, any rental, royalty, or other production or profit-based payments made to the state under this lease will not be refunded.

33. NONDISCRIMINATION. The lessee and the lessee's contractors and subcontractors may not discriminate against any employee or applicant because of race, religion, marital status, change in marital status, pregnancy, parenthood, physical handicap, color, sex, age, or national origin as set out in AS 18.80.220. The lessee and its contractors and subcontractors must, on beginning any operations under this lease, post in a conspicuous place notices setting out this nondiscrimination provision.

34. DEFINITIONS. All words and phrases used in this lease are to be interpreted where possible in the manner required in respect to the interpretation of statutes by AS 01.10.040. However, the following words have the following meanings unless the context unavoidably requires otherwise:

(1) "oil" means crude petroleum oil and other hydrocarbons, regardless of gravity, that are produced in liquid form by ordinary production methods, including liquid hydrocarbons known as distillate or condensate recovered by separation from gas other than at a gas processing plant;

(2) "gas" means all natural gas (except helium gas) and all other hydrocarbons produced that are not defined in this lease as oil;

(3) "associated substances" means all substances except helium produced as an incident of production of oil or gas by ordinary production methods and not defined in this lease as oil or gas;

(4) "drilling" means the act of boring a hole to reach a proposed bottom hole location through which oil or gas may be produced if encountered in paying quantities, and includes redrilling, sidetracking, deepening, or other means necessary to reach the proposed bottom hole location, testing, logging, plugging, and other operations necessary and incidental to the actual boring of the hole;

(5) "reworking operations" means all operations designed to secure, restore, or improve production through some use of a hole previously drilled, including, but not limited to, mechanical or chemical treatment of any horizon, plugging back to test higher strata, etc.;

(6) "paying quantities" means quantities sufficient to yield a return in excess of operating costs, even if drilling and equipment costs may never be repaid and the undertaking considered as a whole may ultimately result in a loss; quantities are insufficient to yield a return in excess of operating costs unless those quantities, not considering the costs of transportation and marketing, will produce sufficient revenue to induce a prudent operator to produce those quantities; and

(7) "force majeure" means war, riots, acts of God, unusually severe weather, or any other cause beyond the lessee's reasonable ability to foresee or control and includes operational failure of existing transportation facilities and delays caused by judicial decisions or lack of them.

35. ROYALTY ON PRODUCTION. Except for oil, gas, and associated substances used on the leased area for development and production or unavoidably lost, the lessee shall pay to the state as a royalty 12.50 percent in amount or value of the oil, gas, and associated substances saved, removed, or sold from the leased area and of the gas from the leased area used on the leased area for extraction of natural gasoline or other products.

36. VALUE. (a) For the purposes of computing royalties due under this lease, the value of royalty oil, gas, or associated substances shall not be less than the highest of:

(1) the field price received by the lessee for the oil, gas, or associated substances;

(2) the volume-weighted average of the three highest field prices received by other producers in the same field or area for oil of like grade and gravity, gas of like kind and quality, or associated substances of like kind and quality at the time the oil, gas, or associated substances are sold or removed from the leased or unit area or the gas is delivered to an extraction plant if that plant is located on the leased or unit area; if there are less than three prices reported by other producers, the volume-weighted average will be calculated using the lesser number of prices received by other producers in the field or area;

(3) the lessee's posted price in the field or area for the oil, gas, or associated substances; or

(4) the volume-weighted average of the three highest posted prices in the same field or area of the other producers in the same field or area for oil of like grade and gravity, gas of like kind and quality, or associated substances of like kind and quality at the time the oil, gas, or associated substances are sold or removed from the leased or unit area or the gas is delivered to an extraction plant if that plant is located on the leased or unit area; if there are less than three prices posted by other producers, the volume-weighted average will be calculated using the lesser number of prices posted by other producers in the field or area.

(b) If oil, gas, or associated substances are sold away from the leased or unit area, the term "field price" in subparagraph (a) above will be the cash value of all consideration received by the lessee or other producer from the purchaser of the oil, gas, or associated substances, less the lessee's actual and reasonable costs of transportation away from the leased or unit area to the point of sale. The "actual and reasonable costs of transportation" for marine transportation are as defined in 11 AAC 83.229(a), (b)(2), and (c) - l.

(c) In the event the lessee does not sell in an arm's-length transaction the oil, gas, or associated substances, the term "field price" in subparagraphs (a) and (b) above will mean the price the lessee would expect to receive for the oil, gas, or associated substances if the lessee did sell the oil, gas, or associated substances in an arm's-length transaction, minus reasonable costs of transportation away from the leased or unit area to the point of sale or other disposition. The lessee must determine this price in a consistent and logical manner using information available to the lessee and report that price to the state.

(d) The state may establish minimum values for the purposes of computing royalties on oil, gas, or associated substances obtained from this lease, with consideration being given to the price actually received by the lessee, to the price or prices paid in the same field or area for production of like quality, to posted prices, to prices received by the lessee and/or other producers from sales occurring away from the leased area, and/or to other relevant matters. In establishing minimum values, the state may use, but is not limited to, the methodology for determining "prevailing value" as defined in 11 AAC 83.227. Each minimum value determination will be made only after the lessee has been given notice and a reasonable opportunity to be heard. Under this provision, it is expressly agreed that the minimum value of royalty oil, gas, or associated substances under this lease may not necessarily equal, and may exceed, the price of the oil, gas, or associated substances.

37. ROYALTY IN VALUE. Except to the extent that the state elects to receive all or a portion of its royalty in kind as provided in Paragraph 38 below, the lessee shall pay to the state that value of all royalty oil, gas, and associated substances as determined under Paragraph 36 above. Royalty paid in value will be free and clear of all lease expenses (and any portion of those expenses that is incurred away from the leased area), including, but not limited to, expenses for separating, cleaning, dehydration, gathering, saltwater disposal, and preparing the oil, gas, or associated substances for transportation off the leased area. All royalty that may become payable in money to the State of Alaska must be paid on or before the last federal banking day of the calendar month following the month in which the oil, gas, or associated substances are produced. The amount of all royalty in value payments which are not paid when due under this lease or the amount which is subsequently determined to be due to the state or the lessee as the result of a redetermination will bear interest from the last federal banking day of the calendar month following the month in which the oil, gas, or associated substances were produced, until the obligation is paid in full. Interest shall accrue at the rate provided in AS 38.05.135(d) or as may later be amended. Royalty payments must be accompanied by such information relating to valuation of royalty as the state may require which may include, but is not limited to, run tickets, evidence of sales, shipments, and amounts of gross oil, gas, and associated substances produced.

38. ROYALTY IN KIND. (a) At the state's option, which may be exercised from time to time upon not less than 90 days' notice to the lessee, the lessee shall deliver all or a portion of the state's royalty oil, gas, or associated substances produced from the leased area in kind. Delivery will be on the leased area, unit area, or at a place mutually agreed to by the state and the lessee, and must be delivered to the State of Alaska or to any individual, firm, or corporation designated by the state.

(b) Royalty oil, gas, or associated substances delivered in kind must be delivered in good and merchantable condition, of pipeline quality, and free and clear of all lease expenses (and any portion of those expenses incurred away from the leased area), including, but not limited to, expenses for separating, cleaning, dehydration, gathering, saltwater disposal, and preparing the oil, gas, or associated substances for transportation off the leased area.

(c) After having given notice of its intention to take, or after having taken its royalty oil, gas, or associated substances in kind, the state, at its option and upon 90 days' notice to the lessee, may elect to receive a different portion or none of its royalty in kind. If, under federal regulations, the taking of royalty oil, gas, or associated substances in value by the state creates a supplier-purchaser relationship, the lessee hereby waives its right to continue

to receive royalty oil, gas, or associated substances under that relationship, and further agrees that it will require any purchasers of the royalty oil, gas, or associated substances likewise to waive any supplier-purchaser rights.

(d) The lessee shall furnish storage for royalty oil, gas, and associated substances produced from the leased or unit area to the same extent that the lessee provides storage for the lessee's share of oil, gas, and associated substances. The lessee shall not be liable for the loss or destruction of stored royalty oil, gas and associated substances from causes beyond the lessee's ability to control.

(e) If a state royalty purchaser refuses or for any reason fails to take delivery of oil, gas, or associated substances, or in an emergency, and with as much notice to the lessee as is practical or reasonable under the circumstances, the state may elect without penalty to underlift for up to six months all or a portion of the state's royalty on oil, gas, or associated substances produced from the leased or unit area and taken in kind. The state's right to underlift is limited to the portion of royalty oil, gas, or associated substances that the royalty purchaser refused or failed to take delivery of, or the portion necessary to meet the emergency condition. Underlifted oil, gas, or associated substances may be recovered by the state at a daily rate not to exceed 10 percent of its royalty interest share of daily production at the time of the underlift recovery.

39. REDUCTION OF ROYALTY. Lessee may request a reduction of royalty in accordance with the applicable statutes and regulations in effect on the date of application for the reduction.

40. EFFECTIVE DATE. This lease takes effect on .

BY SIGNING THIS LEASE, the state as lessor and the lessee agree to be bound by its provisions.

STATE OF ALASKA

By: _____
Mark D. Myers
Director, Division of Oil and Gas

STATE OF ALASKA)

Sec. 38.05.180. Oil and gas and gas only leasing.

(a) The legislature finds that

(1) the people of Alaska have an interest in the development of the state's oil and gas resources to

(A) maximize the economic and physical recovery of the resources;

(B) maximize competition among parties seeking to explore and develop the resources;

(C) maximize use of Alaska's human resources in the development of the resources;

(2) it is in the best interests of the state

(A) to encourage an assessment of its oil and gas resources and to allow the maximum flexibility in the methods of issuing leases to

(i) recognize the many varied geographical regions of the state and the different costs of exploring for oil and gas in these regions;

(ii) minimize the adverse impact of exploration, development, production, and transportation activity; and

(B) to offer acreage for oil and gas leases or for gas only leases, specifically including

(i) state acreage that has been the subject of a best interest finding at annual areawide lease sales; and

(ii) land in areas that, under (d) of this section, may be leased without having been included in the leasing program prepared and submitted under (b) of this section.

(b) The commissioner shall annually prepare and, before February 1 of each calendar year notify the legislature of a five-year program of proposed oil and gas lease sales and proposed gas only lease sales, specifying as precisely as practicable the location of tracts to be offered for leasing during the calendar year of the notification and the following four calendar years. The commissioner may, at any time, notify the legislature of revisions, including additions, to the program. Notification to each legislator, by electronic message or other written means, constitutes notification to the legislature under this subsection.

(c) Except as provided in (d) and (w) of this section, an oil and gas lease sale or gas only lease sale may not be held unless it was included in the proposed leasing programs submitted to the legislature during the two calendar years preceding the year in which the sale is held. A lease sale, whether for oil and gas or for gas only, may not be held before the date it is scheduled in the proposed oil and gas leasing program.

(d) The commissioner

(1) may annually offer leases for oil and gas or leases for gas only of the acreage described in AS 38.05.035(e)(6)(F);

(2) may issue leases in an area that has not been included in a leasing program prepared, in accordance with (b) of this section, if the land to be leased

(A) was previously subject to a valid state oil and gas lease, a valid state gas lease, or a valid federal oil and gas lease;

(B) is contiguous to land already under state, federal, or private lease and the commissioner makes a written finding, after hearing, that leasing of the land would result in a substantial probability of early evaluation and development of the land to be leased;

(C) is adjacent to land owned or controlled by another party on which a discovery of commercial quantities of oil or gas has been made, and the commissioner finds, after hearing, that there is a reasonable probability that the land to be leased contains oil or gas in communication with the oil or gas discovered on the land of the other party;

(D) is adjacent to land included in the federal five-year Outer Continental Shelf leasing program under 43 U.S.C. 1344, and the commissioner makes a written finding, after hearing, that coordinated or simultaneous leasing with the federal government is in the public interest; or

(E) is the subject of an exploration license issued under AS 38.05.131 - 38.05.134; however, if the license issued was for exploration for and recovery of gas only, then the lease issued under this subsection shall be limited to exploration for and recovery of gas only.

(e) The commissioner shall annually prepare and notify the legislature of the availability of a report containing the following:

(1) the schedule of all lease sales held during the preceding calendar year, the bidding method or methods utilized, and an analysis of the results of the bidding;

(2) if determined, a description of the bidding methods to be used for all lease sales to be held during the current and next two succeeding calendar years;

(3) the reasons a particular bidding method has been selected.

(f) Except as provided by AS 38.05.131 - 38.05.134, the commissioner may issue oil and gas leases or leases for gas only on state land to the highest responsible qualified bidder as follows:

(1) the commissioner shall issue an oil and gas lease or a gas only lease, as appropriate, to the successful bidder determined by competitive bidding under regulations adopted by the commissioner; bidding may be by sealed bid or according to any other bidding procedure the commissioner determines is in the best interests of the state;

(2) whenever, under any of the leasing methods listed in this subsection, a royalty share is reserved to the state, it shall be delivered in pipeline quality and free of all lease or unit expenses, including but not limited to separation, cleaning, dehydration, gathering, salt water disposal, and preparation for transportation off the lease or unit area;

(3) following a pre-sale analysis, the commissioner may choose at least one of the following leasing methods:

(A) a cash bonus bid with a fixed royalty share reserved to the state of not less than 12.5 percent in amount or value of the production removed or sold from the lease;

(B) a cash bonus bid with a fixed royalty share reserved to the state of not less than 12.5 percent in amount or value of the production removed or sold from the lease and a fixed share of the net profit derived from the lease of not less than 30 percent reserved to the state;

(C) a fixed cash bonus with a royalty share reserved to the state as the bid variable but no less than 12.5 percent in amount or value of the production removed or sold from the lease;

(D) a fixed cash bonus with the share of the net profit derived from the lease reserved to the state as the bid variable;

(E) a fixed cash bonus with a fixed royalty share reserved to the state of not less than 12.5 percent in amount or value of the production removed or sold from the lease with the share of the net profit derived from the lease reserved to the state as the bid variable;

(F) a cash bonus bid with a fixed royalty share reserved to the state based on a sliding scale according to the volume of production or other factor but in no event less than 12.5 percent in amount or value of the production removed or sold from the lease;

(G) a fixed cash bonus with a royalty share reserved to the state based on a sliding scale according to the volume of production or other factor as the bid variable but not less than 12.5 percent in amount or value of the production removed or sold from the lease;

(4) notwithstanding a requirement in the leasing method chosen of a minimum fixed royalty share, on and after March 3, 1997, the lessee under a lease issued in the Cook Inlet sedimentary basin who is the first to file with the commissioner a nonconfidential sworn statement claiming to be the first to have drilled a well discovering oil or gas in a previously undiscovered oil or gas pool and who is certified by the commissioner within one year of completion of that discovery well to have drilled a well in that pool that is capable of producing in paying quantities shall pay a royalty of five percent on all production of oil or gas from that pool attributable to that lease for a period of 10 years following the date of discovery of that pool, and thereafter the royalty payable on all production of oil or gas from the

pool attributable to that lease shall be determined and payable as specified in the lease; for purposes of this paragraph, the reduced royalty authorized by this paragraph is subject to the following:

(A) only one reduction of royalty authorized by this paragraph may be allowed on each lease that qualifies for reduction of royalty under this paragraph;

(B) if, under this paragraph, application is made for a royalty reduction for a lease that was entered into before March 3, 1997, the commissioner may approve the application only if, on that date, the lease was a nonproducing lease that was not committed to a unit approved by the commissioner under (m) of this section, that is not part of a unit under (p) or (q) of this section, and that has not been made part of a unit under AS 31.05;

(C) if application for a royalty reduction is made under this paragraph for a lease on which a discovery royalty was claimed or may be claimed under the discovery royalty provisions of former AS 38.05.180(a) in effect before May 6, 1969, the commissioner shall disallow the application under this paragraph unless the applicant waives the right to claim the right to a reduced royalty under the discovery royalty provisions of former AS 38.05.180(a) in effect before May 6, 1969; and

(D) the commissioner shall adopt regulations setting out the standards, criteria, and definitions of terms that apply to implement the filing of applications for, and the review and certification of, discovery certifications under this paragraph;

(5) notwithstanding and in lieu of a requirement in the leasing method chosen of a minimum fixed royalty share, or the royalty provision of a lease, for leases unitized as described in (p) of this section, leases subject to an agreement described in (s) or (t) of this section, or interests unitized under AS 31.05, the lessee of all or part of an oil or gas field identified in this section that has been granted approval of a written plan submitted to the Alaska Oil and Gas Conservation Commission under AS 31.05.030(i) shall, subject to (dd) of this section, pay a royalty of five percent on the first 25,000,000 barrels of oil and the first 35,000,000,000 cubic feet of gas produced for sale from that field that occurs in the 10 years following the date on which the production for sale commences; the fields eligible for royalty reduction under this paragraph, all of which are located within the Cook Inlet sedimentary basin, were discovered before January 1, 1988, and have been undeveloped or shut in from at least January 1, 1988, through December 31, 1997, are

(A) Falls Creek;

(B) Nicolai Creek;

(C) North Fork;

(D) Point Starichkof;

(E) Redoubt Shoal; and

(F) West Foreland;

(6) notwithstanding and in lieu of a requirement in the leasing method chosen of a minimum fixed royalty share, or the royalty provision of a lease, for leases unitized as described in (p) of this section, leases subject to an agreement described in (s) or (t) of this section, or interests unitized under AS 31.05, the lessee of all or part of an oil field located offshore in Cook Inlet on which an oil production platform specified in (A), (C), or (E) of this paragraph operates, or the lessee of all or part of the field located offshore in Cook Inlet and described in (G) of this paragraph,

(A) shall pay a royalty of five percent on oil produced from the platform if oil production that equaled or exceeded a volume of 1,200 barrels a day declines to less than that amount for a period of at least one calendar quarter, as certified by the Alaska Oil and Gas Conservation Commission, for as long as the volume of oil produced from the platform remains less than 1,200 barrels a day; the provisions of this subparagraph apply to

(i) Dolly;

(ii) Grayling;

(iii) King Salmon;

(iv) Steelhead; and

(v) Monopod;

(B) shall pay a royalty calculated under this subparagraph if the volume of oil produced from the platform that was certified by the Alaska Oil and Gas Conservation Commission under (A) of this paragraph later increases to 1,200 or more barrels a day and remains at 1,200 or more barrels a day for a period of at least one calendar quarter; until the royalty rate determined under this subparagraph applies, the royalty continues to be calculated under (A) of this paragraph; on and after the first day of the month following the month the increased production exceeds the period specified in this subparagraph, the royalty payable under this subparagraph is

(i) for production of at least 1,200 barrels a day but not more than 1,300 barrels a day - seven percent;

(ii) for production of more than 1,300 barrels a day but not more than 1,400 barrels a day - 8.5 percent;

(iii) for production of more than 1,400 barrels a day but not more than 1,500 barrels a day - 10 percent; and

(iv) for production of more than 1,500 barrels a day - 12.5 percent;

(C) shall pay a royalty of five percent on oil produced from the platform if oil production that equaled or exceeded a volume of 975 barrels a day declines to less than that amount for a period of at least one calendar quarter, as certified by the Alaska Oil and Gas Conservation Commission, for as long as the volume of oil produced from the platform remains less than 975 barrels a day; the provisions of this subparagraph apply to

(i) Baker;

(ii) Dillon;

(iii) XTO.A; and

(iv) XTO.C;

(D) shall pay a royalty calculated under this subparagraph if the volume of oil produced from the platform that was certified by the Alaska Oil and Gas Conservation Commission under (C) of this paragraph later increases to 975 or more barrels a day and remains at 975 or more barrels a day for a period of at least one calendar quarter; until the royalty rate determined under this subparagraph applies, the royalty continues to be calculated under (C) of this paragraph; on and after the first day of the month following the month the increased production exceeds the period specified in this subparagraph, the royalty payable under this subparagraph is

(i) for production of at least 975 barrels a day but not more than 1,100 barrels a day - seven percent;

(ii) for production of more than 1,100 barrels a day but not more than 1,200 barrels a day - 8.5 percent;

(iii) for production of more than 1,200 barrels a day but not more than 1,350 barrels a day - 10 percent; and

(iv) for production of more than 1,350 barrels a day - 12.5 percent;

(E) shall pay a royalty of five percent on oil produced from the platform if oil production that equaled or exceeded a volume of 750 barrels a day declines to less than that amount for a period of at least one calendar quarter, as certified by the Alaska Oil and Gas Conservation Commission, for as long as the volume of oil produced from the platform remains less than 750 barrels a day; the provisions of this subparagraph apply to

(i) Granite Point;

(ii) Anna; and

(iii) Bruce;

(F) shall pay a royalty calculated under this subparagraph if the volume of oil produced from the platform that was certified by the Alaska Oil and Gas Conservation Commission under (E) of this paragraph later increases to 750 or more barrels a day and remains at 750 or more barrels a day for a period of at least one calendar quarter; until the royalty rate determined under this subparagraph applies, the royalty continues to be calculated under (E) of this paragraph; on and after the first day of the month following the month the increased production exceeds the period specified in this subparagraph, the royalty payable under this subparagraph is

(i) for production of at least 750 barrels a day but not more than 850 barrels a day - seven percent;

(ii) for production of more than 850 barrels a day but not more than 1,000 barrels a day - 8.5 percent;

(iii) for production of more than 1,000 barrels a day but not more than 1,200 barrels a day - 10 percent; and

(iv) for production of more than 1,200 barrels a day - 12.5 percent;

(G) shall pay a royalty of five percent on oil produced from the field if oil production that equaled or exceeded a volume of 750 barrels a day declines to less than that amount for a period of at least one calendar quarter, as certified by the Alaska Oil and Gas Conservation Commission, for as long as the volume of oil produced from the field remains less than 750 barrels a day; the provisions of this subparagraph apply to the West McArthur River field;

(H) shall pay a royalty calculated under this subparagraph if the volume of oil produced from the field that was certified by the Alaska Oil and Gas Conservation Commission under (G) of this paragraph later increases to 750 or more barrels a day and remains at 750 or more barrels a day for a period of at least one calendar quarter; until the royalty rate determined under this subparagraph applies, the royalty continues to be calculated under (G) of this paragraph; on and after the first day of the month following the month the increased production exceeds the period specified in this subparagraph, the royalty payable under this subparagraph is

(i) for production of at least 750 barrels a day but not more than 850 barrels a day - seven percent;

(ii) for production of more than 850 barrels a day but not more than 1,000 barrels a day - 8.5 percent;

(iii) for production of more than 1,000 barrels a day but not more than 1,200 barrels a day - 10 percent; and

(iv) for production of more than 1,200 barrels a day - 12.5 percent; and

(I) may obtain the benefits of the royalty adjustments set out in (A) - (H) of this paragraph only if the commissioner determines that the reduction in production from the platform or the field is

(i) based on the average daily production during the calendar quarter based on reservoir conditions; and

(ii) not the result of short-term production declines due to mechanical or other choke-back factors, temporary shutdowns or decreased production due to environmental or facility constraints, or market conditions.

(g) The share of the net profit derived from a lease reserved to the state under (f) of this section is royalty sale proceeds for the purposes of the Alaska permanent fund under AS 37.13.010.

(h) The commissioner may include terms in any lease imposing a minimum work commitment on the lessee. These terms shall be made public before the sale, and may include appropriate penalty provisions to take effect in the event the lessee does not fulfill the minimum work commitment. If it is demonstrated that a lease has been proven unproductive by actions of adjacent lease holders, the commissioner may set aside a work commitment. The commissioner may waive for a period not to exceed one two-year period any term of a minimum work commitment if the commissioner makes a

written finding either that conditions preventing drilling or exploration were beyond the lessee's reasonable ability to foresee or control or that the lessee has demonstrated through good faith efforts an intent and ability to drill or develop the lease during the term of the waiver.

(i) The commissioner may provide for the establishment of an exploration incentive credit system under which a lessee of state land drilling an exploratory well on that land may earn credits based upon the footage drilled and the region in which the well is situated. The commissioner may also provide for credits to be earned by persons performing geophysical work on state land, if that work is performed during the two seasons immediately preceding an announced lease sale and on land included within the sale area and the geophysical information is made public following the sale. Credits may not exceed 50 percent of the cost of the drilling or geophysical work. Credits may be used during a limited period established by the commissioner and may be assigned during that period. Credits may be applied against (1) royalty and rental payments for oil and gas or for gas only payable to the state or (2) taxes payable under AS 43.55. A credit may not exceed 50 percent of the payment toward which it is being applied. Amounts due the Alaska permanent fund (AS 37.13.010) shall be calculated before the application of credits under this subsection.

(j) The commissioner

(1) may provide for modification of royalty on individual leases, leases unitized as described in (p) of this section, leases subject to an agreement described in (s) or (t) of this section, or interests unitized under AS 31.05

(A) to allow for production from an oil or gas field or pool if

(i) the oil or gas field or pool has been sufficiently delineated to the satisfaction of the commissioner;

(ii) the field or pool has not previously produced oil or gas for sale; and

(iii) oil or gas production from the field or pool would not otherwise be economically feasible;

(B) to prolong the economic life of an oil or gas field or pool as per barrel or barrel equivalent costs increase or as the price of oil or gas decreases, and the increase or decrease is sufficient to make future production no longer economically feasible; or

(C) to reestablish production of shut-in oil or gas that would not otherwise be economically feasible;

(2) may not grant a royalty modification unless the lessee or lessees requesting the change make a clear and convincing showing that a modification of royalty meets the requirements of this subsection and is in the best interests of the state;

(3) shall provide for an increase or decrease or other modification of the state's royalty share by a sliding scale royalty or other mechanism that shall be based on a change in the price of oil or gas and may also be based on other relevant factors such as a change in production rate, projected ultimate recovery, development costs, and operating costs;

(4) may not grant a royalty reduction for a field or pool

(A) under (1)(A) of this subsection if the royalty modification for the field or pool would establish a royalty rate of less than five percent in amount or value of the production removed or sold from a lease or leases covering the field or pool;

(B) under (1)(B) or (1)(C) of this subsection if the royalty modification for the field or pool would establish a royalty rate of less than three percent in amount or value of the production removed or sold from a lease or leases covering the field or pool;

(5) may not grant a royalty reduction under this subsection without including an explicit condition that the royalty reduction is not assignable without the prior written approval, which may not be unreasonably withheld, by the commissioner; the commissioner shall, in the preliminary and final findings and determinations, set out the conditions under which the royalty reduction may be assigned;

(6) shall require the lessee or lessees to submit, with the application for the royalty reduction, financial and technical data that demonstrate that the requirements of this subsection are met; the commissioner

(A) may require disclosure of only the financial and technical data related to development, production, and transportation of oil and gas or gas only from the field or pool that are reasonably available to the applicant; and

(B) shall keep the data confidential under AS 38.05.035(a)(8) at the request of the lessee or lessees making application for the royalty reduction; the confidential data may be disclosed by the commissioner to legislators and to the legislative auditor and as directed by the chair or vice-chair of the Legislative Budget and Audit Committee to the director of the division of legislative finance, the permanent employees of their respective divisions who are responsible for evaluating a royalty reduction, and to agents or contractors of the legislative auditor or the legislative finance director who are engaged under contract to evaluate the royalty reduction, if they sign an appropriate confidentiality agreement;

(7) may

(A) require the lessee or lessees making application for the royalty reduction under (1)(A) of this subsection to pay for the services of an independent contractor, selected by the lessee or lessees from a list of qualified consultants compiled by the commissioner, to evaluate hydrocarbon development, production, transportation, and economics and to assist the commissioner in evaluating the application and financial and technical data; if, under this subparagraph, the commissioner requires payment for the services of an independent contractor, the total cost of the services to be paid for by the lessee or lessees may not exceed $150,000 for each application, and the commissioner shall determine the relevant scope of the work to be performed by the contractor; selection of an independent contractor under this subparagraph is not subject to AS 36.30;

(B) with the mutual consent of the lessee or lessees making application for the royalty reduction under (1)(B) or (1)(C) of this subsection, request payment for the services of an independent contractor, selected from a list of qualified consultants to evaluate hydrocarbon development, production, transportation, and economics by the commissioner to assist the commissioner in evaluating the application and financial and technical data; if, under this subparagraph, the commissioner requires payment for the services of an independent contractor, the total cost of the services that may be paid for by the lessee or lessees may not exceed $150,000 for each application, and the commissioner shall determine the relevant scope of the work to be performed by the contractor; selection of an independent contractor under this subparagraph is not subject to AS 36.30;

(8) shall make and publish a preliminary findings and determination on the royalty reduction application, give reasonable public notice of the preliminary findings and determination, and invite public comment on the preliminary findings and determination during a 30-day period for receipt of public comment;

(9) shall offer to appear before the Legislative Budget and Audit Committee, on a day that is not earlier than 10 days and not later than 20 days after giving public notice under (8) of this subsection, to provide the committee a review of the commissioner's preliminary findings and determination on the royalty reduction application and administrative process; if the Legislative Budget and Audit Committee accepts the commissioner's offer, the committee shall give notice of the committee's meeting to all members of the legislature;

(10) shall make copies of the preliminary findings and determination available to

(A) the presiding officer of each house of the legislature;

(B) the chairs of the legislature's standing committees on resources; and

(C) the chairs of the legislature's special committees on oil and gas, if any;

(11) shall, within 30 days after the close of the public comment period under (8) of this subsection,

(A) prepare a summary of the public response to the commissioner's preliminary findings and determination;

(B) make a final findings and determination; the commissioner's final findings and determination prepared under this subparagraph regarding a royalty reduction is final and not appealable to the court;

(C) transmit a copy of the final findings and determination to the lessee;

(D) with the applicant's consent, amend the applicant's lease or unitization agreement consistent with the commissioner's final decision; and

(E) make copies of the final findings and determination available to each person who submitted comment under (8) of this subsection and who has filed a request for the copies;

(12) is not limited by the provisions of AS 38.05.134(3) or (f) of this section in the commissioner's determination under this subsection.

(k) The commissioner shall define all terms and adopt all regulations necessary for a reasonable understanding and evaluation of a particular bidding method before the public announcement of the terms of proposed sale employing that method.

(l) Subject to the provisions of AS 31.05, the commissioner has discretion to enter into an agreement whereby, with the consent of the lessee, the state's royalty share of production of oil and gas or gas only may be stored or retained in storage by the lessee, or the commissioner may enter into an agreement with one or more of the affected field lease holders to trade current royalty production from a field for a like amount, kind, and quality of future production, on the condition that the state receives back its stored or traded royalty share during the first half of the estimated field life or no later than 15 years after start of production, whichever is sooner.

(m) An oil and gas lease or a gas only lease must cover a reasonably compact area not exceeding 5,760 acres, and may be for a maximum period of 10 years, except that the commissioner may issue a lease for a period not less than five years upon a finding that it is in the best interests of the state. An oil and gas lease shall be automatically extended if and for so long thereafter as oil or gas is produced in paying quantities from the lease or if the lease is committed to a unit approved by the commissioner, and a gas only lease shall be automatically extended if and for so long thereafter as gas is produced in paying quantities from the lease or if the lease is committed to a unit approved by the commissioner. A lease issued under this section covering land on which there is a well capable of producing oil or gas in paying quantities does not expire because the lessee fails to produce oil or gas unless the lessee is allowed reasonable time to place the well on a producing status. Upon extension, the commissioner may increase lease rentals so long as the increased rental rate does not exceed 150 percent of the rate for the preceding year. If drilling has commenced on the expiration date of the primary term of the lease and is continued with reasonable diligence, including such operations as redrilling, sidetracking, or other means necessary to reach the originally proposed bottom hole location, the lease continues in effect until 90 days after drilling has ceased and for so long thereafter as oil or gas is produced in paying quantities. An oil and gas lease or a gas only lease issued under this section which is subject to termination by reason of cessation of production does not terminate if, within 60 days after production ceases, reworking or drilling operations are commenced on the land under lease and are thereafter conducted with reasonable diligence during the period of nonproduction.

(n) The commissioner may establish by regulation that after a well has been plugged and abandoned, the rental rate which was in effect during the year of abandonment is maintained for the remainder of the term. Rental is payable in advance and continues until income to the state from royalty or net profit share exceeds rental income to the state for that year. Under this subsection,

(1) leases for oil and gas or for gas only shall provide for payment to the state of rental on the following basis:

(A) for the first year, $1.00 per acre;

(B) for the second year, $1.50 per acre;

(C) for the third year, $2.00 per acre;

(D) for the fourth year, $2.50 per acre;

(E) for the fifth and following years, $3.00 per acre;

(2) if the lessee under a gas only lease demonstrates to the commissioner that the potential resources underlying the lease are reasonably estimated to be only nonconventional gas,

(A) the rental payment is $1.00 per acre until the lease expires or paying quantities of conventional oil or gas are discovered underlying the lease; and

(B) if the nonconventional gas produced will not be in direct competition with gas on which a royalty at a rate of at least 12.5 percent is payable, then the royalty share payable to the state on all production of gas from the pool attributable to that lease shall be 6.25 percent based upon production delivered in pipeline quality and free of all lease expenses, including separation, cleaning, dehydration, gathering, salt water disposal, and preparation for transportation off the lease.

(o) Upon timely application as provided by regulation, the state may issue to the holder of a federal or private lease, a state shoreland lease covering land within the exterior boundaries of the federal or private lease which has been excluded on the basis of navigability or which is later administratively or judicially determined to be shoreland. The term of such a state shoreland lease shall be the same as the term of the federal or private lease.

(p) To conserve the natural resources of all or a part of an oil or gas pool, field, or like area, the lessees and their representatives may unite with each other, or jointly or separately with others, in collectively adopting or operating under a cooperative or a unit plan of development or operation of the pool, field, or like area, or a part of it, when determined and certified by the commissioner to be necessary or advisable in the public interest. The commissioner may, with the consent of the holders of leases involved, establish, change, or revoke drilling, producing, and royalty requirements of the leases and adopt regulations with reference to the leases, with like consent on the part of the lessees, in connection with the institution and operation of a cooperative or unit plan as the commissioner determines necessary or proper to secure the proper protection of the public interest. The commissioner may not reduce royalty on leases in connection with a cooperative or unit plan except as provided in (j) of this section. The commissioner may require a lease issued under this section to contain a provision requiring the lessee to operate under a reasonable cooperative or unit plan, and may prescribe a plan under which the lessee must operate. The plan must adequately protect all parties in interest, including the state.

(q) A plan authorized by (p) of this section, which includes land owned by the state, may contain a provision vesting the commissioner, or a person, committee, or state agency, with authority to modify from time to time the rate of prospecting and development and the quantity and rate of production under the plan. All leases operated under a plan approved or prescribed by the commissioner are excepted in determining holdings or control under AS 38.05.140. The provisions of this section concerning cooperative or unit plans are in addition to and do not affect AS 31.05.

(r) Producing acreage on a known geologic structure of a producing oil or gas field is excluded from chargeability as against the acreage limitation provisions of AS 38.05.140.

(s) When separate tracts cannot be individually developed and operated in conformity with an established well-spacing or development program, a lease, or a portion of a lease, may be pooled with other land, whether or not owned by the state, under a communitization or drilling agreement providing for an apportionment of production or royalties among the separate tracts of land comprising the drilling or spacing unit when determined by the commissioner to be in the public interest. Operations or production under the agreement are considered as operations or production as to each lease

committed to the agreement. The commissioner may not reduce royalty on leases in connection with a communitization or drilling agreement except as provided in (j) of this section.

(t) The commissioner may prescribe conditions and approve, on conditions, drilling, or development contracts made by one or more lessees of oil or gas leases, with one or more persons, when, in the discretion of the commissioner, the conservation of natural resources or the public convenience or necessity requires it or the interests of the state are best served. All leases operated under approved drilling or development contracts and interests under them, are excepted in determining holding or control under AS 38.05.140. The commissioner may not reduce royalty on a lease or leases that are subject to a drilling or development contract except as provided in (j) of this section.

(u) To avoid waste or to promote conservation of natural resources, the commissioner may authorize the subsurface storage of oil or gas, whether or not produced from state land, in land leased or subject to lease under this section. This authorization may provide for the payment of a storage fee or rental on the stored oil or gas, or, instead of the fee or rental, for a royalty other than that prescribed in the lease when the stored oil or gas is produced in conjunction with oil or gas not previously produced. A lease on which storage is so authorized shall be extended at least for the period of storage and so long thereafter as oil or gas not previously produced is produced in paying quantities. Notwithstanding the authorization for payments under this subsection, when requested by a lessee, the commissioner shall exempt a gas storage facility that qualifies for a tax credit under AS 43.20.046 from any payment described in this subsection for the periods described in this subsection. The exemption is available for the calendar year in which the facility commences commercial operation and for each of the nine calendar years immediately following the first year of commercial operation; however, an exemption is not applicable for the calendar year after the facility ceases commercial operation or for any subsequent calendar year. The lessee shall provide the commissioner with any information the commissioner requests to determine if the exemption applies. The information related to state land leased for a gas storage facility under this subsection is public information and may be furnished to the Regulatory Commission of Alaska. On request, the commissioner shall provide the name of each person using state land leased for a gas storage facility under this chapter, the years for which an exemption was granted, and the amount of the exemption. Gas withdrawn from a gas storage facility regulated under AS 42.05 is considered to be non-native gas and is not considered to be produced and subject to royalty until all non-native gas injected into the gas storage facility has been withdrawn from the gas storage facility. A person receiving an exemption for a payment under this section that contracts to store gas for a utility regulated under AS 42.05 shall reduce the storage price to reflect the value of the exemption. In this subsection, "ceases commercial operation," "commences commercial operation," "gas storage facility," and "non-native gas" have the meanings given in AS 31.05.032.

(v) [Repealed, Sec. 36 ch 94 SLA 1980].

(w) Notwithstanding any other provisions of this section, land that was subject to a best interest finding issued within the previous 10 years may be, at the discretion of the commissioner, immediately offered for lease, under regulations adopted by the commissioner, upon terms appearing most advantageous to the state; however, noncompetitive leasing is prohibited. The commissioner shall establish a royalty determined to be in the public interest but not less than 12 1/2 percent. A lease must provide for payment to the state of rental but need not adhere to the rental schedule in (n) of this section nor to the 5,760-acres-per-lease limitation in (m) of this section. The lease term may not exceed 10 years, except as provided in (o) of this section.

(x) A lessee conducting or permitting any exploration for, or development or production of, oil or gas on state land shall provide the commissioner access to all noninterpretive data obtained from that lease and shall provide copies of that data, as the commissioner may request. The confidentiality provisions of AS 38.05.035 apply to the information obtained under this subsection.

(y) A noncompetitive lease existing at October 10, 1978, shall be extended for a period of two years and so long thereafter as oil and gas is produced in paying quantities. A noncompetitive lease extended under this subsection is subject to the regulations in force at the expiration of the initial five-year term of the lease. No extension may be granted, however, unless within a period of 90 days before the expiration date an application for extension is filed by the record title holder or an assignee whose assignment has been filed for approval, or an operator whose operating agreement has been filed for approval.

(z) No leases may be issued under this section without the inclusion of the following language: "The landowners' royalty share of the unit production allocated to each separately owned tract shall be regarded as royalty to be distributed to and among, or the proceeds of it paid to, the landowners, free and clear of all unit expense and free of any lien for it." Leases issued in violation of this subsection shall, for all purposes, be construed as containing the language required by this subsection.

(aa) Within 90 days after the written request of a lessee of a lease issued under this section or of a lessee of federal land from which the state is entitled under applicable federal law to receive a share of the royalty on gas production, the commissioner shall enter into an agreement with the lessee to use or accept, as the value of the state's royalty share of gas production, the price for the gas established in the contract between the lessee and a gas or electric utility sold by the lessee under the contract or the transfer price between the lessee and a gas or electric utility for a transfer by the lessee under an order establishing the transfer price

(1) but only if the primary function of the utility with which the lessee has entered into the contract or transfer is to provide, either directly or by selling at wholesale to another utility, gas or electricity to the general public, including residential consumers, within the utilities' service areas, and the utility with which the lessee has entered into

(A) the contract is not an affiliated interest, as that term is defined in AS 42.05.990, with the lessee or with a subsequent purchaser of more than 10 percent of the utility's gas or electricity; or

(B) the transfer is an affiliated interest, as that term is defined in AS 42.05.990, and the transfer price between the lessee and the utility is established by an order of the Regulatory Commission of Alaska; and

(2) unless the commissioner makes a written finding, based on clear and convincing evidence, that

(A) the contract price or transfer price is unreasonably low;

(B) the prospective reduction in royalty receipts would not be balanced by increased benefits to in-state gas and electric consumers;

(C) the lessee and the utility are related in management, ownership, or other aspect and, in the case of a transfer price, that relationship is not regulated under AS 42.05; and

(D) the contract price or transfer price is not in the best interest of the state.

(bb) In (aa) and (ee) of this section,

(1) "gas or electric utility" includes an electric cooperative organized under AS 10.25, a municipal utility, and a gas or electric utility regulated under AS 42.05; provided that, if the contract gas is transmitted to consumers through a pipeline and the gas utility either owns the pipeline or is related in ownership to the owner of the pipeline, then the gas utility qualifies as a "gas or electric utility" within the meaning of this paragraph only if it is bound or agrees to be bound by the covenants set out in AS 38.35.120;

(2) "manufacturer of agricultural chemicals" means a person that is a business entity primarily engaging in the manufacturing of nitrogenous and phosphatic based fertilizers, mixed fertilizers, pesticides, and similar chemicals for agricultural purposes;

(3) "price for the gas established in the contract" includes tax reimbursement amounts, deliverability and other charges, and other forms of consideration paid by the gas or electric utility or by the manufacturer of agricultural chemicals, as appropriate, under the contract;

(4) "state's royalty share of gas production"

(A) includes payments on federal leases made to the state under 30 U.S.C. 191;

(B) does not include the state's royalty share of gas production from land patented to the state under

(i) P.L. 84-830, 70 Stat. 709 (Alaska Mental Health Enabling Act);

(ii) 38 Stat. 1214 (Act of March 4, 1915); or

(iii) 43 U.S.C. 1635 in settlement of the claims of the state under 38 Stat. 1214.

(cc) The provisions of (aa) and (ee) of this section do not prohibit the commissioner from accepting any payment on a federal lease tendered by the federal agency responsible for determination and transmittal of the payment to the state under 30 U.S.C. 191 or otherwise due the state as the state's royalty share of gas production irrespective of the state's acceptance of an amount that is different than the amount due under the lease for purposes of determining royalty share on gas production under that subsection.

(dd) A lessee is eligible for the royalty in (f)(5) of this section only if production of oil or gas for sale begins from the eligible field before January 1, 2004. However, if the state or an agency of the state is a party to a suit, other than a suit brought by the lessee or agent of the lessee, and if the suit challenges (f)(5) of this section or AS 31.05.030(i) or an act under (f)(5) of this section or AS 31.05.030(i), the January 1, 2004, deadline is extended by the number of days the state or agency of the state is a party to the suit, including any appeals.

(ee) For a contract that is entered into on or after September 9, 2003, within 90 days after the written request of a lessee of a lease issued under this section or of a lessee of federal land from which the state is entitled under applicable federal law to receive a share of the royalty on gas production, in order to establish the value of the state's royalty share of gas production sold by the lessee under the contract, the commissioner may enter into an agreement with the lessee to use or accept as a price for the gas an amount that is not less than the price established in the contract between the lessee and a manufacturer of agricultural chemicals, not to exceed the amount that would otherwise be due under the lease. The commissioner may enter into the agreement if it is in the best interest of the state

(1) only if the primary function of the manufacturer is to engage in the production of a value-added product, and the manufacturer with which the lessee has entered into the contract is not affiliated with the lessee or with a subsequent purchaser of more than 10 percent of the manufacturer's value-added product; for purposes of this paragraph, the parties to a contract or purchase are affiliated if, in the judgment of the commissioner, one of the parties to the contract or purchase exercises substantial influence over the policies and actions of the other as evidenced by relationship based on common ownership or family interest or by action taken in concert without regard to whether that influence is based upon stockholdings, stockholders, officers, or directors;

(2) unless the commissioner makes a written finding, based on clear and convincing evidence, that

(A) the contract price is unreasonably low; or

(B) the prospective reduction in royalty receipts would not be balanced by employment opportunities or other tangible benefits to the state.

(ff) The provisions of this section that authorize oil and gas leases also apply to authorize the commissioner to issue leases for the production of gas only, subject to the following:

(1) in authorizing and managing leases under this subsection, the terms "oil and gas" or "oil or gas" as they are used in this chapter may be read and applied as appropriate as referring to gas only;

(2) when a lease is authorized as a gas only lease, the lease does not give the lessee the right to produce oil; if a well drilling for gas under a gas only lease authorized by this subsection penetrates a formation capable of producing oil, the owner or operator

(A) shall notify the department and the Alaska Oil and Gas Conservation Commission; and

(B) may not conduct further operations in the drilled well until the facility complies with all applicable laws and regulations relating to oil and gas exploration and production; however, this subparagraph does not prevent the owner or operator from conducting activities that may be required by the Alaska Oil and Gas Conservation Commission to plug, plug-back, or abandon a well;

(3) the provisions of this subsection do not apply to authorize a lease for the recovery of nonconventional gas on land that is held under an existing coal lease entered into under AS 38.05.150 that has an active permit for exploration or mining unless the lessee under this subsection is also the lessee under AS 38.05.150 of that land.

(gg) For an activity or operation related to the extraction of coal bed methane,

(1) for which the department by regulation requires submission and approval of a plan of operations before activities or operations may be undertaken, the director shall, as a condition for determining a bond requested under AS 38.05.130, after notice and an opportunity to be heard, review the plan of operations to determine if use of the owner's land is reasonably necessary to extract the coal bed methane; a bond determined under AS 38.05.130 and this paragraph may, at the discretion of the director, be imposed against a statewide bond that has been posted by the person initiating the request for determination of the bond if the statewide bond remains in effect, and an additional bond is not required;

(2) before approving operations for the development of coal bed methane under AS 38.05.134, 38.05.177, or this section, the director shall ensure that the approval is conditioned upon reasonable and appropriate

(A) setbacks governing the placement by the operator of compressor stations; setbacks approved under this subparagraph must be determined with reference to the population density and general character of the parcels surrounding the proposed compressor station site; and

(B) measures to mitigate the noise of compressors, engines, and other noise generating equipment operated by the operator on the lease or license; measures approved under this subparagraph must be determined with reference to the population density and general character of the parcels surrounding the proposed compressor, engine, or other noise-generating equipment.

SB 209:
Strengthening Alaska's Oil and Gas Leasing Laws

Senate Resources Committee
March 23, 2012

The purpose of SB 209 is to encourage greater development of the state's oil and gas resources, consistent with Article VIII of the Alaska Constitution.

Section 8.1 of the Alaska Constitution states:

"It is the policy of the State to encourage the settlement of its land and **the development of its resources** by making them available for **maximum use** consistent with the public interest."

SB 209 was developed in response to concerns that some oil companies are winning exclusive leases of petroleum-rich state lands, then sitting on those leases and warehousing Alaska's resources, while investing elsewhere.

Committee members are all aware of the Pt. Thomson case, in which state lands with vast quantities of oil and gas were leased more than three decades ago and have yet to be developed.

The sponsor's intent with SB 209 is to ensure that we don't have more Pt. Thomsons – to reform Alaska's leasing laws now to avoid spending millions of dollars 20 or 30 years from now to regain control over valuable state lands and resources.

Of course, these are not any resources. They are the state's most valuable resources.

They are commonly referred to as our "lifeblood."

They provide:

- jobs for tens of thousands of Alaskans,*
- roughly 90% of our unrestricted state revenue, which pays for essential state services and infrastructure
- support for economic development in all other sectors of our economy from seafood to timber.

* Nearly 42,000 direct, indirect and induced jobs (or roughly 1/3 of the jobs within our economy), according to Dr. Scott Goldsmith at the Institute for Social and Economic Research.

They are critical to our economy, wellbeing and future.

This importance clearly raises the stakes. It means we must exercise the greatest diligence when it comes to the management of our oil and gas resources.

So, just how bad is the problem SB 209 seeks to address?

It could be significant, according to the Department of Natural Resources. More than 25% of Alaska's existing oil and gas leases could be sitting idle.

Last year DNR examined 1,320 leases.

- 578 were part of production units or were producing oil or gas,
- 404 had been sold in the preceding three years, so might still be in the planning stages, and
- 338 could be "idle," as lessees had not applied for a single permit to explore or develop them.

What is the resource potential of these lands? Could they support production at some point? Could they help to fill the pipeline and provide jobs for Alaskans?

The answer is we don't know. Some company gave the state a bonus bid some years back and continues to pay rent (usually $1/acre per month), indicating the land might have potential.

But that potential has never been explored or realized.

Alaskans have gained little from having taken these lands off the public rolls, putting them out of reach of other companies who may actually want to explore or develop them.

This is no way to ensure "maximum use" of our resources, especially as production in Alaska's largest fields declines, pipeline volumes decrease, and concerns over the state's future fiscal health intensify.

Regular litigation to take back idle leases is not the answer. It should be Alaska's last resort.

Carefully crafted laws that result in clear expectations about each party's responsibilities and intentions is the better way to go.

Alaskans deserve to know precisely what they are getting when they give exclusive 10-year leases, as was done recently on the North Slope, to resource-rich lands.

They deserve commitments they can count on, so 10 or 20 years down the road they don't feel misled or betrayed, ready to do battle against some of the world's most powerful corporations.

How does SB 209 accomplish this?

1) It requires bidders for an oil and gas lease to submit a plan of exploration or, if appropriate, a plan of development for areas it seeks to lease, prior to submitting a formal bid.

The plan could outline seismic work that will be performed or exploration wells that will be drilled.

Actual production commitments would not, of course, be required if the tracts have yet to be adequately explored.

2) It requires the commissioner to review each bidder's plan to determine if it is "reasonably expected to develop the lease in the best interest of the state."

A company may not be qualified to bidder if the commissioner finds it has submitted a plan that is not in the state's best interest or the bidder is not "reasonably capable" of implementing the plan.

While this "best interest" finding sounds vague and subjective, this terminology is used frequently in Alaska law and governs many state procedures.

It appears 131 times in our statute books. It is used to determine to what actions the state should take as well as to select among bidders and competing proposals.

3) SB 209 also requires that these plans be included in leases and requires DNR to review leases annually to ensure that plans are being implemented.

It allows the commissioner to waive a work commitment if conditions preventing drilling or exploration were beyond the lessee's reasonable ability to foresee or control.

It also allows for a waiver if the lessee demonstrates through good faith efforts an intent to drill or develop the lease in the following two years.

Under existing statutes, DNR has the option of including a minimum work commitment in a lease, along with penalties if the lessee does not fulfill the commitment.

This bill simply requires that work commitments, developed by bidders and approved by the state, be part of all future leases.

4) SB 209 also requires DNR to analyze the economics of each "participating area" (a unitized reservoir where sustained production is occurring) every five years to determine whether the area is capable of increased production.

There are 42 “participating areas” in Alaska. They are within the Badami, Colville River, Duck Island, Kuparuk, Milne Point, Nikaitchuq, Northstar, Oooguruk, and Prudhoe Bay units.

Knowing whether a prospect is reasonably economic matters, and the state currently lacks this knowledge.

It determines what lessees obligations are under contracts they have willingly signed.

The following slide contains language from new oil and gas leases which speaks to lessees' obligations to develop. (Form DOG 200204)

13 (b): Upon discovery of oil or gas on the leased area in quantities that would appear to **a reasonable and prudent operator to be sufficient to recover ordinary costs of drilling**, completing, and producing an additional well in the same geologic structure at another location with a reasonable profit to the operator, **the lessee must drill those wells** as a reasonable and prudent operator would drill, **having due regard for the interest of the state as well as the interest of the lessee**.

Language in old leases (referred to as DL-1 leases) addresses the same obligations.

18. OTHER WELLS. **Upon discovery of oil and gas in paying quantities on said land, Lessee <u>shall</u> drill such wells as a reasonably prudent operator would drill having due regard for the interests of Lessor as well as the interests of Lessee.**

As this contractual language makes explicitly clear, knowing whether a particular prospect is economic is key to enforcing the binding terms of leases Alaska has signed with our partners in the oil and gas industry.

The economic data we have today is limited, but indicates that Alaska remains a highly profitable place to do business.

We know that net income per BOE is nearly double in Alaska what it is elsewhere, at least for ConocoPhillips.

The information on the following slide is drawn from their SEC filings.

Table 2: ConocoPhillips: Net Income per Barrel of Oil Equivalent (BOE)

Jurisdiction	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	Average
Alaska	$8.97	$6.01	$6.19	$10.43	$14.36	$20.38	$21.08	$20.66	$22.84	$15.73	$19.47	**$15.10**
Lower 48	$9.13	$8.02	$3.77	$8.42	$10.56	$15.96	$10.63	$9.80	$14.39	($0.20)	$6.26	**$8.79**
International	$5.35	$3.61	$3.33	$5.69	$9.27	$12.33	$13.17	$1.06	$18.96	$3.89	$17.62	**$8.57**
Global	$7.54	$5.62	$4.43	$7.32	$10.75	$14.79	$13.73	$7.02	$18.26	$4.39	$14.86	**$9.88**
Proportion of BOE Production												**Average**
Alaska	35.9%	47.6%	35.6%	23.6%	24.1%	22.0%	15.5%	16.6%	15.5%	11.9%	14.4%	**23.9%**
Lower 48	23.8%	19.6%	19.2%	18.8%	19.8%	19.1%	26.2%	30.9%	28.3%	22.2%	26.7%	**23.1%**
International	40.4%	32.7%	45.1%	57.6%	56.1%	59.0%	58.2%	52.5%	56.2%	65.9%	58.9%	**53.0%**

Notes: "Barrel of oil equivalent" expresses the amount of a given fuel required to equal the amount of energy contained in one standard U.S. barrel of crude oil (42 gallons). For instance, a generally accepted BOE approximation for natural gas is 5,800 cubic feet (5.8 Mcf). Please note, however, that the amount of energy provided by crude oil (or any fuel) varies by production location or, more precisely, the grade of oil produced. Therefore, BOE figures should be viewed as estimates. The figures in this table are the results of dividing net income by the aggregate BOE production of oil, natural gas, and natural gas liquids.

Source: Legislative Research calculations based on annual filings of form 10-K with the U.S. Securities and Exchange Commission posted to the EDGAR online database, *http://www.sec.gov/edgar/searchedgar/webusers.htm* .

We know that 2 of Alaska's three largest producers have made extraordinary profits in Alaska since ACES passed.

BP Alaska Net Income

(in billions)

2007: $2.5

2008: $2.0

2009: $1.9

2010: $2.3*

***minus $1.5 billion in 2010 deducted for non-Alaska costs, such as the Gulf spill**

$8.7 billion in profits under ACES

ConocoPhillips Alaska Net Income

(in billions)

2007: $2.3

2008: $2.3

2009: $1.5

2010: $1.7

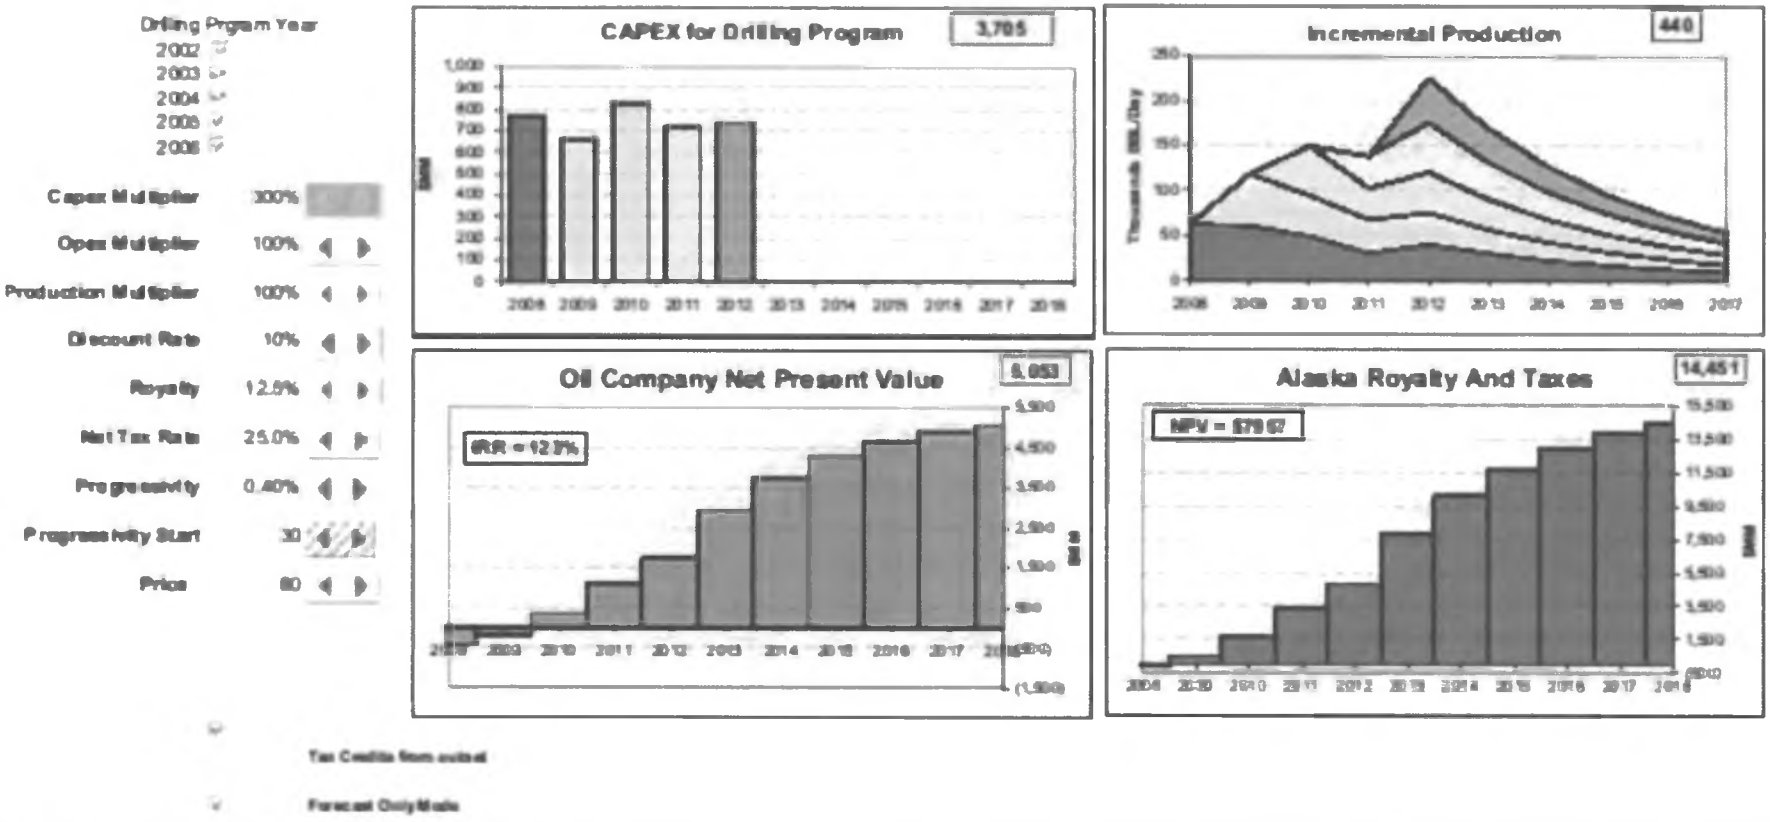
$7.8 billion in profits under ACES

And we know what consultants retained by the Administration and Legislature have told us about the estimated rates of return an oil company would receive when further investing in Prudhoe Bay. The following slide estimates returns at 123% when oil sells at $80 a barrel.

Senate CS – Forecast Mode, $80 oil

- **IRR = 123%, NPV10 = $5.375 billion**

Modeling the Prudhoe Success contained in AOGA/BP Testimony



There is one final provision in SB 209 the sponsor asked me to highlight. It requires DNR to annually submit a report to the legislature that lists each lease found to be out of compliance and the action taken by the commissioner to bring the lessee back into compliance.

DNR has expressed its view on timely lease development in a variety of public statements.

The following statements were made in the context of Point Thomson, but could apply to any lease on which no exploration or development has taken place over an extended period of time.

"The State and the public are primarily interested in **timely oil and gas production** from State leases. **Every year that production is delayed costs the State millions of dollars in unrealized interest on production revenue...**"

(Denial of the proposed plans for the development of the Point Thomson Unit, page 18)

"It is **not in the public interest** to grant a state lessee **an indefinite extension on development merely because development in their view is not currently profitable enough or is too risky.**"

(Denial of the proposed plans for the development of the Point Thomson Unit. Page 20)

"It is not in the public interest to change leasehold intent by **allowing a lessee's parochial interests to supersede the State interest for orderly and reasonably prompt development.**"

(Denial of the proposed plans for the development of the Point Thomson Unit, page 20)

" ... delaying timely production also constitutes waste."

(Denial of proposed plans for the development of the Point Thomson Unit, page 21)

"One of the state's most significant interests in oil and gas leasing is production. The interest is realized by **compliance with the terms of the oil and gas leases**...."

(DNR Commissioner decision on appeal from DNR oil and gas Director's October 27, 2005 decision on the 22nd PTU POD, page 15)

"The unitization scheme is intended to cause state leases to be developed efficiently. It is **not intended to allow lessees to simply hold oil and gas leases indefinitely until such time as the probable profit from a project meets their subjective and internal expectations** or the state agrees to modify its royalty or other contract rights or the state's right to collect taxes."

(DNR Commissioner decision on appeal from DNR oil and gas Director's October 27, 2005 decision on the 22nd PTU POD, page 17)

This last slide is of particular interest in light of statements made by ConocoPhillips' Exploration Manager Michael Faust following Conoco's successful acquisition of 35 North Slope tracts this past December.

Faust said that exploration funding would depend in part on whether changes are made to the state's ACES production tax.

"One of that things that certainly weighs into that decision is the fiscal regime in Alaska."

Michael Faust, Petroleum News, December 8, 2011

The sponsor believes this is an inappropriate approach to the development of leased state lands, which violates the terms of leases ConocoPhillips has signed.

"The state oil and gas leasing system is not intended to require DNR to engage in a murky subjective contest about a Lessees' internal economics, development risk, or view of the difficult of developing the unit. One of the state's primary interests is production. If production is not the plan, the state's remedy is to terminate the unit and find another means to develop the unit."

(DNR Commissioner decision on appeal from DNR oil and gas Director's October 27, 2005 decision on the 22nd PTU POD, pg 17)

"Continuing this 30-year record of non-development and delay of an oil and gas lessee's obligations to develop and produce its oil and gas leases **makes a mockery of the statutory, regulatory and contractual protections for the State as owner of the oil and gas estate.**"

(Denial of proposed plans for the development of the Point Thomson Unit, page 21)

As the legislature considers strategies to increase oil and gas production, the sponsor believes it's important to review and strengthen the state's leasing laws and commitment to lease enforcement.

Changing fiscal terms is not the only way to increase production.

As John Minge, the president of BP Exploration Alaska, recently said, "It's not always only about taxes."

During Alaska's constitutional convention, Bob Bartlett warned fellow delegates that outside interests might "attempt to acquire great areas of Alaska's public lands in order not to develop them until such time as ... they see fit." He saw this as a danger to our development as a state.

Senate Bill 209 attempts to pre-empt that danger by requiring the state to include meaningful work commitments in all state oil and gas leases and to enforce those leases to ensure our resources are developed for the maximum benefit of all Alaskans.

Craig Richards

Presentation Outline Senate Resources on SB 209
855-463-5009

Have Alaska resources been warehoused?

Examples of warehousing
Northstar
Point Thomson
Prudhoe Bay
Gas
Other oil opportunities (e.g., heavy oil)

Big picture question asked by SB209: Should the State modify the terms of its leases to prevent acreage from being held with no present intent to develop?

Explain Primary Term v. Secondary Term

Habendum clause – actual production in paying quantities ; can subsitute capabilty of production (i.e., shut in well)

Primary Term

Speculation: I'll define has holding a WI w/o present intent to develop

- Good and bad.
- Traditionally has had a role in marketplace - liquidity
- Have not studied speculation in Alaska
- More justifiable in role of speculator might lead to development
  - Cook Inlet v. North Slope
- Alaska has long primary terms
  - Common less than 5 years lower-48; 1 or 2 not uncommon
  - Less justifiable in longer primary terms
  - Challenged in Alaska
    - **10 years**: spot checked a half dozen leases and all 10 years;
    - **7 years:** in the 1990's 7 common including 2003 and 2009 model forms on website
      - although Model 2011 form for Beaufort had term blank.

- **Work commitments**
  - Could be from small to large (e.g, seismic to wells)
  - More demanding the more you'll diminish speculation
  - Intuition is speculation plays an important role in the market place
    - In Cook Inlet but not necessarily the ANS
    - For first few years but not after
  - I'd suggest a study as to the role of speculation in market place

        - Might find mandatory work commitments on ANS leases make sense, or for any lease with a primary term over say five years.
            - Could have two parts to primary term, where first five years no work commitment but to hold for the next two to five you have to have approved plans of exploration

Secondary Term

- More observable problems are in secondary term
    - Unitization used as tool to maintain leases not in production
        - Point Thomson
        - Leases getting attached to existing units
            - Cook Inlet
            - Point Thomson
    - Production maintaining acreage, but not being fully developed
        - Classic example – drill one well and won't drill anymore
            - I'd be concerned about Cook Inlet
        - One but not all pools developed
        - Gas
            - Prudhoe Bay

Duty to Develop

- When no development, you fight over the term or duration of the lease or unit
- But once production commences term indefinite
- Duty to develop becomes the mechanism
- Express or implied
- 100% accepted by all o&g states by Statehood; applies to all of our leases. In fact most if not all of lease forms refer to the implied covenants
- Relevant implied covenants (Williams & Myers § 804)
    - *Duty to reasonably develop* – have to drill known, producing formations
    - *Duty to explore further* – must drill test wells in non-producing but potentially productive formations
    - *Duty to market* –
    - *Duty to conduct with reasonable care and due diligence all operations on teh leasehold that affect lessor's royalty interest.*
        - *Catchall*
            - Must develop resonsably and not damage reservior
            - No premature abandonment
            - Must use advance production techniques
            - Must seek regulatory approvals

- Prudent operator standard
- Reasonable expectation of profit
- Example – Duty to Market suit on Prudhoe Bay Gas

- Prima facie case
  1. Discovery of oil and gas
  2. Failure to sell the product
  3. ***Ability of a prudent operator to sell the product through exercise of reasonable diligence***
  4. Damage to the lessor as a result of failing to obtain a market.

- **Remedies**
  - Damages
  - Conditional decree of forfeiture
  - Forfeiture
    - Art. 8, § 8

- *Can State recontract part of a unit or PA where there is production?*
  - If voluntary or court orders forfeiture
  - Happens all the time that first lessee keeps existing wells and then second lessee comes in with right to further develop
  - In large producing fields remedy would complex and court mandated

Conclusion

State using tax policy as a substitute for enforcing its contract rights

The harm is declining oil production

- Discussion has been, cause is too high taxes
- But there are other, likely more relevant causes, that the State can address without giving away tax dollars
  - **Access to information**
    - Failure of this legislature to demand, or the Alaska ANS producers, to bring forward information makes optimizing ACES guess work.
  - **Competitive entry**
    - Barriers to entry in terms of access to facilities and reasonable transportation charges
    - Only one entity other than an Owners of TAPS that ships down TAPS
  - **Refusal to develop existing leases**
    - Steps to take:
    1. Non-producing leases/units: Diligence in not allowing non-producing leases, via unitization, to be held into secondary term
    2. Producing leases/units: Concern is Oil but not gas, or one oil play but not another
       a. Mandatory reporting for marketing

b. Mandatory 5-year economic look

Subject: Senate Bill 209: Stenghtening O&G leasing and enforcement procedures

Hi Craig,

Here are some of the issues Law was going to address that you should feel free to cover.

- What is the "duty to develop"?
- Does it apply to old leases (e.g., for the Prudhoe Bay unit) as well as new leases?
- Does it require production wherever oil can be recovered in paying quantities or simply that production occurs somewhere within a unit or participating area?
- What does "paying quantities" mean?
- Can units or participating areas be contracted if production is not occurring (and hasn't over many years) in a particular part of a unit or PA where development would be reasonable profitable?
- Should our laws be amended to allow this?
- What does the "prudent operator" standard mean in practical terms?
- To what extent must state interests be considered when lessees are making investment decisions?

We thank you again for the insights and information you are providing to the legislature. Your service is much appreciated.

Michelle
465-6881

Senate Resources Committee
Joe Paskvan, Co-Chair / March 23, 2012

Let's call the meeting to order.

Let the record reflect that it is _____ p.m. on Friday, March 23.

Let the record reflect that there is a quorum. Present are

- Co-Chair Wagoner -- excused
- Senator Stedman
- Senator Stevens
- Senator Wielechowski
- Senator French
- Senator McGuire -- excused
- And myself, Senator Paskvan

During this hearing, we have two items on the agenda:

- First, the Committee will hear the merits of Senate Bill 209 relating to Development Plans for Oil and Gas Leases. This is the first hearing for Senate Bill 209 and the Committee looks forward to Senator Wielechowski's presentation of the bill and invited testimony;

- Second, the Committee will hear additional testimony regarding Senate Bill 215, relating to the Gasline Development Corporation and an In-State Gas Pipeline. Joining us today will be Joe Dubler, Vice President and Chief Financial Officer for the Alaska Gasline Development Corporation, to share his thoughts on the bill.

We will dedicate the first hour of the hearing to Senate Bill 209 and the final 30 minutes to Senate Bill 215. Both bills have been scheduled for additional hearings next week.

Senator Wielechowski ...

Calculation of State Subsidy for South to North Line

	Tariff		Tariff+Gas
ASAP Estimated Cost	6.45		8.45
Current Cook Inlet Cost of Gas			6.85
Allowable Tariff to beat ASAP	6.45		1.60
Average MCF/Day	60,000.00		60,000.00
# Days/Year	365.25		365.25
Allowable cost recovery/year	141,351,750		35,064,000
# of years of cost recovery in Tariff	20		20
Total cost able to be recovered	2,827,035,000		701,280,000
Pipeline cost, Big Lake to Dunbar	1,565,000,000	*	1,565,000,000
Lateral Line Dunbar to Fairbanks	60,000,000		60,000,000
Cost of Compressor Station in Cook Inlet	80,000,000		80,000,000
Cost of Chilling Unit at Cantwell	20,000,000		20,000,000
Annual Operating Costs @2% CapEx*20 years	690,000,000		690,000,000
Total cost of South to North	2,415,000,000		2,415,000,000
State Subsidy to run South to North	(412,035,000)		1,713,720,000

Note: Does not include cost of fuel gas, local distribution system for Fairbanks and vicinity, cost of re-engineering project, or inflation.

***cost of pipeline from dunbar to big lake less CI NGL Extraction and Compressor Station. Costs shown on 3-4 and 5-35 of July 1 report.**

Presented to the Senate Resources Committee by Joe Dubler, AGDC (3/23/2012)

SB 215

<TARGET><BILL>SB 215</BILL><SUBJECT>SB 215</SUBJECT><COMM>SRES27</COMM></TARGET>

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 215:

"An Act requiring the Alaska Gasline Development Corporation to construct a natural gas pipeline to deliver Cook Inlet natural gas to Fairbanks and other communities between Cook Inlet and Fairbanks that do not have access to a natural gas pipeline."

For the last forty years, Alaskans have been waiting for a gasline while our gas on the North Slope and in Cook Inlet remains sequestered in the regions where they were discovered. Senate Bill 215 changes this trend and makes Alaska's resources available to more Alaskans by proposing to build a natural gas pipeline from Cook Inlet to Fairbanks.

SB 215 charges the Alaska Gasline Development Corporation to build the fastest, lowest cost and most economic gasline to deliver Cook Inlet gas supplies to market in the Interior.

This bill takes advantage of work already done by the AGDC on the Alaska Stand Alone Pipeline and the Alaska Natural Gas Development Authority while working on the Beluga to Fairbanks gasline. Those organizations have already evaluated many of the important initial steps necessary for any pipeline, including location of access points and resources along the route. With rights-of-way established, tariffs estimated and much of the planning and feasibility studies completed along both the Richardson and Parks Highways, SB 215 would deliver pipeline gas to the Interior faster than any other option on the table today.

With the cost of fuel hovering around four dollars per gallon in Fairbanks and even higher in many other communities in the Interior, sustainable and affordable delivery of natural gas could lower the cost of home heating by 66% or more. Additionally, by enhancing the marketability and distribution of Cook Inlet gas, SB 215 will help improve the economics of gas development in Cook Inlet and augment the reliability and lower the cost of gas to current Southcentral customers.

Alaskans have been waiting far too long for a gasline. I urge you to join me in supporting Senate Bill 215 to deliver Alaska's resources to Alaskans.

January – May: State Capitol – Juneau, Alaska 99801 – (907) 465-2327 – 1 (800) 336-7383 – Fax (907) 465-5241
June – December: 1292 Sadler Way Ste 203 – Fairbanks, Alaska 99701 – (907) 456-8161 – Fax (907) 456-8163

2.1.1 Estimated Residential Savings

The current natural gas cost in Fairbanks is $23.35 per Mcf and heating fuel is $3.84 per gallon, at its best rate, delivered, and quoted by two suppliers. Converting to an equivalent heat basis, natural gas costs $23.35 per million British thermal units (MMBtu) and heating oil is $27.67 per MMBtu, an approximate savings of $4.32 per MMBtu.

An average residential home consumes approximately 190 Mcf per year (2009) for a projected natural gas cost of $4,437 per year, versus heating oil of $5,257. This results in an estimated $820 of savings per year, for the average-size home.

Larger natural gas distribution will lead to economies of scale and potentially reduce prices. Team analysts reviewed a range of natural gas prices from $23.35/MCF to $11.00/MCF in $3.00 increments; potential savings ranged from $114 million to $238 million.

Table 1. Potential Conversion Savings, Natural Gas Over Fuel Oil Equivalent, Selected $/Mcf

Natural Gas, $/Mcf	Savings, $
23.35	114,180,000
23.00	118,800,000
20.00	158,400,000
17.00	198,000,000

Table 3 Estimated Number of Customers and Gas Demand for:
- Parks Highway and Richardson Highway Corridors
- Parks Highway Spur and Richardson Highway Spur Lines and Alaska-Canada Gasline

Parks Highway Stand Alone				
Customers	1,400	190	3	1,593
Demand (mmcfd)	0.8	0.3	17.0	18.1
Richardson Highway Stand Alone				
Customers	2,300	280	2	2,582
Demand (mmcfd)	1.3	0.6	0.5	2.4
Parks Highway Spur/ Alaska-Canada Gasline				
Customers	2,400	300	3	2,703
Demand (mmcfd)	1.4	0.5	17.0	18.9
Richardson Highway Spur/ Alaska-Canada Gasline				
Customers	2,300	280	2	2,582
Demand (mmcfd)	1.3	0.6	0.5	2.4

Notes:
1. Utility demand assumes that the coal-fired power plants at Healy, Clear Air Force Station, and Fort Greely would convert to gas. If they remain coal-fired, the utility demand for the Parks Highway corridor would be 0.0 and 0.03 mmcfd for the Richardson Highway Corridor.
2. Table does not include the number of customers and gas demand for the population centers (Anchorage/Cook Inlet area, Fairbanks) that would be served by either option.
3. The Parks Highway Spur residential number includes people served along the mainline between Fairbanks and Delta Junction.

Air Quality

The non-attainment designation for the Fairbanks area is a cause for concern for several reasons. First, the local population is at increased risk for respiratory and circulatory health problems. Secondly, the designation negatively affects economic growth in the area. Air quality permits for any commercial or industrial activity cannot be obtained if the activity will increase the amount of PM2.5 emissions over current amounts. Because of this restriction, growth of existing commercial and industrial activity will likely not occur, and new commercial and industrial activities will likely not take root in the Fairbanks area until the U.S. Environmental Protection Agency is satisfied that compliance with the ambient PM2.5 standard is attained and a plan is in place to maintain compliance with the ambient standard.

Natural gas conversion in Fairbanks will reduce the emissions of PM2.5 from residential and commercial facilities. The conversion to natural gas will also reduce Oxides of nitrogen (NOX) and Sulfur dioxide (SO2) emissions, which are precursors to the formation of secondary PM2.5 in the atmosphere. The reduction will help bring the Fairbanks area into attainment with the ambient PM2.5 air quality standard.

Environmental engineers based potential reductions in emissions on a five-year build-out of natural gas distribution with the high demand (high density) zone. Preliminary results, using stated assumptions, suggest reductions in PM2.5 emission of up to 95 percent are possible. Table 4 illustrates these results.

Table 4. Change in Emissions Due to Conversion in the High Demand Zone

Presented to the Senate Resources Committee by Joe Dubler, AGDC (3/23/2012)

SB 219

<TARGET><BILL>SB 219</BILL><SUBJECT>SB 219</SUBJECT><COMM>SRES27</COMM></TARGET>

MEMORANDUM
Department of Natural Resources

STATE OF ALASKA
Office of the Commissioner

TO: Sen. Joe Paskvan, Co-Chair
Sen. Tom Wagoner, Co-Chair

DATE: March 21, 2012

TELEPHONE: 465-4730

FROM: Esther Tempel, Legislative Liaison

SUBJECT: Bill Hearing Request—SB 219: Disposals of State Resources

I respectfully request a Senate Resources Committee hearing on SB 219: Disposals of State Resources at your earliest convenience.

SB 219 makes statutory changes that would help reduce applicant costs, create efficiencies by streamlining processes, reduce redundancies, and reduce opportunities for legal challenges. The Division of Mining, Land, and Water in the Department of Natural Resources has worked to address the highest priority changes that relate to the certain leasing and disposal programs and to water rights that are administered by the Department of Natural Resources.

Accompanying this memo, you will find:

1) A copy of SB 219
2) Transmittal Letter
3) Briefing Paper
4) Sectional Analysis
5) Fiscal Notes

A finalized list of witnesses will be forthcoming.

If you need any additional information, please contact Esther Tempel, Legislative Liaison for the Department of Natural Resources at 907-465-4730 or Wyn Menefee, Deputy Director of the Division of Mining, Land, and Water at 907-269-8501.

SENATE BILL NO. 219

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

Introduced: 2/29/12
Referred: Resources, Finance

A BILL

FOR AN ACT ENTITLED

"An Act relating to the Alaska Land Act, including certain lease, sale, and other disposal of state land and materials; relating to production royalties from miners; relating to rights to use state water; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 38.05.055 is amended to read:

Sec. 38.05.055. Auction sale <u>or sealed bid</u> procedures. Unless another method of sale is required under this chapter, AS 38.08, or AS 38.09, the sale of state land shall be made at public auction **<u>or by sealed bid, at the discretion of the director,</u>** to the highest qualified bidder as determined by the director. The director may accept bids and sell state land under this section at no less than 70 percent of the appraised fair market value of the land. To qualify to participate under this section in a public auction **<u>or sale by sealed bid</u>** of state land that is other than commercial, industrial, or agricultural land, a bidder shall have been a resident of the state for at least one year immediately preceding the date of the **<u>sale</u>** [AUCTION] and submit

proof of that fact, as the commissioner requires by regulation. A bidder may be represented by an attorney or agent at **a public** [THE] auction. An aggrieved bidder may appeal to the commissioner within five days after the sale for a review of the director's determination. The sale shall be conducted by the director, and, at the time of sale, the successful bidder shall deposit an amount equal to five percent of the purchase price. The director shall immediately issue a receipt containing a description of the land or property purchased, the price bid, and the amount deposited. The receipt shall be acknowledged in writing by the bidder.

*** Sec. 2.** AS 38.05.065(a) is amended to read:

(a) The contract of sale for land sold at public auction **or by sealed bid** under AS 38.05.055 shall require the remainder of the purchase price to be paid in monthly, quarterly, or annual installments over a period of not more than 20 years, with interest at the rate provided in (i) of this section. Installment payments plus interest shall be set on the level-payment basis.

*** Sec. 3.** AS 38.05.069(a) is amended to read:

(a) After consulting with the Board of Agriculture and Conservation (AS 03.09.010), on a determination that the highest and best use of unoccupied land is for agricultural purposes and that it is in the best interests of the state to sell or lease the land, the commissioner shall grant to an Alaska resident owning and using or leasing and using land for agricultural purposes a first option [AT THE AUCTION] to purchase or lease the unoccupied land situated adjacent to land presently held by the Alaska resident for the amount of the high bid received at public auction **or by sealed bid**. If more than one Alaska resident qualifies for a first option under this section, eligibility for the first option shall be determined by lot and the option must be exercised on the conclusion of the public auction **or opening of sealed bids**. A parcel of agricultural land sold under this section may not be less than 20 acres, and a parcel of agricultural land that is acquired by exercise of the option granted in this subsection may not exceed 320 acres. Agricultural land that is acquired under this section must be used for agricultural purposes as required by law.

*** Sec. 4.** AS 38.05.069(c) is amended to read:

(c) Under this section,

(1) the director may transfer state land classified for agriculture only for agricultural purposes;

(2) the sale or lease shall be at public auction **or by sealed bid**.

*** Sec. 5.** AS 38.05.070(b) is amended to read:

(b) The director, with the approval of the commissioner, shall determine the land to be leased and the limitations, conditions, and terms of the lease. The director shall preserve reasonable and traditional access to state land and water. If the appraised value of the transaction is **$10,000** [$5,000] a year or less the director may negotiate a lease for a period not to exceed 10 years, and on the limitations, conditions, and terms that the director considers are in the best interests of the state. A lease negotiated under this subsection is not eligible for a preference under AS 38.05.102.

*** Sec. 6.** AS 38.05.070 is amended by adding new subsections to read:

(d) If, after notice under AS 38.05.945 soliciting interest for a competitive auction, the department determines that only one potential bidder has expressed interest in bidding, the director may cancel the competitive auction and negotiate a lease and its conditions and terms that the director determines to be in the best interests of the state.

(e) The director may renew a lease issued under this section, AS 38.05.075, or 38.05.810 upon its expiration if the lease is in good standing and the lease renewal is determined to be in the best interests of the state. A renewal issued under this subsection is not subject to AS 38.05.035(e). A lease may only be renewed once for a term no longer than the initial term of the lease.

*** Sec. 7.** AS 38.05.073(g) is amended to read:

(g) After soliciting proposals under (e) of this section, if the commissioner determines that two or more potential lessees are acceptable, the commissioner may select the potential lessee who submits the highest bid during **a public** [AN] auction or by sealed bids, whichever method the commissioner chooses. The minimum bid must equal the amount established by the commissioner plus the administrative fee established under (k) of this section. The commissioner shall also require the potential lessee to make an earnest money deposit under AS 38.05.860(b). After the

38.05.565

commissioner selects a potential lessee, the commissioner may begin negotiations with the potential lessee to develop the terms and conditions for the lease.

*** Sec. 8.** AS 38.05.075(a) is amended to read:

(a) Except as provided in AS 38.05.035, 38.05.070, 38.05.073, 38.05.082, 38.05.083, 38.05.087, 38.05.102, 38.05.600, 38.05.810, and this section, **when competitive interest has been demonstrated or the commissioner determines that it is in the state's best interests,** leasing shall be made at public auction **or by sealed bid, at the discretion of the director,** to the highest qualified bidder as determined by the commissioner. **A bidder may be represented by an attorney or agent at a public auction.** In the public notice of a lease to be offered at public auction **or by sealed bid**, the commissioner shall specify a minimum acceptable bid and the lease compensation method. The lease compensation method shall be designed to maximize the return on the lease to the state and shall be a form of compensation set out in AS 38.05.073(m). An aggrieved bidder may appeal to the commissioner within five days for a review of the determination. The leasing shall be conducted by the commissioner and the successful bidder shall deposit at the **public** auction **or with the sealed bid** the first year's rental or other lease compensation as specified by the commissioner, or that portion of it that the commissioner requires in accordance with the bid. The commissioner shall require, under AS 38.05.860, qualified bidders to deposit a sum equal to any survey or appraisal costs reasonably incurred by another qualified bidder acting in accordance with the regulations of the commissioner or incurred by the department under AS 38.04.045 and AS 38.05.840. If a bidder making a deposit of survey or appraisal costs is determined by the commissioner to be the highest qualified bidder under this subsection, the deposit shall be paid to the unsuccessful bidder who incurred those costs or to the department if the department incurred the costs. All costs for survey and appraisal shall be approved in advance in writing by the commissioner. The commissioner shall immediately issue a receipt containing a description of the land or interest leased, the price bid, and the terms of the lease to the successful qualified bidder. If the receipt is not accepted in writing by the bidder under this subsection, the commissioner may offer the land for lease again under this subsection. A lease, on a form approved by the attorney general, shall be

signed by the successful bidder and by the commissioner [WITHIN THE PERIOD SPECIFIED IN THE AUCTION NOTICE].

*** Sec. 9.** AS 38.05.083(a) is amended to read:

(a) The commissioner may offer to the public for lease at public auction **or by sealed bid** under AS 38.05.075 or by negotiation under AS 38.05.070 a site for aquatic farming or related hatchery operations. Before a final decision to issue or renew a lease under this section, the commissioner shall give notice and allow opportunity for comment in accordance with AS 38.05.945 and may hold a hearing to take testimony. Before a final decision to issue or renew a lease under this section, the commissioner shall consider all relevant comment or testimony submitted under this section, AS 38.05.945, or 38.05.946.

*** Sec. 10.** AS 38.05.110(a) is amended to read:

(a) The commissioner shall provide for cruises of timber **on** [AND APPRAISALS OF OTHER MATERIALS IN OR UPON] state land and shall assess the supply of and current markets for timber on [AND OTHER MATERIALS IN] privately owned land in close proximity to state land to determine

(1) the timber [AND OTHER MATERIALS] that should be offered for sale; and

(2) the terms of sale of the timber [OR OTHER MATERIALS].

*** Sec. 11.** AS 38.05.120 is amended to read:

Sec. 38.05.120. Disposal procedure. Timber [AND OTHER MATERIALS] shall be sold either by sealed bids or public auction, depending on which method is determined by the commissioner to be in the best interests of the state, to the highest qualified bidder as determined by the commissioner. An aggrieved bidder may appeal to the commissioner within five days after the sale for a review of the determination. The sale shall be conducted by the commissioner, and at the time of sale the successful bidder shall deposit the amount specified in the terms of sale. The means by which the amount of deposit is determined shall be prescribed by appropriate regulation. The commissioner shall immediately issue a receipt containing a description of the timber [OR MATERIALS] purchased, the price bid, and the terms of sale. The receipt shall be accepted in writing by the bidder. A contract of sale, on a form approved by the

attorney general, shall be signed by the purchaser and the contract shall be signed by the commissioner on behalf of the state. The commissioner may impose conditions, limitations, and terms considered necessary and proper to protect the interests of the state. Violation of any provision of this chapter or the terms of the contract of sale subjects the purchaser to appropriate legal action.

*** Sec. 12.** AS 38.05.212(a) is amended to read:

(a) In exchange for and to preserve the right to extract and possess the minerals produced, the holder of a mining claim, leasehold location, or mining lease, including a mining lease under AS 38.05.250, shall pay a royalty on all minerals produced from land subject to the claim, leasehold location, or mining lease during each calendar year**, or each fiscal year if the miner does not file the mining license tax on a calendar year basis. The department may exempt, by regulation, small operations from the production royalty otherwise required by this section**.

delete A-6 Amend #4

*** Sec. 13.** AS 38.05.250(c) is amended to read:

(c) Each submerged land mining lease shall be for a period of up to 20 years and for so long as there is production in paying quantities from the leased area. **A submerged land mining lease may be renewed for a period of up to 20 years at the discretion of the director if the director determines that the renewal is in the best interests of the state.**

Two sentences not tied ...

*** Sec. 14.** AS 38.05 is amended by adding new sections to read:

Article 14A. Material Sales.

Sec. 38.05.550. Disposal of materials. (a) All materials owned in fee by the state may be sold or conveyed as provided in AS 38.05.550 - 38.05.565.

(b) Materials may only be sold or removed from sources or sites designated by the department. The department shall issue a decision under AS 38.05.035(e) that the sale and extraction of materials from that location is in the best interests of the state at the time each source or site is designated. The department shall give notice, in accordance with AS 38.05.945, of the department's decision to designate a source or site for the sale and extraction of materials. After decision and notice, the department may sell materials continuously, without further finding or notice, from that designated source or site under this section until the source or site is closed by the

department.

(c) Each sale of materials must be made through a materials sales contract on a form that has been approved by the attorney general. At the time of each sale the department shall determine

(1) the location of the source or site from which materials are to be removed;

(2) the method of disposal as provided in AS 38.05.555 - 38.05.565; and

(3) the limitations, conditions, and terms of sale, which shall address the utilization, development, and maintenance of the source of the materials.

(d) The commissioner shall provide for valuation of materials in or upon state land. Materials sold or conveyed under AS 38.05.550 - 38.05.565 may, at the director's discretion, be sold ~~either~~ at

(1) representative regional sales prices periodically determined by the commissioner for each type of material and for defined geographic regions, under procedures established by regulation; public notice under AS 38.05.945 must be made whenever the commissioner revises the representative regional sales prices;

(2) fair market value determined by appraisal completed and approved within two years of the date of sale; or

(3) a price less than appraised value, determined under AS 38.05.810(a).

Sec. 38.05.555. Negotiated sales and personal use of materials. (a) Notwithstanding any other provision of AS 38.05.550 - 38.05.565, the director may negotiate the sale of any amount of materials from a source or site designated under AS 38.05.550(b). The period of a contract for a sale of materials negotiated under this section may not exceed five years.

(b) Sales of materials under this section must be made at a representative regional sales price set by the commissioner under AS 38.05.550(d)(1) unless

(1) the director determines that it is in the best interests of the state to sell the materials at fair market value determined by an appraisal provided by the department;

(2) the applicant, at its own cost, elects to provide an appraisal, acceptable to the department, determining the fair market value of the materials to be sold; or

(3) the sale is to a state or federal agency, or political subdivision under AS 38.05.810(a) and the material to be extracted and removed is used for public purposes; sales under this paragraph may be at a price less than appraised value as determined by the director.

(c) Subsequent sales of similar materials from the same source or site may be made by the department at the price established by an appraisal provided under (b) of this section.

(d) Individual negotiated contracts for the sale of materials authorized by (a) of this section are not subject to AS 38.05.035(e) or 38.05.945.

(e) Materials from a source or site designated under AS 38.05.550(b) may be extracted and removed for personal use without cost up to a limit of two cubic yards per person within a one calendar year period. Extraction and removal of materials under this subsection must be approved by the department before extraction operations.

Sec. 38.05.560. Competitive sales of materials. (a) The department shall offer materials from a source or site designated under AS 38.05.550(b) for competitive sale if the department determines that

(1) the sale would result in an exclusive use by the purchaser of a designated source or site;

(2) materials available at a designated source or site are insufficient to supply all anticipated buyers;

(3) the size of the designated source or site is too small to accommodate the extraction operations of all anticipated buyers; or

(4) it is in the best interests of the state.

(b) Notice of a competitive sale of materials from a source or site designated under AS 38.05.550(b) shall be given under AS 38.05.945(a)(4) and shall

(1) describe the location of the designated source or site, and the type and quantity of the materials to be sold;

(2) solicit potential bidders to register with the department to participate in the proposed sale; only persons registered to bid at a proposed sale of materials may bid; and

(3) include the minimum bid for materials to be sold.

(c) A notice of competitive sale required under (b) of this section may be combined with a notice required under AS 38.05.550.

(d) If, after notice under (b) of this section, only one potential bidder has registered to bid at a proposed competitive sale, the competitive sale may be cancelled and the materials sold by negotiation under AS 38.05.555.

(e) Materials sold under this section may be sold either by sealed bid or by public outcry or online auction, in the discretion of the department, to the highest qualified bidder as determined by the department. An aggrieved bidder may appeal to the commissioner under AS 44.37.011 within five days after the sale for a review of the determination. The sale shall be conducted by the director or the director's designee, and at the time of sale the successful bidder shall deposit the amount specified in the terms of sale. The means by which the amount of deposit is determined shall be prescribed by regulation. The director shall immediately issue a receipt containing a description of the materials purchased, the price bid, and the terms of sale. The receipt shall be accepted in writing by the bidder. A contract of sale, on a form approved by the attorney general, shall be signed by the purchaser and the contract shall be signed by the director on behalf of the state. The director may impose conditions, limitations, and terms considered necessary and proper to protect the interests of the state.

Sec. 38.05.562. Violations. Violation of any provision of AS 38.05.550 - 38.05.565 or the terms of the contract of sale subjects the purchaser to appropriate legal action.

Sec. 38.05.565. Sale or disposal of materials for special purposes. (a) The department may negotiate the sale or otherwise dispose of materials from sources or sites other than those designated under AS 38.05.550(b) to

(1) municipalities, other state and federal agencies, or other entities under AS 38.05.872; sales under this section may be at less than fair market value and

materials may be disposed of free of charge if the director determines that such a disposal is in the public interest;

(2) a licensed public utility or a licensed common carrier under AS 38.05.810(e); sales under this section shall be at representative regional sales prices determined under AS 38.05.550(d)(1); or

(3) a holder of a permit, land lease, or right-of-way issued by the department, if the materials to be extracted and removed during the construction, use, or maintenance of a facility authorized by a permit, land lease, or right-of-way, are necessary and incidental to the primary purpose of the permit, land lease, or right-of-way, and the materials are put to beneficial use in a way that alters the character, usefulness, or availability of the materials in their native forms; the department may authorize the sale of materials under terms of the permit, land lease, or right-of-way; sales of materials under this paragraph must be at

(A) the representative regional sales price established under AS 38.05.550(d)(1) unless the sale is to a state or federal agency, political subdivision, or other entity under AS 38.05.810(a); or

(B) a price less than appraised value as determined by the director if the sale is to a state or federal agency, political subdivision, or other entity under AS 38.05.810(a) and the materials to be extracted and removed are used for public purposes.

(b) If materials are moved within and not removed from the boundaries of a permit, land lease, or right-of-way issued by the department, without altering the character, usefulness, or availability of the materials in their native forms, the applicant may not be required to purchase the materials.

(c) In this section, "land lease"

(1) means a lease issued under AS 38.05.070 - 38.05.105;

(2) does not include a lease issued under AS 38.05.131 - 38.05.275.

*** Sec. 15.** AS 38.05.810(b) is amended to read:

(b) Notwithstanding AS 38.05.070 - 38.05.080 and 38.05.095, the director, upon application filed by an applicant eligible under (b) - (d) of this section, may, by negotiation and without **competitive bid** [PUBLIC AUCTION] in the manner

prescribed in (b) - (d) of this section, lease state land for a term of not more than 55 years. Before leasing, the director shall prepare a land use plan and a land classification to insure that the proposed use is compatible with area utilization. Before the land may be leased under (b) - (d) of this section, it must be shown to the satisfaction of the director that the land is to be used for an established or definitely proposed project, and that the eligible applicant has the financial ability to carry out the project. The commissioner may establish limitations on the acreage which may be leased under (b) - (d) of this section to an applicant.

*** Sec. 16.** AS 38.05.810(e) is amended to read:

(e) The lease, sale, or other disposal of state land at appraised fair market value may be negotiated with a licensed public utility or a licensed common carrier by the director with the approval of the commissioner if the utility or carrier reasonably requires the land for the conduct of its business under its license. **Notwithstanding AS 38.05.550 - 38.05.565, the sale of materials necessary for construction, use, or maintenance of property leased, sold, or disposed of under this section may be negotiated by the director.** A lease with a licensed public utility that is an electric utility entered into under this subsection may not include, as part of the rent or other fee that is negotiated or charged, an amount that is based on or determined by a percentage of gross revenue for renewable energy produced by the electric utility.

*** Sec. 17.** AS 38.05.872 is repealed and reenacted to read:

Sec. 38.05.872. Disposition of state land and resources for flood control projects. (a) The department may make conveyances of title or other interests in state land, provide for exchange of land, or make other arrangements with respect to state land, as necessary to meet federally established requirements of flood control projects authorized inside the state by the United States.

(b) The commissioner may convey materials at less than fair market value to municipalities, other state and federal agencies, or other entities, and make other arrangements for land and materials as mitigation of a flooding area where excess material deposition significantly contributes to the flooding, consistent with a site–specific flood mitigation plan approved by the commissioner and determined to be in the best interests of the public.

* **Sec. 18.** AS 38.05.945(b) is amended to read:

(b) When notice is required to be given under this section,

(1) the notice must contain sufficient information in commonly understood terms to inform the public of the nature of the action and the opportunity of the public to comment on it;

(2) if the notice is of a preliminary written finding described in (a)(3)(A) of this section, the department shall give notice at the beginning of the public comment period for the preliminary written finding, notifying the public of the right to submit comments; the department shall give notice by

(A) **posting notice on the Alaska Online Public Notice System for at least 30 consecutive days** [PUBLICATION OF A LEGAL NOTICE IN NEWSPAPERS OF STATEWIDE CIRCULATION AND IN NEWSPAPERS OF GENERAL CIRCULATION IN THE VICINITY OF THE PROPOSED ACTION AT LEAST ONCE A WEEK FOR TWO CONSECUTIVE WEEKS];

(B) publication of a notice in display advertising form **describing the proposed action and referencing the online notice required in (A) of this paragraph in newspapers of statewide circulation and in newspapers of general circulation in the vicinity of the proposed action, if available.** [IN THE NEWSPAPERS DESCRIBED IN (A) OF THIS PARAGRAPH] at least once a week for two consecutive weeks;

(C) public service announcements on the electronic media serving the area to be affected by the proposed action; and

(D) one or more of the following methods:

(i) **publication of a legal notice in newspapers of statewide circulation or in newspapers of general circulation in the vicinity of the proposed action, if available, at least once a week for two consecutive weeks;**

(ii) [(i)] posting in a conspicuous location in the vicinity of the action;

(iii) [(ii)] notification of parties known or likely to be

affected by the action; or

(iv) [(iii)] another method calculated to reach affected parties;

(3) if the notice is of an action described in (a) of this section, other than notice of an action under (a)(3)(A) of this section, the department shall give notice at least 30 days before the action by **posting notice on the Alaska Online Public Notice System for at least 30 consecutive days** [PUBLICATION IN NEWSPAPERS OF STATEWIDE CIRCULATION AND IN NEWSPAPERS OF GENERAL CIRCULATION IN THE VICINITY OF THE PROPOSED ACTION] and **by** one or more of the following methods:

(A) **publication of a notice in display advertising form describing the proposed action and referencing the online notice required in this paragraph in newspapers of statewide circulation and in newspapers of general circulation in the vicinity of the proposed action, if available, at least once a week for two consecutive weeks;**

(B) [(A)] publication through public service announcements on the electronic media serving the area affected by the action;

(C) [(B)] posting in a conspicuous location in the vicinity of the action;

(D) [(C)] notification of parties known or likely to be affected by the action;

(E) publication of a legal notice, at least 30 days before the action, briefly describing the proposed action and referencing the online notice required in this paragraph in newspapers of statewide circulation and in newspapers of general circulation in the vicinity of the proposed action, if available; or

(F) [(D)] another method calculated to reach affected persons.

*** Sec. 19.** AS 38.05.945(b), as amended by sec. 18 of this Act, is further amended to read:

(b) When notice is required to be given under this section,

(1) the notice must contain sufficient information in commonly understood terms to inform the public of the nature of the action and the opportunity

of the public to comment on it;

(2) if the notice is of a preliminary written finding described in (a)(3)(A) of this section, the department shall give notice at the beginning of the public comment period for the preliminary written finding, notifying the public of the right to submit comments; the department shall give notice by

(A) posting notice on the Alaska Online Public Notice System for at least 30 consecutive days;

(B) publication of a notice in display advertising form describing the proposed action and referencing the online notice required in (A) of this paragraph in newspapers of statewide circulation and in newspapers of general circulation in the vicinity of the proposed action, if available, at least once a week for two consecutive weeks;

(C) public service announcements on the electronic media serving the area to be affected by the proposed action; and

(D) one or more of the following methods:

(i) publication of a legal notice in newspapers of statewide circulation or in newspapers of general circulation in the vicinity of the proposed action, if available, at least once a week for two consecutive weeks;

(ii) posting in a conspicuous location in the vicinity of the action;

(iii) notification of parties known or likely to be affected by the action; or

(iv) another method calculated to reach affected parties;

(3) if the notice is of an action described in (a) of this section, other than notice of an action under (a)(3)(A) of this section, the department shall give notice at least 30 days before the action by posting notice on the Alaska Online Public Notice System for at least 30 consecutive days and by one or more of the following methods:

(A) publication of a notice in display advertising form describing the proposed action and referencing the online notice required in

this paragraph in newspapers of statewide circulation and in newspapers of general circulation in the vicinity of the proposed action, if available, at least once a week for two consecutive weeks;

(B) publication through public service announcements on the electronic media serving the area affected by the action;

(C) posting in a conspicuous location in the vicinity of the action;

(D) notification of parties known or likely to be affected by the action; **or**

(E) [PUBLICATION OF A LEGAL NOTICE, AT LEAST 30 DAYS BEFORE THE ACTION, BRIEFLY DESCRIBING THE PROPOSED ACTION AND REFERENCING THE ONLINE NOTICE REQUIRED IN THIS PARAGRAPH IN NEWSPAPERS OF STATEWIDE CIRCULATION AND IN NEWSPAPERS OF GENERAL CIRCULATION IN THE VICINITY OF THE PROPOSED ACTION, IF AVAILABLE; OR

(F)] another method calculated to reach affected persons.

*** Sec. 20.** AS 38.05.965(10) is repealed and reenacted to read:

(10) "materials"

(A) means all common variety rock and minerals of any quality, that are saleable and not subject to location under state or federal mining laws;

(B) includes aggregate, riprap, railroad ballast, road ballast, road metal, peat, silt, loam, sand, gravel, and quarry stone;

*** Sec. 21.** AS 46.15.155(a) is amended to read:

(a) Notwithstanding any contrary provision of this chapter, the commissioner may authorize the temporary use of a significant amount of water, as determined by the department by regulation, for a period of time not to exceed five consecutive years **for each authorization**, if the water applied for has not been appropriated in accordance with this chapter. **In the commissioner's discretion, a new authorization for the temporary use of a significant amount of water may be issued for a project at or before the expiration of the existing authorization issued for the**

same project.

* **Sec. 22.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change

(1) the heading of Article 4 of AS 38.05 from "Disposal of Timber and Materials" to "Disposal of Timber";

(2) the catchline of AS 38.05.110 from "Sale of timber and materials; account" to "Sale of timber".

* **Sec. 23.** Section 19 of this Act takes effect July 1, 2017.

* **Sec. 24.** Except as provided in sec. 23 of this Act, this Act takes effect July 1, 2012.

Governor Sean Parnell
STATE OF ALASKA

February 27, 2012

The Honorable Gary Stevens
President of the Senate
Alaska State Legislature
State Capitol, Room 111
Juneau, AK 99801-1182

Dear President Stevens,

Under the authority of Article III, Section 18 of the Alaska Constitution, I am transmitting a bill relating to the Alaska Land Act, including certain lease, sale, and other disposal of State land and materials; relating to production royalties from miners; and relating to rights to use State water. This bill will reduce the permitting burden and costs of applicants by creating efficiencies, streamlining, and eliminating redundancies in the permit application process.

This bill would accomplish the following:

(1) Allow the Department of Natural Resources to use sealed bid procedures, rather than public auction, if appropriate, for certain leasing and disposal of State land;

(2) Raise the monetary cap for negotiating leases of State land from $5,000 to $10,000;

(3) Give the Department of Natural Resources more flexibility regarding when to issue negotiated leases of land, as opposed to using a competitive bid process;

(4) Allow the Department of Natural Resources to renew mineral and land leases under certain conditions without conducting the same process for initiating a new lease;

(5) Separate out the respective rules and procedures for timber sales and material sales, such as for rock and gravel;

(6) Allow the Department of Natural Resources to convey materials as needed for flood control purposes;

(7) Allow the Department of Natural Resources to exempt small mining operations from having to pay production royalties; and

(8) Provide more flexibility to the Department of Natural Resources in how they notify the public of proposed decisions.

Collectively, these various changes represent an effort by the Department of Natural Resources to make its administration of these programs more efficient. If enacted, these changes will help the Department improve its ability to responsibly manage the State's land and resources in accordance with constitutional principles and statutory directives.

Sincerely,

Sean Parnell

Sean Parnell
Governor

Enclosure

royalty exemptions for small scale miners - how much freedom to give DNR.

Jessie - removes a lot of the public process - gives the Dept. the ability to make a judgement call...

- removing written public notice & simply posting on website → full text on website rather than flyer or ad.

- Dick's amend → some peeps in w. AK who want to use peat w/o paying fees...
- other amends to make bill consistent...

SB 219: Disposals of State Resources
Sectional Analysis

For the Senate Resources Committee

Sections 1 through 4 of the bill revise land sales statutes to clarify that the Division of Mining, Land, and Water can use sealed bids instead of public auctions as the Department of Natural Resources has done for many years.

Sec. 5 revises leasing statutes to increase the appraised value of the transaction from $5,000 to $10,000 per year in order to qualify for negotiated leases.

Sec. 6 revises the statute by adding new subsections to the land leasing laws:

(d) This section revises land leasing laws to provide for conversion of a public, competitive offering process to a negotiated, non-competitive process if after public notice only one interested party expresses interest in acquiring the lease.

(e) This section revises land leasing laws to provide for renewals upon expiration of a lease issued under AS 38.05.070, 38.05.075, or 38.05.810. This would allow for a lease to be renewed one time at the discretion of the director of MLW if certain established conditions are satisfied.

Sections 7 through 9 revise land leasing statutes to clarify that MLW can use sealed bids instead of public auctions.

Sections 10 and 11 separate material sales from timber sales in the statutes. Timber sales would remain under AS 38.05.110 – 123 and a new section would be established for material sales (sand, gravel, rip-rap, stone etc.) under Section 14 of this bill. This will clarify the purposes, methods and procedures for these two different types of property sales, which would provide more certainty to the sales processes.

Sec. 12 changes this statute to conform to the Department of Revenue's mining license tax laws and allow miners to file MLT either by calendar year or the company's fiscal year. This section also gives DNR the authority to exempt, by regulation, small operations from the production royalty.

Sec. 13 revises mining statutes to allow the director of the Division of Mining, Land and Water to extend or renew a submerged land mining lease for up to a period of 20 years.

Sec. 14 proposes to revise the Alaska Land Act by adding new sections under a new Article (14A) to deal specifically with Material Sales. This proposed change, associated with proposed changes under Sections 10 and 11, is intended to separate the two very different types of property sales.

The substantive changes to the material sales statutes under this section separate out the respective rules and procedures for timber sales and material sales (such as for rock and gravel).

The proposed changes would:

- Allow the state to solicit competitive interest in material sales, and if there is none, avoid the longer competitive process;
- Establish how prices would be determined and allow for more use of the representative regional sales price rather than requiring appraisals of the material for each sale;
- Clarify that material may be sold at less than fair market value for certain instances that are in the public interest as related to conditions set in AS 38.05.872; and
- Allow material use that is incidental to other authorizations to be sold without a separate material sale authorization.

Sec. 15 revises public and charitable use statutes to clarify that DNR may negotiate the lease of state land without competitive bid as opposed to public auction. This change amends this section of the law to conform to changes proposed in Sections 1-4, and 7-9 of the bill.

Sec. 16 revises public and charitable use statutes to allow DMLW to negotiate within the leasing process the sale of material necessary for construction, use, maintenance of property leased under AS 38.05.810.

Sec. 17 repeals and reenacts the statute that allows the department to convey materials as needed for certain flood control purposes.

Sec. 18 revises public notice statutes in order to modernize public notice requirements for disposals of property rights.

Sec. 19 repeats Sec. 18 except that it removes the option to post a legal notice referencing the online notification in a newspaper of statewide circulation as of July 1, 2017 per section 23. That option was included as a transitional option to help the public transition to online methods.

Sec. 20 changes the definition of "materials" within the Alaska Lands Act.

Sec. 21 changes Alaska Water Law to clarify that temporary water use permits may be renewed.

Sec. 22 provides instruction to the revisor of statutes to make organizational changes to correspond with the proposed separation of timber sales and material sales being proposed in Sections 10, 11, and 14 of this bill.

Sec. 23 provides that Section 19 of the Act takes effect on July 1, 2017.

Sec. 24 provides that, except as provided in sec. 23 of the Act, the Act takes effect July 1, 2012.

10 leases/yr processed

SB219: Disposals of State Resources
Briefing Paper

For the Senate Resources Committee

The Division of Mining, Land and Water in the Department of Natural Resources has identified over 30 statutory changes that would help reduce applicant costs, create efficiencies by streamlining processes, reduce redundancies, and reduce opportunities for legal challenges. These changes would reduce the permitting burden on the applicant and free more time for staff to work on processing applications. Department of Law has drafted a bill that includes some of the highest priority changes that relate to the certain leasing and disposal programs and to water rights that are administered by the Department of Natural Resources.

The bill would accomplish the following primary objectives:

1) Give the department more flexibility on when to issue negotiated land leases, as opposed to using a competitive bid process

   - The proposed changes would give DNR more flexibility to negotiate leases after solicitation of competitive interest where only one party seeks the lease.
   - Negotiating leases rather than conducting the full process for a competitive lease will improve processing times and decrease administrative expenses.
   - Monetary caps would be raised from $5,000 to $10,000 on negotiated leases. The consumer Price Index and land values have increased statewide over the last decade and the monetary cap for negotiating leases has not been adjusted to reflect these changes in value. This would allow more leases to be negotiated rather than having to be offered competitively, which is more time consuming and delays the issuance of the lease.[1]

   couple leases per year

   - Offering more negotiated leases reduces the time it takes to issue leases and reduces costs to the applicant. This will help us reduce the backlog, and help ensure we are not hampering private-sector development by unnecessarily delaying lease issuances.
   - This change does not apply to oil and gas leases.

2) Allow department discretion in renewing certain land leases in good standing for term equal to initial term

   MAX 55 yrs

   - Significantly reduces the administrative cost to the state for executing a new lease at the end of the primary term for these types of lease.

1. Often leases that are offered competitively do not receive any competitive bidders, thus the time does not add any benefit to the process. This change would not prevent the state from offering competitively if it determined there was a competitive interest.

- Includes the requirement for a lease to be used for purpose of original decision in order to be considered in good standing.
- Reduces cost and processing time for lessee at point of renewal when lessee is in good standing and following all the terms of their initial authorization.
- This change does not apply to oil and gas leases.

3) Separate out the respective rules and procedures for timber sales and material sales (such as for rock and gravel)

- Timber and material sale statutes are intertwined, which has led to misinterpretations because many of the existing statutes are specific to only timber or material sales, but not both.
- The proposed changes would provide clarity and efficiency for the material sales process by:
  - Allowing the state to solicit competitive interest in material sales, and if there is none, avoid the longer competitive process. This would allow sales to be offered through a more efficient negotiated sale process
  - Eliminating multiple duplicative decision processes for material sites that will have multiple sales
  - Establishing how prices would be determined and allowing for more use of the representative regional sales price rather than requiring appraisals of the material, thus reducing cost and processing time for applicants
  - Clarifying that material may be sold at less than fair market value for certain instances that are in the public interest
  - Allowing material use that is incidental to other authorizations to be sold without a separate material sale authorization, reducing processing time and cost for applicants
  - Defining materials in such a way as to add clarity and avoid lengthy disputes
  - Allowing the department to convey materials as needed for certain flood control purposes
- The proposed statute changes would ease the permitting burden on the private sector by allowing material sales to be issued more quickly and efficiently. Also, these changes would improve access to state materials for public benefit, such as to municipalities.

4) Clarify that temporary water use permits may be renewed

- Under current statutes, a permittee must reapply for a Temporary Water Use Authorization (TWUA) permit if their project lasts longer than five years. The application must be submitted at the five-year mark and re-adjudicated by staff, even if the use is for the same amount of water from the same source for the same purposes.

- The proposed change would allow the division to provide a new TWUA at the five-year mark—if the water use is the same—without a formal decision process. This would allow applicants to avoid delays during renewal, and would save the division staff time which could be utilized for processing other authorizations.
- TWUA are not permanent water rights. The division may change or revoke TWUA as necessary.

5) Allow the department to use sealed bid procedures, rather than public auction, where appropriate

- This change would clarify that DNR can use sealed bids to facilitate pubic auctions. The sealed-bid auction option is a more efficient and often more revenue positive option. Using this option will reduce the time it takes to sell or lease state land.
- Without this change, DNR could be challenged on the fact that it cannot utilize sealed bid auctions for public auctions, creating inefficiencies, and making it more difficult for the private sector to obtain state land.
- This change addresses statutes that affect land sales, land leasing, contracts, agricultural preferences, and aquatic farm leasing, but does not affect oil and gas leasing.

6) Modernize public notice requirements for disposals of property rights

- Enables the department to notice disposals of property rights via the Alaska Online Public Notice System and de-emphasize notice given in printed media.
- Helps to limit the cost of public noticing, as the cost for noticing in newspapers is continuing to increase as the popularity of print media decreases.
- Increases flexibility for the department on how we issue public notice.
- Existing statutes require 30 day public notice for disposals of property rights.

7) Give the department the authority to exempt small mining operations from having to pay production royalties

- Creates a savings for small-production miners and the state—amounts of locatable minerals being produced from these operations are diminutive and the state's cost to complete the accounting and processing of the royalty is more than the revenue collected.

8) Revise a portion of the mining royalty law to allow companies to file their mining royalty by either calendar year or fiscal year

- Allows for a simplified process and administrative savings for filing, both for the state and the company.
- Helps to coordinate mining royalty processing between the state and company, which creates efficiencies.

None only place

9) Allow the director ~~of the Division~~ of Mining, Land and Water to extend or renew a submerged land ~~mining~~ lease for up to a period of 20 years

- Significantly reduces the administrative cost to the state for executing a new lease at the end of the primary term for these types of lease.
- Benefits the lessee by providing them more certainty in renewing their lease, pending that they are in good standing with the state with adequate production and in compliance with the terms of their lease.

Information provided by the Department of Natural Resources, Division of Mining, Land and Water.

FISCAL NOTE #2

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 219

Analysis

This legislation relates to the Alaska Land Act and the disposal of state land and materials expanding options for the method of sale. The department does not see any fiscal impact from the changes proposed in this legislation.

FISCAL NOTE #3

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB 219

Analysis

LL 0717 proposes to make changes to the Alaska Land Act that are intended to increase efficiency, certainty and timeliness of DNR's land permitting, leasing, mining and land sales programs to permitting applicants.

These proposed changes are not anticipated to have a fiscal impact on the department or the State with the exception of the proposed revision to AS 38.05.212(a), Section 12 of the bill. Under that proposed revision the department would have the authority to exempt, by regulation, small operations from the production royalty. While the definition and threshold level for consideration would need to be established through regulation, DNR anticipates that the net reduction in actual royalties paid to the state under this exemption could be around $10,000 per year. This is because mining operations are allowed to deduct certain operating costs against any royalty due to the state and it is anticipated that the deductions allowed most small operations would equal or exceed any royalty due. Most small operations actually pay no royalty but are still required to go through the accounting and filing operations. The primary benefit of this proposed statute change would come from the cost savings of both DNR and the small operators' administrative efforts to track, calculate and report minimal royalty payments. DNR would then be able to apply this savings in staff time to other, more pressing mining issues.

Because the number of small operations and the threshold level for this exemption must be established through the regulatory process, and because of the variability of the price of metals, DNR cannot provide an estimate of the actual reduction in royalty income at this time. As such the actual reduction to the state's revenue is indeterminate.

The other sections of the bill will either create efficiencies or prevent inefficiencies. The revisions will benefit both the applicant and the State. The applicant will be saved time and cost by the changes.

MEMORANDUM
Department of Natural Resources

STATE OF ALASKA
Office of the Commissioner

TO:	Rep. Eric Feige, Co-Chair Rep. Paul Seaton, Co-Chair	DATE:	March 13, 2012
		TELEPHONE:	465-4730
FROM:	Esther Tempel, Legislative Liaison	SUBJECT:	HB 361 Follow-Up

During the March 5, 2012 hearing on HB 361, the following questions were raised. Please find below the responses from the Division of Mining, Land and Water along with the original questions that were asked (bolded).

Please let me or Dep. Director Wyn Menefee know if you require any further information or have any additional questions.

Note all references to the bill are working off of version 27-GH2717\A

How many leases would be affected by point one of the briefing paper (allowing more leases to be negotiated)?

Let us first clarify that this does not retroactively affect any existing leases. It only applies to future applications for leases. We can not accurately predict how many leases will be applied for and where. We can only look at the historical data and generalize the response.

The goal is to move more lease application processing from full competitive process to negotiated process. There are two parts of the bill that address this effort to shorten the processing time and reduce costs to the applicants. A negotiated process avoids the necessity to prepare an auction brochure, wait 30 additional days after posting notice of the auction, hold the auction and then issue the lease. (See attached chart)

On the first part under Section 5 (on page 3 line 5): the intent is to raise the initial threshold for allowing the director discretion to negotiate leases when the yearly appraised value of the transaction (i.e., rental value) does not exceed $10,000 and the term will not exceed 10 years. The vast majority of our leases do not exceed this value. Most leases are already below the existing $5000 threshold and only a handful of leases would be affected by this change each year. For example, certain larger tracts near communities or on the North Slope (leases of land outside of oil and gas lease boundaries or for non-oil and gas development) could exceed the $5,000 value. Raising the threshold to $10,000 would not automatically move the leases to the negotiated process, but rather provide the director discretion to use the negotiated process.

The second part under Section 6 (on page 3 line 14) would affect many more leases. The intent of part (d) is to first solicit competitive interest in an area where we have a lease application, and if there is no interest other than the applicant, we would begin to negotiate the lease with the applicant, thus avoiding the competitive auction process. We get between 10 – 20 lease applications per year that could potentially be affected by this revision. Why not specify in law then instead of leaving up to "discretion of director"?
Currently these revisions would allow this type of negotiated process for any lease that falls under AS 38.05.070. This includes leasing of uplands, and tide, submerged or shorelands except for resource extraction such as timber, mining or oil and gas leasing. The revisions are broad enough to be applicable for recreational facilities development, aquatic farm, hatchery, and shore fishery leasing. Where more specific statutes are applicable, such as in the shore fishery leasing under AS 38.05.082, the more specific statutes would prevail if there was a conflict.

Under briefing paper point 2, list what types of leases would be affected by this renewal clause?

This revision in Section 6 (on page 3 line 19) allows the director to renew leases that are in good standing one time. Because this revision is in AS 38.05.070 and includes direct references to leases issued under AS 38.05.075 (leasing procedures) and those issued under AS 38.05.810 (public and charitable leases), the renewal clause affects leases of uplands, and tide, submerged or shorelands except

for resource extraction such as timber, mining or oil and gas leasing. This could include everything from docks to lodges to energy production to storage facilities. It is applicable for recreational facilities development, aquatic farm, hatchery, and shore fishery leasing. It would not include leases under the Remote Recreational Cabin Site Program or agricultural preference rights.

Can renewals be applied for before the expiration of the lease?

There are three sections of HB361 that addresses renewals, sections 6 (general leases), 13 (submerged mineral leases), and 21 (temporary water use authorizations). There was concern expressed that lessees should have the ability to apply for renewal sooner than at the point of lease expiration. In all cases the statute would allow leases to be applied for before point of expiration. DNR would seek a determination of whether the lessee would want a renewal in sufficient time before expiration to allow for the renewal decision to be made before expiration. In some cases there may be some reasonable restrictions that would limit how far before the date of expiration a request for renewal could be received. For instance in aquatic farming and mineral leasing, there are requirements of annual reporting of production. DNR would not consider renewal of the lease more than a year before date of expiration to allow time for review of the last year's production reports to determine if the lessee was still in good standing following the stipulations in the lease. Note existing AS 38.05.250(c) allows for submerged mineral leases to be renewed year by year as long as there is production in paying quantities from the leased area, but does not allow for renewals of 20 year terms. This revision under section 13 allows the longer term renewal that provides more certainty for the lessee in business planning.

Do current land leases provide any first right of refusal to give the current lessee the upper hand on reissuance?

Under the current statutes, any reissuance of a lease at the end of a term would require a competitive process. If there was competitive interest and a new applicant were to win the auction, they would be required to reimburse the previous lessee for any of the improvements that the first lessee had built provided that they want to continue in the same use of the land. But the first lessee does not have the first right of refusal.

Under briefing paper point 4, verify that you could issue TWUA before end of term if it makes sense.

As mentioned before, under the revision in section 21, the temporary water use authorizations can be issued at or before the end of the lease.

Clarification of briefing paper point 8: it is mining royalty not mining license tax.

As a reminder, point 8 on the briefing paper is incorrect in saying that we are revising mining licensing tax law referring to Section 12 on page 6 of the bill. We are instead revising the mining royalty law. The statute revision is correct but the briefing paper used an incorrect term when referring to Section 12. The change in Section 12 does not conflict with the Department of Revenue's regulations which state that the mining license tax year is the same as that person's tax year for federal income tax purposes.

Follow up on Agricultural preference right auction question from Representative Seaton

The committee questioned whether the changes suggested in Section 3 (on page 2 line 22) adversely affected the state getting adequate compensation and would be used to stifle bidding. Upon further review of this section, DNR does not believe that the revision to allow the use of sealed bids in any way alters the probable outcome of an agricultural auction held under this section of statute. This area of statute in AS 38.05.069 provides an agricultural preference right. The apparent reason for the existence of this section is to allow agricultural land owners the right to broaden their land ownership if adjacent agricultural land becomes available. This preference right only comes into play when the commissioner has determined that the highest and best use of the unoccupied land to be leased is for agricultural use, and the adjacent owner is an Alaskan resident already using that adjacent parcel for agricultural purposes. This provides the right of the existing farmer to meet high bid to expand their farm. Whether the auction occurs through sealed bid or outcry auction, the adjacent land owner knows they can match high bid to purchase adjacent land through the preference right. They have no incentive to put in a high bid through sealed bid or to drive up the price through an outcry auction. They would wait to match the high bid in either event. Therefore it would not affect the outcome of the auction.

The revision DNR suggests does not address the underlying issue of whether the agricultural preference under the existing statute is the best policy; rather we seek to bring consistency in statute regarding the use of sealed bids or auctions. If there is a desire by the committee to address the underlying policy question of whether the state should offer the agricultural preference in the first place, we suggest that it be done in a separate statute revision.

RE: Final Committee Bills – SB 145 & SB 219

The Senate Resources Committee met on April 2 and acted on SB 145 and SB 219.

Please provide a CS for those bills, per the Committee's actions, as follows:

SB 145 – adopted the following amendments to Draft CS SB 145 version \D:
27-LS1078\D.3 offered by Wielechowski & French (Amend #1)
27-LS1078\D.5 offered by French
French amended from "four" years to "five" years, no objection by committee. Amended amendment was no objection.

SB 219 – adopted the following amendments to version \A
27-GS2717\A.1 offered by Wagoner
27-GS2717\A.2 offered by French
27-GS2717\A.4 offered by French
27-GS2717\A.6 offered by Wielechowski

MEMORANDUM April 2, 2012

SUBJECT: Does an exemption from paying mining production royalties violate sec. 6(i) of the Statehood Act (SB 219, Work Order No. 27-GS2717\A)

TO: Senator Bill Wielechowski
Attn: Michelle Sydeman

FROM: Dennis C. Bailey
Legislative Counsel

You have requested an opinion concerning whether a provision in SB 219 authorizing the department to exempt small operations from production violates sec. 6(i) of the Statehood Act.[1]

Section 12 of SB 219 provides:

> * **Sec. 12.** AS 38.05.212(a) is amended to read:
>
> (a) In exchange for and to preserve the right to extract and possess the minerals produced, the holder of a mining claim, leasehold location, or mining lease, including a mining lease under AS 38.05.250, shall pay a royalty on all minerals produced from land subject to the claim, leasehold location, or mining lease during each calendar year**, or each fiscal year if the miner does not file the mining license tax on a calendar year basis. The department may exempt, by regulation, small operations from the production royalty otherwise required by this section**.

The last sentence is the subject of your question.

Your request suggested that the Alaska Supreme Court may have addressed this issue. The case is *Trustees for Alaska v. State*, 736 P.2d 324 (Alaska 1987), *cert. den.* 486 U.S. 1032, 108 S.Ct. 2013, 100 L.Ed.2d 601 (1988), where the court, following a detailed basis for its conclusion, decided that the leasing requirement in section 6(i) of the Alaska Statehood Act, considered in the context of the School Lands Act, the Mineral Leasing Act, other statehood mineral grants, and mineral leasing systems in other states, mandates

---

[1] The state constitution was adopted containing a provision expressly consenting to the terms of the Statehood Act. *Trustees for Alaska v. State*, 736 P.2d 324 (Alaska 1987), cert denied, 486 U.S. 1032, 108 S.Ct. 2013, 100 L.Ed.2d 601 (1988).

a system under which the State of Alaska must receive rent or royalties for its mining leases. The decision determined that the state could not forego or fail to charge and collect rents and royalties. The court stated that the state hard rock mineral leasing laws that did not require rents or royalties did not meet the leasing requirements of sec. 6(i). *Trustees* at 339. The proposed amendment to AS 38.05.212(a) in SB 219, sec. 12, apparently provides for a circumstance where small operations would be exempt from royalties. Therefore it likely to be found to violate the terms of Statehood Act.

Let me know if you would like a copy of the case.

If I may be of further assistance, please advise.

SB 219 INFO

STATE OF ALASKA

DEPARTMENT OF NATURAL RESOURCES

DIVISION OF MINING, LAND AND WATER

SEAN PARNELL, GOVERNOR

550 WEST 7TH AVENUE, SUITE 1070
ANCHORAGE, ALASKA 99501-3579
PHONE: (907) 269-8600
FAX: (907) 269-8904

The Honorable Senator Wagoner, Co-Chair Senate Resources Committee
State Capitol Room 427
Juneau AK, 99801

March 30, 2012

Dear Representative Wagoner and members of the Senate Resources Committee,

The following questions were asked during Senate Resources on 3/28/12. I have attempted to answer the questions to the best of my ability while attempting to provide a timely response.

Land Leasing:

- **What is the renewal process for leases? What changes result if we were to pass this bill?**
  An attached chart (1) shows some things that will be considered during the lease renewal process.
- ***What are some examples of leases that fall into the various ranges (lease term) and uses/types of operations from big to small?***
  The attached chart (2) shows some examples of the types of leases that have been issued for different lengths of term. The types of projects that require leases range in size and complexity, including but not limited to communication sites, long term gravel pads, commercial recreation facilities, docks, industrial processing facilities, public and charitable facilities, ski area, log transfer facilities, setnet leases and mariculture operations.
- ***How many leases are 55 years long?***
  We do not have a database that tracks the length of the lease specifically so I can not readily pull that information. DMLW has many 55 year leases. The division evaluates the nature of infrastructure investment to determine the length of lease. The vast majority of leases are issued for 35 years or less. However, in the earlier years of the state, there were slightly different standards and we will see 55 year leases coming up for renewal.
- ***How many leases does DNR process or administer yearly?***
  DNR administers 1650 land leases at this time. This does not include oil and gas or mining leases. In FY11 DMLW received 88 applications and processed 39 leases. In FY10 DMLW received 70 applications and processed 64 leases. During testimony the figures I provided were for just the upland and tideland leases and failed to include aquatic farm, set net, public and charitable and log transfer leases. In FY11, DMLW received 12 applications and processed 8 upland and tideland leases. I have attached a spreadsheet (3) that shows the statistics for the last several years.

Temporary Water Use Authorizations:

- ***What is the legal standard for appeal process (in context of renewing TWUA)?***
  Because renewal of a Temporary Water Use Authorization would likely be viewed by a reviewing court as a discretionary agency action not requiring formal procedures, the

applicable standard of review would be the "arbitrary and capricious or abuse of discretion" standard. Under that standard, the Court determines whether the agency's decision was based on consideration of the relevant factors, and whether there has been a clear error of judgment by the agency. If the appeal of the agency's decision raises a legal issue, such as how the governing statute or regulation should be interpreted, different and less deferential standards of review may apply instead.

- ***How will the public know that DMLW has issued a TWUA in order to potentially avail themselves of the right to appeal?***
  DNR has a website where those interested can search for TWUAs. This can be either done by company name, status date or MTRS. The public can access this site from the DNR website under Water Rights and then a link for Water Maps and Data. Once you have obtained the results you can export them into an excel spreadsheet.

http://dnr.alaska.gov/mlw/mapguide/water/twup_start_tok.cfm

- ***Why is repetitively issuing a TWUA not defacto the same as obtaining a permanent water right?***
  A permanent water right is a property right. A TWUA is not a right to water. It can be changed, revoked, additional conditions may be added, reduction in water quantities or use period, suspended to protect the public interest, etc. None of this can be done to a water right without consent of the water right appropriator or abandonment of the water use/source. Therefore the TWUA is designed to allow the DMLW to manage the water use in Alaska whereas a water right is a process where a company or individual can protect their water source from others from adversely affecting their use.
- ***Check on the details of Pioneer's difficulty in getting water from ConocoPhillips Incorporated Alaska (CPIA), mentioned an AOGCC hearing and if it was a TWUA issue. Are there water shortage issues where issuing TWUA would exclude the independents who are trying to enter the North Slope?***
  Pioneer's issue with receiving water from CPIA is in regard to the amount of water the desalination facility CPIA owns can produce verses how much water CPIA needs. When CPIA's needs are low they can provide more water to Pioneer, but when CPIA's needs are higher, then they reduce or stop the quantity of water supplied to Pioneer. The solution to this is either for CPIA to expand their facility or Pioneer to build one of their own.
- ***Are there water shortage issues where issuing TWUA would exclude the independents who are trying to enter the North Slope?***
  As stated in testimony, there are not water shortage issues that we know of that have prevented development. However we recognize that certain areas of the North Slope do have less water in surface systems. Development companies incorporate water use into their planning on the North Slope, and where there is concern over competition to limited resources it is typically in the business' best interest to seek to obtain a water right versus a TWUA.

If you have any further questions, please do not hesitate to contact me.

Sincerely,

Wyn Menefee
DMLW Chief of Operations

SB 219 Amendments

Senate Resources

4-2-12

27-GS2717\A.1
Bailey
3/31/12

AMENDMENT #1

OFFERED IN THE SENATE BY SENATOR WAGONER

TO: SB 219

Page 1, line 1:

Delete "**lease, sale and other disposal**"

Insert "**leases, sales, and other disposals**"

Page 1, following line 4:

Insert a new bill section to read:

"* **Section 1.** AS 38.05.050 is amended to read:

Sec. 38.05.050. Disposal of land for private ownership. The commissioner shall determine the land to be disposed of for private use. The commissioner shall determine the time and place of disposal. **A public** [AN] auction sale, **sale by sealed bid,** a lottery sale, or a disposal of land for homesites may be held in a community that is near the land to be sold or disposed of."

Page 1, line 5:

Delete "**Section 1**"

Insert "**Sec. 2**"

Renumber the following bill sections accordingly.

Page 1, line 10:

Delete "no"

Insert "**not** [NO]"

Page 3, line 22:

Page 5, following line 2:

Insert new bill sections to read:

"* **Sec. 10.** AS 38.05.075(e) is amended to read:

(e) The commissioner may require prequalification of bidders for a lease to be issued under AS 38.05.070. If the commissioner determines to require prequalification, the procedures established by this section and the notice including **prequalification** [PRE-QUALIFICATION] requirements required to be given under AS 38.05.945 shall be completed within 75 days of the receipt of the first lease application unless the commissioner grants additional time for the completion of the procedures. Within the 75-day period or the additional time granted by the commissioner, the commissioner shall complete

(1) classification under AS 38.05.300;

(2) the procedures required by AS 38.05.035(e);

(3) any other action required by ~~law for the disposal~~ of the lease to a bidder except survey, appraisal, and the auction **or sealed bid**.

* **Sec. 11.** AS 38.05.075(g) is amended to read:

(g) Notice of an auction **or sealed bid** required under this section shall be made by certified mail to all prequalified bidders."

Renumber the following bill sections accordingly.

Page 5, following line 19:

Insert a new bill section to read:

"* **Sec. 14.** AS 38.05.115 is amended to read:

Sec. 38.05.115. Limitations and conditions of sale. (a) The commissioner shall determine the timber [AND OTHER MATERIALS] to be sold [,] and the limitations, conditions, and terms of sale. The limitations, conditions, and terms shall include the utilization, development, and maintenance of the sustained yield principle, subject to preference among other beneficial uses. The commissioner may negotiate sales of timber [OR MATERIALS] without advertisement and on the limitations, conditions, and terms that are considered to be in the best interests of the state. Within a one-year period, the commissioner may not negotiate a sale without advertisement to the same purchaser of

[(1)] more than 500 M.B.M. or equivalent other measure of timber [;

(2) EXCEPT AS PROVIDED IN (3) OF THIS SUBSECTION, MORE THAN 25,000 CUBIC YARDS OF MATERIALS; OR

(3) MORE THAN 100,000 CUBIC YARDS OF MATERIALS TO A COMMON CARRIER HOLDING A LEASE UNDER AS 38.35].

(b) Negotiated sales not exceeding 50 M.B.M. or the equivalent other measure of timber [OR 2,500 CUBIC YARDS OF MATERIALS] are exempt from the provisions of AS 34.15.150.

(c) The limitations of this section are not applicable to timber **that** [WHICH] becomes state property under the provisions of AS 45.50.210 - 45.50.235."

MEMORANDUM April 2, 2012

SUBJECT: Does an exemption from paying mining production royalties violate sec. 6(i) of the Statehood Act (SB 219, Work Order No. 27-GS2717\A)

TO: Senator Bill Wielechowski
Attn: Michelle Sydeman

FROM: Dennis C. Bailey
Legislative Counsel

You have requested an opinion concerning whether a provision in SB 219 authorizing the department to exempt small operations from production violates sec. 6(i) of the Statehood Act.[1]

Section 12 of SB 219 provides:

> * **Sec. 12.** AS 38.05.212(a) is amended to read:
> (a) In exchange for and to preserve the right to extract and possess the minerals produced, the holder of a mining claim, leasehold location, or mining lease, including a mining lease under AS 38.05.250, shall pay a royalty on all minerals produced from land subject to the claim, leasehold location, or mining lease during each calendar year**, or each fiscal year if the miner does not file the mining license tax on a calendar year basis. The department may exempt, by regulation, small operations from the production royalty otherwise required by this section**.

The last sentence is the subject of your question.

Your request suggested that the Alaska Supreme Court may have addressed this issue. The case is *Trustees for Alaska v. State*, 736 P.2d 324 (Alaska 1987), *cert. den.* 486 U.S. 1032, 108 S.Ct. 2013, 100 L.Ed.2d 601 (1988), where the court, following a detailed basis for its conclusion, decided that the leasing requirement in section 6(i) of the Alaska Statehood Act, considered in the context of the School Lands Act, the Mineral Leasing Act, other statehood mineral grants, and mineral leasing systems in other states, mandates

---

[1] The state constitution was adopted containing a provision expressly consenting to the terms of the Statehood Act. *Trustees for Alaska v. State*, 736 P.2d 324 (Alaska 1987), cert denied, 486 U.S. 1032, 108 S.Ct. 2013, 100 L.Ed.2d 601 (1988).

a system under which the State of Alaska must receive rent or royalties for its mining leases. The decision determined that the state could not forego or fail to charge and collect rents and royalties. The court stated that the state hard rock mineral leasing laws that did not require rents or royalties did not meet the leasing requirements of sec. 6(i). *Trustees* at 339. The proposed amendment to AS 38.05.212(a) in SB 219, sec. 12, apparently provides for a circumstance where small operations would be exempt from royalties. Therefore it likely to be found to violate the terms of Statehood Act.

Let me know if you would like a copy of the case.

If I may be of further assistance, please advise.

Anna Sorensen

From: Lissa Hughes <Lissa@northern.org>
Sent: Monday, April 02, 2012 2:19 PM
To: Jeff Stepp
Cc: Anna Sorensen; Pamela Miller
Subject: SB 145 - to Paskvan for hearing at 3_30 pm today

Jeff,

Here are some basic concerns the Northern Alaska Environmental Center has on SB 145. Can you put these questions in front of Sen. Paskvan before he goes into Resources Committee?

The proposed expansion of this bill by ADNR's presented information and the filed amendments to include other regions of the state besides Nenana greatly expands the geographic reach of this bill and potential state subsidy to corporations. This is of concern from a fiscal standpoint. There did not appear to be a fiscal note for the expanded version of the bill.

How would this energy generation meet the needs of these communities in light of the fact that oil refining would not likely take place locally? What incentives for renewable energy projects in those communities are underway, or have been requested and not yet funded to date? How do the rate of funding of renewable energy projects requested by communities compare to this corporate subsidy?

The geographic explosion, beyond Nenana basin, is a concern from an environmental standpoint and public transparency standpoint since Doyon and others have not made their current proposed exploration plans public.

There has been considerable opposition to Doyon's oil and gas development over many years within the Yukon Flats by the tribal government at Fort Yukon and others within that community, and there has been no news about this new effort to expand the subsidy to drill in the Yukon Flats to inform the general public what is going on.

The geographic expansion of the state subsidy to cover wells drilled on federal lands within the newly added regions, such as Yukon Flats National Wildlife Refuge, makes the bill far more controversial.

Many Thanks!
Lissa

SB 219 – Disposals of State Resources – Issues

A. Section 6, page 3, lines 19-23.

Allows the director of Mining, Land and Water to renew land use leases that are in good standing one time if the renewal is determined to be in the best interests of the state. Exempts renewals from undergoing a detailed best interest finding required under AS 38.05.035(e). Affects leases on uplands, and tide, submerged or shore lands except for resource extraction such as timber, mining or oil and gas leasing. Examples: docks, lodges, shore fishery leasing, aquatic farms, hatcheries, recreational facilities, other facilities.

1. What is the potential maximum term for a lease renewal?
2. What is the procedure for a lease renewal?
    a. Will a renewal decision be public noticed?
    b. Will there be an opportunity for public comment on a lease renewal?
    c. Could someone opposing the renewal appeal the renewal decision?
3. What bond requirements will apply to lease renewals?
4. Will there be regulations addressing the procedure for a lease renewal?

B. Section 13, page 6, lines 14-19.

Currently a 20-year submerged land mining lease may be extended on a year-to-year basis as long as there is production in paying quantities from the leased area. This section gives the director the discretion to renew a submerged land mining lease for up to a period of 20 years if the director determines the renewal is in the best interests of the state. According to DNR, under the lease terms, a lease may be terminated if there is no production in paying quantities. There is no limit to the number of times a lease may be renewed.

1. What is the procedure for a lease renewal?
    a. Will a renewal decision be public noticed?
    b. Will there be an opportunity for public comment on a lease renewal?

c. Could someone opposing the renewal appeal the renewal decision?

2. What bond requirements will apply to lease renewals?

3. Will there be regulations addressing the procedure for a lease renewal?

It's not entirely clear that a renewal may be approved only if there is production in paying quantities at the time of the renewal. Possible amendment to make this clearer:

On line 16, after "leased area." delete "A" and insert "If there is production in paying quantities from the leased area, a"

The section would read as follows:

(c) Each submerged land mining lease shall be for a period of up to 20 years and for so long as there is production in paying quantities from the leased area. **If there is production in paying quantities from the leased area, a submerged land mining lease may be renewed for a period of up to 20 years at the discretion of the director if the director determines that the renewal is in the best interests of the state."**

C. Section 21, page 15-16, lines 24-31.

Temporary water use permits are currently issued for a period of time not to exceed five consecutive years. There is no specified limit to the size of allowable withdrawals – limits are determined by the size of the source. This section gives the commissioner the discretion to issue a new authorization for the same project. There are no limits as to how many times a new authorization may be issued.

1. Are there any sidebars to the commissioner's discretion? For example, current regulations say a temporary water use authorization may be extended for one time for "good cause." (11 AAC 93.210). And the former coastal program exempted from coastal program review extensions to temporary water use permits when no changes were proposed to the existing project and the permittee had demonstrated compliance with all previously required coastal program stipulations. Will there be similar conditions for a renewal?

2. What is the procedure for an authorization renewal?

a. Will a new authorization decision be public noticed?

b. Will there be an opportunity for public comment on a new authorization?

c. Could someone opposing the new authorization appeal the decision?

3. Will there be regulations addressing the procedure for issuing a new authorization?

4. What laws govern the size of a withdrawal?

5. How does this not become a defacto permanent water use appropriation?

Possible Problem with ~~HB 361~~ SB 219
Renewal of Temporary Water Use Permits

One of the controversies surrounding Temporary Water Use Permits (TWUPs) is that there is no requirement for public notice of a proposed authorization (AS 46.15.133). Added to that, a TWUP is also exempt from issuance criteria such as that the water use is in the public interest, is beneficial, does not unduly effect fish and wildlife or public health, etc (AS 46.15.080).

The current statute states that a Temporary Water Use Permit should not exceed five consecutive years in duration. After all, if you are going to call a permit as temporary, you have to draw the line somewhere. Logically, if an entity's need for a significant amount of water continued for a period of more than five consecutive years, that entity should be required to apply for a regular permit to appropriate water—a permit that would have to be publically noticed and would have to meet statutory issuance criteria.

One of the governor's proposed changes in HB 361 would allow TWUPs to be renewed again and again. This may be an attempt to make TWUPs de facto permanent water use appropriations—appropriations that are permitted time after time at the discretion of the commissioner, with no public notice, without adhering to criteria that requires that the appropriation be in the public interest, and with no opportunity for an "interested person" to file an objection to the appropriation.

See HB 361 excerpt followed by relevant statutes below:

SEC. 21 SB 219

FROM HB 361:
*** Sec. 23. AS 46.15.155(a) is amended to read:**

(a) Notwithstanding any contrary provision of this chapter, the commissioner may authorize the temporary use of a significant amount of water, as determined by the department by regulation, for a period of time not to exceed five consecutive years **for each authorization**, if the water applied for has not been appropriated in accordance with this chapter. **In the commissioner's discretion, a new authorization for the temporary use of a significant amount of water may be issued for a project at or before the expiration of the existing authorization issued for the same project.**

RELEVANT STATUTES:

Sec. 46.15.155. Authorization for temporary use of water.

(a) Notwithstanding any contrary provision of this chapter, the commissioner may authorize the temporary use of a significant amount of water, as determined by the department by regulation, for a period of time not to exceed five consecutive years, if the water applied for has not been appropriated in accordance with this chapter.

(b) Notwithstanding any contrary provision of this chapter, an authorization for a temporary use of less than a significant amount of water is not required under this section unless the commissioner has determined by regulation that the use may have an adverse effect on other water uses and that an authorization must be obtained from the department.

(c) The issuance of an authorization for temporary use of water under this section does not establish a right to appropriate water. The temporary use of water under an authorization remains subject to appropriation under this chapter.

(d) Notwithstanding any contrary provision of this chapter, the commissioner is not required to provide public notice under AS 46.15.133 of a proposed authorization for temporary use of water; however, the commissioner shall request comment on an application for temporary use of water from the Department of Fish and Game and the Department of Environmental Conservation.

(e) The provisions of AS 46.15.080 do not apply to the issuance under this section of an authorization for temporary use of water.

(f) The commissioner may impose reasonable conditions or limitations on an authorization for temporary use of water to protect the water rights of other persons or to protect fish and wildlife habitat, human health, or other public interests.

(g) Upon approval by the department, an authorization under this section may be transferred to another person under the same conditions and limitations under which the authorization was issued.

(h) A person to whom an authorization for temporary use of water was issued under this section may allow another person to use the authorization, consistent with the conditions and limitations of the authorization.

(i) The commissioner may modify, suspend, or revoke an authorization issued under this section if the commissioner determines it necessary to protect the water rights of other persons or the public interest.

Sec. 46.15.133. Notices; objections.

(a) If the commissioner proposes a sale of water or receives an application for appropriation or removal, the commissioner shall prepare a notice containing the location and extent of the proposed sale, appropriation, or removal, the name and address of the applicant, if applicable, and other information the commissioner considers pertinent. The notice shall state that within 15 days of publication or service of notice, persons may file with the director written objections, stating the name and address of the objector, and any facts tending to show that rights of the objector or the public interest would be adversely affected by the proposed sale, appropriation, or removal.

(b) The commissioner shall publish the notice in one issue of a newspaper of general distribution in the area of the state in which the water is to be appropriated, removed, or sold. The commissioner shall also have notice served personally or by certified mail upon an appropriator of water or applicant for or holder of a permit who, according to the records of the division of lands, may be affected by the proposed sale, appropriation, or removal and may serve notice upon any governmental agency, political subdivision, or person; notice shall also be served upon the Department of Fish and Game and the Department of Environmental Conservation. An applicant for an appropriation or removal shall pay the commissioner's costs in providing publication and notice under this subsection. The commissioner may require as a condition of a sale of water under AS 46.15.037, that a purchaser of water reimburse the department for the costs associated with providing notice of the proposed sale.

(c) Within 15 days of publication or service of notice, an interested person may file an objection. The commissioner may hold hearings upon giving due notice and shall grant, deny, or condition the proposed sale or application for appropriation or removal in whole or in part within 30 days of receipt of the last objection or, if the commissioner elects to hold hearings, within 180 days of receipt of the last objection. Notice of the order or decision shall be served personally or mailed to any person who has filed an objection.

(d) If no objection is filed, the commissioner may proceed to make a determination upon the application for appropriation or removal or the proposal for sale.

(e) A person aggrieved by the action of the commissioner or by the failure of the commissioner to grant, deny, or condition a proposed sale or an application for appropriation or removal in accordance with (c) of this section may appeal to the superior court.

(f) The commissioner may, by regulation, designate types of appropriations that are exempt from this section and provide simplified procedures for ruling on the applications. The commissioner may not exempt under this subsection appropriations for removal under AS 46.15.035, appropriations by the state for sale or sales by the state under AS 46.15.037, or removals of water under AS 46.15.035 and 46.15.037.

Sec. 46.15.080. Criteria for issuance of permit.

(a) The commissioner shall issue a permit if the commissioner finds that

(1) rights of a prior appropriator will not be unduly affected;

(2) the proposed means of diversion or construction are adequate;

(3) the proposed use of water is beneficial; and

(4) the proposed appropriation is in the public interest.

(b) In determining the public interest, the commissioner shall consider

(1) the benefit to the applicant resulting from the proposed appropriation;

(2) the effect of the economic activity resulting from the proposed appropriation;

(3) the effect on fish and game resources and on public recreational opportunities;

(4) the effect on public health;

(5) the effect of loss of alternate uses of water that might be made within a reasonable time if not precluded or hindered by the proposed appropriation;

(6) harm to other persons resulting from the proposed appropriation;

(7) the intent and ability of the applicant to complete the appropriation; and

(8) the effect upon access to navigable or public water.

SENATE CONCURRENT RESOLUTION NO. 9

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR EGAN

Introduced: 3/28/11
Referred: Resources

A RESOLUTION

Creating the Taku River Task Force as a joint legislative task force.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the Taku River is Southeast Alaska's largest overall salmon producer, with the region's largest run of coho and chinook salmon and significant runs of sockeye, chum, and pink salmon, and eulachon; and

WHEREAS the state tide and submerged land of the Taku River are crucial to the spawning, incubation, and rearing of all five species of wild Pacific salmon, trout, and char; and

WHEREAS private recreational property in the Taku River valley represents a valued cultural element of the area; and

WHEREAS existing property rights, uses, and access must be protected in all future plans for the Taku River area; and

WHEREAS data from the Department of Fish and Game indicates that 40 to 50 percent of juvenile salmon in the Taku River watershed are reared below the confluence of the Tulsequah River, with the majority of juvenile king salmon rearing occurring in the main channel of the lower Taku River; and

WHEREAS personal use and sport hunting, fishing, and trapping, and the use of recreational personal watercraft and vehicles and aircraft constitute longstanding uses of the Taku River valley; and

WHEREAS those uses should be protected and secured for future generations; and

WHEREAS the Alaska portion of the Taku River supports significant personal use, commercial, and sport fisheries, generating over 400 fishing-related jobs, an estimated $8,000,000 of annual income from commercial and recreational fishing activity, and more than $25,000,000 from all activities associated with those fisheries; and

WHEREAS established businesses use the Taku River to provide supplies to recreational property owners and engage in tourism and sport fishing enterprises on the Taku River; and

WHEREAS past proposals to use the Taku River as an industrial transportation corridor involving conventional tug and barge systems or unconventional barges and large wheeled or tracked vehicles introduced significant risk of damage to the river bottom not generated by existing uses of the river's resources; and

WHEREAS industrial transportation systems pose significant risks to important fish spawning, incubation, and rearing habitats, could degrade water quality, and may disrupt the ice cover, all of which would be detrimental to the habitat; and

WHEREAS user groups such as private recreational property owners, commercial, charter, sport and personal use fishermen, seafood processors, and other local businesses have expressed significant concerns over recent proposals to permit industrial transportation systems on the Taku River;

BE IT RESOLVED that the Taku River Task Force is created as a joint task force of the Alaska State Legislature; and be it

FURTHER RESOLVED that the task force shall be composed of eight members, as follows:

(1) the senator from Senate District B;

(2) the representatives from House District 3 and House District 4;

(3) the commissioner of fish and game or the commissioner's designee;

(4) four members of the public, appointed jointly by the President of the Senate and the Speaker of the House of Representatives as follows:

(A) one owner of private recreational property in the Taku River valley;

(B) one holder of a commercial fishing permit for registration area A;

(C) one owner or employee of a business that derives significant income from transportation to or within the Taku River;

(D) one person who uses but does not consume Taku River resources; and be it

FURTHER RESOLVED that the President of the Senate and the Speaker of the House of Representatives shall jointly appoint the chair and vice-chair of the task force; and be it

FURTHER RESOLVED that the task force shall seek the professional opinions of research and management personnel from the Department of Fish and Game and the Department of Natural Resources in carrying out its duties; and be it

FURTHER RESOLVED that the duties of the task force shall be to

(1) review biological data on Taku River fish and game resources;

(2) work cooperatively with appropriate federal, state, and local government agencies to ensure monitoring of industrial vessel traffic on the Taku River;

(3) determine how best to protect the Taku's unique resources and maintain the general productivity of Taku River habitat while providing for recreational and other uses;

(4) recommend public policy options to ensure the proper protection of Taku River resources; and be it

FURTHER RESOLVED that Taku River Task Force meetings shall be open to the public; and be it

FURTHER RESOLVED that the task force shall submit a report of its findings to the legislature not later than December 1, 2011; and be it

FURTHER RESOLVED that the task force shall be terminated on January 31, 2012.

SENATOR DENNIS EGAN

SCR 8
Taku River Task Force

Sponsor Statement

Taku River resources are critical to the economic and cultural foundations of Juneau and make significant contributions to the Southeast region.

The river provides some of the most important salmon habitat in Alaska, directly supporting over 400 commercial fishing-related jobs, along with sport and personal use harvests. All five species of salmon spawn in the river along with eulachon. King, coho and sockeye salmon rear within its banks.

Many local charter and sport fishing businesses depend on the river. Private cabin owners recreate along the river as part of a long-standing traditional use of the Taku watershed. Transportation and tourism businesses operate there.

In recent years, many citizens of the area have become very concerned about protecting the Taku River due to growing industrial-scale use of the river as a barging route. This provided the catalyst for citizens to start talking about how best to manage and protect the unique area and ensure it is available for future generations to play, work, gather food and make a living.

The Taku River Task Force will be a public forum for community input on how best to protect recreational uses and fish and wildlife habitat within the river. Its report and recommendations will be due to the legislature by December 1, 2011.

SENATOR.DENNIS.EGAN@LEGIS.STATE.AK.US

SENATE CONCURRENT RESOLUTION NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR EGAN

Introduced:
Referred:

A RESOLUTION

Creating the Taku River Task Force as a joint legislative task force.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the Taku River is Southeast Alaska's largest overall salmon producer, with the region's largest run of coho and chinook salmon and significant runs of sockeye, chum, and pink salmon, and eulachon; and

WHEREAS the state tide and submerged land of the Taku River are crucial to the spawning, incubation, and rearing of all five species of wild Pacific salmon, trout, and char; and

WHEREAS private recreational property in the Taku River valley represents a valued cultural element of the area; and

WHEREAS existing property rights, uses, and access must be protected in all future plans for the Taku River area; and

WHEREAS data from the Department of Fish and Game indicates that 40 to 50 percent of juvenile salmon in the Taku River watershed are reared below the confluence of the Tulsequah River, with the majority of juvenile king salmon rearing occurring in the main channel of the lower Taku River; and

WHEREAS personal use and sport hunting, fishing, and trapping, and the use of recreational personal watercraft and vehicles and aircraft constitute longstanding uses of the Taku River valley; and

WHEREAS those uses should be protected and secured for future generations; and

WHEREAS the Alaska portion of the Taku River supports significant personal use, commercial, and sport fisheries, generating over 400 fishing-related jobs, an estimated $8,000,000 of annual income from commercial and recreational fishing activity, and more than $25,000,000 from all activities associated with those fisheries; and

WHEREAS established businesses use the Taku River to provide supplies to recreational property owners and engage in tourism and sport fishing enterprises on the Taku River; and

WHEREAS past proposals to use the Taku River as an industrial transportation corridor involving conventional tug and barge systems or unconventional barges and large wheeled or tracked vehicles introduced significant risk of damage to the river bottom not generated by existing uses of the river's resources; and

WHEREAS industrial transportation systems pose significant risks to important fish spawning, incubation, and rearing habitats, could degrade water quality, and may disrupt the ice cover, all of which would be detrimental to the habitat; and

WHEREAS user groups such as private recreational property owners, commercial, charter, sport and personal use fishermen, seafood processors, and other local businesses have expressed significant concerns over recent proposals to permit industrial transportation systems on the Taku River;

BE IT RESOLVED that the Taku River Task Force is created as a joint task force of the Alaska State Legislature; and be it

FURTHER RESOLVED that the task force shall be composed of eight members, as follows:

(1) the senator from Senate District B;

(2) the representatives from House District 3 and House District 4;

(3) the commissioner of fish and game or the commissioner's designee;

(4) four members of the public, appointed jointly by the President of the Senate and the Speaker of the House of Representatives as follows:

(A) one owner of private recreational property in the Taku River valley;

(B) one holder of a commercial fishing permit for registration area A;

(C) one owner or employee of a business that derives significant income from transportation to or within the Taku River;

(D) one person who uses but does not consume Taku River resources; and be it

FURTHER RESOLVED that the President of the Senate and the Speaker of the House of Representatives shall jointly appoint the chair and vice-chair of the task force; and be it

FURTHER RESOLVED that the task force shall seek the professional opinions of research and management personnel from the Department of Fish and Game and the Department of Natural Resources in carrying out its duties; and be it

FURTHER RESOLVED that the duties of the task force shall be to

(1) review biological data on Taku River fish and game resources;

(2) work cooperatively with appropriate federal, state, and local government agencies to ensure monitoring of industrial vessel traffic on the Taku River;

(3) determine how best to protect the Taku's unique resources and maintain the general productivity of Taku River habitat while providing for recreational and other uses;

(4) recommend public policy options to ensure the proper protection of Taku River resources; and be it

FURTHER RESOLVED that Taku River Task Force meetings shall be open to the public; and be it

FURTHER RESOLVED that the task force shall submit a report of its findings to the legislature not later than December 1, 2011; and be it

FURTHER RESOLVED that the task force shall be terminated on January 31, 2012.

Honorable Senator Dennis Egan
State Capitol Room 510
Juneau, Alaska 99801

February 14th, 2011

2/14/2011

Dear Senator Egan,

The Juneau Douglas Fish and Game Advisory Committee (J-D F&G AC) has met on two occasions, January 28th ,with approximately 150 members of the public attending, and February 8,with approximately 20 members of the public attending . These meetings provided important opportunities to hear concerns from the Taku River Recreation Association and the Taku River Working Group (an ad-hoc group of Taku River stakeholder), complimented with input from Alaska Fish and Game staff, regarding legislation to protect Taku River habitat.

The J-D F&G AC is a local Fish and Game committee that provides a forum for the collection and expression of opinions on matters relating to the management of fish and wildlife resources. The J-D F&G AC is comprised of 15 dedicated seats that represent local use interests including trapping, freshwater charter fishing, fish processing, commercial fishing, sport fishing/personal use/hunting, non-consumptive personal use, saltwater charter fishing, non-consumptive-commercial, and hunting guides.

After hearing from invested parties, and discussion by committee members, the J-D F&G AC voted unanimously to support the collaboration of all stakeholders in moving forward with fish and wildlife habitat protection on state waters and lands within the Taku River Valley through the legislative process during the 2011-2012 legislative sessions.

As reflected by the unanimous vote, we view the Taku River Valley as a unique ecosystem that supports a vital public and regional resource. We believe that legislative action is warranted to further protect that ecosystem and those resources.

Respectfully Submitted,

Mike Peterson- Chair

Greg Brown- Vice-Chair

Juneau-Douglas Fish & Game Advisory Committee 2011 Roster on reverse side.

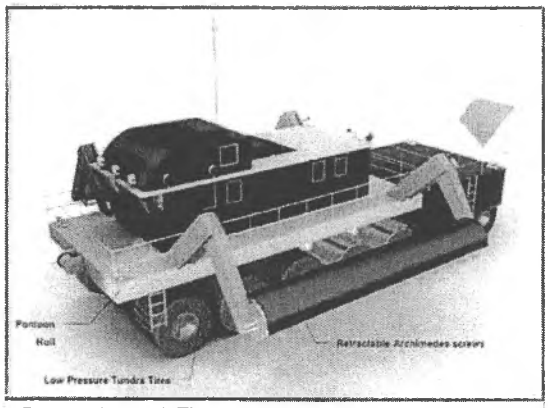
Hoverbarge plan worries Taku River users

By Kate Golden | *JUNEAU EMPIRE*

Cabin owner Errol Champion is more pessimistic and worried than ever after spending the last week driving snowmachines on the Taku River.

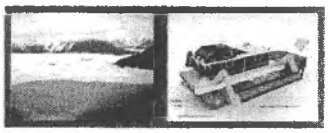
He is one of the many river users waiting for more information about the hoverbarge and newly invented Amphitrac, which the Tulsequah Chief Mine operators have proposed for hauling supplies and ore on the Taku River.

"Part of the river still has ice, but is covered with overflow and surely will not hold the pressures of the ACB (hoverbarge)," Champion said. "And the Amphitrac will be clawing its way along, making a complete mess of the river channel. ... The results are unknown, but it cannot be good."



Proposed vessel: The new Amphitrac was specifically designed for use on the Taku River.

Click Thumbnails to View



Redfern Resources Ltd. is expected to take at least two or three weeks to provide more information on how these vehicles may affect the salmon-rich river. About 400 fishermen and seafood industry workers rely on the Taku for their livelihood.

Environmentalists and state permitters are worried the experimental vessels will hurt fish and other wildlife. Rivers Without Borders, a national conservation group headquartered in Juneau, paid for a study that says the company's claims of minimal damage are unfounded.

Meanwhile, Redfern, based in Vancouver, British Columbia, has produced pictures for the public showing a feather-light footprint for the hoverbarge - with one pound per square inch pressure, less than an eighth of the pressure of a human footprint.

"They have all their environmental documents saying it's not going to cause this problem, that problem or the other problem," said biologist Jackie Timothy of the Office of Habitat Management and Permitting in the Alaska Department of Natural Resources. "We need to see if they can make good on that."

On this side of the border, Redfern's plan is unusual and requires much less paperwork than most projects because it involves no federal lands. The barge system would transport people, ore and goods between Juneau and the multi-metal mine, which is on the Tulsequah River and about 40 miles northeast of Juneau.

State permitters said they're trying to compensate for the work the federal government would ordinarily do.

"It's kind of like we're doing the EIS (environmental impact statement) because there is no federal permit involved," said Joe Donohue, the lead reviewer for the Alaska Coastal Management Program.

Shallow waters, ice operations

"When there's plenty of water in the river, we're basically talking about conventional navigation," said Tom Crafford, large mine permit coordinator for the Department of Natural Resources. The barge would be pulled by a tug in the summer.

"Low-water operations - that, I think, is the real issue," he said, particularly when there's ice.

Moose and other animals travel across the frozen river in the winter, and juvenile salmon grow up under the protection of the ice. The timing of spring break-up and flood levels all affect wildlife's chances of survival.

Champion, on the river last week, wrote in an e-mail that while the ice has been melting, the animals can still run across it.

But he has trouble imagining how a 750-ton loaded hoverbarge and the Amphitrac that pulls and pushes it would avoid creating open leads and ice dams. Moose would get stuck. People wouldn't be able to cross.

The problem is expressed by Michel Lapointe, professor of geography at McGill University and director of the Centre Interuniversitaire de Recherche sur le Saumon Atlantique in Montreal, Canada, in the Rivers Without Borders report:

"Any such changes to breakup flooding regime can have far-reaching, ecosystem-level effects on fish and wildlife habitat," Lapointe wrote.

Originally Redfern and the state proposed testing the vessel system in Southeast in the winter. But the company announced recently that construction delays make it likely the Amphitrac will not arrive on the river until after the ice melts. That means the system could be permitted before it is tested on ice.

Redfern's operations plan says the vessels would avoid open leads in the ice cover. The company also plans to document which areas have the sketchiest ice cover and which are more stable, record how long it takes to form ice, and adjust all operations as necessary.

"That will be something we'll be working with DNR to address," said Redfern spokeswoman Salina Landstad.

Critics, however, say it's an example of testing that shouldn't be done on the Taku.

Donohue of the coastal management program said this week that a likely condition of a needed land-use permit would be that if the vessels kept ice from forming, they would not be allowed on the river at that point.

Testing the company's claims

State permitters haven't seen a picture of the Amphitrac yet, because it doesn't exist. The Amphitrac was invented for the Taku River. It has soft tires used elsewhere for tundra travel; Archimedes screws, a propulsion device that pushes water through pipes on either side of the vessel; and steel screws for moving across ice.

In the summer, a tug would move the hoverbarge. In the winter and shoulder seasons, the Amphitrac would do the job, pushing or pulling the 88-foot-wide, unmanned barge. A powerboat may go ahead of them and scout out the route.

The company has told the state it may use two Amphitracs and two hoverbarges. But state permitters said they weren't sure how this would work and were waiting for more information.

"If the vessels make it to Juneau, that means they meet or exceed the manufacturers' claims about performance and minimal environmental impacts," Timothy of the habitat office wrote in an e-mail.

Redfern says it has devised plans to prevent environmental damage. According to its November 2007 operating plan, the vessels would, among other protective measures:

• Avoid - as opposed to "minimize" - creating new channels.

• Avoid disturbing the sand flats on the shallowest 17-mile stretch, on the U.S. side, upstream from Annex Creek to the Taku Lodge.

• Avoid eulachon, or hooligan, and salmon spawning areas.

• Minimize the potential for stranding juvenile fish with waves from the vessels.

• Minimize resuspension of sediment and bank erosion from the vessels' wake.

• Minimize noise effects on fish and marine mammals such as seals, which congregate in the spring at the edge of the ice.

The American Bureau of Shipping will test the vessels on the Columbia River on standards that Donohue of the Coastal Management Program described as "relatively stringent."

Then they'll be brought to Southeast Alaska and tried at Sheep Creek and Eagle River Beach, just south of Juneau.

These areas are not similar to the Taku in many respects, said Donohue, who grew up fishing on that river.

But they are visible from the road system, which means that residents as well as permitters would be able to see the vessels at work. Donohue will be watching, for example, the turning radius, how long the vessels take to stop and how they move over gravel.

"We're like everyone else," he said. "We're waiting to see how this thing's going to work."

Sheep Creek is a salmon stream, so testing would be done only when the fish are absent, Donohue said.

From there, if permits are granted, the Taku is the testing area. The permit would last for a year and include an environmental monitoring program that Redfern is working on now.

Creative monitoring

There are challenges to that environmental monitoring for which Redfern will have to get creative, according to Timothy.

An example: Young salmon tend to stay under large woody debris and in slower, safer water. Redfern says it won't move those woody snags in the river; they're more of a problem on the Canadian side of the river. But fry also may hang out in the main channel on the sand flats, where Redfern proposes to go. The waters of the Taku are often opaque from silt.

How would they be able to tell when they're damaging salmon fry that can't be seen?

"That's a very good question and one we have asked the company to explain," Timothy wrote.

She mentioned one possibility of having an environmental monitor walk along the beach to check for fry being thrown or washed ashore.

Redfern spokeswoman Salina Landstad said the answer would involve watching spray that's made by the vehicles.

"If the water is spraying, then it's essentially clear," she said, meaning it would be easy to see fry.

'Revokable at will'

The state would reserve the right to pull Redfern's permit at any time.

"This gives the state of Alaska a hook into the whole system," said Donohue of the coastal management program.

"If they were constantly breaking through the ice, we can yank that permit," Crafford said.

Landstad emphasized the permit process is a chance for Redfern to hear and respond to all of the state's concerns and she's confident the company will do so.

Such statements do not reassure Taku River users, who say the damage would have already been done at that point.

Redfern barge plan for Taku River under review

Fishermen and others still concerned about the effects of vehicles

By Kate Golden | *JUNEAU EMPIRE*

State permitters this month are reviewing Redfern Resources Ltd.'s revised plan to haul mine supplies and ore on the Taku River year round.

This is the Vancouver company's second application. The state terminated the first one this summer after the company changed the tow vehicles it planned to use to haul an air-cushion barge across Taku ice.

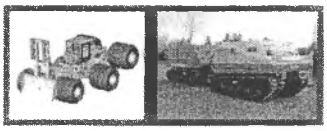
The first plan generated widespread concern among sport and commercial fishermen and other users of the salmon-rich river. More than 250 people attended the last public meeting in February.

Tim Davies of Redfern said the new plan was designed to address those concerns.

Courtesy P

Change of plans: Redfern Resources Ltd. has repla a designer amphibious tow vehicle with two that alrea exist, including the one pictured above, which the company calls an "amphibious tractor." The "tracked articulated vehicle" operates in "nearly all terrain," the company said.

Click Thumbnails to View



Know and Go

What: Public information session on a plan to barg mine supplies and ore on the Taku River.
When: 6:30-9:30 p.m. Thursday.

"Everything, from the equipment to the monitoring plan, was designed to avoid (impact) or accommodate concerns," he said.

Where: Ballroom 3, Centennial Hall in downtown Juneau.

Public comments must be submitted from scratch. The public can learn about the project Thursday at Centennial

The permits

Redfern needs two permits from the state, for travel over land and through fish habitat. The project also goes thrc an Alaska coastal zone consistency review.

The last permit process was plagued by delays. This time, Redfern worked in a "prereview" process with state permitters to submit a more complete application.

That's not a prejudging of its merits, said permitters.

"Agency representatives are very careful to make sure that there's no kind of prereview approvals going on," said Crafford, the large mine permitting coordinator at the Department of Natural Resources.

Redfern is owned by Vancouver-based Redcorp Ventures Ltd.

Barging on the Taku

A marine barge will haul materials between the mine's Juneau office at Alaska Marine Lines and the mouth of the Taku.

There, the barge's load will be transferred to an air cushion barge, also called a hoverbarge.

The barge can't power itself. It will be shuttled by four "amphibious tractors" - either tracked or with big, soft, floati Rolligon-like tires, two in front and two behind - to the barge landing site on the Tulsequah River.

Sixteen miles of the 28-mile route are in Alaska.

From late May to October, the hoverbarge will be moved with a shallow draft tug boat.

The trickiest part is at Canyon Island. On the west is a deeper but narrow channel. On the east is a shallow, braic area with a shifting gravel bar.

In the new summer plan, the tug will hand off the barge at Canyon Island to the amphibious vehicles, which will h around the east side. Meanwhile the tug takes the deeper channel and reconnects with the barge at the other enc

In the winter, the hoverbarge will be pushed and pulled over the frozen river floodplain by the four amphibious tra over the ice of the Taku. Snowmachines or another tracked vehicle may groom the snow and provide crew chang and emergency support.

The Taku's habitat for salmon, hooligan and other species is arguably most vulnerable in the shoulder seasons o and spring, when the ice that protects the river is forming or thawing.

Redfern's Davies said the new plan is more definite about when the company will cease operations altogether for shoulder seasons.

Winter operations will stop, for example, when open leads are too many or too wide for the amphibious vehicles - which have very limited propulsion in water - and won't restart until the river has a minimum flow.

"Most people would agree that's a good thing," Crafford said. "Those are the really difficult times of the year to operate, and the times of the year which you would most likely be disturbing the land the greatest. The new propc in that sense is, I think, good news."

"It does create a different set of issues," he said, including the "additional complexity" of handing off the air cushic barge around Canyon Island.

Noise and wake

Two of the biggest concerns from Taku users this year were the noise and the wake the barge will produce.

Redfern's plan says the vehicles' engines will be muffled and enclosed, and says they won't be louder than 70 decibels at 100 feet. (Seventy decibels is perhaps twice as loud as ordinary conversation.)

They'll also have minimal wake, according to the company.

State permitters will require the system to be tested in Juneau to verify that's all true before allowing the vehicles the Taku.

Environmental monitoring

The plan calls for environmental monitoring that will be refined in the first few years "to the extent practical."

Redfern is required by Canadian permitters as well as Alaskans to monitor bank erosion, the turbidity of fish habit and whether juvenile salmon are being stranded. The permitters have been coordinating their efforts, Crafford sai

The company will also conduct "annual follow-up with property owners, commercial tourism operators, commerci fishers and other users of the river ... to ensure concerns regarding barging operations can be addressed in a tim manner," according to the plan.

Questioning the plan

Concerns remain among Taku users.

Rivers Without Borders field coordinator Chris Zimmer said the company has shown the last two summers, with conventional barging, that it's not prepared to deal with the difficult Taku. Groundings are not uncommon for mucl smaller vehicles on this braided, shallow, dynamic river, he said.

The winter, he said, is likely to be even tougher. And these vehicles have never been used in concert.

"Redfern simply hasn't proven they can operate this barge safely in the Taku, given the novelty of the proposal ar the dynamic Taku," Zimmer said. "It's quite a fleet of different vehicles out there, and it kind of strikes me as a Keystone Cops routine."

Zimmer hired scientists to examine Redfern's previous plan for shortcomings, and is doing so for this one as well.

Could Redfern come up with a Taku plan that would satisfy Zimmer?

"There may be, but we sure as hell haven't seen it yet," he said.

Karl Vandor of the Taku River Cabin Owners Association said his group's main discussions over the last year hav been the "headache" of the Tulsequah Chief plans. He doesn't think the barge will be controllable in the infamous Taku winds.

"We think it's a harebrained scheme. It's just basically going to chew up the river."

"I don't want anybody to think that we're anti-mine," he added.

Redfern's Tim Davies vowed to address Taku users' concerns.

"When a project has the potential to impact people's lifestyles, they have every right to raise concerns," Davies sa "If people bring concerns or information to us, we will look at it seriously."

The public process

Zimmer and others are concerned that the permit process is shorter this time around: 30 days instead of 50.

"We've got the agencies doing a bare-minimum review here, and I think the Taku - the most important salmon riv Southeast - deserves more," Zimmer said.

State permitter Crafford said the original 50-day review was "a mistake."

He also noted that state permitters can stop the clock to ask for more information, and were already preparing to so.

Thursday's public meeting is scheduled a week after the state announced its formal review had begun. That has garnered grumbles among fishermen and others who haven't had time to read the operations plan yet.

But Crafford said it was necessary, because permitters want to hear the public's concerns before they ask the company for more information - and that deadline, in the shorter schedule, is next Tuesday.

"It would look a bit like a sham if it's after the fact, and you can't ask any questions or require anything more that r come out of that meeting," Crafford said.

• Contact reporter Kate Golden at **kate.golden@juneauempire.com**.

March 25, 2011

Senator Thomas Wagoner
Co-Chair, Senate Resources Committee
State Capitol, Room 427
Juneau, AK 99801

Senator Joe Paskvan
Co-Chair, Senate Resources Committee
State Capitol, Room 115
Juneau, AK 99801

Re: Senate Resolution to Establish a Taku River Task Force

Dear Senators Wagoner and Paskvan:

The undersigned organizations, businesses and individuals have long been involved in issues related to fisheries and fish habitat in the Taku River. We urge the Legislature to support the Senate Resolution establishing a Taku River Task Force and to ensure its passage this session

The Taku is Southeast Alaska's largest overall salmon producer, with Southeast's largest run of coho and king salmon, and a vital regional economic, cultural and recreational resource. Annual salmon runs can top 2 million wild fish. The sport and commercial fisheries contribute over $7 million to the regional economy and support hundreds of jobs. Recreation and tourism provides another $18 million annually. The importance of the Taku to Southeast Alaska requires the highest level of habitat protection to ensure the productivity of the Taku for future generations.

The Resolution would create a Task Force whose mission is to determine the appropriate protections for the habitat and water quality of the Taku and to recommend public policy options to provide such protections, while also ensuring that existing property rights, uses, and access are maintained. This mission enjoys deep and diverse support in Juneau from commercial and sport fishermen, fishing businesses, subsistence users, property owners and many others. It is an effective way to ensure the long-term health of the Taku River and its fisheries, and to ensure a vibrant economy and jobs for Juneau. Most importantly, the Taku River Task Force will involve all stakeholders in examining the issues and recommending policy decisions to the Legislature.

We are also concerned about the possible use of the Taku as an industrial transportation corridor for industrial barging to and from British Columbia. Previous experience shows such barging poses threats to habitat and water quality because of the inherent difficulty of navigating such vessels in the Taku due to low visibility, shallows, heavy current and a braided, dynamic and frequently changing river. One purpose of the Task Force is to recommend ways to ensure that such industrial barging does not degrade salmon habitat and harm Taku fisheries.

We would appreciate your support for the Taku's productive fisheries and for protecting the interests of its many stakeholders.

Sincerely,

Dale Kelley, Executive Director, Alaska Trollers Association

Subject: Personal Letter about SCR8 Taku River

4/28/2011

Dear Senator,

On behalf of my family and Takuriver.com, I would like to express by disappointment that Senator, Dennis Egan along with his staff has decided to introduce SCR8. SCR8 is attempting to limit the use of the Taku River by designating it "Critical Habitat". Not only is the material being used to support this, weak and dated, but I believe SCR8 is being used as a stepping stone to more restrictive use in the future, such as a "Wild and Scenic" designation.

There are already enough laws in place to take care of any environmental issues or improper use of the Taku River, and the last thing we need are more laws or restrictions to hamper our current enjoyment of this great place. I am urging you with all due respect, to reject this legislation.

Sincerely,

Ronald J Haffner and Family

To: Senate Resource Committee
From: Taku River Recreation Association

Taku River Recreation Association (T.R.R.A.) was advised on Friday, March 25, 6:30 p.m., by Jesse Kiehl of the plan to introduce SCR 8, establishing a Taku River Task Force.

T.R.R.A. was organized in the 1990's to represent the interests of the property owners and users of the resources of the Taku River Valley.

T.R.R.A. has been excluded from any input into drafting of SCR 8.

T.R.R.A. remains adamantly opposed to the resolution and will provide testimony at the hearing on Monday, March 27th.

Senator Joe Paskvan, Co-Chair
Senator Thomas Wagoner
Senate Resources
Alaska State Legislature
Juneau, AK 99811

Dear Chairmen Paskvan, Wagoner, and Committee Members:

The Alaska Trollers Association (ATA) supports formation of a Taku River Task Force, to review options that may exist to afford the Taku enhanced protection befitting its importance as a major contributor of fish and wildlife.

The Taku River produces more Chinook and coho salmon than any other river in Southeast Alaska and is the last remaining large watershed without road access. On average, the Taku contributes 40% of the wild SEAK Chinook return.

Sport and commercial fishermen, hunters, guides, and outdoor enthusiasts on both sides of the US/Canada border rely heavily on the Taku River's bounty for jobs, food, and recreation. It is essential that habitat values be protected from ill-effect, in order to provide for these uses.

A number of concepts have surfaced recently, which could allow Alaska to better protect the Taku River over the long term. A stakeholder's task force would provide an appropriate venue for the full range of ideas to be analyzed and discussed with the public. This, in turn, could provide the legislature with some well-rounded options for consideration.

We encourage you to appoint a Taku River Task Force, and stand willing to help.

Best regards,

Dale Kelley

Senator Tom Wagoner
Senate Resources Committee

Dear Senator Wagoner,

Thank you for the opportunity to comment Monday on SCR 9. As I promised I have "cleaned up" the letter I commented from and submit it here for the committee's consideration. Some of these comments are derived from the draft bill establishing a Critical Habitat Area for the Taku River that Senator Egan's office had proposed, and although not directly aimed at this resolution they are at the heart of this discussion if for nothing else but background.

As I mentioned at the start of my testimony, my great grandfather used the Taku River numerous times to travel to the interior of Alaska and Canada prospecting and mining. I made my first trip up the Taku in 1954 at the age of five with my father to fish for the first time. We built one of the early cabins on the river the next year and I still build on it to this day, between hunting, fishing and prospecting the river valley.

First and foremost the Taku River has been used for trade and commerce between the coast and the interior of this continent since time immemorial. The right of our Canadian neighbors to navigate this river route for such purposes is further guaranteed by Treaty between our nations. Any acts by the State of Alaska to interfere with these rights could have serious implications for those who transit other waters of this nature. The restrictions we apply to Canadian use of the Taku must be applied to all users of the Taku. How long will it be before those who transit the waters between Blaine Washington and Ketchikan do what those who use the Taku must?

There is also a RS 2477 Right-of-Way existing on the Taku that if asserted could lead to a highway or railroad link down the river to tidewater. Interference with river navigation could force such and assertion and road from Canada to tidewater.

The area encompassed by this proposal is extensive, stretching from the Canadian Border to a half mile south of Point Bishop. It covers three different habitats; river, estuary and deep water. Which habitat is in danger? What is the problem that requires us to essentially dedicate all of this land and water to one use?

So far the proposers of SCR 9 can only point to worry's on the part of some people about a defunct proposal to barge freight with a hover barge on the Taku to the Telesequah Chief mine. This proposal was neither financially or technically feasible and is as defunct as the proposing company. Alaska needs to spend its time and resources dealing with real problems not worries about every wild proposal for this State.
The effects on the people and business who own property covered or abutting a Critical Habitat Area can potentially be severe. The CHA proposal will affect Juneau's hydro electric plants and transmission lines. It will make existing and future hydro resources and transmission lines more difficult and expensive permit, re-permit and operate. It will add to the regulatory burden of Taku Lodge and other tourism operations on the Taku. It will stifle trade and commerce on the Taku.

CHA designation will drastically change the way of life that Taku river property owners and users have enjoyed for generations. The Special Area Permit Regulations (5 AAC 95.410 (b)) are quite clear that:

"No person or governmental agency may undertake an activity listed in 5 AAC 95.420(a) within a special area unless the commissioner has been notified and a permit for the activity has been issued by the commissioner under 5 AAC 95.700 – 5 AAC 96.760"

Under CHA regulations Taku river users would be required to permit for: the continued use of their existing cabins and docks, cutting of brush and trees, digging and using an outhouse, taking river water to drink or water a garden, use or storage of gas and bug spray, and a gathering of more than twenty people. This burden for them also has corresponding burden for the State of Alaska to develop the management plan and then process, issue (or deny) and monitor these permits. These costs must be fully and fairly considered and measured against the revenue that the Taku river fish generates for the State.

Finally, the Taku River is the last Trans Border Riverin Alaska not encumbered by a Park, Wilderness, Wild and Scenic or other restrictive designation. For that reason alone, we must be very cautious in our actions and carefully consider all present and future affects. Absent a definite quantifiable problem and real threat a Critical Habitat Area designation for the Taku or any portion there of seems an unjustifiable misallocation of Alaska's resources that cannot provide commensurate benefit to its citizens.

I hope that I have been able to impart to you and the committee some of my concerns regarding SCR 9. I have many more concerns but I think it better to address them in a second letter that addresses specific items in SCR 9.

Sincerely

Neil MacKinnon

Sent: Monday, March 28, 2011 2:40 AM
To: Sen. Tom Wagoner
Subject: SCR008 Taku River Task Force
Importance: High

Dear Senator,
Because I have lived on Canyon Island in the Taku River since 1984, I too have a vested and personal interest in the ongoing attempts to micromanage this area. It has not been my experience that more is better; more is usually too much. There are several points included in SCR008 and supporting documentation, which I have marked in red, to which I have objections and comments, written in black:
The Taku River Task Force will be a public forum for community input on how best to protect recreational uses and fish and wildlife habitat within the river. Its report and recommendations will be due to the legislature by December 1, 2011.
There are already public forums for community input:
The J-D F&G AC (Advisory Committee) is a local Fish and Game committee that provides a forum for the collection and expression of opinions on matters relating to the management of fish and wildlife resources. The J-D F&G AC is comprised of 15 dedicated seats that represent local use interests including trapping, freshwater charter fishing, fish processing, commercial fishing, sport fishing/personal use/hunting, non-consumptive personal use, saltwater charter fishing, non-consumptive commercial and hunting guides.
These guys are recommending further legislative action, but none is required, as they themselves (The Fish & Game Advisory Committee), as well as ADF&G and ADNR are already empowered to do the necessary job. Together they have the necessary manpower and training and by law are already required to do this job. If they are not doing an adequate job, then we need to kick them into action, not pass more laws to do what is already written.
In recent years, many citizens of the area have become very concerned about protecting the Taku River due to growing industrial-scale use of the river as a barging route. This provided the catalyst for citizens to start talking about how best to manage and protect the unique area and ensure it is available for future generations to play, work, gather food and make a living.
Conventional barging on the Taku R. is not up for management; that is part and parcel of the rules governing international waterways. Any new form of barging (like, hoverbarge, or amphib. tractor) which would impact spawning grounds and fish/wildlife habitat is subject to

ADF&G/ADNR approval, and will be brought to some current authority's attention by some or all the interested user groups, who definitely are paying close attention.

Whereas data from the Department of Fish and Game indicates that 40 to 50 percent of juvenile salmon in the Taku River watershed are reared below the confluence of the Tulsequah River, with the majority of juvenile king salmon rearing occurring in the main channel of the lower Taku River;

In the twenty seven years that I have lived here, NO studies of any fish have been conducted in the winter. The only juvenile salmon studies done in other seasons have been occasional; a few random sampling sessions done in recent years, probably in response to all the hubbub over Redfern's mine. Smolt studies of king salmon and coho have been conducted for many years now, but smolt are in the process of leaving the river, so are trapped in main stem Taku waters. Please stop this redundant process of forming yet another group to protect the Taku River habitat; the several already in place are adequate for the job; do not waste any more time or resources by forming the Taku River Task Force. Thank you.

Sincerely,

Jan Flory

EXECUTIVE SUMMARY

The major commercial, recreational, and cultural activities in the Taku River area benefit residents of both Southeast Alaska and British Columbia. The key economic impacts of Taku River activities are summarized below:

- The ex-vessel value of the commercial harvest of Taku River salmon has been between $603,000 and $2.9 million since 1994. The ten-year average is approximately $1.3 million. Sockeye accounted for about 86 percent of the total US commercial harvest value in 2003.

- The first wholesale value of the US commercial harvest of Taku River salmon has ranged from $2 million to $7.4 million since 1994. The ten-year average value is approximately $3.4 million. About 80 percent of the first wholesale value of Taku River salmon was from the sockeye harvest in 2003.

- The total economic impact of the US commercial harvest and processing of Taku River salmon includes 80 jobs, $1.4 million in labor income, and $5.4 million in total regional economic output.

- Approximately 400 people earn income from the commercial harvest of Taku salmon, including permit holders and their crew, processing employees and others.

- Taku River chinook account for a significant portion of the total sport catch from Juneau waters. For example, the percentage of chinook salmon from the Taku River has ranged from 56 to 93 percent of the total spring sport catch volume from the Juneau area since 1994.

- Based on an estimated $1.5 million in sport fish related expenditures, the total economic impact of sport fishing for Taku River salmon in the Juneau area, including direct, indirect and induced effects is approximately 40 jobs, $700,000 in labor income, and $2 million in total economic output.

- There were 123 personal use permits fished in 2003, and a ten-year average of 130 permits. An annual average of 18 chinook and 1,200 sockeye are caught in the US personal use fishery in the Taku River. Applying a substitution value of $5.00/pound based on the cost of substitute foods at retail stores, the ten-year average harvest of 1,380 salmon is worth approximately $44,000 annually.

- The economic activity from the first wholesale value of the Canadian commercial harvest in the Taku River has been between $478,000 and $1 million since 1994. The ten-year average first wholesale value is approximately $734,000.

- Approximately 60,750 visitors participated in some type of flightseeing tour in the Taku River area in 2003. This includes visitors to the Taku Glacier

Lodge, glacier landings, trekking, dogsledding, and other sightseeing activities. Including charter flights, the approximate retail value of all commercial tourism related aircraft activity in the Taku River area was $13 million in 2003.

- The total direct, indirect, and induced economic impacts of commercial air activity was 150 jobs, $5.5 million in labor income, and $18 million in total economic output in 2003.

- Sportsmen visit the Taku River area on both sides of the border on guided and unguided hunts for moose, mountain sheep, mountain goats, grizzly bears, black bears and other game animals. Some game is hunted by members of the Taku River Tlingit First Nation and other Atlin residents, and contributes to the subsistence economy of Atlin. Including the replacement value of these traditional foods, expenditures on non-guided hunts, and the typical cost of guided hunting packages, hunting activities in the Taku River area on both sides of the border are worth approximately $155,300 annually.

- Approximately 80 people participated in guided river trips on the Taku River in 2003, spending an estimated $240,000 on trip packages.

- Annual property tax from private parcels in the Taku River area received by the City and Borough of Juneau is approximately $300,000.

Inventory of Current Economic Activities in the Taku River Area

Fishing Activities	
US Activity	
Total economic impact of US commercial harvest of Taku River salmon	$5.4 million
Annual average employment from US commercial harvest	80
Total participation in US commercial harvest	400
Total economic impact of sport fishing for Taku River salmon	$2 million
Annual average employment from sport fishing for Taku River salmon	40
Substitution value of US Taku River personal use fishery	$44,000
Average number of participants in personal use fishery	130
BC Activity	
First wholesale value of BC commercial harvest of Taku River salmon	$734,000
Substitution value of BC aboriginal harvest of Taku River salmon	$29,000
Recreational Activities	
Commercial air activity in Taku River area (total value)	$18 million
Annual average employment from commercial air activity	150
Guided river excursions (total value)	$240,000
Average number of participants	80
Hunting activities (total value)	$155,300
Annual CBJ property tax from private parcels in the Taku River area	$300,000
Mining Activities	
Value of mining exploration programs	Variable

Senate Joint Resolution No. 2

Alaska has entered a period of extraordinary efforts by certain federal agencies and environmental groups to lock up Alaska's resources. SJR 2 affirms the broad support of Alaskans and their elected leadership for the governor and attorney general's strategy to vigorously defend the State's ability to develop and manage its resources, protect its sovereignty, foster economic opportunity for our citizens and urge Congress and the President of the United States to limit the unprecedented federal government overreach that threatens our economic future.

CS FOR SENATE JOINT RESOLUTION NO. 2( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS DYSON, Wagoner, Giessel, Meyer

A RESOLUTION

Commending and supporting actions taken by the Office of the Governor and the attorney general to protect the state from federal government incursion into the care and management of state resources and to promote the economic prosperity of the state; and urging the United States Congress and the President of the United States to limit federal government overreach into management of state resources.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the federal government is attempting regulatory actions that are adverse and contrary to the interests of the state and its citizens; and

WHEREAS the Office of the Governor and attorney general, with strong support by the leadership of the Alaska State Legislature, have challenged the federal government in court for its misuse of the Endangered Species Act in its expansive designation of critical habitat for polar bears, for restricting access to Alaska rivers, and for taking adverse actions against our timber interests, mining interests, and interests in development of federal onshore and outer continental shelf oil and gas resources; and

WHEREAS, under art. VIII, sec. 1, Constitution of the State of Alaska, the policy of

the state is to encourage the development of its resources by making them available for maximum use consistent with the public interest; and

WHEREAS actions taken by the state's executive and the leadership of the Alaska State Legislature seek to protect the collective interests of the people of the state and promote a future of economic security and prosperity;

BE IT RESOLVED that the Alaska State Legislature commends and supports the actions of the Office of the Governor and the attorney general to protect the state from federal government incursion into the care and management of state resources and to promote the economic prosperity of the state; and be it

FURTHER RESOLVED that the Alaska State Legislature urges the United States Congress and the President of the United States to limit federal government overreach into management of state resources.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

Alaska Native Corporation's Resource Development

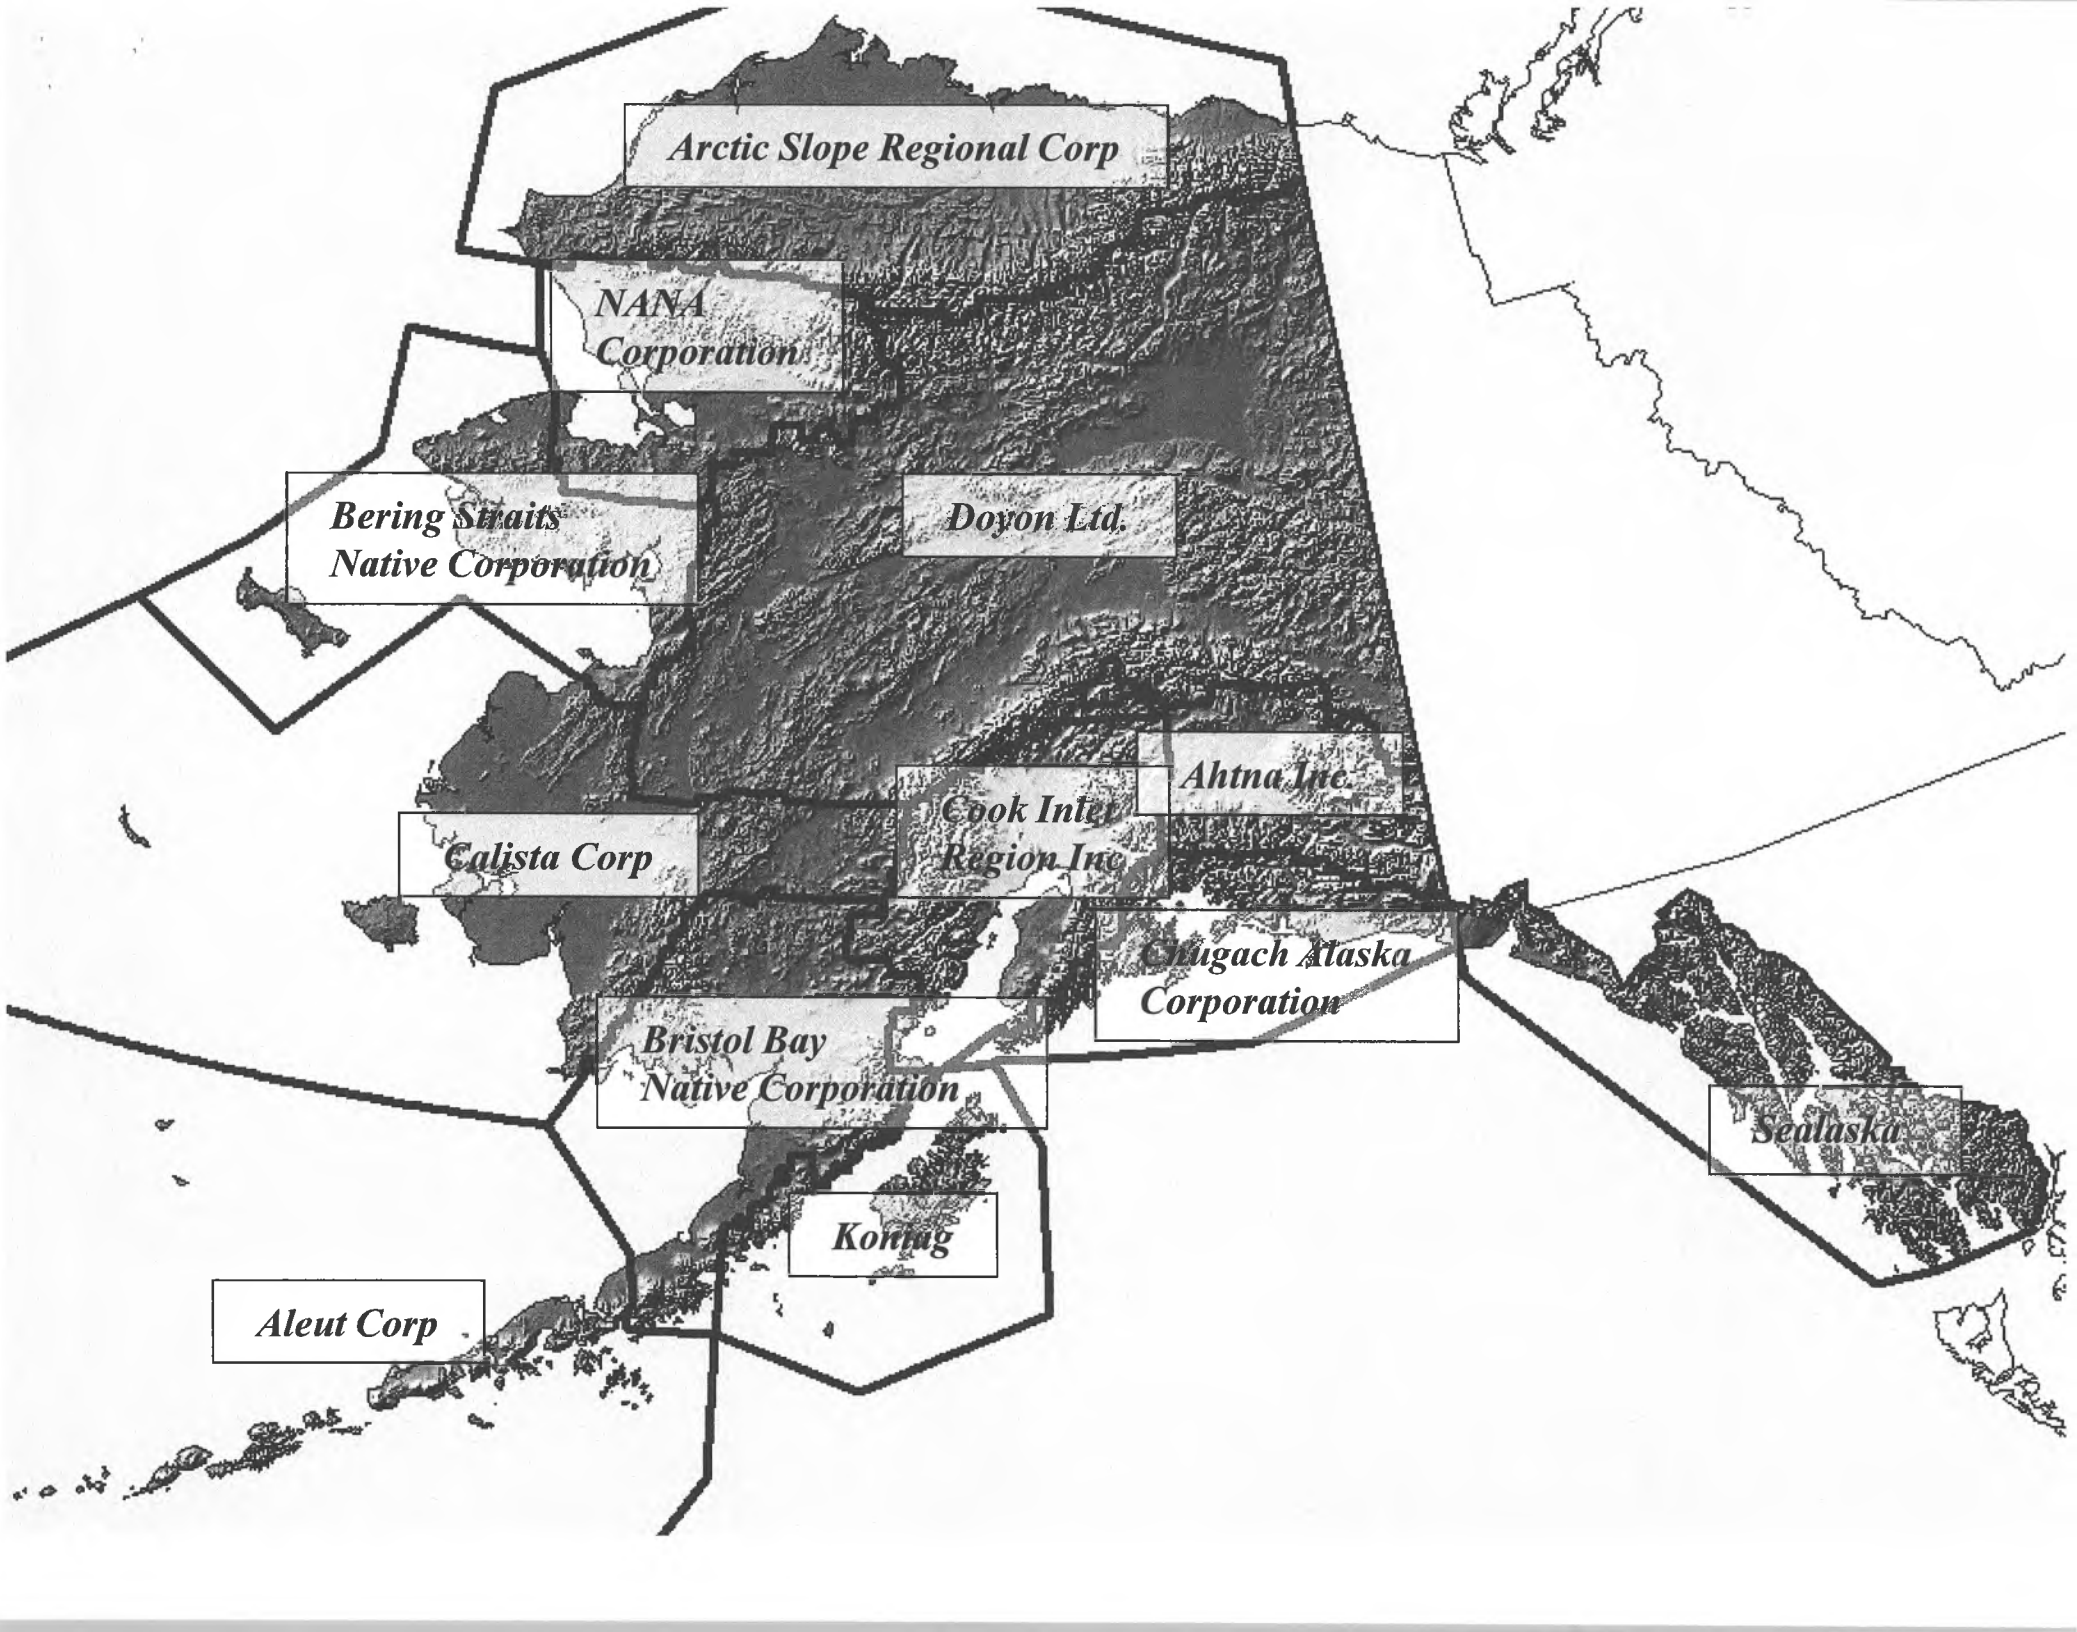
Juneau, Alaska

March 24, 2011



Arctic Slope Regional Corp
NANA Corporation
Bering Straits Native Corporation
Doyon Ltd.
Ahtna Inc.
Cook Inlet Region Inc
Calista Corp
Chugach Alaska Corporation
Bristol Bay Native Corporation
Sealaska
Koniag
Aleut Corp

Alaska Native Claims Settlement Act

- Settled Alaska Native claims in 1971
- Provided for corporate structure for Alaska Native groups along with a land entitlement.
- Created a powerful economic engine for Alaska through the growth of some of the largest state-owned corporations.
- 44 million acres of private land ownership creating a strong resource development platform for rural Alaska.
- ANCSA also provides for revenue sharing between corporation though Section 7(i) and 7(j) providing for benefits to all Alaska Natives.

AHTNA

INCORPORATED

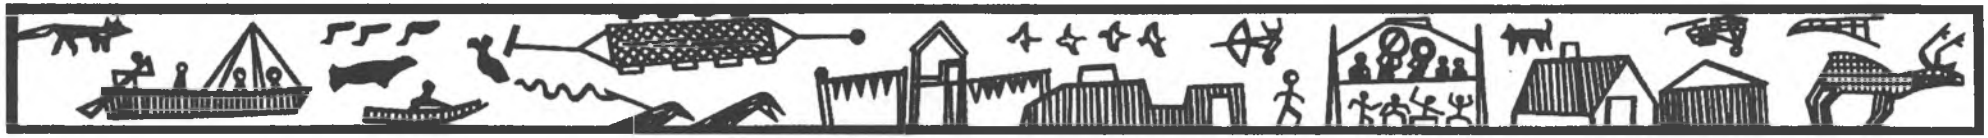
- Owns approximately 1,528,000 acres in east-central Alaska
- Has more than 1,500 shareholders
- Headquartered in Glennallen
- Ten operating subsidiaries that are involved in:
  - government contracting, civil and vertical construction, pipeline maintenance, environmental remediation, surveying, facilities maintenance, administrative and janitorial services, and food service contractors
- Focus is on growth and diversification of its land and mineral resources through:
  - mineral exploration,
  - gas exploration,
  - energy renewable projects.
- While protecting our customary and traditional rights and land protection from trespassers.

Aleut CORPORATION

- Entitled to 70,789 acres of surface lands and 1.572 million acres subsurface estate on the Alaska Peninsula
- Currently manages and sells sand, gravel, minerals and rock aggregates within the region
- Primary areas of business are real estate, government operations and maintenance contracting, aggregate sales, and investments in oil and gas producing properties and marketable securities

arctic slope regional corp.

- Headquartered in Barrow.
- Title to five million acres of land on the North Slope that are abundant in natural resources, including oil and gas and one of the world's largest bituminous coal deposits
- Companies include professional fields of engineering, venture capital and financial management, oil and gas support services, petroleum refining and distribution, aerospace engineering, consulting, civil construction, and communications
- Major Resource Projects are:
  - Subsurface owner in the Colville River Unit – hosts the Alpine oilfield and potential CD5 development,
  - Owner of the Western Arctic Coal fields
  - Owner of subsurface lands in ANWR
  - Small explorer/producer on the North Slope

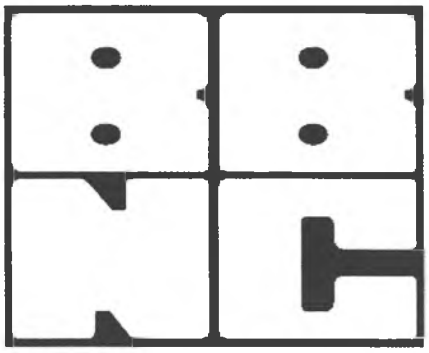


BERING STRAITS NATIVE CORPORATION

- BSNA holds the subsurface estate of highly mineralized land containing prospects of **Strategic metals** including Rare Earth reserves **(REE)**, and known deposits of **tin, platinum, thorium and uranium**. BSNC encourages private/public partnerships for the exploration, characterization, and development of these reserves.

- The region also faces significant growth in trans-Arctic shipping and exploration of the marine waters for oil and gas. Infrastructure and services will need to be developed to insure that support and safety needs are met. Public/private partnerships will be necessary to support this growing sector.

- Ground transportation improvements are critical and BSNC fully supports the preferred alternative for the **road to Nome** and will work cooperatively with the state during the planning and construction phases of this project.



Bristol Bay Native Corporation

- BBNC has approximately 8,700 shareholders who are Eskimo, Indian and Aleut.
- The company owns nearly 3 million acres of sub-surface land in the Bristol Bay region
- The corporation is a diversified company with investment and business holdings in oilfield services, construction services, government contracting and petroleum distribution.
- Commercial fishing is the region's main industry where tourism and the government sector are also part of the local economy.
- Potential for mineral deposits and natural gas.

Calista Corporation

- 13,000 shareholders
- Owns 6.5 million acres of subsurface land, about 300,000 acres of surface
- Investment portfolio includes oil well work-over drilling, royalties from gold and construction material mining, government and military contracting, newspaper publishing, commercial printing and advertising, property management, catering and camp services, telecommunications, heavy equipment sales and construction.
- Major Resource Projects include:
  - Donlin Creek LLC, hard rock gold and platinum prospects
  - Marshall Port and Quarry Road Project
- Mineral Resource development is critical to Calista's future

Chugach Alaska
CORPORATION

- Headquartered in Anchorage
- Investments include maintenance, business services in the areas of General Construction & Construction Management, Civil Engineering, Educational Services, Environmental/Oil Spill Response Services, Information Technology, Telecommunications, Employment Services, Manufacturing Services.

CIRI

- Southcentral Alaska's largest private landowner with 1.3 million acres of subsurface for oil and gas, mineral, and other responsible resource development leasing
- Active participation in Alaska energy and resource development including wind energy and underground coal gasification
- A portfolio of gold, chromium and other mineral prospects including some with significant prior exploration and resource analysis
- Significant participation in oilfield services, heavy civil construction with a specialty in remote resource development projects, environmental remediation services, and renewable energy
- A broad portfolio of other business interests and investments in commercial real estate development and management, tourism and hospitality, telecommunications, aerospace defense, private equity, venture capital and marketable securities

DOYON
Limited

- Land entitlement of 12.5 million acres, largest private landowner in Alaska
- Headquartered in Fairbank
- Company investments include catering, facility maintenance, security, tourism and support for oil, gas and mining construction across Alaska, and real estate assets and operations in the tourism industry

Hard Minerals Exploration Projects

- Zinc, silver, lead
  - Little White Man
  - Reef Ridge
- Gold and gold/copper
  - Mystery Mtns.
  - Vinasale Mountain
  - Seventymile River
  - East Wiseman
  - Sawtooth Mountain

Notes: studies and field programs this year all areas, including drilling. Some areas explored solely by Doyon, others in venture with mining companies.

Oil and Gas Exploration Projects

- Yukon Flats basin
  - Stevens Village sub-basin
  - Birch Creek sub-basin
- Nenana basin

Notes: studies and field programs all areas this year with seismic in 2012 at Nenana. Yukon Flats exploration conducted solely by Doyon; Nenana in venture with other companies

KONIAG
DEVELOPMENT CORPORATION

- Headquartered in Kodiak representing the Alutiiq people
- Title to 160,000 acres of surface estate in the Kodiak Archipelago including logging and tourism operations
- Title to 800,000 acres of subsurface on Kodiak and the Alaska Peninsula including deposits in industrial rock, energy commodities , precious-metals, and base-metals
- Subsidiary Operating Companies across the US engaged in construction and environmental services; manufacturing; industrial services; technology solutions; business services; and real estate holdings
- Resource Development Projects
  - A granite deposit known as Shakmanof Cove Quarry to supply large competent armor stone for coastal marine applications.
  - A research, education and tourism development known as the Kodiak Brown Bear Center located on the Karluk Lake envisioned to be the authority on Kodiak bear habitat.
  - Opportunities on subsurface interests just recently conveyed by BLM

NANA

REGIONAL CORPORATION, INC.

- **As an Iñupiat corporation, NANA values subsistence as the highest and best use of our traditional lands.** All development projects must be in concert with this perspective. The connection we have to our land is crucial and irreplaceable. Yet resource development is critical to our base economy.
- Has surface and subsurface rights to more than 2.2 million acres of mineral-rich land in northwest Alaska
- Red Dog Mine, one of the world's largest zinc and lead mines; 58% shareholder hire; major source of revenues for the NWAB
- Active in new resource development in minerals and Oil & Gas
  - Onshore Oil and Gas potential in the Kotzebue Basin
  - Base and Precious metal exploration in the Ambler Mining District
- Pursuing alternative energy projects in the region (wind, hydro, biomass, geothermal)
- Investment includes resource development, facilities management and logistics, engineering and construction, information technology and government contracting, facilities management and logistics, real estate and hotel development, and IT and telecommunications

A NATIVE CORPORATION
SEALASKA

- Headquartered in Juneau
- 20,000 Tlingit, Haida, Tsimshian shareholders
- 290,000 acres in Southeast
- 300,000 acres subsurface beneath 10 Village & 2 Urban Corporations in Southeast region
- Timber primary source of jobs and revenue for Southeast
- Diversified from forest investments into:

Financial investments
Information technology
Environmental remediation
Construction
Plastics injection molding
Construction aggregates
Logistics
Security services

Common Issues and Concerns

- Federal Overreach
  - Wild Lands designations
  - ESA and Critical Habitat designations on ANC lands
  - DOI management plans in Parks and Refuges
  - EPA regulations and programs
  - Barriers to accessing our lands
  - Overreach of Federal Agencies encroaching and sometimes conflicting with State Agency oversight
- State Issues
  - ACES inhibiting continued oil and gas investment
    - Potential to spill over into over resource sectors
  - High Cost of rural energy
  - Lack of infrastructure
  - Permit backlogs in State agencies impacting ANC project development
  - Need to support accelerated anti degradation rulemaking in AKDEC
  - A disconnect between the project review times at the USACE (United States Army Corps of Engineers) and the DCOM (Division of Coast and Ocean Management)
  - Tideland lease fees for dormant projects

ALASKA STATE LEGISLATURE
House District 35

MEMORANDUM

TO: Senator Joe Paskavan, Co-Chair
Senate Resources Committee
Senator Tom Wagoner, Co-Chair
Senate Resources Committee

FROM: Representative Paul Seaton

DATE: February 8, 2012

RE: Request for a hearing, HB 60

I respectfully request a hearing of HB 60 before the Senate Resources Committee. This is a follow-up to the original hearing request sent on March 22, 2011.

In summary, HB 60 states that the Department of Fish and Game cannot use the absence of wild geoducks in an area to deny a farming permit.

Attached please find: sponsor statement, HB 60, DNR fiscal note, F&G fiscal note, Interesting Geoduck Facts, Article 2 Aquatic Farming, Home page for three-minute trailer for "3 Feet Under – Digging Deep for the Geoduck," Letter from Alutiiq Pride Shellfish Hatchery, Letter from City of Seward.

In order to show the brief three-minute clip "3 Feet Under – Digging Deep for the Geoduck" I will need a computer and a projector.

All teleconference sites are welcome; however there are no special requests. At the committee's discretion, Jeff Hettrick, the manager of the Alutiiq Pride Shellfish Hatchery will need to call in off net.

Staff contact: Heather Beggs, 465-2028

MEETING DATE: February 13, 2012

1. Switch gavel from Paskvan

2. HB 60

    a. This is the initial presentation of the bill – it has a referral next to finance.
    b. Ask for motion on bill – object for discussion
    c. Ask sponsor to present
        i. Rep. Paul Seaton
        ii. Heather Beggs staff
    d. Go to public hearing
        i. Don't have any offnet authorized
        ii. Go to LIO's
        iii. Go to Juneau
    e. Remove objection – ask for motion out of committee with individual recommendations – fiscal notes.

3. Gavel out – announce time.

REPRESENTATIVE Paul Seaton

District 35

HB 60 Expanding Geoduck Farming

Shellfish farming has the potential to diversify the economic base of coastal communities impacted by the changing dynamics of the fishing industry. HB 60 allows this expansion of this clean water industry by permitting geoducks to be farmed subtidally in the Gulf of Alaska even if wild geoducks are not present. The bill does not exempt farmers from any health, safety, or other transfer provisions relating to hatchery seed.

The Alutiiq Pride Shellfish Hatchery is the only hatchery that supplies mariculture spat and seed in the State. It was initiated by the State to be a self-sustaining operation in association with the private mariculture farms permitted by the State. Their business plan relies on the sale of geoduck seed. However, an informal policy of the Department of Fish and Game prevents geoduck seed from being utilized by farms anywhere outside of southeast Alaska. These restrictions on the sale of geoduck seed cause the sole hatchery for the mariculture industry in Alaska to require continual subsidy by the State. HB 60 will allow the mariculture industry to develop around the Gulf of Alaska, providing a potentially strong market for seed and private sector financing for the operation of the hatchery.

As non-mobile filter feeders eating plankton, farmed geoducks will not prey on any local commercial, sport or personal use fish. There have been no reports of species displacement in the sedimentary habitat by geoduck clams. Farmed geoducks will not interfere with personal recreational boaters as they are cultivated in the sediment below low tide and without the numerous buoys and floating cages used in oyster farms. No infectious disease has been identified in any wild geoduck population or the geoduck farming industries of Washington, British Columbia, or Alaska.

The conflict involving geoducks in southeast Alaska is between the dive fishermen who harvest wild stock and farmers who wish to farm in areas with existing wild stock. HB 60 would circumvent this conflict because there is no wild geoduck stock in the proposed area. This bill will not override any Department of Natural Resources farm site leasing or Department of Fish & Game permit regulation.

HB 60 eliminates unnecessary hindrances to the growth of the maricluture industry in Alaska and provides a potential alternative economic base for coastal communities while adequately considering the health of our marine ecosystem.

Staff Contact, Heather Beggs 465-2028

FISCAL NOTE #2

STATE OF ALASKA **BILL NO. HB 60**
2011 LEGISLATIVE SESSION

Analysis

HB 60 would allow for the transfer of geoduck seed from a certified hatchery to an aquatic farm.

This bill would have no impact on the Department of Natural Resources' ability to offer aquatic farming and hatchery lease sites under AS 38.05.083. While this bill might open more areas of the state to the aquatic farming of geoducks, which could result in a slight increase in overall aquatic farmsite leasees, the fiscal impact to DNR is anticipated to be minimal and could be addressed with existing staff and resources.

March 11, 2011

Dear Alaska Legislators,

The City of Seward supports House Bill 60, "An Act relating to aquatic farm permitting involving geoducks and to geoduck seed transfers between certified hatcheries and farms".

HB 60 will remove limitations to the growth of geoduck mariculture in Alaska. Currently, geoduck clam seed from the Alutiiq Pride Shellfish Hatchery can be utilized only by southeast shellfish farms due to Alaska Fish and Game geographic restrictions. This limits geoduck seed sales and the start-up of geoduck farms in Alaska. Removing the geographic limitation will expand the geoduck farming industry into other coastal communities of Alaska.

By supporting HB 60, you are expanding the geoduck industry in Alaska and expanding the economic diversity of our communities.

Sincerely,

Mayor William E. Dunham
City of Seward

Alutiiq Pride Shellfish Hatchery
PO Box 369
Seward, AK 99664

jih@seward.net

January 21, 2011

Representative Paul Seaton
State Capitol, Room 201
Juneau, Alaska 99801

Dear Representative Seaton:

The Alutiiq Pride Shellfish Hatchery appreciates your efforts with House Bill 60. We rely upon shellfish seed sales to cover portions of our operating expenses. Geoducks and their high value offer us the best opportunity to achieve our sales goals. To date, the demand has not been originally projected causing a perpetual shortfall in revenue. Opening additional markets in south-central Alaska will help alleviate this deficit.

We are often frustrated by the Alaska Department of Fish and Game and their regulation of transport. It is ironic that we can transport a non-indigenous species such as oysters and cannot transport a native species outside what is considered its natural range. The fact that it will probably be non-reproductive in south- central Alaska should make management easy.

I would suggest we promote a cooperative demonstration project exploring the feasibility of geoduck farming in south-central Alaska headed by the Department of Fish and Game, the Department of Commerce and the Chugach Regional Resources Commission. The shellfish hatchery can provide geoduck seed for such an effort.

Sincerely,

Jeff Hetrick, Director

Interesting Geoduck Facts

Latin name: *Panopea abrupta* (Conrad, 1849)
Superfamily: Hiatellidae
Family: Hiatellidae

- **"The common name for geoduck has a native American origin, meaning "dig deep", a reference to humans or sea otters digging them. The scientific name is *Panopea abrupta* (Conrad, 1849) and I believe it is the largest intertidal clam in the world. It is the largest species of Panopea."**
  Harbo, R.1997.Shells and Shellfish of the Pacific Northwest".

- **The geoduck clam is sometimes spelled: goeduck, goiduck, or gweduck.**

- **The Chinese call the geoduck the "elephant trunk clam"**

- **Native to the northern Pacific coasts of Canada and the United States of America, that is, along the coasts of Washington state and the province of British Columbia. About 109 million adult geoducks are packed into Puget Sound's sediments the biggest bunch of marine animals in the Sound.**

- **The geoduck is the largest intertidal clam (and the largest burrowing clam) in the world with an average weight of approximately 1 kg (2.2 lbs) in B.C. and a shell length to 195 mm (7").**
  - **"I had one of these (Panopea abrupta) on display here at the Seattle Aquarium that was 13 pounds, and I've heard of bigger ones. They are generally credited with being the deepest digging clam, the biggest burrowing clam and it's possible that the geoduck is one of the longest-living mollusks."**
    Roland C. Anderson, PhD; Puget Sound Curator, The Seattle Aquarium (Source)

- **Huge geoducks have been recorded weighing up to 4.5 kg (10 lbs) Hand et al.1996, Harbo 1997 with larger denizens of the deep reported by fishermen in the field. (Source)**
  The maximum documented weight: 7.15 kgs. (Sources differ on this point)

- **Age and growth studies have shown that geoduck clams grow about one inch per**

year in shell length for the first four years of life. The growth rate is gradually reduced after this time. The average size of 2.2 pounds is reached in five to six years.

- **Average Age: Adults may live to over 140 years and reach a maximum shell length of 23 cm. Geoducks are among the longest-lived animals in the world. Growth-ring analysis shows many individuals live for more than 100 years. They grow rapidly in the first 10-15 years (approximately 1 inch per year), after which time the growth in shell length almost ceases and is replaced by a thickening of the shell and a slow increase in body weight.**

- **Oldest Recorded Age: 146 to 168 years (sources differ on this point).**

    - **"The neck of a geoduck can stretch to 1 meter, from the body and shell of this clam. When the clam is harvested (by divers, using high pressure water jets), the neck contracts. The oldest clam aged from British Columbia is 168 years old!" "**
      Harbo, R.1997.Shells and Shellfish of the Pacific Northwest".

- **Geoducks are most often found at depths between 10 and 80 feet below the mean low tide mark, but have been reported at depths reaching 360 feet. Average depths from another source: subtidal, from 8 to 120 m depth**

- **They bury themselves up to a meter deep in sand, silt, gravel and other soft substrates. A developing geoduck will burrow into sediment at an approximate rate of 1 foot per year. After digging about 3 feet deep, the adult geoduck settles in for 100 years or more.**

- **Siphons and neck cannot be withdrawn into their shell. In burrowed adults, the siphon may stretch 39 inches to the sea bed.**

- **Geoducks have separate sexes. Spawning occurs annually, primarily from Late April to July, when waters are warm. Females release from 7-10 million eggs, which develop through several stages in the water column until settling on the bottom within 40-50 days. At a shell length of 2 mm, they burrow into the substrate and can bury to a refuge depth of 60 cm in two years. They are sexually mature by 3 yrs.**

- **The of the geoduck is thin, it lacks teeth, and it may attain a length of 8 in. (20 cm). The valves, or two parts of the shell, are always open in the adult, because the body and siphons are too large to be retracted.**

- **The geoduck feeds on phytoplankton (single-celled marine algae), mostly diatoms and flagellates. Due to it's diet, one must be careful of paralytic shellfish poison (PSP) or "red tides". Check with autorities if unsure wheter or not there is a red tide before attempting to invite a geoduck for lunch. Red tides are harmless to the clams, but they can be fatal to humans.**

- **As Food: The neck can be cut or ground and used in chowders. The body meat, when sliced, pounded and sautéed it resembles abalone. Although they are edible,**

they are not widely marketed due to their inaccessibility. They are exposed for only a few hours a month, during minus tides, and even then only a very fast person digging with a shovel can attempt to dig out this fast burrowing clam. (Note: sport limits for the stae of Washington are three per day)

- **See the Underwater Harvestors Page for information of purchasing, storing, preparing and recipes for geoducks**
- **The prime meat comes from the neck, which may be up to 24-inches when fully extended, and the mantle can be cut or ground and used in chowders. The neck meat is often used in sushi or minced into patties and quick fried.**
- **Welcome to Geoduck Recipes: not only recipes but an introduction to geoduck aquaultue. By Grant Jones and his wife, Ashley.**
- **Mirugai Sushi: Source**

- **Predators: sea stars, crabs, fishes, and birds.**

- **SCUBA divers utilize high-pressure water to "dig" out the geoduck. The divers wear dry suits for protection from the cold water and they are supplied with air pumped down to them through a flexible hose from a compressor onboard a fishing boat. They must wear heavy weights to keep them submerged. Divers walk along the bottom for geoduck shows, which are the visible exposed tip of a siphon or dimple left in the sand from a retracted siphon. The divers then use a nozzle fed with high pressure water from the fishing boat above them to liquefy the sand around the geoduck thus removing the clam. The geoduck is then placed into a bag clipped to their waist. Divers are in constant communication with their boat via high tech diver to ship communications.**

Article 02. AQUATIC FARMING

Sec. 16.40.100. Aquatic farm and hatchery permits.

(a) A person may not, without a permit from the commissioner, construct or operate

(1) an aquatic farm; or

(2) a hatchery for the purpose of supplying aquatic plants or shellfish to an aquatic farm.

(b) A permit issued under this section authorizes the permittee, subject to the conditions of AS 16.40.100 - 16.40.199 and AS 17.20, to

(1) acquire, purchase, offer to purchase, transfer, possess, sell, and offer to sell stock and aquatic farm products that are used or reared at the hatchery or aquatic farm; and

(2) except as provided in (f) of this section, harvest and, without further cultivation, sell an insignificant population that may be present at the aquatic farm site of a wild stock of a shellfish species intended to be cultured at the site.

(c) The commissioner may attach conditions to a permit issued under this section that are necessary to protect natural fish and wildlife resources.

(d) Notwithstanding other provisions of law, the commissioner may not issue a permit under this section for the farming of, or hatchery operations involving, Atlantic salmon.

(e) Upon the expiration or termination of a permit issued under this section, a person who holds a permit for an aquatic farming site where wild stocks of shellfish indigenous to the site are cultured shall, as a condition of the permit, restore the wild stock of shellfish, as consistent with sustained yield management of the wild stock, to the population level that existed on the site when the permit for the site was initially issued by the commissioner. A permit holder is not required to restore that portion of the wild stock of shellfish that was removed from an aquatic farming site by a common property fishery conducted after the issuance of the permit for the aquatic farming site.

(f) If the wild stock of a shellfish species to be cultured at an aquatic farm site exceeds the amount determined by the department to be an insignificant population and if the commissioner determines in writing that removal from the site of that portion of the stock that exceeds an insignificant population would benefit the public and that removal of the stock by a person other than the permittee would unreasonably interfere with the operation of the aquatic farm, the commissioner may authorize the permittee to remove and sell the excess amount of the wild stock from the site, if the permittee pays reasonable compensation, as defined by the department, to the department for the harvest and sale of the excess wild stock. The department shall deposit the money received under this subsection into the general fund. The legislature may appropriate the money received under this section to the department for shellfish management and enhancement.

Sec. 16.40.105. Criteria for issuance of permits.

The commissioner shall issue permits under AS 16.40.100 on the basis of the following criteria:

(1) the physical and biological characteristics of the proposed farm or hatchery location must be suitable for the farming or the shellfish or aquatic plant proposed;

(2) the proposed farm or hatchery may not require significant alterations in traditional fisheries or other existing uses of fish and wildlife resources;

(3) the proposed farm or hatchery may not significantly affect fisheries, wildlife, or their habitats in an adverse manner;

(4) the proposed farm or hatchery plans and staffing plans must demonstrate technical and operational feasibility; and

(5) the proposed farm site may not include more than an insignificant population of a wild stock, on the site, of a shellfish species intended to be cultured.

Sec. 16.40.110. Permit application, renewal, and transfer.

(a) An applicant for an aquatic farming or hatchery permit required under AS 16.40.100 shall apply on a form prescribed by the commissioner. An application for a permit must include a plan for the development and operation of the aquatic farm or hatchery, which must be approved by the commissioner before the permit is issued.

(b) An application for renewal or transfer of a permit must be accompanied by fees required by the commissioner, a report of the disease history of the farm or hatchery covered by the permit, and evidence that satisfies the commissioner that the applicant has complied with the development plan required under (a) of this section. The commissioner may require a health inspection of the farm or hatchery as a condition of renewal. The department may conduct the inspection or contract with a disease diagnostician to conduct the inspection.

(c) A person to whom a permit is transferred may use the permit only for the purposes for which the permit was authorized to be used by the transferor, and subject to the same conditions and limitations.

Sec. 16.40.120. Aquatic stock acquisition permits.

(a) A person may not acquire aquatic plants or shellfish from wild stock in the state for the purpose of supplying stock to an aquatic farm or hatchery required to have a permit under AS 16.40.100 unless the person holds an acquisition permit from the commissioner.

(b) An acquisition permit authorizes the permit holder to acquire the species and quantities of wild stock in the state specified in the permit for the purposes of supplying stock to

(1) an aquatic farm or hatchery required to have a permit under AS 16.40.100;

(2) the department.

(c) The commissioner shall specify the expiration date of an acquisition permit and may attach conditions to an acquisition permit, including conditions relating to the time, place, and manner of harvest. Size, gear, place, time, licensing, and other limitations applicable to sport, commercial, or subsistence harvest of aquatic plants and shellfish do not apply to a harvest with a permit issued under this section. The commissioner of fish and game shall issue or deny a permit within 30 days after receiving an application.

(d) The commissioner shall deny or restrict a permit under this section upon finding that the proposed harvest will impair sustained yield of the species or will unreasonably disrupt established uses of the resources by commercial, sport, personal use, or subsistence users. The commissioner shall inform the Board of Fisheries of any

action taken on permit applications for species that support commercial fisheries subject to limited entry under AS 16.43 and of any permits denied because of unreasonable disruption of an established use. A denial of the permit by the commissioner must contain the factual basis for the findings.

(e) The Board of Fisheries may adopt regulations for the conservation, maintenance, and management of species for which an acquisition permit is required.

(f) Except as provided in (d) of this section or in a regulation adopted under (e) of this section, the commissioner shall issue a permit if

(1) wild stock is necessary to meet the initial needs of farm or hatchery stock;

(2) there are technological limitations on the propagation of culture stock for the species sought;

(3) wild stock sought is not fully utilized by commercial, sport, personal use, or subsistence fisheries; or

(4) wild stock is needed to maintain the gene pool of a hatchery or aquatic farm.

(g) Aquatic plants and shellfish acquired under a permit issued under this section become the property of the permit holder and are no longer a public or common resource.

Sec. 16.40.130. Importation of aquatic plants or shellfish for stock.
A person may not import into the state an aquatic plant or shellfish for the purpose of supplying stock to an aquatic farm or hatchery unless authorized by a regulation of the Board of Fisheries.

Sec. 16.40.140. Limitation on sale, transfer of stock, and products.

(a) A private hatchery required to have a permit under AS 16.40.100 may sell or transfer stock from the hatchery only to an aquatic farm or other hatchery that has a permit issued under AS 16.40.100, except that shellfish stock may also be sold or offered for sale to an aquatic farm or related hatchery outside of the state.

(b) Stock may not be transferred to or from an aquatic farm or hatchery required to have a permit under AS 16.40.100 without prior notice of the transfer to the commissioner. A notice of transfer shall be submitted at least 45 days before the proposed date of transfer.

(c) A notice of transfer must be accompanied by a report of a health inspection of the stock. The department shall conduct the inspection or contract with a disease diagnostician to conduct the inspection. The cost of inspection shall be borne by the department.

(d) The department may restrict or disapprove a transfer of stock if it finds that the transfer would present a risk of spreading disease.

(e) A person may not sell, transfer, or offer to sell or transfer, or knowingly purchase or receive, an aquatic farm product grown or propagated in the state unless the product was grown or propagated on a farm with a permit issued under AS 16.40.100. The permit must be in effect at the time of the sale, transfer, purchase, receipt, or offer.

Sec. 16.40.150. Disease control and inspection.

(a) The department shall order the quarantine or the destruction and disposal of diseased hatchery stock or of aquatic farm products when necessary to protect wild stock. A holder of a permit issued under AS 16.40.100 shall report to the department an

outbreak or incidence of disease among stock or aquatic farm products of the permit holder within 48 hours after discovering the outbreak or incidence.

(b) A holder of a permit issued under AS 16.40.100 shall allow the department to inspect the permit holder's farm or hatchery during operating hours and upon reasonable notice. The cost of inspection shall be borne by the department.

(c) The department shall develop a disease management and control program for aquatic farms and hatcheries.

(d) The department may enter into an agreement with a state or federal agency or a private, state-certified provider to provide services under (b) and (c) of this section, or inspections under AS 16.40.110(b).

Sec. 16.40.155. Records and reports confidential.
Records required by statute or by a regulation adopted by the department concerning aquatic farm stocks or production, prices, and harvests of aquatic farm products and wild stocks, and annual statistical reports of individual aquatic farms or hatcheries required by statute or by a regulation adopted by the department are confidential and may not be released by the department, except that the department may release the records and reports

(1) to the Department of Revenue and the Department of Natural Resources to assist the departments in carrying out their respective statutory responsibilities;

(2) as necessary to comply with a court order;

(3) provided by an aquatic farm or hatchery permit holder to the permit holder whose activity is the subject of the records or reports;

(4) regarding cumulative annual harvests of wild stocks at individual aquatic farm sites.

Sec. 16.40.160. Regulations.
The commissioner may adopt regulations necessary to implement AS 16.40.100 - 16.40.199.

Sec. 16.40.170. Penalty.
A person who violates a provision of AS 16.40.100 - 16.40.199, a regulation adopted under AS 16.40.100 - 16.40.199, or a term or condition of a permit issued under AS 16.40.100 - 16.40.199, is guilty of a class B misdemeanor.

Sec. 16.40.199. Definitions.
In AS 16.40.100 - 16.40.199

(1) "aquatic farm" means a facility that grows, farms, or cultivates aquatic farm products in captivity or under positive control;

(2) "aquatic farm product" means an aquatic plant or shellfish, or part of an aquatic plant or shellfish, that is propagated, farmed, or cultivated in an aquatic farm and sold or offered for sale;

(3) "aquatic plant" means a plant indigenous to state water or that is authorized to be imported into the state under a permit issued by the commissioner;

(4) "commissioner" means the commissioner of fish and game;

(5) "hatchery" means a facility for the artificial propagation of stock, including rearing of juvenile aquatic plants or shellfish;

(6) "insignificant population" means a population of shellfish that, in the determination of the commissioner, would not attract and support a commercial fishery for that species of shellfish and the harvest and sale of the shellfish would not result in significant alteration in traditional fisheries or other existing uses of fish and wildlife resources if the population were included within an aquatic farm site;

(7) "positive control" means, for mobile species, enclosed within a natural or artificial escape-proof barrier; for species with limited or no mobility, such as a bivalve or an aquatic plant, "positive control" also includes managed cultivation in unenclosed water;

(8) "shellfish" means a species of crustacean, mollusk, or other invertebrate, in any stage of its life cycle, that is indigenous to state water or that is authorized to be imported into the state under a permit issued by the commissioner;

(9) "stock" means live aquatic plants or shellfish acquired, collected, possessed, or intended for use by a hatchery or aquatic farm for the purpose of further growth or propagation.

MEMORANDUM

TO: Senator Joe Paskvan, Co-Chair
Senate Resources Committee
Senator Tom Wagoner, Co-Chair
Senate Resources Committee

FROM: Representative Paul Seaton

DATE: March 22, 2011

RE: Request for a hearing, HB 60

I respectfully request a hearing of HB 60 before the Senate Resources Committee

In summary, HB 60 states that the Department of Fish and Game cannot use the absence of wild geoducks in an area to deny a farming permit.

Attached please find: sponsor statement, HB 60, DNR fiscal note, F&G fiscal note, Interesting Geoduck Facts, Article 2 Aquatic Farming, Home page for three minute trailer for "3 feet under – Digging Deep for the Geoduck," Letter from Alutiiq Pride Shellfish Hatchery, Letter from City of Seward.

In order to show the brief three minute clip "3 Feet Under – Digging Deep for the Geoduck" I will need a computer and projector.

All teleconference sites are welcome; however there are no special requests. At the committee's discretion, Jeff Hettrick, the manager of the Alutiiq Pride Shellfish Hatchery will need to call in off net.

REPRESENTATIVE Paul Seaton

District 35

HB 60 Expanding Geoduck Farming

Shellfish farming has the potential to diversify the economic base of coastal communities impacted by the changing dynamics of the fishing industry. HB 60 allows this expansion of this clean water industry by permitting geoducks to be farmed subtidally in the Gulf of Alaska even if wild geoducks are not present. The bill does not exempt farmers from any health, safety, or other transfer provisions relating to hatchery seed.

The Alutiiq Pride Shellfish Hatchery is the only hatchery that supplies mariculture spat and seed in the State. It was initiated by the State to be a self-sustaining operation in association with the private mariculture farms permitted by the State. Their business plan relies on the sale of geoduck seed. However, an informal policy of the Department of Fish and Game prevents geoduck seed from being utilized by farms anywhere outside of southeast Alaska. These restrictions on the sale of geoduck seed cause the sole hatchery for the mariculture industry in Alaska to require continual subsidy by the State. HB 60 will allow the mariculture industry to develop around the Gulf of Alaska, providing a potentially strong market for seed and private sector financing for the operation of the hatchery.

As non-mobile filter feeders eating plankton, farmed geoducks will not prey on any local commercial, sport or personal use fish. There have been no reports of species displacement in the sedimentary habitat by geoduck clams. Farmed geoducks will not interfere with personal recreational boaters as they are cultivated in the sediment below low tide and without the numerous buoys and floating cages used in oyster farms. No infectious disease has been identified in any wild geoduck population or the geoduck farming industries of Washington, British Columbia, or Alaska.

The conflict involving geoducks in southeast Alaska is between the dive fishermen who harvest wild stock and farmers who wish to farm in areas with existing wild stock. HB 60 would circumvent this conflict because there is no wild geoduck stock in the proposed area. This bill will not override any Department of Natural Resources farm site leasing or Department of Fish & Game permit regulation.

HB 60 eliminates unnecessary hindrances to the growth of the maricluture industry in Alaska and provides a potential alternative economic base for coastal communities while adequately considering the health of our marine ecosystem.

FISCAL NOTE #2

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB 60

Analysis

HB 60 would allow for the transfer of geoduck seed from a certified hatchery to an aquatic farm.

This bill would have no impact on the Department of Natural Resources' ability to offer aquatic farming and hatchery lease sites under AS 38.05.083. While this bill might open more areas of the state to the aquatic farming of geoducks, which could result in a slight increase in overall aquatic farmsite leasees, the fiscal impact to DNR is anticipated to be minimal and could be addressed with existing staff and resources.

Re: House Bill 118 – Research and Development Tax Credit

Dear Senators Paskvan and Wagoner,

Please accept this request for your consideration to schedule CSHB 118 (FIN) – Research and Development Tax Credit in Senate Resources at your earliest convenience.

Innovation can be an expensive, intricate, and time-intensive enterprise. But it also can spark a chain of investments in capital equipment, workers, and spillover activities in every economic sector. In effect, the research and development tax credit would stimulate private-sector investment, entrepreneurial activity, and business expansion in the state that will bring opportunity and sustainable long-term benefits to our economy.

The credit is 20 percent of qualified research and development expenditures that exceed the average qualified research and development expenditures as defined in 26 U.S.C 41(d) (Internal Revenue Code) for the three years immediately preceding the year in which the credit is claimed. Unused credits may be carried forward for up to seven years after the expenditure for which the credit is claimed. In order to prevent a corporate taxpayer from claiming more than one benefit for a single expenditure, the bill also would provide that a credit could not be claimed for expenditures the corporation deducted in calculating its tax liability, or for any other credit, including any federal credits, that have been claimed under Title 43.

The bill will also impose a reporting requirement on the Department of Revenue so the Legislature and the public are aware of the fiscal impact and economic benefits of the research and development credit to the state.

If you have any questions regarding this bill, please feel free to contact either myself or Deputy Commissioner Curtis Thayer at 465-2500.

Sincerely,

Susan K. Bell

Office of the Commissioner

Sean Parnell, Governor
Susan K. Bell, Commissioner

CS for House Bill 118 (FIN)

"An Act relating to a tax credit for corporate income taxes paid for qualified research and development expenditures; and providing for an effective date."

Sectional Analysis

Section 1. Amends AS 43.20 by adding a new section: AS 43.20.047 – Qualified research and development tax credit.

This section outlines the terms and conditions of a qualified research and development tax credit in addition to any other credit that the taxpayer may be authorized to receive under the Alaska Net Income Tax Act. A taxpayer may apply a 20% credit not to exceed $10 million provided the following terms and conditions are met:

- Research and development expenditures are attributable to the state if it is being conducted in this state.
- If the tax credit exceeds the taxpayers liability for the year the expenditure is incurred the excess of the tax may be carried forward up to seven years.
- A person may not claim a credit for research and development expenditures that were already deducted in calculating its tax liability or for which it claimed a federal credit.

Each year the Department of Revenue shall report the number of the taxpayers who received credits under this section for the prior tax year, the total amount of the credits given to taxpayers, a description of the research and development projects for which the credit was granted, and the number of employees conducting the research and development.

This section also defines "base amount" and "qualified research and development".

Section 2. Effective date clause

FISCAL NOTE #2

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSHB 118(FIN)

Analysis

The proposed legislation requires that expenditures attributable to payroll of employees for research and development conducted in Alaska must be reported as paid in Alaska in quarterly unemployment insurance (UI) contribution reports submitted to the Department of Labor and Workforce Development under AS 23.20, in order to qualify for a tax credit under this bill. Department of Revenue auditors would request UI contribution reports from taxpayers in the course of an audit to ascertain that payroll costs claimed for a tax credit under this bill qualify for the credit.

There is no fiscal impact to the department as a result of this legislation.

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSHB 118(FIN)

Analysis

Bill Language:
This bill would allow a credit against corporate income tax of up to $10,000,000 of 20% of qualified research and development expenditures that exceed the base amount incurred by a taxpayer for research and development conducted in Alaska. The base amount is the average qualified research and development expenditures attributable to Alaska for the three tax years immediately preceding the tax year for which the credit is claimed. For purposes of this bill, "qualified research and development" means qualified research as defined by the Internal Revenue Code. If the tax credit allowed exceeds the taxpayer's tax liability, the excess tax credit would be allowed to be carried forward for up to seven years.

This bill also provides that the department is required to complete an annual report disclosing the number of taxpayers receiving the credit, the total cumulative amount of credits granted to all taxpayers and the total cumulative number of employees conducting research and development in the state.

Revenues:
The department is unable to determine the amount of research and development credits which may be claimed by taxpayers as the department currently has no information about the amount of research and development conducted in the state. Therefore, the department has no basis with which to formulate an estimated effect on revenues.

Expenditures:
The department can implement the provisions of the bill with existing resources.

HB 118 Presentation

DEVELOPMENT

This legislation will allow Alaska corporations to receive a 20% tax credit, not to exceed $10 million per taxpayer, per tax year. The research and development activities, or the payroll of the employees, must take place in Alaska.

To qualify, research and development activities must meet the following:

1. The purpose is discovering information technological in nature; AND
2. The application of which is intended to be useful in the development of a new or improved component of the taxpayer; AND
3. Substantially all of the activities constitute a process of experimentation; AND
4. The experimentation is for a qualifying activity or purpose.

What Qualifies:
- Developing new or improved products, processes, or formulas
- Developing prototypes or models
- Building or improving manufacturing facilities
- Developing or improving software technologies
- Certification testing
- Developing or applying for patents

What Doesn't Qualify:
- Exploration activity to ascertain the existence, location, extent, or quality of any ore or mineral deposit
- Duplicating an existing business component
- Surveys and studies such as market research, advertising, and routine data collection
- Research in the social sciences, arts, or humanities
- Anything for style, taste, cosmetic, or seasonal reasons

Oil & Gas FAQs:

Q. Will corporations engaged in oil and gas production be eligible for the R&D credit?

A. Yes. Oil and gas corporations will be treated the same as all other taxpayers and may take a credit against their Alaska corporate income tax for R&D expenses incurred in Alaska.

Q. Can oil and gas companies take a credit against their oil and gas production tax for R&D expenses?

A. No. The Alaska R&D tax credit would only be allowed against corporate income tax. It would not be allowed as a credit against taxes due in any other tax program.

Q. Can oil and gas companies deduct research and development expenditures in the calculation of their oil and gas net profits tax?

A. No. R&D expenses are not qualified lease expenditures under the applicable statutes and regulations governing production tax, and therefore, are not deductible. Specifically, 15 AAC 55.260(g) states that "designing" does not include the types of activities ordinarily considered R&D.

Comments and Questions

I.R.C. Sec. 41, Credit for Increasing Research Activities

Definition of Qualified Research:

1. The purpose is discovering information technological in nature; **AND**
2. The application of which is intended to be useful in the development of a new or improved component of the taxpayer; **AND**
3. Substantially all of the activities constitute a process of experimentation; **AND**
4. The experimentation is for a qualifying activity or purpose.

Activities that Qualify:

- Developing new or improved products, processes, or formulas
- Developing prototypes or models
- Developing or applying for patents
- Certification testing
- Developing new technology
- Environmental testing
- Developing or improving software technologies
- Building or improving manufacturing facilities
- Streamlining internal processes

Activities that Do NOT Qualify:

- Exploration activity to ascertain the existence, location, extent, or quality of any ore or mineral deposit
- Research AFTER commercial production
- Adapting an existing business component for a particular customer
- Duplicating an existing business component
- Surveys & studies such as market research, advertising, and routine data collection
- Computer software for internal use (unless its development supports an otherwise qualifying activity)
- Non-U.S. research
- Research intended to be transferred to another
- Research conducted for the benefit of and prior to commencing a new business
- Research in the social sciences, arts, or humanities
- Funded research
- Anything for style, taste, cosmetic, or seasonal reasons

Allowed Expenses for Qualified Research:

- Research expenses incurred in connection with carrying on a trade or business including:
    - In-house wages and supplies
    - Time-sharing costs for computer use
    - 65% of amounts paid to contractors in the U.S. who work on the taxpayer's behalf
    - Extraordinary utility charges
    - Depreciation and depletion on property used in connection with qualified research activities

RESEARCH AND DEVELOPMENT CREDIT BY STATE

FEDERAL	Two Types: Regular Research Credit (RRC) Method; 20% of qualified expenses Alternative Simplified Credit (ASC) Method; 14% of qualified expenses over 50% of average expenses in the preceding three years (See Exhibit 1 attached)
Arizona	24% of the first $2.5 million in qualifying expenses. Qualifying expenses in excess of $2.5 million, credit is $600,000 plus 15% of the amount over $2.5M. Ariz. Rev. Stat. Ann. § 43-1074.01 [Extended through 2019]
Arkansas	1. University based R&D. 33% tax credit for qualified research expenditure on contracts with AR colleges or Universities 2. In-House R&D. 20% of qualified expenditures exceeding the base year for a 3 year period. Incremental increase for next 2 years. Credit may offset 100% of state tax liability. Unused credit may be carryforward up to 9 years. 3. Strategic Value R&D. For research in an area of strategic value or projects offered by AR Science & Technology Authority. Credit is 33% of qualified expenditures. Max credit is $50,000 per year. Unused credit may be carryforward 9 years Ark. Code Ann. § 15-4-2708
California	15% for qualified research and 24% of research payments Cal. Rev. & Tax. Cd. § 23609
Colorado	3% of increased R&D expenditures. Colo. Code Regs. 39-30-105.5
Connecticut	Three types: 25% grants to institutes of higher education. Conn. Gen. Stat. § 12-217l 20% of incremental expenditures. Unused credit carryforward up 15 years. Conn. Gen. Stat. § 12-217j 1- 6% of non-incremental expenditures. Conn. Gen. Stat. § 12-217n
Delaware	Up $5m for qualified R&D expenses equal to 10% of R&D base amount or 50% of DE apportioned share not to exceed 50% of tax liability. Unused credit may be carried forward up 15 years. Del. Code Ann. § 2070 [Extended to tax years ending after 12/31/12
Florida	Effective 1-1-2012. Credit to a max of $9M not to exceed 50% of tax liability. Unused credit may be carried forward up 5 years. Fla. Stat. § 220.196
Georgia	Up to 10% of base amount not to exceed 50% of tax liability. Unused credit may be carried forward up to 10 years. Ga. Code Ann. § 48-7-40.12
Hawaii	Impose a refundable credit up to 20% on qualified expenses. Haw. Rev. Stat. § 235-110.91

SENATOR BILL WIELECHOWSKI

Enabling Greater Public and Legislative Review of Tax Credits and Other Forms of Indirect State Spending

- Alaskans deserve basic information on state spending, including indirect forms of spending, such as tax credits, waivers and exemptions. This type of oversight is vital to government efficiency and controlling spending.

- Alaska "spends" about a billion dollars each year on tax credits, exemptions and other indirect expenditures without regularly evaluating their impact. This is more than the budgets of the Departments of Revenue, Natural Resources, Environmental Conservation, Law, the Court System and the Legislature combined.

- 45 other states publish this type of information. Alaska is one of only five remaining that does not.

- This amendment would do three things:

    - Require the legislature to include legislative intent language in any new tax credits or exemptions to enable future evaluation of the credit's effectiveness.

    - Require the Department of Revenue to publish information about each tax expenditure in its annual revenue sources book. This information would include the sum of tax expenditures for the prior fiscal year and an estimate for the current fiscal year.

    - Require the Legislative Finance Division to conduct a one-time analysis of tax expenditures over $1 million seven years after their passage to determine whether the tax expenditure is achieving its intended purpose.

AMENDMENT

OFFERED IN THE SENATE BY SENATOR WIELECHOWSKI

TO: CSHB 118(FIN)

Page 1, line 1, following "**Act**":

Insert "**relating to the reporting and analysis of certain information relating to tax credits, exclusions, exemptions, waivers, and other tax expenditures; relating to bills creating tax expenditures; relating to confidentiality and use of tax information;**"

Page 1, following line 3:

Insert new bill sections to read:

"* **Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. Sections 1 - 9 of this Act may be known as the Alaska Tax Break Transparency Act.

* **Sec. 2.** AS 24.08 is amended by adding a new section to read:

Sec. 24.08.038. Tax expenditure bills. The legislature shall include a statement of the rationale and purpose of a tax expenditure in a bill creating a tax expenditure. In this section, "tax expenditure" has the meaning given in AS 43.05.090.

* **Sec. 3.** AS 24.20 is amended by adding a new section to read:

Sec. 24.20.232. Analysis of tax expenditures. If the sum of tax expenditures of a specific type exceeds $1,000,000 in fiscal year 2012 or a succeeding fiscal year, the legislative finance division shall analyze the use of the tax expenditure on the following schedule to determine whether the statute authorizing the tax expenditure has achieved its purpose:

(1) tax expenditures existing on July 1, 2015, shall be analyzed once between July 1, 2015, and June 30, 2020, and before a delayed repeal of a tax

expenditure;

(2) a tax expenditure created after July 1, 2015, shall be analyzed after it has been in effect for seven years or, if the statute authorizing the expenditure has a delayed repeal date, one year before the effective date of the delayed repeal of the tax expenditure.

* **Sec. 4.** AS 37.07.020(a) is amended to read:

(a) **After considering the revenue and tax expenditure report prepared by the Department of Revenue under AS 43.05.090, the** [THE] governor shall prepare a budget for the succeeding fiscal year that must cover all estimated receipts, including all grants, loans, and money received from the federal government and all proposed expenditures of the state government. The budget shall be organized so that the proposed expenditures for each agency are presented separately. The budget must be accompanied by the information required under AS 37.07.050 and by the following separate bills: (1) an appropriation bill authorizing the operating and capital expenditures of the state's integrated comprehensive mental health program under AS 37.14.003(a); (2) an appropriation bill authorizing state operating expenditures other than those included in the state's integrated comprehensive mental health program; (3) an appropriation bill authorizing capital expenditures other than those included in the state's integrated comprehensive mental health program; and (4) a bill or bills covering recommendations, if any, in the budget for new or additional revenue. The budget for the succeeding fiscal year and each of the bills shall become public information on December 15 at which time the governor shall submit copies to the legislature and make copies available to the public. The bills, identical in content to the copies released on December 15, shall be delivered to the rules committee of each house before the fourth legislative day of the next regular session for introduction.

* **Sec. 5.** AS 37.07.020(b) is amended to read:

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), and the Alaska capital income fund (AS 37.05.565);

(4) must set out significant assumptions used in the projections with sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services**;**

(5) must consider issues raised by the revenue and tax expenditure report prepared by the Department of Revenue under AS 43.05.090.

*** Sec. 6.** AS 40.25.100(a) is amended to read:

(a) Information in the possession of the Department of Revenue that discloses the particulars of the business or affairs of a taxpayer or other person is not a matter of public record, except as provided in AS 43.05.230(i) **and 43.05.090(d)** or for purposes of investigation and law enforcement. The information shall be kept confidential except when its production is required in an official investigation, administrative adjudication under AS 43.05.405 - 43.05.499, or court proceeding. These restrictions do not prohibit the publication of statistics presented in a manner that prevents the identification of particular reports and items, prohibit the publication of tax lists

showing the names of taxpayers who are delinquent and relevant information that may assist in the collection of delinquent taxes, or prohibit the publication of records, proceedings, and decisions under AS 43.05.405 - 43.05.499.

* **Sec. 7.** AS 43.05.090 is amended to read:

Sec. 43.05.090. Preparation and publication of reports and statistics. The department shall prepare and annually publish statistics of the revenues derived under the tax laws administered by it**, including an analysis of tax revenue losses due to tax expenditures**.

* **Sec. 8.** AS 43.05.090 is amended by adding new subsections to read:

(b) The revenue and tax expenditure report must include

(1) the statutory authority for each type of tax expenditure;

(2) the annual sum of tax expenditures for the prior fiscal year, separately calculated for each type of expenditure, and the total number of taxpayers who benefitted from each type of expenditure;

(3) an estimate of tax expenditures for the current fiscal year, separately calculated for each type of expenditure;

(4) an estimate of the public costs of administering the tax expenditures.

(c) The department shall annually transmit an electronic copy of the revenue and tax expenditure report to each member of the legislature and make the report available to the public on the department's Internet website.

(d) The department shall notify the legislative finance division when the sum of tax expenditures of a specific type has exceeded $1,000,000 in fiscal year 2012 or a succeeding fiscal year and provide the legislative finance division with the nonconfidential or, subject to the division's execution of a confidentiality agreement, confidential information necessary to complete the analysis under AS 24.20.232.

(e) In this section, "tax expenditure" means a tax credit, exclusion, exemption, waiver, or other loss of state tax revenue due to an express provision of state tax law; "tax expenditure" does not include federal tax expenditures under federal law adopted by reference in AS 43.20.021 or tax deductions incurred in the ordinary course of trade or business.

* **Sec. 9.** AS 43.05.230(a) is amended to read:

(a) It is unlawful for a current or former officer, employee, or agent of the state to divulge the amount of income or the particulars set out or disclosed in a report or return made under this title, except

(1) in connection with official investigations or proceedings of the department, whether judicial or administrative, involving taxes due under this title;

(2) in connection with official investigations or proceedings of the child support enforcement agency, whether judicial or administrative, involving child support obligations imposed or imposable under AS 25 or AS 47;

(3) as provided in AS 38.05.036 pertaining to audit functions of the Department of Natural Resources;

(4) **as provided in AS 43.05.090(d);**

(5) as provided in AS 43.05.405 - 43.05.499; and

(6) [(5)] as otherwise provided in this section or AS 43.55.890."

Friendly Amend BW: NO OBJ. 2018

1100 West Ewing Street
Seattle, WA 98119

March 28, 2012

Honorable Gary Stevens
United States Senator
State Capitol Room 111
Juneau AK, 99801

Dear Senator Stevens:

I am writing you today to express my support for HB 118 – Research and Development Tax Credit. The effect of diversifying seafood resources, above all other efforts, has had the largest positive impact on value, job opportunities and opening new markets for Alaska seafood around the world.

Research and Development is one of the highest risk aspects of our business yet one area that has kept our business strong and growing through tough economic times. The opportunity to accelerate the development of new products and processes through a Public/Private partnership will continue to keep Alaska seafood competitive and gaining new consumers around the world.

An example of new technology that Ocean Beauty has been a part of is the use of microwave sterilization to develop shelf stable ready-to-eat meals. Ocean Beauty Seafoods is a founding member of the Microwave Consortium that includes Washington State University, U.S. Army-NATICK, Hormel, AmeriQual, General Mills, and Nestlé, among others. This group was formed in 2002 with the goal of commercializing a microwave process for the preparation of shelf stable meals. The US military has invested in this project with a goal of improving the eating quality of MRE's (meals ready to eat), as food quality has a direct impact on troop morale. We see the technology as a way to reduce energy costs when compared to traditional retorts to cook salmon and incorporate more "user friendly" packaging vs. canned product.

This has been a very involved technical process and one that Ocean Beauty would have never started on our own, yet if successful it could change the landscape for ready-to-eat seafood from Alaska.

I hope you can lend your support for HB 118 and help push our industry forward as we look for that next great "Product of Alaska".

Best Regards,

Mark Palmer

President – CEO Ocean Beauty Seafoods

Re: HB 118

Dear Governor Parnell:

I write to you today to offer Anchorage Economic Development Corporation's support for the passage of HB 118, "An Act relating to a tax credit for qualified research and development expenditures." Focused on promoting investment in intellectual property and high growth types of businesses, HB 118 will be an important step in the broader effort to further diversify the Alaska economy.

Your proposal to create a 20 percent tax credit for research and development in Alaska has the potential to spur new investment and growth from Alaska's innovators and entrepreneurs. Through AEDC's extensive national outreach and economic research, we have found that this type of incentive is key to fostering economic growth in tomorrow's high value industry sectors.

House Bill 118 will encourage new growth and improve the economic diversity of Alaska. This type of incentive is good for the long term economic growth of Alaska and the Anchorage Economic Development Corporation encourages the legislature to support the passage of this bill.

Sincerely,

Bill Popp

Representative Kurt Olson, Chair
House Labor & Commerce
State Capitol, Rm 24
Juneau, Alaska 99801

February 18, 2011

Dear Representative Olson:

I write to you today in support of HB118, "An Act relating to a tax credit for corporate income taxes paid for qualified research and development expenditures; and providing for an effective date," which will encourage innovation and business expansion in Alaska.

Innovation, experimentation, research and development are all time consuming and often expensive endeavors without a guarantee of financial return. Subsequently, businesses that can benefit from these activities often do not undertake these necessary functions due to the significant economic risk associated with them. HB 118 will work to encourage theses activities by mitigating some of the risk a business might otherwise incur by offering a tax credit for qualified expenditures related research and development.

Although this credit will mitigate some risk, capping it at 20% will encourage responsible research with participating companies still assuming an appropriate portion of the risk.

Half of the private sector is populated by small businesses and as many studies have shown, entrepreneurs and small businesses are the driving force for economic growth. They are also the businesses that after an economic downturn are the quickest to return to growth. This bill will support these businesses as they look to expand their product lines, develop more efficient ways of doing business and enhance their current business. This legislation will help individual businesses, the state and Alaskans by stimulating private-sector investment, entrepreneurial activity and business expansion that will result in sustainable long-term benefits to our economy.

Sincerely,

Bill Popp

Senator Thomas Wagoner
Senator Joe Paskvan
Senate Finance Committee Co-chairs

Alaska State Capitol
Juneau, Alaska 99801-1182

March 28, 2012

Dear Senators Wagoner and Paskvan,

As a recent visitor to and fond admirer of the great State of Alaska, I write this letter to inform you of my support for House Bill 118, which provides tax credits for qualified research and development projects in the state. The expansion of Alaska's R&D capabilities is an important step toward encouraging private-sector investment, economic diversification and entrepreneurial innovation.

Earlier this month, I had the honor of speaking to the Alaska World Affairs Council in Anchorage and I talked at length about the wealth of resources and investment opportunities in the state. However, what really seemed to resonate with the audience was a frank discussion of Alaska's deficiencies in R&D, patent awards and science/engineering education.

Research and development as a percent of the state's total economic output is almost zero – 0.7% compared to an average of 2.6% for the U.S. overall. The number of patents awarded per 1,000 individuals is about 10% of the overall U.S. average. And the percent of graduate students preparing for science and engineering careers (per 1,000 individuals) is similarly far smaller than the rest of the United States.

These are critical issues that must be addressed as Alaska's economy evolves from a dependence on natural resource extraction to a more dynamic, faster-growing base of industries, including technology, health care and transportation. Throughout its storied history, Alaska has benefited greatly from its vast natural resources. Now is the time to encourage, develop and invest in the state's human capital by fostering private-sector R&D – establishing the technical expertise and manpower that will be crucial to the state's future economic growth.

As you may recall, the Guggenheim family also has a storied history in Alaska, building the Kennecott Copper Mine and the Trans-Alaska Railway, as well as other major infrastructure projects. The Guggenheim family helped create a foundation for the state to grow. You should expect, encourage and incentivize the same approach from private companies doing business in Alaska today.

I urge you and your esteemed colleagues in the Senate to support the passage of HB 118. Thank you for your attention to this issue and please feel free to call me directly if you have any questions or require further information.

Sincerely,

B. Scott Minerd

February 24, 2011

Dear Governor Parnell,

We appreciate your continued interest in developing jobs and opportunity in Alaska. The recent legislation submitted by your office, House Bill 118 and 121, creating an Alaska microloan revolving loan fund and a tax credit for qualified research and development expenditures are good examples of your continued efforts. Here at the Fairbanks North Star Borough Economic Development Division we recognize the need for this legislation and offer our support as you move this legislation forward.

Thank you,

Kathryn Dodge

22 February, 2011

Dear Governor Parnell:

I am writing today in support of your efforts to create innovation and investments in Alaska via House Bill 118 and Senate Bill 64. Innovation can be an expensive, intricate and time-intensive enterprise. But it also can spark a chain of investments in capital equipment, workers and spillover activities in every economic sector. Your proposal to establish a 20 percent tax credit for research and development conducted by corporate taxpayers in Alaska recognizes the value of R&D and the advantage it can provide to Alaska entrepreneurs and innovators.

This kind of program has the capacity to create job opportunities for Alaskans by encouraging increased investment in Alaska's human and natural resources. If enacted, the legislation would stimulate private-sector investment, entrepreneurial activity, and business expansion in Alaska that will bring opportunity and sustainable long-term benefits to the state and its residents.

House Bill 118/Senate Bill 64 will help spur sustainable economic growth in Alaska. It is good for business, for the economy, and for Alaska families.

I encourage legislative support, with hope for its passage

Cordially:

John Niles Wanamaker

LOCKHEED MARTIN

Lawrence Duncan III
Vice President
Federal and State Government Relations & PAC Affairs

March 16, 2011

The Honorable Sean Parnell
Governor of Alaska
P.O. Box 110001
Juneau, AK 99811-0001

Dear Governor Parnell:

I am writing to express Lockheed Martin's strong support for House Bill 118 and Senate Bill 64, legislation that reflects your effort to encourage more research and development in the State of Alaska.

Lockheed Martin is heavily focused on research and development, which is critical to innovation and national security. Incentives that encourage more corporate investment in research and development will support economic growth and high-technology jobs across a wide spectrum of industries. These incentives also will support the research efforts of universities working in concert with industry on projects that will improve the lives of all Alaskans.

Forty states have adopted research and development tax credits. Your effort in the State of Alaska is an important step toward expanding and diversifying Alaska's economy. Thank you for your leadership on encouraging new research and development in Alaska.

Sincerely,

Lawrence Duncan III

PSPA
PACIFIC SEAFOOD PROCESSORS ASSOCIATION
Est. 1914

March 23, 2012

Honorable Sean Parnell
Governor, State of Alaska
PO Box 110001
Juneau, Alaska 99811-0001

Dear Governor Parnell,

The Pacific Seafood Processors Association (PSPA) supports your effort, through HB 118, to promote research and development in Alaska.

PSPA has been in existence continuously since 1914, and our member companies have invested billions of dollars in building and expanding seafood processing infrastructure in Alaska. Seafood processors have also invested over the years in new and modern equipment that has helped our industry adapt to changing markets and to produce value added products from Alaska's abundant fisheries resources. PSPA members take a long-term and optimistic view of the future of the seafood business, and we expect to continue to be a keystone resource development industry in Alaska long into the future.

Ours is a high-cost environment in which to operate, and margins are small. Alaska's seafood industry operates within a global, dynamic, and competitive commodity driven business setting that is defined by high volumes and low margins. Through research and development, processors are able meet challenges and explore new opportunities to enhance the value of seafood and improve the stability and profitability of our businesses. Your concept of a research and development tax credit offers the opportunity for seafood processors to make additional investments in Alaska. .

We appreciate your recognition of the costs of doing business in a challenging environment, and we thank you for encouraging innovation in Alaska through HB 118.

Sincerely,

Glenn Reed
President

R&D tax credits bring promise of sustainable growth

Posted: Saturday, March 3, 2012 8:59 pm

Alaska's economy is often likened to a three-legged stool. For decades, the petroleum industry, federal government spending, and the combined economic boost of all other basic sectors have essentially supported the state's economy.

In recent years, we have seen those legs become a bit wobbly. Government spending is way down, relative to what it used to be, and it is clear the days of federal largesse are behind us. While revenue from the extraction and sale of our oil and gas resources has remained mostly stable, production is on a steady downward trajectory.

For these reasons, it is more important than ever for the state to shore up its foundations by diversifying its economy and strengthening its existing economic sectors.

Economic diversification, however, does not happen in a vacuum. It requires an atmosphere conducive to innovation, which can be an expensive, intricate and time-intensive enterprise. Innovation also can spark a chain of investments in capital equipment, workers and spillover activities in every economic sector.

So, Alaskans should be encouraged by the news that the state House on Friday approved legislation that would establish a tax credit for home-grown research and development. House Bill 118, now on its way to the Senate for consideration, is part of a suite of economic development legislation proposed by Gov. Sean Parnell. The bill offers a 20 percent tax credit on qualified research and development expenditures.

Its purpose is to incentivize companies to conduct independent research and development activities that will, in turn, stimulate private-sector investment, entrepreneurial activity, and business expansion in Alaska. These are things that bring jobs and economic opportunity to Alaskans, while providing sustainable long-term benefits to our economy.

Alaska is already poised to be a leader in cold climate housing research and the processing of in-demand rare earth minerals. The potential in other areas is staggering.

For example, the state sits on more than 50 percent of all U.S. coal reserves. Meanwhile, promising cutting-edge technologies for cleaning coal and increasing its efficiency are being fine-tuned and deployed in China and elsewhere overseas. Imagine the potential for jobs, clean, affordable energy and expansion of Alaska's economic base if those technologies could be developed further here?

This is the kind of potential HB 118 holds. We hope the Senate sees the same value in the legislation that the House did and gives it speedy approval.

How the Mat-Su delegation voted:

My Turn: R&D tax credit will boost economy, UAF

Thursday, February 24, 2011

Story last updated at 2/24/2011 - 5:11 pm

My Turn: R&D tax credit will boost economy, UAF
By Brian Rogers | UAF CHANCELLOR

On Jan. 24, Gov. Sean Parnell submitted a bill to establish a 20 percent tax credit for qualified research and development conducted by private businesses in Alaska. If approved, this credit could help stimulate private-sector investment, entrepreneurial activity and business expansion in Alaska that would bring opportunity and sustainable long-term benefits to the state.

In introducing the legislation, the governor said, "Innovation can be an expensive, intricate and time-intensive enterprise. However, it can also spark a chain of investments in capital equipment [and] workers, and spillover activities into multiple economic sectors."

The governor is correct. Innovation can be an expensive, intricate and time-intensive enterprise, but it is definitely worthwhile. The University of Alaska Fairbanks, the state's leading research university, is a partner with Alaska's private sector to use innovation to diversify the state's economy.

UAF has long recognized the value of partnering the knowledge and expertise of our researchers with the needs of communities and private businesses across the state. We have robust research programs that lead to technology development in areas directly related to the needs of the state's economy, including energy, engineering, geophysics, petroleum and mining, health sciences and agriculture.

Some specific examples of these partnerships include:

• UAF, the Alaska Berry Growers and Alaska Blue are examining plant propagation and the nutraceutical properties of blueberries and other berries.

• The UAF School of Natural Resources and Agricultural Sciences is collaborating with the Homegrown Market in Fairbanks to make locally grown reindeer meat available for purchase.

• The UAF College of Liberal Arts and Denali — The Alaska Gas Pipeline are working together to provide training for Alaskans interested in working on the pipeline as archeological technicians.
• The Cooperative Extension Service Thorne Bay program is working with island sawmill operators to turn wood waste into wood fuel to heat the local school and government facilities.
• The Alaska Center for Energy and Power, several utilities, landowners and communities are quantifying resources and assessing options for geothermal development in several areas of the state. They are also investigating a variety of other private and public energy research and development projects.

• The College of Engineering and Mines is conducing applied research in technology to find minerals, extract them and return the land and water to Alaskan's high standards.

• The UAF School of Management is sponsoring the third Arctic Innovation Competition this year, spotlighting innovation by Alaska's entrepreneurs.

• UAF's Community and Technical College provides a wide variety of applied business courses for Alaska entrepreneurs and small businesses.

• The Economic Opportunity Task Force, created by Fairbanks Economic Development Corporation, works with UAF research faculty members to identify technologies and processes that are ready for transfer to the private sector.

UAF's newly created Office of Intellectual Property and Commercialization will augment these efforts and facilitate new partnerships. Under the leadership of associate vice chancellor Dan White, the office will work with partners to commercialize the intellectual property and technology created by UAF's research and development efforts. This work will offer a strong compliment to the governor's endeavor.

In most states, a healthy private research and development sector works in tandem with university research. That hasn't been the case in Alaska; there has been very little private research and development here. The research and development tax credit can change this dynamic. We have seen the film industry tax credit make a difference in the state. This new credit can have a similar effect. It is not just about the opportunity for corporations to conduct independent research in Alaska. Independent research and development can create a ripple effect that benefits more than just the businesses involved.

This is one of the reasons why the Department of Commerce, Community and Economic Development Advisory Council, various Alaska businesses and chambers of commerce, as well as municipalities and economic development councils, support the governor's legislation. It's the reason we support it as well.

The governor's proposed research and development tax credit has the potential to significantly boost economic development in Alaska. UAF is ready to be a partner in that endeavor.

• Rogers is the chancellor of the University of Alaska Fairbanks.

Koeneman, Crystal A (CED)

From: Koeneman, Crystal A (CED)
Sent: Tuesday, March 27, 2012 4:56 PM
To: Koeneman, Crystal A (CED)
Subject: FW: HB118 Benefits

Dear Senator Paskvan,

I am a business and tax attorney in the law firm of Manley & Brautigam PC in Anchorage. Although I have lived in Alaska for over 20 years I have practiced tax law throughout the country for well over 30 years working directly for or representing high tech, manufacturing, and other companies in Seattle, Silicon Valley, and in other venues. Manley & Brautigam currently represents many Alaskan small business owners and frequently works with startups. Some portion of that work is research and development where some expenses of the entity would qualify for the federal R&D tax credit. As such, it is possible that those same expenditures would also qualify for State R&D Tax Credits under HB118 if that bill were to move forward – which could spur those entities to target more of their activities to Alaska rather than elsewhere. The HB118 Research and Development Tax Credit is a necessary addition to the State's incentive and pro-business arsenal and will clearly foster economic development in the State of Alaska. We strongly support its passage.

Alaska is one of the few States that does not have in place a research and development tax credit. The federal Government Accounting Office through the Office of Management and Budget has studied the federal R&D Tax Credit and found that it does stimulate innovation and entrepreneurship. So too would a State tax credit and these are exactly the activities and energy that Alaska needs to further diversify our economy. The bill appears well drafted in that major corporations, from outside, that already use the federal R&D Tax Credit, would get only additional credits from the State program for Alaska specific expenditures and then only those credits above what are already claimed and apportioned to Alaska. Use of the base period requires new and additional investment and research annually and means that only the additional expenditures will qualify for credit treatment and thereby ensures impetus for growth in the sector. This is truly an Alaska Tax Credit!

We strongly support the passage of HB118. I would be more than happy to discuss the bill and its potential impact with you or your staff.

Thanks, Steve

RES

ALASKA GROWTH CAPITAL
An ASRC Company

March 15, 2012

RECEIVED
MAR 23 2012

The Honorable Joe Paskvan
Co-Chair, Senate Resources Committee
Alaska State Legislature
State Capitol Room 115
Juneau, Alaska 99801

Re: HB118, "An Act relating to a tax credit for qualified research and development expenditures; and providing for an effective date."

Dear Senator Paskvan:

I am writing on behalf of Alaska Growth Capital (AGC) to express support for HB118. This bill creates a tax-credit for research and development conducted in Alaska. We at Alaska Growth Capital are certain this bill will directly and positively impact job creation and economic development in Alaska.

Alaska Growth Capital has been active in the tax-credits business since 2004, and has lent over $300 million in the Alaska economy since 2000. In our experience, tax-credits provide needed incentives for projects that otherwise would not have been undertaken. These projects "on the tipping point" provide much needed entrepreneurialism that injects capital into the local economy through wages, purchases and taxes. Without credits, infrastructure is not developed, investment not made, and jobs go elsewhere.

Research and Development has two additional long-term benefits: specialization and money multiplication. Geographic areas have unique demands on the products and services sold inside. Research and development that tailors products and services to local conditions provide the local consumers with a superior product that can spur entirely new industries. One major example of this is the Cold Climate House in Anaktuvuk Pass; this house has the potential to revolutionize the way houses are built in Arctic climates and brings with it potential for jobs and lowered costs for homeowners.

The second long-term benefit is money multiplication. Research and Development conducted in Alaska will produce products and services whose owners are in

Alaska. That means when Alaskans use a specialized product with roots in Alaska, their dollars are spent here circulated here and create jobs here, rather than going outside and contributing to what economists call "capital leakage." Diversified and stable economies are supported by Research and Development's long-term impacts. The infrastructure needed to conduct R & D in Alaska will begin to be constructed, and the quality of life for all Alaskans will improve with more economic opportunity.

Alaska Growth Capital supports H.B. 118 because of the alignment with our corporate mission, to support economic development in Alaska.

I respectfully request that you schedule hearings on this piece of legislation and offer your support. I am happy to answer any questions; should you or your committee have any, please contact me at your convenience.

Sincerely,

Hugh Short, President/CEO
Alaska Growth Capital

Kijani

Dear Senator

I am writing to you to support actions by the State of Alaska to enable and encourage technology commercialization out of Alaska's university system. In particular, I support HB 118, which is the Governor's bill to establish a research and development tax credit in Alaska. This credit would parallel the federal tax credit, which, I understand, is similar to 38 other states.

I have been involved in management of technology transfer from public institutions for the last 13 years. I spent 6 years at Virginia Tech as assistant director and 7 years leading the effort at Washington State University. At WSU I successfully lead the licensing of well over 100 technologies and the start-up of 14 companies.

I have now formed a consulting company called Kijani, we help universities and businesses work together to take technologies from the lab to commerce. Successful transfer through start-up's and licensing to support existing Alaska companies will result in local, high paying job creation. We work with large and small companies and research institutions around the world.

Kijani
1130 SE Spring St
Pullman, WA, 66163
T 509-339-5066
kj35102@gmail.com

In early March I was fortunate to be invited to the University of Alaska Fairbanks to assess intellectual property in agriculture. I was most impressed by the enthusiasm of the faculty and administration and the quality of several of the opportunities. Although I have not looked in detail, I understand there are some significant engineering research programs that are likely to be fertile ground for commercial opportunity.

It may help if I explain a particular example of a technology commercialization out of WSU that has been a success. About 13 years ago a researcher at WSU started to develop a new method of sterilizing food using microwave assisted thermal sterilization (MATS). This new method reduced the heating time for a canning like process from 1 hr to a few minutes. The research was initially funded only by the army - the army wanted better tasting rations for the troops. Over several iterations, many large food companies, including Ocean Beauty Seafoods, became involved in the development of a product that will revolutionize food processing. Imagine shelf stable salmon that is more like freshly cooked than the highly processed canned product! While at WSU I helped set the industrial research consortium that funded industrial development of the MATS machine, found an entrepreneur (through an entrepreneur in residence program) to form a development and manufacturing company for MATS. I also was instrumental in setting up set up the start-up by introducing lawyers and other support professionals, helping draft a business plan and serving as a founding board member.

Please do not hesitate to contact me if you would like to learn more about the potential benefits of university technology commercialization to the State of Alaska.

Sincerely

Kijani

March 23, 2012

The Honorable Sean Parnell
Governor of Alaska
P.O. Box 110001
Juneau, AK 99811-0001

Re: House Bill 118 / Senate Bill 64

Dear Governor Parnell,

I am writing in support of House Bill 118 and Senate Bill 64 and your efforts to encourage more research and development in the State of Alaska.

Research and development can be an expensive and time consuming undertaking. However, it can result in both immediate and longer term economic benefits in the form of high tech jobs, capital investment and associated expenditure, as well as spin-off business activities that can result from this research.

A program that encourages corporate investment in research and development in the State of Alaska can result in economic opportunities that may not otherwise accrue to the State. This direct investment and the resulting longer term opportunities can both grow and diversify the Alaskan economy.

The proposed program of tax credits clearly demonstrates that Alaska values innovation, and recognises the advantage it can provide to the State. We fully support your efforts to enact House Bill 118 / Senate Bill 64 and thank you for your leadership with respect to this initiative. Please let us know if there are any further supportive actions we can take to ensure that this important prospective legislation becomes reality.

Sincerely,

James McKenzie

Twenty-Seventh Legislature of the State of Alaska – Second Session

Subject: House Bill 118 – Research & Development Tax Credit

Dear Senator Paskvan:

I am writing to express my support for House Bill 118.

As an owner of a small Alaskan business, I am actively involved in technology-based research and development. A tax credit for research and development will benefit my business, and more importantly, incentivize my innovation.

A significant research project my business is working on right now is for the US Air Force. This is to produce a better volcanic ash plume forecasting tool. As you are aware, there are 100 active volcanoes in Alaska. Without notice, a volcano may erupt and airborne ash can quickly close airspace. Nearly all aviation from North America to Asia transits Alaskan airspace resulting in significant commerce for the Anchorage and Fairbanks airports. This improved forecasting tool will be key to minimizing economic losses due to diverted air travel.

House Bill 118 would greatly assist my small business in developing and protecting the intellectual properties being researched.

Thank you for your consideration. Please contact me should you have any questions..

The Honorable Senator Joe Paskvan
Alaska State Legislature
Alaska Capitol Room #115
Juneau, AK 99801

Re: House Bill 118 Research and Development Tax Credit

Senator Paskvan:

House Bill 118 is a unique approach to increasing the investment in research and development in Alaska. GCI has invested over $1 Billion in the last 15 years to create Alaska's largest telecommunications network and has recently invested millions in expanding our network to remote and rural areas of the State. The business of telecommunications is constantly changing with the development of new technologies that provide new opportunities. As you know, most new technology is developed outside of Alaska and very little research and development is occurring in Alaska today.

HB 118 should be looked at as a tool to encourage further research and development in Alaska by Alaskans. Increased research and development will help expand our economic opportunities in the future and lead to a more diverse and sustainable future economy.

I encourage you to look at HB 118 to help stimulate an increase in research and development in Alaska.

Sincerely,

Krag Johnsen
Director, Rural Broadband Development
GCI

To: <Senator_Catherine_Giessel@legis.state.ak.us>
Subject: Senate Bill 64

Senator Cathy Giessel:

I am writing today in support of Governor Sean Parnell's efforts to create innovation and investments in Alaska via House Bill 118 and Senate Bill 64. Innovation can be an expensive, intricate and time-intensive enterprise. But it also can spark a chain of investments in capital equipment, workers and spillover activities in every economic sector. The proposal to establish a 20 percent tax credit for research and development conducted by corporate taxpayers in Alaska recognizes the value of R&D and the advantage it can provide to Alaska entrepreneurs and innovators.

This kind of program has the capacity to create job opportunities for Alaskans by encouraging increased investment in Alaska's human and natural resources. If enacted, the legislation would stimulate private-sector investment, entrepreneurial activity, and business expansion in Alaska that will bring opportunity and sustainable long-term benefits to the state and its residents.

House Bill 118/Senate Bill 64 will help spur sustainable economic growth in Alaska. It is good for business, for the economy, and for Alaska families.

I encourage legislative support, with hope for its passage.

Respectfully,

Allan R Johnston

Re: HB 118

Dear Joe Paskvan:

I am Fred West, owner/operator of Tustumena Smokehouse in Soldotna Alaska. As an Entrepreneur and business owner for over 18 years I highly support HB 118.
Working on a new product consumes countless hours of testing and formulating. The product itself and the ingredients used require many purchases. The biggest struggle an entrepreneur has is financial. The costs of ingredients, packaging, freight and marketing and labor are the major battle one faces. It's extremely discouraging to be hindered financially.
I am writing this letter to fully support initiative HB 118, this bill will allow those who have a desire and determination to bring in new ideas and products to the people of Alaska.
I thank you for considering and taking action on HB 118 on behalf of all Alaska's entrepreneurs.

Sincerely,
Fred West

March 26th, 2012

Dear Senator Paskvan,

The purpose of this letter is to ask you to support HB 118, a bill creating a new tax credit for qualified research and development. As you know, UAF, Cold Climate Housing Research Center, and Fairbanks economic development partners have been working to strengthen our ability to attract research investment and this bill strengthens our ability to do just that.

For example, CCHRC is working to develop geopolymer cement as a local and superior alternative to imported Portland cement. CCHRC is already working with Aurora Energy and Usibelli on this research and will partner with many more private companies before the development is complete.

HB 118 would provide additional incentive for private companies to join this effort, thereby helping this important commercialization effort to be realized. Please consider this request for your support and feel free to contact me anytime if you have questions about this or any other topic.

Best Regards,

Jack Hebert

STATE OF ALASKA
DEPARTMENT OF
COMMERCE
COMMUNITY AND
ECONOMIC DEVELOPMENT

Office of the Commissioner

Sean Parnell, Governor
Susan K. Bell, Commissioner

January 26, 2011

Representative Kurt Olson, Chair
House Labor & Commerce
State Capitol, Rm 24
Juneau, Alaska 99801

Re: House Bill 118 – Research and Development Tax Credit

Dear Representative Olson,

Please accept this request for your consideration to schedule HB 118 before the House Labor & Commerce Committee at your earliest convenience.

Innovation can be an expensive, intricate and time-intensive enterprise. But it also can spark a chain of investments in capital equipment, workers and spillover activities in every economic sector. In effect, the research and development tax credit would stimulate private-sector investment, entrepreneurial activity and business expansion in the state that will bring opportunity and sustainable long-term benefits to our economy.

The credit is 20 percent of qualified research and development expenditures that exceed the average qualified research and development expenditures as defined in 26 U.S.C 41(d) (Internal Revenue Code) for the three years immediately preceding the year in which the credit is claimed. Unused credits may be carried forward for up to seven years after the expenditure for which the credit is claimed. In order to prevent a corporate taxpayer from claiming more than one benefit for a single expenditure, the bill also would provide that a credit could not be claimed for expenditures the corporation deducted in calculating its tax liability, or for any other credit, including any federal credits, that has been apportioned to the state and claimed under the current Alaska Net Income Tax Act.

The bill also would also impose a reporting requirement on the Department of Revenue so the Legislature and the public are aware of the fiscal impact and economic benefits of the research and development credit to the state.

If you have any questions regarding this bill, please feel free to contact either myself at 465-2500 or Curtis Thayer, Deputy Commissioner of Commerce, Community and Economic Development at 269-8100.

Sincerely,

Susan K. Bell
Commissioner

Jake...here is a quick response to your questions.

The goals of the legislation are to:

1- Level the competitive playing field in Alaska. Forty other states have recognized the stimulative value of incentivizing home-grown research.
2- Bring opportunity to Alaskans by stimulating private-sector investment, entrepreneurial activity and business expansion

States that routinely score high in business polls know the value of this kind of credit.

Virginia, for example, has been at or near the top of Forbes' "Best States for Business" rankings for the last 10 years. The state recently broadened its R&D credit program.

North Carolina, which has been named by Site Selection magazine as the state with the best business climate in nine of the last 10 years, has had an R&D credit since 2004 and renewed it in 2009 for another five years. It is credited with contributing to business expansion that has added 1250 jobs.

North Dakota is also highly ranked in business climate polls. It has arguably the strongest economy in the country and is the only state to post economic growth during the recession. Part of North Dakota's success is the most aggressive R&D tax credit in the nation.

In most states, a healthy private research and development sector works in tandem with university research. That hasn't been the case in Alaska; there has been very little private research and development here. We are hoping that this legislation will help the University system team up with Alaska entrepreneurs and small businesses which has the potential to significantly boost economic development in Alaska.

Subject: SB 64 Initial Questions

Hi Crystal,

Thank you for your patience as we review SB 64 – R&D Tax Credits. As I continue to do research on this topic I find myself needing some guidance/clarification.

1. What is the goal of this legislation? Meaning, what is the desired outcome of this public policy decision?
2. What does the department envision happening with the passage of this legislation?
3. Who or what kinds of entities is the department hoping to target with this legislation?

I know that these are basic questions, but it would be helpful to understand these questions to have a foundation to build from. Thank you for your help in answering these questions.

All the best,
Jake

Jake Hamburg

(907) 465-3709 Office
jake.hamburg@legis.state.ak.us

Hi Crystal,

I have reviewed the other R&D credits offered by Virginia and North Carolina – two states that you referenced as being excellent examples of states that have favorable business climates. Both states provide the 20% tax credit R&D performed in conjunction with the state University and provide a lower tax credit for work not done in conjunction with the states' university (15% in Virginia and 3.25% for North Carolina). Would the department support/oppose such a change?

(As an interesting note, the North Carolina R&D credit requires that businesses provide health insurance for the full-time employees at the location & must pay at least 50% of the premiums, requires no significant environmental & natural resources violations within last 5 years, and must not have been cited for any serious OSHA violations within last 3 years.)

SB 64 as introduced does not seem to provide any incentive that could stimulate entrepreneurial activity as it provides a 20% corporate tax credit for R&D above the base amount defined as the average of qualified research and development expenditures attributable to Alaska for the three tax years immediately preceding the taxable year, a definition that would seem to exclude start-ups which have not established a history of R&D expenses. The Feds offer two alternative tax credits for start-ups to address this issue, they provide a fixed base percentage of 3% of gross and any other R&D expenditures above 3% would be eligible for tax credits for the first 5 years. OR the start up could choose to accept a 6% tax credit for R&D expenditures. What is the department's thoughts on this approach to make sure we achieve the goal of stimulating entrepreneurial activity?

Also, in conversations with people familiar with R&D at the University, they shared that the cost to file patents can be as high as $50,000. As we know, Alaska has very few patent filings, and often it is the patent ownership that allows a small business to gain a foothold in a market. One way to encourage patent development in Alaska would be to extend this tax credit to patent costs so that R&D ventures might consider the option.

Additionally for start-ups, many of them will have little to no tax liability and so a tax credit may not be an effective incentive. Perhaps making the credit transferrable or allowing a start up to carry the credit forward for a period (3 or 5 years maybe) of time until it would be reasonable to expect an R&D venture to have a tax liability.

There are other alternative ways to define the base level. While the moving average of the firm's R&D is less costly to the state, it is really the least valuable type of credit since whatever R&D a firm chooses to do this year reduces the amount of creditable R&D in subsequent years. The most valuable type of credit to a firm is to have no base at all, also known as a "nonincremental" credit, because every dollar of qualified R&D, not just the amount over the base, is eligible for the credit.

Should we being incentivizing qualified R&D expenditures if the R&D is being conducted in this state AND the payroll of employees conducting the R&D is in this state versus only having to meet one of the two criteria?

Finally, the Feds have a provision to prevent artificial increases in expenditures commonly controlled or otherwise related entities to prevent artificial increases in R&D (gaming of the system). They have a special aggregation rule that provides that all members of the same controlled group of corporations are treated as a single taxpayer.

Senator Paskvan would be interested to know the department's thoughts and input regarding these ideas.

All the best,
Jake

jake.hamburg@legis.state.ak.us

Hi Joe,

I have really been digging into the Governor's Research & Development Tax Credit Bill.

First, I sent the following questions to the Department:

1. What is the goal of this legislation? Meaning, what is the desired outcome of this public policy decision?
2. What does the department envision happening with the passage of this legislation?
3. Who or what kinds of entities is the department hoping to target with this legislation?

The Governor's bill gives a 20% tax break on R&D expenses that are above the companies 'base amount' which is defined as the average of qualified research and development expenditures attributable to Alaska for the three tax years immediately preceding the taxable year for which the credit is being claimed.

The Alaska Tax Division provides the Corporate Income Tax Liabilities Statistics. They show:

Oil and Gas Corporations

Tax Liability Reported	#Filers	Amount	%Total of Total Tax collected
Above $1 million	12	$639,588,554	99.88$
$500k - $1 million	0	0	0.00%
$100k - $499,999	2	$553,576	0.09%
$50k - $99,999	4	$214,289	0.03%
$10k - $49,999	0	0	0.00%
$1k - $9,999	1	$1,836	0.00%
Zero Tax	8	0	0.00%

Other than Oil and Gas Corporations

Tax Liability Reported	#Filers	Amount	%Total of Total Tax collected
Above $1 million	22	$79,830,140	61.65%
$500k - $1 million	25	$17,573,150	13.57%
$100k - $499,999	93	$18,823,860	14.54%
$50k - $99,999	65	$4,661,453	3.60%
$10k - $49,999	278	$6,723,028	5.19%
$1k - $9,999	468	$1,649,495	1.27%
$100 - $999	505	$203,773	0.16%
$1 - $99	917	$26,532	0.02%
Zero Tax	0	$0	0.00%

This seems to suggest that the companies in the top 3 brackets stand the most to gain.

What is not addressed in the Governor's bill:

1. Start up firms
    a. The Feds and other states have a provision for start-ups which do not have a 'base amount' of R&D expenditures established. The Governor's bill does not address this
        i. Feds have a fixed base percentage of 3% of gross, and any other R&D expenditures above 3% is eligible for tax credits for the first 5 years.

ii. Feds offer an alternative to the fixed base for start ups, they offer to reduce the tax credit to 6%

b. Some possible options would be to offer a fixed base percentage to start-ups, as the Feds provide. However, looking at the above tax liability data, they may not owe any taxes anyway.
   i. Could potentially allow the tax credits to be transferrable, so a start up could sell their credits, and would have an additional incentive
      1. This will increase the cost
   ii. Could allow start ups to carry tax credits forward over a few years to a point when they could use them.
      1. Not sure how this would work, but could potentially be combined with further statute that requires commercialization

2. Artificial Increases (gaming of the system)
   a. The Feds have a provision to prevent artificial increases in artificial expenditures among commonly controlled or otherwise related entities. They have a special aggregation rule that provides that all members of the same controlled group of corporations are treated as a single taxpayer. Under regulations prescribed by the Secretary, special rules apply for computing the credit when a major portion of a trade or business (or unit thereof) changes hands. Under these rules, qualified research expenses and gross receipts for period prior to the change of ownership of a trade or business are treated as transferred with the trade or business that gave rise to those expenses and receipts for purposes of recomputing a taxpayer's fixed-base percentage.
3. Commercialization
   a. "Companies can't keep their ideas within their own walls, and when those ideas get out, others begin to copy and imitate them, meaning the original company doesn't profit fully. This credit compensates companies for that outflow of information" – excerpt from an article in *Iowa State Daily*
   b. There is no requirement/incentive for commercialization within the Governor's bill, and so this really goes back to what I asked the Department, what is the goal of this public policy?
   c. In our meetings at the University, the problem didn't seem to lay in the research side, but in the developing and commercializing side of things.
   d. Further excerpt from the same article: "Opponents argue that Iowa has lost sight of the original purpose of the credit, which was to spur growth and innovation among firms that are struggling with startup costs. Instead, most of the money seems to be going to big corporations that are already making huge profits
4. Partnership with University
   a. The emerging energy technology fund provided an additional incentive for working with the university. It might be worth considering a similar incentive in this legislation.

There are other alternative ways to define the base level. There are basically three different ways to define the base level.

1. Have no base at all. A credit with no base is referred to as a "nonincremental" credit.
   a. Most valuable type of credit to a firm because *every* dollar of qualified R&D, not just the amount over the base, is eligible for the credit
2. Use a moving average of the firm's R&D over the past few years – ranging from one to four years. (this is the strategy used in the Governor's bill)

    a. Least valuable type of credit since whatever R*D a firm chooses to do this year reduces the amount of creditable R&D in subsequent years
3. Use recent sales times the average of the firm's R&D –to-sales ratio over some fixed, past period;

All the best,
Jake

SENATE BILL NO. 64

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

Introduced: 1/24/11
Referred: Labor and Commerce, Finance

A BILL

FOR AN ACT ENTITLED

"An Act relating to a tax credit for corporate income taxes paid for qualified research and development expenditures; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.20 is amended by adding a new section to Article 1 to read:

Sec. 43.20.047. Qualified research and development tax credit. (a) Subject to the terms and conditions of this section, and in addition to any other credit authorized to the taxpayer by this chapter, a taxpayer may apply 20 percent of the taxpayer's expenditure for qualified research and development attributable to this state for the taxable year over the base amount as a credit not to exceed $10 million against the state tax liability imposed on the taxpayer under this chapter.

(b) Qualified research and development expenditures are attributable to this state if the research and development is being conducted in this state or the payroll of employees conducting the research and development is in this state. In this subsection, payroll of an employee is in this state if compensation is paid to an employee in this

state and reported as paid in this state in the quarterly contribution report under AS 23.20 to the Department of Labor and Workforce Development.

(c) If the tax credit under this section exceeds the taxpayer's tax liability after other tax credits are taken under this chapter for the year in which the expenditure is incurred, the excess of the tax credit over the liability may be carried forward for up to seven years. If an unused credit is carried forward to a tax year from an earlier year, the credit arising in the earliest year is applied first against the tax liability for the year.

(d) A person may not claim a credit under this section for qualified research and development expenditures that were deducted in the calculation of tax liability under AS 43.20.011(e) or for which any other credit, including any federal credit, has been apportioned to this state and claimed under AS 43.20.021.

(e) Each year, the department shall report the names of taxpayers who claimed credits under this section in the prior year, the total cumulative amount of credits granted to all taxpayers under this section for the prior tax year, and the total cumulative number of employees conducting the research and development for which all taxpayers claim the credit. Notwithstanding AS 40.25.100 and AS 43.05.230, a taxpayer claiming the credit under this section consents to

(1) the public disclosure of its name and status as a beneficiary of the credit;

(2) inclusion of the amount of the credits granted to it under this section and the number of employees conducting the research and development for which it claims the credit in the cumulative total calculated by the department for reporting purposes; and

(3) report on the impact of the credit on research and development for each year that the credit is claimed.

(f) In this section,

(1) "base amount" means the average of qualified research and development expenditures attributable to this state for the three tax years immediately preceding the taxable year for which the credit is being claimed;

(2) "qualified research and development" means qualified research as defined in 26 U.S.C. 41(d) (Internal Revenue Code), as amended, that is attributable to

this state.

Research & Development (R&D) Tax Credit

Frequently Asked Questions

Q. What is the intent of this credit?

A. The R&D credit is intended to attract corporations engaged in research and development activities to conduct those activities in Alaska. This credit is the first step in making Alaska's business climate more attractive to a wide range of industries.

Q. What is the amount of the R&D credit?

A. This legislation would allow corporations conducting R&D in Alaska to take a 20% credit of qualified expenditures exceeding the average R&D expenditures made in Alaska during the previous three years. The credit would be limited to $10 million per taxpayer per year. If a corporation is currently conducting R&D activities in Alaska, the credit would be limited to 20% of the expenditures that increased above the 3-year average.

Q. What types of activities and expenses would qualify for the Alaska R&D credit?

A. Alaska's credit would mirror the federal research and experimentation tax credit. Activities and expenses qualifying for the federal credit under Internal Revenue Code (IRC) section 41 would qualify for the Alaska credit. Attached is a one-page overview showing the definition of the federal credit and identifying the types of activities that would and would not qualify for the Alaska credit.

Q. Would a corporation be eligible for both the federal and Alaska credit?

A. Under current Alaska corporate income tax statutes, corporations receiving a federal research and experimentation tax credit are allowed to take a credit against their Alaska corporate income tax of 18% of the federal credit apportioned to Alaska. Under HB 118, corporations would be allowed a 20% credit of the amount of qualified expenditures incurred in Alaska. Taxpayers would not be allowed both the federal credit and the Alaska credit for R&D activities conducted in Alaska; furthermore, taxpayers would not be allowed to deduct expenses used to calculate the credit in the computation of Alaska taxable income.

Q. Do other states have a research and development tax credit?

A. Yes. Thirty-eight other states offer an R&D tax credit. A review of those states' R&D credit programs indicates most states have either extended or increased their R&D credits within the past few years. For example: Arizona, Delaware, Illinois, Louisiana, Maryland, Minnesota, and Oregon all extended the

sunset dates for their programs. Minnesota had the shortest, extending its program to tax years beginning before January 1, 2015, and Maryland the longest, extending its program through June 30, 2021. Other states like Pennsylvania and New Jersey either increased or removed the income cap altogether. Only two states, Oklahoma and Utah, reduced or placed a moratorium on their R&D credit. No state has repealed the credit.

Q. What types of industries are currently engaged in R&D?

A. The following table shows the amount of credit claimed by corporations against their federal corporate income tax in Tax Year 2008. Corporations engaged in the manufacturing sector accounted for approximately 43 percent of all corporations claiming the credit.

Table 1. Corporations Claiming Research and Experimentation Tax Credit: Tax Year 2008

Industry	Number of Returns	R&E Credits Claimed ($1,000s)	Number of Returns as Percent of Total	Amount Claimed as Percent of Total
Manufacturing	5,420	$ 5,758,082	43%	69%
Professional, scientific, and technical services	3,932	$ 787,671	31%	9%
Information	1,132	$ 944,284	9%	11%
Wholesale and retail trade	865	$ 430,098	7%	5%
Administrative/Support & waste mgmt. services	288	$ 22,373	2%	0%
Management of companies (holding companies)	276	$ 62,091	2%	1%
Finance and insurance	237	$ 142,599	2%	2%
Various services	194	$ 43,942	2%	1%
Utilities	129	$ 48,855	1%	1%
Agriculture, forestry, fishing (seafood), and hunting	83	$ 5,054	1%	0%
Transportation and warehousing	58	$ 10,593	0%	0%
Construction	56	$ 10,278	0%	0%
Mining	36	$ 29,997	0%	0%
Real estate, rental, and leasing	30	$ 7,453	0%	0%
All Industries	12,736	$ 8,303,370	100%	100%

COMMERCE,
COMMUNITY,
AND ECONOMIC
DEVELOPMENT

Q. Why is the tax credit allowed to be carried forward for seven years?

A. It is expected that most companies engaged in R&D are medium to large multi-state corporations. Most should be able to utilize the credit in the year in which it is earned. In instances where corporations do not have enough tax liability in a single year to utilize the credit, the seven-year carry forward provision allows them more opportunity to utilize the maximum credit amount. Other Alaska tax credits can all be carried forward as follows:

Film credit - three years
Salmon product development credit - three years
Minerals exploration credit - 15 years
Gas exploration and development tax credit - five years
Production tax credits (.023(a) and (b)) - indefinite (until exhausted)

Based on other Alaska tax credits, seven years appeared to be an appropriate carry forward option.

Q. Will corporations engaged in oil and gas production be eligible for the R&D credit?

A. Yes. Oil and gas corporations will be treated the same as all other taxpayers and may take a credit against their Alaska corporate income tax for R&D expenses incurred in Alaska.

Q. Can oil and gas companies take a credit against their oil and gas production tax for R&D expenses?

A. No. The Alaska R&D tax credit would only be allowed against corporate income tax. It would not be allowed as a credit against taxes due in any other tax program.

Q. Can oil and gas companies deduct research and development expenditures in the calculation of their oil and gas net profits tax?

A. No. R&D expenses are not qualified lease expenditures under the applicable statutes and regulations governing production tax, and therefore, are not deductible. Specifically, 15 AAC 55.260(g) states that "designing" does not include the types of activities ordinarily considered R&D.

I.R.C. Sec. 41, Credit for Increasing Research Activities

Definition of Qualified Research:

1. The purpose is discovering information technological in nature; **AND**
2. The application of which is intended to be useful in the development of a new or improved component of the taxpayer; **AND**
3. Substantially all of the activities constitute a process of experimentation; **AND**
4. The experimentation is for a qualifying activity or purpose.

Activities that Qualify:

- Developing new or improved products, processes, or formulas
- Developing prototypes or models
- Developing or applying for patents
- Certification testing
- Developing new technology
- Environmental testing
- Developing or improving software technologies
- Building or improving manufacturing facilities
- Streamlining internal processes

Activities that Do NOT Qualify:

- Exploration activity to ascertain the existence, location, extent, or quality of any ore or mineral deposit
- Research AFTER commercial production
- Adapting an existing business component for a particular customer
- Duplicating an existing business component
- Surveys & studies such as market research, advertising, and routine data collection
- Computer software for internal use (unless its development supports an otherwise qualifying activity)
- Non-U.S. research
- Research intended to be transferred to another
- Research conducted for the benefit of and prior to commencing a new business
- Research in the social sciences, arts, or humanities
- Funded research
- Anything for style, taste, cosmetic, or seasonal reasons

Allowed Expenses for Qualified Research:

- Research expenses incurred in connection with carrying on a trade or business including:
    - In-house wages and supplies
    - Time-sharing costs for computer use
    - 65% of amounts paid to contractors in the U.S. who work on the taxpayer's behalf
    - Extraordinary utility charges
    - Depreciation and depletion on property used in connection with qualified research activities

REPRESENTATIVE LES GARA

MEMORANDUM

TO: Senator Wagoner
Senate Resources Co-Chair

FROM: Representative Les Gara

DATE: April 13, 2011

RE: Request to calendar HB 144, Protecting Public Fishing Stream Access

---

I respectfully request that House Bill 144, relating to protecting public fishing stream access, be scheduled on the floor. Please feel free to contact me, or my aide, Mindy O'Neall, with questions or thoughts at 465-2647.

Attached you will find the contents requested by the committee. This includes the most recent version of the bill, the latest sponsor statement, sectional analysis, most recent version of the bill, an explanation of changes, current fiscal notes, and additional documentation relating to this bill.

Thank you for your consideration.

Rep. Les Gara

January-May: State Capitol • Juneau, AK 99801-1182 • (907) 465-2647 • Fax (907) 465-3518
June-December: 716 W. 4th Avenue • Anchorage, AK 99501• (907) 269-0106• Fax (907) 269-0109
Representative_Les_Gara@legis.state.ak.us

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

CSHB 144 (RES): Sponsor Statement
Protecting Public Fishing Stream Access

Alaska's rivers are a treasured resource for fishermen, boaters, hunters, hikers, and people of all walks of life. We need to protect the public's access to them. House Bill 144 aims to ensure future public access to Alaska's fishing streams by putting in place a mechanism for encouraging the Department of Natural Resources to identify areas of public access that are in jeopardy of loss. The program would be facilitated by the Department of Natural Resources and would be completely voluntary. It would not take land away from citizens who do not want to trade for other public land; rather, it would encourage DNR to look for areas to secure needed public access easements.

There are currently large stretches of private land on streams such as the Anchor River, Deep Creek, Parks Highway Streams, the Salcha River and others throughout the state. Today the public uses these streams, and has access to them. Once they're developed, we will never be able to afford to get them back.

Other states have waited too long to take steps like the ones proposed by this bill. In Montana, for example, fishermen have to pay for public access to some rivers. One hundred eighty miles of the Missouri River have lost public access, and that state now budgets $300,000 per year to buy back parcels of riverbank land.

HB 144 will help ensure that unparalleled recreational opportunities in our vibrant river corridors remain accessible, for our own and for future generations. It provides that the state should take action by providing a plan on their website as well as electronically to the legislature on an annual basis that assess those areas most at risk of loss.

January-May: State Capitol • Juneau, AK 99801-1182 • (907) 465-2647 • Fax (907) 465-3518
June-December: 716 W. 4th Avenue • Anchorage, AK 99501• (907) 269-0106• Fax (907) 269-0109

REPRESENTATIVE LES GARA

CSHB 144 (RES): Sectional Analysis
Requiring a DNR Report on Fishing Stream Access

The bill's sections provide as follows:

Section 1. This section requires the commissioner of the Department of Natural Resources to annually provide an electronic report to the legislature and the governor detailing the efforts from the previous year, and objectives for the upcoming year, in maintaining and enhancing public access along fishing streams, where sport, personal use dip net, commercial, or subsistence fishing is conducted.

January-May: State Capitol • Juneau, AK 99801-1182 • (907) 465-2647 • Fax (907) 465-3518
June-December: 716 W. 4th Avenue • Anchorage, AK 99501• (907) 269-0106• Fax (907) 269-0109

FISCAL NOTE #2

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB 144

Analysis

HB 144 would require the Department of Natural Resources, in consultation with the Department of Fish & Game, to provide an annual report to the legislature detailing the department's efforts during the previous year, and objectives in the upcoming year, to maintain and enhance access to and along fishing streams.

The only additional work would be to compile this information into the annual report. Costs associated with preparing the report and including it in the Division of Mining, Land & Water's annual report to the legislature could be addressed with existing staff and resources.

2012 LEGISLATIVE SESSION

Analysis

HB 144 would require the Department of Natural Resources, in consultation with the Department of Fish & Game, to provide an annual report to the legislature detailing the department's efforts during the previous year, and objectives in the upcoming year, to maintain and enhance access to and along fishing streams.

The only additional work would be to compile this information into the annual report. Costs associated with preparing the report and including it in the Division of Mining, Land & Water's annual report to the legislature could be addressed with existing staff and resources.

MEMORANDUM

TO: Robin Willis, Tina Cunning

FROM: Joe Giefer
Habitat Biologist

DATE: January 23, 2006

SUBJECT: Montana Creek To-and-Along Easements

Location depicted on map: Montana Creek, USGS Quad TALKEETNA A-1 and TALKEETNA MOUNTAINS A-6, described as secs. 5, 7, and 8, T. 23 N., R.4 W., W.M., and secs. 11, 14, 15, 21, 22, 28, 32, and 33, T. 24 N., R. 4 W., Seward Meridian, Alaska.

The following distances are approximations based on the maps ADF&G has produced, they do not reflect distance's based on Federal, State, or Borough surveys or plats. On the lower reaches of Montana creek, there is approximately 29,063 feet of accessible shoreline and approximately 17,468 feet of non-accessible shoreline.

The private property depicted on the map without To & Along easements are older conveyances from the Federal Government directly to individual private citizens. As far as we know, these parcels are not subject to a To & Along reservation. In an effort to err on the side of caution, if it's not clear that there is access along the shoreline, ADF&G has assumed that there is not and has depicted it as such on our map. It is possible that some areas depicted as not having access do actually in fact have access, and this could be for a variety of reasons that cant be clarified until further research is done, particularly having some time spent on the ground looking at these areas on a site specific basis.

In secs. 11, 14, 15, 21, and 22, of T. 24 N., R. 4 W., both banks of Montana Creek are subject to a To & Along easement. Secs. 28, 32, and 33 of T. 24 N., R. 4 W., are composed of private parcels not subject to a To & Along reservation.

In T. 23 N., R. 4 W., both banks of Montana creek are subject to easements thru a small reach of State owned land in the N/E corner of sec. 5. In the S/W corner of sec. 5, the creek is subject to a To & Along on river-left, thru the extreme N/W corner of sec. 8, and on into sec. 7 where both banks are subject to a easement for a short distance, then again there is only a easement on river-left downriver to where Montana Creek flows into the Susitna River.

MEMORANDUM

TO: Robin Willis, Tina Cunning

FROM: Joe Giefer
Habitat Biologist

DATE: January 27, 2006

SUBJECT: Salcha River To-and-Along Easements

The location depicted on map is the Salcha River, USGS Quad BIG DELTA B-6, sections 21 and 22, T. 5 S., R.4 E., Fairbanks Meridian, Alaska.

In this particular stretch of the Salcha, the current path of the river is an approximation at best, there is no current aerial photography or surveyed hydrography to use as a reference when comparing the river corridor to the adjacent uplands. The private properties depicted on the map without "To & Along" easements are generally older conveyances from the Federal Government directly to individual private citizens. As far as we know, these parcels are not subject to a "To & Along" reservation. In an effort to err on the side of caution, if it is not clear that there is access along the shoreline, ADF&G has assumed that there is not access and has depicted it as such on our map. It is possible that some areas depicted as not having access do actually have access, and this could be for a variety of reasons that can not be clarified until further research is done, particularly by spending some time on the ground looking at these areas on a site specific basis.

The following distances are approximations based on the maps ADF&G has produced, they do not reflect distances based on Federal, State, or Borough surveys or plats. On the reaches depicted in the maps of the Salcha River, there is approximately 16,181 feet of accessible shoreline and approximately 16,134 feet of non-accessible shoreline. .

In sec. 22, there is a small tract of State owned land on both banks of the Salcha where the Richarson Highway crosses the river. These state owned tracts are subject to easements. There is also a boat launch on these same state owned tracts.

In sec. 21, all the privately held land adjacent to the Salcha is subject to a To & Along easement. The west half of the northwest corner of sec. 21 is state owned land, immediately to the west of this tract is the confluence of the Tanana and the Salcha rivers.

TO: Robin Willis, Tina Cunning

FROM: Joe Giefer
Habitat Biologist

DATE: January 27, 2006

SUBJECT: Anchor River "To-and-Along" Easements (AS 38.05.127)

The location depicted on map is the Anchor River, from the Sterling Highway downstream to the mouth of the river. This area can be found on USGS quad Seldovia D-5, section 33 of T. 4 S., R. 15 W., and sections 5, 4, 3, 10, 11, of T. 5 S., R. 15 W., Seward Meridian, Alaska

The following distances are approximations based on the maps ADF&G has produced, they do not reflect distances based on Federal, State, or Borough surveys or plats. On the reaches depicted on the map of the Anchor River, there is approximately 16,723 feet of accessible shoreline and approximately 4,542 feet of non-accessible shoreline.

Mapping the Anchor River in this area is particularly problematic given its tendency to move and meander over time as it nears the coast. The river channel we are using as a template is from year 2000 satellite imagery that we digitized and placed over the parcel boundary information. The private properties depicted on the map without "To & Along" easements are generally older conveyances from the Federal Government directly to individual private citizens. As far as we know, these parcels are not subject to a "To & Along" reservation. In an effort to err on the side of caution, if it is not clear that there is access along the shoreline, ADF&G has assumed that there is not access and has depicted it as such on our map. It is possible that some areas depicted as not having access do actually have access, and this could be for a variety of reasons that can not be clarified until further research is done, particularly by spending some time on the ground looking at these areas on a site specific basis.

In section 33, T. 4 S., R.15 W., from the mouth of the river upstream to section 5, T. 5 S., R. 15 W., there is a small peninsula shaped parcel on river-left subject to an easement, however it is not continuous upstream into the adjoining southern section. In this area there appears to be no "To & Along" on a short stretch of uplands on river-left, and approximately the last ½ mile of shoreline of river-right at the mouth. Continuing upstream, where the river flows through state land in sec. 5, T. 5

S., R. 15 W., and continues east across sec. 4 of the same township/range both banks of the Anchor River are subject to an along easement, this is mostly state lands and access is assumed. The remaining area where access appears limited is a short distance from the highway downstream to where the river enters State land.

As you continue upstream where the river enters sections 10, 11, and into 14 of T. 5 S., R. 15 W., which is not depicted on map, uplands on river-right were conveyed from the United States to the Mental Health Trust. Lands on river-left were conveyed to the University and a small parcel has become part of the Mental Health Trust. The University and Mental Health Trust Lands have been inconsistently subject to provisions of Title 38 so shoreline access is unclear along these stretches of river.

ALASKA FLY FISHERS

Winners of the 1994 McKenzie Cup

February 21, 2011

Representative Les Gara
State Capitol, Room 500
Juneau, AK 99801

Reference: HB 144

Dear Representative Gara:

The Alaska Fly Fishers is a membership organization representing approximately 400 individuals interested in Fly Fishing conservation and education for the state of Alaska.

Alaska Fly Fishers supports enhancing and maintaining access to fishing streams. We support HB 144 as its intent is to enhance and maintain access to fishing streams by having the Department of Natural Resources report annually on their efforts in regards to stream access.

Access to fishing streams is an important part of the sport of fishing. Considering the importance of gathering fish and sport fishing to the residents of Alaska, this bill shines a bright light on enhancing and maintaining the critical component of stream access.

Thank you for your efforts to enhance and maintain access to Alaska's fishing steams.

Best regards,

ALAKSA FLY FISHERS

Mark Huber
President

cc: Alaska Fly Fishers Board of Directors

3415 Wentworth St.
Anchorage AK 99508

February 19, 2011

Dear Representative Gara:

I support increasing the amount and quality of publicly accessible land for fishing. The area's which are now publicly accessible are often overcrowded which leads to conflict between users, reduces the quality of the experience and results in the degradation of the land. For example, in the mid 1980's the Kenai River when the runs of salmon were heavy was crowded in the area of the old Sportsman Lodge and ferry crossing. However, a short walk either up or down stream would result in far fewer anglers. Now, during the same time periods, the river is often crowded on nearly every available space between the Kenai Lake and Jim's Landing for between June and September. This isn't isolated to this fishery.

If we were systematically to review opportunities to acquire land which has a high value for fishing through a process that insures land owners rights are not violated, it would both improve the access for Alaskans and the quality of their lives. I believe HB 144 would do that.

I have been involved as a volunteer in a number of aspects of resources in Alaska. I served for over 10 years on the Anchorage Fish & Game Advisory Committee, approximately 5 years on the Southcentral Regional Advisory Council for Subsistence, and one term on the Board of Game. During that time access for the average Alaskan was a consistent issue. I am currently a member of the Alaska Fly Fishers and have served numerous terms as an officer of that organization. Again, AFF members have made many contributions to habitat restoration and to enhance our public fisheries. We often hear about the lack of access to fisheries which they can reach within a reasonable distance of their homes.

Based on my experience, the Alaska Department of Fish and Game does a very good job of maintaining and enhancing our fisheries. However with a growing population in Alaska, it becomes critical to do what we can to increase the amount of public lands available. We, as a state, have an obligation under Article 8 of our constitution to make the resources of Alaska available for the maximum use consistent with the public interest. Further the legislature has an obligation to make these resources reserved for to the people for common use.

HB 144, in my opinion, would be consistent with and assist in meeting this obligation.

Sincerely,

Bob Churchill

Juneau, AK 99801

Re: HB144

Dear Representative Gara:

The Kenai River Sportfishing Association (KRSA) supports the legislative objective of House Bill 144, an act requiring the Alaska Department of Natural Resources, in conjunction with the Alaska Department of Fish and Game, to annually deliver to the legislature and the governor a report on fishing stream access.

Alaska is home to some of the best sportfishing, personal use and subsistence opportunities in the world. HB144 provides the Legislature with a reporting mechanism to ensure monitoring of public access to important fishing streams in the state. Protecting and enhancing public access to the hunting, fishing and recreational uses along the state's waterways is of primary importance to many people and a wide variety of user groups.

KRSA is a non-profit 501 (c) 3 conservation organization dedicated to ensuring the sustainability of the greatest sportfishing river in the world – the Kenai. Our goals are to conserve and rehabilitate fisheries habitat, promote predictable and meaningful sportfishing opportunity, encourage and foster fisheries research and provide public aquatic education. Over the past fifteen years we have raised and invested over $10 million towards these goals.

We appreciate your efforts and those of your colleagues in regards to HB144.

Respectfully,

Ricky Gease

Juneau, AK 99801

SUBJECT: Support for HB144

Dear Representative Gara,

I strongly support passage of HB144. This is legislation that is long overdue and I want to thank you for your efforts over the years to get this important piece of legislation passed.

Public access to our public waters is an important issue that many who use this resource take for granted until lost. I spent many years as a member and chair of a local fish and game advisory committee and attended many Board of Fisheries and Board of Game meetings. During this time access issues come up several times in submitted proposals and public testimony. Lost access was always a very contentious issue and was one that should have been foreseen prior to becoming an issue.

You legislation is sorely needed to help prevent these problems from occurring and I ask the Alaska State Legislature to pass this important legislation, HB144, during this session.

Sincerely,

Willard E Stockwell
PO Box 721
Cooper Landing, AK 99572

WOMEN'S FLYFISHING
PO Box 243963
Anchorage, AK 99524-3963

February 17, 2011

Representative Les Gara
State Capitol 500
Juneau, AK 99801

Dear Representative Gara:

I'm writing you today in support of HB 144, which would direct the Department of Natural Resources to report annually to the legislature on its efforts to maintain or enhance access to and along fishing streams as well as its objectives for enhancing and maintaining access to and along fishing streams by the public in the upcoming year.

As the owner of a licensed fly fishing guide service in Alaska, I believe that the Department of Natural Resources should play an active role in assisting the public to have access, wherever possible, to a wide variety of fishing opportunities. The bill would put in place a mechanism for voluntary land exchanges (or purchases) between the State and private owners along important recreational rivers. This would help us avoid the purchases of such lands for development, thus denying the public's use of them. Other efforts could involve working with riparian land owners to identify sections of bank access that could be utilized by the public either free or through a paid access corridor would certainly be worthwhile to pursue as well. "Enhancing access to fishing streams," might also mean identifying areas where people are trespassing on either public or private land to get access to various waterways, which would also provide valuable information on where the Department should direct efforts in opening or developing fishing opportunities to the public.

I would urge members of the House Fisheries Committee to support HB 144.

Sincerely,

Cecilia "Pudge" Kleinkauf

From: Alan Batten [mailto:alanbatten@acsalaska.net]

To: Rep. Les Gara
Subject: Re: HB 144

Dear Representative Gara,

Thanks for sponsoring HB 144, and thanks for specifically mentioning "boaters". I am a recreational canoer and am very concerned about attrition of access points along our rivers. A case in point is the Chulitna River bridge at approximately 134 mile Parks Highway. This area is a commonly used takeout for people who put in at the Parks Highway bridge over the East Fork Chulitna at (very approximately) mile
185 Parks Highway (I believe you rafted this section last summer). The land on both sides of the river above and below the bridge is privately owned, and I understand that access to the 2 landings just upstream of the bridge on river left were closed off last summer. This is not a huge deal to someone in a canoe or kayak since our gear is light enough to just carry it up the right of way under the bridge to the highway.
However, a friend of mine rows a dory that is a bit too heavy to manhandle easily (as I imagine your raft was also), so he can no longer use that area as a takeout.

Similarly, access to the Nenana River at McKinley Village/Crabbe's Corner seems to be secure for right now, but has been a recurring issue in the past.

Thanks!

Alan Batten

Prime fishing land might be sold off

■ **ANCHOR RIVER:** Sale of five-acre parcels could eliminate public access.

By JOEL GAY
Anchorage Daily News

The beaches, banks and wetlands along one of the Kenai Peninsula's most popular fishing streams are being subdivided into five-acre parcels that, if sold, could eliminate public access to the lower Anchor River.

The owners say they've tried for years to sell the land to the state but could never agree on a price. Now it's time to move on, they say, and the first step is chopping their two large parcels into 20 smaller ones.

They hope to win preliminary approval of their subdivision plan Monday night from the Kenai Peninsula Borough. The lots could be on the market later this summer.

Supporters of a buyout still hope the land can be purchased and put into public ownership. The landowners say they're still willing to sell. But time is drawing short, said Lynn Whitmore, a longtime local angler who just recently learned about the proposed subdivision.

"I'm going to urge that they try to convert this to public land, by whatever means necessary," he said. "I want the (borough) mayor or somebody to sit down with these two sides and resolve this."

■ **THE KENAI PENINSULA BOROUGH PLAT COMMITTEE** will hold a public hearing on the proposed Anchor River subdivision at 5:30 p.m. Monday in the Borough Building in Soldotna. For more information, go to www.borough.kenai.ak.us/planningdept, then click on Plat Committee, then Agendas.

Anchor Point pioneer Vern Mutch homesteaded the area decades ago, selecting land that ran from atop the bluffs to the Cook Inlet beach, with the river running through it. His son Paul, a commercial fisherman who lives in Ugashik, now owns much of the land, including a 45-acre parcel just north of one of the river's most popular fishing spots, the Grass Hole.

The state Division of Parks owns the adjoining lot to the south, where it provides parking and a boat launch. But thousands of fishermen every year pass through the state land onto the Mutch property, where they camp on the gravel beach and tromp through wetlands to reach the river.

Many also walk or drive ATVs even farther north, toward the river mouth, where they trespass on a 12-acre parcel owned by Jim Jacobs.

The parks superintendent on the lower peninsula, Chris Degernes, said it's difficult to imagine the private land suddenly being posted with no-trespassing signs. "The public has used that property so many years — as if it were public — that it will be difficult to keep the public off," she said.

The Division of Parks and the Alaska Department of Fish and Game have wanted to buy the Anchor River lands for years, she said. It's rich territory. About 50,000 to 60,000 people visit every year, she said, mostly to fish. The

Public lands demand public access

By LES GARA

If you've ever fished, hunted, hiked a trail or floated a river, you understand the value of public lands. For most Alaskans, the right to public access is a cherished one. It's also a right that has been quietly under siege.

There are people in the Legislature, and who will run for governor in 2002, who have an agenda to sell off vast amounts of your favorite lands: the stream bank that lets you walk for miles along your favorite fishing water, the land you cross to launch your raft or set up camp, the trail you run or hike on and the lands you traverse to hunt the back-country. For example, last year one bill aimed to require that 75,000 acres be sold every year, indefinitely.

Now is the time for us to stand together to make sure we don't lose our right to enjoy this state. One thing we can do is act to forbid the state from selling off any more of our most valuable lands. Along streams, a 100-foot public easement should be retained by the state on all waters that support recreational uses. Future property owners could build next to the easement and use the easement to store things like boats, but they could not ban the public from walking the riverbank. That's the approach taken in New Zealand, where a 70-foot easement along rivers and lakes, called the Queen's Chain, is reserved for public access.

Other states are proof of what will happen if we do not act. In Montana, ranchers and movie stars routinely pro-

Along streams, a 100-foot public easement should be retained by the state on all waters that support recreational uses.

hibit the public from crossing their land to reach prized waters and lands. For years, landowners completely locked up access to the Ruby River, a noted trout stream, as well as the banks on a 180-mile stretch of the Missouri River. To make up for selling its public lands, the state now scrapes for money to buy back or lease miniscule parcels of riverbank and recreational land for public use.

This problem is not new to Alaska. Private land and borough and Native land waiting to be sold line riverbanks from the prized Anchor River to the banks of almost every major stream from Anchorage to Talkeetna. The other day a friend and I were walking a grayling stream north of Anchorage and saw a stretch where cottonwood trees so important to stream bank protection had been clear-cut to the riverbank. We learned that 160 acres more along the riverbank were waiting to be developed. In a few years these banks will be littered with "No Trespassing" signs.

The 2000 Legislature's attempt to sell off millions of acres of state land died in committee. The legislators who pushed the bill likely knew it would be vetoed by Gov. Tony Knowles. Starting in 2002, future governors might not stop these grand land sales.

The public's best course would be to take this issue out of the Legislature's hands by using the initiative process. That would require that fishing, hunting, water sports, trail users, mountaineering and conservation groups join hands. If the state is to be protected, a public easement ensuring access along all valuable riverbanks and a land sale ban covering all valued hunting, hiking, camping and hiking areas need to be adopted. Legislators will tell you that they'd never sell these lands. But you can't sell off 75,000 acres of public land every year without giving away the land that fishermen, hikers, rafters, campers, hunters and other Alaskans cherish.

We should protect our public access rights while we still have them. As people learned in Montana, buying them back later is impossibly expensive.

■ Les Gara has worked with fishing organizations on fisheries protection issues and is a board member of the Alaska Public Interest Research Group.

February 16, 2012

Dear Representative Gara:

It appears that HB 144 is again being considered for consideration by the House. I would like to see a more aggressive approach to land acquisition for public use of our fisheries. However, I fully support this bill as a step towards providing access to Alaskan's of our fisheries resource. I have spent a significant amount of time involved in fisheries issues personally, through organizations and committees. This includes approximately 15 years on the Anchorage Fish & Game Advisory Committee, approximately 6 years on the Federal Subsistence Council, and 25 years as a member of the Alaska Fly Fishers. I have also fished throughout the road system and numerous other areas throughout Alaska. Public access is becoming more limited and crowded. An example of this is the crowding along the public access areas on the Kenai River. In the 1980's the crowds were primarily from the old Sportsman Lodge downriver for approximately 250 yards during the peaks of the salmon runs. Today the Kenai is crowded from the bridge at Kenai Lake to Jim's landing from mid June through late September.

If we, at the state level, were to systematically review opportunities to acquire land which has a high value for fishing through a process, as outlined in HB 144, that insures land owner's rights were not violated it would benefit many Alaskans, improve the quality of the experience in these fisheries, and be in concert with Article 8 of our state constitution.

Based on my experience working with the Alaska Department of Fish & Game, I have a high level of confidence in their ability to manage these fisheries once they become state lands.

I strongly urge all effort be made to pass this legislation.

Sincerely

Bob Churchill

MEMORANDUM

To: Senator Tom Wagoner, Co-Chairman, Senate Resources Committee
Senator Joe Paskvan, Co-Chairman, Senate Resources Committee

From: Representative Tammie Wilson

Date: April 6, 2011
Re: Request for Hearing

Enclosed is CSHB 185—"An Act relating to an exemption from authorizations that may be required by the Department of Environmental Conservation for the firing or other use of munitions on active ranges."

This bill is strongly recommended by the U.S. Department of Defense and a priority for Alaska DMVA.

Accompanying sponsor statement and general back-up documents are included.

I would appreciate a hearing in Senate Resources at your earliest convenience.

Thank you for your consideration. Please contact me if you have any questions

Sponsor Statement

CSHB 185 –27th Legislature

CSHB 185(Res) amends Alaska's Waste Management and Disposal Authorization (AS 46.03.100(e)) such that the use of military ranges can occur in accordance with the Federal Water Pollution Control Act.

Additionally, CSHB 185 clarifies that all military services, such as the U.S. Coast Guard, conducting training activities on an active range, would be exempt from regulation unless otherwise regulated under the Federal Water Pollution Control Act.

This amendment is important because current state law could be interpreted to restrict the use of Alaska military ranges in a way not required by federal law.

This bill is supported by DMVA, DEC, and the Region 10 USAF Regional Environmental Coordinator Office.

I appreciate the committee's consideration for this bill and request your support.

<TARGET><BILL>HB 185</BILL><SUBJECT>HB 185</SUBJECT><COMM>SRES27</COMM></TARGET>

FEDERAL WATER POLLUTION CONTROL ACT (CLEAN WATER ACT)

33 U.S.C. §§ 1251-1387, October 18, 1972, as amended 1973-1983, 1987, 1988, 1990-1992, 1994, 1995 and 1996.

Overview. The Federal Water Pollution Control Act, popularly known as the Clean Water Act, is a comprehensive statute aimed at restoring and maintaining the chemical, physical and biological integrity of the nation's waters. Enacted originally in 1948, the Act was amended numerous times until it was reorganized and expanded in 1972. It continues to be amended almost every year.

Even prior to the enactment of the 1972 version of the Act, the Act authorized the Public Health Service to prepare comprehensive programs for eliminating or reducing the pollution of interstate waters and tributaries and improving the sanitary condition of surface and underground waters. Due regard was to be given to improvements necessary to conserve waters for public water supplies, propagation of fish and aquatic life, recreational purposes, and agricultural and industrial uses. A number of other provisions found in the current Act were adopted prior to 1972.

Primary authority for the implementation and enforcement of the Clean Water Act now rests with the U.S. Environmental Protection Agency (EPA). In addition to the measures authorized before 1972, the Act authorizes water quality programs, requires federal effluent limitations and state water quality standards, requires permits for the discharge of pollutants into navigable waters, provides enforcement mechanisms, and authorizes funding for wastewater treatment works construction grants and state revolving loan programs, as well as funding to states and tribes for their water quality programs. Provisions have also been added to address water quality problems in specific regions and specific waterways.

Discharge Permits. One of the most significant features of the 1972 Act is the creation of a national pollutant discharge elimination system (NPDES). Except as otherwise provided in the Act, industrial sources and publicly owned treatment works may not discharge pollutants into navigable waters without a permit. The Administrator may issue a permit for discharge upon condition that the discharge meets applicable requirements, which are outlined extensively in the Act and which reflect, among other things, the need to meet federal effluent limitations and state water quality standards. The Act also provides that, with EPA approval, a state may administer its own permit program in lieu of the federal program. There are special provisions on municipal and industrial stormwater discharges. § 1342.

EPA was required, by mid-1973, to promulgate guidelines for determining the degradation of the waters of the territorial seas, the contiguous zone and the oceans. These guidelines were to include, for example: the effect of disposal of pollutants on human health or welfare, including but not limited to plankton, fish, shellfish, wildlife, shorelines and beaches; the effect on marine life, changes in marine ecosystem diversity, productivity and stability, or species and community population changes; the effect of disposal of pollutants on aesthetic, recreation and economic values. Discharge permits may not be issued except in compliance with the guidelines. § 1343.

The Honorable Paul Seaton
House of Representatives
Alaska State Capitol, Room 102
Juneau, AK 99801-1182

The Honorable Eric Feige
House of Representatives
Alaska State Capitol, Room 126
Juneau, AK 99801-1182

Dear Representatives Seaton and Feige:

At the March 18 House Resources Committee meeting on CSHB 185, this Department and the Department of Law were asked to provide additional information to the committee. The Department has conferred with the Department of Law on the following information.

What does the Federal Water Pollution Control Act regulate?

The federal Clean Water Act (CWA) prohibits the discharge of pollutants, which includes munitions, into navigable waters without a permit. "Navigable waters" are defined as "waters of the United States, including the territorial seas." "Waters of the United States" are defined in EPA regulation as follows:

> 40 CFR 230.3(s) The term *waters of the United States* means:
> (1) All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
> (2) All interstate waters including interstate wetlands;
> (3) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:
> (i) Which are or could be used by interstate or foreign travelers for recreational or other purposes; or
> (ii) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
> (iii) Which are used or could be used for industrial purposes by industries in interstate commerce;
> (4) All impoundments of waters otherwise defined as waters of the United

Printed on Recycled Paper

States under this definition;
(5) Tributaries of waters identified in paragraphs (s)(1) through (4) of this section;
(6) The territorial sea;
(7) Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (s)(1) through (6) of this section; waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 423.11(m) which also meet the criteria of this definition) are not waters of the United States. Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.

The types of waters that are included in "waters of the United States" have been the subject of much litigation nationwide and its interpretation is continually in a state of flux as courts around the country interpret it on a case-by-case basis.

What is the old state policy vs. the "new" state policy regarding permitting of munitions discharges?

Alaska Statute (AS) 46.03.100 prohibits the discharge of solid or liquid waste to the lands and waters of the state. It has been longstanding state policy via AS 46.03.100(e)(7) to exempt firing ranges from these state permitting requirements.

The CWA, however, requires a permit for discharges of munitions to "waters of the United States" and in order for the Department to receive primacy to issue wastewater discharge permits under the CWA, we had to resolve the discrepancy between the CWA requirement and the longstanding state policy to exempt firing ranges from permit requirements. We did this in a change to AS 46.03.100(e)(7), passed in 2008 (sec. 4, ch. 17, SLA 2008), by adding a phrase to the existing state permitting exemption for firing ranges -- ". . . unless it results in a discharge into waters of the United States." While this change made Alaska's statutes consistent with the requirements of the CWA and was ultimately approved by the EPA in the state's request for primacy, it has the potential to cause the state to be more restrictive (i.e. more stringent) than the CWA or longstanding state policy. This is because the Department of Defense has been working with EPA on the federal requirement to obtain a permit for the discharge of munitions into waters of the United States. So, if that requirement changes, no CWA permit is required, and the state statute remains as is, then the state statute would still require a munitions range operator to obtain a permit, thus exceeding the requirements of the CWA. To avoid that scenario, the goal of CSHB 185 is to match the federal requirements by citing to the CWA.

CSHB 185 would only require the state to issue a permit if it is required to do so under the CWA. It is a subtle, but important change that will retain the state policy to exempt ranges from permitting requirements for munitions discharges to the

land and for discharges to waters that are not required to have a permit under the CWA.

Are non-military training ranges covered by the permit exemption of AS 46.03.100(e)(7)?

Yes - all firing ranges used for training activities on active ranges are exempt from state permitting requirements unless use of the ranges results in a discharge into waters of the United States. CSHB 185 will also exempt all firing ranges used for training activities on active ranges unless the discharge requires a permit under the Clean Water Act.

What is the definition of "active ranges?"

A military representative described "active ranges" from their perspective during the hearing. There is no legal definition of "active range" in state statutes, however, from a permitting perspective an "active range" is one where there are discharges occurring – the range is in use, or will be in use during the 5-year life of a permit (if a permit is required).

Sincerely,

Lynn J. Tomich Kent
Director

The Honorable Tammie Wilson
Alaska House of Representatives
State Capitol, Room 415
Juneau, AK 99801-1182

Dear Representative Wilson:

As the Department of Defense (DOD) Regional Environmental Coordinator (REC) for the states in U.S. Environmental Protection Agency (US EPA) Region X, including Alaska, and on behalf of all the military services, I am responsible for coordinating responses to various environmental policies or regulatory matters of interest. I appreciate the opportunity to provide comments on the proposed amendment to Alaska's Clean Water Act (AK CWA).

DoD and Alaska have a long and proud history of cooperation. Alaska's military installations and training range areas within the state are crucial to DoD's worldwide mission. In this spirit of cooperation, DoD has worked with the Alaska Department of Environmental Conservation (ADEC), Alaska Office of the Attorney General, US EPA, the Alaska Military Force Advocacy and Structure Team (AMFAST), and other interested stakeholders to develop this amendment.

As background, under AS §46.03.100, the disposal of solid or liquid waste material into waters or onto land of the state is prohibited without authorization from ADEC. Importantly, the statute was amended in 2008 when Alaska sought US EPA approval of its CWA program (Alaska Pollutant Discharge Elimination System). As a result, the statutory exclusion for military ranges under AS §46.03.100(e)(7) was modified so that it now excludes "the firing or other use of munitions in training activities conducted on active ranges, including active ranges operated by the United States Department of Defense or a United States military agency, ***unless it results in a discharge into waters of the United States***."

This existing language in Alaska's statute ("unless it results in a discharge into waters of the United States") might be interpreted to restrict the use of Alaska military ranges in a way that is not required under the federal Clean Water Act. To alleviate this concern, the proposed amendment would allow the use of military ranges "unless otherwise regulated by the Federal Water Pollution Control Act." Besides helping ensure military ranges can be used in accordance with federal law, federal and Alaska state agencies agree this amendment will not jeopardize continued US EPA approval of Alaska's CWA program.

The benefit of the proposed amendment to the military in Alaska will be to ensure questions regarding the application of the AK CWA to military ranges are determined in accordance with the federal Clean Water Act. Moreover, while there may be uncertainty as to how the federal Clean Water Act program might apply to military ranges, the proposed amendment will not preclude Alaska agencies, the military, USEPA, or a private plaintiff from making any appropriate arguments under the federal statute. Thus, unless amended, the application of the AK CWA to military ranges might be inconsistent with the application of clean water programs in other states. Finally, because ADEC plans to apply its CWA program to munitions starting on October 31, 2011, DoD strongly supports passing this amendment in the 2011 legislative session.

In closing, this amendment will help ensure Alaska's continued capacity to host sustainable military readiness training for our outstanding airmen, soldiers, and sailors. We welcome the opportunity to provide you with any additional information as you consider this important legislation that has the potential to impact DoD installations.

Thank you for the opportunity to provide comment on this proposed amendment.

Sincerely

CLARE R. MENDELSOHN
DoD Regional Environmental Coordinator, Region 10

STATE OF ALASKA

March 10, 2011

The Honorable Tammie Wilson
Alaska House of Representatives
State Capitol, Room 415
Juneau, Alaska 99801-1182

Representative Wilson,

I fully support the proposed amendment to the Alaska Clean Water Act. This amendment minimizes the opportunities for interruption to critical military training while maintaining a high level of environmental protection according to the Federal Water Pollution Control Act.

The United States Military presence in Alaska is vital to the state's safety, security, and economic stability. We must take every opportunity to empower the men and women of the military with the best training scenarios available. Alaska offers premier military training areas that are unmatched by any other location in the world. Although continued military training is critical, the protection of the natural environment on which the training is conducted is equally important. The amendment to the Alaska Clean Water Act both enhances military training capabilities and ensures the protection of Alaska's pristine environment.

Thank you for your efforts regarding this amendment. Your continued support of the United States Military in Alaska and your desire to protect Alaska's natural environment is very much appreciated.

Sincerely,

Thomas H. Katkus

Rep.Tammie.Wilson@legis.state.ak.us

Explanation of Changes in CSHB 185 (RES)

House Resources adopted a CS with language vetted and approved by EPA/DEC:

1) Page 2, line 19: added the phrase **"or service,"** to clarify that the US Coast Guard should be included in the definition of military training activities.

2) Page 2, lines 19-20: "unless **otherwise regulated under 33 U.S.C. 1251 – 1376 (Federal Water Pollution Control Act), as amended**

This, also, was not a substantive change to the original bill. It was the language approved by all parties (DoD, EPA) that ensured the Federal Clean Water Act would be the law used as the determining factor in exempting use of munitions for military training activities.

AKDEC can only support the HRES CS as it took months to approve the current proposal through EPA. The letter from the Division of Water, included in the packet, is very helpful in understanding the context for this legislation.

HB185

A problem was created when the AK Clean Water Act (CWA) was amended in 2008 to its current form: The State's long-standing comprehensive military munitions exemption, AS sec.46.03.100(e)(7). The current language ("unless it results in a discharge into waters of the United States") potentially allows for a more expansive, unintended application of the AK CWA than the federal CWA, due to the many and varying interpretations of "waters of the US." The proposed amendment in 185 ("unless otherwise regulated by the Federal Water Pollution Control Act") will maintain the State's primacy and, at the same time, allow AK military ranges to comply with State law by operating in accordance with federal law. If not passed, there exists the possibility that military ranges would need to curtail operations because of unique interpretations of AK law, even if the ranges are in compliance with federal law.

And so, the bottom line is: with 185, we are maintaining Primacy, protecting the environment, and allowing military exercises to continue without potential legal issues.

from Rep. Wilson,
delivered to us earlier today

discharge into US water

Subject: RE: HB 185 Question

Why pushed back

Jeff,

No, the timeline for ADEC taking on primacy for munitions discharges was pushed back to October 2012. We will be assuming primacy for oil and gas, munitions and all other remaining facilities in October 2012. See the attached link for additional information.

Is ADEC only ~~hearing today~~ procedurally w/ Fed law only applying substantive law

Subject: HB 185 Question

Hello Marit and Lynn,

Last year, on April 13, Lynn testified about HB 185. According to the minutes, she "explained that DEC is taking on the permitting authority in phases and taking on munitions permitting is scheduled for October 2011."

Senator Paskvan would like to know if DEC "took on" munitions permitting last October. Please let me know the answer before today's 3:30pm Senate Resources Committee hearing on HB 185.

Thanks,
Jeff

Senate District E representing Fairbanks and Fort Wainwright

Testimony of Kevin Ward: Counsel, US Army, Northern Regional Environmental Office

Overview

KEVIN WARD, Counsel, U.S. Army, Northern Regional Environmental Office, stated support for HB 185 and advised that the legislation was a collaborative effort between DEC, DMVA, the Alaska Military Force Advocacy and Structure Team (AMFAST), and the Office of the Attorney General. He said the bottom line is that the proposed amendment provides that the Alaska Clean Water Act would apply to military ranges only if otherwise required by the federal Clean Water Act. The military believes this is necessary. He explained that when DEC sought U.S. EPA approval of its Clean Water Act program, EPA said the blanket exemption needed to be changed and in 2008 the Legislature changed the statute to its current form.

As previously noted, he said, the current statute provides an exemption for military and other ranges unless there is a discharge into waters of the U.S. The difficulty for the military is that the phrase "waters of the United States" is the subject of numerous ongoing debates and discussions as to its meaning and scope, including a recent U.S. Supreme Court decision. In addition, there may be an inconsistency between the state Act and the federal Act if the federal law changes and the state law continue to use the phrase "discharge into waters of the United States" for purposes of determining whether a permit is required for a military range.

MR. WARD stated that the question of whether or not a permit would be required of a military or other range is not determined by HB 185. What the bill does is provide comfort to the Department of Defense that the issue will be decided pursuant to and in accordance with the federal Clean Water Act. This will give the military consistency in Alaska and other states as to whether or not it needs to have permits for its ranges. He emphasized that the bill does not affect primacy or EPA approval of the state program, it does not decide whether a permit is or is not required and if a permit is required it will not affect what standards Alaska could impose pursuant to its Clean Water Act program. The only thing the bill does is to say that whether a permit is or is not required will be determined in accordance with the federal Clean Water Act.

discharge into U.S. waters

Higher State Permit Standards

CO-CHAIR PASKVAN asked if the State of Alaska could require a permit for a higher standard than under the current federal process.

MR. WARD answered the state could ask the military to ask for such a permit under existing law or pursuant to HB 185. Whether or not that permit would be required under current statute would be whether waters were discharged into U.S. waters.

What's the difference between Fed + State law

Primacy

CO-CHAIR PASKVAN asked if Alaska's laws will be primary if there is inconsistency between the state and federal acts.

MR. WARD replied, under HB 185, the question of whether or not a permit is required would be determined in accordance with an interpretation of the federal act.

CO-CHAIR PASKVAN asked what the interpretation of the federal law would be if there was an inconsistency and the state wanted to require a permit.

MR. WARD replied that issue has been discussed and remains unresolved with regard to military ranges.

CO-CHAIR PASKVAN asked if the ultimate conclusion could be that the state's voice in that process could potentially be eliminated.

MR. WARD said no; Alaska's voice cannot be eliminated because it retains primacy and would still be the permitting authority. He offered the opinion that Alaska could assert whatever position it deemed appropriate under the circumstances and seek to require a permit.

CO-CHAIR PASKVAN asked if he was using the word "primacy" in the sense of the issuing agency being a state agency as opposed to a federal agency.

MR. WARD replied he was using the term in the manner the Chair summarized.

Interpretation of "discharge into waters of the United States"

SENATOR WIELECHOWSKI asked how current Alaska law and the federal Clean Water Act differ with respect to "discharge into waters of the United States."

MR. WARD explained that the phrase "waters of the United States" is used in the federal Clean Water Act and the interpretations of that phrase are not always consistent. The U.S. Supreme Court examined the issue and came up with three different opinions.

The debate often involves whether or not a particular water body is a water of the United States. The fact that there's an ongoing debate as to what the phrase means is one reason the military supports removing the phrase from the statute and replacing it with the "Federal Water Pollution Control Act."

SENATE RESOURCES
Apr 13, 2011

HB 185-EXEMPT DISCHARGES FROM USE OF MUNITIONS

3:38:10 PM
CO-CHAIR PASKVAN announced HB 185 to be up for consideration. [CSHB 185(RES) 27-LS0506\X was before the committee.]

REPRESENTATIVE TAMMIE WILSON, sponsor of HB 185, highlighted the important technical changes that House Resources committee substitute made to the original bill. On page 2, lines 19-20, the phrase "or service" was added to clarify that the U.S. Coast Guard is to be included in the provision. Also, the Federal Water Pollution Control Act was referenced differently, but the content was unchanged.

REPRESENTATIVE T. WILSON explained that in 2008, the State of Alaska sought Environmental Protection Agency (EPA) approval of its Clean Water Act program. The exclusion for active military ranges under Title 46 was amended so as to exclude the firing or other use of munitions in training activities conducted on active ranges, including those operated by the Department of Defense or military agencies unless it results in a discharge into U.S. waters. She pointed out that HB 185 was vetted by the EPA, the Alaska Department of Environmental Conservation (DEC), the Department of Defense, and the Alaska Department of Military & Veterans Affairs (DMVA). AS 46.03.100(e)(7) clarifies that military exercises on ranges are not restricted other than instances where the Federal Water Pollution Control Act ("Clean Water Act") would apply. This, she stated, reduces potential litigation in trying to interpret waters within the U.S.

3:41:16 PM
SENATOR FRENCH asked if the list in AS 46.03.100(e)(1)-(7) describes instances for which a state water discharge permit is not needed.

REPRESENTATIVE T. WILSON said that is correct.

SENATOR FRENCH asked if getting a state permit for firing munitions only became an issue once the state assumed primacy for water permits.

REPRESENTATIVE T. WILSON said that is correct.

CO-CHAIR PASKVAN clarified that version X was before the committee.

MAJOR GENERAL THOMAS H. KATKUS, Commissioner, Department of Military & Veterans Affairs (DMVA) and Adjutant General for the State of Alaska, stated that HB 185 is another step to show support for the presence of the military in Alaska. The bill attempts to clarify and offset potential challenges and double permitting related to the development of ranges in Alaska. It is not an effort to reduce constraints or lessen standards that would in any way adversely affect the Alaska environment. HB 185 would not in any way reduce Alaska's primacy in how it determines quality.

MCHUGH PIERRE, Deputy Commissioner, Department of Military & Veterans Affairs (DMVA) added that HB 185 is part of the overall effort and intent to enhance the open working relationship with the military and to keep the current military industrial complex here in Alaska. He offered his understanding that the 2008 legislation changed that intent and potentially added to bureaucracy associated with growing every sector of the business world.

CO-CHAIR PASKVAN thanked Commissioner Katkus for meeting earlier to discuss the issue of state primacy. He noted that according to the House Journal, the intent of the 2008 amendment was "an essential component of the state's effort to receive primacy from the Environmental Protection Agency." He said he wanted to make sure that HB 185 didn't have unintended consequences that would lessen the state's ability to regulate as necessary.

3:46:22 PM

SENATOR WIELECHOWSKI observed that the debate in 2008 was that the state really wanted primacy and this legislation appears to back away from that and say, in this case, the state really didn't want primacy. He asked Commissioner Katkus to talk about levels of munitions and types of chemicals that would be used in

the ordnances.

COMMISSIONER KATKUS replied he couldn't talk to the types of chemical compounds or the components, but the rounds would be the current technology employed on the battlefield. This includes everything from small arms munitions to artillery rounds for aerial gunnery ranges to bombing ranges.

SENATOR WIELECHOWSKI noted that over the years there have been situations at Fort Richardson and Eagle River Flats in particular where thousands of waterfowl died, and the probable cause was chemicals from explosive ordnances. He said he therefore wanted to make sure that this legislation in no way lowers standards and increases the ability to put dangerous substances into the water or air.

COMMISSIONER KATKUS replied the military has become a better steward of the environment every year and is now almost a renowned gold standard for environmental protection. He offered his understanding that the white phosphorus issue on the Eagle River Flats was a long-term problem that was not recognized until waterfowl numbers began to drop. But once the problem was identified, the military was quick to address and fix the problem. He reiterated that HB 185 is not an effort to reduce [water or air quality] standards. It's in everyone's best interest to maintain and continue to meet those high standards. He suggested that the DEC representative could specifically address the white phosphorus issue on the impact area for Fort Richardson.

3:49:15 PM

LYNN KENT, Director, Water Division, Department of Environmental Conservation (DEC), said she couldn't speak to the remediation efforts at Eagle River Flats, but she could say that the bill does not represent DEC backing off on primacy for its Clean Water Act permitting program. What the bill does is ensure that the state program implemented under the Clean Water Act remains consistent with the Act over time.

SENATOR WIELECHOWSKI asked if Alaska law was similar to the federal Clean Water Act and if she could describe any differences.

MS. KENT explained that in order for a state to have primacy to

implement a permitting program under the federal Clean Water Act, the state program has to be as stringent as the federal program. Thus, the Alaska program virtually mirrors the federal Clean Water Act program, she said.

SENATOR WIELECHOWSKI noted that when the debate on primacy took place several years ago, one big concern was that the federal government wasn't hearing cases quick enough. He asked if DEC continued to have that concern.

MS. KENT replied there certainly has been delay in EPA review and approval of water quality standards upon which DEC bases permits, but that problem is nationwide and not specific to Alaska.

SENATOR FRENCH asked who will be issuing permits to the U.S. military for firing ranges under the bill.

MS. KENT replied the permitting authority has been delegated to DEC if the use of the firing range requires a permit under the Clean Water Act.

SENATOR FRENCH asked if the federal Clean Water Act will require a permit for the ranges that are under consideration here. He understands the range outside of Fairbanks is the primary consideration.

MS. KENT explained that DEC is taking on the permitting authority in phases and taking on munitions permitting is scheduled for October 2011. She wasn't familiar with the range he referenced, but DEC will be responsible for issuing a permit for any facility that requires one under the Clean Water Act.

CO-CHAIR PASKVAN asked if DEC will be enforcing federal law, which set the minimum standards.

MS. KENT answered yes.

CO-CHAIR PASKVAN asked what process the state will follow if this law passes and the state's interests weren't parallel with the federal minimum standards.

MS. KENT replied this law, as proposed, will not interfere with DEC meeting the minimum requirements under the Clean Water Act.

The bill will make sure that the state is consistent with the Clean Water Act.

CO-CHAIR PASKVAN asked how DEC would engage in the process under the proposed law if the State of Alaska were to advance standards that were higher than the federal minimum.

3:54:58 PM
MS. KENT said the Clean Water Act requires state programs to be at least as stringent as the federal program and the provision under consideration in HB 185 is neither more nor less stringent than the Clean Water Act requires.

CO-CHAIR PASKVAN asked if the State of Alaska can determine that its interests are such that greater protection would be warranted.

MS. KENT replied the state can have a more stringent program than is required by the federal Clean Water Act, but the bill doesn't propose that at present.

CO-CHAIR PASKVAN asked if the state could impose more stringent requirements than the federal requirements if this bill were to pass.

MS. KENT replied HB 185 would not prevent the Legislature from imposing more stringent requirements in the future.

CO-CHAIR PASKVAN asked if DEC could issue a permit if it wasn't allowed under the federal government system.

MS. KENT answered no and added that the state already regulates discharges that are not covered by the Clean Water Act. For example, DEC has a program that regulates discharges to the land surface and to ground water, neither of which is required by the Clean Water Act.

CO-CHAIR PASKVAN asked if she was comfortable that the state would remain primary with respect to the standards that will be applied in the state.

MS. KENT answered yes.

SENATOR WIELECHOWSKI expressed confusion; his understanding of

the reason for the bill was so the military could bypass DEC and instead go directly to the federal government for these permits. He asked if this was incorrect.

MS. KENT replied she could understand the confusion if the bill is considered by itself, but other statutes give DEC the authority (and it has received approval) to implement the federal program. HB 185 does not change the fact that the military will have to both seek the application and get the permit from DEC.

SENATOR WIELECHOWSKI questioned the need for the bill.

MS. KENT responded DEC's perspective is that the proposed language change makes the state's program consistent with the Clean Water Act right now and as it may change in the future.

SENATOR FRENCH asked if she had learned anything that might cause her to change her statement since she wrote to Representative Paul Seaton and Representative Eric Feige on March 21, 2011 stating:

> CSHB 185 would only require the state to issue a permit if it is required to do so under the CWA. It is a subtle, but important change that will retain the state policy to exempt ranges from permitting requirements for munitions discharges to the land and for discharges to waters that are not required to have a permit under the CWA.

MS. KENT replied that's still accurate; the language in subsection (e) has exemptions for a number of operations that do not need a state permit. In 2008 DEC asked for an amendment to AS 46.03.100 to make the statute consistent with the Clean Water Act, which requires a permit for certain munitions discharges. It was necessary for DEC to have the authority to issue those permits under the terms of the Clean Water Act in order to have primacy for the state program. It's been long-standing state policy that munitions use and a few other things are exempt from state permitting requirements and it was necessary to rectify that in order to receive primacy to implement the permitting program. HB 185 basically clarifies the language.

4:01:22 PM

SENATOR FRENCH said he too labored under a misconception, but he

now understands that the purpose of the bill is to retain primacy and maintain the long-standing exemption for munitions ranges. He added that it is his belief that if the bill were to pass the military would not need a permit in order to conduct training exercises in many areas of Alaska ranges.

MS. KENT reiterated that DEC has the permitting authority even though the Clean Water Act is referenced.

CO-CHAIR PASKVAN asked what DEC's original concerns were with the law that was passed in 2008.

MS. KENT replied the changes were proposed by the Department of Defense to clarify that when a permit is required under the federal Clean Water Act, one will also be required under the state permitting program.

4:03:25 PM
ALPHEUS BULLARD, Attorney, Legislative Legal Services, Legislative Affairs Agency, speaking via teleconference, introduced himself and said he was available to answer questions.

CO-CHAIR PASKVAN asked if he followed the discussion on state primacy and the state's ability to issue a standard that is different than the federal minimum standard.

MR. BULLARD said yes.

CO-CHAIR PASKVAN asked him to offer his thoughts.

MR. BULLARD said he didn't have thoughts on the primacy issue, but was available to answer specific questions.

SENATOR FRENCH reviewed the proposed new language and asked if he had reviewed 33 U.S.C. 1251-1376 of the Clean Water Act.

MR. BULLARD answered yes.

SENATOR FRENCH asked if anything in those federal statutes will require issuance of a permit before firing or use of munitions in training activities conducted on active ranges.

MR. BULLARD said the definition of "waters of the U.S." found in

regulation in 18 AAC 83.990(77) is the same as the definition under the Clean Water Act. He offered his belief that changing the language to read, "the discharge into waters regulated under 33 U.S.C." would clarify that the waters and the discharge into the waters is the concern, not the firing or other use of munitions. As the law stands now, his understanding is that what would be regulated would be the same.

SENATOR FRENCH asked if he means without the passage of HB 185.

MR. BULLARD explained that the definition of the term "waters of the U.S." is the same right now under both the Clean Water Act and state regulations. However, it's very possible that the two definitions will differ in the future.

4:07:06 PM
SENATOR WIELECHOWSKI asked, when he refers to the Clean Water Act, if he is referring to the federal Water Pollution Control Act.

MR. BULLARD answered yes.

SENATOR WIELECHOWSKI asked Mr. Bullard to explain what the bill does.

MR. BULLARD replied the effects and purpose of the legislation were not clear to him.

4:08:31 PM
KEVIN WARD, Counsel, U.S. Army, Northern Regional Environmental Office, stated support for HB 185 and advised that the legislation was a collaborative effort between DEC, DMVA, the Alaska Military Force Advocacy and Structure Team (AMFAST), and the Office of the Attorney General. He said the bottom line is that the proposed amendment provides that the Alaska Clean Water Act would apply to military ranges only if otherwise required by the federal Clean Water Act. The military believes this is necessary. He explained that when DEC sought U.S. EPA approval of its Clean Water Act program, EPA said the blanket exemption needed to be changed and in 2008 the Legislature changed the statute to its current form.

As previously noted, he said, the current statute provides an exemption for military and other ranges unless there is a

discharge into waters of the U.S. The difficulty for the military is that the phrase "waters of the United States" is the subject of numerous ongoing debates and discussions as to its meaning and scope, including a recent U.S. Supreme Court decision. In addition, there may be an inconsistency between the state Act and the federal Act if the federal law changes and the state law continues to use the phrase "discharge into waters of the United States" for purposes of determining whether a permit is required for a military range.

MR. WARD stated that the question of whether or not a permit would be required of a military or other range is not determined by HB 185. What the bill does is provide comfort to the Department of Defense that the issue will be decided pursuant to and in accordance with the federal Clean Water Act. This will give the military consistency in Alaska and other states as to whether or not it needs to have permits for its ranges. He emphasized that the bill does not affect primacy or EPA approval of the state program, it does not decide whether a permit is or is not required and if a permit is required it will not affect what standards Alaska could impose pursuant to its Clean Water Act program. The only thing the bill does is to say that whether a permit is or is not required will be determined in accordance with the federal Clean Water Act.

CO-CHAIR PASKVAN asked if the State of Alaska could require a permit for a higher standard than under the current federal process.

MR. WARD answered the state could ask the military to ask for such a permit under existing law or pursuant to HB 185. Whether or not that permit would be required under current statute would be whether waters were discharged into U.S. waters.

4:14:22 PM
CO-CHAIR PASKVAN asked if Alaska's laws will be primary if there is inconsistency between the state and federal acts.

MR. WARD replied, under HB 185, the question of whether or not a permit is required would be determined in accordance with an interpretation of the federal act.

CO-CHAIR PASKVAN asked what the interpretation of the federal law would be if there was an inconsistency and the state wanted

to require a permit.

MR. WARD replied that issue has been discussed and remains unresolved with regard to military ranges.

4:16:03 PM
CO-CHAIR PASKVAN asked if the ultimate conclusion could be that the state's voice in that process could potentially be eliminated.

MR. WARD said no; Alaska's voice cannot be eliminated because it retains primacy and would still be the permitting authority. He offered the opinion that Alaska could assert whatever position it deemed appropriate under the circumstances and seek to require a permit.

CO-CHAIR PASKVAN asked if he was using the word "primacy" in the sense of the issuing agency being a state agency as opposed to a federal agency.

MR. WARD replied he was using the term in the manner the Chair summarized.

SENATOR WIELECHOWSKI asked how current Alaska law and the federal Clean Water Act differ with respect to "discharge into waters of the United States.

MR. WARD explained that the phrase "waters of the United States" is used in the federal Clean Water Act and the interpretations of that phrase are not always consistent. The U.S. Supreme Court examined the issue and came up with three different opinions. The debate often involves whether or not a particular water body is a water of the United States. The fact that there's an ongoing debate as to what the phrase means is one reason the military supports removing the phrase from the statute and replacing it with the "Federal Water Pollution Control Act."

CO-CHAIR PASKVAN announced he would hold HB 185 in committee.

Follow Up Flag: Follow up
Flag Status: Flagged

Thanks for your reply Mary. I have read all of the committee minutes and attended the Senate Resources Committee hearing last year (I was staff to Senator Wielechowski then) and returned to listen and testify on Tuesday. The bill sponsor and presenters (AK DEC and DNR on Tuesday) were not able to answer Senator Paskvan's questions as to what the bill actually does (at the hearing last year, and again Tuesday).

Today I've had conversations with quite a few people, including Rep. T. Wilson, Clare Mendelsohn (Department of Defence Regional Environmental Coordinator and author of the letter from DOD in the bill packet Tuesday), and Dianne Soderlund (Director of the Alaska Operations Office for EPA).

From Clare Mendelsohn (who is on detail at EPA now) I understand that Alaska is the only state that covers waters in our state standards relating to munitions and ranges so this legislation is precedent setting and that is why the DOD is so interested in getting it past.

From Dianne Soderlund at EPA I understand that because federal agencies don't issue opinions or comments on state legislation and because nobody has asked her any questions about the bill, she hasn't taken much of a look. I explained that the language that this bill seeks to change is language that was added in HB 149 (passed in 2008 -See highlighted section below.) Ms. Soderlund said this was interesting and that she would need to look into this to see how HB 185 would impact Alaska's authority to administer Clean Water Section 402, but she didn't know that she would have an answer by this afternoon.

MAYBE the bill is just fine and doesn't harm Alaska and Alaskans ability to protect water quality, but I am not yet convinced nor have I found anyone who can/will positively say what the bill does. Until the Senators know, it seems hasty to pass the legislation.

http://www.legis.state.ak.us/basis/get_single_minute.asp?ch=H&beg_line=00430&end_line=01059&session=25&comm=RES&date=20070312&time=131301:42:18 PM

LYNN TOMICH KENT, Director, Division of Water, Department of Environmental Conservation (DEC), presented background for HB 149. She explained that the federal Clean Water Act (CWA) requires that all wastewater discharges to surface waters be permitted under the National Pollutant Discharge Elimination System (NPDES) Permitting Program. The CWA intends for states to implement or to have primacy for this program, with the Environmental Protection Agency (EPA) serving in an oversight role over the states that implement the program. There are presently 45 states that have primacy for the NPDES program. In Alaska, the EPA is currently the NPDES permitting authority and DEC plays a secondary role whereby DEC certifies that all of

EPA's permits will comply with Alaska's water quality standards. The DEC also issues permits for those smaller discharges that EPA does not "get around" to issuing permits for.

MS. KENT informed the committee that in 2005 the Alaska State Legislature, through Senate Bill 110, directed DEC to take all actions necessary to assume authority for the NPDES discharge permitting authority, including responsibility for issuing the permits and for ensuring compliance with the permits. As part of DEC's work with EPA to transfer primacy to the state, EPA has identified several areas where changes to the state statutes are required in order for DEC to have the full complement of statutory authorities that are needed for DEC to assume primacy. Those state authorities are adjusted by HB 149 to match the federal authorities. Each change addresses a specific concern that is raised by EPA as something that must be fixed.

Subject: HB 185 and Alaska water quality

Mary,

The Department of Defense has a long-standing effort to gain exemption from many important federal environmental laws including Marine Mammal Protection Act, Endangered Species Act, Clean Air Act, Clean Water Act... They have had some successes to date. I believe that the reason they are seeking to move from state to federal jurisdiction for water quality regulation now is that they are positioning for securing federal Clean Water Act exemptions (which may already be in place - I couldn't find/figure this out).

If HB 185 does not pass, they will be subject to Alaska Clean Water standards and permitting, even if they gain an exemption from Congress.

If HB 185 passes Alaskans will have less or no recourse if/when military munitions/firing range activities threaten water quality, fisheries, etc.

I do not believe that the bill sponsor and proponents have been forthright with this bill. Despite repeated efforts by Senator Paskvan to get a clear answer on how the federal law compares with the state law, there has been no answer. I now believe that is because passing HB 185 will seriously jeopardize Alaska's ability to protect water quality.* I did not know abou this situation when I was before Senate Resources on Tuesday. It took hours of digging online to uncover the motivation for this bill.

*I have not yet had the time to look into the aspect of all of the contaminated sites in Alaska (as of 2004, in Alaska, 79 installations and 264 MRSs have been identified for remediation that have impacted between 1 and 3 million acres) to see if the military has the option to keep old ranges "active" to sidestep cleanup requirements but suspect that could be another motivation.

This link to the Federation of American Scientists has a whitepaper that provides some background from 2007 on the DOD effort for exemptions:

http://www.fas.org/sgp/crs/natsec/RS22149.pdf

I appreciate any help you and Senator Wagoner can provide in seeing that, at least, if this bill MUST be passed it is done so after a hearing the brings forth the complete and honest story. Ideally though, I hope that Senator Wagoner will help to kill this effort to degrade Alaska's right to protect our waters.

Regards,

Karla Hart

523-6996

MEETING DATE: February 21, 2012

Jeff

1. Switch gavel from Paskvan

2. Under bills previously heard, take up SB 176.
   a. Joanna Bales online comment
   b. Remove objection – ask for motion out of committee with individual recommendations – fiscal notes.

3. HB 144 Report on Fishing Stream Access

   a. This is the initial presentation of the bill in Senate Resources – it has no other committee referrals.
   b. Ask for motion on the bill – object for discussion
   c. Ask sponsor to present
      i. Rep. Les Gara – he should be on offnet

   d. Go to public hearing
      i. Go to Offnet
      ii. Go to LIO's
      iii. Go to Juneau
   e. CLOSE PUBLIC HEARING

   f. Remove objection – ask for motion out of committee with individual recommendations – fiscal notes.

TAKE AT EASE – SIGN BILL – CHANGE TESTIFIERS

MEETING DATE: February 21, 2012

4. HB 185 Exempt Discharges from use of Munitions

   a. This is the second presentation of the bill in Senate Resources – heard last session - it has no other committee referrals.
   b. Ask for motion on the bill – object for discussion
   c. Ask sponsor to present
      i. Rep. Tammy Wilson – Brandon Brefczynski

   d. Go to public hearing
      i. Go to Offnet
      ii. Go to LIO's
      iii. Go to Juneau
   e. CLOSE PUBLIC HEARING

   f. Remove objection – ask for motion out of committee with individual recommendations – fiscal notes.

5. Gavel out – announce time.

Dear Senator Wagoner and Senator Paskvan

Subject: HB 340 "An Act relating to the reservation of certain mining claims from all uses incompatible with the purposes for establishing the Petersville Recreational Mining Area."

Please consider scheduling this legislation for a hearing at your earliest convenience. Providing my office with some lead time will be greatly appreciated as we would be able to have Ms. Michele Stevens available to answer any questions the committee may have. Attached is a committee package.

Included are the following:

- Letter of Request
- Current version of the bill.
- Sponsor statement.
- 2012 Fiscal Notes
- Supporting Documents
- Names of persons expected to testify (will depend on hearing date).

Please feel free to contact myself or my aide Rex Shattuck (465-2696) with any questions.

Thank you for your consideration.

Sincerely,

Mark Neuman

MEMORANDUM March 23, 2012

SUBJECT: Amending the land description for the Petersville Recreational Mining Area (HB 340; Work Order No. 27-LS1342\A)

TO: Representative Mark Neuman
Attn: Morgan Hopson

FROM: Donald M. Bullock Jr.
Legislative Counsel

HB 340 amends the description of land and water that are included in the Petersville Recreational Mining Area (Petersville). You asked whether this bill violates the prohibition against local and special legislation in art. II, sec. 19, Constitution of the State of Alaska.[1] Passage of the bill is not prohibited by art. II, sec. 19.

The establishment of the area is authorized by art. VIII, sec. 7, Constitution of the State of Alaska. Section 7 authorizes the legislature to acquire special purpose sites and to preserve and administer the sites for the "use, enjoyment, and welfare of the people."[2] A description of the area is consistent with acquiring and administering a specific area for the people, and HB 340 amends the description of Petersville.

While a description of any limited area in the state is necessarily local, the constitutional authority to acquire and administer Petersville necessarily requires a description of the area within Petersville. HB 340 amends the description of that area. Given the context, the local or special prohibition is likely inapplicable.

---

[1] Article II, sec. 19. Local or Special Acts. The legislature shall pass no local or special act if a general act can be made applicable. Whether a general act can be made applicable shall be subject to judicial determination. Local acts necessitating appropriations by a political subdivision may not become effective unless approved by a majority of the qualified voters voting thereon in the subdivision affected.

[2] Article VIII, sec. 7. Special Purpose Sites.
The legislature may provide for the acquisition of sites, objects, and areas of natural beauty or of historic, cultural, recreational, or scientific value. It may reserve them from the public domain and provide for their administration and preservation for the use, enjoyment, and welfare of the people.

You may wish to review the reasons for excluding the mining claims listed in the bill. Although the designation of the specific area may be necessary for the establishment and administration of the area, the basis for excluding previously included land and water should be consistent with the management of Petersville for the people of the state.

If I may be of further assistance, please advise.

Re: Your Letter of January 29, 2010 on the Petersville Recreational Mining Area

Dear Senator Huggins:

Your letter of January 29, 2010 asked what steps would be needed to reverse the recreational mining designation for the southern portion of the Petersville Recreational Mining Area. The Petersville Recreational Mining Area was enacted under House Bill 46 in 1997 and consists of two areas near Petersville. One area now open for recreational mining is referred to as the northern area and covers 300 acres. The other area is not yet state owned, therefore it is closed to recreational and other mining. This is referred to as the southern area covering 200 acres. The southern area is closed because the federal Bureau of Land Management (BLM) has not yet conveyed the land to the State. The holdup on conveyance has been because of a lease that the BLM is issuing to Michele Stevens for 5 acres within this southern area. We believe that the lease is scheduled to be issued in the near future. Since 1997, the northern recreational mining area has not had much use due in part to difficult access.

To terminate the legislative designation of the southern area, the enabling statute (AS 41.23.630) will need to be modified. In AS 41.23.630 – Petersville Recreational Mining Area, the following verbiage under Section (f)(1) would have to be removed from the statute in order eliminate the southern portion of the Petersville Recreational Mining Area:

> [SECTIONS 21 AND 28; ALDER NO. 1; ALDER NO. 2; COTTONWOOD NO. 3; COTTONWOOD NO. 4; SEATTLE NO. 2; CONTACT NO. 1; CONTACT NO. 2; WILLOW CLAIM; KORTER BENCH.]

If the above statutory language were removed, the Commissioner of DNR would then need to issue a Mineral Opening Order to make these lands open to mineral entry (under AS 38.05.185). The land transfer from the BLM would also need to occur before the lands can be open to mineral entry, although "At Risk" claims could be staked by anyone prior to the land transfer. These at risk claims would

convert to regular state claims following conveyance of the lands to the State by the BLM.

We believe that these recreational mining areas represent a unique opportunity for weekend enthusiasts and visitors to our State to enjoy the outdoors and the fun of non-mechanized mining. If the area is open to mining claims, we expect that a few recreational suction dredge miners may object to then being locked out by the new claimants that would stake mining claims. Other than Ms. Stevens, DNR has not heard from any other members of the public that the Recreational Mining Area should be terminated. In addition, there is no assurance that Michelle Stevens would be the first to stake claims for the law is in favor of whoever stakes the claim first after the land becomes open. It is likely that a number of claimants would end of with conflicting claims. It is likely that the Department of Fish and Game may have concerns about any large-scale mining on the active portion of the Creek.

Please feel free to contact me if you would like additional information.

Sincerely,

Dick Mylius, Director
DNR Division of Mining, Land and Water

The Honorable Paul Seaton
House of Representatives
Alaska State Capitol, Room 102
Juneau, Alaska 99801

Re: HB 340

Dear Representatives Feige and Seaton:

The House Resources Committee requested the Department of Natural Resources (DNR) and the Department of Law (DOL) to provide answers to legal questions about House Bil No. 340. This bill relates to the reservation of certain mining claims from all uses incompatible with the purposes for establishing the Petersville Recreational Mining Area. Much of the land in question, although still owned by the federal government, has been selected by the state to fulfill the state entitlement from the federal government.

First, the Committee asked whether DNR and DOL can assure the Legislature that mining locations recently made by "Golden Girls LLC" (Michele Stevens) are valid locations on state selected lands, such that if HB 340 passed and Mineral Closing Order No. 674 were lifted, Golden Girls LLC would be in possession of these locations once the state-selected land is transferred to the State of Alaska. The DNR and DOL cannot guarantee to the Legislature that these locations would be considered valid in such an instance.

The Alaska Supreme Court has held that a locator of state-selected lands "acquired mining rights at the time of location." *Moore v. Dept. of Natural Res.*, 992 P.2d 576. 581 (Alaska 1999). Here, at the time of the location by Golden Girls LLC, Alaska Statute 41.23.630 was in effect. Alaska Statute 41.23.630(d) states that, "[t]he Petersville Recreational Mining Area *is* closed to mineral entry under AS 38.05.185-38.05.275" (emphasis added). This language could be interpreted to mean that at the time Golden Girls LLC located claims, the area was closed to such "at-risk" staking (described in AS

38.05.275). Therefore, the DNR and DOL cannot assure the legislature that the recent "Golden Girls LLC" locations would be considered valid if HB 340 passed and Mineral Closing Order No. 674 were lifted, as AS 41.23.630 was in full effect at the time of location.

Second, the Committee asked whether the Sponsor could draft legislation that directly reinstates certain mining locations to Michele Stevens. Such legislation could be legally problematic. There could be an issue regarding Article II, Section 19 of the Alaska Constitution, which states that, "[t]he legislature shall pass no local or special act if a general act can be made applicable." The Alaska Supreme Court evaluates "special acts" constitutional challenges with a test which examines the "legislative goals and the means used to advance them to determine whether the legislation bears a fair and substantial relationship to legitimate purposes." *Baxley v. State*, 958 P.2d 422, 430 (Alaska 1998) (internal citations and quotations omitted). Although property is unique in nature, legislation relating to mining claims may at least have to include similarly-situated mining claims.

Please feel free to contact me at 269-5211 or Ed Fogels at 269-8423 with any additional questions or concerns.

Sincerely,

MICHAEL C. GERAGHTY
ATTORNEY GENERAL

FINDING OF THE COMMISSIONER
AS 38.05.185(a)

Mineral Closing Order No. 674

In order to have flexibility in pursuing development of a recreational mining area for the general public, the Division of Mining submitted a request to the Division of Land in March of 1993 for closing to new locatable mineral entry, pursuant to AS 38.05.185, approximately 123 abandoned federal mining claims located in the Peters Creek drainage in the vicinity of Petersville. Total acreage involved approximated 2460 acres and involved U.S. Mineral Surveys No. 2384, 2403, and 2451.

The land surrounding the mining claims, selected by the State of Alaska, was tentatively approved by the Bureau of Land Management (BLM) for transfer to the State. However, the subject federal mining claims were not tentatively approved because of ongoing litigation between the claim owners and BLM. A final court ruling agreed with BLM that the mining claims are abandoned.

Partially as a result of discussions with parties opposed to portions of the original closure proposal, the Division of Mining reconsidered the closure boundaries, reducing it to approximately 520 acres. In conjunction with support from the Alaska Miners Association and other agencies and individuals for closing the area described in Mineral Closing Order (MCO) No. 674 and proceeding with establishing the recreational mining area, the Division of Mining has requested closing the land described in Attachment A.

A recreational mining area and the activities associated therewith would constitute a significant use of the surface estate which would be incompatible with commercial mining and mineral location. Conflicts could be created on the land between the surface and potential subsurface users. MCO 674 would become effective on the date the land is accepted by the State from the Bureau of Land Management by tentative approval or patent, whichever comes first, making null and void any mining claims staked on the land prior to that date.

It is my finding, in accordance with AS 38.05.185(a), that commercial mining and mineral location would be incompatible with the intended surface use of the subject land and therefore, the best interest of the State and its residents is served by closing the land identified in MCO 674 to new locatable mineral entry under the locatable mineral and mining laws of the State of Alaska: Mineral Closing Order No. 674.

December 2, 1996

Dear Alaskan:

I am asking for your comment on draft regulations that concern mining-related fees and activities. For the most part, the proposed changes are clarifications and housekeeping changes. The regulations do contain some new material including new fees for processing mining-related applications, extension of leasehold location requirement to new municipal and charitable conveyances, and a definition of "successor in interest" for the purposes of describing who may not re-stake a location within one year of its abandonment.

If you would like to comment, please do so in writing before **February 14, 1997.** We will accept comments by letter, fax, or e-mail at the address below.

Jules V. Tileston, Director
Division of Mining and Water Management
3601 C Street; Suite 800
Anchorage, Alaska 99503
Tele: (907) 269-8600
Fax: (907) 563-1853
E-mail: JulesT@dnr.state.ak.us

We are asking for your review of the proposed regulations and have prepared this packet to aid your review and comment. We have included an explanation of the proposed changes and a draft of the proposed regulation changes. In addition to any comments on the draft regulations, please indicate any other areas of the department's mining regulations that you believe need change. If you have questions, please do not hesitate to call me, or call Bob Loeffler or Kerwin Krause on my staff. They can also be reached at the address and phone number above.

The regulations were developed in response to review by Division of Mining and Water Management staff, and after working with individuals and groups that have suggested changes to the Division.

Thank you for your consideration. Please write with comments or call with questions.

Sincerely,

Jules V. Tileston,
Director

***Sec. 15. - AS 38.05.275 is amended to add a new subsection (d) to read as follows:**

AS 38.05.275 RECOGNITION OF LOCATIONS

(d) If a mineral location is made in a disputed navigable waterway such as a river bottom where there is likely to be litigation between the state and federal government over ownership, the mineral location shall be treated as located on "state selected land", and will not become a mining claim until such time as the dispute is resolved or court decision rendered granting the state title to the river bed area.

Justification: *To treat mining claims located in certain disputed navigable waters where there was there was likely to be litigation between the state and federal government over ownership The proposed solution is treat these disputed state mining claims in the same manner as claims located on land selected by the state. (The claim is valid only at such time as the state gets T.A from BLM. In the mean time no mining can be done and the claim is invalid if the area is not T.A ed or if the land is closed to mineral entry under state law/regulation prior to T.A.)*

***Sec. 16. - AS 41.23 Multiple Use Management of Public Resources is amended to add a new recreational mining area to Sections 600 - 625 as follows:**

AS 41.23.600 PURPOSE.

The purpose of AS 41.23.600 - 41.23.62[0]5 is to establish the areas described in AS 41.23.620 and AS 41.23.625 as the Caribou Creek Recreational Mining Area and Petersville Recreational Mining Area, respectively. The Caribou Creek and Petersville Recreational Mining Areas [IS] are established to provide for [A] public recreational mining areas to permit public recreational activities and to allow other multiple use activities to continue as long as the activities do not detract from the primary purpose for the establishment of the Caribou Creek and Petersville Recreational Mining Areas.

Sec. 41.23.610. MANAGEMENT AND REGULATIONS.

(a) The commissioner is responsible for the management of the surface and subsurface estate within the Caribou Creek and Petersville Recreational Mining Areas necessary to carry out the purposes of AS 41.23.600 . The commissioner shall adopt and may revise a management plan and shall adopt regulations for the management, use, and development of the Caribou Creek and Petersville Recreational Mining Areas.

(b) The management plans, including any revisions, and regulations adopted by the commissioner shall be developed in consultation with the commissioner of fish and game and the commissioner of transportation and public facilities. The management plans and regulations shall address, but not be limited to,

(1) the methods of mining permitted within the [CARIBOU CREEK R]recreational [M]mining [A]areas;

(2) the types of mining equipment that may be used within the [CARIBOU CREEK R]recreational [M]mining [A]areas;

(3) the protection of habitat within the [CARIBOU CREEK R] recreational [M]mining [A]areas; and

(4) other restrictions consistent with the purposes stated in AS 41.23.600

(c) Except as provided in this subsection, the Caribou Creek and Petersville Recreational Mining Areas [IS] are open to recreational mining under AS 41.23.600 - 41.23.62[0]5. The commissioner of fish and game is responsible for the management of the fish and game resources and the public use of fish and wildlife resources within the Caribou Creek and Petersville Recreational Mining Areas consistent with the purposes stated in AS 41.23.600. The commissioner of fish and game shall issue a general permit to the public authorizing recreational mining activities subject to seasonal restrictions on the mining activities within specified waterbody areas necessary to maintain fishery resources within the Caribou Creek and Petersville Recreational Mining Areas.

(d) The Caribou Creek and Petersville Recreational Mining Areas [IS] are closed to mineral entry under AS 38.05.185 - 38.05.275.

(e) The commissioner shall permit the construction and realignment of the Glenn Highway by the commissioner of transportation and public facilities within the Caribou Creek Recreational Mining Area as follows:

(1) Township 20 North, Range 10 East, Seward Meridian Section 29: The centerline of the realigned Glenn Highway is described as commencing at the Southwest corner of Section 29; thence on a state plane, Zone 4 bearing of North 2 degrees 09'55/" West, along the West boundary of Section 29, 1481.55 feet to proposed centerline Station 692+58.19 and the True Point of Beginning; thence South 85 degrees 52'40/" East, a distance of 3395.32 feet to proposed centerline Station 726+53.51; thence along a curve to the left, having a radius of 916.73 feet, through an arc of 121 degrees 37'14/", a distance of 1945.93 feet to P.C.C. Station 745+99.44; thence along a compound curve to the left, having a radius of 1637.02 feet, through an arc of 30 degrees 01'50/", a distance of 858.01 feet to Point of Tangent Station 754+57.45; thence North 57 degrees 31'44/" West, a distance of 453.00 feet to P.C. Station 759+10.45; thence along a curve to the right, having a radius of 996.45 feet, through an arc of 144 degrees 30'28/", a distance of 2513.18 feet to Point of Tangent Station 784+23.63 BACK = 741+49.55 AHEAD; thence North 86 degrees 58'44/" East, a distance of 1347.13 feet to Station 754+96.68, a point on the east boundary of Section 29, said point is South 2 degrees 09'55/" East, a distance

of 115.88 feet from the Northeast corner of Section 29;

(2) the right-of-way lines that cross Caribou Creek Recreational Mining Area extend varying distances from the centerline as follows:

(A) from Station 760+00 to Station 765+00 the right-of-way extends 300 feet on the left of centerline and 150 feet on the right;

(B) from Station 765+00 to Station 780+00, the right-of-way extends 300 feet on each side of the centerline;

(C) from Station 780+00 to P.T. Station 784+23.63 the right-of-way extends 300 feet on the left and 400 feet to the right of the centerline.

(f) The commissioner shall allow any construction and realignment of the Petersville Road by the commissioner of transportation and public facilities within the Petersville Recreational Mining Area as needed.

Sec. 41.23.620. CARIBOU CREEK RECREATIONAL MINING AREA.

The vacant and unappropriated state-owned land and water and the state land and water acquired in the future that lie within 100 feet of either ordinary high water or mean high tide of the banks of the creeks or rivers described in this section are designated as the Caribou Creek Recreational Mining Area, are reserved from all uses incompatible with the purposes of AS 41.23.600, and are assigned to the department for control and management:

Township 20 North, Range 10 East, Seward Meridian

(1) That portion of Caribou Creek located in Section 28: W1/2; and Section 29: E1/2

(2) That portion of the Matanuska River located in Section 32: SE1/4; and Section 33: NE1/4, NW1/4, SW1/4.

Sec. 41.23.625. PETERSVILLE RECREATIONAL MINING AREA.

Within portions of U.S. Mineral Surveys No's. 2384, 2451, and 2452, those vacant and unappropriated state-owned lands and waters conveyed and acquired in the future through Tentative Approval or Patent, whichever comes first, to the State of Alaska under General Purpose Grant State Selection AA-6909, AA-6911, AA-6912, A-051376-A ; Upon the date the State of Alaska accepts title to the above selected lands, Mineral Closing Order (MCO) 674 (described below) becomes effective and all state-selected mining claims located prior to that

date become null and void. The land within the claims listed below become designated as the Petersville Recreational Mining Area, are reserved from all uses incompatible with the purposes of AS 41.23.600, and are assigned to the department for control and management.

Township 28 North, Range 8 West, Seward Meridian

(1) The following mining claims within Sections 6-8: Daisy No. 2 (portions thereof); Hidden Treasure No. 1 (portions thereof); Hidden Treasure No. 2; Flora No. 1 and 2; Moose No. 1; Beaver No. 1; Alexander No. 1 and No. 2; Lost Shovel No. 1 and No. 2; Peters Creek No. 8, 9, 10, and 11.

(2) The following mining claims within Sections 21 and 28: Alder #1 and #2; Cottonwood #3 and #4; Seattle #1 and #2; Contact #1; Contact Claim #2; Willow Claim; Korter Bench.

Township 28 North, Range 9 West, Seward Meridian

The following mining claims within Section 1: Daisy No.2 (portion thereof); Hidden Treasure No. 1 (portion thereof).

Justification: There is significant interest in having the opportunity to pan for gold by tourists and some Alaskan residents. Most areas where there are actual naturally occurring deposits of placer gold are in private ownership or are under active mining claims/leases under state or federal law. This is an opportunity to promote tourism related expenditures associated with gold panning, especially with the forthcoming Gold Rush Centennial activities.

Background: AS 41.23.600 established, in 1990, the Caribou Creek Recreational Mining Area to provide for a public recreation mininig area and to permit public recreational activities and to allow other multiple use activities so long as the activities do not detract from the primary purpose for establishing Caribou Creek Recreational Mining Area. The Caribou Creek Area (immediately off the Glenn highway near Sheep Mountain) was withdrawn from entry under the state mining laws and reserved as a public area where a person wanting to seek gold could do so without worrying about whether they are on somebody's mining claim. Criteria used to select the Caribou Creek area were: easy access, no existing state or federal mining claims, and the presence of gold that could be recovered by panning. A wayside and trail system has been established and maintained by the Division of Lands. No visitor statistic are available, but the area is regularly used and appears to be popular.

During the process of developing criteria for selection of a recreational mining area, the department consulted the Tooheys about the operation of the Crow Creek Mine near Girdwood. Currently, the Crow Creek Mine is one of the top tourist attractions in Southcentral Alaska, with annual visits nearing 35,000 people. The Crow Creek Mine charges $5/person. Independence Mine receives about 25,000 visits and one of the underground mines there is seriously

considering the option of opening an underground mine tourist operation. One of the visitor attractions to Nome is recreational panning on the Nome beach.

In 1994, the department identified two areas at Petersville that have the qualifications to become a Legislatively Designated Recreational Mining Area like Caribou Creek. Two areas, one at Petersville and the other on the other side of the canyon, have been withdrawn from mineral entry. This action was taken with public involvement and was not opposed by the Alaska Mining Association or miners in the area. In addition to being on the approach to the Denali State Park, the history, scenery, and actual gold available for panning far exceed that of Caribou Creek. The basic intent of the withdrawal action was to secure a place where it might be possible to develop a commercial tourist concession that provides the public a high quality chance to pan for gold, provide revenues to the state, promote local enterprise, and provide an educational experience about gold mining in Alaska.

Legislative Proposal: *Amend the Caribou Creek Recreational Mining Area (AS 41.23.600) by adding a new subsection for the two road accessible areas at Petersville. In addition, we would propose that the legislation provide direction that the department should aggressively pursue the opportunity to have private enterprise develop and run a high quality public recreation experience centered around gold panning. This provision would apply to both the Caribou Creek Recreational Mining Area and Petersville, as well as any future additions. Finally, the legislation would provide that a portion of the fees collected for the recreational mining opportunity be available for appropriation as a fund to reclaim abandoned placer mining operations in area where there is documented damage to other high value public resources due to the unreclaimed condition of the mine area.*

If the concept is approved, we intend to contact the Nome city government to see if there would be an opportunity to have a Legislative Designated Recreational Mining Area there.

Senator Lyda Green:

I am sending you a package of papers on Petersville and some of the new mining regulations that you will be going over this session. The information on the papers are pretty self-explanatory. I originally asked for 240 acres but will take less. I need a minimum of 40 acres but if I have to, I can squeeze my existing buildings onto 20 acres, which would not leave me much room to expand or for the museum building. If you agree with Sec. 41.23.610. Management and regulations, I would appreciate it if you would make a yes vote on it. This would enable me to negotiate with the commissioners on a workable plan that all of the public may enjoy.

I would appreciate anything you could do to help. The papers I am enclosing are most of the records that are currently filed in the DNR office in Anchorage.

My cell ph. 1-907-242-1696, message ph 1-907-345-9655, message ph(Mother, Carol Young)1-907-733-2351. I need all of the help I can get so I am also sending copies to Representative Beverly Masek.

Re: southern section of Petersville recreation Mining area. Constituent Michele Stevens.

Michele Stevens asked me to comment on having the southern portion of the Petersville recreation area closed. Legal description:

Township 28 North, Range 8 West, Seward Meridian. The following claims within section 21 and 28: Alder # 1 and 2: Cottonwood #3 and 4: Seattle # 1 and 2: Contact Claim #1: Contact Claim # 2: Willow Claim: Korter Bench. All invalid 20 acre Federal claims, which BLM currently holds title to.

A little History: On May 14th 1985 BLM null and voided all of the original 20 acre Federal claims previously held by Jacobsen and his wife since the early 1940's. To protect his interests, on May 20 and 21st 1985, Michele's predecessor, John Jacobsen, had 40 acre "State at risk" claims staked over all of the ground where his previous Federal claims had been, including the area that would later be proposed (1997) to become the south recreation area. Jacobsen paid over $100,000.00 to have a professional staking crew help with the new staking. On Jan. 1994 Michele Stevens acquired 127, 40 acre, State at Risk claims from Jacobsen.

I believe it was May 1994 that Michele and I had a meeting with DOM about having the recreational area's gifted to the state (the null and void Federal claims were used as boundary markers because they had been surveyed for patent previously). Alaska Miners Assoc, .Yentna Mining District and several others went along with the June 2, 1994 MCO No 674 because of the promise of a concession to Michele Stevens for giving up valuable mining ground for a public cause, (copy of MCO 674 attached, by Comm.Noah) This issue was discussed with Director of Mining JulesTileston, and Commissioner Harry Noah, and later with Deputy Commissioner Marty Rutherford and many others over a period of 17 years

Division of Mining wanted them for recreational use. Division of Mining told Michele she could have a "concession", (enclosed copy of original proposal by Jules Tileston) renting gold pans etc. and the DOM would have a percentage of this and it would be good to have someone to be there to organize things and to keep a sense of order. It would be a win win situation for both the State and Michele as it would give her some money to help preserve the historic buildings and the historic mining equipment and to build the museum promised to her predecessor in memory of his wife. The recreation areas were given to the Department of Lands instead of the Department of Mining to manage. when lands and mining merged and this was when everything changed, another long story. Employees come and go and Administrations change over a period of 17 years and things have a way of getting confused and misplaced and misunderstood. BLM did issue a RESIDENTIAL lease to Ms Stevens for 5 acres which is where Ms Stevens buildings are located so this helps protect the historical buildings, but she cannot run a business on it unless she goes up for a competitive public bid. This could go for any price and if Michele could not beat the price she would stand the chance of losing her buildings (which by the way is her support center for her mining ventures).

The bottom line to "quote from Comm.Noah's MCO 674" (Para 4 & 5): Para 4: " A recreational mining area and the activities associated therewith would constitute a significant use of the surface estate which would be INCOMPATIBLE with COMMERCIAL mining and mineral location. Conflicts could be created on the land between the surface and potential subsurface users. MCO 674 would become effective on the date the land is ACCEPTED by the State from the Bureau of Land Management by tentative approval or patent, whichever comes first, making null and void any mining claims staked on the land PRIOR to that date."
Para 5: "It is my finding, in accordance with AS 38.05.185(a), that COMMERCIAL MINING and mineral location would be INCOMPATIBLE with the INTENDED surface use of the subject land and therefore the best interest of the state and its residents is served by closing the land identified in MCO 674 to new locatable mineral entry under the locatable mineral and mining laws of the State of Alaska: MINERAL CLOSING ORDER 674."

The northern recreational mining claims are currently open to the public, as that land was conveyed to the State in the 90's. It is easily accessible as there are roads all along the site.

All of the land that was State selected in the 1970's has been conveyed to the State of Alaska where the null and void Federal claims were, also the areas on both sides of the Federal claims giving Ms Stevens valid State claims. Everything has been conveyed to the State EXCEPT for the land where the Proposed South Recreational mining area is. State of Alaska Has not accepted the Conveyance to the land until this issue can be resolved. BLM still holds title to this ground.

It would be appreciated if you would make it possible for the state of Alaska to honor their promise to Ms Stevens.

I know you are very busy and I sincerely thank you for your time spent on this issue.

Respectfully,

Carol Young

Carol young, President
Yentna Mining District
(907-733-2351)

Sean Parnell, Governor
Third Floor, Capitol
P.O. Box 110001
Juneau, Alaska 99811-0001

January 26, 2012

Dear Governor Parnell:

We respectively urge your support for legislation to adjust the Petersville Recreation Mining Area established on May 8, 1997.

As the former Director, Mining and Water Management and former Deputy Commissioner, Department of Natural Resources, we were directly involved in the initial decisions leading to the establishment of the Petersville Recreation Mining Area and we strongly support the legislation to amend that Petersville Recreation Mining Area designation.

Background:

Prior to the Mineral Closing Order, MCO# 674, on June 2, 1994 there were numerous meetings with Ms. Michele Stevens the then owner of approximately 500 acres of State mining claims located on federal land selected by the State. Ms. Stevens proposed to operate a mining concession including a museum and public campground as well as using her mining equipment to facilitate public access to the placer gold known to be in the area. Her concept for a concession-type operation was in part based on the successful commercial operations at the Crow Creek Mine on private land at Girdwood and the El Dorado Gold Mine located on Mental Health Trust land near Fairbanks.

The Director of Mining and Water Management and other members of the Division inspected the 500 acres and adjacent active mining operations in the Petersville area included Ms. Stevens' historic buildings and structures and equipment used when the area was being mined under federal mining law. The Department subsequently determined the 500 acres would make a valuable addition to the areas set aside in Alaska for the general public to pan for gold without being in conflict with a mining claim owner, and therefore initiated the 1994 Mineral Closing Order (MCO).

The original public recreation mining areas in Alaska involved abandoned mining claims, hence Ms. Stevens was requested to gift her 500 acres of mining claims that otherwise would automatically fall into place when the State received title to the land from the federal government. Ms. Stevens did this concurrently with the MCO being imposed.

The State has received title to land in the Petersville area that includes approximately 280 acres of the mining claims Ms. Stevens gifted to the State and that area is now open to public use as a public recreation mining area. Until recently, transfer of the federal land including the remaining 220 acres surrounding Ms. Stevens' historic building and structures has been delayed until the

State and Bureau of Land Management could reach agreement on how to handle the buildings and structures. These buildings and structures were eventually deeded to Ms. Stevens. This issue has been resolved and the land is now ready for transfer to State ownership.

The agreement in 1994 between the Department of Natural Resources and Ms. Stevens was for the Department to authorize Ms. Stevens to operate a commercial recreation mining business on the 220 acres of land surrounding her buildings and structures. Subsequently, the Department determined that it could not legally issue a non-competitive commercial lease to fulfill the agreement with Ms. Stevens. In 2006 DNR determined there actually was a legal way to proceed, whereby a commercial mining business could be operated on a portion of a state mining claim or claims by establishing a miscellaneous land use lease, provided there was concurrence with the state mining claim holder.

However, and very unfortunately, the 2006 approach cannot be followed for lands designated by statute as a recreational mining area since there are no underlying private interests to the minerals. The proposed legislative amendment to the Petersville Recreation Mining Area established in 1997 contains two provisions to correct the problems the Department and Ms. Stevens have been trying to resolve. The pending legislation would: 1) Reinstate Ms. Stevens' full mineral rights to those portions of her mining claims ADLs 508020-508026 that she gifted to the State in this southern area; and 2) It would remove the statutory designation and allow the DNR to fulfill its original agreement with Ms. Stevens. The proposed amendment does not affect the approximately 280 acres of land that will remain in the Petersville Recreation Mining Area.

In summary, we respectively request your support in correcting a situation that evolved and allow the state to honor its commitments to Ms. Stevens

Sincerely,

Signed

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HCR 9

Analysis

The Alaska Working Group on Interstate Energy Production shall consist of four (4) members, with two (2) senators appointed by the President of the Senate and two (2) representatives appointed by the Speaker of the House of Represenatatives. Members of the Alaska Working Group on Interstate Energy Production may meet during and between regular sessions of the Alaska State Legislature and they may travel within Alaska and to other states as necessary to accomplish their purpose. The anticipated travel costs shown above provide each member of the working group with an annual travel budget of approximately $5.0. However, this fiscal note does not ask for an increment to fund this travel. These travel costs will be absorbed in the Legislature's "Legislative Council " RDU in the "Session Expenses" Component. The Alaska Working Group on Interstate Energy Productions will terminate January 18, 2013.

Sponsor Statement

HCR 9
State Energy Production Working Group

House Concurrent Resolution 9 establishes in the Alaska State Legislature the Alaska Working Group on Interstate Energy Production.

This legislation was crafted in response to legislation proposed by other states that produce energy and energy resources. Alaska, along with other states, continues to experience the negative consequences from delay or cancellation of economically viable energy-related projects because federal law and federal law enforcement too often overreach the federal government's constitutional authority to make and enforce laws.

Federal law and policy, including the National Environmental Policy Act and the Endangered Species Act, excessively limit and interfere with production of energy and energy resources in Alaska and in other states.

HCR 9 establishes the Alaska Working Group on Interstate Energy Production to work with other state Legislatures to develop a proposal for an inter-legislature agreement that will facilitate collaboration between the Alaska State Legislature and other state legislatures in efforts to influence federal energy-related law and policy and to discourage delay or cancellation of economically viable energy-related projects in the state and in other states.

I urge your support of this important legislation.

HOUSE BILL NO. HB0217

Production states agreement.

Sponsored by: Representative(s) Lubnau and Senator(s) Bebout

A BILL

for

AN ACT relating to the legislature; providing for legislative participation to develop an energy producing state agreement; specifying goals of the agreement; providing an appropriation and for a report; and providing for an effective date.

Be It Enacted by the Legislature of the State of Wyoming:

Section 1.

(a) Two (2) members of the Wyoming house of representatives appointed by the speaker of the house, and two (2) members of the Wyoming senate appointed by the president of the senate, shall be appointed to study and work with legislative members of other energy producing

states to develop an Energy Producer State Agreement with the following goals:

(i) To encourage domestic development of energy in the United States, and to ensure continued development of each state's domestic natural resources;

(ii) To deliver a strong, unified voice to the federal government from the states that produce the energy that powers the nation's economy, by providing input on and participating in the development of existing and proposed federal legislation and federal regulatory processes, including the National Environmental Policy Act and the Endangered Species Act, and federal land access issues affecting the production of energy in the concerned states;

(iii) To eliminate or reduce overreaching federal legislation and identify and address consequences that result from delays and cancellations of economically viable energy projects.

(b) Legislators appointed pursuant to this act shall be authorized by Management Council to attend meetings as the Council determines necessary to accomplish the purposes

of this act, and shall receive salary, per diem and mileage for the performance of their duties under this act as provided in W.S. 28-5-101. Appointed legislators shall provide a single report to the Council not later than September 1, 2011, including any suggested legislation for referral to the appropriate legislative committee for consideration.

Section 2. For purposes of this act, there is appropriated from the general fund fifty thousand dollars ($50,000.00) to the legislative service office. This appropriation shall be for the period beginning with the effective date of this act and ending June 30, 2012.

Section 3. This act is effective immediately upon completion of all acts necessary for a bill to become law as provided by Article 4, Section 8 of the Wyoming Constitution.

(END)

ENERGY PRODUCER STATES' AGREEMENT

2011 GENERAL SESSION

STATE OF UTAH

Chief Sponsor: Roger E. Barrus

Senate Sponsor: David P. Hinkins

LONG TITLE

General Description:

This bill provides for the appointment of legislative members to participate in multistate discussions involving agreements that encourage the development of domestic energy resources.

Highlighted Provisions:

This bill:

- provides for the appointment of legislators to discuss creating a multistate domestic energy development agreement;
- specifies the goals of an agreement;
- provides for a report on an energy producer states' agreement; and
- provides a repeal date.

Money Appropriated in this Bill:

This bill appropriates:

- to the Legislature for fiscal year 2011-12 only:
  - from the General Fund, $25,000.

Other Special Clauses:

This bill provides an immediate effective date.

Utah Code Sections Affected:

AMENDS:

63I-1-236, as renumbered and amended by Laws of Utah 2008, Chapter 382

ENACTS:

36-12-20, Utah Code Annotated 1953

Be it enacted by the Legislature of the state of Utah:

Section 1. Section **36-12-20** is enacted to read:

36-12-20. Membership selection -- Agreements -- Goals -- Meetings -- Reports.

(1) The speaker of the House shall appoint two members and the president of the Senate shall appoint two members, of which no more than three of the four members shall be from the same political party, to study and work with legislative members of other energy producing states for the purpose of developing a proposed energy producer states' agreement.

(2) The proposed energy producer states' agreement shall have the following goals:

(a) to encourage domestic development of energy in the United States;

(b) to ensure the continued development of each state's domestic natural resources;

(c) to deliver a unified message to the federal government from energy producing states by:

(i) participating in the development of proposed federal legislation and regulations; and

(ii) making recommendations regarding existing federal law and regulations including the following:

(A) the Environmental Protection Act;

(B) the Endangered Species Act; and

(C) federal land access issues that affect the production of energy;

(d) to eliminate or reduce overly broad federal legislation; and

(e) to identify and address consequences of delays and cancellations of economically viable energy projects.

(3) Appointed members shall produce a report with recommendations regarding an energy producer states' agreement to the National Resources, Agriculture, and Environment Interim Committee and the Public Utilities and Technology Interim Committee on or before October 1, 2011.

(4) Salaries and expenses of the appointed members may be paid in accordance with Section 36-2-2 and Legislative Rules, Title 5, Chapter 3, Expenses and Mileage

Reimbursement for Authorized Legislative Meetings, Special Sessions, and Veto Override Sessions.

(5) The Office of Legislative Research and General Counsel shall provide staff assistance as requested.

Section 2. Section **63I-1-236** is amended to read:

63I-1-236. Repeal dates, Title 36.

(1) Section 36-12-20 is repealed June 30, 2012.

(2) Sections 36-26-101 through 36-26-104 are repealed December 31, 2017.

Section 3. **Appropriation.**

Under the terms and conditions of Title 63J, Chapter 1, Budgetary Procedures Act, the following sums of money are appropriated from resources not otherwise appropriated out of funds or accounts indicated for the fiscal year beginning July 1, 2011, and ending June 30, 2012. These are additions to amounts previously appropriated for fiscal year 2012.

Item 1 To Legislature - Senate

From General Fund, One-time $12,500

Schedule of Programs:

Administration $12,500

Item 2 To Legislature - House of Representatives

From General Fund, One-time $12,500

Schedule of Programs:

Administration $12,500

Section 4. **Effective date.**

If approved by two-thirds of all the members elected to each house, this bill takes effect upon approval by the governor, or the day following the constitutional time limit of Utah Constitution Article VII, Section 8, without the governor's signature, or in the case of a veto, the date of veto override.

HOUSE SPECIAL COMMITTEE ON FISHERIES

SPONSOR STATEMENT FOR HOUSE CONCURRENT RESOLUTION NO. 13 (27-LS0802\M.A)

The North Pacific Fishery Management Council (NPFMC) is one of eight regional councils established by the Magnuson-Stevens Fishery Conservation and Management Act to oversee management of the nation's fisheries. The North Pacific Fishery Management Council has jurisdiction over the million square mile Exclusive Economic Zone (EEZ) off Alaska. NPFMC manages federal fisheries in Alaska valued at over one billion dollars annually, with primary responsibility for ground fish management in the Gulf of Alaska, Bering Sea, and Aleutian Islands, including cod, Pollock, flatfish, mackerel, sablefish, and rockfish species.

The Council has eleven voting members and four non-voting members. The eleven voting members include the Commissioner of the Department of Fish & Game, Director of the Washington Department of Fish & Wildlife, Director of the Oregon Department of Fish & wildlife, the Alaska Regional Administrator of NOAA Fisheries, five public members appointed by the Governor of Alaska, and two public members appointed by the Secretary from the State of Washington.

Since, it is estimated that 95 percent of rural households consume fish caught for subsistence, and sports fishing contributes over one-hundred and twenty three million dollars annually, their voices are vital to the sustainability of the resource and should be represented at the North Pacific Fishery Management Council. Both sports fish licensees and Alaska subsistence users who have participated in NPFMC meetings have commonly expressed frustration with the lack of opportunity to meaningfully participate in the process, and a lack of representation on the Council. However, allocation of fish in waters managed by NPFMC directly affects the quantity of fish available for harvest by sports fish licensee and subsistence users.

HCR 13 requests that the Governor nominate both a sports fish licensee and a subsistence user nominated by an Alaska Native organization for a seat on the North Pacific Fishery Management Council. In a state that is home to 3,000 rivers, 3,000,000 lakes and 6,640 miles of coastline, protecting opportunities for sports fishers and subsistence users is vital.

ALASKA FEDERATION OF NATIVES

2009 CONVENTION

RESOLUTION 09-01

TITLE: THE PROTECTION OF ALASKA NATIVE SUBSISTENCE ACTIVITIES AND ACCESS TO, AND TAKINGS, OF CUSTOMARY AND TRADITIONAL AND CULTURAL SUBSISTENCE RESOURCES

WHEREAS: Alaska Native peoples developed rich cultures and enduring societies around their spiritual relationship to the land and resources; and

WHEREAS: Our harvest and utilization of natural resources has been the basis of our sustainable economies through thousands of years; and

WHEREAS: Customary and traditional subsistence hunting and fishing is vital to the survival of Alaska Native cultures and our communities' economic well being; and

WHEREAS: The United Nations Declaration on the Rights of Indigenous Peoples supports Indigenous rights to use and manage resources necessary for our food security; and

WHEREAS: The Marine Mammal Protection Act provides for Alaska Native heritage rights for Marine Mammals; and

WHEREAS: Section 4(b) of the Alaska Native Claims Settlement Act of 1971 (ANCSA) extinguished aboriginal hunting and fishing rights; and

WHEREAS: Congress, through the Conference Report accompanying passage of ANCSA, declared its intent and expectation that the Secretary of the Interior and the State of Alaska should protect Alaska Native customary and traditional subsistence activities; and

WHEREAS: Congress enacted Title VIII of the Alaska National Interest Lands Conservation Act of 1980 (ANILCA), which established a priority for rural resident subsistence users on federal lands and reserved navigable waters; and

WHEREAS: ANILCA authorizes the State of Alaska to regulate customary and traditional subsistence harvests on all lands and waters so long as such regulation is in compliance with the mandates outlined in Title VIII of ANILCA; and

WHEREAS: In 1990, the federal government was forced to assume management authority over customary and traditional subsistence activities on federal public lands and waters because the State of Alaska failed to adequately enact a subsistence priority for rural Alaskans; and

WHEREAS: The Federal Subsistence Management Program is a multi-agency effort to provide the opportunity for a subsistence way of life by rural Alaskans on federal public lands and waters while maintaining healthy populations of fish and wildlife; and

WHEREAS: The Secretaries of the Interior and Agriculture have delegated to the Federal Subsistence Board the authority to manage fish and wildlife for subsistence uses on federal public lands and waters in Alaska; and

WHEREAS: The Federal Subsistence Board is the decision-making body that oversees the Federal Subsistence Management Program, and is comprised of the regional directors of the U.S. Fish and Wildlife Service, National Park Service, Bureau of Land Management, Bureau of Indian Affairs, the U.S. Forest Service, and a chairman appointed by the Secretaries of the Interior and Agriculture; and

WHEREAS: The Federal Subsistence Board membership is now dominated by non-subsistence users and federal employees who lack an appreciation of the significance of traditional subsistence uses, and who have improperly sought to balance the needs of commercial, sport, pleasure and subsistence users, rather than trying to protect Alaska Native access to subsistence resources, as directed by their mandate under Title VIII of ANILCA; and

WHEREAS: The State of Alaska successfully promoted the adoption of a Memorandum of Understanding between the Federal Subsistence Board and the State of Alaska that has seriously undermined Title VIII of ANILCA; and

WHEREAS: The current federal subsistence management scheme has failed to protect traditional subsistence users, and Alaska Natives are finding themselves subject to state citations for traditional subsistence practices that should be protected under Title VIII of ANILCA; and

WHEREAS: Immediate administrative and legislative action is necessary to protect Native traditional subsistence rights and uses;

NOW THEREFORE BE IT RESOLVED by the delegates to the 2009 Annual Convention of the Alaska Federation of Natives that Alaska Federation of Natives shall pursue the following executive and legislative actions to:

1. Seek immediate Congressional oversight hearings in Alaska to be held before the U.S. Senate Committee on Indian Affairs and the House Committee on Natural Resources regarding, access to, and takings of, customary and traditional subsistence resources by Alaska Natives, Alaska Native Corporations, and the federally recognized tribes; and

2. Seek immediate consultation between Alaska Native corporations, federally recognized tribes in Alaska, and the Departments of the Interior, Agriculture and Commerce, to develop recommendations for a new subsistence management

scheme that will protect the traditional subsistence way of life of Alaska Natives and other rural residents, and that will ensure full participation of Alaska Natives in the management scheme; and

3. Seek to replace the Federal Subsistence Board with a federally-chartered or authorized entity whose membership will be comprised of subsistence users rather than federal employees; and

4. Encourage President Obama to issue an Executive Order that advises the Federal Subsistence Board and the Office of Subsistence Management that Title VIII is Indian Legislation enacted under the plenary authority of Congress over Indian Affairs, and that directs the Federal Subsistence Board and Office of Subsistence Management to implement a subsistence management scheme or program in accordance with the Executive Order; and

5. Revoke the 2008 Memorandum of Understanding between the Federal Subsistence Board and the State of Alaska, Department of Fish and Game, and to remove the State's non-voting seat from the Federal Subsistence Board; and

6. Direct the Secretary of the Interior to fully implement his trust responsibility to Alaska Natives, Alaska Native Corporations and the federally recognized tribes, and to direct the employees within the Department of the Interior to honor this relationship; and

7. Direct the Secretary of the Interior to interpret broadly the scope of federal jurisdiction over the management of subsistence resources on public lands and reserved waters, and to extend by regulation the subsistence priority to waters that run through and adjacent to Native allotments and to waters upstream and downstream from federally reserved waters; and

8. Rescind the Federal Subsistence Board's determination that the Organized Village of Saxman; and any other Alaska Native village similarly affected, is not a rural community; and

9. Amend ANILCA to provide for Alaska Native Peoples customary and traditional hunting, fishing and gathering rights Plus Rural subsistence priority;

10. Seek legislation that provides Alaska Native Corporations the authority to opt into a provision ensuring a federally protected customary and traditional hunting and fishing right on corporation lands and associated waters for Alaska Natives associated with the ANCSA corporations, and legislation that allows for the taking of moose and other subsistence resources necessary for the potlatch and other ceremonies; and

11. Advocate for a state and federal Subsistence Support Program in rural Alaska to help offset the drastically increased cost of transportation to harvest subsistence foods; and

12. Amend the Magnuson-Stevens Fishery Conservation and Management Act to include designated voting seats on the North Pacific Fisheries Management Council for federally tribes and/or Alaska Native organizations representing rural subsistence users;

13. Fully fund co-management initiatives and infrastructure to ensure Alaska Native participation in the subsistence management process, and

14. Call for federal resources to be made available for research, protection and enhancement of subsistence resources in Alaska, and;

BE IT FINALLY RESOLVED that the delegates of the Annual Convention of the Alaska Federation of Natives hereby directs the Alaska Federation of Natives that one of the top and ongoing priorities for Alaska Federation of Natives shall be to address this resolution regarding subsistence concerns of all Alaska Natives.

RE: Calendar Request for CS HCR 24 (FIN) "Relating to the establishment and operation of a state food resource development working group."

Mr. Chairs,

I request that CS HCR 24 (FIN) be calendared for a hearing before the Senate Resources Committee Floor at the earliest possible time. I appreciate your consideration of this resolution dealing with Alaska's abundant food resources.

Attached is a sponsor statement, supporting material and a copy of the legislation for consideration.

Contact my staff member Darrell Breese (465-4958) for additional information.

Sponsor Statement for HCR 24 by Representative Bill Stoltze

The passage of House Concurrent Resolution 24 calls of the Governor to establish a state food resource development working group with the primary goal of producing more locally grown and harvested food items to be consumed in Alaska, by Alaskans.

In addition the resolution calls on the Governor to requests multiple departments of his administration to work closely with the working group and the independent Food Policy Council to increase the production and consumption of local food items in Alaska.

Whether it be agriculture products, seafood or locally produced meat, increased local food products will lead to a healthier Alaska and enhance the economy of the entire state.

The importance and value of creating and maintaining a robust supply of Alaskan food is why the resolution is asking the Governor to establish a state food resource development working group to work with the Alaska Food Policy Council to identify resources and set policies to build a strong, sustainable healthy food system in the state.

In addition to creating the working group, this resolution calls on the governor to request the departments of his administration to work closely with the farmer's, fisherman, cattle ranchers and shellfish growers to produce more locally grown food products to consumption in Alaska, by Alaskans.

Summary of Changes for HCR 24

Page 3, Line 29 and following

Added. This section calls on the Governor to have the Departments of Health and Social Services, Education and Early Development and Corrections to work with the state food resource working group to develop a nutrition policy for congregate meals in public facilities.

Page 4, Line 19 and following

Added. Includes the Department of Environmental Conservation, non-profits agencies, the USDA, and Alaska Native regional corporations in the collaborative work of the food resource development working group.

ALASKA FARM BUREAU, INC.

Bryce Wrigley, President
bjwrigley@wildak.net

Jane Hamilton, Executive Director
janehamilton99737@yahoo.com

Farmers and ranchers are state policies and regulations that hinder the growth and expansion of agriculture. We want to produce food for Alaskans, but lack of a coordinated statewide effort to increase food independence affects economic growth and diversity. Every Alaskan knows that an oil economy is not sustainable long term. In spite of that knowledge, year after year we do very little to diversify our economy and nothing to enhance our ability to feed ourselves.

HCR 24 encourages the formation of a group tasked with addressing our statewide food production capabilities. It represents virtually all stakeholder organizations and focuses their efforts on food for Alaska. Not only does it bring together food production from agriculture, fishing, and wild harvest, it also includes nutrition, education, and research services.

A dynamic agriculture industry benefits Alaska in many more ways than just growing food. A vigorous agricultural policy could help resolve many of the social ills that exist in rural and remote Alaska. Agriculture connects people with the land and in the process, re-enthrones pride, industry, and self-reliance. It creates jobs, improves nutrition, and diversifies the economy.

We urge every member of the Alaska State House and Senate to support rapid passage of HCR 24. We need a food production policy that is responsive, proactive, and serves the food needs of all Alaskans. We want this working group to be empowered to work across agency lines to resolve our food production and distribution needs so that all Alaskans have access to locally grown, healthy food.

Thank you for your support.

Bryce Wrigley,
Alaska Farm Bureau President

RE: HCR No. 24 (Stoltze) – Support

Dear Representative Stoltze:

The Alaska Food Coalition is pleased to express our support for House Concurrent Resolution No. 24 relating to the establishment and operation of a state food resource development working group. The Alaska Food Coalition has been a participating member of the Alaska Food Policy Council since 2010, and supports its effort to improve Alaska's food systems.

As advocates seek to address a range of interconnected food system problems, many find that building partnerships and coordinating efforts is essential to developing effective and lasting solutions. Community food security strives to link and integrate diverse fields, including community economic development, anti-hunger, local and sustainable agriculture, public health, and nutrition. The movement encompasses a broad range of participants working on many different issues with similar goals, including the elimination of hunger and food insecurity.

We appreciate your leadership on this issue and wish to express our sincere thanks to you for working to protect, preserve and develop the state's farms, subsistence, agricultural and commercial fisheries industries. We ware also thankful to Representatives Neuman, Costello, Thompson, Fairclough, Munoz, Lynn, Kerttula and Pruitt for signing up to co-sponsor HCR No. 24.

Please do not hesitate to contact Vanessa Salinas, Alaska Food Coalition Manager if you have any questions, 907-222-3103 afc@foodbankofalaska.org

Thank you for all that you do for Alaska.

Sincerely,

Gloria Benson
Alaska Food Coalition President

Subject: HCR 24A - Recommended amendment

Dear Representative Stoltze,

I am a member of the Alaska Food Policy Council's Governing Board and would like to thank you for taking the lead in introducing HCR24A which asks the Governor to establish a establish a state food resource development working group to work with the Alaska Food Policy Council. The proposed working group overlooks including the Department of Environmental Conservation which plays a key role in Alaska food policy. DEC's Food Safety and Sanitation Program, Office of the State Veterinarian, and Environmental Health Laboratory actively work with the state's food industry in ensuring the safety and viability in of Alaska's food industry locally as well as the reputation of Alaska's food industries in the national and international marketplace. In fulfilling its mission the department works closely with DNR, ADFG, DHSS, DEED, DCED, DPS, as well as with USDA, FDA, and NOAA.

I recommend HCR 24A be amended to include the Department of Environmental Conservation (DEC) in the state food resource development working group.

The failure to recognize DEC's role and incorporate DEC into the proposed work group would lead to poor outcomes if the Governor chooses to establish a working group. I suggest the following amendment:

FURTHER RESOLVED that, if the Governor establishes a state food resource development working group, the Alaska State Legislature respectfully requests the Governor to direct the Department of Environmental Conservation to work with the state food resource development working group to incorporate food protection and defense strategies and education programs to ensure safety in food production, food processing, and food distribution businesses.

I would be pleased to provide more information in support of the amendment if it would be helpful.

Sincerely,

Ronald S. Klein

March 12, 2012

The Honorable Representative Stoltze, Co-Chair
The Honorable Representative Thomas, Co-Chair
House Finance Committee
State Capitol, Room 519
Juneau, AK 99801-1182

Dear Representative Stoltze and Representative Thomas,

On behalf of the American Heart Association (AHA), I respectfully request your support of House Concurrent Resolution 24 (HCR 24). This resolution asks the Governor to establish a state food resource development working group to coordinate with the Alaska Food Policy Council to identify resources and set policies which will build a strong, sustainable healthy food system for the state. The resolution further charges the working group to collaborate with state agencies to increase economic development; encourage policies that increase the use of locally grown food in schools and other state operated institutions; establish educational programs about the nutritional value of locally harvested seafood and produce; and create a sustainable agriculture and fisheries system in Alaska.

Heart disease and stroke are the number one and four killers, respectively. Maintaining a healthy diet is critical to reducing the risk of cardiovascular diseases, stroke and other chronic diseases and conditions.

The AHA advocates for policies that will raise public awareness about the importance of a healthy, balanced diet and lifestyle and increase the availability and consumption of fruits, vegetables, and other nutritious foods, particularly in our nation's schools.

HCR 24 seeks to improve access to healthy and nutritious foods and promotes programs that will empower Alaskans to live a heart healthy life. The AHA is pleased to support this resolution.

Respectfully,

Jamie Morgan

Excellent Job Representative Stoltze !
HCR 24 may have huge a impact with positive improvements to our personal and economic health, if the "state food resource development working group" is as good at their job, as you are at yours. Thank you very much for the creative foresight introduced in HCR 24.
On another note, I was able to thank Ben Vanderweele for the excellent carrots that the Ipalook students enjoyed thanks to you bringing them to us here in Barrow. Thanks again, Bob Eason

Dear Rep. Stoltze and Rep. Seaton,

I strongly support HCR 24, and ask your support of this legislation. Our local economy has been so boosted by the advent of High Tunnel farming, that continues to grow. It is a way to provide healthy, fresh foods for our communities. Whatever state support we can get, will assist to continue these federal efforts.

Thank you,

Subject: Thank You: Local Food in Schools

Dear Rep. Stoltze,
Thank you for taking a big first step toward good food policy in Alaska by sponsoring and testifying in support of HCR 24. I too feel that it's very important to encourage Alaska Grown foods in schools and other state institutions. I also love breakfast. Thank you for your continued leadership to ensure that more people have access to healthier foods and therefore have more opportunities to become healthier, smarter people.

Yours,
Kelly DuFort

Subject: HCR 24 and The School Meals Bill

Dear Representative Stoltze:

I want to send you a sincere thank you for your sponsorship and testimony on HCR 24 yesterday. I am moved by your commitment and passion for Alaska produce and seafood. I fully support the working-group as a great way to bring State institutions together to figure out how to make improvements.

Learning more about food issues the last several months has heightened my own passion and dedication to increasing local food consumption, and production of locally grown produce and seafood. And this is why I got involved to help push the school meals bill.

I see the school meals bill as an opportunity to expand and improve a program that already exists, which would incorporate more Alaska grown produce in school meals while helping feed the students who need the nutrition. While it is great to get Corrections purchasing local foods, it drives me crazy to think that our prisoners may be getting healthier food than our students. And I agree with you that nutrition in school meals is a serious issue. It amazes me that pizza is still considered a vegetable.

I apologize for the high emotions and inflammatory rhetoric from the school meals bill advocates, including myself. Though I realize while elevating the discussion of food in Alaska is important, some of us have crossed the line and resorted to personal attacks that are unfounded. I understand you have hundreds of bills waiting to be heard, even your own, and though it is difficult to make everything a priority I appreciate your efforts.

My goal is to try and calm the high emotions these next few weeks, and allow space for the process to go forward.

Thank you again for your support and work on these issues.

Nick Moe

PS The Local Food Film Festival is coming back to the Bear Tooth the first week of June. It will feature several films, local food specials and a panel discussion. If you are available and up for it, it would be great to have you on the panel. Last year was a big success with over 700 people coming through the door and I see it as a great way to increase the demand for local foods in Anchorage. This year we are expecting over 1,500 people to attend throughout the week.

Sponsor Statement

HCR 25, Wildlife & Sport Fish Restoration Program

American hunters and anglers were some of the first conservationists to realize the importance of our natural resources and that without their support they would be in peril if not properly managed. They understood the necessity to regulate harvests and preserve habitat.

Throughout the history of the conservation movement, hunters and anglers have led the way in supporting legislation to stop excessive harvest of fish and wildlife, and establish federal and state fish and game agencies to protect fish, wildlife, and habitat.

The revenue generated from the purchases of hunting and fishing licenses fund agencies efforts to conserve natural resources for future generations.

Wildlife and Sport Fish Restoration Programs began 75 years ago with the passage of the Federal Aid in Wildlife Restoration Act of 1937. Thirteen years later in 1950, the Federal Aid in Sport Fish Restoration Act created an effective "user pay - public benefit" system.

Since 1939, contributions to state fish and wildlife agencies by wildlife and sport fish restoration programs have exceeded $13,000,000,000. This represents the greatest single conservation effort in the history of the United States and the nation's primary means of funding conservation.

The Alaska State Legislature, on the 75th anniversary of the nation's greatest conservation story, recognizes the leading roles of hunters, anglers, boaters, recreational shooters, industry, state fish and wildlife agencies, and the United States Fish and Wildlife Service in restoring healthy populations of fish, wildlife, and other natural resources, both game and nongame, to the abundance enjoyed today.

Alaska Chapter SCI
PO Box 770511
Eagle River, AK 99577
(907) 980-9018

March 1, 2012

The Honorable Steve Thompson, Chair
Alaska State House
Special Committee on Fisheries
State Capitol, Room 428
Juneau, AK 99801

Dear Representative Thompson,

SCI Alaska Chapter is the leading hunter-conservationist organization in the world, as well as here in Alaska. It is our mission to promote conservation of species and the freedom to hunt. Our record here in Alaska clearly illustrates our commitment to that mission from leading the fight against anti-hunters at the ballot box to leading the wood bison restoration project, we are as our motto says, "First for Hunters".

We are writing today to express our support for HCR 25 regarding the commemoration of the Wildlife Restoration Act. This act was made possible by the tireless work of hunter-conservationists who requested that the hunting community be taxed to pay for wildlife. It would be well to remember that this request came during the Great Depression when many Americans were facing financial hardship. Despite that obstacle, hunters pursued and won the creation of the Wildlife Restoration Act agreeing to pay a tax in order to support wildlife conservation.

We ask you as you consider this legislation to remember that we hunters support the user pay system and feel that it is more than fitting the creation of that system be recognized by HCR 25. Please pass this resolution from your committee at your earliest convenience.

Sincerely,

Terry C. Holliday

Terry Holliday
President

cc: Rep. Mark Neuman

SCI's Top Gun Chapter

Alaska Department of Fish and Game

Whittier Harbor boat ramp

Grant Program Overview

The Federal Aid in Sport Fish Restoration (SFR) Act, often referred to as the Dingell-Johnson (D-J) Act or the Wallop-Breaux (W-B) Amendment, not only provides funding for sport fisheries management and research, but also funds projects to improve recreational power boating and sport fishing access. This legislation has created a model "user pay/user benefit" program through federal excise taxes and import duties placed on sport fishing equipment, recreational powerboats, and gasoline used in recreational boats. The tax revenue collected by the U.S. Treasury is transferred to the U.S Department of Fish and Wildlife Service, which is the agency responsible for administering the SFR program. The Alaska Department of Fish and Game (ADF&G) is the only department in state government that is allowed to receive and use SFR funds. The SFR program will cover up to 75% of the cost of an eligible project and requires a 25% non-federal match, which is often met through the sale of sport fishing licenses. To help control program costs, projects are often partnered with other state departments, as well as local governments.

The ADF&G Sport Fish Division has both regional and statewide staff who work with state and federal land managers and local governments to identify, facilitate design and construction, and fund capital improvements and maintenance of boating access sites. Projects are built to Americans with Disabilities Act (ADA) guidelines and include boat launches and parking areas, restrooms, transient moorage, fish cleaning facilities, and other fresh water and marine access site improvements.

Over the years, the Recreational Boating and Access Program has helped to open boating and angler access to many Alaskan waters, both fresh and marine. Over 160 capital improvement projects have been accomplished, which have provided new and improved access to sites throughout the state. Twice as big as Texas, yet with fewer roads than Delaware, Alaska presents unique recreational access challenges. Even so, if you've ever fished or boated in Alaska, chances are you used a facility constructed through the Division of Sport Fish Recreational Boating and Angler Access Program.

Funding Restrictions

According to federal aid regulations, SFR grants can be approved only if they primarily benefit the recreational boating and sport fishing public. These funds cannot be used for projects that primarily support subsistence, personal use, or commercial fishing groups. Subsistence and personal use fisheries are restricted to Alaska residents only and are therefore not open to the public in the federal sense. In addition, the "methods and means" used in subsistence, personal use, and commercial fisheries - gillnets, set nets, and dip nets - are not allowed in sport fisheries, and are thus not subject to the excise tax that supports the Recreational Boating and Angler Access Program. Other users may use an SFR project, but such use cannot displace recreational boater and sport angler use.

Two Types of Projects: Recreational Boating and Angler Access (Non-Boating)

The Wallop-Breaux (W-B) Amendment to the SFR Act requires that a minimum of 15% of SFR funds allocated to Alaska must be used for recreational power boating access projects. However, there is no such requirement on the use of SFR funds for angler access projects. Funding requests for angler access projects compete directly with other Division of Sport Fish SFR programs, such as research, management, hatchery support, information and education, and habitat restoration. Since a large portion of boating access funds comes from federal taxes on fuel and recreational power boats, project proposals that primarily benefit non-motorized boats (canoes, kayaks, and rafts) or diesel-powered boats do not qualify as recreational boating related projects. However, these proposals may be considered for SFR angler access funding.

Recreational Boating Projects

SFR boating access funds must be used only for constructing, renovating, improving, or maintaining access for marine or freshwater trailerable (under 26 feet), gasoline-powered boats. Examples are boat launch ramps, transient docking facilities, fish cleaning tables, parking areas, restrooms, land acquisition and development for power boating use, and related support facilities.

» Listing of eligible boating access projects

Recreational Angler Access (Non-Boating) Projects

SFR non-boating funds can be used for acquiring land, and constructing, improving, or maintaining public works such as sportfishing-related parking and camping areas, trails, fishing piers or docks, fish cleaning tables, restrooms, and associated facilities that are not related to power boating use.

» Listing of eligible angler access projects

Project Identification

Recreational access needs are assessed and projects identified by the local Sport Fish Area Management Biologist (AMB) or Access Program staff. The AMB submits a list of project ideas annually to the Access Program Manager, who then reviews and researches the projects to ensure adherence to SFR regulations and Division of Sport Fish Access Program guidelines. Project ideas are ranked utilizing established criteria and are then prioritized based on project validity, need, and funding availability.

Vision

Excellence in fisheries management and research for the benefit of recreational anglers, the state's economy, and future generations of Alaskans.

Mission

The mission of the Division of Sport Fish is to protect and improve the state's recreational fisheries resources.

Message From The Director

As with any agency, business, or organization, success is measured by how well the entity progresses toward achieving its vision. This strategic plan is our five-year road map to ensure the Division of Sport Fish can achieve its goals and objectives.

It is my belief that fish populations important to recreational anglers and the economy of Alaska must be kept at highly productive levels using local fisheries management expertise. We will invoke state-of-the-art technologies and techniques toward our fish population stock assessments, habitat and aquatic research, and data collection programs. We will apply progressive business practices to administer public funds in a highly accountable fashion, and exemplary public service will be provided to the angling public and citizens. The catalyst necessary to accomplish the challenges we face, solely rests with current and future personnel. To this end, support for and exposure to novel applications will become foundational within all sections of the division. We will recognize and reward personnel for exploring and applying new technologies. Heightened recognition for our efforts will be both our reward and personnel recruitment tool.

Preparation of this document was a group effort for which numerous individuals deserve a hearty "thank you" for their time, energy and demonstrated intellect. In particular, I express gratitude to division staff who participated in the strategic planning process—their motivation and direct input helped greatly in shaping this plan and charting our direction for the foreseeable future.

Finally, I hope you will use this document to track our progress. The success of our division relies upon public input and those that support recreational fishing through the purchase of fishing licenses, stamps, equipment and fuel. Hold us accountable in our ongoing tasks to protect and improve our state's fisheries resources. Let us know how we are doing. I look forward to hearing from you.

— Charlie Swanton

Director, Division of Sport Fish

Organizational Snapshot

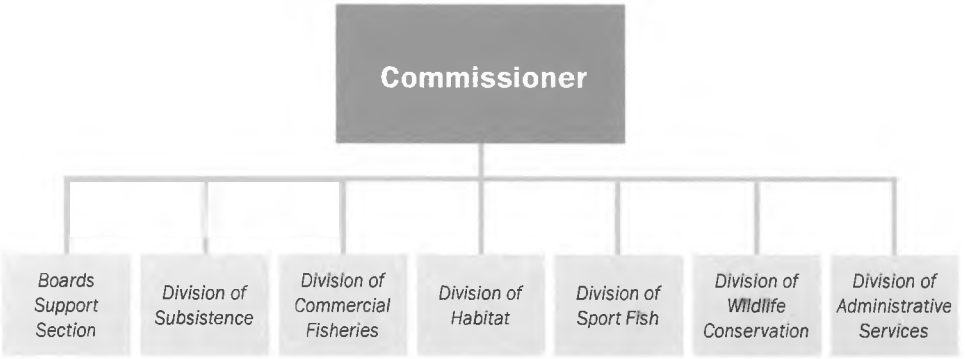
The Division of Sport Fish—along with the divisions of Commercial Fisheries, Habitat, Subsistence, Wildlife Conservation, and Administrative Services—is a discrete entity within Alaska's Department of Fish and Game (see Department Organizational Chart, below). The division is charged with managing recreational fisheries (including shellfish) within state waters. The Division of Sport Fish was established in 1951 as part of Alaska's territorial government to oversee Alaska's developing sport fisheries. Its creation coincided with the passage of the federal Sport Fish Restoration Act of 1950 (also known as the Dingell-Johnson Act), which gave states and territories funds to conduct scientific research related to recreational fisheries. Today, the Division of Sport Fish is responsible for oversight and management of Alaska's sport fisheries with an estimated economic impact of $1.4 billion annually.

In addition to our primary responsibilities, division personnel serve as staff and biological advisors to the Alaska Board of Fisheries, which is responsible for regulatory and fisheries resource allocation decisions. The division is comprised of more than 200 permanent full-time employees and 200 seasonal and temporary personnel. Our mission could not be accomplished without assistance from others whereby we maintain strong partnerships with other divisions and other governmental and nongovernmental groups.

The division maintains regional and area offices throughout the state to serve the public (see regional office contact information on back cover).

Alaska Department of Fish and Game

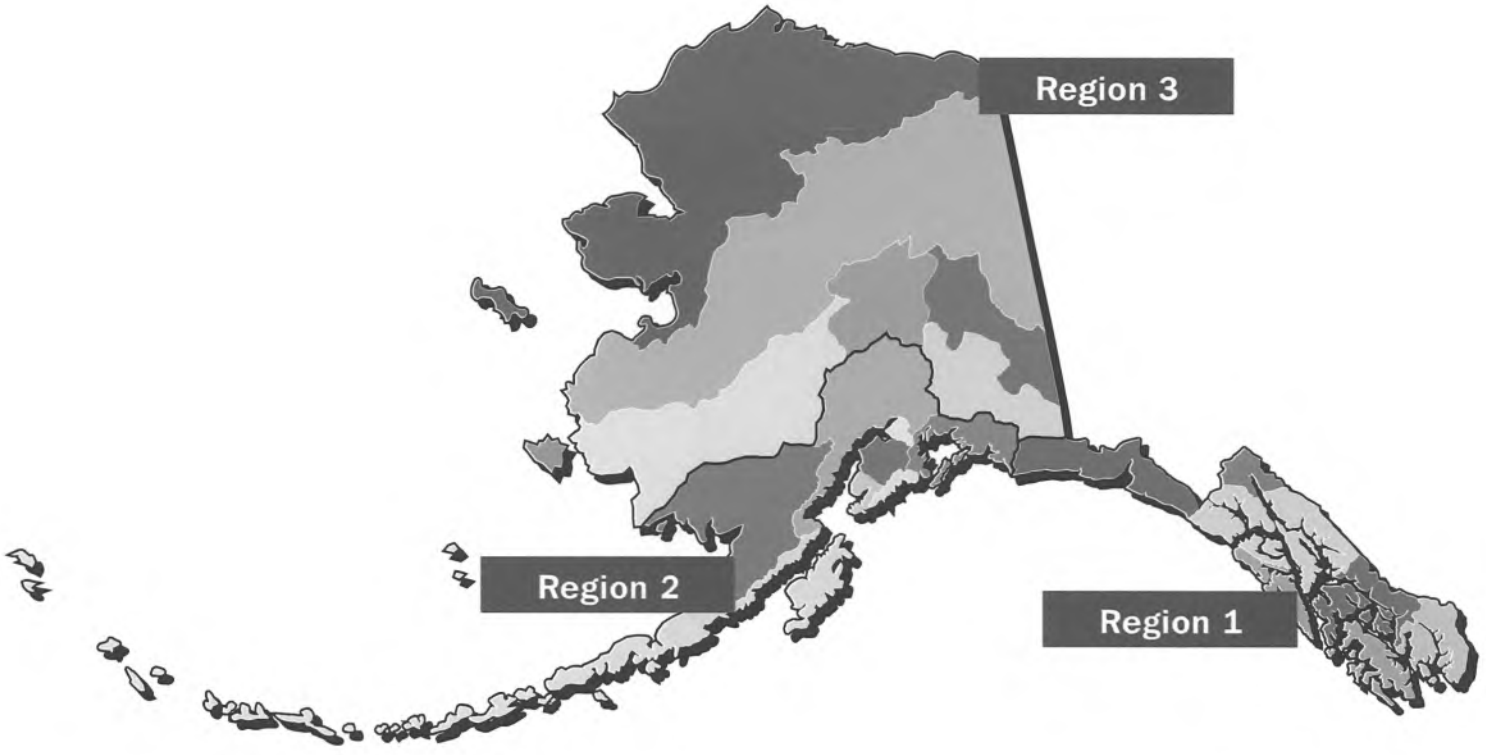
Department Organizational Structure



The Regions

The Division of Sport Fish is divided into three geographic and two technical regions. The division maintains headquarters offices in Juneau and in Anchorage. Regional offices are located in Douglas for Southeast Alaska (Region I), in Anchorage for Southcentral Alaska (Region II) and in Fairbanks for Interior Alaska (Region III). The technical regions, Research and Technical Services (Region IV), and Habitat Conservation and Access Defense (Region V) serve a statewide function, with offices based in Anchorage. The geographic regions are further partitioned into a total of 22 management areas with offices located throughout the state.

Division of Sport Fish Management Regions

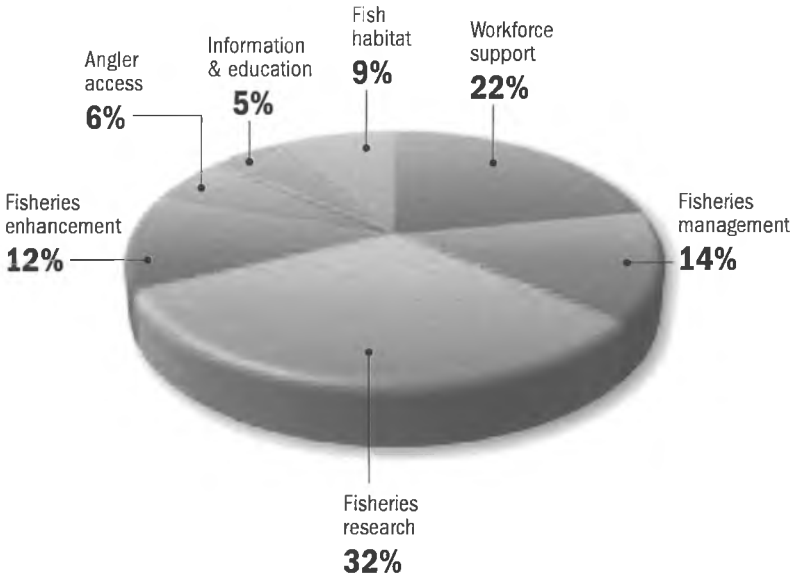


See Regional Management Area divisions at: *http://www.sf.adfg.state.ak.us/Management/*

Funding

The division has an annual operating budget of approximately $50 million. The primary funding sources are the state's Fish and Game Fund (license sales and stamp receipts) and the federal Sport Fish Restoration Program (federal tax dollars derived from sale of sport fishing-related equipment and fuel). These sources are supplemented with competitive grant awards, cooperative agreements, partnerships, and legislative appropriations. All funds are allocated based upon the goals, objectives, and activities outlined within this strategic plan.

FY06 - FY08 Expenditures by Core Functions



The Division

The Division of Sport Fish strives to achieve its mission and vision through seven interdependent core functions: fisheries management, fisheries research, fisheries enhancement, angler access, information and education services, fish habitat, and workforce support. Each core function is further defined by corresponding goals, objectives, and principal activities.

Division of Sport Fish | Core Functions

Fisheries Management

The division's priority to manage Alaska's recreational fisheries for sustained yield and recreational angler satisfaction is centered on an area-based management system. The division is dispersed among three regional offices partitioned into 22 management units ensuring direct relationships between area managers, users, and resources. The managers expend considerable effort in working with recreational anglers, the Alaska Board of Fisheries, and federal and international regulatory bodies to craft fishing regulations and solutions that are effective, minimally intrusive, and enforceable. Area management biologists actively monitor fish stocks and fisheries to adjust regulations in season as required; work closely with enforcement staff in the policing of regulations; maintain a dialogue with local user groups and recreational anglers throughout the year; assist in habitat conservation and restoration efforts; and provide local expertise to the angling public.

Fisheries Research

Management of Alaska's recreational fisheries is based on sound scientific practices and objective-based research. The division's commitment to scientific principles and rigorous project planning and design ensures that data and information collected will address management needs and be scientifically defensible. Research projects are designed and conducted to assess a wide array of management information needs that focus on characterizing fish populations, describing fish habitat use and needs, and assessing fishery characteristics and economics. Research projects are developed and implemented by a team of research and management biologists; biometricians; and cartographic, programming and publication staff to ensure that the data collected are meaningful, statistically sound, and timely. Research results are well-documented in peer-reviewed reports and are made available to the public, other researchers, and fishery regulators.

Fisheries Enhancement

Many of Alaska's most popular and reliable fisheries are created and supported by the division's enhancement program. Program personnel work with management staff to diversify and increase recreational angler opportunities by producing and releasing Chinook and coho salmon; rainbow trout and lake trout; Arctic char; and Arctic grayling into local streams, lakes, and marine waters. The program places great importance on strict adherence to state and division policies designed to maintain

genetic integrity and health of wild stocks. Enhancement staff operate hatchery facilities; collect and report on production data; perform stocked-lakes research; and are responsible for all facets of fish enhancement including remote egg-takes from wild stocks, egg incubation, rearing, and release. Personnel also establish cooperative projects with private, nonprofit hatchery operators to implement enhancement activities where state facilities are not practical and work with various local groups to identify future needs for enhancement to ensure sustainable sport fishing opportunities.

Angler Access

Alaska's exceptional recreational opportunities require that access to the state's public lands are provided and secured. The division supports this endeavor through two programs: Recreational Boating and Angler Access, and Access and Defense. The Recreational Boating and Angler Access program is primarily tasked with establishing and managing federal grant projects that develop or maintain a range of infrastructure such as boat docks, boat ramps, associated parking areas, boardwalks and trails, accessible fishing docks, and restroom facilities. Local governmental agencies, the public, and area managers initiate Recreational Boating and Angler Access projects, which then require management of many components including contract and budget administration; permitting and environmental issues; and legal concerns. The Access and Defense program is tasked with identifying and protecting public access to fish and wildlife resources. This program coordinates the department's participation in the state's land planning process to identify existing public access and fish and wildlife habitat requiring protection; analyzes land and water management plans and land use actions; supports the state's assertion of ownership of submerged lands underlying navigable waters; defends the public's use of trails and easements; and nominates and defends easements during federal, state and municipal land conveyances.

Information and Education Services

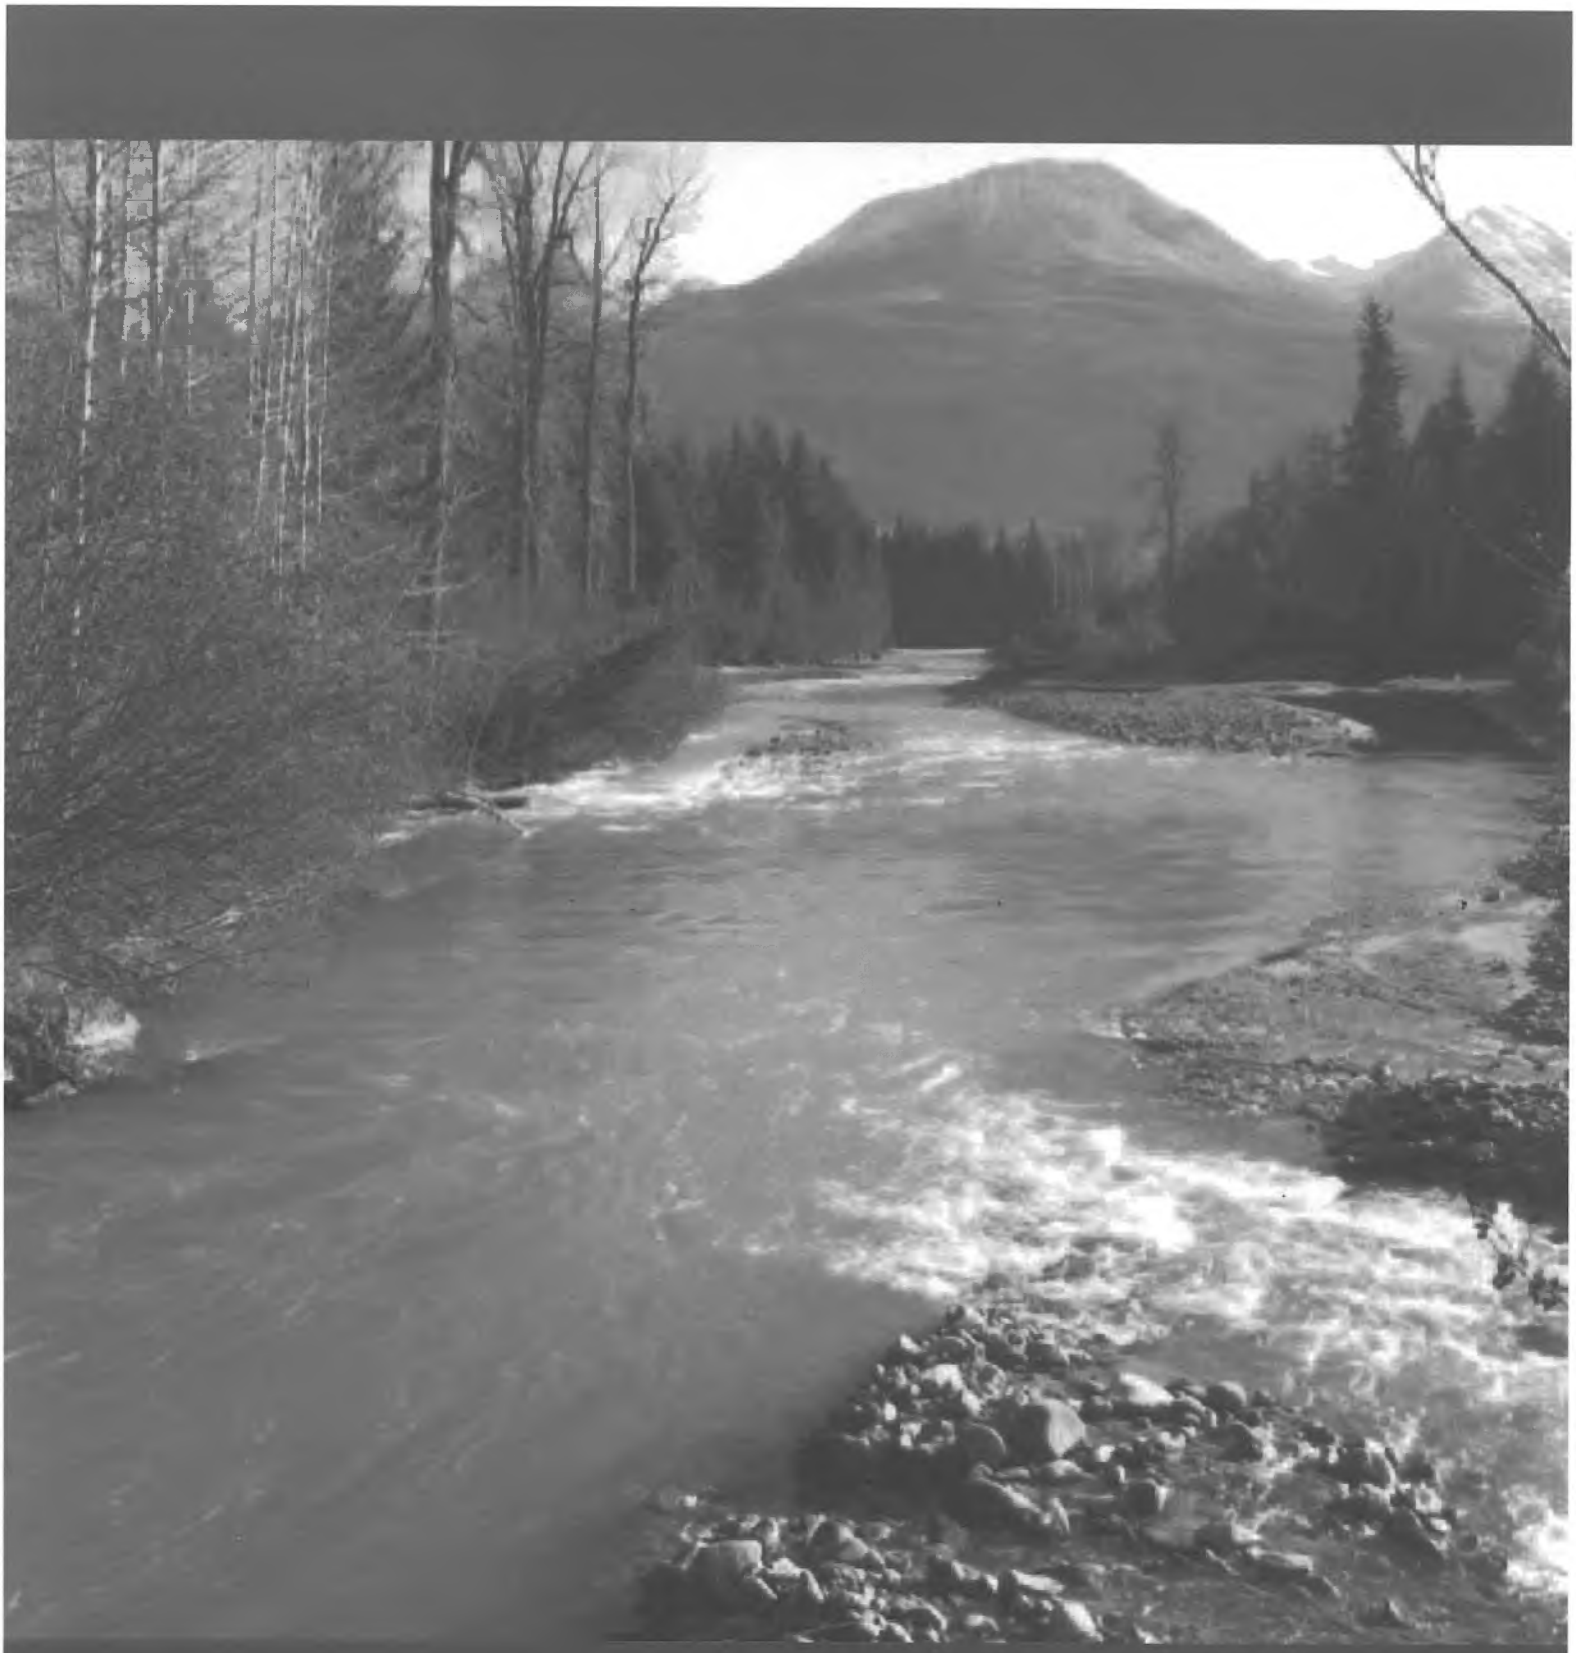
An informed and participatory public is central to the division's management and decision-making processes. Information and Education Services (I&E) functions to support recreational anglers and other members of the public in a timely manner and with an emphasis on exceptional customer service. I&E provides information concerning fisheries management, research, and sport fishing opportunities, including notice of changes to regulations; descriptions of salmon run strength; lists of lakes most recently stocked; and Alaska fishing tips and fishing trip planning. Information is disseminated using various forms and media, including personal phone calls, public meetings, local radio, and the Internet. I&E is committed to pursuing technologies that support online license and permit sales, and a functional website design that will improve data collection and information services to the public. I&E advocates public resource stewardship and sustainable use through education and skills development programs. The division's education programs are directed at recruiting and retaining recreational anglers of all ages.

Fish Habitat

Alaska's productive fisheries are not only attributed to its extensive pristine habitats (fresh water, estuarine, and coastal waters within three miles from shore), but also due to progressive state and federal agency conservation practices and laws. The Division of Sport Fish complements other entities' habitat protection work with programs funded directly by the division and through public and private grants. These programs are directed at protecting and restoring fish habitats for the benefit of fish and current and future recreational anglers. The division's habitat conservation staff conduct research on habitat and fish use of habitats; ADF&G, as well as other agencies and the public use the resulting information to make decisions regarding permitting and planning for land and water use, and fisheries management. The division's fish habitat staff also work cooperatively with other agencies and the public to administer stream bank restoration and fish passage improvement projects across the state.

Workforce Support

The two components of workforce support, the Division Leadership Team (DLT), and dedicated administrative staff, enable the division to achieve its goals in a fiscally responsible manner. The DLT is composed of the director, deputy director, assistant directors, regional supervisors, the administrative operations manager, and an administrative officer. The DLT provides oversight to the entire division, strives to develop its workforce, and provides resources to support its programs. The division's administrative staff is responsible for supporting other core functions through their day-to-day operations, which include budgeting and financial management; payroll and personnel management; and providing exceptional customer service to the public, division, and department staff.



GOAL 1:
Fisheries Management

Ensure the sustained use of Alaska's recreational fisheries while optimizing economic and social benefits

Objective 1

Use area- and fishery-based management to develop and achieve management objectives consistent with the sustained yield principle

Activities

- Utilize annual area management review process to identify data needs and gaps; prioritize projects; and review management actions
- Develop, maintain, and review fishery-based management plans that detail prescribed objectives and regulatory actions for existing and emerging recreational fisheries
- Communicate regularly with the Division of Commercial Fisheries to coordinate in season management for fully allocated fisheries
- Contribute to an effective Alaska Board of Fisheries process
- Maintain area offices and staff presence
- Identify consistent methodology between regions for identifying data needs and gaps
- Conduct pre-and postseason regional management reviews with the Division of Commercial Fisheries

- Conduct regular reviews of escapement goals
- Provide recommendations to the Alaska Board of Fisheries in a uniform and professional manner

Objective 2

Inform the public about management practices and policies so they are knowledgeable about and can participate meaningfully in the regulatory process

Activities

- Facilitate public participation in Alaska Board of Fisheries regulatory processes, and Local Advisory Committees
- Facilitate public participation in federal and international regulatory processes, such as the Federal Subsistence Board
- Summarize and publicize Alaska Board of Fisheries meeting actions

Objective 3

Consider recreational angler preferences and impacts in decision-making processes, including both social and economic effects of management actions

Activities

- Regularly collect, utilize, and report data on the economic significance and social benefits of sport fishing in Alaska
- Communicate recreational angler preferences to decision-making bodies

Objective 4

Achieve recreational angler compliance with laws and regulations

Activities

- Regularly update Sport Fish regulation summaries
- Educate recreational anglers regarding regulations
- Maintain dialogue with Alaska State Wildlife Troopers and attendant enforcement agencies to identify enforcement priorities relative to specific fisheries and licensing requirements
- Provide staff enforcement training, and provide opportunities for trained staff to participate in enforcement activities
- Identify opportunities where proposals can be submitted through the Alaska Board of Fisheries that would result in less complexity for our fisheries regulations
- Post regulatory signage at access sites on an area basis
- Develop and regularly update geographically-based local area fishing guides in addition to regulation summary books

Goal 1: *Continued*

Objective 5

Develop and cultivate associations with recreational anglers, the public, and relevant agencies

Activities

- Establish and maintain personal contact with local communities, recreational anglers, fishing organizations, and advisory committees
- Develop and participate in interagency management teams
- Collaborate with nongovernmental organizations (NGOs) that are working on priority fisheries and habitat issues

Objective 6

Minimize impacts of invasive species on fish stocks, recreational fisheries, and fish habitat

Activities

- Develop field detection, monitoring, and eradication programs for invasive species
- Develop and implement public communication plans related to the prevention, identification, and management of invasive species
- Develop and support community-based invasive species monitoring programs
- Develop, improve, and maintain a website and GIS database of invasive species

Proposed New Activities

- Create a "how-to" manual for the development and implementation of eradication plans (*2010*)
- Create a tutorial for staff on the division's participation in the Alaska Board of Fisheries regulatory process (*2010*)
- Develop informational materials for the recreational fishing public on the Alaska Board of Fisheries process (*2011*)
- Seek public input on how to simplify the regulation summaries (*2011*)
- Reformat and simplify the Sport Fish regulation summary book (*2011*)

Performance Measures

- Provide 2.5 million angler days and sell 450,000 licenses
- Support a positive trend in sport fishing trip-related expenditures as measured by the "Economic Significance of Sport Fishing in Alaska" survey
- Increase to at least 75% the number of anglers that are satisfied with their sport fishing experiences as signified in the Economic Significance of Sport Fishing in Alaska survey
- Eradicate at least one aquatic invasive fish species in a given lake or stream population every three years

GOAL 2:
Fisheries Research

Promote Excellence in Fisheries Research

Objective 1

Plan research projects that are scientifically and statistically sound, cost-effective, and address management information needs

Activities

- Use the area management review process to identify management-based research needs and information gaps
- Use an operational planning process to identify measurable objectives, sampling methods, analytical techniques and costs, and to ensure that projects are scientifically and statistically reviewed and approved
- Provide research staff with training opportunities related to statistical and analytical techniques; sampling methods; and applications of new technologies
- Utilize expertise from cooperating entities including the University of Alaska, other governmental agencies, NGOs, and private consultants

Objective 2

Conduct research to improve our understanding of population dynamics, life histories, and habitat requirements of recreationally-fished species

Activities

- Explore the use of alternative research technologies, methods, and analyses as appropriate
- Create a consistent process to identify intradivisional information needs and to prioritize and coordinate future cooperative research projects
- Utilize partnerships to fund and conduct research relative to information needs of common interest
- Conduct research on prioritized projects that will improve fundamental understanding of sport fish species and habitats

Objective 3

Conduct research to improve our understanding of use patterns, satisfaction, and preferences of recreational anglers

Activities

- Create and implement an electronic system to sell and track fishing licenses and permits
- Conduct surveys to estimate use patterns (e.g., harvest and effort data, angler satisfaction) from guided and nonguided recreational anglers
- Revise Guide/Charter Business Logbook based on the verification program

Objective 4

Publish research results that are peer-reviewed, well-written and timely

Activities

- Adhere to the divisional and departmental reporting policies and procedures
- Provide staff with resources to complete reports
- Promote and facilitate publication in peer-reviewed journals
- Provide recognition for publication in peer-reviewed journals
- Promote publication of research results to general public using traditional and online media

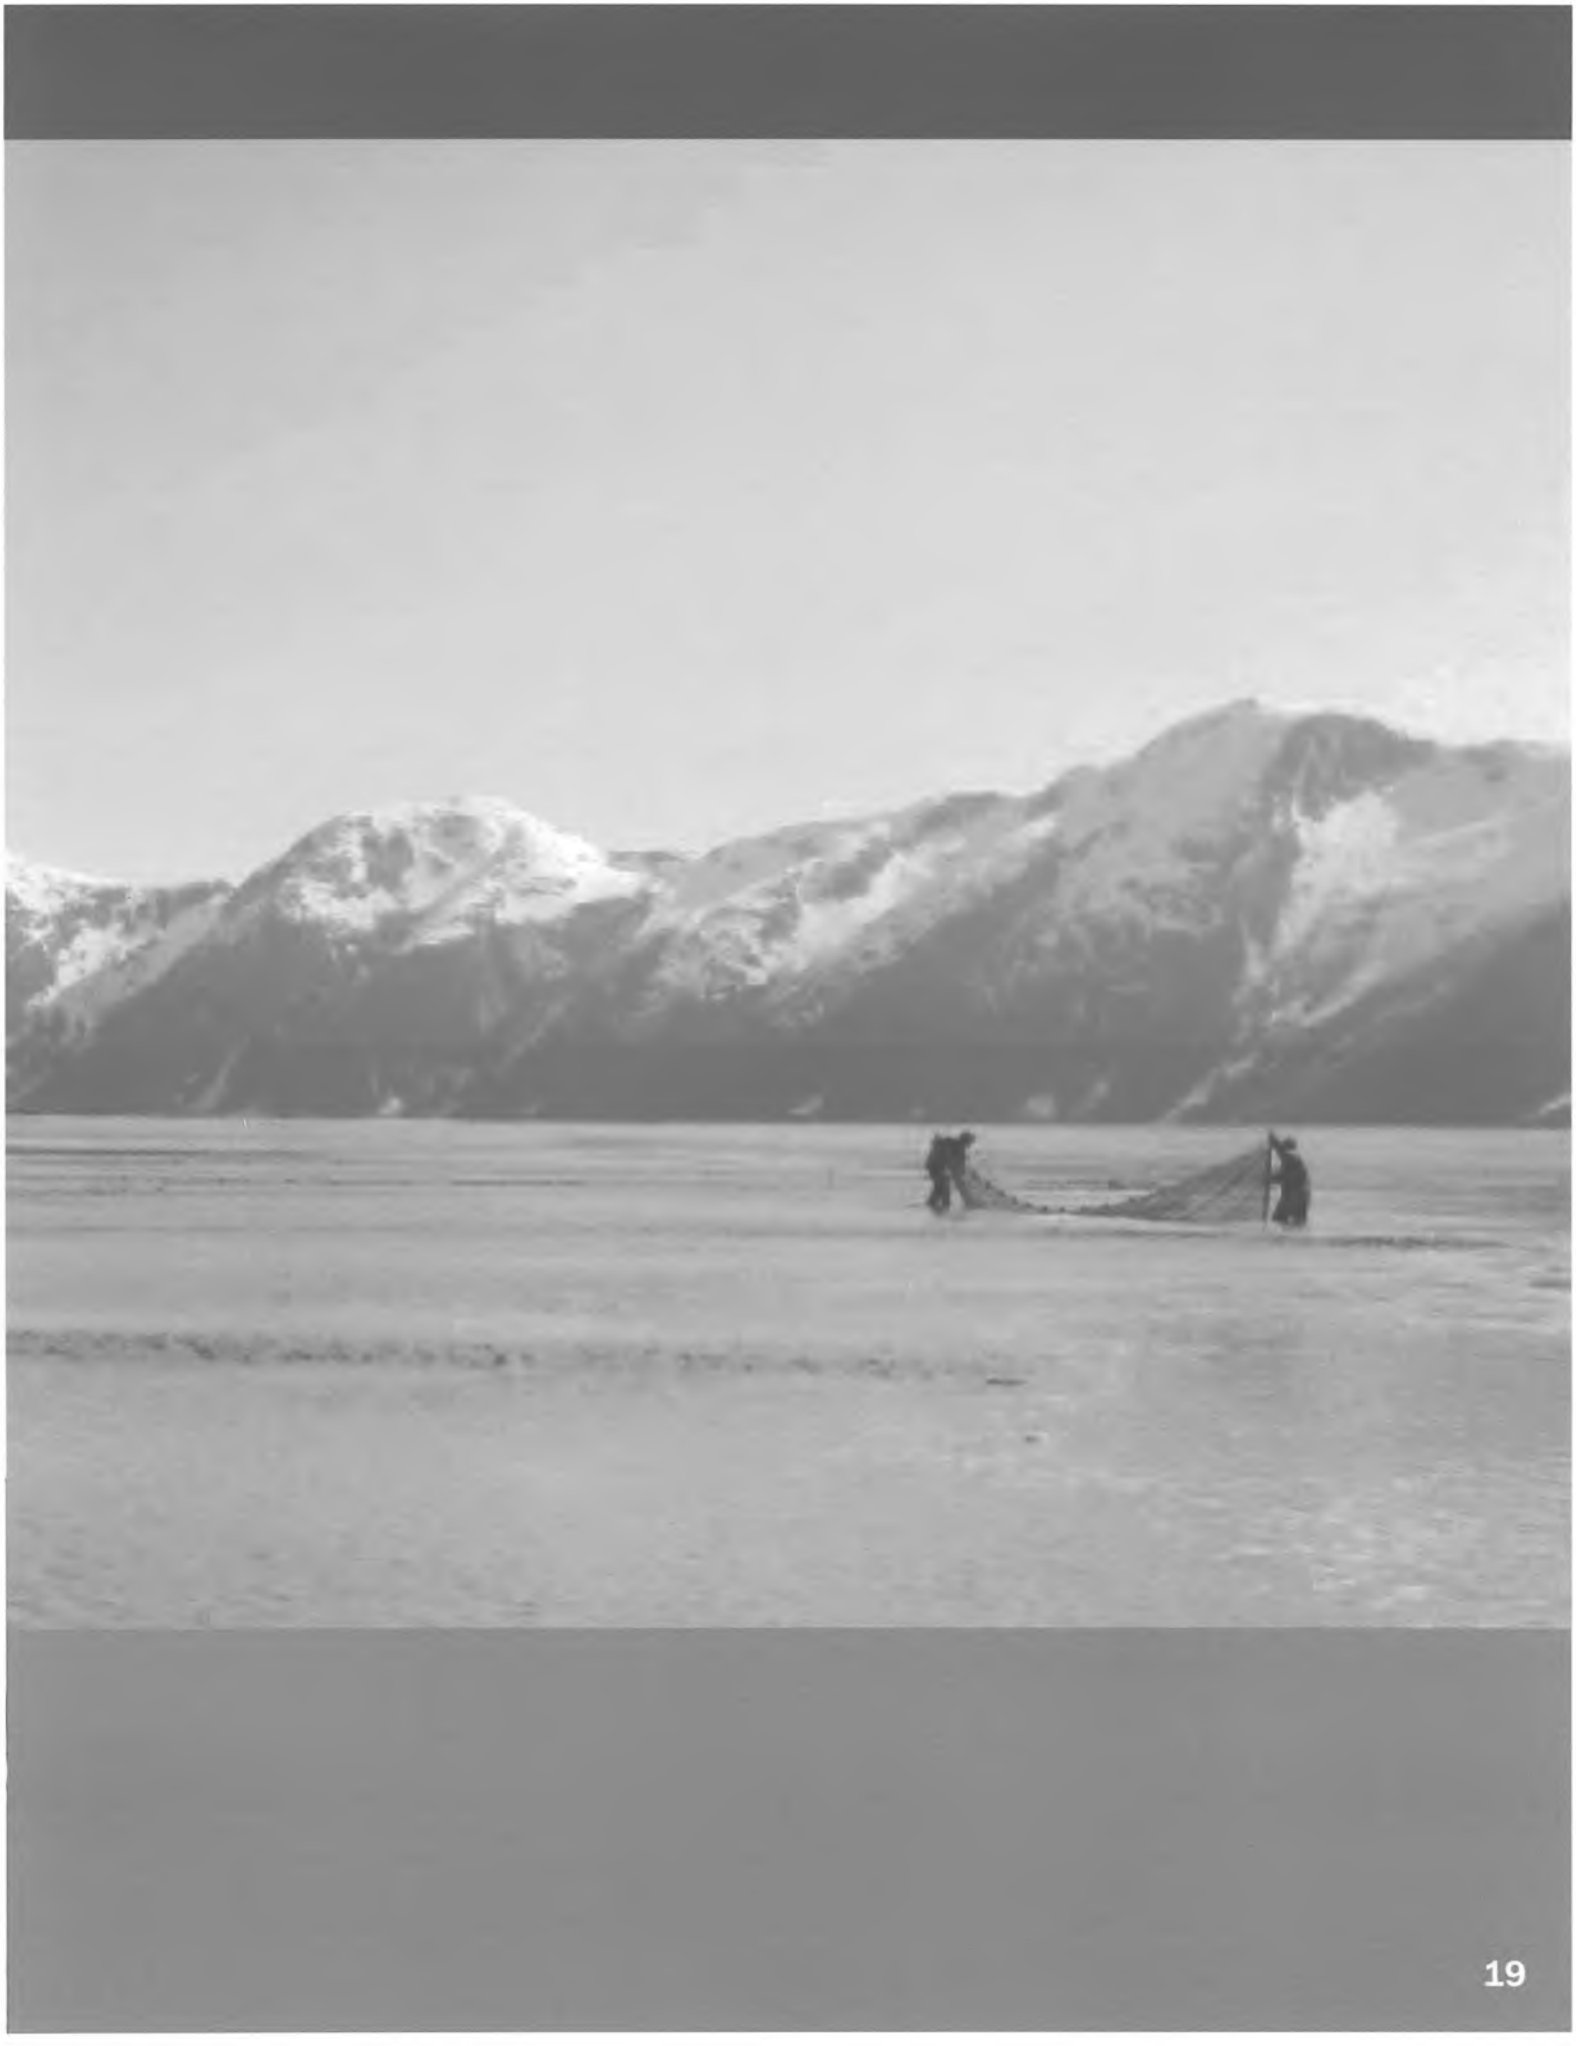
Goal 2: *Continued*

Proposed New Activities

- Develop a plan to increase timeliness of past and future research reporting (*2010*)
- Offer incentives for survey respondents (*2010*)
- Create and implement an electronic system to sell licenses and permits, track sales, and report harvest data (*2010*)
- Review, evaluate, and improve the operational planning process (*2010*)
- Create an option for reporting online for Alaska statewide sport fishing survey information (*2011*)
- Develop and implement a public communication plan on the importance and uses of Alaska statewide sport fishing survey information (*2011*)
- Implement an electronic logbook data collection system (*2011*)
- Create a consistent process among regions to annually identify information needs and prioritize future research projects (long and short term) relative to operational planning, budgeting, reporting and coordinating interdivisional research efforts (*2013*)
- Integrate distribution of survey instruments into the license purchase process (*2013*)
- Develop long-term research plan to identify information needs on emerging issues, such as the effects of climate change on recreational fisheries and habitats (*2013*).
- Create an internal, over-arching data management system for existing and future information (*2014*)

Performance Measures

- Meet or exceed threshold harvest or catch levels in 16 or more of 21 use performance categories (a use performance category is defined as an annually estimated harvest or catch statistic derived from selected stock(s) in particular survey area(s) and water type(s).
- Ninety percent or more of Division of Sport Fish internally peer-reviewed management based reports (Fishery Data Series, Fishery Management Report, Fishery Manuscript, or Special Publication) are published within 2 calendar years from the year that data collection was finished.



GOAL 3:
Fisheries Enhancement

Diversify recreational fishing opportunities via supplemental production of hatchery-reared fish

Objective 1

Conduct enhancement activities in a manner that protects wild fish and habitats

Activities

- Adhere to the policies on genetics, pathology, lake stocking, and for waters bearing anadromous fish
- Assess effects of anadromous and freshwater stockings on wild fish

Objective 2

Meet regional enhancement needs for prioritized anadromous and freshwater fisheries

Activities

- Construct and maintain hatchery infrastructure
- Implement prioritized regional stocking plans
- Base production goals on area-specific management needs

Objective 3

Produce fish in a manner that is biologically sound, cost-effective, and that utilizes innovative practices

Activities

- Develop best management practices for standard hatchery operating procedures
- Develop long-term research plan to identify information needs and to improve fish husbandry and production effectiveness
- Develop and monitor partnerships as needed with private nonprofit hatcheries
- Conduct post-stocking assessment of product performance in prioritized water bodies
- Revise existing Private Non Profit (PNP) cooperative agreements to ensure consistent and timely reporting practices

Objective 4

Inform the public and division staff about fishery enhancement

Activities

- Develop and implement a public communication plan for hatchery production and stocking programs

Proposed New Activities

- Develop long-term research plan to identify information needs and to improve fish husbandry and production effectiveness (*2010*)
- Develop and implement long-term facility plans (*2010*)
- Host a workshop to clarify the policies on genetics, pathology, lake stocking, and waters bearing anadromous fish (*2011*)
- Develop and adhere to best management practices for standard hatchery operating procedures (*2011*)
- Develop proposed PNP standards of performance (*2013*)
- Develop a searchable GIS database for all annual hatchery report data, including size, location, imprint, time,and season of release. (*2013*)

Performance Measures

- Maintain the number of actively stocked lakes with hatchery fish at a level equal to or greater than the 1999-2003 average
- Maintain the number of enhanced anadromous-salmon fisheries actively stocked with hatchery fish at a level equal to or greater than the 1999-2003 average
- Maintain the number of lake-stocked fish caught and harvested using the 1999-2003 average
- Maintain the number of enhanced-anadromous salmon caught and harvested using the 1999-2003 average

GOAL 4:
Angler Access

Protect and improve public access to recreational fisheries resources

Objective 1

Secure and protect recreational angler access to public lands

Activities

- Protect and defend access through participation in state and federal land and water use planning, review of land use actions, and research of navigable waters and historic trails
- Identify and prioritize lands/ easements that currently or could provide public access
- Identify historic and modern uses of water bodies and trails for travel, trade and commerce for RS 2477, ANCSA 17b, navigable waters, and submerged lands

Objective 2

Maintain or improve current access sites and facilities

Activities

- Maintain and improve access-site partnerships
- Create and maintain a regional inspection and maintenance schedule and database for cooperative agreements
- Coordinate with other programs and agencies to review suitability of existing access

Objective 3

Identify, prioritize, and develop new access sites and facilities projects

Activities

- Construct prioritized access projects (boating and nonboating)
- Involve the public to identify access priorities and facilities maintenance needs
- Conduct statewide assessments of nonmotorized angler access sites
- Coordinate with other programs and agencies to consider appropriate access opportunities
- Utilize a prioritization process for potential boating and non-boating access projects
- Consult with the division hatchery program and other land management agencies to improve access to stocked lakes
- Consult with state agencies and other partners on road access improvements
- Review land management plans for habitat affects prior to implementation

Objective 4

Inform division staff and the public about access opportunities and the decision-making process

Activities

- Develop and implement a public communications plan about access available to anglers and the access decision-making process

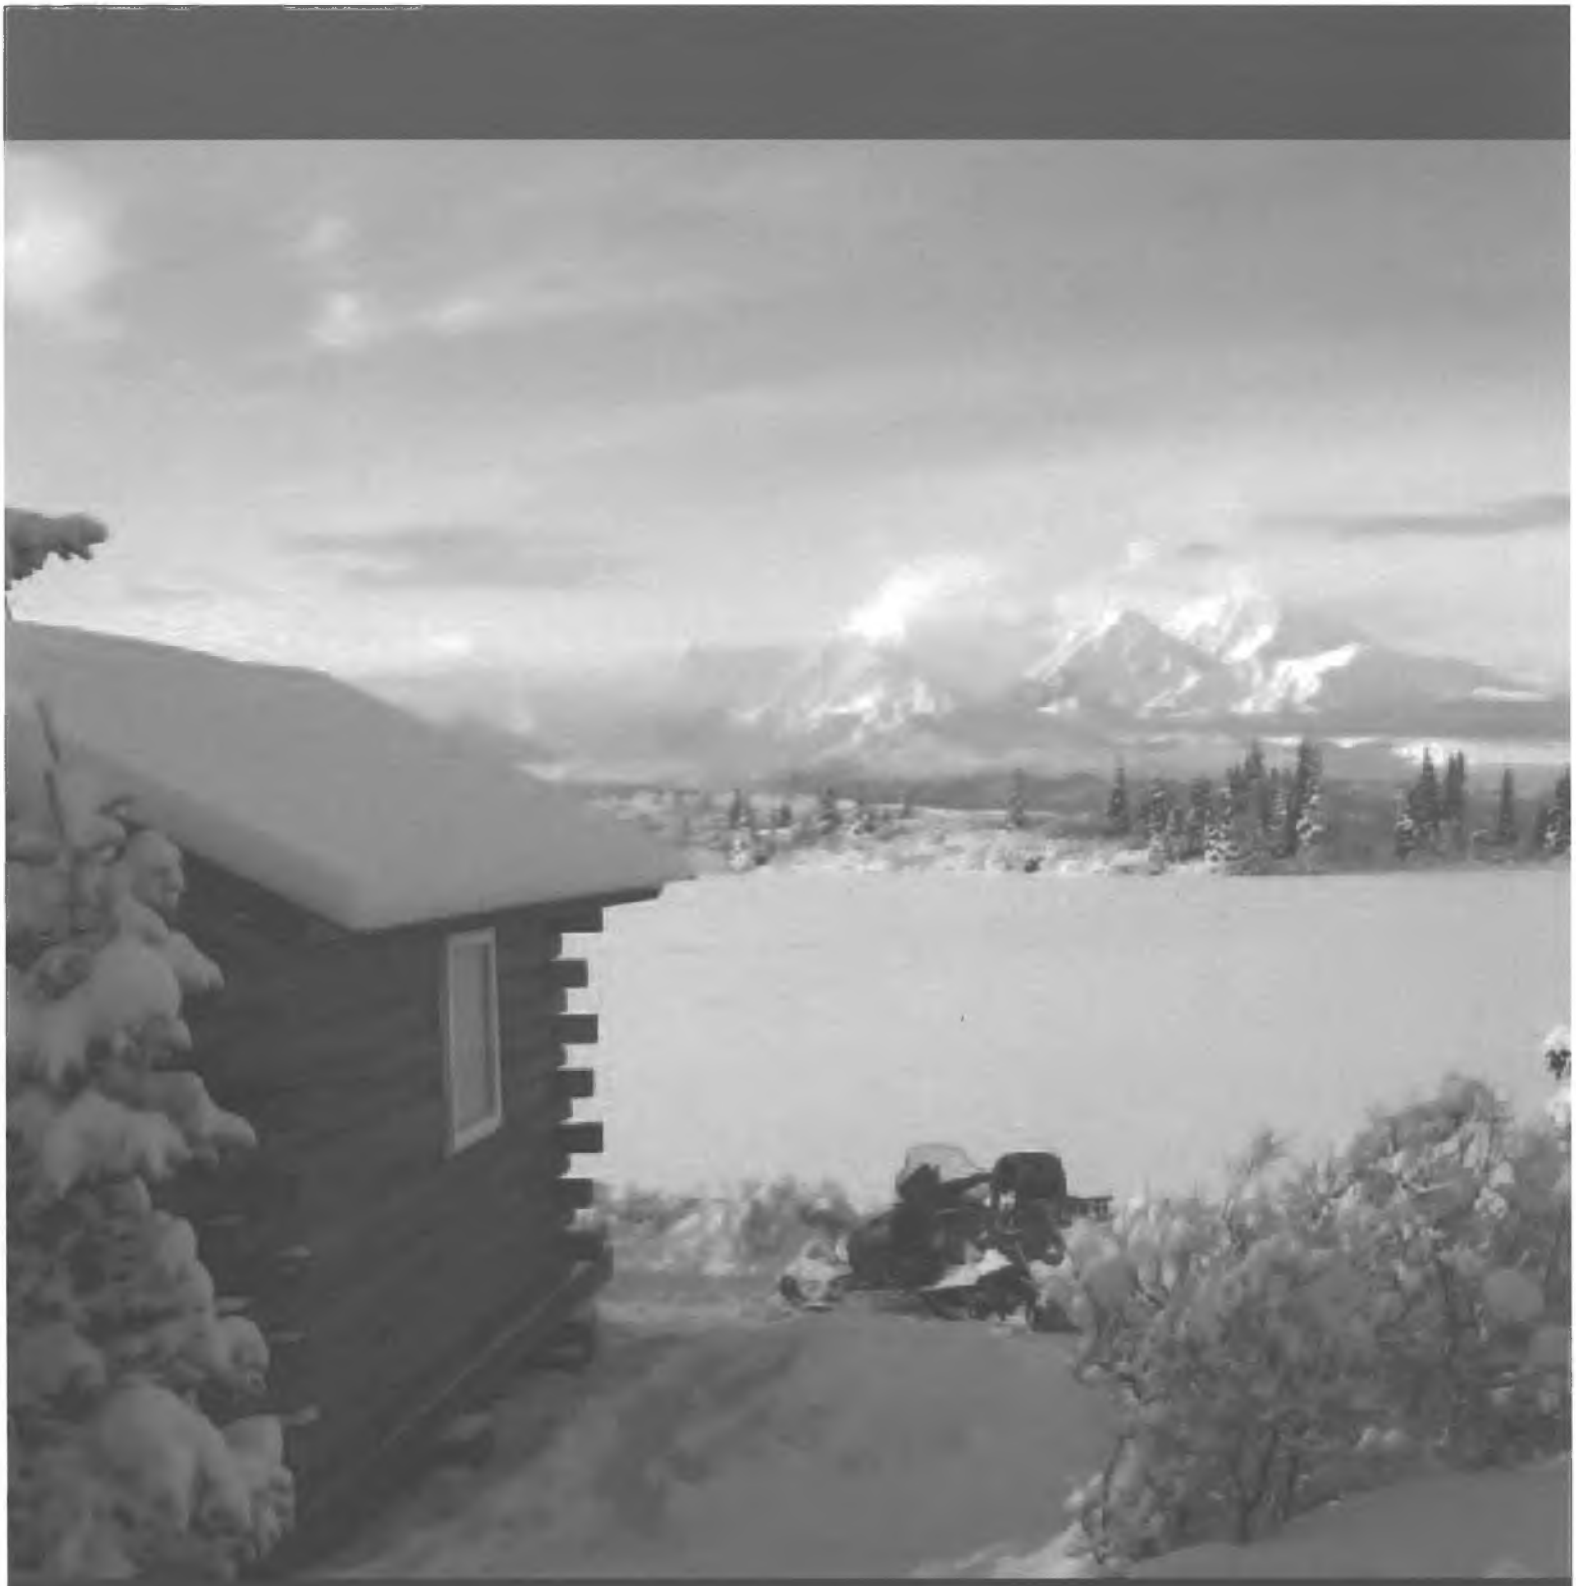
Goal 4: *Continued*

Proposed New Activities

- Create and implement, based on cooperative agreements, a regional inspection and maintenance schedule and database (*2010*)
- Develop and implement a long-term prioritization process for obtaining access easements (*2011*)
- Develop agreements with state agencies for the maintenance and improvement of boating and non-boating angler access sites (*2011*)
- Assess the feasibility of an "adopt-a-site" program (*2011*)
- Conduct a statewide assessment of nonmotorized angler access sites (2012)
- Create a GIS system to track current or potential access sites (*2012*)

Performance Measures

- Complete a total of five priority boating access projects per year over a five-year period
- Complete a total of two priority non-boating angler access projects per year over five years.
- Review 100% of all federal, state, and municipal/borough land actions (excluding those subject to Alaska Native Interest Lands Conservation Act [ANILCA] provisions), within the required time frames to identify those actions that potentially affect public access to fish and wildlife resources
- Develop recommendations to maintain public access to fish and wildlife resources for 100% of those actions that potentially affect public access to fish and wildlife resources



GOAL 5:
Information and Education Services

Inform and educate the public about recreational fishing with an emphasis on exceptional customer service

Objective 1

Inform recreational anglers and division staff about Alaska's recreational fishing opportunities, angler access, regulations, and fisheries management

Activities

- Utilize media and ADF&G web site to provide timely updates regarding fisheries information and emergency orders
- Improve Internet presence and information accessibility
- Develop public communication plans that describe key messages, products, and delivery methods for division informational materials and services
- Participate in local sportsmen's shows and other partner group outreach activities

Objective 2

Promote participation in recreational fishing activities

Activities

- Inform and instruct recreational anglers about the skills needed to participate in Alaska's fishing opportunities and provide experience-based skill-building opportunities
- Conduct innovative recreational angler recruitment and retention initiatives
- Identify opportunities to develop urban, youth, and family fishing programs
- Provide hands-on angling skill-based programs for targeted audiences
- Expand the rod loaner program statewide
- Partner with youth organizations to institute Take a Kid Fishing Day

Objective 3

Provide the public and division staff with information and products that are consistent, accurate, and easily found and understood

Activities

- Deliver exceptional customer service
- Provide educational program templates that can be tailored to local management areas
- Standardize information products and educational programs across regions

Objective 4

Increase public understanding of and participation in the stewardship of Alaska's recreational fisheries resources

Activities

- Integrate stewardship principles in all division education programs
- Develop and deliver Alaska-specific K-12 stewardship curricula

Goal 5: *Continued*

Proposed New Activities

- Develop a public communication plan to educate the public on the link between license fees and conservation management (*2010*)
- Redesign website to exceed user expectations (*2010*)
- Develop communication plans that describe key messages, products, and delivery methods for division informational materials and services (*2010*)
- Build a Web-accessible "how-to" video library (*2011*)
- Develop a customer service manual that covers training, measures, reference materials, and expectations (*2012*)
- Determine better ways to provide in season updates to vendors and guides (*2013*)
- Develop and implement a voluntary angler education certification program (*2014*)

Performance Measures

- Maintain participation at 5,000 participants in angling skills-oriented programs annually
- Implement 15 communication plans that address specific activities implemented each year
- Create or renovate five informational topics on the Division of Sport Fish Web site to provide current information on management, research, and sport fishing opportunities annually; 100% of time-sensitive topics are updated appropriately

GOAL 6:
Fish Habitat

Conserve habitat to sustain recreational fisheries resources

Objective 1

Protect fish habitat to sustain recreational fisheries

Activities

- Administer Alaska's Anadromous Waters Catalog
- Conduct inventories to expand the coverage of the Anadromous Waters Catalog
- Prioritize, document, and reserve water rights in lakes and rivers to ensure water quantity and quality
- Collect hydrological and biological data relevant to habitat protection
- Provide recommendations to minimize impacts to aquatic and riparian habitats of fisheries-related public access projects to fisheries resources
- Coordinate regularly with the Division of Habitat on permitting topics of mutual interest
- Recommend conditions to be placed on permits as necessary to protect habitat

Objective 2

Improve or restore degraded fish habitat

Activities

- Conduct prioritized projects to protect, enhance, and/or rehabilitate degraded habitat
- Provide recommendations on fish passage standards
- Provide training on and promote habitat restoration best practices
- Contribute to special area management planning

Objective 3

Develop and cultivate partnerships to conserve fish habitat

Activities

- Provide technical skills and coordination support to partner organizations and agencies
- Utilize partnerships to promote benefits of stewardship, land and water use planning, and habitat conservation and restoration
- Provide technical support to local National Fish Habitat Action Plan (NFHAP) partners
- Host workshops for landowners, organizations, and the public

Objective 4

Inform the public about the division's habitat conservation efforts

Activities

- Develop and implement a communication plan for habitat conservation activities including research and restoration

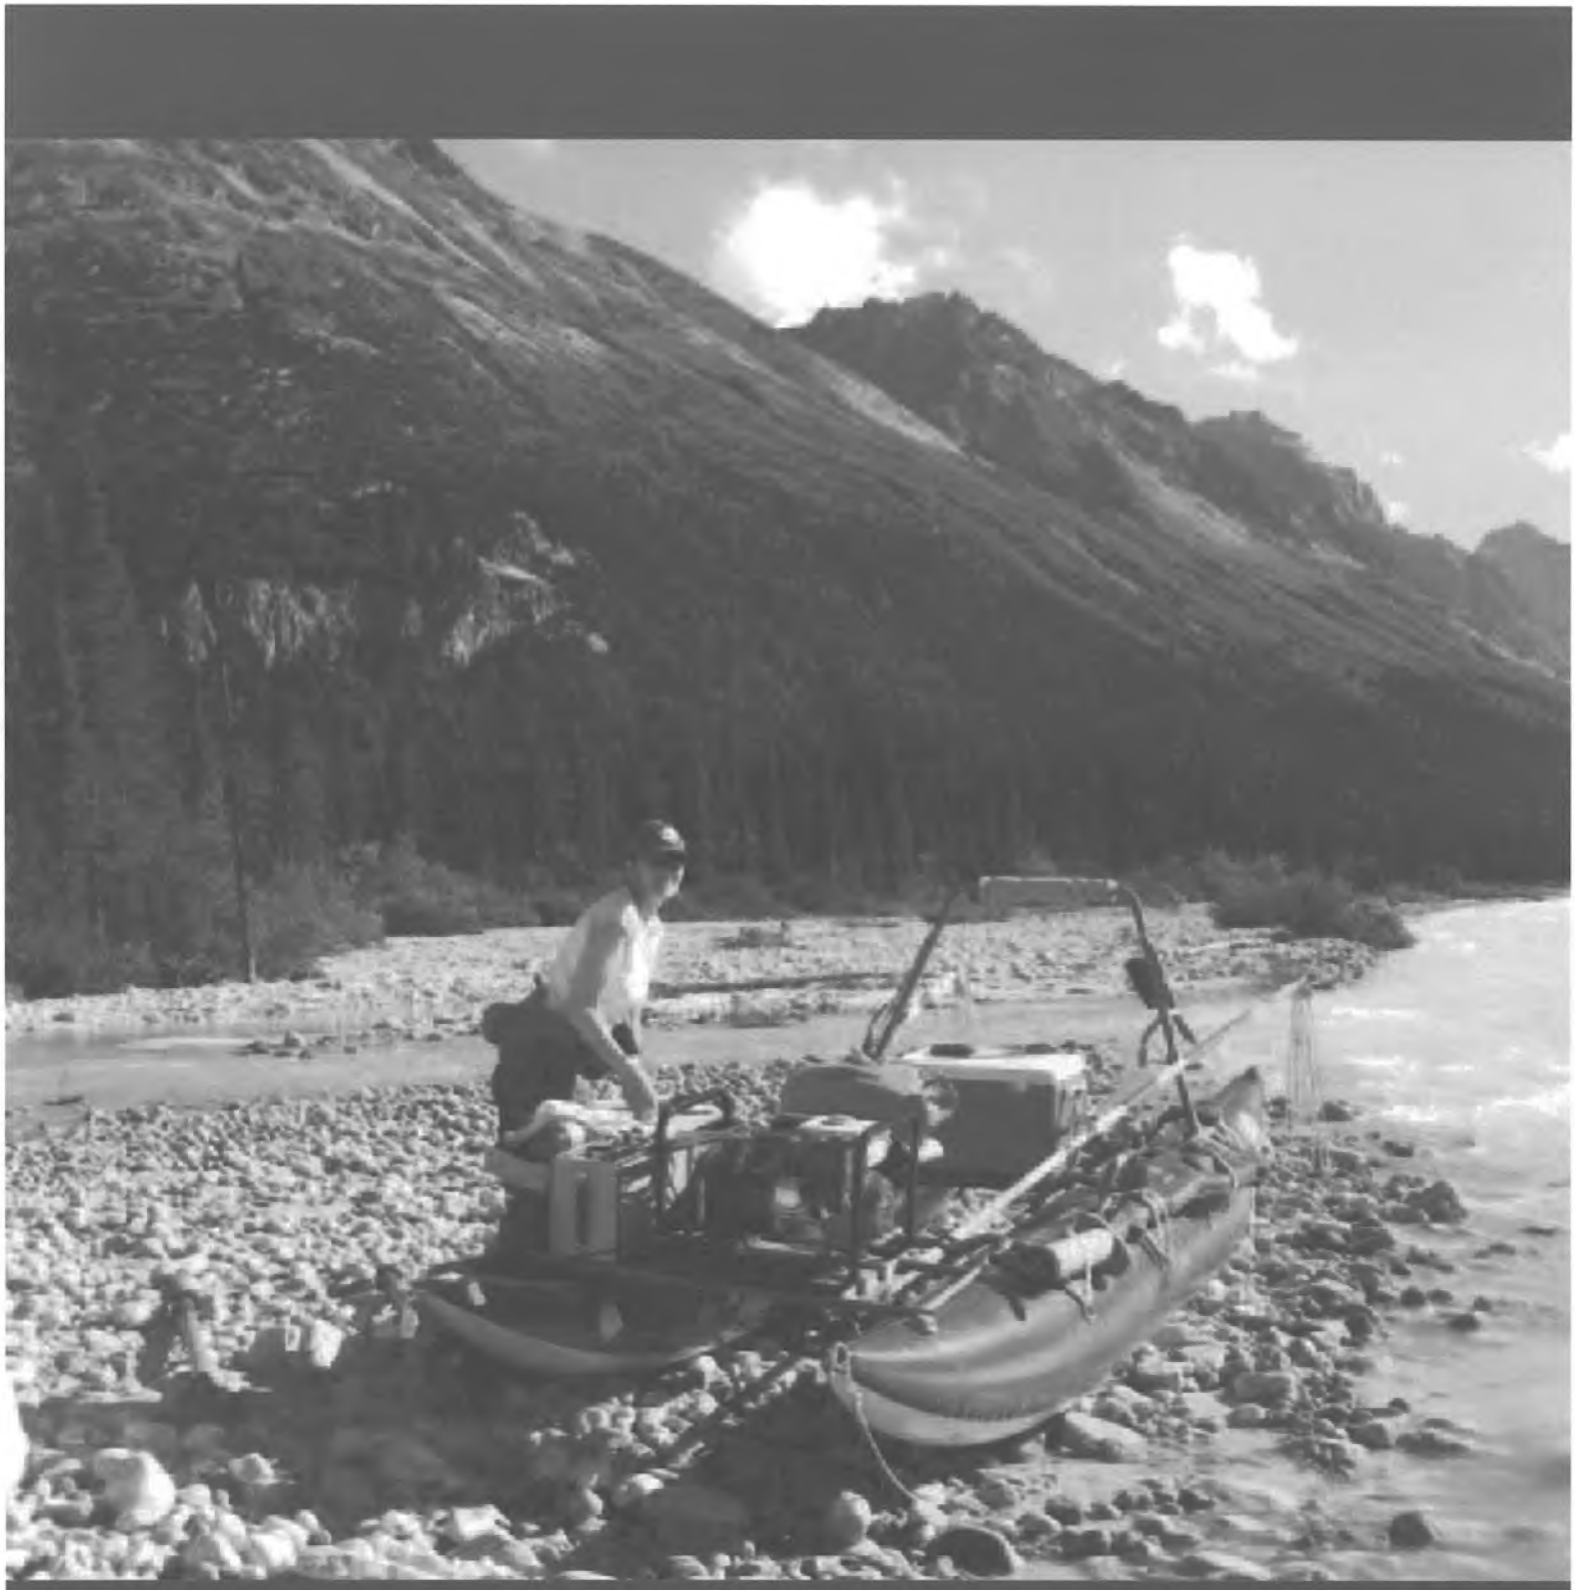
Goal 6: *Continued*

Proposed New Activities

- Develop an internal review process for permitting actions that impacts sport fishing (*2010*)
- Develop criteria for prioritizing habitat restoration and fish passage improvement projects (*2010*)
- Update Memorandum of Understanding with the Department of Transportation and Public Facilities on culvert design (*2010*)
- Develop and implement a public communication plan for habitat restoration (*2010*)
- Evaluate efficacy of restoration projects (*2010*)

Performance Measures

- Annually enhance five miles of priority-catalogued fish habitat by improving fish passage
- Annually rehabilitate or protect at least 1,500 feet of stream bank and riparian habitat
- Annually inventory and/or document aquatic species assemblages, characterize associated habitats, and collect fish stock richness and (relative) abundance data per stock within five sub-basins to add to the Alaska Freshwater Fish inventory database
- Add 1,000 priority stream miles annually to the fish distribution database and Anadromous Waters Catalog
- File 10 reservation of water applications annually for priority water bodies



GOAL 7:
Workforce Support

Provide exceptional support to our workforce to attain the Division's vision and goals

Objective 1

Recruit, develop, and retain highly qualified and motivated staff

Activities

- Develop and implement division-wide recruitment strategies
- Continue to implement the department's workforce development initiative
- Provide division staff with opportunities for professional development, training, and job advancement
- Fund full-time staff salaries from permanent funding sources
- Develop and implement an internal employee awards program
- Conduct annual evaluation of employee satisfaction
- Conduct annual employee performance evaluations and workload assessments
- Formalize internship programs for high school and undergraduate students
- Support graduate level fisheries-related education
- Conduct exit interviews with all departing staff

- Advocate for equitable pay and benefit packages for active and retired employees
- Allow flexible work schedules
- Prepare succession planning for key positions and evaluate promotional opportunities
- Establish dedicated regional training budgets to support general and individual training plans
- Provide safety training
- Mandatory attendance at the state's Academy for Supervisors by all staff range 18 and above, and those with supervisory duties

Objective 2

Provide staff with sufficient resources to perform assigned work

Activities

- Ensure that staff have appropriate tools, technology, and equipment
- Assess and update division-specific employee orientation handbook

Objective 3

Promote a strong team approach between division staff, the regions, and the department's divisions

Activities

- Ensure that staff understands and works toward achieving the division's vision and strategic priorities
- Provide regular communication between regions in all aspects of the division's work
- Encourage all ADF&G divisions to communicate across the department about decision-making on important issues
- Communicate division leadership priorities to all staff

- Include staff in strategic planning processes
- Conduct regular staff meetings at area and regional offices
- Hold statewide function-specific meetings
- Provide staff contributions to the Otolith & Wildlife News

Goal 7: *Continued*

Objective 4

Provide timely and effective administrative support

Activities

- Ensure that staff are familiar with administrative processes
- Maintain up-to-date budgeting and financial data
- Streamline administrative procedures in coordination with the Department of Administration
- Ensure division-wide consistency in application of administrative procedures
- Provide timely information to staff on new procedural changes
- Continue yearly administrative workshops and encourage participation by nonadministrative staff

Objective 5

Ensure that funding is sustainable and aligned with the division's priorities and programs

Activities

- Ensure projects are based on and prioritized by the division's strategic plan
- Prepare annual evaluation on progress toward achieving strategic plan goals, objectives, and activities
- Protect the state's authority over federal Sport Fish Restoration Program funding sources

Proposed New Activities

- Provide staff with opportunities to learn about other division functions (*2010*)
- Provide Division Leadership Team meeting summary to all staff within 2 weeks of meetings (*2010*)
- Develop and provide Budget 101 training to all staff (*2010*)
- Ensure projects are based on and prioritized by the division's strategic plan (*2010*)
- Support staff certification as Associate and Certified Fisheries Professional by the American Fisheries Society (*2011*)
- Develop division-wide approach to coordinate efforts on competitive grants and other funding processes (*2013*)

Performance Measures

- Conduct a confidential employee survey every year that will assess workforce dedication, empowerment and effectiveness.
- Ninety percent of employees report having sufficient resources and skills to perform their assigned duties.
- Ninety percent of employees report that they understand the Division mission and goals.
- Ninety percent of employees report that they have sufficient direction from their supervisor.
- Ninety percent of employees report being able to regularly participate in training events, professional development activities, and meetings with their peers, to enhance their skills.
- Eighty-five percent of employees report having sufficient authority or influence over decisions made related to their work.

Definitions and Acronyms

17b	Section 17b of the Alaska Native Claims Settlement Act related to public easements
ADF&G	Alaska Department of Fish and Game (the department) (*http://www.adfg.state.ak.us/*)
Anadromous	Fishes that spend most of their life at sea and migrate to fresh water to spawn (breed)
Alaska Board of Fisheries	The Alaska Board of Fisheries (BOF), a seven-member board appointed by the governor and confirmed by the Legislature, sets seasons, bag limits, methods and means for the state's subsistence, commercial, sport, guided sport, and personal use fisheries. It also sets policy and direction for the management of the state's fishery resources. The board is charged with making allocation decisions, and the department is responsible for management based on those decisions (*http://www.boards.adfg.state.ak.us/fishinfo/index.php*)
Biometrician	Staff trained in the application of the concepts of statistical probability and the scientific method to the collection and analysis of data used to assess fish stocks
Communication Plan	A tool used to identify target audience(s) and means to reach it, determine key message(s), identify materials to be produced, identify staff/equipment resources, and describe an approach and timeline for implementation
Division	Division of Sport Fish (*http://www.sf.adfg.state.ak.us/*)

DLT	Division Leadership Team, consists of the director, deputy director, assistant director, regional supervisors, the administrative operations manager, and an administrative officer
Enhancement	Increasing fish stocks, such as through supplemental hatchery production
Estuarine	Referring to a partially enclosed body of water (such as bays, lagoons, sounds or sloughs) where two different bodies of water, typically fresh and salt waters, meet and mix
Invasive Species	Fish, animals, or plants that are both non-native to a particular ecosystem and whose introduction causes or is likely to cause economic or environmental harm or harm to human health
Performance measure	The performance measures are integral for achieving the division's goals and were developed in 2008 prior this strategic plan for submission to the State of Alaska Office of Management and Budget (OMB). The OMB uses a targets and measures process to ensure the State's resources are invested in a way that produces results that advance the Governor's priorities. The performance measures listed in this plan were designed to be measurable and are synonymous with OMB's targets and measures. The OMB uses a subset of the division's performance measures that are re-evaluated and updated annually. A current list of the division's submission of targets and measures can be found at *http://omb.alaska.gov/results/view_details.php?p=62*
NGO	Nongovernmental organization
NFHAP	National Fish Habitat Action Plan (*http://fishhabitat.org/*)
PNP	Private nonprofit hatchery
RS 2477	Revised Statute 2477, which allowed for the construction of highways across public lands not otherwise reserved for public purposes (repealed 1976 under the Federal Land Policy Management Act)

Definitions and Acronyms

Reservation of Water

A water right (appropriation of water) to maintain a specific flow rate in rivers (or level of water in rivers and lakes) for one or a combination of four types of uses: 1) protection of fish and wildlife habitat, migration, and propagation; 2) recreation and parks purposes; 3) navigation and transportation purposes; and 4) sanitary and water quality purposes

Stewardship

Principles which contribute to the conservation of a fishery that persists and obtains yields on a continuing basis; characterized by fishing activities and habitat alteration, if any, that do not cause or lead to undesirable changes in biological productivity, biological diversity, or ecosystem structure and function, from one human generation to the next.

State Waters

Internal waters of the state including rivers, streams, lakes and ponds, the tidal zone of the state from mean higher high water to mean lower low water, and those waters extending generally three miles seaward (see *http://www.touchngo.com/lglcntr/akstats/aac/title05/chapter039/section975.htm*)

Sustained Yield

Sustained yield is an output of renewable resources that does not impair the productivity of the resource; it implies a balance between removal through the activities of the fishery and replenishment through incremental growth and/or recruitment of the stock. The sustained yield principle is one of the fundamental elements of dependable recreational fisheries in Alaska. The department has a statutory responsibility to manage the use of wild fish stocks for sustained yield (AS 16.05.730(a)). Scientifically based assessments of wild stocks are the foundation of the sustained yield principle

The Alaska Department of Fish and Game administers all programs and activities free from discrimination based on race, color, national origin, age, sex, religion, marital status, pregnancy, parenthood, or disability. The Department administers all programs and activities in compliance with Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act (ADA) of 1990, the Age Discrimination Act of 1975, and Title IX of the Education Amendments of 1972

If you believe you have been discriminated against in any program, activity or facility, or if you desire further information, please write to ADF&G ADA Coordinator, PO Box 115526, Juneau, AK 99811-5526;

USFWS, 4401 N. Fairfax Drive, MS 2042, Arlington VA 22203, or

Senate Resources Committee

RE: HJR 9 Committee Substitute

The Senate Resources Committee considered and passed HJR 9 with the following amendment:

Page 2, line 18,
Delete "Prudhoe Bay" and replace with
"North Slope"

To read:
WHEREAS, North Slope production is declining; and

Please provide a Senate Resources Committee Substitute that reflects that amendment as soon as is possible.

Thank you in advance for your time and effort.

Sponsor Statement

CSHJR 9(RES)
Endorsing ANWR Leasing

House Joint Resolution 9 urges the United States Congress to pass legislation to open the coastal plain of the Arctic National Wildlife Refuge to oil and gas exploration and development.

The Alaska National Interest Lands Conservation Act of 1980 prohibited leasing or other development leading to production of oil and gas from the Arctic National Wildlife Refuge. Today domestic demand for oil continues to rise while domestic crude production continues to fall, with the result that the United States imports additional oil from foreign sources.

The oil industry has shown at Prudhoe Bay, as well as at other locations along the Arctic coastal plain, that it is capable of conducting responsible oil and gas activity without adversely affecting the environment or wildlife populations.

HJR 9 mirrors and endorses previous Legislature's resolutions in enthusiastically supporting the opening of ANWR for responsible development. It is paramount that the 27th Alaska Legislature joins these past efforts in sending a unified resolution to Congress.

Summary of Changes from HJR 9 Version A to CSHJR 9(RES) Version I

CSHJR 9(RES)
Endorsing ANWR Leasing

The following language was added to the title paragraph on page 1 line 1: "relating to oil and gas exploration, development, production, and royalties; and relating to renewable and alternative energy technologies." This change was made to better reflect all of the language included in the resolution.

Removed "any" from page 3 line 21.

Added "and alternative" to page 3 line 23-24 and page 4 line 5-6. Alternative adds additional sources of energy generation that renewable alone does not.

"the Alaska State Legislature urges that oil and gas exploration, development, and production" added to page 3 line 28. This was added for clarification.

"and the nation's" was added to Page 2 line 6 to emphasize national security.

ANWR:

JOBS AND
ENERGY
FOR AMERICA

ARCTIC POWER
P. O. Box 100220
Anchorage, AK 99510

425 8th Street NW
Ste. 540
Washington, DC
20004
202.248-4468
202.248-6123 FAX
http://www.anwr.org

49 ANWR points from the 49th State

1) The 10-02 Area has more conventional oil potential in one spot than any single or collective regional onshore location in North America.

2) ANWR has been the most continually active energy issue on Capitol Hill for the past 30 years.

3) To date Alaskan oil saved America importing 16,058,674,205 barrels of oil since 1977 when the Trans-Alaska Pipeline opened.

4) In 2010 alone the Trans-Alaska Pipeline, operating at 1/3rd capacity, saved America importing $15,207,988,866 worth of oil.

5) Importing oil is the single largest contributor to our national debt. In 2011 a full TAPS would save America $195,300,000 per day.

6) At $90 pb the mean value of ANWR oil is $936 billion. At 100$pb it is worth over $1.3 Trillion

7) Every Alaskan State Legislature, every single Alaskan Congressional delegate, and every single Alaskan Governor has supported opening the 10-02 every year since the debate began. In a 2008 poll 78% of Alaskans supported exploration in ANWR.

8) Alaska Federation of Natives (AFN), Alaska's Native governing body, supports exploration; the North Slope Borough (the Government of the Arctic) supports exploration, the Village of Kaktovik (ANWR's only settlement) supports exploration, the Arctic Slope Regional Corporation (representing all natives in the Arctic) supports exploration.

9) The State of Alaska position on ANWR is echoed by hundreds of national organizations from all walks of life.

10) A majority of Americans support opening the 10-02. This has been proven in a number of independent public polls in 2008 and 2009.

11) When told the fact that Alaskans support this issue, more than half of all doubters on ANWR convert.

12) Millions more Americans will benefit from the oil and gas from ANWR in one day than will ever visit ANWR in a lifetime.

13) No species of animal, fish, insect, or bird has declined in population within the oil fields of Prudhoe Bay since development began negating doomsday claims by environmentalists.

14) A job created is better than a job lost! Declining production and an empty pipeline means one thing, jobs lost and lost state, federal and private revenue.

15) ANWR has the potential to double Prudhoe Bay's current output. This output could last over 30 years.

16) The predictions on Prudhoe Bay was 9 billion barrels; we surpassed 16 billion barrels in 2009.

17) The USGS estimates for ANWR now used by all in this debate are based on 37% recovery rate; today we recover over 60%.

18) Green organizations will raise more money and spend more money on the ANWR issue in one year than any other environmental issue. It is their golden goose and egg.

19) In its first 20 years Prudhoe Bay development has caused well over $50 billion to be spent by industry buying goods and services nationwide.

20) Even after exploration begins, over 90% of ANWR will always be completely off limits to any development.

21) 30 years have past since the first, "it will take 10 years to develop" argument was raised in Congress.

22) ALL energy provisions in the National Stimulus plan now being implemented could be paid for with AWNR oil royalties / taxes, costing Americans nothing.

23) You cannot conserve your way into energy independence. Conservation produces no energy. Production produces energy.

24) ANWR is a part of the solution, no one has ever argued that it is the whole solution.

25) Saying theoretical "NO" to fossil fuels, leaves us to find other alternative energy sources, not one of which has the current capacity to sustain us or supply us with the products oil does. ALL "alternative energies" use oil and gas to make their component parts.

26) The fact is, "oil is where you find it". Roughly 14% of the onshore Arctic areas has strong oil and gas potential. All of which are opposed by greens.

27) Oil spills in the Arctic are reported and cleaned up by law. Oil spills in any regular city business' parking lot are not.

28) A growing economy means increased energy consumption. The two are directly correlated. This is true, even with increased technological efficiencies.

29) An increasing population means increased energy consumption. The two are directly correlated. This is true, even with increased technological energy efficiencies.

30) The EIA estimates oil to reach $106 pb by 2014 and remain above that line thereafter.

31) America imports 60% of its oil from abroad.

32) In 2010 the US imported over 13.2 million barrels of oil and petroleum products a day (EIA)

33) In 2009 we imported an average12.9 million barrels of oil and petroleum products a day (EIA). The oil alone cost us $922,072,320 per day, or $38 million dollars an hour....just for raw crude alone.

34) ANWR is not an oil bank. It takes years and years to do exploration and then produce oil. Currently we do not even have any hard data on what is exactly there.

35) Given the timeline to produce oil, waiting for a shortage of supply caused by war, hurricane or politics, before approving exploration is a "too little, too late" strategy that will only lead us into a worse economic and social crisis.

36) America is perhaps the only nation, developed or otherwise that deliberately refuses to access its own natural resources, preferring instead to play NIMBY and buy from abroad.

37) In testimony to Congress during the debate to construct the Trans-Alaska Pipeline (1972) Sierra Club biologists argued to build the pipeline east along the Coastal Plain through (now) ANWR's 10-02 Area and down through Canada, stating it would travel with the flow of the caribou's migration and that the area had no scenic beauty or value.

39) ANWR oil production, under current legislation, can take up no more than 2000 acres, or 3.1sq.miles.

40) ANWR oil production demands use of "best technology available" and a "take in- take out" policy. This is not an option but the law.

41) ANWR oil production would be monitored 24/7 by local hire Wildlife Monitors who have the power to mitigate exploration activity if negative environmental effects are seen.

42) Wilderness designation will be near permanent in a political sense. It is nearly impossible to undo it.

43) The battle to undo a Wilderness designation will be larger than the battle to open up ANWR.

44) The environmental movement is openly against any exploration in the Arctic north of the Brooks Range. This was formally codified in a letter to the President by their main leaders, Sen. Inslee and Rep. Markey in 2009.

45) The 10-02 Area contains private land that is effectively locked up by the ANILCA bill that created ANWR's current shape. Private property rights are thus being ignored in the ANWR debate.

46) The villagers of Kaktovik in the 10-02 consider it a great insult that they are often ignored in this debate and that their land is considered "pristine" and uninhabited. To them, it is used and an important part of their daily operating lives.

47) ANWR's 10-02 is the "dinner plate" for the Inupiat of Kaktovik. They would not support this issue if they felt their source of daily sustenance would be at risk.

48) The Inupiat villagers of the Arctic who's sacred land this has been for over 10,000 years, for the past 30 years of development has worked together with the State and the Industry to mitigate a beneficial and positive social, environmental, and economic solution to the development of Prudhoe Bay, America's largest oil field situated on their land. The great success of this effort has made them strong supporters of the fight to open ANWR.

49) ANWR is not and "either / or" situation. The choice is not black or white, yes or no. ANWR is a case of responsible management and governance. It is a case of careful planning, environmental sensitivity and compromise. All Alaskans are aware of this and promote this and believe this can be done right. That is precisely why we overwhelmingly support this cause.

I

112TH CONGRESS
1ST SESSION

H. R. 49

To direct the Secretary of the Interior to establish and implement a competitive oil and gas leasing program that will result in an environmentally sound program for the exploration, development, and production of the oil and gas resources of the Coastal Plain of Alaska, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

JANUARY 5, 2011

Mr. YOUNG of Alaska introduced the following bill; which was referred to the Committee on Natural Resources, and in addition to the Committees on Energy and Commerce and Science, Space, and Technology, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

---

A BILL

To direct the Secretary of the Interior to establish and implement a competitive oil and gas leasing program that will result in an environmentally sound program for the exploration, development, and production of the oil and gas resources of the Coastal Plain of Alaska, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "American Energy Independence and Price Reduction Act".

SEC. 2. DEFINITIONS.

In this Act:

(1) COASTAL PLAIN.—The term "Coastal Plain" means that area described in appendix I to part 37 of title 50, Code of Federal Regulations.

(2) SECRETARY.—The term "Secretary", except as otherwise provided, means the Secretary of the Interior or the Secretary's designee.

SEC. 3. LEASING PROGRAM FOR LANDS WITHIN THE COASTAL PLAIN.

(a) IN GENERAL.—The Secretary shall take such actions as are necessary—

(1) to establish and implement, in accordance with this Act and acting through the Director of the Bureau of Land Management in consultation with the Director of the United States Fish and Wildlife Service, a competitive oil and gas leasing program that will result in an environmentally sound program for the exploration, development, and production of the oil and gas resources of the Coastal Plain; and

(2) to administer the provisions of this Act through regulations, lease terms, conditions, restrictions, prohibitions, stipulations, and other provisions

that ensure the oil and gas exploration, development, and production activities on the Coastal Plain will result in no significant adverse effect on fish and wildlife, their habitat, subsistence resources, and the environment, including, in furtherance of this goal, by requiring the application of the best commercially available technology for oil and gas exploration, development, and production to all exploration, development, and production operations under this Act in a manner that ensures the receipt of fair market value by the public for the mineral resources to be leased.

(b) REPEAL.—

(1) REPEAL.—Section 1003 of the Alaska National Interest Lands Conservation Act of 1980 (16 U.S.C. 3143) is repealed.

(2) CONFORMING AMENDMENT.—The table of contents in section 1 of such Act is amended by striking the item relating to section 1003.

(c) COMPLIANCE WITH REQUIREMENTS UNDER CERTAIN OTHER LAWS.—

(1) COMPATIBILITY.—For purposes of the National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd et seq.), the oil and gas leasing program and activities authorized by this

section in the Coastal Plain are deemed to be compatible with the purposes for which the Arctic National Wildlife Refuge was established, and no further findings or decisions are required to implement this determination.

(2) ADEQUACY OF THE DEPARTMENT OF THE INTERIOR'S LEGISLATIVE ENVIRONMENTAL IMPACT STATEMENT.—The "Final Legislative Environmental Impact Statement" (April 1987) on the Coastal Plain prepared pursuant to section 1002 of the Alaska National Interest Lands Conservation Act of 1980 (16 U.S.C. 3142) and section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)) is deemed to satisfy the requirements under the National Environmental Policy Act of 1969 that apply with respect to prelease activities, including actions authorized to be taken by the Secretary to develop and promulgate the regulations for the establishment of a leasing program authorized by this Act before the conduct of the first lease sale.

(3) COMPLIANCE WITH NEPA FOR OTHER ACTIONS.—Before conducting the first lease sale under this Act, the Secretary shall prepare an environmental impact statement under the National Envi-

ronmental Policy Act of 1969 with respect to the actions authorized by this Act that are not referred to in paragraph (2). Notwithstanding any other law, the Secretary is not required to identify nonleasing alternative courses of action or to analyze the environmental effects of such courses of action. The Secretary shall only identify a preferred action for such leasing and a single leasing alternative, and analyze the environmental effects and potential mitigation measures for those two alternatives. The identification of the preferred action and related analysis for the first lease sale under this Act shall be completed within 18 months after the date of enactment of this Act. The Secretary shall only consider public comments that specifically address the Secretary's preferred action and that are filed within 20 days after publication of an environmental analysis. Notwithstanding any other law, compliance with this paragraph is deemed to satisfy all requirements for the analysis and consideration of the environmental effects of proposed leasing under this Act.

(d) RELATIONSHIP TO STATE AND LOCAL AUTHORITY.—Nothing in this Act shall be considered to expand or limit State and local regulatory authority.

(e) SPECIAL AREAS.—

(1) IN GENERAL.—The Secretary, after consultation with the State of Alaska, the city of Kaktovik, and the North Slope Borough, may designate up to a total of 45,000 acres of the Coastal Plain as a Special Area if the Secretary determines that the Special Area is of such unique character and interest so as to require special management and regulatory protection. The Secretary shall designate as such a Special Area the Sadlerochit Spring area, comprising approximately 4,000 acres.

(2) MANAGEMENT.—Each such Special Area shall be managed so as to protect and preserve the area's unique and diverse character including its fish, wildlife, and subsistence resource values.

(3) EXCLUSION FROM LEASING OR SURFACE OCCUPANCY.—The Secretary may exclude any Special Area from leasing. If the Secretary leases a Special Area, or any part thereof, for purposes of oil and gas exploration, development, production, and related activities, there shall be no surface occupancy of the lands comprising the Special Area.

(4) DIRECTIONAL DRILLING.—Notwithstanding the other provisions of this subsection, the Secretary may lease all or a portion of a Special Area under terms that permit the use of horizontal drilling tech-

nology from sites on leases located outside the Special Area.

(f) LIMITATION ON CLOSED AREAS.—The Secretary's sole authority to close lands within the Coastal Plain to oil and gas leasing and to exploration, development, and production is that set forth in this Act.

(g) REGULATIONS.—

(1) IN GENERAL.—The Secretary shall prescribe such regulations as may be necessary to carry out this Act, including rules and regulations relating to protection of the fish and wildlife, their habitat, subsistence resources, and environment of the Coastal Plain, by no later than 15 months after the date of enactment of this Act.

(2) REVISION OF REGULATIONS.—The Secretary shall periodically review and, if appropriate, revise the rules and regulations issued under subsection (a) to reflect any significant biological, environmental, or engineering data that come to the Secretary's attention.

SEC. 4. LEASE SALES.

(a) IN GENERAL.—Lands may be leased pursuant to this Act to any person qualified to obtain a lease for deposits of oil and gas under the Mineral Leasing Act (30 U.S.C. 181 et seq.).

(b) PROCEDURES.—The Secretary shall, by regulation, establish procedures for—

(1) receipt and consideration of sealed nominations for any area in the Coastal Plain for inclusion in, or exclusion (as provided in subsection (c)) from, a lease sale;

(2) the holding of lease sales after such nomination process; and

(3) public notice of and comment on designation of areas to be included in, or excluded from, a lease sale.

(c) LEASE SALE BIDS.—Bidding for leases under this Act shall be by sealed competitive cash bonus bids.

(d) ACREAGE MINIMUM IN FIRST SALE.—In the first lease sale under this Act, the Secretary shall offer for lease those tracts the Secretary considers to have the greatest potential for the discovery of hydrocarbons, taking into consideration nominations received pursuant to subsection (b)(1), but in no case less than 200,000 acres.

(e) TIMING OF LEASE SALES.—The Secretary shall—

(1) conduct the first lease sale under this Act within 22 months after the date of the enactment of this Act;

(2) evaluate the bids in such sale and issue leases resulting from such sale, within 90 days after the date of the completion of such sale; and

(3) conduct additional sales so long as sufficient interest in development exists to warrant, in the Secretary's judgment, the conduct of such sales.

SEC. 5. GRANT OF LEASES BY THE SECRETARY.

(a) IN GENERAL.—The Secretary may grant to the highest responsible qualified bidder in a lease sale conducted pursuant to section 4 any lands to be leased on the Coastal Plain upon payment by the lessee of such bonus as may be accepted by the Secretary.

(b) SUBSEQUENT TRANSFERS.—No lease issued under this Act may be sold, exchanged, assigned, sublet, or otherwise transferred except with the approval of the Secretary. Prior to any such approval the Secretary shall consult with, and give due consideration to the views of, the Attorney General.

SEC. 6. LEASE TERMS AND CONDITIONS.

(a) IN GENERAL.—An oil or gas lease issued pursuant to this Act shall—

(1) provide for the payment of a royalty of not less than 12½ percent in amount or value of the production removed or sold from the lease, as deter-

mined by the Secretary under the regulations applicable to other Federal oil and gas leases;

(2) provide that the Secretary may close, on a seasonal basis, portions of the Coastal Plain to exploratory drilling activities as necessary to protect caribou calving areas and other species of fish and wildlife;

(3) require that the lessee of lands within the Coastal Plain shall be fully responsible and liable for the reclamation of lands within the Coastal Plain and any other Federal lands that are adversely affected in connection with exploration, development, production, or transportation activities conducted under the lease and within the Coastal Plain by the lessee or by any of the subcontractors or agents of the lessee;

(4) provide that the lessee may not delegate or convey, by contract or otherwise, the reclamation responsibility and liability to another person without the express written approval of the Secretary;

(5) provide that the standard of reclamation for lands required to be reclaimed under this Act shall be, as nearly as practicable, a condition capable of supporting the uses which the lands were capable of supporting prior to any exploration, development, or

production activities, or upon application by the lessee, to a higher or better use as approved by the Secretary;

(6) contain terms and conditions relating to protection of fish and wildlife, their habitat, subsistence resources, and the environment as required pursuant to section 3(a)(2);

(7) provide that the lessee, its agents, and its contractors use best efforts to provide a fair share, as determined by the level of obligation previously agreed to in the 1974 agreement implementing section 29 of the Federal Agreement and Grant of Right of Way for the Operation of the Trans-Alaska Pipeline, of employment and contracting for Alaska Natives and Alaska Native Corporations from throughout the State;

(8) prohibit the export of oil produced under the lease; and

(9) contain such other provisions as the Secretary determines necessary to ensure compliance with the provisions of this Act and the regulations issued under this Act.

(b) PROJECT LABOR AGREEMENTS.—The Secretary, as a term and condition of each lease under this Act and in recognizing the Government's proprietary interest in

labor stability and in the ability of construction labor and management to meet the particular needs and conditions of projects to be developed under the leases issued pursuant to this Act and the special concerns of the parties to such leases, shall require that the lessee and its agents and contractors negotiate to obtain a project labor agreement for the employment of laborers and mechanics on production, maintenance, and construction under the lease.

SEC. 7. COASTAL PLAIN ENVIRONMENTAL PROTECTION.

(a) NO SIGNIFICANT ADVERSE EFFECT STANDARD TO GOVERN AUTHORIZED COASTAL PLAIN ACTIVITIES.—The Secretary shall, consistent with the requirements of section 3, administer the provisions of this Act through regulations, lease terms, conditions, restrictions, prohibitions, stipulations, and other provisions that—

(1) ensure the oil and gas exploration, development, and production activities on the Coastal Plain will result in no significant adverse effect on fish and wildlife, their habitat, and the environment;

(2) require the application of the best commercially available technology for oil and gas exploration, development, and production on all new exploration, development, and production operations; and

(3) ensure that the maximum amount of surface acreage covered by production and support facilities, including airstrips and any areas covered by gravel berms or piers for support of pipelines, does not exceed 2,000 acres on the Coastal Plain.

(b) SITE-SPECIFIC ASSESSMENT AND MITIGATION.—The Secretary shall also require, with respect to any proposed drilling and related activities, that—

(1) a site-specific analysis be made of the probable effects, if any, that the drilling or related activities will have on fish and wildlife, their habitat, subsistence resources, and the environment;

(2) a plan be implemented to avoid, minimize, and mitigate (in that order and to the extent practicable) any significant adverse effect identified under paragraph (1); and

(3) the development of the plan shall occur after consultation with the agency or agencies having jurisdiction over matters mitigated by the plan.

(c) REGULATIONS TO PROTECT COASTAL PLAIN FISH AND WILDLIFE RESOURCES, SUBSISTENCE USERS, AND THE ENVIRONMENT.—Before implementing the leasing program authorized by this Act, the Secretary shall prepare and promulgate regulations, lease terms, conditions, restrictions, prohibitions, stipulations, and other

measures designed to ensure that the activities undertaken on the Coastal Plain under this Act are conducted in a manner consistent with the purposes and environmental requirements of this Act.

(d) COMPLIANCE WITH FEDERAL AND STATE ENVIRONMENTAL LAWS AND OTHER REQUIREMENTS.—The proposed regulations, lease terms, conditions, restrictions, prohibitions, and stipulations for the leasing program under this Act shall require compliance with all applicable provisions of Federal and State environmental law, and shall also require the following:

(1) Standards at least as effective as the safety and environmental mitigation measures set forth in items 1 through 29 at pages 167 through 169 of the "Final Legislative Environmental Impact Statement" (April 1987) on the Coastal Plain.

(2) Seasonal limitations on exploration, development, and related activities, where necessary, to avoid significant adverse effects during periods of concentrated fish and wildlife breeding, denning, nesting, spawning, and migration.

(3) That exploration activities, except for surface geological studies, be limited to the period between approximately November 1 and May 1 each year and that exploration activities shall be sup-

ported, if necessary, by ice roads, winter trails with adequate snow cover, ice pads, ice airstrips, and air transport methods, except that such exploration activities may occur at other times if the Secretary finds that such exploration will have no significant adverse effect on the fish and wildlife, their habitat, and the environment of the Coastal Plain.

(4) Design safety and construction standards for all pipelines and any access and service roads, that—

(A) minimize, to the maximum extent possible, adverse effects upon the passage of migratory species such as caribou; and

(B) minimize adverse effects upon the flow of surface water by requiring the use of culverts, bridges, and other structural devices.

(5) Prohibitions on general public access and use on all pipeline access and service roads.

(6) Stringent reclamation and rehabilitation requirements, consistent with the standards set forth in this Act, requiring the removal from the Coastal Plain of all oil and gas development and production facilities, structures, and equipment upon completion of oil and gas production operations, except that the Secretary may exempt from the requirements of this

paragraph those facilities, structures, or equipment that the Secretary determines would assist in the management of the Arctic National Wildlife Refuge and that are donated to the United States for that purpose.

(7) Appropriate prohibitions or restrictions on access by all modes of transportation.

(8) Appropriate prohibitions or restrictions on sand and gravel extraction.

(9) Consolidation of facility siting.

(10) Appropriate prohibitions or restrictions on use of explosives.

(11) Avoidance, to the extent practicable, of springs, streams, and river system; the protection of natural surface drainage patterns, wetlands, and riparian habitats; and the regulation of methods or techniques for developing or transporting adequate supplies of water for exploratory drilling.

(12) Avoidance or minimization of air traffic-related disturbance to fish and wildlife.

(13) Treatment and disposal of hazardous and toxic wastes, solid wastes, reserve pit fluids, drilling muds and cuttings, and domestic wastewater, including an annual waste management report, a hazardous materials tracking system, and a prohibition

on chlorinated solvents, in accordance with applicable Federal and State environmental law.

(14) Fuel storage and oil spill contingency planning.

(15) Research, monitoring, and reporting requirements.

(16) Field crew environmental briefings.

(17) Avoidance of significant adverse effects upon subsistence hunting, fishing, and trapping by subsistence users.

(18) Compliance with applicable air and water quality standards.

(19) Appropriate seasonal and safety zone designations around well sites, within which subsistence hunting and trapping shall be limited.

(20) Reasonable stipulations for protection of cultural and archeological resources.

(21) All other protective environmental stipulations, restrictions, terms, and conditions deemed necessary by the Secretary.

(e) CONSIDERATIONS.—In preparing and promulgating regulations, lease terms, conditions, restrictions, prohibitions, and stipulations under this section, the Secretary shall consider the following:

(1) The stipulations and conditions that govern the National Petroleum Reserve-Alaska leasing program, as set forth in the 1999 Northeast National Petroleum Reserve-Alaska Final Integrated Activity Plan/Environmental Impact Statement.

(2) The environmental protection standards that governed the initial Coastal Plain seismic exploration program under parts 37.31 to 37.33 of title 50, Code of Federal Regulations.

(3) The land use stipulations for exploratory drilling on the KIC–ASRC private lands that are set forth in appendix 2 of the August 9, 1983, agreement between Arctic Slope Regional Corporation and the United States.

(f) FACILITY CONSOLIDATION PLANNING.—

(1) IN GENERAL.—The Secretary shall, after providing for public notice and comment, prepare and update periodically a plan to govern, guide, and direct the siting and construction of facilities for the exploration, development, production, and transportation of Coastal Plain oil and gas resources.

(2) OBJECTIVES.—The plan shall have the following objectives:

(A) Avoiding unnecessary duplication of facilities and activities.

(B) Encouraging consolidation of common facilities and activities.

(C) Locating or confining facilities and activities to areas that will minimize impact on fish and wildlife, their habitat, and the environment.

(D) Utilizing existing facilities wherever practicable.

(E) Enhancing compatibility between wildlife values and development activities.

(g) ACCESS TO PUBLIC LANDS.—The Secretary shall—

(1) manage public lands in the Coastal Plain subject to subsections (a) and (b) of section 811 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3121); and

(2) ensure that local residents shall have reasonable access to public lands in the Coastal Plain for traditional uses.

SEC. 8. EXPEDITED JUDICIAL REVIEW.

(a) FILING OF COMPLAINT.—

(1) DEADLINE.—Subject to paragraph (2), any complaint seeking judicial review of any provision of this Act or any action of the Secretary under this Act shall be filed—

(A) except as provided in subparagraph (B), within the 90-day period beginning on the date of the action being challenged; or

(B) in the case of a complaint based solely on grounds arising after such period, within 90 days after the complainant knew or reasonably should have known of the grounds for the complaint.

(2) VENUE.—Any complaint seeking judicial review of any provision of this Act or any action of the Secretary under this Act may be filed only in the United States Court of Appeals for the District of Columbia.

(3) LIMITATION ON SCOPE OF CERTAIN REVIEW.—Judicial review of a Secretarial decision to conduct a lease sale under this Act, including the environmental analysis thereof, shall be limited to whether the Secretary has complied with the terms of this Act and shall be based upon the administrative record of that decision. The Secretary's identification of a preferred course of action to enable leasing to proceed and the Secretary's analysis of environmental effects under this Act shall be presumed to be correct unless shown otherwise by clear and convincing evidence to the contrary.

(b) LIMITATION ON OTHER REVIEW.—Actions of the Secretary with respect to which review could have been obtained under this section shall not be subject to judicial review in any civil or criminal proceeding for enforcement.

SEC. 9. FEDERAL AND STATE DISTRIBUTION OF REVENUES.

(a) IN GENERAL.—Notwithstanding any other provision of law, of the amount of adjusted bonus, rental, and royalty revenues from Federal oil and gas leasing and operations authorized under this Act—

(1) 50 percent shall be paid to the State of Alaska; and

(2) except as provided in section 12(d), the balance shall be transferred to the ANWR Alternative Energy Trust Fund established by this Act.

(b) PAYMENTS TO ALASKA.—Payments to the State of Alaska under this section shall be made semiannually.

SEC. 10. RIGHTS-OF-WAY ACROSS THE COASTAL PLAIN.

(a) IN GENERAL.—The Secretary shall issue rights-of-way and easements across the Coastal Plain for the transportation of oil and gas—

(1) except as provided in paragraph (2), under section 28 of the Mineral Leasing Act (30 U.S.C. 185), without regard to title XI of the Alaska National Interest Lands Conservation Act (30 U.S.C. 3161 et seq.); and

(2) under title XI of the Alaska National Interest Lands Conservation Act (30 U.S.C. 3161 et seq.), for access authorized by sections 1110 and 1111 of that Act (16 U.S.C. 3170 and 3171).

(b) TERMS AND CONDITIONS.—The Secretary shall include in any right-of-way or easement issued under subsection (a) such terms and conditions as may be necessary to ensure that transportation of oil and gas does not result in a significant adverse effect on the fish and wildlife, subsistence resources, their habitat, and the environment of the Coastal Plain, including requirements that facilities be sited or designed so as to avoid unnecessary duplication of roads and pipelines.

(c) REGULATIONS.—The Secretary shall include in regulations under section 3(g) provisions granting rights-of-way and easements described in subsection (a) of this section.

SEC. 11. CONVEYANCE.

In order to maximize Federal revenues by removing clouds on title to lands and clarifying land ownership patterns within the Coastal Plain, the Secretary, notwithstanding the provisions of section 1302(h)(2) of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3192(h)(2)), shall convey—

(1) to the Kaktovik Inupiat Corporation the surface estate of the lands described in paragraph 1 of Public Land Order 6959, to the extent necessary to fulfill the Corporation's entitlement under sections 12 and 14 of the Alaska Native Claims Settlement Act (43 U.S.C. 1611 and 1613) in accordance with the terms and conditions of the Agreement between the Department of the Interior, the United States Fish and Wildlife Service, the Bureau of Land Management, and the Kaktovik Inupiat Corporation effective January 22, 1993; and

(2) to the Arctic Slope Regional Corporation the remaining subsurface estate to which it is entitled pursuant to the August 9, 1983, agreement between the Arctic Slope Regional Corporation and the United States of America.

SEC. 12. LOCAL GOVERNMENT IMPACT AID AND COMMUNITY SERVICE ASSISTANCE.

(a) FINANCIAL ASSISTANCE AUTHORIZED.—

(1) IN GENERAL.—The Secretary may use amounts available from the Coastal Plain Local Government Impact Aid Assistance Fund established by subsection (d) to provide timely financial assistance to entities that are eligible under paragraph (2) and that are directly impacted by the exploration for or

production of oil and gas on the Coastal Plain under this Act.

(2) ELIGIBLE ENTITIES.—The North Slope Borough, the City of Kaktovik, and any other borough, municipal subdivision, village, or other community in the State of Alaska that is directly impacted by exploration for, or the production of, oil or gas on the Coastal Plain under this Act, as determined by the Secretary, shall be eligible for financial assistance under this section.

(b) USE OF ASSISTANCE.—Financial assistance under this section may be used only for—

(1) planning for mitigation of the potential effects of oil and gas exploration and development on environmental, social, cultural, recreational, and subsistence values;

(2) implementing mitigation plans and maintaining mitigation projects;

(3) developing, carrying out, and maintaining projects and programs that provide new or expanded public facilities and services to address needs and problems associated with such effects, including firefighting, police, water, waste treatment, medivac, and medical services; and

(4) establishment of a coordination office, by the North Slope Borough, in the City of Kaktovik, which shall—

(A) coordinate with and advise developers on local conditions, impact, and history of the areas utilized for development; and

(B) provide to the Committee on Resources of the House of Representatives and the Committee on Energy and Natural Resources of the Senate an annual report on the status of coordination between developers and the communities affected by development.

(c) APPLICATION.—

(1) IN GENERAL.—Any community that is eligible for assistance under this section may submit an application for such assistance to the Secretary, in such form and under such procedures as the Secretary may prescribe by regulation.

(2) NORTH SLOPE BOROUGH COMMUNITIES.—A community located in the North Slope Borough may apply for assistance under this section either directly to the Secretary or through the North Slope Borough.

(3) APPLICATION ASSISTANCE.—The Secretary shall work closely with and assist the North Slope

Borough and other communities eligible for assistance under this section in developing and submitting applications for assistance under this section.

(d) ESTABLISHMENT OF FUND.—

(1) IN GENERAL.—There is established in the Treasury the Coastal Plain Local Government Impact Aid Assistance Fund.

(2) USE.—Amounts in the fund may be used only for providing financial assistance under this section.

(3) DEPOSITS.—Subject to paragraph (4), there shall be deposited into the fund amounts received by the United States as revenues derived from rents, bonuses, and royalties from Federal leases and lease sales authorized under this Act.

(4) LIMITATION ON DEPOSITS.—The total amount in the fund may not exceed $11,000,000.

(5) INVESTMENT OF BALANCES.—The Secretary of the Treasury shall invest amounts in the fund in interest bearing government securities.

(e) AUTHORIZATION OF APPROPRIATIONS.—To provide financial assistance under this section there is authorized to be appropriated to the Secretary from the Coastal Plain Local Government Impact Aid Assistance Fund $5,000,000 for each fiscal year.

SEC. 13. ANWR ALTERNATIVE ENERGY TRUST FUND.

(a) ESTABLISHMENT OF TRUST FUND.—There is established in the Treasury of the United States a trust fund to be known as the "ANWR Alternative Energy Trust Fund", consisting of such amounts as may be transferred to the ANWR Alternative Energy Trust Fund as provided in section 9.

(b) EXPENDITURES FROM ANWR ALTERNATIVE ENERGY TRUST FUND.—

(1) IN GENERAL.—Amounts in the ANWR Alternative Energy Trust Fund shall be available without further appropriation to carry out specified provisions of the Energy Policy Act of 2005 (Public Law 109–58; in this section referred to as "EPAct2005") and the Energy Independence and Security Act of 2007 (Public Law 110–140; in this section referred to as "EISAct2007"), as follows:

To carry out the provisions of:	**The following percentage of annual receipts to the ANWR Alternative Energy Trust Fund, but not to exceed the limit on amount authorized, if any:**
EPAct2005:	
Section 210	1.5 percent
Section 242	1.0 percent
Section 369	2.0 percent
Section 401	6.0 percent
Section 812	6.0 percent
Section 931	19.0 percent
Section 942	1.5 percent
Section 962	3.0 percent
Section 968	1.5 percent
Section 1704	6.0 percent
EISAct2007:	

To carry out the provisions of:	The following percentage of annual receipts to the ANWR Alternative Energy Trust Fund, but not to exceed the limit on amount authorized, if any:
Section 207	15.0 percent
Section 607	1.5 percent
Title VI, Subtitle B	3.0 percent
Title VI, Subtitle C	1.5 percent
Section 641	9.0 percent
Title VII, Subtitle A	15.0 percent
Section 1112	1.5 percent
Section 1304	6.0 percent.

(2) APPORTIONMENT OF EXCESS AMOUNT.—Notwithstanding paragraph (1), any amounts allocated under paragraph (1) that are in excess of the amounts authorized in the applicable cited section or subtitle of EPAct2005 and EISAct2007 shall be reallocated to the remaining sections and subtitles cited in paragraph (1), up to the amounts otherwise authorized by law to carry out such sections and subtitles, in proportion to the amounts authorized by law to be appropriated for such other sections and subtitles.

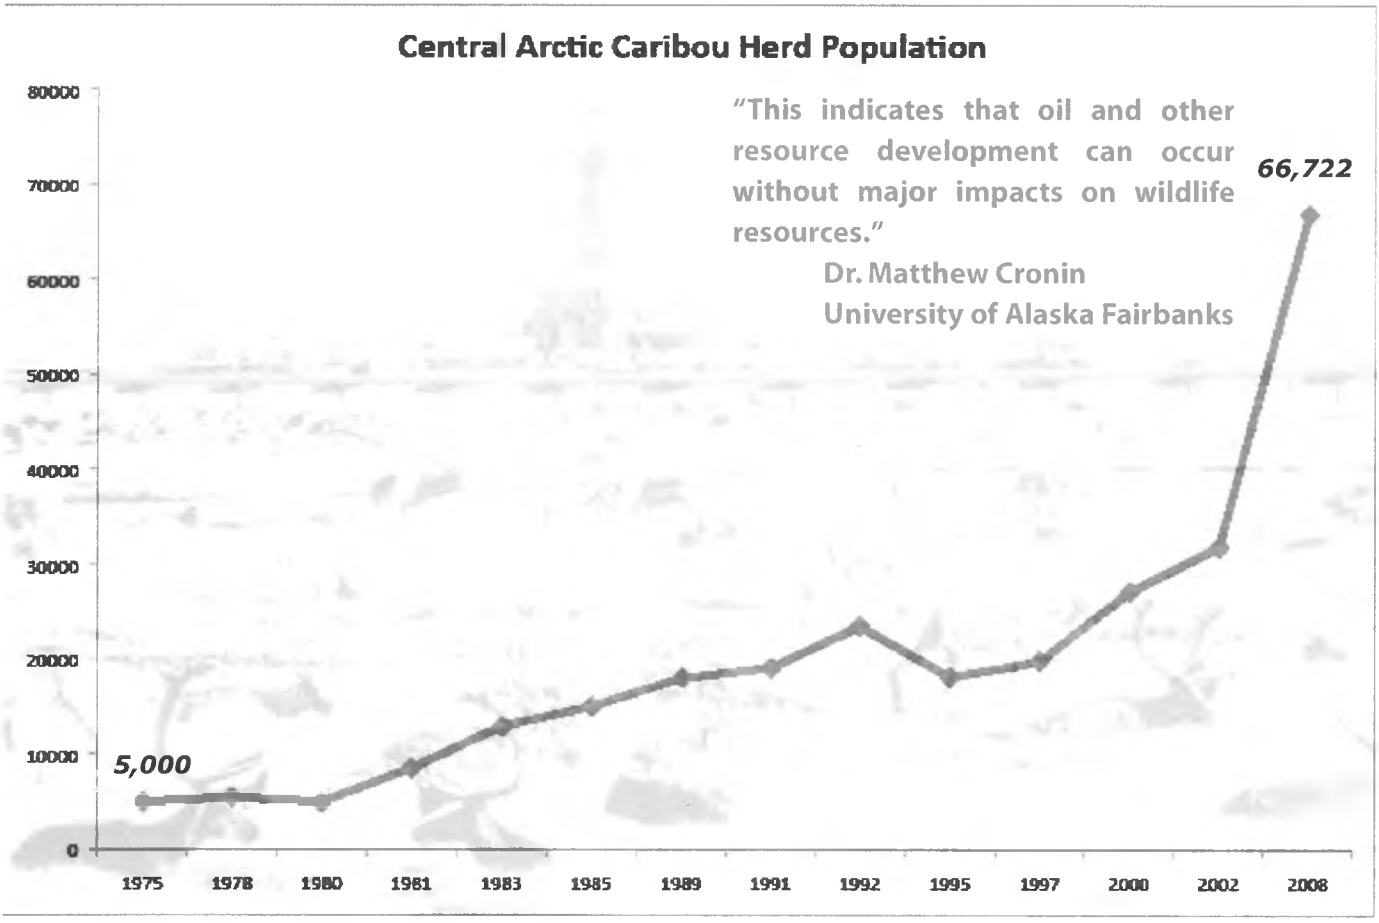
Co-existing with oil development, Central Arctic caribou herd thrives, population at record high



"This indicates that oil and other resource development can occur without major impacts on wildlife resources."

Dr. Matthew Cronin
University of Alaska Fairbanks

The Alaska Department of Fish and Game has reported that the Central Arctic caribou herd, which occupies summer ranges that include the Prudhoe Bay and Kuparuk oil fields, grew sharply in numbers between 2002 and 2008.

The herd included approximately 67,000 animals in summer 2008, compared to 32,000 in 2002. The herd had less then 5,000 animals in 1975, several years before North Slope oil production commenced.

The Teshekpuk Lake herd to the west of Kuparuk also increased in population to 64,000 animals in 2008, up from 45,000 in 2002. The two herds are the only ones in the Arctic known to be increasing at this time, the Department said. The other two Alaskan Arctic herds, the Western Arctic herd, whose range is west and south of the Teshekpuk Lake herd, and the Porcupine herd, with a summer range in Arctic National Wildlife Refuge east of Prudhoe Bay and winter ranges in the Brooks Range and Canada, are decreasing, as are many herds across Canada.

The department has not yet determined the causes of the changes in numbers in the different herds, but believes good reproduction rates, good weather, low predation and good habitat have combined to allow the Central Arctic and Teshekpuk Lake herds to increase rapidly. Movement among the herds may also account for some of the relative increases and decreases in numbers.

The increase in population is good news for many North Slope communities that hunt caribou. The Teshekpuk herd is an important subsistence resource for Barrow and villages in the region while the Central Arctic herd is commonly hunted by Alaskans from all over the state.

"Although some local disturbance impacts may occur, North Slope oil field developments have not resulted in decreased numbers of caribou," noted Dr. Matthew Cronin, a specialist in animal genetics and a research associate professor at the University of Alaska Fairbanks School of Natural Resources and Agricultural Sciences in Palmer. "This indicates that oil and other resource development can occur without major impacts on wildlife resources," Cronin added. "The North Slope oilfields and caribou herds are a good example of achieving multiple use management."

To: Sen. Tom Wagoner, Co-Chair
Sen. Joe Paskvan, Co-Chair
From: Rep. Charisse Millett
Subject: Calendaring request for HJR 11
Date: February 16, 2011
CC:

Please schedule House Joint Resolution 11 for a hearing at your earliest convenience. HJR 11 urges the United States Congress not pass any legislation designating Area 10-02 of ANWR as wilderness.

The resolution is timely because the U.S. Fish and Wildlife Service will release its draft Comprehensive Conservation Plan for ANWR by the end of March 2011. I believe the sooner the legislature weighs in on this issue the better.

The necessary materials for a hearing are included with this request.

Jeff Turner is the staffer assigned to this resolution. His direct line is (907) 465-6588.

House Joint Resolution 11

Sponsor Statement

"Urging the United States Congress to refrain from passing legislation that designates land in Area 1002 of the Arctic National Wildlife Refuge as wilderness"

House Joint Resolution 18 urges the United States Congress to reject any legislation seeking a wilderness designation for Area 1002 of the Arctic National Wildlife Refuge.

The U.S. Fish and Wildlife Service is drafting a new Comprehensive Conservation Plan for ANWR and the draft report is due out by late March 2011. No matter what the report recommends, it will renew calls for a wilderness designation. Not only will a wilderness designation lock it up – it will throw away the key.

Legislation has already been introduced in the US House of Representatives (H.R. 139) to make the coastal plain of ANWR a wilderness area.

The 1002 Area could be the largest untapped onshore oil prospect in the United States and that makes it both a national refuge and a strategic resource. The two are not incompatible.

Congress deliberately set aside Area 1002 for future oil and gas exploration. Lawmakers at the time understood the day may come when those reserves will be needed to fuel the economy and reduce the flow of imported oil into America.

Alaska needs new jobs to grow its economy and new revenue to fund basic services like education, public safety and transportation infrastructure. America needs a stable, safe and secure supply of energy to help the economy get back on its feet. ANWR can do all of that without harming the fragile arctic environment.

Locking up a two thousand acre area that makes up less than one percent of the refuge and holds an estimated 10,400,000,000 barrels of oil does not make sense for America's economy and national security.

HJR 11 has been referred to the House Resources Committee. For more information, contact Representative Millett at (907) 465-3879.

THE ALLIANCE

...for responsible development of Alaska's Oil, Gas & Mineral Resources

February 1st, 2011

Honored Members of the House Resources Committee:

Please accept this letter on behalf of the Alliance's 500 members and their 35,000 employees.

Our organization fully supports HJR 11- a resolution urging Congress to refrain from passing legislation that designates land in ANWR as wilderness.

Jobs are our future. Any attempt to thwart responsible resource development in Alaska is a threat to our member companies and to their employees.

Please support HJR 11.

Respectfully,

Rebecca Logan

Kara Moriarty, Deputy Director

February 3, 2011

Representative Charisse Millett
Alaska House of Representatives
State Capitol – Rm. 13
Juneau, AK 99801

Dear Representative Millett:

The 15 members of the Alaska Oil & Gas Association (AOGA) account for the majority of oil and gas exploration, development, production, transportation, refining and marketing activities in the state. We appreciate the opportunity to voice our support for HJR 11, which opposes the federal government designating the 1002 area of the Arctic National Wildlife Refuge (ANWR) as wilderness.

When ANWR was created as part of the Alaska National Interest Lands Conservation Act (ANILCA) in 1980, only 8% of the area, known as the "1002 area", was set aside for oil and gas development. During the ANILCA debate, it was agreed that "no more" wilderness would be designated as over 8 million acres elsewhere in the refuge was designated as wilderness.

Development is permanently restricted on over 90% of ANWR and for the last twenty years, four out of five Alaskans consistently have supported opening ANWR to oil and gas exploration.

At a time when the Trans-Alaska Pipeline is only operating at one-third of its capacity, federal and state lands designated for oil and gas development should remain a viable option. Now is not the time to set aside more wilderness.

Thank you for sponsoring this resolution. We respectfully request the members of the 27th Legislature to join you by supporting HJR 11.

Sincerely,

Kara Moriarty

Support for H.J.R. 11
27th Alaska State Legislature 1st Session

Arctic Power strongly supports House Joint Resolution 11 introduced to the Alaska State Legislature Jan 21, 2011.

At the opening of each Congress for the past ten years, bills have been introduced to declare the 10-02 area of ANWR "wilderness lands" as defined by the National Wilderness Act of 1964. To date not a single measure has gained support and most have died in committee. Additionally letters have been drafted by Congressmen to the President to either declare the 10-02 as wilderness or, in one case, ban all development of any kind north of the Brooks Range. These letters are often signed by 50-80 congressmen and women and are sent off to the White House. None have yet gained enough traction to cause passage of legislation.

Despite the lack of success in these measures, and that many on Capitol Hill brand these attempts as politically "dead-on-arrival", the fact remains that up to a third of the US Senate and a quarter of the US House actually believe that locking up Alaskan lands is a good thing and Alaskans simply do not know what is best for themselves when it comes to land management. Sadly, very few of those who sign these letters or bills have actually been to Alaska, let alone ANWR, and many support these bills purely on political grounds. As a fact we at Arctic Power know that very few Congressmen or women actually know the issues, the lands, or the history of Arctic oil and gas exploration at all.

As ANWR is the single most legislated energy issue of the modern era, HJR 11 will be a extremely important voice for the people of Alaska in responding to the misguided wishes of certain members of Congress keen on Federal land grabs. It is the voice of the people of Alaska that is often not heard in the Halls of Congress and deliberately left of out the ANWR "wilderness" letters sent to the White House. HJR 11 will be an official message that we, as residents of this state, can take to Washington to help assure our voices are heard.

After ANILCA passed in 1980, Alaska was given reason to breathe a sigh of relief, though at a cost of 105 million acres of our state's land. Today 61% of our state is controlled by Washington and fully 1/3rd of all Federal lands nationally lie in Alaska. Over half of all national wilderness lands or fifty-eight million acres exist in Alaska including 8 million acres (42%) of ANWR itself. Alaska also contains 70% of the nation's national parks and 80% of all the nation's wildlife refuge land. One must ask when is enough enough? Regardless of the rule of law of ANILCA itself, we simply do not need more protected lands.

Demands for wilderness designation of the 10-02 area by anyone inside or outside of Alaska completely and deliberately ignores that Alaskans, both individually and through laws put in place by their elected officials, have acted responsibly and practiced careful conservation and protection of the ecology for 30 years across the entire Arctic. The environmental Armageddon many environmental groups preached never happened. But still, those in favor of 10-02 wilderness designation artfully ignore the now 66,000 strong Central Arctic Caribou Herd migrating, calving and feeding within the largest oil field on the North American continent. A situation which was deemed impossible by the environmental lobby and their supporters in 1972.

Apart from the basic fact that ANILCA specifically did not designate the 10-02 as wilderness lands, ANILCA also states that the Federal Government's fill of claims to Alaskan lands have been met and that no Alaskan land, anywhere in the state, may be taken out of public use without a specific decision by Congress. In 1987, the Department of Interior carried out the letter of the law of ANILCA and recommended opening the 10-02 to oil exploration and development, and; in 1995, Congress fulfilled ANILCA by voting to do so. What has changed since then with regard to ANWR land is almost nothing at all. The Porcupine Caribou Herd fluctuates, as it always has and will, the local governments still strongly support development and overall statewide public support remains at a high 78%. Yet Alaska, year in year out, must battle against bill after bill, letter after letter, campaign after campaign the attempts of environmentalists and misguided US Congressmen and women to keep open the option to responsibly use our lands. Even the current Comprehensive Conservation Plan by the US Fish and Wildlife Service will most likely break the ANILCA law and, in April, come out with a recommendation for a wilderness designation of the 10-02 area. It is our great wish that this effort be stopped, that the US Fish and Wildlife Service know through HJR 11 and the force of law that this is not only not the wish of Alaskans, but it is also against the law of the land.

We at Arctic Power do not agree with those in the US Congress who want wilderness designation for the 10-02 area. We strongly believe they do not fully understand the issue and many are completely unwilling to listen to the voices of the people of Alaska.

We at Arctic Power do believe Alaskans know what is best for Alaskans and that a vast majority of Alaskans support passage of HJR 11 and responsible development of the 10-02 area of ANWR. We strongly support this resolution and recommend its passage.

Sincerely
Mike Navarre Co-Chair ARCTIC POWER
Eric Helzer Co-Chairman ARCTIC POWER

June 7, 2010

Richard Voss
Refuge Manager
Arctic National Wildlife Refuge
101 12th Avenue, Room 236
Fairbanks, AK 99701-6237

Dear Mr. Voss:

The Citizens' Advisory Commission on Federal Areas has considered the Notice of Intent to revise the Comprehensive Conservation Plan (CCP) for the Arctic National Wildlife Refuge and prepare an environmental impact statement. We note that this planning process also will include a review of refuge rivers for potential recommendation for inclusion in the National Wild and Scenic River System and review of refuge lands for potential recommendation for inclusion within the National Wilderness Preservation System. We appreciate the opportunity to offer the following scoping comments for consideration by the refuge planning team.

Public Involvement

The Commission thanks you for providing the briefing and answering questions about the CCP revision at our June 2nd meeting in Fairbanks. We are encouraged by the extensive public outreach effort made by you and your staff during this initial phase of the plan revision. We are particularly pleased that the public meetings did not simply follow the "open house" format, but included the opportunity for the public to provide testimony as part of the planning record. Also, giving attendees the option of presenting testimony in an open forum or by meeting one on one with a member of the refuge staff is commendable. As you know, the Arctic Refuge receives more attention than other unit in the refuge system, making public involvement a critical part of this plan revision. We are confident that you will offer the same level of opportunities for public involvement in each phase of the process. The Commission is available to assist with future public outreach efforts or to again distribute information through our newsletter if that would be helpful.

Wilderness Review

The Commission is strongly opposed to the development of new recommendations for designation of additional wilderness within the Arctic Refuge. The question of additional

wilderness designations for all national wildlife refuge units in Alaska was previously addressed in studies mandated by ANILCA Section 1317. The study for the Arctic Refuge was conducted in conjunction with the development of the current CCP. The November 1988 Record of Decision for the CCP and Final Environmental Impact Statement selected a plan alternative that represented the exiting management situation and did not include a wilderness proposal.

The Commission supports retention of this decision, primarily because the 8.0 million acres of designated wilderness already within the Arctic Refuge is sufficient. Maintaining the remainder of the refuge in a non-wilderness status will allow the Service a measure of flexibility to respond to changing circumstances or management needs. Existing statutory and regulatory authorities provide sufficient protections for refuge values and purposes without reducing management options by imposing an additional layer of restrictions on the Service, cooperating agencies such as the Alaska Department of Fish and Game or the public.

The restrictions imposed by wilderness designation in Alaska are slightly less restrictive because of the special provisions of ANILCA. In spite of those special provisions, however, it is our considered opinion that each Federal land management agency has adopted wilderness policies that are more restrictive than was intended by Congress. These policies can unnecessarily restrict public activities and use, even those of a transitory nature that have no impact to refuge resources.

During the CCP revision process we would encourage the Service to look at how these policies are applied to the existing wilderness area in the refuge. The CCP should contain a table or summary of those activities and uses that are allowed and those that are restricted within designated wilderness. Included in the CCP should be a discussion of the applicable Service polices, regulations and statutes which guide wilderness management. Plan alternatives and refuge management policies should also allow for special circumstances where restrictions on the use of mechanized or power equipment can be waived for medical reasons or to accommodate handicapped individuals.

1002 Area

Although the ANILCA Section 1317 recommendations were never submitted to Congress by the Secretary, Congress has considered the question of wilderness in the 1002 area of the Arctic Refuge many times. There have been bills proposed in both the House and the Senate in each of the last 11 Congresses. At least 22 bills proposing wilderness designation for the 1002 Area have been introduced. Several other bills also contained wilderness proposals for lands within the Arctic Refuge. To our knowledge, none of these bills has advanced beyond committee. Given this and the controversial nature of wilderness designation in Alaska overall, the Commission would suggest that the time and effort in conducting wilderness studies in the 1002 area (Coastal Plain Wilderness Review Units) as well as the Brooks Range and Porcupine Plateau Wilderness Review Units could be better spent on other important management issues.

Wild and Scenic River Studies

The Commission is also opposed to studies and/or recommendations for additional wild and scenic rivers within the Arctic Refuge. As we have stated above on the wilderness study issue, existing statutory and regulatory authorities are more than adequate to protect all rivers and

waters within the refuge. In fact, one of the purposes of the refuge is to ensure "water quality and necessary water quantity within the refuge." We see no need to conduct wild and scenic river studies that will divert staff resources from other management issues.

Access

Under the current CCP and regulations, there are no restrictions for the Arctic Refuge on public access via snowmachine, motorboat, airplane or nonmotorized surface transportation. Even though there have been increases in public use and visitation, Commission members who are knowledgeable about the refuge see no need for any restrictions at this time. While we are aware that restrictions may be implemented only through the closure process and subject to the criteria found in the regulations at 50 CFR §36.42, the findings in the environmental impact statement and the revised CCP will heavily influence any decisions on future proposals for public access restrictions. This issue should be thoroughly and objectively examined as part of this revision.

Visitor Use Survey

We recently learned that implementation of the revised visitor use survey will be delayed until after the plan revision is completed. The Service should reconsider this decision and release the visitor survey for this season so that this information can be included in the CCP revision.

Cabins

Guidance for cabin management in the current CCP was developed prior to the promulgation of regulations for the use and construction of cabins within national wildlife refuges in Alaska. At the time the CCP was adopted, cabins were managed under a regional policy that was not uniformly applied and which was not consistent with the provisions of ANILCA. Formal cabin regulations were not adopted until 1994.

The Service estimated in the original CCP that there were 37 cabins on refuge lands used for trapping or other customary and traditional subsistence uses. According to the CCP, 25 of those were used to "some degree" and 12 were not being actively used. Twelve of the cabins were under special use permit. The CCP (pg. 210) states: "The Service eventually will place all of the cabins on refuge lands under permit, or declare them abandoned after researching their pattern of use."

The CCP goes on to say that a detailed inventory of cabins and their uses on refuge lands will be conducted. It also says that before declaring a cabin abandoned, the Service will research it pattern of use and that all cabins determined to be abandoned will be disposed of in accordance with Service policy.

We have no specific information on the present status of cabins or cabin permits on the Arctic Refuge. We do understand that there are fewer cabins being used or under permit than when the original CCP was adopted. The revised CCP should include the results of the cabin inventory and the current status of cabins on the Arctic Refuge. The original CCP states that the Service has no plans for constructing or designating new public use cabins, but points out that cabins may be constructed or designated if necessary for refuge management and or public health and safety. We suggest inclusion of at least one alternative that would allow either the designation of existing cabins or construction of new cabins for public use in the non-wilderness portions of the

refuge. Consistent with ANILCA Section 1315(d), the need for public use cabins or shelters for public health and safety purposes within the designated wilderness portion of the refuge should also be considered in the alternatives. There is a significant segment of the public that considers public use cabins within conservation system units as both appropriate and desirable.

Again, the Commission appreciates the opportunity to provide these comments. We look forward to working with the refuge staff on the development of this plan revision and the environmental impact statement. We would welcome the opportunity to participate in planning team meetings along with other State personnel, if appropriate and if you think that participation would be helpful. When convenient, we also encourage you to provide updates that can be included in our monthly newsletter. Please contact us if you have questions or if we can clarify any of our comments.

Sincerely,

Stan Leaphart

From: Rep. Bob Herron

RE: CSHJR 19 (RES), Supporting Ratification of Law of the Sea

---

I respectfully request a hearing in Senate Resources for **CSHJR 19 (RES), "Urging the United States Senate to ratify the United Nations Convention on the Law of the Sea."**

HJR 19 urges the United States Senate to ratify the United Nations Convention on the Law of the Sea (UNCLOS), also known as the Law of the Sea treaty (LOST). This resolution will help Alaska's Senate delegation bring the Law of the Sea treaty to the Senate floor for a vote on ratification. Ratification of this treaty is important to protect United States interests concerning the use and development of the high seas off Alaska.

In her annual address to the Alaska State Legislature February 24, 2011, United States Senator Lisa Murkowski called on the Legislature to once again pass a resolution urging United States Senate ratification of UNCLOS.

Under the treaty, member nations can claim an exclusive economic zone (EEZ) to 200 miles, with sovereign rights to explore, develop, and manage the resources within that zone. A claim can extend beyond the 200 mile limit if the continental shelf can be proven to extend beyond 200 miles. It is estimated that the northern seabed off Alaska and beyond the 200-mile limit could be as large as the state of California.

If you have any questions or need additional information, please contact myself or my staff Rob Earl at 465.4942.

CSHJR 19 (RES), "Urging the United States Senate to ratify the United Nations Convention on the Law of the Sea."

CSHJR 19 (RES), urges the United States Senate to ratify the United Nations Convention on the Law of the Sea (UNCLOS), also known as the Law of the Sea treaty (LOST). This resolution will help Alaska's Senate delegation bring the Law of the Sea treaty to the Senate floor for a vote on ratification. Ratification of this treaty is important to protect United States interests concerning the use and development of the high seas off Alaska.

The Law of the Sea treaty governs many aspects of oceans, such as mapping, state area control, environmental control, marine scientific research, economic and commercial activities, transfer of technology and the settlement of disputes relating to ocean matters.

161 countries are signatories to the treaty, including all of the Arctic nations with the exception of the United States.

In her annual address to the Alaska State Legislature February 24, 2011, United States Senator Lisa Murkowski called on the Legislature to once again pass a resolution urging United States Senate ratification of UNCLOS. United States participation in the Law of the Sea Treaty was approved in 1994 by President Clinton after work was done on portions of the treaty to address concerns raised by President Reagan. Entities and persons on record supporting ratification are all United States Presidents since Reagan, the United States Coast Guard, the Department of the Navy, the State Department, the Joint Chiefs of Staff, AT&T, The American Petroleum Institute, The International Association of Drilling Contractors, and the National Oceans Industries Association and many others.

Under the treaty, member nations can claim an exclusive economic zone (EEZ) to 200 miles, with sovereign rights to explore, develop, and manage the resources within that zone. A claim can extend beyond the 200 mile limit if the continental shelf can be proven to extend beyond 200 miles. It is estimated that the northern seabed off Alaska and beyond the 200-mile limit could be as large as the state of California.

Key features of the Law of the Sea treaty include the following:

- Coastal States exercise sovereignty over their territorial sea which may not exceed 12 nautical miles; foreign vessels are allowed "innocent passage" through those waters;
- Ships and aircraft of all countries are allowed "transit passage" through straits used for international navigation; States bordering the straits can regulate navigational and other aspects of passage;
- Coastal States have sovereign rights in the 200-nautical mile EEZ with respect to natural resources and certain economic activities, and exercise jurisdiction over marine science research and environmental protection;
- All other States have freedom of navigation and over flight in the EEZ, as well as freedom to lay submarine cables and pipelines;
- All States enjoy the traditional freedoms of navigation, over-flight, scientific research and fishing on the high seas; they are obliged to adopt, or cooperate with other States in adopting, measures to manage and conserve living resources;
- States are bound to prevent and control marine pollution and are liable for damage caused by violation of their international obligations to combat such pollution;
- All marine scientific research in the EEZ and on the continental shelf is subject to the consent of the coastal State, but in most cases they are obliged to grant consent to other States when the research is to be conducted for peaceful purposes and fulfils specified criteria;
- States Parties are obliged to settle by peaceful means their disputes concerning the interpretation or application of the Convention;
- Disputes can be submitted to the International Tribunal for the Law of the Sea established under the Convention, to the International Court of Justice, or to arbitration. Arbitration is also available and, in certain circumstances, submission to it would be compulsory. The Tribunal has exclusive jurisdiction over deep seabed mining disputes.

The State of Alaska has much to gain from international recognition of the United States' 200 mile EEZ and extended continental shelf and much to lose if we are the only Arctic nation not to extend our ocean boundaries.

Memorandum

TO: Representative Bob Herron

FROM: Chuck Burnham, Susan Haymes, Susan Warner, Tim Spengler, and Roger Withington, Legislative Analysts

DATE: March 11, 2011

RE: United Nations Convention on the Laws of the Sea
LRS Report 11.220

You asked for information regarding the United Nations Convention on the Law of the Sea. Specifically, you asked us to confirm and provide supporting documentation to statements put forth in an updated draft Legislative Resolve concerning the Convention dated March 9, 2011.

We present each of the "Whereas" statements in the draft resolution you provide below. Our findings for each statement immediately follow.

1 WHEREAS the United Nations Convention on the Law of the Sea (UNCLOS) preserves freedom of navigation as a basic right of all countries;

Part VII, Article 87, of UNCLOS guarantees freedom of the high seas as follows:

> 1. The high seas are open to all States, whether coastal or land-locked. Freedom of the high seas is exercised under the conditions laid down by this Convention and by other rules of international law. It comprises, inter alia, both for coastal and land-locked States:
>
> (a) freedom of navigation;
>
> (b) freedom of overflight;
>
> (c) freedom to lay submarine cables and pipelines, subject to Part VI;
>
> (d) freedom to construct artificial islands and other installations permitted under international law, subject to Part VI;
>
> (e) freedom of fishing, subject to the conditions laid down in section 2;
>
> (f) freedom of scientific research, subject to Parts VI and XIII.
>
> 2. These freedoms shall be exercised by all States with due regard for the interests of other States in their exercise of the freedom of the high seas, and also with due regard for the rights under this Convention with respect to activities in the Area.[1]

Free Navigation of the "territorial sea"—the sea area immediately adjacent to a state and extending up to 12 nautical miles seaward—is provided by Part II, Section III, Articles 17-18, under the concept of "innocent passage." That concept means navigation for the purpose of traversing the sea without entering internal waters or calling at port; or proceeding to or from internal waters or a port facility. Such passage must be peaceful as defined in Article 19. Similarly, Part III, Section 3, Article 45, provides the right to innocent passage in straits used for international navigation, while Article 52 provides the same right for passage through archipelagic waters, and Article 58 does so for "exclusive economic zones," which extend 200 nautical miles seaward.

[1] Full text of the Convention is available online at *http://www.un.org/Depts/los/convention_agreements/texts/unclos/unclos_e.pdf*.

2 WHEREAS the United Nations Convention on the Law of the Sea permits member nations to claim an exclusive economic zone out to 200 nautical miles from shore, with an exclusive sovereign right to explore, manage, and develop all living and nonliving resources, including deep sea mining, within that exclusive economic zone;

Part V, Articles 56-57, delineate exclusive economic zones as follows:

> 1. In the exclusive economic zone, the coastal State has:
>
> (a) sovereign rights for the purpose of exploring and exploiting, conserving and managing the natural resources, whether living or non-living, of the waters superjacent to the seabed and of the seabed and its subsoil, and with regard to other activities for the economic exploitation and exploration of the zone, such as the production of energy from the water, currents and winds;
>
> (b) jurisdiction as provided for in the relevant provisions of this Convention with regard to:
>
> (i) the establishment and use of artificial islands, installations and structures;
>
> (ii) marine scientific research;
>
> (iii) the protection and preservation of the marine environment;
>
> (c) other rights and duties provided for in this Convention.
>
> 2. In exercising its rights and performing its duties under this Convention in the exclusive economic zone, the coastal State shall have due regard to the rights and duties of other States and shall act in a manner compatible with the provisions of this Convention.
>
> 3. The rights set out in this article with respect to the seabed and subsoil shall be exercised in accordance with Part VI.

Article 57

Breadth of the exclusive economic zone: The exclusive economic zone shall not extend beyond 200 nautical miles from the baselines from which the breadth of the territorial sea is measured.

3 WHEREAS the United States Arctic Research Commission estimates that the United Nations Convention on the Law of the Sea would permit the United States to lay claim beyond the present 200-mile exclusive economic zone to an area of the Arctic Ocean seabed north of Alaska that is about the size of California;

In his May 6, 2010, testimony before the U.S. House of Representatives Committee on Natural Resources, Subcommittee on Insular Affairs, Oceans, and Wildlife, John Farrell, Executive Director of the U.S. Arctic Research Commission (USARC), advocated for greater mapping of the Arctic Ocean. Describing the bases for his advocacy, Dr. Farrell made the following statement:

> Should the U.S. accede to the United Nations Convention on the Law of the Sea, as recommended by the Commission and many others, estimates . . . suggest that the U.S. stands to gain sovereign rights over seafloor resources in the Arctic Ocean in an area at least the size of California.[2]

The basis for this claim appear to relate to the Convention's provisions related to the extension of a state's control over the continental shelf adjacent to and beyond its 200 nautical mile exclusive economic zone. Those provisions are in Part VI, Article 76, et seq., which read, in part, as follows:

> 3. The continental margin comprises the submerged prolongation of the land mass of the coastal State, and consists of the seabed and subsoil of the shelf, the slope and the rise. It does not include the deep ocean floor with its oceanic ridges or the subsoil thereof.

[2] Dr. Farrell's full testimony can be accessed online at *http://www.arctic.gov/testimony/farrell-05-06-2010.pdf*.

4. (a) For the purposes of this Convention, the coastal State shall establish the outer edge of the continental margin wherever the margin extends beyond 200 nautical miles from the baselines from which the breadth of the territorial sea is measured, by either:

(i) a line delineated in accordance with paragraph 7 by reference to the outermost fixed points at each of which the thickness of sedimentary rocks is at least 1 per cent of the shortest distance from such point to the foot of the continental slope; or

(ii) a line delineated in accordance with paragraph 7 by reference to fixed points not more than 60 nautical miles from the foot of the continental slope.

(b) In the absence of evidence to the contrary, the foot of the continental slope shall be determined as the point of maximum change in the gradient at its base.

5. The fixed points comprising the line of the outer limits of the continental shelf on the seabed, drawn in accordance with paragraph 4 (a)(i) and (ii), either shall not exceed 350 nautical miles from the baselines from which the breadth of the territorial sea is measured or shall not exceed 100 nautical miles from the 2,500 metre isobath, which is a line connecting the depth of 2,500 metres.

6. Notwithstanding the provisions of paragraph 5, on submarine ridges, the outer limit of the continental shelf shall not exceed 350 nautical miles from the baselines from which the breadth of the territorial sea is measured. This paragraph does not apply to submarine elevations that are natural components of the continental margin, such as its plateaux, rises, caps, banks and spurs.

7. The coastal State shall delineate the outer limits of its continental shelf, where that shelf extends beyond 200 nautical miles from the baselines from which the breadth of the territorial sea is measured, by straight lines not exceeding 60 nautical miles in length, connecting fixed points, defined by coordinates of latitude and longitude.[3]

Where a state makes legitimate claim to its continental shelf extending beyond the 200 mile exclusive economic zone, Article 77 provides that "the coastal State exercises over the continental shelf sovereign rights for the purpose of exploring it and exploiting its natural resources." Further, Article 81 states that "[t]he coastal State exercises over the continental shelf sovereign rights for the purpose of exploring it and exploiting its natural resources."

4 WHEREAS, by not joining the Convention, the United States is forfeiting sovereign rights to and international recognition of an expansion of United States resource jurisdiction by as much as 1,000,000 square kilometers of ocean, an area half the size of the Louisiana Purchase;

The U.S. Extended Continental Shelf Task Force—a multi-agency effort chaired by the U.S. Department of State—is currently working to identify the extended continental shelf (ECS) lying more than 200 nautical miles off the shores of the U.S. The Task Force's preliminary estimate puts the entire U.S. ECS at over one-million square kilometers. In order to claim sovereignty over its ECS under Article 76 of the UNCLOS, the U.S. must collect and analyze data sufficient to prove its claims.

It is clear that should the U.S. not become a signatory to the Convention, a number of the rights, responsibilities, privileges, and protections therein will not be available. However, we found nothing in the document that delineates what the specific impact of not becoming a signatory would have on sovereignty rights on the ECS. In the UNCLOS preamble, the signatories affirm that "matters not regulated by this Convention continue to be governed by the rules and principles of general international law." Indeed, among opponents to the U.S. becoming a signatory to the Convention, the impact of current international law is among the primary bases for their resistance. That is, opponents believe that international law already provides the U.S. with desirable sovereignty protections without subjecting the country to the extra-national judicial oversight and other controlling mechanisms in the Convention. A study of the matter prepared for the Council on Foreign Relations strongly disagrees with such claims by Convention opponents as follows:

[3] To see a graphic illustration of the application of the measurement formulae discussed in this section, please see *http://www.state.gov/g/oes/continentalshelf/*.

> Continuing to treat most parts of the convention as customary international law, as the United States does now, literally leaves it without a seat at the table in important decision-making bodies established by the convention, such as the Commission on the Limits of the Continental Shelf (CLCS); weakens the hand the United States can play in negotiations over critical maritime issues, such as rights in the opening of the Arctic Ocean; and directly undercuts U.S. ability to respond to emerging challenges, such as increasing piracy in the Indian Ocean. Joining or not joining the convention is more than an academic debate. There are tangible costs that grow by the day if the United States remains outside the convention.[4]

The impact on U.S. national sovereignty of remaining outside the Convention does not appear to be a settled legal matter. On this point, you may wish to seek an opinion from Legal Services explaining the relationship between the Convention and international maritime law as relates to ECS issues.

5 WHEREAS, with nearly one-third of all the world's hydrocarbons being produced off-shore, the United States would be unwise to ignore the need for access to extended oil and gas resources on the outer continental shelf;

According to the experts with whom we communicated, it appears that the statement that "nearly one-third of all the world's hydrocarbons [are] being produced off-shore," is accurate. G. Allan Petzet, chief editor (explorations) at the Oil and Gas Journal, relates that, while he is not aware if precise published up-to-date figures exist, it is his understanding that around one-third of the world's hydrocarbons are produced off-shore.[5] Additionally, Alex Chakhmakhchev, senior manager, Global Support, IHS Inc., informs us that in 2009, 30 percent of the world's hydrocarbons were produced off-shore.[6] He believes the percentage is roughly the same in today's market.

The Bureau of Ocean Energy Management, Regulation and Enforcement (BOEMRE)—an agency of the U.S. Department of the Interior—released a comprehensive inventory of outer continental shelf (OCS) resources in 2006 that indicated that significant oil and gas resources exist in the U.S. OCS.[7] The study estimated that the quantity of undiscovered, technically recoverable, resources ranges from 66.6 to 115.3 billion barrels of oil and 326.4 to 565.9 trillion cubic feet of natural gas. The mean or average estimate is 85.9 billion barrels of oil and 419.9 trillion cubic feet of natural gas. Therefore, it may be argued that it could be "unwise" for the U.S. to ignore potential oil and gas resources in the OCS.[8]

6 WHEREAS the United States Geological Survey estimates that the Arctic contains conventional oil and gas resources totaling approximately 90,000,000,000 barrels of oil, 1,669 trillion cubic feet of natural gas, and 44,000,000,000 barrels of natural gas liquids, amounting to more than one-fifth of the world's undiscovered, recoverable oil and natural gas resources;

We found the information in the above "whereas" to be accurate. A 2008 United States Geological Survey (USGS) assessment found that 90 billion barrels of oil, 1,669 trillion cubic feet of natural gas, and 44 billion barrels of natural gas liquids may remain to be found in the Arctic. The USGS estimates that these resources account for about 22 percent (or slightly more than one-fifth) of the undiscovered, technically recoverable resources in the world.[9]

7 WHEREAS American energy and deep-seabed companies are at a disadvantage in making investments in the outer continental shelf because of the legal uncertainty over the outer limit of the federal continental shelf; and

A wide majority of the opinions that we found in our review generally support the above "whereas." For example, Gerald Leape, senior officer (international policy) with the Pew Charitable Trusts, related to us that the ratification of the Convention would benefit U.S. energy and deep-seabed companies.[10] As an example, Mr. Leape, who specializes in international marine issues, relates that when disputes regarding OCS claims arise, countries that have ratified UNCLOS have a place "at the table" to work through the issues. Countries that have not ratified the treaty would not have an official voice in such a forum.

Additionally, Coast Guard Rear Admiral Christopher Colvin, commander of Coast Guard operations in Alaska, said recently in an interview that ratifying UNCLOS was imperative for the county.[11] He relates that there are valuable oil, gas, and mineral resources that the U.S. would have a legitimate claim to if the country signs on to the treaty. Admiral Colvin asserts that China is currently exploring areas north of the United States' exclusive economic zone off Alaska that would otherwise be under sovereign control of the U.S. under terms of the Convention.

Further, according to Citizens for Global Solutions (CGS), joining UNCLOS will benefit American businesses.[12] The CGS affirms that UNCLOS would protect the claims of U.S. firms to resources and give us an opportunity to provide better management of the sensitive Arctic environment adjacent to U.S. boundaries. Under UNCLOS, Arctic states stand to gain tremendously by claiming mineral and oil extraction rights in the Arctic seabed in areas that extend beyond their respective exclusive economic zones. Additionally, joining the Convention, would give U.S. companies an opportunity to apply for licenses with the International Seabed Authority, which manages claims to resources in the deep seabed, an area over which no country has sovereign rights.

8 WHEREAS the United States, as a major maritime power and as the country with the largest exclusive economic zone and one of the largest continental shelves, stands to gain more from the Convention in terms of economic and resource rights than any other country;

Our review found the above "whereas" to be accurate. According to our review, the United States' exclusive economic zone (EEZ) is the largest in the world, spanning over 13,000 miles of coastline and containing 3.4 million square nautical miles of ocean (a square nautical mile is equal to 1.3 square miles). According to preliminary studies, the extended continental shelf—again, that portion of the continental shelf beyond 200 nautical miles off shore—likely totals roughly one million square kilometers, or an area about twice the size of California, according to the U.S. Department of State.

Given the size of the U.S. continental shelf, the potential resources may be worth billions if not trillions of dollars, according to a U.S. Department of State article "Defining the Limits of the U.S. Continental Shelf."[13] Mr. Leape of the Pew Charitable Trusts affirms that it is quite likely that the U.S. has more to gain than any other country from the treaty. He cautions, however, that what resources actually exist in the unexplored depths is uncertain.

9 WHEREAS other Arctic nations have been asserting their sovereignty in the Arctic and making extended continental shelf claims under the United Nations Convention on the Law of the Sea;

Receding sea ice in the Arctic has heightened territorial claims in the area. In 2007, Russian divers planted their nation's flag on the seabed below the North Pole. The Russian Federation claims that the underwater Lomonosov Ridge is a natural

---

[11] Rear Admiral Colvin can be reached at (907) 463-2065.

[12] Citizens for Global Solutions is a non-partisan membership organization that envisions a "future in which nations work together to abolish war, protect our rights and freedoms and solve the problems facing humanity that no nation can solve alone." More information on Citizens for Global Solutions' stance on UNCLOS can be accessed at *http://globalsolutions.org/law-justice/law-seatreaty*.

[13] "Defining the Limits of the U.S. Continental Shelf," can be accessed at *http://www.state.gov/g/oes/continentalshelf/index.htm*.

extension of Siberia's continental shelf and, therefore, the nation owns the rights to that vast tract of Arctic seafloor.[14] Denmark responded to Russia's pronouncement with a claim that the 1,200-mile ridge is an extension of Greenland, a Danish possession.[15] Canada's prime minister has vowed to defend "Canada's sovereignty" in the Arctic. While the U.S. considers the Northwest Passage an international strait, Canada asserts that is has sole jurisdiction over the increasingly ice-free waterway.[16]

10 WHEREAS the United States, with 1,000 miles of Arctic coast off of the State of Alaska, remains the only Arctic nation that has not ratified the United Nations Convention on the Law of the Sea;

According to the United Nations, 161 nation-states have ratified the United Nations Convention on the Law of the Sea.[17] Except for the United States, every Arctic nation—Canada, Denmark (Greenland and the Faroe Islands), Finland, Iceland, Norway, the Russian Federation, and Sweden—are parties to the treaty.[18]

11 WHEREAS, until the United States ratifies the United Nations Convention on the Law of the Sea, the United States will not become a full partner in cooperative efforts of Arctic nations to address the manifold problems of the region;

If the United States does not ratify the UNCLOS, it is still highly likely that the United States will continue to partner in various ways with other nations in addressing issues surrounding the Arctic region. According to U.S. Senator Richard Lugar, however, many critical Arctic policy decisions will be made without the input of the U.S. if we do not accede to UNCLOS. Unlike some treaties, such as the Kyoto Agreement, which is inoperable in a practical sense without ratification by the United States, UNCLOS participants will make decisions regardless of whether the U.S. is a party. Senator Lugar maintains that nonparticipation will put the U.S. in a position of "self-imposed weakness," forcing our nation to rely on others to advocate for our interests.[19]

Additionally, the Council on Foreign Relations reports that without accession, the U.S. will give up "a seat at the table" in the important decision-making bodies established by the convention, including the economically critical Commission on the Limits of the Continental Shelf and the International Seabed Authority. The Council also warns that the U.S. could damage efforts to develop cooperative maritime partnerships, such as the Proliferation Security Initiative (PSI), a U.S.-led multilateral effort to interdict shipments of weapons of mass destruction.[20]

12 WHEREAS, until the United States ratifies the United Nations Convention on the Law of the Sea, the United States cannot participate in deliberations to amend provisions of the Convention that relate to the

(1) oil, gas, and mineral resources in the Arctic Ocean and other northern waters;

(2) conduct of essential scientific research in the world's oceans;

(3) right of the United States to the use of the seas;

(4) rules of navigation;

[20] Borgerson, "The National Interest and the Law of the Sea," pp. 19 and 26.

(5) effect of the use of the seas on world economic development; and

(6) environmental concerns related to the use of the seas;

In 1973, the United States participated in the Third United Nations Conference on the Law of the Sea with the objective of dealing with the issues listed above. The U.S. wanted to preserve its freedoms of navigation, diminish threats to fisheries and marine mammals, protect the marine environment, preserve the freedom of scientific research, ensure access to the mineral resources of the deep seabed to U.S. companies, and create a strong, viable organization to arrest the growing claims by northern nations to the Arctic seafloor.[21]

The 1973 UNCLOS agreement addressed these U.S. objectives, and additional U.S. concerns were attended to in a subsequent agreement in 1994; however, according to Scott Borgerson of the Council on Foreign Relations, failure to take the next step through accession will severely weaken the U.S. role in advocating its position on these issues and will undercut its ability to respond to emerging challenges. Mr. Borgerson continues:

> Immediate U.S. accession to the treaty is imperative to advance critical U.S. national interests. These stakes can be grouped into three general "baskets": national security, economic, and environmental. Each day the convention is in force—and each day its various organs make ocean policy and set legal precedent—the United States is in effect marginalizing itself. It is also placing itself at a disadvantage by being unable to mobilize the convention to advance its interests through new initiatives or by means of the credibility that accompanies being a state party.[22]

13 WHEREAS the United States continues to reject a carefully negotiated accord that enjoys overwhelming international consensus, one that has been adjusted specifically to meet the demands set out by President Ronald Reagan two decades ago;

The assertion that the UNCLOS is a "carefully negotiated accord" appears to be accurate. According to a Congressional Research Service Issue Brief entitled, *The Law of the Sea Convention and U.S. Policy*, the treaty "resulted from the third U.N. Conference on the Law of the Sea, which met for a total of 93 weeks between December 1973 and December 1982."[23]

The claim that the UNCLOS "enjoys overwhelming international consensus" appears to be accurate. Currently, 161 nations have ratified the treaty while 32 have not.[24]

The assertion that the UNCLOS was "adjusted specifically to meet the demands put forth by President Reagan" appears to be accurate. On March 10 1983, after months of consideration of the implications of the adoption of the Law of the Sea Conference, and after 119 other nations adopted the Convention on the Law of the Sea, President Ronald Reagan issued his statement on U.S. Oceans policy. In this statement he noted that the U.S. would not join the Convention because of unacceptable provisions related to deep seabed resources beyond national jurisdictions. He also noted, however, that the balance of the Convention was in the interest of, and be observed by, the United States.[25]

Scott G. Borgerson, in "The National Interest and the Law of the Sea," notes that:

> In the end, the Reagan administration declared it could accept Part XI of the Convention only if certain changes were made in six areas relating to matters like technology transfer, and if the United States "preserved a de facto veto power in the governing organs of the new authority so that no financial obligations could be imposed on the United States without its consent." When these changes were not made by 1982, the Reagan administration refused to sign the convention.

[22] Borgerson, "The National Interest and the Law of the Sea," p. 22.

[23] Marjorie Ann Browne, *The Law of the Sea Convention and U.S. Policy*, Congressional Research Issue Brief, February 10, 2005, *http://www.fas.org/sgp/crs/row/IB95010.pdf*.

[24] The status of nations with respect to the Convention can be reviewed at *http://www.un.org/Depts/los/reference_files/status2010.pdf*.

[25] One source for President Reagan's statement is OceanLaw.org, *http://www.oceanlaw.org/index.php*.

> Eventually, all six of the Reagan administration's objections were amended to the satisfaction of the United States in a subsequent supplemental agreement that was negotiated and signed by most countries, including the United States, in 1994.[26]

We note that the text for this "whereas" statement appears to have been extracted from page 38 of Mr. Borgerson's report.

14 WHEREAS the United Nations Convention on the Law of the Sea will have sizable beneficial effects on virtually all states, both coastal and noncoastal, because the United States is heavily dependent on the use, development, and conservation of the world's oceans and their resources;

The statement appears to be accurate. In "The National Interest and the Law of the Sea," Mr. Borgerson spends a great deal of time discussing national interest in the UNCLOS.[27] He notes that:

> The oceans are marine highways, carrying 90 percent of U.S. imports and exports, and most of the world's oil passes through shipping choke points such as the Suez Canal and the Straits of Malacca.

He further notes that:

> ...acceding to the convention would advance a long list of national security, economic, and environmental issues of strategic importance to the United States. Beyond establishing the rules for territorial seas and exclusive economic zones, the convention establishes regimes for managing shipping fleets, fish, and pollutants that do not abide by national boundaries. The Law of the Sea Convention includes specific provisions guaranteeing freedom of navigation for merchant fleets and navies, and sets firm limits on jurisdiction to prevent "creeping sovereignty" by a few aggressive coastal states [nations] eager to unilaterally extend their authority seaward.

15 WHEREAS 161 nations have ratified the United Nations Convention on the Law of the Sea, including almost all of the world's maritime powers; and

According to the United Nations, 161 countries have ratified the United Nations Convention on the Law of the Sea.[28] It is difficult to unequivocally confirm the second portion of the statement as we are unsure of precise definitions of a "maritime power". However, based on our review of the list of the 32 nations that have not ratified the Convention, many of which are landlocked, we consider this statement to be accurate.

16 WHEREAS ratification of the United Nations Convention on the Law of the Sea has been pending before the United States Senate since 1994, and seven hearings on the treaty were held by the United States Senate Committee on Foreign Relations in 2003, 2004, and 2007;

Mr. Borgerson, in his report for the Council on Foreign Relations, notes that:

> On July 29, 1994, President Bill Clinton signed the Agreement on the Implementation of Part XI of the Convention on the Law of the Sea. He sent the agreement, along with the 1982 convention, to the Senate on October 7, 1994. The following month, Republicans won control of the Senate, and in January 1995, Senator Jesse Helms (R-NC) became chairman of the Senate Foreign Relations Committee. Worried that the convention had not been fixed and that it sacrificed U.S. sovereignty, Senator Helms refused to hold committee hearings.[29]

---

[26] Borgerson, "The National Interest and the Law of the Sea," p. 11.

[27] Borgerson, "The National Interest and the Law of the Sea," pp. 14 and 20.

[28] *http://www.un.org/Depts/los/reference_files/status2010.pdf*. We note that Israel, long considered to be an ally of the Unites States, also has not ratified the UNCLOS.

[29] Borgerson, "The National Interest and the Law of the Sea," p. 12.

Based on this summary it appears that the Convention on the Law of the Sea has been placed before the U.S. Senate Committee on Foreign Relations since 1994 although no hearings on the issue appear to have occurred until 2003.

We identified seven meetings of the U.S. Senate Committee on Foreign Relations that had the U.N. Convention on the Law of the Sea on the agenda. The dates are: October 14 and 21, 2003; February 24-25, 2004; September 27, 2007; and October 4 and 31, 2007.[30]

17 WHEREAS, despite favorable reports by the United States Senate Committee on Foreign Relations regarding the United Nations Convention on the Law of the Sea in 2004 and 2007, the United States Senate has yet to vote on the ratification of the Convention;

On February 25, 2004, the Senate Foreign Relations Committee voted 19-0 to approve the UNCLOS, sending it to the full Senate for ratification. Subsequently, on October 31, 2007, the Senate Foreign Relations Committee voted 17-4 to approve the treaty. However, the treaty was not brought to the Senate floor for a vote on either occasion, thus the full Senate has never voted on UNCLOS.[31]

18 WHEREAS all six of the United States military leaders making up the Joint Chiefs of Staff support Senate ratification of the United Nations Convention on the Law of the Sea;

A June 26, 2007, letter to Senator Joseph Biden, Chairman of the Senate Foreign Relations Committee, signed by all six members of the Joint Chiefs of Staff supported ratification of the treaty as follows.[32]

> As the world's preeminent maritime power, leader in the War on Terrorism, and Nation with the largest exclusive economic zone, the United States should accede to the Law of the Sea Convention during this session of Congress. No county has a greater interest in public order for the world's oceans. Becoming a party to the Convention will ensure our leadership role in the continuing development of oceans laws and policies.

On September 27, 2007, testifying before the Senate Foreign Relations Committee, Deputy Secretary of Defense Gordon England reiterated the Joint Chiefs of Staff support as follows:[33]

> As Deputy Secretary of Defense, and a prior Deputy Secretary of Homeland Security and prior Secretary of the Navy, I am well acquainted with the Law of the Sea Convention. The legal framework that the Convention establishes is essential to the mission of the Department of Defense, and the Department of Homeland Security concurs that it is also essential for their mission. For that reason, Secretary Gates, the Joint Chiefs of Staff, the Military Department Secretaries, all of the Combatant Commanders, and the Commandant of the Coast Guard join me in asking the Senate to give its swift approval for U.S. Accession to the Law of the Sea Convention and ratification of the 1994 Agreement.

19 WHEREAS ratification of the United Nations Convention on the Law of the Sea has wide bipartisan support;

The Clinton, Bush, and Obama administrations have all asked for ratification of the Convention. In 2007, it was one of only five international agreements that the Bush Administration placed in its "urgent" category of treaty priorities submitted to the Foreign Relations Committee. Current and former representatives from the Department of State, the Office of the Secretary

---

[30] *http://foreign.senate.gov/search/?q=law+of+the+sea&as_sitesearch=http%3A%2F%2Fforeign.senate.gov%2Fhearings&x=22&y=17.*

[31] Senate Executive Report 108-10, March 11, 2004, 108th Congress and Senate Executive Report 110-9, December 19, 2007, 110th Congress can be accessed at *http://www.virginia.edu/colp/los.html*. Scott Borgerson, Council on Foreign Relations, pp. 12-13, further discusses Senate action on the treaty. We note that under Senate rules, treaties must be reconsidered by the Senate Foreign Relations Committee in each new Congress. Because the full Senate did not take action on UNCLOS before the end of the Congressional term in 2008, the treaty is still before the Senate Foreign Relations Committee.

[32] The entire letter can be accessed at *http://www.virginia.edu/colp/pdf/Biden-Letter-JointChiefs.pdf*.

[33] Deputy Secretary England's full testimony can be accessed at *http://foreign.senate.gov/imo/media/doc/EnglandTestimony070927.pdf*.

of Defense, the U.S. Navy, the U.S. Coast Guard, and the Commerce Department have testified in support of the Convention at various Congressional hearings. Representatives from six Bush Administration Cabinet departments participated in the interagency group that helped write the resolution of advice and consent accompanying the treaty and the U.S. Commission on Ocean Policy, appointed by President Bush, strongly endorsed U.S. accession to the Law of the Sea.

On May 19, 2007, President George W. Bush urged the Senate to approve the Convention during the then-current session of Congress, stating as follows:[34]

> Joining [the Convention] will serve the national security interests of the United States, including the maritime mobility of our armed forces worldwide. It will secure U.S. sovereign rights over extensive marine areas, including the valuable natural resources they contain. Accession [to the Convention] will promote U.S. interests in the environmental health of the oceans. And it will give the United States a seat at the table when the rights that are vital to our interests are debated and interpreted.

In an October 16, 2009 letter to the U.S. Senate Foreign Relations Committee, Secretary of State Hillary Clinton offered strong support for U.S. accession to the Convention, noting that as the country with the largest Exclusive Economic Zone, and one of the largest continental shelves, the United States stands more to gain from the treaty in terms of economic and resource rights than any other country. Likewise, the Department of Defense 2010 Quadrennial Defense Review "strongly supports accession" to the UNCOLS for national security reasons, as well as economic and environmental benefits.[35]

A September 24, 2007, letter to Senators Harry Reid and Mitch McConnell requesting the Senate approve U.S. accession to the treaty was signed by 101 individuals representing former and current government and military officials, environmental and conservation groups, and major industry groups. The signers included such persons as retired Admiral James D. Watkins, former Secretary of State Madeline Albright, co-founder of the Natural Resources Defense Council, John Adams, president and CEO of the American Petroleum Institute, Red Cavaney, Walter Cronkite, former Secretary of the Interior Bruce Babbitt, former Secretary of State, Alexander Haig, Jr., and former Alaska Governor Tony Knowles. In addition, former Alaska Governor Sarah Palin also supported ratification of the treaty.[36]

20 WHEREAS, in 2009, the Twenty-Sixth Alaska State Legislature passed a similar resolution to this one;

In 2009, the Alaska Legislature approved HJR 22 (Legislative Resolve 14), which urged the United States Senate to ratify the Law of the Sea Treaty. The House voted 34 to 4 and the Senate 15 to 2 to issue the resolution.[37] An identical measure was considered in 2008 (HJR 39), but died in the House Rules Committee.

We hope this is helpful. If you have questions or need additional information, please let us know.

Subject: re: Law of the Sea Treaty

To Senator Wagoner:

Please oppose the Law of the Sea Treaty. The fiscal notes show no cost: however, the treaty clearly states that wealth from richer countries would be redistributed to poorer countries through technology transfers,etc. We have already seen the massive redistribution of wealth from the government to Wall Street.

The UN has many corrupt bureaucrats that desire to divide up the riches of the sea through American investment and know-how. We would lose greatly in signing the Law of the Sea Treaty.

Our government, military and businesses would be subject to the International Tribunal for the Law of the Sea in Germany. Their decisions cannot be appealed.

Our United States already has valid claims to the North Pole region under the Doctrine of Discovery.

Why give away our US sovereignty?

Representative Kyle Johansen

House District 1

HJR 20 – "Urging the President of the United States, the United States Congress, and the Secretary of the United States Department of Agriculture not to implement protection of inventoried roadless areas under the "roadless rule" or otherwise restrict the development of necessary hydroelectric projects in the Tongass National Forest and the Chugach National Forest."

The current version of the Roadless Area Conservation Rule, "Roadless Rule", will have an adverse impact on both hydro-power and renewable energy projects, as well as the development of potential mines in Southeast Alaska. These industries are essential to the continued well-being and economic success of residents in our region.

The Obama administration set a goal of having 25% of the energy generated in the United States come from renewable, "green", resources by 2025. Alaska, through the Energy Policy passed by the legislature in 2010, set a goal of 50% by 2025. The implementation of the Roadless Rule in the Tongass National Forest will create additional hurdles for the permitting and construction of hydro-power projects and their connectivity to electrified grids through interties and will not help the State or Federal Governments towards their goals.

Over 3,500 people are directly employed by mines is Alaska and the direct and indirect payroll from mining was over $350M last year. With an average wage of $80K per year, some of the state's highest paying jobs are in the mining industry and keeping these jobs and professionals in Alaska should be a priority for the governing body.

This resolution will send a message to Washington, stating that Alaska is committed to responsible conservation of our forests while developing renewable energy and mining projects.

Representative Kyle Johansen
Finance Committee Co-chair Bill Thomas
Finance Committee Co-chair Bill Stoltze

Dear Representatives Johansen, Thomas, and Stoltze:

Alaska Power Association (APA) strongly supports House Joint Resolution 20 and appreciates your efforts to put the Alaska State Legislature on record as opposing the federal administration's unreasonable efforts regarding implementation of roadless rule regulation for the Tongass and Chugach National Forests.

Alaska Power Association is the statewide trade association for the electric utilities that supply power to more than a half-million Alaskans from Barrow to Adak, through the Interior and Southcentral, and down the Inside Passage.

As your resolution articulates, the requirement for the U.S. Secretary of Agriculture to personally sign permits for hydroelectric projects within roadless designated areas of the Tongass and Chugach will severely impact or outright kill hydro efforts at the same time the White House is advocating for the development of renewable resources.

Preliminary permits issued by the Federal Energy Regulatory Commission are for a three-year period. Considerable field study is required to perfect such permits but, without roadless access permission, project applicants cannot get into the field and their preliminary permits could well expire. Hydro projects will not get built, resulting in continued dependence on diesel generation that exceeds 50 cents per kilowatt hour in many rural communities.

The current roadless rule impediments present an illogical, Catch 22 situation for Alaska utilities and the residents they serve.

APA and its members urge the legislature to pass HJR 20 expeditiously to send a clear message to the federal government that its roadless rule position is misguided and costly to our State. Washington, D.C. cannot have it both ways on renewable energy development.

Sincerely,

Marilyn Leland
Executive Director

ALASKA POWER ASSOCIATION

R E S O L U T I O N

A Resolution Recommending the Elimination of Impediments to the Development of Hydroelectric Power Projects within National Forests (11-15)

Government at all levels, electric utilities, and our consumers are embracing development of renewable energy sources for the production of electricity. Renewable energy sources have environmental, economic and social benefits that are well documented. Hydroelectric energy is among the cleanest of all renewable resources and the most cost effective during the long, low-maintenance lives of the projects.

Alaska is blessed with an abundance of hydro resources from its lakes and streams that can be built with minimal environmental impact. Most new hydro development in Alaska replaces costly, finite and less environmentally benign fossil generation fuels, specifically diesel, coal and natural gas.

Special use permits necessary for federal approval of hydro projects within Roadless Rule designated areas of national forests must be individually signed by the Secretary of the United States Department of Agriculture (USDA). In addition to Roadless Rule designation permits, national forest land use plans must be amended to accommodate hydro projects located in designated "back country" areas of a national forest.

Prior rights-of-way, easements and other authorizations issued or managed by the United States Forest Service may need to be modified to not impede the development of otherwise acceptable projects. The foregoing cumbersome federal actions add a year or more to the hydro project approval process at the Federal Energy Regulatory Commission (FERC), seriously jeopardizing the three-year timeframe within which applicants are bound to perfect their FERC permits.

Alaska Power Association urges Alaska's Congressional delegation and their fellow members of Congress, the Governor's Office, the Obama Administration and federal agencies such as USDA and FERC to work collaboratively and expeditiously to eliminate the burdensome and, in some cases, fatal impediments to hydro development caused by the need for the Secretary of Agriculture's personal signature on Roadless Rule designation special use permits and mandatory forest plan amendments, where national forest lands are involved.

APA further urges the highest level of support from the above-mentioned lawmakers and agencies for ensuring that the US Forest Service works cooperatively with project proponents and others to eliminate unnecessary impediments to project development created by prior use authorizations.

A RESOLUTION OF THE JUNEAU CHAMBER OF COMMERCE URGING THE PRESIDENT OF THE UNITED STATES, THE UNITED STATES CONGRESS, AND THE SECRETARY OF THE UNITED STATES DEPARTMENT OF AGRICULTURE NOT TO IMPLEMENT PROTECTION OF INVENTORIED ROADLESS AREAS UNDER THE "ROADLESS RULE" OR OTHERWISE RESTRICT THE DEVELOPMENT OF NECESSARY HYDROELECTRIC PROJECTS IN THE TONGASS NATIONAL FOREST AND THE CHUGACH NATIONAL FOREST

06-11

WHEREAS, inventoried roadless areas, as defined in 36 C.F.R. 294.11, constitute approximately 57 percent of the acreage in the Tongass National Forest, and

WHEREAS, the United States Congress has designated an additional 35 percent of the acreage in the Tongass National Forest as wilderness, and

WHEREAS, there is an extensive system of federally protected areas in the state, and

WHEREAS, on May 28, 2010, the Secretary of the United States Department of Agriculture issued Secretary's Memorandum 1042-155 that reserves to the Secretary the authority to approve or disapprove road construction or reconstruction and the cutting, sale, or removal of timber in areas identified in the ser of inventoried roadless area maps contained in volume 2 of the Forest Service Roadless Area Conservation Final Environmental Impact Statement, dated November 2000, and

WHEREAS, the Secretary of the United States Department of Agriculture has approved only seven projects under the authority reserved in Secretary's Memorandum 1042-155, and

WHEREAS, 14 of the 15 hydroelectric projects in the Tongass National Forest and Chugach National Forest are subject to the protection of inventoried roadless areas under 36 C.F.R. 294.10 – 294.18 ("roadless rule") and will require approval by the Secretary of the United States Department of Agriculture, and

WHEREAS, failure of the Secretary of the United States Department of Agriculture to approve the hydroelectric projects in the Tongass National Forest and the Chugach National Forest would jeopardize the approval of necessary preliminary permits by the Federal Energy Regulatory Commission because, without the Secretary of Agriculture's approval, the hydroelectric projects would not be able to proceed with the field studies and planning that are required for a Federal Energy Regulatory Commission preliminary permit, and

WHEREAS, the inability to develop hydroelectric projects and construct power lines to bring electricity to communities in the state will result in continued diesel power generation that emits pollutants into the environment, and

WHEREAS, the protection of inventoried roadless areas under the "roadless rule" in 36 C.F.R. 294.10 – 294.18 and the inability to produce and distribute hydro-generated electricity will adversely affect communities in the Tongass National Forest and the Chugach National Forest and will thwart the Governor's goal of generating 50 percent if the energy in the state from renewable sources, and **WHEREAS,** the President of the United States has pledged to embrace and encourage the development of renewable energy sources, and

BE IT RESOLVED, that the Juneau Chamber of Commerce urges the President of the United States, the United States Congress, and the Secretary of the United States Department of Agriculture not to implement protection of inventoried roadless areas under 36 C.F.R. 294.10 – 294.18 or otherwise restrict the development of necessary hydroelectric projects in the Tongass National Forest and the Chugach National Forest.

COPIES, of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Tom Vilsack, United States Secretary of Agriculture; the Honorable John Boehner, Speaker of the U.S. House of Representatives; the Honorable Nancy Pelosi, Minority Leader of the U.S. House of Representatives; the Honorable Harry Reid, Majority Leader of the U.S. Senate; the Honorable Mitch McConnell, Minority Leader of the U.S. Senate; the Honorable Jeff Bingaman, Chair of the Energy and Natural Resources Committee of the U.S. Senate; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

PASSED AND APPROVED by the Juneau Chamber of Commerce Board of Directors on the date: March 15, 2011

A RESOLUTION OF THE JUNEAU CHAMBER OF COMMERCE IN OPPOSITION OF "the Obama Administration's new approach to forest management on the Tongass National Forest"

07-10

WHEREAS, the State of Alaska and U.S. Senator Lisa Murkowski oppose "the Obama Administration's new approach to forest management on the Tongass National Forest" as described in USDA Secretary Thomas Vilsack's September 3, 2010 letter to Senator Lisa Murkowski and

WHEREAS, the U.S. Forest Service Alaska Region (USFS) presented an Integrated 5-year Plan for the Tongass National Forest essentially applying a de facto roadless rule on the Tongass NF in contradiction to the USDA Settlement Agreement with the State of Alaska on the roadless rule and

WHEREAS, the new 5-year schedule is not consistent with the 2008 Tongass Land Management Plan (TLMP) and is prematurely transitioning commercial timber harvests to young growth forests generally sixty years of age or less and

WHEREAS, implementation of the new 5-year schedule and de facto application of the roadless rule on the Tongass will reduce ~~future access~~ to the Tongass NF discouraging private investments for mining, timber, hydro-electric inter-ties and other activities which would help improve the economy and quality ~~of life in Southeast~~ Alaska's forest dependent communities.

THEREFORE, BE IT RESOLVED, that the Juneau Chamber of Commerce join the State of Alaska and U.S. Senator Lisa Murkowski's opposition to the Obama Administration and USDA Secretary's new approach to forest management on the Tongass and U.S. Forest Service five year schedule of activities and

BE IT FURTHER RESOLVED, that the Juneau Chamber of Commerce supports the implementation of the 2008 Tongass Land Management Plan and

BE IT FURTHER RESOLVED, to transmit this Resolution to the Alaska Governor, Alaska Congressional Delegation, Southeast Alaska Legislators, The Southeast Conference, and Juneau Mayor and Assembly.

Record of December 28, 2010 Juneau Chamber Board meeting action:

PASSED AND APPROVED by the Juneau Chamber of Commerce Board of Directors on this date: December 28, 2010

Cathie Roemmich, CEO
Juneau Chamber of Commerce
At the direction of the Board of Directors and
Representing nearly 400 Business Members

CITY OF PETERSBURG, ALASKA

RESOLUTION # 1964

A RESOLUTION URGING ALASKA GOVERNOR PARNELL AND ALASKA'S FEDERAL DELEGATION TO ASSURE THAT THE IMPLEMENTATION OF THE ROADLESS RULE ON ALASKA'S NATIONAL FORESTS DOES NOT HINDER OR PROHIBIT THE DEVELOPMENT AND MAINTENANCE OF HYDRO-ELECTRIC PROJECTS AND ASSOCIATED TRANSMISSION LINES

WHEREAS, the 2010 Alaska Legislature passed an Energy Policy that set a goal of having 50% of the energy generated in Alaska come from renewable, "green", resources by 2025; and

WHEREAS, the Chugach and Tongass National Forests appear to be subject to the implementation of the Roadless Rule; and

WHEREAS, US Secretary of Agriculture Tom Vilsack has anounced that he has the sole authority to approve or disapprove permits for projects within the inventoried roadless areas of the Chugach and Tongass National Forests; and

WHEREAS, the inventoried roadless areas within the Chugach and Tongass National Forests make up the majority of remaining Forest Service lands outside of Wilderness or other areas already off limits to development; and

WHEREAS, a vast majority of potential hydroelectric projects that could be developed to supply renewable energy to Alaska's communities are located within inventoried roadless areas; and

WHEREAS, the inability to develop hydroelectric projects or the transmission lines necessary to transmit this power to Alaska's communities will result in continued diesel generation and resultant pollutants emitted into the environment; and

WHEREAS, the current version of the Roadless Rule may adversely impact the communities that reside within Alaska's National Forests and potential hydro-power and renewable energy projects in Southeast Alaska.

THEREFORE BE IT RESOLVED the City Council for the City of Petersburg, Alaska, strongly urges Alaska Governor Parnell and Alaska's Federal Delegation to assure that the implementation of the Roadless Rule on Alaska's National Forests does not hinder or prohibit the development and maintenance of hydro-electric projects and transmission lines.

PASSED and **APPROVED** by the City Council of the City of Petersburg, Alaska on April 4, 2011.

Dan Hickman

March 15, 2011

To: The Alaska State Legislature

Re: House Joint Resolution No. 20

On behalf of The Southeast Alaska Power Agency (SEAPA), I am writing to inform you of our support for House Joint Resolution No. 20. SEAPA is the owner of the Swan Lake and Tyee Lake hydro projects in southern Southeast Alaska. We deliver renewable hydropower to our member communities of Ketchikan, Wrangell and Petersburg. In addition, we own and maintain 175 miles of transmission lines between these communities. Ketchikan and Petersburg also own several small hydropower plants and, when combined with our facilities, we are able to meet almost all of the current power demands with renewable hydropower. However, loads continue to increase and more hydropower facilities will have to be built. We are fortunate that the geography in the region, coupled with high precipitation, lends itself nicely for the development of hydropower. There are numerous potential projects that can be developed to assure the majority of our power and energy is delivered by hydropower.

Unfortunately, most of these project reside in the Tongass National Forest and are classified as 'roadless'. The implementation of the 'roadless rule' would be not only devastating to our local economies but also devastating to our ability to develop new hydro projects.

We urge passage of HJR20 and also urge the Governor and Legislature to take whatever actions are necessary to stop the implementation of protection of inventoried roadless areas under the "roadless rule" in the Tongass and Chugach National Forests.

Sincerely,

Dave Carlson, CEO
The Southeast Alaska Power Agency

March 16, 2011

The Honorable Peggy Wilson
Alaska House of Representatives
State Capitol Room 408
Juneau, Alaska 99801

Dear Representative Wilson:

The Sitka Economic Development Association is writing to express support for House Joint Resolution 20 regarding the affects of the Roadless Rule on hydro-electric projects located within the Tongass and Chugach National Forests.

Development of additional hydro-electric capacity in Southeast Alaska is vital to the region's economy and to the long-term health of the National Forests in question.

The financial, national security and environmental costs associated with the use of fossil fuels make development of hydro-electricity in Southeast Alaska the obvious course of action. Unlike the large hydro-electric dams of the lower-48 states, the hydro-electric dams of Southeast Alaska are based on alpine lake systems that are renewed by abundant annual rainfall and are relatively environmentally friendly, especially when compared with the continued burning of diesel for generating electricity.

It is ironic and extremely frustrating that at the same time the Federal Government is supporting and pushing for the development of renewable energy projects it is also creating obstacles and barriers that prevent such development. Placing the Tongass and Chugach National Forests under the constraints of the Roadless Rule will effectively make hydro-electric development in these areas impossible due to increased costs and regulatory burden.

The expansion of Sitka's Blue Lake dam has been in the planning stages for a number of years and construction is scheduled to begin early in 2012. The implementation of the Roadless Rule has already created problems for this project by prohibiting the removal of a stand of trees that would be underwater when the level of Blue Lake is raised, creating a turbidity issue that will costs millions of additional dollars to resolve.

SEDA's top strategic priority is to support the development of renewable energy resources in Sitka and Southeast Alaska. Without increased hydro-electric capacity, sustaining our current level of economic activity will be challenging at best and new economic development will be virtually impossible.

SEDA, therefore, strongly supports HJR 20.

Sincerely,

Garry A. White, Executive Director

Southeast Conference

March 16, 2010

Representative Kyle Johansen
State of Alaska
Capitol Building Room 114
Juneau, Alaska 99811

RE: Support for HJR 20-"Urging the President of the United States, the United States Congress, and the Secretary of the United States Department of Agriculture not to implement protection of the inventoried roadless areas under the "roadless rule" or otherwise restrict the development of necessary hydroelectric projects in the Tongass National Forest and the Chugach National Forest."

Dear Representative Johansen;

Southeast Alaska is an archipelago with more than a thousand rugged, forested islands harboring isolated villages which are scattered across its 500 mile length and are accessible only by boat or small plane. More than 90% of that land is owned and governed by the Federal Government. The people of Southeast Alaska are a hearty bunch of folks and are able to overcome many obstacles; however they must have access to land to survive.

Southeast Conference is a regional, nonprofit corporation that advances the collective interest of the people, communities and businesses in Southeast Alaska. Members include municipalities, native corporations and village councils, regional and local businesses, civic organizations and individuals throughout the region. Our goal is to support policies that promote strong economies, healthy communities, and a quality environment. We are the State-designated Alaska Regional Development Organization (ARDOR), the federally-designated Economic Development District (EDD), and the Governing Board for the Resource Conservation and Development Council (RC&D) for Southeast Alaska. Each of these designations requires Southeast Conference to take an active role in regional resource management and economic development planning. Our relationship with our members gives us the advantage of speaking with a unified voice in support of legislation or policy that will be for the betterment of our region.

In the past 10 years Southeast Conference in partnership with many other agencies and organizations have put an extensive amount of effort into the development of affordable, self sustaining, renewable "green" energy projects in our region. And it is fairly obvious that with the federal government controlling such vast amounts of the region and the energy resources within, that land access is a critical issue. And it is equally obvious that during these past few years, the forest was adequately protected during development of energy resources without the roadless enforcement. We have managed to develop several major hydro projects that are providing affordable renewable "green" energy to a portion of our people. Unfortunately we still have entire communities paying up to ninety cents a kilowatt hour for electricity. Our small businesses are the hardest hit and as you know, that has quite a ripple effect in these communities.

Lack of access to land and the paralyzing permitting process of the federal government are killing our communities. People are not able to heat their homes and turn on their lights much less start or

P.O. Box 21989 612 W. Willoughby Avenue, Suite B, Juneau Alaska 99802
(907) 523-2310 (907) 463-5670 Fax info@seconference.org
www.seconference.org

maintain a business. The financial obligation to heat schools or community buildings is crippling in these communities. Jobs are at a premium and there is no good news in sight.

As the government in Washington DC, environmental groups, and the courts continue to lock us out of our national forest our people in Southeast Alaska are being forced to leave the place they have called home for hundreds of years in order to survive.

The Obama administration has set a goal of having 25% of the energy generated in the US come from renewal, "green", resources by 2025. Alaska, through our Energy Policy passed by the legislature in 2010, has a goal of 50% by 2025. As it stands now 14 out of 15 hydroelectric projects in the Tongass National Forest and Chugach National Forest are subject to the protection of inventoried roadless areas under 36 C.F.R. 294.10-294.18 ("roadless rule") and will require approval by the Secretary of the US Department of Agriculture. Any attempt to develop a biomass infrastructure would be impossible with the current restrictions on the Tongass, thus road blocking any efforts made toward those goals.

The Obama administration has, on many occasions, promised jobs for the people of our country. It is time for this administration to set aside the zealous opinions of outside environmental groups and fulfill that promise. Exempt the Tongass and Chugach National Forest from the roadless rule and open these public lands for responsible resource development and allow the people that live here the opportunity to have affordable, "green" energy and a thriving economy.

Sincerely,

Shelly Wright

Typical project activities and timeline:

Year 1: Applicant submits application to FERC and is issued a Preliminary Permit. This gives applicant exclusive right to study feasibility of a site and file a license application within 3 years. FS files as intervenor and submits comments. Applicant applies to FS for investigative studies permit. FS issues special use authorization for investigative studies.

Year 1-2: Pre-application document (PAD) is submitted by applicant to initiate public process and describe project thought to be feasible. FS provides comments. Study plans are developed in consultation with stakeholders. Field studies are conducted. FS provides comments.

Year 2-3: More studies. Applicant prepares Scoping Documents 1 and 2. Applicant prepares Draft License Application and submits to FERC. Includes detailed description of project and environmental analysis. FS comments and submits preliminary 4(e) terms and conditions.

Year 3-4: Applicant prepares/submits Final License Application to FERC, including responses and revisions based on DLA comments. FERC issues EA as final step. Applicant may submit application to FS for permit for the licensed project.

Year 4-5: FERC issues license. Applicant completes required plans for construction, monitoring, etc. FS comments. Applicant submits application to FS for permit for the licensed project—if has not already done so. FS issues decision and authorizes project to occupy NFS lands.

Year 5- ??: Construction of project. FS reviews, monitors, inspects.

SENATE CS FOR CS FOR HOUSE JOINT RESOLUTION NO. 20( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES JOHANSEN, Thomas, Stoltze, Peggy Wilson, Muñoz, Johnson, Chenault, Dick

A RESOLUTION

Urging the President of the United States, the United States Congress, and the Secretary of the United States Department of Agriculture not to implement protection of inventoried roadless areas under the "roadless rule" or otherwise restrict the development of necessary hydroelectric and other natural resource projects in the Tongass National Forest and the Chugach National Forest.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS inventoried roadless areas, as defined in 36 C.F.R. 294.11, constitute approximately 57 percent of the acreage in the Tongass National Forest; and

WHEREAS the United States Congress has designated an additional 35 percent of the acreage in the Tongass National Forest as wilderness; and

WHEREAS there is an extensive system of federally protected areas in the state; and

WHEREAS, on May 28, 2010, the Secretary of the United States Department of Agriculture issued Secretary's Memorandum 1042-155 that reserves to the Secretary the authority to approve or disapprove road construction or reconstruction and the cutting, sale, or removal of timber in areas identified in the set of inventoried roadless area maps contained in

volume 2 of the Forest Service Roadless Area Conservation Final Environmental Impact Statement, dated November 2000; and

WHEREAS the Secretary of the United States Department of Agriculture has approved only seven projects under the authority reserved in Secretary's Memorandum 1042-155; and

WHEREAS Southeast Alaska has some of the largest deposits of precious metals in the world, and the region's economy is dependent on the responsible development of these natural resources; and

WHEREAS 14 of the 15 hydroelectric projects in the Tongass National Forest and Chugach National Forest are subject to the protection of inventoried roadless areas under 36 C.F.R. 294.10 - 294.18 ("roadless rule") and will require approval by the Secretary of the United States Department of Agriculture; and

WHEREAS failure of the Secretary of the United States Department of Agriculture to approve the hydroelectric and other natural resource projects in the Tongass National Forest and the Chugach National Forest would jeopardize the approval of necessary preliminary permits by the Federal Energy Regulatory Commission and other federal agencies because, without the Secretary of Agriculture's approval, the projects would not be able to proceed with the field studies and planning that are required for permitting; and

WHEREAS the inability to develop hydroelectric projects and construct power lines to bring electricity to communities in the state will result in continued diesel power generation that emits pollutants into the environment; and

WHEREAS the protection of inventoried roadless areas under the "roadless rule" in 36 C.F.R. 294.10 - 294.18 and the inability to produce and distribute hydro-generated electricity and develop abundant natural resources will adversely affect communities in the Tongass National Forest and the Chugach National Forest and will thwart the policies of the state, as stated in sec. 1, ch. 82, SLA 2010, to generate 50 percent of the energy in the state from renewable sources and, under AS 44.99.110, to encourage mineral development; and

WHEREAS the President of the United States has pledged to embrace and encourage the development of renewable energy sources and has set a goal of having 25 percent of the energy generated in the United States come from renewable energy resources by 2025;

BE IT RESOLVED that the Alaska State Legislature urges the President of the

United States, the United States Congress, and the Secretary of the United States Department of Agriculture not to implement protection of inventoried roadless areas under 36 C.F.R. 294.10 - 294.14 or otherwise restrict the development of necessary hydroelectric and natural resource projects in the Tongass National Forest and the Chugach National Forest.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Tom Vilsack, United States Secretary of Agriculture; the Honorable John Boehner, Speaker of the U.S. House of Representatives; the Honorable Nancy Pelosi, Minority Leader of the U.S. House of Representatives; the Honorable Harry Reid, Majority Leader of the U.S. Senate; the Honorable Mitch McConnell, Minority Leader of the U.S. Senate; the Honorable Jeff Bingaman, Chair of the Energy and Natural Resources Committee of the U.S. Senate; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

SPONSOR STATEMENT

HJR 21 **"Urging the Secretary of the United States Department of the Interior to withdraw a secretarial order that creates a wild land classification and to administer federal lands in the state in accordance with existing statutes and agency guidelines; and urging the United States Congress to prohibit the use of appropriated funds by the United States Department of the Interior and the Bureau of Land Management to implement, administer, or enforce the secretarial order."**

House Joint Resolution 21 is a response and clear statement of opposition to an attempt by a Federal government department head to ignore Federal Statute and promote an agenda that is detrimental to and could essentially shut down Alaska's economy and unique culture.

On December 22, 2010, the United States Secretary of the Interior, Ken Salazar issued Secretarial Order number 3310 (S.O. 3310) directing the Bureau of Land Management to inventory and designate land with wilderness characteristics as "Wild Lands." This represents a new classification and is currently not legally defined, meaning the designation is based on a whim. S.O. 3310 may go so far as to seek wilderness status for areas of the National Petroleum Reserve, an area critical to the economy of not only Alaska but the entire United States.

S.O. 3310 violates Congressional Law for Alaska relating to land. Both the Alaskan Native Claims Settlement Act (ANSCA) and Alaska National Interest Lands Conservation Act (ANILCA) are in conflict with S.O. 3310 and supersede it since only Congress has the authority to designate wilderness areas.

HJR 21 asks Congress to use its power of appropriations to impress upon the Secretary of the Interior that implementing, administering and enforcing S.O. 3310 will be impossible. Passage of this resolution is critically important to the citizens of Alaska and will serve as a milestone for other states to stand up against this land grab and federal intrusion.

E-Mail: Representative.Eric.Feige@legis.state.ak.us

HOUSE JOINT RESOLUTION NO. 21

"Urging the Secretary of the United States Department of the Interior to withdraw a secretarial order that creates a wild land classification and to administer federal lands in the state in accordance with existing statutes and agency guidelines; and urging the United States Congress to prohibit the use of appropriated funds by the United States Department of the Interior and the Bureau of Land Management to implement, administer, or enforce the secretarial order."

Sectional Analysis (Version M)

1. Cites the December 22, 2010 issuance of Secretarial Order (S.O.) 3310 by Secretary of the Interior Ken Salazar.
2. Summarizes the intent of S.O. 3310.
3. Establishes that "Wild Lands" is a new designation.
4. Highlight's the Alaska Citizen's Advisory Commission's determination that S.O. 3310 was drafted without state input and violates President Obama's pledge towards transparent government.
5. Establishes that Congress is the sole authority for wilderness land designation.
6. States that S.O. 3310 does not recognize Alaska's unique culture nor natural resource development.
7. Cites the Alaska National Interest Lands Conservation Act (ANILCA) as already designating 57 million acres of Alaska land as "wilderness."
8. States that Congress, through ANILCA, has already determined there is sufficient "wilderness lands" in Alaska and prohibited managing subsequent lands for their "wilderness characteristics" without prior Congressional approval.
9. References the inaccurate statement by the Department of the Interior that there has never been a wilderness inventory in Alaska.
10. Highlights S.O. 3310's reversal of 30 years of prior existing Bureau of Land Management (BLM) land review policy in Alaska.
11. References the scope of the "Wild Lands, Inventory, and Planning Guidance Questions and Answers" issued by the Department of the Interior.
12. States that S.O. 3310 violates the Naval Petroleum Reserves Production Act of 1976 and the Federal Land Policy and Management Act of 1976.
13. States that designating "Wild Lands" in the National Petroleum Reserve-Alaska would preclude resource development in this area.
14. States that S.O. 3310 enables the BLM to establish de-facto wilderness areas without required Congressional oversight.
15. States that S.O. 3310 creates a presumption against resource development in designated lands and that this will have a negative impact on Alaska's economic well-being.
16. Requests that the Secretary of the Interior immediately withdraw S.O. 3310.
17. Urges Congress, subject to the refusal of the Interior Secretary to withdraw S.O. 3310, to prohibit the use of federal funds to implement said order.

RE: Hearing Request for HJR 21 Opposing Federal Wild Land Designation

I respectfully request that House Joint Resolution 21 – Opposing Federal Wild Land Designation, be scheduled for a hearing in the Senate Resources Committee as soon as possible. Please feel free to contact me, or my aide, Linda Hay, with questions at 465-3715.

Attached you will find the contents as requested by the committee. This includes the current version of the bill, a sponsor statement, sectional analysis, and pertinent background information.

Thank you for your consideration.

Fact Sheet

Title: Land Ownership In Alaska

Alaska Department of NATURAL RESOURCES
Division of Mining, Land & Water
March 2000

Current land ownership in Alaska can be traced back to three main events in the state's history.

- Russian traders arrived in Alaska in the mid-1700's and established small, scattered trading posts and settlements. Alaska Natives (the Eskimo, Indian, and Aleut peoples) continued as the primary "landowners" during this period of Russian occupation.

  On October 18, 1867, Russia sold Alaska to the United States government. As a result, the federal government owned the Alaska Territory, approximately 375 million acres (about one-fifth the size of the continental U.S.).

- Alaska became a state in 1959. The federal government granted the new state 28% ownership of its total area. Approximately 103,350,000 acres were selected under three types of grants: Community (400,000 acres), National Forest Community (400,000 acres), and General (102,550,000 acres). Additional territorial grants, for schools, university and mental health trust lands, totaling 1.2 million acres were confirmed with statehood. All grants combined gave the State of Alaska approximately 105 million acres.

- In 1971 Congress passed the Alaska Native Claims Settlement Act (ANSCA). This law granted 44 million acres and 1 billion dollars to village and native corporations created under the act. Generally, ANSCA gave Native selections priority over state land selections.

State Land

To date, the state has received patent to approximately 85% (90 million acres) of its total land selections. The state was permitted to select lands, from any federal land not already reserved for other uses, to provide:

1. Land and resources to support the state's economy for road construction, economic development, and building houses, schools, and other public and private facilities.
2. A reduction in federal control over state internal affairs by giving the state ownership and jurisdiction over its own land.

The state chose land to meet three specific needs - settlement, resources and recreation.

Settlement – The State of Alaska selected land to encourage development and settlement. Land for public facilities, road construction and other public needs were included. Once owned, the state transfers large tracts of land to local governments, and leases and disposes of land to the private sector. There are approximately 580,000 acres currently in the state's land disposal bank for eventual lease or sale.

Resources - The Alaskan economy is based on exploration for and the development of natural resources. Lands were selected for agriculture, forestry, commercial fisheries, mining potential, oil and gas development, and wildlife habitat.

Recreation – Lands for wildlife, back-country recreation, and varying degrees and types of developed recreation were chosen and reserved to provide a variety of experiences for Alaskans and the tourist industry.

Once land is selected, land planners develop state land use plans. Planners consider laws and policies set by the Governor and state legislature, the character of the land itself, recommendations made by resource experts and public input to determine the most appropriate management of currently owned or selected state land. Plans are developed for land in selected status in anticipation of its conveyance to the state.

Federal Land

The federal government is still the largest landowner in Alaska with 60% of the total area (222 million acres). This acreage includes national parks, wildlife refuges, national forests, military reservations and the North Slope National Petroleum Reserve. More than a dozen federal agencies manage federal lands in Alaska.

The majority of federally owned lands have been set aside for public use (approximately 80 million acres). These are designated as follows:

> The National Park Service and Fish and Wildlife Service manage about 119.3 acres (48.3 and 71.0 million acres respectively) for primary uses of resource protection and fish and wildlife conservation.
>
> The Forest Service and Bureau of Land Management manage about 97.7 million acres (19.8 and 77.9 million acres respectively) for multiple use purposes including timber production, fish and wildlife, recreation, water and mining. Management of these lands is based on priorities and compatibility among various uses.

The remaining federal land is designated for special purposes, such as military reservations, the National Petroleum Reserve and U.S. Postal Service lands.

Native Lands

Native lands are private lands. The Alaska Native Claims Settlement Act, passed by Congress in 1971, mandated the creation of regional and village Native corporations for the disbursement of the 44 million acres and payment of one billion dollars mandated to Native ownership.

Thirteen regional corporations were created for the distribution of ANSCA land and money. Twelve of those shared in selection of 16 million acres, the thirteenth corporation, based in Seattle, received a cash settlement only. 224 village corporations, of 25 or more residents, shared 26 million acres. The remaining acres, which include historical sites and existing native-owned lands, went into a land pool to provide land to small villages of less than 25 people.

Other Private Land

Land in private ownership (other than Native land) comprises less than one percent of the total land in Alaska. Much of the best land for development around Alaska's communities is, or will be, privately owned. Private land development meets people's needs by providing places to live, work, shop and recreate. It also provides a tax base for cities and communities to help support public services.

Who Owns/Manages Alaska?

Russian traders arrived in Alaska in the mid-1700's and established small, scattered trading posts and settlements. Alaska Natives (the Eskimo, Indian, and Aleut peoples) continued as the primary landowners during this period of Russian occupation. On October 18, 1867, Russia sold Alaska to the United States government. As a result, the federal government owned the Alaska territory, approximately 375 million acres - about one-fifth the size of the rest of the U.S.

State of Alaska - 89.8 million acres

Under the terms of the Alaska Statehood Act of 1959, the federal government granted the new state 28% ownership of its total area. Approximately 103,350,000 acres were to be elected under three types of grants:

1) Community - 400,000 acres

2) National Forest Community - 400,000 acres

3) General - 102,550,000 acres

Additional land grants for schools, university and mental health trust lands totaling 1.2 million acres were confirmed with statehood.

All grants combined gave the State of Alaska approximately 105 million acres. To date, 89.9 million acres has been granted with the balance expected to be granted by 2009.

ANCSA Native Corporation (Private) 39.3 million acres

On December 18, 1971, P.L. 92-203, the Alaska Native Claims Settlement Act was signed into law. The purpose of ANCSA was to legislate the terms by which Alaska Natives could acquire title to their lands. This claim had been unresolved for more than 100 years since the United States purchased Alaska from Russia in 1867.

Native lands are private lands. ANCSA mandated the creation of regional and village Native corporations to manage 44 million acres and payment of one billion dollars. Thirteen regional corporations were created for the distribution of ANCSA land and money. Twelve of these shared in selection of 16 million acres; the thirteenth corporation, based in Seattle, received a cash settlement only. 224 village corporations, of 25 or more residents, shared 26 million acres. The remaining acres, which include historical sites and existing Native-owned lands, went into a land pool to provide land to small villages of less than 25 people. To date, 39.3 million acres have been transferred to ANCSA corporations.

Non-ANCSA Private & Local Government - 5.9 million acres

Land in private ownership (other than Native land) comprises less than one percent of the total land in Alaska. Much of the best land for development around Alaska's communities is or will be, privately owned. Private land development meets peoples needs by providing places to live, work, shop and recreate. It also provides a tax base for cities and communities to help support public services.

Because local governments in Alaska have individual methods of transferring land into private ownership, land currently owned by them is grouped into this category.

Alaska is one-fifth the size of the conterminous 48 states.

Bureau of Land Management - 82.5 million acres

In Alaska, BLM's focus is currently land, wildland fire management, overseeing the Joint Pipeline Office (a partnership with the state and other federal agencies with oversight responsibility of the Trans-Alaska Pipeline), and responding to the public demand for use of the land they manage.

U.S. Fish & Wildlife Service - 78.8 million acres

The USFWS manages 16 wildlife refuges in Alaska. The two largest are the Yukon Delta National Wildlife Refuge and much larger Arctic National Wildlife Refuge (ANWR) both of which are approximately 19 million acres.

National Park Service - 52.4 million acres

There are eight national parks in Alaska, including the five largest in the national park system:

- Wrangell-St. Elias National Park & Preserve - 13,175,901 acres
- Gates of the Arctic National Park & Preserve - 8,472,506 acres
- Denali National Park & Preserve - 6,075,030 acres
- Kobuk National Park & Preserve - 4,093,229 acres
- Lake Clark National Park & Preserve - 4,030,025 acres

U.S. Forest Service - 22.3 million acres

The USFS manages two National Forests in Alaska. The Tongass NF, 16.8 million acres and the Chugach NF, 5.5 million acres are the two largest national forests in the U.S. The USFS manages these lands for a wide range of goods and services while conserving and protecting them.

Department of Defense - 1.7 million acres

Dept of Defense lands in Alaska provide for a unique training environment, most notably at the Northern Warfare Training Center in the Tanana Valley in the interior.

Alaska National Interest Lands Conservation Act (ANILCA)

TITLE I--PURPOSES, DEFINITIONS, AND MAPS

§101(d) **This Act provides sufficient protection for the national interest in the scenic, natural, cultural and environmental values on the public lands in Alaska**, and at the same time provides adequate opportunity for satisfaction of the economic and social needs of the State of Alaska and its people; accordingly, the designation and disposition of the public lands in Alaska pursuant to this Act are found to represent a proper balance between the reservation of national conservation system units and those public lands necessary and appropriate for more intensive use and disposition, and thus **Congress believes that the need** for future legislation designating new conservation system units, new national conservation areas, or new national recreation areas, **has been obviated thereby**.

TITLE XIII – ADMINISTRATIVE PROVISIONS

FUTURE EXECUTIVE ACTIONS

§1326. (a**) No future executive branch action which withdraws more than five thousand acres, in the aggregate, of public lands within the State of Alaska shall be effective** except by compliance with this subsection. To the extent authorized by existing law, the President or the Secretary may withdraw public lands in the State of Alaska exceeding five thousand acres in the aggregate, which withdrawal shall not become effective until notice is provided in the Federal Register and to both Houses of Congress. **Such withdrawal shall terminate unless Congress passes a joint resolution of approval within one year after the notice of such withdrawal has been submitted to Congress.**

(b) **No further studies of Federal lands in the State of Alaska** for the single purpose of considering the establishment of a conservation system unit, national recreation area, national conservation areas or for related or similar purposes shall be conducted **unless authorized by this Act or further Act of Congress**.

Governor Sean Parnell
STATE OF ALASKA

January 26, 2011

The Honorable Kenneth L. Salazar
Secretary
United States Department of the Interior
1849 C Street, NW
Washington, DC 20240

Dear Mr. Secretary,

I have grave concerns about Secretarial Order 3310 and associated policies, which appear to allow the Bureau of Land Management (BLM) to create de facto wilderness in a state without Congressional oversight. My concerns center on how the Order imposes a new "Wild Lands" designation for BLM to administer, and on the Interior's intention to conduct wilderness reviews in the BLM planning process.

The new "Wild Lands" designation places a higher priority on protection of "wilderness characteristics," as defined by the Wilderness Act, which effectively trumps most other land uses. Putting such a sweeping initiative in place overnight, with no Congressional direction and no advance consultation with affected states or the public, is unfathomable. This approach not only runs counter to President Obama's January 21, 2009 Memorandum entitled *Transparency and Open Government* and similar supplemental directives, but federal law as well.

The following outlines my specific concerns with Order 3310 and accompanying planning guidance:

- By designating "Wild Lands," Order 3310 usurps congressional authority where the Interior improperly acted as an administrative surrogate for Congressionally-designated Wilderness;

- In Alaska, where most of BLM's 86 million acres retain their wilderness values, the heavily-weighted default protection of wilderness characteristics could easily render most BLM lands de facto wilderness areas absent BLM's multiple-use direction. This would have a devastating effect on Alaska's people, economy, and land use and access. Thus, the Order directly conflicts with the "no more" clauses in the Alaska National Interest Lands Conservation Act (ANILCA) as well as the Federal Land Policy and Management Act (FLPMA);

- The Order is, for all practical purposes, an end-run around ANILCA, which I predict will lead to egregious social and economic consequences for Alaskans. Without the explicit provisions of ANILCA that apply to conservation system units, BLM Wild Lands will likely

be managed *more restrictively* in Alaska than ANILCA-designated Wilderness managed by the National Park Service, Fish and Wildlife Service, or Forest Service;

- The Order purports to seek "balance" between responsible resource development and protection of wilderness characteristics; yet there is a strong presumption in favor of wilderness-style protection. For that reason, this Order will have a severe chilling effect on future proposals designed to create jobs in resource development once an area is designated Wild Lands. This approach also contradicts BLM's multiple use mandate under FLPMA;

- BLM managers' discretion to determine where and when "impairment" of wilderness characteristics is "appropriate" is subject to undue scrutiny and approval in Washington DC, where decisions tend to be political and knowledge of local conditions, issues, and needs is diluted, at best;

- Last, but certainly not least, BLM has no authority whatsoever to apply this policy to the National Petroleum Reserve-Alaska because it is not subject to FLPMA.

These and other key issues are discussed in more depth in an attachment.

I know other western states are similarly concerned, if not appalled, by this new policy. Our state, and likely many others, would be best served by the former policy regarding wilderness reviews and recommendations that respected the preferences of State and local elected officials. Barring that, any new policy and associated planning direction must first undergo formal State and public review and compliance with the National Environmental Policy Act, and as appropriate, the Administrative Procedure Act.

In addition, no such policy should be applicable to the National Petroleum Reserve-Alaska. I urge you to work with the State Director of BLM in Alaska to ensure Secretarial direction does not run counter to the "balance" already established by ANILCA for Alaska.

Sincerely,

Sean Parnell
Governor

Attachment to Governor Sean Parnell's Letter Regarding Interior Secretarial Order 3310

The Alaska National Interest Lands Conservation Act (ANILCA)

The Order Inventory and Planning Guidance Questions and Answers (Q&A) relies on several provisions of ANILCA to justify application in Alaska; however, the Order fails to recognize the full context of the law and the many other provisions that contributed to the "proper balance" referred to in Section 101(d) of ANILCA. Specifically, the Q&A document claims that Section 1320 of ANILCA "invites" BLM to designate wilderness in Alaska. We agree ANILCA Section 1320 provides BLM the authority to make wilderness recommendations to Congress; however, contrary to the Order, Section 1320 specifically prohibits the presumptive management of land for its wilderness characteristics without Congressional action. While the Order distinguishes between recommending designated wilderness and administratively designating Wild Lands, there is a very fine line between the two, as the basis for both is the Wilderness Act, and any lands set aside as Wild Lands will be managed to preserve the wilderness characteristics as defined by Section 2(c) of the Wilderness Act. In addition, ANILCA Section 1326(b) states:

> *No further studies of Federal lands in the State of Alaska for the single purpose of considering the establishment of a conservation system unit, national recreation area, national conservation areas or for related or similar purposes shall be conducted unless authorized by this Act or further Act of Congress.* [emphasis added]

The underlined language broadens the scope of the provision beyond defined conservation system units (CSUs). Wild Lands are essentially administrative CSUs. Choosing to preserve wilderness character and administratively designating Wild Lands circumvents both Congress and the statutory intent behind ANILCA Sections 1320, 1326(b), and 101(d). In addition, the on-the-ground effects of a Wild Lands designation will likely resemble the administrative "withdrawal" that Congress prohibits in Section 1326(a), and thus are inappropriate.

The Order also ignores ANILCA's hard-fought provisions that protect access for traditional activities and to resources that are the bedrock of Alaska's economy. In contrast to Congressionally-designated conservation system units (CSUs), including Wilderness and Wilderness Study Areas, many of ANILCA's essential provisions would not apply to designated Wild Lands on general BLM lands. These provisions include, but are not limited to:

- Section 1102 Title XI transportation and utility systems;
- Section 1110(a) motorized access for traditional activities and for travel to and from villages and homesites;
- Section 1110(b) inholder access (vs. Section 1323(b) that currently applies);
- Section 1111 temporary access;
- Section 1310 navigation and communication facilities;
- Section 1314(c) taking of fish and wildlife; or
- Section 1315(c) and (d) new and existing cabins.

The importance of these provisions cannot be over-emphasized. For example, the Title XI process for considering transportation and utility systems is critical in Alaska where there are few roads. Congress assumed general BLM lands would remain available for this purpose. While we understand such corridors are not automatically prohibited in designated Wild Lands, we have little doubt that once wilderness characteristics have been identified as warranting protection, applicants would be forced into an excessively costly process or to utilize alternate routes that could end up precluding a legitimate access need.

In another example, ANILCA purposefully differentiated Section 1110(b) inholder access requirements for CSUs (including Wilderness areas) and Section 1323(b) inholder access provisions that apply to general BLM land. Section 1110(b) gives inholders a stronger right of access in areas designated for more restrictive management (CSUs). The stronger inholder access guarantee would not apply to inholdings within Wild Lands on general BLM lands, which could be highly problematic for individual land owners.

These differences, among others, illustrate that Congress understood the importance of balancing conservation objectives with special accommodations for Alaskans.

In addition, the "proper balance" referenced in Section 101(d) is further predicated on continued multiple use management on BLM lands in Alaska. The Order also speaks of the need to protect "rare opportunities for solitude…" as a basis for the new policy. This objective is apparently reflective of "Lower 48" circumstances where remote and primitive areas are the exception ("rare"), not the norm. As we have seen many times over the last several decades, cookie cutter federal land management policies do not fit in Alaska.

The Q&A (Page 6) claims "*There has never been a statewide wilderness inventory in Alaska.*" This assertion is offensive to those Alaskans who lived through the lengthy studies and deliberations leading up to ANILCA. Contrary to the Q&A claim, numerous reviews, inventories and studies were conducted pursuant to the Section 17(d)(1) and (d)(2) withdrawal processes initiated by the Alaska Native Claims Settlement Act (ANCSA). Virtually all these studies focused on BLM lands, and those deemed by Congress to have the highest national interest for conservation purposes eventually ended up in over 100 million acres of conservation system units, including 57 million acres of designated Wilderness. The BLM Kobuk-Seward Resource Management Plan adopted in 2008 documents this history (Page 14):

> *Alaska lands were inventoried, reviewed, and studied for their wilderness values under the Wilderness Act criteria beginning in 1971 when Congress enacted ANCSA. For eight years thereafter, the Department evaluated national parks, forests, wildlife refuges, wild and scenic rivers, and other lands for potential designation as wilderness.*
>
> *Subsequently, Congress passed ANILCA, which preserved more than 150 million acres in specially protected conservation units. This represents more than 40% of the land area of the State of Alaska, and about 60% of the Federal land in Alaska. Pursuant to ANILCA, more than one-third of the lands preserved in conservation units, or 57 million acres, were formally designated as wilderness.*

Examples of such pre-ANILCA studies include a 28-volume EIS completed in 1974 and another EIS signed by Secretary Cecil Andrus in 1978.

National Petroleum Reserve – Alaska (NPRA)

The State is especially alarmed by the extension of the Order to the National Petroleum Reserve – Alaska (NPRA). The Q&A document does not disclose the authority under which the Department of the Interior believes BLM may designate Wild Lands in NPRA. It simply states the BLM "*must inventory lands in the NPR-A and may designate Wild Lands in the NPR-A as part of its integrated activity planning for the area.*" The State strongly disagrees that BLM has such authority. Federal law prohibits BLM from exercising its land use planning authority under Section 202 of FLPMA in the Reserve, and also prohibits wilderness designation recommendations under Section 603 of FLPMA. In particular, land use planning and management in the Reserve is subject to the requirements of the Naval Petroleum Reserves Production Act of 1976, as amended. The Production Act provides no authority for applying the Wild Lands Order to NPR-A, and BLM is therefore prohibited from doing so.

De Facto Wilderness

Secretarial Order 3310 and the associated polices provide BLM with the ability to create de facto wilderness without Congressional oversight. The Order is largely based on authorities, values, and definitions in the Wilderness Act of 1964. In debates leading up to passage of the Wilderness Act, Congress struggled with how far to extend their new mandate. They considered automatically including "primitive" lands, roughly equivalent to the new "Lands with Wilderness Characteristics;" but in the end developed Section 3(b) of the Act, which established a suitability process that ended with Congressional approval. Below are some relevant remarks by Senator Peter Dominick from the Congressional record (Senate Bill 4) leading up to passage of the Wilderness Act:

> *. . . the difficulty is that we are grouping together and putting into one system, without any particular legislative scrutiny, a vast area of land known as primitive lands, which have not been classified by the executive department or reviewed by Congress, to see whether this is the most useful purpose for that particular group of public lands.*
>
> *. . . Congress, should have the right to determine, after recommendation by the executive department, which of these primitive lands or which group of these primitive lands should be brought into the wilderness system, and that they should not all be blanketed in at the same time.* [Congressional Record 109 (1963) pg. 5890]

Congress clearly rejected the option to delegate the creation of wilderness areas to the Executive branch; yet the creation of a new system of BLM Wild Lands is a thinly veiled effort to do just that. Department officials argued during the press conference that since a Wild Lands designation is not permanent, they are not "locked up." Yet conventional wisdom and experience show that once an area is placed in a formalized protective status through a plan, altering that status or accommodating competing uses becomes much more difficult, especially since plans are only updated every 15-20 years, sometimes less often.

The single-minded approach to wilderness characteristics is explicitly illustrated in the Order (Section 4 Policy): "*Where the BLM concludes that protection of wilderness characteristics is appropriate, the BLM shall designate these lands as "Wild Lands" through the planning process.*" [emphasis added] BLM has additional or alternative tools to maintain opportunities for primitive recreation in combination with other public use and/or reasonable development without applying a Wild Lands designation. Furthermore, the policy provides no standards to determine when BLM shall conclude that "*protection of wilderness characteristics is appropriate.*"

Also, just as Wild Lands are essentially de facto Wilderness areas, they also mimic Wilderness Study Areas – even though the Q&A (Page 3) attempts to dismiss the similarities. The draft planning Chapter 6300-2 (.3) describes a process whereby the State Directors will determine whether they will "*...develop a recommendation for Congress to designate Wild Lands as units within the National Wilderness Preservation System.*"

"Balance" is Not Achieved

The Order and policies purport to seek "balance" between responsible resource development and protection of wilderness characteristics. As stated in the Q&A document: "*Balance will be achieved through a public process where lands with energy potential and lands with wilderness characteristics will be identified, evaluated, and managed in accordance with the new policy and the BLM's multiple use mandate.*" Yet if "balance" is the goal, the planning policy need only require an improved inventory of all resources and values, including wilderness characteristics. Area managers would then retain the discretion to do the local "balancing" within the context of a plan. Instead, the policy imposes a default decision to protect wilderness character, unless the local manager can make a proactive determination that impairment of wilderness characteristics is appropriate. Making wilderness character a higher priority than other land uses is not "balance," nor is it consistent with FLPMA's multiple use mandate.

Parenthetically, we note that the Q&A quote above, while referencing "*lands with energy potential,*" is curiously silent regarding mineral resources. We understand that mining is not necessarily precluded by the presence of wilderness characteristics; but the lack of recognition of mineral potential in this context may be indicative of bias against mining.

To avoid a Wild Lands designation, or authorize a development project, or use that could affect wilderness character, BLM must determine that "*impairment*" of such wilderness characteristics is "*appropriate.*" These terms set a high bar, and force BLM to make determinations in a negative context, rather than weighing all the options and making a positive choice toward a desired condition. This negative context adds built-in bias to the deliberative process.

Furthermore, it appears any attempt to steer away from wilderness protection at the State level must be approved in Washington DC by individuals far removed from local issues and control. This is especially problematic for Alaska where an understanding of Alaska's geography, economy, culture, infrastructure, resource development potential, and laws such as ANILCA seem to be poorly understood in Washington DC.

Unfunded Mandate

The Order also represents an unfunded mandate to BLM. Environmental organizations are poised to provide inventory information about wilderness characteristics. According to an

Anchorage Daily News article published on November 6, 2010, the Washington DC based conservation group, the Wilderness League, opened an office in Fairbanks, Alaska. The article quotes the League's stated purpose as "*...securing wilderness designations in the National Petroleum Reserve-Alaska...and on other BLM lands in eastern Interior.*" We are concerned BLM will have insufficient resources to review and either confirm or invalidate wilderness characteristics "nominated" by pro-wilderness interest groups, leading to excessive protection in areas where wilderness characteristics are already compromised. Also, based on the date of this article, we are disappointed the administration apparently engaged in informal consultation with environmental groups who seemed to be aware of the content of this policy before anyone else.

Affect on State Administrative Activities

The effects of a Wild Lands designation on State fish and wildlife management activities is not clear. For example, the use of motorized or mechanical transport and equipment is restricted in designated Wilderness; however, the new policy does not clarify whether similar restrictions would apply to public use or State management activities in administratively designated Wild Lands. The State of Alaska holds primary authority, jurisdiction, and responsibility to manage, control, or regulate all fish and wildlife within federal lands, including uses thereof, unless specifically preempted by federal law. Nothing in the Wilderness Act, FLPMA, or Order 3310 should be construed as an expansion of federal authority or oversight over this traditional State responsibility.

Policy is Confusing and Contradictory

The Order and accompanying direction to BLM are confusing and potentially contradictory – enabling abuse by those seeking a back door way to pursue wilderness protection at the expense of other legitimate uses. For example, the Q&A issued with Order 3310 indicates that "*BLM will consider wilderness values among the broad range of other potential resource values and uses for the public lands in accordance with its multiple-use mission, and make a decision about whether and to what extent to protect those wilderness characteristics.*" However, the Order directs all BLM offices to "*protect those inventoried wilderness characteristics when undertaking land use planning and when making project-level decisions by avoiding impairment of such wilderness characteristics unless BLM determines that impairment of wilderness characteristics is appropriate and consistent with applicable requirements of law and other resource considerations.*" The Order instructs BLM to place a higher priority on protection of wilderness characteristics than other uses contemplated by FLPMA's multiple use mandate.

BLM cannot manage land based on an inventory alone. Land management decisions may only be made in accordance with an adopted plan. This intent is appropriately represented in the Q&A document, which states "*When the BLM decides to protect LWCs through a land use plan decision, it will designate these areas as "Wild Lands." This determination will be made through a public land use planning process....*" (emphasis added) The Order, however, states "*Where the BLM concludes that protection of wilderness characteristics is appropriate, the BLM shall designate these lands as "Wild Lands" through the planning process,*" which essentially directs BLM to make an either/or choice between "protection" and "impairment" before the formal planning process has even begun. This pre-planning decision process is also mirrored in the policy Section (.06) of the draft BLM Manual 6300-2; however, the section entitled "Procedures for Considering LWCs in Land Use Planning" is more consistent with direction in

the Q&A document. These differences need to be reconciled to ensure that any management decisions concerning LWC's occur within a planning process, following public review.

Many questions also arise from the Order and associated documents, including:

- What flexibility will managers and State Directors have in determining Lands with Wilderness Characteristics and deciding which lands are appropriate for Wild Lands designation?
- How would the presence of inholdings, mining claims, rights-of-way, and other valid existing rights affect the inventory of wilderness characteristics and the likelihood of a Wild Lands designation?
- How will the Order affect the future of outdated ANCSA Section 17(d)(1) withdrawals?
- Will BLM conduct a "minimum requirements analysis" on State or federal administrative activities on Wild Lands?
- Have you considered that ANILCA Section 811 significantly constrains BLM's options to restrict access for subsistence purposes, including off-highway vehicles?
- How will long-standing recreational use of airplanes, snowmachines, and off-highway vehicles be addressed?
- What is the relationship between a Wild Lands designation, Areas of Critical Environmental Concern, the National Landscape Conservation System, and other classifications of land with conservation objectives?

Lack of State Consultation and Public Review

In conclusion, Secretarial Order 3310 is a dramatic departure from all previous approaches to BLM management, especially in Alaska. As these comments illustrate, the Order sets entirely new standards, challenges conventional wisdom regarding management of multiple use lands, and raises legal and policy questions. As such, much more rigorous justification and analysis of consequences and impacts are essential; along with an opportunity for formal State and public review. Compliance with the National Environmental Policy Act is also required – most likely through an environmental impact statement given the potential foreseeable impacts.

A rigorous public review process is consistent with

- President Obama's January 21, 2009 Memorandum entitled *Transparency and Open Government.*
- Open Government Directive from the Office of Management and Budget directing all executive departments and agencies to take specific actions to implement the principles stated in the President's memorandum.
- The Department of the Interior's own Open Government Plan assembled by a multi-functional team from across the Department.
- The Federal Land Policy and Management Act (FLPMA) and BLM planning regulations regarding State and public involvement.

The above policies, directives, regulations, and laws require rigorous public discourse.

Committee to Hold Oversight Hearing on Interior Department's "Wild Lands" Policy

WASHINGTON, D.C. – On Tuesday, March 1st the House Natural Resources Committee will hold a Full Committee oversight hearing on "*The Impact of the Administration's Wild Lands Order on Jobs and Economic Growth.*" The Wild Lands policy, established by Secretarial Order, is an attempt by the Interior Department to establish de facto Wilderness areas without Congressional approval.

"This is a prime example of why Congress must exercise vigorous oversight of the Obama Administration," **said Natural Resources Committee Chairman Doc Hastings.** *"The Wild Lands policy expressly circumvents Congress' statutory authority to establish Wilderness areas. Under this policy, the public's access to public lands can be limited or halted entirely – impacting our economy, jobs, recreation opportunities and American energy production. Millions of acres of multi-use land in the West are at risk of being locked-up if the Administration carries out this policy."*

"There are so many unanswered questions surrounding the creation of the new Wild Lands designation and this Administration's plans to redo many of the recently completed inventories of public lands," **said National Parks, Forests and Public Lands Subcommittee Chairman Rob Bishop.** *"In Utah, for example, the BLM just completed an open, seven-year, twenty million dollar process to create resource management plans. Now, this Administration is saying they want to start over. There are thousands of Americans, especially out West, who question the wisdom of such an action and who will be affected by this unilateral secretarial order. We believe this new policy raises a number of troubling questions and that this hearing will be instrumental in bringing greater clarity to the situation."*

WHAT: Full Committee Hearing on "*The Impact of the Administration's Wild Lands Order on Jobs and Economic Growth*"

Witnesses:
The Honorable Butch Otter, Governor of Idaho
The Honorable Gary Herbert, Governor of Utah

Additional witnesses to be announced

WHEN: Tuesday, March 1, 2011
2:00 PM

WHERE: 1324 Hearing Room in the Longworth House Office Building

Background:

- Two days before Christmas last year, Secretary of the Interior Ken Salazar issued Secretarial Order No. 3310 asserting that the Bureau of Land Management has the authority to "designate appropriate areas with wilderness characteristics under its jurisdiction as 'Wild Lands' and to manage them to protect their wilderness value."

- The Wilderness Act of 1964 gives only Congress the authority to designate public lands as Wilderness areas. The Administration does not have the legal authority to impose policies to create *de facto* Wilderness.

- Designating an area as Wilderness imposes the most restrictive land use policies that can be taken. It places severe limitations on public access, prohibits many popular forms of recreation and severely restricts job-creating, and energy-producing activities.

Visit the Committee Hearings webpage for testimony and additional information, once it is made available. The hearing is open to the public and a live stream will be broadcast at http://naturalresources.house.gov/live.

SENATE DISTRICT F

March 1, 2011

Congressman Doc Hastings, Chairman
Committee on Natural Resources
United States House of Representatives
1324 Longworth House Office Building
Washington, D.C. 20515

Chairman, and members of this committee and to Congress, My name is John Coghill a member of the Alaska State Senate. I am grateful for this opportunity to give my testimony to you regarding "the impacts of the Administration's Wild Lands Order on Jobs and Economic Growth" Secretarial Order 3310.

The Impact of Secretarial Order 3310 to Alaska would be in at least three major areas.

First, it would undermine and overrule the work of Congress in passing the laws under (Alaska National Interest Lands Conservation Act) ANILCA, (Federal Land Policy and Management Act) FLPMA, (National Environmental Policy Act) NEPA, and (National Petroleum Reserve in Alaska) NPRA.

Secondly, it would make it more adversarial for the State of Alaska to work with federal land managers under the law if our confidence in our protection of these laws is destroyed through this type of administrative usurpation. As partners in management of land resources and activities within the boundaries of this state it is important to us that we be part of the input to the policies that affect our ability to live up to our duties as a state.

Thirdly, the people of this state are impacted in economic, cultural, civic and mobility ways that impact our way of life expected by us and guaranteed by our constitution. Because the land in Alaska is patchwork in its ownership boundaries it has been promised to us by law that we would have access through federal lands and use of these lands for hunting and fishing. Our ability to traverse the land and navigate our rivers and mine our minerals has been impacted already through wrong application of the law and this order would be a blatant ignoring of the law and make us wonder about our ability to live and thrive in this land.

It took nine long years and a lot of give on the part of Alaska and its people to come up with an agreement on wilderness lands in Alaska between the sovereign State, Congress, and a president

E-Mail: Senator_John_Coghill@legis.state.ak.us

who praised the completeness of the process and considered it one of his biggest accomplishments, Jimmy Carter.

ANILCA preserved 60 million acres of wilderness (an area the size of Oregon or Colorado) and added another 46 million acres to the National Park System (an area the size of Pennsylvania). However, ANILCA protects valid existing rights, access to inholders, and access through BLM lands to mining claims, state owned lands, native owned lands, leased lands, guide and outfitter leases, and historic access routes.[1]

ANILCA clearly states there is no need for more parks, preserves, monuments, wild and scenic rivers, etc. in Alaska[2] and the intent of Congress was to preclude any future executive actions like Secretarial Order 3310 without Congressional approval[3]. Not only must the Secretary obtain Congressional approval, he must give proper notice and publication in the Federal Register.

---

[1] *VALID EXISTING RIGHTS*
SEC. 1109. ***Nothing in this title shall be construed to adversely affect any valid existing right of access.***

SPECIAL ACCESS AND ACCESS TO INHOLDINGS
(16 USC 3170) SEC. 1110. (a) Notwithstanding any other provision of this Act or other law, the ***Secretary shall permit,*** *on conservation system units, national recreation areas, and national conservation areas, and those public lands designated as wilderness study,* ***the use of snowmachines (during periods of adequate snow cover, or frozen river conditions in the case of wild and scenic rivers), motorboats, airplanes, and nonmotorized surface transportation methods for traditional activities*** *(where such activities are permitted by this Act or other law) and* ***for travel to and from villages and homesites.*** *Such use shall be subject to reasonable regulations by the Secretary to protect the natural and other values of the conservation system units, national recreation areas, and national conservation areas, and shall not be prohibited unless, after notice and hearing in the vicinity of the affected unit or area, the Secretary finds that such use would be detrimental to the resource values of the unit or area. Nothing in this section shall be construed as prohibiting the use of other methods of transportation for such travel and activities on conservation system lands where such use is permitted by this Act or other law.*

(b) Notwithstanding any other provisions of this Act or other law, in any case in which State owned or privately owned land, including subsurface rights of such owners underlying public lands, or a valid mining claim or other valid occupancy is within or is effectively surrounded by one or more conservation system units, national recreation areas, national conservation areas, or those public lands designated as wilderness study, the State or private owner or occupier ***shall be given by the Secretary such rights as may be necessary to assure adequate and feasible access*** *for economic and other purposes to the concerned land by such State or private owner or occupier and their successors in interest. Such rights shall be subject to reasonable regulations issued by the Secretary to protect the natural and other values of such lands."*

[2] *"(d) This Act provides sufficient protection for the national interest in the scenic, natural, cultural and environmental values on the public lands in Alaska, and at the same time provides adequate opportunity for satisfaction of the economic and social needs of the State of Alaska and its people; accordingly, the designation and disposition of the public lands in Alaska pursuant to this Act are found to represent a proper balance between the reservation of national conservation system units and those public lands necessary and appropriate for more intensive use and disposition, and thus* ***Congress believes that the need for future legislation designating new conservation system units, new national conservation areas, or new national recreation areas, has been obviated thereby."***

[3] *FUTURE EXECUTIVE ACTIONS*
SEC. 1326. (a) ***No future executive branch action which withdraws more than five thousand acres,*** *in the aggregate, of public lands within the State of Alaska shall be effective except by compliance with this subsection. To the extent authorized by existing law, the President or the Secretary may withdraw public lands in the State of*

According to the State ANILCA Program Coordinator, there are over 100 specific provisions of ANILCA requiring some form of federal agency consultation with the State of Alaska. In addition, numerous other federal laws, regulations and policies require state notification and consultation.

Twenty-five years ago, Congress passed the Federal Land Policy and Management Act of 1976 (FLPMA). FLPMA instructs the Secretary to continuously maintain an inventory all public lands and clearly states such an inventory cannot change the management or public use of lands[4]. Further provisions of FLPMA require notification and comment from States and Congressional oversight.

Any effort to classify any portion of the National Petroleum Reserve in Alaska (NPR-A) as wild lands would be in direct violation of Section 6502 of the Naval Petroleum Reserves Production Act of 1976.[5] The secretary is restricted to four authorities in dealing with NPR-A. He was given no authority to reclassify land in the reserve[6]. The Naval Petroleum Reserves Production

---

Alaska exceeding five thousand acres in the aggregate, ***which withdrawal shall not become effective until notice is provided in the Federal Register and to both Houses of Congress. Such withdrawal shall terminate unless Congress passes a joint resolution of approval within one year after the notice of such withdrawal has been submitted to Congress.***

(b) ***No further studies*** *of Federal lands in the State of Alaska for the single purpose of considering the establishment of a conservation system unit, national recreation area, national conservation areas or for related or similar purposes* ***shall be conducted unless authorized by this Act or further Act of*** *Congress.*

[4] *"The preparation and maintenance of* ***such inventory*** *or the identification of such areas* ***shall not, of itself, change or prevent change of the management or use of public lands.***"

[5] Section 6502: *"Subject to valid existing rights, all lands within the exterior boundaries of such reserve* ***are hereby reserved and withdrawn from all forms of entry and disposition under the public lands laws,*** *including the mining leasing laws, and all other Acts:"*

[6] TITLE 42 CHAPTER 78 § 6502

"Designation of National Petroleum Reserve in Alaska; reservation of lands; disposition and conveyance of mineral materials, lands, etc., preexisting property rights

The area known as Naval Petroleum Reserve Numbered 4, Alaska, established by Executive order of the President, dated February 27, 1923, except for tract Numbered 1 as described in Public Land Order 2344, dated April 24, 1961, shall be transferred to and administered by the Secretary of the Interior in accordance with the provisions of this Act. Effective on the date of transfer all lands within such area shall be redesignated as the "National Petroleum Reserve in Alaska" (hereinafter in this chapter referred to as the "reserve"). Subject to valid existing rights, all lands within the exterior boundaries of such reserve are hereby reserved and withdrawn from all forms of entry and disposition under the public land laws, including the mining and mineral leasing laws, and all other Acts; ***but the Secretary is authorized to***

(1) make dispositions of mineral materials pursuant to the Act of July 31, 1947 (61 Stat. 681), as amended [30 U.S.C. 601 et seq.], for appropriate use by Alaska Natives and the North Slope Borough,

(2) make such dispositions of mineral materials and grant such rights-of-way, licenses, and permits as may be necessary to carry out his responsibilities under this Act,

Act of 1976 put the nation's petroleum reserves in a production mode versus a conservation mode. Wilderness restrictions set in the Secretarial Order would undermine the NPRA and further hinder Alaskan oil production, leaving the United States further dependent on unstable, unsecure foreign oil.

Federal regulations unfairly restrict Alaska's ability to develop our resources. In fact, federal laws have destroyed our timber industry and have crippled most of our other industries. Most Alaskans, including myself, believe we gave up too much but those defending ANILCA's passage said its enactment would put an end to further land grabs through federal restrictions; there would be "no more" federal lock up of Alaska's lands and resources. The impacts of Secretarial Order 3310 are detrimental to the federal government, to the State of Alaska, and to the people who have to live here.

I encourage you as the legislative branch of our federal government to preserve the integrity of Congress and put Secretary Salazar on notice that he is violating federal laws with the issuance of Secretarial Order 3310 and request he withdraw the order.

Sincerely,

John B. Coghill
Alaska State Senator

FOR IMMEDIATE RELEASE **PRESS RELEASE**

HOUSE TO INTERIOR SEC. SALAZAR: NO WILD LAND DESIGNATIONS

HJR 21 points to lack of congressional approval in S.O. 3310 process

Friday, April 01, 2011, Juneau, Alaska – The Alaska State House of Representatives today unanimously passed a resolution re-asserting state's rights and pushing back at a federal bureaucrat's proposed encroachment on Alaska's lands.

House Joint Resolution 21, sponsored by House Resources Co-Chair Rep. Eric Feige, R-Chickaloon, urges U.S. Department of Interior Secretary Ken Salazar to withdraw Secretarial Order 3310, which directs the federal Bureau of Land Management to inventory and designate land with wilderness characteristics as "Wild Lands."

"This is a made-up, unauthorized encroachment on Alaska's lands and we will not stand by and let it happen without a fight," Feige said. "This land classification isn't legally-defined and it's certainly not congressionally-authorized. The order clearly violates congressional law for Alaska both in ANILCA and ANCSA, which supersede S.O. 3310 – only the Congress has the authority to designate Wilderness Areas.

"Our Majority made promoting and working towards Responsible Resource Development and Access to Affordable Energy two of our Guiding Principles, and if Secretary Salazar has his way, the BLM could lock up NPR-A, or the coastal plain of ANWR. Unacceptable," Feige said.

Feige says HJR 21 is a response to, and in clear opposition statement against, Secretary Salazar's action, which he says is in conflict with the "No More Clauses" in ANILCA, the Alaska National Interest Land Claims Act, as well as the Federal Land Policy & Management Act.

Co-Sponsor Rep. Wes Keller, R-Wasilla, the Chairman of the Citizen's Advisory Committee on Federal Areas, agrees, and says HJR 21 follows CACFA and the governor's lead. "We at CACFA have been watching this action by the BLM since the initial order was released in December," Keller said. "HJR 21 adds the Legislature's support to CACFA and the governor's letters already on the record. The resolution sends a compelling message: the 'stroke of the pen' mentality cannot be tolerated."

If Secretary Salazar fails to withdraw S.O. 3310, HJR21 urges Congress to prohibit the use of any appropriated funds by the Dept. of Interior to implement, administer or enforce the order.

"Resolutions against the egregious over-step by Secretary Salazar have already been adopted by our peers in Idaho, Utah and Nevada, and Governor Parnell sent a letter of concern in January," Feige said. "HJR 21 is critically important to the citizens of Alaska and another milepost for other states to follow in standing up against this land and power grab from Washington, D.C."

HJR 21 now moves to the Alaska Senate for consideration.

U.S. DEPARTMENT OF THE INTERIOR **BUREAU OF LAND MANAGEMENT NEWS RELEASE**
Office of the Secretary of the Interior

Release Date: 12/23/10
Contacts: Kendra Barkoff (DOI), 202-208-6416

Salazar, Abbey Restore Protections for America's Wild Lands

Washington, DC - A secretarial order issued today by Secretary of the Interior Ken Salazar restores balance and clarity to the management of public lands by establishing common-sense policy for the protection of backcountry areas where Americans recreate, find solitude, and enjoy the wild.

Secretarial Order 3310 directs the Bureau of Land Management (BLM), based on the input of the public and local communities through its existing land management planning process, to designate appropriate areas with wilderness characteristics under its jurisdiction as "Wild Lands" and to manage them to protect their wilderness values.

"Americans love the wild places where they hunt, fish, hike, and get away from it all, and they expect these lands to be protected wisely on their behalf," said Salazar. "This policy ensures that the lands of the American public are protected for current and future generations to come."

The BLM, which manages more land than any other federal agency, has not had any comprehensive national wilderness policy since 2003, when the wilderness management guidance in the agency's handbook was revoked as part of a controversial out-of-court settlement between then-Secretary of the Interior Gale Norton, the State of Utah, and other parties.

"The new Wild Lands policy affirms the BLM's authorities under the law - and our responsibility to the American people - to protect the wilderness characteristics of the lands we oversee as part of our multiple use mission," said BLM Director Bob Abbey.

Abbey said that Secretarial Order 3310 fills an important land management need for the public and the agency. "Wild Lands," which will be designated through a public process, will be managed to protect wilderness characteristics unless or until such time as a new public planning process modifies the designation. Because the "Wild Lands" designation can be made and later modified through a public administrative process, it differs from "Wilderness Areas," which are designated by Congress and cannot be modified except by legislation, and "Wilderness Study Areas," which BLM typically must manage to protect wilderness characteristics until Congress determines whether to permanently protect them as Wilderness Areas or modify their management.

Secretarial Order 3310 also directs the BLM to maintain a current inventory of public lands with wilderness characteristics, which will contribute to the agency's ability to make balanced, informed land management decisions, consistent with its multiple-use mission.

"Simple principles guide this common-sense policy," said Salazar. "First: the protection of wild lands is important to the American people and should therefore be a high priority in BLM's management policies. Second: the public should have a say in designating certain public lands as 'Wild Lands' and expanding those areas or modifying their management over time. And third: we should know more about which American lands remain wild, so we can make wise choices, informed by science, for our children, grandchildren and future generations."

"We are charting a new course for balanced land management which allows the BLM to take into account all of the resources for which it is responsible through a transparent, public land use planning process," said Abbey.

The Secretarial Order does not change the management of existing Wilderness Study Areas pending before Congress or congressionally designated units of the National Wilderness Preservation System. BLM may also still develop recommendations, with public involvement, regarding possible Congressional designation of lands into the National Wilderness Preservation System.

The BLM manages 245 million acres in the United States, including iconic American landscapes like Canyons of the Ancients National Monument in Colorado, the Headwaters Forest Reserve's ancient redwood forest in California, and the Iditarod National Historic Trail in Alaska. This land, known as the National System of Public Lands, is primarily located in 11 western states and Alaska. The bureau also administers 700 million acres of sub-surface mineral estate throughout the nation. The BLM's multiple-use mission is to sustain the health and productivity of the public lands for the use and enjoyment of present and future generations. The Bureau accomplishes its mission by managing activities such as outdoor recreation, livestock grazing, mineral development and energy production, and by conserving natural, historical, cultural, and other resources on public lands.

To read Secretarial Order 3310, click here.

To read the BLM's draft guidance to its field managers for implementing the Secretarial Order, click here for an inventory manual and here for a planning manual.

Q and A document can be found click here.

Secretary Salazar and Bob Abbey's remarks as prepared can be found here.

--BLM--

THE SECRETARY OF THE INTERIOR
Washington

ORDER NO. 3310

SIGNATURE DATE: December 22, 2010

Subject: Protecting Wilderness Characteristics on Lands Managed by the Bureau of Land Management

Sec. 1 **Purpose**. This Secretarial Order (Order) affirms that the protection of the wilderness characteristics of public lands is a high priority for the Bureau of Land Management (BLM), and is an integral component of its multiple use mission. The Order provides direction to the BLM regarding its obligation to maintain wilderness resource inventories on a regular and continuing basis for public lands under its jurisdiction. It further directs the BLM to protect wilderness characteristics through land use planning and project-level decisions unless the BLM determines, in accordance with this Order, that impairment of wilderness characteristics is appropriate and consistent with other applicable requirements of law and other resource management considerations.

Sec. 2 **Authority**. This Order is issued in accordance with the authorities contained in: Reorganization Plan No. 3 of 1950, as amended, 5 U.S.C. § 301, 43 U.S.C. §§ 1451, 1453; Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1701 *et seq.* (FLPMA) (excluding 43 U.S.C. § 1782); Wilderness Act of 1964, 16 U.S.C § 1131 *et seq.*; and National Environmental Policy Act of 1969, 42 U.S.C. § 4321 *et seq.* (NEPA); Section 1320 of the Alaska National Interest Lands Conservation Act (ANILCA), 43 U.S.C. § 1784.

Sec. 3 **Background**. In an increasingly developed world, public lands with wilderness characteristics (as defined in the Wilderness Act, 16 U.S.C. § 1131(c), and BLM policy guidance adopted in accordance with this Order) provide social, cultural, economic, scientific, and ecological benefits for present and future generations. Many of America's most treasured landscapes include public lands with wilderness characteristics that provide visitors with rare opportunities for solitude and personal reflection. In addition, many of these lands have culturally significant and sacred sites important to tribes. Many people and communities value these lands for hunting and fishing, observing wildlife, hiking, and other non-motorized and non-mechanized recreational uses. Lands with wilderness characteristics are also important for their scientific, cultural, and historic objects, which further our understanding of human and natural history, the functions of healthy ecosystems, and how human activities change our world. They also provide a variety of valuable ecosystem services, including carbon sequestration, watershed protection, and air purification, and may contain habitat for numerous threatened and endangered species and other rare biological resources worthy of protection. Managing an area to protect its wilderness characteristics provides unique opportunities and benefits for present and future generations that may otherwise be irreparably lost.

For all these reasons, proper management of public lands with wilderness characteristics is a high priority for the BLM, and the open and productive natural state of such lands should be protected to the extent possible, consistent with the BLM's planning and management authorities.

Sec. 4 **Policy**. In accordance with Section 201 of FLPMA, the BLM shall maintain a current inventory of land under its jurisdiction and identify within that inventory lands with wilderness characteristics that are outside of the areas designated as Wilderness Study Areas and that are pending before Congress or units of the National Wilderness Preservation System. The BLM shall describe such inventoried lands as "Lands With Wilderness Characteristics," share this information with the public, and integrate this information into its land management decisions. All BLM offices shall protect these inventoried wilderness characteristics when undertaking land use planning and when making project-level decisions by avoiding impairment of such wilderness characteristics unless the BLM determines that impairment of wilderness characteristics is appropriate and consistent with applicable requirements of law and other resource management considerations. Where the BLM concludes that authorization of uses that may impair wilderness characteristics is appropriate, the BLM shall document the reasons for its determination and consider measures to minimize impacts on those wilderness characteristics. Where the BLM concludes that protection of wilderness characteristics is appropriate, the BLM shall designate these lands as "Wild Lands" through land use planning.

The BLM should develop recommendations, with public involvement, regarding possible Congressional designation of lands into the National Wilderness Preservation System.

The BLM shall ensure that all lands with wilderness characteristics outside of the areas designated as Wilderness Study Areas and pending before Congress or units of the National Wilderness Preservation System are managed in accordance with this Order and applicable law.

Sec. 5 **Implementation**. Consistent with Section 4, the BLM shall:

a. Develop policy guidance (BLM Manual or Handbook) within 60 days of this Order that defines and clarifies how public lands with wilderness characteristics are to be inventoried, described, and managed in a manner consistent with this Order (hereinafter "BLM policy guidance").

b. Ensure that wilderness characteristics inventories are conducted consistent with this Order and BLM policy guidance.

c. Maintain a national wilderness database that is accessible to the public and updated annually. This database will describe all public lands identified by the BLM as possessing wilderness characteristics and the manner in which the BLM is managing these lands.

d. Ensure that any new project-level decision or land use planning effort takes wilderness characteristics into consideration in accordance with this Order, subject to valid existing rights, as further provided below:

(1) *Land Use Planning Decisions; Protection of Lands with Inventoried and Identified Wilderness Characteristics.* Where lands with wilderness characteristics have been inventoried and identified and the BLM is undertaking a land use planning process subsequent to this Order, the BLM planning decision shall designate these lands as Wild Lands unless the BLM determines, in accordance with this Order and BLM policy guidance, that impairment of wilderness characteristics is appropriate and consistent with applicable requirements of law and other resource management considerations. Wild Lands shall be managed to protect their wilderness characteristics as part of BLM's multiple use mandate.

(2) *Project-Level Decisions for Lands Designated as Wild Lands.* Where a land use plan has designated an area as Wild Lands, decisions regarding projects proposed for the area must include appropriate measures to protect the area's wilderness characteristics.

(3) *Project-Level Management of Lands Not Previously Inventoried and Analyzed in a Land Use Planning Process Conducted in Accordance with this Order.* For project-level decisions in areas where the BLM determines that the land appears to have wilderness characteristics that have not been both inventoried and analyzed in a land use planning process conducted in accordance with this Order, the BLM shall preserve its discretion to protect wilderness characteristics through subsequent land use planning, unless the BLM determines otherwise as set forth below. Where the BLM has determined that the land appears to have wilderness characteristics and the proposed project may impair those apparent wilderness characteristics, the BLM shall conduct an inventory. If the inventory identifies lands with wilderness characteristics, the BLM shall consider the potential effects of the proposed project on the wilderness characteristics and measures to minimize impacts on those characteristics as documented in an appropriate NEPA analysis. Based on this NEPA analysis, the BLM may approve a project that may impair wilderness characteristics if appropriate and consistent with requirements of applicable law and other resource management considerations consistent with this Order or necessary for the exercise of valid existing rights. The BLM shall, in BLM policy guidance developed pursuant to this Order, identify appropriate officials who may approve actions that may impair wilderness characteristics in accordance with this Order.

e. Submit a report to the Secretary of the Interior within six months of the date of this Order that describes the BLM's plan for considering wilderness characteristics in existing land use plans consistent with this Order.

f. This Order does not alter or affect any existing authority of the BLM. This Order does not change the management of existing Wilderness Study Areas pending before Congress or congressionally designated units of the National Wilderness Preservation System.

Sec. 6 **Effective Date**. This Order is effective immediately and will remain in effect until it is amended, superseded, or revoked, whichever occurs first.

/s/ Ken Salazar
Secretary of the Interior

A Resolution of the Juneau Chamber of Commerce Encouraging the Governor, the Legislature and the Alaska Congressional Delegation to Take Aggressive Action to Oppose the Formation of New De Facto Wilderness Areas on all federal lands in Alaska.

4-11

WHEREAS, through ORDER N0. 3310 the U.S. Secretary of the Interior on December 22, 2010 sets new POLICY for the SINGLE-USE management of lands which the U.S. Bureau Land Management (BLM) may classify as lands with "wilderness characteristics" and designate such lands as "Wild Lands" and

WHEREAS, the BLM is purported to be a Federal land management agency with a MULTIPLE-USE land management mandate under the Federal Land Policy and Management Act of 1976 (FLMA) and

WHEREAS, the 1964 Wilderness Act (P.L. 88-577) established the National Wilderness Preservation System (NWPS) with a total of 9.1 million acres and

WHEREAS, the Congress of the United States of America retains the authority for additions to the NWPS and

WHEREAS, the BLM relies on Section 2(c) of the Wilderness Act for the definition of "wilderness characteristics" and

WHEREAS, the BLM manages approximately 245 million acres of federal land and thus under this new departmental level POLICY could potentially create multiple areas of a new wilderness preservation system that are much greater than the NWPS established by P.L. 88-577 and

WHEREAS, under ORDER NO. 3310 the Secretary of Interior has usurped the authority of the Congress of the United States of America and

WHEREAS, the MULTIPLE-USE management of the 245 acres of Bureau of Land Management land is essential to the economic well being of every individual in every state with such Federal land and is essential to the utilization of renewable and non-renewable resources from these lands by every individual in the United States of America and

WHEREAS, through ORDER NO. 3310 the Secretary of the Interior has set in motion actions that will adversely affect the economy of the State of Alaska and the economy of the entire United States of America.

THEREFORE BE IT RESOLVED, that the Juneau Chamber of Commerce strongly supports all actions by the Governor, the Legislature, and the Alaska Congressional Delegation to work together and/or with other states to defeat the imposition of new wilderness preservation systems on states with BLM managed lands.

PASSED AND APPROVED by the Juneau Chamber of Commerce Board of Directors on this date: February 15, 2011

Cathie Roemmich
CEO, Juneau Chamber of Commerce Representing nearly 400 Business Members

House Special Committee on Energy

Sponsor Statement

HJR 23
Hydroelectric Power; Renewable Energy

House Joint Resolution 23 urges the United States Congress to classify hydroelectric power as a renewable and alternative energy source.

The U.S. has long used targeted tax credit programs to incentivize investment and innovation in the energy sector. This is true for fossil and renewable projects resources alike — and the Investment and Production Tax Credits for renewable energy have been highly successful. According to the National Hydropower Association, tens of thousands of jobs and billions of dollars in private investment across industries — not to mention gigawatts of affordable, reliable, and renewable power — have been driven by smart tax policies.

Hydroelectric has extraordinary potential in Alaska, and the ability to displace diesel generated power with little to no environmental impact. However, hydropower receives only one half the credit available to other renewable energy sources. Equalizing the tax credit for hydropower will help Alaskans in their efforts to displace costly non-renewable generation of power.

HJR 23 sends a strong message urging Congress to develop a working definition of renewable and alternative which includes our hardest working renewable resource, hydropower. Please join me and sending this unified resolution to our elected Representatives in Washington D.C.

HYDRO WORKS FOR AMERICA

NHA
National Hydropower Association

NHA Study Highlights

Job Creation Opportunities in Hydropower

Key Highlights

Capacity by 2025

- **60,000MW** of new capacity
- **160,000MW** installed
- **400,000MW** potential capacity

Jobs by 2025

- **300,000** jobs now
- **1.4 million** jobs created by U.S. hydro industry

Approach

The study examined hydropower's growth under a "business as usual" scenario and under a national policy of 25% renewable generation.

Both cases: **Big gains for American consumers and workers.**

Background

In early 2009, the National Hydropower Association commissioned Navigant Consulting, Inc., to conduct a study examining the hydropower industry's job-creation and capacity-growth potential.

Navigant's assessment confirmed what Energy Secretary Stephen Chu recently described as an "incredible opportunity" to develop America's "lowest-cost energy option."

The results demonstrate the industry's extraordinary potential to expand its contribution to the country's energy, environmental, and economic goals: Hydropower can create 1.4 million cumulative jobs and add 60,000 megawatts of affordable, domestic, renewable energy by 2025.

Findings

The study examined the industry's potential under two different scenarios:

- "Business as usual" where national policies mandate 10% renewable generation
- "Accelerated case" with a 25% renewable generation requirement

Both scenarios also assume existing federal and state incentives for renewable energy development, such as tax incentives and state RES programs, remain in place.

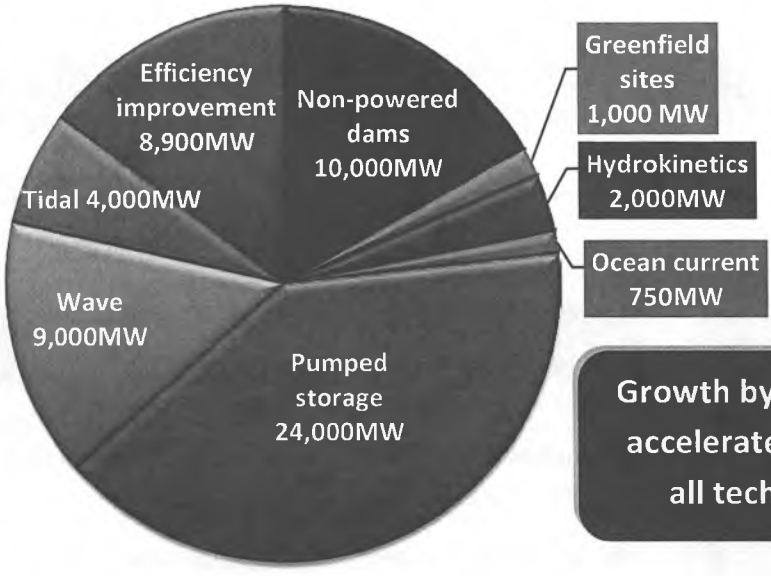
Under both scenarios, the U.S. hydropower industry has the potential for developing significant new clean energy resources and creating hundreds of thousands of good-paying, family-supporting new jobs:

U.S. hydro growth	*New hydro capacity*	*New direct, indirect, and induced jobs*
"Business as usual"	23,300 MW	**480,000**
Accelerated case	60,000 MW	**1,400,000**

Technologies

America's largest renewable resource, hydropower is a proven technology. Leading the growth in the industry are new innovations at existing hydro sites, new applications at non-powered dams and pumped storage- often without large new dams.

Capacity Growth by Technology



Growth by 2025 under accelerated scenario, all technologies

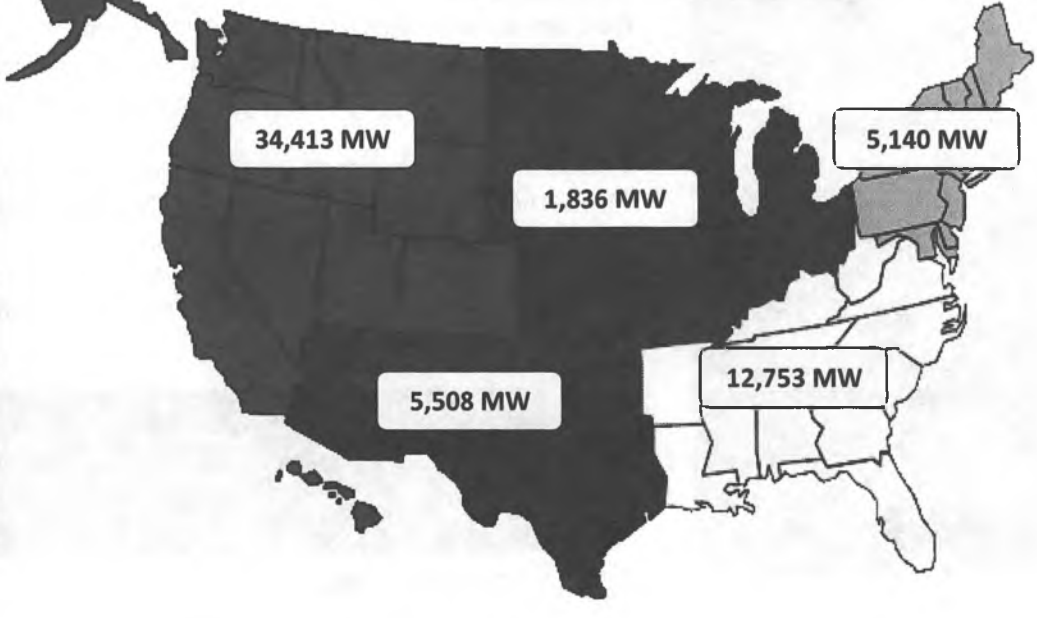
All Regions Benefit

New technologies are unlocking the waterpower potential of every region of the country.

As new technologies become available, the U.S. hydropower industry will consider development at additional environmentally and economically feasible sites.

Capacity Growth by Region

Every state has potential sites that will create new capacity

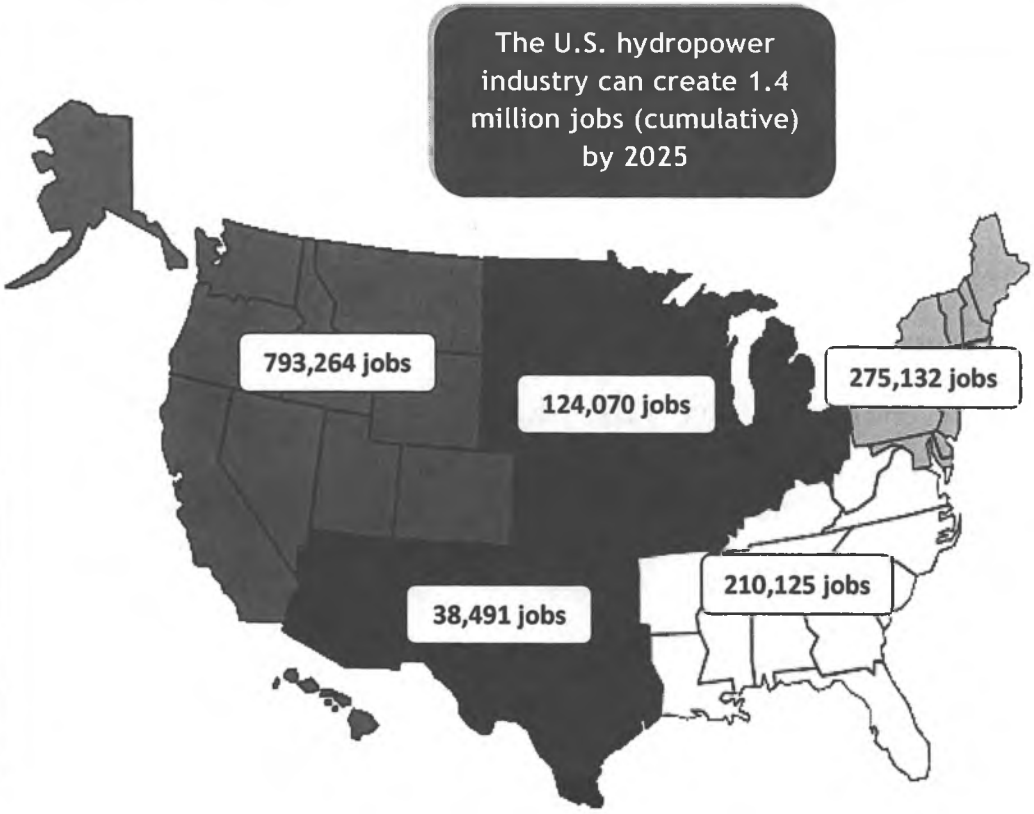


Nationwide job growth

The U.S. hydropower industry will create new, family-supporting jobs in every region of the country.

More than 1.4 million domestic jobs will be created by 2025.

Job Growth by Region



112TH CONGRESS
1ST SESSION

S. _____

To extend certain Federal benefits and income tax provisions to energy generated by hydropower resources.

IN THE SENATE OF THE UNITED STATES

Ms. MURKOWSKI (for herself and Mr. BEGICH) introduced the following bill; which was read twice and referred to the Committee on _____

A BILL

To extend certain Federal benefits and income tax provisions to energy generated by hydropower resources.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Hydropower Renewable Energy Development Act of 2011".

SEC. 2. HYDROELECTRIC ENERGY TREATED AS RENEWABLE ENERGY.

Notwithstanding any other provision of law or regulation, for purposes of any Federal program or standard, the term "renewable energy" shall include hydroelectric

energy generated in the United States by a hydroelectric facility, including electric power produced by efficiency improvements and capacity additions, generation added to nonpower dams, conduits, marine and hydrokinetic resources, lake taps, pumped storage facilities, and conventional hydropower.

SEC. 3. PRODUCTION TAX CREDIT FOR HYDROPOWER RESOURCES.

(a) IN GENERAL.—Subparagraph (A) of section 45(c)(8) of the Internal Revenue Code of 1986 is amended—

(1) by striking "and" at the end of clause (i),

(2) by striking the period at the end of clause (ii) and inserting ", and", and

(3) by adding at the end the following new clause:

"(iii) in the case of any hydropower facility described in subparagraph (D), the hydropower production from the facility for the taxable year.".

(b) PRODUCTION.—Paragraph (8) of section 45(c) of the Internal Revenue Code of 1986 is amended by adding at the end the following new subparagraph:

"(D) OTHER HYDROPOWER PRODUCTION FACILITIES.—For purposes of subparagraph

(A), a facility is described in this subparagraph if such facility—

"(i) is a hydroelectric dam or non-hydroelectric dam—

"(I) which is placed in service after the date of the enactment of the Hydropower Renewable Energy Development Act of 2011, and

"(II) which would be described in subparagraph (A)(i) or (C) but for the placed in service date,

"(ii) is a hydroelectric facility not described in clause (i) which has a nameplate capacity rating of less than 50 megawatts, or

"(iii) is not described in clause (i) or (ii) and generates energy through the use of a lake tap or pumped storage.".

(c) QUALIFIED FACILITIES.—Paragraph (9) of section 45(d) of the Internal Revenue Code of 1986 is amended to read as follows:

"(9) QUALIFIED HYDROPOWER FACILITY.—

"(A) INCREMENTAL HYDROPOWER PRODUCTION.—In the case of a facility described in subsection (c)(8), without regard to subpara-

graph (C) or (D) thereof, which produces incremental hydropower production, the term 'qualified facility' means such facility but only to the extent of such incremental hydropower production attributable to efficiency improvements or additions to capacity described in subsection (c)(8)(B) placed in service after August 8, 2005, and before January 1, 2014.

"(B) PRODUCTION FROM CERTAIN NON-HYDROELECTRIC DAMS.—In the case of a facility described in subsection (c)(8)(C) which produces qualified hydropower production, the term 'qualified facility' means any such facility placed in service after August 8, 2005, and before January 1, 2014.

"(C) PRODUCTION FROM OTHER HYDROPOWER FACILITIES.—In the case of qualified hydropower production at a facility after the date of the enactment of the Hydropower Renewable Energy Development Act of 2011, the term 'qualified facility' includes any such facility which is described in subsection (c)(8)(D).

"(D) CREDIT PERIOD.—In the case of a qualified facility described in subparagraph (A), the 10-year period referred to in subsection (a)

shall be treated as beginning on the date the efficiency improvements or additions to capacity are placed in service.".

(d) INCREASE IN CREDIT RATE.—Subparagraph (A) of section 45(b)(4) of the Internal Revenue Code of 1986 is amended by striking "(7), (9), or (11)" and inserting "or (7)".

(e) EFFECTIVE DATE.—The amendments made by this section shall apply to electricity produced after the date of the enactment of this Act.

SEC. 4. 5-YEAR ACCELERATED DEPRECIATION PERIOD FOR EQUIPMENT WHICH PRODUCES ELECTRICITY FROM MARINE RENEWABLES AND HYDROPOWER.

(a) IN GENERAL.—Subclause (III) of section 168(e)(3)(B)(vi) of the Internal Revenue Code of 1986 is amended to read as follows:

"(III) is described in section 45(d)(11) (without regard to any placed in service date) and converts marine and hydrokinetic renewable energy (as defined in section 45(c)(10)) into useable energy,".

(b) CONVENTIONAL HYDROPOWER.—Clause (vi) of section 168(e)(3)(B) of the Internal Revenue Code of

1986 is amended by adding at the end the following new subclause:

"(IV) is described in section 45(d)(9) (without regard to any placed in service date) and has qualified hydropower production (as defined in section 45(c)(8)), and".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to property placed in service after the date of the enactment of this Act.

REPRESENTATIVE PEGGY WILSON
HOUSE DISTRICT 2

SPONSOR STATEMENT
House Joint Resolution 26

"Urging federal agencies to work with the Alaska Department of Fish and Game, Southeast Alaska Native leaders, and other interested parties to establish strategies and plans for the sustainable management of the reintroduced sea otter population of Southeast Alaska."

In 1965-69, sea otters were reintroduced in SE with no management plan for an eventual overabundance.

Since 1972, under the Marine Mammal Protection Act (MMPA), the federal government who has the sole responsibility for managing has focused on a general harvesting moratorium, with few exceptions.

The 1994 Conservation Plan for the Sea Otter in Alaska states that although the optimum sustainable population range has not been numerically defined for sea otters in Alaska, the stock is believed to be within that range. That was eighteen years ago. The preface states, this plan will be reviewed annually and revised at least every three to five years.

The Southeast sea otters have flourished, with an annual growth rate of 12 percent a year in southern Southeast and four percent in northern Southeast Alaska. There is a known population of some 20,000 sea otters in Southeast. Sea otters eat approximately 23% of their body weight in crab, clams, abalone, mollusk and other dive fisheries or up to 253,000 pounds of food in a single day. According to a McDowell Report in November of 2011, they estimated that Sea Otter predation in the red sea cucumber, geoduck clam, red sea urchin, and Dungeness crab fisheries have already *cost* the Southeast Alaska economy 28.3 million dollars directly and indirectly since 1995.

With the MMPA being 40 years old, it is time to consider broadening the scope of allowable uses of sea otters in Alaska Native handicraft. A long-term sustainable management plan has to be created in regards to sea otter populations, in order to facilitate the means by which all Southeast Alaska people can share in a more robust sport, subsistence, and economic base.

HJR 26 Sea Otter Management

To: Senate Resources Committee

Date: 3/20/12

Explanation of Changes

- The CS from Resources clarified the sale and use of sea otters pelts by suggesting that the Marine Mammal Protection Act definition of handicrafts be changed to read, "Alaska native articles of handicraft."

- CS from the House Floor added two clarifying whereas clause regarding the Marine Mammal Protection Act and investment in fisheries resources.

House Resource Committee:
Re: House Initiative Resolution 26

House Resource Committee,

First I would like to start by applauding Rep. Peggy Wilson for getting something on the table. My name is Frank W. Neidiffer, my background information begins with logging in S.E. Alaska in the 70's. In the mid 80's I started commericial fishing, trolling, crabbing, and long lining. For the last 25 years I have spent a substantial amount of time in lower Chatam, Sumner, and Fredrick Sound. I would like to testify to the "march of the otter" and their scorched earth policy they adhere to.
It's well past time to take action. I do believe Proposition 26 is a start. I think it's very important to revisit the M.M.P.A., and read our Alaska State Constitution. Please make note that we have a viable resource that is destroying resources along with lifestyles and employment opportunities, which also affects the Alaska State economy. Thank You for your time.

To: Rep. Peggy Wilson
Subject: Sea Otter Legislation

Dear Representative Wilson,

Thank you for your recent support of Alaska's dive fisherman and Native artists in the matter of sea otter predation. As a fisherman and environmentalist, it is important to me to see a healthy management plan in place for the control of the southeast sea otter population: if left unchecked, these beasties will ravage the healthy shellfish populations of southeast. However, there is always a place in the ecosystem for a healthy predator population; after all, a thriving predator population equates to a healthy biomass of consumable product.

It's my belief that in the days of yore (i.e. before the aggressive hunting of the sea otter by Russians for their pelts) there had to have been a balance between the otter and their foodstocks. In the more recent vacuum left by the absence of otters, shellfish stocks increased exponentially, leading to the development of a valuable commercially sustainable resource. The reintroduction of the sea otter predator in the past twenty years has virtually given them an all-you-can-eat buffet, and they aren't interested in leaving the table, or saving some for later.

If we do nothing to cull the sea otter population, they will literally eat themselves out of house and home: the population will continue to explode and soon there will be more otters than the stocks can support, leading to a population crash. It has happened before with other predator species, such as wolves. By introducing legislation that checks unmanageable otter population growth, you are not only preserving the valuable commercial resource, but also practicing responsible environmental stewardship and securing jobs for fisherman and Native artists alike.

It seems the most likely avenue of success in this situation is the loosening of restrictions on Native artists that harvest the animal and use its pelt for their wares. This would be a responsible and productive first step in the management of the sea otter population.

Again, many thanks for your support on this matter!

Sincerely,
Eric Riemer
Commercial Fisherman and Harvest Diver

Subject: Sea Otter Bill

Thank you for this bill. This is an issue that shouldn't be an issue. But, the Federal Government's refusal to allow any reasonable management plan for otters and the potentially disastrous effect on SouthEast shellfish fisheries with the subsequent negative economic effects on our communities is unbelievable. I am tired of being a Washington DC social experiment. The State of Alaska should be able to manage otters like any other wild animal. We should be able to take into account the otters overall effects on the environment, fisheries and communities as part of an overall resource management plan. It is obvious that the Federal managers are biased towards the otter and against SE residents given their recent stance on even something as basic as Native and subsistence rights of use. Alaska's economic well being should not be held hostage by this small group of bureaucrats. This issue is about our rights as Alaskans to our resources vs. Federal Agencies establishing a policy of dictating our natural resources use to us. Thank you again for this bill.

Subject: Sea Otter Management Resolution

Dear Rep. Wilson:

Thank you for your efforts vis-a-vis our sea otter problem. The "little critters" have demolished our little neck clam beds.

Let me assure you that the reports of sea otter destruction are not hyperbole. I see what they are doing on a daily basis.

Sincerely,

Eric R Wyatt

RE: Support for HJR 26 regarding Re-introduced Sea Otters

Dear Co-Chairmen Seaton & Feige, and Committee Members,

United Fishermen of Alaska (UFA) is the largest statewide commercial fishing trade association, representing 37 commercial fishing organizations participating in fisheries throughout the state and its offshore federal waters. Fishermen in Southeast Alaska and UFA member groups for years have been alarmed by the rapid increase in sea otter populations, and noticeable impacts on shellfish and fishery resources throughout the region.

In 2009, UFA unanimously adopted Resolution 2009-1 (attached) supporting:

-research on sea otter populations and their effects;

- decreasing hurdles to Alaska Natives in their utilization of this resource;

-requesting the Alaska Dept of Fish and Game to become more actively involved with USFWS in the management of sea otters and documenting their effect.

-requesting the Federal and State agencies, Tribal community organizations and other entities affected by sea otters in the area to meet regionally and develop ecosystem-based sea otter management plans benefiting all users of these resources and protecting the fishery resources from depletion by sea otters, and providing for access to resources in areas of sea otter depletion.

This December, the McDowell Group released a report sponsored by UFA member group Southeast Alaska Regional Dive Fisheries Association (SARDFA), titled Sea Otter Impacts on Commercial Fisheries in Southeast Alaska, which can be found online at:
http://www.scribd.com/doc/74857876/MCDOWELL-GROUP-2011-Sea-Otter-Impacts-Report
This report estimates a direct loss of $12.8 million in ex-vessel value, and $22.4 million in first wholesale value to the Southeast Alaska economy attributable to increased sea otter

populations since 1995. This represents a significant number of jobs lost in communities that already face very challenging circumstances.

UFA commends the bill's sponsors for drawing attention to this issue where the currently popular term of "ecosystem based management" should be applied through management strategies to address this predatory element that is well known to be "out of balance." We also commend the sponsors for calling for broadening the scope of allowable uses for sea otters taken by subsistence users.

Thank you for your attention to this issue, and your support of HJR 26.

Mark Vinsel
Executive Director

Resolution 2009-1

SEA OTTER RESOLUTION

WHEREAS, United Fishermen of Alaska (UFA) represent commercial fishermen organizations and individual fishermen involved in fisheries throughout Alaska in both state and federal waters; and

WHEREAS, sea otters are abundantly healthy and impacting important commercial, subsistence and personal use fishery resource such as crab, abalone, sea cucumbers, sea urchins and geoduck clams in some areas of the State; and

WHEREAS, sea otters are depressed in other areas of the State and critical habitat designation may affect fishery infrastructure and coastal development; and

WHEREAS, sea otters are protected by the federal government under the Marine Mammal Protection Act (MMPA); and

WHEREAS, the only allowable use of sea otters under the MMPA is by coastal Alaska Natives for subsistence or for the making of handicrafts by Alaskan Natives; and

NOW THEREFORE BE IT RESOLVED THAT, UFA supports appropriate local collaborative research projects and grant funding for sea otters whether the population is increasing or declining; and

THEREFORE BE IT FURTHER RESOLVED THAT, UFA supports management strategies which will decrease hurdles to Alaska Natives in their utilization of this resource; and

THEREFORE BE IT FURTHER RESOLVED THAT, UFA request that the Alaska Dept of Fish and Game become more actively involved with USFWS in the management of sea otters and documenting their effect within a region on fishery resources; and

THEREFORE BE IT FURTHER RESOLVED THAT, UFA requests the Federal and State agencies, Tribal community organizations and other entities affected by sea otters in the area to meet regionally and develop ecosystem-based sea otter management plans benefiting all users of these resources and protecting the fishery resources from depletion by sea otters and providing for access to resources in areas of sea otter depletion.

RESOLUTION #29-09

Title: Sea Otter Management

WHEREAS, tribal residents of Southeast Alaska have hunted for sea otters since time immemorial; and

WHEREAS, Section 119 of the US Marine Mammal Protection Act (MMPA) allows for tribally authorized local harvest management plans with US Fish and Wildlife Service; and

WHEREAS, tribal residents of Southeast, Alaska have reported diminished harvest of important traditional foods such abalone, crab, clams and other foods that are consumed by sea otters; and

WHEREAS, due to depressed rural economies, local tribal governments and tribal entities must continue to face the responsibility of developing economic opportunities such as value added fur products in a manner consistent with our uses of marine mammals since time immemorial; and

WHEREAS, with education regarding the traditional hunting practices coupled with the entry into co-management with the Federal government a balance could be achieved between healthy sea otter populations and the availability of healthy traditional foods for residents of Southeast, Alaska; and

WHEREAS, recent Federal enforcement actions have highlighted a need for education and outreach to provide clear and consistent guidance to tribal hunters and artists regarding federal regulations governing the take and use of sea otter; and

WHEREAS, the Sitka Marine Mammal Commission spent many years planning for the establishment of a tannery in Sitka, Alaska which has now been in operation for five years, providing for full-utilization of marine mammals and other animals hunted for food so that artists would be able to use those skins to create handicrafts that could be sold to create additional economic opportunities in our community; and

NOW THEREFORE BE IT RESOLVED, that the Alaska Native Brotherhood's Grand Camp increased education, outreach regarding Federal regulations governing the take and use of sea otter and support in developing local harvest management plans and small business opportunities for tribal residents of Southeast Alaska.

NOW THEREOFRE BE IT FURTHER RESOLVED, the Alaska Native Brotherhood's Grand Camp respectfully requests a region-wide meeting with the US Fish and Wildlife, representation from Southeast tribal communities, USDA Rural Development, and the US Economic Development Administration address the concerns regarding sea otter management as outlined in this resolution.

ANB Grand President

ANS Grand President

ATTEST: I certify that this resolution was adopted by the ANB/ANS Grand Camp in convention at Juneau, Alaska, during the week of October 6-10, 2009.

ANB Grand Secretary

CITY OF PETERSBURG, ALASKA

RESOLUTION # 1958

A RESOLUTION REQUESTING THAT STATE AND FEDERAL AUTHORITIES BECOME MORE ACTIVELY INVOLVED IN MANAGING THE SEA OTTER POPULATION AND FIND WAYS TO REVIVE LOST ECONOMIES DUE TO THE RELOCATION AND RE-COLONIZATION OF SEA OTTERS IN SOUTHEAST ALASKA

WHEREAS, the City of Petersburg, Alaska is a small island fishing community located in Southeast Alaska with a population of approximately 3,000 citizens; and

WHEREAS, residents of the Petersburg community are dependent on abundant, sustainable resources from the coastal waters of Southeast Alaska; and

WHEREAS, in the late 1960's the Alaska Department of Fish and Game reintroduced approximately 400 sea otters in six different locations to near shore waters of Southeast Alaska with no management plan; and

WHEREAS, the federal government has jurisdiction under the Marine Mammal Protection Act (MMPA) and has no active management plan protecting the ecosystems affected by sea otters; and

WHEREAS, without proper management, the sea otter population in southern Southeast Alaska is growing at an alarming rate (5,000 observed in 2003 and a 2010 aerial survey by the United States Fish and Wildlife Service revealed an estimate of over 10,000 otters); and

WHEREAS, this drastic increase in sea otters is threatening the population of many shellfish species, such as crab, abalone, urchins, sea cucumbers, geoducks and others, to a point that subsistence, sport and commercial fishing has been stopped in many areas due to the low abundance; and

WHEREAS, a degradation in the ecological balance of a diversity of species has taken place in many areas; and

WHEREAS, residents of Petersburg and many other communities throughout Southeast Alaska rely on shellfish not only for their livelihood, but for survival in a subsistence way of life; and

WHEREAS, the loss of commercial harvests have resulted in negative economic impacts to the seafood industry. Fisherman, processors and seafood dependent communities have experienced a loss in employment wages and associated economic activities.

THEREFORE BE IT RESOLVED, the Petersburg City Council requests that State and Federal agencies work with tribal leaders in Southeast Alaska to become more actively involved in management of the sea otter population and look to remedy the problems already created.

RESOLVED FURTHER, the State and Federal government managing authorities are requested to find ways to revive the lost economies from the Southeast Alaska region due to the relocation and re-colonization of sea otters in southern Southeast Alaska

PASSED and **APPROVED** by the City Council of the City of Petersburg, Alaska this 18th day of January, 2011.

A copy of this Resolution is to be sent to our Federal Legislators; the Southeast Alaska State Senators and Representatives; State and Federal Wild Life Agencies; and the Coastal Communities of Southeast.

CITY AND BOROUGH OF WRANGELL, ALASKA

RESOLUTION NO. 02-11-1217

A RESOLUTION OF THE ASSEMBLY OF THE CITY AND BOROUGH OF WRANGELL, ALASKA, REQUESTING THAT STATE AND FEDERAL AUTHORITIES BECOME MORE ACTIVELY INVOLVED IN MANAGING THE SEA OTTER POPULATION AND FIND WAYS TO REVIVE LOST ECONOMIES DUE TO THE RELOCATION AND RE-COLONIZATION OF SEA OTTERS IN SOUTHEAST ALASKA

WHEREAS, the City and Borough of Wrangell, Alaska is a small island fishing community located in Southeast Alaska with a population of approximately 2,000 citizens; and

WHEREAS, residents of the Wrangell community are dependent on abundant, sustainable resources from the coastal waters of Southeast Alaska; and

WHEREAS, in the last 1960's the Alaska Department of Fish and Game reintroduced approximately 400 sea otters in six different locations to near shore waters of Southeast Alaska with no management plan; and

WHEREAS, the federal government has jurisdiction under the Marine Mammal Protection Act (MMPA) and has to active management plan protecting the ecosystems affected by sea otters; and

WHEREAS, without proper management, the sea otter population in southern Southeast Alaska is growing at an alarming rate (5,000 observed in 2003 and a 2010 aerial survey by the United States Fish and Wildlife Service revealed an estimate of over 10,000 otters); and

WHEREAS, this drastic increase in sea otters is threatening the population of many shellfish species, such as crab, abalone, urchins, sea cucumbers, geoducks and others, to a point that subsistence, sport and commercial fishing has been stopped in many areas due to the low abundance; and

WHEREAS, a degradation in the ecological balance of a diversity of species has taken place in many areas; and

WHEREAS, residents of Wrangell and many other communities throughout Southeast Alaska rely on shellfish not only for their livelihood, but for survival in a subsistence way of life; and

WHEREAS, the loss of commercial harvests have resulted in negative economic impacts to the seafood industry. Fisherman, processors and seafood dependent communities have experienced a loss in employment wages and associated economic activities.

NOW, THEREFORE, BE IT RESOLVED THAT THE ASSEMBLY OF THE CITY AND BOROUGH OF WRANGELL, ALASKA, requests that State and Federal agencies work with tribal leaders in Southeast Alaska to become more actively involved in management of the sea otter population and look to remedy the problems already created.

LET IT BE RESOLVED FURTHER, the State and Federal government managing authorities are requested to find ways to revive the lost economies from the Southeast Alaska region due to the relocation and re-colonization of sea otters in southern Southeast Alaska.

ADOPTED: February 8, 2011.

KETCHIKAN GATEWAY BOROUGH

RESOLUTION NO. 2313

A Resolution of the Assembly of the Ketchikan Gateway Borough, Requesting that State and Federal Authorities Become More Actively Involved in Managing the Sea Otter Population and Find Ways to Revive Lost Economies Due to the Relocation and Re-Colonization of Sea Otters in Southeast Alaska; and Providing for an Effective Date

RECITALS

A. **WHEREAS,** the community of Ketchikan, Alaska is a coastal island located in Southeast Alaska with a population of approximately 13,000 citizens; and

B. **WHEREAS,** residents of the community of Ketchikan are dependent on abundant, sustainable resources from the coastal waters of Southeast Alaska; and

C. **WHEREAS,** in the late 1960's the Alaska Department of Fish and Game reintroduced approximately 400 sea otters in six different locations to near shore waters of Southeast Alaska with no management plan; and

D. **WHEREAS,** the federal government has jurisdiction under the Marine Mammal Protection Act (MMPA) and has no active management plan protecting the ecosystems affected by sea otters; and

E. **WHEREAS,** without proper management, the sea otter population in southern Southeast Alaska is growing at an alarming rate (5,000 observed in 2003 and a 2010 aerial survey by the United States Fish and Wildlife Service revealed an estimate of over 10,000 otters); and

F. **WHEREAS,** a degradation in the ecological balance of a diversity of species has taken place in many areas; and

NOW, THEREFORE, IN CONSIDERATION OF THE ABOVE FACTS, IT IS RESOLVED BY THE ASSEMBLY OF THE KETCHIKAN GATEWAY BOROUGH as follows:

Section 1. The Ketchikan Gateway Borough Assembly requests that State and Federal agencies work with tribal leaders in Southeast Alaska to become more actively involved in management of the sea otter population and look to remedy the problems already created.

Section 2. State and Federal government managing authorities are requested to find ways to revive the lost economies from the Southeast Alaska region due to the relocation and re-colonization of sea otters in southern Southeast Alaska.

Section 3. This resolution is effective immediately.

ADOPTED this 28th day of February, 2011.

Executive Summary

Purpose

The purpose of this report is to estimate the economic loss to Southeast Alaska commercial fisheries due to growing sea otter predation. The sea cucumber, geoduck, red sea urchin, and Dungeness crab fisheries are examined. This current document is an update of a similar economic loss assessment conducted by McDowell Group at the end of 2005. The 2005 study was, in turn, based on estimated loss of commercial species volume and ex-vessel value calculated by the Alaska Department of Fish and Game (ADFG). This current study uses similar methodology utilizing data collected by ADFG.

Methodology

Economic loss estimates in this report are based on scientific biomass data generated by subdistrict bottom surveys conducted by ADFG biologists and divers. Every dive fishery area is surveyed by ADFG divers on a rotational basis in transects prior to commercial openings in order to calculate biomass and generate Guideline Harvest Limits (GHL) for each fishery. Staff (primarily biologists) then note fishery areas which display physical evidence of sea otter predation and areas where sea otters are active.

McDowell Group has consulted extensively with ADFG staff and employed the same methods to calculate the estimated loss due to sea otter predation in the sea cucumber, geoduck, and red sea urchin fishery. In the Dungeness crab fishery, areas with high otter populations were compared to those with fewer otters to estimate the volume lost due to sea otter predation. Methodology is described in detail in this report body.

Summary of Study Findings

Economic Impacts of Sea Otter Predation on Commercial Species

- Sea otter predation in the red sea cucumber, geoduck clam, red sea urchin, and Dungeness crab fisheries is estimated to have cost the Southeast Alaska economy $28.3 million in direct, indirect, and induced impacts since 1995.

Economic Impacts of Sea Otter Predation on Southeast Alaska Commercial Fisheries

Fishery	Estimated Pounds Lost due to Sea Otter Predation	Estimated Ex-Vessel Value Lost Due to Sea Otter Predation	Estimated Wholesale Value Lost Due to Sea Otter Predation	Time Period
Sea Cucumbers	3,254,000	$5,294,000	$8,951,000	1996-2011
Geoducks	530,500	3,237,000	4,210,000	2005-2011
Red Sea Urchins	3,102,000	1,024,000	3,972,000	1995-2005
Dungeness Crab	2,681,000	3,317,000	5,301,000	2000-2010
Total	**9,567,500**	**$12,872,000**	**$22,434,000**	-

Source: ADFG data and McDowell Group estimates.

- Since 1995, it is estimated $22.4 million in wholesale value has been lost due to sea otter predation. The secondary (multiplier) impact of these losses on the regional economy is estimated to be an additional $5.8 million, for a total of $28.2 million.

- Dive fisheries and Dungeness crab fisheries in Southeast Alaska had a first wholesale value of $25 million in 2010, employing roughly 625 fishermen as well as processing workers and tender operators. The secondary economic activity resulting from these fisheries is estimated to be $6.5 million or equivalent to 59 full-time jobs.

Sea Cucumbers

- Since 1995, the sea cucumber fishery has lost an estimated 3.3 million pounds worth $9.0 million in wholesale terms, and $5.3 million in ex-vessel terms, due to sea otter predation.

- Sea otter impacts were particularly harmful in 2011, as an estimated 235,000 pounds was lost due to predation worth $2.23 million in wholesale value.

- As a result of sea otter predation, the average commercial diver harvesting sea cucumbers in 2011 lost an estimated $7,000 in ex-vessel value.

- Since 1992, ADFG has closed seven areas either specifically due to sea otter predation or presumably due to sea otter predation. Sea otters have been noted to be negatively affecting 12 other harvest areas. See Appendix 2 for a complete list and map of fishery areas affected by sea otter predation.

Geoduck Clams

- Since 2005, the geoduck clam fishery has lost an estimated 530,500 pounds worth $4.2 million in wholesale terms, and $3.2 million in ex-vessel terms, due to sea otter predation.

- Impacts were particularly costly in 2011, as an estimated 140,900 pounds were lost due to predation worth $2.0 million in wholesale value.

- As a result of sea otter predation, the average commercial diver harvesting geoducks in 2011 lost an estimated $20,000 in ex-vessel value.

- No geoduck harvest areas have yet been closed due to sea otter predation, but ADFG has identified 27 fishery areas with evidence of sea otter predation. About 70 percent of the commercial geoduck harvest comes from these 27 fishery areas, where surveys note large craters and shell fragments left over from sea otter predation.

- Although no areas have yet been closed due to sea otter predation, some prospective fishery areas found by commercial divers with sizable geoduck populations were never proposed to ADFG and therefore never opened. Sea otter predation in the area made it likely the fishery would not be worth surveying and managing by the time it could be opened (Doherty 2011, personal communication).

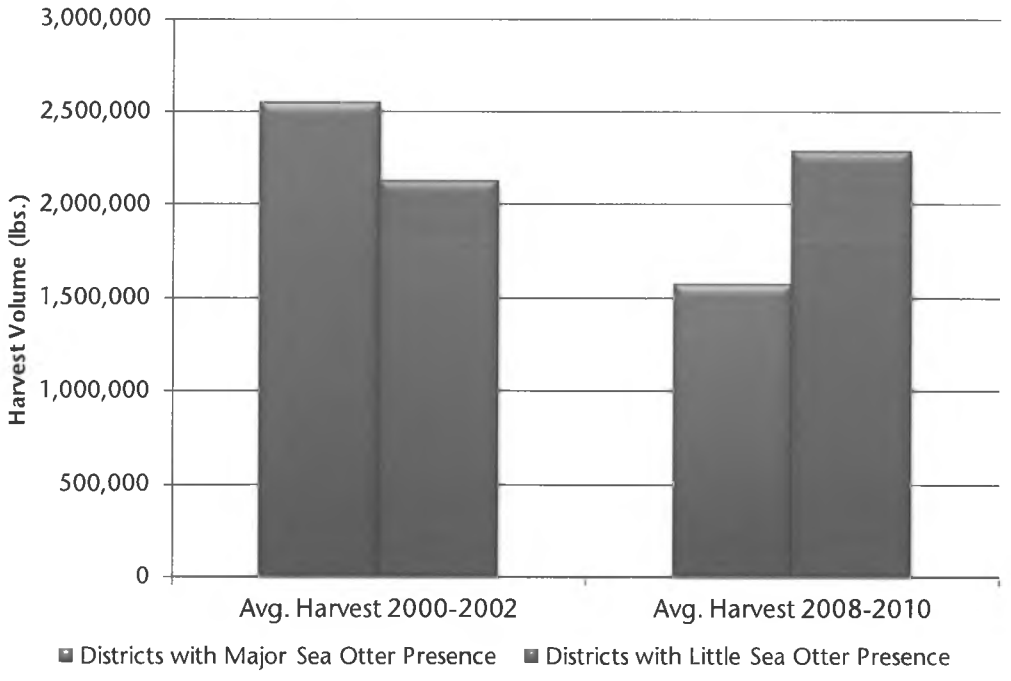
Red Sea Urchin

- The harvest of red sea urchins has declined substantially since 2006. Industry sources indicate only one or two divers are harvesting urchins in 2011, with only one active buyer. Sea otter predation impacts since 2005 have not been compiled, due to the decline of the fishery and the confidential nature of most data associated with it.
- The decline of the red sea urchin fishery in recent years is related to market factors and not due to sea otter predation.
- Prior to 2006, an estimated 3.1 million pounds of sea urchin harvest was lost due to sea otter predation, worth $4.0 million in wholesale value.
- Despite declining effort in the sea urchin fishery, sea otter predation continues to negatively impact stocks. The 2011/12 red sea urchin GHL is 3.28 million pounds, a 40 percent decline from the 2008/09 GHL of 5.44 million pounds. If the market value rebounds and fishery participation increases, the lost GHL due to sea otters will be realized in future years as GHL's are expected to decline.

Dungeness Crab

- Sea otters regularly eat Dungeness crab, which are an attractive food source given their abundance in Southeast Alaska, considerable size, and relative ease of capture.

Comparison of Southeast Alaska Dungeness Crab Harvest in Districts with Major Vs. Minor Sea Otter Presence



Note: Districts with major sea otter presence include districts: 3, 5, 6, 9, 10, and 13.
Source: ADFG harvest data.

- The three-year average harvest from districts with significant sea otter presence was 975,000 pounds less in 2008 through 2010, compared to the 2000-2002 period, a decline of 38 percent. In comparison, districts with less sea otter presence saw average harvests increase 151,000 pounds between the two periods, an increase of 7 percent.

- The Southeast Alaska Dungeness crab fishery has lost an estimated 2.7 million pounds of commercial harvest due to sea otter predation since 2000, worth $3.3 million in ex-vessel terms and $5.3 million in wholesale value.

Sea Otter Population Growth

According to available data, the Southeast Alaska sea otter population has increased significantly, particularly in southern Southeast Alaska where the region's dive fisheries occur. The most recent population survey was completed in 2002 and 2003, indicating a Southeast Alaska population estimate of 8,949 animals. More recent studies suggest annual growth rates are 12 percent in southern Southeast Alaska and 4 percent in northern Southeast Alaska (Hoyt 2011, personal communication). Other authoritative literature suggests sea otter populations can grow at an annual rate of 20 percent per year when expanding into new territory (Paul 2009).

The Southeast Alaska sea otter population is projected to be approximately 19,000 in 2011, increasing from less than 9,000 animals in the most recent published population estimate. By 2015, the Southeast population is expected to approach 28,000 animals. These estimates incorporate the subsistence harvest of sea otters by Alaska Natives.

Estimated Southeast Alaska Sea Otter Population, 2002 - 2015

Season	Last Population Survey (2002/2003)	Projected 2011 Population	Projected 2015 Population	Survey Coefficient of Variation (CV%)
Southern Southeast				
12% Annual Growth Rate	5,845[1]	14,472	22,772	0.14
Northern Southeast (including Glacier Bay)				
4% Annual Growth Rate	3,104[2]	4,418	5,168	0.16
Total Southeast Alaska				
Estimated Population	**8,949**	**18,890**	**27,940**	-

[1]Population estimate is from 2003.
[2]Population estimate is from 2002.
Source: U.S. Fish and Wildlife Service, Hoyt 2011 (personal communication), and McDowell Group calculations.

Given current foraging research, a conservative estimate about body weight (50 lbs.) and daily food intake (20 percent of body weight); a sea otter population of 27,940 would consume just over 10 million pounds of commercial species per year in Southeast Alaska. The entire 2010 Southeast Alaska harvest in the dive and Dungeness crab fisheries was 5.9 million pounds.

Abalone

A commercial fishery for northern abalone (*Haliotis kamtschatkana*) existed in Southeast Alaska from the late 1970s to mid 1990s. Guideline harvest levels where not applied until the 1980/81 season and the fishery slowing declined thereafter. Similar collapses occurred in British Columbia and Washington state.

The fishery collapsed almost certainly because of excessive harvests in the late 1970s and early 1980s. There was not a sufficient stock assessment or research program in place when the Alaska fishery boomed and there was insufficient support to develop a program within the department. Further, there was inadequate understanding among the global research community of the special vulnerabilities of abalone populations to overharvest (ADFG Report to Alaska Board of Fisheries 1999).

The decline of the abalone is probably a long-term condition now that sea otters have expanded to occupy much of their former range. Otter populations have grown exponentially since their reintroduction into outer coastal waters of southeast Alaska in the 1960s, and there are only a few pockets of abalone habitat that have not yet seen a resurgence of otters. The two species share the same environment. Otters are uniquely adapted to prey on abalone and it is clear that abalone cannot co-exist in commercial quantities with sea otters (ADFG Report to Alaska Board of Fisheries 1999).

The decline of the abalone fishery, like the decline of the red sea urchin fishery, was not related to sea otter predation. However, given current otter populations and population growth rates, it is virtually impossible that these species will abound in commercial quantities in the future. By limiting the abalone's population from fully rebuilding - enough to support a commercial fishery - sea otters have diminished the future value of Southeast Alaska's commercial dive fisheries.

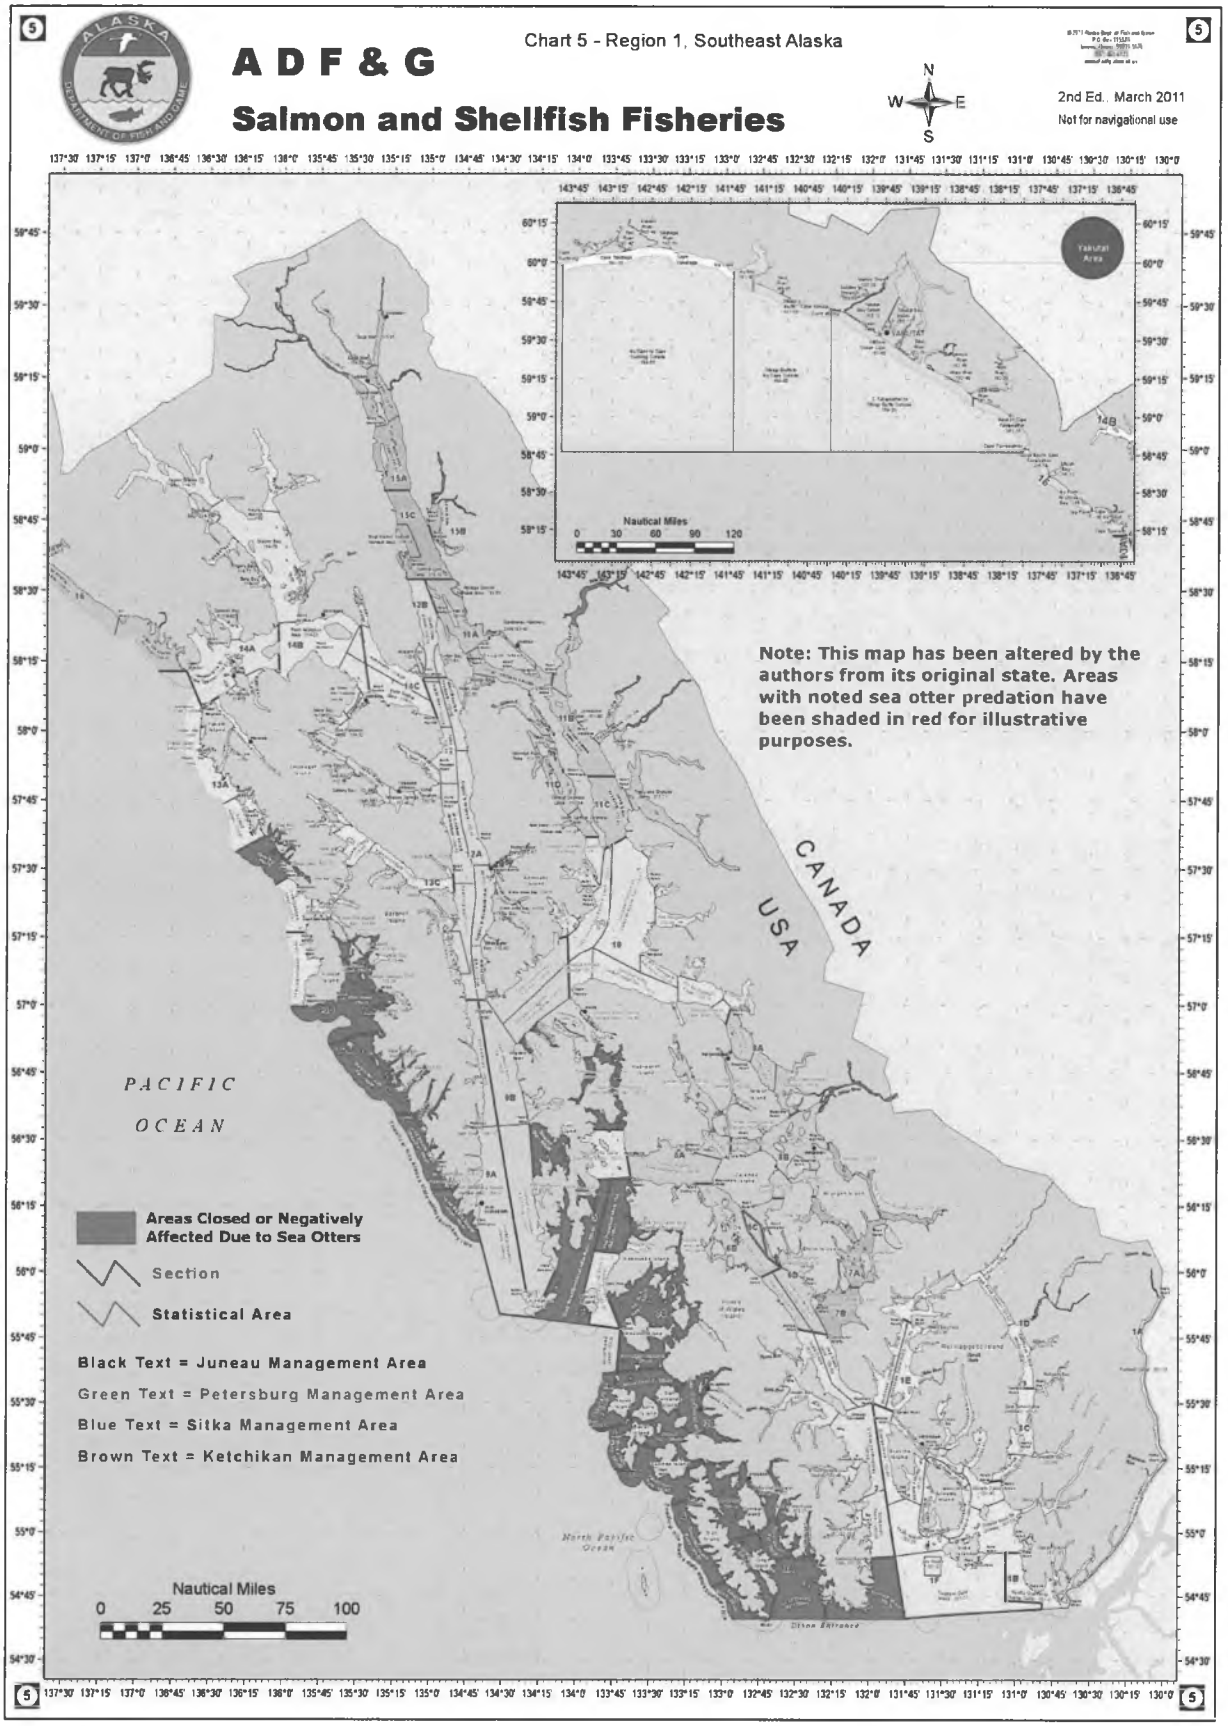
Observations of Sea Otter Predation on Commercial Species

ADFG field research and industry divers support the notion that sea otters are having a significant negative impact on the harvest volumes of geoduck, urchins, crab and other marine species. Growing sea otter populations have led to the depletion of many of these resources within the otters' range, closing some fisheries and leaving others economically unfeasible. In recent years, ADFG has closed 17 dive fishery harvest areas due to sea otter predation.

Given the food source which developed during the last 100 years with little otter predation, it is expected the outer coastline will eventually become continuously populated with sea otters from Dixon Entrance to well north of Cape Spencer (Pritchett and Hoyt, 2008). In addition, many commercial fishermen have noted otter populations in inside waters, expanding their range beyond the coastal areas.

This report contains estimates of financial losses incurred by commercial divers in the past and present, due to sea otter predation. However, large sea otter populations inevitably threaten the future of dive fisheries and crab fisheries; jeopardizing hundreds of jobs and tens of millions of dollars in economic activity for the region.

Map of Fishery Areas Negatively Affected by Sea Otters



Introduction

Purpose of the Research

The commercial harvest closures have resulted in measurable economic impacts on the seafood sector and on communities in Southeast Alaska. Harvesters, processors, and seafood-dependent communities experience lost employment, wages, tax revenue, and related economic activity. The Southeast Alaska Regional Dive Fisheries Association (SARDFA) contracted with McDowell Group to quantify and explain these impacts in 2005. Since the 2005 report, otter populations have continued to grow, further impacting dive fisheries and crab fisheries. This report uses current ADFG data and sea otter research to update the impacts of sea otter predation on Southeast Alaska fisheries and communities.

Methodology

In 2005, the Alaska Department of Fish and Game (ADFG) estimated the lost guideline harvest level (GHL) due to sea otter predation in the red sea urchin and sea cucumber fisheries. These estimates were contained in a November 2005 memorandum. McDowell Group consulted with ADFG biologists who survey the fishery and calculated the original estimates of lost GHL. Using new ADFG biological survey data regarding biomass and sea otter predation, McDowell Group has employed the same methods as those used in 2005 to update the estimates of economic loss.

The Alaska Department of Fish and Game provided McDowell Group with publicly available biomass survey data and professional input (based on survey experiences and institutional knowledge). The scientific survey data and interviews with expert professionals in the department are used in this report. In addition, prior to release of this report, ADFG professionals reviewed the report to ensure data and information provided by ADFG is objectively and accurately represented.

It is important to note, however, ADFG has not conducted controlled experiments to examine the effects of sea otter predation on invertebrate populations. Their estimates are based on regular, direct observations made during dive surveys and the department's expertise as fishery managers.

Estimates of lost harvest volume were combined with average ex-vessel price data from ADFG to estimate the lost value in ex-vessel earnings. Wholesale values are based on data from the ADFG Commercial Operators Annual Report (COAR) database.

Wholesale value impacts are inclusive of impacts reflected by the loss of ex-vessel value. This is because wholesale value of a product, or the revenues a processing company gains through sale of the product, must pay for the expenses incurred in the procurement and processing of that product. This includes the purchase of the raw material from harvesters, which is reflected as the ex-vessel value.

Species Profile and Diet

Sea otters (*Enhdyra lutris*) are a member of the weasel family and a significant predator in the ecosystems of much of coastal Alaska, from Southeast to the Aleutian Islands. Their average life span is 15 to 20 years. Adult male otters weigh typically weight 70 to 90 pounds and average about 4.5 feet in length, while females average 40 to 60 pounds.

The sea otters' only natural predators are sharks, killer whales (orcas), and bald eagles. Sharks and killer whales are not particularly plentiful in Southeast Alaska, and there is no shortage of other food sources for these predators. There is a very narrow window for bald eagles to hunt sea otter pups. Relatively soon after being born, the pups are able to dive and evade the eagles.

Sea otters are the only marine mammal without blubber. As a result, the animals have a high metabolism and require large amounts of food to survive. Sea otters in captivity will consume up to 25 percent of the body weight per day.[1] One male otter, therefore, can consume up to 7,300 pounds of food in one year.

Instead of blubber, sea otters have a dense, water resistant coat which traps air close to their body insulating them from the frigid waters of the North Pacific. Sea otters have the densest coat of any mammal, with roughly a million hair follicles per square inch. By comparison, the human scalp has only 20,000 hairs in total.

Sea otters typically forage in depths of 9 to 27 feet; however, a dive of 291 feet was recorded by an animal which drowned while attempting to remove bait from a crab pot.

Many studies have been conducted on the foraging habits of sea otters. Aside from the tremendous volume of food needed to sustain otters, researchers found significant differences in foraging habits depending on location and available prey. Antonelis et al. (1981) and Ostfeld (1982) found evidence to confirm the hypothesis that otters choose prey with the highest ratio of caloric-value to energy expended foraging (Barnes 2002).

Other studies tend to support the notion that sea otters are opportunistic generalists which adapt their predation to their environment. Studies from the Aleutian chain to Prince William Sound to Southeast Alaska have found different foraging habits. The most recent study, (Hoyt 2010), is collecting foraging data on sea otters in southern Southeast Alaska. Preliminary data from this study suggests when sea otters move into new areas they

[1] U.S. Fish and Wildlife Service. "Wildlife Biologue – Northern sea otter in Alaska (*Enhydra lutris kenyoni*)." p2.

are more likely to prey on commercials species. Over all, that study suggests commercial species make up 10 percent of the sea otter diet in southern Southeast Alaska.

Historical Population

Sea otters were completely removed from their natural range in Southeast Alaska by intense pressure from fur traders in the 18th and 19th centuries. Prior to the fur trade period sea otter populations in the entire North Pacific Rim – extending from Japan to Alaska to Baja California – ranged from 200,000 to 300,000 (Hoyt 2010). Sea otters were believed to have been eliminated from Southeast before 1900 (Pitcher 1989). In 1911, an international treaty, the North Pacific Fur Seal Convention, passed protecting sea otter populations in the United States, Russia, and Japan from further intensive exploitation.

The reintroduction of the sea otter into the Southeast region occurred from 1965 to 1969. A total of 402 animals were relocated from the Aleutian Islands and from Prince William Sound. Otter relocation sites included Khaz Bay, Yakobi Island, Biorka Island, the Barrier Islands, the Maurelle Islands, and Cape Spencer. The Southeast Alaska sea otter population remained low until 1987 when it began a period of rapid growth (Pitcher and Imamura, 1990).

Since that time, sea otter populations have been increasing, and the range of the animals has expanded and shifted correspondingly. The most recently completed population survey, conducted in 2002 and 2003, estimated the Southeast sea otter population at 8,949 animals. Based on aerial surveys performed in 2010 southern Southeast Alaska sea otter populations are believed to be growing at 12 percent per year. Sea otter populations in northern Southeast and Glacier Bay are believed to be growing at 4 percent (Hoyt 2011, personal communication).

Estimated Southeast Alaska Sea Otter Population, 2002 - 2015

Season	Last Population Survey (2002/2003)	Projected 2011 Population	Projected 2015 Population	Coefficient of Variation (CV%)
Southern Southeast				
12% Annual Growth Rate	5,845[1]	14,472	22,772	0.14
Northern Southeast				
4% Annual Growth Rate	1,838[2]	2,616	3,060	0.17
Glacier Bay				
4% Annual Growth Rate	1,266[2]	1,802	2,108	0.15
Total Southeast Alaska	**8,949**	**18,890**	**27,940**	-

[1]Population estimate is from 2003.
[2]Population estimate is from 2002.
Source: U.S. Fish and Wildlife Service, Hoyt 2011 (personal communication), and McDowell Group calculations.

Based on 2003 survey work, and a 12 percent annual growth rate, the current sea otter population of southern Southeast is believed to contain about 14,500 animals. By 2015, the southern Southeast population is expected to exceed 22,700 animals.

With a large food source available, high population growth rates will likely persist for some time. By 2015, the Southeast Alaska sea otter population is conservatively projected to contain 27,940 sea otters. Given current foraging research and a conservative estimate about body weight (50 lbs.) and daily food intake (20 percent of body weight), a sea otter population of 27,940 would consume just over 10 million pounds of commercial species per year in Southeast Alaska. The entire 2010 Southeast Alaska harvest in the dive fisheries and Dungeness crab fisheries was 5.9 million pounds. Southeast Alaska sea otters consumed an estimated 6.9 million pounds of commercial species in 2011.

Population growth rates may actually increase if otters migrate further outside of their current territory. Sea otter populations can grow by 20 percent per year when colonizing new areas with sufficient food sources and few predators (Watson 2000). From 1975 to 1987, the growth rate of the sea otter population in southeast Alaska was estimated at 17.6 percent per year (Estes 1990).

Population growth rates are limited primarily by three factors: abundance of food, predators, and population size. As a population grows larger, it consumes more resources and mortality rates increase. The fact that sea otter populations are growing three times faster in southern Southeast, despite a population which is three times larger would indicate a substantial food source available to the southern Southeast otters. One of the key differences between northern and southern Southeast, as they relate to sea otters, is the presence of large macroinvertebrate populations in the southern region.

Updated sea otter population figures will be forthcoming. The U.S. Fish and Wildlife Service (USFWS) performed aerial surveys during the summer of 2010 and 2011, but has not yet released their findings.

Recent Sea Otter Research in Southern Southeast Alaska

The most direct observation of sea otter effects on commercial fisheries comes from dive surveys performed by ADFG biologists and an ongoing North Pacific Research Board project headed up by researchers from the USFWS and the University of Alaska – Fairbanks (UAF).

ADFG performs annual dive surveys on areas open to commercial dive fisheries. Divers survey the near-shore seabed in pairs for sea cucumbers, geoducks, and sea urchins covering 2-meter-wide transects. Sea otter presence is noted during these surveys.

Observations made by ADFG divers on the outer coast of Southeast Alaska suggest sea otters select red sea urchins and pinto abalone when foraging on rock habitat and on several species of clams including geoduck clams when foraging on soft sand and mud substrate. Once these species have been depleted it appears they turn to less desirable prey such as sea cucumbers and snails (Walker, Pritchett and Hoyt, 2006).

A collaboration of researchers and specialists from UAF and USFWS embarked on a four-year project beginning in July 2010 to study interactions between sea otters and commercially important prey in southern Southeast Alaska. The project will also survey sea otter populations and study movement, habitat, and diets of otters in Southern Southeast Alaska. Preliminary results from this project have revealed the following:

- Otters can consume up to 23 percent of their body weight in a day, as they have a very high metabolic rate.

- Distribution of sea otter populations have grown and moved further inland from outer coastal areas.
- Preliminary foraging data suggests commercially important species make up 10 percent of sea otters' diet. (However, this data was collected from areas with relatively small populations of commercial dive species, and other studies have noted different foraging behavior in different regions).
- When sea otters initially colonize an area, they consume larger amounts of commercially important species such as sea cucumbers and Dungeness crab.

Potential Consequences for Sea Otters and Commercial Fisheries

The sea otter population will likely continue to expand rapidly in coming years as otters consume the large biomasses of crab and macro invertebrate, species which built up in the absence of sea otters during the past century. When these biomasses have been depleted otters will need to find other food sources and many may die off due to starvation. However, because sea otters are opportunistic generalists, it is likely commercial dive fisheries and Dungeness crab fisheries in Southeast Alaska may never return to biomass levels that allow sustainable commercial harvests.

The natural balance between sea otters and their prey, which existed before fur traders wiped out sea otters in Southeast Alaska, did not allow for an imbalance between sea otters, crabs, and macro invertebrates. The population of one group either limited or fueled growth in the other. In such a situation, large-scale commercial dive fisheries and Dungeness crab fisheries may not be possible because crab and macro invertebrate populations would not be able to reach a size large enough to support a fishery of current proportions (given unabated sea otter predation).

In short, commercial dive fishing and large populations of sea otters cannot coexist in the same waters. In addition, once the commercially viable biomass of crab and macro invertebrates – such as sea cucumbers and geoducks - is gone, it likely will not return given sustained sea otter predation.

Southeast Alaska Dive Fisheries

Southeast Alaska dive fisheries occur primarily during the fall and harvest three species of bottom-dwelling marine invertebrates: geoduck clams (*Panopea generosa*), California sea cucumbers (*Parastichopus californicus*), and red sea urchins (*Strongylocentrotus franciscanus*). All three fisheries occur primarily in southern Southeast Alaska waters. Entry into the fishery is limited, but those who hold permits compete to harvest commercial species within the limits of guideline harvest levels established by ADFG.

Alaska dive fisheries started to develop in the mid-1960s, with a fishery for pinto abalone. In the 1980s commercial dive fisheries developed for sea cucumbers, sea urchins, and geoducks. In 2000, the Alaska Commercial Fisheries Entry Commission (CFEC) limited access to the fishery, restricting further growth in the number of participants.

In 2010, Southeast Alaska dive fisheries produced a first wholesale value of $16.7 million and paid out $9.4 million to divers. Roughly 180 permitted divers participated in the fishery in 2010 for average earnings of $52,100 per diver. This revenue is shared with crew, as the average commercial diver employs 0.8 crew members according to surveys done by the Alaska Department of Labor and Workforce Development.

Impacts to the Southeast dive fisheries extend beyond payments made to divers. The fisheries occur during the fall, after the busy summer season when harvests of salmon, halibut, black cod, and herring are finished (or nearly finished). Dive fishery harvests provide processors with additional revenue and the ability to extend some seasonal processing jobs by allowing some processing staff to handle dive fisheries production. In addition, the fisheries add to the state, local, and federal tax base and create business for local dive shops, transport companies, and other related businesses.

Geoduck Clams

Geoduck clams command the highest price of the three dive species. Virtually all Alaska geoducks are exported to China and in 2010 geoduck clams sold for an average wholesale price of $8.72 per pound. Quality geoducks, in the proper retail market, can command prices upwards of $20 per pound.

Southeast Alaska Geoduck Clam Dive Fishery Snapshot

	2010/11 Season	Pct. Change Since 2005/06
Number of Active Divers	69	-3%
Average Permit Value	$81,600	+93%
Total Harvest (in lbs.)	887,500	+39%
Total Ex-Vessel Value	$5.9 million	+197%
Average Ex-Vessel Price	$6.67	+114%
Total First Wholesale Value	$8.0 million	+186%
Average First Wholesale Price (per processed lb.)	$8.72	+94%
Average Revenue Generated Per Diver	$115,900	+195%

Source: ADFG.

Geoduck fisheries take place throughout southern Southeast Alaska, and in waters surrounding Baranof Island. A total of 69 divers fished in 2010, although there were 91 permits for the fishery. The fishery had an ex-vessel value of $5.9 million in 2010, and a wholesale value of $8.0 million.

The value of the fishery has increased in recent years, as prices and harvest volumes have both risen. Harvest volume has grown in spite of sea otter predation because new harvest areas were discovered and added to the fishery. However the 2011/12 quota is only 557,900 pounds – the lowest since 2003 when there were fewer harvest areas. Further harvest reductions are likely because most of the region has been surveyed and areas with commercial quantities have already been opened. So as established areas lose GHL to otter predation, new areas are not expected to make up for the shortfall as they have in the past.

During the past several years, SARDFA surveyors have found substantial geoduck clam beds but in some instances did not attempt to open these areas because sea otters where active in the vicinity. By the time the areas could be surveyed, studied, and opened (at a cost ultimately borne by the industry) the beds would most likely be depleted below a commercially viable level.

Sea Cucumbers

Sea cucumbers are also sold primarily into Chinese markets. Sea cucumbers are raised in large numbers in China in artificial ponds and man-made tide pools. Wild Alaska sea cucumbers tend to be much larger and have higher nutritional value, therefore command a premium price in the Chinese market.

Southeast Alaska Sea Cucumber Dive Fishery Snapshot

	2010/11 Season	Pct. Change Since 2005/06
Number of Active Divers	180	-9%
Average Permit Value	$11,300	+27%
Total Harvest (in lbs.)	1.27 million	-12%
Total Ex-Vessel Value	$3.4 million	-
Average Ex-Vessel Price	$2.65	+16%
Total First Wholesale Value (per processed lb.)	$8.1 million	+60%
Average First Wholesale Price	$10.88	+45%
Average Revenue Generated Per Diver	$45,000	+75%

Source: ADFG.

A total of 180 divers fished in 2010, although there were 291 permits for the fishery. Alaska sea cucumbers had an ex-vessel value of $3.4 million in 2010, and a wholesale value of $8.1 million.

The fishery's value has increased substantially in recent years due to rising prices. Because areas are only harvested once every three years, the harvest can fluctuate greatly from year to year. Despite the fluctuations due to harvest area rotation, the 2011/12 quota is very low. The 2011/12 quota of 999,000 pounds is the lowest since the late 1990s.

Red Sea Urchins

Red Sea Urchins are harvested for their gonads, which is a delicacy in Japan. Male and female sea urchin gonads, both known as *uni* in Japanese, are served in sashimi or in sushi.

Participation in the urchin fishery has declined since 2000, although 2010 posted the first increase in participation since 2004. Still, only 12 divers fished in 2010, out of 71 permits. The fishery had an ex-vessel value of $148,000 in 2010. The average gross earnings of $12,300 per diver in 2010 is the lowest since access to the fishery was limited in 2000. An industry source reports only "one or two" divers are participating in the 2011/2012 fishery, with only one buyer.

Economic Impacts of Sea Otter Predation

As sea otter populations have recovered in areas of the Pacific Coast, conflict has arisen with commercial and subsistence fisheries. Sea otters prey on sea urchins, Dungeness crab, shrimp, clams, abalone, sea cucumbers, and geoducks, among other animals. There are multiple studies that note sea otter population growth can have a negative effect on commercial stocks of these species, potentially resulting in the closure or drastic reduction of the commercial fishery. In one such example, Watson and Smith, in their 1996 paper examining sea otter/fishery interactions in British Columbia, noted there is "no doubt that sea otters threaten urchin fisheries."

Indeed, as sea otters have reestablished themselves in various areas of Southeast Alaska, formerly abundant stocks of several invertebrate species have been locally depleted below commercially harvestable levels. Since 1993 the Alaska Department of Fish and Game has closed 17 dive fishery harvest areas due to presumed sea otter predation. The Department estimates sea otter predation affects 39 percent of Southeast dive fishery harvest areas.

Summary of Dive Fishery Areas Affected by Sea Otter Predation

Species	Total Harvest Areas	Areas Closed Due to Sea Otters	Areas Closed, Presumably Because of Sea Otters	Areas Affected by Sea Otters but Not Closed	Percentage of Areas Affected or Closed Due to Sea Otters
Geoducks	41	0	0	27	66%
Sea Cucumbers	67	3	4	12	28%
Red Sea Urchins	59	4	6	9	32%
Total	**167**	**7**	**10**	**48**	**39%**

Source: ADFG.

The financial impact of sea otter predation affects commercial divers, processors, dive shop owners, and communities both inside and outside of Alaska. This section focuses on the cost of sea otter predation to divers and processors, who have lost revenue in the form of ex-vessel earnings and wholesale revenues due to sea otters.

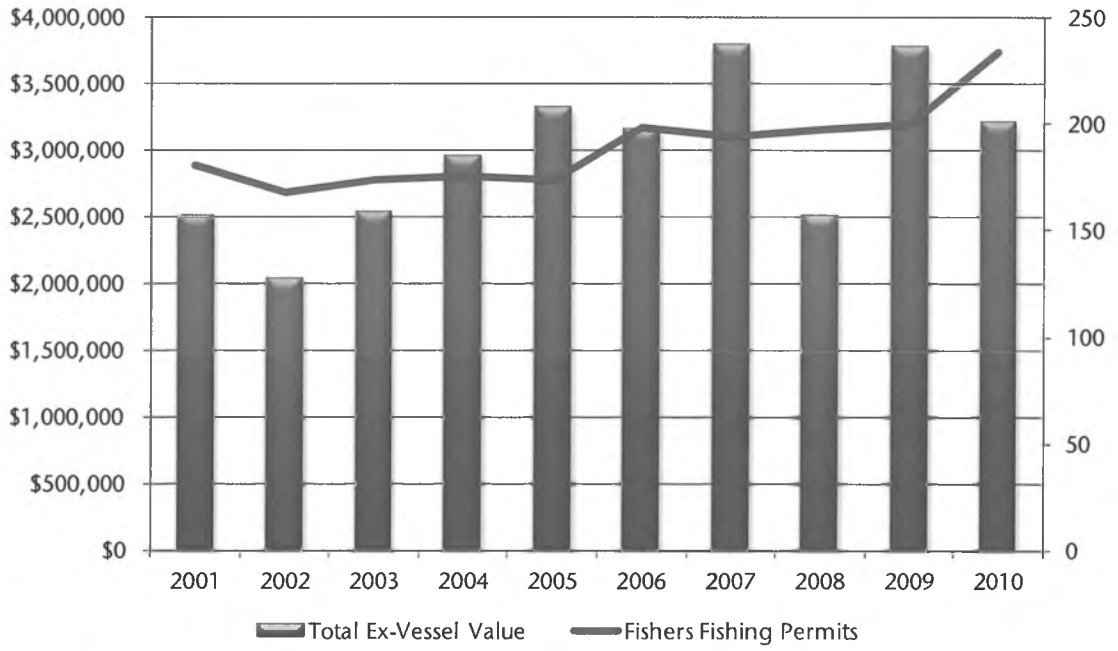
Sea otter predation has had obvious and measureable economic impacts on the sea cucumber, red sea urchin, geoduck, and Dungeness crab fisheries of Southeast Alaska. This report quantifies the estimated impacts sea otters have had on these species. In addition, sea otters affect the tanner and king crab fisheries of Southeast Alaska; however, data to quantify these impacts on these fisheries is not yet available.

Sea Cucumbers

Historical Harvest and Value

Sea cucumber fisheries occur throughout much of Southeast Alaska, in waters surrounding Prince of Wales Island, including Clarence Strait, east to the Behm Canal and waters around Revillagigedo, Gravina, and Annette Islands, and south. Fisheries also occur around Sitka, and in Sumner and Chatham Straits. Each subdistrict opens once every three years. Although divers are allowed to harvest sea cucumbers from October through March of the following year, virtually 100 percent of the harvest occurs during October and November. So although the 2011/12 season will run through March 31, 2012, most of the GHL has already been harvested.

Sea Cucumber Ex-Vessel Value and Participation
2001 - 2010



Source: CFEC.

In 2000, the Commercial Fisheries Entry Commission limited access to the fishery. Since limited access to the fishery, participation has ranged from a peak of 234 permits fished in 2001 to a low of 168 permits fished in 2009. A total of 180 permits were fished in 2010, and fishermen earned a total of $3.2 million or $17,850 per diver.

From 2007 to 2010, ex-vessel prices ranged from $2.86 to $2.56 per pound, but prices are much higher in 2011. Reports from the grounds indicate divers are being paid $5.50/lb. for sea cucumbers this season. While the price appreciation is certainly a positive for fishermen, total ex-vessel values may not increase as much because the guideline harvest level for the 2011/12 season is down. Fishermen will be allowed to harvest roughly 1 million pounds of sea cucumber this season, a 12 percent decline from the 2008/09 season - the last time these this group of subdistricts was harvested.

Impacts of Sea Otters on Southeast Alaska Sea Cucumber Fishery

Sea otters are opportunistic generalists, consuming a wide variety of near-shore prey. Data collected in 2010 on the foraging habits of sea otters near Kake, Alaska revealed sea cucumbers made up 3.1 percent of the sea otters' diet. Similar foraging observations were made in Southwest Alaska during a 2003 study.

Although sea cucumbers do not represent the majority of sea otters diet, otters do consume large amounts of sea cucumbers each year which has had an adverse of effect on the sea cucumber fishery.

Since 1996, sea otter predation has resulted in an estimated lost GHL of 3.25 million pounds worth $5.3 million in ex-vessel terms and $8.4 million in wholesale markets.

In 2011, sea otter predation led to a loss of roughly $7,000 for every active sea cucumber diver.

Estimated Sea Cucumber GHL and Value Lost Due to Sea Otters, 1996/97 – 2011/12

Season	GHL Lost Due to Sea Otters	Ex-Vessel Price ($)	Estimated Ex-Vessel Value Lost Due to Sea Otters	First Wholesale Value/lb. (round weight basis)	Estimated Wholesale Value Lost Due to Sea Otters
2011/12*	235,000	$5.50	$1,293,000	$9.50	$2,231,000
2010/11	151,000	$2.65	400,000	$6.37	961,000
2009/10	192,000	$2.59	497,000	$3.78	725,000
2008/09	241,000	$2.56	617,000	$3.94	949,000
2007/08	116,000	$2.86	332,000	$4.40	511,000
2006/07	143,000	$1.99	285,000	$3.35	480,000

1997/98	90,000	$1.66	147,000	$3.37	304,000
1996/97	34,000	$1.28	44,000	$2.44	83,000
Total	**3,254,000**	-	**$5,294,000**	-	**$8,951,000**

* 2011/12 data is preliminary and based on prices reported by industry.
Source: ADFG data and McDowell Group estimates.

Sea otter predation has forced closures, been observed, or affected 19 sea cucumber harvest areas out of a total of 67 harvest areas. Since 1993, ADF&G has closed three harvest areas specifically due to sea otter predation and has noted four additional areas were probably closed due to sea otters. Two new harvest areas were closed in 2011, specifically due to sea otters.

Geoducks

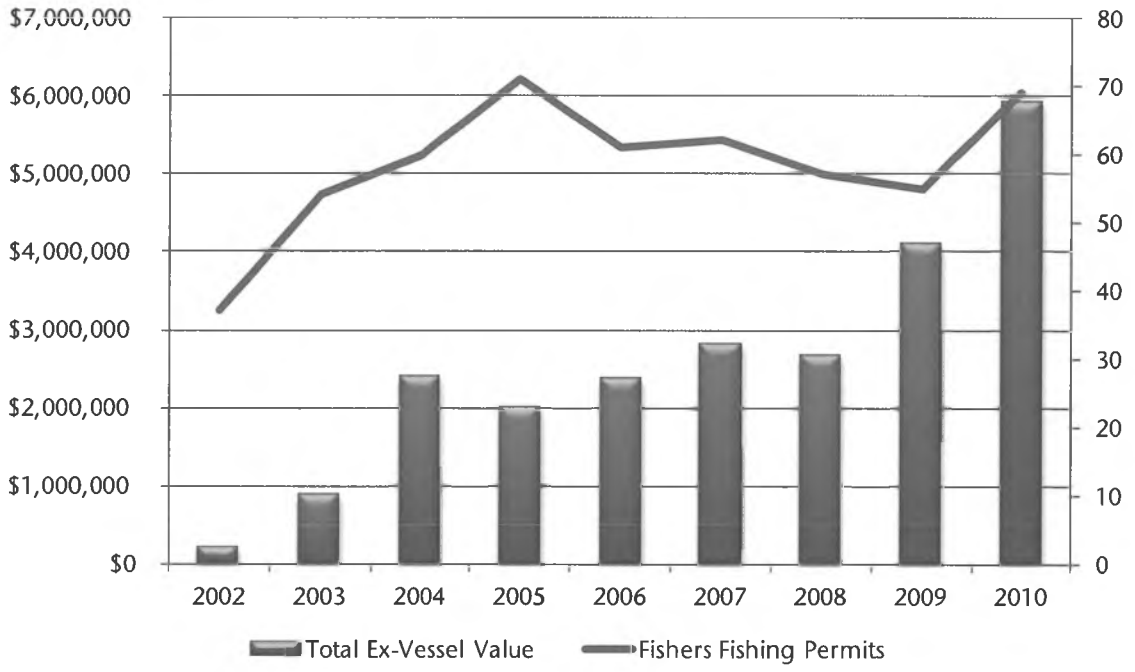
Historical Harvest and Value

Currently there are 39 commercial geoduck clam harvest areas in Southeast Alaska and 2 control areas not open for harvest. All of these areas are located in southern Southeast Alaska, with most of the GHL contained in areas surrounding the communities of Ketchikan, Craig, and Sitka.

Since 2004, and particularly in the last three years, the Southeast Alaska geoduck fishery has become a lucrative fishery. Ex-vessel prices for geoducks have nearly tripled since 2008. Reports indicate geoduck divers are receiving $10.50/lb. from processors this season (2011/12).

Geoduck prices have increased in recent years primarily because coordination between government regulators, fishery managers, and commercial divers has improved. Better communication and coordination has allowed the industry to now sell all geoduck clams as live product. Live geoduck clams command a significantly higher price.

Geoduck Ex-Vessel Value and Participation, 2002 - 2010



Source: CFEC.

Harvest volume has been relatively steady since 2004, ranging from 557,900 to 824,800 pounds. Participation in the fishery has also been steady, with 55 to 71 divers participating in the fishery. In 2010, a total of 69 divers out of 91 permit holders harvested geoducks.

Impacts of Sea Otters on Southeast Alaska Geoduck Clam Fishery

Sea otter predation has become more evident in geoduck clam fisheries since the early 2000s (Walker 2011, personal communication). With geoduck fisheries becoming more commercially important in recent years, these adverse effects have become more costly for commercial divers.

Otter predation in the geoduck fishery is especially evident. Otters dig large holes into the seabed, pull up the geoduck clam, eat the meat and discard the shells – leaving behind a large hole and shell debris which divers note in their surveys. Surveys performed in 2009 on the Portillo Channel (Subdistrict 103-50) area revealed notable otter presence in 70 of 74 transects. Surveys performed on the Lower Cordova Bay (102-10 and 103-11) area showed sea otter presence in over half that district's 60 transects (Rumble and Siddon, 2011).

McDowell Group employed the same methodology used by ADFG to estimate effects on the sea cucumber and sea urchin fisheries from 1996/97 to 2005/06 to estimate geoduck harvest volume and value lost to sea otter predation.

Evidence of sea otter predation has been observed at 27 of the 39 geoduck harvest areas. Biomass has decreased significantly in seven of these 27 areas since 2003. Given the noted sea otter activity in these geoduck fishery areas and lack of other natural predators, it is believed the declining biomass can be attributed to sea otters for these seven harvest areas.

Since 2005, sea otter predation has resulted in an estimated lost GHL of 530,500 pounds worth $3.2 million in ex-vessel terms and $4.2 million in wholesale markets. In 2011, sea otter predation was particularly costly, leading to a loss of roughly $20,000 for every active geoduck diver. This is money which is directly taken out of family budgets and local economies.

Estimated Geoduck GHL and Value Lost Due to Sea Otters
2005/06 – 2011/12

Season	GHL Lost Due to Sea Otters	Ex-Vessel Price ($)	Estimated Ex-Vessel Value Lost Due to Sea Otters	First Wholesale Value/lb. (round weight basis)	Estimated Wholesale Value Lost Due to Sea Otters
2011/12*	140,900	$10.50	$1,479,000	$13.97	$1,969,000
2010/11	43,800	$6.61	289,000	$9.03	77,000
2009/10	142,300	$5.48	780,000	$6.46	919,000
2008/09	18,700	$3.66	69,000	$5.38	101,000
2007/08	95,100	$3.50	333,000	$4.76	452,000
2006/07	10,200	$3.67	37,000	$5.00	51,000
2005/06	79,500	$3.15	251,000	$4.06	323,000
Total	**530,500**	-	**$3,237,000**	-	**$4,210,000**

* 2011/12 ADF&G data is preliminary and values are based on prices reported by industry.
Source: ADFG data and McDowell Group estimates.

Geoducks are in a precarious situation due to sea otters. While prices are high and divers are earning good money harvesting them, that could soon end.

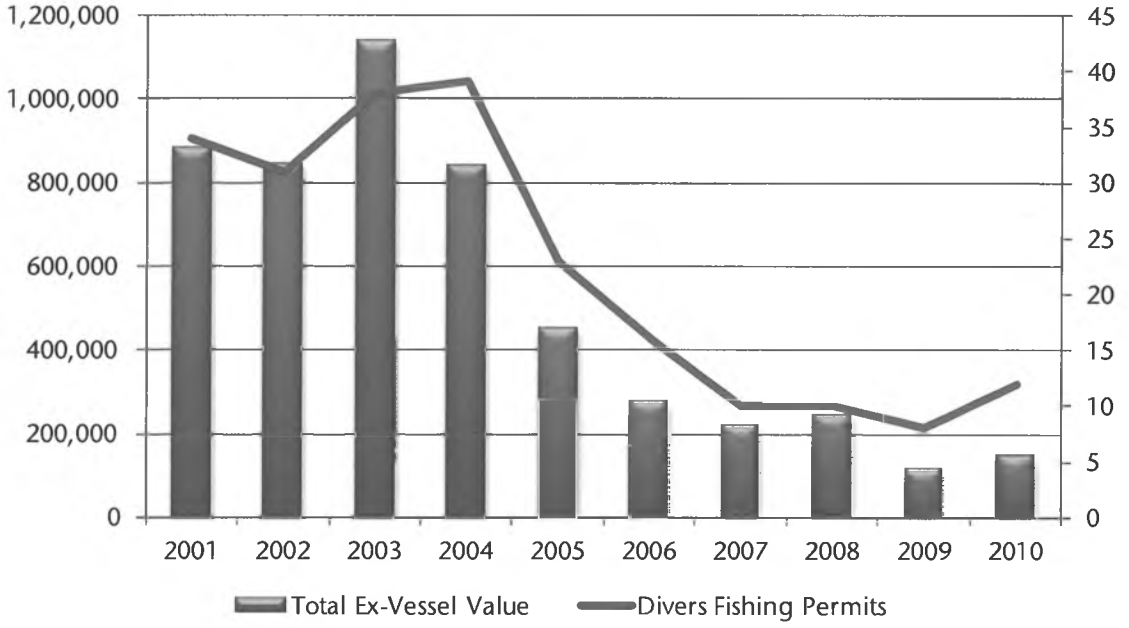
Evidence of sea otter predation has been observed at 27 geoduck fishery areas, but only seven of those areas exhibited significant biomass declines in recent years. However, if those other areas with sea otter activity become harder hit, the impact on the fishery could be devastating because sea otter predation has been noted in harvest areas containing 70 percent of the geoduck biomass. Should otters focus on geoducks as a food source more in the future, it is unlikely the geoduck biomass could reproduce quickly enough to support a commercial fishery which is economically feasible or biologically sustainable.

Red Sea Urchins

Historical Harvest and Value

Participation in the Southeast Alaska red sea urchin fishery has declined rapidly in recent years, approaching zero. During the 2011/12 season, only "one or two" are harvesting urchins with only one buyer, according to an industry source. In 2005, the fishery harvested 1.6 million pounds of red sea urchin worth an ex-vessel value of $453,000. By 2010, production dwindled to 509,000 pounds, harvested by 12 divers who shared $147,700 in total ex-vessel value. The 2010 harvest was just 10 percent of the 4.95 million pound guideline harvest level.

Red Sea Urchin Ex-Vessel Value and Participation, 2001 - 2010



Source: CFEC.

In the red sea urchin fishery, dwindling participation is not being driven by sea otter predation, but rather a falling market value for the product. The gonads of red sea urchins, called *uni* by the Japanese, are a popular sushi item. Virtually all of Alaska's urchin production gets exported to Japan. In general, other urchin fisheries in Russia and the west coast harvest enough supply for the Japanese *uni* market. In addition, there have been market issues with Alaska urchins stemming from inconsistent quality (due to biological factors) and mishandled product by shippers.

In 2000, red sea urchins were fetching $0.45/lb. on the grounds. Ex-vessel prices have steadily declined since then, and in 2010, the 12 divers who participated in the fishery were paid an average price of $0.29/lb. Meanwhile, ex-vessel prices for geoducks and sea cucumbers have risen substantially during this period, along with fuel costs and other operating costs. Low volume and the opportunity cost of harvesting urchins, when a diver could be targeting geoducks or sea cucumbers, has made the fishery uneconomical for most divers and processors.

Impact of Sea Otters on the Southeast Alaska Red Sea Urchin Fishery

In 2008, the average sea urchin diver grossed $24,000, and prior to that time divers generally averaged $20,000 to $30,000 per season. Because sea urchins are a major food source for otters, the financial impact on commercial divers was significant.

Sea otter predation resulted in an estimated harvest shortfall of 3.1 million pounds from 1996 to 2005 worth 1.0 million in ex-vessel terms and 4.0 million in wholesale value.

Estimated Red Sea Urchin GHL, Harvest and Value Lost Due to Sea Otters, 1995/96 – 2005/06

	GHL Lost Due to Sea Otters	Estimated Harvest Lost Due to Sea Otters (adjusted lbs.)	Estimated Ex-Vessel Value Lost Due to Sea Otters	Estimated Wholesale Value Lost Due to Sea Otters
Total	6,285,000	3,102,000	$1,024,000	$3,972,000

Source: ADFG data and McDowell Group estimates.

Participation in the fishery is now so low that many figures on the fishery are confidential, and since only a small portion of the GHL is harvested, the impact of sea otters in recent years is likely very small. For these reasons, sea otter impacts have not been calculated for the 2006/07 through 2011/12 seasons. However, sea otters did have a large impact on the fishery in the past, and will continue to feed on urchins in the future. In an area from the southern shoreline of Sitka Sound to West Crawfish Inlet it was estimated 16 million sea urchins were consumed by sea otters over a 15-month period from December 1992 through February 1993 (Davidson, et al., 2008).

Although the majority of the red sea urchin fishery will go unharvested this season, sea otters are still having a large impact on the biomass. The 2011/12 GHL is 3.3 million pounds; a 42 percent decline from the 2006/07 season (which marks two fishery area rotations). If this trend continues, the fishery may not improve regardless of market price.

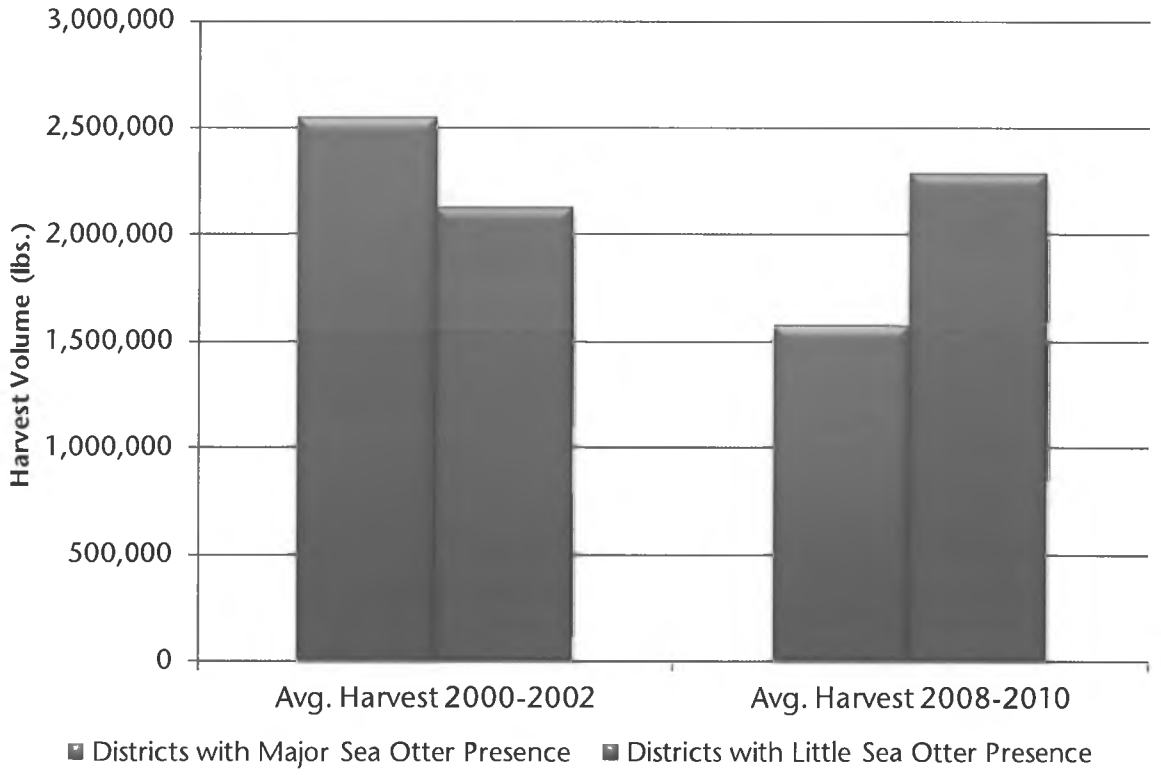
Dungeness Crab

Dungeness crab are a substantial food source for otters. Dungeness crab are typically found at depths of 15 to 100 feet, are plentiful in many Southeast Alaska estuaries, and offer a good nutritional return per unit of energy expended.

It is clear areas with a significant sea otter presence have fared much worse in recent years than areas which are not near large sea otter populations. Out of 15 shellfish districts in Southeast Alaska, six have significant sea otter populations or include translocation sites (where sea otters were released in the 1960s).

These six districts have lost nearly 1 million pounds of harvest activity while districts without sea otters have seen harvests increase slightly since the early 2000s. The greatest loss comes from District 9, near Kake, which had a harvest decline of 776,000 pounds from 2007 to 2010 alone.

Southeast Alaska Dungeness Crab Harvest



Note: Districts with major sea otter presence include districts: 3, 5, 6, 9, 10, and 13.
Source: ADF&G harvest data.

It is very likely sea otter predation is the driving force behind the majority of these lost harvest volumes. Fishermen and biologists note the effect of sea otter predation. Not surprisingly, fishermen are leaving the fishery. The Wrangell-Petersburg census area, which includes Kake and the surrounding waters, was home to fishermen who landed crab under 134 Dungeness crab permits in 2005. By 2010, only 111 permits were fished – a loss of 23 permits or roughly 46 jobs (including 1 crew member and the skipper).

According to the Alaska Department of Labor and Workforce Development, the Southeast Alaska crab fisheries employed 638 workers in 2009. The majority of these jobs are in the Dungeness crab fishery. Expanding sea otter populations seriously jeopardize these jobs.

Methodology For Estimating Dungeness Crab Harvest Lost to Sea Otter Predation

Using field research done by ADFG, USFWS, and UAF, several Dungeness crab harvest districts were identified, which included waters known to have significant populations of sea otters. Crab harvests from these areas were compared to harvests in other districts. In effect, districts with fewer sea otters were treated as a control group. If sea otter predation was a serious issue in the areas identified, the harvest of crab should decrease in those districts relative to harvests in other districts (with fewer otters). This is exactly what took place from 2000 to 2010.

Impact of Sea Otter Predation

Districts 3, 5, 6, 9, 10, and 13 – located in southern part of the region and the outside coast line, have lost out on an estimated 2.7 million pounds of Dungeness crab since 2000. It is assumed all or most of this loss is associated with sea otters, as there are no other known factors which affect crab biomass in these districts and not others in Southeast Alaska.

In 2000, these six districts with large sea otter populations, accounted for 61 percent of the Southeast Alaska Dungeness crab harvest. By 2010, they accounted for just 33 percent; after seeing a gradual decline throughout the decade relative to districts without large sea otter populations.

Since 2000, the lost harvest volume attributed to sea otters was worth $5.3 million in wholesale value and $3.3 million in ex-vessel value.

Estimated Dungeness Crab Harvest and Value Lost Due to Sea Otters in Southeast Alaska, 2000/01 – 2010/11

	Estimated Harvest Lost Due to Sea Otters (live wt.)	Estimated Ex-Vessel Value Lost Due to Sea Otters	Estimated Wholesale Value Lost Due to Sea Otters
Total	2,681,000	$3,317,000	$5,301,000

Source: ADFG harvest data and McDowell Group estimates.

Quantifying the Impact of Sea Otter Predation

Dive fisheries in Southeast Alaska are managed by the Alaska Department of Fish and Game. Management is supported by a tax on the ex-vessel value of red sea urchins, sea cucumbers, and geoducks. This tax is used to pay for management staff and perform scientific dive surveys that allow managers to monitor the biomass of commercial species in established subdistricts, or new harvest areas.

Dive surveys are performed by SCUBA divers surveying established, or new, subdistricts along 2-meter wide transects running perpendicular to the shoreline. To complete transects, divers swim along the transect holding a 2-meter rod made of white PVC pipe in a horizontal position. Transect direction is maintained by a compass mounted on the rod.

Every harvest area gets surveyed before a fishery is opened for a given season, in addition to a group of control areas which are surveyed every year. The harvest areas, or subdistricts, open on a rotational basis, depending on the species and results of the dive surveys.

Photo Credit: Alaska Department of Fish and Game.

Dive surveys are expensive, but necessary for sustainable fishery management. In addition to providing data on the biomass, size, and density of commercial species, the dive surveys also allow managers a chance to maintain data on the invertebrates' habitat and eco-system. Divers have noted the presence and evidence of sea otter predation on each transect for each species, in each fishery area. Areas affected by sea otters are often distinguished by large holes with clam shell fragments (from where an otter has dug up a geoduck) or sea urchin carcasses littering the seabed. In the case of sea cucumbers, no physical evidence is left because otters consume the entire animal. However, divers note areas with active sea otter predation and have attributed large biomass declines in various subdistricts to sea otters.

Detailed survey data from thousands of dives recorded by fishery biologists, combined with information on historical biomass and GHL's, allows for a conservative estimate of sea otter predation. The estimated harvest volume lost due to sea otter predation can be translated into dollar terms by applying the ex-vessel price or wholesale price of a particular species in a given year.

Because virtually 100 percent of the GHL is harvested in the geoduck and sea cucumber fisheries, only the lost GHL is calculated and financial impacts are based on GHL. In the red sea urchin fishery, harvests volumes have not historically met the GHL. Therefore, impacts on the red sea urchin fishery were adjusted to reflect dollars and pounds lost are based the assumed harvest, and not on the GHL.

Accurately quantifying the impact of sea otter predation is only possible because ADFG data on sea otter predation, affected areas, commercial harvests, biomass, and market values is very good.

Because of ADFG's rigorous data collection, these estimates are believed to accurately portray the real, direct impact of sea otters on commercial species. Without such data, other studies such as Loomis (2006) have attempted to explain the value of sea otters in terms of existence value or the value of the public's "willingness to pay." These estimates are theoretical and obtained by surveying a sample of the population about what dollar value they place on knowing a certain species, in a certain locale, is flourishing or what dollar value they *would* pay to engage in a suggested recreational activity involving the species. In contrast, the effect of sea otter predation on commercial divers, seafood processors, and Southeast Alaska communities is not hypothetical.

Sea Otter Predation Impacts on Communities

Sea otter predation has led to an estimated loss of $22.4 million in wholesale value for southern Southeast Alaska communities since 1995. Lost sales for fishermen and processors are estimated to have resulted in indirect and induced losses of $5.8 million during that time. These losses reflect lost economic activity in industries outside the seafood industry in southern Southeast Alaska, resulting from lower wages, less household spending by affected families, less spending on indirect business costs, and less taxes collected from fisheries.

In total, sea otter predation is estimated to have cost southern Southeast Alaska communities $28.3 million since 1995. Any revenue derived from eco-tours, expanded subsistence harvests (above what would normally occur), or economic activity associated with scientific studies, stemming from sea otter expansion have likely been negligible, in comparison.

Southern Southeast Alaska Communities Most Affected by Sea Otter Predation

Ketchikan	Sitka	Kake
Petersburg	Craig	Port Alexander
Klawock	Hydaburg	Wrangell

The livelihood of Southeast Alaska commercial divers, crab fishermen, tender operators, and seafood processing workers is currently being jeopardized by expanding sea otter populations. These include hundreds of basic sector jobs which form the foundation of a regional economy.

Residents of the Wrangell-Petersburg census area have seen 23 fewer permits fished in recent years, part of which may be attributed to sea otter predation. Employment has not declined substantially in the sea cucumber and geoduck fisheries, but sea otter predation is estimated to have cost each geoduck diver $20,000 and each sea cucumber divers $7,000 in 2010. Based on the estimated value of product lost in recent years and the amount of economic activity resulting from the typical full-time job in southern Southeast Alaska, the secondary impacts of sea otter predation has been equivalent to a loss of 5 to 10 full-time average-paying jobs (depending on the year).

The wholesale value of Southeast Alaska sea cucumbers, geoducks, red sea urchins, and Dungeness crab was roughly $25 million in 2010. These fisheries employ roughly 625 fishermen and dozens more tender operators and processing workers. Using economic multipliers developed by IMPLAN[2], it is estimated the $25 million in wholesale value associated with these fisheries results in indirect and induced activity worth $6.5 million - equivalent to 53 additional full-time average-paying jobs[3]. Just like commercial divers and crab fishermen, these jobs are at risk of being lost as well. Indirect losses are more often more difficult to see, but they are economically real, as less money circulates in the economy leading to contracting employment.

[2] IMPLAN is an economic modeling software package widely used to perform economic impact analysis.

[3] The estimated number of jobs created is calculated by dividing the value of the secondary impact ($6.5 million) by the average output created per full-time equivalent (FTE) job in Southeast Alaska ($123,992 per FTE job). Therefore, the term "average-paying" refers to a full-time job producing an average amount of economic output, and paid accordingly.

Sponsor Statement – House Joint Resolution 29

Version: 27-LS1208\A

"Urging the United States Department of the Interior, Bureau of Land Management, to plug legacy wells properly and to reclaim the legacy well sites as soon as possible in order to protect the environment in the Arctic region"

Starting in 1944 the federal government began an exploratory oil and gas drilling program in the National Petroleum Reserve-Alaska. After drilling stopped in 1981 about 130 wells, now known as legacy wells, were never properly plugged and the sites were not cleaned up.

Today those legacy wells threaten the arctic ecosystem. Potential ground water contamination from the wells could harm vegetation. Scrap metal and wood, deteriorating buildings, rusting barrels and debris litter the sites and ruin the natural beauty of the arctic.

The federal Bureau of Land Management is responsible for the wells but has so far refused to take action and claims it does not have the money. To date, the BLM has taken in more than nine billion dollars from oil and gas lease sales in NPR-A and Alaska's outer continental shelf.

These drill sites have been out of compliance with Alaska Oil and Gas Conservation Commission regulations for decades. Unfortunately, the state cannot fine the federal government but if it could - the fines would run in the billions of dollars.

The BLM has a mission statement that states it will "sustain the health, diversity, and productivity of public lands for the use and enjoyment of present and future generations." HJR 29 simply asks the agency to fulfill its mission and clean up its legacy wells so future generations will have an unspoiled arctic wilderness.

HJR 29 and it has been referred to the House Resources Committee.

Prepared by Jeff Turner on Thursday, January 19, 2012

Re: HJR 29, Urging the federal government to plug legacy wells in the Arctic region

Dear Representative Millett:

The Resource Development Council is writing to encourage the House Resources Committee to pass HJR 29, urging the federal government to plug legacy wells properly and to reclaim the legacy wells sites as soon as possible in order to protect the Arctic.

RDC is an Alaskan business association comprised of individuals and companies from Alaska's oil and gas, mining, forest products, tourism, and fisheries industries. Our membership includes all of the Alaska Native regional corporations, local communities, organized labor, and industry support firms. RDC's purpose is to expand the state's economic base through the responsible development of our natural resources.

The Department of the Interior and other federal agencies require that private companies operating in the Arctic explore for and produce domestic energy and mineral resources in an environmentally responsible manner. Through federal laws, regulations, and permitting, federal agencies have set a high bar to mitigate impacts to the environment. As a result, industry has been held to the highest standards – among the most stringent in the world. When violations to federal laws or permitting requirements occur, companies are held responsible, often facing steep fines.

However, in the case of federal lands in the Arctic, the federal government has not held itself to the same standards. The U.S. Navy and the U.S. Geological Survey drilled approximately 137 wells on federal lands in northern Alaska between 1944 and 1981, all of which are now abandoned. Only seven of the legacy wells were properly plugged and reclaimed. The remaining wells are out of compliance with regulations adopted by the Alaska Oil and Gas Conservation Commission (AOGCC), posing a risk to surface vegetation, groundwater, and wildlife. Additionally, debris and deteriorating buildings detract from the landscape.

The AOGCC has repeatedly reminded the federal government of the obligation to plug legacy wells and properly reclaims well sites. The state cannot impose fines on the federal government, but if it could do so, the fines would exceed $8 billion, and much more if the statute of limitations were disregarded.

121 West Fireweed Lane, Suite 250, Anchorage, Alaska 99503-2035
Phone: 907-276-0700 Fax: 907-276-3887 Email: resources@akrdc.org Website: akrdc.org

HJR 29 points out the double standard and hypocrisy that exists in the federal government's regulation and permitting of resource development activities in Alaska. Clearly, the Department of Interior has not held itself to the same standards it demands industry to meet in the responsible development of Alaska's resources.

The resolution rightfully urges the federal government to comply with the same laws and requirements it demands industry to follow. The federal government should lead by example and set even a higher standard for itself.

RDC commends you for introducing HJR 29 and securing 33 cosponsors to the resolution. We strongly encourage its passage.

Sincerely,

Resource Development Council, Inc.

Rick Rogers

Alaska Conservation Alliance

"A Strong Economy and Healthy Environment Go Hand in Hand"

2/17/12

Representative Charisse Millett
State Capitol, Rm. 13
Juneau, AK 99801-1182

Dear Rep. Millett,

The Conservation Alliance supports HJR 29, which urges the Bureau of Land Management to properly plug legacy wells and reclaim legacy drill sites in the National Petroleum Reserve-Alaska. The Alaska Conservation Alliance represents over 30 conservation groups with a combined membership of over 38,000 Alaskans.

Unplugged well sites on the North Slope pose a continuing danger to the environment, and it undermines our shared objective of development occurring in a responsible manner. The legacy well sites located in the National Petroleum Reserve are some of many underreported contamination issues in Alaska. Unfortunately, despite the danger, state agencies don't have the authority to enforce penalties. The responsible federal agency, the Bureau of Land Management, lacks budgeted funds to properly plug and reclaim the drill sites. That funding shortfall needs to be addressed. The unplugged and un-reclaimed legacy well sites, like all such sites across Alaska including dozens of sites on state lands, must be properly and responsibly decommissioned.

Passing HJR 29 will send a clear message to the Federal government and the Bureau of Land Management that Alaska is serious about preserving and protecting its environment. It will also send a clear message to private companies that Alaska is consistent with its demand of responsible resource development: that no entity, government or otherwise, will be allowed to harvest the state's resources while tarnishing Alaska for future generations.

The Federal government must make good on the responsibility it undertook when the legacy sites were drilled. Passing HJR 29 will send a clear message to the federal government and private companies that Alaska is serious about preserving and protecting its environment.

For the above reasons, the Alaska Conservation Alliance supports HJR 29. We appreciate the effort to address this important issue.

Sincerely,

Andy Moderow
Executive Director
Alaska Conservation Alliance

Legacy Wells
Non-compliance with AOGCC Regulations

The BLM is the current operator of approximately 137 wells drilled by the Federal Government between 1944 and 1981 in northern Alaska. These wells are routinely referred to as the legacy wells. All of the wells are or have been out of compliance with multiple AOGCC regulations. Additional review would likely reveal that the wells are out of compliance with Federal regulations as well. A summary of the issues of non-compliance with AOGCC regulations follows:

- 20 AAC 25.070 (3) requires that an operator file Form 10-407 within 30 days after completion, abandonment or suspension of a well. Where Form 10-404 is required, the same 30 day time requirement applies. These forms document what work was actually performed.
    - For well operations performed after 2000, all reporting was late. The earliest was received at least 4 months late with most at least two years late and some as much as 4-1/2 years late. In fact, no Form 10-407 has ever been submitted for at least two of the wells.

- 20 AAC 25.105(a) requires that, if the operator is the landowner, all wells on the property must be abandoned within one year following permanent cessation of the operator's oil and gas activity within the field where the wells are located.
    - Because there has been no BLM operated oil and gas activity anywhere in the NPRA since the final legacy well was drilled in February of 1981, all of the legacy wells that are not currently abandoned are out of compliance.
    - Further, because the first two wells to be plugged were plugged in 2002, those wells were out of compliance for at least 21 years.

- 20 AAC 25.105 (b) requires that a well not completed as an oil, gas or service well must be properly suspended or abandoned before removal of the drilling rig.
    - Since with only one exception, none of these wells was ever completed as an oil, gas, or service well, since there has not been a drilling rig on any of these wells in over 30 years, and since none of them was properly suspended per AOGCC regulations, all of the legacy wells are or have been out of compliance including ones that are now properly plugged.

- 20 AAC 25.110(a) allows the AOGCC not to require abandonment of a well but rather to allow that the well be suspended only if the well has future utility or is located on an active pad or platform.
    - All of the legacy wells are or have at one time been out of compliance including ones that are now properly plugged.

- 20 AAC 25.110(b) requires an operator to submit to and receive approval from the AOGCC for an application for suspension of operations prior to performing the work.
    - No such application has been submitted for any of the legacy wells and none of the wells is suspended in a manner consistent with the operational details of this regulation.

- 20 AAC 25.110(d) requires the operator of a suspended well to install certain downhole plugs to ensure that all hydrocarbons and fresh waters are confined to their respective indigenous strata.
    - With few exceptions, none of the legacy wells is in compliance with this regulation.

- 20 AC 25.110(e) requires that the operator of a suspended well maintain the integrity of the location, provide the AOGCC with a status report every five years, and clear the location of all materials and debris.
    - With few exceptions, none of the wells has been left in a configuration that would allow the BLM the ability to demonstrate downhole integrity.
    - Pictures from the BLM's own report on the legacy wells show open wellbores in several cases.
    - As also demonstrated by pictures in the BLM report, rotting lumber, rusting metal, and other debris have not been cleared from many well locations.

- 20 AAC 25.112(a) requires that all uncased portions of a wellbore be plugged in a manner that ensures that all hydrocarbons and freshwater are confined to their respective indigenous strata and are prevented from migrating into other strata or to the surface.
    - Thirty-two of the legacy wells were never cased. No plugging operations have been performed or are planned on any of these wells. Rather, the earth has been allowed to slough in and the surface to revegetate. Although ten of these wells were drilled only to a depth of fifty feet or shallower and do not likely pose any threat of fluid migration, the remaining twenty-two wells were drilled deeper including seven wells drilled to depths beyond 1000 feet.

- 20 AAC 25.112(b), (c), (d), (e), (f), and (g) require specific procedures to ensure proper abandonment of a well.
    - Five of the approximately ten wells that have actually been abandoned do not meet all of the requirements of these regulations.

- 20 AAC 25.112(h) requires an operator to give the AOGCC at least 24 hours notice prior to commencing plugging operations so that a representative of the AOGCC can witness or waive the right to witness the operations.
    - Four wells were plugged in 2004 without any prior notice to the AOGCC.

- 20 AAC 25.507 (a) requires an operator to obtain prior approval when a substantive change in a previously approved activity is needed.
    - In many cases actual wellwork was substantially different from what was proposed and authorized, yet no request was ever made for approval of the change.
    - In many of these cases, the actual work did not result in the well being plugged in compliance with AOGCC regulations.

Wellhead along with
wood and metal debris
in a natural oil seep

Natural subsidence and snowmelt have started to obscure this site.

Primitive, rusting wellhead and wood debris

Back-up slides

Status of Legacy Wells

- 7 properly plugged and abandoned
- 5 improperly plugged and abandoned
- 32 not cased – collapsed hole & revegated surface
- 17 claimed to be used for temperature monitoring
- 33 classified as “land swap” wells
- 42 flagrantly out-of-compliance wells

Example problems

- 6 have open casing and no wellhead
- 7 have wood or metal debris on site
- 17 are filled with diesel
- 3 can no longer be found
- Of the 33 “land swap” wells, all but 3 are in need of P&A
- 3 have only a surface plug, but BLM is calling them P&A’d.

MEMORANDUM

To: Senator Paskvan, Co-Chair
Senator Wagoner, Co-Chair
Senate Resources Committee

From: Representative Alan Dick, Sponsor

Date: March 29, 2012

RE: HJR 32 - REMOVE WOOD BISON FROM ENDANGERED LIST

I respectfully request that HJR 32 be scheduled for hearing before the Senate Resources Committee at the earliest possible convenience.

The resolution asks Congress to remove wood bison from protected status under the Endangered Species Act.

Removing them from the list would be the single most important action that could be taken to facilitate their reintroduction and recovery – as it would remove the obstacles that have prevented their reintroduction. It is their status as protected, and the onerous restrictions that accompany them, that have kept them from being released into the wild in Alaska.

For questions related to this bill, please contact my legislative aide, Paul Verhagen at 465-2847.

Sponsor Statement

HJR 32: Wood Bison

A Resolution urging The United States Congress to remove wood bison from protection under the Endangered Species Act of 1973 and to grant control of wood bison in Alaska to the state.

The Alaska Department of Fish and Game (ADF&G) has been working to re-introduce wood bison into Alaska for many years. Wood bison are listed as an endangered species under the Endangered Species Act. The introduction of an endangered species into the wild brings with it significant restrictions on resource development and felony charges if they are harmed or hunted.

Under certain circumstances waivers of some of these restrictions are available and ADF&G has worked hard to negotiate such waivers. Last year they successfully concluded negotiations with the United States Fish and Wildlife Service (FWS) and were preparing to release them into the wild when FWS notified them that a lawsuit had been filed challenging whether or not a protected species could ever be hunted.

At that time FWS notified ADF&G that it was willing to proceed with the rest of the negotiated agreement but not the hunting provision. ADF&G wisely elected not to proceed until such assurances are guaranteed. Although the hunting issue has since been resolved, in recent years numerous lawsuits, and petitions for injunctive relief, have been filed seeking to overturn already negotiated agreements or prevent new waivers from being approved.

An ever increasing number of these petitions or suits have been successful, thus the certainty of the negotiated rules cannot be guaranteed by the United States Fish and Wildlife Service - which removes the assurance that the waivers are intended to provide. If wood bison are reintroduced into the wild while they remain on the protected list hundreds of thousands of acres (if not more) of interior Alaska could be

added to the over 200 million acres of coastal Alaska that have recently been locked-up by the addition to the list of polar bears and beluga whales alone.

As a result there are only three reasonable responses to the current situation.

1. Work to facilitate their removal from the ESA by asking congress to intervene and remove them from the list as they did recently with the grey wolves in the Lower 48 states.
2. Release them onto an island and allow them to proliferate there until they are removed from protection at which time they could safely be reintroduced onto previously occupied lands.
3. Do not reintroduce wood bison into the wild in Alaska, even with negotiated agreements, as long as they remain on the ESA's threatened or endangered list.

HJR 32 addresses the first response.

HJR 32 Summary of Changes Version B to Version X (3.2.12)

- Removed unnecessary "whereas" statements.
  - Ver. B, p.1, lines 8-10,
  - Ver. B, p.2, lines 9-16.

- Distinguished between the State of Alaska and Department of Fish and Game in a few locations.
  - Ver. X, p1, line 10;
  - Ver. X, p3, line 5.

- Changed repeated references to the Endangered Species Act of 1973 to "The Act".
  - Ver. X, p1, lines 6, 14;
  - Ver. X, p.2, lines 13, 17, 21;
  - Ver. X, p.3, line 4.

- Noted that the Alaska Department of Fish and Game has successfully managed Plains bison in Alaska for more than 70 years.
  - Ver. X, p. 2, line 31.

- Added clarifying statements.
  - Ver. X, p.1, lines 11-12, 15;
  - Ver. X, p.2, lines 1, 6-7, 31.

Operating on Quicksand

The wisdom of voluntarily subjecting ourselves to the strings that are attached to bringing in an animal that is *already* on the threatened or endangered list is worth careful consideration.

With the addition of just one animal to the list (the polar bear) our state has already had more land "locked up" than all the land granted to us by the federal government at the time of statehood.

Last year Representative Dick filed HB186 in an effort to prevent the Alaska Department of Fish and Game (Fish and Game) from introducing wood bison into the state without approval by the legislature. Between then and now import things have happened with regards to the Endangered Species Act.

After several states spent years working to get grey wolves removed from the list they found themselves extremely frustrated when one court would rule in their favor and another court would rule the opposite.

Eventually they took their case to congress. In a surprise move, congress intervened and exempted the grey wolf from the Endangered Species Act and made their decision "not subject to review by the courts".

From our perspective a similar action by congress would resolve our problems - the bison could be released into the wild *without* the restrictions that come with the act and they could be managed by our State Department of Fish and Game – just as the plains bison have been successfully managed for over 70 years.

In an effort to urge Congress to intervene on our behalf we are seeking this House Joint Resolution that encourages congress to exempt wood bison from the act.

Representative Dick recently received a letter from Geoff Haskett, Regional Director of the United States Fish and Wildlife Service (Fish and Wildlife Service).

Regional Director Haskett takes issue with some of the statements we've made in the resolution and explains that Fish and Wildlife Service has worked closely with Fish and Game in an effort to release the bison into the wild.

We acknowledge that the Service is diligently working to comply with the rulings from the numerous cases that are making their way through the courts. The ink is barely dry on the last ruling before the next ruling is out! That is the point we are making - Fish and Wildlife Service is constantly chasing a moving target and the situation is only getting worse.

The Endangered Species Act may have been created with the best of intentions by people with a sincere concern for the environment, many of whom are working diligently to accomplish those goals – but today it is also being exploited by litigants whose goals appear to be not so much to protect endangered species or the environment but rather as a means of accomplishing other purposes. The consequences are that group after group brings suit after suit and one after another of the resulting rulings invalidate

agreements that were painstakingly worked out by the stakeholders. This undermines the purpose of the act.

While referring to the wolf issue the Secretary of the Interior, Ken Salazar, said

> "The fact is, after years of lawsuits, wolf de-listing got stuck in unacceptable gridlock, acrimony and dispute. The debate was consuming Fish and Wildlife Service resources that could be spent recovering other species."

We don't lay this issue at the feet of the Fish and Wildlife Service. They have no choice but to respond to the suits that are filed, but it is becoming increasingly clear that there are other forces with other agendas that are at work here. James Thompson from the University of Wyoming is quoted as saying[1]:

> "wolf recovery is [only] a 'stalking horse' for the larger issue of land use change." Even environmentalists have admitted that "on the deepest level the issue of...wolf recovery is not about wolves. [Instead] it is about control of the west" (Askins 1993:5). Simply put, environmental-ists are using wolf recovery and the Endangered Species Act to run ranchers out of the country and to thwart multiple use of public lands. It is also a way for animal-rights and antihunting groups to ban all hunting and use of wildlife. Is this what Congress had in mind when it passed the Endangered Species Act? There is no evidence to even remotely suggest that it is".

In the same letter Regional Director Haskett disagreed with our position that – as a result of litigation, implementation of current law serves to defeat its original purpose.

He offers proof that our assertion is wrong by stating that for over 35 years the ESA has prevented the probable extinction of hundreds of species (a position that many disagree with) – but we are *not* disagreeing with what may have happened in the past. We are pointing out that after many years of working towards the goal there are still no wood bison roaming the wilds of Alaska and, as clearly stated by wood bison biologist Bob Stevenson, in the Department's publication *Wood Bison News*, it *was* because of litigation:

> "recent litigation has raised a question about whether the FWS can allow hunting of a species that are protected under the ESA...The result is that the ESA regulations have been delayed".

Regional Director Haskett states that after extensive communications with the Washington office the service director reached a decision that supports future hunting of wood bison – but that underscores our point that *we are all operating on quicksand*. What if regional director Haskett had not gone to bat for us? And nothing guarantees that his successor will be as accommodating as he is or that even he himself will remain free in the future to be as accommodating as he may have been.

Director Haskett concludes his letter with assurances that the Service is working with the state to designate Alaska's wood bison as a nonessential, experimental population that would provide the state with the assurances that they have requested. But the bottom line is that if wood bison weren't under the "protection" of the Endangered Species Act they would already be wandering the wilds like the plains bison are and there wouldn't be any fear of our lands and resources being locked up. And if there weren't elements working against the assurances that Alaska wants, it would not have taken this many years to get to the point that we're still not there.

---

Why are plains bison living in Alaska?

> Plains bison originally lived only in southern Canada and in the lower 48 states. They were introduced to Alaska in 1928, and four herds of plains bison totaling about 900 animals now live in the state. Wood bison would not be released near existing herds of plains bison to maintain the genetic integrity of the subspecies.

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/bison_faq.pdf

Cost to state to hold Wood Bison in captivity:

> It's costing the state about $100,000 per year to house, feed and care for the bison, the state's wood bison biologist, Bob Stephenson at ADF&G in Fairbanks, said.

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/woodbison_news6.pdf

There's nothing else can hold us back:

> "There's nothing else that can hold us back at this point," wildlife planner Randy Rogers with the Alaska Department of Fish and Game in Fairbanks said this week. [August 2010]

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/woodbison_news6.pdf

ESA Regulation Issue Delays Wood Bison Release:

Due to a delay in completing regulations under the Endangered Species Act (ESA) the release of Wood Bison to the wild will be delayed until 2013 or beyond.

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/woodbison_news6.pdf [p. 1]

"The 10(j) rule would designate wood bison in Alaska as a nonessential experimental population, provide protection for other land uses and resource development and allow the state to have the lead role in managing wood bison populations. It would also prevent the designation of critical habitat."

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/woodbison_news6.pdf [p. 1]

...under section 4(d) of the ESA, which would specify the sideboards of state management and allowable "take" of wood bison.

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/woodbison_news6.pdf [p.1]

In Fall 2010 it appeared that the draft regulations would be published in the Federal Register, accomplishing their central purpose of ensuring that releasing a new species onto the landscape would not interfere with other resource development activities. However, these plans hit a snag due to factors not directly related to wood bison, as we explain below.

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/woodbison_news6.pdf [p.1]

One of the key provisions in the draft 4(d) rule was to recognize that once bison populations reached a level that could support a sustainable harvest (about 400 animals), regulated hunting would be allowed based on principles outlined in management plans developed by the state in cooperation with land owners, FWS and other agencies, and other interested parties. ADF&G has always been committed to the principle that the benefits of wood bison restoration including harvest must be shared by local residents, other Alaskans, and eventually visitors to our state.

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/woodbison_news6.pdf [p.2]

However, recent litigation has raised a question about whether the FWS can allow hunting of a species that are protected under the ESA. As a result, FWS recently indicated that at this time they are not prepared to authorize future harvests of populations of listed species (except for certain kinds of "take" otherwise authorized under the ESA) that have been designated as non-essential experimental. In March 2011, FWS informed ADF&G that they could either publish a proposed rule by the end of April 2011 without a provision allowing future hunting, or wait for several months until the issue could be further discussed and hopefully resolved.

http://www.adfg.alaska.gov/static/species/speciesinfo/woodbison/pdfs/woodbison_news6.pdf [p.2]

ADF&G decided that the ESA regulations must provide certainty in terms of allowing a future harvest and that the issue is too important to be deferred to a future regulatory process. The result is that the ESA regulations have been delayed.

Wood Bison News – Issue Number 1, Winter 2005

The future legal status of wood bison in Alaska was recently clarified following a review by the U.S. Fish and Wildlife Service (FWS). The Alaska Department of Fish and Game also reviewed the issues surrounding the legal status of wood bison and agrees with the conclusion reached by FWS. Wood bison are listed as a threated species by Canada and as a foreign listed species in Canada under the U.S. Endangered Species Act (ESA). Because the species is listed in Canada, certain permits are required to import or export wood bison. In October 2004, the FWS determined that should wood bison be restored to Alaska the ESA would not need to be modified to add the imported population as endangered or threatened and that it does not intend to revise the list to include domestic wood bison populations. This means that wood bison in Alaska would have the same legal status as other resident wildlife and would not be listed as threatened or endangered in the U.S.

ADF&G has been exploring the possibility of restoring wood bison since 1991, in cooperation with various U.S. and Canadian agencies, tribal governments, and public groups.

Wood Bison News - Issue Number 3, Spring 2007

The members of this diverse advisory group showed a willingness to work together to achieve the common objective of returning wood bison to the wild in Alaska.

ADF&G believes that wood bison restoration in Alaska represents an outstanding wildlife conservation opportunity and that wood bison restoration will ultimately provide benefits for local and non-local hunters and wildlife viewing enthusiasts. It is clear that wood bison are compatible with other wildlife species in the state and can play an important role in restoring and maintaining natural processes. The wood bison restoration project also has significance beyond Alaska. Wood bison restoration in Alaska would help to achieve several goals in Canada's Wood Bison Recovery Plan and will contribute to international efforts to restore the ecological role of bison throughout North America.

AWCC has worked closely with ADF&G for several years to develop the capacity to serve as a temporary holding facility for wood bison stock for restoration efforts.

In 2003, the U.S. Fish and Wildlife Service transferred 13 wood bison to AWCC. There are now 22 animals in the wood bison herd, and additional calves are expected this spring. About 65 acres in three separate enclosures have been set aside for wood bison.

Additional wood bison that could be imported from Canada in early 2008.

we hope to import wood bison stock from Canada in winter 2007–08, and complete preparations to release wood bison into the wild by spring 2010 or 2011.

Wood Bison News - Issue Number 4, Winter 2008-09

Last June Alaska's wood bison restoration effort moved closer to the goal of reestablishing wild populations when **53 young wood bison were transported** by truck from Elk Island National Park

(EINP) near Edmonton over 2,000 miles **and released** at their temporary home **at the Alaska Wildlife Conservation Center (AWCC).**

The successful transport is an important milestone in the restoration effort, which had its beginnings in the early 1990s, when Athabascan elders in the Fort Yukon area shared historical accounts describing how bison were an important resource for interior Alaska Natives as recently as a few hundred years ago. It is not often that we have an opportunity to restore an indigenous species to large expanses of high quality habitat in its original range. There is a lot of work left to do, but we are now a big step closer to seeing wood bison, one Athabascan name for which translates as "***big, hefty one on the land***," roaming free again in interior Alaska.

Many people submitted comments emphasizing the importance of both local and non-local hunters having opportunities to share in future harvest of wood bison.

Several comments addressed the status of wood bison under the Endangered Species Act (ESA). Most of these comments emphasized the need for ADF&G to continue to work with the U.S. Fish and Wildlife Service (USFWS) and others to ensure that any risk of wood bison restoration interfering with other resource development is minimized.

There were a significant number of comments that recommended putting wood bison on state lands at Minto Flats where implementation costs would be lower because of road access and which is largely under the control of state land managers and the Alaska Board of Game.

Because there is little to no federal land in the Minto Flats area the Alaska Board of Game will have responsibility for decisions about subsistence use and future harvest allocation.

In 1978, the Committee on the Status of Endangered Wildlife in Canada initially assessed wood bison as endangered. This status was improved to threatened in 1988, thanks to successful recovery actions under the Canada National Wood Bison Recovery Program.

Since 1967, Elk Island has provided disease-free [plains] bison for reintroduction throughout North America. Established as Canada's first wildlife sanctuary in 1906, then declared a national park in 1913, Elk Island is Canada's only entirely-fenced national park. Located less than an hour away from Edmonton, Elk Island National Park protects the wilderness of the aspen parkland, one of the most endangered habitats in Canada. This beautiful oasis is home to herds of free roaming plains bison, wood bison, moose, deer, and elk. Also boasting over 250 species of birds, the park is a bird watcher's paradise.

Both Commissioner Lloyd and Larsen specifically thanked Bob Stephenson for conceiving the concept, working with Athabascan elders to document the presence and use of bison, and continuing efforts to restore the species in Alaska over the past 15 years.

Close to 15 years were required to reach this first step. On June 19th, 53 wood bison bolted out of the livestock vans in which they had spent the previous 50 hours into an enclosed area at the Alaska Wildlife Conservation Center at Portage, Alaska. ***Finally, the wood bison project was REAL!***

Status of Wood Bison Under the Endangered Species Act Revised
By Bob Stephenson

As was explained in the wood bison Environmental Review, the U.S. Fish and Wildlife Service (FWS) made a determination in 2003 that although wood bison are listed as "endangered in Canada" under the Endangered Species Act (ESA), wood bison brought into Alaska would not need to be listed as endangered. In December 2007, during the process of reviewing ADF&G's application for an import permit, the FWS revised this determination. A November 2008 letter from the Director of the FWS states, "The wood bison is listed as endangered wherever found and, as such, would retain its endangered status if introduced into the United States." In this letter the FWS also expressed support for the state's effort to reestablish free-ranging wood bison in Alaska. Because at times in the past

there had been public opposition to proposed reintroductions of endangered species due to concerns about restrictions on other land uses and activities, in 1982 Congress added a provision to the ESA to designate specific reintroduced populations of endangered species as "nonessential experimental populations" (NEPs). This is the provision of the ESA has been used for the reintroduction of wolves into Yellowstone National Park, black-footed ferrets, condors and other species. Under an NEP designation regulatory restrictions can be considerably reduced to make the reintroduction more compatible with other land uses.
ADF&G is working with FWS to designate wood bison in Alaska as an NEP. This will help ensure conservation of wood bison, minimize the potential for regulatory conflicts with other land uses great deal of time and effort to develop that support. However, without it there is no doubt in my mind we would have failed to get this far. There were times during the past decade and a half when the project was "half a bison hair" from being stopped. It is only through the growing and unflinching support of many organizations, agencies, and members of the public that we now have wood bison stock to use in restoring these animals in the wildlands of Alaska.
The essence of my message is a simple "thank you." There are too many individuals and organizations for me to name them in this short piece. But, as they say, you know who you are. Each and every contribution in time, money, or moral support was absolutely critical for the all-important first step of getting wood bison from Canada to Alaska.

While this change in the status of wood bison under the ESA adds to the complexity of the project, in the long run this approach will prevent legal challenges that could be more disruptive to the project and other land uses.

On November 4 and 5 about 18 people participated in a successful effort to move 32 wood bison through the recently completed bison handling facility at AWCC. The handling involved the bison transferred to AWCC in 2003 as well as their offspring.

Wood Bison News - Issue Number 5, Fall 2010

This winter we will initiate planning and prepare for the first release of wood bison in the lower Innoko River area in spring 2012.
A release in 2012 depends on completion of several important tasks.

Concern about possible impacts on other resource development activities due to the Endangered Species Act (ESA). As people who have been following the wood bison project may recall, in 2007 ADF&G proposed to begin planning for the Minto Flats site first. In January 2009 Doyon, Ltd., the regional Native corporation for interior Alaska, distributed a report that outlined their concerns that wood bison reintroduction could result in restrictions on oil and gas or other resource development. The state is also concerned about potential effects on resource development due to the ESA and wants to proceed with wood bison reintroduction in the most cautious and prudent manner possible to ensure that other resource development activities are not impeded. As a result, the Governor's Office asked ADF&G to work with the Alaska Department of Natural Resources (DNR) to evaluate the potential for other resource development at the three sites being considered for wood bison restoration and other areas to determine where wood bison could be reintroduced with the least risk to other resource development

Doyon is actively exploring for oil and gas on Yukon Flats and Minto Flats. There is also a proposal to construct a natural gas pipeline from the North Slope to Anchorage and one possible route would cross the eastern edge of Minto Flats. DNR is proposing to move forward with the Nenana-Totchaket agricultural project west of Nenana and is concerned that if wood bison are reintroduced on Minto Flats it might result in conflicts with agriculture similar to those involving the Delta plains bison herd. There is less potential for oil and gas or mineral deposits and no major resource developments proposed at the present time within the lower

Innoko wood bison area. The proposed Donlin Creek mine is located about 30 miles southeast of potential wood bison habitat; however the prospect is located in hilly terrain where wood bison are not likely to go.

At AWCC there are about 40 cows old enough to have calves and eleven bulls old enough to breed.

At AWCC, we currently have 6 five-year-old bulls and 5 ten-year-old bulls.

There are now 80-some wood bison at AWCC and Mike tends to them every day.

Wood bison are currently listed as "endangered" under the ESA, but the two regulations that will be proposed later this year would change this status. One is a special rule that will designate wood bison in Alaska as a "nonessential experimental population," or NEP, under section 10(j) of the ESA, and then specify how they will be managed. The special rule is designed to promote the conservation of wood bison and ensure that other land uses and natural resource development projects are not impeded by complications related to the ESA. Critical habitat cannot be designated with a NEP designation in place, The special rule will also allow "incidental take" so that if wood bison are harmed or killed during resource development or other lawful activities, enforcement actions will not be taken. FWS is also reevaluating the current ESA listing as endangered and may change the status of wood bison to "threatened" throughout their range, or possibly remove wood bison from the list of endangered species. The proposed rules are likely to be published in late 2010. Once public comments have been evaluated, final rules will be published, and FWS hopes to finalize the NEP designation late next summer.

Bison cannot be released until the NEP designation is in place, and an Environmental Assessment (EA) has been completed according to the requirements of the National Environmental Policy Act. The EA will be available for public comment at the same time as the proposal to designate wood bison in Alaska as a NEP.

The State of Alaska will not reintroduce wood bison until regulations are in (Continued from page 9) place that will prevent adverse effects on other resource development activities that are important to Alaska's economy.

The testing program includes the bison imported from Elk Island National Park (EINP) Canada in June 2008 ("2008 group"), the bison which had been transferred to AWCC by the U.S. Fish and Wildlife Service in 2003 ("2003 group"), as well as all offspring that have been born at AWCC.

The first handling in Alaska was conducted in November 2008 and involved only the 32 bison in the 2003 group.

In February 2010 we conducted the third health testing operation. This handling was more challenging. The entire herd of about 80 bison had to be handled twice in less than a week to conduct the USDA certified "caudal fold" test for TB.

Births and Deaths Thirty nine calves have been born since wood bison first arrived at AWCC in 2003. We have not encountered any infectious disease issues other than parasites, but there have been 16 mortalities, with 11 of those since March 2009. While we can determine the cause of some deaths (e.g., traumatic injuries such as fighting or goring from other bison), in other cases the cause of death is not entirely clear. (39 births minus 16 deaths leaves an increase of 23 over the total number imported).

Wood Bison News - Issue Number 6, Summer 2011

Due to a delay in competing regulations under the ESA the release of wood bison into the wild will be delayed until 2013 or beyond.

The 10(J) rule would designate wood bison in Alaska as a non-essential experimental population, provide protection for other land uses, and resource development and allow the state to have the lead role in managing wood bison populations. It would also prevent the designation as critical habitat. This would be accompanied by a special rule, under section 4(d) of the ESA,… would specify the allowable take of wood bison.
(paraphrased: This negotiated section required that once the herd reaches 400 animals that the state could allow hunting by local residents, other residents and eventually visiting hunters - as a management tool.)

However recent litigation has raised a question about whether the FWS can allow hunting of species that are protected under the ESA. (page 2)

NOTE: This is an example of why we are concerned. ADF&G can negotiate an absolutely perfect agreement with FWS under the 10(J) or 4(D) sections but anyone with enough money (like the numerous environmental interests) can file a law suit and a federal judge somewhere, who has nothing to do with Alaska, can rule that the agreement is invalid.

ADF&G decided that the ESA regulations must provide certainty in terms of allowing a future harvest and that the issue is too important to be deferred to a future regulatory process. The result is that the ESA regulations have been delayed. The first release cannot be implemented in 2012 as planned and will have to be delayed until 2013.

NOTE: Given the above how can ADF&G expect certainty when lawsuits can and are being filed regularly and are resulting in regular changes to how the ESA is implemented? The only certainty that we have is that a present there are no wood

bison in the wild in Alaska. Unless and until wood bison are removed from the ESA lists (and all resulting litigation is resolved) we should not release wood bison into the wild in Alaska.

Our herd at AWCC is a healthy growing herd with 102 bison. This spring 18 calves were born. …We grew concerned when five animals died between January and April.

There is a page in this issue that explains the action of the finance subcommittee relating to wood bison and Representative Dicks bill – HB 186 and how it could affect the release of wood bison into the wild.

The point has arrived when many people are wondering why we would even consider proceeding with such a project for the sake of a hundred head of wood bison when so much is at stake with doing so.

It is clear that the intention of the environmental groups is to lock up all of Alaska through whatever means are available to them. After successfully locking up hundreds of millions of acres along our coasts by means of the Polar Bears, Beluga Whales, etc. they have now turned their efforts to get Plains Bison onto the threatened or endangered list which would then result in locking up many thousands of more acres in the Delta, Farewell, and Copper River portions of the Interior. And if the state is foolish enough to put Wood Bison on the Ground in the Lower Yukon massive amounts of additional acreage could be locked up in that part of the interior as well.

Congress, in a First, Removes an Animal From the Endangered Species List

By **FELICITY BARRINGER** and **JOHN M. BRODER**

Congress for the first time is directly intervening in the Endangered Species List and removing an animal from it, establishing a precedent for political influence over the list that has outraged environmental groups.

A rider to the Congressional budget measure agreed to last weekend dictates that wolves in Montana and Idaho be taken off the endangered species list and managed instead by state wildlife agencies, which is in direct opposition to a federal judge's recent decision forbidding the Interior Department to take such an action.

While the language on the Rocky Mountain wolves was a tiny item in budgetary terms, environmental groups said it set an unnerving precedent by letting Congress, rather than a science-based federal agency, remove endangered species protections.

The rider is the first known instance of Congress' directly intervening in the list. While Congress overrode the protections extended to a tiny Tennessee fish called the snail darter about two decades ago, it did so by authorizing the construction of a dam that had originally been tabled to protect the fish. In that case, Congress did not overturn scientists' findings about the fish's viability.

There are myriad restrictions and budget cuts for environmental initiatives in the proposed budget. Most appeared modest compared to the more drastic cutbacks in the original House budget. Federal agencies were still working through the extensive and complex list provided by Congress on Tuesday, trying to determine what their impact might be.

Among the cuts were $49 million from programs relating to climate change, $438 million from programs supporting energy efficiency and renewable energy, $638 million from environmental cleanup efforts by the Defense Department and $997 million from revolving funds through which the Environmental Protection Agency provides money for local water treatment and pollution cleanup programs.

The budget rider on the wolves, backed by two Western legislators — Senator Jon Tester, Democrat of Montana, and Representative Mike Simpson, Republican of Idaho — requires the Interior Department to adopt its earlier plan,

removing wolves from the endangered list in those two states because it deemed that the states' management plans, which include hunts of the animals, were acceptable.

The rider also precluded judicial review of this provision.

The wolf issue has great political resonance among the ranchers and hunters of Montana. The first group is concerned about livestock; the second about declines in elk and moose herds. Senator Tester is up for re-election in 2012.

The fact that the department is being required to do what it had originally intended to do did not take the edge off arguments from environmental advocates that Congress had crossed a crucial line.

Michael T. Leahy, the Rocky Mountain region director for the group Defenders of Wildlife, said in an interview Tuesday, "Now, anytime anybody has an issue with an endangered species, they are going to run to Congress and try to get the same treatment the anti-wolf people have gotten."

A spokeswoman for Interior Department said it would have no comment on the budget rider.

State officials want the population culled because of the threat wolves pose to elk, moose and deer. Ron Aasheim, a spokesman for the Montana Department of Fish, Wildlife and Parks, said Tuesday, "We need to be able to manage them as a state to balance them with other wildlife and landowner impacts pertinent to livestock."

The two sides had recently reached a proposed settlement of a federal lawsuit brought by environmental groups against the Fish and Wildlife Service and Idaho and Montana officials. But the judge, Donald W. Molloy, rejected the settlement.

Ken Salazar, the interior secretary, declined to comment on how all the proposed cuts would affect operations at his department. He did note that the agency responsible for regulating offshore oil and gas development would get an increase in money, allowing it to hire dozens of new inspectors, scientists and other officials.

Interior Department officials would not discuss the bill's elimination of a program to expand wilderness areas in the West, a program prized by Mr. Salazar but bitterly opposed by many lawmakers from the region who argue that it will limit development of natural resources, hunting and recreational uses of public lands.

The National Park Service and the Fish and Wildlife Service take relatively modest cuts.

Conservation programs at the Department of Agriculture will be reduced by $800 million, while the agency's Environmental Quality Incentives Program will be cut by $350 million, essentially ending its financing for the rest of the fiscal year, officials said.

An E.P.A. spokesman, Brendan Gilfillan, said agency staff members were reviewing the spending measure. "We will have more details when that review is complete," he said.

Justin Gillis contributed reporting from New York.

Montana judge allows Congress to remove wolves from endangered species list

Julia Zebley at 10:46 AM ET

[JURIST] A judge for the US District Court for the District of Montana [official website] ruled [order, PDF] Wednesday that Congress' removal of the Northern Rocky Mountain Wolf [Yellowstone Insider backgrounder] from the Endangered Species Act (ESA) [materials], not through amending it but through attaching a "wolf rider" to an appropriations bill, was legal. As a result, state hunting quotas to control the wolf population will be allowed in Idaho, Montana, Oregon, Washington and Utah. Judge Donald Malloy, citing a similar Ninth Circuit ruling as binding, declared the move lawful, if not distasteful:

This case presents difficult questions for me. The way in which Congress acted in trying to achieve a debatable policy change by attaching a rider to the Department of Defense and Full-Year Continuing Appropriations Act of 2011 is a tearing away, an undermining, and a disrespect for the fundamental idea of the rule of law. The principle behind the rule of law is to provide a mechanism and process to guide and constrain the government's exercise of power. Political decisions derive their legitimacy from the proper function of the political process within the constraints of limited government, guided by a constitutional structure that acknowledges the importance of the doctrine of Separation of Powers. That legitimacy is enhanced by a meaningful, predictable, and transparent process.

Plaintiffs in the suit, the Center for Biological Diversity [advocacy website] were disappointed [press release] in the outcome: "Although wolf numbers have risen, the job of wolf recovery in the northern Rocky Mountains is far from complete." The Interior Department [official website] also released a statement [text] on Wednesday stating that the wolf recovery plan was a success and hunting can begin anew.

Controversy began over the Northern Rocky Mountains Wolf in 2009, when US Fish and Wildlife Services [official website] removed [federal registrar notice, PDF] them from the ESA, after a controversial Interior Department memo was published that several animals should be taken off the list despite their numbers not being at a sustainable level. However, Fish and Wildlife Services only gave control of the wolf population to state governments in Montana and Idaho, restricting the wolves in Wyoming under Federal guidelines. In August 2010, Judge Malloy ruled that it was improper to remove restrictions in one jurisdiction and not another, and put the wolves back on the ESA entirely. In response, the "wolf rider" was

attached to the Department of Defense and Full-Year Continuing Appropriation Act of 2011 [materials] bill, which became law in April. This reissued the previous rule, including the restrictions for hunting in Wyoming

What's the Cost?
Private Property, Public Use

By Charles E. Gilliland

Currently, many property owners and environmentalists are locked in a controversy about the need for compensation when environmental regulations limit property uses. Essentially this disagreement results from divergent concepts of the nature of private property rights. This article explores these two views, outlines the fundamental difference between them and explains why compensating owners may provide a superior result when compared with a purely regulatory approach.

Traditional View

The implementation of various environmental laws, but most notably the Endangered Species Act, has created a confrontation between property owners on one side and environmentalists and government agencies on the other. This dispute centers on rival concepts of the basic nature of private property rights that ultimately focuses on the methods used to finance environmental preservation. The traditional view of private property is founded on the belief that individuals have a right to gain the fruits of their labors. By combining their industry with land, individuals create wealth and thus are inherently justified in claiming exclusive rights to the property they own.

Responding to this belief, the founding fathers incorporated protection for private property in the Bill of Rights by barring government's taking private property for public purposes without compensating the owners. The goal is to leave a property owner economically whole when a public taking becomes necessary and to have the public share the cost of a public project.

Protected by this Fifth Amendment guarantee, owners have the incentive to pursue the wisest use of their property guided by the preferences and mores of society. Personal gain from increasing values leads owners to produce the goods that are in demand. As a result, property owners generally conserve and care for their property rather than exploit or destroy it recklessly. Without these guarantees, individuals have few incentives to conserve resources.

Two centuries of American development have institutionalized the eminent domain process to provide just compensation for public takings of private property. When roads, dams, floodways and other public projects require private property, owners receive monetary or in-kind settlements that reflect the market value of their properties prior to the taking. Creation of national wildlife refuges on private lands resulted in compensation to owners. As national parks and national forests expanded, owners were compensated with cash or land. Although owners sometimes feel short-changed, the eminent domain process has served well to transfer property to public projects while leaving the previous owners economically intact.

Providing for preservation of endangered species and wetlands appears to fit this time-honored tradition. In creating the Aransas Wildlife Refuge that serves as home to the whooping crane, for example, the government purchased and permanently set aside an area for the endangered species. This process left private property owners' wealth unchanged and provided a home for the threatened creatures. Similar preserves could be acquired for more recently identified endangered species.

Alternative Perspective

For several reasons, proponents of environmental preservation reject the idea of compensating owners for losses resulting from regulations. The Endangered Species Act regards all threatened creatures as deserving equal protection. Species such as the pacific yew may hold secrets for treating cancer and provide valuable service to countless generations. Accumulating these benefits indicates an enormous value for such a specie. Because no one knows which specie harbors this kind of potential use, all species, including non-descript beetles, blind salamanders, prairie chickens and pandas, are equal under the act. Thus, the benefit of salvaging each endangered specie is assumed to be infinite.

Since the act was adopted, the numbers of species classified as endangered have multiplied. Currently, U.S. Fish and Wildlife Service lists 632 endangered species in the United States (January 1994). The public budget simply cannot stretch far enough to purchase a home for them all. Requiring compensation to property owners would necessitate choosing which species can be preserved within budget constraints. Current law, however, does not contain a mechanism for making such choices.

Another view of property rights eliminates the need to compensate current owners for restrictions on property uses. Under this doctrine, nonowners have a stake in the way owners manage properties; current owners then are stewards temporarily entrusted with the property to preserve it for the public and for future generations. From this perspective, property is not a justified claim but rather an entitlement granted to individuals by the public stakeholders.

Property ownership then becomes similar to a driver's license, which can be revoked or modified at any time. Owners–or licensees–can pursue only those activities that have been approved by licensing authority. In other words, any land use not previously approved by the

government conceivably could be prohibited unless the government first grants permission. Government could even bar previously allowed uses as societal values change.

These differing views have collided as agencies have fashioned regulations to accomplish the objectives of various environmental laws. For example, the Endangered Species Act makes it a crime to "take" an endangered creature, be it bald eagle or beetle. The act further defines *take* to include harassment of the creature in question, and the U.S. Fish and Wildlife Service has extended the law to cover modification of habitat even when the endangered creatures are not present. These actions have forbidden many previous property management practices such as removing cedar, building fences or even driving a tractor near the endangered animals.

The celebrated cases of the spotted owl in the Northwest and red-cockaded woodpecker in the South illustrate the effects of this kind of regulation. In another widely known case, the act precluded California homeowners from plowing firebreaks around homes near Los Angeles because the area contained habitat for an endangered kangaroo rat. As a result, several homes that could have escaped destruction burned to the ground when wildfires swept through southern California. Similar cases have been documented throughout Texas and the nation. Property rights advocates believe that such regulations restrict entire areas of privately owned land to use as endangered species habitat. Advocates of the alternate view believe the regulations simply preserve endangered resources without changing property rights.

To Take or Not To Take

Many landowners and property rights advocates view these regulations as a serious abrogation of their property rights. They reason that such regulations clearly preclude or severely restrict profitable uses of their land and, in effect, take their property without just compensation. They retain the obligations of property owners but no longer reap the benefits. Few, if any, potential buyers want property with such restrictions in place. Because of this decrease in demand, the market value of their holdings has markedly diminished. The regulations have provided a good to society, namely preservation of endangered species, while imposing the cost on selected property owners.

Advocates of the entitlement view of property insist that a "taking" has not occurred. Rather, they believe, the actions instituting the regulations reflect a change in social values that places a premium on preserving the rapidly diminishing biodiversity of the earth. Under this system, owners can still use their property as they choose if the use does not transgress these new societal norms. Property owners have not lost the right to use their property in another fashion, these advocates contend, because they never really had that right in the first place. This kind of regulation is similar to the adoption of zoning without grandfathering; the regulations are simply adjusting behavior to the new social climate. This view holds that compensation should not be required.

The new societal norms reflected by this view see private habitat modification as an enormous cost to this and succeeding generations. By prohibiting any modification, the government keeps current owners from imposing those costs. From this perspective, the action is much like barring landowners from dumping pollutants on others.

On the other hand, private owners of land with endangered species habitat have managed their property in a manner that has sustained habitat. Because there has been no mechanism to pay them for that activity, these owners have provided this benefit to society without compensation.

Battleground

Battles surrounding property rights issues currently are being fought in the courts, in congress and in the court of public opinion with much of the controversy focusing on just compensation issues. In 1960, the Supreme Court ruled in the case of *Armstrong vs U.S.* that the costs of providing public goods should not be imposed on selected individuals. Consequently, if preservation of endangered species is a public good, the cost of preservation should be spread to all beneficiaries. Dealing with regulatory impact on land values in the *Lucas* case, the U.S. Supreme Court ruled that new regulations destroying all or substantially all of the economic value of an owner's property require compensation to that owner. Now the *Dolan* case, argued before the U.S. Supreme Court in March 1994, has the potential to further clarify the circumstances when regulation requires compensation.

Meanwhile, environmentalists are urging congress to renew the endangered species act with its current provisions intact. In response, some property owners have organized to protect private property rights. Property rights advocates are pushing for legislation that specifies when regulation becomes a "taking" requiring compensation. Further, these groups are lobbying to amend environmental acts to require compensation when regulations become burdensome. Finally, property rights advocates believe that all environmental legislation should require reasonable cost-benefit analyses before regulations are imposed.

Search for Cooperation

Although this struggle appears to affect only selected property owners, the outcome has broad implications. First, restricting property use may cause values to fall. Second, if owners are not compensated for declines, their net worth will fall, reducing their ability to participate in economic activity. Even with reimbursement, the value of property-based assets will decline. Lenders have begun to express concern about this potential new source of risk. Because of the prospect of value losses, lenders may reject these properties as security for loans, leading to reduced borrowing power among property owners. Third, declining values on affected properties may reduce tax bases and force local taxing jurisdictions to raise tax revenues from the remaining pool of value. And finally, government actions that seem to so readily restrict control of property because of endangered species lessens the certainty of everyone's property rights.

The regulatory approach taken on this issue excludes private property owners from active participation in the solution. In fact, property owners are also part of the public with unique opportunities to contribute to the solution. The current approach to these property owners ignores the potentially powerful influence of compensation in pursuit of environmental goals.

Precedents for reaching a cooperative solution exist. Faced with continuing erosion on fragile lands throughout the country, environmentalists, agricultural policy administrators and farmers and ranchers cooperated to establish the Conservation Reserve Program (CRP). The CRP made soil conservation, an environmental good, a priority for landowners by providing direct payments to owners or operators. The program consisted of a ten-year lease agreement between farmers and the government during which the farmer returned highly erodable cropland to grass with no grazing taking place. Between 1986 and 1992, more than 36 million acres were enrolled in this program, preserving an average of 19 tons of soil per acre per year. In this case, landowners were enlisted as partners in the drive to reduce soil erosion.

Compensation may further contribute to the solution because it imposes discipline on all sides in the decision-making process. Studies demonstrate that individuals respond one way when choosing between costly alternatives for which they bear no cost and another way when the choice requires money from them. Not surprisingly, individuals consume more of a good when someone else pays for it than they do when acquisition requires a personal sacrifice.

When individuals can opt for endangered species preservation without defraying part of the cost, they will likely opt for preservation at all cost. Further, without compensation, landowners have the incentive to adopt management practices that discourage endangered species from entering their land and to limit the amount of available habitat. Without lease payments, it is unlikely that CRP could have produced the more than 375,000 individual contracts that it elicited.

As history has demonstrated, governments can redefine the bundle of rights held by property owners. However, our traditional regard for property owners' rights have made compensation the norm, and owners are unlikely to surrender the use of their property without compensation or a prolonged struggle. Perhaps a more cooperative approach based on recognizing current owners' contributions to the drive to restore endangered species would achieve the desired results at a minimum cost. Because of the large numbers of species and extent of their habitat, compensating owners could be so costly that the public would not support blanket preservation. If budget constraints preclude outright purchases, perhaps leases similar to the CRP contracts could be devised or government could fashion a tax credit for owners who promote habitat production.

Given the potential pitfalls of the current course, a search for alternatives based on eliciting cooperation may yield a more effective method of achieving the objectives of environmental legislation. Without cooperation, the goal of environmental preservation will be subject to a continuing series of legal and political battles.

An Alternative Perspective on the Endangered Species Act

by William A. Niskanen

This article appeared on cato.org *on April 21, 1995.*

As a registered Republican in the District of Columbia, I have some experience and a special concern for endangered species. My brief remarks tonight are best summarized as follows:

> Long live the Endangered Species Act of 1969.

As you may know, the first general federal measure to protect endangered species was approved in 1966. That act authorized the Secretary of Interior to identify species of native fish and wildlife threatened with extinction and to purchase habitat for their protection and preservation, and directed all federal agencies to protect these species and preserve their habitats "insofar as is practicable and consistent with [the agencies] primary purposes."

The 1969 act maintained the general structure of the 1966 act but expanded the authority to purchase land, broadened the potentially protected species to include invertebrates, and authorized the Secretary of Interior to list foreign species threatened with worldwide extinction and banned the importation of these species except for narrow scientific purposes. So far, so good. That was a law that we could live with.

The general structure of the law, however, was changed substantially by the Endangered Species Act of 1973, with minor amendments in later years. Two provisions of the 1973 act were probably desirable by themselves. The scope of protected organisms was broadened to include threatened species, endangered subspecies, and regional populations. And the limit on spending from the Land and Water Conservation Fund that could be used to purchase habitat was removed. These changes acknowledged that the choice of which organisms to protect and how much to spend to maintain their habitat are basically political decisions that should not be subject to arbitrary scientific or fiscal restraints.

Section 4 requires that species be listed "without reference to possible economic or other impacts." In a 1978 case, the Supreme Court interpreted this language to conclude that "the value of endangered species is incalculable", a listed species must be protected "whatever the cost", and that the language of the act "admits no exception." Such language, in effect, prevents a political decision about whether it is worthwhile to protect a specific organism.

Section 7 prohibits any action by a federal agency that would jeopardize a listed species or substantially modify its habitat. The most important of other federal activities, apparently, is subordinate to the interests of the least significant rat, roach, or weed on the endangered species list.

Section 9 states that no person may "take" a listed organism, where "to take" has been defined to include "acts to annoy it to such an extent as to significantly disrupt essential behavior patterns." This section is outrageous in at least four dimensions:

- This section turns our constitutional protections against government taking of private property upside down. In effect, this section expropriates any listed organism and its habitat without any of the three constitutional tests of due process, public use, or just compensation. Any private action that interferes with this newly asserted government right, then, is considered a taking and the basis for a penalty.
- This section is grossly unjust, by imposing the cost of a national or global public good on the owners of specific properties, rather than some national tax base.
- The power to take private property without compensation leads to inflated demands by those most concerned about biodiversity, because the demand for increasing the list of endangered organisms is not limited by the value of alternative uses of federal revenues.
- This power leads to counterproductive behavior by the owners of private property, who have a strong motiive to destroy the habitat of organisms before they are listed or determined to be on their property.

Given these major sections of the Endangered Species Act of 1973, one should not be surprised that by its history of rapidly increasing costs and few apparent benefits. As with most regulations the costs to government, estimated at $290 million in 1992, are only the tip of the iceberg. The total cost of the recovery plan for a single species can run into billions. The accumulation of reports of the effects on individual property owners should be sufficient witness to the injustice of the distribution of the private costs.

Most of the political pressure to date has been to increase the protected list, and the Fish and Wildlife Service has responded at an accelerating rate--adding 26 species a year through 1989, 68 species a year from 1990 through 1993, and 72 in the first half of 1994. The Service is now considering 400 additional listings by October 1996.

By several measures, however, the benefits of this act are small. A total of 21 species have been removed from the protected list--7 were declared extinct, 12 due to incorrect listing, one due to the ban on DDT prior to the act, and one unexplained recovery. The status of those species on the protected list is no more encouraging. Of the 711 species on the protected list in September 1992, the status of 10 percent were improving, 28 percent were stable, 33 percent were declining, the status of 27 percent were unknown, and 2 percent were thought to be extinct. Less than 60 percent of the listed species had a recovery plan and of these, more than 80 percent had not achieved half of the objectives in their plan. One wonders what purpose is served by further additions to the protected list when the success rate has been so low to date. Faced by this same record, however, supporters of this act seem to conclude that "When at first you don't succeed, redouble your effort."

Federal endangered species legislation must be substantially restructured. Current law would lead to a progressive restriction on other federal activities and private land use, a spreading revolt of small property owners and local governments, and slower economic growth--without any reason to expect an improved record of protecting endangered species. The basic features of an Endangered Species Act that would be effective, efficient, just, and constitutional, I suggest, are the following:

- Return to the basic structure of the 1969 act or, at a minimum, deleting sections 4, 7, and 9 from the 1973 act.
- Broaden the Land and Water Conservation Fund to include any federal subsidies or purchase of easements to preserve wetlands and historic properties as well as the habitat for endangered species. The allocation of funds among these several objectives would be based on a periodic political decision. This would put several environmental constituencies in competition with each other to make the case to Congress and the administration to spend more for their specific objective.
- Endow this fund with the net federal revenues from offshore oil and gas leases, the Alaska Natural Wildlife Reserve, and the sale of federal land. This would give the environmental constituencies a stake in the economic value of these properties and encourage a reallocation of land from uses with low relative environmental values to uses with higher relative environmental values.

One effect of an Endangered Species Act with these basic features would be to restore the role of politics on the decisions about how much to spend on various environmental activities and on the balance between the protection of endangered species and other federal activities. These political decisions would be informed by scientific, economic, and moral considerations but would not be subordinate to any one of these dimensions. I am prepared to acknowledge that the value of protecting any one endangered species is incalculable but it is not infinite, so the institutional challenge is to structure and inform the political choice--not to replace it.

One other effect is to limit the demands per biodiversity by how much of other environmental values one is prepared to forego to protect a specific species. At present, the demands for additional listing are nominally limited only by five dubious scientific criteria but are effectively driven by the political pressure from environmental groups.

A most important third effect is to reward property owners for maintaining or creating habitat for endangered species rather than penalizing them for a failure to do so. This would transform the incentives of property owners from counterproductive behavior to cooperative behavior and eliminate the gross injustice of forcing them to pay most of the cost of a national public good.

In conclusion, as my remarks should have made clear, I value biodiversity but it is not my only value. The endangered species that I most value are men and women who have the freedom to choose among the several conditions they value. And our challenge is to design institutions and decision processes in which these choices are most compatible with the value of others.

Again, long live the endangered species act of 1969.

And I wish that I had a comparable solution to protect the threatened taxpayers and endangered Republicans in the District of Columbia.

Thank you for your attention.

Wolf Recovery, Political Ecology and Endangered Species

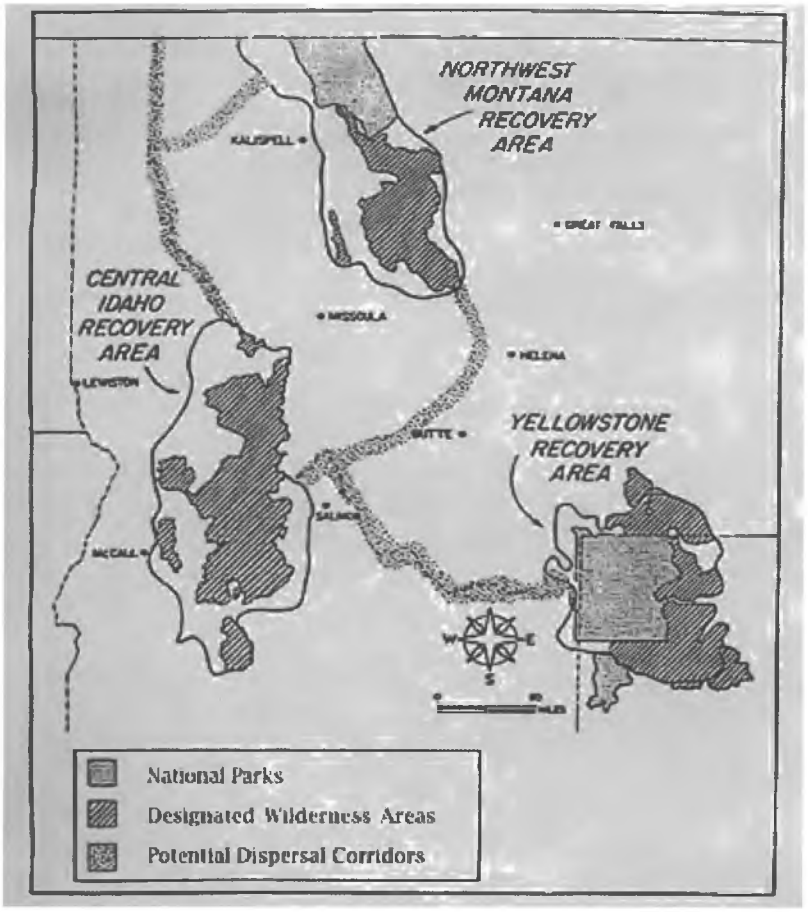
The federal government and environmental groups who would like to see wolves returned to the West under protection of the Endangered Species Act (ESA) claim that the public supports wolf recovery, and that science is on their side. The former director of the National Park Service, for instance, was quoted as saying that "there is little scientific basis for most objections being raised to wolf reintroduction" (Fischer 1987:30). Others contend that "half-truths and misrepresentation of facts continue to thwart" (Miller 1988:5) wolf recovery, and Defenders of Wildlife has said that people who oppose wolf reintroduction are "aggressively anti-science" (Neal 1992:A8). Are wolf proponents right? Or are there aspects of this issue that they have purposefully overlooked?

I am committed neither to having wolves in the West nor to keeping them out. I am committed, though, to science being used responsibly in policy debates, something I have not yet seen with wolf recovery. My analysis indicates that the federal government and other wolf advocates have taken liberties with the truth, with science, and with the Endangered Species Act.

NUMBER OF WOLVES

Far and away the most important aspect of the wolf debate is how many wolves we are talking about 100? 300? Or 2,000? The number of wolves is central to any discussion of whether predation will limit ungulate numbers, whether hunting might have to be curtailed or eliminated, and how much livestock depredation might occur. When Defenders of Wildlife first began to lobby for wolf reintroduction, they talked of "35 to 45 wolves" in all of Yellowstone Park (Randall 1981:31). This was echoed by an early National Park Service (1975:5) report, which said, "the final numbers [of wolves] that would winter within the park and be compatible with other interests on adjoining lands are expected to range between 30 and 40 wolves." Now plans call for 10 wolf packs totaling approximately 100 wolves in Yellowstone.

In 1987, the U.S. Fish and Wildlife Service finalized its recovery plan for wolves in the northern Rocky Mountains as mandated by the Endangered Species Act. Besides Yellowstone, the plan addresses wolf recovery in northwest Montana and central Idaho (see Figure 1). According to that document, if a minimum of 10 wolf packs breed in any one recovery area for three successive years, the wolves in that area are to be downlisted from endangered to threatened status. When at least 10 breeding pairs have been maintained for at least three successive years in all three recovery areas, wolves are to be completely removed from the Endangered Species List. While the wolf is listed as either threatened or endangered, hunting and trapping are not to be permitted except by agents of the federal government who may remove individual wolves that prey on livestock (U.S. Fish and Wildlife Service 1987).



[**Figure 1.** Northern Rocky Mountain wolf recovery areas. This map is from the U.S. Fish and Wildlife Service's (1987) wolf recovery plan and shows how that agency has misled the public from the very start. Note that all the wolf dispersal corridors follow the Continental Divide or other mountaintops. Wolves, however, generally disperse in early spring, when those areas are all deep with snow, and they invariably disperse down valleys where there is little or no snow. This was well known before the U.S. Fish and Wildlife Service developed its wolf recovery plan, so the agency evidently lied when it developed this figure. Western valleys, after all, are mostly private land, and ranchers are worried that wolves will prey on their livestock. So if you are trying to promote wolf recovery, which is what the U.S. Fish and Wildlife Service has been doing, then the last place you want to tell the public wolves will be dispersing is through those people's backyards. By claiming that wolves would disperse along high mountain chains that are, for the most part, uninhabited and in public ownership, the U.S. Fish and Wildlife Service hoped to reduce public opposition to wolf reintroduction. Where wolves from Canada have naturally recolonized northwest Montana, those animals have not only dispersed along valley bottoms, but denned there as well.]

Government and environmental wolf advocates have assumed that breeding packs would contain, on average, 10 wolves. This implies that each recovery area would be downlisted from endangered to threatened at approximately 100 wolves. At 100 wolves in each of the three recovery areas, or 300 total wolves, the species would be removed from the endangered list. According to the U.S. Fish and Wildlife Service (1987:19), "the goal of 10 breeding pairs in each of three recovery areas was established after extensive literature review and consultation with a number of U.S. and Canadian biologists/wolf researchers," but the agency published none of that evidence. So how did the government actually arrive at these figures? And are they realistic?—that is, do they meet ESA requirements?

To find out, I filed an official Freedom of Information Act request with the U.S. Fish and Wildlife Service (Buterbaugh 1991). In reply, the agency admitted that it had "not contracted or undertaken any studies which deal with minimum viable populations of the Northern Rocky Mountain wolf," and added that "there are no records in the files of our Denver Regional Office or the Cheyenne Fish and

Wildlife Enhancement Office referencing any specific materials [which were] used in determining recovery numbers for the Northern Rocky Mountain wolf." I brought this to the attention of noted conservation biologist Dr. Michael Soule, who said, "My guess is that the 10-pack number is more a political than a biological threshold."

Because the U.S. Fish and Wildlife Service developed its recovery goals of 10 wolf packs and 100 wolves in each area with little, or no, supporting scientific evidence, all the government's recent wolf recovery reports, population models, and studies regarding possible impacts on big-game hunting are arbitrary and capricious. They represent not science but a masterful job of deception.

To meet the legal mandate of the Endangered Species Act and biological requirements for minimum viable population size, 1,500 to 2,000 wolves as one interbreeding population will be required (see Figure 2). Although the science of determining minimum viable population size is still developing, numbers alone are not the only criteria (Soule 1987). Genetic variation must also be considered. Maintaining genetic variability is important because inbreeding has serious consequences for the long-term health of any population. Restrictive mating systems, where a few individuals do the majority of breeding, greatly reduce a population's effective size.

Assume, for instance, that you have 10 breeding packs totaling 100 wolves. Since the alpha male and female are usually the only breeding individuals in each pack, a hypothetical population of 100 wolves in 10 packs has an effective breeding size of only 20 individuals per generation. To maintain genetic variation sufficient to cope with environmental uncertainty, and to guard against natural catastrophes, it is necessary to maintain populations of at least 1,500 to 2,000 individuals (Woodruff 1989; Thomas 1990). A Canadian study recommended a minimum of 1,450 wolves (Dueck 1990), and a recent U.S. study called for 2,000 (Dietz 1993).

Based on their arguments for large minimum viable populations in a host of other species—the northern spotted owl and the grizzly bear being the best-known examples—it is difficult to believe that environmental groups have not voiced similar concerns over wolf recovery goals in the West. After a federal court ruled that 2,180 pairs of, or approximately 4,500, spotted owls were necessary to meet ESA requirements (Boyce and Irwin 1990:134) and environmentalists sued demanding 2,000 grizzlies, why would only 300 wolves be enough? It appears that the 100-wolf recovery figures are little more than an elaborate confidence game orchestrated by the federal agencies and others.

The government proposed 100 wolves in each area, knowing that the numbers would not be enough to meet ESA requirements of minimum viable population size, and environmental groups did not object, knowing that 300 wolves would raise less political opposition than 1,500 to 2,000 wolves. Wolves arrive and increase to 300. The government moves to delist. Environmentalists sue and win. The wolf population is allowed to reach 1,500 or more. Environmentalists are happy, the federal agencies are happy, and the public realizes—too late—what has happened.

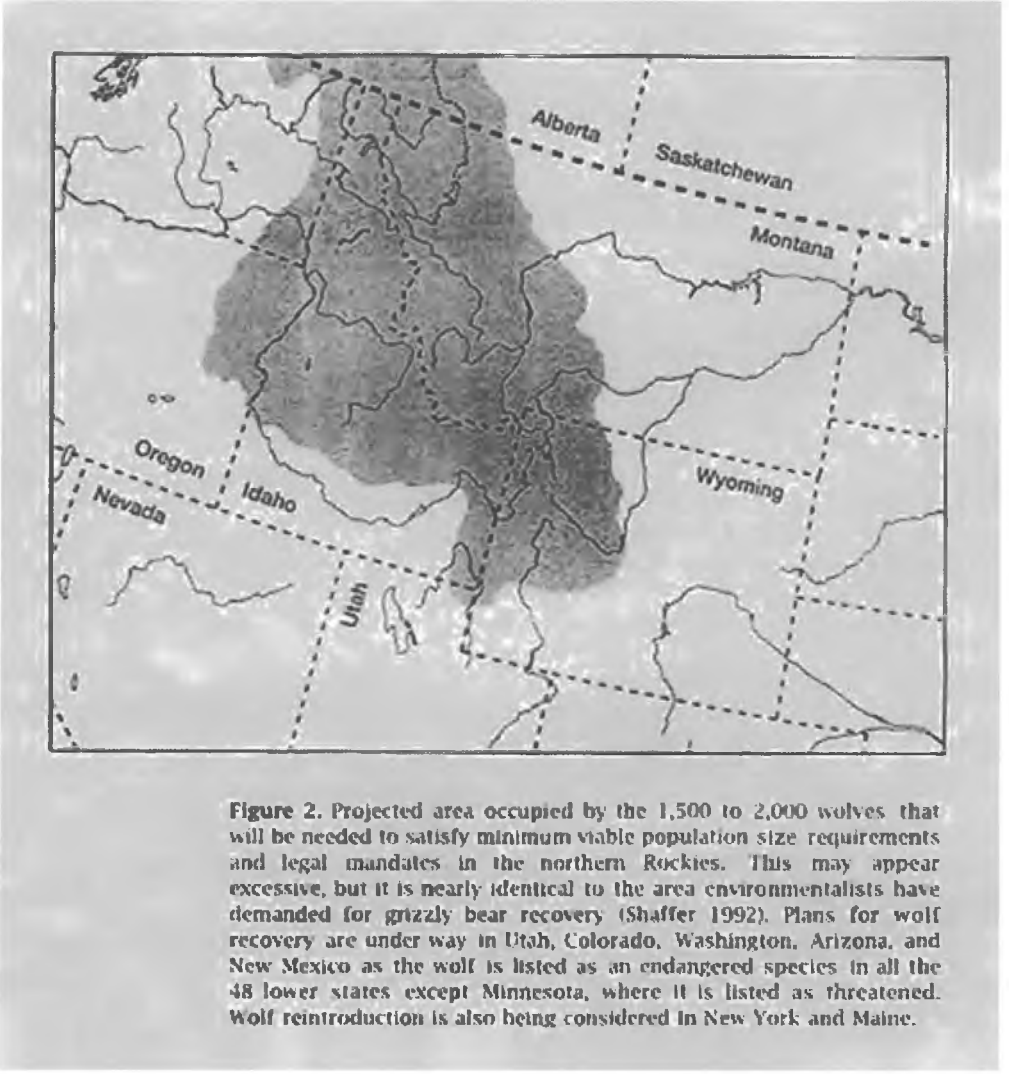


Figure 2. Projected area occupied by the 1,500 to 2,000 wolves that will be needed to satisfy minimum viable population size requirements and legal mandates in the northern Rockies. This may appear excessive, but it is nearly identical to the area environmentalists have demanded for grizzly bear recovery (Shaffer 1992). Plans for wolf recovery are under way in Utah, Colorado, Washington, Arizona, and New Mexico as the wolf is listed as an endangered species in all the 48 lower states except Minnesota, where it is listed as threatened. Wolf reintroduction is also being considered in New York and Maine.

[**Figure 2.** Projected area occupied by the 1,500 to 2,000 wolves that will be needed to satisfy minimum viable population size requirements and legal mandates in the northern Rockies. This may appear excessive, but it is nearly identical to the area environmentalists have demanded for grizzly bear recovery (Shaffer 1992). Plans for wolf recovery are under way in Utah, Colorado, Washington, Arizona, and New Mexico as the wolf is listed as an endangered species in all the 48 lower states except Minnesota, where it is listed as threatened. Wolf reintroduction is also being considered in New York and Maine.]

Minnesota provides an example of how the federal courts might rule on the legal question of what wolf population size will be required before that species can be delisted in the northern Rockies. In the early 1980s, an estimated 1,200 to 1,500 wolves occupied 13 to 17 million acres in Minnesota. At that time, the U.S. Fish and Wildlife Service proposed transferring wolf management authority to the state. This would have allowed wolves to be taken by hunters and trappers. In essence, though not in fact, the government moved to delist the wolf. The federal agencies were immediately sued by a consortium of 14 environmental groups led by Sierra Club and Defenders of Wildlife (Woodsum 1984).

In granting the plaintiff's request to prevent wolves from being returned to state management, the judge noted that the Endangered Species Act allows regulated taking (i.e., public hunting and trapping) only in the "extraordinary case where population pressures within an ecosystem cannot be otherwise relieved" (Sierra Club v. Clark, 577 F. Supp. 783, 1984; Defenders of Wildlife 1984). Based on this ruling, federal or state officials must be able to establish, by a preponderance of evidence, that

wolf population pressure in an ecosystem is so extraordinary as to warrant public hunting and trapping. Given the limited resources of the state and federal agencies and the biology of the species, it will be virtually impossible ever to meet the bur-den of proof established by the court under the Endangered Species Act. If 1,200 to 1,500 wolves were not enough to return that species to state management in Minnesota, it appears doubtful that 100 animals in each of three separate areas would be sufficient to delist wolves in the northern Rockies. There are now more than 2,000 wolves in Minnesota, yet the U.S. Fish and Wild-life Service still has not returned wolf management to the state.

There is also the additional problem of linkage. Wolves in Minnesota have now clearly surpassed the number needed to remove that species from the Endangered Species List (Harrison 1991), yet the U.S. Fish and Wildlife Service has no plans to delist the eastern timber wolf because wolf populations in the neighboring states of Wisconsin and Michigan are far short of the goals established under the Eastern Timber Wolf Recovery Plan (U.S. Fish and Wildlife Service 1978; Harrison 1991). Delisting the wolf in one area, Minnesota, is linked to wolf numbers in two adjacent states, so despite reaching the recovery goal in Minnesota, that wolf population will not be returned to state management, will not be subjected to hunting or trapping, will continue to increase, and will continue to expand its range throughout Minnesota and adjacent states. Wolves have already been reported in both North and South Dakota (Licht and Fritts 1994).

In fact, no one knows if the wolf population in Minnesota will ever be delisted. Wolves have been transplanted into Wisconsin and Michigan, but those animals, as well as natural migrants, have been killed by local residents. If the illegal killings continue and if those acts prevent wolf numbers in Wisconsin and Michigan from increasing, the wolf population in Minnesota will never be removed from the Endangered Species List under the present recovery plan. Even if there were 5,000 wolves in Minnesota, under current regulations, the species would not be delisted. This holds one state hostage to what happens in other areas.

A similar situation could develop in the northern Rockies. Remember that under the approved recovery plan, once wolves in any one of the three recovery areas reach 10 breeding packs (approximately 100 wolves) for three consecutive years, the population in that area will be downlisted from endangered to threatened status. That population, though, will remain under federal control, and hunting or trapping of wolves by the public will not be permitted. Only when all three areas simultaneously reach their recovery goals will the species be removed from the Endangered Species List and management returned to the states.

Assume that wolves are transplanted into or naturally reach central Idaho and Yellowstone (this has already occurred—see below). Say the wolves in Yellowstone reach their recovery goal of 100 animals and that the wolves already in northwest Montana do the same, but for whatever reason the wolves in central Idaho do not. Under this scenario and the present recovery plan, wolves in Yellowstone and Montana would remain under federal control, and those populations would be allowed to grow and expand their range. Even if there were 1,000 wolves in Yellowstone and another 1,000 in Montana, that species would remain on the Endangered Species List unless there were also at least 100 wolves in central Idaho. Sound far-fetched? Not at all. Remember, it is now happening with the eastern timber wolf.

Based on legal precedents and biological requirements for minimum viable populations, it is unlikely that published wolf recovery goals will withstand legal scrutiny or be upheld by the courts. Instead of about 300 total wolves, biology and legal precedents mandate 1,500 to 2,000 wolves as a continuous interbreeding population throughout the better part of Idaho, most of western Montana, much of western Wyoming, and perhaps even parts of eastern Oregon and Washington (see Figure 2). Needless to say, 1,500 to 2,000 wolves will have a much greater impact on ungulate numbers, hunting opportunities, and livestock operations than that projected in government reports. Since wolf populations can increase at 50 percent or more each year, and since wolves are known to disperse up to 200 miles or more, wolves will quickly repopulate the entire West.

It must also be remembered that the wolf is listed as an endangered or threatened species in all the 48 lower states and that plans are under way for wolf recovery in Utah, Colorado (Bennett 1994),

Arizona, and New Mexico. Washington state may already have more wolves than Montana. Wolf reintroductions are being considered for New York and Maine (Van Ballenberghe 1992), and the red wolf has already been released in the Southeast. Under the present Endangered Species Act, wolves must be restored to every state with suitable habitat; at least, that is how the act is being interpreted by environmental organizations.

When I (Kay 1993) first published this analysis of wolf recovery population goals, I was roundly condemned by the U. S. Fish and Wildlife Service. Subsequent events, however, support the analysis I have just presented. Montana and Idaho, for instance, recently issued draft plans for when wolf recovery will be turned over to state managers (Rachael 1995, Ream 1995). Both documents claim that 20 wolf packs are needed in each area before hunting and trapping will be allowed. Thus, they have effectively doubled the number of wolves needed to meet ESA requirements with as minimum of public review and without benefit of a supplemental EIS. Moreover, one environmental group has announced its opposition to delisting wolves in Montana, Idaho, and Wyoming until wolves are also fully recovered in Colorado (Anonymous 1995).

DO WOLVES LIMIT UNGULATE NUMBERS?

During the late 1800s and well into the mid-1900s, it was universally believed that predation in general, and wolf predation in particular, had a devastating impact on ungulate numbers. Wolves were considered such "a decided menace to the herds of elk, deer, mountain sheep [bighorns], and antelope" that the Park Service "exterminated" the wolf from Yellowstone by 1930 (Weaver 1978:9). Similar campaigns of eradication were common across North America. Public opinion, though, began to change during the 1950s and 1960s. Today wolves are seen by many as an integral part of the "balance of nature." According to this view, wolves rid the game herds of the sick, the old, and the unfit, so wolf predation actually benefits ungulate prey by preserving the health of the herds (Wilderness Society 1987:12; Glick et al. 1991:72; Thompson 1991).

These same people believe that wolves regulate their own numbers through social means, primarily territoriality, and therefore do not overutilize their ungulate prey (National Park Service and Fish and Wildlife Service 1990a:21, 1990b:1-57; Williams 1990:38). A corollary view is that wolf predation results in compensatory survival and natality in ungulate populations (National Park Service and Fish and Wildlife Service 1990b:3-42). According to this scenario, ungulate populations are food limited, and wolf predation, by removing some animals from the population, increases the food supply for the remaining ungulates. Since those animals are then better fed, they die less frequently and increase their birthrate, offsetting the effects of wolf predation. Scientific studies, however, have shown this logic to be an inappropriate representation of ungulate predator-prey systems.

Recent research in Alaska, as well as British Columbia, Yukon, Alberta, and other Canadian provinces, indicates that wolves and other carnivores limit ungulates more often than not (Seip 1989a, 1989b, 1991, 1992a, 1992b; Messier 1989a, 1989b, 1991, 1994; Bergerud 1990, 1992; Ballard 1991, 1992; Gasaway et al. 1992; Carbyn et al. 1993; Dale et al. 1994; Hatter and Janz 1994). These studies can be summarized as follows. (1) In many situations, wolves and other predators limit ungulate populations below the level set by food resources; that is, ungulates are not resource limited or "naturally regulated," and any compensatory response of the ungulate population to predators is not enough to offset predation losses. (2) Human predation and carnivore predation on ungulate populations are additive, not compensatory. (3) If grizzly or black bears are present, they often prey heavily on newborn and, to a lesser degree, adult ungulates. Wolf and bear predation are additive, not compensatory, and together they can have a major impact on ungulate numbers. In some areas, grizzlies kill more ungulates than wolves (Gasaway et al. 1992). (4) If ungulate populations have been reduced by severe weather, human hunting, or other causes, wolves and other predators can drive ungulate numbers even lower and maintain them at that level. This condition is commonly called a predator pit, and there is no field evidence that ungulates can escape from a predator pit even if hunting is banned, unless wolves and other predators are reduced by direct management actions, that is, predator control.

As Alaskan biologists have noted, "prey [ungulate] populations can reach extremely low densities under natural conditions, contrary to the 'balance of nature' concept" (Gasaway et al. 1983:6). Today, ungulate populations across most of Canada and Alaska are being kept at low levels by the combined actions of carnivorous predators even in areas where the ungulates are not hunted, such as in national parks.

It must be remembered that wolves limit ungulate numbers by reducing recruitment and increasing adult mortality, not by killing off all the game, instances of surplus killing notwithstanding. Take a hypothetical population of 100 adult female ungulates (for this analysis, we need not worry about the male segment of the herd). In any given year, a number of adult females die from natural causes, disease, or predation. When expressed as a percentage, this is termed the adult female mortality rate. In that same year, a number of calves or fawns are born, but those young also face disease, accidents, and predation, and only a few survive their first year of life to join the adult population. This is called the recruitment rate. For a stable population, recruitment must balance adult mortality. If recruitment is less than adult mortality, the population will decline, and if it is greater, numbers will increase (Bergerud 1990, 1992).

Research has shown that wolves and other predators prey most heavily on young-of-the-year, which lowers the recruitment rate of the prey populations. Predators also kill a few prime-age adults. By increasing adult female mortality and at the same time lowering recruitment, predators can cause ungulate populations to decline. Stabilizing recruitment for caribou is about 15 female yearlings per 100 cows. Caribou herds with few predators have recruitment rates of 20 to 40 per 100 cows, which allows those populations to increase, while caribou herds subject to heavy predation have recruitment rates of 10 or less (Bergerud 1990, 1992). So predation causes ungulate populations to gradually decline over time—wolves do not normally wipe out game herds in a single year or two.

This is what happened in Canada and Alaska (Seip 1989b). During the 1950s and 1960s, when wolf control was widespread and effective, game herds grew and the north country became known as a hunter's paradise. Government wolf control ended by 1970, and predator populations began to expand, but it took 10 years or longer before significant declines were seen in game herds. In Wood Buffalo National Park, for instance, there were approximately 12,000 bison when wolf control was terminated; today there are fewer than 3,500, and the population is still dropping. Wolf predation of calves has been identified as the primary factor responsible for that decline as the bison are not hunted (Carbyn et al. 1993).

Recent research has also demonstrated that multi-ungulate species systems, such as exist in Yellowstone and throughout the West, are actually less resilient than simpler predator-prey systems. Ungulate species vary in their susceptibility to wolf predation, and "wolves may limit the numbers of a more vulner-able, less abundant prey species [such as deer, bighorn sheep, or ante-lope] when wolf numbers are set by a less vulnerable, more abundant prey species," such as elk, moose, or bison (National Park Service and Fish and Wildlife Service 1990b:4-6). It has also been shown that wolves with access to alternative foods, such as that available at garbage dumps, maintain higher populations and reduce ungulate numbers to lower levels than would be possible if they did not have those other food sources (Crete et al. 1981). This is why bear predation can have a major impact on ungulate populations. Because the number of bears is determined primarily by vegetal foods, bears can take ungulates down to low levels without having an adverse effect on bear numbers.

Prior to European settlement in British Columbia, moose were virtually absent and woodland caribou were the most common ungulate. Wolves were rare because they were tied to den sites during the breeding season and therefore could not follow migrating caribou. Today, moose have spread throughout the province, permitting wolves to increase as they now have an alternative source of food. Those wolves, though, prey heavily on the more vulnerable caribou whenever the latter can be located. This has led to the widespread decline of woodland caribou in British Columbia. That is to say, caribou have declined because of the addition of moose to the predator-prey system (Bergerud et al. 1984; Bergerud and Elliot 1986; Seip 1989a, 1992a).

A similar situation may develop in Yellowstone and other wolf recovery areas where large elk populations could permit wolves to take smaller ungulate species, such as deer, to very low levels. In northern British Columbia, wolves caused a sub-stantial decline in the most vulnerable ungulate species and then switched to the next most vulnerable ungulate until it also declined. The wolves cascaded down the list of available ungulate species from the most vulnerable to the least vulnerable until all ungulate populations had been substantially reduced (Elliot 1989). Across Canada and Alaska, moose and caribou populations not subject to heavy predation have densities 10 times greater than populations where carnivore numbers are high (Bergerud 1990, 1992; see Table 1).

In its rush to wolf recovery, the U.S. Fish and Wildlife Service has tried to downplay the impacts wolves will have on western ungulate populations. While the agency has acknowledged that "wolves can play a role in depressing ungulate populations," it claims that "such conditions are not the norm in North America" (National Park Service and Fish and Wildlife Service 1990b:1-57). There is little evidence, however, in the original Alaskan and Canadian research studies to support this contention. The opposite appears to be more the norm; that is, predation depresses ungulate populations even when humans are allowed to kill predators.

The National Park Service and the Fish and Wildlife Service (1990a, 1990b, 1990c) also appear to have biased the computer codes on the two wolf-ungulate models they commissioned to support wolf recovery—those models predict that wolf recovery will have little impact on ungulate populations or sport hunting. In written testimony presented to the congressionally mandated wolf management committee, Dr. Robert Taylor, a noted modeler and predation expert, said in reference to one of the agencies' models that he was "forced to conclude that this is a wholly unacceptable effort. It relies on datasets of questionable utility...it employs obsolete simulation approaches, and it reflects inadequate attention to uncertainty in assumptions and parameters. Perhaps more serious, I do not see how it can be much improved."

Caribou population	Predation intensity	Mean caribou density (no./mi2)
Predators absent	None	19.30
Migratory herds	Moderate	2.80
Mountain herds	High	0.39
Eastern-forest herds	Extreme	0.08

[**Table 1.** The impact of carnivore predation on caribou populations in North America. In eastern Canadian forests where caribou have no effective antipredator strategy, wolves can take caribou populations to very low levels, especially in areas where wolves have alternative prey such as white-tailed deer. By dispersing to high-elevation areas to calve, mountain caribou avoid some of the effects of wolf predation, but wolves still have a significant impact on those herds. By migrating long distances, caribou can avoid most impacts of carnivore predation, but those populations still have lower densities than herds without predators. Long-distance migrations primarily evolved as a strategy to avoid predation, not as a strategy to secure additional food (Bergerud 1990, 1992; Seip 1991; Crete and Huot 1993:2295). Mean caribou densities from Seip (1991:47).]

While Taylor found that the other model (Boyce 1992) "contain[ed] some elements of a useful model for the YNP wolf-elk situation," he nevertheless added that it "falls short, however, in several aspects." According to Taylor, "the model is conceived in such simplistic terms that it cannot, at best, be expected to provide much more than a gross approximation to what will happen [if wolves are reintroduced because] it misrepresents the predatory impact of wolves and their internal population dynamics....The sensitivity analysis is inadequate, considering that many of the parameter values are mere guesses....The net effect of these problems is that none of the conclusions [on probable wolf-ungulate interactions] can be justified at this time." Since his testimony, Taylor obtained the computer codes for this model, made a single, yet reasonable, change to one of the model's assumptions of how wolves interact with their ungulate prey, and found that the model's output was drastically different from what has been published by the agencies; that is, the model is not robust.

Since the agencies modeled only the impact of 100 wolves in each of the three recovery areas, not 1,500 to 2,000 interbreeding wolves, since the models themselves are suspect, and since the agencies have not addressed the additive impacts of bear or mountain lion predation, the conclusion that wolves will have insignificant impacts on ungulate populations is not warranted and cannot be sustained. If these factors had been properly considered in a more realistic model, there is little doubt that the results would have been vastly different and would not have supported agency wolf recovery claims.

Environmentalists, however, like to cite Michigan's Isle Royale National Park as an example of a place where where large numbers of moose and wolves live in harmony (Mech 1970; Peterson 1977, 1995; Peterson et al. 1984; Peterson and Page 1988; McLaren and Peterson 1994). They also cite Isle Royale as proof that wolves have no effect on ungulate numbers. This, though, is incorrect because Isle Royale is not representative of predator-prey systems in the rest of North America. Moose densities on Isle Royale are 10 times higher than anywhere else in Canada where moose are subject to carnivore predation (Messier 1994). There are three major rea-sons for this difference.

First, of all North American ungulates, moose is the most difficult species for wolves to kill. If they have a choice, wolves will usually kill any ungulate besides moose. So the impact of wolves on Isle Royale's moose is less than if other ungulates inhabited the island. On islands off the Alaskan coast, for instance, introduced wolves killed off all the black-tailed deer (Merriam 1964; Klein 1970).

Second, there are no bears on Isle Royale. Again, this is not comparable to mainland situations; as noted above, it is generally the combined effect of wolf and bear predation that limits ungulate populations. In other words, where black and/or grizzly bears are common, as in the western parts of the United States and western Canada, the Isle Royale situation simply does not apply.

Third, as an island in Lake Superior, there is no immigration of wolves to Isle Royale. Moose first colonized the island in the 1920s, and a single pair of wolves arrived during the 1950s, but since that time no other wolves have reached the island (Wayne et al. 1991; Peterson 1995). Lake Superior seldom freezes, and Isle Royale is 20 miles from the mainland. Without immigration, when wolf numbers fall as the most vulnerable moose are killed off, the moose population rebounds faster than the wolves can recover. This allows the moose to "get ahead" of the wolves, something that does not happen in other areas. On the mainland, lone wolves and dispersing animals quickly reoccupy any area vacated by other wolves. This keeps wolf numbers high and allows those predators to exert a significant influence on their prey.

Finally, wolves and moose on Isle Royale do not represent some idyllic "balance of nature"; instead, that national park exhibits many signs of ecological degradation. Overgrazing has eliminated most understory shrubs and aquatic plants that moose prefer (Murie 1934; Hansen et al. 1973; Krefting 1974; Aho and Jordan 1979), and moose overbrowsing is so severe that even common tree species are declining (Brandner 1986; Risenhoover and Maass 1987; Brander et al. 1990; McLaren and Peterson 1994). By eliminating deciduous trees such as aspen, and at the same time promoting the dominance of unpalatable species such as spruce, moose have changed not only plant species composition but soil chemistry and soil fertility as well (Pastor et al. 1987, 1988, 1993; McInnes et al. 1992; Pastor and Naiman 1992). Clearly, moose overbrowsing has altered the eco-system over the entire island. Archaeologically and historically, there is no evidence that moose inhabited Isle Royale before the 1900s. Any moose that reached the island in pre-Columbian times would soon have fallen prey to Native Americans who, at least seasonally, inhabited Isle Royale (Kay 1994).

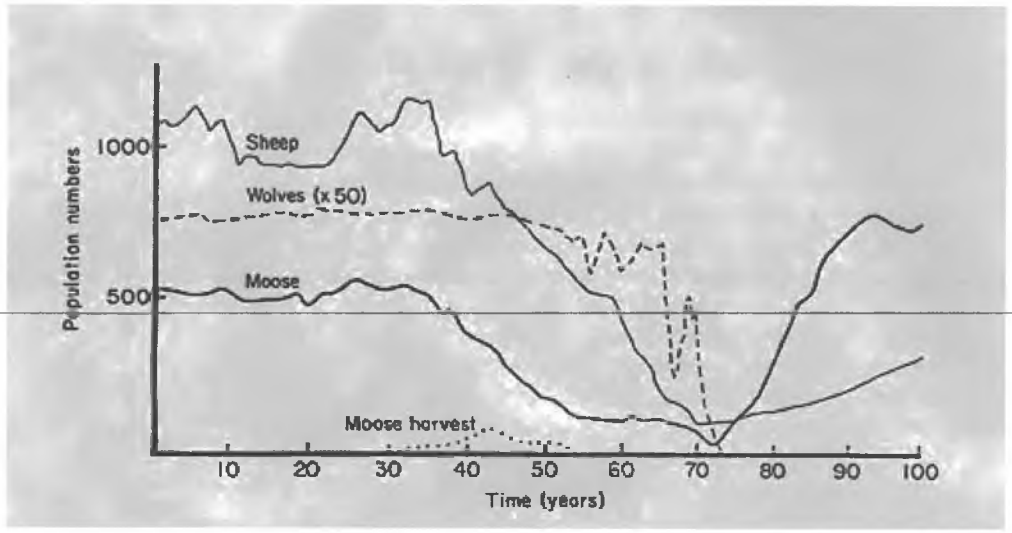
DO PREDATORS LIMIT HUNTING OPPORTUNITIES?

Sport hunting is a multibillion-dollar industry in the West (Loomis et al. 1985; Donnelly and Nelson 1986; Sorg and Nelson 1986; Duffield 1988). Not only is hunting important to economies in the area, but it is also a deeply held social tradition. So it is not surprising that many people have expressed concern about the impact wolf predation will have on western big-game herds and hunting opportunities. Groups who advocate wolf recovery, however, such as the National Parks and Conservation Association, contend that "fears over wolf impact on big-game hunting...are unfounded"

(Miller 1988:6). And according to government reports "sport hunting for any big-game species need not be eliminated or reduced just because wolves are restored" (National Park Service and Fish and Wildlife Service 1990a, 1990b:4-77 to 4-78, 1990c:6). This simply is not true, especially given the thousands of wolves that may ultimately come to inhabit the West.

With few exceptions, big-game guides and outfitters remain in business only if they can locate old-age male ungulates (i.e., trophy elk, trophy deer, etc.) for their paying clientele. Many local sports hunters also seek trophy animals. Fish and game departments in Wyoming, Montana, and Idaho are already under intense public pressure to improve the "quality" of big-game herds by managing for older-age males (Wildlife Division 1985; Montana Dept. of Fish, Wildlife, and Parks 1986). The departments have all instituted regulations that reduce male mortality so that their game herds will contain a greater proportion of older-age males. That hunters favor male ungulates is no secret. Even when either-sex permits are issued, hunters take an overwhelming preponderance of males.

Although it is commonly acknowledged that wolves and other carnivores normally kill a disproportionate number of young-of-the-year and old animals, few people realize that predators also take a disproportionate number of males. In one Minnesota study, over 70 percent of wolf-killed white-tailed deer were males, primarily older males (Mech and Frenzel 1971:41). Thus, there is little question that wolves and sport hunters would compete for many of the same animals. With a large population of wolves, fewer old-age male ungulates will be available to sports hunters. As in the case of Wood Buffalo National Park, wolves alone can completely eliminate any "surplus" ungulates that would otherwise be available for human consumption.



[**Figure 3.** Model of Alaskan wolf-ungulate interactions simulated under circumstances in which human harvest of moose triggered a decline in both predator and prey. Without hunting, wolf, moose, and Dall sheep numbers are low, but relatively stable. The addition of a small amount of human moose harvest, though, destabilizes the entire system. Even after hunting is halted, wolves continue to drive the moose population downward. The wolves then switch to Dall sheep and drive those numbers down as well. In this simulation, wolves go extinct before they can kill the few remaining ungulates, allowing prey populations to recover. Grizzly bear predation on newborn moose calves—and to a lesser extent, on adult moose—is also important in this system, but that factor was not modeled separately. Instead, grizzly predation was included in calculation of moose survival rates internal to the model. In this simulation, hunters removed less than 8 percent of the moose population annually, which is not an excessive harvest rate for systems without wolves, yet the moose population still declined. This illustrates the additive nature of wolf and human predation. In areas of Europe where predators are absent, hunters kill more than 50 percent of the fall moose population each year without any long-term decline in moose numbers. Adapted from Haber (1977) and Walters et al. (1981).]

The combined effect of sport hunting and wolf predation on a common ungulate prey can be seen in a computer simulation model developed for Alaska. Without hunting, wolf, moose, and Dall sheep numbers are low, but relatively stable. The addition of a small amount of human moose harvest, though, destabilizes the entire system (see Figure 3). Even after hunting is halted, wolves continue to

drive the moose population downward. The wolves then switch to Dall sheep and drive those numbers down as well. In this simulation, wolves go extinct before they can kill the few remaining ungulates, allowing prey populations to recover. This model was developed by wolf advocate Gordon Haber, and he uses it to call for a reduction of, or a ban on, sport hunting. According to Dr. Haber, ungulate populations subjected to wolf-bear predation can, at best, maintain a human harvest rate of only 6 to 7 percent, not the 20 to 30 percent common throughout areas of North America where wolves are absent (Warrick 1992).

The relationship of predators, ungulates, and hunting on a larger scale can be seen in a comparison of British Columbia with Sweden and Finland. Both areas are roughly the same size and contain approximately equal amounts of moose habitat. Yet during the 1980s, the overwinter moose population in Sweden-Finland numbered around 400,000 animals and was increasing, while the overwinter moose population in British Columbia numbered around 240,000 and was declining even though habitat was not limiting. Hunters in Sweden and Finland killed nearly 230,000 moose a year, whereas hunters in British Columbia har-vested only 12,000 to 14,000 animals per year (Child et al. 1991).

Although habitat conditions do vary, the overriding difference in the two systems is a virtual absence of predators in the Scandinavian countries. Wolves and bears are rare throughout Sweden and Finland, while wolves, grizzlies, black bears, and mountain lions are common in most of British Columbia. The effect of predation on hunting is seen when hunter harvest is compared to the size of overwinter moose populations. In Sweden-Finland, hunter harvest was 57 percent of the precalving moose population (Cedarlund and Sand 1991) while it was only 5 percent in British Columbia—an 11-fold difference. This suggests that unchecked predation by a combination of carnivores can reduce hunting opportunities by at least a factor of 10.

Simulation models of ungulate populations in eastern Idaho and along the East Front portion of northwest Montana's wolf recovery area indicate that where hunter mortality balances recruitment in stable ungulate populations, the addition of wolves will cause the game herds to decline. Those studies conclude that "the presence of wolves means that hunter harvest will likely [have to] be confined to male [ungulates] most of the time" (Peek and Vales 1989; National Park Service and Fish and Wildlife Service 1990b:3-164). In other words, antlerless seasons will have to be eliminated for many western ungulate herds because most of those populations are already subject to high levels of human harvest. So even if you are just a meat hunter, your hunting opportunities will decline precipitously as wolf populations expand to their full potential.

WOLF CONTROL

In its Northern Rocky Mountain Wolf Recovery Plan, the U.S. Fish and Wildlife Service (1987:33) claimed that "if predation on big-game herds is determined to be in significant conflict with management objectives of a state wildlife agency, wolf control that would not jeopardize wolf recovery would be considered." Other federal agencies have suggested that wolves may have to be killed "to control excessive predation on ungulates" (National Park Service and Fish and Wildlife Service 1990a:3). As one government report put it, "because some populations of prey [ungulates] that may be used by wolves are already harvested [by hunters] at near maximum sustained yield...it may indeed become biologically prudent to reduce wolf populations in some areas" (National Park Service and Fish and Wildlife Service 1990b:1-58). Is wolf control, though, a viable option? After reviewing the available evidence, I am forced to conclude that the federal government and other wolf advocates have mentioned wolf control only to placate sport hunters and to gain acceptance for wolf recovery, not as a statement of fact within the realm of even remote possibility.

Experience in Canada suggests that certain environmental groups will never allow wolves to be killed so that hunters can harvest more ungulates. Debate over British Columbia plans to experimentally reduce the number of wolves to see if ungulate populations would increase has been, to say the least, extremely political, protracted, and divisive (Archibald et al. 1991). In Alberta, ensuing controversy has prevented most wolf control (Gunson 1992). A spokesman for the 150,000-member Canadian Wildlife Federation declared that "wolf control should never be considered unless a prey [ungulate]

population is truly endangered, and the problem should always include a [total] ban on hunting" (Haley 1984).

Even in Alaska, where there are approximately 7,000 wolves, intense opposition, including several legal challenges, has effectively stopped the state's wolf control program. A recent proposal by the Big Game Board to kill 300 wolves to increase moose availability for subsistence and sport hunters was met with vocal objections orchestrated primarily by outside animal-rights organizations. Under a threatened international boycott of the state's tourist industry, Alaska's governor tabled plans for wolf control (Williams 1993).

Experience also suggests that opposition to wolf control is seldom ultimately based on scientific evidence, but rather on ethical and moral concerns (Clarkson 1989). Speaking on behalf of the World Wildlife Fund Canada, Monte Hummel (1989:140–42) asked, "Let's assume for the sake of argument that...in a politically neutral environment it can be scientifically shown that wolves are indeed the primary limiting factor on a given prey population, which incidentally I personally do believe to be true in many cases....Is it ethically justifiable to manipulate wild [wolf] populations to ensure that human predation [hunting] can be maximized?" The answer, he indicated, was no. A recent Canadian opinion poll found that 90 percent of the people surveyed were opposed to "killing of wolves to provide more big game for the hunting community" (Hoffos 1987:55).

Given these precedents, there can be little doubt that a wolf control program anywhere in the West would be subjected to intense scrutiny by the national media and the federal courts. The ensuing battle would pit sport hunters, ranchers, and others against antihunting and animal-rights groups from across the nation and around the world. Given the depth of emotions elicited in the past, the battle would be a political bloodbath. All parties in the western wolf debate should fully understand that wolf control, and especially wolf control to increase ungulate numbers for hunters, is unlikely to be allowed by the court of national public opinion, even if it were permitted by judicial courts. This, of course, assumes that wolves would somehow lose their endangered-species protection, for there is not a court in the land that would allow wolf control as long as that animal remains on the Endangered Species List.

It should also be realized that the wolf's impact on ungulate herds is really not a scientific issue with most wolf advocates. Their desire to have large numbers of wolves is based on value judgments (see below). As one person noted, "The wolf is almost a religious symbol to these people" (Dawson 1988). There is nothing wrong with value judgments. I object, however, when those arguments are shrouded in scientific cloth and the Endangered Species Act.

LIVESTOCK PREDATION

Most opposition to wolf recovery has come from livestock interests and their political allies. Even if wolves are somehow limited to only 100 animals in Yellowstone Park, approximately 20 to 40 wolves would disperse to surrounding areas each year, a fact whose significance has not been lost on ranchers bordering the park. In Montana, where wolves are naturally recolonizing the northern Rockies, individual wolves have moved "over 300 miles in just a few days" (Turner 1991) and one wolf was killed approximately 500 airline miles from where it was born (Pletscher et al. 1991; Ream et al. 1991). Even in areas with established wolf populations, wolves commonly disperse 30 to 100 miles, and dispersing wolves occasionally travel 400 to 500 miles. Stockmen are worried not only about how many of their sheep and cattle wolves may kill, but also about the costs associated with changing their management practices to accommodate wolves.

To alleviate these concerns, the U.S. Fish and Wildlife Service has developed interim wolf control plans for its northern Rocky Mountain recovery areas, including Yellowstone. According to those documents, wolves that prey on livestock will be killed or otherwise removed at the federal government's expense. The "control plans are based on the concept of wolf control to enhance propagation or survival of the species. Control of problem wolves is expected to reduce the hostility towards wolves that would result in illegal killing....[B]y removing the few wolves that kill livestock and [thereby] enhancing the survival chances of non-offending wolves, the FWS believes its control program will actually contribute to the

recovery of the wolf in the Northern Rocky Mountains" (National Park Service and Fish and Wildlife Service 1990b:1-29).

The federal agencies have also produced evidence showing that actual livestock depredations have been remarkably low in Minnesota, Alberta, and British Columbia (Fritts et al. 1992). Livestock operators, however, have questioned the applicability of those data to the western United States. They point out that the situations may not be comparable because the topography is different, ungulates make longer seasonal migrations, and colonizing wolves may behave differently than established populations, and besides, wolves in Canada can be shot on sight; that is, those wolves are not protected by the Endangered Species Act. Experience with Montana's naturally recovering wolves tends to support their concerns.

Most ungulates in the northern Rockies winter at low elevations near private lands and domestic livestock. Wolves would have to winter in those same areas, and they would probably also den there because pups are born early in the spring while most ungulates are still on their winter ranges. The ungulates, however, usually migrate to higher-elevation summering areas before wolf pups can leave their dens. This would place breeding wolves with high food demands in areas with few wild ungulates but abundant livestock. These circumstances may force wolves to prey on livestock to support their growing young.

This appears to be what has happened in Montana. For whatever reason, wolves outside of the Glacier National Park–North Fork of the Flathead area, where there are few livestock, have all denned in valley bottoms in relatively close proximity to humans. They have not stayed in wilderness areas. To date, nearly every one of those wolf packs has eventually turned to livestock and has had to be controlled. Based on the pattern observed in Montana, reintroduced wolves may cause a number of problems for neighboring ranchers. Within a week or so after wolves were transplanted to central Idaho in early 1995 (see below), one of those animals had already turned to killing livestock (Burns 1995). When wolves eventually reduce game populations (see above), the wolves will then be forced to kill even more livestock.

In Canada and Minnesota, the government compensates ranchers when they can prove that wolves killed their livestock, but this is not true in the western states. The federal government has no wolf compensation program, nor do state agencies; thus, wolf-killed livestock is another example of the government taking private property under the Endangered Species Act without compensation. In response to these concerns and in an effort to enhance wolf recovery by preventing "the development of a shoot-on-sight mentality," Defenders of Wildlife raised $100,000 to compensate ranchers for animals that will be lost to wolves. Those claims, though, must first be verified by federal agents or local officials (Fischer 1989, 1995). While this has been hailed by most wolf advocates as a good-faith effort on their part, it has been soundly criticized by the radical environmental group Earth First!, which sees Defenders' compensation program as another sub-sidy to ranchers. It believes wolves have "earned their right to be here merely by being native to North America. Earth First! favors a ram-it-down-their-throat approach" (Skeele 1991).

For their part, many ranchers are not entirely pleased with Defenders' compensation program, claiming that they are not raising animals to feed to wolves or other predators. Other ranchers have pointed out that Defenders will compensate them only for the market value of their dead livestock. For instance, if a wolf-killed cow had a market value of $600, the rancher would be given a check for that amount. The ranchers, on the other hand, claim that it actually costs them more than $600 to replace that cow. They point out that there are time costs and other expenses involved in (1) finding the kill, (2) getting a government agent to verify the kill, and (3) obtaining a replacement animal from a distant market and transporting it back to the ranch.

My personal experience with insurance suggests that the ranchers' position has some merit. When I first heard this argument, I must admit, I did not give it much thought—until I was robbed. While conducting research in Yellowstone, someone cut the back out of my tent and stole all my camping equipment. First I had to report the theft and have the sheriff fill out a report (verify the kill); then I had to deal repeatedly with my insurance company before receiving compensation; and finally I had to

replace all the lost equipment. Not only was my regular work schedule interrupted, for which I received no compensation, but I also spent the better part of two days finding and buying replacement equipment. The nearest town of any was 80 miles away, which would also be true if one had to buy livestock at auction. All in all, this experience convinced me that livestock interests have raised a valid point that should be given due consideration. Moreover, there is also a major problem in proving that missing livestock were actually killed by wolves.

Although some have viewed Defenders' compensation program as an innovative free-market approach to endangered species preservation, others claim it is only a public relations ploy designed to promote wolf introductions. As opponents note, Defenders has said that it will pay for verified livestock losses only as long as wolves are on the Endangered Species List (Fischer 1995). So when wolf populations become high and livestock losses increase, Defenders will no longer compensate ranchers. In addition, since Defenders' program has no force in law (Fischer 1995), it can be terminated at any time even if wolves are still on the Endangered Species List.

The federal agencies have stated that when wolf "depredations on livestock occur, control actions are imperative" and that offending animals will be dealt with "quickly and effectively" (National Park Service and Fish and Wildlife Service 1990b:1-55). The Park Service has stated that "wolves will be easy prey for trappers if killing them should become necessary" (Wise 1987). Experience in Montana, however, suggests that it may be difficult and expensive to control offending animals. When a pack of six wolves killed livestock on the Blackfeet Indian Reservation, government trappers were summoned to remove the offending animals. By its own admission, the federal government spent $41,000 on that wolf control effort, yet all the wolves were never killed (Dawson 1988). Another source put the total, "all costs considered," at perhaps $100,000 (Jonkel 1987).

In at least one case in Montana, members of the Wolf Action Group, an offshoot of Earth First!, attempted to disrupt government efforts to trap a wolf that had killed livestock near Kalispel (U.S. Fish and Wildlife Service 1991:14). Since wolves are very sensitive to human disturbances, all one has to do to defeat wolf control is to leave human scent on or near government traps, that is, urinate on them. If it becomes common practice for individuals or certain groups to interfere with government trappers, the offending wolves will be much more difficult to catch. Groups such as PETA (People for the Ethical Treatment of Animals) who oppose all hunting and killing of wildlife, have advised members to go into the field and physically prevent animals from being killed. If even a small, but dedicated, number of people decide that all killing of wolves should be prevented, the gov-ernment's claim that depredating wolves will be "quickly" re-moved may not be realized. In addition, some of the more radical environmental groups have suggested that they may sue to stop all wolf control. They contend that even killing depredating wolves is unlawful under the Endangered Species Act (Goble 1992).

WHY SHOULD WOLVES BE REINTRODUCED TO YELLOWSTONE?

During the early 1970s, the Park Service began to manage Yellowstone Park under a program called "natural regulation," where nature is allowed to take its course with minimal human interference. Without exception, environmentalists have been widely enthusiastic about "natural regulation." The same people who wholeheartedly are behind "natural regulation" also contend that wolves are needed, according to former Utah Congressman Wayne Owens, "to restore a balance to Yellowstone National Park. The wolf is the only missing piece" (Fischer 1988:17). "A principal predator is missing....[T]o have a large population of ungulates without such a predator in the system is not natural. It's an absence that has ecological significance" (Cauble 1986:24). When asked if they felt that wolves could help "maintain balanced wildlife populations" in Yellowstone, 91 per-cent of those interviewed said yes (MacNaught 1987:519). And others contend that Yellowstone is "a fairly intact ecosystem, except for the wolf. It's the missing link" (Schneider 1981:8).

Some have gone so far as to claim that in the absence of wolves, Yellowstone's elk and other ungulates have overpopulated the park and overgrazed the range. Speaking for Defenders of Wildlife, Dick Randall (1980:189) said, "The solution to a good part of the [elk] overpopulation problem comes softly on four feet, weighs about a hundred pounds, believes strongly in the family virtues, and has

been absent from Yellowstone for about the same length of time the elk problem has plagued park officials. Of course: the grey wolf." Thomas Miller (1988:7) of the National Parks and Conservation Association added that "the benefits from restoration of the wolf to its native Yellowstone include prevention of habitat deterioration and overpopulation by ungulates." In recent testimony before Congress, even Secretary of the Interior Bruce Babbitt contended that wolves are needed to control Yellowstone's soaring elk population.

Not only are claims that wolves would lower ungulate populations and restore a balance with the plant communities logically inconsistent with assertions that wolves would not limit ungulates or hunting opportunities (see above), but proponents of reintroduction, who all support "natural regulation," apparently do not realize that their concept of the wolf's place in the natural scheme of things is contrary to one of the major assumptions of the "natural regulation" paradigm. According to "natural regulation," predation is an assisting, but nonessential, adjunct to the regulation of ungulate populations. Ungulates are limited by resources (food). If wolves were present, they would kill only the animals slated by nature to die from other causes, primarily starvation, so, wolves would not lower Yellowstone's ungulate populations (Kay 1990).

The Park Service has never said that wolves must be restored to Yellowstone to prevent elk and other ungulate numbers from becoming so large that those herbivores would overuse their range. So if you believe that wolves need to be reintroduced in Yellowstone to restore a "balance of nature," control ungulate numbers, or prevent range abuse, logic dictates that you also have to be opposed to "natural regulation." You cannot have it both ways.

Moreover, claims that wolves need to be restored because "every species that was in the park when white men first came to the region is still there, except one [the wolf]" (Dawidoff 1992:40) are also racist, as are similar claims about restoring the wolf as the system's top predator. Native Americans were the ultimate keystone predator, not wolves, and Native Americans once structured Yellowstone and other ecosystems (Kay 1994, 1995). If environmentalists really want to restore Yellowstone's preemi-nent predator, then they should be lobbying for the return of the park to Native Americans. Instead, by inference, they denigrate native peoples as primitive starving savages, or worse, as original poor conservationists.

HISTORICAL DISTRIBUTION AND ABUNDANCE OF WOLVES IN YELLOWSTONE

The plan to reintroduce wolves in Yellowstone is predicated, in part, on the premise that large numbers of wolves inhabited that ecosystem before the Park Service eliminated them from the park (Askins 1992; Wright 1992:144-45). According to some, "[wolves] were a relatively common sight in Yellowstone when it was declared the nation's first national park in 1872" (Anonymous 1987). Dick Randall (1980:188), of Defenders of Wildlife, claimed that "when trappers and explorers reported on the Yellowstone region in the mid-1800s, they sang [of] a land teeming with bison, elk, mule deer, bighorn sheep, and antelope. The great carnivores—grey wolf, grizzly bear, and mountain lion—flourished."

As part of my scientific research in the Yellowstone Ecosystem, I conducted a continuous-time analysis of journals left by early explorers, systematically recording all observations of ungulates and other large mammals, including wolves. Between 1835 and 1876, 20 different expeditions spent a total of 765 days traveling through the Yellowstone Ecosystem on foot or horseback, yet no one reported seeing or killing even a single wolf. Wolf sign, primarily howling, was reported on only three occasions. Since these early observers lacked scientific training, they easily could have mistaken coyote howls or other animal calls for wolves. Besides, when these journals were written, even trained scientists called coyotes wolves or prairie wolves. There certainly is no evidence in historical journals which even remotely sug-gests that large numbers of wolves were common in Yellowstone during the 1835–1876 period (Kay in press).

Other records indicate that wolves were also not particularly common after Yellowstone Park was established. During the late 1800s and early 1900s, few observations were recorded of wolves in the park. "Wolves inhabited the area in unknown but seemingly low densities" (U.S. Fish and Wildlife

Service 1987:1). From 1914 to 1926, when the Park Service was actively working to eradicate wolves from Yellowstone, they killed 136 wolves. This may seem like a lot, but it included only 56 adults over a 13-year interval. Park Service records also suggest that during this time there were, at most, only four wolf packs in the park, and possibly only two (Weaver 1978:11). So, available information does not support the belief that large numbers of wolves inhabited Yellowstone at any point in recorded history. There is no support for the belief that restoring 10 wolf packs to the park would reestablish "natural" conditions. In fact, the data suggest that wolves were always rare in Yellowstone. Native hunting was so intense that historical and pre-Columbian ungu-late populations were very low, which, in turn, accounts for the relative scarcity of carnivorous species such as wolves (Kay 1994, 1995, in press).

THE ENVIRONMENTAL IMPACT STATEMENT

In June 1993, the U.S. Fish and Wildlife Service released its draft Environmental Impact Statement (EIS) for wolf recovery in the northern Rockies. After a series of public hearings and after accepting written comments, the agency issued its final EIS in April 1994. It received over 160,000 comments on the draft EIS, the most ever received under the Endangered Species Act. Public comments ran 2 to 1 in favor of restoring wolves to the northern Rockies. Under the agency's preferred alternative, naturally recolonizing wolves in northwest Montana were given full ESA protection. In Yellowstone and central Idaho, though, the agency proposed to reintroduce wolves as nonessential experimental populations. This was done to deflect local criticism and to allow ranchers more latitude in shooting wolves caught in the act of killing livestock on private land (U.S. Fish and Wildlife Service 1994, Fischer 1995).

As of early 1995, at least two different lawsuits had been filed to block wolf recovery, but the federal courts refused to grant the plaintiffs injunctive relief. Thus, the U.S. Fish and Wildlife Service, with the consent of the Alberta provincial government, began capturing wolves in Canada. So far, over a dozen wolves have been released in central Idaho (termed a hard release) while Yellowstone's wolves were held in three large fenced enclosures on the park's northern range. This is termed a soft release, and it is hoped that this will encourage the wolves to remain in the park.

Some wolves released in Yellowstone quickly left the park and at least three have been shot in violation of the ESA. Other Yellowstone wolves killed livestock and at least one domestic dog in the park. Wolves released into central Idaho have also wandered widely and killed livestock. Nevertheless, as this is being written (early 1996), the U.S. Fish and Wildlife Service is capturing more Canadian wolves for release in Idaho and Yellowstone

The U.S. Fish and Wildlife Service has admitted that wolf recovery will cost at least $12 million, but that figure may be low, and it certainly does not reflect the costs of full wolf recovery in the West. Nevertheless, this still comes to $40,000 per wolf and is an enormous expense for a species that is not biologically endangered. After all, there are an estimated 60,000 wolves in Canada (Theberge 1991), 2,000 in Minnesota (Harrison 1991), and another 7,000 in Alaska (Van Ballenberghe 1992). Wolves are on the Endangered Species List only because the ESA protects subspecies and populations as well as species.

Noted Montana biologist Dr. Charles Jonkel (1987) has raised an interesting question regarding wolves. He has wondered if the money and political capital being spent to reintroduce wolves into Yellowstone and central Idaho might not be better spent on preserving wolves and wolf habitat in other parts of North America. How much time and money will be spent to put 100 or so wolves in Yellowstone? Dr. Jonkel has suggested that those same efforts, if redirected, could perhaps save thousands of wolves in other areas—places where wolves presently exist, but where development threatens their continued survival.

Others have suggested that funds expended on wolf recovery might be better spent on truly rare animals such as whooping cranes, black-footed ferrets, or other globally endangered species. Testifying before the U.S. Senate Committee on Energy and Natural Resources, Kay Kool (1990), former Director of the Montana Department of Fish, Wildlife, and Parks, noted that "the attention and

resources focused on the wolf compete with and drain the limited federal dollars and energy needed to keep truly endangered species from extinction."

The U.S. Fish and Wildlife Service claims that it needs billions of dollars to carry out its mandate under the Endangered Species Act. Currently about $100 million is being spent annually by state and federal agencies to protect endangered species. Over one-half of that total, though, goes to less than 2 percent of the species listed as threatened or endangered. Instead of spending its budget on the animals and plants most in need of protection, the agencies spend their funds on "charismatic megafauna" such as grizzly bears and wolves (Mann and Plummer 1993; Dwyer et al. 1995: 738-739). This may garner the agencies public support, but it does little to pro-tect the majority of endangered species. With so many other species in much greater need, it is easy to see why many conservationists consider wolf recovery an inappro-priate use of government funds. But then, wolf recovery has very little to do with wolves.

HIDDEN AGENDAS

As University of Wyoming geography professor James Thompson (1993:165) recently noted, "wolf recovery is [only] a 'stalking horse' for the larger issue of land use change." Even environmentalists have admitted that "on the deepest level the issue of...wolf recovery is not about wolves. [Instead] it is about control of the west" (Askins 1993:5). Simply put, environmental-ists are using wolf recovery and the Endangered Species Act to run ranchers out of the country and to thwart multiple use of public lands. It is also a way for animal-rights and antihunting groups to ban all hunting and use of wildlife. Is this what Congress had in mind when it passed the Endangered Species Act? There is no evidence to even remotely suggest that it is.

EPILOGUE

Alaskan and Canadian wildlife agencies are concerned that wolf advocates may unwittingly be helping to destroy wildlife habitat, wilderness, and eventually wolves themselves (Gasaway 1989:134). In British Columbia, expanding wolf populations have decimated game herds to the point that today there are fewer hunters in the province, which translates into less public support when wildlife officials have tried to oppose development projects (Hatter and Janz 1994). Black-tailed deer on Vancouver Island, for instance, need old-growth forest to survive during winters—forests that are worth millions of dollars if they are logged. With few deer left to protect, the B.C. government has been reluctant to curtail logging. The same is true in Alaska's coastal forests. More wolves = fewer deer = less public support for wildlife = more clear-cuts.

After reviewing the northern Rockies wolf recovery plan, biologists from the University of Idaho concluded that "in the presence of wolves, more intensive monitoring of both predator and prey will be needed" (Peek and Vales 1989; National Park Service and Fish and Wildlife Service 1990b:3-164). This increased responsibility and its associated costs will fall to western state fish and game agencies, which are funded solely from hunting-license sales and federal excise taxes on sporting goods, not general fund appropriations. When wolves eventually decimate ungulate herds, hunting will have to be curtailed, so revenues available to the state wildlife agencies will fall precipitously. Who then will pay for the needed monitoring, and, for that matter, wildlife management in general? Sportsmen, after all, are the ones who have done the most to nurture and protect the West's wildlife populations, not environmentalists. Wolf recovery is a bad idea whose time has apparently come—unless, of course, the Endangered Species Act can be changed.

Rebuilding the Ark: New Perspectives on Endangered Species Act Reform

Jonathan H. Adler, Editor

*Reviewed by James S. Burling**

In 2005, Congressman Richard Pombo engineered the passage of the most sweeping reform of the Endangered Species Act (ESA) since it was passed in 1973. HR 3824 would have required more workable habitat restoration and better peer review science for listings. Most intriguingly, it contained a compensation mechanism that would have rewarded landowners for maintaining endangered species habitats rather than the current practice of punishing landowners with a massive devaluation of their land values. While it passed the House with bipartisan support, it failed in the Republican-controlled Senate. To thank Representative Pombo for his efforts, the environmental community labeled Pombo an "eco-thug" and flooded his district with attack ads and volunteers in order to ensure his defeat at the 2006 election.

In many segments of the environmental community, the notion of touching the ESA is akin to skinning baby harp seals alive. So it is with some boldness that Jonathan Adler, a Professor of Law and Director of the Center for Business Law and Regulation at Case Western Reserve University School of Law, has pulled together a collection of essays centered around proposals to reform the ESA.

Why reform the ESA? After all, it has been around for decades, and several industries, most notably in the Pacific Northwest and California's central valley, have complained that it has been used as a tool to their destruction. The Act also supports a cottage industry of environmental lawyers—both those in favor of returning the earth to Gaia by any means necessary and those who have a more anthropocentric world view. But aside from these dubious accomplishments, has it actually saved any species? Is it doing more harm than good for plants and animals it is supposed to protect? Do we actually have a clue what the real state of most threatened and endangered species is? Is whatever good it is doing worth the "at any cost" mandate of the Act.[1] Is there a better way?

The essays in this volume attempt to answer these questions, especially the last one. Sadly, we really do not know the answers to most of these questions. Whether the ESA has saved any species may depend on what we mean by "saved." Has the ESA allowed the "recovery" of a meaningful number, or at least a nonzero number, of species? Or has it prevented the slide of species into the abyss of extinction? By the recovery standard, most acknowledge that the ESA hasn't done much. But the ESA's defenders posit that it has met the "slide into the abyss" standard—though this is more through supposition than any hard evidence. After all, we don't have a spare Earth handy to test the efficacy of the ESA against the parallel universe Earth that lacks an ESA.

On whether the ESA does any *harm* to endangered and threatened species, there have always been whispered, but for obvious reasons, largely unverified tales of landowners who deal with their endangered species "problem" with the "shoot, shovel, and shut-up" trifecta. But there are more plausible, and documented, stories of landowners "preplanning" for the arrival of endangered species by rendering land unfit for nonhuman habitation. Owners of Southern pine plantations are thought to be harvesting trees early and before the trees are mature enough to develop cavities that red-cockaded woodpeckers are wont to interpret to be an "open house" invitation.

As to whether we even know enough about the state of most species, the answer is clearly not because the science is incomplete and access to much of America's land is restricted. Various levels of government own over one-half of the nation's land mass, where access by government biologists is reasonably easy. But, for now, that leaves one-half of the nation's land mass—and habitat—in private hands. And those private hands are not very keen on inviting NGO and government biologists onto their property to look for species that are or might become endangered—after all, a positive finding could ultimately sterilize the use and value of the land. More importantly, if we are to be serious about protecting species, then protecting them on private land is essential. But landowners are reluctant to cooperate so long as that means drastic and uncompensated reductions in the use and value of their land.

So, what to do? The nine essays in this compilation each focus on a different problem and a potential solution. While in agreement that the current regime is lacking in its efficacy, the range of solutions is diverse. Ranging from tax relief to free market reforms and to more workable regulatory programs, the common theme of most of the essays is that there must be a better way than regulatory fear and loathing to encourage landowners to preserve and even improve habitats for endangered species.

Northwestern Professor David Dana suggests we improve the process of creating Habitat Conservation Plans (HCPs). HCPs began as a reform from the Clinton Administration that sought landowner cooperation in preserving ecosystems for multiple species in exchange for regulatory certainty. It was then, and remains today, a creative interpretation of the ESA, and any major changes will need statutory authorization. Large-scale HCPs have often been beset with political controversy as multiple landowners have sought to protect their interests, sometimes at the expense of other landowners. Dana's primary criticism of the current HCP process is that the process is less than transparent and there is no standard or reliable measurement of success or even compliance. Congress should, Dana contends, at a minimum mandate a complete database on existing HCPs, mandate the collection of meaningful information, and mandate compliance reporting. Next there should be mandatory review by a scientific advisory board. He proposes that in order to encourage landowners to agree to meaningful biological goals, we should institute an insurance program to protect against a "conservation-failure." Finally,

* *James S. Burling is the Director of Litigation for Pacific Legal Foundation based in Sacramento, California. For more, see www.pacificlegal.org.*

where a smaller scale program is needed, Dana suggests conservation banking could be a more viable alternative. What Dana does not address, is whether the HCP process, existing or as imagined, will provide enough incentives for landowners to voluntarily and readily enter into the process. It is one thing to "encourage" landowners to join because of a fear that the heavy hand of government could become heavier; it is another to actually provide enough incentives so that landowners will actually desire to join HCPs.

Texas A&M Professor of Wildlife Neal Wilkins picks up on the need to provide more landowner incentives. He points to the example of landowners in Texas who may wish to contribute to efforts to preserve the lesser prairie chicken, but may have reservations because of an ongoing boom in wind farms. Reforms could include more in the way of "recovery crediting" wherein landowners who make positive contributions to a species' recovery can be rewarded by landowners who need to affect other habitat. Land use lawyers are quite familiar with the concept of transferable development credits—including the fact that many of them are little more than glorified shell games where some landowners are required to compensate others for takings that might otherwise be assessed to government. If recovery crediting is to be a meaningful reform, it will need to avoid the skepticism engendered by TDR programs.

Wilkins has some additional innovative suggestions. In order to foster more landowners' cooperation with information gathering, he suggests that enforcement functions of government be separated from the science, monitoring, and recovery duties. He also suggests that NGO third parties be authorized to work with private landowners. While not all landowners trust the NGOs, they may well trust some NGOs more than government agents. Other reforms Wilkins proposes are more in the way of market-based conservation programs and more defined recovery goals when species are listed.

In the wake of the Tellico Dam controversy, the ESA was amended to allow for a so-called cabinet level "God Squad" to grant exemptions and "incidental-take permits" to allow for some activities to proceed, even if they might impact an endangered species. Pennsylvania State law professor Jamison Colburn characterizes these amendments, designed to add some flexibility in the ESA, as "notorious," as is pretty much anything that requires meaningful consideration of costs. Colburn suggests instead some alteration in our understandings of the line between permits and property. However, it is uncertain that Colburn's ideas will readily translate into policy prescriptions (assuming that were a desirable outcome) in an essay replete with sentences like, "Yet, even supposing unprecedented computational or coordinative breakthroughs were to make globally scaled cognition practicable, we will still face the normative frictions generated when political power is limited by a polity's democratic traditions and geographic boundaries."[2] Not only is the rhetoric obtuse, but the suggestion leaking through these words—that to save species we must transcend democracy and national sovereignty—is not likely to gain traction in the near term.

Another commonly used mechanism for enlisting landowners' cooperation in species protection is through tax-deductible donations of conservation easements. But there well may be an inefficient allocation of resources with this practice. To a rancher, losing the ability to use 100 acres through a conservation easement may have the same economic consequences whether the habitat is extraordinarily valuable to a critter or simply of marginal biological utility. And because the economic consequences are the same, the government's tax expenditure in allowing the deduction will be the same. In other words, the rancher writes off the same amount in each case. While a receiving entity will be happy to take both marginal and valuable habitat, should government pay the same amount for both?

Emory University School of Law Professor Jonathan Remy Nash has a better idea: "[T]he value of the donation of a conservation easement [should be] based not upon the economic value of the donated easement but rather upon the value of the easement to the ecosystem."[3] This would skew the incentives such that landowners may have added incentive to improve habitat in order to increase its value *to the landowner*. Shoot, shovel, and shut-up could be replaced by restore, improve, and donate. While Nash admits that the valuation of land from economic utility to ecosystem utility may be difficult, it should not prove to be impossible. As with any new proposal, Nash also admits that it may be difficult to craft a program that isn't too costly or that doesn't have unintended consequences.

Unasked and unanswered by Nash is the related vexing and somewhat philosophical question of how much land should ultimately be encumbered. We are entering a brave new world where the utility of vast holdings of land are being stripped from the fee in perpetuity (for to be tax-deductible, easements must be perpetual). While Nash's proposal makes great sense in terms of better targeting government tax expenditures, and it beats the notion that oppressive land use regulation is the best way to achieve ecosystem preservation, it leaves unanswered what the final destination of this journey ought to be. How much land can the nation afford to remove forever from productive use? Further, the common law has always been resistant to attempts of one generation to control the resources of future generations. Will this attempt fare any better?

Today in the Central Valley of California there is a new water war. In the Klamath Basin there has been a water war for over a decade. Unlike previous water wars between ranchers and farmers, or between rural and urban interests, this one is between fish and people. Or, perhaps more accurately, there is war between people who value fish for ecological and commercial purposes and people who value water more for urban and agricultural purposes. Unlike prior water wars fought with guns or *Chinatown* intrigue, this one is being fought with biological opinions and lawsuits. Professor James Huffman at Lewis and Clark Law School understands well the difficulties of creating positive ecosystem incentives among water users who, at present, are feeling rather put upon. And the challenges of water rights, creatures of state law (some would say archaic state laws) but respected by federal law and, more importantly, protected by the federal constitution, is fiendishly complex.

There are several water-rights based challenges to the implementation of the ESA being litigated now in the courts. Huffman argues that the Takings Clause is the most substantial challenge, but that "a strong takings clause does not necessarily

obstruct achievement of the species protection objectives of the ESA."[4] This is not because, Huffman argues, property rights in water are or ought to be malleable (meaning capable as some argue of being defined out of existence). Instead, Huffman suggests, there needs to be *better* understanding of water rights, an understanding that allows greater marketability—such as with water transfers and a greater ability to allocate water to conservation purposes without risking the loss of rights under the regime of "use it or lose it" that is common in many Western states. Huffman concludes that the magnitude of the water wars can be reduced—at least from "all-out warfare to isolated skirmishes—if both sides take a more practical and less principled approach."[5] So long as there is weather—and too much rain falls in one place and not enough in another—people will fight over water. Huffman is optimistic that out of today's controversy we will reach an accommodation that will serve both fish and man; let us hope he is right.

Science and politics are like the East and West. Rudyard Kipling once wrote of the East and West that "never the twain shall meet." But like the East and West in modern times, science and politics are inextricably entwined. The biological sciences are used to justify what are essentially political land use questions. And politics are used to determine whether science is "junk" or gold-plated and peer-reviewed. But because the stakes are so high, both landowners and species advocates have tremendous incentive to ensure that science falls their way. Science also has its limitations. We can only know so much given our current state of knowledge and availability of resources to put into science. In his short piece on science and the ESA, economic consultant Brian Mannix puts a face on the extraordinary burden being placed on science to answer essentially unanswerable questions. For example, EPA has an obligation to consider the impacts of pesticide registrations on endangered species that could "provide *millions* of potential obligations to consult with the [federal regulatory] Services—each, based on experience, taking as much as ten years."[6] Mannix has a few suggestions to get us out of this mess, first and foremost of which is to distinguish between science and policy. In other words, make the ESA more like the National Environmental Policy Act, which demands an analysis of the impacts of a federal action—but does not mandate what should be done with that information. Thus the result of an environmental impact statement is to give federal agencies an option to change course, not to determine the course. The same would be the case in Mannix's new ESA. While eminently sensible and practical, Mannix's proposal to change the basic structure of the ESA may be about forty years too late. No one in Congress wants to be the next Richard Pombo.

It has become an article of faith with many that planet Earth is entering an unprecedented epoch of warming and we must act, and act quickly, to reverse anthropogenic global warming. How this can be achieved without putting an end to Western civilization (and Eastern civilization as well) is anybody's guess. But one way that will not work according to Florida State School of Law Professor J.B. Ruhl is a full-court press played by team ESA. Ruhl has no doubt that the crisis is real, but plenty of doubt that the ESA provides a workable solution. As he puts it, over the years the ESA has proven to be the pit bull of environmental statutes. But when it comes to global warming, he says this pit bull won't fly. Yes, Ruhl says, global warming will have a profound and largely devastating effect on species around the world. But the legal tools of the ESA were simply never designed to shut down emissions of carbon dioxide.

Some of the inherent flaws in using the ESA to combat global warming are being fought tooth and claw with the polar bear listing. The Fish and Wildlife Service listed the bear as threatened because of the potential impact warming will have on sea ice, which the bear uses for summer foraging. Logically, any federal action in any part of the United States that causes an emission of a greenhouse gas could now be made subject to the "consultation" requirement of the ESA with the whole panoply of action-stopping consequences. But that, to the chagrin of the ESA lawyers, was a bridge too far for the Bush II Administration, and it issued a ruling that the listing could *not* be used to trigger consultations in any state but Alaska. But to prove Ruhl's point about the limitations of the ESA, this was not simply a product of the so-called anti-environment Bush Administration. When given a chance to reverse, President Obama did no such thing.

As Ruhl puts it, the stop-carbon "mitigation litigation charge is leading the ESA away from its central mission of conserving ecosystems."[7] Its mission is suited well enough for "what is happening on the ground and in the water . . . rather than being concerned with what is happening in the troposphere."[8] The ESA could be modified, Ruhl suggests, to play a more meaningful and realistic role in combating the effects of climate change. These would include a specific category of listing for climate-threatened species and replacing the goal of species recovery with one of assisting the transition to a warmer climate—recognizing that some species may do better at the expense of others during the transition. But unlike the ESA of the past, which Ruhl calls "both noble and arrogant," he suggests instead that "the ESA must become noble and humble if it is to have any chance of helping species through the era of climate change."

Michael De Alessi, currently a post-doc scholar at Stanford who has long experience in environmental policy battles, concludes this book with a look at the interrelationship between the ESA and the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). Evolved from a conservation effort at the turn of the last century designed to protect megafauna from decimation through unrestricted poaching and trade, CITES restricts or prohibits trade in species from around the globe. But it is not an all-or-nothing proposition. As De Alessi notes, there have been some great successes where CITES has allowed the commercial utilization of species on the brink such as the Nile crocodile and African elephants. Commercial ranching of these species has brought their numbers back from the brink. Of course, this is not a panacea. The replacement of natural ecosystems with ranches is not the end goal, but can serve as a placeholder while ecosystems are restored.

But the ESA has the ability to list any species anywhere in the world. And the federal agencies sometimes do. But is this useful to the species? De Alessi thinks not. While a

listing may stop trade into the United States, and it may, in theory, discourage agencies from funding habitat-harming infrastructure projects, a listing under the ESA has no legal effect outside our borders. But it can hurt species. De Alessi notes that there once used to be 100,000 green sea turtles being ranched on the Cayman Islands for export to Europe. But after they were listed, it became illegal to transship them through the United States, once a necessary step to reach Europe. The farm is no more, having been replaced by a small, government-run eco-tourist operation with far fewer turtles.

There are other examples. As De Alessi points out, once a species is listed export licenses will be denied unless it can be proven that a commercial operation will *enhance* a species. This standard has stopped captive breeders of three African antelope species which are endangered in their native ranges. The ESA does nothing to protect foreign species or habitat, De Alessi contends. Without providing native villages a legal economic incentive to coexist with endangered fauna, especially valuable fauna like black rhinos, villagers might as well poach them. After all, it is hard to instill an environmental ethic in people who are many miles south of the poverty line.

Professor Adler has done a marvelous job collecting the essays in this book. Some are provocative, some are practical, and all are necessary to the debate about where we should go next with the protection of threatened and endangered species. The status quo has been played out. If the protection of species is to advance, the rules of the game need to be changed. And we'd better start recognizing that so long as a substantial percentage of habitat is on private land, landowners need to be encouraged rather than bludgeoned into working for the betterment of species.

Issue Number 6, Summer 2011

ESA Regulation Issue Delays Wood Bison Release

By Bob Stephenson, Wood Bison Biologist

In the fall 2010 issue of the *Wood Bison News* we announced that spring 2012 would be the target date to release wood bison in the Innoko area. Now, due to a delay in completing regulations under the Endangered Species Act (ESA) the release of wood bison to the wild will be delayed until 2013 or beyond. The final federal regulations have to be in place before wood bison can be released.

Photo by Doug Lindstrand

As many supporters of the wood bison project know, ADF&G has worked closely with the U.S. Fish and Wildlife Service (FWS) during the last two years to develop a rule under section 10(j) of the ESA. The 10(j) rule would designate wood bison in Alaska as a nonessential experimental population, provide protections for other land uses and resource development and allow the state to have the lead role in managing wood bison populations. It would also prevent the designation of critical habitat. This would be accompanied by a special rule, under section 4(d) of the ESA, which would specify the sideboards of state management and allowable "take" of wood bison. In fall 2010 it appeared that the draft regulations would be published in the Federal Register, accomplishing their central purpose of ensuring that releasing a new species onto the landscape would not interfere with other resource development activities. However, these plans hit a snag due to factors not directly related to wood bison, as we explain below.

One of the key provisions in the draft 4(d) rule was to recognize that once bison populations reached a level that could support a sustainable harvest (about 400 animals), regulated hunting would be allowed based on principles outlined in management plans developed by the state in cooperation with land-

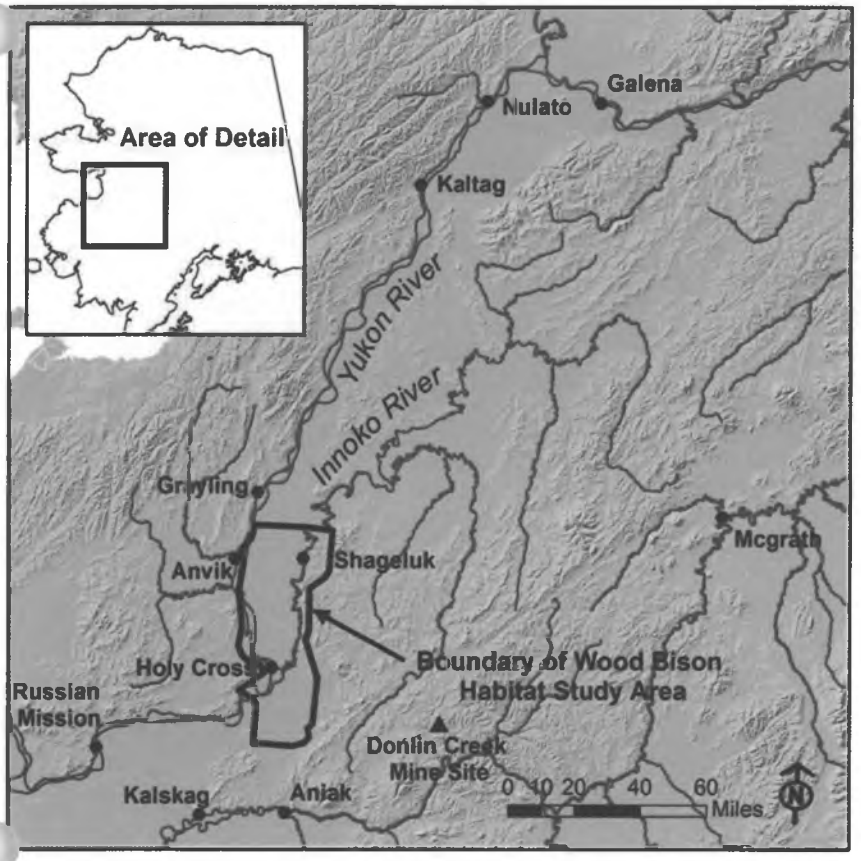
(Continued from page 1)

owners, FWS and other agencies, and other interested parties. ADF&G has always been committed to the principle that the benefits of wood bison restoration, including harvest, must be shared by local residents, other Alaskans and eventually visitors to our state.

However, recent litigation has raised a question about whether the FWS can allow hunting of species that are protected under the ESA. As a result, FWS recently indicated that at this time they are not prepared to authorize future harvests of populations of listed species (except for certain kinds of "take" otherwise authorized under the ESA) that have been designated as non-essential experimental. In March 2011, FWS informed ADF&G that they could either publish a proposed rule by the end of April 2011 without a provision allowing future hunting, or wait for several months until the issue could be further discussed and hopefully resolved. ADF&G decided that the ESA regulations must provide certainty in terms of allowing a future harvest and that the issue is too important to be deferred to a future federal regulatory process. The result is that the ESA regulations have been delayed. The first release cannot be implemented in 2012 as planned, and will have to be delayed until 2013. ADF&G will do its best to resolve this issue as soon as possible, so that the wood bison restoration effort can move ahead.

> *"It is our continued hope that we will be able to resolve this issue and release wood bison onto the Alaskan landscape in the near future."*
>
> *Acting Deputy Commissioner, Doug Vincent-Lang*

FWS has indicated that they are willing to continue to explore options to resolve the issues related to the future hunting of wood bison, but it appears this will take some time. FWS has also committed to provide $200,000 to help offset the additional costs of maintaining a larger number of wood bison for longer than we had planned at the Alaska Wildlife Conservation Center. Project supporters appreciate this contribution, and hope the harvest issue is resolved as soon as possible.



Map showing first proposed release site. Release has been delayed until at least 2013.

Herd Health Update

By Rita St. Louis, Assistant Planner

Our herd at AWCC is a healthy growing herd with 102 bison. This spring 18 calves were born. As with any confined herd of animals, ours has some nutrition and parasite challenges, some of which are unique to bison. We grew concerned when five animals died between January and April. Reasons for the deaths were not completely known, but nutrition, parasites, and certain trace mineral deficiencies seemed to be a common denominator. So in April 2011 we retained an expert consultant, Dr. Gerald Parsons - who is a large animal veterinarian and has a herd of plains bison himself - to advise us. Dr. Parsons said our problems were not uncommon in confined bison herds, and he offered suggestions to remedy the situation. Following his advice, our veterinarians, Dr. Kimberlee Beckmen and Dr. Bob Gerlach, and AWCC's Mike Miller have readjusted the parasite medications and feed that our bison get. For example, some of the medication is sprinkled over the top of grain in the form of pellets. The larger bison get first shot at the grain, so they get the most medication but need it the least. Getting a uniform dosage for all of the bison is not a simple matter. To help solve this, Dr. Parsons recommended using more grain feeders, including some that are on wheels and can be moved to different enclosures. Another recommendation was to change medications periodically so the organisms do not develop an immunity to one medication. Also following his advice, more supplemental grain will be fed. Acquiring the extra grain has taken time. Special thanks goes to Steve Mendive, from AWCC, who has spent many hours researching special bison formula and possible donations from some vendors for the grain supplement.

Keeping a bison herd of this size in captivity requires a continuous learning process, and we constantly discover better ways of doing things. Overall our herd is doing well, and we are looking forward to their release.

Mother bison tending her new calf, born this spring at AWCC

Thank You and Best Wishes from Randy Rogers

To my many friends dedicated to wood bison conservation:

This summer I will be retiring from my work as a Wildlife Planner for ADF&G. I feel very fortunate to have had the opportunity to work on the Alaska wood bison restoration project and with the many individuals and organizations that are involved in this outstanding wildlife conservation initiative. I hope to be able to contribute to the project in other ways and look forward to the day when wood bison are again roaming free in our state.

Randy Rogers holding the skull of a large wood bison

There are too many people and organizations that deserve recognition for their contributions to the wood bison project to all be mentioned here. I have to start by thanking Bob Stephenson who had the original vision for wood bison restoration in Alaska and has been my mentor and partner for the past several years. It took a while for Bob to "train me up," but we have worked closely together to meet one challenge after another to keep the project moving forward. It has truly been a pleasure working with Mike Miller and the Alaska Wildlife Conservation Center. They have worked tirelessly on behalf of wood bison conservation and always bring a 100% "can-do" attitude to any measure needed for the health and well-being of the wood bison. Carlile Transportation Systems has been simply incredible with their continued donations amounting to tens of thousands of dollars by transporting hay to AWCC. And speaking of hay, University of Alaska has donated many bales of hay for the bison at production cost. Norman Harris stated, "*Thank you for allowing the University of Alaska Fairbanks to participate in this project that will benefit all Alaskans specifically, and all people in the United States generally.*" Safari Club International and their Alaska and Kenai Peninsula chapters paid for many of the wood bison facilities at AWCC, and they have offered legal advice and political support. The Turner Foundation provided funding that enabled ADF&G to import wood bison from Canada and move the project from a dream to a reality. Finally, ADF&G Regional Supervisor David James is the unsung hero who has worked behind the scenes to provide the management support and coordination with our headquarters that has been vital to the project.

I have enjoyed working with residents of the Yukon Flats, the Minto Flats, and the lower Yukon and Innoko River area, as well as numerous people involved in state fish and game advisory committees and the federal subsistence councils. Paul Williams, Sr. from Beaver has been an inspiration and a long-standing advocate for restoring wood bison on the Yukon Flats. Ron Silas led the effort to consider restoring wood bison on Minto Flats. Arnold Hamilton and the Tanana Chiefs Conference Lower Yukon Sub-Region have shown unwav-

ering support for wood bison restoration in the lower Yukon/Innoko area for the past several years, and I hope they see wood bison on the landscape in the near future. The support and involvement of local residents, wildlife conservation organizations and other Alaska residents are crucial to the future success of the wood bison project.

In the end though, it's all about the bison. Wood bison are truly magnificent creatures that belong on the Alaskan landscape and deserve the chance to flourish in their natural habitat once again.

In the end though, it's all about the bison. Wood bison are truly magnificent creatures that belong on the Alaskan landscape and deserve the chance to flourish in their natural habitat once again. After the wood bison herds are established and have grown people will be able to enjoy their presence and reap the benefits for many generations to come.

In January 2008, at the end of the wood bison round-up at Elk Island National Park, I was standing in a corral with Archie Handel, Park Warden, and the young wood bison selected for import to Alaska. I made a promise to those bison that we would find them a new home in the wild lands of Alaska, where they could live and prosper. Let's all continue working to fulfill that promise and the vision for wood bison restoration that so many Alaskans and others have shared for nearly two decades.

Thank you my friends and best regards, Randy

Legislative Action Affecting the Wood Bison Project

By Ben Mulligan, Special Assistant to the Commissioner

As part of the process for establishing the 2012 fiscal year operating budget, the House and Senate Finance Committees included language intended to affect the wood bison project in two ways. To import any more wood bison or to relocate the existing herd to another part of the state, the Department would first have to obtain a signed letter from the appropriate federal agencies stating that wood bison will not be considered threatened, endangered, or any other protective status in Alaska, now, or at any time in the future. Furthermore the Department would have to obtain approval from the legislature to import or relocate wood bison in the state. This intent language applies only to the fiscal year from July 1, 2011 to June 30, 2012.

In addition to the language in the budget, Representative Alan Dick (R-Stony River) introduced House Bill 186. House Bill 186 is similar to part of the operating budget intent language and requires the Department to receive approval from the Alaska State Legislature before importing anymore wood bison into Alaska or relocating wood bison to a new area within Alaska. Following hearings in early April the House Resources Committee voted to advance HB 186 to the full House of Representatives for further consideration. However, time in the legislative session ran out and no action was taken by the full House. The bill could come up for further consideration in the House of Representatives next year. No companion legislation has been proposed in the Senate.

Tom Seaton, New Wood Bison Biologist On Board

This summer we have another wood bison biologist on board. Tom Seaton, who has been Assistant Area Biologist for the Fairbanks area, was selected for that position. Those of us who work with Tom and with wood bison feel really fortunate.

Tom Seaton, the new wood bison biologist. In this photo, Tom is conducting a moose browse survey.

Tom comes with a unique skill set to make him the ideal person for the job. Foremost, Tom is a top-notch biologist who has worked extensively with all game and furbearer species in Interior Alaska. He developed a moose browse survey method that is being used statewide to evaluate habitat use. Tom is the chief pilot for Region III, which is good, because it is important to have a pilot as the wood bison biologist. Tom said one of his early tasks is to become familiar with the scientific literature on bison biology and to learn the "institutional knowledge" from the folks at Fish and Game. Of course Bob Stephenson will be sharing his extensive knowledge to get Tom up to speed. Finally, Tom is not a stranger to wood bison. He was one of the two lead handlers at the most recent wood bison health screening events.

Doug Lindstrand, Photographer and Supporter

Most of the best photos you have seen in our *Wood Bison News* and other publications were taken by Doug Lindstrand, a freelance artist/ photographer who has lived in Alaska since 1970. Doug is well-known for his Alaska books such as *Alaska Sketchbook* and *Wild Alaska*. He also publishes prints, cards and various other books on art and wildlife. Doug has generously allowed us use of his photos of wood bison to enhance or bring attention to the wood bison restoration project. Doug can be seen photographing at AWCC about any time of year and in all weather conditions. He donates his photographs because of the true importance of this project. He said, *"We are seldom given the opportunity and honor of reintroducing a species back into its rightful homeland and that it is the shared hope of many that this majestic animal will soon once again roam free and grace the wilds of this unique State of Alaska."*

We greatly appreciate Doug, his beautiful photographs, his absolute generosity, and his support of the wood bison project.

Doug Lindstrand takes photos during the entire year in all weather conditions.
