This fiscal note is based on the costs for the laboratory testing alone. It does not take into account the costs of medical personnel to perform the requisite counseling and testing, travel for medical personnel to communities where qualified personnel are unavailable, shipment of specimens, cost to ensure chain of evidence, and documentation of procedures and test results.

In 1992, 339 charges were made for arrests for sex offenses. Using 350 as the base, the laboratory costs associated with HB 109 is as follows:

ANALYSIS (cont.):

This fiscal note assumes:

- 1) testing and counseling is for individuals who are not being detained by the Department of Corrections or the Division of Family and Youth Services; and
- 2) individuals will present themselves to a Public Health Center for testing and counseling either through a court order or voluntarily will be referred to private providers for counseling.

3/24/93

BRIEFING PAPER  
FOR

CS HOUSE BILL NO. 109 (JUD)

Prepared by Department of Public Safety

“An Act relating to blood tests for persons charged with sex offenses; and providing for an effective date.”

Since 1987, Alaska has received Drug Control and System Improvement Formula Grant Funds through the Office of Justice Programs, Bureau of Justice Assistance. The grant program is authorized by the Anti-Drug Abuse Act of 1988. The purpose of the funds is to provide assistance to the states for their law enforcement efforts to control the drug and violent crime problem. The allocation for each state and territory is primarily based on population.

For the first year, the allocation to Alaska was \$823,000. In 1993, the allocation is \$1,870,000.

Within the State, these funds are shared by state agencies and local units of government for the purpose of addressing the drug control problem through law enforcement, prosecution, and court system improvement programs.

In 1992, with federal allocation of \$1,852,000, there were 5 state agency projects and 9 local government projects funded. Through these projects the funds provided 14 law enforcement officers throughout the State, enforcing the State's controlled substance laws through multi-jurisdictional task force, street level enforcement, and financial investigation efforts. These funds provided for two prosecuting attorneys to specialize in the prosecution of individuals violating the State's controlled substance laws. In addition, the funds provided for timely court processing and the identification of individuals with prior drug offense incidents through improvement of the court and criminal history record systems.

Beginning October 1, 1993, the Crime Control Act of 1990 requires that in order for the states to continue to receive their identified Drug Control and System Improvement Grant allocation amount, the states must have laws in place related to HIV testing of individuals convicted of a sexual offense. The result of a state not having such legislation enacted will be a 10% reduction to the state's identified allocation amount. This amount then will be shared by those states which have enacted such legislation.

Briefing Paper  
CSHB 109(JUD)  
Page 2

For the State of Alaska to continue to receive its entire Drug Control and System Improvement allocation, avoid reducing its current drug control effort, and avoid providing 10% of its allocation to other states, passage of HIV testing legislation is necessary this session.

With a reduction of ten percent, or \$187,000, to the State's annual grant revenue allocation, it will be necessary to fund ten percent of the law enforcement and prosecution effort currently addressing the State's drug control problem through State general funds and municipal revenues.

SPONSOR STATEMENT

HB 109 – Blood Tests for Sex Crime Perpetrators

The purpose of HB 109 is to provide an avenue of relief for victims of sexual assault. The threat of HIV infection and of infection from other sexually transmitted diseases is a serious complicating side-effect of being victimized by sexual assault. The state has a compelling interest in assuring innocent victims of crime timely relief from the anxiety that may result from sexual assault.

HB 109 allows the victim of a sexual assault to petition the court to require a blood test on the defendant. The bill also provides that the state must make available to both the victim and the alleged perpetrator, upon their request, counseling relating to HIV and AIDS which is medically appropriate for those persons, and referrals for medical and support services.

Finally, HB 109 is designed to minimize the cost to the state of implementing this program. If the defendant is convicted, he or she must reimburse the state for the cost of the test. The court may order the Department of Corrections to provide for the reimbursement through garnishment.

The Federal Crime Control Act of 1990 specified that states must have a law such as that proposed by HB 109 or lose part of their law enforcement assistance grants. The deadline established by Congress is October, 1993. If we fail to pass this bill during the current session, Alaska's Department of Public Safety will lose approximately \$185,000 in FY94.

This bill can satisfy the Federal requirement and simultaneously form an integral part of an effort by the state of Alaska to ensure that victims of crime in our state are afforded every opportunity to receive appropriate relief.

Bill No. CSHB 109(JUD)

Date: March 31, 1993

Contact: Joanne F. Lopez  
Executive Director  
465-4356

Title: "An Act relating to blood tests for persons charged with sex offenses..."

A total of 530 rapes were reported in 1991. Rapes account for 15.5% of all violent crimes. There are concerns for victims who may become infected with human immunodeficiency virus (HIV). Cases have been reported.

The Council on Domestic Violence and Sexual Assault supports the concept of a bill that would allow a victim of sexual assault to learn if her/his assailant is infected with HIV.

The Council recommends that the victim be informed that because the offender's blood test is negative, it does not mean that they are safe. The nature of HIV is such that there is an incubation/latency period of six to eight months during which a carrier's blood will not reveal the presence of HIV but they can transmit the virus. Victims need to be aware that they should be (re)tested six to eight months later. The Council would like to see funding for the Department of Health & Social Services to pay for victim testing.

The Council also believes that the legislation should specify how the information will be transmitted to the victim. The Council recommends that the information should be provided to the victim only if the victim (or the victim's legal custodian, if the victim is a minor) wants the information. The information should never be transmitted by letter and the victim, or victim's legal custodian if the victim is a minor, should be allowed to name a designee to receive the information if the victim doesn't want to learn of it directly.

The Council recommends that counseling of victims concerning the results of the alleged offender's blood test need to be handled sensitively. A counseling brochure does not meet this standard. A trained counselor or nurse or other appropriate service provider needs to be available to help the victim deal with the situation and to counsel the victim on safe sex and protection of their partner due to the potential exposure.

MEMORANDUM

February 17, 1993

**SUBJECT:** Blood Testing of Sex Offenders - CSHB 109(HES) (Work Order No. 8-LS0462\K)

**TO:** Representative Cynthia Toohey  
Attn: Lynne Smith

**FROM:** Jerry Luckhaupt *JLB*  
Legislative Counsel

FEB 17 1993

Enclosed is the final committee substitute you requested for the above-referenced bill. I have a few comments about the changes that were made.

1. On page 2, line 1, of the committee substitute, the committee added that "the parent or guardian" may file a petition for a blood test of a defendant. The language the committee adopted would seemingly permit a parent to seek a petition for a test even if the victim of the offense, their child, has reached the age of majority. It would probably be better to use language similar to that used on page 2, lines 16 - 17, such as "or if the alleged victim is a minor or incompetent, the alleged victim's parents or guardian."

2. On page 2, lines 3 - 9, the court is required to make a determination that probable cause exists to believe that a crime for which a test may be ordered was committed and that sexual penetration took place. The committee added language that in making this determination the court may rely on evidence presented before the grand jury or at any preliminary hearing. My concern is that the present language could be interpreted so as to not give a court the authority to hold a hearing if it chose to do so. While the language in the CS uses the permissive term "may" in allowing the court to rely on the evidence adduced at earlier proceedings, and this could be regarded as implicitly giving the court the authority to hold a hearing, it would be better to explicitly state that the court may hold a hearing or may rely on previously presented evidence, or that the court may rely on previously presented evidence or if that evidence is insufficient the court may hold a hearing.

3. On page 5, lines 8 - 12, of the bill draft, the committee removed the criminal penalty for unauthorized disclosure of the results of a test conducted under the bill,

and substituted in that any unauthorized disclosure may be punished as contempt of court. Contempt of court is provided for in AS 09.50.010 - 09.50.060.<sup>1/</sup> Presumably, this contempt would be criminal contempt, as opposed to civil contempt, as one who has disclosed test results is being punished for past conduct and to vindicate the order and authority of the court, and any contempt order would not be conditioned on any future or remedial action of the person facing the contempt charge - that is a civil contempt order usually tries to coerce compliance with a court order and a person found in civil contempt is given the opportunity to purge the contempt charge by doing something the court was commanding the person to do.<sup>2/</sup> See Stadler v. State, 813 P.2d 270 (Alaska 1991); Johansen v. State, 491 P.2d 759 (Alaska 1971).

Further, though the committee was advised that contempt only carries a possible punishment of a fine of \$300 or less, actually the potential punishment could be substantially greater than \$300. An unauthorized disclosure of test results would be a violation of a court order which is provided for in AS 09.50.010(5). The penalty for most forms of contempt, including AS 09.50.010(5), is only \$100. AS 09.50.020. But if by the contempt the "right or remedy of a party to an action or proceeding was defeated or prejudiced by the contempt" the penalty is "by fine of not more than \$300 or by imprisonment for not more than six months." AS 09.50.020. It would appear that the unauthorized disclosure of the test results of the person whose blood was tested would result in the person's right or privilege in not having those results disclosed being defeated or prejudiced. Consequently, I believe a person that discloses test results in an unauthorized manner would be subject to a \$300 fine or six months in jail.<sup>3/</sup> Since the committee's rationale for adopting this change appeared to be based upon the concerns of the Department of Law that an alleged victim could be subjected to a jail sentence this change does not accomplish that goal.

---

<sup>1/</sup> Criminal contempt is punishable as provided for in civil contempt proceedings. AS 12.80.010.

<sup>2/</sup> In a sense the contempt could be considered to be civil, in that any unauthorized disclosure could be considered to have occurred to the detriment of the person whose blood was tested and the person who made the disclosure could be ordered to compensate the person whose blood was tested for any damage sustained by the unauthorized disclosure. See AS 09.50.040 and Stadler, infra, at 272 - 273. But since there is no way the person making the disclosure can purge the contempt - the person cannot take back the unauthorized disclosure - it seems reasonable to assume that any contempt proceeding in this situation would be criminal contempt.

<sup>3/</sup> In Siggelkow v. State, 731 P.2d 57 (Alaska 1987), the Alaska Supreme Court found that a woman's right to be "left alone" by her ex-husband who constantly harassed her in violation of a no-contact order issued as part of the parties' divorce decree was such a right that authorized the increased penalty provisions of AS 09.50.020. I do not believe that it is a great reach from that decision to say that a person's right, under the bill, not to have their test results disclosed is such a right or privilege that the defeat or prejudice of that right by unauthorized disclosure would authorize the increased penalty provision of AS 09.50.020.

Representative Cynthia Toohey  
February 17, 1993  
Page 3

I am also concerned about the removal of the criminal penalty for unauthorized disclosures and how it may affect a court's review of the constitutionality of the entire blood testing scheme. It must be remembered that the Alaska Constitution contains an explicit right of privacy provision that does not exist under the United States Constitution or most other state constitutions. Providing for a certain level of confidentiality of the identifiable test data as is done in the bill and a provision that unauthorized disclosure is a crime provides a court at least some support in finding that this testing scheme is constitutional. While punishment of unauthorized disclosures as criminal contempt does not harm the bill vis-a-vis a constitutional challenge, the removal of any criminal sanction would weaken the bill if its constitutionality were under attack.

Finally, I am concerned about how someone not a party to the petition for testing could be prosecuted for contempt. How would the person have received notice that the test results could not be disclosed if they were not served with the original court order? If a person were aware that testing might be ordered and they might want to disclose the results for whatever personal reason they might have, if they were able to obtain the results by hook or crook, how could the person intervene in the criminal proceeding if they were not the victim or the state? I don't have answers to these questions, but if a criminal penalty is provided for unauthorized disclosure I don't believe that these questions would be implicated.

If you have any questions, please contact me at your convenience.

February 17, 1993

Honorable Pete Kott, Member  
House HESS Committee  
Alaska State Legislature  
State Capitol  
Juneau, AK 99811

Dear Representative Kott,

At the House hearing of HB 109 (Blood testing on individuals accused of sexual assault) on 9/16/93 I made an error in a statement on the disease, Hepatitis B. I wish to take this opportunity to correct that misunderstanding and to apologize for any confusion that the statement may have created.

Contrary to my statement, although the primary method of transmission is through the blood route, Hepatitis B is considered to be a sexually transmitted disease.

Hepatitis B is a highly infectious virus that is very stable and can exist over a month in the dried state. It is not transferred in the fecal, oral route but is transmitted through blood and the sexual process. It can also be transmitted from an infected mother at the birthing and through the saliva of an infected person. The later is considered one reason for the high incidence of hepatitis B in institutions that cared for children who were severely mentally retarded.

Hepatitis B immune globulin is available for those who have high risk exposures but the preventions of hepatitis B is not definite. A Hepatitis B vaccine is available for preventing the disease if given before exposure. The vaccine is given in combination with the globulin at times after the exposure to maximize the possibility of preventing the disease.

In view of the transmission of hepatitis B through sexual practices it would be reasonable that testing for this disease be included in the blood tests mandated under C.S. for H.B. 109.

Thank you for giving me the opportunity to correct any misinformation that may have been provided earlier.

Sincerely,

Peter M. Nakamura M.D., M.P.H.  
Director, Division of Public Health.

Re: CSHB 109(HES) (Relating to blood tests for persons charged with sex offenses)

Dear Representative Kott:

By letter dated February 26, 1993, you have asked us to review CSHB 109(HES), relating to blood tests for persons charged with sex offenses. In particular, you wish to know whether there are potential due process problems in allowing the court to order a blood test without holding a hearing on the matter at which the defendant may be present.

We do not believe that this provision presents any constitutional problems. Proposed AS 18.15.300(c) authorizes the superior court to order a defendant to provide a blood sample for testing if the court determines that there is probable cause to believe that the defendant committed one of the enumerated offenses and that sexual penetration with the victim took place.

The "probable cause" standard set forth in this bill is the same standard that is used for the issuance of search warrants. Search warrants are uniformly issued at ex parte proceedings; the defendant is neither present nor has any right to be heard before the warrant is issued and executed. Search warrants per force involve an invasion of the subject's privacy. The sufficiency of the probable cause standard to support search warrants is highly indicative of the sufficiency of that same standard for the issuance of an order requiring a charged defendant to submit a blood sample for testing. Similarly, the permissibility of obtaining search warrants in ex parte proceedings is highly indicative that an order requiring the production of a blood sample may be issued without providing the defendant an opportunity to be heard on the issue.

Proposed AS 18.15.300(c) further states: "In making the [probable cause] determination, the court may rely on the evidence presented at a grand jury proceeding or

preliminary hearing."<sup>1</sup> At a preliminary hearing, the prosecution bears the burden of establishing that there is probable cause to believe that the alleged offense was committed by the defendant. Criminal Rule 5.1(h). The defendant has the right to be present at this hearing and may cross-examine the witnesses against him. Criminal Rule 5.1(b). Thus, to the extent that the court relies upon evidence that was presented at a preliminary hearing, the defendant had the opportunities to be present and confront the evidence against him at that hearing; a second such opportunity need not be provided.

The defendant does not have the opportunity to be present at a grand jury proceeding. Our constitution, however, provides alternative safeguards to secure defendants' rights. Thus, a grand jury, which is comprised of eighteen persons, hears the evidence against the defendant and applies a standard at least as strict as the "probable cause" standard used in preliminary hearings (whether "all of the evidence taken together, if unexplained or uncontradicted, would warrant a conviction of the defendant"). Criminal Rule 6(q). To the extent that this proceeding is sufficient to justify the maintenance of felony charges against the defendant, with the appreciable loss of liberty entailed throughout those proceedings, we believe that it is also sufficient to justify an order requiring the defendant to provide a blood sample for testing.

Finally, we note that proposed AS 18.15.310(f) specifies that "the results of tests ordered under AS 18.15.300 -- 18.15.330 are not admissible evidence in a criminal or juvenile proceeding." Although we do not believe that this provision is constitutionally required, it further reduces any concerns that may exist regarding the lack of a new evidentiary hearing on the issue of whether a blood test should be ordered. A defendant would have a greater interest in challenging an order to provide a blood sample if that sample could be used as evidence against him.<sup>2</sup>

In summary, we find no constitutional impediment to this bill's provision authorizing the court to rely upon a preliminary hearing and/or grand jury proceedings in making the factual determination that there is probable cause to believe that the defendant committed one of the enumerated offenses and that sexual penetration with the victim took place.

You also wish to know whether the defendant's privacy interests are sufficiently safeguarded by providing that unauthorized disclosure is punishable by contempt of court. We

---

<sup>1</sup> We would like this sentence to be amended to explicitly acknowledge that the court may rely *exclusively* on such evidence.

<sup>2</sup> We note that there is nothing in this bill that would prevent a prosecuting attorney from obtaining an independent order for the provision of a blood sample under Criminal Rule 16.

believe that this is sufficient. To the extent that the circumstances justify the invasion of the defendant's privacy rights in the first instance by requiring the production of a blood sample for testing, the defendant's additional privacy interests in restricting the disclosure of the test results are adequately protected by the provision in this bill prohibiting unauthorized disclosures. We do not believe that the defendant's right of privacy is appreciably affected by whether a violation of that prohibition is treated as contempt of court or is made a new criminal offense.

If you have further questions or if we may be of assistance in any other manner, please feel free to contact us.

Very truly yours,

MEMORANDUM

DATE: March 17, 1993

TO: Representative Larson  
Co-chair, House Finance Committee

FROM: Rep. Pete Kott 

RE: Request for hearing  
HB 109, Blood Tests for Sex Crime Perpetrators

Please schedule HB 109 for a hearing before the House Finance Committee as soon as possible.

HB 109 is a victims rights bill which allows the victim of a sexual assault to petition the court to have the defendant tested for the presence of HIV antibodies and indications of other sexually transmitted diseases. The bill also provides that if the defendant is convicted, he must reimburse the state for the cost of the test.

The following items are attached:

Sponsor statement  
Attorney General's opinion  
Letter from Dr. Peter Nakamura  
Department of Public Safety briefing paper  
Letter of support from Alaska Women's Commission  
Fiscal notes:

### MEMORANDUM

March 27, 1993

**SUBJECT:** Sectional Summary of CSHB 109(JUD)  
(Work Order No. 8-LS0462\O)

**TO:** Representative Pete Kott  
Attn: Jack Phelps

**FROM:** Jerry Luckhaupt *JLB*  
Legislative Counsel

You have requested a sectional summary of the above described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill - the bill itself is the best statement of its contents.

Section 1 of the bill amends AS 18.15 by adding new sections AS 38.15.300 - 38.15.320.

AS 38.15.300 provides that a defendant or a juvenile charged with a violation of AS 11.41.410 - 11.41.440 that includes sexual penetration as an element of the offense may be ordered to submit to a blood test for indications of exposure to or infection by HIV and other sexually transmitted diseases. Copies of the results of the test shall be provided to the defendant or juvenile, the victim, and if the defendant or juvenile is detained, the officer in charge and the chief medical officer of the institution detaining the defendant or juvenile. The section provides procedures for ordering the test and sets limitations on when a test may not be ordered.

AS 18.15.310 provides procedures for conducting the test and issuance of the results. This section also provides that a court may order everyone receiving the results, other than the defendant or juvenile, not to release the results.

AS 18.15.320 provides that the cost of performing a test shall be borne by the Department of Health and Social Services. If a defendant for whom a test has been conducted is convicted the sentencing court is required to order the defendant to reimburse the Department of Health and Social Services for the cost of the test and the Department of Corrections is authorized to deduct the cost of the test from any pay the inmate receives under AS 33.30.201.

Section 2 of the bill provides an effective date.

Randall P. Burns  
Executive Director

Dear Representatives Larson and MacLean:

I am writing to you regarding House Bill 109. HB 109 would require persons arrested for alleged sex offenses involving penetration to have their blood tested to ensure that they are not HIV positive or infected with AIDS virus or other communicable or sexually transmitted diseases. This bill would allow, under fairly stringent confidentiality provisions, the alleged victims of sex offenses involving penetration to discover if they could have contracted any disease from the alleged sex offender.

Although the Alaska Civil Liberties Union (AkCLU) appreciates the desires of the sponsors of this bill to inform alleged victims of sex offenses of the likelihood of future serious -- even life-threatening -- health risks associated with the violence perpetrated against them, it opposes -- for the reasons outlined below -- the approach taken by this bill.

Page Two - Representatives Larson and MacLean - March 23, 1993

First, HB 109 would allow blood samples to be taken from an alleged offender *before* he or she has been found guilty of a crime. Under the bill, however, blood cannot be sampled until a judge finds "probable cause exists to believe that a transfer of blood, saliva, semen, or other bodily fluid took place between the defendant or minor and the alleged victim." This requirement, while putting in place a procedural protection not presently in place for defendants (which the AkCLU supports), poses hardships on both the alleged victim and the defendant.

The bill will require a probable cause hearing before the actual trial itself, requiring the alleged victim to potentially have to appear in court twice, once for the hearing and once at the trial itself. Court appearances in these cases are understandably difficult for the victim and adding a potential second appearance seems very troublesome. In addition, a finding of probable cause by a judge will certainly leave the public with the impression that the defendant is guilty even before he or she has had a full and fair trial on the matter of the offense. This assumption of guilt would potentially deny alleged offenders due process of law by denying them both the right to not incriminate themselves and the right to a presumption of innocence until *proven* guilty.

Secondly, this bill would perpetuate the dangerous misperception that information about a sex offender's (e.g., rapist, incest perpetrator, child molester) HIV status is critical to the victim's health, *when in fact such knowledge is useless*. The knowledge of the health status of an alleged sex offender is of no import when determining the future health of the victim of a sex offense. Though the offender may test positive for HIV (or other sexually transmitted or communicable diseases), there is no guarantee that the victim will develop the disease.

**More importantly, even if the alleged offender tests negative at the time of the blood test, there is no guarantee that the victim will not develop the disease.** We know that the incubation period for the AIDS virus ranges from two weeks to six months and is peculiar to each individual. Therefore, a survivor of a sex offense may improperly rely on a negative result and forgo testing or prophylactic treatment if the accused tests negative.

A much more effective method of determining whether the victim develops such a disease is to *monitor the health of the victim*, not that of the alleged offender. The AkCLU opposes mandatory HIV testing of people accused of sex

Page Three - Representatives Larson and MacLean - March 23, 1993

offenses specifically because such tests do not provide the victims of sex offenses with timely or reliable information which they can use to properly evaluate their level of risk and make informed decisions about their health care. Testing the accused cannot tell the survivor whether she or he has been infected and thus does not preclude the need for survivors to be tested themselves.

Assuming that the underlying purpose of this bill is provide information necessary for the provision of appropriate health care to a victim of sexual assault, testing the defendant for the presence of HIV shortly after the date of the alleged assault will not provide reliable or conclusive information to the victim. A positive test could just as likely reflect that the accused had been exposed to HIV during the period of time after the alleged assault (if the accused is out on bail, for instance) as any exposure prior to the alleged offense.

Furthermore, if there is reasonable evidence to suspect exposure to HIV and treatment is available, it should begin as soon after exposure as possible. This again speaks to the need for testing, treatment, and counseling, if necessary, of the victim without regard to any test result of the accused. Indeed, by six to twelve months after the date of the offense, the survivor's own test result is *the* most reliable source of information regarding her or his health status.

Finally, mandatory testing, even with the protection of a probable cause hearing, is an intrusive medical procedure. The AkCLU is concerned that the alleged perpetrator's individual right to privacy will be infringed upon under this bill. Only in the most extreme of circumstances should any medical procedure be performed upon a person without that person's consent. Given that the test is more accurate when taken from the victim, there is no reason for the state to impose mandatory blood testing on a defendant in a sex offense case.

The AkCLU agrees that sex offenses are terrible crimes. Nevertheless, we also believe that the rights of victims and the rights of the accused must be balanced. The rights of one group should not take precedence over the rights of another. Should HB 109 pass, however, the rights of victims will be granted precedence over the rights of *accused* offenders, while failing to truly offer the victims of sexual offenses the kind of surety about their health that only comes with proper testing of and counseling for the victim.

*Position Paper*

*Alaska Women's Commission  
Post Office Box 82977  
Fairbanks, Alaska 99708*

*Approval By Alaska Women's Commission  
House Bill 109*

*This bill would require blood tests from persons charged with sexual offenses and provide an avenue for victims of the sexual assault to receive the results of those tests.*

*HB 109 provides victims of sexual assault a means to determine whether they have been exposed to communicable diseases. At the present time privacy laws prohibit this testing of alleged perpetrators of sexual assault or disclosure of test results. Victims have no recourse to determine if they have contracted a sexually transmitted disease. This bill would provide that recourse.*

*The Alaska Women's Commission supports HB 109. Victims of sexual assault are innocent people whose person and whose own right to privacy have been violated. The statutes should provide them access to the medical information about their attacker necessary to determine any medical treatment needed to preserve their physical - and mental - health. Sexual assault victims need a great deal of help and support for recovery. HB 109 provides an important remedy without compromising legitimate protection of the alleged attacker's rights.*

*The proposed bill appears to adequately address both the necessary protections and practical means of achieving the desired results. The Alaska Women's Commission supports HB 109 as written.*

NCSL REPORT

## TESTING SEX OFFENDERS FOR HIV

"The public good to be achieved must be balanced against the costs of the policy."  
Larry Gostin, *The Politics of AIDS*, 1989

### INTRODUCTION

In the United States each year between 1973 and 1987 some 155,000 women reported they had been raped. (1, p. 7) Although rape is not solely a crime against women, national statistics on homosexual rape are not available. All victims of sexual assault (or survivors, the term some advocacy groups such as the Center for Women Policy Studies prefer) suffer physical and emotional trauma. (2) When the fear of being infected with the human immunodeficiency virus (HIV) is added, the emotional burden increases. Because the victims not only have been assaulted but also possibly threatened with a deadly disease, they often want to know if their assailant is infected with HIV, and public sentiment tends to support requiring the accused to undergo HIV testing.

States feel pressure to respond with legal remedies. One option is to require offenders to be tested for HIV infection (the presence of HIV antibodies) so that victims may have the information. Federal legislation passed in 1990, the Martin amendment to the Comprehensive Crime Control Act of 1990 (P.L.101-647), pressures states to require HIV testing of convicted sex offenders at the victim's request or lose 10 percent of their victim's assistance funds.

Still, questions exist about the usefulness of testing and the legality of mandatory testing. Being infected with HIV is not a crime; infection only becomes relevant to criminal proceedings in the cases involving reckless endangerment, such as assault with intent to infect or deliberate transmission of the virus.

The states have the task of balancing the rights of victims and defendants. To do so, legislators need to conduct careful research about the issues and involve rape victim assistance groups, other relevant community organizations and public health agencies, as well as legal counsel. As Larry Gostin, executive director of the American Society of Law and Medicine, asserts, "The public good to be achieved must be balanced against the costs of the policy [including] . . . the invasion of human rights, the financial cost or the practical burdens of the policy." (3, p. 1020) This report examines some of those policy costs, focusing on issues for legislators to consider regarding HIV testing. The issues include both practical and legal questions about requiring HIV tests for sex offenders.

### PRACTICAL CONSIDERATIONS ABOUT HIV TESTING

Tests for HIV infection screen for antibodies produced by the immune system's response to HIV, not for the virus itself. The usual testing procedure is to screen with the ELISA (enzyme-linked immunosorbent assay) and then to confirm positive results with the more labor intensive Western blot test. (4, p. 261-2) Testing sex offenders for HIV raises a number of questions, including the small risk of transmission, the reliability of the tests, the usefulness of the information and the cost.

The risk of transmission of HIV from a single sexual assault. HIV is transmitted through the transfer of body fluids such as semen and blood. The risk of HIV transmission from a single sexual encounter is relatively low. Currently available data suggest at most a 1-in-500 chance of

## TESTING SEX OFFENDERS FOR HIV

"The public good to be achieved must be balanced against the costs of the policy."  
Larry Gostin, *The Politics of AIDS*, 1989

### INTRODUCTION

In the United States each year between 1973 and 1987 some 155,000 women reported they had been raped. (1, p. 7) Although rape is not solely a crime against women, national statistics on homosexual rape are not available. All victims of sexual assault (or survivors, the term some advocacy groups such as the Center for Women Policy Studies prefer) suffer physical and emotional trauma. (2) When the fear of being infected with the human immunodeficiency virus (HIV) is added, the emotional burden increases. Because the victims not only have been assaulted but also possibly threatened with a deadly disease, they often want to know if their assailant is infected with HIV, and public sentiment tends to support requiring the accused to undergo HIV testing.

States feel pressure to respond with legal remedies. One option is to require offenders to be tested for HIV infection (the presence of HIV antibodies) so that victims may have the information. Federal legislation passed in 1990, the Martin amendment to the Comprehensive Crime Control Act of 1990 (P.L.101-647), pressures states to require HIV testing of convicted sex offenders at the victim's request or lose 10 percent of their victim's assistance funds.

Still, questions exist about the usefulness of testing and the legality of mandatory testing. Being infected with HIV is not a crime; infection only becomes relevant to criminal proceedings in the cases involving reckless endangerment, such as assault with intent to infect or deliberate transmission of the virus.

The states have the task of balancing the rights of victims and defendants. To do so, legislators need to conduct careful research about the issues and involve rape victim assistance groups, other relevant community organizations and public health agencies, as well as legal counsel. As Larry Gostin, executive director of the American Society of Law and Medicine, asserts, "The public good to be achieved must be balanced against the costs of the policy [including] . . . the invasion of human rights, the financial cost or the practical burdens of the policy." (3, p. 1020) This report examines some of those policy costs, focusing on issues for legislators to consider regarding HIV testing. The issues include both practical and legal questions about requiring HIV tests for sex offenders.

### PRACTICAL CONSIDERATIONS ABOUT HIV TESTING

Tests for HIV infection screen for antibodies produced by the immune system's response to HIV, not for the virus itself. The usual testing procedure is to screen with the ELISA (enzyme-linked immunosorbent assay) and then to confirm positive results with the more labor intensive Western blot test. (4, p. 261-2) Testing sex offenders for HIV raises a number of questions, including the small risk of transmission, the reliability of the tests, the usefulness of the information and the cost.

The risk of transmission of HIV from a single sexual assault. HIV is transmitted through the transfer of body fluids such as semen and blood. The risk of HIV transmission from a single sexual encounter is relatively low. Currently available data suggest at most a 1-in-500 chance of

infection from a single male-to-female exposure if the male is infected. (5, p. 2429 and 6) Risk may be somewhat higher if tissue damage occurs, as may be likely in cases of forcible rape. Of those who died from AIDS-related illness between 1981 and 1990, only 3.5 percent (3,587) were infected through heterosexual contact. (7) The most recent Centers for Disease Control data attribute 10,011 (6 percent) of all known AIDS cases in the United States to heterosexual contact. (8) No cases of HIV transmission from rape have been reported in the United States and only one in Great Britain. (9, p. 36 and 10, p. 2)

Reliability of HIV tests. Most individuals with detectable antibodies are assumed capable of transmitting infection. Current tests are quite reliable, but no test is 100 percent so. (4, p. 260) Especially in low-risk populations, there are significant problems with false positive results (positive tests when the virus is not present) and false negative results (negative tests when the virus is actually present). (4, p. 263) Test results vary among laboratories and are vulnerable to subjective interpretation. Most infected people test HIV-positive within four to six weeks after exposure, but some may not test positive for up to six months, possibly longer, because tests monitor antibodies produced in response to the virus rather than the actual presence of the virus. There is hope for more reliable tests in the future.

Usefulness of testing information. Sexual assault victims might want information about the accused offender's HIV status for two primary reasons: concern for their own health and concern for the health of their sex partners. The victims and their sex partners would be relieved to know if the offender did not test HIV-positive. If the offender tested HIV-positive, victims would want to know quickly to initiate preventive medical action and to protect their partners. A pregnant woman or a woman considering pregnancy has a particularly compelling need to know the offender's HIV status so she can make informed decisions about the health of her future children. Testing the victim will not give useful, reliable information immediately after the assault, because the virus can have an incubation period of six months or more.

A victim might request treatment with AZT (zidovudine), which is used to delay the progression from HIV infection to full-blown AIDS and to increase the length and quality of life of infected patients. Some physicians recommend immediate administration of AZT as a prophylaxis to healthcare workers who have been exposed to HIV, but no studies to date have proven the effectiveness of AZT as a preventive measure. The U.S. Public Health Service recommends that physicians and exposed individuals (but not specifically victims of sexual assault) make decisions about the use of AZT based on risk of infection, time elapsed since exposure, and counseling about the risk of toxicity and the uncertainty about the effectiveness of the medication as a preventive measure. (11, p. 7)

Time also is an issue. Because early intervention may be more effective (if AZT intervention is beneficial at all), testing and communication of test results to the victim need to be completed as quickly as possible after the assault. Waiting until conviction, which can take up to three years, decreases the usefulness of the information to the victim. Testing all accused offenders may solve this problem but raises legal questions. If the offender is not tested promptly, then testing the victim provides at least as much useful information to the victim, because it may show the actual presence or absence of the virus. (12, p. 264)

Cost and payment of mandatory or court-ordered testing. Testing costs vary widely, depending on whether testing is done in bulk, as through a state health department, or individually, by private physicians. Costs also depend on the number of tests required, determined by preliminary test results and the individual's risk factor(s). Costs for tests in bulk are estimated at \$3 to \$15 for the ELISA and \$25 to \$40 for the Western blot assay. Individual tests are substantially more expensive, averaging \$50 to \$75, and can cost as much as \$200.

Only a few states have laws that provide for paying for testing, and none unconditionally pays for a victim's testing. Florida draws on general revenue funds. Kansas, Ohio, South Carolina and Virginia demand repayment from the convicted offender, either directly or as part of the court's judgment. If the defendant is indigent, then the state, municipality or county pays. Oregon uses Crime Victim Compensation funds. Missouri's Department of Health pays for the victim's test if the defendant tests HIV positive, and Idaho pays only to the extent that the Legislature appropriates specific funds.

## LEGAL CONSIDERATIONS ABOUT HIV TESTING

The Fourth and Fourteenth Amendments to the U.S. Constitution raise two major issues concerning mandatory testing of offenders and non-voluntary disclosure of test results to victims and others. The Fourth Amendment guarantees protection of the individual from unreasonable searches and seizures and requires that search warrants be based on probable cause. The Fourteenth Amendment is concerned with personal liberty, restrictions on state action and the right to privacy.

Reasonable search. Obtaining a blood sample for HIV testing is a "search" under federal law. The U.S. Supreme Court's interpretation is that the reasonableness of a search is determined "by balancing the government's need to conduct the search against the invasion which the search entails." (13) Warrantless administrative searches may be allowed in non-criminal proceedings when the government's interest in protecting public safety outweighs the individual's privacy interest. (14) The uncertainty surrounding HIV test accuracy and the decreasing usefulness of the offender's test results over time may weaken the case that testing protects public safety in terms of sexual assault victims.

Privacy. Discrimination against HIV-infected individuals is a serious problem. There are concerns about fairness of trials and treatment in correctional facilities. Knowledge that an individual was tested, regardless of the results, can be damaging. Perhaps more important, if the defendant is tested before conviction, it may prejudice the presumption of innocence. On the other hand, if testing is restricted only to convicted sex offenders, it fails to allow for early medical intervention and provides little physical or emotional benefit to the victim.

Court-ordered testing. If a court receives the defendant's written, informed consent to test, or if a court weighs the need for testing against the right of the defendant and finds cause to test, then there are fewer constitutional constraints on testing. A Connecticut law (S.B. 812, 1989), although not specifically directed at sex offenders, is an example of legislation that balances public need and legal protection. Before a court may issue an order for testing, it must find clear and imminent danger to the public health or the health of another person. In addition, the person requesting testing must demonstrate a compelling need that cannot be met by other means. To assess "compelling need," the court must weigh the need for the test result against the test subject's privacy interests and the public interest, which may be poorly served by involuntary testing. (15, p. 61) The problem with these procedures is how long they take.

## OPTIONS OTHER THAN HIV TESTING OF THE OFFENDER

The Presidential Commission on the HIV Epidemic and others concerned with the needs of assault victims have recommended focusing on the victim's needs and health status, providing HIV and rape counseling, and making medical care available. (2,16,17,18)

When reason exists to suspect HIV transmission from an assault, testing the victim, and retesting over the period of incubation, is the most reliable source of information. (19, p. 1632) In

addition, the victim may better benefit from an immediate assessment of the risk status of the accused offender, with or without HIV testing, to the extent possible within the legal limits of confidentiality. The victim also needs to know the latest information about preventive measures, such as AZT treatment.

The Centers for Disease Control recommend that pre-test counseling include information about:

- ▶ The risk of infection;
- ▶ The limitation of the test results;
- ▶ The consequences of a positive test result, such as concerns about insurance, employment and housing discrimination; and
- ▶ Measures to prevent the spread of the virus.

## STATE RESPONSES

As of May 1991, at least 23 states had passed laws concerning HIV testing of sexual offenders. In addition, at least 70 bills about this issue were proposed in 26 states during the 1991 legislative sessions.

States have taken different approaches to concerns about sex assault. Some have emphasized the rights of victims, others the rights of defendants. California's and New York's laws tend to illustrate the range.

California (S.B. 1007, 1988 and S.B. 2643, 1989) places greater emphasis on victims' rights. One law mandates HIV testing of convicted sex offenders. Another requires the court to issue a search warrant to obtain a blood sample for HIV testing from a person charged with sexual assault when there is probable cause to believe there was a transfer of body fluids. Counseling for both the victim and the accused is required. If the test is positive and confirmed, the victim is notified. The victim is immune from civil liability for disclosing the information as necessary to protect the health and safety of self, sex partner(s) and family. (12, p. 244 and 16, p. 1625)

New York's AIDS Testing and Confidentiality Law [NY PUB. HEALTH LAW 2781.1], which does not specifically address testing sex offenders, protects the rights of the defendant while weighing the needs of the victim. It does not give the victim the right to have the defendant tested. The person to be tested must give written, informed consent unless the test is authorized by law. The court must weigh the victim's needs against the defendant's privacy interests and find "clear and imminent danger" to the victim's life or health before ordering testing or disclosure of test results to the victim. Any further disclosure or redisclosure is prohibited. (12, p. 259 and 16, pp. 1627-29)

The Appendix contains a chart of state laws concerning HIV testing of sex offenders and their provisions on the issues addressed in this report. The following is a summary of the provisions:

- ▶ **Testing Requirements:** fourteen states (CO, FL, ID, IL, IN, MS, MO, NV, ND, OH, OR, SC, TN, WV) require testing for convicted or, in some cases, charged sex offenders; 11 states (AK, AZ, CA, FL, GA, KS, MI, OR, TX, VA, WA) require a court order, some only after failure to get the accused's consent.

- ▶ **Timing** : At least nine states (CA, CO, FL, GA, ID, NV, OH, TX, VA) allow testing at the time of arrest or after charges have been filed, as opposed to after conviction. Four of them require the victim to first request the testing.
- ▶ **Access to Test Results**: Almost all states with testing laws make results available to the victim and the accused as well as to public health authorities. In some states the court and penal system also have access to the results.
- ▶ **Penalties for Unauthorized Disclosure**: Three states (AZ, KS, OR) consider it a misdemeanor to reveal test results to anyone not legally authorized to have access. Penalties include fines.
- ▶ **Counseling**: Laws in 14 states (AK, AZ, CA, FL, GA, IN, KS, MI, MN, OH, OR, VA, WA, WV) include provisions for counseling the victim and/or the accused.
- ▶ **Funding**: Nine states (FL, GA, ID, KS, MO, OH, OR, SC, VA) have included methods of paying for testing in their laws. In Ohio and South Carolina the accused is charged for testing; Kansas and Virginia pay for testing and then include restitution through the convicted person's court costs. Florida draws on general revenue funds, and Oregon uses crime victim compensation funds.

Legislation proposed in 1991 continued to focus on mandatory testing for convicted sex offenders and mandatory or permitted testing of individuals arrested for sex offenses. Other issues under consideration included victim counseling and methods of paying for testing and counseling.

## COURT RESPONSES

State laws concerning HIV testing of sex offenders are relatively new and have undergone little court scrutiny. Michael Stoy, Idaho deputy attorney general, says of his state's law that requires testing of anyone charged with a sex offense, "I keep waiting for our own law to be challenged constitutionally . . . but there has not yet been a definitive nationwide statement as to whether someone can be tested against their will. It's a Fourth Amendment privacy right balanced against a public health situation." (9, p. 38)

## CONCLUSION

Requiring HIV testing is one highly visible legislative response to the problems of sexual assault and AIDS. State policymakers are faced with constitutional issues of balancing both the rights of victims and defendants and with practical concerns about risks, reliability, usefulness and costs of testing. So far, at least 23 states have responded with a variety of legislative provisions concerning testing: mandatory vs. court ordered, before or after conviction, with or without compulsory counseling, and with various notification procedures. Testing, by itself, may not best serve policymakers' intent to assist victims. It may provide some relief to victims, but programs that include counseling, monitoring of victims' own health status, and emphasis on their own well-being may generate greater long-term benefits. States will continue to be involved in addressing this highly emotional and legally difficult issue. Legislators may want to consult with legal counsel, rape victim assistance groups, other relevant community organizations and public health personnel when considering appropriate responses.

## HIV/AIDS Information and Education Project for State Legislators

NCSL works in partnership with the Centers for Disease Control (CDC) to educate and inform state legislatures on HIV and AIDS trends. Continued funding from the CDC enables NCSL's HIV/AIDS Project to serve legislators and their staff as an information resource and a forum to communicate with legislative colleagues, experts, and government officials around the country.

Legislators and legislative staff of the nation's 50 states, its commonwealths and territories are encouraged to request assistance from NCSL's HIV/AIDS Project. The following services are available at no cost to legislators and staff:

- o information clearinghouse
- o technical assistance
- o publications
- o meetings and workshops

The project is funded through a cooperative agreement with the U.S. Centers for Disease Control. For further information contact Tracey Hooker, policy specialist, at NCSL's Health Services Program (303/830-2200).

### The Difference Between HIV and AIDS

It is important for legislators to understand the distinction between the terms "HIV" and "AIDS" when they formulate policies. There is an immense difference between being infected with HIV and being diagnosed as having AIDS.

HIV is the term for the virus that damages the immune system and may eventually cripple the body's ability to fight disease. AIDS is the end result of HIV infection. People infected with HIV are diagnosed as having AIDS if they develop certain serious diseases or conditions, such as Kaposi's sarcoma (a rare skin cancer), pneumocystis carinii pneumonia, or HIV dementia.

Many more people are infected with HIV than have developed AIDS. An estimated one million individuals are believed to be infected. Many HIV-infected people experience no symptoms of illness for up to 10 years or more. "HIV infection" more correctly defines the scope of the public health problem that legislators face today.

#### Some of the most regularly misunderstood phrases related to HIV:

<b>Misleading</b>	<b>More Accurate</b>
Infected with AIDS .....	HIV infection
AIDS virus .....	HIV (human immunodeficiency virus)
HIV virus .....	HIV
AIDS test .....	HIV antibody test
AIDS antibodies .....	HIV antibodies
Positive AIDS test .....	Positive test for HIV antibodies
AIDS transmission .....	HIV transmission
AIDS victim .....	PWA (person with AIDS) or PLWA (person living with AIDS)
High risk groups .....	High risk behaviors

# Bill would allow AIDS testing of rape suspects

By IAN MADER

THE ASSOCIATED PRESS

Sexual assault victims would be able to find out whether their suspected attacker carries the virus that causes AIDS, under legislation introduced in the House.

Victims could petition the court to have the suspect tested for the human immunodeficiency virus, known as HIV. If the court found probable cause that bodily fluids were exchanged, it would have to order the test.

The bill is a rewrite of legislation that died last year. More than a dozen states have passed such laws. To protect the rights of suspects, some states require a conviction before the test can be or-

dered.

No conviction is required under House Bill 109, but if the suspect were convicted, he or she would have to pay for the test. Otherwise, the Department of Health and Social Services would pay.

Rep. Pete Kott, R-Eagle River and sponsor of the bill, said a negative HIV test could alleviate fear for a traumatized victim. If the suspect carried the virus, the victim would know of the risk and could seek prompt medical treatment, Kott said.

The House Judiciary Committee is among the panels that will review the bill. Rep. Brian Porter, R-Anchorage and committee chairman, said testing suspects

may be an unnecessary expense.

A negative test for a suspect is no guarantee that HIV was not passed to the victim, said Porter, a former police chief. An attacker could recently have contracted the virus, but may not be testing positive yet.

"A victim would have to get tested themselves anyway," Porter said. "Anyone, including victims of sex crimes, can obtain free testing in Alaska."

The state will lose \$200,000 in federal aid without such a law, but administering the program may cost more than that, Porter said.

Among other measures introduced in the Legislature recently:

- HB91 and HB107, which would issue general obligation bonds to pay for public school construction and equipment. HB91 would issue \$414 million in bonds for rebuilding schools throughout the state.

CS HB 109(JUD)  
Rep. Kott  
3/25/93

## Appendix

# Worksheet

For Fiscal Year 1994, States and other Jurisdictions (for convenience hereafter referred to as States) must be in compliance with the HIV mandatory testing standards for certain offenders established by Sec. 1804 of the Crime Control Act of 1990, 42 U.S.C. § 3756(f) (hereafter referred to as Section 1804) in order to receive continued full funding under the Edward Byrne Memorial State and Local Law Enforcement Assistance Formula Grant Program.

The purpose of this worksheet is to assist the States in providing a self-assessment of their compliance with Section 1804. It need not be returned.

### 1. Victim Request.

Does the State statute require an HIV testing procedure at the request of any victim of a sexual act for which the person to be tested was convicted in State court (or make such a test mandatory for *all* persons thus convicted regardless of victim request)?

Yes     No    HB 109 exceeds this standard by providing for such testing on charged defendants.

What statutory section(s), subsection(s), paragraph(s), or subparagraph(s) or non-statutory materials provide this authority?

AS 18.15.300

### 2. Administration of the Test.

Does the State statute require an agency of the State (such as a court, health department, correctional authority, etc.) to direct that a test be administered in such cases?

Yes     No

Does the State statute specifically require testing in these cases for the presence of acquired immune deficiency syndrome (AIDS) or its precursor, human immunodeficiency virus (HIV).

Yes     No

What statutory section(s), subsection(s), paragraph(s), or subparagraph(s) or non-statutory materials provide this authority?

AS 18.15.300(d)

AS 18.15.310(b)

3. The Person to be Tested.

Does the State statute require persons to be tested who have been convicted under State law of a defined sexual act?

Yes, in all cases  Yes, but only at the request of a victim  No

Does this either specifically or by definitional inclusion encompass persons found guilty of the offense by a jury or court, as well as those entering a pleas of guilty? (Note: Because Question 6 below concerns the definition of juveniles as persons "convicted," please disregard that issue for Question 3).

Yes  No

What statutory section(s), subsection(s), paragraph(s), or subparagraph(s) or non-statutory materials provide this authority?

AS 18.15.300 (cf. AS 11.41.410 - 11.41.440)

4. Disclosure of the Test Results.

Does the State statute provide for disclosure of the test results to ~~the~~ both the victim and the person tested?

Yes  No

What statutory section(s), subsection(s), paragraph(s), or subparagraph(s) or non-statutory materials provide this authority?

AS 18.15.300(e)

5. Victim Services.

Does the State statute provide for making the following services available to the victims of these sexual acts at their request:

1. Counseling regarding HIV disease?

Yes  No

2. HIV testing in accordance with applicable law?

Yes  No

3. Referral for appropriate health care and support services?

Yes  No

What statutory section(s), subsection(s), paragraph(s), or subparagraph(s) or non-statutory materials provide this authority?

AS 18.15.310(h)

What are the sources of the funds to pay for these services?

Alaska Department of Health + Social Services

(test paid by defendant by order of the court  
if the defendant is found guilty.)

What statutory section(s), subsection(s), paragraph(s), or subparagraph(s) or non-statutory materials provide this authority?

AS 18.15.310(h)

AS 18.15.900

AS 18.15.320

6. Definition of the term "convicted" as including Juveniles.

Does the State statute require HIV testing for juveniles who have been adjudicated under State law of committing sexual acts as it does with adults?

Yes  No

What statutory section(s), subsection(s), paragraph(s), or subparagraph(s) or non-statutory materials provide this authority?

AS 18.15.300

7. Definition of the term "Sexual Act."

Does the State statute define "sexual act" as having the meaning (either literal or approximate) as that given the term in 18 U.S.C. § 2245(2)(A) or (B)? (See Division 7 of the "Guide for the States").

Yes  No

What statutory section(s), subsection(s), paragraph(s), or subparagraph(s) or non-statutory materials provide this authority?

AS 11.41.410 - 11.41.440

AS 11.81.900(b)(54)

This legislation does not have a fiscal impact on the Department of Corrections. The Department has staff who can draw the blood for the tests. Collecting the cost of the blood test from inmate earnings can be achieved without additional cost.

FISCAL NOTE

CS HB 109 (JUD)  
NO. 5  
pg. 2 of 2

STATE OF ALASKA  
1993 LEGISLATIVE SESSION

ANALYSIS (Continued):

The committee substitute for HB 109, CSHB 109 (HES), changes the standard for hearing petitions of victims to request an order requiring that blood samples be taken from a defendant, to require (1) that a court find that probable cause exists to believe that a crime for which a test may be ordered has been committed, and (2) that a court find that probable cause exists to believe that sexual penetration took place between the defendant or a minor and the alleged victim. The bill further provides that in making these determinations, the court may rely on the evidence presented at a grand jury proceeding or preliminary hearing. We believe that these changes will eliminate virtually all "mini-hearings" and associated discovery efforts that we predicted in our fiscal note comments dated February 3, 1993. Consequently, there should not be a fiscal impact for the Department of Law.

This fiscal note is based on the costs for the laboratory testing alone. It does not take into account the costs of medical personnel to perform the requisite counseling and testing, travel for medical personnel to communities where qualified personnel are unavailable, shipment of specimens, cost to ensure chain of evidence, and documentation of procedures and test results.

1992, 339 charges were made for arrests for sex offenses. Using 350 as the base, the laboratory costs associated with 1993 is as follows:

HB 109, Blood Tests for Sex Offenders  
Amendment offered in Senate Finance  
8-LS0462\O.3

PURPOSE

The purpose of this amendment is to provide balance in the bill between the rights of the victim and the rights of the accused person. Considering that the test subject will be charged on a probable cause finding, but not yet convicted, some limit to the allowable disclosures would seem to be necessary to protect the defendant's privacy rights. Several court cases seem to bear this out, notably *In re Juveniles A, B, C, D, E*, Wash SupCt. No. 58364-1, 3/11/93.

This amendment provides for the court to allow a very broad range of disclosures as it sees fit. It also decriminalizes the penalty for unauthorized disclosure. Unlike the original bill which made unauthorized disclosure a misdemeanor, this makes it a violation with a maximum fine of \$1,000.

SPONSOR STATEMENT

HB 109 – Blood Tests for Sex Crime Perpetrators

The purpose of HB 109 is to provide an avenue of relief for victims of sexual assault. The threat of HIV infection and of infection from other sexually transmitted diseases is a serious complicating side-effect of being victimized by sexual assault. The state has a compelling interest in assuring innocent victims of crime timely relief from the anxiety that may result from sexual assault.

HB 109 allows the victim of a sexual assault to petition the court to require a blood test on the defendant. The bill also provides that the state must make available to both the victim and the alleged perpetrator, upon their request, counseling relating to HIV and AIDS which is medically appropriate for those persons, and referrals for medical and support services.

Finally, HB 109 is designed to minimize the cost to the state of implementing this program. If the defendant is convicted, he or she must reimburse the state for the cost of the test. The court may order the Department of Corrections to provide for the reimbursement through garnishment.

The Federal Crime Control Act of 1990 specified that states must have a law such as that proposed by HB 109 or lose part of their law enforcement assistance grants. The deadline established by Congress is October, 1993. If we fail to pass this bill during the current session, Alaska's Department of Public Safety will lose approximately \$185,000 in FY94.

This bill can satisfy the Federal requirement and simultaneously form an integral part of an effort by the state of Alaska to ensure that victims of crime in our state are afforded every opportunity to receive appropriate relief.

**CSHB 109(JUD)  
SECTIONAL ANALYSIS**

**"An Act relating to blood tests for  
persons charged with sex offenses;  
and providing for an effective date."**

Section 1.

Adds new sections to AS 18.15 as follows:

AS 18.15.300

(a) makes a defendant (including a minor) charged with a sexual offense under AS 11.41.410 - 11.41.440 that includes sexual penetration as an element of the crime subject to an order of the court requiring testing for HIV and other sexually transmitted diseases.

(b) allows an alleged victim, the parent or guardian of a victim who is a minor or incompetent, or the prosecuting attorney on behalf of an alleged victim, to petition the court for an order requiring the defendant to be tested.

(c) requires the court to make a probable cause determination 1) that a crime has taken place under the specified statutes, and 2) that sexual penetration took place. Allows the court to rely exclusively on evidence presented at a grand jury proceeding or preliminary hearing to make the determinations required under this subsection.

(d) requires the court to order the test if the court finds probable cause that a crime was committed and that sexual penetration took place.

(e) designates the authorized recipients of test results obtained under an order authorized by subsection (d) of this section. Authorized recipients are the defendant, the victim (or the victim's parents or guardian) and the officer in charge and the chief medical officer of the facility in which the defendant is incarcerated.

(f) places time constraints on when the order authorized under (d) of this section may be filed. The test may not be ordered sooner than seven days after the arrest nor more than 90 days after the defendant has been convicted and sentenced. Additionally, a test may not be ordered after a finding favorable to the defendant.

(g) provides definitions for "disposition favorable to defendant," and "sexual penetration."

#### AS 18.15.310

(a) requires that blood drawn for a test under this act be drawn by licensed medical personnel according to AS 08.64.

(b) requires that testing for HIV and other sexually transmitted diseases on blood drawn under provisions of this act be conducted by a licensed medical laboratory and according to accepted medical standards.

(c) requires that positive test results be transmitted to the Department of Health & Social Services.

(d) requires test results to be sent to the designated recipients and requires a disclaimer to be attached to test results.

(e) allows the court to order persons who receive the test results to maintain the confidentiality of personal identifying data related to the tests. Provides certain exceptions to this confidentiality: (1) the defendant, and (2) the victim for such disclosures as are necessary to provide for the victim's own health and the health of the victim's spouse, immediate family and household, or a person in a dating, courtship, or engagement relationship with the victim.

(f) prohibits the test results from being used as evidence in a criminal or juvenile proceeding.

(g) provides civil immunity for persons performing the duties authorized by this act.

(h) if the test results are positive, requires the Department of Health & Social Services to provide free counseling and testing to the victim and counseling

to the defendant upon request. Also requires the department to provide referral for the victim to appropriate health care facilities and support services.

(i) defines "AIDS," "counseling," and "HIV." Counseling is defined as providing medically appropriate information including information on the diseases, their treatment and the medical and social implications of the diagnosis and the tests.

#### AS 18.15.320

(a) requires the Department of Health & Social Services to pay for tests ordered under this act.

(b) requires a defendant who is convicted of an offense for which a test was ordered under this act to reimburse the department for the cost of the test. Allows the court to order the Department of Corrections to garnish wages earned in correctional industries to pay for the test.

#### Section 2.

Provides that the act takes effect immediately according to AS 01.10.070(c).

Bill No. CSHB 109(JUD)

Date: March 31, 1993

Contact: Joanne F. Lopez  
Executive Director  
465-4356

Title: "An Act relating to blood tests for persons charged with sex offenses..."

A total of 530 rapes were reported in 1991. Rapes account for 15.5% of all violent crimes. There are concerns for victims who may become infected with human immunodeficiency virus (HIV). Cases have been reported.

The Council on Domestic Violence and Sexual Assault supports the concept of a bill that would allow a victim of sexual assault to learn if her/his assailant is infected with HIV.

The Council recommends that the victim be informed that because the offender's blood test is negative, it does not mean that they are safe. The nature of HIV is such that there is an incubation/latency period of six to eight months during which a carrier's blood will not reveal the presence of HIV but they can transmit the virus. Victims need to be aware that they should be (re)tested six to eight months later. The Council would like to see funding for the Department of Health & Social Services to pay for victim testing.

The Council also believes that the legislation should specify how the information will be transmitted to the victim. The Council recommends that the information should be provided to the victim only if the victim (or the victim's legal custodian, if the victim is a minor) wants the information. The information should never be transmitted by letter and the victim, or victim's legal custodian if the victim is a minor, should be allowed to name a designee to receive the information if the victim doesn't want to learn of it directly.

The Council recommends that counseling of victims concerning the results of the alleged offender's blood test need to be handled sensitively. A counseling brochure does not meet this standard. A trained counselor or nurse or other appropriate service provider needs to be available to help the victim deal with the situation and to counsel the victim on safe sex and protection of their partner due to the potential exposure.

  
Willie Kinnebrew, Acting Chair  
Council on Domestic Violence & Sexual Assault

BILL NO: CSHB 109(JUD)

DATE: April 28, 1993

TITLE: "An Act relating to blood tests for persons charged with sex offenses"

CONTACT: C.E. Swackhammer  
Deputy Commissioner  
465-4322

CSHB 109(JUD) amends A.S. 18.15, Disease Control, by adding new sections which will require that:

- Upon petition by the victim and a finding of probable cause, a defendant charged with sexual assault involving sexual penetration will be ordered by the court to submit to testing for medically accepted indications of exposure to or infection by the human immunodeficiency virus (HIV) and other sexually transmitted diseases.
- Sets forth requirements regarding the release of confidential testing results; the use of testing information in civil and criminal proceedings; provides free informational counseling and free testing to a victim for HIV and other sexually transmitted diseases reasonably communicable through the offense; informational counseling to the alleged perpetrator or defendant upon their request; referral to health care facilities and support services at the request of the victim.
- Establishes a means for reimbursement of costs by the defendant to the Department of Corrections.

CSHB 109(JUD) will enable a victim of a sexual assault to obtain information related to an alleged sexual assault perpetrator's infectious disease status, especially HIV infection, and convey this information to alleged victims so that they may take measures to preserve their health.

Beginning October 1, 1993, the Crime Control Act of 1990 requires that in order for the states to continue to receive their identified Drug Control and System Improvement Grant allocation amount, the states must have laws in place related to HIV testing of individuals convicted of a sexual offense. The result of a state not having such legislation enacted will result in a 10% reduction to the state's identified allocation amount.

Passage of CSHB 109(JUD) will enable the State of Alaska to continue to receive the entire Drug Control and System Improvement Grant allocation.

Richard L. Burton  
Commissioner

4/28/93

BRIEFING PAPER  
FOR

CS HOUSE BILL NO. 109 (JUD)

Prepared by Department of Public Safety

“An Act relating to blood tests for persons charged with sex offenses; and providing for an effective date.”

Since 1987, Alaska has received Drug Control And System Improvement Formula Grant Funds through the Office of Justice Programs, Bureau of Justice Assistance. The grant program is authorized by the Anti-Drug Abuse Act of 1988. The purpose of the funds is to provide assistance to the states for their law enforcement efforts to control the drug and violent crime problem. The allocation for each state and territory is primarily based on population.

For the first year, the allocation to Alaska was \$823,000. In 1993, the allocation is \$1,870,000.

Within the State, these funds are shared by state agencies and local units of government for the purpose of addressing the drug control problem through law enforcement, prosecution, and court system improvement programs.

In 1992, with federal allocation of \$1,852,000, there were 5 state agency projects and 9 local government projects funded. Through these projects the funds provided for 14 law enforcement officers throughout the State, to enforce the State's controlled substance laws through multi-jurisdictional task force, street level enforcement, and financial investigation efforts. These funds provided for two prosecuting attorneys to specialize in the prosecution of individuals violating the State's controlled substance laws. In addition, the funds provided for timely court processing and the identification of individuals with prior drug offense incidents through improvement of the court and criminal history record systems.

Beginning October 1, 1993, the Crime Control Act of 1990 requires that in order for the states to continue to receive their identified Drug Control and System Improvement Grant allocation amount, the states must have laws in place related to HIV testing of individuals convicted of a sexual offense. The result of a state not having such legislation enacted will result in a 10% reduction to the state's identified allocation amount. This amount then will be shared by those states which have enacted such legislation.

Briefing Paper  
CSHB 109(JUD)  
Page 2

For the State of Alaska to continue to receive its entire Drug Control and System Improvement allocation, avoid reducing its current drug control effort, and avoid providing 10% of its allocation to other states, passage of HIV testing legislation is necessary this session.

With a reduction of ten percent, or \$187,000, to the State's annual grant revenue allocation, it will be necessary to fund ten percent of the law enforcement and prosecution effort currently addressing the State's drug control problem through State general funds and municipal revenues.

Honorable Pete Kott, Member  
House HESS Committee  
Alaska State Legislature  
State Capitol  
Juneau, AK 99811

Dear Representative Kott,

At the House hearing of HB 109 (Blood testing on individuals accused of sexual assault) on 9/16/93 I made an error in a statement on the disease, Hepatitis B. I wish to take this opportunity to correct that misunderstanding and to apologize for any confusion that the statement may have created.

Contrary to my statement, although the primary method of transmission is through the blood route, Hepatitis B is considered to be a sexually transmitted disease.

Hepatitis B is a highly infectious virus that is very stable and can exist over a month in the dried state. It is not transferred in the fecal, oral route but is transmitted through blood and the sexual process. It can also be transmitted from an infected mother at the birthing and through the saliva of an infected person. The later is considered one reason for the high incidence of hepatitis B in institutions that cared for children who were severely mentally retarded.

Hepatitis B immune globulin is available for those who have high risk exposures but the preventions of hepatitis B is not definite. A Hepatitis B vaccine is available for preventing the disease if given before exposure. The vaccine is given in combination with the globulin at times after the exposure to maximize the possibility of preventing the disease.

In view of the transmission of hepatitis B through sexual practices it would be reasonable that testing for this disease be included in the blood tests mandated under C.S. for H.B. 109.

Thank you for giving me the opportunity to correct any misinformation that may have been provided earlier.

Sincerely,

Peter M. Nakamura M.D., M.P.H.  
Director, Division of Public Health.

Re: CSHB 109(HES) (Relating to blood tests for persons charged with sex offenses)

Dear Representative Kott:

By letter dated February 26, 1993, you have asked us to review CSHB 109(HES), relating to blood tests for persons charged with sex offenses. In particular, you wish to know whether there are potential due process problems in allowing the court to order a blood test without holding a hearing on the matter at which the defendant may be present.

We do not believe that this provision presents any constitutional problems. Proposed AS 18.15.300(c) authorizes the superior court to order a defendant to provide a blood sample for testing if the court determines that there is probable cause to believe that the defendant committed one of the enumerated offenses and that sexual penetration with the victim took place.

The "probable cause" standard set forth in this bill is the same standard that is used for the issuance of search warrants. Search warrants are uniformly issued at ex parte proceedings; the defendant is neither present nor has any right to be heard before the warrant is issued and executed. Search warrants per force involve an invasion of the subject's privacy. The sufficiency of the probable cause standard to support search warrants is highly indicative of the sufficiency of that same standard for the issuance of an order requiring a charged defendant to submit a blood sample for testing. Similarly, the permissibility of obtaining search warrants in ex parte proceedings is highly indicative that an order requiring the production of a blood sample may be issued without providing the defendant an opportunity to be heard on the issue.

Proposed AS 18.15.300(c) further states: "In making the [probable cause] determination, the court may rely on the evidence presented at a grand jury proceeding or

preliminary hearing.”<sup>1</sup> At a preliminary hearing, the prosecution bears the burden of establishing that there is probable cause to believe that the alleged offense was committed by the defendant. Criminal Rule 5.1(h). The defendant has the right to be present at this hearing and may cross-examine the witnesses against him. Criminal Rule 5.1(b). Thus, to the extent that the court relies upon evidence that was presented at a preliminary hearing, the defendant had the opportunities to be present and confront the evidence against him at that hearing; a second such opportunity need not be provided.

The defendant does not have the opportunity to be present at a grand jury proceeding. Our constitution, however, provides alternative safeguards to secure defendants' rights. Thus, a grand jury, which is comprised of eighteen persons, hears the evidence against the defendant and applies a standard at least as strict as the “probable cause” standard used in preliminary hearings (whether “all of the evidence taken together, if unexplained or uncontradicted, would warrant a conviction of the defendant”). Criminal Rule 6(q). To the extent that this proceeding is sufficient to justify the maintenance of felony charges against the defendant, with the appreciable loss of liberty entailed throughout those proceedings, we believe that it is also sufficient to justify an order requiring the defendant to provide a blood sample for testing.

Finally, we note that proposed AS 18.15.310(f) specifies that “the results of tests ordered under AS 18.15.300 -- 18.15.330 are not admissible evidence in a criminal or juvenile proceeding.” Although we do not believe that this provision is constitutionally required, it further reduces any concerns that may exist regarding the lack of a new evidentiary hearing on the issue of whether a blood test should be ordered. A defendant would have a greater interest in challenging an order to provide a blood sample if that sample could be used as evidence against him.<sup>2</sup>

In summary, we find no constitutional impediment to this bill's provision authorizing the court to rely upon a preliminary hearing and/or grand jury proceedings in making the factual determination that there is probable cause to believe that the defendant committed one of the enumerated offenses and that sexual penetration with the victim took place.

You also wish to know whether the defendant's privacy interests are sufficiently safeguarded by providing that unauthorized disclosure is punishable by contempt of court. We

---

<sup>1</sup> We would like this sentence to be amended to explicitly acknowledge that the court may rely *exclusively* on such evidence.

<sup>2</sup> We note that there is nothing in this bill that would prevent a prosecuting attorney from obtaining an independent order for the provision of a blood sample under Criminal Rule 16.

believe that this is sufficient. To the extent that the circumstances justify the invasion of the defendant's privacy rights in the first instance by requiring the production of a blood sample for testing, the defendant's additional privacy interests in restricting the disclosure of the test results are adequately protected by the provision in this bill prohibiting unauthorized disclosures. We do not believe that the defendant's right of privacy is appreciably affected by whether a violation of that prohibition is treated as contempt of court or is made a new criminal offense.

If you have further questions or if we may be of assistance in any other manner, please feel free to contact us.

Very truly yours,

Post Office Box 82977  
Fairbanks, Alaska 99708*

*Approval By Alaska Women's Commission  
House Bill 109*

*This bill would require blood tests from persons charged with sexual offenses and provide an avenue for victims of the sexual assault to receive the results of those tests.*

*HB 109 provides victims of sexual assault a means to determine whether they have been exposed to communicable diseases. At the present time privacy laws prohibit this testing of alleged perpetrators of sexual assault or disclosure of test results. Victims have no recourse to determine if they have contracted a sexually transmitted disease. This bill would provide that recourse.*

*The Alaska Women's Commission supports HB 109. Victims of sexual assault are innocent people whose person and whose own right to privacy have been violated. The statutes should provide them access to the medical information about their attacker necessary to determine any medical treatment needed to preserve their physical - and mental - health. Sexual assault victims need a great deal of help and support for recovery. HB 109 provides an important remedy without compromising legitimate protection of the alleged attacker's rights.*

*The proposed bill appears to adequately address both the necessary protections and practical means of achieving the desired results. The Alaska Women's Commission supports HB 109 as written.*

## Reported Rapes in Alaska 1989 through 1991

Provided by The Network on Domestic Violence and Sexual Assault

Source: Department of Public Safety

**DRUG CONTROL AND SYSTEM IMPROVEMENT FORMULA GRANT**  
**Administered by Bureau of Justice Assistance**

**FACT SHEET**

The Anti-Drug Abuse Act of 1988 establishes the State and Local Narcotics Control and Justice Assistance Improvement Grant Programs known as the "Edward Byrne Memorial State and Local Law Enforcement Assistance Programs". The Drug Control And System Improvement Formula Grant Program is one of these programs.

The purpose of these federal funds is to provide assistance to the states in their law enforcement efforts to control their drug and violent crime problem.

This grant is also referred to as the Formula Grant; the Anti-Drug Abuse Grant; the BJA Grant; and the Narcotics Grant.

The Drug Control and System Improvement Grant allocation for each state is primarily based on the state's population level.

The funds may be used for 21 program areas. However, from these 21 program areas, the states determine which program areas will be funded in their state.

Eligible subgrant applicants are state and local government agencies.

The basic requirements for these funds are as follows:

A percentage of the allocation must be "passed through" to the local units of government. This percentage is determined by the federal census bureau and is equal to the local government share of the state and local criminal justice expenditures for the previous fiscal year.

A 25% cash match in the form of new funds must be provided.

Projects may be funded for no longer than a 4 year period. The only exception to this is the multi-jurisdictional task force projects.

Federal mandates which impact the allocation level of funds are those which require the states to:

Report the conviction of aliens to Immigration and Naturalization Services;

Set aside 5% of the allocation for the improvement of the criminal history record information system within the state;

Establish state legislation which requires, at the victim's request, that an individual convicted of certain assault violations be tested for the presence of HIV.

### **THE DRUG CONTROL AND SYSTEM IMPROVEMENT GRANT IN ALASKA**

The State Administrative Agency (SAA) is the Department of Public Safety, Alaska State Troopers.

The Drug And Violent Crime Advisory Committee has been established for the purpose developing the strategic plan and reviewing the subgrant applications. For final decision in these two areas, the committee makes recommendations to the Department of Public Safety Commissioner.

For the FFY 1992 grant, the program priorities for funding were:

- Increased law enforcement efforts;
- Increased prosecution efforts;
- Eradication of marijuana cultivation;
- Maintenance of law enforcement drug control expertise;
- Automation and improvement of the court case processing system;
- Automation and improvement of the criminal history record system;
- Increased violator accountability.

With FFY 1992 funds, 5 state agency projects and 9 local government projects were funded.

C. Katse!  
11/6/92

## AUTHORIZED PROGRAMS AREAS

1. Demand reduction education program in which law enforcement officers participate;
2. Multi-jurisdictional task force programs that integrate Federal, state, and local drug enforcement agencies and prosecutors for the purpose of enhancing interagency coordination and intelligence and facilitating multi-jurisdictional investigations;
3. Programs designed to target the domestic sources of controlled and illegal substances, such as precursor chemicals, diverted pharmaceutical, clandestine laboratories and cannabis cultivations;
4. Providing community and neighborhood programs that assist citizens in preventing and controlling crime, including special programs that address the problems of crime committed against the elderly and special programs for rural jurisdictions;
5. Disrupting illicit commerce in stolen goods and property;
6. Improving the investigation and prosecution of white-collar crime, organized crime, public corruption crimes and fraud against the government with priority attention to cases involving drug-related official corruption;
7. A) Improving the operational effectiveness of law enforcement through the use of crime analysis techniques, street sales enforcement, schoolyard violator programs, gang-related and low-income housing drug control programs;
7. B) Developing and implementing anti-terrorism plans for deep draft ports, international airports, and other important facilities;
8. Career criminal prosecution programs, including the development of model drug control legislation;
9. Financial investigative programs that target the identification of money laundering operations and assets obtained through illegal drug trafficking, including the development of proposed model legislation, financial investigative training, and financial information sharing systems;
10. Improving the operational effectiveness of court process, such as court delay reduction programs and enhancement programs;
11. Programs designed to provide additional public correctional resources and improve the corrections system, including treatment in prisons and jails, intensive supervision programs and long-range corrections and sentencing strategies;
12. Providing prison industry projects designed to place inmates in a realistic working and training environment which will enable them to acquire marketable skills and to make financial payments for restitution to their victims, for support of their own families, and for support of themselves in the institution;
13. Providing programs which identify and meet the treatment needs of adult and juvenile drug-dependent and alcohol-dependent offenders;
14. Developing and implementing programs which provide assistance to jurors and witnesses and assistance (other than compensation) to victims of crimes;
15. A) Developing programs to improve drug control technology such as pretrial drug testing programs, programs which provide for the identification, assessment, referral to treatment, case management and monitoring of drug-dependent offenders and enhancement of state and local forensic laboratories;
15. B) Criminal justice information systems to assist law enforcement, prosecution, courts, and corrections organizations (including automated fingerprint identification systems);
16. Innovative programs which demonstrate new and different approaches to enforcement, prosecution, and adjudication of drug offenses and other serious crimes;
17. Addressing the problems of drug trafficking and illegal manufacture of controlled substances in public housing;
18. Improving the criminal and juvenile justice system's response to domestic and family violence, including spouse abuse, child abuse, and abuse of the elderly;
19. Drug control evaluation programs which state and local units of government may utilize to evaluate programs and projects directed at state drug control activities;
20. Providing alternatives to prevent detention, jail, and prison for person who pose no danger to the community, and
21. Programs of which the primary goal is to strengthen urban enforcement and prosecution efforts targeted at street drug sales.
