**1993-1994**

**1138**

*212*

Additional contractual costs will be incurred for processing the claims submitted by nurse midwives. The cost is shown as \$6.23 per claim. This fiscal note assumes that the midwives will submit 2 to 3 claims per month more than would be done by physicians and the submissions would cover 5 months. For the 125 births the cost for claims processing would be approximately \$9,700.

NOTES:

The Alaska Midwife's Association reports a range of fees for service of \$1,400 to \$2,300 with a statewide, non-weighted average fee of \$1,850.

Current statistics from the Bureau of Vital Statistics indicate that approximately 42% of births are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of Medicaid eligibility of 70% to 80%.

This fiscal note assumes 50% eligibility for those using the services.

FY 95 and subsequent year's claims are adjusted for growth at 11% and medical inflation at 5%.

Net fiscal impact of all Division of Medical Assistance fiscal notes for SSSB91 is as follows:

Totals	FY94	FY95	FY96	FY97	FY98	FY99
Medicaid Facility	(180.0)	(209.8)	(244.5)	(285.0)	(332.1)	(387.1)

**PREPARER TO PROVIDE ALL DISTRIBUTION COPIES TO GOVERNOR'S LEGISLATIVE OFFICE**  
 For further distribution information call the Governor's Legislative Office

Passage of SB 91 would provide another choice to expectant mothers who are dependent upon medical assistance for pregnancy care and childbirth assistance. At present, physician and hospital services are payable under medical assistance along with some pregnancy related nursing services. Payment of direct entry midwife services may have some downward effect on medical assistance program costs to the extent that expectant mothers choose to use midwife services instead of the more costly physician and hospital services.

There are now 10 licensed direct entry midwives in Alaska; a number which might grow to 25 over the next year. The estimated number of births that will be delivered by these professionals during FY94 is 250 of which an estimated 125 would be eligible for reimbursement under the medical assistance program. Of the 125 eligible for Medicaid an estimated 50%, or about 60 births, would be shifted from hospital and physician care to direct entry midwife care.

**4 Costs:**

**Medicaid Facility**

A survey completed last year of the uncomplicated Medicaid births shows that a course of prenatal care by current licensed providers, with a hospital birth, averages about \$5,000. Based on that survey and updated information the average cost for the hospital portion of services for a birth is calculated as \$3,000. The cost of Medicaid facility services would be reduced by \$180,000 for the 60 births shifted away from hospitals under this bill.

**Medicaid Non-facility**

Non-facility costs would increase under the bill by the cost of the 125 birthing services provided by direct entry midwives, the cost of any birthing facilities involved, and be reduced by the alternative cost of physician fees for prenatal, delivery, and post-partum care. Direct entry midwife services are costed at an average of \$1,480 per birth (80 percent of the \$1,850 average general public rate). Physician costs are estimated at \$2,000 per birth for pre-natal, delivery, and post-partum.

Midwife services	\$1,480 X 125 = \$185,000
Physician fees	<u>\$2,000 X 60 = (120,000)</u>
Net Medicaid Non-facility	\$ 65,000

**Claims Processing**

Based on current experience, the addition of a new provider category and services to the Medicaid Management Information System (MMIS, claims payment system) will require \$30,000. Another \$1,500 cost is required for development of a provider manual. These first year costs for changes to the system receive a 75% federal match and require 25% state general funds.

Additional contractual costs will be incurred for processing the claims submitted by nurse midwives. The cost is shown as \$6.23 per claim. This fiscal note assumes that the midwives will submit 2 to 3 claims per month more than would be done by physicians and the submissions would cover 5 months. For the 125 births the cost for claims processing would be approximately \$9,700.

NOTES:

The Alaska Midwife's Association reports a range of fees for service of \$1,400 to \$2,300 with a statewide, non-weighted average fee of \$1,850.

Current statistics from the Bureau of Vital Statistics indicate that approximately 42% of births are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of medicaid eligibility of 70% to 80%.

This fiscal note assumes 50% eligibility for those using the services.

FY 95 and subsequent year's claims are adjusted for growth at 11% and medical inflation at 5%.

Net fiscal impact of all Division of Medical Assistance fiscal notes for SSSB91 is as follows:

Totals	FY94	FY95	FY96	FY97	FY98	FY99

RE: CSSSSB 91(HES): An Act prohibiting unfair discrimination against direct entry midwives who perform services within the scope of their certification; providing for coverage of midwife services under Medicaid; reordering the priority of optional services provided by the state under Medicaid; and providing for an effective date.

Please schedule SB 91 at your earliest convenience. CSSSSB 91 (HES) passed the Senate April 16, 20-0. This bill allows certified direct-entry midwives to bill under Medicaid; makes midwives the first category of optional Medicaid providers to be dropped if funds are insufficient; and adds midwives to the list of health care providers which insurance companies may not discriminate against.

Allowing midwives to bill for birthing services under Medicaid is expected to save the state at least \$70,000 per year over current costs.

# SENATOR LOREN LEMAN

Northwest Anchorage

3111 "C" Street Anchorage, AK 99503 561-7614 During Session: State Capitol Juneau, AK 99801 465-2095

CSSSSB 91(HES): An Act prohibiting unfair discrimination against direct entry midwives who perform services within the scope of their certification; providing for coverage of midwife services under Medicaid; reordering the priority of optional services provided by the state under Medicaid; and providing for an effective date.

## SPONSOR STATEMENT

This legislation adds certified direct entry midwives to the optional services covered by Medicaid. At least 42% of the pregnant women in Alaska are eligible for Medicaid. This bill allows those women to use midwifery services instead of mandating that they use clinics or hospitals for birthing services. In expanding the options for using midwifery services for births, the state will stretch its Medicaid dollars.

The Department of Health and Social Services estimates that payment of direct entry midwife services may save the state money to the extent that pregnant women choose this option instead of the more costly physician and hospital services.

Cost is not the only issue. Care of the mother and newborn is of utmost concern. I am satisfied that the prenatal care, the nutrition information, the flexibility within midwifery and the postpartum care by midwives increases the good health of the baby and mother.

My grandmother was a midwife who safely delivered 54 babies in her time. For low-risk pregnancies, this option should be available.

Passage of SB 91 would provide another choice to expectant mothers who are dependent upon medical assistance for pregnancy care and childbirth assistance. At present, physician and hospital services are payable under medical assistance along with some pregnancy related nursing services. Payment of direct entry midwife services may have some downward effect on medical assistance program costs to the extent that expectant mothers choose to use midwife services instead of the more costly physician and hospital services.

There are now 10 licensed direct entry midwives in Alaska; a number which might grow to 25 over the next year. The estimated number of births that will be delivered by these professionals during FY94 is 250 of which an estimated 125 would be eligible for reimbursement under the medical assistance program. Of the 125 eligible for Medicaid an estimated 50%, or about 60 births, would be shifted from hospital and physician care to direct entry midwife care.

**FY94 Costs:**

**Medicaid Facility**

A survey completed last year of the uncomplicated Medicaid births shows that a course of prenatal care by current licensed providers, with a hospital birth, averages about \$5,000. Based on that survey and updated information the average cost for the hospital portion of services for a birth is calculated as \$3,000. The cost of Medicaid facility services would be reduced by \$180,000 for the 60 births shifted away from hospitals under this bill.

**Medicaid Non-facility**

Non-facility costs would increase under the bill by the cost of the 125 birthing services provided by direct entry midwives, the cost of any birthing facilities involved, and be reduced by the alternative cost of physician fees for prenatal, delivery, and post-partum care. Direct entry midwife services are costed at an average of \$1,480 per birth (80 percent of the \$1,850 average general public rate). Physician costs are estimated at \$2,000 per birth for pre-natal, delivery, and post-partum.

Midwife services	\$1,480 X 125 = \$185,000
Physician fees	<u>\$2,000 X 60 = (120,000)</u>
Net Medicaid Non-facility	\$ 65,000

**Claims Processing**

Based on current experience, the addition of a new provider category and services to the Medicaid Management Information System (MMIS, claims payment system) will require \$30,000. Another \$1,500 cost is required for development of a provider manual. These first year costs for changes to the system receive a 75% federal match and require 25% state general funds.

Additional contractual costs will be incurred for processing the claims submitted by nurse midwives. The cost is shown as \$6.23 per claim. This fiscal note assumes that the midwives will submit 2 to 3 claims per month more than would be done by physicians and the submissions would cover 5 months. For the 125 births the cost for claims processing would be approximately \$9,700.

NOTES:

The Alaska Midwife's Association reports a range of fees for service of \$1,400 to \$2,300 with a statewide, non-weighted average fee of \$1,850.

Current statistics from the Bureau of Vital Statistics indicate that approximately 42% of births are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of Medicaid eligibility of 70% to 80%.

This fiscal note assumes 50% eligibility for those using the services.

FY 95 and subsequent year's claims are adjusted for growth at 11% and medical inflation at 5%.

For this bill the components included are Medicaid Facility (00230), Medicaid Non-facility (00229) and Claims Processing (00243). The FY94 cost includes one-time costs for \$30,000 changes to the Medicaid Information System and \$1,500 for development of a provider manual. Costs continuing over fiscal years are for an FY94 claims processing cost estimated to include 2 to 3 claims per month for 5 months for each birth. The cost of each claim is estimated at the current \$6.23. Growth in utilization is estimated at 11% and inflation at 5% per year. Federal participation is shown at 75% for claims processing. Additional information and cost figures for hospitals, physicians, midwives, and claims processing are identified in the attached notes.

**PREPARER TO PROVIDE ALL DISTRIBUTION COPIES TO GOVERNOR'S LEGISLATIVE OFFICE**

For further distribution information call the Governor's Legislative Office

Passage of SB 91 would provide another choice to expectant mothers who are dependent upon medical assistance for pregnancy care and childbirth assistance. At present, physician and hospital services are payable under medical assistance along with some pregnancy related nursing services. Payment of direct entry midwife services may have some downward effect on medical assistance program costs to the extent that expectant mothers choose to use midwife services instead of the more costly physician and hospital services.

There are now 10 licensed direct entry midwives in Alaska; a number which might grow to 25 over the next year. The estimated number of births that will be delivered by these professionals during FY94 is 250 of which an estimated 125 would be eligible for reimbursement under the medical assistance program. Of the 125 eligible for Medicaid an estimated 50%, or about 60 births, would be shifted from hospital and physician care to direct entry midwife care.

**FY94 Costs:**

**Medicaid Facility**

A survey completed last year of the uncomplicated Medicaid births shows that a course of prenatal care by current licensed providers, with a hospital birth, averages about \$5,000. Based on that survey and updated information the average cost for the hospital portion of services for a birth is calculated as \$3,000. The cost of Medicaid facility services would be reduced by \$180,000 for the 60 births shifted away from hospitals under this bill.

**Medicaid Non-facility**

Non-facility costs would increase under the bill by the cost of the 125 birthing services provided by direct entry midwives, the cost of any birthing facilities involved, and be reduced by the alternative cost of physician fees for prenatal, delivery, and post-partum care. Direct entry midwife services are costed at an average of \$1,480 per birth (80 percent of the \$1,850 average general public rate). Physician costs are estimated at \$2,000 per birth for pre-natal, delivery, and post-partum.

Midwife services	$\$1,480 \times 125 = \$185,000$
Physician fees	$\underline{\$2,000 \times 60 = (120,000)}$
Net Medicaid Non-facility	\$ 65,000

**Claims Processing**

Based on current experience, the addition of a new provider category and services to the Medicaid Management Information System (MMIS, claims payment system) will require \$30,000. Another \$1,500 cost is required for development of a provider manual. These first year costs for changes to the system receive a 75% federal match and require 25% state general funds.

Additional contractual costs will be incurred for processing the claims submitted by nurse midwives. The cost is shown as \$6.23 per claim. This fiscal note assumes that the midwives will submit 2 to 3 claims per month more than would be done by physicians and the submissions would cover 5 months. For the 125 births the cost for claims processing would be approximately \$9,700.

NOTES:

The Alaska Midwife's Association reports a range of fees for service of \$1,400 to \$2,300 with a statewide, non-weighted average fee of \$1,850.

Current statistics from the Bureau of Vital Statistics indicate that approximately 42% of births are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of Medicaid eligibility of 70% to 80%.

This fiscal note assumes 50% eligibility for those using the services.

FY 95 and subsequent year's claims are adjusted for growth at 11% and medical inflation at 5%.

Net fiscal impact of all Division of Medical Assistance fiscal notes for SSSB91 is as follows:

Totals	FY94	FY95	FY96	FY97	FY98	FY99
Medicaid Facility	(180.0)	(209.8)	(244.5)	(285.0)	(332.1)	(387.1)

MEMORANDUM

March 22, 1993

**SUBJECT:** Amendment to AS 21.36.090(d)(SSSB 91)

**TO:** Senator Loren Leman  
ATTN: Annette Kreitzer

**FROM:** Terri Lauterbach   
Legislative Counsel

You have asked whether the Senate HESS amendment to SSSB 91 that added direct-entry midwives to AS 21.36.090(d) means that coverage of direct-entry midwives would be a mandated coverage for all insurers.

The answer is yes and no. If an insurer covers maternity services of the type that can be performed by a direct-entry midwife, then the insurer may not limit its coverage to physicians and nurses who perform those services, but must also cover those services when they are performed by direct-entry midwives. However, if an insurer does not cover maternity services at all, this amendment will not force new coverage.

I hope this explanation is helpful. Please let me know if I can be of further assistance.

Committee Amendment*

## Position Paper

The Department of Health and Social Services supports SSSB 91 which would provide payment under Alaska's Medicaid program for direct entry midwife services.

Passage of SSSB 91 would provide another alternative for expectant mothers who depend upon the medical assistance program for pregnancy care and childbirth assistance. At present, physician and hospital services are payable under medical assistance along with some pregnancy related nursing services.

Licensure of direct entry midwives was established following passage of HB 382 by the 17th Legislature. In the short time since, 10 direct midwives have been licensed; that number may be expected to reach up to 25 over the next year.

Draft regulations of the Division of Occupational Licensing indicate the direct entry midwife services must include appropriate prenatal care, the delivery, and post-partum care over the 6 weeks following the birth. The draft regulations are very specific about the type of care to be delivered and the times of delivery. Births delivered under a midwife's care typically take place within the home, at the midwife's office, or at a birthing center. AS 8.65.140 specifies a protocol for direct entry midwives to follow for determining when a "difficult" birth should be referred to a physician's care.

The literature on this topic and our consultation with other states indicates that where licensure of midwives has been instituted it was done to improve pregnancy outcomes through increasing the skill level of persons practicing midwifery, improving the awareness of expectant mothers of the impact of nutrition and similar activities, improving the accessibility to services, and by providing a professional alternative that is acceptable to those who choose to not pursue services from a more institutional source.

Data on the impact of licensed midwife services is very limited. Information from the Bureau of Vital Statistics indicates that of all births, 42% are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of medicaid eligibility of 70% to 80%. (The accompanying fiscal notes assumes 50%)

A comparison of vital statistics to payment information also indicates that a large number of the births involving medicaid payment are of low birth weight. Under the draft licensure requirements for direct entry midwives some low birth weight

# POSITION PAPER

STATE OF ALASKA ★ DEPARTMENT OF HEALTH & SOCIAL SERVICES

pregnancies would be referred to a physician while others may be delivered by the mid-wife, having benefitted from the frequent lab test, nutrition counselling and referral for medical examination that are required.

Payment of direct entry midwife services may have some downward effect on medical assistance program costs to the extent that expectant mothers choose to use midwife services instead of the more costly physician and hospital services. The accompanying fiscal note estimates a net cost savings of \$73,800 during FY94 and greater in following years. While this is a estimate based on no experience, the department certainly does not anticipate a requirement for additional funding as a result of SSSB 91.

The placement of direct entry midwife services as (1) in AS 47.07.035 is the appropriate placement. Of the optional services available under Medicaid, direct entry midwives services should have the lowest priority for payment because other alternative services are available.

# Dollars and Sense: Midwifery Care is Cost-Effective Care

---

## *Midwifery Fact Sheet*

 The average professional fees of midwives are lower than those of physicians. Therefore, midwifery care can offer a cost-effective, quality-assured alternative to otherwise prohibitive and escalating maternity fees across the state.

 Midwives use fewer expensive technologies to provide safe care. Consequently, client charges are significantly lower. Comparisons of midwifery care and physician care have shown that midwives have equally good outcomes, while using fewer interventions. 1,2,3

 Midwifery care is preventive care. Midwives spend time to provide education, information and social support to their clients. All of these factors have been cited as significant contributors to reducing adverse outcomes, especially prematurity and low birthweight. 7,8

 Midwives are able to offer a choice of birth settings. Out-of-hospital births, either at home or in a licensed birth center, offer the low-risk, healthy woman a safe option at considerable savings. The cost of an out-of-hospital birth is 50% to 70% less than a hospital birth. 9 Recognizing these substantial savings in health dollars, a majority of private health insurance plans now encourage midwife-attended out-of-hospital birth by reimbursing 80-100% of these charges. 12,13

# Birth Outside the Hospital

## Midwifery Fact Sheet

### Trends in birth setting.

● In 1940, 50% of births in this country took place at home, with a doctor or midwife in attendance. By 1960, birth had been moved almost exclusively into the hospital. During the 1970's, a notable increase in out-of-hospital births signaled a new debate among consumers and health professionals on the appropriate place for labor and birth.

Today, approximately 1% of American families choose to give birth outside the hospital. These families choose home birth, or delivery in a free-standing birth center (not a hospital facility). The majority of out-of-hospital births, in Alaska, as well as throughout the United States, are attended by midwives.

### Reasons for out-of-hospital birth

● Why do families choose out-of-hospital birth? A number of consistent themes emerge from the literature including:

- ⓐ increase of control over the childbirth experience;
- ⓑ avoidance of unnecessary medical routines and interventions;
- ⓒ continuous care by a known and supportive birth attendant;
- ⓓ labor and delivery among loved ones and in familiar surroundings;
- ⓔ avoidance of the high cost of hospitalization.

### Safety: What the Studies Say

● For most people concerned with childbirth, a central issue is safety. What do we know about the relative risks of childbirth in various settings? Studies reporting outcomes from well-organized out-of-hospital birth practices, both in the U.S. and abroad, show very low rates of adverse outcomes for mothers and infants. Holland, for example, where 35% of deliveries take place in the home, has one of the lowest perinatal mortality rates in the world. There is no evidence that birth in the hospital is safest for women at low medical risk. <sup>2,4</sup>

Some early reports on outcomes of out-of-hospital births were misleading because they compared hospital and non-hospital births without determining whether these births were planned and/or attended by a qualified person. In other words, late miscarriages, premature births, taxi cab deliveries, and other unexpected out-of-hospital births were included in the outcome data. <sup>5,6</sup>

Other studies which considered these factors found that the neonatal mortality rates of the planned out-of-hospital births with a qualified attendant averaged 4/1000, below the national rate, while for the unplanned groups the rates averaged 97/1000. <sup>7,8,9</sup>

In controlled studies, those births planned to occur outside the hospital with midwives in attendance were associated with lower rates of obstetrical interventions than births planned to occur in the hospital with physicians and other care providers. In some studies, planned out-of-hospital births also had lower rates of complications than the hospital births. <sup>10,11,12</sup>

Midwives Association of Alaska

1/83

Several authors have estimated that the probability of an emergent complication arising during an out-of-hospital labor, in a well-screened, healthy population of women, in which the loss of time in transit to a hospital could increase the risk of an adverse outcome, would be less than 1 in 1,000. <sup>13, 14</sup>

## Midwifery Practice Ensures Safety

Midwives attending out-of-hospital births ensure optimum safety for their clients by:

- ① Accepting into care only women who have no pre-existing medical conditions, who want to have natural labor and birth (without medical interventions or pain medication) and who are experiencing a normal pregnancy;
- ② Providing comprehensive prenatal care that includes on-going screening for complications, education, support and personal attention;
- ③ Ensuring continuous, one-to-one care during labor, carefully monitoring the progress of labor, and maternal/fetal condition;
- ④ Maintaining the skills and equipment needed for treating emergent and unexpected conditions, such as hemorrhage or neonatal resuscitation;
- ⑤ Establishing consultation and referral relationships with obstetricians and pediatricians who can provide hospital treatment if indicated.

In summary, an out-of-hospital birth that is planned, with a well-trained attendant, is a safe, satisfying, and economical choice.

## *What do international experts say about midwifery?*

---

*"...I came to see that midwifery wasn't just a way of substituting cheaper obstetrical care for the poor and deprived...I discovered that the countries with the lowest infant mortality rates in the world also had medical care systems in which the whole of normal obstetrical practice was carried on by midwives."*

George A. Silver, M.D.  
Professor Emeritus of Public Health, Yale University

Source: *The Next Fifty Years of Nurse-Midwifery Education*, Maternity Center Association, New York, 1983, page 66.

*"...there is evidence that a strong independent midwifery profession is an important counterbalance to the obstetrical profession in preventing excessive interventions in the normal birth process. Consequently, it is perhaps not surprising that in the U.S. one finds the highest obstetrical intervention rates as well as serious problem with malpractice suits. The European experience and our data strongly support the urgent need for the introduction of widespread, independent midwifery practice in the United States as a most important counterbalance to the present situation."*

Mursden G. Wagner, M.D.  
Maternal and Child Health Officer for the European Region, World Health Organization

Source: "Infant Mortality in Europe: Implications for the United States: Statement to the National Commission to Prevent Infant Mortality". *Journal of Public Health Policy*, Winter 1988: 473-484.

*"Midwifery provides a balance between the family and medical perspectives on birth. To negotiate and balance the different meanings and perspectives of birth within the health care system, it is essential for midwives to have a legitimate and powerful role within the system. Midwifery should be powerful enough to influence both the nature and delivery of services. This, I believe, would greatly enhance maternity care, which ultimately is the crux of the matter...the safe, loving and skilled care of women, their babies and their families at one of the most important points of life...birth."*

Leslie Page  
Director of Midwifery, Oxfordshire, England

Source: "The midwife's role in modern health care" in *The Midwife Challenge*, Sheila Kitzinger, ed. Pandora: London, 1988, page 259-260.

*"The midwife must be able to advise the expectant mother, give her moral support, to make her enthusiastic for a natural childbirth, and above all, to supervise her in such a way that all minor and major abnormalities are recognized or at least suspected as early as possible. I am convinced that she is able to do this as well as a doctor, and very often better... Without the presence and acceptance of the midwife obstetrics becomes aggressive, technologic, and inhuman."*

# HOME DELIVERY

## MIDWIFERY WORKS. SO SHOULD MIDWIVES.

When Janet Podell became pregnant in 1989, she determined to have "the real thing" — the fully natural, satisfying birth experience that had eluded her when her first two children were born. Although midwives had assisted her in the two unmedicated births, the impersonality, tension, conflict, and pointless restrictions she experienced in the hospital had left her feeling frustrated and violated. Both times, for example, she was separated from the baby and from her husband after the birth. After moving to western Massachusetts, Podell found a pair of midwives to attend her birth at home. What resulted was a qualitatively different experience: She felt as if she had really given birth under her own power, in an atmosphere of loving support.

**BY ARCHIE BRODSKY**

*Article on Midwives*

As Podell later recalled in *The Midwife Advocate*, the newsletter of Massachusetts Friends of Midwives: "I came away from my hospital births with a sense of helplessness. I came away from my home birth feeling that I had learned deep and amazing lessons about my own strength and resilience, about trusting my body and my instincts....What would happen in this fearful society of ours if all the mothers who gave birth had such an experience?"

Podell is one of many American women who have chosen to give birth outside of a hospital during the last 10 to 15 years. Disillusioned with the routine intrusiveness of conventional hospital obstetrics, they have voted with their feet by giving birth at home with the help of family, friends, and supportive attendants. Some of these women, inspired by the rediscovery of birth as a natural and social event, have become midwives themselves, learning their trade by working with more experienced midwives or with sympathetic physicians.

This social movement, until recently marginalized by organized medicine as a softheaded countercultural rebellion, is now finding common ground with mainstream economic and public-health concerns: the rapid escalation of health-care costs; the loss of obstetricians resulting from the epidemic of malpractice suits; and the high rate of infant mortality among the inner-city poor. Midwifery works, people want it, and it provides an answer to some urgent policy questions. But although midwifery has made progress in recent years, a variety of laws and regulations still prevent midwives from offering their services to everyone who could benefit from them.

The advantages of midwifery depend on a more thoroughgoing change than just plugging in one type of practitioner in place of another. If the law confines midwives to the role of obstetrical handmaidens working exclusively in hospitals under the direction of physicians, it will prevent them from making their full contribution. For the word *midwifery* really stands for a fundamental, different model of maternity care: different people doing different things, often in a different place.

**M**idwives reject the view that giving birth is a medical procedure like having a gall bladder removed. Instead, they understand it as a natural process that ordinarily does not require drugs, surgery, or high-tech equipment. Obstetricians, whose skills and techniques are best reserved for complicated births, are in most cases not well prepared to attend normal births. They know how to intervene but not how to support without intervening.

The high-tech, interventionist approach of obstetricians is illustrated by the widespread use of electronic fetal monitoring. EFM—which records fetal heart tones and the pressure of uterine contractions, either through electrodes passed through the birth canal and attached to the baby's scalp or through a transducer placed on the mother's abdomen—may have a legitimate rationale in high-risk births. But from the beginning it was marketed indiscriminately to physicians hungry for precise diagnostic information.

As a result, by the mid-1970s most U.S. hospitals had adopted EFM for routine use, without any controlled studies showing it to be more effective than traditional, noninvasive methods of listening to the baby's heart. Now studies published in the last two years in such prestigious publications as the British journal *The Lancet* and *The New England Journal of Medicine* have shown that, in the absence of specific indications for its use, EFM not only has no demonstrated benefit in reducing childhood disabilities but may even be dangerous.

EFM plays a major role in the futile cycle of defensive obstetrics brought on by malpractice hysteria. For legal protection the physician uses the monitor so he can show, if anything goes wrong, that he "did all he could." But with the monitor readings a matter of record, his actions will be further scrutinized to see if he once again "did all he could" in response to an abnormal reading.

Alarmist reactions to insignificant variations in monitor readings contribute to the current 24-percent cesarean-section rate in the United

States (a rate twice as high as the World Health Organization recommends). Indeed, any medical intervention in childbirth tends to necessitate further intervention by disrupting the normal physiology of labor and by immobilizing, enervating, disabling, and dispiriting the mother.

A midwife strives to avoid such intervention. Rather than "deliver" the baby, she brings out the birthing woman's own physical and emotional strength—resources left untapped or suppressed by standard obstetrical practices. This is more than touchy-feely rhetoric. It translates into concrete clinical expertise: an appreciation of the variations of normal labor, of the way some problems can correct themselves with time, of the influence of emotional support and a sense of well-being during labor, and of many nonchemical, noninvasive means of encouraging progress.

An obstetrician's highly specialized knowledge represents only a narrow segment of the whole range of knowledge relevant to childbirth. A midwife draws upon a traditional body of knowledge that guides her both in forming a supportive bond with a pregnant woman and in shaping a positive experience of—and attitude toward—birth. In addition to emphasizing prenatal education and preparation, she comes to know the woman, her environment, and the way she lives, and thus can better understand her reactions and assist her during labor.

Podell writes: "The midwives gave me all the room I needed, but they were never distant; they were always right there, offering energy, a sip of juice, a word of encouragement. Their presence comforted me and gave me confidence. One thing I didn't understand.... Without internal exams, how could they tell how the labor was progressing?... They said my body would know what to do and when. And to my very great surprise, they were right."

Instead of pain medication, midwives use noninvasive methods, physical as well as psychological, to help women cope with pain. The midwifery model in its pure form does not allow the use of anesthetic or analgesic drugs in normal births, since these medications interfere with the natural process of labor. Home-birth attendants avoid the use of such drugs entirely, since the safety of a home birth depends on supporting the natural process and not creating added risks. In hospitals, on the other hand, nurse-midwives sometimes make pragmatic compromises, giving pain medication to women who want it in order to make other benefits of midwifery available to them.

It should always be a woman's right to choose between

midwifery and obstetrics for whatever reasons matter to her, including her preferences regarding pain medication. At the same time, as the midwifery model comes to be more widely known and better understood, more women may approach the pain of childbearing in a positive way, as Podell did: "The labor was short, intense, and sweet. It wasn't any less painful than the others, but I tried to put all my concentration on welcoming the pain, on assenting to open up. Away from the interference of the hospital, comfortable in my own familiar house, I felt a lovely sense of freedom. I wasn't anybody's patient. I was myself, doing a task I had really been preparing for since childhood."

The beneficial effects of the laboring woman's sense of well-being, comfort, and control are enhanced in the home or (to a lesser degree) in the home-like setting of a midwife-run birth center. In the words of the prominent Dutch obstetrician G.J. Kloosterman: "The advantages of home confinements are that in her own home the expectant mother is not considered a patient, but a woman, fulfilling a natural and highly personal task. She is the real center around which everything (and everybody) revolves. The midwife or doctor and the maternity aide nurse are all her guests, there to assist her. This setting reinforces her self-respect and self-confidence."

This endorsement of home birth runs counter to the prejudices of most Americans, who have been led to believe that the

best outcomes occur when childbirth is managed by obstetricians in hospitals where medical technology is readily available and where there is little hesitation about using it. This view equates safety with active technological intervention carried out by highly specialized personnel in an institutional setting.

**P**roponents of this position offer three main arguments. First, they cite the decline in maternal and infant mortality that coincided with the shift to medicalized, institutionalized childbirth in this century. But such a sweeping historical comparison is meaningless because it disregards many other changes that occurred at the same time: better nutrition, sanitation, and personal hygiene; fewer large families and closely spaced children; the development of antibiotics; and improvements in diagnosis, risk assessment, and instrumentation. Contemporaneous comparisons, such as one conducted by the New York Academy of Medicine from 1930 to 1932, have almost invariably shown that midwife-attended or home births have outcomes as good as or better than physician-attended or hospital births.

British statistician Marjorie Tew, in her 1990 book *Safer Childbirth? A Critical History of Maternity Care*, uses data from the special British birth surveys of 1958 and 1970 to make detailed comparisons—regional, historical, and individual—of the outcomes of home vs. hospital birth and of high-intervention vs. low-intervention birth in populations closely matched for risk factors. Tew concludes that increased hospitalization and obstetrical intervention cannot be credited with improving the safety of childbirth. To her, in fact, the weight of the evidence suggests that these changes have done more harm than good.

Second, opponents of midwifery argue that mortality statistics show babies are at greater risk if they are born outside a hospital. This fallacious comparison, first made in a 1978 press release by the American College of Obstetricians and Gynecologists, rests on raw statewide figures showing that the risk to a baby's life was two to five times greater in an out-of-hospital birth. But the "out-of-hospital" category included not only intentional home births, but also late miscarriages, premature and precipitous births, and unplanned home births. Such undifferentiated data say nothing about the safety of planned, properly attended home births.

Finally, when forced to confront the lack of statistical evidence in their favor, proponents of orthodox obstetrics say, "OK, so the differences in safety are too small to show up in the data. But even one unnecessary infant death is too many—especially if it's yours." This argument, while highly effective in inducing fear and guilt in parents, fails to take into account the countervailing risks of medicalized birth, such as infections resulting from hospital sepsis or from unnecessary surgical procedures and the many complications that can result from interfering with the progress of labor.

Opponents of midwifery also ignore a large body of evidence that low-intervention maternity care by midwives results in outcomes as good as or better than those of hospital births. Since 1925, for example, the Frontier Nursing Service in Ken-

tucky has provided outstanding maternity care to a poor, geographically remote population. The service, whose midwives attended nearly all births at home (sometimes on horseback) until the late 1960s, has compiled an outcome record that compares favorably with that of mainstream America.

In a remarkable real-life experiment in Madera County, California, neonatal mortality dropped from 24 to 10 per 1,000 when nurse-midwives were introduced into a poor agricultural area in 1960. Pressure from the state medical association ended the program in 1963. Midwives were replaced by obstetricians, whereupon neonatal mortality rose to 32 per 1,000. The number of women receiving no prenatal care doubled.

Midwifery programs are having an important impact among the urban poor as well. With one-third of its largely black and Hispanic clients classified as high-risk, the North Central Bronx Hospital midwifery service has the lowest cesarean-section rate in New York City and lower-than-average rates of low birth weight and perinatal and neonatal mortality. In a well-controlled study involving low-income women in a Houston hospital, published in 1991 in *The Journal of the American Medical Association*, the continuous companionship of a *doula*—a woman trained to provide labor support—shortened the duration of labor, cut the cesarean-section rate in half, and reduced the need for other interventions along with the incidence of maternal fever and prolonged infant hospitalization. And the *doula* provides only part of a midwife's comprehensive skills and services.

Two years ago the National Birth Center Study reported on birth outcomes for nearly 12,000 women admitted to freestanding birth centers in the United States, three-fourths of them operated by midwives. In this largely low-risk population, the low overall perinatal-neonatal mortality rate of 1.3 per 1,000 was comparable to that of low-risk hospital births. Moreover, it was achieved with minimal intervention (most notably, a 4.4-percent cesarean-section rate), low morbidity, and high levels of satisfaction. Similar findings were obtained in a review of more than 3,000 out-of-hospital (mainly home) births attended by licensed direct-entry midwives in Arizona between 1978 and 1985.

Further evidence comes from Holland, where the national health-care system deliberately reversed a trend toward American-style hospital births a decade ago. In a study published recently in the British journal *Midwifery*, researchers who analyzed all Dutch births in 1986 found that, at all risk levels after 32 weeks' gestation, perinatal mortality was "much lower under the noninterventionist care of midwives than under the interventionist management of obstetricians." And this is in a country with an ethnically diverse population (including guest workers).

Studies also find that midwifery is much less expensive than conventional obstetrics. The cost-effectiveness of the midwifery model follows from its reliance on natural processes and settings rather than on expensive technology. In one of the first demonstrations of the cost-saving potential of midwifery, Blue Cross/Blue Shield estimated that its costs for a birth in the Maternity Center Association's Childbearing Center in Manhattan in 1976-77 averaged only 37.6 percent of the cost of an

uncomplicated birth in a nearby hospital (including both hospital and physician charges). As documented in a report prepared for the Federal Trade Commission, Blue Cross/Blue Shield's decision (against formidable opposition) to authorize reimbursement for the center was a major breakthrough in making the freestanding birth center a viable concept in the United States.

Since then, this initial indication of the savings to be achieved through broader application of the midwifery model has been borne out by other research, most notably a Health Insurance Association of America (HIAA) study published in 1989. These savings can be realized in a number of ways:

**Lower fees.** According to the HIAA study, the average physician's fee for a normal pregnancy and birth is \$1,492, while a midwife's fee averages \$994. A midwife's fee typically covers more time spent before, during, and after the birth and includes comprehensive services that otherwise would require a team of providers.

**Lower site-related costs.** According to the HIAA study, a normal birth involving a one-day stay in a birth center costs \$2,111, compared with \$3,233 for a one-day hospital stay. (These figures include practitioners' fees.) Since the average length of stay in a hospital is longer than in a birth center, the difference in practice is even greater. Thus, the average hospital cost for a normal vaginal delivery is \$2,842 in addition to the physician's fee of \$1,492, for a total of \$4,334.

In a home birth there are no site-related expenses. In Australia, for example, an estimate published in the journal *Family Physician* indicated that insurers and families might save \$583 million a year if 30 percent of births took place at home. Of course, the cost of maintaining hospital backup for cases requiring transfer must be factored into the overall costs of out-of-hospital birth services. But such on-call auxiliary services require only a fraction of the institutional resources routinely used and paid for under the present system.

**Reduced use of technology.** Midwives rely much less on technical procedures that entail material costs, increased practitioners' fees, and (often) longer hospital stays. A birth by cesarean section costs an average of \$7,186, compared to \$4,334 for a vaginal birth in a hospital. Since midwife-attended births have a cesarean-section rate 50 percent to 70 percent lower than physician-attended births in comparable populations with equivalent outcomes, the savings to be realized from this aspect of the midwifery model are enormous. If all of New York state's hospitals operated in the manner of the North Central Bronx midwifery service, the reduction in

cesareans alone might save nearly \$150 million annually. Ending the indiscriminate use of other specialized procedures, such as electronic fetal monitoring, ultrasound, IVs, and episiotomy, would also save money.

**Lower training costs.** The Congressional Office of Technology Assessment calculated that the cost of training a certified nurse-midwife in 1985 averaged \$16,800, compared with \$86,100 to train a general physician, let alone an obstetrician. Since midwifery training is more appropriate for a large majority of births, there is great potential for savings here.

**Lower liability costs.** As of 1987, 71 percent of obstetrician-gynecologists had been named in one or more liability claims, compared with 10 percent of nurse-midwives. Direct-entry midwives (those not trained and regulated by the nursing profession) are even more rarely sued. Why these disparities? First, obstetricians deal with more complicated cases with a greater likelihood of a tragic outcome. Second, obstetricians have deeper pockets. (Like physicians, certified nurse-midwives—registered nurses with additional training in midwifery—have malpractice insurance; direct-entry midwives generally do not, except in states where they are licensed.)

Third, and perhaps most important, people who choose a midwife (especially a direct-entry midwife) commit themselves to sharing the risks and responsibili-

MIDWIVES.

ties of birth. Rather than expect a guaranteed perfect outcome, they participate with an understanding of nature's uncertainties. The midwife actively encourages this informed participation. And because she establishes a relationship of trust, full and open communication, and emotional support, the midwife does not leave her clients feeling abandoned and resentful in the event of a tragic outcome.

*Lower health-care costs after birth.* The costs of childbirth pale beside those of taking care of premature and sick infants and children. According to the HIAA survey, it costs nearly \$1,000 a day to keep a baby in a neonatal intensive care unit; a 30-day stay can cost \$30,000. Hospitals that bear these often uncompensated costs should heed the documented success of midwifery programs, over a range of settings and income levels, in reducing the incidence of low birth weight, which is directly associated with prematurity. To the extent that midwives' emphasis on a healthy environment during pregnancy can reduce the short- and long-term effects of malnutrition, smoking, heavy drinking, and drug use on maternal and child health—in some cases preventing lifelong disability—the contribution of midwives to reducing health-care costs may be incalculable.

In the case of midwifery, the evidence is overwhelming that better care can cost less. Indeed, the American system of obstetrics is so inappropriate and inefficient that only as a protected monopoly could it have gained and held its dominant position. It could not have survived, and cannot now survive, in a free market. But the monopoly is well entrenched by law.

Direct-entry midwives are legal in some states, illegal in others. In a plurality of states their legal status is uncertain. But if a state's medical-practice act includes childbirth among the conditions exclusively reserved for medicine, then direct-entry midwifery is presumed to be illegal. And in the Catch-22 of midwifery regulation, some states (such as Rhode Island) won't let midwives practice without a license but won't license them either.

This patchwork of laws resulted in part from deliberate efforts by organized medicine to create a protected monopoly and in part from an unconscious societal assumption that midwifery had disappeared. During the past few decades, midwifery has been allowed back in a limited role in the form of certified nurse-midwives. CNMs practice legally in every state, but their scope of practice—indeed, their ability to practice at all—is often severely restricted when physicians withhold the requisite institutional or logistical support.

Direct-entry midwives are often prosecuted for practicing either medicine or midwifery without a license. Sometimes these prosecutions help clarify the legal status of midwives. In 1990, after charges were brought against a Pennsylvania midwife who attended Amish clients, a judge ruled that state law did not prohibit the unlicensed practice of "lay" midwifery. But in Illinois in 1991 a court decision calling for clarification of the state's medical-practice act led to legislation that included childbirth within the scope of the act. Midwives have also

suffered setbacks in Southern states such as Alabama, where public-health departments have forcibly retired the experienced "granny" midwives who often were the only providers of maternity care for the rural or urban poor. In Arkansas, public outcry over such action persuaded the legislature to legalize direct-entry midwifery. In Georgia, however, recently issued regulations have made the practice of direct-entry midwifery a felony.

A decade ago in REASON, Sarah Foster documented the various tactics that the medical establishment uses to intimidate and exclude midwives ("Up Against the Birth Monopoly," September 1982). In one of the more prominent cases to have occurred since then, a local obstetrician pilloried nurse-midwife Debby Sweeney in front of her students at the Medical College of Georgia School of Nursing in 1986, falsely charging that she was practicing medicine illegally and endangering her patients. The obstetrician's group practice prevented Sweeney from continuing to teach in one of the hospitals affiliated with the college, complaining that they "could not allow their patients to be exposed to students who are being instructed by one who advocates the home delivery concept." Sweeney had run afoul of the medical establishment by advertising her home-birth practice.

Such anticompetitive tactics thus far have limited the availability of qualified attendants for out-of-hospital births and deprived women and families of information about birth options. Unless a woman happens to know someone who knows the local midwife, she may see and hear only horror stories about home birth.

Reform is coming, however. Many prestigious institutions are calling for more widespread adoption of midwifery or a low-intervention approach to childbirth. These include the World Health Organization, the European Economic Community, the Institute of Medicine, the Office of Technology Assessment, the General Accounting Office, the American Public Health Association, and the National Commission to Prevent Infant Mortality. The strongest advocacy has come from the women's health movement. A detailed position paper issued jointly in 1990 by the Women's Institute for Childbearing Policy, the National Women's Health Network, the National Black Women's Health Project, and the Boston Women's Health Book Collective argues for a midwifery-based maternity care system that favors out-of-hospital birth settings.

The great stone face of the birth monopoly is visibly cracking. Hospitals hit hard by the loss of obstetricians are advertising for midwives. HMOs, after considerable resistance, are incorporating midwifery services. Boston will be joining New York, San Diego, and other localities in setting up a public out-of-hospital birth center for low-income women. At the federal level, direct reimbursement for midwives has been mandated for the armed services, Civilian Health and Medical Programs of Uniformed Services (CHAMPUS), and Medicaid. One by one, state governments are authorizing limited prescrip-

tion privileges for certified nurse-midwives and licensed direct-entry midwives. They are also beginning to remove the statutory and regulatory barriers to direct third-party reimbursement for midwives.

In a major breakthrough, Ontario recently recognized midwifery as an independent, self-regulating profession authorized to practice in the home, birth center, or hospital. Ontario's action set a precedent for Canada, which had made no provision for midwifery in its national health-care system. In the United States, legislative efforts continue in New York, California, and other states to legalize midwifery as an independent profession.

Licensing clearly is preferable to illegality; however, in states where midwives currently are unregulated, midwives and their supporters are divided over whether it is better to be licensed or to continue on a laissez-faire basis. Midwives who oppose licensing consider midwifery a "spiritual art," in the words of Ohio midwife Kimberly French, that cannot be regulated by uniform standards as medicine is. "Would we be willing to give up certain aspects of our craft in exchange for certification, such as handling breech births, vaginal births after cesareans, and twins?" asks French in the periodical *Friends of Homebirth*. "What about the woman who is left with no other option but a cesarean if we, as midwives, were restricted...by law?"

Furthermore, opponents of licensing are reluctant to exclude midwives who might not meet the formal criteria established by the law. "I feel strongly," writes Maine midwife Jill Breen in *The Midwife Advocate*, "that there always will and should be a place for the apprentice-trained midwife, the community-called midwife, the non-medically-oriented midwife."

With few exceptions, midwives who support licensing do so not to protect their hard-won turf or to save the public from unqualified practitioners, but because they are weary of their denigrated status as "lay practitioners." They are interested not so much in excluding others as in including themselves in the professional health-care system. Longtime Oregon midwifery advocate Alan Solares, whose arguments against licensing were influential a decade ago, has now changed his position. He addresses the concerns of many midwives today who feel that "they cannot fairly compete in a health-care system based increasingly on third-party payment."

Implicit in Solares's argument is the assumption that, in today's highly professionalized society, the benefits of third-party reimbursement, public visibility and trust, and secure hospital backup cannot be obtained without some concession to "professional standards" and "consumer protection."

For this reason, most people on both sides of the debate would welcome a system of voluntary certification such as New Hampshire's, which sets standards for certification but does not bar uncertified midwives from practicing as long as they do not claim to be certified. But this is not a likely prospect in many states.

For now, midwives and others who seek to open up the health-care market will continue to face rear-guard obstacles such as unequal access to reimbursement, regulatory mechanisms that place competing practitioners under the control of physicians, an information monopoly that can frustrate informed choice even when more overt restraints are halted, and a long accumulation of prejudice against non-technological alternatives to conventional health care. The hardest obstacle, however, may well be a certain faintheartedness in the American public, an ingrained reliance on "consumer protection" even at the expense of consumer choice. ■

## MEMORANDUM

TO: Representative Niilo Koponen  
FROM: Patricia Young *PL*  
Legislative Analyst  
RE: Midwifery and Physician Liability  
Research Request 92.189

MAR 19 1993

You wished to know how Arizona, California, New Mexico and Washington--states which have well-established midwifery experience--have dealt with the question of increased liability to physicians. You were particularly interested in knowing if any of these states limit the liability of physicians or other health care providers who assist midwives in emergency situations.

We discussed the issue of physician liability with state officials and midwives in Arizona, California, Louisiana, Montana, New Hampshire, New Mexico, Washington and Texas. Montana is the only state identified as limiting the liability of health care providers who assist midwives in emergency situations. The statute, MCA 27-1-734, provides that licensed physicians, nurses, and hospitals

rendering care or assistance in good faith to a patient of a direct-entry midwife in an emergency situation [are] liable for civil damages for acts or omissions committed in providing such emergency obstetrical care or assistance only to the extent that those damages are caused by gross negligence or by willful or wanton acts or omissions.

A recent California measure to license direct-entry midwives would have provided that physicians and surgeons could not be held liable for acts of negligence on the part of licensed midwives unless the acts were pursuant to negligent advice of the physicians or surgeons. The bill, widely supported by the public but strongly opposed by obstetricians, died in committee.

In both New Mexico and Washington, midwives are considered independent practitioners, accountable for their actions and omissions. The absence of a supervisory relationship has been deemed sufficient to limit the liability of physicians. Statistically, midwives have exemplary records; and nationwide, few lawsuits have been brought against them.

I hope this information is sufficient for your purposes. If you have questions or need further information, please let me know.

---

<sup>1</sup>Cathy Acree, Midwives Alliance of North America, notes that of midwives who have practiced in the United States, only 6 percent have had lawsuits filed against them.

SB 91 (HES):

"An Act providing unfair discrimination against direct-entry midwives who perform services within the scope of their certification; providing for coverage of midwives' services under medicaid; reordering the priority of optional services provided by the state under medicaid; and providing for an effective date."

One of the more challenging issues facing this country and Alaska is the ever increasing number of medical professions relying on alternative programs and persons for the delivery of health care services.

If direct-entry midwives have a scope of practice under Alaska law, they should not be discriminated against when performing within that scope of practice. Section 1 of the bill bans such a discrimination.

RE: CSSSSB 91(HES): An Act prohibiting unfair discrimination against direct entry midwives who perform services within the scope of their certification; providing for coverage of midwife services under Medicaid; reordering the priority of optional services provided by the state under Medicaid; and providing for an effective date.

Please schedule SB 91 in Senate Finance at your earliest convenience. This bill allows Certified Direct-Entry Midwives to bill under Medicaid, an anticipated savings to the state of \$70,000 for 125 births.

At least 42% of the pregnant women in Alaska are eligible for Medicaid. This legislation doesn't expand the numbers of pregnant women who ALREADY qualify for Medicaid. This bill allows those women to use midwifery services instead of mandating that they use clinics or hospitals for birthing services. In expanding the options for using midwifery services for births, the state will stretch its Medicaid dollars.

My grandmother was a midwife who safely delivered 54 babies in her time. For low-risk pregnancies, this option should be available.

# SENATOR LOREN LEMAN

Northwest Anchorage

3111 "C" Street Anchorage, AK 99503 561-7614 During Session: State Capitol Juneau, AK 99801 465-2095

CSSSSB 91(HES): An Act prohibiting unfair discrimination against direct entry midwives who perform services within the scope of their certification; providing for coverage of midwife services under Medicaid; reordering the priority of optional services provided by the state under Medicaid; and providing for an effective date.

## SPONSOR STATEMENT

This legislation adds certified direct entry midwives to the optional services covered by Medicaid. At least 42% of the pregnant women in Alaska are eligible for Medicaid. This bill allows those women to use midwifery services instead of mandating that they use clinics or hospitals for birthing services. In expanding the options for using midwifery services for births, the state will stretch its Medicaid dollars.

The Department of Health and Social Services estimates that payment of direct entry midwife services may save the state money to the extent that pregnant women choose this option instead of the more costly physician and hospital services.

Cost is not the only issue. Care of the mother and newborn is of utmost concern. I am satisfied that the prenatal care, the nutrition information, the flexibility within midwifery and the postpartum care by midwives increases the good health of the baby and mother.

My grandmother was a midwife who safely delivered 54 babies in her time. For low-risk pregnancies, this option should be available.

SSSB91

Passage of SB 91 would provide another choice to expectant mothers who are dependent upon medical assistance for pregnancy care and childbirth assistance. At present, physician and hospital services are payable under medical assistance along with some pregnancy related nursing services. Payment of direct entry midwife services may have some downward effect on medical assistance program costs to the extent that expectant mothers choose to use midwife services instead of the more costly physician and hospital services.

There are now 10 licensed direct entry midwives in Alaska; a number which might grow to 25 over the next year. The estimated number of births that will be delivered by these professionals during FY94 is 250 of which an estimated 125 would be eligible for reimbursement under the medical assistance program. Of the 125 eligible for Medicaid an estimated 50%, or about 60 births, would be shifted from hospital and physician care to direct entry midwife care.

**FY94 Costs:**

**Medicaid Facility**

A survey completed last year of the uncomplicated Medicaid births shows that a course of prenatal care by current licensed providers, with a hospital birth, averages about \$5,000. Based on that survey and updated information the average cost for the hospital portion of services for a birth is calculated as \$3,000. The cost of Medicaid facility services would be reduced by \$180,000 for the 60 births shifted away from hospitals under this bill.

**Medicaid Non-facility**

Non-facility costs would increase under the bill by the cost of the 125 birthing services provided by direct entry midwives, the cost of any birthing facilities involved, and be reduced by the alternative cost of physician fees for prenatal, delivery, and post-partum care. Direct entry midwife services are costed at an average of \$1,480 per birth (80 percent of the \$1,850 average general public rate). Physician costs are estimated at \$2,000 per birth for pre-natal, delivery, and post-partum.

Midwife services	\$1,480 X 125 = \$185,000
Physician fees	<u>\$2,000 X 60 = (120,000)</u>
Net Medicaid Non-facility	\$ 65,000

**Claims Processing**

Based on current experience, the addition of a new provider category and services to the Medicaid Management Information System (MMIS, claims payment system) will require \$30,000. Another \$1,500 cost is required for development of a provider manual. These first year costs for changes to the system receive a 75% federal match and require 25% state general funds.

Additional contractual costs will be incurred for processing the claims submitted by nurse midwives. The cost is shown as \$6.23 per claim. This fiscal note assumes that the midwives will submit 2 to 3 claims per month more than would be done by physicians and the submissions would cover 5 months. For the 125 births the cost for claims processing would be approximately \$9,700.

NOTES:

The Alaska Midwife's Association reports a range of fees for service of \$1,400 to \$2,300 with a statewide, non-weighted average fee of \$1,850.

Current statistics from the Bureau of Vital Statistics indicate that approximately 42% of births are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of Medicaid eligibility of 70% to 80%.

This fiscal note assumes 50% eligibility for those using the services.

FY 95 and subsequent year's claims are adjusted for growth at 11% and medical inflation at 5%.

Net fiscal impact of all Division of Medical Assistance fiscal notes for SSSB91 is as follows:

Totals	FY94	FY95	FY96	FY97	FY98	FY99
Medicaid Facility	(180.0)	(209.8)	(244.5)	(285.0)	(332.1)	(387.1)

Passage of SB 91 would provide another choice to expectant mothers who are dependent upon medical assistance for pregnancy care and childbirth assistance. At present, physician and hospital services are payable under medical assistance along with some pregnancy related nursing services. Payment of direct entry midwife services may have some downward effect on medical assistance program costs to the extent that expectant mothers choose to use midwife services instead of the more costly physician and hospital services.

There are now 10 licensed direct entry midwives in Alaska; a number which might grow to 25 over the next year. The estimated number of births that will be delivered by these professionals during FY94 is 250 of which an estimated 125 would be eligible for reimbursement under the medical assistance program. Of the 125 eligible for Medicaid an estimated 50%, or about 60 births, would be shifted from hospital and physician care to direct entry midwife care.

**FY94 Costs:**

**Medicaid Facility**

A survey completed last year of the uncomplicated Medicaid births shows that a course of prenatal care by current licensed providers, with a hospital birth, averages about \$5,000. Based on that survey and updated information the average cost for the hospital portion of services for a birth is calculated as \$3,000. The cost of Medicaid facility services would be reduced by \$180,000 for the 60 births shifted away from hospital; under this bill.

**Medicaid Non-facility**

Non-facility costs would increase under the bill by the cost of the 125 birthing services provided by direct entry midwives, the cost of any birthing facilities involved, and be reduced by the alternative cost of physician fees for prenatal, delivery, and post-partum care. Direct entry midwife services are costed at an average of \$1,480 per birth (80 percent of the \$1,850 average general public rate). Physician costs are estimated at \$2,000 per birth for pre-natal, delivery, and post-partum.

Midwife services	\$1,480 X 125 = \$185,000
Physician fees	<u>\$2,000 X 60 = (120,000)</u>
Net Medicaid Non-facility	\$ 65,000

**Claims Processing**

Based on current experience, the addition of a new provider category and services to the Medicaid Management Information System (MMIS, claims payment system) will require \$30,000. Another \$1,500 cost is required for development of a provider manual. These first year costs for changes to the system receive a 75% federal match and require 25% state general funds.

Additional contractual costs will be incurred for processing the claims submitted by nurse midwives. The cost is shown as \$6.23 per claim. This fiscal note assumes that the midwives will submit 2 to 3 claims per month more than would be done by physicians and the submissions would cover 5 months. For the 125 births the cost for claims processing would be approximately \$9,700.

NOTES:

The Alaska Midwife's Association reports a range of fees for service of \$1,400 to \$2,300 with a statewide, non-weighted average fee of \$1,850.

Current statistics from the Bureau of Vital Statistics indicate that approximately 42% of births are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of Medicaid eligibility of 70% to 80%.

This fiscal note assumes 50% eligibility for those using the services.

FY 95 and subsequent year's claims are adjusted for growth at 11% and medical inflation at 5%.

Net fiscal impact of all Division of Medical Assistance fiscal notes for SSSB91 is as follows:

Passage of SB 91 would provide another choice to expectant mothers who are dependent upon medical assistance for pregnancy care and childbirth assistance. At present, physician and hospital services are payable under medical assistance along with some pregnancy related nursing services. Payment of direct entry midwife services may have some downward effect on medical assistance program costs to the extent that expectant mothers choose to use midwife services instead of the more costly physician and hospital services.

There are now 10 licensed direct entry midwives in Alaska; a number which might grow to 25 over the next year. The estimated number of births that will be delivered by these professionals during FY94 is 250 of which an estimated 125 would be eligible for reimbursement under the medical assistance program. Of the 125 eligible for Medicaid an estimated 50%, or about 60 births, would be shifted from hospital and physician care to direct entry midwife care.

**FY94 Costs:**

**Medicaid Facility**

A survey completed last year of the uncomplicated Medicaid births shows that a course of prenatal care by current licensed providers, with a hospital birth, averages about \$5,000. Based on that survey and updated information the average cost for the hospital portion of services for a birth is calculated as \$3,000. The cost of Medicaid facility services would be reduced by \$180,000 for the 60 births shifted away from hospitals under this bill.

**Medicaid Non-facility**

Non-facility costs would increase under the bill by the cost of the 125 birthing services provided by direct entry midwives, the cost of any birthing facilities involved, and be reduced by the alternative cost of physician fees for prenatal, delivery, and post-partum care. Direct entry midwife services are costed at an average of \$1,480 per birth (80 percent of the \$1,850 average general public rate). Physician costs are estimated at \$2,000 per birth for pre-natal, delivery, and post-partum.

Midwife services	\$1,480 X 125 = \$185,000
Physician fees	<u>\$2,000 X 60 = (120,000)</u>
Net Medicaid Non-facility	\$ 65,000

**Claims Processing**

Based on current experience, the addition of a new provider category and services to the Medicaid Management Information System (MMIS, claims payment system) will require \$30,000. Another \$1,500 cost is required for development of a provider manual. These first year costs for changes to the system receive a 75% federal match and require 25% state general funds.

Additional contractual costs will be incurred for processing the claims submitted by nurse midwives. The cost is shown as \$6.23 per claim. This fiscal note assumes that the midwives will submit 2 to 3 claims per month more than would be done by physicians and the submissions would cover 5 months. For the 125 births the cost for claims processing would be approximately \$9,700.

## NOTES:

Direct entry midwife services include 2 to 3 months of prenatal care, delivery, and 2 post-partum visits (usually spread over 2 months) and are typically provided at more frequent intervals than alternative services.

The Alaska Midwife's Association reports a range of fees for service of \$1,400 to \$2,300 with a statewide, non-weighted average fee of \$1,850.

Current statistics from the Bureau of Vital Statistics indicate that approximately 42% of births are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of Medicaid eligibility of 70% to 80%.

A large number of the births involving Medicaid payment are of low birth weight and can be assumed to involve referral to a physician at some point during the pregnancy. The referral would involve a physician and hospital, thereby negating much or all of any cost benefit from having a direct-entry midwife attend the birth.

This fiscal note assumes 50% eligibility for those using the services.

FY 95 and subsequent year's claims are adjusted for growth at 11% and medical inflation at 5%.

Net fiscal impact of all Division of Medical Assistance fiscal notes for SSSB91 is as follows:

Totals	FY94	FY95	FY96	FY97	FY98	FY99

SR91

Passage of SB 91 would provide another choice to expectant mothers who are dependent upon medical assistance for pregnancy care and childbirth assistance. At present, physician and hospital services are payable under medical assistance along with some pregnancy related nursing services. Payment of direct entry midwife services may have some downward effect on medical assistance program costs to the extent that expectant mothers choose to use midwife services instead of the more costly physician and hospital services.

There are now 10 licensed direct entry midwives in Alaska; a number which might grow to 25 over the next year. The estimated number of births that will be delivered by these professionals during FY94 is 250 of which an estimated 125 would be eligible for reimbursement under the medical assistance program. Of the 125 eligible for Medicaid an estimated 50%, or about 60 births, would be shifted from hospital and physician care to direct entry midwife care.

**FY94 Costs:**

**Medicaid Facility**

A survey completed last year of the uncomplicated Medicaid births shows that a course of prenatal care by current licensed providers, with a hospital birth, averages about \$5,000. Based on that survey and updated information the average cost for the hospital portion of services for a birth is calculated as \$3,000. The cost of Medicaid facility services would be reduced by \$180,000 for the 60 births shifted away from hospitals under this bill.

**Medicaid Non-facility**

Non-facility costs would increase under the bill by the cost of the 125 birthing services provided by direct entry midwives, the cost of any birthing facilities involved, and be reduced by the alternative cost of physician fees for prenatal, delivery, and post-partum care. Direct entry midwife services are costed at an average of \$1,480 per birth (80 percent of the \$1,850 average general public rate). Physician costs are estimated at \$2,000 per birth for pre-natal, delivery, and post-partum.

Midwife services	\$1,480 X 125 = \$185,000
Physician fees	<u>\$2,000 X 60 = (120,000)</u>
Net Medicaid Non-facility	\$ 65,000

**Claims Processing**

Based on current experience, the addition of a new provider category and services to the Medicaid Management Information System (MMIS, claims payment system) will require \$30,000. Another \$1,500 cost is required for development of a provider manual. These first year costs for changes to the system receive a 75% federal match and require 25% state general funds.

Additional contractual costs will be incurred for processing the claims submitted by nurse midwives. The cost is shown as \$6.23 per claim. This fiscal note assumes that the midwives will submit 2 to 3 claims per month more than would be done by physicians and the submissions would cover 5 months. For the 125 births the cost for claims processing would be approximately \$9,700.

NOTES:

Direct entry midwife services include 2 to 3 months of prenatal care, delivery, and 2 post-partum visits (usually spread over 2 months) and are typically provided at more frequent intervals than alternative services.

The Alaska Midwife's Association reports a range of fees for service of \$1,400 to \$2,300 with a statewide, non-weighted average fee of \$1,850.

Current statistics from the Bureau of Vital Statistics indicate that approximately 42% of births are to persons meeting eligibility guidelines for Medicaid services. Reports from the Alaska Midwife's Association indicate a much higher percentage of Medicaid eligibility of 70% to 80%.

A large number of the births involving Medicaid payment are of low birth weight and can be assumed to involve referral to a physician at some point during the pregnancy. The referral would involve a physician and hospital, thereby negating much or all of any cost benefit from having a direct-entry midwife attend the birth.

This fiscal note assumes 50% eligibility for those using the services.

FY 95 and subsequent year's claims are adjusted for growth at 11% and medical inflation at 5%.

Net fiscal impact of all Division of Medical Assistance fiscal notes for SSSB91 is as follows:

**ANALYSIS:** (Attach a separate page if necessary)

This fiscal note is to be read in conjunction with notes for other components of the medical assistance programs. For this bill the components included are Medicaid Facility (00230), Medicaid Non-facility (00229) and Claims Processing (00243). The FY94 cost includes one-time costs for \$30,000 changes to the Medicaid Information System and \$1,500 for development of a provider manual. Costs continuing over fiscal years are for an FY94 claims processing cost estimated to include 2 to 3 claims per month for 5 months for each birth. The cost of each claim is estimated at the current \$6.23. Growth in utilization is estimated at 11% and inflation at 5% per year. Federal participation is shown at 75% for claims processing. Additional information and cost figures for hospitals, physicians, midwives, and claims processing are identified in the attached notes.

SUPERINTENDENT

March 3, 1993

Senator Fred Zharoff  
Alaska Senate  
P.O. Box V  
Juneau, Alaska 99811

Dear Senator Zharoff:

At its meeting last week, the Southeast Island School District Board of Education reviewed SB 92, your legislation which would allow advisory questions to be placed upon an REAA ballot at the request of the School Board. The Board is in support of this legislation, as the Board believes there needs to be a legal mechanism to permit such advisory votes.

Sincerely,

A handwritten signature in cursive script that reads "Robert Weinstein".

**SB 92 Sponsor Statement-Sen. Zharoff**

This bill adds a provision in AS 14.08.071 whereby the communities in REAA school areas are able to voice their positions on education and education related issues of concern to them via an advisory vote on the regular school ballot. REAA schools are spread over a wide area, it is often difficult for members of the community to attend board meetings and make their feelings known. This bill allows the the school board to adopt a resolution requesting that an advisory question be on the next ballot. They then get a certified count from the communities regarding each communities stance on this question.

The Department of Education supports this bill. I believe it is a non-controversial bill and I would appreciate the committee's affirmative action.

POSITION PAPER: DEPARTMENT OF EDUCATION

Division: Administrative Services

Bill Number: SB 92

Bill Title: An Act relating to an advisory vote during regional education attendance area school board elections; and providing for an effective date.

Sponsor: Senator Zharoff

Position Statement: Explain briefly what the bill does, its impact and Department's position, i.e. a) support, b) do not support, c) neutral or d) oppose

SB92 allows REAA school boards to place advisory questions, on the next election ballot. The Department of Education supports this bill because it provides an avenue for citizens to inform REAA school boards of their opinion on relevant educational issues. It therefore, keeps school board members more in touch with the priorities of their constituents.
