

ALASKA LEGISLATURE

1694

HOUSE and SENATE FINANCE COMMITTEE FILES, 1997-1998

Failed 4-7

Department of Environmental Conservation
Amendment to Amendment # 3A

Sponsor: Rep. Kohring

Air & Water Quality Division

BRU: Water Quality Grants

319 Grant Funds

(200.) Federal Receipts

Purpose: This Amendment to Amendment 3A is for the purpose of deleting a portion of the federal grant funds for the 319 (Non-Point Source Pollution) Program. Members of the budget subcommittee strongly believe that ADEC has inappropriately awarded grant funds to entities that oppose development in Alaska and are using this funding source for such purposes. Therefore, the grant program receipt authority is reduced to approximately 50% of the requested FY 99 grants (account #77000). The budget subcommittee will review the FY 99 grant awards to determine if future receipt authority will be increased or decreased in the next Legislative session..

INTENT: "It is the intent of the legislature that the Department of Environmental Conservation use federal funds received for wetlands grants and for nonpoint source water pollution pass-through grants for water related research and water related activities in the following order of priority: (1) research projects assisting in remediation of water bodies on the Environmental Protection Agency list of impaired water bodies; (2) government research projects to collect scientific baseline data for use in agency decision making; (3) non-government scientific water data projects or activities in collaboration with and approved by a lead resource agency; (4) water related permitting activities including community involvement and public procedures required under AS 44.62."

Rep. Dennis

DEC #5

OFFERED IN THE HOUSE

HB 325

ADD

Department of Environmental Conservation
Administration
Office of the Commissioner

21.3 General Fund

The incumbent Deputy Commissioner is on loan from the Environmental Protection Agency. The Department reimburses the Environmental Protection Agency for partial costs of the position. Costs reimbursed to the Environmental Protection Agency are less than the typical costs for a Deputy Commissioner, thus the proposed reduction.

If an agency negotiates a creative agreement which provides an ability to direct funding to other services, the legislative action should be to reward the agency rather than cutting the funding.

This eliminates incentives to pursue creative options and when, in this case, the inter agency personnel agreement terminates, the Department will have insufficient funding for the actual costs of a Deputy Commissioner. The current agreement with the Environmental Protection Agency ends in July and we do not know if it will be renewed.

Administration
Administrative Services

~~12.2 General Fund~~
11.4 Oil/Haz Fd

The Division of Administrative Services has staff in Anchorage, Fairbanks, Juneau and one position in Palmer. These staff support Department of Environmental Conservation offices in fifteen locations throughout the State of Alaska. Travel funds are critical to provide necessary on site support services.

Some examples of on site services delivered by the Division of Administrative Services are

- human resources issue resolution;
- computer network installation, maintenance and support;
- administrative training to ensure staff compliance with State of Alaska laws;
- development of cost recovery systems for recovery of fees, federal receipts and response funds which are in excess of 28 million dollars annually; and
- participation in Oil and Hazardous Substance preparedness drills as part of the incident command system.

Communication with the general public is a critical element of the public health and emergency response services in the Department of Environmental Conservation. Failure to communicate accurately and timely could result in the loss of human life or property. The publication specialist in the Division of Administrative Services is responsible for external communications. The Department of Environmental Conservation must keep Alaskans and other consumers informed to help protect health and resources from illness, contaminants, polluted water, oil spills, dirty air, vermin and disease associated with solid and hazardous waste, and contaminated foods of all types. Federal amendments to the safe drinking water act include a requirement to provide public information about public water systems.

HB 325

DEC #8

ADD

Department of Environmental Conservation
Division of Environmental Health
Drinking Water

153.8 ADWF
~~203.8 Federal~~

This is a reduction on a one-time contractual increment request to provide educational assistance such as brochures and videos for home owners on the proper maintenance of their on-lot septic systems. Proper maintenance of on-lot septic systems is critical in preventing drinking water contamination. This type of educational assistance is particularly important since the Department of Environmental Conservation is no longer reviewing septic systems at the time a house sells. Approximately 50% of homes outside Anchorage rely on septic systems for proper sewage disposal.

According to the Notice in the Federal Register, if a state does not use its allocation, these grant funds will be "reallocated and awarded to States" that have obligated their grant funds. Thus, not using these dollars for Alaskan needs will simply serve to benefit residents of other states.

A technical amendment was previously submitted to change the funding source on this item from Alaska Drinking Water Fund to Federal Receipts.

Division of Environmental Health
Seafood and Sanitation Inspections

~~7.5 General Fund~~
185.7 General Fund Program
Receipts

This program receipt transfer (172.5) would have provided the ability to increase annual inspections of high-risk facilities. This transfer would have brought the inspection frequency to an average of once each 18 months.

In addition, a part of this transfer (13.2) would have provided the following public education/outreach efforts: Paralytic Shellfish Poisoning: the incidents of PSP are on the rise, especially with "El Nino" and increased water temperatures; Hazard Analysis Critical Control Point Training for meat processors: federal rules for meat processors have recently been amended but USDA has not provided for any training to help these processors understand the new rules; updating food safety brochures for consumers; provide a food safety curriculum for Alaskan schools; and distribution of a food safety manual for use by food service workers.

The 7.5 GF increment would have provided travel support to the inspectors, enabling them to travel to inspection sites. Travel costs cannot be covered with program receipts.

ADD

Department of Environmental Conservation
Division of Environmental Health
Laboratory Services

103.2 General Fund

The division would have to take this component's targeted General Fund reduction of 103.2 from personal services. An Environmental Laboratory Technician, Chemist I, and Environmental Microbiologist would be eliminated.

Specific service impacts include:

-Reduced marine toxin testing (PSP) and microbiological testing of bivalve and seafood products; this would lead to a reduction in the commercial sales of Alaska-produced shellfish because shellfish must be tested before it can be sold.

-Reduced red meat testing for E-coli, Salmonella, and Listeria; this testing is required under the federal meat inspection program, thus would lead to a reduction in the number of Alaska commercial meat processors.

-Further slow down the approval process of commercial labs for drinking water analysis; prior cuts to this program area have already resulted in a 3-6 month turnaround for drinking water certifications. These cuts, on top of the increasing numbers of contaminants that must be analyzed, will further exacerbate the situation. Certification of commercial labs for drinking water analyses is required by state and federal law.

Drinking Water

(285.8) Alaska Drinking Water Fund

ADD

Department of Environmental Conservation
Division of Environmental Health
Drinking Water

285.8 Federal

This is a technical budget amendment to correct the funding source.

This activity is covered under the Safe Drinking Water Act but is not part of the loan program. The correct fund source is Federal. The Safe Drinking Water Act provides federal funding for a variety of activities. Part of the federal funding is set aside in the ADWF for a loan program and only a loan program. Other activities - not associated with the loan program - are direct federal funding.

AMENDMENT # _____

Rep. Davies

OFFERED IN THE HOUSE

HB 325

DEC #12

ADD

withdrawn

Department of Environmental Conservation
Division of Environmental Health
Drinking Water

75.0
~~200.0~~
~~312.5~~ General Fund

Most of the general fund cut (250.0) would be associated with a total elimination of Class C Public Water System approval and oversight. Class C Public Water Systems currently comprise 49% of the statewide total of Public Water Systems.

Services include plan review and approval, technical assistance, and contaminant monitoring.

The balance of the reduction (62.5) would be taken from the Domestic Wastewater Program. Certified Installers Program would be eliminated. Septic systems would only be able to be installed by registered engineers, significantly increasing installation or repair costs to homeowners, with no appreciable increase in public health protection.

AMENDMENT # _____

adopted 10/11
~~*no obj*~~

Rep. Lewis

OFFERED IN THE HOUSE

HB 325

DEC #13

ADD

Department of Environmental Conservation	90.0
Division of Environmental Health	125.0
Municipal Solid Waste	144.4 General Fund

All general funds in this component go to support Class III landfills which serve rural communities. Landfills in rural areas are frequently in very poor condition and the incremental improvements made through technical assistance and inspections result in significant reductions in public health risk.

Services include permitting, technical assistance, review and approval of solid waste management plans, review of monitoring data, and inspections.

The loss of the Environmental Specialist IV would see these services reduced in rural areas of the State.

Services lost with the elimination of the Analyst Programmer: ability to accurately track time and send correct billings to permittees; ability to track and report on performance measures to the public, the legislature, and department management; ability to coordinate statistical data from solid waste database with contaminated sites and public water systems databases; efficient and effective tracking of time and information on solid waste management in Alaska.

The travel reduction would reduce the staff's ability to obtain training, a necessary part of efficient job performance.

In addition, this reduction may well result in Alaska not receiving EPA approval of its Solid Waste Program. After last year's proposal to reduce the Municipal Solid Waste Program by nearly 80%, the Legislature realized that EPA approval of the program was essential for Alaskan communities. An analysis done at that time revealed that reductions in excess of the 145.9 approved last year would likely result in a program that EPA could not approve.

Water Quality	(178.6) General Fund Program Receipts

Restore funding for the non point source pollution control program commonly referred to as the "319" program. Without these funds, the State of Alaska will no longer develop a strategy for controlling nonpoint source pollution. Alaska will lose seven million dollars annually from the federal state revolving fund to pay for landfill and waste water projects. The State of Alaska will lose an additional million for watershed protection, including coastal watersheds. Grants for local nonpoint pollution prevention will be eliminated. The State of Alaska will not prepare an annual assessment of water bodies or monitor implementation of recovery plans. Grants which could be used in the State of Alaska to help protect water quality in environmentally sensitive areas will be lost. These funds will be directed to other states. The State of Alaska will not offer technical assistance and training to local water quality monitoring projects or technical assistance to local communities to protect watersheds.

Delete general fund program receipts for wastewater permitting. The separate reduction of 123.4 eliminated all travel support for the wastewater permitting program. Without travel support, the department can not continue to issue the full complement of permits and certifications to federal permits, so it would not be able to do the permit work or collect the program receipts.

Adopted

It is the intent of the House Finance Committee that funding for the General Relief Medical (GRM) program is deleted for the following reasons:

A major portion of GRM funding has been used to pay for free elective abortions and abortion related services with little or no regulatory overview or accountability for these expenditures.

The Department of Health and Social Services has failed to document that the women for whom it has provided free elective abortions and abortion related services qualify under the maximum income and asset levels allowed by the program's financial guidelines.

It is the policy of the House Finance Committee to use a portion of this money to fund increases in adoption and foster care.

It is further the policy of the House Finance Committee that the Governor and the Department should refrain from seeking to fund elective abortions through any other revenue source or program.

WITHDRAWN

BY REP. MARTIN

4/16/98 pm

Draft letter of intent for deleted GRM funding:

It is the intent of the Legislature that funding for the general relief medical (GRM) program is deleted from the FY 99 operating budget for the following reasons:

A major portion of GRM funding has been used to pay for free elective abortions and abortion related services, yet most states and the federal government do not pay for this category of abortions.

According to numbers compiled by the State's office of vital statistics, the birthrate in Alaska has dropped from 21.3 live births per 1,000 population in 1988 to 16.6 per 1,000 in 1996, and the actual number of live births has dropped from 11,483 in 1988 to 9,999 in 1997, while the number of State-funded free abortions rose from 463 in 1988 to 843 in 1997. This is an increase of 82 percent in the number of abortions, while live births dropped by 13 percent over the same period. When compared to the falling statewide birthrate, the State's policy of funding abortions could be considered an insidious means by which State government is, in fact, inhibiting the growth of certain minority elements of its population.

In a 1994 settlement agreement, the DHSS agreed to ignore many of its own abortion regulations, yet these regulations were originally promulgated in order to protect the public. The stipulation in this agreement was entered into in a very short period of time and with little or no legislative input.

The State has failed to document that women who receive free, State-funded abortions under GRM also receive correct medical information, as required by 12 AAC 40.070, describing the negative physical and emotional side effects of the radical medical procedure used to expel the fetus, thus

leaving the State vulnerable to legal action for the cost of patients who become psychologically unbalanced as a result of the abortion.

The State may be further vulnerable to legal action because DHSS has not followed its own regulations covering GRM abortions, including: 7 AAC 47.200, requiring a physician to certify the abortion is medically necessary; 12 AAC 40.080, requiring a woman seeking a GRM abortion to be examined by an Alaska-licensed physician before she travels out of state for the abortion; 12 AAC 40.100, requiring a second doctor's opinion before an abortion is performed on a fetus older than 12 weeks; and AS 18.16.010, which requires the woman seeking a GRM abortion to be domiciled or physically present in Alaska for at least 30 days before the abortion.

Many of the State's regulations pertaining to free, State-funded abortions were developed before Roe v. Wade and are therefore not relevant to the financial situations of those seeking abortions nearly 30 years later. With the most recent Permanent Fund Dividend, every couple responsible for the conception of a fetus would have had more than \$2,600 available for their personal needs, over and above any other government welfare and/or Native corporation dividends. In light of this situation, it flies in the face of common sense and the accepted notion of what constitutes "poverty" to suggest the State should continue to provide free abortions for the "poor."

The State's policy of providing free elective abortions also constitutes an incentive for irresponsible males who, after helping to conceive a child, encourage or even coerce the mother to have it aborted for free. The lure of having the state take care of his problem for free, compared to providing a lifetime of support for a live child, is undoubtedly a powerful inducement.

The State may unknowingly be participating in funding partial birth abortions, a procedure which is abhorrent and repulsive to the majority of the people of Alaska.

The State's policy of free abortions further creates horror stories for the families of young girls who, after obtaining secret abortions without their parents knowledge or approval, suffer from deep psychological problems into their adult lives.

There is little or no verification that those seeking free abortions from the State actually meet the minimal income requirements of State law or regulations (7 AAC 47.150), yet the policy of State-funded abortions continues to target poor persons and evidence shows that over the years the State's policy of funding abortions has been designed to get rid of so-called undesirables. Reference DHSS testimony and fiscal note on HB 234.

The GRM program appears to have allowed a significant flow of Permanent Fund hold harmless funding to take place supporting abortion and abortion-related services. It is unconscionable that every Alaskan's Permanent Fund Dividend is directly reduced to pay for free abortions.

The State should not continue to have a policy of terminating the children of the poor, immigrants, or those on welfare with the express purpose of keeping down the cost of State-funded social programs, or for social engineering purposes.

Statistics from DHSS show that between 1988 and 1996, 32 percent of all State-funded abortions were of Alaskan Natives, a rate twice that of their portion of the overall population, and three times the rate of abortions of White children. Further, African-American children are aborted at a rate of

five times that of White children. This amounts to a de facto program of ethnic cleansing.

It is deplorable that the policy of free, State-funded abortions has significantly reduced the future representation in the Legislature for Alaskan Natives. Alaska Natives living in the rural areas of the State stand to lose at least one seat in the Alaska House of Representatives due to redistricting following the census of 2000.

This policy of State-funded abortions of Natives over the past two decades has killed as many as 4,000 unborn Native children, with an additional untold loss of hundreds more due to spontaneous abortions caused by scarring of the uterus that occurred during previous abortion operations. These numbers only mirror the lost generation of young Alaskan Natives who would now be marrying and raising a third generation lost to abortions, all because they have been labeled as "poor." Over the coming decades State-funded abortions would continue to shrink the population of Alaskan Natives who would support a subsistence lifestyle, thereby diminishing efforts to protect subsistence or assert sovereignty rights in a statewide election on these issues.

A policy of State-funded abortions with a disproportionate number of Alaskan Native abortions amounts to a de facto campaign of genocide, but one in which the tiny victims are not seen, which is the moral equivalent of the genocide evidenced at Nuremberg after WWII or more recently in Bosnia-Herzegovina.

After extensive review of the decline in Alaska's population of infants under four years old, the decline in the natural growth rate of minority populations, the unacceptable ratio of minority abortions compared to Whites, and the State's questionable role and rationale for its abortion

policies, the Legislature finds it repugnant, abusive and intolerable to continue to use State funding for such purposes.

It is further the intent of the Legislature that, inasmuch as the Governor, the Legislature, and the federal government have increased funding for adoption, pregnancy prevention, and parenting early development services for low-income Alaskans, through such programs as "Smart Start," that this is a higher and better use of state dollars than paying to abort the children of the poor.

It is further the intent of the Legislature that the Governor and the Department of Health and Social Services should refrain from seeking to fund elective abortions through any other revenue source or program.

MEMORANDUM

To: House Finance Committee Members
From: Representative Terry Martin
Date: April 16, 1998
Subject: General Relief Medical

According to the Mike Gearney, Legislative Fiscal Analyst, report of April 13, 1998: of the 1,699 recipients of General Relief Medical (GRM), 843 (or half) of these recipients did not have to meet GRM requirements. The State of Alaska waives GRM qualification for abortion.

These recipients, all women, instead qualified for Medicaid which allows much more income (\$1,200 for a single mother after her expenses). Why did GRM pay these costs rather than Medicaid? Because these women did not have chronic problems, a disease, a condition of endangerment to their lives, or a family or pregnancy emergency. These recipients wanted elective abortions for reasons other than health which Federal money will not pay for.

Without GRM funding, the State will still be able to continue to pay for abortions for women in the cases of life endangerment, rape, incest, or sexual abuse.

According to *Division of Medical Assistance Report - February 27, 1998 - Demographics*: 53% of GRM recipients are male; apparently the only females served under GRM receive abortions (843 in 1997). The only pregnancy related service, in fact the only female service, is for elective, non health-threatening, abortion.

(Another disturbing fact from this report is that that less than 9% of GRM recipients are Native. Yet the *Abortion Services by Category of Service Report 1997* reveals that 31% of GRM funded abortions are for Natives. Why the wide racial discrepancy in the women receiving abortions?).

As for the remaining 50% of recipients, it appears that the Department of Health and Social Services does not follow existing State law (AS 47.25.230. and AS 47.25.240.). These statutes require the state to identify persons liable for support of the recipient of GRM who include the spouse, children, grandchildren, parents, grandparents, or siblings who are financially able to. The statute requires that the legally responsible relative reimburse the

state (with interest) for any relief granted in the event that the relative fails to provide for the immediate need.

Failure to provide identification of a third party involved who may have a responsibility to pay is intended to result in the applicant's ineligibility

In addition, financial household eligibility must include resources of legally responsible relatives who live with the applicant.

Applicable Statutes:

AS 47.25.230. Persons Liable For Support and Burial.

Every needy person shall be supported while living and upon dying, shall be given a decent burial by the spouse, children, parents, grandparents, grandchildren, or siblings of the needy person, if they, or any of them, have the ability to do so, in the order named. Every designated person who fails to support the needy person when directed by the department to do so, or fails to give the needy person a decent burial shall reimburse the state or a municipality for the funds expended by either the state or a municipality for the relief or burial of the needy person, and these sums with interest and costs may be recovered by the state or a municipality of the state in a civil action.

AS 47.25.240. Action Against Person Liable For Care of Recipient.

If, during the continuance of an allowance, the department ascertains that a person liable for the support of the recipient of assistance is able to provide the necessary care and support of the recipient, and the person liable for the care and support of the recipient fails or refuses to support and care for the recipient, the state has a claim for the assistance against the person liable for it. This claim may be enforced by civil action brought in the name of the state by the attorney general against the person liable for the recovery of the amount of money, with interest, paid to the recipient, together with the costs and disbursements of the action.

DEPARTMENT OF HEALTH & SOCIAL SERVICES
FY99 Impact of House Finance Sub-Committee
(Close-out Version)

ELIMINATE GENERAL RELIEF MEDICAL PROGRAM	2
ADJUST MEDICAID FORMULA GROWTH	3
DENY INCREMENT FOR HEALTH PURCHASING GROUP.....	4
REDUCE COMMUNITY BASED FAMILY ASSESSMENT AND CASE MANAGEMENT PILOT INCREMENT.	5
DENY SUPERVISED VISITATION INCREMENT	6
DENY FOSTER PARENT RECRUITMENT INCREMENT.....	7
REDUCES THE NUMBER OF SOCIAL WORK AND SUPPORT POSITIONS REQUESTED FROM 40 TO 35 POSITIONS.	7
DENY HEALTHY FAMILIES EXPANSION UNTIL CONTROL GROUP IS ESTABLISHED	8
REDUCTION OF THE CHILDHOOD IMMUNIZATION INITIATIVE	9
REDUCTION OF THE TOBACCO USER REDUCTION PROJECT.....	10
AGENCY WIDE TRAVEL REDUCTION	11
RETIREMENT INCENTIVE PROGRAM SAVINGS	11
DENY ADDITIONAL PERSONNEL POSITION	13
DENY INCREMENT FOR COMPASS GRANTS	14

	<p>The GRM program purchases medical services from a variety of provider types such as hospitals, physicians and pharmacies. If the inpatient hospital services for GRM are not reimbursed hospitals would report those costs as bad debt. However, without a GRM program it is unlikely that any other provider types would continue to provide or would increase services to indigents on a bad debt or charity basis.</p> <p>Given the Legislature's intent to eliminate the GRM program, there would be at June 30, 1998 an estimated \$1,000.0 of medical services which will have been provided to GRM clients; but not yet billed to or paid by the GRM program. Without, an appropriation to fund those claims the Medical Assistance program will have to suspend claims received after June 30, 1998 and request a supplemental general fund appropriation from the Legislature for those legal obligations of the state. Assuming the normal supplemental appropriation timeframe, some providers will have to wait up to 14 months to be paid for the services they had in good faith provided.</p>
--	---

BRU	Medical Assistance		
Component	Medicaid Services		
Reduction Description	Adjust Medicaid Formula Growth		
Funding	Total funding loss (Net impact of House cuts)	Total	(3,220.0)
		General Fund	(623.2)
		Federal	(1,925.6)
		Other - I/A	(671.2)
Explanation of Impact	<p>These cuts reduce entitlement growth for new eligible clients, rates and service utilization changes that the Governor Requested by \$3,220.0 in total funds.</p> <p>The cost and utilization of medical services is projected to increase a composite of approximately 7%. The House subcommittee cut the Governor's Request for the projected formula growth by \$1,550.3 of which \$623.2 is GFM and \$927.1 is federal funding. These projections were based upon analysis of data from the previous three fiscal years to capture the changing trends in the Alaska's economy and utilization of medical services patterns.</p> <p>792 new eligible clients (268 elderly and 524 disabled) are projected to be added to the Medicaid program during FY99. These two client groups are the most expensive: the elderly averaging \$9,392 each per year and the disabled \$12,155. The numbers of eligible children and adults are projected to remain</p>

Memorandum

TO: Representative Gene Therriault, Co-chair
House Finance Committee

FROM: Deborah B. Sedwick, Commissioner ^{DBS}
Department of Commerce & Economic Development

DATE: April 15, 1998

RE: Alaska Seed Potato Project

Thank you for your memo regarding Dr. Jenifer McBeath and the Alaska Seed Potato for Export project. You stated you are looking to Department of Commerce & Economic Development (DCED) for participation and evaluation of Dr. McBeath's seed potato project and its potential impact to Alaska farmers. In addition, you requested input from the department on the project's value and our perspective on what level of state support that should be provided for her testing program.

Dr. McBeath, through determination and energy, has made considerable progress in realizing her dream of exporting virus-tested seed potatoes from Alaska to Taiwan. She has utilized the assistance of Alaska's trade representative in Taiwan, Ida Yao, and recently received an order for 40 metric tons of Alaska seed potatoes from an agricultural cooperative in Taiwan – her largest order to date. These potatoes will need to be tested before they can be shipped. This year the combination of a bad harvest in Taiwan and McBeath's several years of working and testing her potatoes in Taiwan gives Alaska a good opportunity to enter the market.

If the legislature appropriates grant money to Dr. McBeath to continue her testing lab, the Department of Commerce and Economic Development would be happy to administer the grant. We have recommendations for grant specifications as follows:

- **Receipt of the money by Dr. McBeath should be tied to the development of a business feasibility study.** The study should include the value of the world market and Taiwan market for seed potatoes, Alaska's competitive advantages and disadvantages, the portion of the market Alaska has the capacity to supply, and the value to Alaska of the testing program. In order to evaluate the State's commitment to this project, we need to know how the benefits compare to the costs, in both the short and the long term.
- **A business plan needs to be developed.** To date, all the research, education, fund-raising, marketing and evaluation have been the responsibility of Dr. McBeath. The business plan should include the next steps, person or agency responsible and projected results.

- **Dr. McBeath should obtain financial commitments from other players** as a condition for the receipt of state grant money. Most grants have a match requirement, generally a producer or end user co-investment.
- **The University of Alaska should continue to be involved**, to provide scientific review. DCED does not have the ability to judge the quality of the science, which is necessary to insure project success. The University could also administer federal grant funds through USDA National Research Initiatives or Agricultural Experiment funds, which would be an additional co-investment.

It is the mission of the DCED, Division of Trade and Development to increase and strengthen demand for Alaska's products and services, both domestically and internationally. The DCED trade representative in Taiwan believes Alaska has the opportunity to open a niche market in Taiwan for Alaska agricultural products. My department will do its best to provide Alaska businesses with information from overseas markets and help promote Alaska products through access to these markets.

I appreciate your request for my input regarding this project. I hope this information is useful in making your decision. If DCED can be of any additional assistance, please do not hesitate to call me.

Cc: Priscilla Wohl, Trade Program Manager
Nancy Babcock, Taiwan Trade Specialist

Sara,

The answer I received to your Ak potatoes export question is:

Seed:

- 1994 - 1,000 lbs to Canada
- 1995 - 1,000 lbs to Maine
- 1996 - 40,000 lbs to Washington State

Novelty Potatoes:

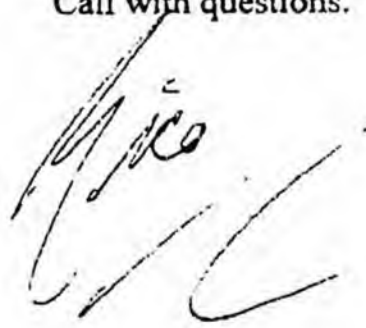

- 1996 - 20,000 lbs to Los Angeles
- 1997 - 20,000 lbs to Los Angeles

The Alaska Agriculture Development & Marketing Corporation:

- 1995 - 150 lbs to Taiwan as a donation for trials
- 1995 - 500 lbs to China as a donation for trials
- 1996 - 20 tons sold to China
- 1996 - 660 lbs sold to Taiwan
- 1997/8 - 40 tons to Taiwan (order)

That's all I have for now. I hope that is what you were looking for.

Call with questions.

April 15, 1998

The Honorable Representative
Gene Therriault
State Capital
Juneau, AK 99801-1182

Dear Gene:

Yesterday, I received a letter via FAX from Ms. Lee, manager of Agronew Trading Co. in Taiwan, inquiring about the price, availability and time of delivery of the Kennebec and Russet Burbank varieties of seed potatoes. She also inquired about the availability and price of tablestock (fresh market) Kennebec potatoes.

This will be the fourth inquiry for seed potatoes and the second for tablestock potatoes. Previous inquiries about seed potatoes have resulted in the sale of 60 tons of lab-tested, Alaska premium Kennebec seed potatoes.

The 60 ton seed potato sale is the result of several year's effort. The virus-free seed potato program will continue to help potato producers in Alaska to improve the health of their crops and build up the supply of high quality seed and tablestock potatoes.

Best regards,

A handwritten signature in cursive script, appearing to read "Jif", written in black ink.
