Table H, I, and J list all the sites inventoried in the Department of Environmental Conservation's contaminated sites and leaking underground storage tank sites database as of June 30, 2002.

Table H summarize the numbers of active sites by location and by priority ranking based on the threats to the public health or welfare or to the environment. The database contains the following totals for each priority category.

High Priority	1400
Medium Priority	1046
Low Priority	733
Unranked	297
Total Active Sites	<u>3476</u>

Table I lists all DEC Inventory of active Contaminated and Leaking Underground Storage Tanks sites alphabetically by location.

Table J lists all DEC Inventory of closed Contaminated and Leaking Underground Storage Tanks sites alphabetically by location.

Table H

Appendix 1: Community Spill Response - No costs incurred for communities in Fiscal years 2001 & 2002.

Appendix 2: Project Summaries - This appendix summarizes information for contaminated sites or pollution incidents for which the department made direct expenditures of \$10,000.00 or more during Fiscal year 2001 & 2002 from the Oil and Hazardous Substance Release Prevention and Response Fund. Indirect expenditures, expenditures paid from other sources (for example, from the general fund) and expenditures for budgeted legal services provided by the Department of Law are not included. Direct department response activities involve cleanup, control, containment, investigation and oversight.

Project/Site Name: 6-Mile Groundwater Monitoring

Location: Fairbanks/North Pole

Project Manager: Douglas Bauer

Site ID Number: 1987310924701

Tel: (907) 451-2192

Tracking Number: 14621570

Situation:

In 1995/1996, an area-wide trichloroethylene (TCE) groundwater plume was discovered in the Six-Mile Richardson Highway area. The plume is over a mile in length, up to 1200 feet wide, and up to 100 feet in depth. It extends in a northwesterly direction from south of the New Richardson Highway to the Six-Mile Village Subdivision area.

The plume impacted fifteen residential drinking water wells. The fifteen homeowners were given individual grants in 1995 to install water treatment systems of their choice (e.g., carbon filters) to remove the TCE from their drinking water.

Individual site investigations are being conducted concurrently with the area wide groundwater investigation. Site investigations at the McCall, Holder, Walsky, and 6-Mile Truck Shop properties indicate that there are multiple source areas where TCE was discharged to the ground. The individual source areas are creating groundwater plumes that eventually merge together to form the area-wide plume. The source areas appear to be located on the Holder and Walsky properties.

In 1996, an annual long-term groundwater program was instituted. Additional permanent groundwater monitoring wells were installed throughout the area. A series of permanent groundwater monitoring wells and a selected number of residential wells have been sampled annually since 1996 to monitor the area-wide plume. The results are analyzed, published, and distributed to interested parties.

FY01 Actions:

The long-term groundwater-monitoring program has evolved into two major components: the testing of residential water wells and filter system maintenance; and long-term groundwater monitoring. In 2001, DEC tested the residential water wells and the changed the carbon filters. In addition, seven additional monitoring wells were installed as part of the long-term monitoring program. Some of the older monitoring wells were eliminated from the program after analysis of historical trend data.

FY01 Response Fund Expenditures: \$56,072.00

FY01 Cost Recovery: NONE

FY02 Actions:

The annual groundwater monitoring and the residential well testing and filter system maintenance were conducted.

FY02 Response Fund Expenditures: \$71,819.33

FY02 Cost Recovery: None

FY 03 Projected Actions and Expenditure Amounts:

Continue the annual groundwater monitoring and the residential well testing and filter system maintenance program. Install several new monitoring wells in the distal portion of the regional groundwater plume to understand why concentration levels in two wells are not decreasing.

FY03 Response Fund Expenditures: \$125,000.

Project/Site Name: 6-Mile Truck Shop
Location: Fairbanks/North Pole
Project Manager: Douglas Bauer
Site ID Number: 1987310924701

Tel: (907) 451-2192
Tracking Number: 14893370

Situation:

A site investigation of the neighboring McCall and Holder properties indicated that the 6-Mile Truck Shop property might be contaminated with trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA). This was based on an interpretation of existing permanent groundwater monitoring well data, on-site drinking water well data, and a review of the site's history. The landowner of record was unwilling or unable to perform a site investigation. The area wide groundwater investigation confirmed area-wide TCE groundwater contamination with some residential wells impacted by low level TCA contamination.

In 1996, several hundred 55-gallon drums (of unknown content or volume) were identified on the 6-Mile Truck Shop property in various stages of deterioration. Several drums were leaking and they were placed in over-pack containers. In 1998, an interim removal action was conducted where 300 drums were characterized and consolidated for transport off site. A site investigation was conducted to characterize the petroleum contamination and investigate the TCE/TCA source areas on the property.

There were access problems associated with bankruptcy proceedings of the previous operator and the presence of equipment that had been abandoned. The proceedings were settled during the summer 2000 and the equipment removed. The site was foreclosed on by Fairbanks North Star Borough for unpaid property taxes in the summer 2000.

FY 01 Actions:

In 2001, five additional monitoring wells were installed on the property. Although neither TCE nor TCA has been detected in the soil on the property to date, the additional wells were installed to access the likelihood of an on-site release and to monitor the groundwater contamination coming from the upgradient Holder and Walsky properties. The characterization of petroleum releases was completed.

FY01 Response Fund Expenditures: \$13,571.00
FY01 Cost Recovery: None

FY02 Actions:

The long-term groundwater monitoring and residential treatment system maintenance programs were continued. Additional permanent groundwater monitoring wells were installed.

FY02 Response Fund Expenditures: \$699.00
FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

Install additional permanent groundwater monitoring wells to gain a better understanding of the regional plume dynamics at the lateral boundaries of the plume. These new wells were cluster wells, which are separate wells installed at the same physical location but screened at different depths. The location and screen depth of the new wells were determined from a series of temporary wells that were located along transects running perpendicular to the regional plume and at various depths.

Continued long-term groundwater monitoring and residential treatment system maintenance programs.

Estimated expenditures: \$31,250.00

Project/Site Name: ADOT&PF Cordova Locke Salvage Yard
Location: Mile 1 Cabin Lake Road, Cordova, Alaska
Project Manager: David Pikul
Site ID Number: 1990240129803

Tel: (907) 269-7551
Tracking Number: 14651260

Situation:

Mr. Jim Locke illegally occupied the site for almost thirty years prior to his death in 1996. Some of the items that Mr. Locke accepted into the salvage yard included: complete automobiles; auto parts; small engines, drums of oil and unknown contents; batteries; and miscellaneous debris (possible PCB transformer). It has been estimated that there is 600+ tons of metal debris. The property is owned and managed by the State of Alaska, Department of Transportation & Public Facilities (DOTPF) as part of the Cordova Airport facility. It is currently littered with the vehicles; structures; various forms of solid waste; and drums of unknown product. The property encompasses approximately 13 acres of land, of which 7 to 8 acres is covered by debris. The debris has been collected on the site in a manner such that the solid wastes and hazardous waste have been interspersed with each other. The site has no current residents. Ecology of the site includes an unnamed stream running between the former residence and the bulk area of the salvage yard. Small fry have been observed in the stream. A site visit and preliminary assessment were conducted by a DEC contractor.

FY01 Actions:

DEC obtained contract services to segregate hazardous waste from hazardous debris. Drums were removed from the site, characterized and staged for removal. Hazardous debris was segregated and staged for removal.

FY 01 Response Fund Expenditures: \$70,193.00

FY 01 Cost Recovery: None

FY02 Actions:

The solid waste and hazardous substances were removed from the site in order to investigate the soil and groundwater.

FY 02 Response Fund Expenditures: \$284,477.00

FY 02 Cost Recovery: None

FY 03 Projected Actions and Expenditure Amounts:

The site investigation for soil and groundwater contamination will be initiated. Site characterization is anticipated to continue through the summer of calendar year 2003.

Estimated FY03 Costs: \$275,000

Project/Site Name: ADOT&PF Peger Road Maintenance Facility

Location: 2301 Peger Road, Fairbanks, AK

Project Manager: Douglas Bauer

Site ID Number: 1991310107201

Tel: (907) 451-2192

Tracking Number: 14800760

Situation:

For over forty years the Peger Road facility has been used as the focal point for operations, maintenance, design, and construction for the interior and northern regions of the State of Alaska. Past practices at the facility have resulted in extensive soil and groundwater contamination at the site, some of which appears to have migrated off-site, potentially impacting neighboring properties.

ADEC conducted a site assessment in 1998, which included the collection of soil and groundwater samples throughout the facility. Petroleum and chlorinated solvent contamination were measured above cleanup levels in soil and groundwater at several locations. Based on this investigation, ADEC determined that two separate groundwater contaminate plumes originate at the facility and are impacting nearby properties. Private residences were contacted to locate private wells. Identified private wells were subsequently sampled for TCE to determine if residents were exposed to the solvent. All sample results indicate that private wells have not been impacted by TCE contaminated groundwater migrating from the facility. ADEC installed additional monitoring wells in 1999, down-gradient and offsite from the facility, to determine the extent of TCE and benzene groundwater contamination.

DEC has implemented a quarterly groundwater sampling program to monitor onsite and offsite contaminant impact to groundwater. The initial site characterization effort (Fall 1999) describing the extent of chlorinated solvent and benzene groundwater and soil contamination at facility did not sufficiently define the extent of plume boundaries. Therefore, additional monitoring wells were installed and supplemental site characterization was completed (Spring 2000). A site characterization report has been submitted for ADEC's review and approval.

FY01 Actions:

ADEC continued to investigate the extent of contamination at the site. Data gaps were filled to better identify groundwater plume boundaries. Off-site private and on-site monitoring wells were monitored. Surrounding property contamination was reviewed and potential contributors to the groundwater contaminant plume identified.

FY01 Response Fund Expenditures: \$37,440.00

FY01 Cost Recovery: None

FY02 Actions:

DEC continued to collect subsurface data to generate an effective remedial strategy to be employed during the FY02 field season. Additional assessment into remedial strategies was completed, as well as off site assessment and a potential receptor search.

FY02 Response Fund Expenditures: \$49,362.00

FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

Monitoring wells were installed on the northwest perimeter of the site to define the lateral and vertical extent of the groundwater plume as it migrates off site. Temporary direct push wells are being installed to define the lateral and vertical extent of the off site plume and to locate permanent monitoring well locations.

FY03 Projected Response Fund Expenditures: \$140,000

Project/Site Name: ADOT Maintenance Station, Soldotna
Location: Soldotna
Project Manager: Don Fritz, Anchorage
Site ID Number: 1993230122905

Tel: (907) 262-5210 X245
Tracking Number: 14966760

Situation:

The former DOTPF Soldotna Maintenance Facility was operated as a maintenance facility for the central Kenai Peninsula between 1954 and 1999. It was used for heavy equipment storage, fueling, maintenance and repair. There was also salted sand, crack sealer, and road paint stored on site. There were also regulated and non-regulated underground storage tanks that contained gasoline, diesel fuel, heating oil and waste oil. In 1999, the facility was re-located and all buildings were removed. The drinking water well was abandoned but monitoring wells still remain on the property.

The investigation of the site identified chloride and petroleum hydrocarbon contamination was in the soil and groundwater. The petroleum contamination was primarily attributed to leakage of the regulated and non-regulated UST's on the site and spills/releases from the dispensers and improper waste handling/disposal activities. There was approximately 4,500 cubic yards of contaminated soil excavated and thermally treated.

There are documented impacts to the Kenai River sediments from the migration of salt. There were also low levels of petroleum contamination encountered in sediment samples but they were similar to samples taken upstream and downstream of the site. The property is proposed for transfer to the City of Soldotna in March 2003. DOTPF is planning to continue a groundwater monitoring program for the next three years, and based on the results, the DEC will determine trends in contaminant concentrations and whether additional cleanup action is required. Three additional monitoring wells were installed on site and the groundwater was sampled quarterly in order to evaluate trend in contaminant levels.

FY01 Actions:

Three additional monitoring wells were installed on site and the groundwater was sampled quarterly in order to evaluate trends in contaminant levels.

FY01 Response Fund Expenditures: \$59,548.00
FY01 Cost Recovery: None

FY02 Actions:

Groundwater and sediment monitoring was conducted to determine trends in contaminant concentrations.

FY02 Response Fund Expenditures: \$10,224.00
FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

Continue groundwater monitoring on a quarterly or semiannual basis.

FY03 projected expenditures: \$45,000

Project/Site Name: ADOT& PF Tudor Road Maintenance Facility

Location: Boniface Parkway and Tudor Road, Anchorage

Project Manager: David Pikul

Site ID Number: 1990210918601

Tel: (907) 269-7551

Tracking Number: 14978960

Situation:

The 20-acre site is used to store and maintain road maintenance vehicles and store materials and chemicals for road maintenance since the early 1970's. Contamination of the property (soil and groundwater) resulted through releases from five former UST's, direct discharge of liquid waste to the ground surface, and facility practices. There are approximately 40 monitoring wells at the site to characterize three main groundwater plumes. Free phase gasoline and its plume at building 4801, gasoline/diesel groundwater contamination at building 5820, and chlorinated solvent contaminated groundwater at building 5750. Four clustered monitoring wells have been installed near building 5750 to determine any vertical concentration gradient. Data indicates that groundwater contaminant concentrations are higher in the upper portion of the aquifer. This information will be used to determine remedial actions to be implemented.

FY01 Actions:

Approximately 60 drums (mostly paint products containing toluene) were removed from the ground during investigation of the "buried drum area". Soils were removed from the excavation and properly disposed of, excavation was characterized and backfilled, release investigation conducted and drums disposed of. A release investigation was conducted to investigate soil and groundwater at the "buried drum area". Site-wide geochemical and contaminant groundwater data has been collected for use in determining remedial options. Water quality data has been collected from the outfall of the stormwater discharge into the neighboring wetlands. This data indicates that water quality standards are being exceeded.

FY01 Response Fund Expenditures: \$215,794.00

FY01 Cost Recovery: None

FY02 Actions:

Installed three down-gradient monitoring wells from building 5820 for the purpose of determining the down-gradient extent and off-site migration potential of the chlorinated solvent plume. Continued with updated sampling plan that outlines activities to measure groundwater elevations or product thickness, groundwater geochemistry, and groundwater contaminant concentrations in all on-site monitoring wells. Collected influent and effluent samples from the storm water detention pond discharging to neighboring wetlands. Collected water samples from the storm drain system culverts to assess water quality for the purpose of identifying potential impacts from contaminant groundwater plumes that may be entering the storm drain system. Evaluated current contaminant data trends identifying natural degradation is occurring.

FY02 Response Fund Expenditures: \$107,651.00

FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

Continued delineation and monitoring of the chlorinated groundwater plume, free product gasoline and associated plume, and diesel groundwater plume. Further identification of the breach into the on-site storm water system by petroleum hydrocarbons discharging to neighboring wetlands. Mitigation of discharge to wetlands and free product recovery. Should data for the chlorinated groundwater plume indicate more aggressive remedial measures, they will be employed.

Estimated FY03 costs: \$350,000

Project/Site Name: Alyeska Pipeline Service Company

Location: Pipeline-wide

Project Manager: Deb Williams

Site ID Number: N/A

Tel: (907) 451-5174

Tracking Number: 14818360

Situation:

Alyeska Pipeline Service Company has numerous sites along the pipeline extending from Pump Station 1 at Prudhoe Bay to the Valdez Marine Terminal. Alyeska conducted environmental site assessments at numerous sites and requested a combination of limited remedial action, surface & groundwater monitoring and use of the Risk Assessment process to address contamination at the sites.

DEC approved of alternative cleanup levels and cleanup actions at numerous Alyeska sites and as a result, has issued no further remedial action planned (NFRAP) determinations for many of Alyeska's contaminated sites on the Contaminated Sites Database. The Department continues to work closely with environmental representatives of Alyeska to effectively prioritize and cleanup sites.

FY01 Actions:

DEC approved of alternative cleanup levels and cleanup actions at multiple Alyeska sites. The risk assessment documents for Happy Valley and Franklin Bluffs camps were reviewed and Alyeska was requested to submit additional work plans for cleanup.

FY01 Response Fund Expenditures: \$16,735.00

FY01 Cost Recovery: \$19,177.00

FY02 Actions:

ADEC reviewed multiple workplans for sampling events involving site characterizations and monitoring events on behalf of Alyeska. Site visits were completed to obtain a better understanding of site conditions for potential NFRAP determinations and monitoring requirements. Several meetings were held to discuss future workload prioritization.

FY02 Response Fund Expenditures: \$11,498.00

FY02 Cost Recovery: \$ 9,864.00

FY03 Projected Actions and Expenditure Amount:

ADEC has received for review numerous workplans for sampling events involving site characterizations and monitoring events. Travel has been conducted to both the Valdez Marine Terminal (VMT) and the Happy Valley and Franklin Bluffs areas to obtain a better understanding of site conditions for potential NFRAP determinations and monitoring requirements. Additional travel will be required to several other sites.

Estimated FY03 costs: \$12,000

Project/Site Name: Amchitka DOE
Location: Amchitka Island (Aleutians)
Project Manager: Jeff Brownlee
Site ID Number: 199225X121101

Tel: (907) 269-3053
Tracking Number: 14907560

Situation:

Amchitka Island is about 1200 miles southwest of Anchorage. The island was used for testing three nuclear devices via underground detonation between 1965 and 1972. The Atomic Energy Commission performed the first test and the Department of Energy (DOE) performed the last two in conjunction with the Department of Defense. Drilling the test holes and related geotechnical borings resulted in creating several large drilling mud disposal pits. The drilling muds are composed mainly of bentonite, but included various contaminants such as diesel fuel, chromium and low level PCBs. The DEC agreed that the preferred alternative for remediation of the mud pits was in-place closure. Several historic spills of the drilling muds have occurred from the mud pits and have impacted drainages in the area.

FY01 Actions:

DEC reviewed and approved a cleanup plan that called for closing eleven (11) drill mud pits, located at six separate sites, in-place. Sand and gravel from borrow pits was mixed with the drill mud to stabilize it and then the pits were covered with a synthetic liner and soil. The soil was then seeded for revegetation. DEC contracted with a geotechnical engineering company to review and provide input on the workplan with a focus on ensuring long-term stability of the mud pits. DEC requested that the DOE perform a human health and ecological risk assessment on PCB contamination in the drainages affected by the spilled drilling muds (PCBs were discovered in the fish in area streams). DEC also conducted an on-site inspection during fieldwork to close the drill mud pits.

FY01 Response Fund Expenditures: \$11,555.00
FY01 Cost Recovery: None

FY02 Actions :

DEC reviewed, with assistance from a term contractor, and approved a risk assessment workplan to address environmental impacts from drilling mud releases and associated contaminants. The risk assessment was conducted during FY02.

FY02 Response Fund Expenditures: \$6,355.00
FY02 Cost Recovery: \$14,556.00

FY03 Projected Actions and Expenditure Amounts:

DEC will review the risk assessment report prepared by DOE and determine whether further cleanup actions are needed. DEC plans to work with DOE and USFW on developing long term monitoring and institutional controls to help ensure wastes remaining at the site do not pose an unacceptable risk to human health or the environment

Estimated FY03 Expenditures: <\$2,500

Project/Site Name: Anchorage International Airport – Wide Risk Management Plan

Location: Anchorage, Alaska

Project Manager: Renee Evans, Anchorage

Site ID Number: 1999210118702

Tel: (907) 269-7530

Tracking Number: 14909660

Situation:

The Department of Environmental Conservation (DEC) was contacted about widespread soil contamination at the Anchorage International Airport. As a world class transportation hub, many construction projects occur in areas that historically experienced releases of hazardous substances. The source of contamination is from underground fuel pipelines and fuel hydrants that serve to re-fuel aircraft, fuel distribution sources, maintenance facilities and operations for aircraft and ground support vehicles and other aviation support services. Soil and groundwater contamination has been detected throughout the terminal/ramp area and at several lease sites throughout the airport property. Several site characterizations have been conducted in order to assess the risk posed by the contamination.

FY01 Actions:

ADEC reviewed and solicited term contractor support to evaluate the risk assessment documents for contaminants of concern at the airport.

FY01 Response Fund Expenditures: \$10,852.00

FY01 Cost Recovery: None

FY02 Actions:

ADEC reviewed and solicited term contractor support to evaluate the risk assessment documents for contaminants of concern at the airport.

FY02 Response Fund Expenditures: \$8,870.00

FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

ADEC anticipates that risk based cleanup levels will be adopted for the airport and that contamination will be cleaned up in accordance with the Risk Zone Assessment.

Estimated FY03 expenses: \$15,000

Project/Site Name: Arndt Gravel Pit

Location: Anchor Point

Project Manager: Paul Horwath

Site ID Number: N/A

Tel: (907) 262-5210, ext. 250

Tracking Number: 14892260

Situation:

Gasoline contaminated soils from fuel releases at the Trailside General Store fuel sales station in Homer, Alaska were transported to this privately owned gravel pit near Anchor Point, Alaska. The soils were to be thermally treated at the gravel pit by Trailside's contractor under an ADEC approved workplan. Trailside failed to pay their soil treatment contractor. The contractor eventually filed bankruptcy, leaving the untreated soil in the gravel pit.

FY01 Actions:

When it became clear that Trailside was not going to complete soil treatment activities in the Arndt gravel pit, and with winter setting in, ADEC hired a contractor to close out the soil treatment operations in the gravel pit. Contaminated soils remaining in the gravel pit were transferred to the Homer ADOT maintenance facility, for safe storage and future treatment.

FY01 Response Fund Expenditures: \$52,293.00

FY01 Cost Recovery: None

FY02 Actions:

No further corrective action is required and no further expenditures anticipated.

Project/Site Name: ARRC Gold Creek Derailment

Location: MP 262

Project Manager: Renee Evans

Site ID Number: 99239935601

Tel: (907) - 269-7530.

Tracking Number: 14910260

Situation:

On December 22, 1999 a fuel train derailed due to snow accumulation on the tracks resulting in the discharge of 120,516 gallons of Jet Fuel (JP 8). Fuel from this derailment migrated to groundwater. Approximately 16,000 gallons of fuel was recovered from the groundwater. The Prevention and Emergency Response Program manage the site cleanup through December 7, 2000. The case was transferred to the Contaminated Sites program for long-term management under the site cleanup rules.

FY01 Actions:

Contractors for the Alaska Railroad managed and operated a soil vapor extraction remediation system through the winter of 00. Additional groundwater monitoring wells were developed along the perimeter of the spill zone. Data was gathered to determine the effectiveness of the SVE system and also for conducting a groundwater model.

FY01 Response Fund Expenditures: \$66,614.

FY01 Cost Recovery: \$333,810.

FY02 Actions:

The ARRC decommissioned the SVE system. They also conducted additional assessment activities to further define the hydrogeology of the site. Groundwater sentinel wells were installed to detect any contaminant migration. The site assessment data will be reviewed and ADEC anticipates issuing a cleanup decision in FY03

FY02 Response Fund Expenditures: \$17,824.00

FY02 Cost Recovery: \$26,154.00

FY03 Projected Actions and Expenditure Amounts:

ADEC will review reports submitted by the ARRC's contractor and issue a decision regarding future cleanup action and/or long term monitoring. PERP will continue to assist the Attorney General's office on the NRDA and legal issues.

Estimated FY03 expenses: \$15,000

Project/Site Name: Coastal Drilling

Location: Mile 0.5 Kenai Spur highway; Lots 4A, 4B, 4C, 4D, & 4E of the Hayward Hill Subdivision No. 3; Section 29, T5N, R10W, S.M.

Project Manager: Don Seagren

Tel: (907) 262-5210, ext. 233

Site ID Number: 1988230918303

Tracking Number: 14932960

Situation:

This is an abandoned industrial site occupying approximately 7.4 acres in Soldotna, Alaska. Commercial and residential areas surround the site. Soldotna Elementary School is located across the Kenai Spur Highway from the site. The Coastal Drilling site was developed in 1957 as a maintenance and support facility for petroleum and gas exploration in Cook Inlet. Disposal of old car engines, drill rig parts, oil tanks, drums, drilling mud, used oil, and miscellaneous scrap metal, rubber, and timber is known to have occurred on site.

Two centrally located pits (one covered and one uncovered) were reportedly used as primary disposal sites. The pits have been the focus of past environmental investigations. The covered pit was reportedly used as a drain field for liquid wastes discharged into a metal grate located near a concrete slab reportedly used for vehicle and equipment wash down. The grate is connected to the pit by a 6-inch diameter steel pipe. Previous environmental investigations have identified petroleum hydrocarbons, chlorinated solvents, metals and PCB's as contaminants of concern remaining in surface soil, subsurface soil and perched groundwater contained within the disposal pits. Low levels of aromatic hydrocarbons were previously identified in groundwater at the site.

In 1998, ADEC coordinated with the owners of the property to conduct groundwater monitoring (semi-annually) for three years to assess current conditions at the site. One of the purposes of the monitoring program was to determine if the contaminants are migrating off site and posing an immediate hazard to human health and the environment. The groundwater investigation included sampling several monitoring wells on site as well as a Class A Public Drinking Water Well, which is located down gradient from the site.

FY01 Actions:

Continued groundwater monitoring program. It included sampling groundwater from four selected onsite monitoring wells; repairing wells; and measuring water elevations on 11 onsite wells.

FY01 Response Fund Expenditures: \$14,795.00

FY01 Cost Recovery: None

FY02 Actions:

The groundwater monitoring program continued through May 2001. It included sampling groundwater from four selected onsite monitoring wells; repairing wells; and measuring water elevations on 11 onsite wells.

FY02 Response Fund Expenditures: \$20,037.44

FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

DEC proposes to evaluate the alternatives to treat the contamination remaining on site. In addition, investigation derived waste generated from past sampling efforts will be disposed. Additional groundwater monitoring should be conducted to verify contamination is not migrating.

Estimated FY03 Expenditures: \$76,000

Project/Site Name: CPF1 Produce Water Spill
Location: CPF1 Facility, Kuparuk, Alaska
Project Manager: Walt Sandel
Site ID Number: 01399910501

Tel: (907) 451-2126
Tracking Number: 14930760

Situation:

External corrosion of a transfer line caused a 92,400 gallon release of produce water (oil and salt-water mixture) onto tundra. The ruptured line occurred in the pipeline culvert where the pipeline leaves the CPF1 gravel pad. The spill covered an area of about 3 acres

FY01 Actions:

The contaminated snow and ice was melted with warm water. The contaminated area was warm water flushed to remove the oil, and to dilute the salt water. The contaminated water was then vacuumed into trucks, and was injected down class II wells for disposal.

FY01 Response Fund Expenditures: \$25,800.00
FY01 Cost Recovery: None

FY02 Actions:

The cleanup is complete, an enforcement action is currently under investigation.

FY01 Response Fund Expenditures: \$224.00
FY01 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

Finalize a settlement agreement with Phillips Alaska Inc. Continue monitoring site for environmental impacts.

Project/Site Name: Deadhorse Hotel
Location: Deadhorse Airport Lease Block 70, Lot 6
Project Manager: Renee Evans
Site ID Number: 1989730902526

Tel: (907) 269-7658
Tracking Number: 14929670

Situation:

The Department of Environmental Conservation (DEC) conducted a Phase II site assessment in 1994 and documented diesel, gasoline, and BTEX contamination. There were also indications that surface water and wetland habitat may be impacted. In 1999, DEC assumed the State lead for cleanup of this site and hired a contractor to excavate contaminated soil and treat it on site in a specially designed biocell. The treatment evaluated various biotreatment products (3 were tested) and it was concluded that using water-soluble fertilizer alone was effective.

FY01 Actions:

The treatment continued through 2001 and it was determined that the upper portion of the biocell achieved target cleanup levels. This site was identified in the British Petroleum Merger agreement between BP and the State where BP would assume the costs to complete cleanup.

FY01 Response Fund Expenditures: \$92,336.00
FY01 Cost Recovery: None

FY02 Actions:

BP has assumed the assessment and cleanup costs associated with this site.

FY02 Response Fund Expenditures: \$0
FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

The project will be completed through the BP Charter agreement. There is no further need for Response Fund expenditures

Estimated FY03 expenditure: \$0

Project/Site Name: Eskimo Creek Seep
Location: King Salmon, Alaska
Project Manager: Jim Frechione
Site ID Number: 1994250122801

Tel: (907) 269-7658
Tracking Number: 14875960

Situation:

The Department of Environmental Conservation (DEC) was contacted in 1994 regarding a petroleum hydrocarbon seep into Eskimo Creek in the vicinity of Eddie's Fireplace Inn. The source(s) of contamination is still unknown but sample analysis indicated a diesel range fuel product. Possible suspect areas included a former heating oil tank buried behind Eddie's Fireplace Inn and possible debris and/or runoff from the King Salmon Airport.

DEC conducted soil and groundwater investigations at Eddie's Fireplace Inn to identify possible source areas of the seep product. The former heating oil tank is suspected as a source and recovery wells were installed to intercept product before it enters the creek. Soil contamination at (and adjacent to) the seep area continue to cause sheen and product release to the creek.

FY 01 Actions:

DEC hired a local contractor responsible for monitoring the recovery wells and collecting product as it accumulated in them. The contractor was also responsible for employing sorbent boom in the creek during times that the product was present.

FY01 Response Fund Expenditures: \$13,584.00
FY01 Cost Recovery: \$ 2,000.00

FY 02 Actions:

DEC installed an interception trench and recovery system. The soil excavated from the trench was transported off site for storage/treatment.

FY02 Response Fund Expenditures: \$168,992.00
FY02 Cost Recovery: \$ 2,200.00

FY03 Projected Actions and Expenditure Amounts:

DEC proposes to excavate the soil and sediment area adjacent to the seep and replace it with clean fill material. The trench will continue to be monitored and any product will be collected and removed from the site. The excavated soil will be transported off site for storage/treatment. Groundwater monitoring will continue to determine the effectiveness of treatment.

Estimated FY03 expenses: \$280,000

Project/Site Name: FAA Statewide

Location: Various

Project Manager: Eileen Olson

Site ID Number: Various

Tel: (907) 269-7527

Tracking Number: 14996860

Situation:

The Federal Aviation Administration (FAA) owns and/or operates properties associated with airports in Alaskan communities and operates navigational aids at remote sites statewide. Many FAA sites are being decommissioned or the acreage is being reduced, as a result of federal policy and technological changes. Surplus land is normally transferred from FAA management to the Bureau of Land Management, which then may transfer the property to other entities that have an interest. Soil and groundwater contamination has been documented at over 50 FAA sites. The releases are primarily associated with petroleum hydrocarbons (diesel and gasoline) and originate from storage tanks, surface spills, floor drains, septic systems, drum storage areas, historic dumps, and extensive fuel distribution systems. There is also contamination associated with metals, solvents, PCB and pesticides.

FY01 Actions:

DEC provided oversight of site investigations and cleanup actions at numerous FAA sites. This included review of workplans, reports and other major submittals for FAA facilities at Bettles, Bethel, Biorka Island, Cape Yakataga, Cordova, Iliamna, Kenai, Lake Minchumina, McGrath, Moses Point, Northway, Shuyak Island, Strawberry Point (on Hinchbrook Island), Tanana, and Woody Island. Sites inspections were conducted at Shuyak Island, Lake Minchumina, Moses Point and Tanana. DEC staff also participated in the Restoration Advisory Board (RAB) meetings in the village of Elim for the FAA Moses Point facility.

FY01 Response Fund Expenditures: \$10,509.00

FY01 Cost Recovery: \$ 6,932.00

FY02 Actions:

DEC provided oversight of site investigations and cleanup actions at numerous FAA sites. This included review of workplans, reports and other major submittals for FAA facilities at Bettles, Biorka Island, Farewell, Iliamna, Kenai, King Salmon, McGrath, Moses Point, Northway, Slana and Tanana. Sites inspections were conducted Biorka Island and Bettles. Staff provided oversight of cleanup actions at FAA sites in Anchorage, Bettles and Biorka Island. Staff provided oversight of site investigations at FAA sites in Anchorage, Bettles, Biorka and Middleton Island. Staff reviewed files for many stations to assist FAA in determining priority and work necessary for future field seasons. This included FAA Stations in Anchorage, Bettles, Big Delta, Biorka Island, Cape Yakataga, Cold Bay, Cordova, Farewell, Fort Yukon, Gustavus, Iliamna, Kenai, King Salmon, Lake Minchumina, Middleton Island, Moses Point, Northway, Slana, Talkeetna, Yakutat, Tanana, and Unalakleet. Staff participated in numerous meetings with FAA staff to resolve general issues and plan for upcoming field seasons. Sites closed were Bettles RCAG and Bettles VORTAC.

FY02 Response Fund Expenditures: \$34,292.00

FY02 Cost Recovery: \$19,804.00

FY03 Projected Actions and Expenditure Amounts:

DEC will continue oversight of the high priority FAA sites. Site investigation and/or interim cleanup actions are scheduled for 2003 at Biorka Island, Bettles, Cape Yakataga, Cold Bay, Fort Yukon, Iliamna, Kenai, King Salmon, Lake Minchumina, Level Island, McGrath, Middleton Island, Moses Point, Nome, Northway, Skwentna, Talkeetna, Tanana, and Unalakleet.

FY03 estimated expenditures: \$45,000

Project/Site Name: F/V Vanguard
Location: Prince William Sound
Project Manager: Harry Young
Spill Number: 01229920701

Tel.: (907) 269-7542
Tracking Number: 14863660

Situation:

On July 26, 2001, the F/V Vanguard, a wooden hulled tender, hit a piece of ice directly on the bow and split the hull. The vessel quickly flooded and sank. The vessel sank North of Glacier Island in Prince William Sound near the Northwest corner of the Island. The vessel sank in an estimated 250 feet of water. Fluids on board at the time of sinking include 2,000 gallons of marine diesel, 500 gallons of gasoline and 60 gallons of lubricating oils. An underwater video camera was used to locate the vessel. The vessel was located in 280 ft of water, nose forward and resting partially on its side. Coast Guard Marine Safety Office (MSO), Valdez conducted over-flights throughout the week to track the discharge location and evaluate recovery operations. A 24-hour boom tending operation took place near the source. On Sunday, July 29 the containment effort appeared to be 60% effective. Sheens were observed in Irish Cove. A shoreline assessment survey was conducted in Irish Cove and no impacts were observed. Alaska Chadux was hired by the owners to respond to the oil discharge. No wildlife impacts were observed.

On August 4, F/V Bering Explorer arrived on site with dive crew and positioned as a dive platform for dive operations. Dive operations to plug fuel vents on the F/V Vanguard were successfully completed during that evening and the early hours on August 5. No further pollution was been observed and protective booming was removed.

FY02 Actions:

FY02 Response Fund Expenditures: \$11,203.00
FY02 Cost Recovery: NONE

FY 03 Projected Actions and Expenditure Amounts: None

Project/Site Name: F/V Windy Bay
Location: Prince William Sound, Olson Rock
Project Manager: Leslie Pearson
Site ID Number: 01229921601

Tel: (907) 269-7543
Tracking Number: 14863760

Situation:

On August 4, 2001 at 11:00 A.M. Central Alaska Response Team (CART) staff responded to a potential diesel spill from the Fishing Vessel (F/V) Windy Bay, which had run aground on Olson Rock and was taking on water. A short time later the vessel re-floated with the incoming tide and sank, discharging an estimated 35,000 gallons of diesel fuel, 100 gallons of lube oil and 300 gallons of hydraulic oil. ADEC staff on site immediately assisted with sensitive area protection and product recovery with spill response equipment which had previously been mobilized for the F/V Vanguard sinking five mile to the east of Olson Rock. Over the month of August, ADEC staff supported the response by providing incident command support, shoreline assessments, beach cleanup, spill response, and waste management oversight. This case was referred to the Department of Law on September 18, 2001 for civil proceedings.

FY 02 Actions: Cost Recovery Packet was forwarded on November 13, 2001 to the Department of Law.

FY02 Response Fund Expenditures: \$ 56,558.54
FY02 Cost Recovery: None

FY 03 Projected Actions and Expenditure Amounts:

Estimated cost is \$ 00.00

Project/Site Name: Gaffney Road Area-Wide Groundwater Investigation

Location: Fairbanks

Project Manager: Larry Johnson, Fairbanks,

Tel: (907) 451-5175

Site ID Number: 9731090550

Tracking Number: 14622260

Situation:

Decades of commercial/industrial use in the area of Gaffney Road, in the City of Fairbanks, has resulted in area-wide groundwater contamination by chlorinated hydrocarbons, primarily tetrachloroethylene (PCE) and its daughter products- trichloroethene and the dichloroethenes. Groundwater investigations from 1997 to 1999 used passive soil gas (PSG) studies, temporary and permanent monitoring wells, and sewer line sampling to delineate two plumes above MCLs originating in the Gaffney Road area and extending downgradient, generally north-northwest. The smaller, eastern plume exceeds 600 feet while the longer, western plume exceeds 3000 feet in length. The distribution of contaminants appear to be associated with the sanitary sewer lines in the area.

The western plume's groundwater contamination migrated towards the Golden Heart Utility (GHU) wells that supply water to city residents. Groundwater monitoring in 2002 and 2001 indicated a stable plume that does not reach the wells. According to results of a DEC well search, there are a small number of private wells in the area, but none are used for drinking water. Evidence to date indicates possible natural degradation of PCE and its breakdown compounds occurring in the groundwater since concentrations decrease from the Gaffney Road area toward the GHU wells. The highest concentrations were found in the western plume near Gaffney Road.

FY01 Actions:

Another sampling event from 27 monitoring wells was completed during October 2000. The results were consistent with the April 2000 event with three exceptions. One well had significant increases in PCE concentrations while another one had significant reductions in concentrations. There also was one shallow sentinel well that detected PCE for the first time but the level was below laboratory detection limits. Additional chemical parameters indicated a possibility of natural attenuation. In general, the 2000 sample results indicate that the plumes are stable but not necessarily that natural attenuation is occurring.

FY01 Response Fund Expenditures: \$65,872.00

FY01 Cost Recovery: None

FY02 Actions:

Twenty two groundwater monitoring wells were sampled in October 2001 for PCE and its breakdown products. Results were generally consistent with the previous results. In order to assess the possibility of indoor air contamination, limited air sampling was performed within two businesses located above the highest concentrations of the western plume. One building had non-detect or below target levels while the second had PCE levels well below the proposed EPA commercial exposure limits.

FY02 Response Fund Expenditures: \$37,523.00

FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

Long term monitoring of groundwater wells for PCE and its breakdown products. Natural attenuation parameters will be taken again from all designated monitoring wells to determine if the conditions for natural attenuation are consistent with the previous results.

FY03 Estimated cost is: \$45,000

Project/Site Name: G & I Surfscote Pad Spill

Location: Prudhoe Bay EOA, Injection Fluid Line located between the Grinding Facility
And the Injection Well

Project Manager: Walt Sandel

Tel: (907) 451-2126

Site ID Number: 01399906501

Tracking Number: 14930660

Situation:

An injection fluid line eroded, resulting in the release of 3225 to 5880 gallons of Class 2 drilling mud. A moderate to light layer of material covered an estimated 12.5 acres of snow covered ground.

FY01 Actions:

The contaminated snow was removed, and was reinjected into the grinding circuit, and injected down a class II well.

FY01 Response Fund Expenditures: \$13,063.00

FY01 Cost Recovery: None

FY02 Actions:

Cleanup is complete, cost recovery has been received, and no further actions will be taken on this event. Final closure occurred on this release in March 2002.

FY02 Response Fund Expenditures: \$0.00

FY02 Cost Recovery: \$17,493.00

Project/Site Name: Holder Property
Location: Fairbanks/North Pole
Project Manager: Douglas Bauer
Site ID Number: 1995310909101

Tel: (9097) 451-2192
Tracking Number: 14619460

Situation:

A 1995 site investigation on the neighboring McCall property indicated that the Holder property could contain two trichlorethylene (TCE) source areas. This was based on a limited number of soil gas and temporary groundwater probes conducted on the McCall and Holder properties, and an interpretation of groundwater data. The current landowner was unwilling or unable to conduct a site investigation. DEC assumed the lead role to investigate the site.

In 1995/1996, an area wide groundwater investigation (including sampling of residential drinking water wells in the Six Mile Village Subdivision about one mile to the northwest of the Holder property) confirmed TCE (and minor concentrations of 1,1,1 - trichloroethane (TCA)) in the groundwater.

A 1998 site investigation delineated the TCE source areas and proposed clean up plans. Sufficient data was collected to conceptually evaluate possible clean up alternatives and their relative costs. Air injection/soil vapor extraction (AI/SVE) was identified as the preferred treatment tool based on a successful treatability and engineering design plan.

In 2000, soil samples from the source areas were collected to aid in the treatability evaluation and for design of a treatment system. Prior to their collection, a ground penetrating radar survey was conducted to locate possible buried drums or other source material. A plan for the treatability evaluation was proposed using state-of-the-practice tracer techniques.

FY01 Actions:

In 2001, the groundwater data was evaluated to determine the interaction between the groundwater plumes generated on the Holder property and the plumes generated down-gradient on the Walsky property. Additional groundwater monitoring wells were installed on the Six Mile Truck Shop property to aid in the determination. The treatability evaluation was not initiated.

FY01 Response Fund Expenditures: \$35,888.00
FY01 Cost Recovery: None

FY02 Actions:

The long-term groundwater monitoring and residential treatment system maintenance programs were continued. Additional permanent groundwater monitoring wells were installed.

FY02 Response Fund Expenditures: \$5,870.00
FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

Install additional permanent groundwater monitoring wells to gain a better understanding of the regional plume dynamics at the lateral boundaries of the plume. These new wells are cluster wells, separate wells installed at the same physical location but screened at different depths. The location and screen depth of the new wells were determined from a series of temporary wells that were located along transects running perpendicular to the regional plume and at various depths.

Continued long-term groundwater monitoring and residential treatment system maintenance programs.

Estimated expenditures: \$31,250.00

Project/Site Name: Janet Phillips (Janet Lawrence) HHO Spill

Location: Naknek, Alaska

Project Manager: Jace Johnson

Site ID Number: 01269902501

Tel: (907) 269-7557

Tracking Number: 14897360

Situation:

On January 25, 2001 ADEC received a spill notification from Mr. John Savo (Env. Support with Bristol Bay Native Corp., BBNC). He informed us that he received a call from a Ms. Janet Phillips (Janet Lawrence?) in which she informed him that she had a heating oil spill at her residence located in D Street in Naknek, Alaska. According to Mr. Savo, Janet was a single mother, unemployed and supporting a number of children. It was our impression that a 300-gallon oil spill posed a threat to the health and well being of Ms. Phillips and the children living in her house. During conversations with Ms. Phillips, it was our belief that she did not have the funds to excavate the soils. During the same conversation she wanted to refer all future correspondence to the BBNC. The ADEC decided to utilize the Local Response Agreement with the Bristol Bay Borough to respond to this spill. The excavated soils were stored in an area that was being used to store other contaminated soils and was scheduled for remediation in the spring by Cascade Environmental. It was our understanding that storing the soils in her yard would pose a threat to the children and the only other justifiable alternative was to have it thermally treated along with the existing soils stockpiled in King Salmon.

FY02 Actions:

A Local Response Agreement (LRA) was activated with the Bristol Bay Borough (BBB), in which they would conduct the initial response. The cost of the initial response by BBB was \$ 8,301.93 which came out of the PERP annual operating budget and is not represented in the FY02 Response Fund Expenditures for this project. The soil excavation and remediation was contracted with Platt Environmental, King Salmon, AK. Due to the RP's hardships, the case was referred to DOL for collection on 11/11/2001.

FY02 Response Fund Expenditures: \$ 17,312.00

FY02 Cost Recovery: None

FY 03 Projected Actions and Expenditure Amounts:

None

Project/Site Name: Kaltag School Oil Seep

Location: Kaltag, Alaska

Project Manager: David J. Pikul

Site ID Number: 1986310123001

Tel: (907) 269-7551

Tracking Number: 14937660

Situation:

The contamination problem at the Kaltag School is predominately Diesel Range Organic (DRO) contamination from years of overfilling and leaking from aboveground storage tanks owned by YKSD and Alaska Village Electric Company (AVEC). Contaminant migration has occurred in the form of groundwater seepage adjacent to the school and downgradient at the site boundary. Interim remedial actions have been employed through installation of seepage collection trenches in combination with water scrubber units to treat seepage water before discharge. Cleanup of the site can not be completed until AVEC addresses upgrade of their tanks, relocation of the power generation facility, and investigation/cleanup of associated contamination. Site work to date has been performed under the States MOA as a state lead project. ADEC will continue to maintain and operate the seepage collection systems under the MOA until AVEC/Denali Commission efforts can be employed.

ADEC has completed some site characterization, identified sources of fuel contamination, installed and operate seepage control systems, and constructed and landfarmed a biocell for treatment of excavated hydrocarbon-contaminated soil.

FY01 Actions:

ADEC continued operation and maintenance of the interceptor trench/scrubber filtration systems in the vicinity of the school; and continued operation and maintenance of the biopile soil remediation cell. Groundwater monitoring was continued to assess the effectiveness of the interceptor trench and interim removal actions.

FY01 Response Fund Expenditures: \$20,928.00

FY01 Cost Recovery: None

FY02 Actions:

ADEC continued operation and maintenance of the interceptor trench/scrubber filtration systems in the vicinity of the school; and continued operation and maintenance of the biopile soil remediation cell. Groundwater monitoring was continued to assess the effectiveness of the interceptor trench and interim removal actions. ADEC coordinated with AVEC and TAPL to move site under Denali Commission work. ADEC attended community meetings to notify the village as to the status of the site work.

FY02 Response Fund Expenditures: \$20,008.62

FY02 Cost Recovery: None

FY03 Projected Actions and Expenditure Amounts:

Planned activities for 2003 include continued operation and maintenance of interceptor trench/scrubber filtration systems and the biopile soil remediation cell. ADEC will continue working with AVEC and Denali Commission staff to move towards site cleanup and meet with the community to discuss progress.

Estimated FY03 response fund expenditures: \$40,000

Project/Site Name: Kenny Lake Subdivision

Location: MP 8.9 Edgerton Highway, Plat 8412, Lot 29

Project Manager: John Brown

Site ID Number: 00229909101

Tel: 269-7688

Tracking Number: 14803660

Situation:

Department personnel received notification from Mr. Rick Galloway of Kenny Lake that an abandoned residence in Kenny Lake had approximately 30 drums of used motor oil and 4 of the drums showed obvious leaking and soil contamination.

During an initial site visit on April 3, 00 ADEC staff confirmed that there were 30 drums of what appeared to be used motor oil along with an additional 15 used empty drums strewn about the property along with numerous batteries, abandoned vehicles, and engine motors. ADEC staff with the assistance of Mr. Galloway cleaned up the obvious oil spills to surface water from 5 separate drums.

During the ADEC investigation it was determined that the owner of the property had died several years prior to ADEC receiving the complaint and that the property was abandoned.

FY01 Actions:

Alaska Pollution Control of Anchorage was contracted to test the contents of the drums, remove the oil, drums, batteries, and incinerate approximately 20 yards of contaminated soil which was removed during the cleanup.

FY01 Response Fund Expenditures: \$11,986.00

FY 01 Cost Recovery: NONE

FY 02 Projected Actions and Expenditure Amounts:

No Further Action Needed
