The Honorable Mike Miller
President of the Senate
Alaska State Legislature
State Capitol, Room 107
Juneau, Alaska 99801-1182

Dear President Miller:

I am pleased to enclose the department's report, *Use of Prototype Designs in Public School Construction Projects*, in response to the request set forth in Legislative Resolve No. 55.

If there are any questions, you may contact the department's facilities manager, Michael Morgan, at 465-1858.

Sincerely,

Shirley J. Holloway, Ph.D.
Commissioner

A Report to the Legislature

Legislative Resolve No. 55

Use of Prototype Designs in Public

School Construction Projects

April 1, 1998

Introduction

By concurrent resolution, the Alaska Legislature passed Legislative Resolve No. 55, relating to the use of prototype design in public school construction projects and requested that the Governor direct the Department of Education to undertake four primary tasks:

1. Develop prototype designs;
2. Identify components within prototype building designs that can be standardized and incorporated in school designs where prototypes may not be appropriate,
3. Consult with the Bond Reimbursement and Grant Review committee, formed under AS 14.11.014, to develop incentives for districts to use prototype school designs, and
4. Report to the legislature by April 1, 1998, suggested statutory changes necessary to implement incentives.

The following addresses the reporting requirements of Legislative Resolve Number 55.

Background

On February 19 and 20, 1998, the Bond Reimbursement and Grant Review Committee (BRGRC) met in Juneau. The primary agenda item addressed at this meeting was the subject of prototypes. The committee's discussions covered the full range of topics regarding prototypes, including: use of prototypes; prototypical components and their use; and, incentives to promote use of prototypes.

The committee also discussed the potential for direct benefits that may be realized by districts using prototypes. These potential benefits include:

- Shorter completion schedule since design is mostly complete,
- Lower startup and break-in costs to the district (an important savings since these costs are often funded from the operating budget,

- Lower life cycle costs, including the on-going costs for operations, maintenance and repair,
- Lower costs for maintenance staff training, parts stocks and repair times when standard components are used,
- Lower design fees resulting in lower project costs for both the district and the state, for example: in the case of a \$10 million dollar new school construction project, typical design fees would run from 8% to 10%. A proven prototypical design, with few or no changes, could expect a design fee of approximately 6%.

This would result in potential savings as shown below:

Construction	\$10,000,000	\$10,000,000
Design @ 10%	\$1,000,000	
Design @ 6%		\$600,000
Total	\$11,000,000	\$10,600,000
District Share @ 30%	\$3,300,000	\$3,180,000
District Savings	<u>\$120,000</u>	
State Savings	<u>\$280,000</u>	

This illustrates the potential magnitude of immediate, direct savings based on design fee reductions to districts using prototypical designs. However, these savings are only realized after a prototypical design is developed and proven. The initial cost of developing a prototypical design may exceed the usual 8% to 10% range.

Requirements for Effective Use of Prototypes

The BRGRC found that to be effective, any program using or promoting the use of prototypes would need to do the following:

- Educate districts about the benefits of utilizing prototypical designs
- Educate community members and teachers about the benefits of using prototypical designs

- Use a prototypical design appropriate for the geographic region and site conditions
- Allow sufficient flexibility to meet the needs of a range of population sizes
- Integrate peer reviews and constructability reviews in the design process
- Mandate value engineering to assure low life cycle costs
- Use post-occupancy reviews as feedback for prototype improvement
- Control revisions to the design
- Collect actual costs for site, land, design, construction, equipment and administration of school construction and major maintenance projects

Limitations on the Use of Prototypes

The BRGRC also found that there were situations where the application of prototypical designs would probably not be successful or which would require several alternate design options. These constraints on the successful application of prototypes included:

- The project constrained to a site which would not support the prototypical design
- Inability of the design to adapt to different educational programs
- Inability to vary school size for different student population
- Varying requirements due to geographical differences: wind loads, seismic zones, snow loads/snow drifting, soil conditions, climate
- Access to the support required for on-going maintenance of technologically complex systems
- Existing and required infrastructure not met or addressed by the design
- Need to adapt to and keep current with codes and technologies
- Material requirements limited by transportation constraints

Reasons for Using Prototypes and Their Relationship to Incentives

Prototypes are most effectively used to achieve long-term economic savings and to meet a rapid growth in population. Savings commonly come from several areas, including:

Short-term advantages

- lower costs associated with design fee savings, *after* the first prototype;
- lower startup costs, *after* the first prototype;
- fewer costs associated with initial building break-in, *after* the first prototype;
- quicker completion of school construction through shortening of the project development process, *after* the first prototype;

Long-term advantages to districts

- lower operation and maintenance costs if standardized systems are used district-wide;
- lower life-cycle costs after the design is refined and proven.

While various short-term advantages accrue to districts from the use of prototypical designs, the only short-term advantage, which may accrue to the state, is a saving in design fees. In the long-term, the state will also benefit from lower life-cycle cost, including a longer time between building and component replacement.

One of the first criteria for the application of an incentive system is to decide which of the cost savings must occur, and to what degree they must occur, before a district should receive direct monetary rewards for having used a prototype design. Also, it should be determined that there was actually a saving which accrued to the project, not merely a positive variance which was the result of initial over-budgeting. Another consideration to review before statutory changes are contemplated is whether any portion of the state share of a saving should be shared with the local district.

If the state saving is to be shared, then a decision regarding how much of the state share of the savings should be given to districts must be made. A decision basis regarding the validity of savings claims must be formulated. The decision basis will require criteria for evaluation of claimed savings. This on-going evaluation of costs will require districts to accurately report costs on a "total project" basis, as opposed to only accounting for the amount funded by an individual state grant or bond allocation on an "as funded" basis.

All of these factors should consider that there are initial costs for development of a prototypical design program which will delay the realization of any savings, and which may actually incur costs over what might be experienced on an individual school design. Savings would not be realized until the second or third implementation of the design, and then only if changes were minimal.

Incentives and the Requirement for Statutory Changes

The result of the BRGRC discussions of development of incentives for use of prototypical school designs produced the following suggestions:

Incentive #1: Reduction to required participating share - For districts using prototypes, reduce the participating share requirement.

To implement this would require a change to AS 14.11.008. Changes should include factors to be met before a reduction in participating share is made and the sliding scale for the reduction. Consideration should also be given to disincentives, which might be applied if a prototype is used and no savings are achieved. The primary statutory changes require definition of the factors to be considered before they can be drafted. A secondary change needed is an addition to AS 14.11.020. This could be phrased: "(e) if a municipality that is a school district, a school district or a regional educational attendance area accepts a grant or debt reimbursement from the state for a school construction or major maintenance project, the recipient shall report costs for the total project."

Incentive #2: Change to application scoring criteria - Provide scoring criteria changes that would benefit projects which use prototypes.

To implement this would require an addition to AS 14.11.013(b).

The addition would add a new section AS 14.11.013(b)(6) "whether the district used a prototypical design or prototypical design components which resulted in long or short-term cost savings."

The Bond Review and Grant Reimbursement Committee could craft actual application scoring criteria.

Incentive #3: Share savings with district - Provide for sharing the savings with the state by allowing an increase to the allowance for the equipment budget for the project.

Statutory change not required. This incentive can be implemented by regulation.

Incentive #4: Districts retain 100% of savings - Allow districts to keep all of the savings for use in funding additional facility maintenance, facility enhancements or additional technology.

Statutory change not required. Currently under the control of the legislature through the budget and reappropriation process

Incentive #5: Direct savings to other district facilities projects - Direct savings toward other district facility projects; either the entire savings or a portion of the savings.

Statutory change not required. Currently under the control of the legislature through the budget and reappropriation process

Incentive #6: Allow additional space as a variance to space guidelines - Allow additional space by providing for a variance to the space guidelines for schools using prototypes.

Statutory change not required. This incentive can be implemented by regulation.

Incentive #7: Provide block funding - Offer yearly block funding and a program to guarantee funding loans or bonds, to be paid back from the block funding allocation. This option would include a minimum mandated expenditure for maintenance and, renovation and renewal.

Statutory change required.

STATE OF ALASKA

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

OFFICE OF THE COMMISSIONER

TONY KNOWLES, GOVERNOR

PHONE: (907) 465-3900

May 4, 1998

The Honorable Eldon Mulder
Alaska State Legislature
State Capitol, Room 501
Juneau, AK 99801-1182

Dear Representative Mulder:

The Deferred Maintenance Task Force identified Computer Maintenance Management Systems (CMMS) as an effective and integral component of a preventative maintenance program. The Task Force publication Building Alaska for the 21st Century (January 10, 1998) recommended state agencies be required to put in place a Preventative Maintenance Program. It is estimated the initial cost of installing additional Computerized Maintenance Management Systems in department maintained facilities to be \$4,800,000. This funding level will provide a computerized maintenance system for our highest priority buildings. The Department maintains numerous other buildings such as warehouses, storage sheds, etc. that will be managed with a card file management system.

The \$4,800,000 figure is based on an estimated 480 buildings at \$10,000 per building. The actual number of buildings warranting a CMMS will not become known until a need evaluation is performed. The \$10,000 per building is an estimate based on the enclosed preliminary single building cost. The actual cost per structure will be determined by variables, which are uncertain at this time. The Department will establish a program of installing the CMMS that will take advantage of cost efficiencies available such as consolidation of travel and interagency cooperation.

Our public buildings have suffered from insufficient maintenance for too long. With your actions, we can provide a tool that will assist our maintenance managers in providing a service more cost effectively.

Sincerely,

for Joseph L. Perkins, P.E.
Commissioner

Enclosure

MEMORANDUM

State of Alaska
Department of Transportation and Public Facilities
Facility Services

To: Rod Wilson, Architect
Headquarters, DOT&PF

Date: 3/25/98

From: Steven Flodin P.E. (Facilities Chief) Phone No.: 269-0808
James Byers, (Bldg. Maintenance Superintendent)
Central Region, DOT&PF Subject: CMMS Cost Estimates

The estimated costs for a maintenance management system has been broken down into several categories depending on the approach we utilize in performing the work.

HARDWARE & SOFTWARE

1. SINGLE SITE

Maximo Pro Advantage software (single site, single user)	\$3,500
Maximo Pro Advantage software (up to five sites)	\$4,600
Computers (depends on number of sites, etc)	\$3,000 to \$5,000
Single site set-up (Labor)	\$1,600

2. CENTRAL SITE

Maximo Enterprise (central server system)	\$61,250
Add for a DDC system interface	\$18,750
Hardware (Computer system)	\$19,000
System Set-up (Labor)	\$14,500

CONTRACT SERVICES FOR A FACILITY (Assume 150 tags per facility)

1. OUT OF TOWN

150 tags @ \$3 per tag	\$ 450
Tagging Labor @ \$100/hr for 5 days	\$4,000
Input data into computer @ \$100/hr for 5 days	\$4,000
Travel & per diem 5 days @ \$100 plus \$600 travel	\$1,100
Training (If required) 2 days @ \$100/hr	\$1,600
Software Maintenance (If wanted)	\$ 700
DOT&PF Management	<u>\$ 500</u>
TOTAL =	\$12,350

2. IN TOWN

Same as above with exception of travel and per diem TOTAL = \$11,250

IN HOUSE (M&O) SERVICES FOR A FACILITY (NOTE labor is general funded)

1. OUT OF TOWN (BUSH)

150 tags @ \$3 per tag	\$ 450	
Tagging Labor @ \$33/hr for 45 hours		\$1,485
Binders, Film, etc.		\$ 200
Input data into computer @ \$50/hr for 5 days		\$2,000
Travel & per diem 6 days @ \$100 plus \$1,600 travel		\$2,200
Training (If required) 2 days @ \$100/hr		\$1,600
Software Maintenance (If wanted)		\$ 700
DOT&PF Management (M&O)		<u>\$ 720</u>
TOTAL =		\$9,355

3. SATELLITE FACILITIES (Palmer, Wasilla, Kenai/Soldotna)

150 tags @ \$3 per tag	\$ 450	
Tagging Labor @ \$33/hr for 45 hours		\$1,485
Binders, Film, etc.		\$ 200
Input data into computer @ \$50/hr for 5 days		\$2,000
Travel & per diem 6 days @ \$100 plus \$700 travel		\$1,300
Training (If required) 2 days @ \$100/hr		\$1,600
Software Maintenance (If wanted)		\$ 700
DOT&PF Management (M&O)		<u>\$ 360</u>
TOTAL =		\$8,095

4. ANCHORAGE BOWL FACILITIES

150 tags @ \$3 per tag	\$ 450	
Tagging Labor @ \$33/hr for 45 hours		\$1,485
Binders, Film, etc.		\$ 200
Input data into computer @ \$50/hr for 5 days		\$2,000
Training (If required) 2 days @ \$100/hr		\$1,600
Software Maintenance (If wanted)		\$ 700
DOT&PF Management (M&O)		<u>\$ 250</u>
TOTAL =		\$6,685

COMPARISON PRICING

The following is the DMVA quote to AVTEC to tag an 8,000 sq ft. building in Seward.

7.5 hrs x 3 days x 2 men	= 45 hours	
Travel to and from	= 15 hours	
TOTAL	= 60 hours x \$33/hr	= \$1,980
Per diem		= \$ 200
Paper/binders/film processing		= \$ 120
Vehicle and Mileage		= \$ 100
Administrative Overhead		<u>= \$ 300</u>
TOTAL		= \$2,700

Please note this does not include computer input, hardware, software, training, and based upon the per diem, it appears that the personnel are staying and eating at the school. They are also receiving assistance from the AVTEC personnel to access equipment and records.

The following is the price from Johnson Controls to install a Maintenance Management system in 6 Pioneer homes located in Juneau, Sitka, Ketchikan, Fairbanks, Anchorage, and Palmer. The project included up to a maximum of 1,000 tags, a work station with software at each location, inputting , travel and per diem, and a year of support services. Total cost for all six locations was \$86,800 or \$14,466 per site.

STATE DEFERRED MAINTENANCE - A CRITICAL NEED
MARCH 1998

FACILITIES MANAGEMENT DIVISION

P.O. Box 5-549, Fort Richardson, AK 99505

Telephone (907) 428-6771

Fax (907) 428-6787

STATE BUDGET/REVENUE

The Alaska Army National Guard leases surplus space and markets our computerized maintenance management services to other agencies to generate additional revenue for maintenance funding.

FACILITIES MANAGEMENT DIVISION -

Deferred Maintenance Funding History

Although the two appropriations have been separate over the years, the two have been added together for the purposes of this chart and to show comparison with the SLA 98 request.

STATE DEFERRED MAINTENANCE FUNDING COMPARISON

**CIP SFY98, DEPARTMENTAL COMPARISON OF DEFERRED
MAINTENANCE/SCHEDULED RENEWAL & REPLACEMENT FUNDING**

1997 PLUS-UP ACCOMPLISHMENTS

- ★ Various Camp Carroll Repairs/Upgrades (asphalt, windows, furnaces, etc..)
- ★ USPFO Roof Repair
- ★ Anchorage Flight Operations - Installed Snowjacks
- ★ CSMS - Ventilation System
- ★ Alcantra - Install Snowjacks
- ★ Alcantra - Perimeter Lights
- ★ AASF Hangar Door PM
- ★ Bethel Operations - Replace Waterline
- ★ Juneau Hangar - Hangar Door Repair
- ★ Nome Hangar - Hangar Door Repair
- ★ Bethel Operations - Thermosiphon Pile Repair
- ★ Bethel Hangar - Insulate Bottom Skirt
- ★ Bethel Hangar - Tank Safety Requirements
- ★ Bryant Army Airfield Road Repair
- ★ Anchorage OPS Construct Lean-To
- ★ Kenai Armory Replace Windows, Paint Exterior

- ★Selawik Armory New Construction
- ★Camp Carroll Bldg 820 Attic Ventilation & Insulation
- ★Camp Carroll Bldg 035 Renovate Interior
- ★Camp Denali Upgrade Road
- ★Bethel Hangar Door
- ★Bryant Airfield Bldg 430 Crane Replacement
- ★Alakanuk Armory Foundation Replacement
- ★Kenai Armory Mechanical Room Piping Upgrade
- ★Gambell Armory Upgrade Ceiling
- ★Savoonga Armory Upgrade Ceiling
- ★Kodiak Armory Paint Exterior

Total Amount - \$964,104

1997 PLUS-UP ACCOMPLISHMENTS

- ★ Bryant Army Airfield Hangar #1 Interior Renovation
- ★ Bryant Hangar #1 Roof Repair
- ★ Bryant Hangar #1 Electrical Upgrade
- ★ Bryant Hangar #1 Fire Suppression Upgrade
- ★ Bryant Hangar #1 Motorized Hangar Doors
- ★ Bryant Hangar #2 Insulation & Siding Upgrade

- ★ Bryant Airfield Hazmat Water Recycler
- ★ Bryant Airfield Energy Parts Purchases
- ★ Bryant Airfield Moisture Test, Bldg 430
- ★ Bryant Airfield Runway Overrun Paving

Total Amount - \$2,066,299

- ★ Bryant Hangar #2 Lighting & Upgrade
- ★ Bryant Hangar #2 Fire Suppression Upgrade
- ★ Bryant Hangar #2 Motorized Hangar Doors
- ★ Bryant Airfield Runway Pavement Overlay & Re-Striping
- ★ Bryant Airfield Taxiway/Apron Repairs
- ★ Bryant Airfield Re-Roof & Moisture, Bldg 430
- ★ Bryant Airfield Metric Map
- ★ Bryant Airfield Upgrade Office Lights, Bldg 430
- ★ Bryant Airfield Rehab Office Space, Bldg 430
- ★ Bryant Airfield COE /Site Survey Visit

NOTE: These Bryant Army Airfield accomplishments were funded with the FY96 RPOM Plus-up, but were completed in FY97.

RPOM AND PLUS-UP FUNDING

If RPOM plus-up money is not received in Federal Fiscal Year 1999, the impact will be shown through the closure of Alaskan armories and the lay-off of personnel. FMD will receive approximately the same amount of RPOM for 2 years in a row; however, we will have added more square footage and our buildings will be another year older, so the impact will be more financially detrimental than is reflected. And, without a FFY99 RPOM Plus-up, this will mean a 50% funding cut for maintenance and repair.

NOTE: \$2 Million from FFY '96 plus-up includes initial funding for Bryant Army Airfield.

FEDERAL LONG-RANGE CONSTRUCTION PLAN

Currently Funded Location/Project	Cost	Status
FY 95 Bethel Army Aviation Operating Facility	\$10.98 M	Const.-Spring '98
FY 97 Fairbanks Armory Expansion	\$ 4.95 M	Const. - Spring '98

INTRODUCTION

For Alaskans and visitors alike, Alaska's state parks are the roadside gateways to outdoor recreation. Park facilities make possible the family vacation, the weekend camping and fishing trip, and the healthy walk after work. And for many local communities, park visitors are the engine of the local economy.

Park visitors expect that park facilities will match Alaska's grand beauty. As a result, they place extraordinary demands on a road accessible park system that sees three times the visitation of Alaska's National Parks. To provide this outdoor recreation experience, Alaska State Parks manages 119 park units where you will find 2,540 campsites, 38 boat launch ramps, 37 scenic overlooks, 106 trailheads, 9 visitor information centers, and 62 public use cabins. And in all these facilities you will find outhouses, most along a highway or road. But to keep Alaskans happy and visitors returning, the facilities must be maintained. Outhouses must be pumped and garbage must be collected.

Alaska has the largest state park system in America and ranks 35th in visitation in spite of its small population. Only one state has a smaller staff. The state parks maintenance staff numbers only 7. And while Alaska State Parks staff are premier scavengers well versed in the time-old Alaskan tradition of making repairs with little more than duct tape and baling wire, a decade's worth of declining maintenance funding has so deteriorated the system that duct tape alone no longer works. In a system where water systems and outhouses are sometimes 30 years old, the maintenance staff only has resources to put bandages and tourniquets on the most critical patients. They desperately need reinforcements and materials.

Alaskans are supportive of fixing our state park system. A recent statewide poll of 600 Alaskans found that 65% would support a statewide bond issue for parks and outdoor recreation programs; 77% wanted that money invested in maintaining existing park facilities.

This summary is provided to those concerned about the health of the state park system. Each park unit is represented in detail. Roads need to be repaired and upgraded to meet safety standards, camping sites need to be brushed and leveled so they are ADA accessible and many need to be enlarged to accommodate today's modern recreational vehicles. Water systems must be brought up to sanitary standards, old and failing outhouses must be rebuilt and made wheel chair accessible, picnic tables and firepits are broken and damaged and need replacing, boat launch ramps are failing, and public use cabins need new roofs and porches.

This backlog of needs cannot be met in a year or two. It is going to take a concerted multi-year effort to rebuild Alaska's state parks. But if we are to have a state park system we can be proud of, this investment is needed and necessary. For Alaskans' continued enjoyment of road accessible outdoor recreation and for the economic benefits that visitors bring to local communities, we can no longer ignore the deplorable condition of our state parks.

Jim Stratton, Director
January 1998
