SCOMM 30

CONFERENCE ON ALASKA'S FUTURE FRONTIERS 1979

Conference Chairmen: Sen. George Hohman, Rep. Russ Meekins

This conference, sponsored by Legislative Council, was held on December 6,7,8,1979, at the Sheraton Anchorage Hotel. The program states that it "...is a continuation of a process begun ten years ago with the convening of the Legialtive Council/Brookings Institution Conference on the Future of Alaska."

The files consist mainly of transcripts of the meetings, correspondence and miscellaneous materials used before and after the conference.

Total volume: 1 cubic foot; 24 items

ITEMS

Item	Contents and Description of Materials in Folders	
1	Information folder	
2	Public papers submitted to Future Frontiers 12/79	
	Proceedings of Conference (19 vols. in all)	
	Alpha Group 3	v.1 (12/6) - 116p.

Verda Marie Jones	Admission to Bar/limited entry
Jorgen W. Bogdanoff	Fisheries limited entry

INDEPENDENCE--AN ALTERNATIVE FUTURE FOR ALASKA

by Marilyn Dudley Rowley

27 November 79

BACKGROUND INFORMATION

Independence--An Alternative Future for Alaska was written by Marilyn Dudley Rowley, co-author of the upcoming book, Alaska--Energy Lands: The Inside Story.

Rowley has spent some three years researching modern Alaska--its people, resources, and position in the world. Her background as feature editor of an Army magazine published by the 172d Infantry Brigade, ad agency work in Anchorage, and news director of KRXA Radio in Seward have contributed to the research which went into Alaska-- Energy Lands.

The paper she submits here is the start of her second book which will be about Alaskan individualism and the Independence Movement in The Great Land.

The author is currently working on a graduate degree at the University of Alaska at Fairbanks and recently was elected to the secretary's position of the Political Action Arm of Alaskans for Independence at the first Alaska-wide convention of that organization.

In addition to her graduate work, she continues to write on Alaskan issues and does media consulting work for friends.

A former South Carolinian, she came to Alaska in the early seventies with the U.S. Army where she became the first woman to successfully complete mountain combat training at Eklutna Glacier.

She holds a B.A. degree in English from Winthrop College, Rock Hill, South Carolina. She has done graduate work at the University of Alaska at Anchorage and Washington State University. She is legislative chairman for the Fairbanks Business and Professional Women's Club and holds an award from the Mathematical Association of America. She is 26 and married to Eugene Arthur Rowley of Fairbanks.

The author wishes to acknowledge her co-authors of Alaska--Energy Lands since some of the material in this paper was taken from that book. Her co-authors are P.M. Ivey and Helen Bailey, both of Fairbanks. Also, the author would like to acknowledge the efforts of Barry Jackson of Fairbanks who made numerous suggestions and helped edit the paper.

INDEPENDENCE--AN ALTERNATIVE FUTURE FOR ALASKA

by Marilyn Dudley Rowley

In Alaska, for the past five years, "Independence" has been synonymous with the name of Joe Vogler of Fairbanks. This identification can be attributed to the Alaskan press, especially the electronic media, who in their haste to get a three-second actuality on the air, latch on to the short, spicy comments of Mr. Vogler. Most Alaskans do not hear the complete report. Few know that Joe Vogler is an attorney. Little do they know that this man has explored the legal avenues of Alaskan Independence in a sane, rational manner.

Yet, the media caricature of Vogler is all the Alaska public has to remind it of an historic notion--the notion of a Republic of Alaska.

Historical Background

The spirit of political Independence in Alaska is a phenomenon with a heritage nearly as old as the American Revolution. In 1790, the young United States still had no specie. So, Boston merchants and shippers turned to the Alaska fur trade to build the new nation's economy. At that time, Alaska was a part of Russian America. Before long, however, the Russians were astounded at the number of Yankee ships plying Alaskan waters. In the ensuing years, businessmen lobbied Congress fiercely. The push was on to separate Alaska from Russia. Some historic events arose in part over the Alaska question --the first Russian ambassador came to the United States and the Monroe Doctrine was drafted.

People from several nations poured into Alaska, all seeking fortune and adventure. With them came the power of individualism and democratic ideals. During this period, a group of Russian workers at Kodiak tried to enlist Yankee aid in a revolution attempt. Unfortunately, the Americans they approached were more interested in the profitable relationship they had established with the Russian American Company. The revolutionaries found their trust had been misplaced when the Americans turned them over to colonial authorities.

However, as mentioned before, the United States was more interested in separating Alaska from Russia. Lobbying Congress was not the only tactics used. The Yankees traded all sorts of weaponry to the Tlingits of Southeastern Alaska to aid in Native resistance against the Czar. The Russians found themselves hard put to turn a blind eye to the heavy cannonry in Tlingit arsenals which had been forged in the United States.[1]

---

1. For further reading into these events see Howard Kushner's Conflict on the Northwest Coast, H.H. Bancroft's History of Alaska, and James Gibson's Imperial Russia in Frontier America.

In 1861, negotiations began between Empress Catherine of Russia and U.S. Russian ambassador Cassius Clay. By 1867, a document had been hammered out which gave the United States only the right to govern Alaska.[2]

A week after transferral ceremonies in Sitka, Secretary of the Interior, O.H. Browning sent word to Alaskans saying that any attempts to acquire land were illegal and anyone who tried would be forceably evicted.[3] This was indeed a strange order from a nation which had made a policy of blessing those who delved into the wilderness of Kentucky, Oklahoma, and Oregon! This warning suggests that the Interior Secretary of 1867 understood that the United States did not own Alaska. The U.S. government evidently could not parcel out land even to those who resided in the territory.

Moreover, in 1867, American Indians were still being exterminated to make way for settlers from the East Coast. General Custer had not yet made his last stand at Little Big Horn. Therefore, it is doubtful the Interior Secretary locked up Alaska back then out of deference to the Alaska Native.

To keep Alaska from hanging out in political limbo, the Fortieth Congress (1867-69) made Alaska a customs district, which made foreign goods subject to the same duties as other U.S. ports, extended laws for commerce and navigation, and made importing and selling distilled liquor illegal. In 1884, Congress passed an Organic Act for Alaska, making it a civil and judicial district, provided for a governor and court system, and also allotted $25,000 for education. Although none of the land laws of the U.S. could be applied to Alaska, Congress established a land district with land offices in Sitka to disburse land they were prevented by law from disbursing.

An 1885 treaty gave Alaska Natives jurisdiction over lands they "claimed or possessed."[4] Yet, this simple clause caused undue legal haggling in later years.

All government offices were Federal and appointive. Alaska became a preserve for the payment of political favors. Regulations for Alaska were suffixed by "as prescribed by the Secretary of the Interior."

Congress extended coal land laws to Alaska in 1900 which left the country open to subsequent decisions about coal lands in the contiguous United States. In 1906, President Theodore Roosevelt withdrew all coal lands in the United States, including Alaska. In that same year, Congress also passed the Antiquities Act, giving the President the

4. This treaty was influenced by Ramona, a book on the taking of California Indian lands, written by Helen Hunt Jackson.

authority to establish national monuments on public lands to protect historic and cultural values.[5]

In 1911, exasperated Alaskans had had enough. Spurred to action by the government's failure to act on Alaska coal land cases, 300 Cordova businessmen and citizens marched to the docks, boarded a ship of imported coal from British Columbia and proceeded to throw several tons of it overboard.[6] In 1912, Congress granted Alaska territorial status. It provided for a legislature, an appointed governor, and a non-voting delegate to Congress. Yet, it prevented the territorial legislature from passing any land laws or laws regulating fish and game, or altering or repealing any Federal laws. It was a much more limited self-government than was given to any other territory of the United States.[7]

Gradually, many Alaskans began to arrive at the notion that statehood might solve the problem of the restrictive Federal hand.

In 1943, Alaska's Congressional Delegate Anthony Dimond proposed statehood, but did not succeed. This bid came during a period of time which saw the near pull-out of the American military in face of what authorities believed to be a Japanese invasion of the Alaskan mainland.[8] In 1951, after more requests for statehood, some citizens became impatient. During that year's territorial legislative session, a House memorial, although withdrawn, asked that Alaska be granted statehood or be given its independence from the government of the United States and be permitted to form the "Republic of Alaska."[9]

In January 1957, a group of Alaskans journeyed to Washington, D.C. and started compiling informational and personal data files on each member of the 85th Congress, delving into their attitudes on Alaskan statehood. C.W. Snedden, publisher of the Fairbanks Daily News-Miner, hired a detective agency to deal with those senators and representatives who remained doubtful or opposed to statehood. The agency managed to unearth a few instances that would compromise certain political careers. To gain leverage, the news was leaked to some of the nation's top columnists. The columnist would then call the Congressmen involved and trade the information for a vote in support of statehood.

Alaska was granted statehood in 1959.

The last territorial governor, Mike Stepovich, commented in the winter of 1979 that the Alaskan people, with the exception of a few old timers, did not understand the contents of the statehood contract. Events in the seventies indicate that the Alaskan understanding of the statehood contract is different than the Federal view.

Present-day Summary

The idea of Alaskan Independence has gained momentum since Fairbanksan Joe Vogler kicked it rudely awake in 1973. Alaskans have come to the end of the line with the Federal cycle of neglect and exploitation. Many who thought statehood would relieve economic and political oppression have since changed their minds.

In 1974, Ernest Gruening, before his death, wrote Vogler that he wasn't ready to join Alaskans for Independence until all other neans were exhausted in fighting the U.S. Government over the D-2 withdrawals. He ended his letter by writing that Vogler deserved a medal for starting Alaskans for Independence.[10]

On November 17th of this year, in Anchorage, former state attorney general Edgar Paul Boyko, told the first Alaska-wide Alaskans for Independence convention that although he had been a co-founder of Alaskans for Statehood, during the statehood effort in 1956 he became a minority of one in insisting on Independence.

The first Alaska-wide Alaskans for Independence convention in November brought members together from as far away as Cooper Landing and Eagle. For the first time, the movement could put selling bumper stickers and demonstrating into a back seat. Reviewing promising public surveys and organizing the movement were the prime orders of business. Public opinion surveys taken at the 1979 Anchorage Fur Rondy and the 1979 Palmer State Fair were not scientific in that those who answered them were not randomly solicited by AFI members. Instead, the surveys reflected the opinions of people who walked up to AFI information booths of their own accord. Both surveys show strong support for Independence and the Palmer survey indicates that half of some 1200 who answered the survey favors a commonwealth status or a break with the United States. This figure has encouraged increased Independence activity within the Alaskans for Independence organization.

A strong theme which came out of the November 79 meeting was that the majority of Independence-minded people view Alaska as an emerging colony of the United States, not as a disobedient state that expects to use revolution to achieve its goals. It is evident that Alaskans prefer Independence to proceed along the same peaceful path as the Carribean and African colonies of Great Britain.

The Future of Alaskan Independence

There are obstacles in the procurement of Alaskan Independence. First, is the inability of the average individual Alaskan to comprehend the makings of a nation-state. The task looks too large to him.

---

10. See appendix.

This is primarily due to the individual's conception of government as a necessarily burgeoning bureaucracy. This notion will be overcome only when the individual is convinced that Alaska doesn't need a huge bureaucracy to operate. Persuasion will be difficult as long as one-third of our population remains on some form of government payroll.

In the author's book, Alaska--Energy Lands: The Inside Story, now in press, Dr. Milton Friedman, a Nobel Prize-winning economist said, "In principle there is no reason why an independent Alaska would not be entirely viable and why it could not have great prosperity if it adopted a free-market libertarian government." However, Friedman pointed out that an independent Alaska might move the Alaskans "from the frying pan into the fire." He described his reasoning, "If you look around at countries of Alaska's size which have some element of representative or democratic government, they have almost all invariably gone in for protection, government welfare-state activities, and the like." He compared Taiwan and Hong Kong to The Great Land as an example of this statement.[11]

Another obstacle to gaining Independence is fear. Unlike Australia, which after some political ceremony, allowed a few wheat farmers in Western Australia to secede and form the Principality of the Hutt River Province, the United States have been known to deal severely with separatists. One only need look to the lessons of Fort Sumter and Wounded Knee. Yet 1980 is not 1860, and peaceful separation has been the rule for most colonies since 1950.

The fear of Alaskan separation from the U.S. is summed up by one Fairbanksan, "If it came to Independence, I don't know if I could go along with it. How would we make it with no allies?"

A Federal worker commented, "Who will protect you from Red China and Russia?" Alaskans are wondering who is protecting them from the Federal bureaucracy.

The advantages of Alaskan Independence seem to outweigh the disadvantages. The general consensus in political quarters world-wide is that the system of governance in the South 48 is out of control.

Specific instances are the inability to deal with the energy crisis, inflation, and the problems Alaskans suffer from as an offshoot of inflation. As these problems escalate, the colonial treatment of Alaska can be expected to get worse. With some 20% of the land, but only two-tenths of a percent of the population of the United States, Alaska will be trampled by the special interests and the Federal bureaucracies. It would behoove The Great Land to break away before it must as a matter of survival.

If Independence can be negotiated, Alaska would come into its own on the international scene. As the United States struggles to

---

11. Friedman seems to be referring to Alaska's population in this analogy. However, both Taiwan and Hong Kong have several million people each, a great deal more than Alaska's population. To be remembered, moreover, is that many African and Carribean nations have lesser or similar populations in relation to Alaska.

retain its power, Alaska could rise as a buffer state between the Soviet Union and western hemisphere Free World countries. To fill this role, Alaska would have to be a neutral, yet relatively strong member of western hemisphere defense. A vigorous trade policy would complete the picture.

Further, the United States would have a friendly vote in the U.N. in Alaska. If a member of OPEC, Alaska could help balance out the internal goings-on of that organization in regard to the United States.

For a free world losing sight of the United States as a model for growing democratic nations, Alaska would rise to meet the need.

In the words of Interior Secretary Cecil Andrus, "Alaska has a lot going for it." It sure does.

There is absolutely nothing Alaska cannot grow or build to support itself. The agricultural potential is phenomenal. In addition to its yet untapped agricultural lands, Alaska with its periods of continuous sunlight has a longer growing season than Iowa. Improved technology in greenhouse construction, geothermal energy, and waste heat from pipeline systems could boost that potential even further.

In Alaska's current predicament of restricted mineral exploration and in view of the fact that no comprehensive mineral survey has ever been made of the subcontinent, there is no way to sum up Alaska's mineral potential other than to say "rich." We can reach some kind of estimation by looking at areas adjacent to Alaska where mining proceeds at a brisk pace. There are six operating mines and 24 major mineralized areas in Eastern Siberia. In Western Canada, there are seven operating mines and 35 major mineralized areas. Mining engineers say that the fact Alaska is located between Eastern Siberia and Western Canada indicates that Alaska could now have at least 13 operating mines instead of just the Nome Gold Dredge and the Usibelli Coal Mine.

In the areas of meat and fish production, present-day inquiries have led the state government far afield. The Alaskan fisheries are a major world protein resource. Current projections of Alaska bottom-fisheries potential indicate that Alaska could have an international market in Europe once the effort is launched. While it is doubtful moose and caribou will ever be domesticated enough to provide us with a meat industry, Alaskan game management, rather than game management from 5,000 miles away, could increase the number of these large game animals enough to continue to provide supplemental and subsistence food for our small population. Other large animals, such as reindeer, are already domesticated and could form the basis of a substitute red meat industry in Alaska for world markets.

Lastly, but not least, there is the human resource. Our population is small and Alaskans tend to want to keep it that way. But, our inventiveness and individualism mark of a different breed of cat.

Some say the Alaska Native cultures are dying. Not so. Had it not been for the Native, the Chilkoot pioneers would have died out. Their lessons for the non-Native have been incorporated into the mainstream of Alaskan life and are here to stay. The Native culture will be part of the new Nation's customs and distinctiveness. That culture is the vital heat in a land where winter is nine months long. For this reason, Independence-minded Alaskans lean heavily toward

honoring all commitments the U.S. government has made with the Alaska Natives. Perhaps with this foresight, a prominent Native Corporation head has indicated that he is in favor of Independence.

The small businessman may well be king in the new Nation. In essence, every Alaskan is a businessman. In his life, he has had to trade or sell something to make a go of it here. Alaskan self reliance will prevail over the American propensity to dish out government paychecks to feed its population. Alaskans will, no doubt, create a national charter containing provisions for free enterprise and opposing government takeover of the work force.

History is being made here in Alaska now and will continue to be. World events and historic trends constantly shape its destiny. Greenland is becoming independent. Canada's western provinces currently are resisting the cheap sale of petroleum to the eastern provinces. For many years there has been a citizen movement in Canada to ally the western provinces with Alaska. What with the possible vote of separation of the eastern province of Quebec next year, the western provinces may see its own separatist movement as a solution to eastern Canadian exploitation.

Such an alliance would make Alaska the second or third largest nation on the face of the Earth.

Actions in Iran and inside OPEC are weaning the United States of foreign oil dependence. Although higher technology energy sources are promising, the United States have not even begun to devote a concentrated plan to develop those sources with the same dedication accorded the Apollo moon landing program in the sixties. It is evident through statements made by the Carter administration that Alaska is the next spot where the American neo-colonialist mosquito will land. The Alaskan insect is big, but this American variety has been working hard since historic times to place 95% of The Great Land in restrictive land classifications. In the next few years, all Alaskans will be aware of the huge charade of the boomers vs. the greenies battle which raged in Alaska in recent times.

Doing research for Alaska--Energy Lands, the author and her co-authors discovered that many large environmental organizations invest their considerable income in stocks, bonds, and securities. In 1975, the National Audubon Society owned 10,000 shares of Dana Corporation, a manufacturer of truck parts. Also, the Society owned 5,800 shares of International Paper Company, 2,200 shares each of Exxon and Mobil Oil and 300 shares of Caterpillar Tractor Company, makers of the "D-9 Cat." The Society also held a $250,000 corporate bond on Sohio-BP, one of the principals in the Alyeska Consortium which built the Trans-Alaska Pipeline. The Wilderness Society has stocks and debentures, notes or mortgage bonds on such companies as Standard Oil of California, Arco Pipeline Company, Minnesota Mining and Manufacturing, J.P. Morgan and Company, Weyerhauser and others for a total investment asset picture of $442,773.

The list of other preservation groups and their alliances with major companies that chop trees and drill oil go on and on. The question comes "Where does the difference between, say, a big oil concern and an environmental group begin and end?" For Alaska there is no difference. As Congressman Don Young has said again and again, "This year it's the environmentalists. Next year it's the rape, ruin,

and run boys."

Our ancestors saw this moment coming. Citizens of Alaska, the colony, are beginning to resist in larger numbers the idea of being the United States' storehouse. Within the next few years, Alaska will begin negotiations with the United States to throw off its "name-only" statehood alias colonial status.

With the Alaskan rugged individualism, the challenge of the land, and our entrance into world politics, the Republic of Alaska will be a reality. With the use of higher technology and the synthesis of Alaskan ideas, that Republic will endure. "North to the Future" will be a world-wide phrase.

APPENDIX

ERNEST GRUENING
7926 W. BEACH DRIVE, N.W.
Washington, D.C., 20012

1/23/74

Dear Joe:

Alaskans for Independence is a natural and praiseworthy reaction to an act of incredible usurpation and invasion of Alaska's rights by Congress and the Interior Department.

But I'm not ready to join yet: not until we have exhausted every effort to undo this outrage. We must settle for nothing less than a total rescission of the 80 million acre provision in the Native Claims Settlement Act, where it had no business whatever to be.

The project is even far worse than it appears to be --like Watergate, increasingly revelations will disclose the monumentalness* of this folly.

My views were set forth in the enclosed letter to the Juneau Chamber of Commerce.

Keep me posted. Let me know what the reactions are to "Alaskans for Independence."

You deserve a medal for starting it.

Cordially yours

Ernest Gruening

* I don't know whether there is such a word. But there ought to be for this monstrosity. So stet.

ERNEST GRUENING
7926 W. BEACH DRIVE, N. W.
WASHINGTON, D. C. 20012

1/23/74

Dear Joe:

Alaskans for Independence is a natural and predictable reaction to one act of unbelievable arrogance and usurpation of Alaska's rights by Congress + the Interior Department.

But I'm not ready to join Yet! Not until we have exhausted every effort to undo this outrage. We must settle for nothing less than a total rescission of the 80 million acre provision in the Native claims settlement act, which it had no business whatever to be.

The project is even far worse than it appears to be — Rabe Wakefield, disparagingly revelations will disclose the monumentalness* of this folly.

My views were set forth in the enclosed letter to the Juneau Chamber of Commerce.

Please me frankly, let me know what the reactions are to "Alaskans for Independence"

You deserve a medal for starting it.

Cordially yours

Ernest Gruening

* I don't know whether there is such a word. But there ought to be for this monstrosity. So start.

PROCESSING CORPORATION

88 ROSE HILL AVENUE
P.O. DRAWER 1157
DANBURY, CONNECTICUT 06810
(203) 744-2090

May 2, 1979

Mrs. Marylou M. Christenson
SR #50447
5 Mile Chena Hot Springs Road
Fairbanks, AK 99701

Dear Mrs. Christenson:

Thank you very much for your recent inquiry; we appreciate your interest as we go through great lengths to make POLY-FIL® brand products the finest on the market.

Unfortunately, we are not set up for export. Therefore, we could not ship to any location outside the United States Mainland. Also, our products are so popular in the United States, that it is quite difficult to fill even the requirements of the domestic market.

We, therefore, do not foresee any change in our policy in the near future and regret that we cannot give you a more favorable reply. However, we could ship our goods freight prepaid to any point of embarkation within the boundaries of the United States. This point could be designated by you-it is usually a customs broker.

The customs broker could handle all export formalities, as well as repackaging materials for overseas shipment; freight; storage; etc. Of course, you would have to assume all financial responsibilites after delivery of our goods to the broker.

In the event that you wish to pursue this matter as outlined above, we will be happy to be of further assistance.

Sincerely,

FAIRFIELD PROCESSING

Fred Menkes
Customer Service Manager

FM:ns

P.S. Enclosed please find a POLY-FIL® hang tag, which can be easily fastened to your handiwork. These tags are available to you in quantity at no charge, upon request.

Section Two of the Antiquities Preservation Act 16, USC sec. 431 (1906)

"The President of the U.S. is authorized, in his discretion, to declare by public proclamation historic landmarks, historic and pre-historic structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the government of the U.S. to be national monuments, and may reserve as a part thereof, parcels of land, the limits of which in all cases shall be confined to the smallest area compatible with the proper care and management of the objects to be protected. When such objects are situated upon a tract covered by a bona fide unperfected claim or held in private ownership, the tract, or so much thereof, as may be necessary for the proper care and management of the object, may be relinquished to the Government, and the Secretary of the Interior is authorized to accept the relinquishment of such tracts in behalf of the Government of the U.S."

Hot Words Over the Cold Land

by William R. Hunt

The uproar among Alaskans over the Interior Department's classification of lands does not reverberate around the nation. But the fighting is intense with those involved with the struggle in Alaska and in Washington, D.C., although its ramifications are dimly perceived elsewhere.

Huge land dispositions have been an American western phenomenen. If Frenchmen had to confront real estate transactions of comparable scale, the resultant trauma would reduce the land pinching nation to hysteria.

Americans have a different heritage. We can give or take ten million acres without batting an eye. It does not really matter whether sixty, eighty, or one hundred million acres are up for grabs in Alaska. Such quantities of land are meaningless, even when acreage is defined in terms of other states. If the U.S. Park Service wants a chunk the size of Washington and New York, less a New Hampshire sized piece, with maybe the Texas Panhandle shoved in for spice, and leave out a wedge of Rhode Island--it sounds o.k. In fact it sounds like a John Owen recipe.

Our interpretation of the land fight depends upon our particular image of Alaska. Currently there are five major distinct views which derive from regional orientation rather than knowledge or good sense.

Number one: Alaska as seen by Grand Rapids and places like that. "Alaska is cold and far away. Anyone who lives there needs his head examined. But don't give us that underdog talk: you got the oil!"

Number two: Seattle's Alaska. "Alaska is part of our backyard. We understand what you need, probably better than you do yourselves. 'Scoop' has to fix you up with a few parks and refuges. It won't hurt too much. Those ecology boys are pushing hard."

Number three: Alaska of California and New York. "It's about time Alaska did the country some good. What's so bad about a few parks? Anyway, you people have been ripping off the Eskimos for too long. You should be flattered. Don't you realize we can save the nation by protecting your ecosystems?"

Number four: Washington, D.C.'s Alaska. "You can't believe the pressure here. We know Alaska. Things are going to hum when we reassign administrative staff up there to manage the lands. It will mean a big payroll and save you from Wally Hickel and those Teamster bulldozers."

Number five: Alaskan's Alaska. "This is the grossest land grab in history. We pioneered here. Nobody gave a damn, now they want to take our land away. Nobody knows how to protect the environment like we do."

Obviously, these five views could bear further definition and allow for more diversity, but they summarize issues well enough for illustrative purposes.

Now let's get to the crunch. What is the truth about Alaska's situation? Are Congress and Interior doing the right thing?

My personal view, as an Alaskan, is that right and wrong are not really issues. In a better world Congress would find a sensible compromise between the vociferousness of conservationists and the Alaskans who demand opportunities for future development. It may prove that Senator Ted Stevens was correct in believing that Alaskans got the best deal possible under the circumstances with the compromise he and Senator Henry Jackson worked out last spring.

What has really disturbed me about the long debate is the extent to which arguments are based upon misconceptions of national experience. The righteous, arrogant, and evangelistic uses of specious references to "Last Chance," "Last Frontier," and "Lost Wilderness" approach the level of earlier national crusades against booze and reds.

When Secretary of the Interior Cecil Andrus and others insist that Alaska represents a last chance for America to do things right for the first time, I am alarmed. God help us if we have to depend upon Alaska to save the nation from its past mistakes, or if "doing the right thing" now in Alaska is a panacea for the future. Besides that I worry about Andrus's family sentiments and humility when he argues that our ancestors fouled everything up. And that his duty is to avoid the reproach of his grandchildren. Probably someone has to be sacrificed in bridging generation gaps. Veneration of

ancestors has not recently held a high place in our culture.

Recently Ralph Nader introduced a book entitled The Last Frontier: the Marketing of Alaska (by Hanrahan and Gruenstein) with a remarkable sentence. "It would be tragic not to have our largest state benefit from the full lessons of human experience, only to find itself plunging into the vortex of corporate determinism." Well, all right. If we now have mastered "the full lessons of human experience," the proper disposal of Alaskan lands is a bagatelle. Surely the solutions to our major social and international problems must be near at hand.

The "Last Wilderness" and "Last Frontier" schools are related. Together or independently the phrases are evoked as if they explained something about Alaska.

Years ago in Virgin Land: the American West as Symbol and Myth, Henry Nash Smith explained some complexities of the wilderness in popular consciousness. Our veneration of the wilderness contained the negative doctrine that civilization was wicked, and the positive doctrine that untouched nature is a source of strength, truth, and virtue. True or not, these doctrines have dominated in western literature. Closely related to the wilderness symbol is the Myth of the Garden, the Jeffersonial ideal of the sturdy, self-sufficient farmer who sustains democracy. Sometimes the Wilderness and Garden symbols conflicted. Was Daniel Boone the standard-bearer of civilization on the frontier, or the child of nature fleeing into the wilderness before the advance of settlement? The duality caused some confusion; yet we needed both images, and western heroes had to accommodate both requirements. It worked pretty well because we had free roving trappers expressing their untrammeled freedom in the vanguard while settlers followed behind to create the Garden.

Everything was going well until historian Frederick Jackson Turner in 1893 announced that the frontier was closed. Although he was optimistic, others deplored the vanishing of free land. Now both symbols were in jeopardy: no more wilderness for our innocent primitivism, and no more free land for development by individuals. And it was not as if Americans were much more enchanted with cities and industrialization in the nineties than they are today.

So what did they do? Did they accept vast Alaska as an interrupted extension of the frontier? Indeed not. They stampeded for gold in person or in literature, and then tucked Alaska away somewhere. It was too cold and desolate even as a ground for wilderness adventures, and certainly it was no Garden.

Now we are told that Alaska is "our last wilderness." A wilderness is good, and presumably, gardens are bad.

I suppose people within and outside of Alaska can have conceptions of wilderness without doing any harm. The problem is in determining the number of acres needed to satisfy the collective wilderness longing. My own needs are very modest, but it may not be easy to give everyone in the nation his own exclusive wilderness. Some may have to rely upon the wilderness of their minds.

The "Last Frontier" expression is no more helpful than "Last Wilderness" as a guide to meaning about Alaska. The term "frontier" suggests the familiar pattern of settlement and development followed by other regions of the West as people flowed in and transportation linked them to the nation. Alaska did not follow this pattern. From the mid-18th to the late 19th century it remained a fur and fish colony. Briefly the gold boom gave the region's development the look of other frontiers, but as mineral production declined so did settlement. Neither agricultural, cattle, or any other industry developed to maintain growth. Profits from fisheries went to Seattle and San Francisco with the salmon, and even most of the cannery labor was imported seasonally. It took World War II defense construction to end the decline and spark new growth.

This boom and bust cycle accounts for the attitude of many Alaskans. Except when outside capital flowed in to exploit a resource, residents depended upon government payrolls. Traditionally citizens have longed for sustained development and clamored for means to keep some of the gains in the region.

Alaskans are not keen on a development which would reproduce New Jersey, nor is there any likelihood of it. Yet they are aware that the closure of land to development can prohibit a post-oil boom development. North Slope oil will not flow forever and thus far Gulf of Alaska explorations have not been encouraging. Now, for the

first time since the gold era, the state has an economic base in petroleum. When production stops, where will the next boom come from? Climate, distances, and costs will remain constants as inhibiting factors to development. If minerals or other resources are not found in sufficient quantity to justify the tremendous costs of production and transportation to market, Alaska will bust once more.

Within this historic framework the land use issue becomes very touchy. It is national land and the nation can dispose of it as it wishes, but it is not unreasonable to leave opportunities for some kinds of development on lands not reserved for special uses or protection.

A steady economic base would be a good thing for Alaska and the nation. Few of us can live off the undeveloped land, and neither a federal payroll nor a federal dole attracts everyone. Either we work here or go back to Seattle or Grand Rapids. There is little other choice.

Once we bannish all fuzziness of the "Lost Frontier" imagery with its echoes of innocence, a pristine nature, and manly virtues, we might begin to assess the region intelligently. Jack London fixed a strong image of the North in his books, and it is not too useful to the nation today. London passed through Alaska as swiftly as the Yukon River current permitted after his short sojourn in the Klondike, and we should not be transfixed by whatever romance his gifted pen created. Save his books, for heaven's sakes, but resource policies should emerge from colder calculations.

If patriotism is the last refuge of a scoundrel, calling up the last or lost frontier, or wilderness, is the recourse of the woolly-minded. For decades Alaska has been a predominately urban society hungering for substantial economic development. Now it has development and some new problems. Environmental protection is one of these, and it may seem a relief to turn from the Southwest's water shortage, or from New York's many travails, to the ripping up of Arctic tundra. But if Alaska causes alarm and does not teach us anything, and if we cannot gain any perspective on the national experience, the change of scene contributes little.

For years writers and government investigators have been rediscovering the "last frontier." More recently the writing trend is to lose the Alaskan frontier as an incident to finding it. It must frustrate Americans who have not been too keenly aware of Alaska to learn suddenly that the "last frontier" is lost. It is not lost--or last--or even a frontier.

But right now it is a battleground. The struggle is not between good guys and bad guys. There is some legitimacy on each side of the development-conservationist debate. Alaskans have no "right" to a land settlement which meets their dreams. And conservationists need not talk about "doing things right" as if they have understood the nation's history accurately, and understood Alaska's relation to their hopes for the future. They can reflect on their power since their misconceptions and propaganda fill some need of the nation's soul.

The Question of the State Income Tax

by Claus-M. Naske

The dramatic increases in the price of petroleum have given the state treasury an unexpected windfall, amounting to hundreds of millions of dollars. Close on the heel of the announcements that the state treasury would enjoy surplus funds have come demands for the abolition of the state income tax. Such proposals, on the surface, sound great. Who, in his right mind, would oppose lower taxes or no taxes at all. What most proponents seemingly ignore is the fact that oil income is a one-shot deal. Alaska boasts of the massive Prudhoe Bay field, destined to decline in the 1980s, and declining Cook Inlet oil fields. No replacements are in sight. Yet state spending has become dangerously dependent on oil revenues. Less and less services are paid for from general taxes. This is an unhealthy trend. Furthermore, while abolishing a general system of taxation may be easy, adopting one is extremely difficult. The history of tax reform in Alaska certainly illustrates this.

In the late 1930s territorial Governor John W. Troy had asked the territorial planning council to make a tax study. The research was not completed until the fall of 1940. The research concluded that an annual revenue of $10,000,000 was entirely feasible. They recommended the adoption of a modern tax system, and urged that the revenue obtained be invested in a soundly planned and economically executed program of permanent improvements such as roads, schools, hospitals, and public buildings. Ernest Gruening, Troy's successor, enthusiastically endorsed these proposals, made them his own, and

fully intended to push them through the legislature. The plan the governor presented to the 1941 legislature for adoption would abolish all obsolete mercantile taxes and license fees, imposing instead a very moderate income and profits tax, plus a nominal levy on property outside of incorporated towns.

Governor Gruening, however, had waded into deep water with his proposal for a streamlined tax system. The scheme immediately mobilized the ever-alert economic interests, such as the canning and mining industries who were in no mood to relinquish their privileged status in Alaska. Many residents, depending for a livelihood on these industries, were unwilling to antagonize them. These feelings were reflected in the mood of the legislature which flatly rejected the governor's tax proposals in every legislative session between 1941 and 1947.

Gruening called a special session of the legislature to convene in March 1946. The purpose was to have measures enacted designed to aid Alaska's veterans. Meeting for thirty days, the legislators passed most of Gruening's proposals. And although the governor was pleased, he was alarmed by a senate memorial which asked the President and the new Secretary of the Interior, Julius A. Krug, "to remove the present governor from office with all possible dispatch." It passed the senate by a vote of nine to six. Thereupon Steve McCutcheon, a Gruening supporter in the house, introduced a long memorial praising Gruening unqualifiedly. It passed by a vote of sixteen to seven. "The opposition," Gruening confided to E. L. "Bob" Bartlett, Alaska's Delegate to Congress, "are going to do everything to smear me in Washington."

Bartlett, however, reassured the governor that he "should not attach any particular importance to any Senate memorial so far as its influence here (Washington, D.C.) is concerned."

Complaints about the governor, however, trickled into Washington. Walter P. Sharpe, the territorial Commissioner of the Department of Labor told Robert E. Hennegan, the Chairman of the Democratic National Committee, that the governor had done everything to split the Democratic Party in Alaska. "Put in anyone, but get rid of this 'pinko' who has no ties in Alaska," Sharpe counseled. The commissioner essentially resented the fact that Gruening made appointments based on ability rather than party affiliation. But despite sniping from various quarters, the governor survived in office. When talk about his replacement once again revived late in 1947, Bartlett persuaded Robert S. Allen of the Boston Daily Globe to analyze Gruening's predicament. Such an article, Bartlett hoped, might help to force the president's hand. On January 30, 1948, the Globe carried the piece entitled "Next on List of New Dealers to be Dropped by Truman?" Allen stated that Gruening, one of the few Roosevelt appointees still holding high office, had only an outside chance of being reappointed for another term. "As of now," Allen claimed, "President Truman does not intend to rename Gruening." That could change, however, continued Allen, because the governor had strong Alaskan backing as well as powerful administration support both in and out of Congress, including "equally powerful Democratic opposition," most of it centered in Washington State, particularly in Seattle. For years the governor had been at loggerheads with Seattle business and transportation interests, accusing them of exploiting the territory like a colonial possession. Washington's Governor

Mon Walgren and Nick Bez, Seattle shipping and fishing magnate, both Truman cronies, led the opposition to Gruening. The president faced a dilemma, Allen concluded, for he needed West Coast support in the upcoming election. Replacing Gruening, however, would upset the New Dealers whose support he needed as well.

It may have been the piece in the Globe which prodded Secretary Krug to see the president and urge the reappointment. In any event, on March 12, Truman sent Gruening's name to the Senate Interior and Insular Affairs Committee for confirmation. Bartlett was happy. "I won't forget ever," he told Krug, "that you went to the White House today and successfully urged President Truman to reappoint our friend, Ernest Gruening, as Governor of Alaska. It was a noble stroke of work." Unhappily, however, an informal poll of the committee revealed that the Republican majority favored "pigeonholing action until after the November election." One Republican member of the committee succinctly summed up majority opinion. "Why should we give a Democrat--and an ardent New Deal Democrat at that--a four year term when after the Presidential election we could put in a good Republican?"

Territorial Republicans were not satisfied with mere delays. The Fairbanks Daily News-Miner, owned by Alaska's foremost entrepreneur 'Cap' Austin E. Lathrop, long a Gruening opponent, urged that the governor be denied a third term. Lathrop argued that Gruening had enjoyed ample opportunities to prove himself as governor of Alaska yet he had failed. Instead of fostering a sound legislative program for Alaska during the last five sessions of the legislature, he had "tried to promote tax legislation which was not acceptable" to the

legislators. As a result, the territory's finances "are now as near complete disorganization as they have ever been." Even more disturbing, biennial territorial appropriations had increased from a modest $3,511,510 in the 1939-1940 period, the last before Gruening took office, to a record $8,476,309 appropriation passed by the last legislature. In short, Gruening had attempted "to use the power and presitge of his office and the resources of the federal government to transfer to himself the initiative and law-making powers of the citizens." Lathrop left unclear how the governor had appropriated to himself all of these powers. In fact, Lathrop's editorial was transparently self-serving, for he was a chief beneficiary of Alaska's totally inadequate tax system. His many enterprises, ranging from banks to motion picture theaters, and from construction companies to a coal mine paid only negligible taxes to the territory.

In any event, the anti- and pro-Gruening forces quickly lined up for battle. While Lathrop urged his friends and associates to communicate their opposition to the Senate committee, the pro-Gruening forces similarly gathered support. Lathrop, for example, praised territorial senator Chas. D. Jones for the fine letter he had written to U.S. Senator Arthur H. Vandenberg, a member of the committee considering Gruening's confirmation. Lathrop was convinced that a sufficient number of protests had reached the Senators to convince them that "right or wrong, he (Gruening) has engendered so much bitterness and dissension in the Territory that very little of a constructive nature can be expected until there is a new governor." Foremost among Gruening's friends, Bartlett solicited support.

Among many others, for example, he asked the Rt. Reverend John S. Bentley of the National Council of Protestant Churches to lend his ehlp in the impending confirmation struggle. Despite all the efforts, Senator Hugh Butler (R., Neb.) decided to allow Gruening's unconfirmed nomination to die.

In the meantime, however, territorial finances had run into trouble. On December 31, 1948, the general fund contained only $6,289.40 and the auditor held legitimate claims against the territory amounting to $758,209.59. It was only through individual and corporate pledges of $200,000 of interest free loans, for example, that the doors of the University of Alaska had been kept open. Earlier on, the governor had rejected pleas for calling a special session, hoping that angry citizens would vote delinquent legis a-tors out of office. Gruening's hopes were largely fulfilled when Alaskans trooped to the polls in October and "threw the rascals out." At that point, the governor summoned the newly-elected body, not the lameduck legislature, into special session. Its only task was to consider the tax bills which territorial Attorney General Ralph Rivers had prepared in his capacity as legislative counsel. From the extraordinary session which convened on January 6, 1949, and the regular one which followed on January 24, there emerged, at long last, a basic tax system.

The first element of the new system consisted of a territorial income tax based on ten percent of the federal tax. A property tax of one percent was credited against the municipal and school district assessments, thus avoiding duplication. At the same time the territorial legislature took over and streamlined the old system of license

fees from the federal government. For each separate business an initial application fee of $25 was charged. Beyond the initial fee, a sum equal to one-half percent above $100,000 received during the income year were to be remitted to the territory. This levy applied to those concerns which, so far, had paid no monies whatever to the Alaska territorial government. These included steamship companies, air and bus lines, lighterage companies, banks and motion picture theaters, oil and construction companies, garage and service stations, newspapers, radio stations, and logging operations. Professional registration, examination and insurance levies were to be collected by the various professional boards. The legislature changed the tax on the fishing industry from a case tax to one based on the wholesale value of the pack, amounting to four percent of the value of the raw fish processed for salmon canneries to one percent of the value of raw fish for herring processing plants. Fishermen's license fees increased from $1 to $5 for residents, and from $25 to $50 for nonresidents. Fishing gear, such as traps, gill nets, and seines were also taxed. Excise taxes on liquor were raised, and establishments serving alcohol were regulated by fees which varied from $75 to $5,000, according to the type of business, the size of the town, or the volume of the business. In addition, the usual motor fuel taxes, vehicle and drivers' licenses and tobacco and various other miscellaneous taxes were modernized.

Gruening was jubilant, and understandably so. It had been a long battle, finally crowned with victory. The special interests were furious. When word reached Alaska that Senator Joseph O'Mahoney (D., Wy.), the new chairman of the Committee on Interior and Insular

Affairs, intended to hold hearings on Gruening's confirmation, a number of former legislators asked the committee to postpone any action until the territorial legislature had adjourned. Residents of Alaska, they maintained, should be given an opportunity "to present evidence and data supporting contention of many substantial citizens of territory that present governor's policies not only definitely destructive to territorial development but will almost stop flow of badly needed investment capital from stateside sources." These disgruntled ex-legislators also asserted that the "present session being quarterbacked by governor is travesty of American tradition and legislative procedure." But despite heated opposition, the Senate confirmed Gruening's nomination for another year.

TO: Future Frontiers
308 G Street, Suite 301
Anchorage, AK 99501

I would like the Alaska State Legislature to consider broadening the scope of the current Alaska Council on Science and Technology and to provide sufficient annual funding to meet more of the unique research needs of the state.

I would urge that the scope of the current Council be broadened, inclusive of the social sciences, the arts and humanities. The Council on Science and Technology was created to meet the unique research needs of the state in science and technology, as such information is indeed necessary for guiding the public policy and assisting the state's decision-making. I believe there are research questions in the humanities, the arts and social sciences which are of equal and vital importance to the state and which should be state supported.

As one who is involved in education, I am aware of the disadvantage researchers from our state encounter when applying for national research funds. Even when the national funding coffers are full, Alaska researchers have a difficult time justifying research expenses to proposal reviewers who know little of the state's needs nor of the costs of doing business in this part of the world. Nationally funded research is presumed to benefit large numbers of people directly and at little cost; these conditions, while appropriate in Lower 48 settings, are virtually impossible for us to meet in a state with a small population and high costs. Additionally, the benefits of research in Alaska are oftentimes unique and not applicable to the other states, diluting the possibilities of federal financing.

I believe that our state could benefit from according the social sciences, the arts and the humanities with the recognition as areas of importance in state-funded research.

Thank you.

Buy Alaskan Committee

4604 BUSINESS PARK BLVD.
ANCHORAGE, ALASKA 99503

Co-Chairman:
Senator George Hohman
Representative Russ Meekins

November 26, 1979

Future Frontiers
308 G Street, Suite 301
Anchorage, Alaska 99501

Gentlemen:

The Buy Alaskan Committee is dedicated to promote Alaskan Businesses to Alaskans. Unfortunately, Alaskan Businesses are in a bad state of affairs, as is graphically illustrated by the following:

1. High unemployment
2. Record numbers of business failures
3. Slumping realestate sales
4. High business space vacancies
5. More families moving out of the state than into it

One of the solutions to the problem is for ALL Alaskans to purchase goods and services within the state whenever possible. When we say ALL Alaskans, we definitely include state and local governments.

Right now, the State of Alaska is legally spending tens of millions of dollars for goods and services outside of the state, which could and should be spent in Alaska. We would like to emphasize that these purchases within the state would support payrolls, inventories, warehouses, office space, vehicles, and taxes of all types.

While we realize that some goods and services are not available locally, the large majority ARE available on a very competitive basis right here in Alaska.

Several state agencies are also abusing their purchasing regulations by specifying "sole source" and "convience" purchases that are not within the bounds of the law. Several of these instances have appeared in the newspapers recently.

A very good bill already exists that would correct many of these problems. Last year Senate Bill 114 was approved by the Senate by a margin of 17 - 2. The bill now rests with the House of Representatives Finance Committee.

We were hopeful that the bill would be approved by the House during the 1979 session, but the last minute rush to pass the budget prevented the bill from being considered.

Gentlemen, we urge you to support and promote the Alaskan Businessman through Senate Bill 114. The sooner the bill is passed, the sooner the Alaskan business community and the citizens of Alaska will enjoy the benefits of doing increased business with the State of Alaska.

May we count on your support?

Sincerely,

BUY ALASKAN COMMITTEE

H. Lamar Gray
Chairman

Future Frontiers
308 G Street, Suite 301
Anchorage, Alaska 99501

Gentlemen:

In response to your call for "papers" dealing with Alaskan issues worth addressing, the status of mineral development, its contribution to providing employment and a program of evaluating the economic potential of Alaska's mineral wealth in a cost-effective, timely manner comes to mind. To be specific, for the purposes of this paper, mineral development pertains only to the exploration, extraction and utilization of naturally occurring metallic and non-metallic mineral substances, excluding hydrocarbon constituents of the earth's crust.

Historically, at a time when modern day geology, geophysics and geochemistry were yet to emerge as scientific tools for mineral development, Alaska presented a romantically enticing place to forage for gold, when the price was less than $20 per troy ounce. The history of gold mining in Alaska is rich in the tales of men enduring the hardships of life in a primitive setting, when transportation of supplies and machinery entailed months and years of endeavor instead of our air freight methods used today.

Lifestyles, scientific methods, and mineral prices have changed markedly since those historic days of mining on the beach in Nome, in the Iditarod district, at Kennecott and in the many other mineralized areas of common knowledge throughout the State.

As a matter of record, Exhibit A, attached hereto [illegible] a summary of "Trends of mineral production of Alaska, 1890-1939" from U.S.G.S. Bulletin 926-A, "The Mineral Industry of Alaska in 1939," as well as a figure depicting "Annual value of all mineral production--Alaska 1900-1965" from State of Alaska Department of Natural Resources, Division of Mines and Minerals Report for the Year 1965.

As an [illegible]-year resident of Alaska, I have personally witnessed our population growth as well as economic change, but the growth in the metallic mineral mining industry has not paralleled the state's growth in other areas. It is my opinion, based on 18 years of observation,

that Alaska represents a storehouse of mineral wealth large enough to provide the Lower 48 states with raw materials to keep their economy rolling along, despite mineral shortfalls elsewhere in the world.

Repeatedly, I have asked myself the question: "If Alaska has this mineral wealth, why are there not more active mining enterprises providing employment for our citizens and helping develop a self-sufficient, stable economy in Alaska?" The only answer that comes to me is that the proper environment, incentive and utilization of available knowledge is not currently being provided by the Alaska Legislature.

Problems in the area of mineral development have been well publicized. Currently the most difficult area deals with land ownership, the D-2 issues and environmental vs. development considerations. It seems foolish to me that the land issue has ballooned out of proportion, when parties concerned with the issues have not inventoried the land on a broad and detailed basis as to its mineral composition and potential for economic mineral development.

The earth's crust is basically composed of only nine elements--namely oxygen, silicon, aluminum, iron, calcium, sodium, potassium, magnesium and titanium, which all together represent 99.25 per cent of the rock globe we call our world.* The 3/4 of one per cent of the crust remaining represents all the other elements available to man. My view is that 3/4 of one per cent of the rock mass in Alaska is of vital economic value to mankind, and particularly to United States citizens and Alaska residents. Therefore, I feel it is urgent that a complete geological inventory is undertaken throughout the state at the soonest possible time.

Since private industry has shown a reluctance to pursue this endeavor due to lack of economic incentive, and the federal government seems more anxious to dwell on hydrocarbon resources within Alaska's borders, while environmentalists would prefer not to learn the truth about economic values at stake in the vast Alaska wilderness, the result has been a continuing lack of precise knowledge in the area of Alaska's economic mineral potential.

As a solution to this problem, and an aid toward expediting the pursuit of a realistic assessment of Alaska's land, I propose that the Alaska legislature proceed to set up a corporation for the purpose of carrying out mineral exploration in the state of Alaska, with the right to participate with others in mine exploration and

development, and to participate in bringing properties into production.

The organization of this corporation should have a guaranteed annual budget from the Alaskan Legislature in the neighborhood of 2 or 3 million dollars per year for a period of at least 10 years. Future production agreements could undoubtedly repay this venture capital.

This is not a new concept. The provincial government of Quebec formed such a corporation in 1965 under the name "Quebec Mining Exploration Co. (SOQUEM)" and has continued to this day with marked success.**

With this approach, the vast exposures of precambrian rock in Alaska could be thoroughly examined through geochemical means, as well as more detailed exploration of the mineral-rich provinces in the state that have yet to see diamond drill core sampling beyond a depth of 200 feet, when Outside there are active mines that go well below 800 feet below sea level.

This proposal is presented with the hope that a detailed examination of its potential will be immediately undertaken by our state legislators in an effort to pursue the future of a self-sufficient, viable economy for our state.

My interest and expertise in the area of mineral exploration is derived from the study of geology at the University of California at Santa Barbara and more than a decade of prospecting in the Alaska bush.

Sincerely yours,

Thor Brandt-Erichsen

ATTENTION: Senator Hohman and Represenative Meekins

Dear Sirs,

Former Health, Education and Welfare Secretary Joseph Callifano stated the cost of health care in the United States is rising at the rate of one million dollars an hour. The costs will double and re-double in the coming decade of the '80s according to the estimate of the former Secretary.

The figures reflect "private" medical care. The high cost of getting sick in America.

The following chart and presentation will show the private sector falls far behind in costs when the State or bureaucracy assumes the administration of care to a handicapped individual.

Sincerely,

J. B. Barry

J. B. Barry

Harborview Valdez	92	all ages	1		$100*	$3,000	$36,000	$3,312,000	0
Satellite Home Program Anchorage	3	all ages				$1,075	$12,900	$38,700	60
Dev. Center Anchorage a) Day Care	45	under 18	1		paid by parent				0
b) 24 hour Respite	8	under 18	1		$65	$1,950	$23,400	$187,200	0

*Funding is based on I.Q. It averages $140 to $160 per day according to figures compiled by Satellite Home Program.

THE REAL COST OF OUT-OF-HOME CARE

The State of Alaska taxpayers could save a minimum of $10,000 a month if the resident population of each Hope Cottage and Harborview were reduced by ONE. This is a minimum of $120,000 a year. These figures reflect only the basic cost of care.

The $10,000 does not include Medicaid, (another taxpayer expense) the burgeoning bureaucracy deemed necessary to administer to a handicapped individual or the special education expenses incurred by students from other school districts being placed in Anchorage or Valdez.

Currently at Harborview Developmental Center in Valdez, the State operated institution for the mentally retarded, 92 clients are served. In FY 7[illegible] 130 positions were funded for Harborview at $5,566,800! That's over $60,000 in salaries per client!

The $5,000,000 is above and beyond the daily amount charged for the care of each resident, funds derived from Supplemental Security Income, Aid to the Disabled (more taxes) or any of the other extras listed. (still more taxes)

Additionally, Hope Cottages, Inc. maintains 14 cottages. These cottages need houseparents. Two additional cottages require houseparents and twenty four hour nursing care. There is also an administration building on Bering Street. To provide a more "home like" atmosphere, Hope is constructing two new 10 bed intermediate care facilities to replace an existing 20 bed facility.

Who pays for the upkeep, maintenance, the purchasing and building of all these physical plants? WE DO. Either by taxes or direct contributions, it's all coming out of the same pocket.

A good example to consider is the Satellite Home Program. They place only moderate to severely handicapped individuals presently residing in institutions. They pay $1,075 per month to foster parents. Fantastic savings to the taxpayers compared to the tremendous cost of institutionalization. Sounds too good to be true, doesn't it?

It is true, but there is a major flaw. The program has been in operation for three years and has placed only three individuals. Three in three years!

It is safe to assume the level of payment to foster parents has remained constant in three years. Want to bet the administrative costs of the program have remained the same?

When I mentioned the possibility of giving the $1075 to the biological parents to enable them to take their child out of the institution, it was greeted by the administrators with an abundance of silence. However, assurances were made that as soon as the foster network was perfected, the very next step would be home placements. At the rate they have established in the last three years, not many of us will still be on this earth to see it happen, nor will the royalty oil payments be here.

WHY IS CARING FOR THE HANDICAPPED SO LUCRATIVE?

Like too many aspects of government or welfare programs, the situation concerning the retarded and handicapped and its terrible consequent costs to the taxpayers, families, children and society evolved from the humanitarian ideal to provide care for the disadvantaged.

Follow the ludicrous evolution. First, lacking support services for the family, the child must be placed in an institution. Level one is created. The institutions are filling up.

Create a network of mini-institutions and call them "group homes". The public has an impression of the handicapped in a cozy home like setting and they just "eat up" that idea. Level two is created.

Now the bureaucrats are really getting somewhere. If "group homes" went over so great with the public, let's try foster homes. Take people out of "group homes" and put them in "for real" homes. One child per home. What a novel idea! John Q. Public falls all over himself applauding the concept. The bureaucrats are delirious! Level three is created.

Now they sit back and maintain nothing could possibly be missing from this plan of total and complete care for the handicapped.

THE IMPACT OF OUT-OF-HOME CARE ON THE FAMILY UNIT

Oh yes, the family. That pesty group of folks that have given hard working bureaucrats headaches and ulcers from day one. This very same group even has the audacity to demand the needs of their child take precedence over form filling and paperwork. Therefore, a plan must be perfected to put these pests in their rightful place- out of our hair!

First we place the institution so remote physically that it will be a real hardship to drive or fly to. (e.g.Valdez) The hotel rooms in the town would be $56 a day. Of course, in the winter the rooms are only $48 but that would by no major problem. The drive in the winter would be so hazardous, few would ever attempt it.

For those hardy souls that do make it to the institution on a winter weekend, we will make sure only substitute administrative personnel will be on duty. These people would know nothing of the weekday activities of the child and would write down all the parent's questions for us to answer by mail in due time.

To further discourage these family ties, there would be no private room available at the institution for visits. If they want to be alone with the child, let them take him or her to their hotel. If their room happens to be on the second floor of a hotel without an elevator and their child is 105 pounds and non-ambulatory, that's their problem, not the administration's.

They are welcome to visit in the resident hall. These parents realize what personal contact means to their child or else they wouldn't be there making pests of themselves. Why should they, of all people, begrudge the other twenty residents of that hall pulling, shoving and clammoring for their attention? Those other children need affection too, you know.

By really trying, we can make these parental visits so stressful they will soon cease altogether. The State can not bother with parental feelings of guilt, frustration, loneliness or anxiety. We have our priorities. We must make sure an increase in funding makes it through the Legislature this session.

Disgusting scenario, isn't it? It happens very day across the United States. Alaska is no exception and may very well be the leader.

The dehumanizing effect of institutions transcends the family to the child. The child is rewarded for following the "pack" Any individuality becomes "unacceptable" behavior. Children must fit the molds established by the institution. The change from the child the parents knew to the "institution child" adds to the stress and sense of failure to the parents. All their work with their child ends up with "proper, regimented institutional behavior".

Some parents turn to alcohol to ease the pain. Others block emotionally all reference to the child ever having been in their lives. Still others, unable to stand the combined strain any longer, get divorced.

Oh, but wait, you say! What about "group homes" close to the parents? That way the parents could have the child on weekends and holidays. How would you like such visitation rights with your child? Ask the thousands of divorced parents with these very rights about their frustrations. How many eventually stop the visits and the monthly checks usually stop shortly thereafter. Anyone can check the welfare rolls for verification.

The child has become a visitor to the life they once lived, confused and disoriented by two sets of people and two different locations.

What to do then?

THE MOST COST EFFECTIVE SOLUTION TO OUT-OF-HOME CARE

It should be fixed in the mind of every taxpayer that institutions and "group homes" are outrageously expensive and definitely deficient alternatives to home care and not vice versa.

The absurdity of foster placements must be made absolutely clear. How can money and support services be given to complete strangers for care of a child without even the slightest thought given to the parents?

No amount of training can teach a foster parent the subtle nuances of a child's behavior that signal an impending ear infection, the cutting of a new tooth or the beginnings of discomfort with a too snug orthopedic brace. The parallel would be a new baby's cry. The parents can tell if the baby is wet, hungry, scared or just lonely. To the outsider, it all sounds like squalling.

Perhaps all families are not able to care for their child in the home. No one knows. No one has ever cared enough to ask. It has become "against the system" to keep the family intact. Out of home care has become the first, not the last, alternative.

The following is a true story of what happened to an Anchorage family.

After 12 years of struggle in a system that harks you to "Walk For Hope", give to the less fortunate, support this, support that, etc., etc., ad infinitum, there comes a day you can no longer cope. To reach this point you can no longer do it alone, emotionally, physically or financially.

You call Hope Cottage. The only person who can help you with your questions is out of the office. He will return your call.

A very nice man tells you he will send a packet of forms to fill out and return. He then asks you about your child. You hear yourself reciting the terms you have heard and used for 12 years.

A 105 pound, 12 year old Caucasian female, multi-handicapped from Rubella Syndrome, including mental retardation, cerebral palsy, seizure disorder in the right hemisphere, non ambulatory without the aid of orthopedic appliances.

No matter how many times you have used this description, it always strikes you as an odd way to describe your beautiful, loving daughter whose one misfortune in life was being born of a mother that contracted German measles.

The nice man expresses surprise that you have kept your child in the home for such an extended period of time. However, since your daughter is non-ambulatory, there are only two cottages that could help her but--those two are full, of course. You will be placed on a waiting list. The waiting period? Six weeks to two years.

In desperation you cry out at this complete stranger. You tell him you can't make it another six weeks or two years. You need help now or you wouldn't be calling. One doesn't plan two years in advance for the day of desperation to get in!

He suggests the foster home program run by Clyde Farrington and Harborview in Valdez. You thank him quietly and hang up. You feel

like a fool for breaking down to a complete stranger. You mentally kick yourself for losing control and pick up the phone again.

You call Clyde first because you have known him for a long time. Your daughter was his first student when he came to Alaska on a Vision and Hearing Impairment Grant your organization had helped to secure. When a parents group was formed for the V.H.I. children, you were the first one called to lead it. You attended conferences on leadership, copeing, advocacy and assertiveness on behalf of the group. Your home was the overnight hotel for out of state conferees to Anchorage workshops, parent advocates and special education people. Your relationship was expanded and ongoing with Clyde, not just the typical parent-teacher one.

He comes on the phone and expounds on the Satellite Home Program. Being such a fantastic program, there is a waiting list of 35 at that time. When you express shock at the program being around for three years and you never hearing about it the reply is simple. Their thrust is to get children out of institutions and into homes. You reply your thrust is to keep your child out of the institution and in the home.

Impasse established. No precedent for operating in such a logical manner. Not enough public support salaries will be generated if this revolutionary idea of home care catches on.

Out comes the phone book again. You call everyone in town who has been to or knows anything at all about Harborview. The opinions vary: never been there, too far away, better than it used to be, it's clean, an insane asylum, good school program, and nice place to visit but--.

The people you have spoken to are parents, legislators, advocates and medical professionals. The questions take on new meaning to all of them for they have witnessed your struggle all those years. So they answer your questions and they express regret that no alternatives are available.

You make the trip to Valdez already feeling the loneliness. You hold your daughter close, stroke her hair, memorize her every move and you cry.

But none of this prepares you for the trip home. The uncontrollable weeping as each mile takes you that much farther from your little girl. The opening of the door to a house that used to be a home. The bed she slept in two nights ago. Scattered toys. An idle rocking chair. Stuffed animals awaiting her return.

You take it a painful day at a time, knowing eventually the pain will have to lessen. The confusion on the faces of friends not knowing what to say when they realize she is gone. The stammering

of the person who says "She's better off there with her own kind" when they see the crushed look that lightly tossed remark has caused. So you see, the real cost of institutionalization and the destruction of a family unit does indeed become most expensive to everyone concerned.

Let's put the astronomical wast inherent in this system aside. Take the $1075 a month presently being given to strangers and offer it to the parents of children in institutions, group homes or on waiting lists. Let them purchase the services required to keep their child home. The money will be spent more efficiently by a caring parent than a paper pushing bureaucrat.

The most expensive institution care is for a multi-handicapped, non-ambulatory child. This care tilts the cash register at a minimum of $36,000 a year for basic costs excluding medical. There is at least one family in Anchorage that would use the money to purchase a van with a hydraulic lift, drive Thompson Pass in the dead of winter and bring their child home. That one purchase by this family would save the taxpayers of Alaska over $23,000 that year. The other benefits speak eloquently alone.

For the parents of the marginally or moderately handicapped, this money might provide enough income to allow a parent to stay home without wrecking the family budget. This in turn would provide the continuing support and encouragement needed for their children to become young adults with the self-confidence and abilities to hold jobs in our community. These young adults break the cycle. They become tax payers instead of tax burdens.

We don't need high priced consultants to figure out how to do this or to tell us "it should be done". There is a wealth of free talent here in Anchorage. The parents of the handicapped are doctors, attorneys, accountants, insurance agents, Labor leaders. They have volunteered their time before and will be glad to do so again.

CONCLUSION

We can no longer afford to allow institutions, "group homes" or foster programs to flourish behind the banner of "Helping those unable to help themselves"! Preying on the sympathies of the public has been too lucrative for too long. This vicious cycle of waste for out of home care must be stopped. The taxpayers can no longer be over burdened with three layers of bureaucracy to support an unwieldly system that will never be as cost efficient as the good old American family.

Dear Legislators and Delegates:

We would like to suggest to the Future Frontiers symposium that consideration be given to providing a loan fund for all utility companies both publicly and investor owned, operating in Alaska particularly the smaller utilities. There were 211 certificated utilities in the state as of December 31, 1978. Of this number, only 21 had gross revenues in excess of $1,000,000, and only 11 had gross revenues in excess of $5,000,000.

The greatest problem facing utilities in Alaska is the difficulty in obtaining financing that has a term comparable to the life of the asset being acquired. In almost all cases, smaller utilities are limited to bank financing of 5 to 7 years maximum, even though the asset may have a life expectancy of 30 or more years. The utility, of course, is required to depreciate the asset over its useful life, not the life of the loan. The result is similar to someone buying a house. Instead of being given a 30 year mortgage, the homeowner is given a 5 to 7 year mortgage, but because his "family" is increasing, he is also expected to made the additions to his house every year. That is the experience of a utility operator today. Although we are now in a temporary slow growth period, future demands for increased and expanded services are anticipated.

Utility operators are basically "cost-plus" contractors. Their costs are submitted to the Alaska Public Utilities Commission, and after due process a rate is established. Included in those costs is the cost of capital. Although it is of greater concern to the utility companies to obtain a more realistic term (time

period), if the state desired to make loans to utility operators at a rate lower than market, the savings would accrue to the rate-payer, since the cost of service is now lower.

Our proposal is to create a procedure whereby utilities, both public and investor owned, could obtain monies from the permanent fund with a term to coincide with the estimated life of the asset being acquired, with a maximum term of 25 to 30 years. To reduce administrative costs, perhaps a bank's participation in a portion of the loan would be desirable. The utility would be responsible to show it could repay the loan. The major advantages to this proposal are:

1. The money is spent in Alaska by Alaskans for the providing vital utility services.

2. Utilities which are forced to make purchase decisions based upon the lowest acquisition cost could now evaluate "lifetime costing". A sound procedure not available to those who do not have access to reasonable financing terms.

3. There is an opportunity to reduce the utility's cost of capital, hence its rates, to the Alaskan people, if the legislature wishes to make loans at a reduced rate of interest.

We would be willing to meet with this group, or any other legislative group at any time. We feel Alaskan utility operators provide vital services to the people of Alaska and that the legislators need to understand their problems.

Very truly yours,

ALASKA UTILITIES ASSOCIATION

What constitutes a "month's rent" for a rental apartment? Is it a half month's rent..the deposit..part of the deposit or the full month..? Can three kids under 18 years of age move into a $350.00 a month apartment, paying $100 only and remain in the apartment with the protection of the police against the house owner? The answer is, unfortunately, yes. Because of the looseness of the prevailing rental laws here in Alaska, actual crimes are being peppetrated against landlords and much cheating owners of their due payment exists. Once the renters obtain ANY KIND of a receipt at all (even for the $100 which was PART of a deposit) they cannot be put out without much expensive legal work, i.e. obtaining an eviction notice, serving them and then waiting out the 10 days for them to vacate...also an attorney must be hired to write the letters and set all of this in motion.

While I was in Florida during the months of April and May, 1979..I instructed my son to advertise (I wrote the ads) the nicer upper apartment of my duplex and try to get suitable renters..The ad read, "$350 a month, $150 deposit." FURNISHED A girl 16 and a boy 17 answered the ad and said that they only had $100 but would come up with the rest after they had moved in on June 1st...My son didn't know how to handle this and he got a friend, 58, to come over and this friend accepted the $100 and made the girl, 16, sign a note saying they would pay the rest by June 8th.. He gave her a receipt for $100...They said they were sister and brother but the boy was Jewish. TWO young men, another kid of 15, moved in at the same time as these two...They in turn, accepted some rent money from 3 other young people and put down mattresses in one of the two bedrooms of the apartment...sublet it, if you please..

I came back from Tampa on June 11th after a very long trip and many hours..I asked my son, "did you get the rest of the rent"..he said, "NO, they are sleeping up there"...this was 4:00 p.m....I went up, knocked on the inner door and much movement ensued..there were 4 of them resting in order that they might be able to perform much activity during the whole of each night that they were in my home...I asked if they had the rest of the rent money..$400. They said they hadn't. I very calmly told them that they had enjoyed 11 days of free rent for 6 people and would they now just pack up and leave..The girl said, "We have a receipt!"...She got some counselor on the phone who screamed at me that "YOU CAN'T THROW THEM OUT, DO YOU HEAR!" I told everyone that they had not really RENTED MY PLACE AT ALL...that it did not constitute a real rental. I called the police to bear me out..They sided with the kids and said , "No, you will have to go down and get an eviction notice"..and then serve it and they can be evicted 10 days after serving this notice..I told them I did not have the money for any of this action..No matter..that was the way it had to be..

The police let me remove some fine books, afghans, Beethoven records, books, linen, pillows and quite a few nice things that had been left up there..This big moving business up and down the basement stairs I performed with asthma making my lungs ache and very short of breath, up and down, while the kids laughed...

They said they had paid $200, not $100...In two days time, I obtained the real receipt that this friend had them sign..It read that they would pay $200 more on June 8 (which date had come and gone) and that they would have the entire $500 paid "by June 31st". So, they had lied about having paid more than the $100 for which they had a receipt. When I got home, I told them the news, ringing the front door bell and standing courteously outside on the porch. They excitedly told me that I had to get an eviction and that I could not turn off the hot water and heat and that I had to let them use the laundry room. They told me how I was going to run things or else. I called the police again..I stayed outside and did some weeding in the front yard and it needed it..

The police came out to tell me that they could not be evicted without the whole legal megilla and "don't turn off their heat and hot water either"...I said "Could I go in and get that large painting from over the couch"..It does not go with the apartment".. "NO" said Officer Shambaugh (?) I said, "You come with me, we'll go in there together".. He proclaimed, "Don't go in that apartment, don't touch that painting, put down that painting"..and with that last statement, he handcuffed me and put me under arrest, strongarming me and shoving me back and forth in front of 7 strangers..The girl's father and uncle had come over to see that this mean old landlady did not harm their amateur prostitute.

Officer Shambaugh rushed, shoved and dangled me outwards towards the door and in so doing my foot struck the handle.."Oh" cried the arresting officer, "Assault and battery"..and lo, and behold, he took me to the station, I was before a woman judge there, who said, "It seems as if the kids paid part of the deposit and NONE of the rent"..this zealous officer said, "there was a promise to pay"..and I was taken to the womans prison and booked and fingerprinted, the whole thing. It was an exhausting, humiliating and physically abusive experience. I was released in custody of my 26 year old daughter who has her own apartment on Barrow St.

Officer Shambaugh turned my duplex and all my possessions over to these strange and wayward kids. There was no relative of mine present during all this... He made large black and blue bruises on my arms which lasted for over 2 weeks...My thumbs were so numb that I could put pins in both of them (or either of them) and not feel it and this condition lasted over a month.

Socially I have suffered more than emotionally...friends of my two boys have taunted me with "Well, I have never been arrested". People tell me, "You can't be such a good Christian, I saw your name in the paper for assault and battrey." One so called friend said, "A lot of people saw this in the paper,"..I replied, "and a lot of people didn't"...Besides shame there was expense as I saw two lawyers.. Mr. Charles Tulin who said it was about the rottenest thing that could happen to a woman alone..that it would NOT have happened if I had been a couple or a man..The other attorney charged me $97.50 for writing a letter, using strong terms to threaten the kids to move, which I never used with them.

LETTER

I endured their nightly party noises for 6 nights thereafter...so much banging and fighting going on that I called the police 2 more nights..I was alone in the basement apartment and afraid of them and of their conditon. I've had no experience with any of this sort of person before..the police came once after 2 hours and the 2nd time did not respond at all..they told them to "quiet down" and then left.

They moved, in part, the following Monday, leaving so much behind that I was afraid to go in and begin to clean up..they did not turn in a key BUT PASSED IT AROUND TO ANYONE WHO NEEDED A PLACE TO GO FOR THE NIGHT..I would hear footsteps at night , either one person or two persons, and they would bed down. This also frightened me plenty. Finally, I changed the locks on the two front doors and packed up their things. A man, 24, came to get the boxes on June 24th..He had to come down and ask me to gain entry. He said he knew nothing about the whole thing, but had given the kids money to sleep in the apartment. He was not the same type as they were.

I have not rented the place again and have done without this extra money. I was a widow who remarried in 1970...this husband went to work on the pipeline and did not return after April 10th, 1977...We had a complicated 3 day divorce trial where he claimed half of my home here and other land. Therefore, I am not well off, but live mainly on my late husband's Social Security death benefits as my youngest son is 15. I could use a little financial help from a renter, but am too scared to rent anymore. P.S. Officer Shambaugh was named "Officer of the Year" much to my consternation.

It is up to the State Legislature to spell out and think it through "just what constitutes a renter"..present law does not answer the question.

Please be advised that I had rented to others, off and on, since Nov.1977 and received as much as $400 for the apartment and it is worth this. However, never did I run into anything like this last adventure. It goes without saying that had I been in command of my home these renters would not have moved in at all.. But, with apartments empty, there are many no-goods who are pulling this same stunt.

Please take it under consideration in the 1980 legislature session.
Respectfully,

Gloria Thompson

Rep. Randy Philips

Alaska need railroads, and the railroads need Alaska, But most important, Alaska's rate of growth may depend on rail carco transportation, and planning as well as investing for cargo freight from Canada and the lower 48 is vital now.

We cannot talk about Alaska, without mentioning the Alaska population. That population is along the railbelt. The Alaska population boom will keep unfortunately, along the railbelt. For whatever reason, the Federal Government is not going to open up the land. If the Federal opens the land, the railroad is the cheapest, fastest, and most efficient way to open that land.

It is more than utopian to think that the Federal Government will contribute to extend a railroad link from Alaska to Canada, when the Federal does not want to open the land now. In order to push the Federal against the wall to open the land, the state has to take concrete measures, to start building by its own effort and resource the railroad link. That will give a very good idea to the Federal, from where the state is coming from. If the most important problem for the Alaskan is to open up the land, we should forget about capital move, in which Alaskans are splited, and start concentrating on the railroad.

Without a railroad line that link to the lower 48, no mining will take place in Alaska. Without no mining, there is not too many reasons to open up the land. No private investors group will start to build a railroad without fiven to them the traditional so many acres as a grant along the entire line of rails. Nowadays, far from the railroad tycoon's age, nor the state, neither the

Federal is willing to give such a grant.

The railroad has to keep running in order to make per ton/mile costs meaningful. A railroad to be profitable MUST be interstate. And the same apply for almost any means of transportation, shipping, airline or trucking. And the more combination there are of all of them no t excluding the railroad, the more benefits to everybody, mainly the consumers.

I think behind the government regulation and project lay not a big brother brand of creeping socialism, but always a private vested interest. Unfortunately, or fortunately, we do not have enough private vested interests. Otherwise, we will have seen not just one, but a few railroad links to Canada and the contiguous lower 48. After so much heresay by every body in Alaska, the only one that have suited the Federal Government is a mining company. With so many diversity of private vested interests. Behind environmentalism, such a company looks like David and Goliath.

I propose that we should forget about the capital move and concentrate in building a railroad link to Canada and the Lower 48. Because the benefit will be greater to the railbelt area without harm to the southeast.

Jose Peguero

Anchorage, Alaska

Nov. 30 1978

First I would like to express my appreciation to the sponsorship of "Future Frontiers" by the State Legislature, the Chairmen, Senator Hohman and Representative Meekins, the Delegates present and of course an invaluable staff to ingest this task and putting it into a functioning product.

It is with great need that a huge and diverse country, with so much natural and human Resource, have a forum Review over such rapid strides since statehood. And to project and plot some of the best courses possible for our immediate benefit and to those Alaskans yet to be.

My thirty-Five years in Alaska have been exciting and fullfilling. I have traveled to at least 90% of this tremendous country and have lived in all the climatic zones with the exception of the Arctic Slope.

I have arrived at a few conclusions, and will do so given this Forum opportunity.

First I highly recommend to the Alaska State Legislature that it form and fund with impetus a Blue Ribbon (panel) Committee to study Certain (viable) resources, labor, markets-State, National, International for Manufactured Alaskan Products.

The flattening local, and national economy is something of a reminder (Anchorage) of being back to the pre-pipeline days, where nearly half of the local economy is generated by Government programs and jobs. This is often the continual case thru out the State.

To some extent this has been counterbalanced with great sales of Raw-Resource, fish, timber and now a strong state income on sales of Crude Oil.

Herein lies the problem, there simply is not a 'middle level', that can insulate us against permanent disabilities of sale of non-renewable resources including the permanent exclusion of vasts amount of land to the use of Alaskans. Monuments are definetely an example OF non-use resource or otherwise.

We certainly conform to the prevailing opinion of ecological use maximizing our preservation of the natural enviroment, but to our absolute exlusion?

I do know what the lack of controls can leave and as a youngster played among the desolute tailing piles of the Gold fields and the Copper pits of Kennecott, to name a few.

Again Alaska's contribution to the Gross National Product is indeed a pecularity among the fifty states, basically hostage by small population and vast resource.

We simply manufacture little or nothing.

We leave it to economists who say labor is too expensive.

We leave it to entrepreneurs who wind up making the immediate dollar, retailing from national outlets.

We leave jobs,jobs-as catch phrases for political candidates or office holders as campaign fodder, but all to often basic devlopement plans are lost in the work load of Legislature.

I just simply believe that our degree of technology, computer wizardry and the strong Spirit of Alaskans - is falling far short of the challenge.

It has become a 'state of mind', well " this certain product, is being shipped in by Sea-Land or Tote carriers." Self sufficiency of good Alaskans certainly sounds good but just isn't there in the material sense.

Well I feel we are sitting on this one.

The Nordic countries with numerous costs are simply more productive and spirited to these ends.

It is Manifest for us, writing Alaskan history, a state moving into its third decade to produce hand-machine made goods, rather than bear such a tremendous raw resource outflow.

Please, we must examine this and put it to Resolve, before the state and private sectors.

I would like to represent one other position briefly here. That is the possibility of a redistribution to Alaskans in some form a 'windfall' royalty from Alaskan crude oil.

The Governor's office has been in huddle and critized with regard to discontinuing the state income tax, or a viable tax credit (energy) to Alaskans.

I urge that an Energy Tax Credit be put on line on a sliding scale.

The Alaskan home owners would be receiving the maximum tax credit benfits and rentors, leasees and down the line.

We must consider the homeowners as a prime target of energy tax credit. they support ultimately the many services that comprise our many cities and towns statewide. Consideration may also be given to the length of residency and home ownership such as given to Alaskan pioneers.

Again I cannot emphasize enough, giving the Alaskan homeowner a strong incentive in an energy credit not solely on energy used but saved!

Perhaps there will be a chance to expand on this during the Forum, thank you,

John Nystrom,Anch.Ak. 99502

Subject: Problems Of Re-Entry After Incarceration

I have been involved with prisoners for the past five years because of the following activities: founder of a Visitation Ministry to Eagle River Correctional Center by the United Methodist Church of Chugiak, chairman since its inception of the Citizen Advisory Committee at Eagle River Correctional Center, and music teacher in the Arts in Prison Program at Eagle River Correctional Center and Ridgeview Correctional Center. As a result of these activities I have become involved in the lives of many prisoners and have experienced with them their difficulties in re-entering society upon release. I have become acutely aware of the near-impossibility of "making it" on the outside. The roadblocks in their way are nearly insurmountable and I am always amazed when someone is able to overcome the odds. What is being done in Alaska to help newly released offenders only scratches the surface of the need. The following programs are a sampling (some of these are not just for ex-offenders):

Glenwood (Halfway House) - Can only take a small percentage of those released on work or school release

Studio Club (and other alcohol and drug abuse programs) - can take only a small percentage

Jaycees Helping Hand Project - small

New Start Center - tries to find jobs for ex-offenders but it is difficult

National Alliance of Businessmen - provides a few jobs

Bean's Cafe - provides food and a warm shelter for Anchorage's street people during daytime hours

Criminal Justice Center TV Ads for hiring ex-offenders - Excellent in giving the public a different perspective and have helped the job situation

Office of Vocational Rehabilitation - helps a limited number of handicapped individuals in job training

Volunteers in Corrections - Has established one-to-one relationships with many prisoners and may carry over when they're out

Probation and Parole - Don't seem to have much impact on ex-offenders lives; have large case loads; not all ex-offenders have to report to them

Prisoners who do not go through other community residental programs (like Halfway House) are typically released with little or no money, no job, no skills or training, no place to live, no appropriate winter clothing. They often have no family to go to, no friends on the outside, no social connections. They have been totally dependent on the state for all their needs and suddenly they are expected to cope with meeting all their own needs. Imagine yourself in this situation: You are taken to a city in a foreign country where you know no one; you can't speak the language very well and you have only $20.00; the customs and culture are strange; when people find out you are an American they refuse to have anything to do with you; you don't know your way around the city and must walk; no one will hire you and you can't find a place to sleep. That is the kind of situation many ex-offenders find themselves in. Its no wonder that many do something that will return them to security (i.e., jail) as soon as possible.

This may seem like an exaggeration but it is an accurate picture of many ex-offender's situation. I have experienced the frustrations, anger, fear and pain right along with several ex-offenders in this situation. And because of the high cost both in money and human suffering I would like to explore some of the causes of the problem and offer some suggestions.

I see at least eight reasons why people fail in their attempts to re-enter society. The first two are the most basic, with several relating to #2.

1. Lack of Money

None of us could survive very long in our society, particularly in Alaska, without cash, credit or collateral. Why do we expect ex-offenders to be able to do it?

2. Poor Self-Image

This is the root cause of many problems ex-offenders face. Subconsciously many feel they deserve failure (or only limited success).

3. Loneliness and Broken Connections

Often the only acceptance an ex-offender gets is from his peers. If he has been in jail long or if the jail is remotely situated his family and friend connections are often broken. Humans need social contact to survive and he may get this only in bars, from "street people", and from other ex-offenders.

4. Cultural Shock

Some kind of decompression experience is needed to make the transition from regimentation and dependency to a free society (which may be very different from the one he left on entering jail).

5. Reverting to Script

Also known as force of habit, or the familiar. Without strong support in changing behavior patterns or reinforcement of changes made while incarcerated it is almost inevitable that he will revert to his previous life script.

6. Despair, Depression, Giving Up

Only a very strong person could endure the rejection and hostility that come to an ex-offender daily. And it is my experience that none feel good about themselves to begin with.

7. Society's Refusal to Mark the Debt "Paid"

People convicted of crimes never stop paying for it. Our society is extremely stingy with forgiveness.

8. Miscellaneous Character Defects

Underdeveloped value systems, hostility, lack of coping skills, alcohol or drug dependency, etc. - the things that put him in jail the first time.

SOLUTIONS

There is no one magic answer. It is a highly complex problem which may be ultimately unsolvable unless prisons are eliminated (except for those who are a clear danger to society and probably wouldn't be re-entering). The problem exists because prisons exist. Accordingly, it follows that anything which keeps individuals out of prison is a solution. There are a number of alternatives to incarceration. One of the most sensible is restitution, which not only helps the victim, but relieves the victim and his fellow taxpayers of the $30,569.00 a year cost of maintaining an inmate in an Alaskan prison. Several others exist, such as probation, drug and alcohol treatment centers, and community service.

Another sensible solution is shorter sentences. It is axiomatic that the longer a person is incarcerated the harder it will be for him to adjust upon release. Incarceration by its nature is psychologically destructive, so no matter how good the program within an institution it can't counteract the harm that being isolated from society does.

Anything that works to prevent dehumanization withing an institution is helpful. When security is a major emphasis and people are treated like dangerous wild animals, they tend to fulfill that expectation. And of course when people are caged they tend to want revenge on the society that does this to them. When institutions are adequately staffed, when policy is consistent and not capricious, when trust exists and people are not labeled, then prisoners are able to have some dignity and feeling of worth.

Anything that gets the community into an institution and the inmates into the community will be a help in the adjustment process.

Some specific suggestions, some long-range and others more immediate, follow:

1. Child abuse programs. Studies show that a large percentage of prisoners were abused children; child abuse repeats itself, generation after generation; Alaska has one of the highest rates of child abuse in the country; and yet our legislature doesn't give funding enough to scratch the surface of the problem.

2. Money upon release. Alaska is one of only four states that gives no money to released prisoners. This is surely the hardest state to survive in without money. This is scandalous and incomprehensible to me.

3. Family sponsorship program. Several states have similar programs. A prisoner is assigned to a volunteer family before release. They can visit him and he can visit them on a furlough. They provide assistance in job hunting, perhaps lodging briefly, moral support, someone to turn to, a sort of "family connection". I tried to start a program like this four years ago but gave up when necessary legislation died after the Anchorage Times labeled it "the prisoner vacation bill". An example of the power of the media and the lack of courage of elected officials.

4. Halfway houses. Anchorage's halfway house doesn't begin to meet the need. Several are needed. If people must be locked up they need a place to adjust gradually to freedom.

5. No remote prisons. If any new prisons are built (which I personally am against) they should be in Anchorage when inmates can keep in touch with their family and friends. This is crucial to keep connections unbroken. It is even more important for the women, many of whom have children, that they not be moved to Palmer. There is no public transportation there and few prisoners' families can afford any other kind.

6. A chance to earn money while incarcerated. Inmates are presently limited to a maximum wage of $3.00 a day. That amounts to slave labor in a country that abolished slavery quite a while ago. Inmates should be paid decent wages for work they perform and be given more opportunities to earn money. Some form of prison industry would seem to be the answer, but this could also be achieved by much wider use of work release. Prisoners could be a good source of manpower of state park projects but they should be paid adequately. A percentage of wages would go for room and board (as it does now) but decent wages would keep some prisoners' families off welfare and enable others to save for release.

7. Volunteer programs. There are many creative, successful projects with prisoners across the cojn try. If the Division of Corrections were more cooperative, less concerned with rules and red tape, and had a Coordinator of Volunteers position I'm sure several programs would develop here. Some of the best work done with prisoners domes from volunteers, who are not hampered by cynicism, worries of job security, bureaucracy, etc. Volunteers bring enthusiasm and idealism and have been lifelines for some prisoners. The more "straight" people an inmate knows the better his chances of success on release.

8. Family Support. A program to help families of prisoners is desperately needed. Their needs fall into two categories:

(1) Basic Survival - warm clothes for the kids, how to get food stamps, how to get to the jail to visit, medical aid, energency food, rent money

(2) Emotional Support - how to cope with having a family member in jail, teaching the kids how to cope with being teased about having a father in jail, feelings of shame and failure, someone to talk to

9. Peer Support Group. These could function something like AA: people who've been there helping each other. This could not be possible unless the law against associating with known felons is changed. This has the potential of being one of the greatest helps an ex-offender could have.

10. Public Education. Better communications (not just PR) from and withing all Criminal Justice agencies is needed. The public must be educated about the realities and the possibilities of the Criminal Justice system. The Criminal Justice Center as hade a good start in this area. If the public were better informed it would be easier for legislators and administrators to make good decisions and to stick with a philosophy that works. As it is now every time there is public (or media) pressure the Division of Corrections changes course.

11. Education for legislators and key state officials (including: governor, attorney general, commissioner health and social services, commissioner public safety) These are the people who make the decisions and often act from ignorance. The Criminal Justice Center could provide a good two or three day training even that would vastly expand perceptions on criminal justice issues.

12. Advisory committees. Each major state correctional center should have a citizen advisory committee and there should be a statewide committee with a member from each center committee. These people could function effectively as liasons between the public and the institutions and assist in developing good relationships between them.

The constitution of the State of Alaska specifies that the purposes of imprisonment are protection and rehabilitation. It does not mention revenge or punishment. If we followed the direction po inted by the constitution we would have far less re-entry problems, a much lower recidivism rate, and a more crime-free society. In Alaska its not too late to do it right!

ALASKA FRONTIERS CONFERENCE - 1979

ALASKA
AN AGRICULTURALLY STRONG INDEPENDENT NATION

DAN C. HADLEY

ALASKA IS EITHER ON THE VERGE OF A BRILLIANT AGRICULTURAL FUTURE WITH THOUSANDS OF PROSPEROUS PRUDUCTIVE FARMS INCORPORATING MILLIONS OF FERTILE ACRES: OR WILL BE RELEGATED INTO A FEW THOUSAND ACRES, WATCHING ITSELF GRADUALLY DIE-OFF WITH LESS AND LESS VITALITY EACH YEAR. IN THIS ARTICLE I WISH TO SHOW: WHAT CAN BE GROWN HERE, HOW MUCH, WHAT QUALITY, WHERE IT CAN BE GROWN, HOW MUCH YEALD, HOW MUCH ACREAGE COULD BE INVOLVED, AND THE TREMENDOUS DOLLAR VALUE.

I HAVE LIVED IN ALASKA NEARLY 10 YEARS AND LOVE THIS PLACE CALLED ALASKA. ALTHOUGH I HAVE ONLY LIVED IN PALMER 5 YEARS AND FARMED A SMALL 5 ACRE FARM THERE, I HAVE STUDIED ALASKA AND ITS INCREDIABLE RESOURCES AND POTENTIAL SINCE I WAS IN HIGH SCHOOL. THE MOST REMARKABLE AND LEAST HERALDED PROSPECT IS ITS EMINENCE AGRICULTURE POTENTIAL.

MY FIELD ACERAGE IS SMALL, BUT EVERY YEAR WHEAT, BARLEY, OATS, RYE, RAPESEED, AND BUCKWHEAT MATURE IN BOUNTIFUL QUANTITIES WITH HIGH QUALITY. I GROW LETTUCE, ZUHCCINI, CAULIFLOWER, AND BROCCOLI COMMERCIALLY, BUT I LIKE TO EXPERIMENT TOO. I HAVE SUCCESSIVELY GROWN WATERMELLONS, CANTELOPES, BELL PEPPERS, SWEETCORN, TOMATOES, EGGPLANT, AND CUCUMBERS; ALL OUTDOORS. ALMOST ALL OF THESE HAVE TAKEN FIRST AND SECOND PLACE RIBBONS AT THE STATE FAIR IN PALMER. IN OUR HOME GARDEN WE GROW PRACTICALLY EVERYTHING WE EAT. BESIDES THE USUAL ALASKAN VEGETABLES LIKE CABBAGE AND CARROTS, AND THE WARM WEATHER THINGS MENTIONED ABOVE, WE GROW MANY TYPES OF SQUASH, POP-CORN, STRAWBERRIES, DRY ONIONS, ACORN SQUASH, NAVY BEANS, GREEN BEANS, GOURDS, AND SUGAR BEETS. WE ARE PROBABLY THE ONLY COMMERCIAL PUMPKIN GROWER IN ALASKA GROWING BETWEEN 50 TO 100 LARGE ONES EACH YEAR IN THE STUMPROWS BETWEEN THE WHEAT FIELDS. IF ALL THIS WASNT ENOUGH, THERE ALSO BEEN VERY INCOURAGING RESULTS IN EXPERIMENTS IN APPLE, CHERRY, APRICOT, PEAR, AND BUSH BERRY PRODUCTION. IT HAS BEEN MY GOOD FORTUNE TO HAVE ASSISTED IN A SMALL WAY IN THIS EXCITING AND SUCCESSFUL EXPERIMENT.

ALL THIS IS NOT INTENDED TO IMPRESS YOU ABOUT MY POWERS AS A FARMER AND GARDENER, BUT RATHER TO DEMENSTRATE TO ALL ALASKANS JUST WHAT CAN BE DONE UP HERE IF SELECTED U OF A TESTED OR SPECIALLY DEVELOPED SEEDS AND ROOT STOCK ARE USED ALONG WITH PROVEN AND NEWLY ESTABOLISHED CULTIVATING PROCEDURES.

AMONG THE SOURCES I USED TO COMPOSE THIS ARTICLE, I FOUND THE FOLLOWING PUBLICATIONS MUST HELPFUL:

1. ALASKAS AGRICULTURAL POTENTIAL, RURAL DEVELOPEMENT COUNCIL
2. SOIL CONSURVATION SERVICE 1973 SUMMARY
3. CREATING A NORTHERN AGRICULTURE, INSTITUTE OF AG. SCIENCES
4. VARIOUS AGRIBOREALIS PUBLICATIONS, U OF A DIV. OF AG. SCIENCE

OTHER SOURCES WERE MOST HELPFUL AS I HAVE TRIED TO KEEP UP WITH RECENT DEVELOPEMENTS, AND HAVE DONE SOME RESEARCH ON MY OWN.

MOST FOLKS FROM THE "OUTSIDE" ARE SHOCKED TO LEARN THAT ALASKANS ONLY PROCUDE 5 PERCENT OF THE FOOD THEY EAT, IMPORTING THE REMAINING 95 PERCENT. ITS SHOCKING TO NOTE THAT THE DELICIOUS LUNCH TODAY WAS ALMOST COMPLETELY IMPORTED. THIS IS NOT THE GREENLAND ICECAP. WHAT IS THE PROBLEM? IT SEEMS THAT INAVAILABILITY OF LAND, GOVERNMENT STRANGULATION, AND ADVERSE MARKETING SYSTEMS COMBINED WITH RESULTING SMALL SCALE OF PRODUCTION (MAKING IT IMPOSSIBLE FOR FARM SUPPORTIVE BUSINESSES AND CO-OPS TO SURVIVE) ARE THE CULPRITS. THE STATE GOVERNMENT IS AS GUILTY OF ALL OF THIS AS IS THE U.S. FEDERAL GOVERNMENT. IT HAS BEEN THE FEDERAL POLICY IN REGARD TO LANDS AND DEVELOPEMENT TO "INIHIBIT AGRICULTURAL DEVELOPEMENT SO AS NOT TO BECOME COMPETITIVE WITH IN-PLACE AGRICULTURAL SYSTEMS IN THE LOWER 48 STATES"

JUST HOW MUCH LAND IS INVOLVED, ESPECIALLY IF WE LOOK AT THE WHOLE PICTURE EXCLUDING THE ARBITRARILY DRAWN LINES ON THE MAP FOR CONSERVATIONALIST WITHDRAWALS? AT ONE TIME IT WAS STATED THAT THERE WAS ONLY SEVERAL THOUSANDS ARES THAT COULD SUPPORT AGRICULTURAL DEVELOPEMENT, AND THAT NEARLY ALL THIS ACREAGE WAS ALREADY DEVELOPING ON THE KENAI PENN., THE MATANUSKA VALLEY AND IN THE TANANA VALLEY NEAR FAIRBANKS. SINCE THE SOIL CONSERVATION SERVICE (SCS) DID THIER STUDY IN 1972 AND 1973 (AND SUBSEQUENT FOLLOW-UP WORK IN THE YEARS SINCE) LITERALLY MILLIONS OF ACRES OF PRIME AGRICULTURAL LANDS HAVE BEEN IDENTIFIED. THIER FIRST REPORT STATED THAT THERE WERE SOME 16 MILLION ACRES OF LANDS CONTAINING CLASS I, II, III SIOLS. SINCE THEN THE FIGURE HAS RISEN TO: 17.5, 20, AND 21 MILLION ACRES. THIS LAND, BESIDES BEING FERTILE ALSO IS CLIMATICALLY SUITED FOR THE MATURING OF ALL SMALL GRAINS (IE. WHEAT, BARLEY AND OATS) AS WELL AS THE USUAL ALASKA VEGETABLE VARITIES.

21 MILLION ACERS OF LAND IS EQUAL TO 32,815 SQUARE MILES, AND IS A TREMENDOUS AMOUNT OF LAND. THIS IS APPROXIMATELY EQUAL IN SIZE TO: THE STATE OF INDIANA, SOUTH CAROLINA, NORTH AND SOUTH IRELAND COMBINED, AND LAKE SUPERIOR. ALTHOUGH ONLY IOWA FARMS MOST OF ITS ACREAGE, MOST OTHER STATES TILL ONLY THE FARMAPLE LANDS WHICH ARE ONLY A PORTION OF THEIR STATES. FOR EXAMPLE: CALIFORNIA FARMS ABOUT 10 MILLION ACRES,

OREGON ABOUT 5M PLUS, AND WASHINGTION STATE LESS THAN 5M. COMBINED THESE THREE STATES FARM LESS THAN THE LATENT AGRICULTURAL LANDS IN ALASKA. ALASKA NOW FARMS ABOUT 17,000 ACRES OUT OF THIS 21 MILLION, WITH THE DELTA BARLEY PROJECT (SEMI-PRIVATE-GOVERNMENT OWNED) SOON ADDING JUST 65,000 ACRES. IN ADDITION TO THIS TREMENDOUS ACERAGE THERE IS ALSO ANOTHER 10 MILLION ACRES OF PRIME GRAZING LANDS, AND APPROXIMATELY 100 MILLION ACRES OF REINDEER LANDS.

JUST WHAT COULD BE PRODUCED ON 21 MILLION ACRES OF TILLABLE AND REINDEER LANDS? HERE IS JUST ONE PROJECTION OF WHAT COULD BE ACCOMPLISHED. KEEP IN MIND THAT ALL THESE ITEMS AND QUANTITIES ARE COMBINED TO FORM A WHOLE; THEY ALL ADD TOGETHER TO FORM A COMPLETE 21M PRODUCRTION. (HELPFUL SOURCE: CREATING A NORTHERN AGRICULTURE, INST. OF AG. SCIENCE).

2,152 MILLION POUNDS BEEF
3,135 MILLION POUNDS PORK
.8 MILLION POUNDS LAMB
13 MILLION POUNDS REINDEER
530 MILLION POUNDS MILK
18 MILLION DOZEN EGGS
.4 MILLION POUNDS WOOL
11 THOUSAND TONS OATS
17 MILLION TONS HAY
1 MILLION TONS VEGETABLES
2 MILLION TONS FRUIT AND BERRIES

SOME PROJECTIONS AS TO AREA AND PRODUCTION PER YEAR:

(IN MILLIONS OF POUNDS)

AREA	BEEF	PORK	MILK	GRAIN
UPPER YUKON VALLEY	1,164	2,444		90
TANANA VALLEY	671	1,247	400	50
MAT-SU AREA	353	421	200	22

THE TOTAL DOLLAR VALUE FROM THIS AGRICULTURAL PROCUCTION IN 1975 DOLLARS WOULD TOTAL 5,415,680 DOLLARS. THIS WOULD ALSO EMPLOY A YEARLY INVENSTMENT OF 73,882 MAN YEARS OF LABOR, PROVIDING EMPLOYMENT TO MANY MORE THAN THIS FIGURE SINCE FARMING WOULD UTILIZE PARTTIME HELP. TOO MANY OF OUR YOUTH ARE GOING JOBLESS, BUT WHY COULDNT THEY BE HELPING THE FARMING ENTERPRISE WHILE EARNING AND LEARNING.

THE BUSINESS SPIN-OFF FROM ALL THIS IS EQUALLY EXCITING. JUST TO SUPPORT SUCH AN EXISTING FARMING STRUCTURE, THE FOLLOWING WOULD BE NEEDED ANUALLY:

3.8 MILLION POUNDS OF FERTILIZER

278 THOUSAND GALLONS DIESEL FUEL AND GASOLINE

2,500 TRACTORS

627 PLOWS

275 COMBINES

THE EQUIPMENT,SUPPLIES AND SERVICES NEEDED FOR THIS MASS FARMING ENTERPIRSE WOULD ALSO EMPLOY THOUSANDS OF PEOPLE AS WELL AS MAKE POSSIBE THE EXISTENCE OF MANY LUCRATIVE BUSINESSES IN THE SUPPLY AND SERVICE AREAS. WE COULD SUPPLY 20 PERCENT OF THE RED MEAT CONSUMPTION IN THE UNITED STATES AND PROVIDE FOOD AND FEED GRAINS TO MOCH OF EAST ASIA. THIS WOULD ENABLE ALASKA TO DO MOCH TO ALEVIATE THE STARVATION AND SUFFERING IN ASIA AND THE WORLD, AS WELL AS ASSIST OTHER DEVELOPING NATIONS WITH THESE NEEDS.

ALASKA HAS 430 MORE HOURS OF SUNSHINE THAN THE CHICAGO ILLINOIS, THAT IS THE EQUIVALENT OF 36 - 12 HOUR DAYS. THEREFORE WHEN CONSIDERING

THE LOWER 48 STATES AND THE 3 MONTHS OF SUMMER THERE: WHILE THEY ARE HAVING 3 MONTHS OF SUNNY WEATHER, WE HERE IN ALASKA ARE ENJOYING 4 MONTHS IN JUST 3 MONTHS. ALSO WHEN YOU CONSIDER THAT VEGETABLES ALSO GROW IN TWILIGHT OUR PLANTS NEVER STOP GROWING IN THE SUMMER (SUMMER NIGHTS ARE DARK DOWN THERE). NO WONDER OUR CABBAGES REACH 70 POUNDS AND MORE UP HERE AND OUR TURNIPS GROW TO OVER 40 POUNDS.

YIELDS PER ACRE ARE ALSO HIGHER. HERE ARE JUST SOME EXAMPLES.

AVERAGE YIELD COMPARISON PER ACRE BETWEEN ALASKA AND THE U.S.A.

	ALASKA	LOWER 48
CABBAGE (6467)	69,604	21,800
BROCCOLI (GEM)	17,338	7,700
BEANS (PROVIDER)	19,213	4,720
CUCUMBERS (TRIPPLE PURPOSE)	57,182	9,380

(ALASKA CUCUMBERS GROWN THROUGH CLEAR PLASTIC MULCH)

THE QUALITY OF ALASKAS AGRICULTURAL PRODUCTS IS ALSO MARKEDLY HIGHER. WHILE SMALL GRAINS YIELD HIGHER AVERAGES PER ACRE THAN THOSE IN THE LOWER 48 (OCCASIONALLY BREAKING NATIONAL RECORDS), THESE SMALL GRAINS ARE CONSISTANTLY VERY HIGH IN PROTIEN AND MILLING QUALITY. RECENTLY ONE OF OUR WHEAT VATITIES WAS TESTED IN THE UNIVERSITY OF NEBRASKA MILLING INSTITUTE. ON A SCALE OF 100 POINTS, CHENA WHEAT GROUND FINE ENOUGH TO RATE 98 POINTS. ONLY ONE OTHER WHEAT EVER TESTED THERE SCORED HIGHER (99), AND OUR WHEAT WAS SAID TO BE THE SECOND BEST EVER TESTED THERE. VEGETABLES HAVE ALSO HAD SIMILAR SUCCESS. A TEST DONE AT THE MATANUSKA EXPERIMENTAL STATION A FEW YEARS AGO TESTED CELLULOSE THICKNESS (THE OUTER PROTECTIVE FIBER LAYER THAT CAN MAKE VEGETABLES TOUGH), AND SUGAR CONTENT. THEY FOUND THERE TO BE A SUGNIFICANT DIFFERENCE IN CELLULOSE THICKNESS, AND THE SUGAR CONTENT TO BE ALMOST HALF AGAIN THE U.S. AVERAGE IN MANY VEGETABLES.

WHAT DOES ALL THIS MEAN TO ALASKA AS AN INDEPENDENT NATION? FIRST OF ALL IT MEANS THAT WE CAN VERY WELL FEND FOR OURSELVES BY PROVIDING MOST OF THE MEAT, CEREALS, BREADS, DAIRY PRODUCTS, VEGETABLES, SUGAR, AND EVEN SOME FRUIT. WE CAN ALSO EXPORT A SUBSTANTIAL PORTION, FURTHER ENHANCING THE BALLANCE OF TRADE IN OR FAVOR. THIS CONCEPT WILL ALSO ENCOURAGE SETTELMENT OF LAND BY TURNING THESE VALUABLE ACRES FROM GOVERNMENT OWNERSHIP TO PRIVATE OWNERSHIP, AND THUS BECOMING TAX-GENERATING INSTEAD OF A TAX BURDEN. THE SETTLEMENT AND USE OF OUR RICH LATENT AGRICULTURAL LANDS WILL ALSO CONTRIBUTE TO OUR NATIONAL DEFENSE. BY SPREADING THE POPULATON OVER THE LAND A POTENTIAL ENEMY WOULD HAVE A MUCH HARDER TIME SWEEPING OVER THE LAND TO ELIMINATE DEFENSE INSTALLATIONS. A PEOPLE WOULD BE MUCH MORE RELUCTANT TO FIGHT TO PROTECT A HUGE PARK THAN THIER OWN PRIVATE PROPERTY FARMS.

ALASKA INDEED HAS A BRILLIANT AGRICULTURAL FUTURE. EVERYTHING WE USE NEED NOT BE GROWN HERE, BUT THERE IS NO REASON FOR ANYTHING LIKE THE PRESENT SITUATION TO PRESIST. WITH MALNUTRITION RAGING AROUND THE WORLD AND THE ALASKAN PEOPLE STARVING FOR LAND AND OPPORTUNITY, IT IS A CRIME NOT TO UTILIZE THIS IMMENSE RESOURCE IN LAND. IM TIRED OF LAND PLANNERS CLASSIFYING PRIME LANDS INTO PERPETUAL MOOSE-PASTURE, BUREAUCRATS HIDING FACTS FROM THE PUBLIC, AND SEEING CONDOMINIUMS SPRINGING UP LIKE MUSHROOMS IN ANCHORAGE AND FAIRBANKS.

WE HAVE EVERYTHING WE NEED TO BE A TRUELY "GREAT LAND"...WE HAVE BOUNTIFUL OIL, MINERALS, FISH, TIMBER AND RICH AGRICULTURAL LANDS -

WAITING FOR THE PRUDENT AND HARD WORKING FARMER. EVERYTHING THAT IS EXCEPT THE OPPORTUNITY TO ACCOMPLISH THESE GOALS. ALASKA AS AN INDEPENDENT NATION WOULD BE IN THE BEST POSSIBLE POSITION TO ENSURE ITS PEOPLE THE FREEDOM, LIBERTY AND LAND THEY NEED TO BUILD ALASKA INTO THE NATION THAT WE ALL DREAMED OF WHEN WE ASPIRED TO BECOME A STATE IN 1958. INDEPENDENCE IS GROWING IN POPULARITY AT A RAPID RATE AND WE NEED TO PLAN NOW A GREAT, STRONG AND FREE NATION KNOWN THE WORLD OVER AS "ALASKA"

BIOGRAPHICAL SKETCH

Joseph E. Vogler is a Real Estate Developer and Placer Miner.

He is a graduate of the University of Kansas, has a L.L.B Degree and a Juris Doctor Degree.

He has been an Alaskan since 1942 to the present time.

Joseph E. Vogler is the organizer of Alaskans For Independence and has been the Alaska National Chairman since its origin of February 3, 1973.

THE LAND IMPERATIVE
By Joseph E. Vogler

Alaska will have her land and Alaskans will use it. This is as inevitable as the march of the pioneers across America to the Pacific Ocean.

This will not be done as it was in the 48 by an endless path of broken Indian treaties and promises. The Alaska Native Land Claims Settlement Act has assured there will be no repetition of those injustices; but let all who would deny our people, their God given right to land, beware of the actions of people too long denied their due.

The nature-proven prime compulsion of all creatures for an exclusive territorial area for their life-need is too well recognized for argument. Ardrey's - Territorial Imperative, will explain this to the uninitated!

Only the drivel of Bureaucratic fools will dispute this. It is to both this group and the citizens of Alaska, that this is directed; lest it become necessary that the people enforce their God-given unalienable rights by extreme measures.

Alaskans are a hard core of individualists and land oriented individuals. The desire for privacy, individual expression, the opportunity for the do it yourselfer, for self-reliance is rampant in Alaskans. It might well be well described as endemic.

Except for those individuals who come to Alaska to do a job on the people and the land, the majority of Alaskans either own or are looking for a piece of land that he or she can afford. Ask any subdivider or person fortunate enough to own land, what it is that our people want most. Only the shortage of private land or the price bars the vast majority from the land.

To see that this is not a recent development, let us examine our State Constitution. Article 8, Sec. 1 is most explicit in its declaration. "It is the policy of the State to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with public interest."

Many officials in the executive, legislative, and judicial departments have taken their oath to uphold and defend this Constitution. What has been their performance? Miserably poor is the best that can be said for them, at the worst it is outright betrayal of trust. Dr. Mike Beirne tried in vain to remedy twenty years of inaction, only to have the Supreme Court, confuse the word appropriate with the obvious intended connotation, "to expend money for a particular use," a shameful dodge of words.

The Governors, six ways to get land, broadcast to the four corners of Alaska, just before the last election, borders on use of public funds for a personal campaign use and amounted to a despicable deception of the land hungry populace of the great land.

The sale of public lands, certainly is not making lands available for maximum use consistent with the public interest, especially when seniority made a shamble of our young peoples hopes.

The legislatures have hedged, dodged and ignored their duty, to their eternal shame.

The long time honored practice of granting homesteading, headquarter sites, trade and manufacturing sites, and homesites, under well established rules for use, occupancy and development, worked wonders in America and is a good example for the State to follow.

Until our Constitution is amended to mock the present "Lock-up" policies of the United States, it is nothing less than treason of our governors, judges, and legislators, to fail to make our lands available to our people. This must include the development of our resources, the minerals, timber, water power and all that goes with human utilization of this earth to promote a healthier fuller life for our people with less of the privations and difficulties, so prevalent just a short century ago even in America, and still so evident in the third world developing nations where human toil, want and misery are the lot of the multitudes.

I have difficulty in finding an example in the animal kingdom for such a shameful denial of living space to its own kind. For want of a better example, I can only reach back to my boyhood task of slopping the pens of hogs, when I found it necessary to rout with my boot, some of the fat sows, who delighted to lay lengthwise in the trough while swilling down the grain and denying the younger and weaker a space at the trough and their share of food.

Our people will have the land and its resources to provide sites for homes, work and recreation. Jobs, except at the public trough, come only from the use of our land, the harvest of our renewable timber and waters, or the wresting of our mineral wealth from the plains and hills and its processing.

The ongoing robbery of jobs from our people by exporting our oil without all refining processes is a crime against every able bodied man and woman in Alaska who wants to work. Many of our government employees are quick to say that the only reason they work for some branch of government is quite simple, their government jobs are the only ones available. They are just putting beans on the table with the employment that is available! No gas should leave Alaska without full processing for petrochemical uses to make jobs for Alaskans. Payrolls are the feed stock for other service businesses.

Many Alaskans, Native and non-native, who have been forced outside for employment would like to return home, if the opportunities were here for them to work!

This is the result of the culpable and criminal failure of our elected officials to carry out the mandate of our Constitution. When 28,000 Alaskans signed Dr. Beirnes petition, it is consistent with the public interest! And <u>if</u> it was not well-drafted, where was the legislature? And Governor?

We must utilize every gallon of water that runs back to the sea, it is a renewable energy source. As the Shah of Iran said years ago, "petroleum is too scarce and valuable to be used for energy or heat, it should be saved for pharmaceuticals and petrochemicals." Our coal must be fully utilized.

We must make homesteads available of at least 640 acres, in areas beyond the region surrounding population centers needed for habitation, including both industrial and recreation purposes. Only this will offer opportunity to our young potential farmers!

Our timber must be harvested, our minerals mined and processed, our farming developed to feed our people as well as other peoples not so fortuniate in arable land. We must become efficient producers from the bounty of our land, as stewards to the world, to justify our position among the landed nations of the world.

Our land titles must grant both surface and sub-surface rights lest bureaucrats continue in the pattern of paternalistic squandering of our wealth. It worked in America and built the most noble nation. The individual is the best judge of the use of his or her land and its wealth.

If you doubt the truth of these statements listen to the people a bit, while they are still patiently waiting for their God-given dues. Why do they distrust, hate and damn every branch of government?

Read the opening paragraph of the Declaration of Independence and let it soak in, all of it, and tremble at the awesome truth of this noble document, lest it must be carried to its fearsome conclusion when the peoples, patience exhausted and tempers thinned beyond the breaking point, carry out their "duty"; to throw off such government and to provide new guards for their future security."

Let every elected official, every appointed hireling understand that the land belongs to individual people and not to the "Nation" so affectionately termed "the people" by all socialists.

Let every member of the news media realize that it is his or her duty to bring this understanding to fruition lest they be judged as partners in the conspiracy to deny land to the people.

Let every Alaskan become aware of this impending treachery so that he or she can prepare for any eventuality necessary to undo this revolution so brazenly announced in the policy clause of the B. L. M. Organic Act of October 21, 1976, wherein two centuries of magnificient demonstration of "land to the people" in the United States was terminated, 43 USC 701, Declaration of Policy, Sec 102: (a) The Congress declares that it is the policy of the United States that (1) the public land be retained in Federal Ownership.....

If America would trod the blood and tear soaked trail to socialism, it is a very sad day for history, but this should not sway Alaskans from the eternal truths of the Declaration of Independence and the exercise of all their unalienable rights among which are Life, Liberty and the Pursuit of Happiness.

The land of Alaska rightfully belongs to the peoples of Alaska and individuals! It is their right to grant such lands and powers to their government as they see fit! The government has no right to parcel out land and land use to the people! It is the peoples! How can one be granted or given something which one already owns?

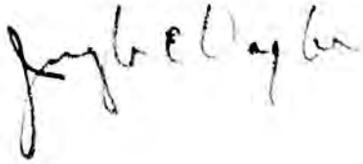
The essence of slavery is the denial of land ownership. Only by thwarting the Territorial Imperative can a people be fully controlled, herded and harnessed to the will of an elitist minority enshrined in bureaucratic security, it is the Territorial Imperative against the Bureaucratic Imperative. If Alaskans would make slaves of themselves and their descendants, they need only submit to the tryanny of Federal Government by failing to demand their God-given right to land by failing to hold their unlawful masters bound by our contracts with the government.

Now for those who still have hopes that the United States will return to the principles which made her a shinning example for all the downtrodden peoples of the world, it is only necessary to examine the course of nations through the pages of history. It will truly take a miracle of untold proportions to alter their course from seeking mass security, to once again seek individual opportunity. The ultimate security from birth to the grave is attained in the institution of slavery, the most degrading of all social systems.

The hope that 400,000 Alaskans can influence 228 million Americans is as if the last hair on the tip of a St. Bernards tail could bounce the rest of the dog up and down like a yo-yo.

As Abraham Lincoln said in his first inaugural address, March 4, 1861, "<u>This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing government they can exercise their constitutional right of amending it, or their revolutionary right to dismember or overthrow it.</u>"

Alaskans <u>inhabit</u> Alaska - <u>NOT</u> the masses of the 48! It belongs to us! Let Alaskans determine our destiny. Let Alaskans control our land in individual



ownership with fee simple, surface and sub-surface rights, but if Alaskans disagree, let it be Alaskans and not outside special interests that determine our destiny. Push all government back in its cage, the limits of the Constitution, and subject to the will of Alaskans.

If America no longer esteems private ownership of land and espouses socialism, it is Alaskas destiny to preserve the original motivating force in Americanism, the private ownership of land and the only practical route to this end is Independence for Alaska with full and complete Sovereignity over the Great land!

Let all in the position of leadership in Native Organizations, business, government, education, the Church, labor, step forward in this rightous battle, as Alaskans seeking self determination for Alaska.

The urgency of 1776 is here today, but the route to its solution is a different path. A peaceful plebiscite, as man struggles upward from the day of the club in the relations between peoples of separated lands!

Colonialism is dying throughout the world; America born of the abuses of Colonialism must not be the last carrier of this malignancy of civilization.

ALASKA'S FUTURE

INDEPENDENCE and DEFENSE

ONE OF THE MOST COMMON QUESTIONS POSED WHEN INDEPENDENCE FOR ALASKA IS DISCUSSED IS, "WHAT WILL WE DO FOR DEFENSE?" TO ANALYZE THIS QUESTION PROPERLY ONE MUST DETERMINE, WHAT IS OUR PRESENT DEFENSE?

NAVAL

TO THE BEST OF OUR KNOWLEDGE THERE ARE NO U.S. NAVAL VESSELS STATIONED IN ALASKA. EVIDENTLY SOME FEW NAVAL AIRCRAFT, MEANT FOR SUBMARINES SURVEILLANCE, COME AND GO IN THE ALEUTIAN AREA. FOR ALL PRACTICAL PURPOSES, ALASKA WITH A LONGER COASTLINE THAN THE ENTIRE LOWER 48, AND A CONTINENTAL SHELF LARGER THAN THAT OF ALL OF THE OTHER 49 STATES, HAS NO NAVAL DEFENSE WHATSOEVER. ACROSS THE BERING STRAITS, IN SOME PLACES A MERE 2 1/2 MILES FROM ALASKA'S SHORES WE ARE FACED WITH THE MOST POWERFUL MILITARY FORCE IN THE WORLD, THE UNION OF SOVIET SOCIALIST REPUBLIC.

THE SOVIET UNION HAS IN THE LAST 15 YEARS BEEN ENGAGED IN A BUILDING PROGRAM WHICH HAS RESULTED IN THE SOVIET NAVY BEING THE MOST MODERN NAVY, AND PERHAPS THE WORLD'S LARGEST. BUT THE UNITED STATES APPEARS TO HAVE OTHER AND MORE STRATEGIC PROBLEMS WITH WHICH IT WISHES TO AMUSE ITSELF, RATHER THAN THE DEFENSE OF CITIZENS OF ALASKA, THE FEDERAL UNIONS LARGEST STATE.

AIR DEFENSE BY THE UNITED STATES AIR FORCE IS WOEFULLY DEFICIENT. THE AIR DEFENSE OF ALASKA EVIDENTLY CONSISTS OF BETWEEN 18 AND 36 PHANTOM II JET AIRCRAFT. THESE AIRCRAFT WERE DESIGNED 21 OR MORE YEARS AGO. THIS SQUADRON OF PHANTOMS IS NOT EVEN PERMANENTLY STATIONED IN ALASKA. SINCE ALASKA STRETCHES OVER SUCH A VAST AREA (FROM ATLANTA TO SAN DIEGO AND NORTH AS FAR AS WISCONSIN) IT IS APPARENT THAT THE U.S.A. CANNOT DEFEND ALASKA WITH THESE PITIFULLY FEW, OLD AIRPLANES. BY CONTRAST, ISRAEL IS 180 MILES LONG BY ABOUT 50 MILES WIDE AND THE ISRAELI GOVERNMENT CONSIDERS 500 AIRCRAFT AS A BARE MINIMUM FOR AN ADEQUATE DEFENSE. AND WE MIGHT POINT OUT, ISRAEL IS NOT A MERE 2 1/2 MILES FROM THE SOVIET UNION. THE TRUTH OF THE MATTER IS THAT THE FEW AGED McDONNELL DOUGLAS PHANTOM IIs ARE PART OF THE EARLY WARNING NETWORK FOR THE LOWER 48 STATES, AND ARE NOT AND COULD NOT MUSTER A DEFENSE FOR ALASKA OR ALASKANS.

IN TERMS OF GROUND TROOPS, ALASKA IS DEFENDED BY A SINGLE INFANTRY BRIGADE WITH SOME SUPPORT UNITS. THAT IS SIGNIFICANTLY LESS THAN ONE DIVISION. FURTHER THE QUALITY OF THESE TROOPS ARE IN SERIOUS QUESTION, WHICH BECOMES EVEN MORE EVIDENT WHEN ONE VIEWS THEIR NUMEROUS WAR GAMES LOSSES TO THE ALASKA NATIONAL GUARD. THIS FORCE COULD NOT CONTAIN OR DELAY EVEN A MODEST SOVIET ATTACK, MUST LESS ONE THAT IS WELL ORGANIZED AND DETERMINED. WE MUST NOT FORGET THAT THE SOVIET UNION HAS A GREAT DEAL OF EXPERIENCE IN "FROZEN WARFARE".

FREQUENTLY IT IS MENTIONED THAT THE FUNCTION OF THE ARMY IN ALASKA IS TO HOLD THE AGGRESSORS OFF FOR A FEW HOURS OR DAYS, WHILE A RETREAT TO ALBERTA IS ORGANIZED. ALL VISIBLE EVIDENCE POINTS TO THAT AS BEING THE PROPER ANALYSIS. IT IS APPARENT THAT ALASKA'S PEOPLE, THEIR HOMES, CHILDREN AND BUSINESSES ARE NOT DEFENDED UNDER PRESENT U.S. DEFENSE POLICY. INDEED, NORTH AMERICA'S BACK DOOR IS WIDE OPEN. IT APPEARS THAT IT IS INTENDED TO BE THAT WAY, FOR ALASKA DOES NOT EVEN HAVE THE TACTICAL AIRCRAFT TO SUPPLY ADEQUATE GROUND SUPPORT FOR THE SMALL GROUND FORCES STATIONED HERE.

AN INDEPENDENT ALASKA WOULD HAVE A BETTER DEFENSE, FOR ALASKANS WOULD BE MORE WILLING TO PROTECT THEIR HOMES AND FAMILIES. THE PRESENT SITUATION OF BEING TREATED AS AN EARLY WARNING OUTPOST, A SACRIFICIAL LAMB FOR U.S. MILITARY POLICY IS INTOLERABLE.

ALASKANS FOR INDEPENDENCE
ORGANIZATION & PLANNING COMMITTEE

COOPERATIVE FIRE PROTECTION IN RURAL AREAS

A Request for Consideration
by Ralph E. Crane

To qualify myself to the information submitted in this request, I offer you the following information on myself:

I am 29 years old and arrived in Alaska for the first time in 1959. Since my first arrival I have worked in and formally studied Fire Management as it applies to both wildland and structural fires. I have learned and taught at the college level. My major field of study has been in Public Administration with an emphasis on Fire Management. I have worked as a city fire department engineer in Alaska and a wildland/structure/rescue engineer and fire captain in California.

I can guarantee you I have no monetary interest in whether this concept ever materializes. My only interest in this is based on my own moral values and my ideas of governmental responsibilities to its citizens.

INTRODUCTION

With the current push to dispose land to private citizens, the State Forestry's ability to provide an acceptable level of wildland fire protection in these areas will be severely taxed.*

One obvious alternative to building up government forces to match the increased responsibility, is to recruit the assistance of interested groups of individuals in the more densely populated areas to provide initial attack on wildland fires in their local area.

The program I envision is one where the State Forestry would provide the assistance in organizing, equipping, and training these groups of people toward fire protection in their area. In return for this assistance, these people would agree to provide initial attack on all wildland fires in their area.

There are two primary advantages to this cooperative fire protection concept:

1. It assists the State in meeting its wildland fire protection responsibility in these areas without major increase in expenditures and government employees.
2. It gives the local people an organized, equipped, and trained fire protection unit for their local structures and improvements as well as providing our wildland fire initial attack force.

The other known advantages and disadvantages to this concept will be addressed further on in this report.

*By 1985 it is estimated that 12.4 fires annually will occur at a suppresssion cost of $1,418,132 for each fire! These figures do not reflect the human impact on state lands resulting from the current land disposal program. This human impact will surely cause these figures to rise, however, to what degree they will rise is unknown.

INCREASE IN FIRE PROTECTION RESPONSIBILITY

As members of the State Legislature, you well know the land disposal task assigned the Department of Natural Resources. For the purposes of fire protection, this simply means that, not only are the values-at-risk increasing in these rural and wildland areas, but the man-caused fire risk is increasing at a rate with which the State Forestry is having problems keeping up.

These values-at-risk include homes, outbuildings, lodges, equipment, vehicles, planes, agricultural products, and most important - human lives! These values-at-risk are going to increase with the increase of land disposed. Indeed, in most cases, the condition of gaining title to the land is to provide improvements (values-at-risk) on it.

In turn, the man-caused fire risk increases sharply as these areas are cleared and burned. The fires on the Delta Barley Agricultural Project are examples of this which stick out like a 4 million dollar burnt thumb. This fire began because of land clearing operations in May of '79 and is still burning as I write this in December '79. It is fully expected to take off burning again in the Spring of '80. In 1980 however, the Southcentral District may not be blessed with the wet summer it had this year.

This summer, the Southcentral District could provide the majority of its firefighting forces to the Delta Fire because it was so wet here. This loss of forces in this District left less than the realistic amount of forces necessary to provide protection, should a large fire or a rapid series of smaller fires occur in the Southcentral District. What happens next year if both the Southcentral and Northcentral, possibly even the Southeastern districts experience extreme fire conditions? This state has <u>extremely</u> limited qualified firefighting manpower and equipment to protect its areas of responsibilities when compared to other state wildland fire protection agencies I am familiar with.

COOPERATIVE FIRE PROTECTION - AN ALTERNATIVE

What happens if two or all three Districts experience problem fire conditions? What happens when a wildland fire occurs in an area such as that

near Homer where the State Forestry has the responsibility for wildland fire suppression, but the closest fire control station is in Soldotna, 60 miles away? (By the time Soldotna forces arrive, the small fire has had at least 1½ hours to grow rather large!) These two questions both have an answer I believe warrants serious consideration; why not enlist the aid of local people to provide initial attack forces on those wildland fires in their local areas?

In my contacts with locals, they have certainly shown an extreme interest in providing fire protection for their own areas. Some have even shown an interest in firefighting outside their home area if an extreme need arises. These interested people range from a group of people unfamiliar with firefighting but interested in providing fire protection in their local area, all the way to a well equipped, incorporated fire department with a full roster of qualified firemen.

Thus, the people are there, and in some cases, the equipment is there -- why not use this to help meet the State responsibility for wildland fire protection? Section 41.15.030 of Title 41, Alaska Statutes authorizes the Commissioner of Natural Resources to "make contracts for forest protection."

There are two main reasons for not aggressively attempting to enlist this aid. First, they <u>all</u> need the training to safely and effectively attack wildland fires and most need organizing and equipping to be effective in initial attack. Second, the State Forestry is not currently funded to provide the necessary organization, equipment, and training services to these interested groups. These services are necessary prior to and during the cooperators assistance period to insure that the cooperators are being used in a safe, efficient, and cost effective manner.

The State Forestry is currently making a frustrating effort towards providing these services, without the necessary funding. A prime example of this frustration is the fact that, in an attempt to provide an area such as Chitina with a fire truck that is primarily for wildland use (although they will be using it for structure fires) the State Forestry was limited by cost to install a small 12 gallon per minute pump. For a structure fire and any sizeable wildland fire, this truck could be compared to having a peashooter in an air raid! The hose used for a pump of this capacity is comparable to a garden hose. This water flow would barely produce a fog pattern through

a one inch combination nozzle -- substantially less in performance than the standard 1½ inch combination nozzle used by the effective firefighter.

THE COOPERATIVE CONCEPT - PROS AND CONS

I have endeavored to make a comprehensive list of the advantages and disadvantages to this concept. I realize it does not include every pro and con that special interest groups could identify. It does list the main points I feel important based on my background in fire management.

PROS:

Lower cost to provide both wildland and structural protection.

Provide structure and wildland protection in areas that currently have little or none.

Provide rapid initial attack on wildland fires in areas where quick response can be critical with the nearest State firefighters hours away.

Trains and equips locals in advance of major fires rather than being unskilled when the State needs them the most. An example of this is the Delta Barley and Browns Lake fires where there were many locals hired, to fight fire, that had never even been on a wildland fire before. This not only limits productivity toward suppressing the fire (expensive), it creates an extremely unsafe condition with untrained people working around bulldozers, retardent planes, and the fire itself (lawsuits - very expensive).

Helps downplay the "Bureaucracy image" of State government by reducing the need for more State employees, new fire stations and more equipment that will be necessary to control wildland fires if the cooperative concept does not develop.

More cost effective. While the need for local initial attack forces is critical, full time State forces would be quite expensive when compared to using locals in the area <u>when necessary</u>.

Promotes a "self-help" attitude rather than a maternal "government will protect" attitude. With the current level of State Forestry forces, this "government will protect" attitude could prove fatal to the locals.

CONS:

Will not provide full time firefighters. This, however, must be weighed against the <u>need</u> for full time firefighters.

Will require close monitoring of local forces by the State Forestry to insure an acceptable level of fire protection forces.

Locals are less inclined to have State interests at heart which also

requires the State Forestry to closely monitor to avoid excessive fire "bills".

The State Forestry employees who monitor and manage this concept would have to be carefully selected individuals that are experts in the fields of fire management and public relations, among others, to insure the concept's smooth operation. These people must be dedicated to this concept to insure that any funds allocated to manageing a cooperative fire program would not be misdirected into other programs within the DNR. The head of this program should be delegated the authority to prevent this "misdirection" from occuring. There is a past history of sympathetic legislators granting funds to the fire protection appeal with the administrators of these funds using them for other purposes.

SUMMARY

I know this concept, as I have covered it, still leaves some areas as yet uncovered. I do feel however, that the obvious benefits warrant this concept to be looked at very closely. With the current emphasis being placed on the big money (oil money, bottom fishing, pipelines, etc. - all important, I realize) projects, I certainly hope this idea is not placed on the back shelf "for future consideration." It is critical that something be done now to assist the State in wildland fire protection - before the next Delta Barley fire occurs on Anchorage's East side area, or Anchor Point, or Delta Junction. This concept not only serves this purpose; properly done, it allows a great number of Alaskans to put out a fire in their own house. This is what Alaskan Government is all about to me - helping Alaskans help themselves. Consider it seriously!

FUTURE FRONTIERS

POSITION PAPER ON THE

ALASKA OFF SHORE FISHING OPPORTUNITY

By

Richard Whittaker.
1285 Tongass Avenue
Ketchikan, Alaska

THE PROBLEM:

The writer of this paper believes the State of Alaska is at a great moment of decision; the issue is the off-shore fishery, protected by the Fisheries Management Act of 1976 - the 200-mile economic zone, and whether the resource can be made a part of the Alaskan economy.

Postulated are notions that the current efforts of the State are generally inconsequential as far as the off-shore fishery is concerned because of the enormity of the fishery, and that what will probably happen over the next four or five years is that there will be the development of a fishing industry using great processing and catcher vessels, such as the Koreans, Japanese and Russians are currently using, and which will homeport out of San Diego, Los Angeles, Astoria and Seattle. Alaska faces the strong possibility of no involvement or benefit, once this happens.

Current trends in the fishery indicate to the writer the major Alaskan fishing companies, which are either owned outside Alaska, or in Japan, are juggling for position, because of the enormity of the fishing and the take-over process, but that when it occurs there will be no signficant number of Alaskans in the fishery as fishremen; there will be no shore-based processing except perhaps at Dutch Harbor; there will be little or no Alaska investment and, therefore, no Alaska profits; and there will be no Alaskan tax revenues. In fact there may be very severe economic loss if the modest efforts we do make are frozen out.

Our goal for Alaska should be a vertically and horizontally integrated fishery such as is found in the Faroe Islands, where local people fish the North Atlantic, bringing the fish home for processing to local plants, and the product is sold into world markets through combines and systems owned by the Faroese.

SO WHAT IS TO BE DONE?

The writer proposes a massive investment by the State of Alaska to capture this fishery. Such investment in shorebased processing facilities, in fishing vessels, and in marketing and management networks could control the volume of fish and its price to the point where returns from the fishery would make profits for the people of the State of Alaska and the State.

It is acknowledged that current prices for the off-shore fish are at a low level, but it is also generally understood that this is because of manipulation by the Japanese in the world markets, manipulation which, of course, is to their best interests. We must and can fight back. But we cannot do so within the current scheme of things!

The writer proposes a company called The Alaska Fishing Company incorporated and owned by the State of Alaska, and with directors, some of the best business talent in the State. The company would seek the immediate involvement of the University of Alaska and others in designing research necessary to understand and manage the control of markets as well as to design the research necessary to assure continued renewability of the fishery.

The Alaska Fishing Company would move, following the feasibility studies, to construct vessels and shore-based facilities in an integrated plan which would maximize the contact of every possible maritime Alaskan with the fishery, and which would have a management and marketing plan, totally integrated and leading toward the sound fiscal management of the company. The Alaska Fishing Company would have as its goal the utilization of the fishery only by Alaskans and for Alaskans to the exclusion of multi-nationals, agribusinesses and other outside interests as well as foreign interests A two or three billion dollar investment

is probably necessary to have the impact on markets, and to produce the volume of product necessary to influence prices.

The Alaska Fishing Company would immediately contract with foreign fleet owners and their home countries to commence an integrated and long-term takeover of the fishery, guaranteeing supplies of fish to the companies, to meet their market commitments and the needs of their peoples, and to allow for reasonable phasing out and amortization of the foreign fishing investment.

The Alaska Fishing Company would seek to develop utilization of fish products in other markets besides the Orient, with emphasis on the American markets.

The Alaska Fishing Company has a potential of providing income to Alaskans far exceeding oil. The fishery is one which, if properly managed, would exist until the end of time, and would provide a high degree of stability to a large number of Alaskans.

The Alaska Fishing Company would provide jobs for the communities of maritime Alaska. The financial institutions, service and supply facilities of Anchorage would be heavily impacted as well.

Revenues from the profits of the company would increase the state coffers and, of course, taxes on the incomes of individuals

involved would provide a revenue base as needed in the future.

THE IMPORTANCE OF INVESTING ALASKAN STATE CAPITAL IN THE FISHERY

Alaska is faced with a budgetary surplus which has the potential of destroying Alaska as we now know it, due to avarice and greed.

The stability provided by a direction for the investment of a significant part of the oil surplus money into an industry which would rely on a sustained yield of products, would provide a focus for Alaskans for the near future and provide a proper forum as the company is developed and as the policies are debated by the people of Alaska, for discussing the future of Alaska. Jobs provided would be stable, long-term jobs, and although some considerable inflation and growth will be expected in every maritime community, this would soon be stabilized and probably would not change over a long period of time, witness the experience of the Faroe Islanders.

THE FUTURE, WHAT WILL IT BRING?

The Alaska Fish Company should have two goals: The first would be total utilization of every bit of fish the State could get its hands on; the catching, processing, and selling of same, at a profit. The second goal would be, once the industry was stabilized, to sell the component parts, except for the marketing umbrella, to the individuals and communities involved. The fishing ships should be sold to the local communities which provide the crews and to

the crews. The cold storage and processing facilities should be sold to the local communities and employees. The marketing umbrella and management probably should be maintained by the State, at least until such time as it could be purchased by the fishing and processing componenets, under a scheme which would guarantee unified and integrated management for the common good.

It is anticipated there would be considerable uproar by the fishing industry against such an idea. It is very important to watch where the uproar comes from. It is expected that those persons and companies which are nurtured by outside interests would be vocal in their opposition.

An important part of the development of the fishery would be the aspect and involvement of fishing companies wholly owned by Alaskans. There are a number of these companies which have great growth potential and which have management of high quality. They would be encouraged to expend and move into the fishing opportunity, supported with state funding. While they were developing their own opportunities in the fishery, their counsel and guidance would be of inestimable value to The Alaskan Fishing Company. New companies of Alaskans would also be encouraged.

It is an act of fate that the fish are available at the same time the capital is also available. Otherwise, we Alaskans

would be delegated to watching from the shore as our fish go elsewhere.

AN ACTION PLAN

The writer recommends funding and leadership by the State in marshalling on a crash basis of all resources in and of the State, including the purchase of services as necessary and the hiring of experts in fishing and market economics etc., to develop a feasibility study. The study would recommend the next steps toward the formulation of the plan. State policy could immediately then focus on the U. S. State Department and the Department of Commerce as well as the Congress in order to gain for the State the acceptance, by government, of the State plan. Such action should be well accepted by the Federal Government because of the recent removal from the Alaskan economy of massive amounts of land, and because nothing of great significance has yet happened in the 200-mile fishery by the people of any other state. This interregnum will soon expire, however.

A very well financed and staffed task force should be assembled involving the citizens who can work on the problem, if not full time, at least to a considerable amount of their time, in order to get the plan off the ground and rolling. Citizens' Committees from each of the maritime communities should be immediately formed, financed and staffed so that each Alaskan maritime community

or other community which feels it should have impact from the fishery could design and structure the involvement deemed necessary by those communities.

Areas where there is great economic distress should be given additional support to guarantee that the bountiful harvest will impact the remote and poverty stricken areas of Alaska.

A time table could well be as follows:

1. March 1, 1980. The Administration and Legislature agreeing on a working plan with time goals and budget for each phase.

2. March 15, 1980. Selection of the task force to head up endeavor. The financing and staffing of component parts, such as local community involvement.

3.0 April 1, 1980. Commitment of state funding for research in markets and supply, with a preliminary report of feasibility within 60 days.

4.0 June 1, 1980. State-wide discussion and evaluation of plan and decision by state leaders as to whether the State would move forward to implement the plan or not. Establishment of corporate machinery and funding package. Lobbying federal decision makers for support and such legislative change as is necessary. Commencement of negotiations with foreign fishing interests for the orderly takeover of the fishery.

A FINAL NOTE

The writer feels this opportunity is a challenge to the people of Alaska, and is one which could and should unify us. It can provide a focus, a platform, and a forum for the development of

the people of the state for years to come. The economic and social benefits from implementation of this proposal could well set the course for the future of Alaska.

FUTURE FRONTIERS
308 "G" Street
Anchorage, Alaska 99501

Gentlemen;

While I speak from the point of view of a resident of "Bush Alaska", and a particular segment of it at that, it is my hope that the needs addressed and proposed approaches to their solution, may have validity on a broader scale.

Very truly yours,

Robert B. Gibson

ALASKAN RESOURCES AND ECONOMIC DEVELOPMENT

Alaska has, since its first "discovery" by Western European Civilization and its American representatives, been a valuable source of raw materials, much as were other Crown Colonies of the European countries in other parts of the "New World."

This situation has not substantially changed since the days of Vitus Bering and Captain Cook.

Outside capital has not been, and probably will not be, willing to invest in industry within Alaska which will contribute to Alaska's internal economy or control of its own economic destiny, let alone its entry into the world market-place.

Because of this historic lack of resident venture capital, and the relative scarcity of a large resident labor pool, both the control of the sources of our wealth in renewable and non-renewable resources and their marketing have remained beyond the control of either the citizen of the state, or its government.

Our gold built the port of Seattle, and the gold is gone. Our Fish have sustained it, and to this day most of the fish market is controlled "outside." Our Timber goes out as logs and is sold back to us after outside processing. Our petroleum wealth goes out on ships, and returns after processing at elevated prices. That same petroleum provides the fertilizer and energy that grows the foodstuffs and meat we import. Added to the processing costs we must pay, are the high transport costs (petroleum based) for all of our imports.

Our sole significant source of taxable wealth for the forseeable future is our mineral wealth.

This wealth must be utilized to foster and, as required, support the growth of an Alaskan Economy, diversified and self-sustaining, which will assure economic independence for Alaska.

Those of us who live here have found a way of life satisfying to our own needs and requirements, and need to be able to afford to live here. But as long as this State remains a Crown Colony, it may be a mostly affordable luxury. In this light I should like to propose the following policies be given consideration by the Legislature and the Administration of Alaska.

ALASKAN OIL AND ENERGY

No more immediate threat, or challenge, faces this state than the current world-wide energy crisis. Alaska may be a major oil producer now, but the oil is a finite resource of increasing scaricity world-wide. It may produce revenue in the form of taxes, and some employment for Alaskans, but to depend on it as either a continuing source of funds for the state, or on the continuation of oil based energy beyond for more than twenty years is unrealistic.

Alaska will have economic independence directly as it develops a realistic and sane approach to the energy crisis. It is uniquely in a position to do this with oil revenues financing the transition. There is no question that the transition must be made. It is only a question of when. Alaska can and should lead the nation in meeting this challenge. To wait for a Federal Energy Policy based on factual imperatives will be akin to awaiting the Millenium. To this challenge we propose:

AN ENERGY POLICY WHICH WILL HAVE THE FOLLOWING GOALS FOR REALIZATION WITHIN THE TIMETABLE(S) INDICATED.

I. By 1985 Alaska will have reserved, for use within the state, sufficient Petroleum reserves from proven resources, to meet the projected needs of its population for 50 years.

II. By 1990, the refining and distribution system required to distribute this resource to all parts of the state shall be on line and operating.

III. By 1982, a plan shall be developed which will provide that all technologically and economically feasible public utility systems providing electrical power within the state shall be converted to the use of renewable resources by 1995 and - -

IV. By 1985, legislation an appropriate financial incentive for such conversion, either in the form of seed monies, tax incentives, or other means, shall be provided by the state from oil revenues, and -

V. By 1990, such a conversion shall have taken place. (see III & IV)

VI. By 1982 a state-wide building code be enacted, for both the public and private sectors, which will comply, as an absolute minimum with the provision of ASHRE #90-75A, and that means shall be provided for the enforcement of that code.

VII. By 1980, waste heat recovery in public power generating utilities will be statutorily recognised as an acceptable expense for incorporating into the rate structure of such utilities, or shall be deregulated completely.

VIII. By 1980, legislative action will have taken place which provides that alternative Energy resource research and development, appropriate to the regions involved, will be adequately funded, and regionally administered.

(2) CONTINUED

AN ENERGY POLICY WHICH WILL HAVE THE FOLLOWING GOALS FOR REALIZATION WITHIN THE TIMETABLE(S) INDICATED.

IX. By 1980, legislative action will have taken place which provides that alternative Energy resource research and development, appropriate to the regions involved, will be adequately funded, and regionally administered.

X. By 1980, legislation will be adopted which will provide for and fund regional Energy Planning Councils throughout the state, said councils directing and controlling the implementation of such of the above policies and legislation as are applicable and enforceable within the region.

FOOD AND AGRICULTURAL INDEPENDENCE FOR ALASKA

The Agricultural potential of Alaska is one of its least developed renewable resources. At least 95% of the food consumed within the state is imported. Yet, with its vast land area and extreme variations of climate and soil conditions, this state has the potential of not only feeding its own population within a decade, but entering the world market as an exporter of grains and protein.

Many agricultural techniques practiced elsewhere in the world in countries of lower latitudes may be directly transportable and applicable to Alaska. Northern European and Siberian agriculture is already developed far beyond anything we have considered for Alaska. It should be studied for application in our own situation.

Perhaps the most quickly realizable agricultural potential (ties in the state Animal Husbandry field. The Aleutian Islands have already proven to be rich cattle and sheep grazing resources, useable as locations for large-scale ranching operations. This is a basic industry which cannot fail, especially in light of the protein deficient conditions of most of the nations bordering the Pacific Ocean Rim to the east.

With the dwindling of petroleum resources that provide the base for many synthetic fibers, wool will experience a resurgence in popularity.

There are vast hundreds of thousands of acres of tundra lands suitable for reindeer grazing. This potential could help turn many rural areas into economically self-sufficient units, with an export potential unlimited.

Basic attitudes and some legislation about reindeer will have to be changed. Siberian reindeer husbandry is a major industry involving more than 8 million animals. Alaska has less than 50 thousand domestic animals in small, localized herds, the meat from which is nearly all consumed locally. Restrictive legislation at the Federal level, which limits reindeer ownership to selective ethnic groups, must be repealed, and venture capital must be encouraged, with state loan guarantees and technical support provided to potential reindeer industry development.

Farming methods which enhance the fertility and quality of the soil should be encouraged. Specifically, organic fertilizers, mulching, and the return to the soil of fibrous matter is a must. Agricultural homesteading provisions should be fostered which encourage both the small and large entrepreneurs with appropriate subsidies available to provision of foodstuff for the Alaskan Market.

Legislation and policy implementation to achieve the following goals should be enacted within the next two years.

By 1985 Alaska should be producing 20% of its dairy requirements.

By 1985 Alaska should be producing 15% of its root and garden vegetable requirements.

By 1990 Alaska should be producing 50% of its animal protein requirements.

By 1990 Alaska should be producing and processing, within the State, all of its requirements for ocean protein indigenous to Alaskan waters.

By 1990 Alaska should be producing all of its fertilizer, and be a potent force in the export market.

By 2000 Alaska should be, for foodstuffs economically feasible to produce within its boundries, self-sufficient.

TRANSPORTATION

Alaskan economic growth and self-sufficiency is utterly dependent upon an internal transportation system. Interior Alaska has some highway and rail service along the rail belt. The remainder of the state is served by water and air, with some local highways activity.

The water transportation of the state is centered in and controlled from Seattle. Such intra-state movement of commodities as takes place, beyond the reach of the rail belt, is by air. The speed and convenience of air service is attractive, but it may be actually impeding the development of the state's overall economy. By way of illustration, consider that:

Air transport is the least economical in terms of ton-mile costs, per unit of energy expended.

In an era of increasing petroleum fuel costs, freight and passenger rates are bound to rise.

The commodities that can be shipped intrastate by air may soon, because of increased air freight costs, be luxury items.

The first potential for Alaskan economic development should be the marketing of Alaskan goods in Alaska. Yet if transport costs make such a prospect economically unfeasible, we shall continue to be frustrated in such development.

Development of the sustained-yield renewable resource potential of the Alaskan "Bush" will be directly proportional to the ease and economy of transport of its products to internal and external markets.

Most of the state north of the Aleutian Islands is only seasonally served by Seattle-Based water transport.

The legislature should address the feasibility of several possiblities with the object of linking various parts of the state together by other than air transport, even though immediate prospects for profitability may be moot. Where appropriate, state subsidies, loans, or tax incentives should be provided for private industry. Where such an approach cannot be effected, the State should consider direct involvement, the precedent for which has already been established with the State Ferry System.

Innovative alternatives in modes of transportation should be studied, fostered, and encouraged.

Extension of rail service from Alaska to the rest of the United States (except Hawaii) through Canada should be encouraged and financially supported to lower freight rates on materials coming into Alaska from the East Coast and Middle West, by eliminating transshipment costs at rail/waterheads.

Rail transport within selected areas of the state could substantially lower living costs for the areas served.

Regional highway systems, perhaps seasonal, could lower costs of distribution from Western Alaska Seaports and major distribution centers to villages served by them. Kotzebue, Nome, Unalakleet, St. Michaels, Bethel, and Dillingham seem good prospects for such consideration.

TRANSPORTATION, (CONTINUED)

Enlarged, diversified, flexible transportation within the State of Alaska will create its own market for services and revenue, by opening up areas not now easily or economically accessible. It will promote tourist travel.

Public Transportation can survive as an economical alternative to the proliferation of urban automobile traffic. The economics of gasoline and diesel powered automobiles may well provide the incentive on the part of the Public that no amount of exhortation to conservation can accomplish. Such public transport should be adequate, not only for the urban care of our large community, Anchorage, but for the suburban areas as well. Monorail trunk systems, with local small or miniscale feeders, would relieve main highway feeder congestion, and reduce the present passenger-per-mile costs of the busses. Monorails are less subject to weather disruption than surface transport, are very fast, safe, and attractive alternatives to automobiles. Electrically powered, they are non-polluting, and most economical of resources.

Inland Waterways have great potential for inexpensive, albeit seasonal, transport into and from areas otherwise unserved. As it is now, only salt water systems get attention from the Coast Guard. Where other federal agencies cannot be involved, the State should take an active part in dredging, channel marking, dock construction and other enhancment of the internal waterways in rural Alaska. Water transport is, and always has been, the most cost efficient means of moving large amounts of heavy cargo.

The Alaska State Ferry System should interconnect, either through Seward or Anchorage, with that portion that terminates at Haines, permitting passengers from the rest of the United States to access not only Southeastern Alaska, but interior Alaska as well, without the necessity of travelling by either auto or bus or air between Haines and SouthCentral Alaska. It would also encourage and foster Intrastate use of the system.

FISHERIES

With its vast coastlines and intercontinental shelves, Alaskan fisheries have been and will continue to be a major renewable resource. However, and this is of prime importance for the economic future of Alaska and the welfare of its citizens, much more Alaskan participation in processing, distribution and marketing phases of the fisheries industry must be developed.

The historically rich salmon fisheries of the Gulf of Alaska and Southeastern Alaska are seriously depleted. While much of this depletion has its historic roots in foreign fishing, its condition is correctible by state action. Other factors have contributed to spawning stream degradation and subsequent run depletion, such as earthquakes, pollution, habitat destruction and the like. These producing areas must be rehabilitated.

While fisheries are renewable resources, the present practices are more exploitive than husbanding and developmental. Catch regulation is only a part of the most effective series of options that ought to be applied.

To the extent that bottom fisheries can be enhanced, rather than selectively fished to near extinction, such measures should be actively pursued.

Many countries throughout the world are successifully rearing fish in aquaculture programs. This method of production is vastly more efficient than the present methods of depending entirely on catching fish in their "natural" state. For the species amenable controlled rearing and harvest, such programs offer the possibility of sustained profits, unaffected by the uncertainties of fish behavior, and requiring minimal investment in harvest gear.

The return to the state's people of a larger share of the market price of its fisheries will increase private income and state revenues. State participation in the world-wide marketing of Alaskan-processed fish products is absolutely essential. Such a State agency could be supported directly from appropriate resource tax revenues.

The following specific recommendations are offered:

A concerted program of regional hatcheries construction for the restocking and restoration of depleted spawning grounds, the development of promising new spawning grounds and the enhancement of present rivers and streams with hatchery reared young should begin immediately.

Experimental acquaculture programs should be initiated throughout selected areas of the State.

A State Board of Fisheries Marketing, supported by appropriate fisheries-derived revenue, should be established, with representatives of the industry and the state represented thereon, to develop world-wide markets, including transportation involvement as required, for Alaskan fisheries products.

Tax incentives, subsidies, or guaranteed loan programs to Alaskan owned and operated fish processing plants should be implemented.

POST-SECONDARY EDUCATION

Alaskan Post-Secondary Education should be considered as falling into two major categories,"University" degree programs leading to Bachelor's and advanced degrees, and the Community College system. At present both systems are administered by the University of Alaska, through its Board of Regents and President.

While the roles of these two systems should be complementary, they are, in fact,administered competitively, to the detriment of the effectiveness of both, and to the disservice of the people of Alaska. Such a competitive system assumes, ultimately, that one must give way to the other, and that they cannot coexist. In this state, there has been a concerted effort to achieve such a destruction of the Community College System, as it has evolved, in favor of the University. This has resulted in a disservice to the people of the state, unnecessary expense to the State, and an atmosphere of distrust surrounding the University, The Legislature, The Administration and within the University itself.

Legislation has already been intruduced to effect a complete separation of these two systems. This legislation should be enacted without delay, and a delineation of the proper spheres of each accompany such legislation.

Clay McBourell

MOM, APPLE PIE and EDUCATION

An assessment of education in Alaska presents us with a complexity of major social trends, technological developments and accumulating evaluative and projective data that are profoundly challenging to the existing education structures and rationales. Not only in Alaska but nationally, significant questions as to role, purpose and methods of instruction are being raised. The quantity of significant concerns appears endless, ranging from record keeping to revenue sharing to "relevancy". It's impossible to devote even a paragraph to each, so in this report I'll attempt to limit discussion of national issues to those which should be of vital concern to Alaska learning programs, while at the same time including those major Alaskan factors that are unique to our particular situation.

An overview of the myriad questions and issues relative to our topic points to four basic areas of educational concern. For purposes of discussion and whim, let's refer to them as the FACE issues of Function, Approach, Control and Economics. These 4 areas are what education is all about...and probably what any social institution is about.

Since the last two FACE issues -control and economics- will be discussed in other reports, we will dispense with their consideration for the purposes of this article but for three major points which have had and will continue to have significant, and perhaps determining, roles in establishing direction for Alaskan educational programs. These will be mentioned only briefly, although their impact is profound, merits a great deal of attention and, when you're dealing with education will occupy much of your time.

1. Education is big business. Roughly $200,000,000 was spent in Alaska last year on education from grades K-12.
   If we include university and college expenditures, vocational and in-service training, and educational counseling. Alaska probably spent close to a quarter of a billion dollars on education this past year. Any business this big is bound to have vested interests, intensive lobbying, and individual and group struggles for power and control. This is especially true in rural Alaska, where the economic impact of education dollars has a significant effect on the local economy.

In many villages the only full-time jobs are with the schools.

2. Education is publicly supported by local, State and federal funds, and is acutely subject to political pressure from all these levels. In addition, federal funds are presently a crucial factor in Alaska Native education. What happens in Washington has a significant impact on what happens in rural Alaska.

3. Education is an emotionally laden issue, dealing as it does with the welfare of children. This is a growing concern in rural Alaska, with the problems inherent in providing quality education for the bush students. This has expressed itself in strong movements toward totally local programming and local educational self determination as opposed to the centralized administration of education in the past which required rural students to leave home in vast numbers.

As stated, these areas of Control and Economics indeed merit consideration, and will have a significant effect on the first two components of FACE, Function and Approach, which we will now examine.

FUNCTION: There is at present a great deal of discussion relative to proper functions of Alaskan and especially Alaska Native education, although all points of view seem to point toward the socialization roles as being of prime import. The question is, socialization to what?

At present we find a variety of opinions as to this role. Should prime emphasis be placed upon education for local socialization, or for socialization within a non-local situation? Is a segregated system preferable to an integrated system? Should school emphasize prevocational studies, precollege, "Life-Skills" - what ever that means?..

Present trends seem to indicate a consensus that schools are expected to provide for educational needs of individuals ranging from early childhood through adulthood, and from the physically or mentally handicapped to the college-bound.

Interest in adult literacy and training is apparently increasing. Opinions solicited from local school boards indicate a feeling that career education is highly important. (Dropout studies also indicate that this is important along with the capability of adapting to the social environment of whatever the setting in which a given career might exist.) The themes of self-identity and cultural pride have also been strongly advanced over at least the past eight or ten years.

This may sound obvious, even trite - yet if we take one short, very brief step backward in Alaskan education - we see a one or two teacher school concerned only with teaching the average child the three R's - and feeling lucky to do that. In fact, though we don't often acknowledge it - that's still a major task in Alaskan education today - and rightly so.

That all these concepts are important seems to be at least generally accepted. However the degree to which they modify curriculum has created controversy in professional and lay circles. At one extreme are proponents of same-culture immersion, in which rural teachers, curriculum, language and academic approach would be totally Native Alaskan, based on three premises - or statements of philosophy defining Functions:

a) Self and cultural identity and pride are necessary for success and the prime function of the academic experience is to instill these traits.

b) The function of school is to develop thought processes and concepts. This can be done most readily when done within the framework in which the student habitually operates;

c) The function of education being preparation for life, schools should offer only that which is relevant to the students' own culture.

This position limits severely both scope and clientele of the educational process.

The other extreme holds the position of majority culture immersion.

This position is also based on functional premises:

a) Teaching of skills is an essential function of the school. Many of these skills are necessarily tied to an understanding of the majority culture which has a high degree of utilization of the skill.

b) Career training as a proper school function demands the ability to deal successfully with the culture in which many career opportunities exist.

c) Students know their own culture through living it; it is not a school function to teach it. It is the function of the school to acquaint them with that culture they don't know.

This position ignores advances in learning theory concerning process, and basic rights of self-determination and self-expression. However within both positions are points of validity, and several appropriate school functions can legitimately be drawn from them.

Positive aspects from each extreme identify the following as legitimate Alaskan school functions on which valid, result-producing programs could be built:

1) To determine community and individual educational interests and priorities and involve all components of the community in this determination.

2) To provide, or act as referral agent for, the educational needs, interests and aptitudes of the broad spectrum of individuals living in the local community from pre-school through adult.

3) To develop competence in the functional skills essential for individual and societal success.

4) To develop analytical processes relevant to situational recognition and problem resolution-the skills of the self-starting, continual learner and independent thinker.

5) To prepare students for the world of work, either through entry level training or pre-vocational and pre-college courses of study.

6) To provide significant opportunities for the development of a positive self and cultural awareness.

7) To develop self-disciplined individuals with positive attitudes toward life and learning.

If these can be accepted as the major legitimate-though by no means exclusive-functions of an Alaskan basic educational program, we can proceed to an analysis of the means to making these functions operational-the Approach component of FACE.

APPROACHES:

The manner in which information is presented is currently known in the trade as a "delivery system." That doesn't fit my particular choice of acronym; therefore, the way the Iceman cometh in this paper is known as the Approach.

This is the action arena in education today-in terms of approaches we are in at least a reform-and probably a revolutionary-era. All aspects of traditional approaches to schooling are being challenged for a myriad of valid (and some less than valid) reasons. Among the more valid seem to be the following:

1. The Information Explosion: More data is being produced than can possibly be taught. The advent and development of computer science is causing quantum jumps in knowledge accumulation.

2. Learning Process Advancements: As other fields have advanced, so too has our understanding of ways in which learning occurs. This knowledge is being translated into functions and approaches.

3. Rapid Societ l Changes: Changes in village society and its relation to larger communities over the past 20 or 25 years has been profound-and increased rates of change are in the offing. This is in part due to technological advances in transportation and communication, in part due to the Land Claims Bill and its economic and socio-political impact.

Changes and growth in Alaskan urban areas has also been profound - indeed overwhelming - in the last ten years. In boom and in bust, for good and for evil - the growth and changes are here.

4. Recent Technological Innovations: These have vast possibilities for application to education, making such terms as relevancy, immediacy, and self-pacing fact rather than fancy for bush education, as well as for the cities.

5. Changes in the Learner: Today's youth enter the educational system with different sophistications, skills and experiences than their parents. In addition, the increase in formal educational opportunities has correspondingly increased the spectrum of learner needs and abilities.

6. The demand for accountability and relevance: It's a generally conceded fact-as evidenced by recommendations of various federal, state, and professional groups - that change in the schools has not kept pace with changes in need and opportunity, and much that occurs in school may not be relevant to-in fact, may even hinder-positive development. Educators are being challenged to justify their actions with more than rhetoric. This demand is coming from educators, society at large-and students themselves.

7. "The Movement": -for want of a better term, that began with the civil rights activitists of the late fifties and has since encompassed women, the aged, all minorities, youth and environment and peace groups. This major social evolution has led to a re-awakening , reaffirming and recognition of the rights of individuals and groups to justice and identity. Alaska, the home of the independent - be he escapist, individualist or opportunist - exemplifies this spirit. This has had-and will continue to have-a profound effect on Alaska education.

In summary, when we speak of Alaskan Education, we are speaking of a societal function designed to provide a broad spectrum of individuals with a wide range of cognitive, affective and psychomotor skills; with positive attitudes about themselves, their society, life and learning -

all this to be done in an arena of continual vast social upheaval, technological advancement, and increasing understanding of learning processes; under conditions which will vary profoundly according to the economic, political, emotional and rhetorical factors of the day. To say the least, a challenge!

It is through the approaches-or strategies-that we use to achieve these constantly evolving ends that our schools as instruments of society will rise or fall. Obviously, several tasks need addressing before this can be accomplished. To develop strategies competent to meeting this challenge successfully over the next several years requires an analysis of variables that includes the following:

1. Examination of those major trends and directions in Alaskan education which we can expect, with some degree of certainty, to expand and develop.

2. Familiarization and continual updating with developments in understanding the learning processes, and with those technological advances that can be used in education activities that stimulate those learning processes and/or increase knowledge and skills.

3. Ongoing determination of relevance between existing and desired educational functions and activities.

1. Examination of Trends:

Although often times education seems to be heading in more directions than there are students, I think we can identify a few major, significant long term trends which we can feel fairly certain will continue. Again I hasten to point out that these are not all-inclusive and that there will be exceptions to each direction mentioned. However, as overall indicators, I think the following appear adequate:

a) Continued decentralization of control
b) Continued expansion of local village high school programs
c) Reducation in non-local secondary options
d) Expansion in scope of all education programs

e) School population stabilization in villages. Growth in urban areas.

f) Increased emphasis on career education and educational accountability

g) Continued rural school facility development.

h) Increased use of regionalized technical assistance support systems.

i) Increased use of self instructional units - or multi-sensory programmed approaches to learning.

j) Increased use of computerization and standardization of support functions.

k) Increased use of satellite video and computer assisted instruction.

L) Spread of community college programs into rural areas, and an accompaning growth in community interest courses in both rural and urban districts.

a) Decentralization of control:

Present trends indicate that both rural and Federal BIA schools will be subject to increasing local control through school boards of the REAA's through local input into Federal funding for schools and through self-determination policies for Federal Native schools.

Along with this decentralization of control will come a corresponding need for local development of educational priorities and projects for federal grants. This will be necessitated by Public Law 89-10 guidelines as well as Indian Education Act regulation, [Public Laws 93-638 and 95-561] , which call for local involvement in project development. As these funds play a major role in Native education programs, this will be a significant factor in the development of quality village school systems.

In addition, there has been a definite pro-localization movement in the technical assistance and administrative control policies of the Department of Education and the Federal Government. Vivid examples include the talent bank approach vis-a vis state "Specialists", the flexibility of graduation requirements, and the formation of REAA's.

b) Expansion of local bush high school programs:

In the past 4 years, there has been a significant increase in the number of local high school programs. Recently more than a dozen new high schools have been constructed or are in the process of being constructed. This spurt,- based upon the legal implications of the now settled Molly Hootch v. State Board of Education case has caused this to become a dominant mode of secondary education for role high school students within the past two or three years.

Although this is the direction in which most educators and Natives seem to wish to move, there is more than a little apprehension about the educational dangers and difficulties inherent in this shift. [In some quarters this is viewed as a potentially hazardous neo-isolationism!] These will be discussed in the section relating to strategy development.

c) Reduction in non-local bush secondary options:

In the recent past, over 1500 Native high school students were required to leave home for secondary school opportunities. This was accomplished through a system of boarding schools, "URBAN" dormitories in Bethel, Nome Kodiak and Kenai and boarding homes in Anchorage and other cities. If we relate bush enrollment projections indicating a short-term growth and a long-term stability or shrinking in secondary student populations to the above mentioned development of village secondary facilities, it became obvious that the non-local options as they have existed were underenrolled, and therefore too inefficient to continue operation. Indeed, this has become glaringly obvious. As this happened, several options for such boarding programs presented themselves:

1) Change to a functional secondary specialization for a selected bush student body attending on a full-time basis.

2) Change to a functional secondary specialization for a general bush student body attending on an intermittant basis.

3) Remain open for those students not reached by local secondary programs.

4) Develop programs related to educational needs other than secondary.

5) Shut down, or change to noneducational uses.

At present option #5 seems to be the only option taken under consideration.

[It would seem that, with thought, other education-related uses for multi-million dollar educational facilities might be developed.

However, these too can be discussed in strategy development.]

d) Expansion of educational opportunities in terms of population and programs offered:

In a village which, twenty years ago, may have had only a single teacher, we today find a variety of programs for kindergarten, special education, bilingual education, and adult basic education. In addition, there are correspondence courses for State diplomas or for community college credit, numerous visits by education consultants in various fields, and in-service training sessions-all of which are designed to provide learning opportunities for those previously untouched by the educational system. Although these programs are far from perfect, they appear to be growing in number and quality. It is not likey that this trend would be reversed.

e) Village Population Stabilization:

Statistical data indicates that village populations are, with few exceptions, in a state of relative stability, or in some cases, decline. The effects this will have upon the total education dollars entering a community and how these dollars will be used has yet to be determined.

f) Increased emphasis on career education and educational accountability:

As the needs of Alaska and the regional corporations expand and become more visible, the school systems will be pressed to assist in meeting these needs. In addition, as the urgency of meeting these needs run headlong into the apparently inevitable time lag in the establishment of programs in this direction, we will be seeing an increased demand for educational accountability. Movement in this direction will most likely be furthered as local control and awareness of school programs increases.

g) Educational facility development:

Over the past five years that has been a burst of village school

facility construction. Most of these projects are for the provision of local secondary options.

It is likely that this trend will continue, it also is likely that as local school districts are formed, the replacement rate of older, existing facilities will increase. Possible, though by no means certain, beneficial outcomes for programs could develop from this construction activity. Regardless such projects also provide temporary construction employment as well as future school jobs. These are important and valid economic considerations.

h) Regionalization of technical assistance:

This has become manifest in Alaska in two unique and apparently effective systems:

1) The Talent bank - Most state departments of education hire and maintain individuals as "specialists" in curriculum areas. Their job is to provide technical assistance statewide in their "specialty" - which is usually for too broad to be a specialty. A rhetorical question: Can one individual reading specialist for example, be an expert in phonetics, in adult reading, in oral reading evaluation, in identification and diagnosis of reading disabilities, in nutritional aspects of reading handicaps, in transitional reading programs in developmental reading programs, in basal reading series, in interpretation skill analysis etc.---and make all these skills available for workshop, teaching program evaluation, project writing, while at the same time keeping current in the field and fulfilling administrative chores - Well, it's difficult but most states try.

However, the talent bank approach catalogs skills and interests of individual professionals around the state recognized by their peers for expertise in specific functions. When a specific skill is needed for a training session, project design or program evaluation, the names of individuals best suited for such activities are pulled, contacted and if free made available by D.O.E. money. And are again evaluated by their peers- the accountability factor mentioned earlier. Simple, but brilliant - and apparently effective.

2) Regional Resource Centers. With the establishment of REAA's came regional resource centers as supplemental support for those essential but expensive school services not affordable by a single small district alone. With minimal D.O.E. funding and dependent upon the school districts they serve for fiscal support, they represent an opportunity for an excellent symbioses not present in most educational systems - the user of the requested service deciding whether or not the service is valid enough to continue paying for. Again - accountability So far 4 of the 5 originally established RRC's are still functioning- so they must be doing something right. The hand-to-mouth nature of the Resource Center funding can generate conditions such as frantic searches for external support, essential political compromise with varying district demands etc - but these are not necessarily unhealthy realities but just realities. So far things are apparently functioning to the relative satisfaction of the concerned school districts.

i) Individualized Self instructional Units: There exists today the possibility of a machine-student "relationship" in tutorial learning situations that in many ways can be more "intimate" than the average teacher-student relationship. Some of the equipment making this possible includes:

1. The packaged unit:

Today, there are commercially available packaged learning "kits" complete with reading materials, filmstrips, cassettes, relevant "objects" to see, touch, and manipulate, lesson plans, objectives and evaluation tools. These are available for all levels and for nearly all subject areas. These range from elementary math tools such as quisenaire rods, to complete motorcycle repair and maintenance studies.

2. The 8mm film loop:

Short (1-5 minute) films on nearly any subject or "mini-subject" are packaged in a quick, slide-tape cartridge for use by individual students-or groups of two or three-in a small quiet projector. The films are usually in series, with each film showing one step in a series. For example, the method for dissection of a frog may be shown in various stages on 8 or 10 film loops. The films keep revolving on the loops in a continuous cycle for constant reference.

3. Programmed Learning Units:

First developed by the Armed Forces, these units consist of lock-step individual instruction in which a small amount of information and explanation is given. A question is asked and answered, and the answer checked by the learner. If he is correct, he proceeds to the next step. If incorrect, he is referred back to a pertinent section for review and retest.

j) Computer Support Systems:

At present we have just begun to tap this resource for educational support. Its significant in time and money savings potential is astounding. For instance school district offices are now plugged into an "EMS" - electronic mail system - whereby sameday, simultaneous two-way information transfer can be accomplished between Juneau and any or all of the remote school districts, and individuals in those districts. Anyone ever dealing with multi-community bush communications, will realize the enormous time and energy savings involved here.

In addition, by March 1st, several Southeast school systems will tie their budgets into the same computer capability. This will put instant budget data in the various funding categories in their possession when they need it - eliminating enormously time-consuming local data collection and retrieval functions.

k) Vido and Computer assisted Instruction:

Adult Education programs and the now notorious t.v. town meetings are only two examples of recent use of televised or computer assisted instruction or information programs utilizing satellite link-ups. Still in the experimental stage, live two-way communications in Alaska will be a day-to-day fact of life in education. Tutorial type, programmable computers already exist in homes and in schools. As training in their operation and experimentation in their utility continue, we can expect to see computers taking an ever increasing role in educational delivery to individual students.

1. Community College and Community Interest Courses.

A notable event over the past few years has been the sudden deployment of community colleges around Alaska. The University of Alaska has 2 such facilities in operation around the State with 3 community college campuses here in Southeast alone.

With the simultaneous growth of small bush high school programs, the opportunity now exists for rural Alaskans to get the "basic +" of public education without leaving home - or at least without going far.

In urban areas as well, the community colleges and community schools concepts have added a new dimension to those long dark winter evenings.

More important perhaps, they are keeping alive the concept that everyone is a teacher - everyone is a learner. Thus a fly-tying course is taught by a fly fisherman, a mining course by a prospector, a lifeboat course by Marine Highways employee. Simple? Certainly - but the idea of <u>not</u> requiring a piece of paper to prove you are "qualified" to do something in a school is unique [though even the community college approve, no credit is given unless the program is signed off on by a "qualified" instructor of record.]

There is a bonus inherent with the community colleges in rural areas - they provide a center of intellectual fermentation - a catalyst for idea exchange and planning of community development. As with any new program, there are adaptions to be made and problems to be dealt with. However, the existing and potential for further successes is a cause for celebration in the rural areas.

2. Developments in Learning Process Theory and Educational Technology:

A great deal of research has been published over the past several years relating to the way we learn; i.e. the learning process.

Rather than reiterate all that has been said, copies of several pertinent books are available for your review. These include HOW CHILDREN LEARN by Holt, the PROCESS OF EDUCATION by Bruner, EDUCATION AND ECSTASY by Leonard, and TOWARD A THEORY OF LEARNING by Bruner (ch. 2&3)

To summarize in a few sentences the divergent points of view represented would not be fair, but a few of the significant findings by these and other researchers appear to include the following:

1. Pertinent and frequent evaluation is an essential element of curriculum design from the point of view of the learner and the instructor.
2. A major goal of education should be to create in the learner a predisposition to learning.
3. Skill development is essential to growth in learning.
4. Accomplishment and gaining of understanding are internal rewards that can lead to further learning development.
5. Experimentation and experience are two essential elements of learning.
6. The curriculum must be relevant to the goals, needs, environment and experiences of the learner and the growth must be measurable.
7. Learning of the concrete must come before learning of the abstract.
8. Learning can be defined in terms of behavior changes to be developed, and therefore the learning and the effectiveness of the instructional strategies can be measured and evaluated.

9. The cognitive skills have been classified and learning experiences prepared to assist in their development.
10. The cognitive skills of thinking are more crucial in today's world than the cognitive skills of remembering.
11. Individual learners have individual needs and interests, and individual rates of physical, emotional and intellectual development.
12. Immediacy of feedback from the appropriate external sources is a positive asset to growth in learning.

Although this is by no means an all-inclusive list, it does include some of the more relevant findings and development of educational theory, and should be reflected in the curriculum and strategies of the practitioners in our school systems.

CONCLUSIONS:

Using the information from preceeding sections, the true tasks of a concerned citizenry and their professionals would seem to be the evaluation of existing and planned educational approaches in the light of

a) what is desirable - and should be striven for;
b) what is possible - and should be achieved;
c) what is probable or certain - and must be accounted for in planning.

How then, is this to be done? Well that, Gentle Reader, is the rub. It doesn't seem there can exist an answer only questions, data, processes and conclusions that must change with time, people and circumstances. And perhaps this is what judicial bodies, legislative committees and administrative agencies are all about - dealing with change. As alwasy we are the yin and yang, the problem and solution, the beginning and.....THE END.

Future Frontiers
308 G St. Ste. 301
Anchorage, Ak., 99501

Honorable Legislators:

ISSUE:

The state creates valuable permits, certificates or licenses by deciding to regulate entry into certain industries. Because entry becomes limited the licenses, etc., become valuable and salable on the private market. These permits become valuable regardless of the value of the business "owning" the permit. There are many cases where a business person sells his equipment for one price, the goodwill of the business for another, and the state license or permit for still another price. Even where a business is bankrupt the permit or certificate is salable.

The value of the permit is created by the state by limiting entry into the industry. If it were not true that the state allowed only a certain number of businesses in the industry (e.g., fisheries, air transportation, etc.) only the equipment, real property and good will of the business would be salable. The state creates the value in the permit or certificate; the value does not result from anything the company does or produces.

Although the Transportation Commission has tried to reduce the occurrences, the permittee now sells his permit and retains the revenue for himself. To me this procedure is an unconscionable transfer of income from the taxpayer to the individual selling the certificate. This windfall was created by the state for state purposes in the public interest. The vendor of the permit has not earned the revenue received from the sale of the permit; his gain is from the sale of his company's goodwill, if any and from the sale of property. In my opinion, the revenue from the sale of the permit or certificate belongs to the state.

RECOMMENDATION:

Where the state wishes to limit entry to an industry the permit should be placed at auction before qualified potential buyers. The auction could be held before the buyers were qualified, or afterwards. In either event the money from the auction would belong to the state.

Existing permittees and licensees in limited industries would merely turn in their permits to the state without selling them to private individuals. This permit would then be auctioned, if in the public interest.

Merely taxing away the gain from the sale of a permit would stimulate the growth of measures to avoid the tax. Vendors of permits would conceal the sale in the price of equipment, value of goodwill or assorted schemes such as "consulting agreements" after the sale. The right of the state to auction the permit would be clouded unless statutory.

CONCLUSION:

The windfall should be removed to the state where it belongs. With the auction there would be no need for public convenience and necessity hearings. The prospective buyer should make such a thorough investigation that he knows that owning the permit would be valuable. The public interest would still require that the buyer be a qualified person or company, but such matters would be determined without large scale hearings. The value of the permit would rise and fall determined by the profitability (public need) of the service.

FRONTIER CHILDREN, 1979

Margaret Fischer, Ph.D.

Alaska Psychiatric Institute

Anchorage, Alaska

(907) 277-6551 x 327

Paper presented at the 37th International Council of Psychogists Convention, Princeton, New Jersey, August 1979

Alaska is a vast expanse, one-fifth the size of continental United States with a population less than that of the state of Nevada. It is the largest and least inhabited per square mile of all the states. The weather varies from mild 50° to 70° temperatures in the long days of summer to frigid subfreezing temperatures in winter which drop as low as 60 below zero in the Interior. Coastal winters are comparatively mild. In such year-round ports as Valdez, as much as 26 feet of snow may fall during a season but the temperature rarely falls below freezing. The population of approximately 400,000 is comprised of Eskimos, Caucasians, and the Indian tribes, primarily the Aleuts, the Tlingits, and the Athabascans. The Native settlements are located on inland rivers or along the 26,000 miles of coastline of the Arctic Ocean and Bering Sea. The Caucasians typically live in urban settlements such as Anchorage, Fairbanks,and Juneau. Russian, French, Norwegian, and English ancestries predominate, however, because of its close proximity to Russia (55 miles at the nearest point) the United States military forces account for a sizeable number of the Non-Native populace. The remainder are private entrepreneurs, government employees, oil pipeline workers, and Sourdoughs of various persuasions. Salmon, halibut, and crab fishing, lumbering, gold and copper mining, and tourism are the leading industries. One of the most striking aspects of Alaska's population is its relative youth. The average age for Alaskan citizens is about 26. Nearly 50 percent of the population consists of persons under age 18. Nineteen-year-old citizens have the right to vote.

The styles of life, the standards of living, and the social systems

which prevail among Alaskans differ measurably. The modern and the primitive coexist within comparatively short geographical distances. In the Native villages an ancient social system prevails.

A common misconception is that people in the Polar regions live in igloos which are dome-shaped shelters made from blocks of ice. The igloo is only used as a temporary shelter during travels or by Eskimos on hunting trips. In areas where timber is available homes are made of wood and turf. As no trees grow in the northern Arctic, houses are made of flat stones, driftwood, and peat. Windows are made from the intestines of seals if glass is not available. The house consists of one large room seldom more than 15 feet in diameter by 9 feet high. A wide platform is the family's sleeping bunk. At times as many as 12 persons may live in such a dwelling. The impossibilities of washing clothes in the low temperatures of the north along with the fact that Eskimos may rarely have a second set of clothes, make it necessary to go naked inside their houses while their clothes are being dried or cleaned of lice. It also allows them to get fresh air for their bodies. Therefore, from their childhood Eskimos are used to seeing men and women in the nude, and no shame is connected with the human body and its needs.

A hunter may have more than one wife or may borrow a friend's wife to help with the cleaning of skins or with homemaking chores while on a hunting expedition. Eskimo and Arctic Indian women as a group demonstrate a striking fecundity with a birth rate more

than double that for the United States as a whole (53 per 1,000 pop.). The high birth rate is more than offset, however, by the fetal and infant wastage evidenced by the high fetal, neonatal, and post neonatal death rates of the infants which is more than four times the United States average. Prematurity is the single most important factor associated with mortality in the neonatal period, which may in part result from widespread anemia and iron deficiency in the maternal group. Postnatal infectious diseases play a major role in contributing to the infant mortality rate. Tuberculosis, otitis media, and meningitis are epidemic, however, there has been close to a 75 percent reduction in the Alaska Native infant death rate over the last twenty years. In 1976 the expectation of life at birth was 62 percent. Compared to the United States total population the life expectancy for Alaska Natives is about ten years behind at birth and nine years behind at age one. At age 65, however, they show the same life expectancy as for the total population. The median age at death is 62.5 for males and 73.9 for females.

Native women who breast feed their babies do not wean them until the child is three or four years old, often later. While Alaskan Natives generally cherish their offspring, male babies are considered more desirable than female babies. A physically or psychologically handicapped child may be viewed as an embarrassment to relatives. The baby is seen as "broken" and rejected by the mother. The rule of survival of the fittest has unfortunate connotations for the handicapped child. Because of the high incidence of consanguinity

and incest in the small villages, hereditary defects transmitted genetically should be greater than the norm yet only a few are identified. For example, there are less than 100 severely/profoundly retarded children who are institutionalized in the state facility for the developmentally disabled when ordinarily that group represents about one percent of the population. The dearth of media may account for the low rate of referrals as many Native parents may be unaware that help is available. It also appears possible that an unwritten law of the Arctic that everyone should contribute to the struggle for food and clothing is an important factor. Those who do not or cannot are despised by all, and feel themselves beyond the pale of the community... the most terrible punishment to any Indian or Eskimo. People who are handicapped are not looked upon favorably and are apt to meet with "accidents."

Health services for the Bush communities are delivered presently by 100 public health nurses who schedule visits four times a year. There are ten native hospitals in Alaska with satellite health stations and village-built clinics throughout the state. Primary health care is provided by Community Health Aides. Hospital and dental care and medicines are free to all Natives. The leading health problems are ranked as alcohol abuse, accidents and injuries, chronic otitis media, and influenza and pneumonia. Epidemics of meningitis and tuberculosis have disastrous consequences on the young. Alcoholism, rampant among Native youth and adults, is a problem of immense magnitude. Alaska ranks fourth among 50 states in per capita alcohol consumption and first in the nation in

alcohol-related deaths. Among Alaska Natives, the alcohol-related death rate is approximately five times as great as that for non-Natives.

For the child in the Alaskan Native village, the school is a focal point of his life. To counteract poverty and malnutrition schools provide breakfast, lunch, and a snack. The schools are often open in the evening to allow children to take showers or they may serve as a refuge in case of heavy drinking or battering by one or both parents.

Since 1972 the schools have attempted to enhance the abilities of the Native children in both English and their native tongue. The lack of materials for the 23 native languages with their many dialectical variations causes English to be the main vehicle of instruction. While many Alaskan Natives speak both best and most often in their native tongue they write in English because they have never been taught to write in the native language. Non-English speaking Alaskans are limited in learning as the media (newspapers, radio, and television broadcasts, when they are available) are in English. The National Bilingual Materials Development Center of the University of Alaska under a Title VII grant develops materials in Native languages in a variety of subjects from music through literature. Finding trained teachers is a problem. In some villages noone can write.

Welfare programs seem to have created as many liabilities as they have benefits. It has given the Alaskan Native time for leisure activities and yet he does not have the options for recreation available to him that people in large communities have. If he cannot read or understand English broadcasts the long hours of dark and cold of winter are often spent drinking, and a vicious cycle ensues.

A comprehensive services network has been developed by the Department of Health and Social Services and by private Native associations to help the children of the Last Frontier and their families to develop to their highest potentials and to function effectively by making needed improvements in community support services on an ongoing basis. The primary objectives are to foster pride in the heritage and traditions of the Native cultures, to preserve their customs, folklore, and art and to promote physical, economic, and social well-being of the Alaskan Natives. It may take a prodigious effort but it is worth that effort to make the dream a reality.

Recommendations:

An Epidemiological Survey is proposed to assess the incidence of developmental disabilities including mental retardation and mental illness among the Native and Non Native populace in the State of Alaska.

Purpose:

1. to obtain accurate data on prevalence.
2. to ascertain the etiological makeup of the disabled.
3. to identify high risk populations.
4. to assist in ameliorative and preventative planning.

Gentlemen:

Enclosed is a rather hastily prepared summary of mining in Alaska as seen by me in a global context.

I believe that stagnation will set in unless some positive actions are taken by the State in the near future, and hope that the suggestions offered might serve as a seed to that end.

Sincerely,

Dick Swainbank

Dick Swainbank

INTRODUDUCTION - HISTORICAL PERSPECTIVE

By 2000 B.C. a flourishing trade existed across the Mediteranean between the Phoenicians and the Britons. The back-haul was tin. In Cornwall, the early Britons dug shallow pits into placer accumulations of cassiterite and with little capital investment produced the commodity so much prized by the traders. In the Middle Ages, the Cornishmen were digging shallow pits on the vein sources of the placers, and by the late 18th century and early 19th century, the scattered landholdings were being consolidated into well-managed mining ventures which followed the tin veins to depth. Today some of these veins are still worked, using modern mining methods at greater depths than was formerly possible. Metals such as molybdenum and tungsten for which there was formerly no use are also extracted.

The Cornwall area has a recorded history of some 4000 years of mining, and during the heyday (about 1800-1914), in excess of 2 million tons of metallic tin was produced, worth about 32+ billion dollars at today's prices. Thus tin mining in Cornwall was no boom and bust operation. Today, Cornwall is still one of the most scenic areas of the British Isles.

Similar histories can be documented for most of the world-renowned mining camps such as Central Sweden, Central Europe, Mexico, and the Andean Region.

At the beginning of the 20th century, mining was already in progress at many camps in the Rocky Mountains, such as at Leadville and Urad (Colorado), Bingham (Utah), Butte (Montana), and many others. The mining was small scale, for high-grade veins and replacement bodies of ore, with a high value for small volumes. In 1899, a young mining engineer, Daniel C. Jacklin, proposed to mine the low-grade copper ore at Bingham and almost the whole of the mining and financial world thought him insane. In 1904, the first year of operation, the mine, now the Bingham open-pit, made $200,000 profit. In the 75 years of operation the mine has produced more than 22 billion pounds of copper, 10.5 million ounces of gold, 525 million pounds of molybdenum and 95 million ounces of silver. At today's prices, the market value of this bonanza would be $32 billion.

Within a year or two of the start-up of the Bingham Pit, numerous other open-pit copper mines were started and many are still being mined 75 years later. Major mines now exist near the sites of some of the old vein-mining concerns--the Anaconda Mine at Butte, Montana; the Climax molybdenum mine near Leadville; the Henderson Mine at Urad. A recent discovery of high-grade ore near the Bingham open-pit--the Carr Fork deposit--promises to extend the mining life of the area considerably.

As in Cornwall, the history of these mining districts progressed from one or two-man operations, to consolidated holdings of a minor company, to large operations with each step requiring greater amounts of up-front financing, and each able to work progressively lower grades of ore.

MINING IN ALASKA - HISTORICAL PERSPECTIVE

Around the turn of the century an overflow from the Yukon goldrush crept over the border into Alaska. These prospectors had arrived in the Yukon to find most of the placer ground staked, and they sought their fortune elsewhere down the Yukon. The gold placer camps in the Fortymile and Circle-Central were founded, and the operations began with one or two men, with little or no capital, working their chosen creek. Some walked over to the Ophir Creek diggings, and then on down to the site of Fairbanks to seek provisions. The great Fairbanks mining district was discovered. As the best ground was taken, the residue moved on. New mining districts were found and new "rushes" to these areas occurred. Most of the placer mining districts had been discovered by 1920, and by then the consolidation of the holdings had begun, though even today family operations feed possibly six hundred families in Alaska.

The consolidation of the placer ground led to dredging of the lower-grade gravels by companies such as the "F.E." in the mid-1920s. These operations, under the names USSR&M, UV and Alaska Gold continue today with an almost continuous 50 year history, hardly "boom or bust."

Lode gold was mined near Juneau from about 1880 to 1942, with about 7 million ounces production and a direct employment of more than 1000 persons. Except for government, few operations employ as many people today!

Thus, gold has, by and large, been the mainstay of mining in Alaska, though the great copper bonanza at Kennicott, which produced 1.2 billion pounds of copper and 9 million ounces of silver between 1907 and 1938, and the ongoing coal mining at Healy cannot be ignored. Minor production of antimony, mercury, lead, zinc, tin, platinum, silver and barite have in the past contributed to the Alaska economy, but the operations have all been characterized by relatively little capital investment, and should still be considered in the pre-consolidation phase of the historical development of a mining district in a world-wide context.

In the early 1960's, a new phase of mining began with the general availability of air transport, particularly helicopters, and the perception by major mining companies that only in frontier areas could ore deposits still be discovered near the earth's surface. The new impetus was helped by the interpolation of mineral zones in Alaska between known deposits in the Yukon Territory and Siberia, and with the discovery of interesting copper mineralization at Bornite. Exploration monies began to flow to Alaska, which was perceived as relatively stable in a political sense, and a good bet for the expenditures. Since then the type of commodity sought and the type of deposit (e.g., porphyry or massive sulphide) have changed in response to price fluctuations in the commodities market, but today exploration produces seasonal work for about 2000 persons and introduces about $70 million in new capital to Alaska.

MINING TODAY, A COMPARISON

In the Yukon Territory, the Cyprus Anvil Mine, 350 miles from tidewater is as remote as anything in Alaska. The deposit was discovered in 1953, and mining began in 1969. It has a projected 15-20 year life and presently contributes 40 percent to the economy of the Yukon. Some 350 families derive their livlihood from the operation.

A review of the Yukon and Northwest Territories shows that the annual per capita income from mining is $8,000 and $6,300 respectively, and that the average number of people employed in the mines is 160 and 190 respectively. Canada-wide, the number of people employed in 50 open-pit and underground mines ranges from 10 to 670 persons, with an average of close to 200.

The geology of Alaska indicates that it has the same potential for mineral occurrence and mining as does the Yukon Territory and the Siberian area of the U.S.S.R. In both the U.S.S.R. and the Yukon Territory, the U.S. Bureau of Mines has indicated 31 or 32 prospects of merit. In the Yukon Territory, 8 mines are presently working. Within Alaska, some 236 significant mineral deposits have been identified, and a map was compiled by the Northwest Miner's Association with significant help from all portions of the industry in an unprecedented cooperative effort.

It is important that Alaska take the next step in the historical development of a mineralized area if mining is to be considered anything other than a scenic nuisance.

MINING IN ALASKA--THE FUTURE?

It is vitally important that a decision be made at the highest levels of State Government in the near future as to whether or not mining will be accepted as a welcome neighbor in the State.

Alaska is only a small part of the world, and exploration monies scheduled for Alaska are being diverted because of two major factors. The first is land withdrawals. It is obvious that without considerably less compromise on the part of the State, the Federal Government is going to withdraw from mineral development (i.e. appropriate) some 80 percent of the "significant mineral deposits" mentioned above. More worrisome to investors is the perception that if the State itself is apathetic towards mineral development, as evidenced by land classifications barring mineral location, by selection of mining districts for land disposals, by numerous overlapping restrictive regulations, by leasing proposals, and by the proposed creation of parks in former mining districts.

The second disincentive to expend exploration dollars in Alaska falls under the general heading of "taxation." Why would a company expend several million dollars in exploration for a deposit when the stated Administration philosophy is that "Minerals belong to all the people." The general attitude to that Marxist philosophy is to explore elsewhere.

It is of interest, in this regard, that the proposed leasings bills, HB's 410 and 420, were drafted by a highly regarded advisor to the State Administration, who is now considered to be a "most valued member" of the Alaska Coalition.

The experience of the oil companies in Alaska, whose successful efforts are penalized by ever-increasing taxation, is also viewed with alarm in mining circles. Only if the numerous failures can be recompensed by a successful venture will exploration capital continue to flow. Monies scheduled for British Columbia were diverted to Alaska in 1973-76 until their Marxist government, with their punitive taxation, was finally ousted.

The Stanford Research Institute Report has been widely quoted, and the seven mines identified as being most likely to produce in the next ten years--Lik, Arctic, Eagle, Green's Creek, Quartz Hill, Picnic Creek, Bohemia Basin--are well known. If these deposits were to be mined, they could produce 9,500 new jobs in Alaska and add new monies to the amount of $1 billion annually to the economy.

More important would be the momentum generated, and the incentive to further explore whichever of the 240 "significant mineral deposits" remained at that time outside of the National Parks and Monuments. It

is therefore extremely important that the State of Alaska and the Congressional Delegation begin to recognize that there are not only seven mineral deposits, but maybe as many as fifty or even one hundred.

The Quartz Hill deposit appears to be "World-Class," and as such, is likely to have a mining life of 40+ years, and perhaps, like Bingham, up to 100 years. Several hundred people will be employed, lifelong, if they wish. It is this kind of stability in areas other than tax-funded government which Alaska so desperately needs. Once Alaskans are trained for the jobs, it is unlikely that an influx of workers will arrive to work a 40-hour week, and so the boom-and-bust cycle could be dented, if not broken.

The S.R.I. report also notes that less than 0.2 percent of Alaska would be disturbed by mining, and the historical perspective of mining would support that contention. What higher use, even if no revenue were to derive to the State, would one-fifth of 1 percent of the land have above a stable future for 10,000 Alaskans? This future could be ours with little or no impact, except on one or two of the 5,000+ anadromous fish streams in Alaska.

If these dreams are to be realized, then the State must begin to look upon mining as a desirable co-equal partner in the economic framework of the State. There must be a cessation of the attitude that taxes derived

from oil and mining should be used to subsidize only forestry, farming and fishing. Finally there must be a realization that profits from oil and mining are different by orders of magnitude, and that the production cycles of the two are incomparable.

INCENTIVES TO MINING IN ALASKA

The most important incentive at this time is a solid statement that mining is viewed by the Administration of the State of Alaska as a desirable industry.

Several other incentives can be offered--a reduction in the mining license tax in return for concessions from the mining companies would be viewed positively. Such concessions might be agreements to produce in a timely manner, to train and hire local persons, to return a portion of "windfall" profits to exploration in Alaska, to add "custom" treatment facilities to standard plant, or to provide infrastructure to operations other than their own.

A definite incentive would be to restructure, with little or no additional hiring, the Department of Natural Resources. A full Department of Minerals and Energy Resources could be split out from the D.N.R., and by use of people presently employed in other sections, would form a knowledgeable nucleus with the welfare of the industry at heart, rather than a tolerant attitude as at present. The Division of Lands would have their fundamentally important function reassigned to an Alaskan Lands Commission. A suggested organization chart is attached.

Though unpopular at present, consideration should be given to infrastructure, particularly transportation, subsidy by the State. Such investments have, by tariff charges, paid for themselves with dividends in Canada.

Basic data generation by such bodies as the Division of Geological and Geophysical Surveys, and the timely publication of the same, should be encouraged by the State, either by mandate or increased funding.

Consideration should be given to prospector and drilling or transport aid through some form of loan or assistance, since many mineral deposits later developed by major companies are discovered by the individual prospector.

Adoption of some of these suggestions would indicate to the mining companies that Alaska looks towards them as responsible and welcome partners in the future, and would help offset the decline in exploration activities which is certain in response to the present taxation policies and land withdrawals.

The Honorable George Homan
State Senator
The Honorable Russ Meekins
State Representative
Co-Chairman
Future Frontiers
308 G Street. Suite 301
Anchorage, Alaska 99501

Dear Senator Homan and Representative Meekins;

Enclosed is a paper expressing my thoughts on the Permanent Fund. I have kept it short and rather to the point since the message it contains is rather simple in it's context, however, I would hope that the basic idea behind this message would not be precluded.

Very Truly Yours,

William B. Fredson

William B. Fredson

A PAPER
ON AND FOR THE PERMANENT FUND.

The Alaska State Legislators and many of the prople of Alaska are aware of the Permanant Fund, the basic idea behind the establishment of this fund, and the growth of this fund through the royalties of the State's share of gas and oil and the interest the fund draws from the banks.

Many ideas, schemes and proposals have been put forth by many people on and for the use of the Permanent Fund, some good, some bad and others down-right unrealistic.

What ever the final decision on the use of the Permanent Fund may be, it will be made by the State Legislature in Juneau, by those legislators, elected officials all, who should be aware of this and understand that they are mandated by law to serve the people as a whole and not any few special interests which would violate the oath of office.

The spending of the 900 million that the State received from the sale of gas and oil leases is a case in point, and can only be hoped that this is a lesson learned, and will serve as such.

Whatever the recommendations are for the best possible use of the Permanent Fund, it cannot and should not be used for bigger government. To provide for better government efficiency and services, perhaps, but not to support a huge bureaucracy which would encumber itself through sheer size.

The very state of the economy of the State of Alaska and the Nation addresses itself to this. The economic forecasts for this country is not good and the effects will surely be felt by all of the industries here in Alaska in the near future.

My one firm recommendation on the use of the Permanent Fund is not to expend the funds to the point where it ceases to be for what it was intended.

Towards this end, I tend to favor the idea of a separate corporation to be set up by the legislature to be outside of the influence of State Government officials with the citizens of the State of Alaska to be stockholders who elect the Board of Directors, much as has been proposed by Senator Mike Gravel.

Should this idea not be favorable to a majority of the people, I suggest that a close watch be kept on the major expenditure proposals through propositions on the ballot, instead of the legislature having overall control of the use of the Permanent Fund.

Why? Because it has been proven through the ages that even our elected officials are sometimes wrong and do the wrong things which exceeds the authority of their office.

Take the recent televised town meetings which was an exercise in futility as evidenced by the reaction of a majority of the people.

But, more than that, take the actions of the President and the Secretary of the Interior in locking up vast acres of lands in Alaska in establishing national monuments, wildlife refuges, and study areas for (sic) the future generations of Americans. These actions will have a diverse effect which portends to be ill advised for the future of this country, and the State of Alaska.

For this reason alone, the Permanent Fund is highly important, and that dictates its wise use and investment for the future generations of Alaskans.

Perhaps this is already known. I can only hope that it is understood by all concerned, and that is why this is;

Respectfully submitted,
FOR MYSELF AND OTHERS.

Senator George Hohman
Future Frontiers
308 G Street Suite 301
Anchorage, Alaska

Dear Senator Hohman:

Dr. John Angell, Director of the Center for Criminal Justice, has written you about my investigation of the Alaska Bar Examination and has suggested that I write a paper for your Committee.

My study of the Alaska Bar Examination began for personal reasons but continued when the findings would no longer be of value to my son. He has been admitted, on the first attempt, to another states bar. A series of events and my own research have prompted me to continue and broaden my study.

Events which have prompted my search are:

1. Jury duty in the summer of 1976.
2. Attendance at a court session presided over by Judge Rowland.
3. A conversation with Mr. Gary Thurlow, former bar examiner.
4. A letter from former Supreme Court Justice Robert Erwin.
5. Conversation with a candidate for the Winter 1979 exam.
6. Inability to secure an appeals attorney.
7. Articles in the Anchorage Times and News concerning minority sentencing.
8. A discovery that a large number of repeat candidates are cultural minorities, particularly Alaska Natives.
9. Conversation with Mr. Neal Thomas, Human Rights Commission.
10. A feeling among citizens of my acquaintance that the legal profession is not open and responsive to the needs of the public. In fact that they are self serving.
11. Research which gives credence to my initial assumption The Alaska Bar Admissions is antiquated, and does not guarantee quality but limits quantity of legal practioneers.
12. No provisions for professional renewal for members.

I welcome the opportunity to appear before your Committee.

ADMISSION TO THE ALASKA BAR ASSOCIATION

LIMITED ENTRY

Professor Charles L. Black of Yale Law School, tells the following story of a Pawnee Indian brave named Peshwataro.

> The law of the Pawnee commanded that on the summer solstice there take place the sacrifice of the star maiden. A girl was each year captured from a neighboring tribe and bound to a stake. At dawn, the Pawnee braves would ride in a circle about her. This was not done for sport, but because, like so much that seems cruel in so many societies, it was thought to be a cruelty necessary to the maintenance of the moral and religious order. Many Pawnees, through what process or influence I cannot say, came to disapprove of it nnd talked of doing away with it, but it was the law, and conservatism was too strong. Then one summer solstice at dawn this Peshwataro, a young man of high repute with the tribe, broke from the circle before an arrow was shot, rode furiously to the stake, freed the girl of that year, slung her in front of him, and escaped with her. He left her with her people and then rode back, much as Gandhi might have done, to submit himself to his fellows. As it happens, they did nothing. It was time, really, to stop this business and they had only needed an act of such courage to make that clear.

The second and seventh month of each year a similar practice takes place in the soverign state of Alaska. It is also thought to be a necessary cruelty. Many have come to disapprove, but no young man of high repute has come forth to stop the practice. What is needed is a single act of courage. It is time, really, to stop this business. The Alaska Bar Admissions is in truth a limited entry program. Your Committee has the obligation to investigate, debate and legislate.

Alaska Constitution, Article I Section I: "This constitution is dedicated to the principles that all persons have a natural right to life, liberty, the pursuit of happiness, and the enjoy- of the rewards of their own industry;..."

Alaska Constitution, Article I, Section 7: "No person shall be deprived of life, liberty, or property, without due process of law,"

United States Constitution, Fourteenth Amendment: Provides for due process of law and equal protection of the laws.

This paper deals with what the Alaska Constitution calls, and is dedicated to, a persons "natural right to...the enjoyment of the rewards of their own industry." The right to make a living is among the greatest of human rights.

Protection of the public is the only justification for prohibiting an individual from practicing his profession. A state may not, under the guise of protecting the public, arbitrarily interfere with private business or prohibit lawful occupations or impose unreasonable and unnecessary restrictions upon them.

The Alaska Bar examination is an imperfect instrument for measuring an individual's qualifications for practicing law. It does not protect the public It does interfere with lawful occupation and impose an unreasonable and unnecessary restriction upon candidates.

Because the examination is such an imperfect instrument for determining an individual's qualifications for practicing law there should be a keen awareness of those imperfections on the part of the Board of Governors. The procedures followed by the Board do not evidence the careful use of awareness essential to an individual's right to practice his profession. The examination itself, the grading system, and the appeal handling do not satisfy the requirements of due process. The decisions of the Board are arbitrary and unreasonable and bear no relationship to the end sought (protection of the public), and is therefore a violation of due process.

Because the bar examination is such an imperfect instrument for measuring an individual's qualification it is especially important that due process be accorded to the examinee. It may be helpful to review the examination process and a few of its defects:

The Alaska State Bar Examination is a two and one half day examination given twice a year. One day is devoted to the multi-state bar examination, which is prepared by the National Conference of Bar Examiners and administered by the Educational Testing Service of Princeton, New Jersey. One day is devoted to essay questions prepared and graded by the California Board of Bar Examiners. One half day is devoted to Alaska questions prepared and graded by the Alaska Board of Bar Examiners.

The multi-state examination consists of two hundred multiple choice questions covering six areas of law. A fact situation

is presented and a series of multiple choice questions are presented for the applicant to indicate the "best" answer. The examination is machine graded.

The California essay questions present a factual situation and request the applicant to write an essay analyzing the legal issues applying the rules of law to the facts presented. The California questions are written by the California Board of Bar Examiners and graded with California applicants.

The Alaska essay questions present a factual situation and request the applicant to write an essay analyzing the legal issues applying the rules of law to the facts presented. The Alaska questions are prepared and graded by the Alaska Board of Bar Examiners.

DEFECTS OF THE MULTI STATE BAR EXAMINATION

The Multi State Bar Examination is not a Valid Examination

1. There is no single correct answer to multi-state bar examination questions.

2. There is no provision for an applicant to challenge the examination.

3. No provisions are made to review the examination as a learning aid for subsequent examinations.

4. Pool questions have been leaked compromising the examination.

5. The examination is culturally biased.

6. The multi-state examination has no relevancy as to future performance.

In preparing the multi-state bar examination the examiners make more than one of the four choices offered very close to correct and students are told to choose the "best" answer. Joe Covington, Director of Testing explained "There may be more than one possible correct answer, but the committees drafted each item with what was regarded as one "best" answer.

The Bar Admissions Study Commission for the State of Oregon examined the multi-state questions and several took the exam. The Committee concluded that in some cases at least two of the choices were sufficiently close to correct that there might be a substantial difference of opinion as to which one could properly be chosen. For such questions applicants with equal knowledge and analytical abilities could choose different responses, and the student who chose the committees "best" answer would receive points while the other candidate, with equal knowledge and skill would have no way of demonstrating that knowledge.

The Washington Bar Association eliminated the multi-state portion of the bar examination in 1977, in part, because there is no single correct answer to the multi-state questions. The Oregon Bar Commission appointed by the Oregon Supreme Court to study bar admissions has recommended that the multi-state portion of the examination be eliminated for the same reason. The study was completed in 1979 but has not been acted upon.

There are no provisions for the applicant to challenge the multi state examination. The examinations are brought to Alaska by Educational Testing Service and administered. No copies remain, or can be secured, for the applicant to use in challenging the examination. An examination that cannot be challenged is not a valid examination.

The State of New York passed a "sunshine" law in 1979 guaranteeing that everyone in the state who takes a test can receive a copy of his test and the correct answers It requires the testmakers to explain on the record how they constructed the examination. Ohio legislators are discussing a similar bill and California enacted a weaker bill after educators lobbied frantically to dilute it. Theodore Weiss is cosponsoring a "truth in testing" bill in the House of Representatives. The New York Congressman argues that it will lead to fairer tests if the "testmakers" rationale becomes public.

There are no provisions for the applicant to review the multi-state examination as a learning aid for subsequent exams. No copies of the examination are allowed to remain in the state or to be reviewed. In subsequent exams the applicant may very well continue to make the same error. Failing to select the answer the committee has designated "best".

Pool questions have been leaked compromising the examination. The reuse of questions on the multi-state examination raises the problem of security. At the present time the National Conference of Bar Examiners have filed suit against Multi State Legal Studies in Federal District Court in Chicago for an injunction and other relief. Advertisements of Multi State Legal Studies of Philadelphia regarding a seminar it offered included the statement, "of the 200 questions, approximately 120 questions were reconstructed from questions which appeared in the 1978 multi-state bar examination."

The multi-state bar examination is culturally biased.

A number of papers have been prepared on the topic of bar examinations and cultural bias. Since trustworthy statistics are difficult to come by none of them can be considered conclusive. Because no questions on race or ethnic status are asked it is not possible to identify minority candidates. Partial statistics have been compiled by the Oregon State Bar Affirmative Action Committee and they verify a lower pass rate for minority candidates. Similar reports have come from studies made by Washington and California .

It is possible to identify more than a dozen Alaska Native applicants that have applied for admission to the Alaska Bar. Most of them within the past four years. Only four had been admitted by July of 1979. At that time a majority of the candidates had taken the examination more than once. One young woman had been examined three times. Black applicants are experiencing difficulties.

It is important to note that two hundred questions must be answered in 360 minutes. With little more than a minute and one half per question reading speed appears to be a requirement in the successful completion of the examination. Thus, performance will be enhanced among students who are able to read fast. Since reading speed is to some degree related to familiarity with the language of the test it orients the test in favor of middle class Anglo students.

The multi-state examination has no relevancy as to future performance. It is an examination which tests ability to remember rules of law and analysis of fact situations. It fails to measure abilities in legal research, negotiation, interviewing, oral advocacy, trial practice and any of the other skills which a lawyer might be called upon to exercise. There has been no attempt to show that the bar examination has any relevancy to the subsequent practice of law.

The multi-state bar examination is stressful, expensive and defective. It cannot be considered a valid examination.

DEFECTS OF THE ESSAY EXAMINATION

The Essay Examination is an Imperfect Instrument for Measuring an Individuals Qualifications

1. It "tests"three or four years of study in one and one half days.

2. There is no single correct answer for essay questions.

3. There is insufficient time to prepare an answer.

4. There are too many issues.

5. The quality of the question is frequently poor.

6. The essay portion of the examination covers too many subjects.

7. The essay examination requires a type of study which is often repugnent to a good analytical mind.

8. The essay portion and the multi-state portion do not select as competent or incompetent the same candidate. The degree of correlation between the two examinations is not consistent.

9. Issue spotting is a very limited form of testing for legal knowledge.

10. There is a lack of agreement among competent readers as to what the score for an essay paper should be.

The essay examination is expected to reveal the abilities of a candidate in a one shot qualification. It fails to take into consideration the physical, mental or emotional conditions of the examinee on the three days of his life that he takes the examination. Law school performanc, and work related activities are not considered. The examinee must be able to cover all possible detailed questions. Three years of academic training are tested in three days.

There is no single correct answer for essay questions. Law is not an exact science, legal issues produce widely varying interpretations and arguments. A student who knows a subject well may view with extreme complexity what the board views as fairly simple issues.

As presently structured the essay examination emphasizes speed and endurance. Forty minutes is an insufficient time to read, analyze, and write a difficult essay. All issues must be spotted, all rules of law applied etc. The average answer prepared by my son was seven single space typewriten pages. The time factor discriminates against cultural minorities. Reading and writing speed are related to familiarity with the language of the test it orients the test in favor of middle class Anglo candidates. A single essay question may have as many as forty issues to spot and analyze.

Essay questions on the bar examination present too many issues to permit full discussion within the time alloted. The essay questions frequently contain so many issues that applicants cannot physically and mentally deal with the analysis or the physical necessity of transmitting the analysis into a written answer. The number of issues goes beyond any reasonable expectation for a response in the time alloted.

Questions are frequently poorly worded and confusing. Names used are similar, facts ambiguously stated, the call line misleading. Questions frequently deal with obscure areas of the law which are not usually covered in law school courses. Questions are designed to require discussions of phantom issues or an explanation of why an issue did not exist. Issue spotting is too limited and results in an examination that is too restrictive in methodology. Questions are phrased using the inductive method. Culturally different examinees do better when questions are phrased using the deductive method. An examination which tests ability to remember rules of law and analyze fact situations in light of those rules is too limited. The essay examination does not measure other important qualities necessary to the practice of law.

The essay portion of the examination covers too many subjects. A two day period is long enough for an effective bar examination. The code of recommended standards recommends twelve subjects. The Alaska applicant must prepare for the California subjects, the Alaska subjects and the Multi-state subjects. The examination is two and one half days. Oregon recommends two, down one half day from the present examination period.

The essay examination requires a certain type of study and writing, not just good legal knowledge, analysis and logic, but the "black letter law" approach. A good legal mind frequently finds this approach repugnant.

If the multi-state examination and the essay examination were correlated they would select the candidate as competent or incompetent in both areas. This is not so. Candidates frequently pass one section of the examination only to fail the other section.

The essay portion of the examination is concerned with issue spotting. Some applicants may not be able to demonstrate their knowledge under the standard essay format but could do so if faced with a different type of question. Some of the suggested question formats are more closely approximated to the way lawyers are required to apply legal rules than the standard issue spotting.

There is a lack of agreement amont competent readers as to what the score for an essay paper should be. A series of studies has shown that answers to essay questions are scored differently by different readers and that even the same reader scores the answers differently at different times.

The Ashburn study of grading essay exams is acknowledged as one of the finest works in the field of testing and measurements. After an in depth study and esperiemnt Dr. Ashburn

found a lack of agreement among the professors on each reading and inconsistency between the two readings for a given professor. He concluded that the passing or failing of about forty percent of the students depended , not on what they know or don't know, but upon who reads their papers. The passing or failing of ten percent of the papers depends upon when the papers are read.

Graders for the essay portion of the Alaska Bar Examination are failing candidates with scores of 69.4, 69.6 and even 69.9 on a scale where seventy is passing. It is not possible to grade essay questions to such a specificity.

Given the defects of the essay examination one must consider that it is an imperfect instrument for measuring the ability of a candidate.

DEFECTS IN THE GRADING PROCESS

The grading Process is Inappropriate and Unfair

1. The present grading process is a form of colonialism.

2. The grading process is not annonyomous.

3. Grading Personnel are not professional examiners.

4. There is a predetermined passage rate.

5. A standardized score of seventy is not consistent with scores of neighboring states.

The present grading process is a form of colonialism. Four fifth of the examination are graded outside the State. The California essay portion is graded with the California candidates. The multi-state portion is graded in Princeton New Jersey. The only part of the examination that is graded in Alaska is the Alaska essay section. This is a one half day session. The other two days are devoted to areas that are graded outside the State.

There is considerable discussion and assurance that the grading process is annonymous. Each candidate being given a number with the key to the numbers held by the Supreme Court. The candidate knows his number and car easily communicate it to members of the examining committee. In the 1979 exam a bar examiner worked in a large legal office. Members of that office were assured by her that they would pass the Alaska questions. There is no such thing as annonymity in grading.

Grading personnel are not trained in testing and measurements. They are frequently new attorneys themselves. They are rendering decisions that are of extreme importance without the training to do so. There are no model answers provided for the graders to follow. The result is that unqualified individuals are admitted to practice and qualified candidates are excluded.

The Board of Governors of the Alaska Bar Association deny that there is a predetermined pass rate. However, in the past sixteen examinations the pass percent has only twice been above seventy nine percent. That was the year when candidates filed a group appeal against the Board of Examiners protesting grading procedures. The winter 1979 pass rate was 69 percent. Almost 40 percent of the candidates failed.

The decision to set the score at seventy is not consistent with neighboring states. Washington is 65 , Oregon is the same, Utah is 60 etc. By setting the multi state exam score at seventy percent many candidates are excluded. By moving the passing score from seventy down to sixty five Pennsylvania changed the pass rate from sixty two percent to ninty eight percent. The majority of the failed candidates do not fail by a large number of points. The total points by which my son failed three examinations is less than four. The third examination by six tenths of a point.

THE APPEALS PROCESS IS DEFECTIVE

Applicants who wish to appeal their failure of the bar examination must do so on the limited grounds of fraud, improper conduct or arbitrary use of discretion on the part of the Board. This does not afford a meaningful review for unsuccessful applicants who contend that mistakes were made in the grading of their examinations.

Appeals to the Board of Governors are usually met with a refusal to hear the applicants appeal. The appeal can then be filed with the Supreme Court. This is a lengthy and costly method of attacking the problem. Douglas Luna a black candidate who failed the examination in 1975 finally received the word that his appeal was turned down in the fall of 1977. I was unable to find an appeal that was found in favor of the applicant. If an applicant is to have any chance at all he must have a very good appeals attorney. A really good appeals attorney will not take cases of this nature. The fees are not as lucrative and they have little hope of winning the case.

November 1979

ALASKA COMMERCIAL FISHERIES ENTRY COMMISSION

and LIMITED ENTRY PERMITS

Commercial salmon fishing has been a main way of life for many Alaskans. This has involved heavy investment, hard work and risk of life in the treacherous waters of Alaska. Fishermen have frequently suffered financial loss and marginal profits because of lenghty breakdowns, loss of vessels and gear, restricted fishing time to ensure adequate escapement and poor salmon runs due to the catch of salmon by foreign fleets on the high seas. Recently there has been a dramatic improvement of the salmon runs due to the enactment in 1976 of the 200 mile limit and the elimination of the foreign fleet from the migratory waters of the salmon on the high seas. Now many of these fishermen have been deprived of the opportunity to fish while a favored few are reaping extrodinary profits. This is an issue of paramount concern to myself and many other fishermen that are at this time and will be in the future excluded from participating in the harvesting of a common Alaskan resource. Alaskan fishermen, including myself, are forced into waging lenghty and costly legal battles against the ill-considered Limited Entry Permit Program instituted and enforced by the Alaska Commercial Fisheries Entry Commission. At present there are numerous suits in the Courts of this State on this issue and many fishermen are waiting to see the outcome of these court actions.

In 1973 the Alaska Commercial Fisheries Entry Commission was created to promote the conservation and the sustained yield management of Alaska fishery recources and the economic health and stability of commercial fishing in Alaska by regulating and controlling entry into the commercial fisheries in the public interest and <u>without unjust discrimination</u>. Amoung the powers and duties of the Commission was to regulate entry into the commercial fisheries for all fishery resources in the State and to issue entry permits to <u>qualified</u> applicants.

The statutes and regulations pertaining to the issuance of Limited Entry Permits states:

> "Each applicant shall personally operate or assist in the operation of the licensed fishing gear."
>
> "The Commission shall accept applications for entry permits <u>only</u> from applicants who have harvested fishery resources commercially while participating in the fishery as holder of <u>gear licenses</u>."
>
> "Applicants shall be assigned to a priority classification based solely upon his qualifications as of January 1, 1973."

A substantial number of permits were issued to persons not qualifying under Alaska Statues governing limited entry.

Below is a partial list of minors who have been issued Limited Entry Permits. I have omitted the names.

I have irrefutable evidence that hundreds of minors were issued permits by the Commission. It is obvious that the Commission could not have unknowingly erred in the issuance of so many permits to unqualified applicants. Criminal conduct must be suspected. Many of these fraudulently obtained permits have been sold. Their are also cases of families, husband, wife and their minor children, all receiving permits. One family in Summerville, Oregon, husband, wife and three minor children, the youngest child having been 5 years of age at the time of qualification, was issued the following 5 permits; S04T 59041J; S04T 59042B; S04T 59043S; S04T 59044L and S04T 59045E. Another family with five minor children, as young as 7 years, received a total of 9 permits. The seven year old daughter was issued permit # S04T 50432C. Two permits each, a Drift Gill Net and a Set Net, were issued to two of the sons. One could not have effectively operated both a Drift Gill Net and a Set Net simultaneously. It is apparent that the members of the Commission have little or no knowledge of the use and operation of salmon gear. Elderly men, some over the age of 85, were issued permits and upon receipt immediately sold them. An example is Permit # S05B 55202Z, birthdate 11-2-1886. Some permits are in the hands of individuals who are not United States citizens. They fish in Alaska for a few weeks and then return, with U.S. Dollars, to their homes and families in foreign countries. I fail to see how and why these individuals were issued permits, when I and other fishermen who did participate in the fisheries for years were denied permits.

The guidelines for awarding points in the implementation of issuing permits have many serious defects and constitutional questions that are being challenged in the Courts today. Some of these are:

The Commissions method of awarding more points for 1972 than are given for previous years. 1972 was the year that the Governor of Alaska was forced, in the case of Bristol Bay area, to declare it a disaster area because of the low salmon run which was only 55% of the forecasted run predicted by the Alaska Department of Fish and Game of 9.744 million. Many fishermen were discouraged from fishing that same year by the Alaska Department of Fish and Game and were offered jobs as forest fire fighters by the State. Fishermen that decided not to fish that year because of the poor predicted run and helped promote escapement to enhance future runs by not fishing forfeited many points and, therefore, did not qualify for permits.

Points awarded on income dependency are a form of penalizing the fisherman who elected to work during the off-season and avoided joining the ranks of the unemployed or going on welfare and becoming a burden to the State. A total of 4 points for 1971 and 6 points for 1972 was awarded to the fishermen who had little or no other income than from fishing. Keeping in mind that the salmon fishing in Bristol Bay actually only lasts approximately six weeks (three weeks King Salmon fishing and three weeks Red Salmon) this means that a fisherman is discriminated against for having had another line of work for the other 46 weeks of the year.

Under availability of alternative occupation, an additional 4 points are awarded based on the population of your place of domain. This is violative of the equal protection clause of the Fourteenth Amendment to the United States Constitution. Because I have resided in Anchorage for the past 18 years, I was awarded 0 points. Individuals living in outlying areas, with a metropolitan population of less than 10,000, in Alaska and other States were awarded up to 4 extra points. These points were awarded irregardless of if the recipient had full time employment and participated in commercial fishing during their summer vacation.

Due to the increased salmon runs in Alaska, the permits are becoming extremely valuable and Bristol Bay Drift Net Permits have sold for up to $125,000.00. One of the former Commissioners of Limited Entry is now involved in the commercial venture of brokering Limited Entry Permits. Under the present system, fishermen are greatly tempted to sell their permits as the value goes up. Only the wealthy or front men, backed with financing and guarantees by canneries and processors are able to afford permits. A large number of canneries and processors operating in the state of Alaska are controlled and owned by foreign corporations. This foreign influence is increasing annually. The processors are able to manipulate and set prices that otherwise would not be acceptable if the fishermen had operated independently. This results in not only a financial loss for the fisherman but also to the people of Alaska, through lost tax revenues because of the lower prices received for their resources.

Many unqualified permit holders are leasing out their permits for the season to the highest bidder and they are, because of the high value of the permit, receiving the major portion of the earnings derived from the salmon catch without having participated in the fishery.

The Alaska Commercial Fisheries Entry Commission must realize that the limited entry program has caused tremendous pressure, discontent and hostility and that it is unworkable in its present form. State Legislators have indicated that limited entry has some serious constitutional questions. An attempt will be made to salvage the concept of limited entry because of the possible financial liability of the State to individuals who have purchased permits. However, I feel that since many of the permits that have been sold were fraudulently obtained, through falsifying documents submitted with applications at time of issuance, the burden of liability rests on the Seller and that CAVEAT EMPTOR applies.

If limited entry was totally eliminated, all permit holders, regardless of their status will still be able to participate in the fisheries and, therefore, are not at any loss. I do not agree with a buy-back program by the State. The permit holders have had the use and benefit of the permits and are not entitled to receive further compensation from the State. Individuals who have purchased permits for investment or speculation are not entitled to consideration as this is not the intended use of the permit.

The Apprenticeship Program being considered opens the door to new avenues of favortism, fraud and bribery. Can State bureaucrats astutely judge the expertise and abilities of a fisherman? The past handling of the awarding of permits should answer that.

Non-transferrable Permits would be unworkable as well. For example, upon the death or retirement of a permit holding fisherman his permit would revert to the State while his vessel and gear would go to his heirs. Hardship would occur as what use would the heirs have with the vessel and gear without a permit? If the State awarded the heir a permit, it would then be guilty of discrimination and creating a class of individuals that inherit the right to harvest a common resource.

The State's loan program to assist fishermen in the purchase of Limited Entry Permits is an inflationary factor in the prices paid for permits. It creates a hardship for the fisherman by becoming another interest-earning indebtedness for a paper that does nothing to improve productivity.

I challenge anyone to formulate a limited entry plan that is effective, uncorruptible, equitable and non-discriminatory.

I recommend that the limited entry program be completely eliminated. The fact that the voters of Alaska did approve this program does not preclude its elimination. Many voter-enacted laws have been subsequently struck down by the Courts on grounds of unconstitutionality. Alaskan voters were led to believe that the enactment of limited entry would promote aqua-culture, that all fishermen that had participated in the fisheries would be enrolled in the program and would be allowed to continue fishing. As I have documented in this letter, there is no evidence that the above has been accomplished.

The Alaska Commercial Fisheries Entry Commission may attempt to take credit for the improved salmon fisheries. But the credit must rest solely with the enactment of the 200 mile limit, the westerly movement of the Japanese salmon fleet from 175W to 175E Longitude (480 miles) and the elimination of the foreign fleet from the migratory waters of the salmon on the high seas. Strict enforcement of the 200 mile limit, regulations governing vessels and gear, and escapement management by the Alaska Department of Fish and Game can adequately enhance and conserve the fisheries. This method of management guarantees equal protection under the law to all citizens.

It is not the duty of the State to insure a profit to the participants in a fishery by limiting their numbers. The market place will govern. Fishermen have always been aware that commercial fishing involves taking a certain amount of risk. The fisherman wants to make this decision on his own. This country is built on a belief in private enterprise without undue interference by governmental agencies. Americans demand freedom of choice and freedom of opportunity. Bureaucratic attempts to take these freedoms from the individual only creats constant friction between the State and it's citizens.

ALPHA GROUP PROCEEDINGS

(December 6, 1979, 10:00 a.m.)

Room 311

MR. KOCSIS: You can start, sir. We're just identifying ourselves.

MR. BRADLEY: My name is Bob Bradley. I'm the husband of Marsha Bradley.

MRS. BRADLEY: I'm Marcia Bradley. I was born and raised in Sitka, and I've lived in Anchorage since approximately 1968.

MR. BRAMSTEDT: Al Bramstedt. I'm President of Midnight Sun Broadcasters.

MS. PLOTNICK: I'm Rocky Plotnick. I was born in Anchorage, and I've been working for the legislature as an Administrative Assistant for the last three years.

MR. BORODKIN: I'm John Borodkin. I'm from Cordova and a commercial fisherman.

MR. PARKER: Walt Parker. I wrote the papers on Air Transportation and Communications, and I was asked to sit with the two groups that are working on Direct Services while you concern yourselves with those two matters particularly.

MR. BLODGETT: For the record, I am Bob Blodgett of Teller, Alaska, and I'm a small businessman. My family and

I own a bush conglomerate, the Teller Commercial Company, a general merchandise store operation, Teller Power Company, a power-light operation, and Mukluk Telephone Company, an independent telephone company in the bush.

MS. ANASOGAK: My name is Georgianne Anasogak. I'm employed by the Norton Sound Health Corporation, and I work as a Community Health Aide, and I come from Akhoik, Alaska.

MR. ALEXIE: I'm Nels Alexie. I'm from Kuskokwim Community College, small engine instructor, also commercial fisherman.

MR. BOWDOIN: I'm Stuart Bowdoin, Bristol Bay Borough manager.

MR. BROWNE: My name is Stuart Browne. I'm chief of telecommunications Planning with the State of Alaska, Department of Transportation/Public Facilities.

MR. HICKEY: I'm Mark Hickey. I'm also with DOT as a planner and planning with the D-2 legislation.

MR. DAHL: My name is Thomas Dahl. I'm an attorney here in Anchorage. I was a delegate at the '69 conference.

MR. FISHER: My name is Jim Fisher. I'm with the US Department of Agriculture. Prior to that I was in private practice for two years, and I was a delegate in 1969 from Kenai at that time.

MR. ACKERMAN: Gary Ackerman, Fairbanks. I live in -- am a resident of Fairbanks for 33 years and Board member of

the State Boundary Commission. I currently serve on Planning and Zoning, and I'm a pipefitter.

MR. SEARS: I'm Dave Sears. I'm with Bright Research Group, FIPA. And I'm just taking notes for George Monson.

MR. JACOBSON: I'm Richard Jacobson. I live in Anchorage, and I'm a laboratory research person here.

MS. BURNETT: Ruth Burnett. City of Fairbanks. I'm here at the request of Dr. Wood, the Mayor of Fairbanks, who could not attend.

MS. BULLOCK: I'm Edith Bullock, former delegate to the Brookings Institute meeting in '69, former legislator. I'm now retired and living in Anchorage after living 31 years in Kotzebue.

MR. STUMP: I'm Keith Stump. I'm born and raised, resident of Ketchikan, Alaska. I am here at the request of Don Bell. I'm a communications consultant and freelance photographer, various -- cinematographer, other communications services.

MS. BENNETT: My name is Jill Bennett. I'm from Fairbanks. I am a small business person. I have a store in Fairbanks, and I teach part time at the community college there.

MR. OSTROSKY: I'm Hank Ostrosky, citizen of Alaska, and I do commercial fishing.

MR. ANGASAN: I'm Ted Angasan. I work as Executive

Director of the Bristol Bay Native Association.

(Discussion off the record.)

MR. BRADLEY: The name is Bob Bradley. To start a journey you've got to take the first step, so I -- as an elemental way of beginning I'd just use the format that's been presented and go over those various points: Government, Education, Transportation, Law, Justice and communications. Hopefully, out of that the various pros and cons of the various issues can be bantered about and philosophies can be stated. The role of the government and the role of -- as an example, speaking to the gentleman's concern for education, there is the question of private education at the higher level. There's no question of private education by the churches. At least in the Anchorage area it's quite an issue for elementary and secondary education. These things can be handled. But if we -- it appears to me, Madam Chairman, with the time restraints put upon you in this group, if there's too much soul searching over philosophy and the deep meaning of life that we -- this group, Madam Chairman, may very well miss its mark.

THE MODERATOR: Yes.

MR. DAHL: Madam Chairman. Tom Dahl from Anchorage. The issue that has not been addressed -- one of the issues, perhaps, that's not been addressed in the Direct Services

area is our responsibility to children that are, in fact, the responsibility of the State because the State has adopted or has taken that responsibility as parent. These are Direct Services that are presently given to the State in an -- provided by the State in an unsatisfactory way, and I hope that we can address that as a responsibility that we have and that we can determine something of our future.

THE MODERATOR: Yes, I think that that would come -- I appreciate what you said, Bob, and I think that if you'll all turn to that page where you have Direct Services outlined here can perhaps follow that format. And I would hope that we can get into all these different questions that you bring forth.

Now, it's eleven o'clock.

MR. KOCSIS: It's eleven o'clock, and one of the things that will perhaps focus your attention -- or however you want to come up with it -- Victor Fischer is here, and he's going to be passing out a questionnaire that we would like you to respond to. We should have the questions this afternoon, but as the conference goes on we should begin to report to you some of the attitudes and some of the things going on in Alaska, some of these issues. I'm going to let Victor talk to you about that. Let me say this: After you're done with this questionnaire you can break for lunch.

Talk during the lunch hour, think whatever is necessary. When you come back at 2 be prepared at that point to devise your agenda and get going on Direct Services. If that's agreeable. This is Victor Fischer, and he'll tell you about the questionnaire. Look at it with that in mind, however. This would help you formulate.

MR. FISCHER: Madam Chairman, this questionnaire -- excuse me. How about handing this out. (Indicating.)

MR. KOCSIS: Yes.

MR. FISCHER: This questionnaire is to be filled out by delegates only, so you give this to delegates only.

The questionnaire has been drawn on the basis of the various papers that each of you has received. And the questionnaire may be somewhat difficult to respond to if you've not read all of the papers. The instructions are that if you can't follow the question, just go ahead and leave it blank and go on to the next question. This questionnaire is to be self administered. Each of you fills it out on your own, and it should take about 20 minutes, more or less, to fill out the questionnaire. The data will be tabulated and should be available back tomorrow for report back to the conference.

As you look at the questionnaire you will see that from time to time the name of a writer from whom the questionnaire was drawn is also mentioned. That is

strictly for reference.

In each of the cases please circle the appropriate numbers for each question as you proceed through the questionnaire. Where you are asked to rank questions, 1 is always the lowest rank and 5 or 10 is usually the highest rank. Then on a couple of specific comments that I would like to have you look at: Question 5.

MR. OSTROSKY: Who prepared this, by the way?

MR. FISCHER: This was prepared by Mike Rowen and the staff.

MR. OSTROSKY: I want nothing to do with this questionnaire by Rowan. And I know psychograhic analysis, and I think this is --

MR. FISCHER: Well, this is -- Hank? That's your privilege.

MR. OSTROSKY: Yes, that's my privilege. That's my statement, too.

MR. FISCHER: That's your statement. But the thing is this is so arranged by the convention staff, convention planners. I am simply the barer of the questionnaire. I personally have nothing to do with it.

But, anyway, Question 5 -- the response should be on the bottom -- 1 should be, rather than "yes" or "no" -- 1 should be "cooperative," and 2 should be "develop independent plan."

On Question 50 it's a multiple choice. One of the items refers to Alaska Resources, Inc. and M. Bradman, parentheses. A quick reference for your interest. In case you haven't read his paper, the reference description of what it refers to is on Page F 7 of the -- there's a yellow cover -- buff-colored compilation.

Question 72 on transportation: The intercommunity roads means roads between communities. And Question 74: Intracommunity roads is roads within communities. The questions look so much alike a number of people thought they were asking the same. But the first one is between, the second one is within communities.

Some questions ask for an open, volunteered remark, but feel free to write in anything you want on any question. Please make a clear mark on the questionnaire so we could code and process them simply and rapidly. Okay. These questionnaires will be checked as soon as you've completed them. Thank you. Are there any questions about it?

MS. BENNETT: Yes. It seems to me that these are the issues that we're supposed to be discussing. I don't understand giving "yes" or "no" answers before we begin.

MR. FISCHER: Okay. This was apparently developed on the basis of the papers, and part of the idea behind them is to see sort of what you're coming in with because then

the discussions themselves and results will be transcribed and will be available. I have had the same reaction, and my suggestion to Mike is going to be to possibly administer the same questionnaire at the end of the conference and if for no other reason than to see what kind of changes in values have been effected. Again, Rob, do you want to comment why this is being done now?

MR. KOCSIS: Yes. We felt one of the things -- we don't know what the background of this group is, what are your feelings, what you really know about any of these questions. This is an attempt to elicit that response, and he's quite correct. We hope at the end to be able to do the same kind of a thing to see if there's been any shift in your reaction to these areas, see whether you've maintained a consistent approach to them. Just some kind of an idea. This whole conference is some way of indicating to the legislature where the people of Alaska are really coming from on these issues. This is the first step. Where you are now, what you think about these issues. If you've read the papers, these questions tie in to those papers. If you haven't, it's still relevant. It's just so that the staff -- so you yourself, when you get these results back -- will be able to see where you stood at the beginning of the conference, and then again we'll do the samething at the end. You'll be able to compare those two

things.

THE MODERATOR: I would like to ask a question. How many of you received your yellow-back book in time to read everything that was in there?

(No response.)

I don't think any of us have. So it seems to me that this is really not too relevant if we haven't been able to -- I know that I myself have read maybe two articles.

MR. KOCSIS: It's not a test in a school sense of a thing. It keys into it. You're not expected to give the right answer. There are no right answers. If you haven't read the book, it won't be as meaningful as far as the relationship between the book and these questions. But the questions, we hope, will still be meaningful, and what we're able to do when we check against your position now as opposed to the end is to show you as well as us what's going on, what kind of dynamics can be developed in a group.

MR. FISCHER: Excuse me. I read the questionnaire this morning and, with the exception of maybe two or three questions that refer to specific material, I had no problem whatsoever in mentally responding to each of the questions because I have certain values, and this is really what it asks for, is my opinions.

MR. FISHER: Jim Fisher. I had an opportunity to have

this for approximately a week. I got it -- encountered it -- the yellow book -- in Juneau, so I had a chance, and I didn't get it read either. But those articles that I did read were as much review of what I had observed as they were new. And I think that substantially you can operate on the basis of your own experience, and I think that's why, you know -- that's why, for example, you and I were selected. I think they're just more looking at our present experience regardless of what we get out of the literature.

THE MODERATOR: Did you wish to say something?

MR. BORODKIN: Yes. This is just for cross reference to the outcome of the conference, what we come out of this conference with? You'll use this for cross reference? Is that it?

MR. OSTROSKY: Uh-huh.

MR. KOCSIS: Yes. One of the problems with the last Brookings conference was we did not follow u on the recommendations of that committee enough. We didn't until this year go back and begin to try to correlate legislative response with those recommendations. What we're trying to do through instruments like this is set up a situation with the computer technology this state has. We can put your recommendations into a computer, and every time the legislature implements or passes legislation responsive to one of the recommendations that these groups will make we

can check that and we could know on a daily basis, if we want. So that as you go down you'll know whether these recommendations mean anything. You'll know whether this conference is relevant or not because you'll be able to pull out that information. That's why we're asking you to fill it out now. This is the beginning of a basis of an information system that is available to all Alaskans as to where you think Alaska is and where you think it ought to be going.

MR. FISCHER: Thank you.

MR. OSTROSKY: Mrs. Chairman, Hank Ostrosky. Mr. Bradley came up and said, "Well, we have to take the first step." We first -- before we have to take a first step, if you're looking into the future, we have to know what direction we're going to go --

MR. KOCSIS: Hank, excuse me. And I -- can we just let them fill out these questionnaires before we make another statement? Forgive me if I'm interrupting.

MR. OSTROSKY: Yeah, you're interrupting.

THE MODERATOR: I think everybody is busy with the questionnaires. Could you wait a while for that?

MR. OSTROSKY: Well, I think this psychographic polling is going on and --

MR. FISHER: Madam Chairman, I don't think the speaker is a delegate.

MR. OSTROSKY: No, I'm a citizen. I was invited, and I can see why.

MR. BLODGETT: Madam Chairman?

THE MODERATOR: Yes.

MR. BLODGETT: I feel I'd like to have an opportunity to hear this gentleman a little later by all means. His input could be very beneficial. But at this time I'd like to concentrate on this questionnaire.

THE MODERATOR: Concentrate on the questionnaire.

I have to bring up a question right now, that I will not be here this afternoon, so you will have to have someone else to handle your meeting this afternoon. I warned you.

(A recess was taken.)

*****

(Afternoon session)

THE MODERATOR: It's ten after 3. The reporter needs to break -- or ten after 2. She needs to break at 3 to change her tape. With the viewpoint of proceeding in an orderly fashion I'd like to set down a ground rule. We'll have input first from the delegates. Then the democratic process should prevail in that interested Alaskans that have taken their time and energy to come here should be heard from. I feel that's only fair. We're all in it together, whether we're delegates or not.

In the area of education, therefore, I would like at this time to have an opportunity to hear from our Commissioner of Education, Marshall Lind, for his input, if I may.

MR. LIND: Thank you, Mr. Chairman. I'm pleased to be able to sit in on this particular group. I hope that you've had an opportunity to read the paper coauthored by Marilou Madden and myself. I apologize for the length but, quite, frankly there have been some things happened in education over the past ten years and we've had a very difficult time keeping it fairly short.

I think that as we have gone back to look at the recommendations that emanated 10 years ago we have tried to trace each of those as far as what progress has been made during that period of time. We have also tried to

highlight seven or eight areas that we feel need a great he deal thought and consideration as we look toward the future. Some of those areas are the same ones we had ten years ago. The very first one speaks about the Bureau of Indian Affairs school. Considerable progress has been made as far as the bureau schools to the public school system, but it's the same issue we were talking about ten years ago. Also the need for looking very carefully and closely at expansion of our vocational and technical programs for people all over the state. And there are a whole series of things.

Mr. Chairman, I'd be happy to answer any questions, if people have some, about the paper, just kind of sit and listen and help you in any way that I can, if that would be appropriate.

THE MODERATOR: Thank you. Is Al Bramstedt here? I don't see him.

MRS. BRADLEY: No, he isn't.

THE MODERATOR: He is not present. As delegates I'd like to have some input from each delegate around the table from my right to the left, and then on the next topic I'll go from the left to the right so no one would be slighted. The next topic we'll come from the corner back and then back this way, if I may. Please identify yourself for input and your interest in this area.

MRS. BRADLEY: In the area of education?

THE MODERATOR: Yes. Please identify yourself and speak up for the record. Okay.

MRS. BRADLEY: Okay. I'm Marcia Bradley. I am an Alaskan native and I was born and raised in Sitka, and I have taught in Kodiak and in Anchorage. I have two children, one now who is in school, and so I'm concerned about what is in the future for our children.

And in reading through the article by Marshall Lind and Miss Madden I was particularly interested in the free schooling through two years of post-high school education and the availablity of the subsidies to students who demonstrate competence. Because I think the point that was made this morning about so many of the students going outside to school instead of staying in Alaska -- I grew up with a lot of kids who went outside for their education. Not entirely because they thought they were going to get a better education but because they had been here and for them part of the education was in going outside to see what else was available besides just Alaska. And I think that they're -- I don't think that our education facilities are really lacking as far as the potential. You know, I think that the University of Alaska has a lot to offer. And I personally don't begrudge anybody coming up from Florida or from California or anywhere else that wants to come to

school here. I don't feel that we're supporting them because their type of -- their reasons for wanting to come here are basically the kind of reasons for other people wanting to go elsewhere, kind of broadening. And you get a lot out of -- people can't have a really broad scope if you only live in one community and get all your education there. You don't really see what it's like elsewhere and have a harder time coping. So I have an interest in, you know, that type of offering.

THE MODERATOR: Thank you, Mrs. Bradley.

Mr. Borodkin?

MR. BORODKIN: Yes, I think in the bush area and some of the smaller communities the -- especially the high school graduates once they graduate the service that's available to them for further education is completely unknown to a lot of the high school graduates. So, therefore, I think that's why some of the students just stop there. I wish there was some way that the services that are available could be, you know, sent out to the bush communities and some of the smaller communities. I'm sure that the educators in those towns would make that kind of information available.

THE MODERATOR: Thank you very much, Mr. Borodkin. Mrs. Anasogak.

MS. ANASOGAK: I have -- I share a great deal of

interest in education and have been for a good many years now. One of the things that I'm concerned about is in the allocation of funds. It's the small schools -- I know when you allocate funds you get X number of dollars per student, and in the long run it's the small schools that get the smaller amount of money. And in order to get the material and not necessarily the quality of education -- but it always comes down to the amount of dollars that the school is allocated for. And it's the X amount of dollars that the small schools receive, and that's what they have to operate with.

And another area is the cultural change. I think that is gradually becoming more toward -- whenever I start to talk my ideas like to just come out, and then sometimes they're not always in order, but what I was trying to get across is that when I was going to school living in the urban -- or in the bush area it was a completely different change going into a bigger community to go to school because my way of life when I was going to school was completely different. And for me to go from one way of life and then to another and then to try to go through your education, per se, what you're required to do -- it was just a little hard to cope with. And I would like to see that change. And it has gradually changed, and I'm glad to see that. And for the bilingual part I'm glad to see that,

at least in my community, we have the bilingual program which helps to cross that gap between the cultures.

THE MODERATOR: Yes. Thank you.

MS. BROWN: Mr. Chairman, I'm a delegate, and I was bypassed. I have a question from Mr. Lind. I'm Lynda Brown from Anchorage.

THE MODERATOR: Yes, Lynda.

MS. BROWN: I don't have a great deal of information bearing these issues. However, I know that the Malahooch case, of course, had a substantial impact on rural education, and I'm primarily interested in bush education.

Can you tell us a little bit about the effect on your department's budget and the allocation of the funds, how that was impacted as far as changes in your department for the allocation of funds available and how much more you've been able to get from the legislature for your department and how this is going to work.

MR. LIND: Let me see if I can put it in as brief a pespective as possible. The major impact on the Department of Education as a result of establishing all of the secondary schools throughout the State is fairly minimal. We did not add additional State employees because of that action. A lot of people probably don't believe that that's the case. The reason for that is that money flows to the school districts. It just passes through us as allocated

by the legislature given to the local school districts to use as they see fit on a -- determined by the average daily membership. The impact has to be taken into account. When we look at the impact of the rural secondary schools we must always look at the other alternatives that we have. For many years we were putting millions of dollars into the support of boarding home or dormatory programs. When the high schools were established the rural area that funding, of course, went way down. It's down now to a very small amount. The foundation support money, which is the basic source of money for instruction, has gone up to some extent. However, we always had the instruction costs except in those cases where we were sending youngsters out of the state because the Bureau of Indian Affairs was then paying the full tax for those kids.

Those youngsters that were in dormatory programs in Bethel, Kodiak or Nome -- something has been toe provided in the regional setting. So all we did was relocated out to the local setting. And we also then reduced the boarding home cost, but that money had to be used for the higher operating costs of small schools.

So the major impact, as far as on State Government -- additional people needed to do this really was minimal. What the local school districts had to do was add the additional employees to develop and operate those

programs. There is a substantial financial impact, but the other thing that needs to be taken into account -- up until the early '70s most of rural secondary education was provided by the Federal Government. And a lot of youngsters did not have the opportunity to go on to high school until the State really got actively involved in providing these programs. We know that they are expensive programs. There's no question about it. We also know that to put a youngster in a dormatory program or to look at the costs of the Bureau of Indian Affairs is now faced with with Mount Edgcomb -- that the costs aren't that high. So we have to take all these things into -- I don't know if I've answered your question sufficiently, but there are a whole series that have to be looked at as you make comparisons for costs of rural education.

MS. BROWN: I was primarily interested in -- I think that the whole idea was that more rural students would be educated in more village schools for that opportunity than under the previous arrangement. And from what you said that, apparently, is going to be so.

MR. LIND: Yes. No question about it. We also can point to the fact that more rural youngsters are graduating from high school, and that is an extremely important fact. The drop-out rate for rural youngsters has decreased. We still have a high drop-out rate in certain areas, but it

has decreased considerably than where it was ten, fifteen years ago. Particularly 10 years ago.

MR. LIND: Thank you very much.

THE MODERATOR: Thank you. Thank you, Lynd.

Mr. Alexie?

MR. ALEXIE: Yes. I'm Nels Alexie from Bethel. I'm from the Apokok area, but I moved up to Bethel. Since we're on this education, people who are on my age -- we had lack of education. We were -- we weren't fully educated quite a ways back, like in 1950s and up to mid '60s. I never did graduate from the grade school because of the classroom speech. And then I jumped up to college. That's the time when I was -- started bumping rocks, started trying to get my college degree.

But today I thought that -- and I tell my kids and the others that education is number one. Without any education -- and ones that are listed here cannot be solved. (Indicating the yellow book.) And I thought that education out in the bush have increased to better education. I lost one word that I thought might be correct.

But, anyway, our schools out in the bush are different than the schools like in Anchorage and Fairbanks. Even they're different than Bethel schools. That's why this education that -- what we're having out in the village is going up in the steps. And it is very important to find

the needs out in the bush and to help the teachers to teach our children what they must know and what they can develop from our environment. Because anything cannot be developed without any education.

Right now I'm talking about education, but we can still refer back to our own people, you know. Like the white man education and native education; they can both work together. Because our people have been educated in our own education system. And you people came up and you educate us in your way. Which is very important. Now, our education has been dropped down a little bit, and the other education is coming. And with your education we can build many things and earn our living. The other education is going down because of a lack of animals. Animals are going down. And education should be presented to our people and make it better, if we can do it better. And a lot of us did not complete school because our schools weren't big enough and we had no high schools out in the villages. I think I can stop here.

THE MODERATOR: All right. Thank you very much, Mr. Alexie.

Is Mr. Bowdoin here?

(No response.)

THE MODERATOR: Mr. Browne?

(No oral response.)

Mr. Hickey?

MR. HICKEY: I'm not a delegate, myself, and I --

THE MODERATOR: Thank you.

Mr. Dahl?

MR. DAHL: Yes, sir. Thank you, Mr. Chairman. I have a couple of concerns. As we discuss the possibilities of free higher education for two years, the concern that I have is what that -- how that will impact private higher education in the State. The University of Alaska budget is approximately $175 million. It's the highest single item in the budget, most expensive single item in the State budget. It translates to the most expensive education anywhere, and it's important to consider cost effectiveness even with an abundance of dollars. Just because we're rich doesn't mean we can't be efficient and shouldn't be.

I think the private higher education gives an important alternative to public education. It helps to keep whole education in perspective. It helps as other influences are present in a community. Those influences that are providing services or institutions that are providing services tend to be better.

So as an alternative to -- or as a means of implementing the philosophy of providing two years of higher education I hope that we would consider that two years of private education should be granted not to an

institution but to a student. And there are ways to do that.

Some years ago -- I don't know that the program is still in effect. It may have been in the State because now there are an abundance of teachers. The Federal Government had a loan program where a student could take out a federally insured loan of some kind for education, and he would go to the school of his choice and become a teacher. And if he served as a teacher for a certain number of years, a portion of that loan was repaid through his services. That seemed to be a very practical means of getting teachers into the work force and also providing an incentive to stay at it.

There may be some constitutional problems, and I wonder if Commissioner Lind could comment on the present status of tuition grants in this state. I know that the tuition grant program as it originally was begun was, I guess -- through an opinion of the Attorney General -- was declared unconstitutional, and grants were not made on that basis.

Is there a tuition grant program in this State and, if so, how is it being --

MR. LIND: As you know, my responsibility is on the line of elementary and secondary education, but I'll be happy to try and answer part of your question.

We did have the tuition grant program up until about three years ago, and it was determined that it was not constitutional, the way to offset the higher cost of private school tuition. So the students had to pay only the same amount as it would a public institution. That is no longer present.

Through the State scholorship loan program, which is a fairly generous program, a very good program, there is a provision whereby up to, I believe, 40 percent of the loan will be forgiven, if the students return to Alaska following the completion of the program. So in the sense it's kind of patterned after the NDA loans that were available for teachers and promoted at the time there was a teacher shortage.

So that's kind of where we are at the present time. No tuition equalization program available, but approximately, I believe, $11 million annually is going out on the scholorship loan program administered by the post secondary commission. Post-Secondary Education Commission.

MR. DAHL: Thank you. Mr. Chairman, one further comment in conclusion.

THE MODERATOR: Thank you.

MR. DAHL: I would hope that our emphasis in providing two years of education would be to provide that education to the student and upgrade the level of education at the

University of Alaska in such a way that it might be competitive and, what, a draw -- that it might have a draw to students. But in doing so we not jeopardize the importance and damage the effectiveness of private higher education in this State. Thank you.

THE MODERATOR: Thank you very much, Mr. Dahl.

Mr. Fisher?

MR. FISHER: Mr. Chairman, I'm Jim Fisher, and I -- my input have looked at the '69 outline, and I'm going to read that -- what help it may be here of the three major programs that I can read in the outline: "Education programs of all institutions of learning in the State including research and graduate schools facilities should be equipped in material and staff so they contribute to the education and training of students for tomorrow's world."

Ways should be found to assist Alaskan youths in obtaining advanced training so that they may participate in all aspects of academic and practical studies including assistance to attend specialized schools not likely to be established in the state, i.e. law and medicine. The state should fund a major portion of education costs through revenue sharing while leaving school control in local hands.

Rural education should be reconstructed in order that native Alaskans as well as non-natives could be equipped to choose the life-style of their seeking, a

situation which does not now exist.

Matters within the education priority and the order of importance are: A, there should be regional schools of boarding facilities so native children and others in remote areas need not be sent out of the state for schooling of the opportunity should remain for rural children to attend urban schools through a program like the present foster home arrangement; B, an agricultural orientation program for new teachers to the State is a significant need.

The teachers assigned to rural areas should receive orientation in the culture of the area in which they will teach just in instruction on how to run the school through. Urban teachers should receive orientation relevant to the native culture. There should be a preschool training in all urban and rural schools. Special kinds of education should be supported such as expanded adult education upward-bound vocational training with special reference to Alaskan industries, special education problems centered particularly for rural Alaska and encouragement to Alaskan natives to enter the teaching profession.

"Other areas of importance include the use of teaching tools such as satellite education television to help bind the state together bilingual teaching aids to

instruct and assist teachers this native culture courses designed to help students meet the identity crisis by leaving home and entering a new environment and courses in Alaska native district culture for al students."

That was one of the most concise of the summaries of the 1969, and I leave that as my input, just the recitation of that outline.

THE MODERATOR: Thank you very much, Mr. Fisher.

Mr. Ackerman?

MR. ACKERMAN: I'd like to expand on what the gentleman over there said, I think, on kids getting out of high school and not going on to something else because they really didn't have direction when they were in high school. I taught our training program -- that's plumbers and pipefitters for a time, and we used to have a five-year program which would teach basic math and basic science and physics just so you get enough to where you could do the trade. And it's -- when the kids go through high school they have no idea what the requirements are to get into a trade or a profession. They go all the way through.

When you start college traditionally they have people from different fields come in and tell you what you need to know to get into that particular field. And you should be doing that in junior high school, is where we should be doing it. And when they go through high school

they can get an education that will enable them to get into a trade or profession. I think that's one of the major defects all the way through our system, all through the rural area.

THE MODERATOR: More intensive counselling? Is that --

MR. ACKERMAN: I think different trades people different operates and professions should be brought into junior high. And that's where they should start, and it should be an ongoing thing in high school. You come out of high school at least halfway prepared to get into a trade or profession.

THE MODERATOR: Thank you very much.

Mr. Sears?

MR. SEARS: I was going to mention the same thing he was going to mention. I've always felt personally that the brain is essentially very vain, that there's lot to be learned from -- putting emphasis in education on developing a trade. I've never found that to be -- I found that to be -- I'm not that far removed from public schools myself, and I was never introduced to a trade. I was introduced to English literature, and I didn't have much interest in English literature at the time, and trigonometry. I've spent an awful lot of my time working with physical labor since then. I found that to be rewarding financially and personally. But to this day there's still no programs initiating the trades at lower levels in high school, ninth

grade and eighth grade. And I agree with Gary completely on that. You should integrate the trades into the schools. Schools essentially seem to be white collar oriented. Why not introduce the trades to them, too.

THE MODERATOR: Thank you very much, Mr. Sears.

Mr. Jacobson?

MR. JACOBSON: Yes. I've spent a lot of years down south in various schools, and the biggest hardship I've found coming back up to Frontier Alaska is the lack of a single bookstore equal to the half dozen or so that you'll find in any downtown south with any reasonable size university. And along the lines of education, if anything could be done about that, whether a cooperative bookstore is started at the universities or something that, you know -- a store located in a central location would be all right because it's the kind of place you'd only have to visit two or three, four times a year. It could be in Anchorage or Fairbanks or Juneau or someplace. But to not have a single bookstore within two time zones is -- that's ridiculous. But as far as something to change, that might be something right there.

THE MODERATOR: Thank you very much, Mr. Jacobson.

Mrs. Burnett?

MS. BURNETT: Yes. I'd like to ask the gentleman down at the end of the table about the questions concerning the

free education. I think it would be a mistake. What Mr. Merdes said this morning sounds very glorious but I think there's kind of a California syndrome built into totally state-supported education where you have students that establish residency and hang around for years. And I don't think we want to develop that in the State of Alaska.

I think the loan program is excellent, and we feel a need, a financial need, so I think maybe we could expend the forgiveness portion of the percentage of forgiveness in possibly some other ways. I really feel like education is an investment in the future, and I think we should value that investment. And I think we should teach our children the value of -- not only the monetary value but the commitment, And the free lunch attitude is something I don't think we want to perpetuate. It doesn't exist. And if it does, it's only for a brief time.

Secondly, on the high school level, the counsel is very inadequate as far as career counselling and otherwise. It's -- I think our local schools recognize it. I hope at this level we recognize it. Students are fumbling and stumbling because of lack of understanding and communication with -- as far as careers and knowing where to go. They graduate from high school and say, "I don't have the credits to go to college, but I didn't know it. I didn't know what was required of me." And I think this is

a shame, but it's a reality. And I would certainly, you know, welcome Mr. Lind's comments on that.

Also, a few years ago we had some movements here in Anchorage and in Fairbanks also towards a year-round school, and I'd be interested to know if you've done any further research on that or information about that. Thank you.

THE MODERATOR: Thank you very much.

Mrs. Burnett. Mrs. Bennett.

MS. BENNETT: I feel that the bush community colleges are really an important part of the educational system. And it seems to me that to get students to come from the bush communities to Bethel or a larger town, which is the only place that a further program is available beyond high school, that we may need to offer incentives such as, you called it, free lunch, you know, to really -- there has to be something to compensate for having to leave once you've gone through high school in a small town and haven't been outside of it. I think the possibility of offering the first two years free, particularly at the regional community colleges, sounds good to me. I know that there are a lot of problems more logical to do it everywhere than to do it in just part of the system, but I think it would be worth talking about.

I think that telecommunications are really

important to education. I thought that the sections in the article were really interesting about the new systems and how the old ones hadn't worked. And it seems like that's something that has to be greatly expanded. It would be nice if somebody in this group has more technical knowledge on that kind of thing. I just don't think the concept is really important.

One thing that concerned me in the article was the mentioning of bringing the education down to age three. And it was mentioned it was needed because day care was needed for working parents. That didn't really appeal to me. It seems to me the Head Start Program is doing a fair job in the community and regional as far as a day care assistance program, should take care of that function.

And I'd also be interested in your comments about the possibility of having one governing board for all the education institutions. I bet you have something to say about that, elementary all the way through community colleges?

MR. LIND: Do you want me to respond?

THE MODERATOR: Please do.

MR. LIND: If I may, there was an earlier question -- several people have touched on it I and you put your finger on a very real problem on counseling. And I think the best indicator that we have to know that there are some problems

in counselling is results of the senior survey that was done this past year, has been done, actually, for the past two years where we've surveyed all of the seniors throughout the state, asked them certain things about the high school program, one of which is how do they feel about the instruction, counseling, what plans have they made for additional high school -- after high school education, whether trade school, technical or university. And they've told us some very interesting things.

The main thing is they feel they need more help with career decision making. And I think, you know, it's telling us something about the area where we have probably placed a lot of our emphasis as far as counseling in the past. It probably also tells us a thing we need to look at very carefully, making sure we do have well-prepared, adequate counselors in a lot of our schools. I think this is one of our major areas of concern.

In addition to that, that study revealed that many of the youngsters in rural Alaska did not have a clear idea as to where they wanted to go after high school, whereas those youngsters coming from the urban areas had pretty well clarified in their minds whether going on to a university and, if so, where, or to some vocational training Senator. And it was very clear about about how they felt as far as skill centers are concerned, a great

the past few years.

The comment on telecommunications is a whole different area. It's the area that we feel over the next ten years has some of the greatest potential for enriching and supplementing programs at the adult level as well as the elementary and secondary level. The notion that people have, of course, sometimes as you think about telecommunications -- it's strictly TV. And as the article I put together indicates, we're not talking just about TV. We're talking about an electronic message system, we're talking about computer assisted instruction and a lot of different things that can be done, and we can handle the video part of the TV part in some other way. But it has great potential. I think it needs to be looked at very carefully.

One of the issues that comes up when we talk about a statewide delivery system -- will the State then be in a position to control that of the content that would go out on this system. And that's a real concern to people. And I think that we need to look at that very carefully. Where will the program determinations be made. And, of course, it has been our position that they should be made as close to the local level as possible and not on some kind of a statewide mandate.

We've demonstrated that by not having a

statewide textbook adoption in this State and also not having a state mandated curriculum as such. So, so far we've been able to be allowed those decisions to be made where they should be made, and I hope that that would continue.

The other comment that you raised regarding expanding the curriculum, either to the -- at the lower end for younger children or for the 13th and 14th grades: There is a bill in now that would do this in the legislature on an experimental basis, on a pilot basis, to expand the 13th and 14th grade as a part of the local high school.

The issue was raised regarding the younger -- the early childhood question only to pose it as a question and tie in some of the other reasons why people probably should be looking at because of some of the changes that we see as far as the number of both spouses working, what is taking place with child care centers and would there be some change to look for a stronger educational component. I don't think anybody's advocating in there that you take all three-year-olds and have a concentrated program in trying to make -- teach them to read. I don't think that's really what is in this whole early childhood development area. But it's only to -- here is an issue that needs to be looked at. We recognize the importance of it for

exceptional children. And the legislature addressed it to lower that age for support to exceptional youngsters. We know that that's extremely important. We're saying now. Are we at a point in time where we're looking at greater state assistance for early childhood programs because some funds which have basically funded Head Start are drying up?

THE MODERATOR: Thank you Mr. Commissioner.

Mr. Angasan?

MR. ANGASAN: My views are the same as everybody else's in this room about career guidance. I think we ought to start in grade schools where a student can take the right courses in high school and continue on with what field he wants. That's about all I have to say.

THE MODERATOR: Thank you.

MR. SEARS: Mr. Chairman?

THE MODERATOR: Miss Plotnick.

MS. PLOTNICK: Well, one of my concerns, coming from -- I'm a product of Alaskan schools all the way from grade school to college, and one of my concerns now is in the field of health education. No one's mentioned it yet, but having been educated in Alaska and having done some substitute teaching in Alaska I'm seeing a serious lack in the field -- or the area of health education. And by that I mean preventative kind of information. I mean facts regarding VD, when you look at Alaska's venereal disease

rates. They're exorbitant. I don't mean any kind of morals but facts. I mean more information in terms of alcohol and/or drugs. When you look at those statistics. I don't think that it's a school place to say what's right or wrong, but I am seriously concerned about the information? The people I talked to who are very unaware of some of the consequences, when I think of nutrition, the kind of food people eat and how it affects them. I think that's serious. And people don't understand. "Oh, well, my child's got an earache." You know, big deal. I think that these are long-term effects, that children become adults and it's the population of the state. So it's something that I think should be addressed in the future.

THE MODERATOR: Thank you.

Mr. Silides?

MR. SILIDES: George.

THE MODERATOR: George.

MR. SILIDES: Yes. I want to touch on something -- speak about something which has been touched upon, and that is vocational training in the high schools.

As a product of the New York City School System I can tell you that the most important thing that I got out of going to high school was a mandatory manual training program that they have in New York up to one-third -- that which encompasses one-third of the time put into high

school.

I know, I was fortunate enough to go on to college and so on, but when I graduated from high school, you know, the business community did not come out and say, "Oh, goody, there's a high school graduate. Let's make him an executive." I went to work in a machine shop. And being the new boy on the block, which -- I did all the dirty work. But because -- at least I knew where to put the oil can in the machines. I was also able to work those machines and more and more.

And so in the three years that it took me between high school and I went to college I was in vocational -- in a machine shop of some type. Most people are not fortunate enough to go to college, nor are they -- and it isn't -- not identity, but they should not even go to college. And contrary to what every doting mother thinks, you know, and what they say at the PTA, every -- you know, their little Johnny is not going to become an Einstein. He's going to be out on -- as part of the labor force. And he's just an American and maybe even better by being tinsmith, an able machinist, an able something.

And the school curriculum today, especially in that Alaska, I think is woefully deficient in manual training. Now, for a while -- and, of course, this is very expensive because it costs a great deal of money to have a

fully equipped machine shop in that high school or a forge or woodworking shop with lathes and all the rest. This is very, very expensive. Because it costs a great deal for blackboards and some textbooks, you know, everybody studies triganometry, which they will never use again unless you're going on. But this state -- and this is what this conference is all about, how to use unanticipated revenue. And I would think that this group and this conference should come up with a statement which advocates the placing of sufficient -- first of all, the formulating within the educational system of a proper manual arts program and also the adequate funding of same. Believe me, without the funding you're just wasting your time talking about it.

THE MODERATOR: Thank you very much, George.

Mr. Kocsis?

MR. KOCSIS: Yes. I wonder -- Mr. Silides said something that again staff had been talking about, but I throw it out for your discussion here. We're talking about how to use nanticipated revenue, doin things other states might not be able to. Yes, we've focussed our discussion of education seemingly around school buildings and what goes on in those buildings what we train people in them. I wonder if this group wants to consider some alternatives: A, you have the alternative -- we spent $110 million out of our last tax money we pulled in as a big chunk. Building

schools or authorizing schools under the Malahooch decision. It's turned out in a lot of those cases that those school buildings have been totally inadequate. They weren't designed for what's going on out there. We're putting in school buildings because that's education. But the same money we're spending on those we can send our children in this state all over the world. We could put them on airplanes and send them where they wanted. They could go to the scene. Whatever happens in the world, they could watch it on TV. Our communications are that sophisticated they could talk back in an interactive way. We may not like it, but we've gotten to that stage. Can we now begin to think about alternatives to education as something that takes place in a big building? We have adventure based-education programs the legislature has begun moving into. We have an internship program which is on-the-job or vocational training. We have examples of that here. (Indicating.) These are working. Do we as a State want to begin making commitments in those areas or do we want to look at -- we better start looking at what the hell we're building out there. If it's building we are into, the State has not made the major commitments other states have made in that area and I think that's one of the things we could look at real closely. I leave that open for discussion.

MR. SILIDES: Mr. Chairman, I agree with Mr. Kocsis to a degree. The buildings which are being constructed, first of all, may or may not be adequate for the purposes and, secondly, though those building are not adequate, are not fully utilized.

Again, in the system which I grew up in the building was in use at seven o'clock in the morning until eleven o'clock at night, and I would -- went in the morning session and the evening -- afternoon session, and when I finally had to reach school and go to work or not go to school all I was able to do was go to school between 7 in the evening and eleven o'clock at night.

Now, the vocational training that Mr. Kocsis speaks about, for example, in -- that takes different forms. And you can do that on the TV. But unless you have to be involved in what I call manual training, that is the operation of machines, see -- and that you cannot do on the TV. You can take your lectures on TV, but eventually you've got to put up the capital expenditures. You've got to put the machines in the school buildings.

MR. KOCSIS: No -- I'm sorry

THE MODERATOR: Have I overlooked anybody? Just a moment. Who's spoken? Anybody that hasn't had an opportunity to speak?

MS. BURNETT: Did you want to speak? You came in late.

MR. STUMP: Yes, I'm sorry. I was not able to be here for part of the meeting, so perhaps -- please stop me if I'm being redundant or bringing up something that's already been discussed.

I mentioned it in my comment at the -- in the general discussion before we really got started or as we were getting started, and that dealt with the problem and the fear of government control. I know that that's some real problems in dealing with disbursement of State monies to private institutions. But I think again you have to bring into consideration the fact that if you centralize or when you centralize control over something as important as education, if you -- if the State does such a great job that you lose your private institutions or that the private institutions just fade away for a variety of reasons -- probably cost is one of the most important there -- then you are going to have the the possibility or the potential of a direction of a killing off independent thinking, thinking that is not in line with a policy established by the State. And whether or not in order to avoid that problem you can create better options to the school. The State private school system or, in particular, the higher educational levels.

THE MODERATOR: Thank you very much. Now that everybody else had an opportnity to speak I'll say my peace.

I live in the bush. I fully recognize the inadequacy our inability to properly staff our rural high schools sufficiently to bring a full high school course on a very high level to our young people. Now, with this problem confronting us -- and if you don't live in the bush you can't live with the problem. You might see it from a distance, and that could be beneficial. We do not have the hardware on a statewise basis as yet to deliver a statewide educational television program that would be available to anybody that had a TV receiver and could pick up that channel.

But I firmly believe that in this area of endeavor that we should address ourselves as Alaskans to providing a statewide educational television network with at least four 50-minute courses every morning five days a week. Obviously we would have the finest instructors in those courses available. If they weren't qualified, the viewing audience would darn sure recognize it in a hurry. The classroom teachers in the classrooms in our rural schools and in our City schools, if they elected to view the programs, instruction, the teachers in the classroom would monitor, they would conduct testing, and in the afternoon hours they would conduct tutoring. But it would be a solid 50 minute program of educational television.

Now, at the present the satellite earth station

system we have in the State is about as modern as the first 1913 Model T Ford. Believe me. It is totally and completely inadequate. There are Mark 8 Continentals available in the satellite earth station configurations, if you may, today. And these present satellite earth stations are, in fact, contemporary artifacts that are still in service and that have to be phased out or upgraded substantially. I'm very excited about the potential. We can come up with that and the right kind of a program that will give our schools full -- they'll be fully accredited schools. And these schools, these rural high schools, are not fully equipped today.

I can envision where other people here have touched on telecommunications and audio visual programming of this nature. But do it on a statewide basis. Have it available to every student in the State. You can even do it on a college level.

I met with Senator George Hohman an hour in Juneau three weeks ago. He just returned from a trip to England. Independently, he paid for that trip 100 percent out of his hip pocket. It wasn't state funds. And there's a university in England with 50,000 students involved and none of them in the classroom. It's all done by television. Telecommunications. And they talk and question back and forth by computer. Now, I note -- it's very noteworthy to

me that there's a been a strong emphasis here to vocational technical education and counseling. We are very, very short in that area of endeavor today, and the late great Senator William E. Bell said he would flee Alaska -- and a number of us in the first State legislature addressed ourselves to that, and we built the first vocational high school in the State. At Nome Alaska. And through political chickenry on the part of the educators of the State it was shot down. It's now being transferred to the first- class City of Nome and is no longer a vocational school. It's known as Nome-Bell High School. How educators, the leaders of the State -- it's an indictment of them and their philosophies. They've shot us down.

We're hurting desparately hurting for vocational-technical training in our state. We have many of our young people in rural Alaska that take the National Achievement Test that are one and a half years behind on the national average. They don't have the capacity, the academic ability to sit down and write a college entrance examination and be admitted to a university of higher learning. If we leave this room without some guidance in this conference to see to it we provide vocational-technical skills for these young people so they can go out and the world and be viable and haul their own freight, then we are shortchanging them. It's our responsibility

here and now. We must address this. Thank you.

MR. KOCSIS: Mr. Chairman, excuse me. Our stenographer needs to change her tape.

THE MODERATOR: Yes, we'll take a break while the secretary changes the tape.

(A short recess was taken.)

THE MODERATOR: With the concurrence of the body we will proceed to the Transportation section. When the Education transcript comes back we can review that because it will come back printed out so we can get it in front of us, all of the cogent remarks that have been made. And then we can develop a position statement. And in the meantime, due to the shortness of this conference, I do believe that we need to move along with efficiency and dispatch and address the next area of endeavor, Transportation. What is the consensus of the body?

MR. DAHL: Let's go.

THE MODERATOR: Mr. Sears?

MR. SEARS: Can I make a statement on that? One of the major complaints is that we didn't receive this book until, you know, Monday, and we haven't reviewed the articles in this yet, and the fact that there will be a transcript added on top of this to further go back and rehash -- boy, that's a lot of reading to squeeze into the next few days because we'll have a Transportation

transcript on top of that.

THE MODERATOR: I received mine at three o'clock yesterday afternoon. I left at ten o'clock and arrived in Anchorage at 12:20 and fell in bed at 3. By the time I got my car at the airport, a flat tire and bite to eat because I hadn't eaten all day, and I digested chat until five o'clock in the morning. So don't feel like the Lone Ranger.

MR. SEARS: That was just sort of a -- I know that's a topic of consternation this morning.

THE MODERATOR: It is somewhat frustrating.

MR. KOCSIS: Mr. Chairman, Mr. Silides, one of the gentleman that prepared the Transportation papers, is here, if you want to go on that.

THE MODERATOR: Thank you. In opening, I'd like to invite George Silides who has presented the paper here on Transportation to have some personal input here now.

MR. SILIDES: Mr. Chairman, as far as personal input is concerned, I take particularly to -- of course, I can just go ahead and highlight and read the whole thing, but mostly I'm here to answer any questions which may have arisen from the reading of the paper.

THE MODERATOR: Would you please highlight it, George?

MR. SILIDES: I will highlight it and I will try to be as brief as possible about it. Transportation is a very, very large subject. But it's also possibly the most

sensitive issue, at least one which creates the most discussion for the simple reason that no matter what the current economic status of a country of Alaska is the quality of life is enhanced by improved transportation or the construction of facilities which make access to improved transportation.

Now, this is epecially true in rural Alaska, which consists of much of Alaska as far as area goes, although not as people. This was recognized by -- in more than one paper this was recognized in 1972 -- particularly in 1972 when up until that time the Division of Waters and Harbors was primarily concerned with servicing the fishing industry.

Since that time it has taken on the job or at least should have began to take on the job of attempting to make the delivery of freight, of all those things which you need in Alaska whether in the urban area or in the rural area but more particularly in the rural area all those things which you need to simply live.

Quite often the mere existence of a community in the rural area depends solely on the ease by which the goods are being delivered to that community. And in 1972 we started a program, a bonding program, in order to get away from user taxes. When we use a tax concept to a bond issue concept -- and there was a bond issue in '72 and

'74 -- and then things seemed to be well on the way towards providing services, tree services, transportation services to rural Alaska.

In 1976 on very, very bad advice the government vetoed the bond issue at that time. And then in spite of the change in attitude by the administration the program has never really gotten back up to speed. Part of that, Senator -- and I think you'll remember this -- part of the problem -- there are two problems first of all.

One is that in 1977 the Governor, by executive order and concurrence of the legislature at the time recreated -- and the Department of Transportation, if you recall -- we had a knock-down drag-out fight in 1957, you know, when we had the head of department, which is just like the one you have now -- became so large and so unwielding that it became totally unresponsive to the legislative event, it became totally unresponsive to the wishes of Governor Egan, so he took the bull by the horns and he order abolished it and recreated the Department of Highways and so on.

Well, to come full circle, this administration has decided to recreate the Department of Transportation, and though I can personally recite a whole litany of bills as to what is wrong -- but I also at the same time hope that the Department will achieve its ends. Up till now it

appears unable to meet legislative intent or the Governor's stated wishes. An example of the Governor's stated wishes -- you know, we have a pretest going on, especially in the interior of Alaska, and some parts of the -- of course, you always have that in rural Alaska. And I saw him come from Fairbanks and Stanton and say, "I want all this work let this year. " He says, "Well, the Department says, 'Well, we don't care what you say and we're just going to fiddle around.'" And then the classic bureaucratic manner when you don't like what your superiors tell you -- you just simply -- you walk around and refuse and can't get things done. And that's what happened.

The second thing is -- I'm on freight -- is this matter of serious environmental fears. I'm talking about -- not fears but rather the issues. Quite often in these projects after they have been proven as fateful for the local community -- they say we need a boat harbor here or we need a dock here or a loading facility here or we need a port here -- after all the valid concerns have been aired and primitive issues along comes somebody with a phony act -- I'll give you an example at Cordova -- first I'll give you an example of Savonga. A very, very dangerous airport. Finally got through the whole works and the budget was about to be -- the budget was about to be issued when somebody says, "Wait. We will need another six

months to study the effect of life in the lagoon. In the meantime people were cracking up and Cordova, for example, which is a community up against a mountain -- and to those of you who are familiar with the costal communities -- all you have there is a strip of beach. And the only way you create landings is to tear out part of the mountain, throw it in the ocean and create yourself a port. So you find somebody with gravel somewhere.

Well, it took two years to get a free use gravel permit on State land because somebody was concerned whether or not the use of two acres for human use would adversely affect the water fowl -- not water fowl but the shore birds there which consist, to my knowledge, of some seagulls and some loons. But that's what happens. So -- and when we get that kind of delay with the rate of inflation the way it is today the principal -- the potential of the principal of any bond issue is seriously eroded. And that type of delay is unconscionable.

Mr. Chairman, there's lots more to -- which is designed for discussion here but, if I might skip at this time, in interest of time, to the recommendations which are found on Page D-44. And the number one priority in my mind right now is to establish a high freight -- that is a ferry system to -- between Kodiak, Alaska, and Bristol Bay, which would be a shore -- a costal ferry system but one which

would have a potential for carrying a great deal of freight, very few passengers.

Secondly is to construct a railroad link to the village of Tanana the Yukon, and that would materially change the way things are done on the rivers. Because the rivers are now coming back into their own as major arteries of transportation in the State as they once were.

So 3 is the construction of barge tie-up and freight off-loading facilities at the communities on the Yukon and Kuskokwim Rivers and on the major tributaries such as the Platte and the Koyukuk, for example. And something we've been talking about for a great many years is to connect the Yukon River and the Kuskokwim River. And indeed at one time there was a tramway there for all boats back and forth. Then as early as 1914 there was the talk of constructing a canal between the two rivers. The Planna' canal has proven to be economically unsound and environmentally unsound.

So what we are suggesting here is that we construct approximately 30 miles -- 30-mile long gravel -- heavy-duty gravel unsurfaced highway link between the Yukon and Kuskokwim at the point they come closest together, which is around the vicinity of Pile Bay on the Kuskokwin side and down the Kalskag on the other side.

To expand the original ports at Bethel and

Dillingham and, as a matter of fact, the surge in Dillingham, and its environment and in Bethel and its environment can be dated from the construction of those ports.

Construct regional ports at Naknek and on the Seward Peninsula and establish a ferry portage system from Iliamna Bay to Kvichak Bay via the Pile Bay portage, Iliamna Kake and the Kvichak River. All of that area, Mr. Chairman, is readily accessible to water, and you simply do not need 300 miles of highway going from nowhere to nowhere and touching no village. That's just a waste of time. But that's the type of proposal which has been made by some very heavy-duty outside firms to the Highway Department, to construct a road across all of this area.

And we propose that an independent Alaska Port Authority be established. This has been very successfully done in the most -- in some states. And the classic example, of course, is the Port of New York Authority, which, incidentally, also takes care of the ports in New Jersey. The state of Hawaii -- all the ports in Hawaii are built and owned by the State of Hawaii and leased out on a management fee basis or concession basis in some way. But the reason I want the port authority is to take -- to get some action done.

And 9 is to put less dependency on federal

assistance. These days with the exception of Alaska reaching all the rest of it -- we are not going to be getting much help from the Federal Government anyway, but it's always been the rule that he who has the gold make the rules. And up until now we've been going around with our hand out to the Feds for a million dollars here and a million dollars there to construct a fortress. They're circumscribed by law in that they must develop a cost-benefit ratio. And though don't give a damn whether or not the people there need that port or not. They have to -- the law says unless you can show dollarwise that each -- the income from that will be greater than the outgo at the very beginning. From Day One you can't build a -- for example, you know what's happened in your area, Mr. Chairman.

Kodiak, for example, has been waiting for years now while the court fiddles around, and here we are talking about what to do with money. Put your money in hard -- in facilities, which will assist three things, which will assist the existing structures in fisheries which will assist in the development of the bottom fishery and, thirdly, will assist people to lower the cost of living by bringing in goods to the area at a lesser rate. And secondly -- lastly, rather, is to establish adequate legislative oversight procedures.

If this conference, Mr. Chairman, is concerned with setting up -- with developing a program, something has to be done. We are saying that the port is successful in the legislative and political environment of the State. Quite often -- and what I'm afraid will happen is this convention will come up with a report to the legislature. The legislature will say, "Great. We approve." And so they pass legislation and they fund the program. Okay? And then they forget it. In the meantime, if one of the departments doesn't particularly care to -- you know, disagrees with you, they simply sit on it until it's a dead issue. You've seen it happen. Both of us have seen it happen. And I think that we really need to establish a better oversight procedure. Thank you.

THE MODERATOR: Thank you very much, Senator. Senator, you recognize, surely, that a Port Authority is totally autonomous once it's established and untouchable by the legislative process. But a port commission would not be. It would be subject to the legislative process.

MR. SILIDES: I agree, Senator. That's correct. I would have to yield to your language, that we do not want the economists -- and again we'll say to you, "We don't care what you say, fellows. We don't agree. This is something that's an oversight."

THE MODERATOR: It could have legislative direction,

yes. Thank you. I'll, if I may, now, proceed -- we will start this time from the left.

MS. BENNETT: Okay.

THE MODERATOR: And at this time I'd like to hear -- have some input, if I may, Mr. Bennett.

MS. BENNETT: Right.

THE MODERATOR: Thank you.

MS. BENNETT: I think transportation is a really important place for us to put dollars. I think that it's -- what I see as being really important for the State to do is to do things so we can have our own production industries. And I don't mean necessarily oil refineries but small businesses, fisheries, that kind of thing. Transportation is extremely important just as I believe telecommunications are. Those two things I feel are really an important place to put our money. I think we need to realize that it's not something we just put our money in but that it needs to be funded for maintenance also. It's a really large expenditure. I guess that's obvious to everyone. I think that the article on -- may I go -- are we talking about all the transportation systems or just water?

THE MODERATOR: Whatever.

MS. BENNETT: That the article on the railroad was really interesting in that the author's concern for the easement, losing the easements right now even if we're not

going to put in the railroad -- that that's something that should be done immediately. That railroad is a good low impact kind of transport for getting mineral resources or whatever out. It's not like putting in a road where anybody can hop in their Jeep and go. I don't think we should put in roads unless we improve roads within towns, that we don't want to connect villages by road. And I also agree that the water transportation is very important. That's it.

THE MODERATOR: Thank you very much.

Mr. Stump?

MR. STUMP: Is it Mr. Silides?

MR. SILIDES: Yes.

MR. STUMP: I'm from Ketchican, and when reading the -- through the transportation section I'm looking at the different ones -- I went right to the waterborne done because waterborne is virtually the only transportation we have in Southeast Alaska. And not only was I -- other people that I met were quite disappointed in the amount of emphasis dealing with Southeast Alaska's Marine Highway system in the water-borne transportation section, but we were quite amazed and somewhat appalled to see that it states that the system was primarily designed to accommodate tourist traffic and private vehicles.

The freight transportation of the capacity system

was quickly recognized. That was not the understanding of the people in Southwest Alaska. When it was proposed and pushed through by people in Southwest Alaska who had no other means of transportation except for freighter service which was, of course, a major problem and also -- or airplane, which serves all of Alaska and, for the most part in some form or fashion, that it was the needs of the communities in freight and in transportation of the people, residents between the cities that was a major concern and a major basis for the development of the Alaskan Marine Highway system, at least in Southwest Alaska.

I don't know how strenuously I can emphasize that, but I think that that direction is quite clear based on recent developments and, for example, Governor Hammond trying to decide whether or not to use one of the Conte Class Ferries to transport or provide a tourist-oriented side trip to the Creek National Monument behind Alaska for which case it was pointed out repeatedly that it was not to provide a tourist system but to provide for the needs of people of Southeast Alaska. That's our only way of connection between communities outside of airplane. And I think that it's extremely important that people throughout the State realize, who have very little roads connecting -- no roads that actually connect communities in Southeast Alaska, the exception, of course, being Haines or Skagway,

which does have an access through Canada to Alaska.

MR.SILIDES. Let me interrupt. I'm not arguing with you. As a matter of fact, your comments are actually in concert with what we had. I don't know if you were here twenty years ago when all this came about, but I'm telling you how the thing was. And this report says -- it recognizes the fact that rather than worry about what we said 22 years ago, or whatever it was, 20 some odd years there ought to be in Southwest Alaska -- if you ever do that with -- and I'll tell you right now, if not for the help of the Fairbanks area, you would not have had a ferry because that proposition was defeated in the Anchorage area. That's part of the history of it. Okay?

MR. STUMP: Yes, sir. I remember well.

MR. SILIDES: Okay. If you do remember, it was defeated in the Anchorage area and it was the fact that southeastern joined with Fairbanks and we weren't concerned about the ferry system then for tourists. We were concerned about what it would do to create transportation between the cities. That came about. Okay? I was bragging in this report. It was bragging about the fact that that, indeed, is the chief purpose or the chief function at this time. And I want to extend that function of being able to carry freight and carry communications between the cities of the area to the western world, you

know. So you shouldn't take my perception 20 some odd years ago when I was involved in getting this thing passed.

MR. STUMP: Am I mistaken? I thought that this report was dealing with the present and was written for this particular conference.

MR. SILIDES: It was written for now, that's right.

MR. STUMP: Oh. Well, it seems to me that, first of all, there are some very substantial problems and concerns in Southeast Alaska dealing with water-borne transportation that were not brought into focus in this and perhaps I have a misunderstanding what --

MR. SILIDES: Let's do it now --

MR. STUMP: -- the direction of the various reports in here are or what they're supposed to be concerned with. But the fact that in the recommendations they're not -- there's not a single reference to any of the issues and concerns of the Marine Highway system in Southwest Alaska.

MR. SILIDES: Mr. Chairman, not to belabor the issue, but -- you know, if you write -- and I -- this is a compilation of -- now, you can write about this subject forever. You can write hundreds of pages. You've got to skim over it. Now, there's certain places in this conference you've got to give assistance to those areas which are lease able to assist themselves. Believe me, Ketchikan is a lot more able to -- we recognize those

problems. And no one is planning to ignore the parlance of Ketchikan.

For example, this report does not say anything about the Port of Anchorage nor does it say anything about the potential of Point McKenzie as an oil -- as a chemical port. It doesn't discuss Anchorage because that's in place and it's taken care of itself. Ketchikan and Southeastern have a great many needs, but it's only started. There is nothing out there in western Alaska, absolutely nothing, you know. And what I'm trying to draw -- maybe I haven't done it properly, but I'm trying to draw the -- I'm trying to say, "Look at the good it's taken in Southwestern, ad let's take that good that's created and send it to the Western." And that's the purpose of that paper, not to downgrade what you need.

THE MODERATOR: I think that we should proceed and give some other people an opportunity to put some input. You have a Marine Highway system in Southwestern Alaska that's functioning. It's subsidized by 20 million a year you're in business. We're addressing future frontiers that need to have their problems solved. Your problems for by lines are solved.

MR. STUMP: That would probably be a point of contention.

THE MODERATOR: All right. Mrs. Burnett?

MS. BURNETT: Yes. I'll make mine very brief. I just have to agree with what George has to say. But I think the point he's trying to make is we are totally interdependent, and the success of one particular area of this huge state is very closely related to the rest it, and I think his remarks are well taken. I pass.

THE MODERATOR: Thank you.

Mr. Jacobson?

MR. JACOBSON: (Indicating)

THE MODERATOR: Mr. Sears?

MR. SEARS: I'd just like to say I think his recommendations are really exciting. You know, it seems that for just a small -- for a comparatively small price it seems like there can be a lot of returns made, financial returns.

But the point I wanted to make, just to change a little bit from the Marine Highway, was recently there was a conference held on the future of air transportation in Alaska. And the FAA came up with some pretty frightening proposed guidelines for the light aircraft industry. I think we're probably all familiar within -- and probably a lot of you are a lot more familiar than I am -- a lot of them involve security procedures in the bush that are impractical and very expensive. I'd like to see one of the results of this committee to -- I don't know what the --

what the legal standpoint is. I know that when the State of Alaska butts up against the federal it's always a big confrontation.

MR. DAHL: They win.

MR. SEARS: Well, I don't know what the legal implications are, but I would like to see at least this committee take a strong stance in favor of the small bush carriers. I don't -- I don't know how practical that is. I don't know if we have a choice in the matter. Is there? I mean, you're a lawyer.

MR. DAHL: I should know everything, right?

MR. SEARS: Sure.

MR. DAHL: You're a lawyer too, Jim. Why don't you answer that?

You're a lawyer too, Rob. Why don't you answer that?

MR. KOCSIS: Notice how we all run for cover. Where is Walt Parker when we need him?

THE MODERATOR: Are you through, Mr. Sears?

MR. SEARS: Well, I don't know if it's worthy of any comment, but the point is made.

THE MODERATOR: Thank you.

Mr. Ackerman?

MR. ACKERMAN: On this water transportation, for many years they've talked about possibly, you know, a ferry

connecting -- for many years they talk about an interior ferry that can circle Eagle and Dawson, which would really expand our transportation system since there are roads at both ends and it would get into the interior a little bit cheaper. I think one of the things that concerns me most about our transportation is on freight in Alaska. And it's all over Alaska you buy a roundtrip ticket and you travel one way. And I think that we have to, on the cost of our transportation after we get it -- we have to develop industries all over where we're traveling both ways, we have a back, we get a balance of trade. I think that's something really legal. I imagine that would be a topic. I think that's one of our major problem, that we don't develop back haul. I think if we do have back haul we can develop it.

THE MODERATOR: Thank you, Mr. Ackerman.

Mr. Fisher?

MR. FISHER: Yes. I checked the 1969 recommendations, and they have very brief references in the 1969 to transportation and the concern for transportation and the establishment of some independence. And I think the idea of independence is very good, and I think we need to push with it. This talk about ferries on the river systems is an excellent idea. The river systems are hopefully coming into their own and will be utilized much as they were in

the early decades of this century.

One example of the possibility is the fact that there are now four schedules a year from Homer to King Cove. And the master -- his name is Dick Hoffstead on the Tustumena said that with a schedule change -- all it takes is a schedule change-- he could run to Unalaska once a month, which would carry the flag that far to Wstern and hopefully it would engender some additional activity on the coast for both freight and passengers. And I think that type of program when connected to the river systems in the interior is extremely important with respect to the Marine transport opportunity that we've got in this state.

While we're doing that we should not overlook the need to improve the facilities for air transportation in some of the more remote villages. It seems that primarily what's needed in a very general fashion are better destination facilities in small rural towns and a system for better equipment and the navigation facilities for those for the air transportation system.

THE MODERATOR: Thank you, Mr. Fisher.

Mr. Dahl.

MR. DAHL: Just two things, Mr. Chairman: Several years ago there was some discussion in this state of a comprehensive transportation plan. I wonder if the Senator could comment on the present status of that comprehensive

transportation plan. Is there one?

MR. SILIDES: No, there isn't one. And it's a pet peeve of mine with the legislature for many, many years. In fact, with the present legislature there is no -- there are five-year plans which -- last year there are 10-year plans but there is no comprehensive plan prepared for Alaska that I know of.

MR. DAHL: Mr. Chairman, it seems -- I knew that was the answer, which is why I always ask those type of questions. I think it's unconscionable that we as a State with resources as great as ours deal with transportation issues in a way other than comprehensive. We've taken a step, it seems to me, by lodging transportation in a single department. That appears to me to be an administrative move that's correct. But there are so many issues that need to be -- that need to be dealt with through transportation.

One of the issues that we're going to be discussing at a later time is the use of in-state oil. I'm very concerned about Western Alaska. I'm concerned about the lower Yukon and the low Koskokwim. And it seems to me we need to get into a situation where we're transporting fuel from Alaska down river to bush communities, not up river from somewhere else through Bethel or Saint Michael. I think it's critical that we begin moving fuel from our

MR. KOCSIS: Mr. Denny is not here, sir.

THE MODERATOR: Okay. Mr. Alexie.

MR. ALEXIE: Mr. Chairman, when I read this -- when I read about transportation, aside from Kuskokwim, I'm all for this 30-mile gravel highway because that will reduce some of the shortage on our section over there because this highway will not be connected to any city but it will be very useful for the creeks that cannot go on this side or the other side. And the other ones are docked at Bethel and ex band because sometimes there's two barges and one is anchored down in the river, one is out loading, so they take care of them one at a time. It's just all I can say.

THE MODERATOR: Thank you.

Mrs. Anasogak.

MS. ANASOGAK: Mr. Chairman, I haven't heard too much on the air transportation. The area that I come from is -- we mainly -- that's our main source of transportation, is by air. A lot of our goods, groceries and that whatnot come by air. And sometimes along with also the freight charges that we pay exceeds the price that we pay for the goods in the first place. And I don't know what's being done or I haven't heard anything about the navigational systems in our present air fields in our area. I feel that navigational lights should be installed in every air field because in my field of work as a community health agent

there's nothing more frustrating than trying to get a patient out in the middle of the night. Because you can't get a plane in, and you have to round up snow machines or whatever -- whatever means of lighting up that air field so that a plane can come in and out.

THE MODERATOR: Thank you. Lynda Brown.

MR. LIND: She mentioned a couple of things that I was thinking about, was the air transportation system. The State is so large that every area of the State has its own transportation problems, and I think that the comprehensive plan is really absolutely necessary because it's really fact cool at this point and controversial. I know that the basic air transportation plans have not kept pace with other changes. You know, there are bush areas trying to get fish out and they can't get fish out because their strips are simply inadequate to handle those kinds of aircraft to carry them out. And the State is really very far behind. And that's a question of mine.

But I certainly feel that the transportation system that we eventually evolve has to be responsive to a change in needs in every area of the State. I think Southeastern has some tremendous needs that certainly haven't been taken care of by $21 million. That's really not the point. The point is efficiency. And it's just like not being able to get the fish out because the air

strips are inadequate. These are the areas where we have to spend the money so we can continue to grow as a state, we can continue to -- I mean fishing jobs is very simple. And I think these are very important points.

THE MODERATOR: Thank you.

Mr. Borodkin?

MR. BORODKIN: Yes, Mr. Chairman, I'm really excited about the coast ways transportation. But one thing I'd like to see is if the recommendation is going to be taken up as to plug the gap between Southeastern and Cordova. As you know, in that area we don't have a ferry that connects from Southeastern to Cordova. And as we plug the gap then you'd have a Coastways Service from Seattle all the way up to Bristol Bay.

THE MODERATOR: Thank you.

Mr. Bradley?

MR. BRADLEY: Thank you, Mr. Chairman. On behalf of my wife who had to leave to take care of the kids, she wanted me to stress her feelings on transportation. As I understand it. And those feelings are that she's strongly in favor of providing the same level of service for rural Alaska in general, that is provided for urban Alaska.

Amplifying on that a little bit, I would imagine her thoughts would stress air and water transportation in those parts of rural Alaska that lend themselves to that.

So that they involve subsidizations or some economic words that economists would use. She would be in favor of that.

THE MODERATOR: Thank you very much.

Yes, Mr. Kocsis?

MR. KOCSIS: I'm thinking again of the recommendations that you're going to be making, and I wonder if could just share with you things. I wonder if you want make recommendations like this: You are looking at the problem and you're asking -- air and water seems to be the big thing. It certainly is in the area I come from. Devise a plan, and I wonder if the State can submit something like this. You need to, A, improve all of the things that we talked about. You've got to get all the runways to where you to get planes in and out. Is that State obligated to do that? Where does it come in as a priority? We need to have some response from you.

Secondly, the equipment itself. When the CAB deregulated in 1978 it meant the subsidies were available on a direct basis to small carriers. That means they can not perhaps begin to complete realistically on routs. We've got to give them our assistance. the Should State begin to look into cooperative ventures on the actual purchase of equipment to service these routes? Should the State encourage regional c .porations which now, if they ran their own airplanes could pick up these subsidies

directly? Should they turn to corporations who are already responsible to develop most of the airlines which would feed into small hubs? And then maybe you begin to consider a State airline which you contract the operation of it. The State owns it and services our citizens. And then you look to Pacific and Polar. Somewhere along the line you have to begin to ask how that airline begins to make trips down to our resource consumers bringing back things that they want. And then perhaps you can conceptualize a super airport in Northwestern Alaska somewhere. And what happens is all the trans-polar flights will stop there. They'll do one thing. They'll fuel. They'll fuel from a small refinery that produces nothing except aviation fuel, and we can do it at a cheaper price because it's ours. And Alaska gets out of it free cargo and reduced price on every fifth flight that comes in. Our stuff comes in at a lower price. And we send out the fish and so forth that the regional airlines bring into this place. And also this airport can become a northern terminal of your rail port. So you can take stuff down that way. Do we want to make recommendations like that?

MR. FISHER: How about the secondary --

MR. KOCSIS: I'm thinking we do. Obviously.

MR. FISHER: For instance, how about the secondary socioeconomic impact putting something like that --

MR. DAHL: I think it was going to go to Teller.

MR. KOCSIS: I think we have enough space. Seriously, that's one of the conversations too. Environmentally we've overloaded our population. Fairbanks and Anchorage can't take it any more. They're diverting flights because of overloading gasoline problems, the whole thing. I think environmentally we could do a lot better job in Northwest Alaska somewhere. I think they could do it. Hell, they built a pipeline. We've got to be able to solve that one. It would have the least impact on population.

MR. SILIDES: You have one of the finest airports in the world, for example, at Cold Bay, Alaska.

MR. KOCSIS: Yes, sir.

MR. SILIDES: And you'll each find that that's developed. There's only one problem with Cold Bay, Alaska: fuel.

MR. KOCSIS: Yes.

MR. SILIDES: Cold Bay, Alaska, is shorter than anywhere else.

THE MODERATOR: I'd like to have an opportunity to have some input now myself on this transportation. Everybody else has spoken, I believe. We in the 1960s, as Chairman of the subcommittee of finance for 12 years handling the public works budget and the highways budget had -- we didn't have very much money in those days. We

designed our bush airports on brown wrapping paper. And we put them out on contract with miners here and there who built bush airports. A miner built an airport at Kodiak. He built one at "Shuktukane". He built one, too, I believe at "Hoytmah". And "Shelum". And on and on around the State. It went that way. And Southeastern Alaska they have the southeastern conference old time friend of mine Dale Stump was involved in that. Felix Toner wrote a report referred to as Toner fairytales on the Marine Highway system to help push that legislation through and fond the Marine Highway system in Southeastern Alaska, ferry system, the first three canoes, and moved up to Cordova. I don't know what happened to it. It was supposed to have been there.

MR. BORODKIN: It went back to Southwestern.

MR. STUMP: It runs to Ketchikan --

THE MODERATOR: There you see. Political pressure here and there to move it around like checkers on a checkerboard. You're amply familiar with that caper. Now we need -- definitely need to extend the Marine Highway system on up to Cordova. We need to upgrade our airports throughout the State. And four years ago after Mr. Hammond was elected governor I conversed with him on this. We had the money to do it and to making a comprehensive -- new comprehensive airport plans that the for the State but

first, before we make that comprehensive airport plan take inventory of the existing airports or conditions, what it would take requiring to upgrade them. That has not been accomplished. Now, we've programmed and doubled Mr. Egan's airport bonding request for airport construction. We used up all the Federal aid airport matching funds that were available. We didn't lead any Federal airport matching funds last. I don't know what the status of it is today, but the transportation picture in the Northwest, at least -- and I don't like to be provincial. I want to address myself here on a statewide basis, a statewide needs. But we have to have input from each area of the State, and we're all representative in many areas of the State. So at the risk of being provincial, I'll address that particular area as it affects us.

Alaska Steamship went out of business, Crawley Maritime Corporation moved in with Tug and Barge Service. Foss Alaska Line moved in, a Dillingham Corporation. Northland Marine Lines moved in. And there was a high spirit of competition in Tug and Barge Service into the Bering Sea. But one thing that was not competitive, believe me, was the prices. If there's any group of people in the transportation industry guilty of price fixing I'm convinced those people are. An example: Three years ago the published tariff of the Crowley Maritime Corporation,

Antarctic Light Ridge subsidiary that they own in Nome, Alaska their barge rate of a gallon of petroleum product -- gas or oil -- by tug and barge to Nome to Teller was 41 cents a gallon. And I was hauling it over the Nome Teller Road with my own trucks for 16 cents. It's unreal that road highway transportation would be more than water transportation. And I may be remiss, but I have not sought to find out what the current tariff is. We're no longer interested. Even though the accelerated cost of fuel today to run our generators -- we buy our fuel every Monday morning. Last Monday it cost us a dollar and 32 cents a gallon to put fuel in our tanks in our powerhouse. Now, then, the bush airports are overloaded. They are moving from -- they move in the 1960s from tail dragers swept wing, and Beavers to Cessna 206's and Aero Commanders. Now they're moving from Aero Commanders and Beavers to single Otters and twin Otters, Sky Vans, and our airports are now too short to accommodate them, and we're supposedly a wealthy state. We don't have to build airports designed on Browene wrapping paper anymore, but they haven't been adequately upgraded. Although we built the lower Yukon multi-engine field at Amdrosky and we build a multi-engine field at Gamble and Prudhoe Bay and Point Hope, and Barrow improved Bethel, improved Dillingham -- we didn't improve youth off cleat -- they need a cross run way badly. We can

go on and on and on, but we need a comprehensive statewide in convenient story and a statewide development plan. And this Department of Transportation animal that we have today has not done the job.

MR. FISHER: you weren't confining your inventory just to air transportation, then?

THE MODERATOR: No. Now, the people in the Northwest, number one -- they do not want a highway link to Anchorage or Fairbanks. There would be too many pressures brought on by the easy access into the area, by people that -- by people that live out there that just as soon wouldn't come.

Why, they show up on an airplane they try and be friendly and courteous and all, but by and large it would be an awful lot of pressures. We know what happened to the caribou herd on Skys Highway area and we know what happened up in that -- up around the Tangerra Lakes into the interior caribou herd and Sweet Lake and McKinley Park Road there for about -- Johnny Windress Roadhouse there on the ridges. Packson's Lodge. An easy access road was in the herds, and the herds were "bootering." Those same pressures can come with the road from Fairbanks to Nome or from Anchorage to Nome or to Kotzebue. But we don't even want a road from Nome to Kotzebue. We do want to see some roads connecting some of our villages for service access by road. Now, the roads out there are not maintained year-round.

God puts the snow there and God takes it away. The maintenance crew goes on around the fuss of May and it goes off around the first every October.

There's a very real need to upgrade the bush airports in the State to no less than 4,000 feet and widen them out.

We're now confronted with this factor at home. This evening I had some 22,000 pounds of Parcel Post and air freight weathered in at Nome that's been there now for nine days. We've had good weather the last couple of days, but all aircraft have been busy in an air search for a missing aircraft with four people. So the air freight and the mail isn't moving. We have a 2600-foot air strip. They've graduated from Cessna 207 and Aero Commander aircraft to twin Otters that are bringing in 3,000 pounds of air freight in one clip instead of a thousand to 1500 pounds. That necessitates a larger vehicle to accommodate that air freight. You can't leave it on the air strip in severe weather. By the time you get up the airport two miles and load up and come back the two miles and unload and go back and get a second load, the stuff you left up there is frozen, not fit to eat, not fit to sell. And you can multiply that problem by every commodity out there. Our bush airports are not inadequate.

Thank you.

MR. KOCSIS: Mr. Chairman. I wonder does the group want to address or should they address this? It makes a difference who does it. Does it all come out of the state? And it goes directly to the local contracting? That's the kind of decision that we're in a position to make. We can make that improvement because of the money we have in the state. Can we go on that lower level? How does the group envision this happening? Is it going to be a master plan that the State comes up with that they come down and building airports for you and parcel out the money little by little, or is it going to be one where the local communities build the airport? I also wonder where does the money come from? Is that an obligation -- is that what this bonus -- not bonus -- this unexpected revenue we have -- is that what that money should go to? Is this a priority? Should it be greater than from the Federal Government? Should we go into corporation partnerships? We have in the native corporation a larger source of money that we haven't really interfaced adequately. Should we look to them and the State and the local units, form together in that way? Would the group address those issues? Or do they care to?

THE MODERATOR: The Federal Aviation Agency yields a lot of control over airport location and design, whether we like it or not. They can dictate to an air carrier that's carrying mail, mail contracts, what airports to use and

what ones not to use. They can say to an insurance underwriter and broker, "If this aircraft uses this field, his insurance would be void. We just won't go along with it." And that's the way it is.

MR. KOCSIS: Mr. Chairman, we now have the position to respond. If they say this is a reasonable requirement, we think the State will find it to be reasonable and chooses to make the commitment, we can build you that field now. That's the kind of decisions we can make. And again then once they've agreed that if you have such and such a field, you'll put the flight in, who builds that field? Send it down from the State level or send it to the local level.

THE MODERATOR: It would be nice to get it on a community level and get away from the State, eases administrative procedures, red tape.

MR. SILIDES: Mr. Chairman, if I may, it depends on the sophistication. I speak now as an engineer. It depends on the sophistication of the State.

MR. SILIDES: But an airport is something else again. So I think you have to look again at the specific project and say to yourself, "You notice this is not part of our job here, you know." Now, the link between the Yukon and Koskokwim can develop. They can possibly be done by local contractors for two reasons: One, because it can be done; secondly, it aids the economy. An airport on the oter hand

involves public safety. You see. And that has to be done to specifications. And very rigid specifications. And therefore I think the process is important.

MR. KOCSIS: Okay. But again I guess my question would be: Who is going to be the guy that leads the bit? The State of Alaska? Is it going to be a contract between him and somebody that comes down and buld them an airport or is it going to be the people in that town making their own decision to the effect that they need experts to hire them?

MR. SILIDES: Well, Mr. Kocsis, let me approach the golden rule. He who has the gold make the rules.

MS. BURNETT: Right.

MR. KOESIS: That's why I make the question. There's been gold back in Juneau for a long time. I think the maybe they might like to see it spread.

MR. SILIDES: That's right.

THE MODERATOR: Mr. Dahl.

MR. DAHL: It seems to me that there are several things occurring here. Certainly it's not advisable for the State to build an airport a place that's overseen by the State with people that -- with contractors that are chosen by the State and laid on superimposed onto a local area without not just -- not just adequate or superficial public response. But significant public response is an

example. It's north of Bethel on the Kuskokwim. They're suspecting a problem now with an airport that was built over a traditional cemetery. Now, that's dumb to do that. And there's no reason to make those kind of mistakes. The reason that those mistakes are made is that nobody asks any questions. And that it seems to me that the State does have the money to do that and ought to have the sensitivity to deal creatively with local people to get the job. Now, whether that means hiring a local contractor I don't know. I'm not willing to even participate in that.

THE MODERATOR: We're going to have to take a break for a tape change.

MR. ACKERMAN: Carolyn, I'd like to comment on some planning zoning and changing.

THE REPORTER: Mr. Chairman, we have to change the tape and then we'll come back to you. Please? Thank you.

THE MODERATOR: I certify our group is on a diet. We're thinning out. Hopefully they're in the smoker or whatever. Mr. Ackerman, would you please proceed?

MR. ACKERMAN: Oh, we were speaking of the runway that was built over the --

THE MODERATOR: Speak up, please.

MR. ACKERMAN: The last legislature, I think Bob expounded on it a little bit. If they don't get returns in 90 days, they go ahead on the process. One of the main

problems we found out is Fairbanks with the Department of Transportation. If you don't like the project, you don't get any project.

THE MODERATOR: That's so true.

MR. ACKERMAN: I think that's something we have to look at. I think one of the best because the legislature was a meaningful public input. However, we need to slow down and look at these a little bit more and get the public input and see where the needs a little bit better.

MR. FISHER: Isn't that the argument for legislative oversight?

THE MODERATOR: Yes, Mr. Fisher, yes.

Does anybody else have any input at this time in this area?

MS. BENNETT: I'd like to make a comment.

THE MODERATOR: Miss Bennett.

MS. BENNETT: I would like to see in trying to do something different with this than has been done before. I think it would be a good idea to fund research for maintenance when you talk about lights on the runway or communications or buildings on the runways. For air transport all these things are important. People in the village would be able to take care of those, and I doubt that there's adequate technology now if the lights went out someone could fix them. And things need to be simplified.

And I think that would mean a whole new system. It's probably a very expensive proposition. It would be a great thing for the State if special buildings were easy to transport and put up lights that were easy to maintain and install, et cetera. That kind of research would be good to use some plan as far as air systems would go.

THE MODERATOR: Yes, Mr. Borodkin.

MR. BORODKIN: Yes, I think the villages would have a final say in location of any airport built within the village boundaries because of Section 14-C under the Claims Act. That provision allows village corporations to make reconveyance either to the municipality or to the State in trust. So they'd work hand in hand.

THE MODERATOR: Thank you, Mr. Borodkin. Miss Anasogak.

MS. ANASOGAK: Just a comment on what she just said where maintenance part of these navigational systems would come from the village. That would be where the education part would come, because if we provided the kids with the education, the necessary education, the vocational skills to maintain these things, these kind of things, if the students so desired, you could.

MR. KOCSIS: Mr. Chairman, we have with us two of the gentlemen who wrote pages that are in front of you here. If I may introduce them, Mr. Walt Parker who wrote the

report on air transportation is sitting here and Mr. Red Swanson, Representative Swanson -- former Representative Swanson who wrote the paper on rail transportation.

Our time is going to be limited in this room, and if the group had questions and the would consider it, we might have comments from them.

THE MODERATOR: Are there any questions regarding the papers on air transportation presented by Mr. Parker or on rail transportation by Mr. Swanson? Mr. Fisher?

MR. FISHER: I would like to direct a question to Mr. Parker. He didn't cover the alternative of possible State ownership of any of those bush facilities as to operating airlines, say comparable to the -- maybe we ought to have a State skyway system like the Marine Highway system in such areas as might be. You didn't cover that. Any comments?

MR. PARKER: Mr. Chairman, no, I didn't raise that particular option. I guess from a feeling that with the stage of deregulation that the aviation industry is in now, that we do need to give that a little more of a try before we proceed to the next stage, if deregulation doesn't work. But with so many air carriers existing in Alaska and the level of competition that does exist at some level, why, moving a State air carrier in there at this time didn't seem like an option I cared to propose any way.

But one of the options that is available is to

provide support for operators so that they can finance new equipment. One of the major problems with the industry now is that a lot of operators simply aren't able to finance new aircraft on three-year terms, which is what the banks usually will limit them to. And if we can work out some system for financing, we can probably get the right aircraft in place.

In the other areas, though, we did strongly propose that the State move into those areas that the Federal Government has never moved in and is probably not going to. The problem is that from the regional centers out from Nome, Barrow and so on out to the villages, Alaska just doesn't fit with the national air system, and it's never fit FAA criteria or Civil Aeronautics Board criteria. And we really do have to sit down and design a special system that's uniquely suited to providing that service aircraft through a system that's certifiable so that the insurance liability and all those things will be operating there the same as it is in any other airport, but one that's tailored to suit Alaska, not trying to fit ourselves into a mold that we never fit into very well. That's the general thrust of the paper.

In order to provide the service and get the planes in place that can do the job better than some of the aircraft that are being used now, why, there would be a

protocol if the State were to finance such aircraft with low interest loans, and that would be that the operator would have to guarantee that they would stay in place and serve that particular area and that he wouldn't pull them out of service and send them off to Eastern Canada or Nigiera or what have you every time it was a good charter market somewhere else and use his old aircraft to serve the bush, which we've had happen a lot of times.

So it's, you know, getting stability every service that's critical. And service is terribly unstable now. We just hired Evergreen to put a fleet into Western Alaska so things are pretty good right now.

THE MODERATOR: Not really.

MR. PARKER: How long are they going to stay? Well, they're better than they were a couple of weeks ago.

THE MODERATOR: We haven't had any mail in nine days.

MR. PARKER: Well, some things haven't changed. At least the potential is there that you've got a better fleet of aircraft than before they did that. But that contract could be counseled by either party. Very short range. So there's no stability in that particular service yet, nor is there any stability anywhere else in the bush in the level of service that's being provided.

Building new airports is only part of the answer. Providing better communications is only part of the answer.

In the area of training somebody mentioned -- that is addressed in the paper and, yes, we've got to let the 250 or so places that are served by bush air service, why, ideally we're going to have somebody trained in each place than can handle the radio equipment and provide a certain level of maintenance there, field lighting, all of those things. The personnel that mans the system are always the key element. And the same way there's o reason why we should continually import pilots from the other end of North America to fly in rural Alaska. We've proved a long time ago we can employ our own pilots adequately, and it's one of the areas that we should be moving on to see why we don't staff the airlines almost totally with people who were born and raised in the country, because people like the jobs. They're usually good-paying jobs. We've had a lot of local people flying. It's just a matter of doing more of it.

THE MODERATOR: Mr. Bradley, I believe, has a question.

MR. BRADLEY: Yes. Walt, doesn't your major concern -- it eems like -- stability -- doesn't that argue for public ownership of the idea of Mr. Kocsis -- you know, to expand on that. Maybe I should let Rob do that. But he was arguing for some sort of centralized airport in various regions over the State now listing a carrier system, owning and managing, I guess charter airlines, and then going on

in some great cosmic idea of inter-polar flights to Hong Kong and, you know, North Korea. But, you know, isn't the public body the most stable, you know, because, of course, that's our system?

MR. PARKER: Yes. If you will look at your service, especially from the regional centers out to the villages, it's just sort of an aerial transit system, why, in each area you could just set up a transit district and operate it as such, and this would be certainly a perfectly feasible thing to do and well within the State regulations and federal regulations. You would get into the same -- it's probably the only way -- you've got two ways you could subsidize a system: You can either own it outright, as a municipal bus system is owned and just take your losses, if there are any, through the budgetary process, or you can continue to use the bush operators and give them as much help as possible to make them as efficient as possible. But it's still that the fares and rates are too high to do the job of providing economical air service to the bush, why, you can actually subsidize the operation not by giving the operator a fixed amount, but simply by subsidizing each fare, each pound of freight with a certain amount or by a certain percentage. So there's options by which the problem with be approached as long as you've got the objective that you want to have a lower fare level and

lower freight rates in the bush. Probably no matter how well you do the job and how efficient you are, there's going to be certain places where no amount of competition or no improvement in the physical structure is going to be able to get the price down. There's some places that you just can't do that. So if you're going to apply universal service principals the way we've historically done in transportation in North America, why, you've got to spread the costs somehow, and that means a government subsidy somewhere in there. And, like I say, you can interject that subsidy in different ways.

THE MODERATOR: Another gentleman has joined our group. -- Mr. Ackerman?

MR. ACKERMAN: I had one question on the air carriers and the State offering airlines. I've talked to several air taxi operators and one of their problems or what they tell me is their rate of Workmen's Compensation insurance. We've watched it -- we have just a barely adequate Workmen's Compensation yet the carriers, I believe, pay a 50-percent rate for Workmen's Compensation. Isn't there some way you could do something to help them offset their Workmen's Comp rate? I believe that would eliminate a lot our air taxi operators because of that, that high oberhead. $10 an hour for Workmen's Compensation. I don't want that we should downgrade our superior Workmen's Compensation

because the air carriers can't afford to pay for it, and that's what we're doing.

MR. PARKER: Yes, there's a whole range. Most of the smaller were operators, were -- in a real cost squeeze the past year with fuel prices, and that's one of the things that's kept them from even considering new equipment. So the economic liability in the small operators is in kind of a state of siege right now throughout the State for many of them. Some of them have their equipment paid for and where the equipment is still adequate to do the job they are making it all right. But anybody who's paying off new equipment, unless he's got some really good contracts going, is going to feel in a bind, some of our oldest operators.

MR. ACKERMAN: Have we looked at any way to offset the high Workmen Compensation rates for the air Taxi operators?

MR. PARKER: I haven't got into that one, no.

MR. ACKERMAN: Like I say, I feel that they are excessive. But I think our Workmen's Compensation bill as a whole is barely adequate. I think if they keep downgrading our Workmen's Compensation bill where the air carriers couldn't afford to operate is really a step backwards.

MR. PARKER: Yes I think that there's more positive ways of approaching that one than downgrading Workmen's Comp.

MR. ACKERMAN: I think it's something we really need to look at.

THE MODERATOR: Mr. Pequero?

MR. PEGUERO: -- Si.

THE MODERATOR: Are you interested in maybe some input in this conference with your input here?

MR. PEGUERO: Si. I'm a member of the public.

THE MODERATOR: Sir?

MR. PEGUERO: I am a member of the public. I am interested in railroad -- in the railroad link from Canada to Alaska and the freight.

THE MODERATOR: Thank you. We're just about to get into that.

MR. BRADLEY: Mr. Dahl.

THE MODERATOR: Did you have a question, Mr. Dahl?

MR. DAHL: I'd like to hold it, Mr. Blodgett.

MR. PARKER: Mr. Chairman?

THE MODERATOR: Yes.

MR. PARKER: One point on the decentralization, which has been a strong theme expressed here and one I'm in total concurrence with, the decentralization of decision making. It is possible to visualize transportation districts around the State, especially in the unorganized world where you could have a form for making those decisions locally, you know, making strong decisions that wouldn't be overturned

easily administratively. And I think that needs to be given some consideration. It's a step that keeps you from having to go the whole route to an organized Borough in some areas of the State, yet gives you some decision-making power in an area that's very critical to all of the un organized boroughs, so it's what I'd like to see pursued a little bit.

THE MODERATOR: As my own experience in dealing with the State on a State airport, federal airport, bush airport, that the administrative procedures that have been promulgated under the Administrative Procedures Act are such that we're saddled with the same sophisticated rules and regulations in the bush for development of the bush airport as they are at Anchorage International airport, and there are road blocks in our way.

MR. PARKER: Yes.

THE MODERATOR: And I saw it for a year in a lease to build up an $85,000 hangar. And then when they finally got the lease, there were so many stipulations you couldn't afford to build it. I mean, the process of building -- preparing to build on my own land and build my own airport on my own land. That's how severe, how prohibitive.

MR. PARKER: Yes, I tried to make that point strongly in the paper, that we don't fit that mold at that level of airport, and we've got to break loose of it and the State's

got to show some leadership and strongly confront FAA and get the necessary exemptions so we can tailor the system to suit the bush airports and not try to mold them within the sophisticated national system, you know, otherwise we're just going to spend a lot of money to really achieve no particular games in transportation efficiency or safety or anything else.

THE MODERATOR: Mr. Fisher.

MR. FISHER: A question which will lead into the airport. At the present time it's my understanding that the railroad owns the tugs on the Yukon River. And the Yutana Barge operates them under some sort of operating contract. Wouldn't that be possible or some general approach like that be possible for the bush airport to have the State own the aircraft and lease to individual operators in the State? Now, I don't know how you're going to carry that out except that that would put new equipment where presumably it was needed. And my follow-up question to that: Weren't we going to be into something comparable to that involving any extension of railroad from the present, if it's an add-on to the Alaska Railroad or if it's a buy-out of the Alaska Railroad and a restocking of the operating equipment on the Alaska Railroad by the State?

THE MODERATOR: Couldn't we do that with the Marine Highway system also?

MR. FISHER: What?

THE MODERATOR: Couldn't we do that with the Marine Highway system as well?

MR. FISHER: Yeah, if we could. I think we could do it on a river highway system equipment for ferry. But then that's my opinion. I was just asking the question about, one, the airport, the airport and then you could go into the railroad.

MR. PARKER: Yeah. You know, that's another alternative way of handling it. Certainly it's one that's been done in many other areas. And whether the State just buys the equipment outright and leases it or whether it does it through long-term low-interest loans, why, I think the net effect winds up the same. You spread your operating costs over a long enough period on the aircraft acquisitions so that you're not faced with these peak fares and prices. And what you're doing is using the strong capital position that the State is in right now to its maximum advantage in a transportation sense. People who don't have the money can't do that, but the State obviously does have the money and we find them in a position to exercise control over the situation.

THE MODERATOR: Yes?

MR. KOCSIS: Mr. Chairman, I'm terribly to sorry to announce there's a problem with the room. The hotel has

just advised us that we need to be out of the this room at five o'clock. It's after that now. I hate to break this up. Mr. Swanson is here, and I know you want to hear about it. Is there a possibility that we could take him first thing in the morning, Mr. Chairman, if that's on your schedule?

MR. SWANSON: I'm not sure what's going to happen in the committee we just left. There was some opposition to me putting a map on and showing the people what the total transportation system problem is.

MR. KOCSIS: We want that.

MR. SWANSON: Unless they disagree over there, I would be just delighted to come into your committee, put the map on the wall and give you a brief overlay of history of what we've done in the past. Where we're going in the future is going to be up to the recommendations of you people. But I'm sure with that type of a map on the wall I will be able to show you what transportation systems not system -- but systems means in the future of Alaska. If we're talking about down, right -- right down to gut economics now. And the number one priority in the State today is conservation in energy, all over the nation, in fact, all over the world. With that map it might sound kind of far fetched to you, but I can show you what we're talking about in the Future Frontiers of Alaska in systems including the railroad

connection. I would be happy to do that. I probably could -- my recommendations are already in the book, so I won't make those. But I think that for the information of this group it would really be enlightening. It would help you in your deliberations. So if I can come --

THE MODERATOR: We're being evicted, Mr. Swanson. They surely have some responsibility to this conference to provide another room facility.

MR. KOCSIS: They didn't, Mr. Chairman.

MS. BENNETT: How can she cut us off with an hour of deliberation time? It's absurd. They can.

THE MODERATOR: We have a good working group here. We're making good progress.

MR. KOCSIS: Mr. Chairman, I'm totally in agreement. I told Mr. Hohman it was a shame to cut us off. You know, I'm sorry. The hotel is very firm about it.

MR. BRADLEY: Are there any alterntives?

MR. DAHL: Could we go to the ballroom? It's being set up for supper?

MR. KOCSIS: Let's go in the corner of the ballroom. Come on.

(A recess was taken.)

THE MODERATOR: Did anybody else have any questions in the area of transportation and Mr. Parker that relates to his paper?

(No response.)

Then I can only assume we're now ready to receive a presentation from Red Swanson.

MR. SWANSON: I'll do the best I can.

THE MODERATOR: Please identify yourself for the record.

MR. SWANSON: I am Red Swanson, and I was invited to write a paper on rail connections. And if you have read the rail report, it has a history of what we have done up to date, why we started, and my recommendations of where we should go, where I think we should go in the future. But for the information of your committee, I might just point out that when you look at the map in the book, you find that the map is flat. But on the globe that's just about the way Alaska sets.

Taking transportation costs in this day and age and particularly in this point in time the most important thing is conservation of energy. And that is the basis, the economic base, for the recommendations that I made in my paper.

I'd just like to talk a little bit about what happens in Alaska with a railroad connection, what it means not only to Anchorage and Fairbanks but what it means to Savonga, anywhere on the Seward Peninsula, to Barrow to Kuskokwim and all of those areas. You talk about a

transportation system and you talk about transportation systems, which means railroads, highways, water, ferry system and airways.

I'm going to go just briefly into our work that we have done in the legislature and the studies that we have made tell us these things. The cost of freight to Seattle from anywhere east of the Missouri River is the same as it is to Prince Rupert, is the same cost identical. Now, the connection between Canada and Alaska and the lower freight -- this system here is British Columbia, and they have got as far as almost to East Lake with the new connection. It became empowered in a political thing and the stopped right there. But the point I want to make to you is that the freight rate in Seattle, if we didn't go to Prince Rupert, would be right here. (Indicating.) And how close is that to Alaska? In our studies that we've been able to do in preliminary work the cost of bringing anything east of the Missouri River is somewhere between 24 and 29 percent cheaper to come up this railroad using the cost that we had at the time we did the feasibility study of $800,000, is from 24 to 29 percent cheaper than if you came through Seattle and went up this way. (Indicating.)

You have to bear in mind we're talking about now conservation saving and saving to the people. If we ordered a Cat, a Caterpillar in Champagne, Illinois, going

from Seattle to Anchorage or Fairbanks, we're talking about at the very best a month to five weeks. If we put that same Caterpillar on the railroad and took it off at Anchorage and Fairbanks, we're talking about ten days to, at the very most, three weeks. We would handle that piece of machinery three times going this route where we only handle it once going the railroad connection.

If you'll look at the future of what we're going to do in Alaska some day, be it this year or next year or the year after. But that secondary transportation system totally takes us out of the domination of the City of Seattle.

Now, those are just things that map will tell you, that we've been a stepchild of the State of Seattle, and the state of Washington forever and ever and ever.

I listened to a discussion a while ago, and we were talking about -- they wanted some roads down on the Kuskokwim River. No one really liked the idea of railroads. But I must connect systems into this thing. If we were going to do -- if we did the railroad somewhere in here, we'd take off of there with an air flight into that area. It would be a saving to the smallest village in the entire -- of all of the State. There isn't any way to dispel the economic possibility that we have in that rail connection, that system I should call it.

We talked a long time ago about the road to Nome. We talked about the road from down the Cosna Peninsula and that down up through Bristol Bay, into McGrath and Akularak Pass. Now those recommendations were made by legislators somewhere down in the past, come to the legislature, make a recommendation, do a feasibility study with the Department of Highways at the time because we need a road. We have to get in and out of here. Those don't come from the Department of Transportation. Those things come from your representatives and your senators. So maybe I'm instituting a little bit of politics into this thing, but facts are facts, and this is the way we arrive at these things. The White pass in Yukon, which is this little bit of a railroad here -- (Indicating.) We're in serious trouble. The Canadian government within the last month told them that they were going to help them finance that railroad, which is a private enterprise, to out it into the biggest -- one of the biggest mineral deposits in the Yukon Territory to keep that railroad going. And you realize now that -- you realize from the map here that that is the connection to this railroad here when and if it gets built. This represents the oil pipeline. (Indicating.) This was one of the proposed oil pipelines, and I had it on the map just at that time just to show people

And this was the proposed road. It went to the

north slope on the railroad. (Indicating.) I put them on there just so you'd be able to see them.

Now, there's another aspect of this, that we're looking at today It's a thousand miles closer to anywhere in the east or the midwest by going down this route than it is coming out of here, Japan and the Far east, than it is to go through Seattle. It's a thousand miles. Now, when we did our studies in our conversations with Japanese and Korean people, that if we did this, if this was done, how much freight would go into the Midwest, into the Midwest and the Southwestern markets. Yes, we'll do that because we ordinarily have to go clear down around through the Panama Canal. That would be really -- our conversations there were personal conversations you have with people representing industry. They said, yes, we could go this route. And it would certainly be feasible to us.

When you look at Alaska and you see the potential some day of all the things that we'll do -- and we're just getting into the agriculture bit -- this area, this area, this area, this area -- and they are are talking -- some of the people are talking that farms down on the Kuskokwim River -- all of that is important to our economic future in a renegotiable resource. I know how, Bob, that you're anxious to get out of here.

THE MODERATOR: No, no --

MR. SWANSON: I probably should just go to questions and answers, if I can do my best to answer.

THE MODERATOR: I think so, because we only have a half hour.

MR. SWANSON: Okay

MR. FISHER: I've got a question.

THE MODERATOR: Mr. Fisher.

MR. FISHER: Red, do you have the figures on the comparative fuel requirements between railroad, truck -- air freight? How many BTU miles? How many BTU ton miles?

MR. SWANSON: Two years ago, we did a cost -- energy cost ratio, railroads, trucks, airlines, and railroads come out far the best. Five to one is on truck transportation. Airlines -- there is to comparison.

THE MODERATOR: Any other questions? Anybody --

MR. PARKER: Red, do we have any existing treatise with Canada that would govern the rates where they would respect any rates that were just on through freight?

MR. SWANSON: I'll have to take it like this, Walt. We -- to go back into the politics that I mentioned just briefly, we were coming here on the railroad. There were two large mineral deposits. The Yukon people said, "We better stop here. We don't want you coming here because we're not going to pay for your railroad."

Then when we really got to looking at it with the

Canadian people at the conference of which you were a member Mr. Bradley can enlighten your committee on this real well, the results on that conference was that we finally had an idea that would work because then all people -- British Columbia, Yukon and Alaska -- would share in that railroad transportation. It put us in a category then of a position that will -- we found out from our studies was that Alaska was far behind either British Columbia or the Yukon government and we had to do the catch-up with the survey that we just finished in the last couple of months and the books are out now -- and the survice is now -- Alaska is now on par with the Canadian government. The recommendation was made by Mr. Henderson, the Director of Transportation Systems for Canada, that when we caught up that one of the next steps was to form an international group of people that was pertinent, and the British Columbia and the Yukon government and our Alaska government and Washington, D.C. to come up with just exactly what you asked, where were we going to go? How are we going to do the international rate structure? How are we going to set all the wheels in motion? What is our government is going to do? Because these are always government railroads. What are we going to do to make this thing -- to put the thing together? That will be the next step. One of the next steps. There's three.

THE MODERATOR: Yes.

MR. PEQUERO: I think that it will be more easier than the bundle up of the Alaska -- the gas pipeline because the people in both area will benefit more direct then. I think that because of that reason will be much more easier, you know, the relationship to get the railroad through.

THE MODERATOR: Mr. Bradley.

MR. BRADLEY: Mr. Chairman, I'd like to ask Mr. Swanson to elaborate on the steps.

You mentioned three critical steps that the State needed to undertake. What are those points?

MR. SWANSON: Well, of the things that we did after the conference and the recommendations made at that time -- we have done the first preliminary study, we did the second preliminary study, which was the survey of the third preliminary work -- the next step is the cost benefit analysis study for the construction of this road. (Indicating.)

Now, when you do that, the Yukon government and the British Columbia government have volunteered to us that they would supply to us all of the information that they have compiled over the years on this rail connection. And in my briefcase I have 15 different studies that they would compile that information from as to help us when we do a cost analysis study.

THE MODERATOR: Is that a centerline survey for the road map?

MR. SWANSON: Yes, sir.

THE MODERATOR: It's a recommended -- well, I have to tell you there were some areas -- some areas right in here that they put the line, from the aerial photography they settled the line. There was some objection to crossing some of the areas so they just crow-hopped it over.

Now, there's another point in here that you must realize that's probably pertinent at this time, that when the Alaska Railroad was built the Congress delegated the power to the President of the United States to build a thousand miles of railroad in Alaska. Now, 400 some odd miles have been built. So actually the President of the United States, because this is a federal railroad has the power tomorrow, if he so desires, to declare that a corridor. Now, I was one of the people that pushed this real hard. Now, we spent over a million dollars so far on what we've done here. But I felt that the State of Alaska was showing Washington good faith, that we just didn't want another hand-out, that we thought we had a good project, one that would be adapted and help the State of Alaska. And that was received well in Washington because the State of Alaska had gone on their own and did this.

(Indicating.)

THE MODERATOR: Yes, Mr. Hickey.

MR. HICKEY: Red, I'm just curious in your opinion what relationship between potential tonnage cost economics and the D-2 classifications that we face, particularly restrictive ones, and our access into those re source potential to carry. Thoughts on that.

MR. SWANSON: The economics of the railroad -- It's a question I can't answer here because I don't know what's going to be in the D-2. So far we don't cross a restricted area in that railroad connection. Now, whether or not the D-2 will close off all of the Wrangell Mountains, everything in Eagle, all of the potential in McKinley Park, all of the potential in the Kobuk Valley, all the potential in the Brooks Range, all the potential down the Kuskokwim and the Yukon -- if it close -- they close it all off, then only, and again only that study, the economic feasibility, will tell us whether or not that we are going to exist under all of those restrictions, whether or not that railroad would be viable. I can tell you this and tell you just straight, that in my work in talking and working with people that at one time about two years ago I had been requested to write a formal letter to the President of the United States asking him to declare that Corridor because we were that close to the Federal Government -- I mean and really taking an in-depth look at that possibility. And

that letter would have triggered the many things. But at that point in time pressure came in on the D-2 and they just set it aside.

THE MODERATOR: Yes, Mr. Ackerman.

MR. ACKERMAN: What were those two lines that come up on the upper right-hand side of the map? What do those represent?

MR. SWANSON: Here? That represented one time a possiblity of a pipeline. And I put them on the map at that time just to show the people what that route was for the pipeline.

MR. ACKERMAN: That's not a railroad.

MR. SWAN: It could be cleared off the map, and I'll probablytake it off. This is the old original map. And I'm going to say a little thing here: If some of the members of this committee would like to take pen in hand and come up here and sign their name somewhere, I'd be happy for you to do it, because there are many signatures on that map.

THE MODERATOR: Mr. Bradley.

MR. BRADLEY: I just wanted to ask Mr. Swanson what's the time frame of this cost benefit analysis?

MR. SWANSON: Well, with the information we have now and with the two governments, Kuskokwim and Yukon, having the information we already have, I would stay five months,

well within five months.

MR. BRADLEY: So time-frame-wise it would be submitted to --

MR. SWANSON: The next legislature.

THE MODERATOR: Mr. Jacobson, do you have any input?

MR. JACOBSON: Not at this time, no.

THE MODERATOR: Miss Bennett? Mr. Borodkin?

MR. BORODKIN: I was going to ask him about D-2. He explained that part.

THE MODERATOR: Sir? I had a question, but I --

Your name, please?

MR. GOLDSTEIN: I came in late, and I apologize if this has been covered already. But when I read your article last night in the book here, you mentioned, as a matter of fact -- can I borrow this for one second?

MR. BORODKIN: Yes.

MR. GOLDSTEIN: That you could not say definitely. Well, let's see if I can find it -- where -- whether or not this would be economically -- an economically viable prospect.

MR. SWANSON: All of the indication is -- I just said it a while ago.

MR. GOLDSTEIN: Sorry.

MR. SWANSON: Until we do a cost benefit analysis study -- again, until we know now, we can do the cost

benefit analysis study of building that railroad because now we know where it can go we know the terrain, we I know how many bridges we're going to build. We can do the cost per mile of that railroad. Then the feasibility, the economics of the thing will hinge on how much freight we do.

I want to tell you an interesting thing. Now, people will tell you that after the pipeline boom we didn't haul things on the Alaska Railroad much. But this last year in my paper, the figures I have, our tonnage has gone up on an average for the last 12 years, has gone up every year, every year, every year. You have to know something about the bookkeeping type of things that they do with a federal railroad. They say we're going to allot 20 million or 10 million and anything it's growing to cost will be over that. They don't tell you how much they took. But they will tell you how much tons they've hauled. Now, our preliminary study that we did in Alaska, which was the small study, we only could use figures, that railroad would have been just nip and tuck in Alaska.

THE MODERATOR: Mrs. Alexie, do you have any input?

MR. ALEXIE: No.

THE MODERATOR: Mr. Dahl?

MR. DAHL: No.

MR. SWANSON: I'd like to stress, Bob, before I quit that this is not a systen by itself. This is the keys to

all the successful systems in this state. It's really the key and the help to your transportation, air transportation to the bush. It's really important.

THE MODERATOR: Thank you. Mrs. Burnett?

MS. BURNETT: No.

THE MODERATOR: Mr. Anasogak?

MS. ANASOGAK: No.

THE MODERATOR: Well, have I cinders in my eyes, Red?

MR. SWANSON: Well, I'd like to think the people for the attendance. I appreciate real deeply you folks listening to me. I have to say this, Bob. I don't take anything from the State. I never have in all of my years. I am not there to take. I have gone to give. And this is a project that deeply feel that is essential and necessary for the State of Alaska and its well-being. Thank you, Bob.

THE MODERATOR: Thank you very much. Thank you very much.

I think that in all fairness to these ladies here that are setting up that we probably should recess this Alpha Committee until in the morning. And we are, according to the schedule, we are to reconvene tomorrow morning at 8:30 a.m. Let's see. The delegate assembly are to reconvene at 8:30 a.m. in the Howard Rock Ballroom right here. And then at 9 a.m. we'll continue our work group and Alpha group will be in Room 311. Thank you very much.

MR. KOCSIS: If you have recommendations, we'll try to get the transcript and get some recommendations for you out of that. But if you have individual recommendations you want the group to consider, if you'll write them down and get them to me in the morning, we'll process and get them in a form for the whole group to consider. So please feel free to do that, any recommendations on anything you've considered so far. I'd appreciate any thoughts you have.

(Whereupon, at six o'clock p.m. the proceedings were adjourned.)

ALPHA GROUP PROCEEDINGS

(December 7, 1979, 9:00 a.m.)

Room 311

THE MODERATOR: If we move closer together, we'll make it easier for our reporter to record the input of this work session. We are 40 minutes behind schedule. We'll have to proceed.

Yesterday evening we finished with the presentation of the Alaska railroad systems taken by Red Swanson. This morning we're now into the area of Law and Justice, and I will start off this morning by asking for input from -- we'll begin with Mr. Alexie this morning in the area of Law and Justice.

MR. ALEXIE: Well, I think our Fish and Game protection officer in our area needs to get a little more pressure, especially during the commercial fishing periods. Well, I had a kick about the Fish and Game because sometimes they come, you know -- they come as a bullet and let the people complain without any warning and they give out tickets and tell them to come over to the court. Okay. Sometimes they don't owe us. There is something overpowered and sometimes they are too easy. Just like they haven't learned to get related with the people who are fishing or

hunting. I think they haven't really presented what to do and what not to do. What I want is give a little less pressure to our people and to themselves and explain what they are going to be doing to the people. Let them notify, instead of just going out and give them tickets and bring them to the court.

And on the other hand I see it's too easy that -- like last year they were pretty tough. This past summer they were too easy. A year before they were still tough, and like there was people who were hooking. If I'm the Game warden, if I have to check their -- check to see if they have any sport fishing license of any kind, I won't stop a solitary woman who is a couple hundred feet away from the other group and give her a ticket since she's quiet and tell her to come to the court and leave. If I have to check, I must check the rest, too, instead of one solitary leader someplace. Because that makes the people have a kick, you know.

THE MODERATOR: Thank you, Mr. Alexie.

Linda Brown.

MS. BROWN: I read a couple of these articles and looked at the statistical tables. I'm primarily in bush justice because I feel that the meaning for addressing certain kinds of problems are at least available, process is available, in the more urban areas. And actually the

process isn't really available in a lot of the bush areas. Some of the problems pointed out in these papers are very real. I've been to a couple of bush conferences and am living with some of the problems. I haven't experienced them personally because I have not lived in the bush. But I'm aware of them from a statistical standpoint, what some of them are. And I think that we're going to have to spend some money on bush justice, on criminal justice in the bush.

I know there are problems, for example, with even getting body bags for burial. There's just not money available.

I do have a couple of recommendations that are fairly minor, considering the huge problems that exist within bush justice. But one of the major problems that I perceived is a lack of police forces in the bush, regardless of size. It's simply not available. And the training is available for the village policemen. There apparently are very strict rules regarding who can be a policeman and who can't, and a lot of training has to go into that. I feel that the trooper academy in Sitka could certainly expand its facilities to take in -- I know that they have programs for village policemen. I really think that definitely needs to be expanded and money spent specifically in that area.

I also feel that there's a problem of detention

facilities where disorderly people or intoxicated people can be detained before they create problems. Intoxication in borough areas is a substantial problem, it's an historic problem of long duration.

There are no detention facilities for people who could be put aside until they are less rowdy before problems actually happen. Those are two things that I think would be expensive. I really feel strongly that this conference has to address this issue and money has to be spent in this area, because the crime statistics in the bush are just terrible. I mean inexcusable for the State. Thank you.

THE MODERATOR: Thank you, Linda.

Mr. Borodkin.

MR. BORODKIN: Yes. I'm not familiar with the bush justice problems, but I do know the problems that the gentleman raised here with Fish and Game. Fish and Game is under the Department of Public Safety, and I strongly feel that the people that's enforcing the Fish and Game laws from Department of Public Safety should have specialized training in Fish and Game laws and regulations that deal with their respective areas that they're, you know, working in. I don't know how this problem could be solved.

In my area, there has been people arrested for certain violations, and oftentimes the arrest just does not

stick. They somehow -- people violating the regulations and the laws find a loophole and get away with their violations. So I think that they should really tighten up in that area. They can do a fine job in enforcing the laws and the regulations. That's it.

THE MODERATOR: Thank you, sir.

Mr. Bradley?

MR. BRADLEY: Thank you, Mr. Chairman. Well, I gave some thought toward discussion that I had with Mr. Dahl yesterday, which he said that the Brookings Institute a decade ago dealt with big picture, large philosophical issues and then iron those out or debated them pro and con and then from out of that rose specifics.

So, taking a leaf from the "book of Dahl," I guess, I would recommend my thought on the justice system, that freedom and equality and the diversity of life-style be stressed. Freedom, as we all know, is very important to we Alaskans, and so probably enough said on that.

The equality argument or that point goes to recent studies by -- oh, what's the research court system called?

MS. BULLOCK: Criminal justice?

MR. BRADLEY: No, not criminal justice but -- our body runs --

MR. DAHL: I wish you hadn't asked.

MR. BRADLEY: Well, anyway they've done a number of reports on the incident of Alaskan natives that do time for being drunk and disorderly.

MR. DAHL: Judicial counsel.

MR. BRADLEY: Yeah, judicial counsel. And it's overwhelming, like a ratio of five to one. In other words, if I'm caught drunk and not driving, anyway, they tell me not to do it any more, and my counterpart from Kwethluk is in Anchorage and he's caught drunk on the street and he does five days, as an example of something like that. And it's really out of round. There's no question of that. Statistics prove that. And the jurists in the legal profession are going to have to come to grips with it. So we're stressing equality, which, of course, would take care of some of that.

Diversity, I think, is important, because what I may care to do -- and this is getting back to the late '60s, early '70s, concept of freedom that doesn't impinge on anybody else's freedoms, or doesn't have any negative impact. It's argued that I should be able to do, if it has no counterproductive, no negative impact on your lives. So I guess enough for my broad philosophical statement. I think those points are very, very important because as we have influxes of people, most of us are from somewhere else and we're happy to be here. And if we don't cherish

diversity and be tolerant and stress tolerance of people's life-styles, why, we're all going a generation down the line, 50 years down the line be just a New York City or a New Jersey or something like that. Mind you, I've never been to any of those states. I'm real provincial. But what I know and what I've seen through the media and reading I don't want to -- I don't want to end up like that.

Some specific, I think, examples that I might share, just some thoughts, would be in the area of -- as an example, the area of some tender, sensitive issues that we have in the State like Fish and Game issues, subsistence versus cash economy-type of thing. There's not as much you can do with statutory requirements, about hook size, and nets and fishing times and stuff like that from a conservation standpoint. You sort of have to lock those in and then enforce them equally and fairly.

But we have the capability in this state that most countries don't have and no other state in the union has, and that is the ability to put out through television and radio some social messages. It seems to me that as an example for Fish and Game most of the statutes are probably reasonable. And we have regional Fish and Game Boards and an overall State Fish and Game Board. But it would seem to me that the State could spend some of its dollars -- not too much -- in putting together programs stressing the

reasons for conservation, the reasons for having the laws. The only reason the laws are there regarding Fish and Game matters are to conserve the fish and to conserve the game so that 50 years from now your children can enjoy a subsistence life-style of catching those animals or, you know, getting them and selling them, making a living from them.

Also in the -- another substantive area is abortion. While this State, through polls, has shown overwhelmingly that this State is not prepared to roll back on its position on the abortion issue, on the other hand, I mean, life is pretty sacred, and it seems to me that this could also be stressed by the State not to get into the areas of religion, I guess -- keep that separate, naturally, as our tradition has it. But to stress the sanctity of life and that one ought to -- I mean, frankly you don't have to forego sex because we all know now you just should be maybe a little careful about cranking out kids because they might not be wanted and then, frankly, the woman nearly exclusively has to take on that responsibility of aborting a child. And I don't think any of us would wish that decision on our daughters.

Certainly I'm as modern as the next person, and I personally believe that that responsibility resides in the woman. However, it's a very sensitive issue and one that's

not going to go away. It's going to -- it's going to be with us now probably forever. And that is an area I think the State could do less to particularly handle.

In other words, not to tamper with the law, people weren't prepared to do that. But on the other hand it should be discouraged, the cranking out of children that individuals aren't prepared for for one reason or another to give birth to and then bring up. In other words, the sanctity of life argument.

And another sensitive issue is the classic pulverizing, hateful issue of drugs that's with this State. And then I'll conclude, Mr. Chairman, because I know I've rambled on for a long time. But there's -- most people don't subscribe to escapism or taking any sort of liquor or drugs to escape from reality. That's not good. We wouldn't counsel our children to do that. However, what's the other -- you know, what is the way to discourage that?

Well, you can put people in jail, but then that gets into the equality argument, you know, who does time and who doesn't do time. The black kid, or the Eskimo that might do time, the lawyer's child might not. They might put out 3500 bucks and get inferred imposition of sentence or not stand trial for whatever quantum of drug, whatever type of drug and thus they're not penalized. So there's inequality there and there's injustice involved in that.

And so the State on the one hand should be discouraging the consumption of any type of drug.

As Miss Brown knows -- because she was involved in the Liquor Board, and as all Alaskans would know for any length of time, alcohol as well as other drugs are real discouraging in our culture, in our state. But there's a fine line from freedom and freedom of choice for adults in all these things. But the State, I think, has the responsibility to assert itself and say you ought not to do this. We're not going to put you in jail. It's not a good idea and -- there are ways of drafting these advertisements, not only through the school systems but just by the State itself, I think.

I guess with that, Mr. Chairman, I'll shut up. Thank you.

THE MODERATOR: Thank you, Mr. Bradley.

Miss Anasogak? We're in the area of Law and Justice. I'll come back to you after we go around, the rest of the way around --

MS. ANASOGAK: Okay.

THE MODERATOR: -- the table to my left. Mrs. Bennett.

MS. BENNETT: It's "Ms." I don't really have anything to add. I don't have any expertise at all in this field except for my feeling that a modern communication network is essential in this area as well as the others that we've

talked about as far as response in times of trouble and things of that kind.

THE MODERATOR: Thank you. Mr. Stump.

MR. STUMP: I have a couple of points I'd like to stress regarding law and justice. I think my first one deals with the role of the State, the role of -- in the lives of the individual, our private and personal lives. I think I disagree with Mr. -- at least the way Mr. Bradley stated that the State ought to tell us what we should or should not do regarding our own private lives and what not.

I think that there's too much opportunity in the laws now for the state to -- and I think Mr. Bradley would agree with this -- for the state to unequally and unfairly or selectively prosecute people for a wrong act, activities, victimless crimes, if you will. And I think that in directing the State away from control over the individual's personal lives and to focus only when people's actions affect other individuals and not in the sense of how they affect them in a broad general sense. I think I agree that alcoholism is a problem in the State, but I think that the State should avoid creating a law based on the lowest common denominator and making laws for the problems that end up infringing on the rights of the individual and his personal life. And I think that we have to be very careful to, if we want to maintain the freedom of our people, then

we have to be very careful about getting in and having the State make social justice that, in effect, dictates to the individual how or how he should not behave.

And obviously, that's not to be interpreted to say that the State, you know, has no control over -- or should have no control over people who harm other people or harm other property. But to say that the State should be telling us what we should and shouldn't do as far as our personal goals in life and our personal attempts to establish reality or to escape it or whatever, I think, is -- creates a real problem and infringement on the private rights. I think that's sufficient.

THE MODERATOR: Thank you.

Mrs. Bullock.

MS. BULLOCK: Bob, I don't feel that I can make any comments about the justice system. I just don't have that sort of background. I agree with you that they certainly need some help in the villages. The situation has been pretty bad, as we all know, out there. I don't know how this can be solved without an extreme amount of cost, but it is a problem that needs to be addressed, and some solutions should be resolved on this.

THE MODERATOR: Thank you, Edith.

Mrs. Burnett.

MS. BURNETT: Yes, I'd like to take a 180 degree turn

from what Linda Brown and Mrs. Bullock have said. I think the only thing that's going to work to the satisfaction of all the people of Alaska is not to continue the way we've been doing it, which is increased money, more law enforcement more rules and regulations. We need education and preventati measures. And we -- I've been working a little bit with the FNA in Fairbanks on alcoholism and he's just done a marvelous job recently on commercials on TV.

MR. DAHL: What is FNA?

MS. BURNETT: Fairbanks Navy Association. They have the alcoholic program. And they've been working with the school, and the answer is not more policeman to pick drunks up off the street. It's an endless cycle. The -- and we all recognize that. But the film that we just saw on this alternative education is what we should focus on. I really hate to see any more money spent for incarceration, for any facilities. We're destroying people. We're not helping them.

But education and changing of attitudes -- I think it's interesting that this gentleman over here touched on, you know, the State's role in changing maybe attitudes or regulating. And I think if we could just get away from that and educate people as to the options. The option to unwanted pregnancy is either an unwanted child or an abortion, but the -- that is not the option. The option

is the responsibility of both parties to what the results are. And only through, you know, really understanding this -- there's so many areas of this.

Child abuse is very high in the military because of their perception of discipline. We need to change our definition of discipline. Discipline is teaching. That's the correct definition. We have -- we need to really explore this area. It's -- I know nothing about justice as far as in our courts. I don't think we have it there. I don't think we'll achieve it this way. I think we can only achieve it by changing our attitudes and developing alternatives.

MS. BROWN: Very good.

THE MODERATOR: Thank you Mrs. Burnett.

Mr. Ackerman.

MR. ACKERMAN: I'd agree with Mrs. Burnett, but I also agree with Miss Brown. I was in Galena and there was a construction worker there that went berserk, and there was absolutely no restraint at all. I called the State Troopers. This was 3 in the morning. I mean he went berserk. He come over and so there's three of us holding this guy and finally, you know, after a half hour, he hasn't shown up. I go get him out of bed. He comes over and says, "There's nothing I can do."

The only thing they had was a heavy equipment

shop, and he handcuffed him to the Catapillar, and the guy just bashed his head. So there was absolutely nothing he was really willing to do. Finally we did get him to handcuff him to the bed, and we stayed there up until the morning and we got him out of town. You know, but you do have a problem in the bush. These things happen.

I think Miss Burnett is right. We have to do other things. But in the meantime we do have problems in some areas.

And I'd also like to agree with Bob. You can have justice if you can all afford it. You know, it's as simple as that. Prepaid legal services for minor violations, you know, traffic tickets and things like this. Just minor violations. And we do have some kind of representation and could --

I've been thrown in jail for a parking ticket that the City couldn't find. I had to get a bail bondsman to bail me out because I didn't have the $200 cash in my pocket. And if I carry $200 and go into the legislature, I've got a real problem there. I'm a real suspicious character.

But, no, they come got me out of bed at nine o'clock in the morning. I had a City officer there with his hand on his pistol, and the kids really thought it was something, you know.

But I think one of the things that we need is a night court system. It is really hard for a working person to take -- you get a ticket maybe, it's 20 or $30. You have to pay it. You can't afford the 100 or $150 it takes you to go down to court. And also it -- to serve on a jury during the daytime is next to impossible for a working person. If you had a night court -- and we've got a big backlog. And there's no reason why we can't double shift them and we can't do that. People would be able to serve on the jury and we'd be able to have the trial. You could have one of your peers on it. And I think this is something that we really have to look at. And that is at night court where people can afford justice.

THE MODERATOR: Thank you, Mr. Ackerman.

Mr. Dahl.

MR. DAHL: I appreciate the comments of the group. I want to just mention a couple things. First of all, there was an approach. I'm a little concerned, and I'm not as concerned about it this morning because I see us dealing with the problem, but I was concerned yesterday after Mr. -- after Red Swanson's presentation that we're really putting the cart before the horse, if you'll excuse that cliche, because we're dealing with solutions before we really have defined the problem.

And I think that that's an important area to

recognize, because if you deal with solutions before you deal with problems, to really understand what those problems are and the breadth of those problems and the philosophical base that has to go into that problem -- once you have determined what the solution is you have limited your understanding of the problem.

MS. BURNETT: That's right.

MR. DAHL: Once you have determined your ends the means are established, or vice versa. I'm not saying that very well. But I think we need to see what problems we have and really carefully define them. Before we start looking very seriously at solutions.

In terms of Law and Justice, we've talked a lot about the criminal calendar and about the problems with the criminal justice system. Certainly there are justice problems in the State. Our Attorney General in an article has stated that Alaska is the only state to abolish plea bargaining. I think that's constructive. If none of the other states have adopted plea bargaining maybe he's discovered something that we haven't discovered. And that is that plea bargaining is a good thing.

It is true that more cases are brought to trial and the results of prosecution have been reasonably good. What the Attorney General does not state in his article is that the civil calendar has suffered terribly as a result

of that. To try to get a dispute before the courts of this State is a major production because the criminal calendar takes precedence.

And for a person with a legitimate grievance against another person or against a government agency or against a corporation -- to get that dispute before the courts in this State is virtually impossible, not just expensive. It's incredibly difficult.

I've got a case that's been put off in Dillingham for three years. We've been ready to go to trial on this for three years.

THE MODERATOR: A civil action?

MR. DAHL: A civil action. And every time we get there the judge says either ayel don't have any help, I don't have a clerk in Dillingham, so I'm not prepared to try that case today, because I need someone else" or "I'm sorry, I've got a major felony that I've got to try and I'm only there for a week."

And he's there every three months for a week. Well, okay. When does this guy get justice?

I think that's a problem that we've got to deal with. And I think we -- as much as I appreciate personally and professionally the skill of the Attorney General, I think this is a problem that we have not faced in this State, and I think we've got to face it.

When Judge Moody presided in Superior Court, Judge in this district -- he says we need more judges, and we need them yesterday, and that's true.

You can't have a night court with the present number of judges. It's not possible. These guys are overworked. Their calendars are incredibly difficult. They do not have enough time to spend doing the sort of work that a judge really has to do in order to make sound intelligent correct decisions. Okay. That is a problem. Civil disputes are not being heard. We need to work out solutions for that problem.

Another serious problem that has to do not so much with the court system but with our whole approach to justice -- I'm talking about civil justice now and not the criminal side -- and that is that the small dispute simply doesn't have a chance in our system. Now, we have -- we've come a long ways by increasing the jurisdictional limit in the Small Claims Court from 1,000 to $2,000. That's a major step. But there needs to be, it seems to me, some way that the person with a relatively small dispute -- and I don't care what the jurisdiction is. It might be 5,000 and it might be still within the relative -- and still be a relatively small claim, according to the -- compared with the size of the claims that reach our court systems.

There needs to be some way, there seems to me,

that that guy with a small complaint can get assistance and can get his dispute heard. He can't afford to come to me. He's got a complaint for $2,000. He's going to come to me and he says how can I get this guy to get out of this apartment? How can I get this guy to pay his bill?

Well, by the time he talks to me and by the time I file the complaint and do all the things that are necessary I've eaten up the cost of that thing. And it's not worth it to him. That is a problem that we need to deal with. And I think that's -- those are the concerns that I have in this area, Mr. Chairman. I appreciate that.

THE MODERATOR: Thank you, Mr. Dahl.

Mr. Vogler, are you prepared -- or would you at this time make a --

MR. VOGLER: My name is Joe Vogler. I was admitted to the Kansas Bar in June of 1934. I've never practiced law but I've watched the legal system. And I have watched protection of property, of life, totally disintegrate in America where the people are now doing it themselves. We've just got a young man -- two of them -- shot in Fairbanks by private individuals. We have a decay in our moral fabric right now that is very, very tragic. The teaching profession is certainly bearing the brunt of very, very disasterous forms of retribution.

Ten years ago, they were telling the people, the

children, to do their own thing. They're doing their own thing in the schools now. They're raping, beating, robbing, maiming and killing the teachers. I don't know where we start, but I think we're most fortunate in Alaska to -- at least in the native culture the home is still a sacred thing. It's gone completely to hell in the white people. And that's where this thing has to start off. There has to be a respect for person and property, because you can hire judges -- we already have more attorneys in the United States and Alaska than any other nation in the world. But we're a lawless group.

I'm awfully tired of hearing all about the rights that people have and absolutely no distinction made that with every one of these rights there is a duty. I have a right to be on the highway, to expect one-half of the road, and I have the duty to see that I stay on that side of the road. I have the duty to give another man his half of the sidewalk. I have the duty to live up to my word, my written word, my signature. I think that we all owe a duty to our civilization, to our country, to our fellow citizens. And this is where we have gone -- the churches are in politics. They're in everything else except where they belong in teaching morality. The teaching profession is going into the business of indoctrinating people for the socialistic life.

The legal profession has made things as complicated as possible. They win many of their lawsuits by procedural means and just delaying the thing. Thus, everybody that knew anything about the deal is dead. They're disgusted, like this gentleman just said, because the costs are so great that you can't do anything about it. I don't know what we can do about it. Of course, I'm the guy fighting for independence because I think a lot of our social and moral decay comes in here from the Lower 48. They're beyond help. And we'll be damned lucky if we'll be able to do anything for Alaska.

The first thing I would suggest is: We elect our judges, our attorney generals and our magistrates. And I have the written word from a man that I regard as perhaps the most gifted man of all time. That was Thomas Jefferson. This 1816 letter to a private friend -- you can get it in book just out about the essence of Jefferson by Martin, if you believe in history -- in which he wrote to a friend and said when we were drawing up the constitution we were following uncharted water.

We made a terrific mistake when we made the judges subject to appointment. We should have made them elected. You'll get some sour apples, ladies and gentlemen, in an elective process, but I'll tell you one thing: They don't get the idea they're God Almighty, sacrosanct above

the people's will and you can't pitch them out. This, I think, is the first order of business, if you would straighten this mess out.

This was a plank in the party of the Alaskan Independence Party in '74. It was there in '78. And, if we're forced to go into the race again, it will be there again. There's also a committee in Alaska to do just exactly that. And this would be my recommendation, if you'd start to clean up this mess; that you make these positions elective. Thank you.

THE MODERATOR: Thank you very much, Mr. Vogler.

Mr. Fisher?

MR. FISHER: May I respond? I'm sorry. I wasn't able to stay here, but -- my name is Jim Fisher and I have been at various times in the practice of law. I'm no longer practicing law. I have some understanding of some of the problems that do exist with the legal system having experienced the frustrations myself and on behalf of clients.

I would like to remind those who get caught in that system that that system occurred when the ordinary social means for resolution of disputes breaks down. Now, what we need to do is to accept responsibility for our own acts as much as possible to resolve those disputes to the utmost we possibly can when we get involved in the legal

system. There have been some attempts to do that with some of the smaller claims and in some of the villages. If you can resolve those disputes before you get into the legal system then you do not have to contend with the frustrations that are almost absolutely inherent in a situation that tries to cure something rather than prevent it. And I think there are efforts along those lines. I don't think they're very well understood. I don't think they're understood by lawyers. They may not be understood by the communities that attempt them, but they are techniques that have been used in, you know, -- by the old people in the villages. The villages used to resolve many of their own disputes with community pressure, which still exists. And if there was a greater encouragement of that community concern, you're going to control things a little bit better.

I know a teacher once who said he could keep order just by the way he scowled at certain kids in town. And, that is the way that hopefully, in rural areas, that kind of encouragement instead of totally ignoring that -- the ability of the people to handle those things for themselves -- that ought to be incouraged.

The election of judges appears to me -- or the election of the District Attorney appears to me to be kind of a single answer to a very complex system. It's a

complex question, and I really don't think it's going to resolve any of these problems. In effect what it amounts to is we've got to accept and encourage more responsibility for our own actions. And how we do that in as mobile a society as we are I'm not quite sure. But I think that's what we've got to do. I think it can receive some governmental help, and I'm not sure exactly how the governmental help is going to encourage us to do that. That's all I have.

THE MODERATOR: Thank you, Mr. Fisher. We'll take the break while the Court Reporter changes the tape in her machine.

(Short recess.)

THE MODERATOR: We will proceed.

Is there anyone that has not had an opportunity to have some input into this area that we have under discussion now? Mrs. Anasogak.

MS. ANASOGAK: Right now the problem that I face in my village is the lack of communication and transportation in order to get some law enforcement into the village whenever a crime is committed. And not only that, the lack of support to our local village policemen within the village and also to be able to pay that policeman adequate monies to protect the village is another area that needs to be resolved. And the whole area of crime again comes back to

the area of education.

There's a lot that you can do in preventive measures. Don't wait until that time. Isn't crime prevented when he's young, his forming years. Sure, a lot of our responsibility as parents is in the home. But the school plays another important part of that child's education. And to prevent it, especially in the area of alcohol and drug abuse you see an awful lot of that in villages. Alcohol is something that is a big problem in the village. And more and more drugs are coming into the villages. The small villages. Even now it's beginning to be a big problem. And our young kids are getting into it whether we like it or not. We're sure we could go out and say -- tell our children, "Don't drink," or "Don't smoke pot," or "Don't take any drugs." But they're not going to really listen. They're going to experiment, and that's where educatior comes in, is to teach our children. If they're going to drink at least teach them what alcohol does to you and to your system, to your body. And the same way with drugs.

THE MODERATOR: Thank you, Mrs. Anasogak.

Is there anybody else, the lady on your right, please?

MRS. BOSTON: I'm Lillian Boston, and I'd like to address the problem of violent crimes against woman, of

which I was one.

Two years ago this man ran me off the road in Eagle River by the bridge. So he runs me off the road, you know, where the bridge is at night so nobody could -- the people on the highway couldn't see that I was down there. And he proceeds to beat me horribly, and thankfully I went into shock because I couldn't feel the kicks or anything. So I kind of flopped around and acted dead and he left. He had a notebook, an address book that fell out of his pocket, and I wasn't discovered until seven hours later, by which time I had frostbite and he removed my driving gloves and my boots and I had to have multiple amputations. And at the time, my husband was working on the pipeline. I've been married for 12 years, and I can realize what problems the police probably do have, you know, in cases like this, but it took them -- this happened in November, and they didn't even pick him up until April, although they knew his address. I spent so much time trying to convince them that I didn't know the man and I had never seen him before. And as a result I was in the hospital for five months and he was in jail for three. And, you know, he had -- I was in isolation. I couldn't even read a newspaper or even touch the television set because you have to be kept very still. But what was ironic is, you know, he went to jail and he watched television and had access to a library, and I just

didn't think it was fair.

And the State statutes are such that the judge's hand were tied. So he only got three months, and they didn't even recommend that he get a psychiatric evaluation. And my husband had to get me -- I started -- it was so traumatic that I knew I was losing grip on reality, so I asked him if he would get me a psychiatrist. And I had seen him for 90 days, every day, and that's the reason why I could handle it now.

And since this time, I've discovered that there's a lot of woman that this has happened to. As a matter of fact, my own cousin was found in July, over by the Fortress Ridge, killed, and they -- the police know who did it, but they can't get the evidence together to prosecute.

So I really think that the laws should be changed. or made stiffer.

When the DA's office sent to the FBI for this man's criminal record it was three pages long, all assault and battery, different states. So, apparently, I wasn't the first one. So, that's all.

MS. BURNETT: Excuse me. Is this man free today? Is this what you're saying?

MS. BOSTON: Yes. And as a result, if it even gets dark I don't drive my car. I take a cab to this day, you know. And he's still here in Anchorage, and I hate to go

shopping alone. You know, I'm so afraid I'm going to bump into him. We were getting some strange phone calls, but we called the police and we had our number changed and the calls stopped, and I'm sure it was him calling. But, like I say, you know, I'm not the only one. That's been happening all over the State. You read the paper and somebody's being found on Highland Drive or something like that.

THE MODERATOR: Thank you very much for your input. It's very beneficial.

Mr. Kocsis?

MR. KOCSIS: Yes. I've practiced law for about 15 years on and off, and what I'm hearing around your table is you're all talking about how the system can respond. I suggest that you take a close look at this system, specifically at lawyers. We rely on them for a lot of things I'm not sure we should.

I do not find in the Constitution, a constitution based on the concept of equal justice under the law. I don't find lawyers written into that. Lawyers have written their own role in this system, and I think everybody --

I think you might want to take a look at what that role is. Lawyers have created it. They have insisted it. They must been there to interpret a series of rule.

The purpose of the criminal law and one of the

differences between our system of law and other systems in the criminal area, at least, is ours is all written down. Every person is supposed to know what he is prevented from doing, and they're supposed to know what they're required to do. But somehow, the lawyers in this State -- and I have to be one of them -- we've interposed ourselves and we've told you you really don't know what it is you're supposed to do and we will interpret it at a very high cost.

The law school professor explained it he said a couple hundred years ago when we invented that system, we translated everything in Latin and we lawyers have been charging you ever since to translate it back. Well, that may be a little extreme, but it's in that area.

I am not convinced -- and you might want to consider the possibility that we ought to as a legislature and as a people be able to write laws, directions to the society, that are clear enough, that are concise enough so that every person entitled to an education under our system and hopfully are getting it -- every person ought to be able to read it, know what's required, and they ought to be able to go before the lawgivers, the judges in the State, and be able to tell his story and know where he stands and have that story listened to without the interpreter.

I want you to perhaps look at that kind of thing. Do not be caught in this system. If you allow it to go on

lawyers will continue to impose upon you. This is our life blood. If it gets real simple, you don't need a guide. Just please think about that a little bit.

I agree with Mr. Dahl and Mr. Fisher, alternative methods of dispute resolution. In New York City, for example, you have in the Jewish community the Hasidin courts which are nothing other than a group of Jewish people who have agreed to live by a certain set of rules, to accept the laws given by their own internal lawgivers. They were Perhaps on a village counsellor type of concept. You are in the community, you are subject completely to the dictates of what that community says. When you violate their laws, they will deal with it. We don't need a complicated system. I don't think I'll belabor the point any more. But there's going to be a bill, for instance, in the next session in the Legislature about derequlation of the Bar. Right now, in order to practice in this State, you must belong to something called the Bar Association and you pass a Bar examination and they police their own members. A lot of our problem, I think comes from that. I -- I'm not assaulting the Bar, but I ask you to look at the fox in the hen house kind of a theory. It's lawyers looking at lawyers. It would be the same as any group looking at itself. Are you really getting the kind of examination you need? Examine very carefully, the role of

the lawyer in this -- you may want to make some recommendations about what that is. I am not convinced -- having practiced law, I'm not convinced any one of you is not able of going before a judge and explaining your case. You ought to be able to do that. If you want, if the criminal gets off and the lawyers are necessary to expedite, the system would automatically break down and just become gobbly-gook. You better examine the rules that you're living under. Don't tell me that the lawyers are necessary to interpret it. Change the rules so that we can all understand them. You may want to make recommendations in that area or not, but I hope you'll address that. Thank you.

THE MODERATOR: Thank you, Mr. Kocsis. Representative Jack Fuller. Do you care to have any input in the area of Law and Justice?

MR. FULLER: Well, as you know, the bush has been doing a lot of work on this bush justice. I don't have anything strong to come out with right now, Bob, but I'm deeply concerned with it, and as most of us members are, problems we have with the bush. And certainly I think I go along with Mr. Kocsis' -- his idea of being able to tell your own story without an interpreter. I think it has a lot of value to it.

THE MODERATOR: Thank you, Representative Fuller.

MR. FULLER: Thank you, Mr. Chairman.

THE MODERATOR: At this time I'd like to make my input.

I finished three years of law by correspondence. I am not an attorney. If I had served my own personal selfish interests when I was in the Legislature I would be a practicing attorney today. I had that opportunity as others did. Others took that opportunity. I elected not to.

I authored and introduced legislation in the Legislature. The Alaska Bar Association held their convention in Juneau, and the Board of Governors of the Alaska Bar asked me to come in and talk to them about my legislation. The bill had been referred to the -- it was not referred to the small judiciary committee of which a well-known Ketchikan attorney was the chairman. Rather I had the skids greased. It was referred to state affairs. But under Mason's Rules some fuller action evolved, and the bill had an additional referral to judiciary. When it got to there it got a pocket veto. However, the Board of Governors assured me that they would strengthen their grievance committee, and they did. They also assured me that anyone that failed to pass the State Bar exam or had failed to pass the territorial Bar exam three times could never take that examination again.

They assured me likewise that while we would have

reciprocity with other states -- and for the layman reciprocity is where, if an attorney has been admitted to the Bar in California, for example, he can then, therefore, transfer and practice law in Alaska, or conversely, an Alaska attorney could go to California and practice law without taking that respective State's Bar exam. But anybody that failed to pass the exam three times -- if they went to another state and passed it and we had reciprocity with that state the record would stand, he could not enjoy reciprocity.

I'm now aware that there have been some violations of that agreement, people that had passed the Bar exam in other states and had failed to pass it here are now permitted to practice law in the State of Alaska. I've been made aware that people had a fourth chance to take the Bar exam in this State. On the other hand, I'm aware that some people that had failed the third time have sued in the State with the viewpoint to having an opportunity to take the Bar exam again. And I'm not aware of any state that has prevailed. It's a fox-in-the-henhouse situation, the way it is today, as far as the Alaska Bar Association and policing themselves goes.

In the area of bush justice, law and order in the bush, I've noted progressive improvement. I'm inclined to be impatient. But, on the other hand, based on the 1970

the bush area of Alaska -- the educational value of our people in 1970, was fifth grade. And 6 percent of the people had college degrees. Most of those people were teachers, Fish and Wildlife biologists and those types.

The past 10 years I feel there's been substantial improvement in bush justice. I am impatient. It's a training process of people on the community level. The magistrate system has had a really rocky time because the people that have been appointed, applied to be appointed magistrates and have been appointed are people that, unfortunately, by and large while they're since c, they're very ill-equipped. And you couldn't bring these people in overnight to dispense justice in the bush and do it fairly. It's a people input thing. Is it fair? Magistrates that are related to probably everybody in the village directly or indirectly -- second cousins or great uncles or whatever -- and culturally our family ties are very great in our bush communities. The family group is extremely close. There's a deep respect for the family structure.

In the area of drug abuse, it is substantially accelerated in the villages. It's running neck and neck in many villages with alcohol. The educational system, when I was a youngster, taught us what 3,000 years of drug abuse had done to China. Our textbooks no longer teach that.

In rearing my own family my wife and I taught our

son how to drink, how to handle alcoholic beverages. We had wine at dinner, we'd have a cocktail on in the evening, and, to the best of my knowledge, I doubt if he consumes equivalent to a case of beer a year. I'm very thankful for that. It's a process -- a learning process that's important both in the home and in the school. You cannot legislate morals or personal behavior.

The quality of the judges across the street that I recognize is improving. I feel we have substantially better quality judges on the bench today than we had 10 years ago. The courts are very lenient. There's -- you recognize this, Representative Fuller, in the disposition of cases at Nome. They're lenient to a point of frustration for the people involved in law enforcement.

I've identified the problems, but the answers? We all have to work at it collectively. We -- all of us, friends and neighbors. I believe in salvaging people just as we salvage aluminum containers, old tires or whatever. Recycle them. Rehabilitation, I believe. I have nothing further on this.

MR. ACKERMAN: Mr. Chairman?

THE MODERATOR: Yes.

MR. ACKERMAN: I have one comment I'd like to make, a Fish and Game I overlooked.

I think, you know, in the area of Fish and Game

we ha a state job requirement that disqualifies many qualified Alaskans from pa.ticipating that have the best interest in State game and management and protection and I think this is the area we really need to look at. Our Fish and Came management -- we disqualify Alaskans that have the best interest in management and protection of resource. And that's what we're doing. Primarily our Fish and Game people are people that come from out of state, and they're not familiar with our problems and so don't have the same concerns with them that we do. And it isn't just fishing.

I think our state job requirements in all areas disqualify qualified Alaskans from doing something that they have a vested interest in. And I think this is an area we really need to look at in Fish and Game.

THE MODERATOR: The administrative rules and regulations under the Administrative Procedures Act have created that where they --

MR. ACKERMAN: Well, we really need to look at it. I think there's -- we have to make some changes, you know, in our procedures in this area, and I think in all our State jobs. Because we do have qualified Alaskans that have a vested interest in many areas that are disqualified by the procedures from doing the job.

THE MODERATOR: There's another area that I'd like to touch on that -- you jogged my memory on this, Mr. Ackerman.

Under the Administrative Procedures Act and personnel rules and regulations, when there are job openings the State is required to advertise these positions. And numerous people apply for these positions, but before they're ever advertised the positions have already been filled by people in-house. And it is a waste, it's deceptive, and this practice is carried on very avidly in the Department of Fish and Game.

The Fish and Game people -- not just the Fish and Game enforcement agents in the Department of Public Safety but the Fish and Game people, Fish and Game biologists have a very real tendency to hassle the people in the bush. They have a very negative attitude, tunnel vision, if you may, toward our people. Our people are game users, and by and large for the most part the conduct of our Fish and Game people -- or in the area that I live in -- is that of preservationist, not conservationist. I profess to be a conservationists. My interpretation of conservation is the orderly utilization of all of our renewable resources on a sustained yield basis for the utilization of man for all time.

In the area of nonrenewable resources, recycling wherever possible.

The State Department of Fish and Game and the Fish and Game enforcement people in the Department of

Public Safety are a very real thorn in our side. And Representative Fuller has been involed with it in virtually every community he's been in this past year. I think you might want to touch on that.

MR. FULLER: I might make a comment on it, Mr. Chairman. I've seen -- experienced some of the frustration in the formation of the subsistence section, and there are people that have background and experience but not the degrees that we have tried to put in some of these slights. The only slights in the subsistence section were on the helper category. And we've already had some turnover. I, myself, made some recommendations not just from my experience but from the people that represent the area. The man that was hired was hired because academically he looked the best. This was a native, incidentally. However, he's no longer there. But I recognize this from just my specific experience. And I go along with Mr. Ackerman. I think that hopefully the Legislators can do something about giving us some direction, because we do have the people that are qualified. And I think there's a lot more than just the academic ramifications. There's inspiration and dedication in which many of our people have. And I think we're just losing a great resource that we're not taking advantage of.

THE MODERATOR: Thank you, Representative Fuller. The

body will now proceed to the area of communications.

MR. KOCSIS: Mr. Chairman, excuse me. I'm sorry to interrupt, sir. We have, speaking of communications, behind you -- part of the record we're making of this proceeding is going to have some television coverage of it, some videotape coverage for it. In order to set up and be ready when they go perhaps a five-minute break would be in order, see they could be right on line, if that wouldn't be presuming, sir.

THE MODERATOR: It is now eleven o'clock. We will proceed in five minutes.

(A short recess was taken.)

THE MODERATOR: Come to order. We'll proceed into the areas of communications. We have the benefit of the presence of Walt Parker, who is from Lake Minchumina, author of a paper on communications, here to open and give us some highlights of his paper in order that we, then, may proceed in an orderly fashion with our input and any questions that we may have to poses to Mr. Parker. Walt Parker.

MR. PARKER: Thank you, Mr. Chairman. That was a nice introduction. Not too many people remember I'm from Lake Minchumina.

Anyway, the communications paper was cast very much in light of what's possible in the next 10 years and

what needs to be done. I didn't get very futuristic in it because I didn't want to blunt the effect of what I really feel needs to be done and concentrate on the rural areas because that's where the basic problem is.

We've got the international and service to the other states pretty well up to speed and the cost factors on that are going to be handled within a national context. So there's -- we don't have the effect there that we have on our own rural system. It is pretty much up to us what we do with it. And the paper simply recommends upgrading that system very quickly using the concept of the small earth stations as the back bone of doing that. The main thing is to free up the communications jam that exists in most of the rural areas there now.

I just recommended one more channel of television, because I couldn't identify any particular need for more than that at this time. And the main area of concentration was in telephones, conference circuits, data circuits and so forth which has not happened. A large percentage of the people in Alaska have television reception capability right now, various grades. But there's a substantial number of them that are still having to communicate by bush phone or an old Northern High Frequency rig that they may or may not be able to get parts for much longer.

So the next thing I tried to float a few concepts

out on was how do we finance all of this? Well, compared to costs now days because of the energy situation telecommunications is becoming more and more of a better buy compared to -- as a result of transportation in many areas. And in order to bring the rural system up to speed, we're not talking about massive sums of money. But if we have to load all those expenses on the rural rate base, as you well know better than anybody else in Alaska, why, you're going to continue to have relatively insupportable telephone bills in the bush. So

one of my long term dreams, and one I put in the paper is to simply approach our interstate communications by treating the State as a single area and spread the long distance costs for calling within the State across the whole state. One of the other options to that, of course, is just to expand the districts within the State. But unless you're able to spread the costs in some manner, why, of course, the rural telephone user is always going to be faced with a very high cost of service. I don't see any other way out of that. And I'd sure be interested if anybody else could come up with any concept.

They are still dealing, of course, with the Federal Communications Commission, as you are well aware of putting more of our Alaskan telecommunication expense spreading those over the national rate base and we don't

know how we're going to come out over that. Because as far as our interstate costs, why, that's the most innovative and far reaching concept I was able to come up with at this time.

And I didn't get into communications in its broader sense of involving the media or any of that aspect of it, so I just deliberately left that out of the paper. But I did try to point out that from my feeling the level of service we're going to provide in education and the new rural education administrative area schools, level of service we can provide in health to the health aids and to the level of service we can provide to local communities in helping them have more support services immediately available and bookkeeping and the whole range of things are directly tied with the quality of telecommunications system.

And I always felt for the last 30 years and feel more strongly all the time that the one area where we can substantially upgrade services across the whole wide range, why, makes fairly minimal inputs in un money at this time. The smaller stations I've always regarded as a great breakthrough. They made financially possible to do some things that were very difficult to finance before. So the other aspect of financing is, in addition to spreading the cost of private phone service over the rate base and a little broader than we do now, why, state dedicated lines for education, for

health services and so forth -- if the State is picking up the costs for those lines, of course, that's another means of spreading the cost of service over the entire state. And so I put some loose concepts in the paper also. That's about it.

THE MODERATOR: Thank you, Walt.

Mr. Borodkin.

MR. BORODKIN: Yes, here about six years ago I was living at Kotlik, and my wife and I was radio operators, the kind of radio Mr. Parker is talking about, a two-way radio. And since we left telecommunications has come into that village. They now enjoy a telephone that can bring any world throughout the world. They also have a television. So I'm really pleased with the kind of services that's getting out to the village as far as telecommunications.

One thing I would like to say to you is: I hope that the State continues to fund the demonstration project. Another thing is that we also enjoy throughout the bush a hot line that's connected with Anchorage Alaskan Native Service Hospital. You can pick up that phone, and it's -- you can get through day or night. And at the same time you can communicate with any of the villages. What it is -- it's sort of a round robin deal that is open. Once you pick up that phone, it transmits throughout the whole

network, among the bush hookup through the earth satellite.

MS. BULLOCK: It's an open line?

MR. BORODKIN: It's an open line. What it is, is it's a hospital related open line. And it's a vitally needed link, and I certainly would like to see this continue. It's been the greatest thing that ever happened in the bush. Thank you, Mr. Chairman.

THE MODERATOR: Thank you.

Linda Brown.

MS. BROWN: I don't have any information on the technology that's involved with Mr. Parker's plan, what's really going on in the area of communications. I recognize there's a need for continued funding for this kind of thing, health hot line you know, that is extremely helpful in areas that don't have doctors.

We talked yesterday about the need for public television use in public for educational television to augment educational benefits. And I think the funding should continue. And I'm going to support these concepts of increased communications in the bush. And I think it's necessary. Thank you.

THE MODERATOR: Thank you very much, Linda.

Mr. Alexie.

MR. ALEXIE: What I would like to present is: I came from where telephones are not dependable, so I think in the

future we'll have communication or communications improve so we can talk to our friends or have emergency calls quickly instead of getting held up someplace.

The telephone system is very important because everybody in the villages are separated from the main town. This is very important to have.

THE MODERATOR: Thank you, Mr. Alexie.

Miss Anasogak.

MS. ANASOGAK: Yes, the communications throughout Alaska is very important. We do have one telephone right now in the village, which is great when it works. And I work as a health aide, and in my clinic I also have a radio that's connected to the hospital and also a telephone that's a direct line to the hospital, which is fine when they both work. And I'm in one tight spot when both the radio and the telephone is out because of whatever and I need to get ahold of the hospital because of an emergency and I can't get through.

I don't know what kind of system that -- when it was the no-plank service, when it was under the direction of Ramon Guiea -- he has a really good communication system. I guess his agents in the village -- they all have radios connected to them. That is one radio system. And I wish my clinic had a set up like that. Anyway, when I transmit over the clinic radio to the hospital anybody in the

village can pick up my transmission on their AM/FM radio. That really shoots down radio, and in the end I get the bulk of this, I get falsely accused of whispering to my patients, this patient has so and so. Simply because people are able to pick up my transmission over the radio. And that's something that I don't think is fair. Something should be done. And which is why I prefer the use of the telephone over the radio. At least the telephone has a much higher frequency that can't be picked up over the local AM/FM radios. And I, for one, am looking forward to the time where we can have reliable communications throughout the State of Alaska and elsewhere. Thank you.

THE MODERATOR: Thank you. Representative Jack Fuller.

MR. FULLER: I would just like to back up to what Georgianna has said. I worked with the North Sound Health Corporation as Chairman of the Board for over a year, and this was a real problem, confidentiality, and one of the handicaps is the mechanical difficulties in the amount of time that the telephone is in operation.

When I go over as Chairman of the Board there was no logs kept, so the only thing the people could tell me is that we had bad results. And we kept a log, and it's still being kept, and that's a matter of record. But just to give you an idea of how bad it was there was only a couple of villages that were about 75 to 80 percent effective, and

the rest were 5, 10, 15 percent effective on the line. And there's a lot of problems. I understand one of them is the heat in the building. I mean, those are very sensitive technical equipment, and you have a problem in the bush with keeping the fuel oil going and having it on line. And I think this is something that needs a lot more attention and a lot more effort put into it to back them up.

THE MODERATOR: Thank you. Miss Bennett.

MS. BENNETT: I do not have technical knowledge of how the telecommunications systems works, but I feel very strongly that we need not only to continue funding but that this is a very important area for us to increase funding in. I can't think of a better use of state funds than to put into systems. As Mr. Parker said, it benefits so many different areas. There are not many places that we can put that in that will benefit all the areas of Direct Service that we've been discussing. And I won't belabor that point. I hope that most people would agree with that. I think that our community colleges should all be connected to the computer network that some of them are connected to. The phone bills at the community colleges are tremendous, and it doesn't seem that that would be necessary. I believe there are three or four community colleges now on a computer network where they can send messages and it's very cost effective and that's an area that should be increased

also.

THE MODERATOR: Thank you. Mr. Stump.

MR. STUMP: Yes. I'd like to refer to a problem in Southeast Alaska, that is outlying logging camps; smaller villages have problems that are very similar to the -- very similar to the problems of the bush. And I think it's simply a matter of recognizing that these problems are just as much a problem in these communities in Southeast Alaska as they are in the bush route, interior and eastern Alaska an to see more attention paid to those. You're talking about lack of phone communications. The bulk of the logging camps in Southeast Alaska are the only kind of -- which are isolated in the fact that they have no road connections to town, so their health problems are very similar to the situations in the bush communities. Their only means of communications is through a privately operated radio telephone network run through the Alaska Loggers Association, one in Ketchikan and one in Sitka. And the level of service and the expense of the service is quite low from service and from expense quite high. So they certainly could use more state aid in that area.

Another thing regarding communications activities the State that I'd like to address is the role of State agency telecommunications facilities equipment and personnel. There's an increased and quite, I think, unfair

kind of competition where these facilities that are paid for by State monies are leased out or used by private groups and also just in the agency use that is preventing private concerns to compete for those projects or activities. And I think that's something that has to be addressed or you'll see the State simply preventing the development of the private companies or groups in developing those capabilities and whatnot. And that to me gets -- goes back to the question of when you have a displacement of various private groups in the field, you have the affair of the control of the State over our private capabilities. And I think that's something that we again have to be cautious of. And that's all.

THE MODERATOR: Thank you, Mr. Stump.

Mrs. Bullock.

MS. BULLOCK: I have nothing to add. It's a learning process for me as much as anything.

THE MODERATOR: Thank you, Mrs. Bullock.

Mrs. Burnett.

MS. BURNETT: Yes. Just one comment in planning for the future. In medical emergency services, it's come to my attention recently that -- depending on the area that you're calling from -- there are many different numbers, and we've been working towards some kind of a system of common numbers for all the areas. Like if you call 911 in

one area it means one thing, and this is also with police and so on. And if somewhere down the line the right ears could hear, all of this state could be very beneficial if we had common numbers that meant the same thing, which is the essence of communication anyway, if we all knew what we were talking about, when there's an emergency that occurs and you pick up the phone and you get the right one at the right time instead of going through two or three dispatchers.

The other thing is I would really like to caution about is the expansion. I keep hearing about how great educational TV is going. We had a program federally funded, and it wasn't continued, it wasn't successful. And before we reinvent the wheel in expanding educational TV, we have to realize it's a very dehumanizing way of learning. It's very sterile. Children are used to being entertained by TV, Sesame Street. Public television has been very successful because it does entertain. The cassettes and films are a tool, a learning tool, and they should be a supplement of -- or an expansion, perhaps, of our system. But I really caution you as far as a very expensive program of expanding public state system of TV. Thank you.

THE MODERATOR: Thank you, Ms. Burnett.

Mr. Ackerman.

MR. ACKERMAN: I believe the stations should be expanded, maybe not necessarily for the total education

process. But I think as Mrs. Burnett says, a good supplement. Everybody should have an earth station. They should have reliable communications. And I think what they've done -- I've participated in several teleconference hearings and testified before the Legislature in Fairbanks, and I think these legislative offices with telecommunications should also be expanded. It makes your government successful. We are a large state. And I think with the expanding of telecommunications, we can bring it a lot closer together. We can solve a lot of our problems rather than being shoved off in a corner. And I think that we really need to put high priorities of our expansion of telecommunications within the State.

THE MODERATOR: Thank you, Mr. Ackerman.

Mr. Sears?

MR. SEARS: I'd kind of like to expand on what Mr. Ackerman said. There's been a move to -- a bill and initiatives and other forms of legislation to move the capitol of the State from Juneau to Willow, and one figure that was quoted in the Frank initiative was $9 million, which coincidentally was the first figure that was given for the construction of the oil pipeline. There were cost overruns in the oil pipeline.

The buildings in the capitol -- the buildings are essentially symbols. What you do in the capitol is

communicate. There's a lot of intercommunication, which is the basis of government. And what I would strongly suggest is that a very strong, highly developed communications network be adopted for the purpose of legislation for the Legislators, keep the capitol in Juneau and build some buildings up here, but don't -- you know, leave the staffs, leave the records in Juneau and have instantaneous communication between there. And let the Legislators meet in a more convenient place, but let there be strong communications between the Legislators and Juneau to defray the cost of moving an entire capitol inland. Thank you.

THE MODERATOR: Thank you. Mr. Jacobson.

MR. JACOBSON: I don't have anything.

THE MODERATOR: Okay. Mr. Fisher.

MR. FISHER: Yes. I would hope the communications would promote more of a sense of community and decreased polarization that apparently has accumulated in the State. I would hope that the increase in communications wouldn't cause further override some of the cultural differences in the rural areas. And that's a real problem. We homogenize everybody so we all act alike, think alike and have a common background; that's going to be pretty monotonous. But right at the present time, we could do something very tangible and very down to earth to remove the obstacles of communicating between people with the government. We could

accept collect calls from anywhere in the State but any executive elective judicial branch. We did a study one time about two or three years ago and then estimate was about $100,000. Say it was $300,000. That's peanuts compared to the money we spend, and to accept calls on the telephones that are working from throughout the State would probably bring a much better sense of communication with the State and hopefully better factual information. What I would suggest is a tangible, immediate step that could be taken by the coming Legislature very quickly. That's all I have.

THE MODERATOR: Thank you, Mr. Fisher.

Mr. Dahl.

MR. DAHL: Thank you, Mr. Chairman. I appreciate the chance to be near the end here, because I want to summarize, if I can -- next to the last, maybe -- I want to summarize by suggesting some of the problems that you've suggested and talk about that in terms of goals that we might have or objectives that we might have to solve those problems.

We've talked about ourselves as a separate people. We've talked about ourselves as being geographically isolated. We've talked about ourselves as being culturally isolated, culturally separated, emotionally isolated, emotionally separated -- maybe spiritually isolated and spiritually separated, too. I think the -- I also wrote

down the capitol move as something that perhaps needs to be addressed in this area because it seems to me that the capitol move initiative was a communications problem. It was a response to frustration of people that were having difficulty communicating their needs and desires and hopes and dreams to the Legislature.

I think part of that, certainly, was irresponsible media hype, but we need to realize that in the context of that media hype there was a propose that was identified. The solution may be the wrong solution, but certainly the problem is a real one. How do you communicate ideas to Legislators? I think we -- a lot of water has gone under the bridge since that initiative passed, and the opportunities and possibilities of a telecommunications network in this State may be available now so that the problem of communication can be solved.

Last night, Mr. Fuller talked about one of our goals being an integrated society that there's no such thing as racial differences, because of all the biological things that went into the whole concept of race. I think what that does not say, though, is that there is no such thing as cultural differences, because there are those of us who had the great opportunity to travel around a little bit in the State, recognizing that there are significant cultural differences that need to be bridged. They need to

be understood, they need to be maintained, if they want to be maintained.

And one of the things that communications can do to help us solve the problem of being isolated is to increase our understanding of each other. I see that as a worthy goal. Training in assistance and medical and the rest of the problems that have been raised by this group are certainly important.

Another thing that was raised last night that needs to be inserted into this discussion in relationship to the university courses or university study is the possibility of feedback. It's no longer necessary for educational TV to be one-way. Feedback can be made and need not be nearly as sterile as how we traditionally thought it to be. I think we have great possibilities in solving some of the problems that we have in communications, and I hope that we will use them as creatively as possible. Thanks.

THE MODERATOR: Thank you, Mr. Dahl. Mr. Ron Hohman is here, and he has some input on the communications area.

MR. HOHMAN: I'm Ron Hohman from the Bering Strait School District. Some people call it the BS District. But I prefer that you not call me that way.

For the past three years I've been Chief Administrator for that school district which has been

charged with the implementation or actually the establishment and then implementation and then operation of the new REAA school district. We've had some of the same types of problems that have been mentioned around the table, and it's really been somewhat difficult in the establishment and development of the new school district in rural Alaska when you don't have the basic communication privileges that sometimes are -- at least available in the urban areas.

The school district or any organization generally you have regular staff meetings, which is something that we aren't privileged with. Although we do maybe once a year have a staff meeting with our administrators. But the 80,000 geographical miles that kind of spread our district apart creates the difficulty, if you don't have staff meetings to rely on some form of communication. We do that through memos or maybe via the AM radio. But it's generally one-sided. So we don't have the opportunity to have the dialogue. That's been very difficult, and now as I see it, I think it's probably been our number one problem in just organizing the district.

The other thing that I see happening now that can really benefit us in refining and improving would be the benefits that telecommunications would have for instructional programs. So I support the comments that

have been made regarding the basic need for a communications system that can provide us with the daily, reliable effort in keeping some of our instructional programs operating, as well as improving the delivery system to maximize some of the State expenditures that can come from a televised network of specialized instructional courses.

THE MODERATOR: Thank you, Mr. Hohman.

We have a gentleman from a State agency, Larry Golden, sitting in the back of the room. Do you desire to have some input?

MR. GOLDEN: Yes, I would.

THE MODERATOR: You have the floor.

MR. GOLDEN: I'm presently working for the Central Interim Committee on Telecommunications. And I'm sure some of you will be very pleased to hear that there's several projects underway now that are very specifically geared to addressing some of the concerns that you've raised in this discussion here.

Personally, I find it very gratifying to see how the conversation has gone from very specific projects and needs to larger issues, and goals for telecommunications in the State. And I think that that's very important.

There's a tendency on the part of people to think that issues dealing with telecommunications by virtue of

the fact that it's technical are the sole province of engineers and perhaps FCC regulators and economists and that sort of thing. But the bottom line as to goals, why we're involved in telecommunications is very much a public issue, and I think it suffers from the lack of continuous public input into what it should be about, why we are doing this. And I just want to say a couple things about that.

Some of the implications of telecommunications, improved telecommunications are very obvious to us, such as the availablity of medical services, the need for phone service in small communities where there is none at a point. And we can relate to what those kind of services provide to us in our everyday lives and how they help us. Some of the broader communications of telecommunications aren't all that obvious to us and need to be addressed and some of the latter comments that were here, I think dealt with those.

Basically, telecommunications is a social tool, a tool that you use to build your own society as you wish to. And if you function in this way when it's set up to be interactive system -- and I'm just talking two basic terms in telecommunications. Broadcast system and interactive system.

Broadcast system that's set up so there's one central point sending a message to everybody and it's the same message and you sit and you watch and you listen to it

and you like it or you don't like it and it ends. Television and radio are like that and they certainly are very valuable techniques.

Interactive techniques such as the telephone computer system, competent communicating systems in the long run prove to be much more efficient, much more valuable as nuts and bolts, day-to-day things that everybody in their own community can use to get the information that they need to hear to make the decision on a local basis and plan things for themselves. I think it's axiomatic that as people have more access to information as they know what's going on individually and groups in the communities they demand to have more say in decisions. This gets us down to the potential telecommunications, either centralize the world or decentralize the world. And it can go either way. And somebody will have to set policies on that. And that kind of choice -- or those two outcomes are very much dependant upon the economic structure of telecommunications, which is a perfectly complicated matter, but it's also based upon some very simple policy decision.

I was involved in planning and setting up lectures, teleconference network. I think that's a prime example of an interactive system. And it's decentralized that anybody at any time can get into the system and ask a

question of a legislature and get a response or provide information to that legislator.

For the time being, I'll drop the whole thing about interactive networks and say that I hope I made the point that they're much more flexible. And it's something that gives you and each of your communities information that you need access to make your own decisions based on that information, plan, use them as tools.

In the area of broadcasting, several people have brought up the question of how do we bring Alaska together? I don't have a simple answer to that, but I think that broadcasting can provide some of the answer. National networking of both commercial and public broadcasting, I think, tends to have the effect of assimulating everybody into a unified culture. Certainly we all want to know what's going on all over the place. That's important. We can't live in isolated pockets.

But at the same time, I think it's also incumbunt upon the broadcasting entry both publically supported and commercial to do something about supporting the concept of regionalized broadcasting so that people in various parts of the State can see their own region of the State or hear their own region of the State reflected back to them. To help them in determining their own identity of who they are, where they want to go to from here. And then also to

network that kind of programming so that people in other parts of the State know what's happening everywhere else. This would help us to bring us together, but at the same time it could give us healthy respect for ourselves in our own areas and a healthy respect for people in other areas. I'll let it go at that. Thank you very much.

THE MODERATOR: Walt Parker. Did you have a question?

MR. PARKER: Yes, Mr. Chairman, in response to this range of comments and specifically to Miss Burnett's comments -- you know, the reason I didn't recommend any more television was very sensitive to that particular aspect in education. And my concepts of this are colored by 30 years ago trying to -- sitting in the midst of the Alaska bush and trying to get my wife through high school and some of my older kids through the primary grades using correspondence courses. I was doing -- I could do great on the -- at the junior level. I had a college degree by then, but I could do great at the -- with the K through 6. But when I went into high school chemistry and physics, I was lost trying to get my wife through that. So I think in those particular areas where you view a whole mix of things going out, computer instructoir -- you're computerized instructors and so forth part of the students must, you know, involve themselves, not to sit there and just have them dumped on them is what we're thinking in terms of, as

far as educational telecommunications goes.

THE MODERATOR: Thank you, Mr. Parker.

Yes, Mr. Borodkin.

MR. BORODKIN: Yes, one thing I forgot to mention is. During the initial installation of equipment I think everyone in this room that's familiar with the system -- they have breakdown after breakdown, and this was because of equipment being so new. And as time went by they've made improvements. And I didn't realize that there were this many breakdowns.

Is it possible that the telephone link that's breaking down is because of an operator that isn't paying attention to the equipment? I don't know what the system is. It may have automatic switching. Could anyone answer that?

MR. PARKER: Mr. Chairman?

THE MODERATOR: Go ahead, Walt.

MR. PARKER: Under the -- at the request of the Lieutenant Governor, why, Alaska is sharing a working group on the level of service to the small earth stations to work out this whole range of problems that's made the telephone service unreliable up to now, and they're making some progress.

Do you want to say any more about that.

MS. THOMAS: Miss Barbara Thomas. I'm with that

Alascom. We had been going back through all the failures at the small earth stations and trying to see a pattern of causes. Power is obviously a big problem, and we're looking through to the redundancy of service, and so we're working with the governor's office and several other people around the State working to solve these problems.

THE MODERATOR: Thank you. Miss Thomas. Mr. Fisher.

MR. FISHER: Question. It would be interesting to know how many people here have experienced the teleconference or -- teleconference system of the legislative information system. It would be kind of interesting to know how many of us actually have been involved in that. (Indicating.)

MR. FISHER: What is that, roughly one-third of us? I would recommend that system as an example of what can be done and how it can make you kind of a village round-table discussion right in the middle of that conference.

THE MODERATOR: Thank you. We're going to have to move along here. It's pressing on lunchtime. She needs to check her tape. All right. Then I have input that's very important.

(Short recess.)

THE MODERATOR: Mr. Kocsis has some input.

MR. KOCSIS: Sure. I'm hearing everybody agreeing on the potential of the system. From the legislative standpoint I would ask the group and each individual, I

guess, to consider: What does it mean when you have the interactive capabilities we're talking about or developing it? At some point, I suspect -- and Walt, I may be wrong -- we may be able to put dishes into every house had Alaska and have interactive TV. That may be long in the future. I don't know. I can foresee it. What have you that potential. What does it mean? Is a town meeting in the old sense of New England? Is that what we're looking for? What will it mean when a person can have it in their own home in their own community and respond to questions from the center of government? What is going to be the role of the Legislature? What must we pay attention to when this interaction is going on. I would hope the group would just address this kind of thing. Is this? Democracy. I'm talking about an interesting paper that Mike Bradner wrote in '78. I recommend you get ahold of it. It should be in the information offices. Take a look at it and please begin on address that kind of question. The Legislature is going to have to when does it mean when citizens can sit in their home and interact with each other from all over the State?

THE MODERATOR: Thank you. I'd like to take this opportunity now to make my input.

My family owned an independent bush telephone company in the bush. We have operated -- we started our first fully automatic unattended telephone exchange at

Teller in 1967 and had an interface for long line service with a Karanon VHF point, very high frequency radio. It was very poor, highly susceptible to precipitation, noise, ignition noises of all kinds. Finally after a number of years and much hassling, our Alascom finally changed that up for an UHF link. That is somewhat better but leaves much to be desired.

We own and operate a private line telephone system in Shismaref Alaska and one in Wales. Those areas have been sadly neglected in the area of satellite earth station communication because we already had local telephone exchange service. Because we had the ability to develop a local telephone exchange system, we were penalized in the State satellite earth station program and still are.

I subscribe to the philosophy that the local exchange companies own the interface long line equipment that interfaces in their exchange in their service area. Then if there is a technical problem in that exchange service area in the local exchange service area there can be no buck passing. The long lines carrier can say, well, it's in your end of the the local exchange service company can't say well the problem is in your earth station or it's in your VHF equipment. Your UHF equipment. There can be no buck passing. Now, they -- the present existing

satellite earth stations that the Legislature funded with the five million dollar appropriation amount to contemporary artifacts, and my company has had an application pending for satellite earth station ownership. We've had other applications pending in the mail. We expect to train the local people, bona fide certificated residents in the areas to maintain this equipment.

The cost of maintaining the satellite earth station and other long lines equipment by Alascom in all areas of Alaska are astronomical. The IBW, the Teamsters and the union agreements that they have with the technicians and such state that if a technician spends the night in a village away from his home base, he is paid eight hours pay at time and a half at $17 an hour or $204 a night. And they call that sleeping bag time and that's all billed in the rate base. It's no wonder that Alascom sought an 87 percent rate increase in the interim state service.

I urge that we have total saturation, a sattellite communications throughout all of Alaska. Junk microwave systems that exist between Nome and Tin City where they've built a repeater station on a hill 3870 that is untenable and has been a perpetual source of problems and outages. Go to a total satellite communications configuration throughout the State.

Now, next year my company will be building local private line exchanges in seven four communities. White Mountain will be a tough one. No satellite earth station. There's a piggyback shop. But in another village where there's only a mere hand full of people counsel there's a satellite earth station. There were people there at the time the earth station was installed, and then there was an exodus to White Mountain and people put their kids to school up there and that village for the most part -- I don't believe there's more than four or five people there this winter. That's a very real waste.

There's a lack of cooperation between Alascom and the State telecommunicatons dealing with the area of the satellite communications that the State has in their warehouse. There are approximately 20 of them. And this must be resolved in the best interest of the people, State of Alaska and quit Mickey-Mousing around with it. I went out -- I operated the low frequency radio communication just like Walt Parker. Many of us in this room for many, many years. When I served in the Legislature I needed better communications to communicate with my family and my business. And I went to General Telephone Company -- I asked them, you know, how about building a local telephone exchange company in the bush out here so we can communicate in the villages and get away from this low frequency radio.

And I -- the manager from Pacific Northwest sat back and his big chair and put his foot on the desk and said, however, there would be more telephones in a motel and they weren't interested. So I wasn't interested and rolled up my sleeves and left.

As Alaskans we are interested in telecommunications. That's come out. It's came out right here at this table today. They are profound communication. The new technologies that are here they've arrived are hoping to further through fiber optic. Through one fiber optic the size of my little finger we can carry 3600 separate communication messages, in fact, simply transfer data transfer television and telephone voice modulation, conversation. The same cable. It has arrived. The position we are in in telecommunications today now with the new technology that's available. But we don't have places. That's where we were in 1950.

Walt, am I on the right wavelength? How do I come on?

MR. PARKER: You're right in that you don't want to be afraid in modern telecommunications to junk or old equipment, you know, because it's usually a better buy to move into the new stuff as fast as you can. Just don't get to attached to maintaining the old system. You know, we have out space earth stations we bought only five years ago.

Five years ago they were the cutting edge of technology. They're not any more.

THE MODERATOR: It's lunch time. This little lady has worked like a Trojan slave --

MR. ACKERMAN: I have one brief comment, Mr. Chairman.

THE MODERATOR: Mr. Ackerman. Pardon me, please.

MR. AKERMAN: I was at Tanana this summer and we were placing control systems in the school there and while the telephones were out one day, I was there -- we were there for three weeks total this summer different times. But the thing I think that stressed me the most when I left -- and I really believe the telecommunications should be expanded -- was that when we filed our flight plan the FAA flight attendant said he only had one way communications, that he couldn't dial out. But when we got to Fairbanks and we cancelled our flight plan that he would know about it. And I think that back up systems -- essentially, some sort that we have constant communications. And I don't think that we can rely entirely on telecommunications. But I think that we have to have reliable back up system. It's just a matter of survival.

THE MODERATOR: Redundancy.

MR. ACKERMAN: It's survival.

MR. PARKER: We needed it for military uses and so forth. We built in all the redundeancy we needed, so we

shouldn't be afraid of redundeancy.

(A lunch recess was taken.)

AFTERNOON SESSION

THE MODERATOR: The meeting will come to order. We're back on the record. We finished the communications portion, and it's been suggested by several members of our group that we proceed here and now to draft our group statement or resolution. And then before this input gets rusty in our mind. And the way things are going, certainly, yes, it most certainly has merit. And I would then, therefore, like to get into the area of drafting a resolution based on general consensus of the body, on the general consensus of the body in the area of our communications posture in Alaska.

It seems to me that the majority of the input concentrated in the area of expansion and upgrading. Is that substantially correct?

MS. BULLOCK: Uh-huh, I think so.

THE MODERATOR: And that's saturation, totally statewide from Shemya to Ketchikan to Brumeaux to Barrow to Point Hope, wherever.

MR. STUMP: I think that if we take as we're making recommendations and going along through crosses and dealing with different concerns of government services and various other things that there's a real tendency in not providing a really valid prioritization of the thing because,

obviously, people are going to say, yes, we want the best communications that we can get. And yes we want the best education and whatnot. And I question how we can get away from just giving recommendations to the Legislature that says, "we want everything." I don't know if there's a way that we can do that. I think maybe a possibility would be to perhaps at the end of the discussions of these various things we've made resolutions as we went along or we've gone back to the ones we covered yesterday this morning and made resolutions to then maybe reserve sometime to make some kind of attempt to provide a better prioritization and to allow people to attempt in their own mind to say when it gets right down to the nitty gritty what they want to see, what they feel is the most important in those ways.

MS. BURNETT: I think there's also a danger in saying, you know, like the gentleman commented on, that we want all these things but we have to recognize the ongoing operation and maintenance, the change in state of the art, the limitations of space and time construction. I realize that isn't our job totally, but in prioritizing I think we should keep those factors in mind.

THE MODERATOR: All right. Walt Parker, author of the paper, I feel, might have some input now in the formation of position on communications. And I'd like to call on Walt to give us his thoughts.

MR. PARKER: Well, I think in the discussions before lunch that focused on the real areas of importance, which is simply to make it possible for communications to function throughout the State at a much higher level of reliability than they are now. And for the system to be inexpensive enough so that it's open to everyone, you know, it's the old problem in designing a system that's supposed to be available to the total public. If you cost it too high, why, you cost out a whole range of people. So it's the availablity both in terms of having a system to utilize and also the cost of it.

I think there are areas of concern that I heard you addressing before lunch that I'd like to see followed up on. As far as getting into all the other problems, why, you just about have to sit down and write a major position paper to do that. And the overall importance of communications as opposed to a whole range of other areas that I regard as a proper level forgetting into here.

MS. DUYACHAK: Senator, do you think if I put some of these things up on the board it would help?

THE MODERATOR: Fine, please do.

MR. ACKERMAN: Mr. Chairman, we're fortunate to have Mike Bradman with us. He's going to come here for a couple hours this afternoon. He's done papers on finance here and has quite a bit of experience on the gas and oil industry.

I wonder if it would be before too much longer if we could hear from him on the oil and gas policies.

THE MODERATOR: That would be very beneficial to have Mike's expertise or input here. We're really behind. We're covering a tremendous amount of trail in a very short period of time, and we lost literally an hour yesterday. We lost time this noon and started late this morning. I'm apprehensive about the net result of this conference on account of the time factor. It puts us -- we're penalized had at the very beginning.

MR. ACKERMAN: I think it would be very beneficial if we hear something firsthand from Mike on some of our financial problems and our resources and our oil and gas policy. I think he has much experience in the two areas, and they are both closely related.

MS. BULLOCK: Could we finish this communications first?

THE MODERATOR: Since we're into it it shouldn't take too much longer to get the general consensus.

MS. BULLOCK: It shouldn't take long.

THE MODERATOR: -- together here on a position statement on communications. There is in put from bush people that will be saddled with emphasis on educational TV. Mrs. Burnett touched on the area of barenness of the human input in the classroom, sterile delivery system. We do not

want that. We do not envision that it would be a totally sterile delivery system at all. The delivery system would be maintained by the classroom teachers. Testing and tutoring would be conducted by the teachers in the classroom. The teachers would have to be prepared to conduct the courses of instruction in the event of satellite earth station failure or failure within the equipment facility.

Yes, Mr. Ackerman?

MR. ACKERMAN: In telecommunications you do have two way communication, and I think we ought to stress the telecommunications a little it longer than with we --

THE MODERATOR: Right.

MR. ACKERMAN: We're running -- we're having a class in Juneau now, and the instructors in Fairbanks. And it's a two-way thing --

THE MODERATOR: That's right.

MR. ACKERMAN: All the way through, and I think that that's something that we really should explain and put an emphasis on.

MR. BORODKIN: Mr. Chairman?

THE MODERATOR: Yes, sir, Mr. Borodkin.

MR. BORODKIN: The satellite, in the event it breaks down you have back up system whereby you could use video, cassette type thing that you can plug in without too much

problem. So that's one way of, you know, you have that back up

THE MODERATOR: We're doing that now to some extent. Yes.

MR. BORODKIN: They're using it in some areas.

MS. BENNETT: Mr. Chairman could I ask a question of Mr. Parker

THE MODERATOR: Yes, Miss Bennett.

MS. BENNETT: Mr. Parker when you mentioned that our earth stations that we bought five years ago were already on the verge of being outmoded -- if a lot of money is put into a telecommunication system, now, is that likely to happen soon again or are the systems -- is it built into them that the new technology can be utilized or --

MR. PARKER: You've got to regard your telecommunication systems just as you do your car. It's not going to last forever. It depends on how often you replace it depends on how well you want it to operate.

MS. BURNETT: Excuse, sir. I don't think you can compare it to a car. Lots of the State of the art punctuates such that by the time -- I just felt that a comparison in communications -- telecommunications and phone systems and so on is not a good comparison because the State of the art fluctuates at such a rate that sometimes by the time we get a system installed it is

already obsolete or at least it's functional. Don't misunderstand me but you have to re train your people in order to make it --

MR. PARKER: You have the same problem with computers.

MS. BURNETT: True.

MR. PARKER: We'll have the mini rapidly advancing system. What I'm saying is you have to make a decision sometime --

MS. BURNETT: Right.

MR. PARKER: -- and so you just have to make your decision on the basis that what you're buying now is going to serve your needs for now and evaluate your position five or 10 years down the line as to whether it's still serving your needs, whether it's better to buy a new system or better to upgrade the system that's partially obsolescent. The problem with the smaller stations now is it's not enough capacity in most of them to serve most places to provide adequate telephone services and do all the things a lot of people want to do in education and health service and so forth. So the question you're faced with technically is whether you want to add on to existing smaller stations or whether you want to buy a complete new small earth station. Well, that's an answer that you have to have some analysis you. Have to come up with your best option, something that I'm not capable of providing you at

this time or even coming close to providing you because the work -- the preliminary investigation hasn't been done as to which is best -- the best option there.

MR. STUMP: I question whether or not this group has the ability to make -- to really even consider those particular concerns. It seems to me that if we were to just stick with establishing our needs, trying to prioritize our needs, that we could be doing the best service we can for this legislative affairs counsel, and perhaps maybe we should get right to that.

THE MODERATOR: This is why I alluded not to the hardware but to the saturation of the system.

MR. PARKER: Mr. Chairman, it depends on whether you want a communication systems that's like the one it is now with a voice that's hard to use, it's expensive to use or whether you want one that's easy to communicate at every level and some effort is made to spread the cost of operating the system as to total impact and not upon the bush. So you've got the two areas, as I see it, the two main areas of concern, how effective a system you want and how you will finance it.

MS. BULLOCK: What are the costs involved, though? You see? This is something we don't have the information.

THE MODERATOR: Yes, the cost on these new satellite earth stations is coming down because there's so many

bright young men from Stanford University and MIT and so forth that have gotten into the act. There is so much of that hardware available it's becoming highly competitive. Like the first model T Ford. Then everybody started building substitutes and locomobiles and Essex and Wimpit and Chevrolet and you name it. There's no machine aircraft manufacturers the same way.

MR. PARKER: Mr. Chairman?

THE MODERATOR: Yes.

MR. PARKER: This is -- it costs the existing carrier -- it needs to have something like 60 million a year in revenue now to operate the system, isn't it? It's more than that. In any case, most of that need is generated from the urban areas. The extra costs for the rural areas are probably on the order of a magnitude of 10 percent more than what it costs to operate the system now to bring the rural system up to a level that is comparable to what the urban areas --

MS. BULLOCK: 10 percent more.

MR. PARKER: Yeah, 10 percent more, roughly what revenues Alaska would needs.

THE COURT: The new hardware is on -- it's on cards that a housewife could maintain.

THE MODERATOR: Mr. Dahl.

MR. DAHL: In the interest of time, rather than get

too much into some of the details that really are far beyond the technical skill that we're able to muster right here at the moment I've drafted some language that I'd like to present for discussion.

THE MODERATOR: Please proceed.

MR. DALL: A resolution on Communications: To expand and upgrade communication service and facilities throughout Alaska with special consideration to, one, television conferencing for legislative and educational purposes, two, efficient telephone systems with a single toll area spreading the cost throughout the State, and three, other appropriate technology with a goal of integrating Alaskan society while preserving the contributions made by diverse cultures.

THE MODERATOR: Very well done.

MR. ACKERMAN: Move to adopt, Mr. Chairman.

THE MODERATOR: There is a move to adopt. Is there a second?

MS. BULLOCK: Second.

THE MODERATOR: Is there an objection?

(No response.)

THE MODERATOR: Discussion? No discussion? Question.

MS. BULLOCK: Question.

THE MODERATOR: Those in favor indicate by raising their right hand.

(Indicating.)

THE MODERATOR: Those opposed.

(No response.)

THE MODERATOR: Thank you very much. Very well done, Mr. Dahl.

MS. DUYACHAK: Would you like us to Xerox that and distribute it to the people?

THE MODERATOR: Please do.

MR. BORODKIN: Mr. Chairman?

THE MODERATOR: Yes.

MR. BORODKIN: I'd like to suggest that here after I think such a resolution before it's adopted and passed, voted on we should be afforded a copy of that resolution so -- in writing.

THE MODERATOR: Would you care to -- would you desire to make that motion rescind our action?

MR. BORODKIN: No, no, I don't.

THE MODERATOR: I must apologize. We're pressed for time, and with the vote I believe it's a consensus of the body that Mr. Dahl had it in focus.

MR. ACKERMAN: I was wondering if possibly we could hear from Mr. Bradner before we get into another topic.

THE MODERATOR: Yes. At this time I'd like to proceed to hear from a representative, Mike Bradner' in the area of finances and oil gas policy. Mike Bradner you have the

floor.

MR. BRADNER: Thank you, Senator. I was asked and had the opportunity to write a paper for your backup material. I'm not sure how they've got these numbered. It's on B75, towards the end of the book. And I tried to take a broad conceptual sweep dealing with disposable be revenues and all of that implies. And of course there were disposable revenues derived basically from one good fortune. No magic, perhaps, or skill or exceptional planning on the part of the State. Just the good luck of a series of holes in Prudhoe Bay which now will support over 75 percent perhaps up to 90 percent of the State budget regardless of what else we choose to do with the money.

The paper was developed with an idea of giving people a background of basically what the policy of the State had been in spending in territorial days, what it was in the early period, what it was in the first periods of excess revenue spending, meaning excess revenues in terms that revenues were available clearly beyond the dimension of what almost any other operating democratic government in North America would simply dream about.

And I chose to suggest also that produces some difficulty because it immediately impedes your priority. And I tried to stress one thing in the beginning of that paper, that perhaps the universal parameter of our American

policy has been you didn't have enough money. And that's what made you select A or B over C or D. And now we've had a little experience with having enough money to do some of the things we wanted. We now face another arena of having possibly from 15 billion to $75 billion in excess revenues between now and 1995.

I detailed in the early part of the paper basically four things that a government could choose to do under those circumstances: They can reduce their existing revenues and lower taxes. We've heard a little of that. That doesn't make a dent in our disposable revenue. We can increase spending on our historically established services. What we're familiar and used to spending money for, what we're comfortable with. If you go outside of those bounds you're going to have difficulty. We can try to find new services that are more ordinary to government to spend. We're talking about communication. As an example that some other governments might not spend money, might not be so traditional where we can simply allow the accumulation of funds and with no use. Send it to New York and bury it beneath the streets.

You can look at the last period of excess revenue, and I think the message in terms of conceptual diagram that I would like to leave is that was the easy job. Alaska, like all governments, is spending money on education,

transportation, health and social services, in that order. You get that by giving money to local government.

They then spend it on the people because that's the government that delivers direct services directly to the people with the exception of health and social services in Alaska. It's not true in other states. Even health and social services in other states go through local government.

The task was easy the last time around. We simply spent money, the 900 million, by giving it to other governments, and we spent it to maximize spending on education, transportation to a much lesser extent on health and social services. And if you want to look at the degree we now fund those governments you could almost make a case that it's not possible without distorting those institutions dramatically to spend more money on it.

Now, there's some exceptions in rural areas where, obviously, the service requirements have not been met and partially because the difficulty of a lack of structure to easily translate them.

THE MODERATOR: Uh-huh.

MR. BRADNER: In stressing these points you often have heard that, well, also there aren't certain taxes that are exacted in the rural area of the State. But any more urban areas have complaint. 75 percent of the Anchorage budget comes from other governments. As of 1977 the Fairbanks

borough owned $23 million as a borough indebtedness. As of that time policy actions of the legislature the State paid for $40 million in those bonds leaving an indebtedness of only $3 million.

The point that I would like to stress is we try to get a concept of where we are now. It's that is an un think able situation. To any other government in almost any other place in the United States or any democratic society. So there's another thought that goes with that. We really can't look for guidance, for precedence, from other places. There just aren't any. So now we're in the difficult situation, not having an easy policy parameter of not having enough money. It makes it easy to tell you or you or you why I can't do something. You don't have enough money. You understand that. That's part of your daily life. That is no longer a really viable answer for the polititon. So our caution flag sometimes of making our options maybe should be there. If we recognize that discipline has been removed we're in danger of trying to do everything for everybody all at the same time.

The thrust of my paper tried to arrive at a point by saying we've done the easy thing. We've increased spending in the general service area to where in terms of most of the urban community you probably can't increase it too much more unless the State simply could run the whole

show.

THE MODERATOR: Uh-huh.

MR. BRADNER: And when you pay the whole figure sooner or later you're going to call the shots.

Now, in terms of rural needs it's a different question. But I would only submit that in terms of the dimension of money before us, what you could possibly spend to meet those needs -- you're going to meet the needs because the money is going to be there. You really arrive, then, at the next dimension of: What do you do when you've spent money relatively to the maximum where government is used to spending money. And that brings you to a very uncomfortable point in how our government has been used to operating. Because it brings to you the point, then, of what role government has in insuring there's some economic equity. In insuring the fact that government is rich doesn't mean that the private individual benefits other than having this child go to a little better school or, you know, having a flushed toilet and a few other things. It doesn't mean that he can pay his house payment with it and survive in an economic society.

What we have learned at this point -- that every time we poke hole in Prudhoe Bay or the Beaufort Sea or anywhere else that economic development is simply inescapable, to Fairbanks, the urbaners. That's why your

economic structure exists. It may not always be the kind of development you want, but something is going to happen.

I once heard the statement that there's one group of people who will inescapably benefit from native land claims. And that's the people in the urban economic structure. Because regardless of what happened out in the field is an economic benefit in the Senate.

THE MODERATOR: That's right.

MR. BRADNER: But what I would submit is the converse isn't true, that general development doesn't necessarily mean that people in the outer reaches of your economic I can structure benefit. And the thrust of my paper -- I brought it up to the point of suggesting that whether we like it or not and whether people at this table philosophically believe it's a good idea or not, if the State is going to be dabbling in direct economic participation or direct energizing by some means the economic structure with the next series of disposable money that you have. And that that situation is maximized by the fact that Alaska also is an owner of resources.

It might interest this group to know that the State of Alaska is the second largest oil reserve holder in the United States. So when you put the de facto situation together, whether we think it's a good idea how closely government operates within the private structure we're a

gigantic resources corporation. If you put that together with the fact that you generally have excess capital that it probably means one way or the other that state policy is going to reach out and try to find a bank to make those revenues meaningful in terms of private paychecks. And that is, perhaps, more realistic to recognize that not only is that going to happen but it is happening. It's happening as quick as you say bottom fish, state loans program, not business loan programs. There's been talk about public financing of a gas plan in Fairbanks, gas line participation. It's coming all the around us. And that it may well be useful to recognize the fact that that has happened and is going to happen and try to direct that policy to more prudent areas in the State. Which are actually less wastefull than feeling that, you know, it has not happened because it's there.

So I think, you know, the underlying thrust of my presentation was that the oil revenues of the State as derived has put the State in this financial position. Again, I feel I'm going to be able to say that and be a screaming, you know, believer that by golly government shouldn't get in private business. The fact remains that you were a multi-billion dollar financial corporation.

And the fact remains on the other side of the fence that you are one of the world's largest and most

research corporations in North America.

And you have to find out what do you with those two things and how you put them together. And I think the second thrust is that it's easy for us to talk about how you deliver money and what you do with money in those areas that we're really in common agreement on. Americans have always been willing to spend almost any buck they got their hands on for education or on transportation or on health and social services. I would include things like communication within transportation. As long as you have the money. And often a group you could get caught, and it's easy to be talking about the details on how you deliver those things.

The next area is extremely uncomfortable, and it's unclear how to do it. There's lots of problems accomplished.

THE MODERATOR: Thank you, Mr. Speaker

MS. BURNETT: Could I have one clarification before you proceed?

THE MODERATOR: Yes, please.

MS. BURNETT: Mike, you said that -- or the impression, I guess is that the municipalities really benefited from, like, say, the holes punched in the ground and like the bush or outlying areas did not.

Being involved a little bit with local government,

we were faced with tremendous problems that we had to solve at the local level. We had double shifting in schools, we had crowded schools, we had increased needs for special services we had to increase taxes to pay for them. I want you to explain a little further how the municipalities benefited from this because I don't understand that.

MR. BRADNER: Well, we're both, of course, talking about Fairbanks. The State got $14 million of impact aid to Fairbanks. When taxes went up a lot of it was because the sales tax generated a lot more money coming into the stores.

The very existence of the last pipeline in Fairbanks increased the tax basis from $300 million in 1973 to about 1.6 billion. Fairbanks now -- it's problem is not that of having government -- we were a tax- poor community in 1969. Our taxes were 28 mill, 2 mill short of the legal limit. And as both of us know the taxpayer was in full revolt. By 1972 we were at 15 mill. By 1976 we had $1.6 billion tax base with only about 15,00015,000 for population. And so here we are. Fairbanks taxwise, is now a more wealthy community than Anchorage. As per capita. But that doesn't necessarily mean your economy is good. That's just the point I'm talking about.

MS. BURNETT: Your quality of life is different.

MR. BRADNER: That's right.

MS. BURNETT: You said that you know these thing are supposed to somehow improve the quality of life. I have to disagree that it has improved the quality of life for the municipalities as well as for the other. Maybe a few. But overall the need to provide services and so on has increased so that the volume of life has decreased in spite of this. And they have not been a failure. If that's --

MR. BRADNER: Sure.

THE MODERATOR: Okay. Now we'll get it in order. We will start with Mr. Tom Dahl and come down the table this way.

MR. DAHL: I'd like to pass on this.

THE MODERATOR: All right, Mr. Fisher.

MR. FISHER: This is the one I wanted to skip over and go on to resources.

MR. DAHL: Yeah, I did, too.

MR. FISHER: No, I'm going to skip. That's unusual for me.

THE MODERATOR: Mr. Jacobson?

MR. JACOBSON: Same thing.

THE MODERATOR: Skip? Mr. Ackerman?

MR. ACKERMAN: I'm going to respond a little to what Mike was saying. I was on Local Boundary Commission for many. Lots of bush areas aren't even organized ment they received no revenue sharing at all. And that was the only

thing available to them. And I think on a per capita wide basis on the money we spent we spent it in the urban areas. We did not spend it in the bush. And the bush is behind and now is the time that we can catch up a little bit. The North Slope Borough was created specifically -- I attended the hearings when they formed that borough up there, and they didn't even get public anything. Nothing off the 900 million. And that's why they formed the borough. And so they could -- I think that's what Mike was saying. The urban areas have got too much; it's just that the rural areas have got too little. Now is is time --

MR. BRADNER: Mr. Chairman let me make one point of clarification.

THE MODERATOR: Okay.

MR. BRADNER: I think what I'm trying to say, Mr. Chairman because of pipeline or whatever reason -- your service entity is irrelevant. Your personal economics grew in a great peak you came crashing down. You're a little squealing right now. But noticed in the rest of the State, that those areas many of them went into depression 40 years ago. But somehow because they were rule, you could of add the word subsistence to them or else that was ignored. Now, you're beginning to hear Anchorage squeak a little bit. And you watch people respond and you watch that legislature responspond right now. (Indicating.)

But in 1948 the Alaska railroad quit burning wood in the Yukon River and the all wood yards dried up and the cash economy dried up with it. There once was a fur industry out there, and that was one of the magic renewable resources. Somebody didn't want it any more and it was gone. People used to be able to work in a lot of different ways in mining operations, whether it was at Grant Creek or -- when I came to Fairbanks it was true from Oolahue to Luisa and somebody else working in the summertime. Suddenly they weren't there any more. In 1962, 1963 Chatanika shut down. Chester shut down. But nobody knows. Now, Seattle, when the SST contract was cut off the people jumped out windows. The PHH's went bananas. Somebody noticed. What I'm suggesting is that when you look at Alascom resources, Inc., and you are a large financial corporation one way or the other we'll probably shake out of or dull drums and pursue the problem creating the private economy, and there it is wiped out and nobody's noticed.

THE MODERATOR: Okay. Mrs. Burnett.

MS. BURNETT: I'll pass.

THE MODERATOR: Mrs. Bullock.

MS. BULLOCK: Pass.

THE MODERATOR: Mr. Stump.

MR. STUMP: I'd kind of like to see our process for discussing this to go more towards a discussion-oriented

thing rather than just one at a time making comments around.

THE MODERATOR: Do you want to change procedures. It's perfectly amenable. It's irrelevant to me.

MR. STUMP: I think it would give us an opportunity to get more involved in pertinent discussions and developing our resolutions.

THE MODERATOR: Okay. Whatever is's the wish of the body.

MR. DAHL: Mr. Chairman?

THE MODERATOR: Yes, Mr. Dahl.

MR. DAHL: I sense a need to deal with the one remaining subject matter that we have, and that is resource development or Resources. Before we get into how to spend the money. I see that as a content thing rather than a procedure thing, and I would suggest that we do that.

THE MODERATOR: I see the need to, if I may, address the disposal of revenues in the -- in the vein of resource development. They can be synonymous. If I may digress a bit on this round table proposal that Mr. Stump suggescs -- we have the youngest population in the United States, and I'm convinced it will always be that way. Now, most young people and young families, I believe, are very real, normal people that are beginning to strive to build a family and develop an estate. I see the canneries and the fishing vessels and the processers owned by the Japanese. Because

the commercial banking system in Alaska was unable to cope with the financing of Alaskans for ownership.

Now, I see no reason why the disposable resources and in the long term investment funds and leveraging section of our revenues from our nonrenewable resources -- why, then, therefore, since the commercial banking structure obviously hasn't had the capacity to finance these -- this industry where it would amount to Alaskan ownership -- why we cannot develop a device that will make ready financing available, bona fide Alaskans, where they came -- develop ownership in the renewal resources and then, therefore, become solvent, independent, healthy, the whole shot. I just throw that out for some food for thought.

MR. BRADNER: However, I think where I've been going -- and the question is you use the State's financial corporate wealth. In fact, $75 billion the City made. You're as big as the biggest bank in the United States. And you use the fact as an omen. Other states aren't owners of resources. That's a very rare exception. You own something, acres of land, you get a cut of a percent. You have access to marine resources and other resources. You own a three mile limit of the coastline, 60 percent of the UnitedStates. That is a gigantic resource corporation. You have the financial corporation, the resource corporation. Do you institutionalize those some way to develop your own

resources and through that then you create to develop your own resources. You have a chance to direct the resources. Because I want to point out something that's over here. We are not a sovereign. We are a sub-sovereign. There's a little thing that a polititon doesn't like to recognize. A commerce clause of the Constitution. I cannot interest local hiring and have protection by governmental action of business as much as I want to. But they resolved that question 200 years ago up in Philadelphia. In the United States Constitution it was not about freedoms and things like that. That was the Bill of Rights. That was after. The Constitution was the commercial document. At that point they resolved the problems discriminating against each other's trade. And so what I am suggesting -- and a lot of us that have been through other -- as I think the Moderator has -- is that, you know, you may find your avenue for directing your policies to the best benefit of your citizen, not by trying to act as a sovereign but trying to act to control your resource wealth and financial wealth, by directing it at a different place. I think that's the question. Are you going to use those two roles to develop the resource wealth. And then are you goin o try to ease that -- not as government but as a manager to see that it again fits the right people in the right places.

THE MODERATOR: All of that.

MR. BRADNER: So, it's all problems of economic equity. Otherwise we can have some growing economic islands.

MS. BULLOCK: Mr. Chairman?

THE MODERATOR: Mrs. Bullock.

MS. BULLOCK: It may seem like an extraneous question I'd like to ask Mike: How does the Alaskan municipal bond bank authority operate with the thought, perhaps, we might have a centralized financial institution through which these monies would flow?

MR. BRADNER: Okay. There's a variety of things you can move money for. The bonds pending usually had been a device where government went and got East Coast money, bought it back and reloaned it. And none of us who are involved in this kind of thinking suggests that you should use or loan money, but some way you can facilitate the use of someone else's money. If you can get State institution, part of a revenue bond, bring other money, use that with your loan. Which leveraging money obviously, that's what you do. And you don't, you know, ever use your own capital. You use somebody else's capitol.

THE MODERATOR: Right.

MR. BRADNER: There also -- we have many participants in such efforts around the State. I don't think -- the State can't be a joint investment and a profit making corporation in the structure. There's lots of potential

Alaska owned partners in the State these days that worked there 25 years ago. But don't exist in any strained economic areas. They're rural areas.

THE MODERATOR: Mr. Stump.

MR. STUMP: Reference is made to foreign ownership of corporations in Alaska, and it -- there's more, I think, to the problem than just the inability to get the financing local in or, you know, into residents or into Alaskan hands. I think a lot of it had to do with just a matter of expertise, and I think that the way that the native corporations have responded to their wealth by getting into management partnerships with people who do have the expertise there's a possible solution to that to see the ownership develop towards more Alaskan people involved and whatnot and to still avoid the pitfall of having a tremendous amount of wealth to go into nonefficient management or un -- not as capable management people.

THE MODERATOR: But then in the example of Household Finance, we -- for all these years for 50 years, we managed. And all of a sudden, "Hey, they've gone the stateside route." In order to get financing to buy aircraft, to compete with the rising cost of fuel I had to go out to a financial department and they went to the loan sharks and the loan sharks bought him out and they owned 50 percent of the stock. And there's no Alaskan-owned company any more.

That's what I'm talking about. We have the expertise in Alaska to manage our industry, but we have the capacity to go out and hire management to bring them in.

MR. BRADNER: Mr. Moderator, there's another good example of the mill at Haines the timber; you would have to sell a lot of timber at Fairbanks. They haven't sold timber at Fairbanks for 15 years. They needed money to finance their operation. They have to go farther and farther for timber sales. The only money available is Japanese money. Now, when somebody provides money because they want to buy your product then we say we want the product and we want all of it. So they just chip the sides off the logs; they went straight to Japan. That mill has been in the act of actually trying to get out under that ownership pattern so they could go into additional processing strictly for coming back into the Fairbanks and Anchorage market. That's the kind of response your having. They want the resource back over there on the cheapest possible basis. That's the reason they buy it.

MR. STUMP: I beg to differ with you on that, Mike. And I don't want to get involved in here, but I'd like to talk to you more after because I'm fairly particular about those circumstances; which I think you're confusing.

But to get back to the question of the State, how the State is going to handle the excess revenues and how

it's going to get it in the hands, I would like to bring out the problem of -- that you brought up, I think, very, very well in your article here in the booklet of how to get it into a private enterprise and to see that it gets to the people in the most direct way allowing them the most direct control or the most --

MS. BURNETT: Discretion.

MR. STUMP: -- discretion, individual discretion, whether that be individual as a single person or an individual partnership or corporation. But in order to bypass the problems and the -- of bureaucratic control, central planning and whatnot. I'm not disagreeing with planning as a basis, but I think --

MR. BRADNER: But I'm saying that's only a problem because traditionally we have not confronted it in the United States. It chose to either be separate or tend to be separate than we are. That is not true with other governments in the world. British petroleum is one of the most innovative petroleum companies in the world, one of the most successful. Government owned, government finance set up in a highly entrepeneurial fashion. Canadians are very successful at I.

Now, many times they will opt never to be the operator. They will always be a private operator. But they are very direct participants. Now, I acknowledge that

the fact of getting into this agreement, lots of problems, and there's going to be some losses and tragedies along the way, but you're better off recognizing that, the fact of what you're doing. We're already doing it. We'll hang pretty words on it and pretend like we're not doing it but, in fact, we're going down that channel whether we like it or not and into that area. And I have simply advocated that you recognize what we're doing and institutionalize it so we can see the problems as they arise and also suggest that by doing this in this way you have some control of the resource actions in your state. The counter argument I would make is excluding that you have no control.

THE MODERATOR: Mr. Borodkin.

MR. BORODKIN: Yes, Mr. Chairman, I agree with your remarks and also Mr. Bradner. I think our renewable resources are being taken over by the foreign countries. And one reason is because of financing we cannot today get out and get a $10 million -- this is just an example. Get a $10 million pact from them to operate a processing plant. We went through this exercise this year, and what happened is we paid 15 percent interest and upward of that. So it's pretty hard to survive when you're paying that kind of interest. You just can't.

And if this trend doesn't change I think with the native corporations that own 40 million acres you're

looking at huge amounts of renewable resources. Timber and your hard rock minerals is going to go to the foreign interests because of financing problems. This is a real problem. It's -- there's no way around it unless the funds that -- disposable revenues may be one way of solving this. The Federal Government is not, you know, making too many loans available for renewable resources. That's the real problem. I just don't know how to deal with this. Right now we're in a position of really breaking even because of high interest rates and improvements we made, gear financing, boat financing. It all takes money. Maybe somebody else can carry on from there.

THE MODERATOR: Mrs. Burnett had raised her hand.

MS. BURNETT: I think, you know, in the overview we all want the same thing for the, bush, whatever. We want to improve the quality of life. We want to use the money in a way that it won't be depleted and have something for future generations. We found out last time around that the politicians tried to meet the needs of the people when they came and asked for more money. They raised the expectations, perhaps, of local governments and so on, and now that those revenues have decreased we're in a lot of trouble. We need more. The municipal needs a 300 percent increase to try to meet just basic services, police protection, et cetera. That's just the facts.

What I think we all want to do is take this money and get it into private enterprise. We don't want the government to handle it for us. We want the least amount of government possible. I would prepare a very simplistic formula, maybe in addition to or maybe in lieu of revenue sharing, is that we -- State government on a per capita basis allocate to the municipalities investment capitol to be placed in local banks, perhaps on their capitalization to handle it. We in the municipalities could run our operating expenses from the interest. The banks would take the total risk for loaning their money to the private sector. We don't want to insure loans for people. The SBA does it -- you, it doesn't work. It's a big operating problem. Once you establish all these things then they become government agencies that you have to keep funding and funding and funding. We have something that would put it so the people coming in, now, the scope of what you're talking about, you know, the millions -- would possibly have to have another formula. But I think for local revenues, I do disagree with life. Our quality of life didn't go up. It went down. The people -- the old timers suffered. They had a lot of trauma. We had a lot or problems during this time. They did spend more money. State government spent more money.

So my proposal is to allocate, perhaps maybe

through the native corporations, through the Boroughs, through the municipality, somehow on a per capita basis this money and then that that capitol cold not be touched, only the earning. that would give the basis for capitalization through the private sector and let the banks worry about whether they get bad loans or not from the State.

THE MODERATOR: The banks got it and they took it and invested it on the outside. And they'll do it again.

MS. BURNETT: Yes, but the local governments and the people didn't have control. Only bureaucracy had control of that.

MR. BORODKIN: Mr. Chairman, I do want to qualify my comment that in no way that I am pitching for the native corporations or -- I think what I was trying to say was if there is a loan program, it should be on a statewide basis not only for the area.

THE MODERATOR: Mr. Ackerman.

MR. ACKERMAN: I think what Mr. Bradner was talking about you know with the cooperation of the development between the State and the native corporations is an appropriate thing. He is personally in area of. We're looking at 40 million in Bristol Bay. We have processing facilities for 20 million, and he's out talking to the Russians and Japanese and everybody else to process our

timber. We've got one $10 million plant that's really a nip and tuck operation because it's 15 percent interest. And that should have been a cooperative between the State and the corporation or whoever it did, and that financing shouldn't have been that difficult to develop an Alaskan resource. You know, I don't like to disagree with Mrs. Burnett on, you know, the quality of life in Fairbanks, but we have one of 15 in the country trash compactors, and we have a solid base disposable system second to none. It's a very small one. It's the smallest in the United States. It cost three and a half million dollars. That would not have been available if it hadn't been for the impact funds that went into the Fairbanks municipal economy. And that is one benefit we did receive.

THE MODERATOR: There's one resource factor that is being overlooked here in this area of disposable revenues and term investments. And that is that the north Pacific Fishery Commissioner rules by very rigid guidelines, and if we do not utilize the fishery to its maximum benefit --

MR. ACKERMAN: Right.

THE MODERATOR: -- and it isn't harvested we have to get the foreign fishermen to come in forever more. So we're almost forced into a corner of getting into a crash position to say -- to whole communities: Here's so much gear. Go fish." We have to say to the airlines AI and so

forth -- we need so many planes to fly these fish out of the communities. We have to say to the processers we need so many processing ports to come in and get these or the North Slope, Fishery Commission is going to dictate we lost so much foreign gear to come in now and forever more.

MS. BULLOCK: What is the timing on that?

THE MODERATOR: I don't know the timing, but Senator --

MR. BRADLEY: Tilla.

THE MODERATOR: -- Tilla, sent us notes, and he's deeply involved in that commission, and I strongly suspect Bob Bommert knows, and other people. People from Bristol Bay. Anderson and -- those people. Kodiak people. Because that's their -- now, their cup of tea, they're commercial fish oriented just as these gentleman -- Mr. Borodkin and Mr. Alexie -- they've been up on the fishery. They recognize it for what it is. We're going to have to get off a high center and move. With efficiency and dispatch authorized to protect the resources for Alaskans for all time. And I say it's a crisis period that we are in because if we don't move rapidly and efficiency we're going to lose a substantial amount of that resource because we .dn't utilize it.

MR. BRADNER: Mr. Chairman, one clarification. I didn't mean to infer that people necessarily living -- the quality of life in Fairbanks improved necessarily, a period

of economic activity. What I do suggest is that when you analyze not only Fairbanks but every other State in local government and State you find the service profile has been pushed to a level that the State policy makers are probably very nervous about allocating too much more revenue for fear of local control because you'll be becoming the only funding source around. And we're very concerned about going any farther and that the margin of revenues immediately in front of us is fine. You can put $150 million into that service area. You can put a hundred more million dollars into it. And I could venture to say we could put enough money into the banks with no problem that the bank could come tiptowing back to the State legislature and say, "Look, you're distorting our priorities, too. It's not healthy for us." This fact, in 1970 that happened. Because we didn't have deposits in the bank. We jolly well put them there, and they told us very quietly to stop. That leaves you at the next point.

THE MODERATOR: We're going to have to stop here and change the tape.

(Short recess.)

THE MODERATOR: We're back on the record.

MR. DAHL: Mr. Chairman, I understand that Rob Kocsis has been asked to leave? Is that correct?

THE MODERATOR: Asked to leave?

MR. DAHL: Or encouraged not to participate in this group?

THE MODERATOR: I was not aware of it.

MR. DAHL: Okay. I think he misunderstood, then, because I think his participation here -- it's been very helpful for me to expand my thinking.

THE MODERATOR: Where did that come from?

MR. DAHL: I'm not sure. I think we should make a point that he needs to be invited.

MR. BRADNER: Mr. Chairman, I might offer one point of clarification. I found myself in on the creation of the permanent fund. And it's a broad conceptual thing. I was for it. Where I began to see it go from there I began to become very uncomfortable. And I found it to be a period when -- because people were comfortable and relatively prosperous that, you know, everybody said, "Wow, let's just put the money away for ever more." That was the tenor of the political current, whether it came from the Anchorage Chamber of Commerce or anyone else. And I found myself in the position of saying, "Wait a minute. A minimum of funds should be available for -- and there's a difference -- present and future generations. And there's one bill in the Legislature that reads only "future generations." And money can be a tool for today and tomorrow and be used to guide a lot of social benefits and economic benefits in the

State. I think only as a moment of panic right now because some people -- the concept was maturing and people were beginning to have some change in concepts and different ideas. Now suddenly because of restricting economy and federally tight money maybe some people panicked too far the other way. But that will pass.

MS. BULLOCK: Mike, do you have any feel for the legislature that's coming up about what their thoughts might be or what the trend might be?

MR. BRADNER: Two years ago was very much short of a purist's permanent fund concept. Last year less, this year even less so. Mainly because I think the temperaments in rural legislaters who also have had great reservations about the permanent fund.

THE MODERATOR: Mike, I would like to see legislation that would handle these funds within the states through the state banking institutions to strengthen or our banks, to strengthen our communities, our business communities. Consequently our communities. But I don't want to see these funds channeled outside of the State of Alaska where they will not be put to work for the development of the renewable resources and non renewable mineral resources of Alaska.

So one of the reasons that -- one of the principal reasons that fishing industry in total is

virtually controlled by the Japanese today, is because the Alaska banks didn't have the capacity to handle the financing the industry needed and the outside participating banks weren't willing to participate. And now if the Legislature will roll up its sleeves and go to work and sit down eyeball to eyeball with Alaskan bankers and put it together we can turn that around. Fishermen can get $10 million from Alaskan banks at the legislatively interest rate that the bank manages for managing it. Give the bank 2 percent of the action for handling it. We can -- our people can become the most viable, independent, well to do people per capita, perhaps in the free world by this approach.

Mr. Dahl.

MR. DAHL: Mr. Chairman, I've been concerned -- I had the same concern in 1969 that I have today, and that is that our effort result in not only increasing government service but an increase in the size of the State bureaucracy.

THE MODERATOR: Yes.

MR. DAHL: I think it's critical -- well, I agree with Mr. Bradner in that we have -- the world is fresh for us. We have a different set of decisions to make in that the reason that other jurisdictions, other governments are opposed to the increase in bureaucracy is that they can

afford that bureaucracy. We are not in that position. I can't afford a large state bureaucracy, and I fear that.

THE MODERATOR: I do to. Scared to death.

MS. BULLOCK: So do I.

MS. BURNETT: Nobody wants it.

MR. DAHL: I don't know if we don't want it. I know on one hand we say we don't want it. On the other hand we say, "Provide services. Provide services, provide services." And I don't think you can provide services without people to do it. Unless the -- and I think it has to begin with this group maybe -- we begin with the philosophical position that supports a free enterprise stance.

MS. BURNETT: Yes.

MR. DAHL: Now, if we are really creative we will develop the kind of funding sensitivities or --

THE MODERATOR: Mechanisms? --

MR. DAHL: -- programs or projects or whatever that will allow private enterprise in Alaska to be viable. One of the geniuses of the act that established the Alaska renewable resources corporation, I believe is what that's called --

THE MODERATOR: Right.

MR. DAHL: -- is very low overhead, three trustees, a good chunk of money - I can't remember how much, but a

bunch -- that they were encouraged to use as venture capitol for renewable resource activities in the State. That is, or for example: Fisheries, timber, any other corporation -- one of the reasons that private enterprise has had this status is they can't get money for things. Alaskan banks are not creative in their financing. It's easy for an Alaskan bank to say, "I'm sorry we don't have the money." And that's why many Alaskan businesses are forced to go outside to get funds. Well, why should any Seattle bank loan money to an Alaska business with the Seattle economy burgeoning the way it is. It doesn't have to.

Venture capital is critical, and it seems to me that State partnership with private enterprise, State providing funds for private enterprising in creative ways -- one of the things I've been talking about with Mr. Kocsis -- it's not a few considered, but it's a fresh idea for a lot of us, and that is for the state to provide a -- an airplane, for example. An air taxi operator in a bush village needs an airplane that will provide all kinds of services to the area. He does not have the capital to do it. Where does he get that capital? He -- does he borrow the money? Maybe. That's certainly one approach. It's a very traditional approach. There's a more creative way to do it and that is for, the State to buy the airplane and

lease it to that air taxi operator where the revenue that's generated by his own service pays the cost of the lease and the insurance, no risk to the state and the airplane is dumped into a mountain the state is paid because -- by the insurance, yet it provides this air taxi operator with the capital that he needs to provide the kind of equipment that's necessary. And this sort of thing can translate into various kinds of business ventures, and I think it should.

THE MODERATOR: All right. Now, would this instrument, then, be handled -- serviced by a bank in that air taxi operator's area?

MR. DAHL: I don't think even the bank has to involve at all.

THE MODERATOR: So hoping the bank on the other hand, has air taxi operator clients that they're financing aircraft that -- and these two taxis are competitors. Then how does that fit? There can be a discrimination there against the banking system's client and the banking system.

MR. KOCSIS: May I respond? One of the things you can look at in that instance is, if the state is involved they could allow the local bank to be the processor in the service organization for that particular instrument. What the state would do in a situation like, that I would suspect, is they would be able to control the amount of

service charge. Banks make their money on that sir service charge.

If the state is willing to make a commitments, the bank should be allowed to make some profit, but it ought to be held at reasonably, so that the citizen does have the benefit directly than the state is trying to get to. The bank will still make money. They will not make as much money because we will control the spread.

THE MODERATOR: All right. Now here if you have a young fellow with no seed money. You know? Strong character like a young man I know at Nome, Chuck Fagastaf. Started in with just nothing, just nothing. But he had character. He was industrious. He was sober. He was aggressive and positive. And he's off and running today. Now, in my own experience in getting started -- and I talked with a man that is deceased -- he's gone now but was a friend 33 years ago, Captain Austin E. Lathrop at Fairbanks. He owned the bank in Fairbanks. I met him as a student when I was a student at the University of Alaska. The Captain told me -- he said, "Young fellow, if you have an idea and you can satisfy yourself in your own mind you can make it work. But you don't have all the expertise to handle it, you can hire brains for 35 hours a week." Now, this was 33 years ago. We can do the same thing today for $35,000 a year. I banked at that bank for 33 years, and I

started in there -- when I started in there, I had -- I started out with a savings account of $12.50. And I've borrowed probably a couple million dollars at that bank down through the years. I had the finest kind of treatment. But I started with nothing. This is what I want to see happen. Character loans. They have to be careful, they have to be well screened, but character loans so that our people in our rural communities don't have anything but have a resource they can develop, can get bankrolled.

Mrs. Burnett.

MS. BURNETT: Mr. Dahl, I don't know the -- you seem to know more about this corporation. You said you had three executives what's the State corporation that was goint to loan?

MR. DAHL: Alaska Renewable Resources Corporation.

MS. BURNETT: Could you tell me how long ago that was set up this.

MR. DAHL: No. last year?

MS. BURNETT: As I understand it, over a year ago -- and they hired these three executives at over 50,000 per person and they have yet to make a loan. That's why I believe in the private sector. A bank would go broke on that kind of operation.

THE MODERATOR: You better believe it.

MS. BURNETT: A bureaucracy -- you know, it doesn't

service the people.

THE MODERATOR: I think she should dump them.

MR. BRADNER: Mr. Chairman, there's a variety of ways that partnership -- financial partnership between state can be set up. And it would be a mistake to think you could conceive anyone that would do it.

Now, there's a real naive approach of the resources corporation. First of all you have three commissioners helping people package loans and develop them at the beginning and then they're going to approve the loan. You know, no banking institution or anything would set itself up that way, a slightly different bunch of cats.

And I think most what we would find would emerge in any partnership is where a lead role is taken in a private institution, package is a resource project together, bringing it to participation because that does allow the single thing that Mr. Chairman mentioned, that the banker can use.

And a bureaucrat -- because you're taught that basically it has a hard time using. line up two loans side by side, one looks good but something up here tells you it's bad. (Indicating.) And it may be just the sheer talent and ability and confidence in the people running the show that it doesn't quite look as good on paper and it smells good. And with the private operator doing the

packaging it allows for that kind of intuition to be applied to the process. And I would think certainly -- because again I'm saying we all get back with this image that bureaucrat sitting there parceling out loans. I think that's what we're talking now because we sort of come in backing in the door to anything. We just set up sort of conventional state loan programs. And of course that's all we know so that's what we do. There's all kinds of packaging, I think -- I certainly conceive of any financial partnership being one of -- where generally the package is developed and brought to you by private individuals, barkers, maybe an outside loaner. You know. There's all kinds. And a broad sweep in a state policy should encourage the development of the institutionalization that facilitates this partnership between state and private industry. And we do hope maybe there's enough state input that a priority may be directed to pushing development where it's the most needed. The demographics are best.

MR. ACKERMAN: Mr. Chairman, I wonder if possibly we could get this down on paper and circulate it for, you know, consideration as one of our concepts?

THE MODERATOR: I think it's time that we get it down on paper. We've kicked it around and that beat it to death. .

MR. ACKERMAN: I wonder if Mr. Bradner has got it on something or possibly --

MS. BURNETT: How about Mr. Dahl?

MR. BRADNER: The points he sort of drew --

MR. DAHL: I haven't finished it, Mr. Chairman, but I've got a start. Alpha group resolves that the Legislature adopt the policy of a financial partnership between the state and private enterprise in cooperation with local banks in order that -- and that's where I stopped.

MR. ACKERMAN: Mr. Dahl and Mr. Bradner confer.

MS. BURNETT: The availablity of funds to be allocated to a private sector, something to that effect.

MR. DAHL: As long as you don't use the word "infrastructure." I have to idea what that is.

THE MODERATOR: And let's get incorporated in there right down to the gut hard character loan approach where we have people without collateral that are of strong character. They're young and healthy and aggressive and progressive, that all the indicators are with reasonable diligence, they'll be able to pay that loan back.

MS. BURNETT: At an expedient process or something that will move this thing. You know, a year of three $55,000 people isin credible to me. That haven't made a loan. Money to burn.

MR. BORODKIN: Would that be a prime rate or what --

MS. BURNETT: No, we can't get into -- we can't.

THE MODERATOR: No, it would not be prime. It would be at a lower interest factor.

MS. BROWN: That prime rate doesn't apply.

MS. BENNETT: That's right. That should be in the resolution. That's what we're trying to do.

LINDA BROWN: That definitely should be. We may wind up with -- paying prime rate.

MS. BULLOCK: Probably something should be in there about the difference between the lending and what the bank is going to get out of it, too. So if there's some suggestion the way we'd like to see this operate.

THE MODERATOR: Mr. Dahl, did you hear Mr. Bullock?

MR. DAHL: I'm sorry.

THE MODERATOR: Let me repeat that, Edith.

MS. BULLOCK: Well, I was saying that I think there probably should be something in there that would say that the bank would get the certain percentage limit this so that they do not have that ability to --

MR. KOCSIS: Mr. Chairman, while Mr. Dahl is poseing here I might tell you something. There's such a plan that is asing you -- I want it on the record the Senate Bill 1 which is pending before the Senate right now combines a lot of what this group is talking about, and broadly what it does is the State has to manage its money the most efficient fashion, Senate Bill 1 is responsive to money

problems the State has right now, the potential. We have the permanent fund. What it says is the State's major role concerning its money is to manage it wisely. The kind of investments you put your money into your most secure don't exist in Alaska for the most part there's government papers and grade A stuff that's outside. So you invest it in that and take the income from that investment and you leveage it and use some principal and create some way, then, after you've got this bundle of money that you've leveraged based on the income from the responsible investment and you distribute that to people. Senate Bill 1 says you do it throuh the loan program. If the banks can participate in that program to the effect they can service the loan and they can the state will fund the loan out of this fund. The banks are controlled, however, in the amount of interest they can charge or service charge they can level. Now, because the state is involved -- and we think we can package the loans properly -- you're getting tax exempt revenue bonds as the source of the money. That means that it comes in view at the lowest possible level of any money in the country, if the bonds will sell because them because -- guarantees you're able to provide on the income at the same time. Under the Internal Revenue code there' a loop hole that says for any amount of tax exempt bonds -- if you issue $100,000 you're allowed to indicate and issue 25

percent above that at the same interest rate, the tax exempt rate. That 25 percent can go to any purpose. It is not restricted to public purpose investment. The central bill brings together the management of all the money in the State including that surplus in the general fund, puts its in a big pool and makes it available for the guarantee and says now we've got some leverage capability here. When you start issuing bonds and real sigh the 25 percent that comes in at the same right -- well, if you've got a billion dollar bond you've got a lot more than 25 above it than if you're issuing a hundred thousand. It's arrangement technique. But the approach that the Senate is taking, if what I'm hearing is correct -- I think you're indicating something along those lines. There's a lot of problem about the leveraging and there's a lot of problem about how you give it out to the loan program. You can't charge much more than, I think -- a rate of percent and a half above what you get the money in for.

MR. BRADNER: Yeah. Tax exempt bonds -- there's a stating that federal rule you can only be above so much. We ran into the reverse problem a few years ago. Alaska Finance Corporation dropped so low due to a lucky sale it created such a run on money that it was -- I mean, it wiped it out prematurely. But I would say that it's a standard practice now for any money that's facilitated through

government carry limitations on it. No bank is going to be able to mark you up on excessive interest rate.

MS. BULLOCK: What about the rate that the State would get? Is that

MR. BRADNER: The practice to date has been for the State to run, you know, at a certain margin below the rate going at the normal market.

MS. BULLOCK: Below the prime rate.

MR. BRADNER: From time to time you may have to have some unusual ability because you can get the situation where you can -- you know, if the Feds knock the rates upright now we can create a run on your funds and you may want -- you know, like you might want to give the governor the authority at any time to curtail the flow of funds.

MR. KOCSIS: I think it's real important that people look at the State function in two ways. One is the creation and management of money. The other is the distribution. And in that position you've got enough. If you manage it well, you can literally leverage everything you'd ever dream of doing. The question is is it really responsible? Do you really want that much money out? The management function, if you organize it right, will allow you to do. Walt wants transportation -- hell, we can do it all, if you manage it right. We can manage some of the money necessary to do it. You're at the responsible

distribution level. I think the Legislature sometimes fails to separate that.

MS. BENNETT: Mr. Chairman, when we talk about loans for private enterprise are we including craft cooperatives and things of this kind also? We're not speaking just -- I assume that it would, wouldn't you?

THE MODERATOR: I don't know why not.

MS. BENNETT: They're a money making enterprise.

MR. BRADLEY: Sure.

THE MODERATOR: It's enterprise.

MR. BRADLEY: I just want to say now that everything's died down, and our two men are down there drafting that resolution.

I'd just like to back up what Michael said. In '75 I personally was a great backer of what's tur ed out to be the House's version of permanent fund or conception. Mr. Kocsis has referrel to it as a management tool that was rather conservative. I've now come 180 degrees by looking at -- I think the Senate version of the Senate Bill SB-1 is a much more humane and progressive and dynamic document in the house. And like Mr. Bradner, my personal friends are on the other side, or were on the other side along with myself. But I don't know how to explain my renaissance except that, you know, times change and your views change.

THE MODERATOR: Right. They sure do.

MR. BRADLEY: And I think that character loan -- from a guy with gray hair I'm -- I'm really impressed.

THE MODERATOR: Thank you.

MR. BRADLEY: No, really, seriously. Because that's absolutely okay, you know. There are all sorts of people, you know, young people which I'm not that much any more. 35, but....

MS. BENNETT: We have to be careful, too, that everything is a viable business.

MR. BRADLEY: It should be reasonably viable.

Let me tell you I really think we've got a great problem in the state with excessive timidity. Nobody's willing to take a chance, nobody's willing to absolutely want to study it to death. You want to hire every consultant in the world so you can't make a mistake.

Now, maybe in New Jersey you know they've already gone through their formulating period and they're all messed up. But in the frontier -- in a frontier setting you've got to be able to -- I mean, that's what pioneering is all about. Every pioneer didn't -- you know, a lot of them got bushwhacked and starved, you know. You've got to take some chances, reasonable chances.

MR. KOCSIS: We did do some things for the people of Alaska, for ourselves. That can't be done anywhere else. When you talk about the credibility of the individual

involved. You've got to be responsible but we want to move in many direction of allowing decent people in this State to benefit of their own mind, trusting each other. Hell, /ST it doesn't mean anything to be in Alaska I guess we could pose a system like the rest of the world. But we think it means something. We thought enough to come here and talk about it. It's irresponsible to the Legislature not to give you an opportunity and what they're basically saying -- I work for them -- I hear we are frightened to let the people make that decision, so we sit on them.

MR. BRADLEY: And even more they're questioning their own manhood, or womanhood that we don't know, enough the shysters from New York they might take us, you know. I mean pound for pound, we're brighter than they are because we're here. It's clear on the face of it.

MR. BRADNER: I think what Bob has referred to is very valid today. There seems to be a tremendous fear that some private operator is going to get one buck away from you, you know, and somebody's going to say, "Aha, you let Mr. Big take you for a ride." But, boy, you let a bureaucrat throw it off the dock, you know --

MR. BRADLEY: Or not do anything, you know.

MR. BRADNER: You really have to get back to the point where you say you're not afraid to make some decisions or try some avenues and maybe come up with egg on your face

occasionally and --

THE MODERATOR: For 12 years when I was on the House Senate Finance Committee there was a feud every year, the Alaska veterans' revolving loan shark. It was a healthy fund. They had a loss of one-half of 1 percent per year and here last year it evolves that it's in trouble. And people want to abolish it do away with it wipe it out because it's in trouble. It's in trouble because it's a people thing. The people that managed it let it get in trouble. Get rid of the people and get new people to manage it. Don't get rid of the program. The program's right, the people aren't.

MS. BULLOCK: What about the farm loan, revolving fund? Same thing?

THE MODERATOR: Same thing. It's a people management thing.

Mr. Dahl.

MR. DAHL: Mr. Chairman, we have drafted a resolution, but in considering if you'll have to realize this is not a race horse. This is a camel.

THE MODERATOR: Right.

MR. DAHL: This camel is a horse that was put together by a committee, and that's what this resolution is.

I have a Pollock story about that.

Alpha Groups resolves that the legislature adopts

a policy of a financial partnership between the State and private enterprise in cooperation with local financial institutions with a view toward, one, supporting private enterprise through the provision of venture capital, two, capital support for projects and equipment through leases with the lease rate based on actual revenue received from use of the product and, three, approval of borrowers based on relevant factors beyond those presently considered by banks. The State economic policy should be developed with goals of desirable social and economic development looking toward the improvement and strengthening of the private sector.

THE MODERATOR: I'd like to change one of the hooves on the camel.

MR. DAHL: Just give it another hump.

THE MODERATOR: Okay. Leases or lease purchases? How does that fit?

MR. DAHL: Fine. Some of these things are going to surface as a result of such a program they're going to be so good some of the banks are going to say, "Hey, we'd like to have a piece of the action.

MR. DAHL: Mr. Chairman, before we move on this I would suggest that we have our support staff type this and get copies of it before us so we can see what the language is and move in that direction.

THE MODERATOR: Is there any objection?

(No response.)

THE MODERATOR: No objection. It is so ordered.

MR. DAHL: Thank you, Mr. Chairman.

MR. BRADNER: Mr. Chairman, one maybe final comment: I had the experience of being in the Legislature a number of years, and you thought you were dealing with a lot of problems outside your urban areas, and after a while you found out you were treating the end product and you try to provide a water system or help with a housing program with some of these. But you could never get at the main problem, and that was the economic base. And by instinct as a politician you knew in the first place you didn't have the revenue to even try. The basic resources and tools weren't there.

Alaska, Inc., as I call it, your resource base was very immature. So you really were just beginning to feel that. And you had no real ak excess revenues and so you've dealt with the problems the only way that we had a system to do it, and that was dealing with the end products of just, you know, reaching in and doing what you can. And I think now something's changed and you have two very interesting tools to deal with, and another one that the Land Claims Act gave you, which is this quasi public private entrepreneurial treaty that exists in the form of

the land corporation, who would have their own set of problems and their own successs and their own mistakes.

And only one following comment. I think how bewildered the State is and unsure of going into this area is exemplified by the fact that the Land claim settlement is now eight years old, and I will defy you to find one place fundamentally where the State has chosen to recognize the value of that resource and the State has a great value of working functionally with it to try to help facilitate an economic base, you know, out yonder. And, I mean, eight years is an awful long time, but it's better than nine years. And so there's really three potential tools laying there that weren't there in the years that yourself, Mr. Moderator, and I serve in the legislative body.

MR. ACKERMAN: This is a point we taught to bring out because we haven't looked at it, and we've sort of excluded it.

MR. BRADNER: Certainly. People always say, well, gee, why don't the corporations do something? And of course the reason is capital. And to seek reasonable security and reasonable profits, you know, do something back home. But it might be very interesting for the State to look and see how they could help secure and facilitate the use of the corporation's capital back home without making them, you know, at an extreme risk situation. I think we have to

recognize their capital is no different than anybody else's capital.

THE MODERATOR: Mr. Bradley.

MR. BRADLEY: Excuse me. Go ahead, Gary.

MR. ACKERMAN: I think this gets to the point that in eight years we have to start doing things in cooperation with the native corporations. You know, we've got 103 million with the 40. That's 43 million acres, you know, that's available to us that's under federal control. And I think we have to live with it in joint participation. And I think this is something that really needs to be included in our sale. I think you know we really need to bring it out in the light of day to look at it and start talking about it and start working together in thse areas.

MR. FISHER: Instead of hoping it will go away?

MR. ACKERMAN: Right.

MR. FISHER: that's what I hear of the land claims. For eight years the State says I could go that way.

MR. ACKERMAN: Well, we started out with land claims and we were talking -- we were talking about a million acres of land. And then we finally, you know, said why a million acres if we could get a hundred million acres from under the feet the federal domination the entire stating going to benefit from it and we ended up with a compromise of 40 million acres. It's not under the federal domination.

So now we should start with the 103 million we had from statehood we should start looking at joint development in things, you know. And we really need to get on the road with it. And like I say there's no reason for going nine or ten years before we start looking at it.

THE MODERATOR: You're going to have to get that land in production, get it yielding revenues as soon as it's transferred because in twenty years time after it's transferred then it's subject to fee -- fee simple title land is subject to taxation, if the State elects to tax it. It's going to have to be yielding revenues in order to pay the taxes or they'll lose it.

MR. KOCSIS: Shouldn't we draft a resolution of this? Presently, there's a real strong feeling we ought to get out on the record. I agree with you.

MR. ACKERMAN: The straight resolution is appropriate. For one thing we were talking about it before earlier in our transportation costs. You know we pay for a round trip ticket and get a one way ride. If we start developing these areas, you know, we can start, you know, getting a round trip ride. We have to do that first -- it's essential.

THE MODERATOR: Mr. Bradley.

MR. BRADLEY: Mr. Chairman, I didn't want to miss this opportunity to put my good friend Michael on the hot seat.

And for a specific project. That I know that he and I have strong feelings on. We both have a little bit of conflict of interest, maybe he more than I. But since we've obviously demonstrated a certain level of trust for Mr. Bradner I think he's a very honorable and trustworthy I just want to bring it out, and that's the gas line. And I'd like him to impart his -- you know, as much knowledge and opinions that he has on that issue that's going to be at least one specific issue that's going to possibly be dealt with because it deals with the resource, gas. It has to indicate the availability of financing through local government, State Government or both of those, at least the State. There's private enterprise involved with that. Classic private enterprise and the whole host is sort of a cornicopia number. And I wondered if he could --

MR. BRADNER: Bob, in a way that is the type of thing that's almost outside of the type of thing we're considering here because I think when you're dealing with what you call medium size deveopment. When you're trying to package a loan -- maybe its the developing of $20 million again. Three million coming from here and 4 million come from there and the State alone is 10 million, and it's something you can expect institutionalize the process so the Legislature is not involved in any one. Obviously, anything that's being held, State participation,

involvement, something like with the gas line and measure themselves in hundreds and millions of dollars. I mean, we're naive if we think that, "Hey, let's give legislators that make every one of those decisions on an individual basis." You know, this would be the case with the gas line. If it's good investment or it's good policy or there are social benefits or other things that will go along with it, if the project is needed, you do it, you know, and if it's a good return on it. Like the gas line could end up in a lot of ways being a very good return that might support other items. But I don't think there's any way that you set up loan committees of private enterprise, buyer contracts or anybody else who would dare take the risk to make those decisions because they'll find a way to say no every time because they're scared to death. It's the safest thing for them to do. So there's no way of -- you know, that those what I call magna investment decisions are simply going to have to come to the legislature each time. They may have some source of advice if there's an investment corporation for retaining consultants or this sort of. But that's simply going to be a case by case process.

MR. BRADLEY: Right. And I agree with you. What are your feelings also on case by case on that specific case?

MR. BRADNER: Yes, I got involved in that project

because I thought basically Carter was going to be an energy leader in America. A lot of us may have to content with El Paso and some of those thing but basically the energy market of North America isn't the West Coast, it's the East Coast, and you draw a straight line between the two, and I always felt your best policy ought to be -- especially where there's a large draw of federal control and you want to retain as much control as you can, you use every device you can to get it. And you may want to be involved in future oil lines, gas lines, gas plants, not misallocate funds. If you can use somebody else's money to do it, you do it. But there's lots of different scenarios you could use. For instance, you could making a case that the state was a 20 percent participant in some type of petroleum development. Believe me they could have a large say in it because they may have something like a gas line that none of the other partners have. They have future gas to sell. So, I mean, that's obviously what Exxon was after, the gas line. They came along and they said, "Hey, we want 30 percent control or 40 percent control. We'll have future gas to sell. All the other partners are consumers and were 48 States so you don't need 51 percent control of something. And I think that's the message, that the State can retain a basic resource policy because you have other future resources too, you know, to offer in the

future. You don't need anywhere near 51 percent control that when you suddenly approach your partners and say, "Look, we'd like to see a labor agreement because a non-labor agreement in avoidance of labor negotiations usually means you scatter hire all over the other states. And what the labor organizationers can't get out of them, even though a labor agreement doesn't mean exclusive Alaska hire, it means 75 percent. So believe me, your partner stands up and says, "Well, yes, sir, because you have something down the line they want, a good example might be we allowed Valdez to issue a billion dollars. We didn't allow them to do. We could rant and rave now of of the Alyeska policy, what do they need from us? They don't need anything. We can't even raise any tax. If you raise the taxes on them, you're going to have to do it on maybe a marginal line that goes from there to Dyon. So you can't even go after Dyon in Canada. Say if Dyon is a corporation, developed gas or oil in Canada near Fairbanks. And it would very marginal. It would be a very marginal operation. So if you wanted to try to get at Alyeska and you increase the tax rate to 30 mill you have to do the same for the marginal operation. And what I'm saying is this: We had no hold, we had no real hold on Alyeska as a pipeline company. However, had the State perhaps issued those bonds and there might be a certain posture since you can issue tax exempt bonds for

harbor improvements and so on that Alyeska might be considering the fact that they might want to come back to you again. And get a half a billion dollars from improvements, which is all the New York bankers want, you just facilitate them. And when you made certain suggestions to them how they might moderate their social economic policy they might be interested because the businessman in adopting such policy only infer one thing. He understands money. And so when you develop resources and so on and so forth you have to work with money.

MR. KOCSIS: The State's role, then, for instance in the pipeline, gas pipeline why not facilitates the proposal for the priorities which is the simple thing. North Slope or you've got the one in between and the Fairbanks, I guess are the ones we go across. Those three government entities join together and the North Slope -- beg your pardon -- biuild the treatment plant for the gas, they own their portion. The next borough owns their portion and the next borough owns their portion. They make a profit on the line they manage it through a tri-bureau authority and there's production of -- reduction to local control but the State would not be as heavy participant because there's pretty good tax basis there. Is that a healthy thing.

MR. BRADNER: I know, I think you can develop all kinds of different scenarios. Sometimes there's some

defects of, you know, an industry 00 horse around a local government, too.

MR. KOCSIS: What we're talking about in overall policy maybe the State wants to begin thinking about that kind of commitment. To support local government that in what if you've got total state support the State policy is we're going to go trace development of local control and the local tax base we get those kinds of things those are the decisions.

(A short recess was taken.)

THE MODERATOR: We have a finance resolution draft before us, financing resolution.

We have some stuff to go back into. Government transportation.

MR. STUMP: We haven't touched resources yet.

MR. FISHER: Mr. Moderator, I've got a draft resolution working for discussion.

THE MODERATOR: Fine.

MR. FISHER: It's in the process of being typed the second time.

THE MODERATOR: In what area, Jamie?

MR. FISHER: Transportation. So it ought to be coming. The staff seems to function almost with lightning speed. I can't believe it sometimes.

THE MODERATOR: Let's go ahead, then, with this

financial resolution draft copy and review that for action.

Alpha Group resolves that the Legislature adopt the policy of a financial partnership between the State and private enterprise, in cooperation with local financial institutions, with a view toward: One, supporting private enterprise through the provision of venture capital; two, capital support for projects and equipment, through leases or lease purchases, with the lease rate based on actual revenue received from use of the product; and three, approval borrowers based on relevant factors beyond those presently considered by banks. The State economic policy should be developed with goals and desirable social and economic development toward the improvement and strengthening of the private sector.

That is the problem that Mr. Borodkin brought to our attention in the area of $10 million loan for handling raw fish purchases.

Is that substantially correct?

MR. BORODKIN: No, I --

THE MODERATOR: You had to get it through 15 percent?

MR. BORODKIN: Yeah, I don't think I should be made part of this resolution.

THE MODERATOR: Not that wording but -- direct that kind of loan financing or that kind of financing to be available.

MR. FISHER: Let me suggest something. No No. 2 right after "Capital." Why not put a capital or operational support."

THE MODERATOR: All right. Very well. You're always very good at amendments, Jamie.

MS. BENNETT: Also in No. 2 -- the leases and lease purchases -- it seems to me that we could strike "projects" in that. We're talking about equipment in that.

THE MODERATOR: Projects? Capital support for projects and equipment.

MR. FISHER: And --

THE MODERATOR: Projects could be a mining project. It could be a milling project.

MS. BENNETT: But it's still for equipment for the project. For fish, not necessarily.

MS. BULLOCK: No, no, it's for capital investment. and I'm talking specifically about leasing and lease purchase agreements for equipment, right?

THE MODERATOR: You could lease a facility on a lease purchase.

You could lease a building.

MR. FISHER: Maybe she's --

MS. BENNETT: I'm just really talking about a minor point in the wording of it.

MR. FISHER: Are you suggesting to strike equipment

because capital and operation support project and leases. That will take care of everything.

MR. BORODKIN: Would that take care of it without saying "fish"?

(Discussion off the record.)

MS. BULLOCK: Mr. Chairman --

THE MODERATOR: Yes.

MS. BULLOCK: In the second line after "enterprise" we should put in the State of Alaska.

THE MODERATOR: Very good thought, Edith.

MR. STUMP: And Alaska's private enterprise?

THE MODERATOR: Modify Alaskan companies. Or "Alaskans." And we wouldn't want to be extending this kind of a financing device to a company that was controlled from outside.

MS. BULLOCK: Right.

THE MODERATOR: If they're controlled from Outside let them get their financing from Outside.

MS. BULLOCK: Private enterprise.

THE MODERATOR: Whether it's a Household Finance coming in to -- use leverage their money and use our money in financing aircraft for Household Finance lien. We wouldn't want that to happen. It's a foreign held airline now for all practical purposes. We're striving to use these nonrenewable resource revenues for the development of

industrial activity.

MS. BULLOCK: Alaskan owned?

THE MODERATOR: Alaskan owned industrial activity. By Alaskans. It's for Alaskans.

MR. STUMP: Between the State and Alaskan owned private enterprise? Would that cover that?

MR. FISHER: Wasn't the suggestion just kind of physically? That's what she's looking for.

MS. BULLOCK: Well, I really am thinking it should be confined to the Alaskan entrepeneur. But how to best state this. What does Mr. Dahl say?

THE MODERATOR: Line 1, supporting private enterprise through the provision of venture capital to Alaskans --

MR. DAHL: Mr. Chairman?

THE MODERATOR: For development within Alaska.

MR. DAHL: Wow. I have some problems with that. I think you're limiting the legislation more than you really want to.

THE MODERATOR: Okay.

MR. DAHL: I think what we're doing in these things is giving some fairly -- a fairly clear direction as to policies that we like to see follow. I agree with you, Edith, that it's good that this be limited, and I think your original idea was really sufficient, and that was to say -- supporting private enterprise in Alaska through the

provision of venture capital."

THE MODERATOR: Okay. Where do you want to amend that?

MR. DAHL: Just add the words after "enterprise" add the words "in Alaska." That was Edith's original thought and I think that's excellent.

THE MODERATOR: Jamie, where were you coming from on that?

MR. FISHER: Object to my proposal? My proposal was in paragraph No. 2: Capital and then insert after "capital" the words "and operational support for projects and equipment through leases and lease purchases." Because of the illustration that Mr. Borodkin gave us with respect to the loan the what he's talking about is not just the facility. They need operation money, and that's what the PAC loan is.

THE MODERATOR: Capital and operational support for projects and equipment through lease or lease purchases with the lease rate based on the actual revenue received for use of the product.

MR. FISHER: It's ambiguous enough you can read anything into it you want to.

MR. DAHL: It's designed to confuse as few as possible.

MS. BENNETT: It doesn't say it's only through leases and lease purchase? I mean, that's what --

MR. FISHER: You put the only in.

MS. BENNETT: It seems to me that's what that sentence says.

MR. STUMP: How about including? Change it to including.

MR. FISHER: How about including but not limited to.

MR. STUMP: Unnecessary.

MS. BENNETT: Yeah.

THE MODERATOR: Including -- strike after equipment strike through and insert "including but not limited to?

MR. FISHER: No, just including.

MS. BENNETT: Just "including."

THE MODERATOR: Okay.

MR. ACKERMAN: Where do we put "including"?

MR. STUMP: Replace "through."

MR. STUMP: I'd like to see us vote on it.

MS. BENNETT: I have --

THE MODERATOR: A motion --

MS. BENNETT: I have one more addition. We still don't have anything in here about the preferred rate of interest, do we? And number one that could added.

MR. ACKERMAN: I think Mr. Bradner said they were really limited to that. There could only be one and a half points over the money we've got. I mean that's a requirement that's already on it.

MS. BENNETT: Okay.

MR. ACKERMAN: That takes care of it, Mr. Chairman. Before we start on it, if you could read it its entirety as it's been amended.

THE MODERATOR: All right. Alpha group resolves the Legislature adopt the policy of the financial partnership between the State and private enterprise in cooperation with local financial institutions with a view toward: One, supporting private enterprise through the provision of venture capital in Alaska; two, capital and operational support for projects and equipment including leases or lease purchases with the lease rate based on actual revenue received from use of the product; and, three, approval of borrowers based on relevant factors beyond those presently considered by banks. The State economic policy should be developed with goals of desirable social and economic develop many toward the improvement and strengthening of the private sector.

MR. ACKERMAN: Move for adoption.

MS. BULLOCK: Exception.

MR. STUMP: Exception.

MS. BULLOCK: My proposal was to move on the second line after private enterprise within the State of Alaska. That covers the following points. And number one says supporting private enterprise through the provision of venture capital. Is that correct?

MR. DAHL: Mr. Chairman?

THE MODERATOR: Right.

MR. DAHL: Sorry if I misunderstood, Edith. I thought your amendment was to change number one to read: "Supporting private enterprise in Alaska through the provision of venture capital."

MS. BULLOCK: Well, if this is the way you like, that's fine.

MR. DAHL: That's what I thought you were asking to do. I misunderstood that language when Bob read it.

MS. BULLOCK: So now we have it: "Supporting private enterprise in Alaska through the provision of venture capital." Okay.

THE MODERATOR: Supporting private enterprise --

MS. BULLOCK: In Alaska.

THE MODERATOR: -- in Alaska through the provision of venture capital.

MR. STUMP: Where are we? Question?

THE MODERATOR: Okay. Number one: Supporting private enterprise in Alaska through the provision of venture capital." Is that correct?

MR. KOCSIS: That's correct. Mr. Chairman?

THE MODERATOR: Mr. Kocsis.

MR. KOCSIS: Is the question called? I'm assuming on the record I would agree with the wording but I'm assuming

by "providing they would also help in facilitation of that, too. In other words, they'd provide seems to indicate they would be the ones to give the money. We also should agree they should go out and facilitate it for them wherever it is. Is that included?

THE MODERATOR: Through local financial institutions. It would be State funds handled through local financial institutions.

MR. KOCSIS: Do you want also to indicate the State could facilitate federal funds on that, too, for instance. They could facilitate the native corporation participation.

THE MODERATOR: Right.

MR. ACKERMAN: Why don't we say --

MR. KOCSIS: On the record, is that part of what we're saying? Is that assumed in there? Is that the feeling of the group?

MR. ACKERMAN: Why don't we say, "provide and facilitate" it?

MR. KOCSIS: I'm not asking to amend. I want to make it clear. The record will be available, if you want to say it. Okay. I want to make sure I'm understanding it to do everything they caN. You do mean they should encourage all participation, not provide just their own money. They get in everything else they can, too.

MR. ACKERMAN: I think we add provide facilitate it

will give us a lot more opportunities to do what we want to do. We don't necessarily have to provide all the money if we can facilitate it it serves the same purpose, and I think we ought to include it in the resolution so it's clear.

THE MODERATOR: Okay. Is that paragraph one? Supporting private enterprise in Alaska? Is that the paragraph?

MR. KOCSIS: It would be it says "through the provision of venture capital." The specific situation I envision that I think is covered -- I just was trying to make sure what the record is: For instance, the State would subsidize loans. Well, they're not providing all the capital they're providing a subsidy or they're guaranteeing a loan. They're facilitating a loan. They've not actually giving you the chunk of money. I want to make sure we're dating that. I just want on the record that's what you do mean.

THE MODERATOR: It's a rather laborious the way I interpret it. Let's read it.

MR. KOCSIS: Yes. Supporting private enterprise through the provision of facilitation of venture capital.

MR. DAHL: Keeping the words in Alaska.

MR. KOCSIS: in Alaska, yes, sir.

MR. STUMP: Would you repeat that?

MR. KOCSIS: You're merely adding after -- I will read the whole thing. Supporting private enterprise through the provision or facilitation of venture capital in that Alaska."

MR. STUMP: I'd agree with that.

THE MODERATOR: Supporting private enterprise and then delete "in Alaska there." All right. Through the provision or facilitation of venture capital in Alaska." Is that the way you want it?

MR. KOCSIS: I think we've discussed enough so the record will show what we're talking about. Yes, I feel comfortable with that.

THE MODERATOR: There was a motion by Mr. Ackerman for the adoption of this financing resolution. Is there a second or an objection?

MR. ACKERMAN: I think we ought to read it again so it's going to be the way through. We've had a couple of changes since that time.

THE MODERATOR: All right. Your motion is on the floor.

MR. ACKERMAN: I'd -- there was an objection.

THE MODERATOR: All right. You seconded it. There can be an objection for reading and then there can be withdrawal of the objection and we can vote for adoption or rejection. Do I hear a second?

(No response.)

CSR #3592

THE MODERATOR: There's no second to the motion?

MR. KOCSIS: Second, second, second.

MR. DAHL: Second.

THE MODERATOR: Second? It's been seconded. Is there an objection?

(No response.)

It's open to discussion. We will now read it one more time. "Alpha group resolves that the Legislature adopt the policy of a financial partnership between the State and private enterprise in cooperation with local financial with local financing institutions with a view toward: One, supporting private enterprise through the provision or facilitation of venture capital in Alaska; two, capital and operational support for projects and equipment including leases or lease purchases with the lease rate based on actual revenue received from use of the project -- product and; three, approval of borrowers based on relevant factors beyond those presently considered by banks. The State economic policy should be developed with goals of desirable social and economic development toward the improvement and strengthening of the private sector."

MS. BULLOCK: Question.

THE MODERATOR: Question. All those in favor significant by raising your right hand.

(Indicating.)

THE MODERATOR: All those opposed.

(No response.)

MR. FISHER: If you call for a voice vote some that weren't delegates could vote on the voice vote.

THE MODERATOR: It's carried unanimously.

MR. FISHER: That wasn't very funny, was it?

MR. STUMP: Before we get off, finances I'd like to direct a bit of discussion and possible resolution dealing with the growth of State government and bureaucratic growth. I think that we're looking at, of course, a tremendous amount of money becoming available within the State, and I think that I personally would like to see a direction to the Legislature to limit the expansion or growth of the bureaucracy in its various forms. I think one possibility we we've gone through the expansion as they did in Washington State limiting, or tying it to the growth of the individual income levels. There are other ways that are possible, but I think that we have expressed in this original financing resolution the idea of improving and strengthening the private sector. I think that this would make it a resolution directed, as I have indicated -- further direction for the legislature to avoid a tremendously expanding bureaucratic -- bureaucracy within the State of Alaska.

MS. BULLOCK: I'm in favor.

MR. FISHER: Let me ask a question. If you're going to be accountable -- if we're going to hold the government accountable for handling the money or are we going to do it? You've just got to have people?

MR. KOCSIS: Mr. Chairman, maybe we could tie in kind of a thought of reducing bureaucracy. And I think we're looking at the State government. Maybe what we can talk about is directing responsibility to local entities whenever possible instead of creating a centralized government unit. Management of contracts and so forth -- a lot of things that are done from Juneau could be done by local government. The State government is really -- they can do it. The money comes through legislature they passed on local communities for managements and so forth, I don't have to have a lot of guys sitting in Juneau. If I've got a few local people doing it.

THE MODERATOR: But then you get caught in the panacea of the local governments boroughs and so forth building a huge buracracy.

MR. FISHER: That's right.

MR. STUMP: Right, I would agree with that entirely. What I have in mind and what my direction is is to limit or to streamline and to reduce the participation or the control and the growth of the bureaucracy in that the direction of our activities of the economy and to see it go

more directly to the private sector --

MR. KOCSIS: Okay.

MR. STUMP: -- and I know that that does cause a problem. We're talking about expanding telecommunications and educational things and whatnot, aspects of government, but I think that -- I think that we have got to recognize that some day even this unexpected revenue is going to be gone, and unless we start taking a look right now at limiting the role of government we're going to have a real problem in Ketchikan. I think this is pretty much true throughout the State. You have pretty much close to 50 percent of the employment in government jobs. When you go over that role, over that majority limitation, now, you run into, I think, some real dangers of not having government being responsive to the economy that really produces the wealth. Now, the State's role or the State's ownership of the tremendous amount of wealth, as Mr. Brandner was pointing out is one thing. The production of wealth is generally within the private sector. And I think that when you have the -- when the employment runs -- tips over into the scale of the majority being outside the private sector I think that you lose a lot of -- I think you lose your balance.

MR. FISHER: Let me ask a question. Didn't Mike Bradner also point out that the production of wealth this

state was the State itself in its resources?

So, you know, admittedly what you say is customarily the situation almost everywhere else, but we turn up being unique in being the exception. So hadn't we better respond with -- you know, hadn't we better respond to account for that both internally and externally? We've got to watch out that we don't hold control, too much hold down the State administrative system too much or it's going to pop up on contracts.

MR. STUMP: I was not giving any specific eliminating factors.

MS. BULLOCK: Right.

MR. STUMP: I was giving a direction of a feeling and a philosophy. Now, maybe -- maybe you can't have one without the other, but I think you can. I think you can put -- I think you can give a directive, if you want to avoid or to limit as much as possible the growth of the bureaucracy over control of our lives. Economic as well.

MR. DAHL: Mr. Chairman, I think one of the questions -- philosophically, I would support that position. And under normal circumstances I would fight on your behalf. But I think what we have to consider in thinking about limiting government, limiting the growth of the bureaucracy is the reason for limiting that program, the growth. The traditional reason for limiting the growth is we can't

afford all these people running around doing things that, you know, some cockamamy ah may me program that's just extra to our lives. That is no longer a reality in the State.

THE MODERATOR: Well....

MR. DAHL: And it seems to me if we are to do what you want to do we need to say it in a different way. And that is to say that we -- that we're limiting programs in a certain way, that we aren't just -- we aren't just saying government will be limited for the sake of limiting government growth. I think we have some other responsibilities that we need to take care of in saying that.

THE MODERATOR: Well, Mr. Dahl, looking back on my personal experience with this North Prudhoe Bay Revenue Funds and the '68 legislature and in the last session in 1970, when the Senate Finance committee was relieved by the present Senate, the new committee was reappointed because we were too conservative. Governor Miller had position requests for 1100 new positions, 1100. And the committee of which I was a member cut that budgetary request to 350 new positions, and the new committee of which I was reappointed but declined to serve on and was replaced -- the new committee allowed in excess of 700 of the 1100 positions. And the screaming bureaucracy -- even with the

funding that will be available, the bureaucracy can become -- every one of those people is a horse and you've got to feed it. And with all of the retirement programs and all of the fringe benefits I can see an operating budget that's absolutely astronomical.

MS. BULLOCK: Education.

THE MODERATOR: The whole shot.

MR. DAHL: Mr. Chairman?

THE MODERATOR: Yes.

MR. DAHL: I don't want to go on record as supporting growth in the bureaucracy. I'm not. The only thing that I'm saying is that if we are to adopt the philosophy of limiting government growth, let's do it for reasons that we understand. The traditional reason for limiting government growth is that we can not afford government. The fact is we can't. The reason that the Finance Committee in 1970 had a responsibility to limit government growth is that they recognized a very limited -- a very limited structure or a mound that $900 million really was. And once you build a bureaucracy you build it forever. I don't want to say anything more about it because I'm inclined to agree with you. I like that policy and think we want to do it.

MR. STUMP: Let me clarify what my real root cause or reason for this concern is. When over 50 percent of the people employed in the State are receiving -- are dependent

upon the State government and not dependent upon the health of the private sector -- okay? When you vote in people your legislaters and your administration who make decisions that are going to affect those businesses, the well being and the ability of the private sector to continue in a healthy state, you've got --

MS. BULLOCK: Vested interest.

MR. STUMP: You have no -- let me back up a bit. The people voting in the control and the direction for government policies, regulatory taxing and whatnot -- they're going to have no concern for the health of the private sector because they're not dependent upon it. And when they're not dependent upon it, when the majority is dependent upon the State, then I think you lose your ability to make your best government policies in particular as they relate to the economy.

So it's more than just the ability of the State to provide to pay for these government jobs. It deals with the whole concept of the role of the private sector and the safeguarding that role.

MR. ACKERMAN: Mr. Chairman.

THE MODERATOR: Mr. Ackerman.

MR. ACKERMAN: The one thing we're going to have to look at here is we're getting into a new area now. If we're going to limit the expansion of our State government

at this time possibly that, you know -- it expanded our State Government a little bit to take care of the things we've been talking about doing resource development timber, fishing, mining and things like this, you know, you're -- and the State getting into the development of these things -- if you don't put the people out to develop these jobs, then you'll continue in your manner where we'll get the balance. But where you can take and put on a few more State employees or add a few more bureaucrats it's going to create five times as many people in the private sector then your percentage starts going the other way. So at this point in time we have to watch that we don't do that.

MR. STUMP: Well, if that was the time, the original time in the first place it became in tie month to the growth of the private sector or the private income levels, then you allow for that expansion and you gave an incentive for the government to see a growth of the private sector in the first place. So I don't know. We're getting down to chickens and eggs. But....

THE MODERATOR: I'd like to make an observation. The more government you have the more regulation you have the less liberty you have. We mustn't overlook this. I can see I'm apprehensive about our Lynn you are tease, and I can see the unprecedented growth of the Department of Fish and Game, the biologists and enforcement agents and

administrative rules and regulations promulgated under Administrative Procedures Act, putting all kinds of regulatory pressures on the people. So we must be very cautious in this area now for 400,000 people to have 85,000 wage earners as a total populous, to have 42,000 of them in the public draw, in the bureaucracy, and the power of the administrative procedures act and administrative regulations they could promulgate as a result of their interpretation of laws governing themselves that then they circumvent the intent of legislative acts to voice their will upon the people that can deprive us of our liberties and the very real lifestyle that we maintain.

Mr. Kocsis.

MR. KOCSIS: Mr. Chairman, I agree with what we're saying I think we're talking of reduction of government.

A VOICE: We have to consider government is here to provide services. If you reduce government it does not mean reduce services, I don't think. It means someone else besides government in the community situation provides services I don't really mean creative borough government that do the same thing that federal -- or the State Government does -- the borough can receive the operating money and so forth, the administrative state present each has. The State just passes it on and then the burough contracts out to a private sector. They do it this such

things as corrections. Senator Hohman last section introduced a bill on adventure based education. It allows private contractors to set up rehabilitation programs for juveniles, and it authorizes the court system to use those private contractors in villages in this State, cities, as an alternative to the government systems, courts systems and the incarceration system for dealing with those people. That's what I mean. You create a public sector or you go to public sector that can provide the services. You're shifting.

MR. DAHL: Private sector.

MR. KOCSIS: I'm sorry. But what you're doing is you're reducing the number of bodies in the nationalized government and the services that they perform you're passing over to public sector. That's, I think, what it means, that the expense will possibly be the same and it may continue to grow. But the emphasis will be entirely different. It will be people receiving the money in local communities, rather be $6 million to McLaughlin for justify m-- which goes into Valdez, Alaska you can spend that where it makes a different in local community and we get a better prospect for the money. Not a reduction in cost and the benefits we give may go up. Have you to realign where that decisionmaking power comes and who provides those services.

MR. DAHL: I would certainly support that.

MR. STUMP: That kind of programming, that kind of funding of the funds to obtain the goals desirable goals is really what I'm talking about. And I certainly would agree that we can -- I think that we can work out some wording that would still give a directive to the Legislature about our attitude, philosophies, regard g public and private sector.

MR. KOCSIS: You want to encourage the government to turn over as much provision of services to individuals as you possibly can, turn those provision of service requirement over to a private sector.

MR. STUMP: For example, the electricity I television coverage. As a result of a process it did go to K-2. But the idea there of allowing the opportunity for the private sector is what I'd like to --

MR. FISHER: -- coverage provided here is one-half the cost of hiring what it would have given the local firm. I talked to the guy this morning. What they did was use force account and though employed a camera, they hired a camera, rented a camera and they provided for one-half of what it would cost here from a commercial TV operation. So, you know, you've got -- you're into a tough, tough situation. Another thing that's happened -- the Federal Government has substantially stayed at, you know, roughly a level, not a whole lot. But what's happened? The State

and local governments have just mushroomed. So you can't both beat the horse and hold it in at the same time. You just can't do that. Now, I didn't -- and one thing we're already doing in the State is we're moving a lot of that stuff into contract. Now, maybe that's more desirable. Maybe it's more flexible. But you're going to end up with quasi government employees or contract government reply ease where you had, you know, those on the payroll.

THE MODERATOR: The federal government's doing the same thing.

MR. FISHER: You're right, you're right. They are doing the same thing. They are redoing to think tanks --

MR. KOCSIS: Excuse me. Mr. Chairman. I think you have to look at the way it's regulated. If we make it clear the legislative policy statements, group statements likes this what we're talking about is not that regulatory not that you say government. If you can't let them tie with that regulating. They're tying it up, you can't do it you have to stay at the State level this is not a regulatory program. This is a problem we're giving responsibility to local levels we'll check it but we're not going to saddle them with the kind of crap. They've have too much, that's not the -- and I am tomorrow was I think the people gave a statement of this when they opted out of Social Security. They're tied of this federal

regulations. They're tired of the -- the federals gave us and taking nothing. And we can insulate ourselves.

(Discussion off the record.)

THE MODERATOR: Okay. Where are we now?

MR. ACKERMAN: Mr. Chairman, I have a resolution here ready for consideration. Are we done with the other one? Or do we have anything that's -- we want to consider at this time?

THE MODERATOR: Let's consider your resolution since it's in draft form before us.

MR. ACKERMAN: Okay. This is a joint resolution with John Borodkin. It's a financial resolution. It's the alpha groups resolves that the Legislature recognize the existence and opportunities provided by the existence of the native land claims corporations and the unique opportunities provided by those rural based private corporations for developing mutual economic and socially desirable goals in rural and urban areas of the states. Alpha group further encourages the legislate too develop structure that can provide creative mutual interaction between the State, native corporations and other entities concerned with a healthy and desirable Alaska urban and rural society.

MR. DAHL: Mr. Chairman, I move its adoption.

THE MODERATOR: What might other tent tease be?

Elucidate.

MR. FISHER: Nonprofit corporations? They don't necessarily have to be native nonprofit corporations. But they could be nonprofit corporations.

MR. ACKERMAN: We have farming coops and several types of cooperatives in the State.

MR. FISHER: There's a regional corporation up around Galena. It's called company AKON development 789 it was set up back in 1969. And it's -- it's membership is substantially all village leaders of 11 villages. But it isn't necessarily a native nonprofit corporation.

THE MODERATOR: There's a motion --

MR. DAHL: Move to be adopted.

THE MODERATOR: Second? Is there any objection in?

MR. FISHER: Second.

THE MODERATOR: Discussion?

Response.

THE MODERATOR: No discussion question. All those in that significant by saying aye.

Aye.

Opposed?

(No response.)

THE MODERATOR: The ayes have it. So ordered.

MR. DAHL: Mr. Chairman, it is almost five o'clock. What is or schedule?

THE MODERATOR: Our schedule is to work until 6.

MR. DAHL: Okay.

THE MODERATOR: Take a two-hour break and come back and work for two hours. And adjourn until morning.

MR. DAHL: All right. There seems to be one major subject area that we have left to do, and that is resources. Is that is that correct?

THE MODERATOR: Yes.

MR. DAHL: Okay. Before we do that, then, I think that I would suggest that we have a couple of housekeeping things that we might be able to take care of in the -- in a short time.

THE MODERATOR: Yes, we do.

MR. DAHL: I have prepared just while we were discussing other things a resolution that I think summarizes the discussion we had on education yesterday. And I would like to present it to the group for discussion.

MR. DAHL: I went through my notes of our discussion yesterday, and in my opinion this is what we discussed: " Alpha Group resolves that the Legislature consider the following recommendations in the area of education: One, that the State of Alaska provide scholorship loan funds to any Alaskan students for the first two years of post

secondary education with special attention paid to: A, preservation of a student's fredom of choice of colleges or university; B, recognition and protection of the signature and important contributions of private higher education in Alaska; CT, providing new and that expanding opportunities for vocational and technical education and training; and, did, loan forgiveness based on years of service in Alaska in the public or private sector; to, that the State of Alaska allocate funds for local school districts for tell he conferenceing and so indication actual education according to a policy other than average daily membership in order that all elementary ask secondary students in Alaska might be provided the option of a technical trade appropriate other for the --

Mr. Chairman, I move its adoption.

MR. ACKERMAN: Second.

THE MODERATOR: It's been moved and seconded that the education resolution be adopted. Do I hear any objection for the purposes of discussion?

MR. ACKERMAN: Mr. Chairman, I wonder if we might include someplace -- I think one of our major problems -- and was our area of counselling. Could we personally include that could where we have people from other different technical trades? Can that enter into counselling, you know, before the secondary levels so they

do get a secondary educational enable them to get into a trade or occupation?

MR. DAHL: That was the intent of my language in No. 2. I was taking it from the notes that I took with your suggestion, Mr. Ackerman, and I certainly don't have any pride of authorship in this. Anything you'd like on do with it or -- it up to amount this I'd be happy to.

MR. ACKERMAN: I think we do need -- the counselors we have now -- I think we might have to go out to the industry and private sector to explain job descriptions and if they want to go to work in this industry what's available to them, what they have to learn to get into it and things like that. And I don't think that you can employ a counselor who can adequately counsel in this area. For everything. I think that we need to bring people in. Maybe on a contract basis to go through the early stages of the secondary education so they can make up their mind what they want to do and have some sort of motiviation for learning something. And I think that you need to stress that we do need to bring in other counselors who are more familiar with the different occupation.

MR. STUMP: Do you have some language that you might substitute?

MR. ACKERMAN: No, maybe Mr. Dahl could include that in there somewhere.

THE MODERATOR: Well, I suggest that we take a short brake, you re structure it, get your heads together and re structure there to your satisfaction and present it.

MS. BULLOCK: May I ask a question?

THE MODERATOR: You may, Mrs. Bullock.

MS. BULLOCK: In B what do you mean by "protection of the private higher education"?

MR. DAHL: Part of our discussion yesterday, Mrs. Bullock, was that to say the danger in saying the first two years of college education would be subsidized is to give that money to the University of Alaska, which would put the university in a -- an incredibly advantageous competitive position with Alaska Pacific University and Sheldon Jackson College. And it would cause either the -- just the total restructure of those schools as schools that provide education beyond the third year -- the third year and that beyond. And what we discussed -- or at least my recollection of what we discussed was that instead of -- because we have a constitutional provision that says the State can't give direct aid to private education we can give student loans why the student has its choice and that in doing that we are recognizing that private institutions in the State do make a significant contribution. And we aren't putting the State university in a superior competitive position.

MS. BULLOCK: I understand what you're saying now. I didn't understand what you meant here, and I'm wondering if there could be some misinterpretation by --

MR. DAHL: I'd be happy to change it in any way.

MS. BULLOCK: If could you change it so it would refer to the scholorship arrangement of some kind I would be happier.

MR. DAHL: All right.

MR. ACKERMAN: I'd like to speak a little bit to this recognition protection significant in sort of a contribution of higher education. Union apprenticeship programs are higher education and they are something that rally needs to than protected. Also when we get into -- usually if you go through union apprenticeship program you have a job when you're done. They have just built a new facility? We spent over a million dollars for welding school and we've gut one of the finest in the United States from what people in the Lower 48 have said about it. And it doesn't necessarily need state funding. All our members pay 45 cents an hour to fund it, you know, to develop the industry and make sure that we have qualified Alaskans that can go on work on these jobs. We can afford to do this, and we -- I think that we've fulfilled our obligations. I'd say that's a considerable at of money to pay out of your pay they can or every hour that you work for every

member. But we can't afford to get with anybody. Or with a lot of people. We're not asking for funding.

THE MODERATOR: Okay.

MR. ACKERMAN: At this time.

MR. FISHER: Do you want to insert that phrase?

MR. STUMP: Mr. Dahl, what was the purpose of limiting it to the first two years of post secondary education? Dahl all a lack of vision.

THE MODERATOR: what?

THE MODERATOR: Lack of what?

MR. BRADLEY: Vision.

THE MODERATOR: Then you're ah mean able to amendment to four years?

MR. DAHL: Shut lee. As I stated, Mr. Chore mun, this is simply a means to get the issue before the body. I have no pride of authorship in this the all. I have no axe to grind. I simply took my notes and smashed out a resolution. Cut it any way you want to and I'll fight you for it.

MS. BULLOCK: I think there might have been confusion in this two years doing away with the tuition for the first two years of post secondary education, which has been suggested. But the scholorship loan funds going for the four years at the present time.

MR. STUMP: And graduates.

MS. BULLOCK: And graduates.

MR. STUMP: If you were to strike the first two years of in your resolution then I would think that would be much, much better.

MR. DAHL: You're absolutely right, miss Bullock. That was a confusion, and I appreciate the clarification.

THE MODERATOR: Then it will read, then, therefore, as follows: "To any Alaskan student of post secondary education with special attention paid to, quote, colon. And delete for the first first two years." Delete that language.

MR. STUMP: Leave in the f-o-r, the four.

THE MODERATOR: What?

MR. STUMP: To any Alaskan student for any post-secondary education.

THE MODERATOR: Right. "For."

MR. BRADLEY: Mr. Chairman?

THE MODERATOR: Yes, Mr. Bradley.

MR. BRADLEY: I didn't mean to interrupt you. I wasn't here during most of this discussion, but just to the chair was there any discussion raised as to postgraduate or professional education?

THE MODERATOR: We did not address that, to my knowledge.

MR. BRADLEY: Well, I'm not a member but I'd throw out that, you know, we're scarce on doctors and scarce on

dentists, and should there be any emphasis put on the construction of those facilities while I know that they're expensive to construct and equip was that discussed or tuition postgraduate training for the professions? I guess the four that comes to mind are law and dentistry and medicine and accounting?

THE MODERATOR: As I recall, it was not addressed.

MR. BRADLEY: I'm tempted to at least mention -- are there any dentists or doctors here or CPA's? I know there are a couple of attorneys so maybe I shouldn't mention law school because --

MR. FISHER: You don't need a law school for lawyers. They'll come in like --

MR. BRADLEY: But Mr. Chairman what about all the hundreds of individuals in Alaska -- of course, not myself -- that might want to pursue that and not want to leave the --

MS. BULLOCK: Well, what about the WAMI program. W-A-M-I. That fulfills the needs for doctors.

THE MODERATOR: We need to be careful that we do not create a device here for people to become professional students.

MR. KOCSIS: Here here.

MS. BULLOCK: Right.

MR. FISHER: Let's just focus, if I may, on -- and its ice my understanding. Maybe it's just part of the

protective structure that medical schools or doctors put up. It's my understanding you have to have a community of a million in order to support a medical school. Now, I don't know whether that balances out, but I don't know where I -- if I recall it from '69 or -- and maybe it's out dated, but that's my understanding. You've got to be careful on some of those things that you don't -- you know, you know, over reach too far. You don't have to have a community law school.

THE MODERATOR: The way this reads is not eliminate student using the scholorship loan fund to pay tuition to a school outside.

MR. BRADLEY: That's right.

MR. KOCSIS: As a matter of fact, it implies that the freedom would be totally on the student's part to do that. I believe is one of the things. I think.

THE MODERATOR: In Senator he had Merdes' address in the opening day of our deliberations -- he was striving to encourage the development of a resolution that would aid and ah bet Alaskan students to go to college in Alaska.

MR. DAHL: That's right.

THE MODERATOR: Is that pretty much correct?

MS. BULLOCK: Right.

MR. DAHL: Mr. Chairman, may I speak to that?

THE MODERATOR: Yes, you may, Mr. Dahl.

MR. DAHL: That's exactly right, and I disagree with Senator Merdes for the reasons stated this this resolution. If you are going to aid Alaskan students to go to college in Alaska you must do two things: You must first of all establish -- you must make a choice. You have to stay we're going to aid the school, and then you say private education is not really important. That's all he was talking about was the first two years. Or you aid the student and then you give the student that chooses to go outside -- you put him at an unfair disadvantage, in my opinion, that he does not have the advantage of state assistance, support, help, for his education. My concern is not that the University of Alaska be supported any more than it is presently. The budget, as I mentioned in our discussion yesterday at the University of last is something like 105 million dollars. The point, it seems to me, is that when students leave this place they don't come back. And President Olds of Alaska Pacific has described that as a brain drain. I think that's an accurate description. This is a -- it's a serious problem, and we were discussing this yesterday after the education area was concluded, and one of the points was that Alaska itself is the -- is the appeal to draw a student back. And that certainly is a truth, but it's not the whole truth in that what happens is that Alaskan students who have had the benefit of years of

experience living in this culture and in this society leave and stay away. And students who have been born and raised in Iowa and Illinois and Indiana come to Alaska, go to school and stay. Or go to school Outside and then come to Alaska and work. We are losing the advantage that -- the contribution that students that have been born and ra[illegible] in this culture and in this society and in this Stat[illegible] make to this -- to Alaska, and I think we need to do something about it. And that's what I'm trying to speak to.

THE MODERATOR: Okay. I don't think they should be economically coerced into attending the University of Alaska. I any what the Senator Merdes has alluded to in that his two year factor was that his -- the experience that he had with his daughter attending for two years ask then she decided well, dad it's so great I want to spend all four years. On the other hand, if a student were locked into attending a university for two years then had the option to attend outside, then they're going to lose some credits this transferring. It happens every time. If any of you've transferred you know what I'm talking about. You lose some credit hours.

MS. BULLOCK: Mr. Chairman, we're not losing site of the fact, are we that those students who return to Alaska for work or for occupation in their careers are released from the obligation at the front.

THE MODERATOR: That's correct. We don't want to overlook that because that the way it is at the present time.

MS. BULLOCK: We wouldn't want to eliminate that.

MR. ACKERMAN: I'd say going to the school outside of the State would be a part of the learning process. My children have never been outside the State. My kids are rady to go to school now and for them -- well, they've never been outside. Never seen the city, big -- most of them haven't seen Anchorage.

THE MODERATOR: By going to school outside they don't become provincial in their thinking. They should be, that's part of the learning process and yet we keep that from them.

MR. KOCSIS: It just seems, Mr. Chairman, what we've got is are we're making a bottom decision. We keep talking about renewable resource? What the State -- or are we talking about the relationship with that university? I don't think you really need to look at that even. We're talking about students.

THE MODERATOR: That's right. There are two ways it's real obvious, I've got to be better. One way to control is you've got to take state contributions -- can be measured in dollars. We can have the legislature analyze how much money can we give to each student and that's how much he

gets. If it be 5,000 or if it be 20,000 during his career in Alaska that's how much is his for an education loan, if he chooses to use it. The other way I guess you could limit it is he could go to school for a period of time. He will support a dowry program. When he comes out with a dowry we will then pay him all the way as long as we get satisfactory progress reports and secondly you could just say if it takes four years we know in this date to get a degree that's how many years he can draw and he draws 5,000 a year. The commitment has to be the student. Anything else is just an artificial imitation and it real each doesn't have anything to to do so with the support of the university. I really believe that. If he wants to go overseas and he's willing to come back with a better perspective -- and if he doesn't come back what we're talking that is educated informed citizen, and that's our highest resource and our highest value.

MR. STUMP: I think that all of our concerns are quite well addressed in the resolution as it's been slightly changed. The loan Section D loan forgive those based on year of service in Alaska in the public or private sector provides that kind of incentive to bring -- to avoid the brain drain. It gives the students the freedom of choice inside the State, private or public or outside the State or outside the country, for that part. So I think it really

addresses it. I would like to add on or consider adding on the fact that there were there were quite a few students who are -- have already participated in the present loan program. And I think that -- I think that the Section D, loan forgiveness certainly has merit. I think it could actually be because of the unexpected revenue that we could increase the forgiveness rate for those people who already have the loans.

MS. BULLOCK: Don't they have that presently?

MR. STUMP: They do have an own forgiveness.

MR. FISHER: 40 percent in law now.

MR. KOCSIS: We could just say the State has this if you want. That's one extreme.

THE MODERATOR: After -- it could become a grant after -- in the loan forgiveness area based on years of service in Alaska this public or private sector. 100 percent grant.

MR. KOCSIS: You bet.

MR. ACKERMAN: Mr. Chairman, I think one thing we have to keep in mind about this resolution is that it's concept and that, you know, it is in legislation. It's a concept.

THE MODERATOR: It's a concept.

MR. ACKERMAN: I really like what I was talking earlier, that had to do with, you know, I guess secondary education. It didn't have to do with this here, and I think we ought to draft something on that. But I think

this for concept is what we're looking at, and I think when we get into legislation then we can get into some of the specifics that we're talking about.

THE MODERATOR: All right. Mr. Ackerman, other a concern about the structuring of Paragraph 2. Are you prepared to submit an amendment to us on a counselling basis?

MR. ACKERMAN: No, I think that's an important paragraph. The recognition and protection of the -- you know, other facilities. I think this covers --

MR. DAHL: Talking about Paragraph 2, not Paragraph D.

MS. BULLOCK: He's talking about the last one.

THE MODERATOR: Paragraph 2. That's the last one.

MR. ACKERMAN: Oh, I didn't mean that. No, I didn't have anything -- what was that

THE MODERATOR: You had alluded to language that would address counselling from the building construction trades.

MR. ACKERMAN: Well, not only building construction trades. Professions in the industry.

THE MODERATOR: Okay.

MR. ACKERMAN: I think we have to add more adequate counselling and I think it needs to be done by a teacher. I think we have to bring representatives in to do that. But I think possibly that the education is a large area and maybe two resolutions would be in order. And think think

that if we get into our second -- one on secondary education on higher education it would be appropriate and we'd have the thing that George Hohman has been talking about which we watched this morning. This is alternative methods.

THE MODERATOR: Then, therefore, it now appears that this education resolution is pretty much in order now for action and difficult posts you will, is that correct?

MR. DAHL: Mr. Chairman I have one suggestion of some alternative wording, given Mrs. Bullock's suggestions or problem with Subparagraph (b). I would add to my motion with the concent of my second that Paragraph B that it appears there be deleted and the following language be substituted: Recognition that private prior education makes a significant and important contribution to this state and that the Legislature not adopt policies that place private higher education at a competitive disadvantage."

MR. AKERMAN: Agree to the amendment.

MS. BULLOCK: Excellent.

MR. DAHL: Shall I read that again?

THE MODERATOR: I'm getting it down.

MR. DAHL: All right.

THE MODERATOR: Recognition that private higher --

MR. DAHL: That private higher education makes a

significant and important contribution to this state, comma, and that the Legislature not adopt policies that place private higher education at a competitive disadvantage.

THE MODERATOR: Do you so move?

MR. DAHL: Yes, I do.

THE MODERATOR: Second?

MR. ACKERMAN: Concur.

THE MODERATOR: Concur?

MR. DAHL: This is an amendment to my original motion and with the consent of my second it replaces the original motion.

THE MODERATOR: Right. Are you ready for the question?

MS. BULLOCK: Question.

THE MODERATOR: All those in favor of the adoption of this education resolution that we have before sing by saying aye.

Aye.

THE MODERATOR: Those opposed.

(No response.)

THE MODERATOR: The ayes have it. So ordered.

MR. FISHER: Mr. Moderator, there's another resolution that's on -- within whether it's been distributed or not. I think it's up there by you on transportation. It's on Sheraton stationary. There's a stack of them up there. Maybe you want to deal with that now.

(A short recess was taken.)

MR. DAHL: Mr. Chairman, the change that I would like to see made in the education resolution with the consent of the body we could simply include it in our approval is at the end of Paragraph 2 that we add the following language: "Soliciting counselling from industry," period. So it reads: "Provided the option of a technical trade appropriate for the 19 years comma soliciting counselling from industry, period."

MR. AKERMAN: I would hardly endorse that. I believe speaks to the problem we have on the counselling and --

THE MODERATOR: You second it?

MR. ACKERMAN: Second it.

THE MODERATOR: Is there any objection?

(No response.)

THE MODERATOR: It's been moved and second. There's no objection discussion?

MR. STOMP: Question.

THE MODERATOR: This is a question. Those in favor say aye.

Aye.

Those opposed?

(No response.)

THE MODERATOR: The adoption is carried. So ordered.

MR. FISHER: Let me do a little bit of dreaming here.

I agree with what Edith Bullock says because she's probably the most experienced in Marines transportation --

MR. DAHL: Mr. Chairman, number of the discussion that we had about transportation is on the record.

MS. BULLOCK: For the record, I would like to say that I take exception to the transportation resolution on number one.

THE MODERATOR: On paragraph one.

MR. DAHL: Mr. Chairman, may I suggest that for the sake of the record Mr. Fisher read the resolution into the record, and then it would be before us and we can discuss it.

THE MODERATOR: Thank you. Mr. Fisher, please read the resolution for the record.

MR. FISHER: All right. The resolution is as follows: Alpha group transportation. Alpha group resolves that the Legislature consider these recommendations for transportation needs: One, xpand the Marine Highway system to the entire state including but not necessarily limited to the Alaska Peninsula Erosion communities. Western Alaska, Yukon, Kuskokwim and tributary system and other areas as later selected.

Pargraph 2: Preparation and implementatin of a statewide plan for air and service transportation.

Paragraph 3:

Construction of a complete system of rural air transportation navigation aids and facilities relatively equivalent to present regional airport saw Valdez.

Four, develop a complete inventory of the entire state's transportation facilitates. Five avoid imposeing transportation intrusions on communities or regions whose residents do not wish to have them, i.e. unwanted highways.

Now, maybe Edith Bullock ought to -- Dahl second for discussion and move to amend.

MR. FISHER: All right. I'll move its adoption.

THE MODERATOR: It's been moved for adoption. It's been second and a move to am.

MR. DAHL: My amendment is in paragraph one we delete the words Western Alaska, Yukon, Kuskokwim and tributary system.

THE MODERATOR: I would object.

MR. STUMP: Is this open for discussion?

THE MODERATOR: It's open for discussion.

MR. STUMP: I think we ran into a similar kind of a problem earlier when we were dealing with getting too involved in specifics and instead dealing with more general directional policies and recommendations. I think that wraps we could solve our problem on this and also one that I have not voted yet, but would if it were not changed to this wording -- to change it to, number one to read: To

improve and expand the Marine Highway system throughout the entire state -- or throughout the State with recognition that such a system provides highways for communities that cannot develop highways to provide the traditional access. Now, perhaps that's a little bit wordy at the end there, but I think that that would -- than would give the direction to the State, to the Legislature that we want to to use some of these unexpected funds for improving transportation, water-borne transportation to facilitate the transportation needs of our communities that do not have access to roads do not have the economic situation, economic and geographical situation situation to have a road system. And then when it gets down to what specific rivers or what specific areas that that is a decision that has to go through the political process and be made at that point rather than here this this short time period that we have.

THE MODERATOR: I believe that we should put some emphasis on -- very real emphasis on a road link between the Yukon and the Kuskokwim.

MR. DAHL: Mr. Chairman, for the sake of --

MR. FISHER: Speed.

MR. DAHL: Speed, I think. Thank you, Jim. This was Miss Bullock's concern, that the Marines -- that this group not go on record as supporting the extention of the you are

Marine Highway system in Western Alaska recognizing Mr. Fisher's realization and information given to the body that it would be a very simple matter to extend the present system out to the Alusion. I think that my amendment, if I may speak to it, deleteing the language covering Western Alaska Yukon Kuskokwim and tributary system speaks to that. The language would be expand the marine highway system to the entire state including but not necessarily to the Alaska Peninsula, the Alusion communities and other areas later selected, which would give the Legislature sufficient latitude to expand it, if they saw fit.

THE MODERATOR: We neglect to give any specific direction and regard to the Kuskokwim problem.

MR. DAHL: I would suggest that that would be -- that that is another number, that number one speaks to the highway system and not to roads into that area. I would certainly agree with you, Mr. Blodgett that that needs to be addressed. That was a very good idea. It was inadvertently neglected, I'm sure.

MS. BULLOCK: Are you moving to adopt the motion?

MR. DAHL: Yes, I move to amend the resolution to delete that language.

MR. ACKERMAN: I second the amendment.

THE MODERATOR: I'd object for the purpose of discussion. I'd like to hear from Mr. Alexie.

MR. ALEXIE: Well, of course I've been wanting to say, you know, on this Marine Highway, Bethel is the center where everything comes -- what comes from Seattle and further out landed at Bethel, and there's several boats come in. And couple times my grocery stuff not come because the barges were already loaded, and I'm taught the only person who survived in winter without any groceries for my children. So I read agree with this that I would like to have something better on Marine Highway system to serve me and the other people and even the Yukon. Because sometime winter comes fast, and last month I've seen two barges stuck on the ice. And a good thing we had the range to pool them on the shore. And the fuel shortage or the education materials can be delivered to the villages on time.

MR. ACKERMAN: Mr. Chairman.

THE MODERATOR: Mr. Ackerman.

MR. ACKERMAN: I'd like to stand on this. The only thing Mr. Alexie did leave out is he paid for the groceries before they were shipped in. He paid for those groceries and he's stuck with having to go buy new groceries, go through an insurance claim process then fly them in. While I was on the Boundary Commission on this area -- you know, this was something that was bought up time and time again. I don't think there was one village on the river that this

problem wasn't expounded upon. The groceries sit on the dock, you've paid for them, then you gather to go out and purchase new. Besides that the air transportation then. Either that or you just do without. So it's really an area every concern.

THE MODERATOR: I've lived it, Mrs. Bullock has lived it with being our tug and barge and elsewhere. Weather catches you and early freeze up -- it's part of the -- it's the greatest mixture company in the world.

MR. AKERMAN: What Mr. Alexie is saying is there's not the capability of getting it up there.

THE MODERATOR: Right.

MR. ACKERMAN: Like I say you are you purchase it and you're flying it this and you can't afford to buy the in the first place let alone the difference in the air freight and river freight. And besides that there's the time involved, and you've got to go through insurance, you sit out and freeze so you've got to go through an insurance settlement -- the insurance companies just don't like to pay. So there you are you've spent your money and you just don't have your resources to do it so that they do have to do something in this area.

MR. ALEXIE: Again, this one lady -- she was not depending on Welfare, she depended on her arts and craft. The both got in and then it freeze and they had a problem

on transportation. I think the both had to go up to Nome first and then back to Bethel. It freeze had, and that lady she chartered a plain to haul them to the smaller village. Again, she couldn't charter a plain to bring her groceries at once because of the landing strip. And the charter on that year was $80 for this -- for that one plain plane to haul her three loads.

THE MODERATOR: $80 a trip.

MR. ALEXIE: $80 a trip.

THE MODERATOR: What kind of language would you like to see in this, Mr. Alexie?

MR. ALEXIE: Well, I'm very poor in language making. I have hard English education. So if somebody put it up correctly in order to satisfy me and the other people, I'll be satisfied.

THE MODERATOR: Mr. Borodkin?

MR. BORODKIN: Yeah, I'm just wondering. I've looked on the map there with Bethel is, and I'm not sure whether an ocean going vessel would negotiate the river up to --

MR. DAHL: It will make it.

MS. BULLOCK: Betheling the transfer point. It's a transfer point.

MR. BORODKIN: Oh, okay.

MR. ACKERMAN: It's on transfer, but we don't have the boat to get from Bethel up the river. That's what we want.

MR. BORODKIN: I didn't know.

MR ALEXIE: That's why I fully support to expend the Bethel docks, because they waste their time while they're waiting to -- the other barges to be unloaded.

MS. BULLOCK: Right. And you get cost with the ice and --

MR. ALEXIE: Yes.

THE MODERATOR: Could perhaps -- Jamie, could you live with amending Western, leaving out-- and leaving Yukon, Kuskokwim tributary and other areas as later selected?

MR. FISHER: Sure.

THE MODERATOR: How would that fit Mr. Alexie?

MR. ALEXIE: Repeat it again.

THE MODERATOR: We delete after communities, comma, delete Western Alaska, comma and leave Yukon, Kuskokwim and tributary systems in. How would that fit?

MR. ALEXIE: Well, I think that --

MR. DAHL: I'll accept that as an amendment to the amendment.

MR. ALEXIE: It sounds good to me.

MS. BULLOCK: Mr. Chairman I'll have to go on record as being opposed but I'll probably be the only one, so....

MR. FISHER: I think we ought to pass the resolution we ought to institute the program and if she takes it, we ought to hire her to run the system.

THE MODERATOR: Thanks a lot, huh?

THE MODERATOR: Yes, Mr. Stump.

MR. STUMP: Mr. Chairman, I'm going to have to -- and I don't want to belabor this point, but I'm not going to be able to support that section unless there is wording recognizing the Marine Highway system that does exist in Southeast Alaska. A need for improvement and expansion in Southeast Alaska as well. There are an other lot of communities in Southeast Alaska of ferry significant size and certainly size to benefit substantially from expanding the system in Southeast Alaska. And I don't think that it would really be very hard to change this resolution -- this section of the resolution to recognize these needs in Southeast Alaska. Perhaps, if I could give just a little bit of a situational report of the Marine Highway system in Southeast Alaska, we do have for the most part boats -- vessels that -- were built in the mid '60s or early '60s, so they are getting quite on in years, and there are substantial amount of problems, mechanical problems with these vessels.

Sighting just, for example, last week with one ferry in the -- already in Seattle for winter maintenance and out of service is on schedule. First of all, one ferry -- one of the remaining ferries and then later on in that week a second of the ferries was -- had mechanical problems that

delayed or stopped their activities in Southeast Alaska. So this again is our only non air link between communities and to the south freight or to the rest of the Alaska through Haines or Skagway. And we have some real needs to improve that part of the Marine Highway system. And I in all conscience I couldn't go along with the resolut on unless there was a recognition of that need in Southeast Alaska.

THE MODERATOR: Thank you Mr. Stump.

Will Ackerman.

MR. ACKERMAN: I think if we just -- and expand that would speak to oust the problem because it is the only marine highway system we have at this time. This resolution supports the entire state, which would be added communities in southeast. But if we just said upgrade and expand Marine Highway system that would speak to the problem with your equipment in southeast because that's all we have.

MR. FISHER: I would accept that. I think that's fine.

MR. STUMP: Perhaps, then, I could move it be worded to either improve or upgrade and expand the Marine Highway system throughout the State, et cetera, as is.

MR. FISHER: I don't see any objection on that either.

THE MODERATOR: All right. Please state it again, read it.

MR. FISHER: I'll let the amenders --

MR. ACKERMAN: Just up great everybody.

MR. FISHER: Upgrade and in front of the sentence in lieu of two after the language highway system throughout the entire state.

MR. ACKERMAN: Be we had that?

MR. FISHER: We do this.

MR. AKERMAN: What we have now is upgrade and ex panel nt Marine Highway system in the entire state included but not necessarily him Ted to the Alaska Peninsula Alusions Chain, Yukon, Kuskokwim and tributaries in other areas as later selected.

MR. FISHER: Yeah, I think you're right.

THE MODERATOR: With Western Alaska deleted?

MR. ACKERMAN: It was deleted as being something we wanted to point to. It doesn't preclude us from expanding service to area. We can do it with the entire state as needed.

THE MODERATOR: Right. Do you so move?

MR. ACKERMAN: So move.

MR. FISHER: I'll second it.

THE MODERATOR: It's seconded.

Mr. Borodkin.

MR. BORODKIN: Yes, yesterday I was concerned with the proposal because I recognize a gap in the Marine Highway

system from Southeastern Alaska into Cordova-Valdez area, Seward.

THE MODERATOR: Right.

MR. BORODKIN: But the remark she made I they we all realize that the cost we're looking at, especially on ocean going vessel. But I still would like to see that made a part of the record. My concerns.

THE MODERATOR: On ocean going --

MR. BORODKIN: No, the gap --

THE MODERATOR: Into Cordova?

MR. BORODKIN: Yes.

THE MODERATOR: Upgrade and expanded the Marine Highway system throughout the entire state including but not necessarily limited to Cordova, the Alaska peninsula? How would that fit?

MR. STUMP: South central? Perhaps Cordova?

MR. BORODKIN: Between Southeastern Alaska through south central, I guess.

THE MODERATOR: Including but not necessarily limited to South Central Alaska, the Alusion -- the Alaskan peninsula, right? How is that?

MR. ACKERMAN: Mr. Chairman, I think an important thing that we have to keep in mind -- that this is a concept. It's an idea that we'd like to put for the. It is thought legislation when we get into legislation they'll

have to to consider and have a debate on it. And I think we have a good record on it and I think it's a good concept. I think we need to put it for the, you know, in that light. We're not, you know, getting into specific as to what we're going to do, but it is a concept that we would like to put for the.

THE MODERATOR: Upgrade and expand Marine Highway system throughout the entire state including but not necessarily limited to South Central, the Alaska Peninsula Alusions Chain Alusion Kuskokwim and tributaries and other areas as later selected. How is that?

MR. ACKERMAN: I so move.

THE MODERATOR: Second?

MR. DAHL: Second.

THE MODERATOR: Second, second. Discussion?

MR. AKERMAN: Question.

MR. FISHER: Let's go.

THE MODERATOR: Those in favor indicate by saying aye.

Aye.

THE MODERATOR: And those oppose indicate by saying nay.

MS. BULLOCK: Nay.

THE MODERATOR: The ayes have it. There's one nay vote. Let the record refect. And the resolution is now before us.

MR. DAHL: Mr. Chairman, I have an additional amendment. No. 6: Upgrade and expand inter-village road systems including but not limited to the extension of the road to Tanana, and the connection link between the Yukon and the Kuskokwim River.

THE MODERATOR: Do you so move?

MR. DAHL: I do.

MR. ACKERMAN: Second.

THE MODERATOR: Discussion?

MS. BENNETT: That was enter not intra? Enter, between?

MR. DAHL: Yes.

THE MODERATOR: Intra.

MS. BENNETT: No, he just said enter.

MR. DAHL: It means roads reasons roads between village.

THE MODERATOR: Within the village.

MS. BENNETT: No, between the villages.

MS. BULLOCK: That's extra.

THE MODERATOR: What? That would be like a road between -- Dahl.

MR. STUMP: Could you change that to villages to communities?

MR. DAHL: Sure. I'm easy. Enter community road system.

MR. STUMP: There are options for logging camp communities and whatnot --

MR. DAHL: I understand.

MR. STUMP: -- fish, communities.

MR. DAHL: no problem.

MR. STUMP: It's a matter of semantics but I think using the broader to be word --

MS. BENNETT: Would you say it again, please?

MR. DAHL: Upgrade and expand the enter community road system including but not limited to an extension of the road to Tanana and a connecting link between the Yukon and Kuskokwim Rivers.

THE MODERATOR: It's been moved and seconded.

MR. ACKERMAN: Yes.

THE MODERATOR: Discussion?

MS. BENNETT: I'd like to discuss that. Why agree with that. I thought we had talked yesterday about the fact that we did not want roads correcting many villages.

MR. DAHL: All right. Let me show you what we're specifically talking about.

THE MODERATOR: Paragraph 5 takes care of.

MS. BENNETT: Now we're saying to May in this resolution we're saying the opposite. That all dull protected by No. 5, though.

MS. BENNETT: Okay. I can see that, right. I --

MR. DAHL: Just for the sake of clarity, the road ends here at Tavey, at least according to this map. (Indicating.)

MR. ACKERMAN: That's not correct.

MR. DAHL: With a slight extension it could go to Tanana, and with a connection between the Yukon and the Kuskokwim at -- where is it?

MR. DAHL: Right here. Between Piamute and Calsak it's about 30 miles. You're talking about a road that will carry freight to Tanana freighting freight by barge down river to this road crossing here and moving it down to Bethel. (Indicating.) With that extension you've got Bethel connected to Fairbanks and that's something you've never had before, and it's critical to the area.

MS. BENNETT: But I think the resolution could spcifically address that particular thing, without saying we want to upgrade the enter community --

MR. ACKERMAN: How about a bridge across the river?

MR. FISHER: Well, that's the use of the community road. The big option is Fairbanks to Nome. That's the option.

THE MODERATOR: Or Anchorage to Nome.

MS. BENNETT: Well -- there are a lot of options. It sounds really general to me.

MR. DAHL: Right. And I meant it to be.

MS. BENNETT: And I do understand what we're saying, I'm just saying the wording sounds really general.

MR. DAHL: I meant it to be as a policy statement that's limited by No. 5. Where roads are not imposed on a community.

MR. ACKERMAN: Why don't we replace -- make No. 5, and that No. 5 -- and that will sort of --

THE MODERATOR: Do you so move?

MR. ACKERMAN: Yes.

THE MODERATOR: Hearing no objection, it's so ordered. Let us --

MR. ACKERMAN: Removed the road. We are telling them we want these roads and then we're saying we want to be able to have a veto power over them.

THE MODERATOR: Let us move on now. It's six o'clock.

MR. ACKERMAN: Mr. Chairman, we have one more item here, and it was facilities on the rivers. I mean whether we expand the highway or not. The people that are using them don't have them in Bethel now. We have -- that's a similar problem all up and down the river, is docking facilities. Maybe we ought to include docking facilities on the river here someplace.

MS. BULLOCK: Mr. Chairman, I again have to make my objection to this sort of thing because it's a cost benefit ratio involved here that I do not think is justified.

It's a tough situation on this transportation problem, as I very well know, but it's a matter of tonnage. Have you no passengers. And when you get into docking facilities, when you build a wharf or you build a dock, you get into a pretty expensive operation.

MR. ACKERMAN: In the normal sense you are or talking about a dock at Anchorage or Valdez? Something like that? A public docking facility --

MR. DAHL: That's fine.

MR. ACKERMAN: -- on the river. Isn't that much of -- I waddled up in the muck. I mean these people around the airplane off. There was nothing on it, and it was coming right off. We landed on the river. We couldn't even get off the docking.

MS. BULLOCK: But by the time you take your equipment in there and you do your construction and you take your equipment become out you can't do that with just a shuffle.

MR. ACKERMAN: If we were going to constantly spending all our money in Anchorage. I don't think that's something we can do. I think we have to have a facility. What good does it do have to the transportation if you can't get off it.

THE MODERATOR: There's a tremendous population that services that watershed through Bethel. And with the road link between the Yukon and the Kuskokwim, I envision that

rail freight coming up the rail and getting on tug barges and going down the coast and being transhipped across into Bethel is going to have to be handled -- I look for a substantial increase in freight. I don't think there's any way that freighting activities are going to go in Alaska here on in by that. And I -- I'm compelled to support the concept the dock facility at Bethel, Edith.

MS. BULLOCK: Bethel. That's fine. I thought you said up and down the river.

MR. BORODKIN: Mr. Chairman, I would like to know a little more about docking facilities. I don't know -- I don't know how those are done up there. But in a river, you know, when ice starts flowing, how does it affect the -- is it built in such a fashion where -- is the ice that's flowing will not wipe it out?

MR. ACKERMAN: Mr. Alexie can see to that. He's lived there. I think you just pull them back.

MR. ALEXIE: Now, we have a dock, and the ice can bump and go over it and it won't disturb the dock. If it's built correctly, the way --

MS. BULLOCK: If you build correct.

MR. ALEXIE: The way ours is built. And up at cattle stack we don't need a big one, just to lift up the barge and unload it. And I don't think that will be too expensive. But I think the price will be covered enough.

MR. BORODKIN: I think I know what you mean. You mean just a ramp instead of a dock.

MR. ACKERMAN: Right. That's right.

MR. BORODKIN: Just an unloading ramp.

MR. DAHL: Not a pier?

THE MODERATOR: Not a pier.

MS. BULLOCK: That's a little different, yes. I'm thinking of -- that's different.

MR. DAHL: Mr. Chairman, it's 6:05. Can we continue this? Are we ready to vote on this or --

THE MODERATOR: I believe we're ready to vote on it. As we can finish this one if we address this here with dispatch.

MR. ACKERMAN: I was asking Mr. Dahl what the proper wording was that we were looking for for a docking facilities.

MR. BORODKIN: Then it would be --

THE MODERATOR: Landing.

MR. ACKERMAN: Landing facilities.

MS. BULLOCK: Landing.

MS. BENNETT: Or loading.

MR. ACKERMAN: This is a concept. It's something we don't have is what should leave our options open to, the specific legislation.

MR. BORODKIN: I think there's a distinction between a

dock and a ramp, though.

THE MODERATOR: River, oh both landing.

MR. ACKERMAN: Off loading facilities?

MS. BENNETT: Uh-huh, uh-huh.

MR. ACKERMAN: And on.

THE MODERATOR: We're ready for -- are we ready for the question?

MR. STUMP: Question.

THE MODERATOR: Is there a motion to adopt the resolution?

MR. DAHL: Mr. Chairman, do we have the language for that No. 7? Again, you know, it will chew it up here we're going improve and expand river loading facilities.

THE MODERATOR: So move?

MR. ACKERMAN: Second.

MS. BULLOCK: Uh-huh

THE MODERATOR: The objection seconded.

MR. BORODKIN: Question.

THE MODERATOR: Those in favor indicate by saying aye.

aye.

THE MODERATOR: Opposed.

THE MODERATOR: Let the record show there was one descending vote.

THE MODERATOR: I entertain a motion for adoption of resolution.

MR. DAHL: So moved.

MR. ACKERMAN: Second.

THE MODERATOR: Second. Objection?

MS. BULLOCK: No, I'm sorry. I didn't mean to object to your amendment. I wasn't paying close attention. What I meant to do was to vote against the total resolution.

THE MODERATOR: The resolution.

THE MODERATOR: Question?

MR. DAHL: Question.

THE MODERATOR: Those in favor of adoption of resolution transportation indicate by saying aye.

Aye.

THE MODERATOR: Opposed?

No.

THE MODERATOR: Let the record reflect there's one nay vote. The resolution is passed.

(A recess was taken.)

THE MODERATOR: We've covered an awful lot of material in a very short period of time. Things are moving very rapidly in the State. The revenue picture is changing very rapidly in the State, and I'd like to suggest to the body that we discuss the presentation of a resolution in the Alpha Group to the conference, that in lieu of waiting another 10 years before another conference of this nature be held again, that we set it up, do it again -- Alaskans

do it whether we're still kicking it around or not or whether we're delegates. But five years down the road a new frontiers -- Future Frontiers Conference be conducted to see where we were, where we're headed and where we want to go. And provide for more time in order for us to be more deliberate.

I feel that in some respects we're almost guilty of shooting from the hip, and I don't like to shoot from the hip. I like to get my sights lined up and then shoot.

MR. ACKERMAN: Mr. Chairman, I think that's an excellent idea we have another one in five years, but I think it would help we have regional conferences, you know, as preliminary and regional conferences, select your delegate to the state conference. That way we'll get a lot better participation buy the regions and we'll be more familiar with the issues we want to discuss at the State conference.

THE MODERATOR: Broader anticipation.

MR. ACKERMAN: Broader.

THE MODERATOR: Anybody care to make a motion to this effect? The chair would entertain a motion.

MR. ACKERMAN: I would recommend we have another conference in five years and it be preceded by regional conferences that would select the delegates for the State conference.

THE MODERATOR: Is there a second?

MR. FISHER: I'll second it.

MR. BORODKIN: He'll second it.

THE MODERATOR: Discussion?

MR. DAHL: Question.

THE MODERATOR: All those in favor indicate by saying aye.

Aye.

THE MODERATOR: All those opposed it by saying nay.

(No response.)

THE MODERATOR: The motion is secured. We'll have to get it drafted in final form for delivery.

We're down to the topic resource of section four. Oil and gas tally.

MR. DAHL: Mr. Chairman.

THE MODERATOR: Mr. Dahl.

MR. DAHL: As I look over these papers I -- I'm concerned that little has been said, if anything, about the most important resource that Alaska has, and that is its people.

The -- I'm particularly concerned about children, about the care of children in this State. Not very many months ago I was elected President of the Board of Directors of Alaska Children's Services, which is the largest private child caring institution in the State. And

participating in the deliberations of that board have been -- have learned that the State, although it has responsibility for children in its care for various reasons, reasons of parental neglect and others, the State by any stretch of the definition could not be considered a good parent. The State has not provided adequate care for its children. It has not provided the kind of support for its children that a good parent would provide. Case in point: The Department of Corrections has numerous children placed under its care by the justice system. Some of these children are placed in institutions throughout the State, in homes, in foster homes. Some of them under the auspices of Alaska Childrens Services.

As of July, the budget had some problem, and the State of Alaska, with its astounding wealth is in debt to private agencies to the tune of some $36,000, and it's -- when asked for that money, this is for the care of children where I, as a parent take that -- take my child and say, "Will you take care of my child for a period of time?" And that person says, "Yes, I will." Provides the care, shelter, food, clothing and nurture, and then I, as a parent, say I'm sorry, I cannot pay you until my ship comes in, or sometime down the road.

That's unconscionable in a state as wealthy as this. I've prepared a resolution that I would like to have

this body consider. I'd ask you to pass it around. While it's being passed around I'd like to read it for the record.

Alpha Group resolves that the Legislature consider the following recommendations in the area of child care: One, that the State continue to use the resources of private child caring institutions to deliver services to children entrusted to the State's care and, two, that child caring institutions be reimbursed promptly and fully for services rendered to those children. The policy of the State should be -- and there's an error in here. The policy -- I see. No, wait.

THE MODERATOR: The State policy should be that of a good parent.

MR. DAHL: That's right. That's right. The policy of the State should be that of a good parent that cares well for children for whom it is responsible and pays its bills quickly.

Mr. Chairman, I move for its adoption.

MR. ACKERMAN: Second.

THE MODERATOR: Discussion?

MR. FISHER: Yeah, I'd like to ask. This is an excellent form. It's a very serious problem, but it seems like it's too narrow.

MR. DAHL: Well, I used the corrections example only as an example the fact is that the State does not provide

full cost I care for its children. Not only does it not pays its bills on time, and causes serious cash flow crunch in all institutions in the State, but it simply is not willing to pay the costs that it takes to take care of kids.

MR. FISHER: It doesn't pay any of the capital cost.

THE MODERATOR: Don't feel like the Lone Ranger. It doesn't just child care.

MR. DAHL: I understand that.

THE MODERATOR: We -- my companies do not seek or desire to contract with the State for any supplies or services of any kind whatsoever because it's so dilitary.

We get invitations to bid, we don't respond.

MR. FISHER: But isn't your situation where it's more voluntary than the children?

THE MODERATOR: Yeah, you know, I mean it gets into the Department of Administration.

MR. DAHL: Our agency is running what we call emergency shelters, receiving homes. I think we have -- we had two, I think we now have three. The -- those receiving homes are emergency shelters are known about by the police, they're known about by the Department of Corrections and other agencies where kids that -- that need immediate care can be brought to these shelters and say for a limited time, not for many days but for a few days. They're well cared for, not just warehoused but cared about by loving people.

And this is something that -- this is a service that this state does not provide. The State simply -- they ought not to. They not to to get involved in this thing becaue private enterprise can do it better. They proved they can do it better. But when these kids are brought there by the State, the State ought to pay the bills. And the State has simply relied on the goodwill and charity of churches and social -- socially mind had people for years. I think it's time to stop.

MR. FISHER: That's why I asked. Isn't it too narrow? I realize the money can -- an extreme crunch somehow or other, just the money seems a little -- something's wrong.

MR. DAHL: How do you want to change it?

MR. BORODKIN: Mr. Chairman?

THE MODERATOR: Mr. Borodkin?

MR. BORODKIN: Would this be something like foster parent time thing?

MR. DAHL: It's similar, but it's not the same. Now, this is -- foster parents are one form of child care. Most of the kids that are in the care of Alaska children services --

MR. BORODKIN: This be would be in a larger way.

MR. DAHL: Right. Jessie Lee Homes, one of the services that we operate, which used to be Unalaska, and then its Seward and after the earthquake moved to Anchorage.

The receiving homes are here. All the services are here. This is not a limited resolution. It deals with the statewide problem.

MR. ACKERMAN: Mr. Chairman, I think this speaks that we have the responsibility for the care of our children and it ought to be something that's foremost in our minds, and since we're depending on, we should, you know, the private sector to provide these services, you know, that we're using we should pay for them.

I think it's a good resolution and I think it speaks to the major problem we have at this time. And I think it's appropriate. I think that we could -- we can get into a lot of specifics and would lose a lot of the meaning of the resolution.

THE MODERATOR: Thank you. Anybody else?

MR. BORODKIN: I have another question. This institution or institutions -- any child is, you know, accepted in these institutions.

MR. DAHL: Absolutely.

THE MODERATOR: Miss Bennett?

MS. BENNETT: Mr. Chairman, in some ways, Gary, I think that it needs to be, if we're going to address child care that there are some other general concerns that haven't been discussed.

For instance, I have a -- I serve on the board of

the day care center? Fairbanks. I have an interest in the day care assistance program, which I don't feel is funded as fully as it should be. This is a program where the State provides assistance for day care so that we can employ parents who would otherwise not be able to work and be on the Welfare roles, et cetera, that that is also a very valid child care concern. Child care is something we haven't really discussed. I'm sure that there are others that are equally importance as this. I to feel that it's a little bit specific, which is not to debate the importance of this particular concern.

MR. DAHL: I meant it to be quite specific, because I'm concerned about the cost of care.

THE MODERATOR: Any further discussion?

MR. ACKERMAN: This doesn't preclude, you know, you from putting people -- children in a day care center and paying the cost of it promptly, in a private day care center, and this is something we're developing in Fairbanks. We have special use permits for day care centers once a month on the planers only. And this doesn't preclude it. It incourages that do these things, and it's a tool that you can use, you know, to pursue that.

MS. BENNETT: Right. I think -- did you understand me to mean assistance to the day care centers? Because what I meant was assistance in State assistance to paying the

bills for the child to go to the day care center. Is that what you mean?

MR. ACKERMAN: This provides this.

MS. BENNETT: No, this -- this is children that are in state -- actual State care. I'm talking about children that are still in the homes of parents that need to be employed. It is actually a different program but a similar problem is what I was saying, it hadn't been discussed. In other words, this doesn't cover it, but I'm not necessarily sure that it should. I just feel like we didn't really discuss this when we were talking about finances, and maybe we should have.

MR. FISHER: Let me ask one -- I still think it's too narrow because I know a little about bit about some of the problems of the cost of care.

THE MODERATOR: Please speak up.

MR. FISHER: The State always leans on the cost, and the cost of care centers are usually half to three-quarters of what the State would have to pay in State run institutions. But the State is always limiting, and they won't let you -- they won't let you -- in some instances they won't provide -- they only pay on the amount of kids that are actually in the facility. And they don't -- so sometimes some of the institutions don't -- aren't even able to maintain staff waiting for the crisis that occurs

with kids. And I've seen a very good one almost go under just because of that situation. Fortunately they had an excellent management and kind of got through. I still think it's too....

MR. ACKERMAN: I was looking at this. I've always been told that children are a ward of the State, you know, and unless the parent had custody of your children this they were adjudicated all children of the State were wards of the State. So, possibly this is speaking more to adjudicated children that are in actual custody of the State and removed from their parents custody?

MR. DAHL: Yes.

MR. ACKERMAN: We still have the problem of those that are adjudicated and still under custody.

MR. FISHER: Let me talk some more. I'm sorry to take up so much time on this. But I've actually been in contact with a group of these people when they made a trip down to Juneau. I think it was last year. And they go down there and they have to justify their costs and they have to justify everything that they do. So they're very closely regulated. But they are leaned on so that they don't -- you know, they aren't paid quite fully, they weren't paid -- somehow or another they get -- there's always that element of contribution that has to be made up somewhere. Now maybe it should be made up somewhere, but in some cases it

puts tremendous pressure on the organizations and devotes energies that ought to be devoted to the children to finance this. And the thing that I keep thinking is it's just too narrow just on the time of paying the bill rather than pay the quantity.

I would hope that the resolution could be broad enough that you could -- you could use it as justification for the annual meetings when you meet with the -- meet with the Department of Health and Welfare and for funding with the Legislature. You know, get it altogether so we can point back and say well, the Future Conference, assuming it did that, said that, one, the State doesn't pay on time and, two, it doesn't pay enough. Now, that's very general. And that's what I think you ought to try to do if you could tell us how to do it.

MR. DAHL: You don't think I've said that?

MR. FISHER: No, I don't think so. All you say is it doesn't pay the State. You ought to say something like the State policy should not that a good parent pays -- that cares well for children for whom its responsible, pays it bills quickly and fully, something like that. I'm not very happy with that word. I think if you're giving a general statement like that, I think you could then argue and say, well, you know, because they always knock you down on some of the things, and they say there's some law. But then

change the law.

MR. DAHL: Would it be helpful to change the -- in section 2, to change "reimburse" to "paid"? Is that what you want?

MR. FISHER: Reimbursed promptly -- I don't know. Maybe I don't know what I'm talking about.

MR. ACKERMAN: Why don't you say all services provided for the wellbeing of the children.

THE MODERATOR: Promptly?

MR. FISHER: Well, he said promptly. Maybe the thing that I'm confused about is the fact that the final paragraph is a reiteration. Maybe you ought to strike the final paragraph.

THE MODERATOR: Please identify yourself for the record. You have the floor.

MR. DAVIC: It would be sufficient to call me Aaron, and I have to admit my ignorance the gentleman across from me, I don't know your name, sir. You raised a point I would like to see not go unobserved, and that is that the institutions like the receiving homes -- their budgets are often based upon the head count, and they don't necessarily always have the funds to deal with the crises that arise.

From my own experience I've seen receiving homes in the State purposely keep warehoused, as it were, as Mr. Dahl said, in order to insure their continued budget. That

means they could have let children go back to situations that may or may not have been the place to back to. However to keep their budget and their position alive they've had to pretty much hang onto some children in some cases, and that -- whether of not that's positive or negative is besides the point. It's valid and vitally necessary to how the facility is available when they were needed. -- what that percentage should be, but it should be a specific amount and significant amount of capital to allow for the provision of those services.

THE MODERATOR: Anybody else?

MR. FISHER: It's inherent.

MR. ACKERMAN: You've got a problem when you get into the percentages and reallocations of State funds and revenues. But, you know, you could have, you know, a base formula, you know, and operate an overhead expense that you provided to the facility and head expense afterwards and operating offerage and when you have somebody in the system then, or head count would take care of the additional expense. But, in the meantime, you have funds and figure out an overhead expense. And that's what you're talking about. We've got an operating, overhead and expenses lumped into one and have you to represent you do have an operating overhead expense. Every institution has one, whether you open the doors or not.

THE MODERATOR: We're going to have to move along and dispose of this. We get on to the rest of it. This is our last work session.

MR. DAHL: Mr. Chairman, let me suggest it be laid on the table for a few minutes and let me massage the language and come back to it. Would you do that?

THE MODERATOR: Do you so move?

MR. DAHL: Yes.

THE MODERATOR: Second?

MR. FISHER: Second.

THE MODERATOR: Question. Please indicate the voice vote. The ayes?

Aye.

THE MODERATOR: The nays.

(No response.)

THE MODERATOR: The ayes have it. It's on the table.

We're in the area of resources, oil and gas policy. It's Mr. Kroft's paper, oil and gas policy and Connie Barlow paper in State Use of Petroleum Resources,R-6.

Miss Anasogak, do you have any input in this area?

MS. ANASOGAK: I haven't had too much time to go over the material, and I'm not very familiar with it, so I --

THE MODERATOR: All right, thank you.

THE MODERATOR: Mr. Alexie?

MR. ALEXIE: I'm in the same boat. I don't know what

say about oil and gas policy.

THE MODERATOR: Very well. Thank you very much, Mr. Alexie.

Mr. Borodkin?

MR. BORODKIN: No comments here either.

THE MODERATOR: Miss Bennett.

MS. BENNETT: My personal feeling is that I would rather see the State get into more of our renewable resources. We are obviously greatly involved in oil and gas resources, but I have doubts about the quantity of subsidization that people talk about in the petro chemical development. I really have serious doubts about.

THE MODERATOR: Thank you. Mr. Ackerman.

MR. ACKERMAN: Yeah, I think as far as oil and gas policy goes, you know, that the State ought to take a careful inventory and right now we depend upon the industry to do the inventorying for us, and they tell us what we have on it.

And they say we should open up this area and open that area, and I think the State has the resources now through area inventory, release the information to everybody, and that way we'll have four or five companies poking holes to get the same information.

You know, have some realistic idea of what the oil and gas is worth up there. And I think by doing that

we would be able to better judge how many sales -- shall lease sales are really required, you know, to maintain, you know, the oil and the glass flow. And that's something that you have to do. You have to develop prudent reserves. But I think the State ought to look at taking a close inventory themselves, so they do have that information. And I think that in straight processing, you know, is a prime importance. I think there's a lot of fringe benefits created by the whole community of jobs. I think that these need to be high priorities.

THE MODERATOR: Thank you, Mr. Ackerman. Mr. Fisher.

MR. FISHER: All right. I've always got something. I'm never lost for something to say.

I think as far as the oil and gas policy is concerned, I think -- and it's already part of law that we're permitted to do something other than the bonus bid system. I think we should make sure that that is continued, and if there is a need to verify the costs because the oil and gas operation is a very, very expensive one. There is need to verify costs you might actually have to have the State subcontract various aspects of the operation. And I'll give you an example. Subcontract is seismic work, so that they know what's on those oil profits just as well as the oil companies do and maybe furnish that information to the industry. That's one thing you thought to do. If they

think the costs are too high -- and that's a possibility -- maybe we need to copy the British system with VP and set up a partially or a completely owned-state company. So that you've got something to judge the oil company costs by in the way they operate. Now, that's almost -- not quite, but almost rank area -- probably if you're talking about anybody with an oil back you are. But those are two things that I think are important. I think you'd be much, much more understanding of the system, about what it amounts to.

THE MODERATOR: Thank you, Mr. Fisher. Mr. Dahl.

MR. DAHL: Mr. Chairman, I've been especially concerned with what Connie Barlow talks about in the State use of petroleum resources. I don't like that word -- that phrase, and neither does she. The -- and I'm not sure how to place this in any kind of language as a resolution and recommendation, that I can see it as a program. We've done several things over the past not very many years, especially in bush Alaska. We have through what we've defined as progress, changed the lifestyle of villages, village people to create a dependency upon petroleum like has never been known before.

With power plants operated by diesel fuel in every village, fuel oil in homes which didn't use fuel oil up until not very many years ago. In those villages served by the Alaska village electrical supply, the cost per

kilowatt is 37 and a half cents. That's an incredible cost. The burden on people with a subsistency economy whose cash resources are limited -- to have to pay that kind of basic cost for electricity and the terrible costs for heating fuel is just -- it's a burden that we have only begun to understand.

It seems to me that part of our policy in the use of oil and gas ought to then provide assets to fuel oil refined in Alaska to the bush.

Right now, fuel oil is shipped in on the Yukon and stored at Saint Michael at the mouth of the Yukon and brought down to the Yukon villages and up river by barge of the on the Kuskokwim. It's shipped to Bethel and transhipped from there by barge. The cost of that and the burden upon people in the villages is a burden that we, in urban areas, do not understand and would be unwilling to bare, and I, frankly, don't know what to do about it. But I raise it as a serious problem we've got to face.

THE MODERATOR: Thank you, Mr. Dahl.

MR. ACKERMAN: Just --

THE MODERATOR: In the area of -- yes, Mr. Ackerman.

MR. ACKERMAN: I'd just say this is not an area that that's unrecognized in Fairbanks we had an editorial in the daily news that it quoted it as being from $1.05 to $1.30 per kilowatt hour, which puts a 500 kilowatt usage, which

is considered to be a -- Mine runs 1500 is 22,000 a month is 180 to $1.00 a month for electric power. One thing, the road we were talking about from Toby and Tanana we'd have cheaper fuel available in Fairbanks at this time to do the Frank Juan and North Pole refinery, that's cheaper than sewage. We did the fuel oil cheaper in Fairbanks when you do it at this time. This would give us cheaper fuel oil into these areas that most of the villages or another of have them could be incorporate so we could get this electric power in there. But think we ought to look at only sort of power, some alternative energy. I think that there's small hydroponics that we can do, that will get it down. I think every community in the State -- as to what type of alternative power that's available. I think that -- you know, this is one of the best ways that we could spend our money because it's something like a damn project, the hydro project. We receive the benefits after 100 or 200 years. And I think the cost of power is one of the main things, you understand that adds to our cost of living in the State. And why our cost of living should be any higher than any place in the United States, to stabilize the States transportation of our -- If we had economic power and economic transportation our cost to reduce things like buld our houses, and like that -- our cost of living won't be higher to speak of. But I think we need to -- this is

is a real problem area and I think looking to invest in the future alternative energy sources for all areas on it, and we can look to the Federal Government to provide them for us.

THE MODERATOR: Thank you.

MR. ACKERMAN: The Federal Government normally would, but I think, you know, the responsibility is ours and we do have the resources.

THE MODERATOR: In this area of oil and gas policy on my own part I'd like to see the State have several approaches in the disposition of oil land by lease with the few point to determining how -- where and how we get the best deal. And in that vein, in addition to doing our own seismic work, I'd like to suggest that in state oil lease sales, not in all the sales, but in some of the sales so we can use it as a yardstick that we conduct those oil lease sales on the basis of checkerboarding. Checkerboarding by the State would recontinue a lease, and the lease next to it would be put up and the oil lease auction.

It would be laid out in the field potential -- oil basin would be laid out in a checkerboard form. And the black blocks would be state blocks, and the red blocks would be competitive bid. I think that we'll get a better deal. We'd have, then -- we'd retain, therefore, half of a field and we would have on our present formulas 12 and a

half percent of one-eighth royalty in addition to lease revenue fee -- whatever the bid for the lease.

Will Ackerman.

MR. ACKERMAN: I think that's a real fine concept. I had a friend of mine that had several leases in the Swanson River area that was surrounded, you know, by oil well interests, and he paid the lease rate on them and they and it took everything he could scratch together for eight years before they finally bait his -- they really wouldn't develop any until they had the area pretty well under control and so before they developed it. And it's just not their policy to develop until that they could secure their investment a little bit more than the checkerboard operation. After they go to the expense of proving it.

That's why the State should approve of the field first. They're not going in to spend a lot of money and have someone piggyback on expenses for a practical matter. That's not one of the policy decisions made.

THE MODERATOR: In addition to that, I don't feel that we should be in any rush to dispose of oil lease lands. In the face of rapidly depleting world carbon fuel resource, in the face of inflation, in the face of rising prices for proof. We're somewhat in a position of the OPEC nations, in some respects. And they are more deliberate than we are. The more cautious we are, the disposition the better we'll

do in the future.

The Federal Government has designs on locking up 92 percent of the potential oil reserves of the State in the D-2 lands, and this, in itself, makes the State land oil province areas that much more desirable.

Now, in the area of an energy -- and this policy in state use -- they're almost synonymous. It should be welded together. My power company, Teller Power Company, are an independent. We don't have any public financing. Our kilowatt hour rate is a flat 35 cents. We have in our tariff filed with the Utility Commission a -- the ability to levy an oil price increase factor on top of that 35 cents, which we have not as yet done. And we don't operate on 2 percent money like AVAK does. And we don't get grants like AVAK does. And subsidy in the school districts BIR or the REA's and, of course, we don't have a taj majhal of International Airport Road and a staff of high salaried engineers and administrators, either. And this is what the people are paying for. This taj majhal here off of Airport Road and high scale read manager and assist opportunity manager and office manager and accountants and the engineers and write away men and the whole shot.

It's top heavy. The board did not function as a Board of Directors, they functioned as a rubber stamp. Now, then, in this area where we were' paying a dollar threw

sense a gallon now for fuel -- our generator has put us in a squeeze. We're going to be driven because of that factor increment. We'll run it through the computer now and we'll see just what we're going to have to do.

Now, in State use of petroleum resources, for my own part I would like to see the State take it's one-eighth or 12 and a half percent oil and gas out of the gas line at Fairbanks and send it down the rail belt through a State by plane to Seward, taking out of that line at Fairbanks natural gas the people in the Fairbanks area can utilize, taking that line out the rail belt, natural gas that the people at Houston Willow or Vacila or Palmer can utilize. Perhaps marking some of that gas to inlet, putting natural gas in through private enterprise and to Seward. And then selling the remaining natural gas comes out the end of the pipe at tide water to the highest bidder, but don't get locked in on any long term deal unless there's an inflationary factor built into the purchase agreement.

MR. ACKERMAN: Mr. Chairman?

THE MODERATOR: Mr. Ackerman.

MR. ACKERMAN: Mr. Chairman, I -- you know, there's already -- if the State had been looking -- I don't see any reason why the State shouldn't bring their natural gas all the way off the slope. And possibly the State could bring their national gas all the way from -- and the flare and

the oil companies problems are having now and it would be a vast project that might help them with the large -- I think in Fairbanks we should probably be critical. We offer it more slow.

THE MODERATOR: They want to take the liquids off and put it up in the area with the petro chemical plant.

MR. ACKERMAN: Well, Mr. Chairman, that's one thing about it. State has its own mind when came to buy out the more healthy. In a small pipe, you could carry a high pressure without the heavier thickness that's required.

THE MODERATOR: Right.

MR. STUMP: You can bring it whatever pressure you want take the liquids off the final process and if it happened on the North Slope and put it on the State line and bring the liquids down. So if the State did bring in royalties at it with they could in the same line ship their liquids. And I think we ought to take the broader thing since we're looking at concepts and look at the State by taking royalty oil off the Slope and that are carrying their liquids at the time the market has to do that on the slope at the time.

THE MODERATOR: Right.

MR. FISHER: Let me -- if I may --

THE MODERATOR: Mr. Fisher.

MR. FISHER: Referring to your arguments on Page R-8,

she raises four questions. First one is: Should the state encourage entry in there whose causes are questionable if by the very nature of the size would link region economic wellbeing of its own. Should the state allow its financial des- -- its royalties to become tied up in the industry's operations now, to comment on that question very briefly. I would point out that big oil was not involved and did not believe petro was economically possible, whether they're right or wrong, big oil wasn't in El Paso.

Two, why is it our leaders talk about broadening Alaska' economy and becoming less dependent on oil and gas production yet fail to main that petro chemicals and that petroleum refining will do just the opposite? Three. Why is it feasible to ride the boom bus syndrome of a large scale construction yet promote action that will only add to the construction boom surrounding the gas line. If a prtro chemical plant is build in Alaska for processing North Slope gas liquids, construction of the plant and maybe a separate liquids pipeline from the North Slope, or products line to tide water almost certainly would occur at the same time as construction of the northwest gas pipeline. The conditioning plant and the water flood facility.

Your method chemical industry -- to get one job in the industry, assuming that's the element objective, costs well over a million dollars. As a matter of fact, it

costs a million dollars and when they built the Collier plant at -- in North Kenai. It would sem to what you're going to get is about ten times the number of fishery jobs the same amount of investment you would get if you were in petro chemical.

Maybe I shouldn't say those, but I have -- I worked that debait down -- at Kenai, and we didn't really have a whole lot of debate. Almost chrewed up a representative over it, but we didn't have much debate. Ask him.

The question that we were asked here, in addition to that, when you think about the cost of the federal stocks -- that's what those gas liquids -- shall they had stocks and if you're trying to go into a full-scale -- or a world scale petro chemical industry you're then starting to compete with Saudi Arabia and they flare the stuff right now. They burn it. They're going into the petro chemical business, and they're going to be able to use the stuff that they're now flareing. I don't know. I would doubt that petro chemical industrial will do for Alaska anything more than give us -- well, she asked if you won't guess more ups and downs.

THE MODERATOR: Mr. Ackerman.

MR. ACKERMAN: I don't think, you know, the jobs are the only thing pregnant we have to look out in petro

chemical development or the State having a royalty why to bring in our product off the -- our share of the product off the slope. Governor Egan talked about the State building a line, and there was a lot there -- you don't lots you money on these transportation systems. They are thought using money. There are blind costs $15 million to Trans-Alaska pipeline it would make money. And the cost of this project which we had no control over at all -- we didn't have any control over who worked on it whether Alaskans worked on it or anything else we didn't -- I shouldn't say we had no control because, I think -- it was or Gene Guess wanted the rifle leasing bill that said use the maximum extent possible. We could increase the lease rate a hundred times or whatever, you know and that's why we had Alaskans working on that job to the maximum extent possible, because because of the lease rate. That's the only thing we have. We have no accountings I've seen doubles, triple, for camp construction costs. I've seen cars often that go -- I'm seen them amortized in the daily room. We were to years into the pipeline before we ever looked at their books. And I mean you've got a stack that you could cover this table with. You have absolutely no accounting of the money that was spent on the pipeline, the double entries on it that an add to the pipeline cost and everything else. By the State -- the pipe line, you're not

going to lose money on that transportation system. You're go going to have more options to deal with your royalties and you're going to get more benefit from a petro chemical plants -- necessarily jobs as much as it is a product that you can by reasonably in the State to lower our cost of living of the I think this is an important thing, that we lower the costs of these products in, and the State would do it and if you should get out that's fine. We should have fertilizer and rate that could you use for or agricultural development at a cheaper rate. There's a lot of other things. I'm not that familiar with all the things that you do do. But I think that the lime and the petro chemical development -- the lime especially this creases our options and gives us the most benefit and mostly of our share of the oil for gas.

THE MODERATOR: We have -- five more subtopics under resources. We've only disposed of -- we've disposed of finances, government education, transportation, law, justice, and communications. We need to address now a resolution on oil and gas policy and the oil and in the in state use petroleum resources. Under this section, oil and gas policy. Rather than double back and have it gets fuzzy in our minds what we've discussed. I now entertain a motion for the adoption of an amendment if member has had the time to make some notes here and get an amendment...

MR. DAHL: Mr. Chairman, I've not taken any notes, but I think it's interesting that in our discussion no one has said that we ought not to develop oil and gas. That certainly is an option. I'm its that I'm particularly recommending. In fact, I'm not recommending. For the record. As I talked to people in other groups, however, we've been quite concerned about making that as a choice not to develop our resources. I -- I'm personally pleased that this group has not considered that as an option. Hour discussion has centered around how do we develop them, what do we do to develop them, but not developing them is not enough.

THE MODERATOR: The closest we came to that is to ring a slow well, right? Not to get -- be hasty but be methodical and deliberate.

THE MODERATOR: Mr. Fisher.

MR. FISHER: Mr. Chairman, of the options considered this the permanent fund discussion, as I understand and probably the best option but probably the lease available would be not to take the oil and gas out of the ground. It would be to leave it there. It proably would be the best savings account there could be.

THE MODERATOR: The royalty or the --

MR. FISHER: Well, the portion that would be assigned to permanent fund -- to leave that in the ground.

THE MODERATOR: Only as the fields depleted the recoverability in that field given substantially.

MR. FISHER: I understand. There's lots of problems. But that is almost what Tom Dahl is talking about, is not to develop and use at a later time. And that was -- that was discussed. Now, I don't think it would, one, be permitted by the United States and, two, I don't think it would really be carried out and be permitted politically in Alaska. But it was considered as being possibly the best return that we could get. And if you think about it, it way well it may well be.

THE MODERATOR: I was reluctant to expostulate on not developing because I don't think the government thought of it, but way can be deliberate. We don't need to be stampeded.

MR. BORODKIN: Mr. Chairman, if we went that way, you know, not endorseing development wouldn't that be at the same time sort of endorseing to lock up shall the resources in Alaska?

THE MODERATOR: It would.

MR. BORODKIN: I don't think I'd --

THE MODERATOR: No.

MR. BORODKIN: -- I don't think I'd want to do that.

THE MODERATOR: No. I don't endorse that concept.

MR. ACKERMAN: I don't think that we should confuse

the transportation system, and I think that you know we're going to have to agree that the pipeline is a transportation system with development. You know, I think the pipeline off the North Slope will maximize our benefit of the gas that we have up there. It's not development of anything. It's a transportation system and I think that the transportation -- we all know there's a direct relationship what we get out of the product is a state and royalty and transportation costs. And I think for the State to put in a line -- I don't know what size would be appropriate -- 24, 30 inch or something most likely in the area.

THE MODERATOR: 26.

MR. ACKERMAN: 36 --

THE MODERATOR: 26.

MR. ACKERMAN: Well, that's close. 24 to 30 but to bring that size line off of the slope I don't think is -- I think it's in the State interest. I don't think that you have the problems you'd have with it. You would have dead control over -- will know what the cost is on it. And it's not -- you're going to make money off the transportation system it's going to be a produce you are of revenue just like is a for alley he is they make money off that pipeline. They're not Lucidine. And they're making it off of us. And I think the transportation system off the Slope

maximizes our options with our resources, particularly since we've been talking about be liquids, if we want to I don't them. We could build a pipeline that we could operate under pressure that would allow us to inject the liquids off of that plant into the pipeline. And I think that this transportation system would maximize, you know, the State's benefits is their revenue income. And I think that's something that we can endorse without get into actual development. We'll take a break here to change the tape now, please.

THE MODERATOR: We're back on the record.

MR. FISHER: Who is going to write the oil and gas resolution?

THE MODERATOR: Do we want to embrace in the oil and gas resolution a recommendation for checkerboarding in a portion of our oil lease land of the State? Not all of them necessarily but as a -- an alternate to the present system?

MR. FISHER: no, I don't think so, but I think it's a continuation of the present policy. I think it's a continuation of what's beening done right now.

THE MODERATOR: Checkerboarding?

MR. FISHER: Yes, I think so. I know the State's tried it. Now whether they're continuing to do it or not I don't know.

THE MODERATOR: Then we want to include in our resolution a recommendation on taking our 12 and a half percent and bringing it through our own line to tied water through the rail belt?

MR. ACKERMAN: I think we ought to look at the State bill royalty line to bring our gas to tide water. I think we should look at the whole thing and shouldn't be than specific on it, you know, as to which route we should take. But I do think we should look at it and to maximize our options and especially with the liquids.

THE MODERATOR: Well, Valdez has a good economy, and this will give Seward an opportunity, and the rail belt the strength in its economy. So we can spread this oil -- begin spreading across the State. This is what I have in mind.

MR. ACKERMAN: I think we should first look at the concept of just bringing it off the slope ourself. This is a concept to where we're going to specifically go with it. You know, if we can get them to look at it, it would be another question, you know, that when we started actually doing it then we could get into that discussion. But I think that, you know, it's -- for the State to get into bringing it off themselves, just to maximize our benefits is something we should look at. I mean exactly which way we should go on it, I think this is something that is a

whole other thing. But I do think we need to bring it off someplace.

THE MODERATOR: Thank you. Are you Mr. Davic?

MR. DAVIC: That's correct.

THE MODERATOR: You're on the record.

MR. DAVIC: I think in the broadest sense, what I would like to see addressed in a resolution involving the oil and gas situation this this state is to prepare for our eventual self-sufficientcy, if that means effect a chemical plant, another pipeline, whatever it takes to provide for that possibility, so that we're in longer stampeded or pushed around by the Federal Government. I think it's highly important to work towards self-sufficientcy and state use of the oil, and state use of other minerals. And indeed, we are in the position of the OPEC nations. And I think the time will come with succession is very real and viable alternative. But I think it's highly important to gear the State's policy and direction toward self-sufficientcy.

THE MODERATOR: Any other comment? Identify yourself for the record, plase.

MR. DAVIC: Yes, my name is Miles David, and for the record I'd like to speak to the gas pipeline. I would prefer to see a rather loosely worded, in one sense, resolution come out with regards to the gas pipeline,

in order to delay any source of decision for a later date, because I feel that the public is perhaps uninformed.

The information that I have as regards to the gas pipeline is, in essence, that if this gas pipeline goes ahead as presently proposed, that the -- we would be losing, perhaps, somewhere between 4 to $8 billion -- 8 million barrels worth of oil out of the Prudhoe Reservoir, which would be unrecoverable, because of losing adequate gas pressure in order to bring it out. Now, investigation should be made of the feasibility of cost. It's definitely feasible of delaying a constructing, a stripping plant at Prudhoe Bay, which would strip all of the gas liquids out and reinject the dry gas into the reservoir. Then at the time that Prudhoe Bay Reservoir has been depleted, then the dry gas will be brought back out. We'll have maximum recovery from Prudhoe Bay and maximum recovery of the natural gas. You will not lose that.

In the meantime, we'll have access to all of those gas liquids to provide -- now, for example, Fairbanks along the rail belt. Now, in those gas liquids we're talking about propane as part of those liquids, so Fairbanks, for example, would have a very good source of a lower cost energy. And then we could build a world class patroleum byproducts, and all the pharmaceuticals and such as this. And also this is part of the OPEC's position

in -- where we have the Saudi Arabians continually addressing Americans what they have to engage in to a really instant and progressive program of conservation, because petroleum and petroleum products are much too valuable for other things that are necessary to mankind, instead of wasting them for just merely creating heat. And also, I would like to add that the figures that I mentioned is 4 to 8 -- I believe it's -- we would have a $4 million -- 4 billion barrel net gain, even after getting all the gas and then having that much more recoverable oil.

So if you just simply multiply four billion barrels is the minimum, and perhaps it will be as much as 9 billion barrel. So, if you'll go the present world market price on oil, perhaps on a contract these days is 26 -- about $ dollars a barrel was going as much as 40 or higher on the spot market. So if we just say $25 a barrel, what we're talking about is somewhere between 10 to $20 million. Now, do we want this available for use, or are we just going to lock up and destroy that resource so no one has any benefit from it, ourselves or the Lower 48 States, et cetera. Thank you.

MR. ACKERMAN: Mr. Chairman.

THE MODERATOR: Mr. Ackerman.

MR. ACKERMAN: Four to 6 billion barrels, it's up to 200 billion, rather than the lower figure, I believe. But

A state pipeline for the royalty of gas. It could distribute -- the gas could goes into the smaller state transportation system, and the rest would be reinjected. And I'm sure it would comply. Hold development in getting something off of the Slope now when it's needed. America is in an energy crunch and I think the smaller pipeline built by the State could be put together a lot faster than what we're talking about the magnitude of the one that's presently proposed. And I think that's, you know, related.

MR. FISHER: Mr. Moderator.

THE MODERATOR: Mile Davic.

MR. DAVIC: I'd like to add to my remarks on that. The Canadians have recently completed a pipeline in Canada about 1500 miles in length, in which to build an oil line, and they are doing just this thing. They are reinjecting the dry gas, stripping out the liquids, and they're sending them down. Now, other information that I have, you know, unverified at this time, but it is being alleged that the treaty that was negotiated and signed by President Carter with the Canadian government permits the Canadians to strip all of the liquids out of the gas and then send only the dry gas to the Lower 48, you see. So, no part of the United States is getting -- if this were true, this part of the United States would be getting access to it. So the

Canadians are encouraging us to do something that they are not going to do because it's not good business and it's not good resource management.

THE MODERATOR: It's 20 minutes to 10 and we have five major topics here under resources to cover yet. We'll need a resolution on oil and gas policy.

MR. ACKERMAN: I'd like to state one belief, and we can talk about it. I'd move that the State investigate a stripping plant on the North Slope for the liquids and State transportation system to bring off the liquids and the State royalty gas.

MR. DAHL: Second.

MR. FISHER: Yeah, second.

THE MODERATOR: Second? Question?

MR. FISHER: I'd like to talk on that.

THE MODERATOR: Okay. Discussion.

MR. FISHER: Well, Ackerman has talked about this about three or four times. It's beginning to sink in. It's beginning to sound like it makes sense. You know, to look in and to check that out because that sounds -- that's an approach that we don't hear very often. I'm not sure that we've heard it at all. There's been some talk about it, but I don't seem to approach it. And I think, you know, it's an innovative idea. We ought to give it a try to some of it. Maybe we ought to even lose some money on some of

these but to find out what it is. And I think we ought to pass the motion for that reason.

MR. DAHL: Question.

THE MODERATOR: Question?

MR. ACKERMAN: I'd like to add, you know, to increase the State's benefit from the resource. Can you do that?

MR. FISHER: No, that's --

MR. ACKERMAN: Maximum state benefit from resources.

THE MODERATOR: Do you have your motion written down?

MR. ACKERMAN: No.

MR. DAHL: Grab a pencil, Barb, get to work.

MR. ACKERMAN: I think the motion was the State investigate a gas stripping plant for the liquids at Prudhoe Bay and a state transportation system to bring the liquids and state gas out --

THE MODERATOR: To tidewater?

MR. ACKERMAN: To tidewater for a maximum state benefit and utilization.

THE MODERATOR: And what do you think about leverage construction? Keep our money, finance it?

MR. ACKERMAN: Yeah, that's fine. I think that, you know, just putting the idea out, you know, we can -- if we can get it across, we can develop the other things on it. I think we should keep it fairly brief in concept.

THE MODERATOR: Mr. Davic.

MR. DAVIC: Yes, Mr. Chairman, I'd like to see the motion amended to read maximum petroleum production from Prudhoe Bay, so as not to be subject to any misinterpretation, because maximizing benefits to the State can mean all sorts of things to all sorts of people. If we address it in that manner specifically, that would the best import a clear intent.

THE MODERATOR: While the resolution is being prepared we'll proceed.

MR. DAVIC: Can I read this back one more time? My shorthand gets real rusty. We recommend that the State investigate a gas stripping plant for the liquids at Prudhoe Bay? Is that --

MR. ACKERMAN: That's what I said.

MS. DUYACHAK: And a state transportation system to bring -- what was it.

MR. AKERMAN: The gas liquids --

MS. DUYACHAK: Bring the last liquids --

MR. ACKERMAN: Royalty gas to tidewater.

THE MODERATOR: Pipeline system.

MS. DUYACHAK: A state transportation system or pipeline system.

THE MODERATOR: A state pipes line system.

MR. DAHL: He said transportation system.

MR. ACKERMAN: I said transportation system. I think

the pipeline's transportation system -- we're into transportation systems with ferries and things like that, airports.

MR. DAHL: Mr. Chairman, I have a point, too, of that resolution I'd like to enter. That every effort be made to use Alaska petroleum to lower the cost of fuel throughout the State.

THE MODERATOR: You so move?

MR. DAHL: I so move.

MR. FISHER: I second.

THE MODERATOR: Second. Discussion? No. Question? Would you indicate by saying aye?

MR. DAHL: Mr. Chairman.

Aye.

THE MODERATOR: Opposed?

The ayes have it, so ordered.

MR. DAHL: Is that the entire resolution, Mr. Chairman?

MR. FISHER: I think so.

THE MODERATOR: We'll proceed to fisheries.

MR. DAHL: Mr. Chairman, at this point I would like to go move to take from the table the child care resolution. May I do that?

MR. ACKERMAN: Second.

MR. FISHER: Let's go.

MR. DAHL: I have an amendment to Item No. 2 -- I have

this written out for you. Delete the No. 2 that is in your resolution and replace it with the following: "That the State place children with child-caring institutions as a good parent would, providing for prompt payment of full cost of care, comma, which includes a portion of those costs required to keep the institution ready to receive the State's children."

And I would move its adoption.

MR. FISHER: Second.

THE MODERATOR: Second? Objection? Discussion?

(No response.)

THE MODERATOR: Question?

MR. FISHER: Question.

THE MODERATOR: Those in favor indicate by saying aye.

Aye.

Opposing, say know.

(No response.)

THE MODERATOR: The ayes have it. So ordered.

MR. FISHER: The whole resolution. We're in the area of fisheries. I'll entertain input from the floor.

MR. FISHER: Why don't you ask the -- our fishermen. Do they have anything special they think --

THE MODERATOR: That's why I say I'm entertaining input from the floor. Whoever.

MS. ANASOGAK: I'm not a fisherman but I'm a fisherman's

wife, so I know some of the problems that the fisherman encounter at home. One of the problems that is being encountered is the transportation of the fish once you get the fish then you have to wait for transportation. Is while you're waiting the fishing to waste because you're sitting there hoping to sell fish to get the money, and because without the transportation, you let the fish sit. By the time you know that, there's not going to be any way out, the fish has -- is spoiled. And that is a waste, too. I can't think of anything more to add to that right now but I'll probably think of something later.

THE MODERATOR: Mr. Borodkin?

MR. BORODKIN: Yes, I agree with the young woman here, that I think utilization is important, especially with the big reduction for Bristol Bay. There should be some alternatives to look at that and that utilization.

Another area is marketing. I think marketing those be looked at. Right now most of the marketing is done over in Japan, and with the American dollar gain is on the Yen, it -- it's going to affect marketing. It already has. And reading the papers, I think the Governor is looking for marketing over in Europe and other places. I think we should be looking at domestic marketing. I firmly believe that the State should assist fisheries in marketing utilization.

Another area that we should be looking at is agricultural program. I happen to be on Prince William Sound Agriculture Board. Just this past year the Prince agriculture harvested over 200,000 that returned, and the 200,000 -- in excess of 2,000 were harvested and sold to the local processers. I just don't recall how many thousand there was kept for ruined stock.

THE MODERATOR: 200,000 what?

MR. FISHER: Salmon. Pinks.

THE MODERATOR: Pinks?

MR. BORODKIN: Yes. So this that's showing us the program is working. I think the State has on the drawing board to build another hatchery. They've already examined the site. Then there's one in -- that it was just completed just recently and Prince Rupert Sound. I think I've made a remark here either yesterday or some time ago that I looked at State hatchery. I went up this road out in wilderness among the woods. And I came up on a clearing and it was just like walking into some parts of downtown Anchorage with this big huge complex, hatchery complex. I just hope that the press -- the paper would go down and, you know, look at it and take pictures and put it in a paper. I really think that these programs are going to pay off not too many years from now. So I think that we should encourage the State in developing these renewable resources.

I should have taken notes, but I didn't.

THE MODERATOR: Any other comment?

MR. ACKERMAN: One comment.

THE MODERATOR: Mr. Ackerman.

MR. ACKERMAN: I believe besides this really isn't an area I've been in. I do recognize the problem and, you know, I've been through the area and besides the transportation I think collection points and holding facilities, you know -- there's a major problem. I mean, we can't -- we're always going to have transportation problems, but they would be minimized if we had holding collection point and holding facilitates, and we could have those, and we are developing again recruit hatcheries. You can't get into that place. That's bad transportation. We spent three times as much time trying to get in and out of canneries as we did on the job on it. But I think that we are developing these hatcheries, that our fishery is developing. If these areas are going to realize the benefit we do have to have refrigerated holding and collection points are we can drop our fish if we can get them to transportation. And if you have a heavy run it's hard to get all the transportation in any way. If you have a holding facility and a collection point then you can maximize your harvest without it spoiling.

MR. BORODKIN: One thing I forgot to mention. On the

private hatchery is we have an assessment among the fishermen, and that's, I think, copper reds has asked us at two cents apiece and Prince William Sound Pinks and other species are assessed at three cents a piece. Change to assessed earlier. So it's working real well. We is a matching fund by that processer so it matches the fisherman.

THE MODERATOR: Mr. Fisher.

MR. FISHER: Fisheries on that, I want to get onto this a lot sooner because some of us know a lot more about fisheries than we do canneries. One thing we need to do pretty badly now -- we need to improve our marketing technique. We've got to handle our fish better. We do such a poor job of handling our fish that we're probably going to have some sort of a scandal resulting from the 1979 pack. John Doyle, who is head of the Marines Advisory Program, which is Sea Grant Funded was recently in Denmark, and he said that he was supposed to give a two hour presentation, and he didn't give that presentation because all that they did was raise hell with him, literally hell, about the poor handling of the Alaskan salmon. They led him to believe that we did such a lousy job that when they did get an occasional good batch of fish from Alaska, in order that it would sell -- they had to put a Canadian label on the fish. Now, that's terrible to have a reputation like that, but that's apparently the reputation

we've got. So we're just going to have to take care of all of them, because we can't sit on Cook Inlet and say those rascals in Bristol Bay are no good because as far as the world's concerned we're all Alaskan fishermen. So we're going to have to do something statewide with respect to maintenance of quality and enhancement of quality and we're going to have to do the whole thing.

I don't know how we're going to do it but at long last the State is starting to do something on quality control in the salmon fishery. They've been doing it in the King crab fishery but we haven't done it -- anything we bad we do to fish, we've done to our salmon. And then we try to sell it, and it just doesn't work.

THE MODERATOR: The feedback I get, Jamie, is that there's a lot of salmon on the West Coast and basically a lot, because of the poor quality control in the pack. This is the feedback I get.

MR. FISHER: Can't even can it, it's so bad. That's what I understand.

MR. ACKERMAN: I think one of our problems is getting it out and if we had refrigerated storage facilities and collection areas, we could increase the quality and its collection point we could make our inspections and see whether we ship or not the fish. I think that's our main problem is getting it out and getting it to a processing

facility, and we have have -- we have to have a holding facility to hold it until we can do that. You can't just leave it sit on a river bank or in a box in the sun.

MR. DAHL: It's more than that, Mr. Chairman.

THE MODERATOR: Mr. Dahl.

MR. DAHL: Alaska has come down through the years as a canning industry, and we have not made the shift from a canning industry where the fish are brought from the fishing -- from the fishermen's boat into a tender and they're thrown from the tender into a -- on to a Convair and thrown into a bucket into the cannery and then mashed in a shredder and stuffed in a can. From that to a fish that is picked up by hand and that moved without being bruised or knocked around or cut or-- with a hole poked in it anywhere to a flash frozen glazed wrapped in poly bag product that goes to that Japanese market and the Japanese housewife looks as it whole and, on the basis of appearance, buys it. That is an entirely new process for us, and we don't know how to handle it. And it's even worse in Northern Europe, in Sweden and Denmark.

MR. ALEXIE: Mr. Chairman?

THE MODERATOR: Yes, Mr. Alexie.

MR. ALEXIE: As I work as a deputy, we have two major problems; like one is getting the piece from fish from the fishermen and that having it on the talk or in the barge,

the process and then waiting for the transportation. What I've been wanteding to do is -- and I've told my boss that he shouldn't buy more fish than he can handle because when we get too many we condition handle them before they get spoiled. Another thing that I've been trying to present it to my employees that we should handle the fish like a baby. Okay. There was one Japanese guy byinging our fish. And he took a lot of pictures and then he says -- he called me told me that everything goes good in a freezer and then the fish is thawed. It doesn't look as good as the way we freezed the salmon. It's what I got from the Japanese who was buying our fish. And I think that a man who is buying the salmon should buy fish which we handle.

MR. ACKERMAN: Mr. Chairman? I oh, when I was younger teenager going to go high school, I spent the summer in Homer and went fishing and I went cooking crab in a cannery down there, and this is one of the reasons we got into frozen crab meat, we got into it down there even had a freezer with ice on 110 foot freezer, both that sat by. But that was a heavy run that cannery couldn't process crab that came in there. It's a backlog and you develop your backlog then they got a percentage of the share of the crab that they could bring in and the salmon's the same thing. We don't have a holding facility. We didn't have the holding facilities. We don't have the holding facilities.

Now when you get a heavy run, we don't have the canning facilities to can the catch. And so we have to -- the holding facilities are, you know, a major problem because we have to develop and we're looking at record runs. It was a record run. When we have a record run, we don't have the canning capability and we have to have the holding capability to handle the fish. And this is something that we have to develop.

MR. DAHL: Mr. Chairman, I think we've run out of time.

THE MODERATOR: We've run out of time.

MR. FISHER: I've got a fishery resolution. It's not very good --

MR. DAVIC: Quickly may I see?

THE MODERATOR: Mr. Davic.

MR. DAVIC: Yes. With regard to the gentleman's statement as to holding facilities and the other comments, there, they're all part of marketing. Everything after the fish is produced is all part of marketing and getting it to the consumer, and I feel that the things you're mentioning are planning what the private entrepeneur should be doing.

Now what we need to do is have some manner in which to encourage him to do this and insure to the public as to the quality of the fish. Now perhaps the time also now to establish a Salmon Fisheries Control Board, or just a generally a Fisheries Control Board that will place a

quality -- you know, the Alaska Good Housekeeping Seal of Approval on these things. So they can establish these standards for handling from different ways down the line so we don't have this -- it's an another waste of -- tremendous waste of resources. And a lot of people are not eating. And it is a tremendous waste of the resource it contributes to the higher price at the grocery store where could you have consumer complaints. Could you brought in your market to other countries.

MR. FISHER: Let me try this out for size. Alpha Group recommends the Alaskan Fisheries Program do you, colon: one, encourage and support the best possible harvest transportation and that care techniques for all its multiple fisheries; two, ready necessary for complete harvest and best utilization of all state fisheries products. And three, initiation of the most advanced systems in that quality production control transportation, storage for all Alaska fisheries products. I'll say that over and over again the I move its adoption.

MR. ACKERMAN: I'd second.

MR. DAHL: Mr. Chairman I'd like to add one more statement to that.

THE MODERATOR: Mr. Dahl.

MR. DAHL: That is that we make every effort to train persons in the technical skills to operate in a modern

fishery?

MR. FISHER: I accept that.

MR. BORODKIN: Mr. Chairman?

MR. BORODKIN: Are we under discussion now?

THE MODERATOR: Yes.

MR. BORODKIN: I think I'd be very careful in one part of it. That's -- would you restate that again, please?

MR. FISHER: Which one?

MR. BORODKIN: In the quality control?

MR. FISHER: All right. Initiation in the most advanced systems in quality production control transportation and storage.

MR. BORODKIN: The State already has -- or I don't know whether it's state, but I think canned salmon industry it has quality control. Every plant usually has quality control working within the plant.

THE MODERATOR: Mr. Davic.

MR. DAVIC: Mr. Chairman, in reply to this guy's comments, the quality control that does exist is ineffective. And I would like to see the amendment -- the motion amended to strike initiate and insert "mandate." And move adoption.

MR. BORODKIN: Insert what?

MR. DAVIC: Mandate. Strike the initiate and insert mandate and move adoption.

MR. BORODKIN: Mr. Chairman, I think if it's done in a manner where we couldn't keep up with this thing that the processers are going to be strapped and may have to be shut down.

MR. DAVIC: Yes, yes, yes. Definitely. That's the idea.

MR. ACKERMAN: Mr. -- the storage facility is going to put us a better product to the processer, you know, we're going to be able to -- you're not going to have your fish backed up because you've forgotten if he can can at the cannery. So you're going to have holding facilities. These canneries are not going to do the holding facilities -- I was in Larson Bay when this incorporated. It was 1975. That cannery that's closed down it was -- something for closed down for two years. There wasn't fish and your up and down cycles of your fish. It's hard to get the canneries and say you've got to take into, know, provide something that's going to

MR. DAVIC: Yes, I'm familiar with the problems. I've been that business and handled all -- and I believe.

MR. AKERMAN: Okay. I was.

MR. DAHL: Mr. Chairman?

THE MODERATOR: Yes.

MR. DAHL: I believe the resolution included the word initiate. I would like to call for the question using that

language, please.

MR. DAVIC: Can we adopt that?

MR. DAHL: The amendments not been seconded.

THE MODERATOR: Question?

MR. BORODKIN: I'll second.

THE MODERATOR: Question? Those in favor indicate saying by aye.

THE MODERATOR: Those opposed?

(No response.)

THE MODERATOR: The ayes have it. So ordered. The resolution is adopted.

MR. DAHL: Mr. Chairman?

THE MODERATOR: Then in the area down here fisheries on down Alaska fisheries there's -- I'd like to touch on an area of concern that I have that I'd like to hear from the other members of the body. The State has thousands of lakes in the State. And an example in the Sitka Flats, there's hundreds of lakes up there that are all interconnected with riverlets and streams. And salmon come up to Cook Inlet and they go on up through that water shed and they spawn in those lakes. Up and Blodgett Lake, which is eight and a half miles above Wasilla and a quarter mile off the Parks Highway -- that lake is spring fed, but the outlet goes on and feeds on down through into Big Lake and all the way on into Cook Inlet.

Then under this agriculture program the State fisheries biologists come in to Blodgett Lake and they took all the reds that escaped from there and stripped them for their eggs and they killed off the run into the lake. It's as barren as a flat chested old maid. Then on the other hand, there are any number of the lakes that are being severely damaged, and they're spawning -- salmon spawn at Big Lake. They're being damaged by sportsman with speed boats and waterskiers and rafts and a whole lot of old automobile tubes and you name it, oil spills from outboard motor oil and oil spils from boats, planes the whole nine yards, and the State doesn't have not any policy to regulate the activities on these various and sundry hundreds of lakes that belong to the State of Alaska.

We're very derelict and remiss in that area. We're wastefull. And I suggest that there be substantial inventory taken of all of the lakes, there be a substantial determination of classification made at each and every lake that will limit the type of activity on that lake. Big Lake for sportsman recreation. It's just -- its so far gone that way now you'll never back it up because of public pressure against backing that. These other lake areas and limit the size of outboard motors, the number of boats that can be on the lake and limit some lakes to sailboat activity or rowing or canoeing and that discipline

ourselves, police ourselves so that we live in concert with nature.

MR. FISHER: Mr. Chairman, I agree with everything you say and would like to say it myself but we're going to overlook your suggestion for five years if we don't pass it. May I move?

THE MODERATOR: You may move.

MR. FISHER: The Alpha group recommends another Future Frontiers Conference be held in five years and that it be preceeded buy regional conferences to select delegates to the Skegway conference. I so move.

MR. DAHL: Second

THE MODERATOR: Moved and seconded. Discussion? Question? Those in favor indicate by saying aye.

Aye. Those opposed it by saying nay.

(No response.)

Ayes have it. It's unanimous.

MR. DAHL: Mr. Chairman, we've done an awful lot of work in a very short time, and I think a great deal of the credit for the expeditious handling of some very difficult problems should go to you. I appreciate the way that you've stepped in and have handled this group, and I'd like to encourage the group to express their appreciate buy our traditional way.

(Applause.)

THE MODERATOR: I would like to applaud this group and our stenograph reporter.

MR. FISHER: Why don't we let her go off the record.

THE MODERATOR: And I applaud this group. We're a hell of a team.

MR. DAVIC: Mr. Chairman I'd like to see a motion with regards to your statements.

THE MODERATOR: With rega. to --

MR. DAVIC: The lakes and water.

THE MODERATOR: To the lakes?

MR. FISHER: Why don't you drop it up.

THE MODERATOR: It's a gross oversight. It's been pushed aside, pushed under the rug. We burried our head in the stand like an ostrich. It needs to be addressed.

MR. DAVIC: Do you have time to pass a resolution a motion on that in the morning?

MR. FISHER: Yeah, I think we can meet in the morning.

MR. DAHL: I suggest move we go off the record.

(Whereupon, at 10:20 p.m. the proceedings were adjourned.)

ALPHA GROUP PROCEEDINGS

(December 8, 1979)

Room 101F

THE MODERATOR: When the rest of our group gets here so we at least have a quorum, well, then we can address ourselves to preparing the appropriate resolution for the remaining topics that we have under consideration in this conference. We'll just start there.

In this energy area, I know nothing, virtually nothing, about hydrogen cells. But people that I've talked with that know something about it are very enthusiastic about it. I don't know if there is anybody in our group that has been exposed to it or not, but the --

MR. ACKERMAN: I know when you have hydrogen welding you've got a problem when the cell cracks on you. Besides that, I don't know.

THE MODERATOR: Solar energy has a substantial potential in Western Alaska because we get substantial quantities of sunlight long, long hours of the day for six months of the year. And certainly in Northwestern Alaska, particularly at Wales on the Bering Strait, the wind blows there 95 percent of the time. That community is a sitting duck for redundancy wind generation throughout the

community, where when generators could be dumping heat into the homes and heating the homes with wind energy and at the same time keeping a battery plant charged to drive their electric lights.

Anybody else?

MR. ACKERMAN: I agree with you. I think it's really mandated to install some sort of alternative energy in every community. I think it's the best investment we could make into the future, and we've seen that in the Lower 48, these type of projects. I think also we need to look at our tide power. You know, we have terrific tides in the State, and we should have either a wind power, tide power or solar power or geothermal power or hydrogen-type situation everywhere. I don't think we need look at the economics. I think we have to look at the future, what the future benefit is going to be to our State.

THE MODERATOR: Looking at the economics shouldn't pose much of a problem. Motor gas -- the last word I got was $2.90 a gallon in Paris. And up home it's already a dollar and a half a gallon. So we're going to be keeping up with the Joneses here overnight.

MR. ACKERMAN: Well, I think anything is going to improve the standard of living. And lower the cost and preserve our oil for other things is really essential at this time.

THE MODERATOR: With the substantial tides that we have, 36-foot tides and this region, Kachemak Bay -- and on the tidal generation is a sitting duck. It could be extremely successful.

MR. ACKERMAN: I think we have to look at the benefits of, you know, our tidal potential and our transportation at the same time in crossways that we're talking about so we tie the area together just a little bit. This is just really, you know, a dual benefit thing that we could achieve down here. And our tide power really hasn't been researched enough to where it doesn't have some of the large drawbacks of a hydro project.

THE MODERATOR: These wind generators and units that are available I regard as entirely too expensive, and I'm satisfied in my own mind that we should be able to buy component parts and assemble wind generation units substantially cheaper than we purchased them on the market. I'm thinking in terms of solid-state or brushless generators that can be manufactured by Reliance Electric Company or any other large electric matcher in substantial mass production quantities. And then the propellers for driving the mechanism are available through manufacturers of aircraft propellers. They're already set up with the plant to mass-produce those propellers.

The towers do not have to be highly sophisticated

towers at all. In fact, the more practical they are the better. Towers can be built right in the small communities out of empty gas drums welded together, and you don't have to be a certified welder to weld those gas drums together to make a pole.

And set those tarren on the inside and outside so they won't deteriorate and use those for towers and just merely mount the wind generator on the empty gas drum pole for the wind generator tower. At the same time you can develop a ladder that -- right on those drums that you can climb up and down that gas drum pole to get access to your wind generation unit for maintenance purposes.

THE MODERATOR: Good morning, Mr. Dahl.

MR. DAHL: Good morning. I apologize for my tardiness.

THE MODERATOR: Last night when we closed we were in the area of considering submitting a resolution urging the State to establish a comprehensive program regulating our lakes.

Is that substantially correct, where we were when we closed?

MS. BENNETT: I don't agree we were in the process of establishing resolutions to the effect. I think they were just introduced.

THE MODERATOR: But we're in the process of input.

MS. BENNETT: Talking about it, right.

THE MODERATOR: With a viewpoint to the resolution with the area -- addressing ourselves to the lakes of Alaska.

MS. BENNETT: Right.

THE MODERATOR: In order to protect the habitat and the environment. There are tremendous human pressures on the habitat in the environment in these lakes out across that sit in the flats up here in particular.

MS. BENNETT: I just don't see how we can regulate something like that. It just sounds -- you know, we've just been discussing earlier the difficulty with Fish and Game and that kind of thing. It's that kind of regulation.

THE MODERATOR: Oh, yes, but it must come. It must happen. And it has to be -- people have to be educated to realize that it's to their benefit to -- in the final analysis it's their benefit to discipline ourselves in the manner in which we conduct ourselves in this environment.

MS. BENNETT: I definitely agree with you there. We need to talk about education and discipline. That's definitely true. I'm just thinking about a State agency trying to regulate something like that. It's extremely difficult.

THE MODERATOR: It can be handled very well.

MR. ACKERMAN: I think this could be probably controversial and something we haven't discussed too much.

we went through our Law and Justice. We haven't had a resolution on that. I think our Land and our Energy -- particularly our Energy -- that we do need to develop a resolution.

MS. BENNETT: Yes.

MR. ACKERMAN: Probably we might defer this item to the last, you know, if we have time.

MR. DALL: I would like that.

MS. BENNETT: I agree with that.

THE MODERATOR: All right, fine. We've had our round-table discussion in the area of Law and Justice. We should be able to proceed to address ourselves to the development of a resolution in the Law and Justice area.

MR. ACKERMAN: I think, just to comment -- I'm not going to make a motion, but I think that, you know, from what we had that we can double our system. We have the physical plant, you know. There's no reason why we can't use it and we can't double-shift it. Of course, with that you'd have twice as many judges, we could hear twice as many cases. And there's no reason for our buildings to sit empty 16 hours a day. I think it's something we need to look at. Our second shift could take care of our civil matters. It can take care of our traffic violations and things like that. And I think it would be a tremendous benefit and service to the people. I think they could

better afford justice. But our civil case backload is just tremendous. I had an insurance claim that had to go to small claims court, and it took six months to the small claims court. This is a ridiculous situation. And the purpose of the small claims court was for, you know -- for a speedy resolution of some of these things. And I think we should look at that type of recommendation at this time.

THE MODERATOR: The heavy burden of civil cases in the State in the area of insurance claim controversy results in -- my way of thinking -- a lot of that results in the fact that the State Department of Commerce, Insurance Division has been and is very weak. When I have insurance claims I automatically turn it over to an attorney that handles insurance cases. It's automatic. We don't go around with the adjustors. We just turn it over to our attorney and let them work with our attorney. We don't even fool with it. That's how bad it is because we've ended up having to take legal action so many times that now it's just become automatic. Fireman's Fund in Oregon controvert claims boom, boom, boom, on Workmen's Comp right and left. Very arbitrary and capricious in that area of endeavor. It's almost virtually automatic that they'll controvert claims. The Industrial Indemnity Company here in Alaska, when they have a Workmen's Comp claim -- they drag their feet on payment of the claim, even though the insurance is in force,

the premiums are paid, the whole shot.

We had an employee who got a broken leg, and it was a month before he got a Workmen's Comp check. He laid in the hospital down here in Anchorage, and his family's up home and nothing coming in. And I have to use this as a yardstick. The only claim we had had in 25 years. That's what happened.

Then the underwriter went over to the hospital, and here the guy is in a hospital bed and they waived a $5,000 check under his nose for 100 percent settlement, and he took it. Where he could have been on compensation during his total recovery period at $200 a week for a year and a half.

MR. ACKERMAN: I'd like to -- our union has instituted prepaid legal just for the reasons that you speak of, the trouble with the insurance and also the automobile violations.

THE MODERATOR: These are the sort of things, Mr. Ackerman, that cause the civil cases to pile up.

MR. ACKERMAN: Yes, that's right.

THE MODERATOR: Just an as an example.

MR. ACKERMAN: I agree with that, but now I think by double-shifting our physical facility, you know, increasing our judges and doubling our staff in using this facility twice as long, we can take care of this backlog and

possibly, if we can get rid of the backlog, we won't have so many of them. When we hit a time of -- you know, where we in our schools -- it's a common thing to double-shift our schools and use them when we can't build something fast enough to take care of the need. We double-shift it.

We should do the same with our courts, and possibly it will change the insurance company's attitudes towards this. And if we do this, maybe we won't have the case load in the future. I think at this time, since that is their attitude, that the best thing we can do is double-shift our physical plant and put on twice as many judges and staff and take care of these things.

And I think if we do it on a second shift, it's going to be a lot handier to the public. They're not going to have to take off time from work, and justice is going to be available. For the working man it's hard to take the time off to appear in court. It's also hard to serve on a jury.

THE MODERATOR: That's right.

MR. ACKERMAN: And your compensation for serving on a jury -- if you're stuck on a jury for 30 days, it's devastating. $20 a day. You just can't --

THE MODERATOR: You end up on food stamps.

MR. ACKERMAN: That's a tough thing.

THE MODERATOR: That's right.

MR. ACKERMAN: You don't end up on food stamps. You just do without.

THE MODERATOR: You make some very valid points, Mr. Ackerman.

MR. LAEL: I'm working on a resolution that will cover those two. Would you discuss, while I'm doing it, the issue of improving efficiency of bush justice so that I can get some language? Would you try to recall the kind of discussion we had a couple days ago.

MR. ACKERMAN: I think the big thing in starting the Fish and Game -- that's where most of our problems are. And if we had, you know, procedures that didn't disqualify qualified Alaskans from doing this.... And if we had a people that had a vested interest in our game protection and management, we would have a lot better bush justice for a start. I think we all, when you look at the Fish and Game man, tell you to do something, you know, what you should be able to do. You've got a new law every year. Every year. I have no idea --

THE MODERATOR: That's right.

MR. ACKERMAN: What the communicating regulations are. I'd be afraid to go hunting now just because of what I've done in the past, you know, 20 or 30 years. I'd be afraid to go out and do -- whether I was in a right district or closed district. Moose season changes every year. It's

risky to do this.

And I think we need people that understand that we've had changes in our management, you know, and when you've done something for years and years, you learn something for twenty years, to unlearn it is something you don't do. It's second nature. You have to have people to understand this problem. And I think that the Alaska resident has a vested interest in our Fish and Game management, and I think he's the one that should be doing -- he's the best qualified to do it.

THE MODERATOR: In the area of bush justice, number one, we need ongoing village policemen training, and they need to be better paid. We've had -- the quality of our village policemen, since it is a relatively new program -- the quality of village policemen is very poor by and large. So, consequently, the populous -- the community recognizes that they're not disposed to cooperate and respect the village policemen in the community. This is the way I'm coming from.

How do you feel about it Georgianna?

MS. ANASOGAK: I agree with you. Currently our village policemen is funded under the CETA programs, and one of the CETA regulations state no employee can be employed more than one year.

Now, we have a perfectly qualified village

policeman -- ex-policeman. He's gone -- he was employed on the Police Department, Nome Police Department, for a number of years. Then gone to several village policemen training courses, and now he's not eligible to be a policeman because of the CETA regulations.

MR. DAHL: Excuse me. He's not eligible to be a policeman using CETA money.

THE MODERATOR: Right.

MS. ANASOGAK: That's right. And then the village does not have enough money to pay him properly. I mean, to give him enough salary for him to take the job.

THE MODERATOR: Does White Mountain have a retail sales tax?

MS. ANASOGAK: I don't know. I'm not from White Mountain.

THE MODERATOR: No, no, I mean Koyuk.

MS. ANASOGAK: Yes.

THE MODERATOR: They have a retail sales tax. How much is it?

MS. ANASOGAK: It's 2 percent.

THE MODERATOR: They could go to 3, and that would help to pay for village services.

MR. ACKERMAN: I'd like to talk about the CETA funds. These are federal funds, and they're not entirely federal funds. You have State participation. And I think that the

amount of paperwork that's involved in CETA funds and the Federal requirements that they put on that the State is better off directly funding the CETA program.

THE MODERATOR: Forget it.

MS. BENNETT: Can't forget it. It's put a lot of people to work in our area.

THE MODERATOR: Not the red tape. We can't forget the red tape because we can't cope with it in the village. That's why I say forget it.

MR. ACKERMAN: It's not only the villages. We have a large problem in the Fairbanks area with the CETA. Federal restrictions and the amount of paperwork that you do --

THE MODERATOR: It's monumental.

MR. ACKERMAN: I think the State should directly fund the CETA program. That would take care of the prior problem about being able to pay a policeman. You wouldn't necessarily have to have a year limit on the program. But where it's really affected us -- our program is -- we trained 300 Alaskans, turned them out as qualified pipefitters. We'll have 2,000 pipefitters working in the next year out of our area. And a large majority of the people that came in and upgraded our trades was with the CETA assistance. They wouldn't have been able to afford that they could sit down and go to school for four months, and that's the minimal amount of time to get a person on

the job. I mean, you barely get them enough to get safety on the job. We have a four-year ongoing training program. And CETA will get them on the job -- this will allow them to be able to take off the time, you know, to update his occupation. And we assume everything after that, and he does, too. And he does, you know, for the next three years.

But getting CETA funds now is next to impossible. It's next to impossible to qualify the issue we took in 872, our apprentice program. We really should be looking at training many people in this pipeline, welder helpers and things like that.

THE MODERATOR: Let's get back to this Law and Justice thing, right directly into it, okay? We're running out of time, Mr. Ackerman.

MR. DAHL: Mr. Moderator, I have a suggested resolution.

THE MODERATOR: Go ahead.

MR. DAHL: One, that the Alaska court system be expanded as follows: a, increase the number of judges in order to expedite the civil and criminal calendar; b, maximize the use of existing facilities beyond the normal working day to improve the convenience to juries and civil litigants; c, improve the magistrate system in villages through better communication, using appropriate technology, with the presiding judge. That's awkward. It should be a

better communication with a presiding judge using appropriate technology.

THE MODERATOR: Question. What does the body think about having initially fewer village magistrates but train them -- have them so they can travel as circuit riders and cover several villages in lieu of one village? Fewer of them but a better quality.

MR. DAHL: Mr. Chairman, I'm not prepared to make that recommendation. I think that given our time constraints what we're called to do as a group, what we're constrained to do, I think, because of time and energy is to give some broad guidelines to the legislature that will set some policies -- I hear what you're saying. I think this language would cover that. Let me read it again

THE MODERATOR: All right.

MR. DAHL: Improve the magistrate system in villages through better communication with the presiding judge using appropriate technology.

If the legislature wants to take that to mean: "Let's have a traveling magistrate that goes from Sheldon's Point to Lockanuk to Omilak," they could do that. They wouldn't be kept from doing that by the language of this resolution. If they want to maintain the present system of having a local person residing in the village acting as village magistrate, they could do that also. But that's a

decision that takes a good bit more discussion than we have time to handle right now.

MR. ACKERMAN: Mr. --

THE MODERATOR: I'll go. I'm amenable.

MR. DAHL: Number two, let me just say one -- let me finish the resolution and then I'll move it's adoption for discussion. Two, provide increased funds to villages for police training and support.

THE MODERATOR: Would that be in the area of revenue sharing?

MR. ACKERMAN: Not necessarily.

THE MODERATOR: It could be.

MR. DAHL: It could be in the area of revenue sharing as this lady was talking. It occurred to me that one of the problems that we have with municipalities -- with smaller municipalities is they have to hire policemen. It seems to me that there may be a better way to do that. And that is to have a -- to have the State participate in some way with the villages, either through actual administrative control or through training or through providing funds for salaries and so forth with the villages to provide not a trooper but a village policeman in that village. Maybe that provides too much control with the State criminal justice system.

THE MODERATOR: Well, our --

MR. DAHL: Our present system is a disaster.

THE MODERATOR: Our village policemen work very well with the troopers. I think it's a team effort. And I believe the village policemen program can be strengthened by an increase in that area of the revenue sharing program. Revenue sharing -- the formula should be rewritten. It should be upgraded to keep abreast of inflation.

MR. ACKERMAN: Mr. Chairman?

THE MODERATOR: Mr. Ackerman.

MR. ACKERMAN: I think -- you know, there is talk all over the State, and there is in our area particularly with Jack Crandall. Maybe these federal funds cost us too much money and they are too restrictive. The cost of the administration of the CETA funds is -- you know, it's just enormous in the amount of people it takes to do it and amount of paperwork you have.

So I think if the State were to look at directly funding the CETA itself we could get out underneath from these bureaucracies. Maybe we're not going to get so much federal funds, but if we do get it and have the people familiar with the structure -- they know about the procedure -- and everyone's aware of the need there of the CETA program, and the State has to look at picking this thing up themselves.

THE MODERATOR: That's true.

MR. ACKERMAN: We're not going to be getting the Federal funds we've been getting.

THE MODERATOR: These Federal fund matching programs are so abundant that, if you had the ability to get through the red tape, you could match yourselves broke.

MR. ACKERMAN: Well, I think the CETA is really a fine program. I'd say it's expanded the opportunities. People would never have had the opportunity if it hadn't been for the CETA programs.

THE MODERATOR: That's right.

MR. ACKERMAN: It is a good program. Basically, it was, but there's been so many more restrictions, Federal revisions and so much more paper put onto it that the State has to look at funding it directly themselves, I think. And by that we wouldn't have a year restriction on the policemen. You know, because a lot of times you go in, and if you're in business and you get a CETA employee, you've brought the employee in, you've trained him, you've increased your business, you've increased your income, and you might get to the point that you go ahead and, you know, assume it yourself if you're a small business and you've increased it. You've got it started yourself and you need an employee and everything. But municipal services operating under the CETA grant -- you know, you're just not doing that. So you have an ongoing need. And a one-year

restriction is too restrictive.

THE MODERATOR: We've taken some CETA people in our businesses, but there's too much red tape.

MR. DAHL: Mr. Chairman, let me modify, given the discussion, No. 2 of this resolution, then, to reflect what's happening. I feel a considerable time pressure, and we've got a lot to do.

Provide increased funds to villages for police training and support, considering state participation in the management and support of the CETA program.

MR. ACKERMAN: Oh, I think that's fantastic.

MS. BENNETT: Would you mind reading it just once more?

MR. DAHL: I'll read the whole thing.

MS. BENNETT: Well, I was really concerned with that last one. I want to hear it once more.

MR. DAHL: Provide increased funds to villages for police training and support, considering State participation in the management and support of the CETA program.

THE MODERATOR: 100 percent funding of the CETA program. Full funding.

MR. ACKERMAN: Well, I --

MR. DAHL: Are you moving to amend my resolution, Mr. Chairman?

MR. ACKERMAN: Mr. Chairman, I'd like to point out one

thing. All of our dialogue, you know, is a part of the resolution when this is going to be considered, and I don't think it necessarily has to be in the resolution as long as we've said it. And I think we're getting it on the floor at our conference that the resolution that is present is appropriate. It speaks to it. We have a dialogue to back it up that knows what we're talking about.

MR. DAHL: Is that a second?

MR. ACKERMAN: Yes, definitely.

THE MODERATOR: Proceed, Mr. Dahl.

MR. DAHL: Question.

THE MODERATOR: Do I hear a motion?

MR. DAHL: Motion is made.

THE MODERATOR: Second?

MR. ACKERMAN: Yes.

THE MODERATOR: Those in favor indicate by saying aye.

(Indicating.)

Aye.

THE MODERATOR: Those opposed.

(No response.)

THE MODERATOR: Let the record show a unanimous vote by the entire Alpha Committee.

MR. DAHL: Teaming masses.

THE MODERATOR: Okay. We've taken care of -- we're in order through Education, Transportation, Law and Justice,

Communication and Finances. Oil and Gas Policy. In the area of Fisheries we haven't arrived as far as the fisheries marketing, economics, bottom fish development and Alaskan fisheries. The resolution covering Subparagraph 1, Fisheries Marketing in Japan. Paragraph 2, Bottomfish Development. No. 3, Alaska Fisheries, Paragraph 3, a three-pronged subtitle under our resolution or subparagraph. I'd like to see us -- see the State and independent marketing agencies exert a substantial domestic thrust on marketing of Alaskan fish products, particularly into the Midwest away from the seacoast. Minnesota and Wisconsin and North and South Dakota, Nebraska, Wyoming, Iowa, Missouri, et cetera. Those people back there are fish eaters when they can get the fish, besides just catfish off the Missouri River.

MR. DAHL: Mr. Chairman?

THE MODERATOR: Mr. Dahl.

MR. DAHL: I think we're operating -- I see reflected here an interesting philosophy, and that is that we use the revenue from nonrenewable resources, that is oil, to support renegotiable resources, that is fish. Include in that non -- or in that renewable resource development timber -- what other renewable resources do we have?

MR. ACKERMAN: Energy.

MS. BENNETT: And tourism and other resources as well.

THE MODERATOR: We should be using the nonrenewable resource revenues to develop our nonrenewable resource potential. Economic base.

MR. DALL: And I think with that as a basis of what we're doing -- keep talking. I'll try to perhaps....

THE MODERATOR: That's good business. Take these substantial windfall revenues from a nonrenewable resource to build an ongoing viable economy from our renewable resources.

MR. ACKERMAN: I think we're mandated to do this in all areas. I think that it's a good investment in the future. It's creating jobs and income, is a better distribution of wealth, of giving people money. And that's a lot of what's been talking about, something that will perpetuate itself. And we have to consider that, you know, developing our renewable resources, our fisheries, our timber, our agriculture, tourism, but especially our alternative energy sources. And I think we should, you know, have a high priority in these areas, and I don't think that economic feasibility is a question that we have to worry about. I think you could consider it an investment in the future.

We had a flood control project in Fairbanks that four engineers put in. We had hydrogen source available to us. The four engineers decided it was economically

unfeasible. So we don't do it. It could have been incorporated for next to nothing. The source at that time was 10 cents a kilowatt hour. If we could lower our rates to 10 cents an hour throughout the state, why -- places we're paying 40 cents an hour --

THE MODERATOR: Right.

MR. ACKERMAN: -- it would have been beneficial at this time. We're approaching 10 cents an hour for power. So we can't -- I don't think we have -- we can afford to look at things that are just economic. That's one of the reasons we're doing this ourselves rather than the Federal regulations that are adopted in the Lower 48, more than they are our needs, is important.

I think that we have to put special attention on our renewable energy resources. I think every community should have some sort of alternative energy, whether it's wind power, solar power, hydro power, tide power. Our hydrogen cells we were talking about earlier -- every community should have one.

THE MODERATOR: While Mr. Dahl is sweating over this fisheries resolution and getting it in final form we could skip to Agriculture. I am somewhat guilty of having tunnel vision where agriculture is concerned. I was an Iowa farm boy, and I think in vast acreages of croplands that are extremely highly productive under extremely favorable

conditions. And it's the breadbasket of America, the Midwest. And when I compare that -- use that for a yardstick to our agriculture potential in Alaska my thinking becomes very confused. I can't comprehend in my own mind -- and I'm short, and I feel inadequate -- I feel that I just couldn't be able to get it in focus how agriculture will really be of any real essence in Alaska compared to what it is in the Midwest.

Mr. Dahl.

MR. DAHL: I think we've been really lax in creativity in this area. There was an article in the Agroborealis, the magazine of the University of Alaska extension service. Some time ago they talked about a wild rice experiment that didn't work very well done near Fairbanks. I'm from Northern Minnesota. Wild rice is just that. It grows wild. It has become a tremendously lucrative commercial crop for Indians in the area. Price has increased from 50 cents a pound not very many years ago to something like $5 or $10 a pound --

THE MODERATOR: Right.

MR. DAHL: -- on the market.

THE MODERATOR: Gourmet food.

MR. DAHL: It's tremendous, the market. As I looked at the potential of the area of the Yukon-Kuskokwim-Delta there's room there for a cash crop because the area is

ideal. Water all over the place. It's the kind of thing that could be raised as a cash crop. Nobody's thumping that drum, and I'm not going to do it alone, but it's just one area, one area of thinking that we haven't even explored.

The Delta Barley project, certainly, is a creative use of State effort to improve our agriculture capability. I think we need to -- we need to do more because the problem -- again, if we talk about problem analysis, the problem is not so much the effective and creative use of land, although that is a part of the problem.

The problem is that it costs more than it should to feed our people. And as native people are moving away from subsistence food, from traditional foods that are part of their culture that have sustained them well over many years, the risk is they move to the less nutrious white man's food that comes in boxes and cans with all the nutrition taken out of it. And not only is that nutritionally deficient it's very expensive. It requires a cash supply that is not presently available under the present work standards that we have. So it seems to me that we've -- that it's critical that we move toward the development of a food supply in this state, that we do it with dispatch and creativity in providing sufficient funding so that our

people can be fed better. We're not doing that now.

MS. BENNETT: Well, there is a program that's just begun this year. I believe it's under the auspices of Tanana Chiefs. They have picked up on that problem. There have been people in the villages this summer doing gardening projects and things like that. Now, that's a really direct food source, I mean a garden in the villages. That makes more sense as a food supply than huge fields of grain. I think that the -- when we're talking about the Delta Barley projects and all you're talking about marketable agriculture for cash, not as a food supply. And that seems more realistic to me than to think we're going to have large farms and be a breadbasket for our own people, and in a direct way it's cash. I think except for gardening projects. Truck gardening is very important, but when we're talking about when you were comparing with Iowa -- we're talking about rape seed to sell to Japan, not as something for food.

THE MODERATOR: I'm guilty of having tunnel vision when I think about agriculture when applied to Alaska.

MR. DAHL: Mr. Chairman?

THE MODERATOR: Yes.

MR. DAHL: You think about the historic cultural shift, though, with that. You're moving people that are traditionally hunters and gatherers and making them farmers.

Now, the Hebrews did that, and Cane ended up killing Abel over it. But --

MS. BENNETT: But a lot of that shift has already taken place. People in the villages are already eating, you know -- importing Coca-Cola and all. So the only thing to do now is to try to make it better. It's already happened. I think it should --

THE MODERATOR: That's happened a long time ago.

MS. BENNETT: That's what I'm saying. I think Mr. Dahl is saying we're trying to prevent that happening, and I think it's already happening.

MR. DAHL: I don't know that we need to prevent it, but I think we need to be alert that we're not just saying, "All right, folks, there's a piece of ground. Make a garden." We're talking about a major cultural shift, and we need to be alert and sensitive to the cultural struggles that we're encouraging here in moving people from being hunters and gatherers to farmers.

MR. ACKERMAN: Mr. Chairman, I'd like to, you know -- at this time we're -- you know, I think we need to take a closer look at our technology that we have available to us in this area. And we went to the dinner, we listened to Buckminister Fuller. You know, the geodesic dome -- we could control the environment where we want to do these things in our agriculture. And I think we have to consider

this technology and develop it a little bit. It has a tremendous potential. We should be able to do anything anywhere the Alaska.

THE MODERATOR: Hydroponics gardening can do substantially well in communities the size of Anchorage. We have that -- look at that heat going out over there, that powerhouse. (Indicating.) That scavenger heat could be used in a hydroponic heat house. They have the powerhouse. They could have a hydroponic greenhouse there. We could go on and on. At our own powerhouse we could operate a hydroponic greenhouse.

MR. ACKERMAN: I think that our geodesic structure could probably do this. Everyone. It's cheap and light. You don't have to bring a lot of stuff in and, yes, you could do this. And I think this was something Buckminister Fuller was talking about. They're talking about doing a whole city under one. Surely we could put up a small dome and do hydroponic guardening around the state. And I think this appropriate technology should be developed in the agricultural field.

MS. BENNETT: I think that that is happening already. In Fairbanks, as a prime example, of the uses of the waste heat with pipes under the ground and things like that, that that's really going forward already.

THE MODERATOR: That's been almost Alaska when the

commercial company started in Fairbanks when --

MS. BENNETT: So is hydropower and everything. I'm talking about more interest and going forward. I'm not saying it's existing.

MR. ACKERMAN: This is all a private and individual basis? You know, but I think the State, you know, is --

MS. BENNETT: But it's being funded -- a lot of new projects that were funded in energy research were in that area also.

MR. ACKERMAN: We should emphasize the appropriate technology and agricultural field, that we develop it more and expand it. It's fine. In Fairbanks we have another need that when you get out of Fairbanks there's not the capability to do. You know, the State should be looking at it. We're obligated to do that.

THE MODERATOR: In the State's land policies dealing with getting State lands in the hands of the residents of the State -- it's very, very controversial. Their policy leaves an awful lot to be desired, and I'm convinced that it's been very detrimental to the development of an economy from the lands. Particularly in the area of agriculture.

I think that we need far more liberal land policy in the disposition of State lands. And when Texas was settled there were no State lands or Federal lands after the Texas lands were disposed of. It was all in private

hands including the King Ranch in South Texas, the largest jet ranch in the nation. And they came in with property tax, the State did, and the people made the land productive. They had to make it productive or the taxes would -- the tax foreclosures would take the land from the people. And if the State or the Federal Government needed land, they had to buy it from individuals. That isn't the case in Alaska. 2 percent of the lands -- not more than 2 percent of it is in the private sector.

MR. ACKERMAN: I think we should stress, you know, land policies, you know, that meet the needs of the people, and a lot better one than we've had. A lot of people are aware of the problems we've had with our land policy. I think I certainly support that. I don't think we have time to get into the land thing here. Everyone's aware of the problem of meeting the immediate needs of the people in the State.

THE MODERATOR: The Interior Department addressed that, and before the settlement act ever surfaced through land allotments where people made application up to 160 acres. The native peoples of Alaska. They had fishing sites, campsites, hunting areas, berry picking areas, the whole shot, that could be transferred to the individual's families on application. That was a -- really, a good approach.

MS. ANASOGAK: Mr. Chairman --

THE MODERATOR: Mrs. Anasogak.

MS. ANASOGAK: It seems to me when you're talking about the native lifestyle when our parents and their parents were living or when they were allowed to live the way they have for years and years, for centuries, that has changed because of the rules and regulations by the Fish and Game and other agencies. We're prevented from living the lifestyle we traditionally did. And now it seems to me that we're trying to create something to take that place. Like we're talking about agriculture, something that the natives had not done before. They tried to introduce that, too, to the natives. And I could understand, and I could see the benefit of it, and yet I could see the other side of the coin, too.

MS. BENNETT: So do you mean you do or you don't favor the gardening projects and things like that?

MS. ANASOGAK: Personally?

MS. BENNETT: Yes. Do you feel divided yourself about that?

MS. ANASOGAK: Uh-huh. Because I -- even now I sometimes wish that I had lived a hundred years ago so that I wouldn't be -- I wouldn't have been faced with this problem. And yet, you know, in order to progress you need to think about these things, and you need to face them.

And a lot of the people are not ready for that.

MR. DAHL: Bob, Mr. Alexie --

THE MODERATOR: Mr. Alexie.

MR. ALEXIE: Mr. Chairman, I've been wanting to see this gardening build up again because when the first white man came to my area they had a lot of planting, turnips and --

MR. DAHL: Potatoes?

MR. ALEXIE: Potatoes, tomatoes, and like my mother and the other people who are on '60s -- they tell us that we're too lazy. "You guys -- youngsters are lazy." They said, "These things are fresh vegetables," what we planted some years ago back in end of '50s. I think some lady came in and started a courage club. So I and the others were planting turnips and cabbage, lettuce, anything that can grow.

Well, they were growing but only once we had a flood and everything had been destroyed. You know, we had the chinook wind. And that was the time I quit, you know. And now I'm beginning to ask myself: "Why did I quit?" You know, because I would have developed some kind of a good soil.

Right now it will be a little hard for me to start because I'll start something new. And I don't have any experience like my mother. If she died, who is going to direct us? Maybe somebody from Idaho. And every day we

used to haul the slime of the fish guts, everything, to the garden and pour it.

THE MODERATOR: Nitrogen.

MR. ALLAIE: Uh-huh. And in wintertime they used to tell us to gather the waste of the dogs and in springtime pour it, you know, mix it with the soil. And everything grew so good. Now just a few people are beginning to start, even down where my wife came from because there was one white man who used to grow these potatoes and turnips. And their ladies used them for cooking.

THE MODERATOR: Mr. Dahl, we're ready to double back to your masterpiece.

MR. DAHL: Well, Mr. Chairman, I don't know if I've covered everything, but let's try this: Alpha Group recommends that the legislature adopt a policy of using revenue from nonrenewable resource development to improve the economic viability of renewable resource development with a view toward: One, providing technical assistance to industry at State cost to improve planning, quality control and marketing; two, providing creative funding programs through loans and grants paid back through employment or tax forgiveness, equipment provided to locally-owned fish processers and fishermen by lease or lease purchase. That's obviously poorly punctuated, but the idea in the second one, I think, is -- and I would move, Mr. Chairman,

for its adoption. Second, second, second.

THE MODERATOR: It's been moved and seconded.

Discussion?

MR. DAHL: The idea of the second one -- Let me read again to refresh your memory. It's still early. "Providing creative funding programs through loans and grants paid back through employment or tax forgiveness and equipment provided to locally-owned fish processors and fishermen by lease or lease purchase."

We've already talked in our deliberations about the State being the owner of equipment and leasing that equipment to -- we're talking about air taxi operators, to improve their capital position and provide better service in the bush. There's no reason why the State could not use its vast resources to assist local fishermen and fish processers in doing that very same thing.

THE MODERATOR: That's right.

MR. DAHL: And it would seem to me to be a good investment for the state rather than have the -- a cannery, for example, that needs to shift its entire emphasis, or a good part of its emphasis -- I'm thinking particularly about Mountain Village on the Yukon -- from a single-line line cannery to a flash processing operation of freezing the fish cold.

THE MODERATOR: Sharp freeze.

necessary for planning, equipment purchase and marketing assistance so that the job is not done piecemeal.

It's not done as funds are available. It's done in a comprehensively way, and it could be a very fine little fish processor, and the State could be paid back its investment through several ways. I'm thinking not only of direct payback of cash with interest, the traditional loan pay back approach, but the State has an income tax. And without getting into whether it ought to continue that income tax -- that's another issue that's too big for us at this point. But there would be no reason why the State couldn't say "for every dollar you pay to an employee we will forgive you a proportionate amount of -- on your lease directly or on the -- well, for every dollar you pay in taxes we will forgive you a proportionate amount on your -- on your lease so that " -- I don't have any --

(Discussion off the record)

MR. DAHL: We've talked about that with student loans where you give a student money and pays that back by coming back to the state and working. Why can't that same principal be used for capital development?

MR. FISHER: You mean getting a vested interest in the establishment that's initially financed by the State by those persons who are working in it gradually getting a piece of the equity ending up owning the cannery?

MR. DAHL: That's not what I was thinking of. But, for example, the cannery itself is required to pay taxes on its profits, on its income. Why not forgive a portion of those taxes -- why not -- no, excuse me. That's not what I mean. Why not take the amount of taxes that they pay and use that to forgive the lease that they owe to the State. If they don't make any money there's -- that lease could be an ongoing debt. But that's not a terrible burden because the creditor is the State and not some bank that's going to come foreclose.

THE MODERATOR: Are you talking about the raw fish tax?

MR. DAHL: I was not talking about the raw fish tax. I was talk about the corporate income tax.

MR. ACKERMAN: I think one thing we should consider in this areas is the State doing it in cooperation with the regional corporations. We talked about this earlier, and this is an excellent example. I think it would be much more responsive to have -- and practical to have regional -- you know, input into this process.

MR. DAHL: I agree with you. What I don't want to get into, Mr. Chairman -- because again the burden -- terrible burden of time, is getting too specific.

THE MODERATOR: Uh-huh. The overview --

MR. DAHL: What I'm trying to see here is a means of creative funding and creative payback of capital -- of

loans for capital projects. That's simply not been tried.

THE MODERATOR: Like the Shepard cannery at Mountain villages. Instead of putting high quality Yukon King in a can, sharp freeze it and compound the value of that fish if in the retail market a thousand fold.

MR. ACKERMAN: Would you object to --

THE MODERATOR: And fund projects through innovative funding to the industry to upgrade the processing techniques.

MR. DAHL: Exactly. But do it comprehensively so that you aren't dealing -- so you don't deal with the cannery without dealing with the fishermen.

THE MODERATOR: Right.

MR. DAHL: If you're talking about quality control you've got to have quality control from the minute that fish gets out of the water.

THE MODERATOR: That's right. It starts right there.

MR. ACKERMAN: Would it take away from it too much if we put in "cooperation with the native regional corporations? " I think that would speak to something we're trying to develop in this areas. I think.

MR. FISHER: Yes, that would be a good idea.

MR. ACKERMAN: Responsive to the problem. I think that's excellent.

MR. FISHER: I could foresee that you could actually

get a piece of the equity, you know. People working in there if they could kind of figure out the corporations so that the forgiveness -- they would own a piece of it and if the State would forgive payment, that's what such money was for. That's what Mike Bradner suggested. We've never done this before. We ought to give it a try.

MR. ACKERMAN: I think if we do it in cooperation with regional corporations and we combine the assets of the State with the regional corporations it's going to be to everybody's benefit, and I think, you know, we'll achieve what we want to do.

MR. FISHER: You know, the regional corporations are the thing we think about first, but we don't want to forget about the villages corporations.

MR. ACKERMAN: The corporations, that's right. But this is -- we're going to have destruction -- I imagine it would be developed. We have the input we want to involve the region. We move from the state into regions and then into villages. The closer you get to the people the more responsive you're going to be to the needs.

MR. DAHL: Shall I read the resolution again, Mr. Chairman?

THE MODERATOR: Please do.

MR. DAHL: Alpha Group recommends that the legislature adopt the policy of using revenue from nonrenewable

resource development to improve the economic viability of renewable resource development with a view toward: One, providing technical assistance to industry at State cost, to improve planning, quality control and marketing; two, providing creative funding programs through loans and grants paid back through employment or tax forgiveness and equipment provided to locally owned fish processers and fishermen by lease or lease purchase in cooperation with native corporations and other sources of private revenue.

MR. STUMP: I think you're making a real problem on that when you're limiting that kind of activity through your wording there to just the fisheries. There's a lot of other activities renewable resources.

THE MODERATOR: We're dealing with the fisheries section at this time. That's why we're addressing ourselves to this specifically.

MR. DAHL: I agree with you, and I have not dealt with timber, if that's your specific concern.

MR. STUMP: Well, there's timber, there's mining, there's --

MR. DAHL: I know.

MR. ACKERMAN: Well, I think --

MR. DAHL: Now, mining is different. Mining is a nonrenewable resource.

MR. STUMP: That's kind of a rhetorical thing.

MR. DAHL: We're talking about using revenue from nonrenewable resources to support renewable resources that have been underfunded through the years. And timber certainly is one.

MR. ACKERMAN: I think, you know, we can develop this in the dialogue. I don't think we're going to get it all in resolution. We're not going to get a resolution covering every areas. But I think if we make a clear record that this is our intent. This should also be, you know, applied in the timber, the agriculture, you know, industries. It will be a matter of record. It's going to be -- we are going to have a verbatim transcript, and it will be used just as much a the actual resolutions. We have to stay brief if we're going to have resolutions at all.

MS. BENNETT: Although, I don't agree with that, I don't think the people will take the time, necessarily, to read the full transcript. I agree that it's on record. But this is what people will look at.

MR. ACKERMAN: I think the reason we are here having the verbatim transcript is so the people--

MS. BENNETT: It's available, I agree with that.

MR. ACKERMAN: I don't think the general public is going to read it but the Legislature is certainly going to be looking at it, and you've opened the door and we've said

this is what we want to look at. We don't have the time to draft a resolution, but this is something that we are interested in and that should be explored, and I think that it will be explored.

THE MODERATOR: When we were implementing State government as a result of the constitutional convention and writing law in the first State legislature and setting up the departments we went back to the minutes of the meetings of the constitutional convention. We researched the minutes to dig in to see what the philosophies of the delegates to the constitutional convention wer. And this very thing will be done by staff researchers and the Legislature and the administration in dealing with the resolutions that come out of this Future Frontiers Conferences.

MR. ACKERMAN: I would move adoption of the resolution at this time and emphasize that, you know, we are -- our intent is clear on the record, that we don't -- we mean to expand this into fisheries and-

THE MODERATOR: Mr. Ackerman, it's been moved and seconded. I called, we had a discussion. I called for the question. All those in favor signify by the customary aye.

(Indicating)

THE MODERATOR: And those not in favor by the customary nay.

(No response.)

THE MODERATOR: Let the record reflect a unanimous vote by the Alpha Committee.

MR. STUMP: Mr. Chairman, I'd like to propose a resolution. The Alpha Group resolves that the State should facilitate in every way possible development of Alaska's vast timber resources in an expeditious, economically feasible and ecologically responsible manner.

MR. ACKERMAN: Second.

MR. DAHL: Question.

MR. FISHER: Let's talk about that just a minute.

THE MODERATOR: Discussion?

MR. FISHER: When you talk about development you want to talk about development and continuation or regeneration. Because all we've done so far in forestry is develop for harvest. We really just harvested. We haven't done into any of the rest of the spectrum of forest management. So you ought to make some reference to that. All right. What was your word? What was your language? Development?

MR. STUMP: That the State should facilitate in every way possible development of Alaska's vast timber resources in an expeditious, economically feasibility and ecologically responsible manner.

MR. FISHER: All right. Let's put "development and continuation " in that very broad -- well, you can put

anything in there. And I would move that as an adoption after "development and continuation " of Alaska's -- that's my motion.

MR. ACKERMAN: Second the motion.

THE MODERATOR: I think Representative Fisher has -- I think what you're alluding to here --

MR. DAHL: It's been a long time.

THE MODERATOR: -- is reforestation of every areas that's harvested must be reforested.

MR. STUMP: That's a present part of the State for Forest Practice Act.

MR. FISHER: That's required by the State Practices Act. But what you need to do in something like this -- in effect, what we're doing is raising the conscience of the State. And all that's happened so far in foresting is cutting.

MR. STUMP: Au contraire.

MR. FISHER: Well, I --

MR. STUMP: That's simply not true. I've worked extensively with the State Agencies and with the State Forest Practices Act. Look at what's happened in Haines. Do you think that that's the activities of the State agencies. And Haines has been one of only timber harvest. I think it's just the absolute opposite.

MR. FISHER: Well, you're --

MR. STUMP: Not absolute but --

MR. FISHER: But it's not looked at as statewide. It really isn't. There is not that awareness.

THE MODERATOR: It is not. It is not statewide.

MR. FISHER: And that's the only reason I was pointing -- don't hang up--

MR. ACKERMAN: As a layman, I hadn't been to Southeast too much. I was on the Boundary Commission, we flew over it. I was appalled. The clear cuts, the dead stuff -- every other tree was dead. Our forests are not harvested, they're not maintained. Our beaches are littered with the deadfall. There's trees on every -- I mean, it's just miles and miles of it. It is really appalling to somebody that doesn't live there all the time to see what we've done with that.

THE MODERATOR: When you go down there it isn't anything to be proud of.

MR. ACKERMAN: You know in Yakutat --

MR. FISHER: I didn't mean to put you --

MR. AKERMAN: You look at that stumpage that waste. You've taken pictures of the difference areas, Sitka, Yakutat and around and I've taken my children up to Thortyone we've looked at it. And to somebody that doesn't live there and look at it every day what we've done with our timber is appalling. You know. And we look at

stumping and it sits there -- you've got 10 inches. It takes a hundred years to regenerate because we don't do it.

THE MODERATOR: Mr Ackerman I'm reluctant to interrupt. It's -- time is running out. We're going to have to dispose of the rest resolutions. We're going to--

MR. FISH: Let me withdraw my motion.

THE MODERATOR: We have to go in session at ten o'clock.

MR. DAHL: I'd like to speak in favor of the resolution. I think the resolution is carefully worded.

MR. FISHER: I withdraw my amendment.

MR. DAHL: We're talking about ecological responsibility now. That means responsibility for the entire environment and the relationship of living things including man to that environment. We're talking about development. I think that's a philosophy that this group has supported in its discussion.

THE MODERATOR: Ask for the question.

MR. DAHL: Question.

MR. FISHER: Yes.

THE MODERATOR: All those in that favor indicate by the customary aye.

(Indicating)

THE MODERATOR: And those opposed by the customary nay.

(No response.)

MR. FISHER: See, it wasn't as hard as you thought it was going to be.

THE MODERATOR: Let the record reflect a unanimous vote by the Alpha Committee.

MR. ACKERMAN: I'd like to get back to the energy sources. I think we really need to look at it. I'm going to state it again. It's going to be on the record a lot of times. I think we have to have some sort of alternative energy for every community in Alaska's, be it hydro, wind, solar, geothermal, tide power or hydrogen cells, some type of alternative energy be developed.

THE MODERATOR: I think that time's getting so short that we should concentrate, prioritize the Energy section now and then address ourselves to the remaining topics, if there's time. Is there any objection to this, if we jump to energy now, on part of any of the body?

(No response)

Let us proceed, then, to the Energy section.

MR. FISHER: What are we going to do? Are we going to pass a resolution on alternative energy?

MS. BENNETT: We're going to talk about it.

THE MODERATOR: We're going to discuss the resolution input first. We've touched on energy numerous times throughout our discussions in other areas of our deliberations, and I believe we're close enough now that we

can proceed to put the committee's resolution together. That is the feeling of the body?

MR. ACKERMAN: That's it.

THE MODERATOR: That's the feeling?

MR. FISHER: Go? Yeah, let's go.

MS. BENNETT: We haven't heard from the people here who live in the small villages. That's what we're talking about.

MS. ANASOGAK: I agree with Mr. Ackerman. Something has to be done to help the small villages because right now in my own little villages fuel prices over the last year have doubled. And it's -- it's something that has to be resolved. We need -- that's why I said I agreed with Mr. Ackerman.

MR. DAHL: Didn't we pass a resolution last night to deal with the State use of oil and gas? I thought we did.

MR. STUMP: Yes, we did.

THE MODERATOR: Alternate --

MR. DAHL: Oh, yes.

MR. FISHER: That's not quick enough. We really ought to have something next week.

THE MODERATOR: We needed it last year.

MR. ACKERMAN: We had hydro power -- you know, small hydro power available to us in Fairbanks with the Chenan Lakes Flood Control Project. With the Federal

participation in that project it wasn't economically feasible to do it. If we had had power generation at 10 cents a kilowatt hour -- if you had 10 cents a kilowatt hour in the bush it would be -- you usually pay 25 percent of your current electric bill. 10 cents an hour, a kilowatt hour, is a lot of money but not when you're paying 40 cents. And you'd have the chance of that going to 80 cents. That's what you're looking at, and I think that's the best investment we could make in our future and our future generations.

These alternative sources are renewable. It's not energy from a nonrenewable source, and they're going to just perpetuate themselves. And I think that, you know, we should support an alternative energy source for every community in the State of Alaska's, be it hydro power, tide power, wind power, solar power, geothermal power or hydrogen cells. Some type of alternative energy source needs to be developed. I feel we're mandated to out of our nonrenewable resource funds.

THE MODERATOR: I feel that a resolution should include direction on acquisition, selection of hydro sites.

MR. ACKERMAN: I think our dialogue should reflect that -- I think for, you know, a broad comprehensive resolution I'll state it in the form of a resolution. That is: The State develop an alternative energy source for all --

THE MODERATOR: Every community.

MR. ACKERMAN: Every community in the State of Alaska --

MR. STUMP: Make that plural. 'Sources."

MR. ACKERMAN: I was going to complete the resolutions -- not limited to hydro power, tide power, wind power, solar power, geothermal power or hydrogen cells. And sites after the inventory has been made of the resource, the renewable resource sites should be selected and protected.

THE MODERATOR: We can divorce ourselves at least 20 percent from dependency on carbon fuels for power generation.

MR. ACKERMAN: Could we have a second on the motion?

MR. DAHL: Second.

THE MODERATOR: It's been moved and seconded. Discussion?

MR. ACKERMAN: I think this is the best investment we could make in our future, and, like I say, it is something that we saw in the Lower 48 where hydro power, which is renewable power source, has stabilized the economy, and the benefit has been, you know, to the people there and the cost of living. And to -- I feel we're mandated to do that with our renewable resource. Particularly when we consider the energy crisis that we do have in the world. It's not just in Alaska's and the United States. It's the world --

THE MODERATOR: Move the question? Did you -- may I

read what I have here so everyone agrees on what we're saying. "The State develop an alternative energy," or would you like "source" or "sources" for every community in the State of Alaska's -- singular or plural?

MR. FISHER: Sources. Let's go plural.

MS. DUYACHAK: "For every community in the State of Alaska's not limited to hydro power, wind, solar, geothermal power or hydrogen cells and sites after an inventory is made should be selected"?

MR. ACKERMAN: "Protected." I think after hydro power there was tide power.

MS. DUYACHAK: Hydro, wind, solar -- "including but not limited to hydro, tide, wind, solar, geothermal, and hydrogen cells?

MR. AKERMAN: Yes. Or hydrogen.

MS. DUYACHAK: Okay.

THE MODERATOR: All those in favor of the adoption of the resolution before us signify by saying aye.

(Indicating)

THE MODERATOR: All those opposed to the adoption of the resolution signify by saying Nay.

(No response.)

THE MODERATOR: Let the record reflect that the resolution has been adopted unanimously.

MR. FISHER: Are we going to do anything on

conservation of energy?

MR. ACKERMAN: I think the record should reflect that, you know -- I think this is one of the biggest areas of conservation, developing alternative sources. You know, technology. And we certainly should expand on it.

MR. FISHER: Okay. Why don't we leave it at that. What's the next priority?

THE MODERATOR: In the areas now of tourism we've really only begun to scratch the surface in Alaska. The real potential of the tourism is that substantial part of our economy. Irrelevant I think that we could certainly take a page out of Hawaii's book. If it would make an in-depth study of their techniques, their philosophies, their innovation of professionalism of developing tourism in Hawaii.

MR. DAHL: Waikiki would be nice to bring up here.

MR. FISHER: Hey, hey, hey.

MR. DAHL: It would be creative.

MR. ACKERMAN: I move that we put up a geodesic dome and bring Waikiki over.

THE MODERATOR: We don't have time for that much levity, really.

MR. ACKERMAN: Why should we have to go to Hawaii with the technology we have now.

MR. STUMP: You mean we can bring it here?

THE MODERATOR: The tourism promotional techniques in the manner which they cater their tourists and promote their tourists.

MR. ACKERMAN: I'd like to say something on -- you know, we look at tourism and the dollars that it brings in. We talked about education and sending our children outside to school. You know, this is -- the people in the United States know less about Alaska than they know about foreign countries. And the tourism does proceed most of the education of the people of the United States.

And if we had a tourist industry 50 years ago, we wouldn't be in the problem we're in with D-2 right now, this thing that the Congress of the United States is dictating to us through ignorance. You know, putting their standards on us. That's what we're doing.

I think the tourist industry needs to be developed for that main issue, for education of the people of the United States and what Alaska is and Alaska's people are. You know, more than -- I think that's a real fringe benefit besides the dollars that we create. And we have to look at that. But I think it's appalling that the people in the United States know less about Alaska -- and they do -- they know less about Alaska than they do about most foreign countries. When I went to school -- and I didn't finish school because I couldn't -- you know, it had no

credibility to me. I came up here in 1946. I was supposed to living in an igloo. And the people in the United States still think we're living in igloos. I was one of the fortunate few, I've seen an igloo. In bad weather that hunters were in there, they put up an igloo in 20 minutes. It was a temporary shelter on the ice. I feel very fortunate to have see one, and it took a long time. But the people in the United States think we lived igloos. They wonder what kind of food we eat. So, I think the tourist industry as an educational process, you know, for the country is really valuable.

MR. STUMP: I really agree with you.

THE MODERATOR: Some in the United States think all the people in Alaska are Eskimos. A young lad told me one when I got up. I had come to his home as a guest and with his father and got up in the morning and this youngster said, "I know who you are, you're that Eskimo from Alaska. And I had some kids come over and they wanted to see that Eskimo from Alaska. They think all the people in Alaska are Eskimos. These kids were around 10 years old.

MR. STUMP: I really agree tourism has a tremendous potential for educating the rest of the people in the other state of Alaska's problems. I think the state would be missing a bet -- a good bet if they didn't capitalize on that when these people were in the State and providing them

the kind of information to more fully understand the state and its issues and problems. Unfortunately, there is for the most part, a very small portion of the year in which you have very many tourists. This is particularly true -- well, I think it's true throughout the entire state. And as such they have a hard time comprehending what kind of problems we have when we don't have 20 hours of sunlight during the day and the sun is shining and it's nice.

I had wished that they would have had an interpretive program, perhaps on the ferry system when Mr. Ackerman was down there so he better understood the timber harvesting process and understood what it was that was happening out there. Granted, a shore cut areas is not a very pretty site for sight for the first two years, but there are a lot of things that have to be interpreted in many areas, not just timber but in fisheries, harvesting and in various other activities that we have throughout the state so that people come away with a really accurate understanding of what it is that Alaska -- that Alaskans go through living.

MR. ACKERMAN: I took my family down -- we spent a couple of weeks down there, you know, so they would be familiar with that. That's a different world, exterior Alaska, than it is from the North Slope.

THE MODERATOR: It's time to knock it off. We're going to have to go down --

MR. FISHER: We're not going to do anything on tourism? Have we done anything on land at all?

THE MODERATOR: We have to go in in seven minutes.

MS. BENNETT: I'd rather not do it than do it in haste. too

MR. PAUL: I would too. I agree.

THE MODERATOR: What?

MR. PAUL: I don't think we should do it if we have to do it in haste

MR. FISHER: Somebody else will cover it.

MR. PAUL: Like talking about sin. You could say you're against it.

MR. FISHER: You mean for tourism? Hey, now, wait. They catch all the biggest fish. They keep us off the beaches? I'm not quoting Alaska. I'm quoting Hawaii. I was just there, and that's what the Hawaiians were saying. So it's a mixed blessing.

MS. BENNETT: There's an awful lot to talk about.

THE MODERATOR: I don't think that we should treat this in haste at all. We don't have time to be deliberate. We don't have time to treat the lakes issue without doing it in haste, so we'll have to let the lakes continue to go to the dogs and the land go to the D-2 and the tourism go to the Hawaiians. In summary.

MR. STOP: I would like -- before we break or go down

there I would like to refer to the resolution on transportation. And as it's typed up it's not as I remember it being passed the other day. I think it's very minor but very critical, dramatically, I think it's critical in what the intent is. On paragraph No. 1, it says " Expand and upgrade the Marine Highway system to the entire State ", and I believe that we had agreed that it would be "throughout' the entire State.

MS. BENNETT: That's right. That's right.

MR. STUMP: And I think that's important.

MR. FISHER: That's right.

MR. STUMP: And on Paragraph No. 5 it was "upgrade and expand". And I believe we agreed that 'community' was a more --

MR. DAHL: Yes. I'm sorry. This was taken from my notes, and I had not written that in. But that's correct.

MR. FISHER: What was it? "To the entire State," "throughout the entire State"?

MR. DAHL: Yes, it should be "throughout the entire State" and the "village" was replaced with " intercommunity road system", is that the one?

MR. STUMP: Yes.

MR. FISHER: Which one was that?

MR. STUMP: No. 5.

MR. FISHER: That's supposed to be intercommunity. Oh,

I see.

MR. DAHL: Yes, those -- we had agreed on that, and I don't think any action of the body is necessary, but I appreciate that.

MS. DUYACHAK: Okay. I've changed my master copy, so if each of you would like to change yours, everybody would be correct.

THE MODERATOR: Okay. Where is it?

MS. DUYACHAK: On the resolution regarding transportation. It's --

THE MODERATOR: Go. Under 5?

MS. DUYACHAK: Right. On paragraph 1, "expand and upgrade the Marines Highway System throughout the entire State ", replace the "to", the second to the last word in the third line with 'throughout. '

THE MODERATOR: That's right.

MS. DUYACHAK: And then in Paragraph 5. Upgrade and expand intercommunity road systems. Replace "village" with "intercommunity."

MR. FISHER: And I've got a question to the staff. Are we going to get names and addresses of all of the participants? I may be suffering from the Stockholm syndrome and I might want to actually look in on somebody when I'm in some of these areas.

MS. DUYACHAK: My understanding was a list like that

was going to be prepared for today. I haven't seen it yet.

MR. DAHL: What is the Stockholm Syndrome?

MR. FISHER: Well, the Stockholm Syndrome occurred when there was a group in Stockholm -- I think it was Stockholm -- that were trapped in a bank by a bunch of bank robbeers and after a while after being held hostage -- "Hey, we've been hostages here. We ought to identify one another." It was very facetious and very convoluted.

MR. ACKERMAN: I would really appreciate the opportunity to participate in this group. I think a future would would be desired.

MR. FISHER: It would make a difference. I -- a little bit of self interest involved in that -- get around the state to some extent, and part of my activities should include, you know, seeing you in the event I get an opportunity and, you know, let you know what's going on. Because we do -- I get involved.

MR. ACKERMAN: I would appreciate it.

MR. STULP: Let's see if we can catch you the biggest fish down in Ketchikan.

MR. FISHER: I'm more interested in berries, if it's consumptive. I'm not really --

MR. AKERMAN: You know, the first job--

MR. DAHL: Mr. Chairman, can we go off the record? Are we through?

MS. BENNETT: Oh, we're still on?

THE MODERATOR: Let's go through these resolutions some more in summary. Under the communications resolution we have here: "Expand and upgrade communications servicing facilities throughout Alaska." Either I didn't interpret what we had in that draft copy or this isn't worded right because we wanted total saturation. We say "throughout", I fear that "throughout" might leave a loophole. It might be throughout the state but might not be total saturation. Expand and upgrade communications services and facilities --

MR. DAHL: "In every community". Is that better?

THE MODERATOR: "In every Alaskan community".

MR. DAHL: Taa-daa.

THE MODERATOR: "Along with special consideration to". We could amend that right here and now.

MR. DAHL: What could be done?

MR. FISHER: Just change it.

MR. STUMP: Second.

MR. FISHER: Question.

THE MODERATOR: Question?

MR. DAHL: Question.

THE MODERATOR: Those in favor indicate by the customary aye.

(Indicating)

THE MODERATOR: Those opposed by the customary nay.

(No response.)

THE MODERATOR: Okay. The ayes have it. Let the record reflect the unanimous vote.

MR. STUMP: I think the single toll area is just bound to run into an awful lot of trouble.

MR. DAHL: I think it's a creative idea. That single toll area. I think that's a creative idea.

MR. FISHER: The APUC has been talking about it for months, but every time they talk about it --

THE MODERATOR: I know.

MR. ACKERMAN: Well, you know, I --

THE MODERATOR: Let us proceed, please. It's time. The financing resolution?

MR. FISHER: You mean you want to look at it and make sure --

THE MODERATOR: An overview.

MR. FISHER: Make sure it's what it ought to be.

MS. DUYACHAK: These things have been typed several times, so if you could just review them and make sure all the corrections have been made.

THE MODERATOR: Let's move very rapidly, folks.

MR. FISHER: How are these things going to be presented?

THE MODERATOR: We'll have to have a spokesman for the Alpha group to present them on the floor, I believe. If

it all the time.

MR. ACKERMAN: Mr. Chairman, I don't mean to restrict your mandate by doing it, but I believe the Alpha Group is going to be the first group to comment, and I think, you know, we ought to recognize the people that put this conference together. I think it was an invaluable conference. I know it was for me, and I have a better understanding of the problems in the State, you know, and to face other people. I think everybody in this room does.

We are all from different areas and with different occupations and, you know, different lifestyles, and I think in that sense we've all benefited tremendously and we have a common goal, and that's, you know, a better lifestyle for everybody. And I think that we have a better chance of achieving just through participating in in this conference.

THE MODERATOR: I'm thankful that people from the bush and small communities have had an opportunity to participate. I'm very grateful for that.

MR. FISHER: I think the participation from rural Alaska is heavier this one than it was in the last one.

MR. DAHL: I agree.

MR. FISHER: And there's something else that showed up. In addition to that there's heavier participation of the women. I've got a copy of the last attendance roster in

1969, and there's a lot more from the rural areas and a lot more women. As a matter of fact, I think the Beta Group has almost been -- well, they've got a woman chairman and I think they've got a group of women that I'm sure somebody -- I know got Red Swanson sore but --

THE MODERATOR: I'm not a male chauvenist. I liberated my wife the day I married her and she --

MR. FISHER: Wait a minute. You've got to be careful with those, Bob.

MR. DAHL: Mr. Chairman, as long as we're talking about that and as long as we're still on the record, let me just state one nagging concern that I've had about participation --

THE MODERATOR: Women?

MR. DAHL: No, not about women but about participation in the conference. The '60 conference was marked by the presence of traditional State leadership: Bob Atwood, Dan Cuddy, Byron Mallott, many other names that were well recognized in both the white and the native community. I think a significant -- I think it's important that this conference -- I'm saying that badly. I think that their absence has affected this conference, and I'm a little bit uneasy about it because I see that kind of leadership as really a shadow legislature. I see the real effectiveness of the traditional leadership in this state not

participating here diminishing the importance of this conference, and I'm sorry about that. I think it -- we would have been better off if they were here.

MR. STUMP: I would echo that.

THE MODERATOR: Not altogether.

MR. ACKERMAN: I'd like to really comment on this. I think the people that are our leaders are doing what we want them to do should be listening to what we are doing and they are going to be listening to what we are doing. I don't think they should have been here telling us what they should be doing. I think we should be listening to your attorneys. And I think that we are going to do that. I think that their not being here hasn't told us what they needed. We're telling them what we need.

MR. DAHL: I'm not talking about elective leadership. I'm talking about the shadow leadership that hovers over that--

MR. FISHER: He's talking about the bankers.

MR. ACKERMAN: I think when they look at the transcript --

MR. DAHL: They never will.

MR. FISHER: We've already had a putdown. The Anchorage Times already has an editorial.

MR. DAHL: Mr. Chairman. May we go off the record.

MS. BENNETT: Let's go off the record and discuss this.

THE MODERATOR: Adjourned.

MR. STUMP: Second.

MR. DAHL: Done.

(Whereupon, at 10:05 a.m. the proceedings were adjourned.)

BETA GROUP PROCEEDINGS

(December 6, 1979, 10:00 a.m.)

MR. VAN DOREN: Ladies and gentlemen, I would like to begin. I think probably the best thing is grab a cup of coffee first and then we can get started. If you don't have any. I guess everybody has enough. My name is Guy Van Doren. I will be your facilitator for the next two and a half days. Before the afternoon session, we will have chosen a group leader from among you, and the group leader or leaders as the case may be, and I will, will be working together with you to help us smoothly arrive at the conclusions that we are going to be working on. As you can see by the agenda, and some people have talked about this, this is a very unstructured type of a meeting. We purposely set it up that way because this is your conference. This is not our conference. It's not a conference run by the Legislature or run by the Administration. It is your conference to be run by you with us here to help you and to work with you and advise you.

As we go through the general categories, we will be discussing this afternoon, we will be discussing direct services. Tomorrow we will be discussing finances in the

morning, and then in the afternoon we will be discussing resources. The five major broad subjects, including transportation and education, they will now be joined in under direct services.

As we go into the general subjects, we will be using the authors of the papers of the booklets you will receive. Also, we have some supplements for you to hand out today. We will be going through, and we are hoping that you will base some of your discussion on the papers. The authors will be available as resource persons to come in and talk to us if we desire. We also will be soliciting your ideas on the general subjects and exactly what you would like to see happen in the future of Alaska. Each of the recommendations that come out of this group we will be filling out in a short form with the general area of the category, specific recommendations of this group, the major factors or considerations leading to why we came to these conclusions.

We will try to work out a financial impact, both for fiscal year 1981 and projected for the next ten years. Each of these recommendations will be gathered together from all five of the groups that are working, and we will come together on Saturday and each group will submit a report.

After the conference is over, the recommendations

from each of the groups will be tabulated, put into book form, along with papers, and will be utilized for distribution to the Legislature, to the Administration and for future action on them.

This morning, I would like to start out with introductions. We are all going to be a group. We are all going to be working together for the next two and a half days. Some of it will be some long hours and some long discussion, and I think it would be a good way to start for us to get to know each other. You will be in this group throughout the whole time. The staff will remain the same throughout the whole time. And the more friendly we are, the better we are going to get along.

First of all, I would like to introduce the staff that will be working with you. We have a staff of three people who have just gone through the internship program with the Legislature. They will be working with the Legislature during the up coming session. These people are here to help you, to serve you. All staff are identified by the orange cards, whether it's our people -- if you need to utilize the other people if we are not around then we will have somebody else help you.

First of all in the back of the room next to the coffee pot is Sandy Bradley and she is from Juneau. And why don't you tell us about yourself?

MS. BRADLEY: I am going to be working with Freeman from the Legislature. I am originally from Ketchikan and moved to Juneau about three years ago, so I am an Alaskan.

MR. VAN DOREN: Okay, and next I would like to introduce Elana Peeley.

MS. PEELEY: My name is Elana Peeley and I am from Bethel. And I am not sure who I will be working with.

MR. VAN DOREN: And the next individual that will be assisting us is Jay and I will ask him to stand up and pronounce his name and tell you a little bit about himself.

MR. PENEKAS: My last name is Penekas. I am from Anchorage now and lived in Juneau and hopefully you guys will be working for us.

MR. VAN DOREN: Okay, I am going to sit down for a minute. And I would like to start with the right side of the table. What I would like to do, I would like to keep this informal. This is an informal session today. This morning is definitely going to be informal. I would like to you stand up and say a little bit about yourself, and if you have an idea, if you would like to express an idea of what you want out of the conference or what you see about the conference or any ideas that you have brought into the conference, we would like you to share those with us now. We want you to be open. We want you to feel for the next two and a half days we are all family. So anything you

would like to say, but definitely your name and where you are from and your interest in the convention and I will start out from my right hand side.

MS. DAVIS: Since I have to open it up first I will just introduce myself. I am Bettye Davis and I live here in Anchorage. I would like to see things come out of this conference, but since I was caught cold, I am going to pass on that.

MR. DESILIO: I am Steve Delisio. I am an attorney in Anchorage. I lived in Fairbanks for about eight years and have been here that long as well. I was with the Brookings seminar as a delegate.

I think probably I could sum my aspirations for this conference as I felt about the Brookings Conference and that is to say that I think that what I would like to see is a goal of creating opportunity for the people of our State. It seems to me that with the great wealth, the great opportunities that we have here in Alaska, there is no reason why we should be victimized by the same kind of problems that exist in the Lower 48 States which restrict opportunity, restrict enterprise, restrict imagination, restrict the ability of their human spirit it seems to me. And it seems that Alaska has an opportunity to break free of all of that or at least a great deal of it and I think Alaska has the aid and means of doing so.

MS. GUESS: I am Carolyn Guess, I am from Anchorage and lived here for 20 years. For the past four years I have been a member of the Alaska Public Utilities Commission. And with that opportunity has come a learning process for me. And of particular interest to me is the problem and the opportunities we face particularly in the energy area. In my particular shop we are seeing daily crises in energy.

We are seeing the escalating costs of diesel fuel create insurmountable problems, particularly for the people in rural Alaska. And I guess if I was to say what I would like this conference, to focus on, I guess, it's however each group decides to go that the word creativity be an important word.

MR. FISON: My name is David Fison. I was here ten years ago for the Brookings Institute and appreciate again sharing in this. I have been an United Methodist pastor for the last 30 years and the last 20 in Alaska I was in various areas of the State. I have been currently in the colleges in Anchorage, Anchorage Community College, Alaska State University. I appreciate Mr. Merdes's education and spiritual qualities because those are what I am interested in, of course.

MR. CHARLEY: I am Walter Charley from Glennallen, Copper River area. I have been with the Copper

River Natives Association for board members several years and I just got released from it last month. Some young fellow took my place.

My interest is a power, power resource, water power relationship. And we have a -- we are going to have to rebuild the village one of these years. We worked last summer, we put a road in there, into the village. Now, we are thinking that before we start rebuilding the village, I would like to -- we would like to think about power resource. We got water running down there. We got Sparks Creek. And there is a place in Town Lake that runs the Old Tunnel down through the underground which water still runs through down there would make a pretty good power resource.

We wrote a letter to -- I had an engineer working with me down there last summer, and I had the -- went down to see this place, and we wrote a letter to Washington, D C about this to see what kind of a help we could get in there. And we haven't heard anything from the State yet.

MS. CROFT: My name is Toni Croft. I am a teacher for the Anchorage Community College. And I have several interests, but the primary one, I guess, would be in trying to find some insights into the problems in post secondary education and seeing if we can't improve what we are getting from the community colleges and the University of Alaska.

MR. GIBSON: I am Bob Gibson. I've lived in Alaska for about 30 years continually. I have been in the communications, sailing, in education. I am currently a teacher in the division at the Kuskokwim Community College in Bethel. I have got all sorts of things I am vitally interested in here. I am an alternative energy nut. I am interested in rural economic development and got some hot ideas on transportation you will hear about those later.

What I was struck by today was a sense of community here. I met a lady I have only known by correspondence from Alaska, and I see people whose faces are familiar to me. Hey, this is a whole integrated independent community and I should like for my part to see that governed and give direction to everything we do here.

MR. FAIRBANKS: My name is Grant Fairbanks. I live in the Kuskokwim River near Steitmute. I am interested in lots of things, farming, fishing, energy, ecology, and that's about all I have to say.

MS. DICKSON: My name is Abi Dickson. I have lived in Alaska for about 15 years. I used to live in Fairbanks. And I lived in Kodiak. And I have to admit to myself that I am a fringe person and now living in Unalaska out in the Aleutians. I have been interested in Alaska for my entire life. And I am on the City Council in Unalaska. One of the things that I have been trying to emphasize out there,

we are an island community in the Aleutians. We are an island community in Alaska. In trying to determine what was the basic common denominator of all the people that have moved into the Aleutians for whatever reason, there is one basic common denominator in that we are at the time this only people on the face of the earth that are living out there. And I think that in Alaska we are the only people living here, and it would be nice, as Bob says, we are an integrated community, I would like to see that out of this conference we become more integrated, emphasizing our self-sufficiency needs in energy, in agricultural pursuits, that we try and bring ourselves into focus as a unit. We can't live happily after here. We can't live happily after anywhere. Thank you.

MR. GAZEWAY: My name is H P Gazeway. I have lived in Anchorage for the last year and a half. I am retired, self-employed. I first came to Alaska in the early 1950s. I lived in Palmer, was with the University U S D A. The last 20 years I was in Juneau. My work mainly was concerned with resource and program planning. I am here mainly just because the reason which I came to Alaska, which most of you came to Alaska. And I am interested in government organization, particularly effectiveness and efficiency, and I was attending the Brookings Conference in '69. I don't know what I expect to come out of this one. In

this way I hope it to be much more successful in Alaska. It's good to see so many people here that I have crossed paths with previously.

MS. FATE: My name is Mary Jane Fate. I was born in Rampart and lived in Alaska not by choice, because it's home. I, too attended the Brookings ten years ago. And because of my involvement as an officer with a native village corporation and, as past president of the national nonprofit corporation, my interest lies in all the fields that you have specific priorities, I think, this year would be land, land use planning, any type of planning or what resource we have in the State of Alaska with expertise to land use planning, utilization, development of any kind. Secondly, of course, education, with my husband being on the Board of Regents. But again, thinking back home and Grade 1, upgrading Grade 1 up, and perpetuating and enhancing our higher education. But also, we've got to work at home and the quality of education at Grade 1 so the students would be able to go on into higher ed. Another thing, of course, is economical development planning. But everything on here that you've got is all relevant to the time, so I am open for any help.

MR. CARLSON: Dwayne Carlson, president of the Alaska AFL-CIO, currently from Juneau. Prior to that ten years in Anchorage, prior to that 17 years in Fairbanks.

I would like to associate myself with Carolyn Guess' remarks. We are aware that there will be a great amount of money. And as I think Chairman Meekins said, he had a request for about three times that amount of projects. I would hope out of this conference we can come with some new concept to have this trickle back to the individual. And I think that can only be done if we can get a comprehensive new approach to the energy problem, and I think tied right with that is the transportation problem.

If we are not successful in doing that in the State of Alaska, most of that is going to be because the individual can't afford to live here any longer. It's fine to have a fine campus and I agreed that we need it. The Labor movement has always supported it. In my opinion, Professor Hesser (phonetic) is more the individual for the university than any college.

I try to take the different papers around the State, and if we don't do something to help that individual owner and soon, I think we are all a failure. A State that's rich in natural resources, there just has to be some way to do it. I hope that out of this conference we can do that.

Thank you.

MR. VAN DOREN: I think we can go to the other side of the table and back up this direction, of delegates.

MR. DAVIS: My name is Larry Davis. I am from Nome. I guess my primary interest in being down here is to try to focus to renewable resources. I think there has been too much attention spent to nonrenewable. If renewable resources are kind of left in the aftermath, I think it's time we focus some attention on the renewable resources in the State of Alaska. And the primary reason I have is personal. It's just not only to the State of Alaska but to the world. I think we should pay more attention to renewable resource and focusing too much attention on nonrenewable resources.

MS. CARPENTER: I am Diane Carpenter, president of Bethel. I have lived in the Kuskokwim Valley for about 25 years. As a teacher, I am interested in education. As a council member in Bethel, which is the city that has a number of problems, our interests range over a wide area including approving justice system, tax base, planning for appropriate economic development, planning for appropriate technology and energy conservation, planning to avoid the State deterioration, and especially for working for enhanced local decision and control and trying to see that the lifestyle that exists in that area is protected as much as possible.

My overall goal for this conference would be that the increasing split that I have observed in the past two

years between urban and rural sections of the State could perhaps be healed in some way and that we could focus on some of the needs of the State overall and on how we can each see other points of view and work together.

MR. GORSUCH: My name is Lee Gorsuch. I am with the University of Alaska, director of the University Research. I have lived in Anchorage for about ten years. I have two lovely children that are now part of the Anchorage school system. I am here as a delegate, not so much as from the university, but rather as a citizen concerned that Alaska does have an opportunity of trying to basically foster its own self alliance. I think the main thing we need to be concerned about is our ability to take care of ourselves in the future. At the same time, the additional self alliance I have been concerned about. What I sense is take care of ourselves and ignore everybody else. I think we have a great deal of responsibility, a responsibility not only to ourselves and our children, but also to the nation and also to the world. Alaska occupies a neat part in the nation's energy situation. We also represent a very unique part in the environment of the entire globe of the planet earth. I hope that we don't lose our perspective of our goal as a unique environment and I hope we also do not lose sight of our obligations as an integral part of the United States of America.

MS.FLYNN: I am Heather Flynn, and I live right here in Anchorage. And I have for years been a member of the Anchorage School Board here, and it's only by an accident of the alphabet Mr. Gorsuch and I are sitting here side by side. And he is a new member of that board. He didn't mention that.

I have also functioned for some years as the legislative representative, that's a fancy word for lobbyist, of the Anchorage School Board to the Legislature, some years with a great deal of success and some years with no success at all. I have throughout that period of time worked very hard at getting the urban and rural areas to work in very close association with one another to try to bridge the gap that Diane mentioned between the urban and rural areas.

In addition to my obvious interest in education, I have a much broader interest in the entire both economic and shall we say philosophical development of the State. We seem to be in a position financially this year where we can build a very great deal. But my stomach familiarity with finances tells me that we better pay some attention as to how we are going to operate what we build in the future and we better keep very close sight of that area. And I hope some discussion in that area comes out in this conference.

One other interest that I have that I would like to see developed in this conference is the whole issue of the use of the land. And I am not a D-2 rah-rah. That issue, in my opinion, has been talked into the earth too far.

What I am interested in is the use of the land as it impacts the individual. I have a very strong feeling that people's individual mental health is very much associated with the kind of environment that they live literally right next to, whether that's a park or a super highway and how we plan our communities, not just how we use the land for hunting and fishing and drilling the oil, but how we plan our communities has a very great deal to do with how happily we live in those communities. And I would hope that we could find some room in this conference for some discussion on that.

MR. CHAPADOS: My name is Frank Chapados. I am an Alaskan by birth. I have resided in practically all of the areas of the State and have, I think, a very good understanding of the problems of Alaska. I am a businessman. I have been in business now for about 25 years in the Fairbanks area. I have served in the State Legislature the first four years of Statehood and also was a member of the Brookings Institute meetings that were held in 1969.

I am looking forward to participating in this conference and I feel that with the experience that I have and the interest in Alaska that I can make a contribution to any of the discussions that are going to be held. Frankly, I am not sure what I want to see come out of this conference, but I do believe that we in Alaska have the opportunity to create a life-style which may require some compromise on the part of all of us that would be the envy of the rest of the world. And we have the tools to do it ith, and what we need to do is learn to agree and to set some goals to plan our future and to follow through and do what we can, what I think we can accomplish.

I was impressed with Ed's remarks about education this morning. I am not sure that I need to think that we should put all of our resources into that area, but I think we have to beef it up to the point where it's going to attract our Alaskans and make them want to attend our university and other institutions of learning in Alaska. And I think we can. By so doing we are also going to attract the kind of people that will help us to develop the kind of leadership that we need to carry out our objectives which I hope we are going to be able to make recommendations on here at this meeting.

Thank you.

MS. COOKE: I am Margaret Cooke from Bethel. I have

three children, two of whom are in school now. And I was here at the Brookings Conference ten years ago. I have a lot of interests in a lot of things that are in the report, problems we have out in the Bethel area. What I am interested in is upgrading our educational system, mainly, plus the energy problem. There is people out in the villages who will be paying over a dollar, probably up to two dollars a gallon, if they could get the oil add on the gas. And I think with a State so rich in oil, that shouldn't be so. And I am hoping that this conference will come out with, you know, positive suggestions.

MR. CROW: My name is J. B. Crow, I am Margaret Cooke's Bethel neighbor. She lives in the elite part of Tim Town. I live in the part that's called Louse Town. I divide my time between about nine months in Bethel, about the remainder split in getting turned on with British Columbia people who are deep in the fishery thing and up the Dishna to a side stream up the Ditnuk. D I T N U K. And that's sort of a retreat and a refreshing of the spirit. I am very impressed with the seriousness and the profundity and the nobility of these expressions. I have to confess my prejudices. I can't beat talking about being an Alaskan. I am here long enough, so I am quite provincial, I am afraid, certainly no ethnic eccentric, I am certainly concerned about my own interests, my business, my family,

much more than the rest of the areas of the State. So as the thing goes along, I hope to make a contribution in the renewable resources aspect as he said over there, and we did our thing together in forming our cooperative ten years ago for fishermen. Right Pren? Right. We still have things to do to make sure our resources are used to get back to the people that live there.

DELEGATE: Pardon me, we didn't get your name.

MR. CROW: Crow, C R O W.

MR. CARTER: My name is Ernie Carter. I have lived in Fairbanks for the last 27 odd years. I have a business there. I have served on the City Council and the Fur Assembly for about nine years, and I was a delegate to the Brookings Institute Conference. I feel honored to be invited back for this one, and I have to say I hope that some of the polarization that is taking place in this State can be put aside and we can show a little bit more cooperation.

The art of politics is always a give and take proposition. You have to compromise for the good of the whole State. I think all of us are going to have to give a little bit on various issues. I would like to see the State develop its natural resources in an orderly development in an orderly manner and thereby benefiting the people in the State and adding contribution to our great

country in the energy field. I would also like to see hydroelectric power pushed because I think it would solve many of the problems with an alternative source of energy. And it's here. All that has to be done is develop. And these studies that we keep having are done over and over again repetitiously. I would like to see some action instead of studies. Thank you.

MS. FLEMING: Hello, my name is Laura Fleming. I am a delegate from the internship program. I live in Juneau, and I am very thrilled to be participating in this experience with all of you. Thank you.

MR. EKVAL: My name is Eric Ekval. I have lived here in Anchorage, I have lived here ten years, because I came up the week of the first Brookings Institution conference. I have been involved in a lot of different kind of work from social services to education. And right now I am a communications and public affairs consultant.

My concern in this conference is that ten years ago I think there was much more of a sense of unity of purpose in this State. There were fewer single issues, there was less polarization, perhaps taking off from what Mr. Carter brought up. I see the people in the State going in a lot of different directions at once. We are also much more prone to future shocks than other places in the country. We are not polluted. We don't have the traffic

jams perhaps as other people do. We don't have the sense of finiteness and the limits of what people can do, which is both a tremendous strengths to our spirit and a sense of what's possible, but it's also we may be diluting ourselves sometimes thinking that the rest of the world is in the same position that we are.

I think we are becoming more and more in Alaska a part of the world and that things that happen here will affect the rest of the world and certainly things that happen to the rest of the world are going to affect Alaska more and more. And I guess something that's a theme for me, a personal theme, is bringing together divergent points of view and melting them into some kind of commonality of purpose and I think that that will be more difficult this year than it was ten years ago.

I think it's more vital that we do that or that we accomplish something like that. I believe we will all have to give a little. I think we have to be daring and very, very open and sure in our minds and our imaginations about what Alaska can be. I think we also have to be greatly pragmatically realistic about what's possible. I have no real axe to grind here. I am interested in education. I am interested in energy. And I hope that we can draw ourselves, not just draw the wagons around in a circle and draw our opinions around in a circle. And I am

for some sort of commonality in purpose.

MR. COOPER: I am Earle Cooper from Homer. I have been from Homer a long while. Before that I was in the Anchorage area. I served on the City Council, the Borough Assembly for 20 some years of elective office. But during that period of time, I think we have all seen the common problem of idle hands and the mischief thereto. I think there is lack of productive work that people can take a pride in accomplishment. There is too much work, too much work to make a living that doesn't really accomplish good for the community or the, or the State. I think we need to go back to 10, 15, 20 years ago when we were probably working harder and had less emphasis on culture. The last ten years, we have had quite an emphasis on the various cultures. But I think we need to realize that without a strong economic base, whatever that base may be, whether it's renewable resource or extractive industry, but without a strong economic base, cultural activity becomes an academic word. You are too busy trying to earn a living or to scratch a living out of something to be able to spend the time and effort for enhancement of the community. I guess what I am wanting to see is some basic productive enterprise within the State to keep the citizens of the communities busy.

MS. ELSON: I am JoAnn Elson and from the City of

Kenai and have been for approximately 12 years. I am with the Department of Labor, the Department of Security Division in Kenai. I am a Kenai Representative to the Assembly. I am also the Assembly President. I am on the Steering Committee for Energy in Environment on the National Association of Counties. I am the Board of Directors for the Alaskan Municipality. And I have a lot of interests, energy and environment being one.

But I also have a unique mission for me. I was asked by the Women's Resource Center in Kenai to come and represent them. This is unique in that I have stayed away from the Women's Resource Center up to now and have been busy. But they have caught up with me. And after reading their packet, they have some very good and sound ideas and some good suggestions which I am hoping that I will be able to help in some way. The land use statement that Edna Flynn made, I think I would have to say ditto. I am concerned with not only how you are going to parcel out the different lands, but what you are going to do after you are settled? What are you going to do as far as the problems of pollution? What are you going to do with the problems of waste and solid waste? Transportation is another problem we are concerned with on the Peninsula. We are concerned about tourism and health and education, and not in that list of priorities. But I do want to say that the

Peninsula is concerned and very, very anxious to participate with the rest of the State. We are not Mavericks on the Peninsula.

MS. FISHER: My name is Helen Fisher and I am a 26 year resident of the State of Alaska. I have never been in the Legislature, so I am a different Helen Fisher. I always explain that, because people invariably say, "Have you been in the Legislature?" And safe to say, I am not that one.

My concern has been education and human resources. I came with some very definite recommendations and feelings. I am director of the Alaskans Resource Center. And we are part of a network of resource centers and shelters for battered women throughout the State of Alaska. So we represent quite a few women and men, too, so we don't discriminate. As far as recommendations are concerned. We would like to see some money spent on human resources centers, through the grass root associations that are already here.

We need to break the circle of family violence, of battered women, of rape, of child abuse and alcohol problems. We need to buy some prevention. We need to start on preventative ideas to stop this circle of abuse. In a beautiful state like this, we have some terrible statistics in all of these social problems.

I have an interest in education and training programs to break the circle of welfare. We see women through the Women's Resource Center who desperately want to get out of the welfare racket. They want jobs, but they lack training. They do not have money for training. They need money to support their family like yesterday. So they don't have the time or the money to go to what few training programs are available. The people are not able to take advantage of the jobs that are offered. We have -- there are people in the private sector who come to us and say we can use a certain number of people with a certain amount of expertise in an area. We cannot provide those people for them because we don't have the training programs to go along with it.

I have a farm background and am an ardent conservationist. I am a proponent of solar wind and water energy and I believe that more needs to be done in the technical and scientific education. I am concerned that the next extinct species might be us.

MR. VAN DOREN: Mr. Clark, we missed you going around the table.

MR. CLARK: Thank you. I was hoping you would, but you didn't. Jim Clark from Bristol Bay Borough, mayor there, financial director for the area. Also I serve as Director for the Board for the Local Utility, electric

utilities there.

And being last, I thought perhaps that I could come up with something that had not been stressed earlier, but being with this knowledgeable group, and what have you, I can only reemphasize some of the things that you have already discussed. It's great to be here from the standpoint of the polarization that was mentioned over here, at this place, to break that polarization now. I have listened to people from different areas and what have you. And I can see that one thing coming out of this would be a situation where we know each other and in the future when some of these things are brought about and come to being that we'll be able to know that. There was Mr. Cooper there, Steve Delisio, Larry Davis, some of these names that we all can familiarize ourselves with.

Opportunity for this State, yes, that's what I would like to see. Opportunities that create opportunities, not opportunities that may be opportunities today and headaches tomorrow or the next day. Communication and transportation, definitely, things that we need. A good flow between our national, our State, and local governments, not just the post office can solve that. They do have a problem, I didn't receive my packets. And I presume somewhere along the line they were lost because they were mailed out.

Also to bring it more closely to my home area, Bristol Bay, our great resource is part of the fish that come in each year, each year they pile in by the millions, next year supposedly more millions. I would like to see us create a situation there that would better benefit all of Alaskans. And education: I teach school also, in my spare time. And I would like to see our education system continually updated. And I don't mean just the classroom. I mean education anywhere that there is a possibility to learn.

And I certainly would like to thank the ones that organized this meeting and I feel there is an opportunity to be here. I thank you.

MR. VAN DOREN: Are there any ot[illegible] delegates that have not been heard from that are delegates to the Beta group?

Okay, I think you have seen going around the table here when we organized these groups, we decided to do it alphabetically. I think it was a very wise decision, because as you have seen, we have people from all different places in the State, from different facets of life, and I think that we will be able to work together. This conference we are giving you very little material except papers that have come from the people themselves.

This conference, what we are supplying, is the

place for you to make your wishes known. What you are going to take out of here is the products that we work on, not papers, not necessarily books, not necessarily writing, and not necessarily dictates from us, but you, yourselves, are bringing in something and you are going to leave with something, and from the group that we have all just met, I think that we will be able to work together very well with some different ideas and some stimulating conversation. I have one more remark to make and then I am going to turn the meeting over to Mr. Michael Rowan. He will be explaining to you the survey that we are going to be taking. Rather than say anything about it, I am going to let him explain it to you.

I would like to remind you this afternoon at two o'clock, we will start delving into direct services, also at the completion of the poll that we will be handing out to you, materials will be available in your packet at the back of the room. They will be handed to you as you go out.

The blue booklets -- would you hold one up, please? The blue booklets that we will be passing out are supplement papers that came in too late to be printed in the yellow booklet. And so you will have from the end of this meeting until two o'clock to look over them. There also will be some people papers that we solicited. We asked anybody that was interested in Future Frontiers in

the program to submit the papers. We call them people papers because they weren't directly asked; anybody who wanted to submit a paper was able to. We will have those for you later on. Okay. You've met the team, you've met the players. This is our group. We come down to not exactly attest, but we have -- Mr. Rowan has devised a survey and he will explain all about that and then we will pass them out to you.

MR. ROWAN: Eric, do you have them?

STAFF: I gave them to Guy.

MR. ROWAN: I think we would like to begin passing them out as they talk. Let me describe what this is. My name is Michael Rowan. And as part of my contribution to this conference, what I have been doing is prepared a questionnaire at the request of George Hohman and Russ Meekins for each delegate. Okay, it's being passed out now for you to self-administrate right now. It takes about 20 minutes, maybe 25 minutes for you to fill out. After completing the questionnaires, the data will be tabulated and we will report back to you tomorrow on what you said. The questionnaire was drawn from the ideas and the conclusions and the proposals put forward in the papers in that gold brochure you have that has about 33 papers prepared on all aspects. So basically what I did was I read through everything everybody said, the proposals they

made, the ideas they came forth with, the contexts, the conclusions, and I began writing questions to you based upon what they were saying in their respective areas. This was defined by the staff people and, you know, we wind up with the product we've got. I hope it's a useful thing to begin stimulating you thinking about, especially every question that could come up.

There are some questions I would like anybody whose got the questionnaire now to please look. You will notice in the questionnaire from time to time the name of the writer from whom the question was drawn in the article in the gold book is also mentioned for your reference, if you want to look at the gold book. You may find it difficult to answer some of the questions if you have not read all the articles that were prepared for this conference. And if so, leave it blank and go on to the next question. I would like you to circle the appropriate number for each question, 1 or 2 or 3 or 4, as you proceed through the questionnaire. Now, you will find in the questionnaire that there are ranking questions, 1, 2, 3 or 4, and I would like people just to see how to respond to this, to turn to question numbers 49 to 55, so that the fourth page reads, and this reads, "How would surplus revenues best be used in Alaska? Please rank the following." And then 49 to 55. In all these ranking questions, the

number 1 is the lowest range, and the highest number there is always the highest rank. So if you have five choices, then five would be your highest ranking and four would be your second highest and so on.

In this sequence, by the way, 49 to 55, there are six choices and you are given five rankings, so please add number 6 to that group, okay. 49 to 54, next to the numbers 5 out there is a number 6 running down the column, because you've got six choices there we are asking you to rank from.

All right, just repeating that now, any time you get into a ranking question, number 1 is your lowest range and whatever the highest number there gives you the highest rank and circle that number, okay.

On question 25, please, if you turn to that, the responses should be, 1 should not be yes, it should be "cooperative." So you can write that in there. One should be cooperative. Question 25, about the third page. One should be "cooperative" and two should be "develop an independent plan." Obviously yes/no is not the answer to that question.

In the same respect on question 7, 07 on the second page, that should not be a yes/no answer either, question 07, number 1 should be "succeed" and number 22 should be "just talk." It's clear from the question: In

question 72 -- this is my last explanation and then I will shut up. In question 72, we have improvements to the existing interAlaskan community road network and in question 74 we have question of improving intraexisting road networks. Inter meaning between, roads between Alaskan communities, and intra, I N T R A, meaning roads inside, roads inside the community. So in 74, it's inside, and in 72, it's roads between our connecting Alaskan communities for clarification purposes. Are there any questions? I will come around and answer any questions. The purpose of the survey is to raise all the questions that were originally brought to you by the 33 or 35 people who wrote papers to you and to bring you up to speed on where your opinions are on all these matters immediately. We will bring the data back to you tomorrow so you will see immediately where you are on these major questions that are raised by the particular people who have raised the questins to.

MR. COOPER: The first question is unrealistic in that it would be unachieveable given the present numbers of people within the State. There are three people to go on a subsistence life-style.

MR. ROWAN: I think you are answering the question.

MR. COOPER: So maybe we would like to see it. But in order to do it, that would mean that we would have to

push half or two-thirds of the people back down south or something in order to leave land enough for that kind of a life-style.

MR. ROWAN: I tend to agree with you, and I would circle in that case, number 2, (laughter) And in question number 2, number 3, no.

MR. COOPER: What I am saying is maybe we would prefer the first, realism being what it is, it's a pipe dream.

MR. ROWAN: I think that's a reasonable conclusion, but I think there are other people that might have opinions on that matter. You know, in 1969, a lot of people had -- this was a large part of the discussion was the Alaska life-style thing. So that's why they wanted to start off with this sequence. They wanted it to be part of your discussion, too.

*****

(Afternoon session at 2:00 p.m.)

MR. VAN DOREN: Ladies and gentlemen, I would like to have us get started now. It's two o'clock. A couple of mechanical things I would like to share with you at this time. We will be passing out an index of the list of authors of the public papers that came in. We only have a

limited amount of the public papers, and if you would like to look them over, like to read them at the end of this period when we take a break or something, if there is any certain papers that interest you, just come up and see us afterward and we will check them out to you. Unfortunately, some of the papers didn't arrive until yesterday or the day before and we weren't able to do a print up of 200 of them. But each group has four or five or six packets available. So these will be coming out to you.

What we would like to do this afternoon is, I have been up here in front of you long enough. You have each had a chance to get together and meet with each other. You have heard a little bit about each other. And I would like to relinquish the floor and be able to turn it over to a moderator or a group leader. And I think at this time would be a good time to have you all chose a group leader. This is, again, your conference. This is your group, the Beta group here. And I would entertain any suggestions for the group leader that would take you through the rest of the conference. Yes.

MR. DESILIO: I would like to nominate Mrs. Guess.

MS. GUESS: I have a problem in that I have obligations to my children for part of tomorrow evening and Saturday morning. I would be willing to take part of the responsibility, but I could not do the whole thing. I do

not know what the requirements are.

DELEGATE: How about Mr. Chapados.

MR. VAN DOREN: I'm sorry, I've got to remind you for Pamela, would you state your name when you are recognized.

MR. COOPER: I would like to recommend JoAnn Elson. She is president of the Kenai Peninsula Borough assembly and has been able to keep 16 assembly people squared away and sort of working on schedule. So she probably has as much experience at this as anyone around.

MR. VAN DOREN: All right, JoAnn's name has been brought up. Are there any other suggestions?

Since there is no objections, it seems to be that you are it, JoAnn.

Okay, the procedure that we will probably use now is: this is your conference, your discussion, your ideas. I told a few of the members of the committee that I was going to ball you out a little bit. When we had the discussion this morning or when we had the survey sent out this morning, I had a lot of people as they went out the door or went out on the balcony talking about the paper or the objections they had to it. What I wish you would do is talk about it in here. That's what we are here for. We are here to discuss things. Whether it be the survey, whether it be the issues or whether it be any subject at all that you want to see be brought up to this group, we

would like to hear about it. And rather than hear about it out in the hallway or on the balcony, we would love to have you bring it up here. And I think right now the session is open, and JoAnn, I would like you to take charge of people wanting to be recognized on that subject or other subjects, then I will let you take care of it. But I am here to help you in any way that you like.

MS. ELSON: Mr. Gibson's, did you want to address the conference?

MR. GIBSON: Yes, I would. Relative to the questionnaire which we filled out prior to our adjournment for lunch, I don't wish to belabor any of my objections to the questionnaire and there may be those that others have and may not. But I would like to obtain the concensus of this group on a proposal that I make that this not in any way be considered in any part of the expression of this group's feeling or anything.

MR. DAVIS: Objection.

THE MODERATOR: Mr. Davis.

MR. DAVIS: I object because this is primarily the purpose of the conference to try to find out what the feeling of the group is here. If you are going to object to a questionairre that's filled out by the legislative members of the Legislature, you are not going to fulfill the purposes of this conference here?

MR. GIBSON: May I answer that objection?

MR. DAVIS: Surely.

MR. GIBSON: I do not object to us using this for our own guidance and as a tool for our own expression. What I do not feel is that a questionnaire of this sort, which is very limited in the options it gives us, which tends to be a polarizing thing, be considered an official expression of this group's views or feelings. We need more time to talk about what we see here rather than making snap decisions on the basis of limited options and having them go forward as a recommendation of our feelings. So I am not suggesting we chuck it out. But I don't want this to have something that people depend on as an expression of our true feelings.

THE MODERATOR: Yes, I think you had your hand up.

MR. CARLSON: Madam Chairman, I would just like to speak in behalf of the motion, that I think those questions were all aimed in a particular direction. And I don't mind the facilitator's, or whoever, using those during the conference. I would hope though that the press doesn't pick up the conference discussed and voted X number of votes in favor of a certain thing and down the line came something else. I hope that wasn't the intent, and I would sure want to put a minority vote somewhere if that were expressed or impressed in any manner, if that were expressed as any of the thoughts of the group gathered here.

I would hate to think that that's where that might be headed. If it is, I would propose it being not released

THE MODERATOR: Yes, sir.

MR. FAIRBANKS: I have a feeling that this might tend to polarize people. One of my main gripes is it seems to answer some of the questions that we have not yet asked. It's too limited. There is a yes and a no where we have maybe a gray area in between. Some of the questions says revenue moneys for bottom fishing or something else. We should talk about the something else, too. I feel it might be a little bit biased and we should not do anything with this officially is one of my feelings.

THE MODERATOR: Mr. Davis.

MR. DAVIS: My primary interest is in resources. I wonder if I could go to a resources group rather than direct services here. I am not really interested in it here. I am more interested in resources.

THE MODERATOR: I believe the discussion now is the questionnaire. And Mr. Gibson, was that a motion that you entertained or was that just a feeling on your part.

MR. GIBSON: I am prepared to make a formal motion if that would help?

I move that this questionnaire be used totally for internal purposes of this group and that it not be in any way considered as a position of the group.

THE MODERATOR: Okay, you have heard the motion before you. Discussion?

MR. FISON: Does that include that it not go to the press?

THE MODERATOR: His particular motion?

MR. DAVIS: Madam Chairman, point of order here, I didn't hear a second.

MR. CARLSON: Madam Chairman, I make a second to the motion?

THE MODERATOR: The motion has been made and seconded. Would you be able to restate that motion?

(The reporter read as requested)

THE MODERATOR: Discussion.

MS. GUESS: I would like to amend the motion in that it not be used as a part of any publication.

THE MODERATOR: Motion, there is a second.

MR. FISON: I will second that.

THE MODERATOR: The motion has been made by Mrs. Guess that this not be used by any paper.

MS. GUESS: For publications purposes.

MR. DAVIS: Are we on discussion.

THE MODERATOR: Discussion on the amendment.

MR. DAVIS: On the motion or the amendment

THE MODERATOR: The amendment.

MR. DAVIS: I would like to focus the attention on

the questionnaire amongst this group here so then we can have some target that we can direct ourselves to rather than just leave it go and then forget it.

MR. CARLSON: That's what the motion does

THE MODERATOR: We have the motion on the floor, an amendment motion. Are you ready for the question?

DELEGATE: Question.

DELEGATE: Yes.

THE MODERATOR: All those in favor.

(Responding)

THE MODERATOR: Opposed?

We have a motion carried. As amended, are you ready for the question?

VOICE: Question.

THE MODERATOR: All those in favor say aye.

(Responding)

THE MODERATOR: All those opposed?

THE MODERATOR: Motion carries.

The discussion listed for our group would be direct services?

Would you be interested in breaking out possibly the individual categories and then discussing each category in turn? And if so, I would like to have some suggestions as which items you would be interested in addressing? I am told transportation, health, education, government services,

any particular ones you would like to address first?

Mr. Cooper?

MR. COOPER: I would like to suggest, then, that we take the transportation portion of that and discuss it first because certainly transportation would have a direct relationship on a good number of other categories depending on whether there was or was not a good transportation between communities?

THE MODERATOR: It has been suggested that we address under direct services transportation. Any other suggestions?

MR. FISON: Will we be limited to the selection we make? Do we select one item now and that's the one we talk about from now on?

THE MODERATOR: I would really like a list to see what it is you are interested under this topic and possibly we can go on at that time. Mr. Cooper?

MR. COOPER: I'm sorry. I was under the impression what we were going to do was discuss a list of items. But we were going to start with one of several and discuss it for awhile and then go on to other items on the list.

THE MODERATOR: I believe that we need some type of list of priorities that you would be interested in. Transportation, for one, has been -- Mr. Fison?

MR. FISON: Then I would like to suggest education as

a priorty.

THE MODERATOR: Okay. Ms. Davis?

MS. DAVIS: I would like to make a motion that we discuss education as our first priorty.

THE MODERATOR: Motion by Ms. Davis that we discuss education.

MS.FLYNN: Second.

THE MODERATOR: Been seconded. Discussion.

MR. DAVIS: I wonder if we break into groups here where we can discuss education, disuss transportation and separate groups. I don't know how much time we have there is my problem.

THE MODERATOR: I believe they have us in here for a purpose, and that's to discuss all the issues together, I have been told.

Okay, the motion on the floor is to discuss education first. Mr. Cooper?

MR. COOPER: Madam President, the reason I suggested transportation as the first item was because if we can arrive at a consensus of what we would like to see the transportation system to be, it will have an effect on a lot of other items. Certainly education and government services are all important but if there is no direct transportation link between communities, then each community will have to evolve its own education system. If

there was a good transportation system between the two, then you could have maybe a different type of educational system by the combination of several. Rather than having several small, you could have one large to give a better, more thorough study into a particular delivery of an education experience.

THE MODERATOR: Your name, sir.

MR. CHAPADOS: Madam Chairman. I think that we probably have a number of important issues that need to be discussed this afternoon and that to set priorities may be right. But I think we ought to set some time limits so that we can at least cover the field. And that would be my suggestion.

THE MODERATOR: Any further discussion on the motion on the floor. The motion is to take a question of education first. Yes?

MS. FATE: My question is: Do we have resource people? Do we have the availability of resource people in the house now of all those subjects? And if not, if they are here, then I see no problem.

MR. VAN DOREN: Guy Van Doren answering her question.

We have available the authors. They are aware that we are going to be discussing direct services. When we need an author, we will send one of the staff to get the person

THE MODERATOR: Mr. Fison?

MR. FISON: A question: Can we ask other people other than authors to come to speak to us? I am thinking in education, of the presence of the three universities in town.

THE MODERATOR: He says yes.

The motion on the floor is on education. Are you ready for the question? All those in favor say yes.

(Responding)

THE MODERATOR: All those opposed say no.

(Responding)

MR. GIBSON: Request a hand count.

THE MODERATOR: All those in favor please raise your left hand.

(Responding)

THE MODERATOR: All those opposed would you please raise your right hand?

(Responding)

The motion passes.

We have been then education first. We have transportation second.

Are there any other topics that you would like to discuss? I understand that there is also communications, health.

MR. DAVIS: I wonder, is the resources going to take

a separate item here on the agenda?

MR. VAN DOREN: Mr. Davis, resources will be discussed in this committee during tomorrow afternoon.

MR. DAVIS: I see.

THE MODERATOR: Mrs. Fisher, you have a question?

MS. FISHER: I was going to suggest that we prioritize the four items next as transportation, health and government services.

THE MODERATOR: Is that in the form of a motion?

MS. FISHER: Yes.

MS. DAVIS: Second.

THE MODERATOR: The motion has been seconded by Mrs. Davis. All those in favor say aye.

(complying)

THE MODERATOR: All those opposed?

MS.FLYNN: Sort of. Madam Chairman?

THE MODERATOR: Mrs. Flynn.

MRS. FLYNN: I don't like the term "government services," because it seems to me that transportation, health and government services fit in there anyway. And I keep hearing communications over on the other side of the table. And I would like to see that replaced, and I would like to see an additional 45-minute time limit on each one.

THE MODERATOR: Okay, under government services, I am told that we could substitute in communications and -- okay,

r. onal government, local government and communications. Is that with your concurrence? Would you give us your name?

MS. FLEMING: Madam Chairman, I would like to recommend that we do not ignore the area of law and justice, which has been characterized under government services.

THE MODERATOR: Under government services as well. We've got regional, local, law and justice, and communications.

MR. DELISIO: Madam Chairman, when do we discuss the philosophy of government, in other words, State government and how it deals with our lives? It seems to me that that would be an appropriate category for a rather extensive discussion under direct services. In other words, it almost seems to supersede everything.

MR. VAN DOREN: Just to help out a little bit, again to reiterate, this is your conference. You may discuss anything you want within the motions made any time you want with somebody just making a proposal and starting off from there.

THE MODERATOR: I think Mrs. Flynn had a suggestion for a 45-minute time limit on each topic.

MS.FLYNN: It was just a suggestion. I didn't make a motion. I can't remember how long we've got this afternoon.

MR. COOPER: Until 6 this afternoon.

MS.FLYNN: Until we all wear out.

THE MODERATOR: We take a break at 4:30, I understand, and then we change rooms and then we meet until six.

Mr. Davis?

MR. DAVIS: If we are going to limit ourselves, I would suggest that we discuss -- I've got 1, 2, 3, 4, 5 items under direct services. If we are going to limit 45 minutes to each item here, I would suggest that each one of us limit ourselves to two minutes on our testimony. Otherwise we are going to be here all day and all night, if there is no time limitation put on the testimony about any of the direct services.

THE MODERATOR: Mr. Fairbanks.

MR. FAIRBANKS: Madam Chairman, if we limit ourselves to 45 minutes, we are not going to hit all of them.

THE MODERATOR: It was just a suggestion.

MR. FAIRBANKS: Maybe I could.

MR. HOFFMAN: My name is Edard Hoffman.

We kept Kuskokwin area, we have the kind of people that represent Kuskokwin here. And we have about three or four important qustions to be answered, and we let our -- we have our chairman, Diane Carpenter, to take care of them. Diane.

MS. CARPENTER: Yes, we were concerned about the major public facility kind of needs. I don't know. There doesn't seem to be any place to address this, such as a

hydro project, a major road system.

THE MODERATOR: I have been told that that would come under the resources, and that would probably be tomorrow.

MS. CARPENTER: Thank you.

MR. HOFFMAN: And the other ones.

MS. CARPENTER: And the others are transportation.

THE MODERATOR: Transportation would be second after education today.

Okay, it's approximately 2:30 now. We have approximately four large topics.

Mr. Cooper?

MR. COOPER: As a suggestion, possibly a half hour for each of the topics as you outlined, and then when we reconvene after the 4:30 break, we would have that time free to go back and pick up on any of the items that we felt we need more time or any new item that would come up. That's a suggestion, not a motion.

THE MODERATOR: Okay, a suggestion has been made that we take 30 minutes on each item and then come back after a 4:30 break and try to come up with some type of summary, some type of decision on each of these categories. Would that be agreeable to every one?

MR. GIBSON: Madam Chairman.

THE MODERATOR: Mrs. Fleming.

MS. FLEMING: Would you like to outline the four

categories?

THE MODERATOR: The four categories, education, transportation, health and government services. Under government services, we have communications, regional and local government, and law and justice.

MS. FLEMING: Thank you, very much.

THE MODERATOR: I hear no objections. We will go that route.

Okay, are you ready for education?

MR. GORSUCH: Madam Chairman, I'd like to ask that we perhaps move that the agenda allow at least an hour towards the conclusion of perhaps -- I haven't seen Saturday's session, but the lead articles on alternative futures to some extent speak to the questions that were expressed by several people of interest in trying to lessen the amount of polarization, the effort of trying to build a stronger sense of community and provided guidelines for the State's decisions over the next five or ten years. And I would certainly hope that our discussions on certain topics not be totally subordinating of the basic concept about how we begin to build back toward the community rather than increasing its divisiveness over arguments about how much money goes to transportation, how much goes into communication, how much goes into public facilities.

So I would like to, I guess, rather than move

prematurely, I would like to ask at what point in the discussion do we deal with some of the questions that were raised by the alternative futures papers or some of the issues that were raised by several participants about their interest of trying to address the question of diminishing the increasing tendencies of polarization and trying to identify a certain unanimity of goals.

THE MODERATOR: I would hope, and I have this problem back home, I would hope by working together on each of these items that we can come to some sort of compromise, because this is, I guess, what it's all going to be about. We have different opinions and different views on each of these subjects. We come from different areas of the state. But I believe if we sit down and discuss these as intelligent people, I feel somewhere along the line we will come out with some type of policy statement, if you would like to call it that, and hopefully it would be intertwined in these different segments.

We have education. Are you ready to go on to that subject? And if so, have at it.

MR. FISON: Madam Chairman, I have a concern that we are going to consider what was suggested this morning, and that is making higher education free to the public. My concern is that this would mean that private education is going to be in the more difficult position than it is

already because of the financial factors. If this is considered, I hope that we will also try to provide some means so that private education in Alaska in higher institutions will not be adversely affected.

Now, there are proposals that students receive the funds and then go to college of their choices. I happen to be affiliated with all three of the institutions in Alaska or in Anchorage here, and I am aware that, well, of what the situation is especially regarding private education, the difficulty in financing. And I hope that if we do consider not having tuition or tuition waived for the public education, that we make some provision so that students can have funds to go to private education also, if they wish. That's my concern.

MS. FISHER: Madam Chairman?

THE MODERATOR: Mrs. Fisher.

MS. FISHER: Yes, I'd like to elaborate on that a little bit. I feel the idea of alloting people X number of dollars for the education of their choice is very desireable. I think it should be extended to not only the student coming out of high school but the student in later years who feels they need to go back and change education or acquire more education, because very often we find that we don't realize how valuable it is until after a few years have gone by.

MR. DELISIO: Madam Chairman, one of the difficulties that we have been encountering to getting assistance to private education in Alaska is our restriction of institutions. Right now the way the Constitution is written, it's simply impossible to provide direct aid to private education, per se. I suppose you could set up a system where you give dollars to children and you say. "We hope you spend these on education and you can spend them wherever you like." And that may pass the test of the State not participating in helping to finance private education.

It seems to me that may be one of the first steps that will have to be taken if there is enough consensus in the State is to get a change to our constitution that would permit direct assistance.

The second observation I would like to make is: If we were to pursue the goal that Mr. Merdes was talking about this morning of trying to do something to enhance the quality of higher education in Alaska and in the process of doing that attract a larger number of Alaskans to go to school in their own institutions, I think we defeat our purposes if we are making moneys available so that the youngsters can go to school wherever they wish. If someone was to give me a tuition free opportunity to go to Harvard or Yale or Cambridge in London or England or something like

that, I might very well choose that opportunity.

On the other hand, where my free tuition or the equivalent of free tuition was to get me into the University of Alaska or its various subsystems or into Alaska Pacific University, then I think we are working into developing and enhancing Alaskan higher education.

THE MODERATOR: Mrs. Flynn.

MS.FLYNN: Yes, two points, and perhaps I would have to direct this to Mr. Ekval to some degree, because I recall that you were involved in this at the time of the proposed time of the constitutional amendment previously.

Mr. Delisio has hit a serious problem here. We do have a prohibition against giving direct aid to private schools, which I might add I support. However, there is a system in Oregon whereby private schools are paid by the State government an amount of money for in-state students. They must be Oregon residents, who are going to the private institutions and thereby not going to the State institutions, an amount which the State subsidizes each student over and above the tuition rate that that individual pays. And it has had a number of court challenges there, and it has withstood every one of them.

I wonder if we might consider or whether that was investigated as to whether that could be a possibility that we could use at this time. And I would like to direct that

as a question, then I would like to come back and make a comment with regard to Mr. Merdes's suggestion this morning.

THE MODERATOR: Your question was directed to Mr. Delisio.

MS. FLYNN: To Mr. Ekval.

MR. EKVAL: As I recall, the Attorney General in 1975, '76 ruled that the tuition grant system, the tuition equalization grant system, which is something similar to what is happening in Oregon, was unconstitutional and that it did violate the constitution. And an attempt was made to -- there was a referandum initiative on the ballot in 1976 to amend the constitution to continue the State program or some program similar to that. And it was defeated by a vote of about 2 to 1. Mr. McGinnis, who is here, is quite closely involved in that. You may have some more.

MR. McGINNIS: I do, Madam Chairman, if I may. I am assigned to another group, but I will speak briefly to this. I think the constitutional issue is a very vital issue. I think since the Supreme Court has ruled, the State Supreme Court has ruled on that, which is absolutely contrary to the U S decision on the same matter, but a State can do it if they want to. That's the way it stands.

I feel there can be some good because of contributions and some disadvantages to Alaska under our

present plan. I believe that the way the ballot was worded was misleading in and of itself and never should have been allowed to stand because it pled the case in the question that inasmuch as this is unconstitutional, you do thus and so. Whereas, if it had said, "This is the present language, would you consent to this language, yes or no?" it would have been somehow somewhat in a different framework.

But the great inequity as I see it at the present time and the great disaster for Alaska is this, that the Court really said that aid to a student is unconstitutional. Because they said aid to the student is the same as aid to the institution, therefore unconstitutional.

Now, the difficulty that is present with our WICHE program,. If someone wanted to bring a case with regard to the WICHE program where we do pay on behalf of the student, then there would be a war in the State, because they would say there in the State Compact for Educational Purposes we've got to do that. That is precisely the question and no one has raised it.

In addition to that, the multi-million dollars program for students going outside the State of Alaska to any state of their choice, is regardless of the loan concept. It becomes a concept when portions of that loan are given and that becomes a gift to the student in the same way and the interest subsidy which the State puts in.

The difference between the going rate of interest and the favorable rate is a gift to the student. And one of these days somebody is going to raise that question as to why is it that we subsidize students out of state to any school of choice public or private, and yet we will not allow that in the State of Alaska. It does contribute to the brain drain; it does drain off some of our best leadership. And it does promote for public and private higher education some problem in policies.

I think that the basic plan in equity is not desirable. I believe the only way it could be fashioned though would be another go and a better educational program in informing the public as to what the issues are because as long as that present issue stands on the present constitutional issue, we will probably never move from where we are now, which is grossly inadequate and grossly inequitable and should not be allowed to stand.

MS. FISHER: Madam President, I would envision if we just allowed subsidized education to the university system, we would be building a real monster. I think we need the contact of the other educational institutions and I am not thinking just of places like APU. I am thinking of in the not too distant future may be something in the cultural light, amuse I can school, the arts, any number of things like that. And I certainly would like to see students

being helped to go to institutions like that.

MR. McGINNIS: May I comment briefly? I was president of the constitutional convention when this was discussed, and I believe that the lawyers and even the Supreme Court missed the major issue, but who am I to judge that? Every discussion surrounding that had to do and the minutes of the convention indicate that that had to do with children. At no time was that ever designed to control higher educational programs in the State of Alaska. It had to do with elementary and secondary, the issue being that they are forced to go to school by law. Every explanation speaks to the children of the State and is never intended for adults and never intended for higher education in any event.

MS. FLEMING: What I hear you saying, Fred, is that one of the things that we should perhaps recommend is a challenge to that Attorney General's opinion.

MR. McGINNIS: It is more than that now. The Supreme Court has agreed.

MS.FLYNN: The development of new legislation which would --

MR. DELISIO: New initiative.

MS.FLYNN: Or new legislation that is geared specifically to higher education with the idea in mind that you would be challenged and that you would have the minutes

of the U S Constitutional question, the U S Supreme Court's tremendous amount of litigation in this area throughout the country, and which for the most part higher education has been left totally alone.

THE MODERATOR: Are you looking at something to be added to a long list that should be added to a Constitutional convention?

MS.FLYNN: Absolutely not, chiefly because I don't happen to support a Constitutional convention. No, under no circumstances. I am looking strictly as a piece of legislation.

THE MODERATOR: Then go into court.

MS.FLYNN: Realizing that somebody is going to go to court and challenge it.

Could I come back very quickly to another top that I think was mentioned with regard to the improvement of higher education right here in the State. I very strongly support the improvement in the quality of education. We've gone a great distance in this State toward quantity and spreading out the available resources throughout the State, and I most heartily approve of that. But we have some very major areas in which we have begun to develop things, but we have not put enough resources into them, for example, developing the chairs in the various departments, improving our library system very, very

significantly. It's great libraries and great teachers that make great universities, that much I agree with. But Mr. Merdes' suggestion that that somehow ought to be the catch all that keeps all of our kids here I think is absolutely the wrong notion to take. What you do is once you have got the good system, you attract people -- I know some of you don't want people from outside -- but you attract very good minds from Outside to come to our schools. The thought that we don't want to let any of our poor children or adults head off to other schools is one of the most parochial backward notions I have heard.

Why should we keep all of us here and not seeing what goes on in the rest of the world? I think that's a terrible trend, rather than attract people here and spread what we've got to other places, too.

MR. DAVIS: Mr. Chairman, I think when I heard Mr. Merdes's speech over this morning, he broke the educational part into three parts, and one of them was education, the other was cultural. And the other was --

MR. FISON: Spiritual.

MR. DAVIS: -- spiritual. If we talk about education, we should look at it from that aspect. Education as I see it today is all the western culture. We have learned all the basic things about the western culture, but nothing about our own heritage. I know nothing about my own

heritage because the system doesn't tell me about it. I think that is discrimination as far as education is concerned. If we don't recognize that now, our education is going to be the same today and forever. It's going to be pointed one way and denied any of my own heritage.

THE MODERATOR: Mr. Gibson.

MR. GIBSON: I have a number of things I would like to say specifically to Mr. Davis. I would heartily support as a rural Alaskan resident as a general Alaskan resident anything we can do to enrich our total State's life with the inclusion of the beautiful heritage that we are ignoring. Whether that be formalized in an educational process only, I don't think that's all of it. But that certainly needs to be a part of it.

What I see here is that there seems to be a consensus that there is more support needed for post-secondary education for our own people within our own State, both public and private. And we already have a program going where people may leave and be subsidized; is that not correct.

MR. McGINNIS: Right, exactly.

MR. GIBSON: But we don't have anything here. And we hear Constitutional questions. I think we maybe should approach a broad statement here that every Alaskan citizen has a basic right to so much post-secondary education which

may be supported by appropriate subsidies for a basic post-secondary education, whether that subsidy is spent within the State or without the problem of providing the quality.

THE MODERATOR: Could you stop right there? Can you go back to his statement where he starts his statement by saying, "The Alaskan citizen has a basic right to education"?

(The reporter read as requested)

THE MODERATOR: That statement that you made there could very well be a statement that this group would want to consider.

MR. GIBSON: I would love to have it debated.

THE MODERATOR: As a policy. And I have to have it in writing because I can't read my writing.

MR. McGINNIS: Mr. McGinnis, I would like to clarify one thing, because one matter Mr. Gibson made could be misunderstood. The subsidy through loans is available to students in the State and out of the State. A disproportionate number seem to be going out of State, a large number. And they can go to both public and private; that is the difficulty. Whereas the loan proposed is available both in the State and out of the State. The drain of the WICHE students is by virtue of the fact that they can go to public and private students out of the State, but those programs are not available within the State. So

I thought that verification odd to be made.

MS. FATE: Madam Chairman, I disagree wholeheartedly against speaking against our students leaving the State. I think this is part of the problem being born and raised here. Maybe we should have gone out of State earlier in life when there was no type of education in State, I mean for quality, and maybe our philosophy would be to be competing in this modern society. So, therefore, we have a right, and this includes the native and rural students, to leave our State for any type of education, because we will return. We are not going to go on a vacation or retire in Hawaii or Florida. We will retire here. But I totally disagree with anybody restricting a student or from any type of higher education out of State

THE MODERATOR: I believe just this little section that we've brought out is simply saying that the Alaskan -- I don't care whether they are polkadot, blue, yellow.

MS. FATE: I don't either.

THE MODERATOR: That's what we are saying here in effect, my interpretation that each Alaskan citizen has a basic right, a basic right to post-secondary education which may be supported by a subsidy whether they stay here or whether they leave. And I think this is -- you would probably agree with that, that portion? Yes, sir.

MR. DAVIS: Madam Chairman, I really have a problem

with education. We want to talk about our secondary post education. We are only talking about one university in the State area. I have kids of my own. And I have sent out two of them already, the two of them, to go out to a spiritual college where they can understand the basic principle of why America was born. And you can't get that from the University of Alaska. I don't care what you say. But the reason I sent them down there is I want them to get ahold on what the first, our constitution says to us, the freedom of worship. And if they understand that, you cannot get it from the University of Alaska. Our university here just only teaches the basic education. You call it post-secondary; that's fine. But it's still the western culture. If you don't break your services out, if the three services, into education we are talking about, we are not going to come to nothing. We have to address ourselves to that, to the fact that we have to break it down to three categories.

THE MODERATOR: Mr. Cooper?

MR. COOPER: I believe that Dr. McGinnis pointed out the problem or the solution, and that is that we don't specify where we have to go but that we make the necessary adjustments in the education system to where we attract the students -- I'm sorry, it was Mrs. Flynn that made the statement. But we attract the students here. They want to

stay here because it's the best education they can get, rather than trying to artificially force students to attend, make the school good enough to where they are able to select who they are going to allow in because of the over-abundance of applications. And that will only come about if the education being delivered by that particular campus is good. And then all of the rest of our discussion can be very academic. We are just going through an exercise in debate.

THE MODERATOR: Did you have a question, Mr. Ekval?

MR. EKVAL: I wanted to respond about the basic right. And I think I have trouble with the word right. We've already got presumably life, liberty, and the pursuit of happiness, and we have trouble defining those and deciding what is happy for one person is breaking another. And where do we stop for rights, right to health care? And what does that mean in terms of social programs. My only concern is I agree in thrust with what you are saying, but my only question is: What does that mean in terms of social policy? What does that mean in terms of appropriations and allocations of money and so forth. I would be really hesitant to advocate that people have a basic right to post-secondary education?

MR. GIBSON: I would love to respond to that.

THE MODERATOR: Mr. Gibson?

MR. GIBSON: I think if you look in context of what I said, they have a basic right to, as yet, an unspecified amount of post-secondary education as the responsibility of the State which may take the form of subsidy to be spent either within or without the State. Now, this is almost as radical as a proposition a few years back that kids had a right to a primary education as the responsibility of the State.

The quality and the content of such education are separate here. But this gives people as a State policy options that they may exercise at their discretion, but that the State is on record as supporting a subsidy as appropriate -- and I am not going to say what that should be -- to obtain that. This might take the form of an expanded WICHE program. It might take the form of a basic educational grant for students who do enroll, not just by bucks and say, go enroll, but bona fide enrolled students. I want it to be a subject of debate, but it want it to be clear that I am specific that the State recognizes a financial commitment as well as glorified rhetoric.

MR. FISON: Mr. Chairman, I think there are two issues. One deals with the State's recognizing the responsibility perhaps for the financing the higher education. The other is providing that staple subsidy so that it can be used for private education.

MR. GIBSON: Exactly. But you are not subsidizing, the way I see it in my statement, private, parochial, or public secular. What I am saying is: We focus on the individual's right and let him make, if he will, the subsidy by the choice of how he expends this. The State has its responsibility already by its post secondary system to provide it. I say we have to go a little bit different and give the student the subsidy to get it because it isn't free yet.

THE MODERATOR: Further discussion on that one? It isn't in the form of a motion. It's just a statement.

MR. GORSUCH: Lee Gorsuch

THE MODERATOR: Mr. Gorsuch.

MR. GORSUCH: Madam Chairman, I would like to make a point that I think throughout the discussion, my fear is that Alaska's wealth begins to corrupt our ability to do things essentially on our own. And more specifically, I am somewhat concerned about making so many services free, because my feeling is once they become free, they become partially wasted, inefficient, and in some cases even squandered.

I think somehow trying to encourage individuals in our society to work for, to invest something of their own for their own human development is a very desirable characteristic of the public system. I think when we talk

about trying to enhance people's capacities to take care of themselves to pursue their own ambitions, we are talking about something that doesn't hand them all rights without having something invested of their own in terms of the scholastic application, applying their intellect, or to even some extent for those who can afford it, making a financial contribution to their own development. So I would hope when we consider issues like providing educational services, I think Alaska is currently quite progressive.

The student already is provided with very substantial subsistence to student education. The University of Alaska has probably the lowest state tuition program in the country, and I would have just some concern about trying to make rights associated with a total free cost for pursuing whatever it is you want to pursue because I don't think that you place the kind of value on something that you do where you invest on your own rather than an occasional attending of the class when no pesonal invstment is made. I think we should make our own individuals pursue rather than society trying to make everything free. I think this will apply to a whole bunch of issues come up.

But I think the danger of the State inheriting wealth, we will become essentially unproductive. And we will spoil ourselves, and I think we will ruin ourselves

for the future. Rather than facing the real word. You have to compete with people outside, and you have to be able to essentially compete in that market. I think we are going to risk here if we try to provide everything free instead of providing incentives. We may wind up providing an inferior education and not a better education, simply because it's free.

THE MODERATOR: This statement that we read just says that the Alaska citizen or every Alaska citizen has the basic right. I am not going for the freebies either. I don't see -- and you can correct me if I am wrong -- but I don't see anything that says freebies in the basic right. I hope it doesn't say that.

MR. GORSUCH: It says those rights or guarantees, irrespective of whatever, you have this guarantee that you are going to get it. What I am saying I am not sure I am willing to go to the point that you are guaranteed this if, in fact, you don't study, if, in fact, you don't make a commitment of your own, I think there has got to be quid pro quo on the individual's part to really pursue the purposes of an education.

THE MODERATOR: Mrs. Guess.

MS. GUESS: I agree with a lot of things that have been said here and have some similar concerns, but I wonder if we are talking about priorities and where we are

spending our educational dollar if, in fact, there is a certain magic amount.

And I guess my goal for youngsters that are educated in Alaska, whether they are born here, whether they come here, is I think one of the most important things is the very beginnings of education so they can want to get to that post-secondary, so they can have motivation. Frankly, if I were spending State dollars, I would say "Don't you put 32 children in a first grade and expect 32 to learn how to read," because they are not going to do it. Ten of them won't even know what's going on. And two years from now, they will have experienced failure every day in a classroom and you are not going to have a productive citizen who is going to have a desire for more education.

My priorty: I agree with Lee on things being free. I think if children are motivated to learn, and this is in terms of the quality of life and all that we have to offer, you have to give them the tools which means that I would place my priorty at the beginning of this system. If the supports aren't in the homes and we know it's not in many of the homes, and some of us are concerned that some of these things are not addressed, the school doesn't do as good of a job, but it can help.

THE MODERATOR: Okay, we've gone through 35 minutes and we haven't come up with any type of policy statement on

anything. Any suggestions?

MR. CHAPADOS: I think that we can probably come to some conclusions if we have a few more minutes, and I would move that we extend the discussion for another 15 minutes?

THE MODERATOR: No problem.

MR. EKVAL: Second.

THE MODERATOR: I don't believe we have a limit yet. Did we vote on a limit? No, so please feel free to go on and debate. I just wanted to warn you that we have gone on 35 minutes.

MR. CHAPADOS: I would like to express my concurrence on what Mr. Gorsuch said. I think he has been speaking to the subjects that we have been discussion. I think we have deviated from that, although the point is well taken. As far as a follow up, I think we should be doing something and I think we should recommend to the legislature that we want and urge that there be upgrading in the higher education that we have in the State of Alaska, that we could attract Alaskan students to stay here and get their education if the quality is there. I am not trying to be critical of what we have today, but I think we can be a lot better than we are.

MS. CROFT: It seems to me we need some sort of specific ways to bring this out. I don't know whether Carolyn Guess was willing or was wanting to promote that

you take part of the Public School Foundation Act and make it broader so that it speaks for more of the needs that Anchorage and the Anchorage School District has so that we fund more of the basic, what are not necessarily called basic needs. In my own idea when you are talking about the right to an education beyond high school, you are talking about perhaps tuition free community colleges. I really would like to hear some specific, rather than some general, some specific proposals put on the floor along that line. And I would like to put out the idea of a free, or not free, token tuition community college system where there is, as Lee said, still a very low tuition, but nevertheless a tuition, that we consider making the community college system, ten, 15 bucks, a token, and not as many as substantial as other.

THE MODERATOR: Wait a minute. Let me guess. Don't tell me. Mrs. Carpenter.

MS. CARPENTER: Along those lines, I would like to make a motion that the residents of Alaska be provided with financial access to post-secondary education. I believe that is a way that it can be stated.

THE MODERATOR: Can you read that back?

(The reporter read as requested)

THE MODERATOR: That motion, I need a second?

MR. HOFFMAN: She's not finished

THE MODERATOR: You are not finished, okay.

MS. CARPENTER: That the State support both public and private post-secondary institutions to enable them to achieve excellence.

THE MODERATOR: Okay, the rest of that motion is that the State support both public and private post-secondary institutions to enable them to achieve excellence, right? Is there more to the motion? Is there a second.

MR. DAVIS: Second.

THE MODERATOR: Okay, the motion reads that residents of Alaska be provided financial access to post-secondary education and that the State support both public and private first and secondary institutions to enable them to achieve excellence.

I know your name, Mrs. Fleming.

MS. FLEMING: Miss Fleming or Ms. Would you define what you meant by about financial access? There seems to be some concern with "freebies." I would like to address that perhaps to something along to line to what Mr. Merdes suggested, continued finances would be available to kind of give an incentive to show up at class, what kind of financial access are we having?

MS. CARPENTER: May I speak to that?

THE MODERATOR: Mrs. Carpenter.

MS. CARPENTER: My point there was no one should be

denied post-secondary education because of lack of funds as a policy that people should be able to have education. And then, within that guide line provisions could be made for payment of a certain amount for a satisfactory completion of course work for attendance, et cetera. I think that's going into more detail than we need for policies.

THE MODERATOR: Mrs. Guess.

MS. GUESS: I have a question. Are we assuming that the financial access is not there now with the student loan program. Are you assuming it's in there?

MS. CARPENTER: Yes.

MS. GUESS: I would like just to argue that it is there, that the loan program, it may not be funded properly, and the ceiling may need to be raised, but are we talking about loans. To me financial access is the loan program. Am I missing something?

MR. McGINNIS: Yes, fundamentally.

MS. GUESS: Okay.

MR. McGINNIS: Part of the financial under rooting of the education is the taxpayer's money in the treasury which has nothing to do with loans to the students, but which is massive subsidies by virtue of the multi-millions, is now poured into the university program. That is now beyond the loan program, because even with the loan or without it, the student does not begin to pay the cost of higher education.

I would agree with you that most people can, indeed, find a way through this public support and through the loan program to get by somewhere in higher education. But I suspect that there are a great number of people who simply cannot afford to, especially young women who do not want at times to burden even themselves with tens of thousands of dollars in loans not knowing how they are going to pay it back or how their husband's will be able to pay it back in marriage.

MR. DELISIO: Madam Chairman, this concerns me, and I think this is a concern that we had in the Brookings seminar, which was alleviated by the fact that we had four weekends spread over four months of time to talk about these various subjects, so we had more time in struggling to find another consensus, that we have a trend here.

The trend is to get from the specific to the general until it's almost so general that it's meaningless. It may be that we need no statement at all, just the opportunity to expose and exchange our views here.

My thinking is varied and altered as I have listened to the way people have talked, that may be a better result than coming out with a meaningless statement. Certainly we should have a concept of whether we believe that the State should be permitted and I think it would necessary State a Constitutional amendment -- whether the

State should be permitted to financially assist private education. You know, that would be a concrete specific statement. If we were to talk about whether or not to make free tuition in our public universities in Alaska or something, that might be a specific thing that doesn't exist now. But I think there is a real danger in passing resolutions that are so broad that they just simply don't mean anything.

THE MODERATOR: Ms. Fate.

MS. FATE: Madam Chairman, I can't vote on any issue that's brought up now because I don't know if the State -- you are talking about the State to fund the building, the staff, the faculty, the purpose of the private institution. I am totally against funding a private institution if the purpose is for a religious group who comes in with a certain purpose and does not want to be dictated to, and they have their own purposes, so therefore do their own thing. How far are we going? If it's for building, ground management, teachers, for tuitions. That's a different story. I don't see where we are at now.

THE MODERATOR: Further discussion?

Several good points have been raised, we have come from a very vague statement --

MR. COOPER: -- to a very vague statement.

THE MODERATOR: To a very vague motion. We have had a

statement. We didn't have a motion on that statement. It was vague. Now you have a motion which is still a little (pause) now we need something concrete. Harold Galliett.

MR. GALLIETT: I would like to ask a question that clears some of the issues for myself, please, and that is: What is precisely wrong with the loan program?

MR. McGINNIS: Madam Chairman, I don't know whether or not the loan program is sufficient to meet the needs. One point I made earlier was that I believe the loan program creates the inequity between students in State and out of State in that the loan program, so-called loan program, is a combination of the loan in the grant because with the creation of certain conditions, it's a gift; it is for giving. That is a grant to the State regardless of what it's called. The policy of the State of Alaska now is that a student can go to any private college in America with those grant loan combination funds, but in the State they cannot do so, see. And that's the inequity. Now, whether or not the loan amount is enough to pay the tuition, maybe that could be debated.

MS. COOKE: We talked about the loan program, perhaps increasing the amount available making a recommendation more be made available in this present program. We talked about a tuition grant program which would necessitate legislation for a Constitutional amendment or else

legislature putting that back on the ballot in a different form. We have talked about -- I have talked about tuition free community college or 14 years of free education in Alaska, wherever you choose to go. I don't know exactly how you want to word that.

And the other thing that was mentioned in the papers that we got was the nontraditional correspondence type or nonresident type of university which I assume we could also talk about financial support for someone who wants to take those kind of courses from the bush. We might not have the money to do it or pay for it. I don't know whether there are any others, but it seems to me we could see whether we support each one of those and probably what we would like to do with them, probably more other than those four.

MR. GORSUCH: Madam Chairman, I think under the circumstances that we are confronting, it's unlikely that we would ever get the kind of information required to make a specific recommendation on the amount for the student loan program. I mean I haven't seen the actual amounts that are currently available. That is getting fairly technical. What I would suggest is rather than trying to entertain specific recommendations for legislative action, that the group might better expand its limited time in coming up with statements of general purpose that regard

the educational system and that we try to address those.

As an example, implicit in the motion is what I would regard as a general concern about the monopoly the University of Alaska has over higher education in Alaska and that the economic realities of Alaska are such that a private, post-secondary institution, simply can't afford to compete with the University of Alaska. A lot of the students that go to the University of Alaska go there because they can't afford to go outside of Alaska. They are essentially captured by the existing system, and that system is monopolized by the State University.

I would suggest, rather than trying to come up with a specific recommendation, if the group felt that the situation was intolerable, this we would come on record, then, trying to suggest that alternative ways are explored to come up with essentially more competition between the post-secondary institutions into Alaska and not try to get so specific about a specific recommendation for legislative action.

You know, we all know that the issue in part of Southeastern, Alaska Methodist and now Alaska Pacific University. Some of those people ought to come forward and make a suggestion rather than implicitly implying about one or two institutions in the State. May be some would transfer and have a different denominational character if,

in fact, that were a wish of a particular group.

I think we ought to try to stay at a generalized level rather than trying to get so specific. And we are never going to get the kind of information I think a group would need to raising the loan program, lowering the loan program, modifying the student foundation program, whatever. Those are actions that the legislative committee spends a great deal of time on. I think our concern is to provide concerns and directions and let our officials iron out what is constitutionally permissible, what is legally possible, what is financially viable, what have you.

THE MODERATOR: Mr. Cooper.

MR. COOPER: It would seem to me that in all of the conversation we have had on this particular subject that Mr. Gorsuch and Mrs. Guess have pretty well summed up my particular feeling anyway, and that is that first off, we want quality higher education within the State regardless of who provides this education; and second off, that the loan program that is presently in effect, if, in fact, the dollar limits on it aren't enough, maybe we should request that those dollar limits be re-examined, but that that would be just about the extent of it. We make the loans available if the students have the interest and the abilities to proceed but that we don't get off into "You can take it whether you really want it or not," because

then we end up with problems in the colleges the same as we have in high schools today. Probably a good share of the high school problem is that we are forcing students in high school that probably shouldn't be there, but are because of the way society is dictating today.

THE MODERATOR: Okay, may I remind you that you do have a motion on the floor. And that motion by Mrs. Carpenter was that the residents of Alaska be provided with financial access to post-secondary education and that the State support both public and private post-secondary institutions to enable them to achieve excellence. Now, are you ready to vote on that motion? Is there any more discussion on that particular motion?

MR. GORSUCH: Madam Chairman, I move to you divide the motion in two.

MR. CHAPADOS: Second the motion.

THE MODERATOR: The motion has been made.

MR. DESILIO: Just ask if there is any objection.

THE MODERATOR: Are there any objections to dividing the motion? Hearing no objections, we will have the first vote as to the residents of Alaska be provided with financial access to post-secondary education. Are you ready for that question? Question.

All those in favor say aye.

(Complying)

THE MODERATOR: All those opposed?

The motion is passed.

The next is: the State supports both public and private post-secondary institutions to enable them to achieve excellence. All those in favor aye.

(Complying)

All those opposed nay.

(Complying)

All those in favor raise your right hand.

(complying)

Mr. Galliett and Mr. McGinnis cannot vote. Let's try one more time. All those in favor raise your right hand.

(complying)

All those opposed, same sign?

(complying)

Motion fails. We have one motion that passed and that's on post-secondary education.

MR. DELISIO: Would the chair note the number of people that sustained? I think it's probably significant because I think the people probably didn't vote in this room.

MS. FISHER: I abstained, because I had difficulty with the word "private" as to what would constitute a so-called private institution, whether it would be strictly

religious or whether it might be as I mentioned before, somebody setting up something like a music school, something in the cultural line or something in the vocational line which we desperately need that would be, in fact, a private school, you know. It gets to be rather confusing.

THE MODERATOR: We are still on education. If we could have those that would like to speak on the subject, their basic, basic idea, very, very short, very, very brief, we would go ahead and take that final. You've all had a chance to talk to every one else. Have that final say and see if we couldn't have staff make the composition, a list of some sort, of all the ideas, and we could probably tackle that first thing tomorrow morning and in 30 minutes possibly go on to transportation.

Could I have your concurrence on that issue, please? Are there any objections?

MR. FISON: You say staff would take this and do something with it?

THE MODERATOR: Yes.

MR. FISON: I wonder why not, accomplishing the same thing, but appoint some people that are members of the group to do it rather than staff.

THE MODERATOR: That would be fine. That would be fine. Would you leave that up to me to appoint? Okay,

let's go around with one last round the table. On education, very, very, very brief. Mrs. Flynn.

MS.FLYNN: At the behest of a few other people of the table, I would like consensus on this statement: The State of Alaska has a continuing and increasing financial responsibility for elementary and secondary education.

THE MODERATOR: Okay, once again, rather than vote on anything thing.

MS.FLYNN: I didn't say vote.

THE MODERATOR: Would you just go ahead and have your spiel and we could go ahead and maybe combine everything into a policy statement for tomorrow.

Would you like to repeat that?

MS. FLYNN: The State of Alaska has a continuing and increasing financial responsibility for elementary and secondary education

THE MODERATOR: Thank you, next. Mr. Gibson.

MR. GIBSON: I should like to propose that the health of both the University of Alaska and the Alaska community college system will best be served and will best serve the interest of the State if autonomy is granted to the community college system

THE MODERATOR: Thank you. Ms. Fate.

MS. FATE: I would like to see an improvement of the standard of education from preschool, primary, secondary,

post-secondary, the handicapped or gifted programs within the State of Alaska, and also the teacher certification be on our priorty.

THE MODERATOR: Thank you. Mr. Ekval.

MR. EKVAL: Ekval, yes. I would like to state that in education as in just about every endeavor -- what was my thought?

MR. GIBSON: I move we table it.

(Laughter)

MR. EKVAL: Excellence in education as in anything else thrives on competition and that the State should consider means through which alternatives to the present University of Alaska community college system can be fostered or enhanced with a view to making them competitive with the university system.

THE MODERATOR: Thank you. Miss Freeman.

MS. FLEMING: Fleming. I would like to suggest that perhaps telecommunications would be a very useful tool for increasing the quality of service to any people involved in any educational program in Alaska.

THE MODERATOR: Thank you, Mr. Davis.

MR. DAVIS: Madam Chairman, I would like to make a comment here: I think the motion that we passed here is to continue the educational service in the State of Alaska as it is now today. We are not developing any new policy.

And I really feel concerned about that, because we are trying to develop policy for education in the State of Alaska. What we have done here is we have adopted the same old principals that we have always had in the past years. And I don't think we should do that. We have already done that. And I think we should try to develop new policies, and that being to go ahead and try to get our kids educated in the private institutions if they want it as long as the parents agree to it.

THE MODERATOR: Mrs. Carpenter, did you have a question?

MS. CARPENTER: No.

THE MODERATOR: Mr. Fison.

MR. FISON: Fison. That the student loan fund program apply equally to institutions within Alaska, private institutions, as it does to institutions outside of Alaska.

THE MODERATOR: Thank you. Miss Croft.

MS. CROFT: That we try to come up with some specific programs for backing up our support for education, for this, whether it's increased scholarship loan or tuition grant; that we put some teeth in our statement that we support education beyond a secondary level.

THE MODERATOR: Mrs. Carpenter.

MS. CARPENTER: I propose that adequate resources be

provided to enable adults who have been unable to obtain a basic education the opportunity for adult basic education services; and second, that a nontraditional rural college -- a nontraditional statewide college be established to enable rural students to obtain a four-year degree.

THE MODERATOR: Thank you.

MS. DAVIS: I'd like to say that I'd like to see some special consideration given to minorities of the State of Alaska in the area of finance so that money can be provided to bring those students that are not functioning up to grade level up to grade level. I know that's a great problem here in Anchorage. Perhaps it's not in surrounding areas, but something has to be done. We have students coming out of school that can't even read. We know where very well that there is a severe problem in the Anchorage area especially with black and native students and I want something to be considered in that area.

THE MODERATOR: Thank you. Anyone else?

MS. GUESS: I'd like to add to Mrs. Davis's statement. I would like to see the re-examination of the existing State funding formula for the delivery of educational services, K through sixth grade.

MS. FLEMING: Carolyn, a question, why only K through six.

MS. GUESS: I am prioritizing, Heather.

THE MODERATOR: Is there anyone else? Ms. Fate.

MS. FATE: Excuse me, the evaluation of teacher system be established in the State, and also, if we could, look into an exchange program where rural and urban students can short term or whatever if there is a feasibility of exchange in secondary education students.

THE MODERATOR: Thank you. Mr. Fairbanks.

MR. FAIRBANKS: Right. I suggest that we consider by cultural and cross-cultural education to be supported by this group at post-secondary level.

THE MODERATOR: Anyone else? Now, how many would like to stay and write this up? I see no -- should I go ahead and just volunteer?

MR. DESILIO: Madam Chairman, won't the court reporter have this as a lift form that would be simple enough to take it off there and make a lift of all those things, run it off on a copier and hand a list to everybody? Everybody said their statement the way they wanted to say them. If we could get those and examine them and think about it a little bit, then I think we might be in a position to. I would suggest that rather than to go for strict votes and technical vote, and so on, we can get kind of a consensus. In other words, are there violent objections from a lot of us to including some of these statements, even though I might not agree to everyone that everyone that I am willing

to go into the report, but I don't have a violent objection to it.

THE MODERATOR: Mr. Fison.

MR. FISON: I would like to see sort of a compromise, that is use this wording that came out of discussion, but somewhat condense that and put it together. There has been some duplication and make a good definitive statement rather than just have a series of statements made by individuals, because this is going to be some kind of report, and I think it would help to be well written.

THE MODERATOR: Mr. Gibson.

MR. GIBSON: May I suggest that we will have to have the transcript before we can do anything, and that when the transcript is received, the chair take action to see that a coherent statement is made upon which we may pass, debate, act, or whatever.

THE MODERATOR: Can we have the statement? Can we have the transcriptions tonight?

(Discssion was had off the record)

Now, I know that there are some people who are not able to stay past five o'clock or six o'clock, but could I ask some of you to stay and help with this maybe 7:30, eight o'clock tonight? We have a banquet.

MR. FAIRBANKS: 7:45?

THE MODERATOR: We have to be out of here by 4:30. We

don't have to convene again until tomorrow morning. I am told that there is a tape recording of this last final for ten minutes. So we could go ahead on that. Would you be able to meet at five o'clock and work awhile on this?

MR. DELISIO: Madam Chairman, if we forfeit an hour and a half this afternoon from our discussions, I think we are doing really major damage to what little time we've got.

MR. VAN DOREN: Excuse me, for clarification, this group will adjourn at 4:30 today, period. There is no place for us to go.

MS. FISHER: Are we the only group that's adjourning?

MR. VAN DOREN: No, two groups have to quit today.

MR. DELISIO: Let's go down and sit in the lobby.

MS. CROFT: There isn't any other place that we go.

MR. FAIRBANKS: There is a motion made that there is a large-sized bar.

MS. FLEMING: Go in the bar and stand out in the lobby. Go on along the railing.

MR. FAIRBANKS: Also, not everybody needs input to this education. It seems like that there are nine or ten people that are really enthusiastic about it.

THE MODERATOR: Could I ask Mrs. Fate, Mr. Chapados, Mr. Ekval, Mr. Cooper, Mrs. Fisher, Miss Fleming, Abi, Mr. Gibson, Mr. Fison, Mr. Delisio, Mrs. Davis, Mr. Gorsuch, could you meet at five o'clock? I don't care whether it's

in the bar or the lobby or whatever.

MS. FLEMING: Lounge sounds good.

THE MODERATOR: Could you meet at five, take the suggestions that this body has made, and try to incorporate it into some type of statement, even if if you can't stay for a long period of time. At least the longer you are there, the better. All right. If so, can we now go on to transportation?

And I believe there are people in the audience who have asked for a few minutes. I think there is a Mr. Swanson and a Mr. Woody Johansen who have asked for a few minutes. So if you would like to go ahead and start your discussion on transportation and give these gentlemen time to go to the room or if they are ready now.

MR. GORSUCH: Madam Chairman, I didn't particularly care too much for the survey question here, but I did find it as a very useful listing of some of the issues that obviously the State legislature is curious about. And I would find it helpful to have a copy of the survey available, since I know as in transportation, there were several major questions.

It was just a fact, on one page, "What are your priorities?" I didn't particularly like having to choose the priorities. I didn't like any of them. But it was helpful. I don't know what the other sense of the group is.

There was questions about education, questions about transportation, and we were each asked to respond to them individually. Maybe it would be more appropriate to respond to them as a group. I would like to have a copy of it, if possible.

THE MODERATOR: Mr. Swanson, would you --

MR. SWANSON: I have a map to go on the wall outlining railroad systems because I am purposely for the railroad through Western Canada, the United States, and Alaska, the work that the legislature has done for the last ten years. Now, I am not really sure what kind of a format you people are looking for, whether you want to go over that as to an opening for your discussion on that portion of transportation or what you would really like to do, because in 30 minutes, if you are going to take highways and airports and railroads and whatever goes into transportation. I am sure you are not going to do it in 30 minutes. Mr. Johansen who has worked with me closely on the railroad system, probably as much as any man in the State, and he has also written a paper on highway transportation.

Perhaps to start you out fresh, it would probably take between the two of us, with just questions from the floor, would probably take more than your 30 minutes.

THE MODERATOR: Okay, may I just read off just a few

of how would you prioritize the following transportation projects. Okay, first one is a full-year maintenance of the North Slope Highway. Construction of railroad links, from the interior to the midwest, outside, construction of road links to create a linkage of Southeast. Improvements of the existing inter-Alaska network, Alaska purchase of the federally owned federal railroad and improvements to the existing inter-Alaska community. Now, that's just railroads. Now, do you want to tackle that particular portion, or do you want to tackle ports and harbors, or what do you want to tackel? What would you like?

MR. GORSUCH: Madam Chairman, I would suggest that we seem to be having less time for transportation than education, that we just follow the parallel format. Four people in the committee expressed a concern. Have four committee, try to subsidize that, that it be brought back for a discussion, and see if we can reach a general consensus just as we are doing education.

MS. CARPENTER: Second.

MR. GIBSON: I did not hear the previous speaker, and I think I did not like his recommendations. And I think I am going to object.

THE MODERATOR: He didn't make any type of -- he just said that we would go ahead and discuss as we did with education.

MR. GIBSON: I thought he suggested that we break up into groups.

THE MODERATOR: No. Mr. Cooper.

MR. COOPER: My problem is that I think I would rather make a good solid recommendation based on good evidence on one issue and ignore all the rest than to give a little bit of superficial consideration to a whole wide range of problems. So personally, I would rather hear what information there is available from the proposed speaker on the rail system, so that at least that part of it I can address with more intelligence than I can at this point.

THE MODERATOR: Mrs. Fisher.

MS. FISHER: We have a problem here as to whether we are coming together for our ideas or to listen to someone else's. I don't know that my ideas are all that important, but I thought that was why I was here.

THE MODERATOR: Ms. Flynn.

Since I believe more in program than format, I like Lee Gorsuch's idea. I will simply make a statement to that. The transportation priorty for Alaska shall be the building and maintenance of small airports in Alaska.

THE MODERATOR: Thank you.

MS. FATE: Can I amend that? But that the acerage not to be too large because, I mean if there is mountains, I mean why go include a mountain? I don't know the minimum,

the acreage that the Department of Transportation is requiring of small airports on private lands. It's a real priorty, concern.

MR. HOFFMAN: Yeah, this same thing came up at our last session we had. And most of us come from the Kuskokwin, and we are not interested in railroads which some of you are. All we are interested in is airports, new roads.

MS.FLYNN: I just stated one. Anybody else can go for it.

THE MODERATOR: Mr. Hoffman, the suggestion was made that we go ahead and just give us what you are interested in because we are here because of you. We are here because of us, so go ahead and tell us what you want.

MR. HOFFMAN: Madam Chairman, I listened to railroad, Mr. Swanson there. We've got nothing to do up from Anchorage by railroad. We want roads in our own bush that we don't have no roads and we've got to get to. That's what we are interested in. That's what we are sitting right here for. You fellows got your own railroads already.

THE MODERATOR: Mr. Fairbanks.

MR. FAIRBANKS: I am not ready right now.

THE MODERATOR: Is there anyone else, Mrs. Carpenter.

MS. CARPENTER: A priorty is a gravel road as deliniated by Mr. Silides in his paper that would link the

Yukon and Kuskokwin Rivers in Western Alaska. This is of great economic importance. A second priorty is expansion of the dock at Bethel and Dillingham. And third, of barge tie up and offloading facilities for communities for whom that is their only heavy freight linkage. That's it.

THE MODERATOR: Mr. Davis.

MR. DAVIS: Madam Chairman, my priorities where I come from would be air transportation where I come from. And the second priorty would be water transportation. I think those two makes the biggest impact on the State today.

THE MODERATOR: Thank you, yes.

MR. CHAPADOS: Madam Chairman, I believe what we need to do when we suggest to the legislature that they suggest some sort of a program that they provide us with a plan for integrated system for transportation in Alaska. And I would include all modes of that and also capital improvements that would serve those modes and that we provide docks and harbors that wander through all the communities. We need this system. Without some planned approach to an integrated system, we are not going to be able to properly take advantage of the development that we would like to see here in this State. That would be my recommendation at this point. I am involved in actually participating in the transportation as an operator of a

transportation company. And I have quite a bit of background in the problems that the industry has and not the least of those I think are the system itself as far as the highways and so on go. We need to have an improvement in existing intrastate systems. But the industry itself has many problems. And would be of the problems before the legislature today is the matter of regulation of the transportation business which I would be very happy to discuss with anybody that's interested on our side of the question. But I don't want to make that an item, you know, of long discussion here. But it is important, and it also plays apart in the type of service and what we will have in the future that we will want to have in a type of transportation that will assist in an orderly development of whatever we want in future industry of the economic situation.

THE MODERATOR: Thank you, Mr. Cooper.

MR. COOPER: I think Mr. Chapados pretty well voiced what's coming out and that's we have a regional problem in a lot of different regions, and those problems are not the same. So if we try to plan a water system in one area and a road system in another, and there isn't any integration of or thought given to how one interacts with the other, we are compounding and creating more problems. I would strongly recommend that any discussion we have in regards

to transportation keep in mind that we are concerned not with just our own particular area but that we are concerned with transportation within the entire state. It's just as important for people within the central area to be able to receive supplies from the west as it is for the west to be able to get supplies in for themselves.

THE MODERATOR: Mr. Carlson.

MR. CARLSON: Yes, Madam Chairman, I would like to see the State make a very thorough study of some method of equalization of the cost of travel in the State. It's fine to talk about harbors and it's fine to talk about airports, but the rapidly escalation of the cost of fuel, you can have the finest airports in the world, but nobody is going to travel in those airplanes. The Southeast was fortunate enough. First it was unfortunate enough they couldn't build roads. The State is subsidizing the system, and I am in strong support of that. I think we are going to have to take a look at some cost subsidy. If it's to pay for the airline and pay for a reasonable fair for people to travel in the remote areas, we would have to do that. But I would your knowledge a thorough study of that? I think the cost equalization is going to have to come about.

THE MODERATOR: Thank you. Mr. Delisio.

MR. DELISIO: I think that underlying my comments is a basic social philosophy. I think we stand in great danger

whether we talk about transportation or education or resources or finances or government services or any of that sort of thing. The State stands in a very dangerous cross road right now, that we could end up being the land of lotus eaters, where everything is given to us, nothing is expected of us, and then we have the life of Riley which, of course, turns us into a bunch of worthless people.

I think there are desperate needs that need to be served. But I would stress, I think the State ought to examine ways of stimulating free enterprise, private initiative, to deal with as many of these problems as possible.

For example, in the area of mass transportation in the larger communities, Fairbanks, for example, which has a very grave pollution problem, part of which is contributed to by use of private automobiles and so on. Anchorage is having the same problems. Other areas in the State are perhaps developing the same problems. I would urge that the State develop incentives for private enterprise to develop more efficient, better and more desirable mass transportation systems within the heavily populated areas. I think that the State, statement, should be encouraging private enterprise to open up some of our interior area to provide whether it be through railroad or the keeping the North Slope Haul Road' Open, to keep

incentives to businesses, industries, mining, whatever it happens to be, to undertake themselves the expansion and development of those systems.

I am appalled at the idea of the State substituting for the United States government as the owner of the Alaska railroad. But the idea of expanding the Alaska railroad to provide a more economic method for us to get goods from other places and to get our raw materials from Alaska to other places to make some of those mining opportunities economically feasible is a great idea.

Something needs to be pursued. But it should be pursued by private enterprise with encouragement, with aid and assistance by government.

I think that we ought to be reducing regulation of transportation modes to the minimum. Certain regulation is necessary and desirable. But much of it is crippling and it is economically disasterous for those of us who are using it and those of us who are trying to provide it. And again, we should be creating incentives, not disincentives, for the private enterprise to try to be able to succeed with these endeavors.

THE MODERATOR: Mr. Gibson.

MR. GIBSON: I would like to make kind of a general statement that cannot be interpreted to each region although it could be implied to all of us. I think that

the future growth and efficiency in this State has got to be built on internal communications. Right now our water transportation is based in Seattle. Our air transportation is largely based in Seattle. And our railroad transportation is based God knows where, but possibly Washington.

I think I would suggest specifically that we do have regional problems that can be met with regional solutions and State problems that can be met with statewide solutions. I would propose the legislature be established in recognizing the legality of and make use of regional transportation development councils which will be empowered to use State moneys for their own area for their own best interest to stimulate local productive economy.

I would like to mention the outer continental development in the Bering Sea is putting pressure on those ports in that area to the additional people that market the bottom fish and the salmon there. If you can't move them they rot and they amount to nothing. We definitely need improved air fields and we need water transportation. Let's send what is in Seattle back and have them send it back to us.

I think we need mixed a State policy implemented appropriately at a local level. I do feel that much of power fuel problems can be met by, as has been suggested,

incentives to private enterprise for industry to develop efficient public transportation.

THE MODERATOR: Mrs. Flynn.

MS.FLYNN: With regard to transportation in the urban areas, to maintain the existing roads prior to building any new roads, and I would like to second Mr. Delisio's commentary regarding support of public transportation.

THE MODERATOR: Thank you, Mr. Fairbanks.

MR. FAIRBANKS: On something Mr. Gibson said about regional transportation councils in that the Department of Transportation now is kind of fostering the way for transportation in that they now have three thousand miles of proposed roads in Western Alaska which have not been dictated to them by the people but has been dictated to them by industry or private sector, but not the people. And I think that this conference here is looking towards the future, and all day we have been talking about short term things like education and not setting goals and then finding some way to reach those goals. But we are talking about goals. And I would like this group to think about transportation that might disrupt life in Western Alaska, such as a road connecting rural and the urban area. The people in the urban area are frankly afraid of the Department of Transportation and the impact it would have if we opened up that can of worms. And I think that we

need to make a statement. Are we going to have a road to Western Alaska? Are we not going to have a road? Are we going to let the Department of Transportation dictate to us or will the people of that transportation area have a say equal to big business?

THE MODERATOR: Anyone else on transportation?

MR. BROWN: My name is Stuart Brown and I am chief to telecommunications in the Department of Transportation. One of the things to realize is in Alaska you can't just simply go in everywhere and put a road because of the inherent natural factors that prohibit that type of development. One of the things that I think we should realize here that telecommunications can be used as an edge or a supplement in some respects to transportation systems. So I would just like to have the group keep telecommunications in mind also as a potential substitute for some of the things that we now utilize transportation systems for.

THE MODERATOR: Thank you very much. We've got seven minutes.

Mr. Gorsuch.

MR. GORSUCH: I would like to just express a concern that the investments that are made in transportation have some evidence that they can sustain those facilities in their operation and maintenance in the future. My concern

is that the investment is going to be made in docks, harbors, roads, railroads and we can't meet future operation expenses of those, and I would like that to be an expressed concern that there is some evidence that supports what would be the potential cost of maintaining these facilities in the future.

THE MODERATOR: Mr. Gibson.

MR. GIBSON: I would like to address that. And I think it's a very real concern that we have to see an immediate and measureable payoff when, in fact, the investment may create things that we have not seen there before. I am mindful of the businesses that have supported private enterprise that have sprung up along transportation corridors that were built when there was no justification at the time for building them. And I feel if we say you've got to have an immediate payoff, that you will impede the economic development which depends upon certain basic things like transportation and communication.

THE MODERATOR: Then what we are saying is we want to know which is first, the egg or the chicken or whatever? You want to know whether you are going to build roads because industry is there or are you going to wait for industry to come and then to build the roads. Are you saying this?

MR. GIBSON: I am saying in many ways transportation

spells the success or failure of invention. I am thinking of a mine that was once a highly productive mine. When transportation costs moved up just a bit, when the price of oil moved up just a bit, because it's only outlet of air, it became much less economic to operate. Had we had an alternative water system there for the movement of that, then that would still be productive. What I am saying is it's very difficult to realize that you can't run a business without a telephone. And yet I can call more easily and more cheaply to Peking, China than I can to one of my neighboring villages and at less cost. So if we want to develop regional economies that support the whole road to the State, we are going to have to invest in and I use that word advisedly, invest in the communications and transportation within the region.

THE MODERATOR: I think there is a gentleman in the back.

MR. PEGEURO: I think that, you know, the best projects that can be done with the money from the permanent fund and the other money, it is railroads, you know. because railroad pays itself. Second, because in order to open up the land in Alaska and to the centralized population just from this center, just from Anchorage and Fairbanks, we have to create another rail belt. I also think that in order to make a lower cost of living in

Alaska, the transportation problem from here to the United States -- to the Lower 48 -- have to be solved.

Because of those reasons and many more, I think that we should endorse unanimously the building of that railroad which, if you see, is very small the price. It's one million dollars and 200,000 for now. There are many other problems that we can keep down that railroad. And we can go from the most remote part in the Lower 48 to get the product down there from the south and bring it all the way up to here quite fast. Also, we have to take into consideration the new technology which, in which that railroad will be based.

I am going to give you the example of the Canadian National. At one time after the war was in very bad shape. Right now, it's paying by itself. Now, highways do not pay by itself and are extremely costly. Dock facility and airports and other major transportation are also subsidized. And the only one that it is not subsidized is railroad, except passenger, then I think that, you know, that was the way to go. That was what really developed Alaska. And that was really who developed places as far as Nome and Bethel and Bristol Bay. And I think that, you know, it is the best, the best thing we can do.

THE MODERATOR: I'd like to thank you for your testimony and advise you that we have run out of time

MS. FATE: Madam Chairman, I would just like to make one more statement. The road to the Yukon I would like to see open for commercial use to the river to the north and to be maintained accordingly. Secondly, would I like to say a lot of our airports in the interior is dangerous to our health and to the life of our citizens, but I would like to see an improvement and in-common sense by acquiring that land by the Department of Transportation.

MR. DAVIS: Madam Chairman, I would just like to reiterate my priorty as far as transportation is concerned and that is mainly air and water born transportation. Those two transportations are not subsidized. The rest of the transportation is subsidized by the State. You should try to get the privates interested to improve services who are not paid subsidy. I think that is a policy you try to develop is the mode of transportation we use right now.

THE MODERATOR: I'm sorry we don't have enough time. I'm sorry we don't have any room to go to. If those of you that have willingly volunteered to write this statement would we stay behind for just a minute because I don't know where we are going to meet. See you tomorrow.

BETA MEETING PROCEEDINGS

(December 7, 1979, 9:55 a.m.)

THE MOLLIATCH: Good morning. This morning we have a big job and we have to get moving, so if I could recognize Mrs. Carpenter, she has a suggestion that you might be willing to follow this morning.

MS. CARPENTER: It's my feeling that we do not have time to really argue or discuss things in depth, and I would like to give, make it possible for everybody to have a opportunity to express their priorities and concerns. And I think one way we can do this would be by using the chart paper, taking each subject area, going around the room and everybody quickly stating in a concise form their priorities in a certain area, with only an explanatory, a short explanatory statement added to that if it's necessary. And then nobody would argue against that at the time. Then all those could be put up on charts. And then after it's up there, if we could say okay, is there anything there that you are strongly opposed to or are there any things there that are conflicts. And if there aren't, then we would leave that for the time being and go on to another area and then at the end of the day, we can divide up into committees and each committee could take one area and write up a coherent statement that would embody the recommendations for that area. I feel that the way we should express ours wants is by dividing them into two sections, one would be needs and priorities, those would be

things that we want done. And the second area would be concerns and guidelines, which would refer to policies and process. And I think if we do that, we can kind of separate where we are, and then the policy and process statements could be an introduction or would become an overall -- would become an overall philosophy and then under that would go the priorities when it's written up. And I think that would include both things and it would give everybody a fair chance and I think it would go fast.

THE MODERATOR: Any problems with that suggestion?

Mrs. Cuess.

MS. CUESS: I have had some concerns on reflecting on the approach we took yesterday, and I agree with your general concept. I was going to offer a little different one. I am very concerned that what we are doing is giving somebody a Christmas wish list, and I am not so sure that that's the direction that I want to go. I think that we should consider not only priorities but goals. My particular approach, which is not that much different from Mrs. Carpenter's would be with a modifying suggestion by Toni Croft, that first of all, I think there are many too many areas to adequately address when you go down through here. We talked about some of ours areas of concern earlier, and if you remember what they are, they break out pretty well. But to go around and those of us who have

some knowledge and some real concerns in specific areas -- for instance, I don't, in every single one of them -- could let the group hear and then break up into groups so that I can have dialogue.

I frankly don't believe that with a large group like this there is an opportunity for dialoque. There isn't the give and take. Okay, you've got an interesting position and my experience is this. And I see that as one of the more important things to come out of this group. I am really opposed to having, you know, my Christmas wish list as I might call it, because I just don't think that is why I am here.

THE MODERATOR: Okay, the suggestion has been made that we would go ahead and try to outline, if you will, with everyone participating. Yesterday we did make a list of topics. The first one was education. We covered that to some extent. Transportation was on ours list, we covered that. The next item that was of concern was health. And the fourth was government services, which included regional and local government's, communications, and law and justice.

So at this time, if there are no objections, we will go ahead and proceed this morning with health with the recommendations as outlined by Mrs. Cuess and Mrs. Carpenter.

MR. CARLSON: Didn't we have a vote yesterday on priority.

THE MODERATOR: Yes, sir, that was a priority.

MR. CARLSON: Number 1 was education and you did it. And number 2 was transportation and you haven't done it. So where are we?

MR. DELISIO: I think we need to know that, too.

THE MODERATOR: Didn't we cover transportation yesterday.

MR. CARLSON: You started, and my point being that you let two experts sit here all day yesterday without even recognizing them. Woody Johansen and Red Swanson. They came up here to speak, and they didn't grab the microphone. They waited to be asked as people normally would, and they were not asked. I thought they were treated badly and I don't think the group got the advantage of their knowledge.

THE MODERATOR: Mrs. Flynn.

MS. FLYNN: I don't think anyone around the table yesterday intended to be rude to anyone else, but this is a conference -- or at least I have been given to understand, that we are provided with a certain amount of background material. And the only reason that resource persons are here is if the group determines the need to ask them specific questions. I am only saying that I think that Helen Fisher's comment yesterday was a very appropriate one,

that I would rather hear the goals and priorities of this group than to hear a speech on somebody's particular pet project, no matter how much an expert they might be.

MR. CARLSON: You mean you don't think this is pet projects of yours, the educational thing, isn't that a pet project.

MS. FLYNN: Not the university.

THE MODERATOR: Madam Chairman. Mr. Chapados.

MR. CHAPADOS: I think the discussion on transportation certainly didn't go far enough to provide us with any basis for making decisions and recommendations and that we are not through with the subject

THE MODERATOR: Would you consider then moving to consider transportation this morning.

MR. CHAPADOS: I was under the impression that we would be continuing with that this morning. And I think that perhaps transportation is a very, very important item along with the others. As long as we haven't set certain priorities, we ought to finish with it, or at least proceed to the point where a small group could sit down who has some expertise in that field and could come back with recommendations.

THE MODERATOR: Are there any objections as to continuing with transportation this morning? As we said all day yesterday, this is your conference.

Mrs. Davis.

MS. DAVIS: I have no objection, but did the group ever get together to complete what we were supposed to do on transportation? Did the group get together as a small group and complete it? Are we going to go back as a small group?

THE MODERATOR: Yes.

THE MODERATOR: Without further ado, we will start transportation, go around the table as it has been suggested, we will outline the different categories, wishes, break up into small groups at a later time, and come up with some type of policy statement.

Mr. Cooper, would you like to start out?

MR. COOPER: With transportation?

THE MODERATOR: Transportation. Very, very briefly.

MR. COOPER: Yeah, I will start. It will have to be a very broad statement. I think probably ours problem yesterday is we got too involved in specifics rather than where we were wanting to be ten years from now or where we want to try to be ten years from now. And I would suspect that if we could continue to, to work towards and upgrade all modes of transportation necessary to provide for an integrated State. We have regions now. We have regionalism. Part of that is because of lack of interrelationship. I, for instance, have never been to the,

to the westward. I have to rely on news accounts or someone else getting me the information. I think if we can, cannot only provide for heavy transportation of goods and services so that one area can supply the other, but also being able to get goods and services to a market, but also for people transportation to make it feasible to know what the rest of the State is like. It will cover a lot of ours problems that we generate within ourselves from lack of knowledge in other areas.

THE MODERATOR: Thank you.

MS. CROFT: I have a question. What is the Department of Transportation doing if they are not doing that.

THE MODERATOR: Could I just interject once? And this is where we are going to get in the problem. We will wait until a later date, it it's with your approval, that we break up. Let's get everyone's ideas first, broad, and then break up in a later date and hash it out, and throw the bad parts out and keep the good ones.

Mr. Carlson?

MR. CARLSON: Yes, ma'am.

THE MODERATOR: I'm sorry, the gentleman to Mr. Cooper's right.

MR. CARTER: Carter, Ernie Carter. I would like to see the State adopt a policy to have access roads to these

lands that they are supposed to be making available to the public. In ours central area they have chosen to designate lands for disposal to the public, they are sending them completely unaccessible places. I don't mean a network of subdivided roads, but at least access to parcels. Otherwise the land disposal thing becomes a joke. I would like to see the State adopt a policy of extending a road system into areas that they intend to, I suppose, put roads in.

THE MODERATOR: Thank you.

MR. CHAPADOS: Frank Chapados. I am not sure that I can give a real good resume of what I think about transportation. As I think I said before, I have not been involved in it in Alaska for a long time. The former things that bother me in ours discussions that you here not only here but in other places is the degree of economic development that people are looking for to in Alaska. And there seems to be -- this seems to be kind of a mushy subject. You just can't seem to pin people down. I don't think there is really a consensus in this State of what we want in this regard. I think personally we should feel that we have to control the economic development and that we should provide a base here so that we have some stability in ours economy and to relieve us from the ups and downs that we suffer from time to time.

Any way, no matter what degree of economic

development you may want, I think there is an absolute need to have a planned approach to an integrated system of transportation. And I am not -- I am not in the trucking business, but I am trying to feature that. All modes of transportation have an important place. And in the establishment of such a system I think you have to give consideration to the various modes, because some will serve the certain areas and needs of a State better than others. My idea is to have this plan prepared and a study made. I know studies are something that we all hesitate to support. But at the same time, it's pretty involved in something that needs to be done. And I am not suggesting that we go to every little village of the road and that sort of thing. I am saying let's establish the network, the State network, the trunk lines that can be approached by the needs of the various communities by building the access roads and so on that need to go to the trunks. Establish the corridors that are necessary. A question was asked, what is the D O T doing. I think that is a good question, just what are they doing. Maybe they are going to go ahead with such plans. But I don't know what the public -- I certainly am not aware of what they are doing. And I think that we ought to know that.

I think what we have to do, ours actions here should indicate to the Legislature, there are some needs

today and there are going to be needs in the future. And now that we have surplus funds and are in a position to do it, we should upgrade ours air transportation, airports, ours docks and harbors and all the necessary things, that are necessary to establish a top level in such facilities. Because if we are going to have a development at all, this is going to play an important part in how this development comes about and the official manner with which we can transport goods and supplies and so forth. In other words, we are not going to be competitive if we want to compete in other world markets and other places.

I would like to make one more comment: The transportation industry, 2 people that did not operate the trucks and the railroads. They have a national problem. There is a big trend to deregulate. Everybody wants to cut out their regulations. And everybody get into the market place. This is one thing -- whether or not we do take any action in this respect, I think we ought to be very, very careful before we do anything along the lines of regulating system that has been in existence for probably 40 years and it's universal throughout the United States, and it's working. And I think the statistics will prove that also as far as cost and productivity are concerned. But I guess my recommendation would be at this point that we seriously consider making some recommends to the Legislature about

how to use the monies that they have available. I am not going to say that the Department of Transportation is not doing the job because I don't know. They may be. If we don't have the money to implement the programs they come up with, we are not going to get the kind of system they look for

I would like, and I think it would be a good idea, to take and go along with Mrs. Guess's recommendation that we later have a group get together on these various points, where we can draw on the expertise, perhaps, that we have had available in the room and do have to help us to answer questions, perhaps, and to help us make something in the form of a recommendation we can bring back for approval.

Thank you.

THE MODERATOR: Thank you, Mr. Chapados.

MR. DAVIDSON: I am Marvin Davidson. And I think in the area of transportation there is four areas I would like to cover closely. One is the area of assessment. Assess very, very carefully what the needs are in terms of the people and in terms of the economy. I don't like generalized statements and generalized letter to the Department of Transportation where we should do this and do that.

I think in their work they should be involved in a very, very careful assessment of actual specific and real

needs because they exist, but no they don't exist every where. The other thing I thought we should look at is the impact in terms of social. Transportation, in terms of social impact, in terms of environmental impact. There are a number of places in Alaska, also in the Lower 48, that you open an area sometimes through transportation and there can be tremendous impacts on the environment and I think we are finding out in a lot of rural areas in Alaska, people are saying, "Hey, we don't want this much access. We don't want this transportation. We don't want to be Anchorage's backyard." So I think a lot of the recommendations we might make to the Legislature we might consider in what transportation has.

The other alternatives are the more conventional means of transportation. Alaska is a little bit different place, we've got different needs. I think we ought to look at things like more rail transportation, more boat transportation, river systems. And someone has even suggested dirigibles as a means of moving agriculture and forest products and things like that.

I am not an advocate of dirigibles, necessarily.

Another thing is: I think a fourth thing we ought to look at recommendations for is how to get the public involved. We are involved here today. But I think when we get to specific types of transportation in specific

areas as the Department of Transportation does and the Legislature does, you've got to really find good ways to get the people in the areas in the local region involved in examining the proposal, coming forth with their idea of what they need, what they like to see and where they like to see the road or the railroad go. It's a difficult thing to do, get meaning for public involvement. But I think that's something that has to be done, so I would encourage those.

THE MODERATOR: Thank you very much. Sorry you weren't here yesterday.

MS. COOKE: Margaret Cooke from Bethel. I am interested in things, I think upgrading the transportation systems we have, like upgrading the airport. And upgrading the existing roads, not putting in any new roads, because I think what we have -- we have a unique problem in ours areas that people in ours area live off the land and 80 to 90 percent of their food is from subsistance on the road and maybe other forms of transportation might kill off ours livelihood. So that's one of the reasons why the people in ours area are really against seeing a road, at least the people I have talked to.

But I think transportation is a big problem and even though we have airports, a lot of times they are not usable . And I think sometimes there is all kinds of

transportation problems. And because of the size of ours State, those different areas have different kinds of transportation that are good for Southeast. What is good for Southeast, won't be good for the Bethel area.

THE MODERATOR: Thank you. Mr. Delisio.

MR. DeLISIO: I would like to speak more conceptually than specifically. First of all, it seems to me philosophically what we should be aiming for is a symbolic relationship between the private, which is you and me, and the public, which is government, where we provide the ideas. We are like the plant or ours idea is like a plant that grows into some sort of an ultimate useable thing. But government can be a little bit like the fertilizer, maybe doing a little bit of scratching out of some weeds or tending it a little bit to help that idea grow into fruition. I think that philosophy, in my mind is important to the delegate of the whole of Alaska over the years. In that concept, it seems to me that in the large populated areas, we really need transportation. The individual automobile transportation is wasteful. It's increasingly dangerous and so O but the massive transportation simply isn't spending millions of dollars to by buses and rail ways and that sort of thing. The real answer is to stimulate people in the private sector to do this ourselves. To create economic incentives and loan systems and that

sort of thing.

In the State context, it seems to me as far as statewide transportation, I think we need to be exploring are alternative conflicts what those policies are beyond my ability to predict. However, the transfer of the hoovercraft. They were here, in the early pipe line phase. They are used extensively all over the world. In Britain and, they have hoovercraft that is almost as big as the floor of this building, the single story of this building, that haul automobiles across the English channels in tons with a minimum of damage to the environment and so on.

Another area that perhaps we ought to be exploring and maybe encouraging private enterprise to explore for us or something for the nation is something like a magnetic tube concept through the Oregon transportation. We put oil through pipes and metal boxes in storage, and from one end of the bank to the other and flows in a vacuum. Why can't we put people, goods, in that tube and shoot them around the countryside without a lot of noise and without a proper amount -- without pollution and so on. It takes quite a few alternatives. But we should think in terms of those alternatives

Let's think in terms of things that service a multiple dual or more capacities. We have talked about making a cross way for the people of Anchorage to get over

to the Matanuska Valley quicker. So it's a convenience. Then it was urged an economically feasible thing because it approved the economic value of the land and the valley. It would provide people with alternative life style and so forth and so on. But consider this. If we built a causeway across the inlet, across the Knik Arm, for example that was designed to convert total energy into electricity. We have the second highest tides in the world here. The movement of this water is about seven or eight knots almost continuously. I have been told, by hydraulics, 30 minutes every half hour period of slow tide. And at all times it is running at a very rapid pace and there is a tremendous force involved. We can somehow convert that sources as it passes through a causeway just like it passes through a dam. We could create an energy horse source that could light up the whole of Alaska for 100,000 years for the cost of maintenance, even long after oil and gas is gone, or if it turns out that solar energy isn't for us.

Another alternative idea, it's not related to transportation. What about communities like Nome, you have a high tidal activity, you have break waters that are built for keeping the sea from washing you away. Why not build the break waters so they can generate electricity from the force of the water that is slamming against them. Kinds of concepts seem to be the kind of philosophical approach I

would like to see.

Lastly, I would like to see government get out of ours way as much as possible. I don't believe we can live in an archive. I don't believe we can live without government. But it seems to me we can live a lot better with a hell of a lot less government than we've got. If we can reduce regulation to a bare essential minimum, not by bureaucrats who want to keep their jobs and not by people who want to protect a monopoly, but we are told what is the only way or what is the minimum, for example, you can't allow people to take contaminated food and put it back on the market. You can't allow people to fly planes that are going to break up in the air and kill everybody on board. There is a certain regulation that is necessary. But the majority of the regulation whether it exists in transportation or otherwise is just a bunch of bull. And it's there for economic best interests. It's there for vested interest groups and it's there for the sake of bureaucrats. I wonder to what extent it truly services the people. We ought to, being a new society in a sense, and certainly fresh and not as bound by institutions than most are. We should find it easier to break those bonds than most are.

THE MODERATOR: Thank you.

THE MODERATOR: Your name.

MS. DEGNAN: Francis Degnan from Coast Sound. I missed out on your discussions yesterday. But as far as transportation in Alaska, I think it's very important that we now, everyone in the general public access to the areas that they go into, and can get into the areas they want to get into. Meaning if you are in the rural areas to get to be able to get into the urban areas and to have that access be safe. Currently Margaret mentioned earlier about airports not being safe and not being kept up to standard and that sort of thing. it's an ongoing thing. And people travel wherever they wish to go provided they've got the dollars and the wherewithall. I think we are -- we are thinking of terms that make sure that legislature by people and local community involvement, that they have access to these program development, in programmed ideas, that in the rural areas if roads are not feasible and they are not wanted and what we have available is either water transportation or air transportation, and the facilities are not there, but your safety factor depends on your pilot a lot of times. And so I think the general public needs, number 1, safety and access.

THE MODERATOR: Thank you.

MR. DAVIS: My name is Larry Davis, and I am from Homer. Yesterday I stated my priorities on transportation system. They still remain the same this morning, that is

the air transportation and the water-born transportation. Those two are the most transportation that has the greatest impact within the total State of Alaska. They are used by almost all the states here.

And I don't think the State should try to get into the business of trying to compete with private industry. Let the private industry provide the mechanical means to get from one place to the other. The State's responsibility should be to take care of facilities and upgrade facilities wherever they are at.

THE MODERATOR: Thank you.

MR. EKVAL: Eric Ekval. I share some of the same concerns that Art Davidson spoke to earlier. I remember a number of years ago, there was a lot of discussion about what the -- I guess it's still going on, the social and cultural impacts of television on rural Alaska or on ours country as a whole. And I think transportation systems have very, very similar kinds of repercussions.

When I hear talk about transportation planning, I sometimes hear or seem to hear more transportation for transportation's sake, access for access sake, and not so much what these systems are going to be used for or what the purpose of putting a transportation plan or roads or railroads into a place would be.

I am thinking in particular of a number of

projects which have been discussed for a long time, a road to Nome, a road from Cook Inlet to Bristol Bay through Iliamna to Dillingham, and those areas.

And if the purpose for building roads to far, spread out places in the State is to bring the cost of transporting food stuffs or commodities to these places, or bring these costs down, there might be much cheaper ways of doing that by upgrading ports, barge tie ups, and things of that nature.

I have heard it repeated very often in my travels that people want improved transportation within a region of a road from Saint Mary's to -- what is it? Mountain village, yes. Improved roads in the Dillingham area to connect the villages there. And I hear a lot of very, very strong operation to roads which connect the big magnets of the State, Anchorage and Fairbanks, to the outer parts of the State. And I think it's important to listen to these things not as nostalgic, kind of an acronistic attitude, but keep the things the same and not change it. When we witnessed the changes in the State in the last ten years, in Anchorage alone, we think of ourselves as a fairly sophisticated urban population, the changes that have hit us here and the changes that have hit urban-rural Alaska, it might make a lot of sense in terms of the manifold human impacts to really stop and consider of what the effects of

building spokes out from the urban centers to the rural centers are.

Off the top of my head it would seem to me we should give greater consideration to improving the intraregional transportation systems and allow people within regions as they identify their needs to build systems within the regions further, so that a gravel pit which is situated between two communities can be used by both those communities, so there would be cooperation sharing, and perhaps some economic development between smaller communities before the pace of the indiscriminate development of transportation from urban Alaska to rural Alaska.

But I think it's important to identify what the uses of these transportation systems will be. If it's to transport food or transport people or transport tourists or what, we have a lot of examples to draw on, the road to Minto we have a lot of mistakes. We have a lot of successes. We have a lot of failures in terms of human impacts and economic impacts on the State, and I think we can learn from them and I think we can listen to the people who have submitted to them or pushed them.

THE MODERATOR: Thank you. Laura Fleming.

MS. FLEMING: Yes, rather than echo Art Davidson and Mr. Delisio and Mr. Ekval here, I would like to fee

specific remarks I have to be kind of considered in light of things that they have to say. I am from Juneau and I don't have too much experience with roads, there is not too many places to go on the roads in Juneau. With regard to roads, it seems that the cost of maintaining a road, not the cost of building it, but maintaining it is astronomical in this State. I would like to see upgrading of the existing modes of transportation, not just airports and aircraft. We are using obsolete aircraft in some places in the State. In some cases I think it's dangerous to people who are using -- who have to rely on that form of transportation.

The marine highway System, places like Tenakee, places like one road and no cars, they rely on those systems heavily for not just freight but for getting around and receiving information and getting supplies. The cost of the Marine Highway System is pretty high, too, because they are using these huge vessels. And I would like to see some smaller designs used. It's ridiculous to be running a huge boat around with ten people on it. It would be nice if these smaller communities could have more frequent runs with smaller vessels suited to the needs that's there, large freight space and smaller passenger space. Water transportation is the cheapest form of transportation available. In it's in terms of moving freight. And at

some time in the State I would like to see rail links to places where water transportation is used as a link there. It would be an intrastructure as a necessary thing for industry, all kinds of industry, timber, agriculture, fisheries, mining, all those independent industries will require a means of transporting to their products, to the Lower 48 or whatever. I would consider it cost effective where transportation would pay for itself. It's a real danger. Let's go, we've got the money. I think there is a danger to create programs that aren't going to pay for themselves, but would require continuing support. There is going to be a time when we don't offer that, and we are going to have to retract some of ours initial agreements that we have made or contracts with the public. I would like to see a development program to pay for themselves in those areas. That's all I would like to say.

THE MODERATOR: Thank you. Ms. Fate.

MS. FATE: I am Mary Fate, and I would like to confirm with Frank Chapados and Mrs. Degnan. My dad carried mail through Rampart, Eureka, and all mining camps to trappers. And I had gone along with him. So, we also used air, boat and road. Now because of legislation nationally and State, we have to have roads on State and private grounds with regional input or the owner's input. So we have this tool if we would just use it, local control.

And that, I really appreciate and respect, is the local plans.

Now, put yourself in ours spot in the interior, 43 small villages without roads. And I worked for an airline for several years and I am for air transportation, but it is sad what we have in the interior. It's dangerous, and I really appreciate what Francis said. It's not only dangerous for the survival of the individual, for the owner of the aircraft, but sometimes you keep your fingers crossed getting in and out. And I have to go back and forth to my village many times a year, and I can't really give you how terrible it is at some points, depending upon the season. When you get to the airport, there is no house, even an outhouse, really. Or if you have medication, you protect it with your body heat, because it will freeze, if you are taking it there to the village for someone to survive. If you have food, it's usually frozen, so eat it, if you may, because some of the stores do not carry that much produce or meat or fish.

And ours seasonal river, you say, is cheap, if you can get in and out, if you can in the river. Ours Kenai River, you can't really beach a boat sometimes on it because of the wind. Good luck. It's so shallow it, itself, moves the river every year. And you really don't know unless you was born on that river.

So again, we have this tool. Let's plan with ours local input, but keep in mind the ten years from now, the 20 years from now. Again, we have small villages. We have small businesses. Very, very, small corporations, so, so small per capita, that ours overhead is so great in transportation we will not survive under this type of overhead. And what Eric said, he didn't finish his statement. He said, "Look at Minto." And I said, "What do you mean, look at Minto?" The road there. It's easy for us looking at those people and staying look at Minto the terrible things that are happening or whatever. I am trying to read into what you are trying to finish. But do look at Minto. They have a gas station there. If they don't make money in that gas station for their corporation that hopefully will go to the future of their residents and youngsters, they will have to go bankrupt. And they can't just make money with that gas station from Snow-Gos and boat fuel. So let's really respect the input of that area, which we have to.

That's all I have to say.

THE MODERATOR: Thank you. Your name.

MR. CROW: My name is J B Crow. Since I am the guilty one in this whole bunch by being provincial in my mind and earning a living by exploiting a natural resource, I yield to the professionals in the conceptualization in

moving greatly forward. I pass.

MR. GIBSON: But so elegantly, Bruce.

MR. CROW: I thought about it.

MR. FAIRBANKS: Being so provincial.

THE MODERATOR: Mrs. Carpenter.

MS. CARPENTER: The concerns in ours area are for some exploitation of resources, but in ways that are appropriate. And I believe, too, that a transportation system should not be just for nothing. It should be for a purpose. We do have needs for economic development, for development of a tax base in Western Alaska. Ours group concurs with recommendations 3, 4 and 5 in Mr. Selites' (phonetic) report on page D 44 and probably himself on 9 and 10. I am not familiar with the others.

We are dealing with high freight costs that discourage local processing. We have resources there, fisheries, agricultural potential, timber and mining that will provide jobs in villages. We would like those resources developed in ways that do provide jobs to local people that are not big, massive, high impact technologies and developments, but appropriate development that are appropriate for the area. And for those reasons, we do need improved local airports. We need barge tie ups; we need improved dock facilities. We need ways of lowering freight costs. And we also need these systems developed in

ways that involve local people in the planning. One of the main links that we need is a road between the Yukon and the Kuskokwin. That would provide low cost freight service to the middle Yukon area that has now served at a very great expense. It would also enable them to produce products for market and develop an economic market in the area that is not based solely on government services and employment. That's all.

THE MODERATOR: Thank you, Ms. Fisher.

MS. FISHER: I am Helen Fisher and I am a 17-year veteran of the lousy roads on the Kenai Peninsula. In thinking about those past 17 years, one of the big things that comes to mind is if they can put a man on the moon, why can't they build a highway that will last beyond one season. I have seen parts of the road continually repaired. And by repaired, I mean a chunk taken out and something else done, only to find by the next spring it's a pot hole mess.

So I would suggest as a pressure, perhaps, of issuing contracts, that the contractor be able to give of indication that they know how to build a road in Alaska.

I think in all of the things that have been said, and I agree with many of them, there seems to be one main thought that I think of, as it comes out, that we should care to what happens in the transportation areas. In my

particular job, I see women coming in from the bush and we know that their trip has been horrible.

I would hope that there would be some way that better and cheaper commuter transportation be made to these areas, because it really is difficult. If they come in because of medical attention, any of the services that have to be offered in a large area, it is really insurmountable at sometimes. So I think mainly we ought to care about what happens to each other.

MS. ELSON: I, also.

MS. CROFT: Also, Mr. Chapados, if he hasn't got a sensible plan, I think it's very necessary that they do have a coordinated plan. I thought they were trying to come up with something, but perhaps they have not. And finally, I would support personally some sort of possible subsidy for either mass transit or some sort of support for not necessarily huge roads, for mass transit, but some sort of support for mass transit so mass transit between the villages are easier.

THE MODERATOR: Thank you, Mrs. Davis.

MS. DAVIS: Transportation is not an area that I have a lot of expertise in, but from listening to what you have said, I feel that there was quite knowledgeable people that I know that we should not put all the responsibility on the government. Yet on the other hand, I think we should be

encouraging the government to contact. And when I say government, I mean all areas, the local, State and federal, to come together, to come up with some kind of design that's going to be helpful for the whole state of Alaska, not just one area, the whole state, and come up with reasonable solutions for transportation system problem that we know we are going to have in the '80s. If we have a problem now, we know it's going to be greater. And one of my main concerns is that we also do something to alleviate the person that has no money and cannot afford a car and would need public transportation. Especially in Anchorage, there are a few buses running around, and there are people who cannot afford cars and need that transportation. I know we will have a greater need in the '80s for that.

I am pushing for massive public transportation. Or maybe they will look at some other areas, monorails or different things. Things for people that are available to large groups of people, and also include the private sector to be involved by giving them some incentive to create these mechanisms for improving the transportation system, and not put all the costs on the State, or the other areas of government.

THE MODERATOR: Thank you.

Is it Mr. Gazeway.

MR. GAZEWAY: Most hearings that have occurred to me

have been at least partially covered by other speakers with the perhaps one exception. That is, I would like to see any consideration given to reducing taxes or fees or licenses or so forth, that would be applied to -- I mean the same consideration and more be given to reducing such things as a fuel tax or possibly license and so forth, as it relates to transportation. And I feel it perhaps would be worthwhile to say would be, too, or reiterating. I am glad to see we are all concerned with attempts to minimize transport calls while improving the services in both rural and urban areas, and particularly in the rural areas because I am of the feeling we haven't seen anything as far as calls are concerned, as to what will be cause for concern, as to what we will be seeing in the next two or three years.

MS. GUESS: Carolyn Guess. In trying not to repeat anything that I said, it would only be to add that I think you cannot consider the transportation needs, the transportation assessments and the transportation needs in a vacuum. I think they have a direct relationship to energy.

And I think when you think about that, you need to consider the availability of energy today. The president has issued his plan for gas rationing. I think you have to consider the efficiency of the energy. And I

think you have to consider the costs of the energy when you are concerning yourself for the transportation field.

THE MODERATOR: Thank you, Mr. Gibson?

MR. GIBSON: Bob Gibson. I have taken the liberty of sparing a lot of things that I want to say bypassing it out in this paper.

A couple things occurred to me, though, that if we as a group are to say something to the legislature, I think we should say that we recognize the need for statewide planning and development. But the particular form that that takes should be recognized as a local concern. We need intra-Alaska transportation. But I think that the areas effected should have something to say about that.

There has been a concern in the part of Alaska that I come from, that if we have a road from a major population center, we will soon be ankle deep, I mean even deeper than that, in Winnebagos and beer cans, and that ours game will be shot and ours streams polluted.

On the other hand, 25 cent pound air freight, is right around the corner. So perhaps a mix is appropriate, with due concerns for the areas effected.

Now, some specific things: We have an example of a State maintained, federally financed road in Bethel, which connects the airport to the communities. This is a

good thing. We need this access. But it is a road built to inappropriate standards and is hardly maintainable at any cost, but could be a lot more easily maintained, if it was not mandated that it be blacktop, which is hazardous in the summer, deadly in the winter, and breaking aago part all the time. So local knowledge does play a part there.

I should like to reiterate the absolute necessity ours region of the Yukon-Kuskokwin Road. It does not have to be a blacktop super highway. A maintainable gravel top could be just beautiful. And certainly saves costs on maintenance. I think anything else I have would be submitted to you in the copy I passed out. Are there any questions?

THE MODERATOR: Mrs. Guess was concerned about the energy potential and costs that evolved therewith.

Mr. Fairbanks.

MR. FAIRBANKS: I have lived in Western Alaska for six years now, and one of the main things, if I could say I've studied anything, would be transportation and the threat of roads to rural Alaska. I have gone to many villages, many people, trying to get a consensus from people about how they feel about it. The consensus I have from the local level is one of fear.

People have said in this room just the Department of Transportation have plans at this moment. Yes, they

have plans, they always have shelves full of plans to do many things. Right now they have plans for about 3,000 miles of roads in Western Alaska, roads which have not been mandated by the people, but which have been pushed by special interest groups, the majority of them not being Alaskan.

Just two things about the consensus that I felt: One, the regional areas should be the major planners of transportation, into their regions and in their regions if that they know what they want and they don't know what they don't want.

I've just got so many pent up feelings about this thing, that we've got so many different people in this room wanting so many different things, and we've got to make sure we make the right decision, because if we don't, we are not going to have Alaska any more. We are going to have L A, anything. If we make a decision, instead of making it right now, let's wait. Let's wait until the technology is there that won't screw up the environment. And the people of the bush are just worried about this. They are worried that they are going to be mandated or something that is going to screw it up. So that's about all I can say about it.

THE MODERATOR: Thank you.

Abi Dickson.

MS. DICKSON: I think I have to agree with everything just than everybody has said in this room. There were several points all pretty much agreed on.

One of them is that we have to integrate every system that we work on. Integrate means it's got to work forever because we are going to use it. I think we have to deal very, very realistically with ours energy problems. The system that we've got now just gulps fuel. They are dangerous to the environment. They are destructive of the human energy potential. We have to deal with the social implication of what we are doing. And I would like to see that we do try and emphasize ours minds and try and come up with some alternatives. In the northern part of the State, you can have very extensive system of well made trains in the center, so people can could get around on foot, by doing that. I am not suggesting that we go back to the dark ages, but that we start using ours human potential to travel around.

I understand the air problems of flying around. I live out in the chain, and there is only two ways to get there, and one's by boat and one is to fly. And it took me a month and a half to come into town. I would like you to see that. We asked the Legislature to respond to the wishes of this group and to the whole. In other words, everyone in the State wants a say in the structure of the

system that we are going to create. The Department of Transportation has got to be the response to people in the area. They are the ones that live there. They know their environment. They know what they want. Thank you.

THE MODERATOR: Mrs. Flynn?

MS. FLYNN: I am going to state what I said yesterday about the need to develop and maintain the smaller airports in rural Alaska, also to maintain existing new ones rather than old ones.

I'm no transportation expert, just a human being who has felt the effects of the development of the transportation systems, but not only in this State, but three or four other states. And I can't deal with the system in Minto or Nome or Steetemute or any other place. I don't know anything enough about it. But I think I can deal with it here in Anchorage. And I want to go back to the opening statement that I made yesterday when we were reducing ours and applied roads to.

As go roads so go the development. Some people look on that as very good. Some people as very bad.

Let me take a middle ground and say something about Anchorage. Sometimes the population follows the development. Sometimes you have the exact opposite effect. And as we build roads, we encircle otherwise healthy populations, and we watch those roads strangle

neighborhoods and we watch them dry up and die from the outside in. We are closing school in Anchorage, not just because we are losing kids, but because they are moving. People don't want to live next to super highways with their little kids. There are few things in the world more threatening than having large high traffic volume roads next door to you or close to you.

I think it very seriously impacts the mental health of a community on how roads are planned and built, where they go and how they go. And all you have to do is walk around this community. You don't have to stay downtown to see it. You can start going out in ours rural areas and seeing the mistakes we have made by building major roads and watch them kill off the entire neighborhoods. The pity of it is, is people want to move out and leave it all behind. What it leaves behind is the poorer people, oftentimes the minorities. And they are stuck there. They don't have the means out and they can't spare.

The fact of what I am saying is assess the need and figure out what the impact is going to be. Because the impact might be the death of a core developed community.

THE REPORTER: Thank you, Mr. Carlson.

MR. CARLSON: Madam Chairman, yesterday, I stated that I felt there had to be some equalization of both the

costs and the transportation energy in the United States. And as it leaves today, it seems that is a great field of road to because of the Anchorage people going to the neighborhood with their beer cans and soda cans.

The other side of that if we were to bring in a cash economy remote areas. There has to be access to jobs. There is almost a total unemployment problem, as I understand it and have studied it through the years. The people want to work, but they want to work where they have access to both homes and the jobs. And that is pretty limited to the rural areas. The job opportunities are pretty scarce. So I think without an integrated reasonably economic means of transportation, the access to employment is very restricted. So I think when we talk about a comprehensive transportation system, access to employment has to be one of the reasons for achieving.

I think that child should have system to what type of transportation to be built or if they don't want a road or don't want more than a one way street then they shouldn't be concerned about the cash economy. They ought to stay on the subsistance life style and not the life of employment opportunities.

So I think that has to be talked about in an integrated transportation system, access to employment.

THE MODERATOR: Thank you. No questions. You won't

believe this, but it's 11 o'clock, and we did it in an hour.

MR. DeLISIO: Madam Chairman, we missed one important person in the room, who I am sure has something to contribute and that's yourself, and I, for one, would be most interested.

THE MODERATOR: I would yield to Mrs. Flynn, Mrs. Guess, Mrs. Carpenter, Mrs. Degnan's views. Let's take a recess.

(Recess)

THE MODERATOR: We've covered education. We've tried to cover transportation. The next on the agenda is health and government services.

Now, we've outlined education to a degree. We've outlined transportation to a degree. The suggestion has been made that we break up into small groups to round out the outline and come back to the group as a whole to see how these statements will fair. We have approximately 45 minutes. It's 11:15, 45 minutes until lunch time. Now, it is ours conference so we don't have to really keep too strict of hours, except that we have to be out of this room at 4:30. And we can meet in room 301 at 8 o'clock tonight.

So shall we do with health?

MS. FITCH: Madam President, isn't there any way we can meet until six? You know, this is the second day we've gotten kicked out of here at 4:30. It seems like we are

getting shafted again.

MR. VAN DOREN: Mrs. Fisher, I can double check on this, but we are supposed to vacate this room at 4:30.

MS. FISHER: I am not opposed to vacating this room. I haven't become that emotionally attached to it. But the thing of it is I would like to continue until six o'clock because I am going to have a lot more energy until six o'clock than I am any time after 8

MR. VAN DOREN: I will look into it and see what I can do.

MR. GIBSON: May I suggest the group activity might occur between 4:30 and six when we have had an opportunity to consider other things which may have a impact on these two things that we have discussed this far. And then the face is at a premium for the whole group might be a time to make a report for the day to bring back, say, at eight o'clock for consideration by the group. And I would suggest that.

THE MODERATOR: Then at this time we will proceed then with the health portion of the agenda.

Mrs. Guess. It's fine with me. I am going to be very provincial in the energy area. I am very concerned listening to us in other areas that we will never get to it. And I think that you can look at every single topic here and you can go right back. You can go back to energy. You

look at finances, you look another all the resources. You look at any kind of services. And so being very provincial, I will make a motion that no later than two o'clock this afternoon we begin to address energy.

MR. EKVAL: Second.

THE MODERATOR: Motion has been made by Mrs. Cuess that we address energy sometime before two o'clock this afternoon.

MS. DAVIS: No later than two.

MS. FISHER: Don't we reconvene at 2?

MR. GIBSON: Don't we supposedly have a two-hour lunch break?

MS. CUESS: No, I.

THE MODERATOR: All those in favor say aye?

(Complying)

All those owe supposed?

Motion carries.

Health, another suggestion has been made to keep ours statements, I know it's hard, but as brief as possible in order to go around as quickly as possible, so I would ask please keep your views, keep your statements brief so that we will be able to do as much as possible in the time that is alloted to us.

THE MODERATOR: I can't lip read.

Okay, Mrs. Davis, would you like to start out?

MS. DAVIS: No, I wouldn't.

THE MODERATOR: Mrs. Croft?

MS. CROFT: Mrs. Fisher, I think.

THE MODERATOR: Mrs. Fisher.

MS. FISHER: Well, my first reaction to the subject of health is with a great deal of indignation and frustration, frustration because things that were set up to help people were not, and I am thinking of Medicaid in particular. We are seeing a lot of women come to the center who are not able to use Medicaid. These are people that would qualify, but because they cannot find a doctor to accept it or they sort of fall through the crack of somebody's regulation which does not apply.

I would like to see the Medicaid overhauled completely so that it serving the people it's intended to serve. I am going to let it go at that, because I am sure that other people have comments that I will agree to, too, and I don't want to monopolize the time.

THE MODERATOR: Mrs. Carpenter?

MS. CARPENTER: Can you come back to me later? I have to find my notes on this.

THE MODERATOR: Mr. Crow.

MR. CROW: I pass.

THE MODERATOR: Ms. Fate?

MS. FATE: Under the health, again, we have State

boards; we have local boards,, we have P H S boards, and for health and planning in the State of Alaska. And I think there should be a coordinated effort of all these that are providing policy making in regard to health. I would like to see a continuance of board of commerce for not only medical, doctors, dentists. but this we've got to continue.

And also, transportation as we talked about, is another very important thing is updating best routes, because the patients do not get the health care in that village except for a health aid or in the rural.

Communication is so important, ours telephone lines. And where emergency is usually not working in the small villages, there is just one phone. There sometimes is an incoming route but not an outgoing route, and maybe we could use -- get the use of -- and I don't know the name of it -- television.

THE MODERATOR: Telecommunication.

MS. PATE: Where the doctor could diagnose the patient that is in that city.

MS. CUESS: Satellite.

MS. PATE: The outgoing I am thinking more of.

MR. DELISIO: Telex.

MS. PATE: Also two way. Also I would like to see this. There might be a possibility. The USPHS Pendex

(phonetic) are priorities of health care, whether they are a physician or dentist, should have some sort of evaluation stand like other priortities of medicine in the State of Alaska

MS. CARPENTER: Could you repeat that?

MS. KATE: For instance a private physician in a community has to pass a board exam. A physician under USPHS do not have to pass that board exam. But they could come here and practice on the individuals who are usually people who cannot have a choice of dental or medical services and usually do not have another diagnosis and usually most likely do take that one step. And it may mean their life. So I really feel USPHS Bencer Medical Services in Alaska should have some sort of screening process.

THE MODERATOR: Thank you. Mrs. Carpenter.

MS. CARPENTER: In ours area, we have two primary concerns: One is preventative programs for otitis media and other chronic conditions that are extremely serious for children.

And the second is expanding to poor for alcohol problems. Alcohol is the primary social problem in ours area. And we do need additional support in dealing with that. And we have developed some programs that are working. Some of the programs in the villages we are getting whole communities that are behind good alcohol programs that are

being helped and rehabilitated. But the funds are extremely limited. And we feel that a larger percentage of the money that is earned from alcohol sales in this State should go to deal with some of the problems that alcohol causes.

THE MODERATOR: Thank you.

Miss Freeman?

MS. FLEMING: Laura Fleming. I don't have any specific things to address in this regard, but I tend to feel that the social and economic health of the State is an extension of the mental and physical and spiritual help of the people who live in the State. And I do feel that the State has a responsibility to the citizens in this regard.

In too many places, good health care is available only to the people who can afford it. And the people who need it the most can't afford it and they can't get it. And I think that that's an ecuality which needs to be rectified.

The Constitution offers quality for people, but if you are not healthy and you can't function, that's not equality. And I think that we could work towards offering a program of health care and alcoholism prevention, which is especially a problem in Southeast Alaska, for every one. This is something that they are trying to work on, they are trying to create, but it's falling short and it's not ready

yet to serve the people. I think we need to put as much energy into that as possible.

THE MODERATOR: Mr. Ekval.

MR. EKVAL: I don't have a statement to make on the subject this morning

THE MODERATOR: Thank you, Mrs. Degnan.

MS. DEGNAN: I've got two areas. I think education is very important. The school system to teach or encourage young people to look after number 1, their physical health, and to know how to keep themselves healthy, because that's very important. You are the one responsible for your own health.

Number 1 is the individual responsibility. And the other area is this that we have had surveys going in areas that don't have health care and local input has been asked and I have never really seen, if I may back up, follow through on what, you know, concerns have been voiced in the past on, you know, health needs in Alaska, and only those that, you know, get to the hospital.

You can't afford to get sick if you live in the bush. So, number 1, you've got air transportation in. You've got to know where to go, where they will be able to take you. And I think what would be critical is the State has a policy for access for individualisation. It's kind of like a health, -- to also enable the emergency cases to

get immediate care without having to wait.

THE MODERATOR: Did you have something?

MR. ERVAL: I do have a statement to make, I think. As health care costs are escalating and there is talk of national health insurance and essentially if you don't have insurance and you fall sick in this country, you may mortgage the rest of your life paying off hospital costs and things like that. I think we are going to have to come nationally, and I think we are in some degree already, to a point of view where a holistic preventive approach to disease and general health is emphasized. And I think that that's going to start to some degree with the larger corporations, the insurance companies. And I think one sees it already in national media in advertising, encouraging people to get out and get healthy, making being healthy and physically fit something that's desireable from all points of view.

I think the State of Alaska should adopt an attitude -- I am not talking about programs but it's easier to adopt programs than it is to adopt attitudes -- towards a, perhaps, nontraditional or nonmedical model approach to health care and prevention of disease which views the whole body, the environment, and not necessarily sort of a Band Aid or fix up approach to making people well but instilling in people a sense of what it is they need to do to stay

healthy.

And I predict that we will see on a very large scale, large corporations trying to keep their health care costs down, encouraging people, giving them incentive, economic incentives, any number of things, running, swimming, playing handball, basically following regimens which keep their bodies fit. And I think until we begin to adopt an attitude that the body has homeostatic tendencies to keep itself well and that we must do everything to encourage them through tax incentives, I don't know. This is sort of a long terms, long terms kind of approach that I think ultimately we should look at them.

THE MODERATOR: Thank you.

THE MODERATOR: Mr. Davis?

MR. DAVIS: I pass on health.

THE MODERATOR: Mr. Pelisio.

MR. PELISIO: Again, I come back to sort of a conceptual approach. I don't have any real precise concepts. But I think in this field as in others, ours government, with its wealth, should be using economic incentives to get private enterprise to solve a lot of ours problems and to take on these problems. One of the things, of course, is we talk about the inability of people to afford health care services. One of the reasons that poor people can't afford health care services. I think rather

than giving hand outs to take care of their medical problems, give the people a means to take care of their own problems.

Among the things that might be considered in the areas for incentives, for example, let's break away a little bit more from the concept that only a doctor can take care of ours needs. Doctors are tremendously expensive as we all know, and I will not going to promote that.

We find that paramedics and nurses are given the capacity to use their skills. We could encourage the concept of using quasi-medical people to deal with an awful lot of ours medical problems at a heck of a lot less expense, and again, they would be providing it as a private enterprise function.

With regard to medical care delivery, one of the highest costs, of course, are hospital costs. And one of the reasons we are told that hospital costs are so high is you are going to provide high technology and I think Alaskans have access to high technology medical invention. As a matter of fact, the scanners, and so on, can scan the entire body and diagnose incredible things in three dimension. The centrifuge systems where you put samples of fluids and you can get computer diagnosis of all kinds of conditions instantaneously at very low cost.

The problem is the initial investment is so high. The hospitals say they have to justify their high costs to acquire the investment of the intensive care units, these sophisticated technological devices. Maybe what the State could do is to make low interest loans or even capital contributions to privately owned hospitals to acquire this equipment, and then, of course, let the hospital charge for the operation of it. But the operational expenses are frequently not that great.

But again to put the incentive on the private enterprise, for the State to provide the seed money in a sense to provide the encouragement, even sometimes the training to learn how to use these things.

The idea that Mary Jane has is an excellent one and I think it meets your problem in part about the Medivac concept about your telecommunications diagnosis and treatment. A lot of what can be done nowadays is not just what the doctor can see the patient. The doctor can actually feel the patient. The doctor can actually be inside the patient doing things, can be administering the patient medications and all kinds of things by remote control in electronics. Again we ought to be encouraging private enterprise. I represent a client, Arctic Telecom Association, which is owned by the people of the Arctic

slope from low interest borrowing of the association, which is going to be repaid out of revenues generated from the telephone system. They hope to be able to provide many of these collateral services, not just a few, so you can pick up a telephone and talk, so the doctors can treat patients in villages, so the people can hold conferences and discussions at long distance, so on and so forth. But the villagers don't have the money to instigate something like that. You need the seed money, the incentives. So we are just kind of going back to the old saw I have been hammering.

Alcoholism. I think it's a sad affair that we are treating alcoholism by government programs and government employees. I think we ought to be treat alcoholism by private enterprise, who maybe has to contract with the government and maybe a large source of their revenue would come from the government, maybe because people can't afford alcohol treatment can. But they have some standards of performance that they have to meet. If they can't cut those standards, somebody else is standing in line saying, "I can do a better job, and I can provide this alcohol treatment better than this other fellow, so I ought to be the one." So maybe there are five or six that are providing competing services in ours society.

I think we ought to get away from the panacea

that government can and should do everything for us. As I talk, I am sure some of you get the feeling that I have kind of an axe to grind with bureaucrats. But in truth, I think we have to realize it's not the bureaucrats all doing what they are doing. They are doing what they are doing because we asked them to, we have given the opportunity, and they have the natural inclinations to use and abuse those opportunities just like we do in the opportunities that we have.

But the problem is we are so used to them solving ours problems for us that we are complaining here that we don't have input in roads. We don't have input on health needs and things like that. The difficulty is when we are often asked for input, we say, "Gee, let somebody else talk, let somebody else take care of it. I'm too busy. I've got to take care of my own personal problems." We don't provide the input, we don't provide the solution to the problem.

We've got to break ourselves away from this. We have to have a system where the man can demand and given the opportunity to be independent, and the government is a helper and sometimes an innovator, maybe, but we are the ones that have to get the job done.

BILL MOLNATCH: Thank you.

Mrs. Cooke, Margaret.

MS. COOKE: I agree with Fran. I think education on health, welfare is very important, especially the villages where there is no access to a doctor or a hospital. and where there is a hospital like in Bethel, I think even though there is a hospital, it's understaffed, and with a new hospital coming up, there is no funding for -- it's not funded enough for a staff, and there is no funding for housing for the staff.

And I think the other thing in the health area we are too look at is housing. In some of the villages there is housing in the villages. There is government housing coming in, but it's not -- plus the thing I see with the housing, the majority of the funding is spent here in Anchorage or wherever it's funded out of. A bulk of the money goes to administration.

And just this last week my husband was in the village and he came back and he couldn't believe what he told me. He said he went into a village to a married couple who had seven kids. He said they were living in a 10 by 12 house. And I couldn't believe it.

It's live -- in the summer we live -- and that's for health problems, he went in there. There was two beds in there. The ceiling was leaking. A couple of rooms and seven kids. And I think health problems is one of the things we should look into: In the summer we live in a 10

by 12 by 14 with three kids and that's hardly enough room

THE MODERATOR: Margaret, are you from Bethel? Is the hospital --

MS. COOKE: We have a new hospital there now, but a new hospital is coming up and should be opening up pretty soon, but the funding isn't there. It's not funded adequately.

THE MODERATOR: Is the hospital that is there now, is it a YKH?

MR. GIBSON: Yes.

MS. COOKE: Uh-huh.

THE MODERATOR: Are there any training facilities that are going on in the hospital?

MS. COOKE: I don't know that much about it, but there are training programs with like Bethel Hospital and USPHS work closely together. They have training programs for vics. But I think there should be more on preventive health, what to do with ours different (pause) well, especially for village people. Education on what we can do for ourselves or prevent sicknesses.

THE MODERATOR: Thank you.

MR. DAVIDSON: I second Margaret and everybody else who has talked about preventive medicine. I think that is an area that needs a lot of emphasis and focus and input from a lot of people.

The one area I think is really important, the mental health. The headline in the paper this morning points out to me the absolute utter failure of ours systen to deal with mental health problems. Here is a 16 year old and 17 year old kids a boy and his girlfriend, in Anchorage arrested for the murder of a taxicab driver. That is an extreme case, but I think there are a lot of kids that have emotional problems that put them in McLaughlin and get them in trouble with the law.

I don't think the answer is real easy, but I think they come from a lot of directions to solve these kinds of problems and I think in the preventive area to give these kinds of kids an opportunity to deal with their problems and to have a healthy environment in the school and in the community, and I think this is what you have to look to.

I think this relates to some of the other subject areas we are going to deal with. For example, in terms of education, this film we saw and the programs we heard described to me this morning to me is an excellent example how in the area of education you can work with kids who have emotional problems or some problems or kids that don't have problems. I think we should have more counseling in the schools. I think we should have a different array of opportunities for kids with problems to work them out and

to have opportunities to develop transportation in other areas that people in some of the rural areas need. If they have some health problem, it's sometimes difficult to get into a hospital and to get to the best medical care. I think that to me emphasizes the need for the airports to be in good shape and have the right equipment to get in and out of there in different types of weather.

It's frustrating, I have been in villages and try to get out and you are there for two or three days because it's storming and the runway washed away or something like that. And if somebody is in a critical condition, it could be a matter of life and death.

In the area of law and justice, I think that there is a lot more than what we can do in terms of rehabilitation when people have gotten in trouble rather than putting them in jail. Rehabilitate them. Again, this is a mental health area.

In terms of recreation and community projects, I think we should try a way to develop opportunities just right in the local level, and communities within cities, so that young people have chances to grow and develop in healthy ways.

And then the area of finances which we will get into later, we've got to learn about financing health. Another article is this hospital, 5 million bucks short. I

don't have the answers to that, but maybe somebody could get into the financing of health, somebody who has expertise in that area. There seems to be a few problems.

THE MODERATOR: Thank you. Mr. Chapados.

MR. CHAPADOS: I am not too familiar with the current situation as far as health care in Alaska is concerned. I still think that we are here, of course, to try and develop some thoughts and to pass these thoughts on to the members of the legislature who are concerned about the level of the services that the State should provide to the people of Alaska. And I am not an expert in this field by any means and maybe someone can address that. But I think in terms of, there is probably several areas in health that need to be looked at. And I think we have to, in order to maintain the high standard of health throughout the State we have, there are certain standards that have to be met and there are other things that are carrying on. I suppose they examine foods in restaurants and all these things are a part of the services that have to be performed. And I suppose the State is the place where this has to be done.

I would say if we had a satisfactory level in this area of performance, that perhaps we are on the right track and that we just have to meet the costs of inflation and the increased population, whatever, that would be necessary to fund these programs. I am not sure where the --

what the situation is regarding the real health problems. Just how bad are things in Alaska with respect to whether or not people are getting proper care.

It was mentioned that only those people that can afford it can get medical attention. I would think that what we are trying to do in the State, and if there has been a lot of money appropriated, we are trying to take care of the people who can't help themselves and are not able to meet costs. If this is the case, there is something wrong with the delivery system and that's got to be looked at and improved on and streamlined on so the money that is the expense gets back to the people that need the help. I am one person that is opposed to hand out, people who are not worthy of hand out. But boy, if somebody needs help, I think it's ours responsibility to get it. And it's a quality type of help.

Where do we stand as far as, should we tell the legislature that the responsibility for health is limited to certain areas or to a certain extent?

We talk about private enterprise coming into the picture and I think that's good, because I think that the State can do a lot to provide the leadership and perhaps the wherewithall, but I think we ought to give ours tax paying citizens and people in enterprise, private enterprise an opportunity to make a few dollars and perhaps

they can pay taxes. Perhaps this is the one way we might meet some of the concerns that Steve has.

That's all I have to say.

THE MODERATOR: Thank you, Mr. Carter.

MR. CARTER: I don't have anything to add.

THE MODERATOR: Mr. Cooper.

MR. COOPER: I listened to the comments coming around the room. And I think we need to realize there is no way for enough money for the State to ever provide all of the health care that everyone feels they should have because it's a nonending escalator. We have to get back to the basic premise that some people feel they get a sliver in their finger, they need to go to the hospital. Others a sliver, why you take care of it yourself. So I guess what I am saying is that if the State is going to be in a position of insuring that every one has all of the health care they feel they need, we are broke. I think we should say that the catastrophic type of illness, accident, there should be help available. But I don't think it should be left to the individual to make the decision on whether or not they can afford health care because there are some people who can never afford anything. And there is others who will do on their own to the point where it makes us feel real bad that they are, in effect, taking care of themselves to that extent, people with broken bones who set

them, themselves, and go on about their business because they couldn't afford it to do otherwise. I think that's the gist of what I am saying.

I would like to mention though that Mr. Ekvall made a comment about physical health, exercise and all of this. But not once did he mention a real fine way of being in fine physical condition. Just to do a little bit of work once in awhile. Just plain productive work has a tendency to keep people in pretty fair physical condition. I am sure Mr. Fairbanks has very little problem with needing to go out and jog in the morning in order to get his exercise, not if he's going to be out in a potatoe field hoeing potatoes all day. Maybe we need to get back to work and help take care of some of ours mental health problems and physical health problems.

THE MODERATOR: Mr. Carlson.

MR. CARLSON: Yes, Madam Chairman, I have very little new to add except I would urge ours Legislature to take a new look at ours current catastrophic insurance program. In talking to the Commissioner, I don't feel it's properly funded. I think normally it's been the history, at least that I have followed, the low income people normally are taken care of healthwise, maybe not to the degree they would like, and maybe it's not as available as they would like, but normally it's not an additional financial burden

even on them. The wealthy have found it's not a big problem. It's the middle income person who is hit and doesn't have a plan with the catastrophic wipe out. And I think ours Legislature without any great new studies or anything could more adequately fund it and maybe take look at what they established originally as the entry level for availability of catastrophic concerns.

THE MODERATOR: Mrs. Flynn.

MS.FLYNN: Agreeing with a number of things I have heard, I pick out three. I would like to see some equal access to health systems. And I say health systems plural intentionally with some rather creative and alternative methods of doing so.

I very, very strongly endorse the idea of prevention, which would include everything from baby clinics, again, sometimes an alternative means, to very, very comprehensive health education. I have heard a dozen people say that, and comprehensive health education, and you used the terms holistic, which means good physical health, the good mental health going along with having a problem, being a productive human being, and feeling good about oneself as a provider or a producer or whatever you're doing. It certainly includes alcohol education and it certainly includes sex education, because that's what's perpetuating all the problems that go along anyway.

And I would also echo on cost containment, primarily through prevention, but also in recognition that health care systems more and more are becoming simply a cost of doing business. Health care systems are provided in two ways, not just in this State, but all over this country. They're provided by the government as a direct subsidy to people, or they are provided by an insurance program paid for through either a union benefit or part of one's job and persons temporarily out of work, Dwayne said it beautifully, persons temporarily out of work or just above the poverty level in that sort of low middle income level are the people who have the worst problems achieving good health care, any health care at all. So I think those areas, access, cost retention and prevention.

MR. ERVAL: Madam Chairman, I would add to those two, people who are self-employed who are not part of a plan fall between those.

MS.FLYNN: Farmers may get sick.

THE MODERATOR: Abi.

MS. DICKSON: I think I have to agree with the holistic approach to this whole problem. I can't emphasize that enough. I also think that we are dealing with prevention. We also have to streamline ours present system of, well, just ours present system. But I just think we've got to emphasize the holistic approach in ours whole

education and preventive maintenance of ourselves

THE MODERATOR: Thank you. Mr. Fairbanks.

MR. FAIRBANKS: Just have three things: number 1, health education programs should be better funded. Right now the health education programs in Bethel are such as they are in a crisis, they were fund for a little while and then they don't have any money for the health aids. And it's very substandard.

Alcohol abuse is a major medical problem in rural Alaska today and it should be recognized as such. If we did not have a lot of alcohol abuse then a lot of ours health problems in the rural areas wouldn't be as bad. And we need to change from crisis management in the health care field to preventive medicine. And right now the output of health care in the bush is only such that they can provide for the crises. And nobody is providing for preventative medicine. That's about all I have to say

THE MODERATOR: Mr. Gibson.

MR. GIBSON: Mr. Fairbanks said a lot of things I was going to speak about. I think if we were to send any priority, however, to the Legislature for its most critical and immediate attention, it would be in the area of alcohol abuse and its attendant ancillary problem. This is probably ours number one crime problem, probably ours number one health problem in the state, certainly of rural

Alaska, and I doubt that urban Alaska is much better off.

Two brief comments on the educational preventive thing. Such programs of paraprofessional education which I have heard recommended here are, indeed, capriciously, carelessly and infrequently funded. The health services in the villages could be vastly improved by helping train and fund the training programs for the paraprofessionals. I have seen great things that they are doing, both in crisis management and again preventative work. They need to do more.

The last thing is that ours communications system in rural Alaska in support of health services in an absolutely indefensible shambles. Many millions of dollars were appropriated for a system to do this. That had been goodness knows how frittered away, but we still have absolutely intolerable unsupportable communications relative to health in the State of Alaska. I would not recommend that we load it on the satellite. I would recommend local, supportable, economically feasible and locally repairable microwave or VHF systems. Amen.

THE MODERATOR: Mrs. Cuess.

MS. GUESS: To add a little different note, based on my experience, I see a need for the realistic planning for the delivery of community health services which ultimately impact the health of the individual. And I am very

specific, and you just know right where I am coming from, it will go back to energy. It's your sewer and water systems.

When these are planned for, consideration must be given to who will and who can pay for those services. Is it going to be the State? Is it going to be the local community? Is it going to be the individual? And specifically, I will give us four examples that have come to the attention of my bureaucratic shop in the last year.

The city of Hoonah, for its water and sewer system, owe the utility $42,000. Minto had the power turned off to its water system because it was unable to pay a $30,000 bill. Skagway, as you may have read, is refusing to hook up to the sewer treatment plant. Ambler has eight lift stations for its sewer facility. That's to take the stuff up the hill. Anchorage has nine.

These community health facilities are directly dependent and the costs of them relate to energy. We go in and say, "Don't worry, we are going to build a system and you are going to maintain it." And I do not think that realistic planning has gone into what we've seen so far.

THE MODERATOR: Thank you.

MS. GULSS: Could I make an aside, just one thing, I wanted to comment on Mr. Davidson, because I felt like a minority of one yesterday. On the head lines, when you

read the paper about the two young people charged with this awful thing, read that neither one of them were enrolled in a high school.

MS. FLYNN: Oh, the Anchorage public schools.

MS. GUESS: And they wouldn't have a need for a post-secondary school.

MR. DELISIO: They might have a need but they wouldn't have an incentive to use it.

MR. CAZIER: I don't have anything to add. Previously most of it has been said here. I was glad to see Mr. Carlson point out how you can't afford to be ill or sick nowadays. And I wish I shared Mr. Delisio's enthusiasm about what technology will do for us, after observing the age of the pills and so forth, what it has done.

VICE MOLLRATCH: Mrs. Davis.

MS. DAVIS: I agree with most of the things that have been said around the table, and I feel as we blueprint for the '90s that we have to give some special consideration to some of the people that fall through the cracks. And that's the senior citizens and teenagers. When you think about State facilities, you know we have API. You know we have really no other place. We have API. We also have the McLaughlin youth center for the juvenile delinquents. For those that aren't in trouble with the law, we have nothing

to provide for them except for some of the private facilities that we have and not having enough. We often have to ship especially teenagers out to the Lower 48. So I feel we have to display special emphasis on that, providing the health services that they need in mental health as well as physical health, whatever they need to be provided for them.

I also think that we need to pay special interest ours senior citizens making sure that their needs are being met because more and more people are beginning to realize that they prefer to stay here in Alaska rather than stay here until they retire and go somewhere else in the Lower 48 to stay. Because of the high costs of medical expenses, a lot of them choose to leave the State against that you their own wishes.

Another area I have some concern about because I am a woman is the fact that I feel that women are not treated fairly when they go to the doctor for examinations to be treated because of something that's wrong with them. A lot of times, the doctors do not want to seem to get to the cause of the problem; they just want to treat the symptoms. In other words, if a man goes, they feel that there is something physically wrong, and they feel that they came to see what they can do to discover the cause of it. If a woman goes, they feel that they can give them

tranquilizers and other things that will take care of their little ills. And I think there should be something in line to correct that.

MR. CHOW: Funny.

MS. DAVIS: This is not funny. It's true. That's one of my main concerns. I also feel that nurses are not treated fairly in this health system because, if you notice, a lot of people State that doctors need not be available to provide all the medical treatment, that it could be done by others, and they push towards doctor's assistants or all the other names that they might want to call them, but the the person who is trained a doctor's assistant act on behalf of the doctors.

On the other hand, we look at nurses who have more than 4 years of education and gone beyond that, and all you want them to provide is beside treatment to the patient, and I think we could get better use than the capacity than we use them, and the aids.

THE MODERATOR: We have Mr. Fison with us this morning.

MR. FISON: My main concern is in the area of prevention realizing that treatment is necessary. But we continue to build bigger and better hospitals at the bottom of the cliff and we haven't built too many fences at the top yet. In other words, we need to prevent people from falling over it we can. And part of the problem is that we

are spending more and more on, let's say, dealing with alcoholism rather than trying to get at the root of alcoholism, which is the problem of many times people not having the kind of emotional stability, not having good self-image, which was already mentioned, emotional and mental health.

The medical profession estimates go as high as 75 percent that most illnesses or all illnesses, except accidental illnesses, begin with emotional stress and grow over the years. We have very few programs dealing with these. I just learned of one program in other states. They are having kids with high blood pressure and who are overweight, coming an hour early to school giving them special exercises and special attention giving them treatment and education so later in life they won't have the problems as the other kids won't have.

I think if we spent money on preventive health, we would have to spend much less on the other end if we had to deal with it in a medical way. That's my feelings

THE MODERATOR: Five seconds.

MR. DILLON: Just the thought occurred to me the idea of this holistic health concept, biofeedback, for example, training people to understand what is going on within themselves and to what extent they can control them by will is an area that we badly need to do a lot more analysis in

and perhaps it requires some means to make it available.

THE MODERATOR: Okay.

MS. CARPENTER: Can I just make one more comment?

THE MODERATOR: One more comment.

MS. CARPENTER: Quickly, in the Bethel area we have a very successful EMS program. I would like to remind everybody that accidents are the highest cause of death in Alaska, and that we do need accident prevention programs and training for EMTs, and ambulance services.

THE MODERATOR: Okay.

MS. FAIR: Just one, protective services, mental health, and drugs are big problem in the villages in the interior, a suicidal mental vacuum. And the State agencies passed an act last year with regards to funds, low interest, and facilities. If we could really get to all that legislation, I would say early detection like you did, but quality health care with a family involvement close to home.

THE MODERATOR: Thank you, it's approximately ten after 12. We will be back here at 1:15.

MS. CARPENTER: Madam Chairman. Can we start at that time regardless of who is here or not here.

THE MODERATOR: We are going to start at 1:15.

MR. OLSON: So there.

(Noon Recess)

THE MODERATOR: Are you ready? The word is energy.

Mrs. Guess?

MR. GIBSON: I think this was rigged.

THE MODERATOR: Yes, it was.

MS. FLEMING: Question? I thought we were going to complete direct services and then energy by two o'clock. Wasn't that the motion we made? By 2, energy.

THE MODERATOR: It's 1:25 now. And direct services just isn't going to -- I took it that we would be on energy by two o'clock. If we start now, we will be on energy by two o'clock.

MR. GIBSON: I understood that it was to be no later than 2 that we would be into it.

MS. FLEMING: I just thought that if there was something pressing that people wanted to say about communications and law and justice.

THE MODERATOR: We are not going to forget it. Carolyn is going to be very, very brief.

MS. GUESS: I am concerned that some of ours tardy ones may have some words to share.

MS. CARPENTER: That's their problem.

MS. GUESS: I agree that it is their problem. I do not want to say that much initially. I would like to reserve some time in the clean-up slot, mainly because I want to hear the concerns and the ideas that other people have.

My job at the Alaska Public Utilities Commission is to react to today's policy and to set rates accordingly. And we are specifically talking in the energy area now.

We should be considering long terms goals in the area of energy. But the reason I handed out the compilation of the diesel fuel costs to you was I wanted to show you what I believe is an overwhelming need to look at some kind of short terms or intermediate terms solution to what I think is an overwhelming problem.

Hydro is a marvelous alternative. We are all talking about it. It doesn't go on line. Next month, next year, two years from now. The people in Kodiak will tell you that they have been working for two years to get a permit to begin and what I want you to see on this sheet. And, of course, my background is particularly in -- as far as the generation of electricity -- but translate this to heating fuel. It's the same fuel that fuels the generator, is I think we have a crisis. And the crisis is this: Shall it be in the public interest to keep the lights on and the generation going in rural Alaska?

Some people say, "You know, if they can't make it, they can't make it." Well, I would like you to consider some of the consequences of not making it. When we talk about health services and the delivery of health services, we are talking about the need for electric energy, keeping

the drugs cold. We are talking about not having freezers if we don't have any power. And I could go on and on. But it's a little tough sitting in the slot where we say, "Usual pay 40 cents a kilowatt hour for power." And this is what my shop has said to the residents of the Avak villages.

To the people of Bethel we have just approved a rate increase that will be probably 22 or 23 cent power. The people in the urban areas, in Anchorage and in Juneau, are a little bit more fortunate today because Anchorage generates on gas. And the gas, the gas contract is much less. The people in the Anchorage area pay four cents a kilowatt hour. The people in Juneau are paying anywhere from five cents to ten cents.

How do we stimulate economic development in ours rural areas when the cost of power is so high? Do we keep the lights going?

THE MODERATOR: All right, who would like to jump in?

MR. GIBSON: Madam Chairman?

THE MODERATOR: Mr. Gibson.

MR. GIBSON: Rather than make a long statement, I would like to refer you to my paper mailed in as a people paper on Alaskan oil and energy. I would like to endorse everything that has been said thus far as entirely realistic. I would like to cast ours energy problems, however, and ours energy challenge on a statewide basis. I

would like it to be the sense of this group that ours highest priority for the expenditure of the monies we get from ours petroleum reserves go to the conversion to systems as appropriate to get us off petroleum power technology no later than the year 2000.

My proposal indicates specific time tables, specific legislation, and specific recommendations for that accomplishment. I should like to recommend to the group that they look it over. It's certainly not definitive or exhaustive. But I think something of this sort should go emerging from this group. We can make a general statement that we need to do more. It's later than we think.

THE MODERATOR: Mr. Fairbanks?

MR. FAIRBANKS: I will pass right now.

THE MODERATOR: Abi?

MS. DICKSON: I think I would like to pass at this point.

THE MODERATOR: Mr. Cooper?

MR. COOPER: I think that Carolyn Guess probably touched on the biggest single problem with the energy within the State, and that's government. I think we are ours own worst enemy. We need to develop hydro, which is a relatively inexhaustible source of power. And the first thing we do is erect such road blocks in the permitting process, that we freeze to death several times over before

we can finally get the permit, let alone get the facility built and on stream. We have been 20 years trying to get the permit to build Bradley Lake. And we are assured that we will be getting it probably within the next couple of years.

And like I say, I think if the commitment to pull the road blocks out of the way that, rather than a being able to carry this permitting process on for practically forever, that there be guidelines established as to the amount of time that an agency can spend in its deliberations to speed up this process that we can turn the human resource loose to develop this alternate sources of energy, whatever they might be.

THE MODERATOR: Thank you.

Miss Fleming?

MS. FLEMING: I can only overwhelmingly support Mr. Gibson's goals as outlined in his paper. I think that Alaska has enough alternative power sources that are regenerative in nature that it will not have to resort to nuclear energy, which at this stage, although it's a wonderful branch of physics, is still in the finishing stage. And when they finally get around to perfecting fuses, it will be great.

But I think the dangers are too important. And I would like to see these other things explored explicitly.

MR. DAVIDSON: I agree. And self-sufficiency, I think, is also very important.

THE MODERATOR: Margaret?

MS. COOKE: I don't have much to add to Gibson's paper, but I think with most of the electricity now, the question posed: is should we continue to keep this electricity going?

Relatively people were happy before electricity came, but now that electricity is there, we don't want to shut it off. Once we get it, we don't want to let it go. And I think it's essential that some. The electricity bills now are way, way, way high. But even though they are high, the people aren't going to shut their houses off. And I think the alternative sources should be explored, you know, because some, sometimes household income for a month will only go into electrical bills or fuel bills. And if they could, you know, get the fuel down.

THE MODERATOR: Thank you, Mr. Delisio.

MR. DELISIO: I think there are two problems. First problem that Carolyn has touched on is one of immediacy. And the other problem is a long terms solution. Obviously what needs to be done now is throw a tourniquet on a gushing wound, perhaps, instead of nursing it and seeing the wound is healed and returned the full use. On a short terms basis, it doesn't seem to me there is too many

alternatives. One alternative is to provide a State subsidy to purchase the fuel or a State subsidy to transport it.

One subsidy that wouldn't be difficult to bear is the use of National Guard personnel to fly tanker planes loaded with diesel fuel and someone into these villages. I find that today in ours system, ours Air National Guard crews are required to fly so many hours a month. And they fly with empty aircraft nine times out of ten with no discernible mission. They are just keeping up their competence, which they must and certainly should do as required by the governor. And if we have critical shortages and the cost of transportation we know is staggering and air we now know is the only way to get it in because the rivers are freezing up and the ocean is freezing. Maybe we ought to use the Air National Guard to put it in.

The water projects we talked about, seems to me that rather than fractionalizing ours energy production system, we really ought to look at some way to concentrate in it so that we gain some efficiencies.

For example, Buckminister Fuller last night was talking about creating a worldwide power grid that we can extend from the United States across the pole from Alaska to the Soviet Union, and Alaska would be the pivotal

location.

He was explaining how with the new methods of conducted electricity, you could transmit power with minimal voltage 1500 miles or more, and by increasing your voltage you could transmit it farther on a point-to-point basis. With those kinds of distances available for transmission of power, there is no need to generate your bulk electrical production in a remote village all of the waste and efficiency involved in that. You could produce it in the Beluga Fields fields, where another source of energy concentration is located.

Another possibility is transmitting electric energy on laser waves, light beams, and on radio waves, which I understand is another technological concept that's developing. Where electrically power itself can be transmitted through the air, the visible world that he was talking about.

Again this seems to be the private enterprise incentive to do this on a long term basis, and disincentives to those who stand in the way.

I wish Mr. Carlson were here right now, because I am sure he would have a reaction to what I am saying. The use of Beluga Fields presents a tremendous source of fuel for Alaska. They have a huge tremendous potential of coal and modern equipment to remove the coal. They are finding

extreme difficulty to continue to do so simply because of the union practices and the feather-bedding that's going on in the coal industry in Alaska.

Those things need to be discouraged, partly by education and partly perhaps by disincentives to the industry that permits itself to respond that way and contract negotiations, perhaps even to the workman who is a party to that thing. What disincentives would be, I haven't really thought it out. But it seems to me it would bear some looking.

THE MODERATOR: Mr. Charley.

MR. CHARLEY: In Copper Valley, we have an electric plant there located in Glennallen. But then 70 miles south, there is a village down there. 50 native people live in that village. And then there is a town. Each one of them has a plant, a local plant. And now what we have been talking about, there is a water, the old hydro plant they had at the Copper River. Town Lake used to supply water plants. And we have been talking about to see if we can revive that old Town Lake land.

The property, that tunnel, whether tunnel or underground down to the Copper River, is our property and wouldn't be much problem to get it transferred the total to the electric company, if we can get one started. And the town hasn't got any lights. The only thing they do is, I

think there was a man I was talking to last week said they were -- it cost them $150 a month just for oil alone. And then they were paying so much a month for installment plan with their, what they were paying on the payment, and which runs about 200, $300 a month for just what lighting they get. That's one person I talked to.

The water potential, we have a lot of water potential, because we've got at Town Lake. And if Town Lake wasn't self-sufficient, we could go to Fox Creek where there is quite a volume of water coming out the hill.

THE MODERATOR: Thank you. Mrs. Degnan?

MS. DEGNAN: Looking at energy, I think, in terms of heating your homes and keeping electricity going and with most of the population living in the Anchorage area and paying four cents a kilowatt hour and the rest of the State over on varying rates.

But looking at choices where people want to live in the life style they want to maintain, and shall we going to come up with a solution to high energy costs to where that we will only have what you call modern cities, regionally, where you have one region -- you go in and you have all the conveniences, and then you go back into the small community to survive and live like we have lived the past several centuries. So it's kind of are we going to provide equal access for the leases or do we make sure that

people can only give them certain places.

THE MODERATOR: You are saying that's for us to decide.

MS. DEGNAN: This is for us to decide.

THE MODERATOR: This is for us to decide.

MS. DEGNAN: This is in the State of Alaska. I think it's a really critical thing where if the costs are ready to be up so high, there is no going into because, you know, centers around are climbing, and development. All I am saying it is a really critical situation. And we are living in a cold climate, and so just -- we are happy in the small village. It hasn't been too cold the past several years. That's all I have to say.

THE MODERATOR: Thank you, Mr. Ekval.

MR. EKVAL: This conference was called because we have millions, if not billions of dollars, extra dollars, because of ours own sort of windfall profits on petroleum in Alaska. And it seems to me that there is no more clear cut issue in terms of how we should spend this money then to somehow plow that back into the development of Alaska's energy potential, one way or the other.

I don't have any black and white or very clear-cut ideas about how that should be done, except that it's going to get worse. The energy problem is going to get worse before it gets better. And if we have a large amount of money to play with over the next two or three years, it

seems obvious to me that we should supplant the use of oil, diesel fuel, petroleum, and so forth, with some other kind of program or programs from retrofitting houses, tax incentives to insulate one's house, to the development of alternative energy sources. And I haven't given it too much thought how that would be done.

But to me it's important that the primary use of these monies should being replowed back into the energy field, because I think Carolyn said it earlier, this is the nut around this which all of the problems revolve. And until we deal with that one, health, transportation, communications, they are all really basically ancillary

THE MODERATOR: Thank you, Mr. Davis on energy.

MR. DAVIS: Yeah, on energy, I think the energy problem you have here is kind of isolated to oil and gas here. And that's what the United States needs to hear, needs today. And it doesn't help us at all in the rural area, because ours energy to operate ours diesel machinery there is still reliant upon the fuel that's being brought up there. We are not getting it big one way or the other on fuel costs because we still pay the same price we did as we did five years ago even though we got the oil being produced here in Alaska. And I think that any kind, any kind of a -- any more production of oil in the State of Alaska last year, we would look at alternate sources of

energy within the area and I see nothing coming out.

Before, we sought ours resource and developed some kind of alternate energy. I think you all know we have the wind, we have the solar power. If we could develop them first, the areas that use the alternate sources, if they could be developed for us, the oil resources tapped, then I think we can benefit not only from the sale of the resource, but also benefit in terms of developing some renewable alternate energy resource for the rural areas.

MS. FATL: I confirm all what you are saying. I would like to see more study into alternate energy plans, like you said, the wind, the water, thermal, the hot springs. We have a lot in the State of Alaska that are not being utilized. Some of them are privately owned. But we haven't even tackled that or looked into it. There should be a tax incentive program not only in large businesses, or the corporation, but for the home owner.

Again, back to transportation, there should a better route of energy transportation, because you can't transfer the products with passenger. And there is certain regulations. You have to charter it certain size, that we should store energy and get places with not too much regulations, again, but store a larger bulk of energies in the rural areas.

THE MODERATOR: Mr. Crow.

MR. CROW: Apparently we have a Kuskokwin caucus position on this to which I subscribe. And I yield to Mr. Gibson's paper.

MR. GIBSON: I am going to pay for this later, I just really know.

(Laughter)

MR. CARPENTER: Yes, we do subscribe to the statement Mr. Gibson has made and the other statements as has been made here. The Kuskokwin Area does support as a long range solution the immediate Bethel needs, the Golden Gate Highway project which has only been been proposed. We realize this does not present a short terms solution. One problem we have in that area relates to the APUC, which has not supported through its regulations the efforts of private utilities to invest money in waste heat recovery systems. And we would like to see the regulations change to permit that to encourage private industry, to utilize modern systems.

And we strongly want to see wind generation. And on an emergency basis, the villages must have some sort of a short terms basis. The oil and gas that has been produced comes from rural areas. The transportation systems that do exist, we have subsidized a system in low populated areas. We have extensive road systems in ours

urban areas.

Because of those things, the people in those areas have short power. For the short range, we must equalize what rural people are paying by coming up with a subsidy plan for, say, a five year period, that would average out the cost of, the cost of power over the State, and enable rural people to pay no more than that average.

And one last thing, we do support the idea of an energy -- regional planning councils for energy that would develop long range plans for fuel efficiency and for alternative energy resources.

THE MODERATOR: Ms. Fisher.

MS. FISHER: In my opening statements, I made reference to the fact that I supported alternative sources of air, water and solar energy. And I still do. I would like to see incentives given to people to do something about any of these areas on a small scale so that if anything goes wrong, you don't wipe out your neighbor.

This idea that if we are going to have solar energy, my God, we have to pave ours glass in, a whole valley, to me does not do the job. I think it should be, having people do things on a smaller scale.

I was recently visiting friends, and I find that they paid more for electricity than we do. I think the house is for a smaller size. One of the things that they

have done is gone to solar for a great number of things. In fact, you will go to the industrial area, and you will go to the stores, where you will buy units that do all kinds of things to your house, cool it or heat it or any number of thing.

I went to a Fairbanks committee and listened to man telling me about solar energy in Fairbanks, that it became too hot and that held the pipes together melted, but that was sort of something that could be rectified. And I think that much should be done to encourage the small inventor-type people to work up things for their own homes.

I think there should be tax placed on the high use cars and the high use buildings. It seems like we bought a house that, when we moved back into Anchorage, that was built over 20 years ago. The rooms are smaller. It doesn't have the cathedral ceiling, the wasters. We enjoy the fact that our fuel bills are less than in Kenai for a comparable house.

I think that there is much could be done in the design of a house. Ours builder told us we have the windows on the wrong side of the house. At this point, we can't do anything about it. In building houses of the future, there should be made into lots of capacity solarization.

You can build things into the house to make it

more economically feasible. We feel it's a God given right to have a glassed in view where we can see a view or something or other. What happens is ours view is obliterated, because somebody builds a house right beside you, because they want to look at you, too.

I think we have to look enough as to what happens to the people in the rural areas as to say there should be a limit on subsidy. I would not like to see them forced into the city simply because they have cheaper power. I think they should be able to live where they want to, but I think there should be a time limit made with definite plans by the area saying that we are going to combine solar, air, power, and have it ready in X number of years.

I was raised on a farm. We did not get electricity until the war came, but because we had cattle, we were able to get electricity. The barn was electric at first and the house came later. I grew up with a wind charmer outside my window. I hated the sort of thing, but it provided a certain amount of electricity for a certain use in the house. And I really didn't suffer a whole lot.

I think there needs to be somebody some education along the lines of automobiles. And it's a rather difficult subject, because for some people taking away their gas guzzling automobile is a traumatic thing. I stepped at the bus in the morning and watched one person go

by at each car, and they have to stop there at the intersection of Fireweed and Arctic. So I get a look at them. So it annoys me. They are using energy that belongs to all of us. I think you are going to have to be assertive to be able to speak up to say, "Go find something else for your ego."

For some people, the only way they can function is to wrap themselves in a piece of steel and get their wheels in gear. And I find that this increasingly annoys me. It really isn't all that good for your mental health. I'm sorry.

MR. GIBSON: Amen.

MS. CROFT: In addition to the remarks by Mr. Gibson which I think are excellent, I would like to also see some study and research in the methods of power transmission. Mr. Buckminister said that hopefully we will be part of the group that's trying to send anybody's journey south. As we would, fund alternative energy sources both individual incentives and agree with the tax on high energy user. I think sometimes the buildings that use a lot of electricity cut right for the amount they use. Nothing like that should ever occur in Alaska.

And I have a question of Mr. Cuccia. We are going to have to do something for the short term. Is the best type program one in which we take money from the

general fund and put it directly into this subsidy, or is it the best type program where rights are equalized or crossed out by putting it into more of a fund and equalizing it? What is the method for, short terms subsidy.

MS. GUESS: I will be glad to respond.

Toni, I don't believe I have the answer for the best. There are two Legislature committees and a governor's committee addressing this problem. There are a number of ways you can go. People are concerned that you have to have some incentive to provide an efficient operation. There are proposals -- I handed you out a sheet of paper so you can see the increase of cost of fuel since January. We get new ones every day.

Approximately 40 percent of the rate that anyone wastes in the cost of the diesel fuel. So you can see what's going to happen. Some people suggest subsidizing only the fuel cost because people have no control over it. My friends out at Bethel Utility have no control over what happens, and I would like to address that. It's going to caucus with the Kuskokwim group. But other people are suggesting bus bar, which is this wonderful technical terms, which means subsidize, you are providing the electricity at the generator. In other words, the maintenance from the generator, you've got the power.

One thing, and I know my friend Mr. Gibson is not

a friend of this. I believe there is and I understand that there be a directive and there is a solution.

As far as I am concerned, there should be one generation source in a community. If the community the utility is the generating source, for the schools, for the cannery, and for whatever else. And you can't make private enterprise hook up. I understand that. They will tell you that it's cheaper. The schools will tell you that it's cheaper. And I will have an opportunity to talk with Mr. Gibson and tell you I don't believe that is. But the larger your source of generation, the more efficiently you are using nonrenewable resource.

And my concern is this, if we get to the crisis stage of allocation in this State, in many areas who are we going to allocate to? Are we going to allocate to the utility? Are we going to allocate to the schooling? Are we going to allocate to the cannery.

So the first thing I would say before we subsidize is that if you have a certificate, you have a utility. You have one generation source and we should encourage private enterprises. Maybe it's through incentives to purchase the power.

But there are a number of combinations in rural Alaska four times what it is in Alaska.

MR. GIBSON: 40, ten times.

MS. GUESS: You are right, ten times. It just spells problems. I don't think -- I think we need answers from people and suggestion, short terms. And there are going to be a lot of them this next session.

THE MODERATOR: Did you have anything else, Mrs. Carpenter?

THE MODERATOR: Mrs. Davis.

MS. DAVIS: I would just like to say that I would endorse Mr. Cooper, his paper. There won't be a lot of people coming from the outside to come in and solve for us that we just better get about ours business. And this one thing we are doing is it's well for the university to do instance research. They will come up for about ours renewable energy resources for the future. I think it is the responsibility of everybody in Alaska to do their part. As you observe people, they seem to have the other person do without. But I want my share of the pie, and I want to use as much as I want. I think we can eliminate that, educating the public, children in the schools about the energy that we now have so that we will know more at this time and also the future.

THE MODERATOR: Mr. Hison.

MR. HISON: I think the key word that I feel in this -- or at least one of them -- is conservation. We are a very wasteful people. We have gotten into a habit of wasting.

And it's difficult for us to retrain ourselves. So I think the key is in education, and if that starts on the elementary schools sufficiently, it will get back home to the parents, and all of the other things that have been mentioned may key into that.

However, I think that some economic incentives would be in order. If it were profitable more than it is now for car pooling, or the other way around, if it were a penalty if you didn't, more people might be interested in car pooling.

Also, from the standpoint of individual home owners, when you install energy sources in your home, you increase the value of your property. And you are penalized for doing so. Your property taxes increase. I think instead of increasing your property taxes, this type of thing, energy efficiency evolves. And it is said reducing your taxes rather than increasing them. And I think it's just working opposite to what we are wanting. I think that really needs to be looked into.

Also the revising of building codes in town would make it possible for energy conservation in that. There are people who would like to rent out a portion of their house which we have the heat anyway, but they can't do it because there are certain restrictions. Maybe some of these restriction are good and I think they may not be.

competition in that regard would be of a help.

Also from the standpoint of construction policies, there are certainly not things allowed to construction in the energy that could be saved by using alternate materials. And yet it's not looked upon in that fashion because it's purely economic. Or the building trades have axe to go grind in it. These are some of the things that I am interested in and they all, I suppose, tend toward conservation.

THE MODERATOR: We had a couple of late comers, if you would like to have a chance, have a say. Mr. Chapados.

MR. CHAPADOS: I haven't heard all of the discussion and I don't know if that means a lot to what I have to say. But I live in Fairbanks where we have a refinery that gets its crude source from the Alaska Pipe Line. We are paying the same kind of money as far as anybody else in the State, as far as the high cost of energy. It would seem to me that somehow or another, this is kind of an unfair situation. The State of Alaska gets the benefit of all the unpaid taxes and that we pay the bill. Some form, it came back to us in another for , whether it's a sublease individual or whoever it goes to.

I feel within Alaska I think we ought to have efficiency from the fact that the resources here are within the State, virtually. There is no shortage. There is a

fact that there is a lot of discussion at the moment. Regarding -- you will request a gas line, the Arasnutes (phonetic) asked me to support the establishment of a conditioning plant in the interior of Alaska.

At the present time, under the ruling of the Federal Regulatory Commission, they have established a Pipe Line pressure that will including transporting all of the liquids into ours gas. The plant is to build the plant at Moser Bay and use probably 50 percent of these liquids. And believe me, there is a lot of them in ours gas. The gas line, once it's in production will produce about 120,000 barrels of liquie a day. That's a lot of propane and methane and other good things that can be used for evaluated energy. That also could be a source of energy. And it's going to provide more revenue to the State. And they are still going to benefit from the windfall to prices that exist today.

I think that somehow another, something, and I am sure the Legislature has under consideration in various committees some way to provide at least some sort of a windfall for the people of Alaska.

I certainly appreciate the problems of the people in the outlying areas because they do have a transportation problem that's very costly on top of the fact the energy sources themselves are expenses.

I don't know whether anybody has mentioned the use of coal and wood. That seems to me I know it has some empathy there with respect to the environment and so on. The problem was anywhere wood could be used and even coal might be used as a source of energy even on the outlying areas because I think the cost of transporting coal could be and the price of the coal at the mine itself is considerably less than what oil or gas would be.

In Fairbanks, if I recall correctly, last year they had permits to cut something like a thousand cords of wood. And this year the permits have gone around to 30,000. People are using wood, a lot of wood, in the Fairbanks area right now. You can drive right through town and see stacks of cord wood in front of many homes.

For whatever that's worth, these are some thoughts. And I guess my thrust is that somehow if the State is going to get the benefit of the windfall of taxes, I think that should come back to the people of Alaska in some form.

THE MODERATOR: We have had a request from Mr. Fairbanks since he did not respond to the questions on energy, he was wondering if he could have someone else make his comments for him, one in particular, Glen Fredricks in the audience.

MR. FREDRICKS: Yes, right here.

THE MODERATOR: Would you like to come up a little closer.

MR. FREDRICKS: I am from where Mr. Fairbanks is, middle Kuskokwin area. I keep hearing this windfall tax and what the State has, and what's the abundance of it. We in ours area are trying to locate some funds, maybe some seed funds for hydroelectric up there. We have tributaries going into the Kuskokwin River. That could be used for hydro. We do and somebody mentioned wood. We surveyed ours area over there and we found we had about a billion board feet of lumber and all kinds of wood that could be used for steam processing, electric.

And I was wishing if anybody here in this audience or in this gathering here is from the State, I would really like to talk to them because we could make cheaper electricity if the State would give us a hand.

THE MODERATOR: We have Mr. Dwayne Carlson who just walked in.

MR. CARLSON: No, Madam Chairman, I apologize for being late and I will just pass.

THE MODERATOR: Does anybody else want to speak who hasn't spoken before. Miss Dickson.

MS. DICKSON: I passed a little earlier. I think everybody has hit on a lot of different subjects. I think that we don't want to lose sight of the fact that ours

people in ours State should get some benefit from the windfall profit, from selling ours resource, which is a national resource, which is a State and human resource. We are really paying service in a sense unless we make a concerted effort individually, publicly, and at State levels to educate ourselves and ours people, that this is it. We've just paid along too long. We've not to do it. We've come down to the nitty-gritty of it. We've got to deal on ours energy problem first and everything else will fall in place. That ours energy problem is our number one problem, if we can emphasize that above everything else to the Legislature, that will be the most important thing that can come out of his hands.

MR. COGHILL: I am sitting here with a real problem, and that is that right today we are starting to get back where we were 20 years ago, in the cost of fuel. Right today it costs less for a gallon gasoline than it did 20 years ago in terms of how much labor it -- or how much money it costs or labor it costs to earn a gallon of gasoline. 20 years ago, one hour of shop time in a shop, would by 15 -- or, I'm sorry, gasoline was 40 cents a gallon upon. Shop time was 5 to $6 an hour.

Today gasoline is a $1.15, $1.20. Shop time is 30 to $35 an hour.

So you get -- you get better than twice as much

gasoline today for an hour's shop time. And you did 20 years ago. 20 years ago I was content with a couple of light bulbs. I was real happy because that was all I could afford. Today electricity is cheap in comparison to the wages paid. So we have a lot of light bulbs. 20 years ago, Mrs. Fisher made the comment, they bought a 20-year old house, the rooms were smaller, easier to heat, the reason being the cost of energy 20 years ago was so much greater than it is today. 20 years ago people didn't build houses which had high volume and high ceilings. We have done it to ourselves. And now we are hollering because we have done it to ourselves.

And that isn't a problem that, I don't think, a problem of the future that we are supposed to be looking at. We are supposed to be looking at where do we want to go from here on. And all we are doing is, well maybe what we are saying is maybe we want to go back 20 years. But if we do, that means that we face the reality that energy is expensive and we have to put more of ours energy working energy into a large, well-heated home if that's what we want. Or we can make the decision to go back to a smaller house, smaller rooms, and spend more of ours time and money on other things.

But let's quit blaming someone else for the high cost of energy. It isn't higher in cost. It's just

inflation is making it seem higher. In reality, you can get a load of oil and haul from it here to the interior cheaper today than you could 20 years ago or 30 years ago. The volume or the economics of volume, as was mentioned in a generation, also is evident in the manufacturing. It's manufactured here. Certainly the fuel costs more than it did 20 years ago, but it doesn't cost the same amount in proportion, because it is manufactured here.

THE MODERATOR: Miss Fleming?

MS. FLEMING: I am not in a position to question the figures. they sound viable to me, but I wonder if they ever are time bound and if they will be holding true five years ago. Any time you have a limited amount of something and all fossil fuels are in a finite amount, there is going to be continuing demand for that and people are going to be paying more.

In light of that, I think it would be foolish, for the space ship earth, as Mr. Buckminister Fuller fondly referred to it as light, to invest much in harnessing and depleting the fossil fuel supply, when we are being bombarded from energy from space that we haven't even bothered to harn. The rest of the world will need ours nonrenewable resources. We have the power, right now, it seems to me to buy the technology that we need to harness and deliver energy that is just wasted. It just needs

somewhere to go. I really think that's the way. And it's not an unpopular view in Alaska, given the many advantages that having nonrenewable resources has given us. But I can see them useful only as a transition. And if we don't jump on it now, the chance will possibly be gone. The federal government has been very slow to move on it for political and other reasons. And I think it's a marvelous opportunity. We can leave the entire nation in sharing this. We can buy the brains.

MS. FISHER: Yes, I would just like to make one final comment and I will shut up. That is, I think we need to clean up ours act. There was a period of time we were accused of the outsiders of going around with ours bulldozers and bulldozing our land. We said we don't know what they are talking about. Of course, we appreciate ours land. About that same time, I drove down in an area on the Peninsula and discovered in one afternoon they had discovered an acre of lovely woods and was in the process of burning it up, which makes ours argument seem a little hollow.

I think we've wasted a good deal of wood, as Alaskan. Part of it has to do with ours antiquated land clearing, the reasons for the use of the land. And you can still go down the road and see large berms of rotting wood left over from somebody's clearing project at one time or

another. It's too bad that that wood couldn't be used in some fuel efficient stove at some time at the time it was decided to do it in.

I think these are some of the things that are coming back to haunt us. We've been messy.

THE MODERATOR: Okay, let's go around one short time. And then we will let Mrs. Guess summarize the whole energy problem. Mr. Delisio.

MR. DELISIO: There is one thing that I neglected to mention is a source of alternative energy that we should take a hard look at. That is satellite solar energy. Apparently there are techniques for transmitting solar electrical power from out of space. We spend a huge amount of money on transmitting television signals to villages. And we probably will spend a huge amount more, and yet the villages won't be able to the use on the TV sets, certainly, if we have the suggestion of using the government money to do this and so on.

One other area, it's kind of interesting the thoughts that you get. Well, you know, I think we ought to do more on a small scale basis. If we do, for example, one generation. I would build a wind tower by my home and get a huge amount of my energy need from it. So could my neighbors.

But if ours utilities operate like most in the

State, it would end up costing me more from the electricity because of the power company. I couldn't tell my excess energy to the power company, which I ought to be able to do, and which will help them out. And they are really penalties assessed new in and tap out. I think that those kind of hinges need to be addressed that we are given the incentive and the opportunity.

THE MODERATOR: May I suggest a real short minute break? Just a quicky five.

THE MODERATOR: I believe Carolyn has just two quick points to make and we go on to government services.

THE MODERATOR: Mr. Davis.

MR. DAVIS: I wonder if we on could try to identify ours problem in the State. We are looking at two different types of energy here. And the first one basically is related to every city in the State here, and that's electricity. And there should be some alternate groups that you can develop other energy uses. In transportation, you have a source of energy that you can point to and that's oil and gas. There is two different kind of energy sources that we are looking at, and I think the Legislature can really take a hard look at it and see if we can come down on the cost on the delivery of this service to the area.

THE MODERATOR: Carolyn.

MS. GUESS: One point of clarification, Abi came up to me a little concerned about one of my statements. When I made the statement that I believed that an immediate thing that could be done would be to have a single source of generation, that certainly does not mean that you wouldn't tie villages together if you possibly could. I think we should encourage alternative methods of transmission which is being done. There are two experiments that will go on next spring, one in Kuskokwim and one up in Kotzebue area. I think this is terribly important. What I was talking about is one source to generate, one source using that fuel to get the electricity out.

I've got some information coming for my Bethel friends in regard to waste heat. We didn't talk about that much. But I think we should get Allstate agencies to encourage ways of using waste heat because it's economical. It's like the sewer and water systems. Somebody has got to pay for it. Figure out. You've got to know what the cost limitations are before it's in front of you and someone has to pay for it.

The third thing was that in terms of what Margaret said about the villages in keeping the lights on and they are not going to -- they were happy before the lights came on, but they are not going to turn them off. I

say to you this: You cannot make a utility stay in business unless it receives revenue. And some of the utilities that are providing service in rural Alaska have receivables that if are not corrected will put them in a bankruptcy position within a year. And the lights won't be there.

I'd like to work with a group from 4:30 to 6 on an energy statement. We are going to do that small group; aren't we? So I would just end that.

MS. CARPENTER: Madam Chairman

THE MODERATOR: One quicky.

MS. CARPENTER: No, no, this isn't on energy.

I am just wondering if there is any way we can speed up between now and 4:30. We have two hours, and we have -- in addition to government services, which is I know a concern we were going to next -- we haven't touched on oil and gas or finance, which are two key areas. So I wonder if we could just keep ours -- just mention ours priorities and just, you know, skip the philosophy. I just don't think we have time for it unless we are talking about a policy guideline because we just are not going to get through. Just have everybody just say the points they want to make. And we will move on. And then if we endorse somebody else's statement, just say we endorse it instead of repeating it.

MS. FATE: Madam Chairman, just quickly on conveyance of Indian claims and subregions and village lands, there is going to be trespassing, especially on the wooded area. It's going to be closed to users, and I am afraid we are not putting this into ours plan. Also, we are not tapping on surplus or waste energy. We should look into that.

THE MODERATOR: Okay, next on the agenda is then government services. Under government services we have regional and local governments. We have communications and we have law and justice. Would there be any opposition to start with local and regional government?

MR. DELISIO: Would it be possible to sort of lump them all together. You know, when you make your statement make it about all of them?

THE MODERATOR: Do you think you could?

MS. FISHER: You could lump local and regional government under one and then do either communication, law and justice.

THE MODERATOR: I don't think we would could lump them all into one. How about let's go into local and regional government. Would anybody like to hop in on that one?

MR. DELISIO: I wrote up and circulated a statement. I sort have been saying this all along, and this applies not only to regional, but it applies to philosophy to the extent in Alaska we can control. It says for every request

in government programs for financing participation and regulation, before acting, the government should ask the requester: Is there really a need?

Number 2, have you exhausted all other means of resolution of the need? Number 3, what is the lease the government can do with government resources in order to meet the need? Number 4, what is the most creative roll the government can play in resolving the need that maximizes private participation?

Once those questions have been asked and answered, then the government's roll should be limited to the participation adequate to resolve, consistent with the incentives for maximum participation by the individual and the private sector in general.

I would urge that as a policy statement of ours group.

THE MODERATOR: Thank you. Anyone else on regional and/or local government? Mr. Cooper.

MR. COOPER: Could I add to that the supposition that local and regional should be required to provide the services before going to the State to implement the services, because to editorialize a bit on it, there are a lot of things that we like, say, well, let's let Juneau do it. It's easier. We don't have to put so much effort into it. But I think that it shouldn't being just a case of us

letting or asking Juneau to do it. We should be, should be forced to do it on a local level. If we feel it's worthwhile doing, we should be willing to do it. If we don't feel it's worthwhile, then we shouldn't have to -- or we shouldn't have Juneau doing it for us.

THE MODERATOR: Thank you. Mrs. Flynn?

MS.FLYNN: Variations on a theme.

I think decisions regarding government service ought to be made at the level where the impact would be felt insofar as possible, my point being it ought to be possible in as many as cases as we can arrange it that way.

And to that end -- and I guess I am looking for a response from some of the rural people on this -- but to that end, I would like to think that as the unorganized boroughs -- the unorganized borough, as areas in the rural part of the State come to desire services, that they will then take on a class of service consistent with first, second, third or fourth class borough and take on the responsibility for making those decisions in an organized fashion. That was sort of vague. I'm sorry; I didn't mean to put it that way. I am suggesting the organization of local government in the areas of the State where there is now no local organized government as persons desire those services.

THE MODERATOR: Thank you.

Anyone else on local or regional government? Mr. Davis.

MR. DAVIS: Madam Chairman, I really have a problem with trying to enforce local control versus local resources, because I think if they are going to administer any kind of service within any area, is that you are going to have a minimum amount of operational money for operational funds to have some kind of control over regulations within any area or within any city, you know.

And to try to classify them is that they are a little different in what kind of services you want. We probably don't want as much service as Anchorage because you've got so many complex problems. None of your complex problems really relate back to the villager. Ours are very simple. We need a minimum amount of administration. The problem I have here is we don't have that kind of resources, unless there is some way you can allocate funds, so the funds equally go out to all areas. I can go along with trying to have local control here.

MS. FLYNN: How about something like a REAA. That is the beginning of the service level.

MR. DAVIS: I feel that would be kind of informative. But I feel we have to have a minute amount that you have to offer.

THE MODERATOR: Mrs. Carpenter, did you have something?

MS. CARPENTER: There 's no way at the present time that rural communities in the unorganized borough can support even basic services with the existing system. The only thing we can do is qualify for grants. Revenue sharing is inadequate. And I would -- I would urge that revenue sharing be increased. I agree with Mr. Cooper that as much as possible should be done at the local level. People in the bush generally do not want things run from Juneau. I think that may be a misconception on his part. Juneau is where the money is. We would much rather take care of those needs locally and we can do it much cheaper. And we do need revenue sharing just for basic local services.

Also another possibility to consider is the local income tax with credits applied against the State income tax so that, so that the money comes into the rural areas. It is being paid.

Third is that right now, the fish processors who are, many of them, from outside, are paying very, very -- they are making substantial profits and paying very good into the areas where the resources are coming from. And we do need to have a higher fish processing, taxes -- not taxes -- so some benefit can come into the local areas.

And fourth, the borough governments are forced; they must be small. They must be small. We do not assist,

because of ours communication and transportation limitations, to be extremely expensive to try to manage.

Just with the REAA system is so incredibly expensive, and the costs for the village people with Bethel, Bethel feels that its needs aren't adequately met because it's the only community. The other community feels that Bethel dominates. It just doesn't work.

MS. FLYNN: Isn't it nice to hear that?

MR. DELISIO: A regional problem within a region.

MS. CARPENTER: And we don't have the rights set up to make large regional governments at this time. So if an organized borough, if mandated, it must be small enough that it can be adequately managed.

THE MODERATOR: Regional and local governments. Mr. Fairbanks.

MR. FAIRBANKS: I agree with Ms. Carpenter on everything she said. I just want to support about everything she said about boroughs. The people up there in Calista region, they are so worried about being mandated a borough Arbister Jeluski said the other day it looks like we are going to be forced into a borough and the people out there would like the boroughs to be small, not encompassed in like the Calista area. We would like it broken down into following the school systems or smaller, simply because it's such a diverse area that Bethel, for instance,

will not do the things for the people in the up-river regions, so small boroughs, if they have to have boroughs. That's about all I can say.

THE MODERATOR: It's communications.

Local regional government. Are you ready to move to that?

MS. DAVIS: We talked about State and local -- I mean regional and local government's. Are we not going to address anything pertaining to State government?

MS. FISHER: Where would you begin?

MS. DAVIS: I would like to go on record saying that I endorse the statement that was passed out by Dr. McGinnis. And I don't know if everybody got a copy of it. And he has done a real detailed report that he summarizes in these two pages, and I want to endorse this.

MS. FISHER: Where did you get that?

MS. DAVIS: I got it from him. There is a lot of issues that we don't have time to go into. And the work has been done for us. Areas have been identified. And one of my main areas of concern is welfare payments to AFDC recipients, paying them at the right of $120 per individual or $350 per mother and a child not being enough money to even meet their basic needs. That somewhere needs to be addressed. And it is addressed in the summary of this paper.

MR. CARTER: I think the good doctor didn't want those to fall into unfriendly hands.

MS. DAVIS: What did you say?

MR. CARTER: Nothing, I've been slighted.

MR. CAZEWAY: I generally endorse everything that was said, but likely, in the petition on revenue sharing, I think the State exercized too much decision by ear marking funds for specific purposes. And I would like to see the local community receive their allocation of money and they decide what programs to be used.

THE MODERATOR: Thank you.

MS. CROFT: Do we get a copy of McGinnis' paper?

THE MODERATOR: Anybody who hasn't spoken before on regional and local government?

MS. PICKSON: Just a comment on some of the things you are speaking about. If you are going to be forced into an unorganized -- I mean into a borough system, you mentioned the system doesn't work. When you get down to local and regional levels of government, don't ever lose sight of the fact that if the system doesn't work and you don't like it, you can always change it to make it fit and to make it work. This is what you are -- this is the nitty-gritty of working in a local and regional level. We need to exercise some ingenuity here. If we don't have a tax base and you want some services, I don't think it's too

much to work something out on a trade and barter system. You could -- one of the gentlemen over here says he's got all this lumber, a billion board feet of lumber, he may not have a tax base, and it's a real resource, and they might use the revenue to pay the tax somewhere else.

THE MODERATOR: Ms. Fate, did you have something?

MS. FATE: Yeah, on government's that are already existing, local and regional, for better communication, especially in their plans asking to the public and letting the public know. I am thinking of meetings that are relevant to some regulation changes and using it properly, whether it's in the media or a newspaper, where those people will definitely receive it.

Another thing is coordination of programs so there is no duplication. These with State, federal, with regional, nonprofit, and subregion nonprofits, and village and incorporated city that are all working on this same programs. And also, the residency longevity this should be extended from one month, if possible, to a longer period of time, maybe three years or five. And that's it's.

THE MODERATOR: Mrs. Flynn.

MS.FLYNN: Yeah, I have long had the feeling that government is very, very good -- at all levels of government -- are very, very good at one thing and that's collecting money. But they are not always very, very good

at spending it. And it kind of goes back to something I think you said, Steve, when we were talking about health care. And you said, "Why in the world is the government health care in the alcohol treatment program?" It occurs to me that I sit on a local health board that does just that. It takes a block of money and it puts it out to bid and anybody can bid on it. I mean any reasonably qualified organization can bid on it. In fact they are private contractors very often that come in for it. I think that should be one of the things that we should be encouraging more. That while government is doing a great job of collecting money, what we should be doing is encouraging -- I hesitate to use the terms private enterprise. I guess it's private enterprise, but encourage individuals and groups and private businesses as well as public corporations to provide the services and utilize the money, bid for the money to provide the services, much the same way you would put out a bid for any other kind of services, a bid to build a building.

THE MODERATOR: Mr. Cooper.

MR. COOPER: A point of clarification. When I am talking about regional government, I am, in effect, thinking in terms of boroughs, which basically cover a wider region than a city. I am not thinking in terms of the ANI Claim Settlement Act regions. I want to make sure

we are not missing basically what will be or what are private corporations with public enterprises or public entities, which are city, borough, and state.

And then a further clarification, or something, may be the way we could encourage more local government would be through the revenue sharing. Revenue sharing being put out to the local level only -- I mean funnelled only through local government, rather than the State providing the local government services that could be provided by incorporation of a city or a borough, and then then receiving those revenue sharing and taking care of the problem, at the local scene.

THE CHAIRMAN: Did you want something, Mrs. Degnan?

MS. DEGNAN: Yes, as far as, you know, the unorganized borough, all the small communities were mandated to incorporate either as first or second class cities, so you do have local government which is, you know, funded through, you know, revenue sharing.

And I think that if there is going to be mandatory regional government, that is the local people that would vote whether or not they want to have that formed and then the size of the boundary or whatever. But it has to be done with your local level if a regional form of government is demanded.

THE CHAIRMAN: Thank you, Mrs. Carpenter. I have a

statement on the subject of reapportionment that comes up here. It doesn't seem to be addressed anywhere else.

THE MODERATOR: Go.

MS. CARPENTER: Ours concern in the rural areas is that reapportionment, although we already have large areas that are fully represented, that we would have virtually no representation at all. And we would like to propose a Constitutional change providing that if reapportionment occurs and rural representation is strictly limited in the Legislature, that the senate be organized to represent geographic areas much as -- regional areas, much as the United States Senate is.

MS. FLYNN: It's been thrown out of the U.S.

MR. COOPER: Can't, federal constitution has thrown it out.

MR. DAVIS: How come the federal government is using it?

MR. DELISIO: It's okay for them but it's unconstitutional for us.

MS. CARPENTER: Apparently it is. This has been discussed in other groups and apparently this is possible.

MR. DELISIO: The Supreme Court has ruled on that specific issue and it says one man, one vote.

MS. FLYNN: Person.

MR. DELISIO: One person, one vote. Excuse me. And

when the argument was made the United States Senate and the accounting fathers in their wisdom felt it was a dual representation taken into account, the Supreme Court said the Constitution specifically permits that at the United States level, but it is not permitted in any other level.

MR. COOPER: It would take a federal Constitutional change.

THE MODERATOR: Ms. Croft.

MS. CROFT: About one of the things that people have been discussing if you grant that we couldn't do that -- there are some petitions going around saying you might not be able to. But you can't do that, the very least we might be able to do is increase the size of the Legislature, so that the proportional representation might drop, the actual number of representatives doesn't drop or at least it doesn't drop so low that someone has something the size twice the size of the State of Texas in order to cover to represent it.

Along those lines, we have a vote coming up on the ballot in '82 asking whether we want a Constitutional convention. I would like to have us go on record saying that that request for the public to decide whether they want a Constitutional convention be on that 1980 ballot instead of the 1982 ballot so that we could possibly have a Constitutional convention before reapportionment takes

effect.

THE MODERATOR: Okay, are you ready to go on to communications?

MS. FLYNN: I just want to voice absolute opposition to what Mrs. Croft said.

THE MODERATOR: I will second: Mr. Carter.

MR. CARTER: I would like to publicly announce my support on the form that Mr. Delisio passed around regarding preparatory steps to take over when the government request the financing or passed on to the legislature. That is what we are supposed to be doing is helping establish policies for the State. And I think it's very good that most of us are eventually getting around wearing the hat off the taxpayer. At least if you are involved in local government, you have to listen to it. And involving yourself as attacks pair, you have to stop and think about these other things. Most of us talk about we would like to see less proliferation of government, less government or as little as possible. And then we turn around and talk out of both sides of ours mouth by asking for everything under the sun. And I think some restraints need to be voiced. And I think Mr. Delisio did a fine job of expressing it on this policy paper.

THE MODERATOR: Are you ready for communications?

MS. CURTIS: I would like to say one thing on the

Constitutional convention question. I prefer the process of amendment as opposed to the Constitutional convention. The people will make the decision, but I think if their concerns about apportionment that we could go that route, I continue to be concerned about polarization, and I think that the thought of a Constitutional convention right now, with all the various factions, could leave us with a very shabby document.

MR. CARLSON: Madam Chairman, Dwayne Carlson, I would like to associate myself with Mrs. Guess' remarks.

MS. CROFT: I want to ask. If it goes on the ballot, I it goes on in '82 I think we are going to have it in any way in '82 and I think it would be better to do it before apportionment rather than after.

THE MODERATOR: Mrs. Fleming.

MS. FLEMING: I just wanted to address Toni on that. The function of having it on the ballot in 1982 is presumably to get a greater cross section of the population's opinion on the matter because it is something that effects everyone.

And since the great fears do resolve around special interest groups. You kind of give them another edge by having it on, not on the general election ballot.

MS. CROFT: It's an advisory vote either way, either in '80 or '82.

MS. FLEMING: That's true.

THE MODERATOR: Are you ready for communications? Ready for communications.

THE MODERATOR: Would someone like to start us out with communications.

MS. FLEMING: I would like to have my friend Larry Golden recognized and just say a couple words about communications.

THE MODERATOR: Mr. Larry Golden.

MR. GOLDEN: That's right.

THE MODERATOR: Are you in the audience?

MR. GOLDEN: Yes, I am.

THE MODERATOR: Would you please stand?

MR. GOLDEN: Certainly. I was involved in the initial set up of the tele-communications conferencing and that is presently working. And we are involved in planning a statewide structural communications network. Some of you may be hearing more about it in the not-too-near-distant future.

In any event I want to propose the discussions regarding Sue's telecommunications that you people think very seriously about the social and political consequences of evolving the telecommunications systems in the State of Alaska. Some of the impacts of telecommunications are very evident to us. People in small villages can see the

benefits of improved phone service, emergency medical service. It touches them in a very concrete way in their day-to-day lives. But some of these other implications of telecommunications aren't so obvious at first glance. And I am asking that you address some of these. These are very broad policy matters. And the public tends to think that this one area is so complicated that only engineers and attorneys are qualified to deal with it. And it's a broad policy the public has to get involved in. It is my own thinking that up until this point in time, telecommunications policy has suffered in Alaska because of the not well thought out year towards social goals.

I want to make a very quick association between broadcast technology and nonbroadcast. In broadcast you are talking about a large number of people who are getting some message at a source at a given point in time. You watch it and listen to it; you like it or you don't like it. And not much you can do about it. That technology is very expensive as well, highly centralized.

On the other hand, there is a possibility for technology that is decentralized the way they work. The telephone is an example. The telecommunications is an example of that. In an interactive system, you get to talk back to the source of information and request the kind of information that you want and change of shape in attitudes

and behavior. These technologies are very inexpensive and they should be looked to as the social tools as the device that you can use to create the society that you want.

On the bottom line, telecommunications effects all the issues that you can deal with.

You have just finished talking about local government and regional government. I would say that that's axiomatic. When people have more access to more information, and they know what's going on in the community, in their own State communities, they demand to have a process and make decisions for themselves. I think you will find that as telecommunications evolve to where people can find out what they want to find out and where they want to find out, they will start getting more control in their own communities and start planning for their own needs.

And you will see a decentralization of power within the State and within the national scene. And I think that these are the sort of things that you should be working towards or at least discussing. Do we want to see government decentralized? If so, what can we do, what telecommunications services to bring this about, because that's going to be the whole nuts and bolts of the whole thing.

Then with respect to the area of broadcast, whether it's television or radio, I have very strong

concerns that with the importation of national television, we are going to see a lot of the cultural values of Alaska, whether they are traditional native values or just the values that have permeated Alaskan life even in the cities for the past 34 years. Those values are going to be changing as exposed to entertainment programs from all over the country. That's all well and good, I suppose. Everything changes. And we can't live in a vacuum. At the same time, I think it's very important that commercial and certainly public broadcasting in Alaska should be doing more to reflect life in Alaska as it really is today so that we see ourselves, hear ourselves, talk about ourselves some more, help us to find ours own identity in the State, and as well do the same thing on a regional basis so the various regions of the State can use communications to help build a common identity, common sense purpose in the various regions, have a healthy respect for themselves and each other. And I just don't think that All In The Family is going to do that for us.

THE MODERATOR: Thank you very much. Going around the table, Mr. Davidson, did you have something to add?

MR. DAVIDSON: I will pass at this point.

THE MODERATOR: Margaret Cooke.

MS. COOKE: I think communications, there is just no communications in ours villages now. There is telephones

in some of the villages, most of the villages now. The telephones we have aren't usually operative. It's really hard to like call between villages.

And there is the radio, I think the radio works better than the telephones. I think the communications is not very widely in the rural areas. And it's not there. There is no communication between villages.

Like it, in ours area, it's really hard to call between villages. Sometimes it takes days to get from Bethel to Hooper Bay. That's about 80 miles.

THE MODERATOR: So you have problems with your communications with telephone and radio.

THE MODERATOR: There is no communication. There is telephones in those villages, but a lot of times they are not operated.

MS. FISHER: Could we ask her why?

THE MODERATOR: Do you know why they don't operate?

MS. COOKE: Technical problems.

THE MODERATOR: You get a lot of that in busy signals.

MS. COOKE: What?

THE MODERATOR: Thank you.

THE MODERATOR: Mr. Delisio.

MR. DELISIO: I wasn't going to say anything about communication.

THE MODERATOR: Good. Then we will go on to the next

MR. DELISIO: but because I represent a client that's doing something about them, again, a cooperative that's putting telephone into the villages, this is an example of a symbiotic relationship that can exist between individuals and some other resources in the states.

In this particular situation a study was made to decide whether free enterprise, RCA or some other company, could go and put a telephone system in and continue. They looked at the government and decided the government would be a disaster if the burough was put it in. They decided it on a cooperative. They are going to own the system and pay for it in part out of their rates. On the other part, they share from this pool that is long distance calling, like Alaska is subsidized by the Lower 48 states. And to this degree, the village is subsidized by the rest of the State in their telephoning. The Arctic Slope Regional Corporation has put up over $100,000 as front money to get the opportunity to get a permit, to get their system, their act in order to borrow money from the Rural Electrification Association and to build their system. I think they are great opportunities. There are also great challenges and great difficulties. It's not an easy thing in the villages.

To answer some of the questions that were asked to Margaret here, one of the reasons that telephone service in the villages is not reliable is that you have an earth

station that's owned by RCA jointly with the State of Alaska, one telephone. That telephone is in a public place, often times locked up. It's not always a place that's truly public. It's semi-public like in a store. Like in a store there is no access. RCA doesn't have the financial incentive to get out quickly to repair a detect. They don't bother in many instances to train local people to make sure that the building where the equipment is properly vented to where the exhaust vents don't get iced over and hence the equipment quits working and so on.

And I think again, here is a situation where local individual effort combined with a seed from the government -- and, of course, we are going to depend a great deal from REA not just on loan moneys but on training. And we are going to try to train ours own people in those villages to have to run their own system.

THE MODERATOR: Thank you, Fran Dagnen.

MS. DEGNAN: Well, we found in the community that I lived in, we found we had telephones since 1964, and they worked a lot better when we were on the microwave system, now we are on to the satellite, and it seems like it is more modern technology, yet at the same time we have more problems with it. But we are a small community up on the Norton Sound and we are one of the very few that do have telephones in each home. And I knew that -- just trying to

call to other villages is very difficult because you can't hear half the time what they are saying, and you wind up yelling and spend money for not hearing. And just recently, because of the storms, the high storms that we have had, there were no radio communications, verbal transmission, you know, from Saint Lawrence Island to the mainland. And they have had to transmit the blind and this sort of thing. And telephones weren't operative.

So even though technology, it's mother nature or whatever, interferes.

THE MODERATOR: Mr. Carlson.

MR. CARLSON: I guess, Madam Chairman, I would like to respond a little bit to Mr. Colden's comment about maybe not liking or not having the life satellite picture come into ours State and upset ours life style or maybe teach us what's going on in the rest of the world.

I happen to appreciate the morning news and the live news. And I may not like what's on it but at least I can see what's going on in the world. I like live football while women may not. But my set also has an on-off button. I turn it off. And I don't want the government particularly telling me what programs we may or may not receive any more than I want them to tell me what kind of books go on the book shelf. That doesn't help the bush much, but I thought that remark should not go unresponded

to.

THE MODERATOR: Mr. Ekval.

MR. EKVAL: The field of communications is expanding at a more rapid rate than anything else we have talked about today, yesterday, or will likely talk about tomorrow. And I think it's probably the area in which we are becoming more and more future shocked, not only in Alaska but in the world. I think we are having a very hard time handling what communications means to us. This little what we have here is a failure to communicate perhaps between Mr. Carlson and Mr. Golden, is one example of that. Another is the incredible heat surrounding the recent TV Town meetings which was, as I see it, trying to apply broadcast communications to a two-way link up of the public and policy makers, and for all its imperfections. It was a very daring and very bold and extremely provocative experience. Most of the public comment that took place about the TV Town meetings was politics, who did what and who screwed who and had less to do with news, without realizing what an incredible step forward this was toward linking the people in the State and diffusing some of the factors that polarize communities and polarize people's opinions. I think it's an extremely sensitive issue. And while I understand Mr. Golden's comments about perhaps preserving some sort of cultural integrity, all the great

buzz words of the '70s of local controls and so forth, we have to keep ours minds extremely open and realize the degree to which the communication tools can better us and how they can be used as weapons. With it the Ayatollah Khomeini's use of communications in a communications war, basically, ranging a little far afield.

I think that as much as possible Alaskans should not become parochial and afraid of the uses of media, and I am afraid. I am concerned that experiments such as the TV Town meetings will not be used in the State because of the heat that was generated around this experiment. I think that it is going to be the most viable way of bringing people together around issues and explaining who we are to other people. We can't overlook this medium and I think we should do as much as we can to explore the different uses of communications, telecommunications, in the area of government, public policy, and just plain cultural exchange.

THE MODERATOR: Thank you. Ms. Fate?

MS. FATE: Yes, I am for a better communication. And I feel that we are still way behind any State in the Union and other foreign countries.

We have better communication between the United States and foreign countries than we do within ours own State of Alaska.

I was born and raised in a village where there

was totally no communication except one phone. And if it worked, and it was usually in a public place that was closed. When an emergency time arose and the phone was needed like at night or during weekends, it was usually dark or the phone was pulled off the wall.

And there is quite a bit of -- really and truly I want to say -- boredom or a lot of time that's not utilized when you don't have a job. There is no education facilities and there are no interested third parties or amusement places or even a restaurant to go to, or even another person to visit in a city in rural areas. And it's kind of good to get a newspaper even if you have to share it with 20 other houses, that one newspaper, and even though it is old, a week or two. And you don't have visitors as often from out of town. And sometimes a movie you might see three times the same one over and over, but you are gathering and there is a common gathering and communication exchange. I think it may help lessen the problem of boredom, then drinking, then use of drugs, and then maybe abusiveness to individuals. We need live television. We need from it ours Legislature in Juneau as well as Washington D C.

Take for instance, Manley Hot Springs. They found out that they could get TV by somebody going up on hill on a Snow Co. And take up a television and here was

television. It happened to be KANC and all the little kids tuned this in. And you should have seen them sitting there listening to long hair music and they loved it and they grew from it and they are interested in music.

I am more interested in communication within an area, within and town city, especially for the aged and the handicapped or the ill, because there is no protective services, and at least they could grab to a telephone if they are in need.

We do need career education in your communication field within ours own state.

THE MODERATOR: Thank you.

Mrs. Carpenter?

MS. CARPENTER: Mr. Gibson is going to be speaking for ours caucus.

THE MODERATOR: Mrs. Fisher.

MS. FISHER: My few comments have to do with the fact that as a nation we have a communication problem that we are a nation of lonely, depressed people. It's one of ours mental health problems.

I think, if anything, there should be more interchange of ideas like this, people getting together throughout the State and talking among themselves. I may not agree with the people around this table, but I am going to be more aware of the problems in bethel of southeastern,

of the places that I have heard about during this conference.

THE MODERATOR: Mrs. Croft?

MS. CROFT: I have several things. One, I think that public policy is best served if the government reserves a hands-off relationship on informational control of public coverage of government affairs. And I would like to see this group go on record to say that radio and television programs set up to report on the government will not be controlled by that government, that some sort of public broadcasting in Alaska will be on a semi-autonomous basis with maybe a regional representation on some sort of control of the board. I think we are in a position that when it was a pilot project Legislature organized something that would emanate from Juneau. We had to see if it would work or not. But we now know that we are going to need that kind of coverage, but year-to-year funding and year-to-year control over those programs is a very dangerous thing. I think the public form was a good idea, but the way it was handled had some serious problems. And we are going to have more and more of this in Alaska and I think we need to set up some sort of system so the government will keep its hands off.

Secondly, I would like to see more -- I would like to see us encouraging University of Alaska to use

telecommunications for teaching between Fairbanks, Anchorage, Juneau, and some of the rural areas. I think the whole idea of how you teach a course, how you use telecommunications to teach in Fairbanks and Juneau and Anchorage and maybe in the rural area, we have only begun to get into it. And it takes some hardware back up, which I think we should start finding out about.

Thirdly, Anchorage is due fairly soon sometime for a cable system, which will have one channel for government access, and I think the State government should be encouraged to cooperate in whatever cable system eventually gets that program in making that government access channel a very viable thing for the Anchorage area.

And fourthly, if it's necessary to put some money in libraries, I don't know exactly where this money would go, but I would like to see -- when local programming is done, Alaska Review, various really good programs that are done in various communities, I would like to see some funds to reproduce those, and to have them not only on the library in Juneau, but have them in Anchorage or Fairbanks so that we can get the benefit of the excellent programming that is done in this State.

MR. WELLER: I am Mark Weller from Anchorage. I work for Alaska Review. They are available through the film library. That is one source. And the rural communities

use that quite extensively.

MS. CROFT: Not only the Alaska Review, just money to produce those so you can have them.

MR. WELLER: Very expensive and the money has to come from someplace.

THE MODERATOR: Mrs. Davis.

MS. DAVIS: I will pass.

THE MODERATOR: I'm sorry, I forgot somebody, somebody slipped in.

MR. CORSUCH: I apologize for being late and I will pass.

MS. DAVIS: I will pass.

MR. GAZEWAY: No comment.

THE MODERATOR: Mrs. Guess.

MS. GUESS: Attempting to learn and build on what we have learned in the energy area of what some of the problems are, I guess the only thing I'd like to say is I think we have to again be realistic about the provision of telecommunication services in Alaska because someone has to pay for it. Again, if the entity doesn't have the money, they are not going to provide the service. We are talking about continuing the satellite demonstration project in rural Alaska, and there are many benefits to it. Somebody is going to have to pay for it. People in rural Alaska are having a very difficult time paying their electric bills.

The Alaska Public Utilities Commission is the State agency that determines whether a utility such as cable television or the telephone utility goes into bills. And we have to make a determination that 1, there is a public need, and that 2, the applicant is fit, willing and able to provide the service. And when we do that, as we did for the application in the Calista area, and now Hooper Bay has a local exchange. So there are telephones in the homes. We have to look at; is it economically feasible; where will the revenues come from?

And so I guess I am going back to my experience of the last four years. If the State is going to pay for certain telecommunication services, that's fine. If the people are going to pay for the telecommunications services, please let's take along hard look and not end up where we are as I mentioned this morning, in sewer and water.

THE MODERATOR: Mr. Gibson.

MR. GIBSON: I would like to make some general statements first which have not only to do with communications technology, but I have a couple other things. The State of Alaska has constantly been faced with the battle of regionalism, whether this is true dichotomies or imagined ones doesn't make any difference.

MR. GIBSON: The State will rise or fall whether it be in energy, communications or anything else, directly

that it realizes that the commonality of bush and urban interests are one and the same. The urban areas provide us with services. The rural areas provide us with raw materials. And the communication and the power and the things that are necessary to support those are a statewide concern.

To go more specifically to the roll of communications in this State, I was, for a number of years, the man in Alaska who allocated services over the satellite system to remote as well as urban areas. And eventually, the military sold its system to private enterprise, which promised and is on record as having promised to provide service to other areas, not forgetting there is a subsidy. It is the subsidy that the urban areas received or rural areas received because of their density on highway money programs they are using.

The private enterprise State partnership in rural Alaskan communications is an unadulterated failure. We are stuck with a single unmanageably large and vulnerable satellite system.

Case in point. About a month ago I was on the phone calling Anchorage. And that wonderful glorious satellite tumbled. And we had so vulnerablized ourselves that the jet could not take off from Bethel because the local FAA station could not call over the satellite to give

it a clearance and the amateur radio operator in town finally. So there is a scale, perhaps, of economy in super big things. But there is also a diminishing manageability scale on power and communications when you put all of your eggs in one basket, accordingly.

I feel that whether private enterprise does what it is supposed to and is obligated to do in this State, or whether the State does it is unimportant. The economic health of ours whole state depends on rural, urban communication and intraregional communications, which we have not got.

I'd suggest technology that perhaps the best way to go would be an integrated VHF, UHF, or microwave system. They are not as glamorous as satellites, but they are not nearly as vulnerable to the operation of Murphy's Law, that we must learn to live without in the Alaskan bush and in the communities as well. Within that system, all needed services could be provided, television channels, public safety channels, channels interstate, intrastate and international communications. This is the backbone technological system that should be used as a supplement to, not a replacement for the satellite. I think that we are paying some tremendous medical costs, whether it come out of the public or private coffers because there is not adequate dedicated medical channel service to us in the

rural areas, and ultimately you taxpayers in the urban areas are footing that bill. You may think it's a giveaway. It's not. It's an integrated system that cannot be separated. So having said that, I think that's where I would like to stop.

THE MODERATOR: Thank you, Mr. Fairbanks.

MS. DICKSON: I defer to what Mr. Gibson said.

MS. FLYNN: Three things. I think telecommunications in this State is going through a birthing process right now, and I think it's having a lot of very real labor pains. I am concerned with the comment that Eric made that because we have had some bad experiences or at least presumed to be bad by some persons that we now want to shove the baby back. Well, the baby isn't going to go back. It's going to be born and we are going to continue to use this new technology that we've got. And I think we should not build upon it, not ban it. That's it.

I would also like to endorse what Toni said. I think that, capital, that '78, '79 and presumably '80, is an outstanding resource. I like that axiomatic conference made there over there by your deference behind you that the more people know about the procedure, the more they demand knowing about the process. I walk walk up and down the halls in Juneau day-to-day, because, frankly, they can pick up more in one camera than

I can in one body in my house. I think it's an absolute necessity for that organization to go on. I don't have to use in it Anchorage, but I use it when I am in Juneau, too, and I think that's extremely important.

The third thing -- I won't hesitate to mention for fear of something blowing up in the room. We have talked a lot about many people have alluded to the devidedness between urban and rural or the dividedness between the State, period. I think that a great deal of that dividedness has come about over the perceived need to move the capital.

Now, I realize there is some very, very strong feelings on all sides of that subject, but I would submit that maybe we ought to give this baby just being born, this kernel of telecommunications, an opportunity to be born and to be nurtured and to grow for just a little while or a little while longer before we plow into the breach of the capitalhood.

MR. CHAPADOS: I would like to confirm the remark that Mr. Carlson made. I would like to confirm Mr. Carlson's remarks and also Ms. Flynn's remarks except where we were discussing the Alaska public forum. I think that needs to develop quite a bit before it's popular in Alaska. To toll that up, I believe that one of the problems we have in Alaska today is that we are governing ourselves by

consensus, and I don't think that is a good way to go. I think that what we should be doing is the people in Alaska should be informed of what's going on. They should know an awful lot more about their government than what they do and the manner in which it functions, and they should know the problems of the various areas. If we are going to have public forums and that sort of things, it may be desireable to have regional programs that come from these areas that educate the rest of the public.

And then, I believe, that rather than consensus, let's get some leadership and go to the poles and vote for the kind of things that you really believe in. And I believe that's where we weakened ours state government considerably.

THE MODERATOR: Mr. Cooper.

MR. COOPER: Just some comments on what has already been said, and that is that all around the room we are talking about a need for more modern satellites in the bush, whether it was electricity awhile ago or whether it was communications today or now. And then statement, people are also saying we need to preserve the life style of the bush communities. And it cannot be done. We are going to have one or the other. We are going to have modern facilities or we are going to proceed serving the life style as is. You can't very well say we are going to be

modern at the same time.

I think we need to make the decision, do we want modern communications which requires a cash society to pay for, which requires a number of people within the area to make it become anywhere near cost effective, or do we want to live the way we did 20, 30, 40 years ago. And maybe some people would desire to go back to that, I don't know. But I don't think we could very well, like you say, have ours cake and eat it, too.

THE MODERATOR: Mr. Carter.

MR. CARTER: I would just like to echo Mrs. Guess's statement that whatever you get, there is going to be a price on it and a few questions need to be asked. And I am all for modern technology and telecommunications and all those great things, but the answers need to be made first. How much do you want? How much is it going to cost? And who is going to provide the money, the bucks, to pay for it?

MR. COOPER: I guess that's what I was saying and I didn't know how.

THE MODERATOR: Would you like to break for five minutes and come back.

THE MODERATOR: Did we pass anyone?

MR. DAVIDSON: I passed earlier, but after hearing all these difficulties with cost and technical difficulties, I wanted to share for consideration alternative forms of

communications I have been using down in Homer, and it avoids high cost, and it avoids big government and technical difficulties and satellites tumbling out of the sky, and at homing pigeons. Now, the range is only up to about 500 miles, but I tell you, you get messages back and forth. We have flocks in every village and house, and everybody can have their own flock. There is some nice side benefits.

We could have a market for the barley and big delta and environmental things like the hawks would have more food. So maybe we could, seriously.

MR. GORSUCH: I didn't know your father-in-law was having such an influence over you.

THE MODERATOR: Mr. Fairbanks.

MR. FAIRBANKS: One good thing about that is that if the communications system of the carrier pigeons does not work, we can always eat it.

THE MODERATOR: Would you like to break for about five, then come back? We need to, you all are getting rummy.

(Meeting was recessed)

THE MODERATOR: We've got about 35 minutes, and we haven't even hit a lot of topics that you would like to have hit by this time. And I'm sorry, but we are pressed for time again. Are you ready for law and justice?

MS. CARPENTER: Yes.

MR. CROW: No.

THE MODERATOR: We will have law and justice.

(Laughter)

THE MODERATOR: We've got 35 minutes in this room. 45 more minutes in this room and then we have two rooms available to us after 4:30. And we have from 4:30 until 3 o'clock in the morning. But we are going to have to decide. we are going to have to break at some point in time and break up into the small committees that has been suggested to bring all these good ideas that you see on the wall all into some sort of policy statement.

So let's try and tackle law and justice and let's see how much time we have left. And then we will take suggestions after that as to what exactly you want to do.

MS. CARPENTER: Madam Chairman, could we -- could we just very briefly just express ours concerns on law and justice and maybe try and take not more than 15 minutes on it and then 15 minutes on finance?

MR. CROW: You've got to be kidding.

MS. FISHER: You've got to be kidding.

MS. GUESS: Madam Chairman. I have a real problem with having a goal of making sure we do everything. I would rather what we do is quality work. And if we can't get to some of them, then I think so be it. But I think I really would rather stand on quality than quantity. I would be willing to go with what anybody wants to do from

here on. I ought to be. I certainly should.

THE MODERATOR: I really tend to agree with you. We have gone further than we probably should have. We've probably not tackled education as well as some of us might have hoped. We've tackled transportation. We have health.

MS. CROFT: Resources is one I would hate to skip.

THE MODERATOR: There is a lot we would really hate to skip. Wait, I can't see.

MS. CARPENTER: Can we go from 7 to 9, take an hour for dinner and go from 7 to 9.

MR. DELISIO: Rather than debating it, why don't we get this done?

MS. GUESS: Can we work tomorrow morning? What do we have to do tomorrow morning?

MR. VAN DOREN: The schedule calls for a summary decision with all the other groups all morning.

THE MODERATOR: Starting at 9 o'clock tomorrow morning.

MS. GUESS: I would like to suggest that maybe a better use of ours time is to work in the morning and then submit the written statements and then the policy makers can take a look at it rather than standing up and reading things that we all have the ability to read later on.

THE MODERATOR: I think this is a Maverick group.

MS. FISHER: I think that's fairly representative of Alaska.

MR. DELISIO: Can I offer something on the justice system? I think I am the only person who is involved in the justice system here on a day-to-day basis. I won't speak about the criminal justice system. But the civil justice system, that I am more involved with.

We have a social problem, a social disease that is creeping -- well, it's no longer creeping, it's reached epidemic proportions nationally in this State, as bad, if not worse, as most with regard to civil justice systems. We have a society this is more dense. We are in closer communication. We are in closer contact physically and otherwise. And yet by virtue of ours judicial decisions, by virtue of legislation, by virtue of attitude in general, we are teaching or ours people to be more intolerant of one another than more tolerant.

It seems to me that somehow we've got to develop and foster in ours State and ours nation an attitude toward each other of tolerance. I was almost physically sick at the question that was asked this morning. We saw that beautiful film about this adventure education as a method of dealing with children, some troubled and some other, as a form of education, as a form of mental health assistance and so on.

And then somebody asked a very pertinent, and unfortunately socially necessary question: What do you do

about insurance for the children? For the children you take out -- you know, here we are trying or someone is trying to do something that helps somebody. And yet in ours society, we are encouraged to sue each other at the drop of a hat for dam near anything. Ours judicial system is -- and ours decisions are aimed at giving a person a suit remedy against anybody for anything at any time under the most absurd conditions imagineable. And we are becoming an extremely litigeous society. This is terrific for me as a lawyer, in the sense that it means a lot more cases for me to handle and so forth and so on. But somewhere along the way that system is going to have to collapse of its own weight.

The Yamanis had a solution for it. They developed a social system in a culture. Which was aimed, as they became densely populated, at being considerate and tolerant of each other. I think you've got to do that here. You can do it a little bit at legislation. Somehow we've got to get the judges who want to do the social engineering from the bench to understand that they are socially unengineering; they are pulling ours society together. And somehow we've got to bring some sanity back to this interpersonal relationship.

MR. COOPER: Amen.

MR. CROW: Gee whiz. A beautiful statement.

MS. CARPENTER: Beautiful statement.

THE MODERATOR: Anyone else on law and justice?

MS. DICKSON: I would like to recommend that we support this Alaska Wilderness Group and perhaps make a policy statement on it. I think it's a very valuable tool that we should use.

Anyone else? Mrs. Carpenter, I would like to refer you to the statement on page D 62, and I would like to say that the basic, the minimum basic safety needs of people in rural Alaska are not being met. There is no -- there is essentially no justice system functioning in many villages. There is no victim assistance. There is no way that people can feel safe in their homes or on the street. And we must have a system for providing local police protection.

At the present time, the only way villages can fund a police force is through a CETA Training Act that was not intended for that purpose, which means that when those CETA -- when the person who is hired to be the village policeman has extended the maximum amount of time possible under the CETA Training Act, they have to start all over with another person, just as that person is getting to the point where he can perhaps provide some adequate services.

There is a very small State police contingent that is, that is expected to cover a 100,000 square-mile area with two airplanes.

Even for homocides, people have to wait three and four days for a State trooper to come. This is incredible. This is the kind of situation that would never be tolerated anywhere else. And we must deal with it. We are paying the social cost of these things many times over in other ways. We must have at least minimum services of that nature in the bush.

We need, also, correctional, a correctional program in ours region for youth and adults so that people who are incarcerated, can have the opportunity to have rehabilitation programs, work release, be close to their families, whatever is appropriate, but not to take, say, a boy who has been in trouble in a rural area and put him in McLoughlin with kids that are ten times tougher than he ever thought of being. This sort of thing does not work. We would like to have a correctional center that would serve that region. Thank you.

THE MODERATOR: Anyone else on law and justice? Mrs. Davis?

MS. DAVIS: I would like to go on record saying that I support the so-called Missouri plan. As mentioned in ours book on page D '69, this particular plan provides for the screening of those applicants that are going to be placed for judges. And those applicants are then screened by a group that could be done by the judicial counsel with

laymen and other appropriate people being on that rather than having the judges appointed and allowing them to serve forever when they are inadequate in that capacity. I would like to see something being done that's going to make the judges accountable for their action. Why should they get away with doing the things that they want to do, where if it was in another case, they would be removed from that duty. But we have judges that have served for many years, and the people are not satisfied with them, but we continue to let them serve. I just want to go on record and present that I adopt that proposal.

I also want to speak on behalf in the judicial counsel on the study that was done. There was some inequality on race in sentences, especially with blacks and native people, because they get longer sentences than the whites for the same charges. I want to know what is done about that, not just denied, but see that something is done to improve it.

THE MODERATOR: Mrs. Fisher.

MS. FISHER: I have another problem that doesn't seem to have any answer at this particular point. In the year that I have served as director for the Alaskans Women's Resource Center, we find that the third most asked for problem that comes into the door is for legal service of some sort. We have not had any help from the Alaska legal

services. They tell us that it has to really be a crisis situation. And I don't know, I thought we had some real crisis come in ours door, but so far they haven't seemed to qualify. And I really don't know the answer. What we have done, as a partial solution, is there are lawyers in the community who will donate time to at least help screen the problems for these women. And this has been a partial solution.

MR. CARLSON: Maybe we can send you some of ours. They are even advertising for clients.

MS. FISHER: The problem is the clients have no money.

MR. CARLSON: I am talking about the freebies.

THE MODERATOR: Anything else on law and justice?

MR. GORSUCH: Madam Chairman? I would like to direct a question perhaps to Mr. Delisio since he is more expert at this than certainly I am. And that is, I know from a number of instances that there are at least to some extension of legal services to low income and certainly available for those who can afford it.

At the middle income categories, however, I find legal service to be exceedingly expensive. And although I would not want to perpetuate litigeous society, nevertheless, it does exist and I am concerned that middle income is often times left in the position of not being able to protect their own legal interest. And I am

wondering whether or not looking for alternative forms of providing, I hate the terms legal insurance, but something that might represent the possibility of forming corporations where people could buy into for the purpose of some joint legal policy that's available. I know this is a fringe benefit that has been extended to the Teamsters as a part of their package. I don't know how successful this has been on, what effect it has had. But I am wondering if it works just as well to contain or protect people from catastrophic illnesses in the health field, whether or not something parallel might be worth exploring on the legal services. I direct that more as a question rather than a recommendation. It's a concern of mine, but I don't know whether it would become counter productive.

THE MODERATOR: Mr. Delisio.

MR. DELISIO: Programs developing across the country, mostly through labor unions, which is prepaid legal service. It's a form of insurance benefit like health insurance.

My own opinion of the Teamsters program is that it was an unmitigated disaster, not because the idea was bad, but because it was badly administered. People could come in for -- if your neighbor's dog messed on your lawn, you could take him to court through the Supreme Court and the legal services program paid for it, which is a little

bit -- that's not serving the need. If it's properly and soundly administered I think it could work extremely well.

I am the chairman of the State bar committee that is serving for altering dispute methods. And one of the things we are intending to recommend is the adoption of the Citizen Dispute Center which would provide binding arbitration to the public at no cost, with volunteers lawyers and laymen to serve as arbitrators to handled things like consumer disputes, the kinds of things that are even -- or the types of things that you don't want to go into small claims court, because you don't want to take a day off work. Ours idea is to provide these services at night. Both parties would have to agree. We may get a person who gets a defective rain coat and feels they should get a replacement; people who got a car repair job done and that sort of thing. So you don't need lawyers in that situation. In fact, we are recommending that lawyers be precluded from participating to represent the people because they will come forth and basically tell their story and the arbitrator will find a fair, equitable solution for them.

MR. GORSUCH: You are saying group legal services is something we might want to advance?

MR. DELISIO: I am saying that the quality American middle class person is applicable in every single field we

think of. The very wealthy can pay for the services. But the poverty line people or people below the poverty line can get virtually what they need, but it's the vast majority of people in between that are getting shafted because they can't a forward to pay what they need.

MS. FISHER: I sort of would like to dispute that, what seems to have been said about three times. If that were so, there wouldn't be any need for the business I am in. I do see the very poor, and they aren't getting service. A typical example of a woman is where she calls us and says that she has been married ten years, she has 2.5 children. Her husband left last night, took the contents of the bank account and the car.

MR. DELISIO: She is eligible for legal services.

MS. FISHER: She hasn't been able to get it. That's what I am trying to say that is these people that we try to get into legal services, they tell us that they are booked, that they can't take them, that they don't have anyone, that they are overworked.

MR. DELISIO: Well, you know, I have to question that a little bit, because they have a long list, for example, of attorneys who sign up to be on an on-call basis for referral. They involve themselves in providing services for entity like, for example, they are representing the North Slope burough against the oil companies on the

Beaufort Sea. Now does the North Slope Burough need anybody to provide legal services or free legal services? I don't think so. There are some problems like that that the resources aren't necessarily put where they are legislatively mandated. That's a real problem.

THE MODERATOR: Anyone one else on law and justice? Mrs. Croft.

MS. CROFT: Mr. Delisio, I have had that same experience in Anchorage with poverty level students who need legal services and are told that they don't need funds: It is, in fact you, true, that they cannot get legal services.

MR. DELISIO: I don't dispute that. The mechanism is there. Maybe the funding is inadequate. I do know that the mechanism is being abused, not by your people. But it's being abused.

THE MODERATOR: Do we have any more comments on law and justice?

MR. COOPER: It should be swift and short. Regardless of the severity in timing on it, it should be short and it should be timely. It doesn't do any good to whip your kids for breaking the window three weeks ago. You only have to give them one whop right away, and it's far more good.

THE MODERATOR: Okay. We have approximately 14

minutes. Now, we have two rooms that are available to us we have so far covered five topics. Now, what do you want to do?

THE MODERATOR: Should we break off into groups?

MS. CARPENTER: What about if we went ahead and tried to do financial resources before six, and then used the even for the committee work.

MS. GUESS: I think we are going to loose some people. My concern is that we get, you know, some kind of written documentation on what we've done so far. I would really vote for breaking up into ours small groups and utilizing the two rooms.

MS. CARPENTER: Then what do we do in the evening?

MR. COOPER: Resource and finance.

THE MODERATOR: I doubt very seriously, the way we are going today, if you are going to decide in one and a half hours all that we've discussed, you are going to come up with a policy statement in one and a half hours. I think you are going to be going on into tonight.

THE MODERATOR: Will we have this room at 8 o'clock.

THE MODERATOR: We have 301 at 8 o'clock.

MR. FAIRBANKS: How much time do we have tomorrow for discussion?

THE MODERATOR: We start at nine o'clock supposedly with a summary, with a summary of all the work we have done

MR. FAIRBANKS: So we've got to be done tonight.

THE MODERATOR: That's what we are saying.

MR. FAIRBANKS: We've still got to do finances.

THE MODERATOR: Not necessarily.

MS. FISHER: Madam Chairman, I would suggest that we choose up subjects and sort of parcel out people. I, myself, will not be able to be here tonight. I am going to turn into a mother and go home and mother a chicken this evening, so I won't be here, which might be just as well, I have a tendency to talk too much.

THE MODERATOR: Let's take them in the order that we started, and that is education. How many would like to tackle education? Oh, come on.

MR. COOPER: May I make a suggestion, that because this group seems to be fairly heavy on education, that we don't load the committee with people from the education field. Certainly there should be someone from the education field on the committee, but I would hate to see the majority of the committee have a vested interest in the education system.

MS. FISHER: Why not have the person whose doing the writing go to each one of the beginnings and those people who are willing to be on that committee to overhaul that area to be written down.

MR. FAIRBANKS: Transportation is here.

THE MODERATOR: Energy is behind me, justice, communications.

MS. DAVIS: Education is not up there.

MS. FISHER: Madam Chairman, Mrs. Carpenter has something to do that has to do with women and justice. I would concur that it's quite important if she might have time to have it included in the section on law.

MS. CARPENTER: Do you have something else?

THE MODERATOR: Do you have something else?

MS. CARPENTER: Yes, we have something I had trouble with. You are aware of the recent study on the treatment, on the comparative treatment of natives and blacks that brought out some very strong discrimination patterns. The same problem exists in crimes against women including extremely severe cases of battering, sexual abuse of children, and other related crimes. And we would like to propose that a study be done by the State to compare convictions and sentencing practices of crimes against women with similar crimes against males.

THE MODERATOR: Okay, the suggestion has been made to just hop up and put your name on whatever list you want to work on tonight. You've got nine minutes.

MR. DELISIO: May I suggest something else? I think I recall Mrs. Carpenter's saying something this morning was that when we get some of these more articulately or

carefully worded and maybe synthesized ideas that we would rather than technically voting them up or down see how many of them everybody is willing to more or less accept even if they don't find a pertinent state of view. And I wonder if in that context, since we haven't gotten to the most critical issue, if some of the people who have ideas about finances and resources would like to try to make up a very carefully-worded written statement to include in that list of things that we are going to word. The problem is we have gotten fewer in number, and I think if you try slicing us any more finely, then you are going to end up with one person, one subject.

MR. GORSUCH: That's what we may need to finish.

MS. CARPENTER: How are we going to come back together to view, if rewritten?

THE MODERATOR: We will come back at eight o'clock tonight.

MS. CARPENTER: Okay, at eight o'clock tonight whoever comes will review the statements.

THE MODERATOR: When we all come back.

THE MODERATOR: Room 301.

THE MODERATOR: Okay.

MS. CARPENTER: Okay, that's clear.

MS. FISHER: Perhaps one person in each of the groups can be responsible for each that all the materials come

back.

MR. DELISIO: What two rooms are we going to provide right now?

THE MODERATOR: Right now we have 1216 and we have 1010.

MR. GORSUCH: Madam Chairman, could we start with at least someone stepping forward to volunteer to make sure each topic is covered.

MS. GUESS: I will be with the energy group.

MS. FISHER: I will join her.

MS. DICKSON: I would like to be in the energy group.

THE MODERATOR: I need leaders, education, I mean education -- no, energy, gas, how about education? Education, going once, going twice.

MS. CROFT: I will recommend Peter Gibson.

MR. GIBSON: I would prefer to work on education.

MS. CROFT: I wanted communication, but I will go education.

THE MODERATOR: Toni Croft on education. Transportation, Mr. Davidson.

MR. GIBSON: I suggested I would like to be on that, too.

MR. DAVIDSON: Sure, I would like to transportation.

THE MODERATOR: Would you lead it.

MR. DAVIDSON: Lead it, unless somebody else would

rather more than happy to lead that group.

THE MODERATOR: Health, health. Going once. Abi would you take health?

MS. DICKSON: I would really like to work with the energy if I could.

THE MODERATOR: Health?

MR. CAZEWAY: Could I raise a question on that? Does that include social services. Normally it does. The State does talk about health and social services

THE MODERATOR: Anybody else on health? Beautiful. Mr. Cooper.

MR. COOPER: I'll take it.

THE MODERATOR: We've got education, energy, transportation, health. How about government services?

MR. DELISIO: How about that one, in fact, if you don't mind, if we can join that and justice together.

THE MODERATOR: Why don't we take communications, regional, and law and justice. Why don't you take them all?

THE MODERATOR: We just don't have that many rooms.

MR. COOPER: Communications isn't that large of a subject or as vital and it certainly ties into local government.

THE MODERATOR: Okay, we've got two rooms.

THE MODERATOR: I've got a room that will take a small group. I'm in 1105. I think it's 1105.

THE MODERATOR: Does anybody else have a room they will volunteer because they don't have?

MR. GIBSON: Madam Chairman, I will volunteer the use of my room for transportation group.

MR. DAVIDSON: No, I am the leader, no smoking.

MR. FAIRBANKS: I suggest the leader for transportation be out on the ledge.

MR. DELISIO: There was a major system here all the time and it's appeared. We have education, Mrs. Croft; and energy, Mrs. Guess; transportation, Mrs. Davidson; health, Mr. Cooper; government services, Mr. Delisio. Now, we've got room -- okay, you said transportation could have your room. And your room number

MR. GIBSON: 610.

MR. GIBSON: They may not have it, they may use it.

THE MODERATOR: 610 education, Croft, would you like 1010?

MR. CROFT: Fine.

THE MODERATOR: Energy, Mrs. Guess.

THE MODERATOR: We don't know which one is going to be the largest, and that room 1216 that we were in last night is a nice-sized room.

MS. FISHER: You could probably get one at least each end. I heard at least three.

THE MODERATOR: You don't want 1216.

THE MODERATOR: How big is education? Would you raise your hand if you are interested in education. Please raise your hand. Education?

THE MODERATOR: How about health, Mr. Cooper, health, how many interested in health?

MR. COOPER: I have to have someone that can write.

THE MODERATOR: Energy and education in 1216, okay.

THE MODERATOR: Mr. Delisio, how about 1010.

MR. DELISIO: 1010, fine. Whose going to be in that group with justice communications and government?

MS. CARPENTER: Can we join you maybe a little later?

MR. DELISIO: If I am not already done.

THE MODERATOR: It doesn't look like we are going to have people working on these committees. Do you want to just double up on the committees?

MS. GUESS: Where are some of these other people? Where are some of the other people going that haven't raised their hand.

THE MODERATOR: I am going to transportation.

MR. CROW: There is some small hope on Kuskokwin East that there will be renewable resources.

MR. FAIRBANKS: I've got a question with that, how about if somebody goes to the other groups and copy is down from what they found out hand then bring it back and present it to the group, and then we can start from what

they've got and we can add ours except theirs.

MS. FISHER: I think we are spreading ourselves a little thin.

MS. CARPENTER: We can do that at eight o'clock tonight when we come back with the other statements.

MS. FLEMING: We should do that now. They are going to be taking it to those statements.

MS. CROFT: We have the points that were covered and try to put them together in some sentences.

THE MODERATOR: Mr. Cooper.

MR. COOPER: You haven't assigned me a room.

THE MODERATOR: You can have my room if I can go up and clean it up a little bit.

MR. COOPER: If I am going to be by myself I can get my own room and get my wife to write up.

THE MODERATOR: That's a good idea, Virginia is not busy. She wouldn't mind.

MR. COOPER: No, but I am hoping there is going to be someone to help me on this. Mr. Fairbanks.

MR. FAIRBANKS: It's is it okay with the group if I go around quickly now to the other rooms that have the things on the wall and record what they have and bring it back at 8.

MS. FLEMING: Grant, I will do the third floor

MR. DeLISIO: By the way, once we get these things

written, is there someone that is going to type them and copy them.

MR. VAN DOREN: We will try.

(Evening Session)

THE MODERATOR: I think everyone should have a copy of the education portion, and if you don't, here are some copies.

MR. FAIRBANKS: Who does not have one? Anybody else not have education?

MR. GIBSON: I went to third grade, is that had education.

THE MODERATOR: Toni, would you like to--

MS. CROFT: Yeah, I guess so. We tried to put everything in. There has been a couple of suggestions since we finished this. First, should I ask, does anyone have any strong objections?

THE MODERATOR: Could you go ahead and read it.

MS. CROFT: Why don't you let everybody have time to read it.

THE MODERATOR: Let's just read it. Sometimes it sounds better and you won't have any problem.

MS. CROFT: We decided to divide it into policy program funding and it didn't always fit that way. Under policy we said. The one that we vote on we passed provided the residents with post-secondary education. We left off

the second part that didn't pass. Then to best serve the interests of the State's autonomy should be granted to the college system. The third one is in educational systems including alternative to the University of Alaska systems. We he decided to say educational systems because that included some of the private programs that are trying to teach secondary and some of the others. Under program, give special consideration to minority students through program development and teacher preparation to enable them to achieve at grade level. Secondly, establish a nontraditional educational program to let rural students obtain a bachelor the school without walls open learning concept that was in O'Rourke's (phonetic) paper and has been talked about.

MR. GORSUCH: Noncampus phase.

MS. CROFT: 3, develop bilingual and cross culture programs and better training to serve minorities students. We kind of threw several together there.

Under funding, we tried to keep the funding down to programs that were already in existence that were, most of the time, that were in existence that were just not adequately funded. Revise the State formula funding to provide smaller classes and needed services for children's in grades K through six to insure their success at the secondary and post-secondary level. That's the secondary school foundation level. That would be a good start.

Second to explore all alternative forms--and we made it Alaskan University so it could not only be the University of Alaska, but Alaska Pacific University if they could qualify for it. Three, increase the level of funding for special education programs including those for gifted students. And 4, provide funding for inovative pilot programs such as student exchange programs, wilderness experience and special constant programs. That is sort of a catch all for a lot. And I think what George Holman said was that the budget" economy wasn't allowing them any flexibility so that they could use those new programs. We wanted to make sure that we told them they should be able to do that.

MR. CROFT: Would you like to explain?

MS. CARPENTER: There are a couple of things we inadvertently left out, one was addressing voter needs and the other was a policy of the Board of Regents. At the present time, the Board of Regents policy is that the only student housing is at the University of Alaska in Fairbanks. However the Board has also passed another policy which is in conflict with that. They have said that they will not duplicate special vocational programs at the various student colleges. So for example, Kenai has a petrochenical program and Kuskokwin has a fisheries program. They won't switch them. Therefore, they are using the community colleges in sort of a regional VOTEC kind of WAY. So, if

they are expecting students to travel from other parts of Alaska to attend these programs, then they do have to address the need for husbanding, because these are all communities in which housing is extremely critical in and everywhere other housing is just not available. It's very difficult in Bethel to find any kind of housing. So we didn't want to add that. That and the VOTEC statement. And both of these were in O'Rourke's papers. And we could perhaps use that wording that would--

THE MODERATOR: Do you want to read it, because I left mine?

SUMMARY OF RECOMMENDATIONS

The following recommendations are inherent and stated within the paper entitled, "Health and Social Services: Needs and strategies in the 1980s." It is recommended that consideration be given by the legislative and executive branches of the government for implementation during the early years of the 1980 decade.

1, public policy in Alaska as developed by the legislative and executive branches of government should shift priority as far as possible from the curative and treatment approach to health promotion, health education, and disease prevention. (Report: Page 1)

2, cost containment for all health care purchased by government should be undertaken with a minimum goal that

payment and fees for services should not be allowable beyond the increases in the consumer price index for the region concerned (report: Page 2)

3, that to the extent allowable by present law and reasonable amendments there to, health and social services delivery programs should be investigated in local government and in private nonprofit corporations with mutually agreeable funding provided by federal and State government's (report: Page 3)

4, revenue sharing funds made available by the State government for health services and health facilities should be made available to local government's with the local government's determining the priorities for usage of the funds, whether for services, institutions, or facilities (report: Pages 4 and 5)

5, that public policy in Alaska includes studies leading toward the possible revision of all direct service, health expenditures, with the emerging possibility of operating out of the Medicaid program, the development of a unique and comprehensive Alaskan health insurance program or other innovative improved methods for assisting Alaskans in meeting medical costs (report: Pages 6-11 and 13-16)

6, immediate attention should be given to an improved catastrophic illness program to bring relief to low and middle income wage earners otherwise ineligible for

federal and State assistance including an improved catastrophic illness program for consideration of coverage under Medicaid of the "medically needy" provided financial impact statements are deemed to be within acceptable ranges (report: Pages 11-12)

7, the State should consider a revised plan of reimbursement for physicians' services and hospitals whether or not the Medicaid program is continued or dropped including strong emphasis on the free enterprise, competitive systems, and that as a quid pro quo the free market forces be ridgidly enforced as demanded in other fields of endeavor (report: Page 16)

8, since disease prevention is cheaper than cure and treatment, Alaska should single out several diseases which contribute unduly to the pain and suffering of citizens and lay heavy claims on public funds. Singled out for earliest attention should be: Tuberculosis, otitis media, alcoholism and drug abuse, accident prevention, venereal disease (report: Page 22)

9, alternatives to expensive institutional health care (hospitals, nursing homes, residential centers) should be sought including pilot programs in home health care with services available not only from nurses, but also doctors for inhome assistance (report: Page 22)

10, financial obligations for emergency response

systems should be a shared responsibility between the State and local government's with special provision for communities with low population and tax base (report: Page 23)

11, since all forms of accidents are responsible for the highest percentage of Alaska deaths and a major portion of health care dollar expenditures, special massive attention should be given to the fundamental causes of those accidents and the relationship there to to other social and health phenomena, and that a bold program of education and prevention be developed (report: Page 26)

12, all third party insurance payment mechanicisms for health care in Alaska should be required to cover mental illness services in much the same way as they cover physical illness at the present time (report: Page 33)

13, legislative and executive branch decisions should be directed toward more extensive utilization in funding of the community mental health centers; several small regional juvenile residential facilities should be provided for mentally disturbed juveniles; in extensive review of the programs of the Alaska Psychiatric Institute and the Harbor View Developmental Center should be instituted in order that their future roles may be determined consistent about changing patterns in delivery

of mental health services (report: Pages 33-34)

14, that the legislative and executive branches provide for detailed analyses regarding the financial impact of improving the current payment level of $120.54 per month per recipient under the aid to families with dependent children program (under AFDC, the monthly payment for mother and child is $350 versus $608 for two persons under the supplemental security income programs) (report: Pages 41-42)

15, since $80 per month per person for certain needy person in the State is not sufficient to deal realistically with those eligible, a detailed study should be provided to determine the future structure and coverages under the general relief and general relief medical programs (report: Page 41)

16, the legislative and executive branches of government should attempt to influence more strongly the federal office of management and budget" in order to adjust the official poverty guidelines for Alaska to bring it in line with financial realities and remove the current discrimination against Alaska's needy made possible by the policies of the federal office of management and budget" (report: Page 42)

17, that the legislative and executive branches provide for an updated, comprehensive study of Alaska's

elderly population, with special emphasis on the adequacies of the financial assistance provided to elderly elegibles, and with special review of the effects of inflation on the fixed income of retired persons (report: Page 45)

18, the legislative and executive branches of government in Alaska have recently provided for a comprehensive corrections master plan for Alaska. Those portions of the plan deemed to be acceptable should be strongly supported by the legislative and executive branches in order to improve both facilities and services in urban and rural areas of Alaska (report: Page 52)

19, limited and new programs such as treatment alternatives to street crime and New Start center have demonstrated efficiency and adequate rate of success in assisting in the continuing rehabilitation of ex-offenders. It is in the interest of every citizen of Alaska that such X offenders be assisted in developing new life patterns free of crime and deserve adequate staff and financial support to assist in that goal. (Report: Page 52)

20, even though public assistance in the form of money transfer payment programs and social services based on counseling do not have the same goals, human service centers in various communities throughout the State should be located in order to serve citizens in a more efficient manner (report: Page 57)

21, since Alaska does not operate any social service child care institutions and only one correctional juvenile institution, revisions should be made in the, "Purchase of Services" statutes by amendment in order to fund those privately operated programs giving care to juveniles whose care has been made a State responsibility more nearly on the basis of actual full cost of care (report: Page 58)

22, the legislative and executive branches of government should make provisions whereby a reasonable percentage (approximately one percent) of the human services budgets of the State could be utilized by the executive agencies for research and evaluation purposes in order that full data may be available and proper evaluations made to play sound statistical and programatical bases under all expenditures in the field of human services.

MR. GIBSON: While we are looking for it, I would certainly like to express my appreciation that that subcommittee did on putting that together. It's nice and concise and clean and very much to the point.

MS. CROFT: Thank you.

MS. CARPENTER: Which one is that? I don't have my glasses on. Let me dig for them.

MR. CARLSON: Why don't you.

MR. DELISIO: Why don't you just say where the Board of Regents places a statewide program at a community college issue also provide dormitory facilities for out of town students.

MR. COOPER: Or be sure that they are available because in some areas there is a problem.

MS. CROFT: On number 8, due to the lack of transportation corridors within the State of Alaska, State policy makers should encourage the establishment of appropriate student housing on a number of campuses within the public higher education system.

THE MODERATOR: Could you be a little more specific or do we dare?

MS. CROFT: I think yours is better, Mr. Delisio.

MR. FISON: They may think we are addressing somewhat of a political football issue between Anchorage and Fairbanks. Fairbanks, the main college, is interested in different curricula in Anchorage College can't be a resident campus because then they feel that would be unfair competition, because the center of the population would be here.

THE MODERATOR: I think Mr. Delisio said very well where housing was not available. And this may be tied into the smaller communities.

MR. GIBSON: I think this is addressing specifically

BETA MEETING PROCEEDINGS

(December 7, 1979, 9:55 a.m.)

to the community college as opposed to or separate from the university situation.

MR. BISON: Is it clear that that's what it is.

MR. COOPER: When he gets it written up, I think it will be fairly clear.

THE MODERATOR: Also, you said there was a statement on the VOTEC. Would you like to read that.

MS. CARPENTER: That the State of Alaska provide a major funding thrust to improve the status of vocational technical education within Alaska geared not only toward program development and maintenance but improved employment prediction needs and improved job development and placement.

THE MODERATOR: Good, good.

MR. GIBSON: I would like to add something to that. Vocational, technical education at the community college.

THE MODERATOR: Level.

MR. GIBSON: At the community college level, right, because that could be satisfied by dumping a lot of more money in the sewer.

THE MODERATOR: Mr. Delisio.

MR. DELISIO: When the Board of Regents establishes the State community college program. It shall insure out-of-town students housing.

MR. GIBSON: Watch that.

MR. DELISIO: That's what I wrote down, town.

THE MODERATOR: Any objections to what we have come up with so far. Mr. Gorsuch.

MR. GORSUCH: I am afraid I would have to object to the last one, the improving the vocational technical. The reason I say that is the State of Alaska spends a great deal of money right now on vocational education, both in the secondary program as well as the community college. In my experience of looking at how successful those programs are, they are not very successful. Approximately two to three percent of the students enrolled in the programs actually graduate from the programs. Of those that are involved in the program, a vast majority of them will take only one course. The lack of attention to actual job opportunities in Alaska is pretty extensive. The actual efforts of trying to develop job development are quite limited, and I would be hesitant about saying you ought to put a lot more money into a program we are already putting a great deal into until I had confidence that the system was really capable of concentrating job development and job placement as well as coming up with real vocational careers rather than a variety of do-it-yourself type courses. And I am not objecting to the do-it-yourself, although I think you need to separate from those that are really oriented towards careers versus those that are helping people in their basic abilities to cut costs by tuning up their own

cars and things of such sort.

MR. GIBSON: May I address that?

MR. CORSUCH: Uh-huh.

MR. GIBSON: First I think you are addressing two different sides of education. The single skill courses, like powder puff mechanics or how to unstop your sink, are not what we consider in the community college education as vocational or career training. These are community interest courses which are not part of the program, but which are designed for what exactly the course implies, how I as a home owner, for instance, can fix my own appliances. The contrast of that is the career development course in the vocational and technical areas. Now, under the reasons you have where the major funding sources are now putting their money, i e, Stewarts Skill Center in Anchorage, the reason you have a low rate of success is those.

MR. CORSUCH: Stuart is far more successful than any other and the Anchorage business college is far more successful than any of the programs.

MR. GIBSON: Let me finish, please. One of the problems with ours rural students is that there is entirely too much irrelevant terms presented in urban centers as opposed to rural needs. And we have another problem, too, that community college serving in rural areas is a very valuable function, which is saving taxpayer money for

supporting those students in a program that they are bound to fail on in the larger urban centers.

So what we are suggesting here is that vocational funds, rather than being allocated in only one or two major areas in a State, be allocated where the students are, where failures are not as expensive, where chances of success are greater because they are tailored to local needs.

For instance, we use bilingual instructors for ours people out in ours area, which are not available here in Anchorage. So, I think that if we look to does saving and efficiency, we can better deliver the educational product in the milieu in which it will be used. And so we need to make those two distinctions, one, community interest program, and that is not to be confused the career vocation or vocational training, and the other actual career training in the other where people live and using that training. Both are cost effective.

THE MODERATOR: Excuse me. I just did it. Everything is being taped and when we could have or make funny noises, the man with the head set gets hickups, and so if we cough, and also that you speak a little slowly, so ours very, very important person over there in the corner is able to take everything that you have said.

Now, we have two statements, one where the Board of

Regents establishes a statewide program at a community college which will assure the availability of adequate housing for out of town students participating. We have no objections to that statement.

We have another statement that the State of Alaska provide a major funding thrust to improve the status of vocational technical education within Alaska and such efforts shall be geared not only towards program development and maintenance but improved employment prediction needs and improved job development and placement. There is objection to that?

MS. CROFT: Madam Chairman, I have a suggestion, if we change provide and major funding thrust to improve and just take that whole thing out and just say improve.

THE MODERATOR: The State of Alaska.

MS. CROFT: Improve the State of Alaska vocational and technical education.

MR. GIBSON: I would like to have statewide inserted after that.

THE MODERATOR: That the State of Alaska improve the status of vocational education within Alaska.

MR. GIBSON: No, statewide, statewide as opposed to within Alaska.

MS. CROFT: Improve the status of vocational technical status statewide.

THE MODERATOR: The State of Alaska improve the status of vocational technical education statewide, period. Such effort shall be geared not only towards program development. Any objections, we have a statement.

MR. COOPER: I have a little bit of a problem with it, and I am not sure what it means, but I would hope that the, the intent is not to have this include only public educational systems, because there are very fine private vocational training systems within the State that certainly are geared towards, and their very success depends upon good results.

THE MODERATOR: Do you have a suggestion.

MR. COOPER: No, just as long as we are aware that we are not talking about public education only.

MS. CROFT: Madam Chairman. We might have covered that in the third one under policy where we said the four methods of encouraging competition within the educational system so that if there is another good one. Then we will encourage them.

MR. COOPER: But I was thinking in terms of some of the union principals programs. Certainly they are turning out first class skills in their particular field.

THE MODERATOR: Okay, a point well taken. Okay, do you think that third sentence, then, Toni, would cover our intent?

MS. CROFT: I think so, do you?

MR. COOPER: I will withdraw any objection there might have been as long as it is then it would be part of the record in case anyone started squabbling about it.

THE MODERATOR: So we have an educational policy.

MR. COOPER: One question.

THE MODERATOR: Mr. Cooper.

MR. COOPER: The last sentence in the printed policy, provide the funding for innovative pilot programs. I have no problem with that. But I do believe that there should be a realization that we have a tendency to create pilot programs that never stop, whether they are good or bad, they seem to go forever.

THE MODERATOR: Just one thought, and what Earle is talking about is the problem that we have had on the Peninsula and I am sure you have had elsewhere as well. The State comes in with a car and says this is going to be a very, very good pilot program for you; you try it and we will pay for it for the first three years. It may or may not works. But after that third year, you have staff on hand. You have hired teachers, and you have hired extra, and you have extra everything. And at that time, your community says, "hey, we have to cut the budget". So the problem is funding. And that's what you are talking about.

MR. COOPER: That's right, and you are locked into

this program that for three years was a pilot program. Now you are obligated because you have accepted the funds for the first three years. You are obligated to continue the thing, and maybe it isn't a successful program.

THE MODERATOR: Is there an alternative?

MS. DICKSON: I am not suggesting an alternative, but I am saying, what do you do when you have a pilot program that is a really good idea and then it's not funded.

MS. CARPENTER: That's the most common problem.

MR. COOPER: Well, it's a pilot program and it's of good value.

MS. DICKSON: So how about if we eliminate the word "pilot" and just say provide funding for innovative programs. Pilot programs seem to make it.

MS. CARPENTER: Beautiful.

MR. GIBSON: Good, good. Then the funding source can determine the effectiveness of it. I think the pilot, that word pilot was what hung you up there.

MR. COOPER: Yeah, because if it's a good one, it should be able to on its own merits be continued.

THE MODERATOR: Mr. Delisio, did you have another comment?

MR. DELISIO: I object to the policy number 2 about autonomy to the community college system. First of all, I think that it's an ill-conceived notion. I can understand

where living out in a community, you'd like to see your system completely independent and under your total local control. But as a practical matter, I am not sure that that's really -- that's a statewide good interest.

MS. CARPENTER: That's not what we meant.

MR. FISON: It's not clear the way it's stated.

MS. CARPENTER: Right.

MR. DELISIO: To take the community college system out from under the Board of Regents, number 1, you have a Constitutional problems, because the Board of Regents under the constitution is designated as an entitiy that is to run the higher education in the State. But the second problem I see is that you are talking about developing -- and I think it's wise to develop in location statewide programs in a certain community to have a fisheries program, not to have in Anchorage but to have in Kuskokwim perhaps. But if you are going to have a statewide system and statewide inter-exchange of students and some sort of meaningful organisation where people can get their credits transferred back and forth and you don't have an unseemly squabbling for who gets what and how it gets done and duplication of efforts. You look at other states where they have two State university systems. You have State university, for example, Michigan and Michigan State University. So often sometimes in other states that duplication system or method

has really been disasterous. So I just -- I feel very strongly about it. I just am not at all confident that while it may sound attractive on the surface that it really is going to generate the things that you think.

THE MODERATOR: The problem again I would have to relate to back home. The problem that we have is successful petrochemical setup in ours community college. And for some reason or another, ours funding didn't come through as we had hoped in ours area. The Kenai community college suffered, suffered greatly, and the residents and the citizens of that community felt unjustly that a lot of that money was going towards other areas. And we have no one on the Board of Regents from ours area as close as we have as the Anchorage area. We have tried to get people on the Board of Regents and have not been successful. And we have not been successful with the excuse that we have to have so many from Anchorage. Okay, that's another story.

What we are saying, we did not get ours funding. Something has to be done in that area. We have the capabilities. We have the facility, and we don't have the funding to provide a good education for ours area. Something has to be done. I don't know whether autonomy is the thing.

MR. DELISIO: Let's assume that community colleges were run by an entitiy different from the University of

Alaska, but I gather what you are saying is that all community colleges would be under one entitiy and the university under another.

Okay, you've still got the problem that Anchorage is where the big student population is. Anchorage is where a lot of legislators with a lot of clout are. Fairbanks has got a big population, Juneau has got a big population, Kenai has a small population, and Kuskokwin, et cetera. You are going to have the same problems. The solution to those problems, I think, are in the solution to ours regionalism and ours urban versus rural. The solution is not in fracturing a statewide system. It would be like saying, "Well, let's have two legislatures are two court systems." We won't solve the problems by fracturing ours institutions, I don't think. I think what we have to do is to fracture the attitudes that make those institutions work in a nonproductive way.

THE MODERATOR: Mr. Peter Gibson.

MR. GIBSON: I would like to address first the regional problems. One of the community colleges is suffering most from the dual competitive system is the Anchorage Community College. I speak in this area exclusive on statewide best interests. First I would like to give you some facts. You are always yelling about effectiveness of cost. All right, the actual credit of

ours production in this State is 60 percent more efficient in the community colleges than it is in the university, because the community colleges are interested in teaching not building up large research grants. Research properly is something done at the University level. But teaching is far more efficient financially to this State in terms of actual credit ours production at the community colleges. Right here in Anchorage is an excellent example, the community colleges not being than through the university system.

Secondly, there are only three states in the Union besides Alaska that have kept this dual system under a single governing board. You will always have competition that usually turns out to the disadvantage of either the university or the community college system.

Now, we have, in fact, an almost complete dual administration at this time with the chancellor of the community college system reporting only to the president and the Board of Regents. However, what has happened is that the more economically efficient and more responsive community college systems have been swallowed up in a most interesting manner or destroyed where there is competition. Let me give you an example.

The University of Alaska, Juneau with five permanent academic staff members and an enrollment of less than 560

credit hours per semester swallowed up the Juneau-Douglas Community College with four times the enrollment, four times the staff, and four times the credit hour production. And in the process destroyed the opportunity for people who wanted to go to night school. They had to now enroll in full time programs. Nobody can go down and help himself at night now because those classes are given during the daytime.

What I am saying is give your people in your major urban centers as well as you will us people in the bush an opportunity for democratic, responsible, cost effective teaching without the frills, community college plan investment is small. University plant investment is large.

Now, the Legislature, and those of us who are proposing this autonomy would welcome legislative involvement in ours cost efficiency. We have already proved it. Now we would like a chance to prove it and be responsive the cut down 15 percent of the administrative overhead that the University of Alaska is hitting you for tax fares just to run the system poorly that they can't even account for their money on. So this is where we are proposing it, not to make regionalism, but because we have a common interest with everybody in the State whether it's in the urban centers or rural centers, for cost effective

responsive education.

THE MODERATOR: Sonny.

MR. DELISIO: All I have heard you say so far, however, is the university, is controlled by the Board of Regents and it's various administrative levels needs to clean up its act.

MS. CARPENTER: Negative.

THE MODERATOR: Sonny.

MS. CARPENTER: Diane.

THE MODERATOR: Diane.

MS. CARPENTER: I think what we are looking at here is just two totally different philosophies. A university system has a perfectly valid philosophy. A community college has a different philosophy. And the people in Kuskokwim want a community college that they can go to and say that, "hey, we want to do this." And at a community college they can say, have flexibility and can respond to that need.

Universities don't have that same -- universities are more traditional. They are more slow to make changes in programs. They have different kinds of standards, different kinds of purposes, and they just don't mix.

And I think that any time you have a Board of Regents over both of those two very different kinds of institutions that they are -- you are going to have a Board that is

either split and doesn't do either one of them very well or favors one or the other. And I just don't feel that you -- I think you have to have a Board that is committed at the community college concept, where there are community colleges and a board that is committed to first rate university where they are quite different. And I think each group has to get fully behind the institution that they are supporting. I don't see them -- I just feel like they ought to be able to develop their own program in a their own way and not have to feel the instrumentation, which every other institution, it's values to represent, is not able to meet the needs that it seeks because because the people are having to use up all their emotional energy dealing with the board of Regents instead of serving the people. And I just don't feel it's ever going to work under one system.

THE MODERATOR: Someone over here had a question?

MS. GUESS: Yeah, I was trying to find a compromise. She doesn't think it would. I took Bob's words of cost effective responsive education and said, could we all agree on cost effective responsive, to what Diane said, education that should be available through the community colleges.

MS. CROFT: Madam Chairman?

THE MODERATOR: Could you repeat that?

MS. GUESS: Cost effective responsive education

should be available through the community colleges. I am only trying to find a compromise area. Toni does not feel that that meets--

MR. FISON: Doesn't that just say it should be run well.

MR. COOPER: That's correct.

MR. DELISIO: That's agreed upon.

MR. FISON: And it doesn't -- that's a nice statement, but it's not specific enough to give any guidance. Of course, we want all of ours institutions run well.

MS. CULES: Maybe you want to say that it's not available and it should be.

MR. CORSUCH: The argument was that it's doing an exceptionally good job under the existing system.

MS. CROFT: It's doing a better job, but every time they just about get a program going -- this has happened all over -- the Board of Regents doesn't seem to be responsive to the whole community college idea. The community college system sort of arose out of the grass roots. Anyway, it rose in response to the Legislature, except as to the Anchorage College. The bush community college came as a response to a real need from an area. The Board of Regents sort of got into it grudgingly and at every opportunity tends to push people into a baccalaureate degree type system.

The Juneau situation is a really good example. I really feel they did it because they can't make it as a senior college without absorbing the community college. There is really a strong need for a senior college there, but not at this one point one or the other.

THE MODERATOR: Mr. Fison.

MR. FISON: I work here on the campuses and am aware of what goes on here at least at Anchorage. And I think part of the problem, if you have two separate systems, that is getting the credit kind of transfer worked out. It's a problem even now but at least they are working on it because it's one union. You don't have to have a group over here and a group over here. It's just a case of setting down and establishing a policy for all.

But if you have two different groups, there can be some kind of competitive thing where University of Alaska says well, now, if we offer those courses over here at the University of Alaska and you have taken that course at community college, we can't give you full credit. That's already happened. But they are trying to work that out.

I fear if you separate the two, the community colleges from the University of Alaska, it may stifle that to where students have the difficulty of receiving full credit for courses they have taken in the community college when they want to transfer over.

MS. CARPENTER: Several years ago, the post-secondary education commission funded a very large project to evaluate the post-secondary education system here. And there is a consultant by the name of Armand Serafian (phonetic), who was the college president from California, very well qualified. Recommended the separation of the two system at that time. The community colleges were just getting set up. Hearings were held throughout the State and we took exactly that same position. We were thinking primarily of students who we felt would be handicapped by having less transferability of credit.

We have since found that you can hardly -- I can't imagine how it can be any worse for students. It's sort of -- it's like if you can't make a marriage work get a divorce.

MR. FISON: Well, they have gotten divorced.

MR. GIBSON: No, it's not that bad.

MS. CARPENTER: Students can have better transferability outside than they have between those two campuses right in Anchorage because of the bad feeling that exists.

MR. GIBSON: It's not near as bad this year.

THE MODERATOR: Okay, we have a statement that this interest to, to best serve the interests on the State, autonomy should be granted to the college system. Now, we

have a very definite difference of opinion.

MR. GIBSON: Madam Chairman, may I suggest that because of this difference of opinion that we submit this resolution to a vote of ours total body for ratification or nonratification?

THE MODERATOR: We will not meet again.

MR. GIBSON: We will not meet again.

MR. DELISIO: I would suggest that what you do is present it -- I think maybe what we can do is put these in two categoris, those which represented a basic consensus of the group and those which don't.

Now, if there is one where you've only got one or two people in favor of it, we ought to eliminate them. But here you've got the --

MR. GORSUCH: The resolution or the people speaking in opposition.

MR. DELISIO: The people speaking in opposition. Here you've got a fairly substantial difference of opinion. It's not just a minor difference of opinion. And put it in as one in which the group did not reach consensus on, but there were a substantial number of people in the group who supported it

THE MODERATOR: I am told that we can have -- we may have a minority point. So we will go ahead and present this, and as such time that it's open on the floor, you are

more than welcome to have at it.

MR. FISON: Could I ask one question? Does anyone know what administrations of these two institutions prefer?

MR. GIBSON: I can address that in part.

The Board of Regents has expressed no desire to foster the separation of the two institutions. The administrator -- that is the chancellor of the community colleges has expressed his views very thoroughly in here. And I refer you to those. And I am not at liberty to say what's in Pat's mind because I don't know. But I think if you will read with the utmost care the view of an inside administrator, you will see that the things that Pat is recommending to make the community college system work would be very difficult to implement within the present structure and attitudes of the president and the Board of Regents.

THE MODERATOR: Okay.

MR. DELISIO: Madam Chairman, is it clear who would present the minority report?

THE MODERATOR: Yes, you would.

MR. DELISIO: How do you know that's minority feeling or majority feeling?

THE MODERATOR: Do you want to take a vote on this, then?

MR. DELISIO: Might not be a bad idea.

THE MODERATOR: All those voting, we are voting on the second sentence for the policy of education. All those in favor would you say aye? (Complying)

THE MODERATOR: All those opposed? (Complying)

THE MODERATOR: We have a majority.

MR. GIBSON: One thing I would like to say to you that during this time all of the community colleges within the State are under going their own accreditation exercises. Ours community college has just been accredited, so that is a problem that did exist, but it's not existing now, because these community colleges are now accredited directly to Northwest a crediting association, which is the same organization that a credits the University of Alaska. And that accreditation is not given now by the blessing of the university but by the merits of the institutions by themselves.

THE MODERATOR: Are we ready to go on to another subject?

THE MODERATOR: Mrs. Guess.

MS. GUESS: I would like to propose an additional category under funding, and that is to increase the loan moneys, and if possible, the seaming amount of the scholarship loan program.

THE MODERATOR: To increase the loan funding.

MS. GUESS: Moneys.

THE MODERATOR: Moneys.

MS. GUESS: And if possible, the ceiling amount.

MS. CARPENTER: Are you talking about individual

MR. GIBSON: Increase the ceiling amount.

MS. GUESS: The ceiling amount. You have a problem now that you can't fund the ceiling amount for the number of youngsters and are applying to increase the ceiling amount.

MS. CARPENTER: What is the difference between the loan moneys and the ceiling amount.

MS. GUESS: Well, you have a basic pot upon which you can draw, depending on how many youngsters are applying for that, the ceiling amount is 3,000. It's my understanding the youngsters are getting anywhere from 1,300 to 2400. They are not able to borrow up to the ceiling amount.

MS. CARPENTER: The ceiling amount for individuals rather than as differentiated from the --

MS. GUESS: And the individual ceiling, we can rephrase it if that's not clear.

THE MODERATOR Okay, to increase the loan funding moneys.

MR. COOPER: You are saying make.

MR. GIBSON: You are saying make the pot bigger and give a bigger amount of money

THE MODERATOR: To increse the loan funding moneys and

if possible the ceiling amount for an individual.

MS. CARPENTER: For the individual.

THE MODERATOR: For an individual.

MS. CARPENTER: Individual applicants.

MR. FISON: Harold, I have something that would go very well with that rather than making it a separate one. We talked about this but it didn't get in. McGinnis spoke to it but I do feel that it's unfair, that is to add to that, and that this moneys be available to students to attend both public and private higher education in Alaska as well as outside of Alaska. The statement that he made was that students can go to private education institutions outside of Alaska, but cannot use that money to go to private institutions in Alaska. And it seems to me to be discriminating against ours own people.

THE MODERATOR: Would you rephrase that one more time slowly?

MR. FISON: Would you be willing to add that bit to yours, because it's talking about the loan fund money, that the money be available to students to attend both public and private higher education in Alaska, as well as outside of Alaska? See, right now the money is available in Alaska only for public education. But outside it's available for public and private. And that's discriminating against ours private higher education institutions in Alaska and I don't

think it's fair.

MS. GUESS: I would agree.

MR. GIBSON: Very good point.

MR. FISON: It isn't specific.

MS. GUESS: It goes to this concern about encouraging competition.

MR. FISON: This is a specific thing that the other could be looked over.

THE MODERATOR: That paragraph reads then to increase the loan funding monies and if possible the individual ceiling amount of the scholarship loan funds and moneys would be available for public and private institutions inside as well as outside Alaska; is that what you have?

MS. GUESS: I agree that that should be the policy. We have a lady in the audience. I am not knowledgeable what Mr. McCinnis said. A lady who worked for Sheldon Jackson who said the youngsters going to her school received the moneys. Maybe we ought to check the facts.

DELEGATE: I think it's just accredited is the key word there. It has to be an accredited institution and Sheldon Jackson has --

MR. FISON: I have no objection to that.

DELEGATE: The students at Sheldon Jackson, I have worked there for seven years and ours students have applied.

MR. FISON: Maybe that's on the basis of

misinformation then.

THE MODERATOR: Moneys will be available for public and private accredited institutions inside as well as outside of Alaska.

MR. FISON: If she is correct on that last statement. I don't know.

THE MODERATOR: Well, let's find out.

MR. FISON: It may be that the institutions outside of Alaska who are unaccredited, but reliable, let's say, students can go there where they can't in the State. I don't know. But he really ought to know what he's talking about.

THE MODERATOR: Okay, are there any others.

THE MODERATOR: There are any other changes, any other changes or proposals. Any other changes or proposals on education. Okay. Guy just went down to talk to McGinnis who supposedly is down in the coffee shop and we should know more on this a little later. Okay. Lee.

MR. GORSUCH: I would like to just cover something that isn't intended as a recommendation but I would be interested in other people's reactions.

I get the distinct feeling that the State of Alaska is determined to spend the surplus. Statement, a very substantial amount of our current expenditures do go to education.

If, in fact, we blow the bundle, education will suffer. That is, I don't know what's going to pick it up and meet those expenses. I am wondering whether or not, we would want to advance something which eventually would create a separate educational endowment or trust fund which had been entertained at one point many years ago. And at that point I think was argued against, that the State would be ill-advised for the State to create a bunch of different trust accounts for various different governmental functions. But I think the criticism was because ideally we can do a better job of managing ours funds as a pool. We have a renewable resources fund for renewable resources. We have a special agricultural fisheries fund to finance fisheries. We have nothing for education, except on the appropriations based on a year-to-year fund, based on a year-to-year basis. I think we are okay the rest of this decade. But I am not sure what we are looking like in 1990.

THE MODERATOR: How about the 10 percent of the permanent fund?

MR. CORSUCH: I am just wondering should we create an accumulative trust to accumulate overtime to insure the continuation of the funds available support, public education in Alaska. It's something that's been nawing at me, because ideally I wouldn't recommend it. But the way I see the money, proposals coming for all kinds of projects.

And I don't object to things like a limited renewable resources fund and so forth. But it does concern me that education is potentially left totally dependent on the availability of nonrecurring revenues, whereas everything else is getting into a permanent endowment or revolving fund.

THE HOUSEKATOR: Are you talking only about scholarships, then, the scholarship fund.

MR. GORSUCH: No, I am talking about the hard core base of the public school foundation program, as well as the university budget".

MS. GUESS: Are you talking about a Consitutional amendment, i e like the permanent fund, or are you talking about a year-to-year appropriation like renewable resources.

MR. DELISIO: You are just speaking conceptaully.

MR. GORSUCH: Just speaking conceptually, because obviously it is considered to support higher education. Does anybody offhand know what program it is?

MS. GUESS: 33 percent of the total budget".

MR. COOPER: Right.

MR. GORSUCH: If you needed ten percent, let's say if you were able to come up with some kind of performance program, you would need a very substantial endowment and so an additional amount as the education will demands increase. At the same time, as we look at 19 -- late 1980s, we are

also anticipating surpluses 20 to 70 billion dollars. What happened to the price of oil and how these other ventures rise.

THE MODERATOR: From what you said, you proposed, we proposed, creating an educational trust fund to insure support of the public school foundation program and scholarship fund, period.

MR. GORSUCH: Something like that, yeah. I am totally open to.

MR. DELISIO: Couldn't we tap in on the natural resources fund.

MS. CROFT: The only problem, there was a lot of talk of this sort. As I understand it now, the renewable resources fund is not a permanent type fund. It's a year-to-year fund thing.

MR. COOPER: Subject to annual appropriation.

MS. CROFT: The only one we have is the permanent fund and ideally the interest or things like that go into affirmative education. It's set up so that things like education don't just fall off the other end.

MR. GORSUCH: The renewable resources is not year-to-year, the statute can be amended. It's not a constitutional provision. The statute says 5 percent every year.

MS. GUESS: But it has to be appropriated. It has to be appropriated.

MR. DELISIO: They are automatically that way, but it has to be appropriated.

MS. GUESS: Idea. Maybe you are talking about about a percentage of the investment from the permanent fund. The fund is already established. That's constitutional. Moneys must go there in the amendment. So maybe you are talking about a portion of those moneys.

THE MODERATOR: Okay, then creating an educational trust fund to insure support of the public school foundation program and scholarship fund to come from.

MS. CROFT: The permanent fund.

THE MODERATOR: The permanent fund.

MS. GUESS: One half of the earnings of the permanent fund. Why not? If we are spending one third.

MR. DELISIO: I would rather put it into that than be in salaries to--

MS. GUESS: Bureaucrats.

MR. DELISIO: I didn't say that. I was biting my tongue.

THE MODERATOR: Creating an educational trust fund to insure support on the public school foundation program and scholarship fund to come from one half of the earnings of the permanent fund.

MS. CROFT: One, we don't really have any idea what the magnitude of the permanent fund is going to be. Can

can we say it's too vague to say a portion.

MR. GIBSON: A substantial portion.

MR. COOPER: I don't think we need to worry about it, because after all, if we put 100 percent, if we use the 100 percent of the permanent fund earnings for the scholarship program or for the foundation program, one thing or another, we wouldn't begin to be accumulating enough to provide 100 percent of the costs. We would still be needing annual appropriation.

MR. DELISIO: What Lee's idea is let's say that the fund earns 300 million dollars, say a ten percent a year or whatever. Say it earns 300 million dollars, so under Carolyn's idea, you put 150 million into a new trust fund that is now earning and invested and it's growing and growing and growing. And in the year 2000, oil and gas money stops, and now this fund that we have appropriated permanent fund moneys every year has grown into a 25-billion dollar fund which is earning 300 million dollars a year which we can now use to fund education. That's the idea, isn't it?

MS. CUESS: I think what he is getting at, is what may be all of us could agree about is concerning. We are talking about spending rather than investing, and that we don't want that to happen in the year 2,500. Now, the specifics are the way to go, and I do not know. There may

be something like that. But then maybe the other thing would be a policy statement of concern that, you know, if the dollars are used up, if we spend everything that comes in and we do not say that in the long terms the educational goals cannot be met.

MS. CARPENTER: I would like the statement. I like the statement. If what you said is the intent of Lee's suggestion.

THE MODERATOR: Would you say it again?

MS. CARPENTER: I like that idea of--

MS. DICKSON: Put these two statements together and that's ours policy statement.

MS. CARPENTER: Your statement as a policy preamble, but I like the specific -- the specificity of the others, too.

MS. GUESS: Sometimes you get people's attention better with specifics.

THE MODERATOR: Would somebody like to start rewording? Carolyn?

MS. CROFT: I will try.

THE MODERATOR: Toni.

MS. CROFT: Establish an education fund similar to the renewable resources fund which dedicates a portion of the permanent fund towards long terms educational needs.

MR. DeLISIO: I don't think we should worry about

dedicating, because if everybody had stood back like everybody agreed to in the beginning and said we aren't going to dedicate anything, we are all going to management, when you chip off the piece here in the interest and you chip off the piece here. If this isn't a piece chipped off, there may not be a piece to chip off.

THE MODERATOR: Every one in agreement? Do we have any other changes in education?

THE MODERATOR: What did we find out.

MR. VAN DOREN: The scholarship loan fund moneys are available to all universities in the State. What was declared unconstitutional was the direct service payments to the schools that were owned by religious organizations.

MS. GOLTS: Which meant that APU could offer the courses at the same price as the University of Alaska and the State subsidized the APU the same difference.

THE MODERATOR: Okay, so ours statement.

MS. CARPENTER: Scratch that.

THE MODERATOR: Any other statements on education.

THE MODERATOR: Carolyn your statement was to increase the loan fund and moist is and, if possible, the individual applicant ceiling amount of the scholarship loan program. That part you still want left in, right?

MR. DELISIO: Yes. It's a different thing altogether

THE MODERATOR: The only thing we scratched was and

the moneys would become available for public and private institutions. Okay, anything else on education.

MS. CARPENTER: Don't even ask. Okay, don't ask. That's it.

MR. BELISIO: The State -- actually, it's in two parts and it could be separate.

MR. GORSUCH: Why don't we separate it?

MR. BELISIO: First part is the State shall invest its surplus and permanent income inside the State to extend the opportunity for investment in Alaska.

THE MODERATOR: Period.

MR. BELISIO: That's the first part. The purpose for that is historically we have always been the treasure chest for everybody else. They came in here took gold out and all the money went outside. First, timber and then oil. And finally the State got a piece of the oil income. The State has invested the money all outside or has given it to ours banks which has taken it all outside and almost none of that money has found its way into any kind of investment here.

THE MODERATOR: That leads me to the second part.

MS. GUESS: Could we just talk about that for one minute. I think, then, we are talking about a policy. And we are talking about a policy that doesn't necessarily maximize the dollar. And I think that's very, very

important. If we feel strongly that the State policy does not have to be to maximize the dollar, but to best serve the interest of Alaskans.

MR. DELISIO: That's why the second part interrelates so much, because the philosophy of this thing, if you take it as a whole, is basically we have a huge sum of money investment capital. The rest of the nation is being victimized by high interest rates, and it can't expand. It can't grow, as long as that economic condition exists. We are in the same boat because we are getting out of the same pie. Now, the State can generate a return on its capital in numerous ways. It can -- it can get 10 percent interest or on the other hand it can build an atmosphere in the community, which we are talking about in terms of capital investment, program investment. Where you build jobs, you build jobs, you build opportunity, you build a variety of different things.

My idea here is that if we made moneys available on low interest basis for people in a sound financial venture, whether it be that I want to finance a house, build a new home and use my house as collateral, and I've got a flow of income that I can pay back, when I build that house and when a hundred other people like me build a house in Anchorage next year, there are going to be jobs created that don't exist right now. When I build a building or if

I decide to build a cannery, if I want to build a cannery in Bethel for seven percent interest, whereas at 10 percent it may not be feasible for me to do and I cannot compete with the existing cannery. But if I can get 7 percent money and build a cannery and provide jobs for people that lift in Bethel and provide -- or if I can build a system for marketing fish in the State of Alaska by borrowing loan interest money which might not be otherwise available. If I want to buy a hundred million dollars resource at someplace near Mt. McKinley and attract tourists as the San Moritz of the northern hemisphere, that's going to generate jobs and it's going to generate economic opportunity

THE MODERATOR: Could you read it again.

MS. GUESS: I would like to make an observation. I think if we are going to adopt that statement, it should also be consistent. That the investment is consistent with other goals. I.e., if people are going to get seven or six percent. It's better energy efficient, businesses, better energy efficiency. I just think we are --

MR. DELISIO: I didn't want to get it too complicated.

MS. GUESS: I understand that. But I think it's got to be consistent.

THE MODERATOR: Could you read it one more time?

MR. DELISIO: The State shall invest it's surplus income in the permanent fund inside the State to the extend

the opportunity for prudent investment exists in Alaska. Money shall be loaned at low interest rates to anyone who had his a financially sound investment opportunity subject to the availability of adequate security and the borrowers demonstrable ability to pay the loan.

THE MODERATOR: Are we talking about Alaskans or are we talking about somebody coming up from the Lower 48, "For you, I've got a deal. I've got this amount of money and I went to build a project out in Dillingham."

MR. DELISIO: I would say anyone in Alaska. Frankly we run into problems again.

THE MODERATOR: Residency.

MR. DELISIO: It really is a problem. I would like to be able to say you can borrow here 3 percent if you lived at 20 percent and 7 percent.

THE MODERATOR: We are in court over something like that.

MR. DAVIDSON: I have real reservations about this. I think there is some merit of having some of that permanent fund money invested for its highest return and to keep its equity. We've got inflation going on and you have to make a good investment just to keep its value. Then we get into the area of business investments in Alaska. To me, I can't personally go along with investment. I don't believe in business for business sake and growth for growth sake. If

somebody wants to come along and build a new bar important a go cart ranch, I don't particularly want my share of the State's money going for things like that. I would feel more comfortable if those loan programs were identified for more needs.

Housing is certainly one, development of renewable resources, any number of things, but saying any investment that might pay its way, just personally I have trouble with that.

THE MODERATOR: I will go along with housing.

MR. CORSUCH: I would also like to make a comment, I think I find troublesome, and that is that the low interest rates essentially a subsidy. That is you could earn 18 percent by having invested in a normal investment and you are going to collect say only 13 percent, or, now, its ten and a half percent to the existing State loan program. You are subsidized when the person gets the loan by almost 8 percent. Now, that eight percent represents almost all of ours money. It seems if you want the subsidy you've got to get into and invest. If you want your share of the money you've got to get in there and getting your share by borrowing.

My sense is the large majority of Alaskans are not going to be business people and they are not going to be investors in the traditional sense. And their

percentage -- we are going to wind up with a very uneven distribution of the benefits of that subsidy. The subsidy is going to go to those who find the opportunity or seek the opportunity of that increased investment.

THE MODERATOR: Need to, too.

MR. GORSUCH: I get back to the idea that need is, in fact, important. I don't object to sort of going into with a specific purpose in mind, but again, just the blanket provision, I can see all kinds of potentially abuses. Someone, for instance, let's say somebody wanted to go out and buy one, just in hotels, and it was owned by an outside company. And they said, "I will own the hotel now, so you give me the interest at ten and a half percent because they are paying 18 percent for their financing right now. So I can buy the hotel, and I'm better off." Well, what are we gaining, its not a new hotel. Its not creating more additional jobs. All it does is give the new owner a chance to get a lower interest rate and increasing profitability.

So I am concerned a lot of the loan programs. I am even concerned about ours existing housing program for the housing mortgages. I am concerned that what happens is it doesn't create new housing, people who are eligible go out and refinance and get rid of their my interest rate to go to a lower mortgage rate. If we do that, I would do it

more equitably. I am just concerned the way these devices work that it ends up in a very uneven distribution of the benefits. Its a false one, because all you are doing is substituting ours dollars for outside dollars. As far as I am concerned, I would like to get as many as outside dollars invested in Alaska as we can, and add ours to it, but not replace those outside dollars.

MR. COOPER: There was a valid point in regards to, in effect, refinancing existing but I do believe that the entire State benefits whether that new cannery is put in, put on line to further be able to process existing product within the State. That's a benefit not just to the borrower, but its a benefit to the entire area, because it is creating a more stable economic base for the people within that particular area, wherever it might be.

So to say that a business loan is only for the benefit of the particular borrower is not necessarily sole.

MR. GIBSON: I would like to support what he just said, that there are benefits, true, to the individual. but any investment we make, when things increase ours economic independence come back to us many times. For instance, if we had a good lumber yard on the Kuskokwin, maybe the guy who is investing in that is getting a little break, eight percent money instead of 5. But those of us down river are saving bundles on transportation, and we are

starting to get away from ours dam import economy for everything, export ours capitol and start developing ours own economic independence which we've got to have. And there may be some restraints that have to be put on that. but I think that is a most sound policy, because never before have we had venture capital come into this country for anything but exploitive activities. The venture capital that came in from the oil was to take out a nonrenewable resource. And we have been hard put to get venture capital.

Now, if we don't invest ours own money up here, the Arabs will be darn soon doing it, because they are looking for places to develop and get returns on it. And I think that's a very sound proposal perhaps with some restraints on refinancing existing stuff.

THE MODERATOR: Do you have that worked out?

MR. DELISIO: Let me respond to a couple of things, because I think -- I wish I was an economist and I could explain the effect of this. Because if I could explain this to you. I think you would understand.

MS. CARPENTER: There is a good explanation. I don't know if you have had a chance to read the supplemental papers. Its on the one on the permanent fund on page 15 and 16. What is economic growth and is it desireable. Have we enough of it now? How can we get more of it if we

desire that? And on page 17 it explains it very well. I found it quite instructive, talking about the multiplier effect.

MR. DELISIO: Let's talk about outside money coming in here. If we borrow outside money we have to pay interest to outside people. The outside money goes back.

MR. GORSUCH: Wait a minute.

MR. DELISIO: You said would you like to attract as much as outside money and add ours on top of it. We borrow, when you go to the National Bank of Alaska, you are not borrowing just money that's Alaskan money, you are borrowing money that's from outside as well. In fact most of ours businesses and homes are financed with money that came from outside. For one reason, because we changed ours interest rates to make them much more attractive than in the general market than most places were than when we moved ours floating ceiling and stuff.

But if you borrow $100 of outside money and you have to pay 18 percent interest on it, you pay back in one year 118 Alaskan dollars to pay back $100 from outside. Now, you are sending wealth out of the State, you are not bringing it in.

The second problem that you have is--

MR. GORSUCH: In other words, if you want to borrow that money, you can borrow it from the State or from a bank

here, and the money will come right back. You are talking about something below the interest rate, but anybody can borrow any business. I mean I know of no business, as long as they can afford to pay the prevailing rate, they can't get money in Alaska.

MR. CARPENTI: No.

MR. DELISIO: A, that's not true, and B, the problem is when you say get it in Alaska, what do you mean by that?

MR. CORSUCH: You've got a sound business venture, and you will go down to the bank and they will finance it.

MR. COOPER: Not today.

MR. DELISIO: The bank does not finance it. The bank goes out into the money market. They go to the Teamsters pension fund in Cincinnitti, Ohio or go to the First National Bank in New York City or they go lower Albuquerque, New Mexico, and that's where the bulk of the money comes from, because we don't have venture capital in the State. We never have. Its borrowed from outside and then we pay a higher rate so they take off their piece and they get paid back off what's inside.

The business is if we refinance, what happens if I refinance my house and I am paying ten percent interest and now I am paying seven percent. I have three percent money left over to do something else with, to spend in this economy, that stimulates economy.

MR. GORSUCH: Why should you do that rather than a person who has a home mortgage.

MR. DELISIO: What about the person living in an apartment, who is paying $500 for an inadequate amount have to get 75 percent to build a house who now pays $400 on their payments and upkeep of their house. That person has an extra hundred dollars in his pocket plus he's got an investment that's growing. What about we talk about all of the expenditure of moneys that we are talking about in services, you know, everything we have been discussing. Why should we spend my share of the investment money to build your dock? Why should you spend your share of the investment money to build my air field? I mean that's -- if we get into that kind of a thing, we get down to the basic question why should we spend it on anybody because somebody is getting some benefit that I am not getting.

MR. GORSUCH: As long as you look at it as an expenditure and not an investment, that's fine.

MR. DELISIO: This is an investment. It creates A, new wealth. B, it creates additional opportunity; C, it creates new jobs; D, it stimulates the economy. A person looking for wages today, if he has the opportunity to earn or get a low interest loan, he may be able to open up his janitorial business, he may be able to go into the wood cutting business and succeed.

THE MODERATOR: We have gone into a subject that we really didn't cover and we are going to have problems, so I would suggest that we cover those items that we did cover as a group first. And if it has to come out as a report under somebody else's, we better get on with what we have accomplished ourselves. And I think, Carolyn, are you ready?

MS. CUESS: Yes, the energy statement is being passed around.

MR. DELISIO: One page.

THE MODERATOR: Go.

MS. CUESS: The firms, in attempting to put this together in some meaningful way, we decided we needed a long term goal and you will see the little squiggles. The long terms goal as the Beta group sees it should be: Existing energy systems which depend on nonrenewable resources should be converted as -- that probably should be as practicably rather than L L Y, that should be A B L Y--as practicably as possible to to systems which are based on nonrenewable resources. On renewable resources.

THE MODERATOR: Any problem with that?

MS. CARPENTER: What do you mean by the word practical?

MS. CUESS: You can't convert tomorrow

MS. CARPENTER: As suitable.

MS. GUESS: No, as practicably. You have financing to consider, you have interest rate. You have the fact that it may take seven years for hydro, wind power is not considered firm power as far as integrating systems.

MS. CARPENTER: I think the meaning isn't clear, if you say assume that it's pratical.

MS. GUESS: Fine.

MS. CARPENTER: You are not talking about time.

MS. DICKSON: I think I can see what your question is, your concern. Okay, as practicably as possible we are not excluding. We are not excluding, within a time frame.

MR. GORSUCH: Cost should have something to do with it.

MS. GUESS: That's why I used the word. I think its semantics.

THE MODERATOR: Read it one more time, Carolyn.

THE MODERATOR: Okay, one more time.

MS. GUESS: Let's take a look at as practicably as possible, because that's the hang up. But the long terms goal. Exist energy systems which depend on nonrenewable resources should be converted -- whatever phrase we want to use -- to systems which are based on renewable resources. But there are many considerations that must go into that so that you have an orderly, effective, efficienct transition from today to tomorrow.

MS. DICKSON: Let's say orderly effective transition.

THE MODERATOR: Should be converted to systems which are based on renewable resources as soon -- go ahead Carolyn, what you are were saying, as soon as efficiently.

MS. DICKSON: Can we just ask her what Carolyn just said.

(The reporter read as requested)

THE MODERATOR: Could you please say existing energy systems which depend on nonrenewable resources should be converted to systens which are based on renewable resources as soon as --

MS. GUESS: Practicable in an orderly, effective and efficienct manner.

MS. DICKSON: Transition as possible.

MS. CARPENTER: I don't know how the transition is going to be orderly.

MS. GUESS: Its got to be because you cannot disrupts your existing systems.

MR. DELISIO: If you just added to that in an orderly and effective and efficient transition, I think you've got it all.

THE MODERATOR: In an orderly, effective and efficienct transition, okay. So it would read, "existing energy systems which depend on nonrenewable resources should be converted to systems which are based on renewable

resources in an orderly, effective and efficient transition." Okay? Next paragraph.

MS. CULLS: I don't think you can put a time on it. Bob is concerned with the specific legislation, but I think its an overall goal. I think to effect a goal, you have ways to effect your goal.

THE MODERATOR: Carolyn.

MS. CULLS: Yes. Now, I am not liking exactly the way the organization came out after this, but we struggled to try and get something that the consensus from ours notes would effect.

A means to accomplish this would be for the State government to encourage the private sector, i.e., business and individual, through tax incentives or tax penalties and low interest loans to convert existing energy systems to be as efficient as possible and to replace existing energy systems and develop new energy systems that rely on renewable resources.

THE MODERATOR: Any objection?

MR. GIBSON: I think that's beautiful, except it's gutless.

All right, look, this is nice, but the private sector will not be encouraged to convert with mere little arrots out here when they've got a plant that's going to be run out of renewable resources in 20 years and then pack up

and go south anyway. We have not once called for the Legislature to take any policy action whatsoever in the form of legislation. So I think we need to be stronger. By gosh, how long have we known there is an energy crisis.

MS. CULSS: Well, there are people today that do not believe there is one

MR. GIBSON: Exactly, a lot of them are in the Legislature.

MR. COOPER: Let's qualify that. We say there is an energy crisis, but an energy crisis in what respect, maybe with certain particular forms of energy. But there is not an energy crisis per se.

MR. GIBSON: There is a crisis in ours dependence upon the depletion rapidly of a single nonrenewable resource. We are on the petroleum mammary up here.

MR. COOPER: That's what you stated, but that is not what the program says. We are not running out of energy. We are running out of potentially for a single source. And that is what ours concern is, but not energy in all forms.

MR. DELISIO: Madam Chairman in the interest of getting something done here, all this says is this is a means. It doesn't say its the only means. Maybe we could state something stronger than we do. But to be very candid with you, when drafting up the sessions that I was trying to draft up, was drafting newspaper language that I thought

would meet a consensus of this group, but maybe that ends up being less gutsy than some of us would like to be or all of us would like to be. But I wonder if we would accomplish more than that.

MR. CROFT: It says among the suggestions, if you have certain ones you that you would like to see in there.

MR. GIBSON: Not really, I don't want to hassle about it. But I just feel that this is just like saying be nice and do something about it when you get around to it and recognize that we really have a problem.

THE MODERATOR: Okay, can we go on to the suggestions and come back to that, to that paragraph later. Carolyn.

MS. GUESS: Okay, these are a couple of suggestions that we pulled out. Energy efficienct improvements for both residences and businesses should not increase the value of the property for taxation purposes but should reduce the property tax.

THE MODERATOR: Uh-huh.

MS. GUESS: Mr. Fison made that recommendation and I think there is a lot of merit in that.

And the second concern I had heard articulated not as strongly in energy but in other areas was regional planning, you know, the people in the local areas understand what would work, that the State should encourage the creation of regional energy counsels to respond to

grass roots concerns and ideas to develop alternative energy sources, you know, being, like the man who spoke about all the wood.

THE MODERATOR: Okay, any objection to that?

MR. COKSUCH: I would simply like to point out there is real danger in regionalizing something as vital as energy. One of the problems that we have confronted in looking at the program like Anak is that once the southern community split off to their separate power authority, their rates were lower. But because their rates were lower, the remaining rates were higher. Then as you take the central Alaska rates and make them a central regional authority, their rates are lower and then the rest of Alaska rates are higher.

MS. CARPENTER: You are talking about planning and getting ideas. You aren't talking about authority or system. Its just a way of getting input.

MR. COKSUCH: My only concern is in the utility field, you want to get a rate equalization going at least to some extend, otherwise you end up with exorbitant rates in some areas and low rates in others, and as in the case of the telephone, and there is a definite limited effort to try to afford those basic utilities on a regional basis.

My only concern about planning regional authorities is that this groups tend to follow and I think they get locked

into a very efficient and very inefficient system.

MS. GUESS: Rate equalization I thought was rejected by this group so, I didn't put it in. I heard rate equalization come out. But I did not hear the support for it.

MR. GIBSON: I think the problem is we do not have a single power monopoly in the State. I would suggest it would not be a good idea. Where was we do have a single communications power.

THE MODERATOR: Do you want to keep on that one.

MR. GORSUCH: I don't object, but it just bothers me.

THE MODERATOR: Can we go on to the next.

MS. GUESS: The next one was trying to branch the long terms goal with the short terms crisis. And so this was ours lead in, nonrenewable resources used for energy systems are in State of transition, transition requires new problem solving techniques. And that's a very ambiguous statement. The traditional approaches won't work, but we have to realize that and policy makers are going to have to address that. We've had to change some of ours thinking, in other words. Human energy potentially should not be diluted by polarization and provincialism, but must acknowledge the immediate challenge that today's energy crisis brings. We took the concern of the group about regionalization, about polarization. We lifted it and we

put it here.

The cost of diesel fuel role. In rural Alaska is a crisis both in financial and emotional terms. Survival and economic development at present in rural Alaska is dependent on the availability and price of diesel fuel. Until the primary goal on energy system dependency on renewable resources is accomplished and a specific time limit should be established, the State should be prepared to assist the people in rural Alaska to acquire and pay a reasonable price for diesel fuel.

Now, this goes right with the paragraph. This was a concern of Earle's when he dropped by. Any State program should promote the stated energy goal, In no way should a government program foster business as usual which provides no incentive to convert to other alternative energy sources.

THE MODERATOR: And then.

MS. GUESS: Then the next one, it appears logical and appropriate that the moneys received by the State from the increased revenues from its petroleum resources should be used to accomplish the long terms energy goals and short terms immediate energy crisis, period. We don't need "facing us today."

MS. CARPENTER: To accomplish the long terms goals and do what to the short terms price is: You don't want to

accomplish the short terms crisis.

MS. GUESS: You are right. Address.

MR. CROFT: So, you want to be more optimistic

MR. GORSUCH: Familiarate.

MS. GUESS: That sounds bureaucratistic. I will go with them, if Toni wants to solve them. I am for that.

The last thing I put in was alls I wanted to make sure that you know that I believe all State agencies better work together including my shop. What I didn't tell you and what I should have upon reflection is what is desperately needed in this State is a coordination of energy policy and program. You have the UPUS. You have the division of power. You have the Alaska Power Authority. You have the Department of Transportation and Public Facilities. Unfortunately, there is no communication. Its difficult to crack. Its a desperate need and I think people are aware of it.

MS. DICKSON: Can we put anything in here about that specifically?

MR. GIBSON: We can't even recommend a 19 or 2,000 conversion target, get a target to shoot at.

MS. DICKSON: Up here we can make some more specifics recommendations.

MR. GORSUCH: Hire Schlessinger as the energy Czar.

THE MODERATOR: So the only thing they had problems

with were the second paragraph. And has anyone come up with a solution to that or have you acquiesced?

MR. CORSUCH: It wasn't objectionable. It should be stronger

THE MODERATOR: Has anyone come up with any wording?

MR. COOPER: I like the way it reads.

THE MODERATOR: You like the second paragraph.

MR. COOPER: Yes. You can't get so specific about something that we are not, we don't know what its going to be.

MS. DICKSON: Can we make a broad terms statement to say that we encourage specific legislation or legislation dealing specifically with time tables, what Bob has been talking about.

MR. FAIRBANKS: Relating to Gibson's energy paper, like you were just saying, all the other groups seem like they are keeping it very low key and not doing anything specific. I think we should mandate some time tables. Let's say by this time let's be self sufficient in energy. We can do it.

MR. FISON: You mean we can say it.

MR. FAIRBANKS: No, we can do it.

MR. COOPER: By the year 2000, we can be self sufficient in energy certainly.

MS. DICKSON: Giving yourself a time table.

MR. COOPER: We are self sufficient in energy today if we so desire. But I think ours whole conversation or ours whole discussion has been the concern over what kind of energy are we self sufficient on. Certainly we produce more than enough oil, for instance, to produce all of the energy that this State needs, today or tomorrow.

MR. DELISIO: Or the world in kind if we just use it.

MR. COOPER: So reasonably what we are discussing is a theory or a pratical point at which we would no longer be dependent upon oil as a nation or as a portion of the imported product coming from foreign nation. But we as a State are certainly energy behind

THE MODERATOR: Okay, it's 10:20. If we are having trouble with that second paragraph, may I make a suggestion that somebody meet tomorrow morning for breakfast and get this ready by the nine o'clock meeting. Because we still have other papers to go through.

MR. DELISIO: The second paragraph.

THE MODERATOR: That's the paragraph that people seem to be having problems with.

MS. CARPENTER: Can we just state the State government should to convert the energy systems.

MS. DICKSON: I think the second sentence says its fine. I think we need to make another suggestion down here under the suggestions of the Beta group, and number 3, we

encourage specific legislation.

MS. CROFT: By a certain time.

MS. DICKSON: That lists -- specific legislation emphasizes time tables. Put some punch into it.

THE MODERATOR: Okay, you want to encourage specific legislation emphasizing.

MS. DICKSON: You try and accomplish a goal, you set yourself a time table of accomplishment. Why can't we say this here. Can't somebody else help me?

MR. FISON: You are talking about goal setting, if the State set goals and then set out to implement that goal, rather than just sort of let it go as whenever it might happen. It may happen and it may not, which seems wordy

THE MODERATOR: I don't see how you can read. I was thinking encourage specific legislation emphasizing the conversion to what and by when. We don't have anything that definite.

MS. GUESS: Pardon?

THE MODERATOR: We really don't have anything that definite. What are we converting to.

MR. CROFT: The third one on Mr. Gibson's papers. By 1982, the plan shall be developed which will provide that all technologically and economically feasible public utility system providing electrical power within the State shall be converted to the use of renewable resources by

1995. That's a plan by '82.

MS. GUESS: Its too short of time frame. We don't even have an energy plan for the State of Alaska.

MR. GIBSON: How do we get it?

MS. GUESS: It's in the budget for next year.

MR. COOPER: I would like to point out in ours discussion of renewable resource and nonrenewable resource that the bulk of electricity in the State of Alaska today, I believe, is generated by renewable resource, methane gas.

MR. GIBSON: Its a permanent generation for the whole state?

THE MODERATOR: Let's go back. Now, is that second paragraph so obnoxious to anyone? Okay, can we go with it.

MR. GORSUCH: Yes.

MS. GUESS: Try this for number 3. Specific legislation should be effected to accomplish the goal within a specific time frame. I frankly don't believe I have enough acknowledge to say it should be 1985 or 1995.

THE MODERATOR: Then you are not saying anything.

MS. GUESS: You are saying to the legislature that there's got to be a specific time frame.

MS. DICKSON: Let's give them a time table to get that time frame. By 1982 there will be specific legislation.

MS. GUESS: I'm sorry, I don't think 1982 is

realistic.

MS. DICKSON: A plan, to come up with a plan

MS. GUESS: We are not going to have an energy plan until 1982. I say 1985.

MR. GIBSON: Oh for gosh sake.

THE MODERATOR: I would suggest we go on. It's almost 10:30. And I know someone else is getting awfully tired. And I would even venture to say would you even consider coming back at 7:30 tomorrow morning. I think its in the best interest of every one. I think we should. We should call it a night?

MS. CARPENTER: We can do ours little scratching on them.

THE MODERATOR: We have been going some of us since eight o'clock this morning.

MR. DAVIDSON: Could we perhaps get the transportation one? First, before we leave this one, could I mention one word? I don't believe anything is said here about conservation and all we are talking about is converting. Maybe we should think overnight about that and put something in the morning.

THE MODERATOR: One last word on transportation.

MR. DELISIO: Where are the copies.

MS. CARPENTER: We are going to work at it at breakfast, after we get a few words from everybody.

MR. DAVIDSON: I would like to read this quickly.

MR. DAVIDSON: It shall be the policy of the State that a transportation system be developed in a manner that serving the economic and social needs of all Alaskans and the areas in had which they reside. An integrated syster of transportation shall include facilities necessary to accomodate the mode of transportation which best fits the need and desires of the particular area or areas to be developed. Regional representatives must participate in the planning process -- no -- and to help -- yeah, regional representatives must participate in the planning process and to help facilitate their involvement must establish regional advisory committees which shall have representation on the statewide board that guides State transportation policy.

Priorities of an integrated transportation system are included, one, careful assessment should be made of all social, cultural and environmental impact involved with proposed transportation projects. Two, airport facilities in rural areas will be improved to assure the safety of users and provide adequate public, medical, safety and service support. Particular attention should be paid to improving and upgrading airport facilities to accommodate critical needs such as the transportation of fishery products.

3, all excision transportation facilities shall be upgraded to standards which assure traveler safety, minimal freight costs and minimized maintenance costs. And that's about what we have.

MS. CARPENTER: Okay, you didn't mention the urban mass transit.

MR. DAVIDSON: That's right.

MR. FAIRBANKS: We didn't get any interests yet.

MS. CARPENTER: The urban mass transit was mentioned by several people.

MR. DAVIDSON: Excellent, excellent.

MR. DELISIO: Also, alternative modes of transportation.

THE MODERATOR: He is trying to find someplace for us to meet at 7:30 in the morning.

MR. FAIRBANKS: Alternatives modes.

THE MODERATOR: Alternative modes of transportation.

MR. COOPER: How about innovative instead of alternative.

MR. DELISIO: Mr. Fuller was suggesting that the next great leap forward would be transmission of the communication by what.

MR. FAIRBANKS: Radio waves.

MS. CARPENTER: A number of points where I think you can use examples where there is really a need for docks and

barges, the plan that George Selites (phonetic) presented in Bethel, where there is presently not any really good freight provision.

THE MODERATOR: I think when they were talking about transportation, we were talking about airports, docks, roads, harbors. I think we were trying to.

MR. COOPER: It would seem to me that the statement that was read and integrated transportation system certainly would have to include docks and related facilities as well as airports or --

MR. GORSUCH: I would like to ask that if the group doesn't disagree that the statement incorporate the idea that when the plan -- when transportation projects are proposed that their full operation maintenance expenses are built in as a part of the decision and the commitment to undertake the project. I say that because my concern is the State increasingly sort of has taken a project. Well, the Haul Road is the best example. And all of a sudden they say here is a big project they say they don't have enough money to operate and maintain and its not kept up to standards. Or the same would be true of a lot of existing bush airports. It doesn't seem to make a great deal of difference to me a commitment you are not willing to stick by and build in enough assurance that are willing to operate and maintain in the few you are a lot of public

facilities such as water system. The systems are not only technologically inappropriate. But you wind up with people who can't afford the user charges. A lot of money is spent consistent and at one time it winds up being shut down and everyone is dissatisfied.

THE MODERATOR: I think we have a phrase under health that would cover water and sewer.

THE MODERATOR: Did you find a room for us for tomorrow morning.

THE MODERATOR: 1, 12, 16 at 7:30 tomorrow morning.

MS. CARPENTER: Where there is a difference is that in Western Alaska, it is the only area that doesn't have anything right now. The other places do. They either have a railroad, they have a road, or they have a subsidized ferry system. Western Alaska doesn't have anything of those things. The only access we have right now is inadequate airports and barge and dock facilities are totally inadequate. So to even meet minimum standards, I think we've got to mention that particular, the airports and port facilities be made available for Western Alaskans communities to meet basic freight and transportation needs.

THE MODERATOR: Lee.

MR. GORSUCH: Madam Chairman, I wanted to suggest adding something to ours initial energy statement, is that the states public facilities and communities be integrated

as apart of the community system. I know in the past there is a big yes about whether or not, whether, for example, the State supported schools will have their own generators independent of the generators in the community. Its probably one of the least sufficient ways of integrating an independent, integrating a system. I think the State needs to participate with the community in affecting an integrated power

THE MODERATOR: Everybody 1216 for 7:30 tomorrow morning.

MS. CUESS: For those of us who can not be here. That's fine. Lee, I put it in because that's my pet project; I can say better, but it will offend people. And that is wherever there are State facilities within a certificated purchase area, they shall purchase power from a utility.

MR. GIBSON: Absolutely I think that is wrong.

MS. GUESS: I know you do.

(Discussion was had off the record).

MS. GUESS: Does anybody object to this additional statement to take care of the concern for a time frame in energy. An Alaska energy plan shall be developed by 1982 which includes a realistic time table to accomplish the long terms energy goal? What I am telling you is that there is no Alaska energy plan right now. And they've got

the draft of a plan that's going to go to public hearings, and then there will be a plan.

THE MODERATOR: Okay, we finished education last night. We snagged on energy, but we did finish to a degree.

MR. COOPER: I think we finished with what's on the paper other than needing to be cleaned up a bit. But we did not agree on additional language.

THE MODERATOR: But that should be coming in this morning, if there is additional language. Okay. Then the next thing we have is health. And Earle, do you want to read that?

MR. COOPER: I will just read it for what it says.

THE MODERATOR: And we will pick from that.

MR. COOPER: I want to emphasize, I did not try to get specific on it because I don't think its something that we can get very specific in.

THE MODERATOR: And the fact that there was Earle, his wife and myself, and there wasn't any other input. So feel free.

MR. COOPER: Health services, which include family planning and counseling, mental alcoholism and drug abuse health need to be made available to all areas of the State from the pars medical, nurse practicioner in the rural level to the fully sophisticated that fills in the central urban areas with adequate means of transportation as is

necessary.

I tried to say a whole lot in a brief sentence, but I believe that that is where ours main health care problems are falling apart is not in the ability to take care of someone once they get to a large urban area, but to deliver a health care out in a rural area and to expect to be able to attract doctors into all of those remote areas is not going to happen, if we have experienced trouble getting doctors into small communities.

MS. DICKSON: Should we just read through the whole thing first?

MR. COOPER: An adequate curriculum be added into the school system at an early age to help school children become aware of health care needs. Now, there is some health as such certainly talking of schools, but I think that's the best place to start.

Alternative methods need to be considered for future water sewer systems to insure the practicality of the operation from a maintenance cost standpoint.

MS. DICKSON: Right.

MR. COOPER: Catastrophic health care should be available to all Alaskans with a mandatory participation requirement sufficient to prevent abuse.

THE MODERATOR: We can strike out the 20 degrees.

MS. DICKSON: Abuse of what, of the system.

MR. COOPER: If its free, the people that want to have their hand held are there, which is what destroys the government provided health care.

MS. DICKSON: I don't quite understand mandatory participation requirement, what you mean by that.

MR. COOPER: You have to pay 10 percent or 20 percent of the cost so that rather than you being faced with a $20,000 bill.

MS. DICKSON: All right, when we come back to it, but maybe we should put somewhere in there that its a personal reimbursement to the system at the ability of the person to deal with it. Its just kind of -- it says like.

MR. DELISIO: Why don't we say with a mandatory deductible.

MR. COOPER: That would do it.

MR. DELISIO: Yeah, that would be recognized.

THE MODERATOR: Okay. Go ahead.

MR. DELISIO: And maybe instead of staying 20 to 30 percent.

THE MODERATOR: We instruct that out completely

MR. COOPER: State needs ways for health education and media, ours TV newspaper and radio should have specific information about preventive health measures, only when ours communities are more concerned about health will we improve ours children's health and consequently about the

welfare of future generations.

MR. FISON: On the second paragraph, we already have in the school system, I think it is mandatory, a health course that people have to take. When I spoke to this, I mentioned about the early detection and retraining programs that go for children that are overweight and had high blood pressure where they come an hour early to school. In other words, it is not just educating the people that now here is something that you've got to be careful about, but it is taking the kids that have approximate and provide getting them there an hour early.

MR. COOPER: Where is that available?

MR. FISON: It is not available in the State now. but I just heard this week of one State that's doing this now and how successful it is being.

MR. COOPER: I think that's what we had partially in mind.

MR. FISON: I don't think that from the statement as it stands it indicates that, so I am saying I know that's what we discussed.

Now, for instance I would suggest to add with that a comma after needs and with early detection and training opportunities for correction. How would that be?

THE MODERATOR: With early detection.

MR. FISON: With early detection and training of

early detection of problems, health problems, early detection of health problems and training opportunities for correction; how's that?

MS. DICKSON: How about if we inject that above, okay, where an adequate curricula.

THE MODERATOR: Should be be curriculum.

MS. DICKSON: Be added into the school system of stressing early detection.

MR. FISON: And training opportunity.

MS. DICKSON: And training opportunity. So as to help school children become aware of health care needs.

MR. FISON: Well, to become aware, is not it? Its actually to provide a correction in the direction of, for instance, if somebody is having overweight problems as an early kid, they are going to have them all their lives not if not careful. So its try to retrain.

MR. DELISIO: What you might want to say is stress on early detection.

MR. FISON: Early detection and training opportunities for correction. That seems to be something that's new is the training opportunities available, not just telling the kids or even the parents, you know, this kid has got a problem, but it is providing something that will bring a correction to that, to that problem.

THE MODERATOR: Okay, so sentence would read an

adequate curriculum be added into the school system stressing early detection and --

MR. FISON: Maybe providing training opportunities for correction.

THE MODERATOR: Providing training opportunities to help school children become aware of health care needs.

MS. DICKSON: I have a concern in here is that nowhere in this statement has the concept of the holistic approach to health care learning. We need to put in in here. This was discussed quite lengthily.

MR. FISON: I think the idea that so many illnesses are brought on by stress, it starts off as an emotional problem. If we could work at that end of it a little more, put more attention to try to have people have a good self image so they won't feel they have to sedate themselves into alcohol.

MR. DELISIO: Maybe its a simple sentence to the effect that the holistic approach to health care shall be --

THE MODERATOR: Considered.

MR. DELISIO: Shall be preferred or urged.

THE MODERATOR: Would we want to put it here or down here or at this statewide health education.

MR. DELISIO: I think its a separate statement.

THE MODERATOR: What was that, the approach.

MR. DELISIO: Let's see. The holistic approach to

health care.

MR. FISON: Does that automatically imply prevention.

MR. DELISIO: Shall be emphasized.

THE MODERATOR: Shall be emphasized

MR. DELISIO: Does that do it?

THE MODERATOR: Okay.

MR. DELISIO: There was one other thing here that I think should be included. You do talk about paramedical and nurse practitioner in the rural area, but the suggestion was much broader than that. If we are going to bring health care costs down or really impact them at all we really need to expand the roll of paramedicals and health care nurses at all levels of delivery. That is one of the things by licensing, by practice in the industry.

MR. FISON: The medical profession can't go against it.

MR. DELISIO: You may be in the office of a doctor right now, you will see the doctor for three minutes and its the nurse that spends the rest of the time you are not waiting. And if you wait, you have a way to pay the nurse for what she is doing.

THE MODERATOR: We have a thing like that.

MR. DELISIO: I know paramedics are able to work as doctor's assistants.

THE MODERATOR: There is three nurses in the Anchorage

area, that opened up an office. I don't know what kind of service it is.

THE MODERATOR: Would that be included in your paraprofessional.

MR. DELISIO: Here what is I said. Expansion of the role of paramedics and nurses shall be encouraged at all levels of health care living.

MR. FISON: I don't know how to say it. But I think one of the greatest things on the health problems is unrelated to health in a sense that if a person can get himself or herself into a situation where life is meaningful and they are active and doing something and feel good about themselves and feel good about life, you are not going to have as near as many problems. And we are addressing the cure most the time.

MS. DICKSON: Well, I think that incorporated into the concept of the holostic approach towards health is the concept of wellness, is that if you are well to begin with, then -- and you maintain your body, this is, I think, what the concept is.

MR. FISION: In your mind.

MR. DELISIO: A whole person is not as prone to mellow.

MS. DICKSON: It's the whole person wellness. Maybe we should define.

MR. COOPER: I think we are getting so nebulous

because a person can be, can be just the opposite rather than being healthy and then able to function as a, in a good job situation, just the change of a job sometimes is sufficient to cure a person's health. They don't (pause)

THE MODERATOR: There is any situation or any other real changes that you can see here.

MS. DICKSON: I do have a concern about this very first paragraph. I think that I would feel more comfortable if somehow we can -- its nebulous somehow. It doesn't flow properly. I think this business of adequate means of transportation as is necessary is what's boggling me.

MR. HISON: A question mark around what does that mean. I think I know what it means, but I am not sure.

MR. DELISIO: Getting to and from health care places

THE MODERATOR: Especially out in the bush.

MR. HISON: Isn't what we are talking about here transportation instead of a delivery system.

MS. DICKSON: Its getting people out in an emergency situation.

THE MODERATOR: We are not talking about building sophisticated facilities in every small area in the State of Alaska.

THE MODERATOR: You have to have some means of transportation to get that patient out.

MS. DICKSON: So how about if we say here, health

services which can or which includes, among others, something like that, family planning counseling, mental alcoholism, drug abuse, health education.

MR. DELISIO: Or did you cover health education.

THE MODERATOR: You have health education already.

MS. DICKSON: Need to be made available to all areas of the State from the paramedical/nurse practitioner level in the rural area.

MR. DELISIO: Slash might not be a bad idea. The comma is kind of confusing.

MR. FISON: Shouldn't that be singular, include.

MS. DICKSON: Including paramedical and nurse practitioner approach.

MR. FISON: I mean the first health services which include, rather than includes.

MS. DICKSON: Yeah, okay. Now, need to be made available to all areas of the State from the -- not from the, but stressing including. See, if you say from the paramedical nurse level it, in a sense, brings it --

MR. DELISIO: That suggestss your minimum standard is all.

MS. DICKSON: Here it kind of indicates that this is less valuable than say a doctor.

THE MODERATOR: Its the only thing that happens.

MS. DICKSON: But its not less valuable.

MR. DELISIO: That's not what its saying. What you are saying is the full gamut of medical services and the bottom of that gamut.

MS. DICKSON: Has to be high quality.

MS. COOKE: It sounds like it will exclude the doctors.

MS. DICKSON: What I am saying is paramedical nurse practitioner levels are actually a high degree.

MR. PISON: Take out. Put a colon after State and then it would read need to be available to all areas of this State, the paramedical, nurse practitioner in the rural level to the fully sophisticated facilities. Would that solve the problem?

THE MODERATOR: Okay, that's it.

MS. DICKSON: And then put a period after areas. And then I think we should say adequate means of transportation are necessary.

MR. PISON: That's better. By putting a period there, that makes it a little clearer.

MS. DICKSON: Transportation in communications.

MR. PISON: Be provided or available.

MS. DICKSON: For emergency and routine. Without getting it too bulky.

MR. DELISIO: You don't want to have adequate means of transportation for routine.

MS. DICKSON: For emergency, then.

MR. DELISIO: Somebody has got a boil on their behind, I don't think you want to send help out for medical care.

MS. DICKSON: Do we want to say adequate means and transportation and communications. We haven't addressed the communications issue appropriately.

MR. DELISIO: That might be important.

MS. FISHER: I think it needs to be said in here. I think communication goes hand in and hand with transportation.

MS. DICKSON: So transportation slash communication.

THE MODERATOR: Adequate means of transportation and communication is necessary.

MR. FISON: As necessary.

THE MODERATOR: Is, is necessary.

MS. DICKSON: Yes, increased, not just adequate, but I mean we want to stress that.

MR. FISON: You can say -- I don't know, maybe there is a better word -- but to augment the program.

MR. DELISIO: The point is if you have adequate means of transportation and communication, then that takes care of the problem. You don't need luxurious and you don't need more than adequate, you need adequate and the problem is you don't have adequate now

MS. DICKSON: Right, if we just used the word,

adequate, it doesn't seem to be strong enough at this point.

MR. DELISIO: If you say more than adequate. People will say, "Why do you need more than adequate?" We had problems in the urban areas.

MR. FISION: Take out the as and you have adequate means of transportation and communication where is necessary.

THE MODERATOR: Period.

MR. COOPER: I am afraid if we get these things too wordy, they get lost. If we try to make them too specific we then get shot down because people find faults.

MR. DELISIO: One of the problems is that there is really not enough time to really hammer these things out like they need to be. That's one thing I hope we don't forget to do here. I would like to see us come up with a very strong statement that we have had grossly inadequate time to do more than a superficial review, and if this kind of format is used again that it ought to be spread over a period of time with repeated meetings so that there is plenty of time to really thoroughly discuss these issues.

THE MODERATOR: Or the groups be assigned different topics.

MR. FISON: Last time. We had 16 to 20 days, it was about four important five days each over a period of at least four months.

MR. DELISIO: It may have been three days a time. I was thinking it was two days a time.

MR. DELISIO: It was Thursday, Friday, Saturday and Sunday each time.

THE MODERATOR: Dick, is there any way we can get back together in a month?

MR. HISON: The problem is once this is done in a booklet form, who is going to take that and really go through with a fine tooth comb and see how this happens? Are you going to be the one?

MR. VAN DOREN: The organization that's the staff, that's behind this, will be doing that. We are each going to be assigned various areas to report on.

MR. HISON: That seems to me to be something missing last time there wasn't any implementation program

THE MODERATOR: There is anything else? Do we have any papers that we would like to take up now. Transportation is still.

MR. DELISIO: I've got justice and government services

THE MODERATOR: I don't have a copy.

MR. COOPER: How did you do that? It's four pages, five pages. One page was given out earlier and I've got it stashed someplace.

MR. DELISIO: The one page is the one that I wrote up the government services policy statement that the questions

should be asked. That's the first to -- unfortunately, these were typed up rather hurriedly and they were out of order, so I will have to read them to you. I have coded them in the margins.

MS. DICKSON: Can I just for one second? Can we go back to health? I would like to suggest that we take the last paragraph and make it be the first one. Its a very well stated -- a need statewide is for health education and media, our TV, radio and newspaper should have more specific information about preventative health measures only when ours whole community is more concerned about health will we improve ours children's health and consequently the welfare future generations.

MR. COOPER: Basically what was thought there was its kind of hard to educate adults.

MR. PISON: That's a conclusion

MS. DICKSON: Is it.

MR. COOPER: But if you can get them to bring home the, bring home from school, it sort of trickles up through the rest of the family.

MR. DELISIO: Sure.

THE MODERATOR: Okay, do you want to start with first, the policy statement is number 1.

MR. DELISIO: Okay, government services, number 1, I thought that sort of set the stage for the rest of it. And

I won't read it because think we talked about it quite a bit and you all heard it.

THE MODERATOR: Why don't you read what you have following that?

MR. DELISIO: Okay, following that. C 2 is actually two statements that appear on different pages, pages 1 and 3, the first statements on each would it read combined revenue sharing funds to local government shall be increased. The State shall share revenue with no strings attached. Disposition to be controlled at the discretion of local government.

MR. FISCH: I see C 2.

MR. DELISIO: You've got the original there anyway.

THE MODERATOR: The pages are numbered on the bottom.

MR. DELISIO: That is an extra copy? I am give you the original now.

MR. FISCH: Okay.

MR. DELISIO: The problem was that they got typed out of order. These are the two -- no, wait a minute, you've got all the ones here. This is all page one that you gave him. Look on my copy for the time being.

(Discussion was had off the record)

THE MODERATOR: Okay, Steve, what do you mean by -- understand the no strings attached, disposition to be sold at the discretion of the local government, as to how they

are going to be allocated.

MR. DELISIO: We are explaining what we mean by no strings attached. In other words if revenue sharing goes to the Municipality of Kenai, then the municipality can spend it on going to the races if they want or they can spend it on something useful, but the government does not tell them how to do it.

MR. COOPER: Let the local area make the decision on what is most needed.

THE MODERATOR: Okay.

MR. DELISIO: I guess the idea is, you know, we had an abuse a few years ago where the benefit didn't go to the tax payers, with the surplus that was given them after the fact so the Legislature passed a law that you have to do what we tell to you do it. And really the best way is to go in and point out your local government people is wasting your money and get rid of them. We called that one with a steamroller.

Then C S 3 (a). If the unorganized areas of the state are compelled to organize into burroughs, they should be limited to small contiguous areas with common needs

THE MODERATOR: Good.

MR. COOPER: Actually, your Burough Act pretty well specifies that. When the Legislature has created burroughs, they have done violence to the very, the very law that sets

up the criteria for each borough.

MR. DELISIO: Okay, then G S 4 the bottom of of page 1 and continuing on page 2, State activities effecting the local area shall not be undertaken without local consultation. Various levels of government participating in the same program shall develop effective means of coordination.

(Discussion was had off the record)

MR. DELISIO: Okay, then G S 4, I think I read that one; didn't I. Okay.

THE MODERATOR: Without local consultation.

MR. DELISIO: G S 5. Means should go found to constitutionally administer at least some State benefits if a longevity basis.

THE MODERATOR: Five years, 1 percent, ten years.

MR. DELISIO: I didn't think we should get specific about it. But, of course, there are Constitutional problems.

MR. DELISIO: Means should be found to constitutionally administer benefits on a longevity residency basis.

MR. COOPER: You left out carrier pigeons.

(Discussion was had off the record)

MR. DELISIO: G S 6. Legislative reapportionment shall be implemented so as not to effectively eliminate

rural representation.

C S 7, the size of the Legislature shall be increased.

THE MODERATOR: You can't do anything now.

MR. COOPER: I don't think that would accomplish anything in increasing the size.

MR. FISON: We don't need to tell them.

MR. DELISIO: That was one of the suggestions made and we just wrote it up.

THE MODERATOR: I don't want to see that.

MR. COOPER: I would be opposed to that.

THE MODERATOR: It won't accomplish anything.

MR. DELISIO: It will accomplish one thing.

THE MODERATOR: Vast chaos.

MR. FISON: We have a mandate so we increased.

MR. DELISIO: C S 8, there should be placed on 1980 general ballot whether to hold a State Constitutional convention.

THE MODERATOR: No.

MR. FISON: I don't really see that we need to address that unless we have something that we feel that from the group needs to be addressed to the constitution convention. And did that come out? I don't recall.

MR. VAN DOREN: May I say one thing. David, when you weren't there the other day at one time when you had to

step out, the only thing they mentioned is its mandated that it has to be on the ballot in '82. The reason why they said to put it on the ballot in '80 was so that they could do it before legislative reapportionment

MR. EISON: I see, well, in that case.

MR. DELISIO: Then someone else pointed out that if you put it on in '80, it gets on in a year which is not a general election, you won't get as many people voting on the issue in a general election.

MR. VAN DOREN: That's not true. The 1980 ballot would be a general election ballot.

MR. DELISIO: You don't have any sexy statewide raise.

MR. VAN DOREN: Sure you do. You've got the Gravel (phonetics) race.

MS. FISHER: Maybe we should State the reason suggested along with that that makes it more reasonable.

MR. DELISIO: The real question with that is whether it wants to go on as a statement.

THE MODERATOR: I would rather not.

MS. DICKSON: I think the feeling of the group as a whole was that we didn't want it brought up. Its just opening a can of worms that we didn't want to bring up.

MR. DELISIO: C S 9 I think I stated it the way, the raw fish tax on fish processors shall be increased. That is what she wanted?

THE MODERATOR: I don't know.

MR. COOPER: They have already addressed that.

MS. DICKSON: We have an increased raw fish tax that came up, it was proposed at 6 and came down to 4. I think what she is getting at is the State needs to be working with the federal government to get more revenue.

MR. FISON: That sounds a little better.

MS. DICKSON: Off of the 200 mile limit area.

MR. FISON: This is extremely specific in one way but it is not in any way stating the problem.

MR. DELISIO: That's the problems, that was all that she said or all that ours notes indicated and I don't know enough about the issues.

MR. COOPER: We are going to make her.

MS. DICKSON: So rather get into the entire fisheries issue at which I can expound at great length we should maybe drop that one.

C S 10. There shall be established a local income tax which she be deducted from the tax pairs State income tax liability.

THE MODERATOR: No, no.

MR. FISON: Once you get something like that, you never get rid of it, and then they come on and up the State tax in some other fashion, and all you've got is another income tax to fill out.

MR. DELISIO: I have got my petition here to abolish the income tax.

MR. COOPER: I think income tax is one of the most unfair.

MR. DELISIO: C S 11 appears on the bottom of page 3, and that's not a government range by the way.

MR. FISON: This abolisnes the State income tax.

MR. DELISIO: That's a petition. That's not on ours program. That is something separate.

MR. DELISIO: C S 11, the adventure education program shall be made available to all Alaskan youth.

THE MODERATOR: Yes.

MR. DELISIO: That was the program in the movie yesterday.

Okay, I think that's all of the government ones, the government services.

THE MODERATOR: Who is going to fund the Alaskan education program.

MR. DELISIO: Well, again the concept would be we should be self help as much as possible, sort of going back to ours original C 1 statement.

The next thing then is -- are there any feelings about those that we left? We have deleted 7, 8, 9 and 10.

MR. COOPER: I have a problem with the last one but I am not articulate enough to be able to say what it is.

MR. BISON: Well, is it this is good. But if it could mean that the young person really not into that and never learned to read and write, how do you offset? The other has to be there, too.

MS. DICKSON: What about stating this?

MS. DICKSON: As an adjunct to the regular education curriculum or something.

(Discussion was had off the record)

MR. DELISIO: As an adjunct to the regular curriculum.

MS. DICKSON: I think it should be made as a part of the whole system.

MR. DELISIO: The regular school curiculum.

(Discussion was had off the record).

MR. COOPER: Some, but I guess what I am saying is that the individual families have responsibilities for their children. And the more we ease up those responsibilities, take over those responsibilities, the less pressure there is that they will do it themselves.

MR. DELISIO: But Earle, I think again when we read these things, if we go back to the statement number 1, that you start off by saying if you want the government to help you, then number 1, there really is a need for help. Number 2, if you exhausted other means of getting the job done.

Now, this, I think really what this statement in

effect does is to say this adventure education concept is extremely valuable to help young people, you know, find themselves.

THE MODERATOR: Say that.

MR. DeLISIO: You want to say it that way?

THE MODERATOR: I would rather say exactly what you you have just said. That is valuable.

MR. DeLISIO: The adventure education program is extremely valuable to Alaskan youth--

THE MODERATOR: Not finding themselves.

MR. DeLISIO: --in achieving towards self confidence and a sense of purpose.

MR. COOPER: Helping them achieve.

MR. DeLISIO: Or helping them achieve, yeah, self confidence and a sense of purpose. Does somebody have that/ I didn't write that down.

MS. DICKSON: The adventure education program is extremely valuable to Alaskan youth.

THE MODERATOR: In helping achieving.

MS. DICKSON: In helping to achieve.

MR. DeLISIO: Self confidence and a sense of purpose.

MS. DICKSON: Self confidence and a sense of purpose in developing maturity.

MR. DeLISIO: That's implicit from the other two, I think.

MS. DICKSON: And shall be made available to all Alaskan youth as an adjunct to the--

MR. DeLISIO: Regular school curriculum.

MS. DICKSON: Regular school curriculum.

MR. DeLISIO: Okay.

MR. PISON: Has anybody addressed this from the standpoint--has the school administration addressed this? Could this bring havoc to the school system, I don't know. If you--

MS. DICKSON: I don't think it could if it was--

THE MODERATOR: At the discretion of the local level.

MR. DeLISIO: Well, again, I think we have taken the local level thing. I think we've got that dealt with.

Okay. On communication.

THE MODERATOR: We are back to page 1, communication number 1, broadcasting of State government activities shall be unde the control of an independent board with regional representation.

As I recall, the concern about this was that you don't want the Legislature spoon feeding what they are wanting to issue out of legislative sessions. You don't want our Governor manipulating the counsel conference situation.

MR. COOPER: Never happen.

MR. PISON: When you use the word, "broadcasting," are

you talking about the word media or what?

MR. DeLISIO: That's the only thing I can think that it will apply to here.

MS. DICKSON: Where is it?

MR. DeLISIO: On page 1, second item, C-1 on top of page 1.

MR. FISON: Broadcasting, you mean dissemination of material?

MR. DeLISIO: What does broadcasting mean to you?

MR. FISON: Well, broadcasting usually limits it to--when I think of broadcasting, I think of radio and television.

MR. DeLISIO: Right.

MR. FISON: What about the newspapers?

THE MODERATOR: All right.

MR. DeLISIO: There are ways they can manipulate the newspapers. But the newspapers have to allow themselves to be manipulated, but on the air--

MS. DICKSON: This is too much like sensorship. That's sensorship. Under the control of the Board under regional representation. If one community doesn't hear it and they say they don't want it, then you are not going to hear it.

MR. DeLISIO: That's not the idea. If you don't want it, you can turn off your switch, you don't have to listen to it. The idea here is you don't want the news of the

Legislature and the news of the Governor of the executive branch being manipulated by the Legislature and the executive branch.

What you want is an independent body which is responsible for--okay, are going to show tonight on a legislative form, are we going to show what went on, on the health and safety committee or are we going to show what went on on the floor of the House where everybody was posturing?

MS. DICKSON: I see what you are getting at, but who would it be under, the control?

MR. DeLISIO: It's under the control of the legislative executive right now. The idea is to take it away from them and give it to an independent board.

MR. COOPER: Public radio and television in this State are controlled by-- and I personally think that it's a dangerous thing-- and it should never have been allowed to get to this point.

MS. DICKSON: It's dangerous the other way, too, if it's exclusively the other way.

THE MODERATOR: How?

MS. DICKSON: Control of an independent Board of Regents.

MR. DeLISIO: Maybe we ought to say an independent public board.

MR. FISON: How about appointed by the Governor?

MR. DeLISIO: There is one thing about that process. The Governor appoints people to serve on the judicial council who screens candidates for judges. But, once they get on the judicial council, they are no cat paw, and all of a sudden they realize, "By god, we are going to do this thing. We are going to do it this way and we don't care what the Governor wants."

MS. DICKSON: I appreciate the concept. It's censorship one way and censorship the other way.

MR. DELISIO: Why don't we insert the word public, an independent public board, so we get away from the idea that it's NBC or Bob Atwood?

MR. FISION: That makes it a little more understandable.

MR. DELISIO: C 2, any expansion or improvement of public education must be preceded by a careful evaluation of the ongoing as well as start up costs and who is going to pick up the tab: Okay, C 3.

MR. COOPER: Basic need in the first place.

THE MODERATOR: That goes back on page one.

MR. DELISIO: C 3, government shall not interfere in program content or availability. We skip over now to page 3, to C 4. C 4, development of communications systems shall be -- that's on page 3. It's the second item -- development

of communications systems shall be sensitive to the resulting social and political effects. This was where people were talking about culture and so on.

C-5, highest priority shall be given to upgrading communications between rural communities and the rest of the world.

C-6, career education shall be provided in the field of communications.

C-7, the University of Alaska shall be provided the means and directive to provide education throughout the State via telecommunications.

C-8, VHF and microwave systems shall be developed as a supplement to satellite communications.

MS. DICKSON: Hear, hear.

THE MODERATOR: That was what Gibson was talking about.

MS. DICKSON: That's great.

MR. DeLISIO: And then, C-9, carrier pigeons--pigeons are misspelled there, by the way, p-i-d-g-- shall be utilized on a lage scale basis as a back up for and supplement to the existing modern communications system.

MR. VAN DOREN: I can see. There will just be silence until they catch on.

MR. DeLISIO: Now, what I wanted to read, it was like this: I wanted it to read "carrier pigeons shall be

utilized on a large scale basis as a back-up for and supplement to the existing modern communication system and as a dietary supplement.

MS. DICKSON: This is the whole stoic approach to communications right there.

MR. HICKS: Carrier pigeons are--

(Brief discussion held off record.)

MR. DeLISIO: That's the end of communication.

Justice, which starts on the bottom of page 3, J-1. Okay, are we all there?

"The State shall assure adequate basic law enforcement facilities in rural areas to local government.

THE MODERATOR: Okay.

MR. DeLISIO: J-2, it's right after that, "Effective means shall be provided whereby judges who are not performing properly shall be removed from office."

This was in response to Betty's question. She was saying that she supports the Missouri plan to get rid of judges easier.

What she was misunderstanding was that the Missouri plan is what we've got right now, and we can't get rid of judges very easily out of the Missouri plan. So, I worded it this way because I thought that was the intent.

MR. COOPER: How about something to the effect that no person, no person be appointed to the judge until he has

been in the real world long enough to know there is a real world.

THE MODERATOR: I don't think we can get that in there.

MR. DeLISIO: Very astute observation.

MR. COOPER: I know a judge who has never been in the real world.

MS. DICKSON: What do you mean by the "real world"?

MR. COOPER: He came out of a law school. Went from the assistant AG office, went from there to the judge. He has never had a client in his life. He has no concept of cost, when he says, "bring me four copies of a 50-page report."

MR. DeLISIO: I say that a full third of our Superior Court judges in Alaska are in that category.

MR. COOPER: That's correct. I ran into one of them, so, I have a personal--

MR. DELISIO: I would say that probably close to over well over half of our superior court judges are wet behind the ears, even though they have clients. They haven't been in practice long enough to have a mature feeling for what the world is all about.

THE MODERATOR: Did you say superior.

MR. FISON: I have problems with our judicial system, anyway. Most of it boils down to that the lawyer's task is

to win the case, not establish what's true.

THE MODERATOR: I think we could probably spend whole weeks on that. So you next one is?

MR. DELISIO: The next one is J 3, publicly supported legal services shall be expanded to meet the growing needs of Alaskans lacking the financial means to hire an attorney. I think that took care of the woman, minority situation.

J 4, research shall be undertaken to evaluate sentencing of offenders in crimes of violence against females in comparison with offenders who commit similar crimes against males.

J 5 is dropped down a little bit. Criminal sentencing shall not reflect minority bail.

J 6, criminal justice to be effective must be swift and sure in application.

MR. COOPER: Thank you.

MR. DELISIO: J 7, the Legislature judiciary executive and private sector shall actively pursue programs, incentives and public education to discourage the people in Alaska from their increasing propensity to litigate and shall encourage social amenity. I have to change the way I wrote it there originally.

MR. COOPER: You mean you don't think I should sue the woman across the hall with the dog that barked last night?

THE MODERATOR: Where do you go from there?

MR. DELISIO: That was th end of it. The only other one I had was that financial policy which is not in the government services report.

THE MODERATOR: Okay, what else do we have besides -- we are still lakcinn transportation?

MR. FISON: How are we going to know then where the levity ends? Are they going to say there may be several in here? Let's flip back. And then they might not notice that it's a tongue-in-cheek thing.

(Discussion was had off the record)

THE MODERATOR: The only thing we are lacking now is transportation. And has anybody heard from anybody in transportation?

MR. FISON: They are working on transportation and they are coming up as soon as they finish breakfast.

MS. DICKSON: May I say one thing about the energy policy: Carolyn, when she phoned, asked if it was all right with the group to state in here at some point that all State agencies should coordinate their effrots. She will phrase it. This is indicating that we don't want overlapping redundant work.

MR. COOPER: Or counter-productive.

MS. DICKSON: I think ultimately if we had a State Department of Energy to coordinate th entire thing, it

would eliminate the redundancy of different agencies, but without stating it specifically at stabbing it at DOE.

MR. VAN DOREN: JoAnn, just as a mechanical thing, I've got to impart a few things to you all.

Okay, these recommendation forms of this type which gives a recommendation to major factors leading to consideration of the specific recommendations, we do not have to use these for this morning's meeting. They've changed their minds. But you are going to have to read these, JoAnn, as the representative of this group. And so you should have -- I don't know if we can get a typewriter available real quick to get these out. And Sandra won't be in for a while. But we need -- you need to be able to read these and present them at this whole thing.

(Discussion was had off the record)

THE MODERATOR: Couldn't we have each individual person read that that is familiar to him?

MR. VAN DOREN: If you want to do that, that's fine.

THE MODERATOR: I would much rather go that route. Steve is knowledgeable at his, Earle at his.

MR. COOPER: No, I am not. Because I didn't write down any of th changes.

(Discussion was had off the record)

MR. DELISIO: On tis finance policy question, you know, do we want to take it up? You know, I read you the

two sentence concept last night. First, the State shall invest in the State of Alaska as much as possible and second, that there would be low interest loans made available.

It was kind of interesting after the discussion last evening: I was shown this article that was written by Bob Richards, who is the President of the Alaska Pacific -- yeah, Alaska Pacific Bank. And he says in the article, to summarize, the State faces a potential fiscal crisis in the long run. The solution to this crisis consists in holding back on expenditures and increasing the sources of revenue through expansion of the economic base. The latter can be aided through a reasonable tax and regulatory climate and parmanent fund intrastructure investments which serve as a

(continued on next page)

catalyst to investment by the private sector. So what he is talking about here is in addition to tax relief and regulatory relief that we need to start injecting some of that State money through loan programs into the State of Alaska.

THE MODERATOR: Okay, but in what areas are you going to pass those loans -- like someone said last night, I don't want to go-cart maybe in Kotzebue. It would THE MODERATOR: Okay, but in what areas are you have to be something that was structured to the needs of the community, and who is going to make that decision.

MR. DELISIO: Well, the problem for a statement like this, I think that this kind of a question is almost appropriate to almost everything that we've approved here. You can't come up with it. If we had three days just to work on this, I think we could probably come up with a super loan program. But we don't have it.

THE MODERATOR: I would go with the loan program if it were for construction of new housing that was needed. But there again, I am not inf favor of going out and buiding housing solely for the purpose of building houses and wrecking the present system in any community. Then we would be overloaded with new houses, and I don't oo for that either. There must be some type of restraint.

MR. DELISIO: Maybe if we were to add a clause on to

the end of it for projects which serve the -- the goals of the State of Alaska.

THE MODERATOR: That is broad and vague.

MR. DELISIO: It is broad and vague, but somebody is going to have to come along and implement the whole thing, but the idea now is we are trying to give a guideline. would This take into account, for example, Carolyn's idea if somebody wants to borrow this money at low interest, then they better have an energy efficient or an alternative energy concept for their project. Your suggestion is there shouldn't be something that is frivolous.

THE MODERATOR: Not frivolous.

MR. DELISIO: Or something that is counter-productive, but something that enhances. Maybe that's the right word, for projects which enhance the goals of the State of Alaska. So with that amendment is that an acceptable (pause)

THE MODERATOR: Read the first part again.

MR. DELISIO: Let me just write this change.

Okay, the State shall invest its surplus income and the permanent fund within the State to the extent the opportun for prudent investment exists in Alaska. Moneys shall be loaned at low interest rates to anyone who has a fiancially sound investment opportunity subject to the availability of adequate security and the borrowers demonstrability to

repay the loan provided the project enhances a goal or goals of Alaska.

MS. DICKSON: Could be system with the goals.

MS. COOPER: I think don't we want to put in who borrows money. Are we inviting a lot of outsiders to come up and borrow if we don't put in --

MR. DELISIO: I suppose we should say anyone in Alaska.

MR. COOPER: I was going to say, I don't really have any problem with where they come from, it's what they are going to contribute after they get here.

MS. DICKSON: And what they are going to leave if they go.

MR. COOPER: From the bush or the urban or from Miami, if they are going to bring business.

THE MODERATOR: No, I don't want Miami to come in here at low cost loans.

MR. DELISIO: What Earle is getting at is suppose somebody comes to Bethel and says, "I know how to process and market fish that are caught in this river to the people of Anchorage, Fairbanks, and so forth, but I need an interest loan to do it, and I am going to set up a program and I am going to hire all the local people and we are going to set up a transportation system and we are going to sell fish from the river in Bethel to the people

in Anchorage." What Earle is saying, if that person came up from Miami or came from Iran, as long as the person that has got a project that enhances the goals of Alaska.

THE MODERATOR: And he has demonstrated that he is able to pay the loan.

MR. DELISIO: There has not to be adequate security. Demostrability to repay the loan and it has to enhance the goal or goals of Alaska.

MR. DAVIDSON: I've got some comments, partly the things I said last night. I think the first part of it and the second part of it are a little contradictory. The first part says, we shall make prudent investments of the money, then we will say we will make low interest loans for these various purposes. And prudent investment means we are meaning to maximize.

MR. DELISIO: That's not what prudent means at all.

MR. DAVIDSON: In terms of an investment. I know that it doesn't have to.

MS. DICKSON: You get the intrinsic and extrinsic.

MR. DELISIO: If you spend $1,000 on mental halth in a State, maybe you are not getting a dime back. In this situation, you are getting interest back, you are getting a tax base with income tax returns, property tax return, plus social enhancement.

MR. FISION: Maybe it could be worded a little better.

MR. DAVIDSON: If that says everybody. To me, it seems like it was saying we are going to make prudent investments of these funds moneys and that seemed to be a little bit different. There is a distinction for investment for finance return and social return.

MR. DELISIO: The idea here was that the reason for using the word prudent was that I don't want to give anybody the idea that this is some sort of a give-away concept. It's just a let's throw money out the window thing.

MS. DICKSON: Steve, can you define the word prudent consistently not to include social implications or something like that, so as to --

MR. DELISIO: For, let's see, the opportunity for --

MR. DAVIDSON How about for prudent investments, for something like social as well as financial returns.

MR. DELISIO: We could put a parenthetical.

MS. DICKSON: It might be necessary.

MR. DAVIDSON: If it's not necessary, I won't argue about it.

MR. COOPER: We can get it so wordy.

MR. GIBSON: I think prudent in a broad context is very well used here, because prudent means thought out and wise, but not necessarily big return. I think prudent is an excellent choice of words there to me.

MR. DELISIO: Maybe we should plainly say this is read

and that's what is intended.

MR. DAVIDSON: I don't know, I just pick out that more than the other.

The other thing, I am still concerned about Lee Gorsuch's comments about the economic rate and thinks some dollars are pretty important. But I think I am saying for the purposes of Alaska, which is it the goals of Alaska.

MR. DELISIO: Provided the project enhances the goals of Alaska.

MR. DAVIDSON: How are those defined. Are these the policies of the State government or a sort of general public concensus of what the goals are.

MR. DELISIO: Whoever enacts this concept into law is going to have to translate that into some meaningful specifics. The difficulty here is if we try to list what we mean by the goals, really what we are trying to do in this whole conference is to identify the goals and to ask the Legislature to implement those goals. The basic intent is, you know, the language is broad enough to incorporate Carolyn's idea last night that we want efficiency, we want alternative efficiency so we can enhance those goals. You were the one that brought up last night you don't want to see a project which is really anti-Alaska or frivolous or that works contrary to our desire to achieve certain things, and so you would like to eliminate those kinds of projects.

The scope is broad enough to mean anything that anybody wants to make it mean. But in acts of law, if this somebody wants to implement this, they are going to have to make it more specific. I don't know how to make it more specific at this time.

THE MODERATOR: I don't think you can.

MR. DAVIDSON: The kind of thing I was hoping we would come up with is real commitment to development of the renewable resources.

THE MODERATOR: I think they will probably come out in other groups, I really do.

MR. DELISIO: We sort of did that in energy, too. We've got this thing that will convert from nonrenewable to the renewable resources.

MR. DAVIDSON: I won't battle this any more.

MR. COOPER: We have almost ran out.

THE MODERATOR: We've got ten minutes to take on transportation.

MR. DAVIDSON: Can't have two minutes.

Basically we have refined the statement we started with last night and added some more specifics. It shall be the policy of the State that a transportation system be developed in a manner which serves the economic and social needs of all Alaskans in the areas in which they reside: An integrated system of transportation shall

include facilities necessary to accommodate the mode of transportation which best fits the particular needs of the area to be served. Regional representatives will participate in all stages of planning and implementation. And to help facilitate their involvement, there will be established regional advisory committees which whall have representation on a statewide advisory board that provides statewice transportation policy. Priorities of an integrated transportation system shall include the following, 1, transportation systems to be developed must have minimal adverse social, cultural and environmental impact -- did I say must have minimal adverse social environmental impact. 2, all transportaton facilities shall be upgraded to standards which assure traveler safety, optimal freight rates and minimal maintenance cost. Airport and port facilities in rural Alaska will be improved to assure the safety of users and provide adequate medical, public safety, and service support.

Particular attention shall be paid to improving airport and port facilities and alternative transportation modes to accommodate critical economic needs, such the transportation of fishery products.

Number 4, when new transportation projects are proposed, full operation and maintenance costs shall be considered in the decision to implement the project.

Number 5, appropriate incentives should be given to private enterprise to develop transportation facilities in the private sector.

Number 6, the State of Alaska shall assist in the immediate improvement and development of mass transit systems in the urban areas.

Number 7, as part of a regional planning process, the Department of Natural Resources shall undertake a thorough assessment of transportation needs in relation to development of Alaska's renewable and nonrenewable resources.

Number 8, the Department of Transportation shall explore innovative and alternative transportation modes that may result in lower freight and fare costs and avoid adverse social, cultural and environmental impact.

A criteria for evaluating new transportation systems in both rural and urban areas shall be energy efficiency.

Number 9, the Department of Transportation shall give immediate attention to the development of intraregional transportation systems which will not necessarily link to urban areas. That's it.

MR. ELLISIO: I just have one comment about subcategory number 1.

MR. DAVIDSON: Priorty number 1, okay.

MR. ELLISIO: Yeah. It says the transportation system to be developed must have minimal adverse social, cultural and environmental impact. If it has minimal adverse impact in one or more of those areas, it may not be possible, and yet it may be desireable, so maybe what we could say instead of minimal adverse, shall minimize adverse social. Th transportation systems to be developed shall minimize adverse.

MR. DAVIDSON: I am happy with that.

MR. GIBSON: That's a good point.

MR. FISON: On number 6, there was a word.

MR. FAIRBANKS: Read number 6.

MR. FISON: In transportation. Read that again.

MR. DAVIDSON: The State of Alaska shall assist in the immediate improvement and development of mass transport systems in urban Alaska.

MR. FISON: There is a difference between mass and rapid. But when you say mass transportation systems, does the word mass have already full meaning to everyone?

MR. DAVIDSON: To me, it implies moving large numbers of people through buses, trains, things like that.

MR. FISON: That could even mean also include rapid transportation if the group wanted it or if the area wanted it.

MR. COOPER: What is the difference between mass

transit and rapid transit?

MR. FISON: Usually rapid transit is like subways and elevated.

MR. COOPER: But what I mean is: we are then getting into a definition or a particular mode of mass transit.

MR. DELISIO: I think the idea of the masses is as opposed to the one driver to one automobile configuration that we currently have now, which is energy inefficient.

MR. FAIRBANKS: Urban mass transportation and alternative energy efficient modes of transportation must be developed.

MR. DELISIO: You've got the energy efficient thing in one of your other priorities.

MR. GIBSON: That's in all of them.

THE MODERATOR: We've got enough town downtown. Is there any real difficulty.

MS. FLEMING: I have a real difficulty after we are through discussing transportation.

MR. FAIRBANKS: One thing, do you think there should be a way to educate the people of the State about stressing energy efficiency and environmental considerations. I mean, people -- we've got to start educating people or they've got to start saving stuff. If we don't teach somebody something, they are still going to be buying forever.

MR. DILLON: Did we have anything in the education statement, because like you say, if we are going to be energy efficient, we better teach people how to do it.

MS. DICKSON: I think it shouldn't in the energy statement.

MR. COOPER: We have several programs now.

MR. FAIRBANKS: For instance, State educational polivy should stress efficiency and environmental considerations in transportation.

MR. PISOM: You are talking about in the schools and everywhere?

MR. FAIRBANKS: Everywhere.

MR. DILLON: Why shouldn't we be trying to educate the public in all respects, not just transportaion, heating your house, electricity?

MR. FAIRBANKS: Okay.

MS. FLEMING: I would like this off the record, both Pamela and Jay. Thank you.

DELTA GROUP PROCEEDINGS

(December 6, 1979, 10:00 a.m.)

Yukon Room

(Introduction of delegates.)

MR. ECKHOLM: The format is that the delegates who have been chosen here are the official delegates. When it comes to votes and everything, those will be the people who will vote. But in terms of discussion, I think it's important to keep it as open as possible. Whether you're from the public or anybody who is in here, I think, unless it gets out of hand, should be able to contribute to the discussions. And I'd like to reserve that right for the staff people, too. Many of the staff people, including myself, have an interest in what goes on and would like to participate, since often we're precluded from doing that.

Today, this morning, we have a survey that's been developed from the issue paper book that was written. It takes most of the papers, the concepts, and reduces them down into issues and answers. And they're going to come in and start on that at some point in time, and it will probably take us half an hour to do it. I see the value of that tool as being a way to focus the issues and give us a base to start talking from.

This afternoon our group is going to talk about

finances, at 2:00 o'clock. And that's a broad category. Tomorrow morning we're talking about resources; and tomorrow afternoon we're talking about Direct Services.

As those discussions go on and arise, we have some information, we have an information room where we have like short forms on the budget, little videotapes from all the paper authors. And there are people who are around here, and we'll go out and grab people and get what you want in developing recommendations.

How the recommendations are going to be and my primary job is try to bring the discussion, reduce it down to a recommendation sheet. I have blank forms here and it starts off with general area as the first heading, category as the second heading, specific recommendation as the third heading, major factors of considerations leading to the specific recommendation is the fourth heading; financial impact with two subheadings, FY81 and projected need for the next ten years is the next heading, and timing is the last one. I think it's important that the discussions do keep focused on specific recommendations. That's the only way you're going to see direct results from it.

And so, we'll try and keep that all filtering down into these recommendations which we can then base recommendations on.

As a group, it's your responsibility now to sort

of elect a moderator who will lead the discussion and work with me in hopefully making things an open forum for you to talk with.

MR. POMEROY: I have to suggest as a group leader Mr. Roderick. He knows the State statewide, sitting at my left.

MR. REAVES: I'll second the nomination.

MR. PERDUE: I move the nominations be closed.

MR. RODERICK: Why don't you tell me what that role is, because I'd like to know.

MR. ECKHOLM: This is your chance to talk. We're setting this up so you've got a form.

Michael, when do you want to come in and visit with us?

MR. KOWAN: Five minutes.

MR. ECKHOLM: What we want to do is keep the discussions focused. As a moderator and facilitator we want to work as a team as much as possible. And that's it. Let's sort of have a general talk right now about what your feelings are coming into it. Is anybody angry, did you get enough information, didn't you get enough information? Does anybody have any strong feelings about how this was set up and what's going on?

MR. REAVES: I think the information was good. I don't think we received it too far in advance. I received all of this yesterday. I just didn't have time to read it

all.

MR. POMEROY: There's lots of information. Can you give us some idea, or help? Jack, give us some idea as a most orderly progression of our discussion so we don't just jump from one thing to another to another. How can you help on that?

MR. ECKHOLM: We've got the days broken out into the broad topics. For example, our first real issue discussion begins this afternoon at 2:00 o'clock. It's finances. When we start off at 2:00 o'clock I've asked some people. Mr. Belden Daniels I hope will be here to give us some idea about the economy, and many of you people know about the economy. I think we ought to start talking about the economy, what you think, when you recommend. What should we do with the three billion dollars, and then start focusing those down into this recommendation sheet as issues develop and they become specific.

MR. POMEROY: For me as a delegate, that's very clear cut. How about this morning, Jack? And you, how do you suggest we start?

THE MODERATOR: Let's hear some more comments of people.

MR. PILLIFANT: You mentioned Direct Services, sometime we're going to discuss that? What are you talking about there?

MR. ECKHOLM: We have the issue paper that was developed as a base. And the instrument that Mike Kowan, the poll he's developed breaks those down into sort of questions about how do you feel about those things. We have Marylou Maden from the Department of Education who has been around who can help provide information. We've got a number of people here who are educators.

MR. PILLIFANT: I didn't see anything on health, particularly, but maybe I missed it. Because, like Jim, I didn't have enough time to read it. Was there anything on health?

MR. ECKHOLM: No, I don't think so. Dr. McGinnis did a lengthy report and unfortunately we were unable to reproduce it at the time. He's taken it and reduced it down to its component parts.

MR. PILLIFANT: I just wanted to comment, that is I was surprised that it was not a major topic because it was our number two priority in 1969. That wasn't mentioned. Of course, education, number one, health number two.

MR. ECKHOLM: Probably a staff fault, we didn't get it together. It's a 64-page paper, and it came in after we had gone to the press with the original book. So we're hoping that when we do discuss that that we'll be able to go at that time.

MS. PALMQUIST: Dr. McGinnis' report has been reduced

to four pages, which is the summary of the recommendations. And I would like to have that provided to all of the delegates here because it addresses what the previous speaker has been talking about. In the area of education, I am particularly concerned about the effectiveness of vocational education and I hope that we spend some time on the area of vocational education.

In the health area, possibly some consideration should be given to -- I know this is kind of a radical concept, but there might be some good things come out of separating health from social services.

MR. ECKHOLM: We'll have that paper duplicated and presented to you as soon as possible.

These white papers are not meant to be the start and the end of the discussion. They're just a base. They are people's opinions from around the State and ideas that we hope to use as a stimulus for discussion. We're not limited to those in any stretch of the imagination.

MR. SEIFERT: I need some orientation on that. I don't really have a wealth of information. I haven't seen the white papers. I have the two preliminary book overviews.

MR. ECKHOLM: Those are the white papers.

MR. SEIFERT: Someone had a loose-leaf. I thought there was other information available.

I would like to suggest that we kind of develop a strong focus area for basing our discussions. If we're going to be guided to a framework of financial institutions, it might be good to address those issues which we think are the most important to address in each framework.

MR. ECKHOLM: And then get into the specific discussions from there?

MR. SEIFERT: I have a specific issue which I think is integrated which I think would be best addressed as to how it would be best accomplished. I have a kind of a goal to suggest.

MR. ECKHOLM: I think that's the best way to get down to issues. When we get into finances, I think you ought to say --

MR. SEIFERT: Would it be appropriate to go into these areas between now and 12:00?

MR. ECKHOLM: I think --

MR. SEIFERT: I think you're misinterpreting what I'm saying. I think there are general goals that could be reflected in each of the framework issue areas. That may be a better approach to it all. I don't see that there are financial problems and then there are resource problems and there are -- I mean, these are all integrated. I think what you should do is address the goal that you want to see the State achieve, and then reflect each of those goals and

how it kind of fits into the framework of the issue areas you identify.

MR. MORGAN: Can I elaborate? What are we not satisfied with in the State; are we happy with everything as it is, are we not happy. If we make some overriding philosophical statements similar in nature to some of the statements that Mr. Merdes made earlier, and we will filter down to what happens in education, what happens in health. But the total human state, now, my own particular soapbox at the moment is I'm afraid we're not able to feed ourselves.

Ten years ago, I saw agriculture spelled out three times in this book. I normally saw it as an afterthought. We import, you know, an inordinate amount of the food we eat.

MR. ECKHOLM: May I make a suggestion?

MR. MORGAN: These kind of human predictions to me are precarious. I'm not plugging agriculture just now, but I'm using this as one example of some things, as a geographer, makes me nervous.

MR. ECKHOLM: If we could spend the time now, Mr. Rowan is here and has the survey. If we can do that and go through it and as soon as that's through, I suspect that will be 11:00 o'clock, we will take the time from 11:00 to noon for you guys to identify broad areas and discuss so we

have a focus. And go with that as a general sort of opening? Is that acceptable?

THE MODERATOR: Let's agree on some kind of starting point here. If that's one, the goals, or if it's the ones he's recommended. What do people think? Should we go on the sort of broad philosophical goals to begin with?

MR. ECKHOLM: Jack, I think we'll have time to do that before the survey.

THE MODERATOR: Mike can wait.

MR. ROWAN: Absolutely.

THE MODERATOR: I think it's more important. My recalling last ten years ago when I was here, Number 1, everybody is here because they want to say something. That you can be sure of. And so that the trafficking of these ideas is very important, you know. And I think that's what this is all about. Everybody has something to say, and we've got to agree that they're going to have time to say it.

This is going to be how do we say it.

Mike is a good one to start with on that.

MR. ECKHOLM: If we can just do this test here and then take an hour and try and get the broad statements and that out before we go into specifics, as per their suggestion, that might be the way to do it.

Michael?

MR. ROWAN: Well, this is basically the same idea, Jack. The notion here in the questionnaire was to get everybody to speak to every issue that was raised in all the papers. Could you start passing these out as I explain this to people?

Here is what this is: We have a questionnaire here that's been prepared for each delegate, okay? If you're not a delegate but an observer to the conference, I hope you would not fill this out. It's to be self-administered now with a pen or a pencil. It will take about 20 minutes for you to fill it out.

After completing the questionnaires, the data will be tabulated and we'll report back to you tomorrow on what you said. The questions were drawn on the ideas, the conclusions, the proposals put forth in the three dozen papers prepared for this conference. So basically we drew out the consents, proposals and ideas that were being laid out by all the writers that were commissioned by the legislative conference to come forth with different views on every agenda item that is in those goal papers you have, and others.

If you've not read all the papers, you may find it difficult to understand or to answer some of the questions. If that's the case, move right on and leave it blank and go on to the next question. You can go back to

that later.

From time to time, in the question, the name of the writer from whom the question is drawn is also mentioned. You can refer back to the goal book. Sometimes it actually has pages mentioned on it in case you're wondering what we're talking about.

If you can do something for me here to make it easy to data process, would you please circle the appropriate number for the question. It's a one, two, three, four, whatever. As you proceed through the questions, you'll find ranking priority. In every case, one is the lowest rank.

In question 25, the responses should be, one, cooperative; and, two, develop independent plan, not yes-no, as is printed in your question. Number one should be cooperative, number two develop independent plan. It has to do with management of lands.

MS. SMYTH: When you say one is lowest --

MR. ROWAN: One is lowest in all cases, all the ranking questions. One is always the lowest ranking and the highest number is always the highest ranking.

In question 72, we mean intercommunity roads. That's between Alaska communities, roads between Alaska communities.

And in question 74, we mean intracommunity roads,

that's inside the community, okay? So a question we get into it at the town meetings, which is always here.

And some questions here ask for open volunteered remarks. But please feel free to write in anything you want on any question at all.

MS. SMYTH: What was the change on 72 again?

MR. ROWAN: I'm just explaining that means roads between intercommunities and intra, 74, inside the communities. Someone raised that as a question before.

We're going to collect these questionnaires as soon as you've completed them. Are there any other questions?

Mc McGINNIS: Mike, not a question, but a request. I believe the ranking which you mentioned early on would well bear repeating. Because I think that could screw everything we're doing. The number one through ten.

MR. ROWAN: If people would turn to question 49, the questions are on the left-hand side. Questions 49 to 54 ask how would surplus revenues best be used in Alaska. Please rank the following. The lowest rank is one, and the highest rank is five. There are five choices. So, to offset the effects of eliminate the State personal income tax is going to be ranked one, two, three, four, five. Circle what rank you have out of the alternatives you have. If, say, you give that the lowest ranking, you'd circle

Number 1.

MS. SMYTH: Is that "of eliminating," or "by eliminating"? If you want to eliminate the personal income tax --

MS. SCHIRMER: That's right.

MR. ROWAN: That has to do with the vulnerability of the writer, ma'am.

MS. SCHIRMER: I believe that.

MR. ROWAN: I meant by, not of, I suppose.

MR. PILLIFANT: In other words, if that is your Number 1 priority, you would circle five.

MR. ROWAN: Correct. The highest priority is the highest number. The lowest priority is the lowest number. If we just keep it that way all the way through, it will be consistent. Is that understood?

Could we just -- yes. I hope everybody is just going to --

THE MODERATOR: When do we get the results of this back?

MR. ROWAN: I think we can have some for you today and some tomorrow. All for you tomorrow.

MS. STRASSBURG: Do you want us to put our names on the top?

MR. ROWAN: No, it's not necessary.

MS. SMYTH: Number 51, what does the HOC stand for?

MR. ROWAN: That's the Alaska general stock ownership corporation. The purchase of the 16 percent increase in the pipeline oil.

MR. ECKHOLM: There is coffee and hot water right ouside the front door.

As you get through, Kathryn is going to go around and pick up the questionnaires. How many people are not through yet?

Okay. Take your time. Don't worry about it. One thing to think about while you're writing it is it is based on a lot of the stuff in the white papers.

Would you be interested in taking the same questionnaire at the end of this two or three days? Would that be interesting to you?

MS. SMYTH: No.

MS. PALMQUIST: If you're going to have a questionnaire that means something, you're going to have to have more conclusions. You have nothing on agriculture.

MR. PILLIFANT: The questions are poorly stated. You can't answer them.

MR. MERDES: They suggest answers.

MR. PILLIFANT: I wouldn't want to take that again.

MS. PALMQUIST: There are a lot more options.

MR. ECKHOLM: Everybody who would like to take it again, assuming your answers change, would you like to take

it again? Would you raise your hand?

MR. McGINNIS: I think it's meaningless. Some of us have stated that the way the questions are stated are essentially meaningless.

MR. ROWAN: You know, it's difficult to State a questionnaire with complex thoughts, trying to divide them in such a way. In that case, I think an appropriate response is just that: The questionnaire is not meaningful.

MS. PALMQUIST: The questionnaire seems to have a slanting in itself.

MR. ROWAN: I think the questionnaire is derived directly from the writers. And so there might be a slant or a bias.

MS. PALMQUIST: I'll agree to that.

MR. ROWAN: Because I took the questions from the proposals and ideas that came forth --

MS. SCHIRMER: I think you should have tried the questionnaire out on a few more people before you presented it. I think you would have found the wording is bad.

MR. PILLIFANT: The biggest problem I saw, Mike, at the beginning a sentence would say, "Do you agree that so and so or," and then in the negative, it would come in and then it would say yes or no. You couldn't answer that yes or no because it had to be broken out somehow, you know.

MR. ROWAN: The questionnaire was a function of two

days of work talking with eight different people and then being reviewed by 16 others who also have their own views on it. And finally finishing it last night at 2:00 A.M.

MR. PILLIPANT: I would hope that the answers are not taken from that and used as our consensus of any sort from this conference.

MR. HARTLE: I agree.

MR. ROWAN: One of the other groups proposed what we ought to do with this is either apply it at the end again to see if there are areas that are meaningful. Also, we might find a consensus in that the whole series of questions make no sense, which is a conclusion. As a researcher, I'm interested in what you say; okay? If you're suggesting whole areas are meaningless to go into or that the way the thing is phrased meaningless, what you're saying is the context it was presented to you by one of the writers, the conference on present things here, makes no sense. And that's as reasonable conclusion to start with in your own discussions. To me it's a research document. If finding of the thing stimulates discussion, says this is the wrong context, let's start over, that's it's purpose.

MS. SPARCK: I would like top move that we go on to another agenda. There's a blank side of the questionnaire that people could put their questionnaires. I think we spent a lot of time on this. I think we ought to go on to

another agenda.

MR. ROWAN: Maybe we can collect it and use its value later.

MR. ECKHOLM: I think the value of it, like it or not, it is focused on the white papers. We can take it and chew it up and discuss it and run with it. Rosemary.

MS. PORTER: I'd like to request as one individual this not be published for public consumption. I don't think that conclusions drawn from this are going to be valid. And I would not like to see them published.

MS. SMYTH: Second.

MS. SPARCK: Question.

MR. ROWAN: Make any assumption you want. It's an internal communication what you're producing here. You're only answering questions and then you're all seeing what you're all answering. If you answer that question 36 makes no sense, that's your conclusion, ordering your own views toward yourself. That's the process as I understood it. That's why I was invited in to do it. I don't have any point of view on this.

MS. PORTER: I would not like to see them published. I don't see the answers are valid.

MR. ROWAN: How about the conclusion is that the question is not valid or not worded correctly? Is that a valid response?

MS. PORTER: That's valid if everyone answered that.

MR. ROWAN: Are you saying all 100 questions in the thing are completely ridiculous?

MS. PORTER: I think many of them are.

MR. ROWAN: How about the location thing. Are you interested in whether there are more men and women as delegates?

MS. PALMQUIST: No.

MS. PORTER: Not particularly.

MR. ECKHOLM: We'll discuss this later. There is a serious question about the questionnaire, and we'll deal with those before it happens. Rosemary, I suggest that you go talk to Senator Hohman about this too, because he'll be finally responsible for that, I think. But we can as a group vote to give a recommendation and then if everybody in the other groups are saying this, then that's your decision. I don't know what the timing is or the decision on how to use this was.

MR. PILLIFANT: I'd like to hear what our chairman has to say, Mr. Roderick, what recommendation he'd make.

THE MODERATOR: Well, it was a little offended in that I didn't have time to think, you know. It's too short. I'm not offend by the questions particularly. How about taking it on Saturday again at the end of the conference? Would that help?

MS. PALMQUIST: We're tired of it.

MR. ROWAN: That's what another group has already decided to do. Their discussion, incidentally, on the notion that this is too fast and so on, is that we ought to have our discussion and then answer some of these questions. And so they decided to take the survey after. We'll separate that group's response so they'll get their responses back and they'll be able to see the differences, if there are any.

MS. STRASSBURG: Mike, might I make a suggestion, please? You wasted practically a whole page on whether we were male or female, white, or new residents, old residents or over 45. And I don't really think this makes any difference. Because many five-year-old kids have good ideas and many who are 90 are totally incapable of anything. So I don't think these are germane to what we're looking at. We're looking at a future for the State, not who the people are who live here. We're all Alaskans, that's the main thing.

MR. ROWAN: Just as a researcher, I always collect topography as a matter of principle.

MR. POMEROY: I disagree with the previous speaker. I think it has some information and some value. With respect to the other speaker who questioned making our information available, I infer from that that there is a feeling that

perhaps there is considerable superficiality to it. There may be. Just the same, we are trying to go through a process that we're taking seriously. And I would certainly hope that out of it, whether it is on Saturday or sometime later, that we do complete these questionnaires and have them available for use.

MR. ROWAN: As you wish. It's just a tool, it seems to me, to find out how you're thinking about all the people who have written papers for you, what your opinion is of them. It's really to start your discussion, not to end it.

THE MODERATOR: Any further discussion on that?

MR. ROWAN: It seems we've done that.

THE MODERATOR: What's the general feeling of the group? Do you want to ask Mike to give it to us again at the end of this three-day conference?

MS. PALMQUIST: I would like to see another questionnaire more comprehensive that gives us more latitude in expressing our real feelings and views.

MR. ROWAN: Maybe there's your resolutions. Maybe the resolutions are your basic question.

MS. SERGYER: I have a problem with the question. It's been said a lot of the questions are slightly slanted. You couldn't answer some of the answers were half of one answer and half of the other, was what I would have answered.

MR. ECKHOLM: Let's take just a vote among us as to whether you think the poll, in your opinion, would be a valid or invalid partial record of where you guys are at at the time. And we'll record that and then we'll pass that along and it will be used as a decision.

MR. PADLOCK: Eric, I favor a significant response to the issues raised by the poll. I've been attempting to do that because we were advised that we could write in anything we wanted to. I've been trying to give this thing a significant response. I don't think that a yes or no response is worth a whale of a lot. And I don't think that a yes or no response after three days is going to be worth any more.

But I think if everybody responds with their feelings on these issues that are raised, maybe we'll be able to provide something of value.

MR. ROMAN: That's a completely legitimate way to do with the questionnaire, by the way, because we can code it in any way that you respond. If you don't like the question as written, that the value should be stated this way, then that's your response and that's the way that gets coded. That's an insight into what that issue is. And obviously, I mean, if I tried to sit down and answer this questionnaire - and by the way I haven't - I don't like the idea of things falling into one category or another either.

Most of these questions are not yes-no questions. But unless you frame them that way, you're never going to be able to talk about this them.

MR. HARTLE: I think one problem that is coming up is the priorities that we're to decide on in this questionnaire are not at all necessarily the priorities of this group. And this was the framework we were given to answer on. And that's what the problem is. And that's why I don't see it as valid whole of our thoughts. Because it doesn't have -- what questions would you ask?

MR. ROWAN: That was not the intention of this. The intention was to read the papers prepared for your discussion, and every one of those people, 33 or 40 of them, have points of view, there is not one objective person, and I'm one of them, right? And so they all have points of view, experiences, history and they all come from different professions and skills. So they came down with certain kinds of proposals, okay? One person assumes we should have, you know, a college that serves all the places that don' have a certified college. That comes out of 16 years professional experience that person had. Okay?

So I give it to you. He gave it to you in the paper. I give it to you as a question. Do you agree or disagree with him? That's it. That's how it all came down, and it's not your ideas we're testing on this. We are

beginning the conference by testing the ideas of the people who prepared papers for you to consider, that's all. And now you can take it and do anything you want with it, really.

MR. PILLIFANT: I just wondered if you took it, Mike?

MR. ROWAN: No, I didn't.

MR. ECKHOLM: All of those who have serious problems with the poll and would like to go on record that the poll is not valid and they do not want it to be part of the record raise their hands. Keep your hands up, please.

Okay, all those who think that it was all right and it has some value and that they would like to not squash it but have it considered for whatever its merit it, raise your hands. Have I framed that question right? Does anybody want to reframe the question for me?

MR. ROWAN: I think they would be in favor of both those things. It's an either or question.

MR. NASKE: It was poorly framed.

MR. ECKHOLM: We've got 16 people who have got problems with it. We'll report it.

MR. NASKE: Instead of writing a critique of each paper.

MR. ROWAN: Can I ask another question just as a research thing, because I'm a volunteer here and I'm interested in how you do things and how you think. How many people read the white papers?

MR. SELBEN: Could you please ask how many got them in time to read them?

MR. ROWAN: that's a different kind of measurement. I'm interested in that because that's a minority here. And so this questionnaire is much more difficult to deal with since it's drawn from those papers for other people.

MR. HARVEY SAMUELSON: I think a lot of people are like me. They were promised very faithfully the stuff would be shipped to me and I never got no information until 9:00 o'clock this morning.

THE MODERATOR: Let's table this for the time being.

MR. ROWAN: Put the postage system on the agenda.

THE MODERATOR: Eric and I have had a chance to talk about how this might go together, this discussion we're going to have now, for a couple of days. And I'm throwing it out to you to see what you think of it.

I would be the guy who recognizes speakers, and I would be the guy who probably indicates that somebody is talking to too much, you know; that kind of thing.

Eric would write down generally what he hears you say about what you think a recommendation should be, et cetera.

Then he will get back to you and say, "Is that really what the group thinks?"

Maybe we'll want to go to votes, I don't know,

formal votes, but maybe we don't.

But, at any rate, what we want is a general feeling after this discussion on a particular point; what it is you want me to say when I go back to the general assembly. And Eric will be that guy that will record that.

And then he'll be, of course, chiming in trying to get agreement from the group as to what they really want to say about any particular issue.

Does that sound okay?

I want you all to know, I was here ten years ago, and it's going to be difficult in that everybody wants to say something and everybody has the right to say it, and everybody is going to say it, which means that everybody has got to be careful on the time they take. And I'll guarantee emotions are going to rise and you're going to want to say what you want to say. We can stay here as long as you want. We can stay evenings. I guess the message I'm trying to tell you is you're going to say what you want to say.

This is a terribly unfortunate room, I think. Can you people hear way over here when somebody is talking here?

MS. JENNINGS: Not easily.

THE MODERATOR: People better be aware of that, too.

Any comments on what I just said?

MR. PILLIFANT: I would only comment that I suspect that we'll probably come down and have to take votes on things. Because that's what we did the first time. And it seems at least you have a definite priority set by the democratic system.

MS. SHROYER: I also think if the votes are close and it isn't a controversial issue, a minority type of report would also be advisable.

THE MODERATOR: I think Eric mentioned that.

MR. SEIFERT: I very apprehensively suggest you might consider the use of Robert's Rules to formalize the process. I know it's kind of an un-Alaskan approach to things, but it be a certain rule for order, you can rule people out of order, and whatever, on time. And it allows any questions raised if you keep it orderly.

THE MODERATOR: I did bring a copy of the State Uniform Rules and stuff like that.

MR. ECKHOLM: I think Jack can handle it. If it begins to be a problem, he can tighten down the screws. If not, he can loosen it up.

THE MODERATOR: You're right. I think the order of recognition is very important. If people can help me on that, you raise your hand and I say okay. We'll just work it that way.

MR. POMEROY: The matter of the minority report was

mentioned. I recall from ten years ago that we came up against that sort of a thing and we found that we had something that was unmanageable that was going to take too much time. And in our conclusions, we said this was not a unanimous report, or some simple little thing like that took place. And I don't think we dare get into a matter of going so far as to have two different reports.

MR. ECKHOLM: We could list on the recommendation areas of strong disagreement point by point.

MR. POMEROY: Yes. Just so that it's noted. But I suggest we keep that in control pretty carefully.

THE MODERATOR: Does that sound right so far?

One other rule they had ten years ago was that legislators could not speak. And I thought it was beautiful.

I think there will be some legislators drifting in and out. That is the rule and I will try to enforce that, particularly if they start talking a lot. I don't think they will.

MS. SHROYER: I was asking legislators on points of information instead of speaking opinions, just what are the facts, and maybe they can list those.

MR. ECKHOLM: Sort of like the children, don't speak unless spoken to.

THE MODERATOR: What do you think about voting, now?

I assume you're talking about delegates with badges on to vote, if we get that narrow, you know.

As far as people speaking, if they're not a delegate, I'm going to throw that out to you. If somebody wants to talk a lot, or talk, I'm going to ask you is it all right. Is that fair?

MR. SEIFERT: "You," meaning the delegates?

THE MODERATOR: "You," being the delegates. And I don't think it will come up, but it might. Somebody might want to take too much time. We want to let people talk, but, on the other hand --

MR. ECKHOLM: Please identify yourself when you're talking, for the court stenographer.

MS. RICHCREEK: I think somewhere in the book it says those could speak after everyone else finished, if there was time.

THE MODERATOR: Okay. Whatever. Thank you.

MS. JONES: I'm not a delegate, but I would like to bring to your attention one thing, that the newspaper solicited papers from citizens. And I took the time to prepare a paper and took a day off from my work to come down here. And I believe that there are people like myself who have prepared papers who we hope you will be able to consider, because we were not included in the manuscripts which you have reached. But they have printed four copies

and are in the four copies which you may receive.

But, as just a plain, ordinary citizen, I feel that because what I have to say I feel is important enough to write a paper about it, I would like to have the opportunity to at least rise to defend my paper.

MR. ECKHOLM: What area is your paper on?

MS. JONES: On the Alaska Bar Association.

THE MODERATOR: Thank you. Yes, sir.

MR. PEQUERO: As a member of the public, I agree to what you said. And I think that persons just should take at the most five minutes for their position on a topic, or three minutes. I think that a person can resume what they're going to say in three minutes, and then everybody will have enough time to approach what they want to approach and also how they want to approach. I also took a lot of my time to write a paper as a member of the public. And I don't see why I just should be left out if there is any time.

THE MODERATOR: Yes.

MR. PERDUE: Mr. Moderator, I think the people are entitled to -- I don't think that there's a question of whether the delegate should accept them or not, because the State did put out an advertisement for public opinion. And I think we owe them their right to three minutes or five minutes.

MR. JONES: You have a paper presented by Mr. Wagstaff, Mr. Gross, both who will be very favorable about the bar association in Alaska. And I have taken the time to say that I believe that the Bar Association has problems which should be addressed by this State. And they have their papers printed. You will be able to read them, unless you take the time to read mine, which I doubt you will time type, you'll have no idea except what Mr. Gross and Mr. Wagstaff says is the situation.

THE MODERATOR: Thank you.

MS. SCHIRMER: I feel very upset that the papers that had been presented by people who were not specifically commissioned have not been made available to us.

MR. ECKHOLM: They are trying to be made available. The supplement came out today. What we've got here, we've got these packages here of Xerox things that we got in just lately. We could only Xerox them. These are papers from a Marilyn Dudley Rowley, William Hunt, Claus Naske, Ronald Inouye, LaMar Gray, Thor Brant-Ericksen, J. B. Barry,. There's about 10 or 15 people, Joe Vogler, about a number of items. We have these papers here. I don't know what arrangements have been made. So I leave it up to the group to determine how to distribute these three copies that we've got around for your perusal.

MS. PALMQUIST: Well, in the brochures that were sent

out to us and the announcement that we were delegates, we were promised copies of those papers at the beginning of this conference.

MR. ECKHOLM: The white papers were the only ones that were brought in in time to be printed, typeset and printed. The supplement was finished at 10:30 this morning, which were the ones that came in after that. These papers didn't get in in time to be printed. And I've got Xerox copies here.

MS. PALMQUIST: Are there Xerox copies for each one of us that wants one?

MR. ECKHOLM: I've got a total of three copies. If there's time to print them up in a nice little booklet, or not, I don't know.

MS. PALMQUIST: Couldn't we get Xerox copies?

MR. ECKHOLM: There won't be enough to give one to everybody that wants one.

MS. RICHCREEK: I was going to ask, is it too big a thing to go down to a Xerox office and run them off?

MR. ECKHOLM: I'll try and see what I can do about it, yes, ma'am. I'll try. Printing them is better than Xeroxing. There's about 300 or 400 pages.

MS. PALMQUIST: All of the list of names which you listed submitted papers have quite a bit of background and knowledge. And they will be benefit to us.

MR. ECKHOLM: That was as many as they could do in the last couple of days. So there was an attempt to get what we could to you. After that, I'll try and get as many as I can Xeroxed. I've got these that we should be passing around looking at.

MS. PALMQUIST: I'd like to have one right now.

MR. POMEROY: You have a program. I think we're going to be short of time at best. It seems to me a fine thing if the managers of the program invited citizens to write in. But I think it has to be treated as citizens having written in and have that material taken into account in connection with the whole program before it's finished. But we would be here for two weeks if we tried to have a discussion of every presentation of every citizen that has written in.

MR. ECKHOLM: What I'll do is I'll keep ahold of one copy that I won't send out. And I'll get a Xerox of the titles. And if you have a specific desire on a title of paper and you want to read it, come and get one from me. Besides that I'll be circulating the other two for now. Ward has gone to see if we can get more copies made. I'll get titles made, and you can see what you want. And we'll do with what we've got for now.

MS. SIMONDS: I remember ten years ago, to take care of a similar situation, there were a lot of handouts on the tables that the delegates could pass by. And they took one

and they read them at their leisure during the conference to get information. So I think the information might come out in that kind of discussion rather than having everyone present a paper.

THE MODERATOR: There are some sources of information which Eric and the staff have accumulated that may help us. And I think if Eric would describe what they are, and we can decide how, if at all, we want to use them.

MR. ECKHOLM: When it's appropriate, if you want, we brought down, I've got some constitutions, I've got some short forms of the budget from last year just so we have general categories. We've got some short video tapes of the white paper authors summarizing their white papers. We have the Bluebook, did I mention that?

Besides that, I think more important we've got a lot of very experienced people around this conference. So if you can dispatch us to go find somebody to come talk to you, we'll do that as you request. Detailed resource information I think might just slow down the process if we get too specific. But if you need anything, we'll scramble and get it, to the best of our ability. Those are the basic resources we have.

And I'll try and get all those papers Xeroxed for you of all the citizens. We're trying to get them out in time and I promise you'll get a chance to look at them

before the end of the conference.

THE MODERATOR: I have a few minutes before 12:00. Is 12:00 when we break?

MR. ECKHOLM: Our schedule, according to the schedule here, we've got until 1:00 P.M., it says, for lunch. I don't think there is any scheduled luncheon or anything. So the way I read it, we've got the rest of this day as this group to get down to business and to discuss basically finances, what's on the agenda, if that's what you want to do. If you want to go into other things, that's fine, too.

We can break for lunch now, we can wait for an hour and get into it for an hour. I sort of would like to keep going and identify a philosophical statement, sort of like what's the biggest problem you feel that's facing the State today, or to come up with kind of a tone for our group, as per your suggestion.

MR. HARTLE: Could we take a five-minute break and come back for an hour? That's my suggestion.

THE MODERATOR: What's your pleasure, people?

MR. PERDUE: My stomach says it's hungry. Move that we take a break.

THE MODERATOR: For lunch?

MR. PERDUE: For lunch.

THE MODERATOR: Are you saying there's a lunch?

MR. REAVES: Yes, there is. That's what it says here.

MR. ECKHOLM: No arrangements. So it's up to us to decide. We can change that, if we want.

MS. PORTER: I'd like to consider maybe a five-minute break, but I'd like to return at 1:00 o'clock as scheduled.

MR. SEIFERT: Could I have a matter of clarification? Is there not a formal lunch?

MR. ECKHOLM: No, there is not a formal lunch.

MR. SEIFERT: That's certain.

THE MODERATOR: You've heard the motion to break for five or ten minutes and then come back and go to lunch. Is there discussion?

MR. SEIFERT: I'll second that.

THE MODERATOR: Any discussion?

MS. PALMQUIST: Some of us have commitments of program lunches that take place at 12:00 o'clock.

THE MODERATOR: I'm sorry, Rose. Program lunches?

MS. PALMQUIST: There are lunches around town by organizations that have a program of interest to us.

THE MODERATOR: Is there further discussion on the motion to break for five to ten minutes only?

MR. POMEROY: Unanimous consent.

THE MODERATOR: I have, but Rosie has just objected. So I'll just say is that generally what people want to do? Okay. Let's take a break for ten minutes, no more.

(The proceedings recessed at 12:03 P.M. and

reconvened at 12:25 P.M.)

THE MODERATOR: It's hard to tell if we're all here, but I don't know if we can wait for everyone.

MR. POMEROY: No. We got to go.

THE MODERATOR: We've got about a half an hour before our lunch break.

Perhaps we could start this way, just simply talking about what we see in terms of the goals or the problems. in other words, we're here to come up with recommendations as to what we want Alaska to be in the next 10 years, 20 years, 30 years. These gentlemen over here suggested that we talk about goals or the problems we now see in the State.

How does that sound? Start with that instead of trying to get to the solutions right away. Okay?

Who wants to start?

MR. SEIFERT: I have a recommendation for a policy goal that comes from several years of evolution that have recently been more clearly articulated by several events, particularly the recent first Alaska Alternative Energy Conference in Anchorage. And in conversations here, I've experienced further support for the idea that I'm going to present.

And that idea is -- perhaps it would be best if I just read what I have written down here.

THE MODERATOR: Would you give your name, first.

MR. SEIFERT: I'm sorry. My name is Mr. Richard Seifert.

It is recommended that a policy goal be established for the State of Alaska to achieve near complete self-sufficiency in energy, food production and other human needs. It is further recommended that this goal can be best accomplished through renewable energy and renewable natural resource development, education to develop our human resources and development of Alaska's local food production potential.

I submit that this has been of a grass-roots mandate that I've become aware of through my involvement in that conference I previously mentioned. And I think there are many other organizations and perceptions of this problem. They may not be articulated the same way, but I think the general common denominator of this approach, the idea of self-sufficiency is very, very keen on people's minds right now because of the vulnerabilities they see. Presently the way our system works, our 97-percent imported foods, our 75-percent imported fuels, even though we have natural active fuels here, we don't refine them here.

This whole process of undermining the economy of rural Alaska by fuel costs and transportation problems all integrate together to point to a further goal of

self-sufficiency as at least a partial and general solution of that problem. And coupled with that is a self-sufficiency in food.

I submit that as a goal to consider for this group.

THE MODERATOR: Harold?

MR. POMEROY: Self-sufficiency in energy and in food and in what else?

MR. SEIFERT: Food production. And I say other human needs. That's a very -- I've left that quite open and general. It may be articulated further in another goal statement and eliminated from this one. But I should say that I have lifted this goal statement from a another person's publication for the Alaska Council on Science and Technology. They are also very keenly interested in proposing this as a goal for their undertakings. And I am articulating that because that group is meeting today somewhere else and they can't have a representative here at the same time.

So I do concede that although this is fundamentally my own perception and statement, it is also the statement of someone else.

MR. REAVES: Do you also have recommendations for meeting this goal?

MR. SEIFERT: I could be considerably detailed in how

I would do that. I think that remains to be discussed.

MR. REAVES: Well, I think perhaps you should lead it off and give us some of your ideas.

THE MODERATOR: Excuse me, but maybe in the limited time we have, should we introduce more problem areas? I'm throwing that out. I don't mean to cut you off. What do I think?

MR. MORGAN: May I go back to something more general?

THE MODERATOR: Okay.

MR. MORGAN: This is one area. We all have, over and over over again here, an Alaskan life style, which is something we must defend at all costs.

What is going to ensure that your future is what you want it to be? And I think I would like to be more independent. I would like to be, as an Alaskan, more self-sufficient and self-reliant. I would like to be less dependent on the capriciousness of transportation systems, international incidents, and so forth.

In other words, I think maybe what we should be concerned with are what actions must occur, what recommendations can we make at this conference to ensure a much more stable -- in other words, the happy situation that we're in at this point is unique to all of us, none of the other 49 states have all the money they want to play with to solve their problems. Time is of the essence in

that we have a certain period of time to make these decisions as to the proper courses. And I think, regarding the statement that Mr. Seifert made, self-sufficiency in food, a close look at renewable resource use, these types of things.

THE MODERATOR: Would you tell her who you are again? Would everyone say their name again.

MR. MORGAN: I'm Morris Morgan.

THE MODERATOR: I hear both of you say self-sufficiency is the greatest need in the State of Alaska. Does everyone agree with that?

MR. NASKE: I certainly don't. I think in the 13 we colonies tried to create some sort of interdependence and a feeling of belonging together, a feeling that all of us were Americans. And yet what I hear is that we are somehow an island, independent island somehow, of trying to achieve that type of situation. And I think that's insanity. I mean, we are part of the United States. We are the 49th State. And there are many others. The system of this interdependence has developed over many years.

THE MODERATOR: I think you should respond to that.

MR. SEIFERT: I would definitely like to respond to that.

I think what I'm going to say bears really close scrutiny. And I think you are in some guises

misinterpreting what I'm saying. Self-reliance from a physical point of view is what I'm talking about. I think there are many, many people in the lower 48 states who would articulate this very same concern, that have the same vulnerabilities to fuel supplies. I mean, the United States imports 54 percent of its fuel. I'm not saying this is a uniquely Alaskan problem. There is no reason to assume that this is a decisive attempt. I certainly do not intend it to be a decisive attempt? It allows you to not be subject to the whims and - what's the word I'm looking for - intimidations of world political situations, of situations which we presently do not have control over.

I'm talking about individual control over individual lives. That doesn't have to be decisive. It allows you to be freer to express your individual needs, to express your individual interdependency from a more human point of view without being under duress to do so. I think it's closer to a more perfect union that we have now. I'm not talking about something in any way that is intended to be separate activity or isolationist.

MR. POMEROY: As to food, I think no one could quarrel with what the gentleman has said about achieving self-sufficiency if he is talking about doing whatever we can as a community to facilitate and assist and encourage those who want to live a subsistence life style or whatever

you call it, where they produce most of their food.

But I do find a great deal of trouble with the broad suggestion that we become independent with respect to food because you run into economic limitations we have and that we cannot overcome unless we simply want to subsidies ourselves. We have examples right here in Anchorage. There are two dairies that had to quit producing certain items here because it cost $28 an hour for labor to produce the products here, and they could be imported cheaper outside where the labor is $16 an hour.

And I use that feature of it to identify one of the greatest disadvantages we have in self-sufficiency, and that is we are the highest cost area for labor in the United States.

We have a, company that produces eggs, and they are good eggs. They are no better than the eggs that come in and are sold by Safeway. And they cost 57 cents a dozen more.

THE MODERATOR: That's all right. You will agree that it's a desirable thing for the State to be more self-reliant?

MR. POMEROY: For us to do what can be done consisting of your economic disadvantages because we should not attempt to subsidize ourselves with food. We shouldn't support a price of 57 cents a dozen so that somebody could

have the privilege of producing eggs here, is what I'm saying.

MR. MOREHOUSE: You assume prices are translated to the grocery shelves in the State. We will find that the competitiveness of things produced in the State of Alaska will take on a little better look.

MR. ECKHOLM: Are we talking about specifically food in terms of self-sufficiency? Would that be a recommendation?

MR. SEIFERT: I would like to say that I think one of the perceptions, and I reiterate what I said earlier, is there is a difference between self-sufficiency and independence. They are conceptually very different to me, and I think there's a confusion about what we're talking about. We're talking about self-sufficiency, not independent.

MR. ECKHOLM: You're not dealing with us and the relationship with the federal government.

MR. SEIFERT: Political reality is being independent, but I'm not talking about an effort to make Alaska independent per se in a political sense. I'm talking about a physical sense making it more self-reliant. I didn't say totally self-reliant. I said near complete self-sufficiency.

THE MODERATOR: This gentleman, and then Lois.

MR. PADLOCK: Back in January or February of 1973, I had the privilege of being associated with the legislature down there as a lobbyist and I enjoyed attending some of the briefings that the legislators see. There at that time I remember the legislature's consultants firm of Lipon & Leavy came in and spoke to the legislature and made some very fascinating predictions about what was going to take place in our country as a whole related to our consumption of energy from the oil producing nations of the far east. That was six years ago. Their predictions came through just letter for letter right down the line.

I saw Mr. Leavy in the hotel here yesterday and early this morning. And I'm wondering if perhaps his presence here was related to this get together. I was hoping that if it were perhaps we'd have an opportunity of hearing from him again because listening to what -- no. Mr. Lipton was here. Listening to what Mr. Leavy said back in 1973 was practically like reading from the gospel, I'll tell you. Because he told it like it is. And many of our concerns that we're articulating here today and are reflected in all these papers relate to events which we individually have little control over. But perhaps as a state, in view of our oil independence, we might have some future control over these events. And I think that anything we do is going to be related very highly to how

well we are informed. Are we going to be informed by him, by chance?

THE MODERATOR: He is in town, and he said he will be available.

MR. ECKHOLM: He is here specifically for this.

THE MODERATOR: is he scheduled to speak to the group?

MR. ECKHOLM: I talked to him yesterday and asked if he could be around for resources. I didn't give him a specific hour.

MR. McGINNIS: I understand, if I remember correctly, he will be addressing the World Council Affairs lunch tomorrow.

THE MODERATOR: We'll get him in and talk to us tomorrow.

MR. ECKHOLM: We'll try. We're scheduled for Resources Friday morning at 9:00 A.M., and we'll and get him then.

MR. PADDOCK: I would think everybody, not just this group, would certainly benefit by whatever he may have to say because these people spend all their time and a great amount of energy and effort into figuring futures, which is essentially what we're doing here.

THE MODERATOR: The future is big, I can assure you. The money, as Russ said, the surplus is upon us. And it's going to last at least another eight to ten years. Lois?

MR. PILLIFANT: I was just going to clarify. What Richard was saying, I think, was in view of what's happening right now in the world in energy and the rest of it, what happens to Alaskans if they can't feed themselves. And what's wrong with subsidizing agriculture like the barley project, for instance, at least so we could have the bare minimum of food at least. And maybe that's a gloomier doom type approach, but it's possible that this could happen to us.

When you say that we don't want to cut ourselves off from the rest of the 48, we don't. But up here we have a different problem than they do down there. If something happens to them, they can go out and throw some seeds out and grow a few carrots, but I don't think they can. When you're talking about self-sufficiency, you're talking about that sort of thing?

MR. SEIBERT: I think that's very much the case.

MS. STRASSBURG: I cannot see where we can be self-sufficient in Alaska until, or we cannot have a totally integrated economic, cultural and environmental situation without a better job climate. We must encourage jobs in the private sector. We can't have a viable economy if we have 90 percent of the people in our State who are government workers with Ph. D.'s. We need architects and designers to design our buildings, but we also need

qualified electricians, carpenters and plumbers who are proud of their ability to build those buildings.

We need to develop a method to use the knowledge and experience of our older citizens for pay. And we should set this up so that this does not influence anything that they now get as pensions. These people have hundreds and hundreds and hundreds of years of experience in this State. My own husband has 40 years of electrical experience in the State of Alaska. He is now retired and it's a shame that the State is losing his ability and his experience. This is a total waste of a resource that we ought to tap.

The people in these positions could be used in the context of the old WPA projects where experienced people were used to teach everything from learning how to play a guitar for your own enjoyment to learning how to preserve your food, how to raise a garden, how to start a business of your own.

A lot of you are old enough and some of you aren't to remember that these programs were very, very good. And we need the development of good technical schools. And we need them in other places besides sewer. We need maybe a small one in Nome, we need a large one in the valley. We need one in southeastern.

Along with this, what Mr. Merdes was saying, we

do also need to have our colleges come up with programs that will not only interest potential students, but will fulfill the needs that they will see in the future. I think these are important.

But we must have jobs.

In the valley right now, they're saying that the unemployment is 16 percent. That's a very false look at the employment in the valley. That is people who are registered in the employment office or are receiving unemployment payments. Those payments for many, many people have long ago run out. There are many people who haven't been able to receive unemployment benefits for over a year. This is a tragic situation. It's one of the reasons why we are having such a rash of crime and vandalism and burglaries also in the valley. These people have to eat and there is no place for them to go. So we must have jobs and we must have jobs that last more than six months at a time.

MS. PORTER: Rather than see a policy goal that says the State of Alaska should achieve self sufficiency, I think we should realize here that, whether we like it or not, we are local citizens. Whatever happens in Africa or the Middle East is going to affect us. The world has shrunk. There is no getting back to being isolated. We are not an island and we're going to have to live with it.

And we're going to have to be concerned about what happens in the nation and what happens in the world. And maybe that's going to be our only salvation. There are only a few of us and it's difficult to make our opinions felt outside, but we are global citizens and we're always going to have that situation here.

I am not opposed to subsidiary goals and seeing us increase food production or increase agriculture or the raising of animals, the making of oil deals that might cushion us from for a while when a real emergency does arise. I know the State can do that. There should be some kind of reserve for the State or perhaps some discount for Alaska residents. It's oil that's being refined elsewhere. The real freedom for Alaska is going to come in the form of economic freedom, when all of our people have jobs and can afford the goods and services that they need to survive.

MS. SHROYER: Going back to education, I believe that our educational and vocational trade schools should be upgraded and brought in so that we do have skilled Alaskans to work for our industries instead of having to bring in the skill from outside.

But although we will need some type of government subsidy to begin these things, I believe the private sector and private monies should be integrated so that we get out of dependence on government and government monies. I think

the private sector should be the ones in economic control.

MR. ECKHOLM: We're sort of getting off the initial discussion about physical self-sufficiency. Could we kind of go back and go over that and decide whether or not the group thinks that's a desirable goal or not?

MR. POMEROY: I think I can come right back to that. At least half of what Richard is suggesting, the self-sufficiency in energy, we have a great potential in hydroelectric power and we know that the cost of energy is going up the world over and we're not going to be immune from it here. And there probably is no better place that we could invest some of our oil earnings than in developing energy. And when we develop energy then, it will put us in a pretty good position with respect to some economic activities. And that, then, leads to the employment that the person on my left spoke of.

And I would have no trouble at all, Richard, in something in that direction. How about that?

THE MODERATOR: But let's talk about energy in this State and self-reliance.

Are we talking the same language here? Is the energy problem in Anchorage the same as in Bethel? I mean --

MS. JONES: No.

THE MODERATOR: Can we be self-reliant in Anchorage

and not in Bethel? I haven't heard anybody talk about the State other than sort of a very big blob.

MR. MORGAN: May I say something about the villagers. We are now in the process of producing foods locally in the villages. The villagers have asked for, and received, some help in village gardening to produce food locally. They're further at the end of the chain of supply and many stores there's a food scarcity. And in all cases there are insufficient nutrients in the villages.

The situation in the village might be reckoned or compared to the situation of the State. The villagers are interested in becoming more self-reliant and self-sufficient because they want to remain in the villages. They want to remain as much like they are as they can without making drastic changes and going to work in a factory 8:00 to 5:00 situation. This is one way they feel they can do this.

Regarding the total situation for the State and the fact that I feel nervous about our susceptibility to world events and so forth is a purely physical thing. I'm a glutton, so therefore I want to be sure I have food. Regarding the stance we are not an island, certainly we are a strategic outpost of the contiguous United States. We are strategically important. If we starved in a month's time, we are of no use to the United States. The only way

the Soviet Union civil defense exceeds us is in the fact that they've made provisions that their citizens won't starve as fast as our citizens. That's the secret that they hold over us probably exceeds in importance the nuclear missiles and so forth.

So I make a plea for not only Alaska to be more sufficient in food, I make a plea for the United States to be more sufficient in food.

I would make a plea for every human to make that adjustment, to try to be self-sufficient, because we are in line for some very real shocks.

I sound like a doomseer. I'm sorry. I reached the age where I can sound like that.

But from the standpoint of national defense, admitting, certainly, we are not an island. I want to survive more than the time that Safeway can feed me.

Thank you.

MR. HARVEY SAMUELSON: I'm Harvey Samuelson. I was President of Bristol Bay Corporation. What I would like to see on the energy deal on looking for oil is the State push for little topping plants so that they could be produced right there in the local areas.

Now, we have one trouble. No matter how much oil we find in Bristol Bay, we can't get over to deep water ports. All the deep water ports, President Carter, with a

stroke of a pen -- I'll get on the map here a little bit.

We got a lot of potential oil in this area. But we can't get to deep water ports down here. Bristol Bay is awful shallow. This is virtually all no man's land. With a stroke of a pen, President Carter made sure that we can't get through.

So we need some access all the way from up here down here. If we built this Western Corridor, there is no way to get to a deep water port.

THE MODERATOR: Is your idea of topping plants so you can use the fuel right there?

MR. HARVEY SAMUELSON: Yes.

THE MODERATOR: And of course employ people, I assume.

MR. HARVEY SAMUELSON: When I negotiated with oil companies, they told me that they can put up a plant that will come in a little askew and be pulled off with a tractor where they can produce 15,000 barrels a day with a little unit like that. It will be made and pulled to shore.

THE MODERATOR: Where would the oil --

MR. POMEROY: Where would the oil come from, Mr. Chairman? Where would the oil come from?

MR. HARVEY SAMUELSON: Up in here. Over here. There's oil never discovered. There's one discovered up at Nome they can put one in for Nome.

MR. POMEROY: Thoroughly practical.

MS. RICHCREEK: I would like to speak to the transportation. We would need transportation either by road or maybe even the railroad.

Whether it be for the use of energy, jobs, agriculture, communications, or whatever, we're going to need transportation.

THE MODERATOR: One of the questions on that Mike Rowan thing was do you favor any particular type of transportation.

MS. RICHCREEK: In the State of Alaska, I think it's impossible to have a specific.

MR. POMEROY: How about the major subject of Richard's?

MR. SEIFERT: I'd like to speak further on several things I think I could raise more clearly.

Energy self-sufficiency is so much more fundamental than a lot of other approaches you can take to a problem. It's been pointed out, Mr. Pomeroy pointed out something that I think should be restated. That is that, having energy of whatever source that is under your own control from within the State, be it renewable or nonrenewable, provides a common denominator of economics which allows you to have economic control over that. From this, as a common denominator substance, from my own personal perception, energy is more valuable than dollars, because you can do things with energy you can't do with

dollars. That's why I'm fundamentally religious about this whole prospect.

I think energy has much more significance to our economic system than most people are presently aware of. That is the reason I take this approach from the energy point of view. Because I think in fact our security rests more in the types and developments and control over energy than it does over control of economics. From the energy development will come the jobs. But if you look at the way our economy works, in essence, many more economists even are taking this approach, the idea of how energy and physical systems work to control economics. I State that for what it's worth. As another point in support of why I feel it's important to approach the idea from energy self-sufficiency because I think so many other things are tied to that directly, that it, being a prime force, would tend to drag us in that direction, if nothing else, but at least lead the way.

THE MODERATOR: Would you agree that Alaska is rich in fossil fuels, hydroelectric, coal? We've got them all. We're just abundant in energy.

MR. SEIFERT: I would more than agree. I would say we can provide for ourselves in any choice we make. I have personal preferences to that which Point Barrow advance to this argument.

The reason I think is important to keep in mind is we do have, I think, a larger cushion. The only thing we have this money situation is because we have the energy situation. The two are implicit in one another. We have the energy situation. I think it's important we have the wealth, both renewable and nonrenewable. We have a cushion. We can therefore decide from a much less emergency point of view which direction we choose to take.

I just think we have the cushion of nonrenewable. If we choose to go towards a renewable future, we have a lot more margin than other places.

MR. ECKHOLM: Would you say that's much more important than agriculture sufficiency?

MR. SEIFERT: No. I don't think it's more fundamental. Human energy requires food. The physics, whole process are implicit in food. We need those calories. We can't function without it. Without food, there's no use having hydroelectric dam if we all die.

MR. ECKHOLM: If we had a choice of what to spend our current oil-based money on, would you rather spend money to develop an agriculture base or to develop energy sources around the State other than oil?

MR. SEIFERT: I would choose not to separate those two.

MR. POMERCY: They are not mutually exclusive.

MR. SEIFERT: And should not be considered mutually

exclusive.

MR. ECKHOLM: If you had a dollar to spend on each of them, would you spend 50 cents on each?

MR. SEIFERT: I can't answer that.

MR. ECKHOLM: Somebody is going to have to answer that. The State legislature has so many billion dollars.

MR. SEIFERT: I don't propose to answer the question.

MR. SCHIRMER: I see, you know, a lot of things have been said that I'd like to kind of comment. One is I think when you're talking about making sure that people have a satisfactory economy, it doesn't necessarily mean job paid for service. It may be a job where -- it may be an economy based on their own activity that they sell to in the form of materials or something. But rather the economy is more than just a number of jobs.

And I think strongly that if we can develop our self-sufficiency in energy with hydroelectric or geothermal or whatever form, then we will be in a position where our cost to produce things are relatively lower in 15 years from now than people who were dependent on other forms of energy. So we will become much more likely to be able to do our own agriculture things, our agriculture products will begin to cost less compared to other people.

And I think, really, the energy thing is basic. And if somebody asked me the question you just asked, I'd

say sure, if you had a dollar to divide between energy and agriculture at the moment, I'd say 20 percent agriculture, 80 percent energy. Because I think the agriculture will come if we can get the energy, but not vice versa.

THE MODERATOR: It's about time, I think, to break for lunch.

You've all heard the self-sufficiency. I heard a word used twice, though, that I think is going to come up in the next three days, and that's subsidize. If we're talking priorities, are we going to end up talking some are going to be subsidized?

MR. PILLIFANT: Well, it's our money, we ought to be able to.

MR. HARTLE: As I understood the discussion that we are to have during this period was to more or less outline our goals and problems that we see rather than, at this point in the conference, come up with our recommendations for solutions. So that subsidize and so forth, those are questions that may come up later, and certainly will.

THE MODERATOR: You're absolutely right. I just thought I'd get my own personal word in there. Jerry?

MR. McCUTCHEN: If you're going discuss agriculture and you think it's an important thing for Alaska, then you better also discuss quality control because that's why we do not have a better agricultural base than we do. We lack

quality control. If you go down Anchorage, you look at potatoes that come from Matanuska Valley, you stand two-thirds of them spoiled, and people won't buy them. If you don't get quality control, there's no sense in putting money in agriculture.

Our big problems with fisheries are the lack of control. We've got a bumper grade of fish on the market. And we've been told so internationally. So until we decide to do a quality job, we better forget to do everything else. Stick to energy.

MS. PILLIFANT: The State is beginning to address that, the quality control, at least in the salmon industry. So they started to address that problem. And I was just going to mention fisheries a little while ago.

MR. McCUTCHEN: The quality control coming over of the Matanuska Valley. Is very poor. The military demands the quality to the military is different than others. The last bag I got was Nordic Farms.

THE MODERATOR: Don't get on agriculture. You'll have a crack at it later.

We have a choice after lunch. We can come back and finish this problem goals, problem attitude toward Alaska, or we can take this recommended finances this afternoon. What do you think?

MR. POMERCY: What is it?

THE MODERATOR: What do you have in mind in finance?

MR. ECKHOLM: The biggest question I see facing the State immediately is what we have now in a cash boom. We don't have an oil boom or energy boom. In the next ten to 30 years, the government is going to have hundreds of billions of dollars to invest. How that's invested and how that's used will make a profound difference on our future. And there are some very important choices that are going to have to be made this next year on how that money is used. Is it used to stimulate the current poor economy? Is it stuck away from Alaska so that we don't increase the population and we don't then have greater demands when the oils run out? Do we use it to stimulate housing, stimulate bottom fishing? Do we use it to build energy or do we decide that oil in the ground is a better investment than money in the hand and not develop any more oil? Those sorts of questions.

MR. POMEROY: Mr. Chairman, I suggest the sooner we see what can be brought to us about finance, about money, the better. Because we can hardly discuss any goal without in the background are you talking about subsidizing it, or are you talking about something else. So I'd suggest we go ahead with that and then come back to those others things.

MS. PORTER: I was going to suggest, if we had six days, we can spend three on goals and three on topics.

Since we only have three days, I for one would like to get on the topics. But the goal is fascinating.

THE MODERATOR: The you mean the only problem Alaska has is we have too much money?

MR. HASKE: I think as a parting shot I think is a sense of community I see lacking throughout the State. You know, you compared, for instance, during the 1950's when there was a cause that united people no matter where they lived. That hasn't been the case in the last 20 years. We've been all pulling in different directions. I think that is regrettable. I don't know what to do about it. But it is a fact of life.

MR. POMEROY: I was just going say finally, we should not write down Richard's and his associate's suggestions as being down to specific issues. They're big. I attended a conference on village gardens and it isn't village gardens, it's individuals learning to garden to improve their diet. And it's an enormously big thing having to do with quality of life on a whole lot of things.

So I would say that there's a subject we should not think of it as just some very specific issue.

THE MODERATOR: What's your feeling, then? When we come back, we talk about finance? Money?

MR. POMEROY: Let's get that out of the way.

THE MODERATOR: Do we need any help on that?

MR. ECKHOLM: I asked Belden Daniels, if he had the time, to please try and be here sometime this afternoon. He's a Harvard economist of extreme intelligence and has been working with the State developing things. He said he's real busy. He said 2:00 o'clock. I hope he is. If any of you know people who have expertise in the state's financial picture, please bring them or bring whatever resources you can use.

THE MODERATOR: When do we meet, now?

MR. ECKHOLM: I said Belden at 2:00. It's a quarter after 1:00. Is that all right?

MR. POMEROY: Sure.

(The proceedings adjourned at 1:15 P.M. for lunch and reconvened at 2:15 P.M.)

THE MODERATOR: Maybe we ought to start.

This is not preplanned, I assure you. But you people asked to talk about finance and I just happen to have three people who know as much about finance, I guess as anyone.

I haven't even told them this. I want them to limit themselves to maybe three or four minutes at most, and then have questions from you people about it, about finance in the State. And hopefully take as long as you want, but we don't want to consume our whole afternoon. I know they're busy, too.

Of course, Representative Russ Meekins is here, and he'll probably speak last of the three. He's the Chairman of the House Finance Committee and knows the finances of the State, obviously.

Belden Daniels is a professor at Harvard in finance. He represents both the executive branch and the State legislature on matters of finance and advising to them. He's had a long, very distinguished career in finance, so I'm sure you can ask him any kind of question.

And then Tom Williams, who was in charge of petroleum revenue for the State until recently, and now he's Commissioner of Revenue for the State. So he knows a great deal about it.

I see Tom Singer there from the governor's office, who is working on finance matters.

So we'll keep this informal. I'll first ask Tom Williams, and then Belden and then Russ.

Let me just say, if people have questions while you're speaking, let's do it that way.

Excuse me. I was going to say, Tom, you talk about the financial picture of the State, and Belden will talk about the world market and where we fit, and Russ could talk about the political implications, perhaps, of our picture.

MR. WILLIAMS: This has been sprung on me at the last

minute. It's all extemporaneous, so bear with me.

Our situation now is we have a lot of money for a little while, and then it's gone, unless we do something about it.

We have in the next 18 months probably something on the order of three billion dollars gross revenues coming in, versus, what is is it, Russ?

MR. MEEKINS: 1.3.

MR. WILLIAMS: 1.3 billion or so of expenditures for ongoing State governmental activities. The difference is a lot of money. The question is, really, what do we do with that money now, because, as you know, it comes from Prudhoe Bay. Right now our current budget, the income from sustainable sources rep-esents about 25 cents on the dollar. And we need to plan for the time when petroleum is not so plentiful, even though prices will be going up. Prudhoe Bay is so huge, when it starts to go down, it will take an awful lot of discovery to take up for the slack. In the 1990's, as the production goes down and the revenues go down with it, we will start dipping into the surpluses that we are enjoying piling up and piling up during the 1980's.

I believe that we need to broaden the base of our revenues so that, when that time comes, we're not caught short. That means a combination of two efforts. One is to hold back the growth of the State government to an almost

flat level in terms of the population, have it keep step with the population and inflation but not to increase at the historic groth rates; and at the same time that we use the money that we have available, not to subsidize uneconomic projects but to facilitate the development of economic projects up here.

There's a distinction between the two that's very important to grasp. It's not enough just to create losing jobs. That's activity that is illusory. We could do that by hiring more bureaucrats. In fact, that's the classic case, stick them in Juneau and Fairbanks and somewhere else. You can see it will not be a solution to the problem. When the petroleum money that's fueling the machine starts to dry up, the machine is not able to continue to function with those extra bureaucrats. The same thing is true if you have a subsidized program going on over that same period of time. Once the grease that forms the subsidy starts drying up from Prudhoe Bay, the machinery is going to come grinding to a halt. So it's important that we facilitate sound economic development up here. I think we have a tremendous opportunity at this time to do so, to use our money wisely, to bring in more money and to allow basically the marketplace it allocate where it's best to place it.

And that's just some general comments right now, but he asked me to keep it short.

MR. DANIELS: I want to echo a number of things Tom has said. I'd first like to go back to Russ' wonderful phrase this morning, that Alaska is facing insurmountable opportunities. It's a great phrase and one that I think during all these three days we ought to have very much before us.

I'd like to put it in Chinese, if I could for a moment. The Chinese symbol for challenge is a two-part symbol, as many Chinese symbols are. There's an upper symbol and a lower symbol. The Chinese symbol for challenge is danger on the top and opportunity on the bottom. And I think that's precisely the circumstance that you face right now.

I am working all over the world at the present time. I'm doing work in Europe, I'm doing work in Egypt, I'm doing work in Indonesia, in Massachusetts, and California, and a number of places in the Lower 48, and I can say absolutely and unequivocally that the single most exciting place, the most exciting political economy on the face of the earth today in terms of both danger and opportunity, in terms of the challenge from a public policy standpoint, is Alaska. If I had to give up everything else I'm doing in the world to be able to continue to play some small part in the working through of the issues in Alaska, I would do it.

But it is scary. It is very scary. I think I'm an optimistic person. This even at 8:00 o'clock you are going to hear from probably the most optimistic person in north America, Bucky Fuller. But I would also like to introduce a little caution for a moment.

And to hold it briefly, I was asked if I would comment on things around the world. Some of you have heard these ideas before, but I think they bear repeating.

There are three diseases which other nations in the world - and I think you should be referred to as a nation - there are three diseases that other nations around the world have caught almost fatally. And I hope and I pray that Alaska does not catch any of these three diseases. Let me very quickly and briefly describe them. And they relate to things that Tom said.

The first disease is the Dutch disease. What happened about 15 years ago in the Netherlands is that the Netherlands hit it rich big in natural gas just as you have at Prudhoe Bay. And what the Dutch did was what you may do, if you're not careful. And that is what governments almost invariably do when presented with this problem: Expenditures always rise to meet revenues. And what happened in the Netherlands is that just as with Prudhoe Bay after ten years or so, that huge natural gas deposit was gone from the ground, gone forever. And all that

Netherlands had managed to do was spend all of that money without investing it in ways that created a more vital economy. And they were left with this huge social overhead and no revenues to pay for it. Very dangerous problem, for which you have an opportunity to deal with.

I'd like to know, as Russ talked about this this morning in his I think very important opening comments, that that isn't to say there aren't some very important services, some very important opportunities that you have in terms of health care and transportation and so forth that you have to face to and that you now can deal with. But it's a balancing act.

Okay. That's number one, the Dutch disease.

Number two is the British disease. And the British disease is one that you also could catch. And that is a disease where you do as the British have done, as Tom warned about. And that is that you spend your very scarce resources, and I'll come back to that. Three billion dollars in a world in which we have commercial banks in the Lower 48 with assets of 100 billion dollars is not very much money in the world, not very much money.

It seems like a lot, but it goes awfully fast. The British have spent their wealth, including their new North Sea wealth, to try and bail out and hold up failing enterprises, or to invest in enterprises that should have

never started in the beginning. It takes two times as many people in Britain to build a Leyland car as it does to build any other car on the continent, and that is misallocating very scarce resources. It's the way of saying it's the Chrysler disease. And the shorthand of it is it could be the ALPETCO disease, or other diseases like that. It could be investing in things which really aren't sound underneath. And governments have a wonderful capacity for doing that.

Okay. The third disease is the newest disease of all. It's one I look forward to and Tom and I were just talking about. It's the Alberta disease. Alberta is Canada's Alaska. You and Alberta have a lot in common and you should talk a lot, as many Alaskans did at an interesting conference of the Alberta heritage savings trust fund about two months ago in Alberta. In fact, the largest number of people from the world that were at that conference that weren't Albertans were Alaskans, and that was very exciting.

The Alberta disease is this: The Alberta disease is keeping value in that money, in the three billion dollars, if you invest it.

The Alberta Heritage Savings Trust Fund is like your permanent fund. And it has grown in three years from zero to seven billion dollars. But in fact it is shrinking fast, very fast. Let me quickly take you through this.

There's no way that, once you take the oil and natural gas of Prudhoe Bay out of the ground, that it can retain the inflation-proof value that it has in the ground over the next 20 years. Your oil and natural gas in the ground is your most inflation-proof asset you've got.

When you take it out of the ground, it's going to begin losing value immediately.

Now, what value ought it maintain? The oil companies are making a 15 percent return on investment right now. We figured in Alberta that the Alberta trust fund should do half as good as that, seven and a half percent. Let me tell you in real terms in our inflation economy the Alberta fund right now is doing zero. Although I'd like to compare these figures with Tom, and he might argue with me a bit about that, my computation of your current rates of return in real terms this year for the permanent fund is minus two percent, and for the general funds is minus five and a half percent, in real terms.

Now, if you think about these three diseases, the first disease of the Dutch is the issue of consumption. The issue of spending some of that money now. There is an important function of spending it, but you got to do it very carefully.

The second disease, the British disease, is the disease of investment. And if you're going to do that, you

have to do it well.

The third disease is the disease of savings. That is, if you're not doing it right, you must do a better job with your savings.

Now, I'm tremendously optimistic. I think that you have a remarkably young and bright and energetic legislature. And I don't say that -- I mean, I deal with them all over the world, and I think I can speak for some real authority about this. And you've got an administration willing to think hard about it, and clearly you have a citizenry that's willing to think hard about it.

And to go back to our opening comments, you have a tremendous opportunity not to suffer from any of those diseases, but to take this remarkable wealth and invest it creatively not only for this particular generation, but for generations ahead in Alaska as well.

MR. MEEKINS: Let me try to stick to information and not give you a speech here. I know you don't want that, and it shouldn't be. But I have some disagreements with some of the things that have been said, although I'm glad that these people say what they do, because we need people like that.

But last year at this time the Department of Revenue was predicting a 65 million dollar shortfall, and now they're predicting for the same period a 900 million

dollar unanticipated revenue; 900 more than we will need. There's quite a difference there.

You all know the international circumstances that have led to that. They're currently predicting about three billion to 3.9 billion to the end of the fiscal year, which ends June 31, 1981. That's the money we're talking about. There is expected surpluses for the next five or ten years, depending on how you indicate even under the Commissioner of Revenue's projections.

The reason for the disparity is, although a lot of people who have projected they didn't know Iran was going to have a revolution. But something was going to happen somewhere. Our consultants told us it was a Iraq. Maybe Iran is going to be next month. We still know that oil prices are extremely likely to increase tremendously over the next 18 months. And that is really not being taken into consideration by these projections, and it shouldn't be.

We need to project based upon what we can realistically believe what is going to come in, we have some sort of proof or honest belief and not plan to spend money we really don't have yet. So it's not right for us to do anything except this sort of base case analysis and projections. But in terms of your thinking, I think it's important to know that the revenues may be much greater

than that and the problems that are being pointed out are minimized if those revenues are greater. It is true that we're wealthy for a time and that we're going to be broke eventually, possibly.

But it used to be that that was going to happen in 1987, and then it was moved to 1992, and now it looks like 1995 or 1994. In some scenarios it looks like 1995 before that cross-over point. Every time the oil prices increase and that price is transmitted to the State in its wellhead, that cross-over point gets farther away. So the crisis is put off, and it's possible for us to do something about it, to do exactly what the commission was talking about, getting into renewable resources, talk about diversifying economy, and broadening the economic base. We cannot survive forever on a finite resource. But if it's seven years away, we're in real trouble. If it's 25 years away, we got a little space. If it's 40 years away, we got more time than we really need. I think that makes a big difference.

The Beaufort sale, we're looking at 80 million dollars. Just talking to some of the experts around here in this place, I've heard the possibilities are much, much greater than that. Because of the windfall profits tax, the oil companies are likely to have to give that money to the federal government if they don't invest it in the

Beaufort sale.

So if the sale goes forward, there's a real chance there will be more than 800 million. And it might be double that, or two billion dollars, even though we got a sale put together that supposedly differs now downstream by the way the sale is put together. In fact, Milton Lipton told me that he wouldn't be surprised if some people would give 100 percent under the net profits, they would bid 100 percent of their profits to the State, if they could just get access to the oil. That will tremendously increase our revenues if there is any revenue at all in the Beaufort. You also got the wellhead price.

Taking over ALPETCO, they've got revenues of four billion dollars this year and a net profit of 350 million. So he knows something about it. His people are projecting that the wellhead price, which is now 13 dollars a barrel, will go by October of 1981 when it's fully decontrolled and the State will be receiving that figure, would go to $41 a barrel. That's the wellhead price from the 13. That's his actual projection that he's basing his investment policy on. And you know they've been pretty successful. So you can take that.

MS. PALMQUIST: The $41 per barrel is of which date?

MR. MEEKINS: October of 1981. I think it's 30 percent decontrolled in July and then four and a half percent a

month. And it ends up it's fully decontrolled by then. Some may or may not be transmitted. I'll get to that in a minute.

If we got all of that, that would be a pretty big jump. And we guess that the average for fiscal year 81 would be 28 dollars a barrel. So almost double what we're getting. Yes, more than double what we're getting right now. So the 1.8 billion we're looking at in terms of oil revenues would be 3.6. So it would be more money per year coming in. These things could change. It depends what happens even today as the Iyatollah is fighting the Khoumini.

The other thing is that some things that could really hurt us. The windfall profits tax can hurt us. Worse than that, I think, the fact that we're making out on the misery of the people in the Lower 48, all of our oil is being sold down there and they're likely to be going into a recession, and possibly a depression. The whole world may be going into one, according to the people that have been giving recommendations to the commissioner and myself. If that's the case, there is a real chance that they'd get upset by the blue-eyed Arabs and wipe the whole thing out.

The depression itself, depending upon how OPEC responds if there's a worldwide depression, and if it's serious and lengthy, that's what the prediction is now, from the people I hear and respect, OPEC has two choices:

They can let the price go up, or they can try to help out the depression by keeping the supplies stable and letting the price go down because of the depression. It could decrease oil consumption because of lack of activity. It depends on their response, whether or not our revenues go that high. We don't know what OPEC will be doing. Maybe the Saudis are very concerned and if they won out they would try not to maximize revenue and try to keep the supply stable. But who knows who's going to do what.

Two more points, quickly. We've got 3.5 billion dollars, according to this base case estimate for the next 18 months. I've got 8.5 billion dollars worth of requests on my desk right now and the legislature hasn't started and it's 18 months away before the end of that period. It's only about two months people have been thinking. I've got another four billion dollars in request for bonds. So there's 12 and a half billion dollars worth of requests, and three and a half coming in. That's an insatiable appetite. There's the Dutch disease, and definitely some people have it.

The sixth point is that, in my thinking - I can't resist saying this - it's really kind of cheating. When you make a list of priorities, the most important things are the cheapest. And the most questionable in terms of benefit to society, benefit to Alaskans, are the most expensive.

And I think that you can really maximize benefit to the State if you keep that in mind and don't suck in for those billion dollar deals that are whack, where all your money goes into two projects and you haven't addressed alcoholism and social problems. I think that's a good rule of thumb.

So thank you for listening. And if you have any questions, I'd be happy to answer them.

THE MODERATOR: Thank you very much, gentlemen. Now questions. Ed?

MR. MERDES: Go on, Harold.

MR. POMEROY: It's certainly most encouraging to hear you think how our revenues are going up. But as they go up, is not the great value of that what's modified a great deal by inflation and by much higher costs of doing everything in Alaska?

MR. MEEKINS: I don't think so. Certainly, but our commodity is going up faster than inflation. We were in a totally new era and I think people have to change identity. We're going to be in pretty good shape. We need to look at those opportunities and not screw up.

MR. POMEROY: You believe the world situation is so different as to the shortage of oil from the effect it will be on here we're the gainers?

MR. MEEKINS: We've got 2.5 billion dollars in the banks and financial institutions in the State. We have got

more than that revenue. You can infer from that we can affect our economy in a positive way, and the question is should we. But we certainly have the capacity to be immune from the outside effects.

MR. MERDES: The last figure was we've got 900 million. We heard the same thing from Wolvert, when he was commissioner. What happened, the conference made up its mind that they were going to address human values. They spent the 900 million.

But I think you ought to be more positive. As a member of this conference, what I'm thinking, I'm thinking probably Russ is more right than you are, not because he's optimistic, because he's a realist.

You hear all these predictions of doom. You economists. You give me three diseases. I'm not criticizing. You ought to say let's assume do we have a surplus of wealth. Let's assume Russ is right. What do we do positively so that we don't go into the tubes, instead of telling us we're going to have Dutch and British diseases. What if we get three billion and we've got so much money we don't know what to do with it?

MR. DANIELS: I'm an extremely optimistic person in everything that I'm doing. It's a warning from experience in other parts of the world. I happen to be very optimistic about your situation. And nothing Russ said do I

fundamentally disagree with. We've been working together too long.

MR. MEEKINS: Getting information from him.

MR. DANIELS: I think you have a tremendous opportunity, one, to invest a portion of this in human development. Because in fact in the end financial capital and physical capital and natural resources don't mean anything. It's people that really count. And that's where the consumption investment should be going, in my judgment.

Let me just go down the three quickly.

One, in terms of the Dutch disease, there are real investments that you need to be making in people. And that's where the consumption ought to be going. I think that's where a lot of these things are.

And we like to make one other observation: Next month I'm going to be working in a country of 100 million, now 150 million, in Indonesia, that has a span on the face of the earth that is about two-thirds the span of Alaska. The cost of interest structure investment here, the cost of communication, transportation is higher. And you have to pay of some of that. Frankly, when I see what has been done with the 900 million, I don't believe there is a waste. When you fly into Hoonah and that airport, it says right on it built in 1970, and that was part of the 900 million. That's one, on consumption.

Two, on investment: That is the British disease. The positive side of it. I just want to reemphasize what Russ said: Don't invest in billion dollar deals. I can tell you emphatically around the world that if it's a big deal, the private market can finance it. And don't you get sucked in unless you're going to make 31 percent return on the pipeline, the natural gas pipeline. Where the real need for investment in this State is, you do have a real capital shortage, a real capital shortage, and it has to do with small enterprise, and particularly small enterprise, which is rural enterprise in the bush.

And because of capital market problems in the Lower 48, there are foreclosures on mortgages and foreclosures on businesses that are taking place in Anchorage right now which are not because the underlying business is no good or because the family can't pay for it. It's because the banks don't have the money. You can deal with that money, and you've got some new mechanisms to deal with that.

Three, that is, the Alberta disease, you have an obligation which I think you can do to meet the standards of a world class institutional investor, which is what you are. You've got to play like the big boys. You want to get out of the short-term debt securities that you're in right now, develop a balanced portfolio in foreign equities as

well as in domestic equities.

So I'm very optimistic on all three counts, and I think we're working on all three of them.

MS. PALMQUIST: I have a question: Recently we loosened up 50 million dollars in State funds in order to encourage the homeowner mortgage situation. Would that be a good type of investment which would be not only property but also people oriented to increase that amount of money?

MR. DANIELS: Very specifically, at the time that that decision was made, Russ and the governor had no other alternative but to use the general surplus funds as a source of that. They were out of session and that was the only source they had. And it was a wise decision.

In my judgment, starting with the new session in January, there are better ways of using that 50 million. Because when you're putting that subsidized housing, when you're doing that with the general fund, you're not getting the value that you might get with alternative investments. But you can import capital for housing, and for the bottom fish development and for agricultural development and for small industry development through the expansion.

MS. PALMQUIST: You said import money. Isn't that one of our problems, is importation of money?

MR. DANIELS: No. You want to import money. You haven't been doing it, and you can do that. And there are

mechanisms for doing it that work with the banking system. I think very serious attention is being given to those by both the administration and the legislature.

MR. MEEKINS: That's right.

MS. PALMQUIST: There's quite a feeling among us taxpayers that we want the permanent fund invested in Alaska and not have other states where our money is outside get the benefit of the development potential from that investment.

And you said we should import the money. But at the same time, we're looking at, in the next 18 months, three and a half billion dollars. So why do we need to import it if we have excess?

MR. MEEKINS: Because you can make your money, do that much more and besides. If you wanted to make loans available, for instance, at nine and a half percent, you'd be losing four points. Four and a half, five points, okay, percentage points on doing that. Now, we just both did it, so we're all in favor of it in a crisis. But if you do it with State money, you lose that. If you want to go in and subsidize, you can actually appropriate a subsidy. You can borrow money at some sort of, hopefully, tax exempt, but at least taxable rate, bring it up at a somewhat lower rate than your opportunity cost, which is your investment rate you'd get. And you end up making more money that way.

Should you bond, or should you cash? The same thing. If you bond, you borrow the money at seven and a half, eight and a half, right now, and you can take the 100 million and you invest the 15. So you make money.

As long as the short-term rates are higher than the long-term rates, you should make cash. Right now it makes sense to import.

MR. DANIELS: Could I give one more illustration of that. Right now your direct loan programs in the State are the second biggest in the State. It's at nine and a half percent or less. Every one of those loans could be made by an expanded and improved Alaska industrial development authority, very similar in fact to Senator Hohman's SB 1 bill; very similar. They're wonderfully close ideas.

And a way which, generally speaking, would produce a lower rate than nine and a half percent of tax exempt revenue bonds from the Lower 48, importing all of that capital from the Lower 48, then putting the several million dollars back into the general fund surplus, going out and investing at the world market rate.

MR. POMEROY: Russ, you said State dispersements in 1992 or 1995 might catch up with the money available. Is there something we should pay attention to in that direction with respect to having money that is saved?

MR. MEEKINS: I think so.

MR. POMEROY: Or invested.

MR. MEEKINS: I think two things. We ought to have a sizable permanent fund. You can't invade the permanent fund without a constitutional amendment. You've got 25 percent going in there, or more. Then I think you ought to have a rainy-day account, six to twelve percent of the operating budget. Appropriate it now, keep pace with inflation by earning investments. It wouldn't be as sacrosanct as a permanent funds and you, couldn't do it on a whim. But it would be halfway between surplus money sitting there for the legislature to spend. And the permanent which the legislature can't get their hands on.

Somewhere in between, if the governor has a problem, break the bank if the pipeline busted, you have some sort of contingency fund, 99 percent of our revenues is coming out of the pipeline. The wind and the cold almost shut it down last year. We almost had the longest stick of Chap-Stick in the world. We need a contingency fund, as well as the bottom fish, all the things people are working on, and then keeping down the operating budget. There's the real key. Anything that is compounding to infinity.

MR. POMEROY: One final short one, if I may, please. What do you think about the idea of a constitutional amendment which the put an absolute lid on our growth, holding down population?

MR. MEEKINS: I'm against it.

MR. POMEROY: So am I.

MS. PALMQUIST: So am I.

THE MODERATOR: Rosemary, did you have a question?

MS. PORTER: I was going to ask what the cure was for the disease, but it's been answered.

MR. DANIELS: You're already moving in that direction. The resources corporation is one of the most exciting by any government. Taking that, investing it and diversifying the economy into renewable resources, very exciting commercial fishery, is a good start, with an excellent new board and a very strong management. These are the possibilities of some of the new institutions that we were talking about. And this is the year of decision on these things. And I'm very optimistic.

MS. PALMQUIST: Isn't there another fund called the renewable industries fund that comes out of the profit? What's the percentage on that?

MR. DANIELS: Five.

MR. ECKHOLM: I have a question for Belden. What do you think of this proposal that came out in the paper last night for Alaska to take care of the nation's energy needs by developing fast and pumping out four and a half or five million barrels of oil a day in the next seven or eight years?

MR. DANIELS: My strategy is stave that off until deregulation. American oil is subsidized right now at somewhere between a half and a third of the world market price. And if you talk about the spot market, it's even worse than that.

Every time you take it out, you're getting less value. Wait until you're up there. You really do have the one asset that beats inflation where you're getting a market price for it.

MR. MEEKINS: As Milton Lipton pointed out in his paper, in the last ten years, not one drop of oil or gas, the total reserves have not been increased in ten years, but the value of our resource has increased ten-fold. So we're sitting pretty, but they're in bad shape down there. The perception in the Lower 48 is that we're closing the tap down on them just like the OPEC nations are. So we've got a public relations problem that needs to be dealt with. Maximizing revenue and conservation of the field with the possibility the federal government may just get angry and nationalize your field. And they can do that.

MR. REAVES: How do you think we in Alaska can best foster and encourage outside investment within Alaska in order to help us sustain a long-term diversified economy? Such as taxing, say, land, so forth.

MR. DANIELS: Well, I could tell you categorically on

the basis of all kinds of analysis. That is incentives don't work. You've seen you can tax the oil companies at a high rate and they're sure interested in Beaufort sale, as far as I could see.

I think the sound management of your government and a willingness to deal much in the fashion as the Japanese do and really a vigorous direct dealing between government and business, that is, large government and business, and a lot of support, again optimism, a lot of the use of these resources to support large enterprise within the State, which I think you're really starting to do in a big way, all three of those.

MR. MEEKINS: There's been some research done for my committee that small business is more profitable for not only the State but for the people of the State in the long run. I think it would be much better to utilize our wealth for leverage in benefits to creation of small business opportunities for just the average person than it is to get these multinationals. Those people are going to come. Whether we encourage them or not. I think we ought to help out the smaller person that actually is living here, whether he's a fisherman or a grocery store owner.

MR. DANIELS: I support all of that 100 percent. Just to take a specific, take the bottom fish industry. The thing that scares me. It is going to develop. There's no

question about that, the issue is who is going to develop it. Is it going to be be a Japanese-based industry, a Seattle-based industry, or an Alaska-based industry, and the State can have a great deal of influence on that. It requires being very realistic about that. I see Albert Asterbach in the back of the room.

The State has to be very realistic about that. It is going to be a mixed development. It is going to be both offshore and onshore, both large scale and small scale.

That means creating the Alaska Renewable Resource Commission. It means creating an agriculture bank to finance boats and offshore facilities. It means the new proposal for an extended industrial development authority which can do that with the banking system. And then it means a very systematic development of infrastructure, not on a log rolling basis or a pork barrel basis but in terms of really where the State industry is going to go. The state has the role of being the manager in collaboration with the fishing industries.

THE MODERATOR: You ask for information on finance. I think you've got a lot. Do you want to stop here? These people are going to be around, except maybe Tom. You won't be around.

MR. POMEROY: One piece of information might be useful. I think we don't have as full an understanding as we should,

Russ, of the levels of revenue the State will get from the several ownerships of oil that may be developed. The big headlines have to do with develop on federal lands. Well, we have three ownerships on land and then one on the water. Could you just briefly indicate what levels of revenue we get from those three sources?

MR. MEEKINS: You mean Prudhoe and --

MR. POMEROY: No. I meant this: If it's ours, if it's our land, we get all the revenues, that is, all the taxes and the royalties, et cetera. If it's on federal land, we get less than that. If it's native, we get something different.

MR. MEEKINS: For potential developments? The only one we got, Prudhoe Bay is the one that we're talking about here.

MR. POMEROY: Yes.

MR. MEEKINS: The Beaufort is unknown. Who knows what we're going to get from the Beaufort. We got some State land there, some federal land and some joint. So the commissioner could tell you.

MR. NASKE: It's about 60 percent State, and the rest, the 40 percent there's some dispute between the federal and the State. And only ten percent federal.

MR. MEEKINS: We tried to pass a tax. I don't think we're going to win that one.

MS. PALMQUIST: Is there quite a potential from Lower Cook inland?

MR. MEEKINS: That's what they say. Also a potential from Matanuska Valley.

MR. NASKE: The federal government now for years has been drilling these big caverns in Louisiana or Texas and pumping oil into it. It has a fiasco from every standpoint. It might be well for Alaskn to say, "Here, we've got a field which is in place, leave it in and pay us for keeping it in the ground." Because, see, if all the construction costs and uncertainties of shipping, it is there for a rainy day.

MR. DANIELS: I'm one of those Lower 48'ers, right. It's funny. Everything I've been responding to as a Massachusetts person. I don't bleed for the Lower 48. I think they're bleeding themselves to death. With the subsidized energy policy, which encourages a misallocation. Get on a freeway in any American city down there and see all the single family people. Bill Spear had a great line in his paper here, where he was defending an alternative. He said what could be more ridiculous than moving a 40-pound child three blocks in a three-ton automobile.

I think we want to get the price of oil up for the benefit of the Lower 48 so they learn to conserve and live within their means and pay that price to you. And I

think we can afford that.

MR. MERDES: Before you leave, I was in the Senate when Governor Egan sent a bill down to take over the Alyeska Pipeline. I voted against it. I think it was ridiculous. I don't know if I would have now. We would have had so much money we wouldn't know what to do with it. Now it isn't as silly as it sounds. Because you have another point of another oil pipeline. You have the gas pipeline.

So the question I'd like to ask any three of you, you got to blow your mind and think big. Because learning from history, what would you guys recommend to the Governor and the legislature right now on whether or not the State should have a personal financial interest in the oil line and future oil pipelines? What's your answer, in light of history?

MR. DANIELS: I have a strong position on that.

MR. MERDES: Go ahead. I'm very interested in this. I think we made a mistake and should have taken an interest in the Alyeska. I don't know what your position is.

MR. MEEKINS: I like the net profits as a way of without taking the risk yourself and getting into what is private enterprise, which is I think is a controversy whether the State should get into this. Say you share in the net profits. If I have 50, 60, 70 percent, we're sitting pretty.

The gas pipeline, we should either not invest a penny in it or we should be just like Exxon and get ownership shares, management control and everything else that any other corporation would get and play the hard ball. And that's Belden's line. I couldn't agree more.

If we're going to go in 400, 500 million, we're not going to do that just because we want a pipeline. Do like the big boys do and get all the benefits. Because that could do a lot of other things. It's either nothing or we play the same hard ball that all the major corporations do and get all the benefits.

MR. MERDES: I'm interested in you, Tom, and Belden.

MR. DANIELS: I'm going to wait for Tom and take the third.

MR. WILLIAMS: I don't know whether we would say that would be a super investment. The federal government is regulating that. They changed the rules since 1941, and very suddenly they have changed the rules on the producers. And I think you would find that even though there may be substantial pipeline profits being made with a $6.20 tariff, the possibility of a dollar a barrel refund on the billion barrels that have moved through that pipeline is looming in the backs of the minds of a lot of corporate owners. You look at how the federal government has helped us so far and you ask you whether you want for plunk lots and lots of

money where you're at their tender mercy.

MR. DANIELS: First of all, Russ and I are very, very close on this. And Tom's comments I find very interesting.

Well, any time you can avoid dealing with the Feds, do it. That's a fundamental rule.

I have a couple of quick observations. One, I am really a net profit person in this business. I think that's the way the Beaufort sale should be done. I feel very strongly. I think there's a tremendous amount of wealth out there in the Beaufort sale that the oil companies are being very careful to keep under wraps because therefore they can sell the leases for much less. I took a cab the other day to the airport with a roughneck who had worked up there and said that one of the wells came in, one of the test wells came in at 40,000 barrels a day.

Now, I don't know whether that's true or not. But you don't have to worry about that if you're in a net profit position. Because you're going to get that. That is playing hard ball. There's a variation. The British disease, which is called lemon association, lemon, as in lemons, which means that everybody else gets the oranges, and we get the lemons.

That's the point with regard to the natural gas pipeline. Natural gas is regulated in a very different fashion from oil. And I don't know enough to say whether

the risks are less or greater than they are in the oil pipeline. But you do know that the equity investors in there on an after-tax basis by virtue of the regulated rate should be receiving a 31 percent return on investment. And what scares me to death is just what Russ said, which is the way the State would get into the natural gas pipeline, is a heads-you-win, tails-I-lose proposition, where you come in and you guarantee the loan. So if it's a loser, you pick up the pieces. And if you win, you lose the profits.

MR. WILLIAMS: I don't want to sound I'm in disagreement with that. I don't want the impression to linger.

I don't think that we bureaucrats are completely stupid all of the time. We can be completely stupid a good part of the time, but --

MR. MEEKINS: Law of average.

MR. WILLIAMS: Sooner or later we have to wake up. I think a deal where you get somebody who comes in and says, "I got a six billion dollar project. I want you to put in $500 million. I'm going to come up with one billion as equity and finance the other four and a half as debt, and I'm going to get a 100 percent tax credit, which is worth 600 million dollars," or says "I'm going to get 100 percent of the accelerated depreciation benefits, which is worth 300 million dollars in the first-year tax benefits," he

says, "I get the first year interest writeoff." He gets a deal like that, so in the first year, he gets a million dollars back. He has the unmitigated gall to say, "How would you like an equity position at nine percent?"

Dumb as we are, we recognize that as a bad deal.

MR. DANIELS: First of all, I don't accept that last remark. I do feel the state's approach to the northwest is quite crude.

I'd just like to quote to you the other day when Mr. McMillan was testifying before Representative Young on this issue in the house, he suggested that the State ought to put in one-eighth of the equity investment because that was what the royalty position was. And Representative Young turned to Mr. McMillan and said, "Well, does that mean that we share one-eighth in the profits?" And Mr. McMillan responded, and I quote, "I'm sure that's negotiable."

THE MODERATOR: Thank you. Thank you very much.

That was a lot of information.

MS. PALMQUIST: Right.

THE MODERATOR: But I do agree sort of we're talking about all this money we have and yet we're trying to attract more money from outside. I understand what they're saying. They're talking like bankers, and I think maybe that's one of the decisions Alaskans have to make. Basically they're saying be a bank, be a big lender, use

other people's money.

MR. REAVES: I think we should.

MS. PALMQUIST: Mr. Chairman, one thing that we did not address was the dangers involved in whatever type of controls we put on that permanent fund. Who controls the funds? What's the setup going to be? We didn't address that at all. How are you going to administer the fund? I use the word "control," but maybe "administer" would be better.

MR. POMEROY: That's all pending in the legislature, is it not?

MS. PALMQUIST: We didn't explore that with the finance people.

THE MODERATOR: Tom, can you answer?

MR. SINGER: There's a law on the books right now, which is referred to as an interim management law. It was passed when the constitutional amendment passed, an implementing law was passed by the legislature. And it has the Commissioner of Revenue manage the fund in the same way, virtually the same way as the state's general fund. So it's on the books in blue chip investments, and things like that.

One of the very big issues in that session is what should be a permanent management strategy. It's a completely open question.

MR. POMEROY: It's a holding action now.

MR. SINGER: The administration has the bill for the

past three legislatures. And the house and senate have been unable to agree for three sessions now, and there's hope this session they will be able to agree.

THE MODERATOR: Well, I think we've been told we have so much surplus money. We've got so much set aside in a permanent fund, like Alberta, and then we've got the following surplus. How are we going to spend it?

I think Harry gave me that idea. Is that basically what we're talking about?

MR. POMEROY: Not quite. It seems to me not quite how we're going to spend it. I listened very carefully to what Russ said. He didn't say it's how the 25 percent has to be handled, but it seems to me he indicated that we did need to build up a cushion there. And we didn't have a chance to explore that very much.

MS. PALMQUIST: Jack said what we're looking at now is the five percent permanent fund, the five percent renewable source, and three and a half billion would be the fund. You've got not one source of money, you've got several sources of money? I got that from what you said.

THE MODERATOR: That's right.

MR. POMEROY: It should be understood 25 percent isn't 25 percent of all of the income from the sale of the oil. It is 25 percent of about 50 percent. That is to say, it's the royalties and the rents and those things.

But the severance tax, which we put on, and the pipeline tax, that's related directly to the production of oil and whether it's this much or this much. So actually it's 12 and a half percent of the total of the monies that we're talking about. And that should be borne in mind whenever there is discussion as to whether we should save a lot, or less than a lot.

MS. PALMQUIST: Well, the 25 percent of the royalty; 25 percent of the royalty income.

MR. POMEROY: It's 25 percent of the royalty income and the rents, and certain other minor items.

MR. ECKHOLM: Could we kind of start to focus the discussion. We've heard a lot of information. We would like to start having recommendations from the group as to what you want to do with our money. It's our money. No matte. what the experts say, it ultimately rests on us on how to spend it. So could we make recommendations on it.

MS. SCHIRMER: Can I toss out as maybe one of the things we might be able to agree on is whether we would recommend, as Russ Meekins said, a rainy-day fund, an amount of money to try and be kept available not in the permanent fund but in case of disaster.

THE MODERATOR: I think he said a six-month rainy-day fund.

MS. SCHIRMER: Yes. A rainy-day fund equivalent to six

months of the cost of running the State.

MR. PILLIFANT: What would a rainy day fund be used for? What would a rainy day be?

MR. ECKHOLM: If the oil pipeline were shut down.

MS. SHROYER: Or maybe results like Wednesday from our last storm in the southwest.

MR. PILLIFANT: You get into a real -- somebody would have to decide what the rainy was, if it's just the pipeline or if it's the big wind like out in Parma.

MS. SPARCK: Mr. Chairman, I feel like I'm the only nonfinancier in this room. I'm hearing that the State has surplus money. What is to be done with it is the question, and how.

And from what they were talking, there are financiers, or whatever you call them, and then there are concerns from the state's citizens. These concerns I feel that we should talk about, and these concerns should guide the financiers, or whatever they're called.

THE MODERATOR: Go ahead.

MS. SPARCK: I feel that we should start talking about some concerns.

THE MODERATOR: What kind of concerns?

MS. SPARCK: Like education, is one; health is one.

THE MODERATOR: They were talking investments, weren't they? Get your money invested so you could make more money

or protect it so you don't lose it. You're talking about something else, maybe?

MS. SPARCK: Maybe I am.

THE MODERATOR: I think you are. Go ahead. I don't want to shut you off.

MS. SPARCK: That's what I'm concerned. Are we going to talk about how to spend it and how to set up the whole financial setup? Is that what we're talking about?

MR. ECKHOLM: As I understand it, there are choices that we have to make which are. We can increase government services if there is a perceived need. But what are the needs?

THE MODERATOR: Harriet, go ahead.

MS. SCHIRMER: I'd like to maybe -- you have trouble with finances, too. But I think when you're looking at your funds and I'm looking at mine, I have to be able to see what there is and then I have to be able to think now do I want to spend it out this year, or do I want to put some of it away into some kind of an investment next year, so I will have something that I can use in case next year I'm sick and unable to work.

And I think what I'm envisioning at this point is maybe thinking about that kind of division, and then when we decide how much we are going to have to spend on the things that we need, then we sit down.

MR. MOORE: My name is Martin more.

I'd like the idea of establishing a permanent fund with the funds that are received, that we are going to be receiving from the oil on other revenues that are coming to the State, provided that the permanent fund be what is called the permanent fund. Because the financial world at times loses monies, but if I am assured that certain funds that are put into the permanent fund are put in like, for instance, A-bonds, triple-A-bonds, and double-A-bonds and things that will be secured that the permanent will be a permanent fund.

Do you know what I'm saying?

So that the monies that are derived from the permanent fund would be sufficient enough to provide some of the needs as employment. I think that the monies that are derived should be used to create employment and employment will, when it rolls and rolls over again, will support the economy and whatever we're talking about, or within the State.

So my idea is to come up, this body come up with a recommendation to support the permanent fund. That's my recommendation.

THE MODERATOR: Support the permanent fund at the level it is now, the 25 percent of royalties? Or more?

MR. MOORE: Whatever the most appropriate formula

would be to satisfy some of the needs in education, employment, et cetera. But the idea of getting a permanent fund would, I think -- we have enough funds to establish the permanent fund and keep the fund there and the funds will keep making money to support the other programs.

THE MODERATOR: Rosemary?

MS. PORTER: Well, as I understood, then, we have already established the nest egg. We have the permanent fund. Now, that's going to live forever and hopefully it's going to be wisely invested and we're not going to be losing five percent on it. It should be earning 15 percent or more on it. And that will provide additional ongoing income that we can use.

Now, assuming that we've got the permanent fund with all this billion dollars in it sitting there growing every year, earning money, and assuming that we continue pumping oil for another 20 years, that's going to be growing. That's what we have. That's the nest egg for when we retire, in a manner of speaking, when the oil dries up and we don't have any more, that's what we've got left over. And it's earning money.

Then Russ was talking about a rainy-day fund. That's in case we have some kind of a disaster, the oil stops flowing and we need money to operate the government, the general fund for a year. That sounds totally reasonable

to me, so that we don't have to have an act of Congress to get into the fund. We've got a rainy-day fund so we're pretty much protected.

So it appears to me what we're looking at are the monies. The economist says the three things we should be investing in is human services, investing in people. To me that means jobs, training, whatever; public works. One of the economists talked about an airport in Hoonah. And he also mentioned small businesses that create additional revenues for the State are very good, they help the economy of the State, create jobs and all of that.

So it seems to me that those might be the areas we're looking at. We're looking at I don't know how many billions of dollars for the next ten years. So we might start looking at the kinds of things that we'd like to do with the surplus money.

We're already established our savings account. In fact, we're talking about maybe two savings accounts. So let's look at what we're going to do with the rest of that money.

Now, are we going to invest it, as one of the economists suggested, instead of using the money to put into bottom fishing and all of that? I honestly don't know. I'm not an economist. I'm not dealing in high finance. It sounded very reasonable to me. Borrowing money here for a

lower price and investing our money and making 15 percent sounds totally reasonable.

So we're left with the couple of billion dollars to put into the State, into the people. It seems to me that we ought to begin looking at those kinds of things. Where would we put a couple billion dollars?

And if we're going to do that, everyone says you're going to be left with a white elephant. When the money dries up, you create huge institutions, huge expensive educational systems. Are we going to be able to afford them when we don't have the billions of dollars anymore?

MS. SIMONDS: Some of our money should be spent in trying to develop things that will finance us after this decade when the oil revenues might be a lot less. So we should think in terms of things that will bring financial security beyond the future.

One part of the money should stand for that.

MR. SEIFERT: I want to reason this out and get something straight which is not straight in my mind about the permanent fund. I think it's clear we've been asked to recommend whether the permanent fund remain the same or be more. From my point of view, it's kind of exclusive from other revenues.

Because if you look at what the permanent fund

does, it takes money, invests it at at high percentage rate of interest, but that rate of interest is very, very close to the present rate of inflation. Even if it's 15 percent, it's still very close. And the net gain on the permanent fund isn't going to be a hell of a lot. It's just going to get sort of put in there and kind of idle along. And there will be maybe one or two percent accumulation on an annual basis if we retain the present rate of inflation, which it seems we're destined to do.

So I think the question becomes one of do you just simply set that money aside and it just kind of idles there, and what percentage that should be. And exclusive from that, there is a large additional amount of money which you have the option to invest, I think, more wisely, to be perfectly frank.

I think this lady's suggestion is the total nature of the focus we have to get on. What are we going to do when it's all gone?

I suggest we -- personally I would move that we maintain the permanent fund at the present level, since it seems as though it is not going to be any more than a simple stashing away of funds which we have presently no better use for.

MS. SHROYER: I keep hearing people say what are we going to do when the money is all gone. What I think wet

ought to do right now is to ensure that we have all that money 10, 15 20 years from now. We've got $3.5 billion. We can invest it. Surely there are expenditures that need it. When we have more expenditures 20 years from now, we have another $3.5 billion as we do now that came from the original money we have now.

MS. PORTER: One thing that has always bothered me about the permanent fund -- it's been a sore point in my life. Is that it appears to me that sometimes the State is kind of like a family, where you say to your children, "No, dearest, we're not going to eat this year. We're going to save that money for next year." Well, next year we're all going to be dead.

There are programs -- I'm serious. There are programs in this State that go unfunded. In Anchorage, you have one of the worst social problems with battered and abused children in a whole area that is just almost totally not funded. You've got 350 -- I don't know how many cases your social workers are working with now.

No place to put up the kids. We're losing all of those children. We're losing a valuable resource. But we're saving a lot of money. We've got a lot of money in the bank, but we're losing kids. We're wasting a lot of people away on alcoholism and drug abuse, but we got a lot of money in the bank. We may not have education, but we've got a lot of

the money in the bank. What the hell are we going to do with it?

If we keep the permanent fund, I say fine, maybe it's not going to hurt me. But I say let's put it back where we need it. We have not begun to address those problems in this state. I mean, all you have to do is walk out on the street here and you see a lot of those problems. And I think we ought to be looking at some of those areas and correcting. They may not be ongoing problems. We're always going to have the social problems. But if we put a lot of energy in and some bucks into it now, we might be able to save some of the children. We might not have to have such big jails in 10 or 20 years.

MR. PILLIFANT: I guess all I wanted to say is by having to have a permanent fund, it kind of shows we don't have much faith in our abilities to invest our money, because we apparently expect everything to go down the drain if we have to put something back and save it. I mean, it's as though we're saying that we can't invest it and get any money back. So we expect for all that money to just go down the tube. Well, it will if we invest in social programs only.

This lady down here I think is talking about investing in Alaskans: Alaskan businesses, getting back our money from those investments.

And I think that's where it's at, whether we invest or keep that 25 percent or 50 percent or whatever. But I think a minimal amount, because I think we're smarter than that. I mean, I hope we are. And that's what we're about here, I think, are we not?

MR. NASKE: Isn't it basically so that we have to create different economies based on renewable resources? because if oil is a one-shot deal, I mean, Prudhoe Bay, and there is no other field of comparable sizes come along. It's nice to spend it all on education and social programs and so on.

But basically right now it's something like maybe 60, 70 percent of revenues that derive from oil, one single source that will be gone within 30 years or so, at best.

So we have to look at renewable resources, build a different economy than the one we have right now. You know, we have to look at -- we have to invest in fisheries in a big scale, on a large scale, and we have to invest in timber, perhaps, and perhaps in agriculture as well. But we have to invest in renewable resources because the oil and the minerals, they will be gone within the foreseeable future.

And then, even with the permanent fund, that money would be sucked up very quickly, with just paying for ongoing programs. And the interest that we earn on that is

so negligible, really, that the interest alone would pay for very little. We would have to dip into the substance of it.

So we have to think of building an alternate economic system from the one that we have now.

MR. PADDOCK: I'm inclined to agree with Rosie. I think Alaska finds itself in very much the same position as Alie did in Wonderland where she was in that place where you have to run just as fast as you can to stay where you were. That's like our society today. Some of our problems that are public, health, social are accelerating. I agree they can't be ignored.

In response to those who want to save the total amount, I sort of feel like they must be firm believers in the approach that anticipation is far better than realization. They might not be so wrong always, but I this it's time that we realized a few things, instead of put things away totally in anticipation of how much better things might be some other day.

MS. RAY: I'm Joan Ray. And I would never go along with that idea, like saving the total amount. But I did like Russ' rainy-day concept, and I believe it would be a very prudent thing for us to consider in that, the way I understood, it would be a fund that would be there in case something were to happen to the state's money, that it

stopped coming in, some sort of national disaster. Any of the State disasters are taken care of by another disaster fund. But something where our money flow would actually stop, that there would be money there for us to continue on with the functions of the State government while we got our act together in getting going again.

But I would see the savings, the rainy-day fund, as quite a prudent first step. And I don't know what the percentage would be, what amount. That would be the kind of money that we're talking about that we have to spend. But to consider that as a first step and then go from there in looking at the other three areas which Mr. Daniels broke out.

THE MODERATOR: What rainy days do you have in mind?

MS. RAY: The way I understood Russ' concept was that if something were to happen to the funds coming into the State, something happening with the resource lines, with the money, the income that we have, and whether or not that would be some sort of disaster or a drying up of the resources. Something like that.

MR. POMEROY: Jack, I think it would be better if we didn't talk about a rainy-day fund, because it isn't a rain we have to worry about, it's a drought we have to worry about. Implicit in all we've heard about financing is that sooner or later the level of oil production is going down.

It's going down to the point where we won't be able with our normal taxes to meet our outgo.

I have no quarrel whatever with those who talk about unmet needs. I think that we are so fortunate, by courtesy of the Arab nations, to be in a situation that's beyond just keeping up with inflation. And Russ referred to that here.

So, where we have some leeway to do something we should do with our money toward a time of drought, and still do some of these other things -- and from all of the discussions that I've had as a member of the growth policy council with people around the State I find people do want to see improvement in services to people and some of the things that are talking about helping the villagers get along with their individual independent living. All of the things that we talk about.

But we must face the fact that it would be a worse gamble than going to Nevada and making a bet there to assume that, when Prudhoe Bay is finished, we're going to have enough more from our land to equal that and cover our budget. We started in 1969 spending the money, the 900 million we got. And we got up to spending twice as much dollars in real money - not inflated money, real money - as we spent, - we've gotten up to spending twice as much per capita as we spent before we got the 900 million. I don't

doubt we will spend some more than that.

But the situation that exists now - may I finish, please - the situation that exists now is that a billion dollar budget -- now I'm talking, you've got to be careful about what dollars you use, because you talk about a larger figure and you're talking about federal money. But our money, State money, we're spending a little over 250 million dollars a year, and oil is spending the rest of it, 750 million of a 50 billion dollar budget. And that's what we get from the sale of oil.

I don't think it makes a difference to us as to whether it's the permanent fund or just money, except the permanent fund by constitution can't be dissipated. It can be loaned out at one percent interest. There's nothing that says you have to get the very highest or do the very best. It seems what we're faced with here is try to take at look at what it would be prudent for us to do in trying to damp down a little bit the rate at which we're increasing our spending in the State. It's almost ten percent a year now, which means that instead of being a 1,200,000,000, in eight years or so at ten percent, what is it? It's 2,400,000,000; something like that.

At the same time we look at dealing with some of the needs we have, and then see what we think we should shoot at as money that we do retain, and think of the

dollar as being a medium of exchange.

We have been told by our experts that that isn't value, that isn't assets. We can use it, we can invest it here, we can invest it in anything we want to invest it in, but retain enough so that, when the flow of revenue does go down, that we'll have enough revenue from all of these assets so that we won't face disastrous increases in taxes.

THE MODERATOR: Marty?

MR. MOORE: I'm not a financial expert or anything of that sort, but I'd like to talk in the terms of my experience. I know that we received the 900 million dollars for the State of Alaska, and I know the native people received some money.

I was one of the committee investment members for my corporation, and we received in one day 24 million dollars. Well, our task was to protect that money from being spent. Our task was to get that money to earn money. That was our appointment.

So we did it. And we made nine percent here, we made eight and a half percent here, we made six percent there. But the average return was seven percent for the 24 million dollars when we finally invested the whole dollars in.

Well, as an experience, I was happy that we had that 24 million, and I know that we were making money. We

were not losing any money.

But, you know, as soon as you put it into the hands of the political people, one being myself, board member, the money just went down the tube. Everybody just wanted to spend it. Now the 24 million dollars is gone. Instead of having profits, you know what we're having? We're having deficits; deficits. Every year, deficit.

That's the reason why I like to protect that permanent fund in there so that we could live off its interest and perhaps help some of the business people make their money. I think we will make a big mistake if we don't put a control.

If we don't have a control in that money, the legislature will spend it. Or anybody with political thing, they don't have to have any reason to spend it, just have enough political pressure, and there you go. I want to get re elected, so I'm going to have to spend money here. We have to have control over that money and that permanent fund will support us.

That's just my statement.

MS. PORTER: I'm afraid we're going to have to get the economists back here to talk to them about the loan programs that they were talking about. Getting outside money to fund things like the bottom fish industry, or fishing industry anywhere, herring, salmon, or bottom fish,

to develop that industry. And use surplus money. They're talking about setting up some kind of fishing committee.

MR. ECKHOLM: There are a number of existing programs. I think I've heard Mr. Daniels speak of before, like the Alaska Industrial Development Authority. There's a fishing farm bank that was set up for specifically fisheries and agricultural development. I think that they're not talking about creating new institutions but sticking enough money in those institutions so that they're able to invest in money coming back in.

MS. PORTER: So assuming that that area is taken care of, I don't know whether people would grab it, just take the bucks and put it into developing onshore processes which are desperately needed if we're going to be into the bottom fish industry, whether they want to put a couple million dollars into several hundred people who want to go into bottom fishing in the State, so that we can control that wealth. That wealth is going to make the State wealthy even when the oil runs out; the bottom fish are still going be there. That is a tremendous, tremendous resource that I guess is going to be addressed properly. I certainly hope it is going to be addressed properly.

But if that's the case, if there is a way of funding that industry without using the surplus money and the agriculture industry without using the surplus money,

what are we going to do with the surplus money if we have set aside a permanent fund. We've got the loan organizations that are going help do the bottom fish thing. Then what are we going to do with that surplus money?

MR. PILLIFANT: I guess I just don't understand why should we invest it outside and get our interest come back here, invest in our own people? Why can't we take the money and invest it in people and let them pay the money back so we can build industry up here? I don't understand the difference.

In other words, it kind of sounded like they were saying we'd make more money by investing outside, taking the money that we got off of our investments outside, and then investing in business inside the State. Right?

But if we loan our money, what we have over to the fishermen or to the small businessman or to whoever needs a loan, we have young people in this State who are wanting to go into business, for instance. There's no money for them to borrow. Can't we trust our people, loan them the money, charge them interest on it, put the money back in? We have our own fund statewide going. I personally would like to see that happen. And I think our economy would boom, our own people would be getting the money, and it would be just revolving here within the State.

Unless they think that maybe getting it outside

it would help the south too.

MR. NASKE: They didn't say that. You misunderstood.

MR. PILLIFANT: Explain to me exactly what they mean.

MR. NASKE: What he said is the monies, the oil monies that are coming in, or some of them, at least, are to be used as leverage, that they're invested on a worldwide scale and that then would become a major banking institution, as it were, and that the money that is here will attract outside monies, that outside people would lend us the money, which then can be invested in Alaskan affairs. All this would double --

MR. PILLIFANT: Why do we need it lent to us, if we have it?

MR. NASKE: Because we're making more on the international money markets. We're multiplying the money we have, and attracting investors into Alaska.

MR. PILLIFANT: You don't think if we start growing with our own money people aren't going to invest?

MR. NASKE: We would grow on that schedule that Belden proposed.

MR. PILLIFANT: But we won't grow if we loan ourselves our own money?

MR. NASKE: No, not anywhere near, as I understand him.

MR. ECKHOLM: It's sort of like buying a house for cash or putting down $10,000, instead of using $50,000 of

the bank's money.

MR. PILLIFANT: Normally I would have some of the money back that I would be able to use for other things. In other words, if I had $20,000, I invested 10,000 in the house, borrowed the rest from the bank, I'd still have 10,000 that I'd be using for something else. And I could see that benefit. But otherwise --

MS. SHROYER: It's the same idea.

MR. PEQUERO: I don't see how can we think in the idea of making more money by investing outside when the greatest unemployment rate is right here in Alaska. And when all the social problems that we try to resolve with money are created exactly because of the unemployment rate.

Then it really don't make sense. Here we are pumping the money in social programs which are not going to be solved with that money, and then over there trying to take other money and put it outside, while the problem is over here, on whether the working population is happy.

The project I came here, I was more interested in the extension of the Alaska railroad from Alaska to Canada to the contiguous Lower 48. I think that it's the best project that we can buy.

First, because it's a project that it will pay itself; second, because it will bring down the cost of living in Alaska, which is mainly transportation, higher

than in the Lower 48; third, there is no use to open up the land if there is not a means to mine it, to make what you are going to mine outside.

Then the whole question that we should be dealing here, if we want to have money forever is to open up the land. And in opening up the land, you have to create railroad. And I think we should be dealing here more with projects that will create a permanent work force and not in how we are going to invest the money just to make more money. That's the function of a bank.

But the function of government, it is not the function of a bank. It is not the function of a business person.

Therefore, I think that the project that we -- the money should be invested in projects. And I propose that we endorse the extension of the railroad from here to Canada, to the contiguous Lower 48 as one of this group.

MS. SIMONDS: There's an article by David Rose, a long term investment and funds leveraging in our white papers. And I think that will help, if you read that will help a little more of what they're talking about.

Now, as far as getting -- we do need capital. Sure we'll have three and a half billion dollars but to extend a railroad could well cost several billion.

MR. PEQUERO: No.

MS. SIMONDS: Anyway, I'm sorry, it could cost a lot. And then if we want to have transportation developed over the State, that would cost a lot of money. If we go into hydroelectric, it's going to cost a lot more than the billions that we have.

So, part of that has to be to secure loans and to deal with the getting capital from outside.

And I think that's all part of this leveraging and why we are involved with even talking about outsiders because the capital to do those things will have to come outside to help us along as we're developing.

MS. RAY: I would like to just bring forth a concrete example of something in the fisheries area and where I believe that we could well spend some of this money.

And I've been spending the past year on a sea food processing plant for a native corporation who wants it built in their village. In the Alaska Industrial Development Board, we were able to use that board as a window in which to obtain some bonding money and we are also able to get up to a maximum of 500,000 per project, is what their particular guidelines are. So we're going to get 500,000 from the State on an approximately seven million dollar job.

But our problem is we're having a lot of trouble getting the financing for this within the banking community.

There isn't the money available. And it is very, very difficult and we are being forced to look at Japanese markets for getting this plant going, and the village is most desirous of it happening.

But it's just up to the 500,000 that we were able to get from the State. And I wish that, if we did have the excess money that we're talking about, that there could be more areas for this kind of development.

MS. PORTER: Obviously, with the surplus monies that we have, not just one thing should be considered. As the economists said, there are several areas. We're looking at shoestring, whether they're business incentives or out and out loans, some enhancement to keep small businesses and increase small businesses in the State.

Another area is the whole area of public works, where the bucks are not wasted. It does create jobs. They're not jobs forever.

But there are several areas that I think we should be looking at. Maybe I'm living under a misapprehension that we have to look at just one thing.

I think we can look at many areas. We do have a lot of money to work with. There should be areas that we should look at, not just simply one area. We do need to create industry that is going to continue to produce revenue that will support the State in the event the oil

ever does dry up.

And, as far as the $500,000 loans, that's a very unfortunate thing that the State is thinking so small when we're looking at the fishing industry, because we're going to lose it by thinking that small. We have to begin thinking in millions of dollars, instead of hundreds of thousands. That might be another thing that we might want to address, pump more money into something like that.

THE MODERATOR: Are we ready for a coffee break? About ten minutes.

(A recess was taken.)

THE MODERATOR: What we thought we'd try to do is maybe Eric can try to summarize what he's heard and what kind of issues have been raised and give some back to you what maybe we've heard and then see where we want to go from there.

What I've heard is that we got money; we want to go from nonrenewable to renewable; we want to put some of that money into social services, schools, et cetera, but with a heavy emphasis on we want to invest it and get it returned to us at a later date for future generations. In other words, loan it.

I hear you people talking about a State being a bank.

Does anyone have any problems about elected or

appointed officials making loan decisions with your money?

MR. MERDES: I do now, with the Commerce Department and Veteran Affairs, and the federal government does with FHA and SBA.

MS. RAY: We're talking about government departments, whether it's renewable resources fund or whatever would be actually handling the money. It wouldn't be like a political football that we go through every session, necessarily.

MR. ECKHOLM: The fact is we already are a bank, too.

MS. RAY: Pardon me?

MR. ECKHOLM: The fact is the loan programs, we already are a bank, the second biggest bank in the State.

MS. SCHIRMER: Do people have confidence in our getting the right people to manage these large amounts of money?

MS. SHROYER: I, for one, have a lot of confidence in Alaska and putting that money into investments that would become the best thing for Alaska. I have a lot of confidence, yes.

MR. SEIFERT: I'd like to speak to that, too. I went to a hearing on permanent fund administration. Another gentleman got up and he said, "I really like the fact," he made the analogy that financial experts and economists are like analygous to a mechanic for your car. They're sort of an mechanic for your bank. He says, "I really like having

that mechanic around, because when I have a problem that requires special tools and special needs, I can go to him and I can count on it. But I don't ask him where I should drive my car. He's a mechanic, and he helps me for my needs."

But there is no analogy that says a fisherman or a farmer doesn't make a good analyst. I think people have an inherent sense, cross evidence of what's here, inherent sense of what's going to make it and what isn't. I don't think that's something to worry about it. I have a lot of confidence in this.

MR. ECKHOLM: Let's sort of go around the room and have you tell us where you want to drive the car, specific recommendations of where you think the money ought to be spent in terms of just one recommendation apiece. Martin?

MR. MOORE: Let some of the fund go into fishing industry, or even bottom fishing industry, because much of our renewable resources has supported the State for such a long time, and we really don't have a control over the market. And I think one of the wisest investments that could benefit and have a little bit more control over our renewable resources would be fishing industry.

And that would be one that I would suggest that would be one of the areas of investment.

MR. ECKHOLM: Thank you.

MR. HARTLE: I think what we're doing now is

converting the energy that we own, the oil, into dollars. And the value, as we all know, of the dollars is dropping, inflation is whatever it is, tremendous. And the value of the energy is increasing. So that I think that one thing we can do with our money, energy converted into dollars, to reconvert it into energy, because that's something that will retain its value. And I think that we need to look for that.

MR. ECKHOLM: You're talking about hydroelectric, wind?

MR. HARTLE: Sources that are not oil and that will last beyond the oil years and that will not harm the environment. I'm sure we're all concerned with that. And I think that would be among the best investments for our money.

MS. STRASSBURG: I think we should make this money available to our local banking houses because certainly they know the problems inherent in a locality, and they know the people personally that they're going to be dealing with, which is something that, much as we appreciate our State loan programs, most of the time I think the local banks can handle them better and they have a little bit better handle on what people are going to do with it.

Now, the money would be deposited from the State to the banks and the banks would then go by the rules and regulations set up by the people in the Capitol, in the

legislature.

But I do think that the local people need to disperse it, per se. I think they have a better knowledge of the people involved.

MR. ECKHOLM: Thank you.

MS. RAY: Money now available for housing out in rural areas at a low percentage rate, the beginnings of a really good program there. But the housing, the loans that are available for the urban house fires, I think we're in a very difficult situation.

And I think that some involvement there is appropriate.

MS. SIMONDS: Housing?

MS. RAY: Yes.

MR ECKHOLM: Has Rosie disappeared? Rosie, where are you?

MS. PORTER: I've got a long list. Do you want me to just say one thing?

MR. ECKHOLM: I wasn't soliciting.

MS. PORTER: One thing? I have 15.

MR. ECKHOLM: I think we should kind of limit ourselves. Could you put all of your 15 into a broad category?

MS. PORTER: No.

MR. PADDOCK: I've got a brought category. I agree

wholeheartedly with what Mrs. Strassburg said. I'm a retired employee of the State of Alaska. As such, having been a government watcher for the last 25 years, I think what the State can do private enterprise can do better.

I agree that the thing that Alaska needs is to further her own economy. I think that the big business generally comes from little business growing up. And I would like to see the opportunity for small businesses in Alaska to grow up. And I like the idea of putting the money into programs that are not necessarily administered by the State, but the State program says that this money is going to be utilized by local banks, local lending institutions.

These people know the risks of the individuals applied to them better than any State program can. They know the needs of their area. And I think if we're going to have more fish processors, the logical way to do it is to assist the local fisherman who may have aspired to be entrepreneurs, to develop into that. I'd much prefer to see that than to make it possible for some big outside corporation to move in big overnight. They have problems when they do that, because they don't know the local problems like some of our leading people in the industry, whether it's fishing, logging, farming, whatever it is.

I like your suggestion very, very much, Mrs. Strassburg.

MR. ECKHOLM: Are you saying what Belden said, stay away from big programs and go for small ones?

MR. PADDOCK: Yes. I agree with that. I think that by starting small the process of survival of the fittest will determine who is going to come out big.

I have nothing against small business turning into big business; absolutely nothing against it. But I hate to see the State backing big business because one reason that I'm opposed to that is because it means, I think, just by the law of supply, that there are a lot of little people who are thereby precluded from ever growing up into that big business.

I hate to see the State get into a program that's in competition with private enterprise, especially small private enterprise.

MR. ECKHOLM: Mr. Pomeroy?

MR. POMEROY: May I ask a question of what he means by I hate to see the State get into competition with private enterprise? What did you mean by that?

MR. PADDOCK: This may be a little uncomfortable, and I'll apologize if it steps on anybody who is present. But on the flight up from Juneau, for instance, I sat by a friend of mine who has a little tour boat, he invested a lot of money in it in Ketchikan. I don't know the details on this, but he tells me that he's hurting because somebody

in the State made the decision that the State ferry system is going to run the State ferries into the area in which he operates and he feels that this has deprived him of much of his local market.

In fact, it reduced the price of the commodity, the price that he can charge for his commodity, because the State set a level for tickets on the State ferry on this tour trip that is at a level substantially below what he feels he needs to charge.

I think this is an instance of the State being in competition with private enterprise. I'm sure that there are a number of excellent reasons for the State doing this, but still, I wonder if those excellent reasons are really adequate in a situation of this sort where --

MR. ECKHOLM: Excuse me, Mr. Paddock. Could you make that into a recommendation, or could we move on, because we are sort of short on time.

MR. PADDOCK: Did I respond, sir, to your question?

MR. POMEROY: Pretty well, yes, you did. And I can pick it up from there.

MR. ECKHOLM: I'm sorry if I cut you off on that.

MR. PADDOCK: No. No. No. I don't feel like I was cut off. But I was just trying to explain to make up for loose ends, that perhaps you, sir, or Mrs. Strassburg would like to assist in wording a recommendation.

MR. POMEROY: Well, are we not sort of in this kind of a situation of there being an apprehension that in our eagerness to promote enterprise, to make jobs, that we may unnecessarily get into business that we need not get into. And my own personal view is that, wherever it is avoidable and we can further a good purpose of development or service and use our private enterprise structure, that we should do so rather than directly take jurisdiction ourselves. And that is very close to the matter of who handles money.

We have an infrastructure, a financial infrastructure that can perform the services of handling money. I don't deny that there might be some special condition that involved something otherwise because I'm not knowledgeable enough to know about how we handle our money that we get that's tax free. I don't know what limitations there are. But in general, I concur with what has been said here and what has been said here, and then I would extend my remarks only this much to say that, with respect to the money we have, it's a medium of exchange. These dollars that we get, whether we will it or not, we're getting a hell of a lot more than would be to our best advantage.

And so our purpose is to think as broadly as we can as to how we may be able to farm that money and convert it into investments of whatever will do best without a concern about whether we have a business here in Alaska

that employs the unemployed.

Now, that may seem like a harsh thing to say, Mr. Chairman, but it's not a harsh thing to say, because if the requisite conditions are healed economically for a business to live, it's going to live one way or another. That is, to say, and it may be that we have money that comes in and becomes an investment one way and another. But to sharpen up the point, I would say that we're going to be money managers that in the long run will give us the best return for all of our people.

We have businesses that -- well, we have a buesiness that's going to cost a billion dollars and it will only employ 60 people.

And would we want one that employed 6,000 people and cost us in the treasury $2,000 apiece.

So I mean simply to emphasize that our concern has got to be good hard managers, because that's going to be the best way to get the best return for the people. And we use the infrastructure we have rather than trying to replace it.

MS. SIMONDS: Belden said that. I agree that the banks might be more competent to decide who should have those, because the fatality of small business is fantastic. And everyone thinks he's capable of running the business. Not only that, the retail stores in Anchorage, they get loans.

They're all using borrowed money. Builders use borrowed money.

I do think it should be done through the banks, because the competency is very important to protect the taxpayers' money.

MR. ECKHOLM: I don't think we should have too much discussion about recommendations right now. I think we should go through and make recommendations and then go back and have discussions.

MR. MURDES: It bothers me what you say about big, because that's a tough term to define. What constitutes big and small.

I happen to have a little banking background. If we're going to be putting millions of dollars in State banks, there should be some strings attached. I agree they administer better than the State does. But the point is, for example, historically, we've been paying more interest than anybody in the State. Our cost of living is higher. The people of Alaska ought to be just like they benefitted before this bonanza came up. We ought to attach low interest rates on these loans and long term. Because if you let the banks have the money, they're going to give it to you at relatively short term, and at the market interest rates. And they're going to get all the prof.ts. They should get a reasonable profit, but not the profit the

market is calling for right now, 14, 16 percent.

And, secondly, if you're going to give them the money, I think you ought to also beef up some of your State program. Like, for example, I am opposed to the State veteran's program. I think that's a disgrace. We ought to take a strong position on the reinstatement.

MR. ECKHOLM: Is that a recommendation?

MR. MERDES: You talk about small business, you can't rent a farm for less than a million dollars. Now, is that a small business or a big business? You got to be careful what's small business and large business.

How about it, Jack?

MR. ECKHOLM: Excuse me. Would you recommend that we reinstate the veterans loan?

MR. MERDES: I move it right now. Don't you agree?

MR. NASKE: I have two recommendations. One is that we invest in an integrated transportation system in the State. Take a hard look; is it really worthwhile to build more roads, which are very expensive to keep up and so on. Perhaps we might think of going back to barges and the interior and various things.

And, secondly, that we invest more money than we previously have done in the resource management. I think in the areas of scientific research enforcement, the whole spectrum of resource management I think has been really

starved in the past.

MS. SHROYER: I have two questions before I want to think about a recommendation, and I'd like local bank control of our loan programs, but I don't really understand the banking system.

We have the federal reserve, which controls our local banks and we have the FDIC corporation. Now, would the federal people with that kind of control have control over how we distribute the monies? Okay? I don't know. No, they won't? Is that the answer?

MR. MERDES: The federal reserve supplies the money to the federal bank system. They don't supply any money to the State bank system in terms of control of it.

MR. REAVES: You disagree with Ed, he said that the State gives money to banks. The State is prudent enough not to give money to the banks. As a matter of course, the banks bid for the money from the State.

MR. MURDES: We're talking about the future, now.

MR. REAVES: This is history.

MR. ECKHOLM: Excuse me. I think I would like to try to get a list of recommendations and then we'll go back and talk about them point by point and decide. Because there are some things, like the State already does involve the bank and money of the loan programs. But I'd like recommendations first so we can get those all and go back.

Is that all right with the group, that we don't discuss them point by point now?

MR. PADDOCK: You asked for a recommendation from me. Did you get a recommendation out of this three-way conversation that we had here?

If not, I would like to recommend that we consider a program in the future whereby State monies are made available to Alaskan banks under a program which will ensure special benefits to Alaskan businesses. And I would appreciate some help from Ed in putting some bones on that skeleton to define Alaskan businesses.

I agree, a million dollar business is not a big business anymore. When I say big business, I think in terms of the fishing industry, largely. And Alaskan processors, some of them just graduated out of the fish boat into a small processing business. Maybe they've got a million dollars, maybe it's two million, maybe it's three million, but they are small businesses when you compare them with the large Japanese trading companies or even the large Japanese fishing companies. They are infinitessimal. That's what I think of when I think of big businesses, or some American businesses, Council & Cook, New England Fish Company, a subsidiary of British Columbia Company, one of the largest in the world.

Those are tremendous businesses, and they are

good and legitimate, and I would hope some day we would have Alaskan-based businesses of similar size. But you've got to start small.

MR. ECKHOLM: I'm passing out a paper from Mrs. Aleck, who is here. Some of you have it already.

MS. RAY: I recommend that we establish a rainy-day insurance fund.

MS. PORTER: I've narrowed it down to one.

MR. ECKHOLM: Rosie?

MS. PORTER: I would suggest that we pour some bucks into public works, which would include alternate energy development. That's like waters and harbors, hydroelectric, waste, heat, airports, intercommunity roads; that kind of thing.

MR. HARVEY SAMUELSON: I'd like to recommend that lump sum liquidation of the amount due to the native fund be paid by the State.

MR. ECKHOLM: Could you explain that a little bit for us?

MR. HARVEY SAMUELSON: The royalty to be paid to the Alaskan natives. And this way it would help the Alaska economy inject quite a bit of money into the private sector.

MR. POMEROY: How much will you discount?

MR. HARVEY SAMUELSON: Pardon me?

MR. POMEROY: I said how much will you discount?

MR. HARVEY SAMUELSON: Nothing. I got the back-up material.

MR. ECKHOLM: How much money are you talking about?

MR. HARVEY SAMUELSON: 400 million dollars.

MR. NASKE: There were two sources where the money came from, the 962.5 million all together and 500 came from a two percent overriding royalty from mineral leasing. And this came out of State funds, you know. And the 462 have been paid already or in the process over a certain number of years. I don't know how it was handled. But it comes from two sources: State participation for 500 million and 462.5 came out of the federal treasury.

MR. ECKHOLM: So it's a debt the State owes, and you're succeeding the State accelerate its payment on that debt?

MR. HARVEY SAMUELSON: Yes. I got material on the whole works here.

MS. ALECK: From what period of time does that cover?

MR. NASKE: Until it's paid off.

MS. ALECK: From what period of time frame is it covering, the accumulated amount now?

MR. HARVEY SAMUELSON: Until 85.

MS. ALECK: Beginning when?

MR. NASKE: 71.

MR. HARVEY SAMUELSON: This past year. State's share.

MS. SIMONDS: I'd like to recommend that the State from an improved communications system to draw us all closer together.

MR. POMEROY: Mr. Chairman, without a money man here from the State to answer questions, I certainly wouldn't feel qualified to vote on a thing like that. That's a lot of money.

MR. ECKHOLM: That's maybe asking if we go back and discuss it, if you do want to consider it, we'll talk about it more this morning or this evening --

MR. POMEROY: I'm not expressing opposition, you understand. I want to know.

MR. ECKHOLM: Yes, sir.

MR. HARTLE: I'd like to recommend that the State invest in higher education and research. And that that can pay its own way in a few years. There is a certain amount of lead time until the pay back, but I'm sure it will, training people to work in the State, basically.

MS. SHROYER: Vocational and trade schools.

MR. ECKHOLM: There has been a concept around for a number of years that the State take the money and pass it back to the citizens in some sort of form. The income tax, all of those ideas seem to have a lot of play among the government type people.

Is there anybody here who has any thinking along

those lines?

MS. SIMONDS: I protest that --

MR. ECKHOLM: Go ahead.

MS. SIMONDS: I protest AGSOG, because there's no insurance that if the money is lost we will have to pay the debt. If it was all profit, it would be fine. But we might be liable for a debt.

MR. POMEROY: AGSOG is different. He's not speaking of AGSOG.

MR. ECKHOLM: There are a number of different schemes to distribute well.

MR. POMEROY: AGSOG is not our money. AGSOG is a special type of corporation which I suggest be given quite different treatment.

MS. PORTER: It would be just like General Motors.

MS. SIMONDS: If the money is tax money that goes into it. Mr. Nordstrum.

MR. NORDSTRUM: I'd like to recommend a tax credit for the Alaskan homeowner of perhaps $200 a year.

MR. MERDES: That's revenue sharing.

THE MODERATOR: Can I speak up, there? That's my kind of bag, you know, going through revenue sharing, though. I don't think it ought to go to the State back to the people. I think it ought to go to the communities. They're the ones that need real estate tax act.

MR. NORDSTRUM: As a homeowner, you bear all the expenses of the community. You're the salt of the earth. You'll probably have one or two cars. We can't hit it at the pumps, except our lag time, but we still pay a pump price. We're producing perhaps one-fifth of the oil, fuel, consumed a day. So I think that if we can go a tax credit, it's a direct return to Alaskans, rather than --

MR. ECKHOLM: Tax credit based on what? Energy use? Personal property?

MR. NORDSTRUM: Energy use, whether it be electricity, natural gas, oil, heat, coal.

MR. MERDES: There was something brought up along that line. The idea of when people improve their home, you know what the burrough does, don't you? I think just the opposite. When people improve their home, they should get their taxes reduced through revenue sharing. We thought about that the last time, but nobody picked up on it. But that's an incentive to beautify your community. And I recommend that strongly.

MR. ECKHOLM: Do you want to put that into a recommendation?

THE MODERATOR: He mentioned homeowners. That's what triggered me. That would apply all over Alaska.

MR. NORDSTRUM: Year round. Throughout Alaska, a home in Susitna, everywhere. But this is a direct return to

Alaskans.

MR. POMEROY: That's to help him in what way?

MR. NORDSTRUM: Well, energy tax credit that he gets a direct --

MR. POMEROY: Suppose he's a renter?

MR. NORDSTRUM: Well, it could be at a scale, you know. It's just like similar to paying the Alaskans having one home exempt.

MR. POMEROY: But if he rents his home, you still would give him a credit?

MR. NORDSTRUM: You could, but it would be scaled down to a third of that to the homeowner. That is a proposal.

MR. ECKHOLM: Do we have any other areas? Jerry.

MR. McCUTCHEN: I'd like to see a direct distribution of the funds.

MR. ECKHOLM: How much of the funds? What funds?

MR. McCUTCHEN: How much? How much have you got? Does that answer your question? They tried to ask in a town meeting, and Daniel Shore won't let him, and he tried to probe the question out there in the audience, how much do you want distributed. We can meet those programs and a number of others fairly easily. So how much more did you want?

MR. ECKHOLM: How much are you suggesting?

MR. McCUTCHEN: I don't know. Maybe $4,000 or $5,000 at

the upper limit.

MR. ECKHOLM: Per person?

MR. McCUTCHEN: Per person. You can do it any way you want to. I'll sit down and write it out between now and tomorrow, if you like. I think the upper limit of $4,000 or $5,000. I'm not much for giving the municipality money. Because I think the municipality taxes ought to be there. The saddest thing is the revenue sharing that's going on now, because it's made our local governments inefficient. One day we will have to come to grips with that. That's going to be one great load. The money will have to go to the citizen. If he feels like giving it to the municipality, that's fine. That's up to him.

MR. POMEROY: On that point, I have no trouble with the concept of that. And I would like to suggest that we all think in these terms when we come to something like this.

We're talking about a social purpose, actually. We are the highest cost place in the United States for living. And we pick at some of these problems, we pick at these problems by conning Uncle Sam in selling some bonds tax exempt and a few people get a few houses with a little better interest rate, and this and this and this and this.

And whether you're distributing money or whether you're trying to do something to help people have the cost

of houses less, and I'm not making a recommendation on that, I'm simply pointing out that we're talking about a social purpose that we're trying to serve for all the people as equitably as possible.

MR. ECKHOLM: Are you making a recommendation? Are you reaffirming?

MR. POMEROY: I'm saying that I concur in the principle.

MR. HARTLE: I'd like to recommend against distributing the state's wealth, excess revenues, whatever, by a means of, for instance, repealing the income tax. Because I think that that particular method is inequitable in that it returns the most benefit to those who least need the benefit, those who pay the most tax. And secondly, the biggest windfall is the federal government, since they would get the most money.

MR. PADDOCK: I'm glad that that subject was brought up. I didn't want to bring it up myself because I've already put in more than my two bits worth. But I think this group ought to address themselves to the question that's very, very current now in our society, about are we going to do away with the State income tax.

And I don't think that the federal government is the biggest recipient, because the biggest recipient would be the nonresident who comes to Alaska and extracts money

from Alaska and would leave no money in Alaska if the individual income tax were done away with.

I do think that this group could well go on record in favor of some sort of tax credit system for resident Alaskans and I think that might meet the objections that you had and it might fall in very well with what you're saying.

MR. HARTLE: It wouldn't meet the objection that it would give the most benefit to the richest people who pay the most taxes.

MR. ECKHOLM: Excuse me. Could we go on?

MS. SIMONDS: I'd like to see money and planning put into rehabilitation of people in our correctional system so that they aren't constantly recidivists.

MR. PADDOCK: That's a losing proposition.

MS. ALECK: We have one continually expanding resource and that happens to be the growth of our State government.

MR. POMEROY: Resource or a liability?

MS. ALECK: I would like to see that $100,000, which is a very, very minor figure, invested in the capitol site planning commission to provide an alternate plan based on the mini-capitol concept, or just the necessary central State government to be relocated from the present site in Juneau to the site selected by the voters, mainly because we are currently leasing one-third of many office spaces in

Juneau. The other one-third is being leased from OSHA, and the State actually owns something less than a third. There is no additional State-owned land in Juneau to expand. And we are expanding at a tremendous rate.

I have listed some current capital expenditure figures at the bottom, which this last fiscal year was over 17 million in State travel and per diem, the telephone bill has increased now to 6.6 million for this last fiscal year, and it is presently under an 87 percent interest rate increase.

And with the additional square footage facilities that will be required in the near future and the fact that most of our leases are currently expiring, it is necessary to implement.

MR. ECKHOLM: So what would be your specific recommendation?

MS. ALECK: Well, my specific recommendation would be to go ahead and allow at least the $100,000 in order for the capitol site planning committee to come up with an intelligent, reasonable plan, which is what the people wanted in the first place.

MR. POMEROY: Couldn't we have a list to read and take this up tomorrow?

MR. ECKHOLM: We may be duplicating some of our discussions when we get into resources and direct services.

We'll be coming up with these points and more specific and better recommendations.

MS. SHROYER: I would just like to say one thing to counter the last recommendation. I would rather see monies put into ways of bringing our government down to a smaller size, having services taking care of through maybe a private sector and doing with what we have instead of spending outrageous amount of money to move the capitol.

MS. ALECK: Well, if you can read the comparative cost studies of capitol buildings remaining in Juneau, again, the big factor is we're leasing private space. And if there's any further construction, private land has to be purchased before the construction can begin.

Okay. You retain the regional offices in Juneau, you retain the regional offices in Fairbanks, as well as Anchorage. The administrative cost that will be saved, we're talking about big millions per annually, which five years down the road you're going to be at least doubling, will be more than enough to offset any bonding requirement. And also don't forget the offset of the sale of land at the site. We're talking about a gain rather than a loss in financial expenditures.

MR. POMEROY: I haven't had a chance to read it. I recommend if we could save time and do it tomorrow.

MR. ECKHOLM: Are there some people here who haven't

made recommendations that would like to make recommendations?

MS. RICHCREEK: I would like to recommend tourism be expanded such as in the way of advertising, et cetera.

MR. ECKHOLM: Advertising outside Alaska?

MR. PEQUERO: Outside.

MR. REAVES: I would like to make a recommendation that -- I'm not very familiar with this industry, but I think it should be supported. From what I understand, it could be the largest industry we have in the State, and this is the timber industry.

MS. SCHIRMER: I'd like to second that. We shouldn't forget the timber and the agriculture business, the farming.

MR. ECKHOLM: You know, what you are all saying right now is that, except for a little bit on education, there have been no recommendations to increase government services any. The bulk of the recommendations that you people are saying to do with the money is to invest it in the economy. Does that mean that you think we have enough government services now, that the government is providing the needs that government is supposed to provide and that it's enough?

MS. STRASSBURG: If you invest in capital expenditures, you have employment, you have less need for services.

MS. SIMONDS: Regional government is services. And

public works.

MR. ECKHOLM: Go ahead.

MR. MERDES: There's something that came up, in 1972, when they gave the State oil to Sohio, unconditionally. They are paying less for the gas and less for the heating oil, anywhere except Alaska. When they sell royalty oil to anybody, people of Alaska, because it's their oil, they ought to at least get lower price for heating oil, not necessarily gasoline. If there is royalty given to anybody, there are conditions that the people of Alaska get that cheaper.

MR. PORTER: I just really wonder if we did this exactly backwards. We have to go through yet a lot of the issues that we've touched upon today. And one of them is Direct Services.

MR. ECKHOLM: Right.

MR. PORTER: I do have a list of a number of things here. But I really don't feel they're appropriate now. I think after we go through all those other, transportation, communications, direct services, energy, then I think our recommendations are going to be how to spend the bucks; honed down. So this might be kind of a practice run. We might want to do it very quickly after we go through all those other topics.

MR. ECKHOLM: We may not go back and finalize

these as recommendations, but I'll have it maybe drafted up and typed up for things for you to work on and then towards the end when we're working on Friday or Saturday, we'll go back over things and have a lot more information.

MR. PORTER: Would you like the rest of my list?

MR. ECKHOLM: Let's do it, then.

MR. POMEROY: I have a specific recommendation. Reference was made to the income tax. I recommend that we oppose the repeal or reduction of the income tax. It's an established --

MR. ECKHOLM: We have that one already.

MR. POMEROY: You've got it?

MR. ECKHOLM: Yes. Mr. Hartle recommended that.

MR. McCUTCHEN: The gentleman here who proposed the reduction, I'd like to tack something on that opposition to tax reduction. Senator Stevens has recommended we don't do it at this time because of what's occurring on the national scene. I think we ought to pay attention to what's happening here. They're eyeballing everything we do here. You can call it whatever you want to; anything.

But as long as the tax law is on the books, there, if you were to distribute, say, $5,000, you'd wipe out most of the tax for most of the people and accomplish the same thing. And if you don't go the other way in making a distribution, you're going to find yourselves in a position

making a distribution based on social services. If not this time, that's certainly going to be coming out of something to subsidize the villagers, for pioneers and this kind of thing. For those who are in the pioneer home, make a distribution. They just turn around and put it back in the same pocket now.

MR. PORTER: Are you talking about just a one-shot deal, or for every year?

MR. McCUTCHEN: Every year, just like stock dividends from the year. If you made it a one-shot operation, you couldn't put length of residence involved.

MR. POMEROY: To the recorder, I should have said I actually wanted to add something to the matter of the income tax, that it would seem strange indeed for us to reduce at all the approximately 25 percent we are paying, as long as it seems to be woven through all of our discussions, the need to save money for the future. Something of that sort, I should like to see, if it's consistent.

MR. ECKHOLM: In terms of timing and investment and stuff, would you like to see investments made in businesses? Say that if Alaskan businesses were allowed to borrow as much money as they needed to, and as long as it was reasonably sound, and that would then stimulate a strong economic climate in that the State would attract probably a

fairly sharp population rise. Because jobs, people almost directly follow jobs up to the State.

Would you want to go ahead with such a program even though it would mean a probably significant population increase?

MR. McCUTCHEN: Leaving what's reasonable and sound in the definition of some politician's hand depends on how much money transpires in campaign contributions. If you're going to make a distribution of money or make money available, make it for a target area that you want to do something in, rather than bulk.

MR. ECKHOLM: So you're not just saying blanket drop a whole bunch of money on problem areas. Which problem areas are you talking about?

MR. McCUTCHEN: Oh, I would say bottom fishing is one.

MR. PADDOCK: Mr. Chairman, I think that the previous discussion when we talked about following this through the local bank pretty well adequately takes care of that. Because most of our experience with bankers has been that they're not in it for charity. And they're not going to loan money to something that will not fly. If it will fill a given felt need in the community, then the bankers will look at it.

MR. ECKHOLM: Should the banks have to put some risk into it themselves?

MR. PADDOCK: I'd defer to Ed Merdes on that. But I agree with him wholeheartedly and with Mr. McCutchen, that you should target on areas, that there's a broad basis of agreement, that these areas need assistance.

MR. ECKHOLM: Then to focus this discussion, I've heard bottom fish. Are there any other critical --

MR. McCUTCHEN: As you go through the resources, like shouldn't those occur as we go along, in tourism?

MR. ECKHOLM: Are there areas that you think are overbuilt or overstimulated that shouldn't have money poured into them at this time?

MR. PADDOCK: The bankers will tell us that.

MR. McCUTCHEN: Right now, housing.

MR. PADDOCK: In certain areas.

MR. McCUTCHEN: Like Anchorage. At this juncture, I would just set loans up to bail the people out, but I wouldn't go for any construction, because you can't sell what you've got.

MS. SIMONDS: There are too many restaurants around Anchorage.

MR. POMEROY: I wouldn't bail them out. It was a bad deal.

MR. McCUTCHEN: It was something that was known ahead of time. Without getting into politics, it's something the Hammond administration should have planned on and did not.

I'll drop it with that. I think you're going off saying where you want to go with your money, rather than where you don't want to go with your money.

MR. ECKHOLM: Would you want to weight it? Mr. Daniels in his recommendation said weight the loans in rural areas. Would you like to see preferences given to loans if they were in rural rather than urban areas?

MS. SCHIRMER: What do you call rural and urban?

MR. ECKHOLM: What do I call it personally?

MS. SCHIRMER: A city of 5,000, is that rural or urban?

MR. ECKHOLM: In my mind, that's rural. That's my personal opinion.

MR. PADDOCK: I think the federal government has defined guidelines. It seems to me that Fairbanks just a certain point here a year or two ago matured to the point where it was urban.

THE MODERATOR: Below 50,000 is rural.

MR. ECKHOLM: Is anybody interested in making that a recommendation, or not?

MR. PADDOCK: I'd like to debate on that.

MR. POMEROY: Unless we have a very specific idea of the social purpose that we want to serve, I should say it should be on the basis of economic feasibility and what it contributes to the community.

MR. ECKHOLM: That might be very difficult to decide.

because if you're talking about economic feasiblity, that would count out a lot of businesses because of the higher cost of everything.

MR. PORTER: You mean the limit would have to be more?

MR. ECKHOLM: It's more economic to do anything in a central area.

Let's move on.

MR. PADDOCK: Mr. Chairman, I think there should be some thought given to that because I remember a few years ago you could not get money in rural areas because the banks had more potential to service, in this case, specifically the Anchorage area than they could handle. So a rural development was just totally out of the question.

I think these guidelines that Ed Merdes spoke of would address that and say, "All right, for this period of time, we want these monies spent to such a such and a percent in rural, and you can spend X percent in urban areas."

This is subject to change from time to time. You're not going to have a healthy infrastructure in urban areas unless you have a healthy support system based in the urban centers.

MS. SCHIRMER: If you're going to get development of ongoing economy in the rural areas, you're going to have to kind of say to the banks, "Now, look, we'll give you this

but you've got to see to it that a fair share of it is used outside of the rail belt." Or they will do what's natural for them, which is to lend it in the rail belt.

MR. POMEROY: I need a question answered. We're talking about investing money, we're talking about aiding development. Is it implicit in that that we are either for or against subsidies, that businesses must pay their way? What about that?

MR. ECKHOLM: That's, I think, a very good question. There are some figures that Belden Daniels -- we'll discuss this later. Go ahead.

MR. MOORE: I think that there should be some special policies how the money should be put in the rural villages. For example, we have a co-op in Yucon Delta, where I am from. And it took five years to develop a program to even convince the federal government to at least give us a loan to start the co-op. It took about $671,000 to finally convince them.

But the bank would never even give us that chance.

I wish this group of people here would at least know that there's an opportunity, give us a little bit more chance to develop the fishing industry that is probably now in the Bering Sea area where there is nonemployment in existence. I think that it would be a benefit for the whole State if we could be able to borrow some money and make the

money turn a little bit more in the communities.

For example, we have five fishing fleets that come in from Seattle. They take the money, and they take the money back out. If we had a better opportunity, we would probably have more companies or more employment right in the local village there and the money would stay. That's why I would strongly suggest that in this loaning programs that these villages be given the opportunity to have loans which are not available at the moment.

Many people even now cannot borrow any money even to build their homes because we still have the problem of whether you have title to your land or you have enough property there. They're still in a working system. And I don't know when we're going to get the final title to the land in order to qualify for some of these small business loans that are not available to us.

MR. PORTER: Martin has brought up an interesting subject that we may want to talk about later, and that is coordination of services, specifically loans. When you're looking at rural development, loans for small business sounds good, let's dump a bunch of money into the bush. But without a small boat operator, as an example, the herring industry is beginning to take off. We got a billion-dollar industry. Almost half the boats were wrecked there a couple of weeks ago. We need ports, we need docks, we need energy,

whether it's hydroelectric or whatever.

There needs to be a whole coordination, a whole look at the economy and not just say, "Well, let's give them some loans." But there needs to be some coordination.

MR. NASKE: There is a recommendation in the transportation system, an integrated transportation system.

MR. ECKHOLM: You realize what we're doing here. We almost spent seven billion out of the eight point five that is sitting on Russ' desk right now. I think it's good, but in order to be real about this thing, we're going to have to start judiciously saying when and how much. I don't think we should do it today, but I think we should start thinking about it. And maybe focus everything and say, okay, the three and a half billion dollars we've heard about we're going to have next year once we get all the recommendations, how much, maybe we'll divvie that up and say how much goes to where and what, so we put some reality into our recommendations.

THE MODERATOR: Let me add something here. I read my notes from ten years ago last night by chance. And so much of that ten years ago was devoted to shall we invest in rural Alaska or in the cities. Incredible. That ran through the whole thing.

Now, Marty and you have sort of begun to discuss that. Do you give a preference, not a preference,

necessarily, but do you get money out into the bush and rural development. I'm just wondering, is that no longer an issue in the State?

MR. PORTER: Can I give you a classic? There are two million fish in Bristol Bay that couldn't be sold because they couldn't get it out. The runway is too short at Dillingham. The planes cannot carry a full payload. They can't get off the ground. There is no way to get the fish out. Just wonderful fishing season, couldn't sell the fish. We're going to experience that problem over and over again. So it's not a matter of giving fisherman loans, giving them boats, but it's the total picture in the rural area.

MR. MOORE: May I finish that story about the co-op? At the moment, a couple of years ago, the fish didn't come and it was a financial handicap for the co-op and the co-op couldn't again borrow money to keep that going. We went to Seattle, tried to convince the bank owners and they wouldn't even look at it. It was fortunate that the Nenana Corporation had $250,000 that they loaned a regular commercial interest rate and they survived. People are hired there and it survived.

Without our aid, it would have gone bankrupt long ago. That's why I think it's important to give us an opportunity to give us commercial loans in that area.

MR. McCUTCHEN: Can I go in that thing? I keep sticking

my hand up and every time you nod to me, he answers.

Jack, I've got a question. In your operation out there, what is it you can do in the rural areas having those hot spots like Dutch Harbor where they need houses, and there is no money for it? Can you do anything at all?

THE MODERATOR: We can make loans to low- and moderate-income people. A person in Alaska has to have an income of $23,400 or less to get one of our houses. That's his Farmer's Home Administration. We put about 30 million dollars into rural Alaska last year in housing. The problem is you get out into the bush in Alaska, or Nenana, they've got to have public sewer and water, you see. You've got to put a person in there that can afford the mortgage for a $70,000 home plus pay his taxes, insurance, get title insurance on his land that he says he doesn't have title to. So, in effect, fireman's home is not in Nenana.

MR. McCUTCHEN: You can't be effective. I think this is one area, get a hot spot that's going, divert some funds, and I agree with the lady there, that you have to look at the whole system.

Here's what happened in Valdez. After the earthquake, they built them a new town and they laid the whole thing out, water, sewer, paved streets, buried power lines, gave them a city hall, post office, grade school building, high school building. And this was all paid for.

This is great.

So the thing was going to be fishing in Valdez, and so the SBA came on along. I've gotten million dollars out there so far. This is just the groundwork, okay. And they go out and they get an SBA loan and they build a brand new modern plant really built right. It gets down to the last $80,000 to put the equipment in to make the plant blow and the SBA cuts the money off and says no way. And the plant was finally used as a warehouse and burned up.

But this is the typical thing. It got shut off because the reason is they lost that extra amount of money for the equipment. The equipment was already aboard railroad cars to be sent to Valdez. The reason is they didn't have any operating capital, the corporation which was going to be given to the City of Valdez. They couldn't get anywhere.

Later on in Valdez, when the pipeline was under way and they were tangled up in the court system, now you have sewer, water, title, and everything you want to have, through there was no housing money because the banks wouldn't look because the thing wasn't under way. When the time came for the housing in Valdez, then came the housing and you had to do two things at one time. This is where the State capital can go into and do ahead of time. When you realize something is going to happen, you can go ahead and

prepare for it and do it. It should be an area where a bank can't get into or some other kind of lending institution can't get into, so it solves some kind of personal need.

MR. ECKHOLM: Let's wrap this thing up.

MS. RICHCREEK: I would like to add one other thing, and that is the State come up with some lands for sale where the people can buy the land to build a house. The reason I'm saying this, out in the Glenn Allen Copper Basin area it's owned by the University or the State of Alaska. People wonder why it's one mile wide and ten miles long, and that's the reason, because it belongs to one or the other.

MS. ALECK: I wanted to add something on this bank acting as a loaning agent for the State funds for personal or business and so forth.

That if the State deposited funds in various banks throughout the State, then they should also set down the criteria as to how these loans should be handled, perhaps even the interest rate. So, in other words, the whole thing isn't up to the bank and they turn around and say, "Oh, yeah, if you need our criteria, we'll loan it to you at 14 percent," or who knows what. You are trying to get the money into people's hands who need it halfway reasonably. Acting more as an agent.

MS. SCHIRMER: I think it's more consent.

MR. ECKHOLM: You realize that by the State taking money and loaning it out at eight percent, if the going rate is 18 percent, if that is money that is, say, permanent fund money or other money, that you're losing that money eventually, you're spending it. It won't be returned to you. It's drawing down. So what you're spending it for, you're not going to replenish the fund. What you're spending it for is going to have to replenish the fund.

MS. ALECK: I'm not saying eight percent per se. Some kind of a fair rate. This is enabling business and construction all over the State.

MR. POMEROY: You said something earlier about we might already have added up an awful lot of money than we have to spend. I am assuming, personal assumption, that we're talking about the kind of investments that are cost effective, whether they're for private business or whether they're for an infrastructure in a harbor. And my position is going to be consistent. It's got to be cost effective. It's got to be able to pay its own way, showing as well as you can show with an investment.

MR. PORTER: One more thing, Mr. Chairman. Also to keep in mind we're talking about the next ten years. We're not talking about tomorrow or the next ten months.

MS. SIMONDS: There may be duplications on the list that are in the office, too. Probably a lot of people are

asking for the same time type of things. So you can compare them and cross off the list and have the same.

MR. PADDOCK: I was going to second Rosie's statement that I think we're doing this wrong.

Will we be going back over this list again before we get through this thing?

MR. ECKHOLM: I'm starting to feel now that we just kind of started to warm up. We're starting to get to know each other, we're getting at areas that are of broad general concern. That are consistencies, and I don't think there is time enough that we have information to go ahead and specify things.

What do you want to do from here? Essentially what we've got is we've got all day tomorrow, and that's about it. And Saturday, they go in the general group and this is what we decide on.

MR. PADDOCK: I think before we finish we ought to go through this shopping list and do some prioritization. But it might be a good idea to trot this list out now.

But certainly I think there should be some reference back to it before we conclude because this lady over here mentioned rehabilitation. I think we sort of sailed by that, subject to Direct Services. Right at this point, without having discussed it, I think we're all looking at other things. We're looking at Christmas gifts

instead of the groceries. And certainly we don't want to give this business of rehabilitation a short shrift. However, I would hope that everybody will take in this -- is it tomorrow morning that George Hohman said we're scheduled for this "Outward Bound"?

MR. ECKHOLM: What I'd like to do is what you're saying: We don't come up with recommendations, and instead of spending the day on one thing, try to compress into two or three hours tomorrow at the end on recommendations, and decide upon all of the recommendations at that time as a group and we don't decide on anything right now until after we've gone over the areas that we have looked at.

MR. POMEROY: Pardon me. But in connection with that, we've certainly got to relate all we've said about what we think about endowing ourselves to think of the future when oil begins going down. Whatever we think about it, we've got to say something about it.

THE MODERATOR: After our breakfast, we have Milton Lipton coming in at 9:00. So we'll start off in the morning with him.

We meet at 8:30?

MR. ECKHOLM: You have 8:30 a.m. It's an assembly.

(The's proceedings recessed at 6:00 P.M.)

DELTA GROUP PROCEEDINGS

(December 7, 1979, 9:50 a.m.)

THE MODERATOR: I wasn't able to hear Mr. Fuller last night. Can somebody tell me what they heard from him?

MR. HARTLE: I'm sure that everybody heard different things. He spoke a long time and he was very impressive, to me a very impressive speech, and I really enjoyed it.

And to me he said there's much to do; it can work out great; be brave. That sums it up in three phrases for me, anyway.

And don't take any assumptions that you haven't investigated thoroughly first.

And he really had a way of just looking at things totally logically and re-examining assumptions that we've been making for years and years. And I found it very impressive for that reason.

MS. STRASSBURG: Jack, to me, what his consensus was is that whether you're an individual, a community, a state or a nation, you can do anything you want to do, if you want to do it bad enough. There's no limit to what we can do regardless, and that all the resources are here, all over the world, not just in Alaska.

But also he felt that Alaska is the keystone of the entire world. It's the thing where everything meets. I

thought it was very -- like him, I think it was terrific. I wouldn't have missed it for anything in the world. It's just a great experience.

THE MODERATOR: Harold?

MR. POMEROY: This preliminary recommendations, I take this to mean these are suggested recommendations. They are not things that we preliminarily agreed upon as a group.

THE MODERATOR: Right. Those are just sort of the wish list we did yesterday. You know, there's been no action taken on them. I think they will be helpful to refer to. Some of you will want to expand, some of you will want to delete. Obviously there's an opportunity to add new ones.

MR. ECKHOLM: We didn't make them to give to anybody else. It's just an in-house group.

THE MODERATOR: Following along on our procedure, yesterday it was finance. This morning I gather it's going to be natural resources, and this afternoon services. Is that your understanding?

MR. ECKHOLM: Yes.

THE MODERATOR: We couldn't have picked a better man to help us with resources, and Milton Lipton has been involved with the State for at least ten years. He and Walter Levi have been advising the Governor and the Legislature about our resources, primarily oil and gas. They're international authorities on oil and gas. He knows

as much as anyone in the State about oil and gas, so I've asked Milton to speak for three to five minutes and then open himself up to questions.

It's a pleasure to introduce him. He's a world-wide authority, and he knows Alaska. Milton?

MR. LIPTON: Ladies and gentlemen, it's a pleasure to be with you. You've got a limited amount of time to do an awful lot of things. And the ideas that he recommendations are going to have to be your ideas, not mine. But I did accept from the Legislative Council, who were sponsoring this conference, the invitation to write a paper. And I believe that it's probably been reproduced and is in all of your hands, although I doubt very much that many of you, under the pressure of time and circumstances, have had a chance to read it.

So what I would like to do for three to five minutes and no more than that is to try to identify for you, say, four selected issues of oil and gas policy.

I've selected these for your possible discussion and consideration because they're the kind of issues, while they matter very much to the State, more important than that, they involve inevitably conflicting values among the people and citizens of Alaska. That is to say, there's no easy answer to the kind of questions I'm going to mention.

There are four of them, I said. The first one is

an obvious and straightforward one. And that has to do with how intensively and how fast is the State of Alaska going to push the exploration of State lands.

There's no question but that from outside in a world where oil supplies are in imbalance, where the nation is heavily dependent on imported oil and energy, where the cost of energy is going up very, very rapidly, that there will be great pressure upon you because of your resource potential.

To develop and facilitate the exploration of your resources as rapidly as possible, this will be the pressure that comes from outside.

But I think that, from the standpoint of your own internal circumstances, these may be conducive to a more deliberate evaluation of competing interests among the citizens of the State.

First of all, as the price of oil goes up, surely it becomes more and more economical to explore even the difficult areas of Alaska.

Secondly, since you're concerned not only with finding and developing your resources but the effect upon the environment, this margin of decision, the choice you make between "do we develop our resources or do we protect our environment," the margin of decision there has probably become a more realistic one. That is to say, every barrel

of oil that you may chose to find and produce is worth so much more that you could afford to spend a lot more on environmental protection you might have been able to ten years ago.

And, third, all of the environmental concomitants of exploration and development of the coastal land management, current versus deferred revenues, all of these things that are troublesome and you're going to have to debate, at least in the world ahead, the ten years in front of you as compared to the ten years behind you, the debate and the decision ought to be able to be carried on in a far less pressurized atmosphere than heretofore, simply again because of the increase in the value of your resources and therefore the wider range of decisions that you have.

Now, the second area, the area of State revenues from leasing and from taxation.

If you go back, look back over the past ten years, decision after decision that had to be taken by the administration in terms of recommendations, and decision after decision that was taken by the legislature in terms of leasing and tax policy, we're almost inevitably constrained and almost inevitably dictated by budgetary needs. That is to say, three years ago there was a consideration "should there be a Beaufort lease sale" when the State was facing a 500 million dollar budgetary deficit.

There's only one way you could have leased. Front end bonuses to have a Beaufort lease sale; you needed the money in a hurry.

Now you can time your leasing. Consider other forms of leasing policy, ranging from bonuses, from variable royalties, down to a share of net profits.

In all aspects of leasing and taxation, where finances are involved, the State has a wider range of choices over the next ten years ahead than it's ever had before.

Third: This whole question about resource-based development, that is to say, will you have investment in the State based upon the availability of the state's natural resources? The commitment of royalty oil or royalty gas is a means of getting downstream investment.

You know, when royalty oil was first held out as a fulcrum for downstream investment, it had virtually no leverage, it took a long time and finally the State was offered four projects, some energy refineries and a couple of petro-chemical facilities. They were thrown into the hopper. And a comparative evaluation among these four was based upon the most tenuous and uncertain comparisons. What came out of it finally was the ALPETCO contract, frought with conflicting opinions and interpretations.

What I'm saying here is again whether it's a

review of a restructured ALPETCO project, whether it's LNG availability, whether it's a natural gas pipeline, or whatever, Alaska's position is strengthened for the ten years ahead as contrasted with the ten years past by the sheer importance of physical access to petroleum supplies and investment decisions.

The availability of oil and gas in Alaska becomes a much more important factor than it has been in the past because availability everywhere else in the world is suspect, is uncertain for political as well as for economic reasons.

What's happened in the world outside has moved Alaska ahead ten years.

And, finally, a point, an issue that is apt to affect, I think, Alaskans more intimately and more directly than these broad policy issues.

Petroleum is more needed in Alaska than other areas in the United States for heating and transportation. Put very simply, a lot of oil or gas has to be used in the home, be it in the city or the village. Whether on the ground or in the air, it takes a lot of oil to move Alaska's ten miles of traffic, be it movement of goods or movement of people. In the past, because Alaska is remote from where the petroleum products were refined, transportation added very, very heavily to the cost of oil for Alaska's

consumers.

In the present, because Alaska is remote from where its crude oil is refined, transportation costs subtract substantially from the value of Alaska's oil and gas.

To what extent should your State as a matter of policy seek to achieve a better balance between the costs of the oil and gas that are produced here and the prices of the oil and gas which are consumed by Alaskans here?

Given the rising trend in real oil prices in the next ten years ahead and the relatively heavy weight of energy consumption in Alaska's households and in its economy, the impact of rising costs on the future costs of living and on the costs of doing business in Alaska could be very substantial. State policy in this area could make a tremendous difference to the future of Alaska, issues, I think, that are of interest to you. I'm not sure.

THE MODERATOR: Questions.

MR. ECKHOLM: When you were suggesting an aggressive exploration of State lands, how do you suggest going about that? Do you mean we actually go and lease the lands for exploration, explore them ourselves? What do you mean?

MR. LIPTON: Eric, I did not suggest an aggressive exploration of State lands.

I think the world as it exists creates a

tremendous incentive and economic possibility for aggressive exploration of State lands. But at the same time, there are many different issues which you as Alaskans confront. The very aggressive exploration of State lands carries a high plus here in Alaska.

What I'm saying is the balance between exploration and all the other things that you value, protection of other resources which may be in danger by exploration, whether you want the income now or you want the income later because the oil will always be there in the ground, what the effect is going to be on the environment. This is an issue.

But what I'm saying is, in whatever direction you go, the decisions ought to be easier and the debate ought to be a more relaxed debate over the next ten years than in the past, because your oil and your gas is worth so much more.

THE MODERATOR: Ed?

MR. MERDES: Are you suggesting, Bill, that there's a possible policy that the State could take, for instance, in the future sale of its royalty oil? Are you saying that it could be a State policy that the State, for example, would, say, the North Pole refinery were Tesoro, gentlemen, we'll sell you this oil below market value, or whatever, provided that you sell it to Alaska residents at such and such or

such and such a cost?

As I see it, that's the only way that the people of Alaska can benefit from lower fuel prices in the bush and in the urban areas.

MR. LIPTON: There's never only one way.

MR. MERDES: That away, though?

MR. LIPTON: Surely. If the state wants to have lower-priced petroleum products in Alaska, one way in a sense is to make it available on the condition that the prices will be reduced. But there are other ways. That's a direct subsidy. There are other ways. And one way is to induce maximum competition among potential suppliers to supply the State market here in Alaska.

For example, if companies want royalty oil, how much royalty oil they get for whatever purposes may be conditioned upon how much they sell in the Alaskan market. So you have three, four, five, potential suppliers, all of whom have now a vested interest in capturing a share or an increasing share of the Alaskan market. Competition may do it without subsidy.

I think there are many different ways.

But, for heavens sake, my purpose here -- I wouldn't presume for a moment to try to suggest to you the way in which you're going to answer these questions. Because these decisions have to be based upon your own

values. I doubt very much if you could get a consensus of opinion among the delegates sitting around the table here on the question of exploration versus protection of the environment. There will be differences of opinions.

What I'm saying is it ought to be easier to debate and find the compromise among them in the ten years ahead than in the past. And the same thing on the question of how you get reasonable prices for oil and gas for the consumers within the State. There are many different ways of doing it. And some people will like subsidy, and other people will like competition.

THE MODERATOR: But as an economist, Ed, which is the next question. We've got the oil, we own it, or at least we own 12 and a half percent of the existing oil. Is it better to take it off at Fairbanks, subsidize it at that point, refine it so it gets out of the bush at a subsidized price?

As an economist, is that good?

MR. MERDES: He came up with alternate suggestions, see, which I like. And that's where his skill would be.

MR. LIPTON: Can I ask one thing? There's no good, bad; there is no right, wrong; there's no justice in there. What it requires is that you focus on what the purpose and objectives of Alaska ought to be in terms of developing and utilizing its resources. What is it you want to achieve? It's not a matter of right or wrong, it's a matter of how

you feel, whether you want to take advantage of the potential resources that are here.

MR. POMEROY: It seems to me, Mr. Lipton, that's a very simple, straightforward proposition.

Do we want to benefit the people of Alaska by a subsidy; that is to say, by providing fuel cheaper than they otherwise would get it.

It comes up in a good many ways, in housing, for example. And that comes to the matter, it seems to me, and I'd like to you to comment, that is a social purpose. Do we say that because costs are so high for living in Alaska, that we should subsidize ourselves? You don't have any observation on that, do you, I suppose?

MR. LIPTON: No, but let me call something, very, very forcibly to your attention.

The cost of producing oil and gas in Alaska is largely imposed upon you by nature. Nature has created the oil and gas. Nature tells you how hard it is to find. You've got a hostile environment in which to operate. Some of the costs are imposed by the economy because of inflation, but basically the costs are imposed by nature.

But the prices are not determined by nature. The prices of gasoline, the prices of heating oil, the prices of fuel while it's used to generate electricity, these are determined by a whole host of circumstances that man makes,

and most of them outside of Alaska.

The fact that your oil now in Prudhoe Bay commands a value of 13 and a half dollars a barrel, this didn't come out of nowhere. This was not preordained. This has got to do with decisions that man is making economic and political decisions in world economies distant and remote from you. But does that mean that number two oil, to heat a home in Fairbanks, shall always cost the family in Fairbanks a price which is determined by the value of Alaskan crude oil, which is determined by what OPEC does in Caracus, Venezuela on December 18th, 1979?

No answers.

You make those choices. The oil has that value, and you can get the value of that oil and you can use those dollars in a thousand different ways.

Or you can say these are the costs that nature imposes, and we choose to use our resources in a different way.

MR. MERDES: Jack, here's always been the problem in the past conferences. You hit the nail on the head. We start to talk about methods and technical ways to accomplish a policy and everybody gets hung up. I agree with Milton. I think this group ought to make a decision as a matter of policy, should the people of Alaska, should they benefit more than any other state in the country,

because we have the oil and gas, and let the State figure out how we benefit from it?

MR. LIPTON: I'm not urging this upon Alaska.

MR. MERDES: But the method, subsidy or competition, is something that you can advise us on.

MR. LIPTON: Look, the name of the conference is Future Frontiers.

THE MODERATOR: But Ed, wait a minute. Subsidy or competition, if you go competition, then you're going to get the highest market value for your oil.

MR. MERDES: No. He's saying just the opposite.

MR. LIPTON: Competition can drive prices down or up.

MR. MERDES: I think I know where he's coming from. We ought to vote eventually. For example, if you're in Texas and you were getting gasoline at 68 cents or 57; we were paying 99 up here. Why? Because they had infrastructure and a competitive marketing system they didn't subsidize. That's the point. I think we ought to decide whether the people of Alaska are going to benefit or pay the world price. I say we can benefit and let the State figure it out. That's my point.

MS. STRASSBURG: Jack, why is it we have a refinery at North Pole and at Kenai now, and you start from here and drive on every single road that's within the web of this little highway system we have.

The highest price that you pay for gasoline in your tank is at a gas station very close to the refinery in either North Pole or Kenai. Why is the gas higher than it is here if transportation is so vital to the cost of gasoline?

THE MODERATOR: Milton?

MS. STRASSBURG: I did this this summer. I bought gas at North Pole and I bought it at Kenai. And I paid a dollar and 39 cents a gallon.

MR. LIPTON: You address your impressions to someone else.

MR. MERDES: Milt, we want your answer.

MR. POMEROY: That's retail pricing practices. They don't divide it up into zones by every ten miles.

MR. MERDES: There's no competition in North Pole and Kenai, that's why.

MS. PORTER: A gentleman here said they're producing number two oil here. They're not producing gasoline.

MR. MERDES: That's right. They're producing Number 1 oil.

MR. PADDOCK: A few minutes ago, Mr. Lipton, you mentioned what happens in the outside world has moved Alaska ahead ten years. I think we can understand that.

But I'd personally appreciate it very much if you would care to put a little meat on those bones and cite

specific things and give us a little background around that.

MR. LIPTON: Well, what's happened in the world outside, it's happened abruptly for political reasons. The crisis in Iran, the interference with the flow of oil supplies and the uncertainty even about the continued flow which now exists, all of these things have brought forcibly to the fore a basic fact. That is to say the world today and for the foreseeable future faces inevitably a shortage of oil. It's a shortage of oil. Never mind whether OPEC is responsible for higher prices, whether the U.S. government has had a good policy or bad policy, about whether the oil companies have created an artificial crisis through conspiracy. You can argue this all day long.

The reality is that we face today and for the foreseeable future a shortage of oil, a very precise sense. The major countries of the world that consume oil would like to consume more oil at lower prices than the major countries of the world that produce it at those prices. It means the price is going to go up. Sometime there is going to be a serious depression. Sometimes there's going to be an acute crisis and the shortage becomes an acute crisis. Come hell or high water, whatever we do with substitutes, whatever we do with alternative exploration, we are facing a continuing shortage of oil, as I define it.

This changes entirely the circumstances of Alaska.

That is to say, your past was already intimately affected by the major discoveries of oil and gas here. Alaska today is a different state than it would have been if there hadn't been a Cook Inlet at Prudhoe Bay. You're a different state already. But as compared to the next ten years, the last ten years are as nothing. Because the next ten years, whatever you do is creating for you such continuing appreciation, increases in the value of your potential resources. The outside world is doing it for you.

As I look back over the last ten years of close association with Alaska on all of these issues, two things stands out.

Number one, literally not a barrel of oil, not an MCF of gas has been added to the known reserves of Alaska in ten years.

But, at the same time, the value of Alaska's oil at refineries in the Lower 48 states has increased already ten times over.

What's been done in Alaska has been very little. What the world outside has done for you has increased the value of your potential resources tremendously. What I'm saying, if I'm reading the future correctly, what happened in the last ten years to the value of resources is nothing as compared to what will happen in the next 10, 12, 15 years. That's what I mean by the changing circumstances.

You'll be living, you'll be making your decisions for the State, for the industry and for your family in a vastly different world. Your Future Frontiers is going to look very different. That's what I'm saying.

MR. POMEROY: It seems to me the most important point you're making is, because of these internal influences that are applicable, shortages growing, it gives us much more elbow room, many more choices for what we wish to do.

MR. LIPTON: No question. But two things about that: I like your much more elbow room for making your choices. For every choice you make will cut far more deeply than in the past. If you opt to be conversationist in the development of your resources, this cuts very deeply upon the rest of the country. You've got to strike that balance. But it matters tremendously to the country outside, also.

So more elbow room to make decisions, but every decision probably is going to be a lot more important in the future than the decisions you made in the past.

MS. RICHCREEK: I feel that exploration could definitely be opened up and and I think it should be done immediately and I'll say it for this reason: That if we don't do it right away and find out where things are at and get them more or less ready, when the South 48 really gets behind, they're going to come in on us and they're going to come in in a bad way. And we need to be ready and waiting

for them. And if we don't go ahead and open it up, I don't think if it was Beaufort, sea or someplace else, I see in the paper, if they offer to okay the exploration now, it will be at least 1982 before we get in there.

THE MODERATOR: Let me say that most of the oil potential in Alaska is offshore. So we've got to consider the impact on our fisheries and on the coastal communities.

Now, I think they're one of the keys. Would you agree with that, Milton, or Ed?

MR. LIPTON: I don't know the answer to that question, Jack. You got tremendous potential here also, both in native lands and the State lands, as well as offshore. But apropos of what you were saying, I think in a way it's a mistake to draw a line between us and them. Alaska, and them, the Lower 48 states.

You know, the "us" up here in Alaska - and forgive me if I make an Alaskan out of myself, I feel that way - us in Alaska have conservation and development, they down in the Lower 48 are also bifurcated. There's An awful lot of people that want to speed up development, especially if it's not in their back yard, but there's lot of people that want to tie up Alaska. I don't think it's a matter of us and them. I think it's a matter of the way people seize upon values. To some people, the undestroyed environment is a real, very appreciated value. It becomes more important

than anything else.

To fishermen to protect against real threats or imagined threats, to protect the protein, the source of protein is a very, very closely-held value. It's a meaningful thing. There's a group of people who went down to Washington and talked about the resources of Alaska being greater than Saudi Arabia, and let's speed it up. These are values. Nobody is right or wrong in this.

This is your big problem here in this conference. How do you choose up sides among all of these conflicting values?

MS. RICHCREEK: What I'm primarily saying is go and explore it. I'm not saying necessarily develop it. But explore it, examine, know where it's at and be ready so it doesn't get torn up as a last-minute thing to rush in and get it.

MR. ECKHOLM: Would you say that we should explore before we start to develop any more? Should we explore the State lands before we go ahead and lease them all out as a policy, or shall we lease it first?

MR. MERDES: I'd like to try to answer that question. The Governor's Blue Ribbon Committee on D-2 legislation considered this. The question she raises is the absolute gut issue. Nobody here wants to see Alaska torn up by a bunch of rapacious oil developers, the Alcan Highway,

without any considerations. That's what she's talking about. But the D-2 Committee, on this question, the legislation is passed. The Arctic wildlife plateau that goes out to the Beaufort sea, nobody wants to rip that up and nobody knows what's there.

The Arctic Slope Regional Corporation - and I've been closely associated with it - spent over 21 million dollars before they selected an acre of land with seismic information to determine whether or not they were going to select that land. They were smart. I think the State of Alaska, we ought to know what's there before we tie it up into a single use. We owe it to the country, to the State. We may never want to develop it. But it's insane to tie up all the land until you know what's under it. Seismic information will give you that, and develop it now in five years or 20 years.

THE MODERATOR: Seismic information will give you some of the knowledge. It won't tell you where the oil is, but it will tell you something.

MR. MERDES: That's right.

MR. ECKHOLM: Are you suggesting, then, Mr. Merdes, that we actually act a State drilling corporation?

MR. MERDES: No. The seismic information is not drilling. They will you if it's not there.

MR. ECKHOLM: Would you think the State should go one

step further and drill exploratory wells?

MR. MERDES: I would leave that up to experts. If they run a seismic, if there's nothing there, turn it into a national park. But why should you turn it into a national park if there's other Prudhoe Bay.

MR. ECKHOLM: Has the State done this?

MR. MERDES: No. The State hasn't the information. The Arctic Slope Regional Corporation has.

MS. SHROYER: I agree, as this can cost hundreds of dollars, into the many millions of dollars, and the State can't afford to put that much money into wasteful exploration. I think with the technology that we are bringing upon, we can find better ways to explore costs a lot less. We have the time and we have the money to move a lot slower and find better ways of doing it.

We don't have to destroy our environment through exploration or through development. And I think we have to keep that in mind, that we have the time to go slow.

MR. MOORE: In my region, we've had a contract with Shell Oil Company to explore the Yukon coast, coastal areas of our region. There's 57 villages. We stopped the contract, at least Shell Oil Company didn't explore any more because the people, the village people says we don't want the terrain, the country to be spoiled.

I guess they had a little occasion one time when

a little slough was damaged the little fishes that were living there and sort of damaged the environment. And at that point in time we stopped exploration.

But we have another contract now to continue exploration more precautiously. But as a director of the corporation, I feel that we explore and find what's there and know when we need it. And that's exactly what we're doing at the moment, except that we have an agreement with each village. If a village says we don't want exploration, we don't; we honor that. We only have certain contracts with each village in order to complete exploration.

Because the village people value just what they have.

But my own opinion is to explore and find out what we have.

THE MODERATOR: I'd be interested in Mr. Samuelson's reaction to that. Is that sort of Bristol Bay's corporation, where you encourage exploration but you adapt it to your particular villager's concerns?

MR. HARVEY SAMUELSON: We went and talked to them first. We had no objections from none of the villagers, so we went right ahead and explored.

Our land down there is somewhat different than the land up in the Chulista region, where Martin is talking about. They have permafrost up there where we don't have

permafrost. So it's easier.

THE MODERATOR: Again that OCS thing, is that a big concern to you, in fact they'll drill offshore and impact you onshore?

MR. HARVEY SAMUELSON: No. It's no big deal with us.

MR. PADDOCK: Jack, I'd like to ask Mr. Lipton. I'm not sure that the one responded to this or not, whether it's out of his field. I'm not sure this is a fair question.

But I'm wondering, sir, if in your mind you feel that exploration is enimical to so-called conservation values. Has the technology of oil exploration advances to the point where exploration can take place without without being destructive of these intangibles?

MR. LIPTON: If there were a single answer to that question, I would answer it. I don't think there really is.

I suspect that -- well, see, the way you phrase the question, "Is exploration consistent with protection of the environment?"

Well, one has to know how much protection of the environment. What part of the environment do you want to protect? It's a very difficult thing.

I would think, in general, one, because we have had enough experience, for example, you talk about Beaufort Sea. The Canadians have gone drilling in Beaufort See for three years now, in the Canadian side of Beaufort. A, our

technology has advanced. B, out of sheer self-protection, oil companies have to be cautious today the way they would not have been ten years ago. I mean, just out of sheer self-protection. Because the first time there is an avoidable accident, you know, the heavens split aside and all hell breaks loose for them.

Third, as I said before, you can afford to spend more money now on environmental protection than you ever could before. So I would think in general with the advanced State of the arts, the fact that the oil industry is driven self perpetually as careful as they can be, and third because we can he can afford to spend more money, the odds are that it is more compatible with environmental concerns. But that's not to say that all risks are gone and therefore one doesn't think about it or in designing an exploration program, you don't do, as they do in Chulista, progressively try to establish as many safeguards as is possible.

MR. PADDOCK: Well, I think I hear you saying that we've come a long way since Santa Barbara.

Would you care to comment on the type of technology, the carefulness for the environment that may or may not have been utilized by drilling down in the Gulf of Mexico?

MR. LIPTON: The Mexicans? I have no comment to make.

I have no idea whether that was sheer carelessness or whether it could have been avoided or anything else.

I mean, basically, if you're going to be honest with ourselves, we've got to say, with all of the protection in the world, A, there's a chance of accident, and, two, man is a falable creature. It can happen.

THE MODERATOR: Even oil men.

MR. MORGAN: I'd like to comment on the shoreline archeologic sites along the Arctic Coast, just publicize the fact that I have some concern that they will not be somehow taken care of.

The dew line stations were implanted on top of archaeological sites; roadways have been built over villages. I would make a plea that whatever does go on up there, it's imperative that these sites be somehow investigated by professionals and all that needs to be learned about them be learned before they may certainly some are being eroded into the sea now.

Our mapping of these sites is fairly incomplete. Because this is one of the measures that the natives understandably feels very strong about.

THE MODERATOR: Tom?

MR. SINGER: Just a slight change in focus, but I see a certain segmentation of issues. Yesterday we were discussing the state's fiscal situation. And I was

wondering if Mr. Lipton can give us insights into the linkage between physical policy. Specifically, we were talking about investing our oil royalty. Given your worldwide perspective since the 30's, Texas' boom or bust since the turn of the century, or something like that. And they certainly have diversified.

Do you see, should the policy debate on use of the surplus be concerned about a boom-bust phenomena, given this optimistic future, or are we all right?

MR. LIPTON: Obviously, one, you want to be concerned about the continent, about revenues and how you use it. There's an important distinction between Alaska and the other major oil-producing states in the United States. If you take the three largest producing oil states in the Lower 48 states, Louisiana, Texas, California, they have several other industries, but they've got fantastically important industrial industries and all three of them are important agriculture states. So it's a mixture of resource development, industrialization and agriculture in all three states.

In Alaska, if you look back over the last ten years, the dominant economic impact upon the State has been the discovery and development of oil. But we've never had this same kind of diversification, nor are you likely, because of the circumstances of the State, to have it in

terms of industrialization on the scale that you have in Louisiana, Texas and California or the agricultural industries that these have. So they have much greater diversification. And the impact of what they could do in terms of oil doesn't have nearly the consequences they have in those states, even though they're the most important states south of Alaska.

So you must be concerned not only about the continuity of your oil revenues, but also the short-term uses and the long-term impact on the life of your citizens of how you utilize these oil revenues much more than these other states.

THE MODERATOR: We had Belden Daniels talk to us yesterday and Russ Meekins and Tom Williams. They were talking about investing dollars, buying a part of the pipeline; would we have bought the pipeline if we had a choice now.

Do you have any comments on hard investments, equities?

MR. LIPTON: It seems to me -- think about your State for a moment and oil and gas in these issues. The State starts out as a landlord. It's inevitable. Most of the land that's prospected onshore is owned by the State. So you start out as a landlord. And as a landlord, you've got certain interests in finding out the value of your property

and getting high rent for your property.

Whatever the State chooses to do, you will end up as an investor. The State will end up as an investor why? Because of the timing and ac consumation of oil revenue. Its inevitable. You're going to have to invest it. So as an investor, you want security of investment, you want a high rate of return on your investment. And, in between, you're a sovereign government that regulates the taxes that it spends. So the State appears many different guises.

And if you're contemplating investment, you can look at it just as an investor would. Yes, you want to worry about security, yes, you want to worry about the rate of interest or dividends that you get out of it. But you also happen to be a State with broader interests than just a bank that says I want security. Your investment has to be purposeful. So you ask yourself, well, why am I investing. If I invested in natural gas pipeline, is it because without it the pipeline won't be built or is it because I want to accomplish something besides just getting an interest rate on my money.

I would suggest that when you look at problems of investment in this State, the first question you ask is what am I trying to effect, what am I trying to achieve by that investment, whether it's in ALPETCO.

Look, if you commit royalty oil, that's an

investment. The State has made an investment. If you commit money to build a conditioning plant to service the natural gas pipeline, that's going to be a hell of a big investment. A billion dollars. Why. What are the purposes, not just security of investment and interest rates. Yes, you worry about that. Why am I doing these things? How is this going to contribute to what Alaska is going to look 10, 15, 20 years from now.

MR. REEVES: Why do you think Alaska does not have the opportunity to industrialize to some extent along the lines of Texas and Louisiana?

MR. LIPTON: To some extent, yes. What I'm saying is it can't be of the proportions in those. The reason is very, very simple.

A, relatively high costs here; and, two, relatively far from big markets. Industry depends upon extensive markets. And Louisiana and Texas and California are proximate to tremendous population centers. Sure, you can industrialize here, and you can even use your resources to speed industrialization, if that's what you want. But you're not going to be a Southern California or a Texas or a Louisiana. You're too far from where the people are, unless you want to build Alaska into a big population center. You build a population of 10, 15 million people here in Alaska and you'll have industrialization.

MR. ECKHOLM: What is your personal opinion of the commonwealth north proposal to come out as rapidly as possible to help our energy problem and be pumping out four and a half million barrels?

MR. LIPTON: I haven't seen anything other than a newspaper headline. I wouldn't want to comment.

MR. POMEROY: Mr. Chairman, this is the concept of growth, getting development, getting development by industrialization and here's getting development by simply getting more and more going.

I know and work with these people quite a good deal, and I should like to make a further comment about our production up here.

Mr. Lipton commented partly on cost. It's just simply basically economics. If we have an oil refinery up here or a petro-chemical company, we can produce basic products that can be sent out bulk. But we can't produce sewing machine oil or products that inquire the necessity to ship in the metal to make the cans and the containers to put them in and send it back out to the market unless we subsidize heavily. That has been an issue pretty much up to now. I don't know whether it will come into any comment here or not.

THE MODERATOR: Thank you.

Any further questions of Milton?

MS. PALMQUIST: I have a question. And that is this: Is it not in the interests of the oil companies to assist the environmentalists in keeping the State closed or slowed up in order to reap the higher prices that will obviously come later on?

MR. LIPTON: I don't think that the oil companies are capable of such long-range planning. Look, they have to survive today. And today there's not an oil company in the world, including the very, very large international major oil companies.

Look, it's overtime. No matter what they do in Alaska, they're not going to have a heck of a lot of oil produced out of today's exploration, the length of time it takes to explore, to develop. They've got to do it for today, for tomorrow.

So I don't think Alaska has to be worried about the self-interest of oil companies, as such. I think their self-interest is to protect the environment, too, because Heaven will fall on their heads if they make a mistake here. I think they will tend to be protective.

I think also competition among them will probably conduce to relatively rapid development. They may like more rapid development than the State is prepared to do. I don't know. But I don't think by itself that they are fearsome creatures for Alaska today.

MS. PALMQUIST: I do want to expand on what was discussed around the table, and that is protecting the environment.

I come from an area which is the second largest borough in the State next to the North Slope Borough, which is the Matanuska-Susitna Borough. There has been extensive exploration in that area north and west of the Anchorage and Cook Inlet area.

Those trails that were built, if there was any damage at all, it's not observable to the naked eye. What it has done is the same as the homesteaders that cleared off your 10 or 20 acres and got their homestead, had a crop, got their homestead. What's happening to those homesteads now, if they're not being farmed, they're going up in moose feed. As a matter of fact, the moose can't keep up with the brush that's growing up in there. So pretty soon it will be back in forests.

We see no damage from the oil exploration, and of course that borough was extremely hopeful that they would strike something there, which they did not.

It would have been very helpful to the tax base of that borough, just as the North Slope situation is very good for the tax base of the North Slope Borough.

So I'm not concerned about that. But I do want to elaborate on what the lady across the way said. It is

important in whatever you do to know the full extent of what it is you're operating with. And it's important for the State to know where its resources are. And at the present time private industry itself has not completed the exploration that is necessary for determining where we have large amounts of whatever it is. In this case, oil, or gas.

And I certainly favor the State entering into a cooperative arrangement with the oil companies where the State also knows where the resources are and not just the oil companies for the first two years when everything is secret.

MS. SCHIRMER: I agree.

MR. ECKHOLM: Given the state's short-term capital wealth, would you recommend as a wise policy for the State to develop, not to explore, but develop our resources rapidly, or over the long term?

MR. LIPTON: I am neither so foolish nor so heroic that I'm going to answer that question. That's why you're here, to establish the values and guidelines.

MR. ECKHOLM: You've called yourself an Alaskan. What would you say as an Alaskan?

MR. LIPTON: I don't think I ought to presume to give you a personal opinion on that. I mean, it would just be completely off base for me.

MR. MERDES: I think he's right.

MR. LIPTON: You've got a whole cross-section of the State here. And you're struggling with these questions. I wouldn't be so presumptious to try to advise you. It's got nothing to do with my experience. It has to do with what you want.

THE MODERATOR: He's got lots of opinions, but he's very clever.

MR. HARVEY SAMUELSON: How close to the truth were the headlines last night on all the oil we have in Alaska?

MR. LIPTON: I don't know. Look, there are people to whom the truth has been revealing. It has not been to me. It has not been to me.

MS. SCHIRMER: It seems to me that the ideas of exploration without sudden exploitation is excellent. And if we can do that, then we can develop a plan so we won't have the boom and bust business so much. And I think that's what we need to aim at.

THE MODERATOR: You know, I see where this conversation is going. The oil industry is very competitive, and they go out and get this information for themselves in order to compete. They keep it all. And the state's job is to get as much as they need, I think. And on the geophysical stuff, they get nothing.

The oil industry is very sensitive and very jealous of this information. And so what we do is we don't

have anything, and we put it out on a contract to lease. That's a contract. You have ten years to explore. So we put it out on a contract before we have any information. Now, the alternative, and the reason the industry resists is if the State gets all this information in advance, what will keep them from going out and exploring on their own? Why put it out on contract when you have all the information? This is the sort of philosophical struggle you keep going through. Do you allow the industry to get a contract, take the risks and find the oil, or do you get the information yourself, once having all the information, just like an oil company, why not go drill it?

Go ahead, Ed.

MR. MERDES: Again, I do in this context have some experience in this field.

The State of Alaska, for instance, could say to the oil companies, "Before we lease this land, we want to find out seismically whether it is sensible to lease it."

To give you a comparison, the corporation went to Chevron, Mobil, said, "Look, we're at arm's length now. You spend the 20 million dollars and share the seismic information with us," which the contract provided, then they decided what land. They said okay, if there's royalty information there, we'll lease it to you.

THE MODERATOR: They're acting like a private

landowner.

MR. MERDES: The State ought to spend State money and say, look, we'll hire a seismic crew and find out if there's any oil. Then you get ten times as much money as you normally get.

I want to ask a question before he leaves. We met you ten years ago when you first came. Personally as an Alaskan and legislator, I want to thank you and Walter, because you've done a real service. I'm not trying to build you up. But I want a question answered in terms of issues.

Based upon your experience and Walter's experience up here, and you've got more than anybody, knowing how we feel, what issues, what can we do, Milton, using your experience in terms that 10 years down the road or 15 years down the road, what issues should we address ourselves here, besides the one we talked about, for example, whether or not we should use State royalty oil to benefit Alaskans? Is there anything from your experience that you could warn us or we should talk about down the road here? Not the answers, I agree with you.

MR. LIPTON: The ones that I passed over quickly at the beginning. Certainly I think the question of the way in which your natural resources are utilized to serve the interests of the people of Alaska is one.

The second one is a whole question of investment.

I define investment a lot of different ways. If you commit royalty oil and gas, you're investing a lot of money, or if you directly invest surplus funds. The whole question of investment, and what the purpose of the investment is, quite a apart from security and investments rates.

The third, I think, is the whole question of the pace of exploration and development and how you balance that against all the other things that as individual Alaskans you're worried about, whether it's coastal zone management or whether it's environment and so on. And the third, I think, has to do this whole subject of leasing policy and taxation. I remember the debates in the legislature, is the State getting a fair share of the value of the oil industry, or it is taxing so heavily that you're going to drive the oil industry out of the State of Alaska?

Well, the questions are going to be the same the next ten years as they were in the last ten years, but the answers don't have to be the same. Because with the increase in the value of the oil and gas, you can do all sorts of things.

I just want to say I think the direction of your discussions here as it dealt with how much the State knows about its resources before the pace of development, I think this is a fruitful area to explore. Because the way in which the oil industry operated in the past doesn't have to

be the way it's going to operate in the future.

The oil industry in the Lower 48 states, each company, hired oil scouts and they went out and they tried to tie up acreage. They did all of their exploration, their geophysical studies in deep and dark secrets. They come up to Alaska and you're going to have a lease sale in the difficult area. When they went into the Gulf of Alaska, they put groups together to do it. Can the State of Alaska be a partner to this kind of preliminary exploration to learn things?

What I'm saying is the world is changing enough so that the forms and the practices and the associations can be in a sense pioneered here to suit your interests. And I don't think one has to worry too much about this is the way the oil companies always did it. They're adapting like mad to a changing worlds, and you can adapt as fast as they can.

I appreciate very much the opportunity of being with you, but I'm committed to run. So again, thanks you. You've indulged me very much, and I enjoyed being with you. Thanks a lot.

THE MODERATOR: What is your pleasure?

MS. RICHCREEK: I would have one more question. Can somebody tell me, does the State own the subsurface rights to all the land in the State before it is bought back?

A VOICE: No.

MS. RICHCREEK: Who does own it?

THE MODERATOR: Under State land, it's owned by the State. Under federal land, by the feds.

MS. RICHCREEK: Who owns the subsurface under private?

MS. SIMONDS: The federal government, if it's got any minerals that it knows about.

THE MODERATOR: It depends on the age. The older ones, the guy owns it all, to the center of the earth.

MS. PALMQUIST: After 1957, it changed.

MS. RICHCREEK: I cannot agree with it, and I'll tell you why. About 71, a man was drilling for water in Glennallen. And a little over 100 feet they hit gas. He was a native, he had given up his mineral rights in order to get his patent.

THE MODERATOR: That's right.

MS. RICHCREEK: So the State then had his mineral rights, so they ended up having to come in and cap that gas well.

THE MODERATOR: Right.

MS. RICHCREEK: We're told out there that we don't own our subsurface rights.

THE MODERATOR: It depends. You probably don't. The Federal or State government reserve those rights when they gave you the patent.

MS. SIMONDS: It would be in your deed.

THE MODERATOR: Right.

MS. PALMQUIST: It's in your patent. I got my homestead patent before 1957. Therefore, I own all the mineral rights, which includes gas and oil. Those that got their patents after a certain month, I think it's July, 1957, do not own their subsurface rights..

MS. SIMONDS: In 1948, they knew there was coal under some of the land. So therefore if you find it, you would have to pay the federal government to take the coal off. So they own the coal because they knew it was there. But they didn't know oil and gas was there.

MR. MORGAN: That was only where they knew there was coal.

MS. SIMONDS: That's right.

MS. RICHCREEK: Well, then, the individual does not own the subsurface rights, necessarily.

MR. MORGAN: In some cases.

MS. RICHCREEK: In some, but not all.

MR. ECKHOLM: Could we hold the conversations down a little bit? She's getting a little confused.

If we're going to talk about other resources in oil and gas, we're going to have to move on. Before we move on, should we have a recommendation session and take a short break and then come back and talk about fisheries?

MR. PADDOCK: I wanted to touch on one issue and perhaps lay it to rest a little bit before we move off of oil.

We talked about exploration. Somehow or other I got the feeling that there was sort of a latent feeling in some quarters that oil exploration was inherently, or could be, at least, inherently destructive of certain values. And I personally feel like perhaps we're providing a straw man here perhaps that doesn't exist in view of the present state of the art in seismic exploration. I'm glad Harvey Samuelson walked back into the room.

It was my privilege to be associated with certain seismic activities out this Bristol Bay as a biologist. These have been required to be done from helicopters. When the work was done, I defy almost anyone to go out there today and find out where seismic exploration was carried on. The exploration took place and I'm a conservationist, but I defy anyone to go find the results of that late work.

Now, the early work, certainly, you can still see the paths in tundra. But it's ancient history. As Mr. Lipton told us, we can do things differently today.

And I think that, Heaven help us, in some cases, subsistence, hunting from snowmobiles is far more damaging to tundra than state-of-the-art oil exploration.

MR. ECKHOLM: I've heard two recommendations that I'll

just lay out before the group and then if there's more let's talk about them.

The major recommendation that I heard many of you talking about was to explore the state's oil and gas potentials so that planned development can occur, and specifically to develop seismic information before the State commits its resources.

The second one I heard was to investigate the archaeological sites long the Arctic coast to insure their protection as development occurs.

MR. POMEROY: Mr. Chairman, I'd like to ask that first one, about learning better what we have, final action to that be held until we get a recommendation that Naushaf, after an all-day panel discussion in May on oil potential wrote concerning what I considered a feasible program. I've telephoned him to see if we can get it, and it may be here. I suggest you hold final action to that, see if you find anything that's useful.

MR. MERDES: I'd like to recommend -- I took notes on what Milt said. I think we ought to vote on these four issues.

Number one, should our oil and gas resources be used to benefit Alaskans. Let the technical way of how to do that be taken care of, but we should vote on that issue.

Secondly, the question of investments. Should we

recommend that factors other than safety and rate of return be considered when the State makes investments. Yes or no?

THE MODERATOR: Security?

MR. MERDES: Security. I'm sorry. You're right. Security and rate of return.

Thirdly, what should the pace of exploration and development of oil and gas and other resources be. I would personally elect that it be determined by the legislature. In other words, should it be slow, fast, medium, whatever.

Fourth, the leasing policy and taxation, in other words, the State be a partner in oil and gas explorations due to changing conditions in the world in the oil industry.

I'm not suggesting answers, but I think we should vote on this.

THE MODERATOR: A partner, you say.

MR. MERDES: A partner, or whatever. Should the State be a partner or some way participate in oil and gas exploration due to changing conditions in the world.

THE MODERATOR: Is that a motion?

MR. MERDES: I would recommend that we vote on those sometime before we leave.

MR. MOORE: Is that a motion?

MR. HARVEY SAMUELSON: I second it.

MR. HARTLE: I'd like to comment briefly on the first one. Could you read your first?

MR. MERDES: Should oil and gas resources be used to benefit Alaskans.

MR. HARTLE: Okay. I think that, as stated, we would probably all agree. But unfortunately the situation is it's not that simple. If it comes to should we subsidize oil companies with State dollars so that it's cheaper for Alaskans, that's a very different question than should we find other mechanisms, such as the one you picked up on, competition.

I think that I would like, before we vote on something like that, would you clarify it a little bit in terms of what it would cost to the State in terms of State dollars rather than oil company dollars. Do you understand what I mean?

MR. MERDES: Yes. I think you're correct. I think I'd like to add to that and let the technical method of this being carried out be left up to the legislature.

MR. HARTLE: Could we add further, in doing so, the technical method that the legislature choose be directed to be that which is least expensive for the State in achieving the same ends?

MR. MERDES: I think you're going into too much detail.

MS. PALMQUIST: I do too, because we may want to invest in human interests, something which will advance, our, for instance, education. And that has no immediate

dollar return. So of benefit to Alaskans. I'd like to leave it right there.

MR. MERDES: That's right. I move those four.

MR. ECKHOLM: That brings us up to six, more or less, recommendations to vote on. These four we won't really know what the recommendation is until we vote.

MS. SIMONDS: Besides, why can't we take an inventory of all our mineral resources and not just limit it to oil and gas to find out where everything is to know what we can depend on the future. Financially, also to know in the future where to put our harbors and roads and what have you. So without an inventory of our mineral all mineral resources, meaning coal, it would bein complete; just oil and gas inventory wouldn't be enough. I think a complete inventory, as much as possible.

You know, they can fly over and see by the color of foliage, what certain things are.

MR. ECKHOLM: What's the state's action in developing information?

THE MODERATOR: Well, I'm not an expert on it. I think that there has been a general reconnaissance, and probably flown magnometers and things like that.

But my impression is that in order for us to really inventory what we really have in hard rock minerals, for instance, there's no substitute in getting on the land.

It's going to take years.

MS. SIMONDS: Coal? I mean, we shouldn't put all our eggs in the oil and gas basket.

THE MODERATOR: We know what the coal is, but we don't know the specifics.

It's been inventoried, but I think there's a lot more to be done, or have to be done to really know what we have.

THE MODERATOR: I'm not answering your question?

MS. SIMONDS: No. But I think it would be advisable to do it, if at all possible.

MR. MERDES: You want that voted on, don't you?

MS. SIMONDS: Yes.

MS. PORTER: There is a federal study that was completed a year and a half ago. They did reconnaissance flying over the entire State so they have the entire State mapped out minerally, and that report is available to anybody. Just write to the feds and they'll give you a copy of it. That doesn't specifically give us the value today or in 20 years of what's there. We just generally know what are on the mineral areas and what kinds of minerals are in the State.

But we do have to separate exploration from development. I think it would benefit the State greatly to do oil and gas exploration specifically, or to deal with an

oil company to have it done so that we know. Right now we're all saying well, the oil money may dry up, we may run out of this, run out of that. It would be very great to know what our potential is. We don't have to develop it. We can sit on it.

MR. ECKHOLM: That goes in the first question.

MS. PORTER: But it would certainly help us to know what we may have.

MR. ECKHOLM: That's the first recommendation that we have. So we'll vote on that first. Are there any other recommendations?

MS. SNOYER. I would just like to add to the recommendation of the inventory of our mineral resources that that inventory should be looked at before public facilities such as docks, and new towns and roads and other avenues such as that be built, that all of those be taken into consideration.

MR. MERDES: Makes sense.

MR. HARVEY SAMUELSON: I noticed the State has a fishery policy. They have a policy for this and that. Do they have a policy for minerals?

THE MODERATOR: We have 140 million acres. They selected 35 million.

MR. MERDES: They've been conveyed.

THE MODERATOR: That was a heavy. So their policy was,

under the Egan Administration, to select as much of the mineral land as possible.

MR. MERDES: And agriculture.

MR. ECKHOLM: Are there any other recommendations along oil and gas?

MR. MORGAN: It has to do with the mineral exploration. I think we should strengthen several departments at the University of Alaska, would be my recommendation, history and geographic ares. If we had had strong history and geography departments, we would know a heck of a lot more about our state.

What I would recommend, in short, is let us strengthen the remote sensing that the university could do, whatever department they want to put it under.

MR. MERDES: Can we include oceanography, fisheries, forestry and other departments that the university strengthen them, and agriculture?

MR. ECKHOLM: That goes back to Mr. Lipton's third point, was a resource based development. So something like develop the University of Alaska as a resource --

MR. MERDES: Think tank.

MS. PALMQUIST: But that should be a separate motion, should it not?

I'd like to know when we get to human concerns. Would that be this afternoon?

MR. ECKHOLM: Any other oil and gas specific recommendations?

A VOICE: I wonder whether, when we talk about lowering the cost of gas for Alaskans, that should be the primary concern, or the primary concern should be protecting primary energy uses in Alaska, the development of alternative energy.

MR. ECKHOLM: Is that a recommendation?

A VOICE: Yes, it's a recommendation, or a suggestion. Just an idea, maybe.

MR. MERDES: To be part of the debate.

MS. SCHIRMER: I don't think you have to choose one or the other. I think you have to work on both.

A VOICE: Then I think there should be something included in the statement.

MR. ECKHOLM: So you would recommend that we develop alternate energy resources other than oil and gas?

A VOICE: Right. Encourage the development.

MS. PORTER: I think yesterday we touched on that subject by using some of our oil monies to develop other methods of supplying energy to the State; diverse methods.

MR. ECKHOLM: Maybe we could finalize that recommendation.

MR. NASKE: I think a good example is on the North Slope where there are tremendous coal resources, but oil is

chipped at great expense. Why can't the State develop small power plants that burn coal? There's no reason for that. It's there. It would provide jobs.

MR. ECKHOLM: Okay. Frieda.

MS. SHROYER: I was just going to go back to the benefits of Alaskans through lower prices is an immediate concern and alternative energy plans is a futuristic thing we have to develop.

But lower prices on oil and gas has to be taken care of now, because that's what we're using now.

MR. ECKHOLM: There's different ways to go about that. They've talked about giving it to an in-State processor so they can get it to the consumer cheaper, and Governor Hammond's latest on that is an energy credit. So instead of actually getting the oil cheaper, the State gets the money from its royalties and then it's passed out in some sort of an energy credit based on how much energy you consume. That's a different kind of a way to get to the same problem.

So are there any recommendations as to how to use our energy to make it cheaper for us to consume energy?

MS. SCHIRMER: Is there anything in that thing based on how much energy you consume that is incentive to consume less?

MR. HARTLE: That was my concern also.

MS. PALMQUIST: The other thing it doesn't address is

still how to get at the heat for your home cheaper. The State hasn't addressed whether the refineries could refine, Number one and number two oils and put it out as a cheaper price, even if it had to be subsidized, rather than to give the consumer a better way to pay the higher bill.

MR. ECKHOLM: That's basically the energy credit plan. Are there any recommendations on either --

MR. NASKE: I would recommend that the State provide some incentives for, for instance, better building construction or better insulating methods as part of that energy credit, not merely subsidizing the cost of oil.

MR. ECKHOLM: Okay. That would be part of an energy credit recommendation, if there is one. There isn't one yet.

MS. PORTER: There is one already. There is in existence a Federal and a State energy credit for insulating.

MR. POMEROY: I think we should take note that a number of these things the State has already gotten into. And we may want to say we want to emphasize an acceleration in one direction or the other.

MR. MERDES: Eric, I think we ought to distinguish, at least from my viewpoint, between gasoline and home heating oil. I think we ought to discourage excessive use of gasoline. But I don't think under any circumstances that you ought to raise the price of home heating oil, and

particularly in the urban area, in the bush. So you can address a subsidy policy on that part possibly, and maybe use the competitive market situation that Hilton was talking about in terms of giving oil to -- royalty oil, say you're going to first take care of the Alaska market before you ship it to California or anywhere else. But I think we ought to distinguish between the two.

There isn't anybody in this room that isn't -- incredible that we pay more for our home heating oil than Seattle does.

MR. ECKHOLM: The general recommendation that I'm hearing is we ought to use our oil and gas energy to lower the cost of Alaskans' energy somehow. Is there any way you want to recommend more specifically to do that? That's so broad, it's not going to give the legislature any directions.

MS. SCHIRMER: We've made other recommendations.

MR. ECKHOLM: I want to get these done and vote on them in the next five minutes.

MS. PALMQUIST: I'd like to have it, when looking at what the higher costs are, and that is in the bush where they use oil. They have to pay as much as $500 and $600 a month to keep a small house heated. And I think they suffer the most from the high cost of fuel oil.

MR. MERDES: They should subsidize home heating oil

everywhere for home use, but maybe not gasoline.

MS. SHROYER: Going back to gasoline use, and I think everybody would like to see less gasoline, maybe, used. I'd like to throw out to debate an incentive or credit for carpools, or the use of public transport. I don't know how exactly we could do that. But to carpool or to use public transport would be definitely to use less gasoline, and an incentive or credit along those lines may be useful.

MS. RICHCREEK: That's kind of limited to Anchorage, though.

MS. SHROYER: To the urban centers, Fairbanks and Juneau.

MS. PALMQUIST: Juneau as well. They have a peoplemover.

A VOICE: The point was raised that any resources that are diverted for developing renewable kinds of energy for the future should be probably put off. And it seems to me that in thinking about Alaska's future, it would not provide a very smooth transition if we were to put off devoting resources into developing renewable energy resources.

THE MODERATOR: In other words, you're saying if we continue to rely on oil and gas, we will never get off the circuit.

A VOICE: Not only continue to rely on it, but without devoting some of our dollars now into developing practical

means of utilizing the renewable resources for energy in the future, that we'll never get there and there will be a big problem later.

MR. ECKHOLM: Maybe the way we can address that, if we get to the recommendations, if anybody wants to attach a recommended dollar figure in terms of investment, if we want to two alternative energies, how much do you want to put into it next year? $500 million?

MS. PORTER: When we say we're going to delay that, one of our categories is energy. I think that's a whole specific category. We have to address that under that category. I don't think we should go into that debate at this time. When we're delaying it, we're not delaying it for ten years, we're delaying it until this afternoon or this evening.

But the energy is a whole different topic. And we're not talking about what we are going to do with the oil and gas monies at this time. We're talking about policy, we're talking about State policy. So when we're delaying the development of other kinds of alternate energy plans, it's until this afternoon.

MR. ECKHOLM: Well, I'll read through these recommendations. Some of them are very negative. So if people decide to table them, they can do that. But a lotof these are energy related.

MS. PORTER: I would prefer to talk about alternate energy, totally separate from the oil and gas issue, if you don't mind, if the group doesn't mind.

THE MODERATOR: Could you address yourself to that?

MR. HARTLE: I'd like to make other recommendation, if we're talking about a ten-year plan here, somehow the biggest push the State should make with oil and gas is to get off the use of it. We can subsidize home heating fuel or whatever. But basically what Mr. Lipton said, and it's very clear, in ten years it's going to cost a lot more no matter how much we subsidize it, no matter what we do. So as a recommendation, our push in this area should be to conserve, to get off of it.

MR. NASKE: Alternatives.

MR. ECKHOLM: Any other recommendations?

Let's go back and ratify the recommendations that we just listed and we'll take a short break.

The first recommendation that I heard and heard the strongest was to explore State oil and gas potentials so the planned development can occur, specifically to develop seismic information before the State commits its oil and gas resources to development.

Is there any discussion before we vote on that? Okay. All those who would be in favor of that recommendation please raise their hands.

Is anybody opposed? Okay. Thank you.

The second one was to investigate the archaeological sites along the Arctic Coast to ensure their protection. Is there any discussion?

THE MODERATOR: Is it just the Arctic Coast?

MR. MORGAN: All of our coastline is needed to be surveyed. We have archaeological sites washing into the sea all around our coast.

MR. ECKHOLM: How about just archaeological sites?

MR. MORGAN: But there should be some priorization there, hot spots. National erosion is threatening more than in some areas. But some sort of coastal survey. Some of this has been done, but I know that the sites along the Arctic Coast from the Canadian border to the (inaudible) River have not really been taken care of.

A VOICE: I'd like to delete the word arctic and add all of the state.

MR. ECKHOLM: Why don't we just investigate archaeological sites and insure their protection in areas currently being developed.

MR. MORGAN: I don't know investigating is a good word. I want to just call attention to them. I want the proper agencies to look at them. There has been some lax policies in the U.S. Fish and Wildlife Service.

MR. ECKHOLM: How much money would you want the State

to spend on this program?

MR. MORGAN: Well, I bid on the map and the ones along the Arctic coast $150,000. It's a pretty expensive kind of a thing.

MR. ECKHOLM: Should we tie it to a dollar figure?

A VOICE: No.

MR. PADDOCK: I was just going to say, perhaps not everyone is aware of the fact that there are organisms already in effect to protect sites like that against degradation in any sort of exploration.

If an archaeological site is brought to light, everything stops right there. That's the way it is now.

But I do agree that we need to get on the ball and start, not necessarily mapping, but at least inventorying sites. We have spent virtually nothing on this. And there are important sites that are known to nobody in an official capacity. And I'd like to see that change and I'd certainly strongly support a motion which says that, let's take an inventory of these things. Let's spend some State bucks from this windfall to do this important task.

MR. ECKHOLM: Let's vote on the recommendation to investigate and inventory archaeological sites and insure their protection, especially in areas currently being developed.

MR. POMEROY: That seems to be like an awful great,

big shotgun kind of a thing.

Would there be any support for something like this: That before entering on to land in connection with seismographic work and exploration work, the matter of archaeological sites and other sensitive areas be taken into account?

MR. MORGAN: May I address this? The oil men are only half of the problem. National erosion is the other half. In other words, this has been pressing us since the early 60's. We have sites going into the ocean.

So, as it relates to the oil, I think it's appropriate to bring it up at this time. However, natural erosion is as big as any man can destroy a site just as effectively as a dozer.

MR. ECKHOLM: What we have done with this recommendation is said especially that areas currently being developed. So if we have limited monies to do it, it should be in areas currently being looked at. So that would be a limiting factor in terms of saving for the State.

MS. PALMQUIST: I like the motion the way it was put to us originally.

MS. SHROYER: Because of natural erosion maybe make you could change the emphasis. Potential damage currently happening or about to happen.

MR. ECKHOLM: Okay. Especially in areas that might

currently being be degrading?

MS. SHROYER: Through development or erosion.

MR. ECKHOLM: Currently be threatened. That might be threatened.

Okay. Let's vote. Rosemary?

MS. PORTER: That might be something that would be appropriate for the University of Alaska again. I know previously they've done some of that work, but they're terribly underfunded. They just have peanuts to work with.

MR. ECKHOLM: You would specifically want us to give it to the University of Alaska rather than have it open for bid?

MS. PORTER: Yes.

MR. ECKHOLM: Any discussion on that?

MS. PALMQUIST: I wouldn't to want to tie our hands. Maybe there are other agencies that do that kind of -- maybe the native corporations have knowledge that they have. Maybe they would like to be on a contract basis. I don't think we should specify just who does it.

MS. PORTER: I don't think giving it to the University would preclude being on a contract basis. But I know the university has done studies with both the native corporations and individual villages to find out where sites might be.

MR. ECKHOLM: What you're doing, Rosemary, you're

giving an economic guarantee to the university, whereas if if the the State's resources are being used for it and they went on a contract basis to develop this information from whatever, they may be an Archaeological Institute of Brooklyn that would bid on it and do it as well as the university. So what you're saying with that just is you want to boost the university. That's fine, if you want to do it.

MS. PORTER: Why not do it?

MR. ECKHOLM: Claus, you have something to say about that?

MR. NASKE: I do. If we say -- the most cost effective way of doing anything is not doing it here. The most cost effective way would be to do away with the university system all together and give each student $10,000 to go to Puget Sound or somewhere else.

MR. ECKHOLM: Let's not discuss the cost effectiveness of the university.

I think we ought to move along.

MR. MORGAN: I've been walking up and down the Arctic Coast since 1960, and in all that period of time there has been millions of dollars spent on that Arctic Coast through NOAH and other agencies, millions, tens of millions. These sites have not been taken care of. That's why I make a plea. Let us at least call them to somebody's attention. And I

for one am not willing to say the university will take care of it.

MR. ECKHOLM: Everybody who would like to include "specifying the university as the primary person to do this investigation" raise their hands.

MS. PORTER: Well, maybe we could word it some other way so that the university could also contract, which is not -- they would at least participate.

MR. ECKHOLM: Everybody who would like to include the university as a --

MR. MERDES: That's where we get into -- you shouldn't have technical ways of doing it. Just the policy. And maybe the university can do it. I think we also get into arguments when you start getting technical. Don't put it in at all.

MS. SIMONDS: Let the legislature figure it out and worry about the money.

MS. PORTER: Then the State will open up their own department of archaeological and compete with the university.

MR. MORGAN: They have a State archeologist.

SUSAN HENOCH: The only land use inventory I'm aware of is done by Flossie Hobson at Burroughs.

MR. MORGAN: I'm familiar with Flossie's work. I gave her most of the location of her sites. There are other

sites that we've not yet mapped. We know they're there. We've flown over.

MR. ECKHOLM: The recommendation is to investigate and inventory archaeological sites to ensure the protection, especially in the areas that currently my be threatened due to erosion or development.

A VOICE: Question.

MR. ECKHOLM: All those in favor raise their hands.

Anyone opposed?

These are the four recommendations that Senator Merdes has proposed to us. The first one is sort of a broad policy vote on should the State's oil and gas resources be used primarily to benefit Alaska?

MR. MERDES: Leave the means up to the legislature.

MR. POMEROY: Is there any more specific way that that can be stated?

MS. PALMQUIST: No.

MR. ECKHOLM: There are some more specifics as we get into it. But this is just the broad overall policy. I think the key word there is primarily. That means that we're taking a stand. It says our resources. If it means it cost more to the Lower 48, we ought to get that out.

MR. MERDES: I'd like to leave the technical means up to the legislature.

(Discussion off the record.)

MR. MERDES: I'm suggesting, if you get the highest price, if that's the policy of the State, that's a policy I disagree with, insofar as Alaskans are concerned. Get the highest price from everybody else in the market, but adapt the benefits of this resource in any way you decide to do it, Mr. Legislator, so that the people in Alaska will at least be equal to or less than in the southern 48, in Texas or Louisiana or California.

THE MODERATOR: Walt, as a legislator, I want to get the market price. I want to get $41 a barrel, therefore I'll have dollars in my hand, therefore I can pay for essential services. If you're saying less than, something different --

MR. MERDES: I like what Eric says.

MR. POMEROY: That's too confoundedly broad. Anything we do benefits Alaskans ore way or the other. We either sell it, have ALPETCO do it. We had a recommendation last night that we have an energy tax credit thing, or whatever you call it. That's before us.

That's benefitting Alaskans. And when we talk about benefitting Alaskans, are you talking about the individual consumers, or are you talking about a huge industry? Is it going to get cheaper fuel? What's it going to be? I want to see this refined more before I vote on it at all.

MS. SHROYER: I have changed that recommendation. Instead of benefit to Alaskans, relieve Alaskans of the burden of high energy cost, or high oil and gas cost. You take away the broad benefit, you still keep it broad, but maybe it's more specific.

MR. MERDES: I have no trouble with that language.

MR. ECKHOLM: Should the state's oil and gas -- as it now stands: Should the state's oil and gas resources be used primarily to benefit --

MR. MERDES: Use her language.

MS. SHROYER: Relieve Alaskans from the burden of higher energy costs.

MR. MERDES: That's it.

MR. PADDOCK: Ed, would you stand still for an amendment which said benefit Alaskan consumers? Does that help any?

MR. MERDES: It's the intent.

MR. PADDOCK: I know that's the intent.

MR. MERDES: I think her language is better.

MR. PADDOCK: Just insert the word consumers in her language.

MR. POMEROY: Mr. Chairman, does she mean individual consumers, or all consumers, business and industry and all utilizers of oil and gas?

MS. SHROYER: I think --

MR. ECKHOLM: Is there any more discussion on this? Rosemary.

MS. PORTER: Well, I just -- I'm not really clear on what that's supposed to do.

MR. ECKHOLM: Now it's been refined. Instead of just a broad policy, it's back to the energy credit kind of approach.

MR. MERDES: Her language is satisfactory to me.

MR. ECKHOLM: As it now stands, it's should the State's oil and gas resources be used to primarily to relieve Alaskan consumers from the burdens of higher energy costs.

MR. HARTLE: Would that be that the primary use of our resources be that --

MR. ECKHOLM: Until that's met.

MS. PORTER: I really object to that and I'll tell you why, for a lot of reasons. The first reason is our major problem is with home heating oil, not with gasoline. People pay whatever the going price is. But we should always be in a crunch so that we are continually looking for alternate energy sources. If we're relieved, if we're paying such a cheap price, there's no incentive to look for other ways. There's no incentive to look for another house or build another home or look for other ways of being energy efficient. I think it's a great mistake.

I think by giving that kind of a benefit to the

State, we definitely need it for now and maybe even for the foreseeable future as far as home and heating oil. Because it's an impossible task to change that over to hydro-electric particular, electricity, or whatever.

But I think there should be -- I just don't like the motion.

MR. MERDES: Since it's my motion -- I actually agree with what she says. That's the trouble trying to do something without having some committee work on it. I think we ought to defer it. I'd like to get with Rosemary and just write the language out that we intend and then vote on it. You're not doing it off the top of your head.

MR. ECKHOLM: We'll hold this one until later, and then move on.

The second question is: Should other considerations than rate of return be considered as a State investment policy. Is that right, Ed?

MR. MERDES: Security. Should considerations in addition to security and rate of return be a policy in State investments. In other words, just what Milton said.

MR. ECKHOLM: Would you restate the motion?

MR. MERDES: Should the criteria other than rate of return and security be considered in making State investments. That's should considerations other than security and rate of return be utilized in making State

investments.

MR. HARTLE: I think you need to state that in the form of a positive thing rather than a question.

And secondly, if you could explain it, I'd really appreciate it.

MR. MERDES: Do you remember when Milt was talking about a question that we should consider here, the normal commercial investor takes into consideration two things before he'll invest any money: Is it safe, and maximum return. Right?

Should factors other than safety and maximum return be used by the State when it makes up its mind what investment it's going into, such as human values.

MS. PORTER: Would you stand for one word in addition to that? Monetary.

MR. MERDES: I agree with that. See, that's obviously what I intend. And again, that should be determined by the legislature. Okay?

But I think that's a very important policy matter. Sort of guide the State.

MR. ECKHOLM: Are we ready to vote on the question?

MR. HARTLE: Can we hear it?

MR. ECKHOLM: I think we've got it. Considerations other than the monetary rate of security should be used as a State investment policy.

Is there anyone opposed to it?

MR. McGINNIS: Mr. Chairman, I would just like to make a comment on it. I think we're talking about the state's special piece of resource to be invested. It would seem to me we move away from rate of return and investment for that piece of investment money, that we could be moving into very treacherous and dangerous waters.

Every dollar invested in education is an investment. 200 million, we're putting that in. That's because of our human values and so forth. We're putting almost $100 million a year into subsidizing health care for Alaskans. That is an investment. State's money in human values.

We do it in cultural values, in libraries, in every kind of money transfer paper. We spend perhaps a half a billion annually in human cultural, educational, social values.

For one to recommend that we take, say, pieces of the permanent fund and move away from rate of return and safety of principal could lead us to some very treacherous financial positions, in my view.

MS. PORTER: We're not saying all, all investments. We're allowing, in a sense, the legislature to make another investment. In other words, they're not only guided by financial return and security. They can do other things if

they wish.

MR. McGINNIS: Are we talking about the permanent fund?

MR. ECKHOLM: Not specifically. It's just broad State investment policy, is how we've got it.

MS. SIMONDS: The money that's left over after our rainy-day fund or the permanent fund.

MR. McGINNIS: I would have no problem if we were to eliminate permanent fund from it. But to say -- because almost every other dollar we so-call invest, is spent is for other than that.

MR. MERDES: That's why we left it up to the legislature, really. They know the permanent fund criteria.

MS. PALMQUIST: I have problems with what Dr. McGinnis said, because the intent of the general motion was to allow the legislature to use all of those human concerns that Dr. McGinnis mentioned. And I don't see that we are endangering the investment process itself.

MR. ECKHOLM: If I may cut you off, because I think we should move on. We've already taken a vote on the issue and it was unanimous. If Dr. McGinnis would like to vote no, that's fine.

MR. McGINNIS: I think you were about to vote. That's just a P.S.

MR. ECKHOLM: Number three, what rate -- this is a question. We'll have to form it as a recommendation. But

we should say -- let's let Senator Merdes frame a recommendation.

MR. MERDES: I would say the pace of exploration and development of the state's oil and gas resources be determined by the legislature, keeping in mind, say, Alaska's life-style. In other words, I think the legislature ought to come out with a policy determination on the pace, whether it's slow, fast, or medium. Because you want them to address that issue in the legislature.

MR. ECKHOLM: Do we want to determine a slow or fast --

MR. MERDES: First, I don't know. We're so dependent upon the Arab situation, whether it eases off, or whether it's our best interest to wait. I don't think we have information to say whether it's slow, fast or --

MR. ECKHOLM: We do know the State has got an awful lot of money in the coffers now.

MR. MERDES: That's why I'm saying the legislature should debate what should the pace be, because they have all the facts. But I want them to debate it. I don't want them to ignore it.

MR. ECKHOLM: You would make a recommendation that the legislature shall develop a policy regarding State oil and gas exploration --

MR. MERDES: That's it. Development of oil and gas

consistent with whatever the state's best interests are.

MR. ECKHOLM: We could argue this and take it --

MR. MERDES: No. That's basically it.

MS. PORTER: The State already has a timeline of what they're going to develop. Everything we know of on the board has a date and they're already working.

MR. MERDES: I happen to know there's violent disagreement in the State government on this in the executive branch. And that's why I said the State legislature should do it. I know one group wants to do it fast, and another slow. I would like the people I vote for make the policy.

MR. ECKHOLM: We could come up -- I think that we don't need to put this on the legislature. I think there's enough information that maybe you people could vote, because there's basically two questions. We could say the State should utilize it's oil and gas resource as a long-term basis, or the State should develop its oil and gas resources as far as is possible, given environmental concerns.

MS. PORTER: Depending on the gas situation, we may not have any choice.

MR. ECKHOLM: But we have the right to say what we want to do, whether it's taken out of our hands. We can't argue about that. We could say what we want to do. If it's

taken out of our hands, that's not the point.

MR. PADDOCK: Mr. Chairman, I don't feel I have enough information. I don't think the rest of you do, either.

MR. ECKHOLM: So you would like to leave it to the legislature?

MR. PADDOCK: I would like to leave it like Ed stated it.

MS. STRASSBURG: And require them to make a policy.

MR. MERDES: That's the Kenai.

MR. ECKHOLM: In this next year the legislature shall develop a policy to determine the rate of development of our oil and gas resources in the 1980-81 legislature session.

MR. MURDES: Okay.

MR. ECKHOLM: Is there anyone opposed to that?

MR. ECKHOLM: Without opposition, it's adopted.

Okay. The fourth question that we haven't developed as a recommendation is should the State act as a partner with the oil industry in developing our oil resources in the future.

Would you like to frame a recommendation?

MR. MERDES: Again, I don't think we have the information. I think it should be the same thing. I think the legislature should address the issue of whether the State, because of changing dynamic conditions in the world

and gas market, the legislature should determine whether the State should participate as a partner in leasing policies, oil and gas leasing policies. That's essentially what I heard Milton say, whether or not, because of those conditions, the State -- in other words, I'm not saying he should or should not. The legislature should address itself to that issue because of changing world conditions. it's whether the State should participate as a partner in oil and gas leases.

MR. HARTLE: Can you define what you mean by partner?

MR. MERDES: For example, he says the oil companies and the states historically would secretly get their seismic information and they wouldn't go together, but then they had the oil in the Gulf of Alaska and it was so big and monstrous that they got together as consortiums. Maybe it's the State's best interest that it get involved in finding that seismic information and getting it all itself. It could be, that may be our interest to get more money. That's the point.

So, hence, I think the legislature again should determine that by studying it, and maybe they'll say no. But I hope they say yes, frankly. The question is the issue.

MR. PADDOCK: Didn't --

MR. ECKHOLM: Excuse me. Is it leasing policy, or exploration and development?

MR. MERDES: No. Well, it includes leasing and exploration and development.

MR. ECKHOLM: Leasing, exploration.

MR. MERDES: Whether they should participate. Whether or not. Let them debate it. That's all I'm saying. They haven't debated it before.

MR. POMEROY: Excuse me. Do you mean consider participating in development, becoming a partner in ownership and operation?

MR. ECKHOLM: That's exactly what he says.

MR. MERDES: You bet. Debate it. They may oppose it. I think -- just like if you recall what Buckmeister Fuller said last night, this world is changing so much, we better keep on her premises.

MR. ECKHOLM: Let's keep rolling.

MS. PORTERFIELD: Could the wording possibly be involved?

MR. MERDES: What's what I mean.

MR. ECKHOLM: Being involved is --

MR. MERDES: Consider being involved.

MR. ECKHOLM: Being involved, or being a partner?

MR. MERDES: Being involved as a partner.

MR. ECKHOLM: The legislature should determine whether the State should be involved as a partner to industry in oil and gas leasing exploration and development.

MR. MERDES: That's it.

MS. PORTER: Should consider the possibility.

MR. POMEROY: Would you read that again, please?

MR. ECKHOLM: The legislature shall determine whether the State should be involved as a partner with industry in oil and gas leasing exploration and development.

MS. PORTER: Should consider the possibility of becoming a partner.

MR. MERDES: That language is what it's intended. Should consider the possibility.

MR. ECKHOLM: Should consider the possibility.

MR. MERDES: They may say no.

MR. PADDOCK: Mr. Chairman, didn't we in earlier action move to do that, insofar as exploration is concerned?

MR. MERDES: No.

MR. MOORE: It's a partner. Question.

MR. ECKHOLM: The question is should the legislature consider the possibility to whether the State should be involved as a partner with industry in oil and gas leasing exploration and development.

Is there opposition to it?

Without opposition, that's adopted.

Question number seven, the State should inventory all of the state's mineral and coal resources and that should be incorporated into the state's capital projects

development plan.

MR. NASKE: Already there are a number of studies that have been done on that, in inventories, energy inventories.

MR. HARTLE: Would we want to say better inventory? I think that's the intent of the --

MS. SHROYER: I think an inventory would encompass all of the studies already done. We wouldn't have to duplicate those studies. But a formal inventory should be done to bring those studies together.

MR. ECKHOLM: We may be taking actions that already are State policy. That shouldn't preclude us from recommending it if it's already done.

MR. POMEROY: Yes. It seems to me to be too much of a shotgun thing. We should take note that there is a great deal of material already secured and being secured, and I know what you say about that.

But I note in connection with all of this, too, that we haven't yet given consideration to money. We're all of us talking about we've got to save money. We're increasing our State budget at the rate of about ten percent a year. We're going to run out of money. We're talking now about spending more money.

Before we get through here, I hope we're going to address the question as to whether or not we want the legislature to begin diminishing the rate at which we

increase our expenditures.

So, in connection with this recommendation, I think at the very least we should modify it to something like this: That it is suggested that the State accelerate as feasible the inventorying and determining potentials of the various resources of the State, with a view to this being of assistance in the development of other potentials to make us progressively less dependent on oil.

MR. MERDES: I only say, in response to that, I got to distinguish between an expense and an investment. Obviously, we shouldn't spend a lot of money unnecessarily. But it seems to me any prudent businessman, and the State should be prudent, ought to consider inventorying as an absolute investment in common sense to make intelligent policy decisions. So I don't think it ought to be considered.

I think the motion as presented ought to be the one voted on and not watered down and let some State Department say, well, it's just a Mickey-mouse motion.

MR. NASKE: Well, I think we're talking about two things here. Inventory means just a collection of possibles, or known sites. Now, that has been done. That involves the literature search, and the Department of Natural Resources did that, I don't know, a year ago, or maybe a couple of years ago.

These sites are known now, talking about

exploration, determining the precise size of the content of these various locations. That involves money. I think we should deal with precisely determining how much coal, or whatever it is we're talking about, geothermal energy and so on is available at these various locations. But there will be exploration, because the information has been collected. Inventorying has been done. So I would like to have a different motion there.

MR. ECKHOLM: Would you like to recommend a change?

MR. NASKE: I would say that, taking the baseline information that is available on various -- all the national energy sources in Alaska, the State should move with prudent speed to determine the exact content of these various deposits and their economic feasibility.

MR. ECKHOLM: That's a little long.

MR. NASKE: Maybe somebody else can --

MR. MORGAN: I'd like to comment on what I said earlier about remote sensing and so forth.

Most of the things I find faulty with the inventories that exist is that they're spotty, and they're dated. I would wish that we could work some way to integrate the inventories in such a way into a computerized situation to where they can be updated so that the information you have about them is valuable other than from a historical standpoint, that you have an updated inventory

or an inventory taken in such a way that it can b continually updated. This can be done. It's just a matter of are we going to do it.

Ten years ago I noticed in the literature that we asked for, a clearinghouse kind of thing on natural resources. I don't know whether we're very much further along than we were then.

MR. POMEROY: I don't want to look foolish in some of the things we're doing here, and I would make an observation: I don't care how long something is if it has to be worded longer to carry a clear meaning.

But I go on from that general observation to the suggestion that was made, that we go ahead and determine exactly the content of these various resources. I suggest that that's very poor wording, because to determine exactly the content of a great coal field or a metal deposit is something in which you're talking about tens or hundreds of millions of dollars. And I hope that the maker of the motion is suggesting that word to say determine as accurately as feasible

MR. MERDES: That's right.

MR. POMEROY: Or more extensively.

MR. ECKHOLM: The State should determine as accurately as possible -- no?

MR. POMEROY: Well, I would have said -- what did

you say?

MR. MERDES: Considering the present state of the arts.

MR. HARTLE: Or as accurate as economically feasible, or reasonable.

MR. POMEROY: Determine as economically -- determine as accurately as is economically feasible, or something to get that thought.

MR. ECKHOLM: The motion is the State should inventory the state's mineral and coal resources as precisely --

MR. MERDES: Accurately as possible.

MR. NASKE: Fuel and mineral resources.

MR. ECKHOLM: You've already done -- okay.

MS. SIMONDS: Fuel is mineral, isn't it?

MR. ECKHOLM: Not necessarily.

MR. NASKE: Geothermal, for instance.

MR MERDES: Geothermal is an important one.

MR. NASKE: And wind power.

THE MODERATOR: Energy.

MR. NASKE: Energy.

MR. ECKHOLM: We need a little clarification on this. It's not coming together.

The State should inventory the state's fuel and mineral resources as accurately as possible?

MR. PADDOCK: That's impossible.

MR. ECKHOLM: Should inventory. Okay. The State should

inventory the state's fuel and mineral resources, and that inventory should be incorporated -- and that potential should be incorporated into the state's capital projects development plan.

MS. SHROYER: I'd like to make a point of information. In 1969 there was a recommendation made to catalogue all mineral resources and a report has been made about how the legislature responded to those ten years ago.

I'd like to find out what kind of action has been taken so we know. Maybe we'd like to change it a little bit from there.

MS. SHROYER: Because that was a 69 recommendation.

MS. STRASSBURG: But anything we do is only a continuation of whatever has been started.

MS. SHROYER: That's true. That's true.

MR. PADDOCK: Mr. Chairman, this effort is a never-ending thing. It's dynamic. It's not static. It can't be static.

MR. ECKHOLM: New methods, knew styles.

Let's take the question as stated.

MR. MERDES: Let's vote.

MR. ECKHOLM: All those in favor of the motion say aye.

Any opposed?

The next question, the University of Alaska shall develop a strong resource management program.

MR. MORGAN: Create another department. Strengthen those they have.

MR. ECKHOLM: Shall strengthen?

MR. MERDES: The University of Alaska shall develop excellence in the areas of particular concern in Alaska, such as oceanography, forestry, fisheries.

MR. NASKE: Why don't you say northern latitudes?

MR. MERDES: What I'm saying, anything that is related to fishing, forestry.

MR. ECKHOLM: Those are still resources, so we can lump those together.

The University of Alaska shall develop excellence in Alaska's resources.

MR. MERDES: You may not develop them. I don't think you mean development. Should develop excellence in -- what is the -- Claus, you used a phrase?

MR. NASKE: I think in matters pertaining to northern latitudes.

MR. MERDES: In matters pertaining to Alaska's resources. Don't use development.

A VOICE: Are we talking about educational programs?

MR. ECKHOLM: But we can come back and do that on education, but this is specifically a resource thing. It is energy-related.

MR. NASKE: Because if you make it Alaska, that would

preclude their programs that are overlapping with Canada and with Greenland, with the Soviet Union, with Siberia and so on. It should be the north latitudes, because we're part of that. Fishes, I mean, swim not only in Alaskan waters, but they have the a nasty habit of going elsewhere.

MR. ECKHOLM: The question is the University of Alaska shall develop excellence in matters pertaining to the north latitudes.

Is there any debate? Is anyone opposed? Without opposition, that's adopted.

Nine, the State shall use its oil well to develop nonoil energy as a major State priority.

MR. NASKE: Excellent.

MR. MERDES: And renewable resources.

MR. ECKHOLM: Well, this is energy. This isn't resources.

MR. POMEROY: Wait, say that again, please?

MR. ECKHOLM: The State shall use our oil well to develop nonoil energy as a major State priority.

MR. POMEROY: How about saying should invest from our oil well. It sounds as though you want to make it a number one priority.

MR. ECKHOLM: Shall invest.

MR. MERDES: That's right.

MR. ECKHOLM: Shall invest from our oil well?

MR. POMEROY: Yes.

MR. ECKHOLM: The State shall invest from our oil well to develop nonoil energy as a major State priority.

Is there any discussion?

MS. PORTER: How about changing that to nonrenewable.

MR. MERDES: I think that's better. Make it more positive.

MR. ECKHOLM: Okay.

MS. PORTER: That includes all fossil fuel.

MS. SCHIRMER: Read that again, now?

MR. ECKHOLM: The State shall invest from our oil well to develop nonrenewable -- no, no, no.

THE MODERATOR: Energy.

MR. MORGAN: Renewable.

MS. PORTER: The stale shall invest from our oil well --

MR. ECKHOLM: To develop?

MS. PORTER: To develop.

MR. HARTLE: Don't you mean the State shall invest from our nonrenewable resource wealth?

MR. ECKHOLM: No. Because coal is a nonrenewable resource wealth. So you're saying you don't want to develop coal.

MS. PORTER: I'm not saying I don't want to develop, but if there's any wealth from it, we want to use it to

develop.

MR. ECKHOLM: So you wouldn't want to develop coal.

MS. PORTER: I think coal is a disaster for the State.

MR. ECKHOLM: That's what you're saying.

MS. PORTER: I'm saying if there is any fossil fuel development monies that we get, some of it should be used in the development of alternate energy, other than fossil fuels.

MR. ECKHOLM: Well, you're precluding coal development.

MS. STRASSBURG: No. Using the returns from the coal income.

MR. NASKE: Income from nonrenewable energy sources.

MR. MERDES: Shall be used to develop renewable energy.

MR. ECKHOLM: Okay. The State /STAT shall invest income from our nonrenewable wealth to develop renewable energy as a major State priority.

MR. MERDES: That's right.

MR. HARTLE: Would you want to say resource wealth?

A VOICE: Nonrenewable resource wealth?

MR. MERDES: Yes.

MR. ECKHOLM: Once more? Is there any question?

MR. HARTLE: Read it again.

MR. ECKHOLM: The State shall invest income from our nonrenewable resource wealth to develop renewable energy as a major State priority.

A VOICE: Question.

MR. MERDES: Question.

MR. ECKHOLM: Anybody opposed? Adopted.

Ten: The State shall develop incentives for energy conservation.

MR. MERDES: I think you said that already. I think that's included in the previous.

MS. SCHIRMER: No.

MR. ECKHOLM: We're talking about carpooling and mass transit. Such as insulation --

MS. SCHIRMER: Public transportation.

MR. ECKHOLM: Mass transit.

MR. NASKE: Improved building construction.

MR. ECKHOLM: Carpooling.

MS. SIMONDS: Walking.

MR. PETERSON: Mr. Chairman, I don't know if it's already been covered, but you recently received a handout on recommendations considerations. It ties in with what we were just discussing with development of renewable energy resources. What I'd like to offer, and I again, if it's already been covered, I don't want to delay it.

But basically what I'm suggesting is that we urge the State or the legislature to actively encourage and support expanded use of coal and hydroelectric power and other alternative resource energy within the State.

I did not include the alternative energy resources in my draft, but I think it should be. I'm wondering if there would be an appropriate time to bring that in.

MR. ECKHOLM: I think we already covered that. The motion that we just passed is the State shall invest income from our nonrenewable resource wealth to develop renewable energy as a major State priority.

MR. REAVES: He's identifing hydroelectric power specifically.

MR. PETERSON: I identified specific ones.

MS. PORTER: We're a very large State. Some areas have hydroelectric potential. Some have geothermal. Wind generation. Such a large state that it's not going to apply across the board.

MR. REAVES: I don't think you can make that determination. Hydroelectric power can be transmitted for miles.

MS. PORTER: When you're looking at where I live, which is the size of the State of Oregon, crossing the tundra for 300 or 400 hundred miles, sure you can do it, but it's over tundra.

MR. HARTLE: Also we're talking about ten years, and we haven't any idea what they'll be doing ten years from now, they are advancing so rapidly. Secondly, I'd like to

mention coal as a nonrenewable resource.

MS. PORTER: Getting back to our initial topic, add in there incentives for the power company to look at waste heat. There are many, many ways that power companies can use waste heat, heat water that heats other buildings. So we ought to add incentives for power companies who are running very inefficiency at this time to be totally efficient.

Also there should be incentive to maybe develop some of the sewage burning plants, as an example, which are very expensive to construct, but could take care of a major problem in Alaska, that is sewage disposal, and give us heat at the same time. So if we're going to give incentives, let's include utilities companies which will in turn lower cost or at least --

MR. MERDES: I'd like to expand it. I think we should state as a matter of policy that we encourage all utility companies, whether the public or private, including pipeline oil and gas companies to utilize waste heat from their pumping stations for the use of Alaska renewable resource development. Let me tell you that pipeline wastes more heat going up into the air that they could use to dry gain and put into other things. And I think it's an excellent idea. Expand it to include pipeline companies.

MS. PORTER: Or industry. There may be other

industries that would be converted.

MR. POMEROY: You're speaking about utilizing, giving attention to utilizing all the resources of waste heat. It's all over in all kinds of places.

MS. PORTER: Giving industry an incentive to do that, because it is expensive.

MR. MERDES: The State provide incentive policies for capturing the use of waste heat, all.

SUSAN HENOCH: There's either a legislation in the hopper, or it's already being done, to capture waste heat from power plants. And I don't know if there's an incentive in that or not. Do you know?

MR. ECKHOLM: We've got to move on here.

MR. MERDES: Let's vote on that.

MR. ECKHOLM: One question.

SUSAN HENOCH: Are you including incentive tax credits for individuals utilizing?

MR. ECKHOLM: The State shall develop incentives for energy conservation, especially in the areas of waste heat utilization, mass transit, insulation and carpooling.

MS. PORTER: Not just waste heat, because that's just one whole part of it. There are a lot of other areas connected with industry that's just not labeled waste heat.

MR. PADDOCK: Mr. Chairman, I'm troubled over getting too specific. I would certainly hate to exclude any source.

MR. ECKHOLM: I said especially, meaning that there are others, because those were brought up. That didn't exclude those.

MR. PADDOCK: I think we want to be careful to be not exclusive in any way. We want be inclusive of any energy efficiency.

MR. MERDES: May I suggest before these things go out maybe appoint a subcommittee to look over thinks these things?

MR. ECKHOLM: I'll do that, make copies of these things. Jack, who do you want to chair?

THE MODERATOR: Ed?

MR. MERDES: Anybody volunteer.

THE MODERATOR: Fine.

MR. ECKHOLM: The question as I now understand it is the State shall develop incentives for energy conservation. Do we want especially in areas of waste heat, carpooling, all that?

MR. MERDES: And other related. We'll change it.

MR. HARTLE: I'm not sure that we need to, as long as we include things as yet to be developed.

MR. ECKHOLM: You're not sure we need to include any of the especiallies?

MR. HARTLE: No. I think the especiallies can stay in there.

MR. POMEROY: Maybe you can get it.

MR. ECKHOLM: Any other massive?

MR. MERDES: Yeah.

MR. ECKHOLM: Is there any opposition to that? That's adopted.

The State shall use its energy wealth -- I think we kind of handled this in the first one. The State shall use its energy wealth to keep Alaskans' energy bills down.

MR. MERDES: That's covered.

MR. ECKHOLM: That's covered. That's all I have.

THE MODERATOR: What's the schedule now?

MR. ECKHOLM: The schedule now is basically we got this room until 4:30, and then we have room 305 available at 8:00 P.M. tonight.

THE MODERATOR: How many subjects are we still to cover? We haven't even gotten on fisheries. Red Swanson and Woody Johansen have offered to spend ten minutes with us on transportation modes in the State, if you're interested in that. What are the topics that we need to cover now?

MR. ECKHOLM: We've got so many that it's obvious we're not going to cover them all. So I think we should take five minutes to develop some priorities on what we're going to devote the afternoon to.

MR. POMEROY: The big one will be our financial future. We haven't said anything about that.

THE MODERATOR: Now, this morning we worked on natural resources, which ended up basically fossil fuels, I would say; oil and gas. Right?

And this afternoon was to be human services. And then we've just got tomorrow morning, or we've got this evening, too.

How many other natural resources are we going to want to deal with? What about transportation, about what the social services?

MR. ECKHOLM: Fisheries is one. We've got transportation, we've got support services, and we've got to finalize what we talk about in financial futures.

MS. SCHIRMER: And we haven't said anything about communications.

MR. POMEROY: It's interesting -- excuse me. It's interesting in our letter of transmittal that brought us this big book, it listed four things: Alaska's financial future, developing marine resources, oil and gas and education. Of course, it doesn't go on to other things, but it mentioned those four.

MR. ECKHOLM: We won't even get to those. So does anybody have any direction?

MR. REAVES: What about the timber industry?

MR. ECKHOLM: Do you want to go come back after lunch and keep on going?

MR. MERDES: And agriculture.

MR. BEARDSLEY: I think we ought to spend at least an hour and a half on those.

MR. ECKHOLM: When we come back let's lights put it into third gear and maybe devote an hour, or set a time and when that time is up, make recommendations and get off of it.

MS. SCHIRMER: Can we go now and come back at 1:00 instead of coming back at 2:00?

MR. ECKHOLM: I'll search around and try and find a room. I don't understand what the situation is.

THE MODERATOR: 1:15.

(The proceedings recessed at 12:15 P.M. and reconvened at 1:45 P.M.)

THE MODERATOR: Let's try to get started here.

MS. PALMQUIST: Are we going to get to social services or human values?

THE MODERATOR: Let's try to decide that now. Eric and I have been trying to go down the subjects now at that we haven't covered yet.

MS. PALMQUIST: We've gone over commercial areas and industrial areas and energy. But there also are the human values to be considered and I'd like to know when we're

going to get to them.

THE MODERATOR: Let me tell you what we've done, or recommended, or said.

We've gone down the list of topics that were given here in the pamphlets that came out on the conference. And we think we've sort of covered finance. We obviously, I think, have covered oil and gas, energy, probably, thus far, up to a point.

We still have timber, agriculture, fisheries, health, education, transportation, communication, justice and finance wrap-up. We've got to do this all between now and 8:00, and whatever you want to do tonight.

So, what Eric and I have tentatively done is we've taken them in that order and given them a half hour apiece. We've got timber first, and then agriculture, and then fishery, and then health. Fred McGinnis wants to contribute something there. Education, then transportation. And if we want, that would be maybe after 4:00 o'clock, 4:30.

MR. ECKHOLM: At 4:30 we have to move to another room.

DELEGATE: Have you decided where?

MR. ECKHOLM: Have you been up to 1060? It's a suite.

MR. ECKHOLM: 1416 is the room number they've found for us. It's not a very large room, but that's the best we can do.

THE MODERATOR: What do you think of the general idea of what we're doing here?

MR. ECKHOLM: What we thought we would do is limit the discussion on 15 minutes on each topic, then go into a recommendation session for about ten minutes, and then move on.

MS. PALMQUIST: Well, justice, transportation and health and education are all human values. One thing you left out, health is not all-inclusive of what this State is administering in the field of human concerns. We have the large area of public assistance and the large area of programs for elderly, the programs for children, so on and so on.

At least some time should be put to that and the Brookings Institute did address those. If we're supposed to follow somewhat the major corners of the Brookings Institute, then under the schedule that you have we're leaving out that large area.

MR. McGINNIS: Mr. Chairman, I wonder if it would be helpful to think in these terms with regard to these broad social concerns and the health concerns which of course all of us feel to be legitimate. It is true that duly commissioned there was a paper on this topic for this conference. It did not get in the booklet for some reasons.

But, in any event, it's been made available together with a number of recommendations.

I would suggest a possibility in that field maybe a slight departure, when it gets to the health agenda item, we spend maybe five or ten minutes just calling on your attention the topics, maybe with a thought you could name four or five people who could take, if you get in a time crunch, and to take those recommendations and either amend them or strike them or say this is the most important, and then come back and say we've now gone over it.

Contributing to those recommendations I would think would be people in the State that would have had a minimum of 100 years of experience in these fields, and they've suggested some things for the State, which I think, based on the way they were created, would give some validity to the background.

But, in any event, I would suggest that we look at exactly what the recommendations seem to say with a possibility then of asking a number of the group to be determined by you to do some homework for us and then bring back the report and say this is what recommendations we ought to go with, if any.

MS. PORTER: I concur with his suggestion, that maybe it would be done over the dinner hour, as an example. I don't know if there were any people that would be able to

do that. That would be a good time. I for one would not want to miss any of the other discussion. So that would split off from the group.

The other thing I would like to suggest, instead of health, call it health and social services, because that's what it is.

MR. McGINNIS: That's what it is.

MR. HARTLE: As a procedural matter --

MR. ECKHOLM: We have it blocked until 6:00 o'clock and coming back at 8:00.

MR. HARTLE: You have it blocked that way?

MR. ECKHOLM: Yes.

MR. HARTLE: That will be acceptable to me, but it's the pleasure of the group.

MS. PORTER: One other thing. Members of the public have come for a couple of days that have not gotten an opportunity to speak. I might suggest at this time for a certain number of minutes, decide on the number of minutes, and let them have their say.

MR. ECKHOLM: Haven't we allowed to public to speak?

MS. PALMQUIST: We did this morning.

MS. PORTER: I thought we had a list of a number of people who were here that wanted to speak on specific subjects.

THE MODERATOR: That's a group of people who have --

MR. ECKHOLM: Written papers.

MS. PORTER: I've got two lists. I've got this one.

A VOICE: That's a supplement.

THE MODERATOR: We've been trying to recognize hands in the back.

MR. ECKHOLM: If we're going to talk about a subcommittee approach in the health and social services area, maybe we ought to go ahead and have Dr. McGinnis lay out those recommendations now and get the subcommittes appointed so maybe we're discussing other things. The subcommittes would have time to think and ask that group that's appointed to come back at 8:00 with the recommendations.

MS. PALMQUIST: He does have a summary of his suggestions, and it comes down to four pages with his recommendations. I think everyone has them.

MR. ECKHOLM: Do you want to accelerate that, do that now so the subcommittes have more time to think about it, rather than going back to resources?

MR. McGINNIS: I would leave that totally up to you and the group, Mr. Chairman.

MS. PALMQUIST: I think if we could meet at the dinner hour and have our supper and go on, between 6:00 and 8:00, I think you need to schedule a time to come back with the recommendations.

FILE COPY

LEGISLATIVE COUNCIL, STATE OF ALASKA

Conference on Alaska's Future Frontiers

Friday, December 7, 1979

Sheraton Anchorage Hotel

Anchorage, Alaska

VOLUME II

Legislative Reference Library
Legislative Affairs Agency
Pouch Y State Capital
Juneau, Alaska 99811

Reported by: Louise K. Mizota CSR

MR. McGINNIS: Mr. Chairman, I could very quickly indicate by topic. I could summarize for you what the topics, with the fact if there is someone who strongly objects to any of those, there is no reason for the subcommittee to unduly go into that. We think it broad enough that they would be of interest. But they would be summarized with maybe a phrase or so.

MS. PALMQUIST: There might be some additions other people would have to add to Dr. McGinnis answer recommendations.

THE MODERATOR: I hear the suggestion being made with health and social services and afterward get back to the other resources issues?

MR. ECKHOLM: It's my understanding that we're not going to really get into a lot of detailed discussion, Mr. McGinnis is going to.

MR. McGINNIS: The same subcommittee would deal with all of these. One committee would do all of them. Are

MS. SHROYER: We have that summary right here.

MR. ECKHOLM: Do you want to go over that right now?

MS. SHROYER: Why don't we skip the discussion since we have what he wants to say in front of us.

MR. ECKHOLM: Everybody may or may not have read that. There might be discrepancies.

MR. PERDUE: The idea of 15 minutes and 10 minutes

discussion is perfectly good. And go on to the next subject. I think this falls right in line. If at the end of the 25 minutes you want to form a committee to meet with Dr. McGinnis, that's perfectly legitimate.

We have a lot of topics to cover and time is getting short and we should have had more time. But under the circumstances, we had to live with it. I think the formula is good, and I'd like to leave it at that.

THE MODERATOR: Okay. Good. Thank you.

MR. ECKHOLM: Dr. McGinnis, would you like to brief us?

MR. McGINNIS: Is that what you'd like? How many of you do not have a paper?

MR. POMEROY: Is it the one that says summary of recommendations?

MR. McGINNIS: Yes. That's right. They were all given out. I don't have more.

I think there were some. While they're looking, maybe to save time, Mr. Chairman, I could begin.

The first concept has to do with the public policy of dramatic shift from the curative services to education, health promotion as a priority.

The second one has to do with certain concepts with regard to cost containment and a formula beyond which costs should not be allowed to go in certain fields.

The third one has to do with the concept of

vesting more authority in local government and local private nonprofit corporations and get away from the State doing so much so for money.

Number four has to do with the idea of revenue sharing funds available through State government with a stronger voice of local governments in determining where that money shall go as a priority in their regions. Now, it's prescribed as to who gets what, what kind of institution gets what and let the local government determine that.

Number five has to do with the revision, possible revision of all direct service health expenditures with the emerging possibility of opting out of Medicaid totally and build a program uniquely for Alaska, hopefully to head off the scepter of national health insurance, which may not be the best for our State. Substitute our own program of health insurance without getting into the health insurance issue.

Number six has to do with people above the profit level but don'thave a million dollar income and therefore cannot afford all the costs in the field of catastrophic illness.

Seven has to do with the possible revision of reimbursement for physicians and hospitals, whether or not the Medicaid program is continued or dropped. We feel that

had been improved and tightened to everybody's advantage.

Number eight again has to do with the disease prevention and the ideas of singling out for early attention tuberculosis, otitis media, alcoholism and drug abuse.

Nine has to do with alternatives to expensive institutional health care, and the possibility of having doctors attached perhaps to hospitals and to clinics and so forth who would help people in their homes and get back a little bit to the old visiting doctor concept and try to cut down expenses of institutionalization.

Ten has to do with an improved emergency response system; the medics and so forth across the State.

Number 11 has to do with the enormous toll of accidents in the State being the greatest cause of death and expense and certain promotional and educational programs with regard to accident prevention.

Number 12, top of Page 3, has to do with the inclusion of mental illness as an illness and not excludable under State programs and third-party payments as though it were not an illness. So they ought to be required to take mental illness, such as an appendectomy.

Number 13 has to do with the emphasis of community mental health services API as 200 people who served 5,445 people at community levels last year. And it

has to do with improving, funding better and doing more at the community level in the mental health clinic concept.

Number 14 has to do with the financial impact of improving the current payment for the Aid to Families with Dependent Children Program. There are great inequities. Two adults get about $608; a mother and child gets $350. There's just a great disparity in those levels and that ought to be addressed, in our view.

Number 15 has to do with with a redetermination for certain elligibility for General Relief, and the General Relief Medical Programs.

Number 16 has to do with the strong legislative and executive pressure on the Federal Office of Management and Budget with regard to the poverty guidelines in Alaska. We are treated in Alaska as though the cost throughout the State were exactly the same levels of cost all over, which obviously is not true. And the thing is that with the right kind of pressure we ought to be able to make some strong case to the Office of Management and Budget by which we could get some adjustments in the State, any of the rural regions. For example, we know we have 200 percent in cost above the national average. And yet we are not able to adjust the poverty guidelines in the State. We want attention to that.

Number 17 has to do with the legislative and

executive branches providing for an updated comprehensive study of the status of the elderly. We had one about not quite ten years ago. The time has come in our belief that indeed we ought to detail a study on the total status of elderly and their needs.

Number 18 has to do with Corrections Master Plan or some reasonable variation of it, but the concept is presented here that we now have spent tens of thousands, and in the hundred thousand range for a comprehensive master plan with regard to rehabilitation of offenders and corrections. We'd like to see that given emphasis and not put on a shelf and forgotten.

Ninteen has to do with alternative to street crime and also the concept of new start centers in the rehabilitation of offenders concept.

Twenty has to do with the public assistance money transfer payment programs and the possibility of co-locating the social services people and the public assistance transfer people together so there's not that dichotomy throughout the State.

Number 21 has to do with the adequate funding for the private child care institutions. Since Alaska does not operate any child care institution, unlike other states, we lean on the private providers.

Number 22, and that's the last one, Mr. Chairman,

has to do with the support by the executive and legislature branches of government by which the department would be allowed to use a very small percentage of its total budget for research and evaluation. Every major industry in the nation today is in the 100,000 to two million range. Never less than one percent on research and evaluation what we're doing. We feel in the human services our budget alone this year in our department is 200 million dollars. We believe that a fraction of that, some fraction of one percent should be devoted to research and evaluation on all we ought to be doing.

That's 22 items, Mr. Chairman, fairly rapid. That's the heart of these 22 recommendations.

Thank you.

MR. ECKHOLM: Thank you, Dr. McGinnis. I think it would be appropriate if we were to accept your recommendations now so that we move into railroad next. So this appears we'd be railroading this through.

You've organized it very well, and they look nice. I hope that we appoint a committee that's able to give this serious attention and we don't limit our concerns to health to these considerations, not just the ones that Dr. McGinnis has outlined.

MR. POMEROY: Mr. Chairman, I do not doubt that people of great competence prepared the report from which these

recommendations are made. But they're so extensive, so diverse, they are so complex and so significant in a number of directions that I don't think it's something that we could do any more than just rubber stamp. We can't in an evening or in two or three days go over this material.

I speak as a person who knows considerable about this field. I would just like to say, Mr. Chairman, I was California State Relief Administrator for a period in the Depression. I've been National Director for Preparedness for the American National Red Cross and have been in county work, welfare. I know something about some of these things here.

And I would consider that we could take almost any one of two-thirds of them and the committee could work all evening on it and it would be just poor business for us to attempt to make a recommendation.

I just feel at a loss.

MS. PALMQUIST: Mr. Chairman, I also come from a social work and administrative background, although I have quite a few other interests.

But let me state that policy decisions, where we -- the direction that we want to go doesn't mean that you have to know all of the details of how a program is administered. In other words, the technical procedures and the workloads and so forth. You don't need to know about

that in order to make decisions.

I do have some alterations that I would like to make in one or two items and to add some. And if that's allowed in the committee, I would like to be able to serve on the committee and to make my contribution there.

My main thought in regard to this is that, broad as it is, it isn't quite sufficiently broad enough. We have concerns such as how to -- which is not just a technical approach, but how to accomplish some of these things which gets right at the root of effectiveness from the standpoint of policy.

And I could address that in one or two items.

MR. ECKHOLM: Mrs. Palmquist, if we could move on, I think that probably the committee would be those people who are interested in working on it. So we should do this as a committee and then come back?

MR. MERDES: I think there's been an awful lot of thought put into this. Possibly one way to approach it it is to say maybe that we should recognize that fact and ask that maybe a special committee of the legislature or somebody go into the ones, for example, that would cost a lot more tha.. anybody here would think.

But I think the hard work that went into this and the obvious organization ought t be recognized. And I think again there, as far as I'm concerned, in the form of

an issue, it's something that's important and we should address ourselves, too. But I agree with Harold in that you simply don't have time to debate these. It should recognize the fact that they're issues.

MR. ECKHOLM: Let's let a committee go over them and see if there are any real big problems as a group. If other people have health and social services issues as recommendations, those should probably filter through that committee and come back at the same time.

MR. HARVEY SAMUELSON: I feel there's been a lot of thought given to this and I move for adoption of Mr. McGinnis' recommendations. We don't have the time to fool around all day.

MR. PERDUE: I second.

MS. SHROYER: I object. I don't think there's been enough time for us to go this these, so I don't think we can just blanket adopt these. I myself disagree with some of these. I feel that some discussion from a subcommittee or all of us needs to go into them. I don't think you can have a blanket adoption.

MR. ECKHOLM: Mr. Samuelson.

MR. HARVEY SAMUELSON: We can accomplish your goal by --

MR. McGINNIS: Let me suggest on one thing. Each of these recommendations have printed keys into the overall

paper. And there's much additional information, data back-up, physical facts in the 60-page paper. And each of these is keyed by page on where the other back-up is. That might be helpful.

THE MODERATOR: Fred, I have a question. Aren't these more detailed than what normally would come out of a conference like this? I mean, I'm just asking you --

MR. McGINNIS: If so, Mr. Chairman, and it could be correct that it may be. I think the committee could strike certain sentences and rephrase others so that it would be in general policy statements and deal with that. But I think each one of those would be subjected to a policy formulation and get away from any particular detail. We try to be rather general in the --

MR. ECKHOLM: Let's let the committee discuss it and come back to us tonight with the recommendations.

MS. PALMQUIST: Mr. Chairman, I have the same feeling that Rose, I think, expressed. And that is that we don't want to lose our input into what's taking place in the committee while we're gone. So I would like to propose that whoever is interested form themselves into a committee to go over these for the purposes of making recommendations back to the body at 6:00 o'clock.

MR. ECKHOLM: At 8:00 o'clock. Let you work from --

MS. PALMQUIST: 6:00 to 8:00.

MR. ECKHOLM: Let's appoint a chairman and have the chairman be responsible. Anybody who is interested in working on it.

MS. PALMQUIST: I suggest Mr. McGinnis be the chairman.

MR. McGINNIS: I think that would be a mistake. I would be glad to be there to make comment, but I believe this document, if it reflects your concerns, that it ought to be of this group and let me just be a resource person, if I may.

MS. SHROYER: I agree with Dr. McGinnis.

MR. ECKHOLM: If there is anyone who would be interested in being the chairman of the committee.

MS. PALMQUIST: I would like to chair it. Let's see, we have to give up this room before 6:00, right? What space would be available for our work?

MR. ECKHOLM: We'll figure something out for you and we'll get back to you.

MS. PALMQUIST: Announce it later.

MR. McGINNIS: One last thing, Mr. Chairman, as far as I'm concerned. Would it be possible as a procedure that if there are those who did not hear your concern about this, maybe they could write out on a piece of paper what they want the committee to consider to Mrs. Palmquist. That would insure that those ideas could indeed surface through the committee.

MR. POMEROY: Mr. Chairman, I would like to make one final comment, because I spoke so strongly about this. I said obviously an enormous amount of work has gone into this, and I know something of the work that has gone into it. And it should be given the honor of some attention.

I will do all I can to dissuade this from being a rubber stamp. And that's all it could be, is a rubber stamp. There should be something said that would lift it up to the level for consideration in the legislature by a special committee, perhaps, because of the enormous amount of significance that there is in this.

MR. ECKHOLM: I assume those people who are interested at the time, we don't have to announce the time, they will be interested at the time, and they will show up at the committee.

MR. MERDES: Where will we meet?

MS. PALMQUIST: I'm on the legislative interim committee and they have a package of bills down for me at the Legislative Affairs office. So I need to excuse myself now, but I'll be back.

THE MODERATOR: Do you need to have a showing of people who are interested?

MS. PALMQUIST: I'll be back, and they can either leave a slip here that -- as Eric says, they can just

show up at the committee.

MR. PERDUE: I have a question for Dr. McGinnis. Dr. McGinnis, is the social welfare as far as the native and the Caucasian under the same jurisdiction, or does the federal government still have jurisdiction over the native population?

MR. McGINNIS: All those programs available to any person in Alaska are available to all. There's certain special programs that are still in existence, and also through the Indian, also to the native, because of that relation. Generally, the individual must be a citizen of the United States and of the State to qualify. There is one exception I can think of. Generally, the programs relate to all.

MR. PERDUE: Maybe I can phrase that. How much jurisdiction do you have of, say, somebody is violating or misusing welfare funds? Who has the jurisdiction over that?

MR. McGINNIS: It is a federal program, in the health service and a State program.

MR. ECKHOLM: Could we move on now to timber? We'll keep it down to --

MS. PORTER: I'm sorry. I couldn't avoid being absent. What happened?

MR. ECKHOLM: Rose is the chairman of a subcommittee that's going to meet starting at 6:00. And they're going to

report back to the group with the recommendations at 7:00.

THE MODERATOR: I did promise this gentleman. You had something on alternate energy sources before we got off energy. He said he might make a short --

MR. PETERSON: It's a little bit out of sight. It will be a brief point that may have been overlooked in our discussion.

Although the recommendations that were made do crease alternate energy, there is no mention made of support for small scale use, which I feel is something that is fairly significant. There's much opportunity for this, especially outside the larger cities. And there's also a tremendous interest in small-scale use, which is shown, and I think a good example of this is in the recent federal program for alternate energy projects. Alaska had a per capita response that was eight times that of any other state. And I think we ought to indicate just how much interest there is in this.

So for this reason I'd like to offer to the group that the State should specifically encourage small scale utilization of alternate energy resources. And this would include individuals, families and small businesses.

Thank you.

THE MODERATOR: Okay.

MR. ECKHOLM: We have a recommendation, then, that the

State should -- could you reread the recommendations?

MR. PETERSON: Okay. Recommend that the State encourage small-scale utilization of alternate energy resources. This would include individuals, families and small businesses.

MS. PORTER: Clarification. I forgot what I was going to ask. I'm sorry. By small scale, are you talking about generation, or how small scale?

MR. PETERSON: The term scale is difficult to define. But when you talk about all the national energy, you're talking about, for example, on large scale, hydroelectric power projects, for, say, a community, or a region, whereas this would address more of the individual or family size. I know it's difficult to define, but that is basically what we have been referring to.

MS. PORTER: You say encouragement. Do you mean incentive? There's a difference between go out and do it and -- you're talking about bucks.

MR. PETERSON: Yes. For example, low interest loans and tax incentives and whatnot. But it should specifically address, I think, the small scale use for subgroups as I recommended. But if you don't specify that, a lot of times it doesn't filter down to the individuals who could benefit.

MS. PILLIFANT: Were you aware that the federal government has got a grant program??

MR. GRANT: Yes. I'm also aware of that. I might point out there was 250 people that applied for that last time, and 14 got it.

So there's a very small number that were able to participate in that program. And that's one of the reasons I'm bringing it up.

MR. MORGAN: I would like to emphasize that in the villages, we are very much concerned with the use of small scale-appropriate technology.

MR. GRANT: This would benefit rural areas a great deal, I feel.

MR. MORGAN: We are doing something with that in relation to local vegetable production.

MR. ECKHOLM: Is there any more discussion on the recommendation?

MS. SCHIRMER: I'd like to encourage -- I mean to propose that it be a recommendation of this group.

MR. HARTLE: As would I. Although I'd like to point out that perhaps we should clarify, it just says alternative energy, that perhaps we should specify renewable here.

MR. PETERSON: I did not say renewable for a very specific reason. Many people in the State are able to use coal as an alternate fuel. If you say renewable, it would automatically eliminate that.

MR. HARTLE: That's what I was talking about.

MR. ECKHOLM: Would you reread it once and we'll take a vote on it.

MR. PETERSON: The recommendation is that the State should specifically encourage small scale use of alternate energy resources. And this would include, as I say, families, businesses, and small businesses. The term renewable is somewhat exclusive in there are several people who could benefit if it was not excluded.

MR. ECKHOLM: Would it include individuals, families and businesses?

MR. PETERSON: Right. You could include that and as a result not eliminate other users.

MR. ECKHOLM: Is there anybody opposed to the recommendation? Then it's adopted.

MR. PETERSON: Thank you.

THE MODERATOR: We've got timber, agriculture, fisheries, in that order. Any objection to that?

MR. ECKHOLM: Let's go for a very short discussion on timber, about 10 minutes or 15 minutes, and go into the recommendation, if we can. Who expressed the interest in timber?

MR. REAVES: I did. Unfortunately, I don't know anything about the timber industry, and it wasn't mentioned, and I feel it should be mentioned. Perhaps we could delay

this and have a member of one of the other groups who does know something about the timber industry come before us and expound on what is needed.

MR. ECKHOLM: John Schnabel is in our group. He didn't show up, though, did he?

MR. REAVES: He's from "paint," isn't he?

MS. SCHIRMER: I feel somewhat in the same position, and I feel one of the weaknesses of the group that we've invited, or at least the group that came is that there is very little, very few people who are knowledgeable in the timber industry invited.

MR. ECKHOLM: The one who was invited was probably the most knowledgeable in the State.

MS. SCHIRMER: That's right. I am from Wrangle and I am surrounded by it and I know something about it from the -- you know, natural processes in my interest.

MR. ECKHOLM: Why don't we table this discussion for a while and we'll send Kathrine around to find out what the other groups have been doing and find out if there's any resource person in the industry and other recommendations that have been made and we'll come back.

MR. POMEROY: I have a suggestion that might be useful. There is a report of domestic market for Alaska wood products. It was commissioned by the Division of Economic Enterprise, Mr. Webber's organization. It was completed

just in June, 1979.

It's brief. It is very good. It indicates what we have in the resources throughout the State, the interior and the southeast. And about all I could think of to say, even if we were to discuss it for an hour or hear somebody, would be to encourage the follow-up of this that in any way feasibly can assist in the development for the domestic market -- for the foreign market, we have no problem. I'm saying that.

But it goes to the economics of how it can be utilized. And maybe just something of that sort or to get somebody here. But I do contribute that.

MR. SWANSON: If I might, from the audience.

For the record, I'm Mike Swanson.

Probably a little history here, I was probably hatched on the firs up in Oregon, went through the timber industry at that time, went through the sawmills, been a sawmill owner and operator, worked through the woods and in my years in Alaska in the territorial days when we were trying to get some kind of an industry and we enticed the federal government to institute the first pulp mills in Alaska.

Maybe a little bit of history of what happened to us and where we might go in the future. What is available to us, I think, would be nice for the committee.

As many of you know, or some of you know, there were three pulp mills designated in the State of Alaska. The reason for that was that we did not want to sell our timber to the State of Washington, thus taking all of our economics out of the State. The federal government authorized in Ketchikan, Sitka and Juneau for pulp mills and utilized pulp mills. Probably southeastern Alaska has the biggest single group of that species of timber, which is hemlock and spruce, now utilized for pulp and timber, some of the best Peter logs that we have which commands $600 a thousand on the market, coming into Alaska and utilizing that timber.

Quite large area that was blocked out under the D-2, the A-2, and anti-growth type things is going to focus attention on to interior along the rivers the type of timber that we haven't utilized before.

The interior, including the Yukon, the Kuskokwim, the Tonga, have the largest timber in Alaska. John Golia, who is the Forest Service man for the interior timber - and I had the pleasure of working for him for about four years - in his studies in catalogueing all of the resource, renewable resource of timber in the interior, it might be surprising to some of you to know that the interior could produce on a total sustained yield basis, totally, on a 50-40 year cycle, pulp mills the same size that's in Sitka. Ten

of them.

Now, this is inventory information from the Forest Service itself. And it's a total fact that these things could happen. I'm not saying that we're going to have ten pulp mills in the interior of Alaska. But we're utilizing in the pulp industry much of the timber that we call scrap. And around the corner somewhere we're going to have to realize that we can utilize those things upon a total sustained yield basis. I think during my tenure in the legislature and serving on the resources committee, we went into lots of opposition about the timber in southeastern Alaska and the clear cutting and things like that. It's pertinent that you should understand that ten years ago, where the people logged, the growth is so thick that you can't walk through it.

So, the reproduction, the reproduction in southeastern Alaska and the logging places where they log is utterly fantastic. I logged on below the Mendenhall Glacier 30 years ago. The trees now in the area where we logged now are in that area, and could be logged again.

I'd like to make one small point of a committee -- a lecture we heard this morning about the camp that took care of youngsters that were problems.

I was a cook in a CC camp that worked in Oregon in rehabilitation, pine forests in the "Ochico" and the "Mado"

National Forests.

I relate the two things that we might do in Alaska is to take the type of CC that we instituted a couple three or four years ago in the legislature, and utilize those youngsters in a CC camp type thing that would thin out the forest that we have the regrowth in Alaska today.

It's really a pertinent thing now, much more, because timber is one of the renewable resources that we're going to take the nonrenewable resources money and important it into that. That would be one of the categories for the future.

I probably have said enough.

MR. REAVES: Are you saying that the primary handicap or opposition to the timber industry within the State of Alaska comes from environmentalists and conservation groups? If so, say it.

MR. SWANSON: The withdrawals of areas, the withdrawals of areas in southeastern Alaska is utterly fantastic, the amount of waste in our timber industry that it's causing. I can walk you through the timber and show you logs that are six feet through that have fallen over that are solid, and they're worth $600 a thousand on the market and they've already fallen over. So selective logging, you could log anywhere and not hurt that forest. You could not hurt that

industry.

But what we do when we just close off mammoth blocks, we're wasting it. And I hope that I've answered your question.

MR. REAVES: What do you think we can do to circumvent this problem? What action can we take?

MR. SWANSON: I think that the legislature did spearhead an effort to utilize every bit of timber that we have and not take it all. I don't mean just wipe it up, because you open a real category. But if you selective cut right the timber that's available to you, there's millions and millions and millions of trees and timber that's usable and not waste your forest.

MS. STRASSBURG: Mr. Swanson, isn't this tied in with the way that they -- in the State of Washington, Cedar Creek and Capitol Peak Forestry Camps are adjudicated delinquents and children who are on probation. These children are from 13 to 21 years old.

They work in forestry camps of the Black Hills. This is their program similar to our wilderness thing we saw this morning. And along with that, you have Port Gamble and many of these other places on the coast where they've done selective logging, from my own experience, since I used to be involved in this sort of thing, they've got selective logging for 50 years. They say now in the State

of Washington, man environmentalists say, "My God, don't clear cut." The clear cutter, you clean up the piece of ground, you take everything. And the next year you burn it and get rid of the trash and get rid of the disease. The third year you use your boys or your girls or whatever, replant and replant trees that are a foot high so the deer don't kill them before they get a chance to grow. Isn't that similar?

MR. SWANSON: I related that program to the presentation this morning of utilizing a category of our human resources to a real good thing. Because the point was made excellent by the lady this morning that you take a youngster that's in trouble and as you get him away from his city environment or his town environment and put him in the forest, or put him out in the country, he has a chance to lose all that thing that got him in trouble. He has a chance to compensate, think, before he goes back in society.

And I think that our legislature would be remiss if they didn't focus their attention on putting those youngsters in that kind of a thing and specifically in our forest where we can use them.

MS. STRASSBURG: But Mr. Swanson, also what you're saying is this child, then, when he goes out to that forest and actually accomplishes something, this then is a pride thing. It's thought he's out there just to have a good time

and just to sing with the birds. He's out there to accomplish something.

MR. HANSON: Yes. Thank you, Jack. I didn't mean to take that much time.

THE MODERATOR: no. Thank you. I think Eric has been trying to capsulize perhaps a couple of recommendations to see what you think of it.

MR. ECKHOLM: Two recommendations: The first one was the State encourage selective logging, not clear cutting, on all State lands where it's commercially feasible and consistent with other land use, but on all State lands where it's commercially feasible.

And the second one was the State establish a youth conservation corps to put young people to work in forestry management. I don't think that's quite right. To put young people to work.

MR. POMEROY: How much is it going to cost?

MS. STRASSBURG: It will pay for itself.

MR. HANSON: The State already has a program now. So it would be just shifting the body from one area of results to another.

MS. SCHIRMER: I'd like to put in a word for removing that clear cutting word in there. I think there are times when it's appropriate.

MR. ECKHOLM: I didn't know how, but Red was saying

that -- he said selected logging, not clear cutting.

MR. SWANSON: yes, I did. Two types of logging. I tried to make the point that where we clear cut years ago, it's coming up solid in almost that level, or whatever level.

MS. SCHIRMER: There are some places where it's appropriate.

MR. ECKHOLM: Yeah.

MR. SWANSON: But both methods should be used.

MR. HARTLE: I'd like to express the thought that I think that it's too broad to say all State land where it's commercially feasible. I find that too broad to be acceptable. I could say more State land than we're now doing, something like that. But to say all State land where it's commercially feasible, that's unacceptably broad to me.

MR. ECKHOLM: We've got Keith Stump here, he's got some experience in the timber industry.

MR. STUMP: Despite my name, I was for five years public information director for the Alaska Loggers Association. And I am a born and raised Ketchikan resident. I don't know exactly what it is that you want for me, if you want to ask me direct questions, or if you want me to respond to your recommendation as it's stated now or whatever. I'd be glad to do whatever.

MR. POMEROY: What aren't we doing that would better

utilize our timber?

MR. STUMP: Well, the major problem is of course the ownership of the land, right now. In southeast Alaska, 88 percent of the timber comes from -- well, statewide, 88 percent of the timber comes from federal lands and is regulated by the U.S. Forest Service. So what the State can and can't do is very substantially affected or limited by that constraint.

MR. POMEROY: As to what the State can do in its acreage over which it has authority, what are we doing poorly, or what's the timber industry doing poorly that we could do better that the public could do something about?

MR. STUMP: Well, I think that the State program is developing along some very good lines and some very good directions with the State Forest Practices Act. I think that, in action, we have, for example, in the Haines area, where some -- the process of revitalizing the Haines timber industry, specifically John Schnabel's mill, is being severely hampered by delays, legal action or threatened legal action by groups opposed to timber harvesting.

I don't know exactly how deep you want to get into that specific thing. But there is a problem there because of the fact in this particular instance that you have a mill that is -- well, since 1973, was facing real

problems in obtaining timber. And as such they began going to the State legislature, to State agencies to get some action so that they would have that resource, some resource made available so they can continue to run their mill.

Well, it dragged on and on and they shut down the mill for two years, another mill that was in Haines. Alaska Forest Products, I believe, AFP, shut down not only from a lack of timber, because it's not quite that simple, it's also a matter of timber at a price that they could afford. So that mill stopped its operations and sold all of its equipment and moved out. Schnabel was down for over two years, and you had a very severe depression within the Haines area.

That's a specific situation. It does exist to some degree in other areas throughout the State, but, for the most part, I would not say that that characterizes the entire State situation; okay?

I don't know if I can give you a really direct answer as to what the State could do, except to try to facilitate the timber sale process to facil'tate the permitting processes that are required for putting together timber sales.

And I think, for one thing, to avoid the kind of statement that you have in this first recommendation, or this one recommendation referring to clear cutting, because

I don't think that that is going to solve any problems, I could get into that particular issue, too.

MR. REAVES: Do you think the sale of timber is somewhat restricted by the environmental controls placed upon the pulp mills?

MR. STUMP: I'm sorry. Would you try to explain that just a little, and reword that a bit, because I was confused.

MR. REAVES: Well, if the pulp mills are overly restricted in the types of commissions that they can allow and so forth, I would suspect that the guy out there cutting timber wouldn't be able to sell it to the mill if the mill has to close down because it's too costly to make those changes, whatever they may be.

MR. STUMP: Again you're dealing with the federal government, for the most part there. For example, in Ketchikan, the Louisiana Pacific Corporation originally had an acceptable pollution discharge program that was acceptable to the State and was originally in the process of being accepted by the federal government as a result. But it's when the federal government changed their regulations to nationwide limitations that you ran into the problem in that particular instance.

And as such you've had some real questions of whether or not that mill is going to continue with their

operations.

MR. ECKHOLM: We had a point from Red that I think what red was saying is we have existing State timber programs where they allow clear cutting and they allow utilization, but then other programs take chunks of land and rope it off. He says besides existing programs to allow those to go on, but in all lands that we can go in and selective log, and it would be consistent with environmental use and we could use the forest even more than we are and still protect the environment.

MR. STUMP: I think you have run into some real dangers in trying to put into a policy statement something selective as opposed to clear cut or patch cut logging. Because those are biological issues. To try to make broad-based statements dealing with it, you have some real dangers.

For example, in Southeast Alaska, selective logging would not be applicable from an economic reason on hardly any land except a few alluvial flat areas.

Biologically it would be unacceptable from the standpoint of blow-down, which is a major problem in the shallow soil basin, you have had your coastal forest areas, from the standpoint of disease infestation. You have a large amount of -- I can't remember.

MS. SCHIRMER: Mistletoe.

MR. STUMP: Mistletoe. The problem is that if you don't get rid of all of the trees with that, that it will spread into the new trees coming up and will continue and increase that infestation thwarting the growth.

So when you get into making recommendations that deal with, really, what should be on the ground forester technically determined decision, I think you're getting off base.

MR. SWANSON: I tried to make the point, when I said we had two different categories there are some areas we could selective log, some areas we could clear cut. Just like you said, there are some side hills that you can't selective log. You can't get a machine up and down. But you don't try to do them both in one spot. Whatever its terrain adapts itself to, that's what you want to do. Utilization is what I'm talking about.

MR. STUMP: Okay. I see what you're saying there, and yes, you should always try to obtain the kind of logical, biological and economically rational plan for the area.

For example, in the interior forests, the closest process, the closest harvesting process to the natural biological life cycle is clear cutting. It very similarly or approximates, really, the natural fire basis for ending of a forest cycle and beginning a new one.

MR. HARTLE: I'm afraid that we're getting too

specific with this and we can talk all day about clear cutting versus other kinds. And something we would be able to support is a recommendation that simply states that we recommend improving our utilization or increasing our utilization of the state's timber resources through appropriate methods depending on biological and ecological considerations. Does that make sense to the group?

MS. SCHIRMER: Yes. I think you put it very well.

MR. ECKHOLM: Could you go over that again, John?

MR. HARTLE: That we recommend that it be a policy of the State of Alaska to increase our utilization of timber resources with appropriate ecologically and biologically considered techniques. Does that cover everybody's concern?

MR. POMEROY: Well, that's consistent, Mr. Chairman, with development of resource, of a renewable resource. That's consistent our whole idea, I think implicit in what we're doing is to develop means of supporting Alaska that isn't just oil.

MR. ECKHOLM: Let's vote on it. The recommendation is that the State increase utilization of the timber resources with appropriate ecological and biological techniques wherever possible

MR. MORGAN: I'd like to change that to say biological and culturally acceptable. Biologically, you cover ecological.

MR. POMEROY: I don't know what that means.

MR. MORGAN: Culturally acceptable?

MR. MERDES: I think the language he has is good.

MR. POMEROY: I like it the way it was, and would so move.

MR. REAVES: Second.

MR. HARTLE: I would make an addition of the word cultural, culturally can he acceptable. It's going to make it hard to pass the recommendation, though, if that happens.

MR. ECKHOLM: It would be --

MR. MORGAN: I'll withdraw the word from it.

MR. STUMP: I'm against in your group, but I think economically would be a consideration involved, too. It is by nature whenever it happens. But I think --

MR. ECKHOLM: That goes without saying.

MR. MERDES: You better say it.

MR. ECKHOLM: Utilization of -- where do you want to --

MR. MERDES: Just put it in after biological, economic.

MR. ECKHOLM: Okay. Economical techniques.

MR. POMEROY: Is cultural in?

MR. MERDES: No. He left it out. Why don't you read it.

MR. ECKHOLM: Okay. That the State increase utilization of timber resources with appropriate ecological, biological and economic --

MR. MERDES: Considerations.

MR. ECKHOLM: -- considerations. Is anyone opposed to the motion? Passed.

The second recommendation. The State establish a youth conservation corps to put young people to work maintaining forests and parks.

MS. SHROYER: I have a question. Both of the youth conservation corps, are they both federally run, or isn't one of them already State one. Because we have the ACC and the YCC.

MS. SCHIRMER: They're both federal.

MR. MERDES: There's people that aren't youths that would probably want to go into the forest, too.

MR. ECKHOLM: You're right. Sorry.

MS. SCHIRMER: How about just a conservation corps?

MR. ECKHOLM: All right. The recommendation is that the State establishing a conservation corps to put people to work maintaining State forests and parks.

MS. PORTER: It is already -- the State already does that.

MR. ECKHOLM: It's a federal program, according to Claus.

MS. PORTER: The State in State parks. The State hires gobs of people every year to clean up all summer, to clean up to do this, to pile wood.

MR. ECKHOLM: I threw in parks. Red was talking about thinning forests.

MR. MERDES: I think Red is right. It applies to parks. But he's expanding that. The State owns millions of acres of forest land that's not a park.

MS. PORTER: I don't know. That really should fall into the industry. Industry is going to do the harvesting, unless the State is going to get into timber industry.

MR. ECKHOLM: The State may not be commercially feasible unless it grows right. Thinning would encourage it to grow right so at sometime it will be commercially harvestable.

MR. STUMP: The reason the industry doesn't do that is they don't own the land. They don't have the right to do that. I think you're going to find it very hard put for a corporation to say we're going to spend so much amount of dollars that we don't know and we may not be able to harvest, come the appropriate time.

MS. SCHIRMER: The forest service found it appropriate to do on the federal land. And I think it's appropriate to consider on the State land.

MS. PILLIFANT: How about the small sawmills? I heard that the State has these large timbers sales which doesn't put the timber within the grasp of the small businesses.

MR. ECKHOLM: Could we finish this recommendation

first, before we go on to that?

MS. PILLIFANT: Can't they clear the land?

MR. ECKHOLM: I think the point is thinning is something you do before the land is commercially feasible. So if I were a sawmill and I didn't own the land, I wouldn't thin it, because it's not going to be harvestable for 10 or 15 years. If the State did it, maybe you would produce a better product so you would end up owning more --

MR. MOORE: We're talking about two things. Southeastern is established, has a couple of mills. We're talking about interior, where the industry is native. There are a bunch of sawmills that have existed for a great many years, and the last couple of years have many, many sales or permits granted by the State for the harvest of fire wood. So there's fairly intense utilization in the various communities in the interior area, immediate vicinity. There has been for a long time various sales that have taken care adequately, I think, of the small sawmills. Fairbanks has three or four.

MR. ECKHOLM: Schnabel's essentially is a small operation.

MR. POMEROY: Mr. Chairman, the State has a policy to do what is questioned down here. They are making small sales.

MR. ECKHOLM: Is there any other discussion on the

conservation?

MR. MERDES: Read the motion.

MR. ECKHOLM: The State establish a conservation corps to put people to work in forests and parks. And I had especially thinning --

MR. SWANSON: In my talk, I was trying to relate that to that special group of youngsters. And I think that probably you could add that to your recommendation.

MS. PORTER: Eric, if I may, I think that program is just totally different. The wilderness- or adventure-based education, it's a totally different thing than just putting people to work. If they just needed to work, they could work anyway. But there is a life-saving kind of thing it's a responsibility. It's a whole educational thing, not where you're just sending them out to pick up sticks in a forest.

MR. ECKHOLM: I don't think anyone would deny working 18 hours a day is not a good experience for a kid.

MS. PORTER: But it's not adventure-based education.

MR. ECKHOLM: But it's not adventure-based education. Is there any disagreement with the motion? Let's move on. Are there any other recommendations?

MR. HARTLE: Yes. I have another recommendation. It relates to an interior timber need that, as Claus Naske mentioned, personal use of fire wood. I happen to know that North Star Burough, they issue wood cutting permits for

people who need firewood. And two years ago they issued 400 permits, last year being 750, this past summer, 3200 permits.

So, in three summers it multiplied by a factor of eight.

So I think that indicates a tremendous demand for such things and I believe that the resource is there for people to use it and that people are going to continue to want to do so with these other considerations we've talked about earlier. And I would put it in the form of a recommendation simply that provision be made to meet this demand.

MS. SHROYER: Excuse me. The State already has a program for personal firewood use and cutting on State lands.

MR. ECKHOLM: I'd like to back you up on that, John, because I live in Juneau, and it's not State land, it's federal land. But just the land they allow you to go in and thin out, it isn't enough because of the people getting into using wood again. I'd like to see the State put in roads, logging roads, into areas around cities that have timber available for personal use so that we increase the accessibility of the people to get to the woods and not just put in logging woods for people who want to commercially harvest it.

MR. HARTLE: The recommendation should be, then, to increase the provisions being made. Frieda is right. There is provision, but I heat with wood in Fairbanks, and you have to drive now many miles to get it. And that consumes a lot of my time and energy and gasoline energy and so forth. And I think that there are State lands -- I'm not positive of this, and I'm sure it's not true in every area, but in some areas, there are State lands that can be used for that not now being used for this. And if there's a priority -- that's all.

MS. SHROYER: I have a small problem with that recommendation in that the public use of wood for that is that private citizens don't know how to cut logs and they leave stumps two, three feet high that are no. only dangerous for other people to go in, but also dangerous for animals that go into the woods. And they don't allow for forest regrowth. and I think that if we had a program for public use that it would have to be regulated in order to protect our forests.

MR. HARTLE: That can be in the provisions to be made.

MR. ECKHOLM: That's right. Regulations could be enforced.

MR. HARTLE: Regulation of it, education on it, help with it, a forester or a logger in town where you could easily get help.

MR. NASKE: I think again you're talking about in Fairbanks, North Star Borough is one example. You have borough lands and you have State lands. The State has a full program of giving permits and regulating the cutting and telling you where to go and so forth.

I don't know about the North Star Borough because the land transfers have just begun in that category. I don't even know whether or not they have classified their lands as to different uses. But the State does have a program.

MR. PETERSON: I was just going to mention, Claus was mentioning there was specific instructions on how to do your cutting under the State program. So they're fairly detailed on how to do it. I would I guess question the hazards ...at this recommendation would present.

MR. ECKHOLM: The recommendation is the State increase utilization of State timber for personal use.

MR. POMEROY: With no limitations? I have some problem with this. I don't know what the limitations are on the qualifications. Can a person go out and cut down a tree only four inches in diameter and it's going to grow to 18?

MR. ECKHOLM: The way they have it now is just dead fall. I don't think we ought to limit that to ourselves here. I know in Anchorage they cut off area of the airport and says, okay, here's a permit, you get a tree.

MR. POMEROY: I understand that. I think you've answered my question. You will have timber that should grow; going to be commercial value and worth more, and you got -- but if it is, if they have it in hand as to dead falls and limitations, that's excellent.

MR. HARTLE: Also, for instance, when a road site is cleared, I know that too often it gets put into a burn pile and burned when it could be hauled away, people would volunteer to haul it away.

MS. STRASSBURG: This is something being addressed by the entire State, along the State and highways being built. Ones who lived in Anchorage will remember a couple of years ago when they widened some of the road. There were public advertisements in the newspaper saying you may come to such and such an area on such and such a day using the stuff that was cut.

MS. SHROYER: I've seen those advertisements all over the State, so I think that's taken care of already.

MR. NASKE: I think the recommendation is superfluous.

MR. ECKHOLM: That it's already being done?

MR. ECKHOLM: It's not being done enough in Juneau.

MS. SHROYER: Maybe there's something to take up with your city.

MR. ECKHOLM: I'd say including access roads into new areas.

MS. SHROYER: I have a real problem with general public access, especially with roads and things. Because you cannot have somebody sitting at the road making sure that everybody who goes in there knows how to cut these trees.

MR. ECKHOLM: We have regulations already.

MS. SHROYER: If you put in public access roads for the purpose of cutting the wood, you have to have some way to regulate it. And I just see too much leeway for everybody who wants it is to use those roads and getting the trees they want to and not knowing how to cut them down.

MR. PETERSON: I move that we read the recommendation and make a vote on it.

MR. ECKHOLM: I added this including building access roads because that's my personal bend. Is that okay with the group?

The state increase utilization of State timber for personal use, including building access roads.

MS. STRASSBURG: The access roads would also open it up for getting down to the river so you can fish and you don't have 1500 fishermen all in an acre on the Russian River. This is one of the things.

MR. ECKHOLM: All those in favor of the motion say aye.

Anybody opposed?

MR. POMEROY: Yes. Opposed.

MR. ECKHOLM: Let's take a vote. All those in favor raise your hands.

All those opposed.

Nine to six is what I've got here.

DELEGATE: It's seven.

MR. ECKHOLM: Nine to seven?

MR. STUMP: I don't know how relevant it is, and I am a guest, but it cost approximately $150,000 per mile of road in Southeast Alaska. It's very, very expensive.

MR. POMEROY: Mr. Chairman, the reason I voted against it is that reason and because of erosion, all kinds of things that is a sweeping thing like that -- excuse me. The vote has been taken.

MR. HARTLE: Can we back up and cancel the roads out of that. I would go for that. If that would help people.

MS. SHROYER: I would support the amendment without roads.

MR. POMEROY: I would support it without the roads.

MR. ECKHOLM: The motion is the State increase utilization of State timber for personal use. All those in favor of the motion say aye.

Opposed.

MS. SIMONDS: Get a workhorse.

MS. SHROYER: Mr. Chairman, I would like to make another recommendation. I believe that this recommendation

may also fall under some that we made yesterday as far as making money available on small business.

But talking to John Schnabel before, he mentioned that a need for kiln-dried timber for local construction use and that all of our timber goes to the states to get processed for use in construction and then comes back to Alaska and therefore our construction costs are a lot higher. I'd like to see the timber made available at such a price so that production and kiln-dried timber would be available for local construction use. I don't know if we can fit it into timber or go back to the --

MR. ECKHOLM: What's the argument?

MS. SHROYER: I'd like to see the timber available at a better price to our local mills so that we can afford to expand them.

MR. ECKHOLM: Why can't they afford to expand them now?

MR. NASKE: It's subsidizing the timber industry.

MS. STRASSBURG: One of the problems is we don't have education to the consumer builder, because he doesn't realize the cotton and birch, properly processed, is as good as Washington fir, that is 99 percent hemlock. This is one of the problems. We have not educated our builder in Alaska to the value of our own local timbers.

MR. ECKHOLM: Doesn't it seem like an enterprising young businessman could go out and do that?

MS. STRASSBURG: Probably.

MR. ECKHOLM: If you build a better product, you're going to sell it, right?

MS. STRASSBURG: Right.

MR. POMEROY: I see the concern there, but I don't see how it's management. The timber, it comes up, it's wet. We don't give kiln-tried timber.

MR. ECKHOLM: We could maybe encourage the State to come up with research.

MS. STRASSBURG: I would like to recommend that this State encourage research into the use.

MS. SHROYER: I was offering it into discussion, because I don't know how to write it either.

MR. NASKE: Fooling around with stumpage price, all you're doing here, taking it out of Peter's pocket to pay Paul. And, really, it's subsidizing.

MS. STRASSBURG: Will not need a lower stumpage price for their timber.

THE MODERATOR: I sense we're getting about ready for a break here. Keith wanted to make a recommendation of his own?

MR. STUMP: Actually, I don't want to make a recommendation, but perhaps out of what I'd like to say, a concern within the general field of timber harvesting and perhaps you'd like to make a recommendation based on that.

A major concern of all of us is the effect of the timber harvesting activities on other resources, on the fisheries, and on wildlife habitat. There's a tremendous amount of emotionalized media-hyped information that is based on insufficient amount of research, is based on qualitative studies that do not have a way of providing the necessary information to make sound political decisions. Because it is eventually political when you get down to government regulation of timber harvesting practices.

There's been a tremendous amount of opinion and quantitative research saying the negative effect of timber harvesting on fisheries, on fish runs. There's been very little, if any, qualitative research, research that deals with what has been the experience, how much effect actually has there been on salmon production in areas that have been logged, in comparison of areas that have not been.

I think that in the interests of not just the timber industry, but fisheries and of habitat, that the State direct more towards relevant research that deals with quantitative impacts as opposed to quantitative, that really do not seem to provide a sufficient research base, at least in my mind it doesn't. There are other people who say that it does. I grant you that.

But I think that if you were to have that you would really, you can do a couple things. One, you would

decrease the furor of timber harvesting, which has an extremely visible impact on resource, and is accused in some instances of having more than just a physical impact. At the same time you would be developing forest practices braced on something that is more well substantiated and more comfort related. Okay, if there is a possibility of a negative effect from timber harvesting, how much of an effect, and is it worthwhile to say make stream borders, leave strips when you're losing a substantial amount of some of your prime growing timber habitat.

MR. POMEROY: Don't impact statements come into this somewhere?

MR. STUMP: They don't have the research, really; what I'm getting at, to really make good decisions on that, I just don't think.

MR. ECKHOLM: How long would it take to do such a report?

MR. STUMP: Oh, you're your talking about a pretty substantial undertaking, really, and it's not a short-term deal, in order to come up with the kind of information necessary. And, unfortunately, that has always been the kind of process of delaying that kind of research until sometime when we could do it. And then you end up getting down in increased polarization.

MR. ECKHOLM: They have two recommendations. Then we

will discussit. The first is the State research developing full utilization of State timber into finished timber products.

MS. SHROYER: That would encompass what I said as well.

MR. ECKHOLM: Yes. Is there any questions or disagreements about the recommendation?

MR. HARTLE: Will you say it again, please?

MR. ECKHOLM: State research developing utilization of State timber into finished timber products.

THE MODERATOR: Research utilization, I think you mean.

MR. ECKHOLM: Research utilization of timber into finished timber products.

MR. HARTLE: Is that the correct wording?

MR. POMEROY: What do we know about what's available already? I have in my own files documents going back to 1947 on the utilization.

MR. ECKHOLM: Well, I think we're talking about what you were saying, people aren't using the wood that we have that's available because they don't know how to process it. And we're not saying the State would get into the business and do it, but just say here's how you do it.

MS. STRASSBURG: The whole thing is they don't realize what we have here, they look out and say, gee that's a little bitty birch tree. That isn't it as big as the alder that I saw in Washington State. They don't realize that the

birch is equally as good a lumber if it's processed properly as what you get out from the out-of-state areas that do scrap mill.

MS. SCHIRMER: Isn't it about time we switch to another one?

MR. PADDOCK: Before we switch to another one, I'd like to add on this subject of utilization of local timbers. This has long been the subject dear to the hearts of the Forest Service people and the Juneau people, especially the utilization of local timbers for unique uses, such as finishing the interiors of bathrooms. This group formed a society down there which was known as the Birch John Society.

MR. ECKHOLM: The recommendation is that the State research utilization of State timber into finished timber products. Is there any opposition to the recommendation? It's adopted.

The State produce a quantitative report of the real effects of timber harvesting on other resources; the recommendation of Mr. Stump.

MS. SHROYER: Hasn't there already been studies on that?

MR. NASKE: There have been studies on everything. Only historians know where they are.

MR. ECKHOLM: And Claus has got half of them.

Does anybody want to make that recommendation? He suggested it.

MS. STRASSBURG: I think it's important. Because many, many times, as he says, the media scares the general public into thinking if you take the trees from this creek, all the salmon is going to disappear, and it isn't always true. The same thing with my statement a little while ago, and I think it was misunderstood. Clear cutting, as I mentioned it, is not always wrong, although the media and I'm not criticizing any particular organization, many conservation organizations have come out rabidly against clear cutting in any case. Now, that isn't true.

By the same token, it isn't always a bad thought to cut the trees up close to the stream. And this is something that we need to know?

MR. HARTLE: I would agree with that. I want to be careful that we don't say what the research is going to show before we start it.

MR. SWANSON: May I add something here that might be helpful. You got to realize that we're in the fourth year now of the limited entry. Now, our fisheries are going down and down and down and down. And they were blaming on to the logger that he done this terrible thing and he ruined all the fish streams. He was fishing out here in a mountain with a creek. We were a limited entry that has taken the

away 200 miles from our shores. We're having the fish come back now in fantastic amounts. If we could, if we are not national enough to keep the foreigners out of here for another two years, then we would have the full.

MR. ECKHOLM: Red, I hate to cut you off, but I'm going to do it. Could we vote on the recommendation?

MR. POMEROY: I have the impression that there is a substantial amount of first-quality attention being given to this subject. For this reason, I vote against it.

MR. ECKHOLM: The recommendation is to produce a quantitative report on the real effects of timber harvests on other other resources. Is there any opposition to the recommendation?

MR. POMEROY: Yes.

THE MODERATOR: Yes. I think it's superfluous. I think Harold is right.

MR. ECKHOLM: Doesn't this guy work in the timber industry that recommended it?

MR. MERDES: Let's vote on it.

MR. ECKHOLM: All those in favor raise their hands. All those opposed. Passes.

Let's take a break. When we come back we'll deal with agriculture. We went way to too long with this. We're going to have to be a little briefer next time.

(A recess was taken.)

MR. ECKHOLM: I think it's time we started rolling again. We should start again, I think.

We have a number of things, as you know, to keep going on. We have one of the white paper authors with us in the back, John Martin, who wrote the paper about Japanese marketing. He had some specific recommendations in that paper, and -- we've told him to limit his comments to just three or four minutes if he couldn't and be very specific about what his recommendations were. And get those on the table and then we can go on and discuss other aspects of fisheries.

John.

MR. MARTIN: As I mention in paper, I don't know how many of you had a chance to look at it, but I've had some experience writing about selling fish, as well as selling fish. And I've looking at export in Alaska for the last 15 years to Japan. It's obvious that we sell the predominant portion of our product to the Japanese. In some cases because they're the only ones that buy certain products, in other cases because they provide the most favorable price, they've been paying higher prices that buyers in the us U.S. and Europe have. In my estimation, and I'm by no means the last word on this, we've become overdependent on the market, whereas the market has become relative soft, and the processors were not able to earn any margin at all on

principally the frozen salmon they process. So we're left holding a huge volume of product and the same thing is carried over into King crab with very few alternative markets, currently developed markets in which to sell this product.

One possible solution to this problem, as I perceive it being a problem, is obviously to aggressively pursue markets in the United States. There's no reason we should discriminate against Americans, and in Europe, and other areas so we're not so intimately tied to one particular economy. And what's happened this year is what the dislocations in international oil markets, with Japan being entirely dependent on imported oil, the yen versus dollar exchange rate is changed considerably. In approximately 23 percent depreciation, yen versus the dollar.

What that means is our exports are 23 percent more expensive to Japanese. Coupled with their economic slowdown it's a very unattractive export market from the standpoint of the U.S. seafood producer. So in order to develop U.S. markets elsewhere, one approach is to form an association as I suggest in the paper. It's not the only approach, certainly.

If you accept the fact that individual companies may not have the wherewithal to go out and put on a billion

dollars campaign in the U.S., and go over to hustle the West Germans, French, et cetera, principally for our frozen salmon, which is the bulk of the value in this State, talking about salmon steak. To keep it brief here, one of the ideas you might kick around is the validity or the usefulness of association of processors and marketers who would proceed note in a generic sense, not on a brand by brand basis, Alaskan seafood products, crab, salmon, to raise the general level of consumer awareness, the general level of demand so the individual companies will be dividing up a larger pie in the American market, hence being less tied to this one specific market area, Japan.

It's a very briefly encapsulated sketch of what I guess was my principal recommendation. It's certainly not the only situation to what may be a short-term problem, but certainly if you look at the statistics, it's a large percentage of our product that does go to Japan. There's no question but we will always be trading with Japan and we will always mutually benefit from that. But to think we can exclusively trade there.

MR. ECKHOLM: Why limit it to just the high-value fish? I hear that Americans don't eat bottom fish as a rule. Why not develop a campaign so we got a bigger market of those, too?

MR. MARTIN: They've got a big import market from

Iceland, Norway, Denmark.

MR. MERDES: That's the paradox, Japan gets it, then they sell it back to the American market. I think we ought to go into the American market.

MR. ECKHOLM: So it's like your Anita Bryant in Florida selling oranges.

MR. MARTIN: A lot of our industries apply to this, like fisheries, agriculture, fruit, dairies, et cetera, have formed associations specifically addressed to this problem.

MS. SCHIRMER: I wondered, is this information that you gave us, are you making it available to the fish processors?

MR. MARTIN: Oh, certainly. In fact, to be perfectly frank with you, we're trying to organize this association and maybe it was a cheap shot to throw it in my paper here.

MS. SCHIRMER: It seems to me it's an appropriate thing to do. I'm not sure it's an appropriate thing for the State government to do, except that maybe it's appropriate that they might try to facilitate it.

MR. MARTIN: We're looking to the State as a capitalist. Given the State has not been historically famous for cooperating in very great detail. We're hoping that certainly the beneficiaries have to be in favor of it.

MR. ECKHOLM: I think another point -- I'm excited about this one too, because I think next in Bristol Bay

we're going to have -- the processors don't care. The processors are going to pack out as much as they can pack out. They're going to be filled up. So they're going to make up as much money as they possibly could, and do it a lot cheaper than they usually do it. The fisherman are in serious straits in Bristol Bay next year. We're looking at a glut on red salmon in the markets now, looking at a record catch and looking at fishermen watch millions of fish rot.

THE MODERATOR: Excuse me.

MS. SHROYER: I'm sorry. Go ahead.

MS. PORTER: Well, if you read Larry Cotter's paper, he addresses this problem. But our number one problem in the nation and in the world and even with Japan is the bad name, as an example, Bristol Bay salmon has. We have, as with agriculture, no quality control. Now, we're giving them bruised fish, fish that have been left in slime overnight or two or three days or left out in the sun and they're unusable. And of course they're not going to get money for those.

And what we have is just a total lack of quality control. Our people don't know how to handle that.

MR. ECKHOLM: In the King crab we have quality control.

MS. PORTER: In King crab you also have an industry that has done their job advertising. When people think of

king crab, they also think of Alaska King crab because they market it that way. But we cannot market it and stamp with it Alaska, this is King crab, unless it's good, and we'll never get a price out of the nation. We can't sell to a lot of the European nations because we've got a bad product. That's one of the reasons we don't get a lot of money.

I have no objections to not exclusively selling to the Japanese, but I'll tell you, the Japanese have been damned good to us they bought the fish when nobody else wanted them, and particularly in Bristol Bay when you're not going to get them out. In the Kuskokwim, they process them on the ship.

THE MODERATOR: He said he'd like for the State to stimulate a market for our fish. And you're saying we've got to have quality control to market it.

MS. PORTER: I think it's very inappropriate for the State to market our fish or to advertise our fish. I think it is appropriate that an association be formed. It's appropriate for the State through the Fisheries Department to develop some kind of an education program that will teach our fishermen how to handle the fish so that we get a better quality and a better price.

MS. PILLIFANT: Yesterday I said when Jerry McCutchen was talking, there is a committee that is working a quality control on salmon and there is a committee of that

committee that is going to look at the education and they're working right now. And they said exactly what you did. They had hearings day before yesterday all day. So it's going to happen. In other words.

MS. PORTER: It's critically important that it begin almost immediately before the next fishing season because our reputation is getting worse and worse.

MS. PILLIFANT: The report will be written hopefully by the middle of March.

MS. PORTER: As far as the State marketing, I think that's a very bum idea.

MR. ECKHOLM: I don't think what he recommend is the State market it.

MR. HARVEY SAMUELSON: I being a Bristol Bay fisherman, when you send garbage collectors to collect garbage -- that's exactly what they did this last summer. These guys come up there with processors that never bought fish before. An old time fisherman like myself, Dean Paddock, that fellow over there, we got to take it on the chin. We take care of our fish. But it's these garbage collectors that the State has got to watch out for. Where that garbage comes from, fishermen fishing with slightly no market. Last summer they were trying to sell me fish for 25 cents apiece with old, white gills.

I don't know. The State has got to come up with

some sort of program to monitor these fishermen.

MS. SHROYER: I'd like to just add on to that. The reason why we do have the bad reputation in Europe is because the processing plants not only buy our good fish from our Alaskan fishermen, but also from what he called the garbage collectors, the people from Seattle for the most part, who don't use quality control and they buy all of the fish together and they process it all together and so that therefore the good fish is mixed with the bad fish. And I'd just like to reemphasize quality control.

MR. POMEROY:

MR. HARVEY SAMUELSON: The canneries themselves, we used to own Peter Pan. We sold it to Japan last year. We had cases of botulism over in England. Two little tiny cases of botulism. One can that had botulism and affected two couples. People died, unfortunately.

But the only way they kept opening cans, opening cans, and one day they took a can and put a 14-point saw across it and do you mean indicated the can. Finally, they done it on the 1400th can.

And they got records in the canneries, the Cook records that supposed to sterilize these -- retort records is what they call them. All the canneries have them.

So, when the can go market industry, it's been the first known one for a good many, many, many years,

health authorities, the American health authorities determined it happened during shipment. So, as for controlling the fish in the canneries, that's all right.

THE MODERATOR: Do you agree with the proposition that, if Alaska can create a larger market, albeit Japan, Europe, United States, for its fish, that we will become much richer from our fisheries?

MR. HARVEY SAMUELSON: Alaska needs a real good advertising campaign.

THE MODERATOR: You think it's advertising? I mean, is it more than advertising?

MR. HARVEY SAMUELSON: Advertising, along with the industry.

MR. PADDOCK: I think when Harvey says advertising he's talking about development of markets. Now, we've talked about the King crab. I can remember when Wakefield Fisheries were the only people who were advertising Alaskan King crab. They were the first. And gradually others came in and got on the band wagon and along the line they developed the King crab Quality Control Board, which is a State-regulated board.

I think we're in the formative stages of a salmon quality control board, if not a fish quality control board. And this is overdue. And the thing that has brought it about is the trend from canned salmon to fish frozen in the

fresh frozen market, which was almost, to start with, primarily in the Japanese market. For red salmon, it's almost entirely a Japanese market.

MR. HARVEY SAMUELSON: That one can of salmon cost us in excess of $800,000 in legal fees and whatnot. And it isn't over with yet. It's still going on. So that little six and a half can of salmon is going to run probably two million dollars or better.

MS. PILLIFANT: But they're not only talking about the fishermen and quality control and how they handle their salmon. They're talking about vessel quality control also in how it's delivered to the tender and the tender to the processor and that sort of thing.

So I do think that they're formulating a plan and one of the primary things that they will be doing very quickly will be education.

THE MODERATOR: My experience in this has been very limited, that you got the canned salmon, which has got the problem that you just talked about, one in a million cans that have botulism. You've got the crab industry which apparently is a very simple process. I've seen it, at least it seemed simple to me, and they have got quality control. You've got the salmon, which we're known for and it's your garbage dealer, you say, comes from the fisherman until the time it gets to the plant where is the damage done? It's

not in the plant itself?

MR. HARVEY SAMUELSON: It's the people that moved in the last few years. The Japanese paid so much money for fish regardless of what kind of grade it was. The year before, this past year, we had a good run of fish all over Western Alaska and they were buying any type of salmon as long as it had scales on it. And some without scales, too.

MR. ECKHOLM: To give us a framework for our discussion, I would imagine we're probably going to have to spend a fair amount of time on fisheries, but that means it's five after 4:00 right now. We probably should have fisheries finished by the time we have to got out of here at 4:30.

MR. POMEROY: Fisheries and bottom fishing may be our greatest potential, outside of oil and gas. It's so complex and there are so many aspects to it that we could discuss it for three days. A dominant feature, however, is economics. And I think we cannot jump into an idea that covers just one aspect of it. And it gets right into economics, which is we're going to try to develop a market until we have a much better analysis and evaluation of the economics of it so long as fish can be taken to Korea and made into fish sticks and sold cheaper back in the United States and we can sell them, it doesn't make anything -- has nothing to do with how much we advertise. And that's

the problem we're up ag nst.

THE MODERATOR: No. But it's a viable industry. People will make money in that industry. There's no question about it.

MR. POMEROY: It's a viable industry, yes.

THE MODERATOR: It isn't a question where it's being sold, the industry will take care of that.

MR. POMEROY: Maybe.

MR. PADDOCK: There's a great deal of truth in what Mr. Pomeroy says. But the reason they are able to take those fish back to Korea and make fish sticks out of them, or wherever, is that they are presently able to take these fish from within Alaskan waters, within the 200-mile limit and do it legally. Because of the catch 22 situation in the fisheries conservation act of 1976, the 200-mile limit thing, which says that as we move into the fishery, then the foreign fisheries are phased out. The only trouble is, as long as they're in it, they have got the market.

And we need some assistance in moving the foreign effort out of the 200-mile zone. And this has been suggested, amendments everybody suggested to the national congress to accomplish this. We're almost four years into the 200-mile limit now and we still haven't cracked the market for high-volume, low-cost bottle fish, I prefer to use the term white fish. And we may need some help on that.

And I think that this group could strongly endorse some national assistance or assistance at the national level on this.

Now, of course, I hope we get a chance to talk about other ways and means of assisting Alaskans to get into it.

Incidentally, we have a very excellent paper submitted by Dick Whittaker, a former legislator, an attorney of Ketchikan, which is in these supplemental papers, which proposes an Alaskan Fisheries Corporation, which is an amalgamation of fishermen and Alaskan processors with assistance by the State to establish a world-class fishing company, which would encompass marketing.

And I've had a chance to read Dick's remarks very, very quickly, but they are applying to the bottom fishery essentially what John said about the salmon fishery, develop new markets.

And I hope we get a chance to talk about that.

MR. ECKHOLM: Harold?

MR. POMEROY: I am not defeatist. I note, however, we have to some extent a chicken-egg kind of situation. And I could have said better what I said, which is we've got to look at economics very carefully, and we've got to be ready to provide those things which will help the industry itself.

We've already talked about infrastructure. That sort of a thing.

So that we can edge into those areas where we can then push with the product that we think is going to be able to be competitive.

MS. STRASSBURG: I don't think that we're ever going to be competitive selling fish and crab to the American housewife as long as when she goes into the store canned crab amounts to $16 a pound as against $5.89 for the American goal of steak. That's one of the places where we got to start. We got to get it down to a competitive price where the housewife will buy it.

MR. ECKHOLM: I don't think we have any problem selling crab at that price. Otherwise, it will be cheaper.

MS. STRASSBURG: I don't know. There's not many people outside who will buy it.

MR. ECKHOLM: There's not very much crab that goes unsold out of Alaska.

MS. STRASSBURG: That may be true. If we're going to get it into the American market, we've got to get it in the household.

MR. MERDES: I think we ought to summarize this and articulate it into some kind of formula. I think we ought to recommend that we phase out foreign and bottom fisheries within one year and that we endeavor to create a market in

the United States -- in other words, it's chicken or the egg. Somebody has got to cut it off at sometime. And I think we ought to recommend to the legislature that that be implemented by legislation.

MR. ECKHOLM: We're going to have a real difficult time with that. Because we're talking about the feds.

MR. MERDES: I know you're talking about it, but I think you got to have an overt policy by the State, otherwise it's going to go on year after year after year.

MS. PORTER: We've got a very critical economic picture here. We're looking at a multi-billion dollar industry. Both in hering, salmon. One of the problems is we don't have any processors here. We don't have any bottom fish boat. We can't compete on the market. You must understand that if we don't harvest those fish, someone else will. Time is of the essence. If we don't harvest the salmon.

If they don't harvest the herring or the bottom fish, some other country will, or Seattle fishermen will. We are not set up at all, we have no onshore processing, we have no sea processing. Those are the kinds of things we need. This State is simply not geared up to help those people in this State who want to get into that industry. It's going to cost millions and millions of dollars, maybe a billion, maybe more.

But this is a life-long industry for the State.

This is going to produce billions of dollars worth of revenue for the State. Taxes and all of that.

It's just an incredible opportunity, but we're going to blow it and we're going to blow it very soon.

We can ask the legislature to put a year limit on it.

MR. MERDES: A time limit. Not a year. It might be it's five.

MS. PORTER: We're not going to be geared up to do it. The international people won't stand for that. If we don't harvest it within that time, the foreign fishermen will come in on you, or the west coast fishermen.

MR. POMEROY: I don't know how a recommendation should be worded, but I contribute this additional thing: I would be delighted to see our industrial development corporation sell tax exempt bonds if you get away with it, and put up the plants and lease them, then, to the operators to run them; anything that would help in this direction to get us going.

MS. PORTER: That very organization, as Jean Ray was telling us yesterday, that it has a $500,000 limit. We're dealing in toothpicks. We need four-by-six's.

MR. POMEROY: Increase it.

MS. SHROYER: I was just -- a few of the Scandinavian countries have expressed an interest to help

us improve our fisheries all the way through processing from actual catch. I think a recommendation ought to be around accepting that help, accepting their obvious expertise. Their fish products are known throughout the world as being excellent. I think we ought to look at that and accept their help.

MR. POMEROY: Consider engaging their technical assistance?

MS. SHROYER: Yes. They've offered it.

MR. PADDOCK: Mr. Chairman, we're already doing that aggressively. I'm happy to see the response on the part of the legislature last session. We now have a European office in Denmark. This interchange has begun. Anybody that attended the fish Expo in Seattle here a few weeks ago couldn't help but have been impressed by the tremendous participation by these European countries.

These companies' representatives are ready, anxious and willing to help and we're anxious to use them. But everything seems to be in a holding pattern here in Alaska in spite of the fact that we have a program going.

Now, one of these papers - I can't remember who the author was, one of these publicly submitted papers made the statement that all the state's efforts thus far really didn't amount to a hill of beans. Well, that may be overstating it a little bit. Not a hell of a lot, as far as

the State push here. You're aware of the fact that the State hires a consultant, he says it's going to be this way. The feds hire a consultant, he says no, it's not going to be that way. It's going to be catchers processing on the high seas as opposed to land-based development.

And I suspect it may go that way to a larger extent than it would unless Alaska jumps into the gap here.

And I wish that we'd had Mr. Whittaker's paper early and in the book so that all of you could expose yourselves to it, because I'm tremendously impressed with it.

He makes a couple of points here. Foremost on his mind is the problem of outside takeover.

I think we have the same situation here as an old Bristol Bay man told me 25 years ago. He says, as far as the residents of the Bay area are concerned, they didn't care whether it comes from Anchorage or Seattle. In this case, we don't care whether it comes from Seattle or Japan. Very little differentiation. It's not going to benefit Alaska to any extent unless it's an Alaska-based industry in some form, at least. I don't think we're ever going to totally divorce ourselves for a long time from going to Seattle and getting a certain amount of services and supplies until our infrastructure built up.

He also makes a statement here that I think is

worthy of consideration. He says that the prudent budgetary surplus of the State has the potential of destroying Alaska as we now know it.

And he suggests that the opportunity to get into the fisheries would avoid what many of us consider as an undesireable, a largely undersirable feature in the state's development. He goes on and says a little later, it's an act of fate that the fish are available at the same time that Alaskan capital is also available.

Otherwise, we Alaskans would be relegated to watching others, outsiders, foreigners, whatever you wish, harvesting these fish.

This is very true.

MR. ECKHOLM: Hank, very quickly.

OSTROVSKY: My name is Hank Ostrovsky. I'm from Bristol Bay, Naknek, Alaska. I'll be specific about the Bristol Bay problem, and specifically about Naknek Kvichak. The information that I have indicates for four major institutional breakdowns --

MR. ECKHOLM: Hank, could you keep your comments just to recommendations for action?

MR. OSTROVSKY: Yes. First you have to identify the problems, then the recommendations can follow from that.

Now, the four major breakdowns in the institution was in the processing, the transportation, the distribution

and the financing. Two institutional successes. Institutional successes were the fishermen who caught the fish, who had no trouble catching the fish and delivering the fish, and the resource itself that did not fail. Now, the financing of the capital equipment necessary for the process was inadequate. This financing is supplied solely from the Japanese, since the Japanese control 95 percent of the processing and that the markets are actually going into Japan at the control of Japan. So what you're looking at it from the inadequate financing ever processing equipment, which allows the waste to occur because the fish cannot be processed.

For instance, when these have been entered into a record at the Department of Fish and Game, there were 27 and a half million pounds of fish wasted. In a breakdown of these two categories, about two and a half million fish, which represents about 15 million pounds at a value of about 16 and a half million dollars, were dumped by the fisherman because they had no processing facilities.

MR. ECKHOLM: Hank, what would you recommend?

MR. OSTROVSKY: This is what we have to get, institution breakdowns and at that point look how you can finance adequately.

The permanent fund as originally conceived was to create a banking mechanism by which the fishermen or the

production in Alaska could factor their resource into market, say, Hamilton's system back 200 years ago when the United States was looking for a banking system, they put the fate and credit in the United States which wasn't very great then. What they did, put the same resource --

MR. ECKHOLM: Hank, two more minutes.

MR. OSTROVSKY: Yes. -- association, financed by the State of Alaska to assure that her producers can factor the demand for that product into market, whether it be in Japan, whether it be into Europe or whether it be into the United States.

And to have any broker between that exchange actually denegrates the capital gains that are available to Alaska for distribution within our own economic system.

THE MODERATOR: Hank, let me ask you a question. I see Ed Naughton there and Representative Ed Osterback. In this financing, how do you see the role of the State money and the federal money? Who is to play the role in this thing?

MR. NAUGHTON: My name is Ed Naughton. I am from Anchorage.

I think what is really needed is when the State of Alaska takes its package of money, its billion dollars or whatever the amount is and looks for a place to deposit it, if it's City Bank or if its Bank of America, or no matter where it is, Chase Manhattan, that you go into that

bank and you say to the banker, "I have a billion dollars I want to deposit somewhere. If I put it in your bank, what will you do for Alaska?"

Now, until we get the big banks from the east coast involved in the development of Alaska's fisheries, we're really not going to have anything. Because the history of Alaska's fisheries is that we are capital poor. The reason we are capital poor is because the eastern establishment pays no attention to us, beyond the pumping money into First Bank and Ranier Bank in Seattle, those two banks.

So if there's anything that Alaskan money, the State government of Alaska can do, it's to lever capital out of the eastern establishment for investment in Alaska.

But now, you jumped ahead on this whole story by asking what we think about the financing. And I think that there's something that everybody has to look very hard at and in the cold light of day, and that is that the price in the wholesale market for pollack blocks, when you're talking bottom fish, which is what you're talking, the bulk. It is sold in block form. The price for that today is 66 cents per pound.

Now, if you consider that you're going to go into the American market, then you're talking fillet. You're not going to sell anything by the fillet of that fish.

The recovery rate on bottom fish pollack is 18 percent. That means that you have to buy five and a half pounds of raw fish to get one pound of salable product, for which you will get 66 cents. It's going to cost you more than six cents to ship from Alaska to the market. So you're down to 60 cents.

I am in the bottom fish business, incidentally.

If you pay six cents a pound, which we have found will attract American fishermen, but very few of them, so that means that that is a viable price, but just barely so.

So you're going to pay 33 cents to get the raw product. So, you see, you've got 40 cents, certainly, into that pound of product before you've even processed it. That 18 percent recovery is depending upon your having stocks of fish that will yield 18 percent.

MR. ECKHOLM: Ed, could you wrap it up into some recommendations for us?

MR. NAUGHTON: I recommend you look very carefully how you spend any money in the bottom fish industry. And if you are not going to spend any money in the bottom fish industry, leave it the hell alone. Because all the State or any government could do for an industry is to regulate or tax it. And that's certain death.

MR. McGINNIS: Could I ask Ed one more? Do you feel there's no obligation to the State with relation to

creation of new economic markets? Say, in China?

MR. NAUGHTON: That's the very thing that should be done is creating markets.

MR. McGINNIS: I heard you say stay the hell out of it.

MR. NAGHTON: That's why I said look very carefully what you do.

MS. PORTER: Are they known? Ed Ed it's an person company in joint venture with the Corrians.

MS. PORTER: They do a lot of bottom fishing?

MR. NAUGHTON: Yes.

MR. McGINNIS: Mr. Chairman, could I say a quick word. For eight years I sat as one of the four American representatives on the International North Pacific Fisheries Commission. We had many battles, the sea battles, the Japanese questions, all the rest of it. One thing is certain. More than any other individual on that commission as a voice of the wilderness 20 years ago, I demanded they do reserve on bottom fish as well as the exotic species of salmon, halibut and crab. Back then just by wringing an arm we did get a research program. Now we know more than we ever would have known.

I find it inconceivable, to me there cannot be enough ingenuity in the Yankee system and the American system to find ways and means in these vast American markets to make it viable. If we have the quality control

so it's a good product and proper promotion across the world and then assistance to finance the enterprise, that we can find ways to make it one of the glowing success stories of the 1980's, and I hope the State can direct itself in those three areas.

MS. RICHCREEK: One thing I'd like to mention, the girl last night, I don't know her name, in Kodiaks, they had tried to get money to build a cannery and had gone to the legislature and 500,000 was the most they could get. And everybody else turned her away. And I asked her what were they trying for. She said two million.

MS. PORTER: As Ed suggested about the eastern thing, I think that's just a dead loss. A lot of people just going to be getting into the fishing industry aren't going to qualify for an eastern bank loan. Eastern banks know very little what's going on up here, particularly in fishing areas. Geographically, if we're going to help the fishing industry, start bottom fish and encourage herring and better salmon, we're going to have to do it with State bucks.

THE MODERATOR: I think Ed said what Belden Daniels said. A billion dollars in an eastern bank will catch their attention; they will even postpone their lunch. He means that they'll get Seattle's attention and Seattle will come up here, you see. The money will find its way if you've got

enough leverage.

MS. PORTER: That may be fine for other things. They may want to do other investing in Alaska. As far as the fishing is concerned, I think it's too critical an area to leave it up to a haphazard method that the fishermen have to go to the bank, any bank, for the bucks. The bank is going to look at the past record, think it's just starting up, it's not going to work. If the State is serious about having the industry here, then I think we're going to have to finance it initially, through State loans, whatever. But get the processing here. There's no reason that we should be buying Japanese-canned salmon or processed salmon or frozen salmon or anything. We should be doing our own processing, or a majority of it here in the State and shipping it out.

MR. MERDES: I'm confused as to the recommendations. What do the bottom fishing people want?

MS. PORTER: Money.

MR. ECKHOLM: I'd like to ask some of the fishermen, is there really a shortage of capital for viable economic products? Is it really that hard to get money if you've got a --

MR. NAUGHTON: The way you do your factory contracts for your fish. This is the way the whole financing systems, within the fisheries or any product, works. The product is

the value. The contract for that product is now factored. What you need is a production credit financing, is take this contract. And the State, all the State has to do, the State has enough money to actually factor that resource in that type of a banking system, this is with the farmers, how the Farmers Production Credit Association, I think Mr. Roderick knows that pretty well.

We have a tremendous amount of product that's valuable. We have to pick up the product to increase its value. We don't look to the banks, we finance it right from the product itself. That is the value. Because people eat fish, the value is in the fish. They don't eat money. This is just a means of guaranteeing that from each step to here that it's going to insure that these contracts are met. It all comes from your product. And this is what the original concept of the permanent fund was scheduled to do when it was first introduced.

And I think the State should follow through, and the recommendation is to follow through and use that fund through credit.

MR. ECKHOLM: There are a number of ways. How about if we generically just say something like provide every opportunity using State investments to stimulate the growth of the bottom fish industry as the state's number one development priority.

MR. OSTROVSKY: No. It should be production credit and use the marketing and the man from the market will set the whole thing up.

MR. PADDOCK: Mr. Chairman, I hope everyone is aware that two legislative sessions ago the legislature, in very far-sighted move, established the Alaskan Commercial Fishing and Agricultural Bank, which allows a· askan link-up with the production credit associations down south and makes these previously farm-oriented type funds available to Alaskan fisheries and agriculture. Interestingly enough, the boards of that bank met here .n Anchorage this very week. Coming up from Juneau, one of the board members, at least was on the plane with me. This thing is going. The State gave it some seed money. Conveivably, the State could give it some more seed money to get this thing off at a real going start.

I'm not an expert on this subject. We have experts on this subject right over here, Representative Osterback, and I certainly yield to him. Perhaps to get things going, maybe we could go on a recommendation.

MR. OSTERBACK: Representative Alvin Osterback from District 15, Chairman of the National Resource Committee on Fisheries.

That bank, he's talking about the Seatac Bank. That's a bill I introduced a couple years ago. The year

before last, we put two million dollars in it to get the bank started. We got another two million to put in when we started the session. That will be four million dollars. We're getting a leverage of federal dollars in there, about ten to one.

I got another bill drafted up now. If we can get that one passed to put in 60 million dollars in there would give us a loan capacity of over 300 million. It will be somewhere around ten percent interest money.

And that's one of our bigger steps to fisheries.

And everybody talks about the bottom fish. There's no plant going to come in and just go into bottom fish. They're putting a 30 million dollar plant in Cold Bay right now, supposed to be operating by spring. Skinner, I think he's from Anchorage here. I understand they got the money. But they will take salmon and then for the off season they will take cod, gray cod, black cod, halibut. So you're not looking at the low specie. You have to take the good along with the bad. So you get the high price for the King crab and the salmon, and then operate on your bottom fish afterwards. That's the operation that can make it. I've been a fisherman all my life. If we can talk to the governor and the administration to get some more money in that bank, seed money isn't going to do it any good. You put in four million dollars, you have about ten to one,

which will only be a drop in the bucket. We have to get started something like three million dollars. And that's the story of the Seatac.

MR. ECKHOLM: It's time for us to break now and move to the other room. It seems obvious we're not going to have fisheries wrapped up. What's your pleasure as a group? Should we break now and focus down and keep fisheries rolling for a while?

MR. POMEROY: I'm worried about what we can do. I've been wondering. It may be that maybe fish is like our great big, beautiful copper deposits and we've got some fine ones bt they aren't competitive on the market. Tell us now or later, how much can you put a pound of what on the market in Minneapolis for and do you get a bottom line that is in the black?

THE MODERATOR: Okay. We'll take that up at 303 here right away.

(A recess was taken.)

THE MODERATOR: Let's try to see where we are on fisheries. Does anyone want to attempt to see where we are and summarize what we've said?

MS. PALMQUIST: Can't we adopt like just a general policy like Ed Merdes proposed? It was completely not controversial.

THE MODERATOR: Well, I can't recall now exactly what

he said. Was it development-oriented?

MR. NASKE: One of the recommendations we can make is that the State expend all effort to find or promote markets for Alaskan fishery products.

MS. PORTER: I think it has to be much, much stronger than that. I think we're looking at everything we've always feared, no economy, no money to run the State on.

Here we have the answer - and I'm serious - to the problem of no money for the economy. We've got a multi-billion dollar industry that the State could capture. We could just capture and hold on to the fishing, the processing, and the marketing. This is year round, because the bottom and the herring fishing don't just go on in the summer, they go on year round.

And it's just a tremendous economic opportunity for the State.

And so I think we should be very strong in our recommendation.

MR. NASKE: I think what we tend to forget is bottom fishery everywhere, in all the world's oceans, are the most intensively developed. And every nation in this area offers meal and blocks of cod and whatever else they get. And I think it's a matter of finding markets, really. Because of intense competition from every direction.

MS. PORTER: I would say if we are not aggressive

within the next three years, in 20 years from now you'll come to me and say, "Now I understand what you were talking about." The world is going to be protein hungry. The United States may only be interested in fillets today, 20, 30 years from now, bottom fishing, the bottom fish is going to be marketed in the United States.

MR. ECKHOLM: And is to a degree now. I don't think it is a matter of whether or not we should develop the bottom fish resource. The fact is that the bottom fish resource in Alaska have been harvested for years and years, perhaps even overharvested by the foreigners. What Rosie is talking about is if we don't get it, someone else will. Us or Seattle.

MS. PORTER: It is being harvested to the fullest extent.

MR. ECKHOLM: As the Americans.

MS. PORTER: If we don't do it, they will remain in. And we will have lost --

MR. ECKHOLM: No, because as soon as we are able, according to the 200-mile law, they leave.

MS. SCHIRMER: Except if it's the Seattle people, they --

MR. ECKHOLM: Right. In terms of the bottom fish, we've got two ways to develop that. This is a little simplistic. About southeast, it's going to be with smaller

boats. The bulk of the bottom fish things, that can either be caught and processed -- this is the two reports -- caught and processed on big boats and on tractor ships and sent down to Seattle and processed and everything, or that we can help establish the processing facilities onshore and capitalize onshore. And that's the choice we really have to make. And that's what isn't being done now.

MS. PORTER: Seattle isn't equipped to handle the quantity we're talking about. There are simply billions of tons.

MR. ECKHOLM: The factory ships will start from Seattle and they'll cruise up to the Bering Sea and they'll fill up and process and they won't have to land on any Alaskan port. And they will then be Americans catching the fish. So they will push the foreigners out. And the capitalization of the industry, if they put all the money to develop the processors now, what they are starting to do, Petersburg Fisheries is, they've got a factory ship, or if the State doesn't encourage and sponsor onshore processing, that's where I see we have the chance to get into industry. It's really getting those onshore facilities, spending that money so it does become cheaper to do that.

MS. PORTER: It's not just assist, it's been a major assistance factor, not for kind of a little helping hand. It's going to have to be a major effort by the State. And

it's going to have to begin immediately. It's not anything that we can just sit around and talk about for ten years.

MS. SCHIRMER: I think it's got to be worked at very promptly, or it will be lost to the State.

MR. NASKE: So what recommendation do you have?

MS. PORTER: I don't have one formulated.

MR. HARTLE: Could we make just a very general statement that says we recommend that the State make it a high priority and make it make a strong effort to develop the bottom fisheries?

MS. SCHIRMER: In the next three years.

MR. HARTLE: That's very general, but how much more specific do you want to get?

MS. PORTER: I think pretty specific. That not just a recommendation that the State -- what is the name of this?

MR. NASKE: Must devote intensive efforts and capital investment to develop the Alaskan fishery.

MS. PORTER: And expertise into the development of the bottom fish industry and hering industry, which should include extensive long-term low-interest loans to fishermen, processors and marketers.

MR. ECKHOLM: Of course, now, that might be the thing that causes development, the low-interest loans. It might be the industry, if they were told they could go to Cold Bay and that they were guaranteed, say, power, that the

State would provide power at a cheap rate which they wouldn't be able to get offshore, or they were guaranteed space, it might not be the low-interest loan.

MS. PORTER: Facilitate the development of, and make long-term low-interest loans available.

MR. NASKE: We're subsidizing everything.

MS. PORTER: Why not? If it's going to bring us a very high rate of return, why not?

MS. PALMQUIST: But you haven't pointed that out in Alaskan development. If you're just going to put money into fisheries, you aren't restricting it to Alaska.

MS. PORTER: Let's put in Alaskans, then. Alaskan fisherman, processors and marketers.

MS. PILLIFANT: Is there nobody studying this problem at this point in time?

MR. ECKHOLM: They're going crazy.

MS. PILLIFANT: Why are we being so specific? Aren't they presumably going to tell us something eventually?

MR. ECKHOLM: Having decisions don't always come that rapidly out of the administration, even if there're there for a few years.

MS. PILLIFANT: That's not a citizen's committee, then; it's the administration, you're saying?

MR. POMEROY: Mr. Chairman, on this vast recommendation that's made, long-term low-interest loans, I

go back to what Dr. Belden Daniels says. This means that we're committing ourselves to say we'd like see a lot of money go into what in effect is a permanent subsidy.

MS. PORTER: Rather than unemployment -- let's go through the same amount of -- not the same amount of money, but close, in other social services. What we're doing is we're creating tax money, employment, and a permanent long-term lifelong industry for the State.

MR. HARTLE: I think those goals that you just mentioned are tremendous, and we all support them 100 percent. But I think what Mr. Pomeroy is saying and what I thought Belden Daniels was saying was that perhaps long-term low-interest loans are not the most appropriate mechanism to do so.

MS. PORTER: They're not going to get the money any other way. We also have in there to facilitate the industry and make available long-term low-interest loans to fishermen, processors and marketers. But without the bucks, you have nothing. Nobody is going to pour millions of dollars into Alaska fishermen. They'll do it in Seattle.

MR. POMEROY: In effect, though, what we're saying is we've got an industry that isn't a competitive industry. Are we saying that?

MS. SCHIRMER: We're saying maybe it isn't this week, but maybe about four years from now it will be and we don't

get it unless we do something now.

MR. POMEROY: But we're talking about long term and low interest, which is negative return to us, on our money.

THE MODERATOR: She could have just as well have said, of course, I think, guaranteed loan.

MS. PORTER: Guaranteed.

MR. ECKHOLM: I don't think low interest is not necessarily a factor that would not make it.

MR. POMEROY: I'm not a purist by any manner of means and if we can get Uncle Sam to stand still for tax exempt bonds, I'm for that.

MR. HARTLE: Can we say provide financing?

MS. PORTER: We can just say we can assist them and then lose the industry and five, ten years up the road not have the employment, not have the taxes, not have the industry for the State, and it could go to Seattle or be continued to be fished by foreign fishermen and we could continue to buy from them and not have our onshore and sea processors. We could do that. I just hate to see a multi-billion dollar industry go down the tube for want of several hundred million dollars now.

MR. POMEROY: Well, if we can be competitive --

MS. PORTER: With who?

MR. POMEROY: If we can be competitive, then why do we have to do this? I know of a copper deposit which is an

exceedingly fine copper deposit. It isn't competitive on the market now. Should we make them long-term low-interest money available so they can get that out of the ground now?

MS. PORTER: You understand that unless we do it now the fishery will be taken over by other fishermen and our Alaskan fishermen will not have the opportunity. The opportunity will have passed us by. We're not being timely. We've just been dragging our little feet.

And we've been dragging it for a couple of years now. We've run out of time. Seattle and west coast fishermen are already gearing up, they're building their boats, processors. And we're going to lose out on a very important economy for the State. That can replace the oil income that we're also worried about drying up. It may not replace it entirely, but it will mean a lasting employment, jobs, and year-round employment for a lot of the State that don't have year round employment now.

MR. POMEROY: Well, why did that fish company go out of business?

MR.DIRKIN; They put two Mitsubishi people on the board of directors and a large chunk of stock. You have a very poor knowledge of the industry. You have a buck and a buck and a half pound wealth. The one you can subsidize, you can shove the money, you can try anything you want.

You have two things. You have absolute Japanese

control of the processing industry. The last one to bite the dust was New England. And if I'm not mistaken, the assistant general manager of Peter Pan made the statement that we can no longer afford to compete to get against what, the Japanese control of the marketing structure? When you control the marketing structure, then you can talk.

THE MODERATOR: Would you give your name for the recorder.

MR. DIRKIN: My name is John Dirkin. I've been around Alaska for 35 years.

MS. PORTER: That's fine. So we'll just say lie down and die.

MR. DIRKIN: Who is the processors? Look at the Alaska Fisheries Development Corporation, using SK funds. Every one of those are foreign controlled. You've talked and I've listened to this illusion for an hour. You don't have an American-controlled industry. Your main thing you should do, we sat right in that Westwood, Howard Pilot, the National Marine Fishery Service. Alaska Fisheries bought the whole group up here. National Fisheries Institute. Every processor in Alaska was invited.

The Chamber of Commerce, Howard Pollack, they had seven or eight. Do you know how many people came up? They wanted to stimulate American processor industry in Alaska. It was sponsored by the Chamber of Commerce of Alaska, and

the Anchorage Chamber of Commerce I'll tell you who was there. All the bureaucratic structure, Ostrovski, myself, Helen Gilget and the man who sponsored it. Not one processor in Alaska who had Japanese control would attend. You just don't realize the absolute control.

MS. PORTER: I realize.

MR. DIRKIN: Promote American industry. If you don't have control through the foreign processors, they got control of the licensing system now.

MS. PORTER: That's exactly what we're talking about, my friend. We're talking about getting control.

MR. DIRKIN: You have to get American industry up here to wrest this from the Japanese.

MR. McGINNIS: Mr. Chairman, is it your observation, based on your experience of knowledge of it, that the government involvement in the industry, the cooperation between private industry and government, is what has given Japan its standing today?

MR. DIRKIN: No. The main trouble has been the office of the governor in Japan.

MR. McGINNIS: I'm talking about the preeminence ir Japan. Is it not true that Japan strongly subsidizes as a government policy its fishing industry?

MR. DIRKIN: No. The government and the fisheries are just almost one thing.

MR. McGINNIS: That's what I'm talking about. They had help.

MR. DIRKIN: That's in the Japanese fisheries. One center in Hokkaido, which is a co-perative of about 18 million, is trying to rebuild of what Tokyo destroyed. Right now Tokyo is in power. Until the new Kumato government comes in, Hokkaido comes in, and maybe they'll keep their nose out of Alaska.

MS. PORTER: What is your suggestion for the industry?

MR. DIRKIN: The suggestion is sit on your money and put it in the right spot. You have two levels of wealth. Right now, the money fleet. What you're really talking about is man staying in Alaska. Money doesn't stay in Alaska. A little of it gets to Kodiak. As a rule, they hire an American boat that comes over from Europe and gets on the boat, comes back, fly a crew out of Seattle and go back to Europe. That's been going on for 15 years. In the salmon fisheries, you've got 150 people coming from Europe.

In Prince William Sound, you turn around and you got a whole slug of people from Bolivia, Peru, Chile that are up here with licenses. When these fishing seasons are over, they're right back there.

If you will be more interested and concentrate how to keep that money in Alaska. Because when this money stays in Alaska, it's no different than the old Seattle

days. When they got on them airplanes with that jet, that was the last you ever see of them. How to keep your money at home to do the most for Alaska.

THE MODERATOR: Mr. Dirkin, is part of the answer shore-based, financed by Alaskans?

MR. DIRKIN: Mr. Naughten laid it on the line. You talk about bottom fish. He laid it on just as honestly as he could. You have to compete in the world market. What you're really talking about, in a sense, you're right. You're competing in a protein war. Sure, there will be a protein war. It won't make any difference in world conditions in three more years, five more years, if it's an edible protein. Two dollars a pound. But right now, for what you're planning, I use the word an in-depth study of some type.

But do you really want to go into it. And can you get American fishermen to turn around and go out there with the absolute control of the marking system? As an example in salmon, you mentioned salmon about next season of the Gulf of "Andure" and the "Sacalene" stocks, the Japanese next year get 40 percent of what would normally be Russian domestic salmon. They don't export most of it, they eat it themselves. That extra 40 percent is going to be used to drive the Alaska price down.

We already know particularly through "Iscal" and

Kiyuku, that you sign up now, we might be able to give you 75 cents, or get your gear out of the cannery so we can make room for somebody else. You're talking of marketing control.

I'm just trying to convince you, you're going to have to try to reestablish -- I've seen -- I went to D. C. I've worked with the National Federation of Fishermen, and also with the processing industry that turned around and came up here. The one thing about it, Alaska is a no-man's land when you talk about American industry.

If you want to do just like AFIC did, funnel all this money into the foreign processors, find business.

MR. NASKE: In other words, a recommendation might be to encourage the purchase, or reestablish American or Alaskan control of the marketing process.

MS. PORTER: Absolutely.

MR. NASKE: Or some legislation that would stipulate a certain percentage of foreign ownership only, let's say 20 percent and 80 percent American.

MR. DIRKIN: I don't want to take your time. I went to Washington, D.C. with Lester Coin. He's a representative from Oregon. He turned around and he has been trying to promote processing industry down there. He would tell you the same thing as I'm telling you. He had to strip his own bill. The only thing he wanted was 51 percent American

ownership of the seafood processing industry.

Before the pollack decision in 1972 from Stephen Nix American seafood processors were 51 percent American owned. It was a time when Congress was weak, they turn around and, by administrative decision of NOAA, National Oceanographic and Atmospheric Administration, they permitted 100 percent ownership of a processing group and also 80 boats known as the Hansen trust. When that happened, that opened the door for the Japanese and in they come. Ever since that time, Lester Coin has been trying to close the door. He has to strip his own bill, the power structure of the Hansen trust lawyers combined with the Kiyuku lawyers, which is Whitney Hidalgo representing Capitol Hill from Japan, and the main industry of Europe. The seeding of the east coast. Those two, they're effective, they know their job and there's no type of effective protective mechanism that this country can install. The two lawyers are ex-staffers, both in the house and merchant marine fisheries. Seven lawyers. They probably have 25 years around the house and Senate. Combine those two law firms. They're effective. There's the reason there had been no effective government measure.

I'm saying the Japanese and the Europeans join together to prevent American ownership. That's the reason I think you're throwing your money away until you solve that

problem.

MR. ECKHOLM: I've got a few recommendations here. This is a long one to begin with that might hit on Rosie's point. The State must stimulate the rapid development for the bottom fish utilizing all the fish including but not limited to loans for Alaskan fishermen and processors, State bonds for the construction of ports and harbors to develop the bottom fish industry, promoting a marketing industry to developoment other markets for Alaskan seafood products in American and Europe. That would be one recommendation.

Two. Let me read them all. Two, establish strict quality control for all Alaskan seafood products, and, three, have the legislature establish a policy that would restrict foreign ownership and control of Alaskan seafood processing industry.

MS. PORTER: We're also going to have to talk about taxation of foreign and outside vessels working in the area.

And fishing within the 200-mile limit.

I appreciate everything you're saying.

This is a pretty critical thing, I think, for the State of Alaska. And I just -- maybe it's just a character fault of mine, I just cannot believe that with an industry lapping at our doorstep that we will have to lie down and die and give it to foreign interests or other

interests and give it up completely.

MR. DIRKIN: No. There's an answer to it. You need an MUF. You see, you have to -- things have changed in the fisheries. You've got political consideration. In other words, when we say exactly how many fish you've got to have to turn around and to get your return maximum sustainable yield, is what we had existed on in this countr , particularly in Alaska. We got to put something in the stream to get it back four years from now. That's maximum sustainable yield.

Now, since this 200 mile has come in, you call it optimum yield where the first thing comes off the top, so much fish for political consideration; so much fish for local catch; and so much for stock propagation.

The real question that you seek as a problem, it's just this simple. If you ever compare the Canadian 200 mile bill with the American 200-mile bill, the Canadians done it right. They have sovereignty, they come first. When they're satisfied that their fisheries -- it is only four years, they say all the herring is in the Bering Sea. But the National Marine Fishery Service says different.

In the Marketing and News Report, and that's what the majority of the fishing group gets on a daily basis, was a whole history, not only four or five years ago of how they had so vastly depleted the Bering Sea stocks that they

wanted somewhere else in the North American continent to move. They made a deal. If they would give the excess landing rights. So they turn around and open the whole chain to the Japanese in order to keep them off of California. Those are trade-offs. You see trade-offs today. You got Mexican off of Charakoff, you get a Mexican fleet. The next one, you got a Cormex fleet. The falacy is two things.

Decide are we going to build the fisheries. State of Maine, they wanted foreign allocations to turn around to go and rebuild the hering stocks. They lost in court. The main thing is you have to decide what we want in that ocean. And as far as salmon, I'll lay it right smack on the line. All the salmon congregate in the Gulf of Alaska. That's what made the Gulf of Alaska. I'm talking about directly the area south of Kodiak and directly west of Sitka. That's the most profitable area for the Japanese to raid for 20 years, plus the mid-water trawl.

Okay. You have such -- you answer yourself the question: When the Russians come in with all of these hatchery programs, with the Japanese increasing them, with AYK, with these over here, can the Gulf of Alaska -- and that's where the fish grow up -- can the gulf of Alaska support that amount? Those are other questions. But you're talking about the 200-mile deal.

MS. PORTER: I understand the question that has been asked. Still, I just cannot believe that the market -- we're not looking at busting up the market in a couple of years.

MR. DIRKIN: When you're talking about the Japanese government, because the fisheries in Japan are the government, controlling the government. A trading license. We talk about free enterprise. But yet we have never had a good idea of how the Japanese system works

THE MODERATOR: Mr. Dirkin, excuse me. You're saying to us save our money.

MR. DIRKIN: I'm saying save your money because you are a state competing using the State money in the bottom fish when the Japanese already control the market that you're going to try to use.

THE MODERATOR: And then you're saying we can't get that control back because Congress won't let us.

MR. DIRKIN: That's right.

THE MODERATOR: What do we do?

MR. DIRKIN: You turn around and you put the squeeze to Congress to do something.

MR. POMEROY: We got to lick the State Department. State Department is what determines that for the congress.

MR. DIRKIN: You say promote American industry. Yet the way the laws are today, they got a perfect right to sue

you in court. And you're talking about the State of Alaska in competition with the sovereign government of Japan.

THE MODERATOR: We're just trying to say what should the State of Alaska do now with the next ten years with its surplus money in terns of -- or doing something with the fishing industry in Alaska. That's all you're saying.

MR. DIRKIN: Let me lay the Adak story on you. I forgot the stop piece o of Adak, Finger Bay. Finger Bay was an American company and went busted. He turned around and Kiyuku bought of paper off of Bank of America and it was stripped in February. The Navy was ordered to support the bottom fish industry. The Aleutian Pribilof group wanted to go out there and develop the site, since it was strippd of everything. It had the equipment, yet it had the physical facilities.

At the same time, the Aleutian Pribilofs were the only groups down there and the Navy was ordered to turn around and to lay it on the line, what it needs out on the Aleutian chain. It was just this simple. There was two people from the Aleutian Pribilofs and it was 24 State people trying to insure the federal government that they didn't want development at Finger Cove. I'm laying it right smack on the line. That's the story.

How are you going to solve those problems?

THE MODERATOR: Your frustration is 25 years ago that

we in the territory weren't getting our fair share. It's the same way in the oil industry. You're saying we're not getting our fair share.

Rosemary is simply saying we want to get our fair share. You're saying don't spend any of our money until you can solve the international problems. We're back where we were 25 years ago, right?

MR. DIRKIN: I'll go into one other one. We had Admiral North in here, and Gravel and everything else. The day the Law of the Sea was signed, just the day the Law of the Sea is signed, we turn to an international body for resource allocation with the exception if the governing structure. He turns around and allows Alaska a subcontinent status then because of the remote type of self-determination.

MS. PORTER: We have control of our own stock.

MR. DIRKIN: No. You turn over your own stocks only if Alaska is put under a subcontinent status. And there has been not one person out of that whole tribe that's ever worked and to turn around and to put Alaska in a subcontinent status is conjecture of Law of the Sea.

MR. ECKHOLM: Thank you, Mr. Dirkin.

MR. POMEROY: Mr. Chairman, I haven't heard anybody say that if we make money available over a long term that we can even complete on the American market with what's

coming in. And we aren't stopping it coming in.

I'm as scared as he is about it.

We have a competition situation where we get into the international market. That just scares the hell out of you. We're selling gas, and this is pertinent to the economics of it. Gas is being sold on Japan, liquified gas. The ship wasn't built here because American prices are too high. It was built in Norway. The crews aren't American. The crews are flown in from Piza, Italy, to that ship, and they go home again because that's makes the difference between gas and the salty blue sea.

MR. ECKHOLM: Let's start pulling it together here.

MR. HARTLE: This is a very important conflict. In a two and a half day conference, we can't solve the problems of the world right here. We need to try to move on.

MS. PORTER: Just one thing. The governor has a 20-year plan on the bottom fish. And I'm sure that he's got a lot, an awful lot of investigation into it, too. It's not something that we should just care less about. It's a very important topic.

MR. ECKHOLM: The primary recommendation of the governor's report was onshore processing. There's no way to get --

MS. PORTER: You should remember. Nobody wanted that gas when the Japanese started buying it. We couldn't give

that away. Nobody else wanted it.

MR. POMEROY: Beg your pardon?

MS. PORTER: Nobody wanted it.

MR. POMEROY: That isn't so.

THE MODERATOR: Well, it's pretty close to being so.

MR. ECKHOLM: Let's go on to some recommendations. Maybe I'll reread this first one and see if that's a recommendation.

One: The State must stimulate the rapid development of onshore processing facilities for the development of the bottom fish industry outlying all of the state's investment tools, including, but not limited to, loans for Alaskan fisherman and processors, State bonds for the construction of ports and harbors to develop the industry, promoting a marketing association to develop markets for Alaskan seafood products in American and Europe. That's it.

MR. NASKE: I would use regulatory. Investment and regulatory tools.

MS. PORTER: Also after tools I'd like to see managerial expertise which would --

MR. McGINNIS: I'd limit the marketing area to America and Europe.

MR. ECKHOLM: World markets?

MR. McGINNIS: World markets.

MS. PORTER: Once we begin competing in the world market as a world investor with an international portfolio, I think our expertise will increase. And I don't think it's impossible.

MR. HARTLE: Do you want to read it one more time and see if we can approve it?

MS. STRASSBURG: At this point, however, Jack, I'm a little bit confused. We keep on talking about this money. This gentleman says if we put it in we have absolutely no control of it and as a state we cannot ban Japan from the international consortium in Europe. Is that true?

MR. DIRKIN: That's it.

MS. SCHIRMER: This is a proposition. We get to vote on it.

MS. PORTER: Could I just say something? I just have to remember ten years ago there was no way we could fight OPEC and the Arab nations on their oil prices, either. Today we're looking at four million bucks. I don't know.

MR. ECKHOLM: I think someone was saying, we can't fight the Japanese because we own the processors and they own the --

MR. DIRKIN: Just one second. The way it works, right down to the individual boat, even down the Antarctica and mixed in the Beagle Canal. First thing, it goes to the system, right back to the system and returns the premier

who owns that boat and it says ABC Fishing Company, calls up ABC Fishing Company no matter where that boat is in the world, he says, "Get that out of here." The Premier exercises instant pinpoint contact over every Japanese investment through the whole world.

We think of private enterprise. What you're talking about, you're talking about the State of Alaska in direct competition with the current Japanese government. No more, no less.

MR. ECKHOLM: Thank you.

MR. DIRKIN: You're going to lose.

MR. POMEROY: Mr. Chairman, we seem to have a recommendation here, and as it's been said here, we can talk about it all night long. I certainly don't think we know enough about it to vote on a motion like this. And it seems to me we're putting ourselves into an open-ended subsidy permanently, not knowing a slightest bit of where we get into it or where it's going to go.

MR. ECKHOLM: Where's the subsidy? It says loans for American fishermen and processors. It doesn't say economic loans. Those could be lent out by a hard loan officer who looks at the investment and sees whether it's going to make a return or not. That's not a subsidy. Ports and harbors pay their own way. If a boat comes into a port it pays over the time, over a course of a few years, a bond. A marketing

association is not a subsidy.

So I don't see anything in this recommendation that represents a subsidy.

MR. POMEROY: Do you mean to see that it's assumed or put in there that all of the infrastructure shall be cost effective?

MR. ECKHOLM: Yes. I wouldn't provide a subsidy.

MR. POMEROY: Okay, put that in there, then.

MR. ECKHOLM: There's nothing saying there is a subsidy here.

MS. PORTER: It never said subsidy.

MR. ECKHOLM: So I would reason it up to the State to loan it out in an economic fashion. I think the subject of low interest loans and subsidies is different than that.

MR. McGINNIS: The availability if capital does create some opportunities, as distinguished from a subsidy. At the same time this is saying indeed Japan is coming to world preeminence. Maybe that is the clue. With some help from government, a little of it could be turned around.

MR. ECKHOLM: The recommendation as it reads, and I think I'd like to add something to it, the State must stimulate the rapid development of onshore processing facilities and Alaskan-based vessels for the development of the bottom fish industry utilizing all the state's investment and regulatory tools, including but not limited

to, loans for Alaskan fishermen and processors, State bonds for the construction of ports and harbors to develop the industry, and promoting a marketing association to develop world markets for the Alaskan seafood products.

MR. POMEROY: How about the word rapid? All from the governor on down has said that it's going to be ten years. I have a little trouble with that word rapid development.

MR. ECKHOLM: In order to sell bonds, by the time you sell bonds and do all the stuff on the harbor, it's probably going to be ten years before you start.

MS. PORTER: Generally, you're not going to think, gee, you've got the corps of engineers involved, fence this, do all the preliminaries.

MR. ECKHOLM: If we spend all our money today, it may not be ten, but four or five before any of these things were --

MR. POMEROY: Well --

MS. SCHIRMER: Can we move the question?

THE MODERATOR: Ready for the question? More discussion?

MR. POMEROY: Well, I will make one final thing. I don't know we know enough of what we're talking about to have a vote like this, much as I want to have it.

THE MODERATOR: Any further discussion?

Any objections to the motion?

MS. PALMQUIST: Could we have it read again, please?

MR. ECKHOLM: The State must stimulate the rapid development of onshore processing facilities in Alaskan-based vessels for the development of the bottom fish industry utilizing all of the state's investment and regulatory tools including, but not limited to, loans for Alaskan fishermen and processors, State bonds for the construction of ports and harbors to develop the industry, and promoting a marketing association to develop world markets for Alaskan seafood products.

THE MODERATOR: Are there any objections to the recommendation?

MS. PALMQUIST: I'm going to abstain from voting.

THE MODERATOR: You can't.

MS. PALMQUIST: That settled that real fast.

MR. ECKHOLM: The second recommendation was to establish a strict quality control for all Alaskan seafood products.

Any discussion?

MS. STRASSBURG: I don't think there's any question on that. I don't want to eat rotten fish.

MR. ECKHOLM: Without question, the motion passes.

Third, legislature establish a policy that would restrict foreign ownership and control of Alaskan seafood processing industry.

MS. PALMQUIST: How would you do that?

MR. ECKHOLM: That's why it says the legislature.

MR. POMEROY: Would you read that again, please?

MR. ECKHOLM: The legislature establish a policy that would restrict foreign ownership and control of the Alaskan seafood processing industry.

MS. PORTER: I would like to see added to that taxation measures for foreign processors, or foreign vessels obtaining fish within the 200-mile limit, buying fish.

MR. ECKHOLM: We would have to recommend a federal tax, because they're not fishing in Alaskan waters, they're fishing in American waters.

MR. HARTLE: Is this first part constitutional?

A VOICE: You're getting into trouble. Anybody who could buy a U.S. bond could buy his way in.

MR. ECKHOLM: They're there already.

A VOICE: I don't see now you're going to achieve the aims.

MR. ECKHOLM: I don't know how it would happen either. It does seem to be --

MR. McGINNIS: Maybe we should call up Arnes Grindig how he did it when the same situation was obtained in Seattle in the 50's. He found a way.

MR. ECKHOLM: I think Rosie might be right in the way of foreign vessels catching in the 200-mile limit.

MS. PORTER: In what's his name's paper here, he talks

about an exploitation tax. And he doesn't talk about it being federal, although it could be. I don't know. It is. I'm sorry. It is federal.

MR. ECKHOLM: So we could recommend --

MS. PORTER: We could recommend that the State support an exploitation tax on foreign vessels fishing or buying in our borders.

MR. ECKHOLM: Okay.

MR. DIRKIN: Our border is into three miles.

MR. ECKHOLM: No. A federal tax. Within our 200-mile zone.

MR. ECKHOLM: We are asking the creation of a federal law.

Would you say that again? State support a federal --

MS. PORTER: State support the establishment of a federal exploitation tax for foreign vessels fishing, buying, and we might as well say or processing within the 200-mile limit.

MR. HARVEY SAMUELSON: I think there's already a tax on that to read increase. What is it, three percent?

MS. SHROYER: I'm not quite sure, but there was a federal tax.

MS. PORTER: It's a very, very minor, itty, tiny tax. Maybe we ought to say increase substantially the exploitation tax.

MR. POMEROY: What was the three cent a pound tax that the legislature adopted this last session? It was going to be six, and it was cut down to four.

DELEGATE: That was on our domestic.

MR. ECKHOLM: The third motion was establish a policy that would restrict foreign ownership and control of the Alaskan seafood process is industry, that just so -- I mean, is that ridiculous to do? Or shall we move on? Let's skip that for now and talk about four.

The State would support a substantial federal exploitation tax for fishing and processing in the American 200-mile zone.

MR. McGINNIS: I just raise this question. I haven't followed the developments in the international field for a number of years. But do we not have a mechanism to require licenses? I know many countries do, be the difference between the 300- one and 200-mile limit.

MR. POMEROY: What is the question?

MR. McGINNIS: Whether or not we require a license of a vessel fishing within the 200-mile zone.

MR. DIRKIN: No. That is done by National Fishery Service and the allocation is made by the North Pacific Council. The allocation for X amount of tons then goes to the Secretary of Commerce. If he approves it, it's printed in the Federal Register and the minute it's in the Federal

Register, the National Marine Fishery Service issues a certificate for --

MR. McGINNIS: You don't know if we license the ones up here, off Alaska?

MR. DIRKIN: Yes. That's what we're talking about.

MR. McGINNIS: Very well.

MR. ECKHOLM: The State support a substantial exploitation tax for foreign vessels fishing and processing in the American 200-mile zone.

MS. PORTER: Maybe we could say it should be levied on.

MR. ECKHOLM: Should be levied on?

MS. PORTER: To be levied on foreign vessels fishing.

MR. ECKHOLM: Any more discussion? Any objection?

Passed.

What about the legislature establish a policy that would restrict foreign ownership and control?

MS. PORTER: How about if we said investigate the possibility of establishing. Ship it out to the legal people.

THE MODERATOR: I don't want to be a doomsayer, but we got communications, we've got transportation, we've got health, we've got education, agriculture. It's a quarter of 6:00. We come back at 8:00 and we have to wrap it up today, because tomorrow we have to go on the floor and say this is the recommendation.

So we can go 15 minutes here with more fisheries if you want, and then we've got to take up those other subjects beginning at 8:00 o'clock.

A VOICE: Can't we go on to agriculture?

MR. ECKHOLM: We can break now --

MS. SCHIRMER: No, we can't.

MS. PORTER: There is one other point and that's limited entry, but I'm not sure if that's appropriate for us to take up now. Since the matter is being decided in the court, anything we say -- I think we really need to have that determination by the court before. We could spin our wheels and waste a lot of time on it.

MR. DIRKIN: Could we use this statement that basically it should have been done when this business many years ago, that the State of Alaska should ask the Supreme Court for a constitutional ruling to turn everybody around and get everybody where it was supposed to be from the beginning and not go through this ten years. You pick up your paper. There's your Fred Paul right upstairs addressing roe count. $100,000 Bristol Bay crossed his desk yesterday.

At the same time, the legislature limited entry study group also testified up there the licenses are leaving the State at a fantastic rate. They're going to make their final report on the 12th and they're going to

have it ready for the legislature.

But I make this suggestion: Since now you're going into the other fisheries in the herring and the crab and the bag is open for the Tioyak Bank and the Bank of Tokyo Seattle bank. Sid (inaudible) and he represents these vessel owners.

Right now, the license. License value in the State --

MR. ECKHOLM: Mr. Dirkin, this is all very interesting, but I think a hot topic in our hand that we can't deal with at this time.

MR. DIRKIN: Could you deal with this question. To solve the limited entry problem, the State of Alaska should ask the Supreme Court to rule on the constitutionality of Alaska's program. That's what we asked them when this business started five years ago.

MS. PORTER: I don't think they'll do that until it gets out of the Alaska court.

MR. DIRKIN: That was the responsibility of the State to do it in the first place. You know it, and I know it. If you want a license, you go to Ballard and you get your license right in Ballard. The eastern licenses are almost the same outside on the ship now.

THE MODERATOR: I think the answer would be if we were the legislature or if we were more knowledgeable about the

limited entry issue, we could do it. But we're trying to project ten years, what should the State do in the next ten years.

Don't you think that issue is going to be resolved by the courts one way or the other within the next few years?

MR. DIRKIN: Yeah, but let's get this thing back on the road.

MR. ECKHOLM: Mr. Dirkin, I feel we really can't deal with it right now, and I appreciate your efforts.

MR. DIRKIN: Then enough.

MR. ECKHOLM: Agriculture. Senator Merdes, I think that was one of your interests.

MR. MERDES: Of course, a permanent fund is designed to finance all renewable resources, fisheries, agriculture.

I think the legislature has already demonstrated their action by going through with the Delta Barley Project.

A VOICE: I think a general policy to the effect the committee urges the State continue its vigorous support of agriculture to the end, that the State become as self-sufficient as possible in all phases of food production. It could be vegetable, dairy, and they commend them for the action taken already in supporting agriculture. That's basically the idea I think we should get across to them.

MS. PORTER: I would have a problem with the word self-

sufficient. I would say as productive as possible.

MR. MERDES: They'll never be totally self-sufficient.

MS. PORTER: I think the words in the report would cause some problems.

MR. MERDES: Okay. We should be as self-sufficient as possible.

MS. PILLIFANT: He said as self-sufficient as possible. Don't you think that's an adequate description of what I would hope we're trying to do?

MR. ECKHOLM: It may be that the agriculture in this state could make a lot more money if they concentrated on one product or something like that rather than trying to provide all the balanced needs of being self-sufficient.

MR. MERDES: I think I will add one more thing on that. They're tying up the Yukon Flats. There's a big fight in Congress to get that excluded. There's 15 million acres of lands in -- you saw the Thomas report in our papers.

Iowa has nine million acres of land that can be tilled. Just to give you an example of Alaska's agriculture potential, because Iowa has got to be one of the most productive agriculture states in the entire union. Look where we are. That's not grazing land, that is grain land. Alaska conceivably, now that it has natural gas, everybody knows it produces urea and fossil, I mean the Arctic Submarine Corporation. You've got possibilities for

fertilizer cheaper than anywhere in the world right in the heart of the agriculture area.

You got the land, and we could conveivably, if we have a vigorous commitment to agriculture, we could conveivably export. That isn't the idea, the idea would be to feed Alaskans first, but we could conveivably merit start feeding other parts of the word. One of the things we ought to start thinking is what we could do for everything else.

MR. ECKHOLM: Senator Merdes?

MR. MERDES: Yes.

MR. ECKHOLM: I don't think anybody is disagreeing.

MR. MERDES: You got time limits.

MR. ECKHOLM: We got total agreement on agriculture.

MR. MERDES: I wanted to get that little bit of background.

MR. ECKHOLM: What was the recommendation?

MR. MERDES: The recommendation is that we continue.

MR. ECKHOLM: I didn't get it all down. The state promote our--

MR. MERDES: Continue to vigorously promote the development of all phases of agriculture to the end that the State will become as self-sufficient as possible in the production of food.

MR. ECKHOLM: The State should vigorously continue to

promote the agriculture potential to its maximum economic capability?

MR. MERDES: To the end that the State become as self-sufficie as possible in the production of food.

MR. ECKHOLM: Did you have a problem with self-sufficienc

MS. PORTER: I'm willing to cancel my suggestion. I don't care.

MR. MERDES: I absolutely agree with you. We're not going to produce fruit.

MS. PALMQUIST: Wait a minute. Strawberries and raspberries are fruit. And currants.

MR. MERDES: I was thinking of bananas.

MR. ECKHOLM: How about the maximum economic benefit of the farmers?

MS. SCHIRMER: Leave it the way it is.

MS. STRASSBURG: What's your position on the department of agriculture for the State of Alaska. This is a recommendation that I think is 30 years behind times.

MR. MERDES: Let's implement that. You can make that the --

MR. MORGAN: May I say something regarding agriculture? I've been waiting around to do that for three days.

THE MODERATOR: You have three minutes.

MR. MORGAN: I can do it in three minutes.

Among all the various topics under discussion, timber or health, transportation and all these things, several things, I've listed four things here that local food production would result in, is improved health. Now, I'm speaking from a native quarter. We have food shortages and so forth in the villages. Improved health, lower food cost, which is an economic advantage. You don't have to sell it for a dollar, process it and go to the village store and sell a can of Spam. You can eat it. Conserve energy.

Every pound of food shipped from Fairbanks to the villages is 18 cents. So we can conserve that energy that then certainly any locally produced foodstuffs is easing the stress on it.

(At this time a brief recess was taken)

THE MODERATOR: We're talking about the subcommittee coming back on health. I'm questioning, even though I haven't heard a thing, if it's taken them two hours to synthesize this, have we got the time to make everybody aware of the kind of input that you had to put into this thing.

MS. PORTER: If I may make a suggestion, everyone has their copy. They've read it over, we could tell them what amendments we've made and take a vote on it.

MS. PALMQUIST: Well, you wish to have the

recommendations that the committee go into the minutes as the recommendations of the committee, or do you want them read to the Delta Group and a vote up or down on the committee's report?

MR. ECKHOLM: Did you make significant changes?

MS. PALMQUIST: We made some changes that we thought might enhance the understanding of it.

MS. SIMONDS: Did you delete anything?

MS. PALMQUIST: Yes, we did delete one entire section and some wording.

MS. SIMONDS: What was it?

MS. PALMQUIST: When I make the report I'll go into it.

THE MODERATOR: I hadn't really thought of that. How do you want to do this? She's suggesting we accept the committee report as such, or they read it all into and we accept it as our report.

DELEGATE: Maybe go recommendation by recommendation and change it as we think we need to and vote as we go along?

MS. PALMQUIST: I'd rather read the whole thing and then make changes.

MR. HARTLE: One thing, that's what the committee just spent two hours doing. We didn't stop for a minute for two

hours, and here it is.

MS. SIMONDS: How about the significant changes? What you deleted and what you added. We know the rest.

MS. PALMQUIST: If you want my report, I'll make it.

THE MODERATOR: I'm concerned. If it's taken you two hours to go through this and make your comments, it's going to take us two hours, I think. Is that a fair statement?

MS. PALMQUIST: Well, it will take you two hours if we wasted our time.

MS. SCHIRMER: I think we should hear the report that will get it into the minutes. Then we can hopefully discuss it briefly.

THE MODERATOR: You'd like to hear the report straight, then?

MS. SCHIRMER: Yes.

MS. PALMQUIST: All right.

"The following recommendations are inherent and stated within the paper entitled "Health and Social Services: Needs and Strategies in the 1980's." It is recommended that consideration be given by the legislative and executive branches of government for implementation during the early years of the 1980 decade."

Number one: "Public policy in Alaska as developed by the legislative and executive branches of government should shift priority as far as possible from

the curative and treatment approach to health promotion, health education and disease prevention and social service programs."

A similar approach is recommended for other social problems.

In other words, we're emphasizing prevention instead of cure and treatment.

Number 2 will then be former Number 8: "Since disease prevention is cheaper than cure and treatment, Alaska should single out several diseases which contribute unduly to the pain and suffering of citizens and lay heavy claims on public funds. Singled out for earliest attention should be: Tuberculosis, otitis media, alcoholism and drug abuse, accident prevention, and venereal disease."

That would come as number two, and number two would be eight.

So I'll read two when we get to eight.

Three: "That to the extent allowable by present and reasonable amendments thereto, health and social services delivery programs should be vested in local government and in private nonprofit corporations with mutually agreeable funding provided by Federal and State governments."

Four: "Revenue sharing funds made available by the State government for health services and health

facilities should be made available to local governments with the local governments determining the priorities for usage of the funds, whether for services, institutions or facilities."

Five: "That public policy in Alaska include studies leading toward the possible revision of all direct service health expenditures with the emerging possibility of opting out of the Medicaid program, the development of a unique and comprehensive Alaska health insurance program, or other innovative improved methods for assisting Alaskans in meeting medical costs."

Six: "Immediate attention should be given to an improved catastrophic illness program to bring relief to low- and middle-income wage earners otherwise ineligible for federal and State assistance," and cancel out the rest.

MR. POMEROY: Stop where?

MS. PALMQUIST: Stop at the word assistance. In other words, you're taking out all of the last sentence.

Seven: "The State should consider a revised plan of reimbursement for physician services and hospitals whether or not the Medicaid program is continued or dropped, including strong emphasis on the free enterprise, competitive systems and that the free market forces be rigidly enforced in other fields of endeavor."

You drop out the quid pro quo.

MR. POMEROY: That's the only change there.

MS. PALMQUIST: Yes.

Then for eight you will have former number two: "Cost containment for all health care purchased by government should be undertaken with a minimum goal that payment and fees for services should not be allowable beyond the increases in the Consumer Price Index for the region concerned."

And by region concerned, we mean the region of the State, not the United States.

Nine: "Alternatives to expensive institutional health care (hospitals, nursing homes, residential centers) should be sought, including pilot programs in coordinated home health-home support care with services available not only from nurses but also doctors for in-home assistance."

This is in essence alternates to nursing home care.

MR. ECKHOLM: Go over that change again.

MS. PALMQUIST: "Expensive institutional health care (hospitals, nursing homes, residential centers) should be sought, including pilot programs in coordinated home health-home support care, with services available not only from nurses, but also for doctors for in-home assistance."

MS. SHROYER: Is that coordinated or consolidated?

MS. PALMQUIST: Coordinated.

We took out ten entirely.

Then 11 becomes 10: "Since all forms of accidents are responsible for the highest percentage of Alaska deaths and a major portion of health care dollar expenditures, special massive attention should be given to the fundamental causes of those accidents and the relationship thereto to other social and health phenomena, and that a bold program of education and prevention be developed."

The next one, instead of 12, will be numbered 11: "All third-party insurance payment mechanisms for health care in Alaska should be required to cover mental illness services in much the same way as they cover physical illnesses at the present time."

And 13 will become 12 and we have some change there: "Legislative and executive branch decisions should be directed toward more extensive utilization and funding of community mental health centers and several small regional juvenile residential facilities should be provided for mentally disturbed juveniles."

The rest is eliminated.

So you take out the word "the" ahead of "community mental health centers," and you add the word "and."

14 will be 13. That's as it is. There's no change. Do you want me to read it?

"That the legislative and executive branches provide for detailed analyses regarding the financial impact of improving the current payment level of $120.54 per month per recipient under the Aid to Families with Dependent Children Program under AFDC, the monthly payment for mother and child is $350 versus $508 for two persons under the Supplemental Security Income Programs.)"

15: "Since $80 per month per person for certain needy persons in the State is not sufficient to deal realistically with those eligible, a detailed study should be provided to determine the future structure and coverages under the general relief and general relief medical programs."

MR. POMEROY: That's 14?

MS. PALMQUIST: That is now 14.

15 will be: "The legislative and executive branches of government should attempt to influence more strongly the Federal Office of Management and Budget in order to adjust the official poverty guidelines for Alaska to bring it in line with financial realities and remove the current discrimination against Alaska's needy made possible by the policies of the Federal Office of Management and Budget."

MR. McGINNIS: Grammar: It should be them.

MS. PALMQUIST: "Bring them in line."

MS. SHROYER: Why does it say "made possible by the policies"?

MR. McGINNIS: The Federal Office of Management and Budget can do what they want to do. They have discretion. They can adjust it if they wanted to. It does not take congressional action. Only we can do it, with pressure and persuasion.

MS. PALMQUIST: 17 will become 16: "That the legislative and executive branches provide for an updated, comprehensive study of the status of Alaska's elderly population, with special emphasis on the adequacies of the financial assistance provided to elderly elligibles and with special review of the effects of inflation on the fixed income of retired persons." And add: "And, in connection with a proposed Older Alaskans' Commission," which is going to be a recommendation coming out of the interim legislative committee.

MR. POMEROY: In connection with what?

MS. PALMQUIST: In connection with -- add the words "Retired persons" and remove the period, "and in connection with a proposed Older Alaskans' Commission."

18 will become 17: "The legislative and executive branches of government in Alaska have recently provided for a comprehensive Corrections Master Plan for Alaska."

Ahead of the next sentence insert: "After public

hearings are held in the affected communities, only those portions of the plan deemed to be acceptable should be strongly supported by the legislative and executive branches in order to improve both facilities and services in urban and rural areas of Alaska."

MR. NASKE: Say that again?

MS. PALMQUIST: Ahead of the second sentence, include the words "After public hearings are held in the affected communities, only those portions of the plan deemed to be acceptable should be strongly supported by the legislative and executive branches in order to improve both facilities and services in urban and rural areas of Alaska."

19 will be 18: "Limited and new programs such as Treatment Alternatives to Street Crime and New Start Center have demonstrated efficiency and adequate rate of success in assisting in the continuing rehabilitation of ex-offenders. It is in the interest of every citizen of Alaska that such ex-offenders be assisted in developing new life patterns free of crime and deserve adequate staff and financial support to assist in that goal."

I think we all saw the movie this morning and that has some aftereffect on that. There's no change in that.

20 will be 19: "Even though public assistance in the form of money transfer payment programs and social

services based on counseling do not have the same goals, human service centers in various communities throughout the State should be co-located in order to serve citizens in a more efficient manner."

An explanation: The Department of Health and Social Services now has public assistance done by one staff and they have counseling done by social workers as another staff. This is that they should be co-located so that they work closely in harmony with each other.

21 will be 20: "Since Alaska does not operate any social service child care institutions and only one correctional juvenile institution," which, as you know, is McLaughlin, "revision should be made in the 'purchase of services' statutes by amendment in order to fund those privately operated programs giving care to juveniles whose care has been made a State responsibility more nearly on the basis of actual full cost of care."

No change in the wording.

22: "The legislative and executive branch," which is 21, "The legislative and executive branches of government should make provisions whereby a reasonable percentage (approximately one percent)" but we agreed on one percent "of the human services budgets of the State could be utilized by the executive agencies for research and evaluation purposes in order that full data may be

available and proper evaluations made to play sound statistical and programmatical bases under all expenditures in the field of human services."

Mr. Chairman, the committee moves the adoption of these recommendations.

MS. PORTER: Mr. Chairman, there are two additional --

MS. PALMQUIST: Rosemary, did want to make another addition in the field of education.

MS. PORTER: I have the legislative support adventure-based education for youth on an ongoing basis.

I have another one that I would also like to suggest for the group's consideration, and that is continued support by the State legislature for crisis centers throughout the State.

MS. PALMQUIST: If the members of the committee have any objections to adding that to our report? Hearing none, then those will be items 22 and 23.

THE MODERATOR: Thank you very much.

MR. ECKHOLM: Have you gotten those added to your list, Rose?

MS. PALMQUIST: As soon as Rosemary gives them to me, they will be added to this.

MR. ECKHOLM: Can I have your copy as the final copy?

MS. PALMQUIST: Yes.

THE MODERATOR: You heard the motion by the

subcommittee to adopt these resolutions. Any discussion?

MR. POMEROY: Do we hear the remaining two, or not? Are they available?

MS. PALMQUIST: They just were read. "The legislature support adventure-based education for youth on an ongoing basis." That will be 22.

Number 23 will be: "Continued support by the legislature for crisis centers throughout the State."

Those are our recommendations, Mr. Chairman.

MS. PILLIFANT: Is the State supporting crisis centers at this point in time?

MR. McGINNIS: I don't know if they are supporting all the crisis centers, but there are a number of crisis centers which are supported through both federal and State LEAA funding. Battered women shelters, defense shelters.

MS. PILLIFANT: I wasn't thinking in terms of those sorts of things. I was thinking --

THE MODERATOR: Discussion.

MR. POMEROY: Open for discussion?

THE MODERATOR: Sure.

MR. POMEROY: First I think I should like to thank the committee for taking a most extensive and comprehensive document and spend the time at dinner on it while I was having martinis in preparation for this encounter.

I think the only thing appropriate to say is that

I believe, I still believe, that the scope and the character of this is something that might better not have come before this group. But it has, and certainly whatever I might have in question at various things here would not be important enough to open up for further discussion, because I note in much of this it's implicit that a lot more work is going to be done. Is that right?

MR. McGINNIS: Indeed. Preprimarily, yes.

MR. POMEROY: And so, with that, all that I might have said I eliminate except for one thing: I note that we're going to have to deal with financial matters. We probably will be talking about the rate at which public costs are increasing. There may be a good deal involved in here in the accumulation of increased public costs and I mention now only in the event as we go along with the other subject we're taking up, that I recommend that we keep in our minds the extent to which we may be just talking about cost for State government going up like that instead of going up at a lower rate.

And I want to thank Rose, particularly, because she and I had some discussion earlier.

MS. PALMQUIST: Thank you, Harold.

MR. McGINNIS: I would be deeply concerned for the same reason that Mr. Pomeroy is concerned. On balance, when you take the entire package and think in terms of a decade

rather than a year or two, the cost of mechanisms could easily offset the increased cost with a better, more effective system. And the detailed studies and analyses would have to be made in cost avoidence.

MS. PALMQUIST: Some of the sections that deal with the medical expenses of people that are in very low incomes, we might actually save money with the recommendations.

MR. HARTLE: For instance, the first recommendation is sure to be cost effective and cost avoidive to a significant degree.

MS. SCHIRMER: I wonder why the business about Alaska Psychiatric Institute was removed.

MR. McGINNIS: May I?

MR. ECKHOLM: Surely

MR. McGINNIS: The committee discussed at some length and thought that should be something done as a regular departmental function in any event, and that it would be done anyway, and we wanted to get as much language out of this as possible. We would like to have reduced 50 percent more language, and maybe even a little more editing, but we wanted to cut away as much as the nonessential as possible.

MR. ECKHOLM: Do you think it might be some indication that we would accept these recommendations but note somewhere that we accept them based upon the paper developed by Dr. McGinnis and they're primarily from those

recommendations?

MS. PALMQUIST: Well, we used these like in the legislative area as a markup, so actually I would hate to limit our recommendation to, really, that we went over his recommendations. Because we used the recommendations for our own evaluation and changes. So, actually, by now they are the recommendation of the committee.

MR. POMEROY: That's a good identification you used as a markup.

MR. MERDES: Like Harold, I really think this is well thought, obviously well thought through documents and ideas.

I have a suggestion. I guess all of us, no matter what part of the life or economic part of life we come from, have some criticism of health and welfare. I don't care what category you're in. And I think it would help the legislature in a creative way if we made a general statement. I have no hangups with any of these specific suggestions. I just wrote out something here that I'd like to try on you. And I don't have any pride of authorship, but this is my feelings on this, that as the spirit underlying each of these policy recommendations, we Alaskans strongly urge the legislature and executive branch to encourage whenever feasible the adoption and implementation of programs to encourage local input, incentives and providing for self-help and any other

creative project encouraging human dignity.

MS. PALMQUIST: We have no objection to that. Speaking just for myself, my own thinking was that I would have gone much further than this, but I would have increased prevention in all fields of social problems: Employment, juvenile delinquency, adult delinquency, family problems, you know, the run-away child and so on.

And especially in the field of the elderly, I would like, really, eventually, to impact upon the State the development of opportunities and programs which eventually will take us off of the state's support system.

THE MODERATOR: Any comments on Ed Merdes' recommendations?

MR. McGINNIS: It would be incorporated?

MR. POMEROY: I suggest we incorporate it and ask by unanimous consent.

MR. HARTLE: I agree. Also, I notice in your statement there about local input, and that's very consistent with several of the recommendations in here.

MR. MERDES: I know Fred would be one of the first to be for this, but let's write and it and tell them where we're coming from.

MR. ECKHOLM: I think we should make it the first recommendation.

MS. PALMQUIST: I seconded Mr. McGinnis' thought that

we add it.

MS. SHROYER: That's going to be my suggestion, put it at the beginning to keep it in mind.

MR. MERDES: I'm asking unanimous consent that we adopt the entire recommendation.

THE MODERATOR: You heard the motion. Is there any objection?

MR. McGINNIS: I have no objection. I'd like to comment before you vote, if I may. I have a feeling, and I could be wrong about this, that this whole area of concern has had more thought and attention in this group than in any of the others. It was my privilege to visit many of them and they suffered from a very understandable human problem. They have the whole word of Alaska coming down on them and schedules got off. And the sort of the Direct Services thing would yield first to transportation, then to roads, then to highways, then to others and some of them wound up saying nice little things in a sentence, which was nice.

But I would hope this group, if you adopt it, could strongly support it in the general session with a thought, and I think you'll find some of them may make a few scattered comments. But whatever support this field is going to get probably is going to come out of the Delta Group.

MR. MERDES: We appreciate your time.

MR. McGINNIS: I appreciate it. My name falls here. McGinnis comes under Delta. I was told this is where you go.

MR. ECKHOLM: Rose, could you add Senator Merdes' preamble?

MR. POMEROY: I should like to note, Jack, if I may, that of everything that we've talked about so far, this most specifically concerns deep social purposes. Better care of children and all the things involved.

THE MODERATOR: I believe everyone understands the motion now, or the recommendations, including Ed's, right? Further discussion on it?

MR. POMEROY: Move adopted by unanimous consent.

THE MODERATOR: Unanimous consent has been asked. Is there any objection? All right. We passed it.

Now, with your thought in mind, Fred, this group has done this. You've told us another group spent three hours on education. That will be our next topic. What kind of time frame should we put it on that, if any?

MR. MERDES: Let's play it by ear.

THE MODERATOR: Just be aware that another group is coming in with heavy recommendations on education.

MR. POMEROY: This isn't quite jocular, I think we could do not much better than to adopt Ed Merdes' opening statement concerning our university system, and then if

there are any specific things beyond that as to what the scope of it should be, how about that?

MR. ECKHOLM: Would you like to make that in the form of a recommendation?

MR. POMEROY: Yes. Don't say it's an unmitigated disaster.

MR. MERDES: I'll leave that out.

MR. POMEROY: His statement concerning what should be the aim of our university as to its quality and scope. I mean, just what he said without --

MR. ECKHOLM: So we should go back and pull it out?

MR. MERDES: I have it on the tape recorder, so I'll give it to you.

MR. ECKHOLM: I would sort of like to hear a replay of that.

MR. MERDES: I don't want to replay it to you but we can we replay it later. I'll shorten it up later, I'll guarantee you.

MR. POMEROY: It condenses very nicely. You have to condense most of what he says.

MS. SCHIRMER: In one of our previous recommendations earlier today, I think we talked about developing excellence in the university with regard to resources. And I can't remember whether we included in that something about forestry. Because the only forestry programs that I

know in the State are Shell and Jackson. I may be wrong. But that's about the only place in the State I know of any forestry program.

MR. MORGAN: They have a forestry soils lab at the university. They have an oil and forest institute there. But as far as formalized programs, no.

MS. SCHIRMER: I think -- as far as our suggestion was the university should strengthen their departments in archaeological, geographic, agricultural, mineral studies, oceanography, fishing and timber for the northern latitudes.

MR. MERDES: We adopted that already.

MS. SCHIRMER: I couldn't remember if the forestry business was in there.

MR. NASKE: Why did we restrict it to those disciplines? If you do that, legislative intent will be focused on these particular disciplines.

MS. SCHIRMER: Maybe it needs to be.

MR. NASKE: I don't think so. I'm sure these disciplines are very important. But why not say that matters of concern to peoples living in northern latitudes.

MR. MORGAN: I thought we made that statement.

MR. ECKHOLM: We do have it.

MR. NASKE: Rather than saying fisheries and forestries.

MS. PORTER: We changed it back from natural resources.

MR. MORGAN: The first one I recommend is history.

MR. NASKE: History? What's history?

THE MODERATOR: I think, if we understand Ed Merdes' comment, is to devote the next ten years to building the greatest university we can. That's more than forestry or fisheries; that's a great university.

MR. MERDES: Excellent.

MR. POMEROY: It actually embraces anything we might suggest here as to scope.

MR. MERDES: But you particularly want it adapted to, for example, the north. I agree with Claus that the oceanography, the fact that we have oil and fisheries and timber and geophysical. You don't want, for example, I don't think we should worry about --

MS. SCHIRMER: Citrus fruit.

MR. NASKE: Near Eastern studies.

MR. ECKHOLM: If I may --

MR. NASKE: Biggest university, the best one, in matters pertaining to the northern latitudes.

MR. ECKHOLM: We have already adopted this.

Number 11: Excellence in the matters pertaining to resources of the northern latitudes. That would encompass timber as well.

MR. NASKE: I'd like to make a recommendation that in view of some loose change rattling around in pockets, perhaps we should urge the legislature to ban Alaskan

residents tuition-free attendance at the statewide system.

MR. MERDES: That's going to be in it. That will be written up.

MS. PORTER: I would feel a lot better if we had building, you know, a University of excellence, and then maybe specializing in those fields.

MS. SCHIRMER: We've got two things that we've talked about: His general statement and then we've already passed this other one, which had to do with resources. And I think we're doing it appropriately.

MS. PORTER: Okay.

MR. POMEROY: Actually, the reason I recommended his words is because I thought it was so all inclusive. It actually is a university in Alaska of the United States for the Arctic. That is the way he identified the whole thing.

MR. MERDES: That was the spirit. I think we should have the greatest Arctic university in the world. For example, what did Dr. Fuller say? Where is Alaska located? That was amazing, that center crossroads, remember? So we ought to be the greatest university, because right in the center of the Arctic.

MS. SIMONDS: The greatest State should have the greatest university.

MR. NASKE: The thing that upsets me is the federal government has a clearly spelled-out policy for an Arctic.

There's no policy for the Arctic and a big chunk of the American territory lies in the south Arctic. The point comes now where the Navy is thinking of abandoning the Arctic research lab, the only base from which any arctic research has taken place over the last 20 years or so. We have no policy, and yet a good chunk of our oceans and land and so on is in this sub Arctic and Arctic area.

THE MODERATOR: The danger we run, though, in talking about arctic education as opposed to general education is that the kids that Ed said are leaving, or kids are going somewhere else for a general education will continue to do so. And if they have a choice of an arctic university versus a good general university, many of them will continue to go out.

So I guess what I'm saying is don't get too narrow here if you want the kind of thing you describe in your opening remarks.

MS. SHROYER: I don't think that we would necessarily give up our wonderful general university by improving an Arctic, complete Arctic university group of departments. We don't have to necessarily give up one for the other.

MS. PILLIFANT: We have to build the first one.

MS. STRASSBURG: Wouldn't that bring in students from outside who are genuinely interested in the arctic, but they won't get that sort of thing in their own localities.

MR. POMEROY: Mr. Chairman, I paid particular attention to what Ed said. Part of it slips in because all of the other things we talk about, whether it's timber and whatever it is, it doesn't have to do with our having ourselves stand out in some direction. And we're going to spend more money per person than we are now. There's no question about that.

I think perhaps the foremost area in which we can stand out as a State, together with the service of the people.

MR. MERDES: I just want to make one observation. It struck me, I was with a bunch of students and as I mentioned it, I wanted to try it out what they thought of the university. Those kids want this university to be outstanding. But we Alaskans go back in the territory. The thing right under your nose, the thing that you could usually do the most, you always overlook. And I think this opportunity, if everybody agrees in this, I was in the legislature. Ed, you know what I'm talking about. The university has always been a political battle in the legislature.

If the whole State would get behind the university, if it's not a political battle anymore, you're going to get excellence. We're the grass roots. We're the ones who send the legislators down there. And we will get a

good university, because we'll tell them we want it. That's the whole spirit behind the whole thing. Legislators get the message, right? We got a broad spectrum of Alaskans here.

I consider it a compliment.

MR. POMEROY: Well, it was deserved.

MR. MERDES: Leadership. What did Buckminister Fuller say last night, the greatest thing we got is the human mind. We're just carrying out what he said last night. That human mind is the most beautiful thing in the world.

I really appreciate your remark.

MS. SPARCK: I think we're rehashing the same words over and over and I think we ought to get on with it.

MR. ECKHOLM: Do we have any recommendations on education?

MR. HARTLE: In line with talking about building up an Arctic studies part of the university and in line with what Mr. Naske said about the federal government lacking a policy, he mentioned specifically follow up on the Naval arctic research lab. The federal government is tentatively planning to abandon that, abandon the funding of it. If the federal government decides to abandon it, the State should at least consider operating it.

It's a matter of funding that is causing it to be abandoned. And if we could include it as part of the

university, I don't know if the federal government would lease it to us for operating it, or if we would have to buy it or what. But we should look into it, because it's a fantastic facility, from what I've understood. So what I'm saying is save money for the Naval reserve lab.

MR. PARKER: The buildings, the physical structure belongs to the government. Since the Navy is giving it up anyway, it probably wouldn't be too much of a job to have the physical structure transferred. It's a very expensive plant to operate, so it's why the Navy wants to get out. They just want to get rid of the housing costs.

MR. NASKE: It's the only base we have. The only one.

MR. PARKER: The only thing, Mr. Chairman, we don't have a discipline for polar studies. Ohio State has one, Vermont has one, Colorado has one.

MR. NASKE: Cambridge, England, has one.

MR. MERDES: University of Washington.

MR. ECKHOLM: I'll write down these recommendations then we'll go back over them all again.

MR. MERDES: I just heard that they funded it for another year.

MS. PORTER: I would suggest separation of the community college system from the University of Alaska.

MR. PARKER: Was that a part of Ed's statement. I heard so much, I don't know.

MR. MERDES: I think it's extremely controversial. I know everyone in this room has strong feelings on it and I personally would not want to let it mix. I rather have them go through the process. Because we got a separate community college system right now.

Personally, I don't want to throw that into the bag because it will just, I think, just blow up the whole program. I personally would not want to, because when I was in the legislature -- even right now that's a horrible thing.

MR. NASKE: Create another board of regents, another set of administrators.

MS. PORTER: All it will do is create another set of regents. They are not able to get anything out of the university. They are self-serving, they hold everything. They simply will not give credit for classes even though they're taught by the same instructor at a community college. They want people on campus. That's their main purpose. I can understand that.

Now the community colleges are in the process of getting their own accreditation. They should not only be allowed to stand on their own, own funding, own administration, have their own accreditation, but also go into an acceptable four year program.

MR. McGINNIS: I believe that we need to be very, very

cautious at this point for a variety of reasons. If we upgrade the quality or consistently upgrade at the higher education level under the university umbrella, those should float into colleges as well. When you look at Alaska in perspective, the whole community is no bigger than perhaps Tacoma, Washington, perhaps a fairly middle-sized city. Cities suffer more from fragmentation.

There are many ways available to the legislature. We found it within certain executive agencies, including our own. They can be persuaded in due course to allocate. There are mechanisms in which they can express the will of the legislature if they wish to do so. It seems if the system is now fragmented, it will open up a very explosive area.

If there are problems in the board of regents in their dealings with community colleges, those problems should be worked out and citizens and the legislature should help them do it. But to create a separate board and a separate group.

Now, if they were going to get a quotation through the junior colleges, two-year colleges, that's quite all right. But at this point in our history to fragment them further I think would be a mistake.

The only other thing I wish to say is, I would hope that Ed would consider adding to his good statement

some concept along the line that there ought to be encouraged in Alaska a fundamental policy shift in terms of thinking about education. Namely, as long as we think of it as an expenditure, like we go and buy a loaf of bread and eat it and expend it, it's gone, this is an opportunity by which these dollars are not, in the true sense of the word expended, they are invested.

Perhaps some of the best investments, talking about investing our permanent fund, some of the best investments we will ever make will be in the investment in upgrading the competence of our young citizens.

MR. MERDES: Fred, I agree with you. I'd like to have Fred assist me, if you don't mind, Mr. Chairman, to write this thing up, or anybody that wants to work with this. I have no pride of authorship, but that's an excellent idea.

MR. PARKER: Following up on that concept, if you're going to have a great university, it can't be subject to the vicissitudes of every funding cycle. All great universities have rested on a reasonably independent financial base, including the great land grant universities can provide operating revenues. So there has been the flow of dollars to support a reasonable degree of independence.

Fred mentioned the heritage fund. Across the board in a certain fairly large segment of them, and I think Ed the other night mentioned endowed chairs. That's

the sort of thing, I think, where you create that kind of base in a great university. Because the whole idea, you're not going to have it until you have a level of independence. You can't expect to swing the university out there and have it respond like it was a State agency, which is generally the way it's been treated. I think some concept between the heritage fund and higher education in this State, not only the University of Alaska, but every institution, is something that should be pursued, eventually.

MR. POMEROY: I associate myself with Dr. McGinnis' statement. I think we shouldn't dilute the main thing we're presenting, get it mixed up with anything else.

MS. PORTER: If we're going to have a great university we're not going to have a community college of great excellence. Because the university simply will not allow it to happen. Different kinds of things occur at community colleges than occur at universities. The university system is short-changing the community college system. The two of them in this State are not compatible.

We're not dealing with a town the size of Tacoma, we're dealing with a huge State; huge. And the coordination, the communications are just insurmountable. Where the university gobbles up a community college system, the community loses because you don't any longer have a community college where someone can run in and take a

couple of courses. You have to enter into a program and name your major. That's ridiculous.

MR. ECKHOLM: I think that this is very interesting, but let's limit it on community colleges to two or three more questions, then we'll move on.

MS. SCHIRMER: I'd like to somehow put into our recommendations that we do not wish this to be a monolithic improvement in the university. We want them to continue to attempt to spread throughout the State an opportunity for higher education.

MR. McGINNIS: Mr. Chairman, may I say one more thing? It's terribly important. One of the best insurances in the long run to assure quality at the community college level would be if it does have a strong identification with the university.

The problems over the country often have been that there has been a dichotomy between the upper level and graduate studies in the lower level so that very often students go through two years only to discover that what they did makes not much difference in building for the upper division and graduate levels. If they are autonomous and separate, that have a vital link with what the whole continuum of higher edcation ought to be.

The other thing troubles me and insists that we really begin to look at the importance of the quality of

the vocational programs in our community colleges. Why is it, for example, that we spend $30,000 or more a year to prepare someone to repair our heart? Because it's important, it has to be done, he has to be very, very good.

Yet, the man who fixed our airplane motor who has 300 people's hearts suspended up there, he had better be good in knowing how to check all these things that are indeed now life-and-death matters. But we have relegated many of these vocational programs to second-third-fourth-rate status, and we ought to begin to put a value on the quality that is necessary for those people as well as the one who is studying geology and metaphysics and teaching. Those things. But be assured those who know most about teaching can keep on in it.

I think the present system is terrible. But it's not going to be better by separating it but by helping the people to improve it, rather than to say we're going to contribute to a further disintegration.

MR. NAUGHTON: The State constitution says that the University of Alaska shall be governed by a board of regents. So don't go to the legislature thinking that you're going to change anything in the university.

Now, I've listened to all the reactions to the proposed policy on community colleges, and I agree. You have to think of higher education as an investment. And we

don't want to think of this thing as a monolith. But the thing is, look at your populations. Where is Alaska's stable population? Where is the population? If you invest in it today, will it be here 20 years from now? It's not in the urban centers. It's five years in, and get out.

So, if you build these monoliths here or in Fairbanks and you don't pay attention to the only place where higher education is delivered in the rural areas of Alaska, you're going to miss that. You're going to invest all your money in people who then will leave and you will have done the Lower 48 a great service.

MR. ECKHOLM: Thank you, Ed.

MR. POMEROY: I have more confidence with respect to where we can go with education than in many other things we are doing. We have been going through a lot of growing pains; we are very, very young. And I believe that the university, actually, if our recommendation is taken as well as it's stated, and I think it will rise to the greatness we can have.

And problems that were in this and we are concerned about getting worse will not get worse, they'll get less.

THE MODERATOR: I'd like to get back to what Ed was saying. I agree with you. That's right. The stable population is out there. And the people you want educated

out there, I'm not sure I agree with Rosie, but I know what she's saying. How do you come down on this? Are the community colleges out in the bush going to be better if they split?

Experience has instructed me that they will be better off separate from the university. Because the history is that the central administration goes in and raises their budgets. And there's nothing we can do about it as citizens, nothing the legislature can do about it.

THE MODERATOR: That's right. Can't the legislature do something?

No, sir, the university is governed by the board of regents.

MR. McGINNIS: Mr. Chairman, I'd like to discuss this one minute further.

MR. ECKHOLM: It's very important, I agree, so let's it discuss it for just a little bit longer.

MR. McGINNIS: The later few years I've seen a drastic change in what the legislature can and in fact is now doing. One example is we used to have medical assistance budgets. There are five or six pieces under it. Now they are appropriating by each title, separate, once they have said this is where it's going. So there are options to the legislature.

But the constitution does not say that the

Department of Social Health and Services shall be governed by somebody other than the legislature. It says it will be controlled by welfare. So they can control that budget. But they cannot control the University of Alaska.

MR. MERDES: They do now.

The way they do it is they pretend they don't know what the condition the books are. If you ask to see them, they'll say the books are so screwed up.

MS. SIMONDS: I would like to have added to our resolution on education funding for the literacy projects, especially the one at Anchorage. It teaches basic English.

MR. ECKHOLM: Let's finish the university discussion.

MS. SIMONDS: I'm sorry. I didn't realize.

MR. MERDES: I think this is a most interesting discussion so far. There's strong feelings about community colleges and really people have convictions. I think there's been a legal opinion. I think we ought to check it. The constitution says there's a board of regents of the University of Alaska. You may have a legal problem. You should consider a constitutional amendment if you feel that strong.

My feeling is this. I think we ought to have a strong statement coming out of this board here to the effect that community colleges are a vital and integral part of the Alaska higher educational system.

In the past everybody ignored it in many respects, especially in the rural areas, and that we urge the legislature to give the highest possible priority to community colleges and the work that community colleges do. I don't think we ought to increase a severance, because you lose the whole thing and cause all kinds of trouble. But I absolutely agree with you.

MS. PORTER: Why not stick your neck in it?

MR. MERDES: I don't think it's legal. As a matter of fact, Ed, I'd like to see you write something up, and you, Rosie. I'll help you.

MS. PORTER: I can write it myself.

MR. MERDES: You're going to lose the whole damn thing, because it's bitterly, bitterly fought.

MR. NASKE: I just don't think that we can build a strong or a recognized university in a State of 410,000 people that consist of three urban campuses, 12 community colleges and Heaven knows how many adult extensions centers. It cannot be done. We have to make a decision one way or the other. If we want to provide equal services, mediocre, in every area of the State, then that's what we should decide, or the recommendation we should make. If we want to create excellence, that takes a lot of money, and you can't do it in 20, 30 centers. You cannot build a reputation in Bethel or Kodiak or Mat-Su Valley.

MS. PORTER: But you can provide needed education that people are not going to get in the villages and in Bethel and in 57 villages and an area the size of Oregon because the university wants them on campus at Fairbanks and at class taking correspondence courses or your own village. That's a crime. We're preventing thousands of people from getting higher education by not separating the community colleges and the university.

MS. PILLIFANT: My children have to go to Fairbanks.

MR. NASKE: I graduated from high school in --

MR. MERDES: There were two possibilities. The legislature didn't come to me and rush to me and say, "Claus Naske, you graduated, you don't want to go to Fairbanks or Seattle; we'll establish a community colleges for you here."

MR. NASKE: They want you because you're a warm body.

MS. PORTER: I think that's a dirty argument.

MR. NAUGHTON: If Dr. McGinnis hadn't got the Methodist University to Anchorage, the university would only be in Fairbanks today.

MS. PORTER: We're talking about teachers aides which have gone on to get an A.A. in their own village. Women who are married, who can't afford to live in Fairbanks. What are they going to do? Drag their husbands and kids with them?

MR. ECKHOLM: Is there any way we can guarantee the

status of the community colleges, give them equal footing?

MR. MERDES: I think they can. I agree with what she said.

MR. POMEROY: We're going to get something or nothing at all. I strongly urge Ed that we accept in good faith what Ed Merdes said about adding something, wording there that will give us some direction and get the big thing we can get, which I hope will stimulate us in directions that will improve everywhere.

THE MODERATOR: We're not addressing this bush question, the community colleges.

MR. McGINNIS: I think one of the greatest ways to shortchange the student is to say he should be kept in the community school, to fragment and scatter him unduly. Surely it's more convenient to be nearby. But in the long run, the student is going to lose.

Across the development of this nation and every other nation in the world there have been centers of learning. What makes good education are three things: Good facilities, laboratories, good teachers, and good libraries.

MS. PORTER: I'm sorry.

MR. McGINNIS: And to the extent that you try to suffer from scatteration and have bad libraries and bad laboratories and mediocre teachers, it's not the budget in the State going to suffer, it's those students that will

suffer from education, and for their whole lives.

MS. PORTER: One example, the day they opened the community colleges, it has been too full in Anchorage, and it has been too full ever since. That isn't a great university, but it is getting education to the people, which is what it's all about. If you want to have a great university in Fairbanks, fine, I have no argument about that. Excellence is there.

But we're talking about common education for the common person who needs it. Vocational training, artistic, whatever they want. Academics they can get at the university colleges. These are people who can't go to Fairbanks that you're educating right here in Anchorage. You have a more informed, more educated population. We'd like to have that, too.

MR. ECKHOLM: Would you like to see a totally separate thing put in the Department of Education?

MS. PORTER: No. Totally separate.

THE MODERATOR: Your argument seems to me to be, if you get away from the junior colleges, you need more money. Would it be a recommendation to give more money?

MS. PORTER: It's not a matter of money. A whole administrative matter. Credits, as far as future education, it's a whole philosophical thing with the university, that they basically don't want people educated at a community

colleges.

MR. McCUTCHEN: Rosie, I disagree with you. When it opened up, it was not full. The Anchorage Community College, I don't know if anybody else was there, I was. I remember. The standards that we had at that particular time are far higher than the standards they have today in the community colleges system.

MS. PORTER: What is that?

MR. McCUTCHEN: Anchorage Community colleges opened up in West High.

MS. PORTER: I happened to be there.

MR. McCUTCHEN: What was the year?

MS. PORTER: 69, 70. I don't remember.

MR. McCUTCHEN: Long before 70. I was there, and I don't remember seeing you. But the point I'm trying to make here is that it's a question of the standards. We didn't have any professional teachers. They went out to the community and found people. The biologist came out of Dr. Rauch's office at the Arctic Research Center. Mathematics came from some engineering firm. All the way down the line. They picked them off that way and these people, all they could do is what did they remember when they were freshman in some big school somewhere and they made it just as tough. That's what counts. There's no entrance examination.

I think if you're going to get into it, somebody

who only needs two years, somebody who has screwed up and has to have a easy way to get in to prove himself to master the work. And you make that school just as tough a as university.

MS. PORTER: I'm not saying we don't have to have excellence in a community colleges. But I'm talking about shining, royal excellence, at the beautiful university.

MR. McCUTCHEN: I'd like to retreat going back more than most of you can go back in this room. That's back in the period of time in the 30's and 40's, also before my time. During the 30's and 40's, we built the best mining engineering schools in the work. And we were broke. It was sheer determination and guts that did it. And later on in the 50's we excelled in geophysics as a result of the mining engineering.

And so I just ask one thing: Don't throw money in it. That's what screwed up our school now.

MR. POMEROY: We must remember that we can't have all we want of everything for everyone everywhere. That's a problem that is with us continuously. We have 400,000 people spread over 327 million acres all the way from Ketchikan to Kotzebue. And I think that we would be screwing ourselves up in an opportunity we have upon this occasion of our being here these three days if we don't go ahead with the main proposition with Ed adding what he

thinks might help as an indication to the legislature.

THE MODERATOR: Perhaps the thing to do, then, is take up Rosie's recommendation, which is to divide the community colleges from the senior colleges and dispose of that. If you want to do that.

MR. ECKHOLM: Well, that's part of the recommendations. We'll come back to it. It's been a well fought battle and there's things to be said for both sides, and get a compromise approach, if we lose this.

Are there any other recommendations relating to the university?

MS. PORTER: Not to the university.

MR. ECKHOLM: Anything else relating to the university or community colleges systems?

Do you want to go back and ratify these universities ones?

MR. NASKE: One concern, and that's I just don't believe that even with the plethora of money we have right now that we'll be able to build 30 or 40 institutions that excell. It just ain't possible.

MS. PORTER: Maybe educate, not excell.

MR. NASKE: There's a difference, I suppose. You can adequately educate.

MR. ECKHOLM: Rosie, do you have another recommendation?

MS. PORTER: You have a continued support by the legislature for the expansion of community education, which is different again.

MS. STRASSBURG: Adult education?

MS. PORTER: You've got it here in all your schools.

MS. SIMONDS: Community school.

MS. PORTER: Community school. Legislature funds it through the local schools. Very important part of the --

MR. HARTLE: Did you say continued support? I'd like to make that a little bit stronger and say continued support and expansion.

MS. PORTER: I did say that.

MR. MERDES: I think you ought to distinguish it because most people will be confused in addition to community college. You got the word "community" in there.

MR. ECKHOLM: You have the specific community schools.

Other recommendations related to education?

MS. SPARCK: I think the State ought to do something about the pathetic high school, rural high schools. It's really pathetic. There are two teachers for the whole four-year high schools, and the quality is just really poor. The State ought to do something about that.

MR. ECKHOLM: What would you like to do?

MR. MERDES: Where is this?

MS. SPARCK: Village high school.

MR. MERDES: Any particular one? Is it all of them? What village are you talking about? Some of them are good.

MS. SPARCK: Hooper Bay, Chevak, Nunapitchuk, Kipnuk, Nelson Island.

MR. ECKHOLM: Are there some particular things that you perceive as being the biggest problems?

MS. SPARCK: There's no teachers. There's no teachers. The teachers that go out there teach whatever they can, even if it's not in their fields.

MS. SIMONDS: What's the population of the high school?

MS. SPARCK: What do you mean the population?

MS. SIMONDS: Of any, the smallest or the largest? In general.

MS. SCHIRMER: Under 15?

MS. SPARCK: Under 15.

MR. NASKE: I have a recommendation.

MS. SPARCK: What difference does that make? The quality has to be there if the high school is in existence.

MS. SCHIRMER: You can't very well have 12 teachers for 12 kids.

MS. SPARCK: Well, something ought to be done. I was saying telecommunications system to be utilized to telecast religious or whatever quality. But something should be done.

MR. NASKE: I'd like to put that in the form of a recommendation, that the legislature pursue methods of

fully utilizing telecommunications in the educational system, meaning from grade school through graduate school.

MS. PORTER: Where?

MR. NASKE: In the State.

MR. ECKHOLM: Go over that again, please?

MR. NASKE: That the legislature pursue the possibility of fully utilizing telecommunications in the educational system from grade school through graduate school.

MS. SCHIRMER: Down in Southeast where we have a lot of very small high schools. That I see quite closely, I think they're doing some really excellent things. Very often only one teacher for a high school, small high school group, that they're using a lot of packaged materials where the kids have stuff on a video tape deal and follow through the directions and come back and go on forward with it that are working very well.

MS. PORTER: That may work just beautifully in Anchorage, Fairbanks and Juneau. But in the rural areas of the State --

MS. SCHIRMER: I'm talking about Prince of Wales.

MS. PORTER: That's wonderful, because you all speak a lot of English down there. But I think if the State is going to enter into the program of educational T.V., that it must be regionalized, that it must not come out of one source.

MS. SCHIRMER: This is why I brought this thing up is because I think it's much more adapted to the two or three kids in the small place than a T.V. thing, where everybody has to get together at the same time in various places.

MS. PORTER: We have an incredible valuable resource in our hands. We must never fool ourselves that the television is going to replace the one-to-one of a teacher, particularly in a small classroom. Once in a while it's nice, but as far as pouring millions of dollars into it as the State has already spent, you realize five point some million dollars and then the State kicked in -- from the Feds, the State kicked $600,000 a couple of years ago to do an educational thing for the rural areas. 23 villages. There was no bilingual programming. We've got many, many scattered spoken every day by students in all the rural areas of Alaska and there was no consideration given to that at all or regionalizing them in any way. I think that's just a dead loss.

THE MODERATOR: I think the way Claus has worded his, though, it would include what you're saying.

MR. NASKE: It's a very broad mandate, really.

MR. ECKHOLM: I think that Rose's point is very important. I'm personally fairly involved in this field. And I think there are ways you can go about it, but I don't think we're talking specifically about T.V.

telecommunications, computer-assisted program. And the point is what you would be doing is you've still got the teacher there, but you're adding to the ability of that teacher to turn on the kids.

MS. PORTER: That's fine, we can use computers.

MR. ECKHOLM: It amounts to about 60 villages now.

MS. PORTER: Two or three villages in our area, about 60 villages.

MS. PORTER: That are getting the television demonstration projects. Unless it's going to be huge capital outlay and continued support for that --

MR. ECKHOLM: They're doing one experiment now at Northwest Labs that does a direct computer individualized program.

What I'm saying is that I agree with you in that in order for it to work it has to be purchased by a district, the district has to say, yes, this is good for our kids. I don't think the State should ever come in and mandate and say this is a program that every kid has to use it. They have to be good enough so they want to use them.

MS. PORTER: If the State has money to do that, I submit it will be much more human, better educationally to give the school district the money with the purpose of hiring traveling teachers, go out one on one, experts in math, the arts, English, whatever, science, to work with

the kids, to bring their experiments and do it throughly, where they can camp with the kids and the kids can ask them questions.

MR. ECKHOLM: There is no replacement for the warm body, but there is an opportunity through telecommunications to give that teacher more information and more resources. When you're out and you can see the evening news, that increases your understanding in the world and that is something that that teacher cannot give you.

MS. PORTER: That's true. Right up until the moment it fuzzes up on you.

MR. MORGAN: Can I address the concern the little lady has over here. And it's one of geography. You're apt to get a better degree from the University of Chicago than you are at Slippery Rock. You're apt to get a better high school education in Anchorage than you are in Delta Junction, for instance, not necessarily, but chances are.

One thing that has caused the quality of education in the bush schools to be not as good as it can be is that geographic fact. It's a little school a long way off. I came from a school where our graduating class was 12. And I never overcame that. And we have that until you get to the point where mechanically you can put, as the lady says here, 12 teachers for 12 students.

But in addition to the physical disadvantage, you have also a cross-cultural disadvantage. If you started to school in the first grade and everyone there spoke German, and you had to learn German automatically and scramble to get going to find out what was really going on, it would shake you up. And that is the case for many, many young native students.

MS. SPARCK: We also don't have -- today, like probably in your day, your teacher was more versed to teach in that setting than today. They're so specialized, like one teacher will be specialized in English, they're not really well versed to teach in all subjects.

MR. ECKHOLM: More recommendations on education?

MS. SIMONDS: Now? I'm way down at the other end, the bottom core of the monolith. It's a project to help people who do not read who are functionally illiterate. This Anchorage literacy project has basic education tutors, and there's English as a second language tutors.

And it's a one-to-one, and there are supposedly ten percent of the people on the national level are nonreaders.

So if you transfer that to Anchorage, it's maybe about 10,000 people. But even if you have that, it's 5,000. There are a lot of natives who come into the community and this would help with urban survival, to help with the reading if they needed English as a second language.

And a lot of people are Orientals, Hispanics, and they also can be helped. We had 100 requests for tutoring English as a second language which we had to turn out because we did not have enough tutors. What we need is funds. The tutors do it voluntarily. We have 45 basic English, but we do not have administrative help to go out and recruit. We should be getting to the prisons, battered wives establishment, halfway houses, McLaughlin Youth Center. We should be contacting counselors. One of my students is a high school graduate from an Anchorage high school, third grade reading level. There are many that we should be finding and helping to read.

MR. ECKHOLM: Would you like to make a specific recommendation?

MS. SIMONDS: Yes. I would like funding for this project.

MR. ECKHOLM: Just that one project?

MS. SIMONDS: This is what I'm involved with. I think literacy is a line item funding.

A VOICE: Where is it?

MS. SIMONDS: This one is in town, but there are others in the State. But I'm not familiar with those, but this one I feel we could do a lot more if we had funding.

MR. HARTLE: I'm familiar with the same sort of program, Literacy Council in Fairbanks, and I just know

that they're doing a tremendous job and one of these places it's a very small program, very inexpensive, they use all volunteer labor except for a very small staff in Fairbanks. The staff is three persons, and they're just doing a tremendous service to the community and it could definitely be expanded. And the fact that they use volunteer labor, it's like leveraging your money.

Secondly, this would meet with Representative Meekins' priority that he mentioned yesterday when he spoke. He said that when he writes the house version of the State budget, he prefers to start with the smallest projects first, then go to the larger ones. I mean, we've talked about buying into the gas pipeline, and all these --

MR. ECKHOLM: Would you like to make a recommendation?

MR. HARTLE: I'm making a recommendation that we fund as a priority in the State educational system these type of reading programs.

MS. SIMONDS: They are not taken care of anywhere else. ABE doesn't do it. Nobody else will take care of them if we don't.

MR. ECKHOLM: Ma'am, do you have your hand up?

MS. SPARCK: No. Are we getting ready to vote on this?

THE MODERATOR: It won't be called the Anchorage Literary Project, it will be called reading program, as he said?

MR. ECKHOLM: Funds to support basic literacy projects in Alaska?

MS. SIMONDS: Yes. You could do that. That's fine. All nonreaders. I'm happy to help.

MR. HARTLE: I have another recommendation that the State consider extending -- how do I say it? Lowering the minimum age at which we fund education. Right now we start with kindergarten. The child is five, we provide for all these kids; if the child is four years, 364 days, we don't provide for them. I think the State should look into funding pre-school education on a voluntary basis. I want to stress that.

MR. ECKHOLM: Any other recommendations?

MS. SPARCK: I have got one more. I would like for the State to consider funding some exchange programs for high school and to rural community colleges for their students to expose them to urban life, because they don't.

MR. ECKHOLM: This would be a transfer. So we should send some urban kids out to the bush, too?

MS. SPARCK: Right. Both exchange.

THE MODERATOR: I heard the other day, my wife was on the advisory board for the university, that she came home with the information that the highest number of drop-outs, first year at the university are native kids. Does that surprise you? I'm not sure it's true, but I think it's

what she said.

MS. SPARCK: I've heard it's true.

MS. SIMONDS: They do have a Denali Project now that's very flexible for native students. And it's really kind of tailored to their easing them into the educational system.

MR. ECKHOLM: It's still not just education. I think that's a very excellent suggestion, but I think that living in a small village in Alaska and living in a big city is worlds apart for many of us who have had the luxury of going to visit and seeing and understanding a little bit of both. There are many people in cities and villages who have no comprehension of the other world. So I think sending city kids out to the villages is just as important.

MS. SPARCK: I think it's a good survival kind of a thing, too. It has to be well constructed, though.

MS. STRASSBURG: Are we into right here the financial aspects of the student in education?

MR. ECKHOLM: Go.

MS. STRASSBURG: Because if we are, Ed is going to be mad at me. We talked, or I heard him speak the other day about free tuition for Alaskan students in the university. Personally, I would rather see a lowered tuition fee for those students who live in Alaska with a very liberal loan program so that they actually pay back the minimum amount of their tuition rather than giving it to them free. People

do not appreciate things they don't earn.

And simply living here is not earning it. This is a feeling that I have. And I really would like to throw it out to you, because it isn't that I want to take things away from someone who wants to learn, but normally the person who wants to learn, if he really has to earn the privilege he's much more apt to make a good use of his education.

MR. MERDES: I'd like to respond to that because I absolutely, as far as you go, express and feel the same way. But I want to go one step further. That's the reason I made the recommendation.

First of all, you're talking about a matter of $5,000,000 that the State gets now for tuition from kids. Now, let's figure out what the expenses are to a university.

Probably the least expensive thing is tuition.

MS. STRASSBURG: This I agree.

MR. MERDES: Let me tell you why my reason is. Food, books, the dorm. What you're doing when you waive simple tuition, which is pretty low anyway, you're telling every family in Alaska you're getting a special thing from the oil revenues. You still are sacrificing because you got to pay for the most expensive stuff. What it is is a round-about way to motivate Alaskan families to send their kids to the university in the first instance for economic

reasons.

Let me tell you, I talked to these kids, they say, "My goodness, just think, we can save $600, but we still got to pay for those books."

MS. STRASSBURG: If you may loan him enough money so he can afford to go and pay his board and room and pay it back later after he has acquired the ability to pay it back.

MR. MERDES: That's your argument.

MS. STRASSBURG: By the time of kid gets out of high school, if this is a low income or very low little income, the parent may have been able to struggle and beat his brains out and support this kid until he gets out of high school. He may be a brilliant child, but the parent cannot afford to support him any longer. He really needs to get out in the economic world and pay for his own way. I think a very low cost, very flexible loan program that would even help support him until he gets out into the working world and can pay it back.

MS. SHROYER: If I may say something, I'm a student at the university and we already have a very flexible loan program and it does cover room and board where I live on campus. It covers travel expenses, and I only have to pay back 60 percent of that loan because I'm over 20. I've been here over 20 years. I think our loan programs are already set as they are. But I still agree with Mr. Merdes.

Books even cost more than tuition. I pay $20 for one book, for one class.

I think that it's a good idea, because just get that little bit more incentive, I don't have to have an extra $600. Actually, it's really less than that for residents. I don't have to pay that extra little bit for tuition when I've got health to worry about and I've got books and room and board and travel expenses, and the necessary recreational expenses for the university students. I think it's a good idea.

MS. STRASSBURG: I was willing to listen, but I also want to put in the fact that I personally think people are much more appreciative of things they have to earn.

MR. MERDES: Don't imply we're not against that, see.

MR. HARTLE: I'm wondering if anybody knows how much this would cost. Just so that we're all aware of this, the University of Alaska has the ninth lowest in the nation as far as tuition. So we're already almost doing that. We certainly subsidize it to a degree.

MR. MERDES: I was one of 13 kids. There are a lot of people in this State who are poor. There's a lot of people in this State folks don't work. You're going to give the poorest kids and the kids that may not have a chance that one little thing that will make him go to the university. That's why I'm for that. It's also a human dimension, and

that's my point.

MS. STRASSBURG: I didn't understand.

MR. McGINNIS: I'm concerned about some of the things that have been spoken of here. I wonder if there is a mechanism by which we can create the sense of responsibility. If the University of Alaska ever moved to free tuition, I would hope that the mechanism by which it could be accomplished is that a check equal to the amount of tuition would be made out to that student and to the university, cashable by both so that student would know that somebody put up that money.

Education is not free. It is enormously expensive. I would even say equal to the full cost of his education would be transmitted to him or to her and the university. So they would have to endorse the check for $20,000 of taxpayer's money over to the university. It's a lot of paperwork, but at least it would say to that student,"what I'm getting is extremely costly. Somebody is paying, and I better appreciate it. And I better make good."

MS. SIMONDS: You might do that with a lot of things we do around the State. Put a price tag on everything.

MS. SPARCK: I have a question in my mind who is going to take over, like, say, you see Alaskan citizens for free tuition. And in order to be an Alaska citizen, all you need to do is stay, what, one month?

MR. MERDES: They have requirements right now at the university. They have regulations on that.

MS. SHROYER: It's 12 consecutive months.

MS. SPARCK: All right.

MR. MERDES: That's already pretty well established.

MS. SHROYER: I would also reemphasize the free tuition. My mother is a universit employee, so I have half of my tuition. If I did not have that privilege, I would not be able to afford to go to colleges because my mother doesn't make enough to support four kids by herself, which is what she's doing. And there's a lot of other families in the same kind of condition. I would not be able to afford that if I did did not work at the university.

THE MODERATOR: We're getting to the point where we've got to wrap up education and get to other things that I might want to say, and then we've got to go down this list, the finance, the first one, go through that, probably go through the others hurriedly in probably an hour.

MS. SIMONDS: There's one here that sounds very odd printed out.

MR. ECKHOLM: Any other recommendations on education?

I have one. We talked about excellence at the university. I think that the public school system promotes mediocrity in our kids from the age of five and that getting to the university and keeping a good brain is a

very difficult task. I think we ought to look at the small percentage of kids that are gifted and bright and devoting a lot of money to keep them bright.

MR. POMEROY: What has been done by the rest of these?

MR. ECKHOLM: They're written down as recommendations. We've got to go back.

MR. POMEROY: Go back and okay them?

MR. ECKHOLM: Do you want to take a little short break?.

THE MODERATOR: Do people want to take a five-minute break?

(A recess was taken.)

MR. ECKHOLM: What we hope to do now as quickly as possible is go over the education ones and we're going to go back to the wish list that we had the first day and that would be the final round of recommendations so that we'll go over that wish list, and if we haven't handled them, come up with a recommendations, any recommendation on any topic.

MS. PORTER: We're not going to go through transportation and communications?

MR. ECKHOLM: No. Make it then.

THE MODERATOR: Eric wants tomorrow to clean up language. If you go along here and want to clean it up, we can.

MR. ECKHOLM: We'll have it done by 8:00 so --

hopefully we'll have it for ready for you at 8:00. If you want to come in and look at the recommendations, I'll have them ready for you.

MS. SIMONDS: I'll trust you.

MR. ECKHOLM: Education. The first recommendation we had in education was to adopt Senator Merdes' opening remarks, including the free tuition for residents, and he was going to have that worked up for us in a form of a recommendation by 8:00 o'clock tomorrow morning.

MR. MERDES: You're sure putting the heat on us. By 8:00 o'clock tomorrow morning? I guess so.

MR. POMEROY: I move the adoption by unanimous consent.

MS. SIMONDS: Does it have to be printed up?

MR. ECKHOLM: No. We can type it. If you could give it to us so we have a chance to put it together.

THE MODERATOR: You've heard the motion. Unanimous consent has been asked. Is there any objection?

MR. ECKHOLM: The second recommendation was if the federal government abandons NARL, the State should consider adding that as a facility of the university.

MR. NASKE: Sounds good.

MR. ECKHOLM: Any objections?

Third was the separation of the community colleges from the University of Alaska.

MS. PORTER: Could I just change the words to grant autonomy to the community colleges system?

MR. ECKHOLM: Okay.

MS. SIMONDS: I think the community colleges people are working on it.

MS. SCHIRMER: Let's vote on that one.

MR. ECKHOLM: This is the biggest vote we got. The motion is to grant autonomy for the community colleges system.

THE MODERATOR: All those in favor.

It didn't pass.

MR. ECKHOLM: If you'd like to develop a minority report and submit that into the record, we'll put it into the record.

MS. PORTER: An extreme minority.

MR. ECKHOLM: Fourth recommendation, to develop excellence in vocational education as a basic function of the university system; to develop excellence in vocational education as a basic function of the university system.

MR. MERDES: It should be vocation and technical.

MS. SIMONDS: Wasn't that the university system?

MR. ECKHOLM: They're both the same, aren't they?

MS. SIMONDS: They are separate functions anyhow. They may be under a different board of regents.

MR. ECKHOLM: If it is all based, develop technical

education as a basis.

Any objections?

THE MODERATOR: That's all right.

MR. ECKHOLM: Five. Continued support for expansion of community education.

MR. POMEROY: Say that again?

MR. ECKHOLM: Continued support for expansion of community education. That's really not the right wording.

THE MODERATOR: Community schools.

MR. MERDES: See, I told you there would be confusion.

MS. SIMONDS: Say community school.

MR. ECKHOLM: Community school programs.

MS. PORTER: The system in itself as established by the legislature is an expanding program. In my original remarks I said continued support by the legislature for the expansion of community education.

MR. ECKHOLM: How about continued support and expansion of the community school program? We'll work on it.

Six: Legislature pursue methods of utilizing telecommunications in all phases of education, especially to support the rural school programs.

MS. PORTER: Only if it's on a regional basis. I will write a minority opinion on it.

MR. ECKHOLM: Can we incorporate that? How can we add that? The districts have to buy it. Nobody has ever told

any school that they have to use any sort of education. It's only provided at the request of the school district. And I think that's basic to our educational system.

MS. PORTER: Nobody has ever -- in this case, maybe not.

MR. ECKHOLM: That's a real basic tenet of our education system is that the local people have full control over the program. And there aren't any dictated programs, as far as I know, from the State.

THE MODERATOR: She's talking regionalism, more control, the language and the programs.

MR. ECKHOLM: That means if they've got control of their systems that they're not going to buy it unless they want it.

MS. SCHIRMER: Can't you put regional in there?

MR. ECKHOLM: How?

MS. SCHIRMER: Read the thing again.

DELEGATE: With regionalized programming.

MS. SCHIRMER: That's good.

MR. ECKHOLM: Pursue methods to fully utilize telecommunications in all phases of education, especially to support rural schools with regionalized programming. Is there any objection?

Next, that the State appropriate funds to support basic literacy projects in Alaska.

MS. PORTER: Could we add a word in there, not just funds, so they don't give them three bucks. Some kind of adequately funded.

MS. SHROYER: I have another amendment. I'd also like to add bilingual so we will continue to support the native language.

MS. SIMONDS: There is a separate program already. There is one. This English as a second language is a different concept.

MS. SHROYER: Thank you.

MR. ECKHOLM: Is there any objection to that? Okay.

Next. State provide funding for pre-school programs.

MR. POMEROY: What does that mean?

MR. McGINNIS: That's probably the most important thing we've talked about here tonight. I'll simply make this remark and shut up. More learning takes place between the years of three and five than at any other time in the learning career of the student. This is where we're missing the boat and we're cheating our kids. Because we're feeding them pablum with some of the television without substance. Whether he's an Einstein to an idiot, he learns more from three to five than any other time in his life.

MR. MERDES: I agree with you, Fred, a thousand percent.

MS. RICHCREEK: I would agree, but there is a problem for us on a travel system. They have to travel 50 miles.

MS. SIMONDS: It's not compulsory. It's optional.

MS. PORTER: We have an enrichment program for early childhood that's operating in our region right now. People travel from home. Because early childhood even before three is a very important time where they have stimulation.

MR. HARTLE: Could we make the wording pre-school education so that that could include programs that came to the home or telecommunications or whatever.

MR. ECKHOLM: State provide funding for pre-school education programs. Any objections?

Nine: Provide exchange programs between urban and rural students in Alaska.

MR. HARTLE: Could we go back it eight for a second. I want to make sure it means that we expand any program that we might have now.

MR. PARKER: You're spending a million-eight right now.

MR. HARTLE: I'd say as a high priority in our educational system.

MS. STRASSBURG: I would only have one question there. I'm afraid of this being -- and, granted, I agree with you that they learn more from three to five years old.

But, are we providing a babysitting service for mamma, who wants to go to the movie in the afternoon?

MR. ECKHOLM: Are we doing that in our public schools?

MS. STRASSBURG: No. What I'm saying is these little youngsters, they need to learn, but they also need their mother. This is something to think about.

MR. MERDES: I don't think potential abuses should be a reason in the program.

MS. STRASSBURG: I don't think so, either.

MR. MERDES: Abuses are have been possible.

MR. ECKHOLM: State provide funding to expand pre-school education programs as an educational priority.

Nine: Provide exchange programs between urban and rural students in Alaska.

Ten: Support expansion of programs for the exceptionally gifted students in Alaska.

That's it.

THE MODERATOR: For education.

Let me try this on you. Here's our wish list now. Let me just read it to you quickly. You can hear these words that you came up with. Remember, we are trying to spend money. We just heard from Belden Daniels and Williams and Russ Meekins. We said fishery loans, nonoil energy; money available to local bank in small Alaskan businesses, housing loans, stay away from big projects and support small businesses, use private enterprise rather than developing State programs with the money to compete with

private enterprise; reinvest in the veterns loan program, enter into great transportation system, invest in resource management, a rainy-day account for State government; invest in public works, especially alternative energy ports and harbors; lump sum liquidation of Alaskan native fund paid for by the State, 400 million dollars, improve communications, higher education and research, vocational and trade education; tax credit for homeowners based on energy use; direct distribution of funds based on residency, $100 per year from the age of 17 up to 50 years; don't repeal State income tax; rehabilitation of correctional system; money to develop the Capitol move; money spent on ways to reduce government and make it more efficient; tourism, massive national advertising; invest in the timber industry; consider investing more in rural areas than in urban areas; State sell lands for housing; invest in programs that are cost effective rather than subsidies.

Those are the 26 items.

MS. SIMONDS: We should cross out the ones we've already taken care of.

MR. ECKHOLM: Let's go from the top.

We've done fisheries loans, right? We've done nonoil energy.

Money available to local banks for investment in small Alaskan businesses.

MS. SIMONDS: I'd like to reconsider that. I think the banks might make a lot of money and I'm not sure what everyone else would end up with. They might give out a lot of loans just to make money on them without being as careful because it's not their money.

MS. SHROYER: I had the same kind of problem with it. But I went and I talked to a couple of people who knew more about local banks. And I believe that they would still want to distribute those monies even with regulation attached to them so that they wouldn't be able to have outrageous interests and some of the interests would go back into the State revenues. I don't know if you want to work that into the recommendation or what.

THE MODERATOR: It was my recollection that people were saying, but let's have the State direct where that money goes to a point. In other words, not just give it to the bank, but to tell the bank we want so much in this area, so much in that area.

MR. POMEROY: It was maximum feasible utilization for financial institution for the management of our loan funds, is that not right?

THE MODERATOR: I think it's like Milton Lipton kept saying, first make up your mind what you want to do before you make that decision. What is it you want to accomplish with your money, not the highest interest rate and the

security. That comes later. Make up your mind and then protect yourself.

MR. HARTLE: One thing we covered, is just what it says here, as small as Alaskan business is, I think that was probably what we were trying to express. We want to invest in small businesses. They provide the most benefit as opposed to huge projects.

MR. MERDES: I'm always worried about that. Because let me tell you the cost of this small business is enormous.

Natural growths that result from small businesses, they may call them small businesses. Take, for example, Matanuska Valley Co-op. They're everything. Is that a big business or a small business? That's the point.

THE MODERATOR: My experience tells me that in order to get into the Delta Barley Project or in order to get into the fishing business or in order to be a small oil operator up here you got to start at a half million and go up.

MS. STRASSBURG: But those are taken care of under your fisheries loans and under your other category, not under the small business loans. My feeling when I suggested this, go through the local banks, is not that that bank is going to just wholesalely support every small business that comes in and wants to borrow money. They're going to look at it and say they want to borrow 100,000 and by the time they

get done this with loan the State and the bank together are going to have a $50,000 profit. This is what I'm thinking about.

But the bank knows his local residents. He knows the people in his town, maybe not personally, but he knows their reputation, and knows whether the program that they're proposing is going to be feasible.

He knows what the economic situation is in his community better. If this man's banker is in Fairbanks or Wasilla, Los Angeles, he knows the potential economic feasibility of that project better than someone in Juneau.

THE MODERATOR: I think that was the philosophy. Use the local banks but direct to use them for small business.

MR. ECKHOLM: Money available to local banks for investment in small Alaskan businesses with specific requirements from the State.

Is there any discussion on that? That's the first one we've adopted on the wish list.

MR. HARTLE: What happened to one and two?

MR. ECKHOLM: We've already done them?

MR. HARTLE: Other places?

MR. ECKHOLM: Yes. Four. Housing loans.

MR. HARTLE: I think that wee need to make some stipulation on this. Some places in the State are totally overbuilt, and putting our money into this wouldn't be cost

effective.

MS. SHROYER: What do you mean by overbuilt? Do you think that Anchorage and Fairbanks should not have the availability of monies for housing just because they have a lot of people there?

MR. ECKHOLM: It would stimulate the housing industry more.

MS. STRASSBURG: No. We've got empty places.

MR. MERDES: Temporarily.

MR. ECKHOLM: But if you make a lot of money available, you're going to get more people building houses.

MS. STRASSBURG: With 60 percent of them sold last year not built.

MR. PARKER: Mr. Chairman, the problem is not overbuilt, but undersold.

THE MODERATOR: Now, the housing is a critical area. Do we want to deal with it, or is it enough? Because we're going to have to talk about it, if we do.

MS. SCHIRMER: I think it's appropriate to deal with it.

THE MODERATOR: Are we talking about housing for everyone? Low, moderate income people?

MR. MERDES: For Alaskans. I like to get on the pioneers and get everybody.

MS. SHROYER: I don't know about the rest of the State, but our Fairbanks Borough just sold bonds to make loan

monies available for housing. I don't know if there's other programs already in practice. Maybe it's just superfluous.

MR. ECKHOLM: There have been programs in the State, but it is a big area and there are a lot of --

MS. SIMONDS: I think that the real estate people work for this, so I don't think we have to do it, and that's private enterprise. I think it will be taken care of through the private channels.

MR. HARTLE: I agree with that. What we're doing here is deciding our priorities for State monies, and that where there are -- I think in some places housing loans are tremendously valuable and needed and that where they are and private enterprise is not now doing it, the State, it's a legitimate reason for the State to do it. But in some places in the State, this is too simple for me.

You need to say where it's needed.

MS. SCHIRMER: Where otherwise not available.

MS. SHROYER: I like that.

MS. SCHIRMER: Because there are places where you don't have a sewer system and you don't have public power and this and that and the other.

THE MODERATOR: Where private housing funds are not available, the State should enter.

MR. POMEROY: This is a program. This matter of housing is something that Russ Meekins is making a high

priority on his. And I think what you said earlier, or somebody said, is important. What sort of purpose are you going to serve?

One of the questions that's been raised is that interest is too high. Are you going to give everybody low-interest loans, or give them low-interest loans up to $100,000 houses or $60,000 houses? I just don't think we can handle it unless we have hours to discuss it.

THE MODERATOR: But if we say where private funds are not available, the State should enter?

MR. POMEROY: Where private funds are available, except for a very few rural areas, private funds are available for a price.

MS. PORTER: They are not available in many, many rural areas.

THE MODERATOR: At any price. Yes.

MR. HARTLE: I agree with your concern there. I just don't think -- I want to be more specific than this, but I want to be less specific than state the interest rate. But I don't know what's going to happen in ten years with interest rates. I think if we say housing loans where otherwise limited and available or where otherwise not available would cover it. If we want to cover all night talking about housing.

MS. SCHIRMER: We're not making the law, we're just

giving some suggestions to the legislature.

MR. POMEROY: Suggesting that broad wouldn't give me anything. Otherwise, where it isn't available, then you got to figure out what interest rate is. If they're making loans available here, because there is money available in agricultural at 13 and a half percent, what are you going to do in Bethel. You're going to decide it ought to be seven and a half percent?

THE MODERATOR: Maybe.

MR. HARTLE: I don't know. I'm not an expert. I want to leave it to the experts.

MR. ECKHOLM: We have a recommendation. Housing loans where private housing funds are not available. Is there objection?

MS. SHROYER: Yes. Private housing funds, if they're by the Borough, then they're not private.

MR. ECKHOLM: Where other housing funds.

MS. SCHIRMER: That's better.

MR. ECKHOLM: Other.

DELEGATE: Other than what? Other than the State.

THE MODERATOR: But actually, the Borough money is used to buy mortgages that are private.

MS. SHROYER: Right. There is a bond sale, but other funds.

MR. ECKHOLM: Okay. Make State housing loans available

where other housing funds are not available. Objections?

That's adopted.

MR. POMEROY: But it's adopted just the same. Go ahead.

MR. ECKHOLM: Five. Stay away from big projects and support small businesses.

MR. POMEROY: I don't like that.

MS. PORTER: That's an investment policy direction and unless we're going to give them a list of investment policy directions --

MR. ECKHOLM: It is a broad category and it could tell the legislature a lot about where you're going to put the money. Because they're going to be asked about going into a couple billion dollars of projects.

MR. POMEROY: What Milt Lipton was talking about, these great projects, they can get their money. You're not going to have to worry about it. You're not going to have to finance Gulkana.

MR. ECKHOLM: They might come to the State, because they might figure they can get it cheaper.

MR. NASKE: It depends on the method of financing. Like the Suisitna project. It's going to be tax exempt bonds. But the State is going to sell those.

MR. ECKHOLM: There has been a motion to table this one, to scratch it.

MR. MERDES: Don't vote it, just ignore it.

MR. ECKHOLM: Does anybody want to include it?

MS. SCHIRMER: Kind of. I really do. I think the Suisitna project is a case in point. I would hate to see us say go and take on the Suisitna project and not be able to fund any of the other small hydroelectric things. I think this would be a mistake. I think we've all sat here and we heard a little bit about the Suisitna project in the background and I think a lot of us are kind of feeling that we kind of worried about it unless we know more than we do.

MS. SHROYER: I think that if something like that would also preclude a recommendation we made earlier with oil and gas, that if we want to be a partner in something like the gas pipeline, that recommendation would exempt that kind of investment. I also trust my State government, my legislature to make good investments and good expenditures with our monies. They haven't always, but for the most part, with our public watchdogs or whatever, I think we'd be just fine, I think.

MS. RICHCREEK: If we do anything, I'd say stay away from corporations and support independent businesses.

MR. POMEROY: No.

MS. PORTER: Can I make a suggestion? That we just table it until tomorrow morning, then we have a little bit of time, we can do up a little philosophy on how we'd like to see them invest the money, just on the investment

portfolio.

MR. ECKHOLM: Would you do that for us, until the morning?

Six, use private enterprise rather than developing State programs with the money to compete with private enterprise.

THE MODERATOR: Adam Smith.

MR. ECKHOLM: Does anybody want to include it?

MS. SCHIRMER: Sure.

MS. SHROYER: Yes.

MR. ECKHOLM: Does anybody want to change it?

MR. RODERICH: Read it again.

MR. ECKHOLM: Use private enterprise rather than developing State programs with the money to compete with private enterprise.

MR. MERDES: That's absolutely ambiguous.

MR. POMEROY: We do have several directed like that.

MS. PORTER: I'm all for dumping it.

MR. POMEROY: Table it.

MR. ECKHOLM: Okay. Scratched.

Reinvest in the veterans loan program. Is reinvest the right word?

MR. MERDES: Reinstate.

MR. POMEROY: Seven percent interest, because I'm a veteran.

MS. SIMONDS: So am I.

MR. ECKHOLM: Is there any discussion about that?

MR. HARTLE: Somehow I'd like to at the same time expand other loan programs that are available to nonveterans.

MR. MERDES: They're doing it.

MR. HARTLE: I don't want to fight this, I just want to say that we need at the same time otner programs. Because veterans are a limited group and, you know, I don't want it to be our policy to fund limited groups of the population.

MS. SHROYER: I like the idea of the basic veterans loan program, but I have the problem basically with the young people who are not drafted. I'm not a veteran, I never will be a veteran because I don't want to join. I think, even though it's good to have the loan program especially for our Viet Nam veterans, that there should be an end.

MR. MERDES: That will end when you don't have any more wars and the veterans go away.

MR. ECKHOLM: Good luck.

MR. ECKHOLM: Could we add to that and their surviving spouse?

MR. MERDES: Veterans and their surviving spouse. There could be male surviving spouses.

MR. ECKHOLM: That's right.

MR. ECKHOLM: Is there any further discussion? You can make a motion later on other fund programs.

MR. MORGAN: In regards to the veterans loans, the veterans loans were set up to somehow or another attempt in some small measure to repay the sacrifices of the veterans who fought for their glorious country. Now, to say everyone now should have a loan because they are a human being, I don't see anything wrong in giving a guy a chance to borrow some money for just the reason that he's a veteran.

MR. ECKHOLM: And some of those people sacrificed their prime earning money and made little money.

MS. SHROYER: My point earlier was for those people who joined the Army and have not had to fight, got good GI pensions. I'm serious. These people are not going to be fighting.

MR. ECKHOLM: If you spend six years in the service from age 20 to 26, --

THE MODERATOR: We're getting too much detail here.

MR. ECKHOLM: Is there any further discussion? Is there any objection? It's worded fully reinstate and fund the veteren's program including the surviving spouse.

MR. ECKHOLM: They closed it down. They closed all the offices.

A VOICE: Alaskan Housing Finance Corporation? The Vet State Loan Program. The provisions to accommodate the

veterans has been moved to Alaska housing finance corporation.

MR. ECKHOLM: The corporation no longer has outside funds.

MR. ECKHOLM: Let's move on. If it is existing it won't matter anyway. If it isn't, it will do it.

MR. MERDES: Can I have one word reinstate and retransfer back. He's right. One at a time.

MR. MERDES: He's right.

MR. ECKHOLM: They did transfer it over?

MR. MERDES: Yes. But they did it by words so let's just put that word in.

MS. PORTER: And return to original whatever it was.

MR. MERDES: Right. Just say reinstate. They closed all the offices.

MR. ECKHOLM: Reinstate does that. And fund.

MR. MERDES: I think that will do it.

MR. ECKHOLM: Fully reinstate.

MR. ECKHOLM: Eight, integrated transportation system.

MR. MERDES: What's that mean?

MR. ECKHOLM: That's so vague.

MS. PORTER: We are going to take up transportation, right?

MR. ECKHOLM: This is it. Maybe you want to be thinking about a specific recommendation.

MR. NASKE: I'm the one who proposed that. What I mean by that, really, is we should look at the whole State and think beyond roads to see if maybe in some areas air transportation is the only feasible way, or trails, roads, maybe barges on the big rivers ought to be considered again, maybe railroad. But we should get away from thinking about just, you know, putting roads everywhere. What I mean by integrated is try to adopt the system of transportation suited to the particular locality.

MR. ECKHOLM: Move on. Invest in resource management. We've done that with the university. Is that what we were talking about?

Ten, a rainy-day account for State government. I think what we had there is equaling one year State operating budget.

MS. SIMONDS: Russ Meekins suggested.

MR. MERDES: He'll do it anyway.

MS. SHROYER: I think that the permanent fund is pretty much a rainy-day account.

MS. STRASSBURG: No.

MR. POMEROY: What the hell is a rainy-day account?

THE MODERATOR: In an emergency, in a crisis.

MR. ECKHOLM: Let's take a vote. All those of favor of providing a rainy-day day account equalling one year budget raise their hands.

All those opposed.

We got a split.

MR. ECKHOLM: Let's vote again.

MS. STRASSBURG: People are asking what that rainy-day account was. Russ Meekins said in case of the break in the pipeline, the income from the pipeline were to immediately stop, that pipeline oil money is what is providing some of these services. And those services cannot continue without the income from the pipeline. So we need a 12-month backlog just like you're supposed to have a savings account that would feed you for six months if you're being smart.

What they're talking about in the rainy-day thing where we could use it in case of an emergency, where the permanent fund, we can't touch it.

MR. McGINNIS: Constitutional provision states every appropriation shall lapse at the end of the year into the treasury.

MR. POMEROY: That doesn't impress me a bit. We're going to have $4,000 per capita per year from the pipeline for about the next ten years. And if we haven't saved money and saved a lot more than goes by the constitution into a permanent fund, then God help us. I don't think we need an additional thing.

MR. McGINNIS: The thing is, in case of an emergency, the worst that can happen, you'd have to convene the

legislature. And I've thought of worse things.

MR. ECKHOLM: One final statement, then take another vote.

MR. HARTLE: As a procedural matter with a vote this close, we should table it. It's obviously not the group's recommendation. I voted for it, but I'll change my vote.

MR. ECKHOLM: Scratch it.

Invest in public works, finish.

MS. SIMONDS: We've already done that.

MR. ECKHOLM: All the national energy, ports and harbors.

MR. MERDES: I guarantee you're going to do that.

MR. ECKHOLM: 12: Lump sum liquidation paid for by the State immediately.

MS. STRASSBURG: That is when we owe on leases, et cetera.

MS. PORTER: When is that deadline?

MR. MERDES: Two percent override.

MR. HARTLE: I'm afraid we need an expert on this.

MR. ECKHOLM: I just wanted to add I heard the same thing discussed in another group. They said there were payments already being made.

MR. ECKHOLM: They wanted to speed this up. Does anybody want to vote on it? We don't consider that.

THE MODERATOR: Harold?

MR. POMEROY: Mr. Samuelson was here, he said he had all the back up material.

MR. ECKHOLM: He gave it me to give to Russ.

MR. PARKER: The idea behind speeding it up would be simply to put more money quicker in the corporations during a period of recession. That was the basic thought behind it.

THE MODERATOR: You pump 400 million through the 12 or 13 corporations invited into the economy, is the theory. If we've got this excess, would it not be wise to pump 400 million right in?

MR. POMEROY: No, it wouldn't.

MR. MORGAN: If it's a good business deal.

THE MODERATOR: We owe it.

MR. MORGAN: Some kind of discount or something.

MR. ECKHOLM: The comment I heard today was they were making payments in advance.

THE MODERATOR: Not in advance. I don't think they can do that under the law, but they are making payments.

MR. ECKHOLM: Would anyone like to take a vote on this, or consider it.

A VOICE: Yes.

MR. ECKHOLM: All those in favor, raise your hands, of lump sum liquidation of Alaska Native Fund.

MR. HARTLE: It would benefit the corporations, I believe.

MR. NASKE: And the local economies. For Christ sake --

MS. SHROYER: We're voting.

MR. ECKHOLM: All those in favor raises your hands.

All those opposed?

It passes.

13, improve communications. We dealt with education a little bit. We got Walt Parker telling us, but do we want to deal with it?

MS. PORTER: Yeah. I've got a couple recommendations. Number 1 is regionalization of the telecommunications system. That means uplinks and downlinks. If the system is going to be expanded, then it should be regionalized.

MR. ECKHOLM: You mean uplinks?

MS. PORTER: I mean full regionalization of the telecommunications so that, as an example, Nome, if they had a television station, could broadcast so that the villages surrounding them or whatever local program. Bethel could go into the same thing. Dillingham, et cetera.

My second recommendation is the telecommunications office should set as a first priority the installation of emergency and medical communications system. We've delayed that too many years and it's just a critical need in the rural areas. In fact, the whole thing is touted as a communication system. This is what is needed first.

MR. ECKHOLM: I would like to consider that as a recommendation that you'll draft better and give to me but we'll vote on it as a concept. I didn't write it down. Did you write it down?

MS. PORTER: I'll rewirte it.

MR. HARTLE: I am speaking in total support of the idea. I think that Alaska should have and especially now that we can finally afford it, the best communications system in the world. In many areas of the State we're very lacking in this regard, as I'm sure all of us know. Now we can afford it and it's a high priority.

MS. PORTER: I think you best beware. Can we afford to maintain and it pay the line charges. We can't. The villages don't have the pay the bucks to pay the line charges. They just can't do it. The State had a program in an increasing amount the villages would pick it up every year. We have to tread very carefully with that.

MR. PARKER: Mr. Chairman, that's why I recommended in the paper the concept of the single toll area. Only by spreading the costs across the whole State that you're going to be able to let the villages can afford it. Otherwise, you're right. The charges will be such that, as now, it will take 25 percent of most people's cash bubbling jet to do a reasonable amount of telephoning.

MS. SCHIRMER: I think the idea of a single-zone or

whatever, that he wrote about would do more for connecting the people in the State than almost anything I can think of. Because you sit in the small community and when you are thinking it's got to go through long distance and how much is it going to cost per minute, you don't make as many telephoning calls as you ought to. And talking to people just makes so much difference in how quickly you can get things done and you don't do it when you're at the end of a long distance line.

MR. ECKHOLM: How would you word that as a recommendation? Create a single toll zone for the entire State?

MR. PARKER: Yes. Single toll area.

A VOICE: I'd like to know your objection.

MS. RICHCREEK: My objection is being a small business relatively close, but yet we're paying a long-distance charge. Let's say you lived in Kotzebue. How many construction businesses are out there that have no choice? There's only one way to get an answer to your question whether you're going to bid a job or finding materials or finding something. How many businesses are there out there versus, say, Mat-Su Valley, Valdez, accident those closer areas.

MR. ECKHOLM: We are as Alaska receiving the same -- we receive 50 million dollars a year subsidy from the

Lower 48 for our phone calls. We don't pay the rate that we call 48, the people outside are supporting us.

MS. RICHCREEK: But we're paying more than we would. I heard RCA talking the other night.

MR. ECKHOLM: Walt, is there any other discussion on that?

MR. PARKER: No. The cost of spreading it by eliminating a lot of Alascom's bookkeeping charges and what have you, why, there should be real savings to each individual and the only person who would be suffering would be the person who makes no long distance calls at all. And I doubt that there are very many of those.

MR. ECKHOLM: Recommendations to create a single toll area for the entire State.

MR. POMEROY: How is that?

MR. ECKHOLM: Create a single toll area for the entire State for telephoning communications.

MS. STRASSBURG: Are we saying, Walt, say now it costs 45 cents to call Houston into Anchorage for three minutes. Then it would cost 80 cents to call Anchorage.

MR. PARKER: You're saying no long distance charges. You've got half the population in the State in a single toll area now in Anchorage. You're doing is putting the other 200,000 people into the same toll area, which 400,000 people is a very small toll area. Satellite communications

makes meaningless the concept of the line charges in any case, because they're all going 22,000 up and 22,000 back. So you're just funding -- you're just putting the kind of rate that should have been put in to begin with.

MR. ECKHOLM: Is there objection to the recommendation?

MS. STRASSBURG: No. I think that's great. My telephoning bill will be $55 a month instead of some months it's 150.

MR. ECKHOLM: Without objection, it's adopted.

Higher education and research we've covered.

Vocational and trade education we've covered.

Tax credit for homeowners based on energy use we've covered, I believe, haven't we?

MS. SHROYER: Yes.

MR. ECKHOLM: Direct distribution of funds based on residency, $100 per year from the age of 18 up to a maximum of 50 years.

MS. SIMONDS: I don't remember that one.

THE MODERATOR: I don't remember that one.

MR. ECKHOLM: That was the guy who --

MS. PORTER: That was McCutchen. And he wanted it.

MR. NASKE: Let's vote on that.

MS. SHROYER: I have a question first. What is the longevity bonus plan?

MR. ECKHOLM: You have to be here before statehood and

how much do you get?

MS. SIMONDS: You have to be 65 years of age.

MR. HARTLE: And 25-year resident.

MR. ECKHOLM: All those in favor of this, direct distribution of funds based on residency $100 per year from the age of 18 up to the a maximum of 15 years.

THE MODERATOR: Anyone in favor?

MR. ECKHOLM: All those in favor raise your hand.

18. Don't repeal the State income tax.

MR. NASKE: No objection.

MS. STRASSBURG: I'm totally in favor of don't.

MR. ECKHOLM: Is there anybody who objects to this motion? Adopted.

19. Rehabilitation of the correctional system.

MS. SIMONDS: We covered that in the health and welfare.

MR. ECKHOLM: 20. Money to develop the capitol move.

MS. STRASSBURG: No. Let me make a recommendation and let you look at it.

We recommend that the Capitol Site Planning Commission be reactivated. This was in the initiative. The Capitol Site Planning Commission be reactivated with an appropriation of $100,000 to consider a central co-relocation plan to the Willow site, retaining regional offices in Juneau, Fairbanks and Anchorage. That's what we've been talking about. Evaluate the administrative

savings in travel, per diem, telephoning and communications, which is included in this paper that gives you the information we need. This is not saying that we're going to move it tomorrow. This is saying that it was a part of the initiative that there would be a capitol planning commission and it has been allowed to semi-die. It still has six people, but there is not enough to do anything.

MR. POMEROY: I'd like to add -- discussion before voting?

MR. ECKHOLM: I don't want to open up a great big ball. We have two items here, 20 and 21, monies spent on ways to reduce government and make it more efficient. And I think that the two topics can be combined under the auspices of the capitol site planning commission to evaluate these things.

Now, we're talking about whether the capitol is relocated to anywhere. And I'm sure that everyone is familiar with the present circumstances in Juneau. We are leasing about 37 buildings from a lot of different private sources there. And in fact the Frank initiative does address that a commission should be formed to evaluate the relocation expenditures, and does not even stipulate to the willow site. But I am saying that in Juneau, if another building is constructed in Mendenhall Valley or whatever, this is still relocation and expansion in that area.

MR. ECKHOLM: Can we take a vote on it.

MR. NASKE: It's just a divisive issue and has been voted up and down so many times. I would like to have a ruling.

MR. ECKHOLM: I agree.

MR. ECKHOLM: the thing I would like to add at this point is you've been talking about funding a lot of other things here, including 400 million dollars is due now to the natives, which they're entitled to it, I feel they are entitled to it. I do feel that something as important as our State government through this is next ten years to fund a committee that will evaluate this, and I don't mean the legislature as a political football or the governor with a personal opinion or anyone else here with a personal opinion, rather that a R an independent committee may evaluate a responsible study, $100,000.

MR. NASKE: They've got studies up the kazoo.

MR. ECKHOLM: Let me say this: That if the planning committee evaluates and approves, say, the relocating of the central core of government, this can be implemented either by the State and presented to the voters for a bonding issue, not the billion dollar thing that was turned out. We're not talking about a city of 30,000. But then even the Mat-Su Borough could go ahead and implement this move under their own responsibility at absolutely no cost

to the State. Or are you saying that 30,000 people should be moved from Juneau?

MR. ECKHOLM: Let's call for the question. This discussion has been debated off and on. I think you presented a good case.

MR. ECKHOLM: One more thing.

DELEGATE: No.

MS. SHROYER: Let's vote.

MR. ECKHOLM: The question is to adopt Pearlie's.

MR. ECKHOLM: I do have one more thing to say.

There has been an engineered report, and this is based on a report that was commissioned by the State administration. And in the report it clearly shows that the continuing capitol expanding costs will be much greater in Juneau than they will even with relocation. And I think it's only fair, unless you say we want to close our minds, we don't care how much it costs to keep it there, then you're not interested in financial responsibility.

MR. NASKE: Other parts of the State have a right to live also.

MR. ECKHOLM: The question is to adopt Pearlie's recommendation.

MS. STRASSBURG: The campus site planning commission to be reactivated with an appropriation of $100,000, to consider a central core relocation to the Willow Burough,

retaining other offices in Juneau, Fairbanks and Anchorage, which would not damage these offices. Administrative savings in travel, per diem, telephoning and communications. This is in the realm of you're trying to save money on State government.

MR. ECKHOLM: All of those in favor --

MR. POMEROY: May I make a suggestion to you, a very simple one. Wouldn't it be simple and more direct simply to recommend that the State capitol relocation commission be reestablished and that the legislature, without delay in accordance with the provisions of law with respect to the move of the capitol?

MS. STRASSBURG: Absolutely.

MS. SHROYER: It was never dissolved. It's still there.

MR. POMEROY: Reactivate.

MR. ECKHOLM: The commission cannot act without funds, and without the remaining two or three seats being appointed.

THE MODERATOR: I think what Harold is trying to say rather than the details, the concept is you want to get this thing back on the road.

MS. STRASSBURG: As according to law.

THE MODERATOR: That's what we're talking about.

MR. POMEROY: As provided for, as required by law to

proceed.

MR. ECKHOLM: That is right.

MR. POMEROY: Connection of relocation of capitol, period.

MR. MERDES: Would that provide for the Frank King (phonetic) Provision?

THE MODERATOR: So we're voting on the concept shall we get the capitol site selection reactivated again.

MS. SHROYER: In the rewording is the dollar figure still there?

MR. ECKHOLM: No.

MS. SHROYER: As long as that 100,000 is out.

MR. ECKHOLM: Let's restate it again.

MR. POMEROY: That the capitol State commission be reactivated and the legislature without delay proceed with all of the requirements under the law for the relocation of the capitol.

MR. ECKHOLM: Capitol site planning committee.

THE MODERATOR: Everyone understand the gist of that?

MR. ECKHOLM: All those in favor of the motion raise your hands.

All those opposed.

The motion passes.

21: Monies spent on ways to reduce government and make it more efficient.

MS. STRASSBURG: This is a part of that thing that we were trying to get through.

MR. MORGAN: May I remark on something the lady said regarding giving the natives 400 million dollars.

We're not giving the natives. The idea here was either pay off or not pay off.

MR. ECKHOLM: We already accomplished that.

MR. MORGAN: I know that. I just want to --

MR. ECKHOLM: 22: Tourism. Massive national advertising. I think that's pretty clear.

MS. PORTER: I object to that. I think we've done a lot of massive advertising the last year.

MS. RICHCREEK: Do we want to quit?

MS. SCHIRMER: This thing insinuates what they've done isn't massive.

MS. PORTER: If I may suggest that --

MR. POMEROY: When do we come to the matter of money?

MR. ECKHOLM: Whenever you'd like to. Did you want to say something?

MS. RICHCREEK: I just said that I was the one who put that in and my meaning behind it was continue, not that I had thought it had stopped or anything like that. Just continue the advertising.

MS. PORTER: Maybe we should say continue an aggressive tourist advertising campaign.

MS. SCHIRMER: That's better.

MS. STRASSBURG: Could I have just a little bit here, I presented a paper to Mr. Meekins and in that paper I suggested that we expand our ferry system to the point where maybe we put on one more ferry, maybe put on two ferries. But when the ferry gets to Ketchikan, you have a six-day lay-over with tours because there are no buses there so you can go out and see the City of Ketchikan. If they were in a hurry, they'd fly. So they get to Petersburg and Wrangell.

Since Ketchikan is a unique Alaskan city, those people coming up on the ferries should have four- to eight-hour layovers so they can see those things. And this goes along with your tourism promotion. But otherwise they're never going to see them unless you do something through the marine highway system. You're not going to see these uniquely Alaskan cities by coming up the Alcan.

MR. McGINNIS: I thought those Ketchikaners were clever enough to develop tours companies.

MS. SCHIRMER: They do. But she says making the ferris stay long enough.

MR. NASKE: They can catch the next one.

MS. STRASSBURG: No, they can't, because they have to have a reservation eight months in advance before you can get on in Seattle. You have to have a reservation in

February to get on in August.

MR. POMEROY: I don't think we're capable here of saying cost effective and economically feasible.

MR. ECKHOLM: We have a motion before us on tourism to continue an aggressive national advertising campaign to promote tourism.

Any objection to that? Would you like to make a motion to expand the ferry system?

MS. STRASSBURG: Yes, I would. I don't believe the ferry system was ever intended to be a profit making thing. I think it was intended to be a service to the people of Alaska.

MR. ECKHOLM: Is there any objection to expanding the ferry system to stimulate tourism.

MR. MERDES: For example, having fast food lines and just lowering the quality. It should be expanded and raise the quality of service.

MS. STRASSBURG: Yes.

MR. ECKHOLM: Expanded and upgrade.

MR. MERDES: Upgrade the quality of service.

MR. POMEROY: Here's something we know so little about and how much it's going to cost. I can't see --

MS. STRASSBURG: We can recommend the legislature investigate the possibility of the expansion and upgrading of the system.

MR. ECKHOLM: Is the motion for the legislature to investigate the possibility of expanding and upgrading of the ferry system.

MS. SHROYER: I don't think we need to say tourist and to increase traffic.

MS. SCHIRMER: And maybe in Bristol Bay.

MR. ECKHOLM: The motion is to investigate the expansion and to upgrade the State ferry system. Any objection to that?

MR. POMEROY: Yes.

MR. ECKHOLM: Let's take a vote. All those in favor raise your hand.

All those opposed?

Consider investing more in rural areas than in urban areas.

MS. PORTER: I think that's poorly put.

MR. ECKHOLM: Invest in the timber industry. We've done that in timber.

24, consider investing more in rural areas than in urban areas.

MR. POMEROY: That's too vague and meaningless, drop it.

MS. SHROYER: What was that again, please?

MR. ECKHOLM: Consider investing more in rural areas than in urban areas.

MR. McGINNIS: Drop it.

MS. SHROYER: Drop it.

MS. PORTER: What was that?

MR. ECKHOLM: Sell State lands for housing These are concepts that if you want to rework, the wording is bad.

MS. RICHCREEK: That was mine, too. What it is is land that is -- think a minute. There's no such thing in our area, but land that you can get to, let me put it that way, accessible.

MS. PORTER: I have an amendment to that, that where the State does not own land in an area, as an example, in the Calista region, the State doesn't own any land, so no land is going to be made available to the people who choose to live in that area for housing, that they should negotiate with the natives corporations for maybe an exchange of land. I'm sure Calista would like more land for the valley, it may be they could exchange for liveable, buildable land, not swamps or the sides of mountains.

MR. ECKHOLM: Could I here hear a recommendation?

MS. PORTER: That goes for the entire State.

MR. POMEROY: The State negotiates, and then what?

MS. PORTER: To exchange land.

MR. POMEROY: What do they do with the land?

MS. PORTER: Open it up for home sites just as they're

doing every place else in the State.

MS. SHROYER: How about a recommendation that the State either make available it's own land or negotiate with the natives corporations and the federal government, where applicable, to make housing land available to Alaskan residents.

MR. POMEROY: Holy smoke. We either have land or we don't. And if we don't have land, and if I had a house on the Kenai Peninsula, I buy a piece of land for it. I feel pretty strongly about that. I'll be damned if I --

MS. SHROYER: You can't buy land that's owned by the federal government. They won't sell to you.

MR. POMEROY: I'm talking about tens of thousands of acres of land on the Kenai Peninsula privately owned. Should we turn around and give it to me?

MS. SHROYER: I don't think anybody is saying give it to people.

MS. PORTER: You understand that the State has just had the land lottery and they've offered many, many acres of land all over the State to residents on a lottery basis. No land, however, was opened up in a good portion of western Alaska because the State simply does not have any land there. Is it fair to those Alaskans, some life long Alaskans, who may not get in on the lottery because there is no land in that area?

THE MODERATOR: Let's be careful. We're talking about land for residential. Now, when we're talking about swapping land, people need land where they live, right?

MS. PORTER: Well, in a general area, yes.

THE MODERATOR: Okay. If you --

MS. STRASSBURG: But if it's privately owned by the natives corporation, and they're not federal, can't we get the same thing there by just saying to the natives corporation, gee, I'd like to have five acres here, will you sell it?

MR. POMEROY: That's what they're doing in Cordova and various other places. They're selling land when there's a demand for land in the market.

MR. PARKER: I don't know of any corporation that's reluctant to sell land like you say where there's a market. It hasn't developed yet.

MS. RICHCREEK: Another thing is that our area is facing is University of Alaska. Copper Basin, not just Glennallen.

MR. POMEROY: We face a lot of problems in southeast Alaska where a lot of communities is surrounded by federal land and the State works all the time figuring out where they can get some land to monopolize sites for people to buy.

MS. RICHCREEK: How about adding the University of

Alaska?

MR. POMEROY: What do we trade them?

MS. STRASSBURG: There's a great deal of pressure by the State board of realtors to get the State to let loose of some of their own lands and put them on to public sales. So I think maybe not in the Glennallen area right at this point, but this is a program that is being implemented all the time and the State board of realtors is pushing, believe me, because they want it to get into private hands instead of State owned. So I think basically this is being implemented now.

MR. NASKE: That's my language.

MR. ECKHOLM: All those in favor of the motion raise your hands. All those opposed.

26, another concept that might need to be reworded a little bit. Invest in programs that are cost effective rather than subsidies.

THE MODERATOR: We've been waiting for that one.

MR. MERDES: Other than the amount of the return, or the security, because that will just be tricky. Maybe times you will want to do something, like for example fisheries or tourism, or vet loans.

MS. PORTER: Could we put that on our investment thing and works it over in the morning?

THE MODERATOR: That's like number four. In the oil

and gas.

MR. ECKHOLM: Okay.

THE MODERATOR: That's it.

MS. PORTER: You're still open for areas that you didn't cover.

MR. ECKHOLM: Did you write out the communications? Ms. Sparks asked me to give you hers on transportation, and that is runways for villages, safe under difficult weather conditions, lighted with beacons and means of maintenance.

MR. NASKE: Wouldn't that be covered under the integrated transportation system?

MS. SCHIRMER: What they're saying is they're really urging upgrading of the small airports, with particular attention to making sure that maintenance is available. I think they would like, from what they're saying, to have them be 24-hour airports.

MS. PORTER: Not 24 hour airports, maybe six-hour airports. Right now in the middle of the winter, you take off from one village, it gets out there in ten minutes.

MS. SCHIRMER: You're going to have to bring planes in the dark. Isn't that what you're saying?

MS. PORTER: Dark, poor weather, it's sometimes difficult on find the little runways.

MS. SCHIRMER: I realize this, but -- I don't know.

MR. ECKHOLM: How about something like upgrading of

State trunk airports to make them more fully operational?

MS. SCHIRMER: Not trunk.

MS. PORTER: We really don't have to adopt this because it has to go to the division of airports, go to the legislature, anyway. If you want to go ahead and support it, fine.

MS. SCHIRMER: I think we should support it.

MR. PARKER: I don't think the division of aviation is going to be that strong. I think you should support it.

MR. ECKHOLM: How should I define the airports? Small airports --

MR. PARKER: Rural airports.

MS. RICHCREEK: You mean to support it clear down to the lights itself? Lighting itself?

MS. SCHIRMER: They're trying to say just upgrade there.

MR. POMEROY: This has been too far. We've got a doggone good Division of Airports, it's working all the time with the hundreds of places all over the State to improve. For us to works with this I don't think makes any sense. I've got a homestead on our airport and it's lit and I've got radio communication and I pay for it. Planes don't come in if it's in the dark unless I put a lantern out.

MS. PORTER: I'm sure that people in California said that about Anchorage, when they were first trying to get planes down here, and you're saying what our outsiders said

to us then.

MR. POMEROY: I tell you what, I'm concerned somewhere along the line we're going to find out we ain't got no money.

THE MODERATOR: Let's listen to Walt here, that's his field.

MR. PARKER: Rural airports haven't improved any except since World War II, except for what the Division of Aviation can accommodate with the fat funds. We get 17 million a year in fat funds and most of that gets spent on the nonbonded airports and upgrading those. There's been a couple million a year going out to the airports. But that's the first time we've been able to afford them. I've landed once every five years. Some of them don't change in between. They're dangerous, and it's simply a question of whether you want dangerous airports or not.

MR. MORGAN: I've landed on almost every village in Alaska at one time or another over the past 20 years, and I agree with you they are crude. We're not talking about a luxury, we're talking about a life-endangering situation where a plane can't get in to get a person out who is mortalally wounded.

MR. ECKHOLM: We're also talking economics, too. rural airports, if you can go another 100 feet, you could cut cost of transportation of foodstuffs which is real

expensive, and you can carry out planeloads of fish in Bristol Bay.

MS. PORTER: That's my second recommendation, is that major centers and fishing areas in rural areas should have their runways expanded. This is a great economic need for those areas. You heard about the Bristol Bay fish, two and a half million fish dumped because the runways are not long enough for a plane to get off.

MR. ECKHOLM: We should discuss about whether or not if whoever can last the longest can recommend everything at once. Because we may get to a point where we can render not a group any more.

MR. HARTLE: On these small airports.

MR. ECKHOLM: Recommendation is to upgrade rural airports to make them more fully operational.

MR. HARTLE: I want to speak in support of it. Many places in the State we spend fortunes on roads, and it's transportation, okay?

So, in rural there's a State, there aren't roads to spend the same money. I mean, it's not like we're doing something drastically radical by doing this.

MS. PORTER: Also we heavily subsidize the losing ferry system, which distributes mail to southeastern. There's no subsidy to western Alaska, nor transportation. We're asking for a few safety measures.

B. Conditions, sun lighting, in the form of sunlight, when it's possible. Reflectors and safe runways.

MS. RICHCREEK: I'd like to bring up one point, and that is the safety, such as if there are other airports in a situation similar to Valdez where there would be side mountains, I don't feel we should put in lighting systems there, and I tell you why. The pilot just out in their own and supposedly the State ended up paying for it. But they all know that they can go right into that mountain before they'll ever land. And if we put the lighting system in, the State does it, I would feel that the State is the one that is held responsible in the long run. Maybe you're wrong.

MR. ECKHOLM: The recommendation is upgrading of rural airports.

MR. HARTLE: And safe? That would eliminate situations that you're talking about.

MR. ECKHOLM: And safe. Is there objection to the recommendation? It's adopted.

Rolling along, Rosemary?

MS. PORTER: Under government--

MR. ECKHOLM: Do you want to do something about expanding airports?

MS. PORTER: Okay. I thought I gave you that one.

The legislature support the expansion of Kenai

fishing area rural airports so that large planes can carry a full payload of fish or whatever to market.

MR. POMEROY: Is that a commercial thing or that --

MS. PORTER: All the time. They can't get off. It's a short runway, it's in a bad spot and they cannot get off the round.

MR. POMEROY: Moving them regularly?

MS. PORTER: Oh, yes. Flying night and day.

MR. POMEROY: As a total method?

MS. PORTER: Not total. There are processors there. But fly them out of Bethel and out of Saint Mary's and out of Dillingham.

THE MODERATOR: Don't you think, Rosie, that that's the keystone of almost all transportation in the bush, expanding the airports? When you tie it to fishing, I wonder if you're not defeating the purpose.

MS. PORTER: That's a multi-million dollar industry right there in Bethel and Dillingham.

MR. PARKER: Fishing is kind of a special case now. War is a good analogy, but normally the mind has the equipment to put in its own strip

THE MODERATOR: I was thinking groceries and fuel. I can see all these areas being supplied eventually by an airplane.

MS. PORTER: Fuel of course is barged up. Fuel is a

really bum thing.

THE MODERATOR: I know it is now. I'm talking about ten years.

MS. PORTER: But it is akin to the expansion of the area. Still, cheaper, still eight cents a pound to barge things up and it's 10 cents to fly things in.

THE MODERATOR: Is that a jet, instead of a little one?

MS. PORTER: No. This is a jet.

MR. PARKER: With the regular needs of villagers, you can serve those with short runways with the next breed of Stoll aircraft, they'll be carry 50, 60 passengers, but with the fish you're talking about heavy operations.

MR. MORGAN: Other places where you wait around to sigh if the pilot is going to make it before before you leave. Yen has willows on his landing gear. They're pressing that.

MR. ECKHOLM: Something like expanded Kenai fishing area airports to --

MS. PORTER: Or Kenai trade centers.

MR. NASKE: Or commercial centers. Expanded Kenai trading centers -- Kenai commercial

MS. PORTER: Expand the runways.

MR. ECKHOLM: Can I add a question about this rural airways you're talking about some? Some airports that I can think of that are not exactly -- they are definitely not

urban, but I'm not sure what's being classified as rural.

MS. PORTER: Under 50,000, isn't it? Who said that earlier?

MR. ECKHOLM: The airways is such akin to the transportation all over the State. I do a lot of flying. And I hate to think of some little air strip being excluded because you're just pointing certain areas.

MS. PORTER: We did one for rural.

MR. ECKHOLM: That's what I was questioning. What would you classify as rural? What is the criteria of rural? Not in a populated center?

MS. PORTER: We've got Kenai commercial centers, Bethel, Dillingham, McGrath. And we've got rural like a rural airport.

MR. ECKHOLM: I'm thinking of some areas that are areas that are, say, maybe around the Copper Center area or even in places further out in the Matanuska Valley.

MR. ECKHOLM: That's rural.

MR. ECKHOLM: We have a recommendation to expanded Kenai commercial center airports to provide for more economic transportation systems. Is there any objection to that?

MR. HARTLE: Didn't you leave out in rural areas?

MR. ECKHOLM: There was no mention of rural areas in that.

MR. HARTLE: Won't this just mean Anchorage and Fairbanks?

MS. PORTER: Talking about Kenai commercial centers within rural areas.

MR. ECKHOLM: Okay. Kenai rural.

MS. SCHIRMER: Some people might not --

MR. ECKHOLM: Expanded Kenai rural commercial center airports to provide for more economical transportation systems.

MR. POMEROY: As long as you include Bear Cove in that.

MR. ECKHOLM: Is there opposition to that? Without opposition, that's adopted. Is anyone going to make a motion to adjourn.

MS. PORTER: I've got another one.

On government, I think there was one specifically on local government.

That the legislature delay any attempt to organize the unorganized Borough and studies can be made of the economic and geographic feasibility of that region.

MR. ECKHOLM: I didn't write that.

MS. PORTER: That the legislature delay any attempt to organize --

MR. ECKHOLM: Why don't we just vote on it.

MR. POMEROY: The unorganized Borough there's one unorganized area.

MR. ECKHOLM: In the unorganized Borough.

THE MODERATOR: Read the question back.

MS. PORTER: That the legislature delay any attempt to organize the unorganized Borough until studies can be made of the economic and geographical--

MR. MERDES: Social and cultural effect.

MS. PORTER: -- feasiblibility of that organization. The State doesn't care too much about social and cultural.

MR. MERDES: I'm doing it for your benefit. I think they should take into consideration cultural impact of levying taxes and making buroughs out of the bush. You don't have to put it in.

MR. ECKHOLM: What were your words?

MR. MERDES: If she doesn't want it, fine.

MS. PORTER: Until studies can be made of the economic and geographic feasibility.

What they want to do is they want to make bush Boroughs. Economic and geographic would put buroughs in common social, cultural, economic areas that already have established ties. That wouldn't be as large and unmanageable.

MR. ECKHOLM: The motion is to delay any attempt to organize the unorganized borough until studies are made of the economic and geographic feasiblibility of that organization.

MS. PORTER: You can add social and cultural.

MR. ECKHOLM: Is there any objection to that?

MR. POMEROY: I note that there is just one other feature involved in it. The Borough wall provides that the legislature may activate the unorganized Borough and itself become the --

MR. ECKHOLM: They are the --

MR. POMEROY: Assembly. They are the assembly. It is not organized now. They are doing nothing in it at all.

MR. ECKHOLM: Right. Is there any further discussion of that? That has been adopted.

THE MODERATOR: Any others?

MS. PORTER: Yes. Under law. I'll just make it short.

Expand the magistrate system in rural Alaska.

MR. POMEROY: Do what?

MS. PORTER: Expand the magistrate system in rural Alaska.

MR. MERDES: You mean appoint more magistrates? Don't you want to upgrade the quality of the magistrates? Some of them are horrible.

MS. PORTER: And improve.

MR. ECKHOLM: Expanded and improve the magistrate system in rural Alaska.

MR. MERDES: Improve, upgrade the quality. Improve

MR. ECKHOLM: We already said expanded.

MR. ECKHOLM: Is there objection?

MR. POMEROY: What else you got? I got one.

MR. PARKER: I'm not sure that --

MR. ECKHOLM: Pardon me?

THE MODERATOR: Come on, now. It's 11:30. Going on 12:00.

MR. POMEROY: What else you got? Anything?

MS. RICHCREEK: I have one. Bring the highways and roads up to decent standards.

MS. STRASSBURG: Isn't this taken care of in our improved network transportation throughout the State.

MS. RICHCREEK: It was passed by a moment ago.

MR. ECKHOLM: That was eliminated because it was too vague. So what is the recommendation? Ma'am?

MS. RICHCREEK: Bring the highways up to a decent standard.

MR. POMEROY: Do you mean provide better maintenance and upgrading existing highways system?

MR. RICHCREEK: Upgrade the present highways.

MS. PORTER: Couldn't we make just one good energy statement?

THE MODERATOR: We've got some in oil and gas.

MS. PORTER: We've got some in oil and gas.

MR. ECKHOLM: The motion is to upgrade the present highway system. Was there any objection to that?

MR. HARTLE: What was that again?

MR. ECKHOLM: To upgrade the present highway system.

MR. POMEROY: Improve means that its upgrading. You're always doing both with those things.

Before everybody goes home --

MS. RICHCREEK: I got another one.

THE MODERATOR: I'm ready to go home. Highways?

MR. McGINNIS: I would like to say, Mr. Chairman, that we appreciate our appreciation to chairman and our facilitator and--

MR. MERDES: And somebody more important to that in addition.

MR. POMEROY: Before you go home, does anybody care at all the rate at which we're increasing State spending annually? Is there any concern about whether we cut the rate at which we're increasing?

THE MODERATOR: We'll know on Tuesday.

MR. POMEROY: That's exactly what I'm afraid of.

(The proceedings adjourned at 11:30 P.M.)

EPSILON GROUP PROCEEDINGS

(December 6, 1979, 10:00 a.m.)

THE MODERATOR: Ladies and gentlemen, I think we're about ready to begin Epsilon Group. My name is Dick Maddox. I'll be your facilitator for the meetings the next few days. I'm on Senator Hohman's staff, and as I see it, my function will be to assist you in any way I can with whatever expertise I have at my disposal. I have assisting me three of our legislative interns who are far more knowledgeable than I going through a crash course in how to be an administrative assistant. They're all just graduating at this point.

Where is Amy, Amy Adams? It looks like I've been deserted again. In any event, they'll be here to assist you, your concerns, in particular, for example, in your book of white papers if you're dealing with that problem, our interns are available to track down the appropriate person of the author of that article or another expert witness and literally subpoena them, to bring them here to amplify it or to argue with you with why they took that particular tack with regard to that issue.

Now, this is not going to be an easy process. This is a working conference, although tonight will be our

one big break listening to Buck Fuller. But this is a working conference. All of us are charged with two responsibilities. The primary responsibility is to determine what sort of Alaska we want, the goals of Alaska need to be known. Until we know where we want to be ten years from now it's virtually impossible to order our priorities. You have to know where you're going to get to before you plot your course on the map. That's our overall goal. Our second goal of equal importance is to come up with solid recommendations for legislative action during the coming session, and those recommendations should deal with five primary subjects. This, of course, is light of the unanticipated revenues that our speakers talked about this morning. Three and a half billion dollars this year and probably over the course of the next ten years somewhere in excess of 30 bill Monday dollars in unanticipated revenues will be at the disposal of the State Legislature. How they spend it is largely going to be determined by your consensus here. We have the financing of Alaska to consider. The permanent fund is the key issue. What do you want to do with it? We need an oil and gas policy, a very solid oil and gas policy. We need to develop our transportation system, our educational system is in need of revamping. That's four. And our primary renewable natural resource, our fisheries needs to be

addressed. Primarily the bottom fish industry.

There are a couple of countries in the world, Iceland and Fairwell Islands, for example, who have a single item. Fisheries, fisheries are all important to those two places as they are going to be all important to us. The judicious harvesting of bottom fish can make Alaska anatomically autonomous. Our oil is going to run out some day, we all know that. One thing we do have going for us in the energy field is the fisheries. We have the richest fisheries in the world. What we do with those five things, financing, i.e. the permanent fund, oil and gas policy, the development of our bottom fish industry, transportation and education are your five primarily responsibilities, solid recommendations in that area.

However, this morning, to start out our meeting, I think the best place to start and all the groups will be starting at the same point is to develop a philosophy; that is, the subject of the first section of the book you were given, Alternative Futures for Alaska, and simply because they're in the book doesn't mean those are the only alternative futures. Those are the things we're going to have to develop.

In a short while, a questionnaire will be distributed to each of the groups, and that's going to take up a good part of our time. In the interim, while we're

waiting for the questionnaires to arrive we can probably kick off with a discussion of what we see as alternative futures for Alaska.

To start it off, I'd like to give you a quote from Alpha Group in 1969. This is one that appeals to me greatly and I think that might give you the inspA.iration to parallel their reference.

MS. WOkL: Before we start off, maybe the members of the panel --

THE MODERATOR: Yes, I'm going to read this one quote and ask you to introduce yourself. This is the summary from Alpha Group the Brookings Conference.

"Alpha Group invisions a future for Alaska as: One which maintains, as we have agreed on, a harmony between natural environment, with strict controls on pollution and environmental degradation...

"One on emphasis is on living, not just making a living...

"One which places technology and the material development in the service of man, not vice versa...

"One where ethnic, racial and cultural diversity is a proud and cherished accomplishment....where discrimination has been eliminated and minimized and where the individual or minimized and where all men are truly brothers...where the individual is freed from the terrible

psychic burden of feeling "superior" to his fellow man for reasons of race, creed, wealth or position...

"One where good health is assumed as a right and men are not expected to compete to achieve it...

One where the arts, the contemplative life and our cultural pursuits receive equal attention with material activity...

"One where the political process achieves a deserved respect through participation of an alert, active citizenry."

That's one that Alpha Group envisioned in 1969, and I think we're coming down the home stretch to achieve those goals.

Now, if I could ask you to identify yourself by name and place as we go around the room starting with Jeff.

MR. STEPHEN: My name is Jeffrey Stephen, Manager of United Marketing Fishermen's Association in Kodiak, and we're primarily involved with the fishing industry, and as equally involved with community development in the City and Bureau of Kodiak.

MR. CHITWOOD: Jeannie Chitwood, Alaska Municipal League.

MR. MONTAGUE: Richard Montague, Director of the Alaska State Division of Tourism.

MR. WOODS: Just a fisherman of Bristol Bay.

MR. HERMANN: Gerald Herman, fisherman, Bristol Bay.

MS. WILKE: Jennifer Wilke, Department of Education in Juneau.

MR. WHITE: George White, Superintendent of the Northwest Arctic School District.

MS. STOKES: Wilma Stokes, Adult Basic Education teacher.

MS. WIESE: Marian Wiese, business owner and housewife.

MS. EASLEY: Paula Easley, I'm Executive Director for Resource Development Council, a statewide citizens group in orderly development of Alaskan resources.

MS. CONVERSE: Maria Converse, A good teacher in Anchorage.

MS. SANDE: Jeanne Sande. I'm a housewife and part-time writer and I'm Chairman of the State Land Disposal Study for the League of Women Voters and I'm from Ketchican. I'm State to know I'm a businessman in Alaska and vice president of our corporation. And I sit on the Unitis advertise Board for the Development of Fisheries for bottom fish.

MS. TROLL: I'm Kate Troll, I work for the Alaskan Division of Parks and I've also just started my own business in trees transportation.

MR. TIPELMAN: Dennis Tieplman, President of Maunel,uk

Association, a non-profit corporation.

MR. WELTZIN: My name is Jeff Weltzin. I'm an instruct technician in Fairbanks.

MR. SWAIN: Michael Swain from Bristol Bay Borough Assembly.

MR. URCHITEL: I'm Bob Urchitel, I've got a construction company here in Anchorage and I'm Chairman of the Board of Multi-Divisions, Communications, Cable TV and I'm also Chairman of the World's Fair here that we're talking about called Alaska 1984.

MR. GARVIN: John Garvin, Director of Alaska Children's Services, private residential child care and President of the Alaska Association of Homes for Children, Anchorage.

MS. YAMASHIRO: I'm Jane Yamashiro, Research Associate Institute for Social and Economic Research.

MS. WROL: Rosita Wrol, Commission on University of Alaska, Anchorage and also AEDIC.

MS. STACHELRODT: I'm Mary Stachelrodt. Owner of Sunworks, I'm from Bethel but recently moved to Palmer.

THE MODERATOR: Ladies and gentlemen, I suggest that we have a very fine representative sample of Alaska's population around this table in terms of occupation and place of residence and I call my home Bethel, too.

Now, two things I'd like you to do. As you speak,

please ask the chair to be recognized and introduce yourself again by name so we all become familiar with one another.

I'm going to turn over the chair to two people to moderate this session.

This is an arbitrary choice on my part simply because I know something of the two people personally and feel that they can handle the job. One for the morning and one for the afternoon.

If you find that noses are getting bloody and we're coming down to a hard case, feel free to elect new moderators. I'm going to suggest that Bob Tiepelman share that responsibility.

Is that all right with you, both of you?

MR. TIEPELMAN: Sure.

THE MODERATOR: With that, I'll turn the chair over to you and you can start sailing on alternative futures.

One other thing. I would like to introduce the three legislative people who are assisting us, Crystal, Amy and Lali.

MR. UCHITEL: Well, first of all, can I see a show of hands of the people that read the first section that we just talked about. Has anyone read it entirely? I did. Anybody else?

MR. STEPHEN: Partially.

MR. UCHITEL: I'm sorry. I'm speaking of this book and I'm just -- can I see a show of hands so I can get a feel for it?

Well, I guess I won't go into it too much because I just read it yesterday on the plane and everybody here hadn't seen it. The thing that I got out of it the most is that we have a lot of very talented people here in Alaska. We have a lot of people here that have a lot of good ideas. I think sometimes we all have a tendency to sit on the sidelines and wonder where the good ideas are going to come from much less than how we're going to implement them.

In the observations that I've seen in the recent months we have some talented people, some people that care. We don't have to go too far to find the questions and the answers. It's a matter as I see it of implementing them. And this is the purpose of this conference. I think it's a shame personally that in 1969 when the Brookings Conference was, had taken place that I had never heard about it until we talked about this one. The PR hadn't gotten out. They may have gotten 75 percent of their things done but they did it very quietly, and I think to a certain extent I personally would like to see a little bit more, a bit more of what we do know in general and it's not implemented every ten years and apply a fashion, but the people throughout the State are much more involved in what we do,

and so what I was going to start off is by saying that in terms of the goals that we perceive our State needing for the future, I'd like to ask notwithstanding all the good things we've heard about, does anyone have a comment before what we haven't accomplished yet and where you feel we're quite weak and where we might want to look to first in terms of a goal that either we haven't thought about or haven't been able to implement as yet? Does anyone have an idea with regard to that? I'll bring one up.

MR. WELTZIN: My name is Jeff Weltzin. I think what will happen with .5 billion, the centralization, this isn't making progress in Alaska and the wealth that is concentrated in Juneau and the State government will have a tendency to make people less aware or responsible for their own environment and their own decision making process, and my biggest fear is the alienation of the average person towards his own responsibility for the State of Alaska.

MR. UCHITEL: What you're saying is what's been left in the sidelines is the individual, the spirit of the person here.

MS. YAMASHIRO: I'm Jane Yamashiro. One of my concerns is when we look at the recommendations for the future, that we're really facing at this time the situation that many developing countries are going through, and we need to look at what is happening to our human resources,

the fact that violence is so high, we're hit with all the top numbers in areas of help, and I think we need to consider the safety of the people as well as some of the other resources.

MR. TIEPELMAN: I'm Dennis Tiepelman. Some of the statements made of these two people so far, I'd like to give a different perspective of what may be a better attitude of why those things might occur. One is the centralization of the State government. I think we're talking about money and we're talking about a geographical area in Alaska that in some way is going to preclude that from happening in these workshop groups. For instance, the centralization of the government can be precluded from occurring and be a negative factor if we look at the possibilities of those geographical areas in the State of Alaska as being vital and determining some of their own affairs as far as how the money can be better spent, and I think the other thing, too, is they all have their unique individual needs and they represent geographical areas because they do have certain ways of doing it themselves so that we don't have to be too overly concerned about whether or not this money will decrease individual responsibility because I think the statement of the conference ten years ago delivered the concept of revenue sharing, and that's still a viable way of doing it. However the decision of

how revenue gets spent once it reaches the areas, I think these workshops will give the legislature an idea of what different ways it is important and there will be priorities only after the groups have gotten together, and there's not going to be a consensus until that report to the full body is made.

The other thing, too, is I disagree this morning with Merdes and the groups at the podium for my personal reasons that I don't think you can unify all of Alaska and say that we're going to meet here as one body, one group, and one mind. All of us represent provisional and territorial areas that have our own interests and because we have certain interests and how we wish to express to make those interests work for us, then, it's at the end of the conference where we can note a movement of unity and how it may come about.

MR. UCHITEL: With regard to that unity, I think we have to establish and I'll play the devil's advocate here. There are economies of scale on these things. If somebody would like to talk about besides the individual is lost and we know that, and putting that aside for the moment, are there other things that are lost by centralization?

MS. SANDE: It seems to me after reading the book and listening this morning, the people talking to me, it seems to me Alaska faces a loft of divisions. Fear of government

seems to be an almost overriding thing in my area. Native versus white is one of the issues that we face in the future. The whole idea of the economic differences in these areas, transportation differences, it seems to me that communication has got to be the key and maybe we have to through education, through communication, somehow we have to understand what the other guy's problem is so we can even discuss on equal terms.

MR. UCHITEL: My question is what's really wrong with centralization? You talked about how we might implement it but why is it bad? Because if we're going to come out of this meeting this morning or make a statement, we've got to get on with it and no more questioning about it. So I think it's important that we address the problem of centralization.

THE MODERATOR: I'd like at this point to introduce the questionnaire. I think it will be helpful to solidify your thinking and it will take about twenty minutes to go through this and the questions are designed to elicit two things. A profile of you as a cross-section of Alaska and to elicit clearer thinking on your part as you address these issues. So if I can now ask you to do that, I'd like to read the instructions. Is that all right with you, Mr. Moderator?

MR. UCHITEL: I guess so. I would say this: Since

people are starting to talk, maybe if we can hang onto that just a second, people are saying something now, and I don't want to lose that.

MS. WORL: First of all, I have two things I'd like to talk about. One is in terms of organization of our panel here, and my feeling is that we should have at least loose ground rules, and I think that the Moderator, might best act as a moderator and if the Moderator would want to participate as a participant, there should be some mechanization for that participation. But the thing I'd like to talk about and we've heard some references to it this morning. We always hear about cultural plagiarism or the necessity of protecting the rights to have cultural differences of those societies.

We speak of them in high ideals. However, we never do anything structurally to allow for the protection and the survival of the different cultural groups that we have, and I think we need to address ourselves in terms of how do we go about developing government to protect the cultural diversity, the cultural groups that are in Alaska, and I think the most immediate thing we have to face is the matter of representation. We see in Alaska we're going to be going through reapportionment and we see that in Alaska representation is going to be coming from a very specific locale, and I think if we're going to talk about survival

of cultures and groups and individuality in this State, then, I think we need to look at the mechanisms that allow for a broader, greater participation of all people in Alaska in our government. I'm speaking specifically right now of Legislature. I think we need to address the problem of reapportionment and how that's going to affect our participation in our government.

MS. STRINGER: Sandra Stringer from Fairbanks. I think centralism is going to be the main topic here. It's something that concerns me greatly. I think government is more and more centralized. We're having problems with maintaining the cultures in various areas, but what concerns me in Fairbanks at this particular time and having lived here for the last 17 years is an increasing economic centralization. It seems to me one of the things we ought to discuss is to make arrangements with the State outside the greater Anchorage area adequately viable.

MR. UCHITEL: Now why don't we go ahead?

THE MODERATOR: These are the instructions for the questionnaire. I'll just read it verbatim. "A questionnaire has been prepared for each delegate to self-administer now. It will take about 20 minutes for you to fill it out. After completing the questionnaires, the data will be tabulated and we will report back to you tomorrow on the results.

"The questions were drawn from the ideas, conclusions or proposals put forward by the three-dozen papers prepared for this conference. If you have not read all the papers, you may find it difficult to understand, or answer, some of the questions. If that's the case, please leave the question blank and go on to the next question.

"From time to time, the name of the writer from whom the question was drawn is also mentioned, for your reference.

"Please circle the appropriate numbers for each question, as you proceed through the questionnaire. In ranging questions, 1 is always the lowest rank, and 5 or 10 is usually the highest ranking.

"The responses to question 25 should be one, cooperative, or two, develop an independent plan.

"In question 72, we mean intercommunity roads, that is roads between Alaska communities; in question 74 we mean intracommunity roads, that is roads inside the community.

"Some questions ask for an open, volunteered remark, but feel free to write in anything you want on any question. Please make a clear mark on the questionnaire so we can code and process them simply and rapidly," and then we'll collect them up and take them to our data processing center.

MR. HERMANN: Of these questions that you have, it seems if we went through them, people have them ready one to ten. I can start sitting down and putting numbers down, but I don't know how you think or she thinks. I think if we went through them as a group. We're asking for an individual response, and what we're going to do in the data processing center is put together a picture of how the body seems to feel as a group. They will be ranked in that order.

MR. HERMANN: It seems that we always do this, and when we make a statement to sit here and talk and we send them to Portland, but the thing that goes in precedes that and not every time is what the group feels in the discussion, it's what's going to be put down in here.

THE MODERATOR: No, if there is a minority position that is going to be spelled out, too, very clearly. You'll see later on we prepared recommendation forms both for the minority fee and majority position, and I assure you that this conference will go the long way around to make sure that everyone's attitude is carefully represented.

MR. WOODS: My question is this essentially tests our attitude going into conference?

THE MODERATOR: That's correct.

MR. WOODS: What tests our attitude going out of it?

THE MODERATOR: We may devise one during the course of

this conference. That's a distinct possibility. Let me pass these out, take a few minutes to look them over and get going on them.

I think you'll find it useful.

MR. HERMANN: I hope so.

MR. WOODS: Do you want names on this thing?

THE MODERATOR: No, completely anonymous, please.

MR. UCHITEL: You said these are anonymous?

THE MODERATOR: They're completely anonymous, please.

(A short recess was taken for the purpose of filling out the questionnaire, and the following proceedings were had:)

MR. UCHITEL: Excuse me. May I interrupt this so that we can get on with it. Apparently at twelve o'clock we break for something.

THE MODERATOR: For lunch.

MR. UCHITEL: And we come back at one. So perhaps some of you that aren't finished, perhaps you can finish it at lunchtime --

THE MODERATOR: No, I'll need them now.

(Noon recess.)

*****

Afternoon Session

MR. MADDOX: Let me make some introductory remarks so we can get going. Before we broke for lunch, one that was not passed out was a proposed agenda as far as how Alpha and Epsilon Groups will get to the subjects. What we have proposed this afternoon is that the Epsilon Group deal with the issue of resources, and that beginning tomorrow at nine a.m., our group will discuss the issues of direct services, and one p.m. tomorrow afternoon, Epsilon will deal with the issue of finances. What we have placed on the board is, in the absence of this agenda, we're trying to figure out the schedule of activities that will work, so right behind me we have roughly 14 hours of discussion time to deal with the whole issues, and we tentatively made some subgroupings of where those discussions could possibly go, and then we kind of stopped that any further what's exhibited there. So that's kind of a reminder of the different issues that we can get into, and there was heated discussion as far as whether or not that should be appropriate or whether that was too broad or some important aspects left out. I think both sides of the issue merit some sort of concession, and if anybody gets the idea that a conference like this does not have its falacy, one thing is we're just going to run out of time if every aspect gets discussed to the point

that we think is long enough or appropriate to feel comfortable with.

The other chart that we have with the big question mark, the yellow pad, is the discussion areas as they are proposed in the yellow hard out book that you have. Item I was the alternative futures and then Roman Numeral II, III, and IV, resources is item IV listed there, and within the discussion of resources, we have those broad areas, and I don't think they're necessarily limited to that area, but it serves as a starting point for some discussion to determine what direction we think this group is heading. And some other groups throughout the next couple of days will also begin with those issues and I think the general report might indicate what happens from there on out. I'm not familiar if there are any other things to be made. Do we have any more remarks or instructions to this group?

MR. MADDOX: No, you're doing fine. Thank you. My role here is to interfere as little as possible unless you come to loggerheads over something or the information.

THE MODERATOR: The Group's discussion, then, on resources, just in the order of priority, we have oil and gas policy. I think how the discussion goes and in what areas should be discussed, does anybody want to make beginning comments at this time on their feelings? I think

some, Kosita Worl, what we need to know is whether there's a general pattern towards how the rest of the conference will go based on how we feel comfortable right now. Why don't you make your remarks.

MS. WORL: Mr. Chairperson, we are going to begin our discussion on oil and gas, I assume? Was that your decision? .

THE MODERATOR: It's not my decision. If there is no objection, we might go with what we have listed of the order of things that have to be discussed, what we're given as the areas of issues that we feel comfortable in discussing.

MS. WORL: Mr. Chairperson, before we get into a discussion of the topics, I would like to for a few moments discuss the questionnaire that we just took, and I understand we're going to be taking it again.

It is my feeling that the questionnaire should be used solely for the purposes of discussion, but not to reflect the position of any individual or as the material is interpreted as the position of the group. I have serious difficulties with the questionnaire, and I think that rather than getting into a whole lot of discussion about the questionnaire itself, I would just like to either make that recommendation or make that note that it be used solely for purposes of discussion, but not to reflect the

position of individuals or interpreted as a group decision.

MR. MADDOX: Mr. Tiepelman, may I speak to that?

MR. TIEPELMAN: Yes.

MR. MADDOX: It was never our intention to allow the questionnaire to be reflective of the Group's issues. This was strictly for in-house analysis of where the delegates were coming from, where they were when they arrived. Our final product will be your recommendations, and that's the only group concensus that we're looking for, your final recommendations on the issues that you're going to deal with. The questionnaire will have no bearing whatsoever and it was never intended that way.

MS. WORL: Mr. Chairman, I'm really being a researcher myself in knowing how questionnaires are used. I want to make that as part of the record that it not be used as a reflection of anyone's position.

THE MODERATOR: Those will be noted as part of the transcripts that will be available. Frank?

MR. WOODS: I feel the same way she does.

THE MODERATOR: Let me ask this question: Is there any way that this group is going to have, say, an indication of any portions of the questionnaire as far as how the attitudes are reflected without say --

MR. MADISON: You'll get a report tomorrow, and it's being analyzed right now.

MR. WOODS: Let me comment on your list here. A reason of mine is that during the oil and gas, I don't think that's really the thing we're looking at. We're looking at renewable land, timber, fisheries, and game and agriculture. It seems to me the only discussion we want to talk about is oil and gas. I think oil and gas is secondary. I notice on that list, you've got oil and gas, and on this list we've got oil and gas.

THE MODERATOR: The way it's listed, I took it off the order of agenda, and that's why I didn't put any numbers as far as priorities.

MR. WOODS: You mentioned the priorities, the first one is oil and gas. Myself personally, I'm prejudiced. I'm a fisherman. I don't think of it as a priority.

THE MODERATOR: Any members want to respond on resources?

MR. WELTZIN: I would say that it's not important to me, but it has far reaching implications on the State as a whole and the one issue concerning the oil and gas issue is the rate that we use and exploit these resources, and I'll start out with the statement that I think the state of Alaska should take a slow pace towards oil and gas and exploration in the future because of the 3.5 billion dollars sitting around right now, and we should really preserve some of these for use in the future.

MR. McCUTCHEON: I'll add to that. We have to go slow because the oil and ground report is going to be produced.

MR. MADDOX: Would you identify yourself, please.

MR. McCUTCHEON: Jerry McCutcheon.

MS. TROLL: One thought I've had about oil and gas in regard to the taxation is I would like to see some of that tax going directly into alternative energy programs and kind of like a transition tax used in renewable resources. It's not a renewable with resource, it helps carry us over to the renewable state. So it would be some kind of a transition tax that would go directly into ongoing projects, energy out in the bush and put it in the programs here in Alaska.

MR. WOODS: Would that include such things as small hydro projects in the southeast?

MS. TROLL: Yes, because I think the insight I've gotten into in the alternative energy program, there's a lot of effort that's being generated, and when one generation gets small hydro projects or something like the Alaskan Resources Project, to put that money into alternative projects.

MR. McCUTCHEON: A lot has happened to Alaska from the renewable corporation which is a non-profit corporation probably a decade or so. At some juncture, it will produce energy which is cheaper. We're discussing the Susitna

Project and the Alaskan Renewable Resources Corporation and the Alaskan Renewable Resources Corporation as I understand it has to be a profit making venture and something like the Susitna Project is going to produce low cost power, and it may be a decade or so before it will be able to pay its own way, but at some point it will present a ceiling as to what the power costs will cost us in the rail belt area, and at that juncture it will then turn a profit and so on for the next 500 years.

THE MODERATOR: This is Dennis Tiepelman speaking again.

Let me give you a scenario and see whether or not there's opinions you can react to and this involves not only the resources category but it gets into the specifics of probably the implication of oil and gas policy as well as fisheries, and this happens to be in the area of say coastal zone management. We're talking about fisheries competing with the need for further oil exploration to be developed on the offshore basis, and what's happening right now in this State is the pending Beauforth oil lease sales that are to be next week, and at the same time, there is the lawsuits filed to prevent that from occurring. So that both sides of the issues can be argued, and on the one hand, you have the people in those various communities expressing the need that certain kinds of life-style and resources

such as the whales and the coastal areas need to be looked at a little closer. And on the other hand we have the energy crises of the oil companies and other people needing to address that situation.

In the area of competing resources, what opinions from the various group discussions here can we state to try to see whether or not here's a better understanding of how that's going to affect the long range Future Frontiers' concept of looking at it with also the thought in mind that in some ways financing or legislative action has got to address that whole area.

Does anybody wish to respond? Rosita.

MS. WORL: Rosita Worl. I would like to throw out a recommendation that come from this body and also throw it out for discussion.

I recommend that no state oil and gas leases be let until the coastal zone management plan for each region has been enacted, and I'd like to just discuss that for a few moments, if I may.

THE MODERATOR: This is Dennis Tiepelman. As a further clarification of that recommendation, can you state the basis of why that recommendation would be made for clarification of other people that might want to know the issue. For instance the CZM law versus OCS strategies.

MS. WORL: I don't understand all of the legal

implications of it all, but I'll share with you what I know or what someone else knows about it.

As I understand it, there is a federal law that is called the Coastal Zone Management, CZM, and under that law, communities, and that's undefined, are allowed to develop or allowed to develop a Coastal Zone Management plan. And under that plan, they develop an inventory of their resources both in terms of its natural resources such as fisheries or in some areas, subsistence resource areas.

Anyway, the local community defines what is important to them and how do they want to plan for oil and gas development.

So the communities meet, they discuss, they formulate plans that protects their interests as a community. And then some may act formal, if they're organized as a bureau government, they formalize a plan or ordinance plan that's adopted by their local government, their bureau government. That plan goes to -- I'm not sure an order, a coastal zone council which is a statewide council. That council reviews the local plan and has the opportunity to respond or change, amend, and I'm not too sure of the order. It may go back to the community. There is further negotiations. Then it also goes to the legislature. The legislature also reviews the plan.

Well, the purpose behind this plan is to develop

local participation, local input, and local decision making however that, you know, there are two levels that it must go through. I think it's a federal law that's already been enacted.

Here in Alaska, we pit ourselves between national interests, state interests, and local interests, and I think all of us who are from Alaska know that we are tired of being ruled from a government that's somewhere farther away from us.

So the concept of local government, local management is basic and an inherant part of this Coastal Zone Management. And like our Fairbanks delegate said, oil and gas is here and if we're going to have develop -- we are going to have development, there is absolutely no doubt about that,, but at least what we can insure is that we protect our interests at the local level, we insure ordinary development, and we insure some protection for Alaskans.

And so my position is that all communities, local communities should have that option. That plan should be in force before oil and gas development occurs in that local area.

THE MODERATOR: Does anybody wish to express an opinion about clarifying that further or give another viewpoint that is not the same as what Rosita has expressed

at this time?

MR. McCUTCHEON: Almost look at the report. I'll second it if it's a motion.

MR. MADDOX: Mr. Chairman, with regard to the oil and gas issue policy, I would like to call your attention to who is here. It's people simply with respect to oil and gas policy, but he is here and available to address you.

THE MODERATOR: Would you like to make some introductory remarks based on the discussion?

MR. LIPTON: No, I don't feel impelled to interject personal opinions or responses, but I'd be delighted to answer any questions that you would like to --.

THE MODERATOR: As we go along, then, I think we can expect you to be a resource person that can share some perspectives.

MR. LIPTON: If I can, I will.

MS. TROLL: I have worked as a consultant in the development of a few coastal management plans. So while I really support the notion that was presented down there, there are some general problems that I will share with you and that is the whole notion of what does consistency mean? That is kind of like the carrot which local planning initiatives get started, because there's a consistency clause that said federal and state agents or management actions must therefore be consistent with the local coastal

management plan.

Well, I did a little bit of reseach in trying to find out what does that consistency mean, and there's a couple of loopholes about national security and the nation's best economic interest and there's a couple of special stipulations that regulate to oil and gas leases. So the real question is consistency and what it means for top and local government is yet to be determined, and I think we're going to see what happens in this rural case right now. So the question of being able to enforce an act to direct oil and gas policies has yet to be resolved. It is going to be resolved in the courts.

MR. GARVIN: John Garvin. I would like to ask Mr. Lipton to respond to what might be the implications of this resolution that's before us.

MR. LIPSON: Let me just say that the resolution that I just heard, the proposal that was laid before the group bears upon one of many aspects of what is essentially the potential conflict of interest, this being resource development and other values the state might have whether it's coastal zone, whether it's environmental protection, whether it's balancing the need elsewhere in the United States with a maximum contribution of oil and gas from Alaska versus Alaska's own interest perhaps in delaying it. All of these things from different aspects represent

conflicting interests, and it seems to me that the basic problem that you're struggling with here now in choosing the values and the directions of policy for Alaska over the next ten years is on what basis you make this selection between conflicting interests. You will always be faced with the problem do we want to threaten our environment or do we want to produce oil and gas for export? Do we want to produce oil and gas for consumption at lower costs or if that be the case -- (Inaudible). I suspect that the major problem you have in looking at Future Frontiers is not so much the specific judgment. Do you hold up all state leasing until every area of the state has enacted its own Coastal Zone Management programs and accepted it at every level, but how does the state go about balancing these conflictions? And this is a run through of aspects of leasing policy, of tax policy, how much money to spend or can you wait until later on?

So it's difficult to respond to the complications of this one thing, this one aspect of what will be the continuing, and the choices you will make over the next ten years will have a broader range than you've ever had before. When the resources are going up, you have wide choices you can make. So I can't answer that specifically. All I can say is is that this problem doesn't stand in isolation. It's part and parcel of the continuing resolution that the

state of Alaska will have to make between the alternative interests which are in conflict, one with the other.

MR. McCUTCHEON: McCutcheon. I didn't understand the lady at the end of the table to say that all oil and gas leasing was to be held up until all the coastal management plans were in. I understood her to say that where the leasing was to take place offshore; that the coastal management plan would be in place. Am I correct?

MS. WORL: Yes.

MR. McCUTCHEON: And that's substantially different.

Two, somehow it's been presented that the national policy that's in the best interest of this country to produce all the oil and gas that we can at this time, and I most whole heartedly disagree with it. Since we are at the end of the oil and gas era of the United States, I would suggest that maybe we ought to hang on. It's like saying we will need oil and gas today but not tomorrow and that's not so true. Well need oil and gas just as much tomorrow that somebody has to say to the federal government that hey, you better think about tomorrow, not just today.

THE MODERATOR: By way of additional information, two weeks ago, there was a work shop held in Anchorage by members that are involved with Coastal Zone Management as it applies to Alaska and the OCS leasing schedule that addresses the exploration of oil development in those areas

of the coast and there was also representatives from those rural areas that are immediately impacted or soon to be impacted, and there was a discussion of the issue of Coastal Zone Management and outer-continental shelf leasing schedules where the issue really came down to the idea that we won't know for sure where a consistency lies until it's been tried in the courts because the interpretation of both sides in what I would call the political arena, you have competing interests for what unfortunately in this instance is maybe a conflict of how that coast is going to be used and that until the lawsuit gets some sort of a judgment, both sides of group discussions will center around what is more appropriate than what is consistent, and I think those of you that are representatives from different areas should feel comfortable in expressing their opinions both pro and con because I don't think anybody denies that there are two sets of the issue and that is the purpose of this group of people to lay out some additional opinions that either can be clarified or someone can come forward and say I disagree for those reasons and more than anything else, the purpose of this is to take a look at those various perspectives that we call in a lot of cases the conflict.

Does anybody else wish to respond to the recommendation have no leasing until the applicability of that that Coastal Zone Management as it applies to bureau

and OCS is kind of still to be decided.

MS. STRINGER: I'm asking a question which is really very basic because my own background in this area is negligible. However, in listening to your discussion, that it seems to me that those of us who have very limited background may address this: Whatever we want is to decide that the federal government supersedes state's desire, which is likely to take precedent. It seems to me we're back into an almost state's rights situation which in rationale was in certain respects a few years ago.

MR. MADDOX: It's axiomatic in language of the general systems theory, that that's society. That socio-cultural system which would harness the greatest amount of energy per capita per annum will prevail. I will suggest we're 214,000 strong. We can harness that energy and enforce our resources politically and intelligently. We may very well be able to prevail to that situation.

MS. STRINGER: It seems to me that indeed to harness the energy we might, but control it is my question. Do we need to control it? If it is decided by the remainder of the population of the United States that national interest requires that the United States get that energy out over the next ten years rather than say the State of Alaska might decide it would be valuable to us that the stuff stay in the ground where it accrues, not only interest in terms

of dollars, but that we might have it for future generations. We can harness, but do we control. It's very basic to the discussion.

MR. MADDOX: That's a political question.

MS. STRINGER: If we don't discuss that, we can make resolutions from here to eternity.

MS. WORL: I know that the topic is of a much broader topic than my resolution addresses. What we're talking about is oil and gas development, what are our policies, national interest, state interest, and maybe local interest, and also maybe one might discuss the merits of the Coastal Zone Management Act. I agree that those are all very important topics. However, this one, you know, this one resolution just addresses something that is already enacted. It is a federal law. The federal law is saying to the state and to the local area, you develop your Coastal Zone Management Plan and then however it's enforced is something else. But at least we start off with a plan. We start off with local government, local citizens participating in the development of a plan. That's all this resolution is talking about, just one specific tool. We may want to broaden the resolution to talk about state interests or local interests versus national interests which this resolution is part of that, but all this resolution that I have proposed is saying that let us use this one tool that

we do have, just this one, however small it is. You know, I know that there are all kinds of problems with it. You know, whether we want to discuss the merits and pros and cons of the Coastal Zone Management act, you know, maybe we might want to do that. All I'm saying in this resolution is calling for the adoption or the implementation of a federal law that already has been enacted, but not implemented. And I'm just saying let us implement those plans before oil and gas development. Let us have the opportunity to plan for whatever kind of development we have because it does give the communities the opportunity to assess their resources, their human resources, their natural and physical resources before they start making the plan and before development proceedings.

THE MODERATOR: By way of information, to the rest of the participants here, is there anybody here that's knowledgeable or can give us a summary of the application of OCS and how it's derived as far as federal law and the method or manner of how it comes to mean the intercontinental shelf leasing schedule? Because I think so far, we've addressed the applicability of a federal law called the Coastal Zone Management Act of whatever year that was and its application is how it's been put together, but the North Slope Borough as a local government and its relationship to how they perceive OCS to be in the North

Slope Borough because it still needs interpretation under a law. It's gone to a lawsuit, but is OCS leasing schedule a result of a specific act as of such and such a date?

MR. LIPTON: No, the leasing schedule, the federal leasing schedule from the outer-continental shelf was determined by the administration. It was determined pursuant to the decision to accelerate the speed at which the potential resources on the federal jurisdiction should be tested. And there was nearly an elaborate evaluation of the oil and gas potential, and then in the Department of the Interior there was devised a schedule for leasing. It does not have, it does not have a force of statutes that was determined by act of Congress, but it was determined by the administration as the pace at which it shows to explore the potential resources in the inter-continental shelf.

THE MODERATOR: So that begins from the Coastal Zone Management to enact up to Congress and the issue to be tested then is the impending lawsuit and how it gets interpreted.

Other comments?

MR. NAUGHTON: My name is Ed Naughton.

Can anybody here tell us what we're talking about in terms of potential gas and oil leases? Are we talking in terms of not leasing? In other words, what besides the North Slope are we talking about? Are we talking about

some potential in the area or are we talking about potential leases in the Fairbanks area? Are we talking about the potential leases for the Laska Pass? What are we talking about when we say don't lease?

MR. MADDOX: I think what we're dealing with here is the potential conflict between the expediency of providing our principal nonremovable resource to the Lower 48 States and other parts of the world against the development of our principal renewable resource, our fisheries, and this is a direct head-on confrontation between these two basic energy sources, protein energy and petroleum energy. The needs of the country are such that the schedule is being stepped up at the most rapid rate possible from their point of view. At the same time, we're concerned with the impact of that development on our fisheries and so we're -- we are talking about oil leases in Yakutat and Kachemak Bay and Bristol Bay, in the Bering Sea. We're talking about the exploration of and drilling for oil and gas in what is potentially the richest fishery in the world. This is the source of the conflict as I see it.

MR. NAUGHTON: Is what? That's why I'm seeking to find out what we're talking about because the United States nationally doesn't particularly care about fish. In fact the attitude in the national capital is that God put the fish out there so the foreigners could catch them and put

them back to put dollars in to sell lords with. I want to get a better look at what we're saying because there's a lesson in the reading of the oath, whether it's better to bend a little bit with the national interest rather than try and draw a line and say absolutely nothing beyond this because you can get run over so quickly when you're dealing with the national government.

THE MODERATOR: The immediacy of OCS right now is in some ways in conflict with the North Slope Borough plan and the need for exploration in the outer-continental shelf. However, the OCS leasing schedule, a five-year plan indicates that these are the areas coming up for nominations for tracts that also includes the Kodiak area, the St. George Island, the St. George Basin and the Norton Basin in the Nome area. So those are not so much being discussed as being so immediate as to not create a conflict right now.

However, the Coastal Zone Management Act at that period of time might have a plan as far as how the two competing resources might decrease each other's potential conflict and disaster, so to speak, and so what we've discussed so far is the recommendation and its application for future utilization of resources in Alaska is only compounded by what we have going in the North Slope Borough. Frank?

MR. WOODS: Well, maybe to answer the question -- Frank Woods, Bristol Bay. It seems to me we're talking about oil and gas but if you look at the history of the United States, they've been dealing with what you call oil money for years and the dollar itself is down. The United States has never dealt with resources like agriculture and fishing which is protein and also people. They've dealt with oil money all the time. That's one of the problems. I don't think we want to be in that same situation twenty years from now, 30 years from now, but once it has gone, we don't have anything. If we leave it there, we know it's worth money. What it is is how do you get the two to work together? And I think the federal government itself is saying instead of repeating on our mistakes, let's honestly look at this problem between the two.

MR. McCUTCHEON: I think Rosita's position is a very defensible position and one which I don't think we would get run over from the federal government. It's simply a position that is asked let's simply see what we know what we are doing before we do it and I think that's what she's saying there, and I think this is the same thing we find if Congress is mandated and that is the federal, that is, the administration which is now in conflict with a law of the federal government, and I think politically we have the resources; that is, money to campaign and prevail if we

really decide to do it and I don't think from her position or there may be some more positions, but I don't think we could be run over from the position that she has taken.

MS. STRINGER: Sandra Stringer, Fairbanks again. I can agree with this particular position that was enunciate had by Kosita earlier if I were fairly aware of how much progress has been made on the coastal zone management plans because if the plans themselves were being either forestalled or local people decided for some reason or other to progress, peace with them. A decision -- if we back up the resolution like this and we can assume attention will be paid to our resolution. A decision could be made by delaying the plans if no action is to be taken to the plans or plans formulated, then, that makes the decision. That bothers me. I'd like to see it brought out more.

MR. MADDOX: I'd like to call your attention to the fact that we've been debating this particular issue now for approximately 50 minutes, and I would like to suggest that you attempt to resolve it within the next ten so we can take a five-minute break and attack something else.

THE MODERATOR: Let me try to conclude with the following remarks: The courts are going to interpret the OCS an ocean management as it applies to the North Slope Boroughs Coastal Management Plan and that the

recommendation is not out of line in the sense that for the next ten years we need to keep that perspective as they develop because in that same period of time, I think both areas will try to achieve consistency, and something that both sides can work with and as time permits throughout the rest of these sessions we can bring out specifics on this matter again but it's not out of line for this recommendation to go as a group based on discussions that what we said so far is appropriate and that it, the frame of events that are still going to occur now is the result of activities that in some ways we have expressed our opinions of how those people should interpret it and view it but we can't guarantee that they will racket to that under our assumed rationality of we've achieved this recommendation.

Getting onto if next portion, let's talk to some degree about fisheries because in some ways --

MR. McCUTCHEON: are we going to wind it up. Can we either go to accepting her recommendation at this time or not?

THE MODERATOR: I have heard no recommendations to it.

MS. WORL: Whatever form we decide to take --

MR. McCUTCHEON: You put the motion and I'll second it.

MR. MADDOX: Our court recorder here will be summarizing your statements and stating the recommendations

as you have given them on a sheet here which covers the general area, the category within that states the specific recommendation and provides information as to the background that led to that recommendation from the group. This will be available on an expedited basis. We have an electronic miracle here that feeds it into a computer and get a printout immediately.

MR. McCUTCHEON: Can we vote on it or assume that it's been accepted.

MS. SANDE: Did you read that?

THE MODERATOR: The major topics of discussion will have the following as an interpretation of recommendation. Then it will mention a general area, the category, and then the specific recommendation which we've discussed for about 45 minutes, maybe half an hour. Then there's a listing here of major factors or considerations leading to the specific recommendation. Again, those are the discussion items that have gone back and forth and allowed various individuals to speak up on. The portion here is financial impact, item number 14-FY-81. Item number two is the projected need for the next ten years. That is still subject, I think, to interpretation because we haven't applied that specifically to our recommendation in discussion right now, and then the very last thing here is the timing.

Is that the length of timing, too?

MR. MADDOX: No, not necessarily. That would be your time frame for effecting the recommendation if you make it.

MS. SANDE: What exactly was the recommendation?

THE MODERATOR: Rosita, repeat the recommendation.

MS. WORL: No oil and gas state leases until the local, and that's not defined, local or regional Coastal Zone Management plan is adopted and implemented.

MR. STEPHEN: Is that just dealing with State leasing or State recommendations on federal leasing?

MS. WORL: State leasing.

MR. McCUTCHEON: I'd like to second it and then I'd like to make an amendment to a concluded basis.

MS. SANDE: Only dealing with oil and gas?

MS. WORL: Just oil and gas.

THE MODERATOR: Just a minute. We have a gentleman here. There was the motion to accept the recommendation, it was seconded by him. Because he has the floor, he can make the amendments which at that time if somebody would like to discuss the amendments further he can second it for discussion. That way there's a formality and process of how people can effect the main motion and whatever amendments. When it comes time to vote on it, then, nobody has an unclear idea as to what the vote's going to be.

MR. McCUTCHEON: For about three seconds --.

THE MODERATOR: I'll allow you to do the second and state the amendment as well.

MR. McCUTCHEON: My name is Jerry McCutcheon, I'll amend Kosita's second motion and then an amendment to read, to include also, also include any federal leases because there's not much point in sewing up the state. You may not be able to block the state -- we may not be able to block the federal government, but the state and they should go together.

THE MODERATOR: Is there a second to that discussion? Stephen?

MR. STEPHEN: Second.

MR. McCUTCHEON: Can I speak?

THE MODERATOR: Jerry McCutcheon.

MR. McCUTCHEON: One of the reasons I want to bring out something here. Back in 1975 when I did, there were four million state acres that were leased out on shore and there were four million acres in Alaska, four million acres state and federal government leased out Alaska in which there was no production, no exploration, no production or exploration. And in the United States at that time there were 75 million acres which were neither for production nor for exploration. There's a hell of a lot of land out there, and maybe it's not worth much, but two things ought to occur first before we go and jeopardize resource. They

either ought to give the lease up or get on or off the pot. This is, you know, the state of the country says they need this. We're going from here to there to somewhere else. For example, today, for every barrel of oil that we produce, we render two barrels of oil unrecoverable. It's because we're dropping the pressure. We're not maintaining the pressure on the reservoir. It's kind of idiotic to go to gutting one reservoir and gutting and gutting and say it's national policy when as a matter of fact the way we have adjusted our tax laws, general rates, this very type of thing. So the question is what will we do with --

One of those two barrels which are renting unrecoverable back again. They do recover it by late pressure and special things to the reservoir. So I think we're really in a comfortable position to argue our case. At least I think it's our case. What they need to do is to maximize the recovery from the reservoirs they've got to maximize the potential --

THE MODERATOR: Let me cut in by making the following statements: You have made a motion to amend, to include CZM and OCS schedules to be applicable to both state and federal uses and it has been seconded. Without trying to limit it to too much debate, let me ask you are you ready for the question on --

MR. MADDOX: This is a public forum. You are a member

of the general public, not a delegate here. I would like to hear a second from that amendment coming from a delegate. Members of the general public are not to vote on these issues. These are the ground rules.

MS. ROWLEY: I'll second it.

THE MODERATOR: Are you ready for the vote? All those in favor of the amendment to have OCS to apply to both federal and state leases signify by saying aye.

Are you ready for the main motion which is to recommend the leasing schedule under CZM applicable laws and its consistency?

MR. GARVIN: Question.

THE MODERATOR: The question has been called. All those in favor of the main motion signify by saying aye. All those opposed signify by saying nay.

MS. STRINGER: Sandy Stringer from Fairbanks, and I have a motion to offer as a companion motion to this and that is in order to facilitate evaluation of possible state and federal oil leases in Alaskan and coastal areas, coastal management plans in various communities be expedited.

THE MODERATOR: Let me make the following statement. I think that by law it is already, is a definite schedule and that the five year OCS schedule is subject to interpretation as far as some of those leases being

postponed or so that the consistency of OCS or YZM is less severe.

MS. STRINGER: I don't feel I understand your answer. The motion hadn't been seconded yet. So you responded to it before it was seconded.

MS. STATON: I'll second it.

MS. TROLL: Kate Troll. Under the Coastal Zone Management right now, there are time requirements in there to incur for the expediting of coastal management plans. The catch is that I think you have five years from the enactment of the act to initiate your plan. If not, the state will come in and do a plan. So there's an insensitivity already built in the Coastal Zone Management

MS. STRINGER: Let me direct a question. I think that answers the question that I had, and the reason that I brought this up because as I said I have no objection to the resolution which we just passed as long as it was not being used as a means to forestall leasing indefinitely by forestalling the development of Coastal Zone Management plans indefinitely. So I withdraw my resolution.

THE MODERATOR: The motion for that recommendation has been withdrawn.

Fisheries, getting back to the subject of fisheries. Rosita.

MS. WORL: Am I to assume that our discussion on oil

and gas has been tabled until a later time? Because I don't think that takes care of oil and gas.

MR. MADDUX: Could I suggest a five-minute break?

THE MODERATOR: Okay. A five-minute break.

(Short recess)

THE MODERATOR: There is a tremendous amount of discussion, and dynamics warrant that we would have to impose instruction or rules that some of you do not appreciate, but I'm trying to represent to the group to get together.

Now that my speech is finished, the next subject that we're trying to get on is fisheries. We have a couple of people here that have expressed that they have an interest or come from the background of being fishermen, so perhaps to kick off some areas of discussion, Frank Woods here can maybe express a couple of opinions, and don't forget that we have both delegates and public members, and once certain things are done, I encourage everybody to express an opinion or ask a question. I know that so far some of us or some of you have not spoken up whether it's your nature to be quiet or whether you feel that some of us are imposing go our will more so that it does not ask you to speak up, and I will ask some people to speak up and ask a question so that at least you'll be given a chance, and if there is no discussion after that, I don't think anybody

can site for me ramroding some of the proposed recommendations if, in fact, those things come up. You're from the Bristol Bay area; right?

MR. WOODS: Fisherman. Frank Woods from Bristol Bay. We talked about the 3.5 billion dollars, how to use it. If you look at the national level which is called the domestic level, the consumer, the domestic consumes about 35 pounds per capita while Japan does almost four and a half times as great, but if you look at the domestic market, the federal and state government has been almost zero. The Japanese has come in here since 1968, took over the canneries, and I think it's about time that the federal government and the state take a really good look at what we have which is fisheries. It produces about three billion dollars worth of industry, and the problems we have in Bristol Bay has been the spillover effect from the southeast, the problems of local participation. I'm talking about getting good boats, getting good gear. The northern part of the state from Kotzebue all the way down to Bethel is having what you call a Bristol Bay spillover. They don't have good equipment, they don't have good gear.

My feeling is that before it happens in those areas, my feeling is the state and the federal government should participate in this industry by putting dollars into the thing. If you look at the economics compared to beef

and fish in the Lower 48 or the domestic market, you will find out the beef is going to keep going up because you've got to feed the animal. Fish you don't have to. They return every year. If you look at the consumption rate, it tells you it is already four and a half times as great as the domestic market. The domestic market does not even know what a salmon is. Whose fault is it? It's the federal government and the state. We know for a fact that the cost of the product can be reduced to two-thirds to the consumer on the other end without going to the controlling factor of Japan which is 80 percent. We know we can do this, but we don't have any help. We don't have any help from the state or the federal government. That's one reason I express my feeling compared to unionable resources is what we're talking about, gas and oil. We should talk about protein, people. We have a lot of problems with our fishing industry because I don't think the state and the federal government really took a good close look at it as far as economics. But what really supported the state before and after we became a state was the salmon industry and it's still here, but we have so many problems. We can't deliver our fish, but we dump 200 thousand fish a day. There's got to be some mechanism where this has got to change around and it is going to cost money.

THE MODERATOR: I think without getting into the

specifics and in some cases, Frank here has brought up some of the problems associated with the fisheries as it currently exists and implicated in that process is the need for more participation in which the state through its investment of the billions of dollars can begin to look at it and I think this forum here, then, does express some of the methods and means of how that can be done, because somebody has, at the most, expressed an opinion of where those problems are right now. The other areas of fisheries that I would like to invite other participants to express an opinion on, is, say the 200 mile limit, the hatcheries, the marine studies and marine biology that affect fisheries and with that being said, would like to hear more opinions.

MS. SANDE: I would very much like to -- well, I guess I'm proposing a resolution that the state invest monies or increase state monies in primary processing facilities on the shores of Alaska and in a hatchery program.

MS. STRINGER: second.

THE MODERATOR: The recommendation is, the remarks that you have made, there has been a second. For further discussion, state your name and add to your comments on that matter.

MR. WOODS: I would, in fact, like to add on what you're talking about. Processing plants. That doesn't solve the problem. You can have a processing plant, but if

you can't get the product, you shouldn't have a processing plant. The fishermen and boats and gear, I think they should go hand in hand. You need all three of these. You need boats, gear, and a processing plant. The fishermen are always there. They live within that geographical area. Our problem now is because of limited entry, our permits are being bought upright and left and they're going into the hands of teachers and doctors, dentists, you name it. If you look at the percent rate that was issued back in 72, we did have more Alaskans fishing in our water, but today if you look at it again, we are being overridden by doctors and I hate to say it, but it's true. There's lawyers, there's doctors, there's teachers, there's dentists and if we're going to have good equipment, we can show you time after time, if you have two bad years you have to sell it in order for you to survive.

MR. MADDOX: Mr. Chairman. That's, I think, a very valid point and one that is being widely discussed all over the state right now. The whole issue of limited entry permits as commodities on the open market, I would like to hear more discussion of that as an issue. The fact that these permits have become a commodity with such a high value placed on them, is a very clear indication that Alaska's resource other than the people of course is the fishing industry. I think that's a very fine point for

departure.

MS. SANDE: I think that is true and there are board officials meeting now and that's one of the topics they're discussing, but there's also a need for processing facilities, marketing studies and maybe I could amend my motion to add research and marketing studies for this phase of fishing, also. There are year loans that you can get. All these aspects do need work, but I think the processing facilities, there is really a need for them. The best example is in this book we got, was an article by Larry Cotter in which he went into the Ketchikan area and the Japanese are coming up with containers and taking out the abalone. Many of the people on the Prince of Wales Islands are saying, "Hey, they're being disseminated." And primarily they're going to Japan. There should be some primary process set up so that Alaska gets some income from it.

MR. MADDOX: Essentially this is what you're talking about. What is the role of the state with regards to the fishing industry in general. Again, I'll make mention of the situation I talked about this morning. The two countries I referred to, Iceland and the Farrow Islands with their single based economy. Obviously the minister of fisheries in those places is the most powerful figure in the country. If, in fact, we agree that Alaska's fisheries

are our greatest resource then perhaps the state has a role that is as of yet undefined and should be discussed here.

THE MODERATOR: Frank?

MR. WOODS: You mentioned that there is programs through the state. The state, for example where I come from, pretty close to 95 percent of our people do not qualify for those loans, but they have their own houses, but they have no track record. These kind of problems I'm talking about and even if I did have what you call a basic track record and I had to buy a boat for $80,000 which they cost now, I'm not going to tie up my house and my land and put all of my eggs in one basket and go out for that loan depending I might have a chance -- there must be other ways you can do that without tying up your whole livelihood. But we're tied down to the system so bad that we have learned. We haven't been hit so hard before in the past that they're people I know that have lost everything, just because of one bad season, and I don't think that should exist when there is a product that can be sold and lose X amount of dollars. If you take Walter Hickel, they can take your fish ticket and you're worth that much money. There are ways to do it but the state and federal government has not ever gotten into this system. Has never run the economics of when that fisherman leaves the boat to the consumer. There's always been a gap, and the gap, it's

a big gap, it's a 400 percent turnover rate. That's why the consumer pays a high price for the product.

THE MODERATOR: The specific recommendations that the participation and its use of funds to improve fisheries, under discussion, I will consider the items as major factors or considerations leading to this recommendation and make your comments related to that and then we'll be reminded before the conclusion of that portion of your specific wording of the recommendation again. George, a comment?

MR. MADDOX: Mr. Chairman, I'd like to call your attention to Mr. David Allison from the Department of Policy Planning and Development.

THE MODERATOR: We'll be taking that next, as soon as George makes his comments.

MR. WHITE: I agree with Frank and his reasons what he stated. There are some areas of Alaska where fishing is not as lucrative where fishing is as Bristol Bay and it's very difficult for the fishermen to make a living at times and as Frank says, the result is that the teachers, then doctors and people from outside end up with the fishing permits, and I think that this is, in some cases, almost disasterous to the local community, to the economy of the community and eventually to the economy of the state, and Mr. Chairman, I would like to offer an amendment to the

resolution that it include a direct subsidy to the fishermen of the state.

THE MODERATOR: Is there a second to that amendment for discussion.

MS. STOKES: I'll second that.
