HOUSE BILL NO. 378

3

IN THE LEGISLATURE OF THE STATE OF ALASKA

4

FOURTEENTH LEGISLATURE - FIRST SESSION

5

A BILL

6

For an Act entitled: "An Act relating to the interest rate on state loan programs; and providing for an effective date."

7

8

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

9

* Section 1. AS 37.05.035 is amended by adding a new subsection to read:

11

(b) Notwithstanding any other provision of law, the interest rate for loan programs administered by the state or an instrumentality of the state shall increase by one-half percent October 1 of each year until the interest rate is equal to

12

13

14

15

(1) the prevailing market rate for each type of loan; or

16

(2) the cost of funds, if the loan program is financed by

17

the sale of bonds or other indebtedness.

18

* Sec 2. This Act takes effect October 1, 1985.

RESEARCH / QUESTION / WHAT SAY

The Honorable Rick Halford
Alaska State Senate
Pouch V
Juneau, AK 99811

Dear Senator Halford:

The enclosed packet, Exhibit I, is presented in response to your request that the effect of modifications to the current level of subsidy be reviewed. The two alternatives chosen to be analyzed were as follows:

Case A: Subsidy reduced to 2-1/2% effective October 1, 1985.

Case B: Subsidy initially reduced to 2-1/2% effective October 1, 1985 and further reduced to 2% beginning October 1, 1986.

The summary on Page 1 of Exhibit I demonstrates the estimated effect of the changes on subsidy requirements and Revolving Fund balances.

You made a second request related to ways the program might be modified to assist the Corporation in being able to accommodate future loan financing activity with existing resources of the Revolving Fund. One proposal would be to provide a substitute for the existing subsidy structure used in the taxable bond funded program. Currently the mortgage note rate is written based upon a 3% rate reduction from the "cost of funds" for the first \$90,000 of a loan. This results in a 3% subsidy for the life of the loan. The proposal calls for the same effective initial note rate with payments increased annually until they are at a level sufficient to pay the principal and interest due on the loan at the unsubsidized rate. This type of a loan is generally referred to in the mortgage lending industry as a "buy-down loan".

The stated note rate would be "bought down" to a subsidized effective rate through an allocation of funds in a pledged account. As the borrower's payments are increased, the required subsidy draws out of the pledged account are reduced until eventually no further draws are required. The borrower would be signing up for a 30 year fixed rate loan with gradually reducing payment assistance provided by AHFC.

This type of a loan would be similar to loans assisted under our Home Ownership Assistance ("HOF") Program. Under the HOF program, the borrower signs a note at the standard AHFC interest rate with additional monthly payment assistance provided to reduce the effective rate to as low as 6%. The HOF assistance is reduced as the borrower's income increases. The buy-down mortgage will have annual increases in the monthly payments beginning in the second year and continuing until the borrower's payments equal those required on an unsubsidized basis.

The following compares the buy-down mortgage with the current ABE structure. Also enclosed are two graphs which demonstrate the difference in payments and subsidies:

	<u>ABE Mortgage</u>	<u>Buy-Down Mortgage Proposal</u>
Effective mortgage rate	10% for life of loan.	10% first year increasing to 13%.
Stated note rate	10%	13%
Borrower's mortgage payment terms	Initial payments based upon 30 yr. fixed rate loan with annual monthly payment increases of 5% beginning in years 4 through 9.	Initial payments based upon 30 yr. fixed rate loan with annual monthly payment increases of 5% beginning in years 2 through 5*.
Gross AHFC subsidy (assuming loan goes to term)	\$32,246	\$7,320
Present value of subsidy discounted at 10%	\$17,992	\$6,092

* Period of increasing payments may vary depending upon loan amounts and interest rate levels.

Standard underwriting guidelines allow for qualification of the borrower at the initial bought-down rate provided that the annual increases in mortgage payments do not exceed 7-1/2%. In our examples we have assumed only 5% annual increases.

The buy-down mortgage has the advantage of reducing the amount of subsidy for loans purchased under the taxable program by approximately two-thirds. This would be accomplished without precluding anyone from the benefits of home ownership who is currently qualified under the existing program.

The Honorable Rick Halford
April 24, 1985
Page 3

In connection with the implementation of the buy-down program, consideration may be given to relaxing the Corporation's requirements of continued owner occupancy. Since the loan will be unsubsidized in approximately 5 years, it is possible the program could look at initial owner occupancy and the "one loan per resident" criteria as being sufficient. Since conventional long term fixed rate financing now imposes a "due on sale" clause, the buy-down loans would have to remain non-assumable.

I hope the above is useful in your review of AHFC's mortgage loan financing program. If I can be of further assistance, please let me know.

Sincerely,

Mark K. Cameron
Acting Executive Director

Alaska HOUSING  FINANCE CORPORATION

April 16, 1985

The Honorable Jan Faiks
Alaska State Senate
Pouch V
Juneau, AK 99811

Dear Senator Faiks:

Enclosed please find a booklet containing lending and financing activity projections along with an analysis of Revolving Fund activity and balance estimates. The first section of the booklet contains projections based upon existing programs, while the second section presents the same information adjusted to reflect the changes expected should legislation in the form of that contained in SB 281 be implemented.

The projections are extremely sensitive to fluctuations in mortgage demand. Fairly low levels of mortgage activity are reflected in the analysis. Recent activity which has been at record lows provided the base for the estimates.

Total mortgage demand for FY 89 is projected to be reduced from \$870 to \$400 million under the provisions of SB 281. Subsequent to FY 89, the only program which would continue would be the tax-exempt financed Veterans Mortgage Program with annual activity of \$175 to \$225 million per year. These bonds would be issued on a non-subsidized basis.

The effect of SB 281 on Revolving Fund balances is dramatic. At the end of FY 89 without changing the program, \$27 million in liquid assets would be in the General Account of the Revolving Fund after receiving an additional appropriation of \$100 million. This compares to a projected liquid asset balance without any future appropriations of \$287 million if SB 281 is effected, representing a net difference of \$360 million.

You have asked whether the Corporation would need future legislative appropriations were SB 281 to become law and \$50 million reappropriated to the State General Fund. As demonstrated in the summary of Exhibit A, projected liquid assets of the Revolving Fund are substantially in excess of \$50 million. Accordingly, such a reappropriation in connection with a phasing out of the Corporation's loan programs is not expected to result in future appropriation requests.

If I can be of further assistance in any way, please let me know.

Sincerely,

Mark K. Cameron

ALASKA HOUSING FINANCE CORPORATION

Testimony Regarding SB 281

"An Act Relating to the Interest Rate on State Loan Programs;
and Providing for an Effective Date"

General Comments

The Alaska Housing Finance Revolving Fund is doing what it was intended to accomplish. Projections based upon recent lending activity indicate that additional appropriations will not be necessary until FY 89. While the request in FY 89 could be approximately \$100 million, the return of assets pledged to initial taxable bond offerings could fund FY 90, 91, 92 and a portion of FY 93's activity. The \$100 million needed in FY 89 would represent an annual average of less than \$17 million for the six years ending in FY 92.

The Corporation maximizes the utilization of State capital through leveraging. The annual subsidy transfers from the Revolving Fund average 12% to 15% of the actual amount of mortgages purchased.

The leveraging effect is even greater when consideration is given to the multiple benefits of the program. Residents are afforded the opportunity to purchase a home who would not have the benefits of homeownership without AHFC and those who find themselves in need of a larger home to accommodate a growing family have reasonable rate financing available in both the sale of their smaller home and the acquisition of the new home. In addition to these benefits to the homebuyer and seller, the economic base of the State is diversified through stimulation of the housing market. Over half the loans the Corporation purchases are for newly constructed residences.

Effects of SB 281 on AHFC

On October 1, 1988 the level of subsidy will be reduced to 1% and the Corporation will in all likelihood cease operating all but the tax-exempt bond funded Veterans Mortgage Program with annual activity in the range of \$175 to \$225 million. The federal authorization for the tax-exempt bond funded first time homebuyers program ceases in 1987. With only a 1% difference in rates on the first \$90,000 of a loan, it is questionable whether the Corporation would be able to compete with the conventional markets which have much more flexibility in accessing the capital markets and arranging financing facilities than a public corporation. The Corporation is probably the only provider of secondary mortgage financing which makes commitments to purchase individual loans from lending institutions. These commitments are binding only upon AHFC and are valid for an initial 4 month period. Should conventional mortgage rates fall below AHFC's at any time during that commitment period, borrowers may opt to cancel their commitment. The applicant's exposure is limited to the 1/2 of 1% commitment fee charged by AHFC. The risk to the Corporation is that it will not be able to acquire mortgage loans necessary to pledge to the bonds. With only a 1% difference between AHFC rates and conventional sources of financing, the risk to the Corporation and the bondholders that loans will not be originated and the bonds required to be retired ("called") early is fairly high. Accordingly, it is extremely questionable whether the Corporation will determine the issuance of the bonds at a 1% subsidy level is worth the risks.

Testimony Regarding SB 281

Page 2

The Revolving Fund is expected to have liquid assets of \$287 million at the end of FY 89 if the programs are phased out pursuant to SB 281. This projection is based upon receipt of the \$16 million FY 85 appropriation and no reappropriation of current assets.

The bill could have a significant impact on housing activity. Uncertainty over continuity of loan programs has historically resulted in stimulation of the housing market accompanied by rising values. The flurry of activity to obtain the last of the subsidized loans could be followed by a major depression in both activity and residential values. The situation could be further aggravated by zero or negative economic growth in the State, resulting in part from a diminishing level of local government and capital project support from the State and reduction in oil related activity as increasing exploration costs face off against lower oil prices.

To protect the security for future loan originations, imposition of a 10% or 15% minimum down payment may be required. This would replace the current terms of 0% down veterans financing and 5% down conventional program loan terms.

To protect the security for bonds previously issued which are collateralized by residential loans, a restriction against financing of new construction may be necessary. Fewer homes would be constructed, thereby reducing the inventory of homes on the market. This would assist in maintaining the value of the existing residential housing stock, a large portion of which are financed with loans pledged as security to in excess of \$4 billion in Corporation bonds outstanding.

The hardest hit by increasing interest rates will be the low to moderate income resident. Those of modest means generally do not have the same number of financing alternatives available as those who are doing fairly well and desiring to trade up to a larger house, often extracting equity in the process.

Questions Related to SB 281

The bill is unclear whether the 1/2% increase is to apply to the entire loan amount or just the subsidized portion. AHFC statutes provide for a "blended" mortgage rate with only the first \$90,000 of a mortgage loan subsidized. The borrower is charged the Corporation's "cost of funds" on the excess of the loan over \$90,000. If the 1/2% increase is to apply to the entire loan amount, we will be charging more than our cost of funds on the portion of a loan in excess of \$90,000.

Is it possible to have the 1/2% annual increase spread out such that each quarter the rate would rise 1/8 of 1%? The October 1 effective date for the increases comes at the down cycle of the housing market. While this may be beneficial for the construction industry, the mortgage lenders and AHFC will be faced with a rush of activity each summer followed by several months with virtually no mortgage demand. While the 1/2% increases may mean only \$30 to \$35 more in payments each month, the buyer psychology will be such that all of

Testimony Regarding SB 281

Page 3

the activity which would have normally occurred in October, November and December will be accelerated into the months of August and September. This will have two adverse consequences. It will be extremely difficult for AHFC and the mortgage lenders to provide timely service to the borrowers. The potential for a boom/bust situation will also be aggravated as each January we wait to see if buyers will go back to the real estate market after the last 1/2% rate increase.

More legislative direction is necessary in determining the desired effect of the changes on the Home Ownership Assistance (HOF) Program. On October 1, 1988 when AHFC shuts down all but the tax-exempt Veterans Mortgage Program, the rate to a HOF recipient will have been increased from its current effective rate of 6% to only 8%. While the non-HOF home purchaser will only have a 1% difference in rates, those who would have otherwise qualified for 8% financing will have to obtain conventional financing which is currently in the area of 13-1/4% to 13-1/2%. The low-end of the housing market will be devastated since the number of those qualifying to purchase homes in that price range will be drastically reduced. The buy versus rent equation now generally comes up with an answer that buying is more advantageous. If the financing is at 13.5%, the answer will not be the same unless rents also escalate by the same degree.

Summary

The funds are in place to allow the Corporation to continue to leverage the financing of residential real estate at below market rates several years into the future.

SB 281 will effectively kill all but the tax-exempt Veterans Mortgage Program by October 1, 1988. In the process of increasing interest rates, low to moderate income families who are either desiring to purchase a home or sell one will be adversely impacted. The Corporation has a lengthy history of assisting low to moderate income residents. This assistance, provided since 1973, would also be phased out.

The impact of SB 281 on the housing market could be severe. This would particularly be the case if the State economy is also struggling and conventional interest rates rising. Program changes would be considered to assist in reducing the Corporation's exposure to increased foreclosures and delinquencies.

ANALYSIS Attach a separate page if necessary

Data was provided by the Division of Investments for current market interest rates for the various loan programs and the resulting decreased loan demand.

The fiscal impact to revenue is the net interest rate increase of .5 percent per year, as proposed in HB 378. All active loan programs administered by DCED have been included.

Prepared By: Margaret I. Hamley, Director
 Division: Accounting & Collections

Phone: 465-2555

Date: 4-23-85

Approved by Commissioner: Loren H. Lounsbury
 Agency: Commerce & Economic Development

Date: 4/23/85

\$10,000 is requested for a one-time charge to prepare and distribute copies of regulations for public comment relating to determination of the existing market rate for each program, and revision and reprinting of the State loan applications and pamphlets. A continuing cost of \$10,000 is required for a contractor to determine market rates for each program on a yearly basis in a manner that would be defensible in court.

POSITION PAPER

RE: HOUSE BILL 378

SPONSOR: REPRESENTATIVES ADAMS AND BINKLEY

Program Effects of the Bill:

This bill seeks to raise the interest rates on loan programs administered by the state or an instrumentality of the state by one half percent annually until the rate charged equals the prevailing market rate. Neither this bill nor the other sections of this statute really define "prevailing market rate," although AS 37.05.035(a) gives each loan program agency the right to determine prevailing market rate if none exists.

For the purpose of determining the effects of this bill on our rural loan programs, we used the current FHA/VA rate of 13 percent, and tried to determine what effect this rate would have on our loan program activity if that rate were in effect today. Our average loan amount on our Rural Owner-Occupied Loan Program for FY 84 and FY 85 year to date is \$89,929. Using this figure and our current interest rate of 9.875 percent, a borrower must have a monthly income of at least \$2,311 to qualify for this loan amount. This is assuming the house payment is their only monthly obligation, which is often the case in rural Alaska. In FY 84 and year to date FY 85, 88.6 percent of our borrowers had incomes greater than or equal to this amount. Using the same loan amount and a 13 percent interest rate and the same assumption about the house payment being the sole monthly obligation of the borrower, it would require a monthly income of \$2,985 to qualify. Only 74 percent of our current borrowers could have met this monthly income amount.

We realize that this bill would not increase the interest rate overnight, however, with construction costs increasing approximately three percent per year, the eventual effects of this legislation on the Rural Housing Loan Program would be more devastating than even the current year figures demonstrated, since we assumed construction costs would remain constant and a larger loan amount would not be required to buy the same house in the future.

Position Paper
RE: HOUSE BILL 378
April 23, 1985
Page 2

The intent and purpose of this loan program, to upgrade and improve the housing stock in rural Alaska and make homeownership a reality for more rural Alaskans, would be seriously compromised.

The effects on the Rural Nonowner-Occupied Loan Program would virtually put the program out of business. Most of the projects we are financing today are just breaking even with a 10.5 percent interest rate and the high operating costs incurred in the rural areas. An interest rate any higher than this would make the vast majority of the projects economically nonviable.

To summarize, the increase in interest rates proposed by this bill would put homeownership out of the reach of most rural residents once again. We would see a run on the loan programs during the first few years by those seeking to own homes before the ideal is out of their reach. We would see people buying or building homes before they are financially stable or emotionally ready for homeownership. This will result in higher delinquency rates and more foreclosures.

One last item to be addressed is the effect of this bill on the Homeownership Assistance Fund. The demand on the fund would be significantly increased with the greater differential between the current program interest rate and the six percent rate to which we can subsidize the payments. A portion of any savings the state may realize by eliminating the subsidy in interest rates in whole would be consumed by the greater subsidies used by individual borrowers under the Homeownership Assistance Program.

Comments:

Another aspect that should be examined is the overall effect this bill would have on the state economy. The construction business and service industries constitute a large part of this state's economy. It is estimated that 20 people are employed by every real estate sales transaction that takes place on an existing structure. These would be people at the lending institutions, mortgage companies, credit unions, title insurance firms, real estate brokerage firms, appraisal firms, surveyors, mortgage insurance firms, tax service firms and firms dealing in fire, hazard, flood or homeowners insurance.

Position Paper
RE: HOUSE BILL 378
April 23, 1985
Page 3

The numbers can grow to as much as 60 - 75 jobs when you are dealing with new construction, depending on the size of the project and whether it is a contractor or an owner builder doing the construction. These figures were supplied to the Housing Assistance Division by Dave Ribachi, an Anchorage realtor at a HAD training workshop.

With the slowdown that would be brought about in the market due to the higher interest rates - and based on most economic projections, that is the direction interest rates are expected to go - the unemployment rates will probably increase, or at least not decrease. The state will incur greater costs in welfare and unemployment compensation as a result of this increase. The communities relying upon property taxes will see their tax base growth diminished due to the slowdown in development and market values.

If the intent of HB 378 is to take the State out of the lending business, the State should face this directly by not appropriating money for those loan programs. An across the board increase of interest rates, however, is not an equitable solution to phase out these programs. By increasing interest rates, the income level criteria is raised for loan recipients, making loans less accessible to lower income families. If the goal of HB 378 is to affect interest rates in themselves, we recommend that the committee defer to the Governor's bill HB 109--which establishes a fixed, market-tied interest rate that is based on the U.S. Treasury rate plus adjustments for administration and risk.

HB 378 - Attachment

Please refer to Exhibit A prepared for SB 281 for a hearing before the Senate Finance Committee for an analysis of the fiscal impact of this bill. If HB 378/SB 281 were to pass in the present form AHFC would not expect to be in for a loans appropriation request in FY 1989 of \$100 million.

Exhibit B is a program overview of the Corporation's current activities.

Exhibit I contains alternatives that the Corporation was requested to look at by the Senate Finance Committee. Included is a letter to Senator Halford outlining a proposed mortgage "buy down" program which could reduce the amount of subsidy for the taxable mortgage program by as much as two-thirds.

Federation's Role in our Enterprise Economy

April 22, 1985

Representative John Sund, Chairman
House Special Committee on Loans
Pouch V
Juneau, Alaska 99811

Attention: John Hartle, Administrative Assistant

Re: HB 378

Dear Mr. Hartle,

The Anchorage Woman's Club FREE Committee is pleased to write this letter in support of HB 378. We understand that this bill is the companion to SB 281 and will raise interest rates on all State loan programs by one-half percent per year until they reach the going market rate or cost of funds.

I am enclosing for the House Special Committee on Loans members a copy of our written testimony presented to the Senate Finance Committee's hearing on SB 281, copies of our position paper on Alaska State Loan Programs and an announcement concerning our recently produced video on the loan programs.

Please feel free to contact me (349-6531) or my co-chairman Sarah Schierhorn (279-5305) if we can be of further assistance.

Sincerely,

Pamela Lambe, Co-Chairman
Tax & Economic Development Subcommittee
AWC FREE Committee

TESTIMONY REGARDING SB 281

A BILL RAISING INTEREST RATES ON STATE LOAN PROGRAMS
BY 1/2 PERCENT PER YEAR UNTIL THEY REACH MARKET RATES
OR COST OF FUNDS

TESTIMONY BY PAM LAMBE AND SARAH SCHIERHORN
AWC FREE COMMITTEE

The FREE Committee recommends passage of SB 281. We applaud the sponsors for recognizing the need for this legislation and for filing the bill. The action demonstrates to us the sponsors awareness of the gravity of the revenue decline and their desire to take action to bring State expenditures in line with current revenues.

To summarize the State's investment in loan programs as of June 30, 1984:

1 - The combined outstanding balance of State loan programs was approximately \$5 billion.

2 - Of that \$5 billion, \$3.8 billion has been funded by bonded indebtedness and the balance by State appropriation.

3 - Of the \$3.8 billion in bonded indebtedness, \$3.5 billion funds AHFC debt.

There are more than 40 loan programs and funds administered by various State agencies and State chartered public corporations.

From FY 81 to FY 85, the State appropriated \$2.6 billion to these programs.

Most programs were originated in response to a real need. You will remember market interest rates peaking in the 20% range not too long ago. Today we are experiencing lower, stable interest rates.

Three studies of loan programs published since 1981 generally conclude that government subsidy and competition with private enterprise is not wise. The most recent study by the FREE Committee specifically recommends that the State reduce and eventually eliminate dollar contributions to loan programs by making programs self-supporting and revolving and by eliminating interest subsidies.

SB 281 would accomplish this recommendation in a fair way by treating all programs equally and by using the stair-step mechanism of a one-half percent per year interest increase.

This approach enables consumers to plan financing. If the rules are set now, consumers can assess various finance options. As program interest rates approach market rates, competition among the various sources of financing should result in lower market interest rates.

SB 281 will assure a gradual phase out of interest subsidies providing for a soft landing for the consumer.
