AHFC: Mortgage delinquency rising

By JIM ERICKSON
Daily News business reporter

The number of homeowners falling behind on their loan payments continues to rise in Alaska, officials for Alaska Housing Finance Corp. said Monday.

The delinquency rate for those with loans more than 30 days past due was 4.42 percent in December. That means more than one out of every 25 people who obtained AHFC financing to buy their homes are behind in their payments.

The rate is up sharply from 3.19 percent last August and is the highest since the corporation began providing subsidized home loans to all qualified Alaskans in 1980.

The delinquency rate is below the national average, which hit a record 5.86 in the third quarter of 1984.

If allowed to continue unchecked, a rising rate in Alaska could affect the corporation's ability to provide subsidized loans. Corporation officials have said the possibility of that happening is remote.

Mike Lynch, AHFC executive director, said condominium owners contributed heavily to the high rate. That reflects a depressed condo market in which people who lose their jobs or have other financial problems are unable to sell their homes quickly. Instead, they fall behind on their mortgage payments.

"There was a time a year or two ago when the market solved everybody's problem," he said. "That's not the case anymore."

More than one out of every 17 condo owners have missed at least one monthly payment, compared with one out of every 25 single-family homeowners.

In recent months the corporation has taken steps to curb delinquencies.

AHFC officials have asked lenders they deal with to enforce collections more rigorously. Four or five lenders were stripped of their AHFC lending powers in the last several months because the delinquency rate for loans they made were too high, Lynch said.

The corporation also has tightened its lending standards.

And to reduce the number of new condos on the market, AHFC in December stopped lending money on condos in projects where less than 70 percent of the units have been sold. Before then, AHFC required that half be sold before its financing could be obtained.

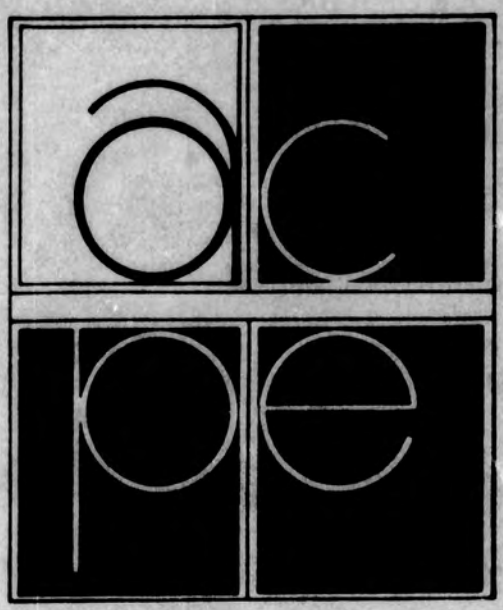
"We are the market, and we intend to maintain that market," Lynch said.

Lynch predicted the delinquency rate could rise early this year. But he predicted the rate should start falling in March, as warm weather brings out more home buyers and more homeowners return to work after winter layoffs.

The corporation has begun foreclosure on 104 condos and 202 single-family houses, and owns 110 homes through foreclosure.

The delinquency rate for those who financed mobile homes through AHFC was 6.75 percent, and most of the 4,600 mobile home loans carried by AHFC are not insured.

The corporation has lost about $150,000 to date because of bad mobile home loans, officials estimated.



Pipeline section to stay buried

Alaska Commission on Postsecondary Education

ALASKA STUDENT LOAN

Background and Discussion Materials

February 1985

PROGRAM DESCRIPTION

PURPOSES

1. To provide Alaskans with access to postsecondary educational resources through low-interest loans to students.
2. To encourage an educated citizenry through initial access to education and training and through inducements to utilize that education and training in Alaska.

TERMS

1. Undergraduates and vocational students may borrow up to $6,000 per year of full-time study.
2. Graduate students may borrow up to $7,000 per year of full-time study.
3. Students may borrow for up to 5 years of undergraduate study, or up to 5 years of graduate study, but for not more than 8 years combined.
4. A student must be a two-year Alaska resident to borrow and must maintain full-time study in good standing to continue borrowing Alaska student loans.
5. Loans may be used for attendance at any approved institution.
6. Proceeds from loans may only be used for the costs of tuition and fees, room and board, and books and supplies.
7. Loan repayment begins one year after the student ceases to be a full-time student (except for approved periods of deferment).
8. Repayment is over a 10-year period with provision for extending to 15 years if necessary.
9. Interest charged on the loans is 5%.

FORGIVENESS

If, upon completion of the program of study for which the loan was granted, the borrower resides in Alaska, a portion of the loan, plus interest, shall be forgiven by the State. That portion, for up to a total of 50%, shall accrue as follows:

1. 2-3 years residence in the state, 10%
2. 3-4 years residence in the state, an additional 10%
3. 4-5 years residence in the state, an additional 10%
4. 5-6 years residence in the state, an additional 10%
5. Over 6 years residence in the state, a final 10%.

This residence must be continuous and must begin within one year of completion of program.

College of Natural Sciences

UNIVERSITY OF ALASKA—FAIRBANKS
Fairbanks, Alaska 99775

MEMORANDUM

TO: President
Vice President
Chancellor
Dean of Natural Sciences
Legislators
Regents
President of AMA

FROM: Sven O. E. Ebbesson, Ph.D., D.Sc.
Director, WAMI Medical Program

DATE: January 10, 1986

RE: Good News from WAMI

New data about the practice location of our Medical School graduates indicate that 44% of Alaskan WAMI graduates have returned to our State after completed residency training. That is more than we had expected and surely reflects the students' warm feelings toward everyone who contributed toward their education. Comparable figures for Montana and Idaho are 37% and 35% respectively.

It was also rewarding to learn that a large proportion of WAMI graudates now practice in smaller communities such as Bethel, Kodiak, Dillingham and Kenai. Almost all are working in primary care areas (family medicine, pediatrics and OB/GYN), where the need is the greatest. This means that the WAMI Program is a success and that our goals are being met. It also reflects well on those that developed and supported the program over the years. The program has allowed sons and daughters of Alaskans to obtain the best medical training in the world and the people of Alaska will continue to gain from their achievements and from their service.

SOE:wv

SURVEY OF 1983-84 ALASKA STUDENT LOAN RECIPIENTS

Alaska Commission on Postsecondary Education
March, 1984

INTRODUCTION

The Alaska Student Loan program, established in 1971, is the most generous loan program in the nation, and has provided student financial aid, in the form of low interest loans, to over 50,000 Alaskan residents. For a number of years the vast majority of borrowers used their Alaska loans to attend postsecondary educational institutions outside the State of Alaska, but from 1975 to 1982 there was a steadily increasing trend toward in-state attendance, culminating in over fifty percent of the 1982-83 borrowers attending school in Alaska. Then, in 1983-84, the trend broke. As of November 1, 1983, 53.4 percent of the student loan borrowers were attending school out-of-state.

In an effort to better understand this break in an eight-year pattern, all 1983-84 loan recipients were surveyed. This was the first attempt to survey current borrowers in the thirteen-year history of the loan program, so the opportunity was taken to solicit opinions on a number of issues related to Alaska student loans.

PROCEDURE

During the last week of October 1983, questionnaires (see Appendix A) were mailed to all (13,026) 1983-84 student loan recipients. The questionnaires were mailed to the permanent home address of each borrower in the hope that it would be forwarded to school addresses when necessary. No follow-up was conducted, since not all files contain accurate current address data.

FINDINGS

Of the 13,026 loan recipients surveyed, 7,476 (57.4%) returned completed questionnaires. For a census-type survey with no follow-up, this is an acceptable response rate as long as the respondents seem to be distributed in a pattern similar to the borrowing population. As can be seen in Table 1, the response rate by student level was quite evenly spread, when compared to the borrowing population, and therefore should serve as a good indicator for inference to the population. Similarly, the in-state/out-of-state mix is not disproportionate.

The only group which may be over-represented is graduate students attending in Alaska, since the response rate was a very high 94.4%. However, since this class of borrowers is relatively small, it should not lessen the reliability of the findings.

TABLE 1

Distribution Of Respondents By
Student Level

Student Level	Alaska Attendance			Out-of-State			Total		
	No.	%	% of Borrowers	No.	%	% of Borrowers	No.	%	% of Borrowers
Freshman	856	25.6	43.7	974	23.6	51.5	1,830	24.5	47.5
Sophomore	743	22.2	57.6	829	20.1	58.4	1,572	21.0	58.1
Junior	596	17.8	64.4	745	18.0	64.4	1,341	17.9	64.4
Senior	516	15.4	64.2	648	15.7	63.8	1,164	15.6	64.0
Graduate	255	7.6	94.4	695	16.8	71.1	950	12.7	76.2
Vocational	378	11.4	46.4	241	5.8	47.9	619	8.3	47.0
Total	3,344	100.0	55.1	4,132	100.0	59.4	7,476	100.0	57.4

Type of Institution Attended. The loan borrowers were asked to indicate what type of school they were attending and whether it is located in Alaska or out-of-state. Over three-fourths (78.0%) of the respondents indicated they were attending a four-year college or university, either public or private, with out-of-state enrollees more heavily represented in this type of school, than Alaska enrollees. (See Table 2.) Not surprisingly, community college and vocational students tend to attend in Alaska, rather than traveling outside for schooling.

TABLE 2

Distribution Of Respondents By
Type Of Institution

Type of Institution	Alaska		Out-of-State		Total	
	Number	%	Number	%	Number	%
Vocational	445	13.3	287	6.9	732	9.8
Community Colleges	766	22.9	231	5.6	997	13.3
Private Coll/Univ.	182	5.4	1,628	39.4	1,810	24.2
Public Coll/Univ.	1,951	58.4	1,986	48.1	3,937	52.7
Total	3,344	100.0	4,132	100.0	7,476	100.0
% of Respondents	44.7		55.3		100.0	
% of Borrowers	55.1		59.4		57.4	

Student Loan Interest Rate. The current interest rate on Alaska student loans is 5%. This is the lowest student loan interest for any state comprehensive student loan program in the nation, and there is nearly always debate over the level during each legislative session. When the borrowers were asked, they strongly endorsed retaining the 5% loan rate. Nearly three-fourths (74.9%) of the borrowers felt that 5% is the appropriate interest rate for these loans. Only 18.6% of the borrowers felt the rate should be increased, and even then, most felt only a small increase was in order. (See Table 3.)

TABLE 3

What Rate Of Interest Should Be Set For Student Loans?

Interest Rate	Number	Percentage
5%	5,603	74.9
6%	640	8.6
7%	441	5.9
8%	164	2.2
9%	145	1.9
No Opinion	483	6.5
Total	7,476	100.0

Student Loan Borrowing Maximums. The Alaska Student Loan program permits students to borrow up to $6,000 per year for undergraduate study and up to $7,000 per year for graduate study. Once again, Alaska's program is distinguished from other state-level comprehensive student loan programs in the nation. There is no other comparable loan program with borrowing maximums as high as Alaska's. Current borrowers were asked what maximums they believed to be appropriate for Alaska Student Loans. As indicated in Table 4, the majority (78.4%) by more than three-to-one, believed the current maximums are appropriate. Few, less than 5%, felt the maximums should be lowered, and 16.1% felt the maximums should be raised.

TABLE 4

Should The Loan Borrowing
Maximum Be Changed?

Response	Number	Percent
Retains Current Level	5,863	78.4
Reduce Maximum	306	4.1
Revise Maximum Upward	1,201	16.1
No Opinion	106	1.4
Total	7,476	100.0

An interesting pattern develops when one looks at which students believe higher maximums are appropriate. These data are presented in Table 5, and indicate that freshman borrowers, both in-state and out-of-state, and graduate borrowers attending out-of-state are disproportionately represented in the 1,201 persons desiring higher borrowing limits. One might guess that the out-of-state graduate borrowers are reacting to actual costs incurred by such attendance when they want limits raised, but the fact that freshman, when compared to sophomores, juniors, and seniors, are disproportionately represented in those wishing higher limits, may simply mean that they do not know the true costs of attendance in this--their first semester of school.

TABLE 5

Distribution Of Respondents Favoring
Raising The Loan Maximum

Type of Institution	Alaska		Out-of-State		Total	
	Number	%	Number	%	Number	%
Freshman	144	28.7	141	20.2	285	23.7
Sophomore	95	18.9	134	19.2	229	19.1
Junior	83	16.5	97	13.9	180	15.0
Senior	44	8.7	94	13.5	138	11.5
Graduate	42	8.3	184	26.4	226	18.8
Vocational	95	18.9	48	6.8	143	11.9
Total	503	100.0	698	100.0	1,201	100.0

Student Loan Forgiveness Benefits. One of the more controversial aspects of the Alaska Student Loan program is the provision of forgiveness benefits. This too, distinguishes Alaska's program as the most generous in the country. If Alaska borrowers complete the program of study for which they borrow and then live in Alaska, they can have up to 50% of their total indebtedness, including interest, forgiven by the State. Periodic discussion in Alaska's Legislature centers on whether this forgiveness provision should be retained. When asked, the current borrowers overwhelmingly indicated their belief that forgiveness should be retained at the current level. (See Table 6.)

TABLE 6

Should The Loan Forgiveness
Benefits Be Changed?

Response	Number	Percent
Retain Current Level	6,864	91.8
Reduce Forgiveness	358	4.8
Discontinue Forgiveness	166	2.2
No Opinion	88	1.2
Total	7,476	100.0

This rather straightforward result was not unexpected, but does not get at the heart of the debate on forgiveness. In order to better understand the effects of forgiveness, borrowers were asked if forgiveness influenced their decisions regarding how much they borrowed and where they would live after schooling. The results, found in Table 7, are somewhat mixed. For students attending in Alaska, forgiveness influenced borrowing in nearly as many cases as it did not, but for out-of-state attendees, forgiveness was said not to be a factor by nearly two-to-one. In terms of residence after schooling, forgiveness did not seem to be a big factor one way or the other for those attending in-state, but was said to influence the decisions of out-of-state attendees, again by nearly two-to-one.

TABLE 7

Influence Of Loan Forgiveness
Benefits On Student Decisions

Do Loan Forgiveness Benefits Influence Decisions Regarding:	Alaska Attendance		Out-of-State	
	Yes	No	Yes	No
How much you borrow?	1,516	1,789	1,812	2,255
Where you live after schooling?	1,538	1,780	2,684	1,396

Change From In-State to Out-of-State Attendance. Borrowers were asked if they had attended a postsecondary school last year, and if so, where. The pattern toward continued attendance was evident for both Alaska attendees and out-of-state attendees. Of the 2,117 respondents currently attending school in Alaska who also attended a postsecondary school last year, 90.4% had attended school in Alaska last year too; and of the 2,942 respondents currently attending school out-of-state who also attended a postsecondary school last year, 78.8% had attended school out-of-state last year, too. Looking only at those students who switched from Alaska to out-of-state attendance, or the reverse, one finds that only 9.6% of the students currently attending in Alaska, attended out-of-state last year; and 21.2% of the students currently attending out-of-state, attended in Alaska last year. (See Table 8.)

TABLE 8

Attendance In-State Versus Out-Of-State This Year
Versus Last, By Type Of Institution

Type Of Institution	Current Attendance in Alaska					Current Attendance Out-of-State				
	Alaska Last Year		Out-of-State Last Year		Total	Alaska Last Year		Out-of-State Last Year		Total
	No.	%	No.	%	No.	No.	%	No.	%	No.
Vocational	39	90.7	4	9.3	43	-0-	0.0	77	100.0	77
Community Coll.	478	87.2	70	12.8	548	44	19.7	179	80.3	223
Private Coll/Univ.	97	85.1	17	14.9	114	204	16.7	1,018	83.3	1,222
Public Coll/Univ.	1,300	92.1	112	7.9	1,412	376	26.5	1,044	73.5	1,420
Total	1,914	90.4	203	9.6	2,117	624	21.2	2,318	78.8	2,942

In order to try to determine why a person would switch from attending in Alaska to attending out-of-state, the 624 respondents who did so were asked to list the top factors (up to four) influencing that decision. The results (based upon a weighted average giving more value to each person's primary reason for switching and correspondingly less for other reasons) are listed in Table 9. Program Availability was the most influential factor in the decision to switch to out-of-state attendance, followed by Closeness to Home and Low Tuition and Expenses. The high ranking of Closeness to Home is difficult to understand, unless persons were trying to indicate they were attending out-of-state so as not to be close to home.

TABLE 9

Reasons For Attending Out-Of-State After Attending In Alaska Last Year

Reason (Descending Order)	Weighted Average
Availability of Program	442.3
Closeness to Home	333.7
Low Tuition and Expenses	321.0
Availability of Financial Aid	239.2
Geographic Location/Weather/Climate	176.5
School Reputation/Prestige	159.0
Ability to Work While Attending	137.3
Encouragement of Parents/Friend	83.1
Availability of Campus Housing	57.0
Encouragement of Teachers/Counselors	41.3
Friends Are There	36.3
Athletics/Recreational Activities	32.4
Religious Atmosphere	26.2
Sororities/Fraternities/Organizations	5.4

Next, those 624 persons switching from Alaska attendance to out-of-state were asked what factor could have encouraged them to continue their Alaska attendance rather than switching. The top factor was again Program Availability, and it was the top factor regardless of what type of institution was being attended out-of-state. The other factors which seemed to have a strong influence on the decision to switch to out-of-state attendance were: Quality, Campus Housing, Lower Costs, and Better Weather. (See Table 10.)

TABLE 10

For Those Attending Out-Of-State After Attending In Alaska Last Year, What Would Have Kept Them In Alaska? By Type Of Institution

Vocational School	Community College	Private Coll/Univ.	Public Coll/Univ.
Program Availability Better Quality Lower Costs	Program Availability Campus Housing Better Quality Better Weather Lower Costs	Program Availability Better Quality Campus Housing Religious Atomosphere Lower Costs	Program Availability Better Quality Campus Housing Better Weather Lower Costs

Reasons For Selecting Current Institution. All respondents were asked why they chose their particular institution for pursuing their education, and as can be seen in Table 11, Program Availability was a very important factor for all students regardless of whether they were attending in Alaska or out-of-state and regardless of the type of school attended. The top three factors for each classification are presented in Table 11, and there is a difference between the responses of those attending in Alaska compared to those attending out-of-state. While the most important factor for out-of-state attendance at community colleges and public colleges or universities is Program Availability, the most important factor for Alaskan attendance at community colleges and public colleges and universities is Closeness to Home. It should also be noted that School Reputation, while an important factor for persons attending out-of-state, was not one of the top three factors for those attending in Alaska.

TABLE 11

Top Three Reasons For Selecting Current
Institution Of Attendance,
By Type Of Institution

Type of Institution	Most Important Factor	Second Factor	Third Factor
Vocational			
(Alaska)	Program Availability	Ability to Work	Financial Aid
(Out-of-State)	Program Availability	School Reputation	Finanical Aid
Community College			
(Alaska)	Closeness to Home	Program Availability	Low Cost
(Out-of-State)	Program Availability	Low Cost	School Reputation
Private College/University			
(Alaska)	Program Availability	Ability to Work	Financial Aid
(Out-of-State)	Program Availability	School Reputation	Religious Atmosphere
Public College/University			
(Alaska)	Closeness to Home	Program Availability	Low Cost
(Out-of-State)	Program Availability	School Reputation	Climate/Weather

For Those Attending Out-of-State, What Could Have Encouraged Alaska Attendance? The 4,132 respondents attending school out-of-state were asked what factor could have encouraged them to attend in Alaska. As with those students who switched attendance from in-state to out-of-state, the single most important factor which could have encouraged Alaska attendance was Program Availability. When the respondents were classified by type of institution (Table 12), the results were surprisingly homogenous. Program Availability and Better Quality were the two top factors for all students, regardless of institutional type. For collegiate students, Campus Housing was also an important factor.

TABLE 12

For Those Attending Out-of-State, What Could Have Encouraged Alaska Attendance? (By Type Of Institution)

Vocational School	Community College	Private Coll/Univ.	Public Coll/Univ.
Program Availability	Program Availability	Program Availability	Program Availability
Better Quality	Better Quality	Better Quality	Better Quality
Nothing	Campus Housing	Campus Housing	Campus Housing
Lower Costs	Nothing	Nothing	Better Weather
Better Weather	Better Weather	Religious Atmosphere	Nothing

Similarly, when the respondents were classified by student level, the same pattern emerged (Table 13). The top five factors for all undergraduate out-of-state borrowers were Program Availability, Better Quality, Campus Housing, Better Reputation, and Nothing (meaning nothing could have encouraged them to attend in Alaska).

TABLE 13

For Those Attending Out-Of-State, What Could Have Encouraged Alaska Attendance? (By Student Level)

Freshman	Sophomore	Junior	Senior	Graduate
Program Avail.	Program Avail.	Program Avail.	Program Avail.	Program Avail.
Better Quality	Better Quality	Better Quality	Better Quality	Better Quality
Campus Housing	Campus Housing	Campus Housing	Campus Housing	Nothing
Nothing	Better Reputation	Better Reputation	Better Reputation	Better Reputation
Better Reputation	Nothing	Nothing	Nothing	Lower Costs

Major Course of Study of Borrowers. All loan recipients were asked to indicate the degree being sought and their major course of study. The top ten majors are summarized by degree level and by in-state or out-of-state attendance in Table 14. Once again, one sees a surprising similarity in responses, particularly at the bachelor's and master's levels, regardless of whether the student is attending in Alaska or out-of-state. Out-of-state doctoral students are largely representative of persons pursuing degrees unavailable in Alaska.

Residency Plans After Graduation. Once these Alaskan students complete their programs of study, where do they plan to live? The vast majority (97.0%) say Alaska. Regardless of whether or not they are attending school in-state, nearly all respondents indicate plans of residing in Alaska after schooling. (See Table 15.)

TABLE 15

Location Plans After Completion
Of Program Of Study

Plans After Program Completion	Attending in Alaska		Attending Out-of-State		Total	
	Number	Percent	Number	Percent	Number	Percent
Reside in Alaska	3,274	97.9	3,976	96.2	7,250	97.0
Reside Out-of-State	70	2.1	156	3.8	226	3.0
Total	3,344	100.0	4,132	100.0	7,476	100.0

Why these students plan to return to Alaska is another question asked of the respondents. As can be seen in Table 16, the top reason for those students planning to live in Alaska after degree completion, regardless of whether or not they are currently attending in Alaska or out-of-state, is "Alaska is my home." The second most important reason for those planning Alaska residence is the top reason for those planning out-of-state residence, and that is "Job Availability." Other factors influencing location decisions include loan forgiveness, geographic location/weather/climate, availability of continuing education, and location of friends.

TABLE 16

Top Five Reasons For Location Plans After
Completion Of Program Of Study

Attending in Alaska		Attending Out-of-State	
Alaska Residency	Out-of-State	Alaska Residency	Out-of-State
Alaska is Home	Job Availability	Alaska is Home	Job Availability
Job Availability	Geog/Weather/Climate	Job Availability	Geog/Weather/Climate
Loan Forgiveness	Cont. Educ. Avail.	Loan Forgiveness	Cont. Educ. Avail.
Friends	Friends	Friends	Friends
Geog/Weather/Clim.	Parents/Relatives	Geog/Weath./Clim.	Recreation Avail.

SUMMARY/CONCLUSIONS

1. One of the principal reasons for conducting this survey was to discover if there was an explanation for the reversal of the eight-year trend toward in-state attendance. From the data collected it is a little difficult to single out exactly what caused this phenomena. However, when coupled with knowledge of the Alaska system a hypothesis may be offered.

   Three factors probably have impacted the in-state/out-of-state attendance pattern. First, the state loan program imposed new "good standing" requirements. These were enforced for the first time in 1982-83 and resulted in a large number of students becoming ineligible for continued borrowing. The majority of these ineligible students were students attending in-state, so the pool of in-state students for the current year, 1983-84, was reduced.

   Second, the only public university in the state with campus housing is the University of Alaska, Fairbanks (UAF). Over six months before the current school year began, UAF had filled all its campus housing. More than 300 students who wished campus housing for the 1984-84 year had to be denied.

   Third, the University of Alaska, Anchorage (UAA) has been heavily over-subscribed in a number of classes both this year and last. Many students have indicated that they simply could not get into all the UAA classes they wished for pursuit of their programs.

2. Students believe 5% is an appropriate interest rate for the student loan program.

3. Students believe the $6,000 and $7,000 borrowing maximums are appropriate for the student loan program. However, there is some evidence that graduate students, particularly those attending out-of-state, may be requesting a higher maximum in the near future.

4. Students believe loan forgiveness should be retained at 50%. When asked directly if loan forgiveness influences their decision on where to reside after graduation, only 57.1% indicate that it is. Also, when asked which factors are most important in this determination of where to live after graduation, loan forgiveness falls far behind "Alaska is My Home" and "Job Availability." The argument that forgiveness seems to reward students for what they would do anyway seems to be supported by this survey.

APPENDIX A

Student Loan Questionnaire

ALASKA STUDENT LOAN QUESTIONNAIRE

The Alaska Commission on Postsecondary Education has not surveyed loan recipients in the past, but due to the increased level of proposed program changes, we feel some information from you, the recipients of this program, would be most useful as we enter a new Legislative Session. Please complete this brief questionnaire and return it to us in the envelope provided. All responses are completely anonymous.

1. Check those school years in which you received an Alaska Student Loan

1975-76 _____	1978-79 _____	1981-82 _____
1976-77 _____	1979-80 _____	1982-83 _____
1977-78 _____	1980-81 _____	1983-84 _____

2. Current student level (please check)

Freshman _____	Junior _____	Graduate _____
Sophomore _____	Senior _____	Vocational _____

3. Current attendance (please check)

	In Alaska	Out-of-State
Vocational School	_____	_____
Community College	_____	_____
Private College/University	_____	_____
Public College/University	_____	_____

4. What interest level do you feel is appropriate for these loans?

5% _____	7% _____	9% _____
6% _____	8% _____	Other _____ (indicate)

5. What loan level do you feel is appropriate for these loans?

$6,000 and $7,000 loan levels should be retained	_____
Loan levels should be reduced	_____
Loan levels should be raised	_____

6. Why did you decide to attend your current institution? (Please number your reasons, with "1" being most important, and limit your choices to no more than four.)

Athletics/recreational activities	_____	Availability of program	_____
Sororities/fraternities/campus organization	_____	Availability of financial aid	_____
Geographic location/weather/climate	_____	Closeness to home	_____
Encouragement of parents/relatives	_____	Religious atmosphere	_____
Encouragement of teachers/counselors	_____	Friends are there	_____
Ability to work while attending school	_____	School reputation/prestige	_____
Availability of campus housing	_____	Low tuition/expenses	_____

7. If you are attending out-of-state, what single factor could encourage you to attend in-state (what could be changed, if anything)? _____

_____

(Please continue on reverse side)

8. Did you attend a postsecondary education institution in Alaska last year (1982-83)?

Yes _____ No _____

9. What degree or certificate are you seeking and what is your major program of study?

Associate Degree (Major?) _____
Bachelors Degree (Major?) _____
Masters Degree (Major?) _____
Specialist Degree (Major?) _____
Doctorate Degree (Major?) _____
Diploma (Course of Study?) _____
Certificate (Course of Study?) _____

10. Do you plan to live in Alaska when your education is finished?

Yes _____ No _____

11. What factors influenced your response in question 10? (Please number your reasons with "1" being most important, and limit your choices to no more than four.)

Availability of jobs	_____	Encouragement of parents/relatives	_____
Alaska is my home	_____	Availability of continuing education	_____
Friends are there	_____	Recreational activity availability	_____
Student loan forgiveness	_____	Geographic location/weather/climate	_____

12. Does the student loan forgiveness feature influence your decisions on:

a. Whether or not you live in Alaska after schooling? Yes _____ No _____

b. How much you borrow? Yes _____ No _____

13. Should the student loan forgiveness feature be:

a. Discontinued? Yes _____ No _____
b. Reduced? Yes _____ No _____
c. Retained as is? Yes _____ No _____

14. If there were no Alaska State Student Loan Program, would you (check as many as applicable)?

a. Delay your education _____

b. Not attend school at all _____

c. Borrow under a federal loan program _____

d. None of the above _____

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

ALASKA COMMISSION ON POSTSECONDARY EDUCATION

POUCH FP
JUNEAU, ALASKA 99811
PHONE: (907) 465-2854

October 4, 1985

The Honorable John Sund
Alaska State Representative
P.O. Box 6440
Ketchikan, Alaska 99901

Dear Representative Sund:

Enclosed is a copy of a proposed regulation change for the Alaska Student Loan Program. The Alaska Commission on Postsecondary Education gave initial approval to this change at its September 20, 1985 meeting and has scheduled final action for its December 13-14, 1985 meeting.

Since you or your staff may receive questions about this proposed change, I wish you to have full information about exactly what is being suggested. The setting for this change is important so I would like to give you a very brief background. Simply stated, the demand for Alaska Student Loans has outstripped the supply for three years in a row, 1983-84, 1984-85, and 1985-86. The Legislature, demonstrating strong support for the program, has consistently provided substantial funding for student loans (FY84 - $60.0 million General Fund, FY85 - $60.00 million General Fund, and FY86 $63.6 million General Fund).

At the same time, loan repayments have continued to rise (FY84 - $6.4 million, FY85 - $9.6 million, and FY86 - $11.8 million projected). Yet, demand still exceeds supply. The program turned away applicants in May 1984; March 1985; and (it looks like) November 1985.

The current priority system is essentially first-come-first-served, with priority given to in-state attendance, but this system results in thousands of borrowers being turned away. The Commission felt that either program changes needed to be made, or a higher General Fund commitment was necessary. Certainly full-funding of the existing program is the most desirous alternative, but this has not been possible the last few years, and with state revenue projections such as they are, it seems unrealistic to expect substantial increased General Fund commitment these next few years. For example, we would need about $70.0 million from the General Fund for FY87 to fund the program (a 10.1% increase over this year). Hence, the Commission explored a variety of alternatives for changing the program while still trying to preserve educational access and benefits to Alaskans.

After a great deal of study and debate, the Commission elected to change regulations to require that the borrower share more responsibility for the cost of going to school. Student loans are awarded, and may be used, for only the cost of tuition and fees, room and board, and books and supplies. Currently, if applicants state they have no non-state loan resources to meet

these expenses, they are eligible to borrow the total cost, or $6,000, whichever is smaller (for undergraduate borrowers). Under the new regulations, each borrower would have to contribute at least $500 toward those eligible expenses. The following examples may help clarify the impact of the regulation.

Example 1. Undergraduate attending the University of Alaska, Fairbanks.

Program Cost		Resources Available	
Tuition & Fees	$1,120	SEIG, Pell Grant	$1,400
Books & Supplies	500	Parents	-0-
Room & Board	2,500	Savings	100
Subtotal	$4,120	Other Scholarships, etc.	500
Transportation	1,000	VA benefits	-0-
Personal	1,000	Other	-0-
Total	$6,120	Total	$2,000

Loan Award: current method $4,100
proposed change $3,600

Example 2. Undergraduate attending University of Alaska, Fairbanks.

Program Cost		Resources Available	
Tuition & Fees	$1,120	SEIG, Pell Grant	$ -0-
Books & Supplies	500	Parents	2,000
Room & Board	2,500	Savings	1,000
Subtotal	$4,120	Other Scholarships, etc.	-0-
Transportation	1,000	VA benefits	-0-
Personal	1,000	Other	-0-
Total	$6,120	Total	$3,000

Loan Award: current method $3,100
proposed change $3,100

Example 3. Undergraduate attending Alaska Pacific University.

Program Cost		Resources Available	
Tuition & Fees	$4,220	SEIG, Pell Grant	$1,500
Books & Supplies	270	Parents	-0-
Room & Board	3,826	Savings	1,000
Subtotal	$8,316	Other Scholarships, etc.	500
Transportation	90	VA benefits	-0-
Personal	1,020	Other	400
Total	$9,426	Total	$3,400

Loan Award: current method $6,000
proposed change $6,000

Example 4. Undergraduate attending Southern Oregon State College.

Program Cost		Resources Available	
Tuition & Fees	$3,691	SEIG, Pell Grant	$ -0-
Books & Supplies	280	Parents	2,500
Room & Board	2,300	Savings	1,000
Subtotal	$6,271	Other Scholarships, etc.	-0-
Transportation	2,306	VA benefits	-0-
Personal	1,223	Other	-0-
Total	$9,800	Total	$3,500

Loan Award: current method $6,000
proposed change $5,750

In examples 1 and 4, the applicant did not indicate at least $500 from non-loan sources toward eligible loan items (the subtotal). Therefore, the loan award would be reduced under the new regulation, that is, $4,100 - $500 = $3,600 (Example 1) and $6,250 - $500 = $5,750 (Example 2). In examples 2 and 3, the award would be the same because the applicant indicated at least $500 available for eligible loan items (Example 2), or the cost of eligible loan items exceeds $6,000 plus the $500 requirement (Example 3).

I hope this better clarifies what we are trying to accomplish with this regulatory change. The idea is to try to spread available loan funds to more individuals without seriously hampering anyone's chances of obtaining education and training.

If you have any questions or comments, please let me know.

Sincerely,

Kerry D. Romesburg
Executive Director

Enclosure

PROPOSED STUDENT LOAN REGULATION CHANGES

20 AAC 15.030 (c) is amended to read:

20 AAC 15.030 (c) Subject to the limitation of (b) of this section, an applicant's authorized loan award will be based on loan personnel's computation of the applicant's financial need. Financial need will be computed as the difference between the required fees, tuition, room, board, books and supplies, as applicable, charged by the institution for the course of study for which the applicant has been accepted or is enrolled in full-time status, and the amount of funds available to the applicant from other sources to meet those expenses or $500 whichever is greater. The amount of the authorized loan award will be the next lower multiple of $50 below the computed financial need.

20 AAC 15.036. is amended by adding a new subsection (4) to read:

20 AAC 15.036. (4) a program of study offered outside the state in which the institution is located, unless the program's location is based upon, and serves, a bonafide educational purpose.

20 AAC 15.045 (f) is amended as follows:

(f) An institution may not hold loan warrants for longer than 60 calendar days after the beginning of the school term, or specified date of beginning, for which the warrant is issued. If the warrant is unclaimed or the student is ineligible at the end of the 60-day period, the institution shall return the warrant to the commission stating the reasons for its return; the warrant and remaining portion of the loan will then be cancelled.

20 AAC 15.900 (b) is amended by adding a new paragraph (9) to read:

20 AAC 15.900 (b) (9) "duress" means threat or violence of a magnitude such as to inspire a person of ordinary firmness with fear of serious injury to the person, reputation, or fortune to the extent that continued school attendance is not possible or practical.

PURPOSE OF THE REPORT

In accordance with the provisions of Title 24 of the Alaska Statutes, an examination of the Alaska Commission on Postsecondary Education, Scholarship Revolving Loan Fund was conducted to:

1. Determine if the financial statements present fairly, the financial position, results of operations, and changes in financial position for the Fund, for the fiscal year ended June 30, 1984 and 1983.

2. Determine the compliance by the Alaska Commission on Postsecondary Education with the applicable State statutes and regulations governing fiscal activities of the Fund.

ORGANIZATION AND FUNCTION

The Scholarship Revolving Loan Fund is classified as an enterprise fund whose sole function is financing the Alaska Student Loan Program. The Alaska Student Loan Program had its origin in a program of scholarship loans established by the 1968 Alaska State Legislature. This program was amended in 1970 and completely restructured in 1971. At that time, the Legislature established the loan program under the administration of the Alaska Commission on Postsecondary Education generally as it exists today.

Educational loans of up to $6,000 and $7,000 per year for undergraduate and graduate study, respectively, are provided to eligible State residents. These loans, to be used only to offset the costs of tuition, room, board, and books, offer the borrower a ten-year repayment period at an annual interest rate of five percent. The loans may be used for full-time attendance at any accredited or approved college, university, or vocational-technical program. An incentive of up to fifty percent cancellation of the loan is offered to those borrowers who reside in Alaska after completion of their programs of study.

In the thirteen years of operation since restructuring in 1971, nearly 63,000 student loans have been awarded to Alaskan residents for a total of almost $212 million.

THE LEGISLATURE

BUDGET AND AUDIT COMMITTEE

November 6, 1984

Members of the Legislative Budget
and Audit Committee:

We have examined the Balance Sheets of the Scholarship Revolving Loan Fund as of June 30, 1984 and 1983, and the related Statements of Revenues, Expenses and Changes in Retained Earnings, and Changes in Financial Position for the years then ended. Our examination was made in accordance with generally accepted auditing standards and, accordingly, included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the financial statements referred to above, present fairly the financial position of the Scholarship Revolving Loan Fund as of June 30, 1984 and 1983, and the results of its operations and the changes in its financial position for the years then ended, in conformity with generally accepted accounting principles applied on a consistent basis.

STATE OF ALASKA
ALASKA COMMISSION ON POSTSECONDARY EDUCATION
SCHOLARSHIP REVOLVING LOAN FUND
NOTES TO THE FINANCIAL STATEMENTS
For the Fiscal Years Ended June 30, 1984 and 1983

Note 1 - Basis of Accounting

A. The financial statements are prepared on the accrual basis of accounting. Revenues are recognized at the time they are earned. Expenses are reported based upon a direct association with specific revenues or when the obligation to pay is incurred.

B. Allowance for Doubtful Accounts is calculated on a percentage basis.

C. Interest is computed at 5% of the loan over the repayment period. Interest is allocated on a straightline (equal) basis to each payment in the repayment schedule.

Note 2 - Allowance for Loans Forgiveness

The State will forgive a portion of the loan plus interest (up to a total of 50%), if the borrower resides in Alaska upon successful completion of the program of study for which the loan was awarded. The Allowance for Loans Forgiven is calculated on a percentage basis.

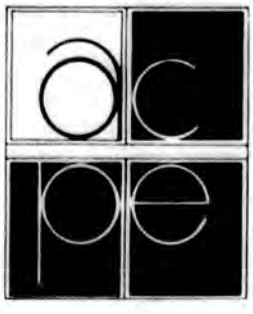
Dear Mr. Wilkerson:

Thank you for the opportunity to review and respond to the preliminary audit report on the Alaska Commission on Postsecondary Education, Scholarship Revolving Loan Fund, for Fiscal Year Ended June 30, 1984. By way of this response, I would like to express our appreciation of the professional manner in which the audit was conducted.

We are most pleased with the audit results, and we concur with the findings.

Sincerely,



Kerry D. Romesburg

PREFACE

The Annual Report on Alaska Student Financial Aid Programs for 1983-84 is hereby transmitted to the Governor and the Legislature of the State of Alaska. The Student Loan Program is administered by the Alaska Commission on Postsecondary Education with advice and guidance of the Student Financial Aid Advisory Committee. Membership of this advisory committee for 1983-84 included:

Ms. Patricia Abney, Chairman (Anchorage)
Ms. Patricia Clark (Fairbanks)
Ms. Ida Greiner (Fairbanks)
Ms. Carol Johnsen (Sitka)
Ms. Marie MacKenzie (Anchorage)
Dr. Ed Nichols (Anchorage)

The Commission and staff wish to express their gratitude for the work of this advisory committee.

Kerry D. Romesburg

INTRODUCTION

The State of Alaska provides student financial assistance for postsecondary study through three programs: the Alaska Student Loan Program, the WICHE Student Exchange Program, and the State Educational Incentive Grant (SEIG) Program. The three programs provide Alaskans with access to postsecondary education which otherwise might not be available. Through the loan and grant programs direct financial assistance is awarded to students in an effort to remove or lessen financial barriers to postsecondary education. Through the student exchange program, Alaskans have access to graduate, professional, and highly specialized fields which are unavailable in-state.

This report briefly summarizes each of these programs and the participation levels for 1983-84. The Student Loan Program will be discussed first, then the WICHE Student Exchange Program, and finally, the Incentive Grant Program.

ALASKA STUDENT LOAN PROGRAM

The Alaska Student Loan Program is one of the most successful programs offered by the State of Alaska. Its purpose is to provide low-interest loans to Alaskans wishing to pursue education and training at a postsecondary level. The program has grown from serving just over 1,000 Alaskans, in 1971-72, to the current 1983-84 level of serving nearly 15,000 Alaskans.

The Alaska Student Loan Program had its origin in a program of scholarship loans established by the 1968 Alaska State Legislature. This program was amended in 1970 and completely restructured in 1971, when the Legislature established the loan program generally as it exists at present. In the twelve years of operation since then, nearly 63,000 student loans have been awarded to Alaskan residents, for a total of nearly $150 million.

Educational loans of up to $6,000 and $7,000 per year for undergraduate and graduate study, respectively, are provided to eligible state residents. These loans, to be used only to offset the costs of tuition, room, board, and books, offer the borrower a ten-year repayment period at an annual interest rate of five percent. The loans may be used for full-time attendance at any accredited or approved college, university, or vocational-technical program. An incentive of up to fifty percent cancellation is offered to those borrowers who reside in Alaska after completion of their programs of study.

Program Summary

During the 1983-84 school year over 16,000 loans were awarded, and 14,785 were finalized and used for postsecondary attendance. Of these 14,785 loans, 50.5 percent were for attendance in Alaska, and 49.5 percent were for attendance out-of-state.

Undergraduate loans continue to dominate the loan volume, with only 13.2 percent of the 1983-84 loans going for graduate study. The largest single group of loans were for freshman borrowers, who accounted for 27.7 percent of all the 1983-84 loans.

Alaskans use these loans for study throughout the United States, and in a number of foreign countries. During the 1983-84 loan year, students from Alaska used state loans for attendance in every state in the Union and in seventeen foreign countries. The most frequent choice continues to be Alaska by more than a four-to-one margin over any other state.

Loan Award Amounts

The average loan award continued to rise slightly in 1983-84, following the dramatic rise in 1981-82 when the borrowing maximums were raised. For 1983-84, an undergraduate average loan was $4,171 while the average graduate loan was $5,097. Out-of-state student loans continue to be higher, on the average, than in-state loans, due largely to non-resident tuition fees. This is graphically presented in Figure 1. It is anticipated that the trend toward higher average loans will continue in the years ahead as tuition rates continue to increase.

Table 1 contains average loan amounts by student level for the last three years, 1981-82, 1982-83, and 1983-84. In general all loans, regardless of level, have steadily increased, for students attending in-state, and have leveled, or even dropped slightly, for those attending out-of-state. The out-of-state borrower averages a higher loan amount than the in-state borrower for every classification other than vocational.

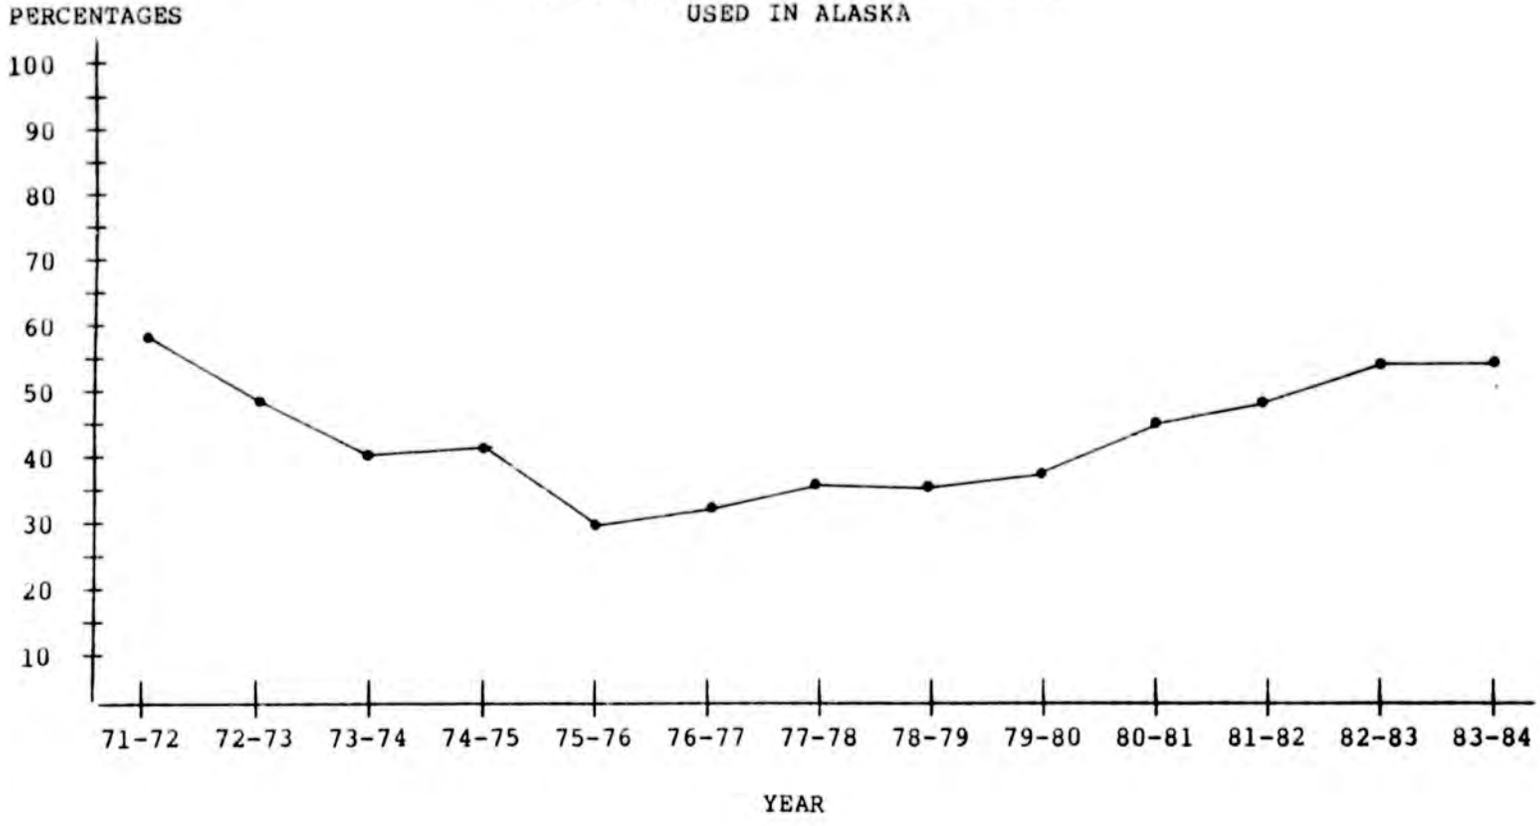
TOTAL	$3,796	$3,872	$4,013	$4,345	$4,558	$4,502	$4,098	$4,213	$4,255

Undergraduate Loans

The number of undergraduate students receiving loans under the state program has increased greatly over the past twelve years. In 1971-72, 990 undergraduates received assistance, while in 1983-84, the number has grown to 13,449. Of these 13,449 loan recipients, 53.3 percent used their loans for attendance in Alaska, and 46.7 percent used their loans out-of-state. The states most frequently chosen by undergraduates in 1983-84 are presented in Table 2.

The consistency of student choice over the past few years is quite high. Alaska remains the most frequent choice for undergraduate attendance this year, as it has been in the past, followed by Washington, Oregon and California.

The average loan amount increased in almost every case, with the most pronounced increase in loans for attendance in Arizona, Colorado, and Alaska. Hawaii continues to be one of the states for which undergraduate loan amounts are the lowest, ($3,426), and two of the top ten states of attendance have lower average loans than does Alaska.



The percent of undergraduates using their loans for attendance in Alaska increased slightly this year. In fact, as can be seen in Figure 2, the 1983-84 rate of 53.3 percent is the highest in-state rate since 1971-72.

The increasing drawing power of Alaskan institutions is hypothesized to be the result of a number of factors including the maturation of Alaska's schools and the accompanying wider array of offerings, as well as the increased cost of attendance at schools outside of Alaska.

FIGURE 2
PERCENTAGE OF UNDERGRADUATE LOANS
USED IN ALASKA

The wide geographic distribution of Alaskans pursuing undergraduate education is shown most vividly in Figure 3, with Alaskan undergraduates attending institutions in every state of the Union. The predominance of the West and Northwest is quite evident, with only Alaska, Washington, Oregon, California, Colorado, Arizona, Idaho, Hawaii and Utah, receiving over 200 Alaskan undergraduates on state loans. Of the thirteen western states comprising the WICHE compact (Western Interstate Commission for Higher Education), only Wyoming received fewer than 35 Alaska undergraduates on state loans. In fact, the WICHE states account for 90.1 percent of the undergraduate loan recipients.

Under the state loan program, Alaskans may pursue their educational goals in whatever setting seems most appropriate for them. The freedom of choice which this provides is quite evident by the wide geographic distribution of our students.

As can be seen in Table 3, Alaska attendance accounts for a very high percentage of vocational borrowers (71.2% in 1983-84). Also, more than half (54.4%) of the freshman borrowers elected to attend in Alaska in 1983-84. There seems to be an increased tendency toward attendance out-of-state as student level increases, however this could be due to a number of factors including the changing attendance patterns the last few years and the propensity to remain in school rather than stop-out or drop-out. Hence, caution should be used in drawing inferences from these data.

TABLE 3
IN-STATE/OUT-OF-STATE ATTENDANCE
BY STUDENT LEVEL
1982-83 through 1983-84

STUDENT LEVEL	1982-83				1983-84

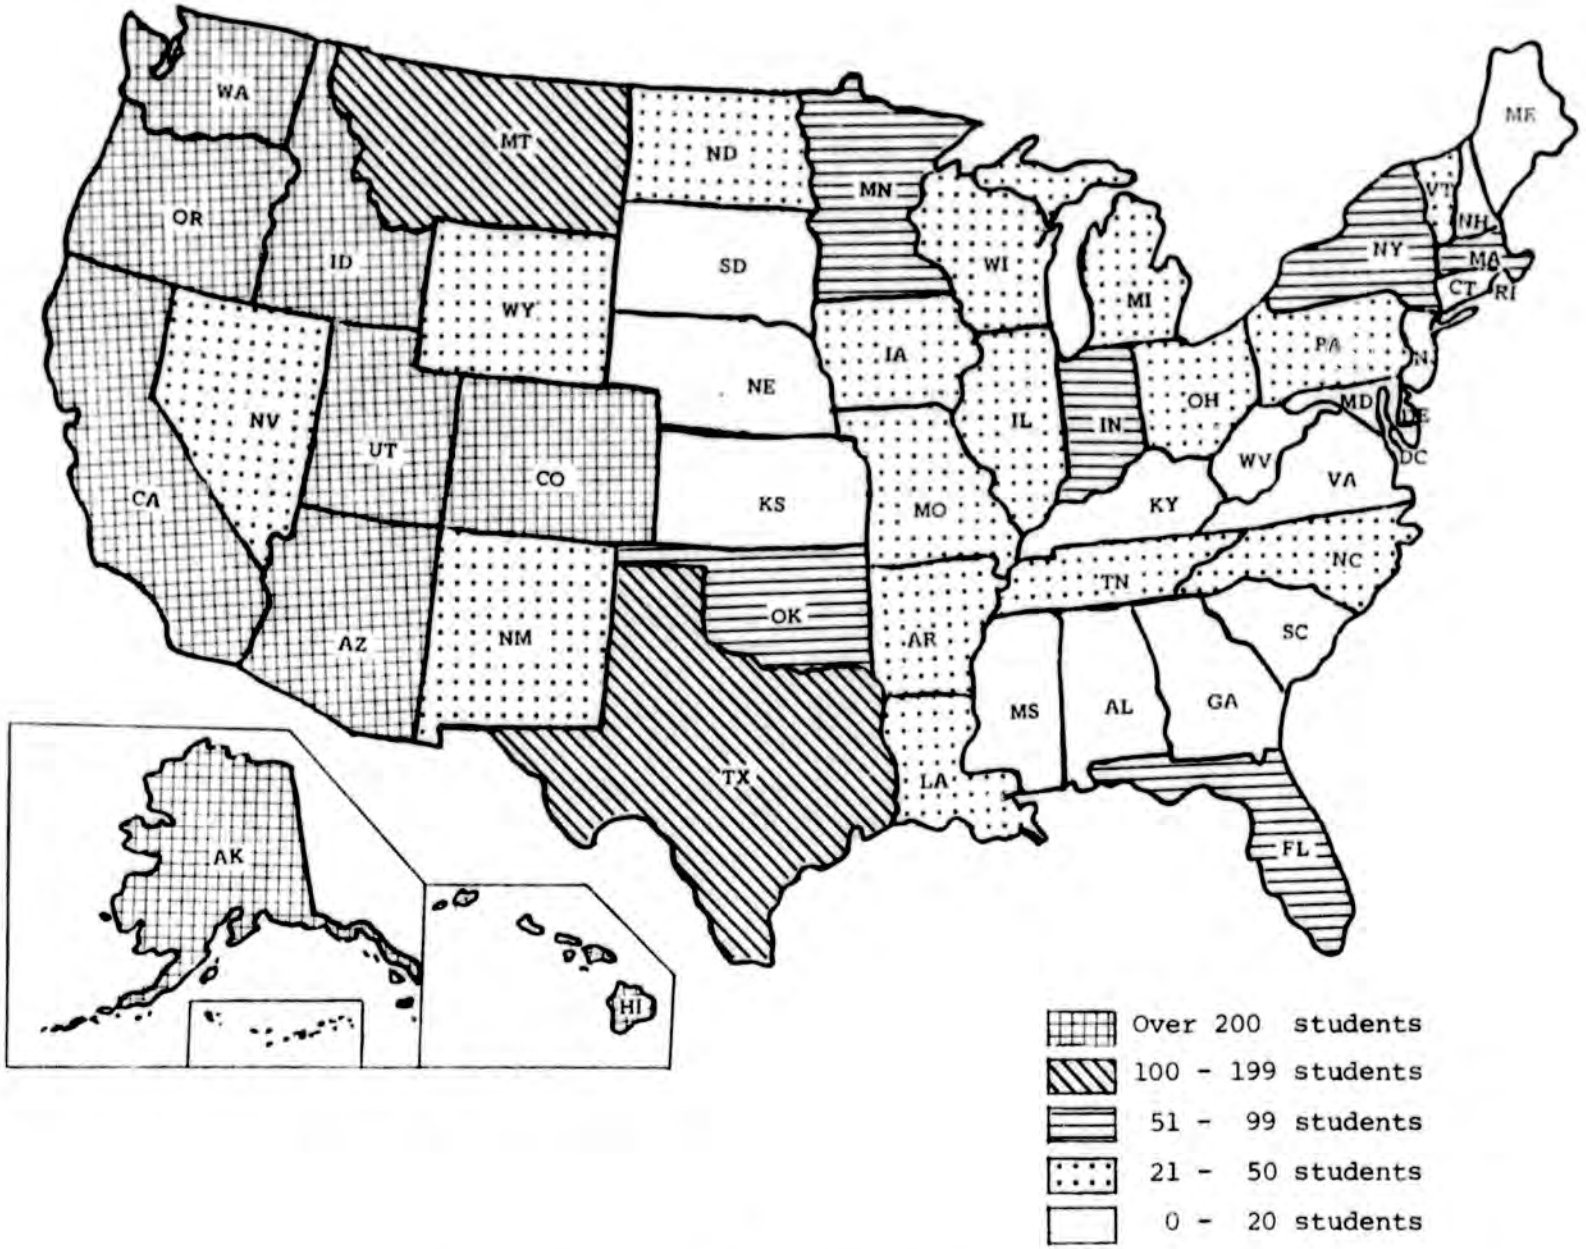

FIGURE 3
GEOGRAPHIC DISTRIBUTION OF ALASKANS UTILIZING
STATE LOANS FOR UNDERGRADUATE EDUCATION IN 1983-84

Graduate Loans

The number of Alaskans receiving loans for graduate study has increased nearly twelve fold since the program began in 1971-72. This year 1,336 students received assistance for the pursuit of graduate study. Of these 1,336, 78.1 percent used their loans for attendance outside of Alaska, while 21.9 percent used them for attending school in-state. The percentage of graduate loan recipients attending school in Alaska has been relatively stable the last few years, after decreasing steadily from 1971-72 through 1977-78. This trend is presented in Figure 4, and is probably largely due to the increased availability of programs in Alaska.

The states most frequently chosen by graduate students from Alaska in 1983-84 are presented in Table 4. Again, as with undergraduates, the students' preference is quite stable.

The average loan award for 1983-84 increased for some states and decreased for others, with the largest increases for students attending graduate institutions in Hawaii and California.

Alaskans pursuing graduate educational goals are also distributed quite widely across the nation, with Alaskan graduate loan recipients attending institutions in all but four of the fifty states. The predominance of the West, and particularly the West Coast, is readily apparent in Figure 5.

Only Alaska, Washington, California, and Oregon received more than 100 Alaskan graduate students on state loans. The thirteen states comprising the WICHE compact account for 74.5 percent of all the graduate Alaskan loan recipients for 1983-84.

GEOGRAPHIC DISTRIBUTION OF ALASKANS UTILIZING
STATE LOANS FOR GRADUATE EDUCATION IN 1983-84

Foreign Study

Alaskans used state loans for study in forty different institutions in seventeen foreign countries in 1983-84. The distribution of these students by country of attendance is presented in Table 5. Not too surprisingly, Canada is the most popular foreign country for attendance of Alaskan students.

TABLE 5

TOTAL	34	$4,402	23	$4,410

Loan Repayments

The student loan program is based upon a revolving fund with the students' loan repayments being re-utilized for future student loans. Since 1971-72 (actually 1974-75, since there were no repayments received the first few years), Alaskans have repaid over $22 million on their educational loans. The volume of these revolving funds now contribute a significant portion of the loan account, and as can be seen in Figure 6, these repayments are rapidly increasing each year.

Also presented in Figure 6 is a representation of the forgiveness history of the student loan program. Students who reside in Alaska after completion of their course of study are eligible to have up to 50 percent of their loans forgiven. Beginning with the first such forgiveness in 1974-75, the total amount of loan funds (including interest) which the State of Alaska has forgiven has generally shown large annual increases, with the exception of 1979-80 when forgiveness benefits temporarily leveled. During 1983-84 nearly 2,500 Alaskans received partial forgiveness of their student loans. Increases are projected to continue over the next few years as larger numbers of students complete their educational programs.

FIGURE 6
STUDENT LOAN COLLECTIONS
AND FORGIVENESS BENEFITS

Default

Nationally, student loans have a notoriously high default rate, and, unfortunately, Alaska's program also has experienced problems with loan collections. Although the Alaska program had been doing considerably better than the federal loan programs, the default rate has begun to rise during 1983-84. As can be seen in Table 6, the default rate had been steadily decreasing since the concerted effort began in 1975-76 to pursue these bad debts. However, during 1983-84 default volumes outstripped available manpower and the rate rose dramatically. It is anticipated that the use of private collection agencies during 1984-85 will bring the default rate back down.

TABLE 6
ANNUAL DEFAULT RATES OF
ALASKA STATE STUDENT LOANS
1971-72 through 1983-84

Statistical Data

In the Appendix are Tables 11-17 containing data on the Alaska Student Loan Program from 1971-72 through 1983-84. Information on the number and amounts of loans made annually to undergraduate and graduate students attending in-state and out-of-state is presented in Tables 11-14. Table 15 contains summaries of the average size loan awarded each year, and Tables 16 and 17 contain data on institutions most frequently attended by Alaska Student Loan borrowers.

WICHE STUDENT EXCHANGE PROGRAM

Through its participation in the thirteen-state Western Interstate Commission for Higher Education (WICHE), Alaska provides residents with access to sixteen fields of professional education not available in-state. The WICHE Student Exchange Program provides access to these sixteen fields at participating institutions throughout the compact states, and makes these programs available at a reduced tuition rate to the out-of-state WICHE students. These reduced rates usually amount to the normal in-state tuition rate at public colleges and universities and one-third the regular tuition rate at private colleges and universities. Alaskans certified for participation in this exchange program may also expect preferential admissions consideration by the schools to which they apply. For this, Alaska pays the college or university in which the Alaskan exchange student enrolls a set fee for a particular field of study. This fee, the support fee, covers the non-resident portion of the tuition and a portion of the institution's operating costs. The student does not receive any direct payment under this program.

Exchange Fields

The WICHE exchange fields in which Alaska would support students for the 1983-84 year included:

Architecture	Occupational Therapy
Dentistry	Optometry
Forestry	Osteopathy
Graduate Library Studies	Pharmacy
Graduate Nursing	Physical Therapy
Law	Podiatry
Maritime Technology	Public Health
Medicine	Veterinary Medicine

A student eligible for state certification in any of these fields must apply for and gain admission to the program of study. The admission decision rests solely with the receiving institution.

Support Fees

The amount of the support fee to be paid for each field of study is set annually by the WICHE Commission, with membership from all thirteen member states. These fees have increased more or less steadily over the last six years, and at the same time, Alaska's participation level has also steadily increased. As can be seen in Table 7, the total support fees exceeded $1.5 million.

TABLE 7
WICHE STUDENT EXCHANGE PROGRAM SUPPORT COSTS
1976-77 through 1983-84

Academic Year	Total Students	Total Fees
1976-77	114	$ 368,473
1977-78	134	634,114
1978-79	171	639,244
1979-80	209	853,959
1980-81	232	956,509
1981-82	269	1,223,091
1982-83	300	1,498,232
1983-84	284	1,591,440
TOTAL	1,713	$7,770,062

Participation Rates

Law continues to be the most popular field for Alaskan students. In 1982-83 Law students accounted for 60.0 percent of the students supported under the exchange program. In 1983-84, Law represented 58.1 percent of the exchange students. The growth fields for 1983-84 were Architecture, Graduate Nursing, Occupational Therapy, Veterinary Medicine, and Osteopathy. For the first time, Law experienced an appreciable decline. These data are listed in Table 8.

TABLE 8
WICHE EXCHANGE STUDENTS BY FIELD
1976-77 through 1983-84

Field of Study	77-78	78-79	79-80	80-81	81-82	82-83	83-84

TOTAL	123	152	166	232	269	300	284

*Discontinued as an exchange field in 1981-82.

The cost of the student exchange for 1983-84 is detailed in Table 9. It can be seen that because of the relatively low support fee for Law, Law exchange students accounted for only 40.0 percent of the total exchange cost (as opposed to accounting for 58.1 percent of the students).

TABLE 9
WICHE SUPPORT COSTS BY FIELD OF STUDY
1983-84

Field of Study	Support Fee	Total Students	Total Costs
Architecture	$ 3,200	18	$ 57,600

TOTAL	N.A.	284	$1,591,440

STATE EDUCATIONAL INCENTIVE GRANT (SEIG) PROGRAM

The State Educational Incentive Grant (SEIG) Program provides need-based grants to eligible Alaskans enrolled in undergraduate programs. Grant awards range from a minimum of $100 to a maximum of $1,500 each, depending upon demonstrated need. One-half of each grant is federally funded and one-half is provided by the State. Grants are awarded to eligible applicants in order of greatest financial need as measured by a standard need analysis.

Participation Rates

1983-34 was the sixth year of operation of the SEIG Program in Alaska. Over 2,000 Alaskans applied for grant funds in 1983-84, but because of fund limitations, only 126 grants were awarded. As can be seen in Table 10, this is a decrease from 1982-83 when 161 grants were awarded. The decline is the result of reductions in funds at the federal level. The grant funds available in 1983-84 were 13.0 percent less than the previous year.

Also listed in Table 10 are the awards for in-state and out-of-state attendance and an institutional listing of the in-state awards. As in the past, University of Alaska, Anchorage students received the most SEIG awards.

#50:3

HOUSING ASSISTANCE LOAN FUND
1984 ANNUAL REPORT

FORWARD

The requirement for an Annual Report to the Legislature is set out in A.S. 44.47.530. It has been our desire to go beyond this statutory requirement in providing both the Legislators and the housing consumer with an overview of our annual activities. A list of our offices is included and we welcome your comments and questions on our programs.

November 30, 1984

Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Ladies and Gentlemen:

It is with pleasure that the Department of Community and Regional Affairs submits its second Annual Report of the Housing Assistance Loan Fund.

This revolving loan fund was established by the Legislature on July 28, 1983. The Housing Assistance Division implemented the two new low income programs starting January 1984, authorized under Chapter 128 SLA 1984—the Homeownership Assistance Fund loan subsidy option and the State Assisted Rental Housing Construction Grant Program.

To more effectively administer the programs, in late February the Department consolidated all of its Anchorage divisions into one location. We believe the relocation will result in improved service to the public and more efficient internal management.

One of the difficulties in administering the loan fund programs has been in defining the term "rural"—a critical definition for distribution of loan funds. In 1984, changes in Section 7 of House Bill 663 created a new definition for "rural." Because of difficulties with the definition, the term "rural" may be rewritten during the Fourteenth Legislative Session.

The goals of the Housing Assistance Division remain intact. As authorized by Alaska statute, the Division seeks to provide decent, safe and sanitary housing at affordable rates for the citizens of Alaska's smaller communities. The programs administered by the Division offer Alaskans opportunities for new housing and for greater private sector participation throughout the State.

Thank you for your interest and support for housing in Alaska. Please contact us whenever we may assist you with housing information.

Sincerely,

Emil Notti

Emil Notti
Commissioner

BILL SHEFFIELD, GOVERNOR

November 28, 1984

Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Ladies and Gentlemen:

Fiscal year 1984 continued to be a busy and productive year for the Housing Assistance Division of Community and Regional Affairs.

In the first month of fiscal year '84, the annual loan appropriations accessed a new revolving loan fund which allowed repayments of principal to be retained by the Division for reinvestment in future loan activities. Interest repayments from annual appropriations are still returning to the State's General Fund.

New regulations for the Home Ownership Assistance Fund (HOAF), the State Assisted Rental Housing Construction Development fund and updates of existing regulations were developed at the conclusion of the 1983 Legislature. Hearings were held throughout the State during the late summer and early fall, and a final draft was sent to the Attorney General's office in November for their review.

Emil Notti assumed his duties as Commissioner of the Department of Community and Regional Affairs in January of '84. Along with this senior management change, new programs were implemented. The Homeownership Assistance Fund subsidy options were created. Training sessions were held in Anchorage for all seller/servicers interested in joining the program. To date 20 of 33 eligible seller/servicers participate in this lower income financing option. Designed with the experiences of the Alaska Housing Finance Corporation in mind, HOAF funds were made available with early applications being processed by April 1984. Final regulations were adopted in September 1984. Concurrently, the State Assisted Rental Housing Construction Grant Program went into effect. In March, grants totaling nearly $5 million were awarded under this new program for low income multifamily housing development. Subsequent financing for the program was approved by the 1984 Legislature at $3,580,000 and is due to be awarded in January 1985.

Also in November 1983, the in-house Automated Accounting System was brought online. With the increase in loan portfolios, this computerized system has enhanced the Division's ability to effectively track loans and control loan receipts and disbursements. Now in progress is the linking of this system to the Anchorage Mainframe Computer for access to PBA, Legislative Information and other State operated computer systems. The Division's advances in this area have allowed the other agencies within the department to also access administrative and legislative data previously unavailable in Anchorage.

The Division continued to meet the needs of housing consumers across the State. This past year many spin-off activities resulted. In November of 1983 the Juneau Regional Office opened to better serve the Southeast area. Guests at the opening celebration included Legislators, aides and representatives from the Governor's Office, other State departments, as well as industry partners from banks, real estate agencies, title firms, and appraisal companies. All concurred that the needs of Southeast for housing assistance would be enhanced by this office expansion.

In late March, the Division initiated their annual spring outreach. A concentrated effort by field staff was made to contact the majority of the communities in each region. The rewards paid off in double—the renovation and nonowner-occupied programs have experienced unprecedented growth. To insure current policy and procedures are being met in the areas of default, foreclosures and assumptions, instructional guideline updates were published and distributed to seller/servicers statewide.

Legislative changes during 1984 included a new definition of *rural*. While there were no changes in the first and second judicial districts, the third and fourth experienced major changes. In the Third Judicial District, a great deal of the area around Fairbanks was opened up due to the rural definition. The Fourth Judicial District experienced an opposite effect. Areas that had previously enjoyed a rural classification are now considered urban, leaving some confusion and some displeasure for residents in adversely affected areas.

In addition to a loan appropriation of $45,000,000, the Legislature appropriated $16.5 million to be awarded statewide in FY 84 for the Housing Grant Programs. Of the $16.5 million, $9.5 was designated for Senior Citizens, $3.5 for Low Income State Assisted Housing, and $3.5 for a Supplemental Housing Development Program.

Cooperation between the Housing Assistance Division and other government agencies generated a new level of involvement for all concerned. Due to limited availability of funds in the area of nonconforming loan financing, a special purchase program of $5 million was implemented between HAD, the Department of Revenue and Alaska Housing Finance Corporation. The Department of Community and Regional Affairs and the Department of Commerce and Economic Development initiated a cross-training seminar for their respective loan divisions. The purpose of the loan examiners' cross training was to facilitate a common working knowledge of all State loan programs. In addition, a State Loan Pamphlet was printed with pertinent information on State loan programs.

Barbara Morse-Quinn
Director 1982–1984

In conclusion, I would like to express my appreciation for your continued guidance and support. The Division looks forward to the new fiscal year, confident in its abilities to fulfill legislative goals, and established in its programs for housing delivery.

Sincerely,

Barbara Morse-Quinn

Barbara Morse-Quinn

Clark D. Boston
Director

SB 1 passes. Creates Housing Assistance Division; $10,000,000 appropriated to Nonconforming Loan Fund. Division also receives Senior Citizen Housing Development Fund from Division of Community Planning.

1980 Legislative Session

First office opens in Anchorage.

August 1980

First loan processes. Dillingham, Nome regional offices open.

February 1981

Kotzebue regional office opens.

March 1981

May 1981

HB 148 passes mandating 80% rural fund emphasis for nonconforming loans. $40,000,000 appropriated to the Nonconforming Loan Fund for FY '82. Supplemental Housing Development Fund authorized within division to augment HUD Indian housing units.

1981 Legislative Session

HOUSING ASSISTANCE DIVISION BACKGROUND

The Housing Assistance Division was created by the 1980 Legislature, (Chapter 120, SLA 1980) to administer the Nonconforming Housing Loan Program. Loan funds were to be distributed on a statewide basis with emphasis on rural Alaska. Administration of these loans was and is primarily through seller/servicer agreements with financial institutions. The initial mandate from the Legislature was twofold; (1) to form a central office and five regional offices and (2) to offer loans for nonconforming housing. First-year loan funds were appropriated at $10 million.

The 1981 Legislature continued funding the Nonconforming Program at a rate of $40 million and directed the Division to divide such funds between rural and urban Alaska at an 80%:20% ratio. The Legislature further directed the Division to offer funds directly to eligible borrowers who could not otherwise get service in rural Alaska (Chapter 82, SLA 1981). This mandate is known as direct lending and has been instituted by the Division.

The Nonconforming Loan Fund was renamed the Housing Assistance Loan Fund during the 1982 Legislature (Chapter 113, SLA 1982). This fund combined the Nonconforming Loan Program with the AHFC Rural Mortgage Purchase Programs for both owner-occupied and nonowner-occupied loans. An FY-82 appropriation to the newly combined Housing Assistance Loan Fund (HALF) was in the amount of $45 million bringing total appropriations to date to $95 million.

The HALF was given another $45 million by the 1983 Legislature and another new program. The new program was called the Homeownership Assistance Fund. The object of this program is to make homeownership a reality for the low to moderate income segment of the State's population by subsidizing a portion of the interest payment on the loan. The Division drafted regulations and held public hearings in October and November of 1983. The regulations were filed with the Attorney General in early December 1983. A workshop for the seller/servicers was held in early February 1984 although the regulations had not been finalized by the Attorney General. We are now in the process of negotiating the HOAF Addendum to the Seller/Servicer Agreement with each seller/servicer, and loans will be made under draft regulations this fiscal year. We currently have over $100,000,000 in loans outstanding, with a 2.14% delinquency rate at June 30, 1984 (principal of delinquent loans compared to total loan principal outstanding).

(Top) Division and department staff attend monthly data processing management committee meeting. (Center) Housing customers receive toll-free assistance from central office staff. (Bottom) Word processing functions interconnect central office with six regional office locations.

Fiscal year closes. 99 loans closed. Rural/urban activities nearly equal.

June 1981

Fairbanks regional office opens.

September 1981

Original management team leaves. Interim manager appointed.

February 1982

New management team appointed.

April 1982

SB 666 passes. HAD receives rural owner-occupied and rural nonowner-occupied programs from AHFC. The sum of $45,000,000 is appropriated to the newly consolidated Housing Assistance Loan Fund. An 80% emphasis in the nonconforming loan program is maintained. New definition of rural is passed for fiscal year 1983.

1982 Legislative Session

Ms. Barbara Morse-Quinn, Director
Department of Community and Regional Affairs
Housing Assistance Division
Anchorage, Alaska

We have examined the balance sheets of the Housing Assistance Loan Funds, Department of Community and Regional Affairs, State of Alaska, as of June 30, 1984 and 1983, and the related statements of revenues, expenditures, and changes in fund balances for the years then ended. Our examinations were made in accordance with generally accepted auditing standards and, accordingly, included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the financial statements referred to above present fairly the financial position of the Housing Assistance Loan Funds, Department of Community and Regional Affairs, State of Alaska, as of June 30, 1984 and 1983, and the results of its operations and changes in its fund balances for the years then ended, in conformity with generally accepted accounting principles applied on a consistent basis.

Laventhol + Horwath

November 19, 1984

Loan and accounting unit staff coordinate on file review before computerized data is stored.

Fiscal year 1982 audit period closes. Only 275 loans outstanding. Large carryover in funds. Audit exceptions noted. New management begins work on corrections.

June 1982

Division regulations drafted. Public hearings held. Regulations filed with Attorney General.

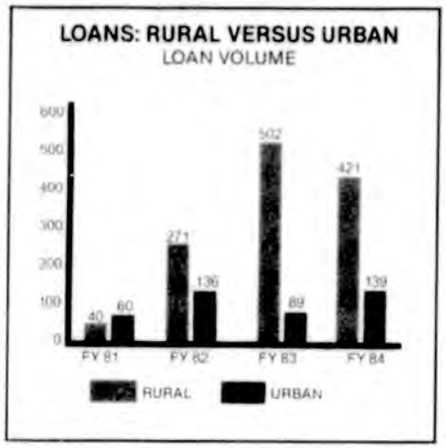
Fall 1982

New Governor elected. Transition team reviews division activities.

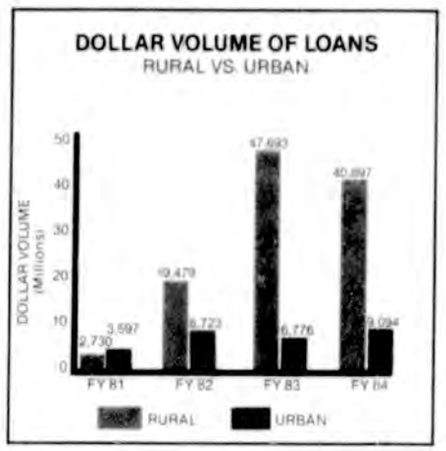
November 1982

New Commissioner appointed to manage department activities. New division management retained. Division handbooks on loan and grant programs published. Brochures printed.

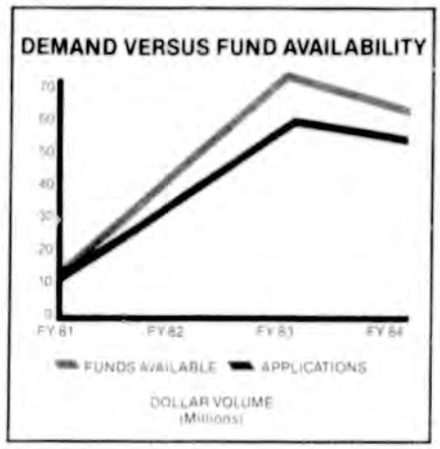
January 1983

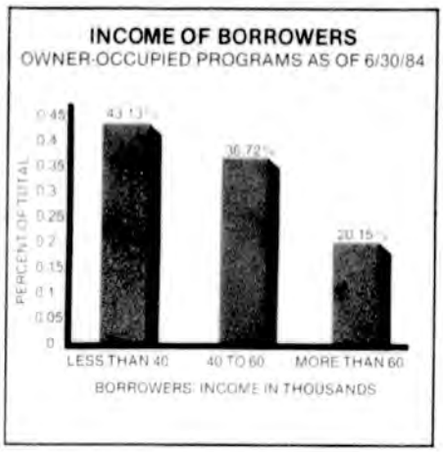


Lt. Governor McAlpine adopts division regulations.

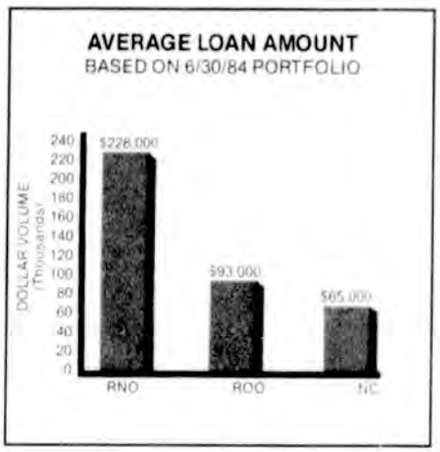


April 1983

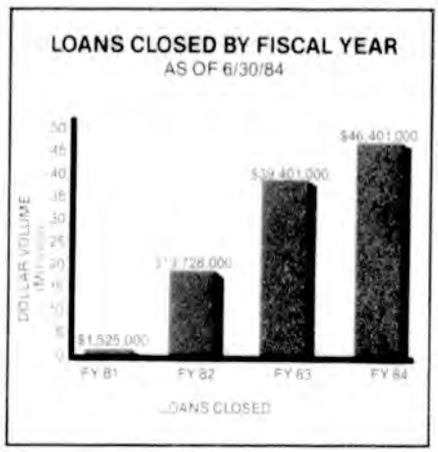


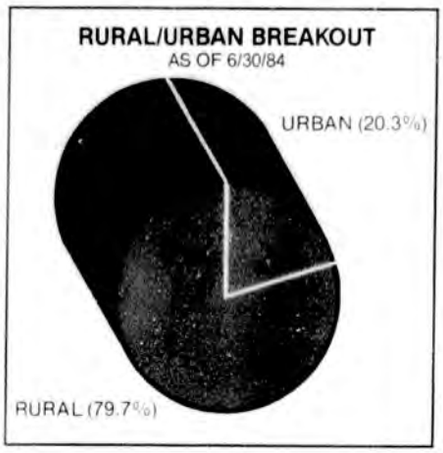


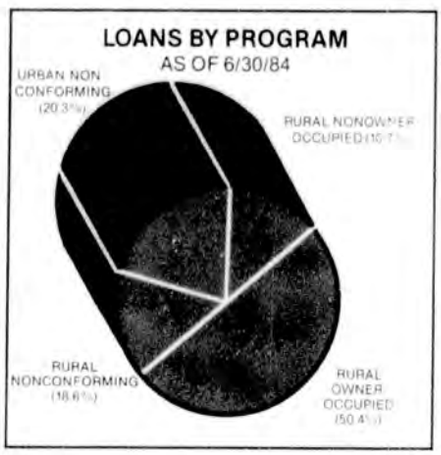
Contract approved to develop and implement automated mortgage loan accounting.

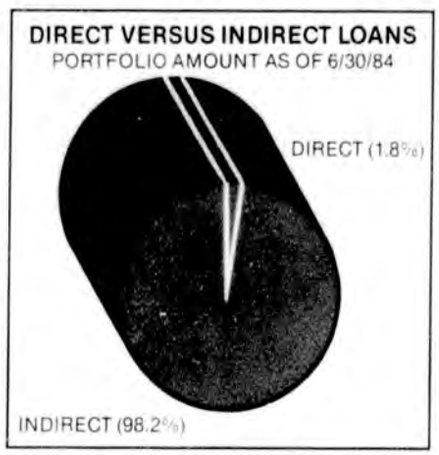


June 1983









1983 Legislative Session

HB 302 passes. 80% rural emphasis shifted to entire Housing Assistance Loan Fund apropriation. The sum of $45,000,000 is proposed for fiscal year '84 programs. Legislation creates a Home Ownership Assistance Program (deep subsidy) loan and a low-income rental housing construction grant fund to take effect 1/1/84. Annual Report to the Legislature on the loan portfolio is required. Housing Demonstration project funded with Legislative grant for owner/builder townhouses.

June 1983

Fiscal year 1983 closes. Appropriation for next fiscal year posted after fiscal year begins. Portfolio growth exceeds 300% of prior years' activities. 7% staff increase received.

October 1983

Computer system installed in division offices. Account conversion process begins.

November 1983

Fiscal year 1983 audit begins. New programs drafted. Proposed regulations out for public hearings. Division hires staff for new Southeast Regional Office. Senior management change in department. Acting Commissioner appointed.

December 1983

1983 Annual Report drafted with improved audit findings. Draft regulations filed with the Attorney General's Office. Automated account conversion continues.

Emil Notti named Commissioner

January 1984

New grant program became effective under AS 44.47.635. This grant program is known as the State Assisted Rental Housing Construction Program.

Home ownership Assistance Fund effective 1/1/84.

February 1984

Official open house for new Southeast Regional office—Juneau.

HAD moves to new location.

March 1984

The first grants totaling $5 million were awarded under the State Assisted Rental Housing Construction Program.

Started accepting HOAF applications 4/2/84.

April 1984

Spring outreach begins.

NOTES TO FINANCIAL STATEMENTS YEARS ENDED JUNE 30, 1984 AND 1983

1. Summary of significant accounting policies:

The following is a summary of the significant accounting policies of the State of Alaska applicable to the Department of Community and Regional Affairs, Housing Assistance Division (Division) loan programs. The loan programs are appropriations of the General Fund.

Fund Accounting:

The State of Alaska maintains its accounting in accordance with the principles of fund accounting. A fund is a fiscal and accounting entity established by law to segregate and account for designated resources and activities. Housing Assistance Division loan programs are administered through the Housing Assistance Loan Funds.

Basis of Accounting:

The financial statements of the loan programs are reported on the modified accrual basis of accounting. The accrual basis is modified to accrue revenues susceptible to accrual, primarily reimbursable items and investment income. Revenue not susceptible to accrual is reported on the cash basis; this is primarily appropriations.

Basis of Presentation:

The balance sheets are presented in a non-classified format. The Division has few assets that can be defined in terms of a one-year operating cycle.

Budgetary Control:

All money received is deposited in the State Treasury. Funds other than the revolving loan fund may not be expended without appropriation. An appropriation is an authorization to spend money and incur obligations. It is a legal limit as to purpose, time, and amount; however, the appropriations of the loan fund are carried forward until used.

Appropriations are enacted by the Legislature and approved by the Governor. The loan programs record appropriations during the period in which the funds become available. Expenditures are reported at the appropriation level to show compliance with the law.

Other accounting policies:

Mortgage loans receivable:

Mortgage loans receivable are recorded at cost. Cost is defined as the total funds advanced, less repayments applied to principal.

Loans in progress:

Loans in progress consist of warrants issued by the State of Alaska for loan closings in progress at year end.

2. Appropriations:

Appropriations for the fiscal year ended June 30, 1983 were enacted and approved prior to July 1, 1982 and, accordingly, included in the 1982 sources of funds. There was no appropriation during the year ended June 30, 1983. In July 1983, the loan fund received an appropriation of $45,000,000 for the fiscal year ended June 30, 1984.

3. Loan Loss Reserve:

The loan loss reserve account is established for losses on mortgages that may become uncollectible. Current management estimates this amount to be one percent of the current loan balance.

This reserve has been allocated between general fund loans and revolving fund loans and is a reduction of the reserve for loans receivable in the fund balances of the funds.

4. Revolving loan fund:

On July 29, 1983, the State of Alaska established the Division as a revolving loan fund. This fund consists of all unexpended appropriations at July 29, 1983, including commitments and loans in progress. In addition, all principal repayments on loans closed on or after July 29, 1983 are included in the revolving fund. Loans closed before July 29, 1983, are not included in the revolving fund at June 30, 1984. As a consequence of this amendment, $250,000 of principal repayments transferred to the State of Alaska General Fund during the year are now due to the revolving loan fund.

As disclosed in Note 6, subsequent to year end all loans were included in the revolving loan fund.

5. Transfers to the State of Alaska General Fund:

Transfers to the General Fund consist of all interest payments net of service fees charged by the seller/servicer and principal repayments on the general fund loans. The Division has transferred approximately $3,400,000 in principal repayments during the fiscal year ended June 30, 1984 and approximately $5,000,000 in principal repayments since inception.

6. Subsequent Event:

Subsequent to June 30, 1984, the Act establishing the revolving fund was amended. As of July 15, 1984, loans closed prior to July 1, 1983 will also be included in the revolving loan fund balance.

7. Reclassification:

Certain amounts on the 1983 financial statements have been reclassified to conform to 1984 presentation.

Special "noncomforming money AHFC—" special purchase program for nonconforming loans.

Analyst Programmer III starts 5/7.

Default and Foreclosure Guidelines for Program Handbook drafted.

In-house seminar on "Construction Inspection."

New definition of "rural" HB 663, Section 7 signed 6/21 by Governor Sheffield—codified as Chapter 128, SLA 1984.

DCRA/DCED cross training workshop—State Loan Pamphlet.

Experimental field underwriting plan—Fairbanks.

Hookups to Anchorage Mainframe Computer.

Development of a written system of internal controls for the HAD Revolving Loan Fund.

Housing Assistance Division Program Descriptions

Rural Owner-Occupied Program

The rural owner-occupied program provides financing to qualified borrowers for the construction and purchase of a unit which will be used as the borrower's principal residence. The program covers single-family, detached and duplex housing. Under this program, loans will not be made to professional builders who will not occupy the unit(s) or to compensate the borrower for his/her labor.

Rural Nonowner-Occupied Program

The rural nonowner-occupied program provides financing to qualified borrowers for the construction, purchase or rehabilitation of rental housing units. The project may involve two to eight units in a single community or specific area outside a community and up to 16 units in areas demonstrating extraordinary need.

Nonconforming Housing Loan Program

Through this program, financing can be obtained to construct, renovate, or purchase urban or rural housing units that will be occupied by the borrower but do not conform to specified standards. Housing units financed under this program must be occupied by the borrower. Nonconforming housing is structurally sound and poses no health or safety hazards to occupants. But because of outmoded construction practices, changes in current design standards, a lack of normal amenities or utilities, financing cannot be obtained through any other private, state or federal home mortgage loan program.

Also included under this program is property that does not have conventional marketable title because of a pending conveyance under the Alaska Native Claims Settlement Act.

Home Ownership Assistance Program

This program provides assistance to persons of lower and moderate income to purchase or construct single-family, owner-occupied dwellings where the mortgage loan on the dwelling is originated or purchased by the Division under the Nonconforming Housing Loan Program or the Rural Owner-Occupied Program. As a new program, with draft regulations awaiting final review in the Office of The Attorney General, only a few loans will be made in FY 84 under this program.

(Left) Successful grant activities finance major housing projects such as the newly completed Robert W. Rude Senior Housing complex in Anchorage. (Above) Rural owner-occupied project.

With the start of a new fiscal year, the housing grants programs have appropriations of over $165 million to award for projects statewide.

Fiscal year begins.

July 1984

Assumption Guidelines for Handbook sent to all seller servicers.

August 1984

Regulations on HOAF and State Assisted Housing Construction Program adopted. Minor changes in old regulations.

September 1984

Division awarded over $7 million in grants to Senior Citizen Housing projects statewide.

Contract proposal for drafting and publication of Handbook and brochures.

October 1984

HOUSING ASSISTANCE DIVISION
LOAN PROGRAM INFORMATION

The Housing Assistance Division (HAD) offers four loan programs; the Rural Owner Occupied, Rural Non-Owner Occupied, Nonconforming Housing Loan Program, and the Housing Rehabilitation Program. The following is a brief summary of these programs.

Rural Owner-Occupied Program - Provides financing to qualified borrowers for the construction or purchase of a single family residence and duplex housing for owner occupancy. The maximum loan term is 30 years.

For new construction, the Division may finance 100% of allowable cost incurred during construction or 85% of appraised value, whichever is less. The maximum dollar amount a borrower may receive is $172,900 for single units and $221,200 for duplexes.

For purchase of existing housing, the Division may finance 95% of the sale price or 95% of the appraised value, whichever is less. The maximum dollar amounts are the same for purchase as shown for construction.

Rural Non-Owner Occupied Program - Provides financing to qualified borrowers for the construction, purchase or rehabilitation of non-owner occupied rental housing units. The interest rate for this program is 10.5% with a maximum loan term of 30 years. The project may involve two to eight units in a single community or specific area.

The principal amount of the loan or loans for housing under this program can not exceed $1,250,000.00. Also, the loan must not exceed 80% of the appraised value or 80% of the purchase price whichever is less. The borrower may not reside in the housing financed.

Nonconforming Housing Loan Program - Provides financing to qualified borrowers for the construction, rehabilitation or purchase of single family detached or duplex housing which exhibits one or more characteristics, with respect to design, construction practices, materials, foundation systems, utilities and minimum space requirements, which are not common to the community in which the property is located and which would ordinarily preclude financing by private financial institutions. The maximum loan term is 30 years.

For new construction, the Division may finance 100% of allowable cost incurred during construction or 85% of appraised value, whichever is less. The maximum dollar amount a borrower may receive is $172,900 for single units and $221,200 for duplexes.

For purchase of existing housing, the Division may finance 95% of the sales price or 95% of the appraised value, whichever is less. The maximum dollar amounts are the same for purchase as for construction.

Housing Rehabilitation Program - Provides financing to qualified borrowers for the repair, remodeling or rehabilitation of existing single family and duplex housing. In addition, the Division may provide first or second deeds of trust financing.

For first deeds of trust, the Division may finance 100% of allowable cost of construction, plus pay off any existing liens on the subject property. However, the amount financed may not exceed the lesser of 95% of the appraised value of the property, or $172,900 for single families and $221,200 for duplexes. The maximum term of the loan is 30 years.

For second deeds of trust, the Division may finance up to $45,000 Maximum term for second is 15 years.

Under the Rehabilitation Program, the amount financed may include costs for contracted labor/services other than that of the borrower.

In the event a borrower requires financing for building materials only (no labor), the Division may provide rehab financing up to 80% of the appraised value of the subject property or $45,000 whichever is less and the maximum term is 15 years.

The Homeownership Assistance Fund (HOAF) was created during the 1983 legislative session and became effective January 1, 1984. The purpose of this fund was to subsidize mortgage payments of low to moderate income borrowers. A qualified borrower may have their monthly mortgage payment subsidized to an interest rate as low as 6%. The subsidy amount is determined by how much the borrower can pay. Income limits, loan limits, and asset value limits are taken into consideration.

The borrower(s) household income limits must not exceed the following:

1-2 adults	$30,000, plus
1st child	5,000
Additional children or adult	$ 1,500

The borrower's maximum gross yearly income limit can not exceed $39,500 per household. Additionally, the borrower may not have assets that exceed three times the applicable income limit for the household. Assets do not include permits for business opportunities, restricted title land, or land, acquired through ANCSA or ANILCA.

The loan limits are as follows:

1-2 member family	$105,000
3 member family	110,000
4 or more member family	120,000

Additionally, for those borrowers whose home is owner-built new construction, the following appraised values may not be exceeded:

1-2 member family	$130,000
3 member family	140,000
4 or more member family	150,000

Once the borrower is determined eligible to obtain a loan with a HOAF subsidy, they are required to enter an assistance agreement. The agreement is re-evaluated at least annually to determine continued eligibility, and the monthly subsidy amount for the next year.

How to Apply - Anyone interested in applying for a housing loan of any type through the Division must first contact all approved mortgage lenders which service the area where the property is located. In the event financing cannot be obtained through this source, the Division may provide financing directly to the borrower.

The interest rates for the Rural Owner-Occupied and Nonconforming Housing Loan Programs fluctuate. The information provided is general in nature and other restrictions may apply.

SUPPLEMENTAL HOUSING DEVELOPMENT GRANTS

Governing Regulations: 19 AAC 88.010 - .900

Governing Statutes: AS 18.55.998

Funding Available:

FY84	$3,500,000
FY85	$3,500,000

Program Summary: This grant program provides grants only to regional housing authorities as supplemental funding to their approved HUD housing projects. Statute limits the grants to regional housing authorities. The statute also limits the grant to project site development for road, water and sewer and electrical distribution work. Grant awards are made to each project when HUD submits to this division an approved HUD project budget indicating the need for supplemental funding and signs concurrence in the need for a grant award. Payment under the grant for the work is made to the housing authority upon HUD's providing a copy of the construction contract for the work and requests payment. The work accomplished with State funds is part of the HUD project and is reviewed, in design and construction by HUD. We have a Memorandum of Understanding with HUD, BIA, and PHS on all aspects of this grant program.

Criteria for Award:

1. HUD project approved
2. Housing authority request
3. HUD concurrence
4. HUD budget shows need for supplemental funding and amount for roads, water, sewer amd electrical distribution
5. Construction contract for work provided

Process for Award of Grants: There is no advertisement for grant applications or deadline for grant requests. The grants are awarded on a first come first served basis within the funds available in accordance with the grant award process outlined above.

STATE ASSISTED RENTAL HOUSING CONSTRUCTION PROGRAM

Governing Regulations: 19 AAC 83.010 - .900

Governing Statutes: AS.44.47.630 - .635

Funding Available:

FY84	$5,000,000
FY85	$3,580,000

Program Summary: This program became effective January 1, 1984. The legislature appropriates funds to the Low Cost and Low Income Multiple Family Housing Development Fund to provide grants to municipalities or public or private non profit corporations for planning and construction of low income rental housing.

The division provides notice in newspapers statewide of the grant application period and deadline for grant applications, and also provides this notice to an extensive mailing list of possible interested applicants. The first application deadline is November 15 annually. The applications are reviewed by a committee and awards announced not later that January 31 annually. An appeal period is provided for the applicants not selected. Following the appeal period, grant agreements are entered into with the successful applicants.

Criteria for Selection of Applicants:

1. Need for housing
2. Other funding available
3. Project Feasibility
4. Rental cost
5. Management plan
6. Evidence of community support
7. Project cost per unit
8. Project density

Process of Awarding Grants:

1. Advertise in papers and mailout of mailing list
2. Selection committee established
3. Selection committee sets criteria and rates and ranks grant applicants
4. Grant awards announced by DCRA Commissioner
5. Appeal period of 15 days provided to non selected applicants
6. Grant agreements prepared and executed

SENIOR CITIZEN HOUSING DEVELOPMENT FUND

Governing Regulations: 19 AAC 85.010 - .130

Governing Statutes: AS 44.47.610 - .620

Funding Available:

FY84	$10,000,000
FY85	$ 8,000,000

Program Summary: This grant program awards grants for both the planning and construction of senior citizen housing. The grant applicants are limited to municipalities and public and private non-profit corporations. Notices are placed in newspapers statewide announcing the grant periods and deadlines for grant applications for award. Notice is also sent to an extensive mailing list for this grant program. Planning grant applications are received and grant awards made four times a year, in July, October, January and April. These grants are up to $75,000, depending on the size of the project. Grants for construction are awarded twice annually in November and March, depending on funding. The grant applications are reviewed and ranked by a selection committee and awards announced by the Commissioner. An appeal process is provided for the applicants not selected. This grant program provides senior citizen housing statewide. The program is administered out of the Housing Assistance Division in Anchorage.

Criteria for Selection of Applicants:

A. Planning Grants
1. Satisfactory completion of application
2. Establishment and documentation of housing need
3. Establishment of a senior citizen steering committee

B. Construction Grant
1. Satisfactory completion of application
2. Housing need
3. Other funding and rental subsidy available
4. Feasibility analysis
5. Management plan

Grant Award Process:

1. Advertise in newspapers statewide and send notice to extensive mailing list of grant application period and deadline.
2. Establish a selection committee
3. Committee set criteria and rate and rank applications
4. Grant awards announced by Commissioner
5. Appeal period of 15 days is provided to non selected applicants
6. Grant agreements are prepared and executed

Senior Citizen Housing Development Fund (cont'd)

Grant Award Process:

1. Advertise in newspapers statewide and send notice to extensive mailing list of grant application period and deadline.
2. Establish a selection committee
3. Committee set criteria and rate and rank applications
4. Grant awards announced by Commissioner
5. Appeal period of 15 days is provided to non selected applicants
6. Grant agreements are prepared and executed

HOUSING ASSISTANCE LOAN PROGRAM
Alaska Statutes 44.47.360-.560

Three kinds of loans are available under this program; Nonconforming Housing, Rural Nonowner-occupied and Rural Owner-occupied.

NONCONFORMING HOUSING LOAN PROGRAM

WHAT IS THIS LOAN PROGRAM FOR?

This program provides financing for construction, rehabilitation or purchase of single family or duplex housing which, because of uncommon design, construction practices, materials, foundation systems, utilities and minimum space requirements may not qualify for financing by private financial institutions.

WHO CAN APPLY FOR A LOAN?

Individuals who are at least 18 years old or older, and a resident of the State of Alaska, may apply for a loan. The borrower must occupy one of the units as a principal residence.

HOW MUCH CAN BE BORROWED?

Maximum loans under the program equal the limits set by the Federal National Mortgage Association, currently $171,000 for a single family residence and $218,700 for a duplex.

WHAT IS THE INTEREST RATE?

The interest rate for nonconforming housing is ¼% higher than the rate based on the most current Alaska Housing Finance Corporation bond sale. A one point discount is available to veterans.

HOW MUCH TIME IS ALLOWED TO REPAY THE LOAN?

You may be allowed up to 30 years or the remaining economic life of the property, whichever is less, to repay the loan.

IS COLLATERAL REQUIRED?

The loan must be secured by collateral. The structure being financed is usually sufficient collateral.

WHERE CAN I APPLY FOR A LOAN?

Loans are available through participating lending institutions. Applying for a loan under this program is basically the same as applying for a conventional home mortgage loan.

HOUSING ASSISTANCE LOAN PROGRAM
Alaska Statutes 44.47.360-.560

RURAL NONOWNER-OCCUPIED PROGRAM

WHAT IS THIS LOAN PROGRAM FOR?

This program provides financing for the construction, purchase or rehabilitation of two, up to eight, rural nonowner-occupied rental housing units. Under extraordinary circumstances, the division may finance up to 16 rental units.

WHO CAN APPLY FOR A LOAN?

Individuals who are at least 18 years old and residents of the State of Alaska, and Alaska businesses may apply for a loan. The borrower may not occupy any of the units as a principal balance.

HOW MUCH CAN BE BORROWED?

The maximum loan amount is $1,250,000.

WHAT IS THE INTEREST RATE?

The interest rate for this program is 10½%

HOW MUCH TIME IS ALLOWED TO REPAY THE LOAN?

You may be allowed up to 30 years or the remaining economic life of the structure, whichever is less, to repay the loan.

IS COLLATERAL REQUIRED?

The loan must be secured by collateral. The structure(s) being financed is (are) usually sufficient collateral.

WHERE CAN I APPLY FOR A LOAN?

Loans are available through participating lending institutions. The division may issue loans directly to borrowers in areas not regularly served by commercial mortgage lending institutions.

PROGRAM DESCRIPTION

CATEGORY: Loan Programs

AGENCY: Community and Regional Affairs

PROGRAM: Housing Assistance Loan Fund

Pursuant to AS 44.47.380, the Housing Assistance Loan Fund was created as a revolving loan fund for the purpose of originating, purchasing and participating in loans for rural housing and nonconforming urban housing. The primary objective of this program is to ensure that the maximum number of eligible Alaskans have access to safe, affordable housing through the delivery of loan funds. Borrowers are assisted with mortgage loan applications through seven offices located in Anchorage, Juneau, Bethel, Dillingham, Nome, Kotzebue and Fairbanks. Although a large majority of loans made under this program are through financial institutions, direct lending services are also available to qualified buyers whose loan applications are unattractive to private lending institutions.

In addition to loans for rural and nonconforming housing, the Housing Assistance Loan Fund is also used to provide funds for:

1. low and moderate income single family housing; the subsidy for these loans is furnished by the assets of the Housing Ownership Assistance Fund (AS 44.47.382);

2. non-owner occupied housing; up to 20% of the principal amount of loans made to rural and nonconforming urban housing may be used for non-owner occupied housing loans (AS 44.47.520)

For FY85 and prior years, appropriations were also made to the Senior Citizens Housing Development Fund (AS 18.54.070) for the purpose of making grants for the development of senior citizens housing. No funding is requested for this purpose in the Governor's proposed FY86 budget.

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

The Housing Assistance Loan Fund was created to provide money to originate, purchase or participate in the purchase of loans for rural housing and nonconforming urban housing. Approximately 97% of all loans have been made through a private financial institution and purchased by the Division. The remaining 3% are loans made directly to borrowers by the Division because no private financial institution was willing to service the borrowers' area. The Division has total loans in excess of 1,900 which require computerized accounting. Payments are collected for 30 years and are received for principal and interest. Section 12, Chapter 102, SLA 1983 changed the fund to a revolving loan fund and allows the Division to retain loan principal payments. In FY 86, approximately 14% of the total funds available are from principal payments.

BUDGET REVIEW

Based on past fiscal years' activities, the Division projects financing in FY'86 approximately 643 new loans with $45.0 million in new appropriations, $9.9 million in carryover funds, and $8 million in repaid principal and payoffs. By statute a minimum of 80% of the funds will be utilized in rural Alaska with the remainder available for urban nonconforming properties. The Division is projecting 505 loans for rural housing and 138 loans for nonconforming housing in urban areas. The $50.0 million allocated to rural Alaskan properties represents in most cases the only available source of mortgage funds. These rural funds will construct approximately 231 new dwellings, finance the sale of 208 existing structures, renovate 60 existing structures and finance 160 rental units. It should be noted that in addition to benefits for individual property investors, the expenditure of these loan funds translates into direct employment opportunities for primary consumers in construction labor, materials suppliers, freight companies, and banks. Funds also indirectly affect the local economy when homeowners purchase goods and services in the community.

The analysis of the programmatic effect of receiving 75% of FY 85 general funds in FY 86 must also discuss the overall impact based on the other funds available during FY 85. The FY 85 general fund allocation of $45 million, $15.3 in carry forward funds, and $6.0 in principal repayments will finance 543 loans for rural housing and 128 loans for nonconforming in urban areas. At 75%, the FY 86 general fund allocation would be $33.75 million plus $8 million in principal repayments, and $9.9 million in carryover funds. At 75%, the net dollar effect is a drop from $62.4 million in FY 85 to $47.75 million in FY 86 or about a 24% decrease in the total funding scope of the program. At this level it is estimated that the Division can finance approximately 520 loans, of which about 416 loans would be for rural housing and 104 loans for urban nonconforming housing. This drop in funding would depress economic activity in the regional centers, primarily through a substantial reduction in the number of new housing starts.

PROGRAM Economic Development

BRU Development

COMPONENT Housing Assistance

FY 86

REVISED DATE

00067

(6/84)-ae1

The impact on the FY 86 program of receiving only 50% of the FY 85 general funds is even more drastic. At 50% of the FY 85 general fund allocation, $22.5 million from the general fund, $9.9 million in carryover funds, and $8 million from principal repayments would be available in FY 86. At the 50% level, the net dollar effect is a drop from $62.4 million in FY 85 to $36.5 million in FY 86, or a decrease of about 47% of the FY 85 total funds available. The results would be a dramatic decrease in the number of total loans made through the program, from 671 in FY 85 to about 400 in FY 86. This decrease would have its greatest impact on the rural regional centers, and a secondary impact on the Anchorage and Fairbanks economies since most of the supplies flow through those cities. It should be noted that the Division projects a demand for financing in FY 86 of $65.0 million and at this level, the Division would only meet about 50% of that demand. With very little other secondary financing available, many Alaskans could not enjoy the safety and affordability of housing now provided.

PROGRAM JUSTIFICATION:

The Housing Assistance Loan Fund BRU is designed to ensure that. through the delivery of loan funds, the maximum number of eligible Alaskans have access to safe, affordable housing. To meet this objective, the Housing Assistance Division offers to eligible Alaskans housing loan programs that focus on the development of rural housing stock and the upgrade or conversion of nonconforming housing stock statewide. Borrowers are assisted with mortgage loan applications through seven offices of the Division, located in Anchorage, Juneau, Bethel, Dillingham, Nome, Kotzebue and Fairbanks. Direct lending services are also available to qualified borrowers whose loan applications are unattractive to private lending institutions.

The administration and delivery of loan funds throughout Alaska assists in meeting the Division's continuous goal of developing safe, affordable, and quality housing for all Alaskan citizens. Economic development is enhanced regionally as well as locally through creation of construction employment, use of professional services, transportation of building materials, expenditures in local areas by construction laborers, and improvements to the community in quality housing stock.

L2 LOAN PROGRAM JUSTIFICATION

AGENCY Community and Regional Affairs

CATEGORY Economic Development

PROGRAM Development

TITLE Housing Assistance

REVISED DATE

FY 86

00969

(6/84)-12

The improvement of rural housing stock is a major factor in stabilizing growth of both regional and remote sites through the enhanced quality of life that it provides. Attractive, affordable housing is a catalyst in encouraging the private investment necessary to develop a healthy diversified economic base and a high standard of living.

As the loan portfolio increases, staff travel needs grow. Current staff activities include assistance with applications, housing inspections, loan closings, and construction management assistance to grant recipients. Further travel funds requested will provide for development of education and information outreach programs within the Division. Such programs will focus on basic mortgage lending information, collection of housing need data and general assistance functions by field staff.

The Division believes that the successful transition to healthy self-sufficient economies in rural communities of Alaska is affected by two factors: (1) loan fund delivery, and (2) an accompanying understanding by potential borrowers of the role such funds play in general economic development of their region. The request for loan funds supports the plans of this division to contribute to the growth and development of rural Alaska.

The Home Ownership Assistance Fund (HOAF) consists of money appropriated to it by the legislature. Money in the fund is used solely to assist persons of lower and moderate income to purchase single-family homes financed under AS 44.47.460 - 44.47.560 by providing a subsidy to those persons in the amount that is necessary to reduce the annual interest rate paid on the mortgage loan to a minimum of six percent.

Approximately 36% of the Housing Assistance Loan Fund BRU request and other available funds will be used to fund 251 loans under the HOAF program. The amount required in subsidy funds for FY 86 is $630,000.

A major benefit of the HOAF subsidy is to increase the number of rural residents served by the housing program. The only positive alternative to a HOAF subsidy would be to lower interest rates for all Housing Assistance loan programs to six percent.

STATUTORY LOAN RATE

Nonconforming Housing: The interest rate on a mortgage loan for nonconforming housing that is not defined as rural, and which is originated or purchased in whole or in part under AS 44.47.380, is one-quarter percent more than the interest rate, as determined under AS 19.56.098(g)(1)-(4), on a mortgage loan purchased under 18.56.098(a) from the proceeds of the most recent applicable issue of taxable bonds before the origination or purchase of the nonconforming housing mortgage loan.

Rural Owner Occupied Housing: The interest rate on a mortgage loan for rural housing originated or purchased in whole or in part under AS 44.47.380 is one percent less than the interest rate, as determined under AS 18.56.098(g)(1)-(4), on a mortgage loan purchased under AS 18.56.098(a) from the proceeds of the most recent applicable issue of taxable bonds before the origination or purchase of the rural housing mortgage loan.

Nonowner Occupied Housing: The interest rate on a mortgage loan for non-owner occupied housing, currently 10.5%, is established in AS 44.47.520(b).

Component Fact Sheets

BRU: Housing Assistance Loan Fund (HALF)

COMPONENT: Housing Assistance Administration

DESCRIPTION: Administers a variety of housing loans through the Housing Assistance Loan Fund for owner and nonowner occupancy primarily in smaller, rural communities with some emphasis on nonconventional properties in urban Alaska. Programs include:

Rural Owner-Occupied Housing Loans (ROO)
Rural Nonowner-Occupied Housing Loans (RNOO)
Nonconforming Housing Loans, Urban/Rural (NCU/R)
Home Ownership Assistance Fund Loans (HOAF)
Building Materials Loans (BML)
Renovation/Rehabilitation Loans (R/R)

PROGRAM RECEIPTS:	829.9	829.9
TOTAL:	$2,606.0	$2,606.0

ISSUES:

This loan program is the only program adequately servicing markets in areas where conventional financing profits are limited. With the receipt of the rural loan authority from AHFC in FY'83, the division has issued total commitments of nearly $181 million in rural housing loans. This record far exceeds any previous records established by any other program serving rural Alaska for the past decade. The success rate of this activity is primarily attributed to the regionalization of loan staff and the involved outreach and training efforts of the central office staff.

Urban nonconforming loan demand continues to climb. There are no alternatives to conventional financing of Alaska's older urban properties. While the division discourages new construction of nonconforming homes, and while limited by statute to a small portion of available funds, this program is often demanded as a main form of financing in communities such as Fairbanks, Juneau, Anchorage, Sitka and Ketchikan.

Home Ownership Assistance Fund subsidies began on January 1, 1984 and are targeted to owner-occupied loans available through existing programs of the division. This program will reach rural and nonconforming home loan borrowers in need of additional subsidy to purchase housing, build equity, and participate in Alaska's housing investments in their communities.

BRU: Housing Assistance

COMPONENT: Housing Construction Development

DESCRIPTION: This component administers all Housing Assistance activities that are not related to loans with a specific emphasis on moderate or lower income housing consumers, senior citizens and Native or Indian housing projects. It is designed to receive and administer any housing project that can leverage federally funded projects in Alaska, and to coordinate housing information data.

Performance Measures

The following have been delivered by this BRU:

Senior Citizen Housing Construction Development
$51,500,000 - 954 units constructed/215 units planned.

Supplemental Housing Development Fund
$26,651,532 - 1923 housing units supplementing 75 project locations and leveraging $177,300,600 of HUD Indian housing funds.

Low Cost/Low Income Multiple Family Housing Development Fund
$8,580,000 - Program began 1/1/84. Funds will finance projects in two to three locations statewide with rents 20% lower than HUD published fair market valuations.

Tlingit-Haida Federal Budget Impact Fund Grant
$419,000 for BIA/Housing Improvement Program funded cuts in FY'83.

Anchorage Neighborhood Housing Services Demonstration grant
$586,300 - 16 units of owner-builder townhouse development.

Housing Information Systems
$250,000 RSA'd to Division of Community Planning in FY'82/83 to study statewide housing needs.

Cook Inlet Housing Authority
$750,000 - grant for planning and design of Robert Rude Intermediate Care Elderly Housing Facility.

Norton Sound Health Corporation
$1,625,000 - for addition to the hospital of elderly long-term care rooms.

Senior Citizens of Kodiak, Inc.
$1,600,000 - fo construct a senior citizens center.

FUNDING:	FY'85 ADJ	GOVERNOR'S
GF:	$98.4	$98.4
TOTAL:	$98.4	$98.4

ISSUES:

This is the only component in the Governor's budget specifically targeted to administer the stated housing goal of providing "affordable" housing by capturing available federal funding.

This component currently runs with minimal administration by one professional and one clerical position. This minimal staff is not able to totally keep current on all new federal housing programs and changes to existing programs that may affect Alaska and to be sure Alaska is in the position to take full advantage of new programs or minimize the impact of changes in programs for all senior citizen low income and native housing programs. Also, due to the heavy workload in administering existing programs, the staff of this component is not able to fully act as the focal point for all information regarding housing programs in Alaska.

In an effort to keep the operating budget within the funding restraints, this component will continue to put its primary emphasis on administering the existing housing programs in an effective manner and not request additional positions to meet the other responsibilities inherent in this component.

BRU NARRATIVE

Housing Assistance

THE HOUSING ADMINISTRATION BRU PROVIDES HOUSING ASSISTANCE TO QUALIFIED ALASKANS THROUGH LOANS AND GRANTS. THE DIVISION ADMINISTERS THE HOUSING ASSISTANCE LOAN FUND. MONEY IN THIS FUND IS USED TO FINANCE THE PURCHASE, CONSTRUCTION OR RENOVATION OF OWNER-OCCUPIED RURAL AND NONCONFORMING HOUSING. IN ADDITION, THIS FUND FINANCES NONOWNER OCCUPIED HOUSING OF TWO TO SIXTEEN UNITS IN RURAL AREAS. 80% OF THE FUND IS DEDICATED TO RURAL ALASKA, WHERE ALTERNATE SOURCES OF MONEY ARE MINIMAL OR NONEXISTENT.

FINANCING OF NEW CONSTRUCTION NOT ONLY MEETS THE HOUSING NEEDS, BUT PROVIDES ECONOMIC STIMULATION IN SMALLER COMMUNITIES. IN URBAN ALASKA, THE FUND FINANCES HOUSING WHICH DOES NOT MEET STRICTER CONVENTIONAL MARKET FINANCING STANDARDS.

THIS BRU ALSO DELIVERS THREE MAJOR HOUSING GRANT PROGRAMS: SENIOR CITIZEN HOUSING DEVELOPMENT FUND, SUPPLEMENTAL HOUSING DEVELOPMENT GRANTS AND STATE ASSISTED RENTAL HOUSING. THESE GRANT PROGRAMS MAY PROVIDE GRANTS TO MUNICIPALITIES AND PUBLIC AND PRIVATE NON-PROFIT CORPORATIONS INCLUDING THE ALASKA STATE HOUSING AUTHORITY AND THE FOURTEEN REGIONAL HOUSING AUTHORITIES.

THE GRANTS PROVIDE FOR SENIOR CITIZEN, LOW INCOME, AND RURAL MUTUAL HELP HOME OWNERSHIP HOUSING THROUGHOUT ALASKA. THESE GRANT PROGRAMS, COMBINED WITH FEDERAL, LOCAL AND PRIVATE FUNDING PROVIDE AN AVERAGE OF OVER 400 HOUSING UNITS ANNUALLY.

* Delinquency rates are from State Loan Program: Quarterly Actitvity Report, Fourth Qtr FY 84; House Research Agency, October 1984.

1). Repealed effective July 1, 1989.
2). Repealed during 1982 session.
3). Interest rate is 5.0% on the first $15,000 and 15% on the excess.
4). On loans made after 12-31/83 the interest rate is the average weekly municipal bond yield rates.
5). Interest rate is 6.0% if the borrower is unable to procure re-insurance from a private casualty insurer.

Chapter 102

AN ACT

Relating to state housing loan and state alternative technology loan programs; and providing for an effective date.

* Section 1. AS 18.55.996(a) is amended by adding a new paragraph to read:

(14) Sitka Community Association (Baranof Island) 18.55.996(a)(14)

* Sec. 2. AS 18.56 is amended by adding a new section to read:

Sec. 18.56.082. ALASKA HOUSING FINANCE REVOLVING FUND. The Alaska housing finance revolving fund is established in the corporation. The revolving fund consists of appropriations made to the revolving fund by the legislature, money or other assets transferred to the revolving fund by the corporation and unrestricted repayments of principal on loans made or purchased by the corporation. Amounts deposited in the revolving fund shall be expended for the purposes of the corporation, set out in this chapter. 18.56.082

* Sec. 3. AS 18.56.089 is amended to read:

Sec. 18.56.089. EXECUTIVE BUDGET ACT. The operating budget of the corporation is subject to the Executive Budget Act (AS 37.07). To further ensure effective budgetary decision making by the legislature, the corporation shall present a complete accounting of all assets of the corporation, including assets of the Alaska housing finance revolving fund, to the legislature by January 10 of each year. The accounting shall be audited by an independent outside auditor and 18.56.089

SCS CSHB 302(Rls)

shall include a full description of all mortgage loan interest and principal repayments and program receipts, including mortgage loan commitment fees, received by or accrued to the corporation during the preceding fiscal year, and all income earned on assets of the corporation during that period, including earnings or assets of the state assisted mortgage fund [FOR FISCAL YEARS BEGINNING AFTER JUNE 30, 1981].

* Sec. 4. AS 18.56.096(1) is amended to read:

18.56.096(1)

(1) a first mortgage loan under this chapter for a duplex, triplex, or four-plex that exceeds the limitations on first mortgage loans for similar housing purchased by the Federal National Mortgage Association as to principal amount and loan-to-value ratio; [OR]

* Sec. 5. AS 18.56.096(2) is amended to read:

18.56.096(2)

(2) a second mortgage loan for a duplex, triplex, or four-plex the amount of which, when combined with the principal balance of a first mortgage loan on the property, exceeds the limitation on the amount set out in (1) of this section or that has a loan-to-value ratio, when considered with the principal balance of the first mortgage loan, that exceeds 90 percent; [.]

* Sec. 6. AS 18.56.096 is amended by adding new paragraphs to read:

18.56.096(4), (5)

(4) a first mortgage loan for a single-family residence that exceeds the limitations on first mortgage loans for similar housing purchased by the Federal National Mortgage Association as to principal amount by more than 10 percent, or has a loan-to-value ratio that exceeds 95 percent, or a second mortgage loan for a single-family residence, the amount of which, when combined with the principal balance of a first mortgage loan on the property, exceeds the limitations on loans for similar housing purchased by the Federal National Mortgage Association as to principal amount by more than 10 percent,

Chapter 102

or has a loan-to-value ratio, when considered with the principal balance of the first mortgage loan, that exceeds 90 percent; or

(5) a first or second mortgage loan for rental housing unless the borrower agrees not to discriminate against tenants or prospective tenants because of sex, marital status, changes in marital status, pregnancy, parenthood, race, religion, color, national origin, or status as a student.

* Sec. 7. AS 18.56.098(g)(1) is amended to read: 18.56.098(g)(1)

(1) The interest rate on the first $90,000 of a mortgage loan purchased with the proceeds of an [THE FIRST] issue of taxable bonds of the corporation is three percent less than [10 PERCENT OR] the cost of funds of that issue, except that

(A) if the cost of funds of that issue is less than 10 percent, the interest rate is equal to the cost of funds; and

(B) if the cost of funds of that issue is more than 10 percent, the interest rate may not be less than 10 percent [, WHICHEVER IS LESS].

* Sec. 8. AS 18.56.098(g)(5) is amended to read: 18.56.098(g)(5)

(5) The interest rate on the first $90,000 of a mortgage loan purchased with [FROM] money that is not the proceeds of either taxable or tax-exempt bonds [APPROPRIATED TO THE CORPORATION] is the rate the corporation determines is appropriate by application of the provision of (1) [- (4)] of this subsection. [THE RATE MAY BE BASED ON AN ESTIMATE OF THE COST OF FUNDS OF A PROPOSED ISSUE OR ISSUES OF BONDS.]

* Sec. 9. AS 18.56.101 is amended to read: 18.56.101

Sec. 18.56.101. ELIGIBILITY FOR VETERANS' INTEREST RATES. The following persons are eligible veterans for the purposes of AS 18.56.-098(g) and (h):

Chapter 102

(1) a person who served in the armed forces of the United States for 90 days or more or whose service was for less than 90 days because of injury or disability incurred in the line of duty, after April 6, 1917,

[(A) WHO AT THE TIME OF INDUCTION INTO THE SERVICE WAS A RESIDENT OF THE TERRITORY OR STATE, WHO HAD BEEN A RESIDENT FOR NOT LESS THAN ONE YEAR IMMEDIATELY BEFORE HIS INDUCTION, AND WHO RETURNED TO THE TERRITORY OR STATE WITHIN ONE YEAR AFTER DISCHARGE AS A RESIDENT WITH THE INTENTION OF REMAINING IN THE TERRITORY OR STATE; OR

(B) WHO, NOT BEING A BONA FIDE RESIDENT OF THE TERRITORY OR STATE AT THE TIME OF ENTRY INTO THE SERVICE, HAS BEEN A RESIDENT OF THE TERRITORY OR STATE FOR AT LEAST ONE YEAR AT THE TIME OF THE LOAN APPLICATION AND HAS BEEN A RESIDENT TO THE TERRITORY OR STATE FOR AT LEAST FIVE YEARS; AND

(C)] whose discharge was under honorable conditions;

(2) the widow or widower of a member of the armed forces or an eligible veteran if

[(A) THE MEMBER OR VETERAN WAS A RESIDENT OF THE TERRITORY OR STATE FOR ONE YEAR BEFORE INDUCTION INTO THE SERVICE;

(B)] the member or veteran served in the armed forces for at least 90 days after April 6, 1917 [;] and

[(C)] the veteran's [HIS] discharge was under honorable conditions;

(3) a person who has served for not less than five years in the Alaska Army National Guard, or the Alaska Air National Guard, [OR THE ALASKA NAVAL MILITIA] or [WHO HAS SERVED IN] a reserve unit of the United States armed forces [IN ALASKA] if the reserve unit required,

Chapter 102

as a minimum, one weekend each month of duty and 15 consecutive days of active duty training each year [FOR NOT LESS THAN FIVE YEARS] and whose discharge was under honorable conditions.

* Sec. 10. AS 18.56.115, is amended to read:

56.115 Sec. 18.56.115. INDEPENDENT FINANCIAL ADVISOR. In negotiating the private sale of bonds or bond anticipation notes to an underwriter, the corporation may [SHALL] retain a financial advisor. A financial advisor retained under this section must be [WHO IS] independent from the underwriter.

* Sec. 11. AS 18.56 is amended by adding a new s tion to read:

56.205 Sec. 18.56.205 RESIDENTIAL MORTGAGE ASSISTANCE FOR MEMBERS OF THE ALASKA DELEGATION TO CONGRESS. The corporation may extend the special mortgage loan purchase program (AS 18.56.098) to purchase a mortgage loan made for the purchase or rehabilitation of a residence located in the District of Columbia or within 50 miles of the District of Columbia to a member of the United State Congress frou Alaska if the member is otherwise qualified for assistance under the special mortgage loan purchase program.

* Sec. 12. AS 44.47.380 is amended to read:

47.380 Sec. 44.47.380. HOUSING ASSISTANCE LOAN FUND. There is created in the Department of Community and Regional Affairs, as a revolving loan fund, the housing assistance loan fund consisting of money appropriated to it by the legislature and repayments of principal on loans made or purchased from the assets of the fund. [INTEREST ON LOANS MADE OR PURCHASED FROM THE ASSETS OF THE FUND MUST BE TRANSFERRED TO THE DEPARTMENT OF REVENUE FOR DEPOSIT IN THE GENERAL FUND.] The director shall administer the housing assistance loan fund in accordance with AS 44.47.360 - 44.47.560 and shall use the money in the housing assistance loan fund to originate, purchase, or

Chapter 102

participate in the purchase of

(1) nonconforming and rural housing mortgage loans;

(2) loans made for building materials for nonconforming and rural housing;

(3) loans made for renovations or improvements to nonconforming and rural housing;

(4) loans made for the construction of owner-occupied nonconforming and rural housing other than loans to builders or contractors or loans that compensate an owner for the owner's labor or services in constructing the owner's own housing.

* Sec. 13. AS 44.47 is amended by adding a new section to read:

44.47.382 Sec. 44.47.382. HOME OWNERSHIP ASSISTANCE FUND. (a) There is created in the Department of Community and Regional Affairs, the home ownership assistance fund consisting of money appropriated to it by the legislature. Money in the fund shall be used solely to assist persons of lower and moderate income to purchase or construct single-family homes financed under AS 44.47.360 - 44.47.560 by providing a subsidy to those persons.

(b) The subsidy provided by this section may not exceed the amount that is necessary to reduce the annual interest rate paid on the mortgage loan to six percent.

(c) A mortgage loan that is subsidized from the home ownership assistance fund may not exceed $120,000.

(d) The division shall adopt regulations that establish maximum income-to-loan payment ratios for persons who apply for a subsidy under this section.

(e) In this section, "persons of lower and moderate income" means individuals considered by the division to require assistance under this section because of inadequate income or other limited

personal financial resources, taking into consideration

(1) the amount of total income available for housing needs;

(2) the size of the family;

(3) the cost and condition of available housing;

(4) standards established in various federal programs for determining eligibility based on income;

(5) the ability to enter the private housing market and to pay market amounts for decent, safe, and sanitary housing; and

(6) other factors considered relevant by the division.

* Sec. 14. AS 44.47.390(4) is amended to read

(4) originate a direct loan for nonconforming or rural housing or purchase or participate in the purchase of a nonconforming or rural housing mortgage loan, other than a loan for the repair, remodeling, rehabilitation, or expansion of an existing owner-occupied residence, if the borrower has an outstanding housing loan made under a state loan program, other than a loan for nonowner-occupied housing under AS 44.47.520, that bears interest at a rate that was less than the prevailing market interest rate for similar housing loans at the time the loan was made. 44.47.390(4)

* Sec. 15. AS 44.47.390 is amended by adding a new paragraph to read:

(5) originate a direct mortgage loan or purchase or participate in the purchase of a mortgage loan for rental housing unless the borrower agrees not to discriminate against tenants or prospective tenants because of sex, marital status, changes in marital status, pregnancy, parenthood, race, religion, color, national origin, or status as a student. 44.47.390(5)

* Sec. 16. AS 44.47.410 is amended to read:

Sec. 44.47.410. INTEREST ON LOANS. (a) The interest rate on a mortgage loan originated or purchased in whole or in part under 44.47.410

Chapter 102

AS 44.47.380 for a nonconforming housing that is not rural housing is one-quarter percent more than [EQUAL TO] the interest rate, as determined under AS 18.56.098(g)(1) - (4), on a mortgage loan purchased under AS 18.56.098(a) from the proceeds of the most recent applicable issue of taxable bonds before the origination or purchase of the mortgage loan originated or purchased under AS 44.47.380.

(b) The interest rate on a mortgage loan originated or purchased in whole or in part under AS 44.47.380 for rural housing is one percent less than the interest rate, as determined under AS 18.56.098(g)(1) - (4), on a mortgage loan purchased under AS 18.56.098(a) from the proceeds of the most recent applicable issue of taxable bonds before the origination or purchase of the mortgage loan originated or purchased under AS 44.47.380 [10-1/2 PERCENT].

* Sec. 17. AS 44.47 is amended by adding a new section to read:

44.47.530 Sec. 44.47.530. ANNUAL REPORT. To further ensure effective budgetary decision making by the legislature, the division shall present a complete accounting of the housing assistance revolving fund to the legislature by January 10 of each year. The accounting shall be audited by an independent outside auditor and shall include a full description of all mortgage loan interest and principal repayments and program receipts, including mortgage loan commitment fees, received by or accrued to the division during the preceding fiscal year, and all income earned on assets of the division during that period.

* Sec. 18. AS 44.47.385 is repealed and reenacted to read:

44.47.385 Sec. 44.47.385. ELIGIBLE LOCATIONS. Not more than 20 percent of the total amount appropriated to the housing assistance loan fund may be allocated in communities other than those defined in AS 44.47.-560(5).

* Sec. 19. AS 45.88.030(c)(1) is amended to read:

(1) the cost of purchase, construction, and installation of an alternative energy system or "centralized multifuel heating systems" which is likely to result in energy conservation or energy cost savings; or 45.88.030(c)(1)

* Sec. 20. AS 45.88.500 is amended to read:

Sec. 45.88.500. DEFINITIONS. (a) In this chapter, "alternative energy system" 45.88.500

(1) means a source of thermal, mechanical or electrical energy which is not dependent on oil or gas or a nuclear fuel for the supply of energy for space heating and cooling, refrigeration and cold storage, electrical power, mechanical power, or the heating of water;

(2) includes

(A) an alternative energy property as defined by sec. 48(l)(3)(A) of the Internal Revenue Code (26 U.S.C. sec. 48(l)(3)(A));

(B) a method of architectural design and construction which provides for the collection, storage and use of direct radiation from the sun;

(C) any other device approved by the Commissioner of Commerce and Economic Development under AS 44.33.040(12); [AND]

(D) a woodstove with a catalytic converter or a catalytic converter for a wood stove; and

(E) a steam, hot water, or ducted hot air central heating system that uses wood or coal for fuel;[.]

(3) does not include

(A) a stove that uses only wood, coal or oil for fuel [A WOOD, COAL, OR MULTIFUEL HEATING STOVE]; or

(B) a fireplace or fireplace insert.

(b) Notwithstanding any other provision in this chapter, a

multifuel heating system which uses the combination of wood or fossil fuel for fuel does qualify under this loan fund.

* Sec. 21. AS 44.47 is amended by adding new sections to read:

ARTICLE 12. LOW COST AND LOW INCOME MULTIPLE FAMILY HOUSING DEVELOPMENT FUND.

44.47.630 AS 44.47.630. DECLARATION OF PURPOSE. There exists in the state a serious shortage of low cost multiple family residential housing available at low rentals. There also exists in the state organizations whose purposes are to provide the housing needed to alleviate rhis shortage. Development work to provide this housing involves substantial expense that is often beyond the resources of the organizations.

44.47.635 Sec. 44.47.635. LOW COST AND LOW INCOME MULTIPLE FAMILY HOUSING DEVELOPMENT. (a) There is created in the Department of Community and Regional Affairs a low cost and low income multiple family housing development fund. Subject to appropriation the department shall make grants to municipalities or public or private nonprofit corporations designated as tax exempt under 26 U.S.C. 501(c)(3) and (4) (Internal Revenue Code of 1954) for the purpose of developing low cost, low income multiple family housing.

(b) Application for a grant under (a) of this section shall be in the form prescribed by the department. The application shall demonstrate the need for low cost, low income multiple family housing in the area to be served, the feasibility of the proposed project, and an adequate management plan that shall demonstrate the ability of the eligible recipient to sustain the proposed project.

(c) All projects under this section shall be in accordance with facility procurement policies developed under AS 35.10.160 - 35.10.200 and are public facilities under those sections.

(d) The department shall adopt regulations to carry out the purposes of this section. The provisions of the Administrative Procedure Act (AS 44.62) apply to regulations adopted under this section.

(e) In this section "low cost and low income multiple family housing" means a specific work or improvement undertaken primarily to provide multiple family dwelling accommodations for low income persons. Low cost and low income multiple family housing includes the acquisition, construction, or rehabilitation of land, buildings, improvements, and other nonhousing facilities that are incidental or appurtenant to the housing.

* Sec. 22. Section 69(c)(8), ch. 113, SLA 1982, is amended to read:

(8) to use assets of the multifamily housing loans security fund to establish capital reserve funds to secure bonds issued in connection with the financing of multifamily housing projects and to provide a loan loss reserve for loans purchased by the multifamily housing loan account of the enterprise development fund.

* Sec. 23. Section 69(e), ch. 113, SLA 1982, is amended to read:

(e) A capital reserve fund established under this section to secure bonds issued in connection with the financing of multifamily housing projects is not subject to the $10,000,000 limitation stated in AS 44.88.105(a). The provisions of AS 44.88.105(f) do not apply to capital reserve funds established to secure bonds issued to finance one or more multifamily housing projects.

* Sec. 24. Section 69(f), ch. 113, SLA 1982, is amended to read:

(f) A multifamily housing loan account is established in the enterprise development fund of the authority (AS 44.88.155), consisting of money and other assets of the enterprise development fund that the authority deposits into it. [HOWEVER, THE AUTHORITY MAY NOT DEPOSIT PROCEEDS FROM THE SALE OF BONDS OF THE AUTHORITY INTO THE

Chapter 102

MULTIFAMILY HOUSING LOAN ACCOUNT.] The multifamily housing loan account shall be used only to purchase or originate loans for multifamily housing projects. The authority may not use proceeds from the sale of bonds of the authority to finance secondary loans for multifamily housing. Notwithstanding the provisions of AS 44.88.155(d), a loan purchased or originate by the authority for the multifamily housing loan account

(1) may not be for a term longer than 30 years from the date the loan is made;

(2) shall be secured by a mortgage or other security instrument in the manner the authority determines is feasible to assure timely repayment under a loan agreement entered into with the borrower; the mortgage or other security instrument constitutes a first lien against the multifamily housing project, except that it may be subordinated by the authority to a loan made directly or indirectly with the proceeds of a sale of bonds by the authority, the Alaska State Housing Authority, or a municipality of the state during the time when the loan from these proceeds is outstanding, and may be subordinated to a loan that refinances the original loan, if the authority considers it appropriate to do so;

(3) shall provide for a schedule of payments of principal and interest that is satisfactory to the authority, and that may include, without limitation, deferrals or reductions of payments, variable payments, balloon payments, sharing in equity appreciation, and other arrangements;

(4) shall be in the form and contain the terms and provisions with respect to insurance, repairs, alterations, payment of taxes and assessments, default reserves, delinquency charges, default remedies, acceleration of maturity, secondary liens, and other matters

as the authority prescribes.

* Sec. 25. Section 69(h), ch. 113, SLA 1982, is amended to read:

(h) The multifamily housing loans security fund is established in the authority. The multifamily housing loans security fund consists of money and assets appropriated or transferred to it, the income produced from its investments and holdings, and deposits that the authority may make from repayments of multifamily housing loans purchased by the multifamily housing loan account of the enterprise development fund. The assets of the multifamily housing loans security fund may be used to establish capital reserve funds to secure bonds issued in connection with the financing of multifamily housing projects. The assets of [THE PURPOSE OF] the multifamily housing loans security fund may also be used [IS] to provide a loan loss reserve for the enterprise development fund for multifamily housing loans made by the authority from the multifamily housing loan account of the enterprise development fund. The multifamily housing loans security fund is not a general asset of the authority and may not be pledged or committed in any way except as provided in this subsection [TO PROVIDE A LOAN LOSS RESERVE FOR THE ENTERPRISE DEVELOPMENT FUND FOR MULTIFAMILY HOUSING LOANS MADE BY THE AUTHORITY FROM THE MULTIFAMILY HOUSING LOAN ACCOUNT OF THE ENTERPRISE DEVELOPMENT FUND]. The authority may

(1) establish separate accounts in the multifamily housing loans security fund for multifamily housing loans, as it finds appropriate, and may establish other accounts that it considers appropriate;

(2) hold and invest money and other assets of the multifamily housing loans security fund at competitive national market rates in the types of investments described in AS 37.10.070(a).

Chapter 102

* Sec. 26. Section 69(k)(2), ch. 113, SLA 1982, is amended to read:

(2) "multifamily housing project" means a specific building, structure, work, or improvement of five or more dwelling units, or a group of these buildings, structures, works, or improvements, the primary purpose of which is to provide rental dwelling accommodations and which qualifies for tax-exempt financing under sec. 103 of the Internal Revenue Code of 1954, as amended (26 U.S.C. sec. 103), or sec. 11(b) of the National Housing Act of 1937, as amended [, AND WHICH IS ORIGINALLY FINANCED BEFORE JANUARY 1, 1984]; "multifamily housing project" includes the acquisition, construction, or rehabilitation of land, buildings, and improvements for rental dwellings, accommodations, and other facilities that may be incidental or appurtenant to rental dwelling accommodations.

18.56.098(g)(2)

* Sec. 27. AS 18.56.098(g)(2) is repealed.

* Sec. 28. Sections 13 and 21 of this Act take effect January 1, 1984.

* Sec. 29. Sections 1 - 12, 14 - 20 and 22 - 26 of this Act take effect immediately in accordance with AS 01.10.070(c).

Eff. §§ 1-12, 14-20 and 22-26 take effect 7/28/83; §§ 13 and 21 take effect 1/1/84

TO: Rep. John Sund, Chrmn., Loans Committee

FROM: Rep. Andre Marrou

RE: Zero-Use Loan Programs

Today in the Fisheries Committe, we received some information on commercial fishing loans, which also touched upon other DCED loan programs (see copy enclosed).

Specifically, during the last 3 years, there have been several programs that have not been utilized, as follows:
In FY 83, 4 loan programs with zero use;
In FY 84, 6 loan programs with zero use;
In FY 85, 9 loan programs with zero use.

Obviously, with this decreasing use of the programs, there arises the question as to whether they should be discontinued. Perhaps your committee is already pursuing this matter.

Also, testimony today by DCED officials indicated that "Type C" commercial fishing loans are now at a 100% delinquency rate and "should be dumped", to use their term.

AVM/mc

POLICY AND PROCEDURES

P & P No.	Page
COL-001	1 OF 1
Effective Date: March 1, 1984	
Supersedes P & P No.	Dated: 10/1/83
APPROVED BY: [signature]	

SUBJECT: LOAN PAYMENT EXTENSION

DIVISION: Accounting & Collections

SECTION: Collections/Customer Service

PURPOSE

To provide guidelines for evaluating requests for loan payment extensions.

POLICY & PROCEDURE

The borrower:

1. Should not have funds available to make the payment;
2. Should not have had any nonessential expenditures within a reasonable time prior to payment due date;
3. Should have a strong payment history on the loan, and should not demonstrate excessive problems keeping contractual agreements;
4. Should demonstrate good faith effort to earn payment money; and
5. Should have reasonable potential to make future payments.

The loan should still be well-secured after the extension. Additional collateral must be required when loan-to-value ratio is excessive.

The following subjective questions should be answerable in the affirmative:

1. Is the requested action reasonable?
2. Will granting the requested action be in the best interest of both the borrower and the State?
3. Will granting the extension promote the intent of the program as specified by law?

A loan which was not in default at the time of the division's receipt of the extension application will not be considered delinquent during the time the request is under consideration. Should the extension be denied, in this instance, the borrower shall have 45 days from the date notice of denial is mailed to make the payment without being considered delinquent, and the payment will not accrue a late fee.

When an extension is granted, an extension fee equal to the contractual late fee will be charged, subject to a maximum of $125.00 for all annual payment extensions less than $35,000. Extensions of annual payments greater than $35,000 shall bear a fee equal to the contractual late fee subject to a maximum of $2,500.

A modification agreement may:

1. Add interest to principal and defer payment to maturity (will cause loan to amortize incorrectly and should be used only when borrower/State agree there is no other option).
2. Extend term of loan to statutory maximum. (NOTE: recording fee must be collected from borrower to record an amendment to First Preferred Ship Mortgage or any other legal document which may require it.)
3. Reamortize loan.
4. Allow double payment the following year.
5. Include other mutually-agreeable work-out arrangements.

APPROVED BY: Wyatt Hunter	

SUBJECT: Commercial Fish Problem Loans Requesting Assumption Approval

DIVISION: Accounting & Collections

SECTION: Collections

PURPOSE

To establish guidelines for borrowers who are requesting approval of an assumption as a "cure" for a problem commercial fishing loan, when an extension is not feasible and foreclosure is impending.

POLICY

We believe there is a strong probability that legislation will be introduced in January 1985 which would allow assumptions of commercial fishing loans in most cases where they are not assumable at present.

Present statutes are interpreted as not allowing assumptions for individuals and/or loans that do not meet all the requirements of the current loan program for new loans. This eliminates assumption of any vessel where the assumed balance would be greater than $100,000; an assuming borrower for any vessel less than $100,000 presently must meet Type B loan requirements: (1) no alternative financing, (2) limited by training or location to fishing, (3) fishing is only occupation, (4) fishing has been way of life.

The Department of Commerce and Economic Development has recommended statutory changes allowing assumptions because we feel viable assumptions are in every case a better solution for the borrower and the State than foreclosure.

Pending action on the proposed legislation, the department's policy will be:

(1) to continue to examine problem loans on individual basis;

(2) to approve extensions where requests meet extension guideline criteria;

(3) where extensions are denied, and an assumption has been proposed by the borrower as "the solution," to hold legal action until after 6-30-85, when it is known whether the assumption legislation passed; a letter will be sent to any borrower where foreclosure action is being delayed pending action on this proposed legislation (see attached).

_____

Dear _____:

Re: _____
_____

Your loan has been reviewed by the loan committee and it has been determined that no legal action will be taken at this time; we believe that an assumption of your loan could be a reasonable solution for both you and the State. However, the statutes currently do not allow assumptions for individuals who do not meet all the requirements of the current loan program for new loans. Many vessels used as security on older loans exceed the $100,000 statutory limit as well.

We believe that new legislation relating to commercial fish loans has a good chance of passing the 1985 Legislature, especially if commercial fishermen and women around the State let their legislators know the importance of this issue. We are delaying legal action on your loan _____-_____-_____ until July 1, 1985, at which time we will know whether your loan legally can be assumed. (This letter is not an approval of the assumption; if the proposed legislation becomes law, assumption applications will be reviewed individually by the Division of Investments to determine acceptability.)

Please contact our Collections Section at (907) 465-2555 or Zenith 5500 if you have any questions.

Yours truly,

Margaret I. Hamley
Director

UNASSUMABLE STATE LOANS

Currently the state makes unassumable loans for commercial fishing boats. Fishermen who can't make the payments on their boats are having difficulty selling them because qualified buyers cannot assume the loans under the present restrictions. The end result is that the state ends up repossessing the boat and selling it at auction for much less than what is owed. The state takes a beating at the auction and one of the reasons is that there is no financing for repossessed boats. Commercial loaning institutions have prohibitive interest rates and also are understandably reluctant to loan money on commercial fishing boats at this time.

The bottom line is that the fishermen in financial difficulties cannot sell their boats to people who are financially qualified, where the state could recover their loans. Boats are being repossessed by the state and put on the auction block, sold at tremendous loss. It is unclear if this situation is occurring because of legislative intent or bureaucratic regulation, but the state agencies involved are blaming it on the legislature.

February 25, 1985

The Honorable Peter Goll, Chairman
House Special Committee on Fisheries
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Goll:

I am writing to you, as Chairman of the House Special Committee on Fisheries, to discuss the effects of the current State commercial fishing loan program on the transfer of limited entry permits from rural to urban Alaska. As Director of the Division of Investments for the Department of Commerce & Economic Development which administers the commercial fishing loan program, I believe further discussion will be helpful.

There are at least four reports that have been published by the Alaska Commercial Fisheries Entry Commission (CFEC) that discuss the impact of the commercial fishing loan programs on the transfer of limited entry permits from rural to urban Alaska:

CFEC Report Number 83-8: Low-interest Loans and the Markets for Limited Entry Permits in the Alaska Salmon Fisheries.

CFEC Report Number 84-2: Alaska's Subsidized Fishing Loan Program. A Study of Distributional Aspects of Permit Related Loans During Fiscal Years 1979 Through 1982.

CFEC Report Number 84-8: Alaskan Natives and Limited Fisheries of Alaska. A Study of Changes in the Distribution of Permit Ownership amongst Alaskan Natives, 1975-1983.

CFEC Report Number 84-10: Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1983.

As you are aware, the commercial fishing loan programs were extensively amended by the Legislature effective June 25, 1982. Consequently, the reports that have been published by the Alaska Commercial Fisheries Entry Commission, for the most part, discuss loan programs that no longer exist. Unfortunately, many readers of these reports erroneously conclude that these reports are discussing the current commercial fishing loan program.

There are some statements and conclusions contained in these reports relating to earlier commercial fishing loan programs administered by the Department of Commerce & Economic Development that I question. Please refer to my memorandum to Kurt Schelle dated April 3, 1984 regarding the draft report for CFEC Report Number 84-3.

I believe highlighting the important changes in the various commercial fishing loan programs would be beneficial and help to put the issues into perspective.

6-21-72 COMMERCIAL FISHING LOAN ACT. When this loan program was initially established, the statutory policy was to promote the development and continued maintenance of commercial gear and vessels throughout the state by means of long term, low interest loans. An individual must have been a resident for five continuous years and held a commercial gear license for three years. Loans were limited to $100,000, 7% interest, with a maximum term of 15 years.

4-24-73 For the first time, the financing of limited entry permits was allowed; however, permits could not be used as collateral. The statutory policy was also amended by referencing a predominately Alaska resident fishery.

6-4-75 The statutory policy was again amended to include language promoting the rehabilitation of the state's fisheries.

6-24-77 The loan limit was increased from $100,000 to $150,000.

6-28-78 Now, for the first time, limited entry permits could be pledged as security for a loan. The loan limit was increased from $150,000 to $500,000. The five year continuous residency had to be immediately preceding the date of the loan application and the license requirement now encompassed a crew member or commercial fishing license or ownership of a limited entry permit. The license or permit must have been held for any one of the past five years and the owner must have actively participated in the fishery during that period. Eligibility was expanded to include corporations, partnerships or joint ventures. Bank participation was, for the first time, provided for in the statutes.

6-1-79 Retroactive to 7-1-78, the interest rate was increased from 7% to 9 1/2% and other minor miscellaneous changes were made.

6-21-80 Language was included to require that all sources of income must be considered in determining whether or not an applicant could service the loan debt.

6-21-80 FISHERMEN'S MORTGAGE AND NOTE PROGRAM. A new loan program was created in addition to the existing Commercial Fishing Loan Act. The purpose of this new loan program was to curb the outflow of limited entry permits from rural Alaska by alleviating the difficulties in obtaining financing for limited entry permits, vessels and gear. Unlike the existing Commercial Fishing Loan Act, this was an indirect loan program. All loans were first made by banks and the State was then authorized to purchase the loans from the banks. The State was not authorized to make direct loans under this program. To be eligible under this program, an applicant must have been a resident for five years and could not have participated in or qualify for any state or federal loan program for similar loan purposes established under the new Fishermen's Mortgage and Note Program. The applicant must have demonstrated to the satisfaction of the bank that because of the lack of training or employment opportunities in the area of residence the applicant did not have occupational opportunities available other than commercial fishing or was economically dependent on commercial fishing for a livelihood and commercial fishing was a cultural and traditional way of life. Additionally, the applicant had to demonstrate to the satisfaction of the bank that there was a reasonably good chance that the loan debt would be repaid. The banks could consider all sources of income in determining the applicant's ability to repay the loan. The State could not refuse to purchase the loan from the bank due solely to the credit history of the applicant. Loans were limited to $200,000, 10 1/2% interest, with a maximum term of 15 years.

7-1-81 Except for the purchase of limited entry permits, all lending functions of the Commercial Fishing Loan Act were transferred to the Alaska Industrial Development Authority.

7-27-81 The Fishermen's Mortgage and Note Program was amended to allow the State to precommit to the banks to purchase loans authorized under this program. The amendment also eliminated a large number of lending restrictions that previously caused banks to refuse to participate in the Fishermen's Mortgage and Note Program. The loan limit was also reduced from $200,000 to $100,000.

6-25-82 The Fishermen's Mortgage and Note Program, in actuality, was repealed and the Commercial Fishing Loan Act was rewritten. All assets of the Fishermen's Mortgage and Note Program were transferred to the newly rewritten Commercial Fishing Loan Act. Three separate loan sections were established under the rewritten program. SECTION A was exclusively for the purchase of limited entry permits. An individual must have been a resident for five continuous years immediately preceding the date of application for the loan and held a crew member or commercial fishing license or owned a limited entry permit for one of the past five years and must have actively participated in the fishery during that period of time. Loans were limited to $300,000, 10 1/2% interest, with a maximum term of 15 years. SECTION B was for the purchase of limited entry permits, vessels and gear. An individual must have been a resident for five continuous years immediately preceding the date of application for the loan and, because of the lack of training or lack of employment opportunities in the area of residence, did not have occupational opportunities available other than commercial fishing, or was economically dependent on commercial fishing for a livelihood and commercial fishing was a traditional way of life in Alaska. Loans were limited to $100,000, 10 1/2% interest, with a maximum term of 15 years. SECTION C was for

the purchase or restoration of vessels or gear. Applicants included corporations, partnerships or joint ventures which were 100% owned by individual commercial fishermen who were state residents for a continuous period of five years immediately preceding the date of application for a loan. Applicants also had to satisfy the remaining eligibility requirements of both Sections A and B. Loans were limited to $100,000, 10 1/2% interest, with a maximum term of 15 years.

4-17-83 The state residency under Sections A, B and C was reduced from five to two continuous years immediately preceding the date of the loan application. In addition, under Section A, the applicant must have had the license or permit the year immediately preceding the date of the loan application and any other two of the past five years. Active participation in the fishery was increased from one to three years, including the year immediately preceding the date of the loan application.

With the creation of the Fishermen's Mortgage and Note Program in June 1980, the Legislature intended to improve the availability of funding for rural Alaskans to purchase limited entry permits, vessels and gear. Under this program this objective was never achieved. During the first year of its existence, no loans were made by the banks, so no loans could be purchased by the State. The reason why no loans were made is simply the fact that the statutes placed so many lending restrictions upon the banks, that the administrative costs outweighed earnings. Most of these restrictions were contained in AS 16.10.710. The following year, AS 16.10.710 was amended and many of the provisions that were objectionable to the banks were removed. All available funds (approximately $1.8 million) were lent out; however the loan program still proved unprofitable to the banks. Of the 29 loans that were made, virtually all were made by the Commercial Fishing and Agricultural Bank (CFAB) and only two or three were made by other banks. CFAB told the State that they were only processing these loans as a service to their members; however, it was costing considerably more than the $100 loan application fee they were charging and they were not interested in continuing these losses.

As a result of the shortcomings of FM&N indirect loan program, the statutes were again amended and the program was made a direct loan program under the Department of Commerce & Economic Development. The basic eligibility requirements of the FM&N program were incorporated into Sections B and C of the rewritten Commercial Fishing Loan Act. Since the state was now administering the entire loan program by making direct loans, the administrative costs of the program were borne by the state. The Legislature appropriated sufficient funding to underwrite the loan program and within a very short period of time both the number and dollar amount of loans increased.

An indication of the success of the current commercial fishing loan program is the number of loans that have been made under Section B. Since the inception of Section B through January 1985, 340 loans have been approved and $16,615,661 has been committed. (During the first seven months of FY 85, 75 loans were approved and $5,131,400 was committed.) This section is targeted for rural Alaskans. In order to qualify for a loan under this section, the applicant must either live in an area that does not provide occupational opportunities other than commercial fishing, or the applicant must be economically dependent on commercial fishing for a livelihood and commercial fishing must have been a traditional way of life in Alaska. Also, applicants cannot have alternative sources of financing available to them. This criteria is important in understanding the success of the loan program.

If there were no commercial fishing loan program, then I believe there would be little argument that urban Alaska would fare much better than rural Alaska in competing for fishing loan financing in the private sector. The financial institutions are established in the urban areas, borrowers are accustomed to the cash/credit economy and have the collateral to support loan requests. Besides the traditional private sector, CFAB would then be the only other source of financing. CFAB will lend for limited entry permits; however, due to the high risks and losses involved in the commercial fishing industry, CFAB will not take the permit as collateral to secure the loan. The loan must be secured by other collateral. For vessel loans, CFAB requires a minimum 25% cash down payment and 10% additional collateral. Only 65% of the vessel cost can be used as collateral to secure the loan. As a result of these lending restrictions, CFAB has only made approximately six limited entry permit and 12 vessel loans during the last half of 1984. Obviously, these restrictions do not favor rural Alaska. However, in defense of CFAB, they are trying to minimize their losses.

If it weren't for the state commercial fishing loan program, particularly Section B, very few commercial fishing loans would be made in rural Alaska. Remember, Section B provides rural Alaska with the capital for the purchase of limited entry permits as well as for vessels and gear in support of the permits. Without vessels and gear to fish the limited entry permits, the permits produce no income, unless sold. Without a Section B loan program, there probably would have been a larger outflow of limited entry permits from rural Alaska. Additionally, without a loan program for Alaskans like the Commercial Fishing Loan Act, there would be greater competition from individuals outside the state for Alaska limited entry permits.

As discussed during the meeting we attended on December 19, 1984, regarding limited entry permit transfer issues, some additional time will be needed to compile data on the commercial fishing loan program. The Division of Accounting & Collections, DCED, has been gathering this data. This entails a sizeable effort as many records have to be manually researched. As soon as this effort is completed, the information will be made available to you.

Sincerely,

Paul B. Arnoldt

SUBJECT: Loan Paper Draft Report (Commercial Fishing Loan Program)

Thank you for the opportunity to comment on the draft of your study regarding the distribution of permit related loans. I would first like to address a couple of small details in the introduction section of the report.

On page 13, it states that the Fishermens Mortgage and Note Program was largely unsuccessful because many people were unaware of the program and the application procedure was complicated. This is partially correct in that the legislation creating the program made it virtually inoperable the first year (FY '81) and that private financial institutions did not actively promote the program. However, in FY '82 virtually all of the $1.8 million appropriated by the Legislature was committed for loans. Also, as you pointed out, in 1982 the Fishermens Mortgage and Note Program was rolled into the Commercial Fishing Revolving Loan Fund. This simplified the application process because an applicant could apply directly to the State without involving a private financial institution.

On page 15, the last paragraph talks about the active participation requirement as amended by the 1983 Legislature. I think that it is important to note that this only affects Section A of the current Commercial Fishing Loan Program and does not affect Section B which is targeted for rural Alaska fishermen.

One of the important issues is the impact of the loan program on rural Alaska. While the data appears to indicate that urban fishermen were more likely to receive subsidized loans than rural fishermen over the 1979-1982 period, this does not mean that the loan program played a significant role in the decline of rural-held permits over that time period. In fact, the statistics in Table 3 and Table 6 would indicate that the loan program played a very slight role, if any, in this process. Table 3 shows that this shift was well underway by 1976 even though the permit loan program was virtually nonexistent until 1979.

There was a significant shift in 1980 when the total number of loans increased from 62 (in 1979) to 159 (in 1980) and the net urban shift increased from 47 to 65. This is understandable because the permit loan program was relatively new and it generally took longer for the word to spread to rural Alaska. However, in 1981 the loan program made another

significant increase from 159 (in 1980) to 202 (in 1981) loans while the net urban shift decreased from 65 to 52. Then in 1982, the loan program remained relatively constant, 197 loans, and the net urban shift made another dramatic decrease down to 46. This permit transfer is approximately the same number that occurred in 1977 and 1978 before the permit loan program even existed. Thus, it appears that factors other than the loan program were primarily responsible for the shift of permits from rural to urban Alaska. It is important to note that any slight shift from rural to urban caused by the loan program would surely be offset by the number of permits that would have transferred out of State had there been no loan program. I think the 1.1% permit transfer increase to non-residents mentioned in your report is of far greater concern.

Also, as you have mentioned, the "targeted loan program" (Sections B and C) are aimed at rural rather than urban fishermen. During the past two years, there has been a substantial increase in the number of loans made under those sections of the statutes.

To conclude, while the report mentions that there is no direct evidence that links the loan program to a decline in rural-held permits, the overall impression left is that the loan program played a significant role. This would be especially true if the report was not examined in detail. To that extent, I disagree with your findings.

Please feel free to contact me or Greg Winegar at 465-2510 if you have any questions.

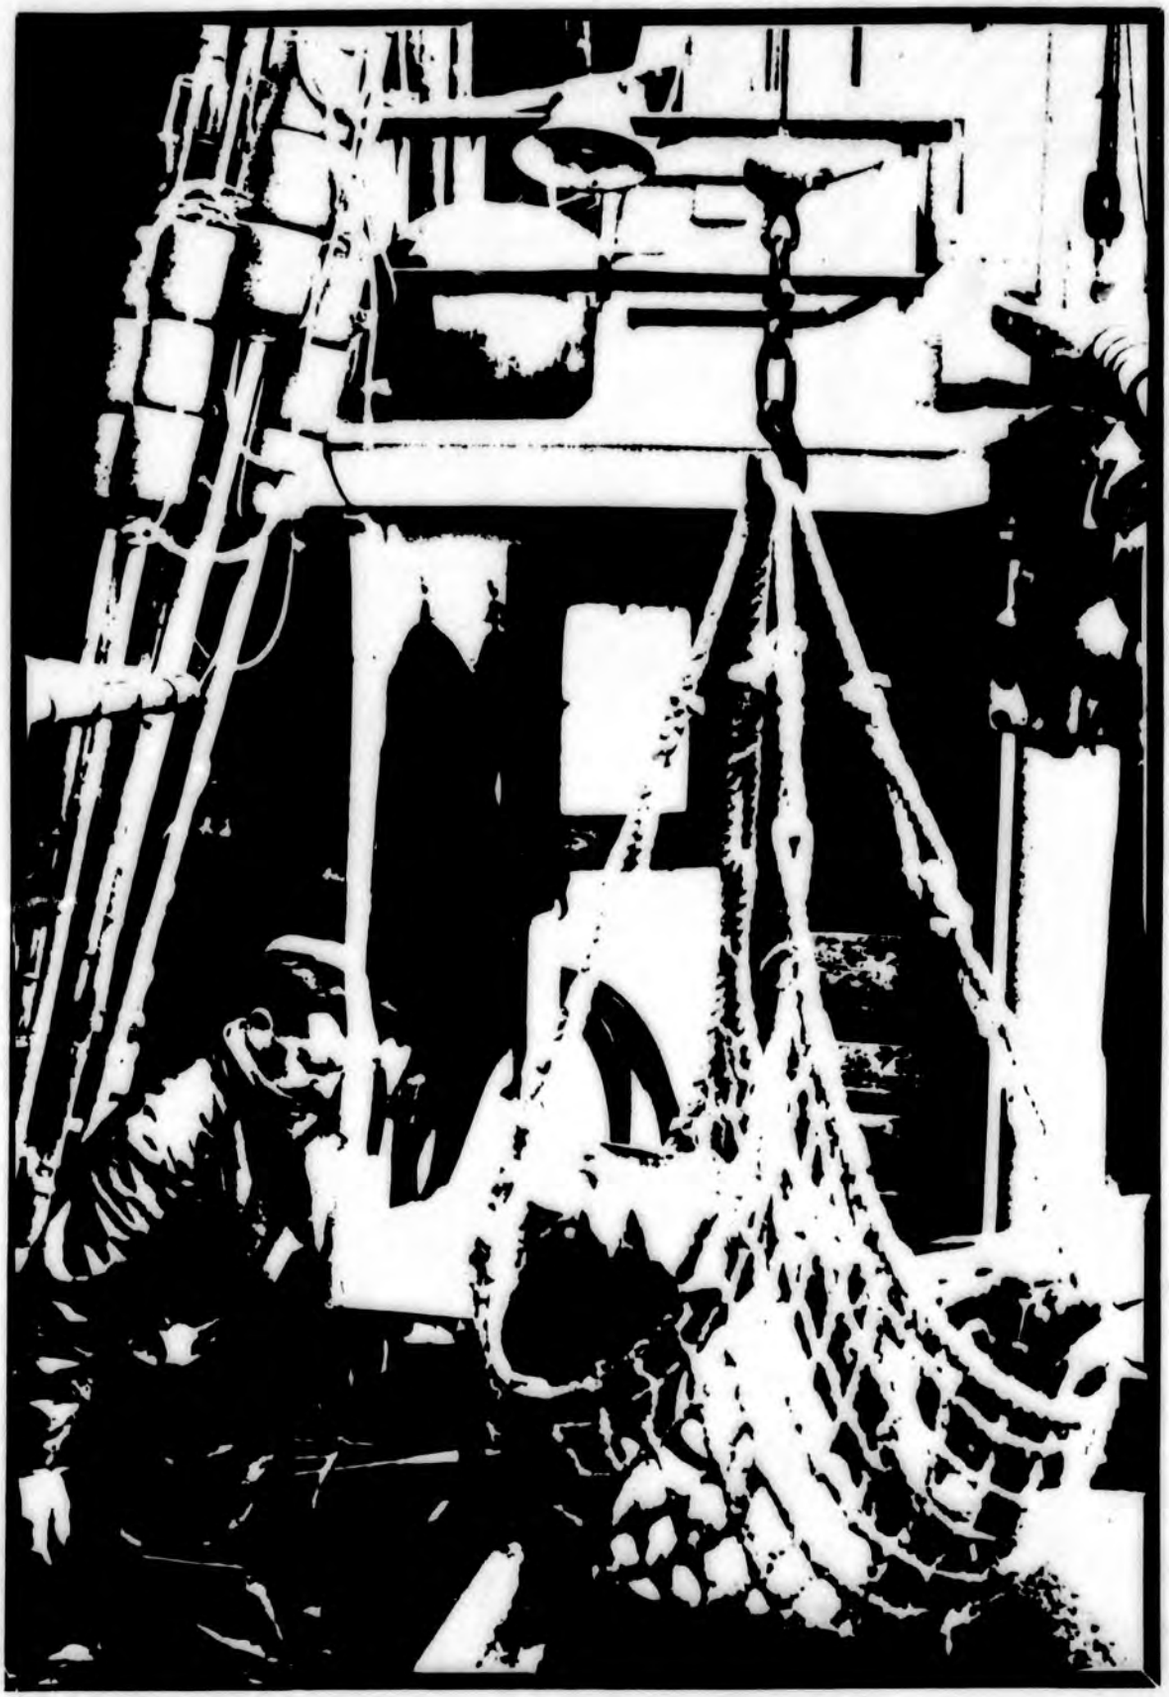
Met w/ Rep from Howard

Frank Waite (Petersburg) is a commercial troller. Two years ago he obtained a type A fishing loan to buy a limited entry troll permit (at that time he lived at Pt. Baker.)

Now he would like to purchase a new boat and finds that he is not, nor will he ever be, eligible for a type B or C loan.
(see page 1 of booklet



Questions

1. Why is a recipient of type A loan not eligible at any future time for ~~an~~ a type B or C loan?

2. Is a type A loan recipient eligible for another type A loan?

3. Are there any exceptions to the rule? Is there any way about of ~~legisla~~ a change in the statutes to reconsider his Type A loan and turn it into a Type B loan, which would then allow him to purchase a boat? This assuming, of course, that he meets the criteria of a Type B loan?

DIVISION OF INVESTMENTS

LOAN POLICIES AND PROCEDURES

COMMERCIAL FISHING REVOLVING LOAN FUND
AS 16.10.310-.370

The Commercial Fishing Revolving Loan Fund consists of three separate sections (A, B and C). Each relates to different types of loans and has its own eligibility requirements. Because the requirements for each section are similar and you may qualify for more than one section, it is imperative that you carefully read the following information.

SECTION A
(Permit Loans to Individuals)

Note: If you receive a loan under this section, you will not be eligible to borrow under Sections B or C at any future date.

LOAN PURPOSE

Loans may only be made to finance the purchase of limited entry permits. Loan funds may not be used to reimburse an applicant for permits which were obtained more than one year before receipt of the application by the Division.

ELIGIBILITY

Loans may be made to individual commercial fisherman who have been State residents for a continuous period of two years immediately preceding the date of application and have held a limited entry permit, commercial fishing or crew member license for the year immediately preceding the date of application and any other two of the past five years. You must have actively participated in the fishery during those periods and have reported commercial fishing income.

LENDING LIMITS

The maximum loan amount is $300,000 less any loan amounts borrowed from any previous State commercial fishing loan programs and any loan amounts borrowed under Sections A, B or C of this program.

INTEREST RATE

Interest will be charged at the rate of ten and one-half (10½) percent.

LOAN TERMS

The maximum loan term is 15 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan.

COLLATERAL

All loans must be secured by adequate collateral to protect the investment of the State in the event of default. The loan shall be secured by a first priority lien and may not exceed 90 percent of the appraised value or cost (whichever is lower) of the collateral being used to secure the loan. The specific amount to be loaned against any collateral offered shall be determined by the loan committee and the loan committee may require additional collateral.

SECTION B

(Permit, Vessel and Gear Loans to Individuals)

LOAN PURPOSES

Loans may be made for the repair, restoration or upgrading of existing vessels and gear, and for the purchase of limited entry permits, gear, and vessels. Loan funds may not be used to reimburse an applicant for permits which were obtained or vessels and gear which were paid for more than one year before receipt of the application by the Division.

ELIGIBILITY

Loans may be made to individuals who have been State residents for a continuous period of two years immediately preceding the date of application and because of lack of training or lack of employment opportunities in the area of residence do not have occupational opportunities available other than commercial fishing or are economically dependent on commercial fishing for a livelihood and commercial fishing has been a traditional way of life in Alaska.

These loans are intended to be made to individuals who do not have alternative sources of financing available to them.

LENDING LIMITS

The maximum loan amount is $100,000 less any loan amounts borrowed from any previous State commercial fishing loan programs and any loan amounts borrowed under Sections B or C of this program.

Two or more individual commercial fishermen applying jointly under this section may combine their eligibilities on a single loan, up to $100,000 per individual less any loan amounts borrowed from any previous State commercial fishing loan programs and any loan amounts borrowed under Section B or C of this program. This paragraph applies only to the purchase or construction of a vessel.

INTEREST RATE

Interest will be charged at the rate of ten and one-half (10½) percent.

LOAN TERMS

The maximum loan term is 15 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan.

COLLATERAL

All loans must be secured by adequate collateral to protect the investment of the State in the event of default. The loan shall be secured by a first priority lien and may not exceed 90 percent of the appraised value or cost (whichever is lower) of the collateral being used to secure the loan. The specific amount to be loaned against any collateral offered shall be determined by the loan committee and the loan committee may require additional collateral.

A loan for the purchase of a limited entry permit may be made up to 100 percent of the appraised value of the collateral used to secure the loan if the borrower has at least three years of experience as a commercial fisherman in the fishery to which the entry permit applies; and has not owned an Alaska limited entry permit in the year immediately preceding the application for the loan. (Three years of experience as a commercial fisherman in the fishery means that for a total of three fishing seasons in the same fishery the borrower has actively participated in the commercial harvest of fish under the direction of a limited entry permit holder.)

STATE OF ALASKA
DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOMENT
DIVISION OF INVESTMENTS

LOAN POLICIES AND PROCEDURES

SECTION C
(Vessel and Gear Loans to Corporations, Partnerships and Joint Ventures)

LOAN PURPOSES

Loans may be made for the repair, restoration or upgrading of existing vessels and gear, and for the purchase of gear and vessels. Loan funds may not be used to reimburse an applicant for vessels and gear which were paid for more than one year before receipt of the application by the Division.

ELIGIBILITY

Loans may be made to corporations, partnerships or joint ventures, 100 percent of which are owned by individual commercial fishermen who qualify under Section B and who have held a limited entry permit, commercial fishing or crew member license the year immediately preceding the date of application and any other two of the past five years, and have actively participated in the fishery during those periods and have reported commercial fishing income.

These loans are intended to be made to borrowers who do not have alternative sources of financing available to them.

LENDING LIMITS

The maximum loan amount is $100,000 less any amounts borrowed from any previous State commercial fishing loan programs and any loan amounts borrowed under Sections B or C of this program.

INTEREST RATE

Interest will be charged at the rate of ten and one-half (10½) percent.

LOAN TERMS

The maximum loan term is 15 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan.

COLLATERAL

All loans must be secured by adequate collateral to protect the investment of the State in the event of default. The loan shall be secured by a first priority lien and may not exceed 90 percent of the appraised value or cost (whichever is lower) of the collateral being used to secure the loan. The specific amount to be loaned against any collateral offered shall be determined by the loan committee and the loan committee may require additional collateral.

LOAN CONDITIONS
(Sections A, B and C)

RESIDENCY

For purposes of eligibility under the Commercial Fishing Loan Program, "resident" is defined as an individual who, except for brief intervals, periods of military service, or attendance at an educational or training institution, has resided in the State for two years. "Residence" is determined by where the individual maintains a permanent place of abode and

(a) is registered to vote;

(b) files tax returns;

(c) registers or licenses personal property, including but not limited to cars, boats, trucks and trailers;

(d) is licensed to drive;

(e) maintains bank accounts, savings accounts, lines of credit and other financial relationships; and

(f) any other information that may show the applicant's residency.

INTERIM FINANCING

Interim construction financing is not available under this program. No loan funds may be disbursed until construction or renovation is 100% complete. Applicants should obtain written loan approval prior to obtaining interim financing. To be considered interim financing, promissory notes must have a term of one year or less and the debt must have been incurred and the note executed within one year prior to receipt of the application by the Division.

REFINANCING

Refinancing is not allowed under this program. An interim note may be refinanced it if has a term of one year or less and the debt was incurred and the note executed within one year prior to receipt of the application by the Division.

ASSUMPTIONS

Assumptions will not be allowed unless it is in the State's best interest to do so and the applicant meets all statutory eligibility requirements. Assumptions, if granted, must serve the policies and purposes of the loan program.

LOAN APPROVAL

Authority for approval of all loans rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on loan applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the application. No loan will be granted without approval of a majority of the loan committee.

LOAN COSTS

The borrower shall pay all direct costs incurred by the State in processing the application for a loan, including, but not limited to the cost of credit reports, title insurance, appraisals, surveys, inspections, or other direct costs. The State is not liable for any costs incurred by the borrower during the application process.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

COMMERCIAL FISHING LOAN APPLICATION CHECK-OFF LIST

The following information **is required** in order to process your application. Please use this list to make sure all information is submitted (incomplete applications will not be accepted). Please retain a copy of this application for your records.

_____ 1. **Application for Commercial Fishing Loan:** Must be notarized in Alaska. (pages 7 and 8)

_____ 2. **Residency Questionnaire:** Must be notarized in Alaska. (page 9)

_____ 3. **Letter of Intent.** (page 10)

_____ 4. **Individual Fisherman Financial Statement:** If your most recent income tax return does not include your most recent fishing season, then you must complete a Statement of Actual Profit and Loss form for your most recent fishing season. You must submit copies of your cannery settlement sheets or your fish tickets to verify your income. (pages 11 and 12)

_____ 5. **Actual Statement of Profit and Loss.** (page 13)

_____ 6. **Projected Statement of Profit and Loss.** (page 14)

_____ 7. **Credit Authorization:** You must submit a form for each loan you have outstanding with any lender. Whether or not you have outstanding loans, a minimum of three credit authorizations are required. (page 15)

_____ 8. **Authorization to Verify Financial Information.** (page 16)

_____ 9. **Federal Tax Returns:** You must submit signed copies of your complete federal tax returns for the last three years and a copy of any other return(s) necessary to document your eligibility (i.e., fourth or fifth year). Do not send original documents as they will not be returned.

_____ 10. **Commercial Fishing Resume.** (page 17)

_____ 11. **Consent to Release Information.** (page 18)

_____ 12. **Copy of your purchase agreement and down payment receipt:** If applicable.

_____ 13. **Pictures of Vessels and Gear:** Be sure to include photographs of vessels and gear if they are being offered as collateral.

_____ 14. **Marine Survey:** If applicable, it must be less than 90 days old.

_____ 15. **Bids, Quotes, receipts and contracts:** To document the costs of the use of loan proceeds.

BILL SHEFFIELD, GOVERNOR

POUCH D
JUNEAU, ALASKA 99811
PHONE: (907) 465-2555

Dear Borrower:

We would like to take this opportunity to introduce ourselves to you. We are the Division of Accounting and Collections (Department of Commerce and Economic Development) and we will be servicing the loan you recently received from the Division of Investments. Our office is located on the 9th Floor of the State Office Building in Juneau, and our phone number is 465-2555. Our mailing address is:

Division of Accounting and Collections
Department of Commerce and Economic Development
Pouch D-0800
Juneau, Alaska 99811

This servicing packet has been designed as a convenience for you. It contains an annual supply of payment cards, forms for a variety of standard requests, a statement of our payment policies, a supply of labels and pre-addressed envelopes. (In the interest of economy, we are using the supply of old envelopes which shows the division's previous name.)

May we suggest that you place your other papers pertaining to your loan in this folder for reference and safekeeping. Also, future statements and correspondence can be added so that you will have a convenient and complete record.

Please be sure to let us know if there is any way we can be of service to you during the term of your loan.

Yours truly,

Margaret I. Hamley
Director

SUBJ: Loan Programs

The following are estimates of prior year appropriations for loan programs that may be available for reappropriation this year due to over capitalization.

	$ Millions
DCED Revolving Loans	$36.6
Power Development	12.0
Power Projects	4.0
Fishery Products	38.5
Total	$91.1

ENERGY PROGRAM FOR AK.

1981 AUTHORIZED LOAN (CAN NOT APPLY FOR LOAN)

* see attached Table 1

The Legislative Audit Division also reports that audits in progress could yield $10.0 million in additional lapse from various agencies' operating budgets.

The DCED Revolving Loans, Power Development and Power Project loan program estimates are from the Department of Commerce and Economic Development. These numbers are based on DCED's estimates of loan demand and loan repayments for FY85 and FY86. The Power Projects funds relate to an appropriation for a district heating loan to the City of Fairbanks in 1981 (SLA 81,Ch. 90,Sec. 16). Apparently, the Alaska Power Authority intends to lapse this money at the end of FY85. The Power Development funds of $12.0 million relate to last year's $210.0 million appropriation for the Four-Dam pool (SLA 84,Ch. 171,Sec. 313).

11-Q1LH

The attached Table II shows historical activity in the Fishery Products Revolving Loan Guarantee program. It may be noted that no loans have been made under this program in FY84 or FY85, and there is no pending loan application.

SUBJ: Loan Programs

Attached is Table I which presents cash flows for DCED and Student revolving loan funds for FY85 and FY86.

Anticipated funding and loan activity for AHFC loan programs is provided in the the attached AHFC memo.

For C&RA and DNR loan programs, using 'cash in treasury' as a starting point for determining over-capitalization (under-capitalization) may be misleading since a high proportion of this cash is restricted for commitments already made, reserves against losses, and accounts payable.

RE: FY 86 CAPITAL BUDGET

The mortgage demand and subsidy requirements for FY 85 have been revised to reflect the balances available as of July 1, 1984, and current projections. An analysis for FY 86 has also been prepared in connection with the State capital budget submission process. Based upon these projections assets available in the Alaska Housing Finance Corporation Revolving Fund as of July 1, 1985, combined with those estimated to be made available, are sufficient to operate the mortgage purchase activities of the Corporation through FY 86.

Mortgage demand for FY 85 was estimated to decrease 11% from that of the previous year followed by a 10% increase in FY 86. These are felt to be conservative in light of the current activity in the mortgage market. The portion of first mortgage loan activity in the Veterans Mortgage Program was dropped almost 24% in response to the change in the Federally defined eligibility requirements of qualified veterans.

As of June 30, 1983, the Corporation owned in the Alaska Housing Finance Revolving Fund $93,254,000 of mortgage loans originated by Commerce and Economic Development, Division of Veteran's Affairs, bearing interest rates of 7% and 7 1/2%. The attached schedules reflect these loans in the "non conforming" column of the Revolving Fund since the loans were closed on non uniform documents. Staff is exploring the possibility of converting these loans to a security form guaranteed by FNMA or FHLMC enabling them to become "conforming" and available to collateralize subsequent bond issues.

The increase in amounts available for future subsidy requirements as of July 1, 1985 is a result of:

1) Utilization of July 1, 1984, actual balances.

2) Decrease in estimated FY 85 mortgage demand.

3) Increase in projected investment earnings.

4) Re-implementation of the tax exempt bond funded First Time Homebuyers Program pursuant to extension of the "sunset provisions" of the Mortgage Subsidy Bond Tax Act of 1980.

5) Decreases in the level of subsidy required reflecting more efficient methods of raising mortgage capital.

Based upon the current projections it is not anticipated that an appropriation to the Alaska Housing Finance Corporation Revolving Fund is necessary for FY 86. Accordingly, submission of a capital budget will not be required.

Alaska HOUSING FINANCE CORPORATION

February 21, 1985

The Honorable Rick Uehling
Alaska House of Representatives
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Representative Uehling:

You have requested an analysis of the assets which are expected to remain in the Alaska Housing Finance Revolving Fund at the end of FY 86. Enclosed are two schedules of "Projected Revolving Fund Activity" covering the balance of the current fiscal year as well as FY 86. As noted in the schedules, the Revolving Fund had approximately $470,000,000 in assets as of January 1, 1985. Since no bonds are scheduled to be issued prior to the end of the current fiscal year, these assets are expected to grow to $547,000,000 at June 30, 1985.

The issuance of an estimated $778,000,000 in bonds and delivery of $300,000,000 FNMA Collateralized Notes during FY 86 will require transfers from the Revolving Fund of approximately $196,000,000. This will put the total assets of the Revolving Fund at $409,000,000 as of June 30, 1986.

The following provides a description of the investments expected to be held by the Revolving Fund at June 30, 1986 in the amounts indicated in the attached schedules:

Account	Investment Category	Amount	Investment Description
HOF Account	Loans	$114,000,000	Nonconforming loans purchased under the rural, mobile home and second mortgage programs.
General Account	Loans/Conforming	110,000,000	Mortgage loans and mortgage backed securities held pending delivery and purchase out of bond proceeds.
General Account	Loans/Nonconforming	175,000,000	Nonconforming loans purchased under the rural, mobile home and second mortgage programs and loans originated by the Dept. of Commerce and Economic Development Division of Veterans Affairs and transferred to AHFC in 1980.
General Account	Investments	10,000,000	Liquid short term investments including Euro CD's and Collateralized Repurchase Agreements.
	TOTAL	$409,000,000	

Telephone (907) 276-5599

235 East 8th Avenue
Third Floor

P.O. Box 101020
Anchorage, Alaska 99510

Included in the "nonconforming" loans held in the General Account are approximately $90 million of 7% and 7-1/2% loans originated by the Division of Veterans Affairs and transferred to the Corporation in 1980. These loans are currently being reviewed to determine their eligibility for conversion to a guaranteed mortgage security which would make them eligible for a subsequent bond issue. This would increase the liquidity in the Revolving Fund but result in higher subsidy transfers since the Corporation would be leveraging with lower rate mortgages.

The conforming loan category in the General Account represents the warehousing of loans purchased pending their delivery for funding from bond proceeds. Loans are purchased twice each month. When enough loans bearing the same interest rate and allocated to the same bond issue have been purchased, they are "pooled" and delivered to FNMA for conversion to a FNMA Mortgage Backed Security. The Mortgage Backed Security is then delivered to the trustee for the bondholders with the funds related to the bonds released. This loan warehousing activity creates a substantial liquidity requirement. While the Corporation is reviewing its purchasing procedures in an effort to reduce the amount of funds necessary to hold the loans, it is expected that some liquidity will always be necessary.

I hope the above has adequately addressed your questions regarding the Revolving Fund. If you do require any additional information, please contact me at your convenience.

Sincerely,

Mark K. Cameron

Mark K. Cameron
Finance Director

RECEIVED 2/19/85

February 11, 1985

The Honorable Ben Grussendorf
Speaker of the House
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Grussendorf:

In accordance with AS 37.05.035, the following is a report of loans purchased by Alaska Housing Finance Corporation during fiscal year 1984.

	Number of Loans	Note Amount	Weighted Average Interest Rate Charge on Loans	Estimated Prevailing Market Rate	Difference Between Rate Charged and Prevailing Market Rate
First mortgage loans funded by issuance of taxable debt	4,612	$523,278,050	10.72%	13.8%	3.08%
First mortgage loans funded by issuance of tax-exempt Home Mortgage Bonds	3,272	270,847,450	9.89%	13.8%	3.91%
First mortgage loans funded by issuance of State Guaranteed Bonds (Veterans Mortgage Program)	4,016	467,310,100	9.51%	13.5%	3.99%
Second mortgage program	141	5,645,350	11.90%	14.2%	2.30%
Mobile home loan program	1,619	59,677,888	10.22%	15.0%	4.78%

The analysis of the income groups benefited under the loan programs is on the attached schedules.

Sincerely,

Mark K Cameron

Attached is Table I which presents cash flows for DCED and Student revolving loan funds for FY85 and FY86.

Anticipated funding and loan activity for AHFC loan programs is provided in the the attached AHFC memo.

For C&RA and DNR loan programs, using 'cash in treasury' as a starting point for determining over-capitalization (under-capitalization) may be misleading since a high proportion of this cash is restricted for commitments already made, reserves against losses, and accounts payable.

Juneau, AK 99811

Dear Guy:

Find attached a copy of a memo presented to our Board of Directors at the September 18, 1984 Board meeting. It provides the justification for not requesting a general fund appropriation for FY86. If you should need more information or an update, please contact Mark or myself.

Very truly yours,

Donald V. Elliott
Controller

Subject: FY 86 Loans Budget

Date: April 22, 1985

I would like to express support for two programs which have been funded historically as part of the Loans Budget. First, the Senior Citizen's Housing Development Fund and second, the Low Cost and Low Income Multiple Family Housing Development Fund. I believe that the Loans Committee should consider funding these two programs at 5 million and 2.5 million dollars respectively. Below, is a proposed Loans Budget which would allow for these programs to be funded. Thank you for considering this proposal.

Alaska HOUSING FINANCE CORPORATION

April 17, 1985

The Honorable John Sund, Chairman
House Special Committee on Loans
Alaska House of Representatives
Pouch V
Juneau, AK 99811

Dear Representative Sund:

John Hartle requested I respond to you with my thoughts on two topics of current interest: the transfer of the urban nonconforming loan program administered by DCRA/HAD to AHFC and the reappropriation of $50 million from the Corporation's Revolving Fund to the State's General Fund.

The transfer of the urban nonconforming loan program can be accomplished smoothly and may be a logical consolidation of programs. Every attempt would be made to categorize a loan as being "conforming" as the mortgage would then be available to be leveraged with bond funds, thereby reducing the required initial capital outlay. Without legislative direction to the contrary, the following changes to the program as operated by DCRA/HAD would be suggested to conform the program to those operated by AHFC:

- A 1/2 of 1% commitment fee would be assessed.
- Primary Mortgage Insurance would be required when the loan to value ratio exceeds 80%.
- The mortgage note used would be that of the Alaska Building Equity ("ABE") Mortgage with payment increases effective the fourth through the ninth year.
- The AHFC Mortgage Program Rider would be required imposing continued owner occupancy and the "due on sale" clause.
- The 1/4 of 1% rate premium over AHFC "conforming" loans would be maintained to create an incentive for the borrower to get the housing considered conforming.
- Newly constructed nonconforming housing would be permitted only in those cases where the construction of "conforming" housing is not possible or impractical.

Telephone (907) 276-5599
235 East 8th Avenue
Third Floor
P.O. Box 101020
Anchorage, Alaska 99510

Current projections indicate that the reappropriation of $50 million will result in the acceleration of future legislative appropriation requests by the Corporation from FY 89 to FY 88. Instead of having a $28 million balance of liquid assets in the general account of the Revolving Fund as of the end of FY 88, a $33.5 million shortfall would exist.

The Corporation's concerns related to the reappropriation fall into two categories: legal aspects and housing market psychology.

AHFC has in excess of $4 billion in bonds outstanding, all of which were issued as "general obligations" of the Corporation. We are urging that the question of whether the State has the ability to reappropriate assets back to the General Fund be resolved prior to passage of the legislation. For the Corporation to reduce the security available to bondholders by $50 million, the requirement to return the funds should be a valid and binding obligation.

The second aspect of the reappropriation question is what effect it will have on the perception as to the permanence of the loan programs. If the State's financial situation this year requires a withdrawal of AHFC funds in the magnitude of $50 million, how will the State be able to accommodate the future appropriations which may be required? If the ability of AHFC to fund future mortgage demand from currently available assets is diminished by reappropriation, will the State meet the full subsidy requirements which could approximate $100 million in future fiscal years?

If the real estate community doubts that the program will be available much longer, a rush to take advantage of it now could be expected. Residential values generally appreciate significantly during a period of accelerated activity. What happens to the values of these homes if the program is dropped suddenly should the legislature choose not to fund a future appropriation request?

If funds are to be taken from AHFC without a reasonable expectation of continuing the programs in the future when surpluses have either been returned to the State or used to subsidize mortgage loan activity, a gradual reduction in the scope of the programs should be considered. With slight program modification, however, the Corporation could operate possibly as long as FY 94 or FY 95 without future requests. While recently introduced bills in both the House and the Senate (HB 378 and SB 281) effectively shut the program down in 1988, such a drastic approach may not be necessary to prevent the requirement of future appropriation requests over the next 7 to 8 years.

I hope the above assists you in the consideration of those legislative matters affecting the Corporation. Should you require anything else, please contact me at your convenience.

Sincerely,

Mark K Cameron

Mark K. Cameron
Acting Executive Director

a Reduced $2.7 million below the Governor's budget.

b Assume FY 85 interest earnings in the amount of $11,600,000 are reappropriated to the Housing Assistance Loan Fund (HALF). Assume legislative passage of statutory change to make HALF eligible to receive interest payments in FY 86 (estimated to be $14 million).

Alaska HOUSING FINANCE CORPORATION

P.O. Box 1020, Anchorage, Alaska 99510

TO: The Board of Directors DATE: September 5, 1984

FROM: Mark K. Cameron MKC
Finance Director

RE: FY 86 CAPITAL BUDGET

The mortgage demand and subsidy requirements for FY 85 have been revised to reflect the balances available as of July 1, 1984, and current projections. An analysis for FY 86 has also been prepared in connection with the State capital budget submission process. Based upon these projections assets available in the Alaska Housing Finance Corporation Revolving Fund as of July 1, 1985, combined with those estimated to be made available, are sufficient to operate the mortgage purchase activities of the Corporation through FY 86.

Mortgage demand for FY 85 was estimated to decrease 11% from that of the previous year followed by a 10% increase in FY 86. These are felt to be conservative in light of the current activity in the mortgage market. The portion of first mortgage loan activity in the Veterans Mortgage Program was dropped almost 24% in response to the change in the Federally defined eligibility requirements of qualified veterans.

As of June 30, 1983, the Corporation owned in the Alaska Housing Finance Revolving Fund $93,254,000 of mortgage loans originated by Commerce and Economic Development, Division of Veteran's Affairs, bearing interest rates of 7% and 7 1/2%. The attached schedules reflect these loans in the "non conforming" column of the Revolving Fund since the loans were closed on non uniform documents. Staff is exploring the possibility of converting these loans to a security form guaranteed by FNMA or FHLMC enabling them to become "conforming" and available to collateralize subsequent bond issues.

The increase in amounts available for future subsidy requirements as of July 1, 1985 is a result of:

1) Utilization of July 1, 1984, actual balances.

2) Decrease in estimated FY 85 mortgage demand.

3) Increase in projected investment earnings.

4) Re-implementation of the tax exempt bond funded First Time Homebuyers Program pursuant to extension of the "sunset provisions" of the Mortgage Subsidy Bond Tax Act of 1980.

5) Decreases in the level of subsidy required reflecting more efficient methods of raising mortgage capital.

Based upon the current projections it is not anticipated that an appropriation to the Alaska Housing Finance Corporation Revolving Fund is necessary for FY 86. Accordingly, submission of a capital budget will not be required.

su

---

* Delinquency rates are from State Loan Program: Quarterly Actitvity Report, Fourth Qtr FY 84; House Research Agency, October 1984.

1). Repealed effective July 1, 1989.
2). Repealed during 1982 session.
3). Interest rate is 5.0% on the first $15,000 and 15% on the excess.
4). On loans made after 12-31/83 the interest rate is the average weekly municipal bond yield rates.
5). Interest rate is 6.0% if the borrower is unable to procure re-insurance from a private casualty insurer.

DRAFT

March 20, 1985

Representative John Sund
Pouch V
Juneau, Alaska 99811

Attn: John Hartle:

As per our phone conversation March 19 regarding the Agricultural Revolving Loan Fund.

At the February 6, 1985 meeting of the Loan Board of the Agricultural Revolving Loan Fund priority loan categories were established as follows:

- New dairies at Point MacKenzie.
- New dairies at Delta.
- Expanded crop products.
- Clearing loans for smaller agricultural parcels on development schedule.
- Miscellaneous needs of existing borrowers.
- Farm product processing other than red meat and dairy.
- Chattal loan other than dairy and red meat projects.

If the proposed 2.5 million appropriation to the Agricultural Revolving Loan Fund is reduced. ARLF would most likely reduce Point MacKenzie dairy loans since that is the largest category. A $500,000 reduction would eliminate a dairy or more - if the dairy were to have 150 cows, that would reduce milk to [illegible] Matanuska Maid plant by approximately 2,000,000 lbs. this coming year. A $1,000,000 reduction would have a proportionately larger impact.

Since loans must be approved by the Loan Fund Board final determination remains with the Board.

Sincerely,

Peter M. Pemberton
Loan Manager

STATE LOAN PROGRAMS

State loan programs are administered by the following departments: Commerce and Economic Development, Community and Regional Affairs, Education, Natural Resources, and Revenue. They cover such diverse areas as agriculture, housing, power development, education, and commercial fishing. Over $5.0 billion in State subsidized loans will be committed by the end of FY 85.

Student Loans

The Alaska Student Loan program provides loans to Alaska residents to finance postsecondary education. The loans may be used for attendance at any accredited or approved college, university, or vocational-technical program. The terms and conditions of the loans are intended to encourage students to remain in or return to Alaska after completing their schooling. Up to $6,000 per year is available to undergraduates and up to $7,000 per year is available to graduate students. Loans must be repaid within ten years of termination of studies and a maximum of 50 percent of a loan can be forgiven (for five years residence in Alaska after graduation). The FY 86 request for $63,600,000 in general funds combined with the carry forward from previous years, principal repaid, interest retained, and $225,000 in Federal receipts will provide an estimated $81,004,800 for this program in FY 86.

The Teacher Scholarship Loan program was established by the 1984 Legislature to encourage teachers to seek employment in rural communities. The program will provide loans for up to $10,000 per academic year to Alaskans who intend to obtain teaching certificates. With an appropriation of $600,000 in general funds the Council on Postsecondary Education will meet an estimated demand for 80 loans averaging $7,500 in FY 86.

Department of Commerce and Economic Development Business Loans

The Department of Commerce and Economic Development administers eight active revolving loan funds:

1. Commercial Fishing Loan Fund: Limited entry permits are required for commercial salmon fishing in Alaskan waters. Currently, the State provides the only active source of permit financing through the Division of Investments. The Division also provides loans for the purchase or upgrade of commercial fishing vessels to resident commercial fishermen who do not have alternative sources of income and for whom commercial fishing is a traditional way of life. The general fund request for $3,710,000, combined with carry forward, interest retained, and principal repaid, will provide approximately $13,572,100 for this program in FY 86.

2. Fisheries Enhancement Loan Fund: This loan fund promotes the enhancement of Alaska's fisheries through the provision of long-term, low-interest loans to regional and private nonprofit aquaculture associations for hatchery planning, construction, and operation. The Division of Investments anticipates that it will make one operational and seven capital improvement loans totaling $6,857,000 in FY 86, of which $2,071,700 will be funded by general fund and the remainder by carry forward from FY 85.

3. Alternative Technology and Energy Loan Fund: This fund promotes energy production alternatives to fossil or nuclear fuel. Loans assist in

the purchase, construction, and installation of wood stoves, multifuel furnaces, wind and hydroelectric systems, and passive energy systems. The general fund request for $1,060,000, combined with principal repaid and interest retained, will enable the Division of Investments to make 362 loans totaling $3,334,500 in FY 86.

4. Residential Energy Conservation Loan Fund: This fund provides low-interest loans for the purchase, construction, and installation of energy improvements in residential buildings as recommended by an energy auditor. No general fund appropriation is being requested for FY 86. The Division of Investments anticipates that it will make 308 loans totaling $1,200,000 in FY 86, all of which will be funded by carry forward, principal repaid, and interest retained.

5. Historical District Loan Fund: This loan fund promotes the restoration, improvement, rehabilitation, and maintenance of structures within the boundaries of historical districts established by Alaska statute. The Division of Investments relies heavily upon the endorsement of the local and State advisory boards in granting loans. No general fund appropriation is requested for FY 86. The Division of Investments anticipates that it will make two loans totaling $150,000 in FY 86, all of which will be funded by carry forward, principal repaid, and interest retained.

6. Child Care Facility Loan Fund: This loan program helps child care facilities in Alaska to comply with State licensing and certification standards by providing low-interest loans for facility construction, renovation, and equipment. No general fund appropriation is requested for FY 86. The Division of Investments anticipates that it will make 12 loans totaling $450,000 in FY 86, all of which will be funded by carry forward, principal repaid, and interest retained.

7. Bulk Fuel Loan Fund: This fund provides financing to small communities for the purchase of bulk fuel. Since these loans are for one year only, principal and interest payments will fund all 44 FY 86 loans.

8. Mining Loan Fund: The Mining Loan Fund provides financing for advanced mineral exploration, development, and mining in Alaska. The Division of Investments anticipates that it will make 20 loans totaling $7,000,000 in FY 86, all of which will be funded by carry forward, principal repaid, and interest retained.

Alaska Power Authority Power Development Loans

The Alaska Power Authority (APA), under the Department of Commerce and Economic Development, administers two loan programs: the Rural Electrification Revolving Loan Fund (RERLF), and the Power Project Loan Fund. The RERLF provides loans to electric utilities for the extension of transmission lines in rural areas to a minimum of three new customers. The interest rate is two percent with a 20-year maturity. The FY 86 general fund request is for $2,000,000. The Power Project Loan Fund provides financing for preconstruction, construction, modification, improvement, and expansion of power production facilities which utilize fossil fuel, wind power, tidal, geothermal, hydroelectric, solar, or waste energy. No general fund appropriation is requested for FY 86.

Alaska Industrial Development Authority Economic Development Fund

The appropriation of $18,000,000 in general funds to the Economic Development Fund of the Alaska Industrial Development Authority (AIDA) for the DeLong Mountains Regional Transportation Project is to be used for the final design of the port and road facilities for the Red Dog Mine. The repayment terms of the loan shall be established by agreement between AIDA and the Department of Revenue with terms consistent with the DeLong Mountains Transportation Project finance plan required pursuant to AS 44.88.173.

Department of Natural Resources Agricultural Loans

Sources of credit for farming and related industries are limited in Alaska. Until Alaska develops sufficient acreage and production for a viable industry, the Agriculture Revolving Loan Fund (ARLF) will remain a prime source of credit for the State's agricultural sector. The Governor's budget includes a $2,500,000 FY 85 general fund request for the ARLF which, combined with the carry forward from previous years, principal repaid, and interest retained, will provide an estimated $12,900,000 for this program in FY 86. The Governor's FY 86 budget also includes a $1,000,000 general fund request for the Grain Reserve Loan Program, which assists State grain producers in developing markets for their products by making loans secured by grain reserves.

Housing Loans

Alaska's housing loan programs are administered by the Department of Revenue, Alaska Housing Finance Corporation, and the Department of Community and Regional Affairs, Housing Assistance Division.

1. ALASKA HOUSING FINANCE CORPORATION (AHFC)

Special Mortgage Loan Purchase Program (SMLPP): This is AHFC's principal financing program, accounting for approximately 90 percent of the Corporation's lending activity. The program assists Alaskans in the acquisition and development of land and in the construction, rehabilitation, and refinancing of homes. Borrowers apply to participating lending institutions which sell the mortgages to AHFC. The borrower must reside in the dwelling to which the loan would apply. SMLPP loans are funded through the sale of taxable and tax exempt bonds combined with State appropriations. No general fund subsidy is requested for FY 86.

Mobile Home Loan Purchase Program (MHLPP): This program provides low-cost financing for mobile homes. No general fund appropriation is requested for FY 86.

Home Ownership Fund: Under this program, qualified low- and moderate-income persons receive home mortgage subsidies greater than those offered by conventional AHFC programs. In FY 86, the fund will have invested assets to generate revenues in amounts sufficient to accommodate the FY 86 demand; therefore, no general fund appropriation has been requested by AHFC for FY 86.

2. HOUSING ASSISTANCE DIVISION

Housing Assistance Loan Fund (HALF): HALF is designed to fulfill the housing needs of rural borrowers who lack adequate service from AHFC

and those who would not qualify for home loans through conventional mortgage lenders because of housing which does not conform to building codes. HALF provides State-subsidized, low-interest loans for the purchase, construction, and rehabilitation of owner and nonowner occupied, single family homes and duplexes. Six statewide offices provide direct lending services to rural areas. Like AHFC's Home Ownership Fund, HALF provides additional home mortgage subsidies to low- and moderate-income persons. The FY 86 request for $37,000,000 in general funds, combined with carry forward and principal repaid, will provide a total of $54,000,000 for this program in FY 86 which will finance approximately 600 new loans.

WHAT AMOUNT OF TOTAL ADMINISTRATIVE COSTS ARE OBTAINED FROM LOAN INTEREST, PRINCIPAL OR FEES?

NONE

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

Program is administered as a component of the Commission on Postsecondary Education. Beginning with FY 85, legislation has made it possible to pay the costs of collection from the Revolving Loan Fund. At this time it is not possible to determine what the fiscal impact will be on the fund since the collections function will probably be awarded to a private vendor.

PROGRAM JUSTIFICATION:

The objective of the loan program is to permit qualified Alaskans an opportunity and choice in the pursuit of their individual educational goals that may otherwise not be available to them because of economic or proximal factors. The intangible and immeasurable benefits that accrue to the State because of its broadly and diversely educated citizens is evident through a cosmopolotanism that ameliorates the parochial view, and through the appreciation for Alaska that develops only when Alaskans can compare what they have to what exists elsewhere. The benefits of education cannot be adequately measured; however, the conditions that accompany ignorance are commonly witnessed.

The Alaska State Student Loan Program permits qualified residents of Alaska (two-year minimum residency) to receive up to $6,000/year for undergraduate study or $7,000/year for graduate study for up to eight years (five years maximum of undergraduate or graduate) to attend institutions that are accredited by recognized accrediting agencies. Loans carry 5% simple interest and ten year payback terms. If a student elects to return to Alaska and reside here upon completion of studies, up to 50% of the principal and interest may be forgiven. See continuation sheets for history and projections.

PROGRAM JUSTIFICATION:

The 1984 Legislature passed HB 504 (now AS 14.43.600-700) creating the Teacher Scholarship Program. The program is intended to make loans for up to $10,000 per academic year available to Alaskans who intend to obtain teaching certificates. The program is designed to encourage teachers to seek employment in rural communities and it discourages the high teacher turnover now experienced.

The estimated demand for these funds is based upon an average loan of $7,500 for 80 students.

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

This Loan Fund was created by the Legislature in Sec. 1, Ch. 118 SLA 1981. It was originally funded by a $6.5 million appropriation in FY81. Loans can be made to certified public utilities for loans to extend transmission and distribution lines to bring central generation service to a minimum of three new customers. Loans bear an interest rate of two percent per annum on the unpaid balance. The loan must be secured by pledge of revenue, lien/mortgage, or pledge of the taxing power of the borrower. Loans must be approved by the Alaska Power Authority which is assisted by a loan advisory committee made up of local residents of the area served by the applicant utility. Loans maximum repayment term is twenty years. Loan demand is anticipated to increase during FY86 because of changes in the legislation which regulates fund, to be considered by the Legislature in SLA 1985, to remove conflict between the Rural Electrification Association (REA) and the State security requirements. REA is the federal program which provides rural utilities with low cost financing for extension and distribution of service to customers but this program has suffered substantial cutbacks and no other alternative funding sources are available to Alaska rural communities.

TITLE Rural Electrification Revolving Loan Fund

REVISED DATE

FY 86

00016

L1 Cont..ed

Replenishment of this loan fund through repayment of outstanding loans will not occur for several years. This funding request is to maintain the fund at a level where rural utilities demands/needs can be satisfied.

No appropriation was made to this fund in FY85. Funding this request at 75 percent or 50 percent would influence the rural communities and utilities on a direct basis. In such occurrences further restrictions regarding the size of the loans would be necessary, a clear cut analysis as to the urgency of the loan would have to be prepared, and strengthening of the definition for which the proceeds of the loan could be utilized. Funds may not be available at all for communities applying for loans later in the FY.

PROGRAM JUSTIFICATION:

It is the policy of State to reduce consumer power costs (AS 44.83.010)
This loan fund AS 44.83.362 was created to provide low cost financing for the extension of electric service lines into rural areas for utilities which do not have access to the Rural Electrification Administration (REA) loan programs and for REA utility borrowers which are experiencing difficulty in obtaining REA loans due to federal cutbacks in the REA program. Utilities cannot extend service into new areas because the costs would impact rates significantly for the utilities existing customers unless the potential new customers can guarantee payments to the utility to repay the investment cost of the new subdivisions cannot afford the out front financial obligations imposed by utilities in order to extend new service. This situation continues from year to year until a new rural area is sufficiently developed to permit the utility and the new customers to come to agreement on the merits of a line extension.

None

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

Description: This is a revolving loan fund which means that, as payments are collected, then those funds become available to be lent out to new borrowers. Interest accrues from the date of the loan and is generally payable on an annual basis.

Under Section A (AS 16.10.310), loans may be made for the purchase of limited entry permits. The maximum loan amount is $300,000; the maximum maturity is 15 years and the interest rate is 10-1/2%. Limited entry permits are required for several fisheries and are expensive to purchase. Since only two entities (the Department of Commerce and Economic Development and the Commercial Fishing and Agriculture Bank) can legally take limited entry permits as collateral, Alaskan fishermen rely on these programs to assist them in purchasing permits. Currently, CFAB is not making loans for the purchase of permits and, thus, the State provides the only active source of permit financing.

L1 **LOAN PROGRAM DESCRIPTION**

(6/84)-11

AGENCY Commerce & Economic Development

CATEGORY Development

PROGRAM Economic Development

TITLE Commercial Fishing Loan Act

REVISED DATE

FY 86

00019

(Description continued)

Under Section B (individuals) and Section C (partnership and corporations), loans may be made to commercial fishermen who do not have alternative sources of financing available to them for the purchase of limited entry permits, and the purchase or upgrading of commercial fishing vessels and gear. The maximum loan amount is $100,000; the maximum maturity is 15 years and the interest rate is 10-1/2%.

25% Reduction: A 25% reduction in FY '86 requested general funds will result in a corresponding reduction of 28 loans that could have been made. Since permit lending is limited primarily to the State, permit financing will become the State's top priority. As a result, the reduction of all 28 loans will take place in the purchase, construction or upgrading of commercial fishing vessels and gear under Section B cannot be made.

50% Reduction: A 50% reduction in FY '86 requested general funds will result in a corresponding reduction of 50 loans that could have been made. Again, permit financing will become the State's top priority. As a result, these loans will not be made for the purchase, construction or upgrading of commercial fishing vessels and gear under Section B.

PROGRAM JUSTIFICATION:

The purpose of the loan fund is to encourage and promote Alaska's commercial fishing industry and to develop a predominantly resident fishery by making low-interest, long-term fishing loans. Section A authorizes financing of limited entry permits and is presently the only active source of funding for permits. Section B authorizes financing of permits, vessels and gear for commercial fishermen who, because of marginal earnings and credit history, cannot obtain financing from private lending institutions. Low-interest, long-term fishing loans with relaxed credit requirements would assure continuation of current lifestyles for many Alaskans and will help to retain limited entry permits in rural Alaska. The current loan subsidy should help to promote one of Alaska's main revenue resources as well as reduce the financial aid given to rural and coastal Alaskan fishing communities through the Departments of Labor and Health & Social Services.

Expected economic benefits will be seen in the growth of Alaska's fishing industry, by creating direct jobs, and by assisting in maintaining the percentage of Alaskans holding limited entry permits. The loan program strengthens and diversifies Alaska's economic base by supporting a self-sustaining, private economic base in rural and coastal Alaska.

WHAT ARE THE TOTAL ADMINISTRATIVE COSTS FOR OPERATING THE LOAN PROGRAM FOR FY 86?

$150.2

WHAT AMOUNT OF TOTAL ADMINISTRATIVE COSTS ARE OBTAINED FROM LOAN INTEREST, PRINCIPAL OR FEES?

None

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

Description: This program promotes the private ownership of salmon hatcheries by qualified nonprofit corporations for the purpose of contributing to the rehabilitation of Alaska's salmon fishery. These State loans further the economic development of commercial and sportfishing industries and benefit subsistence fisheries.

AS 16.10.500-620 authorizes loans for hatchery planning, construction and operation and for enhancement and rehabilitation activities, including, but not limited to, lake fertilization and habitat improvement. The maximum loan amount is $10,000,000 per project for a qualified regional aquaculture association and $1,000,000 per project for a local nonprofit corporation as approved by the regional aquaculture association. The maximum loan maturity is 30 years and the interest rate is 9-1/2%. This is a revolving loan fund which means that, as payments are collected, then those funds become available to be lent out to new borrowers. Interest does not accrue during the initial period of the loan, which is a period of time (as determined by the Commissioner), of not less than six years nor more than 10 years from the date the loan is made. In addition, repayment of principal and interest does not begin until after this initial period. Payments are generally made on an annual basis.

*Includes contingency loans (see page 6 of 8).

TITLE Fisheries Enhancement Loan Program

REVISED DATE 11/08/84

FY 86

00622

(Description continued)

25% Reduction: A 25% reduction in FY '86 requested general funds will result in a reduction in the number of loans that could be made. Operation loans to existing facilities would receive highest priority and would account for $2,955,000 of the FY '86 request. This would leave $3,384,175 available to fund capital improvement and contingency loans that are estimated to be $3,902,000. Some capital improvement and contingency loans to existing facilities would not be funded, placing the financial feasibility of the facilities in jeopardy.

50% Reduction: A 50% reduction in FY '86 requested general funds would have a more drastic effect. Again, continuation of operating loans would account for $2,955,000 leaving $2,866,150 available to make capital improvement and contingency loans to existing hatchery facilities capital improvement and contingency loans again are estimated to be $3,902,000. The shortfall would require allocation of loans for capital improvement and contingencies, most likely on a first-come-first-serve basis. This also would mean that loans to existing facilities would not be funded, placing the financial feasibility of these facilities in jeopardy.

The Governor has placed a moratorium on loans for new hatcheries in FY '85. The Governor's Mini-cabinet on Fisheries is reviewing State policy on all hatchery development in the State. The following summary indicates which projects will be funded under the moratorium in FY '85 and if continued in FY '86 as well as additional proposed projects which would not be funded under a moratorium in FY '85 or FY '86.

PROJECTS NOT SUBJECT TO MORATORIUM AND TO BE FUNDED IN FY '85

Operation Loan Requests - During the start up period of each hatchery, until broodstock and surplus returns can be built to capacity, assistance in meeting the annual operating costs will be given in the form of operating loans. Without these loans most facilities would be forced to close their doors.

Facility Name	FY '85 Request

Contingency

Both private nonprofit and regional aquaculture association hatcheries have experienced unscheduled shortfalls in funds due to inadequate returns on fish, natural disasters and other contingencies.

(Description Continued)

Based on this experience, the department anticipates that by the end of FY '86 an additional $2,000,000 will be necessary for these kinds of loans to assure the viability of existing hatchery operations. Management of the return of fish to the hatcheries to permit economic operation of the hatcheries is a problem that is being addressed by the Division of Commercial Fisheries, Department of Fish and Game.

Interest Only - First six years

PROGRAM JUSTIFICATION:

Long-term, low-interest loans to qualified nonprofit corporations will enhance the development of Alaska's salmon resources, increase egg production, and create additional jobs. The measure of success of the program will be increased egg capacity due to construction of new nonprofit hatcheries and funding of operational and enhancement loans for existing nonprofit facilities.

Egg production should increase by 90.0 million eggs as a result of three new loans to be made in FY '86. In addition, a total of 11 operational and enhancement loans will be made. Existing facilities currently have a combined egg capacity of 633.7 million eggs.

Financing for these projects is not available from the private sector because of the subsidized interest rates and liberal loan terms necessary to make the projects feasible. Private financial institutions cannot afford to forgive interest and forego principal payments for a six-to-ten year period, nor incur the high risk involved in these loans. It takes several years before revenue from the sale of returning fish is available to make payments.

*Does not include contingency loans.

$398.5

WHAT AMOUNT OF TOTAL ADMINISTRATIVE COSTS ARE OBTAINED FROM LOAN INTEREST, PRINCIPAL OR FEES?

None

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

Description: AS 45.88.010-500 authorizes making loans for energy production utilizing energy sources other than fossil or nuclear fuel. The maximum loan amount is $30,000; the maximum maturity is 20 years and the interest rate is 5% for the first $15,000 of the loan and 15% for the amount of the loan that exceeds $15,000. This is a revolving loan fund which means that, as payments are collected, then those funds become available to be lent out to new borrowers. Interest accrues from the date of the loan and is generally payable on a monthly basis. Loan projects will emphasize the use of renewable energy resources within the State as opposed to nonrenewable resources. These loans will promote economic development in the alternative energy industry and the construction industry.

25% Reduction: A 25% reduction in FY '86 authorized funding will result in a corresponding reduction of 113 loans that could have been made. Lending priorities that emphasize wood stoves, multi-fuel furnaces, wind and hydroelectric systems as top priorities would be established. This will result in a reduction in passive energy systems such as solar heating units and solar sunspaces.

IS LOAN FORGIVENESS ALLOWED? *		☐	☒

PROGRAM JUSTIFICATION:

The purpose of the loan fund is to encourage the use of renewable energy resources within Alaska and limit Alaska's dependence on nonrenewable resources. Recognizing that it takes several years to achieve substantial energy savings, a long-term, low-interest loan program was established. Although some funding is available through private lending institutions, this funding is at a higher interest rate and under stricter terms.

Long-term, low-interest loans make alternative energy projects attractive to homeowners. Energy planning and development is a goal of the State; therefore, alternative energy projects should be encouraged through State loan subsidies.

Expected economic benefits will be seen through a decrease in the number of power projects required to supply the State's energy needs and a decrease in the State's dependence on oil and gas. Subsidizing renewable energy projects now is money which will reduce the long-term costs of additional power projects and the dependency of the State on fossil fuel.

* For purposes of subsidy calculation, a composite interest rate of 5.25 per cent is assumed. This is based upon actual data in FY '84.

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

In FY '85, AIDA received a $3,400.0 appropriation to design a 55 mile road and regional port system linking DeLong Mountains mineral resource area with the coast. This request will fund first year of estimated three to four years construction program for road, dock and port facilities. The total transportation project is estimated to cost approximately $155 - $160 million. A finance plan is being prepared that will outline alternative feasible sources of funding. User fees will be charged to pay operational costs and recover capital costs, including loan repayments. Since the finance plan has not been completed, the terms of the loan are not yet known. Hence, the extent of the subsidy requested, if any, is not known at this time.

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

The loan program provides financing for small communities to purchase bulk fuel oil. An organized municipality or unincorporated village with a population under 2,000, or an individual endorsed by the municipality may apply for a loan. Depending upon a community's needs, up to $50,000 can be borrowed. In most cases, a community is not required to pay any interest on its first bulk fuel loan. An interest rate of 5 percent may be assessed on a community's second bulk fuel loan, and an interest rate based upon the municipal bond rate may be charged on subsequent loans. A bulk fuel loan must be repaid within one year.

No general fund appropriation is requested in FY '86. Loans will be made from the existing loan fund balance and repayments of principal and interest from prior loans.

PROGRAM JUSTIFICATION:

This loan program, established in 1980, is to assist communities in purchasing bulk fuel. A community, or a private individual who has written endorsement from the governing body of the community is eligible for a loan. The program is part of the overall goal of the Investments BRU: "to promote economic development through direct State lending within those industries that are not adequately served by the private sector." The program intended to reduce the cost of energy in the State by promoting regional and local energy self-sufficiency and development of efficient methods to distribute local energy resources.

Economic benefits from the program consist primarily in creating economies of scale for small communities in purchasing bulk fuel and the avoidance of high cost emergency fuel shipments in the winter. Given the magnitude of the subsidy, the direct economic benefits that can accrue to a community are a highly effective way of distributing State resources.

If this program was eliminated, private financial institutions might fill the need for this assistance. However, it is unlikely that the terms of such loans would be as favorable as the loans under this program and collateral requirements might be imposed.

* The interest rate under the program varies according to the number of prior loans under the program. See 3 AAC 87.030. For purposes of subsidy calculation interest rates are assumed to be 4.5% in FY '84, 6.5% in FY '85 and 8.0% in FY '86.

IS LOAN FORGIVENESS ALLOWED?		☐	☒

PROGRAM JUSTIFICATION:

This loan program, established in 1976, is intended to make funds available for the construction, renovation and equipping of child care facilities, including private nonprofit child care facilities. This program is part of the overall goal of the Investments BRU: "to promote economic development through direct State lending within those industries that are not adequately served by the private sector." Loans under the program will make additional child care facilities available statewide.

Success of the program is generally measured by the number of new facilities opened pursuant to loans granted by the department and the number of new child care slots created. The overall level of subsidy is modest when compared to the social and economic benefits of the program. The availability of child care services in the State permits many individuals to enter the workforce and engage in productive careers.

While loans from private financial institutions would be available to potential borrowers under this program if the program were discontinued, it would be at higher interest rates. Additionally, there would be a substantial risk that borrowers might be crowded out by other requests for financing from more traditional enterprises.

PROGRAM JUSTIFICATION:

This loan program, established in 1977, is intended to make funds available to those seeking to restore or improve buildings of historic value. Accordingly, the program is part of the overall objective of the Investments BRU - "to promote economic development through direct State lending within those industries that are not adequately served by the private sector.

In establishing the program, the Legislature declared: "It is the intent of the Legislature to foster an awareness of the need to preserve our historic past; to protect those visible aspects of our invaluable heritage so that present and future generations may continue to be enriched by the originality and strength of Alaska's architectural and cultural beginnings."

Financing projects under the program will be of benefit to the local construction and tourism industries. Most program benefits are unquantifiable, although in the subjective view of some citizens individual projects may be of great importance and value given the modest degree of the subsidy.

Absent this program, private financing for improvements to historical properties would continue to be available through traditional lending sources, although at higher interest rates. No new funds for this program are requested in FY '84. The last appropriation for the program was in FY '84. The program has little effect on private lending institutions.

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

The loan program provides funds for advanced mineral exploration, development or mining in the State. Residents with five or more years mining or prospecting experience in the State may apply for loans as may partnerships if at least half of the partners each have five years mining or prospecting experience and at least half are residents. A corporation may apply if at least 51 percent of its shares are held by persons with at least five years mining or prospecting experience and are residents.

Up to $5,000,000 may be borrowed under the program. Interest is charged at a rate of 10 percent on the total amount of the outstanding loan. Collateral, in the form of mortgages on real property, an assignment of a leasehold interest in mining claims or a security interest in machinery or equipment, may be required to protect the investment of the State. Up to 15 years may be allowed to repay the loan.

No general fund appropriation is requested in FY '86. Loans will be made from the existing loan fund balance and repayments of principal and interest from prior loans.

*Assumed on average to be two years for purposes of subsidy calculation.

PROGRAM JUSTIFICATION:

This program, established in 1980, is intended to make funds available "to underwrite advanced mineral exploration, development, or mining in the State." Accordingly, it is a key part of the overall objective of the Investments BRU: "to promote economic development through direct State lending within those industries that are not adequately served by the private sector." This program represents one of the classic methods of economic development available to a State Government and should be continued.

The economic benefits that are generated from the program are directly tied to the successful development of a primary industry: mineral production. Operating mines produce economic development and benefits across a broad spectrum of the economy including construction, direct employment, processing, manufacturing, transportation, finance and service industries. The benefits of the program cannot be fully appreciated by reference to the sudsidy. Mining ventures traditionally have difficulty in raising investment capital and, therefore, perhaps the primary benefit under the program is the simple availability of funds. Given the potential that exists for mineral development in the State and the permanent economic benefit that can be created through operating mines, the subsidy represents an appropriate expenditure of State funds.

Few, if any, alternatives exist that can generate the kinds of direct benefits offered by this loan program. A technical assistance program to mining enterprises would supplement but not replace the loan program. If available, private financing would only be possible at substantially higher cost.

None

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

The program is for the purchase, construction or installation of energy conservation improvements in existing residential buildings. Depending upon the needs of the borrower and the potential energy benefits from the improvements, up to $5,000 can be borrowed under the loan program. Up to 10 years may be allowed for repayment of the loan. Collateral will be required to secure the obligation to the State. The interest rate charged under the program is based upon an index of municipal bond and varies slightly from month to month. As an example, the interest rate charged in January 1984 was 10.25 percent and the rate for April 1984 was 10.05 percent.

No general fund appropriation is requested in FY '86. Loans will be made from the existing loan fund balance and repayments of principal and interest from prior loans.

IS LOAN FORGIVENESS ALLOWED?		☐	☒

PROGRAM JUSTIFICATION:

This loan program, established in 1980, is intended to make funds available to those seeking to make energy conservation improvements to residential buildings. As has been seen on the national level in recent years, these kinds of improvements, when taken in the aggregate, can have a significant impact on the growth of energy demand.

The program is part of the overall objective of the Investment BRU: "to promote economic development through direct State lending within those industries that are not adequately served by the private sector." The program additionally serves as an ongoing incentive to residents of the State to make energy conservation improvements. Under the terms of the program's enabling legislation, loans may not exceed the total energy savings attributable to the improvement over a 10 year period or $5,000, whichever is less.

Economic benefits in the form of sustained demand and availability of energy saving products and energy savings to consumers accrue to local merchants and borrowers. The State, in general, benefits from reduced reliance on high cost energy sources such as oil, natural gas and electrical generation facilities. The 10 year payback calculation, expressed in terms of energy dollars, and the number of loans made, are good indicators of the success of the program.

* The interest rate for the program was changed by the Legislature on January 1, 1984. Loans made prior to that date were at 5%. Loans made after that date vary according to an average of municipal revenue bond yields. For the second half of the FY '84, the rate is assumed to 10.25%. For FY '85, 10.5% and FY '86, 10.75%.

L2 **LOAN PROGRAM JUSTIFICATION**

(6/84)-12

AGENCY Commerce & Economic Development

CATEGORY Development

PROGRAM Economic Development

TITLE Residential Energy Conservation Fund

REVISED DATE

FY 86

00946

The rate of subsidy under the program has been reduced and stabilized following the implementation of a market-related interest rate in January 1984. Alternatives to the loan program include reinstitution of the grant program for energy conservation improvements which existed prior to July 1983 and elimination of the loan fund. The grant program would have a far greater impact on the State's general fund if the same improvements would be eligible for funding and the funds are made available on an equitable basis throughout the State. Elimination of the loan program would simply shift the demand for these kinds of home improvements to private financial institutions. While interest rates would be higher through private lending institutions, the lack of eligibility would ensure that the new demand would be easily absorbed. Obviously, however, an effective incentive to making energy conservation improvements would be lost.

* We used this line to represent actual loan demands. It does not represent the amount of actual loans made for each fiscal year. Please see L2 for actual amounts of loans made or projected annually.

** The total amount is not available for loans since administrative costs are deducted and 67% of this is unavailable total remains in reserve per Department of Revenue categories for doubtful account reserves, loan amounts committed but not drawn, and other authorizations.

The program provides long-term, low-interest loans to qualified applicants throughout agricultural areas in Alaska for development capital and operating funds for farms and agricultural processing plants. Sources of credit generally available to farmers and related industries are limited in Alaska. Until such time as Alaska establishes sufficient acreage and production to become a viable low-risk industry, the Ag Revolving Loan Fund will continue to be the prime source of credit available, supplying an estimated 90-95% of all ag funding in the state. An example of the need for low-interest loans to provide for an increased chance for a postitive cash flow as quickly as possible to allow self-sufficiency of the farming units and weaning to other financing sources is provided:

Full funding is needed to prevent failure in the final stages of dairy development on the Pt. MacKenzie Agricultural Project. Marketing questions with Matanuska Maid slowed the development of some of the dairy parcels. This delayed development at Pt. MacKenzie was the major reason the limited funding of FY 85 was able to meet the loan demand. The ninth Pt. MacKenzie dairy loan was closed in August 1984, leaving nine projects to be funded and completed. The full appropriation is needed to provide funding for the remaining dairy development loans, plus the increasing number of spring planting loans. A reserve of $5 million is being designated by the ARLF Board to meet operating loan demands, which would almost eliminate making any types of loans other than operating for that year. Nine more dairy parcels at Pt. MacKenzie will need to be funded by FY 86 at approximately $900,000 per farm. Without a $15 million appropriation, other development loans will not be met and other agricultural-rights contract owners with development requirements would lose their parcels due to lack of financing.

Increased loan demand is expected due to increasing numbers of Alaska farms. The USDA Statistical Reporting Service estimates the number of farms in Alaska during 1984 at a record 650, up 50 farms from 1983. This is double the 320 farms reported in 1970. New loan demand also comes as more state and borough disposal agricultural lands have clearing and planting development contractual requirements that must be met or the farmers wil have their properties foreclosed by the state and borough. Increased road access construction during 1984 will increase loan demand as farmers in some areas will for the first time be able to effectively execute their development programs and also realistically look at marketing farm produce. A number of development schedules have been delayed pending completion of road access. Since 1978, 440 DNR agricultural tracts, 68 project tracts, and 50 borough tracts have moved into private hands.

Growth of the red meat processing industry is expected to continue to generate demand for loans to expand existing livestock bases and increased grain production. A couple of groups have been evaluating large pork production units

ARLF

in Delta and in the Matanuska Valley. If one of these groups moves as indicated to the press and to others, a significantly increased market for Alaska barley will be available. The addition of the slaughter facility at Fairbanks will further increase loan demand for expanded red meat production. The increased barley production (6,000 acres increase in 1983) held in 1984 with a possible 1,000 to 2,000 acres above the 1983 total. The development requirements required to qualify for land and clearing loan payment moratorium under SB 45 and SB 47 will further stimulate loan demands for increased crop acreage. If 50 existing and/or new borrowers have new loan demands for expanded crops and/or increased red meat production for an average of $150,000 each, increased loan demand in this area alone would exceed $7 million.

Agricultural development remains in a critical stage where continued fianancing to meet the essential demands from existing agricultural production and from the newly developing parcels must be met. Failure to do so at this point will cripple the existing industry as well as seriously curtail the present agricultural expansion.

PROGRAM JUSTIFICATION:

*Principal deferments have been allowed on 9 loans (760 as of 6/30/84 in resume) which were specifically designed for periods up to 18 months only as dairy farms in order to allow time for construction and generation of cash flow--repayments to occur as soon as milking begins with maximum of 18 months deferment.

Long-term, low-interest loans for farming and farm processing operations has been the purpose of ARLF since its formation in 1953. Growth of the fund from $7.0 in 1978 to $68.0 in FY 85 has been a result of the major commitment made to agriculture by the state in disposal of ag lands and in major Ag Projects such as Pt. MacKenzie and Delta I & II. ARLF is the major source of funding for agriculture in the state, supplying 90-95% of all ag funding, in spite of attempts by the state to encourage other ag funding participation such as CFAB (which has less than 1% of its portfolio in ag loans, and they include all timber loans under that category). Long established existing farmers depend annually on ARLF for operating funds and equipment replacement monies as well as the new farms being developed. More than 163,000 acres of ag rights land has been disposed of and is in various stages of development required by land purchase contracts which must be financed in order to fulfill their contractual obligations. Those, plus the ag project developments in grains and dairy, are at a critical stage. Ag processing facilities for these products have been financed by either ARLF or Ag Action Council and are depending on the expanding production capacities from these developing farms. Because of the fact that both infrastructure and ag production are interdependent and being financed simultaneously, any decrease in funding at this point could create a devestating collapse of the existing ag production and marketing structure, including those well established farms.

ARLF

Until such time as Alaska has established sufficient acreage in production to become a low-risk industry, financing participation from the private section will occur only for the blue-chip farmers, who when they are forced to pay the higher interest rates may well become non-competitive with neighboring farmers. Sources of such credit are quite limited to even well established farmers, although ARLF encourages joint participation in funding with private financing institutions.

Present capitalization of $68.5 million into the revolving fund and a projected demand for $20.0 during FY 85 indicates continued need to increase the funding available. Detailed justification based on types of production, known production costs, geographic differences, and known loan demands from development schedules will be supplied during the budget process.

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

The loan program is designed to allow farmers to handle grain that is not marketable at harvest time by placing it in the grain reserve program. They are able to borrow money to cover crop expenses for that season and then market the grain in response to demand during the course of the year. The program allows the farmers to realize short term cash flow through the loan and then sell by orderly marketing. Grain quality standards, which parallel the USDA program, determine elegibility for loans. Periodic inspections insure conformance of quantity and quality and secure the state's collateral.

The effect of reduced funding in FY 86 should be viewed with knowledge of the constraints that limited loans in FY84. Since loan qualification is entirely dependent upon grain that meets a specified grade and moisture content, the effect of the weather at harvest time creating high moisture content in the grain and additional storage problems due to wet grain resulted in several farmers who were interested in the program not qualifying. At this date, the Delta grain harvest is underway with good weather conditions which will minimize grain drying costs and maximize the number

of farmers who can qualify with good grain for the program. We anticipate significantly increased participation in the program for both this reason and the fact that farmers have experienced positive results from the program which has mitigated initial skepticism and reticence to participate.

The grain reserve program was passed by legislation in 1984 and had $1.6 million appropriated. The current acreage planted could utilize the entire amount of carryover FY 84 and additional FY 85 funding. We realistically project that 20,000 acres will be planted in FY 86 which could qualify for this loan program. This year's acreage is betwee 16,000-18,000 planted in barley; the exact numbers will be known after harvest. The FY 84 carryover funds and the FY 85 appropriation of $.5 million will adequately provide funding through FY 85. Cutting the FY 86 request to eith 75% or 50% of the FY 85 request would severly effect the program at a time when the loan demand is increasing. The Governor's request for FY 85 was $3 million and the appropriation was $.5 million. The projected loan demand indicates that any decrease in funding below the $.5 million could mean that insufficient loan funds were available

The Governor's plan for agriculture was to have $1.0 appropriated annually for three years. Since only $.5 million was appropriated for FY 85, and projected demand justifies it, the FY 86 request is for $1.5 million.

PROGRAM JUSTIFICATION:

This loan program was established by HB 309 in the 1983 legislature. The first loan in FY 84 in this program was closed in March 1984 and the last loans apprved in June 1984. Difficult harvest due to rain, high moisture grain and storage problems reduced grain quality which limited the FY 84 participation. crop and harvest conditions appear to be considerably different in early September 1984, part.cipation in FY 85 could result in 14,000 to 16,000 tons requiring loans under the grain reserve program.

Since the loan program requirements can allow up to three years for storage before repayment, operation funding to continue moisture testing, and fulfilling USDA grain grading requirements must be funded for three successive years, as must be administration of the loans themselves which will occur through the Agricultural Revolving Loan Fund staff and the governor appointed Agricultural Revolving Loan Fund Board.

RE: FY 86 CAPITAL BUDGET

The mortgage demand and subsidy requirements for FY 85 have been revised to reflect the balances available as of July 1, 1984, and current projections. An analysis for FY 86 has also been prepared in connection with the State capital budget submission process. Based upon these projections assets available in the Alaska Housing Finance Corporation Revolving Fund as of July 1, 1985, combined with those estimated to be made available, are sufficient to operate the mortgage purchase activities of the Corporation through FY 86.

Mortgage demand for FY 85 was estimated to decrease 11% from that of the previous year followed by a 10% increase in FY 86. These are felt to be conservative in light of the current activity in the mortgage market. The portion of first mortgage loan activity in the Veterans Mortgage Program was dropped almost 24% in response to the change in the Federally defined eligibility requirements of qualified veterans.

As of June 30, 1983, the Corporation owned in the Alaska Housing Finance Revolving Fund $93,254,000 of mortgage loans originated by Commerce and Economic Development, Division of Veteran's Affairs, bearing interest rates of 7% and 7 1/2%. The attached schedules reflect these loans in the "non conforming" column of the Revolving Fund since the loans were closed on non uniform documents. Staff is exploring the possibility of converting these loans to a security form guaranteed by FNMA or FHLMC enabling them to become "conforming" and available to collateralize subsequent bond issues.

The increase in amounts available for future subsidy requirements as of July 1, 1985 is a result of:

1) Utilization of July 1, 1984, actual balances.

2) Decrease in estimated FY 85 mortgage demand.

3) Increase in projected investment earnings.

00959

4) Re-implementation of the tax exempt bond funded First Time Homebuyers Program pursuant to extension of the "sunset provisions" of the Mortgage Subsidy Bond Tax Act of 1980.

5) Decreases in the level of subsidy required reflecting more efficient methods of raising mortgage capital.

Based upon the current projections it is not anticipated that an appropriation to the Alaska Housing Finance Corporation Revolving Fund is necessary for FY 86. Accordingly, submission of a capital budget will not be required.

DESCRIBE THE PROGRAM AND EXPLAIN IMPACTS ON THE PROGRAM OF RECEIVING IN FY 86 75% OF FY 85 AUTHORIZED GENERAL FUNDS AND 50% OF FY 85 AUTHORIZED GENERAL FUNDS:

The Housing Assistance Loan Fund was created to provide money to originate, purchase or participate in the purchase of loans for rural housing and nonconforming urban housing. Approximately 97% of all loans have been made through a private financial institution and purchased by the Division. The remaining 3% are loans made directly to borrowers by the Division because no private financial institution was willing to service the borrowers' area. The Division has total loans in excess of 1,900 which require computerized accounting. Payments are collected for 30 years and are received for principal and interest. Section 12, Chapter 102, SLA 1983 changed the fund to a revolving loan fund and allows the Division to retain loan principal payments. In FY 86, approximately 14% of the total funds available are from principal payments.

BUDGET REVIEW

Based on past fiscal years' activities, the Division projects financing in FY'86 approximately 643 new loans with $45.0 million in new appropriations, $9.9 million in carryover funds, and $8 million in repaid principal and payoffs. By statute a minimum of 80% of the funds will be utilized in rural Alaska with the remainder available for urban nonconforming properties. The Division is projecting 505 loans for rural housing and 138 loans for nonconforming housing in urban areas. The $50.0 million allocated to rural Alaskan properties represents in most cases the only available source of mortgage funds. These rural funds will construct approximately 231 new dwellings, finance the sale of 208 existing structures, renovate 60 existing structures and finance 160 rental units. It should be noted that in addition to benefits for individual property investors, the expenditure of these loan funds translates into direct employment opportunities for primary consumers in construction labor, materials suppliers, freight companies, and banks. Funds also indirectly affect the local economy when homeowners purchase goods and services in the community.

The analysis of the programmatic effect of receiving 75% of FY 85 general funds in FY 86 must also discuss the overall impact based on the other funds available during FY 85. The FY 85 general fund allocation of $45 million, $15.3 in carry forward funds, and $6.0 in principal repayments will finance 543 loans for rural housing and 128 loans for nonconforming in urban areas. At 75%, the FY 86 general fund allocation would be $33.75 million plus $8 million in principal repayments, and $9.9 million in carryover funds. At 75%, the net dollar effect is a drop from $62.4 million in FY 85 to $47.75 million in FY 86 or about a 24% decrease in the total funding scope of the program. At this level it is estimated that the Division can finance approximately 520 loans, of which about 416 loans would be for rural housing and 104 loans for urban nonconforming housing. This drop in funding would depress economic activity in the regional centers, primarily through a substantial reduction in the number of new housing starts.

The impact on the FY 86 program of receiving only 50% of the FY 85 general funds is even more drastic. At 50% of the FY 85 general fund allocation, $22.5 million from the general fund, $9.9 million in carryover funds, and $8 million from principal repayments would be available in FY 86. At the 50% level, the net dollar effect is a drop from $62.4 million in FY 85 to $36.5 million in FY 86, or a decrease of about 47% of the FY 85 total funds available. The results would be a dramatic decrease in the number of total loans made through the program, from 671 in FY 85 to about 400 in FY 86. This decrease would have its greatest impact on the rural regional centers, and a secondary impact on the Anchorage and Fairbanks economies since most of the supplies flow through those cities. It should be noted that the Division projects a demand for financing in FY 86 of $65.0 million and at this level, the Division would only meet about 50% of that demand. With very little other secondary financing available, many Alaskans could not enjoy the safety and affordability of housing now provided.

PROGRAM JUSTIFICATION:

The Housing Assistance Loan Fund BRU is designed to ensure that, through the delivery of loan funds, the maximum number of eligible Alaskans have access to safe, affordable housing. To meet this objective, the Housing Assistance Division offers to eligible Alaskans housing loan programs that focus on the development of rural housing stock and the upgrade or conversion of nonconforming housing stock statewide. Borrowers are assisted with mortgage loan applications through seven offices of the Division, located in Anchorage, Juneau, Bethel, Dillingham, Nome, Kotzebue and Fairbanks. Direct lending services are also available to qualified borrowers whose loan applications are unattractive to private lending institutions.

The administration and delivery of loan funds throughout Alaska assists in meeting the Division's continuous goal of developing safe, affordable, and quality housing for all Alaskan citizens. Economic development is enhanced regionally as well as locally through creation of construction employment, use of professional services, transportation of building materials, expenditures in local areas by construction laborers, and improvements to the community in quality housing stock.

PROGRAM Development

TITLE Housing Assistance

REVISED DATE

FY 86

00069

The improvement of rural housing stock is a major factor in stabilizing growth of both regional and remote sites through the enhanced quality of life that it provides. Attractive, affordable housing is a catalyst in encouraging the private investment necessary to develop a healthy diversified economic base and a high standard of living.

As the loan portfolio increases, staff travel needs grow. Current staff activities include assistance with applications, housing inspections, loan closings, and construction management assistance to grant recipients. Further travel funds requested will provide for development of education and information outreach programs within the Division. Such programs will focus on basic mortgage lending information, collection of housing need data and general assistance functions by field staff.

The Division believes that the successful transition to healthy self-sufficient economies in rural communities of Alaska is affected by two factors: (1) loan fund delivery, and (2) an accompanying understanding by potential borrowers of the role such funds play in general economic development of their region. The request for loan funds supports the plans of this division to contribute to the growth and development of rural Alaska.

The Home Ownership Assistance Fund (HOAF) consists of money appropriated to it by the legislature. Money in the fund is used solely to assist persons of lower and moderate income to purchase single-family homes financed under AS 44.47.460 - 44.47.560 by providing a subsidy to those persons in the amount that is necessary to reduce the annual interest rate paid on the mortgage loan to a minimum of six percent.

Approximately 36% of the Housing Assistance Loan Fund BRU request and other available funds will be used to fund 251 loans under the HOAF program. The amount required in subsidy funds for FY 86 is $630,000.

A major benefit of the HOAF subsidy is to increase the number of rural residents served by the housing program. The only positive alternative to a HOAF subsidy would be to lower interest rates for all Housing Assistance loan programs to six percent.

STATUTORY LOAN RATE

Nonconforming Housing: The interest rate on a mortgage loan for nonconforming housing that is not defined as rural, and which is originated or purchased in whole or in part under AS 44.47.380, is one-quarter percent more than the interest rate, as determined under AS 19.56.098(g)(1)-(4), on a mortgage loan purchased under 18.56.098(a) from the proceeds of the most recent applicable issue of taxable bonds before the origination or purchase of the nonconforming housing mortgage loan.

Rural Owner Occupied Housing: The interest rate on a mortgage loan for rural housing originated or purchased in whole or in part under AS 44.47.380 is one percent less than the interest rate, as determined under AS 18.56.098(g)(1)-(4), on a mortgage loan purchased under AS 18.56.098(a) from the proceeds of the most recent applicable issue of taxable bonds before the origination or purchase of the rural housing mortgage loan.

Nonowner Occupied Housing: The interest rate on a mortgage loan for non-owner occupied housing, currently 10.5%, is established in AS 44.47.520(b).

IN THE HOUSE

BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

CS FOR HOUSE BILL NO. 105 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes, establishing conditions under which the bonds or notes for the DeLong Mountain transportation project may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15.410 is amended to read:

Sec. 37.15.410. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money that [WHICH] may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $86,525,000 [$62,825,000] is authorized to acquire, equip, construct, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.510. The principal of and interest on these bonds shall be paid out of and secured by the gross revenues derived by the state from the ownership, lease, use, and operation of the airports, and of all the facilities of them and out of any other revenues or money that [WHICH] the state legislature may provide exclusive of any state tax or license.

* Sec. 2. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project.

* Sec. 3. Before bonds or notes authorized under sec. 2 of this Act may be issued the Alaska Industrial Development Authority shall comply with

AS 44.88.173 and, to the extent feasible, shall incorporate into the final finance plan for the DeLong Mountain transportation project the following terms and conditions:

(1) Cominco, Ltd. is required to agree in writing that

(A) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project based on the use Cominco Alaska makes of the facilities compared to the use made by others;

(B) if Cominco Alaska ceases to develop the Red Dog Mine after costs or debts have been incurred for the project, Cominco, Ltd. will repay the Alaska Industrial Development Authority for those costs and debts;

(C) toll fees paid by Cominco Alaska for the use of facilities constructed as part of the project to the Alaska Industrial Development Authority may be periodically adjusted if the price of zinc rises above a level that yields a return on investment commensurate with risk;

(2) land in the Cape Krusenstern National Monument is conveyed to NANA Regional Corporation by the United States Department of the Interior;

(3) NANA Regional Corporation is required to agree in writing to make available to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the project and land needed for future expansion of the road and port;

(4) tax exempt financing for the project is used to the maximum extent possible;

(5) a toll schedule, that may be periodically adjusted, is established for use of facilities constructed as part of the project that

(A) ensures a reasonable return on the state's investment in the project; and

(B) guarantees equitable access to the facilities by all users.

* Sec. 4. Before bonds or notes authorized under sec. 2 of this Act may be issued the Alaska Industrial Development Authority shall

(1) report in writing to the legislative budget and audit committee that the conditions under sec. 3 of this Act have been met; and

(2) agree with the Department of Revenue in writing to deliver all money generated by the DeLong Mountain transportation project, other than money necessary for payment of the principal and interest on bonds or notes issued under sec. 2 of this Act, to the Department of Revenue for deposit in the general fund.

* Sec. 5. This Act takes effect immediately in accordance with AS 01.-10.070(c).

Telephone Number: 842-1087

STATE OF ALASKA
DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT
DIVISION OF INVESTMENTS

LOAN POLICIES AND PROCEDURES

CHILD CARE FACILITIES REVOLVING LOAN FUND
AS 44.33.240-.275

LOAN PURPOSES

Loans may be made for the construction, renovation, and equiping of child care facilities in the State. Loan funds may not be used to reimburse an applicant for expenses which were paid for more than six months before receipt of the application by the Division.

ELIGIBILITY

A facility qualifies as a "child care facility" if the principal purpose of the facility is to provide care for children not related by blood, marriage, or legal adoption, including, but not limited to, day care centers, family day care homes, and schools for preschool age children.

LENDING LIMITS

The maximum loan amount is $50,000.

INTEREST RATE

Interest will be charged at the rate of seven (7%) percent.

LOAN TERMS

The maximum loan term is 20 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan. If a child care facility ceases operation, any loan to the facility from the fund is due on the date the facility ceases operation.

COLLATERAL

All loans must be secured by adequate collateral to protect the investment of the State in the event of default. The collateral may include, but is not limited to, a lien on buildings, equipment and machinery, marketable securities and approved assignments.

The specific amount to be loaned against any collateal offered shall be determined by the loan committee.

INTERIM FINANCING

Interim construction financing is not available under this program. No loan funds may be disbursed until construction or renovation is 100% complete. Applicants should obtain written loan approval prior to obtaining interim financing. To be considered interim financing, Promissory Notes must have a term of six months or less and the debt must have been incurred and the note executed within six months prior to receipt of the application by the Division.

REFINANCING

Refinancing is not allowed under this program. An interim note may be refinanced if it has a term of six months or less and the debt was incurred and the note executed within six months prior to receipt of the application by the Division.

LOAN APPROVAL

Authority for approval of all loans rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on loan applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the application. No loan will be granted without approval of a majority of the loan committee.

LOAN COSTS

The borrower shall pay all direct costs incurred by the State in processing the application for a loan, including, but not limited to, the cost of credit reports, title insurance, inspection expenses, or other direct costs. The State is not liable for any costs incurred by the borrower during the application process.

ASSUMPTIONS

Assumptions will not be allowed unless it is in the State's best interest to do so and the applicant meets all statutory eligibility requirements. Assumptions, if granted, must serve the policies and purposes of the loan program.

SUBORDINATIONS

In general, subordination requests will only be considered when they involve improvement to the collateral held by the State. All requests for subordination must be approved by the loan committee. In order to apply for a subordination, you will need to submit a written request to the division describing the following:

1. the amount you wish the State to subordinate to;
2. the reason for the request; and
3. documentation to support the value of the added improvements.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

CHILD CARE FACILITY LOAN APPLICATION CHECK-OFF LIST

The following information **is required** in order to process your application. Please use this list to make sure all information is submitted (incomplete applications will not be accepted). Please retain a copy of this application for your records.

_____ 1. **Application for Child Care Facility Loan:** Be sure the form has been completed and signed. (pages 4 and 5)

_____ 2. **Letter of Intent:** You must include copies of bids or quotes to document the total cost of the proposed project. (page 6)

_____ 3. **Photographs or Drawings:** Which clearly illustrate the project to be funded. (page 7)

_____ 4. **Collateral:** You will need to include documentation to verify the value of the collateral being offered to secure the loan. You must include the following:

_____ a. A copy of your tax assessment notice or appraisal;

_____ b. A copy of your existing title insurance policy or a copy of the Warranty Deed for your residence.

_____ 5. **Individual Financial Statement.** (pages 8 and 9)

_____ 6. **Business Financial Statement.** (pages 10 and 11)

_____ 7. **Actual Statement of Profit and Loss.** (page 12)

_____ 8. **Projected Statement of Profit and Loss.** (page 13)

_____ 9. **Personal Resume:** Include three references. (page 14)

_____ 10. **Personal Resume:** Include three references for the manager of the facility if not the applicant or coapplicant. (page 14)

_____ 11. **Business Resume.** (page 15)

_____ 12. **Credit Authorization:** Each form must be completed and signed. (page 16)

_____ 13. **Authorization to Verify Financial Information.** (page 17)

_____ 14. **Federal Tax Returns:** You must include complete copies of your last three years Federal Income Tax Returns. You must also submit tax returns for individuals owning 10% or more of the corporation, as well as the corporation's returns. Do not send original documents as they will not be returned.

_____ 15. **Licensing Requirements:** If you are resident of Anchorage, Anderson, Bethel or any other community that licenses or regulates child care facilities, you may wish to contact the appropriate local agency for information concerning the operation of your facility.

STATE OF ALASKA
DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT
DIVISION OF INVESTMENTS

LOAN POLICIES AND PROCEDURES

ALTERNATIVE TECHNOLOGY AND ENERGY REVOLVING LOAN FUND
AS 45.88.010-.500

ALTERNATIVE ENERGY

LOAN PURPOSES

Loans may be made for the purchase, construction and installation of alternative energy systems, including, but not limited to, the following: woodstoves with catalytic converters, catalytic converters for woodstoves, solar systems, wind systems, hydro systems, and centralized multifuel heating systems. Loan funds may not be used to reimburse an applicant for expenses which were paid for more than six months before receipt of the application by the Division.

LENDING LIMITS

The maximum loan amount is $30,000.

INTEREST RATES

Interest will be charged at the rate of 5% for the first $15,000 of the loan and 15% for the amount of the loan that exceeds $15,000. This will be computed as a composite rate.

LOAN TERMS

The maximum loan term is 20 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan.

COLLATERAL

All loans must be secured by adequate collateral to protect the investment of the State in the event of default. In virtually all cases, this will require a Deed of Trust against the property receiving the improvements. A fire insurance endorsement and title insurance policy will be required for virtually all loans over $15,000. The specific amount to be loaned against any collateral offered shall be determined by the loan committee.

REFINANCING

Refinancing is not allowed under this program. An interim note may be refinanced if it has a term of six months or less and the debt was incurred and note executed within six months prior to receipt of the application by the Division.

CONTROLLED DISBURSEMENT

Loan proceeds will be disbursed to the applicant as documented and supported by labor and material estimates submitted with the loan application. This documentation must clearly describe the items being purchased or the project to be financed. In addition, within 90 days after the loan has closed, the division will require copies of all paid invoices and receipts to substantially support the estimates that were submitted with the loan application. Do not send original documents as they will not be returned.

For loans under $10,000, the loan proceeds will be disbursed at closing.

Loans over $10,000 will be disbursed in phases after the date of closing in amounts that best protect the State's investment in the project.

LOAN APPROVAL

Authority for approval of all loans rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on loan applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the application. No loan will be granted without approval of a majority of the loan committee.

LOAN COSTS

The borrower shall pay all direct costs incurred by the State in processing the application for a loan, including, but not limited to, the cost of credit reports, title insurance, inspection expenses, or other direct costs. The State is not liable for any costs incurred by the borrower during the application process.

INSPECTIONS

The project must be completed and ready for inspection within 90 days from the loan closing date.

ASSUMPTIONS

Assumptions will not be allowed unless it is in the State's best interest to do so and the applicant meets all statutory eligibility requirements. Assumptions, if granted, must serve the policies and purposes of the loan program.

SUBORDINATIONS

In general, subordination requests will only be considered when they involve improvement to the collateral held by the State. All requests for subordination must be approved by the loan committee. In order to apply for a subordination, you will need to submit a written request to the division describing the following:

1. the amount you wish the State to subordinate to;
2. the reason for the request; and
3. documentation to support the value of the added improvements.

STRUCTURAL MODIFICATIONS

All modifications to a structure or improvement financed under this program must be submitted to the Division of Investments for written approval prior to the modification.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

ALTERNATIVE ENERGY LOAN APPLICATION CHECK-OFF LIST

The following information **is required** in order to process your application. Please use this list to make sure all information is submitted (incomplete applications will not be accepted). Please retain a copy of this application for your records.

_____ 1. **Application for Alternative Energy Loan:** Be sure the form has been completed and signed. (pages 4 and 5)

_____ 2. **Letter of Intent.** (page 6)

_____ 3. **Individual Financial Statement:** Be sure the form has been completed and signed. (pages 7 and 8)

_____ 4. **Business Financial Statement. (pages 9 and 10)**

_____ 5. **Credit Authorization:** Each form must be completed and signed. One of these forms must be for the financial institution which has a lien (if any) against the proposed collateral. (page 11)

_____ 6. **Authorization to Verify Financial Information.** (page 12)

_____ 7. **Employment Verification:** The top of this form should be completed by the applicant, then returned with the application. If you are self-employed, you must submit a signed copy of your most recent complete federal tax return. (page 13)

_____ 8. **Federal Tax Return:** You must submit a copy of the front page of your most recent federal tax return.

_____ 9. **Collateral:** You will need to include documentation to verify the value of the collateral being offered to secure the loan. You must include the following:

_____ a. a copy of your tax assessment notice or appraisal;

_____ b. a copy of your existing title insurance policy or a copy of the Warranty Deed for your residence.

_____ 10. **Photographs:** You must submit recent photographs of the proposed collateral. (page 14)

_____ 11. **Solar Loan Guidelines:** If you are applying for a solar heating project, you must comply with these guidelines. (page 15 and 16)

_____ 12. **Solar Specifications:** If you are applying for a solar heating project, the solar specifications form must be completed and returned. (page 17)

_____ 13. **Centralized Multi-Fuel Heating System Guidelines:** If you are applying for a centralized multi-fuel heating system, you must comply with these guidelines. (page 18)

SOLAR LOAN GUIDELINES

ALL SOLAR HEATING UNITS AND SUNSPACES

In addition to the specific requirements listed in the following sections, all solar heating units and sunspaces should meet the following guidelines:

1. The design must have the PRIMARY INTENT of being an alternative energy source and this design must emphasize energy performance over aesthetics (i.e., maintaining a year-round growing environment for plants or including hot tubs, swimming pools, and similar items would disqualify projects under this program).

2. Site pictures, drawings, as-built surveys and documentation of solar access showing a prime solar fraction of at least 70% or more must be provided. Solar access can be measured by using a Lewis Solar Site Selector, a Solar Pathfinder or by other appropriate instruments approved by the department and must be accompanied by corresponding pictures. Roof overhangs and pony wall-like obstructions must be considered in the efficiency of your design.

3. Framing should be of wood or equivalent with a thermal break. All frame walls must be insulated to at least R19, frame floors (over an unheated airspace) insulated to at least R30 and the roof insulated to at least R30.

4. Masonry foundations must be insulated with 2" extruded polystyrene (R10) or equivalent below grade to 42 inches (or the area standard) and with 4" styrofoam or equivalent above grade. A vapor barrier must be provided.

5. Glazing should have a R-value greater than 1.5 with transmittance greater than .75.

6. The design must provide for proper circulation of the heated air to the existing living areas and for the return of cool air. If natural convection is to be used, vents must be placed at appropriate intervals for a balanced heat flow. Occupant-operated windows and doors can be of a means of providing air circulation and will be allowed on loans $15,000 and under. All loans over $15,000 will require automatic circulation. The circulation should provide at least 2 cubic feet per minute per square foot of glazing and be equipped with automatic controls. An exhaust fan or exhaust vents must be provided to protect against overheating by venting to a storage mass or to the out of doors. On all loans over $15,000, this exhaust system must be automatically controlled.

ADDITIONAL REQUIREMENTS FOR SOLAR HEATING UNITS

A solar heating unit is attached to the residence and is able to be sealed off from the existing living space. It is designed and constructed to provide collection and use of the sun's radiation. The solar heating unit must act as an air heater for the existing structure, must be isolated from the living area, and contain no auxiliary heating system. The entire project should comply with the following guidelines in order to be eligible, whether or not the entire project is to be funded by this program. The items to be funded must be related to the construction and purchase of the solar heating unit and must be an integral part of the solar heating unit as an alternative heating system.

1. The solar heating unit must be isolated from the living area and access may be through an exterior-type door. All glazing on the interior wall(s) should have movable shades or shutters to insulate the glazing to at least R4. The interior wall(s) glazing cannot exceed 25% of the total interior wall(s) area. All doors on exterior walls must be thermal insulated doors.

2. Heat loss and heat gain calculations may be required to document the solar efficiency of your proposed structure.

3. All glazing must be within 30 degrees east or west of true south and between a tilt of 60 to 90 degrees. No glazing in the end walls or skylights/roofs will be funded or allowed in the design. 70% of the interior south facing wall must be glazed.

4. Absorbers and thermal mass should be provided. Thermal mass is normally of concrete, water or phasechange materials. If the pony wall exceeds 12 inches, the storage mass on the floor will not be funded. Funding for storage mass on the floor cannot exceed $10.00 per square foot.

5. All glazing in the solar heating unit can be provided with movable insulation to insulate the windows to at least R5. The homeowner should be aware that if they choose to install the above there may be condensation problems with interior window insulation which may result in damage to the window structure.

6. The length of the end walls cannot exceed 12 feet.

7. The homeowner shall not modify a structure or improvement financed under the provisions of this program in any manner which is not in compliance with these guidelines during the life of the loan. All modifications to a structure financed under this program must be submitted to this division for prior written approval.

8. Applicants seeking financing for a solar heating project in conjunction with the construction of a new building must provide written confirmation that the long-term lender is not also financing the solar heating aspect of the total construction project. No loan funds will be disbursed until the building is complete and the long-term financing has been finalized.

ADDITIONAL REQUIREMENTS FOR SUNSPACES

A solar sunspace is designed and constructed to collect and use the sun's radiation and is an integral part of the living area. Sunspaces should also meet the following standards to be eligible:

1. Monthly heat loss and gain calculations must be performed to document the solar efficiency of your project. The calculations can be performed by your architect, engineer or a qualified homeowner.

2. All glazing must be within 30 degrees east or west of true south and between a tilt of 60 to 90 degrees. No glazing in the end walls or skylights/roofs will be funded, and the nonsouth glazing must be within a 75% to a 25% ratio.

3. The glazing in the sunspace must be provided with movable insulation to insulate the windows to at least R5. The homeowner should be aware that there may be condensation problems with interior window insulation which may result in damage to the window structure.

4. The loan program is concerned with and will only fund the items that are related to the alternative heating system. Items to be funded include but are not limited to the following: south-facing glazing, movable window insulation, ventilation and circulation system to transport the heated air, and building components that are not conventional or considered normal construction that will make the solar system more efficient (i.e., insulation for the walls that is over R19 or insulation for the roof and floor that is over R30).

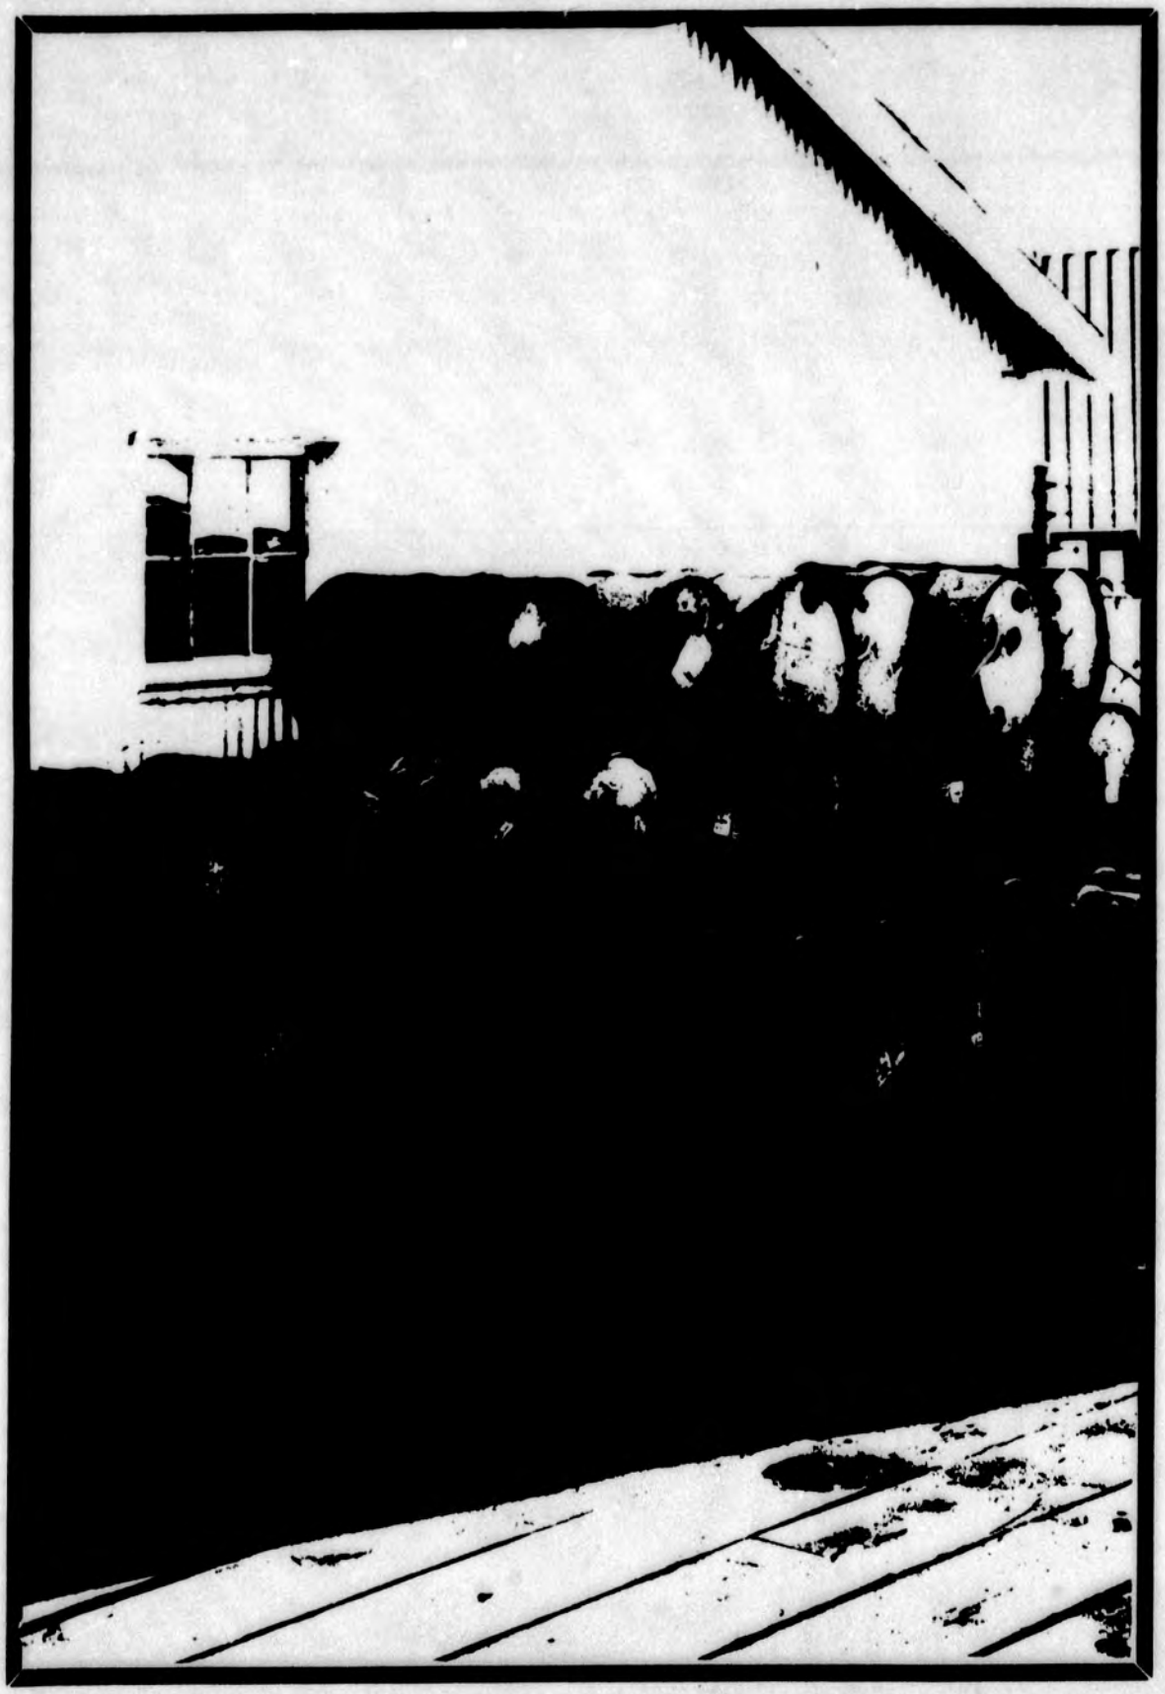
CENTRALIZED MULTI-FUEL HEATING SYSTEM GUIDELINES

1. A multi-fuel heating system includes all components which are linked together to form a system; such as wiring, plumbing and ducting. Fuel oil tanks and oil lines, although necessary, do not qualify for loan funding. AS 45.88.500(b) is read to modify AS 45.88.500(a)(2)(E) such that other fossil fuels can be used in conjunction with wood or coal; but as backup only and are not fundable.

2. Coal storage sheds, wood sheds, and/or any other components related to a multi-fuel system which are not mechanically connected to the multi-fuel furnace are not eligible for funding.



3. A multi-fuel heating system does not include free standing stoves or fireplace inserts. The only stoves which can be funded as defined under AS 45.88.500(a)(2)(D) are wood stoves with catalytic converters. No zero clearance fireplaces or fireplace inserts are eligible for funding.

4. If the labor estimate exceeds 40% of the total cost of a multi-fuel system, the applicant must supply at least one additional estimate to document the cost of the proposed labor.

5. All boilers financed under this program must meet Alaska State Department of Labor safety standards (A.S.M.E. approved or equivalent).

6. Applicants seeking financing for a multi-fuel heating system in conjunction with the construction of a new building must provide written confirmation that the long-term lender is not also financing the heating system. No loan funds will be disbursed until the building is complete and long-term financing for the building has been finalized.

LOAN POLICIES AND PROCEDURES

BULK FUEL REVOLVING LOAN FUND
AS 45.87.010-.050

LOAN PURPOSES

Loans may be made to assist communities in purchasing bulk fuel oil.

ELIGIBILITY

Loans may be made to an organized municipality or unincorporated village with a population under 2,000, or an individual with a written endorsement from the governing body of the community.

LENDING LIMITS

The maximum loan amount is $50,000.

INTEREST RATE

In most cases, a community is not required to repay any interest on its first bulk fuel loan. An interest rate of 5% may be charged on a community's second bulk fuel loan, and an interest rate based upon the municipal bond rate may be charged on a community's third bulk fuel loan and any additional bulk fuel loans.

LOAN TERMS

The loan must be repaid within one year.

COLLATERAL

At present, there is no collateral required to secure bulk fuel loans.

LOAN APPROVAL

Authority for approval of all loans rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on loan applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the applications. No loan will be granted without approval of a majority of the loan committee.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

GRANTS FOR BULK FUEL STORAGE

Grants to communities for bulk fuel storage are available on a one-time only basis for amounts up to $100,000. For information on this grant program, please contact the:

Department of Community and Regional Affairs
Division of Municipal and Regional Assistance
949 E. 36th Avenue, Room 400
Anchorage, Alaska 99501

BULK FUEL LOAN AGREEMENT
(AS 45.87)

THIS AGREEMENT is made this _____ day of _____, 19 _____, BY AND BETWEEN the State of Alaska, Division of Investments ("Lender") and _____ _____ ("Borrower").

1. The Lender, subject to the terms and conditions set forth in this agreement, agrees to loan an amount of money not to exceed $_____ to Borrower to enable it to purchase an emergency or annual fuel supply for use in the village of _____ and to pay for the necessary transportation costs.

2. Borrower agrees to use the proceeds of the loan only for purchasing the emergency or annual fuel supply and paying for the necessary transportation costs of the fuel to the village of _____. Borrower further agrees that it will obtain approval for the transportation costs from Lender before incurring them and before using the proceeds of the loan to pay for them.

3. Borrower further agrees that it will not use the proceeds of the loan to:
   (a) purchase aviation gas, unless the Borrower certified in writing that aviation gas will be used only for local ground transportation, such as snow machines and outboard motors;
   (b) subsidize a business; or
   (c) make a profit unless the profits are used to purchase additional community fuel supplies.

4. The Borrower further agrees that, before the Lender loans money to the Borrower under this Agreement:
   (a) The Borrower will provide information satisfactory in content and quality to the Lender on the following:
      (1) the reason for the fuel shortage or need for assistance; and
      (2) the types of fuel and the quantity of fuel required as determined from a survey of the community.
   (b) The Borrower will submit to the Lender information about the shortage of fuel, the bulk storage available for fuel, the resale cost of the fuel in the community, and other fuel related information requested by the Lender.
   (c) The Borrower will submit to the Lender a resolution of the governing body of the community, in the form attached, authorizing the Borrower to enter into and execute this Agreement, a promissory note evidencing the loan, and such other documents as the Lender may require. The resolution will authorize the Borrower to borrow from the Lender an amount not to exceed $ _____ and will further authorize completion of the note as described in paragraph 5, below.

5. The Borrower hereby authorizes the Lender to fill in the blanks in the attached Promissory Note with (1) the amount of the principal sum once that amount is finally determined, but not to exceed $ _____, (2) the date interest will be charged on the loan, and (3) the rate of interest that will be charged on the loan. The Lender will send to the Borrower, by certified mail with return receipt requested, a copy of the completed Promissory Note. The Borrower has five (5) days from receipt of the completed Promissory Note to notify the Lender, by certified mail with return receipt requested, if the completed Promissory Note is unacceptable to the Borrower. If the Lender is so notified, then the completed Promissory Note is voided and no loan proceeds will be disbursed.

6. The Borrower agrees to repay the loan over a period of no longer than one year pursuant to the terms of the promissory note, to provide the collateral for the loan that the Lender may require, and to execute documents and to take action as the Lender may require in connection with the loan and the securing of the loan with collateral.

7. The Borrower agrees that no person or persons shall, on the grounds of race, creed, color or national origin, be excluded from participation in, be denied the proceeds of, or be subject to discrimination in the use of this loan.

8. This Agreement shall be governed by the laws of Alaska.

9. The Parties hereto have excuted this Agreement as of the date above written.

BULK FUEL PROMISSORY NOTE
(AS 45.87)

NOTE: Under the provisions of paragraph 5 of the Bulk Fuel Loan Agreement, executed between the undersgined and the State of Alaska, Division of Investments on _____, 19 _____, the Division of Investments is authorized to complete certain terms in this promissory note. Please refer to the Agreement.

For value received, the Undersigned _____ promises to pay to the order of the State of Alaska, Division of Investments, at Pouch D, Juneau, Alaska 99811, or at any other place the holder of this Note may direct in writing, the principal sum of (to be completed by the Division) $ _____ with interest from (to be completed by the Division) _____, 19 _____, at the rate of (to be completed by the Division) _____ per centum (_____%) per annum on the balance remaining from time to time unpaid. Interest will start on the date the funds are actually disbursed, and the Undersigned authorizes the Division to insert that date on this Note. The Undersigned hereby authorizes the Division to fill in the blank in the preceding sentence with the amount of the principal sum, not to exceed (to be completed by the Undersigned) $_____, when that amount is finally determined, if the Division mails certified, return receipt reqested, a copy of the completed Note to (to be completed by the Undersigned) _____ at (to be completed by the Undersigned) _____ upon its completion.

The principal and interest shall be due and payable as follows: A lump sum of (to be completed by the Division) $ _____ plus interest shall be paid on or before (to be completed by the Division) _____, 19 _____, and the balance shall be paid in equal monthly installments of (to be completed by the Division) $_____ commencing on the first day of each month thereafter until the balance is paid in full.

Under this Note, if a payment is not received by the Division when due (a "default") and if the payment is not made prior to the due date of the next payment, the entire unpaid sum shall at once become due and payable at the option of the holder of this Note. Failure to exercise this option shall not constitute a waiver of the right to exercise the same option in the event of any subsequent default. If any suit or action is instituted to collect this Note or any part of it, the Undersigned promises and agrees to pay, in addition to the costs and disbursements provided by statute, a reasonable sum as attorney fees in such suit or action.

The Undersigned hereby waives demand, protect, and notice of demand, protest of nonpayment, and expressly agrees that this Note or any payment hereunder may be extended from time to time, and consents to the acceptance of security or further security, including other types of security, all without in any way affecting the liability of the Undersigned. This Note shall be governed by the laws of the State of Alaska.

P.O. Box 370
Dillingham, Alaska 99576
Telephone Number: 842-1087

STATE OF ALASKA
DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT
DIVISION OF INVESTMENTS

FISHERIES ENHANCEMENT REVOLVING LOAN FUND
AS 16.10.500-.620

LOAN PURPOSES

Loans may be made for planning, construction, and operation of fish hatchery facilities, including preconstruction activities necessary to obtain a permit, construction activities to build the hatchery facility, and the costs to operate the facility for not more than the first ten years (to be loaned annually). Loan funds may not be used to reimburse an applicant for expenses which were paid for more than six months before receipt of the application by the Division.

ELIGIBILITY

Loans may be made to qualified regional associations or private, nonprofit corporations who have obtained a private, nonprofit hatchery permit from the Alaska Department of Fish and Game. Loans may also be made for planning and preconstruction purposes prior to receipt of a hatchery permit from the Alaska Department of Fish and Game.

LENDING LIMITS

The maximum loan amount is $10,000,000. If a request is for more than $1,000,000, the applicant must be a regional association or a private, nonprofit corporation approved by the regional association in the specific area of the proposed hatchery development.

LOAN TERMS

The maximum loan term is 30 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan. No repayment of the principal is required for an initial period of six to ten years; no interest on the principal shall accrue during that period.

INTEREST RATE

Interest will be charged at the rate of nine and one-half (9½) percent.

COLLATERAL

All loans must be secured by collateral to protect the investment of the State in the event of default. The collateral may include, but is not limited to, a lien on lands, buildings, equipment, machinery, marketable securities, approved assignments including assignment of enhancement tax receipts, or sale of surplus fish from the hatchery. The specific amount to be loaned against any collateral shall be determined by the loan committee.

REFINANCING

Refinancing is not allowed under this program. An interim note may be refinanced if it has a term of one year or less and the debt was incurred and note executed within six months prior to receipt of the application by the Division.

CONTROLLED DISBURSEMENT

Disbursement of loan funds will be made in a manner prescribed by the Division of Investments.

LOAN APPROVAL

The Division of Investments will contact other State agencies, such as the Alaska Department of Fish and Game, to assist with technical evaluation of a loan application.

Authority for approval of all loans rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on loan applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the application. No loan will be granted without approval of a majority of the loan committee

LOAN COSTS

The borrower shall pay all direct costs incurred by the State in processing the application for a loan, including, but not limited to, the cost of credit reports, title insurance, inspection expenses, or other direct costs. The State is not liable for any costs incurred by the borrower during the application process.

ASSUMPTIONS

Assumptions will not be allowed unless it is in the State's best interest to do so and the applicant meets all statutory eligibility requirements. Assumptions, if granted, must serve the policies and purposes of the loan program.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

FISHERIES ENHANCEMENT LOAN APPLICATION CHECK-OFF LIST

The following information **is required** in order to process your application. Please use this list to make sure all information is submitted (incomplete applications will not be accepted). Please retain a copy of this application for your records.

_____ 1. **Application for Fisheries Enhancement Loan:** Be sure the form has been completed and signed by an individual authorized by the corporate resolution in item #14, below. (pages 4 and 5)

_____ 2. **Letter of Intent.** (page 6)

_____ 3. **Copy of all Permits:** Include copies of all permits necessary for construction of the hatchery facility or a schedule indicating when required permits will be obtained.

_____ 4. **Copy of Contractor's Bid:** For planning, construction, and operational costs. The division may require competitive bids on all loans in excess of $100,000.

_____ 5. **Copy of Nonprofit Hatchery Permit:** Issued by the Alaska Department of Fish and Game. Include the Basic Management Plan and current Annual Management Plan.

_____ 6. **Copy of Nonprofit Status:** Issued by the Internal Revenue Service or by the Alaska Department of Revenue.

_____ 7. **Copy of Qualification:** For loans to private, nonprofit corporations in excess of $1,000,000, include a letter of approval from the qualified regional association.

_____ 8. **Financial Statement:** Include your most recent annual statement and the current month end statement. (pages 7 and 8)

_____ 9. **Projected Statement of Profit and Loss:** Include actual figures currently available and projected figures over the expected term of all anticipated future State loans you may require. (page 9)

_____ 10. **Personal Resume:** Include a resume for the hatchery manager and all key personnel. (page 10)

_____ 11. **Business Resume.** (page 11)

_____ 12. **Federal Tax Returns:** You must include complete copies of your last three years Federal Income Tax Returns. Do not send original documents as they will not be returned.

_____ 13. **Credit Authorizations:** Each form must be completed and signed. (page 12)

_____ 14. **Corporate Resolution:** Include a copy of the Corporate Resolution Form authorizing the corporation to obtain this loan and authorizing an individual to execute all loan documents, if the loan is approved. (pages 13 and 14)

_____ 15. **Consent to Release Information.** (page 15)

Are there or have there ever been any judgments, bankruptcy, garnishments or other legal proceedings against you? (If none, please state "None." If any, give particulars.)

MANAGEMENT OF CORPORATION

(1) Names of all officers, directors and their annual compensation, including salaries, bonuses, fees, withdrawals, etc.
(2) Stockholders not otherwise listed—(five largest).
(3) For each stockholder owing 10% or more of the stock include a current financial statement and three (3) credit authorizations.

Name and Address	Annual Compensation	Office Held	Percent Ownership

On behalf of the corporation, I certify under penalty of perjury that all of the information contained in this application and any attachments to it is true, accurate and complete. I am aware that the maximum penalty for perjury, a Class B felony under AS 11.56.200(c), is a fine of up to $50,000 (AS 12.55.035(b)(2)) and imprisonment for up to 10 years (AS 12.55.125(d)).

I agree that if any information contained in this application and attachments is false, inaccurate or incomplete, the division will deny the application. I also agree that if I receive a loan based on this application and attachments and any information contained in this application and attachments is later determined to be false, inaccurate or incomplete, then the loan will be cancelled and I will be immediately liable to repay the total I owe. I further agree that if any application submitted to the division is denied or if a loan that has been made is cancelled due to false, inaccurate, or incomplete information, I will no longer be eligible for any future benefits under the Fisheries Enhancement Loan Program.

The State is authorized to obtain any and all credit reports and verification needed to evaluate this application, and the cost of obtaining these reports will be paid by the applicant.

CORPORATE RESOLUTION

_____, Alaska _____, 19 _____

I, _____, Secretary of the _____, a corporation organized and existing under and by virtue of the laws of the State of Alaska do hereby certify that at a meeting of the Board of Directors of said corporation, duly and regularly called and held on the _____ day of _____, 19 _____, at which a quorum was present and voting, the following resolutions were unanimously adopted:

BE IT RESOLVED, that any _____ of the following named officers or employees of this corporation:

NAME	POSITION
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

acting for and on behalf of this corporation and as its act and deed, be and they are hereby authorized and empowered:

(a) To borrow from the State of Alaska, Department of Commerce and Economic Develoment, Division of Investments, on such terms as may be agreed upon between the said officers or employees of said Division, such sum or sums or money as in their judgment should be borrowed, not exceeding, however, at any one time the aggregate amount of $ _____.

(b) To execute and deliver to said Division the promissory note or notes of this corporation, on forms which may be by said Division submitted, at such rates of interest and on such terms as may be agreed upon, evidencing the sums of moneys so borrowed or any indebtedness of this corporation which may be to said Division incurred; and also to execute and deliver to said Division any renewal or renewals of said notes, or any of them, or of any part thereof.

(c) To mortgage, pledge, hypothecate or otherwise encumber and deliver to said Division, as security for the payment of any loans so obtained or any promissory notes so executed or any other or further indebtedness of this corporation to said Division at any time owing, however, the same may be evidenced, any property belonging to this corporation or in which this corporation may have an interest, real, personal or mixed. Such property may be encumbered, hypothecated or pledged at the time such loans are obtained or such indebtedness is incurred, or at any other time or times, and may be either in addition to or in lieu of any property theretofore mortgaged, hypothecated, encumbered or pledged.

(d) To execute and deliver to said Division the form of pledge agreement which may be by said Division submitted and which shall evidence the terms and conditions under and pursuant to which such pledges, or any of them, are made; and also to execute and deliver to the Division any financing statements, security agreements, mortgages, deeds, trust indentures or other instruments in writing, or any kind or nature, which may be necessary or proper in connection therewith or pertaining thereto.

(e) To draw, endorse and discount with said Division drafts, trade acceptances, promissory notes or other evidences of indebtedness payable or belonging to this corporation or in which this corporation may have an interest, with or without recourse against this corporation, and without limitation as to the amount thereof, and to guarantee payment thereof, and either to receive cash for the same or to cause such proceeds to be credited to the account of this corporation in said Division or to cause such other disposition of the proceeds derived therefrom as they may deem advisable.

(f) To do and perform such other acts and things and to execute and deliver such other documents as may in their discretion be deemed reasonable, necessary or proper in order to carry into effect any of the provisions of these Resolutions.

BE IT FURTHER RESOLVED, that these Resolutions shall remain in full force and effect until written notice of the revocation thereof shall have been delivered to and received by said Division.

I further certify that the persons hereinabove named occupy the positions set opposite their respective names; that the foregoing Resolutions now stand of record on the books of said corporation and have not been modified or revoked in any manner whatsoever; that the foregoing, together with the exhibit hereto attched, if any, and the Resolutions, if any, heretofore certified to said Division, comprise all of the action of the said Board of Directors pertaining to said subject matter, which is, at the date hereof, in force and effect.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed the seal of said corporation this _____ day of _____, 19 _____.

LOAN POLICIES AND PROCEDURES

HISTORICAL DISTRICT REVOLVING LOAN FUND
AS 45.98.010-.070

LOAN PURPOSES

Loans may be made for the restoration, improvement, rehabilitation or maintenance of historical buildings. Loan funds may not be used to reimburse an applicant for expenses which were paid for more than six months before receipt of the application by the Division.

ELIGIBILITY

Loans may be made to a person, firm, business or municipality subject to applicable laws. The structures must be within the boundaries of a historical district and they must be identified as important in State or national history or be suitable for superficial modification so that they can conform to the period or motif of the surrounding structures that are the reason for the area's designation as a historical district. All projects must be approved by a local Historical District Commission and by a majority of the members of the Historic Sites Advisory Committee.

LENDING LIMITS

The maximum loan amount is $250,000 per structure. State participation in all loans in the aggregate for any one historical district may not exceed $1,500,000.

INTEREST RATE

Interest will be charged at the rate of seven and one-half (7½) percent.

LOAN TERMS

The maximum loan term is 30 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan.

COLLATERAL

All loans must be secured by adequate collateral to protect the investment of the State in the event of default. The collateral may include, but is not limited to, a lien on lands, buildings, equipment, machinery, marketable securities and approved assignments. The State must be in a first lien position on the collateral offered to secure the loan. No loan may exceed 85% of the value of the collateral offered. Loans secured by real estate are normally 85% of the appraised value or cost, whichever is lower. Loans secured by equipment or machinery are normally 60% of the appraised value or cost, whichever is lower. The specific amount to be loaned against any collateral offered shall be determined by the loan committee.

INTERIM FINANCING

Interim construction financing is not available under this program. No loan funds may be disbursed until construction or renovation is 100% complete. Applicants should obtain written loan approval prior to obtaining interim financing. To be considered interim financing, promissory notes must have a term of six months or less and the debt must have been incurred and the note executed within six months prior to receipt of the application by the Division.

REFINANCING

Refinancing is not allowed under this program. An interim note may be refinanced if it has a term of six months or less and the debt was incurred and the note executed within six months prior to receipt of the application by the Division.

PROJECT APPROVAL

Prior to submitting an application to the Division of Investments, the applicant must receive plan approval from a local Historic District Commission and from the Historic Sites Advisory Committee. Written approval of the project must be included with the loan application.

LOAN APPROVAL

Authority for approval of all loans rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on loan applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the application. No loan will be granted without approval of a majority of the loan committee.

LOAN COSTS

The borrower shall pay all direct costs incurred by the State in processing the application for a loan, including, but not limited to, the cost of credit reports, title insurance, inspection expenses, or other direct costs. The State is not liable for any costs incurred by the borrower during the application process.

ASSUMPTIONS

Assumptions will not be allowed unless it is in the State's best interest to do so and the applicant meets all statutory eligibility requirements. Assumptions, if granted, must serve the policies and purposes of the loan program.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

HISTORICAL DISTRICT LOAN APPLICATION CHECK-OFF LIST

The following information **is required** in order to process your application. Please use this list to make sure all information is submitted (incomplete applications will not be accepted). Please retain a copy of this application for your records.

_____ 1. **Application for Historical District Loan:** Be sure the form has been completed and signed. (pages 4 and 5)

_____ 2. **Letter of Intent:** Include copies of bids or quotes to document the total cost of the proposed project. (page 6)

_____ 3. **Collateral:** Include documentation to verify the value of the collateral being offered to secure the loan. In most cases, this will require a copy of your tax assessment or an appraisal.

_____ 4. **Individual Financial Statement.** (pages 7 and 8)

_____ 5. **Business Financial Statement.** (pages 9 and 10)

_____ 6. **Actual Statement of Profit and Loss.** (page 11)

_____ 7. **Projected Statement of Profit and Loss.** (page 12)

_____ 8. **Personal Resume:** Include three references. (page 13)

_____ 9. **Business Resume.** (page 14)

_____ 10. **Credit Authorization:** Each form must be completed and signed. (page 15)

_____ 11. **Authorization to Verify Financial Information.** (page 16)

_____ 12. **Federal Tax Returns:** You must include complete copies of your last three years' Federal Income Tax Returns. You must submit tax returns for each individual owning 10% or more of the corporation, as well as the corporation's returns. Do not send original documents as they will not be returned.

_____ 13. **Written Verification of Approval:** From the Historical District Commission and the Historic Sites Advisory Committee. This approval must state that the structure to be modified is within a historical district as defined under AS 29.48.110 and has been identified as important in State or national history.

_____ 14. **Photographs or Drawings:** Which clearly illustrate the project to be funded. (page 17)

LOAN POLICIES AND PROCEDURES

MINING REVOLVING LOAN FUND
AS 27.09.010-.060

LOAN PURPOSES

Loans may be made to underwrite advanced mineral exploration, development, or mining in the State. These purposes are defined as:

1. "advanced mineral exploration" means the investigation of a known mineral deposit to determine its size, shape and value, and to determine whether it is feasible for mining, by use of geophysical surveys, boreholes, pits or underground workings;

2. "development" means the preparation of a proven mineral deposit for mining;

3. "mining" means the extraction of ore and preparation of a mineral product for market.

ELIGIBILITY

Loans may be made to:

1. an individual who has had at least five years' mining or prospecting experience in Alaska and is a resident of the State;

2. a partnership if at least half of the partners each have five years' mining or prospecting experience in the State and at least half are residents of the State; and

3. a corporation if at least 51% of its shares are held by persons having at least five year's mining or prospecting experience in the State and at least 51% of its shares are held by persons who are residents of the State.

LENDING LIMITS

The maximum loan amount is $5,000,000 less any loan amounts previously borrowed from the Mining Revolving Loan Fund.

INTEREST RATE

Interest will be charged at the rate of ten (10%) percent.

LOAN TERMS

The maximum loan term is 15 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan.

REPAYMENT TERMS

Loans made for purposes other than placer mining require principal repayment to commence not later than one year after the mineral production begins or five years from the date the loan is made, whichever is sooner.

Loans made for placer mining activites may not require principal repayment to commence before the end of the second placer mining season after the loan is made.

The accrual of interest on all loans made under this chapter begins when the loan is made, and the accrued interest shall be repaid on a annual basis, or more frequently if the department and the borrower so agree.

RESIDENCY

A "resident" means a corporation, partnership, or limited partnership organized under the laws of Alaska and headquartered in Alaska or a person who, except for brief intervals, periods of military service, or attendance at an educational or training institution, has resided in Alaska for thirty days. "Residence" is determined by where the individual:

1. is registered to vote;
2. maintains a permanent place of abode;
3. files tax returns;
4. registers or licenses personal property, including but not limited to cars, boats, trucks and trailers;
5. is licensed to drive; and
6. maintains bank accounts, savings accounts, lines of credit, and other financial relationships.

OPERATING PLAN

A person requesting a loan under this chapter shall prepare and submit an operating plan which describes the amount of the loan requested, the nature and location of claims for which the loan is requested, the equipment and other resources available to implement the operating plan, and the economic feasibility of the plan.

COLLATERAL

All loans must be secured by adequate collateral to protect the investment of the State in the event of default. The collateral may include, but is not limited to, a lien on lands, buildings, equipment, machinery, marketable securities, and approved assignments. No loan may exceed 75% of the current value of the collateral offered. Loans secured by real estate are normally 75% of the appraised value. Loans secured by equipment, machinery, etc., are normally 60% of the appraised value or cost, whichever is lower. The specific amount to be loaned against any collateral offered shall be determined by the loan committee.

CONTROLLED DISBURSEMENT

Disbursement of loan funds will be made in a manner prescribed by the Division of Investments.

REFINANCING

The department may refinance a loan under this chapter by making a loan to pay outstanding mining debts. When an original loan is to be refinanced, the refinance may not exceed 49% of the amount of the original loan.

LOAN APPROVAL

Authority for approval of all loans rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on loan applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the application. No loan will be granted without approval of a majority of the loan committee.

LOAN COSTS

The borrower shall pay all direct costs incurred by the State in processing the application for a loan, including, but not limited to, the costs of credit reports, title insurance, inspection expenses, or other direct costs. The State is not liable for any costs incurred by the borrower during the application process.

ASSUMPTIONS

Assumptions will not be allowed unless it is in the State's best interest do do so and the applicant meets all statutory eligibility requirements. Assumptions, if granted, must serve the policies and purposes of the loan program.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

COLLATERAL TO SECURE MINING LOAN

All loans must be secured by collateral acceptable to the Division of Investments. Describe the collateral you are offering below:

REAL PROPERTY

Legal Description	Location	Improvements	Original Cost/Price	Date Purchased	Current Market Value	Mortgages		Mortgage Held By	Monthly Payments
						Original Balance	Present Balance		
			$		$	$	$		$
Totals			$		$	$	$		$

EQUIPMENT AND MACHINERY

Item	Make	Model	Serial No.	Location	Original Cost/Price	Date Purchased	Condition New/Used	Current Market Value	Liens		Lien Held By
									Original Balance	Present Balance	
					$			$	$	$	
Totals					$			$	$	$	

(10)

The following information must accompany this application for the different types of collateral offered:

1. **Existing Real Property - an appraisal, less than 90 days old and a purchase agreement, if applicable (Maximum loan; 75% of appraised value or cost, whichever is lower)** $ _____ x 75% = $ _____ (1)

2. **New Construction - a construction bid and an as-built appraisal. (Maximum loan; 75% of appraised value or cost, whichever is lower)** $ _____ x 75% = $ _____ (2)

3. **New Equipment or Machinery - a bid, quote or invoice from the supplier.** $ _____ x 60% = $ _____ (3)

4. **Used Equipment or Machinery - an itemized list with current value verified by a reputable supplier. (Maximum loan: 60% of cost or appraised value, whichever is lower)** $ _____ x 60% = $ _____ (4)

The maximum loan you can secure with the collateral offered is the sum of figures 1-4. $ _____

NOTE: A COPY OF ALL BIDS, APPRAISALS, PHOTOS AND PURCHASE AGREEMENTS MUST ACCOMPANY THIS APPLICATION.

DIVSION OF INVESTMENTS

LOAN POLICIES AND PROCEDURES

RESIDENTIAL ENERGY CONSERVATION FUND
AS 45.89.010-.500

LOAN PURPOSES

Loans may be made for the purchase, construction and installation of an energy conservation improvement in an existing residential building. The residential building must be complete. Loan funds may not be used to reimburse an applicant for expenses which were paid for more than six months before receipt of the application by the Division.

LENDING LIMITS

Loans made may not exceed the lesser of:

1. $5,000; or

2. an amount, as determined by the actual cost of labor and materials for each category, which is documented by invoices, bids or contracts; or

3. an amount, as determined by an acceptable energy improvement payback calculation, which is equal to the total estimated energy savings attributable to the energy conservation improvement over a ten-year period following the purchase, construction or installation of the energy conservation improvement.

LOAN PROCEEDS

Loans may only be made for energy conservation improvements listed in the following sections (A, B and C) or for exceptions approved by the division.

SECTION A

The following conservation measures have historically shown a significant amount of energy savings and thus in most cases an energy improvement payback calculation will not be required. The division reserves the right to require these calculations on any measures which it feels may not meet the statutory requirements.

1. **Caulking:** material used to reduce the passage of air and moisture by filling small air gaps, usually occuring in exterior walls, including sealants, putty, glazing compounds and canned spray foam.

2. **Weatherstripping:** material used to reduce the passage of air and moisture by placing small strips of material in or around moveable joints of windows and doors.

3. **Automatic Setback Devices:** mechanisms which are designed to reduce energy consumption by regulating a heating system through the use of:

   a. a clock or other automatic mechanism for switching from one temperature control level to another;

   b. a control device which reduces energy consumption by comparing indoor and outdoor temperatures and controlling or adjusting the heating system operating temperature; or

   c. a demand control unit consisting of a preprogrammed timer which reduces energy consumption by regulating the operational cycle of the heating system.

4. **Duct/Pipe Insulation:** insulation installed on hot water or heating pipes or heating ducts in an unconditioned area.

5. **Water Heater Insulation:** an insulating jacket which reduces heat loss from a hot water tank.

6. **Vent Damper:** a device that may be installed in the flue of the central heating system which will electrically, mechanically or manually close the flue when the central heating system is not in operation.

7. **Furnace Replacement Burner:** upgrading of a furnace burner designed to achieve a reduction of the amount of fuel consumed as a result of increased combustion efficiency. The unit must be of the same fuel type as the existing burner.

SECTION B

The following conservation measures also have historically shown a significant amount of energy savings and thus in most cases an energy improvement payback calculation will be not required. However, these measures must meet the following minimum requirements in order to qualify without these calculations. The division reserves the right to require these calculations on any measures which it feels may not meet the statutory requirements.

8. **Insulation:** material designed primarily to resist heat loss. This may include fiberglass batts, blown fiberglass, cellulose, sytrofoam or spray foam. To be eligible, the R-value of the present insulation must be increased by at least R-7. Financing of damaged insulation due to maintenance neglect will not be considered.

9. **Storm/Thermal Window:**

   a. A storm window is glazing material placed outside an ordinary window, creating an air space, for the purpose of providing greater resistance to heat loss than the ordinary window alone.

   b. A thermal window is a window unit with improved thermal performance by using two or more sheets of glazing material affixed to a window or door frame creating one or more air spaces.

      The overall R-value of the existing **functional** window unit must be increased by at least the equivalent of one sheet of glazing material.

10. **Storm/Thermal Door:**

    a. A storm door is a second door, installed on either side of the primary door, creating an insulating air space.

    b. A thermal door is a primary exterior door with an R-value of at least R-7; financing is available for the replacement of an exterior door provided it increases the existing R-value by a factor of at least R-4.

11. **Interior Insulating Shades:** shades attached to the interior window assembly which provide an insulating level of at least R-3.

12. **Insulating Shutters:** shutters attached to the exterior window assembly which provide an insulating level of at least R-3.

SECTION C

The following conservation measures require an energy improvement payback calculation which is acceptable to the division. The amount being requested cannot exceed the savings, attributable to the energy conservation improvement, which could be achieved over a ten-year period. These calculations may be perfomed by the applicant or other qualified individuals such as a mechanical engineer, architect, etc., and must include all the following information:

A. a description of the current physical characteristics of the building including the size, type and rate of energy consumption. The energy calculations must include a determination of the current yearly energy costs of the building;

B. a detailed description and evaluation of the proposed energy improvements for which financing is being requested; and

C. heat loss calculations which compare the existing building with the building after the proposed improvements have been made. These calculations must clearly reflect the amount of savings which would be realized over a 10 year period after the improvements have been made. If you are applying for more than one improvement the calculations must show a separate 10 year savings for each conservation measure.

13. **Air and water heat recuperator (heat exchanger):** a waste-heat recovery device which transfers heat from exhaust air or waste water to incoming fresh air or unheated water.

14. **Replacement furnace/boiler:** furnace or boiler which replaces an existing **functional** furnace or boiler of the same fuel type and which reduces the amount of fuel consumed due to increased combustion efficiency. Requests for financing of projects of this type require a flue-gas analysis which must accompany the application.

15. **Skirting:** the materials enclosing the area between the ground/foundation and the base of the structure (mobile home/house).

16. **Structural changes:** insulation projects which involve **replacement** sheetrock, framing, siding, flooring, roofing materials, etc., can be considered for financing provided the loan application clearly demonstrates that this is the only practical means of installing the insulation.

LOAN CONDITIONS

INTEREST RATE

The interest rate shall equal the percentage of the average weekly yield of municipal bonds for the 12 months preceding the loan as determined from the municipal bond yield rates reported in the 30-year revenue index of the Weekly Bond Buyer.

LOAN TERMS

The maximum loan term is 10 years. Terms of all loans will be fixed by the loan committee in consideration of the purpose of the loan, the needs of the borrower, the collateral offered and the ability to repay the loan.

COLLATERAL

All loans must be secured by adequate collateral to protect the investment of the State in the event of default. In most cases this will require a Deed of Trust against the property receiving the improvements. The specific amount to be loaned against any collateral offered shall be determined by the loan committee.

REFINANCING

Refinancing is not allowed under this program. An interim note may be refinanced if it has a term of six months or less and the debt was incurred and note executed within six months prior to receipt of the application by the Division.

CONTROLLED DISBURSEMENT

Loan proceeds will be disbursed to the applicant as documented and supported by labor and material estimates submitted with the loan application. This documentation must clearly describe the items being purchased. In addition, within 90 days after the loan has closed, the division will require copies of all paid invoices and receipts to substantially support the estimates that were submitted with the loan application. Do not send original documents as they will not be returned.

INSPECTIONS

The project must be completed and be ready for inspection within 90 days from the loan closing date.

LOAN APPROVAL

Authority for approval of all loans rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on loan applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the application. No loan will be granted without approval of a majority of the loan committee.

LOAN COSTS

The borrower shall pay all direct costs incurred by the State in processing the application for a loan, including, but not limited to, the cost of credit reports, a title search, inspection expenses or other direct costs. The State is not liable for any costs incurred by the borrower during the application process.

STATE OF ALASKA
DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT
DIVISION OF INVESTMENTS

ASSUMPTIONS

Assumptions will not be allowed under this program.

SUBORDINATIONS

In general, subordination requests will only be considered when they involve home improvement loans. All requests for subordination must be approved by the loan committee. In order to apply for a subordination you will need to submit a written request to the division describing the following:

1. the amount you wish the State to subordinate to;
2. the reason for the request; and
3. documentation to support the value of the added improvements.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

RESIDENTIAL ENERGY CONSERVATION LOAN APPLICATION CHECK-OFF LIST

The following information **is required** in order to process your application. Please use this list to make sure all information is submitted (incomplete applications will not be accepted). Please retain a copy of this application for your records.

_____ 1. **Application for Residential Energy Conservation Loan:** Be sure the form has been completed and signed. (pages 7 and 8)

_____ 2. **Use of Loan Proceeds:** Be sure to break down by category the energy conservation items and be sure the cost is documented. (page 9)

_____ 3. **Collateral:** You will need to include documentation to verify the value of the collateral being offered to secure the loan. (page 11) You must include the following:

_____ a. a copy of your tax assessment notice or appraisal;

_____ b. a copy of your existing title insurance policy or a copy of the Warranty Deed for your residence.

_____ 4. **Financial Statement.** (pages 12 and 13)

_____ 5. **Credit Authorization:** Each form must be completed and signed. One of these forms must be for the financial institution which has a lien (if any) against your residence. (page 14)

_____ 6. **Authorization to Verify Financial Information.** (page 15)

_____ 7. **Employment Verification:** The top of this form should be completed by the applicant, then returned with the application. If you are self-employed, you must submit a signed copy of your most recent complete federal tax return. (page 16)

_____ 8. **Federal Tax Return:** You must submit a copy of the front page of your most recent federal tax return.

_____ 9. **Energy Improvement Payback Calculations:** If you are applying for a loan under Section C, you must include a complete copy of your energy improvement payback calculations.

_____ 10. **Photographs:** You must submit recent photographs of each side of the residence being improved. (page 17)

LOAN POLICIES AND PROCEDURES
VETERANS' ASSUMPTIONS
AS 26.15.010-.170

LOAN PURPOSES

In accordance with AS 26.15.040(e) as amended by the 1982 Legislature, existing single family, multiple dwelling, and small business loans approved under AS 26.15 may be assumed by qualified applicants at the existing interest rate.

All assumptions are without release of the original borrower; assumption of a loan does not release the original borrower from liability under the original note.

ELIGIBILITY

Qualified applicants who are 18 years old or older may assume existing veterans' loans. Veterans' personal loans are not assumable.

LOAN TERMS

Existing veterans' loans are assumable at the original rate of interest and under the original loan terms.

FEES

1. An application fee (nonrefundable) in the form of a check or money order for $50 made payable to the Division of Investments must accompany the application.
2. If your application is approved, an assumption fee of ½ of 1% of the assumable balance will be due at closing.

PURCHASE

An Original Signed Earnest Money Agreement, showing terms of purchase, legal description, location of property, and full names of sellers and buyers must be included with this application.

LOAN CLOSING

All approved assumptions must be closed by a title insurance company.

LOAN APPROVAL

Authority for approval of all assumptions rests with the loan committee appointed by the Commissioner of the Department of Commerce and Economic Development. The loan committee will independently evaluate all relevant information before taking action on assumption applications. The committee may also consider, but is not bound by, the recommendations of the loan examiner assigned to process the application. No assumption will be granted without approval of a majority of the loan committee.

LOAN COSTS

The borrower shall pay all direct costs incurred by the State in processing the application for an assumption, including, but not limited to, the cost of credit reports, title insurance, inspection expenses, or other direct costs. The State is not liable for any costs incurred by the borrower during the application process.

REGULATIONS

The Department of Commerce and Economic Development has adopted administrative regulations governing loan policies and procedures, and public disclosure of information in an individual loan file. Copies of these regulations may be obtained by contacting the Division of Investments.

VETERANS' ASSUMPTION APPLICATION
CHECK-OFF LIST

The following information **is required** in order to process your application. Please use this list to make sure all information is submitted (incomplete applications will not be accepted). Please retain a copy of this application for your records.

_____ 1. **Application for Veterans' Assumption:** Be sure that the form has been completed and signed. (pages 3 and 4)

_____ 2. **Application Fee:** You must include a check or money order for $50.00. If applying as a partnership, each partner must include $50.00.

_____ 3. **Individual Financial Statement.** (pages 5 and 6)

_____ 4. **Business Financial Statement.** (pages 7 and 8)

_____ 5. **Credit Authorization:** Each form must be completed and signed. (page 9)

_____ 6. **Authorization to Verify Financial Information.** (page 10)

_____ 7. **Employment Verification.** (page 11)

_____ 8. **Original Earnest Money Agreement:** The agreement must explain all terms and conditions of the transaction and be signed by all parties.

_____ 9. **Federal Tax Returns:** You must include complete copies of your last three years' Federal Income Tax Returns. You must also submit tax returns for individuals owning 10% or more of the corporation, as well as the corporation's returns. Do not send original documents as they will not be returned.

DRAFT

3 AAC 80.010. APPLICATION PROCESS. (a) To apply for a loan for the purchase of a limited entry permit, gear, or vessel, an applicant must file with the department

(1) a completed application for a commercial fishing loan on a form provided by the department;

(2) a completed residency questionnaire on a form provided by the department;

(3) a letter of intent stating the amount requested, the intended use of the proposed loan funds, and a proposed plan for repayment;

(4) copies of the purchase agreement or vendors' cost estimates and down-payment receipt;

(5) a commercial fishing resume identifying all permits and licenses held by the applicant, summarizing the applicant's experience as a commercial fisherman in Alaska, and identifying the actual number of days fished for each year;

(6) a business and credit history including complete copies of income tax returns for the preceding three years or for other years as may be requested by the department to document eligibility;

(7) a financial statement consisting of a current balance sheet, a profit and loss statement and a statement of projected income and expenses for the following year's operating plan;

(8) a schedule of acceptable collateral, including collateral now owned and other collateral to be acquired with the loan proceeds, stating date of acquisition, cost, location, market value and existing liens;

(9) if a vessel is used for collateral, a current marine survey acceptable to the department including pictures of the vessel; and

(10) any other information as the department may require.

(b) If a vessel is offered as collateral for a loan, the department or its designee shall be permitted to inspect the vessel or vessel construction project prior to making the loan. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC 80.010, a loan request will be processed and evaluated by a loan examiner. The loan examiner will evaluate the applicant's eligibility, financial and credit history, operating plan and ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee. However, the recommendation of a loan examiner is not binding on a loan committee. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.020. LOAN COMMITTEE. (a) A loan committee consists of one or more persons appointed by the commissioner from the department to act on a loan request.

(b) A loan committee may approve, deny, or modify and approve a loan request, or table a loan request subject to obtaining additional information.

(c) A loan committee may impose reasonable conditions on the approval of a loan, including the following requirements:

(1) additional collateral be pledged to secure the loan;

(2) additional guarantors be provided; and

(3) subordination of prior lien holder's rights to the interests of the State.

(d) A loan committee will evaluate an applicant's eligibility for a loan, financial and credit record, and capacity for repayment and operating plans, and the adequacy of collateral offered to secure the loan. A loan committee may also consider the recommendations of the loan examiner assigned to process the loan application, and any other relevant information.

DRAFT

(e) A loan committee may fix the term of a loan and the repayment schedule to meet the needs of the borrower and the collateral available to secure repayment of the loan.

(f) If a loan request is denied or significantly modified by a loan committee, the loan committee will provide the applicant with a statement of the reasons for the action and the information relied on.

(g) A material misstatement or omission of fact made by an applicant constitutes grounds for denial of a loan request. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.030. RESIDENCY REQUIREMENTS. (a) In determining if an applicant fulfills the two year residency requirements under AS 16.10.310, the loan committee may consider the following factors:

(1) where the applicant is registered to vote;

(2) where the applicant maintains a permanent place of abode;

(3) where the applicant files tax returns, and the address that is listed on the returns;

(4) where the applicant registers or licenses personal property, including but not limited to cars, boats, trucks and t. ilers;

(5) where the applicant is licensed to drive; and

(6) where the applicant maintains bank accounts, savings accounts, lines of credit and other financial relationships.

(b) Periods of absence from the state will not negate establishment of residency unless, during the absence, the individual establishes or claims residency in another state or performs other acts inconsistent with residency in Alaska.

(c) If two or more individuals apply jointly or as a partnership or corporation, all parties to the application must establish residency. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.035. ELIGIBILITY. (a) In determining whether an applicant has "actively participated in the fishery" under AS 16.10.310(a)(1)(A) or 16.10.310(a)(1)(C), the department may consider any or all of the following factors for each of the years claimed by the applicant:

(1) the gross income earned by the applicant

DRAFT

while engaged in commercial fishing in limited entry fisheries; and

(2) the time an applicant commercially fished during openings of limited entry fisheries.

(b) For purposes of eligibility, an applicant must establish one of the following circumstances for each year claimed:

(1) that 30 percent or more of the applicant's total gross income has been derived from commercial fishing in limited entry fisheries;

(2) that 10 percent or more of the applicant's total gross income has been derived from commercial fishing in limited entry fisheries and the applicant engaged in commercial fishing in these fisheries for twenty-five or more days; or

(3) that 10 percent or more of the applicant's total gross income has been derived from commercial fishing in limited entry fisheries and the applicant engaged in commercial fishing in a particular limited entry fishery for 80 percent or more of the total number of days that the particular fishery was open for commercial fishing. For purposes of this paragraph, "particular limited entry fishery" refers to gear type and fishing area.

(c) The department may rely on the following documents to verify that an applicant has actively participated in the fishery:

(1) tax returns;

(2) verified affidavits from the applicant and others certifying the applicant's experience;

(3) fishing and gear licenses;

(4) commercial fish tickets;

(5) wage receipts; and

(6) cannery statements.

(d) An applicant for a loan under AS 16.10.310(a)(1)(B)(i) must establish that either:

(1) commercial fishing represents the largest single employer in the area that the applicant resides; or

(2) the applicant does not have training sufficient to qualify for other employment opportunities in the area.

(e) An applicant for a loan under AS 16.10 .310(a)(1)(B)(ii) must establish that he fulfills all requirements of this clause. In this clause, "economically

DRAFT

dependent on commercial fishing for a livlihood" means that a majority of the applicant's gross income during the previous two years was derived from commercial fishing.

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.040. FINANCIAL AND CREDIT RECORD. (a) The department will, in its discretion, consider the following factors in assessing an applicant's financial and credit record:

(1) existing and prior debts;

(2) credit reports obtained from creditors and private credit reporting services;

(3) prior loan history with the department;

(4) timeliness in making payments on loans and other debts;

(5) prior bankruptcies;

(6) existence of tax liens, unpaid judgments, and prior foreclosures; and

(7) the applicant's financial and credit reputation in the community.

(b) Information establishing unacceptable credit will be more heavily weighed by the department if it has occurred in recent years. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.045. ABILITY TO REPAY. (a) The department may consider the following factors in evaluating an applicant's ability to repay a proposed loan:

(1) income history, including present income;

(2) prospects for future income;

(3) assets and their liquidity;

(4) liabilities;

(5) reasonableness of projected profit and loss statement; and

(6) other business experience.

(b) The department may compare revenue projections contained in an applicant's profit and loss statement with information it may acquire through its own efforts or from the Department of Fish and Game, the Commercial Fisheries Entry Commission or the Alaska Commercial Fishing and Agri-

DRAFT

culture Bank on the success of other fishermen in similar circumstances to determine the reasonableness of the applicant's projections. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.050. COLLATERAL. (a) A loan must be secured by collateral acceptable to the department to ensure repayment of the loan in the event of default.

(b) Acceptable collateral may include a mortgage or other security instrument in real property, buildings, machinery and equipment, fixtures, limited entry permits or commercial fishing vessels with gear and appurtenances.

(c) To be considered acceptable collateral, personal property must be capable of being specifically identified. A vessel that can be documented must be documented to be acceptable collateral.

(d) Loans for the purchase of limited entry permits will be made only if the permit is placed in the name of the applicant and the permit is offered as security for the loan. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.320
AS 16.10.339

3 AAC 80.055. LENDING PRACTICES. (a) If loan funds are limited, applications for loans to purchase entry permits will receive priority over applications for the purchase of vessels and gear.

(b) Applications for loans to purchase entry permits, gear and vessels under AS 16.10.310 (a)(1)(B) and for gear and vessels under AS 16.10.310(a)(1)(C) will be approved only if alternative sources of financing are not available to the applicant. An applicant for a loan under AS 16.10 .310(a)(1)(B) will not be considered ineligible for a loan because the applicant can provide a guarantor for the loan.

(c) A loan will not be approved if it would allow an applicant to:

(1) speculate in the acquisition and sale of limited entry permits, vessels, or gear;

(2) lease out a commercial fishing vessel or limited entry permit; or

(3) purchase a commercial fishing vessel, gear or limited entry permit that will not be put to use in the fishing season immediately following the date of the application.

(d) A loan will not be approved for refinancing long term debt. Interim or construction financing is not con-

DRAFT

sidered long term debt if the term is 12 months or less and the promissory note or the original agreement was executed less than 12 months before receipt of the application by the department.

(e) In determining the maximum loan amount that may be approved for the purchase of a limited entry permit, the department will rely on the value established by the Alaska Commercial Fisheries Entry Commission or other appropriate sources as determined by the department.

(f) A loan for the purchase of a limited entry permit will not be approved if an applicant holds another permit currently financed by the state and active participation in the two limited entry fisheries would be mutually exclusive.

(g) A loan for the purchase of a limited entry permit under AS 16.10.310(a)(1)(A) will not be approved if the applicant has pending an application for a loan under AS 16.10.310(a)(1)(B).

(h) A loan for the purchase of a vessel for use in a limited entry fishery will not be approved unless the applicant holds a limited entry permit for that fishery.
(Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.320
AS 16.10.325
AS 16.10.339

3 AAC 80.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the State has been perfected, except that in the case of a mortgage on a documented vessel this requirement shall be satisfied by the establishment of the mortgage as a preferred mortgage pursuant to the provisions of the Ship Mortgage Act of 1920, (46 USC §§911-984);

(2) the borrower has complied with the marine insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter.
(Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.320

3 AAC 80.070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss

DRAFT

statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit or audits to determine whether the borrower has complied with the provisions of the loan and conduct periodic inspection of collateral securing repayment of the loan. If a vessel is used as collateral, a current marine survey must be supplied to the department at the borrower's expense upon request by the department. (Eff. / / , Reg.)

Authority: AS 16.10.310

3 AAC 80.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, out-of-state travel and other direct costs. (Eff. / / , Reg.)

Authority: AS 16.10.310

3 AAC 80.080. ASSUMPTIONS. (a) Requests for permission to assume obligations and benefits of loans granted under AS 16.10.300-16.10.370 will be processed in the same manner as a loan request.

(b) A loan committee may permit an assumption if the individual seeking to assume the loan would be eligible for a new loan of the type that is sought to be assumed, the applicant is a good financial risk, and the security of the state's investment is preserved.

(c) Eligibility standards currently in effect, rather than standards in effect at the time the original loan was made, will govern assumptions. (Eff. / / , Reg.)

Authority: AS 16.10.310

3 AAC 80.085. RECONSIDERATION. (a) If a loan request is denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee.

(b) The loan committee will reconsider a request only upon a showing by the applicant that

(1) there has been a substantial change in the circumstances; or

(2) additional relevant information can be provided to the loan committee that was not initially available. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

DRAFT

3 AAC 80.090. CONFIDENTIALITY OF LOAN INFORMATION.
(a) The following information is not confidential and is available for public inspection upon request:

(1) a document which is already a public record including deeds of trust, financing statements, limited entry permits, warranty deeds, bills of sale, marine mortgages, liens, vehicle titles and vessel documentation;

(2) general information regarding loans, including the amount of a particular loan, loan terms, personal guarantees, and disbursement and repayment schedules;

(3) documents regarding foreclosure and default proceedings.

(b) The following information is confidential and is not subject to public disclosure:

(1) personal and financial information, including income tax returns, financial statements, business income statements, pro forma profit and loss statements, credit information obtained directly from banks and other creditors, reports obtained from consumer reporting agencies, cannery statements, and commercial fishing pink slips (fish tickets);

(2) loan committee memoranda and minutes containing information relating to credit worthiness of an applicant; and

(3) payment history on a loan, unless the loan is in default.

(c) Information not described in (a) and (b) of this section may be subject to public disclosure. Requests for disclosure must be made and will be determined in accordance with 6 AAC 095. On receipt of a request for disclosure, the department will notify the loan applicant and other persons with a privacy interest in the request, to permit them to present reasons why the requested information should not be disclosed. (Eff. / / , Reg.)

3 AAC 80.900. DEFINITION OF TERMS. Unless the context requires otherwise in this chapter

(1) "applicant" means the individual, partnership, corporation or association applying for a loan;

(2) "commercial fishing" means the actual catching of fish, shellfish, crabs or other fishery resources with the intent of disposing of those resources for profit by sale in commercial channels. For purposes of

DRAFT

this definition, "actual catching" means having gear in the water with the intent to catch fish;

(3) "commissioner" means the Commissioner of the Department of Commerce and Economic Development;

(4) "debtor" means an individual commercial fisherman who initially contracts for a loan, assumes a loan, or guarantees or co-signs a loan under AS 16.10.330 - AS 16.10.337.

(5) "default" means a violation of any terms of the loan document, or the failure to make the necessary payment within fifteen (15) days of when it is due, or the failure to maintain the insurance required by the Department of Commerce and Economic Development.

(6) "department" means the Department of Commerce and Economic Development;

(7) "documented vessel" means a vessel permanently or temporarily registered, or enrolled or licensed under the laws of the United States;

(8) "extension package" means such forms as the department may require in order to make a decision on an extension request. (Eff. / / , Reg.)

(9) "limited entry fishery" or "limited entry fisheries" means those fisheries requiring that a participant hold a permanent entry permit;

(10) "residency" means, in the case of an individual, physical presence in Alaska with the intent to remain indefinitely and make a home in the state. (Eff. / / , Reg.)

DRAFT

3 AAC __.010. APPLICATION PROCESS. To apply for a loan for the purchase, construction and installation of an alternative energy system an applicant must file with the department

(1) a completed application for an alternative energy loan on a form provided by the department;

(2) a letter of intent stating the amount requested, the intended used of the proposed loan funds, and a proposed plan for repayment;

(3) a credit authorization form for each of the applicant's creditors;

(4) an employment verification form;

(5) a financial statement including a copy of the applicant's federal income tax return for the most recent year;

(6) a schedule of acceptable collateral, stating date of acquisition, cost, location, market value and existing liens. Market value must be verified by providing a copy of a tax assessment or notice. Ownership of collateral should be verified by a copy of the existing title insurance, deed for the residence, or property profile;

(7) photographs of the proposed collateral; and

(8) any other information the department may require. (Eff. / / , Register)

Authority: AS 45.88.020

3 AAC __.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC __.010, a loan request will be processed and evaluated by a loan examiner. After reviewing the materials submitted and obtained through the normal investigative process the loan examiner will evaluate the eligiblity of the proposed system for a loan. The loan examiner shall also evaluate the applicant's eligibility for a loan based upon financial and credit history, ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee. However, the recommendation of a loan examiner is not binding on a loan committee. (Eff. / / , Register)

Authority: AS 45.88.020

3 AAC __.020. LOAN COMMITTEE. (a) A loan committee consists of one or more persons appointed by the commissioner from the department to act on a loan request.

(b) A loan committee may approve, deny, or modify and approve a loan request, or table a loan request subject to obtaining additional information.

(c) A loan committee may impose reasonable conditions on the approval of a loan, including the following requirements:

(1) additional collateral be pledged to secure the loan;

(2) additional guarantors be provided;

(3) subordination of prior lien holder's rights to the interests of the State.

(d) A loan committee will evaluate the eligibility of the proposed system and the applicant's financial and credit record, capacity for repayment, and the adequacy of collateral offered to secure the loan. A loan committee may also consider the recommendations of the loan examiner assigned to process the loan application, and any other relevant information.

(e) A loan committee may fix the term of a loan and the repayment schedule to meet the needs of the borrower and the collateral available to secure repayment of the loan.

(f) If a loan request is denied or significantly modified by a loan committee, the loan committee will provide the applicant with a statement of the reasons for the action and the information relied on.

(g) A material misstatement or omission of fact made by an applicant constitutes grounds for denial of a loan request. (Eff. / / , Register)

DRAFT

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.035. ELIGIBILITY. To be eligible for a loan, an applicant must seek to purchase, construct, or install an alternative energy system or centralized multifuel system, as those terms are defined in AS 45.88.500. A loan request for solar heating units and sunspaces must also meet the guidelines contained in 3 AAC __.036, 3 AAC __.037 and 3 AAC __.038. A loan request for centralized multifuel heating systems must meet the guidelines contained in 3 AAC __.039.

Authority: AS 45.88.020

3 AAC __.036. SOLAR LOAN GUIDELINES. (a) All solar heating units and sunspaces must meet the following minimum standards. Solar heating units must also meet the minimum standards in 3 AAC __.037. Sunspaces must also meet the minimum standards in 3 AAC__.038.

(b) The design or item funded must be primarily intended as an alternative energy source and must emphasize energy performance over aesthetics.

(c) Site pictures, drawings, as-built surveys and documentation of solar access showing a prime solar fraction of at least 70 percent or more must be provided. Solar access can be measured by using a Lewis Solar Site Selector, a Solar Pathfinder or by other appropriate instruments approved by the department and must be accompanied by corresponding pictures. Roof overhangs and pony wall-like obstructions must be considered in the efficiency of the design.

(d) Framing must be wood or the equivalent with a thermal break. All frame walls must be insulated to at least R19. Frame floors over an unheated airspace must be insulated to at least R30. The roof must be insulated to at least R30.

(e) Masonry foundations must be insulated with 2 inch extruded polystyrene (R10) or equivalent below grade to 42 inches or the area standard, and with 4 inch styrofoam or equivalent above grade. A vapor barrier must be used.

(f) Glazing must have an R-value greater than 1.5 with a transmittance greater than .75.

(g) The design must provide for proper circulation of the heated air to the existing living areas and for the return of cool air. If natural convection is used, vents must be placed at appropriate intervals for a balanced heat flow. Occupant-operated windows and doors are an acceptable means of providing air circulation on loans of $15,000 and under. On all loans over $15,000, automatic circulation is required. The circulation must provide at least 2 cubic feet of air per minute per square foot of glazing and be equipped with automatic controls.

DRAFT

(h) An exhaust fan or exhaust vents must be provided to protect against overheating by venting to a storage mass or to the outside. On all loans over $15,000, this exhaust system must be automatically controlled. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030
AS 45.88.500

3 AAC __.037. SOLAR HEATING UNIT STANDARDS. (a) A solar heating unit is attached to the residence and is able to be sealed off from the existing living space. It is designed and constructed to provide for collection and use of the sun's radiation. The solar heating unit must act as an air heater for the existing structure, must be isolated from the living area, and must contain no auxiliary heating system.

(b) A solar heating unit must meet the following standards to be eligible for a loan:

(1) The solar heating unit must be isolated from the living area and access may be through an exterior door. All doors on exterior walls must be thermal insulated doors;

(2) All glazed interior walls must have movable shades or shutters to insulate the glazing to at least R4. Glazing on interior walls cannot exceed 25 percent of the total interior wall area.

(3) All glazing must be within 30 degrees east or west of true south and between a tilt of 60 to 90 degrees. Glazing in the end walls or skylights in roofs will not be funded or allowed in the design. Seventy percent of the south facing wall must be glazed;

(4) Absorbers and thermal mass must be included in the unit. Thermal mass normally consists of concrete, water or phase-change materials. If the pony wall exceeds 12 inches, the storage mass on the floor will not be funded. Funding for storage mass on the floor may not exceed $10.00 per square foot;

(5) The length of the end walls cannot exceed 12 feet;

(c) Heat loss and heat gain calculations may be required to document the solar efficiency of the proposed structure;

(d) In order to be eligible for funding, the entire project must comply with these guidelines whether or not the entire project is to be funded by this program. The items to be funded must be related to the construction and purchase of the solar heating unit and must be an integral part of the solar heating unit as an alternative heating system. (Eff. / / , Register)

DRAFT

Authority: AS 45.88.020
AS 45.88.030
AS 45.88.500

3 AAC __.038. SUNSPACE STANDARDS. (a) A solar sunspace is designed and constructed to collect and use the sun's radiation and is an integral part of the living area.

(b) A sunspace must meet the following standards to be eligible:

(1) Monthly heat loss and gain calculations must be performed to document the solar efficiency of the project. The calculations can be performed by an architect, engineer or other qualified individual;

(2) All glazing must be within 30 degrees east or west of true south and between a tilt of 60 to 90 degrees. Glazing in the end walls or skylights in roofs will not be funded, and the nonsouth glazing must be within a 75 percent to a 25 percent ratio;

(3) All glazing in the sunspace must be provided with movable insulation to insulate the windows to at least R5. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030
AS 45.88.500

3 AAC __.039. CENTRALIZED MULTIFUEL HEATING SYSTEM GUIDELINES. (a) A multifuel heating system includes all components which are linked together to form a system; such as wiring, plumbing and ducting. Coal storage sheds, wood sheds, or any other components related to a multifuel system which are not mechanically connected to the multifuel furnace are not eligible for funding.

(b) If the labor estimate exceeds 40 percent of the total cost of a multifuel system, at least one additional estimate must be supplied to document the cost of the proposed labor.

(c) All boilers financed under this chapter must meet Alaska State Department of Labor safety standards (A.S.M.E. approved or equivalent). (Eff. / / , Reg.)

Authority: AS 45.88.020
AS 45.88.030
AS 45.88.500

3 AAC __.040. FINANCIAL AND CREDIT RECORD. (a) The department will, in its discretion, consider the following factors in assessing an applicant's financial and credit record

(1) existing and prior debts;

(2) credit reports obtained from creditors and private credit reporting services;

DRAFT

(3) prior loan history with the department;

(4) timeliness in making payments on loans and other debts;

(5) prior bankruptcies;

(6) existence of tax liens, unpaid judgments, and prior foreclosures; and

(7) financial and credit reputation in the community.

(b) Information establishing unacceptable credit will be more heavily weighed by the department if it has occurred in recent years. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.045. ABILITY TO REPAY. The department may consider the following factors in evaluating an applicant's ability to repay a proposed loan:

(1) income history, including present income;

(2) prospects for future income;

(3) assets and their liquidity; and

(4) liabilities. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.050. COLLATERAL. (a) A loan must be secured by collateral acceptable to the department to ensure repayment of the loan in the event of default.

(b) Acceptable collateral may include a mortgage or other security instrument in real property, buildings, machinery and equipment or fixtures. To be considered acceptable collateral, personal property must be capable of being specifically identified. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.055. LENDING PRACTICES. (a) A loan for a sunspace may only include funding for items related to alternative heating systems. Items which may be funded include south-facing glazing, movable window insulation, ventilation and circulation system to transport the heated air, and building components that will make the solar system more efficient but are not conventional or considered normal construction.

(b) A borrower may not modify a structure or improvement financed under the provisions of this program in any

DRAFT

manner which is not in compliance with the applicable guidelines contained in 3 AAC __.036 - 3 AAC __.039 during the life of the loan. All modifications to a structure financed under the program must be submitted to the department for prior written approval.

(c) An applicant seeking financing for a solar heating project in conjunction with the construction of a new building must provide written confirmation that the long-term lender is not also financing the solar heating aspect of the total construction project. Loan funds will not be disbursed until the building is complete and the long-term financing has been finalized.

(d) Applicants seeking financing for a multifuel heating system in conjuction with the construction of a new building must provide written confirmation that the long-term lender is not also financing the heating system. No long funds will be disbursed until the building is complete and long-term financing for the building has been finalized.

(e) Loan funds may not be used to reimburse an applicant for costs incurred more than 6 months prior to loan approval. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the State has been perfected;

(2) the borrower has complied with the insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit or audits to determine whether the borrower has complied with the provisions of the loan, and conduct periodic inspection of collateral securing repayment of the loan. (Eff. / / , Register)

DRAFT

Authority: AS 45.88.020

3 AAC __.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, and other direct costs. (Eff. / / , Register)

Authority: AS 45.88.020

3 AAC __.080. ASSUMPTIONS. Assumption of loans will not be permitted. In the event the property containing the improvement is sold, the loan will be promptly paid in full. "Wraparound" financing which includes a loan under this chapter is prohibited and will constitute a default on the loan. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.085. RECONSIDERATION. (a) If a loan request is denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee to be considered timely.

(b) The loan committee will reconsider a request only upon a showing by the applicant that

(1) there has been a substantial change in the circumstances leading to the loan committee's initial denial or modification; or

(2) additional relevant information can be provided to the loan committee that was not initially available. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.090. CONFIDENTIALITY OF LOAN INFORMATION. (a) The following information is not confidential and is available for public inspection upon request:

(1) a document which is already a public record including deeds of trust, financing statements, limited entry permits, warranty deeds, bills of sale, marine mortgages, liens, vehicle titles and vessel documentation;

(2) general information regarding loans, including the amount of a particular loan loan terms, personal guarantees, and disbursement a repayment schedules;

(3) documents regarding foreclosure and default proceedings.

DRAFT

(b) The following information is confidential and is not subject to public disclosure:

(1) personal and financial information, including income tax returns, financial statements, business income statements, pro forma profit and loss statements, credit information obtained directly from banks and other creditors, and reports obtained from consumer reporting agencies;

(2) loan committee memoranda and minutes containing information relating to credit worthiness of an applicant; and

(3) payment history of a loan, unless the loan is in default.

(c) Information not described in (a) and (b) of this section may be subject to public disclosure. Requests for disclosure must be made in accordance with 6 AAC 095. On receipt of a request for disclosure, the department will promptly notify the loan applicant and other persons with a privacy interest in the request, to permit them to present reasons why the requested information should not be disclosed. DRAFT

3 AAC __.010. APPLICATION PROCESS. To apply for a loan for the purchase, construction and installation of an energy conservation improvement, an applicant must file with the department

(1) a completed application for an energy conservation loan on a form provided by the department;

(2) letter of intent stating the amount requested, the intended use of the proposed loan funds, and a proposed plan for repayment;

(3) a credit authorization form for each of the applicant's creditors;

(4) an employment verification form;

(5) a financial statement including a copy of the applicant's federal income tax return for the most recent year;

(6) a schedule of acceptable collateral, stating date of acquisition, cost, location, market value and existing liens. Market value must be verified by providing a copy of a tax assessment or notice. Ownership of collateral should be verified by a copy of the existing title insurance, deed for the residence, or property profile;

(7) An energy improvement payback calculation, if required under 3 AAC___.035;

(8) photographs of each side of the residence being improved; and

(9) any other information the department may require. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC __.010, a loan request will be processed and evaluated by a loan examiner. After reviewing the materials submitted and obtained through the normal investigative process the loan examiner will evaluate the eligibility of the energy conservation improvement for a loan. The loan examiner shall also evaluate the applicant's eligibility for a loan based upon the applicant's financial and credit history, ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee. However, the recommendation of a loan examiner is not binding on a loan committee. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.020. LOAN COMMITTEE. (a) A loan committee consists of one or more persons appointed by the commissioner from the department to act on a loan request.

(b) A loan committee may approve, deny or modify and approve a loan request, or table a loan request subject to obtaining additional information.

(c) A loan committee may impose reasonable conditions on the approval of a loan, including the following requirements:

(1) additional collateral be pledged to secure the loan;

(2) additional guarantors be provided; and

(3) subordination of prior lien holder rights to the interests of the State.

(d) A loan committee will evaluate the eligibility of the energy conservation improvement and the applicant's financial and credit record, capacity for repayment, and the adequacy of collateral offered to secure the loan. A loan committee may also consider the recommendations of the loan examiner assigned to process the loan application, and any other relevant information.

(e) A loan committee may fix the term of a loan and the repayment schedule to meet the needs of the borrower and the collateral available to secure repayment of the loan.

(f) If a loan request is denied or significantly modified by a loan committee, the loan committee will provide the applicant with a statement of the reasons for the action and the information relied on.

(g) A material misstatement or omission of fact made by an applicant constitutes grounds for denial of a loan request. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.030. LOAN AMOUNTS. A loan may not exceed the lesser of

(1) $5,000; or

(2) an amount, as determined by the actual cost of labor and materials for each category, which is documented by invoices, bids or contracts; or

(3) an amount, as determined by an acceptable energy improvement payback calculation which is equal to the total estimated energy savings attributable to the energy conservation improvement over a ten-year period following the purchase, construction or installation of the energy conservation improvement. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.035. ELIGIBILITY. (a) An energy conservation improvement described in (b), (c) or (d) of this section is eligible for a loan under this chapter. An energy audit will not be required.

(b) The following conservation measures have historically shown significant energy savings and the department will generally not require an energy improvement payback calculation. However, if the department believes a conservation measure may not meet statutory requirements, it may require an energy improvement payback calculation.

(1) caulking: material used to reduce the passage of air and moisture by filling small air gaps, usually occuring in exterior walls, including sealants, putty, glazing compounds and canned spray foam;

(2) weatherstripping: material used to reduce the passage of air and moisture by placing small strips of material in or around moveable joints of windows and doors;

(3) automatic setback devices: mechanisms which are designed to reduce energy consumption by regulating a heating system through the use of:

(A) a clock or other automatic mechanism for switching from one temperature control level to another;

(B) a control device which reduces energy consumption by comparing indoor and outdoor temperatures and controlling or adjusting the heating system operating temperature; or

(C) a demand control unit consisting of a pre-programmed timer which reduces energy consumption by regulating the operational cycle of the heating system;

(4) duct/pipe insulation: insulation installed

DRAFT

on hot water or heating pipes or heating ducts in an unconditioned area;

(5) water heater insulation: an insulating jacket which reduces heat loss from a hot water tank;

(6) vent damper: a device that may be installed in the flue of the central heating system which will electrically, mechanically or manually close the flue when the central heating system is not in operation;

(7) furnace replacement burner: upgrading of a furnace burner designed to achieve a reduction of the amount of fuel consumed as a result of increased combustion efficiency. The unit must be of the same fuel type as the existing burner;

(c) The following conservation measures also have historically shown significant energy savings and the department will generally not require an energy improvement payback calculation provided that these conservation measures must meet the following minimum requirements. However, the division may require an energy improvement payback calculation on any measure which it believes may not meet statutory requirements:

(1) insulation: material designed primarily to resist heat loss. This may include fiberglass batts, blown fiberglass, cellulose, styrofoam or spray foam. To be eligible, the R-value of the present insulation must be increased by at least R-7. A loan may not be made for the replacement of damaged insulation due to maintenance neglect;

(2) storm or thermal windows:

(A) a storm window is glazing material placed outside an ordinary window, creating an air space, for the purpose of providing greater resistance to heat loss than the ordinary window alone;

(B) a thermal window is a window unit with improved thermal performance by the use of two or more sheets of glazing material affixed to a window or door frame creating one or more air spaces;

(C) the overall R-value of the existing functional window unit must be increased by at least the equivalent of one sheet of glazing material by the installation of storm or thermal windows;

(3) storm or thermal doors:

(A) a storm door is a second door, installed on either side of the primary door, creating an insulating air space;

(B) a thermal door is a primary exterior door with an R-value of at least R-7;

DRAFT

(C) the existing R-value must be increased by a factor of at least R-4 with the installation of a storm or thermal door;

(4) interior insulating shades: shades attached to the interior window assembly which provide an insulating level of at least R-3;

(5) insulating shutters: shutters attached to the exterior window assembly which provide an insulating level of at least R-3;

(d) The following conservation measures must have an energy improvement payback calculation acceptable to the department. The amount of the loan cannot exceed the savings, attributable to the energy conservation improvement, which could be achieved over a ten-year period:

(1) air and water heat recuperator (heat exchanger): a waste-heat recovery device which transfers heat from exhaust air or waste water to incoming fresh air or unheated water;

(2) replacement furnace or boiler: furnace or boiler which replaces an existing functional furnace or boiler of the same fuel type and which reduces the amount of fuel consumed due to increased combustion efficiency. Application for financing of a project of this type must include a flue-gas analysis;

(3) skirting: the materials enclosing the area between the ground or foundation and the base of the structure;

(4) structural changes: insulation projects which involve replacement of sheetrock, framing, siding, flooring, roofing materials, and other similar structural changes may be financed only if the loan application clearly demonstrates that this is the only practical means of installing the insulation.

(e) An energy improvement payback calculation may be performed by the applicant or other qualified individual such as a mechancial engineer or architect. The calculation must include:

(1) a description of the current physical characteristics of the building including the size, type and rate of energy consumption, along with a determination of the current yearly energy costs of the building;

(2) a detailed description and evaluation of the proposed energy improvements for which financing is being requested; and

(3) heat loss calculations which compare the existing building with the building after the proposed improvements have been made. These calculations must clearly reflect the amount of savings which would be realized over a

DRAFT

10-year period after the improvements have been made. If applying for more than one improvement the calculations must show a separate 10-year savings for each conservation measure. (Eff. / / , Reg.)

Authority: AS 45.89.030
AS 45.89.500

3 AAC __.040. FINANCIAL AND CREDIT RECORD. (a) The department will, in its discretion, consider the following factors in assessing an applicant's financial and credit record:

(1) existing and prior debts;

(2) credit reports obtained from creditors and private credit reporting services;

(3) prior loan history with the department;

(4) timeliness in making payments on loans and other debts;

(5) prior bankruptcies;

(6) existence of tax liens, unpaid judgments, and prior foreclosures; and

(7) financial and credit reputation in the community.

(b) Information establishing unacceptable credit will be more heavily weighed by the department if it has occurred in recent years. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.045. ABILITY TO REPAY. The department may consider the following factors in assessing an applicant's capacity for repayment of a proposed loan:

(1) income history, including present income;

(2) prospects for future income;

(3) assets and their liquidity; and

(4) liabilities. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.050. COLLATERAL. (a) A loan must be secured by collateral acceptable to the department to ensure repayment of the loan in the event of default.

(b) Acceptable collateral may include a mortgage or other security instruments in real property, buildings, machinery, equipment or fixtures. To be considered acceptable collateral, personal property must be capable of being specifically identified. (Eff. / / , Reg.)

DRAFT

Authority: AS 45.89.030

3 AAC __.055. LENDING PRACTICES. (a) A loan will not be approved for refinancing long term debt. Interim or construction financing is not considered long term debt if the term is 12 months or less and the promissory note or the original agreement was executed within 12 months before receipt of the application.

(b) Loan funds may not be used to reimburse an applicant for costs incurred more than six months prior to loan approval. (Eff. / / , Register)

Authority: AS 45.89.030

3 AAC __.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the State has been perfected;

(2) the borrower has complied with the insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter. (Eff. / / , Register)

Authority: AS 45.89.030

3 AAC .070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit to determine whether the borrower has complied with the provisions of the loan, and conduct periodic inspection of collateral securing repayment of the loan. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, and other direct costs. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.080. ASSUMPTIONS. Assumption of loans will not be permitted. In the event a residence is sold a loan will be promptly paid in full. "Wraparound" financing which

DRAFT

includes a loan under this chapter is prohibited and will constitute a default on the loan. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.085. RECONSIDERATION. (a) If a loan request is denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee to be considered timely.

(b) The loan committee will reconsider a request only upon a showing by the applicant that

(1) there has been a substantial change in the circumstances leading to the loan committee's initial denial or modification; or

(2) additional relevant information can be provided to the loan committee that was not initially available.

Authority: AS 45.89.030

3 AAC__.090. CONFIDENTIALITY OF LOAN INFORMATION. (a) The following information is not confidential and is available for public inspection upon request:

(1) a document which is already a public record including deeds of trust, financing statements, limited entry permits, deeds, bills of sale, marine mortgages, liens, vehicle titles and vessel documentation;

(2) general information regarding loans, including the amount of a particular loan, loan terms, personal guarantees, and disbursement and repayment schedules;

(3) foreclosure and default proceedings.

(b) The following information is confidential and is not subject to public disclosure:

(1) personal and financial information, including income tax returns, financial statements, business income statements, pro forma profit and loss statements, credit information obtained directly from banks and other creditors and reports obtained from consumer reporting agencies;

(2) loan committee memoranda and minutes containing information relating to credit worthiness of an applicant; and

(3) payment history of a loan, unless the loan is in default.

(c) Information not described in (a) and (b) of this section may be subject to public disclosure. Requests for disclosure must be made in in accordance with 6 AAC 095. On

DRAFT

receipt of a request for disclosure, the department will notify the loan applicant and other persons with a privacy interest in the request, to permit them to present reasons why the requested information should not be disclosed. (Eff. / / , Reg.)

3 AAC __.010. APPLICATION PROCESS. To apply for a loan for the construction, renovation or equipping of a child care facility, an applicant shall file with the department

(1) a completed application for a child care facility loan on a form provided by the department;

(2) a letter of intent stating the amount requested, the intended use of the proposed loan funds and a proposed plan for repayment;

(3) a letter indicating the applicant's knowledge of child care programs and business conditions as listed in 3 AAC .035;

(4) a personal resume including three personal references;

(5) a business and credit history including complete copies of income tax returns for the preceding three years;

(6) a financial statement consisting of a balance sheet, a profit and loss statement and a statement of projected income and expenses for the following year's operating plan;

(7) a schedule of acceptable collateral, including collateral now owned and other collateral to be acquired with the loan proceeds, stating date of acquisition, cost, location, market value, and existing liens;

(8) if an applicant is applying for a loan to operate a day care facility licensed by the state or a local government, a copy of the application for the license or, if the facility has already been licensed, a copy of the license;

(9) any other information that the department may require. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC __.010, a loan request will be processed and evaluated by a loan examiner. The loan examiner will evaluate the applicant's eligibility, finance and credit history, operating plan, ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee. However, the recommendation of a loan examiner is not binding on a loan committee. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.020. LOAN COMMITTEE. (a) A loan committee consists of one or more persons appointed by the commissioner from the department to act on a loan request.

(b) A loan committee may approve, deny, or modify and approve a loan request, or table a loan request subject to obtaining additional information.

(c) A loan committee may impose reasonable conditions on the approval of a loan, including the following requirements

(1) additional collateral be pledged to secure the loan;

(2) additional guarantors be provided; and

(3) subordination of prior lien holder rights to the interests of the state.

(d) A loan committee will evaluate an applicant's eligibility for a loan, financial and credit record, capacity for repayment and operating plans, and the adequacy of collateral offered to secure the loan. A loan committee may also consider the recommendations of the loan examiner assigned to process the loan application and any other relevant information.

(e) A loan committee may fix the term of a loan and the repayment schedule to meet the needs of the borrower and the collateral available to secure repayment of the loan.

(f) If a loan request is denied or significantly modified by a loan committee, the loan committee will provide the applicant with a statement of the reasons for the action and the information relied on.

(g) A material misstatement or omission of fact made by an applicant constitutes grounds for denial of a loan request. (Eff. / / , Register)

3 AAC __.050. COLLATERAL. (a) A loan must be secured by collateral acceptable to the department to ensure repayment of the loan in the event of default.

(b) Acceptable collateral includes a mortgage or other security instrument in real property, buildings, machinery, equipment and fixtures. To be considered acceptable collateral, personal property must be capable of being specifically identified. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.055. LENDING PRACTICES. (a) A loan will not be approved for the purchase of

(1) undeveloped property for the construction of a child care facility;

(2) existing child care facilities; or

(3) vehicles.

(b) A loan will not be approved for refinancing long term debt. Interim or construction financing is not considered long term debt if the term is 12 months or less and the promissory note or the original agreement was executed less than 12 months before receipt of the application by the department.

(c) Loan funds may not be used to reimburse an applicant for costs incurred prior to loan approval.

(d) Loans will not be approved to finance facilities which do not comply with state or local licensing requirements. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the state has been perfected;

DRAFT

(2) the borrower has complied with the insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter. (Eff. / / Register)

Authority: AS 44.33.245

3 AAC __.070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit or audits to determine whether the borrower has complied with the provisions of the loan and may conduct periodic inspection of collateral securing repayment of the loan. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, travel and other direct costs. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.080. ASSUMPTIONS. (a) Requests for permission to assume obligations and benefits of loans granted under this chapter shall be processed in the same manner as a loan request.

(b) A loan committee may permit an assumption if the individual seeking to assume the loan would be eligible for a new loan of the type that is sought to be assumed, the applicant is a good financial risk, and the security of the state's investment is preserved.

(c) Eligibility standards currently in effect, rather than standards in effect at the time the original loan was made will govern assumptions. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.085. RECONSIDERATION. (a) If a loan request is denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee.

DRAFT

(b) A loan committee will reconsider a request only upon a showing by an applicant that

(1) there has been a substantial change in the circumstances leading to the loan committee's initial denial or modification; or

(2) additional relevant information can be provided to the loan committee that was not initially available. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC 80.090. CONFIDENTIALITY OF LOAN INFORMATION. (a) The following information is not confidential and is available for inspection by the public upon request:

(1) a document which is already a public record, including deeds of trust, financing statements, warranty deeds, bills of sale, mortgages, liens, and vehicle titles;

(2) general information regarding loans, including the amount of particular loans, terms of the loan, personal guarantees, and disbursement and repayment schedules;

(3) insurance matters, including title insurance policies and correspondence with insurance companies or borrowers regarding losses, accident reports, and nonpayment of premiums;

(4) documents regarding foreclosure and default proceedings.

(b) The following information is confidential and is not subject to public disclosure:

(1) personal and financial information, including income tax returns, financial statements, business income statements, pro forma profit and loss statements, credit information obtained directly from banks and other creditors and reports obtained from consumer reporting agencies;

(2) loan committee memoranda and minutes containing information relating to credit worthiness of the applicant;

(3) the payment history of an applicant, under circumstances not constituting foreclosure or default.

(c) Information not described in (a) or (b) of this section may be subject to public disclosure. Requests for disclosure must be made and will be determined in accordance with 6 AAC 95. On receipt of a request for disclosure, the department will notify the loan applicant and other persons with a privacy interest in the request, to permit them to present reasons why the requested information should not be disclosed. The department will approve requests for disclosure of information if the public interest that would be

DRAFT

served from disclosure outweighs the privacy interests of the applicant. (Eff. / / , Register)

3 AAC __.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the state has been perfected;

(2) the borrower has complied with the insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030

3 AAC __.070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit or audits to determine whether the borrower has complied with the provisions of the loan and conduct periodic inspection of any collateral securing repayment of the loan. (Eff. / / , Register)

DRAFT

Authority: AS 45.98.020
AS 45.98.030
AS 45.98.040

3 AAC __.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, and other direct costs. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030

3 AAC __.080. ASSUMPTIONS. (a) Assumption of a loan issued under this chapter is not permitted.

(b) Secondary financing of a loan issued under this chapter is not permitted.

(c) If the property on which the structure for which a loan was obtained under this chapter is sold, the borrower must immediately repay the loan in full. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030

3 AAC __.085. RECONSIDERATION. If a loan request has been denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee. A loan committee will reconsider a request only upon a showing by an applicant that

(1) there has been a substantial change in the circumstances leading to the loan committee's initial denial or modification; or

(2) additional relevant information can be provided to the loan committee that was not initially available. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030

3 AAC __.090. CONFIDENTIALITY OF LOAN INFORMATION. (a) The following information is not confidential and is available for inspection by the public upon request:

(1) a document which is already a public record including deeds of trust, financing statements, warranty deeds, bills of sale, liens, and vehicle titles;

(2) general information regarding loans, including the amount of a particular loan, loan terms, personal guarantees, and disbursement and repayment schedules;

DRAFT

(3) documents regarding foreclosure and default proceedings.

(b) The following information is confidential and is not subject to public disclosure:

(1) personal and financial information, including income tax returns, financial statements, business income statements, pro forma profit and loss statements, credit information obtained directly from banks and other creditors, and reports obtained from consumer reporting agencies;

(2) loan committee memoranda and minutes containing information relating to credit worthiness of an applicant;

(3) payment history on a loan, unless the loan is in default.

(c) Information not described in (a) and (b) of this section may be subject to public disclosure. Requests for disclosure must be made and will be determined in accordance with 6 AAC 95. Upon receipt of a request for disclosure, the department will notify the loan applicant and other persons with a privacy interest in the request to permit them to present reasons why the requested information should not be disclosed. (Eff. / / , Register)

DRAFT

3 AAC 80.010. APPLICATION PROCESS. (a) To apply for a loan for the purchase of a limited entry permit, gear, or vessel, an applicant must file with the department

(1) a completed application for a commercial fishing loan on a form provided by the department;

(2) a completed residency questionnaire on a form provided by the department;

(3) a letter of intent stating the amount requested, the intended use of the proposed loan funds, and a proposed plan for repayment;

(4) copies of the purchase agreement or vendors' cost estimates and down-payment receipt;

(5) a commercial fishing resume identifying all permits and licenses held by the applicant, summarizing the applicant's experience as a commercial fisherman in Alaska, and identifying the actual number of days fished for each year;

(6) a business and credit history including complete copies of income tax returns for the preceding three years or for other years as may be requested by the department to document eligibility;

(7) a financial statement consisting of a current balance sheet, a profit and loss statement and a statement of projected income and expenses for the following year's operating plan;

(8) a schedule of acceptable collateral, including collateral now owned and other collateral to be acquired with the loan proceeds, stating date of acquisition, cost, location, market value and existing liens;

(9) if a vessel is used for collateral, a current marine survey acceptable to the department including pictures of the vessel; and

(10) any other information as the department may require.

(b) If a vessel is offered as collateral for a loan, the department or its designee shall be permitted to inspect the vessel or vessel construction project prior to making the loan. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC 80.010, a loan request will be processed and evaluated by a loan examiner. The loan examiner will evaluate the applicant's eligibility, financial and credit history, operating plan and ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee. However, the recommendation of a loan examiner is not binding on a loan committee. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.20.339

3 AAC 80.020. LOAN COMMITTEE. (a) A loan committee consists of one or more persons appointed by the commissioner from the department to act on a loan request.

(b) A loan committee may approve, deny, or modify and approve a loan request, or table a loan request subject to obtaining additional information.

(c) A loan committee may impose reasonable conditions on the approval of a loan, including the following requirements:

(1) additional collateral be pledged to secure the loan;

(2) additional guarantors be provided; and

(3) subordination of prior lien holder's rights to the interests of the State.

(d) A loan committee will evaluate an applicant's eligibility for a loan, financial and credit record, and capacity for repayment and operating plans, and the adequacy of collateral offered to secure the loan. A loan committee may also consider the recommendations of the loan examiner assigned to process the loan application, and any other relevant information.

DRAFT

(e) A loan committee may fix the term of a loan and the repayment schedule to meet the needs of the borrower and the collateral available to secure repayment of the loan.

(f) If a loan request is denied or significantly modified by a loan committee, the loan committee will provide the applicant with a statement of the reasons for the action and the information relied on.

(g) A material misstatement or omission of fact made by an applicant constitutes grounds for denial of a loan request. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.030. RESIDENCY REQUIREMENTS. (a) In determining if an applicant fulfills the two year residency requirements under AS 16.10.310, the loan committee may consider the following factors:

(1) where the applicant is registered to vote;

(2) where the applicant maintains a permanent place of abode;

(3) where the applicant files tax returns, and the address that is listed on the returns;

(4) where the applicant registers or licenses personal property, including but not limited to cars, boats, trucks and trailers;

(5) where the applicant is licensed to drive; and

(6) where the applicant maintains bank accounts, savings accounts, lines of credit and other financial relationships.

(b) Periods of absence from the state will not negate establishment of residency unless, during the absence, the individual establishes or claims residency in another state or performs other acts inconsistent with residency in Alaska.

(c) If two or more individuals apply jointly or as a partnership or corporation, all parties to the application must establish residency. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.035. ELIGIBILITY. (a) In determining whether an applicant has "actively participated in the fishery" under AS 16.10.310(a)(1)(A) or 16.10.310(a)(1)(C), the department may consider any or all of the following factors for each of the years claimed by the applicant:

(1) the gross income earned by the applicant

DRAFT

while engaged in commercial fishing in limited entry fisheries; and

(2) the time an applicant commercially fished during openings of limited entry fisheries.

(b) For purposes of eligibility, an applicant must establish one of the following circumstances for each year claimed:

(1) that 30 percent or more of the applicant's total gross income has been derived from commercial fishing in limited entry fisheries;

(2) that 10 percent or more of the applicant's total gross income has been derived from commercial fishing in limited entry fisheries and the applicant engaged in commercial fishing in these fisheries for twenty-five or more days; or

(3) that 10 percent or more of the applicant's total gross income has been derived from commercial fishing in limited entry fisheries and the applicant engaged in commercial fishing in a particular limited entry fishery for 80 percent or more of the total number of days that the particular fishery was open for commercial fishing. For purposes of this paragraph, "particular limited entry fishery" refers to gear type and fishing area.

(c) The department may rely on the following documents to verify that an applicant has actively participated in the fishery:

(1) tax returns;

(2) verified affidavits from the applicant and others certifying the applicant's experience;

(3) fishing and gear licenses;

(4) commercial fish tickets;

(5) wage receipts; and

(6) cannery statements.

(d) An applicant for a loan under AS 16.10.310(a)(1)(B)(i) must establish that either:

(1) commercial fishing represents the largest single employer in the area that the applicant resides; or

(2) the applicant does not have training sufficient to qualify for other employment opportunities in the area.

(e) An applicant for a loan under AS 16.10 .310(a)(1)(B)(ii) must establish that he fulfills all requirements of this clause. In this clause, "economically

DRAFT

dependent on commercial fishing for a livlihood" means that a majority of the applicant's gross income during the previous two years was derived from commercial fishing.

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.040. FINANCIAL AND CREDIT RECORD. (a) The department will, in its discretion, consider the following factors in assessing an applicant's financial and credit record:

(1) existing and prior debts;

(2) credit reports obtained from creditors and private credit reporting services;

(3) prior loan history with the department;

(4) timeliness in making payments on loans and other debts;

(5) prior bankruptcies;

(6) existence of tax liens, unpaid judgments, and prior foreclosures; and

(7) the applicant's financial and credit reputation in the community.

(b) Information establishing unacceptable credit will be more heavily weighed by the department if it has occurred in recent years. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.045. ABILITY TO REPAY. (a) The department may consider the following factors in evaluating an applicant's ability to repay a proposed loan:

(1) income history, including present income;

(2) prospects for future income;

(3) assets and their liquidity;

(4) liabilities;

(5) reasonableness of projected profit and loss statement; and

(6) other business experience.

(b) The department may compare revenue projections contained in an applicant's profit and loss statement with information it may acquire through its own efforts or from the Department of Fish and Game, the Commercial Fisheries Entry Commission or the Alaska Commercial Fishing and Agri-

DRAFT

culture Bank on the success of other fishermen in similar circumstances to determine the reasonableness of the applicant's projections. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

3 AAC 80.050. COLLATERAL. (a) A loan must be secured by collateral acceptable to the department to ensure repayment of the loan in the event of default.

(b) Acceptable collateral may include a mortgage or other security instrument in real property, buildings, machinery and equipment, fixtures, limited entry permits or commercial fishing vessels with gear and appurtenances.

(c) To be considered acceptable collateral, personal property must be capable of being specifically identified. A vessel that can be documented must be documented to be acceptable collateral.

(d) Loans for the purchase of limited entry permits will be made only if the permit is placed in the name of the applicant and the permit is offered as security for the loan. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.320
AS 16.10.339

3 AAC 80.055. LENDING PRACTICES. (a) If loan funds are limited, applications for loans to purchase entry permits will receive priority over applications for the purchase of vessels and gear.

(b) Applications for loans to purchase entry permits, gear and vessels under AS 16.10.310 (a)(1)(B) and for gear and vessels under AS 16.10.310(a)(1)(C) will be approved only if alternative sources of financing are not available to the applicant. An applicant for a loan under AS 16.10 .310(a)(1)(B) will not be considered ineligible for a loan because the applicant can provide a guarantor for the loan.

(c) A loan will not be approved if it would allow an applicant to:

(1) speculate in the acquisition and sale of limited entry permits, vessels, or gear;

(2) lease out a commercial fishing vessel or limited entry permit; or

(3) purchase a commercial fishing vessel, gear or limited entry permit that will not be put to use in the fishing season immediately following the date of the application.

(d) A loan will not be approved for refinancing long term debt. Interim or construction financing is not con-

DRAFT

sidered long term debt if the term is 12 months or less and the promissory note or the original agreement was executed less than 12 months before receipt of the application by the department.

(e) In determining the maximum loan amount that may be approved for the purchase of a limited entry permit, the department will rely on the value established by the Alaska Commercial Fisheries Entry Commission or other appropriate sources as determined by the department.

(f) A loan for the purchase of a limited entry permit will not be approved if an applicant holds another permit currently financed by the state and active participation in the two limited entry fisheries would be mutually exclusive.

(g) A loan for the purchase of a limited entry permit under AS 16.10.310(a)(1)(A) will not be approved if the applicant has pending an application for a loan under AS 16.10.310(a)(1)(B).

(h) A loan for the purchase of a vessel for use in a limited entry fishery will not be approved unless the applicant holds a limited entry permit for that fishery.
(Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.320
AS 16.10.325
AS 16.10.339

3 AAC 80.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the State has been perfected, except that in the case of a mortgage on a documented vessel this requirement shall be satisfied by the establishment of the mortgage as a preferred mortgage pursuant to the provisions of the Ship Mortgage Act of 1920, (46 USC §§911-984);

(2) the borrower has complied with the marine insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter.
(Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.320

3 AAC 80.070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss

DRAFT

statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit or audits to determine whether the borrower has complied with the provisions of the loan and conduct periodic inspection of collateral securing repayment of the loan. If a vessel is used as collateral, a current marine survey must be supplied to the department at the borrower's expense upon request by the department. (Eff. / / , Reg.)

Authority: AS 16.10.310

3 AAC 80.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, out-of-state travel and other direct costs. (Eff. / / , Reg.)

Authority: AS 16.10.310

3 AAC 80.080. ASSUMPTIONS. (a) Requests for permission to assume obligations and benefits of loans granted under AS 16.10.300-16.10.370 will be processed in the same manner as a loan request.

(b) A loan committee may permit an assumption if the individual seeking to assume the loan would be eligible for a new loan of the type that is sought to be assumed, the applicant is a good financial risk, and the security of the state's investment is preserved.

(c) Eligibility standards currently in effect, rather than standards in effect at the time the original loan was made, will govern assumptions. (Eff. / / , Reg.)

Authority: AS 16.10.310

3 AAC 80.085. RECONSIDERATION. (a) If a loan request is denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee.

(b) The loan committee will reconsider a request only upon a showing by the applicant that

(1) there has been a substantial change in the circumstances; or

(2) additional relevant information can be provided to the loan committee that was not initially available. (Eff. / / , Reg.)

Authority: AS 16.10.310
AS 16.10.339

Alaska Const.

3 AAC 80.900. DEFINITION OF TERMS. Unless the context requires otherwise in this chapter

(1) "applicant" means the individual, partnership, corporation or association applying for a loan;

(2) "commercial fishing" means the actual catching of fish, shellfish, crabs or other fishery resources with the intent of disposing of those resources for profit by sale in commercial channels. For purposes of

DRAFT

this definition, "actual catching" means having gear in the water with the intent to catch fish;

(3) "commissioner" means the Commissioner of the Department of Commerce and Economic Development;

(4) "debtor" means an individual commercial fisherman who initially contracts for a loan, assumes a loan, or guarantees or co-signs a loan under AS 16.10.330 - AS 16.10.337.

(5) "default" means a violation of any terms of the loan document, or the failure to make the necessary payment within fifteen (15) days of when it is due, or the failure to maintain the insurance required by the Department of Commerce and Economic Development.

(6) "department" means the Department of Commerce and Economic Development;

(7) "documented vessel" means a vessel permanently or temporarily registered, or enrolled or licensed under the laws of the United States;

(8) "extension package" means such forms as the department may require in order to make a decision on an extension request. (Eff. / / , Reg.)

(9) "limited entry fishery" or "limited entry fisheries" means those fisheries requiring that a participant hold a permanent entry permit;

(10) "residency" means, in the case of an individual, physical presence in Alaska with the intent to remain indefinitely and make a home in the state. (Eff. / / , Reg.)

DRAFT

3 AAC __.010. APPLICATION PROCESS. To apply for a loan for the purchase, construction and installation of an alternative energy system an applicant must file with the department

(1) a completed application for an alternative energy loan on a form provided by the department;

(2) a letter of intent stating the amount requested, the intended used of the proposed loan funds, and a proposed plan for repayment;

(3) a credit authorization form for each of the applicant's creditors;

(4) an employment verification form;

(5) a financial statement including a copy of the applicant's federal income tax return for the most recent year;

(6) a schedule of acceptable collateral, stating date of acquisition, cost, location, market value and existing liens. Market value must be verified by providing a copy of a tax assessment or notice. Ownership of collateral should be verified by a copy of the existing title insurance, deed for the residence, or property profile;

(7) photographs of the proposed collateral; and

(8) any other information the department may require. (Eff. / / , Register)

Authority: AS 45.88.020

3 AAC __.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC __.010, a loan request will be processed and evaluated by a loan examiner. After reviewing the materials submitted and obtained through the normal investigative process the loan examiner will evaluate the eligiblity of the proposed system for a loan. The loan examiner shall also evaluate the applicant's eligibility for a loan based upon financial and credit history, ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee. However, the recommendation of a loan examiner is not binding on a loan committee. (Eff. / / , Register)

Authority: AS 45.88.020

3 AAC __.020. LOAN COMMITTEE. (a) A loan committee consists of one or more persons appointed by the commissioner from the department to act on a loan request.

(b) A loan committee may approve, deny, or modify and approve a loan request, or table a loan request subject to obtaining additional information.

(c) A loan committee may impose reasonable conditions on the approval of a loan, including the following requirements:

(1) additional collateral be pledged to secure the loan;

(2) additional guarantors be provided;

(3) subordination of prior lien holder's rights to the interests of the State.

(d) A loan committee will evaluate the eligibility of the proposed system and the applicant's financial and credit record, capacity for repayment, and the adequacy of collateral offered to secure the loan. A loan committee may also consider the recommendations of the loan examiner assigned to process the loan application, and any other relevant information.

(e) A loan committee may fix the term of a loan and the repayment schedule to meet the needs of the borrower and the collateral available to secure repayment of the loan.

(f) If a loan request is denied or significantly modified by a loan committee, the loan committee will provide the applicant with a statement of the reasons for the action and the information relied on.

(g) A material misstatement or omission of fact made by an applicant constitutes grounds for denial of a loan request. (Eff. / / , Register)

DRAFT

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.035. ELIGIBILITY. To be eligible for a loan, an applicant must seek to purchase, construct, or install an alternative energy system or centralized multifuel system, as those terms are defined in AS 45.88.500. A loan request for solar heating units and sunspaces must also meet the guidelines contained in 3 AAC __.036, 3 AAC __.037 and 3 AAC __.038. A loan request for centralized multifuel heating systems must meet the guidelines contained in 3 AAC __.039.

Authority: AS 45.88.020

3 AAC __.036. SOLAR LOAN GUIDELINES. (a) All solar heating units and sunspaces must meet the following minimum standards. Solar heating units must also meet the minimum standards in 3 AAC __.037. Sunspaces must also meet the minimum standards in 3 AAC__.038.

(b) The design or item funded must be primarily intended as an alternative energy source and must emphasize energy performance over aesthetics.

(c) Site pictures, drawings, as-built surveys and documentation of solar access showing a prime solar fraction of at least 70 percent or more must be provided. Solar access can be measured by using a Lewis Solar Site Selector, a Solar Pathfinder or by other appropriate instruments approved by the department and must be accompanied by corresponding pictures. Roof overhangs and pony wall-like obstructions must be considered in the efficiency of the design.

(d) Framing must be wood or the equivalent with a thermal break. All frame walls must be insulated to at least R19. Frame floors over an unheated airspace must be insulated to at least R30. The roof must be insulated to at least R30.

(e) Masonry foundations must be insulated with 2 inch extruded polystyrene (R10) or equivalent below grade to 42 inches or the area standard, and with 4 inch styrofoam or equivalent above grade. A vapor barrier must be used.

(f) Glazing must have an R-value greater than 1.5 with a transmittance greater than .75.

(g) The design must provide for proper circulation of the heated air to the existing living areas and for the return of cool air. If natural convection is used, vents must be placed at appropriate intervals for a balanced heat flow. Occupant-operated windows and doors are an acceptable means of providing air circulation on loans of $15,000 and under. On all loans over $15,000, automatic circulation is required. The circulation must provide at least 2 cubic feet of air per minute per square foot of glazing and be equipped with automatic controls.

DRAFT

(h) An exhaust fan or exhaust vents must be provided to protect against overheating by venting to a storage mass or to the outside. On all loans over $15,000, this exhaust system must be automatically controlled.. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030
AS 45.88.500

3 AAC __.037. SOLAR HEATING UNIT STANDARDS. (a) A solar heating unit is attached to the residence and is able to be sealed off from the existing living space. It is designed and constructed to provide for collection and use of the sun's radiation. The solar heating unit must act as an air heater for the existing structure, must be isolated from the living area, and must contain no auxiliary heating system.

(b) A solar heating unit must meet the following standards to be eligible for a loan:

(1) The solar heating unit must be isolated from the living area and access may be through an exterior door. All doors on exterior walls must be thermal insulated doors;

(2) All glazed interior walls must have movable shades or shutters to insulate the glazing to at least R4. Glazing on interior walls cannot exceed 25 percent of the total interior wall area.

(3) All glazing must be within 30 degrees east or west of true south and between a tilt of 60 to 90 degrees. Glazing in the end walls or skylights in roofs will not be funded or allowed in the design. Seventy percent of the south facing wall must be glazed;

(4) Absorbers and thermal mass must be included in the unit. Thermal mass normally consists of concrete, water or phase-change materials. If the pony wall exceeds 12 inches, the storage mass on the floor will not be funded. Funding for storage mass on the floor may not exceed $10.00 per square foot;

(5) The length of the end walls cannot exceed 12 feet;

(c) Heat loss and heat gain calculations may be required to document the solar efficiency of the proposed structure;

(d) In order to be eligible for funding, the entire project must comply with these guidelines whether or not the entire project is to be funded by this program. The items to be funded must be related to the construction and purchase of the solar heating unit and must be an integral part of the solar heating unit as an alternative heating system. (Eff. / / , Register)

3 AAC __.038. SUNSPACE STANDARDS. (a) A solar sunspace is designed and constructed to collect and use the sun's radiation and is an integral part of the living area.

(b) A sunspace must meet the following standards to be eligible:

(1) Monthly heat loss and gain calculations must be performed to document the solar efficiency of the project. The calculations can be performed by an architect, engineer or other qualified individual;

(2) All glazing must be within 30 degrees east or west of true south and between a tilt of 60 to 90 degrees. Glazing in the end walls or skylights in roofs will not be funded, and the nonsouth glazing must be within a 75 percent to a 25 percent ratio;

(3) All glazing in the sunspace must be provided with movable insulation to insulate the windows to at least R5. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030
AS 45.88.500

3 AAC __.039. CENTRALIZED MULTIFUEL HEATING SYSTEM GUIDELINES. (a) A multifuel heating system includes all components which are linked together to form a system; such as wiring, plumbing and ducting. Coal storage sheds, wood sheds, or any other components related to a multifuel system which are not mechanically connected to the multifuel furnace are not eligible for funding.

(b) If the labor estimate exceeds 40 percent of the total cost of a multifuel system, at least one additional estimate must be supplied to document the cost of the proposed labor.

(c) All boilers financed under this chapter must meet Alaska State Department of Labor safety standards (A.S.M.E. approved or equivalent). (Eff. / / , Reg.)

Authority: AS 45.88.020
AS 45.88.030
AS 45.88.500

3 AAC __.040. FINANCIAL AND CREDIT RECORD. (a) The department will, in its discretion, consider the following factors in assessing an applicant's financial and credit record

(1) existing and prior debts;

(2) credit reports obtained from creditors and private credit reporting services;

DRAFT

(3) prior loan history with the department;

(4) timeliness in making payments on loans and other debts;

(5) prior bankruptcies;

(6) existence of tax liens, unpaid judgments, and prior foreclosures; and

(7) financial and credit reputation in the community.

(b) Information establishing unacceptable credit will be more heavily weighed by the department if it has occurred in recent years. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.045. ABILITY TO REPAY. The department may consider the following factors in evaluating an applicant's ability to repay a proposed loan:

(1) income history, including present income;

(2) prospects for future income;

(3) assets and their liquidity; and

(4) liabilities. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.050. COLLATERAL. (a) A loan must be secured by collateral acceptable to the department to ensure repayment of the loan in the event of default.

(b) Acceptable collateral may include a mortgage or other security instrument in real property, buildings, machinery and equipment or fixtures. To be considered acceptable collateral, personal property must be capable of being specifically identified. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.055. LENDING PRACTICES. (a) A loan for a sunspace may only include funding for items related to alternative heating systems. Items which may be funded include south-facing glazing, movable window insulation, ventilation and circulation system to transport the heated air, and building components that will make the solar system more efficient but are not conventional or considered normal construction.

(b) A borrower may not modify a structure or improvement financed under the provisions of this program in any

DRAFT

manner which is not in compliance with the applicable guidelines contained in 3 AAC __.036 - 3 AAC __.039 during the life of the loan. All modifications to a structure financed under the program must be submitted to the department for prior written approval.

(c) An applicant seeking financing for a solar heating project in conjunction with the construction of a new building must provide written confirmation that the long-term lender is not also financing the solar heating aspect of the total construction project. Loan funds will not be disbursed until the building is complete and the long-term financing has been finalized.

(d) Applicants seeking financing for a multifuel heating system in conjuction with the construction of a new building must provide written confirmation that the long-term lender is not also financing the heating system. No long funds will be disbursed until the building is complete and long-term financing for the building has been finalized.

(e) Loan funds may not be used to reimburse an applicant for costs incurred more than 6 months prior to loan approval. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the State has been perfected;

(2) the borrower has complied with the insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit or audits to determine whether the borrower has complied with the provisions of the loan, and conduct periodic inspection of collateral securing repayment of the loan. (Eff. / / , Register)

DRAFT

Authority: AS 45.88.020

3 AAC __.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, and other direct costs. (Eff. / / , Register)

Authority: AS 45.88.020

3 AAC __.080. ASSUMPTIONS. Assumption of loans will not be permitted. In the event the property containing the improvement is sold, the loan will be promptly paid in full. "Wraparound" financing which includes a loan under this chapter is prohibited and will constitute a default on the loan. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.085. RECONSIDERATION. (a) If a loan request is denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee to be considered timely.

(b) The loan committee will reconsider a request only upon a showing by the applicant that

(1) there has been a substantial change in the circumstances leading to the loan committee's initial denial or modification; or

(2) additional relevant information can be provided to the loan committee that was not initially available. (Eff. / / , Register)

Authority: AS 45.88.020
AS 45.88.030

3 AAC __.090. CONFIDENTIALITY OF LOAN INFORMATION. (a) The following information is not confidential and is available for public inspection upon request:

(1) a document which is already a public record including deeds of trust, financing statements, limited entry permits, warranty deeds, bills of sale, marine mortgages, liens, vehicle titles and vessel documentation;

(2) general information regarding loans, including the amount of a particular loan, loan terms, personal guarantees, and disbursement and repayment schedules;

(3) documents regarding foreclosure and default proceedings.

DRAFT

(b) The following information is confidential and is not subject to public disclosure:

(1) personal and financial information, including income tax returns, financial statements, business income statements, pro forma profit and loss statements, credit information obtained directly from banks and other creditors, and reports obtained from consumer reporting agencies;

(2) loan committee memoranda and minutes containing information relating to credit worthiness of an applicant; and

(3) payment history of a loan, unless the loan is in default.

(c) Information not described in (a) and (b) of this section may be subject to public disclosure. Requests for disclosure must be made in accordance with 6 AAC 095. On receipt of a request for disclosure, the department will promptly notify the loan applicant and other persons with a privacy interest in the request, to permit them to present reasons why the requested information should not be disclosed. 300. Definition of Terms

DRAFT

3 AAC __.010. APPLICATION PROCESS. To apply for a loan for the purchase, construction and installation of an energy conservation improvement, an applicant must file with the department

(1) a completed application for an energy conservation loan on a form provided by the department;

(2) letter of intent stating the amount requested, the intended use of the proposed loan funds, and a proposed plan for repayment;

(3) a credit authorization form for each of the applicant's creditors;

(4) an employment verification form;

(5) a financial statement including a copy of the applicant's federal income tax return for the most recent year;

(6) a schedule of acceptable collateral, stating date of acquisition, cost, location, market value and existing liens. Market value must be verified by providing a copy of a tax assessment or notice. Ownership of collateral should be verified by a copy of the existing title insurance, deed for the residence, or property profile;

(7) An energy improvement payback calculation, if required under 3 AAC___.035;

(8) photographs of each side of the residence being improved; and

(9) any other information the department may require. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC __.010, a loan request will be processed and evaluated by a loan examiner. After reviewing the materials submitted and obtained through the normal investigative process the loan examiner will evaluate the eligibility of the energy conservation improvement for a loan. The loan examiner shall also evaluate the applicant's eligibility for a loan based upon the applicant's financial and credit history, ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee. However, the recommendation of a loan examiner is not binding on a loan committee. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.020. LOAN COMMITTEE. (a) A loan committee consists of one or more persons appointed by the commissioner from the department to act on a loan request.

(b) A loan committee may approve, deny or modify and approve a loan request, or table a loan request subject to obtaining additional information.

(c) A loan committee may impose reasonable conditions on the approval of a loan, including the following requirements:

(1) additional collateral be pledged to secure the loan;

(2) additional guarantors be provided; and

(3) subordination of prior lien holder rights to the interests of the State.

(d) A loan committee will evaluate the eligibility of the energy conservation improvement and the applicant's financial and credit record, capacity for repayment, and the adequacy of collateral offered to secure the loan. A loan committee may also consider the recommendations of the loan examiner assigned to process the loan application, and any other relevant information.

(e) A loan committee may fix the term of a loan and the repayment schedule to meet the needs of the borrower and the collateral available to secure repayment of the loan.

(f) If a loan request is denied or significantly modified by a loan committee, the loan committee will provide the applicant with a statement of the reasons for the action and the information relied on.

(g) A material misstatement or omission of fact made by an applicant constitutes grounds for denial of a loan request. (Eff. / / , Reg.)

DRAFT

Authority: AS 45.89.030

3 AAC __.030. LOAN AMOUNTS. A loan may not exceed the lesser of

(1) $5,000; or

(2) an amount, as determined by the actual cost of labor and materials for each category, which is documented by invoices, bids or contracts; or

(3) an amount, as determined by an acceptable energy improvement payback calculation which is equal to the total estimated energy savings attributable to the energy conservation improvement over a ten-year period following the purchase, construction or installation of the energy conservation improvement. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.035. ELIGIBILITY. (a) An energy conservation improvement described in (b), (c) or (d) of this section is eligible for a loan under this chapter. An energy audit will not be required.

(b) The following conservation measures have historically shown significant energy savings and the department will generally not require an energy improvement payback calculation. However, if the department believes a conservation measure may not meet statutory requirements, it may require an energy improvement payback calculation.

(1) caulking: material used to reduce the passage of air and moisture by filling small air gaps, usually occuring in exterior walls, including sealants, putty, glazing compounds and canned spray foam;

(2) weatherstripping: material used to reduce the passage of air and moisture by placing small strips of material in or around moveable joints of windows and doors;

(3) automatic setback devices: mechanisms which are designed to reduce energy consumption by regulating a heating system through the use of:

(A) a clock or other automatic mechanism for switching from one temperature control level to another;

(B) a control device which reduces energy consumption by comparing indoor and outdoor temperatures and controlling or adjusting the heating system operating temperature; or

(C) a demand control unit consisting of a pre-programmed timer which reduces energy consumption by regulating the operational cycle of the heating system;

(4) duct/pipe insulation: insulation installed

DRAFT

on hot water or heating pipes or heating ducts in an unconditioned area;

(5) water heater insulation: an insulating jacket which reduces heat loss from a hot water tank;

(6) vent damper: a device that may be installed in the flue of the central heating system which will electrically, mechanically or manually close the flue when the central heating system is not in operation;

(7) furnace replacement burner: upgrading of a furnace burner designed to achieve a reduction of the amount of fuel consumed as a result of increased combustion efficiency. The unit must be of the same fuel type as the existing burner;

(c) The following conservation measures also have historically shown significant energy savings and the department will generally not require an energy improvement payback calculation provided that these conservation measures must meet the following minimum requirements. However, the division may require an energy improvement payback calculation on any measure which it believes may not meet statutory requirements:

(1) insulation: material designed primarily to resist heat loss. This may include fiberglass batts, blown fiberglass, cellulose, styrofoam or spray foam. To be eligible, the R-value of the present insulation must be increased by at least R-7. A loan may not be made for the replacement of damaged insulation due to maintenance neglect;

(2) storm or thermal windows:

(A) a storm window is glazing material placed outside an ordinary window, creating an air space, for the purpose of providing greater resistance to heat loss than the ordinary window alone;

(B) a thermal window is a window unit with improved thermal performance by the use of two or more sheets of glazing material affixed to a window or door frame creating one or more air spaces;

(C) the overall R-value of the existing functional window unit must be increased by at least the equivalent of one sheet of glazing material by the installation of storm or thermal windows;

(3) storm or thermal doors:

(A) a storm door is a second door, installed on either side of the primary door, creating an insulating air space;

(B) a thermal door is a primary exterior door with an R-value of at least R-7;

DRAFT

(C) the existing R-value must be increased by a factor of at least R-4 with the installation of a storm or thermal door;

(4) interior insulating shades: shades attached to the interior window assembly which provide an insulating level of at least R-3;

(5) insulating shutters: shutters attached to the exterior window assembly which provide an insulating level of at least R-3;

(d) The following conservation measures must have an energy improvement payback calculation acceptable to the department. The amount of the loan cannot exceed the savings, attributable to the energy conservation improvement, which could be achieved over a ten-year period:

(1) air and water heat recuperator (heat exchanger): a waste-heat recovery device which transfers heat from exhaust air or waste water to incoming fresh air or unheated water;

(2) replacement furnace or boiler: furnace or boiler which replaces an existing functional furnace or boiler of the same fuel type and which reduces the amount of fuel consumed due to increased combustion efficiency. Application for financing of a project of this type must include a flue-gas analysis;

(3) skirting: the materials enclosing the area between the ground or foundation and the base of the structure;

(4) structural changes: insulation projects which involve replacement of sheetrock, framing, siding, flooring, roofing materials, and other similar structural changes may be financed only if the loan application clearly demonstrates that this is the only practical means of installing the insulation.

(e) An energy improvement payback calculation may be performed by the applicant or other qualified individual such as a mechancial engineer or architect. The calculation must include:

(1) a description of the current physical characteristics of the building including the size, type and rate of energy consumption, along with a determination of the current yearly energy costs of the building;

(2) a detailed description and evaluation of the proposed energy improvements for which financing is being requested; and

(3) heat loss calculations which compare the existing building with the building after the proposed improvements have been made. These calculations must clearly reflect the amount of savings which would be realized over a

DRAFT

10-year period after the improvements have been made. If applying for more than one improvement the calculations must show a separate 10-year savings for each conservation measure. (Eff. / / , Reg.)

Authority: AS 45.89.030
AS 45.89.500

3 AAC __.040. FINANCIAL AND CREDIT RECORD. (a) The department will, in its discretion, consider the following factors in assessing an applicant's financial and credit record:

(1) existing and prior debts;

(2) credit reports obtained from creditors and private credit reporting services;

(3) prior loan history with the department;

(4) timeliness in making payments on loans and other debts;

(5) prior bankruptcies;

(6) existence of tax liens, unpaid judgments, and prior foreclosures; and

(7) financial and credit reputation in the community.

(b) Information establishing unacceptable credit will be more heavily weighed by the department if it has occurred in recent years. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.045. ABILITY TO REPAY. The department may consider the following factors in assessing an applicant's capacity for repayment of a proposed loan:

(1) income history, including present income;

(2) prospects for future income;

(3) assets and their liquidity; and

(4) liabilities. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.050. COLLATERAL. (a) A loan must be secured by collateral acceptable to the department to ensure repayment of the loan in the event of default.

(b) Acceptable collateral may include a mortgage or other security instruments in real property, buildings, machinery, equipment or fixtures. To be considered acceptable collateral, personal property must be capable of being specifically identified. (Eff. / / , Reg.)

DRAFT

Authority: AS 45.89.030

3 AAC __.055. LENDING PRACTICES. (a) A loan will not be approved for refinancing long term debt. Interim or construction financing is not considered long term debt if the term is 12 months or less and the promissory note or the original agreement was executed within 12 months before receipt of the application.

(b) Loan funds may not be used to reimburse an applicant for costs incurred more than six months prior to loan approval. (Eff. / / , Register)

Authority: AS 45.89.030

3 AAC __.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the State has been perfected;

(2) the borrower has complied with the insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter. (Eff. / / , Register)

Authority: AS 45.89.030

3 AAC __.070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit to determine whether the borrower has complied with the provisions of the loan, and conduct periodic inspection of collateral securing repayment of the loan. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, and other direct costs. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.080. ASSUMPTIONS. Assumption of loans will not be permitted. In the event a residence is sold a loan will be promptly paid in full. "Wraparound" financing which

DRAFT

includes a loan under this chapter is prohibited and will constitute a default on the loan. (Eff. / / , Reg.)

Authority: AS 45.89.030

3 AAC __.085. RECONSIDERATION. (a) If a loan request is denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee to be considered timely.

(b) The loan committee will reconsider a request only upon a showing by the applicant that

(1) there has been a substantial change in the circumstances leading to the loan committee's initial denial or modification; or

(2) additional relevant information can be provided to the loan committee that was not initially available.

Authority: AS 45.89.030

3 AAC__.090. CONFIDENTIALITY OF LOAN INFORMATION. (a) The following information is not confidential and is available for public inspection upon request:

(1) a document which is already a public record including deeds of trust, financing statements, limited entry permits, deeds, bills of sale, marine mortgages, liens, vehicle titles and vessel documentation;

(2) general information regarding loans, including the amount of a particular loan, loan terms, personal guarantees, and disbursement and repayment schedules;

(3) foreclosure and default proceedings.

(b) The following information is confidential and is not subject to public disclosure:

(1) personal and financial information, including income tax returns, financial statements, business income statements, pro forma profit and loss statements, credit information obtained directly from banks and other creditors and reports obtained from consumer reporting agencies;

(2) loan committee memoranda and minutes containing information relating to credit worthiness of an applicant; and

(3) payment history of a loan, unless the loan is in default.

(c) Information not described in (a) and (b) of this section may be subject to public disclosure. Requests for disclosure must be made in in accordance with 6 AAC 095. On

DRAFT

receipt of a request for disclosure, the department will notify the loan applicant and other persons with a privacy interest in the request, to permit them to present reasons why the requested information should not be disclosed. (Eff. / / , Reg.)

3 AAC __.010. APPLICATION PROCESS. To apply for a loan for the construction, renovation or equipping of a child care facility, an applicant shall file with the department

(1) a completed application for a child care facility loan on a form provided by the department;

(2) a letter of intent stating the amount requested, the intended use of the proposed loan funds and a proposed plan for repayment;

(3) a letter indicating the applicant's knowledge of child care programs and business conditions as listed in 3 AAC .035;

(4) a personal resume including three personal references;

(5) a business and credit history including complete copies of income tax returns for the preceding three years;

(6) a financial statement consisting of a balance sheet, a profit and loss statement and a statement of projected income and expenses for the following year's operating plan;

(7) a schedule of acceptable collateral, including collateral now owned and other collateral to be acquired with the loan proceeds, stating date of acquisition, cost, location, market value, and existing liens;

(8) if an applicant is applying for a loan to operate a day care facility licensed by the state or a local government, a copy of the application for the license or, if the facility has already been licensed, a copy of the license;

(9) any other information that the department may require. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC __.010, a loan request will be processed and evaluated by a loan examiner. The loan examiner will evaluate the applicant's eligibility, finance and credit history, operating plan, ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee. However, the recommendation of a loan examiner is not binding on a loan committee. (Eff. / / , Register)

(1) income history, including present income;

DRAFT

(2) prospects for future income;

(3) assets and their liquidity;

(4) liabilities;

(5) reasonableness of projected profit and loss statement;

(6) other business experience. (Eff. / / , Register)

Authority: AS 44.33.245
AS 44.33.260

3 AAC __.050. COLLATERAL. (a) A loan must be secured by collateral acceptable to the department to ensure repayment of the loan in the event of default.

(b) Acceptable collateral includes a mortgage or other security instrument in real property, buildings, machinery, equipment and fixtures. To be considered acceptable collateral, personal property must be capable of being specifically identified. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.055. LENDING PRACTICES. (a) A loan will not be approved for the purchase of

(1) undeveloped property for the construction of a child care facility;

(2) existing child care facilities; or

(3) vehicles.

(b) A loan will not be approved for refinancing long term debt. Interim or construction financing is not considered long term debt if the term is 12 months or less and the promissory note or the original agreement was executed less than 12 months before receipt of the application by the department.

(c) Loan funds may not be used to reimburse an applicant for costs incurred prior to loan approval.

(d) Loans will not be approved to finance facilities which do not comply with state or local licensing requirements. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.065. DISBURSEMENT OF LOAN FUNDS. Loan funds will be disbursed when

(1) a security interest in the collateral on behalf of the state has been perfected;

DRAFT

(2) the borrower has complied with the insurance requirements contained in an instrument signed by the borrower;

(3) all requirements of the loan committee have been met; and

(4) the borrower has complied with all other provisions of the loan documents and this chapter. (Eff. / / Register)

Authority: AS 44.33.245

3 AAC __.070. SUPERVISION OF LOANS. As a condition of a loan and while there is an outstanding loan balance, the department may require a borrower to furnish annual financial statements consisting of a balance sheet, profit-and-loss statement, sources and application of all funds received and a schedule of change of owner's equity. The department may also require an audit or audits to determine whether the borrower has complied with the provisions of the loan and may conduct periodic inspection of collateral securing repayment of the loan. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.075. COSTS. All expenses incurred by the department in closing a loan, including the processing of the loan application, shall be paid by the applicant. These expenses include the cost of credit reports, title reports and insurance, recording fees, appraisals, surveys, travel and other direct costs. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.080. ASSUMPTIONS. (a) Requests for permission to assume obligations and benefits of loans granted under this chapter shall be processed in the same manner as a loan request.

(b) A loan committee may permit an assumption if the individual seeking to assume the loan would be eligible for a new loan of the type that is sought to be assumed, the applicant is a good financial risk, and the security of the state's investment is preserved.

(c) Eligibility standards currently in effect, rather than standards in effect at the time the original loan was made will govern assumptions. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC __.085. RECONSIDERATION. (a) If a loan request is denied or significantly modified by a loan committee, an applicant may file a written request for reconsideration with the department. The request must be filed within 30 days of receipt of the initial decision of the loan committee.

DRAFT

(b) A loan committee will reconsider a request only upon a showing by an applicant that

(1) there has been a substantial change in the circumstances leading to the loan committee's initial denial or modification; or

(2) additional relevant information can be provided to the loan committee that was not initially available. (Eff. / / , Register)

Authority: AS 44.33.245

3 AAC 80.090. CONFIDENTIALITY OF LOAN INFORMATION. (a) The following information is not confidential and is available for inspection by the public upon request:

(1) a document which is already a public record, including deeds of trust, financing statements, warranty deeds, bills of sale, mortgages, liens, and vehicle titles;

(2) general information regarding loans, including the amount of particular loans, terms of the loan, personal guarantees, and disbursement and repayment schedules;

(3) insurance matters, including title insurance policies and correspondence with insurance companies or borrowers regarding losses, accident reports, and nonpayment of premiums;

(4) documents regarding foreclosure and default proceedings.

(b) The following information is confidential and is not subject to public disclosure:

(1) personal and financial information, including income tax returns, financial statements, business income statements, pro forma profit and loss statements, credit information obtained directly from banks and other creditors and reports obtained from consumer reporting agencies;

(2) loan committee memoranda and minutes containing information relating to credit worthiness of the applicant;

(3) the payment history of an applicant, under circumstances not constituting foreclosure or default.

(c) Information not described in (a) or (b) of this section may be subject to public disclosure. Requests for disclosure must be made and will be determined in accordance with 6 AAC 95. On receipt of a request for disclosure, the department will notify the loan applicant and other persons with a privacy interest in the request, to permit them to present reasons why the requested information should not be disclosed. The department will approve requests for disclosure of information if the public interest that would be

DRAFT

served from disclosure outweighs the privacy interests of the applicant. (Eff. / / , Register)

3 AAC __.010. APPLICATION PROCESS. To apply for a loan for the restoration, improvement, rehabilitation or maintenance of an approved structure in a historical district an applicant must file with the department:

(1) a completed application for a historical district loan on a form provided by the department;

(2) evidence of a plan approval by a local historical district commission and recommendation by a majority of the members of the Historic Sites Advisory Committee;

(3) a letter of intent stating the amount requested, the intended use of the proposed loan funds, and a proposed plan for repayment;

(4) a personal resume including three personal references;

(5) a credit history including complete copies of income tax returns for the preceding year;

(6) a financial statement consisting of a current balance sheet, a monthly budget and a statement of projected income and expenses for the next year;

(7) a schedule of acceptable collateral, including collateral now owned and other collateral to be acquired with the loan proceeds, stating date of acquisition, cost, location, market value and existing liens;

(8) photographs of each side of the structure to be improved; and

(9) any other information the department may require. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030

3 AAC __.015. EXAMINATION. (a) Upon receipt of the materials described in 3 AAC __.010, a loan request will be processed and evaluated by a loan examiner. The loan examiner will evaluate the applicant's eligibility, financial and credit history, ability to repay, and proposed collateral.

(b) On the basis of the evaluation, the loan examiner will recommend proposed action on the loan request to the appropriate loan committee; however the recommendation of the loan examiner is not binding on the loan committee. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030

3 AAC __.020. LOAN COMMITTEE. (a) A loan committee consists of one or more persons appointed by the commissioner from the department to act on a loan request.

(b) A loan committee may approve, deny, or modify and approve a loan request, or table a loan request subject to obtaining additional information.

(c) A loan committee may impose reasonable conditions on the approval of a loan, including

(1) additional collateral to secure the loan;

(2) additional guarantors;

(3) subordination of prior lien holder's rights to the interests of the state.

(d) A loan committee will evaluate the applicant's eligibility, financial and credit record, capacity for repayment and the adequacy of the collateral offered to secure the loan. A loan comittee may also consider the recommendations of the loan examiner assigned to process the loan application and any other relevant information.

(e) A loan committee may fix the term of a loan and the repayment schedule to meet the needs of the borrower and the collateral available to secure repayment of the loan.

(f) If a loan request is denied or significantly modified by a loan committee, the loan committee will provide the applicant with a statement of the reasons for the action and the information relied on.

(g) A material misstatement or omission of fact made by an applicant constitutes grounds for denial of a loan request. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030
AS 45.98.040

3 AAC __.035. ELIGIBILITY. To be eligible for a loan, a plan must be approved by a local historical district commission and be recommended by a majority of the members of the Historic Sites Advisory Committee. A loan may be made to a person, firm, business or municipality. A structure must be within the boundaries of a historical district and it must be identified as important in state or national history or be suitable for superficial modification so that it can conform to the period or motif of the surrounding structures that are the reason for the area's designation as a historical district. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030
AS 45.98.040

3 AAC __.040. FINANCIAL AND CREDIT RECORD. (a) The department may consider the following factors in assessing an applicant's financial and credit record:

(1) existing and prior debts;

(2) credit reports obtained from creditors and private credit reporting services;

(3) prior loan history with the department;

(4) timeliness in making payments on loans and other debts;

(5) prior bankruptcies;

(6) existence of tax liens;

(7) unpaid judgments and prior foreclosures; and

(8) financial and credit reputation in the community.

(b) Information establishing unacceptable credit will be more heavily weighed by the department if it has occurred in recent years. (Eff. / / , Register)

Authority: AS 45.98.020
AS 45.98.030

3 AAC __.045. ABILITY TO REPAY. The department may consider the following factors in assessing an applicant's ability to repay;

(1) income history, including present income;

(2) prospects for future income;

(3) assets and their liquidity;

(4) liabilities;

(5) reasonableness of projected profit and loss statement;

INTRODUCTION

This activity report is designed to assist legislators with their oversight responsibilities by providing a compilation of data obtained from each of the active State-sponsored loan programs. For our purposes, active loan programs are those which presently make or service loans. (See the list of active and inactive programs on page 4.) The House Research Agency has produced reports covering quarterly lending activity since January 1981.

This report groups State loans into six categories--Economic Development, Education, Energy, Housing, Medical and Child Care, and Municipal Assistance. A list of the programs in each of the six categories is found on page 3.

The figures representing loans approved during a quarter do not necessarily represent direct State expenditures. Bond-financed loan programs provide the bulk of the funds referred to in this report; these programs rely to some degree on State appropriations, in some cases only for administrative funds, but obtain most of their loan funds by selling bonds on the national market. Only in the case of direct loans, such as those administered by the Department of Commerce and Economic Development, does the figure for loans approved represent direct investment of the State's cash. Of course, part of the cost of these programs is returned through payments of principal and interest. We have noted on page 4, with the list of active and inactive programs, whether each lending program is financed entirely through State appropriation or is partially bond-financed.

This activity report is meant to give an idea of the number and dollar amount of loans approved each quarter for use in such areas as economic development and housing, and to present the volume of loans and loan amounts approved each quarter by all State loan programs. The figures given for "loans approved" are just that: loans to which the loan agency has committed itself, not necessarily cash transactions. Figures representing numbers and dollar amounts of total loans outstanding to date are the loans that are still owed to the loan agency, and the amount of principal still unpaid. In other words, total loans outstanding to date are <u>not</u> all loans ever made or approved by the agency.

In addition to information about delinquency, we have included the number and dollar amount of each agency's outstanding loans that are in default. For the sake of uniformity, we define loans in default as delinquent loans that the lending agencies have turned over to their counsel for legal action. Page 5 is a summary sheet showing the rates of delinquency and default for all the loan programs.

Several State programs that are authorized to make either loans and/or grants have chosen to make grants. These are the Outdoor, Recreational, Open Space and Historical Properties Development Fund and the Disaster Relief Fund. The Senior Citizens Housing Development Fund was included in this group until 1982, when the legislature made it strictly a grant program. Because they have never been active in lending, we do not include these programs in our reports. Another program that we omit is the Memorial Scholarhip Revolving Loan Fund, administered by the Commission on Postsecondary Education. This loan program is funded by private donations rather than by the State and is virtually inactive.

Some of the State's loan programs were altered or eliminated by the legislature in 1982; where pertinent, the changes are reflected in this edition. The Fishermen's Mortgage and Note Fund has been combined with the Commercial Fishing Revolving Loan Fund; the former Alaska Renewable Resources Corporation (ARRC) is now the Alaska Resources Corporation (ARC). The rural housing programs were moved from the Alaska Housing Finance Corporation to the Housing Assistance Loan Fund in the Division of Housing Assistance, which also manages the Nonconforming Housing Loan Fund. The Residential Care Facility Revolving Loan Fund was eliminated. In addition, the legislature cleared the books of several loan programs that had never been active or funded and so were never included in these reports.

A new loan fund, the Alaska Grain Reserve Loan Fund, was established by the passage of the Alaska Grain Reserve Program in 1983 (Ch. 100 SLA 1983). This program, established in the Department of Natural Resources, Division of Agriculture, assists state grain producers by making loans secured by grain reserves. Administrative procedures to process loan applications were established during the first few months of FY 84.

Chapter 161 SLA 1984 provides for the orderly termination of the Alaska Resources Corporation (ARC). This act restructures the ARC Board of Directors, transfers the corporation to the Department of Revenue and provides for the disposition of ARC assets and liabilities. As a result of this reorganization, 4th quarter activity information was not available and is not included in this report.

As in previous reports, this report incorporates changes that were made in response to the suggestions of loan program administrators and legislative staff. Readers are encouraged to let us know if they have further modifications to suggest. Also, anyone needing more detailed information about a loan program should call this agency, because we do collect more data from the programs than we have room to print each quarter.

For current descriptions of the active and inactive State loan programs, we refer legislators to "State Loan Programs: A Review of Administration, Funding and Activity," published by the House Research Agency in December 1982. Also, the Division of Budget and Management in 1982 produced a helpful guide entitled "Overview of State Loan Programs and Investment Funds."

*--- less than .1%

[1]Delinquency includes all loans that are more than one day past due at the end of the quarter; the exceptions are the Agricultural Revolving Loan Fund, AIDA and the Scholarship Revolving Loan Fund.

[2]Loans in default are defined as delinquent loans that have been turned over to counsel for legal action, except loans made from the Scholarshop Revolving Loan Fund which are considered to be in default if more than 120 days delinquent.

[3]Includes only the Nonconforming Housing Loan program and mortgages for the Rural Owner-Occupied and Rural Non-Owner-Occupied programs that were purchased since the start of FY 83; mortgages made by the two rural programs before July 1, 1982 are serviced by AHFC and are included in AHFC's delinquency and default figures.

[4]Reflects transfer of all AHFC owned veteran loans effective 11/1/83.

MEMORANDUM

TO : THE HONORABLE JOHN L. SUND
HOUSE LOANS

FROM : PAMELA A. STOOPS, MANAGER
ADMINISTRATIVE SERVICES

DATE : JULY 19, 1985

SUBJECT: FY 86 INTERIM COMMITTEE BUDGET

Speaker Grussendorf has authorized an interim committee budget for FY 86 to the House Loans committee in the amount of $50,960.00. A $25,000.00 allocation was also allotted to your committee for a professional services contract but will not be reflected in your FY 86 monthly budget reports.

71000	Personal Services	$42,860.00
72000	Travel	5,000.00
73000	Contractual	2,800.00
74000	Supplies	300.00
75000	Equipment	0.00
		$50,960.00

Our accounting office has assigned your committee the account code 31-92-2-618. All expenditures of the committee should be forwarded to this office in the form of an invoice or receipt, with an authorized signature, and the account code written clearly on the face of the invoice.

The account chairs are authorized to sign any committee expenses, along with any individuals designated by the chair. Our records indicate that you are the authorized signer of this account. If this is not correct, please submit in writing the names of individuals whom you wish to authorize.

Please remember all travel requests must be approved by the Speaker's Office. No equipment purchases are authorized without prior written approval from the Speaker's Office.

It is the responsibility of the committee to work within the allocated budget. Monthly reports will be issued showing the current status of

the account. Please review these closely. If you have any questions, please give me a call at 465-3850.

The unexpended funds for the House Loans committee as of January 11, 1986, will be unavailable during session for expenditures. Interim committees do not operate during session. Bills will not be paid for any expenditures dated after January 10, 1986. The balance of your FY 85 committee funds will be available after session adjourns in May of 1986 to pay for your staff and committee expenses through June 30, 1986. No additional funds will be available to your committee until July 1, 1986.

Red Dog funds may be tied to airport bonds

Daily News reporter

JUNEAU — The House Loans Committee on Tuesday discussed options for attaching a measure to aid the proposed Red Dog mine to a bill authorizing the sale of bonds for improvements to Anchorage International Airport.

The proposed amendment to the bill would authorize the Alaska Industrial Development Authority to sell up to $175 million worth of bonds to finance construction of a road and port to serve the proposed zinc mine north of Kotzebue.

The original bill would authorize the sale of $86.5 million worth of bonds for improvements to the main Anchorage airport.

Linking the Red Dog bonds to the airport bonds would make it more difficult for Anchorage legislators to vote against the Red Dog proposal.

Rep. John Sund, D-Ketchikan and chairman of the loans committee, said the Sheffield administration, which has requested the aid for Red Dog, asked that the Red Dog bond authorization be attached to the airport bonds.

The administration has requested the Red Dog bond authorization be approved with no legally binding conditions attached to it, but the loans committee discussed making the bond authorization contingent on AIDA and the mine developers satisfying several requirements.

The loans committee took no action on the Red Dog proposal but Sund said the committee will continue the discussion on Thursday.

The proposed mine would be developed by Cominco Ltd., a Canada-based international mining company, in partnership with the Kotzebue-based NANA Regional Corp., which owns the mineral deposit.

Cominco has agreed verbally to repay the state $260 million over 30 years in the form of user fees for the road and port. That would make state financing of the mine transportation system a low-interest loan with an effective subsidy of tens of millions of dollars.

Under the loans committee staff proposal for bonding conditions, Cominco would have agree to pay road and port user fees that ensure a "reasonable return on the state's investment." Cominco would have to agree to an accelerated user-fee payment plan if zinc prices rise above a level AIDA determines would yield a "reasonable profit" to Cominco.

Terry Elder, deputy commissioner of the state Department of Commerce and Economic Development, told committee members the proposed conditions on bond authorization could leave the state vulnerable to lawsuits from opponents of the project who might disagree with the administration on wh constitutes a reasonable return to state and a reasonable profit for Co inco.

HB 105: Read the first time 01/23/85 with Governor's Transmittal Letter and referred to TRSP Rpt 3DP 1NR, Loans Referral added on 04/10/85, State Loans, Finance and Rules; fiscal note with analysis in Supplement #7. Previous hearings regarding Red Dog Mine by Loans Committee 2/8/85 (joint with Resources), 3/26/85 and 3/27/85.

ACTION NARRATIVE

TAPE #21, SIDE ONE

Recording Number 001

The meeting was called to order at 3:33 p.m. by Chairman Sund. Members present included Representative Sund, Representative Uehling, Representative Fuller, and Representative Cotten. Representative Duncan arrived at 3:45 p.m. Representative Frank also attended. Chairman Sund said that the committee would be considering bond authorization for AIDA in the form of amendments to HB 105.

Number 056

Mr. Terry Elder, Deputy Commissioner for DCED, explained what the proposed amendments would do to HB 105. He said they would give AIDA the authority to issue bonds or notes for the financing of the DeLong Mountain Transportation Project in an amount not to exceed $175 million. He added that there also are other amendments proposed by the committee staff that outline conditions that have to be met before the bonds can be sold.

Number 089

Chairman Sund asked what is the statutory requirement that the Legislature approve AIDA's bonding authority.

Number 095

Mr. Bert Wagnon, Executive Director of AIDA, answered that, according to AS 44.88.090, every project exceeding $50 million must be approved by the Legislature.

Number 155

Chairman Sund started to go through the conditions outlined in the amendment, stating that bonds or notes may not be issued until certain conditions are met. He asked if bond council would be available to

address the applicability of the amendments.

Number 170 — Mr. Wagnon said that, although bond council had not yet reviewed these specific amendments, AIDA does not feel that any of the conditions destroy the tax exemption. He added that they wanted to avoid creating a direct link between Cominco's tariff payments and the debt service on the bonds, because that may jeopardize the tax exempt status of the bonds.

Number 210 — Chairman Sund asked Mr. Elder and Mr. Wagnon for their reactions to the proposed conditions.

Number 215 — Mr. Elder said that there are some wording problems, for example in item 1c, stating that payments by Cominco, Ltd., to the state will be accelerated. He said that "state" should be replaced with "AIDA". In item 4, he said that they wouldn't want to have to obtain a revenue ruling that all of the bonds would qualify as tax exempt. He suggested deleting everything from "obtains" through "status". He added that the conditions had given them heartburn but that, since they do not destroy the tax exempt status, AIDA would like to see the committee move ahead with them.

Number 265 — Chairman Sund said that, since there is no finance plan, the conditions act as a "comfort factor" for the committee.

Number 270 — Mr. Elder said that, when things like "reasonable profit" are included in the conditions, his concern would be the possibility of litigation in the future.

Number 278 — Representative Uehling asked Mr. Elder if he would make suggestions as to what should be changed.

Number 281 — Mr. Elder said that his suggestion would be to include the conditions in a letter of intent, instead of putting them into law. He said that the committee could still accomplish its objectives without the threat of litigation.

Number 295 — Chairman Sund asked if AIDA's intention to buy the road corridor from Nana at fair market value was part of the plan all along.

Number 300 Mr. Wagnon answered that detailed plans had not yet been worked out, but that he was also surprised to learn of this, because in tentative discussions with Nana, they had talked in terms of easements, rights of way, and long term lease arrangements, but not actually buying the land.

Number 315 Chairman Sund asked why they wouldn't pursue fee simple ownership of the land.

Number 320 Mr. Wagnon answered that it would be against Nana's corporate philosophy to dispose of any of their land.

Number 323 Representative Cotten said that, since the road would benefit Nana, it seems strange that AIDA would have to buy the land. He suggested excluding the words "more than fair market value" and include the word "cost", and after the word land include the words "and materials".

Number 344 Mr. Elder said that, if the legislature is that specific about what should be a negotiable item, they may run the risk of legal problems leading to loss of the contract.

Number 350 Chairman Sund pointed out that there is no contract.

Number 355 Mr. Elder said no, but this would be in essence forming a contract.

Number 360 Representative Frank said that, if Nana wants the state to provide beneficial financing, then they should be willing to put up their part of the deal.

Number 365 Mr. Wagnon answered that Nana and AIDA have not yet agreed on what the cost will be. He said that, besides the land, there is also the material involved, and Nana will control the vast amount of material (gravel, rip rap, rock.) He said it wouldn't be appropriate for the state to say that they were going to obtain land for free that belongs to a private corporation. Some of these negotiations should not be put into statute.

Number 380 Chairman Sund said that the committee is trying to give AIDA the authority to issue

bonds, and since AIDA has not given any specifics on these issues, the committee coming up with guidelines to give AIDA direction and make the committee more comfortable.

Number 389 — Representative Duncan asked if the land in the national monument has been conveyed to Nana by the Dept. of Interior yet.

Number 400 — Mr. Don Argetsinger, Vice President of Nana Regional Corporation, answered that the road would go through land owned by Nana, state land, and it is proposed to go across 15 miles of the monument. He said that they had looked at two options:

(1) to try to get a right of way from the Secretary of Interior with the approval of Congress to go across the monument; and

(2) to do a land exchange between Nana and the Park Service. They chose the second option. Once this is done, they would grant a right of way to AIDA, with an agreed upon fee for the use of the right of way and the materials. He said that it is against corporate policy to sell the land, and the materials cannot be given away because they are share with other regional corporations. Appraisals would be done to determine the value of the land and gravel.

Number 439 — Chairman Sund asked if Nana feels that the state should pay fair market value for these things, or if not, what the cost would be.

Number 442 — Mr. Argetsinger answered that Nana feels that they need to get a fair market value price, independently determined, for the right of way.

Number 449 — Mr. Elder said these kinds of questions are inappropriate for the legislature to consider, since they should be between AIDA and Nana. He added that it is not without precedent to buy materials from a regional corporation.

Number 453 — Chairman Sund said that the committee is trying to get an idea of what is being contemplated, and they are not inappropriate.

Number 464 — Representative Duncan said that it looks to him as though the language talks about fair market value, and that Nana is talking about fair market value, so that it is not likely to end up being less.

Number 470 — Mr. Elder answered that there is no reason why Nana should not be compensated for the land and the materials, but that according to the wording, it could be any amount from zero to fair market value.

Number 480 — Representative Frank asked if the project cost estimate includes the cost of materials.

Number 483 — Mr. Wagnon said that the costs had been broken down for the materials, but he could not say exactly what the total is.

Number 490 — Chairman Sund asked for Mr. Argetsinger's comments on number 2 of the conditions, pertaining to the monument land exchange.

Number 495 — Mr. Argetsinger said that Nana is optimistic that the deal will go through.

Number 498 — Representative Uehling asked if the language in numbers 2 or 3 would restrict Nana in their negotiations.

Number 500 — Mr. Argetsinger answered no problem.

Number 514 — Representative Frank asked if the land being given up is larger or smaller than the land Nana would get in exchange, or if it is an acre for acre exchange.

Number 516 — Mr. Argetsinger answered that it is almost an acre for acre exchange. Nana will give up about 900 acres more than they are getting in exchange.

Number 524 — Representative Frank said that it seems inconsistent to be able to trade land but not sell it.

Number 527 — Mr. Argetsinger said that Nana does not feel that a sale is necessary, because they are achieving the same purpose as if they granted title to DOT.

Number 535 — Chairman Sund asked if there would be any problem with selling bonds to build a road

that will be on land not owned by AIDA.

Number 538 — Mr. Wagnon answered that there would be no problem. It depends on the terms of the lease. AIDA will finance nothing unless the lease is 10 years beyond the amortization of the loan.

Number 551 — Ms. Mary Nordale, Commissioner of Revenue, said that many states have built public roads on lease-hold right of ways.

Number 560 — Chairman Sund asked Mr. Wagnon if he envisions the bond authorization to to more than build the road and port or if some funds will be held in abeyance for future roads.

Number 565 — Mr. Wagnon said that AIDA wanted to make sure that they had other dedicated lands available because of possible additional users.

Number 575 — Chairman Sund said that he thinks it is essential that the agreement regarding dedicated lands be between AIDA and Nana, but the question remains whether AIDA expects to spend additional money in that region without coming back to the Legislature.

Number 580 — Mr. Wagnon said no, unless the proposed project is less than $50 million.

Number 584 — Representative Frank asked what is Nana's position regarding a proposed corridor going all the way across the state.

Number 608 — Mr. Argetsinger that there has been talk about the potential to serve other claims in the area in the future.

CHANGE TAPE #21, SIDE TWO

Number 010 — Chairman Sund asked Mr. Elder who the finance plan would be submitted to.

Number 013 — Mr. Elder answered that it would be submitted to the Board of AIDA, the Governor, the Legislature, and the State Bond Committee, as required by AS 44.88.173.

Number 040 — Chairman Sund asked about the toll schedule issue and the question of reasonable rate of

return (item #5). What, he asked, would AIDA do with the money if the project was a great success.

Number 050 — Mr. Wagnon answered that the money would go into the Economic Development Fund, and that the tentative plan is to have an agreement between AIDA and the state for funds to flow back to the state. The bond holders will have first call on the funds, however.

Number 070 — Chairman Sund asked how the funds would get from the Economic Development Fund into the General Fund.

Number 073 — Mr. Wagnon answered that it could be a loan agreement, or it could be subject to reappropriation annually, to leave it in the fund for future projects, etc.

Number 091 — Representative Duncan asked, if the money were left in the Economic Development Fund, would AIDA then be able to use it without legislative approval.

Number 095 — Mr. Wagnon said that, within the $50 million limit, they could authorize bonds, but that it had never occurred to him that AIDA might have cash available in large amounts to spend on other projects.

Number 098 — Representative Duncan asked if this meant the Legislature would not need to do anything to keep AIDA from spending the money.

Number 100 — Mr. Wagnon answered yes, no special action would need to be taken.

Number 138 — Representative Cotton said that the committee isn't sure what AIDA is able to do with the cash that goes into the Economic Development Fund.

Number 145 — Mr. Wagnon said that legally he thinks AIDA could build a project without legislative approval if the cost was under $50 million, but he would need to check the statutes to be sure.

Number 157 — Chairman Sund said, under item #5, he wants to know if periodic adjustments to the toll schedule could ever result in tolls going to zero, and if so, for what reasons.

Number 165 — Mr. Wagnon said that his opinion is that the project should be treated like the Brooklyn Bridge in that when you go across you pay a certain fee. Cominco, he added, has offered other proposals. One option is to bind Cominco contractually to make minimum tolls for a set number of years, after which the toll would be adjusted. It would be up to the AIDA Board at that time to determine what the tolls would be. Conceivably, the tolls could go to zero. The more conditions that are placed on the project, he said, the worse it will look to the bond council and the greater the chance of litigation. A letter of intent would be easier to deal with.

Number 210 — Representative Duncan said that zero tolls could not be construed to be a "reasonable return to the state", so zero tolls would not be an option under the language of the amendment.

Number 215 — Mr. Elder said that, at some time in the future, tolls may drop significantly because of an increase in the number of users.

Number 245 — Chairman Sund said that the Legislature will have to make up its mind as to whether it will build the road and port as a total grant, or whether the state will expect some money back, and if so, how much.

Number 250 — Mr. Elder said that there has never been any suggestion that it be a total grant.

Number 255 — Mr. Wagnon said that Cominco has agreed to pay user fees for the road and port of $260 million over a 30 year period. This does not include Operation and Maintenance costs, which will always be paid by the users.

Number 271 — Chairman Sund asked what authority AIDA would have to impose continuing toll fees on Cominco after they have paid back the $260 million.

Number 275 — Mr. Elder said that AIDA has the authority to negotiate a contract with Cominco that would settle those kinds of questions.

Number 282 — Mr. Wagnon said that AS 44.88.080 gives AIDA the authority to enter into such contracts.

Number 295 — Chairman Sund pointed out that there is no mechanism currently in place for the money to flow from the Economic Development Fund to anywhere else.

Number 305 — Mr. Elder said that reappropriation would be a mechanism for accomplishing this.

Number 345 — Mr. Wagnon said that probably the Economic Development Fund would be pledged for payment of the bonds.

Number 355 — Chairman Sund said that item #6 addresses the question of who would make sure that the conditions of the agreement are being met, and assigns this job to the Budget and Audit Committee.

Number 364 — Representative Duncan pointed out that the Budget and Audit Committee has limited powers, and #6 does not say what would happen after Budget and Audit gets the report.

Number 370 — Mr. Wagnon said that he has problems with the word "reasonable" and what this means.

Number 407 — Commissioner Nordale said that she is concerned about having the bond conditions encorporated in the authorization to issue the bonds. She suggested that Section 2 be ended at the end of the sentence (after "project") and another section be created stating that any financing plan approved by the Board of AIDA would encorporate to the extent feasible the following conditions. This would give them the leeway to deal with the ambiguities in the conditions.

Number 490 — There was discussion about having bond council available to answer questions and give advice, and about Commissioner Nordale's suggestions.

Number 570 — Chairman Sund said that a proposed CS for HB 105 would be prepared in time for a 3:00p.m. Thursday meeting.

Number 579 — The meeting was adjourned at 5:00 p.m.

PREVIOUS ACTION

HB 105: Read the first time 01/23/85 with Governor's Transmittal Letter and referred to TRSP Rpt 3DP 1NR, Loans Referral added on 04/10/85, State Loans, Finance and Rules; fiscal note with analysis in Supplement #7. Previous hearings regarding Red Dog Mine by Loans Committee 2/8/85 (joint with Resources), 3/26/85 and 3/27/85. HB 105 with Red Dog testimony heard by House Loans Committee on 4/16/85.

ACTION NARRATIVE

TAPE # 22, Side One
Recording
Number 001

The meeting was called to order by Chairman Sund at 3:12 p.m. Members present included Representative Sund, Representative Cotten, and Representative Fuller. Representative Uehling arrive at 3:35. Representative Duncan arrive at 3:44. Chairman Sund explained that CSHB 105 (Loans) adds three sections to the bill: Sec. 2 authorizes

AIDA to sell $175 million in bonds to finance the DeLong Mountain Transportation Project; Sec. 3 lists the conditions that must first be met before the bonds are issued; and Sec. 4 requires AIDA to report annually to the Legislative Budget and Audit Committee, and to turn over to the Department of Revenue any toll money received in excess of what is required to pay off the bonds. This money would be deposited in the General Fund.

Number 107 — Mr. Terry Elder, Deputy Commissioner for DCED, commended the committee for the work done on the CS. He said it would accomplish the goals laid out in the last meeting and also allow for work to proceed on the project. He said that he was pleased with the CS and supportive of it.

Number 140 — Representative Cotten asked if Mr. Elder's view was also the position of the Administration.

Number 141 — Mr. Elder answered yes, it is the Administration's position.

Number 142 — Representative Cotten asked why the Administration did not introduce a bill that would allow the issue to be considered separately from the Anchorage Airport Bonds.

Number 145 — Mr. Elder said that he did not know why.

Number 149 — Mr. Ken Vassar of Wohlforth and Flint, Bond Council for AIDA, said that with respect to the Red Dog Project, AIDA has been retained by Cominco. For this reason, AIDA has retained the services of an independent bond council for the DeLong Mountain Transportation Project. He said that he would discuss the effects of this legislation on bond issuance and the ability of AIDA to issue bonds under the conditions outlined in the CS. He said that it appears to be a good bill with conditions that can be met without hindering or unnecessarily obstructing the issuance of the bonds.

Number 190 — Chairman Sund asked Mr. Vassar what AIDA's bonding history is, and what do they call their bonds.

Number 195 — Mr. Vassar responded that the term "revenue

bonds" refers to bonds where the debt service payments are secured solely by the revenue of the project being financed. Some of AIDA's bonds are secured in this way, but they also issue general obligation bonds of the Authority, in which case the bond holders also have the right to look to certain other assets for security for the bonds.

Number 225 — Chairman Sund asked, if the project goes ahead and bonds are sold, will any other of AIDA's assets be exposed.

Number 230 — Mr. Vassar answered that it would depend on how the project is put together. Typically, he added, AIDA pledges a particular fund.

Number 238 — Representative Cotten asked Mr. Elder what his intention is as far as what might be negotiated.

Number 240 — Mr. Elder said that they do not want to be restricted to Revenue bonds, but that it is the intention to pledge only the Economic Development Fund, its assets and cash flow.

Number 250 — Representative Cotten asked if there would be any difficulty for a bond sale if the legislature were to limit the ability of AIDA to pledge only the Economic Development Fund and the revenues from the project.

Number 260 — Mr. Vassar answered that the effect would be to limit the way that the transaction could be structured and so would limit AIDA's flexibility to put together a deal that would be optimally satisfactory in the marketplace.

Number 270 — Mr. Elder said that AS 44.88.172 (b) says that if a project is financed or developed through use of the assets of the Economic Development Fund, the Authority may not pledge or use other assets of the Authority to assist in the financing, development or operation of the project.

Number 285 — Representative Cotten asked if it was yet known how much the Legislature would be asked to put into the Economic Development Fund.

Number 290 — Mr. Elder answered that letters to Senator

Sturgulewski outline what the Legislature has been asked to do. This includes the appropriation of loans ($130 million) from the Department of Revenue, roughly $3 million that AIDA already has, and the authority to utilize funds already within AIDA for the project. This would include funds that are currently in multi-family housing programs that are in excess of the needs of that program (about $12 million.)

Number 300 — Representative Cotten commented that this is money that would otherwise be available to the Legislature for reappropriation. He then added up the numbers, including $18 million in revenue that would be produced from these loans in FY 86, for a total of $33 million for FY 86 that would otherwise be available to the Legislature.

Number 310 — Mr. Elder confirmed that this would be the total and noted that the $3 million and the $12 million would be available only for reappropriation.

Number 315 — Representative Cotten asked Mr. Elder if the revenues from the loans would stay in the Economic Development Fund until they exceed the debt service requirement.

Number 320 — Mr. Elder said yes, this would be the case.

Number 328 — Chairman Sund asked Mr. Milt Barker, Deputy Commissioner of Treasury for the Department of Revenue, if anything being done by the committee with respect to this issue would affect the general obligating authority of ability of the state.

Number 328 — Mr. Barker answered that there would be no direct effect. General Obligation Bonds are secured and paid by General Fund appropriations, whereas these bonds are secured by project revenues and the Economic Development Fund. Therefore, these will not be counted toward the State's outstanding debt. However, if the project is a success, it would increase the state's debt capacity. If the project were a failure and the state agreed to pick up the tab, which it is in no way obligated to do, then the state's debt capacity would be affected.

Number 364 — Representative Cotten asked Mr. Vassar how

big the Economic Development Fund would have to be before money could be returned to the General Fund.

Number 379

Mr. Vassar answered that it is typical to have one year's average annual debt service in a fund like the Economic Development Fund. It is also typical that 15% of the principle amount of the bonds is considered a ceiling for what is reasonably required to be in such a fund.

Number 420

Mr. Brian Allen, volunteer for the Alaska Environmental Lobby, said that there were no public hearings on Red Dog during the 1984 session. He said that the Red Dog issue is important to the Environmental Lobby for four reasons:

(1) because it affects natural resource conservation and development;

(2) the development of the mine and transportation corridor should be sensible and environmentally responsible;

(3) state subsidies are huge, and the state is going into the mining business with very little public debate or approval; and

(4) the state should be cautious in giving so much power to AIDA. He also said that the Environmental Lobby is concerned about the health of the workers who may be mining the lead, and about the fact that the state will be making cash contributions to help the project along. The level of the subsidy, he said, depends on the tolls that will be paid by Cominco, and these have not yet been set. The longer the interval without toll payments from Cominco, the greater the state contribution to the project. He concluded by urging the State to wait until all the facts are in (i.e. the finance plan.)

Number 532

Mr. Phil Barnett, attorney for the Sierra Club Legal Defense Fund, testified that the legislation appears to be unconstitutional, because it would be committing future revenues to a certain project. This loan package, he said, does not fall into any category that has been used as an exception to the dedicated funds provision. The

method which the state is choosing to subsidize the project creates a constitutional problem.

Number 563 — Representative Uehling asked Mr. Barnett how this project differs from other loan funds that have been dedicated.

Number 570 — Mr. Barnett responded that those other loan funds were dedicated to be used for their original purpose (i.e. a revolving loan fund.) These loans, however, were set up to generate revenues for the state and also to accomplish whatever purposes underlie the original legislation.

Number 581 — Representative Uehling said that he does not see how this is any different.

Number 588 — Chairman Sund said that there are loan funds that revolve with the principle, some with the principle and interest, and some that don't revolve at all. None of the loan funds being considered for transfer from the Department of Revenue are revolving.

Number 595 — Mr. Barnett responded that this project shows the soundness of the prohibition of dedicated funds, that it is unclear what the amount of the subsidy is, and that the legislature should get an idea of what the subsidy is. Also, they should know if the bonds are tax-exempt or taxable, and what kind of agreement for repayment there will be with AIDA.

Number 600 — Chairman Sund asked Mr. Barnett if he saw any problem with the legislature making a direct appropriation to help finance the project.

Number 605 — Mr. Barnett responded that he saw no constitutional problem regarding dedicated funds with that approach. He added that he would urge the Legislature to approach the project like an investment, by making a direct appropriation and then charging tolls.

Number 612 — Representative Cotten expressed surprise that the Sierra Club is approaching the question of this project from a constitutional perspective, rather than environmental. He asked if the Sierra Club

is opposed to the mine or to the road.

Number 620 — Mr. Barnett said that he was acting on behalf of the Environmental Lobby in reviewing the legislation. However, the Alaska Chapter of the Sierra Club is opposed to the location of the road corridor, i.e. through a national monument.

Number 625 — Representative Cotten said that he had asked the question out of curiosity, with all due respect for the fact that Mr. Barnett had every right to testify in whatever way he chose.

Number 630 — Representative Uehling asked Mr. Barnett if he had any objection to the language on page two regarding the National Monument.

Number 635 — Mr. Barnett responded that the Sierra Club is opposed to the road going through the monument, but that he saw no legal problem with the language.

Number 649 — Representative Cotten moved to adopt CSHB 105 (Loans), dated April 18, 1985. There were no objections and the CS was adopted.

Number 655 — Representative Cotten then moved to delete the phrase "to the extent feasible" from page 2, line 1.

CHANGE TAPE #22, SIDE TWO

Number 001 — Representative Duncan said that he would support the amendment with the understanding that the Finance Committee would have a chance to look at it.

Number 010 — chairman Sund said that he would feel more comfortable if the language were deleted, then there would be an opportunity to see what the ramifications of this would be before the Finance Committee hearing. There were no objections, and the motion passed.

Number 068 — Mr. David Kennedy, geologist for GCO Minerals, testified in favor of the DeLong Mountain Transportation Project, since GCO Minerals Co. and Noranda have the lick deposit about 12 miles N.W. of Red Dog. He said that there is need for a specific access guarantees for future users.

Number 145

Ms. Maureen Kennedy, Director of Alaska Public Interest Research Group (AKPIRG), said that AKPIRG is supportive of the Red Dog Mine itself, and believes that state participation is appropriate to get the project over the hump of marginal economics in the beginning. However, she said, there are many questions left unanswered, and that state involvement in the project is premature because of the uncertainties, such as the lack of a finance plan. She said that, although the Department of Revenue says that they anticipate the revenues coming from the loan portfolio will be about $18 million this year. However, the Governor's budget indicates a $31 million figure. AKPIRG's specific suggestions, she added, include the Legislature requiring Nana to make the land for the road available at no cost. The precise amount of the subsidy should also be quantified, and the combined users should be required to reimburse the state at the market rate of interest plus principle. She concluded by saying that, if the project is delayed and the "window of opportunity" is missed, then the state should be able to revoke the bond authorization. She suggested that the bond authorization automatically lapse after a certain date if bonds have not yet been issued, after which the Legislature can reconsider the issue.

Number 316

Representative Cotten said that Mr. Elder said that the total cost to the state this year would be $33 million.

Number 320

Ms. Kennedy responded that she believed the figure should be $46 million, to reflect $31 million in revenues from the loan programs.

Number 352

Chairman Sund pointed out that the $12 million from multi-family housing is already in AIDA and not in the General Fund. He went on to say that, regarding the cost of the land for the road corridor, the language saying "no more than fair market value" allows Nana to discuss the issue of what they want to charge for the lease of the land. He also said that he is not supportive of an arbitrary deadline, but that a mechanism for doing that is already built in, since bonds cannot be sold until the finance plan is completed.

Number 370	Representative Cotten moved to report out CSHB 105 (Loans), as amended, with individual recommendations. The motion passed with no objections.
Number 385	The meeting was adjourned at 4:35 p.m.

ACTION NARRATIVE

Tape #5
Side 1
Recording
Number 001 Chairman Sund called the meeting to order at 8:35 a.m. Members present were Representatives Thompson, Jenkins, M.W. Miller, Cato, Shultz, Sund and Pearce. Representative Wallis arrived at 8:35, Representatives Uehling and Fuller arrived at 8:47. Chairman Sund introduced Bert Wagnon, Executive Director of AIDA.

Number 020 Mr. Wagnon testified on behalf of AIDA in favor of the DeLong Mountains Transportation Project, including a port and a 55 mile long road in Western DeLong Mountains area near Kevalina. Estimated costs are $65 million for the port and $85 million for the road. Proposed mineral development in the region includes Red Dog Mine. He added that the entire region is heavily mineralized with good potential for future development. AIDA is proposing to construct the transportation project and then charge user fees to all users. Initially, Cominco would be the only significant user. Mr. Wagnon said that the $150 million to build the project can come from tax exempt revenue bonds, loans to AIDA and possibly state grants. So far the $3.4 million appropriation to AIDA by the legislature in 1984 has been used to pay for financial plan costs, engineering services, and miscellaneous AIDA expenses. An additional $18 million state loan is in the governor's FY 86 budget request. Mr. Wagnon justified the project on the grounds that it would bring jobs, tax revenues and increase economic stability to Alaska. He added that there has been a resolution of intent

between the Department of Commerce and Cominco. A RFP for the finance plan has been distributed (deadline 2/15/85,) as well as a RFP for civil engineering services.

Number 150 Representative Thompson asked Mr. Wagnon if the cost estimates for the port and road were AIDA's or Cominco's.

Number 154 Mr. Wagnon responded that they are Cominco's figures, stated in 1985 dollars.

Number 156 Chairman Sund asked if the finance plan will have to be submitted to the legislature.

Number 158 Mr. Wagnon answered that it must be submitted to the legislature, governor and State Bond Committee, but does not require legislative approval.

Number 208 Representative Frank asked if the debt to AIDA would be retired by fees from the initial user (Cominco).

Number 216 Mr. Wagnon responded that fees from future users would be required, and that about a $10 million tariff is expected from the first significant user of the project.

Number 240 There was discussion regarding the use of tax exempt bonds to finance the project beyond the $18 million in direct loan from the state.

Number 258 Representative Uehling asked what the projected costs of the project for the next several years would be.

Number 262 Mr. Wagnon answered that AIDA anticipates bonding for at least a portion of the remainder of the project beyond the $18 million loan for FY 86, but that if general funds were to be used for the entire project, the requirement would be $18 million in FY 86, $50 million for the second year, $50 million for the third year, and $10 or $20 million for the fourth year. He said that AIDA feels that that would be an unacceptable burden for the general fund to bear. Therefore, AIDA is working on alternative finance plans.

Number 313 John Schaeffer, president of Nana Regional Corporation, owner of the Red Dog deposit, testified in favor of the project. The reasons he cited are that the project would provide about 400 jobs, more than half of which would be filled locally. Nana Regional Corporation would also get 4% of the net smelter return until Cominco recovers its investment, then 25% of net profits after that, increasing by 5% every 5 years to a maximum of 50%. Of this money, Nana would get one third and the remaining two thirds would be distributed among eleven other regional corporations state-wide.

Number 465 Mr. Bill Wilson, president of Cominco, Ltd., summarized Cominco's activities world wide, discussed shifts in markets for zinc in recent years, and said that Cominco wants to bring Red Dog into production by the end of the decade. He said that Cominco was prepared to make guarantees covering repayment of the state financing and start-up of the

mine, backed by $2 billion in Cominco assets (Canadian dollars). He said that the current price of zinc is $.43 per pound.

Number 585 Mr. Giegerich gave a slide presentation to emphasize what Cominco believes the Red Dog development would mean to Alaska. He emphasized that 300 people would be employed during the construction phase, and about 400 when the mine is in operation and about 230 in the service industries. Cominco anticipates expenditures in Alaska of about $100 million yearly: $20 million in wages, $5 million in Alaskan purchases (services and materials,) $20 million in transportation payments, and $30 million in royalty payments. He emphasized that timing is critical because the world zinc industry is competitive and that a commitment is needed from the legislature in 1985 so that Red Dog can be brought into production by the end of the decade. He said that the capital cost of Red Dog is estimated at $400 million in 1985 dollars, $250 million of which is for the mine facilities and $150 million for transportation. He said that Cominco's proposal provides for a 30 year payback of the state's investment: $260 million in toll fees and taxes of $360 million (shared by Cominco and the Regional Corporations.) He said that Cominco has invested $25 million in the project to date, and will reach $40 million by the end of 1985.

Side 2
Recording
Number 106 Chairman Sund asked how Cominco feels about the risk involved in going ahead with the project before getting a commitment from the state.

Number 110 Mr. Wilson answered that Cominco's willingness to go ahead with the project depends on obtaining the AIDA loan, settling on an appropriate route to the sea, and location of the min in terms of management. Currently, the proposed mine site is in the North Slope Borough, and there is talk of moving boundaries and organizing a borough in the Nana Region.

Number 167 Representative Pearce asked Mr. Giegerich about the length of the shipping season.

Number 170 Mr. Giegerich responded that the shipping season is about 100 days, but the mine would operate year-round. He added that working capital (what it takes until the mine is operational and product is sold) is 35-50% of the capital cost. This compares with about 10% for a non-arctic project.

Number 180 There was some discussion regarding the marketing of ore when the shipping season is short.

Number 205 Representative Frank asked how the $10 million tariff was determined.

Number 208 Mr. Giegerich said that $10 million is based on the $150 million estimated capital cost, plus the payment schedule Cominco felt they could afford.

Number 215 There was some discussion regarding the price of zinc and what it would take for Cominco to recover its investment, and also about the

quality of ore, the stripping ratio and cost of transportation as those variables affect the cost of operation.

Number 306 There was some discussion regarding the average mining rate of return on investments and Cominco's expectation of a 20% return.

Number 350 Chairman Sund expressed doubts about the state becoming a risk taker in a private enterprise, unless the risk factors are identified, and concern about the cost of the state being a facilitator in financing the project. He said he would want to see the financial plan.

Number 357 Representative Frank asked when the financial plan would be ready.

Number 368 Mr. Wagnum answered that it should be ready by April 15th.

Number 372 The meeting was adjourned at 9:45 a.m.

ACTION NARRATIVE

TAPE #5, SIDE ONE
Recording
Number 001

Chairman Sund called the meeting to order at 8:35 a.m. Members present were Representatives Thompson, Jenkins, M.W. Miller, Cato, Shultz, Sund and Pearce. Representative Wallis arrived at 8:35 a.m. Representatives Uehling and Fuller arrived

at 8:47 a.m. Chairman Sund introduced Bert Wagnon, Executive Director of AIDA.

Number 020

Mr. Wagnon testified on behalf of AIDA in favor of the DeLong Mountains Transportation Project, including a port and a 55 mile long road in Western DeLong Mountains area near Kevalina. Estimated costs are $65 million for the port and $85 million for the road. Proposed mineral development in the region includes Red Dog Mine. He added that the entire region is heavily mineralized with good potential for future development.

AIDA is proposing to construct the transportation project and then charge user fees to all users. Initially, Cominco would be the only significant user. Mr. Wagnon said that the $150 million to build the project can come from tax exempt revenue bonds, loans to AIDA and possibly state grants. So far the $3.4 million appropriation to AIDA by the legislature in 1984 has been used to pay for financial plan costs, engineering services, and miscellaneous AIDA expenses. An additional $18 million state loan is in the governor's FY 86 budget request. Mr. Wagnon justified the project on the grounds that it would bring jobs, tax revenues and increase economic stability to Alaska.

He added that there has been a resolution of intent between the Department of Commerce and Cominco. A RFP for the finance plan has been distributed (deadline 2/15/85,) as well as a RFP for civil engineering services.

Number 150

Representative Thompson asked Mr. Wagnon if the cost estimates for the port and road were AIDA's or Cominco's.

Number 154

Mr. Wagnon responded that they are Cominco's figures, stated in 1985 dollars.

Number 156

Chairman Sund asked if the finance plan will have to be submitted to the legislature.

Number 158

Mr. Wagnon answered that it must be submitted to the legislature, governor and State Bond Committee, but does not require legislative approval.

Number 208

Representative Frank asked if the debt to

AIDA would be retired by fees from the initial user (Cominco).

Number 216 — Mr. Wagnon responded that fees from future users would be required, and that about a $10 million tariff is expected from the first significant user of the project.

Number 240 — There was discussion regarding the use of tax exempt bonds to finance the project beyond the $18 million in direct loan from the state.

Number 258 — Representative Uehling asked what the projected costs of the project for the next several years would be.

Number 262 — Mr. Wagnon answered that AIDA anticipates bonding for at least a portion of the remainder of the project beyond the $18 million loan for FY 86, but that if general funds were to be used for the entire project, the requirement would be $18 million in FY 86, $50 million for the second year, $50 million for the third year, and $10 or $20 million for the fourth year. He said that AIDA feels that that would be an unacceptable burden for the general fund to bear. Therefore, AIDA is working on alternative finance plans.

Number 313 — John Schaeffer, president of Nana Regional Corporation, owner of the Red Dog deposit, testified in favor of the project. The reasons he cited are that the project would provide about 400 jobs, more than half of which would be filled locally. Nana Regional Corporation would also get 4% of the net smelter return until Cominco recovers its investment, then 25% of net profits after that, increasing by 5% every 5 years to a maximum of 50%. Of this money, Nana would get one third and the remaining two thirds would be distributed among eleven other regional corporations state-wide.

Number 465 — Mr. Bill Wilson, president of Cominco, Ltd., summarized Cominco's activities world wide, discussed shifts in markets for zinc in recent years, and said that Cominco wants to bring Red Dog into production by the end of the decade. He said that Cominco was prepared to make guarantees covering repayment of the state financing and start-

up of the mine, backed by $2 billion in Cominco assets (Canadian dollars). He said that the current price of zinc is $.43 per pound.

Number 585

Mr. Giegerich gave a slide presentation to emphasize what Cominco believes the Red Dog development would mean to Alaska. He emphasized that 300 people would be employed during the construction phase, and about 400 when the mine is in operation and about 230 in the service industries. Cominco anticipates expenditures in Alaska of about $100 million yearly: $20 million in wages, $5 million in Alaskan purchases (services and materials,) $20 million in transportation payments, and $30 million in royalty payments. He emphasized that timing is critical because the world zinc industry is competitive and that a commitment is needed from the legislature in 1985 so that Red Dog can be brought into production by the end of the decade. He said that the capital cost of Red Dog is estimated at $400 million in 1985 dollars, $250 million of which is for the mine facilities and $150 million for transportation. He said that Cominco's proposal provides for a 30 year payback of the state's investment: $260 million in toll fees and taxes of $360 million (shared by Cominco and the Regional Corporations.) He said that Cominco has invested $25 million in the project to date, and will reach $40 million by the end of 1985.

CHANGE TAPE #5 TO SIDE TWO

Number 106

Chairman Sund asked how Cominco feels about the risk involved in going ahead with the project before getting a commitment from the state.

Number 110

Mr. Wilson answered that Cominco's willingness to go ahead with the project depends on obtaining the AIDA loan, settling on an appropriate route to the sea, and location of the min in terms of management. Currently, the proposed mine site is in the North Slope Borough, and there is talk of moving boundaries and organizing a borough in the Nana Region.

Number 167

Representative Pearce asked Mr. Giegerich

about the length of the shipping season.

Number 170 — Mr. Giegerich responded that the shipping season is about 100 days, but the mine would operate year-round. He added that working capital (what it takes until the mine is operational and product is sold) is 35-50% of the capital cost. This compares with about 10% for a non-arctic project.

Number 180 — There was some discussion regarding the marketing of ore when the shipping season is short.

Number 205 — Representative Frank asked how the $10 million tariff was determined.

Number 208 — Mr. Giegerich said that $10 million is based on the $150 million estimated capital cost, plus the payment schedule Cominco felt they could afford.

Number 215 — There was some discussion regarding the price of zinc and what it would take for Cominco to recover its investment, and also about the quality of ore, the stripping ratio and cost of transportation as those variables affect the cost of operation.

Number 306 — There was some discussion regarding the average mining rate of return on investments and Cominco's expectation of a 20% return.

Number 350 — Chairman Sund expressed doubts about the state becoming a risk taker in a private enterprise, unless the risk factors are identified, and concern about the cost of the state being a facilitator in financing the project. He said he would want to see the financial plan.

Number 357 — Representative Frank asked when the financial plan would be ready.

Number 368 — Mr. Wagnon answered that it should be ready by April 15th.

Number 372 — The meeting was adjourned at 9:45 a.m.

Red Dog Mine: Please refer to House Special

Committee on State Loans dated 02/08/85.

ACTION NARRATIVE

TAPE #17, Side 1

Recording Number	
001	Chairman Sund Called the meeting to order at 3:46 p.m. Members present were Representatives Sund, Cotten, and Uehling. Representative Phillips and Representative Frank also attended. Representative Duncan arrived at 4:05 p.m.
015	Senator Zharoff said that the St. Paul Breakwater has received damage from two storms. SB 186 would authorize a loan for $3.4 million from the Disaster Relief Fund to the Division of Risk Management to repair damage. Zharoff continued to say that the project is covered by insurance and the loan will be repaid from proceeds. A $2.5 million Federal EDA grant is conditional upon completion of Phase 1 by June 30.
119	Mr. Anselm Stack, Deputy Commissioner for the Department of Administration, with responsibility for the Division of Risk Management. He said that the St. Paul Breakwater falls under an "all risk" policy held by the Division. He added that the deductible under the "all-risk" program coverage amounted to $600,000, $300,000 per storm. The deductible would be paid out of the annual cash flow appropriation to the Division. $3.4 million would eventually be covered by the insurance, which added to the $600,000 deductible equals $4 million total to repair the damage.
170	Chairman Sund asked if there were any design defects.
175	Mr. Staack answered that he was not aware of any.
179	Representative Frank asked if all capital projects are covered by all risk insurance.
183	Mr. Staack answered that most projects are covered, but not all.
203	Representative Frank then asked if the builders were responsible to provide risk

insurance.

Number 206 — Mr. Staack answered that, in this case, St. Paul contracted out the Phase 1 construction through a transfer of responsibility agreement. He said that often builders carry insurance.

Number 226 — Representative Frank said he thought it was the builder's responsibility while under construction to provide this insurance.

Number 230 — Mr. Staack answered that, in this case, there will be claims against the builder, but that the Division of Risk Management believes they have the first responsibility to go in and get their claims reimbursed.

Number 240 — Representative Uehling asked what kind of insurance they carry.

Number 245 — Mr. Staack said that there were several and that it is good coverage.

Number 250 — Representative Uehling then continued by asking when they expected payment from the insurance company.

Number 280 — Mr. Stack said that partial payment will be in 120 days, but will not receive full reimbursement until late in the year.

Number 285 — Chairman Sund asked if the 4 million dollars was an estimated cost and who would make up the $600,000 deductible.

Number 290 — Mr. Staack said that it was an estimated cost and appropriations from loss reserves in the Division of Risk Management would make up the $600,000 difference.

Number 314 — Representative Frank asked what the state policy was regarding insurance, because he thought the state wasn't at risk until the project was completed.

Number 319 — Mr. Staack said the department has accepted that the project was substantially completed at the time of the damage.

Number 354 — Mr. Clark Gruening, representing the City of St. Paul, made himself available to answer questions.

Number 356 — There was some discussion regarding insurance coverage, and assurances given that the state would be repaid the full $3.4 million before St. Paul received any money.

Number 450 — Chairman Sund suggested that the committee draft a letter of intent saying that St. Paul agrees to relinquish all claims to the insurance settlement and any other claims they may have, including the amount of the deductible.

Number 470 — Mr. Staack said that if the insurance payment was low, the Division of Risk Management would pay extra and request an appropriation from the legislature.

Number 515 — Representative Cotten made a motion to move SB 186 with a letter of intent and individual recommendations. There were no objections, so the motion passed.

Number 525 — Chairman Sund opened the meeting for Red Dog testimony.

Number 536 — Mr. Terry Elder, Deputy Commissioner of DCED, testified that the Administration supports Red Dog, and urged legislative approval of the $18 million loan. He added that the Board of AIDA supports the project, and expressed his belief that the project makes sound social and economic sense for Alaska.

Number 590 — Chairman Sund commented that it is appropriate for the state to function as a facilitator in financing projects, but that the state should not be put at risk in this project. He also expressed concern for the opportunity cost to the state.

Number 610 — Mr. Elder addressed the question of risk by saying that Cominco is agreeing to pay toll fees that would repay the state investment, the operation and maintenance, minimum toll payments and other payments necessary to repay the state's investment if the mine is delayed or if production is suspended after operation commences. Also, if the price of zinc goes higher than expected, then the state should recover its investment at an accelerated rate. He added that Nana Regional Corporation has agreed to provide necessary land to accomodate reasonable

expansion for future users.

Number 624 — Chairman Sund asked if these guarantees are being made by Cominco Ltd. in Canada or C.P. Railroad.

Number 626 — Mr. Bert Wagnon, Executive Director of AIDA, answered that the guarantees are made by Cominco Ltd., which has most of the financial strength. He emphasized that the road and port would be owned and operated by the State of Alaska but that all the operations and maintenance expense would be paid by the users, 100% by Cominco as long as they are the only user. The $18 million requested would be appropriated to the Economic Development Fund. Additional security will be required to satisfy the bond market. He said that the finance plan, being prepared by Stanford Research institute, will be available in late April or early May of 1985. He said that they also want to appropriate loans through the Department of Revenue and deposit them in the Economic Development Fund. He said that this would keep them from coming back to ask for more money next year. He said that Cominco is willing to pay about $260 million over a 25 year period in the form of toll fees alone. Interest rate on the loans is still hypothetical.

CHANGE TAPE #17, SIDE TWO

Number 119 — Chairman Sund asked how the loan funds would be obtained from where they are now into the Economic Development Fund.

Number 125 — Mr. Wagnon said that an appropriation bill for about $130 million would be needed.

Number 140 — Chairman Sund noted that the total being requested is then $148 million ($130 million plus $18 million.)

Number 147 — Mr. Elder said that any finance plan by SRI will include some bonding for the project, which would require bonding authorization and assets in the Economic Development Fund. The cash itself would not be used for the project, he said, but rather the bonds. He also said that he and Paul Engleman have estimated that the present value of the direct corporate taxes and the avoided

transfer costs alone is $210 million, not including user fees or anything else.

Number 200 — Chairman Sund asked for a detailed account of Mr. Elder's statement about the $210 million. He also asked Mr. Elder to explain what an avoided transfer payment is.

Number 210 — Mr. Elder answered that an avoided transfer payment is like a welfare payment that the state is currently making that it won't have to make after the person is employed.

Number 220 — Representative Cotten asked who calculated that this would amount to $40 million. Someone answered that the $40 million is based on estimates of the total transfer payments going into the region.

Number 222 — Representative Phillips asked about the alleged conflict of interest rising from the fact that the SRI representative preparing the finance plan was a former Cominco employee.

Number 230 — Mr. Wagnon explained the process by which SRI was selected, and that it was later discovered that Olaf Wolf had been employed by Cominco and was drawing a pension. Mr. Wagnon said that he then became concerned about the appearance of a conflict of interest and requested that Mr. Wolf be removed from the study. SRI then substituted Eugene Thayers for the study, and since he had good qualifications, the Board of AIDA decided to go ahead with contract with SRI. There was an appeal, which was dismissed by the Commissioner of Administration, so the Commissioner's decision to go with SRI is final.

Number 265 — Representative Duncan asked which is being suggested in the March 19th letter to Chairman Sund.

Number 273 — Mr. Wagnon answered that they are advocating Case 4, which asks for all the money this year. By contrast, Case 3 requires AIDA to come back to the Legislature each year for more money.

Number 316 — Mr. Elder explained that the timing and amount of the bond sale is different in the different cases.

Number 366 — Chairman Sund asked about the statement in the same letter which says that no provision has been made to repay the state contribution.

Number 372 — Mr. Wagnon said that the statement results from the assuming a bond interest rate of 10.5% and that $155 million in bonds would be issued. In this case, the state would not be repaid until the $155 million in bonds had been liquidated, after 25 years.

Number 387 — Representative Duncan asked if SRI shares the concern that there should not be a large or repeated appropriation.

Number 395 — Mr. Elder answered that since SRI is working for AIDA, they would share AIDA's concern.

Number 410 — Chairman Sund expressed concern that, since AIDA (as represented by the commissioners) and the Governor are in favor of this project, there are varying reports as to what the cost to the state will be, depending on who you talk to. By the time the SRI report is ready, the $148 million will already have been appropriated.

Number 420 — Mr. Elder said that if you look at the returns, the cost to the state is in fact a profit.

Number 457 — Chairman Sund requested a draft of the appropriation bill. The meeting was adjourned at 5:00 p.m., to be reconvened at 3:30 p.m. on March 27, 1985.

PREVIOUS ACTION

Red Dog Mine: Refer to House Special Committee on State Loans Minutes dated 02/08/85 and 03/26/85.

ACTION NARRATIVE

TAPE #18, SIDE ONE
Recording
Number 001

The meeting was called to order by Chairman Sund at 3:36 p.m. Members present were Representative Sund, Representative Cotten, Representative Fuller, and Representative Uehling. Representative Duncan arrived at 3:45 p.m. Representative Frank was also present. Representative Uehling and

Representative Frank left at 4:05 p.m. Representative Uehling returned at 4:30 p.m. Chairman Sund asked Mr. Terry Elder, Deputy Commissioner of DCED, to explain Case #4 in terms of the loan appropriation.

Number 012 — Mr. Elder explained that the fourth scenario was put together by AIDA, and that what they hope to do is create a bonding mechanism for construction of the port and the road. Both the $18 million appropriation and the loan appropriation from the Department of Revenue would be deposited in AIDA's Economic Development Fund.

Number 035 — Chairman Sund asked what type of loans are in that portfolio, what the maturities are.

Number 040 — Mr. Elder answered that there was $141 million worth of outstanding principal amount as of January 31, 1985. The average interest rate is about 7.9%. The average maturity is about 10 years or less, though he said he wasn't sure.

Number 076 — Representative Uehling asked if money that is lapsing from the loan programs would now be made available to AIDA.

Number 085 — Mr. Elder answered no, these loans are owned by the Department of Revenue and serviced by DCED, as distinguished from cash that could be reappropriated because it had not been loaned out yet.

Number 125 — Representative Frank asked if the bonds would also be collateralized by a financial arrangement with Cominco.

Number 130 — Mr. Elder answered that, as part of the finance plan, there would be a contract with Cominco for user fees.

Number 140 — Representative Frank asked how the $100 million estimated par value of the loans relates to the $141 million figure.

Number 145 — Mr. Elder answered that there is $100 million in "good loans", but that there is a high delinquency rate.

Number 167 — Representative Frank asked how bonds could be collateralized by bad loans.

Number 170 — Mr. Elder answered that they were not all bad loans, just that there is a high delinquency rate.

Number 180 — Representative Frank noted a sentence that says no provision has been made to repay the state's contribution but that it might be paid out of excess revenues. He asked how this fits with Cominco's pledge to repay the state.

Number 200 — Mr. Elder answered that perhaps it does not fit, and said that he anticipates that the finance plan will reflect all the income that the state will receive.

Number 230 — Chairman Sund asked what is the cash flow of the existing loans.

Number 235 — Mr. Elder estimated that it is the neighborhood of $15 to $20 million annually. He added that the assets and the cash flow will collateralize the bonds, as well as the user fees. However, cash from user fees will not happen until the mine is in production. The cash flow would be used to meet annual obligations on the debt service in the meantime.

Number 257 — Chairman Sund asked Mr. Elder what the legislature has to do in order to implement the plan that he is discussing.

Number 265 — Mr. Elder answered that the legislature would have to appropriate $18 million to AIDA, to appropriate the outstanding principal amounts of the loans held by the Department of Revenue to AIDA, and to give AIDA the authority to issue bonds in an amount not to exceed $175 million.

Number 280 — Chairman Sund asked if these bonds would go against the state's bonding capacity.

Number 283 — Mr. Elder answered no, they would be the obligation of AIDA.

Number 292 — Representative Frank asked Mr. Elder why $18 million appropriation plus $141 million in loans is needed in order to proceed on schedule.

Number 298 — Mr. Elder answered that they want to proceed with construction in calendar year 1986.

The $18 million plus some of the proceeds from the bond sales would be required to do the final engineering and design, to bring them up to the point of construction. Some of the $18 million might also be used to pay the debt service on the bonds. The project would be delayed another year if the money is not appropriated for FY 86.

Number 310 — Chairman Sund asked if the bonds will be tax exempt.

Number 314 — Mr. Elder answered that they would be, if possible, but that the IRS would have to rule on it. He added that they are fairly sure that the bonds for the port will be tax exempt, but less sure about the road.

Number 330 — Representative Cotten asked if it is unusual for AIDA to take an active role in promoting this kind of project.

Number 335 — Mr. Elder answered that is not unusual, but this is the first owner-operator project for AIDA.

Number 340 — Representative Cotten asked how the possibility of cost overruns is being considered.

Number 344 — Mr. Elder answered that the estimates have been reviewed by experts, and they feels comfortable that the estimates are accurate.

Number 355 — Representative Cotten said that there is always a good chance of cost overruns and asked how they would deal with a 25% overrun.

Number 380 — Mr. Elder answered that some contingency had been worked into the plan, and that a change in the estimate of cost could be handled by the bond financing.

Number 390 — Chairman Sund asked if there is a guarantee of completion with Cominco.

Number 395 — Mr. Elder answered that, as a part of the finance plan, there will be a contract that would obligate the users to meet the debt obligations of the authority.

Number 402 — Representative Frank asked why AIDA was chosen instead of DOTPF to build the

project.

Number 410 — Mr. Elder answered that AIDA was chosen because of their expertise in putting financing packages together. Number

Number 420 — Mr. Hank Giegerich, President of Cominco Alaska, introduced himself and Mr. Bob Stone, Vice President of Finance for Cominco, Ltd.

Number 430 — Representative Cotten noted that the finance plan may not be ready until May 1, even though originally they thought it would be available April 15.

Number 435 — Mr. Elder answered that there had been delays and that the first draft would be available on May 6, but that SRI would be available in mid to late April to discuss the plan.

Number 460 — Representative Cotten expressed concern that the legislature would only have one week to review the finance plan and make a decision.

Number 465 — Mr. Elder answered that what is being requested of the legislature is the tools for the finance plan, and that there has been a verbal promise of safeguards by Cominco. The committee might want to draft a letter of intent which addresses these safeguards and making the use of the $18 conditional upon meeting the conditions of the letter.

Number 480 — Chairman Sund said that the committee will work on language for such a letter. He asked Mr. Giegerich when Cominco will start spending money.

Number 485 — Mr. Giegerich answered that Cominco would start spending money about the same time the state does, in order to get modules constructed.

Number 495 — Chairman Sund asked how much of Cominco's money would be spent in Alaska.

Number 500 — Mr. Giegerich answered that the modules would be built outside, but that all the on-site work would of course be in Alaska, and offered to provide the committee with a breakdown of where the money would be spent.

Number 520 — Chairman Sund asked how the congressional action to provide access across the monument is coming.

Number 540 — Mr. Don Argetsinger of the Nana Corporation answered that a land exchange agreement with the Department of Interior has been signed, requiring confirming legislation which was introduced early in February. He said that he expects passage by the time Congress recesses in early August. He added that if the bill does not pass by then, it will delay construction, but that there has been no significant objection to the bill so far.

Number 556 — Representative Duncan asked what Cominco would do if the legislature does not act this session on the requests for appropriations.

Number 565 — Mr. Giegerich answered that Cominco would no trash the whole project, but that Cominco is concerned that the mine be operational by the end of the decade because of the anticipated market opportunity at that time.

Number 620 — Representative Duncan expressed concern that the first draft of the finance plan would not be ready until May 6, hinting that the money should not be appropriated until 1986 when the plan has been completed. He asked if Cominco would use their own resources until that time.

Number 630 — Mr. Giegerich answered that Cominco must make a commitment to the construction of the modules early in 1986 and must have a contractor ready to go to work in July. He said that Cominco's board probably would not give the authority to proceed with the project if the state did not appropriate the money.

Number 618 — Mr. Stone added that Cominco had already spent about $25 million by the end of 1984 and that the 1985 expenditures will be about $12 million. He guessed that, if an agreement with the state is reached this session, it would be presented to the Board in the August meeting, after which the board would give the authority to proceed.

CHANGE TAPE #18, SIDE TWO

Number 056 Mr. Elder saidthat, since this is being developed as a publicly owned and operated regional transportation system, the state would not want a private corporation to develop the road and port. He added that all the details would be worked out before the sale of any bonds.

Number 108 Chairman Sund asked if the bond people would put a requirement of completion of the entire project on the bonds, since they will be paid off by toll fees after the mine is operational.

Number 120 Mr. Elder answered that the bond people would probably require some sort of take or pay contract.

Number 150 Ms. Mary Nordale, Commissioner of the Department of Revenue, said that the finance plan may not be complete in every detail when it comes out, and that they want a commitment from the legislature with the needed guarantees, so that AIDA can "fine tune" the finance plan.

Number 155 Mr. Giegerich said that Cominco is prepared to make a guarantee that the mine will be operational within a definite time period after completion of the transportation system, providing they can work out an agreement with AIDA. He added that Cominco understands that AIDA is committed to working out the details of a financial arrangement with Cominco during the next month.

Number 180 Representative Duncan asked Mr. Elder if they have talked to some bond people about the acceptability of the plan for bonding.

Number 190 Mr. Elder answered that AIDA has run it by its own financial advisor.

Number 200 Representative Duncan asked what would happen if the fund were capitalized but there was no appropriation this year.

Number 212 Mr. Elder answered that there would be expenditures early in 1986, and that without the $18 million appropriation, the project would probably be delayed.

Number 237 Mr. Giegerich added that the $18 million is

necessary to both AIDA and Cominco.

Number 250 — Ms. Nordale said that the finance package must be put together by AIDA. The $18 million would fund the preliminary work necessary to determine construction costs and the amount needed for the total financing of the project. Since AIDA, as an agency of the state, will own the transportation system, then they must borrow the money.

Number 290 — Chairman Sund said that there is a $100 million cap on loan programs this year, requiring $30 million to be cut from existing loan programs. If $18 million is appropriated to AIDA, then other programs will have to be chopped. He said that it is an important decision to be made with insufficient data.

Number 300 — Mr. Giegerich said that it is his understanding that AIDA needs the $18 million in order to put together the total financial plan, and Cominco must see the financial plan in order to make a commitment.

Number 310 — Representative Duncan asked Mr. Elder how much money would be needed between January and May of 1986.

Number 312 — Mr. Elder answered that he did not know, but that funds will be needed up front for construction of the project so that they can make commitments.

Number 338 — Ms. Nordale said that the $18 million will go for engineering for designing the project, and costs will not be determined until that is done.

Number 345 — Representative Duncan asked why the cash flow from the loans could not be used instead of an $18 million appropriation.

Number 350 — Ms. Nordale offered to meet with Representative Duncan to explain it. She said that starting July 1 there will be no money, and if they wait until January 1 when there will be money, they will have lost a year on the project.

Number 375 — Chairman Sund asked how much of the $18

million and the $141 million would ever come back to the General Fund.

Number 380 — Mr. Elder answered that, if the mine is developed, taxes and avoided transfer payments would be worth $210 million (present value), which goes to the General Fund.

Number 408 — Representative Duncan asked if it would be possible to outline what the $18 million will be used for. He also asked that they investigate how the $18 million could be reduced.

Number 420 — Mr. Elder answered that they would do as Representative Duncan requests and that they will not ask for more than is needed.

Number 437 — Representative Uehling agreed with Representative Duncan that the legislature should know what the $18 million will be spent for, and asked what is the time line for cost estimates, engineering the road, etc.

Number 450 — Mr. Elder said that he did not know.

Number 465 — Chairman Sund said that a meeting needs to be set to draft a letter of intent. The meeting was adjourned at 4:50 p.m.

4/25/85

MEMORANDUM

TO: Rep. John Sund

FROM: John Hartle, P

RE. CSHB 105 (Finance)

House Bill 105 is scheduled for Finance Committee consideration today and Rep. Adams has asked you to present the Loans CS. The Finance Committee Substitute is very close to the Loans CS, with just a couple changes which were taken from the proposed Senate Resources CS.

The House Special Committee on Loans held five hearings on the Delong Mountains Transportation project. I feel that we gave the proposal a health dose of skepticism, especially the state financing. The porblems we had were never with the mine itself, never with Cominco or NANA, only with the state agencies working on the project.

The situation is that we have no finance plan to work with. The AIDA statutes mandate that a plan of finance be in place before any debt is issued for a project that they intend to own and operate. Due to administrative procedures the finance paln is delayed; SRI, the contractor, will make an oral presentation on April 30 and may have a

draft plan ready by May 6. I assume that this plan will be subject to change many times before all is said and done.

The bill has been looked at by AIDA's bond attorney and found not to cause any problems for the bond issue.

The Loans CS does three things:

1. Authorizes and increase of the Anchorage Airport bonds by $23.7 million. We didn't really hear this issue in Loans; House TRansportation Committee heard this bill as originally introduced.

2. Authorizes AIDA to issue up to $175 million in bonds for the DeLong Mountains Transportation Project. These are "moral obligation" bonds, though are CS takes out those specific words. The bond authorization was taken from a draft by the AG's office and rewritten by legislative legal services. Moral obligation is a term of art which, as I understand it, mainly means that the Authority will have a pledged fund for the issue. As I understand it these binds will be a general obligation of AIDA.

3. Attaches some conditions ot the bond authorization. The Committee did not want to authorize any state agency to issue such a large amount of bonds (without a plan of finance) without some basic conditions being attached. This is a generic concern having nothing to do with Red Dog; it would apply to any state agency and any project of this size. This is particularly true as AIDA has never constructed anything.

Sectional Analysis:

Section 1. This is the Anchorage Airport bonds authorization. (Someone else would be better to answer any questions on this).

Section 2. AIDA authorization to issue up to $175 million in bonds. The latest plan from the ADministration I believe calls for issuence of $135 million.

Section 3. Reminds AIDA to follow AS 44.88.173 which requires the plan of finance. Then says that AIDA will incorporate into the final finance plan the following terms and conditions:

(best to just read the bill here for the conditions...)

Cominco will agree to pay for operation and maintenance on the road proportional to its use of the facility.

If Cominco ceases to develop the mine it will pay AIDA back for all costs and debts incurred.

Toll fees may be adjusted if the price of zinc goes up enough.

The land is made available for the route through the monument (if that is the route they actually use).

Page 2, line 33 (item (3)): NANA agrees to make available land for future expansion of the road and port. This section attracts a lot of

attention for the phrase "at no more than market value." The purpose of the section is to see that land is available to other users (i.e. that NANA and Cominco do not try to keep others out)

AIDA maximizes the use of tax-exempt financing.

A toll schedule is established that (A) ensures a reasonable rate of return on the state's investment and (B) guarantees equitable access to the facility by all users.

The road construction is subject to AS 36 - local hire and prevailing wage.

A new provision (from the Senate Bill): reasonable access to the road and port is guaranteed to all users.

AIDA is required to notify Legislative Budget and Audit that the above conditions have been met.

AIDA agrees that all funds from the project not needed for bond covenants will be returned to the General Fund. (This section has been amended in the Finance CS to meet the concerns of AIDA's bond attorney)

IN THE HOUSE BY THE FINANCE COMMITTEE

CS FOR HOUSE BILL NO. 105 (Finance)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes, establishing conditions under which the bonds or notes for the DeLong Mountain transportation project may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15.410 is amended to read:

Sec. 37.15.410. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money that [WHICH] may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $86,525,000 [$62,825,000] is authorized to acquire, equip, construct, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.510. The principal of and interest on these bonds shall be paid out of and secured by the gross revenues derived by the state from the ownership, lease, use, and operation of the airports, and of all the facilities of them and out of any other revenues or money that [WHICH] the state legislature may provide exclusive of any state tax or license.

* Sec. 2. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project.

* Sec. 3. Before bonds or notes authorized under sec. 2 of this Act may be issued the Alaska Industrial Development Authority shall comply with

AS 44.88.173 and shall incorporate into the final finance plan for the DeLong Mountain transportation project the following terms and conditions:

(1) Cominco, Ltd. is required to agree in writing that

(A) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project based on the use Cominco Alaska makes of the facilities compared to the use made by others;

(B) if Cominco Alaska ceases to develop the Red Dog Mine after costs or debts have been incurred by the Alaska Industrial Development Authority for the project, Cominco, Ltd. will repay the authority for those costs and debts;

[Alaska Ind. Development]

(C) toll fees paid by Cominco Alaska for the use of facilities constructed as part of the project to the Alaska Industrial Development Authority may be periodically adjusted if the price of zinc rises above a level that yields a return on investment commensurate with risk;

(2) the United States government makes available land in the Cape Krusenstern National Monument that is included in the proposed land exchange with NANA Regional Corporation to the corporation for construction of a transportation system; [is conveyed to by the U.S. Department of the Interior]

(3) NANA Regional Corporation is required to agree in writing to make available to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the project and land needed for future expansion of the road and port;

(4) tax exempt financing for the project is used to the maximum extent possible;

(5) a toll schedule, that may be periodically adjusted, is established for use of facilities constructed as part of the project that

(A) ensures a reasonable return on the state's investment in the project; and

(B) guarantees equitable access to the facilities by all users;

(6) contracts for the construction, operation, and maintenance of the port and road are subject to AS 36;

(7) reasonable access to the port and road is guaranteed to all users.

* Sec. 4. Before bonds or notes authorized under sec. 2 of this Act may be issued the Alaska Industrial Development Authority shall

(1) report in writing to the legislative budget and audit committee that the conditions under sec. 3 of this Act have been met; and

(2) agree with the Department of Revenue in writing to deliver all money generated by the DeLong Mountain transportation project to the Department of Revenue for deposit in the general fund, other than money necessary for payment of the principal and interest on bonds or notes issued under sec. 2 of this Act and except as may otherwise be provided in the bond or note covenants. [to the Dept. of Rev. for deposit in the general fund]

* Sec. 5. This Act takes effect immediately in accordance with AS 01.-10.070(c).

AMENDMENT

Offered in the HOUSE BY THE HOUSE SPECIAL

TO: HB 105 COMMITTEE ON STATE LOANS

Page 1, lines 6 and 7, delete:

"international airport revenue bonds authorization" and insert "authorization of bonds or notes, establishing conditions under which the bonds or notes for the DeLong Mountain transportation project may be issued"

Page 1, after line 22, insert the following new bill sections:

"* Sec. 2. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project. ~~Bonds or notes may not be issued under this section until~~ (c) Sec. 3. The board of AIDA shall, prior to issuance and sale of the bonds, incorporate in its financing plans to the extent necessary and appropriate the following terms and conditions:

(1) Cominco, Ltd. agrees in writing to terms and conditions under which

(A) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project based on the use Cominco, Ltd. makes of the facilities compared to the use made by others;

(B) Cominco, Ltd. will repay all expenditures by the state for the project through toll fees for the use of facilities constructed as part of the project;

(C) payments by Cominco, Ltd. to the state will be

4/16/85

accelerated if the price of zinc rises above a level determined by the Alaska Industrial Development Authority to yield a reasonable profit;

(2) land in the Cape Krusenstern National Monument is conveyed to NANA Regional Corporation by the United States Department of the Interior;

(3) NANA Regional Corporation agrees in writing to make available to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the DeLong Mountain transportation project and land needed for future expansion of the road and port;

(4) the Alaska Industrial Development Authority obtains a ruling from the Internal Revenue Service that bonds or notes issued under this section will qualify for tax exempt status;

(5) the Alaska Industrial Development Authority establishes a toll schedule for use of facilities constructed as part of the DeLong Mountain transportation project that ensures a reasonable return on the state's investment in the project and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted; and

Sec 4 (6) the Alaska Industrial Development Authority reports in writing to the legislative budget and audit committee that the conditions under (1) - (5) of this section have been met.

* Sec. 3. Notwithstanding limitations on the establishment of a capital reserve fund under AS 44.88.105, the authority may covenant and agree with the trustee or holders of the bonds or notes authorized under sec. 2 of this Act that the authority will establish a capital reserve fund for the

purpose of securing the bonds or notes, that the chairman of the authority will, by January 2 of each year, certify in writing to the governor and the legislature the amount required to restore the capital reserve fund to the capital reserve fund requirement, and that the legislature may appropriate to the authority the amount certified by the chairman. Nothing in this section creates a debt or liability of the state."

Renumber the following bill section.

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 105

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the international airports revenue bonds authorization and to the authorization of bonds or notes for the DeLong Mountain transportation project and the establishment of conditions under which the bonds or notes for the DeLong Mountain transportation project may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15.410 is amended to read:

Sec. 37.15.410. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money which may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $86,525,000 [$62,825,000] is authorized to acquire, equip, construct, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.510. The principal of and interest on these bonds

shall be paid out of and secured by the gross revenues derived by the state from the ownership, lease, use, and operation of the airports, and of all the facilities of them and out of any other revenues or money which the state legislature may provide exclusive of any state tax or license.

what kind?

* Sec. 2. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project.

* Sec. 3. Prior to the issuance and sale of any bonds or notes authorized in Sec. 2 the board of directors of the Alaska Industrial Development Authority ~~to the extent feasible~~ shall incorporate into the final finance plan substantially the following terms and conditions:

compliance with AS 44.88.173 and shall

(1) Cominco, Ltd. agrees in writing that

(A) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project, based on the use Cominco, Ltd. makes of the facilities compared to the use made by others;

(B) if Cominco Alaska ceases to develop the Red Dog mine after expenditures on the road or port have commenced, Cominco, Ltd. will repay all expenditures by the Alaska Industrial Development Authority on the DeLong Mountain transportation project;

(C) toll fees paid by Cominco, Ltd. for the use of the road and port facilities to the Alaska Industrial Development Authority may be periodically adjusted if the price of zinc rises above a level agreed upon with the authority, which yields a return on investment commensurate with the risk;

(2) land in the Cape Krusenstern National Monument is conveyed to NANA Regional Corporation by the United States Department of the Interior;

(3) NANA Regional Corporation agrees in writing to make available to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the DeLong Mountain transportation project, and land needed for future expansion of the road and port;

(4) The Alaska Industrial Development Authority shall maximize the use of tax exempt financing;

(5) The Alaska Industrial Development Authority establishes a toll schedule for use of facilities constructed as part of the DeLong Mountain transportation project that ensures a reasonable return on the state's investment commensurate with project viability and future usage, and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted.

* Sec. 4. The Alaska Industrial Development Authority reports in writing to the legislative budget and audit committee that the conditions under (1) - (5) of Section 3 of this act have been met.

* Sec. 5. Notwithstanding limitations on the establishment of a capital reserve fund under AS 44.88.105, the authority may covenant and agree with the trustee or holders of the bonds or notes authorized under Sec. 2 of this act that the authority will establish a capital reserve fund for the purpose of securing the bonds or notes, that the chairman of the authority will, by January 2 of each year, certify in writing to the governor and the legislature the amount

required to restore the capital reserve fund to the capital reserve fund requirement, and that the legislature may appropriate to the authority the amount certified by the chairman. Nothing in this section creates a debt or liability of the state.

* Sec. 6. This act takes effect immediately in accordance with AS 01.10.070(c).

3/28/85

(Dept. of Commerce + Economic Development)

SUGGESTED DRAFT OF LETTER OF INTENT ATTACHED TO THE APPROPRIATION BILL WHICH INCLUDES THE APPROPRIATION OF $18.0 MILLION AND REVENUE'S LOANS TO AIDA:

It is the intent of the Legislature that, before the appropriation of $18.0 million and loans to the Economic Development Fund may be expended, obligated, or encumbered, the Alaska Industrial Development Authority must enter into a binding contractual agreement(s) with Cominco, Ltd. and with Nana Regional Corporation to execute substantially the assurances and guarantees represented by the parties to the Legislature.

Specifically, those assurances and guarantees are as follows:

1. Cominco, Ltd. will guarantee to pay toll fees that will repay State expenditures.

2. Cominco, Ltd. will guarantee to pay the operation and maintenance costs of the road and port facilities.

3. Cominco, Ltd. will guarantee minimum toll payments and other payments necessary to repay the State's investment if the mine is delayed or if production is suspended after operation commences.

4. Cominco, Ltd. will agree that, to the extent that the price of zinc should rise above a level presently contemplated to yield a reasonable profit, the State's investment will be repaid at an accelerated rate.

5. Nana Regional Corporation will guarantee to provide necessary land to accomodate reasonable expansion requirements for future users at the port site.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes for the DeLong Mountain transportation project; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175 million to provide financing for the development of the DeLong Mountain transportation project.

* Sec. 2. The authority may pledge the moral obligation of the state in support of the issuance of bonds or notes authorized under sec. 1. If the moral obligation of the state is pledged, the authority shall establish appropriate capital reserve funds, and the chairman of the authority shall, no later than January 2 of each year, certify in writing to the governor and the legislature the amount, if any, required to restore a capital reserve fund to the capital reserve fund requirements. The legislature may appropriate to the authority the amount certified by the chairman of the authority. Nothing in this section creates a debt or liability of the state.

* Sec. 3. The authority may not issue bonds or notes authorized under this Act unless any limitations imposed by law with respect to the expenditure of money appropriated for the fiscal year ending June 30, 1986 to the authority as loans or grants for the purpose of the DeLong Mountain transportation project have been satisfied.

* Sec. 4. This Act takes effect immediately in accordance with AS 01.-10.070(c).

DRAFT
Law

"PROPOSED SECTION TO BUDGET BILL"

* Sec. __. (a) All right, title, and interest in loans of the type described in (b) of this section, in an amount not to exceed $142,000,000 in unpaid principal as of July 1, 1985, and all right, title, and interest in all mortgages, notes, and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated to the Alaska Industrial Development Authority for the purposes of its economic development fund (AS 44.88.172).

(b) This section transfers and appropriates

(1) veterans loans acquired or made under AS 26.15;

(2) commercial fishing loans acquired or made under AS 16.10.300 -- 16.10.360;

(3) small business loans acquired or made under AS 45.95;

(4) tourism loans acquired or made under AS 45.90;

(5) fisheries enhancement loans acquired or made under AS 16.10;

(6) child care loans acquired or made under AS 44.33; and

(7) historical district loans acquired or made under AS 45.98.

(c) In an amount not to exceed $30 million in unpaid principal as of July 1, 1985, all right, title, and interest in commercial fishing loans acquired or made under AS 16.10.300 -- 16.10.360 and secured by a limited entry permit, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated from the general fund to the commercial fishing revolving loan fund (AS 16.10.340) for the purposes of AS 16.10.300 -- 16.10.370.

(d) In an amount equal to the principal balance of loans appropriated under (c) of this section, all right, title, and interest in commercial

fishing loans, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, are transferred from the commercial fishing revolving loan fund to the Alaska Industrial Development Authority for the purposes of its economic development fund (AS 44.88.172). However, only loans which are not secured by a limited entry permit may be transferred or appropriated under this subsection.

SENATE JOURNAL

ALASKA STATE LEGISLATURE

FOURTEENTH LEGISLATURE - FIRST SESSION

JUNEAU, ALASKA MONDAY May 6, 1985

One Hundred Thirteenth Day

Pursuant to adjournment, the Senate was called to order by President Bennett at 11:09 a.m.

The roll showed nineteen members present. Senator Kerttula was excused from a call of the Senate but was present. Senator Sackett was absent.

The prayer was offered by the Chaplain, Pastor Hunt of the Resurrection Lutheran Church.

Senator Sackett requested that his presence be noted.

Senator Halford moved and asked unanimous consent that the journals for the one hundred eleventh and one hundred twelfth legislative days and Supplement No. 36 be approved as certified by the Secretary. Without objection, it was so ordered.

Senator Ziegler introduced former Senator Pete Meland and President Bennett granted him the privilege of the floor.

MESSAGES FROM THE GOVERNOR

Governor Sheffield signed the list of appointments, to be considered at Joint Session today, as correct. The list will be distributed to all Legislators.

MESSAGES FROM THE HOUSE

SB 172

Message of May 5 was read, stating the House passed and returned:

SENATE BILL NO. 172

(extending the termination date of the Council on Domestic Violence and Sexual Assault; efd)

SENATE BILL NO. 172 was referred to the Secretary for enrollment.

SB 218

Message of May 5 was read, stating the House passed and returned:

CS FOR SENATE BILL NO. 218 (L&C)

(extending the termination date of the Board of Barbers and Hairdressers; efd)

CS FOR SENATE BILL NO. 218 (L&C) was referred to the Secretary for enrollment.

SB 247

Message of May 5 was read, stating the House passed and returned:

CS FOR SENATE BILL NO. 247 (L&C)

(extending the termination date of the Alaska Public Utilities Commission; efd)

CS FOR SENATE BILL NO. 247 (L&C) was referred to the Secretary for enrollment.

HJR 35

Message of May 5 was read, stating the House concurred in the Senate amendment to HOUSE JOINT RESOLUTION NO. 35 (Urging the United States Olympic Committee to select Anchorage as the United States nominee for the site of the 1992 Winter Olympic Games), thus passing:

IN THE SENATE BY THE FINANCE COMMITTEE

CS FOR SENATE BILL NO. 280 (Finance) am

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes for the DeLong Mountain transportation project, establishing conditions under which the bonds or notes may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project.

* Sec. 2. Before bonds or notes authorized under sec. 1 of this Act may be issued, the Alaska Industrial Development Authority shall comply with AS 44.88.173 and shall incorporate into the final finance plan and agreement for the DeLong Mountain transportation project the following terms and conditions:

(1) Cominco, Ltd. is required to agree in writing that

(A) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project based on the use Cominco Alaska makes of the facilities compared to the use made by others;

(B) if Cominco Alaska ceases to develop the Red Dog Mine after costs have been incurred by the Alaska Industrial Development Authority for the project, Cominco, Ltd. will pay the authority for those costs together with interest from the date the costs were incurred;

(C) toll fees paid by Cominco Alaska for the use of facilities constructed as part of the project to the Alaska Industrial Development Authority may be periodically adjusted if the price of zinc rises above a level that yields a return on investment commensurate with risk;

(2) the United States government makes available land in the Cape Krusenstern National Monument that is included in the proposed land exchange with NANA Regional Corporation to the corporation for construction of a transportation system;

(3) NANA Regional Corporation is required to agree in writing to sell, lease for a prepaid term of at least 99 years or grant a perpetual easement to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the project and land needed for future expansion of the road and port, subject to no terms or conditions inconsistent with use as a public road and port;

(4) tax exempt financing for the project is used to the maximum extent possible;

(5) a toll schedule, that may be periodically adjusted, is established for use of facilities constructed as part of the project that

(A) ensures full repayment of and a reasonable return on the state's investment in the project; and

(B) guarantees equitable access to the facilities by all users and potential users, including access to private property and access for travel necessary and related to resource exploration and development for which valid permits have been obtained and travel in support of resource exploration and development;

(6) contracts for the construction of the port and road are subject to AS 36;

(7) reasonable access to the port and road is guaranteed to all users and potential users;

(8) the Alaska Industrial Development Authority will own and operate the facilities collectively referred to as the Delong Mountain transportation project.

* Sec. 3. Before bonds or notes authorized under sec. 1 of this Act may be issued, the Alaska Industrial Development Authority shall

(1) report in writing to the legislative budget and audit committee that the conditions under sec. 2 of this Act have been met; and

(2) agree with the Department of Revenue in writing to deliver all money generated by the DeLong Mountain transportation project to the Department of Revenue for deposit in the general fund, other than money necessary for payment of the principal and interest on bonds or notes issued under sec. 1 of this Act and except as may otherwise be provided in the bond or note covenants.

* Sec. 4. As used in this Act, "reasonable return" means a rate of return on the total investment of the state of at least five percent.

* Sec. 5. This Act takes effect July 1, 1985.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act transferring and appropriating certain loans to the economic development fund and the commercial fishing revolving loan fund, transferring and appropriating money to the economic development fund; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. (a) All right, title, and interest in loans of the type described in (b) of this section, and all right, title, and interest in all mortgages, notes, and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated to the economic development fund (AS 44.88.172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project. However, if the amount in unpaid principal of the loans exceeds $112,000,000 as of July 1, 1985, only loans and instruments of security totaling $112,000,000 in unpaid principal are transferred and appropriated under this section.

(b) This section transfers and appropriates

(1) veterans loans acquired or made under AS 26.15;

(2) small business loans acquired or made under AS 45.95;

(3) tourism loans acquired or made under AS 45.90;

(4) fisheries enhancement loans acquired or made under AS 16.10;

(5) child care loans acquired or made under AS 44.33; and

(6) historical district loans acquired or made under AS 45.98.

* Sec. 2. All right, title, and interest in commercial fishing loans

acquired or made under AS 16.10.300 - 16.10.370 and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated from the general fund to the commercial fishing revolving loan fund (AS 16.10.340) for the purposes of AS 16.10.300 - 16.10.370. However, if the amount in unpaid principal of the loans exceeds $30,000,000 as of July 1, 1985, only loans and instruments of security totaling $30,000,000 in unpaid principal are transferred and appropriated under this section.

* Sec. 3. All right, title, and interest in loans that are not secured by limited entry permits in an amount equal to the principal balance of loans appropriated under sec. 2 of this Act, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, are transferred and appropriated from the commercial fishing revolving loan fund (AS 16.10.340), the small business revolving loan fund (AS 45.95.060), and the Alaska World War II Veterans' revolving fund (AS 26.15.090) to the economic development fund (AS 44.88.-172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project.

* Sec. 4. The sum of $12,000,000 is transferred and appropriated from the multifamily housing loans security fund (AS 44.88.156(h)) to the economic development fund (AS 44.88.172) for the purpose of financing the DeLong Mountain transportation project.

* Sec. 5. The appropriation made by sec. 2 of this Act is for capitalization of a loan fund and does not lapse in accordance with AS 37.25.010.

* Sec. 6. The appropriations made by secs. 1 and 3 of this Act are for a capital project and are subject to AS 37.25.020.

* Sec. 7. The appropriation made by sec. 4 of this Act is for a capital project and is subject to AS 37.25.020.

* Sec. 8. Sections 1 - 3, 5 and 6 of this Act take effect on the effective date of an Act entitled "An Act relating to the authorization of bonds or notes for the DeLong Mountain transportation project, establishing conditions under which the bonds or notes may be issued; and providing for an effective date."

* Sec. 9. Sections 4 and 7 of this Act take effect on the date the board of directors ~~of the~~ Alaska Industrial Development Authority adopts a resolution that declares there exists a surplus of at least $12,000,000 in the multifamily housing loans security fund (AS 44.88.156(h)) and that $12,000,000 is available for transfer to the economic development fund (AS 44.88.172).

CS FOR SENATE BILL NO. 279 (Resources)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the economic development fund of the Alaska Industrial Development Authority, transferring and appropriating certain loans to the economic development fund and the commercial fishing revolving loan fund; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $18,000,000 is appropriated from the general fund to the economic development fund (AS 44.88.172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project.

* Sec. 2. (a) All right, title, and interest in loans of the type described in (b) of this section, and all right, title, and interest in all mortgages, notes, and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated to the economic development fund (AS 44.88.172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project. However, if the amount in unpaid principal of the loans exceeds $112,000,000 as of July 1, 1985, only loans and instruments of security totaling $112,000,000 in unpaid principal are transferred and appropriated under this section.

(b) This section transfers and appropriates

(1) veterans loans acquired or made under AS 26.15;

(2) small business loans acquired or made under AS 45.95;

(3) tourism loans acquired or made under AS 45.90;

(4) fisheries enhancement loans acquired or made under AS 16.10;

(5) child care loans acquired or made under AS 44.33; and

(6) historical district loans acquired or made under AS 45.98.

* Sec. 3. All right, title, and interest in commercial fishing loans acquired or made under AS 16.10.300 - 16.10.370 and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated from the general fund to the commercial fishing revolving loan fund (AS 16.10.340) for the purposes of AS 16.10.300 - 16.10.370. However, if the amount in unpaid principal of the loans exceeds $30,000,000 as of July 1, 1985, only loans and instruments of security totaling $30,000,000 in unpaid principal are transferred and appropriated under this section.

* Sec. 4. All right, title, and interest in loans that are not secured by limited entry permits in an amount equal to the principal balance of loans appropriated under sec. 3 of this Act, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, are transferred and appropriated from the commercial fishing revolving loan fund (AS 16.10.340), the small business revolving loan fund (AS 45.95.060), and the Alaska World War II Veterans' revolving fund (AS 26.15.090) to the economic development fund (AS 44.88.-172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project.

* Sec. 5. The appropriation made by sec. 3 of this Act is for capitalization of a loan fund and does not lapse in accordance with AS 37.25.010.

* Sec. 6. The appropriations made by secs. 1, 2 and 4 of this Act are for a capital project and are subject to AS 37.25.020.

* Sec. 7. This Act takes effect July 1, 1985.

SB 279

Approximately 2,800 loans will be affected by the reappropriations proposed in SB 279.

The following assumptions are made:

- Effective date is July 1, 1985.
- AIDA will not service the transferred loans.
- Division of Accounting & Collections will continue to service these loans under contract with AIDA. If this legislation is enacted, service fees currently received from the Department of Revenue will be received from AIDA instead. There will be a net zero fiscal impact for the service fee portion of this fiscal note as the service fees retained by the Department of Commerce and Economic Development will remain the same.

Given these assumptions:

- the ability of the loan funds to meet future loan demand is not affected.
- effect on borrowers would be minimal; an information letter and new payment cards would be mailed to borrowers. Changes in policy are not anticipated.
- FY '86 budget requests for Division of Accounting & Collections and Division of Investments would not be affected. (Cash flow from these loans is remitted to the investor on a monthly basis, net of service fees, late fees, NSF fees and application and assumption fees which are retained by the fund. Veterans and commercial fish fees are appropriated by the Legislature to fund operating efforts in Division of Accounting & Collections and Division of Investments.)

Operating costs that will be incurred:

Contractual

Postage for information letter	
2,500 x .22 ea. =	$ 550
Postage for payment cards	
1,800 x .71 ea. (bulk rate) =	1,278
700 x .18 ea. (bulk rate) =	126
Increased long distance charges	
Estimated 20% of borrowers will contact	
the division with additional inquiries/questions	
560 calls x 5 minutes (ave. $4.25)	2,380
Filing fees for assignment of First Preferred	
Ship Mortgage for commercial fish portfolio	
500 filings x $5.00 ea.	2,500
TOTAL	$6,834

SB 279
Fiscal Note Analysis

The cash flow figures shown in the fiscal note reflect the reduction in general funds available for appropriation arising from SB 279. These figures are based on the scheduled loan payments shown in the attached Table I after netting out service fees as calculated in Table II. Table II also provides a breakdown of the reduction into interest and principal.

Due to loan prepayments, actual receipts may be greater than scheduled in early years and less than scheduled in later years. This is the main reason why the FY 86 budget actually contains $31.3 million estimated loan cash flow, made up of $13.3 million interest and $18 million principal. The difference between the budget estimate and scheduled cash flow for FY 86, which is $13.5 million, will be a downward adjustment to the next revenue estimates in June.

Table I

General Fund Loans to be Appropriated to AIDA
Estimated Cash Flow (Principal and Interest)
($ 000)

Fiscal Year	Veterans	Small Business	Commercial Fish	Tourism	Child Care	Historical District	Fisheries Enhancement	Total
1986	9,247	2,855	6,105	308	5	22	N/A	18,542
1987	9,034	2,783	5,786	308	4	22		17,937
1988	8,784	2,613	5,409	308	3	22		17,139
1989	8,554	2,404	4,243	308	2	18		15,529
1990	8,379	2,279	3,870	282	1	14		14,825
1991	8,343	2,134	3,233	243		14		13,967
1992	8,042	1,946	2,037	229		14		12,268
1993	7,409	1,551	837	221		14		10,032
1994	6,955	907	214	212		7		8,295
1995	6,851	344	34	208				7,437
1996	6,814	59		201				7,074
1997	6,532			186				6,718
1998	6,174			85				6,259
1999	6,038							6,038
2000	5,998							5,998
2001	5,899							5,899
2002	5,096							5,096
2003	4,254							4,254
2004	4,035							4,035
2005	3,925							3,925
2006	3,865							3,865
2007	3,182							3,182
2008	1,709							1,709
2009	521							521
2010	98							98
2011	20							20
Total	145,758	19,875	31,768	3,099	15	147	6,804 (principal only)	207,466

1. This table represents the cash flow to the Department of Commerce and Economic Development. Cash flow to the general fund would be further reduced by .5% service fee on loans serviced by Commerce and .125% service fee to Commerce on loans serviced by banks.
2. Cash flow has not been adjusted for delinquency or default. Except for commercial fish non-permit loans, the state expects complete recovery on defaults. Thus, delinquency and default merely produce lags in receipts.

Table II

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Alaska Industrial Development Authority economic development fund for design and construction of the Delong Mountains regional transportation project."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $18,000,000 is appropriated from the general fund to the Alaska Industrial Development Authority economic development fund (AS 44.88.172) for design and construction of the Delong Mountains regional transportation project.

* Sec. 2. The appropriation made by this Act is for capitalization of a loan fund and does not lapse in accordance with AS 37.25.010.

Amendment to SB279

A BILL

For an Act entitled: "An Act _____; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $12,000,000 is appropriated from the multifamily housing loans security fund (AS 44.88.156) to the economic development fund (AS 44.88.172) for the purpose of financing the DeLong Mountain transportation project.

* Sec. 2. This Act takes effect on the date that the board of directors of the Alaska Industrial Development Authority adopts a resolution which provides that there exists a surplus of at least $12,000,000 in the multifamily housing loans security fund, and that the funds are available for transfer to the economic development fund.

W. G. WILSON

PRESIDENT

COMINCO LTD.

SENATE RESOURCE AND SENATE FINANCE COMMITTEES

WEDNESDAY, FEBRUARY 6, 1985

Madam Chairman of the Resource Committee, Madam Chairman and Mr. Chairman of the Finance Committee, Members of the Committees, Ladies and Gentlemen, good afternoon.

My name is Bill Wilson. I am President of Cominco Ltd. and I live in Vancouver, B.C. Accompanying me from Vancouver is Bob Stone, Vice President, Finance, of Cominco Ltd. Hank Giegerich has already described some aspects of Cominco and I would like to add a few comments.

Worldwide, Cominco employs approximately 10,500 people. In 1984 our total assets were more than $2 billion, and annual sales were about $2.1 billion. We have active operations in 9 countries and carry on exploration activities in a further 12 countries.

Our major business is mining and metals. Cominco Ltd. owns zinc and lead mines at Kimberley, at Pine Point and at Polaris, N.W.T., in Canada; Black Angel in Greenland; Rubiales in Spain;

2/...

Que River in Australia, and the Magmont mine in Missouri. Other mines owned by Cominco include a gold mine in the Northwest Territories of Canada and a gold mine in Nevada; a copper mine in British Columbia; a coal mine in British Columbia; a potash mine in Saskatchewan; and a phosphate rock mine in Montana. At Trail, British Columbia, Cominco operates the world's largest integrated smelter and refining complex, producing zinc, lead and silver plus chemical fertilizers, and high purity electronic materials. Cominco's sales of zinc and of lead amount to approximately 10% of each of the world's production.

Now I would like to talk a little about world metal markets, so that you can see where we think Red Dog will fit in. In the late 70's and early 80's, zinc concentrate markets were bouyant due to the general "boom" conditions that existed worldwide. This shifted dramatically in 1982 when the world moved into recession. Concentrate markets softened, inventories increased significantly, and prices dropped to the lowest "real" level in 50 years. For the metals industry this was the most severe recession since the 1930's.

During 1983/84 production and consumption remained in balance, and there was slow improvement in price, but not enough to put the industry back into complete health. The situation today is essentially unchanged. Zinc consumption in the Western World

3/...

has increased but so has production, so there is still some surplus capacity over-hanging the market. This was the major reason behind Cominco's recent temporary shutdowns -- to try to eliminate some of these surpluses. All of our mines are now operating again, and we will hope to see an improved inventory situation by next summer. And, if the economic recession that the experts are predicting for 1986 materializes, we may again see lower prices for a period and this may result in a shake-out in the market that will finally eliminate some of the high-cost, marginal producers.

However, by the end of this decade, we anticipate some significant changes in the world zinc market. To start with, there are going to be a number of good-sized mines going out of business due to exhaustion of ore reserves. These include our own Black Angel mine in Greenland, Nanisivik in Canada's arctic, the Meggan mine in West Germany (which has been in production for 300 years), plus other major operations in Canada and Australia. These shutdowns are going to take more than half a million tons off the market annually by the end of this decade. Exansions and new mines that have been announced will compensate for some of this, but will not take care of the new zinc production that will be required by 1990, due to the normal expansion of the world economy. So this is where Red Dog comes in, as this market gap that has been identified fits in with our proposed timing for bringing Red Dog on by the end of the decade.

4/...

Cominco is therefore taking metal prices and markets, and the future outlook, into consideration in our planning on when to bring the Red Dog mine into production. Our production decision will be based on these market considerations, plus the return on investment, and the risk. And probably the most critical factor is whether the State of Alaska can assist in the initial financing of the road and port facility. This is the single largest item in the project, and accounts for almost 40% of the total project cost. Our present studies indicate that if Cominco is required to directly finance this portion of the project, the return on the investment will not likely be adequate to justify developing this mine, with its problems of isolation, climate and short shipping season.

In return for State assistance in developing the transportation infrastructure, we have stated that Cominco will make certain guarantees to the State of Alaska covering repayment of the State financing and start-up of the mine. We have been asked what these guarantees mean, and whether the State of Alaska can count on Cominco. These guarantees are backed by the assets of Cominco Ltd., which are more than $2 billion, with two-thirds in fixed assets such as land, building, equipment and developed mineral properties. Cominco is owned by 20,000 shareholders in Canada and the U.S.A., including 54% by Canadian Pacific Ltd., the company instrumental in forming Cominco Ltd. over 80 years

5/...

ago. Canadian Pacific Ltd. is the largest company in Canada, with assets of $17.6 billion, and sales of $13.1 billion.

Another way to measure our guarantee is to look at our past performance. The proposal we are making to you is not new in the world, or to Cominco. In 1961 we reached an agreement with the Canadian Federal Government which called for the construction of a railroad and hydro-plant to assist in bringing the Pine Point mine in Northern Canada into production. We made commitments and guarantees similar to what we are proposing with the State of Alaska. One of these called for the repayment of capital costs for the railroad. As a result of increased production and higher revenues at the mine over that which we expected, we paid for the capital cost in a shorter time period than was required in the agreement. This mine is still in production and is expected to continue for another 5 to 10 years.

Thank you for the opportunity to address this hearing. I am sure that you have a lot of questions about our project and the company. We will be happy to answer any questions you might have, and look forward to meeting with you again.

Thank you.

David S. Kennedy

Senior Geologist

GCO Minerals Company

Joint Senate Resources & Finance

Committee Hearing

Wednesday, February 6, 1985

Madam chairman, members of the committee on behalf of GCO Minerals Company, I appreciate this opportunity to testify before you in support of an important mine development in Alaska. My name is David Kennedy, and I am a Senior Geologist for GCO. First of all, let me provide a brief background of GCO Minerals Company. GCO is a wholly-owned subsidiary of International Paper Company. International Paper Company, one of the largest wood products companies in the country, provides the wood products component of the Dow Jones Index. Annual sales in 1984 were in excess of four billion dollars. Until the Native Claims Settlement Act in Alaska, IP was the largest private land owner in the country. IP is still one of the largest private owners of real estate in the world, owning approximately seven million acres of timberland in the U.S.

To help illustrate the magnitude of probable mine development in northwestern Alaska, in addition to Red Dog, I would like to give a very brief review of GCO's DLM project and then provide some order-of-magnitude operational and financial data for the Lik deposit.

GCO has carried out exploration in Alaska since 1969 and has conducted a continuous exploration program in the DeLong Mountains region since announcement of significant lead-zinc mineralization at Red Dog on D-2 lands in 1976. To date, GCO has expended approximately twenty million dollars on this project, delineated significant zinc-lead ore reserves in the Lik deposit which is located approximately twelve miles northwest of Red Dog and maintains over 6,000 federal and state mining claims. These mining claims contain other good mineral showings which occur within ten to fifteen miles of the proposed right-of-way. An agreement between GCO and Noranda Exploration for further agressive exploration on these mineral claims has been recently consumated.

Prior to 1984, over 100 holes totalling more than 60,000 feet were drilled on the Lik deposit. Ore reserves indicated by this drilling were approximately 25,000,000 tons containing 12% combined zinc and lead with approximately 2 oz/ton silver. Exploration drilling this past summer resulted in the discovery of an extension to the known deposit which we feel confident will double the present reserves.

Conceptual engineering design and order-of magnitude feasibility studies have been carried out for the Lik deposit. These studies indicate a mine operation with the following parameters:

1) A mine operating at approximately 5,000 tons per day. Initial production will come from a small open pit with an underground mining system being introduced in later years.

2) Capital costs exclusive of a road and port would be in the order of 300 million dollars.

3) Concentrate production would be in the range of 275,000 to 350,000 tons per year with higher production occurring in early years due to selective mining of higher grade reserves near the surface.

4) The Lik operation would be connected to the DeLong Mountains Transportation system by a spur road 14 to 25 miles in length.

5) Direct full-time employment generated by the Lik operation will be in the order of 300 jobs at start-up with an additional 20% added at the point of phasing-in the underground operations.

6) The importance of the 1984 exploration results is a potential increase in mine life to at least 30 years.

We have not at this point calculated a dollar value for the benefits that will accrue to the state from this additional mine development. However, implications from the Lik conceptual mine plan in addition to those previously stated for the Red Dog mine clearly show long term economic benefits for Alaska.

There is no question that state aid in the financing of the road and port will speed the development of Red Dog and make possible additional mine developments such as Lik in the region. We are confident that the road and port will make the Lik deposit economically viable. The importance of the road and port project and the Red Dog mine to mine development in Alaska can be illustrated by an analogy with north slope oil development. Red Dog would be analogous to Prudhoe Bay development in the mid 1970's, and subsequent development of the Lik deposit and others would be analogous to development of the Kuparik, Milne Point and Endicott reservoirs.

In conclusion, GCO strongly endorses the Red Dog Project, as it will be the first major mine development in Alaska in over 50 years. In view of Cominco's unparalleled experience in mine development in arctic environments, the Red Dog project should set a very positive precedent for mine development in Alaska and is thus deserving of broad support from the state and the public. GCO believes that the state involvement in the development of the DeLong Mountains Transportation system will not only enhance the opportunity for development of mineral deposits in addition to Red Dog, but will be the first step in the creation of a viable mining industry in the state of Alaska.

Thank you.

Geoffrey G. Snow, President

Noranda Exploration, Inc.

Joint Senate Resources & Finance

Committee Hearing

Wednesday, February 6, 1985

Madam Chairman, members of the committee - Thank you for the opportunity to brief you today. Noranda Exploration, Inc. is the wholly-owned subsidary of Noranda Inc. Noranda Inc. is a major Canadian mining company and a major zinc producer. Noranda mines produce (in 1982) about 625,000 tons of zinc per year, or close to 15% of world consumption. Zinc is important to Noranda's earnings. A 10% change in the price of zinc (4¢ today) affects Noranda's earnings 30%.

I am employed because Noranda's mines are being depleted. In order to survive, a mining company must replace material mined-out. Noranda can look any were in the world, but our organization has focused on the western Brooks Range. We have just concluded an agreement with GCO Minerals that permits us to examine a large claim block in the DeLong Mountains.

Why did we select the DeLong Mountains? Figure 1 shows where zinc has been mined. Most was from the Mississippi Valley. We are not looking there because, at today's prices and costs, the 6% average grade is not attractive.

Further we think the environment labled volcanic-exhalitive has greater potential. Figure 2 shows where reserves are.

The Red Dog geologic environment is analogous to others in the world, for example the Selwyn Basin of the Yukon. There 10 deposits, ranging in size from 20 to 100 million tons, are in similar rocks over a length of 200 miles.

The point for me as an exploration geologist and for you as legislators is that deposits of this type occur in clusters. Noranda hopes to discover others in the Red Dog-Lik cluster.

We are not looking in the Yukon because that is too far from tide water. We are attracted to the DeLong Mountains because tide water is close. We are attracted because there is the possibility of a road to that water. We are attracted because Alaska's tax structure does not penalize those who produce.

The viability of mining operations is directly related to the capital required. A road into the DeLong Mountains will encourage exploration. Because of the clustering nature of deposits of this type, discoveries will hopefully result. Once started the DeLong Mountain zinc belt can provide long term employment, social benefit and new wealth to Alaska.

H. M. GIEGERICH

PRESIDENT AND GENERAL MANAGER

COMINCO ALASKA, INC.

SENATE RESOURCE AND SENATE FINANCE COMMITTEES

WEDNESDAY, FEBRUARY 6, 1985

MADAM CHAIRMAN OF THE RESOURCE COMMITTEE, MADAM CHAIRMAN AND MR. CHAIRMAN OF THE FINANCE COMMITTEE, MEMBERS OF THE COMMITTEES, LADIES AND GENTLEMEN, GOOD AFTERNOON.

THANK YOU FOR THE OPPORTUNITY TO TESTIFY BEFORE YOU ABOUT OUR PENDING DEVELOPMENT, THE RED DOG MINE. MY NAME IS HANK GIEGERICH, AND I AM PRESIDENT AND GENERAL MANAGER OF COMINCO, ALASKA, INC. BASED IN ANCHORAGE. WITH ME IS BILL WILSON, PRESIDENT OF OUR PARENT COMPANY, COMINCO LTD. OF CANADA, AND BOB STONE, CHIEF FINANCIAL OFFICER FOR COMINCO.

OUR PRESENTATION TODAY WILL BE DIVIDED INTO THREE SECTIONS. FIRST, BILL WILSON WILL COMMENT ON COMINCO'S BUSINESS ACTIVITIES, AND SOME OF THE ISSUES WHICH COMINCO WILL CONSIDER BEFORE MAKING A PRODUCTION DECISION. FOLLOWING THIS, I WILL PRESENT A SLIDE SHOW WITH DETAILS ON THE PROJECT. THEN, I WOULD LIKE TO WIND UP WITH SOME OF THE KEY REASONS WHY WE BELIEVE IT IS BENEFICIAL FOR COMINCO ALASKA, AND THE STATE OF ALASKA, TO DEVELOP THE RED DOG MINE.

COMINCO AMERICAN, WHICH IS A WHOLLY OWNED SUBSIDIARY OF COMINCO LTD. OF CANADA, HAS BEEN OPERATING IN THE STATE OF ALASKA SINCE 1973. COMINCO ALASKA, A SUBSIDIARY OF COMINCO AMERICAN, WAS INCORPORATED AS AN ALASKAN COMPANY IN 1982 TO LOOK AFTER ALL OF COMINCO'S BUSINESS ACTIVITIES IN ALASKA.

IN FEBRUARY 1982, NANA AND COMINCO AMERICAN SIGNED AN AGREEMENT FOR THE EVALUATION AND DEVELOPMENT OF THE DEPOSIT. THIS AGREEMENT REQUIRED NANA TO PUT THE MINERAL DEPOSIT IN A PARTNERSHIP IN WHICH COMINCO IS THE MANAGER AND FINANCER. MR. JOHN SCHAFFER, PRESIDENT OF NANA, WILL BE DISCUSSING THIS FURTHER.

NOW I WOULD LIKE TO CALL ON BILL WILSON.

I WOULD LIKE TO ELABORATE ON WHY WE CONSIDER RED DOG SHOULD BE DEVELOPED NOW. ALASKA IS AT A POINT IN ITS HISTORY AND DEVELOPMENT WHERE IT IS DESIRABLE FOR THE STATE TO DIVERSIFY ITS ECONOMY. THIS IS NECESSARY PRIMARILY BECAUSE OF THE STATE'S VULNERABILITY TO DECLINES IN OIL REVENUES. IF ALASKA DOES NOT BEGIN TO DIVERSIFY SOON, THERE WILL BE NO WAY TO CREATE THE NEW JOBS, NEW WEALTH, AND NEW OPPORTUNITIES FOR ALASKANS WHEN THE OIL IS GONE.

BY ASSISTING IN DEVELOPING THE TRANSPORTATION INFRASTRUCTURE, ALASKA WILL SEND OUT A SIGNAL THAT THE STATE IS SERIOUS ABOUT

DIVERSIFYING ITS ECONOMY AND BECOMING COMPETITIVE IN THE WORLD MINERAL MARKETS.

ANOTHER POSITIVE ASPECT TO ASSISTING WITH THIS PROJECT IS THE MESSAGE THAT IT WILL SEND TO OTHER MINING COMPANIES OPERATING IN ALASKA, AND TO COMPANIES INTERESTED IN DOING BUSINESS IN THE STATE IN THE FUTURE. IT IS IMPORTANT FOR A MAJOR MINE TO COME INTO PRODUCTION SOON IN ALASKA, TO ENCOURAGE FURTHER INVESTMENT IN NATURAL RESOURCES. THE RED DOG MINE WILL DEMONSTRATE THAT ALASKA KNOWS HOW TO USE ITS OIL REVENUES WISELY IN DEVELOPING ITS OTHER RESOURCES. MINING HAS PLAYED AN IMPORTANT ROLE IN ALASKA'S PAST, AND CAN PLAY AN EVEN MORE IMPORTANT ROLE IN ITS FUTURE.

AS I MENTIONED, TWO CRITICAL AND RELATED FACTORS IN THE DEVELOPMENT OF THE RED DOG MINE HAVE TO DO WITH TIMING AND MARKETS. FROM THE STANDPOINT OF TIMING, RED DOG MUST BE IN PRODUCTION BY THE END OF THIS DECADE SO THAT WE CAN TAKE ADVANTAGE OF THE MARKET OPPORTUNITY WE HAVE IDENTIFIED. IF ALASKA FALTERS, THE MARKET COULD BE LOST UNTIL SOMETIME IN THE FUTURE. THIS WOULD NOT ONLY BE A MISSED OPPORTUNITY FOR COMINCO, BUT, MORE IMPORTANTLY, IT WOULD BE A GREATLY MISSED OPPORTUNITY FOR THE STATE AND PEOPLE OF ALASKA.

I WOULD LIKE TO MAKE ONE FINAL POINT. OVER THE PAST FEW MONTHS THIS PROJECT HAS BEEN CRITICIZED BECAUSE OF THE PERCEPTION THAT

IT HELPS ONE INDUSTRY, ONE REGION AND ONE REGIONAL CORPORATION. LADIES AND GENTLEMEN, WE CONSIDER THIS TO BE FAR FROM THE TRUTH. AS HAS BEEN SHOWN BY RECENT STUDIES COMPILED BY THE ALASKA OIL AND GAS ASSOCIATION, INDUSTRIAL DEVELOPMENT RESULTS IN SIGNIFICANT SPIN-OFFS TO BUSINESSES IN THE REST OF THE STATE, DUE TO THE NEW MONEY THAT IS INJECTED INTO THE ECONOMY, AND MINING IS NO DIFFERENT. IN THE CASE OF RED DOG, A MAJORITY OF THE NEW MONEY WILL PROBABLY GO TO SERVICE INDUSTRIES IN THE ANCHORAGE/ FAIRBANKS AREA.

AS WELL, THE 7(i) PROVISION IN THE NATIVE CLAIMS SETTLEMENT ACT ENSURES THAT THE INCOME AND EXPENDITURES FOR THE RED DOG MINE WILL BE DISTRIBUTED, AND FELT, ALL AROUND ALASKA. THIS PROJECT CAN DEFINITELY BE DESCRIBED AS AN ALASKAN PROJECT!

WITH YOUR APPROVAL, BEFORE TAKING ANY QUESTIONS, WE WOULD FIRST LIKE TO SHOW A SLIDE PRESENTATION WHICH PROVIDES FURTHER DETAILS ON THE PROJECT. MR. WILSON WILL THEN CLOSE OUR FORMAL PRESENTATION.

Rough Draft

sf0430850840

SENATE FINANCE/SENATE RESOURCES
JOINT COMMITTEE MEETING
ON
RED DOG MINE FINANCING
April 30, 1985
8:40 a.m.

Joint SFC/Res 85-1, Side 1, #001 - End
Joint SFC/Res 85-1, Side 2, #001 - #719

CALL TO ORDER

Senator Jan Faiks, co-chairman of the Senate Finance Committee, called the meeting to order at approximately 8:40 a.m.

PRESENT

In addition to co-chairman Faiks, those FINANCE COMMITTEE members in attendance when the meeting convened were Senators Dick Eliason and Jay Kerttula. Senators Frank Ferguson, Paul Fischer, and Rick Halford arrived later in the meeting. Senator John Sackett, co-chairman, was absent.

RESOURCES COMMITTEE members in attendance when the meeting convened were Chairman Arliss Sturgulewski, and Senators Vic Fischer and Fred Zharoff. Senators Dick Eliason and Rick Halford are also members of the Resources Committee. Senator Jack Coghill arrived later in the meeting. Senator Bettye Fahrenkamp was absent.

Also in attendance: Representatives Al Adams, Red Boucher, Sam Cotten, Marco Pignalberi, and Steve Rieger.

Also present: John Moberly, director, Minerals and Metals Industries/Energy and Resource Center, and Gerry Marsh, senior consultant, Management Consulting Division, from Stanford Research Institute, International, of California; R.R. Stone, COMINCO, Ltd.; H.M. Gregerich, COMINCO/Alaska; John W. Schaeffer, president NANA Regional Corporation, Inc.; Joe M. Britton, district geologist, GCo Minerals; Commissioner Loren H. Lounsbury and Terry Elder, deputy commissioner, and Ron Lahr, deputy director, Alaska Industrial Development Authority, and Jim Deagan, development specialist, Department of Commerce and Economic Development; Guy Bell, Office of Management and Budget, Office of the Governor; Jonathan B. Rubini, assistant attorney general, Civil Division, Department of Law; legislative aides; various members of the news media.

Co-chairman Faiks announced this hearing is in connection with the following two bills concerning RED DOG MINE FINANCING:

SB 279 - An Act making a special appropriation to the economic development fund of the Alaska Industrial Development Authority, transferring and appropriating certain loans to the economic development fund and the commercial fishing revolving loan; and providing for an effective date.

SB 280 - An Act relating to the authorization of bonds or notes for the DeLong Mountain transportation project, establishing conditions under which the bonds or notes may be issued; and providing for an effective date.

Co-chairman Sturgulewski commented these two bills were forwarded to the Finance Committee from the Resources Committee with a series of conditions.

Co-chairman Faiks advised it is the intent of the Finance Committee to address SB 279 and SB 280 at its meeting tomorrow morning at 8:30 a.m.

The following is a transcript of the testimony presented by JOHN MOBERLY and JERRY MARSH of SRI, Inc.:

MOBERLY: We'd like to go over rather briefly today the work that we've conducted over the last six to eight weeks related to the Red Dog project, how some of our results have come out. It is our intention to have a draft interim report in written, published form to you next Monday, and we are on target with that.

KERTTULA: They are from Stanford Research?

FAIKS: They are from Stanford Research International.

KERTTULA: And what is Stanford Research, for the record?

MOBERLY: Actually, it's SRI International. For many years, it was called Stanford Research Institute, and as a consequence of some of the student disorders in the late 1960s, SRI, as we now call ourselves, and the university formally separated. Up until late 1960s/early '70s, SRI was an arm of the university, but is entirely an entirely separate facility, located in the San Francisco Bay area about two or three miles from the Stanford University campus.

(Senator Ferguson arrived at this time.)

SRI originally was formed in 1946. The basic purpose was to do research for West Coast industry; that was the initial goal. Over the years, that has changed quite a bit. SRI does about $180 million a year in contract research and consulting activities. We are structured in three main

operating divisions, one of which is called an engineering division. They do experimental work related to electronics, satellites, laser communications, that sort of thing. We have a large area of what we call Sciences Division. It's composed of both physical and life sciences activities. Almost all of the work in this area is of the experimental nature. Then we have a large consulting group that Gerry Marsh and I are a part of. We call it the Management and Economic Group. This is composed of consultants that work in a wide range of activities, from the more generic management type of consulting activity to specialists in various industry sectors. Gerry, actually, is one that comes out of the management consulting area. I come out of one of the industry areas that's related to the minerals industry. We are then a part of what we call a Resources Division, and there are many other industry areas within us. There are a chemicals industry, forest products industry, and what not. All told we have a staff of about 3,000 people. We conduct work for both private industry and the government. About 60% of SRI's revenue comes from the federal government. Most of that is in the sciences and in the engineering areas. The work that's done in this management consulting group is primarily for companies, both U.S. companies and international companies. I've been with SRI for a long time, initially. I joined SRI in 1961. I stayed with the Institute through 1979. I was on my own for about six years and had my own consulting firm. I rejoined SRI just January of this year. Gerry Marsh is also a recent hire of SRI, and when he starts talking, I'll let him mention a little bit about his background.

I would like to give a quick overview of the study and some of the items. Basically, this discussion will be divided between Gerry and myself. There were really five principles that SRI involved with the study. We gained two of them. My main roll was to take a look at the mine and mill and the economics of the Red Dog Mine and Mill, do the economics, the cost structure, return on investment, these conditions. Gerry's roll was to head up the financial overview, develop various financial plans, what sort of user fees would be necessary to cover the cost the State might bear for the road and port, both capital cost andoperating and maintenance cost. In addition, we used three other in individuals, one is a registered civil engineer in the State of California, who's long taken a look at road/port construction projects. His main purpose and main roll was to review the various documents that were submitted to us by COMINCO on the capital charges and the construction schedule of the road and port facility. We also used one of our transportation experts. That roll was filled by Clare Staried(?). Her main activity was to go over the operating and maintenance cost of the road and port facility during the life of the project. She did, in addition, develop cost for transporting these ore

concentrates around the world. One of the major costs that COMINCO will incur is the ocean freight, ocean shipping, and inland freight shipping for the ore concentrates to be delivered at smelters, literally, throughout the world. Finally, our project leader is Gene Tiers(?), who's long been in the minerals and metals game. He's at home right now trying to put together the final report. We've all written our sectors, and he's got the unenviable burden of putting it together in a very short time; otherwise, he would be here.

(Senator Paul Fischer arrived at this time.)

Before I get into what we want to talk about, I would like to say that we had extremely good cooperation from COMINCO all the way through this. We clearly would not have been able to do what we wanted to do if they had not willingly given us information on costs so we could examine them, felt they were reliable, which was the case. We had questions. We were free to call them, and they responded promptly. We clearly could have not done the study in the timeframe that we had -- roughly six/six-and-one-half weeks -- without their cooperation, and it was not only COMINCO directly, it was some of the engineering firms that COMINCO had contracted work to do. They were all very cooperative. Basically, we looked at the project from two points of view; one the way I looked at it, one the way Gerry looked at it. We essentially developed two computer models to analyze the project, one of which we call the COMINCO model, which is looking at the mine and mill from COMINCO's point of view, what were their costs, what were their profitability; and then the model, which is a basic financial model and a transportation model that we call the Alaska model, and it was to look at the road and port, the capital costs, the operation financing from the State of Alaska's point of view. Now one of the costs, of course, which COMINCO will incur is the road and port user fee. Now, that's a cost to COMINCO. It's a revenue to the State, so what the economic, transportation, financial model comes up with as a revenue is a cost that COMINCO incurs. In doing the work, we went through numerous documents supplied by COMINCO and their engineers, and one of the first things we looked at was the road and port capital cost. These were in a series of documents submitted to us. Our engineer looked at them. He also used an outside engineering firm, HARDING LAWSON(?), who had experience in Alaska to help assist in the evaluation. Now, all these things will be written up fully, and you'll see them in a week or two, but I'll just try to give you some of the highlights. We initally examined what we call the COMINCO-based proposal, and this examined the capital cost and the operating cost of the road and port that COMINCO envisioned. Basically, including escalation of cost during construction, but not interest during construction, we had the road at about $86 million, the port at $72 million. Since we have developed our initial numbers, we have received

some additional capital cost estimation for the port that has not been included in this initial report, but certainly will be included in the final report, which will be submitted sometime later. In addition to this what we call COMINCO-based case, we examined some "what if" situations, an alternative case, as we refer to it. Now, in no way were we trying to second guess the engineering estimates that COMINCO and their engineers had put up, but we wanted to take a look at what was the exposure to the State in case some of the things didn't go quite according to the initial engineering plan. We went through cost item by cost item in the capital estimates for the road and port, and we came up with some things that we said perhaps would be a little different. One of the things was the grade of the road. Apparently, in the initial concept, the road would have a 4% grade. It has been relaxed, as we understand it, to a allow grades of 8-10%. Our engineers just say possibly that might not work out: What are the consequences in capital charges? That could, in fact in our estimate, raise the capital cost by $8.5 million. We also examined and questioned the possible need of additional operating and maintenance cost of the road during the road construction period. That added about $2.1 million. Similarly, we had some possibilities that could happend in the port construction, basically, if there was an additional ice problem beyond what was anticipated. There might have to be more pilings to support the port. That could add like a $1.7 million. The ore storage and the oil(?) storage facilities could add an additional $2-3 million. In the initial $158 million estimate for the road and port -- now remember, that includes escalation during construction period -- we did not use the contingency that COMINCO had in their proposal. In the alternative case, we did include the possibility of the use of this contingency. All told, the $158 million on this alternative scenario goes up to $190 million. Now, Gerry will get into how we analyzed that and what the impact of that alternative scenario would be on the port and road user fees. Again, whether or not that would ever happen is strictly problematical. We have no idea, and we have no reason to believe that the initial engineering estimates might not exactly come about.

FAIKS: Are you saying that $190 million would be the maximum?

MOBERLY: From our initial overview, that was what we considered could be an upper limit.

FAIKS: If everything went wrong?

MOBERLY: If those items that we picked out could go wrong, that's correct. In addition to that, in actual operation of the road and port during the life of the project, we developed some additional cost. For example, if the road maintenance costs were a little bit higher, this would add to

the yearly operation and maintenance costs. We also said what if the sustaining capital charges for maintaining the road and port facility were a little bit higher. Those costs were also included in the sequential year-by-year estimate of costs.

(Senator Halford joined the meeting at this time.)

Now, as I mentioned, since we had this, we have received information that gives a lower estimate of the port charges, so we will be developing another scenario examining what would happen if these capital costs were a little bit lower than the $158 million. We had to essentially settle on what costs we were using about three weeks ago, so we had time to run off the analysis.

At this time, I would like to go into the project as I took a look at it, which was from the COMINCO point of view, the mine and mill. As I mentioned, COMINCO supplied us with many documents, one of which included capital charges. I have some questions on some of those. I got to them, and they responded immediately. We estimate that, during the construction period and including costs that COMINCO has spent since 1979, we have estimated that the capital costs of the mine and mill, including the inflation or escalation during the construction period, will be about $270 million. Now, this does not include interest during construction nor does it include the working capital. Working capital will probably add another $75 million in the first couple of years. We have in the report how these charges were spent over the period of years in the main categories of expenditure, be it concentrator, what they initially spent on ore delineation, airstrip, all the items as they've broken them down. We then went into what are the actual operating costs of the mine and mill during the life of the mine. Basically we had four/five major cost items, that we then broke down in subcategories. The first one was operating costs. This includes the operation of the mine, of the mill, maintenance costs, power generation, overhead costs, initial costs in the first few years for start-up, and a contingency factor. The second major category we had was the transportation charges. Now, this includes the transportation charge that COMINCO would incur to take their concentrates from the mine site 55 miles to the port. That is a cost that we have COMINCO bearing themselves. They would use their trucks, their own workers, to haul the concentrate to the port. The concentrate would be dumped at the port for loading four months a year, which is the few months of the year that they actually can operate. There then would be a port and road user fee. Now, once again, this is the revenue to the State. That's the second category in what we call transportation costs. The third cost, which COMINCO would incur, probably to an outside contractor, would

be costs of removing the concentrate by barge to the ocean-going ships. Then they would have charges for moving that concentrate from the ships through the ports. They will essentially ship the bulk of their material to Vancouver. Other quantities go to Japan, Eastern Canada, and Europe. Finally, there'll be a rail or service transportation charge from the port site to the smelter. I don't want to bother you with a lot of numbers, and I will pass over some initial dollars. Toward the end, I'll show some percentages which, I think, give you a better idea. After operating costs and transportation, the third major cost item, which we have in the mine and mill, is what we call other costs. This includes a corporate overhead charge, a sales general administrative charge. Basically, we examined the mine and mill as a stand-alone operation. So it's appropriate to assign a corporate overhead charge to that as a cost function. The second other cost would be the royalties. In the various documents, which we obtained from COMINCO, the royalties were explained. The formulas for calculating the royalties were included, and we were able to take those numbers with our model and determine the royalties that would be paid each year over the life of the project. Then, of course, there's a mining license tax paid to the State of Alaska. As you know, there is no mining license tax essentially for the first 3-1/2 years of operation. After that comes in, it's a rather complicated formula, and we included that. Finally, there are depletion and depreciation charges. These are not cash costs, but they're certainly need to calculate taxes, both federal and state income tax, mining license tax, and the minimum state and federal tax which do apply.

!TABO!x (Senator Paul Fischer left the meeting.)

The production schedule was what was supplied by COMINCO. Basically, it's the mine starting up in 1989, mining one million tons of ore a year. That increases to a little over two million tons about the third year of the operation. From that they will mill that ore, and when full production, ship roughly 710,000 tons of concentrate each year. We used their schedule of production. We had no question of it. Let me back up a minute and mention how we reviewed the COMINCO supplied information concerning the operating, maintenance, and operating costs, and the capital charges. Within the group that I worked with, we've long done economics of metal, mine and mill, be it lead/zinc, as this operation is, copper, or what not. We've looked at operations around the world. We've visited them. We feel we have a good understanding of the cost structure. Looking at the capital charges that COMINCO supplied us, we compared that with other new projects that we anticipate could come on over the timeframe that this one is scheduled. COMINCO's charges, capital charge estimates were certainly in line with any other capital

charge estimates that we know of of similar operations. Now, this is in a remote area, and there are some additional costs because of that, but we accepted without quarrel their capital cost estimates. Similarly, we accepted their operating and maintenance costs. We reviewed their manning tables. We reviewed their salary schedule. We reviewed their fuel consumption. Again, those were in line with the internal numbers that we have and have had for many years on similar type mines. We felt those numbers were straight through. The transportation numbers, we developed on our own. COMINCO had some; we felt we could do justice with our own numbers, and we used our own transportation numbers. The depreciation/depletion come from standard accounting formulas for similar type operations, so that was no problem. The main uncertainty in any mining project -- and it certainly became one of the main uncertainties in this project -- is what are the revenues, and this is dependent upon the metal prices, and in this case, lead and zinc price.

We have some viewgraphs (Attachment A) that can show this. I apologize that we haven't got visuals for everything. It's just there was a time constraint squeezed on us, and we just didn't have time to prepare things. We have long been involved in the economics of mines, mills, looking at metal prices, how do you forecast metal prices, what determines prices, what mechanisms, and clearly nobody has a crystal ball that they can say that gold's going to be such and such next year, and the same sort of thing applies to these lead and zinc commodity prices. This is actually the plot, and what we did is we developed three price scenarios: an optimistic case, a base case, which we think is the most likely case, and a pessimistic case. Now we explained in the report, and I don't think we need to go through it now just what all went into this methodology. I'll be glad to talk with any of you later about what we did. What this curve shows (page 1 of Attachment A) is actually how zinc prices have moved since 1970. They've slowly increased, and then we look at what we anticipate in 1989 and beyond, going out to the year 2000. That's in cents per pound. Zinc is currently priced about 45 cents a pound. The next chart (page 2 of Attachment A) shows the lead price. It's been up and down. Lead is currently about 19 cents a pound. Once again, those are our three price scenarios, and this is vital for the project, these price outlooks and what they imply. The past prices are in actual dollars that occurred in those particular years. Now, it's hard to get a good understanding when you show prices like that, because we all relate to what's going on in 1985. The next view (page 3 of Attachment A) shows zinc price, and what we have done is put them in -- as we call them -- 1985 constant dollars. In other words, we've had to inflate the past prices, and in effect, you deflate the future charges, and in constant '85 dollars -- certainly since 1970, going up initially, but then coming

down -- zinc has been on a downward trend. We see on all three of our price scenarios, in constant 1985 dollars, prices continuing to deteriorate essentially into the 1990 period. Now, we can talk afterward about why that is happening. We think there will be a recovery. Once we get to 1995, 10 years out, it's simply beyond our ability to make any reasonable estimate of price, and so beyond 1990, we have prices going at essentially inflation, constant dollars. It turned out that we go through a rather elaborate methodology to come up with these prices. The optimistic price beyond 1995 in 1985dollars is about 48 cents, slightly higher than it is today. The base case price is just about today's price. The pessimistic case is about 37 cents as I recall. The same sort of thing applies to lead (page 4 of Attachment A). Now lead isn't as critical to this project as zinc. Most of the revenue will be coming from zinc, so it's that zinc price which is going to be the main determinate in the profitability that COMINCO may achieve. Here you can see what's happened to that lead price. Recently, there was a spike-up. There was a large increase in lead demand in the late '70s that put upward price pressure. That has been alleviated now, and it's on a downward trend. As opposed to the zinc price, which we think may continue to deteriorate for a few years, we don't think that deterioration will be quite as great as lead. We think lead is pretty well bottomed out. Those prices are the key.

(Senators Eliason and Ferguson left the meeting.)

To give you a few numbers, if we look to 1992, and the reason we focus on 1992, that is the first year the mine will be fully operational, mining about 200 tons of ore a year. That's also the time that the start-up costs will be over, and COMINCO certainly expects to be on a stable cost schedule/production schedule. We have some rather large numbers. Sales of these concentrates based upon some formulas for determining concentrate price at these price scenarios. If we look at the base price scenario, and I'll only talk about that right here. We would be looking at sales from that operation of those concentrates in 1992 of about $215 million. Now, those are in inflated dollars. That includes the escalation in prices between now and then. Operating costs for the mine and mill -- that includes the mining activity, the milling, plant overhead -- will be about $73 million. The transportation charges, including port and road user fees, will be about $52 million by our estimates, and the other costs -- the royalty, mining license tax, corporate overhead -- about $16 million; depreciation and depletion, about $55 million.

(Senators Ferguson and Paul Fischer rejoined the meeting.)

I'll ask Gerry to write some numbers down of just what we see as the percentage of what these costs amount to. Put 1992, Gerry, '97, and 2002. We ran a five-year sequence. In the information you'll be getting will be yearly sequences of all of these costs. But by our estimates of the cost, operating cost will be about 37% of the total cost, pre-tax cost in 1992.

(Senator Coghill arrived at this time.)

Transportation cost, less road and port user fee, about 19%. Put 7% road and port user fee. The other costs category will be 8%. Depreciation and depletion will be about 29%. Hopefully, those add close to 100%. We look at '97, operating costs stay about 36%. Transportation, less road and port user fees, 17%. Road and port user fee will be a little less than 7% -- stay with 7%. Other costs jump to 19%. Depreciation and depletion will be about 20%. Depreciation/depletion will be high the first few years, because many of the capital items will be depreciated over five years. So when we get to 1997, major proportions of the initial capital charges will be fully depreciated. Now we look at 2002, we've got operating costs staying at 37%. Transportation cost, less road and port user fees, 16%. Road and port user fee itself will be down to 6%. Other costs, 23%. Depreciation/depletion, about 19-20%.

That trend continues for the life of the project. Operating costs stay at about the same percentage of the total. The transportation charges will continue to decrease slightly. The other costs increase significantly, mainly because of the royalty increase. We carried these all the way through to see what sort of return on investment COMINCO might achieve. Now, return on investment is only one way a mining company will look at a property. They have criteria of what may be acceptable rates of return. They frequently look at the payback period, how long it takes them to recover their capital. They will also look at a project of how it fits into the whole corporate structure. So rates of return, it turns out to be a handy way for analysis like this, because we come up with a nice, well-defined number. But it's certainly not the only way a mining company will look at a project. I'll just give you the case, and these are based upon the user fee, and I want to point out that the user fee we have up there is based on the COMINCO based proposal. Gerry Marsh will be talking about user fees on other scenarios. But using the COMINCO base proposal, we came up with a rate of return for COMINCO -- using the base case price of 16.5%. Now, this is a rate of return based on all the monies that COMINCO has spent up to date and capital charges they will incur between now 1989 when its production starts and also the sustaining capital that they will incur over the life of the project. So on the base case, we came

up with 16.5%. Under the optimistic price scenario, we came up with 19.3% as a rate of return, and under the pessimistic case, we got 10.3%. Now, this was calculated based on the assumption or analysis of all equity finance. Now obviously, when a mining company goes ahead with the project, they will use leverage, they will have some debt financing. When you do that, the rates of return will increase. But based on all equity financing and these price scenarios, we got rates of return varying from as low as 10% to 19%, a significant change based upon those prices. That is not surprising. In all mining projects, what the revenue is is the mystery, and it has a major impact on the rates of return one will achieve. I do want to mention, though, that in the analysis that we conducted, the operation generates profits, as in a positive cash-flow from the second year onward, even at the low price estimates.

FAIKS: Are there any questions for John at this point?

MOBERLY: I'll turn it over to Gerry.

MARSH: What I'd like to spend the next few minutes on is to take you through our evaluatin of the proposed investment that the State is considering in this transportation system, and we're looking at it now from the point of view of the State. I think just to preface my comments, I think I'd like to underline the investment concept that we've been working with, the assumptions behind that investment concept. First and foremost, we're talking about investment in a transportation system that will be owned, operated, and financed by the State through its agency, AIDA. The State will attempt to recover all or part of its investment through a schedule of user fees, and the third point that we were working with was to determine how this project could be financed at the least possible cost to the State and the least possible financial risk. Those are the assumptions we were working with in doing the investment evaluation.

We're going to be talking about our evaluation of the COMINCO proposal, which is our terminology. I'd just like to spend a few minutes to bring everyone to the same level of understanding in the data that we were working with. I was working with the information that was contained in a Memorandum of Understanding, dated December 11th, 1984, that plus the capital cost estimates provided to us by COMINCO and a series of other documents. That Memorandum of Understandingcontained a lot of terms in it. We didn't evaluate it from a legalistic point of view. We evaluated it from a financial and economic impact point of view, so there are a lot of clauses in that proposal that I'm not going to be dealing with that have legalistic implications and some terms that could affect the taxable status, or tax-exempt status of the bond. In any eventual negotiation, all these

other terms have to be carefully looked at. The other point I'd like to make, at least to the best of our knowledge, this Memorandum of Understanding is still a proposal. There's been no formal response to this. Indeed, in the Memorandum itself, it describes it as a basis for continuing negotiation and further discussion. So, the numbers we're going to be dealing with is an evaluation of the hypothesis that this is the impact on the State if these terms were accepted. So, it's hypothetical. These terms have not been accepted.

To evaluate COMINCO's proposal, we developed two scenarios. One we call the COMINCO base scenario, and John alluded to that before. That's using, basically, COMINCO's estimates as provided -- the capital costs as provided, less the project contingency. It's COMINCO's philosophy that they do not expect to spend project contingency, and that's the $158 million figure we're talking about in terms of as-spent dollars to the end of 1989. The other scenario we looked at, called the alternative scenario, and basically, this is an analysis we performed to get a feeling what the impact might be on the State if things don't go according to plan, that's the $190 million figure that John referred to earlier. Also in the alternative scenario, we have slightly operating and maintenance costs and slightly higher sustaining capital costs throughout the 30-year lifetime horizon that we use for analysis.

Now, I'd like to work on the flip-chart to show you the analysis we did and the matrix we developed to show COMINCO's profitability versus the implied level of State subsidy if the key terms in that Memorandum of Understanding are accepted, that the user fees in particular and the capital costs. Now, I'd just like to take you through this matrix, and it's a little complicated if you're not used to looking at these types of things, so I'll try to develop it before I show you what the actual numbers are. On this axis, we thought of COMINCO's mining profitability, and the measurement of profitability we used was return on investment. We have the mine (ROI/inaudible): 20% up here, 15% there, 10%, and 5%. Along this axis we looked at the implied level of State subsidy, if those user fees are accepted. We measured this by looking at all the funds that flow from the State into the project all during the construction and the financing and interest on money during construction phase, and then we take away from that all the money that flows into the State above the operating fees of this project. It's the revenues that come in through the user fees, less all the operating costs, and we call that net operating income. That's the money that flows back to the State. That's the only source of income the State has from this project to recover its investment and the cost of money associated with that investment, and then we discount that. Using a 10% discount rate, we assume that this cost of

capital to the State is roughly 10% to express it in 1985 dollars, numbers that we can relate to. We have two scenarios -- (inaudible) this bottom line here. This is what we call the COMINCO base scenario with the $158 million investment. Over her we have the alternative scenario which has the higher capital costs and higher operating costs that we used for analysis. Under this scenario, the implied level of State investment in '85 dollars is about $80 million. Under this scenario, it approaches $95 million, and to compound the effect, we have higher capital costs and financing during that stage, and the user charges do not escalate high enough under COMINCO's proposal; and hence, the State subsidy goes up. So that's the order of magnitude we're talking about in terms of implied/applied subsidy. Another way of looking at this is what is the return on the State's investment. The return in this area is around 2%. In other words, the State recovers all its original investment and makes 2% on its money. There's a subsidy here, because the money is costing the State roughly 10%. That's where the subsidy comes in.

Now, there is one clause in the COMINCO proposal that we wanted to draw your attention to, because it does increase the State's financial exposure. There's a clause in there that permits COMINCO to delay commercial start-up of the mine for up to two years at the completion transportation system. This can have quite a negative impact on the State, because you have a transportation system that's already to go, your money's all been invested in it, you have to finance that an extra two years, and there are no revenues for up to a two-year period. That has quite an impact. In fact, the impact's about $130 million on top of this worst-case scenario. So, with delay, from the State's point of view, it could be financial exposure of up to about $35 million. Now, this is the level of State subsidy.

Let's look at the applied profitability from COMINCO's point of view. Under this scenario, rate of return is in the 19% range, using the optimistic prices. To use our base case prices, we're in the 16% range, and if we use our pessimistic prices, we're down in the 10% range. Now, if this other scenario were developed, and we were to experience higher capital costs, COMINCO, under that situation, does experience slightly higher user charges, but they're not dramatically higher. So, the impact on profitability is very slight. In fact, the difference in profitability between these scenarios is less than a half a percentage point, about two tenths of a percentage point. So, we have corresponding profitability over here that is not much lower for any given pricing scenario. So, what we're saying is that the State's subsidy level is quite sensitive to these conditions, but the impact on COMINCO's profitability is not that sensitive in this situation.

Now, I think you can all anticipate that the State's greater return or the level of subsidy is going to be very sensitive to the level of user fees, and that's the next thing I'm going to show you, that sensitivity. I think I'll do it this time with a viewgraph (page 5 of Attachment A). Over here, what I was talking about on that lower axis, this is the level of State contribution in 1985 dollars. A moment ago, we were talking about this level, minus $80 million level. Under the COMINCO proposal/scenario, this the quoted average user fee we're talking about. I'll explain this number here. What I'm showing along here are user fees in dollars per ton. This is really approximate to the total amount of user fees. To get at this number, we basically calculated the amount of money that COMINCO would pay in user fees divided by the concentrate shipped in that year. That gave us an average user fee in dollars per ton in any one particular year over a 30-year period. We then converted all those numbers in 1985 dollars and took an average. So, COMINCO will not actually pay this. This is really approximate of how much they pay to allow us to develop a break-even analysis. Under the COMINCO proposal, we're talking about an $11 charge per ton in 1985 dollars on average over the life of the project. To get to break even from the State's point of view, the zero point, we'd have to move from about $11 up to the $19 range. So, the level of State subsidy is very sensitive to the level of user fees. Now, by break-even, what we mean here is that the State recovers all its investment and makes 10% on that. In other words, it recovers its costs of money as well. Under this scenario, where we have the higher capital costs, we need about another $4-5 more per ton on average to get to a break-even situation.

Now, the next thing I want to show you is COMINCO's profitability, how that carries users fees. Here we're looking at State subsidy versus user fee, now we'll look at profitability versus user fee (page 6 of Attachment A). For the moment, keeping in mind about $20, $19 a ton as the State's (inaudible). This would be up to the year 2018.

FAIKS: For the life of the project?

MARSH: Yes. We use a 30-year production cycle that COMINCO used in their analysis, which is a reasonable period of time to evaluate a mining program.

FAIKS: So you're using 30 years as the base amount to recover investment.

MARSH: Now, what we have here in this graph (page 6 of Attachment A), again we have mining profitability measured in terms of percent in return on investment -- percent/ROI. Here we have those user fee figures in dollars per ton, 16 here all the way up to 26, with breakeven occuring around the

$19-20 point. Two things I'd like to call your attention to on this graph -- first of all, the overall level of mining profitability is dramatically influenced by the price scenario. That's what these refer to -- optimistic level price scenario, base case metal price scenario, pessimistic price scenario. Profitability is highly sensitive to price assumptions. It is less sensitive to the user fees. That's the slope in these curves. To go from COMINCO's proposal of about $11 per ton back in here to the break-even point for any given price scenario, we use/lose this profitability by less than two percentage points. Now, I don't want to imply that that's not a significant two percentage points. I think what you should get from this thing is an appreciation from a businessman's point, a banker's point of view, in evaluating the risk. We're talking about a company risking $300 million investment, and they have to come to grips with which price forecast do they really believe in to make this kind of analyses, and that's going to be domineering in their thought process in this respect. User fees do have an impact, about a 2% impact.

COTTEN: What did you use to decide -- what was the base optimistic or pessimistic. One thing we do with State revenues, we assign a percentile. So, would you say that the base metal price was, using a 50th percentile, in other words, there's just as good a chance it would be higher as it would lower?

MOBERLY: It's pretty difficulty to assign a probability, as to if it would be off, would it be skewed more to the pessimistic. It's just not possible.

COTTEN: What is base metal price mean, then?

MOBERLY: Well, that is what we think is the most likely case of the direction of prices.

FAIKS: Is that your 70 percentile, then?

MOBERLY: It's not on a probability is what you're asking. It's basically going through a methodology of what we think is most likely to determine price.

FAIKS: And you've never equated it to a probability.

MOBERLY: There's no way to put a probability on it. I can appreciate your question. There's just no way to put a probability on that.

MARSH: I think that one thing we can add, although we call it pessimistic, in our view, it's still a plausible situation.

MOBERLY: That's correct. There could be some conditions happen where it could go there.

COTTEN: So then the conclusion is that, if things went wrong, if the capital costs were high, metal prices were low, the State wanted to break even, the mine wouldn't make any money.

MARSH: Not as much as it would like to.

MOBERLY: No. It still is profitable.

MARSH: But we're down around the 10% or lower area.

MOBERLY: Rate of return. It makes money.

COTTEN: What's the bottom of the line?

MOBERLY/MARSH: Eight percent.

HALFORD: But that's not return on capital.

MOBERLY: Yes. That's your accumulated cashflow return on invested capital throughout the life of the project.

HALFORD: But why do a project if you could put it in CDs at higher than that?

MOBERLY: Well, that's what some people say. But as I said, there's other ways that mining company will evaluate whether they'll go ahead with the project. You may not want to put your money into it, that 10% rate of return.

MARSH: Now, we don't know that COMINCO's point of view, what their philosophy is on future prices. They have their own viewpoint on this. We're showing you the range we think a plausible range is to the end to give you a feel for the rest of the associated (inaudible). I think I'd like to also say that we did the analysis to find out what it takes for the State to break even. We're by no means recommending that or suggesting that as a proposition. In fact, COMINCO should pay the full shot of this. That get to an issue of equity, and I'd like to finish out my presentation with that issue.

Just briefly, I'd like to talk about the financing of these various proposals. The second part of my assignment was to look at feasibility of financing this. Now, let me just go back to my notes for a minute. The overall approach we took to financing, and I should make you aware at this point that we've engaged First Boston in San Francisco to be advisers to us on financing issues, and they've been very helpful. In terms of the overall approach or the overall philosophy on financing, we feel that the State can minimize its cost and come up with the lowest cost approach to this by making the

most judicious use of the resources that are being contemplated being transferred to AIDA, the so-called capitalization. Here I'm referring to the $12 million appropriation that's under discussion, plus the transfer of the loan portfolio. Assuming that AIDA, in fact, received those financial resources, we can keep the bond size down to a minimum level, and the way we can do that is rather than issuing a large bond to provide a debt service reserve, we're suggesting that the AIDA financial resources be set aside for the debt service reserve. That allows AIDA to invest that money at a higher rate than the bond proceeds under tax exempt financing because of IRS arbitrage rules, bond proceed money that's not being used cannot be...

(End SFC/Res 85-1, Side 1 -- Begin SFC/Res 85-1, Side 2)

...so with judicious use AIDA resources we could set up a debt service reserve that earns money until the money's required. We use the bond proceeds to cover construction costs, and when they run out in '89, then we start drawing down on the AIDA funds that have been building up and accumulating over time from the loan portfolio and from reinvestment, and under that situation, and looking at the COMINCO proposal, we're coming up with a bond issue with a fixed rate financing of about a $100 million. It was lower than we originally anticipated, and that's because of the contemplative resources being transferred to AIDA. A bond level or bond issue of that size, First Boston is very comfortable with in terms of going to market. When we start to get up to bond levels of $175-200 million, which would be required if AIDA did not have those financial resources, because now you would have to issue a large enough bond to provide a debt service reserve and to provide for capitalized interest. That brings us up into the $200 million range, and people getting a little concerned about the marketability of that in view of this project. A key aspect in marketing the bonds is eventually going to be COMINCO's credit worthiness, because the bond holders are going to look through the project and look through to the principle user in year-to-years for repayment of debt service. So, we've tried to come up with a financing approach that keeps that bond issue down as small as possible and reduces the cost to the State. We've also looked at, and you'll see in the final reports, variable rate financing, which reduces the interest rate from 10-1/2% to 7%. However, the State is exposed to some more financial risk, the risk of interest rates moving up over time, and First Boston has a point of view on that, and they will be providing that advice to AIDA through our report.

We can't see any reason why the project should not proceed. It looks like a good project. It seems to me it really requires a true partnership of the three principal interests: the State, COMINCO, and the native associations through NANA

Corporation. In terms of can COMINCO afford to pay the full shot of the project, that's debatable. We don't want to put COMINCO management in that position of saying yes they, because you've got to look at those price scenarios, and you've got to look at their whole decision process and the risk they're facing. I'd rather address it by saying, is it equitable for COMINCO to pay the whole shot in view of other users that could be coming in the future and in view of other benefits to the region? I'd like to raise the question, when you look at the potential economic return from this mine site, is it equitable for the State to subsidize it to the tune of $75 million? I think that's a legitimate question. I don't think it has to be subsidized to that level. The third group, the third beneficiary of this project, are the native organizations through the NANA corporation. The amount of royalty that will be coming out of this project in 1985 dollars, using our base-case price scenario is in excess of a half a billion dollars. They are not facing the same sort of investment risk that COMINCO is facing. Is it equitable that that type of money be available and not somehow used, or part of it used, in this project. Now, we can't answer those questions. That's obviously the important part of the political process to decide what's equitable. But in our analysis, these are the thoughts that came to our mind as we went through it, and we just tabled them here for your discussion.

V FISCHER: In this kind of an analysis, is it appropriate to also count as a benefit other prospective revenues that may have accrued to the State, such as corporate income tax, various other kinds of revenues?

MARSH: I think, when you get into infrastructure type of projects, where the State's investing in infrastructure, you normally look at the broader cost benefits that accrue to the State, and I understand analysis like this has begun. This was not part of our assignment, and we can look at that, but I would be surprised if there aren't some quantifiable benefits from this project. I just don't know what the level might be, but that certainly is a consideration. That's why I say, looking at it from the State's point of view, you may not have to have a subsidy, but is that equitable? Should there be some subsidy to recognize those broader benefits?

MOBERLY: From the results of our work, we can easily just sum up what those total dollar figures are, just like Gerry mentioned the total accumulated royalty over a 30-year production period in excess of $500 million. We can easily come up with those other numbers of what the other State mining license tax, other State income taxes that will generated.

V FISCHER: Will that be part of your report?

MOBERLY: Those numbers will be included, yes. We have not done any cost-benefit analysis. That was not the intent, but just the absolute numbers that fall under the analysis will be there.

V FISCHER: You said the analysis is based on the 30-year projection, and that's the usual way of doing it. Under what circumstances, if any, would it make sense to have a 40-year analysis, and what would happen if one could do that?

MOBERLY: It won't have any consequence at all when you do a return of investment, because those revenues are generated so far out, it would not have any major impact at all on raising, say, that 16.2% or 4% of fraction. It simply wouldn't. It's just money too far out. Indeed, that's a lot of mony out there, and particularly if you look at it in inflated dollars, but it won't have any impact on the return of investment.

MARSH: That's assuming the present user situation. If another major mine were to come into development 10 or 15 years down the road, that would be a sufficiently large enough increase in revenues that it would have an impact in today's dollars, but just working with COMINCO's facility, the revenues that are coming out in the 30th and 35th year, by the time you discount them back to '85 dollars at 10%, they're not very large.

V FISCHER: Generally, we look at the current value. If the State placed a significant value on future revenues, counting that current revenues are generally spent, and the State will have need income in future years, would that in any way change our analysis, or our conclusion?

MARSH: I'm not sure what you mean. You mean using this project to generate revenue?

V FISCHER: Well, in part. That it may be more significant to the State to have major revenues in the future invest now to have revenues in the future, because the alternative, if in effect we have money now to spend, we probably will not invest it at 10%. We'll just spend it. Could that be a consideration?

MARSH: Yes, it could be. It depends on the mangnitude of those revenues and just how far out into the future they really are, but that's the key aspect.

MOBERLY: You could develop another scenario of how the user fee would be taking the same amount of dollars and spread them out over a different sequence. Once again, it would have an effect on the return investment if you'd reduce those in the

early years. It would be beneficial to COMINCO on a return on investment calculation.

(Senator Kerttula left the meeting.)

MARSH: One of the major benefits of this investment proposal the way it's structured right now, and a very valuable role that the State can provide in this, is the up-front financing of this whole project. That's very critical from a private company's point of view. This project can be financed by the State, and its cost can be repaid in part through user fees. That reduces the drain on COMINCO's cash at a very critical time in terms of developing its own facility, and that's a very valuable and valid role for the State to play is to provide that financing to ease the financial burden on the mining company until it gets its operation going, and then it has the ability from cashflow to pay back part of that investment over time. So that's a very valuable role that the State has proposed here in terms of financing this project and getting it launched.

STURGULEWSKI: Would you explain again your $500 million figure?

MARSH: Okay. What we did was calculated the royalties that would accrue to the native councils through the NANA Corporation, because that's an important cost to this project. We did it in each year, and then we expressed those amounts, because those royalties accrue out to the year 2018. We reduced them to 1985 dollars, and we added that up. Now, that amount is also sensitive to the pricing assumptions you use, and we used our base case pricing assumption. When we added it all up, we're about $600 million in 1985 dollars.

STURGULEWSKI: Then a specific question. The one thing that you talked about in terms of State risk was a delay in the beginning of the project, possibly by two years. What other elements are there? We have as one of the conditions, assuming the legislation goes through, a direction that, if something happens and the project does not move ahead, the company will see that the funds are repaid to the State. How much have you looked in terms of the State and where it is at risk?

MARSH: We looked at that particular aspect, because what it drives home is the need to consider just what sort of financial risk the State wants to assume opposite COMINCO during the negotiation phase, and the delay effect and the higher capital cost effect get at the same sort of thing. It's our experience that projects don't go according to plan, and part of the negotiation process from the State's point of view is to what extent does it want to assume the risk and to what extent does it want to share the risk with COMINCO -- some sort of contractual way on what you do with capital cost

overruns and delays -- and we just tried to say, from our point of view, trying to give you a feel for the magnitude of the dollars involved in this sort of thing, they're fairly significant. Now, it's basically a pointer in terms of eventually negotiating some kind of agreement.

HALFORD: You mentioned the $35 million figure as the cost of that delay.

MARSH: That's assuming the higher capital cost, too. So, we kind of loaded the thing to get a downside situation.

HALFORD: Okay. Well, your higher capital cost in '85 dollars is $95 million, and then, if the higher capital cost became a fact and you had a two-year delay...

MARSH: It goes from $95 million up to $130. So the difference is $35 million.

HALFORD: It's $130 million, and that's a subsidy cost?

MARSH: Yes. At that level, the State's return on investment is pretty close to zero. You're giving up the opportunity cost of money, basically.

HALFORD: So, then the State subsidy cost is $130 million.

MARSH: If that were to happen. If all those events were to happen.

HALFORD: But your graph of what the profitability to COMINCO was, if that happens, shows very little difference.

MARSH: That's right. Because their proposal insulates them to some extent from all that happening. Now, this gets back to a very important point. We don't believe that COMINCO would choose to delay the startup, because the impact on them is very severe. They've got a mine already to go. They've got some $200-300 million invested. It's not likely they would do that. The point is that clause is in the proposal. We just wanted to bring your attention to the impact of that clause from the State's point of view. We didn't analyze the impact on the mining profitability if it were a delayed-production situation.

HALFORD: I mean that clause may be there because they have properties worldwide and substantial reserves and want to have the flexibility to be able to utilize those reserves in the most efficient way.

MOBERLY: We think, on that issue, that once that mine is developed, it's such a good mine, that they would bring this mine on and bring it into production, possibly at the expense

of others. Now, that's our judgment. That's nothing from COMINCO. As Gerry said, they've got $270 million invested. It's certainly not in their best interests not to produce material from that mine.

FAIKS: Gentlemen, the impression that we're being left with is the State's taking all the risk, and I think you better clarify that thought.

MARSH: No, I don't think you're taking all the risk. I think if you accepted the terms that are in that Memorandum of Understanding, we're talking about a subsidy of $75-80 million, roughly.

HALFORD: Up to $130 million.

MARSH: If those other things were to occur.

V FISCHER: But, as I understood your analysis, the State is in the position of responding to the COMINCO proposal by indicating that, if the State protected itself by having user fees that were high enough to provide the State a decent or even a full return on investment, it would have only a minimal effect on COMINCO profitability, so in effect, if the State bought the COMINCO proposal, then the State would be fully at risk. But if the State took the position of a banker in this case, the State doesn't have to be at such great risk. Isn't that correct? I'm bargaining.

MARSH: Well, you're making it black and white, and don't think it's really that black and white. I understand what you're saying. The one thing I would caution you about -- our analysis shows that profitability for any given pricing scenario is not extremely sensitive to user fee, but you've got to avoid the situation of the straw breaking the camel's back, to some extent. When you start getting down to that 10% area, if you're looking at that as a plausible outcome, that 2% becomes important, and that's why I raised the point of are there other ways of the State recovering its investment through a portion of the NANA royalties, for instance. There are other ways to do this. You don't have to charge COMINCO. You can wait for other users to come on-stream.

(Senator Coghill left the meeting.)

HALFORD: Well, you mentioned that the three partners in this arrangement: the State, COMINCO, and the landowners, and you stated that the potential benefit to the landowners are $600 million in 1985 dollars over a 30-year period. The investment in benefits that will have been invested by COMINCO is $270 million. The investment by the State in total is $150 million backed out to a subsidy value of $80 or

$90 to $130 million. What is the investment by the corporations, or what's the rate of return for the landowners, COMINCO, and for the State? That comparison, I think, would be important to look at where the possible pieces to make the project go (inaudible).

MARSH: The royalty is basically economic rent.

MARSH/MOBERLY: There is no investment there.

MARSH: There's no money at risk in that situation. It's a royalty.

MOBERLY: So their rate of return is infinite.

COTTEN: Maybe I misunderstood you. Did you say that the $175 million authorization wasn't required, but in fact, only $100 million in authorization for AIDA bonds was all that was required?

MARSH: No. I don't think you should cut it that fine, because we had to make certain assumptions about the quality of that loan portfolio and the cashflow coming out of that, and we're still making assumptions. Something that I should mention that I'm glad you reminded me of is it's not at all clear at this stage as to whether the financing for this project will be tax exempt. That's being debated. First Boston had some views on it. AIDA's own bond counsel has views on it. It looks like it may take an advance ruling from the IRS to try to resolve that. If you have to go to partial tax-exempt financing, you're probably talking in the order of $120-125 million bond. The $175 certainly is safe. It gives you the room you might need. We approached this from what's the least size bond you could get away with to keep the overall cost down, and if AIDA has those resources, and if it can count on that cashflow from the loan portfolio -- we don't know the quality of that cashflow at this stage -- then there's a way to keep the size of that bond down.

COTTEN: So, if you had to do some non-tax-exempt bonds, you might have to go up to $125 million, then. Is that what you're saying?

(Representative Cotten left the meeting.)

V FISCHER: A followup to Senator Halford's previous questions. In calculating, referring to the owner, the rent, can one put into the equation the value of the property, the value of the minerals that NANA in effect is contributing? Is there a value to those minerals, as they exist when the mine commences operation?

MOBERLY: That could be done.

MARSH: I'm not sure of methodology.

MOBERLY: Reserves are sold. Now whether these would be saleable or not, I don't know, and then what would be the estimate of it?

V FISCHER: I was just wondering, so that when the question's asked, what is each party contributing? Nana in effect is contributing the property.

MOBERLY: It's contributing reserves. That's correct.

MARSH: But it's negotiated compensation for that through the royalty.

V FISCHER: Right. A more specific question: Based on your analysis, can you tell whether COMINCO could finance the port and the road themselves or is upfront financing by the State crucial to the project?

MARSH: We're not privileged to COMINCO's thinking in that regard. If you chose to back out of the project and put the full burden on COMINCO, that certainly is a heavy load to carry, given the state of mining these days. That certainly would put a heck of a load on their balance sheet, because they've still got to finance the mine, and we're talking a mine with working capital in excess of $300 million. We're talking this project -- by the time you put in capitalized interest in excess of $200 million, if you look at COMINCO's balance sheet, that's putting it out at a very high debt/equity ratio. I would be concerned about putting that kind of a load on a company.

MOBERLY: In other words, if you would capitalize the thing at the larger capital and adding the road and port to the mine and mill and then on the revenues generated from the whole situation, you'd have a lowerrate of return for COMINCO, because you see, the State essentially gets money at 10%, where COMINCO is going to want a higher rate of return. S, then in that effect, your ROI for the combined project would be lower than the numbers that we showed.

MARSH: If we had to look at this whole project from COMINCO's point of view, including the construction and financing of the road and all those cash outflows from the period '85-'89, that ROI would drop dramatically.

FAIKS: Did you get an answer to your question?

V FISCHER: I think so. The answer is basically the project is very sensitive to State participation, because as you pointed out in one of your charts, State involvement is simply critical to the level of terms.

MOBERLY/MARSH: Yes. That's right. That is correct. That's what we believe.

HALFORD: In following up an earlier question on tax exempt versus non-tax-exempt financing. If the higher price scenario came about and if the two-year delay came about, what is the effect of the cost in terms of subsidy cost, if in fact the majority of the bonds have to be taxable bonds, and who carries that cost?

MARSH: Well, actually the project carries the cost. It's a question of how much of that cost you recover through the user fees.

(Senators Paul Fischer and Dick Eliason left the meeting.)

HALFORD: What is the effect on the subsidy?

MARSH: It would go up slightly, but it's not a huge effect. For example, you'll see in our report an analysis where we assume a breakeven situation for the State under our base case scenario and COMINCO scenario. We use tax-exempt financing 100%, and we use a combination -- we say that the port is tax exempt, but the road is taxable financing -- that gives us an interest rate of around 12%. Under the tax-exempt financing, it was designed for breakeven, therefore, it means the State's rate of return is 10.0%. If we went with a partial tax-exempt situation, the State's rate of return drops to about 9.8%. It's not terribly sensitive.

HALFORD: So, what's that mean in terms of total subsidy cost -- $5 million, $10 million?

MARSH: Yes. I haven't worked it out, but it's in the report -- that order of magnitude.

HALFORD: So it gets up to maybe $130-135 million.

MARSH: You're using that very outside figure, which we really see as a real downside, outside figure. By the way, if you look at what bond issues require, assuming all those things are going to happen, you're talking about a $145 million bond issue, if you take the delay plus the alternative scenario. If you load the project with those kinds of costs, the bond issue now climbs to about $145 million.

HALFORD: With regard to the legislation that the Legislature has been considering, as an entity which is representing the peoples' funds basically, do you think that we're basically issuing an authority to go forward to AIDA which says there will be a return, we don't know how much it'll be, there will be a payback, we don't know when it'll come, we don't know what the total cost is, and we don't know if it's taxable or

non-taxable, we don't know all these things. I guess that calls for too much of a substantive question. I was going to ask you if you thought that was the responsible way to manage as an entity loaning money. Would anyone in the private sector do that.

MARSH: Are you giving them a blank check, basically, to carry on. It's a Catch 22 here, because you can't start nailing some of these things down until you come to grips and have some sort of contractual arrangement with both COMINCO and NANA. Right now we have proposals. You really can't proceed until you can get contractual arrangements. On the other hand, how can AIDA negotiate in good faith and demonstrate that the State supports this project and is behind it if they don't have some sort of general parameters to work within, as proposed by the legislation. If you always are going to second guess them on when they are going to get these financial resources and what the bond authority might be, they're trying to negotiate with one hand behind their back, and looking at it from a private sector point of view, it's difficult to negotiate with someone that's not in a position to negotiate. So, I don't know how you resolve that problem.

HALFORD: The State deals with these kind of cases in negotiations on royalty, and what happens is the negotiations are carried out, and once the contract is completed and signed off, it comes back before the Legislature for ratification. My question is can we give AIDA the authority to go forward but still require that the final contractual arrangement, which really says the total dollar figures and all the figures come back before the Legislature for ratification by law before they go forward.

MARSH: I don't think I want to comment on something that involves due process and constitutional issues. It's just beyond my capability.

STURGULEWSKI: I would hope that while you gentlemen are in town -- certainly your contract with the Administration, but certainly this information is vital to the Legislature -- I would hope that you would be able to review the legislation that has been proposed and is now before the Finance Committee as to whether or not those conditions generally address those questions where the State is most at risk. We had some problems in tightening those up because of the situation with bond council saying that you can go so far, and then you start to get into an area of concern. So, I would appreciate some response on those pieces of legislation. Also, the major thing that has come, I think, in this discussion is the lack, perhaps, of sensitivity of the user fees to the overall return on the project, although of course, there's a point at the lower level where you might have some problems. I guess I would like to know, and

certainly the Finance Committee should consider, as to whether or not we should be looking at more specific direction in that range of user fees, again to minimize the State's potential risk in this. So, I'd really appreciate some comment now or some during the course of the day on that issue.

MARSH: Okay. Perhaps we could talk later to give us some time to think about it.

PIGNALBERI: I heard you mention earlier that you thought a valid question is should the State subsidize the project for $75 million, and you said that's probably not necessary. Do you have a figure in mind, an amount of subsidy that you think is necessary?

MARSH: No. I think that's the equity issue that I think, unfortunately, that's precisely the type of issue you people have to come to grips with -- what represents the true benefit to the State. Then you have to look at things like the cost benefit analysis we talked about earlier. We're not in the position to advise what's a desireable subsidy. That's something we can't answer.

PIGNALBERI: But you did say that you thought it was not necessary --

MARSH: I think the project generates a high enough economic return, when you look at what's accruing to COMINCO and what's accruing to the native organizations through the royalty, that you could avoid a subsidy if you wanted to. Now, you've got to be careful, I think, about the methods you use. If you loaded up on user fee, then you're affecting COMINCO's rate of return. If you take the tack of appropriating part of the royalties, you don't affect the rate of return. It's another way of recouping some of that subsidy.

FAIKS: Right now, the State of Alaska does not have a severance tax on minerals. Did you look at cranking in a couple of percentage severance tax for the State to get its rate of return back that way?

MOBERLY: No, but we could. We did not put that in.

MARSH: In effect, that has the same sort of affect as increasing the user charge.

MOBERLY: That's correct. It's just an added cost.

MARSH: It's an added cost that comes out before the royalties are worked up.

FAIKS: Well, that's right. If it comes out before the royalties are worked out, then that's a way for the State to get some of its return back prior to the native corporations getting their royalty fee, right?

MARSH: What it will do is pull down the rate of return on the project.

MOBERLY: No, but it possibly would reduce somewhat the royalty. We could run the numbers.

FAIKS: I would appreciate it if you could run the numbers for me, starting at 1-2-3, going up to about 5%.

(3) "corporation" means the Alaska Resources Corporation;

(4)—(7) *[Repealed, § 16 ch 161 SLA 1984.]* (§ 3 ch 179 SLA 1978; am §§ 23 — 28 ch 142 SLA 1982; am § 16 ch 161 SLA 1984; r § 18 ch 161 SLA 1984)

Effect of amendments. — The 1984 amendment, effective July 7, 1984, repealed paragraphs (1), (4)—(7).

Chapter 15. State Bonding Act.

Article

1. General Obligation Bonds (§ 37.15.012)
3. International Airports Revenue Bonds (§ 37.15.415)
4. Toll Facilities Revenue Bonds (§§ 37.15.610 — 37.15.760)

Article 1. General Obligation Bonds.

Section

12. Continuing debt service appropriation

Sec. 37.15.012. Continuing debt service appropriation. The amounts required annually to pay the principal, interest, and redemption premium on all issued and outstanding general obligation bonds of the state are appropriated each fiscal year from the general fund to the state bond committee to make all required payments of principal, interest, and redemption premium. (§ 1 ch 100 SLA 1981; am § 1 ch 156 SLA 1984)

Effect of amendments. — The 1984 amendment, effective July 6, 1984, substituted "each fiscal" for "on July 1 of each."

Article 3. International Airports Revenue Bonds.

Section

415. Continuing revenue bond debt service appropriation

Sec. 37.15.415. Continuing revenue bond debt service appropriation. The amounts required annually to pay the principal, interest, and redemption premium on all issued and outstanding international airports revenue bonds of the state are appropriated each fiscal year from the international airports revenue fund to the state bond committee to make all required payments of principal, interest, and redemption premium. (§ 2 ch 156 SLA 1984)

Effective dates. — Section 5, ch. 156, SLA 1984 makes this section effective July 6, 1984, in accordance with AS 01.10.070(c).

Article 4. Toll Facilities Revenue Bonds.

Section	Section
610. Bond authorization	690. Bond negotiability
620. Construction fund	700. Refunding
630. Revenue fund	710. Bonds as legal investments
640. Bond redemption fund	720. State toll facilities
650. Bond terms	730. Knik Arm Crossing
660. Bond resolution	740. Toll facility charges
670. Enforcement by holder	750. Statutory construction
680. Amounts required for payments	760. Definitions

Sec. 37.15.610. Bond authorization. For the purpose of providing part or all of the money to be used, with or without any grants or other money that may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $500,000,000 is authorized to acquire, construct, equip, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.720 and 37.15.730. The principal of and interest on these bonds are paid out of and secured by the gross revenues derived by the state from the ownership, use, and operation of the toll facilities, and out of any other revenue or money that the state legislature may provide exclusive of any state tax or license. Bonds may not be issued to assist in the acquisition, financing, or operation of projects without prior approval from the legislature. (§ 1 ch 162 SLA 1984)

Sec. 37.15.620. Construction fund. (a) The toll facilities construction fund is established for deposit of proceeds of the sale of the bonds authorized by AS 37.15.610 and any grant or other money that is legally provided for the same purposes for which the bonds are authorized except for any accrued interest paid on the bonds by the purchaser. The money in the construction fund is used to pay the cost of acquiring, constructing, and equipping facilities authorized in AS 37.15.720 and 37.15.730 and costs incidental to those activities, including costs of the authorization, issuance, and sale of the bonds. To the extent allowed in the bond resolution, money in the construction fund may also be used for the payment of interest on the bonds during the time of actual construction, and for any additional time, not exceeding one year after construction is completed. Money in the construction fund may also be transferred to the bond redemption fund, as permitted by the bond resolution, to establish a reserve for the payment of the principal and interest on the bonds.

(b) The bond resolution may provide for the investment of money in the construction fund as the committee determines. The interest earned upon or any profit derived from the sale of the investment is deposited in the construction fund. (§ 1 ch 162 SLA 1984)

Sec. 37.15.630. Revenue fund. (a) The toll facilities revenue fund is established and shall be set apart from all other money of the state. The toll facilities revenue fund is a trust fund for the purposes under

AS 37.15.610 — 37.15.760, where all revenue, fees, tolls, charges, and rentals are deposited that are derived by the state from the ownership, lease, use, and operation of the facilities authorized by AS 37.15.720 and 37.15.730. The revenue, fees, tolls, charges, and rentals may not include the proceeds of any state tax or license. The money in the revenue fund may only be used to

(1) pay or secure the payment of the principal of and interest on the toll facilities bonds and principal of and interest on any other revenue bonds issued by authorization of the legislature to provide money to acquire, construct, and equip facilities authorized by AS 37.15.720 and 37.15.730 and to be payable out of the revenue fund;

(2) pay the normal and necessary costs of maintaining and operating the facilities acquired, constructed, or equipped under AS 37.15.610 — 37.15.760;

(3) pay the costs of renewals, replacements, and extraordinary repairs to facilities acquired, constructed, or equipped under AS 37.15.610 — 37.15.760;

(4) redeem before their fixed maturities any and all revenue bonds issued for the purpose of acquiring, constructing, and equipping facilities authorized by AS 37.15.720 and 37.15.730;

(5) provide money to acquire, construct, and equip necessary additions and improvements to facilities authorized by AS 37.15.720 and 37.15.730; and

(6) provide money to pay any and all other costs relating to the ownership, use, and operation of the facilities.

(b) The investment of money in the revenue fund may be made as the committee determines. The interest earned upon or any profits derived from the sale of an investment under this subsection shall be deposited in the revenue fund. (§ 1 ch 162 SLA 1984)

Sec. 37.15.640. Bond redemption fund. The toll facilities revenue bond redemption fund is established for deposit in trust of money for paying and securing the payment of principal of and interest and redemption premium, if any, on bonds and is set apart from all other money of the state. The committee, on behalf of the state, shall obligate the state to set aside and pay into the bond redemption fund from the revenue fund an amount of money sufficient to pay the principal of and interest and redemption premium, if any, on the bonds as the payments become due and, if the committee considers it necessary, to set aside and maintain a reserve for this purpose. The bond redemption fund is drawn upon for the purpose of paying the principal of and interest and redemption premium, if any, on the bonds, and the bonds do not constitute a general obligation of the state. (§ 1 ch 162 SLA 1984)

Sec. 37.15.650. Bond terms. (a) The toll facilities bonds are sold in the amounts or series and at the time as determined by the committee. Before selling a series of bonds, the committee shall give notice

inviting sealed bids. If satisfactory bids are received, the bonds offered for sale are awarded to the highest responsible bidder. If the committee determines that a bid received is not satisfactory as to price or responsibility of the bidder, the committee may reject the bid received. Bonds, or a series of bonds, may not be sold if the effective interest rate over the life of the bonds exceeds 11 percent per year or that rate of interest that is 125 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. Interest is payable annually or semiannually.

(b) The bonds mature at the time fixed by the committee. The bonds may be subject to redemption before their fixed maturities as determined by the committee and with the premium fixed by the committee, but a bond may not be subject to redemption before its fixed maturity date unless the right to redeem that bond is expressly mentioned on the face of the bond. The bonds

(1) may be in denominations determined by the committee;

(2) may be issued in coupon form or in fully registered form, and may be registrable as to principal or both principal and interest, all under regulations and conditions the committee provides;

(3) are payable as to principal and interest at the place determined by the committee;

(4) shall be signed on behalf of the state by the governor and shall be attested to by the lieutenant governor, both of which signatures may be facsimile signatures, and each of the interest coupons attached to them shall be signed by the facsimile signatures of these officials;

(5) shall have the seal of the state impressed, printed, or lithographed on them; and

(6) shall be issued under and subject to the terms, conditions, and covenants, providing for the payment of the principal of and interest on the bonds and the other terms, conditions, covenants, and protective features safeguarding this payment and relating to the maintenance, operation, and improvement of the toll facilities as found necessary by the committee, which covenants may include a provision requiring the setting aside and maintenance of certain reserves to secure the payment of the principal and interest.

(c) If found reasonably necessary, the committee may select a trustee or trustees for the holders of the bonds or any series of the bonds, for the safeguarding and disbursement of any of the money in any of the funds created by AS 37.15.620, 37.15.630, and 37.15.640, or for the duties for authentication, delivery, and registration of the bonds as the committee may determine. The committee shall also fix the rights, duties, powers, and obligations of the trustee or trustees.

(d) In the committee's determination of all of the matters and questions relating to the issuance and sale of the bonds and the fixing of the maturities, terms, conditions, and covenants of the bonds as provided

in (a) — (c) of this section, the decisions of the committee shall be those found to be reasonably necessary for the best interests of the state and its inhabitants, and those that will accomplish the most advantageous sale of the bonds, with due regard, however, (1) to necessary or normal costs of maintenance and operation; (2) to renewals and replacements of and repairs to the toll facilities; (3) to all improvements to toll facilities and property of toll facilities owned, used, operated, or leased in connection with toll facilities; and (4) to the future growth and expansion of all of the facilities and the possibility of additional revenue bond financing for toll facilities purposes. A decision of the committee, as expressed in any bond resolution, is final when any bonds have been issued under the bond resolution.

(e) A bond resolution may provide that the bonds issued contain a recital that they are issued under AS 37.15.610 — 37.15.760, and any bonds containing this recital are conclusively considered to be valid and to have been issued in conformity with AS 37.15.610 — 37.15.760.

(f) The validity of the authorization and issuance of bonds is not affected by any proceeding for the acquisition or construction of the additions, improvements, or facilities for which the bonds have been issued or by any contract in connection with the acquisition or construction. (§ 1 ch 162 SLA 1984)

Sec. 37.15.660. Bond resolution. The committee is authorized and directed to adopt the bond resolution and prepare all other documents and proceedings necessary for the issuance, sale, and delivery of the bonds or any part or series of them. The bond resolution shall fix the principal amount, denomination, date, maturities, place or places of payment, rights of redemption, if any, terms, form, conditions, and covenants of the bonds or each series of them. The committee shall also determine and provide for the date and manner of sale of the bonds, and shall provide whether the notice of sale is to be published elsewhere in addition to the publication required by AS 37.15.650. (§ 1 ch 162 SLA 1984)

Sec. 37.15.670. Enforcement by holder. The holder of any bonds or the trustee for the holders of the bonds or any series of them, may, by appropriate proceedings in the courts of record of the state, compel the transfer, setting aside, and payment of money and the enforcement of all of the terms, conditions, and covenants as required and provided in AS 37.15.610 — 37.15.760 and in the bond resolution. (§ 1 ch 162 SLA 1984)

Sec. 37.15.680. Amounts required for payments. The committee shall, before December 31 of each year, commencing with the year in which the bonds are issued, certify to the commissioner of revenue and the commissioner of transportation and public facilities the amounts required in the next ensuing calendar year by a bond resolution to be paid out of the revenue fund into the bond redemption fund and to be

paid into and maintained in any reserve fund or account or any other fund or account created by a bond resolution. The committee shall also certify to the commissioners the last date upon which payments may be made. (§ 1 ch 162 SLA 1984)

Sec. 37.15.690. Bond negotiability. The bonds and the coupons attached to them are fully negotiable instruments under the laws of the state. (§ 1 ch 162 SLA 1984)

Sec. 37.15.700. Refunding. (a) The bonds or any part of them may be refunded at or before their maturity by the issuance of refunding revenue bonds of the state if in the opinion of the committee refunding is advantageous to and in the best interest of the state and its inhabitants.

(b) The issuance of refunding bonds need not be authorized by an act of the legislature, and the committee shall adopt the resolution and prepare all other documents and proceedings necessary for the issuance, exchange or sale, and delivery of the bonds. All provisions of AS 37.15.610 — 37.15.760 applicable to revenue bonds are applicable to the refunding bonds and to the issuance, sale, or exchange of the bonds, except as otherwise provided in this section.

(c) Refunding bonds may be issued in a principal amount sufficient to provide money for the payment of all bonds to be refunded by them, and, in addition, for the payment of all expenses incident to the calling, retiring, or paying of the outstanding bonds, and the issuance of the refunding bonds. These expenses include the difference in amount between the par value of the refunding bonds and any amount less than par for which the refunding bonds are sold, any amount necessary to be made available for the payment of interest on the refunding bonds from the date of sale of them to the date of payment of the bonds to be refunded or to the date upon which the bonds to be refunded will be paid under the call of the bonds or agreement with the holders of them, and the premium, if any, necessary to be paid in order to call or retire the outstanding bonds and the interest accruing on the outstanding bonds to the date of the call or retirement. (§ 1 ch 162 SLA 1984)

Sec. 37.15.710. Bonds as legal investments. Toll facilities bonds are legal investments for all banks, trust companies, savings banks, savings and loan associations, and other persons carrying on a banking business, all insurance companies and other persons carrying on an insurance business, and all executors, administrators, trustees, and other fiduciaries. The bonds may be accepted as security for deposits of all money of the state and its political subdivisions. (§ 1 ch 162 SLA 1984)

Sec. 37.15.720. State toll facilities. The state is authorized to acquire, construct, equip, and maintain toll bridges, highways, roads, crossings, and causeways found to be necessary by the commissioner of transportation and public facilities. (§ 1 ch 162 SLA 1984)

Sec. 37.15.730. Knik Arm Crossing. Notwithstanding the provisions of AS 37.15.720 the first state toll facility to be financed under AS 37.15.610 — 37.15.760 is the Knik Arm Crossing near Anchorage if the following conditions are met:

(1) the department submits to the governor and the legislature a feasibility study that finds that the crossing is financially feasible and able to produce revenue adequate to repay the bonds with which it is financed;

(2) if financing in addition to revenue bonds is anticipated, the department submits to the governor and legislature a finance plan to include an estimate of the total cost of the project and a description of the sources of money that will be used to finance the total cost of the project; and

(3) the office of management and budget reviews the feasibility study and the finance plan, if required, and reports its findings and recommendations to the governor and legislature not later than 90 days after the study and plan are received by the office. (§ 1 ch 162 SLA 1984)

Sec. 37.15.740. Toll facility charges. The commissioner of transportation and public facilities shall fix and collect the fees, charges, tolls, and rentals derived by the state from the ownership, lease, use, and operation of the facilities authorized by AS 37.15.720 and 37.15.730 and improvements of the facilities as will provide revenues sufficient to comply with all of the covenants of the bond resolution. (§ 1 ch 162 SLA 1984)

Sec. 37.15.750. Statutory construction. AS 37.15.610 — 37.15.760 shall be liberally construed in order to carry out the purposes for which the provisions were enacted, and all existing laws in conflict with AS 37.15.610 — 37.15.760 are superseded as necessary to accomplish the purposes of AS 37.15.610 — 37.15.760. (§ 1 ch 162 SLA 1984)

Sec. 37.15.760. Definitions. In AS 37.15.610 — 37.15.760, unless the context requires otherwise

(1) "bond redemption fund" means the toll facilities revenue bond redemption fund created by AS 37.15.640, including any accounts that are created in that fund after the effective date of this Act;

(2) "bond resolution" means the resolution authorizing the issuance of bonds, adopted by the committee under AS 37.15.660;

(3) "bonds" means the toll facilities revenue bonds authorized by AS 37.15.610 — 37.15.760;

(4) "committee" means the state bond committee created by AS 37.15.110, or any other committee, body, department, or officer of the state that or who succeeds to the rights, powers, duties, and obligations of the state bond committee by act of the legislature;

(5) "construction fund" means the toll facilities construction fund created by AS 37.15.620;

(6) "revenue fund" means the toll facilities revenue fund created by AS 37.15.630;

(7) "toll facilities" means highways, roads, bridges, crossings, and causeways upon which tolls, charges, rentals, or other user fees are placed by the commissioner of transportation and public facilities. (§ 1 ch 162 SLA 1984)

Chapter 25. Miscellaneous Provisions.

Sec. 37.25.020. Unexpended balances of appropriation for capital projects.

Opinions of attorney general. — Appropriations that are available for expenditure in a fiscal year should be counted only against the appropriation limit of § 16, art. IX, of the state constitution, for the first fiscal year during which they could be completely expended, even if an unexpended balance is carried forward into the next fiscal year. 1983 Op. Att'y Gen. No. 01.

(b) The commissioner of revenue may

(1) invest and reinvest the principal of the funds;

(2) sell, exchange, convey, transfer, or otherwise dispose of investments of the funds by private contract or at public auction;

(3) vote upon a stock, bond, or other security; give a general or special proxy or power of attorney with or without power of substitution; exercise a conversion privilege, subscription right, or other option and make payments incidental to it; consent to or participate in a corporate reorganization or other change affecting corporate securities, delegate discretionary power, pay an assessment or charge in connection with the delegation; and generally exercise any of the powers of an owner with respect to stocks, bonds, securities, or other investments held in the funds;

(4) make, execute, acknowledge, and deliver documents of transfer and conveyance and instruments necessary or appropriate to carry out the powers granted;

(5) register investments held in a fund in the name of the board having the power to approve investments for a fund;

(6) do all acts whether or not expressly authorized which are considered proper for the protection of the investments held in the funds. (§ 4 ch 182 SLA 1978)

220. Short title

Sec. 37.15.010. Full faith and credit for general obligation bonds. The full faith, credit and resources of the state are hereby pledged to the payment of the principal of and interest and redemption premium, if any, on all general obligation bonds of the state authorized pursuant to art. IX, § 8 of the constitution. (§ 1 ch 175 SLA 1960; am § 1 ch 104 SLA 1967)

Collateral references. — 63 Am.Jur.2d, Public Funds, §§ 23-32. 64 Am.Jur.2d, Public Securities and Obligations, § 1 et seq.

81A C.J.S., States, §§ 250-262.

Funding or refunding obligations as subject to conditions respecting approval by voters, 97 ALR 442.

Validity of bond issue in excess of amount permitted by law within authorized debt, tax or voted limit, 175 ALR 823.

Sec. 37.15.012. Continuing debt service appropriation. The amounts required annually to pay the principal, interest, and redemption premium on all issued and outstanding general obligation bonds of the state are appropriated on July 1 of each year from the general fund to the state bond committee to make all required payments of principal, interest, and redemption premium. (§ 1 ch 100 SLA 1981)

Opinions of attorney general. — This section does not represent an unconstitutional dedication of public funds under § 7, art. IX, of the state constitution, as that section of the constitution contains an implied exception for bond obligations. November 30, 1982, Op. Att'y Gen.

Sec. 37.15.015. Committee shall publish notice of existing state indebtedness before election. (a) Before a general or special election in which a bond issue is offered for ratification, the state bond committee shall publish a notice of existing state bonded indebtedness at least once a week for three consecutive weeks in a newspaper of general circulation in each of the four judicial districts of the state. The first notice shall be published at least 20 days before the date of the election. A notice shall contain

(1) the current total bonded indebtedness of the state,

(2) the cost of the debt service on the current indebtedness.

(b) Neither the failure to publish the notice of existing state bonded indebtedness nor a defect in the publication affects the validity of the bond issue offered for ratification or of a general or special election in which a bond issue is offered for ratification. (§ 2 ch 50 SLA 1964; am § 1 ch 8 SLA 1969)

Collateral references. — Effect of inclusion in call for election, or in proposal for bond issue submitted to people, of unauthorized method of payment or retirement, 93 ALR 362.

Bonds issued by state officer or board payable solely out of proceeds of obligations of political subdivisions pledged as within constitutional or statutory provisions which impose a limit on state indebtedness or require consent of electors, 100 ALR 1114.

Mistake, ambiguity, or omission in statement as to indebtedness, in call for

election or proposal for bond issue, as affecting validity of election or bonds issued pursuant thereto, 116 ALR 1258.

Effect of delay after authorization by voters on power of governmental unit to issue bonds, 135 ALR 768.

Validity, within authorized debt, tax, or voted limit, of bond issue in excess of amount permitted by law, 175 ALR 823.

Sec. 37.15.020. Manner and amounts of sale. The state bond committee shall sell the bonds of each authorization in the amounts or series and at the times which it finds are for the best interests of the state and its inhabitants. (§ 1 ch 175 SLA 1960)

Sec. 37.15.030. Interest rate and maturity. Each issue or series of bonds shall bear interest at an effective rate over the life of the bonds not to exceed 11 percent a year or that rate of interest which is 110 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. The bonds shall mature in not more than 30 years from date of issue, unless a longer period is specifically authorized by statute. (§ 1 ch 175 SLA 1960; am § 2 ch 104 SLA 1967; am § 1 ch 92 SLA 1970; am § 1 ch 29 SLA 1976; am § 1 ch 85 SLA 1980; am § 1 ch 110 SLA 1982)

Effect of amendments. — The 1980 amendment substituted "10" for "eight" preceding "percent a year" at the end of the first sentence.

The 1982 amendment substituted the language beginning "11 percent a year" for "10 percent a year" at the end of the first sentence.

Collateral references. — Right to call governmental bonds in advance of their maturity, 109 ALR 988.

Sec. 37.15.040. Sale of bonds. Before selling an issue or series of bonds, the state bond committee shall give notice inviting sealed bids in such manner as it may prescribe. If satisfactory bids are received, the bonds offered for sale shall be awarded to the highest responsible bidder. If the state bond committee determines that the bids received are not satisfactory as to price or responsibility of the bidders, it may reject all bids received. (§ 1 ch 175 SLA 1960; am § 3 ch 104 SLA 1967; am § 1 ch 43 SLA 1969)

Sec. 37.15.050. Redemption. The state bond committee may determine whether the bonds are subject to redemption before their fixed maturities and may fix the premium for and all other terms of the redemption. No bond may be subject to redemption before its fixed maturity date unless the right to so redeem the bond is expressly mentioned on the face of the bond. (§ 1 ch 175 SLA 1960; am § 4 ch 104 SLA 1967; am § 1 ch 26 SLA 1968; am § 7 ch 143 SLA 1968)

Collateral references. — 81A C.J.S., States, § 261.

Funding or refunding obligations as subject to conditions respecting limitation

of indebtedness, 97 ALR 442.

Validity of bond issue in excess of amount permitted by law within authorized debt, tax or voted limit, 175 ALR 823.

Sec. 37.15.060. Form and registration of bonds. An issue or series of bonds may be issued in coupon form payable to bearer or in fully registered form, and bonds in coupon form may be made registrable as to principal or principal and interest, as determined by the state bond committee. (§ 1 ch 175 SLA 1960; am § 2 ch 26 SLA 1968)

Sec. 37.15.070. Place of payment. The state bond committee may fix the place or places of payment of the principal, interest and redemption premium, if any. (§ 1 ch 175 SLA 1960; am § 5 ch 104 SLA 1967)

Sec. 37.15.080. Signatures and seal. (a) Each bond shall be signed on behalf of the state by the governor and attested by the lieutenant governor, which signatures may be facsimile signatures. The seal of the state shall be impressed, imprinted or otherwise reproduced on each bond. Each interest coupon attached to the bond shall be signed by the facsimile signatures of the governor and lieutenant governor. If an officer whose signature appears on the bonds or coupons ceases to be an officer before delivery of the bonds, the signature is, nevertheless, valid and sufficient for all purposes, as if the officer had remained in office until delivery.

(b) A signature required on a bond issued by a political subdivision of the state may be a facsimile signature. (§ 1 ch 175 SLA 1960; am § 6 ch 104 SLA 1967)

Collateral references. — Printing, lithographing, or other mechanical signature on public bonds, coupons, or other pecuniary obligation, 94 ALR 768.

Sec. 37.15.090. Terms and conditions. Each issue or series of bonds shall be issued under and subject to the terms, conditions, and covenants providing for the payment of the principal and the interest and other terms, conditions, covenants, and protective provisions safeguarding the payment as found reasonably necessary by the state bond committee for the most advantageous sale. The terms, conditions, and covenants may include the setting aside and maintaining of certain reserves to secure the payment of principal and interest. (§ 1 ch 175 SLA 1960)

Collateral references. — Effect of inclusion in call for election, or in proposal for bond issue submitted to people, of unauthorized method of payment or retirement, 93 ALR 362.

Power of legislature to add to or make more onerous the conditions or limitations prescribed by Constitution upon incurring public debts, 106 ALR 231.

Power and discretion of officer or board authorized to issue bonds of governmental unit as regards terms or conditions to be included therein, 119 ALR 190.

Sec. 37.15.100. Trustee. If the state bond committee finds it necessary to accomplish the most advantageous sale of the bonds, the committee shall select a trustee for the owners and holders of the bonds or for the safeguarding and disbursement of the proceeds of the sale of the bonds for the use and purpose for which issued, and shall fix the rights, duties, powers, and obligations of the trustee. (§ 1 ch 175 SLA 1960)

Sec. 37.15.110. Creation and membership of state bond committee. There is created a committee known as the "state bond committee," the members of which are the commissioner of commerce and economic development, the commissioner of administration, and the commissioner of revenue. If a member of the committee is absent or otherwise unable to act, the member's designee in the department shall act as a member of the committee in the member's place. (§ 2 ch 175 SLA 1960; am § 7 ch 104 SLA 1967; am § 81 ch 218 SLA 1976)

Sec. 37.15.120. Regulations. The state bond committee may adopt regulations for the performance of its duties and may designate by resolution one of its members to perform any act necessary to effectuate its duties not required by statute to be performed by the state bond committee in meeting or by resolution, or by another officer of the state. (§ 2 ch 175 SLA 1960; am § 8 ch 104 SLA 1967)

Sec. 37.15.130. Officers, records and proceedings. The commissioner of commerce and economic development is the chairman of the state bond committee and the commissioner of revenue is the secretary. A majority of the members of the committee constitute a quorum. The committee shall keep a full, complete, and permanent record of its proceedings. All records and correspondence of the committee shall be kept in the office of the commissioner of revenue. (§ 2 ch 175 SLA 1960; am § 82 ch 218 SLA 1976)

Collateral references. — Personal liability of officers to holders of invalid public money obligations, 87 ALR 273.

Sec. 37.15.140. Duties of state bond committee. The state bond committee shall adopt the resolution and prepare the documents necessary for the issuance, sale, and delivery of bonds. (§ 3 ch 175 SLA 1960)

Sec. 37.15.150. Committee may employ special services. If the state bond committee considers it necessary and advisable, it may procure architectural or engineering, fiscal agent or municipal investment, legal and other expert or specialized services at reasonable and customary fees to assist it in accomplishing the most advantageous sale of the bonds. The fees may be paid from the proceeds of the sale or advanced from the contingency fund in the office of the governor or otherwise. (§ 3 ch 175 SLA 1960)

Sec. 37.15.155. Prohibited bidding on bonds and anticipation notes. (a) No person who provides financial programming or marketing assistance to the state bond committee in connection with the issuance or sale of general obligation bonds, revenue bonds or bond anticipation notes of the state may bid on the bonds.

(b) The sale of general obligation bonds, revenue bonds or bond anticipation notes of the state to a person who is prohibited from bidding on the bonds or notes under (a) of this section is against public policy and the sale is void.

(c) In this section "person" means an individual, firm, agent, factor, intermediary, partnership, corporation, association, bond house, stockbroker or bond broker. (§ 1 ch 102 SLA 1974)

Sec. 37.15.160. Contents of resolution. The resolution adopted by the state bond committee shall

(1) fix the principal amount, denominations, date, maturities, place of payment, terms, right of redemption if any, form, conditions and covenants of the bonds;

(2) fix the date of sale and the form of the notice of sale; and

(3) provide if the notice is to be published elsewhere in addition to the publication required by AS 37.15.040. (§ 3 ch 175 SLA 1960; am § 3 ch 26 SLA 1968)

Sec. 37.15.170. State bond committee to certify annual principal, interest, and reserve requirements. (a) Before January 1 of each year after bonds are issued, the state bond committee shall certify to the commissioner of administration the amount needed for the following calendar year to meet principal, interest, and reserve requirements on all bonds or issues or series of bonds then outstanding.

(b) The commissioner of administration shall set aside these amounts or make the necessary provisions for the setting aside of these amounts so that there will be sufficient money to pay the principal and interest on the due date and to meet reserve requirements. (§ 4 ch 175 SLA 1960)

Sec. 37.15.180. Remedies of bondholders. The owner and holder of each bond or the trustee may by appropriate proceeding require and compel the transfer and payment of money as directed by this chapter. (§ 4 ch 175 SLA 1960)

Sec. 37.15.190. Negotiability. General obligation bonds of the state and the coupons attached to the bonds are negotiable instruments. (§ 5 ch 175 SLA 1960)

Collateral references. — Negotiability of state warrants, 36 ALR 949.

Sec. 37.15.200. Bonds as legal investments. General obligation bonds of the state are legal investments for all state funds, or for funds under state control, and for all funds of a political subdivision of the state. (§ 5 ch 175 SLA 1960)

Sec. 37.15.210. Refunding bonds. (a) All or a part of the general obligation bonds of the state, or all or a part of each outstanding issue or series of bonds, may be refunded at or before maturity by the issuance of general obligation refunding bonds of the state if, in the opinion of the state bond committee, refunding is advantageous to and in the best interest of the state and its inhabitants. Money set aside as reserve to secure the payment of the principal and interest of bonds being refunded may be used to pay the principal and interest on these bonds or may be retained by the state to secure the payment of the principal and interest on the refunding bonds to be issued.

(b) Refunding bonds and the coupons attached to them are negotiable instruments. The effective rate of interest over the life of refunding bonds may not exceed 11 percent a year or that rate of interest which is 110 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of bonds, whichever is higher, and the amount of premium which is paid to effect the redemption of outstanding bonds may not be considered in determining the effective rate of interest.

(c) Refunding bonds may be exchanged for the bonds being refunded or refunding bonds may be sold in the manner and at the prices which the state bond committee determines to be for the best interest of the state and its inhabitants either at public or private sale.

(d) The issuance of refunding bonds need not be authorized by the qualified voters of the state. The state bond committee shall adopt the resolution and prepare the documents necessary for the issuance, exchange or sale, and delivery of refunding bonds. The provisions of this chapter relating to the terms, conditions, covenants, issuance, and sale of general obligation bonds of the state apply to refunding bonds except as otherwise specifically provided in this section. (§ 6 ch 175 SLA 1960; am § 2 ch 92 SLA 1970; am § 2 ch 85 SLA 1980; am § 2 ch 110 SLA 1982)

Effect of amendments. — The 1980 amendment substituted "10" for "seven" preceding "percent a year" in the second sentence of subsection (b).

The 1982 amendment substituted the language beginning "11 percent a year" and ending "date of sale of bonds, whichever is higher" for "10 percent a year" in subsection (b).

Collateral references. — Funding or refunding obligations as subject to conditions respecting limitation of indebtedness or approval by voters. 97 ALR 442.

Power of governmental unit to issue bonds as implying power to refund them. 1 ALR2d 134.

Sec. 37.15.215. Official statements. To the extent practicable the official statements and other documentation issued in connection with an offering of state or local government securities shall comply with

the guidelines of the Municipal Finance Officers Association or other nationally recognized guidelines. (§ 12 ch 168 SLA 1978)

Sec. 37.15.220. Short title. AS 37.15.010 — 37.15.220 may be cited as the State Bonding Act. (§ 7 ch 175 SLA 1960; am § 54 ch 127 SLA 1974)

Article 2. Bond Anticipation Notes.

Section		Section	
300.	Borrowing in anticipation of sale of bonds permitted	350.	Security for repayment of revenue bonds
310.	Issuance of notes	360.	Limitation on issuance of notes
330.	Repayment of notes	370.	Use of proceeds from sale of notes
340.	Security for repayment of general obligation bonds	380.	Sale of notes
		390.	Execution of notes

Sec. 37.15.300. Borrowing in anticipation of sale of bonds permitted. When the state bond committee considers it in the best interests of the state, it may borrow money in anticipation of the sale of general obligation and revenue bonds, if

(1) the general obligation bonds to be sold have been authorized by law and ratified by a majority vote of the qualified voters of the state who vote on the question; or

(2) the general obligation bonds to be sold have been authorized by law for the purpose of meeting natural disasters, repelling invasion, suppressing insurrection, or defending the state in war; or

(3) the revenue bonds to be sold have been authorized by law; and

(4) money to be derived from the sale of general obligation and revenue bonds has been appropriated by the legislature. (§ 1 ch 42 SLA 1964; am § 1 ch 74 SLA 1964)

Sec. 37.15.310. Issuance of notes. The state bond committee shall issue notes for the amounts borrowed with a maturity date not to exceed one year from the date of issue. All the notes are payable at a fixed place, on or before a fixed time, or at a fixed time, from the proceeds of the sale of bonds, in anticipation of which the original note or notes were issued, unless the bonds have not been sold by the maturity date of the notes. Interest on the notes is payable at a fixed place, on or before a fixed time, out of appropriations made for the payment of interest on general obligation notes or bonds of the state. (§ 1 ch 42 SLA 1964; am § 1 ch 127 SLA 1976)

Sec. 37.15.320. Issuance of new notes. [Repealed, § 3 ch 41 SLA 1967.]

Sec. 37.15.330. Repayment of notes. Every note shall be payable from the proceeds of the next succeeding sale of bonds or from the proceeds of the sale of new bond anticipation notes. (§ 1 ch 42 SLA 1964)

Sec. 37.15.340. Security for repayment of general obligation bonds. Notes issued in anticipation of the sale of general obligation bonds and the interest thereon are secured by the full faith, credit, and resources of the state. (§ 1 ch 42 SLA 1964)

Sec. 37.15.350. Security for repayment of revenue bonds. Notes issued in anticipation of the sale of revenue bonds and the interest thereon are secured in the same manner as are the revenue bonds in anticipation of which the notes are issued. (§ 1 ch 42 SLA 1964)

Sec. 37.15.360. Limitation on issuance of notes. The total amount of such notes issued and outstanding shall at no time exceed the total amount of bonds authorized to be issued. (§ 1 ch 42 SLA 1964)

Sec. 37.15.370. Use of proceeds from sale of notes. The proceeds from the sale of the notes shall be used only for the purposes for which the proceeds from the sale of bonds may be used or to meet payment of outstanding bond anticipation notes. (§ 1 ch 42 SLA 1964)

Sec. 37.15.380. Sale of notes. Notes issued under this chapter shall be sold by the state bond committee in such manner and at such price or prices as it shall determine, at either public or private sale; however, no such note shall be sold for less than par and accrued interest or at an interest rate exceeding 11 percent a year or that rate of interest which is 110 percent of the rate of Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the notes, whichever is higher. (§ 1 ch 42 SLA 1964; am § 3 ch 92 SLA 1970; am § 3 ch 85 SLA 1980; am § 3 ch 110 SLA 1982)

Effect of amendments. — The 1980 amendment substituted "10" for "seven" preceding "percent a year" at the end of the section.

The 1982 amendment substituted the language beginning "11 percent a year" for "10 percent a year" at the end of the section.

Sec. 37.15.390. Execution of notes. Notes for money borrowed in anticipation of receipts from the sale of bonds shall be signed by the governor and countersigned by the lieutenant governor. The governor's and lieutenant governor's signatures may be facsimile signatures. (§ 1 ch 42 SLA 1964; am § 4 ch 110 SLA 1982)

Effect of amendments. — The 1982 amendment substituted the present second sentence for the former sentence, which read: "The governor's signature may be a facsimile signature."

Article 3. International Airports Revenue Bonds.

Section		Section	
410.	Bond authorization	490.	Bond negotiability
420.	Construction fund	500.	Airport charges
430.	Revenue fund	510.	State improvements to airports

450.	Bond terms	530.	Bonds as legal investments
460.	Bond resolution	540.	Statutory construction
470.	Enforcement by holder	550.	Definitions
480.	Amounts required for payments		

Legislative history reports. — For report on ch. 149, SLA 1972 (CSHB 531), see 1972 House Journal, p. 1233.

Sec. 37.15.410. Bond authorization. For the purpose of providing part or all of the money to be used, with or without any grants or other money which may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $62,825,000 is authorized to acquire, equip, construct and install the additions, improvements, extensions and facilities authorized in AS 37.15.510. The principal of and interest on these bonds shall be paid out of and secured by the gross revenues derived by the state from the ownership, lease, use and operation of the airports, and of all the facilities of them and out of any other revenues or money which the state legislature may provide exclusive of any state tax or license. (§ 1 ch 149 SLA 1972; am § 1 ch 66 SLA 1974; am § 1 ch 68 SLA 1979; am § 1 ch 11 SLA 1982; am § 1 ch 25 SLA 1983)

Effect of amendments. — The 1979 amendment substituted "$43,325,000" for "$34,825,000" in the first sentence.

The 1982 amendment, substituted "$34,825,000" for "$43,325,000" in the first sentence.

The 1983 amendment substituted "$62,825,000" for "$34,825,000" in the first sentence.

Editor's notes. — See ch. 69, SLA 1979 in Temporary and Special Acts and Resolves for the appropriation of the increase in bonds authorized by ch. 68, SLA 1979.

Sec. 37.15.420. Construction fund. (a) There is a special fund of the state known as the "International Airports Construction Fund," into which shall be paid the proceeds of the sale of the bonds (except any accrued interest paid on them, which shall be paid into the bond redemption fund) and any grant or other money which is legally provided for the same purposes for which the bonds are authorized. The money in the construction fund shall be used to pay the costs of acquiring, equipping, constructing and installing additions and improvements to and extensions of and facilities for the airports and costs incidental thereto, including costs of the authorization, issuance and

sale of the bonds. To the extent provided in the bond resolution, money in the construction fund may also be used for the payment of interest on the bonds during the period of actual construction, and for such further period, not exceeding one year after the period of construction, as may be provided in the bond resolution. Money in the construction fund may also be transferred to the bond redemption fund, to the extent provided in the bond resolution, to establish a reserve for the payment of the principal of and interest on the bonds.

(b) The bond resolution may provide for the investment of money in the construction fund in such manner as the committee may determine. The interest earned upon or any profits derived from the sale of this investment shall be deposited in and become a part of the construction fund. (§ 1 ch 149 SLA 1972)

Cross references. — For initial appropriations to fund, see section 2, ch. 149, SLA 1972, Temporary and Special Acts.

Opinions of Attorney General. — This fund does not represent an unconstitutional dedication of public funds under § 7, art. IX, of the state constitution, as that section of the constitution contains an implied exception for revenue derived from bond issues and for revenue derived from facilities constructed with bond proceeds, at least to the extent that it is necessary to satisfy the debt obligation or maintain the facility so that it continues to generate revenues for that purpose. November 30, 1982, Op. Att'y Gen.

Sec. 37.15.430. Revenue fund. (a) There is another special fund of the state, known as the "International Airports Revenue Fund," which shall be completely segregated and set apart from all other funds of the state, which is a trust fund for the uses and purposes provided in AS 37.15.410 — 37.15.550, and into which shall be paid all revenues, fees, charges and rentals derived by the state from the ownership, lease, use and operation of the airports and all of the facilities and improvements of them and facilities and improvements used in connection with them. These revenues, charges, fees and rentals shall not include the proceeds of any state tax or license. The money in the revenue fund shall only be used for the purpose of paying or securing the payment of the principal of and interest on the bonds and of and on any other revenue bonds issued by authorization of the legislature to provide funds to acquire, equip, construct and install additions and improvements to, and extensions of and facilities for, the airports and to be payable out of the revenue fund, the purpose of paying the normal and necessary costs of maintaining and operating the airports and all of the improvements and facilities of them, the purpose of paying the costs of renewals, replacements and extraordinary repairs to the airports and all of the improvements and facilities of them, the purpose of redeeming before their fixed maturities any and all revenue bonds issued for the purposes of the airports, the purpose of providing funds to acquire, construct and install necessary additions and improvements to and extensions of and facilities for the airports and all of their facilities, and the purpose of providing funds to pay any and all other costs relating to the ownership, use and operation of the airports.

(b) The investment of money in the revenue fund may be made in such manner as the committee may determine. The interest earned upon or any profits derived from the sale of this investment shall be deposited in and become a part of the revenue fund. (§ 1 ch 149 SLA 1972)

Opinions of Attorney General. — This fund does not represent an unconstitutional dedication of public funds under § 7, art. IX, of the state constitution, as that section of the constitution contains an implied exception for revenue derived from bond issues and for revenue derived from facilities constructed with bond proceeds, at least to the extent that it is necessary to satisfy the debt obligation or maintain the facility so that it continues to generate revenues for that purpose. November 30, 1982, Op. Att'y Gen.

Sec. 37.15.440. Redemption fund. There is another special fund of the state, known as the "International Airports Revenue Bond Redemption Fund," which is a trust fund for paying and securing the payment of the principal of and interest and redemption premium, if any, on the bonds and which shall be at all times completely segregated and set apart from all other funds of the state. The committee, on behalf of the state, shall obligate and bind the state to set aside and pay into the bond redemption fund any part or parts of, or all of, or a fixed proportion of, or a fixed amount of the money in the revenue fund sufficient to pay the principal of and interest and redemption premium, if any, on the bonds as the payments become due and, if it considers it necessary, to set aside and maintain reserves for this purpose. The bond redemption fund shall be drawn upon for the purpose of paying the principal of and interest and redemption premium, if any, on the bonds, and the bonds do not constitute a general obligation of the state. (§ 1 ch 149 SLA 1972)

Opinions of Attorney General. — This fund does not represent an unconstitutional dedication of public funds under § 7, art. IX, of the state constitution, as that section of the constitution contains an implied exception for revenue derived from bond issues and for revenue derived from facilities constructed with bond proceeds, at least to the extent that it is necessary to satisfy the debt obligation or maintain the facility so that it continues to generate revenues for that purpose. November 30, 1982, Op. Att'y Gen.

Sec. 37.15.450. Bond terms. (a) The bonds shall be sold in such amounts or series and at such time or times as determined by the committee. Before selling a series of bonds, the committee shall give notice inviting sealed bids in such manner as it may prescribe. If satisfactory bids are received, the bonds offered for sale shall be awarded to the highest responsible bidder. If the committee determines that the bids received are not satisfactory as to price or responsibility of the bidders, it may reject all bids received. The bonds, or each series of them, shall be sold at such a price so that the effective interest rate over the life of the bonds does not exceed 11 percent per year or that

rate of interest which is 125 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. Interest shall be payable annually or semiannually.

(b) The bonds shall mature at such time or times as fixed by the committee. The bonds may be subject to redemption before their fixed maturities as determined by the committee and with such premium or premiums as fixed by the committee, but no bond may be subject to redemption before its fixed maturity date unless the right so to redeem that bond is expressly mentioned on the face of the bond. The bonds may be in denominations determined by the committee; may be issued in coupon form or in fully registered form, and may be registrable as to principal or both principal and interest, all under such regulations and conditions as the committee shall provide; shall be payable as to principal and interest at such place or places as may be determined by the committee; shall be signed on behalf of the state by the governor and shall be attested by the lieutenant governor, both of which signatures may be facsimile signatures; shall have the seal of the state impressed, printed or lithographed on them, and each of the interest coupons attached to them shall be signed by the facsimile signatures of these officials; shall be issued under and subject to such terms, conditions and covenants providing for the payment of the principal of them and interest on them and such other terms, conditions, covenants and protective features safeguarding this payment and relating to the maintenance, operation and improvement of the airports as found necessary by the committee, which covenants may include a provision requiring the setting aside and maintenance of certain reserves to secure the payment of this principal and interest. The committee may provide that any additional bonds authorized after June 27, 1972 by the legislature to be payable out of the same source or sources as the bonds authorized as of that date may later be issued on a parity with the bonds authorized as of that date upon compliance with any conditions which the committee may prescribe.

(c) If found reasonably necessary, the committee may select a trustee or trustees for the holders of the bonds or any series of them, for the safeguarding and disbursement of any of the money in any of the funds created by AS 37.15.420, 37.15.430 and 37.15.440, or for such duties with respect to the authentication, delivery and registration of the bonds as the committee may determine, and shall fix the rights, duties, powers and obligations of the trustee or trustees.

(d) In its determination of all of the matters and questions relating to the issuance and sale of the bonds and the fixing of the maturities, terms, conditions and covenants of them as provided in (a), (b) and (c) of this section, the decisions of the committee shall be those found to be reasonably necessary for the best interests of the state and its inhabitants, and those which will accomplish the most advantageous sale of

the bonds, with due regard, however, to necessary or normal costs of maintenance and operation, renewals and replacements of and repairs to the airports and to all improvements to them and facilities of them owned, used, operated or leased in connection with them, the future growth and expansion of the airports and all of such facilities, and the possibility of additional revenue bond financing for airports purposes. Any such decisions of the committee, as expressed in any bond resolution, are final and conclusive when any bonds have been issued pursuant to the bond resolution.

(e) A bond resolution may provide that the bonds issued shall contain a recital that they are issued under AS 37.15.410 — 37.15.550, and any such bonds containing this recital shall be conclusively considered to be valid and to have been issued in conformity with AS 37.15.410 — 37.15.550.

(f) The validity of the authorization and issuance of bonds is not affected by any proceedings for the acquisition or construction of the additions, improvements, extensions or facilities for which the bonds have been issued or by any contracts in connection with the acquisition or construction. (§ 1 ch 149 SLA 1972; am §§ 1, 2 ch 19 SLA 1973; am § 4 ch 85 SLA 1980; am § 5 ch 110 SLA 1982)

Revisor's notes. — AS 37.15.450 was derived from § 7, ch. 88, SLA 1961, as amended by § 8, ch. 62, SLA 1968 and § 3, ch. 173, SLA 1970. In the last sentence of what is now designated subsection (b), the only differences between the wording here and in those earlier versions are that "hereafter" was changed to "after the effective date of this Act" and "authorized by this Act" (in two places) was changed to "authorized as of that date." The latter change suggests that the date referred to in the former change is June 27, 1972, the effective date of the Act putting these provisions in the Alaska Statutes, rather than April 15, 1961, the effective date of the original international airports bond authorization Act. Therefore, under AS 01.05.031(b)(5), the 1972 date has been inserted in the text.

Effect of amendments. — The 1980 amendment substituted "10" for "eight" preceding "percent per year" near the end of the next-to-last sentence of subsection (a).

The 1982 amendment substituted the language beginning "11 percent per year" for "10 percent per year" at the end of the next-to-last sentence of subsection (a).

Sec. 37.15.460. Bond resolution. The committee is authorized and directed to adopt the bond resolution and prepare all other documents and proceedings necessary for the issuance, sale and delivery of the bonds or any part or series of them. The bond resolution shall fix the principal amount, denomination, date, maturities, place or places of payment, rights of redemption, if any, terms, form, conditions and covenants of the bonds or each series of them. The committee shall also determine and provide for the date and manner of sale of the bonds, and shall provide whether the notice of sale is to be published elsewhere in addition to the publication required by AS 37.15.450. (§ 1 ch 149 SLA 1972)

Sec. 37.15.470. Enforcement by holder. The holder of any bonds or the trustee for the holders of the bonds or any series of them, may by appropriate proceedings in the courts of record of the state, require and compel the transfer, setting aside and payment of money and the enforcement of all of the terms, conditions and covenants as required and provided in AS 37.15.410 — 37.15.550 and in the bond resolution. (§ 1 ch 149 SLA 1972)

Sec. 37.15.480. Amounts required for payments. The committee shall, before December 31 of each year, commencing with the year in which the bonds are issued, certify to the commissioners of revenue and transportation and public facilities the amounts required in the next ensuing calendar year by the bond resolution or resolutions to be paid out of the revenue fund into the bond redemption fund and to be paid into and maintained in any reserve fund or account or any other fund or account created by the bond resolution or resolutions, and shall also certify to the commissioners the last date or dates upon which payments may be made. (§ 1 ch 149 SLA 1972)

Sec. 37.15.490. Bond negotiability. The bonds and the coupons attached to them are fully negotiable instruments under the laws of the state. (§ 1 ch 149 SLA 1972)

Sec. 37.15.500. Airport charges. The commissioner of transportation and public facilities shall fix and collect such fees, charges and rentals derived by the state from the ownership, lease, use and operation of the airports and all of the facilities and improvements of them or used in connection with them as will provide revenues sufficient to comply with all of the covenants of the bond resolution. (§ 1 ch 149 SLA 1972)

Sec. 37.15.510. State improvements to airports. The state is authorized to acquire, equip, construct and install additions and improvements to and extensions of the airports, facilities for the landing, parking, loading, storing, repairing, safety and utility of aircraft at the airports and passenger, freight and terminal facilities, including safety equipment and devices at the airports, found to be necessary by the commissioner of transportation and public facilities. (§ 1 ch 149 SLA 1972)

Sec. 37.15.520. Refunding. (a) The bonds or any part of them may be refunded at or before their maturity by the issuance of refunding revenue bonds of the state if in the opinion of the committee refunding is advantageous to and in the best interests of the state and its inhabitants.

(b) The issuance of refunding bonds need not be authorized by an Act of the legislature, and the committee is authorized and directed to adopt the resolution or resolutions and prepare all other documents and proceedings necessary for the issuance, exchange or sale, and

delivery of such bonds. All provisions of AS 37.15.410 — 37.15.550 applicable to revenue bonds are applicable to the refunding bonds and to the issuance, sale or exchange of them, except as otherwise provided in this section.

(c) Refunding bonds may be issued in a principal amount sufficient to provide funds for the payment of all bonds to be refunded by them, and, in addition, for the payment of all expenses incident to the calling, retiring or paying of the outstanding bonds, and the issuance of the refunding bonds. These expenses include the difference in amount between the par value of the refunding bonds and any amount less than par for which the refunding bonds are sold, any amount necessary to be made available for the payment of interest upon the refunding bonds from the date of sale of them to the date of payment of the bonds to be refunded or to the date upon which the bonds to be refunded will be paid pursuant to the call of them or agreement with the holders of them, and the premium, if any, necessary to be paid in order to call or retire the outstanding bonds and the interest accruing on them to the date of the call or retirement. (§ 1 ch 149 SLA 1972)

Collateral references. — Funding or refunding obligations as subject to conditions respecting limitation of indebtedness or approval by voters. 97 ALR 442.

Power of governmental unit to issue bonds as implying power to refund them. 1 ALR2d 134.

Sec. 37.15.530. Bonds as legal investments. The bonds are legal investments for all banks, trust companies, savings banks, savings and loan associations and other persons carrying on a banking business, all insurance companies and other persons carrying on an insurance business, and all executors, administrators, trustees and other fiduciaries. The bonds may be accepted as security for deposits of all funds of the state and its political subdivisions. (§ 1 ch 149 SLA 1972)

Sec. 37.15.540. Statutory construction. AS 37.15.410 — 37.15.550 shall be liberally construed in order to carry out the purposes for which they were enacted, and all existing laws in conflict with any of these sections are superseded insofar as necessary to accomplish the purposes of and carry out the provisions of these sections. (§ 1 ch 149 SLA 1972)

Sec. 37.15.550. Definitions. As used in AS 37.15.410 — 37.15.550, unless the context otherwise requires:

(1) "airports" means the international airports owned and operated by the state and located at or near the cities of Anchorage and Fairbanks;

(2) "bond redemption fund" means the International Airports Revenue Bond Redemption Fund created by AS 37.15.440, including any accounts which are created in that fund after June 27, 1972;

(3) "bond resolution" means the resolution or resolutions authorizing the issuance of bonds, adopted by the committee under AS 37.15.460;

(4) "bonds" means the international airports revenue bonds authorized by AS 37.15.410 — 37.15.550;

(5) "commissioner of transportation and public facilities" means the principal executive officer of the Department of Transportation and Public Facilities of the state as provided in AS 44.42.010, or a successor;

(6) "commissioner of revenue" means the principal executive officer of the Department of Revenue of the state as provided in AS 44.25.010, or a successor;

(7) "committee" means the state bond committee created by AS 37.15.110, or any other committee, body, department or officer of the state which or who succeeds to the rights, powers, duties and obligations of the state bond committee by lawful Act of the legislature;

(8) "construction fund" means the International Airports Construction Fund created by AS 37.15.420;

(9) "revenue fund" means the International Airports Revenue Fund created by AS 37.15.430. (§ 1 ch 149 SLA 1972)

Chapter 20. Acceptance of Federal Funds.

Section	Section
10. Acceptance of federal grants and transfers of property	30. Jurisdiction of accepted property
20. Federal Transitional Grants Account	40. Alaska Native Fund

Sec. 37.20.010. Acceptance of federal grants and transfers of property. The governor is authorized to accept on behalf of the state all federal grants and transfers of property of an emergency, transitional or omnibus nature upon conditions imposed by the federal government. (§ 1 ch 176 SLA 1959)

Sec. 37.20.020. Federal Transitional Grants Account. There is established in the general fund a special account designated the Federal Transitional Grants Account. All grants of money accepted under this chapter shall be deposited in this special account. (§ 2 ch 176 SLA 1959)

Sec. 37.20.030. Jurisdiction of accepted property. (a) All chattels accepted under the provisions of AS 37.20.010 and 37.20.020 are subject to the jurisdiction of the Department of Administration for distribution to the appropriate department.

(b) All land accepted under the provisions of AS 37.20.010 and 37.20.020 is subject to the jurisdiction of the Department of Natural Resources.

Chapter 162

AN ACT

Authorizing the construction of the Knik Arm Crossing and relating to the acquisition, construction, equipping, and maintenance of toll facilities funded by revenue bonds and providing toll collection authority.

---

* Section 1. AS 37.15 is amended by adding new sections to read:

ARTICLE 4. TOLL FACILITIES REVENUE BONDS.

37.15.610 Sec. 37.15.610. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money that may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $500,000,000 is authorized to acquire, construct, equip, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.720 and 37.15.730. The principal of and interest on these bonds are paid out of and secured by the gross revenues derived by the state from the ownership, use, and operation of the toll facilities, and out of any other revenue or money that the state legislature may provide exclusive of any state tax or license. Bonds may not be issued to assist in the acquisition, financing, or operation of projects without prior approval from the legislature.

37.15.620 Sec. 37.15.620. CONSTRUCTION FUND. (a) The toll facilities construction fund is established for deposit of proceeds of the sale of the bonds authorized by AS 37.15.610 and any grant or other money

Chapter 162

that is legally provided for the same purposes for which the bonds are authorized except for any accrued interest paid on the bonds by the purchaser. The money in the construction fund is used to pay the cost of acquiring, constructing, and equipping facilities authorized in AS 37.15.720 and 37.15.730 and costs incidental to those activities, including costs of the authorization, issuance, and sale of the bonds. To the extent allowed in the bond resolution, money in the construction fund may also be used for the payment of interest on the bonds during the time of actual construction, and for any additional time, not exceeding one year after construction is completed. Money in the construction fund may also be transferred to the bond redemption fund, as permitted by the bond resolution, to establish a reserve for the payment of the principal and interest on the bonds.

(b) The bond resolution may provide for the investment of money in the construction fund as the committee determines. The interest earned upon or any profit derived from the sale of the investment is deposited in the construction fund.

Sec. 37.15.630. REVENUE FUND. (a) The toll facilities revenue fund is established and shall be set apart from all other money of the state. The toll facilities revenue fund is a trust fund for the purposes under AS 37.15.610 - 37.15.760, where all revenue, fees, tolls, charges, and rentals are deposited that are derived by the state from the ownership, lease, use, and operation of the facilities authorized by AS 37.15.720 and 37.15.730. The revenue, fees, tolls, charges, and rentals may not include the proceeds of any state tax or license. The money in the revenue fund may only be used to 37.15.630

(1) pay or secure the payment of the principal of and interest on the toll facilities bonds and principal of and interest on any other revenue bonds issued by authorization of the legislature to

determined by the committee;

(4) shall be signed on behalf of the state by the governor and shall be attested to by the lieutenant governor, both of which signatures may be facsimile signatures, and each of the interest coupons attached to them shall be signed by the facsimile signatures of these officials;

(5) shall have the seal of the state impressed, printed, or lithographed on them; and

(6) shall be issued under and subject to the terms, conditions, and covenants, providing for the payment of the principal of and interest on the bonds and the other terms, conditions, covenants, and protective features safeguarding this payment and relating to the maintenance, operation, and improvement of the toll facilities as found necessary by the committee, which covenants may include a provision requiring the setting aside and maintenance of certain reserves to secure the payment of the principal and interest.

(c) If found reasonably necessary, the committee may select a trustee or trustees for the holders of the bonds or any series of the bonds, for the safeguarding and disbursement of any of the money in any of the funds created by AS 37.15.620, 37.15.630, and 37.15.640, or for the duties for authentication, delivery, and registration of the bonds as the committee may determine. The committee shall also fix the rights, duties, powers, and obligations of the trustee or trustees.

(d) In the committee's determination of all of the matters and questions relating to the issuance and sale of the bonds and the fixing of the maturities, terms, conditions, and covenants of the bonds as provided in (a) - (c) of this section, the decisions of the committee shall be those found to be reasonably necessary for the best

interests of the state and its inhabitants, and those that will accomplish the most advantageous sale of the bonds, with due regard, however, (1) to necessary or normal costs of maintenance and operation; (2) to renewals and replacements of and repairs to the toll facilities; (3) to all improvements to toll facilities and property of toll facilities owned, used, operated, or leased in connection with toll facilities; and (4) to the future growth and expansion of all of the facilities and the possibility of additional revenue bond financing for toll facilities purposes. A decision of the committee, as expressed in any bond resolution, is final when any bonds have been issued under the bond resolution.

(e) A bond resolution may provide that the bonds issued contain a recital that they are issued under AS 37.15.610 - 37.15.760, and any bonds containing this recital are conclusively considered to be valid and to have been issued in conformity with AS 37.15.610 - 37.15.760.

(f) The validity of the authorization and issuance of bonds is not affected by any proceeding for the acquisition or construction of the additions, improvements, or facilities for which the bonds have been issued or by any contract in connection with the acquisition or construction.

Sec. 37.15.660. BOND RESOLUTION. The committee is authorized and directed to adopt the bond resolution and prepare all other documents and proceedings necessary for the issuance, sale, and delivery of the bonds or any part or series of them. The bond resolution shall fix the principal amount, denomination, date, maturities, place or places of payment, rights of redemption, if any, terms, form, conditions, and covenants of the bonds or each series of them. The committee shall also determine and provide for the date and manner of sale of the bonds, and shall provide whether the notice of sale is to be

37.15.660

published elsewhere in addition to the publication required by AS 37.-15.650.

37.15.670 Sec. 37.15.670. ENFORCEMENT BY HOLDER. The holder of any bonds or the trustee for the holders of the bonds or any series of them, may, by appropriate proceedings in the courts of record of the state, compel the transfer, setting aside, and payment of money and the enforcement of all of the terms, conditions, and covenants as required and provided in AS 37.15.610 - 37.15.760 and in the bond resolution.

37.15.680 Sec. 37.15.680. AMOUNTS REQUIRED FOR PAYMENTS. The committee shall, before December 31 of each year, commencing with the year in which the bonds are issued, certify to the commissioner of revenue and the commissioner of transportation and public facilities the amounts required in the next ensuing calendar year by a bond resolution to be paid out of the revenue fund into the bond redemption fund and to be paid into and maintained in any reserve fund or account or any other fund or account created by a bond resolution. The committee shall also certify to the commissioners the last date upon which payments may be made.

37.15.690 Sec. 37.15.690. BOND NEGOTIABILITY. The bonds and the coupons attached to them are fully negotiable instruments under the laws of the state.

37.15.700 Sec. 37.15.700. REFUNDING. (a) The bonds or any part of them may be refunded at or before their maturity by the issuance of refunding revenue bonds of the state if in the opinion of the committee refunding is advantageous to and in the best interest of the state and its inhabitants.

(b) The issuance of refunding bonds need not be authorized by an act of the legislature, and the committee shall adopt the resolution and prepare all other documents and proceedings necessary for the

issuance, exchange or sale, and delivery of the bonds. All provisions of AS 37.15.611 - 37.15.760 applicable to revenue bonds are applicable to the refunding bonds and to the issuance, sale, or exchange of the bonds, except as otherwise provided in this section.

(c) Refunding bonds may be issued in a principal amount sufficient to provide money for the payment of all bonds to be refunded by them, and, in addition, for the payment of all expenses incident to the calling, retiring, or paying of the outstanding bonds, and the issuance of the refunding bonds. These expenses include the difference in amount between the par value of the refunding bonds and any amount less than par for which the refunding bonds are sold, any amount necessary to be made available for the payment of interest on the refunding bonds from the date of sale of them to the date of payment of the bonds to be refunded or to the date upon which the bonds to be refunded will be paid under the call of the bonds or agreement with the holders of them, and the premium, if any, necessary to be paid in order to call or retire the outstanding bonds and the interest accruing on the outstanding bonds to the date of the call or retirement.

Sec. 37.15.710. BONDS AS LEGAL INVESTMENTS. Toll facilities bonds are legal investments for all banks, trust companies, savings banks, savings and loan associations, and other persons carrying on a banking business, all insurance companies and other persons carrying on an insurance business, and all executors, administrators, trustees, and other fiduciaries. The bonds may be accepted as security for deposits of all money of the state and its political subdivisions. 37.15.710

Sec. 37.15.720. STATE TOLL FACILITIES. The state is authorized to acquire, construct, equip, and maintain toll bridges, highways, roads, crossings, and causeways found to be necessary by the 37.15.720

commissioner of transportation and public facilities.

37.15.730 Sec. 37.15.730. KNIK ARM CROSSING. Notwithstanding the provisions of AS 37.15.720 the first state toll facility to be financed under this article is the Knik Arm Crossing near Anchorage if the following conditions are met:

(1) the department submits to the governor and the legislature a feasibility study that finds that the crossing is financially feasible and able to produce revenue adequate to repay the bonds with which it is financed;

(2) if financing in addition to revenue bonds is anticipated, the department submits to the governor and legislature a finance plan to include an estimate of the total cost of the project and a description of the sources of money that will be used to finance the total cost of the project; and

(3) the office of management and budget reviews the feasibility study and the finance plan, if required, and reports its findings and recommendations to the governor and legislature not later than 90 days after the study and plan are received by the office.

37.15.740 Sec. 37.15.740. TOLL FACILITY CHARGES. The commissioner of transportation and public facilities shall fix and collect the fees, charges, tolls, and rentals derived by the state from the ownership, lease, use, and operation of the facilities authorized by AS 37.15.720 and 37.15.730 and improvements of the facilities as will provide revenues sufficient to comply with all of the covenants of the bond resolution.

37.15.750 Sec. 37.15.750. STATUTORY CONSTRUCTION. AS 37.15.610 - 37.15.760 shall be liberally construed in order to carry out the purposes for which the provisions were enacted, and all existing laws in conflict with AS 37.15.610 - 37.15.760 are superseded as necessary to

accomplish the purposes of AS 37.15.610 - 37.15.760.

Sec. 37.15.760. DEFINITIONS. In AS 37.15.610 - 37.15.760, unless the context requires otherwise 37.15.760

(1) "bond redemption fund" means the toll facilities revenue bond redemption fund created by AS 37.15.640, including any accounts that are created in that fund after the effective date of this Act;

(2) "bond resolution" means the resolution authorizing the issuance of bonds, adopted by the committee under AS 37.15.660;

(3) "bonds" means the toll facilities revenue bonds authorized by AS 37.15.610 - 37.15.760;

(4) "committee" means the state bond committee created by AS 37.15.110, or any other committee, body, department, or officer of the state that or who succeeds to the rights, powers, duties, and obligations of the state bond committee by act of the legislature;

(5) "construction fund" means the toll facilities construction fund created by AS 37.15.620;

(6) "revenue fund" means the toll facilities revenue fund created by AS 37.15.630;

(7) "toll facilities" means highways, roads, bridges, crossings, and causeways upon which tolls, charges, rentals, or other user fees are placed by the commissioner of transportation and public facilities.

* Sec. 2. AS 19.05.040 is amended to read:

Sec. 19.05.040. POWERS OF DEPARTMENT. The department may 19.05.040

(1) acquire property;

(2) exercise the power of eminent domain;

(3) take immediate possession of real property, or any interest in it under a declaration of taking or by other lawful means;

(4) acquire rights-of-way for present or future use;

(5) control access to highways;

(6) regulate roadside development;

(7) preserve and maintain the scenic beauty along state highways;

(8) dispose of property acquired for highway purposes;

(9) accept and dispose of federal funds or property available for highway construction, maintenance, or equipment;

(10) enter into contracts or agreements relating to highways with the federal government, municipalities, a political subdivision, or with a foreign government, if the contract is approved by the federal government; [AND]

(11) establish, levy, and collect tolls, fees, charges, and rentals for the use of state roads, highways, bridges, crossings, and causeways; and

(12) exercise any other power necessary to carry out the purpose of AS 19.05 - 19.25.

* Sec 3. AS 44.88.010(a) is amended to read:

44.88.010(a)

(a) The legislature finds, determines and declares that

(1) there exist areas of the state in which seasonal and nonseasonal unemployment exist;

(2) this unemployment is a serious menace to the health, safety and general welfare, not only to the people in those areas, but also to the people of the entire state;

(3) the state lacks the basic manufacturing, industrial, and business enterprises and the other facilities referred to in (5) of this subsection necessary to permit adequate development of its natural resources and the balanced growth of its economy;

(4) the establishment and expansion of industrial,

ent or future use;

enic beauty along state

r highway purposes;
funds or property avail-
r equipment;
ments relating to highways
a political subdivision,
tract is approved by the

tolls, fees, charges, and
s, bridges, crossings, and

ecessary to carry out the

and declares that
ate in which seasonal and

ous menace to the health,
people in those areas, but

manufacturing, industrial,
ilities referred to in (5)
equate development of its
its economy;
expansion of industrial,

Chapter 162

manufacturing, and business enterprises in Alaska and the other facilities referred to in (5) of this subsection are essential to the development of the natural resources and the long-term economic growth of the state, and will directly and indirectly alleviate unemployment in the state;

(5) the achievement of the goal of full employment, and of establishment and continuing operation and development of industrial, manufacturing, and business enterprises in the state, including, without limitation, facilities for [AIR AND WATER] transportation, facilities for pollution control and waste disposal, facilities for the local furnishing of gas, facilities for water, [AND] facilities for industrial parks, mass commuting vehicles, facilities for local district heating or cooling, parking facilities, or a storage or training facility relating to a plant or facility, will be accelerated and facilitated by the creation of an instrumentality of the state with powers to incur debt, to own and operate facilities, [AND] to make and insure loans to finance, and to assist private lenders to make loans to finance, the establishment, operation, and development of industrial, manufacturing, and business enterprises, including, without limitation, facilities for [AIR AND WATER] transportation, facilities for pollution control and waste disposal, facilities for the local furnishing of gas, facilities for water, [AND] facilities for industrial parks, mass commuting vehicles, facilities for local district heating or cooling, parking facilities, or a storage or training facility relating to a plant or facility;

(6) it is in the public interest to promote the prosperity and general welfare of all citizens of the state by stimulating commercial and industrial growth and expansion by encouraging an increase of private investment by banks, investment houses, insurance

HCS CSSB 347(SA) am H

companies, and other financial institutions, including pension and retirement funds, to help satisfy the need for economic expansion;

(7) it is in the state's interest to import private capital to create new economic activity which would not otherwise take place in the state.

* Sec. 4. AS 44.88.070 is amended to read:

44.88.070 Sec. 44.88.070. PURPOSE OF THE AUTHORITY. The purpose of the authority is to promote, develop and advance the general prosperity and economic welfare of the people of Alaska, to relieve problems of unemployment, and to create additional employment by providing various means of financing and means of facilitating the financing of industrial, manufacturing, and business enterprises and the other facilities referred to in AS 44.88.010(a)(5) within the state, and by owning and operating the enterprises and other facilities.

* Sec. 5. AS 44.88.080 is amended to read:

44.88.080 Sec. 44.88.080. POWERS OF THE AUTHORITY. In furtherance of its corporate purposes, the authority has the following powers in addition to its other powers:

(1) to sue and be sued;

(2) to have a seal and alter it at pleasure;

(3) to make and alter bylaws for its organization and internal management;

(4) to adopt regulations governing the exercise of its corporate powers;

(5) to acquire an interest in a project as necessary or appropriate to provide financing for the project, whether by purchase, gift or lease;

(6) to lease to others a project acquired by it for the rentals and upon the terms and conditions the authority may consider

including pension and re-
economic expansion;
to import private capital
not otherwise take place

RITY. The purpose of the
nce the general prosperity

(7) to issue bonds, in accordance with AS 44.88.090, to pay the cost of a project and to secure payment of the bonds as provided in this chapter;

(8) to sell, by installment sale or otherwise, exchange, donate, convey or encumber in any manner by mortgage or by creation of any other security interest, real or personal property owned by it, or in which it has an interest, including a project, when, in the judgment of the authority, the action is in furtherance of its corporate purposes;

(9) to accept gifts, grants or loans from, and enter into contracts or other transactions regarding them, with a federal agency or an agency or instrumentality of the state, a municipality, private organization or other source;

(10) to deposit or invest its funds, subject to agreements with bondholders;

(11) to enter into contracts or agreements with respect to the exercise of any of its powers, and do all things necessary or convenient to carry out its corporate purposes and exercise the powers granted in this chapter;

(12) to purchase or insure loans to finance the costs of manufacturing, industrial, and business enterprise projects;

(13) to enter into loan agreements with respect to one or more projects upon the terms and conditions the authority considers advisable;

(14) to acquire, manage, and operate projects as the authority considers [A PROJECT WHEN IT BECOMES] necessary or appropriate [DESIRABLE] to serve a public purpose [DO SO TO SAFEGUARD THE

AUTHORITY FROM LOSSES];

(15) to assist private lenders to make loans to finance the costs of projects through loan commitments, short-term financing, or otherwise;

(16) to accept gifts, grants, or loans from a federal agency, from an agency or instrumentality of the state or of a municipality, or from any other source;

(17) to enter into contracts or other transactions with a federal agency, with an agency or instrumentality of the state or of a municipality, or with a private organization or other entity consistent with the exercise of any power under this chapter;

(18) to facilitate the expansion of a secondary market for the resale of federally or commercially insured loans made to finance the costs of projects in Alaska held by federal and state chartered financial institutions or by the Alaska Commercial Fishing and Agriculture Bank;

(19) to charge fees or other forms of remuneration for the use or possession of the projects described in (14) of this section in accordance with the agreements described in (11) and (17) of this section, other agreements pertaining to the projects, covenants, or representations made in bond documents pertaining to the projects, or regulations of the authority pertaining to the projects.

* Sec. 6. AS 44.88.105 is amended by adding a new subsection to read:

44.88.105(h) (h) Notwithstanding any other provision of this section, the authority may waive or modify the requirements of (a) of this section establishing maximum costs of $10,000,000 for a project and the requirements of (f) of this section as it considers appropriate and prudent in order to finance a project if the authority intends to own the project. However, if the authority intends to lease or otherwise

as it considers appropriate and
t if the authority intends to own
rity intends to lease or otherwise

Chapter 162

permit the state to use or occupy a majority of the project, the authority may only establish a reserve fund under (g) of this section to secure bonds issued to finance a project.

* Sec. 7. AS 44.88.155 is amended by adding a new subsection to read:

(g) Notwithstanding any other provision of this section, the authority may waive or modify the requirements of this section as it considers appropriate and prudent in order to finance a project if the authority intends to own the project. 44.88.155(g)

* Sec. 8. AS 44.88 is amended by adding new sections to read:

Sec. 44.88.172. ECONOMIC DEVELOPMENT FUND. (a) The economic development fund is established in the authority. The fund consists of money or assets appropriated, loaned, or transferred to the authority, and other money or assets deposited in the fund by the authority. The fund may only be used to finance, acquire, manage, and operate projects that the authority intends to own and operate. The term "operate" includes operation directly by the authority, or by an agent of the authority. 44.88.172

(b) If a project is financed or developed through use of the assets of the economic development fund, the authority may not pledge or use other assets of the authority to assist in the financing, development, or operation of the project. However, whether or not the authority uses the economic development fund, it may issue bonds to finance a project and may secure the bonds with a mortgage, pledge, or assignment of the project or of revenues, money, or agreements attributable to the project or the bonds as provided in sec. 10 of this Act.

Sec. 44.88.173. FINANCE PLAN. (a) Before approving a project financed under AS 44.88.172, the authority shall prepare a finance plan. The finance plan must include an estimate of the total cost of the project, and a description of the sources of money that will be 44.88.173

used to finance the total cost of the project. The finance plan must also include an estimate of the operational costs of the completed project, as well as a description of the source of the money that is to be used to pay the operational costs.

(b) The authority shall give preference to a project that does not require financial assistance from the state. If the authority determines that a project requires state financial assistance, and if the authority further determines that it is desirable to finance the project, the authority shall recommend a method of financing that minimizes cost to the state. A finance plan required under (a) of this section must identify the method of financing that minimizes the cost to the state.

(c) The authority shall submit a finance plan prepared under this section to the state bond committee, the governor, and the legislature before issuing bonds or otherwise incurring debt for the project. If a project requires financial assistance from the state, the state financial assistance must be available before bonds are issued for the project.

44.88.174

Sec. 44.88.174. REGIONAL RESOURCE ADVISORY COUNCIL. (a) Within 30 days after the authority adopts a resolution certifying that a project in the unorganized borough is eligible for financing under AS 44.88.172, the governor shall appoint a Regional Resource Advisory Council in the area of the state where the project is to be located and for which a regional housing authority has been established under AS 18.55.996. The purpose of a council is to assist the authority in reviewing a project that has been proposed for development in its area of the state.

(b) A Regional Resource Advisory Council consists of five members registered to vote in the region. The governor shall appoint the

members to reflect the economic and geographic diversity of the region. Council members serve three-year terms at the pleasure of the governor, except that the initial members may be appointed for less than three years so that the term of at least one of the members expires each year. The governor shall appoint a chairperson who shall call meetings as required and preside over the deliberations of the council. A majority of the council constitutes a quorum for conducting the business of the council.

(c) Members of a Regional Resource Advisory Council do not receive compensation for their services on the council, but are entitled to per diem and travel expenses authorized by law for state boards and commissions under AS 39.20.180.

Sec. 44.88.175. REQUIREMENTS PRIOR TO APPROVAL OF PROJECTS. (a) Before entering into an agreement to finance or to develop a proposed project with a cost in excess of $10,000,000 that is financed under AS 44.88.172, the authority shall obtain the approval of each Regional Resource Advisory Council or municipality in the area in which the proposed project is to be located. Approval under this subsection must be evidenced by a certified copy of a resolution of the council or of the governing body of the municipality. 44.88.175

(b) Before approving a project financed under AS 44.88.172 for which bonds must be issued, the authority shall

(1) obtain approval under (a) of this section;

(2) find, on the basis of all information reasonably available to it, that

(A) the project and its development under this chapter will be economically advantageous to the state and to the general public welfare and will contribute to the economic growth of the state;

(B) the project applicant is financially responsible;

(C) the project is economically and financially feasible and able to produce revenue adequate to repay the bonds or loans with which it is financed;

(D) increased demand on public facilities that might result from the project will be provided for;

(E) the project will provide or retain employment reasonably related to the amount of the financing by the authority, considering the amount of investment per employee for comparable facilities, and other relevant factors;

(F) the scope of the project is sufficient to provide a reasonable expectation of a benefit to the economy of the state;

(G) the project is in compliance with applicable law; and

(H) issuance of the bonds is not expected to adversely affect the ability of the state or any political subdivision of the state to market other bonds.

44.88.176 Sec. 44.88.176. HEARING TO CONSIDER PROPOSED PROJECT. Before considering a resolution regarding the approval or rejection of the development or financing of a proposed project with a cost in excess of $10,000,000, that is financed under AS 44.88.172, a Regional Resource Advisory Council shall conduct a public hearing within the region. If a proposed project is located within a municipality, the governing body of a municipality shall conduct a hearing on the proposed project.

44.88.177 Sec. 44.88.177. OPERATION OF PROJECTS. If a project is financed under AS 44.88.172, the authority shall solicit the review and advice of the Regional Resource Advisory Council or governing body in the

Chapter 162

area in which a project is located before the execution of contracts, agreements, resolutions, or other matters that directly concern the development, maintenance, and operation of a project.

* Sec. 9. AS 44.88.220(5) is amended to read:

44.88.220(5)

(5) "project" means

(A) a plant or facility used or intended for use

(i) in connection with making, processing, preparing, or producing in any manner, goods, products or substances of any kind or nature or in connection with developing or utilizing a natural resource, or extracting, smelting, transporting, converting, assembling or producing in any manner, minerals, raw materials, chemicals, compounds, alloys, fibers, commodities and materials, products or substances of any kind or nature;

(ii) [, ANY PLANT OR FACILITY USED OR INTENDED FOR USE] as an industrial park; [OR] in connection with [AIR AND WATER] transportation; [, OR ANY PLANT OR FACILITY] for the prevention, limitation or control of [AIR OR WATER] pollution; [,] for the disposal of sewage or solid waste; [,] for the local furnishing of gas; [, OR] for the furnishing of water; as or in connection with mass commuting vehicles; for local district heating or cooling; as a parking facility; or as a storage or training facility directly related to a plant or facility described in this paragraph;

(B) a plant or facility used or intended for use in connection with a business enterprise;

(C) commercial activity by a small enterprise;

* Sec. 10. The authority may not issue bonds to assist in the acquisition, financing, or operation of projects under AS 44.88.172 enacted by

sec. 8 of this Act without prior legislative approval.

* Sec. 11. It is the intent of the legislature to minimize the cost of state financial assistance for projects funded under AS 44.88.172, enacted by sec. 6 of this Act. To the extent possible, financial assistance shall be extended in the form of loans.

Eff. 10/4/84

AUTHORITY FROM LOSSES];

(15) to assist private lenders to make loans to finance the costs of projects through loan commitments, short-term financing, or otherwise;

(16) to accept gifts, grants, or loans from a federal agency, from an agency or instrumentality of the state or of a municipality, or from any other source;

(17) to enter into contracts or other transactions with a federal agency, with an agency or instrumentality of the state or of a municipality, or with a private organization or other entity consistent with the exercise of any power under this chapter;

(18) to facilitate the expansion of a secondary market for the resale of federally or commercially insured loans made to finance the costs of projects in Alaska held by federal and state chartered financial institutions or by the Alaska Commercial Fishing and Agriculture Bank;

(19) to charge fees or other forms of remuneration for the use or possession of the projects described in (14) of this section in accordance with the agreements described in (11) and (17) of this section, other agreements pertaining to the projects, covenants, or representations made in bond documents pertaining to the projects, or regulations of the authority pertaining to the projects.

* Sec. 6. AS 44.88.105 is amended by adding a new subsection to read:

44.88.105(h)

(h) Notwithstanding any other provision of this section, the authority may waive or modify the requirements of (a) of this section establishing maximum costs of $10,000,000 for a project and the requirements of (f) of this section as it considers appropriate and prudent in order to finance a project if the authority intends to own the project. However, if the authority intends to lease or otherwise

A.I.D.A. 274-1651

permit the state to use or occupy a majority of the project, the authority may only establish a reserve fund under (g) of this section to secure bonds issued to finance a project.

* Sec. 7. AS 44.88.155 is amended by adding a new subsection to read:

44.88.155(g)

(g) Notwithstanding any other provision of this section, the authority may waive or modify the requirements of this section as it considers appropriate and prudent in order to finance a project if the authority intends to own the project.

* Sec. 8. AS 44.88 is amended by adding new sections to read:

44.88.172

Sec. 44.88.172. ECONOMIC DEVELOPMENT FUND. (a) The economic development fund is established in the authority. The fund consists of money or assets appropriated, loaned, or transferred to the authority, and other money or assets deposited in the fund by the authority. The fund may only be used to finance, acquire, manage, and operate projects that the authority intends to own and operate. The term "operate" includes operation directly by the authority, or by an agent of the authority.

(b) If a project is financed or developed through use of the assets of the economic development fund, the authority may not pledge or use other assets of the authority to assist in the financing, development, or operation of the project. However, whether or not the authority uses the economic development fund, it may issue bonds to finance a project and may secure the bonds with a mortgage, pledge, or assignment of the project or of revenues, money, or agreements attributable to the project or the bonds as provided in sec. 10 of this Act.

44.88.173

Sec. 44.88.173. FINANCE PLAN. (a) Before approving a project financed under AS 44.88.172, the authority shall prepare a finance plan. The finance plan must include an estimate of the total cost of the project, and a description of the sources of money that will be

used to finance the total cost of the project. The finance plan must also include an estimate of the operational costs of the completed project, as well as a description of the source of the money that is to be used to pay the operational costs.

(b) The authority shall give preference to a project that does not require financial assistance from the state. If the authority determines that a project requires state financial assistance, and if the authority further determines that it is desirable to finance the project, the authority shall recommend a method of financing that minimizes cost to the state. A finance plan required under (a) of this section must identify the method of financing that minimizes the cost to the state.

(c) The authority shall submit a finance plan prepared under this section to the state bond committee, the governor, and the legislature before issuing bonds or otherwise incurring debt for the project. If a project requires financial assistance from the state, the state financial assistance must be available before bonds are issued for the project.

44.88.174

Sec. 44.88.174. REGIONAL RESOURCE ADVISORY COUNCIL. (a) Within 30 days after the authority adopts a resolution certifying that a project in the unorganized borough is eligible for financing under AS 44.88.172, the governor shall appoint a Regional Resource Advisory Council in the area of the state where the project is to be located and for which a regional housing authority has been established under AS 18.55.996. The purpose of a council is to assist the authority in reviewing a project that has been proposed for development in its area of the state.

(b) A Regional Resource Advisory Council consists of five members registered to vote in the region. The governor shall appoint the

members to reflect the economic and geographic diversity of the region. Council members serve three-year terms at the pleasure of the governor, except that the initial members may be appointed for less than three years so that the term of at least one of the members expires each year. The governor shall appoint a chairperson who shall call meetings as required and preside over the deliberations of the council. A majority of the council constitutes a quorum for conducting the business of the council.

(c) Members of a Regional Resource Advisory Council do not receive compensation for their services on the council, but are entitled to per diem and travel expenses authorized by law for state boards and commissions under AS 39.20.180.

44.88.175

Sec. 44.88.175. REQUIREMENTS PRIOR TO APPROVAL OF PROJECTS. (a) Before entering into an agreement to finance or to develop a proposed project with a cost in excess of $10,000,000 that is financed under AS 44.88.172, the authority shall obtain the approval of each Regional Resource Advisory Council or municipality in the area in which the proposed project is to be located. Approval under this subsection must be evidenced by a certified copy of a resolution of the council or of the governing body of the municipality.

(b) Before approving a project financed under AS 44.88.172 for which bonds must be issued, the authority shall

(1) obtain approval under (a) of this section;

(2) find, on the basis of all information reasonably available to it, that

(A) the project and its development under this chapter will be economically advantageous to the state and to the general public welfare and will contribute to the economic growth of the state;

(B) the project applicant is financially responsible;

(C) the project is economically and financially feasible and able to produce revenue adequate to repay the bonds or loans with which it is financed;

(D) increased demand on public facilities that might result from the project will be provided for;

(E) the project will provide or retain employment reasonably related to the amount of the financing by the authority, considering the amount of investment per employee for comparable facilities, and other relevant factors;

(F) the scope of the project is sufficient to provide a reasonable expectation of a benefit to the economy of the state;

(G) the project is in compliance with applicable law; and

(H) issuance of the bonds is not expected to adversely affect the ability of the state or any political subdivision of the state to market other bonds.

44.88.176 Sec. 44.88.176. HEARING TO CONSIDER PROPOSED PROJECT. Before considering a resolution regarding the approval or rejection of the development or financing of a proposed project with a cost in excess of $10,000,000, that is financed under AS 44.88.172, a Regional Resource Advisory Council shall conduct a public hearing within the region. If a proposed project is located within a municipality, the governing body of a municipality shall conduct a hearing on the proposed project.

44.88.177 Sec. 44.88.177. OPERATION OF PROJECTS. If a project is financed under AS 44.88.172, the authority shall solicit the review and advice of the Regional Resource Advisory Council or governing body in the

area in which a project is located before the execution of contracts, agreements, resolutions, or other matters that directly concern the development, maintenance, and operation of a project.

* Sec. 9. AS 44.88.220(5) is amended to read:

44.88.220(5) (5) "project" means

(A) a plant or facility used or intended for use

(i) in connection with making, processing, preparing, or producing in any manner, goods, products or substances of any kind or nature or in connection with developing or utilizing a natural resource, or extracting, smelting, transporting, con erting, assembling or producing in any manner, minerals, raw materials, chemicals, compounds, alloys, fibers, commodities and materials, products or substances of any kind or nature;

(ii) [, ANY PLANT OR FACILITY USED OR INTENDED FOR USE] as an industrial park; [OR] in connection with [AIR AND WATER] transportation; [, OR ANY PLANT OR FACILITY] for the prevention, limitation or control of [AIR OR WATER] pollution; [,] for the disposal of sewage or solid waste; [,] for the local furnishing of gas; [, OR] for the furnishing of water; as or in connection with mass commuting vehicles; for local district heating or cooling; as a parking facility; or as a storage or training facility directly related to a plant or facility described in this paragraph;

(B) a plant or facility used or intended for use in connection with a business enterprise;

(C) commercial activity by a small enterprise;

* Sec. 10. The authority may not issue bonds to assist in the acquisition, financing, or operation of projects under AS 44.88.172 enacted by

Chapter 162

sec. 8 of this Act without prior legislative approval.

* Sec. 11. It is the intent of the legislature to minimize the cost of state financial assistance for projects funded under AS 44.88.172, enacted by sec. 6 of this Act. To the extent possible, financial assistance shall be extended in the form of loans.

MEMORANDUM

TO: Rep. John Sund
FROM: J. Hartle, AA JH

RE: Red Dog Mine

Here are some questions, issues, and comments relating to the Red Dog mine.

According to its annual report, Cominco had an operating loss of $39.3 million in 1983 and $49.3 million in 1982. What was the loss for 1984 and what is it anticipated to be this year?

The Dept. of Commerce & Economic Development report on Red Dog states that government spending (especially the U.S. Federal Government) is a major fraction of the world zinc market. The outlook for increased (or even level) spending by the government is not good for the next few years. What will this mean in terms of zinc prices?

World market price? World market price? World market price? World market price? World market price? World market price? World market price? World market price? World market price?

What is the status of the plan of finance required by AIDA statutes before any of this money can be spent? When will it be done? What will it say?

What happened to last year's appropriation of $3.4 million?

Is the price of labor too high in Northwest Alaska to profit from mining? (especially considering the last question above)

What happens to Cominco's guarantees (tarriff, loan payback, etc) if the state does not meet the proposed payment schedule of $18 million this year, $50 M next year, $50 M the next year, and $30+ M the year after that?

What assets are Cominco willing to put up to guarantee payback (note that if the mine is not developed, then, of course, the minerals aren't worth much as a guarantee, either!)

With the North American mining industry losing so much money how will the bond market look at a bond issue guaranteed by tarriffs on a mining road?

What is the level of Cominco's current debt? Their percentage of debt to capitalization? (According to the annual report it is very high - do they need a large new debt? Can they afford to pay interest?)

Will the strength of the U.S. dollar make it too expensive for Cominco to invest in an American mine?

Demand/prices Demand/prices Demand/prices Demand/prices
NEED TO SEE LOTS OF CHARTS AND GRAPHS
AND THEY BETTER LOOK GOOD

Comincio has a mine in South Africa. Would they be willing to get rid of it? How would it look for the State of Alaska to be working with a company that has investments in a country with one of the most repressive governments in the world?

Cominco has a zinc discovery in Australia with very high-grade ore - 20% zinc and silver 6 oz/ton. Will this compete with Red Dog? Will it come on line sooner than Red Dog? Cominco also has found new zinc in the Yukon Territory.

After we purchase the port and road with the General Fund - then the mine? (work our way uphill so to speak?)

What is the status of access through the park for the road - the proposed land swap with Nana needed for the whole project to go?

Will this $18 million be like the Susitna continuing appropriation that supposedly could not be spent until some decision was reached on Susitna that now the APA is able to spend?

Is this another Alpetco?

Background Materials on the Dedication Clause

Prepared by

Philip S. Barnett, Law Associate, Sierra Club
Legal Defense Fund, Inc.

April 16, 1985

Article IX, § 7, of the Alaska Constitution, the dedicated funds clause, provides as follows:

> The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

In State v. Alex, 646 P.2d 203 (Alaska 1982), the Alaska Supreme Court held that the application of the clause should not be limited to taxes and licenses. The Court observed that in a draft at the Constitutional Convention, the prohibition against dedication was applied to "all revenues." After a review of the history of the Convention, the Court held that the change from the draft to the final version was not intended to have significant consequences. Rather, "the purpose of the proposed amendment was to allow for the setting up of certain special funds." Id. at 210. All other dedications were intended to be prohibited.

The "certain special funds" mentioned in Alex are easily identified, for they were expressly referred to during the Constitutional Convention. Specifically, they are pension contributions, proceeds from bond issues, sinking fund receipts, revolving fund receipts, contributions from local government units for state-local cooperative programs, and tax receipts which the state might collect on behalf of local government units. See 1982 Alaska Op. Atty. Gen. No. 13 at 10-11.

The loans that will be used to capitalize the road and port do not fit within one of the exempt "certain special funds." Therefore, they cannot be dedicated.

APPENDIX B

GENERAL GUIDELINES OF STATE/COMINCO RELATIONSHIP

SHOULD STATE INVEST IN THE PROJECT

(1) The State of Alaska thru AIDA will own and operate the port and road.

(2) Cominco will enter into an agreement with AIDA for payment of a user fee for operations and maintenance expense, as well as a toll fee for use of the facility.

(3) Additional users will be accommodated upon payment of appropriate fees.

(4) Satisfactory guarantees of total repayment of state expenditures by Cominco in the event the mine does not commence operation and accordingly completion guarantees by AIDA will be required.

(5) NANA will provide the necessary leases and rights-of-way for the land required.

3/26/85

MEMORANDUM CONFIDENTIAL

TO: Rep. John Sund

FROM: John Hartle, AA

RE: Questions for agencies on Red Dog Mine

What we are looking for in this hearing is for the Administration to come forward and say: "this is the plan" but as of this morning, there seems to be no plan or perhaps it is secret....

1. AIDA: What is the status the finance plan? New contractor? Delay? When will we have a draft? When will we have the final? Are we going to be expected to commit state money to this project without a plan of finance? (The finance plan is mandated by statute) What is SRI's credibility now? Is it hopelessly compromised? Will the adiministrative appeal of the RFP award delay the whole plan?

2. AIDA: [see AIDA financing proposals] Which of the four plans looks most feasible? Which requires the least General Fund commitment from the state? Which provides for the best return on the state's investment (not including all the claimed tax benefits)?

3. Revenue: What will the true tax benefits be of this project? Will Cominco actually pay any taxes, considering that the Mining License Tax has a 3½-year moratorium on payments for new projects and the newly-enacted Investment Tax Credit will shelter Cominco from the Corporate Income Tax to a large extent and under the 7(i) provisions the royalty share that Nana receives will be distributed 13 ways?

4. Commerce: The update of your project analysis still shows a very optomistic projection for the price of zinc over the long term. Is this the case even though the price looks flat? What happens to the projections if the timing on the project slips by a year? Two years? (Cominco says that the timing <u>has already slipped two years</u> from where they want to be).

5. AIDA: Why do you think that your first experience in the construction business will be any better than that of the APA? Why shouldn't the construction schedule slip (like the dams) and why shouldn't the project have cost overruns (like the dams)?

6. AIDA: The Finance Committee Chairmen have announced that there will be a major reduction in loan program funding. Can you take a cut like the other loan programs?

7. Commerce: Are you willing to see other Commerce loan programs cut to include this $18 million?

8. AIDA/Commerce: Now (Monday at Senate Resources) AIDA is proposing that $100 million be appropriated in existing loans (with interest) to AIDA for the project. Is the Governor going to submit a bill to do this? If so, when? If not, why not? Are the specific loans identified? What is the difference between this and general fund? Are the loan proceeds to be used to repay the state? Does this make sense? (we already own those loans!!)

10. C&RA: You predict an <u>increase</u> in the need for state programs in the Nana region based on the influx of workers; Cominco and DCED has made a big deal of the reduction of transfer payments to the region. Who is right and how much money are we talking about?

11. AIDA: Why do so many of your scenarios show no provision for return of the state's investment? We want you to drive a hard bargain with Cominco; (at least as hard a bargain as they are offerering!!) Why doesn't it look like you are doing so?

12. AIDA: all assumptions about bonding assume tax exampt financing will be available for this project - will it?

13. DCED: Status of land trade for right of way - Congressional action expected soon?

14. DCRA: Status of moving project out of North Slope Borough? Is this still a critical decision point as indicated by Cominco President Bill Wilson?

15. AIDA: Present value of subsidy to Cominco under each of the four financing scenarios?

14. AIDA: (Again) Why must we appropriate funds this year? (Despite the lack of the statutorily-mandated plan of finance) Can we put a late effective date on the appropriation? Tie it to conditions?

15. AIDA: Can private lenders provide the funds needed by Cominco for building the road? (Bill Wilson says yes) If so, at what rate? If not, why not? If not, why should we? Monday in Senate Resources Bert Wagnon said that Cominco could not afford to pay back $150 million with interest. Why not?

April 25, 1985

Alaska Senate
Alaska House of Representatives
Pouch V
Juneau, AK 99811

Dear Legislator:

The Alaska Public Interest Research Group is very supportive of development of the Red Dog lead and zinc mine in northwest Alaska. The project will bring needed employment and earnings to the area, and the benefits of the multiplier effect will be felt in the NANA region and throughout the state.

We have several very serious reservations concerning the $175 million appropriation ($33 million in direct appropriations and $142 million in loan appropriations) and additional $175 million bond authorization planned this year for the Red Dog Road and Port Project:

*If the project is pursued as most-recently planned, the State will divert $435 million from the General Fund to the Road and Port Facility over the next 30 years in the form of a direct state subsidy. The Alaska Industrial Development Authority (AIDA) intends to issue $175 million in bonds early next year. Over 30 years, our liabilities to bondholders will mount to $662 million. Cominco Alaska has agreed in principal to contribute a total of $260 million over 30 years in the form of toll fees. The balance, $402 million, will be picked up by AIDA.

To this figure must be added the $33 million in direct appropriations ($15 million now available for reappropriation within AIDA which will be redirected to the Red Dog project, and $18 million in principal and interest which will accrue to AIDA's Economic Development Fund rather than to the Dept. of Commerce as a result of the transfer of the $142 million loan portfolio) for a total subsidy of $435 million over 30 years.

We anticipate that a major portion of the state subsidy will come from interest and principal payments on the $142 million loan

portfolio. The Dept. of Revenue estimates that these payments will total only $207.5 million over 25 years. However, the difference between the $435 million in outstanding obligations and the $207 million in diverted General Funds ($228 million) may have to come from future General Fund appropriations to AIDA.

Nothing in HB 105 or SB 280 (the bond authorization bills with accompanying commitments) requires AIDA to cover the difference between its bond obligations without resorting to future General Fund appropriations through increased assessments to road and port users. Without this insurance, the state is not protected from a major revenue drain in the future.

*According to the statute authorizing AIDA's Economic Development Fund, AIDA must "submit a finance plan prepared under this section (AS 44.88.172) to the state bond committee, the governor, and the legislature before issuing bonds or otherwise incurring debt for the project." The finance plan "must identify the method of financing that minimizes the cost to the state." Clearly, the intent of this section was to ensure that the legislature and administration had sufficient background information to make an informed, rational funding decision.

The Finance Plan for the Red Dog Road and Port Project will not be available until August 15th, at the earliest, according to AIDA. In the meantime, you are being asked to make a $862 million decision based on "financing options" hastily assembled and constantly changing. Those options, one of which is embodied in the appropriation and authorization bills before you, may be dramatically different from the Finance Plan "that minimizes the cost to the state" finally developed by SRI in August. Or the other hand, the Finance Plan may be a rubber stamp of that developed in late March, and less-expensive options may not be fully examined.

*Finally, although the end of the session is only 3 short weeks away, many of the details of the Red Dog package are still murky: the Administration says it no longer needs a direct appropriation of $18 million (still in the budget) but rather a reappropriation of $12 million (not yet in the budget). HB 105 and SB 280 both authorize a $175 million bond issue, yet AIDA says it needs only $135 million. The $142 million in loans is scheduled to be transferred from DCED to AIDA, yet Commerce officials say only $136 is available. The actual cost of construction on the project has increased 65% since February, 1984 (from $135 million to $208 million). Even those following the project must carefully do not know exactly what is being appropriated or to what extent the State is committing itself over the long term.

We urge you to wait until these issues are resolved before voting for funding for the project. Under the current scenario, each of the 347 jobs anticipated for Alaskans at the Red Dog mine will entail a $1.2 million state subsidy. Is Red Dog a good deal in that light?

Sincerely,

Maureen Kennedy

Post Office Box 1093/Anchorage, Alaska 99510/(907) 278-3661

The Red Dog Road and Port Project

THE PROPOSAL: Cominco/NANA have formed a joint venture to develop the Red Dog zinc/lead deposit just north of Kotzebue near the mouth of the Noatak River. The deposit is 55 miles from tidewater. With Administration support, Cominco /NANA is pushing the State to build a port facility and road from the deposit to tidewater for transportation to smelters in British Columbia and Japan.

Though majoir components of the plan have changed several times in the last 2 months, the most recent plan is for the State to transfer $142 million of the State's loan portfolio to the Alaska Industrial Development Authority's (AIDA) Economic Development Fund. The loan principal and interest would form collateral for a $175 bond issue for construction of the road and port. Some portion of construction costs would be paid by facilities users over the life of the project.

Until today, an $18 million appropriation to AIDA for the project was in the governor's budget. In February, 1984, the total cost of the project was anticipated at $135 million. That figure increased to $150 million in February, 1985, to $165 million in March, 1985 and $193 million in late March, 1985.

Varying moratoria on repayments, low-interest or no-interest loan terms, term repayment schedules and outright grants have been discussed by state policymakers and Cominco. The value of direct subsidy on the part of the State has varied from $40.1 million in February, 1984 to $65 million in February, 1985 to a high of $90 million in March, 1985.

NANA and Cominco have worked out a detailed agreement covering shared profits, local hire goals, efforts to minimize the adverse impacts of the project on the NANA region, etc.

Once the infrastructure is in place, the State and Cominco/NANA anticipate that other deposits in the area will be exploited as development

costs go down. GCO, Inc. owns rights to the Lik deposit 10 miles from Red Dog, and Cominco has control of the nearby Su deposit.

COST/BENEFIT OF PROJECT: The State projects a 5.3/1 (down from 6.2/1) cost-benefit ratio for the port and road project. (Assumes .60/lb. price for zinc, 15% return on investment for Cominco/NANA, $40.1 million subsidy, $169 million in direct returns to the State in taxes or transfer payment savings.)

"The ratio is high because it appears the project would not be viable without State support. Under the foregoing assumptions, the minimum level of investment the State can make in the project and have any expectation of immediate development is estimated to be $40.1 million. Higher involvement by the State through larger amounts of subsidy will increase expected rates of return to Cominco . . . . The State could subsidize the project up to $245.0 million and still have a benefit/cost ratio greater than 1 . . . . If the zinc price is lowered from .60 to .55 per pound (the low side of our estimated future price), the rate of return to Cominco would also fall. At the .55 price, to get the return to Cominco up to 15% the State might have to put up a subsidy of $158.0 million in the project. Because of the lower price, the taxes are also lower; this, coupled with the higher level of subsidy, reduces the benefit/cost ratio to 1.25 in comparison to the 6.2 figure generated by a .60 price." (Red Dog Project Analysis, February, 1984.)

At .63/lb., the project is expected to be viable without state investment. The current price of zinc is .45/lb.; of lead, .19/lb.

OTHER ISSUES: In addition to state sponsorship of the project, a few other issues must be resolved . The road route preferred by Cominco/NANA, the southern route, is less environmentally damaging. However, it runs through the Cape Krusenstern National Monument. The joint venture has applied for a land exchange and right of way from the Dept. of Interior. Congress is considering a bill approving the land exchange.

Just as difficult is the conflict between NANA and the North Slope Borough over jurisdiction over the Red Dog deposit. After ANCSA, the Arctic Slope Native Assoc. formed a borough which included a strip of land (the Red Dog deposit) which now is part of the NANA regional corporation. The borough and regional corporation boundaries should be roughly contiguous, but the processes were completed out of synch with each other and thus the important discrepancy occurred.

Without the tax base represented by the Red Dog mine, a proposed NANA area borough will not have enough revenues to function. Since the disputed area is not populated (and a simple vote cannot be taken), a complicated detachment process is underway. Various technicalities preempt the Legislature from signing off on any agreement until the '86 legislative session. NANA has indicated that if the boundary dispute is not settled, and tax policy is not clear, the mine will not be developed.

COST/BENEFIT OF THE MINE ITSELF: The Red Dog Project Analysis anticipates the following costs and benefits of the mine:

Employment:

Direct:	143 jobs during construction (40% NANA residents) 375 jobs during production (50-75% NANA residents)
Indirect:	92 during construction (23 in NANA villages) 226 during production (106 in villages)

Income:

Direct:	$8.8 million/yr during construction ($3.5 million to NANA residents) $12 million/yr during production ($7.5 million to NANA residents)
Indirect:	$2.3 million/yr during construction ($.575 million/yr in villages) $5.7 million/yr during production ($2.7 million/yr in villages)

Jobs for previously unemployed people:

During Construction: 38-- 12 in villages, 7 outside AK
During Production: 93--51 in villages, 10 outside AK

Tax revenues:

(Corporate income tax and mining license tax, based on probable price of zinc at .60/lb)
Cominco:
$2 million per year through 1992, $8 million in 1993, average $10 million per year through 2008.
NANA:
$2.36 million per year through 1991, $6.68 million after 1991.

Last year's investment tax credit grants the joint venture nearly $15 million in tax breaks through 1994.

ZINC OUTLOOK: Today's zinc price is .45 lb., lead price is .20/lb. The State's analysis of the Red Dog project assumes 20 year real prices for zinc and lead to average .60/lb and .35/lb respectively. Today's low prices are supposedly reflective of low recessionary demand and high supply of metals. Developing technology should bring about some product substitution for lead, little for zinc.

Business Week's 12/17/84 issue featured a cover story, "The Death of Mining." In it, the authors lump zinc and lead in with copper, nickel and moly markets and envision bad times ahead for the long term future. Cominco has reflected worldwide difficulties: it lost $31 million in 1982 and $39 million 1983. Analusts anticipate that lead and zinc demand will increase by 1-2% in the next ten years. The State is assuming a 2.5% increase in demand annually. The article does emphasize that third world mines are coming on line rapidly and are far superior to American mines as far as recovery technology goes. The Red Dog mne is analogous to a third world mine in this sense, except that transportation costs as a proportion of production costs are higher (40%) than average (10%).

Brad Tuck of the Institute for Social and Economic Research, wrote a chapter on mining in Alaska Resource Development last year. He anticipates that world metal prices will not increase significantly (prices would have to increase by 35% to reach the probable price of .60/lb in the state analysis). "The State will at best derive only modest revenues from non-fuel mineral and coal development. Annual revenues by the mid 1990s from Red Dog, Eagle, Greens Creek and Quartz Hill will be less than $10 million."

ALASKA PUBLIC INTEREST RESEARCH GROUP
Post Office Box 1093/Anchorage, Alaska 99510/(907) 278-3661

RED DOG ROAD AND PORT FACTSHEET

The Alaska Industrial Development Authority (AIDA) with the support of the Administration, is pushing for an $18 million appropriation to AIDA's Economic Development Fund, along with a commitment of the interest and principal on $142 million of the State's loan portfolio. This commitment will become collateral for a bond issue of $175 million for actual road and port construction.

Over the past year, the estimated cost of the project has risen from $135 million to $193 million, an increase of 42%. The level of direct state subsidy increase from $40.1 milliion to $65 million between February, 1984 and February, 1985. Current options include direct subsidies of up to $90 million. If no appropriation is made, the State will provide a $15 million subsidy to the project through tax breaks already on the books.

When the legislature gave AIDA authority to develop and own projects such as the proposed road and port, it required that AIDA produce a Finance Plan for the legislature and the governor, laying out financing options. AIDA is specifically required to seriously consider those options requiring the least state involvement.

Although the legislature is being pressed to fund the project now, before the money runs out, the conclusions of the Finance Plan will not be available until next August at the earliest. In the meantime, the legislature is considering a $142 million loan appropriation and $175 million bond authorization based on a series of "finance options" assembled in less than 24 hours.

The Alaska Public Interest Research Group feels that the DeLong Mountain Regional Road and Port Facility is a poorly planned project, based on inadequate financial backup and nonexistent investment criteria. Given the State's other pressing needs and declining revenues, the project should not be funded this year.

If the legislature chooses to invest jn the Red Dog road and port project, it should protect Alaskans' interests by:

*Limiting the extent of the State's direct subsidy to the initial appropriation of $18 million;

*Requiring Cominco/NANA and any other future users to repay the principal and interest of a market value state loan from AIDA;

*Requiring Cominco/NANA and any other future users to cover operation and maintenance costs of the project;

*Requiring AIDA to return to the General Fund any toll payments beyond those necessary to repay the debt service and secure outstanding bonds;

*Putting a time limit on the project: if conditions are not met by March 15, 1986, the bond authorization lapses.

Introduced: 1/23/85
Referred: Transportation and Finance

Terry Elder Draft
AK/PIRG comments

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 105

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the international airports revenue bonds authorization, and to the authorization of bonds or notes for the DeLong Mountain transportation project and the establishment of conditions under which the bonds or notes for the DeLong Mountain transportation project may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15.410 is amended to read:

Sec. 37.15.410. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money which may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $86,525,000 [$62,825,000] is authorized to acquire, equip, construct, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.510. The principal of and interest on these bonds

shall be paid out of and secured by the gross revenues derived by the state from the ownership, lease, use, and operation of the airports, and of all the facilities of them and out of any other revenues or money which the state legislature may provide exclusive of any state tax or license.

* Sec. 2. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project.

* Sec. 3. Prior to the issuance and sale of any bonds or notes authorized in Sec. 2 the board of directors of the Alaska Industrial Development Authority to the extent feasible shall incorporate into the final finance plan substantially the following terms and conditions:

(1) Cominco, Ltd. agrees in writing that

(A) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project, based on the use Cominco, Ltd. makes of the facilities compared to the use made by others;

(B) if Cominco Alaska ceases to develop the Red Dog mine after expenditures on the road or port have commenced, Cominco, Ltd. will repay all expenditures by the Alaska Industrial Development Authority on the DeLong Mountain transportation project;

(C) toll fees by Cominco, Ltd. to the Alaska Industrial Development Authority may be adjusted if the price of zinc rises above a level, agreed upon with the Authority, which yields a return on investment commensurate with the risk;

(2) land in the Cape Krusenstern National Monument is conveyed to NANA Regional Corporation by the United States Department of the Interior;

(3) NANA Regional Corporation agrees in writing to make available to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the DeLong Mountain transportation project, and land needed for future expansion of the road and port;

make available at no cost — long term lease

(4) The Alaska Industrial Development Authority shall maximize the use of tax exempt financing;

(5) The Alaska Industrial Development Authority establishes a toll schedule for use of facilities constructed as part of the DeLong ~~Mountain transportation~~ project that ensures a reasonable return on the state's investment commensurate with project viability and future usage, and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted.

We're further away from the original stat. language re: repay expenditures

Sec. 4. The Alaska Industrial Development Authority reports in writing to the legislative budget and audit committee that the conditions under (1) - (5) of Section 3 of this act have been met.

* Sec. 5. Notwithstanding limitations on the establishment of a capital reserve fund under AS 44.88.105, the authority may covenant and agree with the trustee or holders of the bonds or notes authorized under Sec. 2 of this act that the authority will establish a capital reserve fund for the purpose of securing the bonds or notes, that the chairman of the authority will, by January 2 of each year, certify in writing to the governor and the legislature the amount

AIDA should be able to agree ~~to~~ that the "combined" users will pay fees that will at a minimum cover the P+I, without risking tax exempt status

required to restore the capital reserve fund to the capital reserve fund requirement, and that the legislature may appropriate to the authority the amount certified by the chairman. Nothing in this section creates a debt or liability of the state.

* Sec. 6. This act takes effect immediately in accordance with AS 01.10.070(c).

Missing: AIDA assures that Cominco & future users will cover O&M (as opposed to just requiring Cominco to cover its proportion).

The bond authorization lapses if the bonds aren't issued by mid '86 — if we will miss the "window of opportunity," then the State ought not be involved. Even Cominco agrees it will not be feasible.

ALASKA PUBLIC INTEREST RESEARCH GROUP
Post Office Box 1093/Anchorage, Alaska 99510/(907) 278-3661

Proposed Amendments to SB 280

Section 1. (1) (c) Cominco, Ltd. will repay all expenditures (market rate interest and principal) by the State for the project through toll fees paid beginning the year of project completion for the use of facilities constructed as part of the project; (and other payments;)

Section 1. (2) The United States Congress approves the Cape Krusenstern National Monument land exchange between NANA Regional Corporation and the United States Dept. of Interior or a right of way as authorized by Title II of ANILCA;

Section 1. (3) NANA Regional Corporation agrees in writing to convey to the Alaska Industrial Development Authority, (at no more than fair market value,) at no cost, land needed for the port and road constructed as part of the DeLong Mountain transportation project and land needed for future expansion of the road and port;

Section 1. (5) the Alaska Industrial Development Authority obtains a ruling from the Internal Revenue Service that all bonds or notes issued under this section will qualify for tax exempt status; (and;)

Section 1. (6) the Alaska Industrial Development Authority establishes a toll schedule for use of facilities constructed as part of the DeLong Mountain transportation project that minimizes the cost to the State of (ensures the greatest return on the state's investment in) the project and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted.

Section 1. (7) the Alaska Industrial Development Authority ensures that Cominco and any other future users will pay all operation and maintenance of facilities constructed as part of the project, on a pro rata basis;

Section 1. (8) the Alaska Industrial Development Authority agrees to limit the present value of the direct subsidy to the project to $18 million;

Section 1. (9) the Alaska Industrial Development Authority agrees to turn over any funds not necessary for bond security or construction of the authorized project to the general fund as they become available;

Section (2). If the Alaska Industrial Development Authority does not issue bonds for the project by March 15th, 1986, this bond authorization lapses.

March 6, 1985

Sen. Arliss Sturgulewski
Pouch V
Juneau, AK 99811

Dear Sen. Sturgulewski:

Thanks very much for meeting with me last week to discuss issues. I wanted to get back in touch with you to point out some areas of the Red Dog Project Analysis that should be updated by staff before the Resources Committee examines the Delong Road and Port Project more seriously.

1. The analysis does not include the impact of the Investment Tax Credit which the legislature passed last year. The lost revenues will be very substantial as the new law provides a 100% tax credit on both mining license tax and state corporate tax payments on the first $50 million in investment, an 80% tax break on the next $50 million and so on up to $250 million for up to 10 years. I'm also unclear whether the tax exemption would apply to the $150 million in road and port construction as well as the $400 million in mine development--if the State is acting as bank, wouldn't Cominco/NANA be eligible for the credit on the $150 million too?

2. We are also unclear on how the new mining license tax regs will impact the project. The regs were not in existence at the time of the analysis; now proposed regs are available and can be used to evaluate the revenue potential (or loss).

3. Although savings in regional shipping costs are touted as a major justification for state investment in the project, the projected savings are small and OMB did not have time to check 4 of 6 issues factored into the estimate. Are the other assumptions and the total estimated savings correct?

4. What discount rate is Cominco using in its proposal, and what rate of return will it require before committing to the project? The company provided this information to Canadian provinces when negotiating state assistance with infrastructure there; why does

the State have to make assumptions about these critical factors, basically making major fiscal decisions in a dark room?

5. While project benefits have been outlined extensively in the Analysis, costs have not been delineated because "time constraints have prevented analysis," and "no attempt is made here to place a dollar value on the increase in social service delivery." Costs should be fleshed out to the same degree as have benefits.

6. Shouldn't the royalty payments to NANA ($658 million) be included in the cost-benefit analysis, since according to Cominco, development and therefore royalties, would not come through if the State does not invest in the project?

7. How is the dramatic difference in estimated tax payments cited at $205.69 million on p. IV-2 of the Analysis and $420 million on pp. V-66 and V-68 explained (these final figures are extrapolated from the "probable" figures listed on those pages, multiplied by a conservative 20-year mine life).

8. Does the State or legislature have any recent indications as to the likelihood of a detachment agreement between the NSB and the potential NANA borough?

9. Since AIDA has recently decided to scrap its contract for geotechnical studies with Cominco, will that $3 million be available to the project as the first installment of an $18 million appropriation, reducing this year's appropriation down to $15 million?

As I expressed to you during our meeting, AkPIRG is very supportive of the development of the Red Dog Mine in NW Alaska; we are, however, concerned that the State go into negotiations with accurate information and a full hand. Given that the session is nearly half over, that a proposal is still not on the table, that Cominco has said it cannot agree to develop the mine unless certain commitments are ironed out, and since these difficulties are very likely NOT to be ironed out before May 15th, we have strong reservations about the manner in which the state seems to be rushing headlong into a commitment.

I hope you will ask your staff to include these issues as part of its updated analysis of the project.

Sincerely,

Maureen Kennedy

Re: Red Dog Mine road and port proposal
Date: 2/5/85

As agreed at our last Board meeting, I have done extensive research on the Delong Mt. Port and Road Project. Please read this memo so we can make a decision on our involvement in the issue at the next Board meeting. Things are moving fast, so we must make SOME decision on the 12th.

THE PROPOSAL:

Cominco/NANA have formed a joint venture to develop the Red Dog zinc/lead/molybdenum deposit just north of Kotzebue near the mouth of the Noatak River. The deposit is 55 miles from tidewater. With Administration support, Cominco/NANA is pushing the State to build a port facility and road from the deposit to tidewater for transportation to smelters in BC and Japan.

Though few details have been worked out, the most often-cited plan is for the State to loan the venture $135 million plus inflation and cost overruns to build the project, with repayment based on road and port user fees. Though facilities users would pay for the project, the State would actually own it. Eighteen million dollars is scheduled for appropriation to the Alaska Industrial Development Authority this year, which in turn would lend to C/N, $50 million next year, $50 million in '87/'88 and $18 million plus inflation and overruns in the final year to round out the project. The most-often considered proposal includes forgiving $28 million of this total. C/N have asked for a ten year moratorium on repayments; a 6 year moratorium seems more popular at this time. Interest rates, collateral, repayment schedules, etc. are all up in the air.

NANA and Cominco have worked out a detailed agreement covering shared profits, local hire goals, efforts to minimize the adverse impacts of the project on the NANA region, etc. With the exception of local hire provisions (targets, not commitments; NANA is responsible for training of workers), NANA seems to be getting a good deal.

Once the infrastructure is in place, the State and C/N anticipate that other deposits in the area will be exploited as development costs go down. GCO owns rights to the Lik deposit 10 miles away, and Cominco also has control of the nearby Su deposit.

This whole proposal originated with Cominco: the State has gone through and tried to test the assumptions, costs, and cost/benefits suggested by Cominco. It has been a difficult task however, since Cominco has not been willing to turn over much of the critical metals price forecasts, or information about its corporate decisionmaking (necessary rate of return, etc...

COST/BENEFIT OF PROJECT:

The State projects a 6.2 : 1 cost benefit ratio for the port and road project. (Assumes .60/lb price for zinc, 15% return on investment, $40.1 million necessary state subsidy, $245.85 million in direct returns to the State in taxes or transfer payment savings.)

> "The ratio is high because it appears the project would not be viable without State support. Under the foregoing assumptions, the minimum level of investment the State can make in the project and have any expectation of immediate development is estimated to be $40.1 million. Higher involvement by the State through larger amounts of subsidy will increase expected rates of return to Cominco . . . . The State could subsidize the project up to $245.0 million and still have a benefit/cost ratio greater than 1 . . . . If the zinc price is lowered from .60 to .55 per pound (the low side of our estimated future price), the rate of return to Cominco would also fall. At the .55 price, to get the return to Cominco up to 15% the State might have to put a subsidy of $158.0 million in the project. Because of the lower price, the taxes are also lower; this, coupled with the higher level of subsidy, reduces the benefit cost ratio to 1.25 in comparison to the 6.2 figure generated by a .60 price."

At .63/lb., the project is expected to be viable without state investment.

COMPLICATIONS:

In addition to state sponsorship of the project, a few other things may impede the whole project. The road route preferred by C/N, the southern route, is less environmentally damaging. However, it runs through the Cape Krusenstern National Monument. C/N have applied for a right-of-way permit from the DOI; the Sierra Club is opposing it. A land swap between NANA and the Monument has also been proposed.

Just as difficult is the conflict between NANA and the North Slope Borough over jurisdiction over the Red Dog deposit. After ANCSA, the Arctic Slope Native Association formed a borough which included a strip of land which now is part of the NANA regional corporation. The borough and regional corp. boundaries should be roughly contiguous, but the processes were completed out of synch with each other and thus the important discrepancy occurred. Without the tax base represented by the Red Dog Mine, a proposed NANA area borough would not have enough revenues to function. Since the disputed area is not populated (and a simple vote cannot be taken), a complicated detachment process is underway. Various technicalities preempt the Legislature from signing off on any agreement until the '86 legislative session. Cominco has indicated that if the boundary dispute is not settled, and tax policy not clear, the company is unlikely to move forward with the mine project.

COST/BENEFIT OF THE [illegible]:

I think it is crucial to be clear that our interest [illegible] the road and port project, not the proposal by NANA/Cominco [illegible] a private development project on private land. Nevertheless, the feasibility of the mine impacts the likelihood that the State will actually get repaid for its investment, and influences the need for any state involvement at all.

The Red Dog Project Analysis attributes the following jobs and benefits of the project:

Employment:

Direct: 143 jobs during construction
(40% NANA residents)
375 jobs during production
(50-75% NANA residents)

Indirect: 92 during construction
(23 in NANA villages)
226 during production
(106 in villages)

Income:

Direct: $8.8 million/yr during construction
($3.5 million to NANA residents)
$12 million/yr during production
($7.5 million to NANA residents)

Indirect: $2.3 million/yr during construction
($.575 million/yr in villages)
$5.7 million/yr during production
($2.7 million/yr in villages)

Jobs for Previously Unemployed People:

During Construction: 33, 12 in villages, 7 outside of AK
During Production: 93, 51 in villages, 10 outside AK

Supposed savings in Shipping Costs to Kotzebue Area:

(Very uncertain because of Jones Act restrictions, etc)
$2-3 million annually

Tax Revenues to AK mining tax and [illegible] tax:

Cominco estimate based on
probable price of zinc at .60/lb: $10.21 million/yr
(Note--Project is exempt from mining
license tax for first 3 1/2 yrs. of
production)

NANA taxes, same assumptions: $2.[illegible] million/yr '88-91
$5.75 million/yr '91-

Population Impacts:

During construction:
During Production:
(NB: with the exception of [illegible], which [illegible] capacity right now, the State does not anticipate any additional costs based on population increase.

Road and Port Requirements:

See attached table. IMPORTANT. [illegible] year deferred payment is a present [illegible] of $28-45 million to the State, representing a direct [illegible] of $60-107 million of the project. An 8% loan with a 5 year moratorium has a present value of $57-91 million, representing a $44-78 million cost to the State. BIG DIFFERENCE.

THE BIG PICTURE, OR MAUREEN'S THUMBNAIL SKETCH OF THE FUTURE OF WORLDWIDE ZINC PRICES:

Since 85% of the revenues of Red Dog will be based on zinc concentrate sales, and since loan repayment is based on a successful mine project, this is an important issue.

Today's zinc price is .43/lb., lead price is .23/lb. The State's analysis of the Red Dog Project assumes 20 year real prices for zinc and lead to average .60/lb and .35/lb respectively. Today's low prices are supposedly reflective of low recessionary demand and high supply of metals. Developing technology should bring about some product substitution for lead, little for zinc.

Business Week's 12/17/85 issue featured a cover story, "The Death of Mining." In it, the authors lump zinc in with the copper, nickel, lead and moly markets and envision bad times ahead for the long term future. Cominco has reflected worldwide difficulties--it lost $91 million in 1982 and $39 million in 1985. (through Sept. 84, things were on the rebound: Akt income was $29 million). Analysts anticipate that lead and zinc demand will increase by 1-2% in the next ten years. The State is assuming a 2.5% increase in demand annually. The article does emphasize that third world mines are coming on line rapidly and are far superior to American mines as far as recovery technology goes. The Red Dog mine is analogous to a third world mine in this sense, except that transportation costs as a proportion of production costs are higher (40%) than average (10%).

Brad Tuck of the Institute for Social and Economic Research wrote a chapter on mining in Alaska Resource Development last year. He anticipates that world metals prices will not increase significantly (price would have to increase by 50% to reach probable price of .60/lb in State analysis). "The State will at

best derive only modest revenues from [illegible] and coal development. Annual revenues [illegible] from Red Dog, Eagle, Green Creek and Ruby Creek will be "less than $1 million."

Cominco anticipates an increase in demand of 3% per year for zinc and 1% for lead.

World supplies for zinc and lead are expected to decline over the next 10 years. Smelters, including those owned by Cominco, will be looking for new sources of concentrate. The most "new" competition for Red Dog will be from existing sources.

POLITICS:

1. The deal has to go through House and Senate Resources, Finance and the House Special Committee on Loans. These are chaired by Herrmann/Schultz, Sturgulewski, Adams, Faiks/Sackett and Sund. Because the project is in his district, Adams is very attached to it. Adams, Ferguson, Sackett, and Willie Hensley are committed to pushing the project through.

2. The Governor is behind the project. Both John Shaffer and John Shively have connections with NANA.

3. The House minority and the Senate majority have expressed opposition or concerns about the propriety of state involvement.

4. The State analysis of the project includes a list of other potential mine projects and necessary infrastructure--the state could conceivably receive $1.9 billion in requests for state aid on other roads, railroad spurs and ports just for the mining industry. Equity question.

5. Cominco agrees that Red Dog will be developed at some point, it's just a question of when. With State involvement, it'll happen that much sooner.

6. Impact on ACAP.

7. No one else is willing to enter the discussion with our viewpoint. Ann Cony couldn't get anyone to go on record with concerns, much less opposition to the investment when the News did its analysis piece on Red Dog.

8. Sheffield can be fairly criticized for ignoring the real unemployment problem in Bush Alaska (less than 5% of the Red Dog area population is "fully employed"). The road and port project will produce construction jobs and facilitate production jobs.

9. John Hartle, John Sund's staffperson on the loans committee, says the approval is wired.

10. The State hasn't promulgated mining license tax regs yet.

RECOMMENDATION:

I suggest that we go ahead and [illegible] ourselves in the [illegible]. Adams et al. will have rights to be fleshed off at no cost already and this is exactly the [illegible] we should be known for influencing. I think we could be successful in changing certain aspects of the deal such as interest rates, moratorium, royalty rate, collateral on the loan, tax deferments, etc. Could argue that it will be mining the richest portion of the deposit first, yet that also ties that payments to the state might be front-loaded or delayed, and then any mining taxes might be for longer.

At the Pine Point mine in Canada, Cominco engineered an agreement for the State to build a railroad with payments based on tons shipped, with an overall cap on total annual payments. Should payments be based on value or volume? In the first couple of years, the mine was unexpectedly successful, yet Cominco's annual payments were limited by the cap.

We will enhance our credibility with the public. With every additional point of interest charged, the people save roughly $5 million 1983 dollars. Getting rid of the 6 year deferment saves roughly $40 million. Alot's at stake.

With the paranoia about declining revenues, legislators might see the light and realize that subsidies on the project must be scaled back and we would win out.

TABLE D-4

COST TO THE STATE

OF NO-INTEREST LOAN OF $135 MILLION

WITH VARYING PAYBACK PERIODS*

(Millions--1983 Dollars)

Payback Deferment Options	Present Value to State of Payback @ OCC =			Direct State Costs (-NPV) OCC =		
	8%	10%	12%	8%	10%	12%
10 Years	$30	$22	$16	$105	$113	$119
5 Years	45	35	28	90	100	107
No Deferment	67	58	51	68	77	84

OCC = Opportunity cost of capital for the State.
-NPV = Negative net present value.

* Loan is to be paid back in equal installments over a 20-year period, with different deferment periods as shown.

NB: Estimates based on overnight construction costs, (i.e., initial loan is made at a single point in time, after which the deferment period or repayment period begins).

April 26, 1985

Terry Elder
Dept. of Commerce and Economic Development
Pouch D
Juneau, AK 99811

Dear Terry:

I understand you have some questions concerning the assumptions we used in quantifying the subsidy involved in the Red Dog Road and Port Project. Before explaining our figures, I would like to make a few points.

Jobs: The jobs generated by state investment in the Red Dog project are 5 year jobs. Cominco officials have said time and time again that the Red Dog project will be developed with or without state help--the only question is timing. In atesting to the value of the Red Dog deposit, Cominco lobbyists have told us that the mine would be developed 5-8 years later than the proposed schedule without this year's $175 million appropriation and $175 million bond authorization. By funding Red Dog this year, the legislature is simply bringing those jobs on line 5 years sooner, at a nominal cost of $1.2 million over 5 years.

Taxes and Avoided Transfer Payments: You would be correct in saying that our subsidy estimate did not include increased future state revenues in the form of taxes and avoided transfer payments only if these payments would not accrue without state investment in the project. As we pointed out above, Red Dog will be developed and the benefits will accrue--starting in 1989 with state investment or 5-8 years later without. Since the State will receive the $169 million in taxes and transfer payment savings in any event, these cannot be counted as a benefit of the project.

"Finance Plan": You are correct in saying that an official Finance Plan is not yet in place. This has been a source of great concern to us. In the meantime, the Dept. of Commerce and AIDA have proffered a finance "option" and have based legislative requests on it. All our estimates are based on the "option" discussed in the numerous letters DCED, DoR and AIDA have written

in response to Committee questions. Our assumptions are, in fact your assumptions, and I have referenced them in the footnotes below.

As you know, I have asked many times over the past months for an Administration estimate of the subsidy to Red Dog similar to the one given in the Red Dog Project Analysis. No one has answered. If you do not agree with our estimate, I would be very interested in hearing your figure.

THE SUBSIDY LEDGER

Nominal Costs:	Benefits:
$175 million bond issue-- annuitized sinking fund payment of $22.09 mil. per year for 30 years will cover state debt. $22.09 million x 30 = $662 million(1)	$10 million in payments over 30 years in toll fees from Cominco, capped at-- $260 million(4)
Available in AIDA for re-appropriation but now to be directed to Red Dog-- $ 15 million(2)	
FY 86 P+I on loan portfolio transferred from DCED to AIDA $ 18 million(3)	
COST: $625 million	BENEFITS: $260 million

Difference (subsidy) = $435 million

(1) Assumes $175 million bond issue (SB 280), tax exempt rate of 10.5% (AIDA letter to Sturgulewski, 3/19/85, page 9 <unnumbered> of Appendix A, Case IV), taxable rate of 13.5% (3% margin between tax exempt and taxable), port costs (ibid., p. 9) are tax exempt, $12 million in bonds called 1990 (ibid., p. 9), 30 year term (ibid., page 2).

(2) $3 million in FY 85 app. to AIDA for DeLong Mountain Regional Port and Road available for reappropriation (AIDA letter to Sturgulewski, 4/9/85, p. 2), $12 million in multifamily housing funds to be reappropriated to the project (committee testimony, 4/16/85).

(3) Dept. of Revenue letter to Sturgulewski, 4/15/85, p. 2).

(4) AIDA letter to Sturgulewski, 3/19/85, p. 9. Assumes 4 year moratorium on payments (conversations with Cominco, Red Dog Project Analysis options, p. V-72, explicit cap at $260 million rather than $300 million over 30 years).

Real Costs:	Real Benefits:
Present Value of construction (value of bond issue)--	PV of $260 millinn over 30 years beginning year 5--
$175 million	$67.82 million

PV of net subsidy--$107.2 million* or 61% of total project cost.

*Same assumptions as above

I would be happy to answer any questions you may have on these figures.

Sincerely,

Maureen Kennedy

Maureen Kennedy
Director

Post Office Box 1093/ Anchorage, Alaska 99510/ (907) 278-3661

Proposed Amendments to SB 280

Section 1. (1) (c) Cominco, Ltd. will repay all expenditures (market rate interest and principal) by the State for the project through toll fees paid beginning the year of project completion for the use of facilities constructed as part of the project; (and other payments;)

Section 1. (2) The United States Congress approves the Cape Krusenstern National Monument land exchange between NANA Regional Corporation and the United States Dept. of Interior or a right of way as authorized by Title II of ANILCA;

Section 1. (3) NANA Regional Corporation agrees in writing to convey to the Alaska Industrial Development Authority, (at no more than fair market value,) at no cost, land needed for the port and road constructed as part of the DeLong Mountain transportation project and land needed for future expansion of the road and port;

Section 1. (5) the Alaska Industrial Development Authority obtains a ruling from the Internal Revenue Service that all bonds or notes issued under this section will qualify for tax exempt status; (and;)

Section 1. (6) the Alaska Industrial Development Authority establishes a toll schedule for use of facilities constructed as part of the DeLong Mountain transportation project that minimizes the cost to the State of (ensures the greatest return on the state's investment in) the project and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted.

Section 1. (7) the Alaska Industrial Development Authority ensures that Cominco and any other future users will pay all operation and maintenance of facilities constructed as part of the project, on a pro rata basis;

Section 1. (8) the Alaska Industrial Development Authority agrees to limit the present value of the direct subsidy to the project to $18 million;

Section 1. (9) the Alaska Industrial Development Authority agrees to turn over any funds not necessary for bond security or construction of the authorized project to the general fund as they become available;

Section (2). If the Alaska Industrial Development Authority does not issue bonds for the project by March 15th, 1986, this bond authorization lapses.

Cominco's Red Dog plan masks subsidy

Steve Cowper

Views expressed here do not necessarily represent those of the Daily News-Miner

A few weeks ago, three representatives from Cominco, a Canadian-based mining company, argued their case for the Red Dog zinc mine before the Fairbanks Chamber of Commerce.

It was quite a presentation. There was a film and a slide show to boot. The inescapable conclusion seemed to be that the mine was of great benefit to the state. People would get jobs during the construction phase and, for a lucky 400, there would be permanent employment at the mine itself.

NANA, the Kotzebue-based regional corporation, owns the prospective minesite, for which it expects to receive hefty royalties. Because of some peculiar provisions of the Alaska Native Claims Settlement Act, all the other regional corporations will share in the profits. It sounded like a good deal for everybody.

Cominco's arguments were persuasive, except for just one item. The whole project was said to depend on the expenditure of $150 million by the state to build a road for hauling the ore and a port facility for shipping it out. Only then could the company put its financing package together for the rest of the operation.

With all the free-market advocates in the room, you'd have thought somebody might at least twitch or moan softly over that part of the deal. Nobody did, though. Apparently that kind of state spending is universally acceptable in Alaska these days.

In fairness, the Cominco people thought that the $150 million was not really a subsidy. Besides being the kind of "infrastructure" that the state is supposed to provide, the road and port would generate a user fee of $10 million every year for 30 years, thereby doubling the state's money.

The trouble with the "infrastructure" argument is that the facilities aren't being built for public use, but for private profit. And if you do your math, you'll find that $150 million paid back over 30 years at $10 million a year amounts to a loan at a very low interest rate.

If a low-interest loan isn't a subsidy, why can't you get one to buy a computer, or a front-end loader, or an addition to your house? Of course the state's contribution to Red Dog is a subsidy; furthermore, it raises important questions of policy in Alaska.

If the state's arrangements with Cominco and NANA are approved, you can bet it won't be the last such request. In fact, it will be a signal for all sorts of proposals to "create jobs" and to "diversify the economy."

Who is going to get these subsidies? The ones who promise campaign contributions? Those in the districts who deliver the votes to the right people? Furthermore, who is to control where the subsidies go? The legislature? The governor? A council of wizards? A dart board?

Down in Ketchikan, U. S. Borax is waiting for better market conditions before developing their molybdenum mine some miles away. To Borax's credit, they've never asked for a state subsidy, but after Red Dog, why shouldn't they? Jobs are hard to come by in Ketchikan, and more people live and vote there than in Northwest Alaska.

In case you hadn't noticed, there aren't any rules any more about public spending. Nothing is out of bounds. The money's free (meaning it comes from the oil companies), so there isn't any reason to watch the till. Plenty more where that came from, right?

Wrong. The downward drift in worldwide oil prices has created a massive treasure hunt in Juneau. They're looking for money everywhere, but they won't find much. The next thing you know, they'll be looking at our wallets.

So we'd better make some kind of informed judgment as to whether we really want to subsidize industries in Alaska, and if so, which ones. If we decide that government participation in private business ventures is a good thing, then we need to decide what standards will apply to such activities so that things won't get out of hand.

Government participation in the marketplace is not new. All sorts of countries have tried it: Great Britain, Brazil, Nigeria, Poland. None of them could figure out how to make it work, though, for in the end the government does not respond to the market. It responds instead to political pressure.

According to the available evidence, the wisest course for Alaska to take is to forget subsidies to industry. We can help to encourage entrepreneurship in a lot of intelligent ways - providing useful information, a sensible regulatory structure, low taxes - but all the indications are that the laws of the marketplace ought to determine whether natural resource extraction can be profitable.

None of this is an indication of hostility towards the Red Dog project. I hope the world suddenly discovers thousands of new uses for zinc. I hope Cominco and NANA are able to put it together and that everybody involved gets rich. I wish them all the success they can achieve, as long as they don't use my tax money.

In the meantime, here's some more math. If we invested the $150 million at 11 percent, the $16.5 million in annual interest would be enough to give each one of those 400 Red Dog employees $41,250 a year forever, and none of them would even have to pick up a shovel.

Of course math is the same thing as logic, and we all know how much logic has to do with it.

Steve Cowper, a former state legislator representing Fairbanks, is a lawyer now engaged in professional arbitration.

...or high school student.

Junkie didn't do well. He slowed down, got fat and dropped dead. Healthnut stayed healthy and learned to speed through the maze. And Lori Demond, a student at Wasilla Junior High School, concluded in her project that diet had affected her pets' performance.

Junkie did not die in vain. He was a participant in one of the 213 experiments that packed West High the International Science and Engineering Fair on May 11.

Some of the projects were simple; others were startling in their sophistication. And some were just plain fun.

There were the banana batteries, created by amateur scientist Bill Norton. The student plugged zinc and copper plugs into fruit and measured the trickles of power produced by chemical changes inside. The banana wasn't too great, Norton wrote. The the judges plenty of consumer tips. Youths determined that a "new and improved" brand of gum tasted no better than its unimproved ancestor. The students also tested shampoos, toothpastes and the teeth-staining power of various soft drinks.

"Some of these projects are really something," said fair director Robert Pawlowski.

While science fairs have been held here for decades, the sophistication of the projects have been increasing

Curiosity and tenacity provided the winning combinati... for the 11 first-place winners.

"It's really going to be up to Don. There will be so much aurora, and he will make the decision about which to videotape and when. He spent a year at UAF as a visiting professor, so he has a good idea of what I'd be considering."

Clocksin urges close look at Cominco ties to S. Africa

By ROBB FULCHER
United Press International

JUNEAU — An international mining firm's plan to develop a huge zinc deposit in northwest Alaska should be carefully scrutinized, because the firm has a joint venture diamond mine in South Africa, the House majority leader said Friday.

"I have always been cautious about the Red Dog Mine project because of the amount of state money involved, and the fact that they have interests in South Africa does not make them look any better," Rep. Don Clocksin, D-Anchorage, said.

Clocksin has co-sponsored a resolution calling for the state of Alaska to sever its business ties with South Africa until racial oppression in that country is ended.

South Africa's apartheid system of racial separation, which sharply curtails the liberties of the country's 22 million blacks and does not recognize them as citizens, is drawing increasing criticism in the United States.

Cominco Ltd., a Vancouver, British Columbia-based mining firm, wants to develop a vast zinc deposit northwest of Kotzebue, in cooperation with the NANA Native regional corp., which owns the land over the mineral deposit.

The Sheffield administration has supported the development, and has announced plans to pump $150 million into the project, although officials have not made it clear how the money would be made available.

Legislation has been introduced in the House and Senate that would make $175 million available for the project in the form of bonds and grants to fund the construction of a road and port to service the mine.

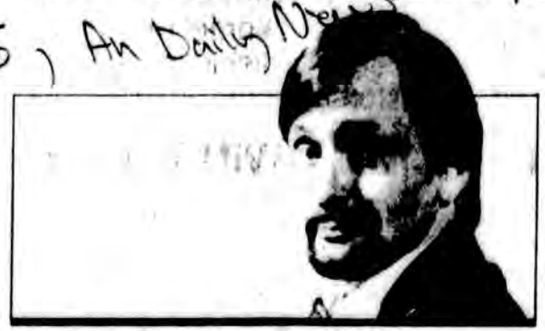
Under plans by the legislature and the administration, the state would recover its investment in the mine through tolls and user fees from the road and port.

Clocksin said the Cominco project should be looked at closely because of the amount of state money involved, and the South African connection makes the project even more questionable.

"South Africa would not be a deciding factor in my decision on whether to support the project, but it is one of the considerations," Clocksin said.

Cominco has been taking part since 1978 in a small, joint venture diamond mine north of Cape Town, South Africa, and maintains an exploration office in Johannesburg, company spokeswoman Lisa Parker said.

There are 120 employees, almost all of them black South Africans, at the mine, and nine employees at the exploration office, Parker said.



Cominco officials stressed that the South Africa employees are paid at least 50 percent above the prevailing South African minimum wage, and they have benefits such as a pension plan, death and disability benefits and a minimum 18 days paid vacation each year.

The mine employees work a five-day, 51-hour week and are paid room and board in addition to their wages, Parker said.

Spotlight on libraries — something you can make book on

April 15, An Daily News

satch carlson

It's going up, this wonderfully huge building that looks like an assemblage of Quaker Oats boxes: the new state headquarters library, which probably is to be called the Loussac Library, but which I would just as soon name after Wilda Marston. On my list of civic priorities, I have to admit I put libraries at the top, even ahead of performing arts centers and limited-access freeways. I am, I suppose, a library junkie.

I am not the only one.

There is in fact a group called Friends of the Library, which sounds like a pretty good group to belong to if you are a joiner. [illegible] need all the help [illegible]

ets.

Besides, if it weren't for libraries, I wouldn't be what I am today. Whatever that is.

I don't remember how it was that I came to be familiar with the Washoe County Library as a child; it was a somber, gothic place (since replaced with the most wonderful library in the Western Hemisphere — but that's another story), with a special section for children, one of which I was stuck as at the time. But it didn't seem to bother the librarians if I wandered out of the children's section into the Big Time, the REAL stacks. (Not that the

strongly influenced by H. Allen Smith. Twenty years later, on rereading him, I was astounded at the similarities in our writing styles — and I can't think of a way to claim that his was derived from mine.)

The first time I checked out books from the real stacks, of course, I was terrified, but the librarians didn't bat an eye; they didn't care if I was corrupting my morals by reading humorists, as long as I got the books back on time. For my part, I was enchanted and grateful to live in a place that provided books, all kinds of books, that I could read for free.

Hill's project started with a tankful of dead fish and a mystery. The fish were floating in an aquarium near the blackboard in a Dillingham High School classroom. The mystery was what killed them.

Hill, a sophomore, spent months chasing the fish killer — which she now suspects was dust left by newfangled blackboard pens. Those pens, Hill said, contained kentone solvents which can lead to skin irritation and are suspected of causing respiratory and nervous damage.

"We thought that the dust from the pens may have fallen into the tank," she said. "Once we put a cover over the fish, they stopped dying."

Hill's work garnered her $50 in cash, a blue ribbon and a blender.

But while she won, she said she wants to know a lot more about the pens which are now commonly used in Alaska schools. She wrote to several pen manafactures asking them for information on their ink. There were no replies, she said.

"I still haven't figured out exactly what's in them," Hill said of the suspect pens. "The manufacturers don't give away that kind of information."

Manslaughter conviction upheld

The Associated Press

The conviction and sentence of Stephan J. Dresnek of Anchorage for manslaughter and assault in connection with a drunken driving case were upheld Friday by the Alaska Court of Appeals.

A two-ton pickup driven by Dresnek collided with a

...since.

Today there are 129 international students at UAF. Canadians (32) still dominate, but there is a smorgasboard of global representation.

Most students have made their way here without a formal exchange program and without financial assistance. Many are older, graduate students.

"Homesickness is of more importance with them because they are quite a bit farther from their homes," says Greg Snoddy, head resident at Nerland Hall, where many of the foreign students live. "The important thing is to keep them busy, get them in with the crowd, try to introduce them to people, activities, on campus."

Toward that end, Nerland Hall is the scene of international dinners, speakers, student programs on their home countries and slide shows. "We ...directors or deans to allow the students to enter the university even though their English is not up to par," Snoddy says. "That's a major problem. We need to set a straight policy on English language ability for the students."

Arna Isacsson is from Sweden. Her English is easily understood, with only a faint accent.

"I wanted to see a wildlife management program in the states. Since I'm from up north in Sweden, I wanted something similar (geographically)," she says. "We don't have wildlife programs in universities like they have here."

Isacsson wants to return to Sweden to work with wildlife in the Laplands, specifically wolves. There are only eight, but even with such a small population, "the wolf question in Sweden is as hot as it is here," she says, referring to predation conflicts.

Swedish children study English in ...they watch TV."

Isacsson says she's had problems because she insists on doing independent study and taking higher level courses. But lectures are the tough part.

"It's so fast all the time. You're listening with your pen. So many words I didn't know how to spell."

She'd write those down, guessing at the spelling, "and I couldn't figure out what I meant" later, she says.

"I have found the people that are most open to me are the people from other countries," says Isacsson. "They yield more. They open up more, to learn what I have to say from my culture, while Americans say, 'This is not Sweden. You have to adapt.'"

Masumi Tsurumi is on exchange from Nagoya Gakuin University in Japan, studying economics. Her English does not come easy, although it was required at junior and senior ...and reading comprehension ...learned, Tsurumi says speaking ...glish is another matter.

"We have an English handicap ...listen to lecture in my case, s... ...times I can't understand what ...structor say. Sometimes I need ...transfer from English to Japanese ...she explains.

State contract delayed on Red Dog mine study

By ANN CONY
Daily News reporter

JUNEAU — Work on a $267,000 state contract to study options for financing Cominco Ltd.'s proposed Red Dog mine has been delayed by a conflict of interest within the company chosen to do the study.

The conflict, involving SRI International of Menlo Park, Calif., was revealed earlier this month when state officials learned that the SRI project manager was a retired Cominco officer. The man draws a monthly pension from Cominco, according to Bert Wagnon, executive director of the Alaska Industrial Development Authority, which is overseeing the study.

SRI has since named a new

See Back Page, RED DOG

Red Dog Mine study delayed

Continued from Page A-1

project manager to avoid the appearance of a conflict of interest, said Wagnon.

AIDA plans to negotiate with Cominco the terms of proposed state financing after the SRI study is completed. The study is to include recommendations on financing terms and conditions.

Cominco is asking the state for a $150 million low-interest loan to build a port and a 57-mile road to serve the proposed zinc mine north of Kotzebue.

Cominco, an international mining company based in Canada, plans to develop the Red Dog zinc deposit in partnership with Nana Regional Corp., a Kotzebue-based Native corporation that owns the land.

Cominco and the Sheffield administration have asked the legislature to appropriate the first $18 million of the loan this year, though terms and conditions for state financing of the port and road will not be nailed down before the legislative session ends.

Department of Administration Commissioner Lisa Rudd on Wednesday cleared the way for AIDA to enter into a contract with SRI by rejecting as too late a protest filed Monday by an SRI competitor.

Arthur Young & Co., whose proposal had been rated second-best, argued that the state should re-evaluate the top proposals for the financing study because SRI's proposal relied heavily on the experience of A. Olaf Wolff, a former vice president of Cominco, whom SRI originally designated as the project manager.

"SRI's independence and objectivity were compromised by placing an ex-Cominco official in the key role of project leader on their team," the Arthur Young protest said. "Obviously the firm selected to assist AIDA in developing a finance plan for the Red Dog mine and por will be in a unique position c influence concerning th state's potential bargainin position in negotiating th commercial terms and cond tions of any future state f nancial assistance to Comir co."

SRI officials could not b reached for comment Wednes day evening.

Wolff's resume, which wa included in SRI's study pro posal, states that he is former vice president of Com inco.

Wagnon said he and othe AIDA staff members wer aware of that when they rat ed SRI's proposal above Ar thur Young's and 11 others.

While the resume did no list the dates of Wolff's em ployment with Cominco, i appeared that he had beer with Cominco for five years and he had held held jobs with two other companies including SRI, since leaving Cominco, Wagnon said.

The AIDA board of direc tors, controlled by Sheffield appointees, on Feb. 25 accept ed staff recommendations that SRI receive the contract.

While negotiating the SRI contract, "I came to find out that he (Wolff) retired from Cominco in 1970 and that he was there for 25 or 30 years," Wagnon said. "When he said the word 'retired,' that's when the red light went on."

Wagnon said he learned that Wolff receives monthly pension payments from Cominco.

SRI replaced Wolff with Eugene Thiers, who, like Wolff, holds the title of senior management consultant, Wagnon said.

The AIDA evaluation team reviewed Thiers' resume and judged his qualifications to be equal to or better than Wolff's, and the AIDA board of directors concurred, Wagnon said.

AIDA had planned to submit a first draft of the Red Dog financing plan to the legislature in mid-April.

Cominco closing may rescue zinc

by Olav Svela

When Cominco Ltd. announced a month-long closure starting mid-December of the Polaris zinc-lead mine and the Black Angel mine in Greenland, it was thought its European customers' appetite for concentrates had been sated.

That is true. The European smelters and refiners of Cominco zinc concentrates are sitting with seasonally high inventories.

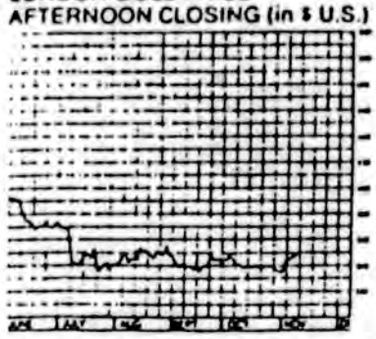
But the real reason for the closing of two profitable mines could be quite different than what is generally accepted, says Raymond Goldie, mining analyst with Richardson Greenshields.

At the time of the announcement, Cominco and its overseas customers, who rely on the company for nearly one-quarter of zinc metal production, were in the midst of negotiations. In the absence of new agreements, the Europeans could be sitting with near-empty warehouses by the spring of 1985.

Mr. Goldie believes Cominco is prepared to extend the shutdowns to prove a point — if the Europeans still demand discounts from the posted $US900-per-tonne price, then Cominco will not be shipping concentrates.

"Cominco's actions appear to carry an implicit threat that, if zinc prices don't improve, Cominco will extend the shutdowns," Mr. Goldie said.

There is also the possibility the company, fed up with the braying for discounts by its traditional buyers, could strike a deal with Japanese smelters.



Nor does Cominco seem overly concerned about losing market share, Mr. Goldie noted. Marginal suppliers only reopened mines about a year ago when prices improved. With tags again at lower levels, these producers might be loathe to boost production until solid price gains have been made.

Besides, Mr. Goldie observed, any expansions would require six months to complete.

So Cominco is taking the lead in showing discipline.

"It demonstrates that at least one producer is willing to make a stand when it believes that it is not getting a fair price for its product," the analyst said.

LONDON GOLD PRICE — AFTERNOON CLOSING (in $ U.S.)

LONDON SILVER PRICE (in $ U.S.)

METAL AND MINERALS

Courtesy: GPS Publishing, Toronto

The implication for the price of zinc? Obviously, less concentrates should translate into a tighter market. It hasn't happened so far with free market prices (London Metal Exchange) having slipped nearly a cent to 39.1¢ (US) since the Cominco move.

But Mr. Goldie is confident that with supply and demand in fairly close balance even before Cominco's actions, prices will respond.

Cominco itself projects world shortages.

"Cominco and the smelters both have their eyes on the long term. Cominco wants to take full advantage of a major world shortage of zinc concentrates which, it expects, will develop by the late 1980s," Mr. Goldie said.

The strength of the yellow metal, meanwhile, continues. At press-time the second London fix (Nov. 13) was $US350.45 while the key December contract on Comex was trading at $350.90.

Richardson Greenshields analyst David R. James, noting "the much more positive tone to the gold market," said he expects a "ragged, slow erosion" of the American dollar if newly-re-elected President Ronald Reagan keeps his promise to try to lower interest rates.

Closure of Polaris mine proof of Cominco's Red Dog commitment

By BERT TARRANT

There's more than meets the eye in Cominco Ltd. of Canada's recent announcement of a month-long closure (which began Dec. 1) of its Polaris lead-zinc mine in northern Canada.

When word of the closure was announced, the fact was jumped on by the Anchorage media as if it were proof positive that any efforts by the state to help Cominco Alaska and partner, NANA Regional Corp., develop the Red Dog lead-zinc project would be throwing so much money down a rat hole.

Cominco and NANA, the Kotzebue-based Native regional corporation, are seeking help from the state to take the edge off the steep front-end infrastructure costs (road and port) the joint venture faces if it is to develop what is considered the richest lead-zinc deposit in the world.

NANA and Cominco had made notable progress in pleading their case and demonstrating the benefits of the project (especially in local hire in unemployment-plagued northwest Alaska) for state help when the Polaris closure (and one in Greenland) was announced.

Tactically, the announcement came at an inopportune time. The knee-jerk reaction from the media and some state-help opponents was that the closures indicated Red Dog wasn't all it was cracked up to be.

But mining industry analysts of international repute are taking an entirely different view of the closures.

When Cominco announced closure of the Polaris mine and the Black Angel mine in Greenland, it was thought its European customers' appetites for concentrates had been sated.

That is true, according to industry observers in Canada. The European smelters and refiners of Cominco zinc concentrates are sitting on seasonally high inventories.

But the real reason for the closure of the two profitable mines could be quite different than what is generally accepted, says Raymond Goldie, mining analyst with Richardson Greenshields.

At the time of the announcement, Cominco and its overseas customers, who rely on the company for nearly one-fourth of zinc metal production, were in the midst of negotiations. In the absence of new agreements, the Europeans could be sitting with near-empty warehouses by the spring of next year.

Goldie believes Cominco is prepared to extend the shutdowns to prove a point -- if the Europeans still demand discounts from the posted $900 per ton price, then Cominco will not be shipping concentrates.

"Cominco's actions appear to carry an implicit threat that, if zinc prices don't improve, Cominco will extend the shutdowns," Goldie said.

There is also the possibility the company, fed up with the braying for discounts by its traditional buyers, could strike a deal with Japanese smelters.

Nor does Cominco seem overly concerned about losing market share, Goldie noted. Marginal suppliers only reopened mines about a year ago when

See COMINCO, Page 18

• Cominco's mine move shows spine

Continued from Page 1

prices improved. With lower prices once again, these producers might be loathe to boost production until solid price gains have been made.

Besides, Goldie said, any expansions would take six months to complete. So Cominco is taking the lead in showing discipline.

"It demonstrates that at least one producer is willing to make a stand when it believes it is not getting a fair price for its product," the analyst said.

Although it hasn't happened so far, that should translate into a tighter market and higher prices and Goldie is confident, with supply and demand in fairly close balance even before Cominco's actions, prices will respond.

Cominco itself projects world shortages. "Cominco and the smelters both have their eyes on the long term. Cominco wants to take full advantage of a world shortage of zinc concentrates which it expects will develop by the late 1980s," Goldie said.

And the late 1980s, incidentally, is when Cominco and NANA would like to bring the Red Dog project on line.

Natives, U.S., Audubon ba

By BETTY MILLS
Daily News correspondent

WASHINGTON — Reagan administration officials, Native leaders and representatives of two national environmental groups Monday endorsed legislation to ratify a land exchange that would allow development of a major lead and zinc mine in Northwest Alaska.

Environmentalists from three national groups opposed the bill, which would allow construction of a road across land that is now within the Cape Krusenstern National Monument. The road would allow the NANA Regional Corporation to gain access to its claim at the Red Dog mine, located 82 miles north of Kotzebue.

The testimony came at a Senate Energy subcommittee hearing chaired by Alaska Republican Frank Murkowski.

The bill was introduced by the Alaska delegation to implement the land exchange negotiated by NANA and the Interior Department. Under the deal, the Natives would receive 64,000 acres of land in the northern part of the monument and would relinquish 102,000 acres the corporation selected on the eastern side of the monument.

NANA and Cominco Alaska have joined forces to develop the mine and want to build an access road in what is now the northwest corner of the monument. The route was determined to be environmentally preferred and economically acc

Anchorage. The city's utility headquarters are in additional buildings and would not be included in a consolidation of city offices.

But the city is quickly running out of room for its workers and will need to lease more space for the 2,868 employees expected to be on the city payroll by 2005.

Mann and his staff looked at six options for future city office space, including purchasing the Hill Building, leasing a large office building to consolidate city offices and continuing the current practice of leasing several buildings throughout town.

But Mann said Monday the best deal for the city is to construct a new building with about 180,000 square feet of office space. A low-interest, tax-exempt loan could be used to finance the project, he said.

If work beg now on finding a site, arranging financing and designing a building, Mann said the new city hall could be ready in three years.

Any new leases in the next five years should include a clause that would allow it to be canceled when the new facility is completed, Mann said.

The city now pays about $957,000 a year in rent to Zamarello's Olympic Inc. If the lease is extended through 1990, the rent would rise to about $1.07 million a year.

The city pays about 89 cents a square foot in the Hill Building, well below current market rate for downtown office space, Mann said.

The $8.7 million asking price for the building could be a bargain. The property was appraised at $13.7 million by city assessors.

Red Dog mine

neficial to resident or migratory wildlife of the monument" and would enhance fishery protection.

Willie Hensley, vice president of NANA, stressed the importance of the Red Dog project as a means of employing Natives in the area.

"For our shareholders, Red Dog means approximately 400 year-round jobs. These jobs and the economic survival of our people are what is at stake," he said.

The mineral prospect, located in the DeLong Mountains of the western Brooks Range, represents one of the largest lead/zinc/silver deposits in the world, according to Henry Giegerich, president of Cominco Alaska. The deposit has known reserves of 85 million tons and the proposed mine has a projected life of 50 years, he said. The mining claim is not in the monument.

Murkowski said the land swap would benefit the Na-

project manager to avoid the appearance of a conflict of interest, said Wagnon.

AIDA plans to negotiate with Cominco the terms of proposed state financing after the SRI study is completed. The study is to include recommendations on financing terms and conditions.

Cominco is asking the state for a $150 million low-interest loan to build a port and a 57-mile road to serve the proposed zinc mine north of Kotzebue.

Cominco, an international mining company based in Canada, plans to develop the Red Dog zinc deposit in partnership with Nana Regional Corp., a Kotzebue-based Native corporation that owns the land.

Cominco and the Sheffield administration have asked the legislature to appropriate the first $18 million of the loan this year, though terms and conditions for state financing of the port and road will not be nailed down before the legislative session ends.

Department of Administration Commissioner Lisa Rudd on Wednesday cleared the way for AIDA to enter into a contract with SRI by rejecting as too late a protest filed Monday by an SRI competitor.

Arthur Young & Co., whose proposal had been rated second-best, argued that the state should re-evaluate the top proposals for the financing study because SRI's proposal relied heavily on the experience of A. Olaf Wolff, a former vice president of Cominco, whom SRI originally designated as the project manager.

"SRI's independence and objectivity were compromised by placing an ex-Cominco official in the key role of project leader on their team," the Arthur Young protest said. "Obviously the firm selected to assist AIDA in developing a finance plan for the Red Dog mine and port will be in a unique position of influence concerning the state's potential bargaining position in negotiating the commercial terms and conditions of any future state financial assistance to Cominco."

SRI officials could not be reached for comment Wednesday evening.

Wolff's resume, which was included in SRI's study proposal, states that he is a former vice president of Cominco.

Wagnon said he and other AIDA staff members were aware of that when they rated SRI's proposal above Arthur Young's and 11 others.

While the resume did not list the dates of Wolff's employment with Cominco, it appeared that he had been with Cominco for five years and he had held held jobs with two other companies, including SRI, since leaving Cominco, Wagnon said.

The AIDA board of directors, controlled by Sheffield appointees, on Feb. 25 accepted staff recommendations that SRI receive the contract.

While negotiating the SRI contract, "I came to find out that he (Wolff) retired from Cominco in 1970 and that he was there for 25 or 30 years," Wagnon said. "When he said the word 'retired,' that's when the red light went on."

Wagnon said he learned that Wolff receives monthly pension payments from Cominco.

SRI replaced Wolff with Eugene Thiers, who, like Wolff, holds the title of senior management consultant, Wagnon said.

The AIDA evaluation team reviewed Thiers' resume and judged his qualifications to be equal to or better than Wolff's, and the AIDA board of directors concurred, Wagnon said.

AIDA had planned to submit a first draft of the Red Dog financing plan to the legislature in mid-April.

December 19, 1984

Dear House and Senate Resource Committee Members:

I am enclosing a copy of an article titled "The Death of Mining," which appeared in the December 17, 1984, edition of Business Week. I hope that you will read this article, as it contains information which should be useful to you in deciding whether to spend state money to support the mining industry.

The article displays that the mining industry in this country is in serious trouble. The article says that:

> "The recovery of 1983-1984 largely by-passed producers of copper, iron ore, nickel, lead, zinc and molybdenum. Now, after a prolonger period of painful losses, these companies are reeling from what are clearly chronic problems: shrinking markets, huge debt, and depressed prices. Three or four major metals producers may even be forced out of the business over the next few years. In a very real sense the industry is dying."

As you know, the state does not receive tax revenues from the mining industry. Therefore, I fear that spending large amounts of money to support the mining industry would have little benefit to the state. There is a very real chance that even with this state financial support mining industries could not survive.

Sincerely,

Tony

Representative Tony Vaska

Encl.

ANV/krh

THE DEATH OF MINING

AMERICA IS LOSING ONE OF ITS MOST BASIC INDUSTRIES

Just south of Tucson, a two-lane highway rolls through the desert to Mexico. Along one 26-mi. stretch, it skirts five open-pit copper mines amid the saguaro cactus, mesquite, and ironwood. This is U.S. 89, known as *el camino de la muerte*—"road of death"—for the toll it has taken on drivers zooming north from a hard-drinking night in the border town of Nogales. But the macabre name might just as easily refer to the mines that line this lonely road. Once the workplaces of thousands, they are now either closed or up for sale—a stark reminder of the sad state not only of U.S. copper companies, but of most of the rest of the North American metals mining industry.

The recovery of 1983-84 largely bypassed producers of copper, iron ore, nickel, lead, zinc, and molybdenum. Now, after a prolonged period of painful losses, these companies are reeling f what are clearly chronic proble shrinking markets, huge debt, and pressed prices. Three or four major als producers may even be forced ou the business over the next few years a very real sense the industry is dyi

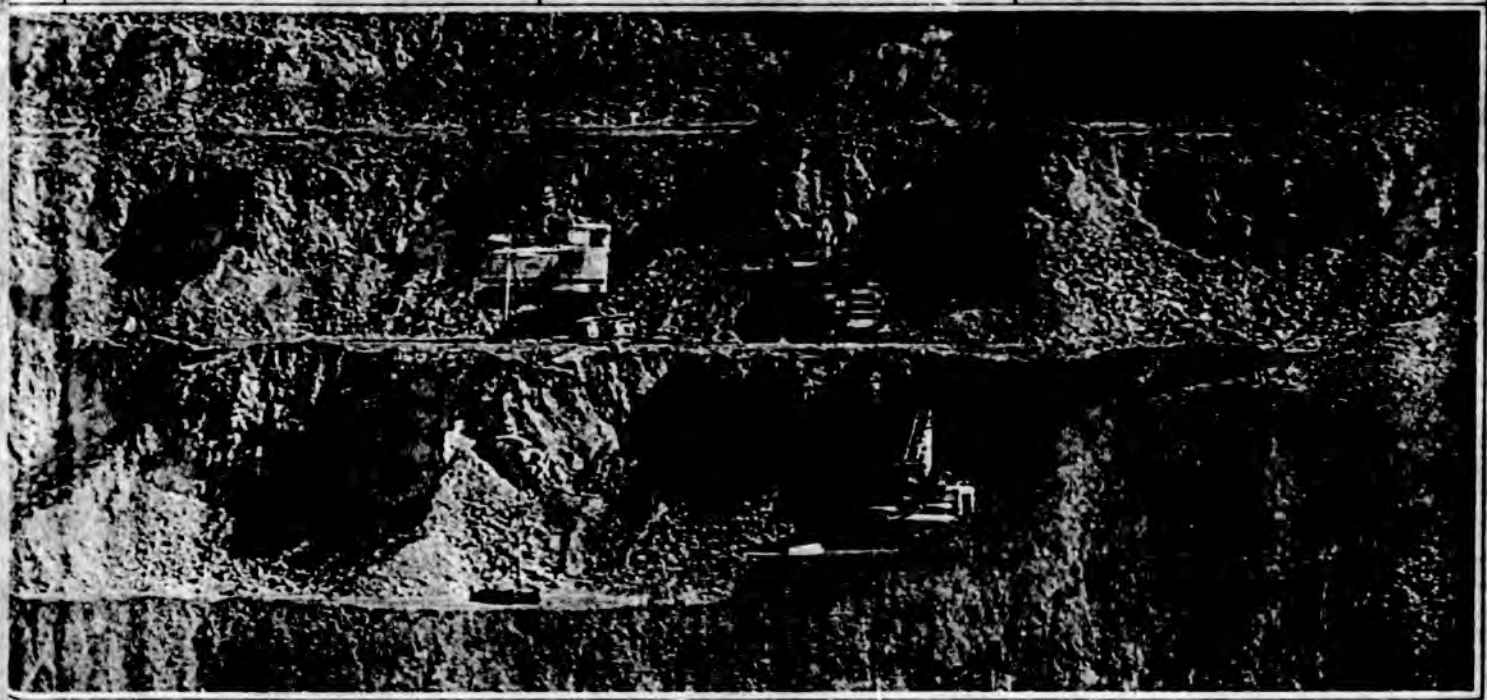
The pangs of mining are the la example of what may be an indust megatrend: the inexorable shift of production and processing of all b

(TOP) JACK RENDLEIGH (BOTTOM) JEFFREY HAMILTON

materials from the industrial countries to the Third World. Like steelmaking, metals mining is vulnerable to some fundamental forces. It is an industrial activity in which, these days, the developing nations have an almost unbeatable pair of economic advantages: cheap labor plus very-low-cost reserves.

The industry's plight ripples far beyond the dozen or so companies that dominate metals mining in North America. Just four years ago, metals mining in the U.S. was an $8.9 billion enterprise. By 1983 it had shrunk to just $5.9 billion. Mining employment, already down to 44,800 at the start of this year from 109,000 in 1981, could fall a further 30% over the next two to three years. The contraction is already creating modern-day ghost towns (page 68) in mining regions of the country. And while lower metals prices do mean at least a short-term benefit for manufacturers and consumers, some observers are concerned that the industry's problems may one day put national security at risk. "We need a copper industry, for defense purposes if nothing else," asserts Representative Morris K. Udall (D-Ariz.), chairman of the House Interior Committee.

REAL DANGER. For all these reasons, metals mining could become the next *cause célèbre* in Washington's continuing debate over industrial policy. Many officials within the Commerce, Defense, and Interior Depts., as well as in Congress, now believe the U.S. may soon have to choose between forgoing major segments of its minerals-producing capability and subsidizing them. "We are in real danger of losing 75% of our copper industry and 40% to 50% of our iron-ore industry," warns Robert C. Horton, head of the Bureau of Mines. All across the mining spectrum the signs are plain:



- The largest copper producers—Kennecott, Asarco, and Phelps Dodge—are deep in the red again this year. Phelps Dodge lost $50 million in the first nine months. Kennecott Corp.'s $41 million operating loss in metals during the third quarter brings its total loss in the business since 1981 to $483 million. Asarco Inc., which suffered a net loss of $70 million in the first nine months of 1984, had to cancel its fourth-quarter dividend.
- The major oil companies—which once rushed into metals as the next best thing to oil—are already giving up. Last month, Pennzoil Co. took a hefty $100 million write-off to reflect the decreased value of Duval Corp., its copper and molybdenum mining subsidiary. Three months earlier, Atlantic Richfield Co. took a $785 million write-off on Anaconda Minerals Co., a copper and metals fabricator it purchased in 1977 for $680 million. Both companies have put their metals operations on the block.
- In iron ore, U.S. Steel, Hanna Mining, and Pickands Mather announced in November yet another round of temporary mine closings that will shut down most of Minnesota's iron-ore Mesabi Range this winter. Days later, Canadian steelmaker Stelco Inc. announced that it was permanently closing its Griffith Iron Ore Mine. That added a further 1.5 million tons of ore-producing capacity to the 25 million that has been shut down for good in the U.S. and Canada since 1980.
- In nickel, zinc, and lead, the scene is much the same. Toronto-based Inco Ltd., a giant nickel producer, has posted 13 consecutive quarters of operating deficits. Noranda Inc., a major zinc and lead producer, lost $38 million in the third quarter, wiping out its first-half profit.

A series of factors accounts for mining's malaise. The industry is hobbled by a worldwide excess of capacity that shows no sign of abating. Despite disappointing demand for most metals, Third World countries, eager to exploit more of their natural resources, keep opening giant new mines that incorporate the latest recovery techniques. The strong dollar makes their low-cost products particularly appealing to U.S. buyers. Underlying all this is a weakening geological base: Many of the richest domestic base-metal reserves are coming close to depletion, while the low-grade ore that remains is becoming too costly to recover.

In their day, North American mining companies ranked among the world's industrial elite. Amax, Anaconda, Asarco, Kennecott, or their forerunners helped settle the West. Huge family fortunes derived from mining, including the Hearsts' and the Guggenheims'. Mining companies were among the first U.S. multinationals, dominating world markets during the boom that followed World War II. Amax Inc. once held 50% of the Free World market for molybdenum, a metal used in everything from light bulbs to jet engines. Inco once supplied 90% of the world's nickel.

WILD FLUCTUATIONS. Things began to change in the 1970s. Copper and iron-ore mines in South America and Africa were expropriated. The North American industry was hit with large environmental expenditures. New competitors from the Third World appeared, many of them state-owned and blessed with abundant reserves.

Price-setting, once the province of the North American oligopolies, shifted to

PENNZOIL'S SIERRITA COPPER MINE IN ARIZONA: THOUGH UP FOR SALE, IT HAS SO FAR SURVIVED BY CUTTING WAGES AND BENEFITS AND EXTENDING WORK HOURS

the floors of the world's commodities exchanges, chiefly the London Metal Exchange. Steady prices yielded to the wild fluctuations now the norm in the business. Demand for iron ore, nickel, and molybdenum started to wobble as the biggest customer for all three metals—the U. S. steel industry—faltered.

But the most devastating blows came with the recession of 1981-82. After hitting record, or near record, levels in 1979 and 1980, earnings of the North American producers collapsed. From 1982 through this year's third quarter, 10 of the largest independent North American mining companies reported net losses totaling $1.8 billion. At the start of 1981, their debt amounted to 36% of their capitalization; by the end of this year's third quarter, it was close to 41%—at least 10 percentage points above the average for U. S. industry. Return on shareholders' equity, which stood at 18% five years ago, is likely to end up this year at minus 1%. On average, the shares of the U. S. metals mining companies in the group sell for 36% below book value.

The situation has grown so grim that Interior Secretary William P. Clark, who last fall tried to win import relief for copper producers, is now publicly voicing his alarm. Worried about U. S. dependence on foreign minerals, Clark has appointed a 25-member task force to search for ways to preserve the nation's remaining mines. In mid-November, the panel, headed by retired Rear Admiral William C. Mott, issued its first substantive proposal. It called for the U. S. strategic metals stockpile to be placed in the hands of a Comsat-type, quasi-government corporation instead of several agencies. A single entity presumably could make decisions more smoothly than the present mix of overseers can.

ROCKS IN WATER. The industry's most visible problem is prices, which have lately had all the buoyancy of rocks in water. Even though strikes have curtailed 63% of U. S. lead mining capacity since summer, lead has nonetheless fallen an additional 5¢ a lb. since July. Although inventories of copper on the London and New York exchanges have dropped 50% since January and world demand for the metal may hit a record 8.3 million tons this year, copper is now 61¢ a lb.—9¢ below its price last April.

"These are not normal economics as we have known them," says Asarco President Richard de J. Osborne. "Based on the fundamentals and on historic precedent, we should now be several quarters into a price recovery." Yet, in real terms, the price of copper is lower now than at any time in this century except during the trough of

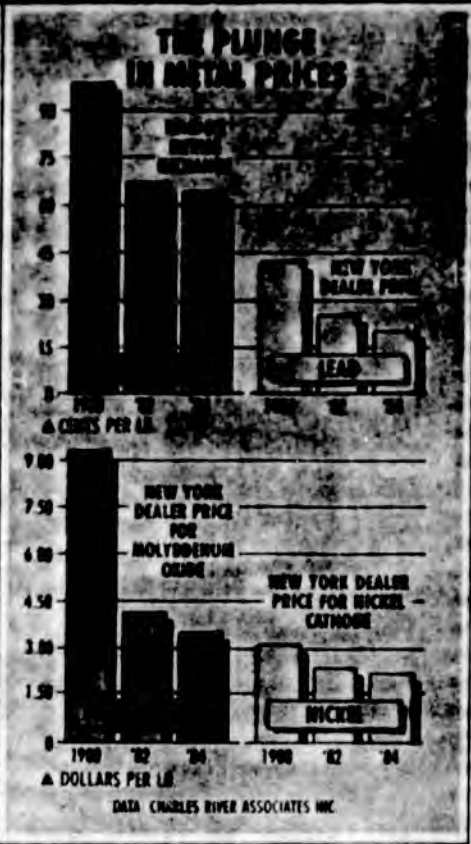
WHY CHILE IS THE KING OF COPPER



ABBAS/MAGNUM

CHEAPER LABOR: CODELCO MINERS' WAGES ARE HIGH BY CHILEAN STANDARDS—BUT ONLY A TENTH OF WHAT U. S. MINE

he thinks they will more likely languish near present levels. He predicts that copper will sell for less than 90¢ a lb., in constant dollars, through the rest of the century and that nickel and lead prices will stagnate into the 1990s. The price of molybdenum, he predicts, will remain weak through 1987.

A significant increase in volume also seems far off. Metals experts almost all agree that demand will hold steady, or at best grow modestly, over the next decade. Cleveland-based Hanna Mining Co. is forecasting that North American consumption of iron-ore pellets will average no more than 74 million tons a year through 1990—a far cry from the 109 million tons consumed in the peak year of 1979. Demand for copper, nickel, lead, and zinc is seen increasing by only 1% to 2% for the next 10 years.

A host of factors is curbing growth. New materials, such as plastics and optic fibers, are replacing metals in many product lines. Katrak estimates that, by 2000, technological advances will enable manufacturers to use only two-thirds as much copper per unit of output as they do today. Lead is being banished from gasoline, its second-biggest market, while longer-lasting, lighter batteries are slowing consumption in its primary market. More and more metals recycling is occurring almost everywhere.

In the few markets where demand continues to grow respectably, supplies keep growing as fast or faster. According to Katrak, world molybdenum consumption may increase 3.5% a year through 1990. But so many new molybdenum mines have opened up during the past five years that annual capacity is now 69% greater than the 166 million lb. expected to be consumed next year.

For many struggling producers of North America, the telling factor is the decline in the grade of their ore. "The high-grade, easily accessible deposits have been mined out" in the U.S., says John W. Goth, Amax's senior executive vice-president. Most of the richest deposits now are in developing countries. That is a major reason why the giant Corporacion Nacional del Cobre de Chile (CODELCO) is now the world's foremost producer of copper (below).

Similarly, Cia. Vale do Rio Doce, the Brazilian state-owned mining company, will be the world's premier iron-ore producer when its giant Carajás mine comes on stream next year. Not only does Carajás contain 20 billion tons of the world's richest iron ore, but Brazilian labor costs are 78% lower than those at U.S. mines. By 1988, output could hit 35 million tons a year—nearly as much as the entire U.S. produced last year.

'UNCONSCIONABLE' LOAN. It is unlikely that Carajás ore will flood the U.S., since domestic steelmakers have a huge investment in North American iron-ore mines and processing facilities. But Japanese and European steelmakers have signed long-term contracts that should allow them to buy Carajás ore for even

If Chile is the Saudi Arabia of copper, Corporacion Nacional del Cobre de Chile (CODELCO) is the Petromin of Chile. Formed as the successor to five mining companies nationalized in 1971, this state-owned giant is blessed with more than 25% of the world's known copper reserves. Its gargantuan Chuquicamata mining and processing complex yields ores with 1.65% copper—2½ times what a typical U.S. deposit contains. At 44¢ per lb., CODELCO's production costs are the world's lowest. Not surprisingly, it accounted for 16% of all copper mined by non-Communist countries last year.

While sheer size gives CODELCO operational advantages, its rock-bottom labor costs are what make competitors weep. Although its 26,000 workers earn only a tenth of what U.S. copper companies pay, their wages are much higher than average for Chile, where 25% of the work force is idle.

In 1983, while the North American mining industry was deep in the red, CODELCO netted a respectable $220.6 million on sales of $1.8 billion. This year, in spite of severely depressed copper prices, it is expected to earn $140 million. Profits would be even higher were it not for a government decree that diverts 10% of copper revenues to the Chilean armed forces.

As U.S. copper producers see it, CODELCO's success comes mainly at their expense. Last year the company shipped a record 330,000 tons to the U.S.—46% of copper imports and 15% of all the copper used by U.S. manufacturers. Clearly, the strong dollar was a factor. But U.S. companies say CODELCO's refusal to scale back despite bulging world inventories is the prime reason world copper prices are so low. While U.S. mines are typically operating at 40% of capacity, CODELCO continues to run flat out. Douglas J. Bourne, chairman of Duval Corp., Pennzoil Co.'s mining subsidiary, charges that this is a deliberate attempt to drive U.S. companies out of the business.

RADICAL BREAK? CODELCO officials respond that their operation is the chief prop under a teetering economy. Chile depends on CODELCO for 46% of its foreign exchange. The government's 1983 interest payments on $20 billion in debts consumed all of the $678.5 million the company handed over to the state in taxes that year. Chile's military strongman, Augusto Pinochet, is likely to impose additional unpopular austerity measures to maintain debt payments, so the pressure will remain on CODELCO to keep production and exports high. The company is authorized to spend $1.4 billion by 1988 to expand its mines. Outsiders estimate that by 1990 it could be mining 40% more copper than the 1.1 million tons it now produces a year.

Simon D. Strauss, a former Asarco Inc. vice-chairman who is now a consultant, concedes that the Chilean government has monumental problems. But he believes that both CODELCO and Chile would be better off in the long run if they cut copper production to raise prices. That would ultimately bring in more foreign revenue, he says, while slowing the depletion of Chile's most important resource.

Chilean officials point out that for such a strategy to work, CODELCO would have to move in concert with other Third World producers, who are also spewing out copper at an accelerating rate. Given the developing world's plight, such cooperation is questionable. And that sort of planning would mark a radical break with Santiago's 11-year reliance on the free market. Some CODELCO executives even argue that copper's reign as a key metal is limited, so Chile should sell all it can before the market shrinks.

By John O'Brien in Santiago and Patrick Houston in Toronto

CHART BY BRIAN MCDONALD

less than this year's Brazilian price of $17 per dry metric ton, and that will pressure U.S. producers to make even more drastic cost cuts. Says Robert McInnes, president of Cleveland's Pickands Mather & Co.: "Importation of subsidized or low-cost foreign ore is, without question, one of the gravest threats our industry faces." Equally ominous, the cheap Carajás ore will cut the production costs of some foreign-made steel, which already claims more than 20% of the U.S. market.

The Carajás mine project particularly galls U.S. executives because its $5.1 billion price tag was underwritten with a $500 million loan from the World Bank. "The world did not need Carajás," snaps Hanna Chairman Robert F. Anderson. Adds S.K. Scovil, chairman of Cleveland-Cliffs Iron Co.: "It was unconscionable [that] they made that loan."

Given so many adverse forces, it seems only a matter of time before the North American metals mining industry suffers a major casualty. Analysts contend that Phelps Dodge Corp., the second-largest U.S. copper producer, is especially vulnerable because it relies on copper for almost all its revenues. The

THERE'S NOT MUCH JOY IN LEADVILLE

For more than a century, Leadville, Colo., has mirrored the ups and downs of the mining industry. The town, then called Oro City, was devastated in 1865 when its gold mines played out. Twenty-eight years later, it was racked by the great silver crash, which turned local kings into paupers overnight. Now molybdenum has dealt Leadville a cruel blow.

Four years ago, Amax Inc.'s Climax mine employed 3,000 and had a payroll of more than $80 million. Then demand for molybdenum plummeted. Amax closed the mine, and Leadville's unemployment rate leaped to 40%. Although Climax has since reopened with some 800 employees, the company has made it plain that the mine will never again employ thousands.

So residents of historic Leadville are now courting tourists and small businesses. This, the town hopes, will open up 2,500 jobs in 5 to 10 years. If it does, Leadville could provide a prototype for other withering mining towns.

BAWDY HOUSES. Leadville has a wealth of Old West lore. Molly Brown got rich on its gold; Oscar Wilde outdrank the miners at a local silver mine. Once known as "the wickedest town in the West" because of the bawdy houses that lined Stillborn Alley, it still boasts unspoiled gingerbread cottages and Victorian commercial buildings.

After Amax shut down Climax, Leadville hired a full-timer to head its Chamber of Commerce, launched a series of summer events that included gold panning and a 100-mi. ultramarathon along the Continental Divide, and invested $40,000 in a multimedia presentation ballyhooing its assets. By yearend the town will have spent $100,000 marketing itself, and its merchants have approved a $900,000 bond to upgrade the sidewalks and lighting.

As a result, says Elaine Kochevar, executive director of the Chamber of Commerce, tourism jumped 75% last summer, and revenues from the local sales tax rose nearly 25%. She expects more of the same this winter. With an $850,000 grant from the state, Leadville's ski area, Ski Cooper, has expanded. This year it will offer lift tickets at $12 a day—half the price at nearby Vail. Visitors are invariably reminded that a three-bedroom house in Leadville—just two hours from Denver—typically costs $45,000, a fraction of the price at other Colorado ski resorts.

THE TOWN—BETRAYED BY GOLD, SILVER, AND MOLYBDENUM—IS TURNING TO TOURISM

BARRY STAVER

Big investors have taken notice. Dallas' Trace Investment Inc. plans to purchase six buildings, including the 1885 Vendome Hotel, where President Benjamin Harrison once trod a lobby floor inlaid with silver dollars. The company will pay about $1.5 million for all six buildings and intends to spend $10 million restoring and converting them to modern hotels or condominiums.

Revving up tourism may prove easier, however, than attracting new businesses. One reason: Two-mile-high Leadville, situated just below the timberline, seems desolate to many outsiders. Winters are so long that the locals quip that Leadville has only two seasons—this winter and last.

The days are gone in Leadville when the Guggenheims could build a fortune starting with one small smelter, or a David May could launch a nationwide department-store chain. "We're not going to land a Sperry Rand," admits Kochevar. Still, she adds, small manufacturers and distributors could be drawn to Leadville, with its ready labor and easy access to a railroad, airport, and interstate highway.

MELTDOWN. Eight new enterprises have started up in the past two years. To draw still more, the town has formed the Leadville Improvement Group with $50,000 in state assistance. This office is now applying for a $250,000 grant from the U.S. Housing & Urban Development Dept. To be matched by local banks, the money would finance low-cost loans to new businesses.

Compared with some previous schemes for reviving Leadville, the current plan looks eminently workable. Following the depression of 1893, for example, the town built a three-acre ice palace, complete with ballroom. It did a booming business—until a warm spell began melting its ice blocks.

By Sandra Atchison in Denver

company has lost $187 million since 1982, and "unless the world copper price improves very sharply throughout the rest of the decade, it is difficult to see how the company can survive," says William G. Siedenburg, an analyst with Smith Barney, Harris Upham & Co.

GETTING TOUGH. The day of reckoning also may be nearing for Kennecott, the copper mining giant acquired by Standard Oil Co. (Ohio) three years ago for $1.8 billion. Sohio has been mulling over a proposed $1 billion modernization for Kennecott's huge Bingham Canyon mine in Utah but has not approved the expenditure. That mine "is not something you'd lightly turn your back on," says Sohio Chairman Alton W. Whitehouse Jr. "But we just aren't going to take [Kennecott's] losses indefinitely."

As Big Oil backs out of metals mining, the independents are struggling to survive. While some are closing down high-cost operations, others can't even find the money to meet the steep severance and shutdown costs without eating into the cash they need to pay their debts. Corporate staffs are being cut. Falconbridge Ltd., a Canadian nickel producer, has slashed white-collar employment so much that top management now occupies one floor instead of three in its Toronto headquarters. Chairman William James even shares a secretary.

Mining companies are also getting tough with their unions. The most dramatic example is Phelps Dodge, which in July, 1983, accepted a strike at its Arizona mines and smelters rather than settle for the terms other copper producers agreed to. The company has replaced the strikers with nonunion workers and now awaits court rulings on decertification votes. In October, Pennzoil's Duval subsidiary unilaterally imposed a new labor contract on workers at its Sierrita (Ariz.) mine, cutting wages 15%, dropping cost-of-living adjustments, and increasing work time for all employees by two shifts a month.

These cost-cutting measures have resulted in impressive productivity gains. The cost of producing copper in the U. S. has dropped 25% in the past three years. Inco has lowered its breakeven point for nickel 12% this year alone, to $2.30 a lb., and Chairman Baird's goal is to get down to $2 next year.

NO FAT. More gains are needed. "We've reduced costs, but not at the same precipitous rates as metals prices have declined," says Kennecott President G. Frank Joklik. But making further headway will be tough. "The mining companies don't have any more fat to shave off," says Canadian consultant Felske.

Because they see diversification as a way out of their troubles, some base-metals mining companies are rushing into gold—so many, in fact, that North American gold production is expected to jump 50% by 1989. "The only thing worth developing now is a good-grade precious metals deposit," says Alfred Powis, chairman of Noranda. His company is spending $230 million to develop its Hemlo stake in Northern Ontario, a gold vein that eventually could add $38 million to the company's annual profits.

Other companies are looking further afield. Newmont Mining Corp. intends to add a "fourth leg" to its copper, gold, and energy businesses, says Chairman Plato Malozemoff. Hanna is on the diversification trail too, but it will be cautious: It has been burned by bad moves in the past. Some 85% of its $28.8 million loss last year resulted from energy businesses it acquired in the late 1970s.

Amax, which had eight separate metals divisions, is restructuring all its mining operations to make them more market-responsive. The company also wants to expand into more specialized products such as molybdenum chemicals, ceramics, and plastic composites. "That's the only way," says Chester O. Ensign Jr., who heads the company's strategic planning and development group, "to make sure Amax doesn't perish."

Consultants agree such changes are necessary. "Metals companies have got to become more market-driven," says Frank Schwab Jr., president of Fenvessy & Schwab Inc., a management consulting firm in New York. He also urges companies to get more involved in commodities trading to help offset the volatility of their business. Finally, Schwab advises his North American clients to enter joint ventures, especially with foreign partners. "Somehow," he says, "our companies have to develop a workable program to finance the development of ore reserves outside the U. S."

Here and there, mining companies are beginning to embrace such strategies. But even insiders acknowledge that the industry as a whole is changing too slowly, because of what some see as an anomaly in the thinking of many metals mining executives: While they are rarely averse to the risks of developing new ore deposits, that same spirit usually does not extend into the marketing and financial aspects of their business. "The industry is dominated by guys who bring things to the surface," says consultant Felske. "They have to become more sophisticated in the commercial side of the business."

REDEMPTION? Some believe that redemption may be found in high technology. The Colorado School of Mines has launched what could become a $25 million research effort to adapt automated factory techniques to mining. In October, Inco created a separate equipment company to develop machinery for continuously mining and transporting ore, now done in batches. But the potential of such innovations is limited. Concludes Noranda Chairman Powis: "There's not going to be one technology that will change the economics of this industry."

The chance of getting much government help is dim. Mining companies lack political clout because their constituency is relatively small and they have been unable to put together a unified lobby. Moreover, a growing chorus of voices argues that a shortfall in U. S. metals production is not necessarily a problem. After all, notes John A. Cordes, head of the Mineral Economics Dept. at the Colorado School of Mines, "countries like Japan and West Germany have very, very strong economies with very low levels of metals self-sufficiency."

The U. S. is rapidly heading in their direction. Indeed, if another broad-based recession were to hit the U. S. in 1985 or 1986, it would probably sound the death knell for an industry that is already permanently bedridden.

State Financing For the Red Dog Lead Zinc Mine
(Delong Mountain Transportation System)

The Alaska Environmental Lobby, a coalition of 19 groups within the State, has followed and testified on legislation involving the Red Dog mine for the last three years. The issue is important to us for four reasons. First, we are interested in all legislation affecting natural resource conservation and development. Because of its size alone, the Red Dog project deserves special attention. Second, the mine and transportation corridor are in an undeveloped part of the state, and we want the development to be sensible and environmentally responsible. Third, the proposed state subisidies to this project are huge. In effect, the state is going into the mining business without public debate or approval. Fourth, the state is delegating enormous power to a state authority, the Alaska Industrial Development Authority (AIDA). The history of the Alaska Power Authority shows that the state should be much more cautious with giving power to AIDA.

The Red Dog Mine. The world's largest producer of lead and zinc, Cominco, has entered into a partnership with NANA Regional Native Corporation to develop a mine in Northwest Alaska, about 90 miles from Kotzebue. It will be on NANA Corporation land. At full production, it could be the world's largest zinc mine. The ore body is extremely rich and easy to remove. Hank Giergerich, the president of Cominco Alaska, has stated that once the mine is developed, the operating costs will be lower than 90% of the world's zinc mines.

Development Costs. The promoters of this impressive mine say that they need financial aid from the state of Alaska before they can develop the project. Strange as it sounds, they say that Cominco, a large healthy multinational corporation, cannot raise the needed funds from private sources. They go on to say that help from the state will make the difference between stop and go.

It is certain that the development costs for the mine will be high. The site is in a roadless area, and the most direct route to tidewater is 55 miles. There is no port facility at tidewater, and shallows will prevent ocean freighters from getting close to shore. The most direct route to tidewater requires Congressional approval. The alternatives are longer and more expensive.

ALASKA CENTER FOR THE ENVIRONMENT • ALASKA CHAPTER, SIERRA CLUB • JUNEAU GROUP, SIERRA CLUB • SITKA GROUP, SIERRA CLUB
KNIK GROUP, SIERRA CLUB • DENALI GROUP, SIERRA CLUB • ANCHORAGE AUDUBON SOCIETY • ARCTIC AUDUBON SOCIETY
DENALI CITIZENS' COUNCIL • ALASKA FRIENDS OF THE EARTH • JUNEAU AUDUBON SOCIETY • KACHEMAK BAY CONSERVATION SOCIETY
KENAI PENINSULA AUDUBON SOCIETY • KODIAK AUDUBON SOCIETY • LYNN CANAL CONSERVATION • ALASKA WILDERNESS GUIDES ASSOCIATION
SITKA CONSERVATION SOCIETY • NORTHERN ALASKA ENVIRONMENTAL CENTER • SOUTHEAST ALASKA CONSERVATION COUNCIL

The crucial question is whether the high development costs of the mine will be paid off in the long run by the profits from the mine. The profits will vary tremendously with changes in the world price of lead and zinc. These prices are very hard to predict. The prices for lead and zinc went into a slump at the last recession, and so far they have not recovered.

State Participation. The state is being asked to build a road and port facility for the use of the Red Dog mine, as well as other mines which may or may not be developed in the same area. If the state built the port and road, it would help Cominco, because Cominco would not have to raise and repay so much money to get the project started. The project would be financed with revenue bonds issued by the state. Cominco and any other mines would pay tolls for the use of the road. According to current Department of Commerce projections, the tolls would pay only part of the costs of the road and port facility.

The difference between the tolls that Cominco pays and the repayments on the bonds that the state makes would be a subsidy of the mining road and port. The magnitude of the subsidy would depend on the tolls negotiated with Cominco. The lower the tolls, the higher the subsidy. Interest rates for bonds also are a factor. If bond interest rates were high at the time of the bond sale, the state would have to pay more. The bond sale will be before construction, but tolls will be collected only after construction, or possibly later. The longer the interval without toll payments from Cominco, the greater the state contribution to the project.

The Economic Development Fund. Last year the Legislature created the "Economic Development Fund" within the Alaska Industrial Development Authority. This was the result of a late night last minute maneuver on the House side that also authorized a revenue bond sale for the Knik Arm Crossing. The economic development fund would provide the difference between low toll payments and high bond payments. The current plan for subisidy would have the state dedicate $18 million dollars and a bond portfolio worth $112 million to the fund. This amounts to a blank check for the Red Dog project with an upper limit of $140 million, if precise restrictions on not placed on the use of the fund.

The Bond Issue. The state plans a sale of $175 million dollars to build the road and port facility. This is a revenue bond sale, and so does not require voter approval, as would state guaranteed "general obligation bonds", such as school bonds. The revenue bond issue will be backed up by the tolls on the road and port, and the $140 million in the economic development fund mentioned above. To further reassure investors in the bonds, the authorization of the bond issue will also have "moral obligation" language, which instructs AIDA to notify the legislature and the Governor if the economic development fund is depleted and there is danger that the bondholders will not be paid. Thus the backing of the state is not guaranteed, but it is suggested.

Legislation has been introduced on both sides of the Capital to set up the bond issue and economic development fund. They are HB 369, HB 370, SB 279 and SB 280. Draft legislation, which may be amended to HB105, Anchorage Airport Bonds, does the same thing, but with fewer restrictions.

Hasty Decisions. Incredibly, this legislation is being considered before the state has an accurate view of the profitability of the mine. They do not know if the road and port subsidy is really needed to help the mine, or if Cominco is just trying to mine the state for extra dollars. If a subsidy is needed, they do not know the magnitude of it. A detailed finance plan is being prepared by Stanford Research Institute under contract to the State of Alaska. But it will not be ready in final form until August. Draft versions may be ready before the Legislature adjourns. Only after the finance plan is ready will the state have an idea of how much of the $18 million in cash and $112 million in bonds is really needed to get the mine started.

RED DOG

RECOMENDATIONS OF THE ALASKA ENVIRONMENTAL LOBBY

1.) The State should not subsidize mining ventures. Mining is a complicated and speculative business. The estimation and assumption of risks in mining development should be left to the private sector. If the world's largest producer of lead and zinc can't find investors to develop the Red Dog mine, the state should not try to second guess the market.

2.) If Legislators are determined to subsidize mining ventures, they should have an overall plan for subsidizing mining ventures. Is Red Dog the best mine to subsidize? Will the next mine to come along receive such generous treatment?

3.) The State is being hurried into a blind commitment to Red Dog. The legislature should wait until the Stanford Research Institute financial plan is completed, and until affected agencies have a chance to respond to questions from Legislators about the subsidy plan.

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF COMMERCE & ECONOMIC DEVELOPMENT

OFFICE OF THE COMMISSIONER

7TH FLOOR FRONTIER BLDG.

ANCHORAGE, ALASKA 99503
PHONE: (907) 562-2728

RECEIVED JAN 2 8 1985

RESOLUTION OF INTENT

WHEREAS, the State of Alaska encourages the diversification of the Alaska economic base through the development of mineral resources; and

WHEREAS, the State of Alaska supports economic development in Alaska and the expansion of regional job opportunities; and

WHEREAS, the State of Alaska recognizes that the lack of transportation facilities in Northwest Alaska poses an economic barrier to the attainment of economic development; and

WHEREAS, the Alaska Department of Commerce and Economic Development is the principal state department responsible for facilitating economic development in all regions of the state; and

WHEREAS, Cominco, Alaska, a division of Cominco, American is considering the development of the Red Dog mineral deposit in the DeLong Mountains area; and

WHEREAS, other mineral resources have been identified in the area near the Red Dog mineral deposits; and

WHEREAS, the Alaska Department of Commerce and Economic Development, in a report entitled Red Dog Project Analysis, identified substantial regional benefits in the event that the DeLong Mountains transportation project is developed; and

WHEREAS, the projected cost of the development of the Red Dog mineral site, excluding the cost of developing transportation facilities, is estimated to be $290 million (in 1985 dollars); and

WHEREAS, the projected cost of the transportation facilities is estimated to be $152 million (in 1985 dollars); and

WHEREAS, the lack of available transportation facilities near the mineral deposit may substantially delay private development of the Red Dog mineral deposit; and

WHEREAS, it is contrary to the best interests of the state for there to be a substantial delay in the development of the DeLong Mountains mineral resources and, in particular, in the development of the Red Dog mineral deposit; and

WHEREAS, the transportation facilities which, among other public purposes, would be used in conjunction with the development of the Red Dog mineral deposit are collectively referred to as the Delong Mountains transportation project; and

WHEREAS, the Alaska Industrial Development Authority (AIDA), a public corporation of the State of Alaska has authority under Alaska Statutes Title 44, Chapter 88, to participate, either independently or in conjunction with a private developer, in the financing and development of public transportation facilities such as the DeLong Mountains transportation project;

NOW THEREFORE BE IT RESOLVED that Cominco, Alaska and the Alaska Department of Commerce and Economic Development, on behalf of the State of Alaska, agree to the following STATEMENTS OF INTENT:

1. The State of Alaska supports ongoing efforts by the Alaska Industrial Development Authority to examine the feasibility of AIDA financing of the DeLong Mountains regional transportation project.

2. The parties recognize and support AIDA's intent to promptly execute all necessary professional services contracts, including a contract with a firm nationally recognized in the field of financial planning, to assist in the preparation of the financial plan required pursuant to AS 44.88.173.

3. If AIDA participates in the financing of the DeLong Mountain transportation project, the parties agree that AIDA and Cominco, Alaska will enter into an agreement which will provide, inter alia, for the establishment of equitable user fees payable to AIDA in an amount sufficient to enable AIDA to repay amounts loaned by the state to AIDA; and for the refunding of certain state expenditures in the event that Cominco, Alaska decides not to proceed with the development of the Red Dog mineral deposit.

4. The State of Alaska states its intent to submit appropriate funding requests to the Alaska legislature in support of the DeLong Mountain transportation project.

5. The State of Alaska and Cominco, Alaska recognize that this Resolution of Intent does not limit or otherwise affect AIDA's Board of Directors' independent judgment with respect to AIDA's participation in the DeLong Mountain transportation project, nor does this Resolution of Intent limit or otherwise affect the independent judgment of the Alaska legislature upon its consideration of funding requests.

Date: Dec 18/1984

H. M. Giegerich, President
Cominco, Alaska

Date: Dec 17, 1984

Richard A. Lyon, Commissioner
Department of Commerce and
Economic Development

I. BACKGROUND

To help understand the Alaska Industrial Development Authority's (AIDA) potential role in the DeLong Mountains transportation project, some history is useful. Prior to 1984, AIDA could not have participated in projects such as that contemplated for the DeLong Mountains, in that State law did not permit AIDA to own projects, except in cases of default. Rather, what AIDA could do then, and still does now, is to issue tax exempt industrial development bonds to assist private investors in the financing of a variety of projects. AIDA has been very successful in this role, having issued over $700 million worth of tax exempt revenue bonds during the past few years. However, despite this success AIDA still could only play a passive role, in that AIDA could neither initiate or own projects.

During the 1984 legislative session, both the Governor and the Legislature decided that a more active State participant was needed for certain economic development projects. Many proposed developments are likely to be of a joint public-private nature, because of resource ownership, access, and so forth, hence an active state representative is needed. This is especially true if it appears that the State will become involved financially. For instance, in many situations, new infrastructure facilities have to be constructed before development can proceed. Although these facilities are, by and large, the responsibility of developers as a group, they are not necessarily the responsibility of any single developer. And, if the cost of providing the required infrastructure facilities has to be borne by one developer, it may be that these costs, in addition to the developer's other costs, are simply too much for the proposed project to bear, so the development does not proceed. In such cases, it may be appropriate for a governmental entity to construct the necessary infrastructure facilities, and then charge fees to all users to pay for the facilities. Furthermore, if the State decides to participate financially in providing these infrastructure facilities, it is much easier to do so via a governmental entity as opposed to directly with a private developer.

Of course, State government should not get involved in a development project simply because it is difficult for the developer to pay for some costs. Rather, State involvement should be based upon the benefits of the project to all Alaskans. In light of the State's almost singular dependence upon the petroleum industry, development of new, non-petroleum based or dependent industries is of critical importance. Further, when evaluating a proposed new development, it is important to keep in mind the total impact of that project or development. Generally the project is being evaluated during its start-up phase, where costs are significant and revenues are, at best, just starting. Since the State is concerned with the future economic situation, as well as the present, the benefits to the State over the long term must be given adequate weight, rather than focusing strictly on short term return.

II. WHY IS AIDA INVOLVED

The question remains, why did the Governor and the Legislature decide AIDA should have the ability to actively become involved in infrastructure projects such as discussed above. Although there may be other reasons, at least some of the major factors were:

(1) AIDA is a known, existing entity that has an independent legal existence from the State, but is still controlled by the State.

(2) AIDA can (and does) issue debt that is separate and distinct from the State.

(3) AIDA has experience with complex projects.

(4) AIDA has extensive experience with financing and bonding, particularly tax exempt bonding.

As a result, in 1984 the Legislature passed Chapter 162, which broadened AIDA's ability to participate in economic development projects. As well as expanding AIDA's powers, Chapter 162 also established a new fund in AIDA, the Economic Development fund, that is legally and financially separate from the Authority's existing fund. It is through this new fund that AIDA can exercise its new powers to:

(1) own and operate certain types of projects;

(2) charge user fees for these projects;

(3) issue debt for these projects; and

(4) accept state loans or grants for these projects

III. AIDA AND THE DELONG MOUNTAINS TRANSPORTATION PROJECT

Because of AIDA's newly acquired abilities, the decision was made to involve the Authority in the DeLong Mountains transportation project. The transportation project itself consists of a port and a 55 mile road in the western DeLong Mountains area, near Kivalina. The cost of the port is estimated at $65 million, and the cost of the road is estimated at $85 million, for a total estimated cost of $150 million for the project, with all figures in 1985 dollars. Although this region is a heavily mineralized area, only one mine site is presently close to going into production. This is the Red Dog deposit, a zinc, lead and silver deposit being jointly developed by Cominco Alaska and the NANA Regional Corporation. Other major deposits are known, such as GCO Mineral's Lik deposit, but development of these are thought to be five years or more behind Red Dog.

What is being considered at this time is to have AIDA construct the transportation project, and then charge fees (or tolls) to all users. At first, it is expected that Cominco Alaska would be the only significant user, but eventually other users are expected.

At this time, AIDA's continued involvement and eventual completion of the project looks favorable, however, no final "go-no go" decision has yet been made. Prior to making a final decision, the Authority has to prepare a Finance Plan, as prescribed by AS 44.88.173.

The Finance Plan has to identify the operational and capital costs of the project, and identify where all revenues will come from to pay these costs. The Finance Plan will offer a variety of financing options, with at least one of the options being that approach which minimizes any cost to the State. In preparing a Finance Plan, AIDA has identified the following guidelines:

(1) attempt to minimize the total costs of the project;

(2) minimize any State General Funds required;

(3) make maximum use of tax-exempt financing;

(4) design a plan that has the optimum chance of completing the project as expeditiously as possible; and

(5) never allow the State or AIDA to be in the position of having a completed project without a user, unless the State and AIDA are reimbursed for their investments.

IV. WHAT HAS OCCURRED TO DATE

Since AIDA became involved with the transportation project in the summer of 1984, a number of activities have occurred.

(1) A Resolution of Intent has been executed between the Department of Commerce and Economic Development and Cominco Alaska (Appendix A).

(2) An RFP for the Finance Plan (required by 44.88.173) has been prepared and distributed (Appendix B). A draft report is due this session of the Legislature. The statute requires that a Finance Plan be prepared and presented to the Legislature, the Governor and the State Bond Committee before issuing bonds or otherwise incurring debt for the project. It also mandates, among other things, that if a project requires financial assistance from the State, the state financial assistance must be available before bonds are issued for the project.

(3) An RFP for civil engineering services to verify cost figures for the road and port has been prepared and distributed.

(4) The Authority has assembled a team of legal and financial experts to assist with the project.

(5) Much attention has been focused on how to finance the project. For AIDA to build the project, it will need to have $150 million to pay for construction. These funds can come from a variety of sources, with the most likely ones being tax exempt revenue bonds, state loans to AIDA, and possibly state grants. A number of differing financial scenarios have been considered, all of which have indicated the need for some initial state financial involvement, for instance loans to AIDA.

(6) Last year the Legislature appropriated $3.4 million to AIDA for the project. To date, it has been used for the following items:

(1) Finance Plan costs of between $250,000 - $300,000
(2) Engineering services of $50,000 - $100,000
(3) Miscellaneous AIDA expenses of approximately $10,000

The remainder is available for various aspects of the DeLong Mountains transportation project consistent with the appropriation and finance plan.

(7) An additional $18 million request for a state loan to AIDA has been included in the Governor's FY86 Budget Request. As noted above, all analysis to date indicates the need for state loans, and this would constitute the initial capitalization.

V. WHAT IS PLANNED FOR THE FUTURE

The goal of this project is to allow development and production of the mineral resources of the western DeLong Mountains, along with the new employment and new economic activity that would result. Since this is a new (non-petroleum dependent) industry that will provide economic benefits to Alaskan citizens and State government over a long period, AIDA is eager to proceed with the project, assuming a suitable financial arrangement can be achieved. Although, of course, no results from the Finance Plan RFP are available yet, both the Department of Commerce and Economic Development and AIDA have made some initial calculations with respect to financing and costs and revenues associated with the transportation project. At this stage, under a range of different assumptions and alternatives, it is inevitably the case that State financial assistance is required, at least initially, if the transportation project and mineral development are to occur in the near future. The details of how much assistance would be required, and under what terms, will be provided in the Finance Plan. AIDA is continuing to meet with Cominco Alaska and NANA to devise an approach that minimizes any required financial assistance from the State, but still allows the project to proceed in an expeditious manner.

In closing, one seeming inconsistency needs to be discussed. The transportation project is being acclaimed as being part of a new self-supporting economic development project that will bring jobs, tax revenues, and increased economic activity to Alaska, yet a major part of this, and other discussions on the project center on the need for State financial assistance. While it is true that the project definitely appears to need State assistance, at least initially, to fairly appraise the true impact and value of the project, one must consider both the broad geographic and duration of the project. This infrastructure project will facilitate development of not just Red Dog, but also other mineral resources in the area. Further its benefits are by no means short term, but rather should go on for decades. So although there appears to be an initial financial need, when viewed in this broader perspective, available information suggests that the State may receive its initial investment back many times over. Indeed, the State's ultimate decision regarding financial involvement should consider all of these broadly based factors, and then proceed only if, in this broad perspective, it is a "good deal" for the people of Alaska.

APPENDIX A

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF COMMERCE & ECONOMIC DEVELOPMENT

OFFICE OF THE COMMISSIONER

7TH FLOOR FRONTIER BLDG.
3601 C STREET, SUITE 722
ANCHORAGE, ALASKA 99503
PHONE: (907) 562-2726

RESOLUTION OF INTENT

WHEREAS, the State of Alaska encourages the diversification of the Alaska economic base through the development of mineral resources; and

WHEREAS, the State of Alaska supports economic development in Alaska and the expansion of regional job opportunities; and

WHEREAS, the State of Alaska recognizes that the lack of transportation facilities in Northwest Alaska poses an economic barrier to the attainment of economic development; and

WHEREAS, the Alaska Department of Commerce and Economic Development is the principal state department responsible for facilitating econom development in all regions of the state; and

WHEREAS, Cominco, Alaska, a division of Cominco, American is considering the development of the Red Dog mineral deposit in the DeLong Mountains area; and

WHEREAS, other mineral resources have been identified in the area near the Red Dog mineral deposits; and

WHEREAS, the Alaska Department of Commerce and Economic Development, in a report entitled Red Dog Project Analysis, identified substantial regional benefits in the event that the DeLong Mountains transportation project is developed; and

WHEREAS, the projected cost of the development of the Red Dog mineral site, excluding the cost of developing transportation facilities, is estimated to be $290 million (in 1985 dollars); and

WHEREAS, the projected cost of the transportation facilities is estimated to be $152 million (in 1985 dollars); and

WHEREAS, the lack of available transportation facilities near the mineral deposit may substantially delay private development of the Red Dog mineral deposit; and

WHEREAS, it is contrary to the best interests of the state for there to be a substantial delay in the development of the DeLong Mountains mineral resources and, in particular, in the development of the Red Dog mineral deposit; and

WHEREAS, the transportation facilities which, among other public purposes, would be used in conjunction with the development of the Red Dog mineral deposit are collectively referred to as the Delong Mountains transportation project; and

WHEREAS, the Alaska Industrial Development Authority (AIDA), a public corporation of the State of Alaska has authority under Alaska Statutes Title 44, Chapter 88, to participate, either independently or in conjunction with a private developer, in the financing and development of public transportation facilities such as the DeLong Mountains transportation project;

NOW THEREFORE BE IT RESOLVED that Cominco, Alaska and the Alaska Department of Commerce and Economic Development, on behalf of the State of Alaska, agree to the following STATEMENTS OF INTENT:

1. The State of Alaska supports ongoing efforts by the Alaska Industrial Development Authority to examine the feasibility of AIDA financing of the DeLong Mountains regional transportation project.

2. The parties recognize and support AIDA's intent to promptly execute all necessary professional services contracts, including a contract with a firm nationally recognized in the field of financial planning, to assist in the preparation of the financial plan required pursuant to AS 44.88.173.

3. If AIDA participates in the financing of the DeLong Mountain transportation project, the parties agree that AIDA and Cominco, Alaska will enter into an agreement which will provide, inter alia, for the establishment of equitable user fees payable to AIDA in an amount sufficient to enable AIDA to repay amounts loaned by the state to AIDA; and for the refunding of certain state expenditures in the event that Cominco, Alaska decides not to proceed with the development of the Red Dog mineral deposit.

4. The State of Alaska states its intent to submit appropriate funding requests to the Alaska legislature in support of the DeLong Mountain transportation project.

5. The State of Alaska and Cominco, Alaska recognize that this Resolution of Intent does not limit or otherwise affect AIDA's Board of Directors' independent judgment with respect to AIDA's participation in the DeLong Mountain transportation project, nor does this Resolution of Intent limit or otherwise affect the independent judgment of the Alaska legislature upon its consideration of funding requests.

Department of Commerce and
Economic Development

APPENDIX B

REQUEST FOR PROPOSAL FOR FINANCE PLAN

The Alaska Industrial Development Authority is inviting proposals to assist in preparation of a finance plan for a proposed transportation project in the DeLong Mountains area.

This RFP does not in any way obligate the Authority to reimburse recipients of this RFP for any costs incurred in the preparation of a proposal. The Authority reserves the right to reject all proposals. The Authority may request some or all respondents to clarify or supplement their proposals through additional written submission. All respondents will be notified in writing of the acceptance or rejection of their proposal.

I. Introduction and Explanation of Project

A. Alaska Industrial Development Authority:

The Authority was created by the Alaska Legislature in 1967. The purpose of the Authority, as stated in the Act, is to promote, develop and advance the general prosperity and economic welfare of the people of the State of Alaska, and to relieve problems of unemployment. In 1982, the Authority's enabling legislation was amended to add to its purpose the promotion, development and maintenance of an adequate supply of multi-family housing projects. Under legislation enacted in 1984, the Authority may acquire, manage and operate certain types of projects which the Authority considers necessary or appropriate to serve a public purpose. Under the newly enacted statutory authority, the Authority is presently reviewing the possibility of financing and constructing a transportation project in the DeLong Mountains area.

B. The Proposed Transportation Project

The proposed transportation project (sometimes also referred to herein as "the project") consists of two components; (1) a 55 mile segment of road, commencing near the Red Dog mine site and going to tidewater, and (2) a port, including shore facilities. The intent of the transportation project is to provide the necessary infrastructure to encourage mining development and regional port in the western DeLong Mountains area, in northwest Alaska.

The entire western DeLong Mountains is believed to be heavily mineralized. One mine site in particular has been extensively explored, and it is understood that this particular mine would be the initial user of the proposed transportation project. This mine would be based upon the Red Dog zinc, lead, and silver deposit. The Red Dog deposit is one of the richest in the world, having indicated reserves of 85 million tons of ore with an average grade of 17.1% zinc, 5.0% lead, and 2.4 ounces per ton silver. The mine would be developed as a joint project involving Cominco Alaska and the NANA Regional Corporation. The mine site itself would be developed by Cominco Alaska without any state involvement.

The transportation project would be owned and operated by AIDA. Users, such as Cominco Alaska would be charged a fee for use of this transportation system.

C. The Finance Plan

Before AIDA can proceed with a project which it intends to own and operate, it must first prepare a finance plan. The requirements of the finance plan are listed in AS 44.88.173, which is reproduced below. The purpose of this RFP is to fulfill the requirements of AS 44.88.173.

Sec. 44.88.173. Finance plan.

(a) Before approving a project financed under AS 44.88.172, the authority shall prepare a finance plan. The finance plan must include an estimate of the total cost of the project, and a description of the sources of money that will be used to finance the total cost of the project. The finance plan must also include an estimate of the operational costs of the completed project, as well as a description of the source of the money that is to be used to pay the operational costs.

(b) The authority shall give preference to a project that does not require financial assistance from the state. If the authority determines that a project requires state financial assistance, and if the authority further determines that it is desirable to finance the project, the authority shall recommend a method of financing that minimizes cost to the state. A finance plan required under (a) of this section must identify the method of financing that minimizes the cost to the state.

(c) The authority shall submit a finance plan prepared under this section to the state bond committee, the governor, and the legislature before issuing bonds or otherwise incurring debt for the project. If a project requires financial assistance from the state, the state financial assistance must be available before bonds are issued for the project. (¶ 8 ch 162 SLA 1984)

II. Terms & Conditions of Performance

A. Your proposal should be submitted with the understanding that it may form a material part of any subsequent contract. Your proposal should be complete as to all terms and conditions. After the contractor is selected the Authority may negotiate a contract with conditions considered in the best interest of the Authority. All terms and conditions must remain a firm offer for a period of not less than 60 days.

The proposal is due by February 15, 1985 (see Submission of Proposal section for details). The Authority expects to select a successful contractor by February 22, 1985. A complete first draft that is available and suitable for public distribution and comment must be completed by April 15, 1985.

Please note that the contract will not take effect until approved by the Commissioner of the Department of Administration pursuant to Alaska Statutes 36.98.040 (c).

B. Preparation of the finance plan requires the use of certain cost figures. In general estimates of these cost figures should be available from Cominco Alaska via the Authority. Some of these estimates will have been verified by the State Department of Transportation and Public Facilities, and/or by an independent contractor. It is not the intention of the Authority that a contractor employed as a result of this RFP prepare totally independent estimates of germane cost figures. Rather, a contractor should verify that cost estimates provided are reasonable, or make any modifications which the contractor believes are appropriate.

III. Scope of Services

A. Costs of the Project

1. Capital Costs: The contractor should provide an estimate of the capital costs of the project, broken down by major component.

2. Operational & Maintenance Costs: The contractor should provide an estimate of the Operational & Maintenance costs of the project, including an estimate of cost sensitivity to different use factors.

3. All estimates should be provided in 1985 dollars, and relevant cost escalators should be provided so that cost figures can also be estimated in future years dollars.

B. Revenues of the Project

1. The revenues of the project will be provided by fees charged to users of the project. All user fees should be in dollars per ton of ore shipped through the project, unless otherwise stated. Since no final user fee structure has been adopted by the Authority, alternative possibilities need to be examined. These alternatives must consider, at a minimum, the cases listed below.

   Some of the alternatives will require information specific to the proposed Red Dog mine. The contractor should assume that Cominco Alaska will, through the Authority, provide estimates of the capital costs and operational costs, including transportation costs, of the proposed mine, as well as estimates of ore production and the resultant concentrate tonnage that would be transported through the proposed road and port. A contractor may use these figures, or provide alternative figures.

2. The first set of alternatives assumes that the State will provide no financial assistance for the project. Since Cominco Alaska will be the initial user, baseline revenue projections should be based on Red Dog mine ore shipments. The contractor should provide estimates of different user fees, based upon: a range of price assumptions for zinc; a range of rates of return on investment to Cominco Alaska; a range of cost of capital to AIDA; other options deemed pertinent by the contractor.

3. The second set of assumptions assumes that the State is willing to make an unspecified amount of subsidy to the project, both to encourage its early completion and to account for its regional benefits. In this case, the contractor should select what it believes to be the "minimum rate of return on investment" required to induce a mining firm such as Cominco Alaska to make a major mining investment such as the Red Dog mine. More than one value may be selected for the "minimum rate of return", if the contractor believes a range of estimates would present a more accurate picture. Given this "minimum rate of return", the contractor is to estimate the amount of subsidy (if any) on the transportation project needed to cause the investment to be made. This should be estimated under a range of alternatives based upon differing assumptions for the: price of zinc; cost of capital for AIDA; other options deemed pertinent by the contractor. For all of the various alternatives estimated above, the contractor should indicate the cash flow to the project and the implied user fee structure of this cash flow. For any given level of subsidy, the contractor should indicate how the rate of return to the mine investor is affected depending upon whether this subsidy is used to offset the construction cost of the transportation project, or is reflected in deferred imposition of user fees on the project, or some combination thereof.

4. A proposal has been made to charge a certain user fee schedule to Cominco Alaska for its use of the proposed transportation project. This proposal will be made available to the successful contractor.

   Using the proposal and using the assumptions of the earlier alternatives with respect to costs and production, the contractor is to estimate: the implied rate of return to Cominco Alaska on its mine investment, and the amount of subsidy, if any, implied in the proposal. The contractor should state specifically what assumptions are being used for key variables (e.g. price of zinc) in this analysis, and further should discuss how sensitive the results are to changes in these key variables.

5. There are potential users of the transportation project other than Cominco Alaska for the Red Dog mine. The contractor should demonstrate how the above results would change if other users were to utilize the transportation system. Estimates of the production volume attributable to other users will be available from AIDA, however an independent estimate should also be made by the contractor.

C. Financing Options

1. The intent of the Finance Plan is to develop a financial plan that will provide adequate resources to enable a project to be undertaken and completed, while at the same time minimizing the costs both to the State and to the proposed project. As such, any proposed plan that will not realistically provide for enough resources to complete the proposed project is, by definition, not a Finance Plan.

2. The contractor should examine the question of debt financing for the project. At a minimum, the following questions should be answered:

- What forms of debt financing are available, and under what conditions?

- From a financial perspective, how much of the proposed project can be debt financed, and under what conditions?

- What types of security will be required for debt financing, and what are the possible interest rates for various types of financing?

3. If State financial assistance is required, it could come in a variety of forms. The contractor should consider different types of State assistance, such as a cash grant, low or deferred interest loans, appropriation of capital reserve funds, and so forth. The attributes of different types of assistance should be discussed, included specific advantages and disadvantages to the State, or to the financial feasibility of the project.

4. The contractor should consider these various financing options for both the construction phase, and the term financing. That is, one type of financing may be more appropriate during construction, whereas a different option may be better for term financing.

D. Presentation of Alternative Finance Plans

1. The contractor is to provide a series of alternative total Finance Plans. The term total Finance Plan refers to including financing during construction as well as term financing. At a minimum, the contractor must include as alternatives: (1) The Finance Plan involving the minimum cost to the State; (2) the option proposed by Cominco Alaska; and (3) an option that utilizes the maximum possible tax exempt bonding. Other options having particularly favorable attributes should also be included, up to a maximum of eight alternative Finance Plans.

2. The advantages and disadvantages of each plan should be discussed. At a minimum, each plan should include the total costs of the project; the costs, if any, to the State; the estimated rate of return to Cominco Alaska; the proposed cash flow and user fee structure; and explicit listing of key assumptions.

3. The models used to develop these alternatives must be available at no additional costs to the Authority. If requested by the Authority, the contractor will make these available in a computer ready manner that can be loaded on the Authority's equipment (see Appendix A).

E. Presentation of Results

An integral part of this study is satisfactory presentation of findings. These presentations would include at a minimum interim reports as requested by the Authority, an initial completed draft report, and a final report. In addition, the contractor must be available to make presentations to the Governor, other members of the administration and to various legislative committees during, and after, the course of the study.

F. **Fees**

A contractor should provide a fixed price bid for the entire contract. Also, an hourly charge should be provided for any work done at the request of the Authority after the completion of the project described in this R.F.P. The Authority has budgeted approximately $250,000 to $300,000 for this study.

IV. Method of Evaluation

An evaluation system will be utilized to review the proposals. The factors to be considered will consist of:

(i) a work plan which addresses the scope of services set forth in Section III of this RFP

(ii) proposed staff;

(iii) experience of respondent in performing an analysis of the feasibility of comparable capital facilities; and

(iv) availability of respondent to confer with staff of the Authority and to complete the feasibility study within the contemplated time frame.

In addition, the Authority may elect to conduct oral interviews with some or all of the respondents, and if oral interviews are conducted, the interviews will be considered in the award of the contract.

V. Submission of Proposals

Proposals may be submitted by providing 6 copies of your proposal to:

Bertram L. Wagnon, Executive Director
Alaska Industrial Development Authority
1577 "C" Street, Suite 304
Anchorage, Alaska 99501

Proposals must be received at the offices of the Alaska Industrial Development Authority, 1577 "C" Street, Suite 304, Anchorage, Alaska, 99501, no later than 3:00 p.m. on February 15, 1985. The proposer is solely responsible for the delivery of their proposal and proposals received after the above date and time will be rejected.

Each proposal should be clearly marked "Proposal to the Alaska Industrial Development Authority" on its outside cover. All proposals will remain sealed and unopened until after 3:00 p.m. on February 15, 1985.

APPENDIX A

TECHNICAL SPECIFICATIONS

COMPUTERS:	WANG VS 80	with a 308K-Byte Diskette Drive (S.S.,S.D.) and a Phoenix Disk Drive (75M Fixed Disk & 15M removable pack).

ALASKA INDUSTRIAL DEVELOPMENT AUTHORITY

1577 "C" STREET • SUITE 304 □ ANCHORAGE, ALASKA 99501-5177 □ (907) 274-1651

March 19, 1985

Representative John Sund
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Sund:

As requested, AIDA has compiled four possible financing scenarios as well as a general outline of what Cominco's obligations should be if the State were to invest in this project. These are attached as Appendix A and B. It is perhaps helpful to note that virtually any financing scenario that may work requires at least $18 million in up front state assistance.

Based upon the requirement that the State take some affirmative action this session of the Legislature the most prudent course of action would seem to be:

(1) Appropriate $18 million to the Economic Development Fund for the DeLong Mountains Transportation project.

(2) Capitalize the AIDA Economic Development Fund with approximately $100 million of loans held now by the Department of Commerce & Economic Development.

(3) It will take approximately six months to transfer loans and audit them. No financing could be done during this period. When the Legislature reconvenes in January, they could reappropriate everything back to the General Fund or allow the project to go forward.

(4) Large project financings such as this involve an immense number of variables. Absolute certainty of the financing will occur only when the financing is completed. Neither AIDA, Cominco or anyone else can control these external factors. By taking step one and two the State will have:

    (1) Indicated to Cominco its intent to proceed with the project.

(2) Put Cominco on notice that now they must negotiate and execute appropriate guarantees and use agreements as they have indicated to the Legislature.

(3) Provide AIDA both time and perimeters to attempt to craft a financial transaction to provide the necessary funds for the road and port.

(4) Should the project fail to go forward, all funds would be available for reappropriation. Interest earnings on the $18 million as well as principal and interest on the loans would be retained in the Economic Development Fund and be subject to reappropriation.

Your requested review of the overall economics of the project as pertains to State benefits is being coordinated by Frank Homan and involves an "update" of the Red Dog Project Analysis, a comprehensive work compiled in the fall of 1984.

On Monday, February 25, 1985, the Alaska Industrial Development Authority Board selected SRI, International as the contractor to prepare the finance plan. A first draft was due by mid-April with the final product to be completed by late summer of 1985.

On March 18, 1985, Arthur Young filed a request for an administrative appeal of the award of the contract for the preparation of the finance plan. This appeal may preclude us from executing a timely contract with SRI and may make a draft written report this session of the Legislature doubtful. The Authority feels the capitalization of the Economic Development Fund with both the loans and $18 million is the minimum required under any financing scenario.

Sincerely,

Bertram L. Wagnon
Executive Director

Enclosures

APPENDIX A

Case I

Summary: Entails large bonding at outset of project. Bonds are used for construction, state appropriations are required to pay interest for bonds during construction, then a large share of bonds are called after project begins operating.

ASSUMPTIONS AND CHARACTERISTICS

1. Construction draws are assumed to be (in thousands):

DATE	PORT DRAW	ROAD DRAWS	TOTAL	CUMULATIVE
1/1/86	$ 4,000	$ 1,000	$ 5,000	$ 5,000
1/1/87	3,000	5,000	8,000	13,000
1/1/88	14,000	57,000	71,000	84,000
1/1/89	50,000	33,000	83,000	167,000
1/1/90	4,000	3,000	7,000	174,000
TOTALS	75,000	99,000	174,000	174,000

2. Bonds: Assumes that $155 million in tax exempt bonds are issued on 1/1/86. Of this amount approximately $128 million goes to the construction fund, and $19 million is placed in a debt service reserve fund. As of 1/1/90, adequate funds are available in debt service fund to call $56 million in bonds, leaving $99 million outstanding. Bond interest rate is assumed to be 10.5%.

3. State Assistance: This case assumes that the following general fund appropriations are made to AIDA to pay bond interest during the construction period - also assumes that interest earned on these appropriations stays with AIDA for same purpose:

DATE	G.F. APPROPRIATION (000)
7/1/85	$30,000
7/1/86	$20,000
7/1/87	$20,000
7/1/88	$10,000
7/1/89	$10,000
TOTAL	$90,000

4. After Completion: There are assumed to be $99 million worth of bonds outstanding, with approximately $12 million of this in what is assumed to be a self-supporting capital reserve fund. This leaves approximately $87 million in debt that must be repaid by the revenues of the project. Debt service on this is

assumed to be: interest only 1990 - 1995: debt service $9.1 million; interest and principal 1995 - 2015: debt service $10.7 million. No provision has been made to repay the State contribution of $90 million, but this could happen from tolls collected above those needed to pay debt service, and after 2015.

5. Advantages: Bonds are issued up front, so this provides high likelihood there will be enough funds to construct project. Also, early issuance locks in long term interest rate, and protects against possible changes in federal laws involving tax exempt bonding. Also provides debt service in line with Cominco Alaska's estimate of their ability to pay.

6. Disadvantages: Involves large issuance of bonds and attendant bond issuance cost, plus large risk of interest rate loss if bond proceeds cannot be invested at bond debt service rate prior to use in construction. Unless it can be guaranteed that needed state appropriations will be forthcoming, this is not a legal approach, since AIDA cannot issue debt that requires state assistance, unless the state assistance is already in place. Requires state to appropriate $90 million for project with no specified repayment provisions. It may be that not all of the project is eligible for tax exempt bonding under federal law, and if so, this approach would probably not be feasible.

CASE IIa

Summary: Entails the state being the construction lender for the project. At completion, bonds are issued for a portion of the project cost, and those funds are used to repay state. Remainder of state construction financing is converted to long term loan, or grant.

ASSUMPTIONS AND CHARACTERISTICS

1. Construction draws are assumed to be (in thousands):

DATE	PORT DRAW	ROAD DRAWS	TOTAL	CUMULATIVE
1/1/86	$ 4,000	$ 1,000	$ 5,000	$ 5,000
1/1/87	3,000	5,000	8,000	13,000
1/1/88	14,000	57,000	71,000	84,000
1/1/89	50,000	33,000	83,000	167,000
1/1/90	4,000	3,000	7,000	174,000
TOTALS	75,000	99,000	174,000	174,000

2. Bonds: Assume tax exempt bonds for $84 million are issued at the completion of the project, with an interest rate of 10.5%. Of this amount $75 million would be used to pay back the state for construction financing, and $9 million would be used for a capital reserve fund.

3. State Assistance: State assistance would be in the form of interest free construction financing. The amount needed would be in accord with the construction draws.

4. After completion: After completion, $75 million of the state construction financing is paid back via a tax exempt bond sale. Debt service is assumed to be $9.6 million, with $8.6 million being required from the project, and the remainder from a self-supporting capital reserve fund. The remainder of the state construction financing, $99 million, would be converted to either long term loan or a grant. Repayment could come from tolls collected above that needed for debt service, or after bonds are paid (2015).

5. Advantages: Minimizes amount of external debt financing, and lowers total costs that are attributed to project, because there is no construction period interest to be paid. Maximizes probability that funds will be available for construction. May provide for lower interest rate for bonds, since project is less risky because it would be a completed, functioning project before bonding would occur. Provides relatively low debt service requirements on the bonds, so some "excess" funds may be available to pay back to the state.

6. Disadvantages: Requires major commitment by the state - e.g. $175 million over the five years. If bonds are not issued until, say, 1990, federal laws affecting tax exempt bonding may have changed. Also, there would be considerable uncertainty with respect to what interest rate might be in five years. Any repayment to the state would be over a long period of time.

CASE IIb

Summary: Entails the state being the construction lender for the project. Further it assumes that state will capitalize the Economic Development Fund (the Economic Development Fund is the own-and-operate element of AIDA) with existing state loans. At completion, bonds are issued for a portion of the project cost, and those funds are used to repay the state. Also, the cash flow from the loan capitalization is used to repay the state. The remainder of state construction financing is converted into a long term loan.

ASSUMPTIONS AND CHARACTERISTICS

1. Construction draws are assumed to be (in thousands):

DATE	PORT DRAW	ROAD DRAWS	TOTAL	CUMULATIVE
1/1/86	$ 4,000	$ 1,000	$ 5,000	$ 5,000
1/1/87	3,000	5,000	8,000	13,000
1/1/88	14,000	57,000	71,000	84,000
1/1/89	50,000	33,000	83,000	167,000
1/1/90	4,000	3,000	7,000	174,000
TOTALS	75,000	99,000	174,000	174,000

2. Bonds: Assume tax exempt bonds for $89 million are issued at completion of the project, with an interest rate of 10.5%. Of this amount, $80 million will be used to pay back the state for construction financing and $9 million will be used for a capital reserve fund.

3. State Assistance: This would be in two forms, first as interest free construction financing, and as capitalization of the Economic Development Fund. The construction financing would be in accord with construction draws. The capitalization is estimated to be approximately $100 million par value of existing state loans now held in the treasury.

4. After Completion: At completion, the state would have advanced an estimated $1/4 million to the project. Of this amount, $80 million would be paid back from the bond issue, approximately $55 million would be paid back from the cash flow of the loan portfolio capitalization, and the remaining $39 million would be converted to a long term loan. The total estimated debt service is $10.2 million, with $9.2 million being required from the project, and the remainder from a self-supporting capital reserve fund. This loan would be repaid with interest off the remaining capitalization and tolls in excess of the debt service, and after bonds are paid off.

5. Advantages: Minimizes amount of external debt financing, and lowers total costs that are attributed to project, because there is no construction period interest to be paid. Maximizes probability that funds will be available for construction. May provide for lower interest rate for bonds, since project is less risky because it would be a completed, functioning project before bonding would occur. Provides relatively low debt service requirements on the bonds, so some "excess" funds may be available to pay back to the state. Allows the state to be repaid most of its construction financing immediately upon initial operation of the project. Allows for good possibility that state will be repaid remaining $39 million within foreseeable future. Should make it easier to sell bonds, because cash flow from remaining capitalization can be used to increase coverage of debt service.

6. Disadvantages: Requires major commitment by the state - e.g. $175 million over the five years. Requires further up front commitment of $100 million in existing state loans. If bonds are not issued until, say, 1990, federal laws affecting tax exempt bonding may have changed. Also, there would be considerable uncertainty with respect to what interest rates might be in five years.

CASE III

Summary: This case uses a combination of funding sources. The funding sources involve state loan appropriations during construction, state capitalization of the Economic Development Fund (the Economic Development Fund is the own-and-operate element of AIDA) with existing state loans held by treasury, and issuance of tax exempt bonds for a major share of the project cost toward the end of the construction period. After completion the project would be financed with a combination of state debt and bond debt.

ASSUMPTIONS AND CHARACTERISTICS

1. Construction draws are assumed to be (in thousands):

DATE	PORT DRAW	ROAD DRAWS	TOTAL	CUMULATIVE
1/1/86	$ 4,000	$ 1,000	$ 5,000	$ 5,000
1/1/87	3,000	5,000	8,000	13,000
1/1/88	14,000	57,000	71,000	84,000
1/1/89	50,000	33,000	83,000	167,000
1/1/90	4,000	3,000	7,000	174,000
TOTALS	75,000	99,000	174,000	174,000

2. Bonds: Assumes that $110 million in tax exempt bonds would be issued to provide funds for construction during the fourth year. Of this, approximately $13 million is for a capital reserve fund, $75 million is for construction costs, and the remainder is for interest during construction and issuance cost. Bond interest rate is assumed to be 10.5%.

3. State Assistance: This would come in two forms. The first would be interest free loan appropriations (including interest earned on the appropriations) according to the following schedule:

DATE	G.F. APPROPRIATION (000)
7/1/85	$18,000
7/1/86	$15,000
7/1/87	$15,000
7/1/88	$15,000
TOTAL	$63,000

The other state assistance would be the capitalization of the Economic Development Fund with existing state loans. The required amount is estimated to be approximately $100 million in par value of loans, however any increases above this amount would lead to more rapid repayment of the state loan appropriations.

4. After Completion: At this point, the project will have $110 million of bond debt and $63 million of state debt, with an estimated $7 million available in a construction/debt service fund available to reduce bonded debt. After this reduction, total bond debt service is estimated at $11.8 million, with $10.5 million required from the project and the remainder from a self-supporting capital reserve fund. The state debt would be repaid from interest off of the remaining capitalization and tolls in excess of the debt service, and after bonds are paid off.

5. Advantages: Allows general fund assistance to be spread over a number of years, and is less in total than many options. Since bonding isn't done until near the end of the project, there is less bond interest during construction, and furthermore the project may appear to be more certain and hence get a lower interest rate. Assuming fourth year appropriation is made concurrent or before the bonding, then state law is satisfied in that AIDA has not incurred debt with state support being in place. Treats state appropriations of $63 million as loan, rather than grant. Should make it easier to sell bonds, because cash flow from remaining capitalization can be used to increase coverage of debt service.

6. Disadvantages: Requires significant commitment by the state, $63 million in general fund loan appropriations and a capitalization of at least $100 million in existing state loans. If bonds are not issued until, say, 1988, federal laws affecting tax exempt bonding may have changed. Also, there would be considerable uncertainty with respect to what interest rates may be in three years. This particular approach is very sensitive to cash flow projections, and further may require writing construction contracts that are subject to future appropriations.

Case IV

Summary: Entails large bonding at outset of project. Also assumes that state will capitalize the Economic Development Fund (the Economic Development Fund is the own-and-operate element of AIDA) with existing state loans. Bonds are used for construction, state appropriations are required to pay interest for bonds during construction. After completion, some bonds are called, and income from capitalization plus project revenues are used to pay for bonds that remain outstanding.

ASSUMPTIONS AND CHARACTERISTICS

1. Construction draws are assumed to be (in thousands):

DATE	PORT DRAW	ROAD DRAWS	TOTAL	CUMULATIVE
1/1/86	$ 4,000	$ 1,000	$ 5,000	$ 5,000
1/1/87	3,000	5,000	8,000	13,000
1/1/88	14,000	57,000	71,000	84,000
1/1/89	50,000	33,000	83,000	167,000
1/1/90	4,000	3,000	7,000	174,000
TOTALS	75,000	99,000	174,000	174,000

2. Bonds: Assumes that $155 million in tax exempt bonds are issued on 1/1/86, with approximately $128 million going into the construction fund. As of 1/1/90 adequate funds are available in the debt service fund to call $12 million in bonds, leaving $143 million outstanding. Bond interest rate is assumed to be 10.5%.

3. State Assistance: This would be in two forms, first as a $30 million appropriation on 7/1/85, and second as capitalization of the Economic Development Fund. The capitalization is estimated to be at least $100 million par value of existing state loans now held in the treasury.

4. After completion: There are assumed to be $143 million worth of bonds outstanding, with approximately $18 million of this in what is assumed to be a self-supporting capital reserve fund. This leaves approximately $125 million worth of debt that must be repaid from available sources. The annual debt service on this $125 million is estimated to be $14.3 million. Assuming the project tolls will generate $10.3 million, then the other $4.0 million is assumed to be derived from the interest from the remaining loans of the original $100 million capitalization of the Economic Development Fund. No provision has been made to repay the state contribution, but this could happen from excess revenues.

5. Advantages: Bonds are issued up front, so this provides high likelihood there will be enough funds to construct project. Also, early issuance locks in long term interest rate, and protects against possible changes in federal laws involving tax exempt bonding. Also provides debt service in line with Cominco Alaska's estimate of their ability to pay. Requires only $30 million worth of general fund cash appropriations, which is the least of all suggested options, to date.

6. Disadvantages: Involves large issuance of bonds and attendant bond issuance cost, plus large risk of interest rate loss if bond proceeds cannot be invested at bond debt service prior to use in construction. Assumes that all of the project is eligible for tax exempt financing, and this is not a certainty. This approach is quite sensitive to the construction draw schedule.

APPENDIX B

GENERAL GUIDELINES OF STATE/COMINCO RELATIONSHIP

SHOULD STATE INVEST IN THE PROJECT

(1) The State of Alaska thru AIDA will own and operate the port and road.

(2) Cominco will enter into an agreement with AIDA for payment of a user fee for operations and maintenance expense, as well as a toll fee for use of the facility.

(3) Additional users will be accommodated upon payment of appropriate fees.

(4) Satisfactory guarantees of total repayment of state expenditures by Cominco in the event the mine does not commence operation and accordingly completion guarantees by AIDA will be required.

(5) NANA will provide the necessary leases and rights-of-way for the land required.

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF REVENUE

TREASURY DIVISION

ELEVENTH FLOOR
STATE OFFICE BUILDING
POUCH SB
JUNEAU, ALASKA 99811
PHONE:

April 15, 1985

The Honorable Arliss Sturgulewski
Chairman
Resources Committee
Alaska Senate
Pouch V
Juneau, AK 99811

Dear Senator Sturgulewski:

This letter is in response to the requests contained in your April 1 letter on state loans that may be used in financing the DeLong Mountain Transportation project. The responses are in as much detail as is available at this time.

1. It has been suggested that $142 million in state loans held by the Department of Revenue be transferred to AIDA bonds. I would like to know the make up of those loans. What is the amount of each category (such as veterans, commercial fishing, small business, tourism, fisheries enhancement, child care and historical districts), the interest rates by category and the maturity dates? What is the amount of money by category that returns to a revolving loan fund pool and what amount returns to the general fund? If any revolving loan funds are transferred to AIDA, how does that affect the future ability of those revolving funds to meet the public demand for loans?

   The following amounts of loans are held in the general fund and serviced by the Department of Commerce and Economic Development as of February 28, 1985:

Type	Amount ($ 000)	Average Interest Rate 1/	Average Maturity
Veterans	82,291.4	6.92%	2003
Small Business	18,573.5	8.49	1993
Commercial Fish	29,809.3	7.81	1991
Tourism	2,575.2	8.07	1996
Child Care	18.0	5.83	1989
Historical District	123.7	6.67	1993
Fisheries Enhancement	6,804.2	7.96	N/A
Total	140,195.3	7.39	

1/ Net of .5% service fee on loans serviced by Commerce and an estimated .125% Commerce service fee on loans serviced by banks. The bank services fees are also netted out.

These loans would be transferred to AIDA with the exception of an estimated $19,873,000 of commercial fish loans which are secured by permits. Only the state is authorized to hold permits as collateral.

To make up for this deficiency, AIDA would take up to $19,873,000 in loans held by the Department of Commerce and Economic Development. Commerce had $48,402,500 of commercial fish loans as of January 31, 1985 of which an estimated $16,118,000 were not backed by permits and would be taken by AIDA.

All of the payments on the general fund loans, both principal and interest, return to the general fund. Transfer of these loans to AIDA will reduce the amount of general funds available for appropriation in FY 86 and future years. It will not affect the ability of the revolving loan funds to meet loan demand.

Even with AIDA taking some Commerce loans, the Department's ability to meet loan demand should not be impaired. The estimated $16,118,000 in Commerce's commercial fish loans taken by AIDA would be replaced with a roughly equivalent amount, the $19,873,000 in estimated general fund commercial fish loans secured by permits, by transferring these loans from the general fund to Commerce.

2. What is the expected cash flow (principal and interest) by year from July 1, 1985 that would return to the state over the term of the loans if they remained in the Department of Revenue?

See attached table for scheduled cash flow. Actual cash flow may be accelerated due to loan prepayments, resulting in a reduction of total interest from that scheduled.

3. What is the expected financial shortfall in state revenue in FY 86 as a result of transferring these loans to AIDA? Has any adjustment been made to the Administration's budget for FY 86 to reflect this income reduction?

In our effort to minimize the impact on the FY 86 general fund revenues, the administration believes that no net adjustment will be required to the FY 86 budget by the appropriation of the loans to AIDA. The administration proposes to utilize the $17.8 million cash flow from loans held by the Department of Revenue as a substitute for the appropriation of $18 million in general funds now contained in the Governor's loan budget for this project. This will offset the reduction in general funds available for appropriation arising from the appropriation of the loans. This reduction would be $17.8 million for FY 86 based on the scheduled payments shown in the attached table. This would be composed of approximately $10 million in interest and $7.8 million in principal repayments.

The administration would propose that the cash needed to support the project could be obtained in part by giving AIDA the authority to use $12 million already appropriated to that agency. This would be combined with approximately $3 million of funds available from last year's appropriation for this project.

It should be noted that the amount of cash flow from these loans included in the Executive Budget 1986 as amounts available for appropriation is $31.3 million, composed of $13.3 million interest and $18 million principal repayments. The budget estimate is higher than the scheduled payments for two reasons. One is that prepayments on loans result in greater amounts of principal receipts than scheduled. The other is that this response to your questions has been done in much greater detail than the budget estimates.

A fiscal note for $17.8 million, reflecting the scheduled reduction in FY 86 revenue, will be submitted for the appropriation of the $142 million in loans. The difference between the scheduled payments and the budget estimate, $13.5 million, will be a downward adjustment to the next revenue estimates which will be made in June. This adjustment has not been incorporated in the Administration's FY 86 budget. The Administration does not believe this adjustment materially affects the March revenue forecast.

4. What is the total amount of interest that is expected to be returned to the state from the $142 million over the life of the loans calculated as of July 1, 1985?

   Approximately $71.6 million in interest would be received by the state from July 1, 1985 through 2011 from the loans. The loan balances are estimated to total $135.9 million on July 1, 1985. The amount received by the general fund would be somewhat reduced by service fees retained by Commerce.

5. What is the total amount of interest that the state would expect from the $142 million in loans plus the $18 million in general fund expenditure if this $160 million were not transferred to AIDA?

   Over the period of years to 2015, assuming compounding and an average rate of interest of 10%, total interest would come to $1,984.3 million. The present value of this interest would be $113.7 million at a 10% discount rate.

   Implicit in the question is an assumption that the cash flow from the loans and the $18 million will not be spent if it is not appropriated to AIDA. If it is spent, the state would of course receive no interest on the $18 million and only the $71.6 million on the loans.

6. Will the transfer of the $142 million in loans to AIDA result in increased requests this year or in future years for the various state loan programs since the principal and interest will not flow back to the general fund or a revolving fund as expected?

   Transfer of the $142 million will not generally affect revolving fund cash flow and will not require increased requests for Commerce loan programs in the future. See question #1.

Sincerely,

Mary A. Nordale
Commissioner

2010	98							98
2011	20							20
Total	145,758	19,875	31,768	3,099	15	147	6,804 (principal only)	207,466

1. This table represents the cash flow to the Department of Commerce and Economic Development. Cash flow to the general fund would be further reduced by .5% service fee on loans serviced by Commerce and .125% service fee to Commerce on loans serviced by banks.
2. Cash flow has not been adjusted for delinquency or default. Except for commercial fish non-permit loans, the state expects complete recovery on defaults. Thus, delinquency and default merely produce lags in receipts.

ALASKA INDUSTRIAL DEVELOPMENT AUTHORITY

1577 "C" STREET • SUITE 304 ☐ ANCHORAGE, ALASKA 99501-5177 ☐ (907) 274-1651

April 9, 1985

The Honorable Arliss Sturgulewski
Chairman, Senate Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Sturgulewski:

In response to your letter of April 1, 1985, I am providing the following requested information. Please note that our responses are based upon the estimated net cash flows shown in Attachment I. After adjusting for loans that have paid down or will not be transferred for legal reasons, we estimate that approximately $136 million in loans will be transferred.

It is not possible to provide an unambiguous answer to the first three questions until two things happen. First, we need the results of the Finance Plan project, now being worked on, and second we need to have an agreement reached between AIDA and Cominco with regard to user fees. The best figures that we have at present with respect to revenue generated by the project are those tolls which Cominco has offered to pay. Please be aware that our use of these figures should in no way be taken as evidence that AIDA has agreed to these charges. In any case, utilizing the attached cash flows, and our most current assumptions regarding costs and financing, we estimate that the cash flow of the portfolio would not be directly used after 1995. At that time, the cash flow would be used for coverage for the bonds, and eventually could flow back to the general fund. Any tolls collected above those needed to pay debt service on bonds and provide for coverage on the bonds could also flow back to the general fund.

1. If the $160 million ($142 million in loans plus the $18 million from the general fund) are transferred to the AIDA Economic Development Fund, what is the mechanism for these funds to flow back to the general fund over time?

   At this time, the actual repayment mechanism has not yet been determined. It could be set up as a loan from the Department of Commerce and Economic Development to AIDA, with terms ranging from a fixed amount per year, or "any amount above that required for debt service". Regardless of the mechanism, we recommend that a coverage test be utilized, and only income above that required for the coverage requirement be remitted to the State.

2. Considering that the $160 million will be used to back the sale of AIDA bonds but that toll fees charged to Cominco, LTD. (and perhaps others) as well as interest earned from the fund will be used to retire the bonds, what is the expected balance in the Economic Development Fund at the end of 20 years?

   As noted above, using our most current cost and financing assumptions, we assume all cash flow after 1995 will be available for reinvestment in the Economic Development Fund for purposes of providing coverage for the bonds. Since this also assumes that the only toll fees are from Cominco and that these fees are just enough to pay debt service, the cash flow from the loan portfolio after 1995 and its reinvestment will be the only source of funds to be deposited in the Economic Development Fund. Although these are the best assumptions available today, we believe they are conservative assumptions, especially with regard to other future users. In any case, if we assume the cash flow can be reinvested at a 10% earnings rate, then by 2005 the balance will be $106,433,000.

   These figures are based upon our latest estimates of relevant factors for what presently appears to be the best financing approach. This approach, which was discussed in an earlier memo, aggregates funds from the general fund appropriation, cash flow from the loan portfolio, and proceeds from a tax exempt bond sale. This total collection of funds is then used to pay for construction costs and for interest on the bonds until revenues from the project are sufficient to pay for the bonds.

3. Can you provide us with a projected Economic Development Fund balance by year from July 1, 1985 until the retirement of all of the $175 million in bonds issued for this project?

   Under our latest assumptions, only $135 million in debt will be issued. This reduced amount is possible because cash flows from the loan portfolio appear to be greater than originally estimated. Once again, using all of the assumptions mentioned above, the projected balance of the Economic Development Fund is given in Attachment II.

4. What effect will the additional management requirements of $142 million in loans have on AIDA's personnel requirements?

   We would not anticipate immediately transferring the loan servicing from Commerce to AIDA, but rather using a phase-in process. At the outset, we would request Commerce to continue servicing the portfolio for us. We expect that our servicing costs would be similar to those experienced by the Department of Commerce and Economic Development.

5. Can you provide us with a breakdown of the expenditures made to date and those anticipated from the $3 million appropriation in last years budget for this project?

   To date we have made the following commitments for expenditure: RSA with DOTPF for various engineering and technical assistance $50,000; RSA with Department of Law for specialized legal counsel $50,000; contract with

SRI International for Finance Plan $267,000; contract with R & M Engineering for cost verification and other engineering services $75,000; and other miscellaneous expenditures $15,000. Planned uses for the remainder are associated with getting the projects ready for construction bids, for instance, preparation of final detailed design, preparation of bid packages, and so forth.

6. What is the total amount that could be expected to accrue to the Economic Development Fund in both principal and interest over time if you added together the $18 million from the general fund, the $142 million principal in loans, the interest on the $18 million while in the fund, the interest generated from the $142 million in loans and the interest earned on the earnings of the fund?

   It appears in this question that you simply want us to do a straight forward calculation of a future value of a known income stream. If so, then of course the only real unknown is the assumed rate of return on the reinvestments. For these calculations we will assume it is 10%, and again we will use the cash flow shown in Attachment I. The results, by year, are given in Attachment III. Although the numbers on Attachment III get rather large, I think it is important to put these values in perspective, since what is really being shown on that table is the effects of compound interest. A more relevant number is the net present value of the appropriations being proposed. Assuming that $18 million is appropriated on July 1, 1985, that the loan portfolio can provide the net cash flow shown in Attachment III, and that 10% is the discount rate, then the net present value of these appropriations as of July 1, 1985 is $117.3 million.

Although no direct question was asked regarding the philosophy behind AIDA's involvement in this project, I believe it to be of paramount importance. We approach this project as an investment, both in needed infrastructure and diversification. We believe that, after some initial state assistance, the project will start generating income for the general fund. Eventually, the project should pay for itself many times over, and quite possibly be a major source of state revenue when other sources have dwindled.

Please let me know if you have further questions.

Sincerely,

Bertram L. Wagnon
Executive Director

Notes

(a) Cash flow figures available only for Dept. of Commerce serviced loans, of $10,473.7 principal balance. Estimate of cash flow of bank serviced loans of $6,221.3 balance assumed to be proportional to relative principal balances, i.e. 6,221.3 / 10,473.7 = .594

(b) Cash flow figures available only for Dept. of Commerce serviced loans, of $1,097.4 principal balance. Estimate of cash flow of bank serviced loans of $1,300.0 balance assumed to be proportional to relative principal balances, i.e. 1,300.0 / 1,097.4 = 1.185

(c) No cash flow figures are included for Fishery Enhancement loans since they were not available. It is expected that any significant cash flows would be well into the future and hence not available during the critical early years.

(d) Net figures are adjusted to take into account estimated delinquency and defaults as well as servicing costs, assuming net figures are 95% of gross figures.

2. Considering that the $160 million will be used to back the sale of AIDA bonds but that toll fees charged to Cominco, LTD. (and perhaps others) as well as interest earned from the fund will be used to retire the bonds, what is the expected balance in the Economic Development Fund at the end of 20 years?

   As noted above, using our most current cost and financing assumptions, we assume all cash flow after 1995 will be available for reinvestment in the Economic Development Fund for purposes of providing coverage for the bonds. Since this also assumes that the only toll fees are from Cominco and that these fees are just enough to pay debt service, the cash flow from the loan portfolio after 1995 and its reinvestment will be the only source of funds to be deposited in the Economic Development Fund. Although these are the best assumptions available today, we believe they are conservative assumptions, especially with regard to other future users. In any case, if we assume the cash flow can be reinvested at a 10% earnings rate, then by 2005 the balance will be $106,433,000.

   These figures are based upon our latest estimates of relevant factors for what presently appears to be the best financing approach. This approach, which was discussed in an earlier memo, aggregates funds from the general fund appropriation, cash flow from the loan portfolio, and proceeds from a tax exempt bond sale. This total collection of funds is then used to pay for construction costs and for interest on the bonds until revenues from the project are sufficient to pay for the bonds.

3. Can you provide us with a projected Economic Development Fund balance by year from July 1, 1985 until the retirement of all of the $175 million in bonds issued for this project?

   Under our latest assumptions, only $135 million in debt will be issued. This reduced amount is possible because cash flows from the loan portfolio appear to be greater than originally estimated. Once again, using all of the assumptions mentioned above, the projected balance of the Economic Development Fund is given in Attachment II.

4. What effect will the additional management requirements of $142 million in loans have on AIDA's personnel requirements?

   We would not anticipate immediately transferring the loan servicing from Commerce to AIDA, but rather using a phase-in process. At the outset, we would request Commerce to continue servicing the portfolio for us. We expect that our servicing costs would be similar to those experienced by the Department of Commerce and Economic Development.

5. Can you provide us with a breakdown of the expenditures made to date and those anticipated from the $3 million appropriation in last years budget for this project?

   To date we have made the following commitments for expenditure: RSA with DOTPF for various engineering and technical assistance $50,000; RSA with Department of Law for specialized legal counsel $50,000; contract with

Case IV

Summary: Entails large bonding at outset of project. Also assumes that state will capitalize the Economic Development Fund (the Economic Development Fund is the own-and-operate element of AIDA) with existing state loans. Bonds are used for construction, state appropriations are required to pay interest for bonds during construction. After completion, some bonds are called, and income from capitalization plus project revenues are used to pay for bonds that remain outstanding.

ASSUMPTIONS AND CHARACTERISTICS

1. Construction draws are assumed to be (in thousands):

DATE	PORT DRAW	ROAD DRAWS	TOTAL	CUMULATIVE
1/1/86	$ 4,000	$ 1,000	$ 5,000	$ 5,000
1/1/87	3,000	5,000	8,000	13,000
1/1/88	14,000	57,000	71,000	84,000
1/1/89	50,000	33,000	83,000	167,000
1/1/90	4,000	3,000	7,000	174,000
TOTALS	75,000	99,000	174,000	174,000

2. Bonds: Assumes that $155 million in tax exempt bonds are issued on 1/1/86, with approximately $128 million going into the construction fund. As of 1/1/90 adequate funds are available in the debt service fund to call $12 million in bonds, leaving $143 million outstanding. Bond interest rate is assumed to be 10.5%.

3. State Assistance: This would be in two forms, first as a $30 million appropriation on 7/1/85, and second as capitalization of the Economic Development Fund. The capitalization is estimated to be at least $100 million par value of existing state loans now held in the treasury.

4. After completion: There are assumed to be $143 million worth of bonds outstanding, with approximately $18 million of this in what is assumed to be a self-supporting capital reserve fund. This leaves approximately $125 million worth of debt that must be repaid from available sources. The annual debt service on this $125 million is estimated to be $14.3 million. Assuming the project tolls will generate $10.3 million, then the other $4.0 million is assumed to be derived from the interest from the remaining loans of the original $100 million capitalization of the Economic Development Fund. No provision has been made to repay the state contribution, but this could happen from excess revenues.

Number 170 — Mr. Elder answered that they were not all bad loans, just that there is a high delinquency rate.

Number 180 — Representative Frank noted a sentence that says no provision has been made to repay the state's contribution but that it might be paid out of excess revenues. He asked how this fits with Cominco's pledge to repay the state.

Number 200 — Mr. Elder answered that perhaps it does not fit, and said that he anticipates that the finance plan will reflect all the income that the state will receive.

Number 230 — Chairman Sund asked what is the cash flow of the existing loans.

Number 235 — Mr. Elder estimated that it is the neighborhood of $15 to $20 million annually. He added that the assets and the cash flow will collateralize the bonds, as well as the user fees. However, cash from user fees will not happen until the mine is in production. The cash flow would be used to meet annual obligations on the debt service in the meantime.

Number 257 — Chairman Sund asked Mr. Elder what the legislature has to do in order to implement the plan that he is discussing.

Number 265 — Mr. Elder answered that the legislature would have to appropriate $18 million to AIDA, to appropriate the outstanding principal amounts of the loans held by the Department of Revenue to AIDA, and to give AIDA the authority to issue bonds in an amount not to exceed $175 million.

Number 280 — Chairman Sund asked if these bonds would go against the state's bonding capacity.

Number 283 — Mr. Elder answered no, they would be the obligation of AIDA.

Number 292 — Representative Frank asked Mr. Elder why $18 million appropriation plus $141 million in loans is needed in order to proceed on schedule.

Number 298 — Mr. Elder answered that they want to proceed with construction in calendar year 1986.

MEMORANDUM State of Alaska

TO: The Honorable John Sund
Chairman
House Special Loans Committee

DATE: March 26, 1985

FILE NO: 85I-170

TELEPHONE NO: 465-3568

FROM: Jack Fargnoli, Senior Analyst
Division of Strategic Planning
Office of Management and Budget

JLF

SUBJECT: Red Dog Mine - Royalty Payment Distribution Likely Under ANCSA 7(i)

This memorandum summarizes information that the Office of Management and Budget (OMB) presented yesterday before the Senate Resources Committee, regarding the effects of Section 7(i) of the Alaska Native Claims Settlement Act (ANCSA) on the distribution of potential Red Dog Mine royalty payments among Alaska Native corporations.

The attached table, "RED DOG MINE ROYALTY PAYMENTS - PROBABLE DISTRIBUTION UNDER ANCSA 7(i)", shows the percentage of total royalty payments from Cominco to NANA that each Native corporation would be likely to receive after redistribution under the allocation provisions of ANCSA 7(i). Section 7(i), as you are aware, requires that any royalty payments to NANA from Cominco due to Red Dog Mine operations would have to be shared with all other regional Native corporations. While the actual dollar amounts likely to be involved in such a distribution are uncertain, as discussed below, OMB feels that the percentage distribution shown in the table is highly probable.

As indicated yesterday in testimony before the Senate Resources Committee, OMB has chosen not to estimate possible ANCSA 7(i) dollar flows for the Red Dog Mine project at this point, because the magnitude of such dollar flows will largely be determined by the extent of any financial participation in the project by the State of Alaska.

That notwithstanding, one level of possible dollar amounts is shown in the attached table, solely to present a reference point for the order of magnitude of royalty payments that could result from Red Dog operations. The amounts shown, which are pre-tax amounts, are based on an estimate provided by Cominco on March 6, 1985, and reflect Cominco's estimate that an average of approximately $30 million per year (1985 dollars) for thirty years will be paid in royalties to NANA, and then subsequently be redistributed to NANA and the other regional Native corporations under ANCSA 7(i). The estimate of $30 million per year in royalty payments itself rests on Cominco's assumption in this scenario that the State would provide $150 million in revenue bonding for the road and port

infrastructure, with Cominco repaying the State approximately $260 million (nominal dollars) through user fees over a 30-year period.

If additional information is needed on this or any other topic, please don't hesitate to contact me or Alan Shelly at 465-3568.

OFFICE OF THE COMMISSIONER

April 8, 1985

The Honorable Arliss Sturgulewski
Chairman
Senate Committee on Resources
Pouch V
Juneau, Alaska 99811

Dear Senator Sturgulewski:

Re: $142 Million AIDA Transfer

In response to your letter of April 1, 1985, I am providing you with the following requested information.

1. Will the transfer of the $142 million in loans to AIDA affect the personnel requirements of your loan servicing division? In other words, would you anticipate a reduction in staffing?

   There are several factors that are pertinent, assuming the appropriation to AIDA does take place and is effective July 1, 1985.

   (a) AIDA will not service the transferred loans.

   (b) The Division of Accounting and Collections would continue to service the loans after July 1 under contract with AIDA until such time as AIDA and/or the division decide that transfer of servicing to a private bank is appropriate.

   (c) The earliest such a servicing transfer could occur is mid-year FY '86 due to the complexity of the transfer, keeping in mind the transfer may not occur at all if AIDA and the division feel it is not appropriate.

   (d) If the FY '86 budget cuts are as severe as the first draft cut appears, the division may request that AIDA transfer the servicing. If this were to occur, the division would reduce staff after the servicing transfer so that the combined reduction in staff (due to budget cuts and the transfer) would be about 35% - proportionate to the number of loans transferred. Such staff reductions would <u>not</u> free up excess general funds because the

transferred loans would be those that currently generate 100% of our "other funds" (service fees) in the divisions' operating budgets (Division of Acccounting and Collections and the Division of Investments). Therefore, while the appropriation of these loans could result in a reduction in staff, it would not be in "General Fund" funded staff, and the staff reduction would come only after the transfer of servicing, not on the effective date of the appropriation.

2. If these loans were transferred to AIDA, do you anticipate that the loan repayment or servicing policies would change?

   No, both organizations expect repayment on a timely basis.

3. What would be the effect on the borrowers if these loans were transferred to another agency?

   While servicing remains under the Division of Accounting and Collections, the effects would be minimal: prior to the effective date of the appropriation, new loan numbers may be required to allow for accurate accounting to the new investor; this would entail a letter and a new supply of payment cards being sent to the borrower. The effort required of division staff to close out one investor and begin servicing a new investor will be substantial; borrowers may notice a slight decline in the quality and timeliness of service as the division copes with the changes.

   If the servicing itself were transferred to a private bank at some point, the following changes would occur:

   (a) Borrowers would receive another new loan number, another set of payment cards, and a series of letters explaining each step of the servicing transfer;

   (b) Service quality and timeliness may vary.

All impacts to borrowers could be summed up as short-term inconveniences which would occur for six months or so during the transition to a new servicer.

4. How would the loss of future income from these loans (both principal and interest) affect the ability of your loan divisions to provide for the public demand for loans in the various categories? Would you anticipate increased funding requests to the Legislature to meet the public need?

There would be virtually no effect on the loan fund balances.

The cash flow from these loans is remitted to the General Fund (through Division of Treasury) on a monthly basis, net of service fees, late fees, NSF fees and application/assumption fees which are retained by the fund. In the case of veterans and commercial fish, these fees then are appropriated by the Legislature to fund operating efforts in the Division of Accounting and Collections and the Division of Investments.

We would not anticipate increased funding requests in the loans budget to meet public loan demand.

5. Does the loss of income from these loans affect your FY '86 budget loan requests if all principal and interest are transferred on the $142 million as of July 1, 1985?

No, the loss of income to the loan funds will be negligible (See #4).

The operating budgets of the Division of Accounting and Collections and the Division of Investments could be impacted mid-year due to loss of service fees if the servicing is transferred prior to year-end FY '86.

Please let me know if you have further questions.

Sincerely,

Loren H. Lounsbury

OFFICE OF THE COMMISSIONER

March 26, 1985

Honorable Arliss Sturgulewski
Chairman, Senate Resource Committee
Pouch V
Juneau, Alaska 98111

Dear Senator Sturgulewski:

Red Dog is, by universal acclaim, one of the world's premier ore deposits and will help satisfy an expected shortfall in world zinc supply far into the 21st century. It is estimated that over a 20-year period, the Red Dog Mine will provide in direct revenues to the State over $210 million in net present value in the form of taxes and avoided transfer payments. Additionally, the mine will create 400 direct jobs in the northwest Alaska region which experiences very high levels of unemployment, as well as some 200 jobs state-wide in service and supply sectors of the economy. Regional benefits of the project will include significantly reduced transportation costs and the mine could provide an economic base for the formation of a regional borough.

Investment by the State of Alaska in the construction of a regional port and access road, not only to the Red Dog Mine site, but also the richly mineralized Noatak region is both an opportunity for the State to diversify its economy and, backed up by sound financial analysis, is an appropriate responsibility of the government.

The State of Alaska shares the concerns expressed by the Legislature with regard to protecting State interests since it is, in fact, the State of Alaska that will be the owner of the road and the port.

Both the Administration and the Legislature are in complete agreement with regard to assurances and guarantees to be provided by Cominco and NANA. Such guarantees have already been outlined to the Legislature and consist of the following:

- Cominco will guarantee to pay toll fees that will repay State investment.

- Cominco will guarantee to pay the operation and maintenance costs of the road and port facilities.

- Cominco also will guarantee minimum toll payments and other payments necessary to repay the State's investment if the mine is delayed or if production is suspended after operation commences.

- To the extent that the price of zinc should rise above a level presently contemplated to yield a reasonable profit, the State believes that it should be able to have its investment liquidated at an accelerated rate. This is a provision common to many loan agreements involving sizeable investments.

Additionally, NANA will guarantee to provide necessary land to accommodate reasonable expansion requirements for future users at the port site.

The State intends to hold Cominco and NANA to these guarantees, plus any other appropriate commitments, that may be identified by the contractor, Stanford Research Institute, who will produce the comprehensive financial plan.

With the ironclad assurances and guarantees in place, the Legislature, this session, has the opportunity not only to move the Red Dog Mine project forward in a timely manner but to assure potential consumers of Alaska's exports that the State is serious about developing its natural resources.

Sincerely,

Loren H. Lounsbury
Commissioner

MEMORANDUM State of Alaska

TO: The Honorable John Sund
Chairman
House Special Loans Committee

DATE: March 26, 1985

FILE NO: 85I-170

TELEPHONE NO: 465-3568

FROM: Jack Fargnoli, Senior Analyst
Division of Strategic Planning
Office of Management and Budget

SUBJECT: Red Dog Mine - Royalty Payment Distribution Likely Under ANCSA 7(i)

This memorandum summarizes information that the Office of Management and Budget (OMB) presented yesterday before the Senate Resources Committee, regarding the effects of Section 7(i) of the Alaska Native Claims Settlement Act (ANCSA) on the distribution of potential Red Dog Mine royalty payments among Alaska Native corporations.

The attached table, "RED DOG MINE ROYALTY PAYMENTS - PROBABLE DISTRIBUTION UNDER ANCSA 7(i)", shows the percentage of total royalty payments from Cominco to NANA that each Native corporation would be likely to receive after redistribution under the allocation provisions of ANCSA 7(i). Section 7(i), as you are aware, requires that any royalty payments to NANA from Cominco due to Red Dog Mine operations would have to be shared with all other regional Native corporations. While the actual dollar amounts likely to be involved in such a distribution are uncertain, as discussed below, OMB feels that the percentage distribution shown in the table is highly probable.

As indicated yesterday in testimony before the Senate Resources Committee, OMB has chosen not to estimate possible ANCSA 7(i) dollar flows for the Red Dog Mine project at this point, because the magnitude of such dollar flows will largely be determined by the extent of any financial participation in the project by the State of Alaska.

That notwithstanding, one level of possible dollar amounts is shown in the attached table, solely to present a reference point for the order of magnitude of royalty payments that could result from Red Dog operations. The amounts shown, which are pre-tax amounts, are based on an estimate provided by Cominco on March 6, 1985, and reflect Cominco's estimate that an average of approximately $30 million per year (1985 dollars) for thirty years will be paid in royalties to NANA, and then subsequently be redistributed to NANA and the other regional Native corporations under ANCSA 7(i). The estimate of $30 million per year in royalty payments itself rests on Cominco's assumption in this scenario that the State would provide $150 million in revenue bonding for the road and port

infrastructure, with Cominco repaying the State approximately $260 million (nominal dollars) through user fees over a 30-year period.

If additional information is needed on this or any other topic, please don't hesitate to contact me or Alan Shelly at 465-3568.

RED DOG MINE ROYALTY PAYMENTS,
PROBABLE DISTRIBUTION UNDER ANCSA 7(i)

Regional Native Corporation	Probable Share (Percent)	Possible Avg.* Annual Amount (1985 Dollars x 1,000)
Ahtna	1.4%	$ 300.0
Aleut	4.4	923.3
Arctic Slope	5.0	1,050.0
Bering Straits	8.5	1,786.7
Bristol Bay	7.3	1,533.3
Calista	18.0	3,780.0
Chugach	2.6	546.7
Cook Inlet	8.4	1,766.7
Doyon	12.2	2,566.7
Koniag	4.5	946.7
NANA	6.5	1,366.7**
Sealaska	21.1	4,433.3
TOTAL:	99.9%	$21,000.0/yr.(avg.)

* Cominco estimate as of 3/6/85. Amounts shown are before taxes (mining license tax, corporate income tax). Assumes $150 million in revenue bonding by State for infrastructure, and repayment of approximately $260 million (nominal dollars) by Cominco through user fees over 30 years.

** In addition to Cominco estimate of $9 million (1985 dollars) that NANA would receive annually (avg.) as its allowable 30% of gross royalty payments, assuming State participation and Cominco repayment as above.

Senator Arliss Sturgulewski
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Sturgulewski:

You have expressed concern regarding a situation where the Legislature appropriates a considerable amount of resources to AIDA to help finance the DeLong Mountains Transportation project without the Legislature having full knowledge of the total financial picture of the project. Of course, the intent of the Finance Plan contract now underway is to enable the Authority to be able to provide this "full picture" to the Legislature, the Governor and other interested parties. However, since we are requesting an appropriation now, even though the Plan is not yet completed, it is incumbent upon AIDA to provide assurances to the Legislature that no improper or imprudent use will be made of these resources.

Should the Legislature decide to appropriate funds to allow this project to go forward, the State's investment could be protected by restricting the expenditure of such funds by AIDA until both a guaranty agreement and a detailed use agreement are completed and executed.

As envisioned by AIDA, Cominco will be required to enter into a guaranty agreement with AIDA covering such items as total repayment in the event the mine is not operated, guaranteed minimal toll charges, payments in event production is suspended after operation commences, commitment to pay operating and maintenance expenses of the transportation project, as well as appropriate financial provisions to enforce such guarantees. Although we (AIDA) are discussing these matters at present with Cominco and NANA, we will not complete any agreements until we have the results of the Finance Plan.

This would be followed by a detailed "use agreement" between AIDA and Cominco, which would cover all facets of the project in detail. It is anticipated that the use agreement will be a very complex document and take approximately three to four months to finalize.

Because of the time involved to complete both of these agreements, AIDA would not expect any significant expenditure of funds until after the Legislature reconvened in January 1986. If at that time, the Legislature decided to not proceed with state involvement in the project, the Legislature could simply notify AIDA and, with the Governor's concurrence, reappropriate the funds to other uses.

I hope this adequately answers your quite valid concerns. Please remember that all along we have maintained that we only want to pursue this project if it is a 'good deal' for the State.

Sincerely,

RE: Red Dog Project Analysis

Attached are supplemental materials that update the Red Dog Project Analysis done by the various state departments in February, 1984.

1. Section III: Report of the Office of Mineral Development;

2. Section IV: Report of the Division of Finance and Economics, DCED;

3. Section V: Report of the Office of Management and Budget;

4. Section V: Report of the Department of Revenue;

5. Section VI: Report of the Department of Community and Regional Affairs.

You have also received last week a report from Bert Wagnon of AIDA on the outline of several financial plans.

Summary of Changes to Tax Revenue Forecast

Red Dog Project Analysis - Section V

Prepared By:
Alaska Department of Revenue
March 21, 1985

I. Special Industrial Incentive Investment Tax Credit

The Alaska Legislature passed CCSHB 258 late in the 1984 sesssion instituting a tax credit for new mining and gas processing operations. This legislation was not considered in developing the estimate of taxes to be paid by Cominco. Provisions and limitations of this legislation applicable to Cominco are:

a. The credit is granted to mining operations which begin production after December 31, 1984;

b. Investments in property which are entitled to the federal investment tax credit qualify for the incentive credit;

c. To qualify for the credit, the investment must be made by December 31, 1994;

d. The credit may be applied against the taxpayer's Alaska mining license tax and corporate net income tax liabilities.

e. The credit may not exceed 60 percent of the total tax liability for these two tax types in any given year.

f. Unused credits may be carried forward by federal tax law. However, unused credits may not be carried forward to tax years after December 31, 1999.

g. The credit is in place of the regular investment tax credit granted by AS 43.20.036(b).

h. The amount of investment subject to credit is limited to the first $250 million placed in service in the state; and is further limited to:

1) 100% of the 1st $50 million investment
2) 80% of the 2nd 50 million investment
3) 70% of the 3rd 50 million investment
4) 60% of the 4th 50 million investment
5) 40% of the 5th 50 million investment

i. The amount of credit which may be applied against the tax liability is the amount of credit allowed against federal taxes for the same investment. Currently, the Internal Revenue Code allows a regular credit of 10% of the qualified investment with mandatory reduction in the asset's depreciable basis of one-half of the credit, or an optional 8% rate with no basis adjustment.

j. Exhibit I recalculates the estimated tax liability of Cominco on an annual basis giving the effect of the special incentive credit. This schedule updates the schedule at V-66 of the Red Dog Project Analysis, February 1984 report for the "probable" metal price forecast scenario.

II. Update on Tax Consequence to NANA Development Corporation

a. NANA will be subject to the corporate income tax and the mining license tax on its royalty income from Red Dog.

b. The computation of NANA's mining license tax liability in the February 1984 Red Dog Project Analysis at page V-68 did not consider the depletion deduction. Exhibit II recalculates NANA's total tax exposure given the effect of a 15% depletion deduction from the net proceeds royalties.

c. NANA will not be entitled to a credit under the special incentive investment tax credit provisions of AS 43.20.042.

III. Mining License Tax Regulations

a. Status

The Department of Revenue has drafted proposed mining license tax regulations. Public hearings have been held in Fairbanks, Anchorage and Juneau. Also, a teleconference was held with Nome. The deadline for written comments and testimony concerning the regulations is March 31, 1985.

b. Intent

The current draft of the regulations attempts to interpret the statute and provide rules for its administration. The regulations should have no effect upon the estimate of Cominco or NANA's mining tax liabilities as portrayed in the original report. The draft provides:

1) clarification of who must apply for a mining license and file mining tax returns

2) instructions for obtaining the three and one-half year exemption certificate

3) methods for determining income when mined resources are exported from the state or commingled with non-mining products to form a salable product

4) an explanation of the types of expenses deductible from mining income.

Summary of update of Section VI of the Red Dog Report

3/22/85

After a review of Section VI of the Red Dog report of February 1984, and materials provided to the Department in the interim, the Department finds that there is no basis for any substantial change in the conclusions presented at the time of that report.

With regard to the possible detachment of the mine site lands from the North Slope Borough, NANA continues to seriously investigate the feasibility and means of accomplishing this detachment. NANA continues to base the viability of a possible NANA Borough upon the availability of the mine to provide a substantial portion of the new borough's tax base. NANA has performed a feasibility study to this effect which the Department has reviewed. The prospects for detachment remain uncertain.

With regard to the socioeconomic impact assessment of the development on the NANA region, no critical changes have been introduced by way of newly proposed development scenerios or changes in development parameters. A postponement of mine development of several years will not radically alter the region's baseline context (existing population, income, employment levels, etc) as it would be impacted by the mine development. Therefore, the Department stands by its assessment as providing a reasonable estimate of development impacts.

A question has been raised regarding the lack of quantitative measures of certain "costs" of development as compared to the more detailed presentation of the "benefits" of the development. Specifically, the Department's assessment did not attempt to quantify the costs of potentially increased service demands for social, medical and public safety programs which might result from disruptions of lifestyle due to a sudden increase in the region's cash economy.

In general, the Department stands by its decision not to try to provide a dollar value on these potential costs. There is simply no practical basis for establishing such a number. No one can predict with any certitude the response of these particular residents in this particular situation. While there is likely to be some increase in certain social service demands as a result of new affluence, we would assert that the net social service demand in the region is most likely to be reduced as a result of the proposed development, particularly in the long run.

Regarding medical services, it is assumed that the State would experience some reduction in costs as a consequence of the mine's development. The Department of Health and Social Services is working with the NANA region to localize medical services by contracting for service provision with a local entity. A provision of these contracts requires the contracting entity to phase in a user-fee system which could greatly reduce the facility operating costs for the State. Employment increases in the region should have the effect of increasing the number of fee-paying users of the region's medical services.

Regarding public safety, a "worst case" service demand increase might require an additional Village Public Safety Officer in each outlying community and several additional full or part-time police officers in Kotzebue. This case would represent an increase in costs of some $150,000 annually ($100,000 State, $50,000 municipal). It is not expected that new public safety facilities would be required directly as a result of the mine development.

With regard to the utility service demands on Kotzebue, the point is made that the impacts which would arise as a result of the developement represent less than 15% of the impacts which Kotzebue will experience through natural population increases even if the mine is not developed. This 15% value is unlikely, in itself, to trigger the necessity of a major capital project such as a new school, fire hall or power generating station. This assessment is based upon the commitment expressed by NANA/Cominco that the mine development is to be operated as an enclaved development.

MEMORANDUM

State of Alaska

TO: John Sims

DATE: March 22, 1985

FILE NO:

TELEPHONE NO:

FROM: Paul Engelman Paul

SUBJECT: Red Dog Mine Update
Section IV

The changes in the tax return rate and the additional information supplied by the Department of Revenue have changed the original report as follows:

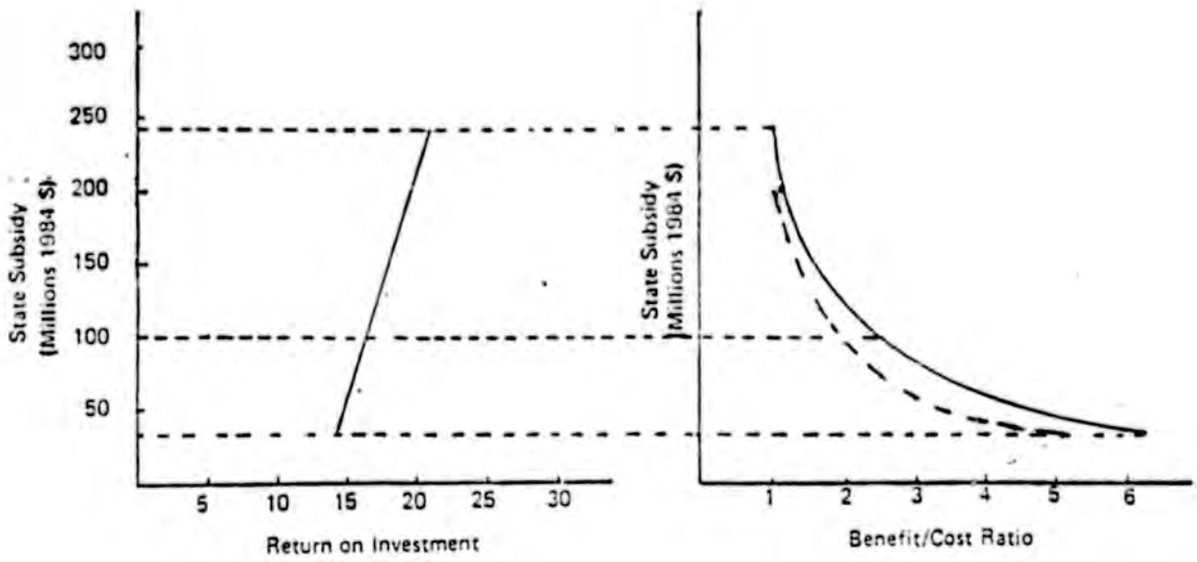
1. Page IV-1 - The present value of the taxes has been reduced to $169.49 million resulting in a decrease in estimated total benefits to the State of $210.65 million when zinc is priced at 60¢ per pound.

2. Page IV-2 - Table I should be revised as follows:

TABLE I

Returns* to the State from
Red Dog Mine Development
(Millions of Dollars)

	Price of Zinc		
	55¢	60¢	65¢
Taxes	129.7	169.49	216.32
Transfers	41.16	41.16	41.16
Total	170.94	210.65	257.48



*All returns are given in terms of their present value. Only direct returns to State Government are considered.

3. Page IV-2 - The State's benefit ratio from Cominco for the $40.1 million investment is reduced to 5.3:1 since the benefits have been reduced to $210.65 million.

4. Page IV-3 - The State's theoretical maximum subsidy is reduced from $245 million at 60¢ per pound to $210.45 million

5. Page IV-5 - Charts I and II should be modified as follows:

CHART I CHART II

---------- adjusted for new tax regulations.

[* Assumes a real price of zinc of 60¢ per pound.]

6. Page IV-6 - The discussion on the required subsidy at different price levels for zinc isn't changed. However the reduction in tax liability should raise the rate of return Cominco receives at every price level since the tax reduction reduces their costs. While it is difficult to determine the exact amount the tax reduction will effect their rate of return, it appears to be about a 1.0% increase when zinc is 60¢ per pound. Charts I and II have not been adjusted to reflect this. The effect would be to shift the line in Chart I to the right indicating a greater rate of return at every level of subsidy.

PE/wfs0004p

MEMORANDUM State of Alaska

TO: John Sims, Director
Office of Mineral Development
Department of Commerce and
Economic Development

DATE: March 15, 1985

FILE NO: 85F-201

THROUGH: Gordon S. Harrison, Associate Director
Office of Management and Budget

TELEPHONE NO: 465-3568

FROM: Alan Shelly, Senior Analyst
Division of Strategic Planning
Office of Management and Budget

SUBJECT: Update of OMB Portion (Part V) of Red Dog Project Analysis

We have been asked to review several aspects of the Red Dog analysis in light of information currently available. These aspects are economic impacts, ANCSA Section 7(i) distributions, and potential local tax revenues.

Our findings are:

1. Based on figures provided by Cominco and the Office of Mineral Development, there are only slight changes in the plans for the project from what was contemplated in the 1983 study. The start of production is now anticipated for 1989, not 1988, and the initial production estimate is now 1.5 million tons of ore per year, instead of the 1.1 million tons expected in 1983. Neither change should significantly affect the income and employment situation with respect either to the construction or full (not initial) production periods. Since these are the periods emphasized in our part of the 1983 study (pages V-37 through V-62), that analysis remains valid, subject to the limitations and constraints described in the original report.

   Also, since no major changes are suggested in the construction scenario, the limited analysis of shipping costs (pages V-59 to V-60) remains in force.

2. We have examined the figures reported in the Office of Mineral Development's "Supplement to Red Dog Project Analysis Section III-C" for ANCSA Section 7(i) distributions. While much more information from Cominco would be necessary to evaluate the profit figures contained there, we can verify that the percentage distributions to the various Native Corporations appear to be approximately correct.

02-001A(Rev. 10/79)

Speediset ® Moore Business Forms, Inc.

403833

3. We are unable to provide an estimate of possible local tax revenues, since in addition to the suggested nine or ten mill rate, we should need detailed information on the type and value of the various items of plant and equipment at the Red Dog site. Moreover, the legal limit on the rate of local taxation depends on the amount of State taxes, if any. Thus, we should need to know the assumptions made on State behavior.

Office of Management and Budget
Office of the Governor
State of Alaska

Final Report on the Red Dog Mine Project
February 21, 1984

SUMMARY

This summary presents the major findings of the Office of Management and Budget's final report on the Red Dog Mine project. The report was prepared for the Interagency Task Force on State Participation in Infrastructure Development, which was assembled for this project. The report's findings, based on assumptions described in the full report, are shown below.

Task 1 - Cominco Corporate Profile

- Cominco Ltd. is an established and sound company with good overall prospects, and is backed by a large and reputable parent corporation.
- The company appears able to provide a solid corporate base for support and development of the Red Dog Mine project.

Task 2 - NANA Corporate Profile

- NANA Regional Corporation appears to be solvent and strongly oriented towards projects which offer long-term employment benefits to its shareholders (principally joint business ventures in Northwestern Alaska).
- The corporation's participation in the Red Dog Mine project appears consistent with its corporate purposes and past activities.

Task 3 - Direct And Indirect Economic Impacts

- No guarantee exists that the project sponsors' projected employment goals or local hire goals will be achieved.
- The project appears likely to create 350-400 permanent jobs at the mine site, constituting approximately $11-$13 million per year (1983 dollars) in total direct income.
- NANA region residents may obtain an estimated 220-250 (50%-75%) of the mine jobs, constituting approximately $7-$8 million per year (1983 dollars) in direct income for regional residents.

Task 3 (Continued)

- The project may generate an estimated 225 additional jobs within the state due to indirect and secondary employment effects, constituting an estimated $5.7 million per year (1983 dollars) in additional income.

- NANA region residents may obtain an estimated 100-110 (47%) of these additional jobs, constituting approximately $2.7 million per year (1983 dollars) in additional income for regional residents.

- The project's indirect and secondary employment effects may cause approximately 50 previously unemployed persons to be hired within the NANA region, plus an additional 30-60 such persons elsewhere in the state (chiefly in the Anchorage area).

- No basis is available at present for estimating the number of job-seeking in-migrants which the project might attract into the state, though the project sponsors will attempt to minimize such effects through employment advertising.

- Local population increases due to the project itself probably will be moderate, totaling an estimated 280 new residents (including dependents) across the state, exclusive of in-migration. These increases could have significant local consequences within the NANA region, however (e.g., an estimated 70-75 new residents in Kotzebue, exclusive of in-migrants).

Task 4 - Fiscal Impacts

- The total amount of tax revenues that the State is likely to receive from the Red Dog Mine project has been estimated to be approximately $9-$16 million per year during the years 1988-1991, and approximately $12-$20 million per year after 1991 (1983 dollars). This estimate is reasonably made, and is consistent with current Alaska tax statutes. It is necessarily speculative, however, due to the profits-based nature of the main taxes involved, the current absence of mining license tax regulations in Alaska, and the possibility that the project sponsors' actual tax liability may be based on unitary taxation principles in the future.

- An interest-free loan to Cominco of $135 million (with a 10-year deferment of payments, to be followed by a 20-year repayment period), for construction of the mine access road and port facility, could represent a direct net cost to the State of approximately $100-$120 million (1983 dollars).

Task 4 (Continued)

- Increases in State and local program costs due to project-caused population increases could be moderate, though not insignificant at the local level. Such costs would depend largely on the extent to which the project induced speculative in-migration into the state and into the NANA region.

Task 5 - Cominco/NANA Contractual Agreement

- The agreement appears to contain no provisions which would alter this report's assessment of the economic and fiscal impacts of the project.

Task 6 - Effects On State Bonding Capacity

- Industrial development bond (revenue bond) financing of the project infrastructure, including the access road and the port facility, would not in itself adversely affect the State's bonding capacity.

Summary of Substantive Changes in Section III
of the Red Dog Report

1. The U.S. Bureau of Mines reports that Red Dog holds 29% of total U.S. reserves of zinc. Cominco reports that Red Dog holds over one-third of U.S. reserves when only economically recoverable reserves are considered.

2. Cominco has revised its initial start-up production rate from 1.1 million tons per year to 1.5 million tons per year. Figures for concentrate production, daily mill tonnage production, a daily number of truckloads of concentrate shipped to the port facilities and other related figures have been changed to reflect the revised initial production rate.

3. The development time schedule has changed by one year. Assuming construction begins in 1986, start-up is scheduled for 1989.

4. The Environmental Impact Studies are complete and the final EIS was issued in September 1984.

5. NANA has signed an administrative land exchange with the Department of the Interior for the access route through the Krusenstern National Monument and is awaiting congressional approval.

6. Cominco, through sales of stock, sold 18 percent of its interest in the Pine Point Mine to retain a 51 percent ownership, and completely sold its 17 percent interest in the Tara Mine in Ireland.

7. All reserve tonnages, grades, and production figures for Cominco mines and smelters have been updated to 1984.

8. World zinc consumption recovered from 1982 recessionary levels and zinc consumption in automobiles for rust proofing and die casting is increasing, a positive trend in the long term outlook for zinc demand and prices. Short term price movements included rising

prices in the first half of 1984 due to strong demand. U.S. producer prices fell in the second half of 1984 and early 1985 while London Metal Exchange prices (in pounds sterling) reached record highs, indicating the U.S. price was being driven down by the record strength of the dollar.

9. Cominco projects a zinc demand growth rate of 1.7% (compared with the U.S. Bureau of Mines 2.5% projection and foresees a loss of world mine production capacity due to reserve exhaustion of over 500,000 tons of zinc metal by 1990. The demand increase and capacity loss will create the market window for Red Dog.

10. GCO Minerals announced the discovery of an extension of the nearby Lik deposit. The discovery is expected to substantially increase the reserves of the deposit and make it increasingly likely that this deposit will be developed at some future date.

Office of Mineral Development
March 19, 1985

SHORT TERM ZINC, LEAD, AND SILVER PRICES
Supplement to Red Dog Project Analysis
Section III-C

Fluctuations in the prices of zinc, lead and silver between December 1983 and March 1985 are discussed below.

Zinc

Zinc prices, responding to strong demand in late 1983, advanced from 49 cents per pound to a high of 53 cents per pound in March 1984. Zinc consumption in the second half of 1983 was strong, demand forecasts for 1984 were strong, producer stocks were down, and net exports to socialist countries were expected to increase. Zinc consumption in the automotive industry began to climb in 1983 and 1984 as technological advances in die casting and the need for improved rust proofing reversed the trend for substitution by plastic and aluminum.

From mid 1984 to the present, the U.S. zinc producer price fell from a high of 53 cents per pound to February 1985 lows of 43 cents per pound. Reasons cited for the fall of U.S. producer prices include increasing smelter stocks of refined zinc, lower than expected bid prices to the U.S. Mint for use in zinc pennies, and pressure from consumers for discounted prices.

However, since the last quarter of 1984, while U.S. producer prices have fallen from 49 cents to 43 cents, London Metal Exchange (LME) prices have risen from £600 per ton to over £800 per ton suggesting that recent low U.S. prices may have been strongly influenced by the record strength of the dollar against the British pound.

As this report was written, both Cominco and Kidd Creek have announced 2 cent price increases to 45 cents per pound. There is also downward pressure on the dollar which may have the effect of raising U.S. producer prices in the short term. In the near term, Cominco President W. G. Wilson has indicated that a period of lower prices, the result of cyclical economic recession, could occur between now and 1989 when production from Red Dog begins. Wilson feels a period of lower prices may "shake-out" marginal high cost producers, further opening the market for a Red Dog appearance in 1989 or 1990.

Lead

Lead prices over the last fourteen months have ranged from a fairly stable U.S. producer price range of 24-28 cents during the first half of 1984, rising to a high range of between 28 and 34 cents during the third quarter of 1984, and dropping slowly to the present February low of 18-22 cents.

The strongest influence on lead prices during this period was the threat of supply shortages by several real and threatened production stoppages. Strikes of U.S., Australian, and German producers,

coupled with threatened Peruvian and Mexican strikes, created buying pressure from consumers. LME lead stocks were drawn down from 170,000 tons in February 1984 to a low of 40,000 tons in November 1984 as consumers bought to establish inventories in the event of long producer disruptions.

As a result of large consumer inventories stockpiled by late summer. the seasonal buying of lead by battery makers was absent in the fall. And coupled with the resolution of U.S. producer strikes, the price has since fallen to its present low.

As with zinc prices, the LME lead price in British pounds rose while U.S. dollar producer prices fell during the last quarter of 1984 and early 1985, generally reflecting the weakening of sterling against the dollar. Strengthening of the pound against the dollar could bring the U.S. producer price back up in the short term. Also, the effect of cold winters in both North America and Europe may keep lead stocks low as the winter's demand for replacement batteries should have been high.

Silver

Silver prices fell from $9 in January 1984 to its present price between $5-$6. Though silver has significant industrial uses, its price is closely tied with the gold price and its recent decline parallels that of gold. The strengthening of European currencies against the dollar is predicted to strengthen gold and silver prices.

No change is foreseen for the 20 year zinc, lead and silver price forecasts included in Section III-C of Red Dog Project Analysis, February 1984. Price changes based on strikes, inventory fluctuations, exchange rates, and the short term vagaries of commodity pricing are not indicative of long term trends.

MEMORANDUM State of Alaska

TO: Hon. Richard Lyon, Commissioner
Dept. of Commerce & Economic Develop.
Chairman, AK Industrial Dev. Authority
AND
Bert Wagnon, Exec. Dir., AIDA

DATE: September 13, 1984
FILE NO: 366-127-85
TELEPHONE NO: 465-3600

FROM: Norman C. Gorsuch
Attorney General

By: Jonathan B. Rubini
Assistant Attorney General
Governmental Affairs-Juneau

SUBJECT: DeLong Mountain transportation project appropriation

This memorandum identifies alternative methods for the Alaska Industrial Development Authority ("AIDA") to expend the funds appropriated under sec. 319, ch. 171, SLA 1984, p. 53, line 8. That appropriation provides that the sum of $3.4 million is appropriated from the general fund to AIDA for the purpose of "Geotechnical Studies, Routing, Engineering, Design and Acquisition -- DeLong Mountain Regional Port."

We first observe the unique nature of the appropriation and the resultant uncertainty regarding the manner in which the appropriation may be implemented.

The adoption of ch. 162 (HCS CSSB 347(SA) am H), enables AIDA to "own and operate" projects. Whereas AIDA was once only a secondary financing conduit, the expanded statutory powers will necessarily transform the characteristics of AIDA, requiring that the board and staff assume a far more substantial role in the development of projects which AIDA directly finances. The immediate appropriation presents the question of whether AIDA merely responds to "construction ready" proposals, or whether AIDA may initiate or may assist a project proponent to develop whatever preliminary analyses are necessary to assess with the requisite specificity the economic feasibility of a project. If nothing else, the appropriation of $3.4 million to AIDA for the purpose of developing preliminary project information on the DeLong Mountain port and road suggests the legislature's intent that AIDA assume an active, not responsive, role in exercising the "own and operate" powers with respect to the DeLong Mountain transportation project.

AIDA's role in the development of preliminary project information for the DeLong Mountain transportation project is particularly unsettled. While construction of the port and road serves regional purposes, development of the DeLong Mountain transportation project is inextricably linked to the development of the Red Dog mineral deposits. The mineral development is presently under review by Cominco, Alaska, a private corporation

which has executed an agreement with the NANA Regional Corporation (NANA) to obtain access to the deposit. Cominco, Alaska is currently expending substantial funds assessing the feasibility of the Red Dog project, and a final production decision is anticipated in 1985. At present, the state's overall role in the Red Dog project is under review, with the possibility that the state -- perhaps through AIDA -- will extend financial assistance toward development of the port and road. AIDA's potential role is further complicated by the fact that the newly-enacted statutory mechanism under which AIDA may participate does not, as yet, provide specific guidance to many of the questions presented. Simply put, many of the questions relating to both the expenditure of the appropriated funds for preliminary project development and the application of other state law are not presently addressed in statute.

Our analysis and recommendations must thus be viewed more as pragmatic proposals to work as well as possible within the existing statutory scheme than as a substitute for specific statutory guidance. If AIDA assumes a continuing role in the development and financing of the DeLong Mountain transportation project, we think it well advised to seek more explicit guidance from the legislature, in particular with respect to the question of the applicability of other state law.

I. DOES EXPENDITURE OF THE FUNDS SATISFY THE "PUBLIC PURPOSE" REQUIREMENT?

Article IX, section 6, of the Alaska Constitution provides that an appropriation of public money may only be made for a public purpose. While all validly enacted appropriations are presumed to satisfy this standard, an executive branch recipient of an appropriation of public funds is responsible for assuring that the public purpose limitation is satisfied.

The appropriation at issue is extended directly to AIDA, yet it is equally clear that expenditure of the funds will indirectly extend a substantial benefit to two private, for-profit corporations, Cominco, Alaska and NANA. Whether or not Cominco, Alaska receives a benefit is not, in our view, the dispositive factor, however. The test instead is whether the expenditure will directly enhance the general welfare of the community. E.g., Wright v. City of Palmer, 468 P.2d 326 (Alaska 1970); Suber v. Alaska State Bond Committee, 414 P.2d 546 (Alaska 1966); Lien v. City of Ketchikan, 383 P.2d 721 (Alaska 1963). In undertaking this inquiry, substantial deference must be extended to

the legislature's finding -- as evidenced by the adoption of the appropriation -- that the expenditure of public funds to assist in the development of preliminary site information for the DeLong Mountain Transportation Project serves a valid public purpose. AIDA, as would a court upon review of the appropriation, must therefore find that the legislative public purpose finding was arbitrary or without any reasonable basis in fact before concluding that the expenditure constitutes an impermissible expenditure of public funds. Cf. Wright v. City of Palmer, 468 P.2d 326 (Alaska 1970); DeArmond v. Alaska State Development Corporation, 376 P.2d 717 (Alaska 1962).

The Red Dog Project Analysis, a comprehensive report prepared through the coordinated efforts of several state agencies, offers a detailed analysis of anticipated public benefits which result from the development of the Red Dog project. Even if the appropriation had been directly extended to Cominco, Alaska, 1/ it is our view that the legislature's decision to assist in the development of preliminary information on the development of the support transportation network for the Red Dog project would have been amply supported by the detailed analysis in the Red Dog Report. 2/ That the appropriation was, in fact, extended directly to a public entity provides further assurance that the public purpose limitation is satisfied. Clearly, AIDA must accumulate adequate information before it may reach an informed decision regarding participation in a project as substantial as the DeLong Mountain transportation project. Development of an adequate information base necessarily requires the expenditure of public funds, if only through the commitment of staff resources. Indeed, the information to be developed through expenditure of the appropriation will assist a broad array of state officials, including the legislature, in consideration of the more substantial question of whether more extensive state financial involvement in support of the Red Dog project is appropriate.

1/ Traditionally, appropriations in Alaska have rarely, if ever, been extended directly to a private, for-profit corporation. Appropriations to private, nonprofit corporations are common though, and in one instance, such an appropriation was expressly approved. Lien v. City of Ketchikan, 383 P.2d 721 (Alaska 1963).

2/ Each appropriation must be assessed on a case-by-case basis. We thus express no opinion at this time on whether the expenditure of additional public funds in support of the Red Dog project or any other comparable project raises more substantial "public purpose" concerns.

II. MAY AIDA EXPEND GENERAL ASSETS TO DEVELOP PRELIMINARY PROJECT INFORMATION?

The newly-enacted provisions substantially expand AIDA's "own and operate" powers, in part in an attempt to facilitate coordinated public and private participation in the development of major capital projects. To reiterate, a problem raised by the immediate appropriation is that AIDA's role in the preparatory stages of the "own and operate" process is not defined by statute.

There are two express limitations on AIDA's exercise of its "own and operate" powers through use of assets in the economic development fund (AS 44.88.172) (hereafter "fund"). First, AIDA may not agree to finance a project under AS 44.88.172 without developing a finance plan which includes an estimate of the total cost of the project, a description of financing sources, an estimate of operational cost, and a description of the source of funds to pay operational costs. AS 44.88.173. Second, AIDA may not agree to finance a project which costs in excess of $10 million with assets of the fund without the approval of the local Regional Resource Advisory Council. AS 44.88.175.

It is our view that the prerequisites of a finance plan and of local approval do not apply where AIDA uses general assets to develop or assist in the development of preliminary project information. By the express terms of the statute, local approval is required only where a project which costs in excess of $10 million is to be financed or developed through use of the assets of the fund. At the same time, AIDA may not use assets of the fund without first developing a finance plan. As the DeLong Mountain transportation project illustrates, development of a finance plan demands a substantial degree of preparatory work. For example, the cost of the road connecting the port and the mineral deposits cannot be ascertained with the required level of specificity until seismic studies have been completed, the route of the road determined, and design work completed. Development of this type of preliminary information through use of general assets of AIDA is authorized by AS 44.88.085(11), which empowers AIDA "to enter into contracts or agreements with respect to the exercise of any of its powers, and do all things necessary or convenient to carry out its corporate purposes and exercise the powers granted in AS 44.88.010 -- 44.88.220." 3/

3/ The use of general assets assumes, of course, that the underlying appropriation of the general assets authorizes expenditure of the funds for such purpose.

III. WHAT PROCEDURES ARE AVAILABLE TO AIDA TO EXPEND THE APPROPRIATION?

Prior appropriations to AIDA supplied funds to undertake general financing programs or to meet general administrative expenses. The present appropriation represents the initial instance of a project-specific appropriation. While the appropriation prescribes the purposes for which the funds may be expended, AIDA enjoys broad discretion in identifying who may perform the work funded by the appropriation. 4/

Before addressing alternative ways to utilize the appropriated funds, we first observe that AIDA may elect to not spend the funds. An appropriation authorizes the expenditure of funds; it does not, except in rare instances, require that the authority to spend be exercised. See Ellis v. City of Valdez, ___ P.2d ___, Op. No. 2844 (Alaska, July 6, 1984). Importantly, the appropriation is for a capital project, and does not lapse in accordance with AS 37.25.020. As a consequence, AIDA may elect to reserve the funds for expenditure in a subsequent fiscal year, presumably at a time when some of the legal and procedural uncertainties have been resolved.

Assuming that AIDA elects to authorize expenditure of the appropriated funds, we believe that the preferred method is to seek authority to directly negotiate a professional services contract with Cominco, Alaska. We discuss below alternative options as we note the basis for this recommendation.

In the typical instance where a state agency, such as AIDA, seeks private assistance to undertake a function, a competitive procurement is required. In large part, the stated purpose for the $3.4 million appropriation is to obtain information available upon performance of functions which constitute "professional services." The procedures to contract for a professional service are prescribed in AS 36.98.010 -- 36.98.080, and we have previously advised that the provisions of AS 36.98 apply to AIDA. Cf. 1982 Inf. Op. Att'y Gen. (Oct. 13; 366-211-83). Under a

---

4/ We assume for purposes of this discussion that AIDA employees are not available to perform the functions. In addition, for the reasons which justify a sole-source negotiation discussed in text, we do not address whether other state employees, most notably employees of the Department of Transportation and Public Facilities, would be available under the terms of a reciprocal service agreement ("RSA").

competitive award of a contract for professional services, the statutes require that the agency provide public notice of the contract through circulation of a request for proposals ("RFP"), and that the agency award the contract upon an evaluation of the submitted proposals.

The problem in this instance is the established role of Cominco, Alaska in the development of the Red Dog project. Cominco, Alaska has the exclusive right to develop the mineral deposits under the agreement with the NANA Corporation, the owner of much of the land involved in the entire development. Access to NANA land for purposes of developing the preliminary information may well be restricted to Cominco, Alaska employees or their authorized agents. In addition, Cominco, Alaska has expended a substantial amount of funds toward development of information which relates to the preliminary information to be developed through expenditure of the appropriation. In this context, we question whether a general solicitation would provide a fair and competitive opportunity for other firms.

The law recognizes an exemption from the requirement of a competitive solicitation for precisely this type of situation. AS 36.98.030(d) provides that the commissioner of administration may authorize the contracting entity to negotiate directly with an identified provider if "there is a single source of the expertise or knowledge required or that one person or firm can clearly perform the required tasks more satisfactorily because of the person's or firm's prior work." AS 36.98.030(d). We believe that Cominco, Alaska's contractual relationship with NANA, as well as the extent of Cominco, Alaska's existing involvement in the Red Dog project, supply the requisite basis to seek sole source authorization.

In the event that AIDA seeks approval to negotiate directly with Cominco, Alaska, we offer several brief comments with respect to the scope of the proposed contract. We understand that several of the functions authorized under the appropriation -- such as seismic studies -- are currently being performed by Cominco, Alaska. As a general rule, the "public purpose" doctrine precludes use of public funds to reimburse a recipient for work that has been completed. AIDA may, however, properly purchase the information generated, providing that the cost of the information bears a fair market value. More generally, we recommend that any professional service contract executed between AIDA and Cominco, Alaska be tied to AIDA's statutory obligation to develop a finance plan if it is to participate in the financing of the DeLong Mountain transportation project. Both the information specifically identified in the appropriation and the addi-

tional information previously compiled by Cominco, Alaska are essential to the development of a sufficient finance plan.

In short, we suggest that AIDA use the available funds to obtain Cominco, Alaska's acknowledged expertise and assistance in developing a finance plan, in addition to the acquisition of specific information.

A related alternative to a sole-source professional services contract with Cominco, Alaska would be for AIDA to make the funds available to Cominco, Alaska as a grant. While the distinction between a grant and a professional services contract is more illusory than real, we believe a contract allows for more effective oversight of the expenditure. Ultimately, AIDA is accountable for the manner in which the funds are expended, and effective control is thus desirable, if not essential. A more substantive concern is that the appropriation was not structured as a grant, and AIDA, indeed, does not have specific statutory authority to provide grants. Though the general corporate powers of AIDA may well be sufficiently broad to imply authority to provide grants, a more explicit authority is available to contract for the services. Finally, a grant would place in question legal rights to documents produced through expenditure of state funds. Were AIDA to ultimately "own and operate" the port and road, ownership of the material may prove important.

IV. CONCLUSION

In sum, we conclude that the fairest and preferable method to expend the available funds is to request approval from the Department of Administration to negotiate directly with Cominco, Alaska for assistance in development of the finance plan required under AS 44.88.173. Specifically, the contract should minimally require that Cominco, Alaska develop and present to AIDA information relating to the Delong Mountain port and road in sufficient detail to enable AIDA to determine the cost of development. Any geotechnical studies, engineering, or design work developed under the contract would be the property of AIDA, and would be available for use in the event that AIDA ultimately determines to participate in the financing of the project.

Office of the Governor

II. Executive Summary

- This section of the report was prepared by the Office of Mineral Development. The contributing agencies have reviewed the Executive Summary for consistency.

A. Summary of Findings

Project Feasibility

- The enormous tonnage and high combined grade of zinc, lead and silver make Red Dog the worlds largest, undeveloped zinc/lead deposit.

- Development costs will be high. However, the deposit can be mined as an open pit with a very low ratio of waste material to ore. Therefore, actual mining costs will be low compared with the majority of world zinc/lead mines. This will give the Red Dog mine competitive advantage and result in reducing the possibility of temporary mine shutdowns in times of world economic recession.

- For the foreseeable future, 70%-80% of mine revenues will be from the sale of zinc concentrates. Zinc is the fourth most widely used industrial metal, and compared with the other base metals (copper and lead), zinc has the greatest potential for growth in terms of world demand and the least potential for being over-produced.

- Without State investment, an average long term zinc price of 63¢ per pound is estimated to provide Cominco a 15% return on investment. A return on investment of 15% is cited for comparison purposes only and should not be interpreted as a decision threshold for Cominco. A 2.5% change in the return on investment is estimated for each 5¢ change in the long-term average zinc price.

- In the long term, much of Red Dog's concentrate production can be refined at Cominco's smelter and refiner in Trail, British Columbia, and will replace concentrates from other depleting Cominco zinc mines. In the near and long term, concentrates from Red Dog will be attractive to Japanese and European processors because of the reliability of the supplier, the longevity of the mine, and the political stability of the United States. The development of Red Dog and other base metal deposits may eventually make the construction of an in-State smelter and refiner feasible.

Permitting and Access

- Conditions at Red Dog will allow the operators to meet the most stringent environmental regulations and environmental permitting should not pose any problems.

- Gaining an access right-of-way from a Chukchi Sea port, across the Krusenstern National Monument to the mine site, poses the single greatest hurdle to mine development.

NANA

- The NANA Regional Corporation is solvent and is strongly oriented towards projects which offer long-term employment benefits to its shareholders, principally in the form of joint ventures within the region.

Cominco

- Cominco is a sound corporation, has good overall prospects, is backed by a large, reputable parent corporation, and appears able to provide a solid corporate base for support and development of the Red Dog mine project.

- Cominco is presently the free worlds largest producer of zinc and lead and has been successfully mining, processing and marketing zinc and lead for over 70 years.

- Cominco has developed and successfully operates four major mines in the North American arctic. Three of these are zinc/lead mines and have been developed within the last 20 years. The senior management for the Red Dog project will include many of the same personnel responsible for building and operating these arctic mines.

State Impacts

- The project will create between 350 and 400 direct, permanent jobs within the State with an annual gross payroll of between $11.2 and $12.9 million. Additionally, approximately 225 secondary and indirect jobs will be created. Construction employment will total 143 full time equivalent jobs between 1986 and 1988 with an annual gross payroll of $8.8 million during those years.

- Revenues to the State from the mine will be derived from the mining license tax and the corporate income tax. As both taxes are based on net profits, annual State revenues range from $9 to $20 million in current dollars subject to how repayment of infrastructure costs are treated. The net present value of revenues to the State over 30 years, including estimated reductions in

transfer payments, is from $200 million to $300 million based on a zinc price range between 55¢ and 65¢ per pound. Additionally, earnings derived by NANA from the mine will provide revenue to the State. At present, there is no personal income tax so no revenues from employee income can be projected.

- No estimates have been made for the potential demands on State programs from the migration of out-of-state job seekers attracted by the project. Because of the NANA/Cominco agreement requiring preferential local hire, the remoteness of the project, and the lessening of national unemployment, the problem of out-of-state job seekers may not be significant.

- Recent dramatic decreases in the total of state transfer payments to the NANA region have been tentatively linked with permanent fund distributions. This indicates that income derived from mine wages may also have a positive effect on reducing regional transfer payments by the State.

- If State ownership and future control of the transportation corridor and infrastructure facilities are not considered and assuming a 60¢ lb. zinc price an examination of project finances estimates that a direct State subsidy of $40.1 million towards project development costs would assure a 15% rate on investment. This would provide a six-fold net present return on the State's subsidy in the form of tax revenues and transfer payment reductions totaling $270 million. If the State were to completely finance construction of the road and port for an estimated cost of $135 million, the cost/benefit ratio would be reduced to 2:1.

- Industrial development bond financing of the project infrastructure would not adversely affect the State's bonding capacity.

Regional Impacts

- Red Dog will provide approximately 260 full-time jobs for regional residents at mine start-up in 1988, increasing to 400 in 1993. The total regional payroll will total approximately $7.0 million initially and will increase constantly as local employees move into professional and technical positions. Additionally, some 75 secondary jobs will be created after start-up and would mostly be filled by regional residents. At present, 88% of the regional economy is supported by Federal and State revenues, and the existing 1200 full-time equivalent jobs in the region are heavily dependent upon Federal, State and local government employment.

- If the local hire objectives are met, the net effect of the mine on increasing the regional population will not be significant. Some increase in the population of Kotzebue is expected as regional residents relocate to be closer to their jobs. Kotzebue's population increase attributable to the mine represents about 6% of the total increase in Kotzebue's population over the next 20 years. With the possible exception of the water system, existing municipal facilities should not be significantly stressed by population growth attributable to development of the mine.

- Because Red Dog is an enclaved development, no substantial additional demands will be placed upon the region's service delivery. However, an increase in regional affluence is likely to require some increased social service delivery, at least temporarily. Service delivery in Kotzebue will be impacted to some degree if mine workers commute regularly through the city. That impact will depend on the frequency and duration of transient visits.

- The NANA/Cominco agreement requires Cominco, contingent upon the availability of skilled labor, to preferentially hire regional

residents, state residents and out-of-state residents in that order. While there is no guarantee of the percentage of local hire, NANA has stated it will assume the responsibility to train regional residents for these jobs.

- The region could benefit from the use of the project's port facilities and backhaul capabilities. Savings on freight costs are estimated by Cominco to be between $1 million and $3 million annually assuming port user fees are not assessed to incoming regional freight.

- NANA is presently seeking to detach Red Dog and other mineral deposits in the area from the North Slope Borough. Successful detachment is seen as a factor in the decision to proceed with the Red Dog project (due to uncertain future taxation policies of the North Slope Borough), and in the creation of a Northwest Alaska Borough.

Infrastructure Costs

- Cominco's route selection and road design are based on sound engineering criteria and the cost estimate of $80 to $90 million for the preferred road through the Krusenstern National Monument is realistic for this stage of the evaluation.

- Cominco's estimates for port costs of $50 to $60 million, based on the proposed, ballasted-tanker design, appear reasonable.

B. Recommendations

Red Dog will become one of the premier zinc/lead mines in the world. While the mine would eventually be developed without assistance, there are several reasons why the State may want to consider participating in the funding of all or part of the costs of building a road and regional port.

- There is little risk that the project will not generate sufficient revenues to amortize infrastructure costs at a modest interest rate.

- In addition to being able to repay any State funding, the project will generate over 400 year-round, permanent jobs; provide direct tax revenues to the State and local governments; and may significantly reduce the amount of regional transfer payments.

- The port facility, tidelands, uplands and right-of-way will service the region as well as the mine, and both the road and the port may stimulate future development of additional mineral deposits in the Noatak area. The road could eventually become part of an integrated transportation system that could link other more distant mineral developments such as the Northern Alaska Coal Field.

- The development of Red Dog will signal Alaska's firm intention to become a world supplier of mineral resources. This will have the effect of establishing Alaska's credibility with international consumers and attracting investment capital for other resource development projects.

If the State is to participate in the funding of the road and port facilities, the following recommendations are suggested.

- Any major State investment in the road and port facilities which will initially service the Red Dog mine should be conditional upon

firm agreements with NANA and Cominco which will provide for State interests in the facilities and right-of-way, as well as further guarantee the use of the road and the port to other potential users. This requires that State tidelands, privately owned uplands and the right-of-way be available for expanded development and use, in a reciprocal use agreement among affected landowners and users.

- The maintenance and operating costs of the road and the port should be borne by the users.

- If State funding were to take the form of a loan or appropriation, repayment of the funds should be required and should be spread over a period of 20 years or longer to begin with mine production. Whether repayment is to be made in the form of annual installments, tied to a tonnage user fee or some combination of both, the interest rate attached to the repayment should reflect the State's willingness to share in the project risk and should recognize the total benefits the project will provide, including State interests in the road and port.

- Any agreement between the State and NANA/Cominco should include an equitable mechanism to accommodate other future users into a fee schedule which would incorporate a pro rated share of debt amortization as well as operating and maintenance costs.

ALASKA INDUSTRIAL DEVELOPMENT AUTHORITY (AIDA)

AIDA is a public corporation and an instrumentality of the Department of Commerce and Economic Development, with a legal existence separate from and independent of the State.

AS 44.88.010 - AS 44.88.220: enacted in 1967; amended in 1975, 1976, 1977, 1980, 1981, 1982 and 1983.

Purpose

AIDA's statutory purpose is to "promote, develop and advance the general prosperity and economic welfare of the people of Alaska; to relieve problems of unemployment; to create additional employment by providing various means of facilitating the financing of industrial, manufacturing, and business enterprises;" and "to promote, develop and maintain an adequate supply of decent, safe and sanitary multi-family housing projects during times of shortages of such projects, by providing various means of financing and facilitating the financing of multi-family housing projects in the state."

Method

AIDA sponsors six different financing programs, five for business and one for multi-family housing; the programs are used according to the size of the project and the limits of the federal tax code.

Economic Development Umbrella Bond Program. AIDA issues tax-exempt industrial development bonds to finance Alaskan projects of $1 million or less. (The tax-exempt status of the bonds is permitted by Section 103 of the Internal Revenue Code.) AIDA groups qualifying projects together for the bond sales, pledging its full faith and credit for repayment of the bonds. The Authority uses the proceeds of the bond sales to purchase up to 90 percent of each loan (originating lenders must retain 10 percent of the loan). The lower interest rates available through this program often make the difference in a project's fiscal viability.

Consolidated Umbrella Bond Program. The legislature in 1982 amended AIDA's statutes to include financing for projects valued at more than $1 million in a manner similar to that used for the Economic Development Umbrella Bond Program: after grouping several project loans together, AIDA sells tax-exempt bonds. However, for the sale of these bonds, commonly called Consolidated Bonds, AIDA uses the proceeds of bond issues to purchase up to 80 percent of project loans, leaving the remaining 20 percent for the originating lender. AIDA reviews each applicant project carefully to determine its financial viability before purchasing part of the loan. Like the bonds sold for the smaller-project umbrella program, Consolidated Bonds are backed by both the financed project and AIDA's full faith and credit.

Federally Guaranteed Program. Funds within AIDA's Small Enterprise Loan Account may be used to purchase the federally-guaranteed portion of a loan made by a private financial institution (the federal agency that has guaranteed almost all of these loans to date is the Small Business Administration). The loans may be used to finance working capital, inventory, construction, etc.

Revenue Bond Program. Through this program, the Authority acts as a conduit in the sale and issuance of bonds without participating financially or pledging its full faith and credit as security for the bonds. The bonds are sold primarily to financial institutions where they are privately held, and to bond buying houses or investment bankers for resale. Due to market fluctuations and the type of bonds sold, all sales to date have been negotiated. The bonds are secured by the project, special reserves, bank letters of credit, lease and/or revenue assignments, personal guarantees, or liens on other assets.

Multi-Family Housing Loan Account. The legislature in 1982 authorized AIDA to finance multi-family housing. To obtain financing through this program, a borrower applies to a private lending institution for a loan to construct a multi-family dwelling of 5 or more units. AIDA issues tax-exempt bonds, backed by its full faith and credit, to purchase up to 90% of the mortgage; the originating lender retains 10% of the loan. By statute, bonds for such projects must be sold before January 1, 1987.

Taxable Bond Program. As of August, 1984, the Authority is in process of implementing a taxable bond loan program. This program is designed to assist in financing projects that at one time were eligible for tax-exempt bond financing, but have been deleted from eligibility by federal law. It is anticipated that the mechanics and fees of this program will be very similar to the economic development and consolidated tax-exempt programs, but will carry a higher interest rate.

Eligibility

- In general, AIDA may finance any project it approves as long as the project conforms to the Internal Revenue Service guidelines for the use of proceeds of tax-exempt bond sales. Each of the six programs outlined above has eligibility requirements that are too extensive for this brief space.

- For a multi-family housing loan, a borrower must make at least 20% of the financed units available to persons of lower or moderate income.

Terms

Economic Development Umbrella Bond Program

Maximum Amount:	75% of the appraised value of the project
Collateral:	Variable - must be first lien
Interest Rate:	Variable; based on the cost of funds
Fees:	$100 pre-application fee; plus 1.0% of AIDA participation amount for each loan

Consolidated Umbrella Bond Program

Maximum Amount:	75% of the appraised value of the project
Collateral:	Variable - must be first lien
Interest Rate:	Variable; based on the cost of funds
Fees:	$100 pre-application fee; plus 1.0% of AIDA participation amount for each loan

Federally Guaranteed Program

Maximum Amount:	$500,000 is the maximum amount of AIDA's participation in one project
Interest Rate:	Variable; based on the Moody AA Corporate Index;

Revenue Bond Program

Maximum Amount:	Variable
Interest Rate:	Variable; based on the cost of funds
Fees:	$100 pre-application fee; plus 1.0% for the first $1 million, 1/2% for the next $4 million, 1/4% for the next $10 million, and 1/10% for any remaining amount

Multi-Family Housing Loan Account

Maximum Amount:	75% of the appraised value of the project
Collateral:	First lien, minimum
Maximum Term:	30 years, or 75% of the estimated economic life of the project, whichever is less
Interest Rate:	11% (subject to change)
Fees:	2.0% of the amount of AIDA's participation in the loan

Lending Activity, FY 81-82

Fiscal Year	# of Loans Approved	$ Amount of Loans Approved
FY 83	378	$253,329,707
FY 84	338	$208,885,747

Authority Members

The five members of the Authority include: the Commissioners of the Departments of Revenue and Commerce and Economic Development; one other head of a principal executive branch department, appointed by the governor; and two public members appointed by the governor and approved by the legislature for staggered two-year terms.

Dear John:

On April 10 I wrote to you about the fact that I had not received a reply from Cominco to questions I had asked for on February 12.

Cominco did reply to my Anchorage address. I have it in hand now and it is enclosed for your information.

Yours truly,

Marco

March 8, 1985

Dear Representative Pignalberi:

I would like to apologize for taking so long to supply the information that you requested during our meeting in Juneau on February 12. My only excuse is press of work and lack of time. I have spent most of the intervening period on airplanes.

We certainly appreciated the opportunity to meet with you and the Anchorage caucus, to discuss our Red Dog Project. I consider that the exchange of views was very worthwhile, and I think that we were able to better appreciate your thoughts and concerns.

During the discussions, I gave you some estimated figures in regard to Cominco's return on investment under different financing alternatives, and I indicated that these would be confirmed. I am now pleased to do this, and will compare these with my estimates, which have turned out to be both optimistic and pessemistic.

The first alternative assumes that Cominco puts up the entire $400 million investment. Using current metal prices, the return on investment (R. O. I.) would be 7.8% (My estimate was 6.0%). With Cominco's forecast prices, the R.O.I. increases to 13% (My estimate was 10%).

If the State finances the $150 million cost of the transportation system, and this financing is repaid as proposed by Cominco, the R. O. I., using current metal prices, increases to 9.6%, and to 16% (My estimate was 18%) with Cominco's forecast prices.

You also requested information in regard to the State's return on its investment. Assuming a State investment of

$150 million, to be repaid by a toll fee of $260 million over 30 years, this is a return on investment (on a discounted cash flow basis) of 4.3%. Adding in the estimated direct taxes to the State of $360 million during the same 30 year period (for a total of $620 million) the R.O.I. is increased to 12.8%. And it should be stressed that these taxes are a direct result of income generated by Red Dog and will be achieved only if Red Dog is put into production.

One further item should be considered. In early 1984, at Governor Sheffield's request, a study of the Red Dog Project was carried out by a Task Force from the key State agencies, including CED, CRA, Revenue, DOT/PF and DNR. One portion of this report studied the economic effect of Red Dog on the State, and identified a significant reduction in transfer payments from the State to the NANA region, amounting to about $1.5 million per year, or more than $40 million over 30 years.

This reduction in State expenditures can also be directly attributed to Red Dog. When this is added to the previous $620 million, the R.O.I. on the State investment of $150 million becomes 13.7%. So it can be seen that the Red Dog transportation system is truly an economic investment for the State.

If there is any other information on Red Dog, or Cominco, that would be of assistance to you, please do not hesitate to contact me.

Yours truly,

H. M. Giegerich
President and General Manager

HB 369
Fiscal Note Analysis

The cash flow figures shown in the fiscal note reflect the reduction in general funds available for appropriation arising from HB 369. These figures are based on the scheduled loan payments shown in the attached Table I after netting out service fees as calculated in Table II. Table II also provides a breakdown of the reduction into interest and principal.

Due to loan prepayments, actual receipts may be greater than scheduled in early years and less than scheduled in later years. This is the main reason why the FY 86 budget actually contains $31.3 million estimated loan cash flow, made up of $13.3 million interest and $18 million principal. The difference between the budget estimate and scheduled cash flow for FY 86, which is $13.5 million, will be a downward adjustment to the next revenue estimates in June.

Table I

General Fund Loans to be Appropriated to AIDA
Estimated Cash Flow (Principal and Interest)
($ 000)

Fiscal Year	Veterans	Small Business	Commercial Fish	Tourism	Child Care	Historical District	Fisheries Enhancement	Total

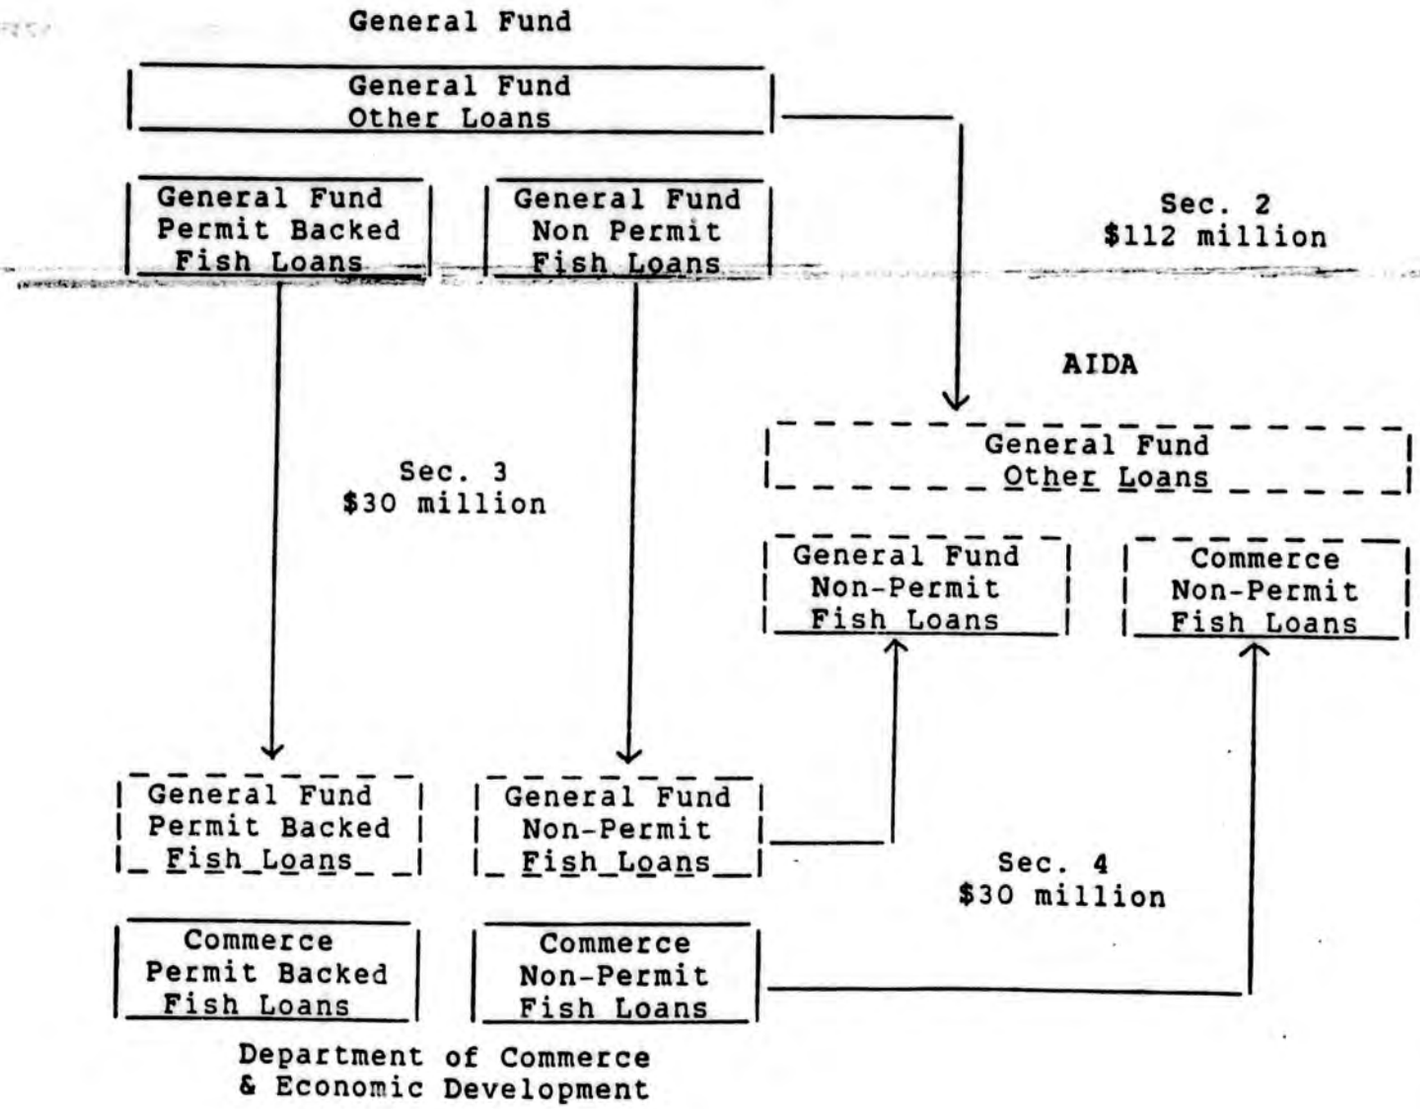
2007	3,182							3,182
2008	1,709							1,709
2009	521							521
2010	98							98
2011	20							20
Total	145,758	19,875	31,768	3,099	15	147	6,804 (principal only)	207,466



1. This table represents the cash flow to the Department of Commerce and Economic Development. Cash flow to the general fund would be further reduced by .5% service fee on loans serviced by Commerce and .125% service fee to Commerce on loans serviced by banks.
2. Cash flow has not been adjusted for delinquency or default. Except for commercial fish non-permit loans, the state expects complete recovery on defaults. Thus, delinquency and default merely produce lags in receipts.

NANA REGIONAL CORPORATION, INC.
4706 HARDING DRIVE ANCHORAGE, ALASKA 99503
TELEPHONE (907) 248-3030

March 29, 1985

Mr. John Hartle
Office of Representative John Sund
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear John:

As requested I am enclosing a copy of the sections of the agreement between NANA and Cominco pertaining to employment and training.

The agreement requires Cominco to hire employees according to a defined order of preference which begins with Natives of the NANA region and ends with individuals who have resided in Alaska for less than two years or, non-residents. This order of preference is set forth at section 10.1.2 of the enclosed. You will also note this local hire and order of preference provision applies to employment by contractors of Cominco performing work within the State. Finally, I would direct your attention to section 10.2 which requires the development and implementation of a "Training and Employment Plan" for the project.

We believe these provisions of the agreement between NANA and Cominco will result in the most comprehensive major project local hire program ever implemented in Alaska. If you have further questions about this or desire additional information, please let us know.

Sincerely,

Don Argetsinger
Vice President

Enclosures

ARTICLE X

EMPLOYMENT

10.1 Employment Goals and Policy.

10.1.1. Beginning in calendar year 1982, as many as possible of the employees required by Operator or any contractor or subcontractor in connection with any activities under this Agreement to be undertaken in Alaska shall be Natives of the NANA Region, including employees for Exploration Work, development and production activities and supervisory and managerial positions. It is the goal of NANA and Cominco that by not later than twelve years after commencement of production from the first Mine on the Red Dog Property, to the extent feasible, one hundred percent (100%) of such employees shall be Natives of the NANA Region. To that end, whenever employees are hired for jobs relating to any activities to be undertaken in Alaska under this Agreement, such employment shall be offered first to available Natives of the NANA Region who are qualified for the job or, if none are qualified and except as otherwise provided in Section 10.1.3, to those who meet job-related standards of fitness and ability which indicate that with a reasonable amount of on-the-job training as outlined

in the Employment Plan the person could satisfactorily perform the job.

10.1.2 If Natives of the NANA Region are unavailable as provided above, then Operator shall, to the extent permitted by law, give preference to qualified job applicants in the following order of priority:

(a) individuals who have been residents of the NANA Region for at least two years;

(b) individuals who have been residents of Northwest Alaska for at least two years;

(c) individuals who have been residents of Alaska for at least two years;

(d) any other job applicant.

10.1.3. If there are no Natives of the NANA Region qualified and available for nonrecurring jobs with a duration of two months or less after inquiry to NANA in the manner prescribed by the Employment Plan for the names of such available and qualified Natives, the Operator may hire persons qualified for such jobs without regard to the requirements of Section 10.1.1 and 10.1.2 for reasons of essential and/or expeditious performance. It is recognized that emergency situations may arise where it is necessary for Operator to bring in specialists from outside of the NANA Region and the State of Alaska without regard to the requirements of this Article X if a breakdown of equipment, metallurgical and/or water treatment process problem, structural failure or some similarly serious problem occurs. This emergency power will be detailed in the Employment Plan. Operator need not provide training for jobs described in this Section 10.1.3, unless otherwise required by the Employment Plan.

10.2 Training and Employment Plan.

In furtherance of the goals and policies described in Section 10.1, NANA and Operator shall with due diligence, working in

conjunction with the Management Committee, develop a mutually satisfactory plan for the training and employment of Natives of the NANA Region (the "Employment Plan"). NANA and Operator will attempt to secure State and/or Federal funding to cover as much as possible of the cost of the Employment Plan. The Employment Plan shall, among other things, provide that:

(a) A personnel officer (the "Personnel Officer") be appointed and be responsible for implementing, supervising and managing the Employment Plan. Until the Personnel Officer is appointed NANA will perform the functions of the Personnel Officer as requested by Operator. If no Personnel Officer is appointed within thirty (30) days after the Production Decision, NANA shall thereafter be reimbursed by Operator for any salary and other expenses it incurs in performing the functions of the Personnel Officer requested by the Operator, the amount of any such reimbursement to be a cost of the Project. The Personnel Officer shall be someone selected by NANA; provided, that Operator may submit nominees for NANA's consideration and shall have the right to veto any selection made by NANA and to terminate the employment of any Personnel Officer for cause. Operator shall give NANA a written explanation of the basis for any such veto or termination;

(b) NANA shall be responsible for providing Operator, any contractors or subcontractors, and the Personnel Officer, on a continuing basis, with the names of any Natives in the NANA Region eligible for preference employment pursuant to Section 10.1.1, their employment status, preferred type of employment, training, experience, education and availability;

S. 79

(c) The type and scope of training will take into account the type and number of jobs expected to be available, the estimated number of available Natives of the NANA Region eligible for training and employment hereunder, the qualification level of such persons and the experience requirements of various job categories.

10.3 Wages and Benefits.

There shall be no discrimination in the amount or rate of wages and fringe benefits paid to employees on the basis of race, color, religion, sex, national origin, age, physical or mental handicaps, or status as a disabled veteran.

10.4 Unions.

If Operator should have a collective bargaining relationship with one or more unions representing employees employed in connection with the Project, it shall not enter into any agreement which prevents the full compliance with this Article X. Non-Operator shall be notified of and be afforded the opportunity to have a representative attend and observe any negotiations Operator may have with a union, it being agreed that Operator will control any such negotiations.

10.5 Compliance with Applicable Laws.

Nothing in this Agreement shall require NANA or Cominco, or any contractors or subcontractors, to violate Title VII of the Civil Rights Act of 1964, as amended, Executive Order 11246, as amended, the National Labor Relations Act, ANCSA, or any other law or regulation relating to employment.

10.6 Scholarships.

Operator shall provide up to Thirty Thousand Dollars ($30,000) each calendar year for a scholarship program for the Natives of the NANA Region. The scope and focus of the program, giving due consideration to the need to develop mining and geological expertise in the NANA Region, and the method of awarding scholarships shall be

determined by the Management Committee; provided, that Operator may assist NANA in selecting recipients of scholarships and the recipients selected will be agreeable to both NANA and Operator if the Operator chooses to participate in the selection process; provided further, that it is the intent of the parties to award scholarships pursuant to this provision to students who meet the eligibility requirements of the program and both parties will make a good faith effort to fulfill this intent.

MEMORANDUM OF UNDERSTANDING

BETWEEN THE ALASKA INDUSTRIAL DEVELOPMENT AUTHORITY
AND
COMINCO, LTD.

FOR THE DELONG MOUNTAINS TRANSPORTATION SYSTEM

The Alaska Industrial Development Authority's (AIDA) Negotiation Committee and the Cominco Negotiation Committee (Cominco) agree in principle to the following terms and conditions for the purposes of establishing a contractual relationship to secure project financing on the DeLong Mountains Transportation System ("The System") and outlining the terms under which Cominco shall be entitled to use The System:

1. All parties agree to adopt the SRI methodology for calculating the Minimum Annual Assessment and the Rate of Return. The Minimum Annual Assessment and the Rate of Return will be calculated over a fifty (50) year period.

   The parties agree to a Minimum Annual Assessment which results in an annual return on the State's total investment of 6 1/2%.

   This agreement is contingent upon the results produced by the SRI model being substantially arithmetically correct.

2. AIDA agrees that no interest will be imputed on its equity infusion prior to the date that The System is placed in service. Furthermore, AIDA agrees, that subject to U.S. Treasury laws and regulations and bond covenants related thereto, to apply its equity first to the project for purposes of calculating the Minimum Annual Assessment.

3. Cominco's first quarterly installment payment on the Minimum Annual Assessment is due three months after the date the facility is placed in service for transportation and storing Red Dog concentrates. However, in any event, the first quarterly payment may not be due before January 1, 1990 nor later than July 1, 1990.

4. Maintenance and Operating, and Sustaining Capital Costs will be carried as separate line items and not be considered in calculating the Minimum Annual Assessment or the State's Rate of Return.

5. Cominco agrees that all the facilities being financed with AIDA bond proceeds and equity are multi-user facilities and accommodation of third party users may be necessary provided that capacity is available.

6. The parties agree that expenditures before July 1, 1985 for project development tasks attributed to The System, will be reimbursed in payments over a five-year period in equal quarterly installments coinciding with receipt of the first quarterly payment from Cominco with interest thereon at 6 1/2% from the earlier of the placed-in-service date or July 1, 1990.

7. AIDA and Cominco will approach financial institutions jointly to obtain acceptable credit enhancement on the bonds and on the first 10 Minimum Annual Assessments. AIDA agrees to pay .5% of the par amount outstanding of the bond issue or that amount allocable to the credit enhancement for the bonds whichever is greater.

Clarified as for 10 years.

Cominco will be responsible for the reimbursement agreement with respect to the Minimum Annual Assessment enhancement.

8. During the 50 years that Cominco is paying the Minimum Annual Assessment, the parties agree that Cominco's total toll fee, when calculated on a unit basis, will not exceed that of other users shipping comparable products.

9. Toll fees from future users will accrue 100% to the State except as noted in item 12.

10. Prior to the in service date, should Cominco cease to develop the Red Dog Mine after costs have been incurred by AIDA for the project, Cominco Ltd. will pay the Authority for those costs together with interest from the date the costs were incurred.

11. Using a five-year moving average beginning in the year in which annual payments are due (1990), AIDA will receive 5% of the price increase above 50¢ per pound (in 1985 $ using the GNP deflator) times the number of pounds of zinc contained in the zinc concentrate shipped. The price will be the average of the European and U.S. Producers price as reported in Metals Week in U.S. cents per pound.

The payment received as a result of the Zinc Price Escalator described above may not exceed 50% of the Minimum Annual Assessment. The Zinc Price Escalator will be in effect until the retirement of outstanding bonds or 35 years whichever is earlier.

12. Cominco will sign a take-or-pay Minimum Annual Assessment contract covering a fifty year period. For that portion of the fifty year period following the retirement of all outstanding bonds issued to construct the project or 35 years from bond issuance whichever is earlier, the Minimum Annual Assessment may be reduced in the event of certain force majeure events that prevent Cominco from shipping the agreed to amount of concentrate during any 12 month period.

Force Majeure events include strikes, boycotts, labor disputes, embargoes, acts of God, acts of public enemy, acts of superior governmental authority, riots, rebellions, and sabotage.

If, after the bonds have been retired or 35 years from bond issuance whichever is earlier, AIDA has obtained at least 6 1/2% Rate of Return from user fees including all fees from Cominco but excluding M & O and 50% of the fees from third parties, then Cominco is required to pay the Minimum Annual Assessment pro rated by the tonnage produced in that year relative to the original mill capacity. If AIDA has received less than the 6 1/2% Rate of Return as calculated above, then Cominco will pay a Minimum Annual Assessment in any one year equal to the amount necessary to provide AIDA with a 6 1/2% Rate of Return amortized over the balance of the fifty year agreement and allowing for 50% of the user fees paid by third parties in that year.

The Minimum Annual Assessment will give Cominco the right to access the public transportation system to ship the projected tonnage related to original mill throughput ("Allowable Base") plus an additional 10% in any 12 month period. The Allowable Base will be cumulative during the 50 year period of this agreement so that shipments in one year that are less than the Allowable Base may be made up in subsequent years in order to achieve the cumulative Allowable Base. The additional 10% of shipments will be annual and will not be cumulative. Should Cominco desire to ship an amount of concentrate in excess of the cumulative Allowable Base plus the allowed overage, Cominco will pay a tonnage fee on the excess at the same rate that it pays on the allowable tonnage.

Fees paid on such excess tonnage referred to in the above paragraph and by the zinc price escalator will be deemed to have retired the outstanding bonds at the end of the amortization period.

RED DOG MINING LEASE

THIS RED DOG MINING LEASE (hereinafter referred to as the "Lease") is made and entered into as of the 11th day of October, 1982, by and between NANA REGIONAL CORPORATION, INC., a corporation organized pursuant to the laws of the State of Alaska (hereinafter "Lessor") and COMINCO AMERICAN INCORPORATED, a corporation organized pursuant to the laws of the State of Washington (hereinafter "Lessee"):

W I T N E S S E T H :

WHEREAS, Lessor and Lessee have entered into that certain Development and Operating Agreement dated as of October 11, 1982 (hereinafter referred to as the "Agreement") which calls for the execution of this Lease among other provisions;

NOW, THEREFORE, in consideration of the mutual agreements and covenants contained herein, the execution of the Agreement, the payments of rents for the lands controlled by this Lease as required by the Agreement and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Lessor and the Lessee hereby agree and covenant as follows:

1. Definitions.

Except as otherwise specifically set forth in this Lease, the terms defined in the Agreement which are used in this Lease shall have the meanings assigned to them in the Agreement.

2. Grant and Description of Leased Premises.

2.01 Grant. Subject to the terms, conditions, exceptions and reservations contained herein or in the Agreement, the Lessor hereby grants, leases and demises (to the extent the Lessor has or hereafter acquires the right to do so) to the Lessee, its successor and assigns, the exclusive right to the surface and subsurface of the land described in Exhibit A, attached hereto and made a part hereof, (hereinafter

S. B

"Subject Lands") and any and all Minerals located on, in or under the Subject Lands, for the purpose of exploring, prospecting, developing, working, using, mining, milling, and substantially equivalent processes, removing, tranporting, storing, selling, disposing of, managing, and controlling any and all Minerals located on, in, or under the Subject Lands.

2.02 Exceptions and Reservations. The Lessor expressly excepts and reserves the following from the grant set forth in Section 2.01 above, except to the extent the Agreement grants to or makes available to Lessee any of the reserved substances identified in this Section:

(a) All Oil, Gas, and Oil and Gas Associated Substances;

(b) Sand, gravel, and stone;

(c) Geothermal Resources.

2.03 Conditions on Effectiveness. The effectiveness of this Lease and of the grant made hereunder (a) with respect to any land initially covered by this Lease, shall be conditioned upon the occurrence of each and all of the events described in Section 2.3 of the Agreement; and (b) with respect to any land subsequently added to this Lease, shall be conditioned upon the occurrence of each and all of the events described in Article III of the Agreement. This Lease as it relates to any land shall not be recorded until it has become effective as to such land pursuant to the provisions of this Section 2.03.

3. Purposes.

Subject to the terms, conditions, exceptions, and reservations herein contained, the purposes of this Lease are to enable the Lessee:

(a) To explore for, mine, mill, beneficiate, concentrate, extract, leach, mix, convert, or otherwise obtain and dispose of all minerals and materials covered by this Lease and the Agreement and located on, in, or under the Subject Lands described in Exhibit A

B. JJ

attached hereto and all products derived therefrom by or for the Lessee;

(b) To develop, reclaim and rehabilitate the Subject Lands in conformance with applicable laws and regulations (including those relating to environmental and ecological standards) and the provisions of this Lease and the Agreement;

(c) To explore the Subject Lands by such means and methods as to the Lessee may appear reasonably necessary or advisable, including without limitation, aerial, surface and subsurface examination and testing by geophysical, geochemical and geological surveys; taking samples of earth, rock and ores for purposes of assay and other testing; drilling; sinking of shafts and driving of adits, tunnels and drifts;

(d) To mine the Subject Lands by such methods and in such manner as the Lessee shall elect, including, but not limited to, stripping, shaft, underground mining, open-cut, open-pit, pit and dredge, block caving, solution, and other methods now or heretofore known or hereafter developed;

(e) In connection with the operations of the Lessee under this Lease and the Agreement, to place and use excavations, openings, shafts, ditches, and drains on or below the surface of the Subject Lands, and to construct, erect, install, maintain, repair, use, replace, or remove roads, buildings, structures, machinery, equipment, and facilities of any nature whatever, both on or below the surface of the Subject Lands, appropriate to the purposes hereof, including, but not limited to, access roads, mine plant, mill, and/or other similar processing plants, water, power, fuel, and communications facilities, trackage, pipelines, roads, airport, railroad and other means of transportation, storage facilities, stockpiles, waste piles, tailings, settling ponds, dams, sump pits, flues and sluices, loadings and shipment facilities, support, ancillary and infrastucture facilities,

B. 75

including personnel accommodations, and offices for conduct of the operations hereunder; and

(f) To take any and all other actions which are necessary to enable the Lessee to conduct its operations under this Lease and the Agreement.

4. Agreement.

This Lease is entered into pursuant to and supplemented by the Agreement and all terms and provisions of the Agreement (and modifications thereof) are hereby incorporated in this Lease and made a part hereof to the same extent as if said terms and provisions were fully set forth herein.

5. Term.

This Lease shall remain in full force and effect only so long as the Agreement is also in full force and effect. Any termination of the Agreement shall automatically constitute a termination of this Lease. The consequences of the breach of any provision of this Lease shall be determined in accordance with Article XX of the Agreement.

6. Stockpiling.

Lessee shall have the right at any time during the term of this Lease to stockpile any ores, concentrates or other products mined or produced from the Subject Lands, either on the Subject Lands or at other locations subject to the provisions of the Agreement. The rights and liens of Lessor, if any, in and to any such ores, concentrates or other products stockpiled on land other than that subject to this Lease shall not be divested by the removal thereof from the Subject Lands but shall be the same in all respects as though such ores, concentrates or other products had been stockpiled on the Subject Lands.

8.79

7. Protection From Liens.

7.01 Obligations of Lessee. The Lessee shall keep the Subject Lands and every part thereof free and clear of liens for labor done or work performed upon the Subject Lands or materials furnished for the exploration, development, or operation thereof under this Lease and the Agreement. It is understood that Lessee may encumber its interest under this Lease for purposes of financing the Project. The Lessee shall at all times keep conspicuously posted on the land notices that the Lessee is in possession of the Subject Lands and that all work on the Subject Lands is being done by the Lessee and that the Lessor is not responsible for labor, material, or supplies furnished to or used on or in connection with the activities on the Subject Lands, or for claims under the Workmen's Compensation Act. Any such lien upon the Subject Lands shall not constitute a default if the Lessee in good faith disputes the validity or amount of the claim, in which event the existence of the lien shall constitute a default only if the claim is not paid within a reasonable time after the validity and amount of the claim has been finally adjudicated.

7.02 Obligations of Lessor. Subject to the terms, conditions, exceptions and reservations contained herein and the rights reserved and excepted by the Lessor hereunder, the Lessor agrees not to encumber the Subject Lands in any way whatsoever that will interfere with the rights of the Lessee granted pursuant to this Lease or the Agreement.

8. Access.

Subject to the terms and conditions of the Agreement, Lessor agrees to provide Lessee with access or easements to the Subject Land over other lands owned or controlled by Lessor for the undertakings contemplated by the Agreement.

9. Assignment.

No party to this Lease shall assign its rights and obligations under this Lease without assigning a like interest in the Agreement.

8. 25

A party may assign rights under this Lease only in the manner and to the extent that the Agreement may by its terms be assigned.

10. Relinquishment and Release of Lands.

At any time during the term of this Lease, Lessee shall have the right to relinquish its right to any part of the Subject Lands. Such relinquishment shall be effective upon the delivery of written notice of such surrender to Lessor. Such relinquishment shall terminate all rights and obligations under this Lease (except those arising prior to any such relinquishment, including reclamation obligations) of either party. Any lands so relinquished shall no longer be Subject Lands for the purpose of this Lease. Lessor shall have the right of access to such relinquished lands across any of the Subject Lands so long as such access does not unreasonably interfere with Lessee's use of the remaining Subject Lands.

Upon the relinquishment of any of Lessee's rights in the lands subject to this Lease and upon the termination of this Lease, Lessee shall provide Lessor with a written document in recordable form satisfactory to Lessor evidencing the relinquishment of any such rights.

11. Notices and Delivery.

11.01 Written Notices. Except as otherwise specified herein, all notices contemplated by this Lease shall be in writing.

11.02 Delivery by Mail. Any notice or other document shall be deemed sufficiently delivered if mailed by United States certified or registered mail, return receipt requested, postage prepaid, and addressed as follows:

(a) If to the Lessor:

NANA Regional Corporation, Inc.
4706 Harding Drive
Anchorage, Alaska 99503
Attn: Vice President, Operations

8.25

with a copy to:

NANA Regional Corporation, Inc.
Box 49
Kotzebue, Alaska 99752
Attn: President

(b) If to the Lessee:

Cominco American Incorporated
West 818 Riverside Avenue
P. O. Box 3087
Spokane, Wasington 99220
Attn: Corporate Secretary

with a copy to:

Cominco Alaska
5660 "B" Street
Anchorage, Alaska 99502
Attn: President

Delivery by mail shall be deemed effective and complete and the notice or other document to have been received by the addressee seven (7) days after the date of mailing thereof.

11.03 Delivery by Personal Service. Any notice or other document may be delivered by personally serving said notice or other document upon the designated agent of the party at the Anchorage address for Lessor and the Spokane address for Lessee. In the event of delivery by personal service, delivery shall be deemed effective and complete on the date of said personal service. The party serving said notice or other document shall also mail a courtesy copy thereof to the party so served at the address indicated in Section 11.02 above that is different than the address at which personal service was made.

11.04 Change of Address. The address to which a party desires that notices and other documents be delivered may be changed at any time by giving notice thereof to the other party in the manner contemplated above.

12. Use of Lands.

12.01 Non-Interference with Rights. The rights reserved to the Lessor under this Lease shall not be utilized by the Lessor to unreasonably interfere with the rights of the Lessee under this

Lease or the Agreement; and the rights granted to the Lessee under this Lease shall not be utilized by the Lessee to unreasonably interfere with the rights reserved to the Lessor under this Lease or the Agreement.

13. Representations and Warranties.

13.01 General. Each party to this Lease represents and warrants that it is a corporation duly incorporated and validly existing in accordance with the laws of the state of its incorporation, that it is in good standing and qualified to do business in the State of Alaska, and that it is empowered, authorized and entitled to enter into this Lease and any and all transactions contemplated hereunder without being in breach of any agreement or other arrangement to which it is a party.

13.02 Land Title. Lessor makes no warranties of title, either expressed or implied, to the Subject Lands except that it has the right to receive title to the Subject Lands pursuant to ANCSA, that it has filed applications to receive title to the Subject Lands pursuant to ANCSA and that it will continue to use its best efforts to receive Conveyance of the Subject Lands.

13.03 Survival of Representations and Warranties. The representations and warranties aforesaid shall survive so long as this Lease remains in full force and effect and after termination thereof in respect of any claims arising prior to termination.

14. Status of Parties.

Nothing herein is intended nor shall ever be construed to create a joint venture, mining partnership or any other type of association between the parties, nor shall either party have the right to act in behalf of or bind the other for any liability, cost, expense or undertaking.

15. General Provisions.

15.01 Modification of Lease. This Lease may only be modified by a document in writing executed by the Lessor and the Lessee.

15.02 Waiver. The failure of any party to this Lease to insist upon the strict performance of any provision of this Lease or to exercise any right, power, or remedy consequent upon a breach thereof shall not constitute a waiver by said party of any such provision, breach, or subsequent breach of the same or any other provision.

15.03 Severability. If any provision of this Lease or any application thereof shall be invalid or unenforceable, the remainder of this Lease and any application of such provision shall not be affected thereby.

15.04 Law Governing. This Lease shall be construed and interpreted in accordance with, and governed and enforced in all respects by, the laws of the State of Alaska.

15.05 Section Headings. The descriptive section headings throughout this Lease are for convenience and reference only, and the words contained therein shall not be held to expand, modify, amplify or aid in the interpretation, construction or meaning of this Lease.

IN WITNESS WHEREOF, the parties hereto have executed this Lease as of the date first hereinabove set forth.

Moody's Rating:
Standard & Poor's Rating:

In the opinion of Bond Counsel interest on the Bonds is exempt from Federal income taxes under existing statutes, rulings and court decisions, except that no opinion is expressed as to the exemption from such taxes of interest on any Bond for any period during which such Bond is held by a person who, within the meaning of Section 103(b) of the Internal Revenue Code of 1954, as amended, is a substantial user of facilities with respect to which the proceeds of the Bonds were used, or a related person.

$11,800,000

ALASKA INDUSTRIAL DEVELOPMENT AUTHORITY

Economic Development Bonds, Series 332 through 334 Series 336 through 345 Series 347 through 351

Date of Issue: December 20, 1984
Date of Conversion to Fixed Interest Rates: May 1, 1985

Due: April 1, as shown below

The Bonds, which were sold by private placement, were issued, together with Series 335 and Series 346 Bonds, by the Alaska Industrial Development Authority (the "Authority") on December 20, 1984, as $13,120,000 Floating Demand/Fixed Rate Economic Development Bonds, Series 332 through 351, bearing a floating interest rate and subject to conversion at any time to fixed interest rates at the option of the Authority. The Authority has determined to exercise its option to convert the Bonds to Bonds bearing fixed interest rates effective May 1, 1985. The present holder of the Bonds intends to tender the Bonds for payment on the date of conversion, and the Authority will remarket the Bonds by the sale thereof to the Underwriters.

The Bonds are fully registered bonds without coupons and are in denominations of $5,000 or integral multiples thereof. Principal of and premium, if any, on the Bonds are payable at the principal corporate trust office of the Trustee, Seattle-First National Bank, in Seattle, Washington, or its successor. Upon conversion of the Bonds to Bonds bearing a fixed interest rate, the Bonds will bear interest from May 1, 1985, payable October 1, 1985, and semiannually thereafter on April 1 and October 1 by check or draft mailed to the registered owners of record as of the 15th day of the month next preceding the interest payment date.

The Bonds are subject to certain mandatory and optional provisions for redemption prior to maturity as described herein under the caption "Redemption Provisions."

The Bonds were issued by the Authority to finance the purchase of participations in qualified economic development loans in the State of Alaska, as more fully described herein. The Authority is a public instrumentality of the State of Alaska in the Department of Commerce and Economic Development but with a separate and independent legal existence.

The Bonds constitute general obligations of the Authority, and the full faith and credit of the Authority are pledged to the payment of the principal of, redemption premium, if any, and interest on the Bonds. The Bonds are further secured by the Economic Development Bond Capital Reserve Fund and the monies, properties, assets and revenues described herein. See "Security for the Bonds" herein and the subsections thereunder.

The Authority does not have the power to levy taxes for any purpose. The Bonds do not constitute an indebtedness or liability of the State of Alaska and do not directly, indirectly or contingently obligate the State to apply money from, or levy or pledge, any form of taxation whatever to the payment of the Bonds.

SUMMARY STATEMENT

The following summary is subject in all respects to the more complete information contained in the Official Statement and the Appendices thereto.

The Authority

The Alaska Industrial Development Authority was created by the Legislature of the State of Alaska in 1967 (AS 44.88, as amended). The purposes of the Authority include the promotion, development and advancement of the general prosperity and economic welfare of the people of the State, the relieving of unemployment problems, and the promotion and development of multi-family housing projects.

The Bonds

The Bonds described in this Official Statement are Economic Development Bonds issued under the Authority's general obligation Umbrella Bond Program. Economic Development Bonds are issued to provide funding for industrial and commercial projects in amounts not exceeding $1 million pursuant to Section 103(b)(6)(A) of the Internal Revenue Code of 1954, as amended, and rulings and regulations thereunder. The Umbrella Bond Program also includes (a) Consolidated Bonds issued for multi-family housing projects and, in amounts between $1 million and $10 million, for industrial and commercial projects and (b) Variable Demand/Fixed Rate Bonds, which are special limited obligations of the Authority secured by a direct pay letter of credit and which will become general obligations of the Authority upon their conversion to fixed-rate bonds.

Loan Participations

The Authority provides project financing under the Umbrella Bond Program by using bond proceeds to purchase participations in qualified loans originated by Alaska commercial lending institutions. (The Authority does not engage in direct lending activities.) The Authority purchases participations of up to 90% of loans in which the Authority's participation is $1 million or less, and up to 80% of loans in which the Authority's participation is in excess of $1 million. The loan originators service both the originator and Authority portions of the loans. If more than 2% of the outstanding principal balance of Authority participations in the loans originated by an institution are 90 days or more delinquent, that institution is ineligible for future participation in programs of the Authority until such loan delinquencies are reduced to less than the 2% limit.

Security for the Bonds

The Bonds constitute general obligations of the Authority, and the full faith and credit of the Authority are pledged to the payment of the principal of, redemption premium, if any, and interest on the Bonds. In addition, the revenues to be derived from the loan participations financed with the proceeds of each Series of Ecomomic Development Bonds are also pledged to the payment of debt service on the respective Series of Bonds. All Economic Development Bonds have an equal claim on the Capital Reserve Fund. (Consolidated Bonds have the support of a separate capital reserve fund and, upon conversion to fixed-rate bonds, Variable Demand/Fixed Rate Bonds will also have the support of a separate capital reserve fund.)

The Authority does not have the power to levy taxes for any purpose. The Bonds do not constitute an indebtedness or liability of the State of Alaska and do not directly, indirectly or contingently obligate the State to apply money from, or levy or pledge, any form of taxation whatever to the payment of the Bonds.

Capital Reserve Fund

The Capital Reserve Fund is funded from available monies of the Authority other than bond proceeds and maintained in an amount equal to the average annual debt service on all of the Authority's outstanding Economic Development Bonds. The Capital Reserve Fund is pledged to the payment of debt service on all outstanding Economic Development Bonds to the extent that other monies of the Authority are not available therefor.

Moral Obligation

AS 44.88 requires the Chairman of the Authority to annually certify to the Governor and to the State Legislature the amount, if any, required to restore the Capital Reserve Fund to its required level. The Legislature may, but is not required to, appropriate monies to make up any such deficiency in the Capital Reserve Fund.

Financial Covenants

The Authority has covenanted that it will not make any loans, incur any General Obligation Indebtedness, or expend any money except for reasonable and necessary operating costs or the payment of principal of and interest on any General Obligation Indebtedness, the effect of which would (a) reduce its estimated Net Income (as defined in the Bond Resolution) at any time to less than 150% of maximum annual debt service requirements on its General Obligation Indebtedness, or (b) cause its unrestricted surplus to be less than $100 million. As of June 30, 1984, the unrestricted surplus of the Authority was $258.9 million, and the 1984 Net Income coverage of maximum annual debt service was 3.36 times.

Financial Information

As of June 30, 1984, the Authority's general assets included $101.5 million of investments in U.S. Government securities and commercial paper and $327.6 million of loans including (1) $105.6 million of loans appropriated to the Authority by the State, (2) $60.2 million of federally guaranteed loans, and (3) $161.8 million of loan participations financed or to be financed from bond sales of the Authority. A portion of the general assets of the Authority are restricted. Loan participations and loans were 95.34% current as of June 30, 1984.

Net earnings of the Authority totaled $25.3 million for the year ended June 30, 1984, and $22.6 million for the year ended June 30, 1983.

Total assets of the Authority were $435.3 million as of June 30, 1984, and $350.3 million as of June 30, 1983. Total equity of the Authority was $274.8 million as of June 30, 1984, and $248.9 million as of June 30, 1983.

Total liabilities of the Authority were $160.5 million (including $155.4 million general obligation debt) as of June 30, 1984, and $101.5 million (including $98.1 million general obligation debt) as of June 30, 1983.

Outstanding Bonds

As of December 31, 1984, there were $131,360,000 Economic Development Bonds (including the $13,120,000 Floating Demand/Fixed Rate Economic Development Bonds, Series 332 through 351), $60,170,000 Consolidated Bonds and $12,200,000 Variable Demand/Fixed Rate Bonds of the Authority outstanding.

Additional Bonds

Additional General Obligation Indebtedness may be issued by the Authority provided certain coverage and other requirements are met, including a requirement that estimated annual Net Income over the term of all General Obligation Indebtedness equals not less than 150% of the annual debt service on such Indebtedness. See "Financial Covenants of the Authority" herein.

$11,800,000

ALASKA INDUSTRIAL DEVELOPMENT AUTHORITY ECONOMIC DEVELOPMENT BONDS

Series 332 through 334
Series 336 through 345
Series 347 through 351

INTRODUCTION

This Official Statement, including the cover page, Summary Statement and Appendices hereto, was prepared to provide information relating to the Alaska Industrial Development Authority (the "Authority") and the Authority's $11,800,000 Economic Development Bonds, Series 332 through 334, Series 336 through 345 and Series 347 through 351 (the "Bonds").

The Bonds were issued on December 20, 1984, as part of $13,120,000 Floating Demand/Fixed Rate Economic Development Bonds, Series 332 through 351 (the "Floating Rate Bonds") bearing a floating interest rate and subject to conversion at any time to fixed interest rates at the option of the Authority. The Authority has determined to exercise its option to convert the Floating Rate Bonds to Bonds bearing fixed interest rates effective May 1, 1985 (the "Conversion Date"). The present holder of the Floating Rate Bonds intends to tender them for payment on the Conversion Date, and the Authority will remarket the Bonds by the sale thereof to the Underwriters except that the $710,000 Series 335, $580,000 Series 346, and $30,000 of the $675,000 Series 338 Floating Rate Bonds will be redeemed and retired prior to the delivery of the Bonds to the Underwriters.

The Bonds were issued as Economic Development Bonds under the Authority's Umbrella Bond Program pursuant to Title 44, Chapter 88, Alaska Statutes, as amended (the "Act") and 20 respective Bond Resolutions, each adopted by the Authority on December 19, 1984 (the "Bond Resolutions"), to provide funds for the purchase by the Authority of participations (the "Participations") in 20 eligible economic development loans (the "Loans") made by Alaska financial institutions (the "Originators") to various borrowers.

Descriptions of the Bonds, the security for the Bonds, the Authority, the programs of the Authority, the Bond Resolutions, the Economic Development Bond Capital Reserve Fund Resolution, and other elements bearing upon the security and legality of the Bonds and their tax exemption under the Internal Revenue Code of 1954, as amended (the "Code"), are contained in this Official Statement. Some terms used herein are defined in the Bond Resolutions (see "Summary of Certain Provisions of Each Bond Resolution and the Economic Development Bond Capital Reserve Fund Resolution"). This Official Statement contains financial information taken or derived from the audited financial statements and other unaudited financial reports of the Authority. All of the financial information taken or derived from the financial statements and reports of the Authority and all of the summaries of resolutions, statutes, agreements and other documents contained herein are made subject to, and are qualified in their entirety by reference to, such financial statements and reports, resolutions, statutes, agreements and documents, copies of which are available for inspection at the office of the Authority, 1577 "C" Street, Suite 304, Anchorage, Alaska 99501; the office of Prudential-Bache Securities Inc., 1111 Third Avenue, Suite 2750, Seattle, Washington 98101; the office of Goldman, Sachs & Co., 85 Broad Street, New York, New York 10004, and the office of Bear, Stearns & Co., 333 Market Street, San Francisco, California 94105.

The information within this Official Statement has been compiled from official and other sources considered reliable and, while not guaranteed as to accuracy, is believed by the Authority to be correct. Any statements herein involving estimates, forecasts or projections are to be construed as such rather than as statements of fact.

THE BONDS

The Bonds are fully registered bonds without coupons, are in denominations of $5,000 each, or integral multiples thereof, are dated as of the date shown on the cover hereof, and mature April 1 of the years and in the amounts set forth on the cover hereof. The Bonds are subject to certain mandatory and optional redemption provisions prior to maturity including the mandatory sinking fund redemption of Bonds of the 1999, 2004, and 2009 Term Bond maturities (see "Redemption Provisions").

The Bonds bear interest from May 1, 1985, payable October 1, 1985, and semiannually thereafter on each April 1 and October 1 by check or draft mailed to the registered owners of the Bonds of record as of the 15th day of the month next preceding the interest payment date. The principal of and premium, if any, on the Bonds is payable at the principal corporate trust office of the Trustee, Seattle-First National Bank, in Seattle, Washington, or its successor.

Redemption Provisions

1. *Mandatory Redemption.* (a) The Bonds of each Series are subject to mandatory redemption on April 1, 1986, in inverse order of maturity and by lot within a maturity, at par plus accrued interest to the date of redemption, from unexpended Bond proceeds remaining on February 1, 1986, in the Loan Participation Fund created by the Bond Resolution for such Series of Bonds. All the Loan Participations financed with proceeds from the December 20, 1984 sale of the Bonds, have been fully funded except that the Loan Participation financed by the sale of the $675,000 Series 338 Floating Rate Bonds was reduced and funded at $645,000. To compensate for this reduction, $30,000 Series 338 Floating Rate Bonds are to be redeemed from the proceeds thereof prior to the conversion of the Floating Rate Bonds to fixed interest rates. Therefore, there will be no unexpended Bond proceeds requiring the implementation of this mandatory redemption provision.

(b) Until conversion to Bonds bearing fixed interest rates and in the year immediately following conversion, the Bonds of each Series are subject to mandatory redemption each October 1 beginning October 1, 1985, at par, plus accrued interest to the date of redemption, in an amount sufficient to ensure that the yield on each Participation acquired with Bond proceeds will not exceed the yield on the respective Bonds by more than the allowable spread under Income Tax Regulation 1.103-13(b)(5), as it is then in effect. However, the Authority expects it will not be necessary to employ this redemption provision at any time after the Conversion Date and that no Bonds will be redeemed on October 1, 1985, or thereafter in order to ensure compliance with the arbitrage restrictions during the floating rate period.

2. *Sinking Fund Redemption.* Of the combined total of $3,105,000 Bonds due April 1, 1999, $2,345,000 Bonds are subject to mandatory redemption in part, by lot, at par plus accrued interest to the date of redemption, from Sinking Fund payments required to be made on April 1 of the years and in the amounts shown in the following schedule:

Year	Amount
1995	$495,000
1996	550,000
1997	615,000
1998	685,000

The remaining $760,000 Bonds of the 1999 maturity will mature April 1, 1999.

Of the combined total of $4,490,000 Bonds due April 1, 2004, $3,390,000 Bonds are subject to mandatory redemption in part, by lot, at par plus accrued interest to the date of redemption, from Sinking Fund payments required to be made on April 1 of the years and in the amounts shown in the following schedule:

Year	Amount
2000	$715,000
2001	800,000
2002	885,000
2003	990,000

The remaining $1,100,000 Bonds of the 2004 maturity will mature April 1, 2004.

Of the combined total of $700,000 Bonds due April 1, 2009, $530,000 Bonds are subject to mandatory redemption in part, by lot, at par plus accrued interest to the date of redemption, from Sinking Fund payments required to be made on April 1 of the years and in the amounts shown in the following schedule:

Year	Amount
2005	$110,000
2006	125,000
2007	140,000
2008	155,000

The remaining $170,000 Bonds of the 2009 maturity will mature April 1, 2009.

3. *Optional Redemption.* On and after April 1, 1994, the Bonds of each Series are subject to redemption, at the option of the Authority, as a whole on any date or in part on any interest payment date, in inverse order of maturity and by lot within a maturity, at the prices (expressed as a percentage of par value) set forth in the following schedule, plus accrued interest to the date of redemption:

Redemption Period	Redemption Price
April 1, 1994 through March 31, 1995	102 %
April 1, 1995 through March 31, 1996	101
April 1, 1996 and thereafter	100

In the event of an optional redemption, the Authority may direct each Series and amount thereof to be redeemed.

4. *Special Optional Redemption.* The Bonds of each Series are subject to redemption, at the option of the Authority, as a whole on any date or in part on any interest payment date, in inverse order of maturity and by lot within a maturity, at par plus accrued interest to the date of redemption, from amounts recovered or received by the Authority as a prepayment of any Loan Participation financed with the proceeds of such Series of Bonds. The Authority may accept Loan prepayments on such terms and conditions as it determines. In each Bond Resolution, the Authority covenants that it will require any prepayments to be in amounts sufficient to redeem a like principal amount of Bonds of such Series at the applicable redemption price. The Authority has also covenanted in each Bond Resolution that prior to the exercise of its election to redeem Bonds, it will use its best efforts to apply monies derived from prepayments to the purchase of investment securities or new loan participations which pay principal and interest sufficient to pay scheduled principal and interest on the applicable Series of Bonds as the same become due.

Notice of Redemption. Thirty days' notice of redemption of any Bond, all or a portion of which is to be redeemed, will be mailed to the registered owner thereof at the owner's last address appearing on the registry books of the Authority kept by the Trustee.

Disposition of Funds Received from Sale of Bonds

The funds received by the Authority from the sale of the Bonds to the Underwriters will be used by the Authority to pay the principal of the tendered Floating Rate Bonds.

Disposition of Proceeds from Issuance of Floating Rate Bonds

Upon the issuance of the Floating Rate Bonds, the proceeds of the Bonds of each Series were deposited by the Authority with the Trustee and deposited by the Trustee in the Loan Participation Accounts within the Loan Participation Fund, except that accrued interest on the Bonds was deposited in the Principal and Interest Account within the Debt Service Fund maintained under each Bond Resolution. Amounts deposited in the Loan Participation Accounts may be expended only (a) to purchase the Participations for which the Bonds were issued or to reimburse the Authority for its prior purchase of such Participations, (b) to pay costs of issuance of the Bonds not otherwise provided for, (c) to pay the principal or redemption price of and interest on the Bonds when due to the extent that amounts in any other Fund or Account are insufficient or unavailable therefor. The amount, if any, remaining in any Loan Participation Account on February 1, 1986, will be transferred to the Redemption Account of the Debt Service Fund.

SECURITY FOR THE BONDS

General

The Bonds constitute general obligations of the Authority, and the full faith and credit of the Authority are pledged to the payment of the principal of, redemption premium, if any, and interest on the Bonds. Each Series of Bonds is further secured by a pledge of certain monies, properties, assets and revenues as described below. The Authority does not have the power to levy taxes for any purpose. The Bonds do not constitute an indebtedness or liability of the State of Alaska (the "State"), and the Bonds do not directly, indirectly or contingently obligate the State to apply money from, or levy or pledge, any form of taxation whatever to the payment of the Bonds. All Economic Development Bonds have an equal claim to monies on deposit in the Capital Reserve Fund (see "Capital Reserve Fund").

Pledge Under Each Bond Resolution

Pursuant to each Bond Resolution, the revenues, including amounts representing payments of principal, to be derived from the Participations financed with the proceeds of each Series of Bonds and all monies and investments in the funds and accounts established thereunder are pledged to pay the principal of, redemption premium, if any, and interest on such Bonds, subject only to the provisions of the Bond Resolution permitting the application or release thereof for or to the purposes and on the terms and conditions therein set forth.

Each Bond Resolution also pledges and assigns the Participations financed thereunder to the Trustee, reserving to the Authority, except in the event of default, the right to administer and enforce the provisions of the documents evidencing the Participations in its own discretion and to enter into amendments with respect thereto, including releases of security and removal of covenants and conditions contained therein.

The Act provides that any pledge made in respect of the Bonds shall be valid and binding from the time when the pledge is made, that the money or property so pledged and received by the Authority shall immediately be subject to the lien of such pledge without any physical delivery or further act and that the lien of any such pledge shall be valid and binding against all parties having claims of any kind in tort, contract or otherwise against the Authority irrespective of whether the parties have notice.

Capital Reserve Fund

On April 13, 1981, the Authority adopted the Economic Development Bond Capital Reserve Fund Resolution under which it covenants and agrees with the holders of Economic Development Bonds to establish and maintain the Capital Reserve Fund in an amount at least equal to the Capital Reserve Fund Requirement (an amount equal to average annual debt service on Economic Development Bonds). The monies on deposit in the Capital Reserve Fund are pledged to the payment of all outstanding Economic Development Bonds of the Authority and may only be used by the Authority for the payment of principal, redemption premium, if any, and interest on Economic Development Bonds, but only when and to the extent that other monies are not available therefor pursuant to the bond resolution under which the Economic Development Bonds were issued. It has never been

necessary for the Authority to use funds in the Capital Reserve Fund for this purpose. Any amounts on deposit in the Capital Reserve Fund in excess of the Capital Reserve Fund Requirement will be transferred to the Authority and commingled with other Authority revenues. The calculation of the present Capital Reserve Fund Requirement of $13,360,390 included the effect of an estimated floating interest rate of 15% on the Floating Rate Bonds. Upon the establishment of fixed interest rates on the Bonds, the Capital Reserve Fund Requirement will be $

The Act requires the Chairman of the Authority, at least annually and no later than January 2 of each year, to certify in writing to the Governor and to the State Legislature the amount, if any, required to restore the Capital Reserve Fund to the Capital Reserve Fund Requirement. The Legislature may, but is not obligated to, appropriate to the Authority the amount certified by the Chairman of the Authority. The Authority is required to deposit any monies so appropriated in the Capital Reserve Fund.

In 1982, the State Constitution was amended to impose a limit on the amount of appropriations from the State Treasury in any fiscal year. This amendment may limit the amounts available in future fiscal years for appropriation by the State Legislature to cure any deficiency in the Capital Reserve Fund and other capital reserve funds of the Authority.

General Assets of the Authority

As of June 30, 1984, the Authority's general assets included $101.5 million of investments in United States government obligations and commercial paper and $327.6 million of loans including (1) $105.6 million of loans appropriated to the Authority by the State, (2) $60.2 million of federally guaranteed loans, and (3) $161.8 million of participations in loans financed or to be financed from the proceeds of the Authority's general obligation bonds. As of June 30, 1984, the unrestricted surplus of the Authority was $258.9 million.

In 1980, the State appropriated the sum of $183 million to the Authority to initiate its programs, and in 1981 the State appropriated an additional $8 million for future capital reserve fund purposes. The 1980 appropriation included cash in the amount of $15 million, $166 million principal amount of outstanding loans acquired by the State in connection with State loan programs, and certain other assets. The Authority was authorized to select the specific loans to be included in the appropriation (the "Appropriated Loans") from a total pool of approximately $350 million principal amount of loans.

The Appropriated Loans selected by the Authority included Small Business Loans, Tourism Loans and Commercial Fishing Vessel Loans. *Small Business Loans* have a term of up to 25 years. Approximately 90% are secured by real property, the balance by equipment. The maximum loan in each case did not exceed the lower of 75% of cost or appraised value. *Tourism Loans* have a maximum term of 20 years. The majority were made for hotels and motels within the State. Two loans were made for large tour vessels. Tourism loans required at least a 20% participation by the originating lender. *Commercial Fishing Vessel Loans* have a maximum term of 15 years. All such loans are secured by fishing vessels. The maximum loan in each case did not exceed the lower of 75% of cost or appraised value, and each owner was required to carry insurance on the vessel equal to 110% of the amount of the loan.

Amounts to be received by the Authority from the Appropriated Loans have not been pledged to the payment of any general obligation indebtedness (including the Bonds). As general assets of the Authority, such amounts (if not spent for other purposes) will be available for the payment of the Bonds in the event amounts on deposit under the applicable Bond Resolution and in the Capital Reserve Fund are insufficient for such purpose.

The Authority has created a loan loss reserve (which is not pledged to the Bonds) for the Appropriated Loans which had a balance as of June 30, 1984, of $2,567,000. In the year ended June 30, 1984, $728,332 was charged against the reserve for loan write-downs and charge-offs, but the reserve was restored by a like charge to current earnings.

Financial Covenants of the Authority

Each Bond Resolution (Part II, Section 713) contains the following financial covenants:

(A) The Authority shall not create or permit to be created any pledge, assignment, lien, encumbrance or charge on the Appropriated Loans whether in favor of the Bonds, any Series of Bonds or for any other purpose. The Authority may pay Costs of Issuance of any Series of Bonds and Operating Costs and any charges, and may make deposits into any funds or accounts of the Authority, from Appropriated Loan Receipts or from any source of funds.

(B) The Authority shall not incur any General Obligation Indebtedness unless the Net Income, as estimated in a Certificate of an Authorized Officer delivered at the time of the incurring of the General Obligation Indebtedness, over the term of all General Obligation Indebtedness equals not less than 150% of the General Obligation Annual Debt Service Requirements in each year in which General Obligation Indebtedness is outstanding. Such estimate shall be made after deducting an amount equal to an aggregate of all annual payments thereafter due on all Non-Current Assets. (As defined in the Bond Resolutions, Net Income includes (a) all revenues, including principal and interest receipts, derived from loan participations acquired with the proceeds of (i) Economic Development Bonds and other bonds which are tax exempt under Section 103(b)(6)(A) of the Code and are issued pursuant to a bond resolution with substantially the same general terms and conditions as are contained in the Economic Development Bond Resolutions, (ii) Consolidated Bonds and (iii) Variable Demand/Fixed Rate Bonds, (b) all Appropriated Loan Receipts, and (c) all other revenues or receipts of the Authority, but excluding any proceeds of money borrowed by the Authority, any revenues or receipts specifically pledged or assigned to the payment of any bonds or other indebtedness other than the Bonds or any Series of Bonds, and any amounts appropriated and paid to the Authority by the State, less Service Fees and all Operating Costs of the Authority.)

(C) The Authority shall not make any loans, incur any indebtedness, or expend any money, except for reasonable and necessary Operating Costs or the payment of principal and interest on any General Obligation Indebtedness, the effect of which would (i) reduce its estimated Net Income, estimated in the manner provided in clause (B), at any time to less than 150% of the General Obligation Annual Debt Service Requirements in any year in which General Obligation Indebtedness is Outstanding, or (ii) cause its unrestricted surplus to amount to less than $100,000,000.

Covenant of the State

Pursuant to the Act, the State has pledged and agreed with the holders of any bonds and notes issued under the Act that the State will not limit or alter the rights vested in the Authority until such obligations, together with the interest thereon, are fully met and discharged, provided nothing shall preclude such limitation or alteration if and when adequate provision shall be made by law for the protection of the holders of such bonds and notes.

THE AUTHORITY

The Authority was created by the State Legislature in 1967 to promote, develop and advance the general prosperity and economic welfare of the people of the State, and to relieve problems of unemployment. In 1982, the Authority's enabling legislation was amended to add to its purpose the promotion, development and maintenance of an adequate supply of multi-family housing projects.

Powers

Under the Act the Authority has the power to adopt regulations; to acquire an interest in a project; to lease projects; to issue bonds; to sell and otherwise convey interests in its properties; to accept gifts, grants and loans; to deposit and invest funds; to enter into contracts; to purchase and insure loans; to make loans; to acquire, manage and operate projects; to assist private lenders to make

loans; to facilitate the expansion of a secondary market for the resale of insured loans in Alaska held by financial institutions or by the Alaska Commercial Fishing and Agricultural Bank; and to participate with the Alaska State Housing Authority or municipalities in the financing of multi-family housing projects.

Pursuant to legislation enacted in 1984, the Authority is authorized to acquire, manage and operate projects which the Authority considers necessary or appropriate to serve a public purpose. The 1984 legislation prohibits the use of capital reserve funds to secure bonds of the Authority issued to finance such a project if a majority of the project is to be used, leased, or occupied by the State. In the case of a project acquired, managed or operated by the Authority and which is financed or developed through the use of the assets of the Economic Development Fund established pursuant to AS 44.88.172, the Authority may not pledge or use other assets of the Authority to assist in the financing, development or operation of the project.

Authority Members

The powers of the Authority are vested in its five directors: two members of the general public appointed by the Governor and three ex officio members. The ex officio members are the Commissioner of Commerce and Economic Development, the Commissioner of Revenue, and one other member of the Governor's Cabinet appointed at his discretion. The Commissioner of the State Department of Labor is the Cabinet member selected by the Governor as his discretionary appointee. The current directors of the Authority are:

LOREN H. LOUNSBURY, Chairman, Commissioner of the State Department of Commerce and Economic Development. Mr. Lounsbury was appointed Commissioner in January 1985. Prior to entering government service he was President of Lounsbury and Associates, Inc., a family-owned survey and engineering firm. A 40-year resident of Alaska, he has held leadership positions in both community and professional organizations in Alaska, including that of Honorary Consul, Republic of Korea in Anchorage. Mr. Lounsbury holds a Bachelor of Science degree in civil engineering from Oregon State University.

MICHAEL G. HARPER, Vice Chairman. Mr. Harper currently is Vice President of United Bank Alaska. Previously, he held the positions of Administrative Assistant to the Governor, Deputy Commissioner for the State Department of Community and Regional Affairs and Executive Director of the Rural Alaska Community Action Program. Mr. Harper was appointed as an Authority director in August 1981 and was subsequently reappointed for a term expiring on July 1, 1985.

JEFFREY HASSLER. Mr. Hassler is Executive Vice President of Carr-Gottstein Properties, Inc. and has been affiliated with the company for 15 years. His responsibilities have encompassed all phases of real estate development, from feasibility studies and construction to permanent financing, leasing and property management. Mr. Hassler holds a Bachelors degree in Business Administration and has been an Alaska resident since 1952. He was appointed a director of the Authority in July 1984 for a term expiring July 1, 1986.

MARY A. NORDALE, Commissioner of the State Department of Revenue. Ms. Nordale was appointed Commissioner in September 1984. She is a lifelong resident of Alaska. She holds degrees from Gonzaga and George Washington Universities and was admitted to the Alaska Bar in 1969. Her prior experience includes: Assistant U.S. Attorney (1968-1969), Assistant District Attorney (1969-1970), Branch Counsel for Small Business Administration (1970-1972) and private practice (1972-1984). She is a member of the Alaska, Tanana Valley, Federal and American Bar Associations as well as the District of Columbia Bar.

JIM ROBISON, Commissioner of the State Department of Labor. Mr. Robison was appointed Commissioner in December 1982, was appointed a director of the Authority in April 1984 and was subsequently reappointed to a term expiring July 1, 1986. A 38-year resident of Alaska, he has been engaged in all phases of the construction industry and has served in numerous positions with various labor organizations. Immediately prior to his appointment as Commissioner, Mr. Robison served as

Business Manager and Secretary/Treasurer of the Alaska State District Council of Laborers and then as President of the Alaska State AFL-CIO.

Authority Staff

The Authority's programs are managed by an administrative staff consisting of an Executive Director, three Deputy Directors, two loan officers and eleven other employees.

BERTRAM L. WAGNON is the Authority's Executive Director. Mr. Wagnon was appointed Executive Director in May 1982. Prior to his appointment as Executive Director, Mr. Wagnon served as Assistant Deputy Commissioner of the State Department of Transportation and Public Facilities and as Deputy Commissioner of the State Department of Commerce and Economic Development. Before entering State service, Mr. Wagnon was with an investment banking firm. He holds a degree in Business Administration from the University of Alaska.

Umbrella Bond Program

Under the Act and the regulations of the Authority, the Authority administers the Umbrella Bond Program to purchase participations of up to $10,000,000 in project loans. There are three types of bonds issued under the Umbrella Bond Program: Economic Development Bonds, Consolidated Bonds and Variable Demand/Fixed Rate Bonds. Economic Development Bonds (for issues of $1,000,000 or less for commercial and industrial facilities) are issued pursuant to Section 103(b)(6)(A) of the Code. Consolidated Bonds are issued pursuant to Section 103(b)(4) (residential rental housing and other exempt activities or facilities), Section 103(b)(5) (industrial parks) or Section 103(b)(6)(D) (commercial and industrial facilities) of the Code. Variable Demand/Fixed Rate Bonds may be issued pursuant to any of the above Sections of the Code.

Under the Umbrella Bond Program, the Authority issues commitments to Originators to provide monies to purchase not in excess of 90% interests in permanent loans (80% with respect to loan participations in excess of $1,000,000) for which such institutions have provided interim financing on a taxable basis. Upon completion of a project and satisfaction of all terms of the commitment, the Authority will acquire its participation in the loan for the project. Each Originator has entered into a Loan Participation and Servicing Agreement with the Authority (collectively, the "Agreements") pursuant to which the Originators have agreed to originate and service eligible loans made to borrowers. An Originator may subsequently sell or assign up to 90% of its interest in a loan, but only to regulated financial institutions and qualified pension trusts. A list of the Participations acquired by the Authority with the proceeds of each Series of the Bonds is set forth in Appendix A.

Approximately $53 million principal amount of the Authority's participations in loans made under the Umbrella Bond Program may be prepaid at any time without penalty after 30 days' notice. It is anticipated that some of these loans (and therefore the Authority's participations therein) will be prepaid and that the Authority will reinvest the proceeds of such prepayments by the acquisition of new participations or other permitted investments. The yield on such new participations or permitted investments will be limited by the provisions of Section 103 of the Code.

The Authority maintains a multi-family housing loan security fund which contained approximately $18.3 million of assets as of June 30, 1984. These funds are available to replenish any losses of the Authority on loans or to establish capital reserve funds to secure bonds issued in connection with the financing of multi-family housing projects.

As of December 31, 1984, there were $131,360,0000 Economic Development Bonds (including the $13,120,000 Floating Rate Bonds), $60,170,000 Consolidated Bonds and $12,200,000 Variable Demand/Fixed Rate Bonds outstanding. Economic Development Bonds and Consolidated Bonds are general obligations of the Authority additionally secured by separate capital reserve funds. The amounts required to be on deposit in the Economic Development Bond Capital Reserve Fund ($ upon the conversion of the Floating Rate Bonds to Bonds bearing fixed interest rates) and the Consolidated

Bond Capital Reserve Fund ($6,382,364 as of December 31, 1984) are available as a source of payment of only Economic Development Bonds and Consolidated Bonds, respectively.

The outstanding $12,200,000 Variable Demand/Fixed Rate Bonds are secured by a letter of credit issued by Lloyds Bank International Limited. The Authority's obligation to repay Lloyds Bank for any drawings under its letter of credit will constitute general obligation indebtedness of the Authority. Owners of the Variable Demand/Fixed Rate Bonds may tender their bonds for payment upon seven days' notice. The Authority has reserved the right to convert the Variable Demand/Fixed Rate Bonds to fixed interest rates. After such conversion such fixed rate bonds will be general obligations of the Authority and will be entitled to the benefit of a separate capital reserve fund.

Self-Sustaining Revenue Bond Program

Under the Act and the regulations of the Authority, the Authority administers a "self-sustaining" Revenue Bond Program intended to provide financing to those borrowers not using credit assistance by the Authority. As of December 31, 1984, the Authority had funded 220 projects aggregating $464 million under the Revenue Bond Program for businesses located in various parts of the State. These financings were made possible by the original enabling legislation as well as legislative amendments adopted in 1977 expanding the Authority's purposes to include commercial projects, air and water transportation facilities, pollution control facilities and facilities to furnish gas and electricity.

Bonds issued under the Revenue Bond Program have been and are expected to continue to be secured solely by the revenues to be derived from the project so financed or the private business for which the project is financed. No revenue bonds issued by the Authority do or will enjoy any claim on the capital reserve funds for the Economic Development Bond, Consolidated Bond and Variable Demand/Fixed Rate Bond programs. However, separate capital reserve funds and insurance funds may be established to secure such bond issues and, in the event of deficiencies therein, the Authority may be required to certify the amount of such deficiencies to the Governor and the State Legislature.

Federally Guaranteed Loan Participation Program

The Authority conducts a program of purchasing the guaranteed portion of loans guaranteed by the Small Business Administration and other independent agencies of the Federal government. As of June 30, 1984, the Authority had issued commitments for the purchase of participations in federally guaranteed loans aggregating $100.7 million and had funded $76.9 million of its participation commitments.

Additional Programs

Under the Act, the Authority is also empowered to:

(a) make loans to business enterprises for projects not qualifying for tax-exemption;

(b) establish a loan insurance program;

(c) purchase loans from the Alaska State Housing Authority or municipalities in the State in furtherance of the multi-family housing programs developed by the Alaska State Housing Authority or the municipalities; and

(d) acquire, manage and operate projects which the Authority considers necessary or appropriate to serve a public purpose.

Of these programs only the taxable bond program described in (a) above and certain projects described in (d) above may be financed by the issuance of general obligation bonds of the Authority, subject to the limitations on total outstanding general obligation indebtedness set forth in each Bond Resolution.

Operating Results and Financial Position

The following comparative table sets forth selected information relating to the operating results and financial position of the Authority for the following years ended June 30 (in millions):

	1984	1983	1982	1981
Net Earnings	$ 25.3	$ 22.6	$ 21.0	$ 16.5
Total Assets, as of June 30	$435.3	$350.3	$307.4	$217.6
Liabilities, as of June 30:				
General Obligation Debt	$155.4	$ 98.1	$ 78.4	$ 18.8
Other	5.1	3.4	2.7	1.5
Total Liabilities	$160.5	$101.5	$ 81.1	$ 20.3
Total Equity	$274.8	$248.9	$226.2	$197.2

See the audited Financial Statements with Accountants' Report Thereon attached hereto as Appendix C for further information about the financial condition of the Authority as of June 30, 1984.

The following table sets forth the loan delinquency experience for loans funded from the proceeds of Umbrella Bond Program bond issues.

LOAN DELINQUENCY EXPERIENCE OF UMBRELLA BOND PROGRAM LOANS
(as of December 31, 1984)

	Number of Days Delinquent			
	30	60	90	Total
Percent of Total Number of Loans Delinquent	1.32%	1.32%	1.06%	3.70%
Percent of Total Par Value of Loans Delinquent	0.62%	1.90%	0.46%	2.97%
Total Par Value of Loans Delinquent (millions)	$1.17	$3.56	$0.86	$5.59

The following table sets forth the loan delinquency experience of the Authority's Appropriated Loans portfolio.

LOAN DELINQUENCY EXPERIENCE OF STATE-APPROPRIATED LOANS
(as of December 31, 1984)

	Number of Days Delinquent			
	30	60	90	Total
Percent of Total Number of Loans Delinquent	2.52%	1.78%	5.49%	9.79%
Percent of Total Par Value of Loans Delinquent	1.80%	1.31%	4.72%	7.84%
Total Par Value of Loans Delinquent (millions)	$1.76	$1.28	$4.62	$7.66

The following table sets forth the loan delinquency experience for federally guaranteed loans funded by the Authority.

LOAN DELINQUENCY EXPERIENCE OF FEDERALLY GUARANTEED LOANS
(as of December 31, 1984)

	Number of Days Delinquent			
	30	60	90	Total
Percent of Total Number of Loans Delinquent	8.26%	1.18%	0.29%	9.73%
Percent of Total Par Value of Loans Delinquent	8.25%	1.13%	0.17%	9.55%
Total Par Value of Loans Delinquent (millions)	$5.61	$0.77	$0.11	$6.49

Loan Program Regulations

The Authority's Umbrella Bond Program is administered pursuant to regulations promulgated by the Authority. The Authority's regulations and procedures described herein are derived from the provisions of the Act and regulations of the Authority adopted under the Administrative Procedure Act of Alaska. These regulations and procedures are in all respects subject to amendment or change by the Alaska State Legislature or the Authority and are not covenants with bondholders.

Procedures

A business enterprise which wishes to receive a loan under the Umbrella Bond Program may apply for financing to any Originator. The Originator will then perform an initial review of the proposed use of funds, borrower eligibility and borrower creditworthiness. Thereafter the Originator will submit to the Authority on behalf of the borrower a preliminary application which contains sufficient information to allow the Authority to determine on a preliminary basis whether the proposed project and the applicant are eligible for consideration and whether interest on the Authority's Umbrella Bond Program bonds issued to fund the purchase of a participation in the loan will be tax-exempt under Section 103 of the Code. The preliminary application must be accompanied by a non-refundable $100 fee.

Upon review of a preliminary application by the Executive Director, Bond Counsel and the administrative staff of the Authority, a summary of the application is transmitted to the Authority's Board of Directors for consideration along with the Executive Director's recommendation. If the Authority determines to purchase a participation upon successful completion of the application process and acquisition or construction of the project by the applicant, the Authority adopts a resolution indicating its intent to issue bonds.

After adoption of such a resolution by the Authority, the Originator and borrower may submit an application for Authority participation in the loan. The Authority may require the following in an application:

1. Letter of transmittal.

2. Loan summary.

3. Signed loan application.

4. Current credit report.

5. Current financial statement.

6. Copies of the applicant's Federal income tax returns or audited financial statements for each of the past three years.

7. Copies of earnest money receipt and agreement, option to purchase, contract to purchase or invoice for purchase of (a) land, (b) land and improvements or (c) tangible personal property.

8. Leases for land or improvements related to the project.

9. Plans and specifications for construction of the project and a detailed project description for real or tangible personal property which is to be acquired rather than constructed.

10. Construction cost estimate.

11. For a real estate loan, a narrative appraisal report in a format consistent with standards established by the American Institute of Real Estate Appraisers or the Society of Real Estate Appraisers or, for a tangible personal property loan, an appraisal prepared by an appraiser who is acceptable to the Authority.

12. Copies of leases or binding commitments to lease or renew leases between the applicant and project tenants, including, where appropriate, a list of tenants with lease rates, terms and options.

13. Soil tests.

14. Proof of a business license.

15. Job certification forms.

16. Any other information required by the Authority.

The Authority may also require a financial feasibility study satisfactory to the Authority and, as applicable, require a statement from the borrower that the borrower is in compliance with the capital expenditure restrictions of Section 103(b)(6)(D) of the Code.

The Authority purchases participations in loans originated by Alaska commercial lending institutions (see "Umbrella Bond Program"). The Authority does not engage in direct lending activities. The Originator services both the Originator and the Authority portion of each loan. If more than 2% of the outstanding principal balance of Authority participations originated by any Originator are 90 days or more delinquent, such Originator is ineligible for future participation in Authority programs until the delinquencies on the Loan Participations it originated are reduced to less than the 2% limit. Authority loan participations are funded net of each borrower's share of pro rata costs of issuance and bond discount.

Industrial and Commercial Loan Criteria

Real Property Loans. Loan participation commitments for projects involving the purchase or improvement of interests in real property will be issued in accordance with the following criteria established by the Act and the Authority's regulations:

1. The Authority may loan, through its purchase of a participation in a loan from an Originator, up to $10,000,000 ($1,000,000 for Economic Development Bond issues) to applicants who are principal users or related persons in connection with a facility, provided that the Authority's Umbrella Bond Program bonds issued for that purpose qualify in all respects as tax-exempt obligations under Section 103 of the Code.

2. The loan shall be secured by a mortgage which shall constitute a first lien, subject to permitted encumbrances, on real estate in fee simple or on a leasehold estate.

3. The maximum loan-to-value ratio for the purchase of an existing project is 75% of the lesser of the appraised value or sale price of the project. The maximum loan-to-value ratio for the construction of a new project is the lesser of 75% of the appraised value or 100% of the certified costs approved by the Authority.

4. The rate of interest on the Authority's participation in a loan will be determined after sale of the Authority's Umbrella Bond Program bonds but may not exceed the interest rate paid by the Authority on the Umbrella Bond Program bonds by more than the percentage permitted under Section 103 of the Code and regulations promulgated thereunder. The rate of interest on the Originator's participation in a loan is established by the Originator but may not exceed a market rate.

5. The maximum term of any loan is the lesser of 25 years or 75% of the Authority's estimate of the economic life of the project.

6. The Originator of a loan under the Authority's Umbrella Bond Program must retain at least a 10% (20% for loans involving Authority loan participations in excess of $1,000,000) interest in the loan amount but may subsequently sell or assign up to 90% of its interest, but only to regulated financial institutions and qualified pension trusts. The Authority's participation will be adjusted to the next lower $5,000 increment.

7. Prior to closing, the Authority will require documentation:

(a) by a qualified appraiser that all construction was completed in conformance with the plans and specifications upon which the appraiser relied in formulating the appraisal;

(b) by the appropriate person or persons that the buildings and structures may be legally occupied and that the occupancy of buildings and structures conforms to all requirements of Federal, State and municipal law; and

(c) by a registered architect or professional engineer, if there is no appropriate person available for the purposes described in (b) above or, in any event, if required by the

Authority, that the property offered as security is structurally sound and that any buildings or structures conform to applicable building standards.

8. The terms and conditions of any leasehold estate securing a project are subject to approval by the Authority. The term of any lease must extend at least 10 years beyond the term of the loan, but leases for a shorter term, with options to renew, will be considered by the Authority on a case-by-case basis.

9. Secondary financing by an applicant will be permitted by the Authority on a project to be financed by the Authority on a case-by-case basis when the applicant is able to demonstrate that additional debt can be serviced from the cash flow generated by the real property offered as security for the loan.

10. The Authority may require personal guarantees from partners, joint venturers and substantial corporate stockholders (including those of a parent corporation if the applicant is a subsidiary corporation).

11. The Authority may require prepayment fees on its share in a loan in such amounts as it may determine.

12. Fire, extended coverage, vandalism and optional perils insurance is required for not less than 90% of the value of improvements to the real property, unless waived by the Authority. Natural hazard, including flood and earthquake, insurance may be required, and American Land Title Association type of title insurance coverage is also required.

Borrowers whose loans include funding from the proceeds of Consolidated Bonds issued subject to Section 103(b)(6)(D) of the Code have agreed to specifically limit their own future capital expenditures and those of other principal users and persons related to a principal user. In the event such capital expenditure limitations imposed by the Authority in the loan agreements or other documents are exceeded, the borrower is contingently liable to the Authority for any and all costs of the Authority incurred in the event of a violation of the capital expenditure limitations of Section 103(b)(6)(D) of the Code.

Tangible Personal Property Loans. Loan participation commitments for projects involving the acquisition or fabrication of tangible personal property, whether or not attached to real propery, will be issued in accordance with the following criteria established by the Act and the Authority's regulations.

1. The Authority may loan through its purchase of a participation in a loan from an Originator up to $10,000,000 ($1,000,000 for Economic Development Bond issues) to applicants who are principal users or related persons in connection with a facility, provided that the Authority's Umbrella Bond Program bonds issued for that purpose qualify in all respects as tax-exempt obligations under Section 103 of the Code.

2. The loan shall be secured by a security interest which shall constitute a first lien on the tangible personal property.

3. The maximum loan-to-value ratio is 75% of the lesser of the appraised value or purchase price of the project.

4. The rate of interest on the Authority's participation in a loan will be determined after sale of the Authority's Umbrella Bond Program bonds but may not exceed the interest rate paid by the Authority on the Umbrella Bond Program bonds by more than the percentage permitted under Section 103 of the Code and regulations promulgated thereunder. The rate of interest on the Originator's participation in a loan is established by the Originator but may not exceed a market rate.

5. The maximum term of any loan is the earlier of 15 years or 75% of the Authority's estimate of the economic life of the project.

6. The Originator of a loan under the Authority's Umbrella Bond Program must retain at least a 10% (20% for loans involving Authority loan participations in excess of $1,000,000) interest in the loan amount but may subsequently sell or assign up to 90% of its interest, but only to regulated financial institutions and qualified pension trusts. The Authority's participation will be adjusted to the next lower $5,000 increment.

7. The terms and conditions of any leasehold estate securing a project are subject to approval by the Authority.

8. The Authority may require personal guarantees from partners, joint venturers and substantial corporate stockholders (including those of a parent corporation if the applicant is a subsidiary corporation).

9. The Authority may require prepayment fees on its share in a loan in such amounts as it may determine.

10. Full-coverage insurance is required including, but not limited to, fire, theft, comprehensive, collision and liability in form and amount acceptable to the Authority.

Borrowers whose loans are funded from the proceeds of Consolidated Bonds issued subject to Section 103(b)(6)(D) of the Code have agreed to specifically limit their own future capital expenditures and those of other principal users and persons related to a principal user. In the event such capital expenditure limitations imposed by the Authority in the loan agreements are exceeded, the borrower is contingently liable to the Authority for any and all costs of the Authority incurred in the event of a violation of the capital expenditure limitations of Section 103(b)(6)(D) of the Code.

Housing Loan Criteria

Loan participation commitments for multi-family housing projects involving the purchase or improvement of interests in real property will be issued in accordance with the following criteria established by the Act and the Authority's regulations:

1. A project must contain no fewer than five housing units.

2. The principal amount of a non-federally insured or guaranteed loan may not exceed 75% of the appraised value of the project or 100% of the cost of construction of the project which has been certified by the borrower and Originator and approved by the Authority, whichever is less.

3. A loan, other than a loan referred to in paragraph 6 below, must be secured by a real property mortgage or deed of trust which is a first lien on real property in fee simple or on a leasehold estate. The Authority may, in its discretion, permit further encumbrances against the real property which do not in the Authority's opinion affect the security of the loan.

4. The term of a non-federally insured or guaranteed loan shall not exceed 25 years or 75% of the estimated economic life of the project, as determined by the Authority, whichever is less.

5. A loan shall be in the form and contain, among other things, the terms and provisions with respect to insurance, repairs, alterations, payment of taxes and assessments, default reserves, delinquency charges, default remedies, acceleration of maturity, secondary liens, assumability of the loan, and other matters, as the Authority determines.

6. The Authority may provide for secondary financing of a project in conjunction with a loan purchased by the Authority and secured by a first lien referred to in paragraph 3 above. The secondary loan may contain such terms as the Authority determines necessary to permit the bond financing of the first-lien loan participation including, without limitation, provisions for periodic advances of funds to meet the difference, as determined by the Authority, between principal and interest payments on bonds, the proceeds of which were expended to purchase the first-lien loan participation, and loan repayments net of fees. The secondary loan shall be subordinate to a loan participation purchased with the proceeds of bonds.

7. The loan documents shall contain such deed restrictions, tax-exempt compliance agreements, or other requirements as may be determined by the Authority to be necessary to cause the loan and the bonds issued to finance the purchase of a participation in the loan to comply with the applicable provisions of Section 103(b)(4)(A) of the Code and the regulations and rulings issued or proposed to be issued thereunder, as determined by the Authority.

8. Before funding a loan, the Originator shall obtain a statement in writing from:

(a) the appraiser that construction was substantially completed according to the plans and specifications relied on by the appraiser in making the fair-market-value appraisal required by the Authority;

(b) a registered architect or professional engineer that the property securing the loan is structurally sound or that the buildings or structures thereon conform to applicable building standards, or from an authorized official that the buildings may be occupied and that the occupancy, buildings and structures conform to all applicable requirements of Federal, State and municipal law; and

(c) other persons as directed by the Authority concerning matters which are reasonable and customary in commercial loan transactions.

9. Unless waived by the Authority, the borrower shall obtain fire, extended coverage, vandalism and optional perils insurance for not less than 100% of the value of the improvements on the real property. Natural hazard insurance coverage for flood and earthquake may be required by the Authority. American Land Title Association type of title insurance coverage is also required.

10. The Authority may require a guarantee for repayment of the loan from such persons as the Authority determines.

11. Pursuant to an agreement with the Municipality of Anchorage, multi-family housing projects constructed within Anchorage must comply with the conservation-of-energy and access-for-handicapped requirements of the Municipality.

Loan Commitment

A loan participation commitment is effective upon payment of a non-refundable commitment fee by the borrower. By its commitment the Authority agrees to purchase a participation in a loan to the borrower in an amount and on the terms and conditions described in the loan commitment.

A decision by the Authority's staff not to approve a loan participation application may be appealed by the Originator by filing a written notice of appeal with the Board of Directors of the Authority within 10 days of notification that the loan participation application has not been approved. The Board of Directors is required to issue its decision within 45 days after receipt of the notice of appeal based solely upon the loan application documents originally filed.

Loan Closing and Disbursement of Funds

The Authority issues its bonds in amounts sufficient to provide the necessary funds for the Authority's purchase of its interest in the permanent financing for each project being financed. Upon certification by the Originator and the borrower that all provisions of the loan commitment have been complied with, the loan participation will be scheduled for closing and disbursement of funds to the Originator.

Servicing of Loans

The Authority has entered into a loan servicing agreement with each Originator which:

(a) provides that all servicing be by a regulated financial institution within the State and that the Originator hold at least that portion of the loan minimally required to be held by the

Originator, as previously described herein under "Real Property Loans" and "Tangible Personal Property Loans";

(b) provides the methods whereby delinquent collections will be made and foreclosure or exercise of security rights will be undertaken by the Originator;

(c) provides for periodic reports to the Authority by the Originator; and

(d) requires the Originator to service the loan in accordance with acceptable practices of prudent lending including, but not limited to, the exercising of diligence in collecting amounts due under the Loan.

The Originator must provide a bond deemed sufficient by the Authority to protect the Authority against errors, omissions and fraud.

In the event of any material breach by an Originator of any agreement or covenant contained in the loan servicing agreement which remains uncorrected for 30 days, the Authority may at its option, require the Originator to repurchase the Authority's interest in any loan. Furthermore, the Act requires the Authority to discontinue purchasing participations from any Originator whenever more than 2% of the participations purchased from such Originator are 90 or more days delinquent.

General Provisions

A borrower requesting a loan will, upon receipt of a written request from the Authority, make its books and records available for inspection by the Authority at a reasonable time. As long as any bonds issued by the Authority to finance the purchase of a participation in a loan are outstanding, the Authority may, in its discretion, require an applicant whose financing of a project is approved, or who is the recipient of a loan, to permit and pay the costs of an audit or examination of its books and records by an independent firm of certified public accountants at a reasonable time to determine whether the borrower has complied with the provisions of the bonds.

SUMMARY OF CERTAIN PROVISIONS OF EACH BOND RESOLUTION AND OF THE ECONOMIC DEVELOPMENT BOND CAPITAL RESERVE FUND RESOLUTION

Each Series of the Bonds is issued pursuant to a separate Bond Resolution. The Bonds, together with all other Economic Development Bonds, are entitled to the benefits and security of the Economic Development Bond Capital Reserve Fund Resolution. Reference is made to each Bond Resolution and the Economic Development Bond Capital Reserve Fund Resolution for a full and complete statement of their provisions. The following is a brief summary of certain provisions contained in each Bond Resolution and the Economic Development Bond Capital Reserve Fund Resolution and should not be considered a full statement thereof.

BOND RESOLUTION

Definitions (Section 101)

"Appropriated Loans" means the loans appropriated to the Authority pursuant to Section 9 of Chapter 120, Session Laws of Alaska, 1980, as described in a certificate of an authorized officer on file with the Trustee.

"Appropriated Loan Receipts" shall mean the scheduled payments (representative of principal or interest or proceeds of insurance) called for by any Appropriated Loan and paid to the Authority from any source, including both timely and delinquent payments with late charges, and all amounts received by the Authority as a recovery of the principal amount, including any premium or penalty with respect thereto, on account of (i) the advance payment of amounts to become due pursuant to such Appropriated Loan, (ii) the sale, assignment, endorsement or other disposition thereof, or (iii) the acceleration of payment due thereunder or other remedial proceedings taken in the event of a default thereon, but shall not mean or include any payments with respect to such Appropriated Loans

received prior to April 1, 1981, any amount retained by the servicer, if there be one, as service fees, or payments of ground rents, taxes, assessments or mortgage, fire or other hazard insurance premiums or like payments.

"Bond" shall mean one of the bonds to be authenticated and delivered pursuant to the Bond Resolution.

"Capital Reserve Fund" shall mean the fund so entitled established in the Capital Reserve Fund Resolution.

"Capital Reserve Fund Requirement" shall have the meaning ascribed thereto in the Capital Reserve Fund Resolution.

"Capital Reserve Fund Resolution" shall mean the Economic Development Bond Capital Reserve Fund Resolution of the Authority adopted on April 13, 1981, as amended.

"Fiduciary" shall mean the Trustee and any Paying Agent, or any or all of them, as may be appropriate.

"Fiscal Year" shall mean a twelve-month period commencing on the first day of July of any year.

"General Obligation Annual Debt Service Requirements" shall mean the amounts required to be paid in each Fiscal Year as sinking fund installments, or as principal not required to be redeemed through the payment of said sinking fund installments, and interest payable, adjusted for capitalized interest or scheduled redemption through payment of said sinking fund installments on General Obligation Indebtedness, all in accordance with the terms of the General Obligation Indebtedness.

"General Obligation Indebtedness" shall mean all indebtedness, including, without limitation, the Bonds and all Series of Bonds, notes or other forms of indebtedness of the Authority payable from its income and receipts or assets generally, whether or not additionally secured in any manner, but shall not include liabilities or obligations in the nature of accounts payable incurred as Operating Costs of the Authority or amounts loaned by the State subordinate in all respects to General Obligation Indebtedness then outstanding or thereafter issued.

"Investment Securities" shall mean and include any of the following obligations, to the extent the same are at the time legal for investment of funds of the Authority:

(1) direct obligations of or obligations guaranteed by the United States of America;

(2) any bond, debenture, note, participation certificate or other similar obligation issued by any of the following agencies: Government National Mortgage Association, Federal Land Banks, Federal Home Loan Banks, Federal Intermediate Credit Banks, Banks for Cooperatives, Tennessee Valley Authority, United States Postal Service, Farmers' Home Administration and Export-Import Bank;

(3) any bond, debenture, note, participation certificate or other similar obligation issued by the Federal National Mortgage Association to the extent such obligations are guaranteed by the Government National Mortgage Association or issued by any other Federal agency and backed by the full faith and credit of the United States of America other than as provided in (1) hereof;

(4) any other obligation of the United States of America or any Federal agency which may then be purchased with funds belonging to the State or which are legal investments for savings banks in the State;

(5) Public Housing Bonds issued by public agencies or municipalities and fully secured as to the payment of both principal and interest by a pledge of annual contributions under an annual contributions contract or contracts with the United States of America or temporary notes, preliminary loan notes or project notes issued by public agencies or municipalities, in each case fully secured as to the payment of both principal and interest by a requisition or payment agreement with the United States of America;

(6) direct and general obligations of or obligations guaranteed by the State of Alaska, to the payment of the principal of and interest on which the full faith and credit of the State is pledged;

(7) units of participation in any money market fund constituting an investment trust, the corpus of which is restricted to cash, direct obligations of or obligations guaranteed by the United States of America, or repurchase agreements with respect to such obligations; and

(8) deposits in interest-bearing time or demand deposits, or certificates of deposit, secured by obligations described in clauses (1), (2), (3), (4), (5), or (6) above.

"Net Income" means (a) all revenues, including principal and interest receipts, derived from loan participations acquired with the proceeds of (i) Economic Development Bonds and other bonds which are tax exempt under Section 103(b)(6)(A) of the Code and are issued pursuant to a bond resolution with substantially the same general terms and conditions as are contained in the Economic Development Bond Resolutions, (ii) Consolidated Bonds and (iii) Variable Demand/Fixed Rate Bonds; (b) all Appropriated Loan Receipts; and (c) all other revenues or receipts of the Authority, but excluding any proceeds of money borrowed by the Authority, any revenues or receipts specifically pledged or assigned to the payment of any bonds or other indebtedness other than the Bonds or any Series of Bonds, and any amounts appropriated and paid to the Authority by the State, less Service Fees and all Operating Costs.

"Non-Current Assets" shall mean loans and securities of the Authority, including, without limitation, Appropriated Loans, on which payments of principal or interest are 90 days or more delinquent.

"Operating Costs" shall mean, as of any date, all the Authority's expenses in carrying out and administering its powers, duties and functions under the Act, including service fees on any loan for which there is no servicer, and shall include, without limiting the generality of the foregoing, (a) salaries, supplies, utilities, mailing, labor, materials, office rent, maintenance, furnishings, equipment, machinery and apparatus, and insurance premiums, (b) legal, accounting, management, consulting and banking services and expenses, (c) the fees and expenses of any trustee, depositary or paying agents, (d) costs of issuance not paid from proceeds of a Series of Bonds, (e) payments to pension, retirement, health and hospitalization funds, and (f) any other expenses required or permitted to be paid by the Authority under the Act.

"Pledged Receipts" shall mean (i) the scheduled payments (representative of principal or interest or proceeds of insurance or amounts withdrawn from the Recoveries of Principal Account with respect thereto) called for by any Loan Participation and paid to the Authority from any source, including both timely and delinquent payments with late charges, but shall not include or mean any amount retained by a Loan servicer as Service Fees, or payments of ground rents, taxes, assessments or mortgage, fire or other hazard insurance premiums or like payments, and (ii) all income earned or gain realized in excess of losses suffered on any investment or deposit of monies in Funds or Accounts established and maintained pursuant to the Bond Resolution, other than the Pledged Receipts Account.

"Project Security Contract" shall mean the participation certificate issued to the Authority and evidencing the interest of the Authority in an economic development loan.

"Recoveries of Principal" shall mean all amounts received by the Authority as a recovery of the principal amount disbursed by the Authority in connection with any Loan Participation, including any premium or penalty with respect thereto, on account of (i) the advance payment of amounts to become due pursuant to such Loan Participation, (ii) the sale, assignment, endorsement or other disposition thereof, or (iii) the acceleration of payments due thereunder or other remedial proceedings taken in the event of a default thereon.

"Revenues" shall mean the Pledged Receipts and Recoveries of Principal.

"Series of Bonds" shall mean Bonds and any other series of bonds which are tax exempt under the provisions of Section 103(b)(6)(A) of the Code and which are issued by the Authority pursuant to a

bond resolution with substantially the same general terms and conditions as to the bonds as are contained in the Economic Development Bond Resolutions.

"Service Fees" shall mean the reasonable or necessary expenses of servicing any economic development loan participations.

Bond Resolution to Constitute Contract (Section 202)

In consideration of the purchase and acceptance of the Bonds by those who shall hold the same from time to time, the provisions of the Bond Resolution shall constitute a contract with the holders of the Bonds. The pledges contained in the Bond Resolution and the covenants and agreements set forth therein shall be for the equal benefit, protection and security of the holders of any Bonds, without preference, priority or distinction of any Bonds over any other, except as expressly provided in the Bond Resolution.

Obligation of Bonds and Pledge Effected by the Resolution (Sections 204 and 501)

The Bonds are general obligations of the Authority, and the revenues, including amounts representing payments of principal, to be derived from the Participations financed with the proceeds of each Series of Bonds and all amounts in any Fund or Account, including investments thereof, established under the Bond Resolution are pledged to secure the payment of the principal or redemption price of and interest on the Bonds (including the sinking fund payments for the retirement thereof) in accordance with their terms and the provisions of the Bond Resolution, subject only to the provisions of the Bond Resolution permitting the application or release thereof for or to the purposes and on the terms and conditions therein set forth.

The Authority also pledges and assigns the Participations financed under the Bond Resolution to the Trustee, reserving to the Authority, except in the event of default, the right to administer and enforce the provisions of the documents evidencing the Participations in its own discretion and to enter into amendments with respect thereto, including releases of security and removal of covenants and conditions contained therein.

Application of Bond Proceeds and Other Amounts (Article IV)

The Bond Resolution establishes separate Loan Participation Accounts and Recoveries of Principal Accounts for each project within the Loan Participation Fund and the Revenue Fund, respectively. The monies deposited in a Loan Participation Account or a Recoveries of Principal Account may be used for the financing of Loan Participations but only if:

(1) the Authority is of the opinion and determines in accordance with the Act that the Revenues derived from the project to be financed thereby shall be sufficient (i) to pay the principal, as the same becomes due at maturity or upon redemption by application of sinking fund payments, of and interest on the Bonds issued to finance such project, (ii) to establish, increase and maintain any reserves deemed by the Authority to be advisable to secure the payment of the principal of and interest on such Bonds, (iii) unless the person entering into the Project Security Contract is obligated to pay for the maintenance and insurance of the project, to pay the cost of maintaining the project in good repair and keeping it properly insured and (iv) to pay such other costs or taxes on the project as may be required and that such person is found by the Authority to be financially responsible and presumptively able to comply with the terms and conditions of any Project Security Contract with respect to such project;

(2) one or more Project Security Contracts have been executed which, upon the use and application of any monies for such project as permitted in the Bond Resolution, shall evidence the rights of the Authority in a Loan; and

(3) there shall be filed in the records of the Authority an opinion of counsel satisfactory to the Trustee (who may be counsel to the Authority) to the effect that, in the opinion of such counsel, such Project Security Contracts have been duly and validly executed and delivered and

as of the date of delivery thereof constituted valid and binding agreements between the parties thereto enforceable in accordance with their terms, except as the same may be limited by bankruptcy, insolvency or similar laws affecting creditors' rights, but such opinion may be subject to such exceptions and qualifications as an authorized officer shall determine to be reasonable and not to indicate a substantial impairment of the Authority's rights in the project and the Project Security Contracts;

(4) there shall be filed in the records of the Authority a certificate of an authorized officer stating that to the best of his information knowledge and belief:

(a) the costs of the project to be financed were not incurred prior to the approval of the project by the Authority, which may include preliminary approval in accordance with the practice of the Authority;

(b) there are no outstanding obligations described in Section 103 of the Code, the proceeds of which were used with respect to facilities of which the principal user is or will be the same person or two or more related persons and which are located in the same incorporated municipality as the project or the same Borough (but not in any incorporated municipality other than the Borough), or in the Unorganized Borough, or in any other of the project locations specified in Part I of the Bond Resolution and which would cause the aggregate face amount of the Bonds to be treated as exceeding $1,000,000 pursuant to Section 103(b)(6)(A) of the Code;

(c) the proceeds of the Bonds used by the Authority to finance a Loan Participation in respect of the project will be used in their entirety for the acquisition, construction, reconstruction or improvement of land or property of a character subject to depreciation for Federal income tax purposes;

(d) the proceeds of the Bonds used by the Authority to finance a Loan Participation in respect of the project will not be used in any manner which would cause the Bonds to be "arbitrage bonds" within the meaning of Section 103(c) of the Code; and

(e) the average maturity of the Bonds does not exceed 120% of the average reasonably expected economic life of the project in accordance with Section 103(b)(14) of the Code, which shall be accompanied by (i) a certificate of the project occupant stating the average reasonably expected economic life of the project if a substantial portion of the project consists of personal property and (ii) a certificate of the financial advisor to the Authority stating the average maturity of the Bonds, the proceeds of which are expected to be used to finance said project.

Establishment of Funds and Accounts (Section 502)

Each Bond Resolution establishes the following Funds and Accounts, which are to be held in trust by the Trustee and the depositaries selected by the Trustee:

(1) Loan Participation Fund:
   (a) Loan Participation Account
(2) Revenue Fund:
   (a) Pledged Receipts Account
   (b) Recoveries of Principal Account
(3) Debt Service Fund:
   (a) Interest and Principal Account
   (b) Redemption Account
(4) Surplus Reserve Fund

Loan Participation Fund (Section 503)

Amounts in the Loan Participation Fund may be expended only (i) to pay the cost of financing Loan Participations, (ii) to pay the reasonable and necessary costs of issuance of the Bonds, (iii) to the extent that amounts in any other Fund or Account are insufficient or unavailable therefor, to pay the

principal or redemption price of and interest on the Bonds when due, but only if there shall have been filed with the Trustee a certificate of an authorized officer of the Authority stating (a) that the Revenues expected to be received thereafter by the Authority together with amounts expected to be made available therefor by the Authority will be sufficient to pay in full the principal or redemption price, if any, of and interest (and any arrears thereof) on all outstanding Bonds when and as the same shall become due, and (b) in reasonable detail, the basis for such certification, or (iv) applied to the redemption of Bonds. Any amount remaining in the Loan Participation Fund on February 1, 1986, shall be applied to redeem Bonds on April 1, 1986.

Revenue Fund (Section 504)

All Pledged Receipts and Recoveries of Principal are to be transmitted to the Trustee regularly or at least semiannually prior to the fifth day preceding any interest payment date and deposited into the Pledged Receipts Account and Recoveries of Principal Account, respectively. On or before the day preceding each interest payment date, the Trustee is required to make payments from the Pledged Receipts Account into the following Funds and Accounts in the following amounts and in the following sequence:

FIRST: Into the Interest and Principal Account, the amount necessary to increase the amount in such Account so that it equals the sum of (i) unpaid interest on the outstanding Bonds accrued and to accrue to such interest payment date and (ii) the principal installments accrued and to accrue to such interest payment date, assuming the accrual of principal installments on the same basis as interest accrues commencing one year prior to the next principal installment date, and with respect only to principal installments on outstanding Bonds due and payable on either of the two next succeeding interest payment dates.

SECOND: Into the Surplus Reserve Fund, the amount remaining.

Amounts on deposit in each Recoveries of Principal Account shall be applied to the redemption of Bonds or (i) invested in Investment Securities sufficient, in the opinion of the Authority, to provide for the payment of the principal of and interest on the Bonds as the same become due or (ii) expended to finance further loan participations, provided that the Authority has been furnished with a counsel's opinion or a ruling of the Internal Revenue Service to the effect that the financing of such further loan participations will not result in the inclusion of interest on any Bond in the gross income of the holder thereof for Federal income tax purposes. The Authority covenants that prior to applying amounts in any Recoveries of Principal Account to the redemption of Bonds, it will use its best efforts to apply such monies to the purchase of Investment Securities or to finance further loan participations.

Debt Service Fund (Section 505)

The Trustee is required to pay out of the Interest and Principal Account to the respective Paying Agents for any of the Bonds, on or before each interest payment date, the amounts required for the payment of interest on the outstanding Bonds due on such date and, on or before the redemption date, or date of purchase, the amounts required for the payment of accrued interest on Bonds redeemed or purchased for retirement (unless the payment of such accrued interest shall be otherwise provided for), and such amounts shall be applied by the Paying Agents to such payments.

The Trustee is required to pay out of the Interest and Principal Account to the respective Paying Agents, on the day preceding each principal installment date for any of the outstanding Bonds, the amounts required for the payment of principal due on such date, and such amounts shall be applied by the Paying Agents to such payments.

The amount accumulated in the Interest and Principal Account for each sinking fund payment may, and if so directed by the Authority shall, be applied (together with amounts accumulated in the Interest and Principal Account with respect to interest on the Bonds for which such sinking fund payment was established) by the Trustee prior to the forty-fifth day preceding the due date of such sinking fund payment as follows:

(1) to the purchase of Bonds for which such sinking fund payment was established, at prices (including any brokerage and other charges) not exceeding the applicable redemption price, plus unpaid interest accrued to the date of purchase, such purchases to be made in such manner as the Trustee shall determine, or

(2) to the redemption, pursuant to the Bond Resolution, of such Bonds, if then redeemable by their terms, at their applicable redemption prices.

Surplus Reserve Fund (Section 506)

Amounts in the Surplus Reserve Fund shall be deposited or transferred by the Trustee to the Interest and Principal Account on the day preceding each interest payment date to provide the amount necessary to increase the amount therein so that it equals (a) the interest due on such date or (b) if such interest payment date is also a principal payment date, the interest and principal, in that order, due on such date. On the day following the day each principal payment is due, the Trustee, upon the direction of the Authority, shall pay to the Authority all amounts in the Surplus Reserve Fund free and clear of any lien or pledge created by or pursuant to the Bond Resolution for expenditure for any lawful purpose of the Authority consistent with Section 706 relating to Tax Covenants.

Deposits (Section 507)

Any amounts held under the Bond Resolution may be deposited in the commercial banking department of the Fiduciary or depositary holding such amounts which may honor checks and drafts thereon as if it were not such Fiduciary or depositary. All amounts so deposited are required to be continuously and fully secured either by lodging Investment Securities with the Trustee as collateral or in such other manner as may then be required by applicable Federal or State laws regarding the deposit of trust funds.

Investment of Certain Funds (Section 508)

Amounts held under the Bond Resolution may be invested in Investment Securities or deposited in interest-bearing time deposits, certificates of deposit or other similar banking arrangements with the Trustee, banks of the Federal Reserve System or banks the deposits of which are insured by the Federal Deposit Insurance Corporation.

Valuation of Investments (Section 509)

In computing the amount in any Fund or Account, obligations purchased as an investment of amounts therein are to be valued at par, if purchased at par, or at amortized value if purchased at other than par. Valuation is to be made at least 30 days before each interest payment date and on any particular date shall include the amount of interest then earned or accrued to such date.

Payment of Bonds (Section 701)

The Authority covenants that it will duly and punctually pay or cause to be paid the principal or redemption price, if any, of every Bond and the interest thereon, at the dates and places and in the manner mentioned in the Bonds according to the true intent and meaning thereof, and shall duly and punctually pay or cause to be paid all sinking fund payments, if any, becoming payable with respect to any Bonds.

Tax Covenants (Section 706)

The Authority covenants not to permit at any time or times any of the proceeds of the Bonds or other funds of the Authority to be used directly or indirectly to acquire any securities or obligations, the acquisition of which would cause any Bond to be an "arbitrage bond" as defined in Section 103(c)(2) of the Code and that it will not permit such proceeds or other funds to be used in a manner which would result in the exclusion of any Bond from the treatment afforded by Section 103(a) of the

Code, except in the case of Bonds held by a "substantial user" or "related person" within the meaning of Section 103(b) of the Code.

Loan Participations (Section 709)

The Authority from time to time shall, with all practical dispatch and in a sound and economical manner consistent in all respects with the Act, with the provisions of the Bond Resolution and with sound banking practices and principles, (i) use and apply the proceeds of the Bonds (to the extent not reasonably or otherwise required for other purposes of the Act) to finance Loan Participations, (ii) do all things necessary to receive and collect Pledged Receipts and, when applicable, Recoveries of Principal, sufficient to pay the principal or redemption price of and interest on the Bonds and (iii) diligently enforce and take all steps reasonably necessary to maintain any insurance on the Loan Participations and the projects related thereto and to enforce all terms, covenants and conditions of the Loan Participations. The Authority covenants not to sell or assign a Loan Participation other than for the purpose of foreclosure or realizing the benefits of insurance with respect thereto or the project relating thereto.

General Obligation Indebtedness (Section 712)

If the Authority authorizes any General Obligation Indebtedness other than the Bonds or a Series of Bonds, it will establish and maintain a capital reserve fund with terms and provisions the same as the terms and provisions contained in the Capital Reserve Fund Resolution.

Negative Covenants (Section 713)

(A) The Authority covenants not to create or permit to be created any pledge, assignment, lien, encumbrance or charge on the Appropriated Loans for any purpose. The Authority may pay costs of issuance of any Series of Bonds and Operating Costs and any charges, and may make deposits into any funds or accounts of the Authority, from Appropriated Loan Receipts or from any source of funds.

(B) The Authority covenants not to incur any General Obligation Indebtedness unless the Net Income as estimated in a certificate of an authorized officer delivered at the time of the incurring of the General Obligation Indebtedness over the term of all General Obligation Indebtedness equals not less than 150% of the General Obligation Annual Debt Service Requirements in each year in which General Obligation Indebtedness is outstanding. Such estimate shall be made after deducting an amount equal to an aggregate of all annual payments thereafter due on all Non-Current Assets.

(C) The Authority covenants not to make any loans, incur any indebtedness, or expend any money except for reasonable and necessary Operating Costs or the payment of principal and interest on any General Obligation Indebtedness the effect of which would (i) reduce its estimated Net Income, estimated in the manner provided in clause (B), at any time to less than 150% of the General Obligation Annual Debt Service Requirements in any year in which General Obligation Indebtedness is outstanding, or (ii) cause its unrestricted surplus to amount to less than $100,000,000.

Events of Default (Section 1001)

Each of the following events is an "Event of Default": (1) the Authority shall default in the payment of the principal or redemption price of any Bond when and as the same shall become due, whether at maturity or upon call for redemption or otherwise; (2) payment of any installment of interest on any of the Bonds shall not be made when the same shall become due; (3) the Authority shall file a petition in bankruptcy or seeking a composition of indebtedness under the Federal bankruptcy laws or under any other applicable law of the United States of America or of the State; (4) the Trustee has been notified by the trustee under the Capital Reserve Fund Resolution that an event of default specified in the Capital Reserve Fund Resolution has occurred; (5) the Authority shall fail or refuse to comply with the provisions of the Bond Resolution, or shall default in the performance or observance of any of the covenants, agreements or conditions contained therein, in any supplemental resolution, or in the Bonds, and such failure, refusal or default shall continue for a period of 45 days

after written notice thereof by the Trustee or the holders of not less than 5% in principal amount of the outstanding Bonds.

Remedies (Section 1002)

Upon the happening and continuance of any Event of Default specified in clauses (1) through (3) of Section 1001, the Trustee shall proceed, or upon the happening and continuance of any Event of Default specified in clauses (4) and (5) of Section 1001, the Trustee may proceed, and upon the written request of the holders of not less than 25% in principal amount of the outstanding Bonds is required to proceed, in its own name, subject to the Bond Resolution, to protect and enforce its rights and the rights of the Bondholders by such of the following remedies as the Trustee, being advised by counsel, shall deem most effectual to protect and enforce such rights: (a) by mandamus or other suit, action or proceeding at law or in equity, to enforce all rights of the Bondholders (including the right to require the Authority to receive and collect revenues, including Pledged Receipts and Recoveries of Principal, adequate to carry out the covenants and agreements as to, and assignment of, the Loan Participations) and to require the Authority to carry out any other covenant or agreement with Bondholders and to perform its duties under the Act; (b) by bringing suit upon the Bonds; (c) by action or suit in equity, to require the Authority to account as if it were the trustee of an express trust for the holders of the Bonds; (d) by action or suit in equity, to enjoin any acts or things which may be unlawful or in violation of the rights of the holders of the Bonds; (e) by declaring all Bonds due and payable, and if all defaults shall be cured, then, with the written consent of the holders of not less than 25% in principal amount of the outstanding Bonds, by annulling such declaration and its consequences; or (f) in the event all Bonds are declared due and payable, by selling Loan Participations. Upon commencement of judicial proceedings by the Trustee to enforce the rights of the Bondholders under the Bond Resolution, the Trustee is entitled to cause the appointment of a receiver for the Authority.

Priority of Payments After Default (Section 1003)

If, upon the happening and continuance of any Event of Default, the funds held by the Trustee and Paying Agents are insufficient for the payment of principal or redemption price, if any, and interest then due on the Bonds, such funds (other than funds held for the payment or redemption of particular Bonds which have theretofore become due) and any other amounts received or collected by the Trustee are to be applied as follows, after making provision for the payment of expenses to protect the interests of the holders of the Bonds and of charges, expenses and liabilities incurred and advances made by the Trustee or any Paying Agents in the performance of their respective duties under the Bond Resolution:

1. Unless the principal of all of the Bonds shall have become or have been declared due and payable:

FIRST: To the payment to the persons entitled thereto of all installments of interest then due in the order of maturity, and, if the amount available shall not be sufficient to pay in full any installment, then to the payment thereof ratably to the persons entitled thereto, without any discrimination or preference; and

SECOND: To the payment to the persons entitled thereto of the unpaid principal or redemption price of any Bonds which shall have become due, whether at maturity or by call for redemption, in the order of their due dates and, if the amounts available shall not be sufficient to pay in full all the Bonds due on any date, then to the payment thereof ratably to the persons entitled thereto, without any discrimination or preference.

2. If the principal of all of the Bonds shall have become or have been declared due and payable, to the payment of the principal and interest then due and unpaid upon the Bonds without preference or priority of principal over interest or of interest over principal, or of any installment of interest over any other installment of interest, or of any Bond over any other Bond, ratably to the persons entitled thereto, without any discrimination or preference except as to any difference in the respective rates of interest specified in the Bonds.

ECONOMIC DEVELOPMENT BOND CAPITAL RESERVE FUND RESOLUTION

Definitions (Section 101)

"Bonds" shall mean bonds of a Series which are tax exempt under the provisions of Section 103(b)(6)(A) of the Code issued by the Authority pursuant to a bond resolution or bond resolutions with substantially the same terms and conditions as are contained in the Bond Resolution.

"Bond Trustee" shall mean the trustee appointed under each resolution securing Bonds and its successor or successors and any other person substituted in its place under said resolution.

"Capital Reserve Fund" shall mean the Capital Reserve Fund established pursuant to Section 301.

"Capital Reserve Fund Requirement" shall mean, as of any particular date of calculation, the amount of money equal to the average of the amounts of money required to be paid in each future Fiscal Year until the last maturity date of outstanding Bonds for interest payable on Bonds and for the amortization of principal installments, including sinking fund payments.

"Capital Reserve Fund Trustee" shall mean the trustee appointed under the Capital Reserve Fund Resolution.

"Fiduciary" shall mean the Capital Reserve Fund Trustee, any Bond Trustee and any Paying Agent acting under any resolution securing a Series of Bonds.

"Fiscal Year" shall mean a twelve-month period commencing on the first day of July of any year.

"Interest and Principal Account" shall mean the Interest and Principal Account established pursuant to a resolution securing a Series of Bonds.

"Investment Securities" shall mean and include any of the following obligations, to the extent the same are at the time legal for investment of funds of the Authority under the Act:

(1) direct obligations of or obligations guaranteed by the United States of America;

(2) any bond, debenture, note, participation certificate or other similar obligation issued by any of the following agencies: Government National Mortgage Association, Federal Land Banks, Federal Home Loan Banks, Federal Intermediate Credit Banks, Banks for Cooperatives, Tennessee Valley Authority, United States Postal Service, Farmers' Home Administration and Export-Import Bank;

(3) any bond, debenture, note, participation certificate or other similar obligation issued by the Federal National Mortgage Association to the extent such obligations are guaranteed by the Government National Mortgage Association or issued by any other Federal agency and backed by the full faith and credit of the United States of America other than as provided in (1) hereof; and

(4) deposits in interest-bearing time or demand deposits, or certificates of deposit, secured by obligations described in clauses (1), (2), and (3).

"Series" shall mean all the Bonds of a series authenticated and delivered as a series of bonds under an authorizing bond resolution.

Resolution to Constitute Contract (Section 202)

In consideration of the purchase and acceptance of the Bonds by those who shall hold the same from time to time, the provisions of the Capital Reserve Fund Resolution shall constitute a contract between the Authority, the Capital Reserve Fund Trustee, the Bond Trustee and the holders from time to time of the Bonds. The pledges contained in the Capital Reserve Fund Resolution and the provisions, covenants and agreements therein set forth shall be for the equal benefit, protection and security of the holders of any and all of such Bonds, all of which shall be of equal rank without preference, priority or distinction of any of such Bonds over any other thereof, except as expressly provided in the Capital Reserve Fund Resolution.

Pledge Effected by Capital Reserve Fund Resolution (Section 301)

The amounts in the Capital Reserve Fund, including the investments thereof, are pledged to secure the payment of the principal or redemption price, if any, of and interest on all Bonds (including the sinking fund payments established by the resolutions securing the Bonds for the retirement thereof) in accordance with their terms and the provisions of said resolutions subject only to the provisions of the Capital Reserve Fund Resolution permitting the application or release thereof for or to the purposes and on the terms and conditions herein and therein set forth.

Operation of Capital Reserve Fund (Section 302)

(A) If on any interest payment date or redemption date for any Bonds the amount in the Interest and Principal Account or a redemption account established under a resolution securing the Bonds shall be less than the amount required for the payment of all principal installments or redemption price and interest on the outstanding Bonds due on such interest payment date, or redemption date, upon notification by the Bond Trustee acting under the resolution securing the Bonds, the Capital Reserve Fund Trustee shall transfer amounts from the Capital Reserve Fund to the Bond Trustee to the extent necessary to make good the deficiency.

(B) If on the first days of January, April, July or October of each year the amount in the Capital Reserve Fund is in excess of the Capital Reserve Fund Requirement, the Capital Reserve Fund Trustee shall transfer at the request of the Authority the amount of such excess to the Authority free and clear of any lien or pledge created by or pursuant to the Capital Reserve Fund Resolution for expenditure by the Authority for any lawful purpose.

(C) The Capital Reserve Fund Trustee shall sell, redeem or transfer Investment Securities to the extent necessary to make any required or permitted payment or transfer and, at the direction of the Authority, shall sell, redeem or transfer Investment Securities as necessary to comply with this section.

Investment of the Capital Reserve Fund (Section 303)

(A) Monies in the Capital Reserve Fund shall be invested in Investment Securities so that the maturity date or date of redemption at the option of the holder thereof shall coincide as nearly as practicable with the times at which monies are needed by the Authority to be so expended. The Investment Securities purchased shall be held by the Capital Reserve Fund Trustee and shall be deemed at all times to be part of the Capital Reserve Fund, and the Capital Reserve Fund Trustee shall keep the Authority advised as to the details of all such investments. The Capital Reserve Fund Trustee shall sell at the best price obtainable, or present for redemption, any Investment Securities purchased by it as an investment whenever it shall be necessary in order to provide monies to meet any payment from the Capital Reserve Fund. The Authority may direct the Capital Reserve Fund Trustee to enter into financial transactions under which Investment Securities are sold under an agreement providing for their repurchase at a future date for a fixed price.

(B) In lieu of such investments the Capital Reserve Fund Trustee shall, at the written direction of an authorized officer of the Authority, deposit amounts or cause amounts to be deposited from the Capital Reserve Fund in interest-bearing time deposits, or certificates of deposit, or shall make other similar banking arrangements, with itself or a member bank or banks of the Federal Reserve System or banks the deposits of which are insured by the Federal Deposit Insurance Corporation. Each such interest-bearing time deposit or certificate of deposit or other similar banking arrangement shall permit the monies so placed to be available for use at the times at which monies are needed by the Authority to be expended. All monies in each such interest-bearing time deposit or certificate of deposit or other similar banking arrangement shall be continuously and fully secured by direct obligations of the United States of America or of the State or obligations the principal and interest of which are guaranteed by the State or the United States of America, of a market value equal at all times to the amount of the deposit, certificate or other similar banking arrangement.

(C) Investment Securities purchased as an investment of monies in the Capital Reserve Fund under the provisions of the Capital Reserve Fund Resolution shall be deemed at all times to be a part of the Capital Reserve Fund until transferred therefrom as permitted by this section.

Maintenance of Capital Reserve Fund (Section 305)

(A) The Authority shall at all times maintain the Capital Reserve Fund in an amount at least equal to the Capital Reserve Fund Requirement and do and perform or cause to be done and performed each and every act and thing with respect to the Capital Reserve Fund required to be done or performed by or on behalf of the Authority or the Capital Reserve Fund Trustee under the terms and provisions of the Capital Reserve Fund Resolution or by or on behalf of the Authority or each Bond Trustee under the terms and provisions of all resolutions securing Bonds or of the Act.

(B) In order to better secure the Bonds and to make such Bonds more marketable and to maintain in the Capital Reserve Fund an amount equal to the Capital Reserve Fund Requirement, and in furtherance of the provisions of the Act, the Authority shall cause its Chairman at least annually, no later than January 2 of each year, to make and deliver to the Governor and to the Legislature his certificate stating the amount, if any, required to restore the Capital Reserve Fund to the Capital Reserve Fund Requirement. All monies received by the Authority from the State in accordance with the provisions of the Act pursuant to any such certification shall be paid to the Capital Reserve Fund Trustee for deposit and credit to the Capital Reserve Fund.

Events of Default (Section 601)

Each of the following is an "Event of Default":

(1) the Authority shall fail or refuse to comply with the provisions of subsection (B) of Section 305; or

(2) the amounts certified pursuant to Section 305 shall not have been paid by the State for deposit in the Capital Reserve Fund within 90 days of the date of such certification; or

(3) the Authority shall fail or refuse to comply with the provisions of the Capital Reserve Fund Resolution, or shall default in the performance or observance of any of the covenants, agreements or conditions on its part contained therein or in any supplemental resolution.

Remedies (Section 602)

Upon the happening and continuance of any Event of Default specified in Section 601, the Capital Reserve Fund Trustee may proceed and, upon the written request of the holders of not less than 25% in principal amount of the outstanding Bonds, shall proceed, in its own name, subject to the provisions of the Capital Reserve Fund Resolution, to protect and enforce the rights of the Bondholders by such of the following remedies as the Capital Reserve Fund Trustee, being advised by counsel, shall deem most effectual to protect and enforce such rights:

(1) by mandamus or other suit, action or proceeding at law or in equity, to enforce all rights of the Bondholders, and to require the Authority to carry out any other covenants or agreements with Bondholders and to perform its duties under the Act; or

(2) by action or suit in equity, to enjoin any acts or things which may be unlawful or in violation of the rights of the holders of the Bonds.

ABSENCE OF MATERIAL LITIGATION

The Authority will furnish a certificate, dated the Conversion Date, of an authorized officer of the Authority to the effect that there are no proceedings or litigation of any nature pending or threatened restraining or enjoining the issuance, sale, execution or delivery of the Bonds, or in any way contesting or affecting the validity of the Bonds or any proceedings of the Authority taken with respect to the

issuance or sale thereof or the right, power or authority of the Authority with respect to the pledge or application of any monies or securities provided for the payment of the Bonds or the existence or powers of the Authority.

Members of the First Session, Thirteenth Alaska State Legislature have commenced litigation in the Superior Court for the State of Alaska, Third Judicial District, in an action styled *Abood et al. vs. Gorsuch et al.* (Case No. 3 AN 83-5980-CIV) challenging the legality of the proceedings taken during that Session with respect to the confirmation by the Legislature of certain State Commissioners and other State officers appointed by the Governor who are named as defendants in the litigation. Among other things, the plaintiffs seek a declaratory judgment that each defendant is unlawfully holding or exercising a public office. Two of the Commissioners by virtue of their offices served as members of the five-member Board of Directors of the Authority on the date of the issuance of the Floating Rate Bonds. On October 22, 1984, the Superior Court issued an opinion granting the defendants' motion for summary judgment and dismissing the case. The plaintiffs filed notice of appeal of the Superior Court decision to the Supreme Court of Alaska on October 30, 1984. It is the opinion of the Attorney General of the State of Alaska and of Bond Counsel that the confirmation of all Commissioners will ultimately be validated in such judicial proceeding. It is further the opinion of the Attorney General and Bond Counsel that even if the plaintiffs ultimately prevail, actions taken by the Authority in connection with the authorization, issuance, sale or delivery of the Bonds would not be invalidated and that any claim to the contrary is without merit.

FINANCIAL STATEMENTS

The financial statements of the Authority have been examined by Peat, Marwick, Mitchell & Co., Anchorage, Alaska, independent certified public accountants, to the extent and for the periods indicated in their report. Such financial statements have been appended to this Official Statement as Appendix C and are included in reliance upon the report of such firm as experts in accounting and auditing.

BOND RATINGS

Moody's Investors Service, Inc. has assigned the Bonds a rating of . Standard & Poor's Corporation has assigned the Bonds a rating of . The ratings assigned by the rating agencies reflect only the respective views of the rating agencies, and an explanation of the significance of such ratings may be obtained only from the respective rating agencies. The rating agencies have the right to change, suspend or withdraw their ratings at any time, and any such action may have an adverse effect upon the market price of the Bonds.

LEGAL OPINION

The Bonds were issued subject to the opinion of Wohlforth & Flint, Bond Counsel, of Anchorage, Alaska, approving the legality of the issuance thereof. Legal matters incident to the conversion of the Bonds from Bonds bearing a floating interest rate to Bonds bearing fixed interest rates and the sale thereof to the Underwriters are subject to the approval of Bond Counsel. Certain legal matters will be passed upon for the Underwriters by their counsel, Preston, Thorgrimson, Ellis & Holman of Seattle, Washington.

TAX EXEMPTION

In the opinion of Bond Counsel, interest on the Bonds is exempt from Federal income taxes under existing statutes, rulings and court decisions, except that no opinion is expressed as to the exemption from such taxes of interest on any Bond for any period during which such Bond is held by a person who, within the meaning of Section 103(b) of the Code, is a substantial user of facilities with respect to which the proceeds of the Bonds were issued, or a related person.

UNDERWRITING

The Bonds are being purchased by Prudential-Bache Securities Inc. and Goldman, Sachs & Co. as representatives of the Underwriters. The Underwriters have agreed to purchase the Bonds at an aggregate purchase price of $, plus accrued interest. The Underwriters intend to offer the Bonds to the public at the offering prices set forth on the cover page of this Official Statement. The Underwriters may allow concessions from the public offering prices to certain dealers, who may reallow concessions to other dealers. After the initial public offering, the public offering price may be varied from time to time by the Underwriters.

EXECUTION OF OFFICIAL STATEMENT

The execution and delivery of this Official Statement have been authorized by the Authority. This Official Statement is submitted only in connection with the conversion of the interest rates on the Bonds from a floating rate to fixed rates and the sale of the Bonds and may not be reproduced or used in whole or in part for any other purpose.

2009	5,751,476	5,374,013	184,392	153,080	63,414,116	69,125,601	12.02	63,374,125	1,152,983,936
2010	1,637,788	192,974	99,161	0	66,899,693	67,191,828	41.03	65,554,040	1,216,358,061
	$508,556,119	$499,801,899	$29,475,228	$275,539,331	$882,868,139	$1,687,684,597			

(1) Includes (a) the $13,120,000 Floating Demand/Fixed Rate Economic Development Bonds, Series 332 through 351 at actual interest cost to March 1, 1985, and an estimated interest rate of 10% thereafter to the Conversion Date, and (b) the $11,800,000 Bonds at an estimated interest rate of 10% from the Conversion Date.

(2) Revenues are net of all fees and expenses. Schedule assumes that loans are funded on anticipated funding dates. Estimated New Loan Revenues are from Loan Participations funded by proceeds of the Floating Rate Bonds.

(3) Represents revenues from the loans appropriated by the State to the Authority, net of all fees. Principal and interest on loans delinquent more than 90 days are not included. Also includes revenue from certain loans and participations purchased by the Authority, primarily participations in loans guaranteed by the Small Business Administration.

(4) Includes income from investment of certain assets and excess net revenues of the Authority at actual present rates and at an assumed rate of 5.5% compounded annually for periods after present investments mature.

(5) Coverage reflects debt service requirements, including mandatory sinking fund requirements. There are currently outstanding $6,035,000 Economic Development Bonds which may be tendered for payment by the holders thereof commencing April 1, 1987 ($80,000 of which are subject to Mandatory Sinking Fund redemption on April 1, 1987). If all of such bonds were tendered for payment on April 1, 1987, the estimated coverage for the year ending June 30, 1987, would decline from 2.48 to 2.01. The reduction in annual debt service requirements thereafter would result in slightly higher coverage multiples for the years 1988 through 2007 than those shown above.

NOTE: Table does not include the outstanding $12,200,000 Variable Demand/Fixed Rate Bonds, 1984 Series A and B, nor the loan revenues and investment earnings associated therewith because those bonds will not become general obligations of the Authority until such time as they are converted to Fixed Rate Consolidated Bonds.

The Board of Directors
Alaska Industrial Development Authority:

We have examined the balance sheets of Alaska Industrial Development Authority as of June 30, 1984 and 1983, and the related statements of earnings and retained earnings and changes in financial position for the years then ended. Our examinations were made in accordance with generally accepted auditing standards and, accordingly, included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the aforementioned financial statements present fairly the financial position of Alaska Industrial Development Authority at June 30, 1984 and 1983, and the results of its operations and the changes in its financial position for the years then ended, in conformity with generally accepted accounting principles applied on a consistent basis.

ALASKA INDUSTRIAL DEVELOPMENT AUTHORITY

Notes to Financial Statements

June 30, 1984 and 1983

(1) Historical

The Alaska Industrial Development Authority (Authority) is a public corporation of the State of Alaska, constituting a political subdivision within the Department of Commerce and Economic Development, but with separate and independent legal existence. The Authority's purpose is to promote, develop and advance the general welfare of the people of Alaska by providing permanent, long-term financing for industrial, manufacturing and other business enterprises.

Prior to July 1, 1980, the Authority's sole means of providing financing for business enterprises was through a tax-exempt stand-alone revenue bond program. Funds were provided to qualified applicants by issuance of the Authority's industrial development revenue bonds, which are secured solely by the revenue earned by the applicant's project and the financial credit of the individual applicant.

Since July 1, 1980, the legislature of the State of Alaska has appropriated the following to the Enterprise Development fund of the Authority:

(a) $23,668,200 cash.

(b) All rights, title and interest in loans, with remaining principal balances totaling approximately $166,000,000, held by the State Department of Revenue and State Department of Commerce and Economic Development.

(c) Assets and liabilities of the Alaska State Development Corporation, the Small Business Development Corporation and the Alaska Toll Bridge Authority, with fund balances of $2,554,055.

(Continued)

State of Alaska legislation has also enabled the Authority to significantly expand its financing programs as follows:

(a) A tax-exempt umbrella bond program, under which the Authority's bonds are sold on national markets, was established to provide loans of up to $10,000,000. The proceeds of the sales are used to purchase portions of loans made by financial institutions to their customers. The bonds may be secured by any or all of the following:

-- The full faith and credit of the Authority.
-- Principal and interest payments received on the loans.
-- Collateral held by the Authority on projects financed by the loans.
-- A Capital Reserve Fund to be established from the State appropriation.
-- A negative covenant on other commitment of assets.

(b) The tax-exempt stand-alone revenue bond program was also expanded to enable the Authority to issue bonds to provide funds for business enterprises other than those of a manufacturing or industrial nature. Such bonds are not secured by the full faith and credit of the Authority and are not recorded as obligations of the Authority.

(c) The Authority has annual authorization to finance projects totaling $400,000,000 under its bond programs.

(d) Uncommitted funds held in the Enterprise Development Fund may be used to purchase the guaranteed portion of business loans (usually 90% of the loan amount) guaranteed by the Small Business Administration, the National Marine Fisheries Service or the Farmers Home Administration.

(e) On June 24, 1982, legislation was signed into law by the Governor of Alaska providing authorization and funding of a multifamily housing loan program. Under this legislation, $21,000,000 in certificates of deposit were appropriated by the State to the Authority in July 1982 for a multifamily housing loan security fund to provide a loan loss reserve for certain multifamily housing loans. As the legislation excluded the assets of the fund from the general assets of the Authority, the fund and the earnings thereon are not recorded on the financial statements of the Authority.

In July of 1983, the Alaska legislature approved a bill which transferred $5,000,000 of certificates of deposit, held in the multifamily loan security fund, to other State uses and expanded the uses of the remaining funds enabling the Authority to utilize the assets of the fund for capital reserve fund purposes and to provide a loan loss reserve for all multifamily housing loans. The fund balance at June 30, 1984, was $18,345,200 after transferring $668,200 to the Authority for capital reserve purposes.

(Continued)

(2) Summary of Significant Accounting Policies

Basis of Accounting

The Authority uses the accrual basis of accounting, under which revenues are recorded when earned, and expenditures are recorded when liabilities are incurred.

Investments

Investments are recorded at the acquisition cost which approximates market.

Income Taxes

The Internal Revenue Code provides that gross income for tax purposes does not include income accruing to a state or territory, or any political subdivision thereof, which is derived from the exercise of any essential governmental function or from any public utility. According to the Alaska Statutes, the Authority constitutes a political subdivision of Alaska and is therefore exempt from State and Federal taxes.

Tax-Exempt Stand-Alone Revenue Bonds

Tax-exempt stand-alone revenue bonds issued by the Authority are not general obligations of the Authority. They are payable solely out of the revenues derived from the financing of projects. They do not constitute indebtedness of the Authority within the meaning of any provision or limitation of the Constitution or Statutes of the State of Alaska, and they do not constitute or give rise to a pecuniary liability of the Authority or a charge against its general credit.

The repayments of these bonds by the various entities on whose behalf they have been issued are made directly to the trustee for each bond issued and, therefore, are not recorded as revenues and expenses of the Authority.

Allowance for Loan Loss

Management regularly reviews the loan portfolio and determines provision for loss based upon experience and management's estimate of potential loss.

Retirement Plan

All employees of the Authority participated in the State of Alaska Public Employees' Retirement System. The State's policy is to fund pension costs accrued.

(Continued)

Bond Issue Costs

When advanced by the Authority, costs of bond issues, including underwriters' fees and commissions, legal fees, bond insurance and printing, are amortized over the life of the bond issue on the straight-line method and are recovered from the borrowers primarily as a part of the interest rate charged. Current practice is to require borrowers to pay for bond costs at the time of funding.

Furniture and Equipment

Purchases of furniture and equipment are expensed, as such items are the property of the State of Alaska.

(3) Investments

At June 30, 1984, all investments were in United States Government securities or commercial paper, yielding interest at 9.5% to 13.0% and maturing within one year, except $4,899 in United States Treasury Notes maturing in 1990.

At June 30, 1983, all investments were in certificates of deposit, United States Government securities or commercial paper, yielding interest at 8.5% to 15.0%, and maturing within six months, except United States Treasury notes maturing $115,307 in 1984 and $4,899 in 1990.

Certain invested funds are restricted by the terms of the Authority's bond resolution and are held and invested by the trustee. A summary of these investments follows:

Name	Restriction	Amount 1984	Amount 1983
Loan participation funds	Committed loans not closed at June 30	$ 3,210,000	$ 1,600,000
Capital reserve funds	Secure debt service payment - bonds	15,870,477	10,117,508
Debt service funds	Loan repayments and funds held for debt service - bonds	11,707,225	7,761,125
		$ 30,787,702	$ 19,478,633

(Continued)

The Capital Reserve Fund is maintained for the purpose of making principal and interest payments on the bonds payable if monies received by the Authority and available for the payment of bond principal and interest are insufficient to make the required debt service payments. The amounts held in the capital reserve funds are equal to the average of the amounts required to be paid for principal and interest in each future fiscal year until maturity of the outstanding bonds. On the first day of January, April, July and October of each year, the Authority must replenish the capital reserve funds to the required amounts or may withdraw any excess amounts.

(4) Loans

Loans outstanding at June 30, 1984 and 1983 are classified as follows:

Loan Type	1984 Number	1984 Amount	1983 Number	1983 Amount
Appropriated	699	$ 105,594,820	763	$ 120,348,684
Federally guaranteed	308	60,202,983	217	39,185,785
Bond sale	365	161,797,684	267	97,508,566
	1,372	$ 327,595,487	1,247	$ 257,043,035

An aging of loans as of June 30, 1984 and 1983 follows:

Loan Age	1984 Amount	1984 Percent	1983 Amount	1983 Percent
Current	$ 312,325,338	95.34	$ 242,381,031	94.38%
Past due:				
30-60 days	7,194,844	2.20	7,004,586	2.72
61-90 days	2,555,586	.78	1,680,004	.65
Over 90 days	5,519,719	1.68	5,977,414	2.25
	$ 327,595,487	100.00%	$ 257,043,035	100.00%

(5) Tax-Exempt Stand-Alone Revenue Bonds Issued

At June 30, 1984, the Authority had issued tax-exempt stand-alone revenue bonds totaling $392,138,180 for 176 projects in various parts of Alaska, including $105,432,875 issued for 65 projects during the year ended June 30, 1984.

(Continued)

(6) Notes and Bonds Payable

Notes and bonds payable at June 30, 1984 and 1983 consisted of the following:

	1984	1983
Economic development bonds:		
7-1/2% to 11-3/8%, issued April 1, 1981, maturing between 1982 and 2007	$ 15,725,000	$ 16,590,000
9-3/4% to 13-5/8%, issued October 15, 1981, maturing between 1983 and 2008	52,590,000	55,000,000
12.875%, issued August 15, 1982, maturing between 1984 and 2008	920,000	930,000
10% to 11.25%, issued October 1, 1982, maturing between 1983 and 2008	6,890,000	7,195,000
10% and 11.375%, issued December 1, 1982, maturing between 1984 and 2009	2,905,000	3,335,000
8.5% to 10.5%, issued November 1, 1983, maturing between 1984 and 2009	11,870,000

9.25% to 10.75%, issued December 1, 1983, maturing between 1984 and 2009	7,700,000	
2% certificates of deposit originally issued by the Alaska State Development Corporation, due August 1, 1983	106,775	515,736
	$ 155,431,775	$ 98,085,736

The bonds payable are secured by the general assets of the Authority, including loans, loan proceeds and capital reserve funds of $15,870,477 established pursuant to terms of the bond resolutions (note 3).

(Continued)

The principal portions of the bonds payable mature as follows:

Year ending June 30	Total principal maturing
1985	$ 4,385,000
1986	4,285,000
1987	4,210,000
1988	3,805,000
1989	3,790,000
1990-1994	22,910,000
1995-2010	111,940,000
	$ 155,325,000

(7) Fees

At the time tax-exempt stand-alone revenue bonds are issued by the Authority to provide financing for a project of an applicant, the applicant shall pay a financing fee equal to 1% of the first $1,000,000 of the principal amount of the bonds issued, 1/2% of the next $4,000,000 of the principal amount of the bonds issued, 1/4% of the next $10,000,000 of the principal amount of the bonds issued, and 1/10% of the principal amount of the bonds issued in excess of $15,000,000.

The Authority charges borrowers under the tax-exempt umbrella bond program a nonrefundable commitment fee equal to 1% of the Authority's participation in the loan.

The commitment fee for a multifamily housing loan is 2% of the principal amount of the participation of the Authority in the loan and is nonrefundable.

The Authority also charges a preapplication fee of $100 to each applicant under the stand-alone revenue bond program, the umbrella bond program or the multifamily bond program.

Applicants pay the cost of issuing bonds, underwriters' discount, financial advisor fees, bond counsel fees and other costs of the Authority.

(Continued)

(8) Retirement Plan

The Authority participates in the State of Alaska Public Employees' Retirement System. Plan expense for the years ended June 30, 1984 and 1983 were $79,429 and $68,250, respectively.

Information as to accumulated plan benefits and net assets available for plan benefits is not available on an individual agency basis for each State agency which participates in the State of Alaska Public Employees' Retirement System.

(9) Commitments

At June 30, 1984 and 1983, the Authority had entered into loan commitment agreements for loans of $34,637,093 and $59,431,000, respectively.

NORTH SLOPE BOROUGH

OFFICE OF THE MAYOR

P.O. Box 69
Barrow, Alaska 99723

Phone: 907-852-2611

George N. Ahmaogak, Sr., Mayor

December 27, 1985

Representative John Sund
2504 Second Street
Ketchikan, Alaska 99901

Dear Representative Sund:

As you know, the State Department of Community and Regional Affairs filed a petition on November 22, 1985 to detach over 2.1 million acres from the North Slope Borough. This proposed action is contrary to the expressed wishes of the North Slope Borough voters. Further, no provision for compensation to the Borough for loss of tax base is included in the State's petition. Such compensation is required by law.

I am writing to remind you of the limited and rushed schedule of Local Boundary Commission public hearings on this matter. The LBC will hold the following hearings:

1. January 8, 1986
   Anchorage, 10:00 AM
   University Plaza Building
   349 E. 36th Avenue
   Suite 404

2. January 9, 1986
   10:00 AM Noatak School
   7:00 PM Kotzebue Senior Citizens' Center

3. January 10, 1986
   10:00 AM Point Hope High School Library
   7:00 PM Barrow High School Auditorium

4. January 11, 1986
   11:00 AM
   Fairbanks, Alaska

Since it is possible that the entire matter will wind up for action during the first 45 days of the Legislature, I would urge you to come to Barrow for the last meeting of the LBC on January 10. The LBC has already scheduled a decisional meeting the morning after the Barrow hearing in Fairbanks at 11:00 AM January 11, 1986. There are no scheduled flights from Barrow to Fairbanks between the evening Barrow hearing on January 10 and the decision meeting on January 11. Any of our residents who are interested would have to take an expensive charter flight to attend the Fairbanks meeting.

I would encourage you to attend the Barrow or another Local Boundary Commission hearings and experience the local input for yourself. Thank you for your time and consideration.

Sincerely,

George N. Ahmaogak, Sr.
Mayor

Re: Red Dog Mine: Cominco/Nana Corp. - Financing
the 91 km Mine Road

Dear Rep. Davis:

The Red Dog mine has the potential for becoming a world class lead-zinc ore body. Cominco is a well respected multinational corporation with similar deposits in the high Arctic regions and in Spain. As a multinational corporation Cominco views the world as their oyster. Cominco, like any for-profit corporation, must make strategic decisions based upon what is best for the corporation.

Mining locations will be put into production and taken out of production based upon world economic conditions, i.e. the demand for various mineral commodities, technological shifts in their usage in manufacturing, the coming on stream of other lead-zinc producers by the governments of less developed countries and a host of other variables.

The citizens of Alaska and our legislators have been asked to assist in the development of the Red Dog mine and more specifically to build the 91 km access road from Kivalina to the mine site at an estimated cost of $150 million. Various financing schemes have been put forth. One such proposal would have the Alaska Development Authority make a loan of $150 million to Cominco at 4 per cent interest to be repaid by a royalty tonnage tariff.

Suggestion: The State of Alaska is seeking greater revenues for current and future State expenditures. It is clearly appropriate for the State to expect market returns on their investments. Various figures have appeared in the popular press for the total cost of the Red Dog mine development which seems to be approximately $400 million with Cominco putting up $250 million (62.5%) and ADA contributing $150 million (37.5%) of the capital outlay.

(1) Loan: As a viable business deal the State must consider the option of a 20-25 year loan at 1 to 2 percent above the prime interest rate with guaranteed annual payments without regard to tonnage shipped. This is necessary, since Cominco may decide for whatever reason not to operate the mine for a period of time.

(2) Loan with Equity Position: As a venture capitalist we know that Cominco has the $150 million required for the road, but they also have other investment opportunities. Why should Cominco not try for some low cost money through the ADA? No reason if they can get the 4 percent money so much the better.

But let us proceed with the scenario. We, the venture capitalist (State of Alaska) make a counter offer. The State of Alaska puts up the $150 million for 51 per cent voting control until $100 million of the loan is paid back and then take an equity position of 20 percent of the Red Dog Mine for their remaining $50 million loan.

Other considerations would be appropriate representation on the Corporate Board of Directors, oversight control in managerial decision making, but not operating decisions, etc.

Conclusion:

Alaska is unique, not like any other state. Alaska must be an equity participant in its economic development. It can no longer be a donor of monies to every good cause. Alaska must participate as a responsible corporate person for the benefit of all Alaskans.

Two viable options are available to the State: (1) Long-term loan at market rates of interest, repayable on a fixed schedule; (2) Loan with equity position at variable interest rates, generally for mining ventures the loan would command a premium of 1 to 2 percent above the prime rate.

I urge the State to support those economic development projects that are viable on their own merit. It is inappropriate for industrial development projects to be subsidized by state or federal monies.

I wish to thank you for this opportunity to express my personal opinion in this matter.

Sincerely,

Peter G. Biesiot, PhD.

AF... 1985

UNIVERSITY OF ALASKA

FAIRBANKS, ALASKA 99701

April 27, 1985

Senator Frank R. Ferguson
Alaska State Senate
Pouch V
State Capitol
Juneau, Alaska 99811

Dear Senator Ferguson:

With 85,000,000 tons of proven lead-zinc reserves and a vast additional resource potential, Alaska's Red Dog Mine could become the largest lead-zinc mine in the world. At a rated annual capacity of 580,000 metric tons, this one mine would produce 8.9% of the total world production.

If the Red Dog Mine were in production, Alaska would rank as the fourth most important source of lead-zinc in the world. The State would only be outranked by the countries of Canada, U.S.S.R. and Australia. It would boost the total U.S. lead-zinc production ahead of Australia's and would reverse the long and continuous decline in U.S. metal production.

More importantly, it would establish Alaska as an important new world source of minerals and would provide a broad spectrum of economic benefits to our State and the nation.

Sincerely,

Leo Mark Anthony

PLEASE REPLY BY AIRMAIL

March 20, 1985

The Honorable John Sund
Representative
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Sund:

There has been a substantial amount of attention given lately to the proposed Red Dog project in Northwest Alaska. Although far from the villages and cities of Southeastern Alaska many people fail to realize the positive effects this project will have on our region.

Some of the more positive impacts of the Red Dog project will be in diversifying the economy and providing other Alaskan resource developers trade opportunities with Pacific Rim nations, as well as other nations around the world.

This project, once on-line, will also bring revenues to Southeast, in the form of royalty distributions under Section 7(i) of the Alaska Native Claims Settlement Act. The owners of the mineral deposit, NANA Corporation, according to an agreement signed with Cominco Alaska, developers and financiers of the project, will receive a percentage of the net proceeds derived from the sale of lead and zinc concentrates.

Over the first 30 years of the project NANA will receive, on the average, $30 million per year. According to Section 7(i), NANA will retain 30 percent, or $10 million, and the remaining 70 percent, $20 million, will be distributed to all of the regional corporations. Sealaska Corporation will receive over 20 percent of the $20 million, about $4 million per year and over $120 million over the first 30 years of the mine's life. This is indeed a substantial contribution to the economy of Southeastern Alaska.

Support for funding of a road and port which will be utilized by this mine is important this legislative session. I understand Cominco Alaska as agreed to a series of guarantees which eliminate the element of risk to the State of Alaska, if the State agrees to long-term financing for the road and port

costs. I believe this project is in the State and people's best interests and hope you will be able to support the necessary funding request.

Sincerely,

SEALASKA CORPORATION

Rep Sund

April 2, 1985

Chairman, Senate Resources Committee
Senator Arliss Sturgulewski
Pouch V
Juneau, AK 99811

Dear Senator Sturgulewski:

Greetings from Dillingham on this cold but sunny day. It is 14 below zero with steam rising from the waters of Bristol Bay.

I am not writing to tell you about our weather but to encourage you and the Senate, the House and the Administration to approve the Red Dog Mine request for funds through the Alaska Industrial Development Authority. This is a project that I believe will send a strong signal that our State has leaders that want to set Alaska on a course of resource diversification and development.

We are relying too heavily on one resource, oil, to meet our short and long term needs. Alaska, much like a developing nation, needs to support and assist diversification in order to move ahead in a manner consistent with the requirements, goals and objectives of our entire state community.

I believe that the people of the NANA Corporation have studied the impact of the mining activity in their area and they have seen that it is time to bring the stated goals of Alaskan resources development and their regional goals together. For the first time, I see an opportunity for our State government and a region of our State to work together to achieve common goals.

These goals are to diversify our economy, bridge the economic gaps between urban and rural Alaska, employ and train Alaskans for a major mining activity and allow a region of our State a chance to engage in a long term project that will not be a financial burden for Alaska in the future.

It would be a major economic development setback if an agreement cannot be struck before this session ends. A delay will send a signal out that will be difficult to override in terms of perception. We Alaskans will be perceived as anti-development on a major scale if the terms needed to proceed cannot be negotiated before the legislature adjourns.

Your request for additonal information on a financing statement is legitimate and should be honored as quickly as possible by the Administration. However, I have never seen a legislature give a blank check to any sitting Governor, nor should you on any project of this magnitude.

I urge you to proceed with dispatch to help our State move toward a future that sees us developing our natural resources in a prudent and equitable manner. This is the time to act and you are capable of dynamic action when you know what your are doing is right!

Thank you for listening.

Very sincerely,

Nels A. Anderson, Jr.

ALASKA INDUSTRIAL DEVELOPMENT AUTHORITY

1577 "C" STREET • SUITE 304 ☐ ANCHORAGE, ALASKA 99501-5177 ☐ (907) 274-1651

May 10, 1985

The Honorable John Sund
Chairman, House Special Loans Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Sund:

As you are aware, the Alaska Industrial Development Authority is actively involved in a proposal to build and operate a transportation system in the DeLong Mountains area. This transportation system, consisting of a 55 mile road and a port, would be used by Cominco Alaska, for its Red Dog Mine, and eventually by other users in this mineral rich area. Prior to incurring any debt on this project, AIDA has to prepare a Finance Plan that accounts for all costs, both operating and capital, and details revenue sources that are adequate to cover all of these costs.

Enclosed is a preliminary draft report, prepared by SRI International, that is being sent to you for your information and comments. When the final version of this report is prepared, it will form the basis of this Financial Plan.

I welcome any comments and suggestions you might have.

Sincerely,

Bertram L. Wagnon
Executive Director

I INTRODUCTION

This draft report summarizes the results of SRI International assistance to Alaska Industrial Development Authority (AIDA) in preparing alternative finance plans for the proposed transportation system for Cominco Alaska's Red Dog deposit. The deposit is about 90 miles north of Kotsebue and about 70 miles east-northeast of Kivalina, some 55 miles from the Chukchi Sea.

To assure that the legislative requirements of the State of Alaska (Alaska Statutes Section 44.88.173) are met, the various finance plans, and alternatives include estimates of project capital costs, possible sources of capital funds, anticipated project operating costs and the money sources to meet them, and our comments regarding implied levels of State financial assistance.

In undertaking the work SRI has adopted a multidisciplinary approach, with specialists assigned to the study team for the duration of the program. SRI has consulted multiple sources of information, which are listed in Attachment 1.

Unless otherwise noted, all prices and costs in this report are expressed in inflated dollars (i.e., the inflated dollar values that are likely to prevail in the future), as opposed to dollars expressed in terms of 1985 purchasing power. Such projections are based on assumptions about future levels of inflation, and escalation or deflation factors that apply to cost components like labor, supplies, or energy. Table I-1 summarizes SRI's principal assumptions regarding escalation factors and overall inflation.

Following this introduction is Chapter II, the Executive Summary. Chapter III reviews the information collected, and briefly describes the transportation project and the capital and operating costs associated with the required infrastructure. Chapter IV describes the transport model SRI has used for allocating cargo and user costs. Chapter V deals with the profitability of the Red Dog project (relative to other major zinc/lead suppliers in the Western World). The chapter reviews the capital, operating, and maintenance costs associated with the mine and mill facilities that are currently contemplated. Chapter V also briefly discusses relevant metal prices and describes the model SRI has created to examine Cominco Alaska's profitability under various operating assumptions.

A financial evaluation of Cominco's proposal and the State's investment in the proposed transportation system, including possible alternatives, are discussed in Chapter VI. The importance of such

critical parameters as start-up date and construction and capital cost schedules are discussed. Chapter VI also describes the financial model SRI has used to evaluate different proposals and alternatives, and sets forth the principal results modeled. Chapter VII provides a brief discussion of results.

Special effort has been made to make this draft report a succinct document--one that is immediately useful to AIDA and the Alaskan Legislature and other state organizations. Accordingly, certain details pertaining to intermediate steps or methodology are omitted here. Also omitted are Appendix materials, such as tables and figures. These will be included, however, in SRI's final report.

II EXECUTIVE SUMMARY

In general, SRI has identified no serious discrepancies in the review of capital and operating and maintenance (O&M) cost data regarding the proposed road and port facilities that will serve Cominco Alaska's Red Dog operation. The data, which were largely submitted by Cominco Alaska but include those from multiple other sources as well, indicate that the capital investment required will be on the order of $158 million for the road and the port. This estimate, which we have called the "Cominco-Based Scenario," has been adjusted to reflect SRI's views on possible cost contingencies. If all these contingencies are considered, they would raise the total investment contemplated under the Cominco-Based Scenario by about 20%. We refer to this higher capital cost set of assumptions as the Alternative Scenario.

Both the Cominco-Based Scenario and the Alternative Scenario have been used to evaluate the State subsidy implied in Cominco Alaska's proposal outlined in its December 11, 1984, Memorandum of Understanding--representing an offer that has not been officially acknowledged. Our findings indicate that, under the Cominco-Based Scenario, the State would earn a return of about 2% to 3% on its investment in the transportation system and a return of about 1% to 2% under the Alternative Scenario. Assuming that the State's cost of money is about 10%, the implied level of State subsidy would range from about $80 million (in 1985 dollars) to about $95 million (in 1985 dollars). Furthermore, the State's financial exposure can increase significantly if the first shipment of concentrates is delayed after 1989. For example, a 1-year delay in shipments and user charges increases the implied subsidy from about $16 million (in 1985 dollars) under the Cominco-Based Scenario to $20 million (under the Alternative Scenario).

Surprisingly, Cominco's mine profitability (i.e., as a percent of return on investment--%ROI) appears to be relatively insensitive to the total amount of user charges for the transportation system. SRI examined the effect of significantly higher user charges on both the State's return on its transportation system investment and on Cominco Alaska's return on its mine investment. The results indicate a user charge that will allow the State to achieve breakeven on its investment and that will reduce Cominco's rate of return on its mine investment by less than two percentage points compared with its original proposal.

Comparisons with international producers of lead and zinc indicate that Red Dog's operating cash costs should be below the median of those for the western world at any point in the foreseeable future. Furthermore, Cominco, Ltd. will benefit from this mine development through continued high utilization of existing facilities.

We note that debt-financing by Cominco of its mine and mill facilities--as is usual within the industry--would increase the anticipated return on its investment in the Red Dog operation above what is shown by our analysis.

The proposed mine development will also generate handsome royalties for NANA, which owns the resource, as well as distribution to other regional corporations--more than $600 million (in 1985 dollars) under our base price metal forecasts.

We believe that the State, in view of the sizable total economic return expected from developing this mine, should facilitate this commercial development. However, we question the need for a substantial State subsidy in financing the proposed transportation system. We recommend that a reasonable rate of return on this investment be secured in future years through an appropriate schedule of user charges.

III REVIEW OF INFORMATION

Project Description

The proposed transportation system consists of two relatively distinct components:

1. A year-round, 30-foot wide roadway, some 55 miles in length, extending from the proposed Red Dog Mine site (800 to 1500 feet in elevation and 90 air miles north of Kotzebue), southwesterly to the port site on the Chukchi Sea, a few miles south of Ipiavik Lagoon.

2. A sea port facility, which is currently described as a "800 lineal foot, 20 foot (water) depth, 2-dolphin" plan, with support features, including: material-handling equipment; power generation and fuel storage; water and sanitary works; helipad; personnel accommodations; and a barge for "regional" use. Major associated features include a concentrate storage building, fuel tank farm, storage areas for regional supplies (solids) and containers, and a regional supplies (liquid) facility.

The proposed road portion of the transportation system is described in "Geotechnical Report, Alaska Red Dog Mine" (October 1984). For the port, the following preliminary plans were provided to SRI:

- Cominco Alaska Red Dog Project, Seaport Facilities, Scheme 3B, Drawing SKD-GA-09, Rev. B (2-23-85).

- Concentrate Storage Facilities at Seaport, Drawing SKD-GA-10, (2-26-85).

- Cominco Alaska Red Dog Project, Dock Facilities, Drawing SKD-GA-11, Rev. A (3-8-85).

In addition, physical conditions data were also obtained from reports by D&M and from telephone discussions with Arctec, Inc., and Brian J. Watt Associates.

The road is planned for construction over a 2-year period from mid-1986 to mid-1988. This schedule, which includes two winter seasons, allows for road embankments to be constructed on undisturbed tundra in its frozen state, and for necessary embankment repair or grade correction after periods of thaw. Construction of the port facility is also planned to commence in mid-1986; it will extend somewhat beyond mid-1988,

however--primarily because of the extensive mechanical-electrical installations required.

Capital Costs

Two key documents on construction costs and their expenditure rates over the planned construction periods were provided to SRI:

- Road and Port Cost Summaries; Memorandum (March 7, 1985) from T. J. Manning (Red Dog Project Office, Pasadena) to H. M. Giegerich (Cominco Alaska, Anchorage),
- Port and Road Cash Flow; prepared by RMP (3-15-85), referring to Job No. 6560.

The road's cost summary reflects RMP's audit of the PN&D cost estimates. The cost summary for the port reflects a revised port scope (i.e., the one used here) developed by RMP.

To supplement the limited backup detail provided, SRI held several in-depth telephone discussions with RMP's estimating department during our review of the cost estimates and schedules. These estimates were then partially reordered to take account of transport cost modeling and financial analyses of a public-based transportation system in Alaska, and the scheduled need for in-process construction capital. We refer to these estimates as the "Cominco-based" case.

Given that Cominco Alaska, RMP, PN&D, and others familiar with Alaskan construction cost factors have allotted considerable effort to developing detailed cost estimates, SRI believes its comment on aggregated costs are in order but notes that similar time for conducting detailed checks on economic assessments was unavailable.

Nevertheless, SRI and HLA suggest that if certain construction item costs were in fact higher than originally estimated, their overall cost effect should be considered in the financial analysis. For this purpose, SRI has developed an Alternative Case.

Our review has thus centered on identifying possible geotechnical and Arctic engineering concerns and constraints that might affect project costs. Those identified are discussed below.

Roadway Gradient and Curvature

The PN&D report specifies a maximum grade of 4% and addresses a one-lane road with passing turnouts every 2 miles and a sight distance design speed of 55 miles per hour. We understand, however, that curvature (vertical and horizontal) design criteria have subsequently been relaxed and maximum grades could reach 8% to 10%, altnough for

relatively short distances. For a public highway with similar traffic conditions, such grades and lesser alignment standards, particularly for winter driving in Alaska, may pose a severe safety hazard. For example, these road configurations may compound sight and stopping distance problems. Given the passing turnouts proposed and speeds to 55 miles per hour, this change in alignment criteria may prove to undesirably decrease the margin of operational safety. For the purpose of cost impact analyses in the Alternative Case, the embankment fill quantity has been increased by 50% (i.e., an additional $8.5 million).

Roadway Maintenance and Repair during Construction

Two freeze/thaw cycles will occur during the construction period. The severity and frequency of roadway depressions and/or surface cracking resulting from these conditions are unknown. Along the road's centerline, 15 test borings were drilled, with 9 more drilled at major stream crossings, and 51 at proposed roadway borrow sites. PN&D concludes that subsurface conditions of importance have probably been identified. However, to account for soil problems that may not have been identified and to account for higher than expected roadway reconstruction costs, the Alternative Case doubles the fill quantity provided in the "Cominco-based" case for these purposes for an additional $2.1 million.

Ice Forces on the Port's Causeway

As currently proposed, the causeway consists of a series of cellular sheet pile structures filled with quarry run material. Preliminary plans envision the sheet piles bottoming some 25 feet below mudline. (Bedrock is apparently about 40 feet below the mudline.) To our knowledge, uplift and horizontal ice forces on the proposed structure have not been definitively quantified. Concerns therefore include potential jacking of individual sheet piles because of ice bonding and uplift, or the possible failure of individual sheets or groups of sheets because of large local lateral ice forces, leading to progressive failure of the cell. Accordingly, the Alternative Case assumes that the $6.9 million estimate for the cellular causeway portion be increased by 25% (i.e., an additional $1.7 million) to allow for unexpected additional sheet pile lengths or other required design modifications.

Concentrate Storage Facility and Fuel Tank Farm

The D&M reports provide no conclusions or recommendations in regard to the proposed location of the concentrate ore pile and the fuel tank farm, which is supported on fill pads adjacent to an existing lagoon. No doubt, additional test borings and soils analysis will be conducted before final design decisions are made. In the meantime, however, related concerns about soils stability and settlement, and about lateral loads on the foundations of the concentrate storage building appear worthy of consideration in the Alternative Case. Accordingly, the Site Preparation and Pad Fill item for both the concentrate storage and fuel

storage facilities were used as the basis for the Alternative Case. Cost for these items were increased by 100% (i.e., an additional $2.1 million for the concentrate storage facility and $1.6 million for the fuel tank farm).

In summary, although it is problematical whether any or all of the above cost adjustments will in reality occur, their net effect would be to raise the Cominco-based estimates (for direct construction costs) by about 15% for the road and 10% for the port facility. These adjustments serve as the basis for the Alternative Case analysis discussed in subsequent sections.

Operating and Maintenance Costs

Road

The road from the Red Dog mine to the port site is assumed to carry substantially heavier trucks than most other roads in northern Alaska. Therefore, its operating and maintenance (O&M) costs are likely to be higher than comparable roads. From our discussions with the contacts cited in Attachment 1, the O&M items discussed below will be required. Annual costs (in 1985 dollars) associated with these activities are listed in Table VII.1 for the Cominco-based Case and the Alternative Case.

- General and Administrative--Three persons, plus support facilities, are estimated to be required to administer road O&M. They will be in offices at the mine site or the port. Information used to develop this estimate was obtained from discussions with the Alaskan Department of Transportation (ADOT) and the highway consultant cited in Attachment 1

- Maintenance--Maintenance estimates are based on two camps of crew and equipment--one at the mine and one at the port. Each camp will be responsible for servicing approximately 30 miles of road and will be staffed by 4 persons. Maintenance will be year-round, with the possible exception of a shut-down period during thaws. Typical activities include snowplowing and repair of the roadway and structures. The cost estimates for maintenance are based on per-mile costs to maintain the Dalton and Elliott Highways and similar roads in northern Alaska. All labor costs are based on prevailing local wage standards. (Our discussions with state and federal officials indicate that this facility should conform to the provisions of the Davis-Bacon Act.)

- Sustaining Equipment--Sustaining equipment includes snowplows, snowblowers, loaders, bulldozers, graders, trucks, and related equipment. These items will be replaced as needed throughout the life of the road. The costs for acquiring this equipment,

which were provided by Cominco, are consistent with estimates provided by ADOT.

- Sustaining Capital--Major repairs to the roadway and structures (e.g., replacement of bridge decking and culverts, and roadway reconstruction) are expected periodically, starting about 5 years after the road is opened. These activities are included in the sustaining capital category. Estimates for these activities were developed from discussions with highway engineers at ADOT and with LCMF, Ltd., a highway consulting organization. Some uncertainties remain about sustaining capital requirements (e.g., major damage to the road from recurring freeze/thaw conditions or from poor quality ground surface or greater sustaining capital costs).

- Right-of-Way--The road will cross land owned by the NANA Corporation and Krusenstern National Monument. Right-of-way costs have not been included in this analysis, because no data are available, but such costs are likely to be assessed.

Port

The methods used to maintain and operate the port serving the Red Dog mine will be like those at other ports with similar climatic conditions and/or cargo operations. From discussions with the contacts noted in Attachment 1, the O&M items listed below will be required. Annual costs (in 1985 dollars) associated with these activities for each of the two cases being analyzed are given in Table III.1.

- General and Administrative--We estimate that four persons, plus support facilities, will be required to administer operations at the port.

- Maintenance--Maintenance estimates are based on data provided by Cominco in its March 27, 1985, letter and have been corroborated by SRI in discussions with officials at similar ports. Cominco estimates are about 15% higher on a per ton basis, than maintenance for other ports but SRI believes these estimates are reasonable given that the port will be open only about 3 to 4 months per year.

- Replacement Parts--Cominco estimates, provided in Appendix 7 of the Red Dog Report, indicate replacement parts to keep the port operating will amount to $250,000 per year (1984 dollars). This figure appears to be reasonable.

Table III.1

ANNUALIZED OPERATING AND MAINTENANCE COSTS FOR ROAD AND PORT
(1985 dollars)

	Cominco-Based Case	Alternative Case
Road		
General and administration	15% of maintenance costs[a]	15% of maintenance costs[a]
O&M	$15,000 per mile[a]	$20,000 per mile[a]
Sustaining equipment	Varies each year[b]	Varies each year[b]
Sustaining capital	$8,500 per mile[c]	$11,300 per mile[c]
Right-of-way	Unknown	Unknown
Port		
General and administrative	15% of O&M costs[a]	15% of O&M costs[a]
O&M	$1.06 million per year[b]	$1.06 million per year[b]
Replacement parts	$250,000 per year[b]	$250,000 per year[b]
Fuel	150,000 gallons per year, at $1.10 per gallon (1985$)[d]	150,000 gallons per year, year, at $1.10 per gallon (1985$)[d]
Sustaining equipment	Varies each year	Varies each year[b]
Sustaining capital	0.5% of the value of port construction[e]	0.5% of the value of port construction[e]
Royalty on port land	Unknown	Unknown

---

[a] Based on estimates provided by ADOT and LCMF, Ltd.

[b] Cominco, Red Dog Report, Appendix 7.

[c] Costs incurred after about the fifth year of operation, based on information provided to SRI by ADOT.

[d] Letter from T. J. Manning of Cominco to John Moberly of SRI, March 27, 1985.

[e] SRI International, to start about the fifth year of operation.

NOTE: Dollar figures in this table are increased each year by the appropriate inflators throughout the period of analysis.

- Fuel--The cost of fuel to operate the port is based on use figures provided by Cominco in its March 27, 1985, letter. The fuel, Arctic No. 1 Diesel, currently costs $1.10 per gallon. This amount has been inflated by the price escalators in the Introduction.

- Sustaining Equipment--Sustaining equipment includes container chassis, tractors, forklifts, container loading equipment, cranes, trucks, and other items. These items are replaced as needed throughout the life of the port. The costs Cominco stipulated for acquisition of sustaining equipment are reasonable.

- Sustaining Capital--Major periodic rehabilitation and repairs to port facilities are expected (e.g., for ice and wind damage to loading equipment and for rehabilitation of the port structures). Such costs are likely to start about 5 years after the port is opened. These activities are included in the category of sustaining capital. The total cost of these activities is estimated to be about 0.5% of the cost of construction, adjusted for inflation.

- Royalty on Port Land--The port will be situated on land owned by the NANA Corporation. Although annual royalty costs for using the land are not included in this analysis because no data on them have been provided, they are likely to be assessed.

We have not included, in either the port or road costs, the cost of reclaiming the land. The Red Dog Environmental Impact Report indicates that if these facilities are no longer used at the end of the project, the developer will be required to return the area to its natural conditions.

IV THE SRI TRANSPORT MODEL

The SRI Transport Model consists of two parts: The first part evaluates land movement between the port and the Red Dog mine. The second part evaluates the cost of moving concentrate from the port to smelters at various locations around the world. The latter part of the model is not of direct interest to AIDA because the Authority will not be involved in its funding. However, the cost of transporting the concentrate will affect the profitability of the mine and, therefore, Cominco's ability to pay user fees levied by the State for the port and road facilities.

Road and Port Model

The land-side road and port model is a cost-allocation model that determines the annual charges necessary to meet all capital and O&M costs. Costs are allocated to users on the basis of tonnages moved. The sources of capital and O&M data and the inflation rates used to escalate costs throughout the period of construction and operation are given in Attachment 1.

The model has been used to evaluate two cases: The first is the Cominco case, where the capital and O&M costs are, to the extent feasible, those Cominco provided by in its Red Dog Report (the exceptions to those costs are noted). The second case is an alternative that reflects the adjustments SRI has made, as discussed in Chapter III.

Construction Costs

Road

All road construction costs have been allocated to Cominco because it appears unlikely that others in the region (whether other mines or local residents) will be using the road in the near term. The net present value of these costs has been determined, and an equal, annualized, payment has been calculated that allows payback of the construction costs and interest over the 30-year operation period, 1989 to 2018. The discount rate of 10.5% reflects the estimated cost of money to be raised through long-term, tax-exempt bond issues.

Port

Because the port may be used by local residents and others living in the small communities nearby, costs of port construction and operations

have been allocated between Cominco and regional users. The communities include Kivalina, Noatak, Kiana, and Kotzebue. Currently, cargoes destined for these communities are barged from Seattle and conveyed via lighter (a type of barge) to shore. The presence of the port for the Red Dog Mine may allow for more efficient transport and unloading of this cargo. Indeed, the Red Dog Mine Port Evaluation report (prepared by Cominco Engineering Services, Ltd., November 1983) contends that the port will reduce freight charges for regional cargo and may help to eliminate one of the greatest handicaps to growth in the region--high freight charges. SRI has found no data to support or refute this assumption. However, because the port may well be used for regional cargoes, such estimates have been incorporated in the analysis based on the Cominco report, which estimates that regional cargoes will total 32,700 to 34,900 tons per year (general cargoes and fuel).

Construction costs have been allocated to Cominco and regional users by identifying project elements that are dedicated to Cominco or region users and those elements that are common to both. Items that are specific to Cominco include the material-handling equipment, fuel storage, and concentrate storage. Items specific to regional users are the dry and wet storage areas, and a barge for local residents' use. All of the other construction costs have been allocated to Cominco or regional users on the basis of the percentage of tonnage moving through the port.

Annual construction costs have been calculated in the same manner as for the road.

Operating Costs

Most of the operating costs for the road and port have been estimated on an annual basis. Sustaining capital costs, however, have been taken from estimates provided by Cominco in its Red Dog Report, Appendix 7, and are not evenly spread throughout the period of operation. To spread these costs evenly over the life of the project, the net present value of purchases required has been calculated, and an equal, annualized payment that pays back the cost of the equipment and interest has been determined.

Operating costs, other than those for sustaining equipment, have first been estimated in 1985 dollars, and then have been escalated to reflect inflation. The costs for sustaining equipment, like those for construction or capital costs, have not been inflated. Rather, the method used to calculate the equal annual payments accounts for the effects of inflation on future purchases of equipment and the related interest costs.

Although the port and road will be in operation from 1988, and will be used for construction supplies for the mine before the export of

concentrate, the transport model does not allocate costs until 1989 (i.e., the first year of concentrate shipment). Any operating costs that are incurred in 1988 have been included in the mine cost model and have been assumed to be paid directly by Cominco. Depreciation of capital has been assumed not to begin until 1989.

All O&M costs have been allocated to regional and Cominco cargo on the basis of tonnage. Although the costs of handling and storing different types of cargo are likely to be different, we did not have sufficient information to determine these differences. In addition, from discussions with personnel at various ports and, given the operating conditions expected at the Red Dog port, the differences in overall operating and storage costs for the types of cargo are unlikely to be major.

Traffic

Cominco traffic will dominate port and road uses. Table IV.1 shows the amount of cargo, by type, during the peak use of the road and port--from 1993 to 2007. Concentrate will account for more than 95% of the cargo for the road and about 90% for the port.

About 700,000 short tons of concentrate will be moved each year. In addition, about 10,000 short tons tons of general cargo and about 25,000 short tons of fuel will be imported for use at the mine and port. Regional users have been estimated to move an additional 11,600 short tons of general cargo and 23,300 short tons of fuel through the port each year.

Cost Allocations

Table IV.2 gives the estimated cost allocations for Cominco and regional users for each of the two cases. The port costs could not be broken down by type of cargo because the information available was insufficient for doing so.

The port charges per ton of regional cargo are about 50% higher than for Cominco cargo because of the higher cost per ton of construction for the regional storage facilities (as a result of the small tonnage throughput and the resulting lack of economies of scale) and the barge that serves local residents' needs. Those facilities dedicated to Cominco will be used, on average, more intensively. Of course, no road charges are incurred for regional cargo.

Table IV.1

PEAK LEVEL TRAFFIC FOR THE RED DOG PORT AND ROAD
(Dry Short Tons)

Road	
Cominco	
Zinc concentrate	585,000

Ocean Transport Model

The second part of the transport of concentrate is from the port to various smelters. Because of the shallow depth of the water at the Red Dog port, lightering barges will be required to carry the concentrate to ocean-going vessels about 4 miles off shore. The ocean transport model, therefore, includes the costs of the barges and concentrate carriers, as well as port discharge costs and in-land haulage. There are four probable destination areas: Trail, British Columbia; Japan; Europe; and Eastern Canada.

The information sources used to develop the capital and operating costs for the barges ocean transport, discharge, and in-land transport costs are given in Attachment 1.

Barge Costs

Two self-propelled concentrate barges are expected to be used to carry the concentrate from the port to the concentrate ships. These barges will be dedicated to Cominco use because it is unlikely any other use will be found for them. The barges will be stored in British Columbia during the winter season. They will be used to bring containerized general cargo to the mine at the beginning of the shipping season in June and to return the containers at the end of the season. The useful life of the barges is expected to be 30 years.

Self-sustaining barges, which have greater maneuverability in the choppy waters in the Chukchi Sea, will be used instead of the more common tug and gage operations. Operations with tug and barge would have to be curtailed more often than those employing a self-sustaining barge.

We have assumed that foreign-flag barges will be used, given Cominco's stated intentions for doing so. There is, however, some concern that U.S.-flag barges may be required by the Jones Act. If so, U.S.-flag barges would cost about 33% to 50% more to purchase and operate. Barge cost estimates are given in Table IV.3.

Vessel Costs

We have developed vessel costs that are based on the use of foreign-flag ships of varying sizes and whose characteristics depend on the water depth at the port of destination and the amount of cargo being shipped and the estimated number of voyages. We have assumed tnat the ships will be chartered on a one-way basis for Europe and Eastern Canada, and on a two-way basis for Japan and Trail. Voyage costs include the time charter rate, bunker fuel, oil costs, and canal charges if any. No delivery charges for initially bringing the ships to Alaska have been included, but we have included the cost of the additional insurance required for operations north of the Arctic Circle. Vessel, port, and in-land haulage cost estimates are given in Table IV.4.

Port and Inland Haulage Costs

Port charges include discharge, storage, and docking fees. Sufficient port facilities currently exist in Eastern Canada and Europe. Japan's port limitations are related to draft because ports for smelters are located upriver where concentrate is unloaded. Therefore, cost estimates reflect actual charges that would be incurred today. Vancouver is an export port and has few facilities to handle large amounts of in-bound cargo. Vancouver Wharves has indicated that it would be willing to install unloading and storage equipment to handle Cominco concentrates

Insurance	$12,000	$25,000	$10,000	$25,000	$10,000
Total voyage cost	$225,813	$416,091	$273,877	$704,970	$403,754
Cost per SWT	$6.34	$7.00	$10.57	$11.87	$14.95
Transship to smelters	$24.00	$24.00	$5.00	$10.00	$5.00
Vancouver storage/handling*	$12.00	$12.00	$0.00	$0.00	$0.00
Total cost per SWT	$42.34	$43.00	$15.57	$21.87	$19.95

if movement of at least 250,000 tons per year through the port was guaranteed. Vancouver Wharves, however, has a shallow draft and ships requiring greater than 35 feet draft would be tide dependant. An alternative port is Roberts Bank, which could easily handle ships as large as 60,000 dead weight tons (dwt). Unloading and storage facilities would have to be installed at this facility, too, however.

Little inland haulage is anicipated, except for Trail, British Columbia, where the cost of moving the cargo is about $24 per ton. We have assumed that inland haulage will be about $5.00 per ton for Japan and Eastern Canada; and $10 per ton for Europe. Most of the smelters that might be used are relatively close to the port of discharge. Forecasts of these costs are provided in Table IV.5.

Table IV-5

ESTIMATED TRANSPORTATION COST FOR ZINC CONCENTRATE
(per short wet ton)

	1989	1990	1995	2000	2005	2010	2018

Europe	$31.31	$32.63	$32.37	$39.63	$48.68	$66.79	$94.33

V MINE ECONOMICS AND PROFITABILITY

The SRI cost model of the Red Dog mine and mill considers individual cost elements. Costs are broken down into the following major categories: operating costs, transportation charges, other costs, depreciation, and depletion. The model calculates an internal rate of return on investment (ROI), after state and federal taxes, that is based on capital costs during the life of the project. Capital investments include the initial investment spent before start-up of the operation, sustaining capital during the years of production, and working capital. The analysis considers the cash flow during the development and construction years, 1979 to 1989, and for a 30-year mine production life, 1989-2018.

The project is considered to be a "stand-alone" operation; corporate overhead costs are included in the overall cost structure. The ROI has been determined on the assumption that the project is financed totally by equity. In practice, a significant share of the initial capital for all mining projects is debt-financed and such an approach could have been selected, and an ROI based on the equity share of tne project could have been determined. However, making an initial determination of the profitability and return on mine investment on the basis of the total equity condition is in accordance with standard mining economic practices. (An ROI based on the equity share of a partially debt-financed project generally results in a higher ROI than that of a totally equity-financed project.)

The data used in our cost model have been taken from a variety of sources. The mine and mill capital and operating costs have generally been extracted from various published Cominco reports and submissions to AIDA. These data have been carefully examined and compared with information available to SRI through other sources. SRI has estimated the transportation charges for concentrate shipments from the port to smelters throughout the world. Other costs, including royalties for the Northwest Alaska Native Association (NANA) and the State Mining License Tax, have been calculated by formulas used by Cominco in its profitability determination. Income taxes and the minimum tax paid to the State have been calculated by considering investment tax credits and appropriate depreciation and depletion schedules.

In estimating cash flow profitability and internal rate of return, the major uncertainty is the future flow of revenues, which depends on the projected sales value of the commodity produced--in Red Dog's case, zinc and lead concentrates. The future sales value of these concentrates will be determined by metal--zinc, lead, and silver--prices, less penalties for impurities in the concentrate and treatment charges (i.e.,

the cost of converting the concentrate to metallic zinc, lead, and silver). Clearly, precise forecasts of commodity prices cannot be made. Instead, we have formulated a base price case, an optimistic price case, and a pessimistic price case for the metals. Our analysis of this major task in the project is summarized below.

Assumptions and Data Sources

Capital Costs

The capital costs for the initial charges spent before start-up of the mine and mill have been based on a Cominco memorandum of March 1, 1985, which was supplied to SRI by Cominco and AIDA. (This memorandum has also been used as the information source for the future production schedule; ore and concentrate grade, market distribution; sales value of the concentrate; and formulas for determining management and selling fees, royalties, investment tax credits, and federal and state taxes). The estimated fixed capital costs for the construction of the mine and mill, development costs, start-up costs, and various other expenses and advance payments are given in Table V-1. The costs have been escalated to account for inflation (discussed in Chapter I) during the years of construction.

The total initial capital costs are estimated to be $270 million for development and construction of the mine, mill, and on-site mine facilities, excluding interest during construction and working capital. Given the estimated future production of 2 million dry short tons per year (dst/y) of ore, the capital cost per ton for the mine and mill complex is $135. This cost per ton compares favorably with other new surface mines and mills now being considered throughout the world. Some of the proposed new South American operations have capital costs in the range of $90 to $115/dst of ore. But given the less expensive labor in South America and the remoteness of the Red Dog project, Cominco's capital cost estimates for its operation in Northern Alaska seem reasonable. (The Cominco Polaris mine in Canada, completed in 1983, was developed at a capital cost of $145/dst.)

Sustaining capital charges incurred over the life of the project vary, depending on the expenditure, from $2 to $8 million/y. (An exception to this range of capital charges occurs in the fourth and fifth years after mine start-up when additional worker accommodations are installed.) The sustaining capital costs are for the mine and mill, and for concentrate haulage from the mine to the port. Sustaining capital costs for road maintenance and port facilities have been included in the costs for the transportation system. (The estimates for sustaining capital were obtained from information provided in the Appendix of Cominco's "Feasibility Report" of July 1984.)

Table V-1

FIXED CAPITAL FOR RED DOG MINE AND MILL
(Millions of Dollars)

Cost Item	Year of Expenditure 1979 to 1984	1985	1986	1987	1988	1989
Exploration	0.62	0.30	0.42	0.56	-	-

Total(a)	18.35	13.50	42.57	60.55	115.80	18.88

(a)Totals may not add because of rounding.

The estimates of working capital are those of SRI and have been based on accounts receivable, accounts payable, production inventory, and supplies inventory. The initial working capital has been estimated to be about $65 million spent during the first 3 years of mine operation, increasing by $4 to $6 million/y thereafter.

Operating Costs

Detailed operating costs were provided in Cominco's July 1984 Feasibility Report. After examining additional manning tables, salary schedules, fuel consumption, other supplies use, and details about overhead expenditures provided by Cominco, and comparing those data with SRI information of other mines and mills, we have accepted Cominco's operating costs as accurate and reasonable.

The operating costs are listed in the following categories: mining, milling, maintenance, power generation, mine and mill overhead, costs for start-up procedures (lasting 3 years), and cost contingency. These cost

categories, except for start-up and contingency, are broken down into labor, fuel, supplies, and other charges. Total operating cost, per ton of ore mined, is about $4l/dst in 1989--the initial year of mine operation. (Wet concentrate, containing about 8% moisture, will be the actual product shipped.) The concentrate cost, based on the appropriate ratio of ore mined to concentrate shipped, will be about $106/dst of concentrate. These costs are estimated to decrease to $103/dst of concentrate in 1992 when the operation is in full production and the additional operating costs for start-up are no longer needed.

Transportation Charges

The transportation of the concentrate initially involves moving the concentrate 55 miles from the mine and mill site to the port. This cost will be incurred by Cominco. The rest of the transportation costs will be fees, or charges, to be paid by Cominco to outside contractors. A road and port user-fee will be paid to the State. (This is essentially the revenue the State will collect to cover its capital and operating costs for the transportation system.) Cominco will also have to pay a fee for loading the concentrate at the port and hauling it by barge to oceangoing ships. It will then incur the costs for ocean transportation to ship the concentrate to Vancouver, British Columbia, Eastern Canada, Europe, and Japan. (We have assumed that, depending on the destination, ships in the 26,000 DWT to 60,000 DWT range will be used.) Finally, a rail transportation cost will be imposed at the destinations to transport the concentrate to the smelter sites.

As mentioned, SRI has estimated these costs. In 1992, the total transportation cost is about $73/dst of concentrate, of which the user fee of $19/dst reflects the "Cominco-based" proposal.

Other Costs

We have included corporate overhead (sales, general and administration) costs, NANA royalties, and the Alaska mining license tax in our "other cost" category. We have allocated a Cominco corporate overhead charge at 4% of the concentrate sales. (Although Cominco incurs an actual corporate overhead cost of about 6% on all sales, we have reduced this percentage because we consider the sales expense of Red Dog's concentrate product is likely to be less than Cominco's overall selling expenses.) The NANA royalty and the mining license tax are calculated by formulas defined by the State and NANA. No mining license tax is imposed in the first 3.5 years of the mining operation.

Total "other costs" are about $25 to $30/dst in the initial years of mine operation. They may escalate rapidly, however, depending on the NANA royalty. The royalty, in the initial years of mine operation, is 4.5% of "net smelter return" (i.e., concentrate sales, less selling and distribution expenses). The royalty based on 4.5% of net smelter return will prevail until Cominco recovers nearly all of its previously spent

capital and operating funds. Once Cominco has recovered these funds, the NANA royalty increases to a 25% (with further 5% incremental increases every 5 years until 50% is reached) of what is defined as "net proceeds from production"; that is, the net smelter return, less operating costs, management fees, and royalties.

In the years that the "percentage of net proceeds" constitutes the basis of the NANA royalty, this royalty is the largest single cost item incurred by Cominco for the project. Even when the royalty is "only" 25% of net proceeds, it can amount to $40 to $50/dst of concentrate. In years when the royalty reaches 40% to 45%, the royalty that Cominco has to pay can amount to as much as one-half of the total of all the operating costs (e.g., those for mining and milling).

Depreciation and Depletion

Although they are not "cash" costs, depreciation and depletion are critical in any cash flow analysis because they affect the Mining License Tax, state and federal income taxes, and the "minimum" state and federal tax.

Depletion allowances have been determined by standard depletion calculations--using the lesser of 22% of gross income of the operation or 50% of the net income from the mine. Depreciation has been determined by assigning the appropriate depreciation schedule to the various capital assets. We have used either a straight-line 5-year schedule, or and 18-year schedule, depending on the capital item. Rather than expense some of the initial fixed capital costs as they were incurred, we have carried these expenses to the first year of project operation and included them in the first year's depreciation. This results in a high depreciation charge in 1989, but in no way alters the tax calculation.

Production and Sales

The production schedule used is the one proposed in the Cominco memorandum (see Table V-2). We have assumed that sales of concentrates in each year will equal their production in that year. We recognize, however, that in practice a lag will occur before actual sales begin relative to production during the first 2 or 3 years of the mine operation.

The value of the concentrates has been calculated by using formulas defined by Cominco. These are based on the grade of zinc, lead, and silver in the concentrates; the metal prices; and the normal recovery factor in smelting the concentrate. Deductions from the metallic values of the concentrates have been made for iron and other impurities in the concentrates and for the treatment charge (i.e., the cost of smelting the concentrate to metal).

Table V-2

RED DOG PRODUCTION SCHEDULE
(Thousands of Dry Short Tons per Year)

	1989	1990 to 1991	1992 to 2008	2009 to 2018
Ore mined	1,000.0	1,826.0	2,050.0	2,050.0
Zinc concentrate	316.0	585.0	587.5	492.0
Lead concentrate	69.0	127.8	119.6	119.6

Metal Prices and Pricing Mechanisms

This section briefly discusses the assumptions SRI has used to project zinc and lead prices for the anticipated duration of the project. Silver prices, like those for all precious metals, are subject to greater uncertainty than the prices commodity metals. They are influenced by speculation and by the relatively smaller proportion of industrial applications to total consumption. Using a simplifying assumption, SRI has thus assumed that future silver prices will escalate from current levels at a slightly lower rate than inflation.

SRI recognizes that the present strength of the U.S. dollar can distort the relative cost position of international zinc and lead producers. However, in our calculations we have assumed that other major international currencies will gain value with respect to the dollar and, in turn, that international production costs when expressed in dollars will increase accordingly. Zinc and lead prices have been projected under three conditions: a base price case, an optimistic price case and a pessimistic price case. We provide for each case key assumptions and a brief description of our methodology.

For the base price case we have assumed that ideally the economics of supply/demand balance will apply to future zinc and lead producers throughout the Western world. Simply stated, future prices are assumed to be determined by the "marginal" producers; their output is required to meet current demand, and they neither profit nor lose excessively by maintaining operations.

However, in actual practice, a simple balance between supply and demand is not sufficient for analysis for a number of reasons. First, prices are not a simple function of production costs. Speculation, intermaterial substitution, and technical innovations all play different roles, particularly when the market is in balance or demand exceeds supply. Only when supply greatly exceeds demand are operating costs more important than the other factors.

In other words, only when recessionary economic conditions are in effect or when metals are under great pressure from substitutes does economic analysis allow the assessment of likely price movements. Thus, such price assessments can only be undertaken when market conditions are poor; accordingly, prices determined through these methods tend to correspond to what the industry calls "floor prices"-- prices that do not become lower because such price erosion would subtract significant supplies from the market place. "Normal" prices (in fact, a misnomer, because prices either go up or down but seldom remain at a "normal" level) can then be determined by historical relationships between floor and normal (or median) prices.

SRI's procedure in projecting zinc prices entails (1) first estimating future net demand (e.g., demand, less the portion of recycled scrap that contributes to total demand), (2) then identifying the marginal zinc producer that is required to meet such demand, and, (3) ending with price adjustments that reflect normal rather than recessionary conditions. Table V-3 summarizes the results for zinc and lead. Note that the lead figures have not been adjusted to normal conditions because the current contributions of scrap lead should prolong the near-recessionary conditions that primary lead producers are now experiencing for some time.

No provisions have been made in the base price case for profits or for meeting capital-related obligations. Naturally, low-cost producers-- those whose operating cash costs are substantially lower than marginal

Table V-3

METAL PRICE OUTLOOK

	Zinc		Lead	
	1990	1995	1990	1995
Demand metal demand (millions of dst/y)	5.37	5.50	4.47	4.54
Scrap use (percent of demand)	7.0	7.0	44.0	44.0
Net metal demand (millions of dst/y)	4.49	5.12	2.51	2.54
Prices ($/lb)				
Base price case	0.503	0.739	0.238	0.395
Optimistic price case	0.544	0.794	0.293	0.473
Pessimistic price case	0.430	0.601	0.225	0.319

Source: SRI International

producers--automatically receive some profits as long as prices allow marginal suppliers to meet operating cash costs. However, the base price case largely excludes the influence of capital charges. In contrast, the optimistic price case includes them and establishes the price levels that potential suppliers require to expand capacity. The implication is that such prices should not only be sufficient to meet depreciation and interest charges, but enough to provide a comfortable return on investment.

In arriving at the optimistic price case, SRI has adopted cash operating costs that correspond to floor price conditions. Then, we have added the cost of depreciation, interest, taxes, and other miscellaneous expenses that, when subtracted from metal revenues, will still provide a net profit. For this purpose, the specific investment requirements for new zinc and lead capacity have been assumed to be in line with that anticipated for the Red Dog deposit.

Unlike the previous two cases, the pessimistic price case takes account of the substantial shift in production from developed to developing countries, particularly at the mine and mill stage, and assigns that shift to the national differences in perceptions regarding what is a profitable operation. The pessimistic price case arbitrarily discounts major cost factors (e.g., labor, or hydro-power) in production in developing countries to reflect the cost perceptions of those countries. In addition, the pessimistic price case assumes that the proportion of secondary zinc and lead that enters into refined metal production will be greater than in the base price case (e.g., secondary lead use increases from 44% to more than 55%).

In SRI's experience, price projections that are based on production economics entail the risk of becoming increasingly less accurate after about 10 years. However, we see no reason to assume further cost escalations in real terms or deflationary influences for the period after 1995 in the many Western countries that supply zinc and lead. Accordingly, SRI's price projections for zinc and lead simply follow long-term inflation (which has been assumed to be about 5.5%) for that period.

Figures illustrating SRI's price projections for zinc and lead in inflated and 1985 dollars are included in Appendix ___.

Mine and Mill Cost Model

Table V-4 gives the cash flow of the Red Dog operation at the base case price projections. The cash flow includes expenditures during the construction years, 1979 through 1989, and the 30-year production period, 1989 through 2018. All numbers in the table are in millions of dollars, except zinc, lead, and silver, which are given in dollars per pound ($/lb).

Table V-4

Source: SRI International

In 1989, sales are estimated to be more than $93 million. They double during the next 2 years as production rises from 386,000 to about 710,000 sdt/y and as prices increase modestly. In 1992, when the operation is in full production, sales are estimated to be nearly $215 million. When operating costs stabilize because additional costs for start-up have been eliminated (which also occurs in 1992), operating cost estimates total $72.9 million, transportation costs are $51.9 million, and other costs are $16.5 million. With depreciation at $30.8 million and depletion at $20.0 million, total costs equal $198.0 million, yielding a pretax profit of $16.8 million. Net income after taxes (i.e., after-tax profits) in 1992 are estimated to be $13.3 million.

Table V-4 indicates net income is always positive, except in 1989, when high depreciation charges are incurred because of the items capitalized during the construction period. Depreciation charges substantially decline after 1993 because a major portion of the depreciated capital items are fully depreciated in 5 years. The net cash flow (i.e., net income after taxes, plus depreciation, plus depletion, less capital investments) is also always positive after 1989. The ROI for the "bottom line" cash flow is 16.5%.

The road and port user fee accounts for less than 7% of the total costs in 1992, and continues to decline as a percentage of costs in future years (see the summary in Table V-5). This decrease occurs because the major portion of the user fee is capital recovery, and the capital charge remains nearly constant over the life of the project. The user fee increases to $17.8 million in 1992 and to $19.8 million in 2002. The large increase in cost over this period is accounted for by the increase in the NANA royalty. These trends continue throughout the life of the project.

The major factors in determining the profitability of the project are metal prices. The comparison of ROI resulting from running the cost analysis for the base, optimistic, and pessimistic price scenarios using the "Cominco-based" user fee is given below:

	ROI (percent)
Base price case	16.5
Optimistic price case	19.3
Pessimistic price case	10.3

The detailed cash flows for these alternative price scenarios are included in Appendix C-1. Although the cash flows are significantly different for the three cases, all (even the pessimistic price case with the low ROI) show a positive cash flow after the first year of operation.

Table V-5

COST COMPONENTS OF TOTAL PRODUCTION COSTS
(Percent)

	1992	1997	2002
Operating costs	36.8	36.1	36.6
Transportation costs, less road and port user fees	19.3	17.0	15.6
Road and port user fees	6.8	6.7	5.7
Other costs	8.3	19.5	22.7
Depreciation	18.6	3.4	2.7
Depletion	10.1	17.3	16.9
Total(a)	99.9	100.0	100.2

(a)Totals do not add because of rounding.

The accumulated NANA royalties and accumulated revenues to the State (from the Mining License Tax and State taxes) during during the 30 years of production--1989 to 2018--are shown below:

	Base Price Case	Optimistic Price Case	Pessimistic Price Case
NANA royalties	635.5	813.9	286.6
Mining License tax	53.2	69.5	21.9
State tax	24.4	36.4	10.2

Another factor that has a measurable effect on the return of the operation is the treatment charge, which is deducted from the value of the concentrates. In this analysis we have used Cominco's proposed treatment charge of 40% to 41% of the value of the zinc concentrates. Treatment charges for concentrates vary, depending on concentrate quality, smelter availability (i.e., excess or limited smelter capacity), and smelter location. In addition, for a smelter to use Red Dog concentrates it must store large quantities because they will be shipped only during 4 months each year.

To test the sensitivity of the ROI with a reduced treatment charge, we used charges of 35% to 36% of the value of the zinc concentrates. (A lower treatment charge results in a higher concentrate value, hence a higher overall sales figure.) With the base price case projection, the

1992 total sales increase from $177.8 million to $191.6 million, with the lower treatment charge. Using a lower treatment charge increases the ROI by about 2% for each of the price cases, as shown below:

	ROI (percent)
Base price case	18.4
Optimistic price case	21.2
Pessimistic price case	12.7

VI INVESTMENT EVALUATION AND ALTERNATIVE FINANCE PLANS

The Investment Concept

Our investment evaluation and financing analyses are based on the following points:

- The State of Alaska, through AIDA, will finance, construct, own, maintain, and operate the proposed DeLong Mountain transportation system.
- The transportation system comprises a port, cargo-handling equipment, storage facilities, and a 55-mile road that provides tidewater access to mineralized areas in the DeLong Mountains.
- Cominco Alaska has asked the State to provide the transportation system so that commercial development of the Red Dog mine can proceed.
- The State's investment in the transportation system will be recovered, in whole or in part, through user fees and annual assessments levied against Cominco Alaska, other mining companies (which may develop claims if the State approves financing of the transportation system), and local residents who may use it to bring in fuel and other supplies.
- The State wishes to invest the minimum amount of funds at the least possible cost and financial risk, consistent with providing an adequate incentive for Cominco Alaska to develop its Red Dog mine.

SRI has addressed all of these points in evaluating the proposed State investment. However, we have emphasized the last point in developing alternatives for recovering the maximum portion of the State's investment while minimizing its financial exposure and risk.

Cominco Alaska's Proposal

Cominco Alaska, in its "Memorandum of Understanding" of December 11 1984, proposed design, construction, financing, operations management, and user charge terms to cover operating and maintenance (O&M) costs, as well as to contribute towards debt service. We refer to this Memorandum, as well as the estimates of capital costs and O&M costs in other Cominco documents, as "the proposal."

Our analysis has focused on the aspects of the proposal that directly influence the economics and financing of the project. However, other aspects of the proposal must also be carefully considered before reaching a final agreement with Cominco Alaska because they may influence the tax-exempt status of the bond issue. We have assumed that the bond issue will qualify for tax-exempt status in all but the one case, which is presented under "Alternatives to Cominco's Proposal" below.

We emphasize the following aspects of the proposal:

- A estimated capital cost of $157.9 million for the transportation system in as-spent dollars from 1985 to 1989, including some $5 million charged for studies before 1985. This is Cominco's $167.5 million estimate, less a project contingency of $9.6 million that the company does not expect to spend.

- A first shipment of concentrates during 1989, amounting to about one-half of the mine's designed production level, increasing to full output in 1990 and operating at this level thereafter. However, a clause in Cominco's proposal appears to allow delay of this first concentrate shipment by 2 years--to 1991.

- A minimum annual toll charge beginning in 1990, amounting to about $8.5 million, increasing in 1994 to about $11 million, remaining at this level to 2015, and then decreasing to about $2.2 million and remaining at this level to 2018, the end of our analysis period. This toll charge contributes towards fixed annual debt service payments.

- A user fee to cover Cominco's share of the transportation system's annual O&M costs.

- Revenues from other future transportation system users that accrue to Cominco Alaska's benefit (but not the State's) by allowing the company to reduce its annual payments by the corresponding amount of other user fees.

These points in the proposal have the greatest effect on the amount of State subsidy required. The following factors are critical here:

- The total capital costs that the State needs

- The year in which commercial concentrate production begins

- The source of funds to cover all or a part of the bond debt service (i.e., toll charges or a minimum annual assessment).

- o The source of funds to cover annual O&M costs (i.e., annual user fees).

- o The disposition of additional revenues from other future users of the transportation system.

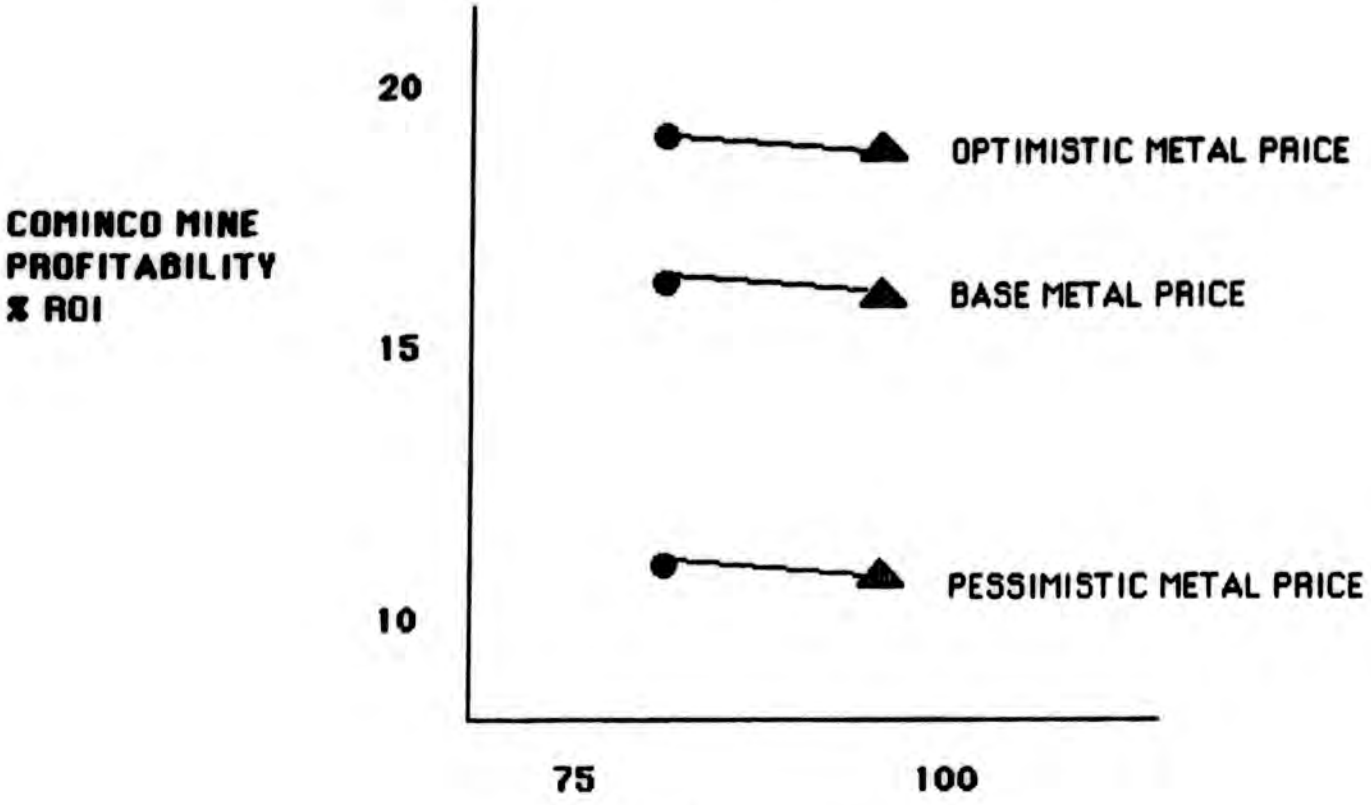
The level of State subsidy and the ease of financing depend on the assumptions made about each critical factor. Cominco Alaska's assumptions about these factors are collectively referred to as the "Cominco Scenario."

We have also developed a set of assumptions for these factors as alternatives to Cominco's assumptions--an "Alternative Scenario." Our assumptions illustrate the potential effect on the required level of State subsidy and project financing if things do not proceed according to plan. The different assumptions for the two scenarios are illustrated in Figure VI.1, "Scenarios Used to Evaluate the Cominco Proposal."

Economic Evaluation of the Cominco Proposal

Detailed financial projections and our economic analysis are included in Appendix 8 for all the cases evaluated under each scenario. The results of our evaluation and analysis are summarized in Figure VI.2, "Evaluation of the Cominco Proposal." The left portion of the figure shows SRI's estimate of the mine's percent of after-tax return on investment (% ROI) to 2018. The bottom portion of the matrix shows our estimate of the State funds contributed. These are funds that are not recovered during project life (i.e., net present losses in 1985 dollars at a 10% discount factor).

We estimate that the State's subsidy of the transportation project will amount to about $80 million under the Cominco Scenario and about $95 million under the Alternative Scenario. This difference of $15 million is due to an assumed higher project capital cost of $190 million versus $157.9 million in as-spent dollars.



If Cominco Alaska should also delay concentrate shipments by 2 years to 1991, and hence user charges, the State's subsidy would increase by $35 million, to about $130 million (a one year delay would increase the subsidy by $20 million). We refer to this eventuality as the "Alternative, Plus Delay Scenario." This large increase is due to two factors: (1) loss of user charges in 1989 and 1991 and (2) the additional burden of financing the cost of a completed transportation system for 2 more years.

Figure VI.2 also shows the variation in Cominco Alaska's mining profitability for each scenario, given base, optimistic, and pessimistic case metal price assumptions over the 30-year analysis period (1989 to

FIGURE VI.1: SCENARIOS USED TO EVALUATE THE COMINCO PROPOSAL

ASSUMPTIONS	COMINCO SCENARIO	ALTERNATIVE SCENARIO
CARGO TRAFFIC:

OTHER INBOUND CARGO	YES	YES
OTHER OUTBOUND CARGO	NONE	NONE
USER REVENUES:		
ANNUAL ASSESSMENTS	COMINCO'S TAKE-OR-PAY CONTRACT	INCREASED TO ACCOUNT FOR HIGHER CAPITAL COSTS
USER FEES	COVERS ANNUAL O&M COST	COVERS HIGHER ANNUAL O&M COST
O&M:	COMINCO ESTIMATES	INCREASED MAINTENANCE COST
CAPITAL COST: (INFLATED $)	COMINCO'S $157.9 MILLION (PROJECT CONTINGENCY NOT SPENT)	$190 MILLION TO PROVIDE FOR HIGHER CAPITAL COSTS (PROJECT CONTINGENCY SPENT)
MINING OPERATION:	COMMERCIAL START-UP 1989	COMMERCIAL START-UP 1989

FIGURE VI.2: EVALUATION OF THE COMINCO PROPOSAL

2018). Mining profitability is marginally lower under the Alternative Scenario (for any given metal pricing assumption) because:

- Higher capital costs result in a higher annual user assessment charge
- Annual user fees are higher to cover higher O&M costs.

However, as Figure VI.2 shows, these two factors have a negligible effect on mining profitability in comparison with metal prices. Here, changes in metal prices can alter estimated mining profitability from about 10% to 19% after tax.

Financing the Cominco Proposal

The ability to finance the Cominco Proposal will be determined by two sets of constraints:

- The funds available to AIDA (through the proposed capitalization plan) to finance the project and their annual timing, including: a transfer to AIDA of a loan portfolio (and its annual cash flow) from the Department of Revenue effective July 1, 1985; a cash appropriation to AIDA of some $12 million effective July 1, 1985, which will increase its cash reserves to $15 million; and the issuance of a bond early in 1986.
- The annual user assessment (i.e., toll charge) proposed by Cominco Alaska, which is not quite large enough to cover the debt service on a 30-year $100 million fixed rate bond at 10.5%.

The three scenarios used in the preceding sections to evaluate Cominco's proposal can be financed within these constraints. We have sized the bond issue to maximize the use of all of AIDA's financial resources in our alternative financial plans. The bond issue size has therefore been set for each scenario at the minimum level necessary to ensure that AIDA would have sufficient funds to cover all construction expense, debt service, and possible operating losses. SRI has chosen the minimum level because smaller bond issues are more marketable than large ones and result in lower financing costs for the State. Our calculations have involved an iterative approach, testing each issue size against the AIDA Fund balance and ascertaining that in the years after 1986 the fund is not overdrawn.

Under fixed-rate financing (FRF), a $100 million bond issue (10.5%, 30 years) will be required to finance the Cominco Scenario. A $140 million FRF bond issue (10.5%, 30 years) will be required to finance the Alternative Scenario, and the Alternative, Plus Delayed Scenario will require a $145 million bond issue. For each of the FRF scenarios, we estimate that a 3% bond issue expense will be required. That fee

includes all expenses normally associated with issuing an industrial development bond, and the fee has been deducted from the bond proceed fund at the time of issuance.

Our principal concern with using a $140 or a $145 million bond issue is that the annual debt service payments (about $16 million) exceed Cominco Alaska's proposed annual assessments of about $10 to $13 million (the lower amount pertains to the first 4 full operating years). Thus, the project would not be self-financing after commercial start-up because the net operating income would be less than debt service. AIDA, therefore, would be required to cover the difference on an ongoing basis. Although AIDA has the financial resources to do so, the State may prefer a self-financing situation. Furthermore, the project would not generate enough surplus revenue to accrue reserves to provide for contingencies. However, each finance plan has a debt service reserve with the equivalent of 1 year's debt service payment that is funded from AIDA's cash balances.

We have also developed finance plans for the Cominco proposal that uses variable rate financing (VRF). VRF differs in three potential regards from FRF: (1) lower overall interest charges during construction, which reduces the State's subsidy; (2) the opportunity to issue a smaller bond; and (3) a smaller bond issuance fee of 1.5%. However, this financing approach exposes the State to the risk of higher future interest rates.

Figure VI.3, "Finance Plans--The Cominco Proposal," shows the key elements, assumptions, and results of alternative finance plans. Appendix 8 includes a financing analysis showing the details of each of these alternative finance plans and associated cash flows for each of the three scenarios.

We have measured the State's subsidy by discounting all cash outflows (i.e., all State funds put into the project, including the net interest expense during construction) and all cash inflows (i.e., annual net operating income from the transportation system) at 10% back to the beginning of 1985 (i.e., NPV at 10% in 1985 dollars). If the computed value is zero, the State will achieve a "breakeven" position, recovering all of its investment, plus 10% interest on that investment. If the NPV at 10% is negative, the State will have earned less than 10% on its investment.

Alternatives to Cominco's Proposal

Cominco Alaska's proposal would result in the State providing a permanent subsidy of some $78 million (in 1985 dollars under the Cominco Scenario). That is, the State would invest a total of about $154 million (NPV at 10% in 1985 dollars) in capital and interest during construction, but would only recover about $76 million (NPV at 10% in 1985 dollars)

Figure VI.3

FINANCE PLANS--THE COMINCO PROPOSAL

	Cominco Scenario		Alternative Scenario	Alternative Plus Delay	
	Fixed Rate	Variable Rate	Fixed Rate	Fixed Rate	Variable Rate
User Charges ('85$)					
-Concentrates	$4.00/t		$4.50 /t	$4.50 /t	
-General Cargo	$ 28 /t		$ 28 /t	$ 28 /t	
-Annual Assessment (MM)	$8.5-$11.0		$10.3-$13.3	$10.3-$13.3	
Capital Costs (MM)

-As Spent $	190	178	229	278	246
-NPV @10%	140	131	167	194	174
Bond Issue (MM)					
-Principal (MM$)	100	90	140	145	125
-Interest Rate	10.5%	7%	10.5%	10.5%	7.0%
-Issue expense, (MM$)	3.0	1.35	4.2	4.35	1.89
State Subsidy (NPV @10%)					
-Recovered Invest.	62	62	74	63	63
-Subsidy	78	69	93	131	111
-ROI	2.4%	3.0%	2.5%	1.2%	2.0%

through net operating income over a 30-year period. The other two scenarios result in yet higher State subsidies.

The State would be held to providing these potential subsidies on a permanent basis because of Cominco Alaska's proposal to use revenues from other users to offset its own user charges. Therefore, one alternative for the State to pursue to recover a higher proportion of its investment is having the additional revenues generated by future non-Cominco users accrue to the State's account and not to Cominco Alaska's.

As discussed, the State could encounter significant financial risk should Cominco Alaska delay start-up from 1989 to 1991. This option represents a financial exposure to the State of about $35 million (NPV at 10% in 1985 dollars). In view of the implied level of subsidy in Cominco's proposal, the State needs to consider whether or not it wishes to assume a risk of this magnitude.

The most direct means the State has to reduce the amount of subsidy implied in Cominco's proposal is to charge Cominco Alaska higher user fees. Cominco Alaska's rate of return on its mine investment is not particularly sensitive to the range of user fees suggested here. Yet the level of State subsidy is quite sensitive over this same range of user fees.

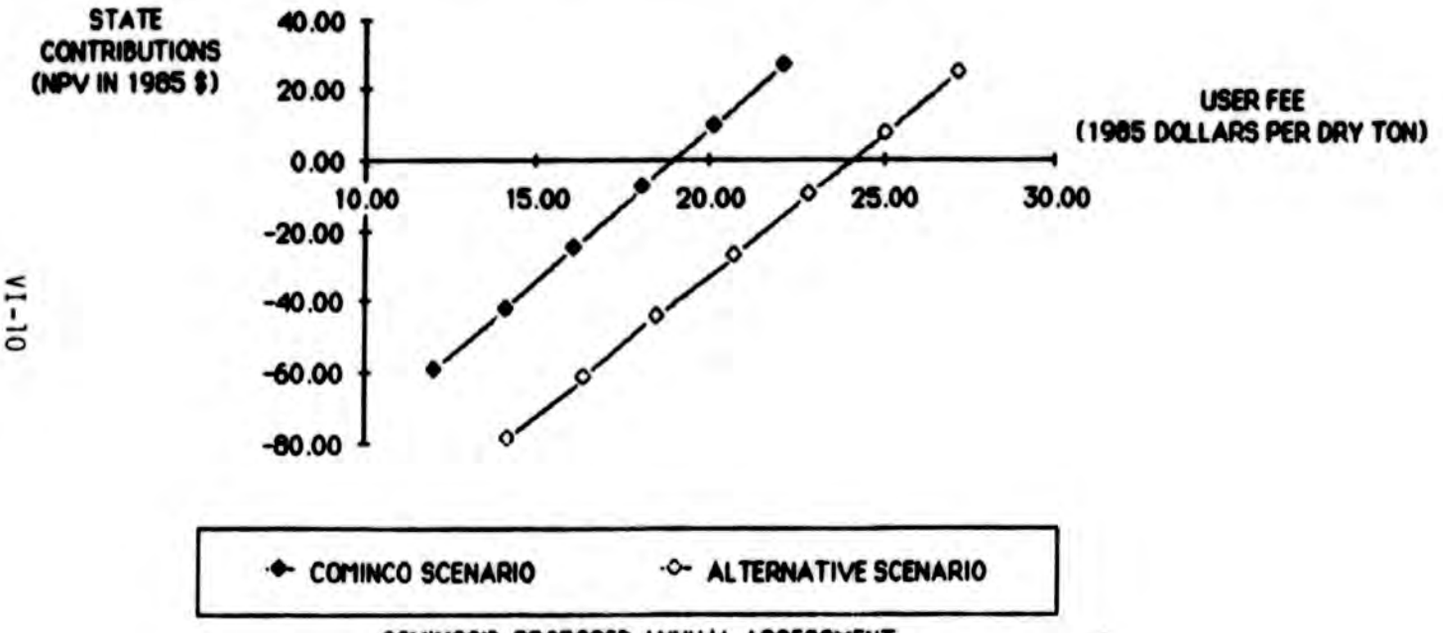

Figure VI.4, "State Contribution versus User Fees," shows the sensitivity of State contributions to variations in user fees. The user fees are expressed as a 30-year average rate in 1985 dollars per ton of concentrate.

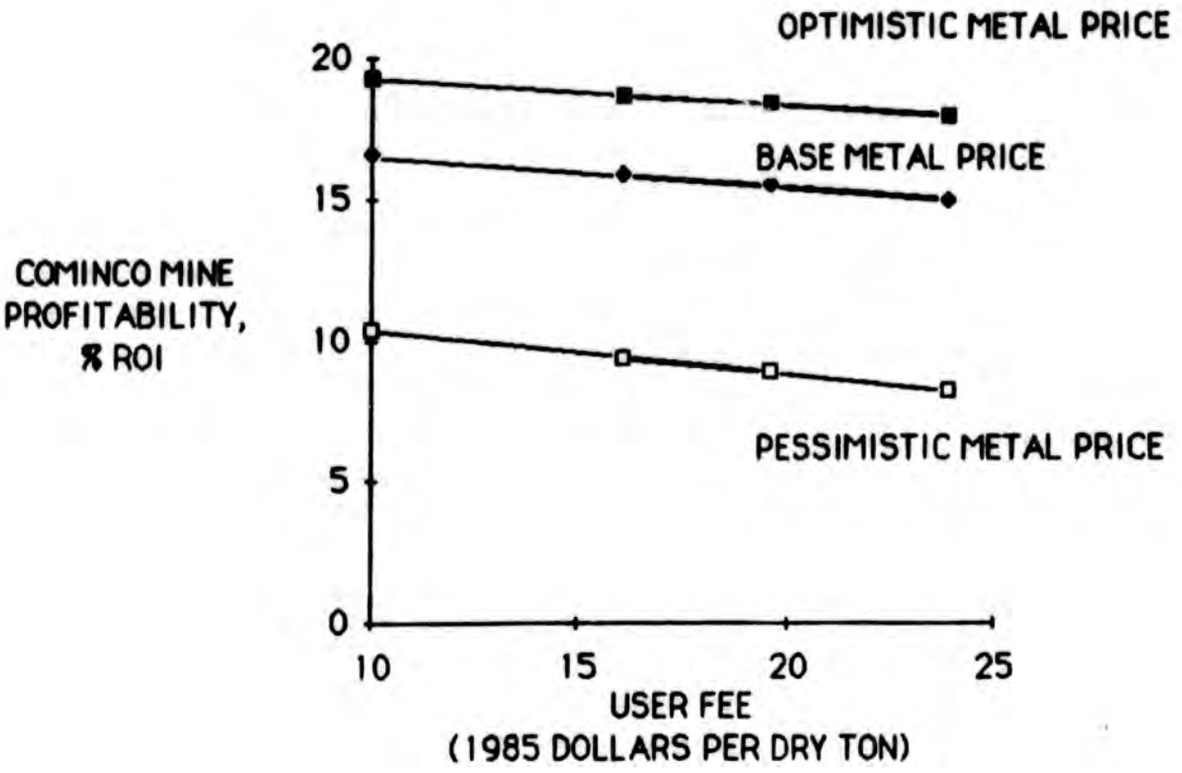
The Cominco proposal (under the Cominco Scenario) had an average annual total user charge of about $11/dst of concentrate (in 1985 dollars). Figure VI.4 shows that the State can achieve a breakeven position (i.e., 10% return on its investment) with an average annual total user charge to Cominco Alaska of about $19/dst of concentrate (in 1985 dollars). This would increase Cominco Alaska's total annual user charges by about $10 million--from about $17 million to $27 million during 1995, for example.

Figure VI.5, "Mining Profitability versus User Fees," indicates an implied return on Cominco's mine investment that ranges from about 19% to 8%, depending on the metal price assumption selected (i.e., from pessimistic to optimistic) and average use fee selected. Under any given metal price assumptions, the State can achieve breakeven while reducing Cominco Alaska's profit by less than 2 percentage points compared with the Cominco proposal.



For illustrative purposes, we present a case with a user fee structure and rate that result in a 10% ROI for the State). Apart from the higher user fees (i.e., $6.40/dst of concentrate, $50/t or general cargo, and a flat annual assessment of $17 million), we have used the

FIGURE V1.4: STATE CONTRIBUTION VERSUS USER FEES (GENERAL CARGO RATE OF $50 PER TON)

COMINCO'S PROPOSED ANNUAL ASSESSMENT

FIGURE VI.5: MINING PROFITABILITY VERSUS USER FEE (GENERAL CARGO RATE OF $50 PER TON)

same assumptions as those in the Cominco Scenario. We refer to this new set of assumptions as the Adjusted Cominco Scenario. The detailed economic and financing analysis for this adjusted scenario is found in Appendix 8.

Alternative Financing Plans

We believe the best overall approach to financing the transportation project that will minimize the total cost to the State is by making maximum use of AIDA's funds and to supplement these funds, as necessary, with the least possible amount of bond debt. Our finance plans thus use AIDA money to fund the debt service reserve rather than bond proceeds. This approach would reduce the amount of bond money and will allow the money that would be set aside for debt service reserve to earn interest at a rate higher than the bond interest rate (i.e., it would not be subject to IRS arbitrage restriction).

We would also use AIDA funds rather than bond proceeds, to cover capitalized interest costs during the construction period; doing so would reduce the size of the required bond issue. Furthermore, the AIDA funds will earn interest at a rate higher than the bond rate.

The finance plans we have developed for use in evaluating the Cominco Proposal assume that the associated bond issue will have tax-exempt status. However, AIDA's legal counsel appears to be of the opinion that an advance ruling from IRS will be required to clarify this tax-exempt status issue.

Because tax-exempt financing is not at all certain at this point, we have developed two finance plans for the Adjusted Cominco Scenario: one is based on a fixed rate tax-exempt (FR/TE) bond issue; the other is a fixed-rate partially exempt (FR/PE) bond issue. The latter finance plan assumes that the port will qualify for tax-exempt financing (at 10.5%) and that the road will require taxable financing (at 13%). Therefore we have used a weighted average bond interest rate of 11.9% in this FR/PE version of the finance plan.

The key features of these two finance plans are shown in Figure VI.6, "Finance Plans--the Adjusted Cominco Scenario".

Figure VI.6

FINANCE PLANS--THE ADJUSTED COMINCO SCENARIO

	Tax Exempt Fixed Rate Financing	Partially Tax Exempt Fixed Rate Financing

-Subsidy	0	3
-ROI	10.0%	9.8%

VII DISCUSSION

A central question in any decision involving user fees and financing alternatives for the transportation system is the effect of Cominco Alaska's project rate of return. Clearly, this is not an easy question to answer because Cominco Alaska, AIDA, and possibly others will apply different judgmental factors to the problem. SRI's approach has thus been to compare the results of Chapter V (Mine Economics and Profitability) with data for other operations, and to provide comments that qualify our previous conclusions.

The Red Dog mine should thus be a very low cost mine and become one of the most important zinc/lead operations in the world.

SRI has compared the economics of the Red Dog mine with other Western zinc and lead operations. To do so, we have used SRI's proprietary Mine Cost Model--a computerized model that estimates cash operating costs for mines, mills, and smelters in the Western World.

The results are graphically summarized in Figures VII.1 and VII.2, which depict lead and zinc suppliers in the Western World, arranged in ascending order of cash operating costs; the comparative position of the Red Dog mine is shown in each figure. (Cost items considered for Red Dog but not for other operations have been excluded to make for comparability.) In addition, each mine is assumed to be fully integrated into smelting and refining.

A mine's profit potential is related to its operating costs and revenues. The former, which have been discussed in the sections above, generally indicate that the Red Dog operation will be one of the lowest cost zinc/lead mines in the world. The revenues will be related to the realizable price of the metal concentrates that are sold, the "net smelter return"--a quantity that expresses the difference between prevailing metal prices and the amount that smelters charge for smelting and refining concentrates, plus transportation charges and selling expenses.

SRI recognizes that metal concentrates are sold on an individual basis and, therefore, that several factors (not merely one) determine the net smelter return for a mine.

Concluding Recommendations

SRI has examined several factors in terms of their potential effect on the proposed transportation system and its financing potential. Those that are most critical include: (1) the total capital costs of the

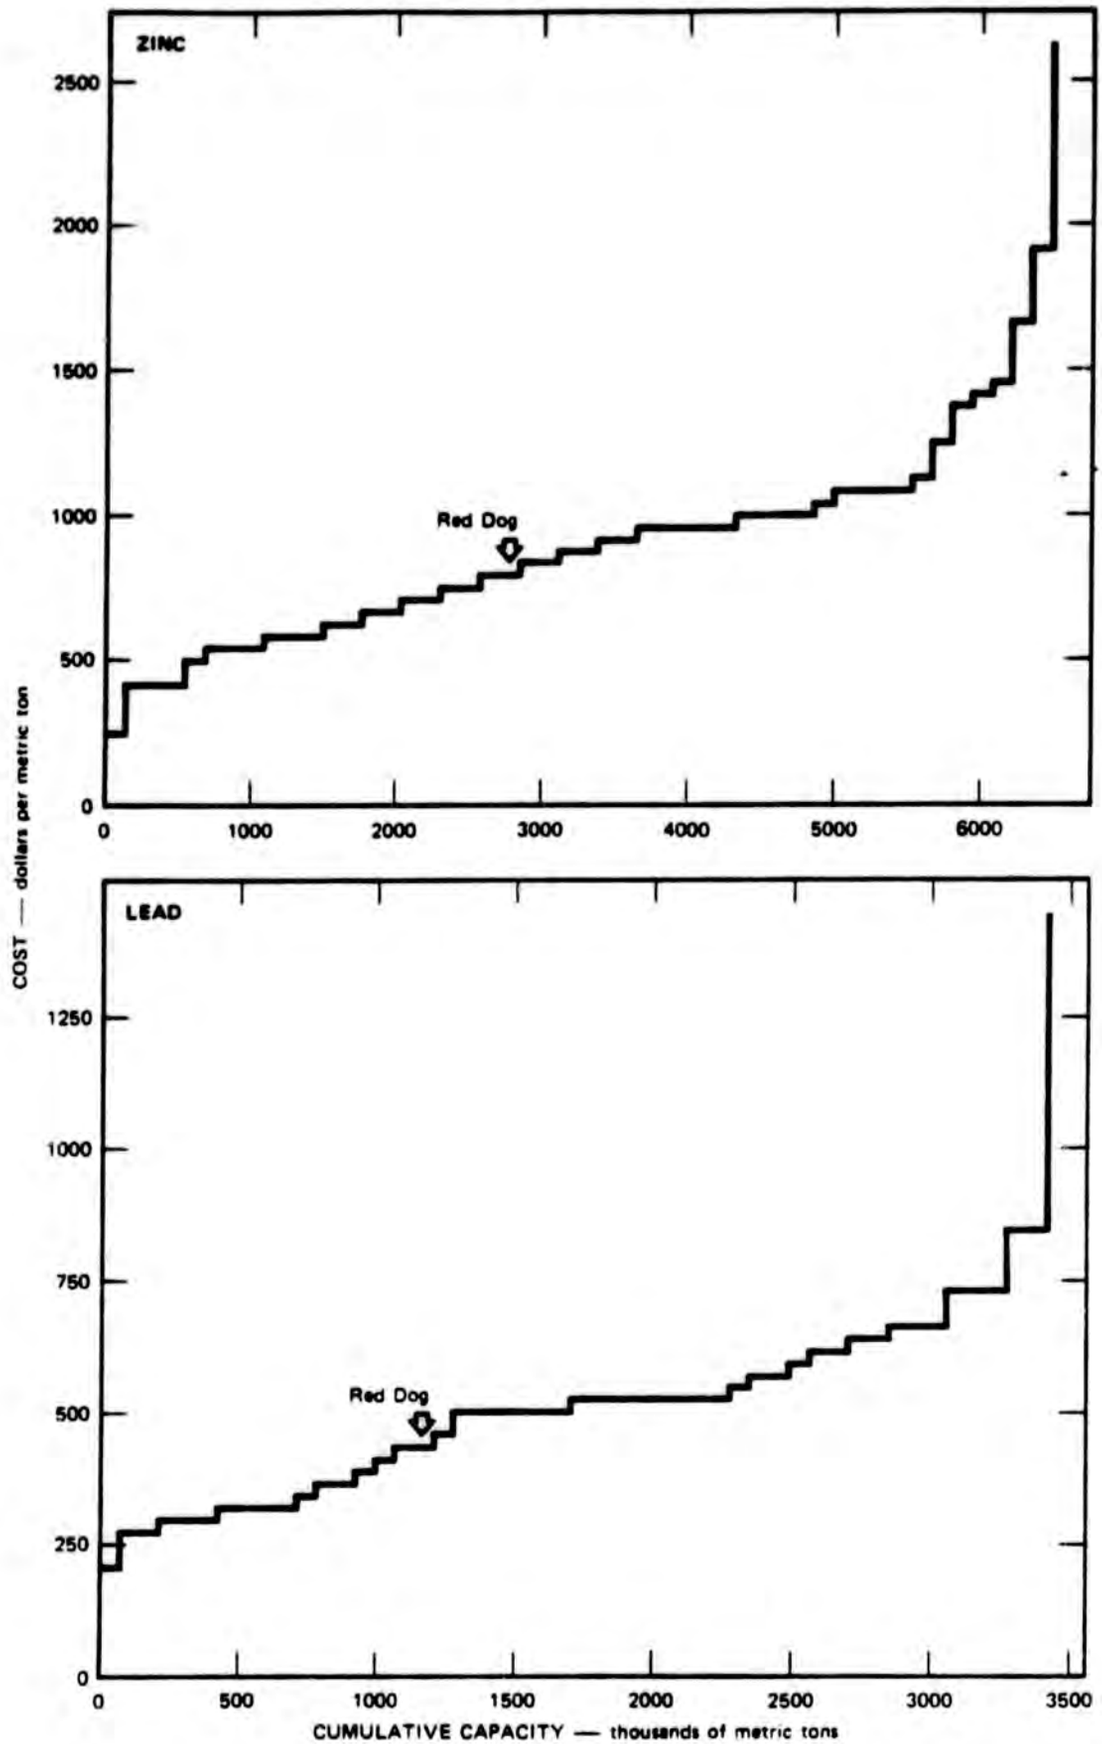

FIGURE VII-1 ZINC AND LEAD PRODUCTION COST CURVE FOR 1990

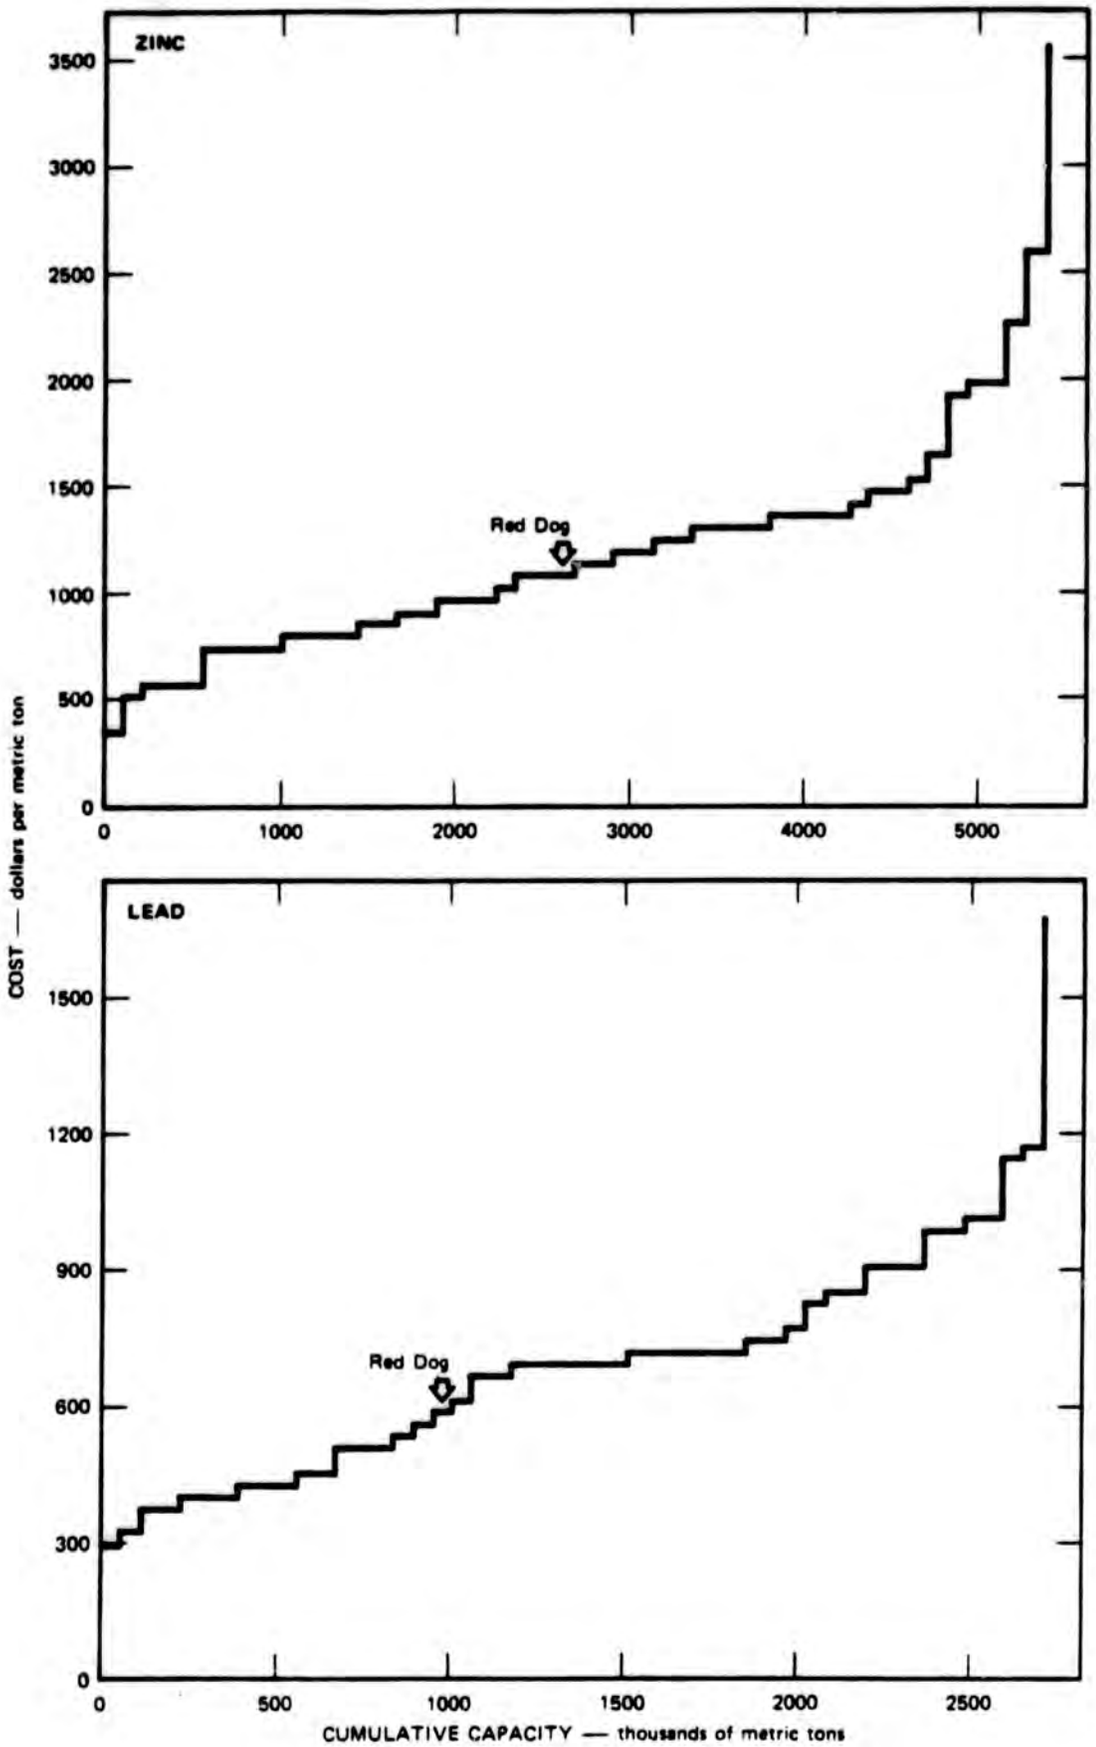

FIGURE VII-2 ZINC AND LEAD PRODUCTION COST CURVE FOR 1995

proposed infrastructure, (2) the date of mine and mill start-up, (3) the source of the funds that will cover all or part of the bond debt service, (4) the source of funds to cover O&M costs, (5) the disposition of possible revenues from other potential users of the transportation system, and (6) the price outlook for zinc, lead, and silver.

From SRI's analyses of these factors and of alternatives to those suggested by Cominco, it is clear that the most critical factor determining Cominco Alaska's return on investment will be the concentrate prices that the Red Dog operation will realize. This factor will depend on prevailing price levels for zinc, lead, and silver; equally important, however, will be the magnitude of smelting and refining charges.

Surprisingly, Cominco Alaska's rate of return appears relatively insensitive to many of the factors pertinent to its proposal (i.e., the broad range of user fees considered and, by extension, the amount of State subsidy required, if any). Potential increases in the amount of capital investment required for the road and port facilities or the possible contribution of other users of the transportation system also appear to have only limited effect on mining return. Instead, the second most important factor, following future concentrate revenues, is a possible delay in the starting date of production. If the delay is 1 year--from 1989 to 1990--for concentrate shipments an addition to the State subsidy of about $20 million would result that would be unrecoverable. For a 2-year delay--to 1991--an additional $35 million would be necessary.

Additional clarification may be gained by elucidating the meaning of ROI in Chapter V calculations. These calculations are based on the assumption that 100% of the required mine and mill investment will in fact be provided by Cominco Alaska's funds. In all likelihood, however, Cominco Alaska would seek debt-financing of a substantial portion of the Alaska investment as is commonly done in the industry. A 40% debt-to-equity ratio would raise Cominco Alaska's profitability because the rate of return is higher than the cost of debt funds.

SCOMM

#50:11

Geoffrey G. Snow, President

Noranda Exploration, Inc.

Joint Resources and Special Committee on Loans

Briefing

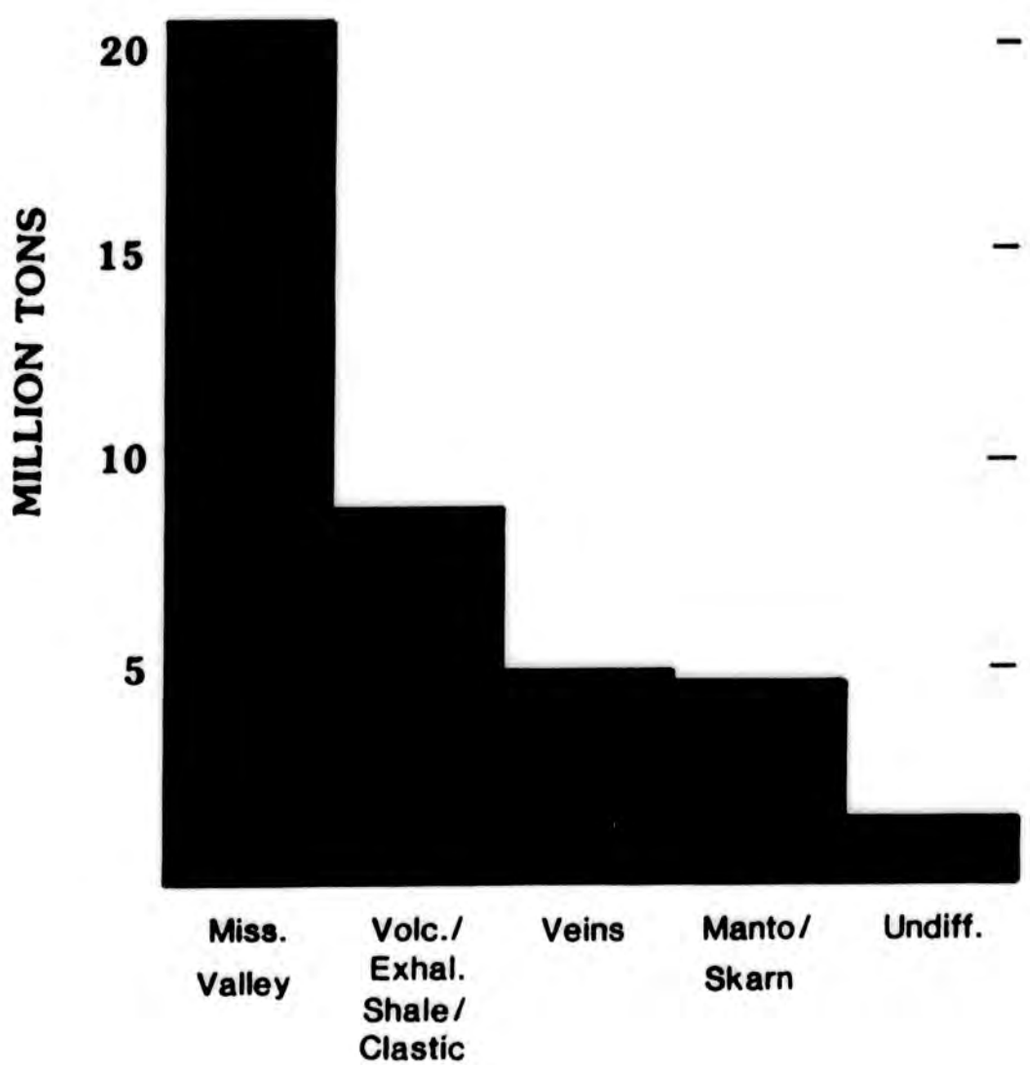
Friday, February 8, 1985

Mr. Chairmen, members of the committee - Thank you for the opportunity to brief you today. Noranda Exploration, Inc. is the wholly-owned subsidary of Noranda Inc. Noranda Inc. is a major Canadian mining company and a major zinc producer. Noranda mines produce (in 1982) about 625,000 tons of zinc per year, or close to 15% of world consumption. Zinc is important to Noranda's earnings. A 10% change in the price of zinc (4¢ today) affects Noranda's earnings 30%.

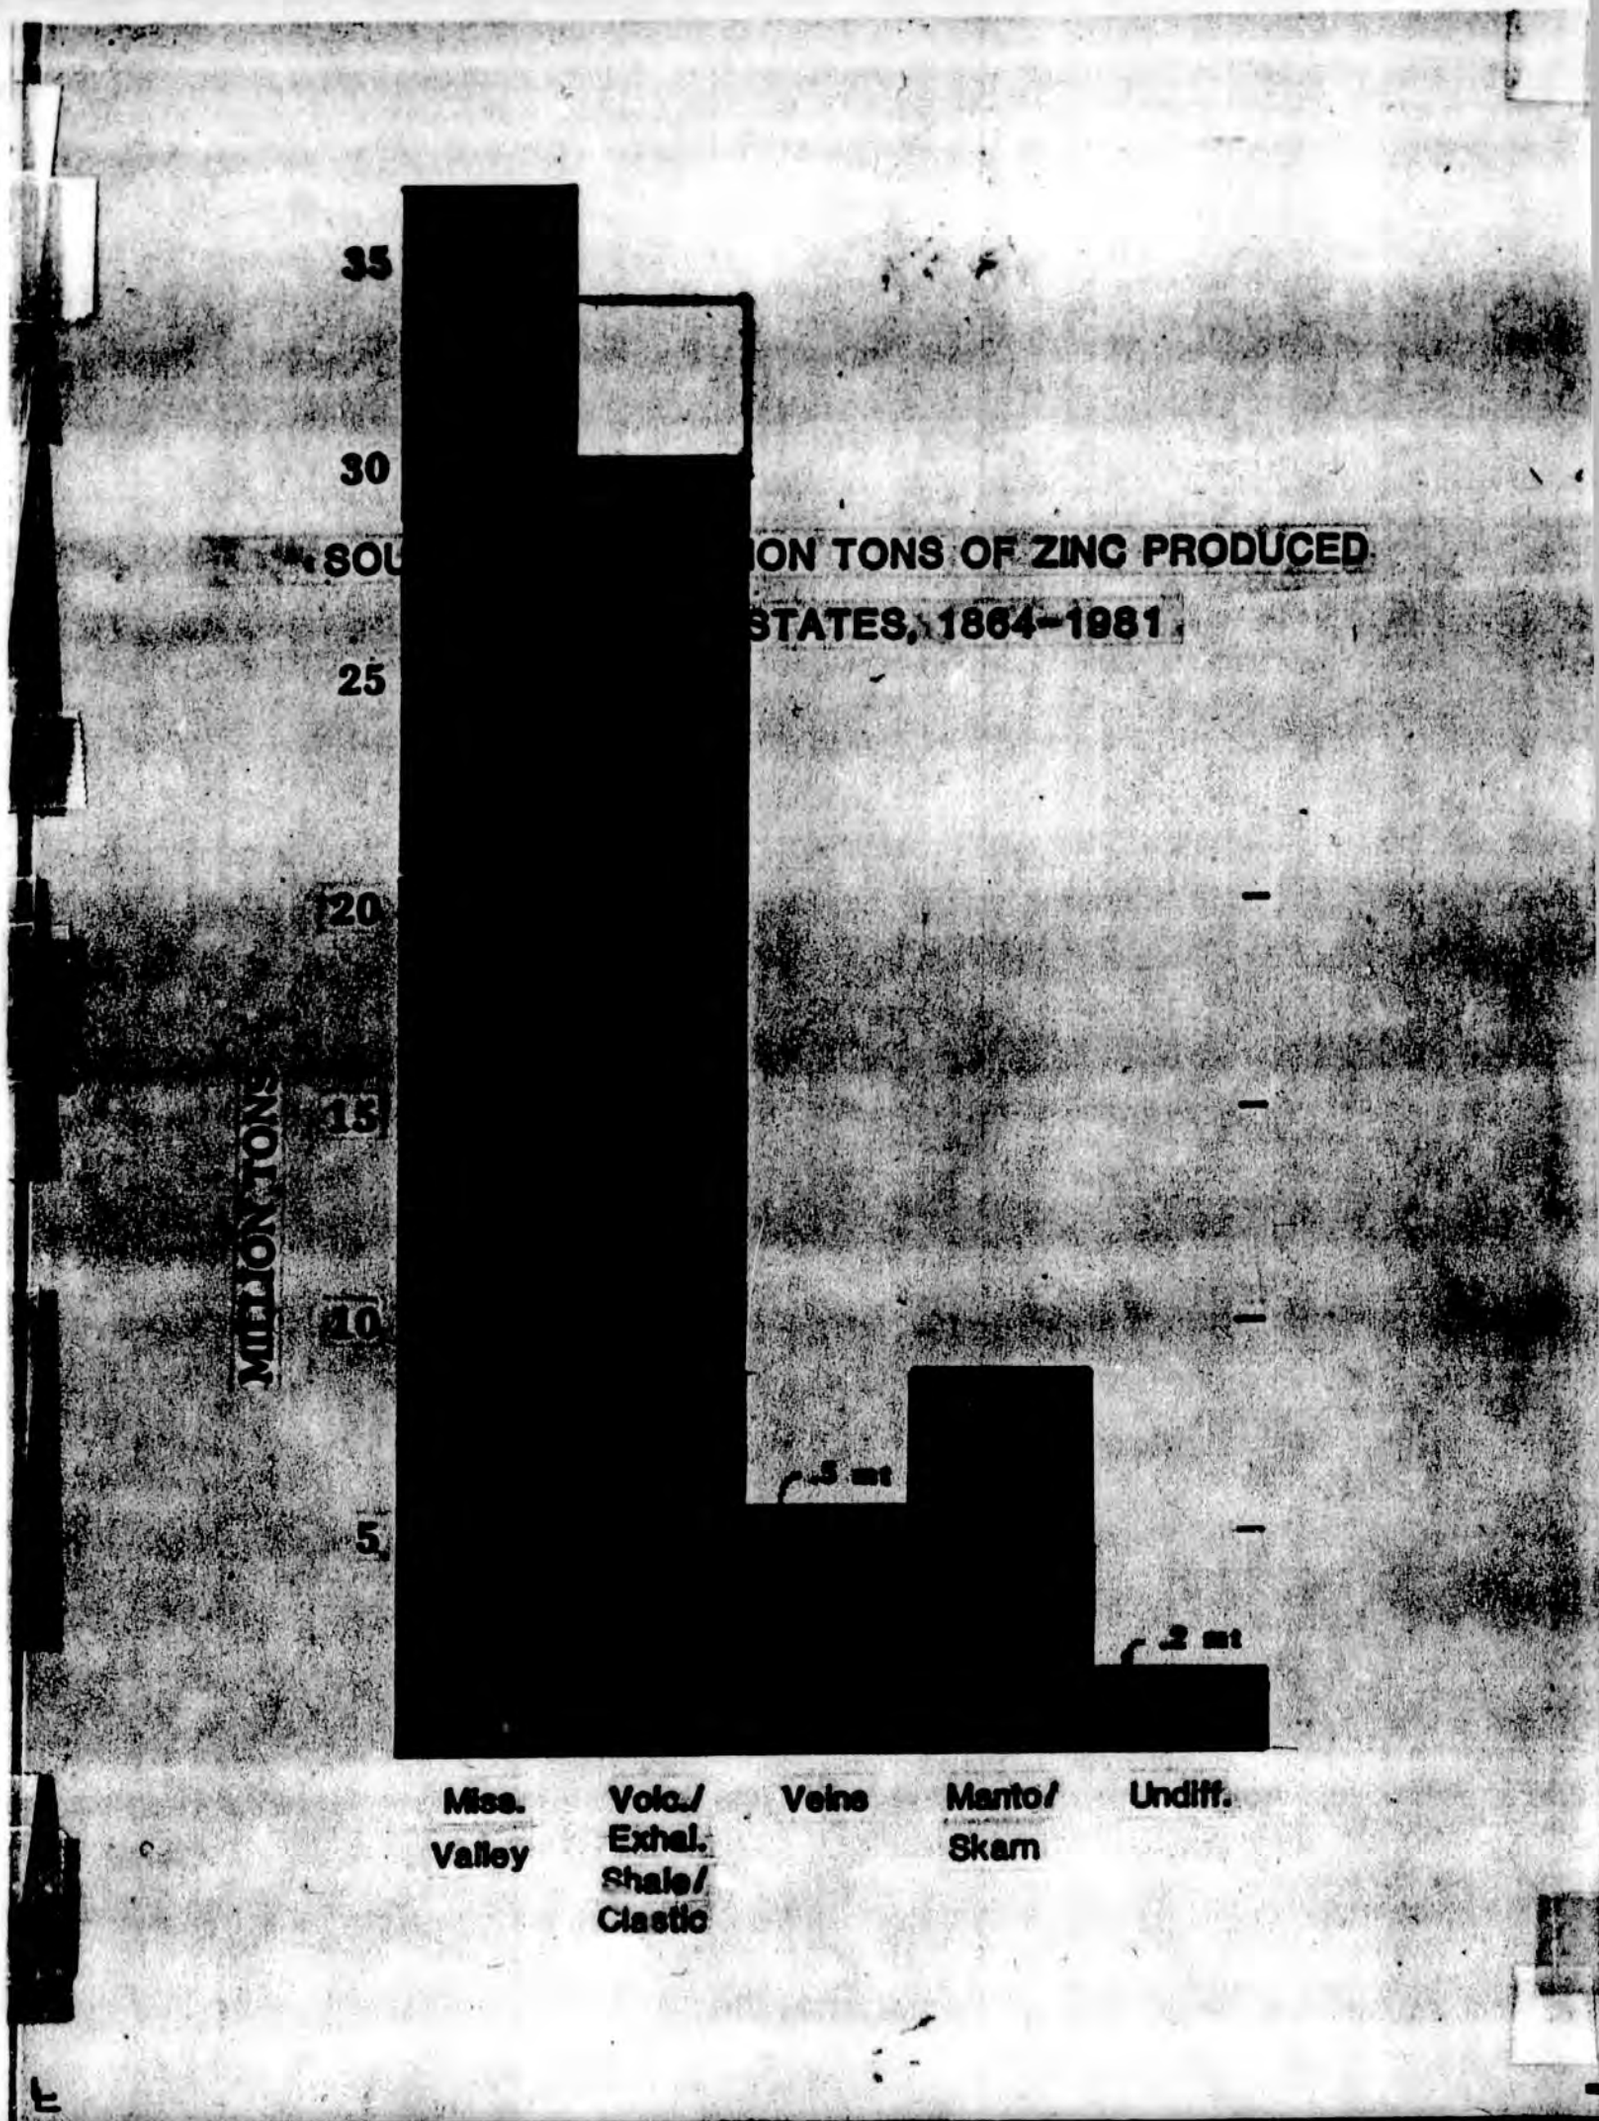
I am employed because Noranda's mines are being depleted. In order to survive, a mining company must replace material mined-out. Noranda can look any were in the world, but our organization has focused on the western Brooks Range. We have just concluded an agreement with GCO Minerals that permits us to examine a large claim block in the DeLong Mountains.

Why did we select the DeLong Mountains? Figure 1 shows where zinc has been mined. Most was from the Mississippi Valley. We are not looking there because, at today's prices and costs, the 6% average grade is not attractive.

Further we think the environment labled volcanic-exhalitive has greater potential. Figure 2 shows where reserves are.



The Red Dog geologic environment is analogous to others in the world, for example the Selwyn Basin of the Yukon. There 10 deposits, ranging in size from 20 to 100 million tons, are in similar rocks over a length of 200 miles.



The point for me as an exploration geologist and for you as legislators is that deposits of this type occur in clusters. Noranda hopes to discover others in the Red Dog-Lik cluster.

We are not looking in the Yukon because that is too far from tide water. We are attracted to the DeLong Mountains because tide water is close. We are attracted because there is the possibility of a road to that water. We are attracted because Alaska's tax structure does not peralize those who produce.

The viability of mining operations is directly related to the capital required. A road into the DeLong Mountains will encourage exploration. Because of the clustering nature of deposits of this type, discoveries will hopefully result. Once started the DeLong Mountain zinc belt can provide long term employment, social benefit and new wealth to Alaska.

IN THE SENATE BY THE RESOURCES COMMITTEE

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes for the DeLong Mountain transportation project, establishing conditions under which the bonds or notes may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project. Bonds or notes may not be issued under this section until

(1) Cominco, Ltd. agrees in writing to terms and conditions under which

See #6

(A) adequate access to the road and port constructed as part of the DeLong Mountain project is guaranteed to other users;

(B) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project based on the use Cominco, Ltd. makes of the facilities compared to the use made by others;

(C) Cominco, Ltd. will repay all expenditures by the state for the project through toll fees for the use of facilities constructed as part of the project; [and other payments;]

(D) payments by Cominco, Ltd. to the state will be accelerated if the price of zinc rises above a level determined by the Alaska Industrial Development Authority to yield a reasonable profit;

(2) the United States Congress approves the Cape Krusenstern National Monument land exchange between NANA Regional Corporation and the United States Department of the Interior;

(3) NANA Regional Corporation agrees in writing to [convey] to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the DeLong Mountain transportation project and land needed for future expansion of the road and port;

[(4) NANA Regional Corporation agrees in writing to lease land for the Red Dog Mine to Cominco, Ltd. and to provide easements and right-of-ways needed to operate the mine to Cominco, Ltd.;]

(5) the Alaska Industrial Development Authority obtains a ruling from the Internal Revenue Service that bonds or notes issued under this section will qualify for tax exempt status; and

(6) the Alaska Industrial Development Authority establishes a toll schedule for use of facilities constructed as part of the DeLong Mountain transportation project that ensures [the greatest] return on the state's investment in the project and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted.

* Sec. 2. Notwithstanding limitations on the establishment of a capital reserve fund under AS 44.88.105, the authority may covenant and agree with the trustee or holders of the bonds or notes authorized under sec. 1 of this Act that the authority will establish a capital reserve fund for the purpose of securing the bonds or notes, that the chairman of the authority will, by January 2 of each year, certify in writing to the governor and the legislature the amount required to restore the capital reserve fund to the capital reserve fund requirement, and that the legislature may appropriate to the authority the amount certified by the chairman. Nothing in this section creates a debt or liability of the state.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

April 15, 1985 SECOND SCENARIO

SUGGESTED AMENDMENT LANGUAGE TO SB 280

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act transferring and appropriating certain loans to the Alaska Industrial Development Authority; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. (a) In an amount not to exceed $142,000,000 in unpaid principal as of July 1, 1985, all right, title, and interest in loans of the type described in (b) of this section, and all right, title, and interest in all mortgages, notes, and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated to the Alaska Industrial Development Authority (eff (AS__)) for the ~~purposes of its economic development fund (AS 44.88.172).~~ For the Delta Mtns Regional ~~Dist~~ Trans Project.

(b) This section transfers and appropriates

(1) veterans loans acquired or made under AS 26.15;

(2) commercial fishing loans acquired or made under AS 16.10.300 - 16.10.370;

(3) small business loans acquired or made under AS 45.95;

(4) tourism loans acquired or made under AS 45.90;

(5) fisheries enhancement loans acquired or made under AS 16.10;

(6) child care loans acquired or made under AS 44.33; and

(7) historical district loans acquired or made under AS 45.98.

(c) In an amount not to exceed $30,000,000 in unpaid principal as of July 1, 1985, all right, title, and interest in commercial fishing loans acquired or made under AS 16.10.300 - 16.10.370 and secured by a limited

entry permit, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated from the general fund to the commercial fishing revolving loan fund (AS 16.10.340) for the purposes of AS 16.10.300 - 16.10.370.

(d) In an amount equal to the principal balance of loans appropriated under (c) of this section, all right, title, and interest in commercial fishing loans, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, are transferred from the commercial fishing revolving loan fund to the Alaska Industrial Development Authority for the purposes of its economic development fund (AS 44.88.172). However, only loans that are not secured by a limited entry permit may be transferred or appropriated under this subsection.

* Sec. 2. This Act takes effect July 1, 1985.

April 15, 1985

SUGGESTED AMENDMENT TO SB 279

Sec. 4. All right, title, and interest in [commercial fishing] loans that are not secured by limited entry permits, in an amount equal to the principal balance of loans appropriated under sec. 3 of this Act, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, are transferred and appropriated from the commercial fishing revolving loan fund (AS 16.10.340), the Small Business revolving loan fund (AS 45.95.060), or the Alaska World War II veterans' revolving fund (AS 26.15.090) to the economic development fund (AS 44.88.172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project.

(3) NANA Regional Corporation agrees in writing to make available [convey] to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the DeLong Mountain transportation project and land needed for future expansion of the road and port.

[(4) NANA Regional Corporation agrees in writing to lease land for the Red Dog Mine to Cominco, Ltd. and to provide easements and right-of-ways needed to operate the mine to Cominc1, Ltd.;]

(4) [5] the Alaska Industrial Development Authority obtains a ruling from the Internal Revenue Service or obtains an opinion of bond counsel that some or all of the bonds or notes issued under this section will qualify for tax exempt status; and

(5) [6] the Alaska Industrial Development Authority establishes a toll schedule for use of the facilities constructed as part of the DeLong Mountain transportation project that ensures the greatest return on the state's investment commensurate with project viability in the project and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted.

April 15, 1985 FIRST SCENARIO

SUGGESTED AMENDMENT LANGUAGE TO SB 280

Begin at line 18 of the bill

[(A) adequate access to the road and port constructed as part of the DeLong Mountain project is guaranteed to other users;]

(A) [B] Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities contructed as part of the project based on the use Cominco, Ltd. makes of the facilities compared to the use made by others;

(B) [C] Cominco, Ltd. will repay all expenditures by the state for the project through toll fees for the use of facilities constructed as part of the project and other payments;

(C) [D] payments by Cominco, Ltd. to the state will be accelerated if the price of zinc rises above a level determined by the Alaska Industrial Development Authority to yeild a reasonable profit;

(2) the United States Government [Congress] approves the Cape Krusenstern National Monument land exchange between NANA Regional Corporation and the United States Department of the Interior;

Draft

4/4/85

It is the intention of the Legislature that, before the appropriation of $18.0 million and the loans of the Department of Revenue to the Economic Development Fund may be expended, obligated, or encumbered, the Alaska Industrial Development Authority must enter into a binding contractual agreement with Cominco, Ltd. and with NANA Regional Corporation to execute substantially the following assurances and guarantees:

1. Cominco, Ltd. will guarantee to pay minimum toll and other payments necessary to repay the State's investment if the mine is delayed or if production is suspended after operation commences.

2. Cominco, Ltd. will guarantee the operation and maintenance costs of the road and port facilities, proportianate to its use of those facilities.

3. Cominco, Ltd. will make available to AIDA and the communities of the region a description of the process it will use to allow regional freight to be carried on its ore carriers destined for the regional port, along with the estimated cost of such freight haulage.

4. NANA will make available at no cost to AIDA the land necessary to meet the expansion needs of the port to accommodate future regional and industrial users.

5. AIDA will establish a toll schedule for the use of the road and port facilities which maximizes the return to the state on its investment throughout the useful life of the facilities and which guarantees eqitable access to the facilities by all users.

MEMORANDUM April 2, 1985

SUBJECT: Bond Authorization for the DeLong Mountain Transportation Project (Work Order No. 14-1012)

TO: Representative John Sund

FROM: Tamara Brandt Cook TBC
Deputy Director
Division of Legal Services

Here is a draft of the bill you requested based on a draft submitted by the Department of Law authorizing the Alaska Industrial Development Authority to issue bonds or notes for the DeLong Mountain Transportation Project.

With the permission of Mr. John Hartle, I have omitted language from section 2 of the draft submitted by the Department of Law that deals with a "moral obligation" of the state. Bill Berrier has informed me that the term is shorthand for the standard provision - the entity that issues bonds may covenant with the holders of the bonds that a capital reserve fund will be established that any shortfall must be reported to the legislature, and the legislature may appropriate the amount needed to restore the fund. The term does not have legal significance in itself and a "moral obligation" is not capable of being pledged. Consequently, I have rewritten section 2 using the standard provision. Bill Berrier also informed me that he checked the statutes of several other states and has not found any use of the term "moral obligation" in the other states.

If the language as rewritten in this draft creates a problem, please let me know. The committee might also consider submitting the draft to a qualified bond attorney for review.

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act transferring and appropriating certain loans to the Alaska Industrial Development Authority; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. (a) In an amount not to exceed $142,000,000 in unpaid principal as of July 1, 1985, all right, title, and interest in loans of the type described in (b) of this section, and all right, title, and interest in all mortgages, notes, and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated to the Alaska Industrial Development Authority for the purposes of its economic development fund (AS 44.88.172).

(b) This section transfers and appropriates

(1) veterans loans acquired or made under AS 26.15;

(2) commercial fishing loans acquired or made under AS 16.10.300 - 16.10.370;

(3) small business loans acquired or made under AS 45.95;

(4) tourism loans acquired or made under AS 45.90;

(5) fisheries enhancement loans acquired or made under AS 16.10;

(6) child care loans acquired or made under AS 44.33; and

(7) historical district loans acquired or made under AS 45.98.

(c) In an amount not to exceed $30,000,000 in unpaid principal as of July 1, 1985, all right, title, and interest in commercial fishing loans acquired or made under AS 16.10.300 - 16.10.370 and secured by a limited

entry permit, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated from the general fund to the commercial fishing revolving loan fund (AS 16.10.340) for the purposes of AS 16.10.300 - 16.10.370.

(d) In an amount equal to the principal balance of loans appropriated under (c) of this section, all right, title, and interest in commercial fishing loans, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, are transferred from the commercial fishing revolving loan fund to the Alaska Industrial Development Authority for the purposes of its economic development fund (AS 44.88.172). However, only loans that are not secured by a limited entry permit may be transferred or appropriated under this subsection.

* Sec. 2. This Act takes effect July 1, 1985.

Bert Wagnon, Executive Director
Alaska Industrial Development Authority
1577 C Street, Suite 304
Anchorage, AK 99501

Dear Mr. ~~Wagnon~~ Bert:

We are continuing to gather information concerning the Delong Mountain Transportation Project (Red Dog) and would like to ask you to provide some additional data. The announcement by the Department of Revenue last Friday that the state's expected revenues would be less than previously anticipated has naturally caused a great concern about all state spending programs.

1. If the $160 million ($142 million in loans plus the $18 million from the general fund) are transferred to the AIDA Economic Development Fund, what is the mechanism for these funds to flow back to the general fund over time?

2. Considering that the $160 million will be used to back the sale of AIDA bonds but that toll fees charged to Cominco, LTD. (and perhaps others) as well as interest earned from the fund will be used to retire the bonds, what is the expected balance in the Economic Development Fund at the end of 20 years?

3. Can you provide us with a projected Economic Development Fund balance by year from July 1, 1985 until the retirement of all of the $175 million in bonds issued for this project?

4. What effect will the additional management requirements of $142 million in loans have on AIDA's personnel requirements?

5. Can you provide us with a breakdown of the expenditures made to date and those anticipated from the $3 million appropriation in last years budget for this project?

6. What is the total amount that could be expected to accrue to the Economic Development Fund in both principal and interest over time if you added together the $18 million from the general fund, the $142 million principal in loans, the interest on the $18 million while in the fund, the interest generated from the $142 million in loans and the interest earned on the earnings of the fund?

I have enclosed for your information copies of requests I have made to the Departments of Revenue and Commerce and Economic Development. Because of the limited time remaining this session, I would appreciate a response as soon as possible. Thank you.

Sincerely yours,

Arliss

Mary Nordale, Commissioner
Department of Revenue
Mail Stop 0400, Pouch S
Juneau, AK 99811

Dear Commissioner Nordale: Mary

In light of your announcement on Friday regarding further declines in expected state revenues over the next several years, it is important that we closely analyze all proposed state funding requirements. As you know, the Senate Resources Committee has the Delong Mountain Transportation Project (Red Dog) under investigation and we are in need of some additional information.

1. It has been suggested that $142 million in state loans held by the Department of Revenue be transferred to AIDA bonds. I would like to know the make up of those loans. What is the amount of each category (such as veterans, commercial fishing, small business, tourism, fisheries enhancement, child care and historical districts), the interest rates by category and the maturity dates? What is the amount of money by category that returns to a revolving loan fund pool and what amount returns to the general fund? If any revolving loan funds are transferred to AIDA, how does that affect the future ability of those revolving funds to meet the public demand for loans?

2. What is the expected cash flow (principal and interest) by year from July 1, 1985 that would return to the state over the term of the loans if they remained in the Department of Revenue?

3. What is the expected financial shortfall in state revenue in FY 86 as a result of transferring these loans to AIDA? Has any adjustment been made to the Administration's budget for FY 86 to reflect this income reduction?

4. What is the total amount of interest that is expected to be returned to the state from the $142 million over the life of the loans calculated as of July 1, 1985?

5. What is the total amount of interest that the state would expect from the $142 million in loans plus the $18 million in general fund expenditure if this $160 million were not transferred to AIDA?

6. Will the transfer of the $142 million in loans to AIDA result in increased requests this year or in future years for the various state loan programs since the principal and interest will not flow back to the general fund or a revolving fund as expected?

I have included for your information copies of requests I have made to Bert Wagnon, Executive Director, AIDA and Commissioner Lounsbury, Department of Commerce and Economic Development. Because of the limited time remaining this session, I would appreciate a response as soon as possible. Thank you.

Sincerely yours,

Senator Arliss Sturgulewski

Loren Lounsbury, Commissioner
Department of Commerce and Economic Development
Mail Stop 0800, Pouch D
Juneau, AK 99811

Dear Commissioner Lounsbury: Loren

It has been suggested that $142 million in loans from the Department of Revenue and Department of Commerce and Economic Development be transferred to AIDA in support of the Delong Mountain Transportation Project (Red Dog). This would no doubt have some effect on your department's operation. Can you provide me with some further information on the following questions.

1. Will the transfer of the $142 million in loans to AIDA affect the personnel requirements of your loan servicing division? In other words, would you anticipate a reduction in staffing?

2. If these loans were transferred to AIDA, do you anticipate that the loan repayment or servicing policies would change?

3. What would be the effect on the borrowers if these loans were transferred to another agency?

4. How would the loss of future income from these loans (both principal and interest) affect the ability of your loan divisions to provide for the public demand for loans in the various categories? Would you anticipate increased funding requests to the legislature to meet the public need?

5. Does the loss of income from these loans affect your FY 86 budget loan requests if all principal and interest is transferred on the $142 million as of July 1, 1985?

I have enclosed for your information copies of requests I have made to AIDA and the Commissioner of the Department of Revenue. Because of the limited time remaining this session, I would appreciate a response as soon as possible. Thank you.

Sincerely yours,

Senator Arliss Sturgulewski
Chairman, Senate Resources Committee

MEMORANDUM

To: John Hartle
From: Jack Hession
Re: Cominco's Transportation Study
Date: April 1, 1985

On page 25, total construction cost of the Asikpak Route is listed as $125.7 million. On page 31, total construction cost for the Kruz (Cominco's preferred) route is $115.3 million if Cominco is not allowed to take gravel from inside Cape Krusenstern National Monument.

When Cominco filed its Title 11 application, the National Park Service asked the company what the Kruz route would cost with and without gravel from the Monument. Cominco's answer is $74.7 million (p. 29), and $115.3 million, respectively. Hence, the $40.6 million difference I mentioned.

One other observation. Cominco is apparently telling the Legislature that its preferred route is assured if the State agrees to the funding of its transportation facilities.

Is it prudent for the Legislature to appropriate funds on the basis of Cominco's assurance of Congressional cooperation? That cooperation is by no means assured. Hearings have not even been scheduled yet.

REPORT

An Economic Evaluation of Alternative Road Routes from RED DOG to a Road/Marine Transhipment Site

PREPARED FOR COMINCO ALASKA INC.
JUNE 1984

I. INTRODUCTION

The purpose of this report is to provide route selection and engineering data sufficient to permit a detailed independent review.

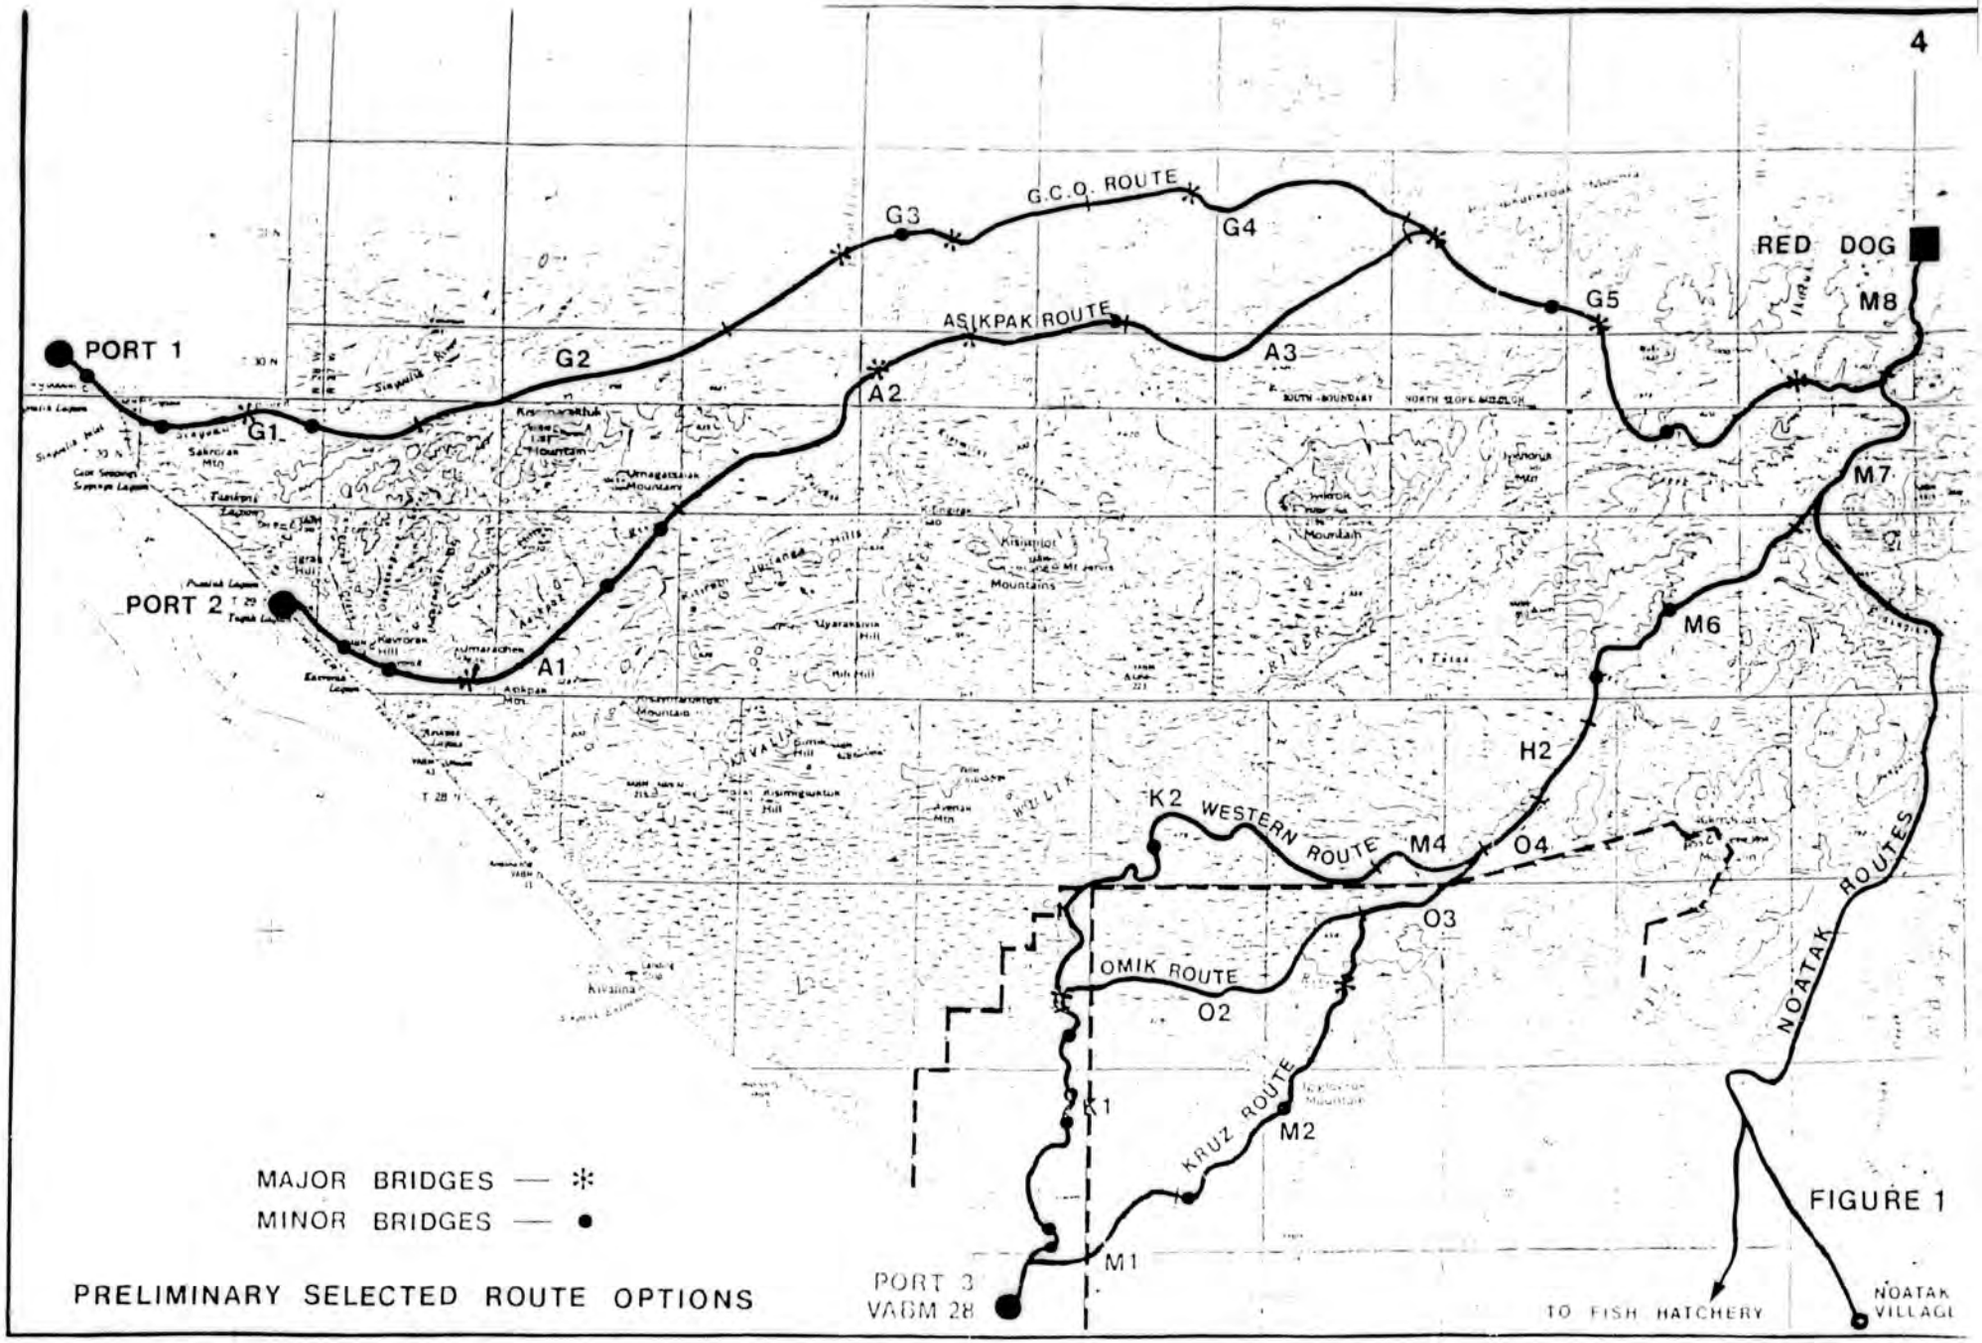
The report outlines the cost of constructing and operating a road from Red Dog to a port on the Chukchi Sea. The alternative routes investigated are identified and the selection procedure described. In addition, the report defines the environmental constraints, basic engineering design parameters and basis of estimate.

Throughout this report geographical identification is based on physical features and settlements named on the U.S. Geological Survey 1:63360 scale mapping.

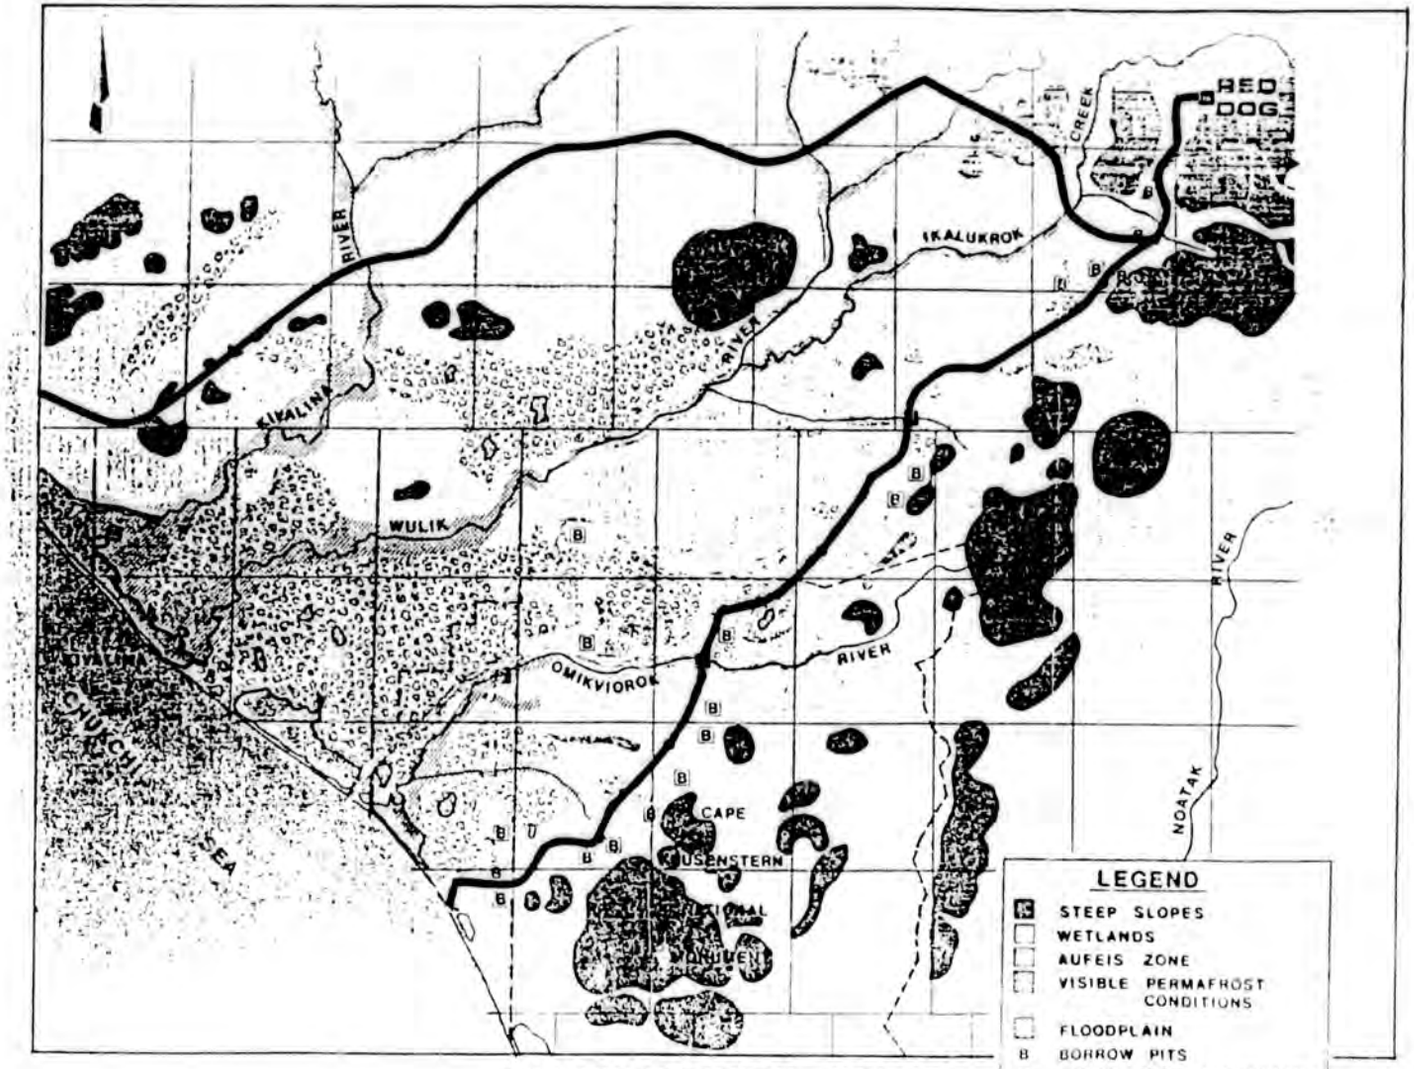
II. DESCRIPTION OF PROPOSED ROAD ALTERNATIVES

The Red Dog deposit is located in northwest Alaska approximately 90 miles north of Kotzebue and 70 miles east of Kivalina. The deposit is on the west side of Deadlock Mountain and straddling Red Dog Creek. A suitable mill site has been identified on a low hill 1-1/2 miles west of the deposit at an elevation of 1050 feet. This is the designated inland terminus for all the alternative road routes investigated.

Four possible port sites on the Chukchi Sea have been identified, together with two road vehicle to barge transhipment sites on the Noatak River. These are located as follows (see Figure 1):



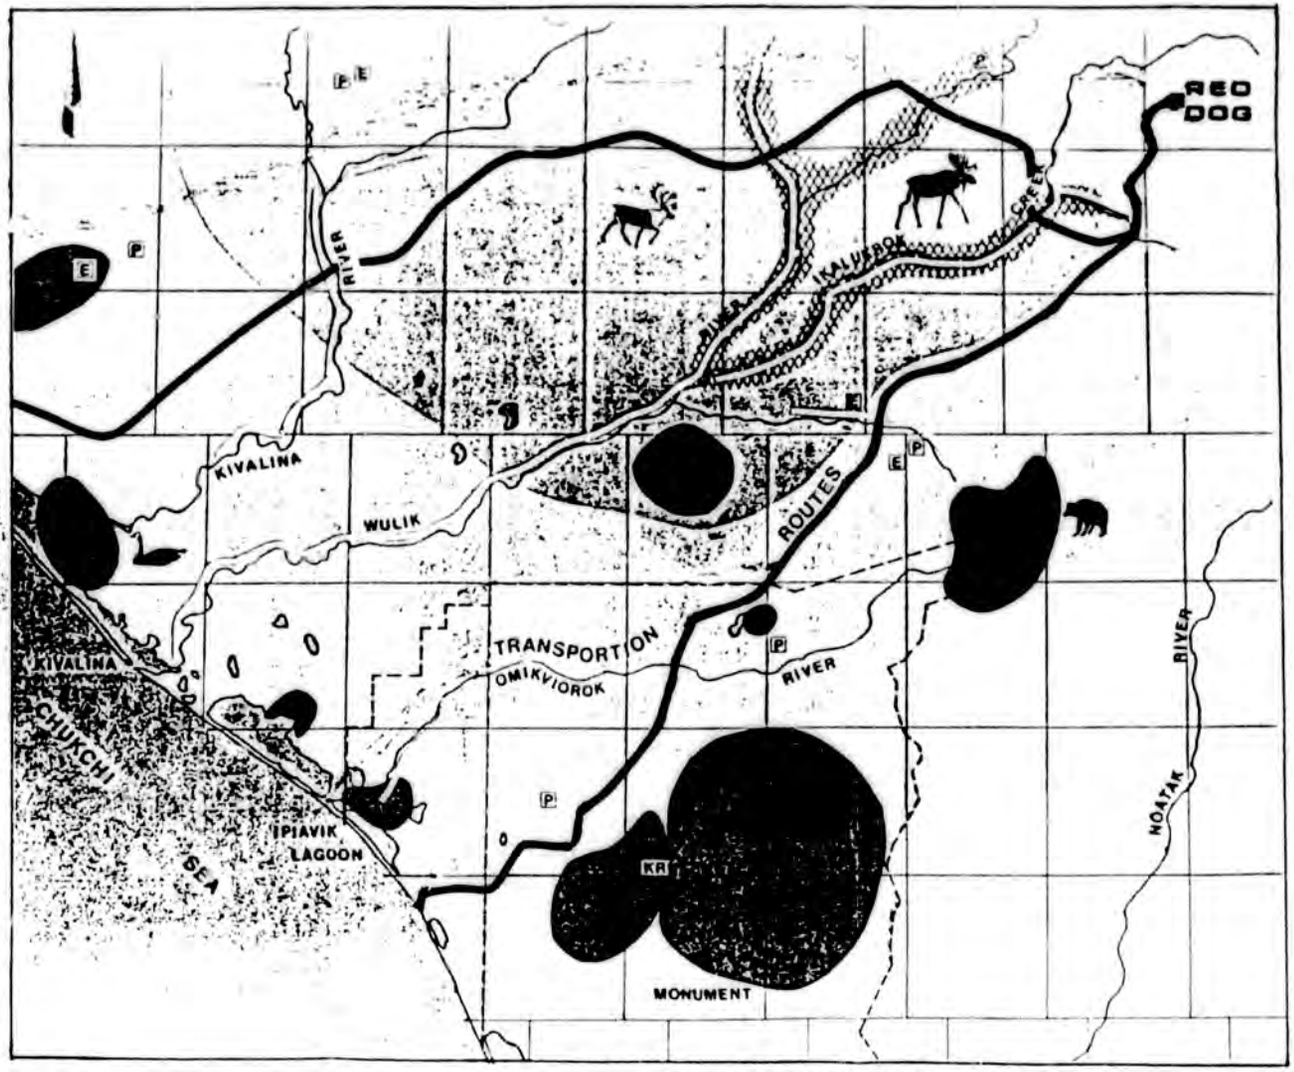
- Port Site 1 -- 28 miles northwest of Kivalina village, between Singoalik and Pusigrak lagoons.
- Port Site 2 -- 16 miles northwest of Kivalina village and immediately south of Tugak lagoon.
- Port Site 3 -- Located 10 miles southeast of Kivalina village at VABM 17, between Imikruk and Ipiavik lagoons.
- Port Site 4 -- Located 16 miles southeast of Kivalina village at VABM 28, midway between the mouths of New Heart and Umagatsiak Creeks.
- Transhipment Site 1 -- On the Noatak River at Noatak village.
- Transhipment Site 2 -- At the Fish hatchery on the Noatak River, 19 miles south of Noatak village and 10 miles above the confluence of the Agashashok River.



II. DESCRIPTION OF PROPOSED ROAD ALTERNTIVES (continued)

Engineering and environmental constraint maps were prepared incorporating existing data and the results of field work carried out by Cominco's consultants. (For much simplified versions of these maps, see Figures 2, 3, and 4). Using these maps, along with U.S. Geological Survey 1:63360 scale mapping, numerous possible routes and route segments were defined (see Figure 1).

For each of these routes, the alignment has been plotted on 1:63360 scale mapping or enlargement of this mapping and for the majority of routes profiles were also prepared.



A preliminary engineering evaluation was carried out for each route. This evaluation included an estimation of route length, determination of terrain characteristics by segment, calculation of approximate fill quantities, preliminary sizing of major bridges and an estimation of minor bridge and culvert requirements. From this data, preliminary cost estimates were prepared. A preliminary selection was made using these cost estimates in conjunction with the constraint mapping and additional field reconnaissance.

II. DESCRIPTION OF PROPOSED ROAD ALTERNTIVES (continued)

All of these routes were reviewed by the Environmental Protection Agency and the Department of the Interior. The KRUZ and ASIKPAK route options were selected by these agencies for more detailed study (Figure 6). The Environmental Impact Statement should be referred to for a detailed description of this selection procedure. In addition, further studies were carried out by Cominco and the Environmental Protection Agency's E.I.S. contractor of the logistics and costs of the road/barge/bulk carrier transhipment via the Noatak River.

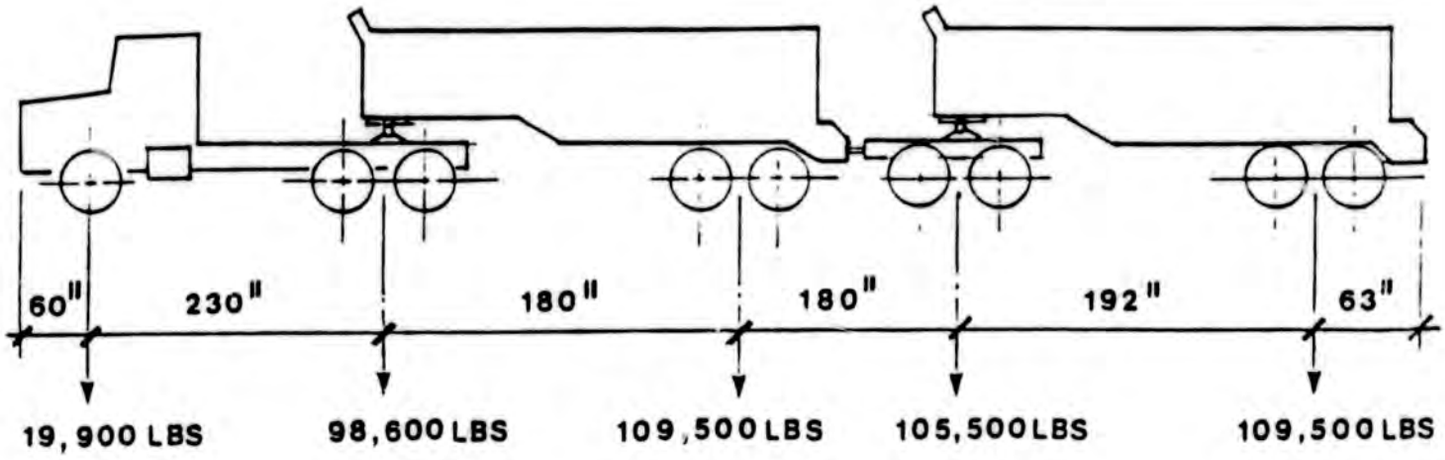
At this point, engineering design parameters were reviewed and refined to form a basis for more detailed evaluation of the two selected routes. These parameters are as follows:

- Road design speed - 30 mph.
- Road width - 30 feet.
- Design vehicle is the proposed concentrate haul truck/a tractor/ double trailer, side dump vehicle of 443,000 pounds GVW and maximum tandem axle loads of 109,500 pounds. (Figure 7).
- Crossfall 3 percent either side of center line.
- Side slopes 2:1 minimum.
- Maximum grade 4 percent.
- Maximum grade change 4 percent.
- Minimum radius of horizontal curvature 400 feet.
- Minimum radius of vertical curvature 1,500 feet.
- Thaw settlement of subgrade 6 inches maximum.
- Passing turnouts (50 feet total road width) at 2-mile intervals.

E.I.S. SELECTED ROUTE OPTIONS

FIGURE 5

II. DESCRIPTION OF PROPOSED ROAD ALTERNATIVES (continued)



The road must also be capable of handling the movement of plant modules of up to 1500 tons weight during the construction period. These modules will be moved on multi-wheeled, hydraulic levelled, purpose made transport vehicles (Figure 7). Maximum speed when loaded will be approximately 5 mph. Side clearances must be sufficient to permit movement of modules up to 70 feet wide.

At stream and river crossings, two approaches to module movement have been considered. Modules may be transported through the streams at low water using temporary diversion roads and fords or alternatively, bridges would be strengthened to sustain module loads. Either of the approaches would be viable for the Kruz Route, however, on the Asikpak Route, fording the major rivers may not be practicable and strengthening of the longer span bridges will result in significantly increased costs.
