Even with AIDA taking some Commerce loans, the Department's ability to meet loan demand should not be impaired. The estimated $16,118,000 in Commerce's commercial fish loans taken by AIDA would be replaced with a roughly equivalent amount, the $19,873,000 in estimated general fund commercial fish loans secured by permits, by transferring these loans from the general fund to Commerce.

2. What is the expected cash flow (principal and interest) by year from July 1, 1985 that would return to the state over the term of the loans if they remained in the Department of Revenue?

   See attached table for scheduled cash flow. Actual cash flow may be accelerated due to loan prepayments, resulting in a reduction of total interest from that scheduled.

3. What is the expected financial shortfall in state revenue in FY 86 as a result of transferring these loans to AIDA? Has any adjustment been made to the Administration's budget for FY 86 to reflect this income reduction?

   In our effort to minimize the impact on the FY 86 general fund revenues, the administration believes that no net adjustment will be required to the FY 86 budget by the appropriation of the loans to AIDA. The administration proposes to utilize the $17.8 million cash flow from loans held by the Department of Revenue as a substitute for the appropriation of $18 million in general funds now contained in the Governor's loan budget for this project. This will offset the reduction in general funds available for appropriation arising from the appropriation of the loans. This reduction would be $17.8 million for FY 86 based on the scheduled payments shown in the attached table. This would be composed of approximately $10 million in interest and $7.8 million in principal repayments.

The administration would propose that the cash needed to support the project could be obtained in part by giving AIDA the authority to use $12 million already appropriated to that agency. This would be combined with approximately $3 million of funds available from last year's appropriation for this project.

It should be noted that the amount of cash flow from these loans included in the Executive Budget 1986 as amounts available for appropriation is $31.3 million, composed of $13.3 million interest and $18 million principal repayments. The budget estimate is higher than the scheduled payments for two reasons. One is that prepayments on loans result in greater amounts of principal receipts than scheduled. The other is that this response to your questions has been done in much greater detail than the budget estimates.

A fiscal note for $17.8 million, reflecting the scheduled reduction in FY 86 revenue, will be submitted for the appropriation of the $142 million in loans. The difference between the scheduled payments and the budget estimate, $13.5 million, will be a downward adjustment to the next revenue estimates which will be made in June. This adjustment has not been incorporated in the Administration's FY 86 budget. The Administration does not believe this adjustment materially affects the March revenue forecast.

4. What is the total amount of interest that is expected to be returned to the state from the $142 million over the life of the loans calculated as of July 1, 1985?

Approximately $71.6 million in interest would be received by the state from July 1, 1985 through 2011 from the loans. The loan balances are estimated to total $135.9 million on July 1, 1985. The amount received by the general fund would be somewhat reduced by service fees retained by Commerce.

5. What is the total amount of interest that the state would expect from the $142 million in loans plus the $18 million in general fund expenditure if this $160 million were not transferred to AIDA?

Over the period of years to 2015, assuming compounding and an average rate of interest of 10%, total interest would come to $1,984.3 million. The present value of this interest would be $113.7 million at a 10% discount rate.

Implicit in the question is an assumption that the cash flow from the loans and the $18 million will not be spent if it is not appropriated to AIDA. If it is spent, the state would of course receive no interest on the $18 million and only the $71.6 million on the loans.

6. Will the transfer of the $142 million in loans to AIDA result in increased requests this year or in future years for the various state loan programs since the principal and interest will not flow back to the general fund or a revolving fund as expected?

   Transfer of the $142 million will not generally affect revolving fund cash flow and will not require increased requests for Commerce loan programs in the future. See question #1.

Sincerely,

Mary A. Nordale

1. This table represents the cash flow to the Department of Commerce and Economic Development. Cash flow to the general fund would be further reduced by .5% service fee on loans serviced by Commerce and .125% service fee to Commerce on loans serviced by banks.
2. Cash flow has not been adjusted for delinquency or default. Except for commercial fish non-permit loans, the state expects complete recovery on defaults. Thus, delinquency and default merely produce lags in receipts.

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 105

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the international airports revenue bonds authorization; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15.410 is amended to read:

Sec. 37.15.410. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money which may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $86,525,000 [$62,825,000] is authorized to acquire, equip, construct, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.510. The principal of and interest on these bonds shall be paid out of and secured by the gross revenues derived by the state from the ownership, lease, use, and operation of the airports, and of all the facilities of them and out of any other revenues or money which the state legislature may provide exclusive of any state tax or license.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.070(c).

Dear Representative Grussendorf:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill to raise from $62,825,000 to $86,525,000 the amount of international airports revenue bonds that may be issued by the state bond committee. This additional $23,700,000 is intended to be used for the Anchorage International Airport Terminal Renovation, Phase II.

Sincerely,

Bill Sheffield

Assumes issuance of bonds of $23,700,00 at 11% with level debt service for 30 years. The project appropriation is continued in the General Appropriation Bill and is titled "Anchorage International Airport Main Terminal Renovation Phase II". Debt Service is capitalized through the bond sales the first two years, and thereafter, paid from the International Airport Revenue Fund.

April 9, 1985

The Honorable Arliss Sturgulewski
Chairman, Senate Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Sturgulewski:

In response to your letter of April 1, 1985, I am providing the following requested information. Please note that our responses are based upon the estimated net cash flows shown in Attachment I. After adjusting for loans that have paid down or will not be transferred for legal reasons, we estimate that approximately $136 million in loans will be transferred.

It is not possible to provide an unambiguous answer to the first three questions until two things happen. First, we need the results of the Finance Plan project, now being worked on, and second we need to have an agreement reached between AIDA and Cominco with regard to user fees. The best figures that we have at present with respect to revenue generated by the project are those tolls which Cominco has offered to pay. Please be aware that our use of these figures should in no way be taken as evidence that AIDA has agreed to these charges. In any case, utilizing the attached cash flows, and our most current assumptions regarding costs and financin we estimate that the cash flow of the portfolio would not be directly used after 1995. At that time, the cash flow would be used for coverage for the bonds, and eventually could flow back to the general fund. Any tolls collected above those needed to pay debt service on bonds and provide for coverage on the bonds could also flow back to the general fund.

1. If the $160 million ($142 million in loans plus the $18 million from the general fund) are transferred to the AIDA Economic Development Fund, what is the mechanism for these funds to flow back to the general fund over time?

   At this time, the actual repayment mechanism has not yet been determined. It could be set up as a loan from the Department of Commerce and Economic Development to AIDA, with terms ranging from a fixed amount per year, or "any amount above that required for debt service". Regardless of the mechanism, we recommend that a coverage test be utilized, and only income above that required for the coverage requirement be remitted to the State.

2. Considering that the $160 million will be used to back the sale of AIDA bonds but that toll fees charged to Cominco, LTD. (and perhaps others) as well as interest earned from the fund will be used to retire the bonds, what is the expected balance in the Economic Development Fund at the end of 20 years?

   As noted above, using our most current cost and financing assumptions, we assume all cash flow after 1995 will be available for reinvestment in the Economic Development Fund for purposes of providing coverage for the bonds. Since this also assumes that the only toll fees are from Cominco and that these fees are just enough to pay debt service, the cash flow from the loan portfolio after 1995 and its reinvestment will be the only source of funds to be deposited in the Economic Development Fund. Although these are the best assumptions available today, we believe they are conservative assumptions, especially with regard to other future users. In any case, if we assume the cash flow can be reinvested at a 10% earnings rate, then by 2005 the balance will be $106,433,000.

   These figures are based upon our latest estimates of relevant factors for what presently appears to be the best financing approach. This approach, which was discussed in an earlier memo, aggregates funds from the general fund appropriation, cash flow from the loan portfolio, and proceeds from a tax exempt bond sale. This total collection of funds is then used to pay for construction costs and for interest on the bonds until revenues from the project are sufficient to pay for the bonds.

3. Can you provide us with a projected Economic Development Fund balance by year from July 1, 1985 until the retirement of all of the $175 million in bonds issued for this project?

   Under our latest assumptions, only $135 million in debt will be issued. This reduced amount is possible because cash flows from the loan portfolio appear to be greater than originally estimated. Once again, using all of the assumptions mentioned above, the projected balance of the Economic Development Fund is given in Attachment II.

4. What effect will the additional management requirements of $142 million in loans have on AIDA's personnel requirements?

   We would not anticipate immediately transferring the loan servicing from Commerce to AIDA, but rather using a phase-in process. At the outset, we would request Commerce to continue servicing the portfolio for us. We expect that our servicing costs would be similar to those experienced by the Department of Commerce and Economic Development.

5. Can you provide us with a breakdown of the expenditures made to date and those anticipated from the $3 million appropriation in last years budget for this project?

   To date we have made the following commitments for expenditure: RSA with DOTPF for various engineering and technical assistance $50,000; RSA with Department of Law for specialized legal counsel $50,000; contract with

SRI International for Finance Plan $267,000: contract with R & M Engineering for cost verification and other engineering services $75,000; and other miscellaneous expenditures $15,000. Planned uses for the remainder are associated with getting the projects ready for construction bids, for instance, preparation of final detailed design, preparation of bid packages, and so forth.

6. What is the total amount that could be expected to accrue to the Economic Development Fund in both principal and interest over time if you added together the $18 million from the general fund, the $142 million principal in loans, the interest on the $18 million while in the fund, the interest generated from the $142 million in loans and the interest earned on the earnings of the fund?

   It appears in this question that you simply want us to do a straight forward calculation of a future value of a known income stream. If so, then of course the only real unknown is the assumed rate of return on the reinvestments. For these calculations we will assume it is 10%, and again we will use the cash flow shown in Attachment I. The results, by year, are given in Attachment III. Although the numbers on Attachment III get rather large, I think it is important to put these values in perspective, since what is really being shown on that table is the effects of compound interest. A more relevant number is the net present value of the appropriations being proposed. Assuming that $18 million is appropriated on July 1, 1985, that the loan portfolio can provide the net cash flow shown in Attachment III, and that 10% is the discount rate, then the net present value of these appropriations as of July 1, 1985 is $117.3 million.

Although no direct question was asked regarding the philosophy behind AIDA's involvement in this project, I believe it to be of paramount importance. We approach this project as an investment, both in needed infrastructure and diversification. We believe that, after some initial state assistance, the project will start generating income for the general fund. Eventually, the project should pay for itself many times over, and quite possibly be a major source of state revenue when other sources have dwindled.

Please let me know if you have further questions.

Sincerely,

Bertram L. Wagnon
Executive Director

Notes

(a) Cash flow figures available only for Dept. of Commerce serviced loans, of $10,473.7 principal balance. Estimate of cash flow of bank serviced loans of $6,221.3 balance assumed to be proportional to relative principal balances, i.e. 6,221.3 / 10,473.7 = .594

(b) Cash flow figures available only for Dept. of Commerce serviced loans, of $1,097.4 principal balance. Estimate of cash flow of bank serviced loans of $1,300.0 balance assumed to be proportional to relative principal balances, i.e. 1,300.0 / 1,097.4 = 1.185

(c) No cash flow figures are included for Fishery Enhancement loans since they were not available. It is expected that any significant cash flows would be well into the future and hence not available during the critical early years.

(d) Net figures are adjusted to take into account estimated delinquency and defaults as well as servicing costs, assuming net figures are 95% of gross figures.

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF COMMERCE & ECONOMIC DEVELOPMENT

OFFICE OF THE COMMISSIONER

POUCH D
JUNEAU, ALASKA 99811
PHONE: 465-2500

April 8, 1985

The Honorable Arliss Sturgulewski
Chairman
Senate Committee on Resources
Pouch V
Juneau, Alaska 99811

Dear Senator Sturgulewski:

Re: $142 Million AIDA Transfer

In response to your letter of April 1, 1985, I am providing you with the following requested information.

1. Will the transfer of the $142 million in loans to AIDA affect the personnel requirements of your loan servicing division? In other words, would you anticipate a reduction in staffing?

   There are several factors that are pertinent, assuming the appropriation to AIDA does take place and is effective July 1, 1985.

   (a) AIDA will not service the transferred loans.

   (b) The Division of Accounting and Collections would continue to service the loans after July 1 under contract with AIDA until such time as AIDA and/or the division decide that transfer of servicing to a private bank is appropriate.

   (c) The earliest such a servicing transfer could occur is mid-year FY '86 due to the complexity of the transfer, keeping in mind the transfer may not occur at all if AIDA and the division feel it is not appropriate.

   (d) If the FY '86 budget cuts are as severe as the first draft cut appears, the division may request that AIDA transfer the servicing. If this were to occur, the division would reduce staff after the servicing transfer so that the combined reduction in staff (due to budget cuts and the transfer) would be about 35% - proportionate to the number of loans transferred. Such staff reductions would <u>not</u> free up excess general funds because the

transferred loans would be those that currently generate 100% of our "other funds" (service fees) in the divisions' operating budgets (Division of Acccounting and Collections and the Division of Investments). Therefore, while the appropriation of these loans could result in a reduction in staff, it would not be in "General Fund" funded staff, and the staff reduction would come only after the transfer of servicing, not on the effective date of the appropriation.

2. If these loans were transferred to AIDA, do you anticipate that the loan repayment or servicing policies would change?

   No, both organizations expect repayment on a timely basis.

3. What would be the effect on the borrowers if these loans were transferred to another agency?

   While servicing remains under the Division of Accounting and Collections, the effects would be minimal: prior to the effective date of the appropriation, new loan numbers may be required to allow for accurate accounting to the new investor; this would entail a letter and a new supply of payment cards being sent to the borrower. The effort required of division staff to close out one investor and begin servicing a new investor will be substantial; borrowers may notice a slight decline in the quality and timeliness of service as the division copes with the changes.

   If the servicing itself were transferred to a private bank at some point, the following changes would occur:

   (a) Borrowers would receive another new loan number, another set of payment cards, and a series of letters explaining each step of the servicing transfer;

   (b) Service quality and timeliness may vary.

All impacts to borrowers could be summed up as short-term inconveniences which would occur for six months or so during the transition to a new servicer.

4. How would the loss of future income from these loans (both principal and interest) affect the ability of your loan divisions to provide for the public demand for loans in the various categories? Would you anticipate increased funding requests to the Legislature to meet the public need?

There would be virtually no effect on the loan fund balances.

The cash flow from these loans is remitted to the General Fund (through Division of Treasury) on a monthly basis, net of service fees, late fees, NSF fees and application/assumption fees which are retained by the fund. In the case of veterans and commercial fish, these fees then are appropriated by the Legislature to fund operating efforts in the Division of Accounting and Collections and the Division of Investments.

We would not anticipate increased funding requests in the loans budget to meet public loan demand.

5. Does the loss of income from these loans affect your FY '86 budget loan requests if all principal and interest are transferred on the $142 million as of July 1, 1985?

No, the loss of income to the loan funds will be negligible (See #4).

The operating budgets of the Division of Accounting and Collections and the Division of Investments could be impacted mid-year due to loss of service fees if the servicing is transferred prior to year-end FY '86.

Please let me know if you have further questions.

Sincerely,

Loren H. Lounsbury
Commissioner

The Red Dog Road and Port Project

THE PROPOSAL: Cominco/NANA have formed a joint venture to develop the Red Dog zinc/lead deposit just north of Kotzebue near the mouth of the Noatak River. The deposit is 55 miles from tidewater. With Administration support, Cominco /NANA is pushing the State to build a port facility and road from the deposit to tidewater for transportation to smelters in British Columbia and Japan.

Though majoir components of the plan have changed several times in the last 2 months, the most recent plan is for the State to transfer $142 million of the State's loan portfolio to the Alaska Industrial Development Authority's (AIDA) Economic Development Fund. The loan principal and interest would form collateral for a $175 bond issue for construction of the road and port. Some portion of construction costs would be paid by facilities users over the life of the project.

Until today, an $18 million appropriation to AIDA for the project was in the governor's budget. In February, 1984, the total cost of the project was anticipated at $135 million. That figure increased to $150 million in February, 1985, to $165 million in March, 1985 and $193 million in late March, 1985.

Varying moratoria on repayments, low-interest or no-interest loan terms, term repayment schedules and outright grants have been discussed by state policymakers and Cominco. The value of direct subsidy on the part of the State has varied from $40.1 million in February, 1984 to $65 million in February, 1985 to a high of $90 million in March, 1985.

NANA and Cominco have worked out a detailed agreement covering shared profits, local hire goals, efforts to minimize the adverse impacts of the project on the NANA region, etc.

Once the infrastructure is in place, the State and Cominco/NANA anticipate that other deposits in the area will be exploited as development

costs go down. GCO, Inc. owns rights to the Lik deposit 10 miles from Red Dog, and Cominco has control of the nearby Su deposit.

COST/BENEFIT OF PROJECT: The State projects a 5.3/1 (down from 6.2/1) cost-benefit ratio for the port and road project. (Assumes .60/lb. price for zinc, 15% return on investment for Cominco/NANA, $40.1 million subsidy, $169 million in direct returns to the State in taxes or transfer payment savings.)

"The ratio is high because it appears the project would not be viable without State support. Under the foregoing assumptions, the minimum level of investment the State can make in the project and have any expectation of immediate development is estimated to be $40.1 million. Higher involvement by the State through larger amounts of subsidy will increase expected rates of return to Cominco .... The State could subsidize the project up to $245.0 million and still have a benefit/cost ratio greater than 1 .... If the zinc price is lowered from .60 to .55 per pound (the low side of our estimated future price), the rate of return to Cominco would also fall. At the .55 price, to get the return to Cominco up to 15% the State might have to put up a subsidy of $158.0 million in the project. Because of the lower price, the taxes are also lower; this, coupled with the higher level of subsidy, reduces the benefit/cost ratio to 1.25 in comparison to the 6.2 figure generated by a .60 price." (Red Dog Project Analysis, February, 1984.)

At .63/lb., the project is expected to be viable without state investment. The current price of zinc is .45/lb.; of lead, .19/lb.

OTHER ISSUES: In addition to state sponsorship of the project, a few other issues must be resolved. The road route preferred by Cominco/NANA, the southern route, is less environmentally damaging. However, it runs through the Cape Krusenstern National Monument. The joint venture has applied for a land exchange and right of way from the Dept. of Interior. Congress is considering a bill approving the land exchange.

Just as difficult is the conflict between NANA and the North Slope Borough over jurisdiction over the Red Dog deposit. After ANCSA, the Arctic Slope Native Assoc. formed a borough which included a strip of land (the Red Dog deposit) which now is part of the NANA regional corporation. The borough and regional corporation boundaries should be roughly contiguous, but the processes were completed out of synch with each other and thus the important discrepancy occurred.

Without the tax base represented by the Red Dog mine, a proposed NANA area borough will not have enough revenues to function. Since the disputed area is not populated (and a simple vote cannot be taken), a complicated detachment process is underway. Various technicalities preempt the Legislature from signing off on any agreement until the '86 legislative session. NANA has indicated that if the boundary dispute is not settled, and tax policy is not clear, the mine will not be developed.

COST/BENEFIT OF THE MINE ITSELF: The Red Dog Project Analysis anticipates the following costs and benefits of the mine:

Employment:

Direct:	143 jobs during construction (40% NANA residents) 375 jobs during production (50-75% NANA residents)
Indirect:	92 during construction (23 in NANA villages) 226 during production (106 in villages)

Income:

Direct:	$8.8 million/yr during construction ($3.5 million to NANA residents) $12 million/yr during production ($7.5 million to NANA residents)
Indirect:	$2.3 million/yr during construction ($.575 million/yr in villages) $5.7 million/yr during production ($2.7 million/yr in villages)

Jobs for previously unemployed people:

During Construction: 38-- 12 in villages, 7 outside AK
During Production: 93--51 in villages, 10 outside AK

Tax revenues :

(Corporate income tax and mining license tax, based on probable price of zinc at .60/lb)
Cominco:
$2 million per year through 1992, $8 million in 1993, average $10 million per year through 2008.
NANA:
$2.36 million per year through 1991, $6.68 million after 1991.

Last year's investment tax credit grants the joint venture nearly $15 million in tax breaks through 1994.

ZINC OUTLOOK: Today's zinc price is .45 lb., lead price is .20/lb. The State's analysis of the Red Dog project assumes 20 year real prices for zinc and lead to average .60/lb and .35/lb respectively. Today's low prices are supposedly reflective of low recessionary demand and high supply of metals. Developing technology should bring about some product substitution for lead, little for zinc.

Business Week's 12/17/84 issue featured a cover story, "The Death of Mining." In it, the authors lump zinc and lead in with copper, nickel and moly markets and envision bad times ahead for the long term future. Cominco has reflected worldwide difficulties: it lost $31 million in 1982 and $39 million 1983. Analusts anticipate that lead and zinc demand will increase by 1-2% in the next ten years. The State is assuming a 2.5% increase in demand annually. The article does emphasize that third world mines are coming on line rapidly and are far superior to American mines as far as recovery technology goes. The Red Dog mne is analogous to a third world mine in this sense, except that transportation costs as a proportion of production costs are higher (40%) than average (10%).

Brad Tuck of the Institute for Social and Economic Research, wrote a chapter on mining in Alaska Resource Development last year. He anticipates that world metal prices will not increase significantly (prices would have to increase by 35% to reach the probable price of .60/lb in the state analysis). "The State will at best derive only modest revenues from non-fuel mineral and coal development. Annual revenues by the mid 1990s from Red Dog, Eagle, Greens Creek and Quartz Hill will be less than $10 million."

ALASKA PUBLIC INTEREST RESEARCH GROUP
Post Office Box 1093/Anchorage, Alaska 99510/(907) 278-3661

RED DOG ROAD AND PORT FACTSHEET

The Alaska Industrial Development Authority (AIDA) with the support of the Administration, is pushing for an $18 million appropriation to AIDA's Economic Development Fund, along with a commitment of the interest and principal on $142 million of the State's loan portfolio. This commitment will become collateral for a bond issue of $175 million for actual road and port construction.

Over the past year, the estimated cost of the project has risen from $135 million to $193 million, an increase of 42%. The level of direct state subsidy increase from $40.1 milliion to $65 million between February, 1984 and February, 1985. Current options include direct subsidies of up to $90 million. If no appropriation is made, the State will provide a $15 million subsidy to the project through tax breaks already on the books.

When the legislature gave AIDA authority to develop and own projects such as the proposed road and port, it required that AIDA produce a Finance Plan for the legislature and the governor, laying out financing options. AIDA is specifically required to seriously consider those options requiring the least state involvement.

Although the legislature is being pressed to fund the project now, before the money runs out, the conclusions of the Finance Plan will not be available until next August at the earliest. In the meantime, the legislature is considering a $142 million loan appropriation and $175 million bond authorization based on a series of "finance options" assembled in less than 24 hours.

The Alaska Public Interest Research Group feels that the DeLong Mountain Regional Road and Port Facility is a poorly planned project, based on inadequate financial backup and nonexistent investment criteria. Given the State's other pressing needs and declining revenues, the project should not be funded this year.

If the legislature chooses to invest jn the Red Dog road and port project, it should protect Alaskans' interests by:

*Limiting the extent of the State's direct subsidy to the initial appropriation of $18 million;

*Requiring Cominco/NANA and any other future users to repay the principal and interest of a market value state loan from AIDA;

*Requiring Cominco/NANA and any other future users to cover operation and maintenance costs of the project;

*Requiring AIDA to return to the General Fund any toll payments beyond those necessary to repay the debt service and secure outstanding bonds;

*Putting a time limit on the project: if conditions are not met by March 15, 1986, the bond authorization lapses.

Post Office Box 1093/ Anchorage, Alaska 99510/ (907) 278-3661

Proposed Amendments to SB 280

Section 1. (1) (c) Cominco, Ltd. will repay all expenditures (market rate interest and principal) by the State for the project through toll fees paid beginning the year of project completion for the use of facilities constructed as part of the project; (and other payments;)

Section 1. (2) The United States Congress approves the Cape Krusenstern National Monument land exchange between NANA Regional Corporation and the United States Dept. of Interior or a right of way as authorized by Title 11 of ANILCA;

Section 1. (3) NANA Regional Corporation agrees in writing to convey to the Alaska Industrial Development Authority, (at no more than fair market value,) at no cost, land needed for the port and road constructed as part of the DeLong Mountain transportation project and land needed for future expansion of the road and port;

Section 1. (5) the Alaska Industrial Development Authority obtains a ruling from the Internal Revenue Service that all bonds or notes issued under this section will qualify for tax exempt status; (and;)

Section 1. (6) the Alaska Industrial Development Authority establishes a toll schedule for use of facilities constructed as part of the DeLong Mountain transportation project that minimizes the cost to the State of (ensures the greatest return on the state's investment in) the project and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted.

Section 1. (7) the Alaska Industrial Development Authority ensures that Cominco and any other future users will pay all operation and maintenance of facilities constructed as part of the project, on a pro rata basis;

Section 1. (8) the Alaska Industrial Development Authority agrees to limit the present value of the direct subsidy to the project to $18 million;

Section 1. (9) the Alaska Industrial Development Authority agrees to turn over any funds not necessary for bond security or construction of the authorized project to the general fund as they become available;

Section (2). If the Alaska Industrial Development Authority does not issue bonds for the project by March 15th, 1986, this bond authorization lapses.

BILL SHEFFIELD
GOVERNOR

HB109

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 23, 1985

The Honorable Ben Grussendorf
Speaker of the House
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Grussendorf:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to interest rates on and handling repayment of state loans. The bill establishes a fixed, market-tied interest rate for the commercial fisheries, fisheries enhancement, veterans', mining, child care, bulk fuel, alternative technology, residential energy, and historical district loan programs. The rate is based on the United States Treasury rate plus an administrative fee and a subsidy, with an adjustment for risk. The bill also provides that principal repayments on these loans will be returned to the loan funds. Income from the loans, including interest, administrative fees, late fees, and service charges to investors, is paid to the general fund.

Sincerely,

Bill Sheffield

STATE LOAN PROGRAMS
(Relating to Interest Rates and Handling
Repayment of State Loans)

LOAN BUDGET

$3,400.0 In FY '86, $3,400.0 in collected interest payments would be deposited into the Commercial Fishing Loan Fund (AS 16.10.300-.370) used to make new loans. As a result of this bill, interest payments will now be deposited into the General Fund and must be appropriated back to the Commercial Fishing Loan Fund. This procedure removes the question of the constitutionality of dedicated funds, i.e., the direct deposit and use of the interest payments. (See Attorney General Opinion dated November 30, 1982. Subject: The dedicated funds prohibition applied to various funds and accounts. Our file numbers J66-785-81 and J66-649-80.)

$549.0 In the FY '86 Loan Budget, $549.0 in collected interest payments was to be deposited into the Alternative Technology and Energy Revolving Loan Fund (AS 45.88.010- .500) and used to make new loans. As a result of this bill, interest payments will now be deposited into the General Fund and must be appropriated back to the Alternative Technology and Energy Revolving Loan Fund in order to meet the budgeted demand for new loans. This procedure also removes the question of the constitutionality of dedicated funds (see the discussion above).

The remaining loan programs administered by the department would accumulate $1,417.8 in interest payments in FY '86. These programs include the Residential Energy Conservation, Mining, Historical District, Fisheries Enhancement, Child Care and Bulk Fuel loan programs.

Since it is not anticipated that these amounts would be necessary to make new loans under the programs, only the amounts shown for the Commercial Fishing Loan and Alternative Energy Loan programs may be requested for appropriation back to the department in FY '86. Interest from the other loan programs would remain in the General Fund. If utilized, this treatment of the funds would result in a net <u>increase</u> in General Fund revenues of $1,417.8 in FY '86, in addition to the new revenues generated through market-tied interest rates. At such time as the interest payment becomes necessary to make new loans, requests for reappropriation from the General Fund would be made on an annual basis.

0872W113084d

OPERATING BUDGET HB 109 p 3 of 5

#1

$68.6 In the FY '86 Operating Budget request, $68.6 in service fees (late charges, service charges, assumption fees, and mortgage life insurance fees) received under the Veterans' Loan Fund would be appropriated as program receipts to cover the administrative costs involved in processing loan assumptions. As a result of this bill, service fees will now be deposited into the General Fund and will no longer be identified as program receipts. This funding will now be requested as General Funds.

$200.5 In the FY '86 Operating Budget request, $200.5 in service fees (service charges and late fees) received under the Commercial Fishing Loan Program would be appropriated as program receipts to cover the administrative costs involved in making new loans under this program. As a result of this bill, these service fees will now be deposited into the General Fund and will no longer be identified as program receipts. This funding will now be requested as General Funds.

Operating Budget impact is assumed to be constant for FY '87-90.

0872W11584c

TITLE OF INCREMENT/DECREMENT:	AGENCY CONTACT/PHONE NUMBER:
FN Relating to Interest Rates and handling repayment of State loans.	Paul B. Arnoldt, Director 465-2510

DESCRIBE WHY THIS INCREMENT/DECREMENT IS NEEDED AND WHAT IT PURCHASES:

LOAN BUDGET: In FY '86, $3,400.0 in collected interest payments would be deposited into the Commercial Fishing Loan Fund (AS 16.10.300-.370) and used to make new loans. As a result of this bill, interest payments will now be deposited into the General Fund and must be appropriated back to the Commercial Fishing Loan Fund. This procedure removes the question of the constitutionality of dedicated funds, i.e., the direct deposit and use of the interest payments. (See Attorney General Opinion dated November 30, 1982. Subject: The dedicated funds prohibition applied to various funds and accounts. Our file numbers J66-785-81 and J66-649-80.)

In the FY '86 Loan Budget, $549.0 in collected interest payments was to be deposited into the Alternative Technology and Energy Revolving Loan Fund (AS 45.88.010- .500) and used to make new loans. As a result of this bill, interest payments will now be deposited into the General Fund and must be appropriated back to the Alternative Technology and Energy Revolving Loan Fund in order to meet the budgeted demand for new loans. This procedure also removes the question of the constitutionality of dedicated funds (see the discussion above).

The remaining loan programs administered by the department would accumulate $1,417.8 in interest payments in FY '86. These programs include the Residential Energy Conservation, Mining, Historical District, Fisheries Enhancement, Child Care and Bulk Fuel loan programs.

Since it is not anticipated that these amounts would be necessary to make new loans under the programs, only the amounts shown for the Commercial Fishing Loan and Alternative Energy Loan programs may be requested for appropriation back to the department in FY '86. Interest from the other loan programs would remain in the General Fund. If utilized, this

Revision: Please see attached for a summary of revenue impacts by loan fund.
Funding: The portion of this BRU's operating expenses formerly funded by restricted interagency receipts (budgeted VRLF service fees) must be funded by the general fund since this legislation will cause these service fees to be deposited into the general fund.

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF COMMERCE & ECONOMIC DEVELOPMENT

POUCH D
JUNEAU, ALASKA 99811
PHONE: 465-2500

OFFICE OF THE COMMISSIONER

March 27, 1985

Honorable John Sund, Chairman
House Special Committee on State Loans
Pouch V
Juneau, Alaska 99811

Dear Representative Sund:

I would like to encourage your favorable consideration of HB 109 which establishes a market-tied interest rate for loan programs within the Department of Commerce and Economic Development.

At the time the various loan programs were established, the Legislature set the interest rates at or near the market rate. Over time, the statutorily set interest rates for most programs have changed very little while the market rates have risen considerably. HB 109 would provide a way of returning to the policy that was intended at the inception of each loan program, i.e., set the interest rate in some relation to the market and maintain that relationship through time by tying the rate to the market. In other words, a greater or lesser subsidy can be provided for any given loan program, according to social need, but the amount of the subsidy will remain static rather than having the interest rate remain static.

Besides providing a reasoned approach to financial management, an additional benefit will derive from a market-tied interest rate. The market-tied rate should even out the fluctuations in demand for certain loan programs. A rising market interest rate won't create an increased subsidy and, consequently, increased pressure on loan programs. This will stabilize the loan programs and facilitate planning for budgeting and administration of the programs.

HB 109 contains two further provisions which are important to financial management. The first is the authority to charge an administrative fee (the fee is built into the interest rate formula). This fee will eventually work so that the beneficiaries of loans will pay the administrative costs of the program. An average of 1,338 new loans are made each year. Currently, all residents of the State must assume the administrative costs for the recipients of these loans. An administrative fee represents a fair cost of business for loan recipients.

Secondly, HB 109 provides that only the principal from loan repayments returns to the loan fund to provide capital for new loans. The interest earnings are deposited in the general fund, providing additional income to the State. The revised language complies with concerns over dedicated funds. This will require the department to seek general fund appropriations rather than program receipts in order to meet projected loan demand. In addition, our operating budget will be funded solely by general fund appropriations rather than partly by program receipts. While the net effect of these two provisions is zero, it is critical that the fiscal note be passed with the bill so that the department will have the operating resources to administer the programs and loan funds to satisfy loan demand.

With the adoption of HB 109, the State would have a program that provides a source of funds for certain kinds of loans, subsidized according to social need, and bears some relation to market trends. I ask your careful consideration of this bill and will make myself available to answer your questions and concerns.

Sincerely,

F. Terry Elder
Deputy Commissioner

March 1, 1985

The Honorable John Sund, Chairman
House Special Committee on Loans
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Sund:

In follow-up to this department's testimony on HB 109 (market-tied interest rates), I would like to provide the House Special Committee on Loans with the following historical information relating to interest rates. This data should assist the committee in determining the subsidies that should be assigned to the market-tied interest rate formulas contained in HB 109.

For each of the loan programs affected by HB 109, I have identified the date and interest rate that was in effect when the loan program first became law as well as each time the interest rate was amended by the Legislature. This information is listed under the headings of Effective Date and Statutory Rate.

Under the heading of Average Loan Term, I have indicated the average length of time that loans are made for each of the loan programs. This information is necessary so that the committee can see what the corresponding market-tied interest rate would have been for a comparable loan term. The figures contained under the heading of Market-tied Rate is the six-month average interest rate that would have been calculated under HB 109. This figure does not include any adjustments for administrative fees, risks or subsidies as provided for under HB 109.

LOAN PROGRAM	EFFECTIVE DATE	STATUTORY RATE	AVERAGE LOAN TERM	MARKET-TIED RATE

Veterans' Loans	4-08-65	5.00%	10 yrs 20 yrs 30 yrs	4.17% 4.18% 4.19%
	10-07-67	6.00%	10 yrs 20 yrs 30 yrs	4.91% 4.88% 4.86%

LOAN PROGRAM	EFFECTIVE DATE	STATUTORY RATE	AVERAGE LOAN TERM	MARKET-TIED RATE
Veterans' Loans Continued				
	5-07-69	8.00%	10 yrs	5.90%
			20 yrs	5.86%
			30 yrs	5.83%
	5-27-71	Federal VA Rate (7% as of 5-27-71)	10 yrs	6.24%
			20 yrs	6.19%
			30 yrs	6.19%
	6-01-79	9.50%	10 yrs	9.13%
			20 yrs	9.05%
			30 yrs	9.02%

Please remember that under the fisheries enhancement loan program there is forgiveness of interest and deferment of principal for between six and ten years. Under the mining loan program, principal is deferred until the end of the second mining season and under the bulk fuel loan program, by regulation, no interest is charged on the first loan, 5.00% is charged on the second loan, and a market rate is charged on the third and subsequent loans. These factors should be considered when establishing the subsidy under the market-tied interest rate formulas.

If I can be of further assistance to the committee regarding HB 109, please let me know.

Sincerely,

Paul B. Arnoldt
Director

Department of Commerce & Economic Development / POSITION PAPER

1983 — 1984 — ADMINISTRATION LEVEL 3% HYDRO (PROVIDE 1985)

HB 109: An Act relating to interest rates on and handling repayment of State loans; and providing for an effective date.

SEC. 23 OF THE BILL

ACTIVE

ADMINISTRATION

Department Position: Support

This bill would allow the State to fix the amount of subsidy that would be offered through the following loan programs: Commercial Fishing, Fisheries Enhancement, Veterans, Mining, Child Care, Bulk Fuel, Alternative Technology and Energy, Residential Energy Conservation, Historical District and Fishermen's Mortgage and Note. INACTIVE House Bill number 109 accomplishes this by tying the interest rate charged under these programs to the rates prevailing in the marketplace at a given time. In so doing, the subsidy would remain constant regardless of the movements of the market rates.

The United States treasury rate was selected as the standard because:

1. it is the rate most commonly used in the financial industry as the benchmark by which risk is evaluated;

2. the rates are readily available from the federal government; and

3. the varying terms of the U.S. treasury rates can easily be matched to the terms of the loans made under the various loan programs.

This bill also provides that the repayments of interest, service charges, late fees, assumption fees and administrative fees from these loan programs be paid over to the Department of Revenue for deposit in the General Fund. The Legislature may then appropriate, from the General Fund, an amount to the Department of Commerce and Economic Development to fund operating expenses of the loan programs. This procedure avoids problems from the constitutional prohibition against dedicated funds.

Loren H. Lounsbury, Commissioner

Date: 2/7/85

1493m/020585a

SECTIONAL ANALYSIS -- HB 109
DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT

INTEREST RATES VALUES OVER TIME

Section 1.

This section would replace the current fixed interest rate of 10.5 percent for loans under the Commercial Fishing Loan Act, AS 16.10.300-16.10.370, with an interest rate that is established at the time the loan is made. The new interest rate would be based on a six-month average for U.S. Treasury bills of comparable duration and adjusted for risk, administration cost and the subsidy provided by the State. Interest rates would not change during the term of the loan. Existing loans would not be affected.

The proposed language represents an effort to introduce two important concepts to the administration of State loan programs. First, interest on State loans would vary with overall lending market rates. The degree of subsidy offered by the State through the affected loan programs, in this case, the commercial fishing loan program, would not depend on the interest rates prevailing in the marketplace at a given time. Rather, the subsidy, in the form of reduced interest rates, would remain constant to the borrower at 300 basis points or three percentage points. Second, the proposed change reflects an effort to quantify the risk to the State in making loans under the various programs, the cost of administration and the total State subsidy. Should any of these measures change over time, or if the Legislature should want to change the degree of subsidy, this can easily be accomplished. The department intends to use monthly averages of interest rates for U.S. Treasury securities of from one to thirty years' duration, updated weekly in a publication of the Federal Reserve System, "Selected Interest Rates." Interest rates for loan terms not reflected in this data would be interpolated from the nearest two figures available. An example of this monthly calculation and its effect on a typical commercial fishing loan is attached.

Section 2.

For fishermen who apply jointly under the commercial fishing loan program for a gear or vessel loan, this section would conform the language to the changes made in Section 1 (Market-Tied Interest Rates). It is identical in scope and effect to that section.

Section 3.

The second major change proposed by the bill is shown in this section. The new language provides that repayment of principal under the Commercial Fishing Loans Act will be made to the fund established for that purpose but interest, service charges, late fees, assumption fees and administrative fees will be paid over to the Department of Revenue for deposit in the General Fund. The Legislature may then appropriate

from the General Fund an amount to the Department of Commerce and Economic Development to fund operating expenses of the loan programs. The procedure avoids problems from the constitutional prohibition against dedicated funds. See the opinion of the Attorney General dated November 30, 1982.

Section 4.

The section is identical to Section 1 (Market-Tied Interest Rates) but the changes are made to the Fisheries Enhancement Loan Program, AS 16.10-500 - 16.10.620. The present interest rate for loans under this program is 9.5 percent.

Section 5.

The section is identical to Section 3 (General Fund Deposits) but the changes are made to the Fisheries Enhancement Loan Program, AS 16.10.500 - 16.10.620.

Sections 6, 7 & 9.

The changes proposed in these sections are identical to those proposed in Section 1 (Market-Tied Interest Rates) but are made to the Veterans' Loan programs, AS 26.15.010 - 26.15.170. The present interest rate is 9.5 percent.

Sections 8 & 10.

These sections are identical in effect to Section 3 (General Fund Deposits) but the changes are made to the Veterans' Loan programs, AS 26.15.010 - 26.15.170.

Section 11.

The section is identical to Section 3 (General Fund Deposits) but the changes are made to the Mining Loan program, AS 27.09.010 - 27.09.060.

Section 12.

The section is identical to Section 1 (Market-Tied Interest Rates) but the changes are made to the Mining Loan program, AS 27.09.010 - 27.09.060. The present interest rate is 9.5 percent.

Section 13.

The section clarifies that the Child Care Facility Revolving Loan Fund, AS 44.33.240 - 44.33.275, consists of legislative appropriations and repaid principal amounts and that these funds do not lapse at the end of a fiscal year.

Section 14.

The section is identical to Sections 1 (Market-Tied Interest Rates) and 3 (General Fund Deposits) but the changes are made to the Child Care Facility Revolving Loan Fund, AS 44.33.240 - 44.33.275. The present interest rate is 7 percent.

Section 15.

The section is generally these same in effect as Section 1 (Market-Tied Interest Rates) but the changes are made to the Bulk Fuel Revolving Loan program, AS 45.87.010 - 45.87.500. The present interest rates under this program are tied to an average of municipal bond yields. The change, therefore, is largely for the purposes of uniformity. The average of the municipal bond yields is presently 10.52 percent. The commissioner retains the authority to reduce or eliminate interest charges for communities facing hardship.

The section also includes the changes with regard to principal and other repayments found in Section 3 (General Fund Deposits).

Section 16.

The section is identical to Section 3 (General Fund Deposits) but the changes are made to the Alternative Technology and Energy program, AS 45.88.010 - 45.88.500.

Section 17.

The section is identical to Section 1 (Market-Tied Interest Rates) but the changes are made to the Alternative Technology and Energy program, AS 45.88.010 - 45.88.500.

Section 18.

The section is generally the same in effect as Section 1 (Market-Tied Interest Rates) but the changes are made to the Residential Energy Conservation Loan program AS 45.89.010 - 45.89.500. As in the case of the Bulk Fuel Revolving Loan program, the interest rates under this program are tied to an average of municipal bond yields. Presently that rate is 10.52 percent. Again, the change is largely for the purposes of uniformity.

Section 19.

The section is identical to Section 3 (General Fund Deposits) but the changes are made to the Residential Energy Conservation Fund program, AS 45.89.010 - 45.89.500.

Section 20.

The section includes provisions identical to those contained in Section 3 (General Fund Deposits) but the changes are made to the Historical District Loan Fund, AS 45.98.010 - 45.98.070. Language clarifying that the fund consists of legislative appropriations and repayments of principal is included.

Section 21.

The section is identical to Section 1 (Market-Tied Interest Rates) but the changes are made to the Historical District Loan Fund, AS 45.98.010 - 45.98.070. The present interest rate is 7.5 percent.

Section 22.

This section would replace the present fixed interest rate assessed as a penalty for inconsistent use of historical district loan funds with the proposed new flexible interest rate and provide that the penalty would consist of removal of the State subsidy for such loans. The present interest rate is fixed as 10.5 percent by AS 45.45.010.

Section 23.

The section is identical to Section 3 (General Fund Deposits) but the changes are made to the Fisherman's Mortgage and Note program, formerly AS 16.10.650 - 16.10.720. This program was repealed in 1982 so no new loans are being made. Repayments under existing loan continue.

Section 24.

The effective date for this legislation is proposed for July 1, 1985, the beginning of the new fiscal year.

Re: The dedicated funds prohibition applied to various funds and accounts. Our Files Nos. J~~66-785-81~~ and J66-649-80

Dear Mr. Wilkerson and Commissioner Burger:

You have both asked for a broad review of the application of the constitutional dedicated funds prohibition to various state funds and accounts. Alaska Const. art. IX, § 7. Because of the factual complexities presented by the various funds, accounts, and appropriations and because of the paucity of judicial precedent, we are not able to advise you with absolute certainty regarding the constitutionality of state practices. However, some of the issues raised by your request may be resolved in litigation which is now pending concerning the administration of

certain appropriations and funds by the Alaska Power Authority. 1/

In response to your request, we have identified and analyzed several categories of funds, accounts, and transactions which raise dedication questions. Our approach in dealing with these questions will be to first discuss the purpose and meaning of the dedication prohibition. We will then focus on the implications of a recent Alaska Supreme Court case that deals specifically with the dedicated funds prohibition. Next we will consider the probable legal status of several general categories of funds, accounts, and appropriations which raise dedication questions. Lastly, we will consider the dedication prohibition in reference to specific funds and appropriations.

We should point out that the advice given in this opinion could have a significant effect upon the state budget. This results from the recent adoption of Article IX, section 16 of the Alaska Constitution (the spending limit). Under the reasoning of this opinion, it may be that income earned by a loan fund or public enterprise must be appropriated to that fund or

---

1/ The legal issues in this litigation are the validity of the deposit of interest and principal payments on loans in a revolving loan fund and of the appropriation to the Power Development Fund of interest to be received on specific amounts appropriated to that fund (§ 1 ch. 90, SLA 1981 as reenacted by § 69 ch. 69 SLA, 1981 and amended by § 236 ch. 141, SLA 1982.). Trustees for Alaska, et al. v. State of Alaska and Alaska Power Authority, No. 3AN-492-82 Civ. (Alaska Super., Jan. 21, 1982)

enterprise if that income is to be retained by it. If the Alaska Supreme Court adopt that reasoning, the necessity for these appropriations would have to be considered by the administration and the legislature in developing a state budget which conformed to the spending limit. This concern would also become important if independent authorities for operation of entities like the State Ferry System or the Alaska Railroad were to be considered.

I. THE PURPOSE OF THE PROHIBITION

Article IX, Section 7 provides:

> DEDICATED FUNDS. The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article [establishing the Permanent Fund] or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

There are essentially two views of the meaning of this provision. Under the first interpretation the dedicated funds prohibition would require that every dollar received by the state be deposited and remain unrestricted in the general fund until it is withdrawn pursuant to an appropriation authorizing the expenditure of a specific dollar amount for a specific pur-

pose (absent a contrary federal requirement or a statutory dedication which existed prior to ratification of the Constitution). This is known as the strict interpretation view.

Under the strict view, the phrase "proceeds of any state tax or license" would encompass every dollar paid to the state (or to a public corporation or authority established by the state) for whatever purpose. State loan repayments (both principal and interest), enterprise receipts (e.g., airport lease revenues, parking garage receipts, etc.), program receipts (e.g., Ferry System ticket sales, University of Alaska tuition receipts, etc.), as well as all other revenues (e.g., taxes, natural resource revenues such as royalties, etc.), would be required to be deposited in the state treasury and retained there until the expenditure is authorized by appropriation of a specific dollar amount.

An argument can certainly be made that this is the proper interpretation of the dedicated funds prohibition. As set out in 1975 Op. Atty. Gen. No. 9 at 2 (Alaska May 2, 1974), "Section 7 of Article IX had two interrelated purposes: (1) to prevent any future dedication of revenues for special purposes [i.e., 'earmarking'] and (2) to prevent the creation of new special funds separate from the general fund." The rationale underlying each of these two purposes is "that the widespread existence of dedicated revenues lodged in special funds deprives

both the governor and the legislature of 'any real control over the finances of the state.'" Id. at 3 (citation omitted). Requiring all monies received by the state to be deposited into the general fund clearly would satisfy both interrelated purposes of the prohibition. The strict interpretation view of the dedication prohibition would preclude the use of public monies to establish a standing or revolving loan fund or any other program which would be self-sustaining. 2/

However, a second approach in interpreting the meaning of Article IX, section 7 is also very plausible. Under this view, the dedication prohibition is not to be construed to require a blanket prohibition of self-sustaining programs set up by the legislature. As noted in 1975 Op. Atty. Gen. No. 9 at 6-8 (Alaska, May 2, 1975), the constitutional framers substituted the phrase "[t]he proceeds of any state tax or license" for the phrase "[a]ll public revenues" to avoid having to state a number of intended exceptions to the prohibition on dedicated funds. Examples of these exceptions were pointed out in a January 4, 1956, 3/ memorandum by the Public Administration Service (PAS) to

---

2/ Of course, even under the strict view, there would be some kinds of monies received by the state which it could not, for independent legal reasons, deposit into the general fund. These monies would include trust funds, restricted gifts, and funds subject to restrictions by contract.

3/ The actual date shown on the memorandum is "January 4, 1955". However, considering the timing of the constitutional convention, this was certainly a typographical error.

the Constitutional Convention: "pension contributions, proceeds from bond issues, sinking fund receipts, revolving fund receipts, contributions from local government units for state-local cooperative programs, and tax receipts which the state might collect on behalf of local government units." 4/

Some of those examples were specifically mentioned by the court in State v. Alex, 646 P.2d 203 (Alaska 1982), which held that the phrase "proceeds of any state tax or license" was to be broadly construed to include all sources of public revenues. The court noted that the drafters intended to permit the establishment of certain special funds, (e.g., sinking funds for the repayment of bonds), but to prohibit the earmarking of any special tax to such a fund. Alex, supra at 210. The court did not elaborate on the application of the dedicated funds prohibition in these situations.

4/ The Public Administration Service prepared a publication entitled "Alaska Statehood Commission, Constitutional Studies (1955)" at the request of the Alaska Territorial Legislature for use at the constitutional convention. Ch 108 SLA 1949. This publication collected research papers on other state constitutions. Copies were mailed to all delegates, and it was often referred to in the convention proceedings. Alaska Statehood Committee, "Handbook for Delegates to the Alaska Constitutional Convention" 4 (1955). Referred to in State v. Alex, 646 P.2d 203, 209 n. 5 (Alaska 1982). The memorandum of January 4, 1956 contained comments by the PAS on the proposed draft of the Finance and Taxation article. Constitutional Convention Finance Committee minutes, Jan. 13, 1956.

II. MEANING OF THE PHRASE "PROCEEDS OF ANY STATE TAX OR LICENSE"

There has been continuing controversy over the proper construction of the phrase "proceeds of any state tax or license." In a number of earlier opinions, this office concluded that the dedicated fund prohibition did not reach all public revenues but, under its plain language, only the actual "proceeds of any state tax or license." See 1969 Op. Atty. Gen. Nos. 3 (Alaska, April 4, 1969) and 5 (Alaska, April 15, 1969); and 1959 Op. Atty. Gen No. 7 (Alaska, March 11, 1959). This conclusion also was reached by the Division of Legal Services in the Legislative Affairs Agency. See September 1, 1977 memorandum from Bill G. Berrier, Director, to Subcommittee on Alaska Renewable Resources Development Fund of Alaska Permanent Fund (House).

Those opinions all concluded that the prohibition did not reach revenues derived from the disposal of state-owned natural resources. Given this conclusion, it followed that the legislature was free to dedicate all or a certain portion of such revenues to specific purposes. An example of this is found in AS 37.11.020, which requires that not less than five percent of state mineral lease receipts be deposited in the Alaska Renewable Resources Development Fund. (This statutory dedication was the subject of Mr. Berrier's September 1, 1977, memorandum).

On the other hand, 1975 Op. Atty. Gen. No. 9 at 24 (Alaska, May 2, 1975) reached the opposite conclusion:

> Section 7 of Article IX of the state Constitution can be given its intended effect and serve its repeatedly expressed purpose only if the words "proceeds of any tax or license" are interpreted to mean what their framers clearly intended, i.e., the sources of any public revenues.
>
> Accordingly, it is our conclusion that the dedication of any source of public revenue: tax, license, rental, sale, bonus-royalty, royalty, or whatever is limited by the state Constitution to those existing when the Constitution was ratified or required for participation in federal programs.

(Emphasis added.)

In State v. Alex, 646 P.2d at 210, the Alaska Supreme Court adopted the position set out in 1975 Op. Atty. Gen. No. 9 (Alaska, May 2, 1975). 5/ It now is clear that the term "proceeds of any state tax or license" is to be construed broadly to reach all public revenues, including public revenues from the development of state-owned natural resources, and not just the proceeds of taxes and license fees.

5/ Alex involved a challenge by commercial fishermen to the collection by a private aquaculture association of a special assessment authorized by statute and imposed on the sale of salmon. The court held that the statute improperly delegated the legislature's taxing authority, and that the assessment constituted "proceeds of a state tax or license" within the meaning of Article IX, section 7. State v. Alex, 646 P.2d at 210, 213.

After the decision in Alex we can now reach some definite conclusions regarding some of the funds and accounts you have asked us to review. The answers to other questions, however, are not as clear.

III. IMPLICATIONS OF THE ALEX DECISION

There is no question that the dedicated funds prohibition in Article IX, section 7 flatly prohibits the legislature from dedicating future unrestricted general revenues to any particular purpose unless the dedication is required for participation in a federal program or the dedication existed before ratification of the Constitution. Alex, supra at 208-210. This confirms the view expressed in our April 1, 1981 memorandum opinion to the legislative auditor that the requirement in AS 37.11.020 that not less than five percent of state mineral revenues be placed in the Alaska renewable resources development fund is unconstitutional. This would be true of any statutory requirement that a specified percentage of revenues derived from the development of state-owned resources be deposited in a fund or earmarked for a particular purpose.

The Alex decision, however, does not provide answers to a number of additional questions. For example, does the dedicated funds prohibition apply (1) to money received through the sale of bonds (either general obligation bonds of the state or

revenue bonds of a public corporation); (2) to receipts from operation of facilities constructed with bond proceeds; or (3) to interest or investment income earned on money appropriated for a specific purpose? In short, are there any exceptions to the prohibition beyond those expressly set out in the Constitution? The section immediately following discusses this question.

IV. POSSIBLE EXCEPTIONS TO THE DEDICATED FUND PROHIBITION

A. Implied Exceptions.

An early draft of what is now Article IX, section 7 (but which was at that time numbered section 8) read as follows: "All public revenues shall be deposited in the state treasury . . ." Subsequent to this early draft, the Committee on Finance and Taxation of the Constitutional Convention requested comments from the Public Administration Service on this wording. The PAS responded with the January 4, 1956 memorandum in which it warned that a strict interpretation of section 7 (then section 8) would prohibit the segregation of state money without regard to the source. The PAS then suggested that certain exceptions be identified in section 7. These exceptions included pension contributions, proceeds from bond issues, sinking fund receipts, revolving fund receipts, contributions from local government units for state-local cooperative programs, and tax receipts

which the state might collect on behalf of local government units.

After considering the PAS memorandum, the committee deleted the phrase "all public revenues shall be deposited ..." and substituted the phrase "The proceeds of any state tax or license ...". 3 Alaska Const. Conv. Proceed. at 2361. The record of the committee debate makes it clear that the purpose of this change was to meet the problems raised by the PAS in its January 4 memorandum. See 1975 Op. Atty. Gen. No. 9 at 8 (Alaska, May 2, 1975).

Given this drafting history, a very good case can be made that the resent language of Article IX, section 7 must be read to include certain implied exceptions, such as those that are set out in the January 4 PAS memorandum, i.e., pension contributions, proceeds from bond issues, sinking fund receipts, revolving fund receipts, contributions from local government units for state-local cooperative programs, and tax receipts which the state might collect on behalf of local government units. We believe this implied exception approach is the better interpretation of the dedicated fund prohibition and would be adopted by the Alaska Supreme Court if the question is presented to it.

B. Dedication of Money to Specific Purposes on a Continuing Basis When Appropriated

A question of the proper application of the dedicated funds prohibition arises when money is appropriated to a revolving loan fund or other special reserve fund or account. Revolving loan funds provide for the return to the fund of repayments by borrowers of the principal (and frequently the interest on that principal) 6/ which was loaned to them from the fund so that new loans can be made on a continuing basis. Special reserve funds involve essentially the setting aside of money for certain specified future needs or conditions which may or may not occur. 7/ When this is done, it might be argued that the legislature has made an impermissible dedication with respect to the future use of the money placed in those funds and accounts.

We believe the better view is that the dedication prohibition does not apply to money once appropriated by the legislature, regardless of whether the appropriation contemplates that the money will be expended. Usually appropriations authorize money to be spent. In other cases, however, the legis-

---

6/ We discuss the dedication of interest earned by revolving loan funds and other separate funds and accounts in the next portion of this opinion which begins below at p. 14.

7/ The "Rainy Day Account," AS 37.05.179, is an example of such an account.

lature may prefer to establish by general law a continuing loan program and finance it through a one-time appropriation or to reserve money in a special fund or account for future use for limited purposes. A strong argument can be made that money once appropriated, regardless of the mechanism utilized, loses its character as revenue for the purpose of the dedicated funds prohibition because the purpose of the prohibition, i.e., that the legislature retain control over state revenues, has been satisfied.

Under this reasoning there would be no unlawful dedication involved in the return to a revolving loan fund of principal payments on loans. The initial appropriation would suffice to authorize the use of that money for other loans until the legislature reappropriates the unobligated assets of the fund or abolishes the fund.

Support for this position is found in the Alaska Supreme Court's analysis in the Alex case. In Alex, the court took note of the drafting change of Article IX, section 7 referred to earlier. This change, said the court, "did not seek to exempt some sources of revenue from the prohibition, but was intended instead to allow necessary dedication of funds once they were received and placed in the general fund." State v. Alex, supra at 210.

The Alaska Supreme Court has thus recognized that the dedication prohibition of Article IX, section 7 does not operate to prohibit all dedications whatever their nature. Rather, the court seems to be saying that Article IX, section 7 must be read to allow certain necessary dedications of money by the legislature after that money is received and placed in the state treasury (i.e., general fund). This analysis by the Supreme Court gives support to the argument that the dedication prohibition does not apply to money once it has been lawfully appropriated from the general fund and that the legislature can, without violating Article IX, section 7, create "necessary dedications" out of that money.

C. Income Generated by Specific Funds or Accounts

A question separate from that just discussed arises concerning the application of the dedicated fund prohibition to the interest or other income earned by money appropriated to revolving funds and other funds and accounts. Is that derivative income revenue which, under the prohibition, must be deposited in the general fund, or may it accrue directly to the fund or account which "earned" it, increasing the amount of money in that fund or account which may be spent without further appropriation?

We are advised by the Department of Administration that the National Committee on Governmental Accounting has defined a fund to be:

> A fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.

Municipal Finance Officers Association of the United States and Canada, "Governmental Accounting, Auditing, and Financial Reporting," 1980, Appendix B.

From the point of view of generally accepted accounting principles, then, income generated by a fund accrues to that fund unless a transfer is authorized. Economic theory also leads to that result, arguing that the interest or investment income on a particular fund is simply an increase in the value of the fund which offsets inflation and reflects the gradual growth of our economy. Under either approach, such derivative income ought not to be considered revenue subject to the dedicated funds prohibition.

Derivative income such as interest and investment income is not a traditional source of public revenue. It is generated by public revenue which has been received and appropriated and would not be generated if the legislature had

simply spent the money rather than appropriated it to a separate fund. Thus, a statutory dedication of the interest or investment income of a separate fund would not impair the ability of future legislatures to control the spending of general revenues. Rather, it would create a new pool of resources to be used under the statutory guidelines applicable to a particular fund until a future legislature amended or repealed those guidelines. There is no indication in the minutes of the Constitutional Convention that the drafters considered the treatment of separate funds which are endowed in this manner.

A difficulty that arises from the view that the dedicated funds prohibition is not applicable to interest or investment income on separate funds is that it permits steadily increasing amounts of money to be received and used by state departments and agencies without legislative control through the annual budget process. This is precisely the problem posed by the dedication of revenue sources which the drafters sought to avoid. For this reason, while we are not certain about the likely outcome, we doubt that a blanket exception for derivative income would be approved by the courts.

After all, the Alaska Constitution was not written for accountants and economic theorists. Although not expressly addressed by them, the framers were very much aware of the boom-bust cycle of Alaska's economy. In fact, a driving force

behind statehood was the desire of Alaskans themselves to be able to manage the income derived from those brief periods -- as Prudhoe Bay bears witness -- when the state may receive enormous sums of money which are then immediately available for expenditure or placement, by appropriation, into a variety of funds and accounts for various permissible purposes. Depending on the number and size of those funds and accounts, the interest earned on the money placed in them could itself be substantial and would almost certainly be of a magnitude which is far greater than that likely envisioned by the National Committee on Government Accounting in the above-quoted standard. Moreover, the significance of that interest income in properly managing the state's budget leads us to the conclusion that our framers would have considered it to be within the dedicated fund prohibition. As we have indicated, however, the answer to this question is not free from doubt. Consequently, until the question is ruled on by the courts, we will defend legislative action dedicating, by general law, derivative income to the funds which "earned" them.

In the absence of valid general law dedications of derivative income, we believe there would still be a way to maintain legislative control over revenues through the budgetary process while achieving the efficient accounting organization provided by separate funds. This would be if the legislature appropriated to the separate fund for a fixed period the amount

of interest or investment income received by that fund. Since each legislature has implicit budgetary authority for a maximum period of only two years, this practice would not impair the ability of future legislatures to dispose of those derivative revenues. Under this line of reasoning, the interest on a loan fund or other separate fund is public revenue which must be transferred to the treasury, unless the fund is authorized by appropriation to retain it for a specific period. Although it may be possible to argue in favor of a longer period, our recommendation is that these appropriations of derivative income to the fund which "earns" them be made annually, for each fiscal year.

D. Appropriations Stated in General Terms, Rather than Specific Amounts.

The annual budget has traditionally included certain appropriations not stated in specific dollar amounts but rather in terms of money to be received from certain sources during the fiscal year. Such an appropriation, for example, would authorize the risk management division of the Department of Administration to spend the anticipated proceeds from any insurance settlement

or judgment arising from the damage or loss of state property. 8/ This practice ensures effective legislative control over state finances while, at the same time, it provides for budgeting flexibility which is especially useful for programs like risk management, the needs of which are necessarily unpredictable.

We have consistently advised that an appropriation is valid if it states a public purpose, has a source, states or implies a time period, and states an amount which is ascertainable by reference to specified information. Under this view a "revolving" loan fund could be established and operated, even if both principal and interest payments on loans are considered to be revenues which may not be dedicated, as long as there is an annual appropriation to the fund of all principal and interest payments received by the fund during the fiscal year. The fund would continue to revolve as long as it was included in the budget.

8/ See, for example, Sec. 7 ch. 113, SLA 1978 which provides:

> Amounts equivalent to the amounts to be received in settlement of insurance claims for property losses are appropriated from the general fund to the affected agency for the purpose of replacing the facility or service lost as a result of the incident giving rise to the insurance claim.

Under this language, the state could undertake immediate repair or reconstruction of a school, maintenance facility, or other property damaged by fire or other cause covered by insurance without having to wait for actual settlement and payment by the insurer.

The practice of appropriating to a separate fund an amount to be ascertained by reference to receipts from a specified source during a definite period accommodates the need and desire of each legislature for budgetary flexibility without impairing the ability of future legislatures to control and dispose of public revenues. In fact, since the legislature maintains control of the appropriation by means of the budget, it could be argued that this practice does not even create a dedication in the first place since a true dedication must function to take control away from the legislature. If legislative control is present, then a dedication does not exist.

We do not think that this practice violates the dedication prohibition.

V. APPLICATION OF DEDICATION PROHIBITION TO SPECIFIC FUNDS, ACCOUNTS AND APPROPRIATIONS

We have identified the following categories of funds, accounts, and appropriations which raise dedicated funds questions.

A. Allocation of a revenue source by statute to a fund or account from which it may be withdrawn only for limited purposes by appropriation.

1. Tobacco Tax (School) Fund (AS 43.50.140). This fund existed before ratification of the Alaska

Constitution and is therefore authorized to continue under Article IX, section 7. This tax and dedication have not been changed, but the legislature has imposed an additional tax on cigarettes which is deposited in the general fund. Although we have issued several opinions on the subject, there has been no judicial review, and it remains unclear to what extent the legislature may change the dedication or the underlying revenue source within the limit of "continuing" the dedication. 9/

2. Fish and Game Fund (AS 16.05.100 et seq.). The dedication of proceeds of fishing and hunting licenses to the operation of a Department of Fish and Game is required by federal law for participation in federal programs and is therefore authorized by Article IX, section 7. See 16 U.S.C. § 669. However, as discussed earlier, it is not clear whether a dedication of interest

---

9/ See Atty. Gen. Op. Nos. 7, 9, and 14; inf. memo (Alaska, March 10, 1966); Atty. Gen. Op. No. 22 (Alaska, June 2, 1978); inf. memo (June 30, 1981).

earned on investments in a fund such as that made by AS 16.05.110(5) is constitutional.

3. Reserves for Capital Outlay (AS 37.05.157) and Energy Facilities Development (AS 37.05.158).

By statute there is allocated to each of these accounts a fixed percentage of annual receipts from minerals on state land. Both of these funds appear to be unconstitutional dedications to the extent that they restrict the purpose for which money may be spent. We are informed that the Department of Administration has recorded the amounts to be allocated to each account but has not retained that money for expenditures related to capital outlay or energy facilities development. We also understand that the legislature has not made any appropriations from these two accounts. We suggest that AS 37.05.157 and AS 37.05.158 be repealed.

4. Renewable Resources Fund (AS 37.11.010-090). As we advised in our 1975 Attorney General Opinion No. 9, this statutory dedication is unconstitutional. We understand that the Department of Administration has followed our advice and has disregarded AS 37.11.010-090. We suggest that these statutes be repealed.

B. Allocation by Statute of Revenue to a Fund or Account From Which it may be Spent or Used Without Further Appropriation.

1. Public Employees Retirement System Fund (AS 39.35)

This fund receives money from employees and employers who participate in the system. State employer contributions are paid to the fund monthly. AS 39.35.280. State employee contributions are statutorily required to be withheld from wages and transferred to the funds. AS 39.39.170. Participating political subdivisions make similar contributions on behalf of their employees. Benefits are paid to members of the retirement systems according to statute AS 39.35.370 et seq. Expenses of administering the system are also paid from the fund but are specifically required by statute to be included in the annual operating budget. AS 39.35.100(b)(4). The Teacher's Retirement System is accounted for in the same manner.

Although this is clearly a dedication of money received by the state, we believe that it is permissible under the implied exception theory

discussed earlier. It is our opinion that there is an implied exception to the dedicated funds prohibition for pension fund contributions. 10/

2. International Airport Funds (AS 37.15.420, 430, 440)

The fund established under AS 37.15.420 contains money received from the sale of general obligation bonds for airport improvements and other grants or money provided for the same purpose for which the bonds were authorized. The fund established under AS 37.15.430 contains revenues received by the state from ownership and operation of its airports. The fund established under AS 37.15.440 contains interest earned on money in the section 420 fund and revenues transferred from the section 430 fund for the purpose of redeeming airport revenue bonds.

Although each fund provides for a dedication of state revenue, we believe that they are permissible under the implied exception theory discussed earlier at pp. 5 and 6. It is our opinion that there is an implied exception to the

10/ The constitutional provision for state employee retirement systems supports such an implied exception. Alaska Constitution, Article XII, section 7.

dedicated funds prohibition for revenue derived from bond issues and for revenue derived from facilities constructed with bond proceeds, at least to the extent that it is necessary to satisfy the debt obligation or maintain the facility so that it continues to generate revenues for that purpose. To the extent that revenues are dedicated for purposes which are not related to satisfying the debt or maintaining the facility 11/, we believe that dedication would

---

11/ AS 37.15.430(a) authorizes use of funds dedicated to the International Airport Revenue Fund for six purposes providing, in pertinent part, as follows:

> The money in the revenue fund shall only be used for the purpose of paying or securing the payment of the principal of and interest on the bonds and of and on any other revenue bonds issued by authorization of the legislature to provide funds to acquire, equip, construct and install additions and improvements to, and extensions of and facilities for, the airports and to be payable out of the revenue fund, the purpose of paying the normal and necessary costs of maintaining and operating the airports and all of the improvements and facilities of them, the purpose of paying the costs of renewals, replacements and extraordinary repairs to the airports and all of the improvements and facilities of them, the purpose of redeeming before their fixed maturies any and all revenue bonds issued for the purposes of the airports, the purpose of providing funds to acquire, construct and install necessary additions and improvements to and extensions of and facilities for the airports and all of their facilities, and the purpose of providing funds to pay any and all other costs relating to the ownership, use and operation of the airports.

violate Article IX, section 7 unless it either existed prior to ratification of our Constitution or is required by federal law. 12/

3. Continuing Debt Service Appropriation (AS 37.15-.012)

This statute purports to create a continuing annual appropriation from the general fund of the amount necessary to pay debt service on all outstanding general obligation bonds. This may be a dedication of revenues for a specific purpose. 13/ Even if it is, it is our opinion that there would be an implied exception to the dedicated fund prohibition for bond obligations.

4. Rural Electrification Revolving Loan Fund (AS 44-.83.361)

This fund received an initial appropriation from which the Alaska Power Authority is authorized to make loans. Principal and interest

---

12/ A dedication of airport revenues did exist prior to ratification. § 32-3A-15 ACLA 1949. However, it was repealed in 1968 by § 2 ch. 14, SLA 1968. On the other hand, it may be that 49 U.S.C. § 1718, adopted in 1970 and amended in 1982 by Section 511 of the Tax Equity and Fiscal Responsibility Act of 1982, P.L. 97-760, would be interpreted to require dedication of all airport revenues to construction, maintenance and operation of airports.

13/ Our uncertainty on this point arises from the fact that the statute does not purport to dedicate a particular revenue source.

payments on loans made from the fund are required by law to return to the fund. As we pointed out above, at n. 1, the questions of whether the principal and/or interest payments are revenues which may not be dedicated in this manner is now a matter in litigation in a suit filed by the Trustees for Alaska.

We will be defending the legislature's action in making both those dedications. In doing so, we will present in more detail a number of the arguments discussed above in support of the legislature's action. In addition, we will discuss the presumption of constitutionality of statutes and the deference due to the administrative and legislative interpretation of the dedicated funds prohibition. As indicated above, we believe that the return of principal payments to a loan fund does not offend the Constitution and that the return of interest payments to the loan fund may be permissible. However, we cannot predict with certainty the position that the court will adopt.

C. Appropriation of an amount from a specific revenue source (e.g., program receipts).

From time to time the legislature, by means of an annual operating budget appropriation, authorizes an agency to spend money that is generated out of one of the agency's programs. The appropriation also sets an upper limit on the amount that can be spent. Although program receipts are clearly state revenues which may not be dedicated, the practice of identifying program receipts as an appropriation source does not in any way limit legislative control over the expenditure of revenues because the legislature maintains control of the appropriation by means of the budget. Therefore, we believe that this practice is not affected by the dedicated funds prohibition.

D. Appropriation of an amount which is ascertainable only by reference to specified information.

Appropriations are regularly made to the risk management division, Department of Administration, of all proceeds during a fiscal year from claims, settlements or judgments arising from damage to or loss of state property. As pointed out above, at 18, this permits the state to repair or replace damaged property without specific appropriations, which would probably be either more or less than the actual property damage in any fiscal year.

The only difference between this and a typical appropriation is in the determination of the amount appropriated. When a fixed amount is appropriated, obligations incurred against it may be honored as long as there is cash available in the treasury. When an appropriation is made for an amount to be received from a certain source during a specific period, obligations may be honored only if a sufficient amount of money has been received from that source and there is cash available in the treasury. However, the amount of the appropriation remains determinable. Consequently, it is our opinion that these kinds of appropriations do not violate the dedicated fund prohibition. 14/

14/ The pending litigation discussed earlier (Trustees for Alaska v. State, supra) also includes a claim that an appropriation to the Alaska Power Authority of the interest to be received on money separately appropriated to the Power Development Fund violates the dedicated funds prohibition. § 1 ch. 90, SLA 1980, as reenacted by § 69 ch. 92, SLA 1981 and amended by § 236 ch. 141, SLA 1982. The questioned appropriation does not state a specific time period during which the interest is to be accrued. Consideration by the court of this particular question might not occur since, by informal memo dated April 19, 1982, we advised the Treasury Division of the Department of Revenue that the interest must be returned to the general fund because of a specific statutory requirement, AS 44.83.388(b). We are informed that no interest has accrued to the Power Development Fund.

E. Other Miscellaneous Dedications

1. Appropriations to the Permanent Fund. Since the constitution (Article IX, section 15) specifically authorizes dedications to the Permanent Fund of "at least" 25 percent of certain revenues, we believe any additional dedication to the fund by statute 15/ or by appropriation is also permissible.

2. Rainy day account. AS 37.05 179 creates a reserve fund to which money is appropriated and authorizes it to be spent for certain necessary emergency operating expenses at some future time. It is our opinion that this practice is permissible under the theory discussed above beginning at p. 12 that money once it is appropriated loses its character as revenue for purposes of the dedicated funds prohibition. A contrary view would severely restrict flexibility in state budgeting and accounting, and we doubt that such a view would be adopted by the courts.

15/ In 1980, the legislature increased the percentage dedication applicable to most new mineral leases to 50 percent. AS 37.13.010(a)(2).

We hope you find this analysis helpful in determining the nature of the problems presented by the dedicated fund prohibition and the various statutory programs which may or may not run afoul of it. We expect to be able to advise you with greater certainty on some of these questions at the conclusion of the pending litigation described above.

Sincerely,

Wilson L. Condon
Attorney General

MEMORANDUM State of Alaska

TO: Bill Sheffield
Governor

DATE: 29 March 1985

FILE NO:

THRU: Mr. John Shively
Chief of Staff

TELEPHONE NO: 249-1228

FROM: MG Edward G. Pagano
The Adjutant General
Department of Military and Veterans Affairs

SUBJECT: Veterans Small Business Loans

Alaska veterans have expressed concern that small business loans are not available to veterans. These individuals have suggested the State of Alaska make or guarantee small business loans to qualified veterans. I am aware of proposed legislation submitted by the Department of Commerce and Economic Development that would include veterans under a linked deposit concept. I understand this bill may not be submitted by your office.

I have read HB 135 sponsored by Representatives Duncan, Sund and Herrmann and request you consider an amendment that would give veterans a preference for loans under that proposal.

It is the recommendation of the Department of Military and Veterans Affairs that veterans be specifically identified in this bill and loans through the "Small Business Development Loan" program be made available to qualified veterans at two percentage points below that rate being offered to non-veterans.

For the purpose of this bill, a veterans should be defined as follows: a person with 181 days or more active service in the Armed Forces of the United States who has been honorably discharged after having served during any period between April 6, 1917 and December 1, 1919, between September 16, 1940 and December 31, 1947 or between June 27, 1950 and October 14, 1976.

IN THE HOUSE

HOUSE BILL NO. 135

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act establishing a Small Business Development Loan program; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 45.95.020 is repealed and reenacted to read:

Sec. 45.95.020. SMALL BUSINESS DEVELOPMENT LOANS. (a) The commissioner shall adopt regulations and policies to make small business development loans or to purchase small business development loans from a bank or other financial institution in the state. A small business development loan made under this chapter may not exceed $100,000 and shall be for the purpose of acquiring, operating, or equipping a business, other than a farming, mining, or fishing business. A small business development loan shall be secured by acceptable collateral and may not exceed 80 percent of the fair market value of the collateral offered as security. The initial rate of interest on a small business development loan is equal to the federal discount rate in effect on the first day of the month preceding the month of closing the loan plus three percentage points. The interest rate shall be adjusted annually to be three percentage points more than the federal discount rate in effect on the first day of the month preceding the month of the anniversary date of the loan.

(b) Money loaned shall be delivered to the borrower as provided by regulations adopted by the commissioner. Upon repayment of loans by installments, or otherwise, in accordance with the prescribed terms, or upon liquidation by foreclosure or other process, or upon

TIE TO HB149
market rate TIE

receipt of interest or other revenue, the money so received shall be turned over to the commissioner of revenue for deposit in the small business development revolving loan fund.

(c) The commissioner may not disqualify an applicant for, or prejudice an applicant's privilege to receive, a loan for a purpose authorized under this section because the applicant has previously received a loan under this chapter, but the total principal amount outstanding to a borrower on loans made under this chapter may not exceed $150,000.

* Sec. 2. AS 45.95.050 is amended to read:

Sec. 45.95.050. POWER OF COMMISSIONER TO ASSIGN AND SELL MORTGAGES. The commissioner may assign and sell small business development loan mortgages to the Alaska permanent fund, the Department of Revenue, the Alaska Industrial Development Authority, or to a bank or other private purchaser [STATE MORTGAGE ASSOCIATION] in consideration of receiving [ITS] cash, bonds, debentures and notes upon conditions which the commissioner [HE] considers advantageous to the state small business development lending program.

* Sec. 3. AS 45.95.060 is amended to read:

Sec. 45.95.060. ESTABLISHMENT [CREATION] OF FUND. The [THERE IS CREATED THE] small business development revolving loan fund is established in the Department of Commerce and Economic Development to carry out the purposes of this chapter. This fund may not [SHALL] be used for any [NO] other purpose.

* Sec. 4. AS 45.95.070 is amended to read:

Sec. 45.95.070. ELIGIBILITY FOR LOANS. A small business [PERSON] is eligible for a loan under this chapter if

(1) it [HE] can establish or demonstrate [GOOD CHARACTER,] capacity for financial responsibility and an [,] ability to provide

sufficient collateral [AND KNOWLEDGE OF ALASKA ECONOMIC CONDITIONS]; and

(2) [HE IS A RESIDENT OF THE STATE; AND

(3)] in the judgment of the commissioner [DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT]

(A) the business shows a definite potential for growth;

(B) the borrower will be able to repay the loan; and

(C) the loan has the potential to [WILL POTENTIALLY] create more jobs and provide additional services in the community.

* Sec. 5. AS 45.95.080 is amended to read:

Sec. 45.95.080. DEFINITIONS. In this chapter,

(1) "commissioner" means the commissioner of commerce and economic development;

(2) "small business" means a sole proprietorship, partnership, or corporation operating only in the state that is not a subsidiary of another business and that does not employ more than 10 employees.

* Sec. 6. Section 71(2), ch. 106, SLA 1980 is amended to read:

(2) no further loans may be made under AS 45.90.020 [,AS 45.95.020,] and AS 26.15.040(3).

* Sec. 7. This Act takes effect immediately in accordance with AS 01.-10.070(c).

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM April 1, 1985

SUBJECT: Sectional analysis of HB 135
(Small Business Development Loans)

TO: Representative Jim Duncan

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a sectional analysis of HB 135. This bill reactivates and amends the Small Business Development Loan program.

Section 1 rewrites the existing procedures for small business loans. The Commissioner of Commerce and Economic Development is required to adopt regulations to make or purchase small business loans, not to exceed $100,000, for the purpose of acquiring, operating, or equipping a business, other than a farming, mining, or fishing business. The loans must be secured by collateral and may not exceed 80 percent of the value of the collateral. The initial interest rate on the loans is equal to the federal discount rate in effect plus three percentage points and must be adjusted annually to maintain the same relationship with the federal discount rate. Money repaid on the loans is returned to the small business development revolving loan fund. A person may not be disqualified for a small business loan because the person already has one, but the total amount borrowed may not exceed $150,000.

Section 2 amends existing law to provide that the Commissioner of Commerce and Economic Development may assign and sell small business loans to the Alaska permanent fund, the Department of Revenue, the Alaska Industrial Development Authority, or to a bank or other private purchaser.

Section 3 amends existing law to clarify that that the small business development revolving loan fund is administered by the Department of Commerce and Economic Development.

Section 4 amends the eligibility requirements for small business loans to require demonstration that (1) the borrower has financial responsibility and the ability to provide sufficient collateral, (2) the business has a potential for growth, (3) the borrower will be able to repay the loan, and (4) the loan has potential to create more jobs and provide services in the community.

Section 5 defines "small business" as a "sole proprietorship, partnership, or corporation operating only in the state that is not a subsidiary of another business and that does not employ more than 10 employees."

Section 6 amends sec. 71(2), ch. 106, SLA 1980, which discontinued the existing small business loan program, to reactivate it.

Section 7 provides for an immediate effective date.

HB 135
SMALL BUSINESS DEVELOPMENT LOAN PROGRAM

This bill establishes a new Small Business Development Loan program. The interest rate is based on the federal discount rate plus three points and also requires an annual loan anniversary interest rate adjustment. The maximum amount which can be loaned is $100,000 and outstanding loans under this program may not exceed $150,000. Loans may be made for the purpose of acquiring, operating and equipping a business except farming, mining or fishing. Borrowers who would like to refinance existing loans held by other financial institutions may do so.

The following information is assumed for purposes of preparation of this Fiscal Note. Loan demand is 533 loans per year, average loan size is $75.0, average term is 10 years, and the interest rate is 11.0% (based on current federal discount rate of 8% plus three points).

During FY '84, the Division of Accounting & Collections serviced a relatively stable number of loans, approximately 8,000 total: 1,100 new loans were processed while 925 loans were paid off.

The provision in this bill which causes the biggest impact to the division is the requirement for annual anniversary adjustment of the interest rate of the loan. A tracking system, tied to the closing date of the loan and compatible with the existing subsidiary loan accounting system, must be designed and implemented to effect the timely and accurate annual interest rate adjustment. Heavy borrower contact and individual account maintenance will be required after the first 12 months of the program when, on a monthly basis, new loan payment cards would have to be generated, letters produced, and borrower's phone calls and correspondence relating to the changed payment amounts dealt with. Also, borrowers who inadvertently send the old amount when the new interest rate is implemented will cause cash processing delays and additional costs to service.

In addition to the new positions and related costs described in the attachments, the division would incur the following expenses that cannot be associated with any position. Printing of a borrower's servicing packet $3.5; data processing supplies $.5; data processing design, development, documentation, implementation and training $20.0; DP chargeback - 533 loans @ 2.40/mo. $15.4.

Accounting Technician II

This position will be established in the Customer Service Section. Primary responsibility will be the litigation and repossession accounting and secondary responsibility will be backup to the Accounting Technician I for customer and loan servicing. Duties include auditing the account before it enters litigation or repossession status, maintaining a ledger card system on all litigation and repossession accounts, reviewing the invoices on all the expenses incurred, coding PBA accounts on the invoices and requesting payments of the invoices. When a loan is repossessed, this position will close the loan on the subsidiary loan and transfer it into the repossessed account. Upon sale of the repossessed property, this position prepares the AV's required to record the sale and clear the property from the State's books.

Associated costs included are space allocation, training, communications, general office supplies and furniture and equipment (open system work station, calculator, microfiche viewer, phone and cabinet).

JUSTIFICATION

Accounting Technician I

This position will be established in the Customer Service Section and assigned the Small Business Development Loan portfolio. Duties include responding to customer service inquiries, requests and account, problems, auditing subsidiary ledger accounts making subsequent calculations of interest, principal, late fees, refunds, loan payoffs, and unapplied funds computations, initialing necessary system documents to effect the necessary correction and monitor the action to ensure proper recording on the subsidiary system.

Due to the annual loan anniversary interest rate adjustments based on the federal discount rate, there will be heavy monitoring and maintenance to the accounts on the subsidiary loan system. A high volume of borrower contact is anticipated due to the need to notify and instruct borrowers on payment amounts and procedures due to the interest rate adjustment.

Associated costs include communications (long distance, postage, centrex) training, space allocation, general office supplies and furniture and equipment (open system work station, calculator, microfiche viewer, phone and file cabinet).

HB 135
SMALL BUSINESS DEVELOPMENT LOAN PROGRAM

This bill establishes a new Small Business Development Loan program. The interest rate is based on the federal discount rate plus three points and also requires an annual loan anniversary interest rate adjustment. The maximum amount which can be loaned is $100,000 and outstanding loans under this loan program may not exceed $150,000.

Loans under this program would be available for virtually any business enterprise except farming, fishing and mining. Borrowers who would like to refinance existing loans held by other financial institutions may do so. Loan requests would be received for manufacturing services and distribution activities utilizing all levels of technologies and workers. This variety of proposals would require a high level of scrutiny of loan applications by loan examiners. Specialization by loan examiners would be necessary to adequately assess loan applications calling for use of advanced technologies.

The division estimates that the average loan under this program would be $75,000. It is estimated that 533 loans will be made annually with an average term of seven years and an interest rate of 11.0% (based on current federal discount rate of 8% plus three points). In order to support this loan demand, an initial appropriation of $40.0 million will be required. Subsequent funding requirements are detailed on the attached Revenue Analysis.

For the last several years, the division has processed approximately 100 loans for each of its ten loan examiners. In addition, three loan closers and one document processor support the ten loan examiners. Based upon these statistics, the division will need 6 additional loan examiners and 3 additional loan closers as a result of HB 135. The division's support staff (director, regional loan managers, and clerks) will be required to absorb the additional support work load. Two loan examiners and one loan closer will be located in Juneau, Anchorage, and Fairbanks.

Loan applications would be monitored on a daily basis. Efforts to inform the public regarding the program will be carried out by the division. It is expected that these outreach efforts will generate some additional interest in other loan programs administered by the division.

Under the contractual line item, $7.0 is included for the design and printing of the small business loan application and loan closing forms. $2.0 is included in subsequent years for additional printing. This funding is specific to the program and was not detailed under the Request For New Positions.

The division estimates that 533 loans will be made annually under this loan program. Based upon actual workload performance of the division, a loan examiner can process approximately 100 loans in a year and maintain a 32 day turnaround from the day the application is received to the day the application is either approved or disapproved by a loan committee.

Small business loan requests will be received from a broad spectrum of the economy and will require the division to respond accordingly. This requirement for specialized expertise will be met by staffing each of the division's three regional offices (Juneau, Anchorage and Fairbanks) with one senior loan examiner III and one junior loan examiner II as well as one senior loan closer II.

The Loan Examiner III will act as lead examiner for the small business program within each regional office. Specialization by the Loan Examiner III will be necessary to adequately assess loan applications calling for advanced technologies.

FY 86

SMALL BUSINESS DEVELOPMENT LOAN PROGRAM

Sources of Funding:

A. Inactive Loan Programs

Under this alternative, the portfolios of inactive loan programs would be transferred to the Small Business Development Loan Fund.

These inactive loan programs will have a cash flow in FY86 and FY87 of approximately $13.8 million. However, interest payments to the Small Business and Tourism Loan Programs have already been included in the Department of Revenue and OMB cash flow estimates. Therefore, of the $13.8 million, about $8.8 million is unallocated in the FY87 budget.

Program	FY86 P	FY86 I	7/1/86 Balance	FY87 P	FY87 I	Total
Small Business Dev. Loan Fund	3,153.9	2,345.2/	5,267.0	3,300.0	2,207.2/	10,774.2
Tourism Loan Program	289.6	297.8	547.3	318.6	245.5	1,111.4
Veterans Loan Program	551.9	1,059.5	337.0	590.5	1,012.0	1,939.5
SUBTOTAL:	3,995.4	3,702.5	6,151.3	4,209.1	3,464.7	13,825.1

Note: For the FY86 cash flow to be applicable, the bill must have an immediate effective date.

B. Active Loan Programs

The Governor's FY87 loans budget already reappropriates $19.2 million in loan fund surpluses to fund existing, active loan programs. Additional cash may be available through the elimination or scaling back of active loan programs or by merging active programs into the Small Business Loan Program.

Program	7/1/86 Balance	FY87 P	FY87 I	Total
Child Care Facility Loan Fund	435.4	111.3	60.0	606.7
Alternative Energy Loan Fund	897.4	1,744.2	722.6	3,364.2
Residential Energy Loan Fund	304.8	1,207.2	275.9	1,787.9
Historical District Loan Fund	125.8	6.4	27.4	159.6
SUBTOTAL:	1,763.4	3,069.1	1,085.9	5,918.4

Loans for Child Care Facilities would be absorbed within a Small Business Loan Program; however, acceptance of this option would take the State completely out of the lending business for alternative energy system development, residential energy conservation, and historical building acquisition and renovation. One alternative proposed by DCED would scale back the Alternative Energy Loan Program by eliminating passive energy systems, which comprise approximately 80% of the program's activity.

C. Summary

As much as $19.7 million may be available for a Small Business Development Loan Program in FY87. Of this amount, approximately $5 million has been included in the FY86/FY87 revenue estimates, leaving an "unallocated" balance of $14.7 million.

MEMORANDUM State of Alaska

TO: Jim Ayers, Director
Legislative Affairs
Office of the Governor

DATE: January 29, 1986

RECEIVED
JAN 30 1986

FILE NO.:

THRU:

TELEPHONE NO.: 465-2510

SUBJECT: Small Business Development Loan Program

FROM: Paul B. Arnoldt, Director
Division of Investments
Department of Commerce and
Economic Development

Terry Elder, Joan Brown, Maggie Hamley and I met with Guy Bell on January 22, 1986, to discuss the proposed small business program contained in HB 135, to recommend amendments to the bill, to discuss fiscal impacts, and to identify potential funding sources. We used Guy's memorandum to you dated January 21, 1986 as a basis for our discussion.

AMENDMENTS TO THE BILL

(1) Refinancing: Under HB 135, borrowers who would like to refinance existing loans held by other financial institutions may do so. This is a very costly provision and would add substantially to the number of loans that would qualify under the proposed small business program. Since these borrowers already have financing through the private sector, and since there is limited State funding for this proposed program, we recommend that refinancing be excluded under the bill.

(2) Interest rates: Under HB 135, the interest rate is based on the federal discount rate plus three points and also requires an annual loan anniversary interest rate adjustment. The federal discount rate is a short-term rate established by the Federal Reserve Board. Since differing discount rates are issued out of New York, San Francisco, etc., the bill would have to be clarified in this respect. The federal discount rate is not a market interest rate; typically, the federal discount rate lags the market. HB 109, introduced by the Governor, provides an excellent formula for calculating a market-tied interest rate. Another alternative, already used under the Bulk Fuel and the Residential Energy Conservation Loan Programs, is to charge interest at a rate equal to the percentage of the average weekly yield of municipal bonds for the 12 months preceding the date of the loan as determined from municipal bond yield rates reported in the 30-year revenue index of the Weekly Bond Buyer. We would recommend that an index other than the federal discount rate be used that both parallels the market and corresponds to various loan terms.

We also recommend that the annual adjustment in the interest rate over the life of the loan be eliminated. Making an annual adjustment in order to track rising and falling interest rates may only be an exercise in futility since in the long-run these increases and decreases will average out. There will be confusion among borrowers as their payments vary from year to year, and there will be considerable administrative and data processing costs incurred in implementing this provision.

Finally, since one of the proposals for partially funding the proposed small business loan program is to use surplus funds from the Veterans Loan Program, consideration should be given to granting a 1% veterans preference in the interest rate that is being charged.

(3) Terms: HB 135 does not establish a statutory maximum loan term. Since there will be innumerable small business loan requests, maybe the bill sponsor intended this provision to be addressed by the department under regulation. While this can be done, I only mention this in case there was a drafting oversight.

(4) Effective date: HB 135 would take effect immediately in accordance with AS 01.10.070(c). Clearly staffing, developing application packets, promulgating regulations, modifying data processing and accounting programs will take time. If an additional qualifier, such as, "no loan applications will be accepted until September 1, 1986" was added to the effective date clause, then the infrastructure could be in place and the public will not be disenfranchised by delays in implementing the program.

FISCAL IMPACTS

Updated fiscal notes for HB 135 for the Division of Investments and the Division of Accounting and Collections are included for your reference. These fiscal notes were adjusted to reflect today's personal service costs and current interest rates. We recognize that funding HB 135 at $40.0 million is very unlikely. Once some agreed upon funding level is established, we are prepared to revise these fiscal notes. We anticipate this new funding level will be substantially less than the $40.0 million loan demand that is anticipated under HB 135; therefore, the revised fiscal notes will be lower.

One of the proposed sources of funds contained in Guy's memorandum is to use surplus funds from the Small Business, Tourism and Veterans Loan Programs. Since these programs are inactive, that is no new loans are being made, there will be no change in the administrative costs necessary to support these programs as a result of using them as a funding source.

However, eliminating the Alternative Energy, Residential Energy Conservation, Child Care Facility, and Historical District Loan Programs to create a source of funds for the proposed small business program will reduce the administrative costs associated with these programs. Obviously, the cost of making and servicing new loans will be eliminated; however, the cost of servicing existing loans will continue. We recommend that consideration be given to eliminating specific categories of loans under the Alternative Energy Loan Program rather than eliminating the program altogether. In the past we have called attention to the problems of passive energy systems such as solar heating units and solar sunspaces. These types of loans account for approximately 80% of the Alternative Energy Loan Program. The remaining 20% represent loans for alternative energy sources utilizing wind, water and renewable fuels which satisfy the needs of many rural Alaskans and appear to be justified.

The following represents the first year savings that would be achieved if some or all of the mentioned loan programs were eliminated. These savings would serve as an offset against the fiscal notes for HB 135:

	Division of Investments	Division of Accounting & Collections	Total
(1) Alternative Energy:			
(a) 100% eliminated	$206.4	$13.4	$219.8
(b) 80% eliminated	$165.1	$10.7	$175.8
(2) Residential Energy	$135.4	$10.0	$145.4
(3) Child Care Facility	$ 19.6	$ 2.0	$ 21.6
(4) Historical District	$ 2.7	$ 0.4	$ 3.1

POTENTIAL FUNDING SOURCES

The Division of Accounting and Collections estimates the following cash will be available for reappropriation beginning FY 1987:

gross receipts

(1) Alternative Energy:	
(a) 100% Eliminated	$1,904.2
(b) 80% Eliminated	$1,523.4

(2) Residential Energy	$1,151.9
(3) Child Care Facility	$ 130.6
(4) Historical District	$ 26.1
(5) Small Business	$4,580.8
(6) Tourism	$ 489.3
(7) Veterans	$1,342.3

Obviously, reappropriating funds under the active loan programs (Alternative Energy, Residential Energy, Child Care Facility and Historical District) will have the effect of eliminating these loan programs; however, applications for child care facility loans and for some historical district loans will probably qualify under HB 135.

Bob Heath, Executive Director for the Alaska Power Authority, has advised us that no excess cash will be available for reappropriation from the Power Development Revolving Loan Fund beginning FY 1987.

MEMORANDUM State of Alaska

RECEIVED
JAN 30 1986

TO: Paul B. Arnoldt, Director
Division of Investments
Department of Commerce & Economic Development

DATE: January 31, 1986

FILE NO.:

TELEPHONE NO.: 465-2555

THRU: Margaret I. Hamley, Director
Division of Accounting & Collections

SUBJECT: Small Business Development Loan Program

FROM: Debbie Guillaume
Administrative Assistant III
Division of Accounting & Collections

Page 3, under "Potential Funding Sources," of your memo of January 29, 1986 addressed to Jim Ayers, contained information which I provided. The amounts in your memo were estimated total cash receipts for FY 86 and not net cash available for reappropriation beginning FY 87. Taking into consideration the Governor's budget request (HB 500, as introduced January 17, 1986), the estimated cash available on July 1, 1986 is as follows:

Alternative Energy	$677.6
Residential Energy	159.4
Child Care Facility	413.8
Historical District	122.7
Small Business	5,267.0*
Tourism	547.3*
Veterans	337.0
	$7,524.8

*Assumes repeal of Sections 3 and 4, Ch. 156, SLA 1984 which would allow cash balance to remain in the loan fund. (Current statute transfers 6/30 cash balance to General Fund each year.)

All of the active loan programs listed above are dependent on these funds for meeting FY 87 loan demand. Reappropriating these funds to a new loan program without merging the active loan programs into the new one will cause the shut down of these programs on July 1, 1986.

If all, or a portion of all of the active loan funds are eliminated and the administrative cost savings are taken into consideration, the July 1, 1986 cash available would be:

Program Eliminated:	Estimated 7-1-86 Cash Available	Admin. Cost Savings	Adjusted 7-1-86 Cash Available
Alternative Energy			
(1) 100% Eliminated	$677.6	$219.8	$897.4
(2) 80% Eliminated	677.6	175.8	853.4
Residential Energy	159.4	145.4	304.8
Child Care Facility	413.8	21.6	435.4
Historical District	122.7	3.1	125.8

I apologize for the misunderstanding. This information should clarify the cash available issue. Please contact me if you have any questions.

Representative Jim Duncan
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Subject: House Bill 135

Dear Representative Duncan:

Alaska veterans are concerned that small business loans are not available to veterans. Our veterans have suggested the State of Alaska make or guarantee small business loans to qualified veterans.

It is requested you consider an amendment to House Bill 135 that would give veterans a preference for loans under that bill.

The American Legion, Department of Alaska recommends that veterans be specifically identified in this bill and loans through the "Small Business Development Loan" program be made available to qualified veterans at two percentage points below that rate being offered non-veterans.

There are approximately 66,000 veterans living in the State of Alaska and this requested amendment would help many of our veterans obtain small business loans.

Any consideration you make for the veterans is appreciated.

Sincerely,

E.P. "Shorty" Oliver
Department Commander

Representative Sund

ALASKA
STATE LEGISLATURE

MEMORANDUM

February 8, 1985

TO: Representative Sund, Chairman
House Special Committee on Loans

FROM: Representative Jim Duncan

RE: HB 135

HB 135 concerning Small Business Development Loans has been referred to your committee.

I urge you to schedule it for a hearing as soon as possible. With the cuts in the federal small business loans, the proposed state loan program may be the only financing available to Alaskan businesses.

(c) After a default by a borrower, the maximum liability of the fund for a loan guarantee under this chapter is equal to the amount then in default multiplied by a percentage equal to the guaranteed percentage of the loan. Payments received toward satisfaction of a default shall be allocated between the lender and the fund according to the guaranteed percentage of the loan until the principal balance has been repaid. (§ 1 ch 83 SLA 1984)

Sec. 45.94.060. Definitions. In this chapter

(1) "commissioner" means the commissioner of revenue;

(2) "department" means the Department of Revenue;

(3) "forest products business" means a sole proprietorship, partnership, corporation or other business organization formed for the purpose of harvesting or processing timber or other forest resources;

(4) "fund" means the forest products business loan guarantee fund. (§ 1 ch 83 SLA 1984)

Chapter 95. Small Business Loans.

Section

20. Small business loans

Sec. 45.95.010. Powers and duties of Department of Commerce and Economic Development in general.

NOTES TO DECISIONS

Cited in State v. First Nat'l Bank, Sup. Ct. Op. No. 2370 (File No. 5371), 629 P.2d 78 (1981).

Sec. 45.95.020. Small business loans. (a) The commissioner shall, under regulations and policies adopted by him, make small business loans to acquire, finance or refinance or equip businesses, including farming, mining and fishing, not exceeding $500,000. The loans shall be secured by acceptable collateral and may not exceed 75 percent of the appraised value of the collateral offered as security. The rate of interest may not exceed nine and one-half percent a year on the unpaid balance. For the purposes of this subsection business equipment includes, but is not limited to, farming equipment and fire protection systems approved under AS 18.70.081.

(b) *[Repealed, § 14 ch 122 SLA 1980.]*

(c) *[Repealed, § 108 ch 59 SLA 1982.]*

(d) Money loaned shall be delivered to the borrower in the form of a warrant drawn on the treasury, vouchered in the manner prescribed for state disbursing officers, and charged against the small business revolving loan fund. Each voucher shall be approved by the commis-

sioner or any bonded deputy authorized to act as a certifying officer. Upon repayment of loans by installments, or otherwise, in accordance with the prescribed terms, or upon liquidation by foreclosure or other process, or upon receipt of interest or other revenue, the money so received shall be turned over to the commissioner of revenue for deposit in the small business revolving loan fund.

(e) The commissioner may not disqualify an applicant for, or prejudice an applicant's privilege to receive, a loan to purchase and install a fire protection system solely because of a loan already made to the applicant under this chapter. (§ 8 ch 109 SLA 1971; am § 1 ch 103 SLA 1974; am § 110 ch 218 SLA 1976; am § 6 ch 139 SLA 1977; am § 25 ch 72 SLA 1979; am §§ 6, 7 ch 45 SLA 1980; am § 14 ch 122 SLA 1980; am § 108 ch 59 SLA 1982)

Effect of amendments. — The 1982 amendment repealed subsection (c) concerning a limitation on the authorization of loans.

Sec. 45.95.060. Creation of fund.

Cross references. — For annual appropriation of cash balance attributable to loans owned by the fund, see § 4, ch. 156, SLA 1984 in the Temporary and Special Acts.

Chapter 98. Historical District Revolving Loan Fund.

Section

40. Limitations on loans

Sec. 45.98.020. Historical district loans.

Opinions of attorney general. — The zoning power vested in the Department of Natural Resources under this section is broad enough to encompass the creation of historical districts as a control over land use, but the exercise of that authority does not make the property eligible for historic preservation loans under AS 45.98, which is aimed solely at historic districts established by municipalities January 3, 1980, Op. Att'y Gen.

Sec. 45.98.040. Limitations on loans. Loans made under this chapter are subject to the following limitations:

(1) state participation in all loans in the aggregate, for any one historical district qualifying under this chapter may not exceed $1,500,000;

(2) state participation in a loan for the restoration, improvement, rehabilitation or maintenance of any one building or structure qualifying under this chapter may not exceed $250,000;

(3) the loans shall be secured by acceptable collateral and may not exceed 85 per cent of the appraised value of the collateral offered as security;

Effect of amendments. — The 1979 amendment in subsection (b), substituted "commissioner of commerce and economic development" for "commissioner of commerce" and "Department of Commerce and Economic Development" for "Department of Commerce" in the first sentence and "may purchase" for "shall purchase" in the second sentence.

The 1980 amendment repealed subsection (b), which read: "The commissioner of commerce and economic development may sell or transfer at par value to the Department of Revenue the mortgages and notes held by the Department of Commerce and Economic Development as security for loans made under this chapter. The Department of Revenue may purchase the mortgages and notes offered."

Chapter 95. Small Business Loans.

Section

10. Powers and duties of Department of Commerce and Economic Development in general
20. Small business loans
30. Sale or transfer of preferred commercial paper
40. Sale or transfer of mortgages and notes
50. Power of commissioner to assign and sell mortgages
60. Creation of fund
70. Eligibility for loans
80. Definitions

Sec. 45.95.010. Powers and duties of Department of Commerce and Economic Development in general. (a) The Department of Commerce and Economic Development shall formulate general policies and adopt regulations.

(b) The department may hold hearings and subpoena witnesses and documents, and administer oaths in connection with hearings.

(c) The department shall

(1) cooperate with the state and its political subdivisions and agencies;

(2) adopt regulations necessary for the conduct of its business and for carrying out the provisions of this chapter, and make necessary regulations to maintain such standards;

(3) require bonds and undertakings from persons employed by it as shall in its judgment be necessary, and pay the premiums on them;

(4) establish such regional and local offices and such advisory groups as may be necessary or considered expedient to carry out or assist in carrying out its duties and authority. (§ 8 ch 109 SLA 1971; am § 109 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "Department of Commerce and Economic Development" for "Department of Commerce" in subsection (a).

Sec. 45.95.020. Small business loans. (a) The commissioner shall, under regulations and policies adopted by him, make small business loans to acquire, finance or refinance or equip businesses, including farming, mining and fishing, not exceeding $500,000. The loans shall be secured by acceptable collateral and may not exceed 75 percent of

the appraised value of the collateral offered as security. The rate of interest may not exceed nine and one-half percent a year on the unpaid balance. For the purposes of this subsection business equipment includes a but is not limited to, farming equipment and fire protection systems approved under AS 18.70.081.

(b) Repealed by § 14 ch 122 SLA 1980.

(c) No loans authorized by this section may be made unless the commissioner is satisfied that no money is available to the applicant from private lending institutions on a guaranteed basis as set out in (b) of this section.

(d) Money loaned shall be delivered to the borrower in the form of a warrant drawn on the treasury, vouchered in the manner prescribed for state disbursing officers, and charged against the small business revolving loan fund. Each voucher shall be approved by the commissioner or any bonded deputy authorized to act as a certifying officer. Upon repayment of loans by installments, or otherwise, in accordance with the prescribed terms, or upon liquidation by foreclosure or other process, or upon receipt of interest or other revenue, the money so received shall be turned over to the commissioner of revenue for deposit in the small business revolving loan fund.

(e) The commissioner may not disqualify an applicant for, or prejudice an applicant's privilege to receive, a loan to purchase and install a fire protection system solely because of a loan already made to the applicant under this chapter. (§ 8 ch 109 SLA 1971; am § 1 ch 103 SLA 1974; am § 110 ch 218 SLA 1976; am § 6 ch 139 SLA 1977; am § 25 ch 72 SLA 1979; am §§ 6, 7 ch 45 SLA 1980; am § 14 ch 122 SLA 1980)

Effect of amendments. — The 1976 amendment deleted "of commerce" following "commissioner" in the first sentence of subsection (a), in the first and third sentences of former subsection (b), in subsection (c), and in the second sentence of subsection (d).

The 1977 amendment substituted "$300,000" for "$100,000" at the end of the first sentence of subsection (a).

The 1979 amendment, in subsection (a), substituted "$500,000" for "$300,000" at the end of the first sentence and "nine and one-half per cent" for "eight per cent" in the third sentence.

The first 1980 amendment added fire protection systems approved under AS 18.70.081 to subsection (a) of AS 45.95.020 to insure that such systems were eligible for loans under AS 45.95. As enacted, that amendment inserted "fire protection systems approved under AS 18.70.081" preceding "mining and fishing" in the first sentence of subsection (a). The section has been rearranged by the revisor of statutes pursuant to AS 01.05.031 in the interest of clarity.

The second 1980 amendment repealed subsection (b), which read: "The commissioner may enter into agreements with private banks, other lending institutions and individuals for the purpose of guaranteeing loans made to qualified applicants. The guarantees may not exceed 90 per cent of the amount loaned and the loans shall be secured in the same manner provided for direct loans under this section. A loan made under this subsection and guaranteed by the commissioner and the state shall bear an interest rate not exceeding eight per cent a year on the unpaid balance."

Editor's note. — Section 1, ch. 139, SLA 1977, provides: "INTENT It is the intent of the legislature to foster an awareness of the need to preserve our

historic past; to protect those visible aspects of our invaluable heritage so that present and future generations may continue to be enriched by the originality and strength of Alaska's architectural and cultural beginnings."

Section 71, ch. 106, SLA 1980 provides that after July 1, 1981, "no further loans may be made under AS 45.90.020, AS 45.95.020, and AS 26.15.040(3)."

Subsection (b), referred to in subsection (c), was repealed by the second 1980 amendment.

Sec. 45.95.030. Sale or transfer of preferred commercial paper. The commissioner may negotiate with and transfer or sell to and repurchase from the Department of Revenue, its preferred commercial paper, not to exceed $1,000,000 for cash, which cash shall be used only for the purposes of making loans to persons eligible under this chapter. Money loaned under this section is subject to interest at the rate of two and one-half per cent a year until all principal and interest are fully paid. (§ 8 ch 109 SLA 1971; am § 111 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment deleted "of commerce" following "commissioner" in the first sentence.

Sec. 45.95.040. Sale or transfer of mortgages and notes. (a) The commissioner may sell or transfer at par value or at a premium or discount to any bank or other private purchaser for cash or other consideration the mortgages and notes held by the Department of Commerce and Economic Development as security for loans made under this chapter.

(b) The commissioner may sell or transfer at par value to the Department of Revenue the mortgages and notes held by the Department of Commerce and Economic Development as security for loans made under this chapter. The Department of Revenue may purchase the mortgages and notes offered. (§ 8 ch 109 SLA 1971; am § 112 ch 218 SLA 1976; am § 26 ch 72 SLA 1979)

Effect of amendments. — The 1976 amendment deleted "of commerce" following "commissioner" near the beginning of subsection (a) and near the beginning of the first sentence of subsection (b), and substituted "Department of Commerce and Economic Development" for "Department of Commerce" near the end of subsection (a) and in the first and second sentences of subsection (b).

The 1979 amendment in the second sentence of subsection (b), substituted "may purchase the mortgages" for "shall purchase all of these mortgages" and deleted "allowing the Department of Commerce and Economic Development a one-half of one per cent service fee" from the end.

Sec. 45.95.050. Power of commissioner to assign and sell mortgages. The commissioner may assign and sell small business loan mortgages to the Alaska State Mortgage Association in consideration of receiving its cash, bonds, debentures and notes upon conditions which he considers advantageous to the state small business lending program. (§ 8 ch 109 SLA 1971; am § 113 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment deleted "of commerce" following "commissioner" near the beginning of the section.

Sec. 45.95.060. Creation of fund. There is created the small business revolving loan fund to carry out the purposes of this chapter. This fund shall be used for no other purpose. (§ 8 ch 109 SLA 1971)

Sec. 45.95.070. Eligibility for loans. A person is eligible for a loan under this chapter if

(1) he can establish or demonstrate good character, capacity for financial responsibility, ability to provide sufficient collateral and knowledge of Alaska economic conditions;

(2) he is a resident of the state; and

(3) in the judgment of the Department of Commerce and Economic Development

(A) the business shows a definite potential for growth;

(B) the borrower will be able to repay the loan; and

(C) the loan will potentially create more jobs and provide additional services in the community. (§ 8 ch 109 SLA 1971; am § 1 ch 17 SLA 1974; am § 114 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "Department of Commerce and Economic Development" for "Department of Commerce" in the introductory language of paragraph (3).

Sec. 45.95.080. Definitions. In this chapter, "commissioner" means the commissioner of commerce and economic development. (§ 115 ch 218 SLA 1976)

Chapter 98. Historical District Revolving Loan Fund.

Section

10. Creation of historical district revolving loan fund
20. Historical district loans
30. Powers and duties of the department
40. Limitations on loans
50. Sale or transfer of mortgages and notes
60. Penalty provision
70. Short title

Cross references. — As to the creation of historical district commissions, see AS 29.48.108. As to the establishment of historical districts, see AS 29.48.110. As to the duty of the Historic Sites Advisory Committee with regard to historical district loans, see AS 41.35.180(5).

Editor's note. — Section 1, ch. 139, SLA 1977, provides: "INTENT. It is the intent of the legislature to foster an awareness of the need to preserve our historic past; to protect those visible aspects of our invaluable heritage so that present and future generations may continue to be enriched by the originality and strength of Alaska's architectural and cultural beginnings."

HOUSE BILL NO. 135

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act establishing a Small Business Development Loan program; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 45.95.020 is repealed and reenacted to read:

Sec. 45.95.020. SMALL BUSINESS DEVELOPMENT LOANS. (a) The commissioner shall adopt regulations and policies to make small business development loans or to purchase small business development loans from a bank or other financial institution in the state. A small business development loan made under this chapter may not exceed $100,000 and shall be for the purpose of acquiring, operating, or equipping a business, other than a farming, mining, or fishing business. A small business development loan shall be secured by acceptable collateral and may not exceed 80 percent of the fair market value of the collateral offered as security. The initial rate of interest on a small business development loan is equal to the federal discount rate in effect on the first day of the month preceding the month of closing the loan plus three percentage points. The interest rate shall be adjusted annually to be three percentage points more than the federal discount rate in effect on the first day of the month preceding the month of the anniversary date of the loan.

(b) Money loaned shall be delivered to the borrower as provided by regulations adopted by the commissioner. Upon repayment of loans by installments, or otherwise, in accordance with the prescribed terms, or upon liquidation by foreclosure or other process, or upon

COMMITTEE COPY

receipt of interest or other revenue, the money so received shall be turned over to the commissioner of revenue for deposit in the small business development revolving loan fund.

(c) The commissioner may not disqualify an applicant for, or prejudice an applicant's privilege to receive, a loan for a purpose authorized under this section because the applicant has previously received a loan under this chapter, but the total principal amount outstanding to a borrower on loans made under this chapter may not exceed $150,000.

* Sec. 2. AS 45.95.050 is amended to read:

Sec. 45.95.050. POWER OF COMMISSIONER TO ASSIGN AND SELL MORTGAGES. The commissioner may assign and sell small business development loan mortgages to the Alaska permanent fund, the Department of Revenue, the Alaska Industrial Development Authority, or to a bank or other private purchaser [STATE MORTGAGE ASSOCIATION] in consideration of receiving [ITS] cash, bonds, debentures and notes upon conditions which the commissioner [HE] considers advantageous to the state small business development lending program.

* Sec. 3. AS 45.95.060 is amended to read:

Sec. 45.95.060. ESTABLISHMENT [CREATION] OF FUND. The [THERE IS CREATED THE] small business development revolving loan fund is established in the Department of Commerce and Economic Development to carry out the purposes of this chapter. This fund may not [SHALL] be used for any [NO] other purpose.

* Sec. 4. AS 45.95.070 is amended to read:

Sec. 45.95.070. ELIGIBILITY FOR LOANS. A small business [PERSON] is eligible for a loan under this chapter if

(1) it [HE] can establish or demonstrate [GOOD CHARACTER,] capacity for financial responsibility and an [,] ability to provide

sufficient collateral [AND KNOWLEDGE OF ALASKA ECONOMIC CONDITIONS]; and

(2) [HE IS A RESIDENT OF THE STATE; AND

(3)] in the judgment of the commissioner [DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT]

(A) the business shows a definite potential for growth;

(B) the borrower will be able to repay the loan; and

(C) the loan has the potential to [WILL POTENTIALLY] create more jobs and provide additional services in the community.

* Sec. 5. AS 45.95.080 is amended to read:

Sec. 45.95.080. DEFINITIONS. In this chapter,

(1) "commissioner" means the commissioner of commerce and economic development;

(2) "small business" means a sole proprietorship, partnership, or corporation operating only in the state that is not a subsidiary of another business and that does not employ more than 10 employees.

* Sec. 6. Section 71(2), ch. 106, SLA 1980 is amended to read:

(2) no further loans may be made under AS 45.90.020 [,AS 45.95.020,] and AS 26.15.040(3).

* Sec. 7. This Act takes effect immediately in accordance with AS 01.-10.070(c).

Analysis:

HB 146 would establish within AHFC a loan program for the severely and permanently disabled. The key to the program is a lower mortgage rate (6%). The lower interest rate will assist in qualifying those individuals who would not be afforded the opportunity of home ownership based upon current AHFC rates. Since this program will increase the number of residents who would qualify for AHFC loans, it is program expansive. The demand for this program is not expected to be offset by a reduction in any other AHFC program.

As drafted, a significant portion of the loans purchased would be nonconforming in that they would not be eligible for pledge to bonds issued by the Corporation. Accordingly, they would have to be funded out of pocket without the benefit of leveraging. As detailed below, the incremental cost of the program would be $12.2 million for FY 86. Were the bill amended to require a minimum 5% down payment on each loan, they would be eligible for pledge to bonds and the FY 86 cost would be reduced to approximately $4.5 million.

The purpose of the bill is to make financing available to those with special housing needs. It would be available to not only the severely disabled but also their parents and guardians if they are living with the individual. To prevent those who have already managed to obtain home ownership from selling their current home and buying another with a 6% loan, a prior homeownership rule could be imposed that would limit the program to those individuals who have not had an ownership interest in their primary residence during the 3 year period preceding their application. This additional requirement is estimated to reduce the program cost to $3.4 million for FY 86.

The program is not expected to increase operating expenses above those reflected in the Corporation's proposed FY 86 operating budget.

Summary of Assumptions

FY 86 applications for disabled	105
FY 86 applications for parents and guardians	149
Total loans	254

Direct funded loans [254 x 25% x $140,000]	$ 8,960,000
Subsidized leveraged loans [190 x $115,000 x 14.7%*]	3,211,950
	$12,171,950

* Analysis of subsidy percentage:

50% Tax-Exempt First Time Homebuyer Program	at 14% subsidy	= 7.0%
30% Tax-Exempt Veterans Mortgage Program	at 11% subsidy	= 3.3%
20% Taxable Program	at 22% subsidy	= 4.4%
		14.7%

Subsequent fiscal year activity:

- The analysis assumes program implementation in July 1986.
- A 10% decrease is estimated in FY 87 followed by 5% increases each year in FY 88 through FY 90.
- Effects of changing program mix in subsequent years when tax-exempt financing may not be available to AHFC are not included.

by the disability under which the borrower became eligible for the loan.

(e) For an individual or a parent or guardian of the individual to be eligible for a loan under this section, the individual must

(1) provide a written statement from a physician stating that the nature of the individual's disability is permanent;

(2) establish that the individual has a specialized housing need; and

(3) establish that the individual is severely disabled, through

(A) a statement from the federal Veterans Administration indicating that the individual is at least 70 percent disabled;

(B) proof of eligibility as a blind or disabled person under the federal supplemental security income program (42 U.S.C. 1381 - 1385) or the federal disability insurance benefits program (42 U.S.C. 423);

(C) a statement of eligibility from the Board of Vocational Rehabilitation (AS 23.15.010); or

(D) a statement of disability from the division of public health, family health section.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to housing loans for the permanently disabled."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 18.56 is amended by adding a new section to read:

Sec. 18.56.102. LOANS FOR THE PERMANENTLY DISABLED. (a) The corporation shall establish a residential housing loan program for the permanently disabled under the special mortgage loan purchase program (AS 18.56.098). A loan may be made under this section to an individual who is eligible under (e) of this section, or to a parent or guardian of the individual if the parent or guardian is living with the individual.

(b) A loan made under this section shall be at a fixed annual interest rate of six percent. The loan amount may not exceed the maximum loan amount for a single family residence under the special mortgage loan purchase program, and the appraised value of the residence may not exceed the loan amount by more than 25 percent. The corporation may not require a borrower to make a down payment toward purchase of a residence under this section.

(c) The value of the equity in a residence purchased with a loan under this section may not be used to deny the borrower state benefits to which the borrower may be otherwise entitled.

(d) The corporation may require a borrower under this section to prove present and future financial ability to repay the loan. However, a loan may not be denied solely because of circumstances caused

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM March 7, 1985

SUBJECT: Sectional analysis of HB 146
(housing loans for permanently disabled)

TO: Representative Walt Furnace

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a sectional analysis of HB 146, relating to housing loans for the permanently disabled.

This bill adds a new section to the Alaska Housing Finance Corporation provisions (AS 18.56.102) to require AHFC to set up a residential housing loan purchase program for the permanently disabled under the existing special mortgage loan purchase program. These loans must be at a fixed annual interest of six percent. The loan amount may not exceed the maximum single family loan amount under the existing special mortgage loan program (currently $178,650) and the appraised value of the residence may not exceed the loan amount by more than 25 percent. AHFC may not require a down payment for the loans.

The bill also provides that the value of the equity in a home purchased with one of these loans may not be used to deny the borrower other state benefits to which the borrower may otherwise be entitled. Although AHFC may require the borrower to prove financial ability to repay the loan, it may not deny a loan solely because of circumstances caused by the disability under which the borrower became eligible for the loan.

The loans may be made to an individual or the parent or guardian living with the individual if the individual meets certain criteria. The person must prove that he or she is severely disabled, that the disability is permanent, and that the person has a specialized housing need. The disability may be established through any of the following:

a statement from the Veterans Administration indicating a minimum of 70 percent disability, proof of eligibility as a blind or disabled person under the federal SSI program or the disability insurance benefits program, a statement of eligibility from the state Board of Vocational Rehabilitation, or a statement of disability from the division of public health, family health section.

KBL:ojb
J12/067

Analysis:

HB 146 would establish within AHFC a loan program for the severely and permanently disabled. The key to the program is a lower mortgage rate (6%). The lower interest rate will assist in qualifying those individuals who would not be afforded the opportunity of home ownership based upon current AHFC rates. Since this program will increase the number of residents who would qualify for AHFC loans, it is program expansive. The demand for this program is not expected to be offset by a reduction in any other AHFC program.

As drafted, a significant portion of the loans purchased would be nonconforming in that they would not be eligible for pledge to bonds issued by the Corporation. Accordingly, they would have to be funded out of pocket without the benefit of leveraging. As detailed below, the incremental cost of the program would be $12.2 million for FY 86. Were the bill amended to require a minimum 5% down payment on each loan, they would be eligible for pledge to bonds and the FY 86 cost would be reduced to approximately $4.5 million.

The purpose of the bill is to make financing available to those with special housing needs. It would be available to not only the severely disabled but also their parents and guardians if they are living with the individual. To prevent those who have already managed to obtain home ownership from selling their current home and buying another with a 6% loan, a prior homeownership rule could be imposed that would limit the program to those individuals who have not had an ownership interest in their primary residence during the 3 year period preceding their application. This additional requirement is estimated to reduce the program cost to $3.4 million for FY 86.

The program is not expected to increase operating expenses above those reflected in the Corporation's proposed FY 86 operating budget.

HB 161
Analysis of Fiscal Impact

Assumptions

(1) % of borrowers entering repayment:

Percent	Years after borrowing
0.0	one year
22.4	two years
21.3	three years
21.8	four years
32.3	five years
2.2	six or more years
100.0	

(2) Borrowing averages will be:

FY86	$4,775	FY89	$5,725
FY87	$5,050	FY90	$5,900
FY88	$5,400		

(3) Loan volumes are at current projection levels and program is fully funded. Adjustments made will be the result of program changes.

Impacts

(1) Increasing loan interest from 5% to 8% (Section 1 of the bill).

(a) The increase will not affect loan volume.
(b) Increased interest will impact the fund over time in the following manner:

Year of	Borrowing Year				Total
Impact	FY86	FY87	FY88	FY89	New Revenue
FY86	$ -0-	$ -0-	$ -0-	$ -0-	$ -0-
FY87	-0-	-0-	-0-	-0-	-0-
FY88	56.7	-0-	-0-	-0-	56.7
FY89	108.2	60.7	-0-	-0-	168.9
FY90	168.5	118.5	62.3	-0-	349.3
FY91	247.9	177.6	121.6	58.5	605.6
FY92	253.5	265.1	182.3	114.2	815.1
FY93	253.5	271.1	272.2	171.1	967.9
FY94	253.5	271.1	278.3	255.5	1,058.4

(2) Eliminating the forgiveness benefits in 1990 (Section 4 of the bill)

(a) Elimination of forgiveness will not affect loan volume
(b) The impact of eliminating forgiveness will be realized over time, however, delaying implimentation until 1990, moves the fiscal impact even further into the future.

Year	Principal	Interest	Total Additional Revenue
FY86	$ -0-	$ -0-	$ -0-
FY87	-0-	$ -0-	$ -0-
FY88	-0-	$ -0-	$ -0-

- Legislative Finance
- Legislative Sponsor
- Requestor
- Office of Management and Budget
- Impacted Agency(ies)

7/1/84

Comments:

1. The $20.0 in contractual is for modifying the existing student loan on-line system to accommodate for individuals with loans carrying varying interest rates.

2. The monthly payments for borrowers would change upward the last seven years of the repayment cycle. Examples of the repayment schedule are:

Loan Amount	Current 5%	Delayed 8%
$ 1,000	$ 10.61	$ 10.61/$ 12.80
$24,000	$254.56	$254.56/$306.89

3. Forgiveness would be applied as it is now, with the State paying on behalf of the borrower up to 50% of the principal and interest accrued. Hence, the delayed impact of the 8% interest will actually provide a small additional incentive for forgiveness (about $26 on a $24,000 loan).

Assumptions: 1. General Fund appropriation remains constant at $60.0 million after FY87.

2. The percentage of borrowers entering repayment, with a 12-month grace period, will be:

Percent	Years After Borrowing
0.0	one year
22.4	two years
21.3	three years
21.8	four years
32.3	five years
2.2	six or more years
100.0	

3. Borrowing rates will not be reduced if interest is increased to 8 percent.

HB 161
Analysis of Fiscal Impact

Assumptions

(1) % of borrowers entering repayment:

Percent	Years after borrowing
0.0	one year
22.4	two years
21.3	three years
21.8	four years
32.3	five years
2.2	six or more years
100.0	

(2) Borrowing averages will be:

FY86	$4,775	FY89	$5,725
FY87	$5,050	FY90	$5,900
FY88	$5,400		

(3) Loan volumes are at current projection levels and program is fully funded. Adjustments made will be the result of program changes.

Impacts

(1) Increasing loan interest from 5% to 8% (Section 1 of the bill).
(a) The increase will not affect loan volume.
(b) Increased interest will impact the fund over time in the following manner:

Year of Impact	Borrowing Year FY86	FY87	FY88	FY89	Total New Revenue
FY86	$ -0-	$ -0-	$ -0-	$ -0-	$ -0-
FY87	-0-	-0-	-0-	-0-	-0-
FY88	56.7	-0-	-0-	-0-	56.7
FY89	108.2	60.7	-0-	-0-	168.9
FY90	168.5	118.5	62.3	-0-	349.3
FY91	247.9	177.6	121.6	58.5	605.6
FY92	253.5	265.1	182.3	114.2	815.1
FY93	253.5	271.1	272.2	171.1	967.9
FY94	253.5	271.1	278.3	255.5	1,058.4

(2) Eliminating the forgiveness benefits (Section 6 of the bill)

(a) Elimination of forgiveness will not affect loan volume
(b) The impact of eliminating forgiveness will be realized over time, in the following manner:

Year	Principal	Interest	Total Additional Revenue
FY86	$ -0-	$ -0-	$ -0-
FY87	-0-	-0-	$ -0-
FY88	378.7	94.7	$ 473.4
FY89	1,143.2	285.8	$1,429.0
FY90	1,648.8	412.2	$2,061.0
FY91	3,814.0	953.5	$4,767.5

(3) Changing eligibility requirements (Section 2 of the bill)

(a) Requiring graduation from an Alaska high school would greatly reduce the number of borrowers eligible for the loan program. Based upon high school enrollment projections provided by the Department of Education, and based upon attendance patterns, the potential number of borrowers would be:

Year	Potential New Borrowers	Total Reduction in Borrowers
FY86	3,517	3,977
FY87	3,664	4,278
FY88	3,753	4,581
FY89	4,402	5,031
FY90	4,805	5,288

The fiscal savings of this requirement would be:

Year	Reduction in Borrowers	Savings
FY86	3,977	$18,990.2
FY87	4,278	$21,603.9
FY88	4,581	$24,737.4
FY89	5,031	$28,802.5
FY90	5,288	$31,992.2

(b) Providing aid on a need-based system would allow some borrowers, excluded by the high school requirement, to borrow. We have no good estimate on the number of students qualifying for need on a need-test analysis. The estimate is that only about one in four could qualify. Hence, the reduction in borrowers would be decreased by about 25%.

The fiscal impact of the needs analysis would be:

Year	Qualifying Borrowers	Cost
FY86	994	$ 4,746.4
FY87	1,070	$ 5,401.0
FY88	1,145	$ 6,184.4
FY89	1,258	$ 7,200.6
FY90	1,322	$ 7,799.8

(c) Therefore, the total fiscal impact of the two factors (high school graduation and a needs test) would be:

Year	Savings
FY86	$14,243.8
FY87	$16,202.9
FY88	$18,553.0
FY89	$21,601.9
FY90	$24,192.4

(4) Combining all changes would result in the following:

Year	Savings (including Revenue)
FY86	$14,243.8
FY87	$16,202.9
FY88	$19,083.1
FY89	$23,199.8
FY90	$26,602.7

Additional Notes

(1) Loan processing would be slowed greatly the first year, due to imposing the new requirements and needing to handle all loans a number of times.

(2) Grandfathering those current borrowers from the needs test requirement was assumed in the projected fiscal impact.

(3) Additional staff may be required to administer the needs test verification, but this is unknown until the whole process is actually finalized.

BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

CS FOR HOUSE BILL NO. 161 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to student loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.120(f) is amended to read:

(f) Interest on a loan given under AS 14.43.090 - 14.43.160 is at the rate of <u>eight</u> [FIVE] percent a year unless the loan is in default. Interest on a loan that is in default is 10 percent a year for the period the loan is in default.

* Sec. 2. AS 14.43.125 is repealed and reenacted to read:

Sec. 14.43.125. ELIGIBILITY OF STUDENTS. (a) A person may apply for and obtain a scholarship loan if the person

(1) is

(A) enrolled as a full-time student in a career education, associate, baccalaureate, or graduate degree program; or

(B) a graduate of a high school or the equivalent, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university;

(2) is not delinquent or in default on a previously awarded scholarship loan; and

(3) is a resident of the state at the time of application for the loan; for purposes of this section, a person qualifies as a resident of the state if at the time of application for the loan the person

(A) has been physically present in the state for at least two years immediately before the time of application for the loan;

(B) is dependent on a parent or guardian for care, the parent or guardian has been present in the state for at least two years immediately before the time of application for the loan and the person has been present in the state for at least one year of the immediately preceding five years; or

(C) has been physically present in the state, or is a dependent of a parent or guardian who has been physically present in the state, for at least two years immediately before the applicant was absent from the state and the absence is due solely to

(i) military service;

(ii) volunteer service under the Peace Corps Act;

(iii) volunteer service under the Domestic Volunteer Service Act of 1973;

(iv) participating in a foreign exchange student program recognized by the commission;

(v) attending a school as a full-time student;

(vi) full-time employment by the state;

(vii) being a member of or employed full-time by the state's congressional delegation;

(viii) required medical care for the applicant or the applicant's immediate family; or

(ix) being a person who otherwise qualifies as a resident and is accompanying a spouse who qualifies as a resident under (i) - (viii) of this paragraph.

(b) A person does not qualify as a resident of the state under

this section if the person declares or establishes residence in another state during an absence from Alaska.

* Sec. 3. Notwithstanding AS 14.43.120(j), the maximum portion of a scholarship loan that may be repaid by the state is 40 percent for a loan made for the school year beginning in 1986, 30 percent for 1987, 20 percent for 1988, and 10 percent for 1989.

* Sec. 4. AS 14.43.120(j), (o), and (p) are repealed.

* Sec. 5. Section 4 of this Act takes effect September 1, 1990.

* Sec. 6. Sections 1 - 3 of this Act take effect July 1, 1985.

(PRIORITY)

20 AAC 15.025. PRIORITY RANKING OF APPLICANTS. (a) Upon receipt of a completed application for collegiate study, an applicant will be assigned priority points based upon the schedule set out in (b) of this section.

(b) Each applicant for a loan for a collegiate program will be assigned priority points based upon student status and state of attendance, according to the following schedule:

(1) student status (during loan period):
(A) continuing undergraduate or graduate students with existing Alaska student loans for the previous school year or term.....6 points
(B) remaining senior students.....5 points
(C) remaining junior students.....4 points
(D) remaining sophomore students.....3 points
(E) remaining freshman students.....2 points
(F) remaining graduate students.....1 point
(2) students attending colleges or universities in Alaska.....1 point

(c) Completed applications for collegiate study received by February 15th will be grouped together. Complete applications received after February 15th will be grouped in monthly lots. The groups will be processed according to priority point accumulation. Those applicants receiving the highest priority point accumulation within a group will be processed first and those receiving the lowest priority point accumulation within a group will be processed last. In the case of equal point accumulation within a group, priority will be based upon the earliest date of receipt of the completed application.

(d) Completed applications for a non-collegiate postsecondary program will be processed in the order of receipt of the application in the loan office. (Eff. 2/3/77, Reg. 61, am 12/7/80, Reg. 76; am 11/19/83, Reg. 88).

HOUSE BILL NO. 161

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to student loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

Section 1. AS 14.43.120(f) is amended to read:

(f) Interest on a loan given under AS 14.43.090 - 14.43.160 is at the rate of eight [FIVE] percent a year unless the loan is in default. Interest on a loan that is in default is 10 percent a year for the period the loan is in default.

* Sec. 2. AS 14.43.125(a) is repealed and reenacted to read:

(a) A person may apply for and obtain a scholarship loan if the person

(1) is a resident of the state at the time of application for a scholarship loan;

(2) meets the requirements of (b) of this section; and

(3) has

(A) graduated from high school within one year preceding the date of application or is scheduled for graduation from a high school within six months after the date of application, with sufficient credits to be admitted to a career education program or to an accredited college or university; or

(B) established financial need in accordance with regulations adopted by the Alaska Commission on Postsecondary Education.

* Sec. 3. AS 14.43.125 is amended by adding a new subsection to read:

RETROACTIVE

(c) The recipient of a scholarship loan may continue to apply for and receive scholarship loans during each year in which the recipient remains enrolled as a full-time student in a career education, associate, baccalaureate or graduate degree program. A recipient who, after the date of the initial application, interrupts study as a full-time student for periods totaling more than two years may receive a new loan only if the recipient can establish financial need under (a)(3)(B) of this section.

Sec. 4. AS 14.43.640(b) is amended to read:

OK

(b) If a borrower meets the conditions provided in (a) of this section and is employed as a teacher in a rural elementary or secondary school in the state, a portion of the loan shall be repaid by the state. The [THE] portion of the loan that shall be paid by the state [, NOTWITHSTANDING AS 14.43.120(j),] is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

FORGIVENESS REMOVED

(1) one year employment, 15 percent;

(2) two years employment, an additional 15 percent;

(3) three years employment, an additional 15 percent;

(4) four years employment, an additional 25 percent;

(5) over four years employment, an additional 30 percent.

* Sec. 5. AS 14.43.640 is amended by adding a new subsection to read:

(e) Notwithstanding AS 14.43.120(f), interest on a loan made under AS 14.43.600 - 14.43.700 is at the rate of five percent a year unless the loan is in default. Interest on a loan that is in default is 10 percent a year for the period the loan is in default.

Sec. 6. AS 14.43.120(j), (o), and (p) are repealed.

OK

* Sec. 7. A student who received a scholarship loan during the school year before the year this Act takes effect may receive a new loan only if

the student

(1) initially applied for a loan while in high school or within one year after graduation from high school, and has not interrupted study as a full-time student for periods totaling more than two years; or

(2) can establish financial need under AS 14.43.125(a)(3)(B), as amended by sec. 2 of this Act.

* Sec. 8. This Act takes effect July 1, 1985.

Alaska State Legislature
House

Official Business

Pouch V
State Capitol
Juneau, Alaska 99811

February 1, 1985

TO: Rep. John Sund
Chairman
Special Committees on Loans

FROM: Rep. Johne Binkley

Re: House Bill 161 "An Act relating to student loans; and providing for an effective date."

Today I have introduced a bill that will amend certain portions of the Post Secondary Commission program that deals with student loans.

The Alaska Student Loan program established in 1971 to provide aid to Alaska residents in the form of low interest loans, is undeniably the most generous such program in the nation. It has provided loans to over 50,000 Alaskans since the inception of the program. It was intended to allow students to leave Alaska to secure an education, and encourage them to return by providing that a portion of the loan would be forgiven for returning and working in the state, which needed trained people in many areas of expertise. Many students in the early days of the program, once they left the state would not return because of lack of opportunities for suitable employment when they returned.

Conditions have changed substantially since then. In a survey done by the Post Secondary Commission of the grant recipients of 1983-84, most students, regardless of whether they had attended school "outside" or not, intended to return to Alaska to live and work for various reasons. Those reasons most often cited by both groups of students were that Alaska was their home and that it provided economic opportunity. Loan forgiveness was not considered a major factor.

The financial climate of the state has changed also. In 1971, Alaskans' incomes ranked fourth in the nation, twenty percent above the per capita national average. Now we rank number one, and our income, per capita, is forty-seven percent above the national average.

There are and will continue to be students in Alaska who will need as much help as we as a state can provide them. In order to help as

many of those needy students as possible, I feel some changes are mandated in the student loan program as it is now constituted.

In this bill, the interest rate on student loans will be raised from its present five percent to eight percent. The rate on defaulted loans will remain the same.

If a student has not applied for admission to the student loan program within six months prior to graduation, or within one year after graduation from high school, the student must show financial need as established by regulation of the Post Secondary Commission. Once a student has applied for a loan, he/she may defer going to school for a cumulative of two years. This allows a student to travel, work one semester while attending school the other, or to respond to some emergency situation that might arise.

Once students have applied for, and been accepted into the program, they may continue to apply for and receive the loan as long as they remain a full-time student in a career education, associate, baccalaureate or graduate degree program, and will not have to demonstrate need unless they interrupt their studies for more than two cumulative years.

The intent of the change in the statutes is to limit the program to those who are newly graduated as these students usually have not had the opportunity to establish themselves in the work force. It does not seem to be the function of the state to guarantee an education to persons who are financially able to bear the cost of educating themselves.

Eliminating the "forgiveness" portion of the present loan program would allow the Commission to recover more funds that would then be available to provide loans for more Alaskan students, thus assuring that this will truly be a revolving loan program.

I appreciate your consideration of this bill and I will be available to answer questions on it.

Sincerely,

Johne Binkley
Representative
District 25

1. Sectional Analysis House Bill 161
2. Survey of 1983-84 Alaska Student Loan Recipients

SECTIONAL ANALYSIS HOUSE BILL 161

Mary Beth Hilburn

"An Act relating to student loans; and providing for an effective date."

Section 1. AS 14.43.120(f) is amended to increase the interest rate on a student loan from five (5) percent to eight (8) percent.

Section 2. AS 14.43.125 (a) is repealed and reenacted changing the eligibility requirements by requiring a student who meets the established criteria for qualifying and desiring a state loan to apply within six months of graduation, or within a year after graduation, or to establish financial need as determined by regulations to be promulgated by the Post Secondary Commission.

Section 3. AS 14.43.125 adds a new subsection (c) which states that a recipient of a loan under (A) may continue without demonstrating need if the recipient does not interrupt the course of study for more than a cumulative of two years.

Section 4. AS 14.43.640(b) inserts some technical changes that clarify the intent of the section.

Section 5. AS 14.43.640 adds a new subsection that keeps the rate of interest on teachers loans at five (5) percent unless that loan is in default, then the interest is ten (10) percent.

Section 6. AS 14.43.120: (j), (o) and (p) of this section are repealed.

(j) is the portion of the statute that "forgives" up to 50% of the loan if the borrower returns to the state as a resident for varying periods of time.
(o) is the portion of the statute that nullifies the "forgiveness" clause if the loan is in default since it will no longer be needed.
(p) sets out the requirements of residency to qualify for "forgiveness" since it will no longer be applicable.

Section 7. Requires students presently receiving a student loan to meet the new qualification standards of initial application, or financial need.

Juneau, AK 99811

Dear Mr. Hartle:

Thank you for taking the time to discuss the Alaska Student Loan Program with me. I am currently making the final revisions on the ASUA Alaska Student Loan Position Paper, and will either send you a copy through the mail, or have Ken Knox, my legislative assistant, drop one off to you when he is in Juneau the 12th, 13th and 14th of this month.

I am enclosing a copy of an article taken from The Chronicle of Higher Education as it may be of interest to you. The article discusses the default rates of various loan programs for students.

Once again, thank you for discussing the Alaska Student Loan Program with me.

Sincerely yours,

Darin Hargraves

Rate of Default Declines on Loans to Students, Varies Widely Among States

WASHINGTON

Default rates under the Guaranteed Student Loan program vary dramatically from state to state—from a high of 12.8 per cent in the District of Columbia to zero in North Dakota in fiscal 1983. Rates rose in 31 states from 1981 to 1983, but dropped in 17 others, a survey has found.

The default rate is the amount of money owed on delinquent loans divided by the total amount of money loaned.

The overall national default rate decreased from 10.17 per cent in 1981 to 9.16 per cent in 1983, while the dollar volume of loans in default grew 77 per cent, from $867-million in 1981 to $1.53-billion in 1983, according to a report by Jerry S. Davis, director of research and policy analysis at the Pennsylvania Higher Education Assistance Agency.

"This increasing default volume was expected, as huge volumes of Guaranteed Student Loans made in fiscal 1979, 1980, and 1981 reached maturity," Mr. Davis said.

Alaska Posts Biggest Decrease

The biggest drop occurred in Alaska, where the default rate went down 5.03 percentage points from 1981 to 1983. States where default rates rose the most in the three-year period include Arizona, California, the District of Columbia, Hawaii, Nebraska, Texas, and West Virginia, with increases ranging from 4 to nearly 13 percentage points.

The survey, which was based on data gathered by the Education Department, is of particular interest because paying off defaults in the Guaranteed Student Loan program costs the government about $800-million a year.

Budget pressures are forcing increased scrutiny of the causes of, and possible solutions to, the problems of student-loan defaults.

But the survey indicates that the default problem is not as bad as many people believe it to be, said Mr. Davis.

"Discussions of default rates and soaring default volumes and their costs to the Guaranteed Student Loan Program all too often treat these problems as if they were monolithic among all states," he said.

"The default problem is not the same for all states. These differences suggest that remedies for the problem cannot be couched in terms of national or program-wide solutions, but must recognize the different situations among the states," he continued.

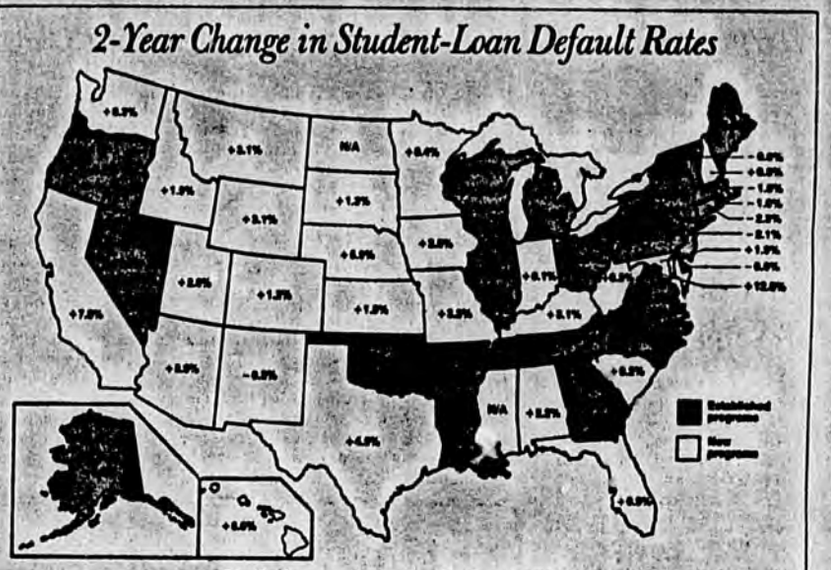
States with long-established student-loan-guarantee agencies generally have better default rates than states with newer agencies. Mr. Davis called agencies "established" if they guaranteed at least 40 per cent of their total loans before fiscal 1981; "new" states guaranteed over 40 per cent since that year.

Default rates dropped in 17 of the 23 states that have "established" guarantee agencies.

Increases in 31 States

State guarantee agencies insure lenders who make Guaranteed Student Loans against default, and the federal government in turn insures state agencies for the loans they back.

Default rates increased in 31 states, largely because they had new agencies with limited experience insuring student loans, Mr. Davis said.



Mr. Davis said the decline in the overall national default rate was due primarily to lower rates in states that guarantee the largest volumes of loans, including Illinois, Massachusetts, New Jersey, New York, and Pennsylvania.

The number and dollar value of loans increased significantly from 1981 to 1983, with a total of $11.7-billion in such loans made during 1982 and 1983, the report says.

"Thus the recent huge increases in numbers of loan dollars guaranteed and reaching maturity has generated a not unexpected large increase in default loan dollar volumes," Mr. Davis said in his report.

—DONNA ENGELGAU

2-Year Change in Student-Loan Default Rates

Default rates by state for fiscal 1983

Alabama	2.2%	Kentucky	4.1%	North Dakota	0.0%
Alaska	1.4%	Louisiana	6.1%	Ohio	0.7%
Arizona	8.9%	Maine	2.9%	Oklahoma	0.5%
Arkansas	1.3%	Maryland	5.2%	Oregon	2.1%
California	9.2%	Massachusetts	2.4%	Pennsylvania	5.0%
Colorado	2.3%	Michigan	2.7%	Rhode Island	5.7%
Connecticut	4.5%	Minnesota	5.2%	South Carolina	0.9%
Delaware	2.0%	Mississippi	3.8%	South Dakota	2.8%
District of Columbia	12.8%	Missouri	6.4%	Tennessee	3.2%
Florida	2.0%	Montana	3.1%	Texas	4.8%
Georgia	4.4%	Nebraska	6.2%	Utah	2.8%
Hawaii	8.0%	Nevada	6.2%	Vermont	2.8%
Idaho	4.6%	New Hampshire	1.5%	Virginia	0.0%
Illinois	2.4%	New Jersey	4.7%	Washington	1.8%
Indiana	2.1%	New Mexico	0.3%	West Virginia	6.3%
Iowa	3.8%	New York	0.4%	Wisconsin	5.4%
Kansas	7.3%	North Carolina	3.8%	Wyoming	3.1%

Note: "Established" states guaranteed at least 40 per cent of their total student loans before fiscal 1981. "New" states guaranteed over 40 per cent of their student loans after that year.

The figures show the change in the default rate from fiscal 1981 to fiscal 1983.

Fairbanks, Alaska 99701

A POSITION PAPER: HOUSE BILL NO. 161

As student representatives of the University of Alaska, Fairbanks, the Legislative Council is responsible for bringing the needs of the student body to the state Legislature. An issue of the utmost importance to the students of this university is the introduction of House Bill No. 161, relating to the Alaska Student Loan program. The continuation of the current loan regulations is the primary objective of the Legislative Council this year. We feel we must adamantly oppose this bill for the following reasons:

1. Section (1) of this bill would increase the interest rate of student loans from five to eight percent per year. This in itself is not highly objectionable to the student body, although we are not pleased with the prospect. We do, however, believe that the increased interest rate, when combined with the other proposed changes in this legislation, will place serious financial burdens on many students attending this university. We have no strong objections to the increase in the interest rate to ten percent for defaulters either, but do feel that students intentionally defaulting payment on their student loans will continue to do so, and students in default for financial reasons will only plummet further into debt. We on the Legislative Council do share with the Alaska State Legislature their concerns regarding the default rate of the loan program. We have in the past consistently supported legislation designed to increase the fiscal responsibility of the borrower.

2. Section (2) of this bill would make it manditory that all loan applicants show financial need to be eligible for an initial student loan. ASUA objects to this because most loan programs base financial need solely upon parental income. Many students with financially secure parents would prefer to put themselves through school, as opposed to having their parents pay their way. These students would be rendered ineligible.

3. Section (5) sets a different rate of interest for rural education loans than for other student loans. This would discriminate against all students not wishing to pursue a career in rural education. We find this unacceptable.

4. Section (6) of this bill repeals the forgiveness clause in the current student loan program. It is this section to which we most strongly object. If passed, this would place a much heavier financial burden upon many students needing the loan to

attend school. The forgiveness clause is the one thing that separates the Alaska program from similar student loan programs in other states. It has attracted many Alaskan students back to the state after graduation. The sponsor's statement that this is indeed occuring is the very reason to maintain the status quo and not abolish this most important clause.

It is our opinion that the rural education loan was created to supplement the current student loan program, not replace it. We simply do not see the advantage in sacrificing the benefits of one loan program for another. The Legislative Council and the student body of the University Alaska, Fairbanks, strongly urge Alaska legislators to seriously consider the objections raised in this document. Again, the continuation of the current student loan program is the primary concern of the council, and most definitely, of students all across the great state of Alaska.

Submitted by: Robert Menard

Governmental relations representative

Student Association for University of Alaska, Anchorage

The intent of House Bill 161 is to put the Post Secondary Commission Student Loan Program on a sound financial basis, making it a truly revolving loan program.

While the intent is courageous and admirable, and while we feel that there is room for adjustments in the program, this bill has some provisions in it which we cannot support.

HB 161 would raise serious questions concerning discrimination between two groups. It divides rural and urban students, and continuing education and "non-traditional" students. For example, HB 161 would raise the interest rate from 5% to 8% for all urban students, but not for rural students. Secondly, the legislation would totally eliminate the forgiveness clause of the program. It does not address the people who are currently involved in the program, and the drastic impact that such a change would cause. Thirdly, the bill would mandate that loan applicants who have been out of high school for more than two years demonstrate financial need. This portion also applies to those who already have student loans--A student who is presently receiving a loan would have to reapply if he or she had been out of high school for more than two years at the time of his or her original application; while continuing

education students (directly from high school to post secondary) would not have to show financial need, resulting in top priority.

We believe the "value" judgements concerning this legislation are totally unethical and undermine the intent and focus of the student loan program. We understand that the House Special Committee on State Loans will be looking at tightening up this program, without in any way destroying its integrity. Creating a strong and fiscally responsible loan program for the future students of tomorrow is the positive direction that the committee should go.

The Student Loan Program is the most generous loan program offered to students in the nation. It is a program that the state should take pride in maintaining and promoting. Due to the ever declining revenues in the state, each program should be evaluated carefully, but due to the current standing of the student loans, many provisions would have a drastic effect on the student's financial burden. A short term remedy for a long term reality would drastically change the educational commitment that the State of Alaska is so proud to support.

Alternatives:

1) Forgiveness clause: Implement a reduction of 10% per year over a five year period.
2) Interest rates: Compatible with other student loan programs, i.e. 8%.
3) Default on loan: The State cannot tolerate persons not responsible for paying back their loan payments. Defaulting on

the loan program is cheating the students of tomorrow of their opportunity for furthering their own dreams of higher education.

Short-term Cuts

After reviewing the Student Loan Program and the effects that HB 161 would have on the program, the Student Body of the University of Alaska-Anchorage is completely opposed to HB 161.

The Student Association of the University of Alaska, Anchorage (SAUAA), recognizes the need for revision of the Alaska Student Loan Program so that it may be available for future generations, but SAUAA completely rejects HB 161 for the following reasons:

1- The accessability of the loan program must not be threatened. The five percent rate of interest encourages many Alaskans to further their educations. A three percent increase would mean on a $20,000 loan an extra $27 per month over a 10 year period. The burden of repayment becomes too great. The Postsecondary Education Commission no longer supports this increase and neither do the students of UAA.

2- The decrease of the grace period from one year to six months would create unneeded hardships for students. This part of the bill could increase the default rate due to problems encountered directly after graduation. If a student graduates in May, their note would become due in November which is typically a depressed financial time of year. If students take a break in the course of their studies, they will be forced into a repayment schedule. The students should be allowed the time of one year just to get their lives stable after being in school for so long. As many of us know, the federal government loan programs do not endorse six month grace periods either.

3- The ramping clause is misleading. It could not only lead to an administrative nightmare, but could lead to massive confusion by the students as well. SAUAA can see no good reason for its inclusion in the bill.

4- The Postsecondary Education Commission administers the Alaska Student Loan Program. With the budget cuts to the agency, the staff perform amazingly efficient. The commissioners are prominant, educated

leaders of Alaska. Their expertise and broad experiences should contribute towards a positive direction. On December 14, 1985, The commission passed a regulation that each student recipient of a loan must contribute $500 to their own education. This will create an additional $4.3 million into the fund to help other perspective students afford their educations.

We feel the commission has solved the problem Representative Binkley was concerned with in the beginning, the Postsecondary Education Commissioners should be congratulated on their efforts to rescue the Alaska Student Loan Program. Representative Binkley recognized a need and helped stimulate constructive discussions. There is no current need for HB 161 and SAUAA believes it should be taken off the agenda.

ANCHORAGE COMMUNITY COLLEGE STUDENT ASSOCIATION

Resolution No. 86-10
By: Virginia Belknap

OPPOSITION OF HB-161

WHEREAS the proposed changes suggested in HB-161 for the Student Loan Program would have a dramatic effect on the lives of students; and

WHEREAS students have been faced with tuition increases, reduced class time, a cost of living increase, promises of paid parking in the near future; and

WHEREAS the reduction of the grace period from one year to six months would cause financial burdens to the student just entering the work force; and

WHEREAS the U. S. House of Representatives has approved a bill that increases the grace period from six months to nine months for the 5.3 million students who receive guaranteed student loans and other government educational funding and that bill now goes to the U.S. Senate; and

WHEREAS education should be looked on as an investment in the future of our people, not as an expense and burden on society,

BE IT THEREFORE RESOLVED that the Assembly adopt this resolution as an offical and formal expression of opposition to HB-161, and

BE IT FURTHER RESOLVED that this resolution be forwarded to the Alaska Legislature, the student member of the Commission on Postsecondary Education, the ASIN representative and other student governments in the state of Alaska.

Re: House Bill 161 - State Student Loan Program

Dear Ms. Whittlesey:

I was pleased that you took the time to participate in the teleconference on March 12. As a follow-up to the discussions on House Bill 161 I'd like to share just a few comments as to why it is so important that we re-evaluate Student Loan Program regulations now.

The Student Loan Program is the best loan program we have in the State of Alaska today. There is no better way for the State to invest its money than in the education of its people. That is why we must make some changes in the program to protect it for future generations to have the same opportunities. If we don't make changes now to put the program on a sounder financial base it will end up short-funded before too long. All state loan programs this year are looking at reductions in funding, whether or not HB 161 passes, the student loan program included. That will mean that some students who had planned on receiving state student loans may not receive them.

Changes in eligibility requirements would actually work to the benefit of young people just out of high school, like yourself, by giving you first priority regardless of your parents' financial situation. Under the changes I proposed to the regulations you would not have to compete for monies with the older students who have already gone through school and on to good paying jobs and who can truly afford to finance their own education. If choices have to be made, I feel young high school graduates and older students who demonstrate financial need should be given first priority.

I have received a large number of letters and public opinion messages concerning House Bill 161; I have listened to a substantial amount of testimony at hearings on the bill; I have talked with students on campuses across the State; I have talked with parents; I have talked with many persons who have taken the time to discuss this bill; and I have talked with a number of high school students. Interestingly, it is the high school students who seem to best understand that by making some adjustments in the program regulations now we are in effect strengthening the program and protecting its future.

I thank you for your interest. I hope you will continue to follow House Bill 161 and that you will lend your support to its passage.

Sincerely,

Johne Binkley

Dear Carolyn,

Thanks for stopping in my office earlier this month to discuss the student loan program. I appreciate your concerns.

As you know, House Bill 161 to revamp the student loan program passed out of the House last year and is now in the Senate Health, Education and Social Services Committee. Although I cannot be certain as to what the Senate will do with the bill, I can say with confidence that continuation of the student loan program remains a statewide priority.

Thanks again for your input and feel free to call on me in the future.

Sincerely,

John Sund

Dear Richard,

Thanks for stopping in my office earlier this month to discuss the student loan program. I appreciate your input.

As we discussed, the legislation that addresses the program, House Bill 161, passed out of the House last year after extensive amendments. It is now in the Senate Health, Education and Social Services Committee. I can't say what the Senate will do with the bill, but I can say with some certainty that continuation of the student loan program is a statewide priority.

You also requested information on the teacher scholarship loan program. A new brochure on the program is at the printer and will be forwarded to you when it is ready.

Participation in the program requires an invitation from a school district. If you hope to take advantage of the program soon, it may be worthwhile to begin contacting either the school district from which you graduated or the one in which you hope to work and express your interest.

Let me know if I can help out in any way.

Sincerely,

John Sund
Representative

Plan may foil Kenai fish nhancement project

Associated Press

Kasilof — The U.S. Fish and Wildlife Service may thwart state plans to use hatchery-produced fish to boost red salmon production in the Kasilof River on the Kenai Peninsula.

A soon-to-be-released management plan for the Kenai National Wildlife Refuge prohibits "wilderness" area fishery enhancement projects designed to push salmon production above natural or historic levels.

If that prohibition remains part of the plan, it could end state stocking of Tustumena Lake with hatchery-spawned sockeye fry. Those fry now account for as much as 50 percent of a growing Kasilof River red salmon run.

The lake was classified a wilderness area in 1980 by Congress.

Federal officials say they fear that continued introduction of hatchery fish will have an adverse effect on wild stocks that spawn in the streams that are part of the Kasilof River system.

The final draft of the refuge management plan is scheduled for release within the next two weeks. After its distribution, state officials will have 60 days to comment. They hope to change the prohibition, but it may be difficult.

"Any enhancement of salmon in Tustumena Lake has to be at the expense of the natural runs," said Refuge Manager Bob Delaney.

"My job is to protect Tustumena as a living laboratory. I'm more of a guardian than a gardener," he said. "A gardener massages and manipulates the environment to increase production."

But despite misgivings, the federal agency approved and has played a major role in a five-year, experimental stocking program conducted by the state. In 1978, 400,000 fry were released in Tustumena Lake. Last year, the total climbed to more than 15 million.

As a result of the program, more than 14 million stream and hatchery-spawned salmon will leave the Kasilof as smolts this year, said Loren Flagg of the state Department of Fish and Game's Fisheries Rehabilitation, Enhancement and Development Division.

"We feel the (Kasilof River) may be spawning-limited," Flagg said. If so, Tustumena Lake could support far more salmon than the streams that drain into it are capable of producing."

By putting fry in the lake and taking advantage of that excess rearing capacity, salmon production could be boosted far above the system's natural level, he said.

By monitoring the lake and spawning activity in adjacent streams, biologists can ensure that stocking does not harm the river's natural runs, Flagg said.

The potential dividends are tremendous, he said. If current survival trends continue, more than 1.4 million reds should return to the Kasilof in two to three years.

"The record return was 800,000 so we're looking at almost doubling the largest run ever recorded," Flagg said.

Bob Ochs, manager of the Crooked Creek Hatchery, said he sees the new refuge plan as just another example of a federal agency denying Alaskans full use of their state's natural resources.

"If we can produce fish without hurting the environment, why not let us do it?" he asked.

For commercial fishermen, the 600,000 additional salmon would be money in the bank, but organized sport fishermen may take a different view.

Large Kasilof River red salmon runs could mean more commercial fishing time on set net sites on the eastern shores of Cook Inlet. That could affect the incidental commercial catch of late-run Kenai River king salmon.

Temper foils robbery

Associated Press

Two armed, masked men fled under a barrage of merchandise hurled by a clerk after the pair tried to rob his convenience store, police said.

When the bandits entered the store late Friday, the clerk, Mark McCoy, 24, was at the rear of the store, police said. McCoy asked if he could help the two, reportedly thinking they were playing a joke.

In response, one of the men brandished a handgun, demanded cash and used his weapon to knock items from a store shelf. The second thief, wielding a knife, stood silently by the front door, police said.

The clerk got angry and started pitching bottles at the two. They immediately dashed out the door, police said, with the clerk in pursuit. He returned to the store to call for help when he remembered one of the

Rural lifestyles ebb in fast-growing Anchorage

by Naomi Klouda
Times Writer

Anchorage Assemblywoman Heather Flynn says it's no longer possible to live the back road country life in Anchorage, and the sooner people realize it the sooner they can settle down to planning a better organized city.

"I sometimes worry we are so busy hanging onto a myth that we won't be able to plan for tomorrow. Not one week goes by that I don't hear the media or some development group marketing the homesteading myth — and I'm not sure that's so honest," Flynn said in a recent interview.

"The rural lifestyle may have existed 20 years ago in Anchorage, but now it would cost a million bucks," said the 17-year Alaskan from Boston.

What is the rural lifestyle? Flynn says it's living in the boondocks with few amenities: A 10 acre spread away from neighbors. It's also lacking city services such as schools, road maintenance and water-sewer hookups.

"The problem is that in the places people think they can live that way — such as the Peters Creek area and on Hillside — it's not possible," Flynn said. "People want the peace and quiet, plus being close to a school, water and sewer systems, and landowners propose condominium projects and massive subdivisions in undeveloped areas, Flynn said. Assembly members are asked to review between 30 and 40 re-zoning proposals each year. Half of those are fairly large, she said.

"On the one hand you have the the landowner-developer who wants to realize profits and thinks he can do what he wants with his land," Flynn said. "On the other hand, you have the people who want to live without being crowded out or having their water-sewer systems threatened."

The problem in many cases boils down to resolving how to get adequate water and sewer hookups. The aquifer in many parts of the Greater Anchorage area cannot sustain increasing numbers of individual septic tanks without damaging water quality. At the same time, there are other areas where it isn't possible to hook up whole subdivisions to one line. "The cost is prohibitive," Flynn said.

Random commercial developments along major roads also dash the hopes for would-be rural neighborhood communities.

"Maybe when we have created enough disasters like Dimond Boulevard, our tolerance for mixing commercial and residential areas will increase," Flynn said.

Mixing the two is possible if planners nudge the process along through the maze of municipal procedures, she said. Downtown residential areas — sometimes called "yuppiedomes" — such as Park Place Condominiums and Cordova Square prove it, Flynn said.

But that sort of planning, called zoning with special limits, requires that developers landscape and buffer residential buildings from the surrounding commercial areas.

"It's not going to happen overnight, but we can hope for some areas to be straightened out. We're in the middle of re-development now," Flynn said.

"It really comes down to community pride — if people are embarrassed enough they will insist it gets cleaned up," she said. "The attitude that government created it and that government will fix it is hogwash. Personal responsibility has to come in to it."

THE ALASKA STUDENT LOAN PROGRAM

Introduction

The Alaska Student Loan Program is one of the most successful programs offered by the State of Alaska. Its purpose is to provide low-interest loans to Alaskans wishing to pursue education and training at a postsecondary level. The program has grown from serving just over 1,000 Alaskans in 1971-72, to the current 1984-85 level of serving nearly 17,000 Alaskans. The true impact of this program is considerable, that is, the financial assistance, not only to the individual, but to the individual's family; the expanded educational opportunities afforded the citizens of the state; the societal benefits of having a more highly trained and educated citizenry; and the benefits to the state and local communities of having educational institutions and resources available to meet current and future demands. All of these are related, either directly or indirectly, to the availability of student loans. Alaska has chosen to invest in the education of its people. Through these loans, which are in large part repayable to the state, Alaska has committed itself to providing opportunities and access to all those residents seeking postsecondary education.

Legislative History

The current student loan program was created by the 1971 Alaska State Legislature, however, it was based upon a program which originated in 1968. The 1968 Alaska State Legislature established a program of

Scholarship Loans (Senate Bill 378). These loans were for undergraduate students studying in Alaska at an accredited institution. The students could borrow up to $500 per year for up to four years. The loans were non-interest-bearing and could be used only to meet the costs of books, tuition, and required fees (excluding room and board). If the student lived in Alaska after ceasing study, the loans were forgiven at a rate of $500 of loan indebtness for each six months spent in Alaska.

This program was amended by the 1970 Alaska State Legislature after a good deal of debate (based upon the bill number for the adopted legislation - FCCS SCS CSHB599). Loans now were for up to $750; could be used at any accredited college or university, could be used for books, tuition, room and board, and required fees; and were eligible for forgiveness at a rate of $750 of loan indebtedness for each full year spent in Alaska. The loans were still restricted to undergraduate students and were still non-interest-bearing.

In 1971, the Alaska State Legislature once again looked at student loans and passed CSHB415 (Finance) am S. This bill created the true framework for the present student loan program. Under the 1971 program, student loans could be obtained for undergraduate study, graduate study, and career education programs. Undergraduate students and career education students could borrow up to $2,500 per year and graduate students could borrow up to $5,000 per year. Students could borrow for up to six years of study. Loans were to bear interest at a rate of 5 percent and could be used for books, tuition, room and board, and required fees. Forgiveness was limited to 40 percent of the total borrowed (plus interest), and was accrued in 10 percent increments for each year of employment in Alaska after the grace year.

The loan program experienced minor amendments on a number of occasions, but remained relatively unchanged until the 1976 Alaska State Legislative Session. During that session, FCCSSB70 passed. Under this bill, the undergraduate and career education borrowing maximum was raised to $3,000 per year, but the $5,000 per year maximum for graduate students was maintained.

Subsequent legislatures continued to make relatively minor adjustments to the program, and then in 1981, the last major change occurred. The 1981 Legislature passed FCCSSB120, which raised the borrowing maximum to $6,000 per year for undergraduate and career education students and to $7,000 per year for graduate students. The bill also raised the amount of loan forgiveness up to 50 percent of the total borrowed (including interest), and provided that this forgiveness be accrued in 10 percent increments for each year of residence in Alaska after the grace year. Loans under this program could be obtained for up to five years for either undergraduate or graduate study or up to eight years of combined study. This is the program currently being administered by the state.

ALASKA COMMISSION ON POSTSECONDARY EDUCATION

STATEMENT ON ALASKA STUDENT LOANS

The State of Alaska can make no better commitment of resources than investing in the education of its citizens. Direct support of Alaska's public elementary, secondary, and postsecondary school systems is vital to the state's continued growth and development. It is in the best interest of the state to provide access to these educational resources for the citizens of Alaska.

The best method of assuring access and opportunity is through the direct provision of educational services, but this is not always practical or possible, particularly at the postsecondary level. Therefore, the most effective and efficient method in attaining these goals of access and opportunity is through a system of low interest loans which allow the students to choose the educational setting most appropriate for their particular needs.

The Commission endorses and recommends the continuation and full-funding of the Alaska Student Loan Program. Amendments which restrict access by denying loans to groups of Alaskans, either by design or by default, are vigorously opposed.

RE: Student Loans Legislation

DATE: February 5, 1985

You will find find a copy of legislation pertaining to the Alaska Student Loan program attached. I intend to introduce this legislation on Friday, February 4. You may wish to co-sponsor this legislation.

This bill deals with two sections of AS 14.43. The first (AS 14.43.120(k)), deals with "Conditions of Loans" - specifically deferral of repayment. The second section (AS 14.43.125) deals with eligibility for the student loan program.

DEFERRAL OF REPAYMENT - This bill defines a maximum length of time (6 years) for which a person can have repayment of their student loan deferred because they are on active duty as a member of the armed forces of the United States.

ELIGIBILITY - Language is added making certain provisions by which a person could have been out of state within the last two years and still be eligible for a student loan. These provisions include required medical care, attendance school outside of Alaska as a fulltime student etc. Currently, military service is the ~~only~~ allowable ~~absence~~.

one of only absences in statute.

I have included a copy of the referenced existing statutes for your convenience. Please contact my staff person, Lisa McLaren, if you wish to be added as a co-sponsor.

IN THE HOUSE

BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

CS FOR HOUSE BILL NO. 161 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to student loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.120(f) is amended to read:

(f) Interest on a loan given under AS 14.43.090 - 14.43.160 is at the rate of <u>eight</u> [FIVE] percent a year unless the loan is in default. Interest on a loan that is in default is 10 percent a year for the period the loan is in default.

* Sec. 2. AS 14.43.125 is repealed and reenacted to read:

Sec. 14.43.125. ELIGIBILITY OF STUDENTS. (a) A person may apply for and obtain a scholarship loan if the person

(1) is

(A) enrolled as a full-time student in a career education, associate, baccalaureate, or graduate degree program; or

(B) a graduate of a high school or the equivalent, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university;

(2) is not delinquent or in default on a previously awarded scholarship loan; and

(3) is a resident of the state at the time of application for the loan; for purposes of this section, a person qualifies as a resident of the state if at the time of application for the loan the person

(A) has been physically present in the state for at least two years immediately before the time of application for the loan;

(B) is dependent on a parent or guardian for care, the parent or guardian has been present in the state for at least two years immediately before the time of application for the loan and the person has been present in the state for at least one year of the immediately preceding five years; or

(C) has been physically present in the state, or is a dependent of a parent or guardian who has been physically present in the state, for at least two years immediately before the applicant was absent from the state and the absence is due solely to

(i) military service;

(ii) volunteer service under the Peace Corps Act;

(iii) volunteer service under the Domestic Volunteer Service Act of 1973;

(iv) participating in a foreign exchange student program recognized by the commission;

(v) attending a school as a full-time student;

(vi) full-time employment by the state;

(vii) being a member of or employed full-time by the state's congressional delegation;

(viii) required medical care for the applicant or the applicant's immediate family; or

(ix) being a person who otherwise qualifies as a resident and is accompanying a spouse who qualifies as a resident under (i) - (viii) of this paragraph.

(b) A person does not qualify as a resident of the state under

this section if the person declares or establishes residence in another state during an absence from Alaska.

* Sec. 3. Notwithstanding AS 14.43.120(j), the maximum portion of a scholarship loan that may be repaid by the state is 40 percent for a loan made for the school year beginning in 1986, 30 percent for 1987, 20 percent for 1988, and 10 percent for 1989.

* Sec. 4. AS 14.43.120(j), (o), and (p) are repealed.

* Sec. 5. Section 4 of this Act takes effect September 1, 1990.

* Sec. 6. Sections 1 [- 3] of this Act take effect July 1, 1985.

MEMORANDUM 2/3/83

TO: Rep. Koponen, Rep. Wendte, Minority Caucus members
FROM: Lisa McLaren, Suzanne Mullen
RE: Alaska Student Loan Program

SOME POINTS TO BE CONSIDERED

* In looking through the statues, House & Senate Journals, and what committee minutes were available from 1971 when the Alaska Student Loan Program was put into its current form, no intent language could be found. Perhaps creating some intent language for inclusion at the beginning of the statute is in order.

* The Alaska Student Loan Program is equally accessible to all Alaskans who meet its residency requirements. It affects not only those Alaskans who actually directly use the program, but also their families' well-being. It give young adults the ability to be self-sufficient in obtaining their postsecondary education & training. There is a nation-wide trend, duplicated in Alaska, towards the student population becoming older. Currently the average age of someone receiving an Alaska Student Loan is 23.

* It currently costs the State of Alaska about $24,500 to keep someone incarcerated in Alaska for a year. In Feb. 1983 Alaska had approximately 1146 persons incarerated (this figure and the cost figure does not include persons "furloughed"in halfway houses, or in federal institutions in the lower '48. These are an additional 267 persons which AK pays for.) For the State of Alaska to be loaning $6,000 per person plus administrative costs & interest subsidy could be a very reasonable expenditure for the State to make. It depends in part on what the administrative costs & interest subsidy costs. Those figures should be available in a day or so. The weight may actually fall upon the increasing number of persons seeking that benefit, and whether or not the State has a sufficient pool of funds to have out on loan for such a program and whether or not the State can afford the overall "cost" for a larger number of people.

* When re-examining the Alaska Student Loan Program, it might be wise to examine the scholarship programs currently in statute. In talking with persons who administer financial aid programs at UAF it sounds as if some of these programs are no longer functioning the way they were intended due to the population growth in the state. A comprehensive system to provide assistance to those seeking postsecondary education and training might prove the most effective and efficient.

MEMORANDUM

To: Representative Niilo Koponen

From: Leonard Steinberg, Research Staff L. S.

Re: Forecasting Student Loan Demand -- Additional information
Research Request 83-157

Attached is a follow-up memorandum from Mr. David Swanson regarding forecasts for student loan demand. Although Mr. Swanson was not able to develop a "life table" type of analysis, his findings led him to ask if the student loan program's participation rate is nearing the saturation point. Furthermore, Mr. Swanson identified the specific types of information that would be necessary to develop a more reliable "life table" type of analysis.

* * * * *

We hope this information is helpful. Please let us know if you would like any additional infomation.

DATE: May 16, 1983

FILE NO:

Thru: Nico Bus, Acting Director
Administrative Services, DOL

TELEPHONE NO: 465-4500

Thru: Chuck Caldwell, Chief
Research and Analysis, DOL

SUBJECT: Student Loan Information

From: David Swanson, State Demographer
Research and Analysis, DOL

Following an intensive analysis of available data, we offer the following observations on CPE's forecasted number of student loan borrowers.

1. We believe that our preliminary finding (reported in our memo to you on May 12th, 1983) is correct: In order to achieve 24,365 borrowers by 1988-89, substantial increased participation in the loan program would be necessary. Even if our population forecast understates the 1988 population by 100,000 persons, a noticeable increase in participation would still be needed to generate 24,365 borrowers.

2. Is it possible that participation in the student loan program is nearing a "saturation point?" Although the following table (No. 1) presents a rough picture, it shows that in 1982-83, the "crude rate of participation in the student loan program" reached approximate parity with the "crude rate of full-time college participation" found in both Alaska and Washington.

   There are several reasons why the participation rate in the student loan program could exceed the rate for full-time participation in public colleges and universities. But will full-time attendance at vocational institutions, in-state private colleges and universities, and public colleges and universities out-of-state be sufficiently high to generate the borrowers by 1988-89 needed to achieve the 24,365 forecasted? Under the Department of Labor forecast of Economic Trends (used in conjunction with our population forecast), the outlook to 1988 shows relatively stable employment with declines occurring only within the construction industry. Under such a scenario, what will generate increased full-time school attendance?

3. After analyzing the data available for forecasting student loan borrowers we found that they were not sufficient to utilize the "life table" approach we desired. Consequently, we are unable to capture some of the dynamics underlying the program that we thought could assist the forecasting process.

   Using the data that are available, we can, under different assumptions, generate forecasts that are: less than those generated by CPE; higher than CPE's or about the same as CPE's. The crucial question - assumption - that needs to be answered is the level of participation in the program.

For example, if participation remains constant (29.43 per 1000), a population increase of 71,640 persons between 1982 and 1988 will generate only about 15,670 borrowers in 1988. On the other hand, if the trend in the rate of particiation found between 1981 and 1982 (22.74 and 29.43, respectively) continued to 1988, the crude participation rate would be 63.80. At a population increase of 71,640, this would generate 33,970 borrowers. Taking a simple average of these two values, 15,670 and 33,970, would result in 24,823 borrowers in 1988-89.

From the preceding examples, you can see why we believe that the assumption regarding the level of participation is crucial. This relates to the two major points that were made earlier: Given that participation must increase substantially in order to generate 24,365 borrowers by 1988-89, is it likely that it will if the rate of participation is currently reaching a "saturation point?"

4. As mentioned above, the "life table" type of analysis could not be accomplished because the CPE data were insufficient. This type of analysis, which would be very useful in developing a demographic-based forecast system, would require the following:

   a. Clear identification of <u>first-time borrowers</u> by age, type of program, etc.

   b. A tracking system to follow each <u>first time borrower</u>, in order to show:

      1. Terminations due to completion of an educational program;
      2. Terminations due to withdrawal before completion; and
      3. Borrowers who may have interrupted periods of attendance in a program.

   This type of information system would allow the creation of two important models: one giving the probability of 1st time participants by age, type program, etc.; the other showing flows through the program. Together these could be used with demographic data to help identify the number of people in the population who are eligible, the number using the program, and the number of people in the population who have exhausted benefits and are not part of the group eligible for entry in the program.

TABLE 1

	Year	Crude Participation Rate (Per 1000 Persons): Student Loan Borrowers in Alaska[1/]	Public 4 and 2 Year Full-time (10 hours and over) in Alaska[2/]	Public 4 and 2 Year Full-time (10 hours and over) in Washington State[3/]

1/ Student loan data are from page 13, "Alaska Student Loans: Background and Discussion Materials for the House Special Committee on State Loans," Alaska Commission on Postsecondary Education (no date). Population data used to compute rates for 1971-82 are from Table II.1 in Alaska Population Overview 1982, Alaska Department of Labor; Population Data for 1983-88 are from a forecast used for the "Plan of Service," Alaska Department of Labor.

2/ Statewide University of Alaska data used to develop full-time participation estimates for 1980-82 are from "Summary of closing Fall Semester Credit Enrollment and Credit Hour Data by Institution 1980-82," office of Institutional Planning, University of Alaska, February 25, 1983. These data only displayed total credit enrollment headcount. The full-time (10 or more hours) enrollment headcounts were estimated using data for Washington state, which show headcount enrollment by credits taken. ("Higher Education Enrollment Forecasts for the 1981-83 Biennium Budget, Office of Financial Management, State of Washington, December, 1980).

Approximately 66 percent of all students at four-year public institutions in Washington take 10 or more hours: approximately 33% of all students at two-year public insitutions take 10 or more hours. The population data used to develop the rates are from Table II.1, Alaska Population Overview 1982, cited above.

3/ The enrollment data for Washington are taken from "Higher Education Enrollment Forecasts for the 1981-83 Biennium Budget, Office of Financial Management, State of Washington, December, 1980. The population data for Washington are taken from Table 12, Population Trends for Washington State, Office of Financial Management, State of Washington, August, 1981.

Research and Analysis

SUBJECT: Progress on Student Loan Forecast Project

From: David Swanson, State Demographer DAS
Research and Analysis

Here are some preliminary findings from our work on the student loan project. At this point our analysis is incomplete and utilizes some rough approximations but some points worth possible consideration have emerged.

It appears that CPE's forecasted increase in student loan borrowers is primarily due to an implied increase of participation in the program. Using, for example, CPE's forecast of 24,365 by 1988, our analysis shows that if age-specific participation rates remain at the levels reported for 1983, our civilian population forecast will generate only 14,875 borrowers in 1988.

Given that our forecasted civilian population for 1988 is accurate, age-specific participation rates would have to show the following increases by 1988 in order to generate 24,365 borrowers:

Age-specific participation rate of student loan borrowers
(Per 1000 civilian persons)

Age	1983	1988	Percent Change 1983-1988
15-19 years	47.24	77.39	63.8%
20-29 years	81.42	133.36	63.8
30-39 years	28.64	46.90	63.8
40-49 years	12.73	20.85	63.8
50-59 years	5.17	8.45	63.4
60 years and over	1.00	1.66	66.0
15 years and over	40.83	65.16	59.6%

Alternatively, if the age-specific participation rates for 1983 remained constant, the implied errors in our forecasted civilian population by age for 1988 would be as follows:

	1988 Civilian Population			
		Implied Under	Implied Error in DOL Forecast	
Age	DOL Forecast	CPE Loan Total	Absolute	Percent
15-19 years	34,796	57,007	-22,211	-38.96
20-29 years	115,417	189,044	-73,627	-38.95
30-39 years	99,905	163,617	-63,712	-38.94
40-49 years	60,011	98,272	-38,261	-38.93
50-59 years	34,898	57,060	-22,162	-38.84
60 years and over	28,908	48,000	-19,092	-39.78
15 years and over	373,935	613,000	-239,065	-39.00

Our population forecasts do not provide an error-free description of the actual population that will be in Alaska in the future. Further, we cannot provide an error-free forecast of the participation rates that will occur in the future. However, our initial analysis suggests the following two related points.

1. It may be helpful to use our forecasting procedure as a means of identifying implicit assumptions contained within CPE's forecasts. For example, our analysis strongly indicates that CPE's implicit participation rates will have to increase between now and 1988 to achieve the 24,365 figure even if our forecasted civilian population is increased by over 215,160 persons. The "crude participation" rate needed to generate 24,365 borrowers in 1988 at increasing levels of population illustrates this implicit feature in the CPE forecast:

If Forecasted 1988 Population is increased by:	1988 Crude Participation rate needed to generate 24,365 borrowers	Difference Between Crude Participation Rate Needed in 1988 and the Current Rate of 40.83
0 persons	65.16	+24.33
23,907 persons	61.24	+20.41
47,812 persons	57,77	+16,94
71,720 persons	54.67	+13.84
95,627 persons	51.89	+11.06
119,533 persons	49.30	+ 8.47
143,440 persons	47.09	+ 6.26
167,346 persons	45.01	+ 4.18
191,253 persons	43.11	+ 2.28
215,160 persons	41.36	+ 0.53

In our view it is unlikely that our forecast for 1988 would be in error to the degree indicated by -239,065 civilian persons 15 years and over. To generate these "missing persons" the volume of migration into the state between now and 1988 would have to be over three times the volume experienced during the 5 year period associated with the pipeline boom. On the other hand, our forecast for 1988 could easily understate the population that will be here by 70,000 persons.

2. It may be worthwhile to focus more attention on participation rates. The CPE Methodology for forecasting has inherent assumptions on participation even through participation rates are not explicitly used. Variability in rates used for estimation purposes is generally the primary cause of variation (or error) in the resulting estimates. By explicitly looking at the implied range of participation rates contained within a given CPE forecast and a given population forecast, perhaps a clearer picture of participation and its correlates would emerge.

As stated in the beginning of this memo, our analysis is incomplete. Consequently, no attempt has been made at a detailed description of the conceptual and data problems that could potentially affect our approach to the student loan forecast project. We have developed a list of potential problems and will examine them as work progresses.

We will pursue a course of analysis similar to the one outlined here upon receiving the data that CPE is generating for us. Conceptually, this course will be superior to the "participation rate" analysis but it requires the derivation of additional data -- which may not be available. As we reach either critical or interesting points in our continued work, we will provide you with the results.

MEMORANDUM

To: Representative Niilo Koponen

From: Leonard Steinberg, Research Staff L. S.

Re: Cost Breakdown of Student Loans
Research Request 83-114

Lisa McLaren of your office requested information about the subsidy inherent in an Alaska student loan. We were asked to analyze the costs to the State for at least two scenarios: first, a one-time, one-year loan of $4,500, and second, four consecutive one-year loans of $4,500. We were also requested to provide a projection of the number of Alaska high school seniors that will attend college in Alaska in the next five years. Last, Ms. McLaren requested information about who receives student loans and how the Commission on Postsecondary Education projects student loan demand.

Findings

A one-time, one-year student loan of $4,500 at 5 percent interest has a present value cost to the State of $2,357, not including the cost of forgiveness. The cost can increase up to $3,064 if the borrower takes advantage of the maximum (50 percent) forgiveness. Four consecutive $4,500 loans have a present value cost of $8,367, not including the cost of forgiveness, and up to $11,923 if the full 50 percent forgiveness allowance is used. The cost of student loans is not as sensitive to repayment interest rates as might be expected because of the high cost of deferring interest and principal repayment. Increasing the interest rate from 5 to 9 percent would save the State approximately $585 on a 1-year loan and $2,026 on a 4-year loan, not including the cost of forgiveness. The present value cost of the forgiveness provision is less than the nominal cost because the forgiveness occurs in the future when the value of money is substantially less. For a 1-year loan of $4,500, eliminating the forgiveness provisions would save the State up to $707 and for a 4-year loan, would save the State up to $3,556. However, the cost of student loans is sensitive to market interest rates (which determine the opportunity cost of money) precisely because of the high cost of deferment.

Projecting the number of Alaska high school seniors that will attend college in Alaska during the next five years is difficult because of a lack of adequate data. These projections have not been made by the Department of Education, the Commission on Postsecondary Education, nor the University of Alaska. The Department of Education's Office of Planning and Research recently published projections of the number of Alaska high school seniors through the remainder of the decade, and the Commission on Postsecondary Education annually conducts a survey of Alaska high school seniors that reports the plans of this group for postsecondary education. On the basis of this information, we estimate that between 1,434 and 1,589 Alaska high school seniors will attend college in Alaska in FY 1984, rising to between 1,525 and 2,442 Alaska high school seniors attending college in Alaska in FY 1988.

Student loans are used mostly by undergraduate students in Alaska; in January 1983, the Commission on Postsecondary Education estimated that 49 percent of all student loans in FY83 would go to this group. The Commission's demand projections for student loans are based on correlating the projected number of seniors and the number of individuals in the 18-45 age group with the past demand for student loans, and projecting forward on the basis of the expected number of each group. A comparison of past demand projections and real demand shows that there has been substantial variation between projected and actual demand.

Student Loan Subsidy

Methodology. The cost of a student loan has been determined by using the net present value method of analysis. Other analytical techniques would yield slightly different answers to the question of how much a student loan costs. The net present value form of analysis was chosen specifically because it presents a single figure for the net gain or loss of a stream of benefits and costs over time.

Through discounting, net present value analysis (also known as discounted cash flow analysis) accounts for the fact that a given amount of money today is worth more than that same in future years. The discount rate used is an estimation of how much difference there will be between today's dollars and future dollars. For this analysis we chose a discount rate of 10 percent. The discount rate for any analysis is established by the rate of return which would be obtained by an alternative investment of similar duration and risk. We assumed that funds not spent on the student loan program and not spent on alternative government services would be invested in a low-risk asset such as

a Treasury Bill. Current yields on 10-15 year Treasury Bills are 10-10.5 percent; as long-term interest rates appear to be declining, we chose to use a discount rate of 10 percent. Changes in long-term interest rates can substantially modify the answers produced by this analysis.

Student loans are generally distributed at the begining of each academic semester or quarter, not all at once. For this analysis, we assumed that half the money would be distributed in September and half four months later in January. Both interest payments and repayment of principal are deferred during the time a student is in school and for one year thereafter. In analyzing the financial impacts of the forgiveness provisions we assumed that forgiveness will occur by eliminating payments at the end of the repayment period. The Postsecondary Commission has already approved this change from the current method of providing cash rebates throughout the repayment period. New regulations reflecting this change are in the process of being adopted.

The one-time administrative cost for each loan was estimated on the basis of a March 10, 1983 memo (attached as Appendix A) on administrative costs from Dr. Kerry Romesburg, Executive Director of the Commission on Postsecondary Education, to Representative Mae Tischer. According to Dr. Romesburg, the cost of finalizing a loan award in FY 83 is approximately $84 and the cost of each loan account in repayment is $89. To determine the cost per loan we summed the appropriate number of loan award costs and loan repayment years for each cost estimate. Depending on the length of the repayment period, the administrative cost per one-year loan is estimated to be between $978 and $511. Similarly, the administrative cost for four consecutive loans is estimated to be between $1,231 and $784.

The default rate is currently around 9 percent. The cost of collecting on loans in default is included in the administrative costs. Approximately 0.6 percent ($300,000) of the amount of money that should be in repayment as of March 16 will never be collected because of death, disability, or disappearance of the borrower, and has been written off by the Commission. Loan write-offs, though part of the real cost of a student loan, have not been included in this analysis because of the small cost per loan.

Discussion. The cost of a single $4,500 student loan at 5 percent is shown in Table 1 below. The first row indicates the total cost to the State under different forgiveness conditions. The remaining rows in the table indicate the breakdown of costs among the different cost components.

As indicated in Table 1, a single $4,500 loan at 5 percent interest costs the State $2,357 not including the cost of forgiveness. Forty-two percent of this cost is administrative expenses, 37 percent of the cost is the interest subsidy, and 21 percent of the cost is required to pay for the deferment of interest repayment. The total cost grows to $3,064 with full 50 percent forgiveness and the relative size of the cost components cited above declines as the forgiveness subsidy rises to 38 percent of the total cost.

Table 1

Present Value Cost Breakdown Of A Single (1-Year) $4,500 Loan At 5 Percent

Cost Component	No Forgiveness	Amount of Loan Forgiven				
		10%	20%	30%	40%	50%
Total	$2,357.43 (100%)	$2,455.40 (100%)	$2,572.90 (100%)	$2,711.96 (100%)	$2,874.85 (100%)	$3,064.03 (100%)
Admin. Costs	977.68 (42%)	888.34 (36%)	799.00 (31%)	709.66 (26%)	620.32 (22%)	530.98 (17%)
Interest Subsidy	875.33 (37%)	875.33 (36%)	875.33 (34%)	875.33 (32%)	875.33 (30%)	875.33 (29%)
Deferment Subsidy	504.42 (21%)	504.42 (20%)	504.42 (20%)	504.42 (19%)	504.42 (18%)	504.42 (16%)
Forgiveness Subsidy*	0.00 (0%)	187.31 (8%)	394.15 (15%)	622.55 (23%)	874.78 (30%)	1,153.30 (38%)

* Note: Eliminating the forgiveness provisions will not reduce the cost to the State by the full amount of the forgiveness subsidy because of increased administrative costs in handling the loan over a longer period of time.

Table 2 presents the total cost and a breakdown of the cost structure for four consecutive loans of $4,500 at a 5 percent interest rate. Total costs for four consecutive loans range from $8,367 with no forgiveness to $11,923 with full 50 percent forgiveness. With four consecutive loans, the relative importance of the various cost components is different from a single loan; because of the time factor, the deferment subsidy is the most important cost component in every scenario except 50 percent forgiveness.

Table 2

Cost Breakdown Of Four Consecutive $4,500 Loans At 5 Percent

Cost Component	No Forgiveness	Amount of Loan Forgiven				
		10%	20%	30%	40%	50%
Total	$8,366.89 (100%)	$8,930.08 (100%)	$9,558.11 (100%)	$10,260.94 (100%)	$11,046.38 (100%)	$11,922.98 (100%)
Admin. Costs	1,230.52 (15%)	1,141.18 (13%)	1,051.84 (11%)	962.50 (9%)	873.16 (8%)	783.82 (7%)
Interest Subsidy	3,501.32 (42%)	3,501.32 (39%)	3,501.32 (37%)	3,501.32 (34%)	3,501.32 (32%)	3,501.32 (29%)
Deferment Subsidy	3,635.05 (43%)	3,635.05 (41%)	3,635.05 (38%)	3,635.05 (36%)	3,635.05 (33%)	3,635.05 (30%)
Forgiveness Subsidy*	0.00 (0%)	652.52 (7%)	1,369.90 (14%)	2,162.07 (21%)	3,036.85 (27%)	4,002.84 (34%)

* Note: See note on forgiveness subsidy for Table 1.

In addition to clarifying the relative value of the deferment subsidy, the cost component breakdown also indicates the relative costs of the forgiveness program. However, the savings realized from eliminating the forgiveness program are substantially less than the amount shown as the cost of the forgiveness subsidy. The reason for this difference is that the administrative expenses increase for every year the loan is retained as an account. Loan forgiveness reduces administrative expenses because the number of years in which the account is handled is reduced. For example, 10 percent of a $4,500 loan is $450, but eliminating 10 percent forgiveness saves the State $98, 22 percent of $450. Eliminating the entire forgiveness program would reduce State costs for a one-time $4,500, 5 percent interest loan by a present value of $707 or 23 percent of the $2,250 being forgiven. For four consecutive $4,500, 5 percent interest loans, costs to the State could be reduced by $3,557 or 30 percent of the $9,000 being forgiven. Table 3, below, shows the real present value savings to the State from eliminating the forgiveness program and the percentage of the nominal amount forgiven that these savings represent.

Table 3

Actual Savings Realized From The Elimination of Forgiveness
(Percentage of Nominal Amount Forgiven)

Loan	Amount of Loan Forgiven				
	10%	20%	30%	40%	50%
$4,500 1-Year 5-Percent	$97.97 (22%)	$215.47 (24%)	$354.53 (26%)	$517.42 (29%)	$706.60 (31%)
4/$4,500 Loans ($18,000) 5-Percent	$563.19 (31%)	$1,191.22 (33%)	$1,894.05 (35%)	$2,679.49 (37%)	$3,556.09 (40%)

Tables 4 and 5 illustrate the degree to which the present value cost analysis is sensitive to a change in borrowers' interest rates. Table 4 shows the cost to the State of a one-time, one-year student loan of $4,500 with borrowers being charged a 9 percent interest rate. The table indicates that raising the interest rate to 9 percent (an 80 percent increase) will reduce the cost to the State of a one-time one-year loan by 25 percent when comparing costs without forgiveness and 12 percent under a 50 percent forgiveness scenario. Table 5 illustrates similar cost reductions for four consecutive $4,500 loans lent at 9 percent.

Table 4

Cost Breakdown Of A Single (1-Year) $4,500 Loan At 9 Percent

Cost Component	No Forgiveness	Amount of Loan Forgiven				
		10%	20%	30%	40%	50%
Total	$1,772.48 (100%)	$1,906.41 (100%)	$2,063.61 (100%)	$2,246.53 (100%)	$2,457.83 (100%)	$2,700.48 (100%)
Admin. Costs	977.68 (55%)	888.34 (47%)	799.00 (39%)	709.66 (32%)	620.32 (25%)	530.98 (20%)
Interest Subsidy	179.51 (10%)	179.51 (9%)	179.51 (9%)	179.51 (8%)	179.51 (7%)	179.51 (6%)
Deferment Subsidy	615.29 (35%)	615.29 (32%)	615.29 (30%)	615.29 (27%)	615.29 (25%)	615.29 (23%)
Forgiveness Subsidy	0.00 (0%)	223.27 (12%)	469.81 (23%)	742.07 (33%)	1,042.71 (43%)	1,374.70 (51%)

Dropping the forgiveness program from the one-time $4,500 loan at 9 percent interest could reduce the cost of the loan by up to $928.00 or 34 percent. Eliminating the forgiveness program could also reduce the cost of four consecutive $4,500 loans at 9 percent interest by up to $4,321 or 41 percent.

Comparisions between Tables 1 and 2 and Tables 4 and 5 also indicate that if the interest rate is raised to 9 percent and the forgiveness provisions are eliminated, costs can be reduced by 42 percent from the most expensive cost of a one-time, one-year $4,500 loan. Similarly, costs for four consecutive loans at $4,500 can be reduced by up to 47 percent.

Table 5

Cost Breakdown Of Four Consecutive $4,500 Loans At 9 Percent

Cost Component	No Forgiveness	Amount of Loan Forgiven				
		10%	20%	30%	40%	50%
Total	$6,341.04 (100%)	$7,026.04 (100%)	$7,791.78 (100%)	$8,646.70 (100%)	$9,600.05 (100%)	$10,662.16 (100%)
Admin. Costs	1,230.52 (20%)	1,141.18 (16%)	1,051.84 (14%)	962.50 (11%)	873.16 (9%)	783.82 (7%)
Interest Subsidy	718.04 (11%)	718.04 (10%)	718.04 (9%)	718.04 (8%)	718.04 (7%)	718.04 (7%)
Deferment Subsidy	4,392.48 (69%)	4,392.48 (63%)	4,392.48 (56%)	4,392.48 (51%)	4,392.48 (46%)	4,392.48 (41%)
Forgiveness Subsidy	0.00 (0%)	774.34 (11%)	1,629.42 (21%)	2,573.68 (30%)	3,616.37 (38%)	4,767.82 (45%)

Student loan costs to the State per dollar loaned decrease as the amount loaned increases. The cost to the State per dollar loaned also decreases as the number of loans granted to the same party increases. Last, the cost to the State per dollar loaned falls as interest rates rise. The first two trends can be explained by the relatively high and constant cost of loan administration. The third trend is solely a function of reducing the level of interest subsidy required.

As of March 3, 1983, 12,827 student loans averaging $4,415 have been awarded in FY 83. Had these loans averaged $4,500, and had all borrowers been one-time borrowers, the present value cost to the State of these loans would be $30,238,755, not including the cost of forgiveness. If the loans averaged 20 percent forgiveness, then the present value cost to the State would rise to $33,002,588. Had these loans been part of a multi-year lending package, the present value costs to the State would be less.

Alaska High School Senior/College Freshman Projections

As far as we have been able to determine, reliable projections of the number of Alaska high school seniors that will attend college in Alaska have not been made. Consequently, we made our own projections on the basis of the best available information. The accuracy of the data we used to make the estimates below is unknown, but we estimate only a 50 percent level of confidence in the accuracy of these projections. Nevertheless, we feel that the actual number of Alaska high school seniors that will attend college in Alaska lies somewhere in the range of estimates provided below.

Table 6

Estimated Number of Alaska High School Seniors Attending College in Alaska

Fiscal Year	Number of Students
84	1,434 - 1,589
85	1,461 - 1,800
86	1,515 - 2,052
87	1,489 - 2,200
88	1,525 - 2,442

The estimates in Table 6 were based upon two basic sources of information. First, the Department of Education's Office of Planning and Research has recently published a report entitled Enrollment Projections for Alaska Public Schools. The report provides two separate estimates of enrollments in grades K-12 through FY 1989; the first estimate is based on cohort enrollments and the second estimate is based on cohort enrollments and cohort births. Both estimates appear to be simple linear models which do not account for changes in economic conditions and changes in migration patterns. The Office of Planning and Research does not prepare these reports regularly and therefore does not have a history of making these types of projections. Furthermore, it is not possible to check earlier projections to determine whether or not the Office of Planning and Research has been accurate in the past; the Office has prepared only one other report of this type (during the pipeline period) and it was found to be highly inaccurate. The estimates in Table 6 are derived from the cohort enrollment based projections only.

The Alaska Commission on Postsecondary Education conducts a survey of Alaska high school seniors every year which asks, among other things, how many seniors plan to attend college and of those, how many plan to attend in Alaska. The Commission on Postsecondary Education has not conducted a follow-up survey to determine how often high school seniors actually do attend college in Alaska. Moreover, some of the findings of the survey cast doubt on the survey's accuracy. For example, the 1981-82 Survey Report stated that 1,849 seniors intended to attend college or a vocational-technical school after graduation, but 2,576 (727 more) seniors responded to questions about where they intended to attend college or a vocational-technical school.

According to the survey, the portion of high school seniors intending to seek postsecondary education has remained fairly constant at approximately 57 percent during the years 79-80, 80-81, and 81-82. However, the 1981-82 report found that 40.6 percent of high school seniors seeking postsecondary education would do so in Alaska; in 1980-81, 36.5 percent intended to stay in Alaska and in 1979-80, 31 percent had intended to stay in Alaska.

Our estimates in Table 6 are based on the assumption that 56.7 percent of high school seniors will attend postsecondary education after high school. The lower end of our estimate represents a projection based on the 1981-82 finding that 40.6 percent of Alaska high school seniors intended to seek postsecondary education in Alaska. The upper end of our estimate reflects the trend of an increasing percentage of Alaska high school seniors intending to seek postsecondary education in Alaska.

An evaluation of the accuracy of the high school survey in the Anchorage area has been prepared by the Anchorage School District and their information will be forwarded to you as soon as we receive it. Additionally, the University of Alaska is sending information about past enrollments and how many freshmen attended high school in Alaska; this information will also be forwarded to you when it is received.

Student Beneficiaries

The largest single group benefiting from student loans are undergraduates studying in Alaska (about 40 percent). As of January 1983, undergraduates studying in Alaska were expected to receive 54 percent of all undergraduate student loans and 49 percent of all student loans. By the end of the year, these numbers will drop a few percentage points because Alaska students are more likely to drop out of school in mid-year than out-of-state students, but undergraduates in Alaska will remain the single largest group of borrowers. Additionally, the Commission's January data shows that 73 percent of all vocational students with student loans attend school in Alaska, and 26 percent of all graduate students with student loans attend school in Alaska. A copy of the Commission on Postsecondary Education's most recent annual report on student financial aid programs, which contains additional statistical information, is enclosed for your review. Table 7 below describes the beneficiaries by student group as of March 3, 1983.

Table 7

Distribution of 1983 Student Loans by Group
(as of March 3, 1983)

Group	Number	Amount	Average Amount per Loan
Undergraduates	10,125 (79%)	$42,607,931 (75%)	$4,208
Vocational	1,560 (12%)	$7,878,118 (14%)	$5,050
Graduate	1,142 (9%)	$6,149,590 (11%)	$5,384
Total	12,827	$56,635,639	$4,415

The trend during recent years has been for an increasing number of student loan borrowers to attend school in Alaska. Table 8 below illustrates the percentage of undergraduate and graduate student loan borrowers who attended colleges in Alaska during the last five fiscal years.

Table 8

Percentage of Student Loan Borrowers Attending in Alaska Schools

Fiscal Year	Undergraduates	Graduates
1979	35%	12%
1980	36%	12%
1981	45%	18%
1982	47%	24%
1983	54%	26%

Student Loan Demand

The Commission on Postsecondary Education projects future student loan demand by correlating the historical demand for student loans with the number of high school seniors and the number of individuals in the 18-45 year age group, and projecting forward on the basis of the expected size of these two groups. The Commission uses the projections of the number of high school seniors developed by the Department of Education in Enrollment Projections for Alaska Public Schools. Similarly, the Commission obtains estimates of expected size of the 18-45 year old age group from the Department of Labor's Alaska Population Overview and Alaska Annual Planning Information.

The Commission's system for projecting demand does not account for changes in economic conditions, the trend toward increasingly older postsecondary students, changes in migration patterns, or changes in the laws and regulations concerning the student loan program. The Commission's demand projections for student loans exceeded actual demand by 33 percent in FY82 and underestimated actual demand by 17 percent in FY83. Attached as Appendix B is a memorandum from Commission Executive Director Dr. Kerry Romesburg comparing the projected demand with actual demand for fiscal years 1971-1984.

APPENDIX D

BILL SHEFFIELD, GOVERNOR

ALASKA COMMISSION ON POSTSECONDARY EDUCATION

POUCH FP
JUNEAU, ALASKA 99811
PHONE: (907) 465-2854

M E M O R A N D U M

TO: Representative Mae Tischer
Co-Chairman, House HESS

FROM: Kerry D. Romesburg, Executive Director
Alaska Commission on Postsecondary Education

DATE: March 10, 1983

At the recent HESS Committee hearing on HB 56, you requested information on administration costs of student loans. Listed below are the actual costs for FY82 and the budgeted costs for FY83.

	FY82-Actual	FY83 Budgeted
100	$ 835,400	$1,467,900
200	11,800	7,800
300	438,500	667,200
400	17,100	19,800
500	80,800	153,000
TOTAL	$1,383,600	$2,315,700

In FY82 we made 9,898 finalized loans, and in FY83 we estimate 12,500. At mid-year FY82 we had 8,718 loan accounts in repayment, and at mid-year FY83, we had 14,128 accounts in repayment. Therefore, in FY82 we handled (either in awards or repayment and collections) 18,616 loan accounts, and in FY83, we handled 26,628 loan accounts. Dividing this into the administrative expense, one finds a straight administrative cost in FY82 of $74.32 per loan account handled, and $86.96 per loan account handled in FY83.

Pro-rating our administrative expenses between loan awards and loan collections, we can get a better estimate of costs to make loans and costs to collect loans. This break-out includes a lot of estimates and assumptions, but at least it can serve as a guide.

	Awards-82	Repayment-82	Awards-83	Repayment-83
100	$389,389	$446,011	$ 667,842	$ 800,058
200	5,497	6,303	3,548	4,252
300	244,170	194,330	303,552	363,648
400	7,971	9,129	9,008	10,792
500	37,662	43,138	69,609	83,391
TOTAL	$684,689	$698,911	$1,053,559	$1,262,141

05-F34LH

Again, simply dividing by the number of accounts handled, one gets an administrative cost in FY82 of $69.17 per loan award finalized and $80.17 per loan account in repayment, and $84.28 per loan award finalized and $89.34 per loan account in repayment in FY83.

A third way of looking at administrative cost is to compare it as a percentage of loan volume. Using this approach, in FY82 we find that award administration cost 1.69% of loan award volume, and repayment administration cost 15.31% of loan funds collected and/or forgiven. In FY83, award administration costs 1.87% of loan award volume, and repayment administration cost 17.60% of loan funds collected and/or forgiven. (It should be noted that these percentages already have default totals factored out.)

I am not certain that this is exactly what you were asking for in terms of administrative costs per loan. If not, please let me know and I will re-work the figures.

APPENDIX B

BILL SHEFFIELD, GOVERNOR

ALASKA COMMISSION ON POSTSECONDARY EDUCATION

POUCH FP
JUNEAU, ALASKA 99811
PHONE: (907) 465-2854

M E M O R A N D U M

TO: Leonard Steinberg
House Research Agency

FROM: Kerry D. Romesburg, Executive Director
Alaska Commission on Postsecondary Education

DATE: March 21, 1983

When we last met, you asked for a five-year history of the "fit" of our projections. I went back through old budget documents and have developed a twelve-year "fit." The two tables enclosed with this memorandum contain the data for number of loans, average loan amounts, and total program cost. Prior to FY77, the estimates were based upon a linear regression model utilizing state population estimates. From FY78 through the present, the estimates are based upon a linear regression model utilizing the state population estimates and the projected high school seniors.

You will note that the newer regression missed pretty badly in FY79 and again in FY81 & 82. In FY79, borrowing amounts were raised from $2,500 to $3,000; in FY81, we simply missed (we received an additional $3,000,000 in a supplemental, which is not reflected in the estimate); and in FY82, borrowing amounts were raised from $3,000 and $5,000 to $6,000 and $7,000.

Enclosure

YEAR		NUMBER OF LOANS		AVERAGE AMOUNT		TOTAL AMOUNT	
		ESTIMATE	ACTUAL	ESTIMATE	ACTUAL	ESTIMATE	ACTUAL
FY 71							
FY 72		1,060	1,081	$ 1,500	$ 1,483	$ 1,582,300	$ 1,603,158

REQUEST FOR BIDS TO PROVIDE LOAN SERVICING

FOR THE STUDENT LOAN PROGRAM

1.0 PURPOSE OF REQUEST the State of Alaska, the Alaska Commission on Postsecondary Education is soliciting proposals for the servicing of Alaska student loans throughout repayment, deferment, and collection of defaulted accounts.

The State plans to gain current and long-term savings by contracting for the servicing of the repayment and collection functions of the student loan program.

The bids for this servicing should be less than current state costs. The phasing out and elimination of commission staff associated with the loan repayment and collection services and related costs will finalize the cost savings to the state.

2.0 CONSIDERATIONS

2.1 This Request for Proposal (RFP) does not in any way commit the State of Alaska or the Alaska Commission on Postsecondary Education to reimburse recipients of this RFP for any costs involved in the preparation and submission of proposals. All materials submitted to the State in response to this RFP will become the property of the State and will not be returned.

2.2 Furthermore, this RFP does not obligate the State of Alaska to accept, or contract for, any services expressed or implied.

2.3 The State of Alaska reserves the right to:

(a) Request any respondent to clarify their proposal or to supply additional material that is necessary to assist in the contract award.

(b) Modify or otherwise alter any or all of the requirements of this RFP. If, in the opinion of the State, there is a material requirements modification, all respondents will be given an equal opportunity to modify their proposals in the specific areas designated by the State.

(c) Reject any or all proposals and specifications received and to waive formality in bidding procedures.

(d) Require the submission of a reasonable performance bond as a guarantee of project completion.

3.0 QUESTIONS REGARDING THIS RFP

All questions regarding details or scope of this project must be submitted in writing and will be answered in writing. Questions should be addressed to:

Mr. Kevin Hanon

Alaska Commission on Postsecondary Education

Division of Student Financial Aid

Pouch FP

Juneau, Alaska 99811

Copies of questions and answers will be sent to all firms that receive a copy of the RFP. No questions will be addressed that are received after 4:30 p.m., March 30, 1984.

4.0 PROPOSED PROJECT SCHEDULE

4.1 Request Released	February 28, 1984
4.2* Final Date for Written Questions	March 30, 1984
4.3 Pre-bid Conference	April 11, 1984
4.4 Proposals Due	May 11, 1984
4.5 Vendor Selection	May 25, 1984
4.6 Contract Negotiation	June 8, 1984
4.7 Begin Project Implementation	June 11, 1984
4.8 Assume Loan Servicing	August 20, 1984

*A summary of all written questions received with answers will be sent to all vendors who have indicated interest in responding to this RFP.

5.0 GENERAL INFORMATION

5.1 The Alaska Student Loan Program (ASLP) is administered by the Alaska Commission on Postsecondary Education. The Commission will continue to determine loan eligibility and make loan awards. As of January 9, 1984, there were 20,600 loan accounts in the loan repayment and collections cycle. Of these, 15,327 were current in payments, 1,345 were 30 to 59 days delinquent, 624 were 60 to 89 days delinquent, 420 were 90 to 120 days delinquent, and 2,884 were in default (over 120 days past due and in litigation).

5.2 The ASLP has been experiencing rapid growth over the past five years. Vendors should realize that the service function will be heavily impacted over the next few years as large numbers of accounts enter the repayment cycle. Loan volume history and projections are presented in Appendix B.

5.3 The ASLP has a number of unique features, so it is not a Federal Guaranteed Student Loan Program (GSL). However, one year's worth of loans, 1981-82, was comprised of a combination of ASLP and GSL loans. Therefore, potential vendors must be able to service both types of loans (see summary in Appendix B).

5.4 ASLP loans have been awarded since 1971-72, and loan terms have changed a number of times since the program's inception. The contractor should accommodate loans of variable interest, variable repayment schedules, variable deferment categories, and variable forgiveness rates.

5.5 Loan repayment begins one year after the student ceases to be a full-time student (except federal GSL, which only have a six-month "grace" period).

5.6 Repayment is over a 10-year period with provision to extend to 15 years if necessary. Portfolio also includes some loans (early ASLP) with a 6-year repayment period with extension to

11 years, and Federal GSL loans, which also have a 10-year repayment, but also impose a minimum monthly payment of $30 per month.

5.7. Interest does not accrue and is not charged while a student is full-time, while in the 12-month grace period (6-month for Federal GSL), while in approved deferments, and while in a 6-month grace period following approved deferments. The exception is on early ASLP loans with 6-year repayment period. With these loans, interest accrues during the "grace year."

5.8 Current loans, including the Federal GSL loans in our portfolio, received up to 50% forgiveness, but some earlier ASLP loans may still only be eligible for up to 40% forgiveness.

5.9 Loans may be partially forgiven if, upon completion of the program of study, the borrower resides in Alaska. That portion, for up to a total of 50% of the total principal and interest, shall accrue as follows:

2-3 years residence, 10%
3-4 years residence, an additional 10%
4-5 years residence, an additional 10%
5-6 years residence, an additional 10%
Over 6 years residence, an additional 10%

Residence must be continuous and must begin with in one year of completion of the program.

5.10 Approximately 1 account in 5 applies for and receives forgiveness benefits.

5.11 No portion of the loan receipts including interest, may be withheld in the form of collection or servicing fees; rather, these expenses must be part of the contract to be billed to the Commission.

5.12 Multiple loans may be grouped wherever possible, except in the case of the Federal GSL loans.

5.13 Approximately 98% of all loan payments come through a lock-box arrangement with Alaska Pacific Bank in Anchorage.

5.14 ASLP is currently an on-line automated system tied to the State's mainframe. The ASLP system was developed by Computer Management Services, Inc. (CMSI), which is currently servicing the system. The State's mainframe is described in the following paragraph.

5.15 The Juneau Data Center (JDC) currently operates two IBM 3033 mainframes, referred to as "CPU A" and "CPU B" under VM/SP and OS/MVS, respectively. The Anchorage Data Processing Center operates one IBM 3031 and one 3081 mainframe. System software on CPU A includes VTAM, CMS, and PVM. System software on CPU B includes VTAM, ACF/VTAM, NJE, JES2, NCCF, NPDA, and CICS. A migration of VCNA with all terminals having cross-domain capability is in process. Pertinent applications support software includes, SPM, CMS, LIBRARIAN, VSAM, RAMIS II, ADABAS, NATURAL, ADAMINT, DMS, COBOL, CICS, AMS, VSAM-ASSIST, and BSAM QUICK-INDEX. Numerous other languages and software packages exist.

Vendors desiring technical information concerning current configurations, release levels, or software availability should contact the JDC Customer Services Manager at (907) 465-4801.

It should not be construed that because the State of Alaska currently has a suitable mainframe computer that proposals address this alternative. This is but one variation, and the State encourages innovation and alternative approaches.

5.16 Samples of all current forms and reports can be seen at the Commission's office.

5.17 Appendix B contains information on Repayment and Collection's workloads and a list of printed forms used in servicing loans. Each quantity represents a years supply.

6.0 SCOPE OF WORK

6.1 All loan servicing must include those functions currently handled by the Alaska Commission on Postsecondary Education in the Repayment and Collections sections. This also includes all Memorial Scholarship accounts (see Appendix B for a description).

6.2 An on-going interface must be maintained with the loan awards and microfiche records sections.

6.3 GSL reporting requirements, as prescribed by federal program regulations, must be met.

6.4 The contractor will have full responsibility for borrower inquires and decisions regarding repayment (including revised repayment schedules) forgiveness, deferment, and collection actions and status. Contractor also handles all illegal loans.

6.5 The following management reports must be submitted by the contractor. A copy of each report appears in Appendix B.

(a) Monthly statement of principal received current month and year-to-date for both federal GSL and state loans.

(b) Monthly statement of interest received current month and year-to-date for both federal GSL and state loans.

(c) Monthly statement of both principal and interest forgiven current month and year-to-date for both federal GSL and state loans.

(d) Monthly past due report listing number of accounts and dollar volume of such accounts current, 30-59 delinquent, 60-89 delinquent, 90-119 delinquent, and 120+ in default (including those in litigation). Report should include default rate as defined by Commission.

(e) Monthly summary of loans in deferment, by deferment status.

(f) Annual summary of repayment account for income tax purposes -- to be mailed to borrower.

(g) Federal GSL Quarterly Reports.

(h) Accounts receivable monthly report.

(i) Periodic death, disability, bankruptcy, and uncollectible accounts report.

(j) Notification of paid-in-full accounts.

6.6 Collection of defaulted accounts (over 120 days past due) must include skiptracing and preparation of court documents for processing by the Office of the Alaska Attorney General. If repayment on a revised schedule basis is set by the courts, the contractor must service repayment again (usually at 10.5 percent interest).

6.7 In skiptracing, every reasonable effort must be made to locate the borrower.

6.8 Litigation involves preparing all the paperwork (Department of Law supplies stationary for complaint and summons) for complaint and summons and payment for servicing them. Other paperwork or activities include the following:

(a) Location of and maintaining contact with borrowers.

(b) Request for default judgment.

(c) Revised schedules based on default judgment.

(d) Payment of attorney fees.

(e) Writ of execution (after contractor locates borrower's assets).

(f) Processing funds received from court actions.

(g) Maintain report on status of all borrowers in litigation.

(h) Dealing with Bankruptcy - Chapters 7 and 11.

(i) Dealing with Bankruptcy - Chapter 13.

6.9 Recommend to the Commission, loans for write-off after due diligence in collecting loan has been taken and documented in the file.

6.10 Write-off loans due to death of borrower.

6.11 Report to the Credit Bureau all defaulted student loan accounts.

6.12 Successful contractor's activities with regard to servicing the ASLP and appropriate GSL loans in behalf of the Commission must be subject to audit to the satifaction of the Alaska Division of Legislative Audit.

6.13 A transition plan must be submitted detailing how the transition will be accomplished. Complete takeover is scheduled for August 20, 1984.

7.0 PROPOSAL EVALUATION

7.1 Proposals will be evaluated primarily on the basis of the criteria listed below, although the State reserves the right to consider any other factors which it may consider to be pertinent.

(a) Responsiveness to all items, requests, and requirements contained in this RFP.

(b) Costs quoted and estimated ultimate costs to the State. Future cost increases will only be considered for increases in the volume of loans serviced and increases in

the cost of comparable services. The successful contractor will receive priority consideration at renewal time if his costs have been kept at a reasonable level.

(c) Technical and personal qualifications and related experience of personnel to be assigned. Personal resumes are required.

(d) Qualifications, capability, and experience of the vendor including general management, project management, financial responsibility and stability, willingness to negotiate and cooperativeness.

7.2 All bid responses must be complete and received no later than 5:00 p.m., April 9, 1984. It must address all areas of the proposal and must contain a plan for transition and eventual assumption of full servicing of loans in the repayment/collection cycle.

8.0 MISCELLANEOUS

8.1 Contractors must have a current Alaska State Business License in order to conduct business in Alaska. However, this is not a requirement for submitting a proposal if the proposal contains a declaration of intention to obtain such a license before contract negotiations begin.

8.2 The Postsecondary Education Commission will serve as a board of appeal for conflicts which may arise between student loan borrowers and the contractor.

8.3 Successful contractor's activities with regard to servicing the ASLP and appropriate GSL loans on behalf of the Commission must be subject to audit by state and federal audit divisions.

8.4 This RFP and portions of the vendors proposal will be attached to the negotiated contract and will become part thereof.

8.5 A copy of the State of Alaska's Standard Agreement Form for Professional Services Contract is enclosed. The firm selected will be expected to agree to the provisions of the agreement unless deviations are negotiated with the Alaska Commission on Postsecondary Education and approved by the Department of Law.

APPENDIX A

INSURANCE

During the life of this contract, the Contractor shall purchase and maintain insurance with a carrier or carriers satisfactory to the Department of Administration, Division of Risk Management, covering injury to persons or property suffered by the State of Alaska or a third party, as a result of errors or omissions or operations which arise both out of and during the course of this contract by the Contractor or by any subcontractor or anyone directly, or indirectly employed by them. The coverage will also provide protection against injuries by all employees of the Contractor and the employees of any subcontractor engaged in work under this contract. A Certificate of Insurance will be furnished to the Contracting Officer prior to beginning work under this contract. This certificate will show evidence of coverage and provide a written thirty (30) day prior notice to the Contracting Officer, of cancellation, non-renewal or material change. Failure to furnish satisfactory evidence of insurance or lapse of the policy is material breach and grounds for termination of the Contractor's services.

Before performing under this contract, evidence of the following coverages will be provided.

1. Comprehensive General Liability with coverage limits per contract schedule:

    a. Premises operations
    b. Independent contractors
    c. Products/ completed operations
    d. Blanket contractual
    e. Personal injury

2. Comprehensive Automobile Liability with coverage limits per contract schedule.

    a. All owned vehicles
    b. All hired vehicles
    c. All non-owned vehicles

3. Professional Liability with Limits per Contract Schedule.

    a. Coverage for all errors, omissions or negligent acts which the Contractor, employees, or the subcontractors may make which result in financial loss to the State of Alaska.

VI. GUARANTEED STUDENT LOAN PROGRAM

C. DIFFERENCES IN ADMINISTERING THE GUARANTEED STUDENT LOAN PROGRAM AND THE ALASKA STUDENT LOAN PROGRAM DURING REPAYMENT STATUS

Summary

The Alaska Student Loan Program (ASLP) has been making student loans since 1971. During the 1980-81 school year the Alaska Student Loan Program qualified as an approved lender under the Guaranteed Student Loan Program, a federally-reinsured student loan program.

During that school year the maximum GSLP undergraduate loan allowable was $2,500.00 and the maximum ASLP undergraduate loan was $3,000.00. If the borrower qualified for a $3,000.00 loan, he was issued a $2,500.00 GSLP Promissory Note and a $500.00 ASLP Promissory Note.

During the 1980-81 school year 5,236 borrowers received GSLP loans totaling $11,556,257 through the Alaska Student Loan Program.

Most borrowers who received GSLP loans during the 1980-81 school year also have received ASLP loans, either during the same year, in prior years or in subsequent years.

Since the laws and regulations governing the GSLP and ASLP programs are slightly different, the loans must be kept separate during the disbursement and repayment process. On the following page is a chart outlining the differences in the two programs which affects the administration of the loans during repayment.

V. C. DIFFERENCES IN ALASKA STUDENT LOAN AND GUARANTEED STUDENT LOAN PROGRAMS

	ALASKA STUDENT LOAN PROGRAM (01 loans)	GUARANTEED STUDENT LOANS (51 Loans)
Years loans have been made	1971 through the present	1980-81 school year only
Are loans reinsurred?	No	Yes, by U.S. Department of Education (USDE), but only death claims are filed.
Annual interest rate	5% while in repayment status. Interest is waived while in school and during periods of deferment.	5% interest billed USDE while in 1st 6 months of grace period and during periods of deferment listed below. (These are considered as 9% loans when billing for special allowance.
Grace period	1) 1 year grace period when borrower ceases to be full-time student 2)6 month grace period after periods of approved deferment listed below.	1) 6 month grace period when borrower ceases to be a full-time student. However, student receives full year period--during 2nd 6 month period, interest accrued is waived by State. 2)6 month period after periods of approved deferment.
Allowable periods of deferment of repayment	1)Full-time student status (unlimited) 2)Active duty with U.S. Armed Forces (unlimited) 3)Full-time Peace Corps Volunteer (3 year limit) 4)Full-time Domestic Service Act Volunteer (3 year limit) 5)Unemployment (1 year limit) 6)50% medical disability 7)Internship/residency (2 year limit)	1)Full-time student status (unlimited). 2)Active duty with U.S. Armed Forces (3 year limit) 3)Full-time Peace Corps Volunteer (3 year limit) 4)Full-time Domestic Service Act Volunteer 3 year limit) 5)Unemployment (1 year limit) 6)Graduate fellowship program (unlimited) 7)Rehabilitation training program (unlimited)
Can borrower qualify for deferment if 120 days or more past due in monthly payments?	Yes	No
Minimum annual payment	None - 10 years to repay	$360.00 annual payment to principal, plus interest.
When must borrower receive repayment schedule?	Not defined, but borrower is required to notify the ASLP office when he ceases to be a full-time student so that a repayment schedule may be prepared.	150 days prior to the end of the grace period.

REPAYMENT

MEMORIAL SCHOLARSHIP ACCOUNTS

The following memorial scholarship loans are administered by the ASL office.

Michael Murphy Memorial Scholarship loan may be used only to pursue a degree program in an accredited college or university in law enforcement, law, probation and parole, or penology, or closely related fields.

Carroll L. "Butch" Swartz Memorial Scholarship may be used only to pursue a degree program in an accredited college or university in criminal law, criminology, corrections, police science and administration, juvenile justice, or other fields closely related to criminal justice.

Harvey Golub Memorial Scholarship loan may be used only to pursue a degree program in accredited college or university in civil, mechanical, electrical, electronic, petroleum, mining, traffic and transportation, sanitary, chemical or other recognized field of engineering.

Robert C. Thomas Memorial Scholarship loan may be used only to pursue a degree program in an accredited college or university that will lead to a career in education or public administration, or other closely related fields.

These loans are not on the SFAS, but are kept on ledger cards. Once they have entered the repayment cycle they require a monthly review to verify that payments are being made.

These loans are basically subject to the same regulations as ASL accounts with the following exceptions:

- grace year is 6 months
- loan is non-interest bearing
- minimum monthly payments are $50
- loan must be repaid within 6 years

OFFICE OF THE ATTORNEY GENERAL

March 16, 1984

The Honorable Mae Tischer, Chair
Health, Education, and Social
Services Committee
Alaska House of Representatives
Pouch V
Juneau, AK 99811

Re: Draft CS for HB 681(HESS)
-- default on and collection of student loans
Our file: 377-114-84

Dear Representative Tischer:

At the request of Bill Lovell, of your staff, I have reviewed Legislative Counsel Lynn Asper's February 29, 1984 draft of a committee substitute for HB 681, which Bill delivered to me this morning. The draft CS makes no substantive change from the original HB 681, and the Department of Law has no objection to it on that basis.

The draft CS makes two minor style changes: (1) it changes the word "which" to the word "that" in two places, which is good; and (2) in the bill's sec. 2, the draft deletes our subsec. (f)'s reference to default "under (o) of this section," while adding to (f) a sentence stating that default occurs if a loan payment is 120 or more days past due. That new sentence in (f) repeats our new sentence in (o) and adds the phrase "under this subsection" in both places. Basically, that looks okay.

Regarding the latter, my only concern is that, when an identical provision is placed in two different locations in the statutes, there is always the potential for one of them to be amended in the future while the other one is overlooked; this could cause confusion and litigation. Lynn's objection to our version is based on his feeling that where our subsec. (f) refers to "default under (o) of this section" it is not really accurate since, although (o) contains what is essentially a definition of "default," default is not really occurring under that subsection. It's a fairly subtle point, but a third approach that would meet both of our concerns would be to change both (f) and (o) to refer to "default as defined in (q) of this section." Then add a new section to the bill that would add a new AS 14.43.120(q) to read "For the purposes of this section, a loan is in default if a loan

payment is 120 or more days past due." (Or perhaps this definition could be added to the definition section for AS 14.43's art. 4 -- AS 14.43.160.)

Thank you for this opportunity to comment.

Yours truly,

NORMAN C. GORSUCH
ATTORNEY GENERAL

Levy is working out language since Maynard didn't. I think we finally got it squared away & tight enough. He'll send it to the Committee (at the request of the sponsor) & copy us.

If that's what 2 lawyers are like — Judiciary must ~~be~~ really be something.

Levy.

A M E N D M E N T

Offered in the HOUSE By Sund

TO: CSHB 161(Loans)

Page 1, delete section 1 of the bill and insert:

"* Section 1. AS 14.43.120(f) is amended to read:

(f) Interest on a loan given under AS 14.43.090 - 14.43.160 is at the rate of five percent a year <u>for the first three years of repayment, and eight percent a year for the remainder</u> unless the loan is in default. Interest on a loan that is in default is 10 percent a year for the period the loan is in default."

20 AAC 15.025. PRIORITY RANKING OF APPLICANTS. (a) Upon receipt of a completed application for collegiate study, an applicant will be assigned priority points based upon the schedule set out in (b) of this section.

(b) Each applicant for a loan for a collegiate program will be assigned priority points based upon student status and state of attendance, according to the following schedule:

(1) student status (during loan period):
(A) continuing undergraduate or graduate students with existing Alaska student loans for the previous school year or term.....6 points
(B) remaining senior students.....5 points
(C) remaining junior students.....4 points
(D) remaining sophomore students.....3 points
(E) remaining freshman students.....2 points
(F) remaining graduate students.....1 point
(2) students attending colleges or universities in Alaska.....1 point

(c) Completed applications for collegiate study received by February 15th will be grouped together. Complete applications received after February 15th will be grouped in monthly lots. The groups will be processed according to priority point accumulation. Those applicants receiving the highest priority point accumulation within a group will be processed first and those receiving the lowest priority point accumulation within a group will be processed last. In the case of equal point accumulation within a group, priority will be based upon the earliest date of receipt of the completed application.

(d) Completed applications for a non-collegiate postsecondary program will be processed in the order of receipt of the application in the loan office. (Eff. 2/3/77, Reg. 61, am 12/7/80, Reg. 76; am 11/19/83, Reg. 88).

SURVEY OF 1983-84 ALASKA STUDENT LOAN RECIPIENTS

Alaska Commission on Postsecondary Education
March, 1984

INTRODUCTION

The Alaska Student Loan program, established in 1971, is the most generous loan program in the nation, and has provided student financial aid, in the form of low interest loans, to over 50,000 Alaskan residents. For a number of years the vast majority of borrowers used their Alaska loans to attend postsecondary educational institutions outside the State of Alaska, but from 1975 to 1982 there was a steadily increasing trend toward in-state attendance, culminating in over fifty percent of the 1982-83 borrowers attending school in Alaska. Then, in 1983-84, the trend broke. As of November 1, 1983, 53.4 percent of the student loan borrowers were attending school out-of-state.

In an effort to better understand this break in an eight-year pattern, all 1983-84 loan recipients were surveyed. This was the first attempt to survey current borrowers in the thirteen-year history of the loan program, so the opportunity was taken to solicit opinions on a number of issues related to Alaska student loans.

PROCEDURE

During the last week of October 1983, questionnaires (see Appendix A) were mailed to all (13,026) 1983-84 student loan recipients. The questionnaires were mailed to the permanent home address of each borrower in the hope that it would be forwarded to school addresses when necessary. No follow-up was conducted, since not all files contain accurate current address data.

FINDINGS

Of the 13,026 loan recipients surveyed, 7,476 (57.4%) returned completed questionnaires. For a census-type survey with no follow-up, this is an acceptable response rate as long as the respondents seem to be distributed in a pattern similar to the borrowing population. As can be seen in Table 1, the response rate by student level was quite evenly spread, when compared to the borrowing population, and therefore should serve as a good indicator for inference to the population. Similarly, the in-state/out-of-state mix is not disproportionate.

The only group which may be over-represented is graduate students attending in Alaska, since the response rate was a very high 94.4%. However, since this class of borrowers is relatively small, it should not lessen the reliability of the findings.

TABLE 1

Distribution Of Respondents By
Student Level

Student Level	Alaska Attendance			Out-of-State			Total		
	No.	%	% of Borrowers	No.	%	% of Borrowers	No.	%	% of Borrowers
Freshman	856	25.6	43.7	974	23.6	51.5	1,830	24.5	47.5
Sophomore	743	22.2	57.6	829	20.1	58.4	1,572	21.0	58.1
Junior	596	17.8	64.4	745	18.0	64.4	1,341	17.9	64.4
Senior	516	15.4	64.2	648	15.7	63.8	1,164	15.6	64.0
Graduate	255	7.6	94.4	695	16.8	71.1	950	12.7	76.2
Vocational	378	11.4	46.4	241	5.8	47.9	619	8.3	47.0
Total	3,344	100.0	55.1	4,132	100.0	59.4	7,476	100.0	57.4

Type of Institution Attended. The loan borrowers were asked to indicate what type of school they were attending and whether it is located in Alaska or out-of-state. Over three-fourths (78.0%) of the respondents indicated they were attending a four-year college or university, either public or private, with out-of-state enrollees more heavily represented in this type of school, than Alaska enrollees. (See Table 2.) Not surprisingly, community college and vocational students tend to attend in Alaska, rather than traveling outside for schooling.

TABLE 2

Distribution Of Respondents By
Type Of Institution

Type of Institution	Alaska		Out-of-State		Total	
	Number	%	Number	%	Number	%
Vocational	445	13.3	287	6.9	732	9.8
Community Colleges	766	22.9	231	5.6	997	13.3
Private Coll/Univ.	182	5.4	1,628	39.4	1,810	24.2
Public Coll/Univ.	1,951	58.4	1,986	48.1	3,937	52.7
Total	3,344	100.0	4,132	100.0	7,476	100.0
% of Respondents	44.7		55.3		100.0	
% of Borrowers	55.1		59.4		57.4	

Student Loan Interest Rate. The current interest rate on Alaska student loans is 5%. This is the lowest student loan interest for any state comprehensive student loan program in the nation, and there is nearly always debate over the level during each legislative session. When the borrowers were asked, they strongly endorsed retaining the 5% loan rate. Nearly three-fourths (74.9%) of the borrowers felt that 5% is the appropriate interest rate for these loans. Only 18.6% of the borrowers felt the rate should be increased, and even then, most felt only a small increase was in order. (See Table 3.)

TABLE 3

What Rate Of Interest Should Be
Set For Student Loans?

Interest Rate	Number	Percentage
5%	5,603	74.9
6%	640	8.6
7%	441	5.9
8%	164	2.2
9%	145	1.9
No Opinion	483	6.5
Total	7,476	100.0

Student Loan Borrowing Maximums. The Alaska Student Loan program permits students to borrow up to $6,000 per year for undergraduate study and up to $7,000 per year for graduate study. Once again, Alaska's program is distinguished from other state-level comprehensive student loan programs in the nation. There is no other comparable loan program with borrowing maximums as high as Alaska's. Current borrowers were asked what maximums they believed to be appropriate for Alaska Student Loans. As indicated in Table 4, the majority (78.4%) by more than three-to-one, believed the current maximums are appropriate. Few, less than 5%, felt the maximums should be lowered, and 16.1% felt the maximums should be raised.

TABLE 4

Should The Loan Borrowing
Maximum Be Changed?

Response	Number	Percent
Retains Current Level	5,863	78.4
Reduce Maximum	306	4.1
Revise Maximum Upward	1,201	16.1
No Opinion	106	1.4
Total	7,476	100.0

An interesting pattern develops when one looks at which students believe higher maximums are appropriate. These data are presented in Table 5, and indicate that freshman borrowers, both in-state and out-of-state, and graduate borrowers attending out-of-state are disproportionately represented in the 1,201 persons desiring higher borrowing limits. One might guess that the out-of-state graduate borrowers are reacting to actual costs incurred by such attendance when they want limits raised, but the fact that freshman, when compared to sophomores, juniors, and seniors, are disproportionately represented in those wishing higher limits, may simply mean that they do not know the true costs of attendance in this--their first semester of school.

TABLE 5

Distribution Of Respondents Favoring
Raising The Loan Maximum

Type of Institution	Alaska		Out-of-State		Total	
	Number	%	Number	%	Number	%
Freshman	144	28.7	141	20.2	285	23.7
Sophomore	95	18.9	134	19.2	229	19.1

Total	503	100.0	698	100.0	1,201	100.0

Student Loan Forgiveness Benefits. One of the more controversial aspects of the Alaska Student Loan program is the provision of forgiveness benefits. This too, distinguishes Alaska's program as the most generous in the country. If Alaska borrowers complete the program of study for which they borrow and then live in Alaska, they can have up to 50% of their total indebtedness, including interest, forgiven by the State. Periodic discussion in Alaska's Legislature centers on whether this forgiveness provision should be retained. When asked, the current borrowers overwhelmingly indicated their belief that forgiveness should be retained at the current level. (See Table 6.)

TABLE 6

Should The Loan Forgiveness
Benefits Be Changed?

Response	Number	Percent
Retain Current Level	6,864	91.8
Reduce Forgiveness	358	4.8
Discontinue Forgiveness	166	2.2
No Opinion	88	1.2
Total	7,476	100.0

This rather straightforward result was not unexpected, but does not get at the heart of the debate on forgiveness. In order to better understand the effects of forgiveness, borrowers were asked if forgiveness influenced their decisions regarding how much they borrowed and where they would live after schooling. The results, found in Table 7, are somewhat mixed. For students attending in Alaska, forgiveness influenced borrowing in nearly as many cases as it did not, but for out-of-state attendees, forgiveness was said not to be a factor by nearly two-to-one. In terms of residence after schooling, forgiveness did not seem to be a big factor one way or the other for those attending in-state, but was said to influence the decisions of out-of-state attendees, again by nearly two-to-one.

TABLE 7

Influence Of Loan Forgiveness
Benefits On Student Decisions

Do Loan Forgiveness Benefits Influence Decisions Regarding:	Alaska Attendance		Out-of-State	
	Yes	No	Yes	No
How much you borrow?	1,516	1,789	1,812	2,255
Where you live after schooling?	1,538	1,780	2,684	1,396

Change From In-State to Out-of-State Attendance. Borrowers were asked if they had attended a postsecondary school last year, and if so, where. The pattern toward continued attendance was evident for both Alaska attendees and out-of-state attendees. Of the 2,117 respondents currently attending school in Alaska who also attended a postsecondary school last year, 90.4% had attended school in Alaska last year too; and of the 2,942 respondents currently attending school out-of-state who also attended a postsecondary school last year, 78.8% had attended school out-of-state last year, too. Looking only at those students who switched from Alaska to out-of-state attendance, or the reverse, one finds that only 9.6% of the students currently attending in Alaska, attended out-of-state last year; and 21.2% of the students currently attending out-of-state, attended in Alaska last year. (See Table 8.)

TABLE 8

Attendance In-State Versus Out-Of-State This Year
Versus Last, By Type Of Institution

Type Of Institution	Current Attendance in Alaska					Current Attendance Out-of-State				
	Alaska Last Year		Out-of-State Last Year		Total	Alaska Last Year		Out-of-State Last Year		Total
	No.	%	No.	%	No.	No.	%	No.	%	No.
Vocational	39	90.7	4	9.3	43	-0-	0.0	77	100.0	77
Community Coll.	478	87.2	70	12.8	548	44	19.7	179	80.3	223
Private Coll/Univ.	97	85.1	17	14.9	114	204	16.7	1,018	83.3	1,222
Public Coll/Univ.	1,300	92.1	112	7.9	1,412	376	26.5	1,044	73.5	1,420
Total	1,914	90.4	203	9.6	2,117	624	21.2	2,318	78.8	2,942

In order to try to determine why a person would switch from attending in Alaska to attending out-of-state, the 624 respondents who did so were asked to list the top factors (up to four) influencing that decision. The results (based upon a weighted average giving more value to each person's primary reason for switching and correspondingly less for other reasons) are listed in Table 9. Program Availability was the most influential factor in the decision to switch to out-of-state attendance, followed by Closeness to Home and Low Tuition and Expenses. The high ranking of Closeness to Home is difficult to understand, unless persons were trying to indicate they were attending out-of-state so as not to be close to home.

TABLE 9

Reasons For Attending Out-Of-State After
Attending In Alaska Last Year

Reason (Descending Order)	Weighted Average
Availability of Program	442.3
Closeness to Home	333.7
Low Tuition and Expenses	321.0
Availability of Financial Aid	239.2
Geographic Location/Weather/Climate	176.5
School Reputation/Prestige	159.0
Ability to Work While Attending	137.3
Encouragement of Parents/Friend	83.1
Availability of Campus Housing	57.0
Encouragement of Teachers/Counselors	41.3
Friends Are There	36.3
Athletics/Recreational Activities	32.4
Religious Atmosphere	26.2
Sororities/Fraternities/Organizations	5.4

Next, those 624 persons switching from Alaska attendance to out-of-state were asked what factor could have encouraged them to continue their Alaska attendance rather than switching. The top factor was again Program Availability, and it was the top factor regardless of what type of institution was being attended out-of-state. The other factors which seemed to have a strong influence on the decision to switch to out-of-state attendance were: Quality, Campus Housing, Lower Costs, and Better Weather. (See Table 10.)

TABLE 10

For Those Attending Out-Of-State After Attending In Alaska Last Year, What Would Have Kept Them In Alaska? By Type Of Institution

Vocational School	Community College	Private Coll/Univ.	Public Coll/Univ.
Program Availability Better Quality Lower Costs	Program Availability Campus Housing Better Quality Better Weather Lower Costs	Program Availability Better Quality Campus Housing Religious Atomosphere Lower Costs	Program Availability Better Quality Campus Housing Better Weather Lower Costs

Reasons For Selecting Current Institution. All respondents were asked why they chose their particular institution for pursuing their education, and as can be seen in Table 11, Program Availability was a very important factor for all students regardless of whether they were attending in Alaska or out-of-state and regardless of the type of school attended. The top three factors for each classification are presented in Table 11, and there is a difference between the responses of those attending in Alaska compared to those attending out-of-state. While the most important factor for out-of-state attendance at community colleges and public colleges or universities is Program Availability, the most important factor for Alaskan attendance at community colleges and public colleges and universities is Closeness to Home. It should also be noted that School Reputation, while an important factor for persons attending out-of-state, was not one of the top three factors for those attending in Alaska.

TABLE 11

Top Three Reasons For Selecting Current
Institution Of Attendance,
By Type Of Institution

Type of Institution	Most Important Factor	Second Factor	Third Factor
Vocational			
(Alaska)	Program Availability	Ability to Work	Financial Aid
(Out-of-State)	Program Availability	School Reputation	Finanical Aid
Community College			
(Alaska)	Closeness to Home	Program Availability	Low Cost
(Out-of-State)	Program Availability	Low Cost	School Reputation
Private College/University			
(Alaska)	Program Availability	Ability to Work	Financial Aid
(Out-of-State)	Program Availability	School Reputation	Religious Atmosphere
Public College/University			
(Alaska)	Closeness to Home	Program Availability	Low Cost
(Out-of-State)	Program Availability	School Reputation	Climate/Weather

For Those Attending Out-of-State, What Could Have Encouraged Alaska Attendance? The 4,132 respondents attending school out-of-state were asked what factor could have encouraged them to attend in Alaska. As with those students who switched attendance from in-state to out-of-state, the single most important factor which could have encouraged Alaska attendance was Program Availability. When the respondents were classified by type of institution (Table 12), the results were surprisingly homogenous. Program Availability and Better Quality were the two top factors for all students, regardless of institutional type. For collegiate students, Campus Housing was also an important factor.

TABLE 12

For Those Attending Out-Of-State, What Could Have Encouraged Alaska Attendance? (By Type Of Institution)

Vocational School	Community College	Private Coll/Univ.	Public Coll/Univ.
Program Availability	Program Availability	Program Availability	Program Availability
Better Quality	Better Quality	Better Quality	Better Quality
Nothing	Campus Housing	Campus Housing	Campus Housing
Lower Costs	Nothing	Nothing	Better Weather
Better Weather	Better Weather	Religious Atmosphere	Nothing

Similarly, when the respondents were classified by student level, the same pattern emerged (Table 13). The top five factors for all undergraduate out-of-state borrowers were Program Availability, Better Quality, Campus Housing, Better Reputation, and Nothing (meaning nothing could have encouraged them to attend in Alaska).

TABLE 13

For Those Attending Out-Of-State, What Could Have Encouraged Alaska Attendance? (By Student Level)

Freshman	Sophomore	Junior	Senior	Graduate
Program Avail.	Program Avail.	Program Avail.	Program Avail.	Program Avail.
Better Quality	Better Quality	Better Quality	Better Quality	Better Quality

Nothing	Better Reputation	Better Reputation	Better Reputation	Better Reputation
Better Reputation	Nothing	Nothing	Nothing	Lower Costs

Major Course of Study of Borrowers. All loan recipients were asked to indicate the degree being sought and their major course of study. The top ten majors are summarized by degree level and by in-state or out-of-state attendance in Table 14. Once again, one sees a surprising similarity in responses, particularly at the bachelor's and master's levels, regardless of whether the student is attending in Alaska or out-of-state. Out-of-state doctoral students are largely representative of persons pursuing degrees unavailable in Alaska.

TABLE 14

Residency Plans After Graduation. Once these Alaskan students complete their programs of study, where do they plan to live? The vast majority (97.0%) say Alaska. Regardless of whether or not they are attending school in-state, nearly all respondents indicate plans of residing in Alaska after schooling. (See Table 15.)

TABLE 15

Location Plans After Completion
Of Program Of Study

Plans After Program Completion	Attending in Alaska		Attending Out-of-State		Total	
	Number	Percent	Number	Percent	Number	Percent
Reside in Alaska	3,274	97.9	3,976	96.2	7,250	97.0
Reside Out-of-State	70	2.1	156	3.8	226	3.0
Total	3,344	100.0	4,132	100.0	7,476	100.0

Why these students plan to return to Alaska is another question asked of the respondents. As can be seen in Table 16, the top reason for those students planning to live in Alaska after degree completion, regardless of whether or not they are currently attending in Alaska or out-of-state, is "Alaska is my home." The second most important reason for those planning Alaska residence is the top reason for those planning out-of-state residence, and that is "Job Availability." Other factors influencing location decisions include loan forgiveness, geographic location/weather/climate, availability of continuing education, and location of friends.

TABLE 16

SUMMARY/CONCLUSIONS

1. One of the principal reasons for conducting this survey was to discover if there was an explanation for the reversal of the eight-year trend toward in-state attendance. From the data collected it is a little difficult to single out exactly what caused this phenomena. However, when coupled with knowledge of the Alaska system a hypothesis may be offered.

   Three factors probably have impacted the in-state/out-of-state attendance pattern. First, the state loan program imposed new "good standing" requirements. These were enforced for the first time in 1982-83 and resulted in a large number of students becoming ineligible for continued borrowing. The majority of these ineligible students were students attending in-state, so the pool of in-state students for the current year, 1983-84, was reduced.

   Second, the only public university in the state with campus housing is the University of Alaska, Fairbanks (UAF). Over six months before the current school year began, UAF had filled all its campus housing. More than 300 students who wished campus housing for the 1984-84 year had to be denied.

   Third, the University of Alaska, Anchorage (UAA) has been heavily over-subscribed in a number of classes both this year and last. Many students have indicated that they simply could not get into all the UAA classes they wished for pursuit of their programs.

2. Students believe 5% is an appropriate interest rate for the student loan program.

3. Students believe the $6,000 and $7,000 borrowing maximums are appropriate for the student loan program. However, there is some evidence that graduate students, particularly those attending out-of-state, may be requesting a higher maximum in the near future.

4. Students believe loan forgiveness should be retained at 50%. When asked directly if loan forgiveness influences their decision on where to reside after graduation, only 57.1% indicate that it is. Also, when asked which factors are most important in this determination of where to live after graduation, loan forgiveness falls far behind "Alaska is My Home" and "Job Availability." The argument that forgiveness seems to reward students for what they would do anyway seems to be supported by this survey.

APPENDIX A

Student Loan Questionnaire

ALASKA STUDENT LOAN QUESTIONNAIRE

The Alaska Commission on Postsecondary Education has not surveyed loan recipients in the past, but due to the increased level of proposed program changes, we feel some information from you, the recipients of this program, would be most useful as we enter a new Legislative Session. Please complete this brief questionnaire and return it to us in the envelope provided. All responses are completely anonymous.

1. Check those school years in which you received an Alaska Student Loan

1975-76 _____	1978-79 _____	1981-82 _____
1976-77 _____	1979-80 _____	1982-83 _____
1977-78 _____	1980-81 _____	1983-84 _____

2. Current student level (please check)

Freshman _____	Junior _____	Graduate _____
Sophomore _____	Senior _____	Vocational _____

3. Current attendance (please check)

	In Alaska	Out-of-State
Vocational School	_____	_____
Community College	_____	_____
Private College/University	_____	_____
Public College/University	_____	_____

4. What interest level do you feel is appropriate for these loans?

5% _____	7% _____	9%
6% _____	8% _____	Other _____ (indicate)

5. What loan level do you feel is appropriate for these loans?

$6,000 and $7,000 loan levels should be retained	_____
Loan levels should be reduced	_____
Loan levels should be raised	_____

6. Why did you decide to attend your current institution? (Please number your reasons, with "1" being most important, and limit your choices to no more than four.)

Athletics/recreational activities	____	Availability of program	____
Sororities/fraternities/campus organization	____	Availability of financial aid	____
Geographic location/weather/climate	____	Closeness to home	____
Encouragement of parents/relatives	____	Religious atmosphere	____
Encouragement of teachers/counselors	____	Friends are there	____
Ability to work while attending school	____	School reputation/prestige	____
Availability of campus housing	____	Low tuition/expenses	____

7. If you are attending out-of-state, what single factor could encourage you to attend in-state (what could be changed, if anything)? _____

_____

(Please continue on reverse side)

8. Did you attend a postsecondary education institution in Alaska last year (1982-83)?

Yes _____ No _____

9. What degree or certificate are you seeking and what is your major program of study?

Associate Degree (Major?) _____
Bachelors Degree (Major?) _____
Masters Degree (Major?) _____
Specialist Degree (Major?) _____
Doctorate Degree (Major?) _____
Diploma (Course of Study?) _____
Certificate (Course of Study?) _____

10. Do you plan to live in Alaska when your education is finished?

Yes _____ No _____

11. What factors influenced your response in question 10? (Please number your reasons with "1" being most important, and limit your choices to no more than four.)

Availability of jobs	_____	Encouragement of parents/relatives	_____
Alaska is my home	_____	Availability of continuing education	_____
Friends are there	_____	Recreational activity availability	_____
Student loan forgiveness	_____	Geographic location/weather/climate	_____

12. Does the student loan forgiveness feature influence your decisions on:

a. Whether or not you live in Alaska after schooling? Yes _____ No _____

b. How much you borrow? Yes _____ No _____

13. Should the student loan forgiveness feature be:

a. Discontinued? Yes _____ No _____
b. Reduced? Yes _____ No _____
c. Retained as is? Yes _____ No _____

14. If there were no Alaska State Student Loan Program, would you (check as many as applicable)?

a. Delay your education _____

b. Not attend school at all _____

c. Borrow under a federal loan program _____

d. None of the above _____

FROM: Rep. Johne Binkley

Re: House Bill 161 "An Act relating to student loans; and providing for an effective date."

Today I have introduced a bill that will amend certain portions of the Post Secondary Commission program that deals with student loans.

The Alaska Student Loan program established in 1971 to provide aid to Alaska residents in the form of low interest loans, is undeniably the most generous such program in the nation. It has provided loans to over 50,000 Alaskans since the inception of the program. It was intended to allow students to leave Alaska to secure an education, and encourage them to return by providing that a portion of the loan would be forgiven for returning and working in the state, which needed trained people in many areas of expertise. Many students in the early days of the program, once they left the state would not return because of lack of opportunities for suitable employment when they returned.

Conditions have changed substantially since then. In a survey done by the Post Secondary Commission of the grant recipients of 1983-84, most students, regardless of whether they had attended school "outside" or not, intended to return to Alaska to live and work for various reasons. Those reasons most often cited by both groups of students were that Alaska was their home and that it provided economic opportunity. Loan forgiveness was not considered a major factor.

The financial climate of the state has changed also. In 1971, Alaskans' incomes ranked fourth in the nation, twenty percent above the per capita national average. Now we rank number one, and our income, per capita, is forty-seven percent above the national average.

There are and will continue to be students in Alaska who will need as much help as we as a state can provide them. In order to help as

many of those needy students as possible, I feel some changes are mandated in the student loan program as it is now constituted.

In this bill, the interest rate on student loans will be raised from its present five percent to eight percent. The rate on defaulted loans will remain the same.

If a student has not applied for admission to the student loan program within six months prior to graduation, or within one year after graduation from high school, the student must show financial need as established by regulation of the Post Secondary Commission. Once a student has applied for a loan, he/she may defer going to school for a cumulative of two years. This allows a student to travel, work one semester while attending schoo the other, or to respond to some emergency situation that might arise.

Once students have applied for, and been accepted into the program, they may continue to apply for and receive the loan as long as they remain a full-time student in a career education, associate, baccalaureate or graduate degree program, and will not have to demonstrate need unless they interrupt their studies for more than two cumulative years.

The intent of the change in the statutes is to limit the program to those who are newly graduated as these students usually have not had the opportunity to establish themselves in the work force. It does not seem to be the function of the state to guarantee an education to persons who are financially able to bear the cost of educating themselves.

Eliminating the "forgiveness" portion of the present loan program would allow the Commission to recover more funds that would then be available to provide loans for more Alaskan students, thus assuring that this will truly be a revolving loan program.

I appreciate your consideration of this bill and I will be available to answer questions on it.

Sincerely,

Johne Binkley
Representative
District 25

2. Survey of 1983-84 Alaska Student Loan Recipients

SECTIONAL ANALYSIS HOUSE BILL 161

Mary Beth Hilburn

"An Act relating to student loans; and providing for an effective date."

Section 1. AS 14.43.120(f) is amended to increase the interest rate on a student loan from five (5) percent to eight (8) percent.

Section 2. AS 14.43.125 (a) is repealed and reenacted changing the eligibility requirements by requiring a student who meets the established criteria for qualifying and desiring a state loan to apply within six months of graduation, or within a year after graduation, or to establish financial need as determined by regulations to be promulgated by the Post Secondary Commission.

Section 3. AS 14.43.125 adds a new subsection (c) which states that a recipient of a loan under (A) may continue without demonstrating need if the recipient does not interrupt the course of study for more than a cumulative of two years.

Section 4. AS 14.43.640(b) inserts some technical changes that clarify the intent of the section.

Section 5. AS 14.43.640 adds a new subsection that keeps the rate of interest on teachers loans at five (5) percent unless that loan is in default, then the interest is ten (10) percent.

Section 6. AS 14.43.120: (j), (o) and (p) of this section are repealed.

(j) is the portion of the statute that "forgives" up to 50% of the loan if the borrower returns to the state as a resident for varying periods of time.
(o) is the portion of the statute that nullifies the "forgiveness" clause if the loan is in default since it will no longer be needed.
(p) sets out the requirements of residency to qualify for "forgiveness" since it will no longer be applicable.

Section 7. Requires students presently receiving a student loan to meet the new qualification standards of initial application, or financial need.

UNIVERSITY OF ALASKA, FAIRBANKS
Fairbanks, Alaska 99701

A POSITION PAPER: HOUSE BILL NO. 161

As student representatives of the University of Alaska, Fairbanks, the Legislative Council is responsible for bringing the needs of the student body to the state Legislature. An issue of the utmost importance to the students of this university is the introduction of House Bill No. 161, relating to the Alaska Student Loan program. The continuation of the current loan regulations is the primary objective of the Legislative Council this year. We feel we must adamantly oppose this bill for the following reasons:

1. Section (1) of this bill would increase the interest rate of student loans from five to eight percent per year. This in itself is not highly objectionable to the student body, although we are not pleased with the prospect. We do, however, believe that the increased interest rate, when combined with the other proposed changes in this legislation, will place serious financial burdens on many students attending this university. We have no strong objections to the increase in the interest rate to ten percent for defaulters either, but do feel that students intentionally defaulting payment on their student loans will continue to do so, and students in default for financial reasons will only plummet further into debt. We on the Legislative Council do share with the Alaska State Legislature their concerns regarding the default rate of the loan program. We have in the past consistently supported legislation designed to increase the fiscal responsibility of the borrower.

2. Section (2) of this bill would make it manditory that all loan applicants show financial need to be eligible for an initial student loan. ASUA objects to this because most loan programs base financial need solely upon parental income. Many students with financially secure parents would prefer to put themselves through school, as opposed to having their parents pay their way. These students would be rendered ineligible.

3. Section (5) sets a different rate of interest for rural education loans than for other student loans. This would discriminate against all students not wishing to pursue a career in rural education. We find this unacceptable.

4. Section (6) of this bill repeals the forgiveness clause in the current student loan program. It is this section to which we most strongly object. If passed, this would place a much heavier financial burden upon many students needing the loan to

attend school. The forgiveness clause is the one thing that separates the Alaska program from similar student loan programs in other states. It has attracted many Alaskan students back to the state after graduation. The sponsor's statement that this is indeed occuring is the very reason to maintain the status quo and not abolish this most important clause.

It is our opinion that the rural education loan was created to supplement the current student loan program, not replace it. We simply do not see the advantage in sacrificing the benefits of one loan program for another. The Legislative Council and the student body of the University Alaska, Fairbanks, strongly urge Alaska legislators to seriously consider the objections raised in this document. Again, the continuation of the current student loan program is the primary concern of the council, and most definitely, of students all across the great state of Alaska.

A Position Paper: House Bill No. 161

A Statement to the
Fourteenth Legislature

By

Legislative Council,
Associated Students of the University of Alaska

February 4, 1985

A Position Paper: House Bill No. 161

As student representatives of the University of Alaska, Fairbanks, the Legislative Council is responsible for bringing the needs of the students body to the State Legislature. An issue of the utmost importance to the students of this university is the introduction of House Bill No. 161, relating to the Alaska Student Loan Program. The continuation of the current loan regulations is the primary objective of the Legislative Council this year. We feel we must adamantly oppose this bill for the following reasons:

1. Section (1) of this bill would increase the interest rate of student loans from five to eight percent per year. This in itself is not highly objectionable to the student body, although we are not pleased with the prospect. We do, however, believe that the increased interest rate, when combined with the other proposed changes in this legislation, will place serious financial burdens on many students attending this university. We have no strong objections to increasing the interest rate to ten percent per year for loan defaulters either, but do feel that students intentionally defaulting payment of their student loans will continue to do so, and students in default for financial reasons will plummet further into dept. We on the Legislative Council of ASUA do share with the Alaska State Legislature concern over the default rate of student loans. We have in the past consistently supported legislation designed to increase the fiscal responsibility of the borrower.

2. Section (2) of this bill seems to be ambiguous and is very confusing. Any student able to meet the requirement of (2) in this section would also meet the (B) subsection of (3). Therefore, it would seem that (3A), as well as (3B), of this section are unnecessary.

3. Section (5) sets different rates of interests for students pursuing different careers. This section would discriminate against all students not seeking a career in rural education. We find this unacceptable.

4. Section (6) of this bill repeals the forgiveness clause in the current loan program. It is this section which we most strongly object to. If passed, this would place a much heavier financial burden upon students needing the loan to attend school. The forgiveness clause is the one thing that sets the Alaska loan program apart from the loan programs of other states. It has attracted many Alaska residents back to the state after graduation. The sponsor's statement that this is occuring is the very reason to maintain the status quo and not abolish this most important clause.

It is our opinion that the rural education loan was created to suppliment the current student loan program, not to replace it. We simply do not see the advantage in sacrificing the benefits of one loan program for another. The Legislative Council and the

student body of the University of Alaska, Fairbanks, strongly urge Alaska legislators to seriously consider the objections raised in this document. Again, the continuation of the current student loan program is the primary concern of the council, and most definately, of students all across the great state of Alaska.

John Hartle
C/O Representative John Sund
Pouch V
Juneau, AK 99811

Dear Mr. Hartle:

Thank you for taking the time to discuss the Alaska Student Loan Program with me. I am currently making the final revisions on the ASUA Alaska Student Loan Position Paper, and will either send you a copy through the mail, or have Ken Knox, my legislative assistant, drop one off to you when he is in Juneau the 12th, 13th and 14th of this month.

I am enclosing a copy of an article taken from The Chronicle of Higher Education as it may be of interest to you. The article discusses the default rates of various loan programs for students.

Once again, thank you for discussing the Alaska Student Loan Program with me.

Sincerely yours,

Darin Hargraves

Rate of Default Declines on Loans to Students, Varies Widely Among States

WASHINGTON

Default rates under the Guaranteed Student Loan program vary dramatically from state to state—from a high of 12.8 per cent in the District of Columbia to zero in North Dakota in fiscal 1983. Rates rose in 31 states from 1981 to 1983, but dropped in 17 others, a survey has found.

The default rate is the amount of money owed on delinquent loans divided by the total amount of money loaned.

The overall national default rate decreased from 10.17 per cent in 1981 to 9.16 per cent in 1983, while the dollar volume of loans in default grew 77 per cent, from $867-million in 1981 to $1.53-billion in 1983, according to a report by Jerry S. Davis, director of research and policy analysis at the Pennsylvania Higher Education Assistance Agency.

"This increasing default volume was expected, as huge volumes of Guaranteed Student Loans made in fiscal 1979, 1980, and 1981 reached maturity," Mr. Davis said.

Alaska Posts Biggest Decrease

The biggest drop occurred in Alaska, where the default rate went down 5.03 percentage points from 1981 to 1983. States where default rates rose the most in the three-year period include Arizona, California, the District of Columbia, Hawaii, Nebraska, Texas, and West Virginia, with increases ranging from 4 to nearly 13 percentage points.

The survey, which was based on data gathered by the Education Department, is of particular interest because paying off defaults in the Guaranteed Student Loan program costs the government about $800-million a year.

Budget pressures are forcing increased scrutiny of the causes of, and possible solutions to, the problems of student-loan defaults.

But the survey indicates that the default problem is not as bad as many people believe it to be, said Mr. Davis.

"Discussions of default rates and soaring default volumes and their costs to the Guaranteed Student Loan Program all too often treat these problems as if they were monolithic among all states," he said.

"The default problem is not the same for all states. These differences suggest that remedies for the problem cannot be couched in terms of national or program-wide solutions, but must recognize the different situations among the states," he continued.

States with long-established student-loan-guarantee agencies generally have better default rates than states with newer agencies. Mr. Davis called agencies "established" if they guaranteed at least 40 per cent of their total loans before fiscal 1981; "new" states guaranteed over 40 per cent since that year.

Default rates dropped in 17 of the 23 states that have "established" guarantee agencies.

Increases in 31 States

State guarantee agencies insure lenders who make Guaranteed Student Loans against default, and the federal government in turn insures state agencies for the loans they back.

Default rates increased in 31 states, largely because they had new agencies with limited experience insuring student loans, Mr. Davis said.

Mr. Davis said the decline in the overall national default rate was due primarily to lower rates in states that guarantee the largest volumes of loans, including Illinois, Massachusetts, New Jersey, New York, and Pennsylvania.

The number and dollar value of loans increased significantly from 1981 to 1983, with a total of $11.7-billion in such loans made during 1982 and 1983, the report says.

"Thus the recent huge increases in numbers of loan dollars guaranteed and reaching maturity has generated a not unexpected large increase in default loan dollar volumes," Mr. Davis said in his report.

—DONNA ENGELGAU

2-Year Change in Student-Loan Default Rates

Default rates by state for fiscal 1983

Alabama	3.2%	Kentucky	4.1%	North Dakota	0.0%
Alaska	1.4%	Louisiana	5.1%	Ohio	0.7%
Arizona	8.9%	Maine	2.9%	Oklahoma	0.5%
Arkansas	1.3%	Maryland	5.2%	Oregon	2.1%
California	9.2%	Massachusetts	2.4%	Pennsylvania	5.0%
Colorado	2.3%	Michigan	2.7%	Rhode Island	5.7%
Connecticut	4.8%	Minnesota	5.2%	South Carolina	0.9%
Delaware	2.0%	Mississippi	3.6%	South Dakota	2.6%
District of Columbia	12.8%	Missouri	6.4%	Tennessee	3.2%
Florida	2.0%	Montana	3.1%	Texas	4.5%
Georgia	4.4%	Nebraska	6.2%	Utah	2.8%
Hawaii	8.0%	Nevada	6.2%	Vermont	2.8%
Idaho	4.8%	New Hampshire	1.5%	Virginia	0.0%
Illinois	2.4%	New Jersey	4.7%	Washington	1.5%
Indiana	2.1%	New Mexico	0.3%	West Virginia	6.3%
Iowa	3.8%	New York	0.4%	Wisconsin	5.4%
Kansas	7.3%	North Carolina	3.5%	Wyoming	3.1%

Note: "Established" states guaranteed at least 40 per cent of their total student loans before fiscal 1981. "New" states guaranteed over 40 per cent of their student loans after that year.

The figures show the change in the default rate from fiscal 1981 to fiscal 1983.

IN THE HOUSE

BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

CS FOR HOUSE BILL NO. 161 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the interest rate, forgiveness provisions, eligibility requirements, and conditions of scholarship loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.120(f) is amended to read:

(f) Interest on a loan given under AS 14.43.090 - 14.43.160 is at the rate of <u>eight</u> [FIVE] percent a year unless the loan is in default. Interest on a loan that is in default is 10 percent a year for the period the loan is in default.

* Sec. 2. AS 14.43.120(k) is amended to read:

(k) Periodic installments of principal shall be deferred, but interest shall accrue and be paid unless the student is eligible for interest payment benefits under (l) of this section during any of the following:

(1) return to student status as provided in (c) of this section;

(2) serving <u>an initial period of up to six years</u> on active duty as a member of the armed forces of the United States;

(3) serving, for up to three years, as a full-time volunteer under the Peace Corps Act;

(4) serving, for up to three years, as a full-time volunteer under the Domestic Volunteer Service Act of 1973;

(5) for a one-time period up to 12 months in which the

borrower is seeking and unable to find employment in the United States; or

(6) if the borrower becomes 50 percent or more disabled as certified by competent medical authority.

* Sec. 3. AS 14.43.125 is repealed and reenacted to read:

Sec. 14.43.125. ELIGIBILITY OF STUDENTS. (a) A person may apply for and obtain a scholarship loan if the person

(1) is

(A) enrolled as a full-time student in a career education, associate, baccalaureate, or graduate degree program; or

(B) a graduate of a high school or the equivalent, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university;

(2) is not delinquent or in default on a previously awarded scholarship loan; and

(3) is a resident of the state at the time of application for the loan; for purposes of this section, a person qualifies as a resident of the state if at the time of application for the loan the person

(A) has been physically present in the state for at least two years immediately before the time of application for the loan;

(B) is dependent on a parent or guardian for care, the parent or guardian has been present in the state for at least two years immediately before the time of application for the loan and the person has been present in the state for at least one year of the immediately preceding five years except that the commission may by a two-thirds vote, acting upon a written appeal by the

person, grant an exemption to the requirement that the person has been present in the state for one year of the immediately preceding five years;

(C) has been physically present in the state, or is a dependent of a parent or guardian who has been physically present in the state, for at least two years immediately before the applicant was absent from the state and the absence is due solely to

(i) serving an initial period of up to six years on active duty as a member of the armed forces of the United States;

(ii) serving, for up to three years, as a full-time volunteer under the Peace Corps Act;

(iii) serving, for up to three years, as a full-time volunteer under the Domestic Volunteer Service Act of 1973;

(iv) required medical care for the applicant or the applicant's immediate family;

(v) being a person who otherwise qualifies as a resident and is accompanying a spouse who qualifies as a resident under (i) - (iv) of this paragraph; or

(D) has been physically present in the state, or is a dependent of a parent or guardian who has been physically present in the state, for at least two years immediately before the applicant or the parent or guardian was absent from the state and the absence is due solely to

(i) participating in a foreign exchange student program recognized by the commission;

(ii) attending a school as a full-time student;

(iii) full-time employment by the state;

(iv) being a member of or employed full-time by the state's congressional delegation;

(v) being a person who otherwise qualifies as a resident and is accompanying a spouse who qualifies as a resident under (i) - (iv) of this paragraph.

(b) A person does not qualify as a resident of the state under this section if the person declares or establishes residence in another state during an absence from Alaska.

* Sec. 4. AS 14.43.120(j), (o), and (p) are repealed.

* Sec. 5. Section 4 of this Act takes effect September 1, 1990.

* Sec. 6. Section 1 of this Act takes effect July 1, 1985.

* Sec. 7. Sections 2 and 3 of this Act take effect immediately in accordance with AS 01.10.070(c).

PREVIOUS ACTION

Please refer to House Special Committee on State Loans, State-wide Teleconference Minutes of Feb. 26, 1985.

ACTION NARRATIVE

TAPE #9, SIDE ONE

Recording Number 001 — The meeting was called to order by Chairman Sund at 3:35 p.m. Members present were Reps. Cotten, Fuller, Uehling, and Sund. Representative Duncan arrived at 4:15 p.m. Representatives Binkley and Koponen also attended.

Number 033 — Marie Motschman, Government Relations Representative from UAA, testified against HB 161 and in support of HB 185 and HB 197. Speaking on behalf of UAA and ACC students, she objected particularly to the discrimination against non-traditional students inherent in the needs-based section of HB 161. She noted that the average student age at UAA is 26, and at Anchorage Community College it is 27. She said that the students at UAA would be willing to work with the legislature toward a solution to the problem.

Number 084 — There was some discussion about whether all students who do not pass the needs test would be able to afford to pay for their own schooling.

Number 130 — Representative Binkley said that the intent of HB 161 is merely that those students who can afford to pay their own way would be ineligible, and asked Ms. Motschman if she agreed.

Number 180 — Ms. Motschman said that she agreed with Rep. Binkley, but that she was representing a lot of other students and could not speak for

them.

Number 209 — Representative Uehling noted that HB 161 would save the state about $14 million, and asked Ms. Motschman what her suggestions would be as to how to cut back and still offer a good loan program.

Number 230 — Ms. Motschman responded that savings from eliminating the forgiveness clause would not be seen for several years, but added that the students of today don't want to lose their forgiveness, even though only 20% of the students actually use the forgiveness clause. She suggested a gradual elimination of forgiveness at the rate of 10% per year. She added that the lending cap could be lowered from $6000 to $4500 for a more immediate savings.

Number 292 — Bob Menard, representing the Legislative Council from UAA, suggested some alternatives to HB 161. He noted that HB 161 would raise the interest rate for urban students but not for some rural students (Teacher Scholarship Loan Program.)

Number 361 — There was some discussion about the Teacher Scholarship Loan Program for rural students, which offers 5% interest and 100% forgiveness for those students who qualify and who return to rural Alaska to teach.

Number 397 — Chairman Sund pointed out that the only students that would pay back a Teacher Scholarship Loan would be those who do not return to rural Alaska to teach, and that they would still have the advantage of a 5% loan and a $7,500/year loan amount.

Number 410 — Representative Binkley explained that this loan program had been set up as separate and distinct from the Student Loan Program.

Number 420 — Representative Fuller said that he does not favor raising the interest rate for the one loan program and not for the other.

Number 450 — There was some discussion about whether there is a need to save money on the Student Loan Program this year and how to do it.

Number 480 — Ms. Motschman read a resolution by the senate of the ASUAA which advocates

publishing in the local papers the names of individuals in default on student loans.

Number 519

Kerry Romesburg stated that the Postsecondary Education Commission endorses and recommends the continuation and full-funding of the Alaska Student Loan Program. He added that amendments which restrict access by denying loans to groups of Alaskans are vigorously opposed.

He said that nearly 17,000 people have borrowed money this year under the Student Loan Program. He said that $78 million has been loaned out in 1985, and that more than $286 million has been loaned total to date. $20 million has been repayed.

Number 550

Representative Cotten asked Dr. Romesburg when interest starts to accumulate.

Number 560

Dr. Romesburg answered that the interest starts to accumulate one year from the first day of the month after a person ceases to be a full-time student. He added that clamping down on defaults would not add enough money to the program to make a very big difference. He stated that the Commission wants to see the interest rate increased from 5%, to a rate at least as high as the federal and higher than passbook savings. He said that increasing the rate from 5% to 8% would increase the payment by $1.37 per month per $1000 borrowed.

Number 623

Representative Uehling asked what the fiscal effect of such an increase would be.

Number 630

Dr. Romesburg that there would be no impact until 1988, which would increase gradually.

Number 646

Representative Binkley disagreed and expressed th opinion that raising interest and eliminating forgiveness would result in a decreased demand for student loans.

Number 670

Dr. Romesburg said that the Postsecondary Education Commission favors the elimination of forgiveness, since there is no evidence that a high proportion of students return to Alaska in order to get forgiveness. He added that this would result in a savings of $6-$8 million in six or eight years.

CHANGE TAPE #9, SIDE TWO

Number 001 — Dr. Romesburg spoke strongly in favor of HB 185 and said that the Commission has wanted to see such a bill passed for several years. He said that the bill would allow for deferral of student loans to veterans during the first enlistment term only. Another section would define the terms under which a person can be absent from the state and still be eligible for a loan. He said that technically, students attending an out of state institution must return to Alaska for 2 years before getting a student loan for their next year of college. Therefore, the Commission has been breaking the rules by giving loans for consecutive years to these students, and feels uneasy doing so. He said that there would be no fiscal impact. He added that there is also a provision that would give the Commission statutory power to deny a loan to an individual in default on another student loan.

Number 072 — There was committee discussion about the requirement for physical presence in Alaska and possible exceptions.

Number 188 — Dr. Romesburg spoke in favor of HB 197 and said that it would pose no problem in terms of administration. He noted that the purpose of the bill is to allow a senior to obtain a loan in order to complete his/her studies during summer session, rather than returning in the fall.

Number 201 — Rep. Uehling asked if this bill would result in students getting more money than the current maximum during a year.

Number 210 — Dr. Romesburg answered that it would be possible for a student to get $8000 instead of $6000 in a 12 month period, but this would only happen once, since the $2000 for summer school would come out of the next year's loan amount if the student returned to school. He added that there would be no fiscal impact since the $2000 for summer would be taken out of lapsed money from the year before.

Number 288 — Rep. Cotten asked Dr. Romesburg what the average length of residency is for individuals applying for student loans, and

what is the trend (increase or decrease) in the use of forgiveness.

Number 295 — Dr. Romesburg answered that the trend is toward shorter residency, that 55% indicate 3-5 years and 22% indicate 2 years. He also said that there has been some decrease in the use of forgiveness (1/6 of loans get forgiveness,) because first a person must graduate and then must live in Alaska.

Number 340 — Dr. Romesburg told the committee that, in the event of less money available for student loans, the Commission already has a method of prioritizing loans, besides first come first served. Preference is given to those who have borrowed before, to those who are borrowing for a shorter duration, and to in-state borrowers. The two classes of students on the bottom of the priority list are graduate students who have not borrowed before and are going outside Alaska to school, and freshmen students who have not borrowed before and are going outside Alaska to school. He added that there is no need to use this system when there is enough money. He also said that the Board does not favor across the board cuts, giving less money to more borrowers.

Number 370 — Rep. Binkley expressed concern about the impact on rural students of the first come first served rule.

Number 375 — Dr. Romesburg answered that traditionally, rural students tend to apply late and are therefore at a disadvantage.

Number 385 — Rep. Fuller said that school counselors should see that students get their applications in on time.

Number 410 — Rep. Fuller suggested giving the bill back to Rep. Binkley, so that he could work on some of the bill's provisions, and the committee agreed.

Number 450 — Rep. Cotten said that he could go along with raising the interest rate and phasing out the forgiveness, but that he would not favor restricting access to the program.

Number 480 — Chairman Sund said that he would prefer to pass one bill out of committee in place of

HB 161 and HB 185, since both bills address the same section of the statutes.

Number 500 — Dr. Romesburg asked that HB 185 be allowed to go through without combining it with a controversial bill like HB 161, thereby decreasing its chances of passing.

Number 510 — Chairman Sund said that he and Rep. Koponen had agreed that HB 197 could be amended into HB 185. He then announced that the committee would meet again on Friday, March 1. The meeting was adjourned at 4:50 p.m.

HB 197: Read the first time 02/13/85 and referred to State Loans, HESS, Finance and Rules.

ACTION NARRATIVE

TAPE #8, SIDE ONE
Recording
Number 001

The meeting was called to order by Chairman Sund at 3:35 p.m. Members present were Representatives Cotten, Fuller, Duncan and Sund. Representative Uehling arrived at 3:40 p.m. The teleconference was set up to include about twenty communities around the state.

Number 037

Representative Binkley, sponsor of HB 161, explained the three sections of the bill, which included

(1) raising the interest rate on student loans from 5% to 8%,

(2) eliminating the forgiveness clause, and

(3) limiting the program to students who

apply within 6 months of graduation from high school and start college with 2 years. All other applicants would have to demonstrate financial need.

Number 090 — Lisa McLaren, aide to Representative Koponen, sponsor of HB 185, explained that the bill allows for deferment of student loan payments for military service during the first enlistment term only. She said that HB 185 also clarifies the special conditions and length of time which a student could be out of state and still qualify for a student loan.

Number 145 — Chairman Sund, sponsor of HB 197, explained that the bill makes it possible to apply for a loan for a 4th consecutive quarter which would then be taken out of the next year's loan amount. The purpose of the bill, he said, is to allow graduating seniors to finish school during the summer quarter, rather than having to return in the fall.

Number 176 — Chairman Sund invited participants from around the state to share their views and questions with the committee members and bill sponsors.

Number 176 — Don Patterson of Wasilla testified against HB 197 and against HB 161.

Number 255 — Burt Augst, Director of Student Services at Islands Community College in Sitka, testified against HB 161.

Number 325 — Frank Haas of Haines testified against HB 161.

Number 341 — Tanja Lofftus of Wrangell asked if her parents' income would affect her eligibility for a loan.

Number 355 — Representative Binkley answered no, she would have full access to the program, since she is still in high school.

Number 362 — Lorna-Lee Arndt of Kodiak testified against raising the interest rate on student loans, and complained that her son's loan check had not arrived on time.

Number 425 — Kerry Romesburg, Executive Director of Postsecondary Education, answered that all

students who filed their applications by the deadline had their money on time.

Number 440 — Joyce Bergmann of Petersburg asked a question about the $35,000 income limit.

Number 450 — Dr. Romesburg answered that the income limit refers to federal student loans, and that few Alaskans would qualify under these limits.

Number 460 — Tyler Henshaw of Petersburg testified against HB 161 and in favor of HB 185 and HB 197.

Number 497 — Darin Hargraves of the University of Alaska Fairbanks testified against HB 161.

Number 520 — Kathy Ward of Dillingham testified against HB 161 and asked why the bill provided for forgiveness for rural teachers only.

Number 545 — Representative Binkley answered that the special loan program for rural students going into teaching as a profession was enacted by the legislature last year.

Number 556 — Tony Goforth of Unalaska testified in favor of HB 161, HB 185 and HB 197.

Number 576 — Paul Stubbe, Dean of Kodiak Community College, testified that almost all students there have been out of high school for more than 2 years.

Number 606 — Chris Tolladay of Anchorage Community College testified in favor of HB 185 and 197, and against HB 161 on the grounds that it discriminates against non-traditional students. She also said that she favors a first come first served basis.

CHANGE TAPE #8, SIDE TWO

Number 001 — Representative Uehling said that he favors an increase in the interest to 8%, but that he is not in favor of a needs-based program.

Number 025 — Michelle Merritt of Wrangell testified in favor of an 8% interest rate and against the elimination of forgiveness.

Number 082 — Barbara Todd testified against HB 161, and said that delinquent borrowers should be

charged a higher rate.

Number 115 — Dr. Romesburg answered that when loans are more than 120 days in default, the interest rate increases to 10%, all forgiveness is lost, the loan is turned over to a law firm, and the borrower is issued a summons to appear in court.

Number 148 — Cecilia Meyer of Homer testified against HB 161. She said that she is 36 years old, wants to go back to school, and does not want to sell her house in order to demonstrate need.

Number 252 — Gretchen Mau of Palmer asked if it would be necessary to take 12 credits in one 6-week summer session in order to qualify for a loan under HB 197.

Number 283 — Dr. Romesburg answered that 12 credits can be split between two summer sessions.

Number 399 — June Haas of Haines testified that forgiveness is an important feature of Alaska's student loans, because it encourages people to come back to Alaska to live.

Number 450 — Nathan Lewis of Kodiak testified against HB 161.

Number 460 — Ron Welsh of Sitka testified against HB 161 and in favor of HB 185 and HB 197.

Number 531 — Linda Fossen of Valdez testified against HB 161 and in favor of HB 197 and HB 185.

Number 550 — The teleconference ended and the meeting was adjourned at 5:00 p.m.

PREVIOUS ACTION

Please refer to House Special Committee on State Loans,-State-wide Teleconference for HB 161, HB 185 and HB 197 Minutes for 2/26/85 and 2/27/85.

HB 161 returned to sponsor for revisions (see HSCSL minutes for 2/27/85.)

HB 197 and HB 185 combined to make CSHB 185 (see HSCSL minutes for 2/27/85.)

ACTION NARRATIVE

TAPE #10, SIDE ONE
Recording
Number 001

The meeting was called to order at 3:35 p.m.by Chairman Sund. Members present were Representatives Uehling and Sund. Representatives Duncan and Fuller arrived at 4:15 p.m.

Chairman Sund announced that P.S. Dhillon and John Hartle were present to provide information on the different loan accounts, e.g. how much cash is in accounts, the expected demand, etc.

Number 045

Mr. P.S. Dhillon, fiscal analyst for Legislative Finance, discussed cash balances in the various loan programs as of 6/30/84 and 1/31/85. He said that Legislative Audit Division had identified some over-

capitalization of the loan funds, after which Legislative Finance followed up by looking at some of the demand projections and comparing their findings with those of DCED. They also looked at one loan program in the Dept. of Revenue, the Fisheries Products Revolving Loan Fund.

Number 090 — Mr. Mike Greany, Director of Legislative Finance, explained that there are two reasons why there is a cash balance in some of the loan programs:

(1) Some of the programs are starting to see a significant payback; and

(2) Because interest rates are different now than they were when the programs were started, it is now more attractive for some borrowers to go to the commercial market. He added that the departments had verified the figures in the cases where there a cash surplus was found to exist.

Number 120 — Chairman Sund asked if the Governor had any appropriation in his FY 86 budget for the Mining Loan Fund.

Number 125 — Mr. Hartle answered that no, the governor had no appropriation for the Mining Loan Fund in the budget.

Number 130 — Mr. Dhillon explained that the Small Business Loan Fund and Tourism Revolving Loan Fund are not applicable because the balance in those funds is automatically transferred into the general fund at the end of the fiscal year. He went on to explain that the Veteran's Loan Fund is no longer being used to make new loans, but there is $8.8 million in the fund now that could be reappropriated. About $5 million more will be added to the fund as the remaining loans are paid off.

Number 235 — Mr. Dhillon went onto discuss the Residential Energy Loan Fund, which is expected to have a cash surplus of about $7 million at the end of FY 86.

Number 250 — Mr. Hartle made the point that none of the loan funds on the list (showing a surplus) are in the Governor's budget for this year.

Number 255 — Mr. Dhillon said that Commercial Fish, Fish Enhancement, and Alternative Technology show a deficit and are included in the Governor's budget.

Number 320 — Chairman Sund asked Mr. Dhillon to explain the fact that the Power Development Loan Fund shows a $12 million surplus.

Number 325 — Mr. Dhillon explained that $210 million was appropriated in 1984 for the Four Dam Pool. APA has a loan for $198 million from the DCED. The balance is $12 million, and to date there is no known use for the money. He added that future demand for the money would depend on the outcome of the Four Dam Pool negotiations.

Number 380 — Mr. Dhillon explained that $4 million in the Power Projects Fund relates to an appropriation (1981) for a loan to the City of Fairbanks Municipal Utility, but that, since the utility is not authorized to incur any debt, there has been no loan application. The legislature would have to take action in order to lapse the money.

Number 400 — Mr. Dhillon discussed the fact that there is a $38.5 million surplus in the Fish Product Revolving Loan Fund, with no new loan applications pending.

Number 450 — There was some discussion about taking a look at loan programs in the future.

Number 565 — Chairman Sund opened the meeting for consideration of student loan bills.

Number 568 — Representative Binkley explained the changes that had been made to HB 161 as follows: Sec. 1 remains the same, with interest rates going to 8%; Sec. 2 incorporates the language from HB 185, and the needs-based portion of the section has been deleted; and Sec. 3 phases out forgiveness over the next 5 years.

Number 630 — Representative Uehling suggested that it would be more fair to the current student loan recipients to eliminate forgiveness all at once at a future date (possibly 1989), since they started school with the belief that they would be able to get forgiveness.

Number 645 — Representative Fuller said that the Alaska Student Loan Program is one of the finest in the nation, and that it is time to stop rewarding people for coming back to Alaska.

CHANGE TAPE #10, SIDE TWO

Number 040 — Representative Duncan said that he was not in favor of eliminating the forgiveness clause, because the problems would outweigh the cost savings. He said it would cause concern among students and parents.

Number 060 — Representative Binkley said that the big savings would be that students would no longer have the idea that the more they borrow, the more the state will subsidize their education.

Number 083 — Chairman Sund asked Representative Uehling to clarify his concerns regarding the elimination of forgiveness.

Number 090 — Representative Uehling said that, although the state has no contract guaranteeing students forgiveness in upcoming years, he would prefer to see forgiveness eliminated after the students that are in school now have had a chance to finish.

Number100 — Representative Binkley said that student loans are made on a year to year basis, with no guarantee that the money will be available next year.

Number 127 — Representative Duncan said that he agrees with Representative Uehling, and that it would be better administratively to eliminate forgiveness all at once in 1989 than to phase it out over several years.

Number 148 — Representative Binkley said that Dr. Romesburg had indicated to him that a gradual phase-out of forgiveness would not be that difficult to do.

Number 200 — Chairman Sund asked the committee to set aside CSHB 161 in order to act first on CSHB 185, for which an amendment had been written. He went on to explain that Sections 1 and 2 of CSHB 185 are the identical language that was in HB 197. Section 3 is the original HB 185, and the proposed amendment limits the time period

after which a person leaves Alaska, that she/he can still apply for a loan.

Number 290 — Lisa McLaren explained some of the language in the amendment.

Number 320 — Representative Uehling moved and asked unanimous consent that the committee adopt CSHB 185. There were no objections and CSHB 185 was adopted.

Number 330 — Amendment number 1 for CSHB 185 was moved and adopted.

Number 335 — A motion was made to move CSHB 185 as amended, with individual recommendations. There were no objections.

Number 340 — Representative Uehling moved and asked unanimous consent that the committee adopt CSHB 161. There were no objections.

Number 390 — Representative Uehling moved and asked unanimous consent that amendment number 1 for CSHB 161 be adopted and inserted in Section 2, page 1. There were no objections.

Number 400 — Representative Duncan moved that Section 3 of CSHB 161 be eliminated, and in Section 6 change the reference to number 3 to number 2. which would have the effect of eliminating the forgiveness all at once in 1990.

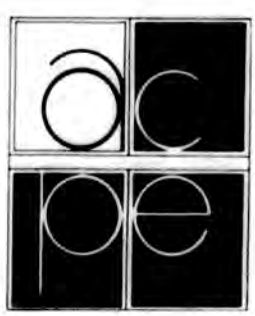
Number 410 — There was some committee discussion regarding the motion.

Number 415 — The committee voted 3 to 1 to adopt amendment number 2.

Number 460 — Representative Uehling moved and asked unanimous consent the the committee pass out CSHB 161, as amended. There were several objections.

Representative Uehling withdrew his motion.

Number 480 — Representative Duncan introduced an amendment that would keep the interest rate at 5% for the first three years of repayment and raise it to 8% for the remainder. The intent, he said, is to encourage people to repay their loans quickly.



Number 500	There was discussion regarding Representative Duncan's amendment.
Number 530	Representative Duncan withdrew the amendment.
Number 535	Representative Uehling moved and asked unanimous consent that CSHB 161 be passed out of committee, with amendments 1 and 2 as adopted, with individual recommendations.
Number 538	Representative Duncan objected.
Number 540	The committee voted 3 to 1 in favor of the motion.
Number 545	The meeting was adjourned at 5:00 p.m.

PREFACE

The Annual Report on Alaska Student Financial Aid Programs for 1983-84 is hereby transmitted to the Governor and the Legislature of the State of Alaska. The Student Loan Program is administered by the Alaska Commission on Postsecondary Education with advice and guidance of the Student Financial Aid Advisory Committee. Membership of this advisory committee for 1983-84 included:

Ms. Patricia Abney, Chairman (Anchorage)
Ms. Patricia Clark (Fairbanks)
Ms. Ida Greiner (Fairbanks)
Ms. Carol Johnsen (Sitka)
Ms. Marie MacKenzie (Anchorage)
Dr. Ed Nichols (Anchorage)

The Commission and staff wish to express their gratitude for the work of this advisory committee.

INTRODUCTION

The State of Alaska provides student financial assistance for postsecondary study through three programs: the Alaska Student Loan Program, the WICHE Student Exchange Program, and the State Educational Incentive Grant (SEIG) Program. The three programs provide Alaskans with access to postsecondary education which otherwise might not be available. Through the loan and grant programs direct financial assistance is awarded to students in an effort to remove or lessen financial barriers to postsecondary education. Through the student exchange program, Alaskans have access to graduate, professional, and highly specialized fields which are unavailable in-state.

This report briefly summarizes each of these programs and the participation levels for 1983-84. The Student Loan Program will be discussed first, then the WICHE Student Exchange Program, and finally, the Incentive Grant Program.

ALASKA STUDENT LOAN PROGRAM

The Alaska Student Loan Program is one of the most successful programs offered by the State of Alaska. Its purpose is to provide low-interest loans to Alaskans wishing to pursue education and training at a postsecondary level. The program has grown from serving just over 1,000 Alaskans, in 1971-72, to the current 1983-84 level of serving nearly 15,000 Alaskans.

The Alaska Student Loan Program had its origin in a program of scholarship loans established by the 1968 Alaska State Legislature. This program was amended in 1970 and completely restructured in 1971, when the Legislature established the loan program generally as it exists at present. In the twelve years of operation since then, nearly 63,000 student loans have been awarded to Alaskan residents, for a total of nearly $150 million.

Educational loans of up to $6,000 and $7,000 per year for undergraduate and graduate study, respectively, are provided to eligible state residents. These loans, to be used only to offset the costs of tuition, room, board, and books, offer the borrower a ten-year repayment period at an annual interest rate of five percent. The loans may be used for full-time attendance at any accredited or approved college, university, or vocational-technical program. An incentive of up to fifty percent cancellation is offered to those borrowers who reside in Alaska after completion of their programs of study.

Program Summary

During the 1983-84 school year over 16,000 loans were awarded, and 14,785 were finalized and used for postsecondary attendance. Of these 14,785 loans, 50.5 percent were for attendance in Alaska, and 49.5 percent were for attendance out-of-state.

Undergraduate loans continue to dominate the loan volume, with only 13.2 percent of the 1983-84 loans going for graduate study. The largest single group of loans were for freshman borrowers, who accounted for 27.7 percent of all the 1983-84 loans.

Alaskans use these loans for study throughout the United States, and in a number of foreign countries. During the 1983-84 loan year, students from Alaska used state loans for attendance in every state in the Union and in seventeen foreign countries. The most frequent choice continues to be Alaska by more than a four-to-one margin over any other state.

Loan Award Amounts

The average loan award continued to rise slightly in 1983-84, following the dramatic rise in 1981-82 when the borrowing maximums were raised. For 1983-84, an undergraduate average loan was $4,171 while the average graduate loan was $5,097. Out-of-state student loans continue to be higher, on the average, than in-state loans, due largely to non-resident tuition fees. This is graphically presented in Figure 1. It is anticipated that the trend toward higher average loans will continue in the years ahead as tuition rates continue to increase.

Table 1 contains average loan amounts by student level for the last three years, 1981-82, 1982-83, and 1983-84. In general all loans, regardless of level, have steadily increased, for students attending in-state, and have leveled, or even dropped slightly, for those attending out-of-state. The out-of-state borrower averages a higher loan amount than the in-state borrower for every classification other than vocational.

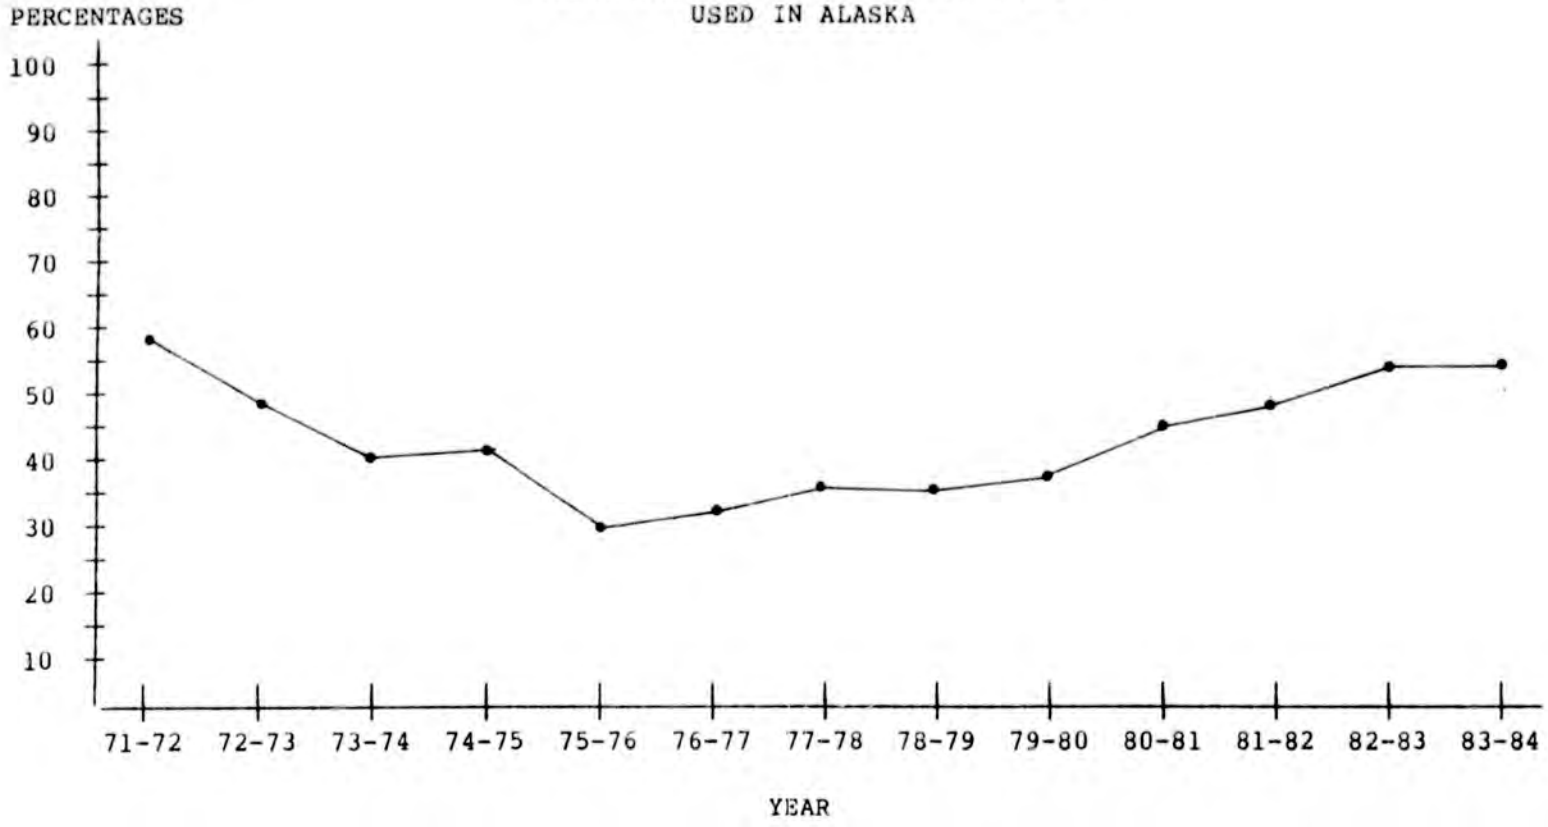
Graduate	4,630	4,454	4,527	5,401	5,336	5,257	5,218	5,129	5,097
TOTAL	$3,796	$3,872	$4,013	$4,345	$4,558	$4,502	$4,098	$4,213	$4,255

Undergraduate Loans

The number of undergraduate students receiving loans under the state program has increased greatly over the past twelve years. In 1971-72, 990 undergraduates received assistance, while in 1983-84, the number has grown to 13,449. Of these 13,449 loan recipients, 53.3 percent used their loans for attendance in Alaska, and 46.7 percent used their loans out-of-state. The states most frequently chosen by undergraduates in 1983-84 are presented in Table 2.

The consistency of student choice over the past few years is quite high. Alaska remains the most frequent choice for undergraduate attendance this year, as it has been in the past, followed by Washington, Oregon and California.

The average loan amount increased in almost every case, with the most pronounced increase in loans for attendance in Arizona, Colorado, and Alaska. Hawaii continues to be one of the states for which undergraduate loan amounts are the lowest, ($3,426), and two of the top ten states of attendance have lower average loans than does Alaska.



The percent of undergraduates using their loans for attendance in Alaska increased slightly this year. In fact, as can be seen in Figure 2, the 1983-84 rate of 53.3 percent is the highest in-state rate since 1971-72.

The increasing drawing power of Alaskan institutions is hypothesized to be the result of a number of factors including the maturation of Alaska's schools and the accompanying wider array of offerings, as well as the increased cost of attendance at schools outside of Alaska.

FIGURE 2
PERCENTAGE OF UNDERGRADUATE LOANS
USED IN ALASKA

The wide geographic distribution of Alaskans pursuing undergraduate education is shown most vividly in Figure 3, with Alaskan undergraduates attending institutions in every state of the Union. The predominance of the West and Northwest is quite evident, with only Alaska, Washington, Oregon, California, Colorado, Arizona, Idaho, Hawaii and Utah, receiving over 200 Alaskan undergraduates on state loans. Of the thirteen western states comprising the WICHE compact (Western Interstate Commission for Higher Education), only Wyoming received fewer than 35 Alaska undergraduates on state loans. In fact, the WICHE states account for 90.1 percent of the undergraduate loan recipients.

Under the state loan program, Alaskans may pursue their educational goals in whatever setting seems most appropriate for them. The freedom of choice which this provides is quite evident by the wide geographic distribution of our students.

As can be seen in Table 3, Alaska attendance accounts for a very high percentage of vocational borrowers (71.2% in 1983-84). Also, more than half (54.4%) of the freshman borrowers elected to attend in Alaska in 1983-84. There seems to be an increased tendency toward attendance out-of-state as student level increases, however this could be due to a number of factors including the changing attendance patterns the last few years and the propensity to remain in school rather than stop-out or drop-out. Hence, caution should be used in drawing inferences from these data.

TABLE 3
IN-STATE/OUT-OF-STATE ATTENDANCE
BY STUDENT LEVEL
1982-83 through 1983-84

STUDENT LEVEL	1982-83				1983-84

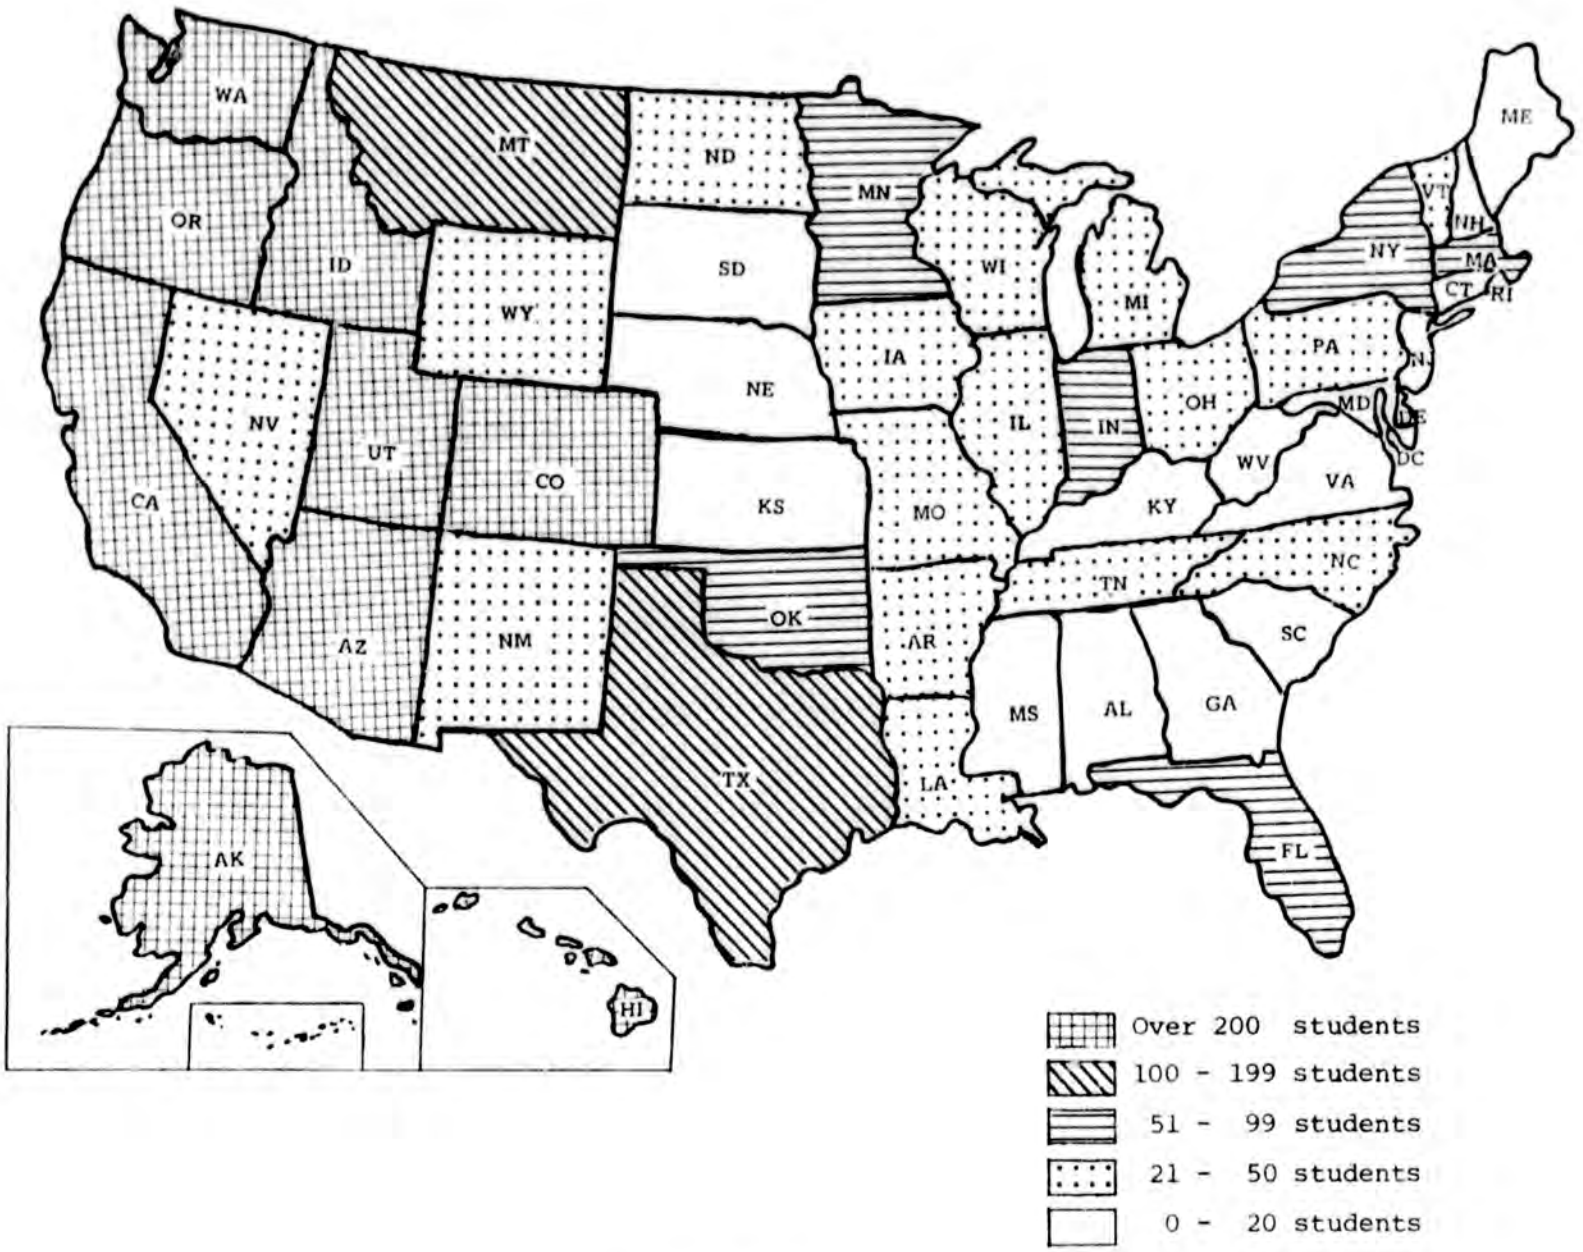

FIGURE 3
GEOGRAPHIC DISTRIBUTION OF ALASKANS UTILIZING
STATE LOANS FOR UNDERGRADUATE EDUCATION IN 1983-84

Graduate Loans

The number of Alaskans receiving loans for graduate study has increased nearly twelve fold since the program began in 1971-72. This year 1,336 students received assistance for the pursuit of graduate study. Of these 1,336, 78.1 percent used their loans for attendance outside of Alaska, while 21.9 percent used them for attending school in-state. The percentage of graduate loan recipients attending school in Alaska has been relatively stable the last few years, after decreasing steadily from 1971-72 through 1977-78. This trend is presented in Figure 4, and is probably largely due to the increased availability of programs in Alaska.

The states most frequently chosen by graduate students from Alaska in 1983-84 are presented in Table 4. Again, as with undergraduates, the students' preference is quite stable.

The average loan award for 1983-84 increased for some states and decreased for others, with the largest increases for students attending graduate institutions in Hawaii and California.

Alaskans pursuing graduate educational goals are also distributed quite widely across the nation, with Alaskan graduate loan recipients attending institutions in all but four of the fifty states. The predominance of the West, and particularly the West Coast, is readily apparent in Figure 5.

Only Alaska, Washington, California, and Oregon received more than 100 Alaskan graduate students on state loans. The thirteen states comprising the WICHE compact account for 74.5 percent of all the graduate Alaskan loan recipients for 1983-84.

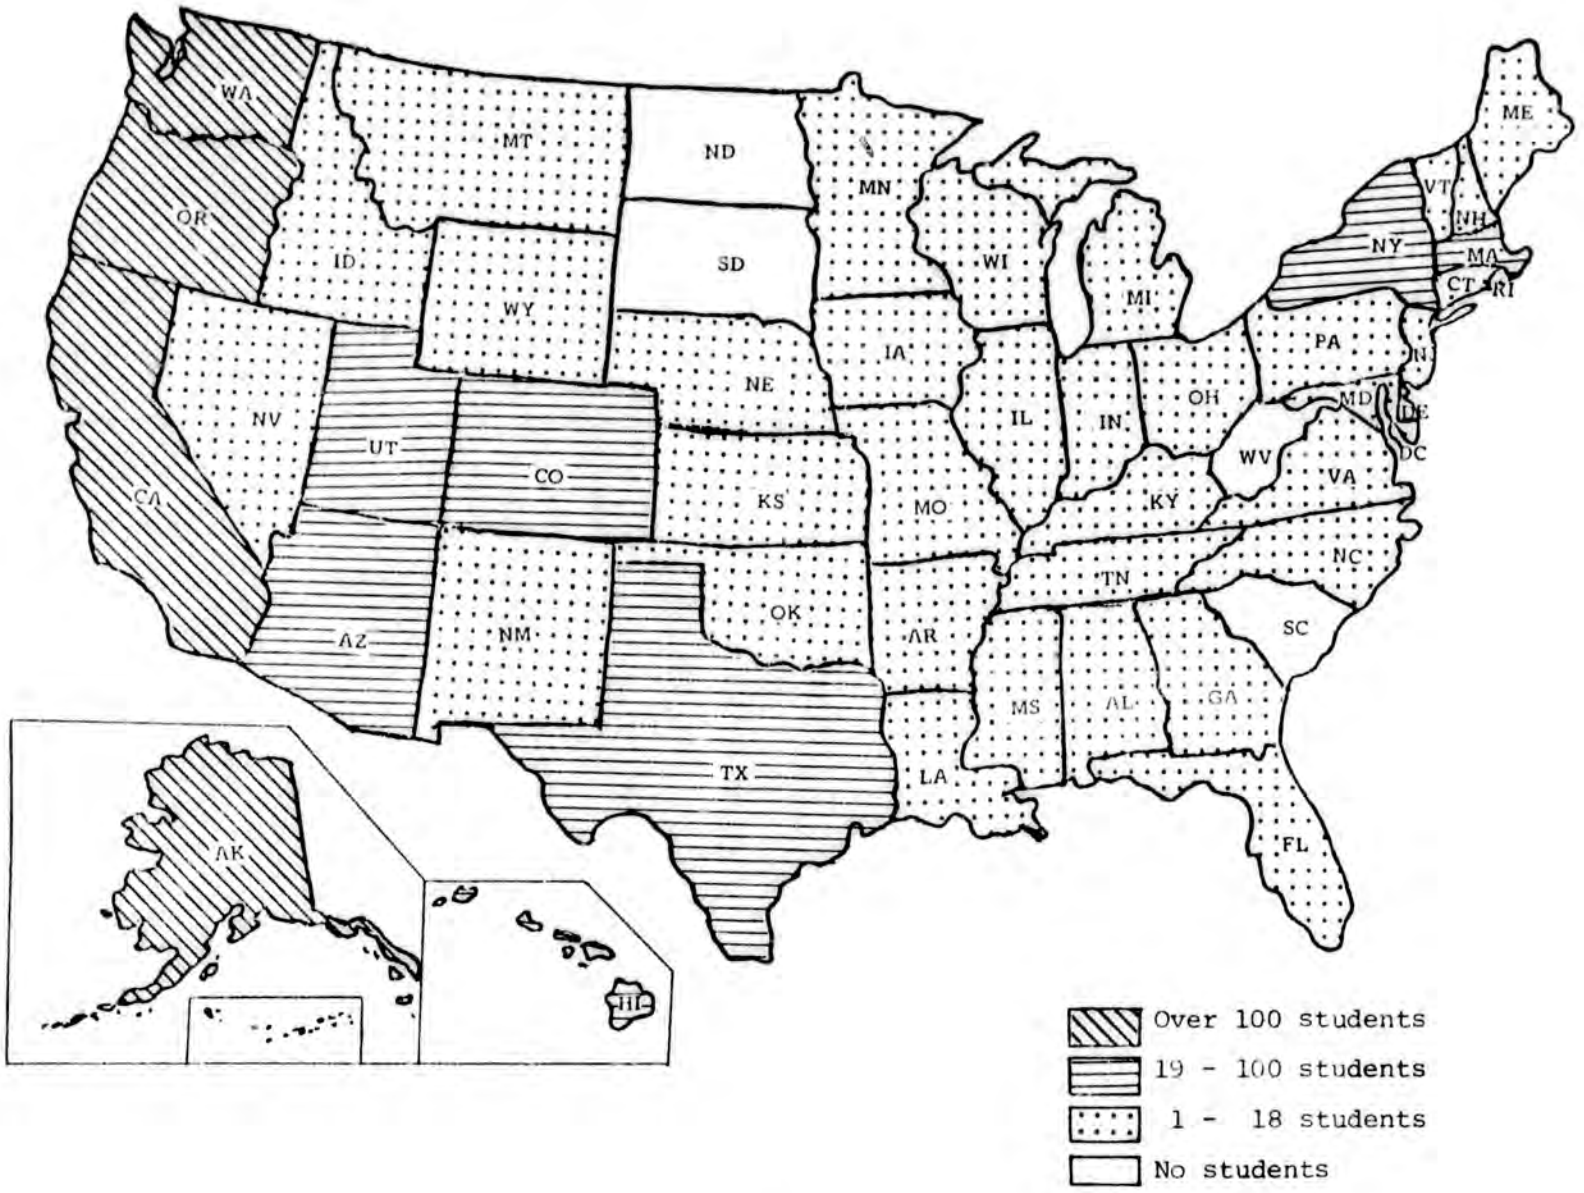

FIGURE 5
GEOGRAPHIC DISTRIBUTION OF ALASKANS UTILIZING
STATE LOANS FOR GRADUATE EDUCATION IN 1983-84

Foreign Study

Alaskans used state loans for study in forty different institutions in seventeen foreign countries in 1983-84. The distribution of these students by country of attendance is presented in Table 5. Not too surprisingly, Canada is the most popular foreign country for attendance of Alaskan students.

TABLE 5
DISTRIBUTION OF BORROWERS
BY FOREIGN COUNTRY OF ATTENDANCE

TOTAL	34	$4,402	23	$4,410

Loan Repayments

The student loan program is based upon a revolving fund with the students' loan repayments being re-utilized for future student loans. Since 1971-72 (actually 1974-75, since there were no repayments received the first few years), Alaskans have repaid over $22 million on their educational loans. The volume of these revolving funds now contribute a significant portion of the loan account, and as can be seen in Figure 6, these repayments are rapidly increasing each year.

Also presented in Figure 6 is a representation of the forgiveness history of the student loan program. Students who reside in Alaska after completion of their course of study are eligible to have up to 50 percent of their loans forgiven. Beginning with the first such forgiveness in 1974-75, the total amount of loan funds (including interest) which the State of Alaska has forgiven has generally shown large annual increases, with the exception of 1979-80 when forgiveness benefits temporarily leveled. During 1983-84 nearly 2,500 Alaskans received partial forgiveness of their student loans. Increases are projected to continue over the next few years as larger numbers of students complete their educational programs.

FIGURE 6
STUDENT LOAN COLLECTIONS
AND FORGIVENESS BENEFITS

Default

Nationally, student loans have a notoriously high default rate, and, unfortunately, Alaska's program also has experienced problems with loan collections. Although the Alaska program had been doing considerably better than the federal loan programs, the default rate has begun to rise during 1983-84. As can be seen in Table 6, the default rate had been steadily decreasing since the concerted effort began in 1975-76 to pursue these bad debts. However, during 1983-84 default volumes outstripped available manpower and the rate rose dramatically. It is anticipated that the use of private collection agencies during 1984-85 will bring the default rate back down.

Statistical Data

In the Appendix are Tables 11-17 containing data on the Alaska Student Loan Program from 1971-72 through 1983-84. Information on the number and amounts of loans made annually to undergraduate and graduate students attending in-state and out-of-state is presented in Tables 11-14. Table 15 contains summaries of the average size loan awarded each year, and Tables 16 and 17 contain data on institutions most frequently attended by Alaska Student Loan borrowers.

WICHE STUDENT EXCHANGE PROGRAM

Through its participation in the thirteen-state Western Interstate Commission for Higher Education (WICHE), Alaska provides residents with access to sixteen fields of professional education not available in-state. The WICHE Student Exchange Program provides access to these sixteen fields at participating institutions throughout the compact states, and makes these programs available at a reduced tuition rate to the out-of-state WICHE students. These reduced rates usually amount to the normal in-state tuition rate at public colleges and universities and one-third the regular tuition rate at private colleges and universities. Alaskans certified for participation in this exchange program may also expect preferential admissions consideration by the schools to which they apply. For this, Alaska pays the college or university in which the Alaskan exchange student enrolls a set fee for a particular field of study. This fee, the support fee, covers the non-resident portion of the tuition and a portion of the institution's operating costs. The student does not receive any direct payment under this program.

Exchange Fields

The WICHE exchange fields in which Alaska would support students for the 1983-84 year included:

Architecture	Occupational Therapy
Dentistry	Optometry
Forestry	Osteopathy
Graduate Library Studies	Pharmacy
Graduate Nursing	Physical Therapy
Law	Podiatry
Maritime Technology	Public Health
Medicine	Veterinary Medicine

A student eligible for state certification in any of these fields must apply for and gain admission to the program of study. The admission decision rests solely with the receiving institution.

Support Fees

The amount of the support fee to be paid for each field of study is set annually by the WICHE Commission, with membership from all thirteen member states. These fees have increased more or less steadily over the last six years, and at the same time, Alaska's participation level has also steadily increased. As can be seen in Table 7, the total support fees exceeded $1.5 million.

TABLE 7
WICHE STUDENT EXCHANGE PROGRAM SUPPORT COSTS
1976-77 through 1983-84

Academic Year	Total Students	Total Fees
1976-77	114	$ 368,473

1982-83	300	1,498,232
1983-84	284	1,591,440
TOTAL	1,713	$7,770,062

Participation Rates

Law continues to be the most popular field for Alaskan students. In 1982-83 Law students accounted for 60.0 percent of the students supported under the exchange program. In 1983-84, Law represented 58.1 percent of the exchange students. The growth fields for 1983-84 were Architecture, Graduate Nursing, Occupational Therapy, Veterinary Medicine, and Osteopathy. For the first time, Law experienced an appreciable decline. These data are listed in Table 8.

TABLE 8
WICHE EXCHANGE STUDENTS BY FIELD
1976-77 through 1983-84

Field of Study	77-78	78-79	79-80	80-81	81-82	82-83	83-84

TOTAL	123	152	166	232	269	300	284

*Discontinued as an exchange field in 1981-82.

The cost of the student exchange for 1983-84 is detailed in Table 9. It can be seen that because of the relatively low support fee for Law, Law exchange students accounted for only 40.0 percent of the total exchange cost (as opposed to accounting for 58.1 percent of the students).

TABLE 9
WICHE SUPPORT COSTS BY FIELD OF STUDY
1983-84

STATE EDUCATIONAL INCENTIVE GRANT (SEIG) PROGRAM

The State Educational Incentive Grant (SEIG) Program provides need-based grants to eligible Alaskans enrolled in undergraduate programs. Grant awards range from a minimum of $100 to a maximum of $1,500 each, depending upon demonstrated need. One-half of each grant is federally funded and one-half is provided by the State. Grants are awarded to eligible applicants in order of greatest financial need as measured by a standard need analysis.

Participation Rates

1983-34 was the sixth year of operation of the SEIG Program in Alaska. Over 2,000 Alaskans applied for grant funds in 1983-84, but because of fund limitations, only 126 grants were awarded. As can be seen in Table 10, this is a decrease from 1982-83 when 161 grants were awarded. The decline is the result of reductions in funds at the federal level. The grant funds available in 1983-84 were 13.0 percent less than the previous year.

Also listed in Table 10 are the awards for in-state and out-of-state attendance and an institutional listing of the in-state awards. As in the past, University of Alaska, Anchorage students received the most SEIG awards.

HB 185

330

BILL SHEFFIELD, GOVERNOR

ALASKA COMMISSION ON POSTSECONDARY EDUCATION

POUCH FP
JUNEAU, ALASKA 99811
PHONE: (907) 465-2854

M E M O R A N D U M

TO: Sheila Peterson
Legislative Assistant to
Senator Dick Eliason

FROM: Kerry D. Romesburg
Executive Director

DATE: February 4, 1985

Following is the language which we discussed concerning amending the loan law to provide for more discretion in the awarding of student loans.

Amend AS 14.43.125 (b) by adding a new paragraph (4), to read:

(4) has been granted an exemption from this section as the result of at least a two-thirds vote of the Commission acting upon written appeal of the applicant.

Sitka Seventh-day Adventist Church
BOX 1540 SITKA, ALASKA 99835
TELEPHONE 747-8131

May 17, 1984

Senator Richard Eliason
State Capitol
Juneau, Ak

Dear Senator Eliason,

This letter is in response to recently learned information regarding the student loan program. I believe the law as it now reads is quite unfair to those students who choose to attend Christian secondary schools outside Alaska.

As in the case of my children, James and Diana, who are now attending a Seventh-Day Adventist College in College Place, Washington, we moved to Sitka, Alaska in June, 1980. James and Diana came with us and in the fall of 1980, they enrolled in a Seventh-Day Adventist boarding school for secondary students in Spangle, Washington, from which they graduated in 1981 and 1983, respectively. They returned home to Sitka each summer and Christmas vacation to work here in Sitka. As the law now reads, they are ineligible to receive any student loan money for their college expenses because they were unable to be physically present for one full year in Alaska. I can't understand why they are considered Alaska residents and receive the permanent fund dividend, yet are unable to receive the student loan appropriations. It seems to me that some provision should be made for those students who with their parents are Alaska residents and choose to attend such schools outside because of religious preference, especially since there are no such schools available in Alaska.

I would hope this will be presented to the Senate.

Cordially,

James Ball

Pastor James Ball
Seventh-Day Adventist Church
Sitka

IN THE HOUSE

HOUSE BILL NO. 185

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to student loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.120(k) is amended to read:

(k) Periodic installments of principal shall be deferred, but interest shall accrue and be paid unless the student is eligible for interest payment benefits under (1) of this section during any of the following:

(1) return to student status as provided in (c) of this section;

(2) serving an initial period of up to six years on active duty as a member of the armed forces of the United States;

(3) serving, for up to three years, as a full-time volunteer under the Peace Corps Act;

(4) serving, for up to three years, as a full-time volunteer under the Domestic Volunteer Service Act of 1973;

(5) for a one-time period up to 12 months in which the borrower is seeking and unable to find employment in the United States; or

(6) if the borrower becomes 50 percent or more disabled as certified by competent medical authority.

* Sec. 2. AS 14.43.125 is repealed and reenacted to read:

Sec. 14.43.125. ELIGIBILITY OF STUDENTS. (a) A person may apply for and obtain a scholarship loan if the person

(1) is

(A) enrolled as a full-time student in a career education, associate, baccalaureate, or graduate degree program; or

(B) a graduate of a high school or the equivalent, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university;

(2) is not delinquent or in default on a previously awarded scholarship loan; and

(3) is a resident of the state at the time of application for the loan; for purposes of this section, a person qualifies as a resident of the state if at the time of application for the loan the person

(A) has been physically present in the state for at least two years immediately before the time of application for the loan;

(B) is dependent on a parent or guardian for care, the parent or guardian has been present in the state for at least two years immediately before the time of application for the loan and the person has been present in the state for at least one year of the immediately preceding five years; or

(C) has been physically present in the state, or is a dependent of a parent or guardian who has been physically present in the state, for at least two years immediately before being absent from the state and the absence is due solely to

(i) military service;

(ii) volunteer service under the Peace Corps Act;

(iii) volunteer service under the Domestic Volunteer Service Act of 1973;

(iv) participating in a foreign exchange student program recognized by the commission;

(v) attending a school as a full-time student;

(vi) full-time employment by the state;

(vii) being a member of or employed full-time by the state's congressional delegation;

(viii) required medical care for the applicant or the applicant's immediate family; or

(ix) being a person who otherwise qualifies as a resident and is accompanying a spouse who qualifies as a resident under (i) - (viii) of this paragraph.

(b) A person does not qualify as a resident of the state under this section if the person declares or establishes residence in another state during an absence from Alaska.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

HOUSE BILL 185

House Bill 185 is legislation requested by the Postsecondary Commission. Last year it was introduced as SB 385. HB 185 is a shortened version of the final version of SB 385 (CSSB 385(Fin) am).

This bill deals with two sections of AS 14.43. The first (AS 14.43.120(k)), deals with "Conditions of Loans" - specifically deferral of repayment. The second section (AS 14.43.125) deals with eligibility for the student loan program.

DEFERRAL OF REPAYMENT - This bill defines a maximum length of time (6 years) for which a person can have repayment of their student loan deferred because they are on active duty as a member of the armed forces of the United States.

SB 385 originally had a deferral period of 4 years. This was increased to 6 years in the Senate Finance amended version after discussion in committee of initial service periods which last 6 years rather than 4.

ELIGIBILITY - Language is added making certain provisions by which a person could have been out of state within the last two years and still be eligible for a student loan. These provisions include required medical care, attendance school outside of Alaska as a fulltime student etc. Currently, military service is one of the only allowable absences.

At present the Postsecondary Commission has no statuatory authority to grant Alaska Student Loan eligibility to anyone who has been out of the state in the 2 years immediately prior to applying for a student loan. There is a Postseondary Commission regulation to allow absences out of state of not more than 8 consecutive weeks or no more than 16 total weeks, but even students who have been receiving Alaska student loans and who have been going to school fulltime outside the state are not, under current statute made clearly eligible for the Alaska Student Loan program.

In Section 3 (B) a dependent must have been present in the state for at least one year of the immediately preceeding 5 years because that is a requirement Senate Judiciary included in the omnibus residence bill (HB323). (Now AS 14.43.125)

I have included a copy of the referenced existing statutes for your convenience.

Revisor's notes. — AS 14.43.125 was substituted for AS 14.40.765 to conform to the renumbering of that section by the revisor of statutes under AS 01.05.031.

Effect of amendments. — The 1981 amendment substituted "$7,000" for "$5,000" following "not to exceed."

Sec. 14.43.120. Conditions of loans. (a) Proceeds from scholarship loans may only be used for books, tuition and required fees, and for room and board.

(b) The loans may only be used to attend a career education program or a college or university approved by the commission, and, if the loans are federally insured, by the United States Commissioner of Education.

(c) To maintain a loan the student must continue to be enrolled as a full-time student in good standing in a career education program, college or university designated under (b) of this section. The commission shall adopt regulations defining "good standing" for purposes of this subsection.

(d) Scholarship loans may not be made to a student

(1) for more than five years of undergraduate study;

(2) for more than five years of graduate study;

(3) for more than a total of eight years of undergraduate and graduate study.

(e) Loans are interest bearing while a student is enrolled under (c) of this section or is receiving a deferment of payments under (k) of this section; however, a student is entitled to have a portion of the interest paid in accordance with (1) of this section.

(f) Interest on a loan given under AS 14.43.090 — 14.43.160 is at the rate of five per cent a year.

(g) Repayment of the principal and interest on the loan begins no later than one year after the borrower's studies are terminated. The loan shall provide for repayment of the total amount owed in periodic installments in not more than 10 years from the commencement of repayment, except as provided in (k) and (m) of this section. If the commission and the borrower agree to a different repayment schedule, the borrower shall repay the loan in accordance with the agreement. A borrower may make payments earlier than required by this subsection.

(h) Security may not be required for the loans; however, provision shall be made for payment of attorney fees and costs of court if either or both are incurred in collection of the amount owed on the loan.

(i) If a loan is in default, the commission shall notify the borrower that repayment of the remaining balance is accelerated and due by sending the borrower a notice by registered or certified mail.

(j) A portion of a loan shall be paid on behalf of the borrower by the state if, upon completion of the course of study for which the loan was granted, the borrower is a resident of the state for at least two years. The portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 50 percent of the total loan:

(1) two — three years residence in the state, 10 percent;

(2) three — four years residence in the state, an additional 10 percent;

(3) four — five years residence in the state, an additional 10 percent;

(4) five — six years residence in the state, an additional 10 percent;

(5) over six years residence in the state, an additional 10 percent.

(k) Periodic installments of principal shall be deferred, but interest shall accrue and be paid unless the student is eligible for interest payment benefits under (1) of this section during any of the following:

(1) return to student status as provided in (c) of this section;

(2) serving on active duty as a member of the armed forces of the United States;

(3) serving, for up to three years, as a full-time volunteer under the Peace Corps Act;

(4) serving, for up to three years, as a full-time volunteer under the Domestic Volunteer Service Act of 1973;

(5) for a one-time period up to 12 months in which the borrower is seeking and unable to find employment in the United States; or

(6) if the borrower becomes 50 percent or more disabled as certified by competent medical authority.

(*l*) The state will pay the interest on that portion of a loan that is not federally insured during

(1) the period before the beginning of the repayment period of the loan; and

(2) deferments under (k) of this section.

(m) In case of hardship, the committee may extend repayment of a loan for an additional period of up to five years in increments no longer than 12 months each.

(n) Repealed by § 11 ch 89 SLA 1981.

(o) The provisions of (j) of this section do not apply to a loan to a borrower named in a complaint as a defendant in an action by the state or by the commission to secure payment of the unpaid balance of a loan made under AS 14.43.110 or 14.43.115.

(p) For purposes of this section, a person qualifies as a resident if the person is physically present in the state with the intent to remain permanently in the state or, if not physically present in the state, the person intends to return to the state and is absent due to military service. (§ 1 ch 98 SLA 1971; am § 4 ch 156 SLA 1972; am § 6 ch 78 SLA 1974; am § 8 ch 136 SLA 1974; am §§ 1—4 ch 99 SLA 1977; am §§ 3 — 8 ch 87 SLA 1979; am §§ 3 — 9, 11 ch 89 SLA 1981; AS 14.40.763)

Revisor's notes. — In ch. 98, SLA 1971, AS 14.43.120(j)(2) read "four — five years . . ." This was a typographical error occurring for the first time in the enrolled version of the bill (CSHB 415 [Finance am S] and has been corrected here.

Effect of amendments. — The 1979 amendment deleted "approved by the commission" following "career education program" and substituted the language

beginning "approved by the commission" for "accredited by the accreditation association for the region in which the college or university is located" in subsection (b), substituted "interest" for "non-interest" in subsection (e), added the language beginning "however, a student shall be entitled" to the end of subsection (e), rewrote subsection (g), and in subsection (j), substituted "paid on behalf of the borrower by the state" for "considered a grant," "borrower" for "grantee," and "three years" for "two years" in the first sentence, substituted "paid by the state" for "regarded as a grant" and "interest for up to a total of 40 percent" for "accrued interest" in the introductory language of the second sentence, and substituted "an additional 10 percent" for "20 percent" in paragraph (2), for "30 percent" in paragraph (3), and for "40 percent" in paragraph (4). The amendment also rewrote subsection (k) and added subsections (*l*), (m), and (n).

The 1981 amendment, added the second sentence of subsection (c). In subsection (d), the amendment added paragraphs (1) and (2) and in paragraph (3), substituted "a total of eight" for "six" preceding "years" and added "of undergraduate and graduate study" following "years." In subsection (i), the amendment substituted "shall" for "may" and "borrower" for "student." In subsection (m), the amendment substituted "12" for "six" preceding "months" and deleted "within the 15-year requirement of (g) of this section" following "months each." The amendment also rewrote subsections (g) and (j), added subsections (o) and (p) and repealed subsection (n) which read "Each year spent attending a college or university in Alaska qualifies as a year of employment and residency under (j) of this section, if the borrower resides no less than three years in Alaska after completion of the course for which the loan was granted, and has a total Alaskan residency of ten years time."

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.-5.031(c) and § 4, Chapter 58, SLA 1982.

Section 8, ch. 99, SLA 1977 provides: "The change in the repayment period of student loans set out in AS 14.40.763(g) [now 14.43.120(g)] as amended by sec. 3 of this Act and the additional basis for granting a deferment of repayment of a student loan set out in AS 14.40.763(k) [now 14.43.120(k)] as enacted by sec. 4 of this Act shall, upon request of the loan recipient, be applied retroactively to the outstanding balance of principal of and accrued interest on loans made under AS 14.40.751 — 14.40.806 [now 14.43.090 — 14.43.160] as they read before the effective date of this Act."

Section 12 of ch. 89, SLA 1981, provides: "The reenactment of AS 14.40.763(j) [now 14.43.120(j)] in sec. 7 of this Act applies to any student who has obtained a scholarship loan under AS 14.40.751 — 14.40.806 [now 14.43.090 — 14.43.160] since July 1, 1971."

Legislative history reports. — For a report of legislative intent concerning the loan forgiveness provisions of ch. 89, SLA 1981 (FCCSSB 120), see 1981 Senate Journal p. 1560, 1580; 1981 House Journal p. 2289.

Sec. 14.43.125. Eligibility of students. (a) A person may apply for and obtain a scholarship loan if the person

(1) is a resident of the state at the time of application for a scholarship loan;

(2) meets the requirements of (b) of this section; and

(3) is

(A) enrolled as a full-time student in a career education or associate or baccalaureate or graduate degree program; or

(B) a graduate of a high school, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university.

(b) In addition to the requirements of (a) of this section, to obtain a scholarship loan a person must have been a resident of the state for at least two years at the time of application for the loan. For purposes of

this subsection, a person qualifies as a resident of the state if at the time of application for the loan the person

(1) has been present in the state for at least two years unless an absence from the state during any part of the two years was due to military service; or

(2) is a person who is dependent on a parent or guardian for care, and the parent or guardian has been present in the state for at least two years. (§ 1 ch 98 SLA 1971; am § 10 ch 89 SLA 1981; AS 14.40.765)

Effect of amendments. — The 1981 amendment rewrote this section.

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.05.031(c) and § 4, ch. 58, SLA 1982.

Sec. 14.43.130. Selection criteria. (a) The selection committee shall grant loans based on total point accumulations under the subsection with priority going to those applicants with the highest point accumulations, except as provided in (b) of this section for loan applications completed before May 15 of each year. Points shall be awarded to applicants based upon student status and continuous Alaskan residency, according to the following schedule:

(1) student status:

(A) continuing undergraduate and graduate students with existing Alaska scholarship loans . . . . . 4 points

(B) continuing undergraduate and graduate students without existing Alaska scholarship loans . . . . . 3 points

(C) freshmen . . . . . 2 points

(D) new graduate students without existing Alaska scholarship loans . . . . . 1 point

(2) continuous Alaskan residency:

(A) students with continuous Alaskan residency of 10 years or more . . . . . 3 points

(B) students with continuous Alaskan residency of at least 5 years and less than 10 years . . . . . 2 points

(C) students with continuous Alaskan residency of more than 2 years and less than 5 years . . . . . 1 point

(3) students attending Alaska colleges or universities . . 1 point

(b) In awarding loans the selection committee shall award loans to applicants based upon the earliest date of completed applications if

(1) the applicant has accumulated at least 5 points under (a) of this section; and

(2) the applicant has filed a completed application not later than May 15 of the year for which the loan is requested. (§ 1 ch 98 SLA 1971; am § 2 ch 87 SLA 1979; AS 14.40.767)

Effect of amendments. — The 1979 amendment rewrote this section.

Editor's notes. — Section 1, ch. 87, SLA 1979 provides: "The legislature determines that

MEMORANDUM

February 18, 1985

SUBJECT: Sectional analysis of HB 185 (student loans)

TO: Representative Niilo Koponen
Chairman, Health, Education and Social Services Committee

FROM: Keith B. Levy
Legislative Counsel

The following is a sectional analysis of HB 185, relating to the student loan program.

Section 1. Existing law allows a deferral of the repayment of student loans for certain activities including service on active duty as a member of the armed forces. This section limits the military service deferral to an initial period of service of up to six years (AS 14.43.120(k)).

Section 2. This section rewrites the eligibility requirements for a student loan (AS 14.43.125). To be eligible, a person must meet three requirements. First, the person must either be enrolled as a full-time student in a career education, associate, baccalaureate, or graduate program, or a high school graduate, or scheduled for graduation from high school within six months. Second, the person may not be deliquent or in default on a previously awarded loan. Third, the person must be a resident of the state at the time of application. To qualify as a resident, the person must either (1) have been physically present in the state for two years before applying; (2) have been present in the state for one year of the preceding five and be dependent on a parent or guardian who has been present in the state for two years before the application; or (3) have been present in the state for two years or be dependent on a parent or guardian who has been present in the state for two years before the person was absent from the state if the absence was due solely to one of the justifications listed in the statute. The justifications for absence include

military service, Peace Corps service, volunteer service under the Domestic Volunteer Service Act of 1973, participating in a foreign exchange student program, attending school as a full-time student, full-time employment by the state, working as or being employed full-time by the state's congressional delegation, medical care for the applicant or the applicant's immediate family, and accompanying a spouse who qualifies under these provisions. A person does not qualify as a resident if that person establishes residence in another state during the absence.

Section 3. This section provides for an immediate effective date.

RE: Student Loans Legislation

DATE: February 5, 1985

You will find find a copy of legislation pertaining to the Alaska Student Loan program attached. I intend to introduce this legislation on Friday, February 4. You may wish to co-sponsor this legislation.

This bill deals with two sections of AS 14.43. The first (AS 14.43.120(k)), deals with "Conditions of Loans" - specifically deferral of repayment. The second section (AS 14.43.125) deals with eligibility for the student loan program.

DEFERRAL OF REPAYMENT - This bill defines a maximum length of time (6 years) for which a person can have repayment of their student loan deferred because they are on active duty as a member of the armed forces of the United States.

ELIGIBILITY - Language is added making certain provisions by which a person could have been out of state within the last two years and still be eligible for a student loan. These provisions include required medical care, attendance school outside of Alaska as a fulltime student etc. Currently, military service is the ~~only~~ allowable ~~absence~~.

one of only absences in statute.

I have included a copy of the referenced existing statutes for your convenience. Please contact my staff person, Lisa McLaren, if you wish to be added as a co-sponsor.

March 29, 1985

To: The Chairman and Members of the House Finance Committee

From: Ronald D. Martinson, 3220 Briarcliff Dr. Anchorage, AK 99508 338-2481, 277-1622

Re: House Bill No. 185 and House Bill No. 197 (Student Loans)

I am writing to urge you to pass on to the House as swiftly as possible the two Bills mentioned above. I would hope that this might be done so that the Full House might act on them and process them on through the Legislature and Governor so that they might become law during this session.

I request this for the following reasons: (1) I have discovered the shortcomings of the law(s) regarding the present rules on the student loan program through a lengthy appeal process in behalf of our daughter, Anne. (2) I discovered that the requirements for residency to enter the loan program as stated on the 1984-1985 forms were not what the law(s) read. This created confusion and frustration for an applicant who was denied, as well as for the Commission on Postsecondary Education as it sought to work under the law(s). (3) I have read carefully House Bill No. 185 and I am in full agreement with it. It covers all of the concerns I raised in the appeal process regarding the law(s) presently in effect, i.e., absence due to being in college out of State, the power of the Commission to act (by 2/3 majority) to admit persons to the loan program when there are unusual circumstances affecting their entrance into the program, loss of use of the program when a person becomes a resident of another state during absence from Alaska. (4) The change in the law made in 1983 which required one year in the last five of personal presence in the State might have seemed to be generous; however, it gave a person four years after leaving the State to continue in the loan program and denied a person who moved here with her family and left for college in the fall the opportunity to enter it. It also would have eliminated a person who attended four years of college and one year of graduate school outside of the State from continued use of the program, if the "letter of the law" had been enforced. The law preserved a person's right to use the program but made it difficult to enter it. (5) This Bill will allow the goals of the Alaska Student Loan Program to be met; and (6) I have read the rules for eligibility regarding residency as printed in the forms for use in 1985-1986 and they will need the passage of House Bill No. 185 to match the law(s) of the State of Alaska.

We have an excellent Student Loan Program in the State of Alaska. The passage of these two bills will clarify several issues which need legal clarification if the program is to continue to be fair and just.

I would hope that no changes would be made to these Bills as they proceed toward law. Some may want to limit the program to recent high school graduates. I believe that would be a mistake, and it would open the program to legal battles which could destroy it. It would prevent persons from getting a loan who need further education to continue their work or who need to change work because of injury or changes in economic conditions or of unemployment in their chosen field. Interest may need to be increased and the forgiveness provision may need to be re-examined, but the whole program should not be changed. In an effort to save money for the State we may be looking at areas which should be left alone. I would hope that we could increase our efforts to collect from those who use the program and default in their payments. Thank you for listening to my concerns.

Sincerely,

Ronald D. Martinson

HB 161
Analysis of Fiscal Impact

Assumptions

(1) % of borrowers entering repayment:

Percent	Years after borrowing
0.0	one year
22.4	two years
21.3	three years
21.8	four years
32.3	five years
2.2	six or more years
100.0	

(2) Borrowing averages will be:

FY86	$4,775	FY89	$5,725
FY87	$5,050	FY90	$5,900
FY88	$5,400		

(3) Loan volumes are at current projection levels and program is fully funded. Adjustments made will be the result of program changes.

Impacts

(1) Increasing loan interest from 5% to 8% (Section 1 of the bill).
(a) The increase will not affect loan volume.
(b) Increased interest will impact the fund over time in the following manner:

Year of Impact	Borrowing Year FY86	FY87	FY88	FY89	Total New Revenue
FY86	$ -0-	$ -0-	$ -0-	$ -0-	$ -0-
FY87	-0-	-0-	-0-	-0-	-0-
FY88	56.7	-0-	-0-	-0-	56.7
FY89	108.2	60.7	-0-	-0-	168.9
FY90	168.5	118.5	62.3	-0-	349.3
FY91	247.9	177.6	121.6	58.5	605.6
FY92	253.5	265.1	182.3	114.2	815.1
FY93	253.5	271.1	272.2	171.1	967.9
FY94	253.5	271.1	278.3	255.5	1,058.4

(2) Eliminating the forgiveness benefits (Section 6 of the bill)

(a) Elimination of forgiveness will not affect loan volume
(b) The impact of eliminating forgiveness will be realized over time, in the following manner:

Year	Principal	Interest	Total Additional Revenue
FY86	$ -0-	$ -0-	$ -0-
FY87	-0-	-0-	$ -0-
FY88	378.7	94.7	$ 473.4
FY89	1,143.2	285.8	$1,429.0
FY90	1,648.8	412.2	$2,061.0
FY91	3,814.0	953.5	$4,767.5

(3) Changing eligibility requirements (Section 2 of the bill)

(a) Requiring graduation from an Alaska high school would greatly reduce the number of borrowers eligible for the loan program. Based upon high school enrollment projections provided by the Department of Education, and based upon attendance patterns, the potential number of borrowers would be:

Year	Potential New Borrowers	Total Reduction in Borrowers
FY86	3,517	3,977
FY87	3,664	4,278
FY88	3,753	4,581
FY89	4,402	5,031
FY90	4,805	5,288

The fiscal savings of this requirement would be:

Year	Reduction in Borrowers	Savings
FY86	3,977	$18,990.2
FY87	4,278	$21,603.9
FY88	4,581	$24,737.4
FY89	5,031	$28,802.5
FY90	5,288	$31,992.2

(b) Providing aid on a need-based system would allow some borrowers, excluded by the high school requirement, to borrow. We have no good estimate on the number of students qualifying for need on a need-test analysis. The estimate is that only about one in four could qualify. Hence, the reduction in borrowers would be decreased by about 25%.

The fiscal impact of the needs analysis would be:

Year	Qualifying Borrowers	Cost
FY86	994	$ 4,746.4
FY87	1,070	$ 5,401.0
FY88	1,145	$ 6,184.4
FY89	1,258	$ 7,200.6
FY90	1,322	$ 7,799.8

(c) Therefore, the total fiscal impact of the two factors (high school graduation and a needs test) would be:

Year	Savings
FY86	$14,243.8
FY87	$16,202.9
FY88	$18,553.0
FY89	$21,601.9
FY90	$24,192.4

(4) Combining all changes would result in the following:

Year	Savings (including Revenue)
FY86	$14,243.8
FY87	$16,202.9
FY88	$19,083.1
FY89	$23,199.8
FY90	$26,602.7

Additional Notes

(1) Loan processing would be slowed greatly the first year, due to imposing the new requirements and needing to handle all loans a number of times.

(2) Grandfathering those current borrowers from the needs test requirement was assumed in the projected fiscal impact.

(3) Additional staff may be required to administer the needs test verification, but this is unknown until the whole process is actually finalized.

CS FOR HOUSE BILL NO. 161 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to student loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.120(f) is amended to read:

(f) Interest on a loan given under AS 14.43.090 - 14.43.160 is at the rate of <u>eight</u> [FIVE] percent a year unless the loan is in default. Interest on a loan that is in default is 10 percent a year for the period the loan is in default.

* Sec. 2. AS 14.43.125 is repealed and reenacted to read:

Sec. 14.43.125. ELIGIBILITY OF STUDENTS. (a) A person may apply for and obtain a scholarship loan if the person

(1) is

(A) enrolled as a full-time student in a career education, associate, baccalaureate, or graduate degree program; or

(B) a graduate of a high school or the equivalent, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university;

(2) is not delinquent or in default on a previously awarded scholarship loan; and

(3) is a resident of the state at the time of application for the loan; for purposes of this section, a person qualifies as a resident of the state if at the time of application for the loan the person

(A) has been physically present in the state for at least two years immediately before the time of application for the loan;

(B) is dependent on a parent or guardian for care, the parent or guardian has been present in the state for at least two years immediately before the time of application for the loan and the person has been present in the state for at least one year of the immediately preceding five years; or

(C) has been physically present in the state, or is a dependent of a parent or guardian who has been physically present in the state, for at least two years immediately before the applicant was absent from the state and the absence is due solely to

(i) military service;

(ii) volunteer service under the Peace Corps Act;

(iii) volunteer service under the Domestic Volunteer Service Act of 1973;

(iv) participating in a foreign exchange student program recognized by the commission;

(v) attending a school as a full-time student;

(vi) full-time employment by the state;

(vii) being a member of or employed full-time by the state's congressional delegation;

(viii) required medical care for the applicant or the applicant's immediate family; or

(ix) being a person who otherwise qualifies as a resident and is accompanying a spouse who qualifies as a resident under (i) - (viii) of this paragraph.

(b) A person does not qualify as a resident of the state under

this section if the person declares or establishes residence in another state during an absence from Alaska.

* Sec. 3. Notwithstanding AS 14.43.120(j), the maximum portion of a scholarship loan that may be repaid by the state is 40 percent for a loan made for the school year beginning in 1986, 30 percent for 1987, 20 percent for 1988, and 10 percent for 1989.

* Sec. 4. AS 14.43.120(j), (o), and (p) are repealed.

* Sec. 5. Section 4 of this Act takes effect September 1, 1990.

* Sec. 6. Sections 1 - 3 of this Act take effect July 1, 1985.

RE: Student Loans Legislation

DATE: February 5, 1985

You will find find a copy of legislation pertaining to the Alaska Student Loan program attached. I intend to introduce this legislation on Friday, February 4. You may wish to co-sponsor this legislation.

This bill deals with two sections of AS 14.43. The first (AS 14.43.120(k)), deals with "Conditions of Loans" - specifically deferral of repayment. The second section (AS 14.43.125) deals with eligibility for the student loan program.

DEFERRAL OF REPAYMENT - This bill defines a maximum length of time (6 years) for which a person can have repayment of their student loan deferred because they are on active duty as a member of the armed forces of the United States.

ELIGIBILITY - Language is added making certain provisions by which a person could have been out of state within the last two years and still be eligible for a student loan. These provisions include required medical care, attendance school outside of Alaska as a fulltime student etc. Currently, military service is the ~~only~~ allowable ~~absence~~.
one of only absences in statute.
I have included a copy of the referenced existing statutes for your convenience. Please contact my staff person, Lisa McLaren, if you wish to be added as a co-sponsor.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM

February 18, 1985

SUBJECT: Sectional analysis of HB 185 (student loans)

TO: Representative Niilo Koponen
Chairman, Health, Education and Social Services Committee

FROM: Keith B. Levy
Legislative Counsel

The following is a sectional analysis of HB 185, relating to the student loan program.

Section 1. Existing law allows a deferral of the repayment of student loans for certain activities including service on active duty as a member of the armed forces. This section limits the military service deferral to an initial period of service of up to six years (AS 14.43.120(k)).

Section 2. This section rewrites the eligibility requirements for a student loan (AS 14.43.125). To be eligible, a person must meet three requirements. First, the person must either be enrolled as a full-time student in a career education, associate, baccalaureate, or graduate program, or a high school graduate, or scheduled for graduation from high school within six months. Second, the person may not be deliquent or in default on a previously awarded loan. Third, the person must be a resident of the state at the time of application. To qualify as a resident, the person must either (1) have been physically present in the state for two years before applying; (2) have been present in the state for one year of the preceding five and be dependent on a parent or guardian who has been present in the state for two years before the application; or (3) have been present in the state for two years or be dependent on a parent or guardian who has been present in the state for two years before the person was absent from the state if the absence was due solely to one of the justifications listed in the statute. The justifications for absence include

military service, Peace Corps service, volunteer service under the Domestic Volunteer Service Act of 1973, participating in a foreign exchange student program, attending school as a full-time student, full-time employment by the state, working as or being employed full-time by the state's congressional delegation, medical care for the applicant or the applicant's immediate family, and accompanying a spouse who qualifies under these provisions. A person does not qualify as a resident if that person establishes residence in another state during the absence.

Section 3. This section provides for an immediate effective date.

HOUSE BILL 185

House Bill 185 is legislation requested by the Postsecondary Commission. Last year it was introduced as SB 385. HB 185 is a shortened version of the final version of SB 385 (CSSB 385(Fin) am).

This bill deals with two sections of AS 14.43. The first (AS 14.43.120(k)), deals with "Conditions of Loans" - specifically deferral of repayment. The second section (AS 14.43.125) deals with eligibility for the student loan program.

DEFERRAL OF REPAYMENT - This bill defines a maximum length of time (6 years) for which a person can have repayment of their student loan deferred because they are on active duty as a member of the armed forces of the United States.

SB 385 originally had a deferral period of 4 years. This was increased to 6 years in the Senate Finance amended version after discussion in committee of initial service periods which last 6 years rather than 4.

ELIGIBILITY - Language is added making certain provisions by which a person could have been out of state within the last two years and still be eligible for a student loan. These provisions include required medical care, attendance school outside of Alaska as a fulltime student etc. Currently, military service is one of the only allowable absences.

At present the Postsecondary Commission has no statuatory authority to grant Alaska Student Loan eligibility to anyone who has been out of the state in the 2 years immediately prior to applying for a student loan. There is a Postseondary Commission regulation to allow absences out of state of not more than 8 consecutive weeks or no more than 16 total weeks, but even students who have been receiving Alaska student loans and who have been going to school fulltime outside the state are not, under current statute made clearly eligible for the Alaska Student Loan program.

In Section 3 (B) a dependent must have been present in the state for at least one year of the immediately preceeding 5 years because that is a requirement Senate Judiciary included in the omnibus residence bill (HB323). (Now AS 14.43.125)

I have included a copy of the referenced existing statutes for your convenience.

Revisor's notes. — AS 14.43.125 was substituted for AS 14.40.765 to conform to the renumbering of that section by the revisor of statutes under AS 01.05.031.

Effect of amendments. — The 1981 amendment substituted "$7,000" for "$5,000" following "not to exceed."

Sec. 14.43.120. Conditions of loans. (a) Proceeds from scholarship loans may only be used for books, tuition and required fees, and for room and board.

(b) The loans may only be used to attend a career education program or a college or university approved by the commission, and, if the loans are federally insured, by the United States Commissioner of Education.

(c) To maintain a loan the student must continue to be enrolled as a full-time student in good standing in a career education program, college or university designated under (b) of this section. The commission shall adopt regulations defining "good standing" for purposes of this subsection.

(d) Scholarship loans may not be made to a student

(1) for more than five years of undergraduate study;

(2) for more than five years of graduate study;

(3) for more than a total of eight years of undergraduate and graduate study.

(e) Loans are interest bearing while a student is enrolled under (c) of this section or is receiving a deferment of payments under (k) of this section; however, a student is entitled to have a portion of the interest paid in accordance with (1) of this section.

(f) Interest on a loan given under AS 14.43.090 — 14.43.160 is at the rate of five per cent a year.

(g) Repayment of the principal and interest on the loan begins no later than one year after the borrower's studies are terminated. The loan shall provide for repayment of the total amount owed in periodic installments in not more than 10 years from the commencement of repayment, except as provided in (k) and (m) of this section. If the commission and the borrower agree to a different repayment schedule, the borrower shall repay the loan in accordance with the agreement. A borrower may make payments earlier than required by this subsection.

(h) Security may not be required for the loans; however, provision shall be made for payment of attorney fees and costs of court if either or both are incurred in collection of the amount owed on the loan.

(i) If a loan is in default, the commission shall notify the borrower that repayment of the remaining balance is accelerated and due by sending the borrower a notice by registered or certified mail.

(j) A portion of a loan shall be paid on behalf of the borrower by the state if, upon completion of the course of study for which the loan was granted, the borrower is a resident of the state for at least two years. The portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 50 percent of the total loan:

(1) two — three years residence in the state, 10 percent;

(2) three — four years residence in the state, an additional 10 percent;

(3) four — five years residence in the state, an additional 10 percent;

(4) five — six years residence in the state, an additional 10 percent;

(5) over six years residence in the state, an additional 10 percent.

(k) Periodic installments of principal shall be deferred, but interest shall accrue and be paid unless the student is eligible for interest payment benefits under (1) of this section during any of the following:

(1) return to student status as provided in (c) of this section;

(2) serving on active duty as a member of the armed forces of the United States;

(3) serving, for up to three years, as a full-time volunteer under the Peace Corps Act;

(4) serving, for up to three years, as a full-time volunteer under the Domestic Volunteer Service Act of 1973;

(5) for a one-time period up to 12 months in which the borrower is seeking and unable to find employment in the United States; or

(6) if the borrower becomes 50 percent or more disabled as certified by competent medical authority.

(*l*) The state will pay the interest on that portion of a loan that is not federally insured during

(1) the period before the beginning of the repayment period of the loan; and

(2) deferments under (k) of this section.

(m) In case of hardship, the committee may extend repayment of a loan for an additional period of up to five years in increments no longer than 12 months each.

(n) Repealed by § 11 ch 89 SLA 1981.

(o) The provisions of (j) of this section do not apply to a loan to a borrower named in a complaint as a defendant in an action by the state or by the commission to secure payment of the unpaid balance of a loan made under AS 14.43.110 or 14.43.115.

(p) For purposes of this section, a person qualifies as a resident if the person is physically present in the state with the intent to remain permanently in the state or, if not physically present in the state, the person intends to return to the state and is absent due to military service. (§ 1 ch 98 SLA 1971; am § 4 ch 156 SLA 1972; am § 6 ch 78 SLA 1974; am § 8 ch 136 SLA 1974; am §§ 1—4 ch 99 SLA 1977; am §§ 3 — 8 ch 87 SLA 1979; am §§ 3 — 9, 11 ch 89 SLA 1981; AS 14.40.763)

Revisor's notes. — In ch. 98, SLA 1971, AS 14.43.120(j)(2) read "four — five years ...." This was a typographical error occurring for the first time in the enrolled version of the bill (CSHB 415 [Finance am S] and has been corrected here.

Effect of amendments. — The 1979 amendment deleted "approved by the commission" following "career education program" and substituted the language

beginning "approved by the commission" for "accredited by the accreditation association for the region in which the college or university is located" in subsection (b), substituted "interest" for "non-interest" in subsection (e), added the language beginning "however, a student shall be entitled" to the end of subsection (e), rewrote subsection (g), and in subsection (j), substituted "paid on behalf of the borrower by the state" for "considered a grant," "borrower" for "grantee," and "three years" for "two years" in the first sentence, substituted "paid by the state" for "regarded as a grant" and "interest for up to a total of 40 percent" for "accrued interest" in the introductory language of the second sentence, and substituted "an additional 10 percent" for "20 percent" in paragraph (2), for "30 percent" in paragraph (3), and for "40 percent" in paragraph (4). The amendment also rewrote subsection (k) and added subsections (*l*), (m), and (n).

The 1981 amendment, added the second sentence of subsection (c). In subsection (d), the amendment added paragraphs (1) and (2) and in paragraph (3), substituted "a total of eight" for "six" preceding "years" and added "of undergraduate and graduate study" following "years." In subsection (i), the amendment substituted "shall" for "may" and "borrower" for "student." In subsection (m), the amendment substituted "12" for "six" preceding "months" and deleted "within the 15-year requirement of (g) of this section" following "months each." The amendment also rewrote subsections (g) and (j), added subsections (o) and (p) and repealed subsection (n) which read "Each year spent attending a college or university in Alaska qualifies as a year of employment and residency under (j) of this section, if the borrower resides no less than three years in Alaska after completion of the course for which the loan was granted, and has a total Alaskan residency of ten years time."

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.-5.031(c) and § 4, Chapter 58, SLA 1982.

Section 8, ch. 99, SLA 1977 provides: "The change in the repayment period of student loans set out in AS 14.40.763(g) [now 14.43.120(g)] as amended by sec. 3 of this Act and the additional basis for granting a deferment of repayment of a student loan set out in AS 14.40.763(k) [now 14.43.120(k)] as enacted by sec. 4 of this Act shall, upon request of the loan recipient, be applied retroactively to the outstanding balance of principal of and accrued interest on loans made under AS 14.40.751 — 14.40.806 [now 14.43.090 — 14.43.160] as they read before the effective date of this Act."

Section 12 of ch. 89, SLA 1981, provides: "The reenactment of AS 14.40.763(j) [now 14.43.120(j)] in sec. 7 of this Act applies to any student who has obtained a scholarship loan under AS 14.40.751 — 14.40.806 [now 14.43.090 — 14.43.160] since July 1, 1971."

Legislative history reports. — For a report of legislative intent concerning the loan forgiveness provisions of ch. 89, SLA 1981 (FCCSSB 120), see 1981 Senate Journal p. 1560, 1580; 1981 House Journal p. 2289.

Sec. 14.43.125. Eligibility of students. (a) A person may apply for and obtain a scholarship loan if the person

(1) is a resident of the state at the time of application for a scholarship loan;

(2) meets the requirements of (b) of this section; and

(3) is

(A) enrolled as a full-time student in a career education or associate or baccalaureate or graduate degree program; or

(B) a graduate of a high school, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university.

(b) In addition to the requirements of (a) of this section, to obtain a scholarship loan a person must have been a resident of the state for at least two years at the time of application for the loan. For purposes of

this subsection, a person qualifies as a resident of the state if at the time of application for the loan the person

(1) has been present in the state for at least two years unless an absence from the state during any part of the two years was due to military service; or

(2) is a person who is dependent on a parent or guardian for care, and the parent or guardian has been present in the state for at least two years. (§ 1 ch 98 SLA 1971; am § 10 ch 89 SLA 1981; AS 14.40.765)

Effect of amendments. — The 1981 amendment rewrote this section.

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.05.031(c) and § 4, ch. 58, SLA 1982.

Sec. 14.43.130. Selection criteria. (a) The selection committee shall grant loans based on total point accumulations under the subsection with priority going to those applicants with the highest point accumulations, except as provided in (b) of this section for loan applications completed before May 15 of each year. Points shall be awarded to applicants based upon student status and continuous Alaskan residency, according to the following schedule:

(1) student status:

(A) continuing undergraduate and graduate students with existing Alaska scholarship loans . . . . . 4 points

(B) continuing undergraduate and graduate students without existing Alaska scholarship loans . . . . . 3 points

(C) freshmen . . . . . 2 points

(D) new graduate students without existing Alaska scholarship loans . . . . . 1 point

(2) continuous Alaskan residency:

(A) students with continuous Alaskan residency of 10 years or more . . . . . 3 points

(B) students with continuous Alaskan residency of at least 5 years and less than 10 years . . . . . 2 points

(C) students with continuous Alaskan residency of more than 2 years and less than 5 years . . . . . 1 point

(3) students attending Alaska colleges or universities . . 1 point

(b) In awarding loans the selection committee shall award loans to applicants based upon the earliest date of completed applications if

(1) the applicant has accumulated at least 5 points under (a) of this section; and

(2) the applicant has filed a completed application not later than May 15 of the year for which the loan is requested. (§ 1 ch 98 SLA 1971; am § 2 ch 87 SLA 1979; AS 14.40.767)

Effect of amendments. — The 1979 amendment rewrote this section.

Editor's notes. — Section 1, ch. 87, SLA 1979 provides: "The legislature determines that

"(1) there are no incentives in the

IN THE HOUSE

BY THE HOUSE SPECIAL COMMITTEE
ON STATE LOANS

CS FOR HOUSE BILL NO. 185 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the maximum loan amounts, eligibility requirements, and conditions of scholarship loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.110 is amended to read:

Sec. 14.43.110. UNDERGRADUATE LOANS. The committee may make a loan, not to exceed $6,000 in any one school year, to an undergraduate student eligible under AS 14.43.125. <u>The committee may make a loan for a summer term, even if the total loan for the school year exceeds the $6,000 maximum, if the loan for the summer term is counted against the $6,000 maximum for the following school year.</u>

* Sec. 2. AS 14.43.115 is amended to read:

Sec. 14.43.115. GRADUATE LOANS. The committee may make a loan, not to exceed $7,000 in any one school year, to a graduate student who is eligible under AS 14.43.125 and is pursuing an advanced degree. <u>The committee may make a loan for a summer term, even if the total loan for the school year exceeds the $7,000 maximum, if the loan for the summer term is counted against the $7,000 maximum for the following school year.</u>

* Sec. 3. AS 14.43.120(k) is amended to read:

(k) Periodic installments of principal shall be deferred, but interest shall accrue and be paid unless the student is eligible for interest payment benefits under (1) of this section during any of the following:

(1) return to student status as provided in (c) of this section;

(2) serving an initial period of up to six years on active duty as a member of the armed forces of the United States;

(3) serving, for up to three years, as a full-time volunteer under the Peace Corps Act;

(4) serving, for up to three years, as a full-time volunteer under the Domestic Volunteer Service Act of 1973;

(5) for a one-time period up to 12 months in which the borrower is seeking and unable to find employment in the United States; or

(6) if the borrower becomes 50 percent or more disabled as certified by competent medical authority.

* Sec. 4. AS 14.43.125 is repealed and reenacted to read:

Sec. 14.43.125. ELIGIBILITY OF STUDENTS. (a) A person may apply for and obtain a scholarship loan if the person

(1) is

(A) enrolled as a full-time student in a career education, associate, baccalaureate, or graduate degree program; or

(B) a graduate of a high school or the equivalent, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university;

(2) is not delinquent or in default on a previously awarded scholarship loan; and

(3) is a resident of the state at the time of application for the loan; for purposes of this section, a person qualifies as a resident of the state if at the time of application for the loan the person

(A) has been physically present in the state for at least two years immediately before the time of application for the loan;

(B) is dependent on a parent or guardian for care, the parent or guardian has been present in the state for at least two years immediately before the time of application for the loan and the person has been present in the state for at least one year of the immediately preceding five years except that the commission may by a two-thirds vote, acting upon a written appeal by the person, grant an exemption to the requirement that the person has been present in the state for one year of the immediately preceding five years; or

(C) has been physically present in the state, or is a dependent of a parent or guardian who has been physically present in the state, for at least two years immediately before the applicant was absent from the state and the absence is due solely to

(i) military service;

(ii) volunteer service under the Peace Corps Act;

(iii) volunteer service under the Domestic Volunteer Service Act of 1973;

(iv) participating in a foreign exchange student program recognized by the commission;

(v) attending a school as a full-time student;

(vi) full-time employment by the state;

(vii) being a member of or employed full-time by the state's congressional delegation;

(viii) required medical care for the applicant or the applicant's immediate family; or

(ix) being a person who otherwise qualifies as a resident and is accompanying a spouse who qualifies as a resident under (i) - (viii) of this paragraph.

(b) A person does not qualify as a resident of the state under this section if the person declares or establishes residence in another state during an absence from Alaska.

* Sec. 5. AS 14.43.160 is amended by adding a new paragraph to read:

(9) "summer term" means the period from June 1 - August 31.

* Sec. 6. This Act takes effect immediately in accordance with AS 01.-10.070(c).

CS FOR HOUSE BILL NO. 185 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the maximum loan amounts, eligibility requirements, and conditions of scholarship loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.110 is amended to read:

Sec. 14.43.110. UNDERGRADUATE LOANS. The committee may make a loan, not to exceed $6,000 in any one school year, to an undergraduate student eligible under AS 14.43.125. <u>The committee may make a loan for a summer term, even if the total loan for the school year exceeds the $6,000 maximum, if the loan for the summer term is counted against the $6,000 maximum for the following school year.</u>

* Sec. 2. AS 14.43.115 is amended to read:

Sec. 14.43.115. GRADUATE LOANS. The committee may make a loan, not to exceed $7,000 in any one school year, to a graduate student who is eligible under AS 14.43.125 and is pursuing an advanced degree. <u>The committee may make a loan for a summer term, even if the total loan for the school year exceeds the $7,000 maximum, if the loan for the summer term is counted against the $7,000 maximum for the following school year.</u>

* Sec. 3. AS 14.43.120(k) is amended to read:

(k) Periodic installments of principal shall be deferred, but interest shall accrue and be paid unless the student is eligible for interest payment benefits under (1) of this section during any of the following:

(1) return to student status as provided in (c) of this section;

(2) serving an initial period of up to six years on active duty as a member of the armed forces of the United States;

(3) serving, for up to three years, as a full-time volunteer under the Peace Corps Act;

(4) serving, for up to three years, as a full-time volunteer under the Domestic Volunteer Service Act of 1973;

(5) for a one-time period up to 12 months in which the borrower is seeking and unable to find employment in the United States; or

(6) if the borrower becomes 50 percent or more disabled as certified by competent medical authority.

* Sec. 4. AS 14.43.125 is repealed and reenacted to read:

Sec. 14.43.125. ELIGIBILITY OF STUDENTS. (a) A person may apply for and obtain a scholarship loan if the person

(1) is

(A) enrolled as a full-time student in a career education, associate, baccalaureate, or graduate degree program; or

(B) a graduate of a high school or the equivalent, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university;

(2) is not delinquent or in default on a previously awarded scholarship loan; and

(3) is a resident of the state at the time of application for the loan; for purposes of this section, a person qualifies as a resident of the state if at the time of application for the loan the person

(A) has been physically present in the state for at least two years immediately before the time of application for the loan;

(B) is dependent on a parent or guardian for care, the parent or guardian has been present in the state for at least two years immediately before the time of application for the loan and the person has been present in the state for at least one year of the immediately preceding five years except that the commission may by a two-thirds vote, acting upon a written appeal by the person, grant an exemption to the requirement that the person has been present in the state for one year of the immediately preceding five years; or

(C) has been physically present in the state, or is a dependent of a parent or guardian who has been physically present in the state, for at least two years immediately before the person [or the parent or guardian] was absent from the state and the absence is due solely to

(i) military service;

(ii) volunteer service under the Peace Corps Act;

(iii) volunteer service under the Domestic Volunteer Service Act of 1973;

(iv) participating in a foreign exchange student program recognized by the commission;

(v) attending a school as a full-time student;

(vi) full-time employment by the state;

(vii) being a member of or employed full-time by the state's congressional delegation;

(viii) required medical care for the applicant or the applicant's immediate family; or

(ix) being a person who otherwise qualifies as a resident and is accompanying a spouse who qualifies as a resident under (i) - (viii) of this paragraph.

(b) A person does not qualify as a resident of the state under this section if the person declares or establishes residence in another state during an absence from Alaska.

MEMORANDUM

TO:
FROM: Representative John Sund

RE: HB 197

Sectional analysis of proposed Student Loans legislation:

The purpose of this bill is to give undergraduate and graduate students the opportunity to apply loan money, promised to them for the upcoming school year, toward their summer quarter tuition.

The present Alaska Statutes will not allow students to attend more than three quarters or two semesters at full loan funding.($2,000 quarter/$3,000 semester) As a result, students who require more than four years to graduate must travel home for the summer and re-register in the fall for their remaining units. For a student going out of state and living off campus, the cost or travel and the trouble of relocating an apartment can be overwhelming.

This bill amends AS 14.43.110 - the statute setting loan terms in the Dept. of Education.

Section 1
This section provides that the committee may make a loan to a student for a summer term even if the total loan for the school year exceeds the $6,000 maximum. The loan for the summer term will be counted against the $6,000 maximum for the following school year.

To do this a student would present his loan promissory note to the school financial aid office and they would allow him to register for the summer and pay tuition with his first loan disbursement in September.

Section 2
This section provides that the committee may make a loan to a graduate student for a summer term, even if the loan for the school year exceeds the $7,000 maximum, if the loan for the summer term is counted against the $7,000 maximum for the following school year.

Section 3
This section amends AS 14.43.160 by adding a new paragraph that defines "summer term". The period from June 1, to August 31 is used, as it includes the dates that a school would provide for a summer term.

This bill would directly save undergraduate and graduate students time and money while creating no new cost for the state.

HOUSE BILL NO.146

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to housing loans for the permanently disabled."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 18.56 is amended by adding a new section to read:

Sec. 18.56.102. LOANS FOR THE PERMANENTLY DISABLED. (a) The corporation shall establish a residencial housing loan program for the **permanently disabled under the special mortgage loan purchase** program (AS 18.56.098). A loan may be made under this section to an individual who is eligible under (e) of this section, or to a parent or guardian of the individual if the parent or guardian is living with the individual.

17,650

(b) A loan made under this section shall be at a fixed annual interest rate of **six percent**. The loan amount may not exceed the maximum loan amount for a single family residence under the special mortgage loan purchase program, and the appraised value of the residence may not exceed the loan amount by more than **25 percent**. The corporation may not require a borrower to make a down payment toward purchase of a residence under this section.

(c) The value of the equity in a residence purchased with a loan under this section may not be **used to deny the borrower state benefits to which the borrower may be otherwise entitled**.

(d) The corporation may require a borrower under this section to prove present and future financial ability to repay the loan. However, a loan may not be denied solely because of circumstances caused

by the disability under which the borrower became eligible for the loan.

(e) For an individual or a parent or guardian of the individual to be eligible for a loan under this section, the individual must

(1) provide a written statement from a physician stating that the nature of the individual's disability is permanent;

(2) establish that the individual has a specialized housing need; and

(3) establish that the individual is severely disabled, through

(A) a statement from the federal Veterans Administration indicating that the individual is at least 70 percent disabled;

(B) proof of eligibility as a blind or disabled person under the federal supplemental security income program (42 U.S.C. 1381 - 1385) or the federal disability insurance benefits program (42 U.S.C. 423);

(C) a statement of eligibility from the Board of Vocational Rehabilitation (AS 23.15.010); or

(D) a statement of disability from the division of public health, family health section.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to interest rates; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 06.20.320(a) is amended to read:

(a) A licensee or lender who, in the making or collection of a loan contract, does any act <u>that</u> [WHICH] violates AS 06.20.230 - 06.20.260 or 06.20.280 - 06.20.310 shall at the option of the commissioner reimburse the portion of the interest and charges in excess of that provided in those sections, or, in the case of repeated violations of those sections by the licensee, the commissioner may, upon a hearing, require the licensee to adjust the loan contract interest or other charges down to <u>10.5 percent a year</u> [THE CONTRACT INTEREST LIMITATION SPECIFIED IN AS 45.45.010(a)].

* Sec. 2. AS 06.40.160(a) is amended to read:

(a) A lender who, in the making of any contract, loan or premium finance agreement or the collection of interest or charges, does any act <u>that</u> [WHICH] violates AS 06.40.010, 06.40.020, 06.40.090, or 06.40.110 - 06.40.130 shall at the option of the commissioner reimburse that portion of the interest and charges in excess of that provided in those sections, or, in the case of repeated violations of those sections by the lender, the lender shall adjust the contract, loan, or premium finance agreement interest and other charges down to <u>10.5 percent a year</u> [THE CONTRACT INTEREST LIMITATION SPECIFIED IN AS 45.45.010(a)].

* Sec. 3. AS 06.45.060(5)(A)(vi) is amended to read:

(vi) the rate of interest may not exceed [THE GREATER OF] 15 percent a year [OR THE RATE SPECIFIED BY AS 45.45.010(b)];

* Sec. 4. AS 45.10.120(c) is repealed and reenacted to read:

(c) A seller or holder of a retail charge agreement, revolving charge agreement or other retail charge agreement may charge, receive and collect a service charge at a rate of 1.5 percent a month computed on the outstanding balance from month to month. If the service charge so computed is less than $1 for any month, then the service charge is $1. The service charge may be computed on a schedule of fixed amounts if as so computed it is applied to all amounts of outstanding balances equal to the fixed amount minus a differential of not more than $5 provided that it is also applied to all amounts of outstanding balances equal to the fixed amount plus at least the same differential.

* Sec. 5. AS 45.45.010(b) is repealed and reenacted to read:

(b) Parties to a contract or loan commitment may charge by express agreement a rate of interest that does not exceed 24 percent a year. A contract or loan commitment in which the principal amount exceeds $25,000 is exempt from the limitation of this subsection.

* Sec. 6. AS 44.33.020(11) is repealed.

* Sec. 7. This Act takes effect July 1, 1985.

MOST FAVORED LENDERS DOCTRINE

* Sec. . AS 45.45.010(b) is amended to read:

(b) No interest may be charged by express agreement of the parties in a contract or loan commitment which is more than eight [FIVE] percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District on the day on which the contract or loan commitment is made. A contract or loan commitment in which the principal amount exceeds $25,000 is exempt from the limitation of this subsection.

RETAIL

* Sec. 4. AS 36.90.001(b) is amended to read:

(b) If the state fails to make a payment due the contractor under this section within 30 days after receiving a contractor's billing, the state shall pay interest to the contractor [UNDER AS 45.45.010(a)] on the amount due at the following rate of interest: (1) 10.5 percent a year except as provided in (2) and (3) of this subsection; (2) if expressly agreed by the parties to a contract that has a principal amount of $25,000 or less, a rate that is no more than five percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District on the day when the contract is made; (3) if expressly agreed by the parties to a contract that has a principal amount of more than $25,000, any rate.

* Sec. 5 AS 36.90.001 (c) is amended to read:

(c) The state or a political subdivision of the state is liable to a contractor registered under AS 08.18 for interest [AT THE RATE PROVIDED IN AS 45.45.010(a)] on retainage on a contract for public works or public construction. Interest on retainage accrues from the date of approval of a pay estimate until the date of payment to the contractor. A contract provision purporting to waive the interest provisions of this subsection is void as contrary to public policy. The interest rate to be paid on the retainage is (1) 10.5 percent a year except as provided in (2) and (3) of this subsection; (2) if expressly agreed by the parties to a contract that has a principal amount of $25,000 or less, a rate that is no more than five percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District on

the day when the contract is made; (3) if expressly agreed by the parties to a contract that has a principal amount of more than $25,000, any rate.

Bill would hike loan interest to 24%

By JIM ERICKSON
Daily News business reporter

Alaska bankers are seeking changes to state law that would allow lenders to charge more for small loans and consumer credit plans, such as charge cards.

But a state consumers group said this week some banks are already charging far more for certain loans than state law allows though a federal loophole in banking law.

Maureen Kennedy, executive director of the Alaska Public Interest Research Group (AKPIRG), said she found it "appalling" that the Alaska Bankers Association is lobbying for a measure now before a House committee that would allow lenders to charge up to 24 percent interest annually for loans of $25,000 or less.

The current cap for the so-called "consumer loans," such as car or boat loans, is 13.5 percent.

The bill was introduced by Rep. Jim Duncan, D-Juneau, Drue Pearce, R-Anchorage, John Ringstad, R-Fairbanks, and H.A. "Red" Boucher, D-Anchorage. Pearce is a former employee of the Alaska Bank of the North.

At the same time bankers are pushing for the bill, "they are ignoring state law and implementing wholesale increases in interest rates on consumer loans," she said.

For example, she said, First Interstate Bank is now charging 22 percent interest on loans under $2,500.

"The smaller borrower, the one that can least afford it, is being hit hardest by the bank's belligerence," she said. Interest rates on loan amounts of more than $25,000 are not regulated.

Derrell Smith, president of the Alaska Bankers Association, said at least one Alaska bank began exceeding state limits about five years ago. Others are increasingly following suit.

That's because a federal banking law known as the "most favored lenders doctrine" allows federally-chartered banks to charge as much as other Alaska lenders, such as small loan companies, Smith said.

Under the state's Small Loan Act, national banks based in Alaska can charge up to 36 percent annual interest on loans of $850 or less, and 24 percent annual interest on the principle balance of a loan between $850 and $10,000, said Dave Lawer, a local lawyer whose firm recently reviewed how the most favored lenders doctrine applies in in Alaska.

The doctrine extends to state-charted banks as well, said Willis Kirkpatrick, director of the state Division of Banking.

The state's largest bank, National Bank of Alaska, last year began charging 15 percent annual interest on auto loans and 17.5 percent on other consumer loans. The rate of small loans from Alaska Statebank increased two weeks ago to 14.5 percent, from 13 percent.

Kennedy said AKPIRG is considering a court test of the legality of the most favored lenders doctrine — and whether Alaska banks can use it to circumvent state law.

AKPIRG this week asked the

See Page D-4, BILL

remarks.

Valdez could not be reached for comment Wednesday.

At issue are statements made by Valdez to the Fairbanks Daily News-Miner, which were published in an Associated Press article that appeared last week in the Anchorage Daily News.

In July 1983, J.H. Moneymaker Construction Inc. and Hub City Construction Inc., owned by Andrews, were contracted by ASHA to build the 40-unit senior citizen housing project in Fairbanks. The project was shut down later that year and again in 1984 because of structural design deficiencies, the lawsuit said.

Moneymaker and Andrews eventually terminated their contract with ASHA because of the prolonged shutdowns and other problems with the design of the structure, Moneymaker officials said recently.

Moneymaker-Hub City's dispute with ASHA over the project is the subject of a separate mulitmillion dollar lawsuit that is pending in Anchorage Superior Court.

Meanwhile, the Fairbanks newspaper began an investi-

Reorganized North Pacific to fly again

By HAL BERNTON
Daily News business reporter

A reorganized North Pacific Airlines plans to resume commuter flight service later this month, according to a spokesman for the carrier's owner, Nondalton Native Corp.

North Pacific suspended all flight service on Feb. 14, 10 days after one of its commuter planes crashed near Soldotna and killed nine people.

Bill Bellows, a public relations officer representing Nondalton, said details of the reorganization plan will be released within

Luxury line fights to stay airborne

The Associated Press

WASHINGTON — Regent Air, the "all-frills airline" that offers everything from an in-flight beauty parlor to private compartments, is struggling to stay airborne — in part because of government concern over alleged links between its founders and organized crime.

The Transportation Department said Wednesday it has told the airline it could fly for

Bill would allow lenders to hike loan interest to 24 percent

Continued from Page D-1

Consumer Protection Section of the state Attorney General's Office to investigate the matter, she said.

According to state and federal officials, the state usuary laws are not enforced by regulators. In most instances, consumers must press action in court if they feel a bank has violated the law.

"We don't step into the shoes of the borrower," said Debra Chong, a senior attorney for the Comptroller of the Currency in San Francisco. "The borrower has to sue on their own."

Smith said the apparent increasing willingness by banks to charge more than state law allows "puts a different complexion on the bill."

Although "we'd feel comfortable using the most favored lenders doctrine" without changes to state law, Smith said, the provision does not go far enough.

"My personal preference is to completely deregulate," he said.

Raising the lending cap to 24 percent is a good compromise, he said.

"Obviously, (bankers) are trying to get the law changed so there is never any hint of them being in violation of state law," said Gary Jenkins, director of governmental relations for the National Federation of Independent Business/Alaska.

The 3,000-member federation opposed the bill, because small businessmen fear banks would begin charging more for small business loans of $25,000 or less.

The measure is backed by the Alaska Bankers Association, the state Chamber of Commerce, and the Alaska Retail Association.

A hearing on the bill was held Tuesday by the House Special Committee on State Loans. Another hearing is scheduled for 3:30 p.m. today in Juneau. The hearing is not going to be teleconferenced.

The buill has been referred on to the House Judiciary Committee.

Bank officials say national deregulation has forced them to pay more for deposits. But Alaska's "usury" law prevents corresponding increases in loan charges and cut profit margins.

"Although banks have been profitable the last few years, the next few years don't look so good unless we try to match revenue to expenses," Smith said.

Alaska retailers and bankers have been lobbying to raise or eliminate interest rate caps since 1980, because of the increasing costs of servicing small loans.

Besides raising the ceiling on small loans, the bill introduced this year also would raise allowable interest rates for credit card account balances above $1,000 from 10.5 percent to 18 percent.

Without the changes, banks are not willing to make small consumer loans, according to lenders.

Alaska's usury laws are among the most restrictive in the nation, bankers said. Almost all states have limits of 18 percent or higher; 13 states have eliminated caps entirely.

The industry argues that consumer credit would be more available if restrictions were eased.

However, Kennedy of AKPIRG said that "has clearly not been the case" in states where deregulation has occured.

Rep. John Sund
Chair, House Special Committee on Loans
Pouch V
Juneau, AK 99811

Dear Rep. Sund:

I wanted to follow up my earlier letter regarding HB 217. In the last year or so, additional information has become available bolstering our arguments that the Committee should not pass HB 217 out.

Will competition keep rates down?

New York state senator Franz Leichter completed a study in 1983 evaluating the effects of deregulation of the banking industry in New York in 1980. This study follows up the work done by the NY Banking Dept. in 1981. Leichter's study, entitled, Deregulation of Consumer Lending in New York: The Rates Went up but Never Came Back Down, concludes exactly that.

In 1980, at deregulation, the prime rate was 17.7%, and the interest rate on an unsecured loan averaged 13.21%. In January of 1981, the prime was at 20.50% while the average interest rate on an unsecured loan had climbed up to 18.21%. In November of 1982, however, the prime declined by nearly 50% to 12%, but interest rates inched up to 18.35%. By February of 1983, the prime dropped further to 10.5%, yet loan interest rates continued to increase up to 19%. Credit card rates followed roughly the same pattern. The pattern to be drawn is not that interest rates vary with the cost of money, but that regardless of what happens to the prime, interest rates will trend upward in a deregulated market (or effectively deregulated market, as we are proposing here).

Will increased rates increase availability of credit?

I have not seen any additional information addressing the credit availability issue. On the other hand, I have not heard any bankers resorting to that argument in the last year either.

Nevertheless, in 1981, the NY Banking Dept. study concluded that increased rates did not transfer into increased availability. In fact, 93% of banks increased their rates substantially just after deregulation, but did not loosen new-borrower standards.

Are bank profits being squeezed unfairly in today's market?

There has been much discussion recently of record bank profits. In April of 1984, the Daily News reported that 4 Alaskan banks placed among the 10 most profitable in the nation. An article within the last 3 months reemphasized the banks' profitability.

Leichter's study also addresses the cost of money issue:

> ...(I)t is true that money is costing the banks more than it once did, but it is also true that the rates on most of the major sources of borrowed funds has declined considerably during the past several months (this is mid-'83). Commercial paper (60 day) was at an 8.5% rate in early March, several points below the year earlier level, and another major source of funds, "federal funds" was at 8.35% on March 14th as compared with 14.2% one year earlier. Two year Treasury notes yielded 9.66% on March 16th, down from 14.14% a year earlier. Generally, the overall cost of all the long-term and short-term money the banks borrow has been under 10% for several months, and with most consumer lending at 17% and above, the difference between the cost of the money borrowed by the bank and the money lent to the consumer by the bank has been from 7% to 10%. Traditionally, this gap has been around 4% or 5%.

The report also notes that, "(t)he spread between the cost of funds and the prime rate is larger than normal, according to a February 24, 1983 American Banker article, which found that, 'over the past six years that spread has almost doubled.'"

A Newsweek article of a year ago pointed out that banks are bringing in additional revenues through miscellaneous charges and fees. Our own Anchorage Guide to Banking Services bears this out. Security National now charges $25 for a stop payment order, up from $15 a year ago. Alaska Pacific Bank charges up to $50 for overdrafts, up from $15 a year ago. Minimum balances are increasing, monthly fees and per check charges are increasing. Consumers are paying the price and the banks are earning record profits.

Finally, banks are violating the state interest rate ceiling right now. In doing research on HB 217, I found that NBA has been charging more than the specified 13.5% rate on consumer loans for a year and a half, and several other banks in town have just this week begun charging the higher rates. They are relying on the federal "most favored lender" doctrine and a 1981 state AG opinion in doing so. The move is subject to legal challenge, and our attorneys are examining the issue.

I find it particularly offensive that the banking industry is asking the legislature to authorize an increase in the cap at the same moment it is violating the cap previously set by the legislature.

If I can answer any questions, please be sure to give me a call.

Sincerely,

Maureen Kennedy

March 10, 1985

Rep. John Sund
Chair, Special Committee on Loans
Pouch V
Juneau, AK 99811

Dear Rep. Sund:

I understand that HB 217 will come before your committee on Tuesday. Although the new bill is a vast improvement over last year's deregulation bill, AkPIRG continues to be opposed to the final section.

As I understand it, the first two sections embody housekeeping changes, in that the contract interest limitation specified in AS 45.45.010 IS 10.5% a year.

Sections 4 and 5 seem reasonable. We are not opposed to Section 6, which would increase the interest rate on balances above $1,000 from 10.5% up to 18%. Although passage of such a change will entail additional costs to consumers, we feel that consumers eligible for credit cards carrying a monthly balance over $1,000 should be sophisticated enough to "know what they're getting into." This section is also a vast improvement over last year's bid to increase credit card rates from 18% to 24% across the board.

Section 7, however, is a problem. The current cap on interest rates is so far below the proposed 24% cap that we are, in effect, not raising the cap but deregulating interest rates again. And in that case, the arguments we put forth last year apply to this year's bill as well.

Rates will go up. Studies in states around the country that have deregulated or increased ceilings indicate that rates increase 3 or 4%. An ABA study published early in 1983 examined installment credit increases in Montana, Mississippi, NJ and Ohio. Just after deregulation, rates increased between 1/2% (Ohio) and 3 3/4% (NJ).

The bankers argue that rates later came down, so its "not the end

of the world for consumers." But by late '82, rates were still between 1/2% and 2 3/4% above their original levels.
The prime averaged 10.81% through '82, down from a high of 20.5% in mid '81. Overall interest rates in NJ increased between 6 and 7% just after ceilings were lifted in 1981--they hadn't come down by mid 1983. In Maryland, interest rates on credit cards went up and stayed up 3% after the ceiling was lifted in '82. In NY, rates on credit cards increased nearly 6% shortly after deregulation. By late '82, rates on other types of loans increased as much a 6 1/2%.

Consumers will suffer. Extrapolating from conservative national figures, Alaskan consumers will pay $6.4 million more to banks for each 1% increase in interest rates on installment credit alone. Assuming rates go up 3%, we're talking about a $19.2 million transfer from Alaskan borrowers to lenders--just on installment credit. As I've already demonstrated, banks will not compete, thereby keeping rates in check. A "pack mentality" is at work, and even bankers say that increased ceilings "give us something to shoot for."

Consumers will not gain greater access to credit under HB 217. The NY State Banking Dept. study found that 93% of commercial banks increased rates substantially, but did not loosen new-borrower standards. Eighty three percent did not increase access to their own customers. The study indicates similar behavior for credit unions, finance companies, S&Ls and retailers.

Bankers will needlessly increase their profits. Business Week reported last August that banking nationwide was the 10th best profitmaking industry with a 34% increase in profits over 1982. In December, the magazine reported a 15.2% increase in earnings per share for banks. Consumer installment credit increased by $1 billion between March of '82 and March of '83. Closer to home, Alaska Business reported that the six largest Alaskan banks had profit to earnings ratios ranging from 4.73 to 12.00. All the state's banks increased earnings through 1982; many posted record earnings. Total assets and deposits increased more than 25% according to the June issue; Security National doubled its assets while it's deposits increased by 137%. The bankers I've spoken with agree that regulatory relief is not necessary now--they want to hedge their bets against a repetition of 1980's economic conditions.

Careful adjustments to interest rate laws are appropriate when economic conditions demand them. For instance, last year, several witnesses at the hearing in Anchorage testified that it might be appropriate to widen the margin between the discount rate and the interest rate limit (i.e., the limit might be equal to 8 percentage points above the discount rate rather than only 5). We feel we have not yet reached that point.

We urge you not to pass HB 217 out of committee at this time. I found out about today's hearing by chance this morning and have not yet had time to look at the bill extensively or in research new developments since last spring.

Sincerely,

Maureen Kennedy

Credit sales are a cost for retailers

I've been a union man most of my working life, but dagnab it, there are times when I think that no one can ignore economic reality with more contrary, wrongheaded predictability than a labor leader bent on saving us all from corporate greed.

One of those times came a few days ago when Minnesota's major retailers asked the Legislature to raise the interest-rate ceiling on consumer credit from 16 percent, lowest in the nation, to 18 percent a year.

Far from trying to swell their profits on charge accounts, the retailers said, what they'd sort of like to do is cut down a mite on the millions of dollars in losses they post on consumer credit each year.

Their blandishments didn't faze Bernard Brommer, secretary-treasurer of the powerful Minnesota AFL-CIO, whose knees began to jerk almost immediately: "We've opposed (a higher rate ceiling) historically," he grumped. "Increasing interest rates for consumers and working people . . . I just don't think it's very wise."

The way he sees it, apparently, retailers can afford to absorb those credit losses a whole lot easier than us working stiffs. Unfortunately, this is yet another example of Big Labor's enduring effort to rewrite the economics textbooks, which assure us that there is no such thing as a free lunch.

There sure isn't: My exhaustive investigation uncovered no retailing executives who are taking pay cuts to offset their employers' losses on consumer credit. Ditto for shareholder dividends.

Instead, the credit losses are being translated into higher retail prices paid by the very working people the AFL-CIO aims to protect, including the 20 to 30 percent of us who rarely or never use credit cards.

Actually, Brommer isn't the only one jerking his knees. Our resident populist, who manages at times to overcome his rather extensive economics training, began muttering about the avarice of retailers who try to raise interest rates even as a declining prime rate cuts their cost of money.

"What about the poor guy who has to buy on credit?" he demanded.

Let's go through this economics lesson just once more: Just as Social Security isn't designed to lift the elderly out of poverty and commodity programs cannot save the small farmer, retailers shouldn't be expected to solve the problem of the low-income consumer. These are issues best addressed by sharply focused programs that eliminate as many middlemen as possible.

My colleague had a point about timing, however — interest rates have fallen a couple of points in the past year. I sought an explanation from Dayton Hudson Corp., a solid corporate citizen with a reputation for sensitivity to the needs of the consumer. (It has a no-questions-asked policy on merchandise returns, and its Target chain spends $750,000 a year testing toys and other products for safety.)

What I got from James Diriam, vice president of credit sales at Dayton's, were some impressive numbers: In Minnesota during 1983, the combined credit operation of Dayton's and Target spent $8.3 million for operating expenses (payroll, postage, supplies), $2.7 for bad debts and $17 million for interest on the cash used to finance accounts receivable.

Customer finance charges raised just $18.4 million, however, leaving their Minnesota credit operations $9.6 million in the red!

Even if the interest ceiling had been 18 percent instead of 16, Diriam said, the increased revenue from finance charges would have trimmed the loss only to $7.3 million.

Moreover, the 1983 loss was calculated on the basis of a 12 percent interest rate on the cash used in credit operations, he said. Even if the rate had been 10 percent, one-half point below the current prime rate, the loss still would have been about $4.5 million.

That strikes me as quite a lot to ask a retailer to pay for the privilege of granting us credit.

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

RECEIVED
FEB 14 1985

POUCH Y STATE CAPITOL
JUNEAU, ALASKA 99811
907 465 3800

MEMORANDUM February 14, 1985

SUBJECT: Interest rates
(Work Order No. 14-0378)

TO: Representative Jim Duncan

FROM: Theresa L. Bannister TB
Legislative Counsel

You has requested this office to prepare a sectional analysis of Work Order 14-0378, relating to interest rates.

Section 1 of the bill sets 10.5% as the annual interest rate to which the Commissioner of Commerce and Economic Development can reduce the contracts of small loan licenses that violate the interest and charges provisions of the Alaska Small Loans Act. (AS 06.20.010 - .920).

Section 2 of the bill sets 10.5% as the annual interest rate to which the Commissioner of Commerce and Economic Development can reduce the contracts of premium financing lenders that violate the licensing, advertising, disclosure, contents, interest, prepayment and delinquency charge provisions of the Premium Financing Act (AS 06.40.010 - .190). That act covers the financing of loans to purchase insurance policies.

Section 3 sets at 15% per year the maximum interest rate that a state-chartered credit union can charge for loans to members.

Section 4 of the bill amends AS 36.90.001(b) to maintain the present interest rate that the state must pay to a public construction contractor on late payments. The present rate is 10.5% a year or, if expressly agreed to by the parties, up to 5 percentage points above a floating Federal Reserve rate.

Section 5 of the bill amends AS 36.90.001(c) to maintain the present interest rate that the state must pay to a

public construction contractor on the retainage on a public construction contract. (The present rate is the same given in Section 4 of this analysis.)

Section 6 of the bill sets at 18% per year the maximum interest rate that sellers can charge on a charge account.

Section 7 of the bill sets at 24% per year the maximum interest rate that parties to a contract or loan agreement for less than $25,000 can set by express agreement. (Over $25,000, there is no limit.)

Section 8 of the bill deletes the requirement that the Department of Commerce and Economic Development furnish certain organizations such as banks, with the maximum annual interest rate allowed under AS 45.45.010(b) each quarter.

Section 9 of the bill makes the bill effective July 1, 1985.

TELEPHONE NO: 465-3675

FROM: WILSON L. CONDON
ATTORNEY GENERAL

SUBJECT: Depository Institutions Deregulation and Monetary Act of 1980.

By: Leslie J. Ludtke
Leslie J. Ludtke
Assistant Attorney General

You have requested this department's opinion regarding interest rates applicable to state chartered credit unions under the Depository Institutions Deregulation and Monetary Control Act of 1980. (Public Law 96-221) You have asked whether 12 U.S.C. §1757(5)(A)(vi) (1980 Deregulation and Monetary Control Act §310) applies to state chartered credit unions. We conclude that it does not.

Section 1757 of the federal Credit Union Act applies only to federally chartered credit unions. 12 U.S.C. § 1757 states that "A federal credit union . . . shall have power." The term "federal credit union" is defined under 12 U.S.C. § 1752 as "a cooperative association organized in accordance with the provisions of this chapter . . ." Therefore, the provisions of 12 U.S.C. § 1757 do not apply to state chartered credit unions. 12 U.S.C. § 1757(5)(A)(vi) provides in part:

> (vi) the rate of interest may not exceed 15 per centum per annum on the unpaid balance inclusive of all finance charges, except that the Board may establish
> (I) after consultation with the appropriate committees of the Congress, the Department of Treasury, and the Federal financial institution regulatory agencies, an interest rate ceiling exceeding such 15 per centum per annum rate, for periods not to exceed 18 months, if it determines that money market interest rates have risen over the preceding six-month period and that prevailing interest rate levels threaten the safety and soundness of individual credit unions as evidenced by adverse trends in liquidity, capital, earnings, and growth;

Recently, the National Credit Union Administration (NCUA) Board raised the interest rates under this section to 21 percent. This rate supercedes the otherwise applicable rate established in 12 U.S.C. § 1785(g)(1) (1980 Deregulation and Monetary Control Act § 523). In relevant part, this section states:

> (g)(1) If the applicable rate prescribed in this subsection exceeds the rate an insured credit union would be permitted to charge in the absence of this subsection, such credit union may, notwithstanding any State constitution or statute which is hereby preempted for the purposes of this subsection, take, receive, reserve, and charge on any loan, interest at a rate of not more than 1 per centum in excess of the discount rate on ninety-day commercial paper in effect at the Federal Reserve bank in the Federal Reserve district where such insured credit union is located or at the rate allowed by the laws of the State, territory, or district where such credit union is located, whichever may be greater.

Additionally § 528 of the 1980 Deregulation and Monetary Control Act provides that if one or more provision of the Act, or of any other law, applies to the same loan, the loan may be made at the highest applicable interest rate. The issue raised is therefore whether state chartered credit unions may charge 21 percent interest as authorized by 12 U.S.C. §1757(5)(A)(vi) or whether state chartered credit unions are limited to the rate set by 12 U.S.C. § 1785 when federally chartered credit unions are permitted to charge a higher rate under 12 U.S.C. § 1757(5)(A)(vi). Our conclusion that state chartered credit unions are not permitted to charge the higher rate established by the NCUA Board under 12 U.S.C. § 1757(5)(A)(vi) is based on three factors.

First, 12 U.S.C. § 1757 is not directly applicable to state chartered credit unions. This section sets out the powers which a federal credit union may exercise. The NCUA regulates the activities of federal credit unions by adopting rules to carry out this section. The activities of state chartered credit unions are not regulated by the NCUA and state chartered credit unions are not subject to the limitations nor are they granted the powers of federal credit unions under 12 U.S.C. § 1757. The conference report on the 1980 Deregulation and Monetary Control Act reinforces the conclusion that state chartered credit unions are not subject to 12 U.S.C. §1757.

The report states in part:

> The conferees adopted a provision which would allow federal credit unions to raise their loan rates up to an annual rate of 15 percent subject to rules issued by the National Credit Union Administration. The legislation would also permit the National Credit Union Administration to raise the loan ceiling above 15 percent for periods not to exceed 18 months, after consultation with appropriate Congressional committees, the Department of Treasury, and the other federal financial regulator agencies. 1980 Deregulation and Monetary Control Act. CCH Reports, paragraph 2036, pg. 211.

State chartered credit unions are, however, subject to regulation under 12 U.S.C. § 1785 which sets out the requirements governing federally insured credit unions. State chartered credit unions are federally insured. The Conference Report on 12 U.S.C. § 1785, 1980 Deregulation and Monetary Control Act § 523, states in part:

> State usury ceilings on all loans made by Federally insured depository institutions (except national banks), and small business investment companies will be permanently preempted...

Because state chartered credit unions are federally insured depository institutions, the preemptive interest rate set out in 12 U.S.C. § 1785(g)(1) applies.

Secondly, 12 U.S.C. § 1785(g)(1) permits state chartered credit unions to charge interest at a rate of "not more than 1 per centum in excess of the discount rate on ninety-day commercial paper in effect at the Federal Reserve bank in the Federal Reserve district where such insured credit union is located or at the rate allowed by the laws of the State...where such union is located..." The phrase "at the rate allowed by the laws of the State" has been interpreted to mean at the highest rate allowed by the state to be charged by any lender for a particular type of loan.

For example, small loan licensees are permitted to charge a higher rate of interest under AS 06.20 for loans under $25,000 than other financial institutions may charge for these same loans.

Therefore, 12 U.S.C. § 1785(g)(1) would permit a federally insured state chartered credit union to charge the same rate as the small loan licensee for a loan under $25,000. 1/

The phrase "at the rate allowed by the laws of the State" is derived from the National Bank Act, 12 U.S.C. § 85, and is commonly referred to as the "most favored lender" doctrine. This doctrine originally was established to ensure parity between national banks and state chartered financial institutions. It allows a national bank, or in this instance a federally insured, state chartered credit union, to charge the same interest rate as any state chartered or licensed financial institution would be permitted to charge on a particular type of loan. 2/ The national bank, or state chartered credit institution, is granted parity by being permitted to charge the highest rate allowed for the state's most favored lender. The doctrine therefore focuses on the type of loan offered rather than establishing parity with the same type of financial institution. 12 U.S.C. § 1785(g)(i) incorporates this concept of most favored lender. It does not, however, establish a state chartered credit union's right to parity with a federally chartered credit union.

1/ The fact that a credit union is not licensed under AS 06.20 would not alter this result. See n.2, below.

2/ In Marquette Nat'l Bank v. First of Omaha Corp., 439 U.S. 299, 314 (1978) the Court stated that the "most favored lender" doctrine had "been interpreted for over a century to 'give advantages to National banks over their state competitors'." 12 C.F.R. § 7.7310 incorporates the "most favored lender doctrine", as expressed by case law, into the regulations of the Comptroller of the Currency. 12 C.F.R. § 7.7310 reads:

> §7.7310 Charging interest at rates permitted competing institutions . . .
>
> (a) A national bank may charge interest at the maximum rate permitted by State law to any competing State-chartered or licensed lending institution. If State law permits a higher interest rate on a specified class of loans, a national bank making such loans at such higher rate is subject only to the provisions of State law relating to such class of loans that are material to the determination of the interest rate. For example, a national bank may lawfully charge the highest rate permitted to be charged by a State-licensed small loan company or morris plan bank, without being so licensed.

The "most favored lender" doctrine refers to the highest permissible rate under state law. The authority to charge 21 percent on loans, under 12. u.s.c. § 1757(5)(A)(vi) is not a right granted by state law, but a right given by federal law. No law of Alaska specifically allows any financial institution to charge on a lona. Nor does state law incorporate any maximum rates set under federal law in establishing allowable state maximums. Therefore, although the concept of most favored lender is incorporated into 12 U.S.C. § 1785(g)(i), state chartered credit unions are not granted parity with federal credit unions. To construe the phrase "at the rate allowed by the laws of the State" to include the rate permitted by 12 U.S.C. 1757(5)(A)(vi) would constitute a misapplication of the "most favored lender" doctrine.

Third, Section 528 of the 1980 Deregulation and Monetary Control Act does not authorize state chartered credit unions to charge the rate set by the NCUA Board under 12 U.S.C. § 1757 (5)(A)(vi). This section reads:

> Sec. 528. In any case in which one or more provisions of, or amendments made by, this title, section 529 of the National Housing Act, or any other provision of law, including section 5197 of the Revised Statutes (12 U.S.C. 85) apply with respect to the same loan, mortgage, credit sale, or advance, such loan, mortgage, credit sale, or advance may be made at the highest applicable rate.

This section permits financial institutions to charge interest at the "highest applicable rate". Because we have concluded that 12 U.S.C. §1757(5)(A)(vi) does not apply to state chartered credit unions, Section 528 does not by its terms permit state chartered credit unions to charge a higher rate of interest than what would otherwise be permitted by 12 U.S.C. § 1785(g)(1). Section 528 authorizes the lender to charge the higher rate only when "one or more provisions. . .apply with respect to the same loan". 12 U.S.C. § 1757(5)(A)(vi) does not apply to loans made by state chartered credit unions.

It is our conclusion that state chartered credit unions are limited to charging the maximum interest rate established by 12 U.S.C. § 1785(g)(1). Although this provision incorporates the "most favored lender" doctrine, it does not grant state chartered credit unions most favored lender status with regard to interest rates set by federal law.

Additionally, it should be noted that the reference to state interest ceilings in 12 U.S.C. § 1785(g)(1) incorporates the relevant state law as to how interest may be computed and what charges are considered interest. 3/

LJL:wjp

3/ See First National Bank in Mena v. Nowlin, 509 F.2d 872 (8th Cir. 1975)

Section 1 amends Chapter 20, Alaska Small Loans Act. of the Banks and Financial Institutions Statutes.

AS 06.20.320 Civil and Criminal Penalties is amended by changing the penalty for violations of:

AS 06.20.230. Maximum Interest Permitted
AS 06.20.250. Computation and Payment of Interest
AS 06.20.260. Charges Prohibited
AS 06.20.280. Maximum Charge by Licensee
AS 06.20.285. Open-end Loans
AS 06.20.287. Credit Insurance on Open-ended loans
AS 06.20.290. Purchase of Wages for $25,000 or less
AS 06.20.300. Maximum Charges By nonlicensee on Loans
AS 06.20.310. Illegal Interest Rate

Currently repeat violators of the above sections may be required by the Commissioner to Adjust the loan contract interest or other charges down to the 12th Federal Reserve rate plus five percentage points. The amendment will fix the rate at 10.5 percent a year.

Section 2 amends Chapter 40. Premium Financing Act. of the Banks and Financial Institutions Statutes.

AS 06.40.160. Civil and Criminal Penalties is amended by changing the penalty for violations of:

AS 06.40.010. License Required
AS 06.40.020. Applicability
AS 06.40.090. Advertising of Misleading Statements Prohibited; Disclosure of Interest
AS 06.40.110. Contents of Premium Finance Agreement
AS 06.40.120. Maximum Interest Permitted: Prepayment, Refund
AS 06.40.130. Delinquency Charge

Currently repeat violators of the above sections shall at the option of the Commissioner adjust the contract, loan, or premium finance agreement interest and other charges down to the 12th Federal Reserve rate plus five percentage points. The amendment will fix the rate at 10.5 percent a year.

Section 3 amends Chapter 45. Alaska Credit Union Act. of the Banks and Financial Institution Statutes.

AS 06.45.060. Powers of a Credit Union is amended by changing the maximum rate of interest.

Currently the rate of interest may not exceed the greater of 15 percent a year or the 12th Federal Reserve rate plus five percentage points. The amendment will fix the rate at 15 percent per year.

Sections 4 and 5 amend Chapter 90 Miscellaneous Provisions. of the Public Contracts Statutes.

AS 36.90.001. Public Construction Contract Payments is amended to avoid changing the rate of interest the state currently pays contractors on amounts not paid within 30 days of receiving a contractors billing and the rate paid by the state or a political subdivision on retainage on a contract for public works or public construction.

Section 6 amends Chapter 10. Alaska Retail Installment Sales Act. of the Trade and Commerce Statutes.

AS 45.10.120. Extent of Service Charge is amended by changing the rate of interest that my be charged on retail charge agreements, revolving charge agreements or other retail charge agreements.

Currently the interest that may be charged on outstanding balances of less than $1000. is 1.5 percent per month but on balances exceeding $1000. the rate is one twelfth of the annual 12th Federal Reserve rate plus five percentage points on that portion over $1000. The amendment will fix the rate at 1.5 percent a month on the outstanding balance from month to month.

Section 7 amends Chapter 45 Trade Practices. of the Trade and Commerce Statutes.

AS 45.45.010 Legal Rate of Interest is amended by changing the maximum rate of interest charged by express agreement of the parties in a contract or loan commitment on principal amounts up to $25,000.

Currently the rate is the 12th Federal Reserve rate plus five percentage points. The amendment will make the maximum rate 24 percent a year on principal amounts up to $25,000.

Section 8 Repeals the requirement for the Department of Commerce and Economic Development to notify lending institutions, title insurance companies, mortgage companies and clerks of the respective superior courts of the 12th Federal Reserve District discount rate that is to be used during that calendar quarter for computing the maximum rate of interest. Section 7 will amend the rate to a fixed 24 percent a year.

SCOMM

#50:24

ALASKA POWER AUTHORITY
FOUR DAM POOL
OBJECTIVES IN NEGOTIATIONS

1) Form the foundation for a statewide energy program for Alaska;

2) Establish debt service so that rate shock is not experienced by the communities;

3) Establish entry rates for the communities at no higher than their avoided cost; and

4) Establish long-term rates which benefit the communities as well as provide a return to the state.

3/4/85

MEMORANDUM

TO: Rep. John Sund, Chair,
House Special Committee on Loans

FROM: John Hartle, AA JH

RE: Analysis of HB 219 (Hydro)

The purpose of this bill is to set out in law, terms for the $196 million loan from the Department of Commerce and Economic Development to the Alaska Power Authority which was appropriated last year to take out the short term bonds issued to complete construction of the four dam pool hydroelectric projects. The Department currently has broad discretion to set the terms of loans from the Power Development Revolving Loan Fund, but agreement has not been reached with the four dam pool communities.

The bill is based on the power sales proposal from the communities and will lead to long term power sales agreements if enacted. It adds a new subsection to AS 44.33.620 (attached) - terms for Power Development Loans. This subsection specifically addresses loan terms only for the initial project (as described in AS 44.83.398(a), "initial project" is the four dam pool).

The bill does not constrain the Department of Commerce's flexibility now in law for setting terms for future projects (Bradley, Susitna, etc.). In HB 219 we avoid interfering with the Department's discretion in setting the terms of loans for those projects.

Sectional Analysis:

Section 1: This section expands the definition of "qualified utility" to include joint operating agencies. A joint operating agency is an instrumentality of two public utilities owned and operated by municipalities. The primary purpose of this section is to allow Wrangel and Petersburg to jointly operate the Tyee Hydroelectric Project, without subjecting them to economic regulation by the APUC. There may be other communities in the state with the same needs.

Section 2: This section just adds the words "Except as provided in (d) of this section." It also shows current law setting loan terms.

Section 3: The new subsection. (1) Sets the loan terms to provide for an interest rate not to exceed four percent, fifty-year maximum term, forty-year amortization period.

(2) Sets the payment rate per kilowatt hour for the debt service component of electric rates. The rate is based on spreading the debt service payment over the total amount of electricity offered by the

project for sale. This will produce a fixed debt service rate for the life of the loan, subject to the "ramping" provision in (3).

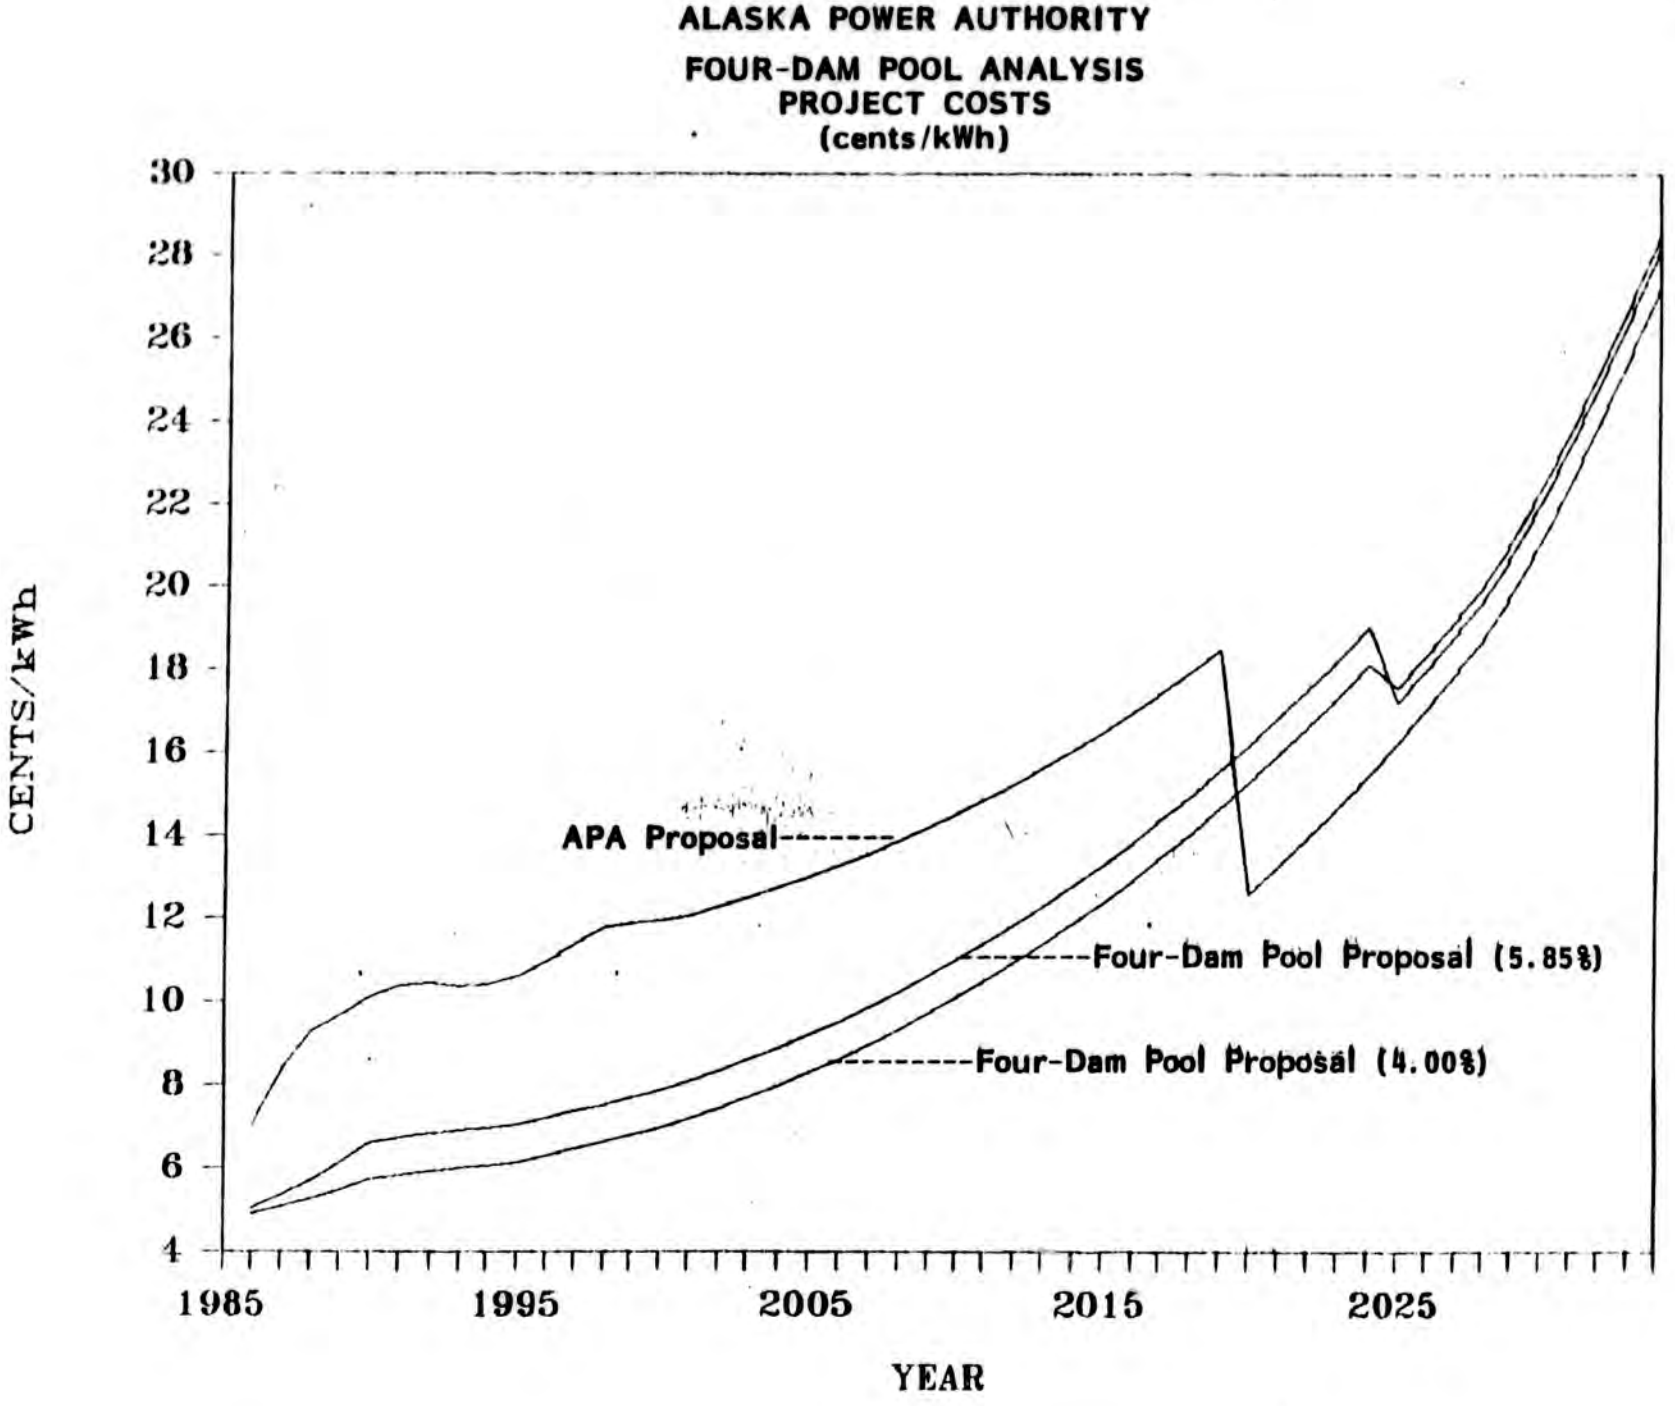
(3) Allows repayment to be adjusted during the first five years to provide a "ramp up" in rates, avoiding a severe rate shock. Interest deferred during the first five years is added to the principal balance and scheduled for full repayment in later years.

(4) Provides that any principal not paid under subsection (2) be paid off, with interest, during the last ten years of the loan terms.

Section 4: Adds regional electric authority to the definition of "Qualified Utility" for APUC certification. (Same purpose as section 1.)

FOUR-DAM POOL DEBT SERVICE

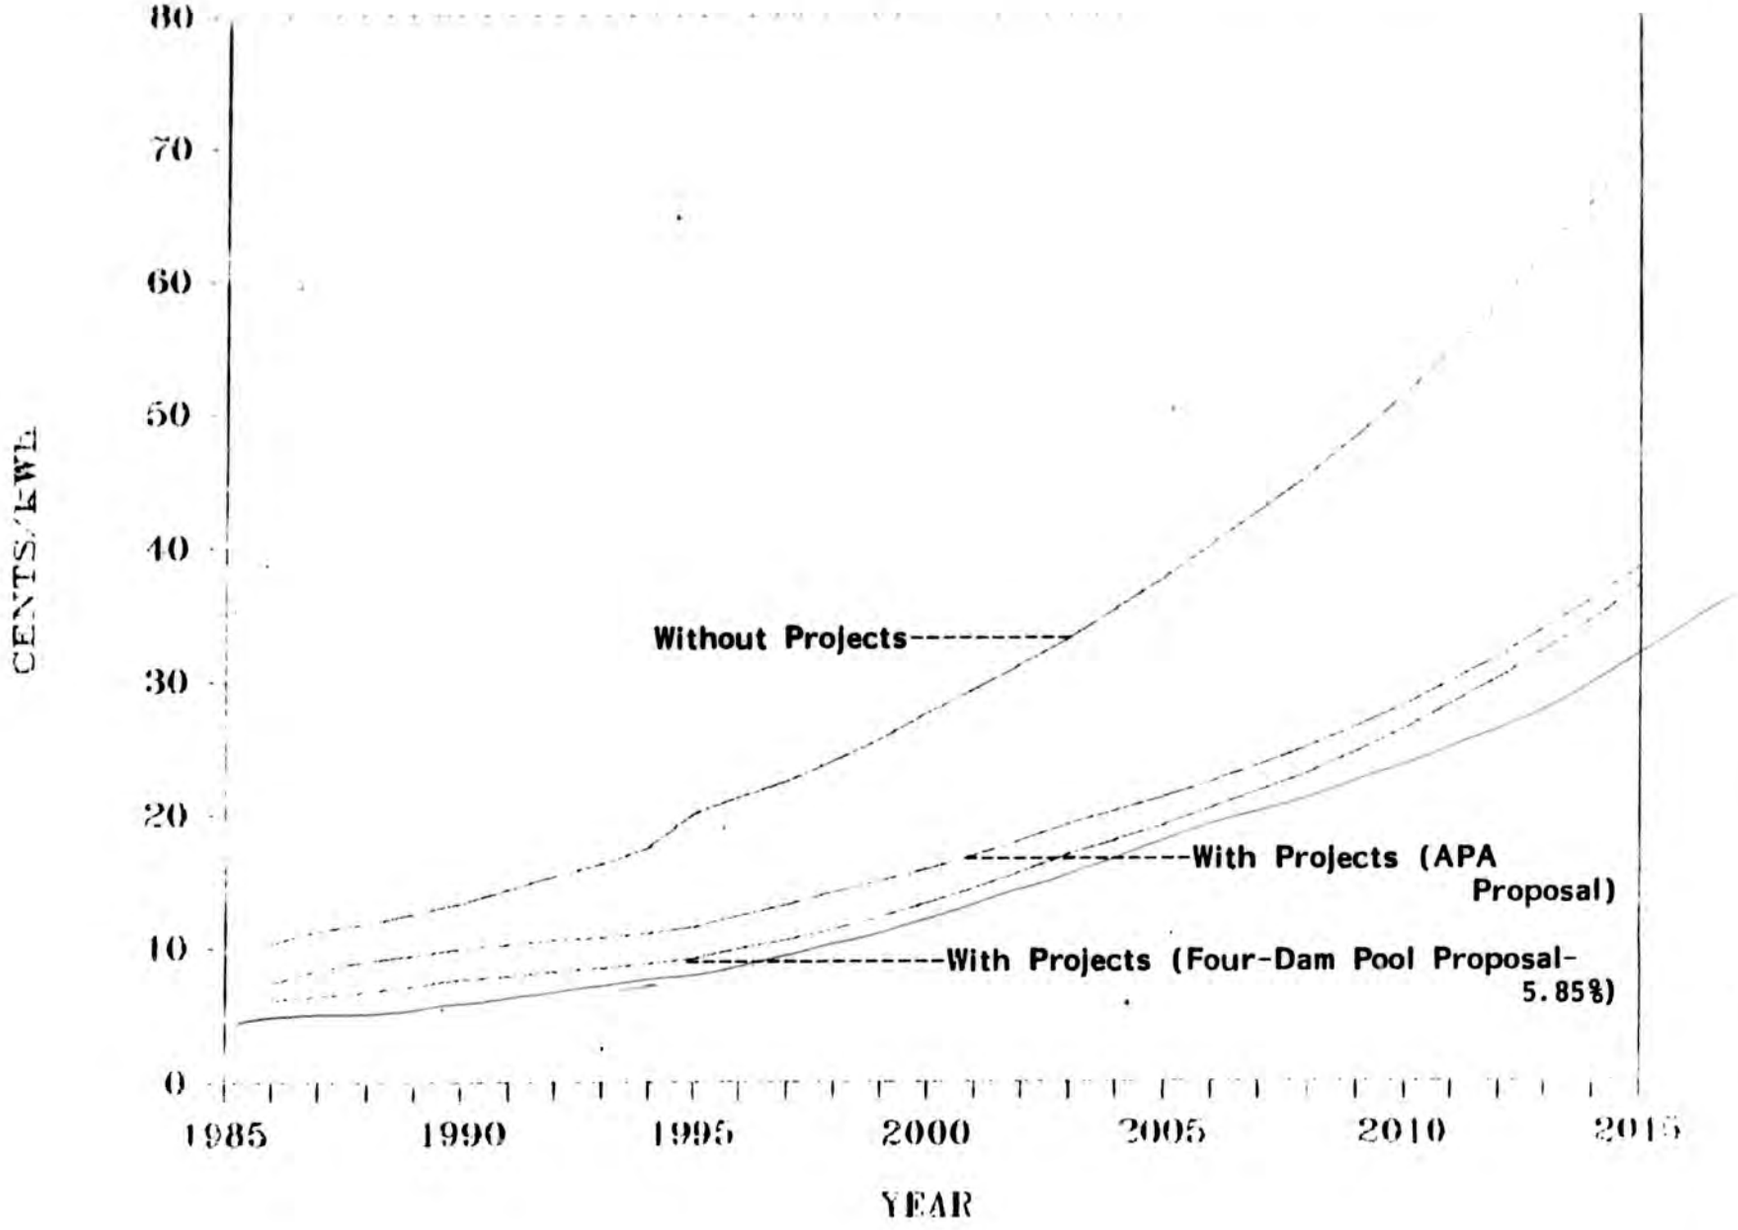
ALASKA POWER AUTHORITY



VERSUS

PARTICIPANTS' PROPOSAL

Comparison of Major Issues
Alaska Power Authority Proposal vs. 4-Dam Pool Proposal



HB-219

Issue	Alaska Power Authority	4-Dam Pool — 4%
Interest Rate	- 8% Yield on Total Loan	- 5.8% (3.3% Yield on Total Loan)
Amortization Period	- 35 Years	- 40 years
Annual Debt Service	- Level Debt Service With Ramp Features. WHAT IS "WOW"!	- Level debt service with Purchasers to pay amount in proportion to energy usage; Ramp features included.
Ramp Features	- Initially 2¢/KWH below alternative cost (2.5¢ for CVEA) decreasing to 0¢ at the point where Project costs without ramp and alternative costs cross.	- Defer part of principal and interest payments in years 1-5 and repay, with interest, in years 6-40.
Deferred Payments	- All payments deferred in Ramp features are repayed with interest by the end of 35 years.	- Principal amount deferred due to unused Project capability is repaid, without interest, in years 41-50. Principal and interest deferred due to ramp features is repayed, with interest, in years 6-40.

Retail Rate*	16.6	19.1** 15.1**	10.0	11.1	14.9

* Per KWH at 750 KWH/Month, as of 2/16/85

** 19.1 = Copper River; 15.1 = Valdez

KEA = Kodiak
CVEA = Copper Valley
KPU = Ketchikan

LETTER OF UNDERSTANDING

The negotiating team representing APA, Ketchikan, Copper Valley Electric Association, Kodiak Electric Association, Petersburg and Wrangell have agreed on the terms and conditions of a power sales agreement incorporating the following:

1. The written and oral understandings of the parties heretofore reached shall be placed in writing in agreed final form, and remaining comments of the parties will be mutually and expeditiously resolved and also incorporated in the agreement.

2. A rate stabilization fund shall be established as proposed in the communities' 17 point proposal funded in part by a State appropriation of $49,000,000.

3. The system increment proposal of the communities shall also be incorporated in such agreement.

We mutually recognize that certain statutory amendments are required to implement the agreements reached to date.

We expect to conclude draft O & M agreements and interconnection agreements following a mutual review of proposed contract revisions.

We will recommend to our respective boards and councils that the agreements be adopted and that we be authorized to execute them and to assist in the steps necessary to complete the financing.

SENATE FINANCE COMMITTEE
MAY 26, 1984
9:20 A.M.

CALL TO ORDER

CO-CHAIRMAN DON BENNETT CONVENED THE MEETING AT APPROXIMATELY 9:20 A.M.

PRESENT MEMBERS PRESENT: SENATORS BENNETT, FERGUSON, MULCAHY, SACKETT, AND V. FISCHER. SENATORS JOSEPHSON AND FAIKS CAME IN LATER.
OTHERS PRESENT: MIKE GREANY, DIRECTOR, LEGISLATIVE FINANCE; P.S. DHILLON, REVENUE ANALYST, LEGISLATIVE FINANCE; MILT BARKER, DEPUTY COMMISSIONER, DEPARTMENT OF REVENUE; COMMISSIONER HEATH, DEPARTMENT OF REVENUE; COMMISSIONER LYON, DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT; REPRESENTATIVE HURLBERT; SENATOR KERTTULA; RICH UNDERKOFLER, CITY MANAGER, CITY OF PETERSBURG; DON KOENIGS, MAYOR, CITY OF PETERSBURG; KURT DZINICH, SENIOR ADVISOR, SENATOR ADVISORY COUNCIL; SUSAN WHITE, EXECUTIVE ASSISTANT, ALASKA POWER AUTHORITY; MARTHA FOX, ASSISTANT ATTORNEY GENERAL, DEPARTMENT OF LAW; TERRY ELDER, DEPUTY COMMISSIONER, DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT; AND STAFF FROM STATE OFFICES AND LEGISLATIVE OFFICES.

SUMMARY INFO

CSHB 684(FIN) AM AN ACT MAKING SPECIAL APPROPRIATIONS TO THE ALASKA POWER AUTHORITY; AND PROVIDING FOR AN EFFECTIVE DATE. DISCUSSION AND HELD IN COMMITTEE.

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THE PROPOSED SCS FOR CS FOR HB 684(FINANCE). HE THEN ASKED MR. LARRY CRAWFORD AND BILL BATT TO COME FORWARD AND DISCUSS THE PROPOSAL WITH THE COMMITTEE.

LARRY CRAWFORD

MR. LARRY CRAWFORD, EXECUTIVE DIRECTOR OF THE ALASKA POWER AUTHORITY CAME FORWARD TO TESTIFY AND INTRODUCED MR. BILL BATT, DIRECTOR OF FINANCE. SENATOR MULCAHY ASKED WHAT THE INTENT WAS OF THE ALASKA POWER AUTHORITY WITH REGARD TO SECTION 1, THE $210,000,000 AND THE POWER CONTRACTS. MR. CRAWFORD SAID THE INTENT OF THE POWER AUTHORITY WAS TO USE THE RENEGOTIATED AGREEMENTS AS THE BASIS FOR THE LOAN AND THE COMMUNITIES WOULD HAVE RATES BASED ON THOSE RENEGOTIATED AGREEMENTS. HE SAID THE ONLY TIME THEY WOULD ENFORCE THE EXISTING AGREEMENT WOULD BE WHERE THEY DID NOT HAVE A NEW RENEGOTIATED AGREEMENT.

SENATOR MULCAHY ASKED ABOUT CLARIFICATION ON SECTION 1. HE FELT THE APPROACH BEING TAKEN WOULD DO AWAY WITH THE RATE STABILIZATION APPROPRIATION THAT HAD BEEN LOOKED AT BEFORE WHEN GOING OUT TO THE BOND MARKET. HE SAID IT WAS HIS UNDERSTANDING THAT THE RATE STABILIZATION APPROPRIATION WOULD NOT BE NEEDED BECAUSE OF THE USE OF GENERAL FUNDS AND BECAUSE THE LANGUAGE IN THE AUTHORIZING BILL IS SUCH THAT THE INTEREST RATE CAN BE "BACKED IN."

MR. CRAWFORD SAID THIS WAS CORRECT, THAT THEY ARE LOOKING AT WHAT THE DEBT SERVICE PAYMENTS WOULD HAVE BEEN UNDER THE RENEGOTIATED AGREEMENT AND THEN THEY WILL BE RETURNING THE MONEY TO THE STATE IN ACCORDANCE WITH THOSE DEBT SERVICE PAYMENTS. THE INTEREST RATE IS THE DERIVED NUMBER AND LOOKS TO BE ABOUT AN 8% YIELD TO THE STATE ON THE $210,000,000 OVER THE LIFE OF THE LOAN. HE SAID THE PAYMENTS IN THE EARLY YEARS WILL BE LESS THAN IN THE LATER YEARS AND THEY CAN DO AWAY WITH THE RATE STABILIZATION FUND.

SCS FOR CSHB 587(FINANCE)

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THIS LEGISLATION. SECTIONS 1 THROUGH 3, CREATE THE POWER DEVELOPMENT REVOLVING FUND FOR THE PURPOSE OF IMPLEMENTING THE $210,000,000 LOAN FOR THE FOUR-DAM POOL PAY OUT. SECTION 4 ALLOWS THE CREATION FOR THE FOUR-DAM POOL.

MEMORANDUM

TO: House Special Committee on State Loans

FROM: Richard D. Newland, Utilities Manager
Ketchikan Public Utilities

RE: Wholesale Power Cost Comparison

DATE: March 5, 1985

Attached you will find a tabulation, accompanied by a graphic presentation, showing projected wholesale power costs for the City of Ketchikan under three alternative scenarios. The generation of power from the Swan Lake Hydroelectric Project is compared under HB 219 and the package proposed by the Alaska Power Authority (APA); we also project the costs of a like amount of power generated by diesel.

Several points should be emphasized regarding these numbers. First, these are wholesale rates. Rates to the customer would be considerably greater than what is presented here. Second, these are "marginal" rates, i.e., rates for power generated by the Swan Lake Project or by diesel generation used in lieu of Swan Lake. Their effect on Ketchikan's retail rates, up or down, is mitigated by Ketchikan's other sources of power, including other hydroelectric generation. Third, these rates do not account for needed generation in the future. Swan Lake is projected to meet Ketchikan's needs for approximately the next ten years, after which we will need to rely on new generation. Our future rates will therefore continue to be affected by changes in the energy program for Alaska.

In constructing these projections, we have relied on the following sources:

1. Load forecasts were developed by the APA.

2. Swan Lake operation and maintenance costs are from our current budget. They are inflated annually at the assumed inflation rate.

3. Diesel operation and maintenance costs are from the studies used to develop our most recent proposed rate ordinance. They are also inflated annually.

4. Diesel operation and maintenance costs are divided into fixed and variable costs. The fixed costs have been included under the Swan Lake projections because the diesels will be used as reserves.

5. APA debt service costs are from their projection of February 12, 1985.

6. Diesel fuel projections are from the Alaska Department of Revenue Mean Forecast of World Oil Price (Saudi Medium), calculated in 1983 dollars and then inflated at the assumed inflation rate.

7. Each of our cases uses different assumptions about 1985 diesel costs and about the rate of inflation. These assumptions are printed on the tables. The base case (Case 1), uses a 1985 diesel cost of 71¢ per gallon, computed from information provided by Chuck Logsden, Petroluem Economist for the Department of Revenue. The base inflation rate is 5% per year.

I would like to thank the Committee for the opportunity to present this information.

Introduced: 2/20/85
Referred: House Special Committee
on State Loans, Resources and
Finance

IN THE HOUSE

BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

HOUSE BILL NO. 219

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and regional electric authorities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state, none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) Except as provided in (d) of this section, a [A] loan from the fund must be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) the market rate of interest for a loan of comparable size and duration at the time the loan is made; and

2.68 D. Sewick

(2) the estimated costs of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) A loan from the fund to finance the initial project, as described in AS 44.83.398(a), shall be subject to the following terms:

(1) the loan must be amortized based on an annual interest rate not to exceed four percent, a term not to exceed 50 years, and a 40-year amortization period;

(2) the annual debt service payment per kilowatt hour for energy purchased by utilities from the initial project equals the total annual payment needed to amortize the loan on the terms set out in (1) of this subsection divided by the long-term average annual kilowatt hour capability of the initial project;

(3) repayment may be adjusted so that the debt service payment per kilowatt hour, as determined under (2) of this subsection, increases gradually over the first five years of the loan and remains fixed over the next 35 years; and

(4) deferred principal shall be repaid with interest in equal annual installments during the last 10 years of the loan.

* Sec. 4. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or a regional electric authority established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

ANALYSIS
FOUR DAM POOL PROPOSAL

The Four Dam Pool proposal addresses, within existing law, several problems of the energy Program as currently structured and administered. I emphasize that these problems arise largely out of the statutory framework within which the APA operates. All prior contract negotiations with the APA have attempted to deal with these statutory structures. I believe our proposal simply does so more effectively than prior proposals. The problems we encounter are as follows:

- Uncertainty Under the Energy Program, we do not know the cost of power before we buy. Because power is priced according to the amount sold, a reduction or termination anywhere in the system could raise the price of power and force us to "true up" our bill after the fact.

- Unbearable Risks Unless otherwise limited, the Program makes each Purchaser jointly and severally responsible for the entire debt of the APA. A longterm contract on these terms could lock a small community into a fifty-year, open-ended obligation to pay off billions of dollars in debt.

- Guaranteed Inflation In order to pay for projects that are too big and too expensive for the communities' current needs, the APA has had to borrow money and accept a repayment schedule that includes "negative amortization" and periodic increases in debt service. These increases are purportedly based on predicted increases in the cost of diesel fuel. Even if these predictions were accurate, which we dispute, how can we benefit from hydropower if we aim for the diesel price? In fact, while diesel prices have been dropping, the only certainty about the APA's payment obligation is that it will increase.

- Unequal Benefits The Energy Program has been based on the idea that each community would pay according to the cost of APA facilities available to serve it. This formula ignores other variables such as whether the facilities are entirely necessary to that community and

whether such costs would result in large disparities between the retail rates of that and other communities. Anomalies result. For example, one community could end up paying a "system increment" increase in order to subsidize a project in another community that already enjoys lower rates. Likewise, a community could find itself ultimately worse off by gaining the "benefits" of hydropower and thereby losing its power cost assistance entitlement.

- Out-of-Reach Prices No matter how theoretically elegant, a power cost formula fails if ratepayers cannot afford the power. In the best of circumstances, prices under the current Program are projected at or just above what the communities estimate they can afford to pay without suffering serious economic dislocation. If assumptions underlying the projections are wrong -- if loads do not materialize, for example -- the results could be disastrous.

- Uncontrollable Costs Finally the existing Program gives the purchasers of power little ability to learn about, much less to control, the debt service obligations and operations, maintenance, and administrative overhead costs incurred by the APA. Yet these costs are passed directly through to the purchasers. Such unanticipated costs can add substantially to the unpredictability discussed above. Since utilities cannot easily recover previously incurred costs from their ratepayers, the result could be extremely disruptive to a utility's ability to plan. As I have emphasized before, long-term planning is essential to the proper management of an electric utility.

The Four Dam Pool proposal is aimed at overcoming the problems described above, without the need for statutory change. The principles behind our proposal are applicable to the Energy Program state-wide, although possibly not without new legislation. Those principles are as follows:

- Certainty The creation of a Power Development Revolving Loan Fund enables the APA to borrow money upon very flexible terms from the Department of Commerce and Economic Development. We propose terms that would permit the APA to charge a fixed rate for power. Purchasers would thereby know the price of power before they buy.

- Acceptable Risks Our proposal is that debt service

on the state loan be related to project usage, with power priced as though projects were fully utilized. This would place the risks of over-capacity and reduction in sales upon the State. Such a risk allocation is appropriate, since excess electric capacity is part of the infrastucture used to promote economic development throughout the State.

- Flat Rates Except for a brief initial "ramp up" to ease the rate shock for some utilities, we propose that debt service costs be flat throughout the contract period. This would assure that the benefits of hydropower are passed on to the citizens of the State, and that utilities would achieve a measure of predictability necessary for long-term planning.

- Equity Our proposal entails equal debt service costs for each member of the Four Dam Pool. Applied statewide, this principle might mean equality per kilowatthour for debt service, wholesale power costs, or total system revenue requirements.

- Affordability The ultimate wholesale power rate proposed by the Four Dam Pool was derived from what the communities believe they can afford. In most cases, that amount results in rates to the consumer at or near what those rates are today. We believe that no community in the State should be forced beyond its means to purchase power.

- Cost Control The role of the APA should be limited to helping finance the Energy Program. The only way operations and maintenance costs can be held in check is if they are placed within the control of those who must ultimately pay them. All APA borrowing, expenditures, and administrative overhead should be subject to strict audit, and should be governed at least in part with the active participation of the power purchasers.

Very truly yours,

* Homer Electric Association, Matanuska Electric Association and the City of Seward are combined with Chugach Electric. Seward is an unregulated utility.

† According to John McCracken, Finance Director for the City and Borough of Sitka, the utility did show a paper loss of approximately $69,000 in 1983; however, this does not account for the large negative difference between the retail rate and the production cost. This difference is the result of not counting substantial income from interest on cash reserves and on overlapping financing, while apportioning the interest expense of this financing to production costs.

The following exchange illustrates the point made earlier that Congress' primary concern was only that the overall revenue derived from rates be sufficient to repay the Federal investment in the power project.

> "Mr. KING. There may be some provision in the bill, but I have failed to discover any--and I may say that I have had the bill which passed the House, instead of the Senate committee bill--which will provide for reimbursement to the Government of the United States of the enormous sums which are to be appropriated under the provisions of the bill. I ask the Senator whether or not it is contemplated that the Government is to be reimbursed, and what provisions are found in the bill to effectuate that purpose?
>
> "Mr. McNARY. Mr. President, that is a very natural question. On page 12 the bill provides:
>
> > 'Rate schedules shall be drawn having regard to the recovery (upon the basis of the application of such rate schedules to the capacity of the electric facilities at Bonneville project) of the cost of producing and transmitting such electric energy, including the amortization of the capital investment over a reasonable period of years. . . .'
>
> "Mr. ELLENDER. While the Senator is considering section 7 of this bill will he explain the meaning of the language which appears in parenthesis on lines 18 and 19, page 12?
>
> "Beginning at line 18, I find this language in parenthesis:
>
> > 'Upon the basis of the application of such rate schedules to the capacity of the electric facilities of Bonneville project.'
>
> "Mr. STEIWER. Mr. President, there is some language included in the parenthesis on page 12, line 18, to which the Senator from Louisiana directs attention, and with the permission of my colleague I will undertake to answer the question by saying that in figuring the amortization of the capital investment it is necessary, of course, to have a formula of revenue. That formula consists of the rate multiplied by the amount of energy which presumably will be offered for sale.

"Mr. ELLENDER. Will that take into consideration the cost of the entire project?

"Mr. STEIWER. Ultimately it will. The parenthesis is merely to state the formula. It uses the words 'upon the basis of the application of such rate schedules to the capacity of the electric facilities of Bonneville project.'

"Mr. ELLENDER. Suppose the capacity of the plant is not used; how will the rate then be fixed so as to amortize the entire cost of the project in a given period?

"Mr. STEIWER. The rate will be figured on the capacity. It necessarily must be so, or we never could initiate the use of that power. The rate will be figured on the capacity; but, of course, the amortization will proceed more slowly, for the project is only partly completed, and only part of the energy is being sold.

"Mr. ELLENDER. Suppose the time for amortization is fixed. How would that language then be applicable? Am I to understand that the rate is fixed on a basis of the full capacity of the entire plant?

14

"Mr. STEIWER. That is correct.

"Mr. ELLENDER. Suppose the entire production is not sold and the time for amortization has been fixed. Would not the number of years in which the cost of the plant is to be repaid be changed, or would it not be necessary to increase the rates?

"Mr. STEIWER. It would have the practical effect of doing what the Senator first suggested, because the rate, being a fixed amount, if less capacity than anticipated should develop, of course, it would tend to postpone the time of complete repayment to the Treasury.

"Mr. ELLENDER. Does the Senator from Oregon understand from the language in section 7 that the Government will eventually get back operating expenses and also the entire amount of money spent for erecting the plant?

"Mr. STEIWER. Yes, the Government would get the entire amount, less the charge-off for navigation. Our government never recovers money expended for the building of rivers and harbors. The amount charged off for navigation, therefore, will not be recovered; but the amount that is charged for the development of hydroelectric power will be recovered eventually.

016891

The rate of recovery, of course, will be dependent upon the market and the amount of energy sold." 81 Cong. Rec. 8524 (1937).

One final argument conclusively refutes the California utilities' contention that BPA's NF-2 rate must be cost-based, and that is that one of the Act's primary objectives would not have been achieved had the rates been required to have been cost-based.

The Bonneville Project Act emphasized the objective "to encourage the widest possible use of all electric power . . ." The widespread use policy appears three times in sections of the Act authorizing building of transmission lines, requiring preference for public and cooperative systems, and as guidance for setting wholesale rates (Sections 2, 4, and 6).

Widely debated during the drafting of the bill was whether a postage stamp or uniform rate would encourage widespread use more than a zone rate, which is lowest at the dam and increases with distance.

A zone rate reflects the actual power and transmission costs associated with a particular user while the uniform rate does not. It was thought at the time that if zone rates were charged, those domestic and rural consumers farthest from the dam would not be able to afford the actual cost of service, and thus the objective of widespread use would not be attained.

As explained by the following exchange in the House Hearings on H.R. 7642, Congress was concerned that rates not reflect the actual cost of providing service, for to do so would price out those farthest from the dam and allow big industry to locate near the dam and buy up all the available power:

MEMORANDUM

TO: Rep. John Sund, Chair
House Special Committee on Loans

FROM: John Hartle, AA JH

RE: Questions for the APA

1. The single most critical assumption in all the forecasts of future electric rates is that of oil prices. WHY does the APA insist on using different forcasts than those made by the Department of Revenue?

[The importance of this cannot be stressed too much. The difference is so significant in all the APA forecasts. EXAMPLE: (see attaached) In the year 2000, measured in 1983 dollars
Dept of Revenue = $25.42/bbl; APA = $40.00/bbl
Virtually everything the APA does depends on the price of oil for comparison - the financial feasibility of dams, comparing four dam pool electric rates to those of the rest of the state, etc.

Again: Why not use the official State of Alaska forcasts?

2. Will the APA charge different debt service component rates per killowatt hour for each of the communities? WHY? Is this legal? (I was under the impression we were talking about pooling those rates.)

3. To the proposed one-year hold-everything-and-study-some-more plan: Steve Sealey, (Wrangell mill owner), and others like him, can't wait that long to make their decisions - they will generate their own power by then - this would mean the difference between a 36% useage of Tyee and the current 18% useage.

Subject: Oil Price Forecasts

Dear Mr. Rosenberg:

Attached are the two oil price forecasts that we discussed by telephone on February 19:

1) Alaska Department of Revenue mean forecast, issued December 1984;

2) Sherman H. Clark Associates "no supply disruption" forecast (adopted by the Power Authority as the base case for Susitna), issued August 1984.

Sincerely,

Richard Emerman
Senior Economist

4/12/85

MEMORANDUM

TO: Members, House Finance Committee

FROM: Rep. John Sund

RE: HB 219 (Four dam pool)

The subcommittee and the representatives of the four dam pool communities have been unable to agree on provisions for a Finance Committee CS for HB 219. I would appreciate your support for a version of the original bill.

The difference between the two proposed committee substitutes is one of approach:

The subcommittee bill sets guidelines for the APA and the communities to negotiate power sales.

The original bill actually sets the terms of the loan. This is in response to two years of negotiations. We have added a new provision for a price reopener to be included 15 years into any contract for power sales.

MEMORANDUM OF UNDERSTANDING

Between the Alaska Power Authority
and
Representatives of the Four Dam Pool Communities
governing
Power Sales Contracts for the Four Dam Pool

Representatives of the APA and the Four Dam Pool utilities (Ketchikan, Kodiak, Copper Valley, Wrangell, and Petersburg) have reached agreement in principle on the terms and conditions of a power sales contract for the sale of power from the Solomon Gulch, Swan Lake, Lake Tyee, and Terror Lake hydroelectric projects (the "Initial Project"). Although the specific details of such a contract must still be resolved and drafted, the undersigned representatives hereby agree to recommend to their governing bodies the approval of power sales contracts embodying, among other things, the principles set forth in this Memorandum.

1. The Alaska Power Authority ("APA") and the purchasing utilities of the Four-Dam Pool communities ("Purchasing Utilities") agree to enter into a power sales agreement that will run for 50 years, subject to periodic renegotiations and other conditions set forth below.

2. At the end of the contract period, there will be no debt service component of the wholesale rate charged by the APA for power from the four projects. Debt service payments that may be required to pay for additions and expansions of the four projects that are made subsequent to the execution of these agreements will be governed by future agreements.

3. The Purchasing Utilities agree to pay a wholesale rate for energy purchased from the APA that is generated by the four projects that has a debt service component, and a component relevant to all other annual costs.

4. The annual costs exclusive of the debt service component shall include costs of on-site operations and maintenance, safety inspections and investigations, insurance, project-specific administrative and general expenses, and renewals and replacements.

5. Annual costs referred to in Section 4 will be based on prudent utility practice, and will be subject to mutual agreement arrived at through an annual process that establishes an operating budget for the coming year. An O&M

oversight committee composed of all parties to the agreement will be established. In the event disputes over these annual costs cannot be resolved by the parties, the matter will be referred to arbitration by a certified engineer mutually agreeable to the parties.

6. All annual costs referred to in Section 4 will be pooled and divided by the total annual sales from the four projects, so that all Purchasing Utilities pay the same annual cost component of the wholesale rate.

7. The debt service component of the wholesale rate has two elements: an element paid for energy shown in Schedule A as "forecast sales," and an element paid for energy in addition to the "forecast sales," which is referred to as "additional sales."

8. The "additional sales" debt service element in Schedule A will be charged only after the total annual sales from all four projects exceed the "forecast sales" for that year; that is, the distinction between "forecast sales" and "additional sales" applies to the entire four dam system (as configured at the time this agreement is executed).

9. The purchasing utilities will schedule the energy produced by the projects into their load ahead of energy from other sources, except from existing hydroelectric projects.

10. Upon the initiation of either party, the debt service rates shown in Schedule A may be renegotiated after 15 years. The contract shall require reasonable notice of intent to renegotiate rates, and the contract may direct the parties to consider certain factors and conditions in establishing a new rate schedule.

11. The parties to this agreement do not expect that the composite wholesale rate that results from this agreement will be less than the composite wholesale rate charged by the APA for energy produced from the Bradley Lake hydroelectric project.

12. The APA shall bear the risk of uninsured project failures, substandard project performance, and failure of any Purchasing Utility to make payments required by the contract.

TO: John Hartle DATE: May 2, 1985

FROM: Eric Redman and Doug Rosenberg ER & DR

SUBJECT: What Happened In Your Absence

1. The filthy lawyers fed at the public trough for hours and hours, with no one but the cleaning person here to restrain them.

2. There's good news about your diskette LOANS2! It's been liberated from its unpromising childhood here in Juneau, adopted by two terrific daddies from Seattle, and will grow up amid the joys of the Pacific Northwest. (We couldn't find another diskette onto which to duplicate our documents. But we did duplicate your document SB 186 INTENT onto diskette LOANS, and since that was the only document besides ours on the diskette, all you've lost is the value of one diskette.) If you begin a custody fight for LOANS2, we may relent and return it, even though it will never really be happy here.

3. Attached please find the fruits of our labors:

(a) A one-page draft of a Memorandum of Understanding, not yet shown to anyone and eager to retain that status. Short, sweet, clever.

(b) A one-page Exhibit A for same, showing the wholesale power rate schedule and its components, including the scheduled debt service component, with notes. (This, incidentally, is H-2 without additional loads, otherwise known as the H-2 base case.)

(c) A print-out of Exhibit B for same, showing the internal rate of return to the state and all the data (well, most of the data) used to derive it. This shows both the H-2 base case and the H-2 additional sales case.

4. On Friday, May 3rd, Doug will transmit copies of all the foregoing to each of the Four Dam Pool communities in preparation for next week's meeting. We will also try to reach Heath and/or Harrison to tell them:

(a) That we are trying for an MOU approach, and why we are doing so; and

(b) To emphasize that we now hope to have the Four Dam Pool signed off on a draft of the MOU on the 7th, with meeting with Heath and Harrison set for the 8th, in the hope that by the evening of the 8th Heath can tell Sen. Faiks and Sen. Halford that an MOU is in hand, and that it will produce a respectable rate of return to the state.

Draft
5/2/85

MEMORANDUM OF UNDERSTANDING

Between the Alaska Power Authority
and
Representatives of the Four Dam Pool Communities
governing
Power Sales Contracts for the Four Dam Pool

Representatives of the APA and the Four Dam Pool utilities (Ketchikan, Kodiak, Copper Valley, Wrangell, and Petersburg) will recommend that their governing boards approve power sales contracts that embody the principles set forth below:

1. Rates: Subject to a rate reopener provision (below), the purchasers will pay in each year a wholesale power rate consisting of three components:

(a) Debt service: 4¢ per kwh for all purchases except for purchases in excess of current forecasts and purchases during the 5-year "ramp" period. See Exhibit A.

(b) Operations & Maintenance (O&M): Actual O&M costs for the Pool divided by actual power sales to the Pool, expressed in cents per kwh. See Exhibit A for estimates.

(c) Renewals & Replacement Fund (R&R): $500,000 per year to fund the project R&R capital account.

2. Projected Rate Of Return To State: The wholesale power rate schedule is projected to produce a return to the state of 6+ percent under the "additional sales" forecasts and 5+ percent under conservative forecasts. See Exhibit B. The parties regard these forecasts as reasonable.

3. Rate reopeners: APA may give a 7-year notice of rate increases at any time after the 8th contract year. Increased rates may not produce average wholesale power costs for Four Dam Pool communities in excess of average wholesale power costs projected for Railbelt utilities at that time. Purchasers may reduce or eliminate purchases of APA power when increased rates take effect or at any time after 15th contract year.

4. O & M responsibilities: The purchasers must pool and pay all on-site O&M expenses. An O&M oversight committee will provide supervision. APA will perform inspections and investigations, buy insurance, and include those costs in O&M.

5. Sharing of risks: Purchasers will bear the risk of increased rates caused by project failure, poor performance, and deviations in actual O&M costs or actual power sales from forecasts, up to a limit of 0.5¢ per kwh increase over the forecasted base case rates shown in Exhibit A.

6. Commerce Department loan to APA: The power sales contracts shall take effect when the terms of the loan have been modified in a manner that permits the contracts to be effective in accordance with the principles of this Memorandum.

May 10, 1985

The Honorable Jan Faiks
Co-Chair
Senate Finance Committee
Pouch V
Juneau, AK 99811

Dear Senator Faiks:

For you and the other members of the Senate Finance Committee to have some perspective on the effect of the power sales agreement that would result from the Memorandum of Understanding of May 8, I have prepared the analysis that is enclosed. The numbers are based on our most current computer simulations of the contract. The avoided cost analysis is very crude, but I believe it presents a reasonably accurate estimate of the range of effects we can expect. We will continue to refine and revise the numbers shown here, but overall they reflect our best view of the impacts of the proposed contracts on wholesale power rates from the Four Dam Pool projects .

Sincerely,

Gordon S. Harrison

Gordon S. Harrison

MEMORANDUM OF UNDERSTANDING

Between the Alaska Power Authority
and
Representatives of the Four Dam Pool Communities
governing
Power Sales Contracts for the Four Dam Pool

Representatives of the APA and the Four Dam Pool utilities (Ketchikan, Kodiak, Copper Valley, Wrangell, and Petersburg) have reached agreement in principle on the terms and conditions of a power sales contract for the sale of power from the Solomon Gulch, Swan Lake, Lake Tyee, and Terror Lake hydroelectric projects (the "Initial Project"). Although the specific details of such a contract must still be resolved and drafted, the undersigned representatives hereby agree to recommend to their governing bodies the approval of power sales contracts embodying, among other things, the principles set forth in this Memorandum.

1. The Alaska Power Authority ("APA") and the purchasing utilities of the Four-Dam Pool communities ("Purchasing Utilities") agree to enter into a power sales agreement that will run for 50 years, subject to periodic renegotiations and other conditions set forth below.

2. At the end of the contract period, there will be no debt service component of the wholesale rate charged by the APA for power from the four projects. Debt service payments that may be required to pay for additions and expansions of the four projects that are made subsequent to the execution of these agreements will be governed by future agreements.

3. The Purchasing Utilities agree to pay a wholesale rate for energy purchased from the APA that is generated by the four projects that has a debt service component, and a component relevant to all other annual costs.

4. The annual costs exclusive of the debt service component shall include costs of on-site operations and maintenance, safety inspections and investigations, insurance, project-specific administrative and general expenses, and renewals and replacements.

5. Annual costs referred to in Section 4 will be based on prudent utility practice, and will be subject to mutual agreement arrived at through an annual process that establishes an operating budget for the coming year. An O&M

oversight committee composed of all parties to the agreement will be established. In the event disputes over these annual costs cannot be resolved by the parties, the matter will be referred to arbitration by a certified engineer mutually agreeable to the parties.

6. All annual costs referred to in Section 4 will be pooled and divided by the total annual sales from the four projects, so that all Purchasing Utilities pay the same annual cost component of the wholesale rate.

7. The debt service component of the wholesale rate has two elements: an element paid for energy shown in Schedule A as "forecast sales," and an element paid for energy in addition to the "forecast sales," which is referred to as "additional sales."

8. The "additional sales" debt service element in Schedule A will be charged only after the total annual sales from all four projects exceed the "forecast sales" for that year; that is, the distinction between "forecast sales" and "additional sales" applies to the entire four dam system (as configured at the time this agreement is executed).

9. The purchasing utilities will schedule the energy produced by the projects into their load ahead of energy from other sources, except from existing hydroelectric projects.

10. Upon the initiation of either party, the debt service rates shown in Schedule A may be renegotiated after 15 years. The contract shall require reasonable notice of intent to renegotiate rates, and the contract may direct the parties to consider certain factors and conditions in establishing a new rate schedule.

11. The parties to this agreement do not expect that the composite wholesale rate that results from this agreement will be less than the composite wholesale rate charged by the APA for energy produced from the Bradley Lake hydroelectric project.

12. The APA shall bear the risk of uninsured project failures, substandard project performance, and failure of any Purchasing Utility to make payments required by the contract.

18 April, 1985

Mayor Don Koenigs
Petersburg, Alaska 99833

Dear Don:

It was a pleasure to visit Petersburg last weekend, meet you and your fellow citizens, and participate in the Rotary Club's annual benefit. I hope I shall be able to return soon.

The enclosed memo outlines the strategy we talked about for resolving the impasse over the four hydro projects. I think this strategy would result in almost exactly the kind of resolution the parties are looking for, whether they know it or not. For both tactical and selfish reasons, however, the memo strikes me as a bit too detailed and too specific, and I am a bit uneasy about seeing it circulated widely in its present form.

The best tactic for getting acceptance of a proposal of this kind is usually to let its details emerge from discussion and negotiation, so that the various parties (the municipalities, the Power Authority, the Administration, and key legislators) all feel that they have contributed to or at least influenced the final product. No matter how fair and well thought-out a it may be, a settlement proposal emanating from one side of a controversy tends to be perceived by those on other sides as a bargaining position to be diluted and whittled away at. A motion that comes unsolicited from an outside party like myself who has no stake in the dispute is likely to be treated even less seriously.

My selfish reservations about circulating a fully thought-out proposal stem from the fact that I occasionally like to get paid for performing the kind of service at which I am best, and from which I try to make a living. At the very worst, I would like to have been asked formally by one or more of the parties to make a stab at solving their problem. The kernel of an idea contained in the enclosed memorandum is, however, already the most critical part of any contribution I might make on behalf of a settlement. It is this one seemingly simple concept that might not have appeared absent my involvement. The further refining of the concept, its formulation in legislative language, and its public advocacy would all consume more professional effort and are, by that token, more "billable" than what I have already offered. But there are a host of people who are as good or almost as good as I am at these tasks, if not better. With this memo in hand, one may legitimately ask, who needs Tussing?

Here is the idea, nevertheless, for what it is worth, in sufficent detail for all the parties to understand. From the moment you and I began discussing the problem last weekend, I was convinced this general approach was superior --- from almost everyone's standpoint --- to the House Bill or anything else that has yet surfaced publicly.

I do want to see the strategy proposed and tried, even if it generates no personal credit and no professional fee. My druthers, however, lean toward getting a small retainer either from the municipalities or, preferably, from one of the responsible committees of the legislature to explore the general idea with the municipalities, the Power Authority, the Governor, and legislative leaders; to conduct research on relevant regulatory standards and precedents; to draft a proposal that could be incorporated into legislative language; and to appear at hearings on its behalf. I believe this is also the approach most likely to be successful.

The politics of the question I now leave to your judgment, however, and you are free to use this memorandum however seems most appropriate. My associate, Connie Barlow, has spoken with Senate Resources Committee staff about the approach, and I expect to get Senator Sturgelewski's reaction within a few days. Let me know what you do and what happens, and I will keep you similarly informed.

Also enclosed are a statement for my late travel expenses, and a some nice publicity I will be getting in Forbes magazine next week.

Very truly yours,

Arlon R. Tussing

Apportionment of Four-Dam Pool Project Costs
A Suggested Settlement Procedure

OBJECT

The object of the procedure suggested here is the rational and fair apportic ment of costs incurred by the Alaska Power Authority for electrical-generation and transmission facilities designed to serve the four municipalities. The key elements of such a settlement are ---

An impartial valuation of the projects, reflecting only the necessary and prudently incurred outlays for their construction, and

An impartial determination of the fair market rate of interest due the State on the value of the project.

The State would thus write off as a loss any expenditures determined to be unnecessary or to have resulted from imprudence or mismanagement, while electricity costs to the municipalities would be based upon an unsubsidized interest rate. This settlement would differ from others now being proposed in that it would be ---

Permanent,

Uncoupled from the politics of Statewide rural energy assistance, or future Railbelt energy planning, and

Free from dependence upon speculative and controversial estimates of future "avoided costs" of electricity in the four municipalities.

Because such a settlement apportions accountability for all sunk costs directly to the parties responsible for their occurrence, its precedent should make similar fiscal disasters less likely in the future.

ARBITRATION PANEL

The settlement would be determined in binding arbitration, conducted by a panel of three arbitrators, each of whom would have substantial experience as a commissioner, administrative law judge, or hearing officer of a federal, state or provincial public utility commission in the United States or Canada (other than the Alaska Public Utilities Commission). Two arbitrators, appointed respectively by the four municpalities and the Alaska Power Authority, would select the third.

TERMS OF REFERENCE

The arbitrators would determine the fair value, for purposes of sale or rate-making, of the facilities constructed by the Alaska Power Authority to serve the four municipalities. They would use the same standards that regulatory utility commissions throughout North America customarily use in reviewing the capital costs that electric utilities propose to include in their "rate bases", namelyt

(1) Are the facilities "used and useful", and

(2) Were the expenditures "necessary and prudently incurred"?

The arbitrators would also determine a fair market interest rate, and the appropriate amortization schedule to be applied to the fair value of the facility, for the purposes of sale or electric rate-making.

STANDARDS

1. **Valuation of Facilities.** In determining fair value, the arbitrators would

   1.1 Review the construction and interim financing costs actually incurred by the Alaska Power Authority, and

   1.2 Determine what portion of these costs were necessary and prudently incurred for used and useful plant. Specifically, the arbitrators would be authorized to exclude from fair value any expenditures that were incurred ---

      1.2.1 For generating capacity in excess of that required to serve reasonably anticipated demand by the respective municipalities,

      1.2.2 Because of mismanagement or gross negligence, or

      1.2.3 After the date (if any) at which a prudent management would have concluded that a project as planned was not economically viable, and thus would have downsized the project or terminated construction in order to hold losses to unavoidable levels.

   In determining any expenditures to be excluded from fair value, however, the arbitrators would be authorized to consider the extent to which the municipalities or their representatives may have knowingly encouraged, abetted, or agreed to unnecessary or imprudent outlays.

2. Fair market interest rate. In determining a fair market interest rate, the arbitrators would consider ---

   2.1 The actual or probable cost of revenue- or general-obligation borrowing by the municipalities for power-project financing,

   2.3 The actual or prospective cost of revenue- or general-obligation borrowing by the Alaska Power Authority for power-project financing, and

   2.4 The actual or prospective returns to the State of Alaska from alternative uses of any State funds committed to the projects.

3. Appropriate amortization schedule. In determining the appropriate schedule for amortizing the sums determined to constitute the fair value of facilities, the arbitrators would follow generally accepted principles of power-project financing and public-utility ratemaking, but would be authorized to consider ---

   3.1 Projected electricity-demand trends in the respective municipalities,

   3.2 The prospective impact of the amortization schedule (when combined with the fair value of the facilities and the fair market rate of interest) on consumer costs of electricity, and

   3.3 The present and prospective financial capacity of the respective municipalities.

EXECUTION OF THE SETTLEMENT

The decision of the arbitrators would be final and binding. Upon a determination of the fair value of each of the facilities, the fair market interest rate, and appropriate amortization schedule(s), the Alaska Power Authority and the municipalities would be required to execute contracts which, at the option of the respective municipalities, would provide for one of the following ---

1. Sale of electricity by the Alaska Power Authority to the municipalities for a lump-sum monthly charge that reflects the fair value of the facilities, the fair market interest rate, and the appropriate amortization schedule,

2. Sale of facilities to one or more of the municipalities, at fair value plus interest to the date of sale at the fair market interest rate --- with long-term financing arranged by the municipalities themselves, or

3. Sale of facilities to one or more of the muncipalities at fair value --- with long-term financing by the State at the fair market interest rate and with the appropriate amortization schedule.

In the event a municipality elected to purchase facilities, the Alaska Power Authority would retain title to any project capacity that exceeds the capacity the arbitrators have determined to be used and useful for valuation purposes.

ly! No information was forthcoming on this point. What about Merrill Lynch? "We don't talk about what our customers do. I doubt you're going to find out about Phillips from anybody," Merrill told the committee.

But further inquiries revealed a good reason for brokers *not* to be diligent in tracking down wayward holders who left no instructions. Shares left in the custody of brokers in margin or managed-cash-type accounts could have been used to make substantial windfall profits—for the broker.

A reminder of the Phillips recapitalization will be helpful here. The company decided to exchange debt for half its shares. For every two shares tendered, the holder was to get back a package of debt securities worth $62 and one share of stock. Before the offer expired, the old stock was trading at around $49 a share. That means that the new stock would be worth only $36. Why? Twice $49 minus $62 equals $36. (Because not all shares were tendered, the shareholders actually got bonds for slightly more than half their stock—but that is a fine point.) Again, in round numbers: A 200-share, $9,800 position in the old stock was going to turn into $3,600 worth of new stock and $6,200 worth of bonds.

The expected disparity between the value of old Phillips and the value of new Phillips created considerable demand for borrowed Phillips stock. Short-sellers and various other investors had been maneuvering to increase their profit on the Phillips tender (see box, p. 57). These efforts created a demand for untendered Phillips shares, to replace shares that had been called away or sold short. While the tender was under way, the premium exacted by lenders of Phillips stock certificates ranged from $4 to $9 a share, prices that one arbitrager terms "obscene." In most circumstances, stock certificates are lent at no premium at all.

Phillips shares owned by alert investors were, of course, en route to Phillips and unavailable. But what about stock owned by the aforementioned dummies? Some of it, apparently, was available. When stock is bought on margin, the investor signs an agreement allowing his broker to lend out his securities. Also, most so-called managed cash accounts are automatically deemed margin accounts. Margin accounts owned by customers who didn't respond to the tender thus provided a potential supply of lendable certificates.

Precisely how much lending took place from nontendering margin accounts? Evidence is not available on this point. Brokers complained of enormous premiums being charged for borrowed stock, but few would admit to lending it. Shearson Lehman Brothers Senior Executive Vice President Victor Samra averred that he lent stock, the stock being obtained "from institutional investors, mostly." (Apparently some institutions did not have time to read the prospectus, either. It came less than two weeks before the tendering deadline.) Samra said he wasn't sure whether his firm got a premium.

It further appears that none of the loan premiums found their way back to the accounts of the nontendering customers who made it all possible. The following testimony is from a vice president at a small firm in New York City, who was guaranteed anonymity in return for his statement. "Everyone supped at the expense of the negligent Phillips shareholder who left his stock in street name. That guy was carved up on the table."

The committee concludes that the brokers did nothing wrong, or at least nothing actionable. If it weren't the case that 8.6% of the world is slow on its feet, how would some others get rich? ■

The natural gas industry is moving into the world of competition. Some will sink and some will swim, says Arlon Tussing, who has a winning record on predictions.

The coming world of anything goes

By Toni Mack

ARLON R. TUSSING has run up an enviable record predicting swings in the volatile energy business, particularly in natural gas. He called the turn on prices in 1980. In 1981 he forecast that pipelines then contracting to take high-priced gas or pay for it anyway would break their contracts and take the lawsuits, which they did. In 1983 he predicted the industry would rediscover the Sherman Act. The state of Illinois is now suing Panhandle Eastern Corp., and Mobil Corp. is suing Transco Energy Co., both on antitrust grounds.

What next, FORBES asked Tussing (pronounced TOO-sing), a 51-year-old, blue-eyed and jut-jawed Seattle-based consultant.

Deregulation, in fact if not in law, is here, he says, and companies in the gas business aren't particularly happy about it. Says Tussing:

"In this new market, wellhead prices will be determined by competition, and neither the regulators nor the regulated companies will be able to control the price. The market value of gas will be determined in competition with other fuels and electricity. It will only be the sheerest of accidents if the margin between the price of gas in the field and the market value to final customers equals the rates that would be set by regulators under traditional cost-of-service pricing.

"One of the biggest problems is that many executives think just like regulators and Congress. Regardless of their official economic philosophies, they don't like or trust competitive markets. They prefer a visible hand, however palsied, to an invisible one."

Today the pipelines' average costs for gas run from $2 per thousand cubic feet (mcf) to more than $4 per mcf. That disparity will narrow in two to three years as contracts expire and are renegotiated. Then, says Arlon Tussing, the gas transportation costs will be important.

"You'll see the competitive advantage shifting. For instance, Transco and Columbia Gas System have among the highest purchase costs, and they've been the most troubled

Energy consultant Arlon R. Tussing
Everything that isn't expressly prohibited can be done.

pipelines competing in the Middle Atlantic states. But they both have mature systems that have been pretty much written off. If either could get its gas purchase costs down [Columbia Gas in April agreed to lower the price for its gas to keep from losing more business], it would be in a relatively strong competitive position."

Most gas distributors—the companies taking gas from pipelines and delivering it to the customers—still resist competition, and that's where Tussing expects to see the greatest turmoil.

"They are still mentally and emotionally in the 1970s. Most rate cases at the state level are still for higher rates. Depending on how price-sensitive their load [demand] is, they can get into what I call the death spiral, where higher rates and load loss drive each other."

Attempts by pipelines or distributors to hold their monopolies will be futile, he thinks. Transco and Panhandle Eastern are being sued under antitrust laws for using their monopoly position to block competition (that is, not moving competitive gas) or otherwise gain an advantage.

A second trend is the building of pipelines to bypass higher-priced suppliers. Bethlehem Steel is trying to bypass Northern Indiana Public Service Co. by building a spur to a pipeline a few miles away owned by American Natural Resources Co. (now merging with Coastal Corp.). Bethlehem would be able to buy gas for about $1 per mcf under Nipsco's rate. There are already two applicants, and there may be four, to build an interstate pipeline into California's Kern County to serve the growing enhanced oil recovery market there. The purpose is to bypass both Pacific Gas & Electric and its regulator, the California Public Utilities Commission, notorious for the high prices it tolerates for industrial customers in the name of the consumer.

"The basic natural monopoly argument," says Tussing, "is that the cost of service for one pipeline is less than the cost of service for two smaller-scale pipelines. It follows that it is also possible for everybody to get a lower rate under monopoly. But the test of that is in the doing. If the monopoly, even a regulated monopoly, is mainly used to rip off customers, then the natural monopoly argument crumbles. So if Bethlehem or any other customer can get a better rate by building an additional pipeline, then let them do it. If it is cheaper for everybody collectively to be the only pipe in the area, then Nipsco and PG&E had damn well better provide cheaper service to everyone."

Tussing also predicts the natural gas industry will face competition from electric utilities. Today those utilities are raising rates. "That will cause a fall in consumption from normal markets, so they will be desperately trying to flog off extra power for anything over variable costs," he says. "The electric utilities haven't quite caught on yet, but they will."

With all these troubles, Tussing sees some pipelines and gas distributors pushed to the wall. "There's a one-word term for that: bankruptcy." He hesitates, then adds that there are also shotgun weddings.

But it isn't all gloom. Says Tussing: "One area of enormous potential for arbitrage profits and for marketing and transportation is replacing the physical movement of gas with exchange and displacement transactions. The pipeline system in North America is like a big swimming pool: You can take a bucket of water from one end and dump a bucket of water in the other end, without physically carrying the bucket from one end to the other."

For example, instead of building a pipeline to carry western Canadian gas to New England, there's a proposal to use existing lines to carry the Canadian gas to the Midwest. It would be traded for Texas gas, aimed at the Midwest, which could be diverted eastward through existing lines.

Tussing thinks Kenneth L. Lay, now chairman of Houston Natural Gas Corp., represents the new type of thinking coming into the business. "While Lay was president of Transco, Transco invented the whole notion of using spot market gas to regain lost customers [lost because its contract gas prices were too high]," Tussing says. Lay has directed $1.2 billion in acquisitions for Houston Natural, and with two other companies has proposed one of the pipelines into Kern County, Calif. "Something he did at Transco and is now doing at HNG is completely swamping the regulators with proposals within the existing framework, which keeps them off-balance," says Tussing.

Buyer beware

If Arlon Tussing is right, natural gas companies—and their stocks—are in for it. "Whenever an industry gets deregulated, everybody gets clobbered initially, even the good companies. So earnings will be under pressure for all companies for several years," says Foster Corwith, an analyst for Dean Witter Reynolds.

But there will ultimately be winners. Analyst John Olson of Drexel Burnham Lambert likes the prospects, over the long haul, of Houston Natural Gas, which recently moved into Florida and California through acquisitions, and Lear Petroleum Corp., an aggressive pipeliner in Texas and Oklahoma.

Among the big interstate pipelines, MidCon Corp. and InterNorth Inc. are considered standouts for their efficiency, low-cost gas and competitive ability. They also avoided most of the contract and regulatory problems that plague others. Others getting favorable reviews include Texas Eastern Corp. and Coastal Corp.

The pariah of the group is Columbia Gas System. It has high-cost gas Columbia is trying to renegotiate its contracts), fading markets (particularly in the East and Midwest), crippling contract problems and regulation by two federal and seven state agencies. "It's got a lot of things going against it," says Tussing.

On the plus side, of course, stock prices already have been pumped up in anticipation of takeovers, as other pipelines seek access to markets and low-cost gas. Producing properties also are spun off into publicly traded limited partnerships as an antitakeover technique, which pushes up stock prices.

But there's a necessary caution. "The problem is that you can't tell who is shark and who is lunch," says R. Gamble Baldwin, analyst for First Boston Corp. The effect, he says, is that "the natural gas group by and large is overvalued in relation to its fundamental outlook."—T.M.

He sees this as an evolution of management, drawing analogies to banking. "Natural gas has been pretty much a deadhead industry in both pipelines and distribution, and the whole presumption has been that anything not specifically approved by regulators in advance is out of bounds. That's where the bankers were 20 years ago. Bankers did only what bankers had always done.

"But something happened. Bankers left behind the old banker mentality. They assumed that everything that isn't expressly prohibited can be done, and put the onus on the regulators to stop them. Once you had some people with imagination out there, any deal became doable under some combination or permutation of existing institutions and rules. What Congress and the regulators have to say—interstate banking is a good example—has no relevance.

"We're moving in that direction with natural gas. The most interesting things are the ones not foreseeable, because they will be the result of innovations by contrarian individuals. You now have a handful of people who start with the premise that everything not expressly forbidden is allowable." ■

Meet Pat McGovern, the centimillionaire magnate of computer publishing—as unlikely a magnate as ever was.

As you give

By Richard Behar

PATRICK MCGOVERN plans to give away his computer publishing empire when his International Data Group, outside Boston, reaches $1 billion in sales. He says he will then turn over 51% of the firm to his employees. McGovern has already sold 15% of the company to a profit-sharing employee trust.

Says McGovern: "I won't have at IDG what's happened in so many other businesses, where the owner dies or sells and a new team replaces the people who have given so much blood, sweat, toil and tears. What we try to do is build a total common family."

Of course, IDG still has a good way to go; its revenues in 1984, triple those of 1981, were just $225 million, but McGovern figures that revenues will reach the $1 billion mark by 1990.

McGovern is an intensely private person. IDG has 41 corporate units, each with its own president and business plan. His name appears only in *Computerworld*. But he founded, controls and runs the U.S.' biggest chain of computer publications, 62 at last count, as well as the biggest computer market research firm. IDG is private, with profits reportedly running about $20 million a year and no debt. His wealth is estimated at $250 million or so, and he says he's been offered around $500 million for his company.

McGovern, a construction manager's son, caught the computer bug in the tenth grade after reading a book. Thirty-three years later he still remembers the title: *Giant Brains; or, Machines That Think*. Inspired, he built a computer that was unbeatable in ticktacktoe. That won him a scholarship to MIT. He helped pay for school by editing a Boston-based computer magazine run by Edmund Berkeley, the author of *Giant Brains*. After college McGovern put an idea to work. He realized that IBM's rivals lacked information about computer customers; remember, this was 1964. He persuaded firms like Xerox, Burroughs and Univac to prepay $7,500 each for a census report, gathered in $75,000

MAY 10 1985

Senators:

RE: House Bill 219 Relating to Power Development Loans

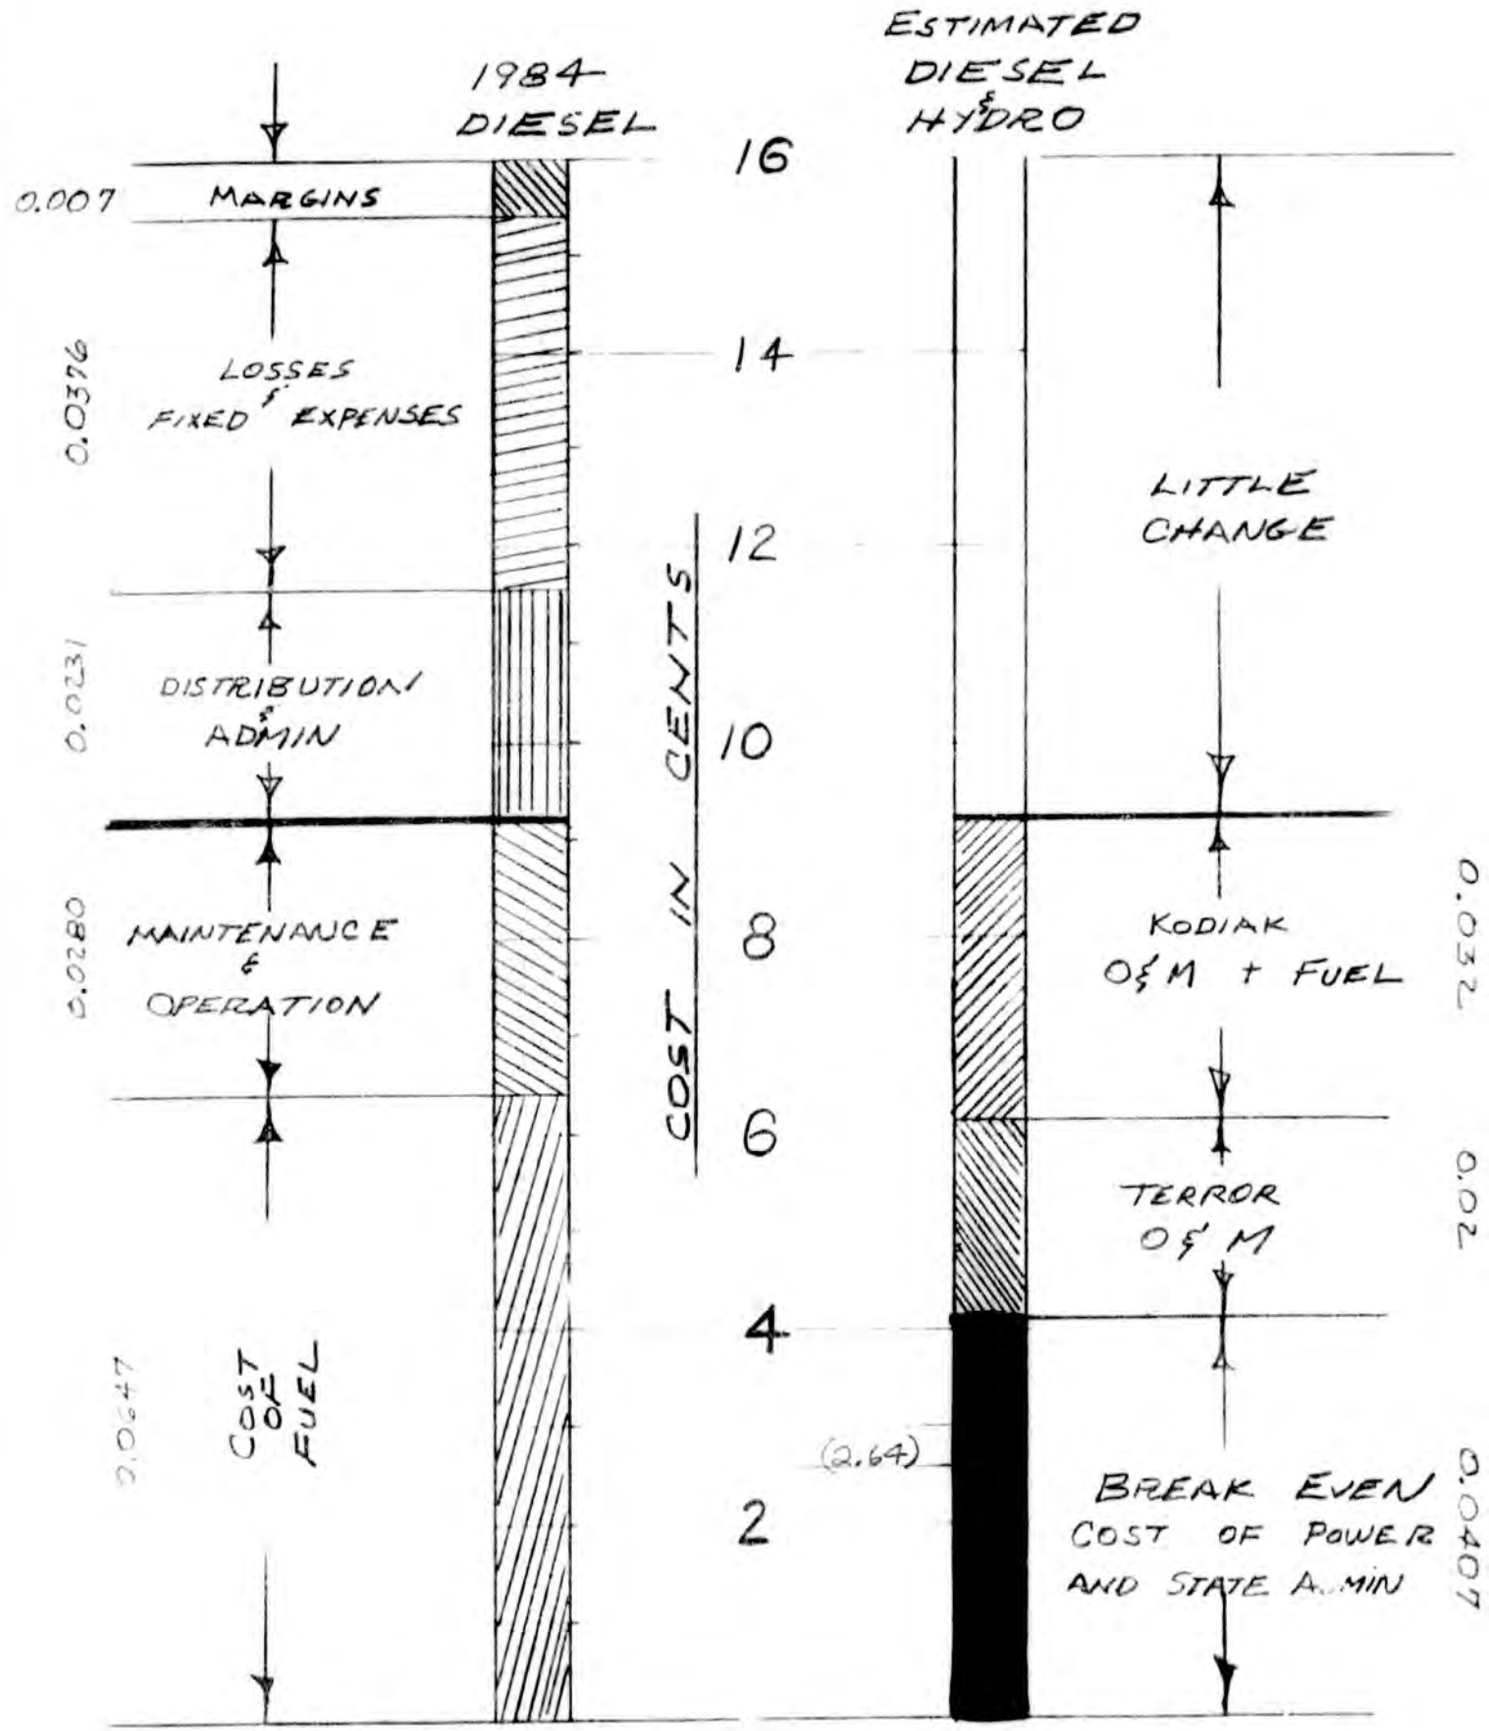
Absence of my signature on the Memorandum of Understanding Dated May 8, 1985 between APA and Four Dam Pool Communities indicates I do not endorse this agreement as it relates to HB 219.

Within this memo I strongly object to articles (1) periodic renegotiations, (7) two debt elements, (10) renegotiate in 15 years, (11) ties to Bradley Lake Project. Therefore do not support this memorandum, nor the passage of the bill.

Recommend deferring bill until next session.

Further recommend this entire issue be determined in binding arbitration, conducted by a panel of three arbitrators. Two arbitrators, appointed respectively by the municipalities and Alaska Power Authority, would select the third.

Suggested Terms of Reference for Arbitration:



Are the facilities used and useful, and were the expenditures necessary and prudently incurred?

The arbitrators would determine a fair market rate of interest, the appropriate amortization schedule to be applied to the fair value of the facilities for the purposes of sale or electric rate making.

Sincerely,

Don Koenigs

Oct. 28, 1985

Mr. Bruce Tenn[illegible]
Assistant Dist[illegible] Attorney
State of Alaska
1031 West 4th [illegible] ste 200
Anchorage, Ala[illegible]

Dear Mr. Tenna[illegible] Re: Tyee Power Project

I will shortl[illegible] shipping you a box containing data, (Thomas Bay Power Commission re[illegible]), which hopefully will help you in the [illegible] case. For your infor[illegible], the following is a brief history of the events which developed into [illegible] Tyee Project as we now know it.

Thomas Bay Pow[illegible] Commission was founded by the communities of Wrangell and Petersburg in [illegible], with responsibility of devising means for obtaining hydro power [illegible] for the two cities. Funds for these studies were grant appropri[illegible] from the legislature, made possible by our state representative [illegible] Naugen.

Our first engi[illegible] study was done at Swan lake (Thomas Bay), about twelve miles from [illegible]. This study was completed in Nov. 1975 by R.W.Beck and Assoc., and was [illegible] P.W. first phase project with an estimated completion date cost in [illegible] million dollars. This study was presented to state and federal [illegible] at that time, (Dept. of Commerce and Alaska Power Administration), [illegible] was turned down as too large a project for the two communities. [illegible] Bay Power Commission was instructed to continue the studies to [illegible] project with an initial first phase capacity which would be compatable [illegible] the present loads and load forcasts for the immediate future.

By August 1977, [illegible] sites had been narrowed down to four, by R.W.Beck. They were:

[illegible] Lake	7.5 Mw	@ 29 Million dollars
[illegible]ola Lake	8.0 Mw	@ 57 Million dollars
[illegible]/Tunk	7.9 Mw	@ 49 Million Dollars
[illegible]rise	3.9 Mw	@ 22 Million dollars

With the exc[illegible] of Sunrise lake, all possible projects had salmon runs besides being [illegible] costly for the KW generated, and no 2nd phase potential. Other sites no[illegible] which could be considered also had salmon streams or were in wilderness [illegible] designated areas which could result in lengthly litigation if an attempt was [illegible] to utilize them.

The Dept. of [illegible] Geological Survey Bulletin 1211-[illegible], [illegible] in 1969, listed three [illegible] hydro power sites in the nearby area, [illegible] Mt. lake in Burroughs [illegible] Ketchikan, and Eagle and Tyee Lakes on Stadfield Canal near Wra[illegible]. A copy of this booklet was obtained and Sutherford and Assoc., wh[illegible] doing some engineering work at Petersburg's Crystal Lake hydro fac[illegible], were asked to do a study with the limited information available at t[illegible], to see if there was potential for power at Tyee, Eagle lake be[illegible] a low elevation lake having substantial runs of all salmon species within [illegible] boundaries. The preliminary study proved promising, so the firm was hired to do an in depth study with the intent to apply for an F.E.R.C. permit. The stipulation at the time was to design a project with a first [illegible] capability to take care of the two communities present needs, with a [illegible] phase available when the demand required it.

The initial plan developed originally with two 5 Mw turbines at the first phase, with a single 5 Mw additional turbine when the second phase became necessary. This was changed to two 7½ Mw generators at the first phase, and a single 15 Mw at the second, to more balance the system. Power lines were scaled down for the first phase capability, with wood poles supporting the 69 KV capacity to Wrangell and 138 KVA on to Petersburg. Estimated cost of this project was in the forty to fifty million dollar range. For the second phase, needed after the turn of the century, it would be necessary to upgrade the entire transmission line components as well as the required additional generation and control costs, as it would then require the 115 KVA lines, steel towers, controls, etc, bringing the costs up considerably.

In the two years that passed before the F.E.R.C. permit application was hand carried to Washington D.C. in December 1979, a great many things occurred relating to energy in Alaska. Thomas Bay Power Commission had received $300,000.00 dollars from the Dept. of Commerce for the study, and the balance from the newly formed Alaska Power Authority, to pay for the $600,000.00 study needed to apply for the F.E.R.C. permit. As the APA had been established by the legislature to make the power resources of the state available to all the citizens of the State, and had the capability of acquiring the expertise necessary to bring this into being, it became obvious to the Thomas Bay Power Authority members that the time had arrived to turn the project over to the APA for the actual construction. With the concurrance of the cities, the project was turned over to the APA for construction with the proviso that after completion the cities would have three options. 1. APA would own and run the project, 2. APA could lease the project to Thomas Bay Power Commission, or 3. the cities could buy the project. (Later legislation and other events have apparently eliminated these options for the cities).

Many people have asked how our Tyee project increased to become a 20 Mw facility and such escalated costs, when we were told by the state and federal government at the beginning to keep our project within the present power needs of the two communities. I believe it should be clear to all that the Tyee project under APA planning, was no longer a project for Wrangell and Petersburg, but part of a long term objective to provide a power grid for south east Alaska. With the Tyee project in the center of south east Alaska, it was only logical to make change orders to upgrade transmission lines to carry such future loads and to increase the generating capacity. In fact, one of the last major change orders during tunnel excavation was to lower the intake tap depth to allow for a constant 20 Mw output from the facility. (Considering that the Wrangell/Petersburg area would not need until well after the turn of the century). This indicates to me at least, that the Tyee facility was designed for constant 20 Mw. output to supply power to the entire southeast area with their two proposed grid system, not just to meet intermittent demands that occur in small communities such as ours.

I do not fault the APA staff entirely for this. They were given a mandate by the legislature to make a power rich state, and they succeeded with a great deal of enthusiasm. Had the money held out, Southeast would have had an intertie for security and cheaper rates, the Railbelt area would have had Susitna, knowing that they still need, and the entire state would have been studying other power sources and methods including the rate stabilization program supported by the legislature. The result would be, shared equally among the power users statewide, would have provided affordable electric power for the entire state, something we all support.

The difficulties between the APA and the citizens of Wrangell and Petersburg over the past few years, have been among other things, due to the insistance

that the co[illegible]ic are liable for all the costs o[illegible]pite the fact that, as st[illegible], the project was overbuilt by [illegible]eds. Had the Thomas [illegible]n Commission and the two communiti[illegible]wnership, we are quite co[illegible]t that the project would have been built [illegible] the grant funds appro[illegible]by the legislature, simply because it would have remained a smaller pro[illegible].

Be that as it [illegible], we now have a project that will supply [illegible] communities with power far into the future, and it will have the capability to be an intregal part of an [illegible]o intertie when such a developement eventually occurs. Also, through the [illegible] of state officials, the legislature, [illegible]icials and the public, we [illegible]an agreement which hopefully will [illegible] resolve and set to rest, [illegible]egional, regional, and statewide [illegible]ncerning these hydro[illegible]e the agreement is implemented, [illegible]sult in stable rate[illegible]nstituents and hopefully re[illegible]minate the narrow and [illegible]l attitudes which in the past [illegible]ttempts to bring state[illegible]development into being.

As you have [illegible]ed, I will be sending you copies of [illegible]ta that we have which [illegible]pertinent to the Tyee project and [illegible]er runs. I should emph[illegible]wever, that with both the AEA and [illegible]nd Assoc. having their [illegible]s in Anchorage, we soon found ourselves excluded from much of the early [illegible]s in the project. This early exclusion of our input did much to com[illegible] to turn the construction phase [illegible], and as a result we [illegible]ittle or no input on the decisions [illegible] the project from a 2 ph[illegible]n into a single full scale facility. [illegible] resulted in our havi[illegible]e no records on any decisions regard[illegible] orders or information [illegible]changes to the concept of the [illegible]. Because of this, our [illegible]may not help you a great deal [illegible]tainly welcome to [illegible]ave and hope that they provide [illegible]taff some of the info[illegible]you might need.

Sincerely,

Terry Lindberg

P.O. box 613
Wrangell, AK 99929

Dear Harry:

Thanks very much for your note and copy of your letter to Assistant D.A. Bruce Tennant.

Your points are well taken. There are many lessons to be learned from our experience with the Tyee Project. One lesson the APA and all State agencies should learn from this experience is not to leave policy decisions (e.g. the size of the Tyee) to consultants. Local decision-making and local control of projects is the only way to keep spending under control.

I certainly hope the State can win the current lawsuit over cost overruns on Tyee. This could have a significant impact on power rates for Wrangell and Petersburg in the long term by reducing the state debt service component.

With the passage, last session, of House Bill 219 we have finally managed to construct a framework for agreements with the APA for power sales to the communities. Now we are in for the ongoing work of making those agreements function.

Two items we will be monitoring closely in my office are those of insurance costs for the project and APA spending of program receipts from power sales. Insurance costs are significantly higher than forecast and we are getting less comprehensive coverage than last year. We are looking into the possibility of a state insurance pool for hydro projects. The APA, I feel, will always push to attribute whatever costs they can to power sales program receipts. I will be working with the House Finance Committee to do what we can about this ongoing problem.

Anyway, thanks again for your letter; let me know if there is anything I can do.

Sincerely,

John Sund, Representative

U.S. DEPARTMENT OF COMMERCE
Economic Development Administration
701 "C" Street, Box 10
Anchorage, Alaska 99513

May 9, 1985

Honorable John L. Sund
Distract 1-B
The Legislature
State of Alaska
Juneau, Alaska 99811

Dear Representative Sund:

In January, 1985, the Economic Development Administration of the U. S. Department of Commerce authorized the submission of a formal application by the City of Saxman for a grant in the amount of $550,000, contingent upon a matching State Legislative appropriation in the amount of $1,245,312 for the construction of a traditional Tribal House (Longhouse).

This project would provide some $650,000 or more in construction wages to local workers in an area of exceedingly high unemployment. The project, which is part of the Tlingit-Haida Central Council and City of Saxman Overall Economic Development Programs, and is a significant component of tourism development planned within the Ketchikan area, would also employ some 100 local residents during the tourist season through dance performances, cultural interpretation, totem pole and other craft demonstrations, and from food and other sales.

As this appears to be a true economic development project benefitting Southeast Alaska and is one which is revenue producing, I am anxious to see the project succeed.

Because of your indicated support for this project, the City of Saxman has requested that I contact you on the current status. If there is some way in which I may be of assistance in this regard, please let me know.

Sincere best regards,

Bernay Richert

Bernhard Richert
Economic Development
Representative

IN THE HOUSE BY THE FINANCE COMMITTEE

CS FOR HOUSE BILL NO. 219 (Finance)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and <u>electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state,</u> none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) A loan from the fund <u>shall</u> [MUST] be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) [THE MARKET RATE OF INTEREST FOR A LOAN OF COMPARABLE SIZE AND DURATION AT THE TIME THE LOAN IS MADE; AND

(2)] the [ESTIMATED] costs, <u>at the time the power sales</u>

agreement is initially negotiated or renegotiated, of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund;

(2) the effect of the loan terms on the wholesale power costs to all utilities purchasing power from the initial project;

(3) the long-term benefits to consumers and communities of stable wholesale power costs;

(4) the affordability of initial wholesale power costs that result from the loan terms with utilities purchasing power from the initial project;

(5) increasing repayment, not to exceed five years, of debt service payment per kilowatt hour gradually over the initial period of a loan repayment schedule to the extent necessary to avoid significant rate increases to the consumer;

(6) the existing excess capacity of power projects; and

(7) the effects of increased capacity utilization, inflation, and alternative energy production costs over the life of the initial project.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) In (a) of this section "initial project" means the project described in AS 44.83.398(a).

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. RATE REOPENERS. A power sales agreement for the sale of power from the initial project, as described in AS 44.83.-398(a), financed with a loan under AS 44.33.610 may include among its provisions an agreed schedule of wholesale power rates notwithstanding the provisions of AS 44.83.398, but must include a provision for a rate reopener.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or an electric operating entity established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

Sec. 44.33.625. RATE REOPENERS. A power sales agreement for the sale of power from the initial project, as described in AS 44.83.-398(a), financed with a loan under AS 44.33.610 may include among its provisions an agreed schedule of wholesale power rates notwithstanding the provisions of AS 44.83.398, but must include a provision for a rate reopener.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or an electric operating entity established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

AMENDMENT

TO: "Discussion Draft" HB 219

Page 2, Line 23:

Replace Section 4 with:

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.~~83~~ 825. RATE REOPENERS. A power sales agreement for the sale of power from the initial project financed with a loan under AS 44.33.610 may include among its provisions an agreed schedule of wholesale power rates notwithstanding the provisions of AS 44.83.398 but must include a provision for a rate reopener, ~~after the first 15 years~~.

Pat:

(1) If this is acceptable we have a deal.

(2) The major issue in .398 is the separate accounting of debt service and O+M. The ability to avoid .398 will allow them to be put together in one fixed rate.

(3) Heath is discussing issue with your staff now

Dave:

The communities and Native corporations have agreed to this. Heath and accept Pourchot amendment. Shively assures me Heath has direct support of the governor's staff.

This looks good to me — let's get a clean COPY - I'll talk to Richard & Heath

Pat

JEAN -

I DON'T LIKE POLICY BASED ON PERSONALITY, HOWEVER, I WILL NOT OBJECT IF WE CAN GET ALL TO SIGN OFF ON IT. BETTER AN UNDERSTANDING, HOWEVER FLAWED, THAN NOTHING. CERTAINLY WE HAVE MADE HEATH REALIZE THE PRIORITY OF THE ISSUE. I HOPE ~~GUESS~~ OUR TIME HAS BEEN WELL SPENT. NOW THE FLOOR FIGHT!

Representative John Sund
Alaska State Legislature
Pouch B (MS 3100)
Juneau, Alaska 99811

Dear Representative Sund:

Attached is a computer analysis that forms the most promising basis for agreement in our current discussions with the Alaska Power Authority. As we mentioned to John Hartle, this model was proposed by Bob Heath and Gordon Harrison, and grew out of certain reservations expressed by the Power Authority staff in response to a prior proposal that was also made by Gordon Harrison. The model appears to offer an affordable wholesale power rate to the communities and a fair return to the state.

For purposes of comparison, we have also included a printout of the first Harrison proposal. As you can see, that proposal featured an agreed wholesale power rate schedule that was to cover both debt service and operations and maintenance (O & M). Debt service would be funded out of any revenues remaining after O & M was paid. A floor and ceiling rate of return on the state's investment would trigger either increased payments by the communities or an early retirement of principal debt.

The Power Authority staff felt that this type of agreement might be difficult to administer because it would make debt service revenues highly dependent on O & M costs over which they would exercise little control. They were also concerned that it placed the risks of inflation, low loads, and excessive O & M costs squarely on the state, without sufficient incentives to the communities to assure the state of a fair return. Of course the benefits of high loads and lower-than-projected O & M costs would also be enjoyed by the state.

The new proposal has the virtue of simplicity. Each community would pay for O & M at the actual pooled average rate for all four projects, and thus bear much of the risk and benefit of fluctuations in load and cost. In this example, "debt service", or an amount above O & M, would be charged at 2.6 cents/kWh in 1986, rising to 4 cents/kWh by 1990, for all sales up to a particular combined forecast load. Sales above the

forecast would be deemed "incentive sales" and would be charged at 1 cent/kWh less than the regular debt service amount. This lower rate would make it possible to attract large industrial loads, and would give the communities an additional incentive to increase project utilization. Finally, the communities would contribute a total of $500,000 per year in addition to O & M to build a fund for renewals and replacements.

Because both O & M and debt service would be pooled, the wholesale power rate would be identical for all communities. This makes it possible to market the power from projects with high unit costs of O & M. The pooling of O & M is one reason that a statutory change is required in order to implement this proposal.

The rate of return to the state in this model is primarily sensitive to changes in load. By passing on the benefits of an incentive rate, we believe the communities can market substantial amounts of additional power to potential large loads that would otherwise develop their own diesel generation. The incentive sales increase the rate of return to the state to over 6%. They also lower the effective melded wholesale power rate to the communities. Without incentive sales, the forecast wholesale power rate would face stiff competition from alternative forms of generation, and the return to the state would be substantially lower.

The rate of return to the state is based upon revenues which include interest on reserves and the communities' contribution to the renewal and replacement fund. These are capital costs paid in consideration of the state's risk, and dedicated to the long-term preservation of the state's investment in the projects. The benefit of these funds will extend well beyond the period for which rate certainty will be guaranteed to the communities. We have not attempted to estimate the extent to which these reserves would be drawn down to pay for claims or improvements, or when such costs would be incurred.

The models provided are as follows:

1. Case H1-1 is the original proposal without any large loads.
2. Case H1-2 is the original proposal with large loads added.
3. Case H2-1 is the new proposal without any large loads.
4. Case H2-2 is the new proposal with large loads added.

I hope you will find this information useful evaluating the legislation necessary to implement the proposal. Please let me know if I can provide anything further.

Very truly yours,

MEMORANDUM

TO: Sen. Arliss Sturgulewski, Chair,
Senate Resources Committee

FROM: Rep. John Sund

RE: HB 219 "An act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

The purpose of this bill is to resolve the problems holding up four-dam-pool power sales agreements and to provide for payback of the $196 million appropriation made last year to complete the hydroelectric projects. The Alaska Power Authority and the six communities served by the four dams have been negotiating power sales agreements for 2½ years without success. The goal is a long-term power sales agreement that provides affordable electricity for the communities and a maximum return on the state's investment.

$210 million was appropriated last year; $196 million has been spent to complete the dams and pay off short-term construction financing issued by the APA. This appropriation was structured as a loan from the Department of Commerce and Economic Development to the APA to be paid off through power sales from the project. AS 44.33.620 sets terms for the loan.

As in existing law, the Finance Committee Substitute does not set in law exact terms for the loan, nor does it set power rates. These are left open for further negotiation. The bill provides specific guidelines for resolving the issue under a plan developed by Gordon Harrison of the APA board.

The APA and the six communities report recent significant progress in power sales agreement negotiations; the plan they are now working with requires the passage of CSHB 219 (Fin). Action is required this session to permit sales agreements which will capture additional loads for the under-utilized hydroelectric capacity.

The bill is supported by both the APA and the four-dam-pool communities. Bob Heath, Executive Director of the APA and representatives of the communities are expected to testify before the Resources Committee.

Sectional analysis:

Section 1:
Sections 1 and 5, propose a change in law to allow two communities to get together for joint operation of a dam. The main purpose is to allow the Thomas Bay Power Authority to operate the Tyee Dam. Tyee serves two communities (Wrangell and Petersburg); Current law requires one or the other to operate the dam. This section corrects that by adding "electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state" to the APUC statutes. Like the communities, the 'joint operating entity' would not be subject to APUC regulation.

Section 2:
This section amends the loan terms for the Power Development Revolving Loan Fund (AS 44.33.620). This fund was created last session and the statutory loan terms give little direction to the APA. The added language sets clear guidelines for the agencies to work with. Deleted is the requirement that the loan terms be set considering market rates of interest.

Section 3 adds a definition: "initial project" means the four dams.

Section 4 adds a provision for power sales contract rate reopeners. This protects the state in times of inflation when the power sales rate could not provide sufficient loan repayment in real terms and protects the communities should the price of alternate power generation drop significantly. An important provision is added allowing an agreed schedule of wholesale power rates to be included in the contracts. This allows a contract to be reached through negotiation which will provide for certainty in power rates as needed by utility planners. This also will provide for a greater return to the state in debt service from the project.

Section 5 adds joint operating entities to the definition of "qualified utilities" which may purchase power from the APA. (See explanation of Section 1)

Draft: April 23, 1985

SHORTCOMINGS OF PRICING APA POWER AS A PERCENTAGE OF AVOIDED COST

A. Problems for the purchasing utility (in the Alaskan context)*/

1. Loss of potential loads: Some or all potential large new loads that could increase project utilization will be lost, because such loads demand a higher degree of certainty over longer periods. Many such loads will either be met with private generation or cogeneration (e.g., Wrangell Forest Products) or will be lost entirely (e.g., Phillips). In the cogeneration case, the utility may be required by law to purchase excess cogenerated power from the private party, thus reducing the utility's own purchases from the APA project. In the case of loads lost because the economic activity is relocated (e.g., to the Lower 48), the community loses not only employment and taxes, but also the "induced" loads, i.e., increases in other community loads resulting from the economic activity represented by the primary load.

2. Ratemaking and billing problems: The utility must make its retail rates prospectively, yet its power costs will become known only retrospectively. Matching costs to rates during each rate period (and keeping rates fairly predictable for consumers), always a chore, becomes significantly more difficult.

3. Added administrative costs: A fairly sophisticated formula is needed to calculate true avoided cost, and the values for each variable in the formula must be recalculated at frequent (e.g., monthly) intervals. This would create some administrative burden even if (a) diesel were the only alternative, and (b) disputes with APA over the proper value for each variable never arose. (It is also difficult to continue getting realistic quotes for a large volume of diesel once the utility begins buying reduced volumes.) In practice, the difficulties are even greater because (a) the formula must accommodate other alternatives (e.g., cogeneration) as such alternatives become available, and (b) disputes with the APA over the value of individual variables are likely.

---

*/ Such pricing works well in power "pools" in which a sophisticated computer controls the generators of many producers on an instantaneous central-dispatch basis. The computer is programed to minimize total generation costs at all times, based on each generator's fuel cost, efficiency, and maximum/minimum operating guides. Cost savings made possible by using Utility A's generator rather than Utility B's to serve a portion of Utility B's load are "split" (usually on a 50/50 basis) through use of a share-the-savings rate the computer charges to Utility B and credits to Utility A. The actual rate for each transaction, and each utility's costs and savings for any given period, are known at once, facilitating utility ratemaking and billing. Nothing similar exists in Alaska, nor could it exist in the Four Dam Pool context where (a) the communities are not electrically interconnected, and (b) APA power is intended to displace thermal generation completely for most days of the year.

AMENDMENT

TO: "Discussion Draft" HB 219

Page 2, Line 23:

Replace Section 4 with:

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.~~33~~ 625. RATE REOPENERS. A power sales agreement for the sale of power from the initial project financed with a loan under AS 44.33.610 may include among its provisions an agreed schedule of wholesale power rates notwithstanding the provisions of AS 44.83.398 but must include a provision for a rate reopener~~, after the first 15 years~~.

DISCUSSION DRAFT

IN THE HOUSE

CS FOR HOUSE BILL NO. 219 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and regional electric authorities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state, none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) A loan from the fund shall [MUST] be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) [THE MARKET RATE OF INTEREST FOR A LOAN OF COMPARABLE SIZE AND DURATION AT THE TIME THE LOAN IS MADE; AND

(2)] the [ESTIMATED] costs, at the time the power sales agreement ~~loan~~ is ini-

tially negotiated [and at the time it] or is renegotiated, of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund;

(2) the effect of the loan terms on the wholesale power costs to all utilities purchasing power from the initial project;

(3) the long-term benefits to consumers and communities of stable wholesale power costs;

(4) the affordability of initial wholesale power costs that result from the loan terms with utilities purchasing power from the initial project;

(5) increasing repayment, not to exceed five years, of debt service payment per kilowatt hour gradually over the initial period of a loan repayment schedule to the extent necessary to avoid significant rate increases to the consumer;

(6) the existing excess capacity of power projects; and

(7) the effects of increased capacity utilization, inflation, and alternative energy production costs over the life of the initial project.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) In (a) of this section "initial project" means the project described in AS 44.83.398(a).

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. PRICE REOPENERS. A power sales agreement for the sale of power from a power project financed with a loan under AS 44.33.610 must include a provision for periodic price reopeners.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or a regional electric authority established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public

Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

RICK NEWLAND

The initial project offers a unique opportunity to share the infrastructure development in a sensible and equitable manner. the state or Federal Government has traditionally taken the responsibility for the infrastructure necessary to encourage statewide and/or regional economic development. The initial project has an excess capacity of approximately 59% at the present time. Of that 59% excess, approximately 49% is to be found in the Tyee project. The Tyee project, as an example, was built with excess capability because it is geographically well placed to aid regional and statewide energy and economic development. However, the interest on the excess capacity should be carried at state expense until such time as it is needed.

The current situation offers a unique opportunity for the communities and the state to share the burden of infrastructure development in a sensible and equitable manner. The provisions of HB 219 provide for the complete repayment of the principal and the maximum affordable interest rate which can be repaid under current conditions.

Repayment of the APA loan is computed at a fixed interest rate over a set term in order to yield a levelized debt service payment per kilowatt hour. Actual debt service is, in each year, the result of the payment of that portion of the levelized debt service amount corresponding to the fraction of the initial project's total capability which is actually sold in that year. The portion of the debt service amount not paid that year would have a principal component and an interest component. The principal component would be deferred to the end of the amortization period, to be repaid over the contract term remaining thereafter. The interest component is cancelled or treated as simply

unearned. The effect of this structure would be to establish a debt service rate which assumes the initial project is fully utilized and which remains level throughout the period of the loan.

ESSENTIAL LOAN CONDITIONS:

1. Interest rate of 4% on the fraction of the principal which corresponds to the fraction of initial project which is utilized in each contract year.
2. Principal amount of approximately $196 million.
3. Term of the loan is 50 years with a 40 year amortization period.
4. Annual debt service during the amortization period to be computed payment amount multiplied by a fraction, the numerator of which is the actual amount of energy sold that year, and the denominator of which is the total 378,607,000 kwh capability of the initial project.
5. Principal amounts of the loan not paid during the amortization period because of unsold capability shall be deferred until the fortieth year, and then repaid in equal installments without interest over the remaining ten years.

AMENDMENT

OFFERED IN THE HOUSE: BY: SUND

TO: _____ HOUSE BILL No. 219

SENATE BILL No. _____

PAGE: _____ LINE: _____

Page 1, line 13
Delete "regional electric authorities"
Replace with "electric operating entities"

Page 2, line 22, 23
Delete "a regional electric authority"
Replace with "an electric operating entity"

****

Purpose of amendment:

A term of art "regional electric authority" was inadvertantly used; the effect of using this term would be to deregulate an existing electric authority. The amendment would clarify the legislative intent and leave unchanged existing APUC regulation.

HB219
Sund

E. C. PHILLIPS & SON, INC.
Box 8235
KETCHIKAN, ALASKA 99901

March 28, 1985

Mayor Charles Freeman
City of Ketchikan, Alaska

Dear Chuck,

I am writing this letter to inform you that we are strongly considering buying diesel generators due to the high cost of K.P.U. power. We have done considerable research and found that we can generate for less than 6½¢ per kilowatt hour.

We feel that since Swan Lake is being utilized less than 50%, we should not have to pay a demand charge since there is a surplus of power. I am enclosing a copy of a proposal on diesel power which clearly shows that by using their option 3 plan at 6½¢ per kilowatt hour, we could save close to $40,000 a year. This is based on $1.25 per gallon for fuel and we are only paying $.94 per gallon at the present time.

We also have another option which would be to ship all of our product South during the season and close the plant at the end of the season. We normally keep a crew employed in the Winter to pack the fish and fill our orders directly from Ketchikan.

We would like to keep the plant open all year round, utilizing K.P.U.'s power, but the continuing high cost may prohibit us from doing this.

Thank you,

Jim D. Jones
Chief Engineer

Re: Diesel electric power conversion for your Ketchikan plant

Jim,

For your electric power requirements, I am pleased to offer you the following quote.

Option #1

2 (two) each NTA 495 G1, 1800 R.P.M. 110 KW prime, (125 KW w/o fan) diesel electric generators for the price of $39,025.00

Which includes the following:

* Skid mounted w/pad type vibration isolation
* Radiator cooled
* Unit mounted manual start control panel with complete instumentation and manual paralelling capability
* Unit mounted circuit breaker
* Stainless steel exaust flex and Nelson "critical level" exaust silencers
* Vernier throttles
* Batteries, rack and cables
* Custom Registry
* F.O.B. your plant, Ketchikan, Alaska - delivered

Alternates:

A. Wall mounted control panel for both units w/complete instrumentation for manual paralelling $9,528.00
B. Heat exchanger cooling (skid mounted) for both units...$1,267.00
C. Motor operated circuit breakers for both units $1,425.00

Option #2

2 (two) each Cummins N 855 G, 1800 R.P.M., 135 KW prime (140 KW w/o fan) diesel electric generators for the price of $47,335.00

Which includes the same equipment as in option #1.

Alternates:

A. Same as option #1 alternate A.....$9,528.00
B. " " B.....$2,156.00
C. " " C.....$1,425.00

Option #3

2 (two) each Cummins NT 855 G3 1200 R.P.M., 160 KW prime (170 KW w/o fan) diesel electric generators for the price of $57,200.00

Alternates:

A. Same as option #1 alternate A $9,528.00
B. " " B $1.625.00
C. " " C $1,425.00

Summarization:

Initial investment cost per KW (includes wall mounted panel, heat exchanger cooling, and motor operated breakers).

Option #1 $232.93
Option #2 $223.87
Option #3 $218.06

KW cost per hour, based on both units (set up heat exchanger cooled, w/wall panel, & motor operated breakers), operating continously at 3/4 rated load each for 5 years. Include the following:

(1) The investment cost amortized over 5 years
(2) Fuel @ rated consumption based on $1.25 per gallon
(3) $3.00 per hour for lube oil, filters, maintenence and 1 major overhaul in the 5 year period

Option #1.....Less than 8¢ per KW/hr.
(1) per KW/hr.....$0.0070907
(2) " "..... 0.0533333
(3) " "..... 0.0160000
$0.0764240

Option #2..... Less than 7¢ per KW/hr.
(1) per KW/hr.....$0.0065714
(2) " "..... 0.0465686
(3) " "..... 0.0142857
$0.0684761

Option #3..... Less than 6½¢ per KW/hr.
(1) per KW/hr.....$0.0062474
(2) " "..... 0.0465686
(3) " "..... 0.0117647
$0.0645807

As you can see the larger the unit, the lower the cost, if you can utilize the power. Remember while one unit is not being used your KW/hr. cost would [redacted] increase by the amortized factor, decrease by fuel & maintenance factors.

I hope that this has been some help to you. The prices quoted are firm for 60 days and subject to change thereafter. Availability on these units is 60 days. I look forward to doing business with you.

MEMORANDUM

TO: House Special Committee on State Loans

FROM: Richard D. Newland, Utilities Manager
Ketchikan Public Utilities

RE: Wholesale Power Cost Comparison

DATE: March 5, 1985

Attached you will find a tabulation, accompanied by a graphic presentation, showing projected wholesale power costs for the City of Ketchikan under three alternative scenarios. The generation of powe from the Swan Lake Hydroelectric Project is compared under HB 219 and the package proposed by the Alaska Power Authority (APA); we also project the costs of a like amount of power generated by diesel.

Several points should be emphasized regarding these numbers. First, these are wholesale rates. Rates to the customer would be considerably greater than what is presented here. Second, these are "marginal" rates, i.e., rates for power generated by the Swan Lake Project or by diesel generation used in lieu of Swan Lake. Their effect on Ketchikan's retail rates, up or down, is mitigated by Ketchikan's other sources of power, including other hydroelectric generation. Third, these rates do not account for needed generation in the future. Swan Lake is projected to meet Ketchikan's needs for approximately the next ten years, after which we will need to rely on new generation. Our future rates will therefore continue to be affected by changes in the energy program for Alaska.

In constructing these projections, we have relied on the following sources:

1. Load forecasts were developed by the APA.

2. Swan Lake operation and maintenance costs are from our current budget. They are inflated annually at the assumed inflation rate.

3. Diesel operation and maintenance costs are from the studies used to develop our most recent proposed rate ordinance. They are also inflated annually.

4. Diesel operation and maintenance costs are divided into fixed and variable costs. The fixed costs have been included under the Swan Lake projections because the diesels will be used as reserves.

5. APA debt service costs are from their projection of February 12, 1985.

6. Diesel fuel projections are from the Alaska Department of Revenue Mean Forecast of World Oil Price (Saudi Medium), calculated in 1983 dollars and then inflated at the assumed inflation rate.

7. Each of our cases uses different assumptions about 1985 diesel costs and about the rate of inflation. These assumptions are printed on the tables. The base case (Case 1), uses a 1985 diesel cost of 71¢ per gallon, computed from information provided by Chuck Logsden, Petroluem Economist for the Department of Revenue. The base inflation rate is 5% per year.

I would like to thank the Committee for the opportunity to present this information.

WHOLESALE POWER COST ALTERNATIVES

CITY OF KETCHIKAN – CASE 4

ALASKA POWER AUTHORITY
FOUR DAM POOL
OBJECTIVES IN NEGOTIATIONS

1) Form the foundation for a statewide energy program for Alaska;

2) Establish debt service so that rate shock is not experienced by the communities;

3) Establish entry rates for the communities at no higher than their avoided cost; and

4) Establish long-term rates which benefit the communities as well as provide a return to the state.

LETTER OF UNDERSTANDING

The negotiating team representing APA, Ketchikan, Copper Valley Electric Association, Kodiak Electric Association, Petersburg and Wrangell have agreed on the terms and conditions of a power sales agreement incorporating the following:

1. The written and oral understandings of the parties heretofore reached shall be placed in writing in agreed final form, and remaining comments of the parties will be mutually and expeditiously resolved and also incorporated in the agreement.

2. A rate stabilization fund shall be established as proposed in the communities' 17 point proposal funded in part by a State appropriation of $49,000,000.

3. The system increment proposal of the communities shall also be incorporated in such agreement.

We mutually recognize that certain statutory amendments are required to implement the agreements reached to date.

We expect to conclude draft O & M agreements and interconnection agreements following a mutual review of proposed contract revisions.

We will recommend to our respective boards and councils that the agreements be adopted and that we be authorized to execute them and to assist in the steps necessary to complete the financing.

SENATE FINANCE COMMITTEE
MAY 26, 1984
9:20 A.M.

CALL TO ORDER

CO-CHAIRMAN DON BENNETT CONVENED THE MEETING AT APPROXIMATELY 9:20 A.M.

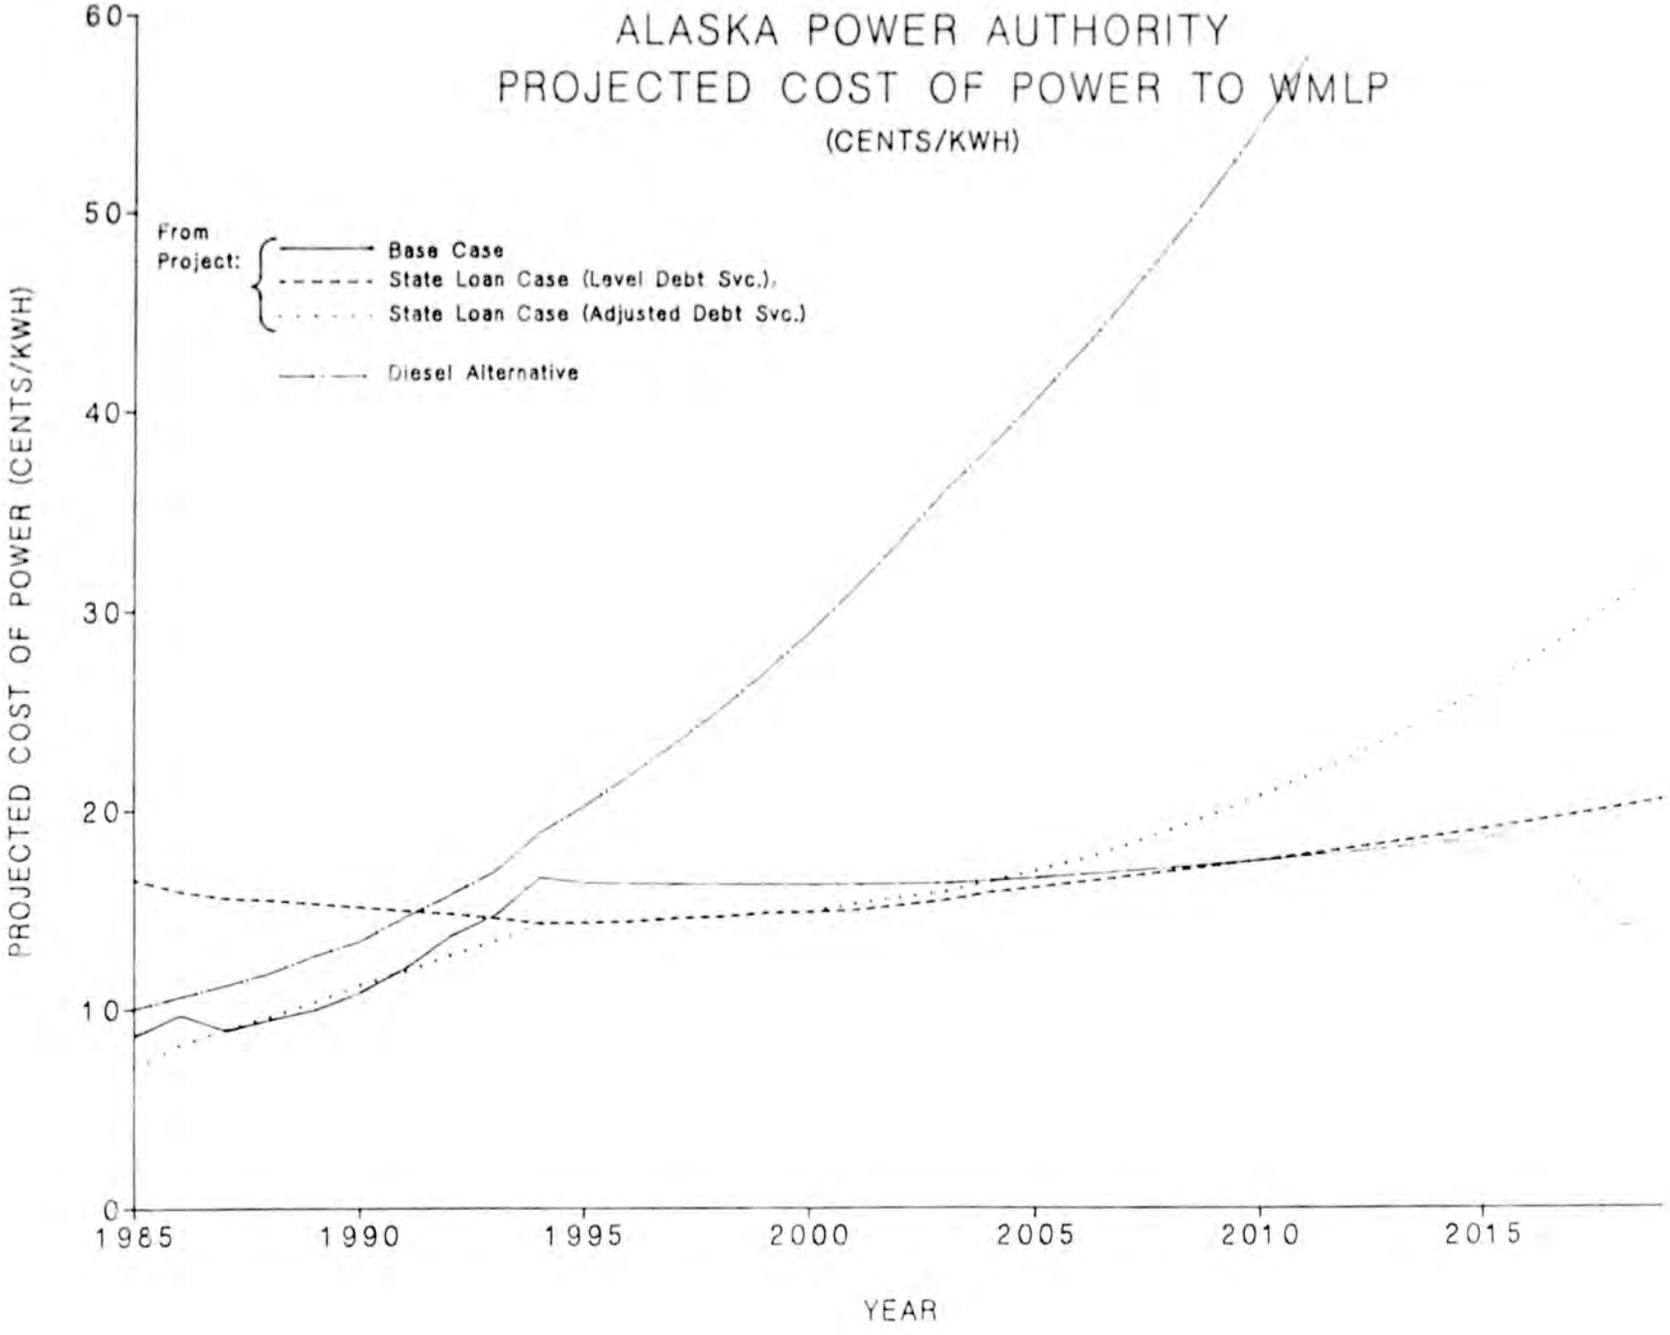
PRESENT MEMBERS PRESENT: SENATORS BENNETT, FERGUSON, MULCAHY, SACKETT, AND V. FISCHER. SENATORS JOSEPHSON AND FAIKS CAME IN LATER.
OTHERS PRESENT: MIKE GREANY, DIRECTOR, LEGISLATIVE FINANCE; P.S. DHILLON, REVENUE ANALYST, LEGISLATIVE FINANCE; MILT BARKER, DEPUTY COMMISSIONER, DEPARTMENT OF REVENUE; COMMISSIONER HEATH, DEPARTMENT OF REVENUE; COMMISSIONER LYON, DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT; REPRESENTATIVE HURLBERT; SENATOR KERTTULA; RICH UNDERKOFLER, CITY MANAGER, CITY OF PETERSBURG; DON KOENIGS, MAYOR, CITY OF PETERSBURG; KURT DZINICH, SENIOR ADVISOR, SENATOR ADVISORY COUNCIL; SUSAN WHITE, EXECUTIVE ASSISTANT, ALASKA POWER AUTHORITY; MARTHA FOX, ASSISTANT ATTORNEY GENERAL, DEPARTMENT OF LAW; TERRY ELDER, DEPUTY COMMISSIONER, DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT; AND STAFF FROM STATE OFFICES AND LEGISLATIVE OFFICES.

SUMMARY INFO

CSHB 684(FIN) AM AN ACT MAKING SPECIAL APPROPRIATIONS TO THE ALASKA POWER AUTHORITY; AND PROVIDING FOR AN EFFECTIVE DATE. DISCUSSION AND HELD IN COMMITTEE.

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THE PROPOSED SCS FOR CS FOR HB 684(FINANCE). HE THEN ASKED MR. LARRY CRAWFORD AND BILL BATT TO COME FORWARD AND DISCUSS THE PROPOSAL WITH THE COMMITTEE.

LARRY CRAWFORD



MR. LARRY CRAWFORD, EXECUTIVE DIRECTOR OF THE ALASKA POWER AUTHORITY CAME FORWARD TO TESTIFY AND INTRODUCED MR. BILL BATT, DIRECTOR OF FINANCE. SENATOR MULCAHY ASKED WHAT THE INTENT WAS OF THE ALASKA POWER AUTHORITY WITH REGARD TO SECTION 1, THE $210,000,000 AND THE POWER CONTRACTS. MR. CRAWFORD SAID THE INTENT OF THE POWER AUTHORITY WAS TO USE THE RENEGOTIATED AGREEMENTS AS THE BASIS FOR THE LOAN AND THE COMMUNITIES WOULD HAVE RATES BASED ON THOSE RENEGOTIATED AGREEMENTS. HE SAID THE ONLY TIME THEY WOULD ENFORCE THE EXISTING AGREEMENT WOULD BE WHERE THEY DID NOT HAVE A NEW RENEGOTIATED AGREEMENT.

SENATOR MULCAHY ASKED ABOUT CLARIFICATION ON SECTION 1. HE FELT THE APPROACH BEING TAKEN WOULD DO AWAY WITH THE RATE STABILIZATION APPROPRIATION THAT HAD BEEN LOOKED AT BEFORE WHEN GOING OUT TO THE BOND MARKET. HE SAID IT WAS HIS UNDERSTANDING THAT THE RATE STABILIZATION APPROPRIATION WOULD NOT BE NEEDED BECAUSE OF THE USE OF GENERAL FUNDS AND BECAUSE THE LANGUAGE IN THE AUTHORIZING BILL IS SUCH THAT THE INTEREST RATE CAN BE "BACKED IN."

MR. CRAWFORD SAID THIS WAS CORRECT, THAT THEY ARE LOOKING AT WHAT THE DEBT SERVICE PAYMENTS WOULD HAVE BEEN UNDER THE RENEGOTIATED AGREEMENT AND THEN THEY WILL BE RETURNING THE MONEY TO THE STATE IN ACCORDANCE WITH THOSE DEBT SERVICE PAYMENTS. THE INTEREST RATE IS THE DERIVED NUMBER AND LOOKS TO BE ABOUT AN 8% YIELD TO THE STATE ON THE $210,000,000 OVER THE LIFE OF THE LOAN. HE SAID THE PAYMENTS IN THE EARLY YEARS WILL BE LESS THAN IN THE LATER YEARS AND THEY CAN DO AWAY WITH THE RATE STABILIZATION FUND.

SCS FOR CSHB 589(FINANCE)

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THIS LEGISLATION. SECTIONS 1 THROUGH 3, CREATE THE POWER DEVELOPMENT REVOLVING FUND FOR THE PURPOSE OF IMPLEMENTING THE $210,000,000 LOAN FOR THE FOUR-DAM POOL PAY OUT. SECTION 4 ALLOWS THE CREATION FOR THE FOUR-DAM POOL.

Four Dam Pool: Round & Round We Go

Three meetings were held this week between legislators, the administration officials and representatives of the four-dam pool communities to discuss Rep. John Sund's House Bill 219. The bill represents the four-dam pool communities' latest attempt to come to an agreement with the Alaska Power Authority and the admininstration for long-term power rates that the communities can afford, and that offer the state a reasonable rate of return on its investment.

Negotiations began on an amicable, hopeful note, but by week's end, when House Bill 219 failed to move from a House Finance subcommittee, the pre-Easter talks ended on a hostile, confrontational note. The turn in events was termed "frustrating, but not surprising," by some of the players who have worked for two and e half years to reach the ever-elusive, long-term power cost agreement with the state.

In spite of the negative end to

(Continued on page 8)

Wunnicke Defends DNR Action on Royalty Gas Increase

Controversy erupted last week over a decision by the Department of Natural Resources (DNR) to increase state royalties on Cook Inlet natural gas. The action could result in significant increases for Anchorage utility consumers, and some lawmakers are concerned over the effect that would have on the rural power cost equalization program which provides power subsidies for rural consumers.

DNR announced on March 19 that it had notified five Cook Inlet gas producers (ARCO, Chevron, Marathon, Shell and Union Oil of California) that, effective April 1, it would no longer accept royalty valuation based on long-term contract prices that are significantly below current market value. A higher royalty valuation on the state's portion of Cook Inlet gas translates into about $8 million per year in additional revenues to the state.

It also means that the producers, under the terms of their contracts with purchasers, will pass the costs on, in this case to Chugach Electric Association and Enstar Natural Gas in Anchorage. Those utilities would probably seek APUC approval to pass the costs on to their customers.

Estimates vary as to the magnitude of the increases, but according to DNR Commissioner Esther Wunnicke, press accounts of a 20 percent jump are overstated. She feels prices would rise by no more than about ten percent for Chugach Electric Association, the utility that will be the most severely affected, and by about one percent for Enstar who relies less heavily on Cook Inlet gas. Chugach estimates utility rates will rise about four percent as a result of the action.

Wunnicke said recent negotiations by Enstar and Marathon set the market rate for natural gas at around $2.05 per thousand cubic feet (mcf), significantly higher than the rates established under long-term contracts the some producers are operating under. Chugach, under its present contract with Chevron, ARCO and Shell for Beluga gas, pays only $.21 per mcf. Wunnicke pointed out that although Chugach's gas purchase costs will increase by almost 50 percent, the gas represents only 30 percent of the utility's fuel requirement.

According to Wunnicke, who gave an overview on the subject to the Senate Resources Committee on April 1, DNR is merely exercising the state's right to obtain royalties on the higher "market value" of its natural gas. Wunnicke labeled the action a "lease enforcement action" and not an optional or arbitrary decision.

Wunnicke also stressed the importance of strict, yet even-handed enforcement of the state's leases. "If we hope to prevail in the North Slope royalty litigation, it is our view that we must act across the board to collect full value for the state's resources. It would be improper to have one standard of enforcement where oil companies bear the burden and a different more lenient standard where some of that burden is passed on to Alaska consumers," she said.

The effect on bush power subsidies is not clear. Some fear that an increase in Anchorage power rates will adversely affect the Power Cost Equalization program established last year which provides power cost subsidies to rural consumers. Some of the impetus to establish the program came from recognition of the fact that Anchorage enjoyed what amounted to a state subsidy in the form of low gas prices to the utilities, and that rural consumers should be afforded the same benefits. On March 25 Rep. Virginia Collins (R-Anchorage) circulated a letter to Sheffield claiming that rates established under the Power Cost Equalization program "are premised, in large part, on per kilowatt hour costs in the Anchorage area."

Wunnicke disagreed. "The marker for rural subsidies is set by statute at 8.5 cents per kilowatt hour, and this rate is unaffected by changes that might occur in urban power rates," she told the Senate Resources Committee. She also said that the lower gas prices have never been openly labeled a subsidy, and that if the Legislature decides to subsidize Anchorage then it

(Continued on page 6)

The Hyder Connection

The House Finance Committee gave a favorable recommendation to Rep. Robin Taylor's bill to link Hyder, Alaska with the rest of the state via marine highway service. Taylor (R-Wrangell) introduced the bill in mid-February to appropriate $22,000 to initiate trial summer service into the long-neglected Southeastern Alaska community. Taylor said he hopes to see the bill on the floor of the House for a vote early next week, and he hopes that the bill's minimal fiscal impact will help it in its journey through the Senate.

Hyder is a community of approximately 100 residents located at the head of Portland Canal, a long, scenic fjord that runs 90 miles along the U.S. - Canadian border just north of Prince Rupert, British Columbia. Hyder is directly across the canal from Stewart, a British Columbia mining town. Children from Hyder are bused to Stewart to attend school, and the currency used in town is Canadian. The State of Alaska provides very little in the way of services to Hyder, the town that calls itself "The Friendliest Ghost Town in Alaska."

The Stewart-Cassiar Highway opened last year, connecting the two towns to the Alaska/Yukon Highway 37, and Hyder asked the Legislature that it be designated as "Mile 0" of the Alaska/Yukon Highway. Proponents point out that Hyder is 141 miles closer to the Seattle than Prince Rupert, and that the road is superior to the Prince Rupert-Terrace portion of the Yellowhead Highway. Rep. Taylor testified that over 25,000 cars made the trip into Stewart and Hyder last year. Taylor would like to see the State help out one of its own, and he sees Hyder as a possibility for a future southern terminus of the Alaska Marine Highway. A companion measure, House Bill 202, that is also in House Finance, appropriates $2.1 million for construction of a ferry dock and terminal facilities at Hyder.

Chances of HB 202 passing this session are slim, however Rep. Taylor intends to keep pushing for a ferry terminal at Hyder. Joe Camp from the Marine Highway System claims that the northeast end of Portland Canal can be extremely windy, and that the twice-weekly summertime runs would give them some experience in navigating the canal.

Subsistence and Tlingit Culture

by Robert Willard

Let me allay any fear that the culture of the Tlingit nation is dying. There are those among you who preach the notion that the culture of the Tlingit is either dead or dying on the vine.

There are even some among the Tlingit people who express that fear. It may well be that these people, on their own or through their upbringing, write off the customary ways and the heritage of the Tlingit. But I can assure you, the culture of the Tlingit nation is alive and well.

To our younger people: do not believe that the culture is dying. It is there because you are there.

We thank and acknowledge our elders - our mothers and fathers who brought us here, and our aunts, uncles, grandmothers and grandfathers for teaching us to respect the culture and to respect our fathers, mothers, brothers, sisters, and our children. Respect is the cultural trait of the Tlingit people.

We acknowledge, too, those among us who have a culture to identify with. We applaud the Irish, the Filipinos, the Vietnamese, the African nations, the Russians - and others from around the world who are among us. We are pleased when we observe their folklore dances in our presence. They too have not lost the cultural identity and the inherited traits of their cultural beginnings. Likewise, they must respect the Tlingit when we act in our customary and traditional ways.

In order to understand this business of culture, you need first to identify what you claim is lost. These things may not be understood even by our own people.

You must understand the king's language on the terms "culture" or "cultural," "custom" or "customary," "tradition" or "traditional," and "heritage," "hereditary," or "inherited."

You should know the difference between these terms before you charge me, or my Tlingit people with having lost our cultural ties.

Permit me to explain certain aspects of culture, custom, tradition and heritage.

Tlingit is the culture of the land and waters around us. Likewise, the land and water are the culture of the Tlingit.

My five Tlingit names are part of the Tlingit culture, in fact my very existence is living proof of that culture. The honor we give to the Tlingit name is customary practice. The method that I use, perform and speak at ceremonial activities is the tradition of our people. All of the above is the heritage, because I inherited all from my mother and father.

"Subsistence is the very culture of the Tlingit Nation. . . . To take away subsistence . . . would constitute cultural genocide."

I belong to the Decitan, or clan of the beaver. That too is the culture. My Tlingit name is that of the beaver, and the headgear, the blanket, leg wear and make-up I wear at official Tlingit activity are all aspects of culture.

Occasionally you will hear of a "40-Day Party" being held for a deceased member of the Tlingit. This has become a tradition, although it is not of the true culture because this practice came with the advent of Christianity. The churches take credit for having "brought Christianity to the Tlingit people." Not true. Long before the Christians came to our shores, the Tlingit had a word for "God." The Tlingit accommodated the Christians' religion though, and instituted the 40-Day Party. In that event the favorite food of the decedent was served in the traditional way, usually our subsistence foods - the fish, the deer, the berries, the water plants, and other wildlife.

Subsistence is the very culture of the Tlingit Nation. It is of the land and the water around us. The methods we use to prepare and preserve our foods are the customary ways that we have used since life began. The manner in which we serve our foods is in the traditional way of the Tlingit nation, and the implements derived from the resources represent the Tlingit culture. All of these uses and methods are the heritage of the Tlingit nation. Thus, the subsistence use of the resources is more than traditional and customary.

Any effort to take subsistence away will be met with the full resistence of the Tlingit nation. The same is true of the Haida nation. To take away subsistence would constitute cultural genocide, by any interpretation.

Because we respect other cultures, we would never deny the Chinese his rice or the Norwegian his lutefisk.

We have never imposed our culture, customary or traditional ways upon others. They are reserved and revered by the Tlingit nation. All we ask is that you understand our ways, we do not ask that you respect them or observe our rites when they are occurring. Only to understand.

Our present generation, and the generations to come, will observe the cultural traits and customary way of life of the Tlingit nation. They will enjoy the fruits of our labors in the traditional way. That is our heritage and it will never be surrendered or lost. For that is the culture of the Tlingit nation. I have spoken.

Vern's Version

Presiding Officers I Have Known

By Vern Metcalfe

For those who are into Alaska Trivial Pursuit, it should be known that the first speaker of the House in 1913, was Earnest B. Collins. He was named aptly and from then on referred to as "Fox." His counterpart, from Seward, was L. V. Ray and no, he was not related to another present day senator, who has yet to be prexy of the Senate and is not included in the coalition ruling the Senate body this session.

E. B. Collins later moved to Fairbanks and last served as a senator in the 1949 Territorial Legislature. He was a delegate to the Constitutional Convention of 1955. No one else, to my knowledge, had a greater time span in legislative office than the Fairbanks attorney, who was born in 1873 and had resided in Alaska since 1904.

Collins was the only speaker to serve two consecutive terms until another Fairbanksan, Warren A. Taylor did so for the first two sessions of the State House. Taylor was a good friend of the writer (we served together in 1951 and again in 1955) and he was also the only member to be elected from three different towns -- Cordova, Kodiak, and Fairbanks. Taylor read law under Anthony J. Dimond, who had served eight years in the Territorial Senate before becoming a delegate to Congress, from 1933 to 1945, after which he became a federal judge for the Third Division.

One of the most colorful of all presiding officers, Taylor was once accused during a debate in the 1955 session of "defending more criminals than any other Alaskan attorney." Speaker Wendell P. Kay could have taken exception but agreed with Taylor when he replied, "you have that wrong, sir, I have defended more people accused of crime than any other attorney."

My acquaintance with speakers began with Stanley J. McCutcheon of Anchorage who served in 1949 and was perhaps the ablest I've seen in the chair. He could move more legislation off the calendar faster than anyone I've seen. He was often placed in the chair during the 1951 session, when William A. Egan was speaker, to do just that, move things. The Democrats had only a four vote margin (14 to 10) with two of these being prone to vote with the GOP unless sufficiently prodded to do otherwise.

Egan was a no-nonsense man in the chair although reduced to laughter on occasion -- once when Mike Stepovich, later a Territorial governor, got carried away with his fiery oratory. Seems that Mike was seated directly behind Alden Wilbur, a Fairbanks plumber and businessman, who got tired of dogging that Stepovich windmill approach to debate. Each time Mike stepped forward, Alden put out his arm and pushed him back, without Stepovich missing a word or Wilbur changing expressions.

". . . Taylor was once accused . . . of 'defending more criminals than any other Alaskan attorney.' Then Speaker Wendell P. Kay could have taken exception, but agreed when Taylor replied, 'you have that wrong, sir, I have defended more people accused of crime then any other attorney.'"

George Miscovich followed Egan and presided over the Republican-controlled 1953 House. Miscovich was non-plussed at being in the majority but handled the chores well. In 1951 there was a saying that went, "23 and Miscovich" since he never liked having a unanimous vote on anything. He also figured in a last night epic that is still spoken of when such matters are discussed. Seems he was presented with a painting he much admired (all presiding officers get gifts for surviving) and overcome with emotion, reared back in his chair which rolled off the podium with a horrendous crash. Miscovich recovered enough to crawl back up on his dais, slam down the gavel and call a recess.

Wendell Kay was given a solid majority in 1955, 21 to 3, where Miscovich had like numbers, 20 to 4, which was the fastest party turn around in legislative history. Kay had quite a crew to herd, consisting of 12 attorneys, plus 12 laymen. His session saw the passage of the "Unified Bar" which gave the Alaska Bar Association the ruling of the legal roost but only after a trick brought about by Rep. Dora Sweeney (D-Juneau).

The House was expected to pass the bill without any nays but each lawyer had to rise to explain the benefits of the passage. Rep. Sweeney determined that the laymen should upset various applecarts and when the vote was called Wendell Kay very nearly emulated Miscovich's upsy-daisy. He was busy scanning a newspaper, feet on his desk as the roll call was made, and suddenly dropped his feet, paper, and almost himself and yelled, "What in the hell is going on here?"

Seaborn J. Buckalew, Jr. also was on his feet in a panic but all was well when the lay people allowed that another vote be taken. There have also been instances wherein a speaker had a pet bill which he left the chair to champion and then heard the House roundly vote it down. All in fun, of course.

There have been some Senate presidents I've known, although when covering the legislature as a reporter I've always preferred the House. Where else could you have seen such a maverick as Bruce Kendall presiding? Bruce was the winner in a 20-20 contest. Kendall was later to become a Democrat after not gaining the Republican nomination, he lost to Walter J. Hickel in the 1966 primary for governor. Kendall was one of the shrewdest operators I've seen.

He once told the reporter following a stirring speech he made, before he became speaker, that his

(Continued on page 6)

Legislature . . .

(Continued from page 5)

proponents to be "freedom of choice" legislation, was sponsored by Sen. Bettye Fahrenkamp, and would exempt midwives from State Medical Board regulation, and instead grant the Department of Health and Social Services power to adopt regulations for educating and training persons engaged in the practice of midwifery.

Kay Connelly, a midwife who is licensed through the state of New Mexico and practices in Juneau, told members of the HESS committee that because midwives are not regulated they cannot get insurance. Connelly was one of five Juneau residents testifying in favor of the bill. Most midwives in Alaska are licensed through New Mexico, which is one of more than 10 states that has sanctioned the practice of midwifery.

One Anchorage doctor, who spoke on behalf of the Anchorage medical society, and said that they are "adamantly opposed" to this bill. Another doctor in Anchorage also voiced his objection to the bill, by stating that he doesn't "want to see the state legitimize a second class of care."

The bill defines the practice of midwifery as "giving education and advice concerning pregnancy; supervising, caring for, and advising women during pregnancy, labor, and the postpartum period; conducting deliveries without supervision; and caring for newborns and infants."

A student midwife in Fairbanks, Diane Fuller, said women have a "right to be attended by the person of our choice, and a right to alternative health care. And it is our constitutional right to choose where and when we give birth."

—The Senate postponed action on a bill that would allow a terminally ill patient to decide whether life-sustaining devices are used. Under the "living will" bill, CSSB 140(HESS) by Sen. Eliason, a patient would have the right to make treatment decisions "as long as the patient is able to do so." When a patient is no longer able to make decisions, hiw sworn statement regarding withdrawal of life-support systems becomes effective. Sen. Josephson (D-Anchorage) felt the circumstances constituting "not being able to make a decision" should be clearly defined in the legislation, and Sen. Ray (D-Juneau) expressed concern over a provision requiring doctors who will not honor the wishes of a patient to transfer the patient to another doctor. The Senate will take the bill up again on Tuesday, April 9.

—A bill creating the Alaska State Fire Commission to promote fire safety was passed out of Senate State Affairs on Tuesday, but with only one favorable recommendation. Sen. Bob Ziegler's Sb 209, and the companion funding measure, SB 210, prompted criticism from Anchorage Republican Tim Kelly who questioned a section in the bill granting the Commission power to adopt regulations. "What we're talking about here is a statewide, super-regulatory agency," Kelly said. "Frankly, I don't think that's necessary." Sen. Bill Ray of Juneau was the lone "do pass."

--Sen. Bettye Fahrenkamp (D-Fairbanks) testified before Senate State Affairs on Tuesday in support of her bill to continue the Administrative Journal, the bi-weekly compilation of state solicitations to bid and notices of changes in regulations. The journal was started on an experimental basis last year.

Four Dam Pool . . .

(Continued from page 8)

Pourchot until the Alaska Power Authority and the four-dam communities reach a compromise somewhere between 8 and 4 percent, and until a formula for figuring out avoided cost is settled on.

No one is saying what the final figures will be, but they are talking, and most of the parties agree that Bob Heath, the most recent in a chain of Alaska Power Authority executive directors, is the most reasonable person they have had to deal with so far. Heath is confident of reaching an agreement and said, "we're getting close and are working toward a conceptual framework," and he hopes that in another two or three meetings the factions can agree on a methodology. Heath said all of the ideas are on the table, and stated "nothing is sacred here - until we reach some agreement I'm refusing to recognize any boundaries..."

Vern's Version . . .

(Continued from page 4)

remarks might have been on the wrong bill — they were — but the mistake was a natural one for him. "I've never read a bill en toto yet, why start now?" he told me. He was extremely partisan prior to becoming the speaker but acquitted himself well once he gained the throne. It should also be noted that as House minority leader in 1959, the 1st State Legislature, he persuaded Jay Hammond, who was elected as an Independent, to join the five-man Republican force.

He explained to Hammond that he would be able to choose what committees he wished since the majority had to allow at least one GOP member on each. Hammond confessed that when he ran he didn't know which party appealed to him the most, thus his classification as an Independent.

More than one Republican later indicated that he was still a bit foggy as far as party affiliation went but that would be another column all in itself. Hammond was to preside from 1971 to 1973 as Senate President, then retired from the fray to his home in Bristol Bay only to be persuaded by Sen. Lowell Thomas, Jr. to run for governor with Thomas as his Lt. Gov. candidate.

Others that I came to know and admire included Frank Peratrovich of Klawock who holds distinction in leadership roles and service in both houses, which has never been attained and never will be attained by any other legislator. There was Bill Boardman, a Ketchikan Republican, who like Kendall surprised a lot of people, including me, by being an extremely effective speaker.

Gas . . .

(Continued from page 2)

should do so directly, not through slack enforcement of its leasing program.

Collins' letter to Sheffield urges the governor to suspend DNR's decision until the Legislature has a chance to study its impact on both rural and urban consumers. Wunnicke said that in response to these concerns the effective date of the decision has been postponed until April 15 to give lawmakers a chance to study the problem.

Sheffield's Budget "Revelation" Anti-Climactic At Best

Commentary
by Joe LaRocca

Several weeks ago, when I discussed here the ease with which Alaska's government and political establishment are able to manipulate Alaska's gullible press corps, I didn't anticipate the prompt confirmation they would obligingly proffer.

The case in point was the Sheffield administration's recent "revelation" that first quarter state revenue projections foretold a half billion dollar shortfall from earlier budget expectations.

The local rag, for example, carried this Page One banner headline: "New forecast: State revenue falls $463 million."

In fact, there was nothing at all new about the projections. They were, at best, an anti-climactic, after-the-fact reaffirmation of months' old projections which could be altered only by dramatic events which would have been obvious if and when they occurred.

If ever there was a non-news story, it was the one to which Alaska's naive news media over-reacted on April 1 when they announced, with drum rolls and fanfare, the "new" state revenue projections. April fools, indeed.

My news media colleagues compounded their folly when they erroneously attributed the $463 million shortfall announced by the administration exclusively to eroding oil prices.

In fact, only half that total is directly attributable to the softening world oil market. The other half is due to shortfalls from three general revenue sources: state investment yields ($75 million); property taxes ($60 million); and corporate income taxes ($95 million).

The distinction is subtle, but significant. There is little, if anything, the state can do to make up shortfalls directly attributable to declining world oil prices.

But there's much it can do to compensate for shortfalls from two of the other three revenue sources: to wit, raise taxation levels.

While I'm not necessarily advocating that option, it's clearly one over which state decision makers exercise significant control.

By hyper-dramatizing a non-news event, the news media played right into the hands of sly politicians, underscoring the myth that Alaska is going broke.

"By hyper-dramatizing a non-news event, the news media played right into the hands of sly politicians, underscoring the myth that Alaska is going broke."

That's precisely the perception which certain politicians are anxious to foster among rank and file Alaskans. The reality, which the politicians prefer to mask, is that Alaska is, relatively speaking, awash in money.

But by poor-mouthing their constituents, the politicians are more easily able to deflect constituent demands in favor of their own pet projects, which they continue to promote and fund behind the scenes

Legislature

--A proposal to guarantee the state Ombudsman access to confidential records of state agencies drew fire from Department of Health & Social Services representatives at a Senate State Affairs meeting on Tuesday. SB 9 by Senator Ray would grant the Ombudsman access "at all times to records of every state agency, including confidential records." Deputy Commissioner of the Department of Health & Social Services Connie Sipe objected to the language as being too broad. "Some federal statutes and regulations flatly prohibit public disclosure of client records, except for internal audits. Other federal laws condition receipt of federal funds by the state upon the state's agreement to honor client confidentiality requirements," she said. DH&SS recommended a substitute version with more restrictive language relating to confidential information. The bill will be brought before the committee again when the Ombudsman's Office and bill drafters have reached agreement on a proposed substitute.

--Senate Resources unanimously approved a bill which would remove a possible legal obstacle to development of Barrick Petroleum, Ltd.'s treadwell mine development in Juneau. The bill, SCS CSHB 273 (Res), grants extralateral mining rights to owners of mining claims located before statehood under federal mining laws. Extralateral rights enable the claim holder to follow a slanting vein of ore even if it slants out of the boundaries of the claim.

—A bill requiring the Department of Revenue to make public the list of candidates and groups to which campaign contributions were made and political campaign contribution credits granted was piloted through House State Affairs by its sponsor, Rep. Terry Martin (R-Anchorage). Martin requested this information earlier this year, but was not successful in obtaining the list until DOR was ordered by the Supreme Court to release it

—Proponents and opponents of a bill that would legalize the practice of midwifery testified in force Tuesday during a Senate HESS Committee teleconference with Anchorage and Fairbanks. SB 239, termed by many

(Continued on page 6)

LaRocca . . .

(Continued from page 5)

with cash surpluses obscured by political pettifoggery.

For example, legislators can use the state's misperceived impecunity as a pretext to roll-back state employees' salaries (while greedily pocketing their own extravagant paychecks).

The half billion dollar shortfall, which anyone could have computed with a dime store calculator, has prompted a re-examination by some legislators of the state's corporate income tax law. That's the likeliest target for a tax rate increase, because of lingering resentment among some legislators over 1981 changes in the 1978 law which they say have cost the state literally hundreds of millions of dollars in revenues foregone.

The 1981 amendments were sold to the legislature, based upon assurances from the Hammond administration and other industry supporters that they would not result in a significant decrease in state revenues over time.

But subsequent events revealed that an egregious error by the Department of Revenue had led to a gross miscalculation of future revenues which, according to figures developed in 1983, will reduce the state's corporate income tax revenues by more than two billion dollars over the next five years.

During a House Finance Committee meeting last week at which the director of the Revenue Department's research section testified, one member, Rep. Sam Cotten, drew from him an admission that the 1981 miscalculation has already cost the state incalculable millions of dollars in revenues foregone. Cotten estimates the losses "in hundreds of millions of dollars."

After the enactment of the new corporate income tax law in 1978, the major oil companies operating in Alaska took the state into court, contending that the statute was unconstitutional.

Later, they said they would settle the lawsuit out of court if the state would amend the law to satisfy their objections to it. It was an unwritten agreement to that effect which led to the 1981 amendments.

But the oil companies subsequently decided that the amendments did not go far enough in their favor, and they continued the lawsuit. A decision in State Superior Court upheld the state's position, and an appeal to the State Supreme Court is still pending.

A news report last week that the House Finance Committee was quietly drafting legislation to re-institute the 1978 law brought oil industry lobbyists scurrying to Juneau in their corporate jets to try to forestall that threat. The proposed legislation was introduced in the House on Wednesday, April 3, precipitating one of this legislature's potentially most explosive issues.

Helmar's Politicians Past

Sen. W.E. "Brad" Bradley (R-Anchorage) and the late Sen. John Huber (D-Fairbanks), 1978 Session.

Four Dam Pool . . .

(Continued from page 1)

the meetings, negotiations will continue, and representatives of the four-dam communities hope to iron out the loan repayment terms so they can finally sign power sales agreements that will assure their communities of stable electrical rates into the next century.

Rep. Pat Pourchot (D-Anchorage) headed the House Finance subcommittee where the bill is mired. When Pourchot refused to move the bill out of his subcommittee Rep. Robin Taylor (R-Wrangell) and Rep. David Thompson (R-Kodiak) badgered Pourchot about a time schedule for moving the bill. Taylor and Thompson represent a constituency who harbor a growing resentment over failure to reach an agreement between their city governments and the state on long-term electric rates.

Cities in Taylor's district have refused to accept agreements until they are put before the voters, and Taylor stated that he is afraid of a "consumer revolt" if something is not resolved soon. Rep. Thompson accused Pourchot of not appreciating the amount of time spent negotiating, and Taylor said four-dam communities desperately need to see the bill move.

Pourchot told Taylor and Thompson that they could have their pick of a final resting place for the bill, the subcommittee, the full Finance Committee, the Rules Committee, the House floor, or the Senate, and he indicated that persistence on their part would not change his mind.

Pourchot was more hopeful about continued negotiations between the state and the communities the day after the heated meeting. As chairman of the subcommittee he feels he must try to fashion a rate structure that will benefit the state as a whole. He thinks it would be presumptuous of the committee to move the bill before the Power Authority comes in with its offer, and Pourchot said "one or two points means literally millions of dollars." He wants to take the time to study the proposals, and he thinks it is important that all factions talk.

The four-dam pool communities are Ketchikan (Swan Lake), Wrangell and Petersburg (Tyee Lake), Valdez and Glenallen (Solomon Gulch), and Kodiak (Terror Lake). What they have in common are hydroelectric projects that have been financed by the state. The projects are very different, the communities are very different, but in order to finance the state's first petro-dollar dams, a pool was formed, now known as "the four-dam pool," or "the poor, damned fool," depending on who you talk to.

What is at stake is repayment of $196 million in loans from the state. The dams were built at a total cost of $490 million, and except for the $196 million owed, the projects were funded by state grants. The repayment terms are seen by some, including Pourchot, as precedent-setting, in terms of the "Energy Program for Alaska." The energy program is the statutory vehicle by which the Alaska Power Authority has authority to acquire or construct power projects in the state with approval of the legislature. One faction fears the long-term loss to the state if this legislature were to give up too much on the four-dam contracts, with so many unmet energy needs in the state.

According to House Bill 219, the communities would commit to an annual interest rate not to exceed four percent, a loan term not to exceed 50 years, and a 40-year amortization period. The communities want loan payments adjusted so the payment per kilowatt hour increases gradually over the first five years of the loan and remains fixed over the next 35 years. The deferred principal would be repaid with interest in equal annual installments during the last 10 years of the loan.

Last summer the Power Authority's offer was an eight percent average yield over 35 years. The four-dam communities made a counter proposal in September, that is basically what HB 219 calls for, four percent over 40 years. The four percent sounds good, but in reality does not equate to a four percent average total yield, said Kurt Dzinich, the senior advisor to the Senate Advisory Council. Dzinich has been following the four-dam issue for over three years during his tenure with the Senate. He figures the interest rate equates to 2.2 percent because the communities will only agree to pay a lower interest rate on the unused capacity of the dams. They also want to defer payment of the principal, interest free, until the last 10 years of loan. Community representatives claim some of the dams were grossly overbuilt, and they refuse to pay the high costs now for future power capacity.

Dzinich blames the longevity of negotiations on passage of a $210 million loan made by the Legislature to the communities last year. The loan is administered by the Department of Commerce and Economic Development, and paid off short-term bonds that financed the original projects. Payment of the short-term bonds changed the whole negotiating scenario that had gone on between the communities and the Alaska Power Authority.

Dzinich said that the APA, by law, must charge debt service on a loan, and the Dept. of Commerce must set the terms. The state agencies have to take into consideration the current market rate and the cost of alternative avoided cost. Avoided cost, Dzinich explained, is determined by figuring what a community like Ketchikan, for example, would pay for power should the Swan Lake hydro project not come on line - what they would pay if they had to buy a diesel generator, install it and operate it.

Figuring a formula for avoided cost gets confusing, too. The price of diesel fuel has dropped, and the communities are arguing against paying premium prices for hydro power when over the next five years they could be getting bargain electrical rates burning diesel fuel. Charles Freeman, mayor of Ketchikan, said that HB 219 puts his city over the amount they would pay for diesel, but would give them predictable rates in the long term.

Ketchikan has commercial customers who need predictability, and Freeman is afraid they will opt for buying their own diesel generators which they can operate cheaper in the short run. In addition to short-term lower rates, private businesses can take advantage of investment tax credits, Freeman stated.

In spite of the brief confrontation between Taylor and Thompson, who represent communities with real problems, and Pourchot, who sees his job as fashioning a rate structure that is in the state's best interest, it seems as though negotiations will proceed. House Bill 219 will not move out of the Finance subcommittee headed by

MEMORANDUM

TO: Sen. Arliss Sturgulewski, Chair,
Senate Resources Committee

FROM: Rep. John Sund

RE: HB 219 "An act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

The purpose of this bill is to resolve the problems holding up four-dam-pool power sales agreements and to provide for payback of the $196 million appropriation made last year to complete the hydroelectric projects. The Alaska Power Authority and the six communities served by the four dams have been negotiating power sales agreements for 2½ years without success. The goal is a long-term power sales agreement that provides affordable electricity for the communities and a maximum return on the state's investment.

$210 million was appropriated last year; $196 million has been spent to complete the dams and pay off short-term construction financing issued by the APA. This appropriation was structured as a loan from the Department of Commerce and Economic Development to the APA to be paid off through power sales from the project. AS 44.33.620 sets terms for the loan.

As in existing law, the Finance Committee Substitute does not set in law exact terms for the loan, nor does it set power rates. These are left open for further negotiation. The bill provides specific guidelines for resolving the issue under a plan developed by Gordon Harrison of the APA board.

The APA and the six communities report recent significant progress in power sales agreement negotiations; the plan they are now working with requires the passage of CSHB 219 (Fin). Action is required this session to permit sales agreements which will capture additional loads for the under-utilized hydroelectric capacity.

The bill is supported by both the APA and the four-dam-pool communities. Bob Heath, Executive Director of the APA and representatives of the communities are expected to testify before the Resources Committee.

Sectional analysis:

Section 1:
Sections 1 and 5, propose a change in law to allow two communities to get together for joint operation of a dam. The main purpose is to allow the Thomas Bay Power Authority to operate the Tyee Dam. Tyee serves two communities (Wrangell and Petersburg); Current law requires one or the other to operate the dam. This section corrects that by adding "electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state" to the APUC statutes. Like the communities, the 'joint operating entity' would not be subject to APUC regulation.

Section 2:
This section amends the loan terms for the Power Development Revolving Loan Fund (AS 44.33.620). This fund was created last session and the statutory loan terms give little direction to the APA. The added language sets clear guidelines for the agencies to work with. Deleted is the requirement that the loan terms be set considering market rates of interest.

Section 3 adds a definition: "initial project" means the four dams.

Section 4 adds a provision for power sales contract rate reopeners. This protects the state in times of inflation when the power sales rate could not provide sufficient loan repayment in real terms and protects the communities should the price of alternate power generation drop significantly. An important provision is added allowing an agreed schedule of wholesale power rates to be included in the contracts. This allows a contract to be reached through negotiation which will provide for certainty in power rates as needed by utility planners. This also will provide for a greater return to the state in debt service from the project.

Section 5 adds joint operating entities to the definition of "qualified utilities" which may purchase power from the APA. (See explanation of Section 1)

Draft: April 23, 1985

SHORTCOMINGS OF PRICING APA POWER AS A PERCENTAGE OF AVOIDED COST

A. Problems for the purchasing utility (in the Alaskan context)*/

1. Loss of potential loads: Some or all potential large new loads that could increase project utilization will be lost, because such loads demand a higher degree of certainty over longer periods. Many such loads will either be met with private generation or cogeneration (e.g., Wrangell Forest Products) or will be lost entirely (e.g., Phillips). In the cogeneration case, the utility may be required by law to purchase excess cogenerated power from the private party, thus reducing the utility's own purchases from the APA project. In the case of loads lost because the economic activity is relocated (e.g., to the Lower 48), the community loses not only employment and taxes, but also the "induced" loads, i.e., increases in other community loads resulting from the economic activity represented by the primary load.

2. Ratemaking and billing problems: The utility must make its retail rates prospectively, yet its power costs will become known only retrospectively. Matching costs to rates during each rate period (and keeping rates fairly predictable for consumers), always a chore, becomes significantly more difficult.

3. Added administrative costs: A fairly sophisticated formula is needed to calculate true avoided cost, and the values for each variable in the formula must be recalculated at frequent (e.g., monthly) intervals. This would create some administrative burden even if (a) diesel were the only alternative, and (b) disputes with APA over the proper value for each variable never arose. (It is also difficult to continue getting realistic quotes for a large volume of diesel once the utility begins buying reduced volumes.) In practice, the difficulties are even greater because (a) the formula must accommodate other alternatives (e.g., cogeneration) as such alternatives become available, and (b) disputes with the APA over the value of individual variables are likely.

*/ Such pricing works well in power "pools" in which a sophisticated computer controls the generators of many producers on an instantaneous central-dispatch basis. The computer is programed to minimize total generation costs at all times, based on each generator's fuel cost, efficiency, and maximum/minimum operating guides. Cost savings made possible by using Utility A's generator rather than Utility B's to serve a portion of Utility B's load are "split" (usually on a 50/50 basis) through use of a share-the-savings rate the computer charges to Utility B and credits to Utility A. The actual rate for each transaction, and each utility's costs and savings for any given period, are known at once, facilitating utility ratemaking and billing. Nothing similar exists in Alaska, nor could it exist in the Four Dam Pool context where (a) the communities are not electrically interconnected, and (b) APA power is intended to displace thermal generation completely for most days of the year.

4. Regulatory costs: For the cooperatives (Kodiak and Copper Valley), whose retail rates are regulated by the Alaska PUC, rate filings and rate cases will become more frequent, more complex, and more costly. If the past is a guide, the APUC may also require the co-ops to raise/lower retail rates to "track" the fluctuating wholesale cost of power to the co-op, thus producing fluctuating retail rates.

5. Planning problems: The search for alternative sources of power supply with more predictable long-term costs would be intensified and simultaneously complicated. Presumably the planning process would be biased (rationally) toward predictability, even if the price of predictability were that somewhat higher retail rates might result from the more predictable alternatives.

6. Uncertain impact on utility financing: It is not clear that a utility would be able to finance additions to its distribution system and/or its generating plant as easily or inexpensively as would otherwise be the case, since the utility's revenue stream and its ability to maintain required coverage ratios and reserves would be somewhat unpredictable.

B. Problems for the State of Alaska as the seller of power

1. Reduced revenue: Compared with long-term contracts under the terms of HB 219 pricing method, power sold on a percentage-of-avoided-cost basis is likely to produce less total revenue for the State, even if one assumes that loads are equal in both cases. But loads will actually be less (see ¶ A.1. above). The loss of potential large new loads that would have produced more revenue for the State would make the comparative revenue disadvantage to the State worse.

2. Increased revenue risk: This would take two forms. First, the State would take the entire risk of further downward movement in the price of diesel and the cost of alternative resources, whereas under HB 219 the communities would bear that risk entirely. Second, because the utilities would be free, over time, to switch wholly or partially to other sources of supply, and because the utilities would have an incentive to investigate and pursue such other sources, the State would face some risk of losing even the existing loads of the utilities, as well as utility load growth.

3. Risk of negative rate of return (failure to cover current costs): This simply indicates the extreme to which the State's additional risk could take it. Under HB 219, the State is assured that (a) O&M costs will be completely paid by the utilities, and (b) some positive return, in addition to return of the principal, will be earned on the State's loan. If wholesale rates are tied to actual avoided costs of the utilities, however, a sufficiently great drop in actual avoided costs would result in the APA failing to cover even its O&M costs. In less extreme cases, APA might cover its O&M costs but fail to earn sufficient revenue to repay the principal and/or interest on the loan.

4. Added administrative costs: Administering such a pricing system would be just as complex and labor-intensive for the APA as it would be for the utilities.

MEMORANUDM

TO: Rep. John Sund
FROM: J. Hartle, PA

RE: Amendment to Subcommittee draft of HB 219

Here are some reasons for adding the section:

*Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. RATE REOPENERS. A power sales agreement for the sale of power from the initial project financed under AS 44.33.610 may include among its provisions an agreed schedule of wholesale power rates notwithstanding the provisions of AS 44.83.398 but must include a provision for a rate reopener.

1. Will allow the present negotiations to continue.

Negotiations are presently moving forward under a plan from Gordon Harrison. His plan is to offer a wholesale power rate which combines debt service and O & M. The plan would offer the purchasers of power a certain rate per kwh, O&M would be taken out of that rate and whatever is left above O&M would go to debt service. This is not allowed under AS 44.83.398 which specifies that O&M and Debt service must be separated and debt service must be the same for all projects.

2. Will return more debt service to the state.

Per KWH, Tyee has the highest O&M rate; this rate is by itself almost equal to the cost of alternative sources of power. Therefore, if the "Harrison plan" is implemented, very little would be left over for debt service thus limiting the debt service rate that can be paid by the other projects as well (under 398). Other projects with lower O&M are, with this amendment, allowed to provide a greater return to the state for debt service.

3. It still leaves the rate open to negotiations.

The amendment only provides for an agreed schedule, it is silent as to what that rate will be. Under AS 44.83.398 there is no way to agree on a schedule - the rates must fluctuate with loads - if loads go down, rates go up, if loads go up, rates go down. This is the exact problem the communities are trying to get away from - certainty is more important than the actual rate itself; the amendment allows for agreement.

Bill may facilitate power sales dealings

The Associated Press

JUNEAU — House lawmakers passed a bill Tuesday that supporters say offers new hope to officials trying to negotiate power sales agreements between the Alaska Power Authority and the so-called "Four-Dam Pool" communities.

The measure, first sponsored by Rep. John Sund, D-Ketchikan, was sent to the Senate after a 33-to-4 vote in the House.

The communities — Ketchikan, Wrangell and Petersburg, Kodiak, and Valdez and Glennallen — are all served by hydroelectric projects recently built in their back yards.

But municipal officials in those areas have been unable to reach long-term power agreements with the APA, fearing it will cost more to pay for hydroelectric power than to generate diesel-fueled power.

Officials from the communities currently are negotiating with the APA, trying to work out repayment schedules on a $210 million loan set aside last year by lawmakers to offset part of the cost of the four projects.

Sund said his bill outlines "general policy direction" for both sides involved in the power-sales negotiations.

A key provision in the measure would release the APA from offering repayment agreements at current market rates. By setting lower interest rates on the loan, APA officials hope to offer the communities power at more affordable rates.

State lawmakers in the late 1970s put together a $462.5 million, four-part hydroelectric project designed to make the state energy self-sufficient.

Anc. Daily News 4/17/85

Draft: April 23, 1985

SHORTCOMINGS OF PRICING APA POWER AS A PERCENTAGE OF AVOIDED COST

A. Problems for the purchasing utility (in the Alaskan context)*/

1. Loss of potential loads: Some or all potential large new loads that could increase project utilization will be lost, because such loads demand a higher degree of certainty over longer periods. Many such loads will either be met with private generation or cogeneration (e.g., Wrangell Forest Products) or will be lost entirely (e.g., Phillips). In the cogeneration case, the utility may be required by law to purchase excess cogenerated power from the private party, thus reducing the utility's own purchases from the APA project. In the case of loads lost because the economic activity is relocated (e.g., to the Lower 48), the community loses not only employment and taxes, but also the "induced" loads, i.e., increases in other community loads resulting from the economic activity represented by the primary load.

2. Ratemaking and billing problems: The utility must make its retail rates prospectively, yet its power costs will become known only retrospectively. Matching costs to rates during each rate period (and keeping rates fairly predictable for consumers), always a chore, becomes significantly more difficult.

3. Added administrative costs: A fairly sophisticated formula is needed to calculate true avoided cost, and the values for each variable in the formula must be recalculated at frequent (e.g., monthly) intervals. This would create some administrative burden even if (a) diesel were the only alternative, and (b) disputes with APA over the proper value for each variable never arose. (It is also difficult to continue getting realistic quotes for a large volume of diesel once the utility begins buying reduced volumes.) In practice, the difficulties are even greater because (a) the formula must accommodate other alternatives (e.g., cogeneration) as such alternatives become available, and (b) disputes with the APA over the value of individual variables are likely.

---

*/ Such pricing works well in power "pools" in which a sophisticated computer controls the generators of many producers on an instantaneous central-dispatch basis. The computer is programed to minimize total generation costs at all times, based on each generator's fuel cost, efficiency, and maximum/minimum operating guides. Cost savings made possible by using Utility A's generator rather than Utility B's to serve a portion of Utility B's load are "split" (usually on a 50/50 basis) through use of a share-the-savings rate the computer charges to Utility B and credits to Utility A. The actual rate for each transaction, and each utility's costs and savings for any given period, are known at once, facilitating utility ratemaking and billing. Nothing similar exists in Alaska, nor could it exist in the Four Dam Pool context where (a) the communities are not electrically interconnected, and (b) APA power is intended to displace thermal generation completely for most days of the year.

4. Added administrative costs: Administering such a pricing system would be just as complex and labor-intensive for the APA as it would be for the utilities.

RE: Amendment to Subcommittee draft of HB 219

Here are some reasons for adding the section:

*Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. RATE REOPENERS. A power sales agreement for the sale of power from the initial project financed under AS 44.33.610 may include among its provisions an agreed schedule of wholesale power rates notwithstanding the provisions of AS 44.83.398 but must include a provision for a rate reopener.

1. Will allow the present negotiations to continue.

Negotiations are presently moving forward under a plan from Gordon Harrison. His plan is to offer a wholesale power rate which combines debt service and O & M. The plan would offer the purchasers of power a certain rate per kwh, O&M would be taken out of that rate and whatever is left above O&M would go to debt service. This is not allowed under AS 44.83.398 which specifies that O&M and Debt service must be separated and debt service must be the same for all projects.

2. Will return more debt service to the state.

Per KWH, Tyee has the highest O&M rate; this rate is by itself almost equal to the cost of alternative sources of power. Therefore, if the "Harrison plan" is implemented, very little would be left over for debt service thus limiting the debt service rate that can be paid by the other projects as well (under 398). Other projects with lower O&M are, with this amendment, allowed to provide a greater return to the state for debt service.

3. It still leaves the rate open to negotiations.

The amendment only provides for an agreed schedule, it is silent as to what that rate will be. Under AS 44.83.398 there is no way to agree on a schedule - the rates must fluctuate with loads - if loads go down, rates go up, if loads go up, rates go down. This is the exact problem the communities are trying to get away from - certainty is more important than the actual rate itself; the amendment allows for agreement.

4. Regulatory costs: For the cooperatives (Kodiak and Copper Valley), whose retail rates are regulated by the Alaska PUC, rate filings and rate cases will become more frequent, more complex, and more costly. If the past is a guide, the APUC ma, also require the co-ops to raise/lower retail rates to "track" the fluctuating wholesale cost of power to the co-op, thus producing fluctuating retail rates.

5. Planning problems: The search for alternative sources of power supply with more predictable long-term costs would be intensified and simultaneously complicated. Presumably the planning process would be biased (rationally) toward predictability, even if the price of predictability were that somewhat higher retail rates might result from the more predictable alternatives.

6. Uncertain impact on utility financing: It is not clear that a utility would be able to finance additions to its distribution system and/or its generating plant as easily or inexpensively as would otherwise be the case, since the utility's revenue stream and its ability to maintain required coverage ratios and reserves would be somewhat unpredictable.

B. Problems for the State of Alaska as the seller of power

1. Reduced revenue: Compared with long-term contracts under the terms of HB 219 pricing method, power sold on a percentage-of-avoided-cost basis is likely to produce less total revenue for the State, even if one assumes that loads are equal in both cases. But loads will actually be less (see ¶ A.1. above). The loss of potential large new loads that would have produced more revenue for the State would make the comparative revenue disadvantage to the State worse.

2. Increased revenue risk: This would take two forms. First, the State would take the entire risk of further downward movement in the price of diesel and the cost of alternative resources, whereas under HB 219 the communities would bear that risk entirely. Second, because the utilities would be free, over time, to switch wholly or partially to other sources of supply, and because the utilities would have an incentive to investigate and pursue such other sources, the State would face some risk of losing even the existing loads of the utilities, as well as utility load growth.

3. Risk of negative rate of return (failure to cover current costs): This simply indicates the extreme to which the State's additional risk could take it. Under HB 219, the State is assured that (a) O&M costs will be completely paid by the utilities, and (b) some positive return, in addition to return of the principal, will be earned on the State's loan. If wholesale rates are tied to actual avoided costs of the utilities, however, a sufficiently great drop in actual avoided costs would result in the APA failing to cover even its O&M costs. In less extreme cases, APA might cover its O&M costs but fail to earn sufficient revenue to repay the principal and/or interest on the loan.

April 11, 1985

MEMORANDUM

TO: Senator Bettye Fahrenkamp, Chairman

FROM: Senator Jan Faiks

SUBJECT: Background on Senate Bill 263, an Act relating to disqualification for certain state loan programs for failure to pay child support.

This bill will disqualify persons who have an overdue child support obligation from participating in certain state loan programs. Persons who are delinquent in their payments to the Child Support Enforcement Division of the Department of Revenue (CSED) will be prevented from receiving loans from any of the following programs:

Section of Bill	Loan Program
Section 1	Agricultural Loan Program
Sections 2 & 3	Alaska Student Loan Program
Section 4	Commercial Fishing Loan Program
Section 5	Alaska Housing Finance Corporation
Section 6	Veteran's Loan Assumption

Section 7	Mining Loan Program
Section 8	Housing Assistance Loan Program
Section 9	Alternative Technology and Energy Loan Program
Section 10	Residential Energy Conservation Loan Program

Delinquent child support is a monumental problem in Alaska. As of April 2 of this year, CSED has 7198 cases having a total arrearage balance of over $30,000,000. The Division is now determining what portion of this debt is owed by loan recipients. Once this information is available, I will forward it to the committee.

The Division's files are computerized, and it can share information with loan agencies in three ways. Upon receiving a call from an agency, CSED can respond within minutes with a status report on a particular loan applicant. The Division can match computer tapes with any agency which has a system which is compatible with its IBM equipment. Finally, CSED sends a monthly statement to all absent parents which verifies their current obligation status. The parents can provide a copy of this statement to the lending agency when they file their loan applications, or upon request, CSED can verify their obligations in writing.

Support payments are a debt that is owed to the children of Alaska. When payments are not made, our public assistance programs must often pick up the cost of maintaining our children's health, safety, and comfort. To alleviate hardship and reduce our public welfare costs, I ask you to act favorably on this bill.

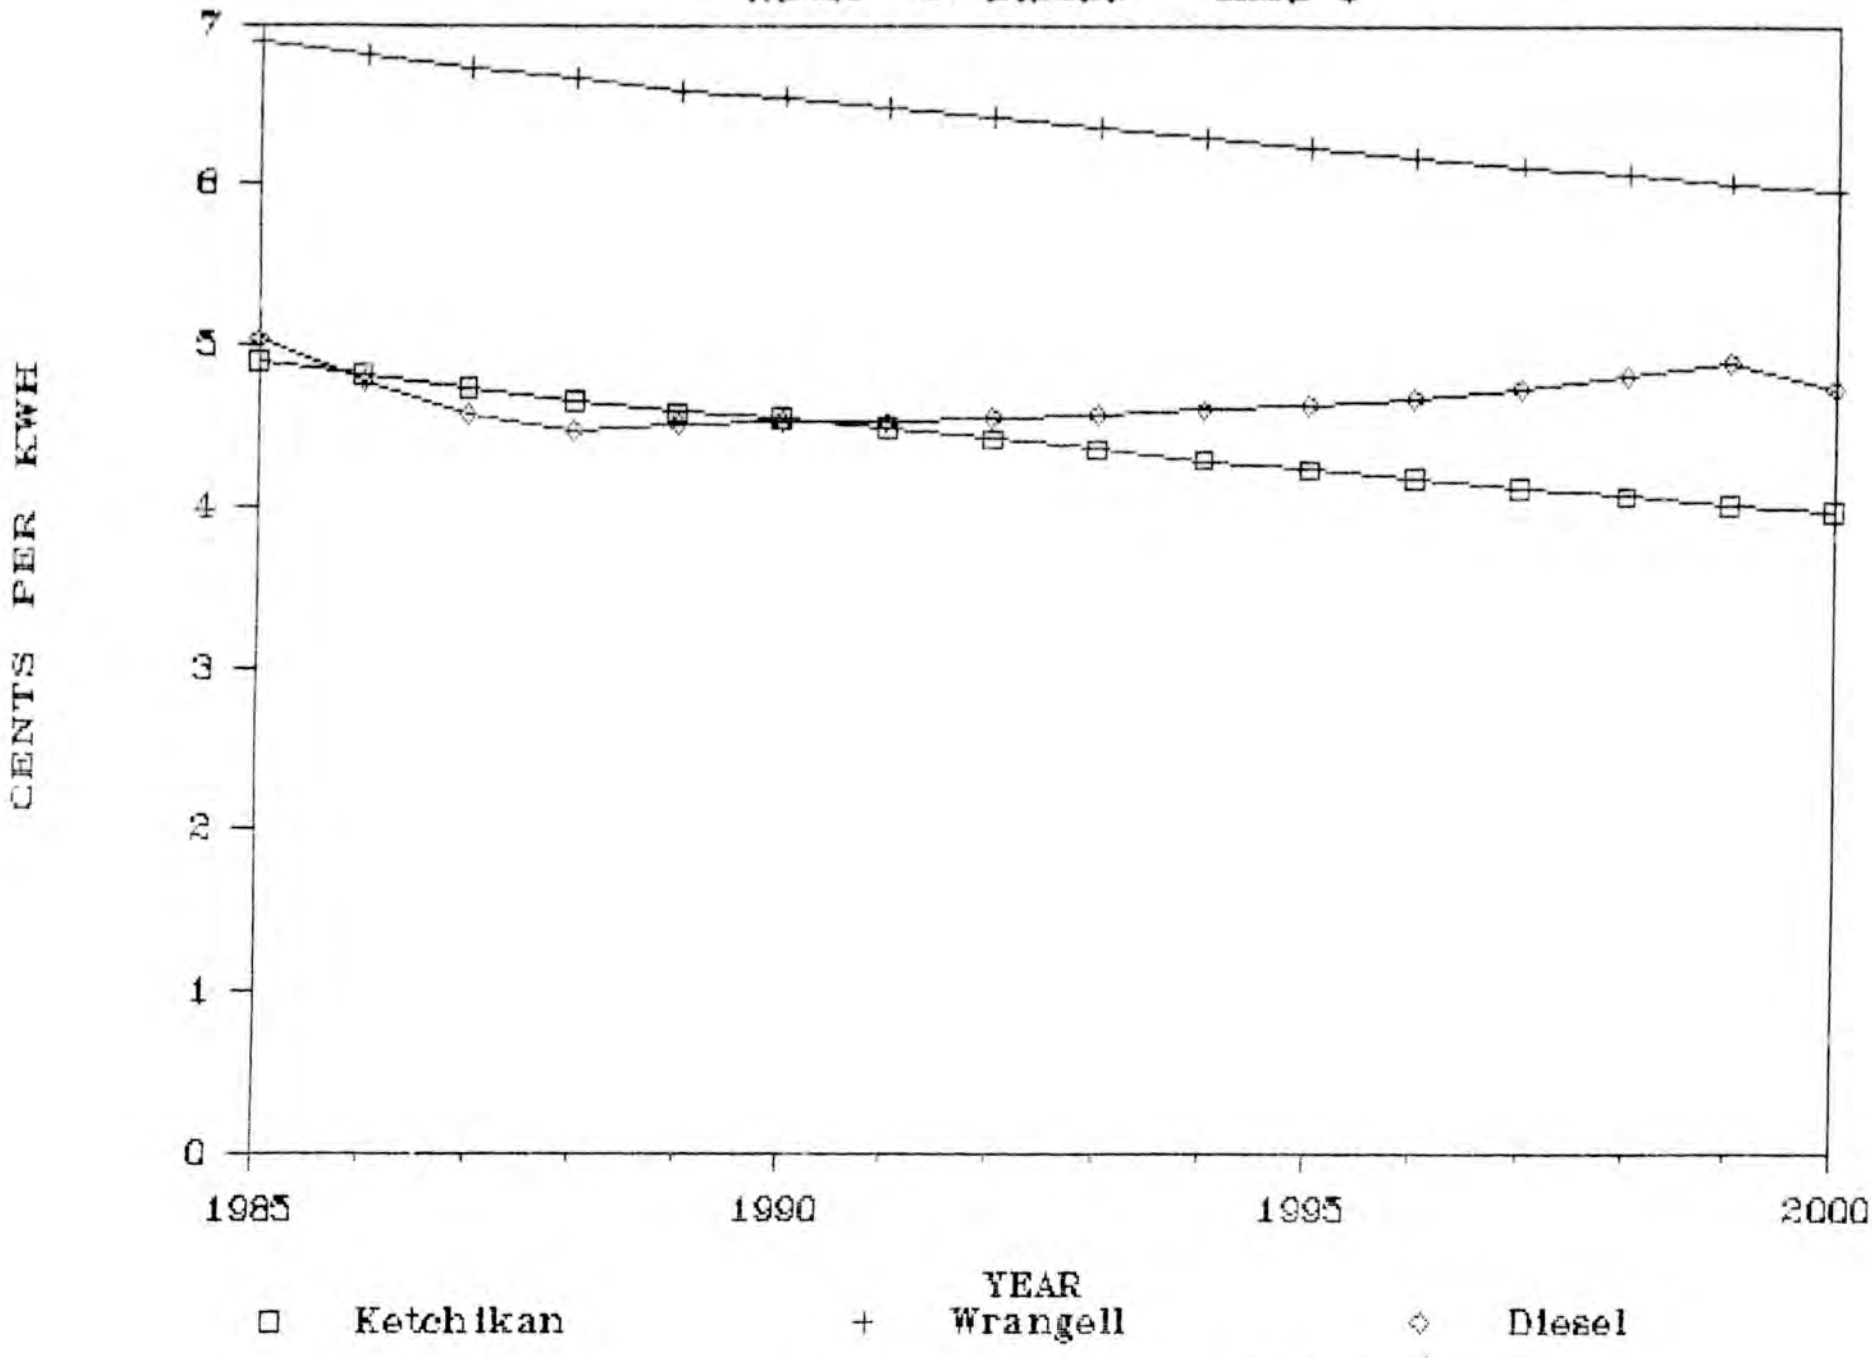
COMPARISON OF HB 219 AND "DIESEL ALTERNATIVE"



The attached tables and graphs present a rough calculation of projected wholesale power rates and amounts returned to the state by the City of Ketchikan under two alternative arrangements for purchasing power out of the Swan Lake Hydroelectric Project. The first is the result obtained under HB 219, now pending in the House. The second assumes that power from the Project is priced according to what the City would save by not burning diesel fuel.

Several assumptions need to be clarified. First, these are wholesale power costs from the Project. The City has other costs and other resources which bring its current retail rates up over 10¢ per kWh. Future resources will need to be acquired under circumstances far different from those of the past. Second, it is not certain that diesel generation will be the only alternative open to the City in the future. Cogeneration, alternative fuels and technologies, and imported power could all play a role. Thus the diesel alternative analyzed here may not be the lowest cost alternative. Third, we have computed the avoided cost of diesel generation -- i.e., only the savings that would actually be realized by taking power from the Project. Because the City's diesel generators would need to be maintained in reserve, only fuel and lubrication costs would be saved. Finally, we have simplified the "ramp" that is authorized but not required by HB 219. This reflects a recognition that the wholesale power rate under the Interim Power Sales Agreement is currently close to the fixed rate under HB 219.

The numbers presented here are highly sensitive to inflation, changes in the cost of fuel, and changes in load. Case 1 assumes no inflation and modest load growth. It shows that HB 219 would produce insignificant savings over diesel in 1985, and would result in slightly higher costs in the years 1986-1990. Savings from HB 219 would largely be realized in the years from 1990 and later. Case 2 shows what happens if load growth does not materialize. In this case, the diesel alternative remains less expensive throughout the entire 15 year period. This reflects the fact that under HB 219, the City bears the risk of operations and maintenance. If loads, fuel prices, and other prices fall steeply over this period, HB 219 would become relatively more burdensome to the City, whereas if these components rise, the bill becomes more attractive.

Document/diskette: LOANS/Eric1 Draft: April 1, 1985

SHORTCOMINGS OF PRICING APA POWER AS A PERCENTAGE OF AVOIDED COST

A. Problems for the purchasing utility (in the Alaskan context)*/

1. Loss of potential loads: Some or all potential large new loads that could increase project utilization will be lost, because such loads demand a higher degree of certainty over longer periods. Many such loads will either be met with private generation or cogeneration (e.g., Wrangell Forest Products) or will be lost entirely (e.g., Phillips). In the cogeneration case, the utility may be required by law to purchase excess cogenerated power from the private party, thus reducing the utility's own purchases from the APA project. In the case of loads lost because the economic activity is relocated (e.g., to the Lower 48), the community loses not only employment and taxes, but also the "induced" loads, i.e., increases in other community loads resulting from the economic activity represented by the primary load.

2. Ratemaking and billing problems: The utility must make its retail rates prospectively, yet its power costs will become known only retrospectively. Matching costs to rates during each rate period (and keeping rates fairly predictable for consumers), always a chore, becomes significantly more difficult.

3. Added administrative costs: A fairly sophisticated formula is needed to calculate true avoided cost, and the values for each variable in the formula must be recalculated at frequent (e.g., monthly) intervals. This would create some administrative burden even if (a) diesel were the only alternative, and (b) disputes with APA over the proper value for each variable never arose. (It is also difficult to continue getting realistic quotes for a large volume of diesel once the utility begins buying reduced volumes.) In practice, the difficulties are even greater because (a) the formula must accommodate other alternatives (e.g., cogeneration) as such alternatives become available, and (b) disputes with the APA over the value of individual variables are likely.

---

*/ Such pricing works well in power "pools" in which a sophisticated computer controls the generators of many producers on an instantaneous central-dispatch basis. The computer is programed to minimize total generation costs at all times, based on each generator's fuel cost, efficiency, and maximum/minimum operating guides. Cost savings made possible by using Utility A's generator rather than Utility B's to serve a portion of Utility B's load are "split" (usually on a 50/50 basis) through use of a share-the-savings rate the computer charges to Utility B and credits to Utility A. The actual rate for each transaction, and each utility's costs and savings for any given period, are known at once, facilitating utility ratemaking and billing. Nothing similar exists in Alaska, nor could it exist in the Four Dam Pool context where (a) the communities are not electrically interconnected, and (b) APA power is intended to displace thermal generation completely for most days of the year.

4. Regulatory costs: For the cooperatives (Kodiak and Copper Valley), whose retail rates are regulated by the Alaska PUC, rate filings and rate cases will become more frequent, more complex, and more costly. If the past is a guide, the APUC may also require the co-ops to raise/lower retail rates to "track" the fluctuating wholesale cost of power to the co-op, thus producing fluctuating retail rates.

5. Planning problems: The search for alternative sources of power supply with more predictable long-term costs would be intensified and simultaneously complicated. Presumably the planning process would be biased (rationally) toward predictability, even if the price of predictability were that somewhat higher retail rates might result from the more predictable alternatives.

6. Uncertain impact on utility financing: It is not clear that a utility would be able to finance additions to its distribution system and/or its generating plant as easily or inexpensively as would otherwise be the case, since the utility's revenue stream and its ability to maintain required coverage ratios and reserves would be somewhat unpredictable.

B. Problems for the State of Alaska as the seller of power

1. Reduced revenue: Compared with long-term contracts under the terms of HB 219 pricing method, power sold on a percentage-of-avoided-cost basis is likely to produce less total revenue for the State, even if one assumes that loads are equal in both cases. But loads will actually be less (see ¶ A.1. above). The loss of potential large new loads that would have produced more revenue for the State would make the comparative revenue disadvantage to the State worse.

2. Increased revenue risk: This would take two forms. First, the State would take the entire risk of further downward movement in the price of diesel and the cost of alternative resources, whereas under HB 219 the communities would bear that risk entirely. Second, because the utilities would be free, over time, to switch wholly or partially to other sources of supply, and because the utilities would have an incentive to investigate and pursue such other sources, the State would face some risk of losing even the existing loads of the utilities, as well as utility load growth.

3. Risk of negative rate of return (failure to cover current costs): This simply indicates the extreme to which the State's additional risk could take it. Under HB 219, the State is assured that (a) O&M costs will be completely paid by the utilities, and (b) some positive return, in addition to return of the principal, will be earned on the State's loan. If wholesale rates are tied to actual avoided costs of the utilities, however, a sufficiently great drop in actual avoided costs would result in the APA failing to cover even its O&M costs. In less extreme cases, APA might cover its O&M costs but fail to earn sufficient revenue to repay the principal and/or interest on the loan.

4. Added administrative costs: Administering such a pricing system would be just as complex and labor-intensive for the APA as it would be for the utilities.

May 11, 1985

The Honorable Jan Faiks, Chair
Senate Finance Committee
Pouch V
Juneau, Alaska 99811

Dear Madam Chair:

My name is Jim Franzel. I am a member of the Petersburg City Council and it is my signature that appears on the Four Dam Pool/APA memorandum of understanding, dated May 8, 1985. I would like to briefly comment on several items, mostly related to the M.O.U., for the record.

(1) I believe that Petersburg would have preferred not to have a rate reopener, but if we must have one, we will be negotiating for some tight limitations.

(2) The mention of Bradley Lake in the M.O.U. has been difficult to assess in the limited time we have had to work with it. Comparing the APA forecast loads and projected project construction costs for Bradley Lake versus the Four Dam Pool projects, it looks like the Four Dam Pool will have higher electric rates. I want to emphasize that, since Bradley Lake has not been constructed, it is my understanding that if there are construction cost overruns (as there were with Tyee,) the Petersburg rate payers will not eventually be penalized for something that isn't their fault.

(3) If HB 219 becomes law, the Four Dam Pool communities will have among the most expensive residential electrical rates in Alaska at present. I think this will be a concern to the voters of Petersburg.

(4) The Petersburg City Council intends to put the negotiated contract to a vote of the people.

I would like to express that I feel we have made significant progress with the M.O.U. agreement. However, we still have a long way to go.

I pledge that I will support the M.O.U. to my governing body.

Finally, I think that it is to everyone's advantage to settle this issue. Thank You.

Sincerely,

Jim Franzel

IN THE HOUSE BY THE FINANCE COMMITTEE

CS FOR HOUSE BILL NO. 219 (Finance)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and <u>electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state,</u> none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) A loan from the fund <u>shall</u> [MUST] be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) [THE MARKET RATE OF INTEREST FOR A LOAN OF COMPARABLE SIZE AND DURATION AT THE TIME THE LOAN IS MADE; AND

(2)] the [ESTIMATED] costs, <u>at the time the power sales</u>

agreement is initially negotiated or renegotiated, of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund;

(2) the effect of the loan terms on the wholesale power cos . to all utilities purchasing power from the initial project;

(3) the long-term benefits to consumers and communities of stable wholesale power costs;

(4) the affordability of initial wholesale power costs that result from the loan terms with utilities purchasing power from the initial project;

(5) increasing repayment, not to exceed five years, of debt service payment per kilowatt hour gradually over the initial period of a loan repayment schedule to the extent necessary to avoid significant rate increases to the consumer;

(6) the existing excess capacity of power projects; and

(7) the effects of increased capacity utilization, inflation, and alternative energy production costs over the life of the initial project.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) In (a) of this section "initial project" means the project described in AS 44.83.398(a).

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. RATE REOPENERS. A power sales agreement for the sale of power from the initial project, as described in AS 44.83.-398(a), financed with a loan under AS 44.33.610 may include among its provisions an agreed schedule of wholesale power rates notwithstanding the provisions of AS 44.83.398, but must include a provision for a rate reopener.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or an electric operating entity established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

MEMORANDUM OF UNDERSTANDING

Between the Alaska Power Authority
and
Representatives of the Four Dam Pool Communities
governing
Power Sales Contracts for the Four Dam Pool

Representatives of the APA and the Four Dam Pool utilities (Ketchikan, Kodiak, Copper Valley, Wrangell, and Petersburg) have reached agreement in principle on the terms and conditions of a power sales contract for the sale of power from the Solomon Gulch, Swan Lake, Lake Tyee, and Terror Lake hydroelectric projects (the "Initial Project"). Although the specific details of such a contract must still be resolved and drafted, the undersigned representatives hereby agree to recommend to their governing bodies the approval of power sales contracts embodying, among other things, the principles set forth in this Memorandum.

1. The Alaska Power Authority ("APA") and the purchasing utilities of the Four-Dam Pool communities ("Purchasing Utilities") agree to enter into a power sales agreement that will run for 50 years, subject to periodic renegotiations and other conditions set forth below.

2. At the end of the contract period, there will be no debt service component of the wholesale rate charged by the APA for power from the four projects. Debt service payments that may be required to pay for additions and expansions of the four projects that are made subsequent to the execution of these agreements will be governed by future agreements.

3. The Purchasing Utilities agree to pay a wholesale rate for energy purchased from the APA that is generated by the four projects that has a debt service component, and a component relevant to all other annual costs.

4. The annual costs exclusive of the debt service component shall include costs of on-site operations and maintenance, safety inspections and investigations, insurance, project-specific administrative and general expenses, and renewals and replacements.

5. Annual costs referred to in Section 4 will be based on prudent utility practice, and will be subject to mutual agreement arrived at through an annual process that establishes an operating budget for the coming year. An O&M

oversight committee composed of all parties to the agreement will be established. In the event disputes over these annual costs cannot be resolved by the parties, the matter will be referred to arbitration by a certified engineer mutually agreeable to the parties.

6. All annual costs referred to in Section 4 will be pooled and divided by the total annual sales from the four projects, so that all Purchasing Utilities pay the same annual cost component of the wholesale rate.

7. The debt service component of the wholesale rate has two elements: an element paid for energy shown in Schedule A as "forecast sales," and an element paid for energy in addition to the "forecast sales," which is referred to as "additional sales."

8. The "additional sales" debt service element in Schedule A will be charged only after the total annual sales from all four projects exceed the "forecast sales" for that year; that is, the distinction between "forecast sales" and "additional sales" applies to the entire four dam system (as configured at the time this agreement is executed).

9. The purchasing utilities will schedule the energy produced by the projects into their load ahead of energy from other sources, except from existing hydroelectric projects.

10. Upon the initiation of either party, the debt service rates shown in Schedule A may be renegotiated after 15 years. The contract shall require reasonable notice of intent to renegotiate rates, and the contract may direct the parties to consider certain factors and conditions in establishing a new rate schedule.

11. The parties to this agreement do not expect that the composite wholesale rate that results from this agreement will be less than the composite wholesale rate charged by the APA for energy produced from the Bradley Lake hydroelectric project.

12. The APA shall bear the risk of uninsured project failures, substandard project performance, and failure of any Purchasing Utility to make payments required by the contract.

MEMORANDUM

TO: Sen. Arliss Sturgulewski, Chair,
Senate Resources Committee

FROM: Rep. John Sund

RE: HB 219 "An act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

The purpose of this bill is to resolve the problems holding up four-dam-pool power sales agreements and to provide for payback of the $196 million appropriation made last year to complete the hydroelectric projects. The Alaska Power Authority and the six communities served by the four dams have been negotiating power sales agreements for 2½ years without success. The goal is a long-term power sales agreement that provides affordable electricity for the communities and a maximum return on the state's investment.

$210 million was appropriated last year; $196 million has been spent to complete the dams and pay off short-term construction financing issued by the APA. This appropriation was structured as a loan from the Department of Commerce and Economic Development to the APA to be paid off through power sales from the project. AS 44.33.620 sets terms for the loan.

As in existing law, the Finance Committee Substitute does not set in law exact terms for the loan, nor does it set power rates. These are left open for further negotiation. The bill provides specific guidelines for resolving the issue under a plan developed by Gordon Harrison of the APA board.

The APA and the six communities report recent significant progress in power sales agreement negotiations; the plan they are now working with requires the passage of CSHB 219 (Fin). Action is required this session to permit sales agreements which will capture additional loads for the under-utilized hydroelectric capacity.

The bill is supported by both the APA and the four-dam-pool communities. Bob Heath, Executive Director of the APA and representatives of the communities are expected to testify before the Resources Committee.

Sectional analysis:

Section 1:
Sections 1 and 5, propose a change in law to allow two communities to get together for joint operation of a dam. The main purpose is to allow the Thomas Bay Power Authority to operate the Tyee Dam. Tyee serves two communities (Wrangell and Petersburg); Current law requires one or the other to operate the dam. This section corrects that by adding "electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state" to the APUC statutes. Like the communities, the 'joint operating entity' would not be subject to APUC regulation.

Section 2:
This section amends the loan terms for the Power Development Revolving Loan Fund (AS 44.33.620). This fund was created last session and the statutory loan terms give little direction to the APA. The added language sets clear guidelines for the agencies to work with. Deleted is the requirement that the loan terms be set considering market rates of interest.

Section 3 adds a definition: "initial project" means the four dams.

Section 4 adds a provision for power sales contract rate reopeners. This protects the state in times of inflation when the power sales rate could not provide sufficient loan repayment in real terms and protects the communities should the price of alternate power generation drop significantly. An important provision is added allowing an agreed schedule of wholesale power rates to be included in the contracts. This allows a contract to be reached through negotiation which will provide for certainty in power rates as needed by utility planners. This also will provide for a greater return to the state in debt service from the project.

Section 5 adds joint operating entities to the definition of "qualified utilities" which may purchase power from the APA. (See explanation of Section 1)

MEMORANDUM

State of Alaska

RECEIVED
APR 5 1985
ALASKA POWER AUTHORITY

TO: William H. Batt
Assoc. Executive Director
Finance/Administration
Alaska Power Authority

DATE: April 3, 1985

FILE NO:

TELEPHONE NO: 276-3550

FROM: Norman C. Gorsuch
Attorney General
By:
Carolyn E. Jones
Assistant Attorney General

SUBJECT: Swan Lake Project,
City of Ketchikan

I have reviewed the materials you sent with me with regard to the transfer of leftover construction moneys. I can find nowhere in this packet a written request for the funds with directions as to how the funds are to be transferred or a refusal by KPU to transfer the funds. The September, 1984 Crawford letter is more advisory than directory and suggests that several more steps still needed to be taken, e.g., "We will be in touch with you tomorrow regarding transactional details."

What is needed now is a letter from the APA to Ketchikan Public Utilities requesting that the Utility turn over the money, and setting out the procedural steps relating to the transfer. That is an administrative matter which I leave you to draft as you wish the request and process to take place.

If you wish to discuss in this letter the informal signals you have received regarding KPU's demand that its legal fees be paid, then I offer the following paragraph to be included in your demand letter: [Note to typist: the following paragraph should be inserted in the letter immediately following the text requesting transfer and setting out the procedure for the transfer.]

We have learned informally that Ketchikan Public Utilities believes that moneys from the construction fund and reserve account should be used to pay for KPU's legal costs in negotiating the power sales agreement. We believe that any legal fees related to negotiating KPU's negotiations in the context of purchasing energy from the project are not covered by the terms of the acquisition agreement.

Section 10 of the acquisition agreement provides that the Alaska Power Authority will reimburse the City of Ketchikan for its project costs including legal fees related to the cost of management and construction. The section reads,

> Compensation for Management and Construction Services. The City shall be compensated for

XEROX TELECOPIER 295 : 4-28-85; 6:02 AM; CCITT G3 → 9074653686 : # 2

management of the project and for work performed by the city personnel in relation to the project, by payment of the following cost on a monthly basis:

> (b) the cost and expenses of attorneys, consultants, engineers or other consultants, whether or not such persons are employees of the city, and any and all other out-of-pocket expenses incurred by the city in administration or management of, or in connection with the project;

We believe that the intent of the acquisition agreement was to cover KPU's costs vis-a-vis construction and management of the project on the APA's behalf. When KPU negotiated with the APA for the right to purchase power from the project, KPU stood in an arms-length relationship with the APA-- as any buyer and seller do. In those circumstances, KPU's activities and legal fees were not covered by the contract. Indeed, the APA is not paying comparable legal expenses to the other communities that are negotiating with us to buy power from the Four Dam Pool project. (end of letter)

RE: HB 219 "An act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

****

Attached please find a package of backup information on HB 219, the four-dam-pool bill. Please let me know if there is any further information I can provide you.

The package contains:

- The Finance Committee Substitute for the bill
- A Memorandum of Understanding dated May 8, 1985
- Schedule of debt service charges for the project
- Schedule of retail electric rates
- Memo to Senate Resources with sectional analysis HB 219
- Spreadsheet of debt repayment

IN THE HOUSE BY THE FINANCE COMMITTEE

CS FOR HOUSE BILL NO. 219 (Finance)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and <u>electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state,</u> none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) A loan from the fund <u>shall</u> [MUST] be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) [THE MARKET RATE OF INTEREST FOR A LOAN OF COMPARABLE SIZE AND DURATION AT THE TIME THE LOAN IS MADE; AND

(2)] the [ESTIMATED] costs, <u>at the time the power sales</u>

agreement is initially negotiated or renegotiated, of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund;

(2) the effect of the loan terms on the wholesale power costs to all utilities purchasing power from the initial project;

(3) the long-term benefits to consumers and communities of stable wholesale power costs;

(4) the affordability of initial wholesale power costs that result from the loan terms with utilities purchasing power from the initial project;

(5) increasing repayment, not to exceed five years, of debt service payment per kilowatt hour gradually over the initial period of a loan repayment schedule to the extent necessary to avoid significant rate increases to the consumer;

(6) the existing excess capacity of power projects; and

(7) the effects of increased capacity utilization, inflation, and alternative energy production costs over the life of the initial project.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) In (a) of this section "initial project" means the project described in AS 44.83.398(a).

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. RATE REOPENERS. A power sales agreement for the sale of power from the initial project, as described in AS 44.83.-398(a), financed with a loan under AS 44.33.610 may include among its provisions an agreed schedule of wholesale power rates notwithstanding the provisions of AS 44.83.398, but must include a provision for a rate reopener.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or an electric operating entity established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

MEMORANDUM OF UNDERSTANDING

Between the Alaska Power Authority
and
Representatives of the Four Dam Pool Communities
governing
Power Sales Contracts for the Four Dam Pool

Representatives of the APA and the Four Dam Pool utilities (Ketchikan, Kodiak, Copper Valley, Wrangell, and Petersburg) have reached agreement in principle on the terms and conditions of a power sales contract for the sale of power from the Solomon Gulch, Swan Lake, Lake Tyee, and Terror Lake hydroelectric projects (the "Initial Project"). Although the specific details of such a contract must still be resolved and drafted, the undersigned representatives hereby agree to recommend to their governing bodies the approval of power sales contracts embodying, among other things, the principles set forth in this Memorandum.

1. The Alaska Power Authority ("APA") and the purchasing utilities of the Four-Dam Pool communities ("Purchasing Utilities") agree to enter into a power sales agreement that will run for 50 years, subject to periodic renegotiations and other conditions set forth below.

2. At the end of the contract period, there will be no debt service component of the wholesale rate charged by the APA for power from the four projects. Debt service payments that may be required to pay for additions and expansions of the four projects that are made subsequent to the execution of these agreements will be governed by future agreements.

3. The Purchasing Utilities agree to pay a wholesale rate for energy purchased from the APA that is generated by the four projects that has a debt service component, and a component relevant to all other annual costs.

4. The annual costs exclusive of the debt service component shall include costs of on-site operations and maintenance, safety inspections and investigations, insurance, project-specific administrative and general expenses, and renewals and replacements.

5. Annual costs referred to in Section 4 will be based on prudent utility practice, and will be subject to mutual agreement arrived at through an annual process that establishes an operating budget for the coming year. An O&M

oversight committee composed of all parties to the agreement will be established. In the event disputes over these annual costs cannot be resolved by the parties, the matter will be referred to arbitration by a certified engineer mutually agreeable to the parties.

6. All annual costs referred to in Section 4 will be pooled and divided by the total annual sales from the four projects, so that all Purchasing Utilities pay the same annual cost component of the wholesale rate.

7. The debt service component of the wholesale rate has two elements: an element paid for energy shown in Schedule A as "forecast sales," and an element paid for energy in addition to the "forecast sales," which is referred to as "additional sales."

8. The "additional sales" debt service element in Schedule A will be charged only after the total annual sales from all four projects exceed the "forecast sales" for that year; that is, the distinction between "forecast sales" and "additional sales" applies to the entire four dam system (as configured at the time this agreement is executed).

9. The purchasing utilities will schedule the energy produced by the projects into their load ahead of energy from other sources, except from existing hydroelectric projects.

10. Upon the initiation of either party, the debt service rates shown in Schedule A may be renegotiated after 15 years. The contract shall require reasonable notice of intent to renegotiate rates, and the contract may direct the parties to consider certain factors and conditions in establishing a new rate schedule.

11. The parties to this agreement do not expect that the composite wholesale rate that results from this agreement will be less than the composite wholesale rate charged by the APA for energy produced from the Bradley Lake hydroelectric project.

12. The APA shall bear the risk of uninsured project failures, substandard project performance, and failure of any Purchasing Utility to make payments required by the contract.

MEMORANDUM

TO: Sen. Arliss Sturgulewski, Chair,
Senate Resources Committee

FROM: Rep. John Suno

RE: HB 219 "An act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

The purpose of this bill is to resolve the problems holding up four-dam-pool power sales agreements and to provide for payback of the $196 million appropriation made last year to complete the hydroelectric projects. The Alaska Power Authority and the six communities served by the four dams have been negotiating power sales agreements for 2½ years without success. The goal is a long-term power sales agreement that provides affordable electricity for the communities and a maximum return on the state's investment.

$210 million was appropriated last year; $196 million has been spent to complete the dams and pay off short-term construction financing issued by the APA. This appropriation was structured as a loan from the Department of Commerce and Economic Development to the APA to be paid off through power sales from the project. AS 44.33.620 sets terms for the loan.

As in existing law, the Finance Committee Substitute does not set in law exact terms for the loan, nor does it set power rates. These are left open for further negotiation. The bill provides specific guidelines for resolving the issue under a plan developed by Gordon Harrison of the APA board.

The APA and the six communities report recent significant progress in power sales agreement negotiations; the plan they are now working with requires the passage of CSHB 219 (Fin). Action is required this session to permit sales agreements which will capture additional loads for the under-utilized hydroelectric capacity.

The bill is supported by both the APA and the four-dam-pool communities. Bob Heath, Executive Director of the APA and representatives of the communities are expected to testify before the Resources Committee.

Sectional analysis:

Section 1:
Sections 1 and 5, propose a change in law to allow two communities to get together for joint operation of a dam. The main purpose is to allow the Thomas Bay Power Authority to operate the Tyee Dam. Tyee serves two communities (Wrangell and Petersburg); Current law requires one or the other to operate the dam. This section corrects that by adding "electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state" to the APUC statutes. Like the communities, the 'joint operating entity' would not be subject to APUC regulation.

Section 2:
This section amends the loan terms for the Power Development Revolving Loan Fund (AS 44.33.620). This fund was created last session and the statutory loan terms give little direction to the APA. The added language sets clear guidelines for the agencies to work with. Deleted is the requirement that the loan terms be set considering market rates of interest.

Section 3 adds a definition: "initial project" means the four dams.

Section 4 adds a provision for power sales contract rate reopeners. This protects the state in times of inflation when the power sales rate could not provide sufficient loan repayment in real terms and protects the communities should the price of alternate power generation drop significantly. An important provision is added allowing an agreed schedule of wholesale power rates to be included in the contracts. This allows a contract to be reached through negotiation which will provide for certainty in power rates as needed by utility planners. This also will provide for a greater return to the state in debt service from the project.

Section 5 adds joint operating entities to the definition of "qualified utilities" which may purchase power from the APA. (See explanation of Section 1)

Sec. 44.83.380. Program established. (a) The energy program for Alaska is established. The program shall be administered by the Alaska Power Authority.

(b) The energy program for Alaska is a program by which the authority may acquire or construct power projects with money appropriated by the legislature to the power development fund established in AS 44.83.382. A power project may be acquired or constructed as part of the energy program for Alaska only if the project is submitted to and approved by the legislature in accordance with procedures set out in AS 44.83.177 — 44.83.187.

(c) The provisions of AS 36.10.010 — 36.10.125 apply to power projects constructed by the authority under AS 44.83.380 — 44.83.425. (§ 1 ch 118 SLA 1981)

Revisor's notes. — Enacted as AS 44.83.400. Renumbered in 1981.

Sec. 44.83.382. Power development fund established. (a) A power development fund is established in the Alaska Power Authority to carry out the purposes of the energy program for Alaska (AS 44.83.380 — 44.83.425).

(b) The fund includes

(1) money appropriated to it by the legislature; and

(2) *[Repealed, § 27 ch 89 SLA 1983.]* (§ 1 ch 118 SLA 1981; am § 27 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.410. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, repealed paragraph (2) of subsection (b).

Alaska (AS

981; am § 27

ragraph (2) of

Sec. 44.83.384. Use of fund balance. (a) The fund may be used by the authority to provide money for

(1) reconnaissance and feasibility studies and power project finance plans prepared under AS 44.83.177 — 44.83.181;

(2) the cost of a power project, including but not limited to costs of acquiring necessary licenses, preparing engineering designs, obtaining land, and constructing the power project;

(3) the defeasance of bonds, or the payment of debt service on loans for or on an issue of bonds sold in connection with a power project;

(4) the cost of operating and maintaining power projects; and

(5) debt service on power projects.

(b) Money in the fund may be used under (a) of this section only for a power project that

(1) is economically feasible; and

(2) provides the lowest reasonable power cost to utility customers in the market area for the estimated life of the power project, whether operated by itself or in conjunction with other power projects in the market area, and that operates or will operate on one or more of the following:

(A) renewable energy resources, including but not limited to hydroelectric power, wind, biomass, geothermal, tidal or solar energy, or a method that uses temperature differentials or other physical properties of the ocean;

(B) coal or peat;

(C) energy derived from waste heat; or

(D) fossil fuel, including oil or natural gas.

(c) Notwithstanding (b)(1) of this section and AS 44.83.396 — 44.83.398, the fund may be used by the authority to provide money for the cost of a power project that is or was either constructed or owned by the United States government if the requirements of this subsection are met. The provisions of AS 44.83.177 — 44.83.187 do not apply to a power project financed under this subsection. The authority may use money in the fund for the cost of a power project under this subsection if

(1) the legislature enacts a law approving the project;

(2) the office of management and budget in the Office of the Governor reviews a feasibility study and a plan of finance for the project and determines that the feasibility study complies with the requirements for a feasibility study submitted under AS 44.83.181(b) and that the plan of finance complies with the requirements for a plan of finance submitted under AS 44.83.181(c); and

(3) the project meets the other requirements of this chapter. (§ 1 ch 118 SLA 1981; am § 12 ch 133 SLA 1982; am § 28 ch 63 SLA 1983; am §§ 14, 15 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.420. Renumbered in 1981.

Effect of amendments. — The 1982 amendment added subsection (c).

The first 1983 amendment, substituted "office of management and budget" for "division of budget and management" in paragraph (c)(2).

The second 1983 amendment, rewrote paragraph (1) of subsection (b) and substituted "AS 44.83.396 — 44.83.398" for "AS 44.83.394 — 44.83.398" and "or was either constructed or owned" for "constructed and owned" in the first sentence of subsection (c).

Sec. 44.83.386. Investment of fund. The Department of Revenue shall invest the money in the fund in accordance with AS 37.10.070 and 37.10.075. The Department of Revenue shall provide money in the fund to the authority only after costs have been incurred or amounts in the fund have been otherwise obligated under contracts for the acquisition and construction of a project. Amounts that have been obligated, but for which costs have not yet been incurred, may be segregated by the Department of Revenue or transferred to the authority only with the prior approval or agreement of the commissioner of revenue. Interest received on money that is segregated or transferred under this section must be deposited in the general fund. (§ 1 ch 118 SLA 1981; am § 16 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.430. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, substituted the language beginning "costs have been incurred" for "a cost for a project is incurred" at the end of the second sentence and added the third and fourth sentences.

Sec. 44.83.388. Allotment to projects. (a) The authority shall maintain records of power project allocations from the fund for each power project

(1) approved in accordance with AS 44.83.185; and

(2) for which an allocation is made from an appropriation made by the legislature without specifying an appropriation to a project.

(b) Income earned from investment of money appropriated to the fund shall be deposited in the general fund and may be appropriated to the fund by the legislature. (§ 1 ch 118 SLA 1981)

Revisor's notes. — Enacted as AS 44.83.440. Renumbered in 1981.

Sec. 44.83.390. Reappropriation of fund balance. (a) If a power project designated by the legislature by law is not constructed, the amount appropriated to it may be reappropriated to other power projects by the legislature.

(b) The legislature may reappropriate money under (a) of this section only for a power project that is economically feasible under AS 44.83.181(b) and only if the project will serve the market area that would have been served by the power project designated by the legislature and not constructed. Revisor's notes. — Enacted as AS 44.83.450. Renumbered in 1981.

Sec. 44.83.392. Lapse of excess appropriations. If at the end of construction of a power project appropriations for the power project exceed the amount required for construction of it, the excess lapses into the general fund. (§ 1 ch 118 SLA 1981)

Revisor's notes. — Enacted as AS 44.83.460. Renumbered in 1981.

Sec. 44.83.394. Revenue requirements. [Repealed, § 27 ch 89 SLA 1983.]

Sec. 44.83.396. Operation of power project. (a) A power project that is acquired or constructed as part of the energy program for Alaska is owned, and shall be administered, by the authority.

(b) When a power project has been acquired or constructed by the authority, the project may be operated for the authority under a contract or lease entered into by a qualified utility and the authority.

(c) The authority shall enter into a contract or lease under reasonable terms and conditions to permit the applicant utility to operate the power project when the applicant utility is the only wholesale power customer to be served directly by the power project unless the authority determines a utility making application for a contract or lease to operate a power project is not a qualified utility or is not capable of operating that power project efficiently and in a manner that is consistent with national standards for the industry and with agreements with bondholders.

(d) The authority shall adopt regulations to determine the manner of selecting a qualified utility to operate a power project under a contract or lease when there is more than one wholesale power customer to be served directly by the power project.

(e) When the authority permits a power project to be operated by a qualified utility under a contract or lease, the authority shall

(1) review and approve the annual budget for the operation and maintenance of the power project; and

(2) assure that the project is being operated efficiently and in a manner that is consistent with national standards for the industry and agreements with bondholders. (§ 1 ch 118 SLA 1981; am §§ 17 — 19 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.480. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, deleted "by the state" following "is owned" in subsection (a), inserted "a qualified utility or is not" near the end of subsection (c), added the language beginning "efficiently and in a manner that is consistent" to the end of subsection (c), added "and" to the end of paragraph (1) of subsection (e), and added "and agreements with bondholders" to the end of paragraph (2) of subsection (e).

Sec. 44.83.398. Sale of power from power project. (a) The authority shall sell power produced from power projects acquired or constructed under the energy program for Alaska. For purposes of this section, Lake Tyee, Swan Lake, Solomon Gulch, and Terror Lake hydroelectric facilities are considered to be one power project. This power project is referred to as the initial project

(b) The authority shall establish a wholesale power rate structure applicable to sales of power to the customers of a power project as follows:

(1) The authority shall establish and maintain a separate wholesale power rate applicable to each power project that it has acquired or constructed under the energy program for Alaska, other than a project described in (f) of this section. The wholesale power rate established by the authority for the initial project shall be a rate calculated under this paragraph except that the portion of the rate applicable to (A) and (C) of this paragraph shall be adjusted for the hydroelectric facilities in the initial project as set out in (3) of this subsection. The wholesale power rate shall be computed by the authority annually, or more frequently as may be necessary, and shall equal the rate that the authority estimates is necessary to produce revenue that is sufficient to pay

(A) operation, maintenance, and equipment replacement costs of the power project;

(B) the power project's proportionate share of the debt service on state loans and bonds for all power projects in the energy program for Alaska, determined in accordance with (g) of this section;

(C) safety inspections and investigations of the power project by the authority.

(2) *[Repealed, § 7 ch 169 SLA 1984.]*

(3) For the purposes of determining amounts to be allocated to each hydroelectric facility in the initial project under (1)(A) and (1)(C) of this subsection, the authority shall determine for each hydroelectric facility its individual operation, maintenance, equipment replacement, safety inspection, and investigation costs.

(c) The authority shall transmit all the money that it receives under (a) of this section to the commissioner of revenue for deposit in the state general fund except for money it has pledged or otherwise covenanted to secure bonds.

(d) *[Repealed, § 8 ch 169 SLA 1984.]*

(e) After determining the wholesale power rate for a power project under the provisions of this section, the authority may adjust the rate or change the rate provisions to insure that the revenue derived from that power project and the aggregate revenues of the authority will be adequate to comply with the rate covenants and other agreements contained in any trust indenture or trust agreement entered into by the authority for the seurity of the holders of bonds issued to finance power projects in the energy program for Alaska. The authority may agree with a purchaser of power to limit rate increases caused by debt service payable by the authority on subsequent projects.

(f) The provisions of (b) of this section do not apply to an intertie that is authorized as a separate project under AS 44.83.380. The authority shall establish and maintain separate power rate schedules applicable to each intertie that it has acquired or constructed as a separate power project under the energy program for Alaska. The power rate schedules shall produce sufficient revenue from utilities connected by the intertie to pay (1) operation, maintenance, and equipment replacement costs of the intertie; (2) debt service of the intertie; and (3) safety inspections and investigations of the intertie by the authority. If the authority determines that an intertie has ceased to function as a separate project and has become a part of one or more other power projects and has become a part of one or more other power projects as a transmission line, the power rate schedules established under this subsection shall be terminated and a wholesale power rate applicable to the former intertie shall be calculated under (b) of this section for the project or projects of which it has become a part.

(g) For the purposes of (b)(1)(B) of this section, a power project's proportionate share of debt service on state loans and bonds for all power projects in the energy program for Alaska is equal to the state's investment in the power project divided by the state's investment in all power projects in the energy program for Alaska and multiplied by the debt service on state loans and bonds for all power projects in the energy program for Alaska. In this subsection

(1) "state's investment in the power project" includes all state money invested in a power project, including loans, grants, and proceeds from bonds, less the principal repayments on the project's proportionate share of debt service on state loans and bonds;

(2) "state's investment in all power projects in the energy program for Alaska" includes all state money invested in the power projects, other than interties, in the energy program for Alaska, including loans, grants, and proceeds from bonds, less the principal repayments on bonds and state loans issued for the power projects.

(h) Notwithstanding (g) of this section, in the 1983 state fiscal year the proportionate share of debt service under (b) of this section, expressed as a rate, for a power project for which a construction contract has been awarded before June 25, 1982 may not exceed the average debt service component of the wholesale power rate for all power projects in the energy program for Alaska. The limit imposed by this subsection shall be increased in the 1984 state fiscal year to four percent above the average debt service component of the wholesale power rate for all power projects in the energy program for Alaska and by an additional four percent above that average in each succeeding state fiscal year. If application of this subsection results in the production of insufficient revenue to pay the total debt service for all projects in the energy program for Alaska, a project that does not have its share of debt service limited under this subsection shall be subject to a rate

in addition to the rate established under (b) of this section. The additional rate is the rate that the authority estimates is necessary to produce revenue that is sufficient to pay the difference between the total debt service for all projects in the energy program for Alaska and the revenue actually produced to pay that debt service, multiplied by a fraction whose numerator is the total cost of the project and whose denominator is the total cost of all of the projects that are subject to the additional rate. In this subsection, "projects in the energy program for Alaska" does not include an intertie that is authorized as a separate project as described in (f) of this section.

(i) The authority may place in a separate interest bearing account money appropriated to the authority as a loan for the purpose of meeting the operating expenses of a facility in the initial project. The money may be used to replace amounts which were expected to be paid by a utility potentially served by a facility in the initial project, which has not entered into a power sales agreement with the authority. Repayment of the amount loaned must be made from revenues attributable to power sales from that facility, as limited by the terms of power sales agreements with power purchasers from that facility. A loan made in accordance with this subsection is not a state loan for purposes of calculating the wholesale power rate under (b)(1) of this section. (§ 1 ch 118 SLA 1981; am §§ 13 — 16 ch 133 SLA 1982; am §§ 20 — 23 ch 89 SLA 1983; am § 125 ch 6 SLA 1984; am §§ 2-8 ch 169 SLA 1984)

Revisor's notes. — Enacted as AS 44.83.490. Renumbered in 1981.

Effect of amendments. — The 1982 amendment, in subsection (b), substituted "a power project" for "the power project" in the introductory language, substituted "separate" for "single" and "each power project" for "all power projects" in the first sentence of paragraph (1), added "other than a project described in (f) of this section" to the end of the first sentence of paragraph (1), inserted "or more frequently as may be necessary" in the introductory language of the second sentence of paragraph (1), substituted "power project" for "power projects" in subparagraph (1)(A) and (C), added "the power project's proportionate share of the" to the beginning of subparagraph (1)(B), substituted the language beginning "on state loans and bonds" for "of the power projects" in subparagraph (1)(B), substituted "separate" for "single" and "each power project that is" for "all power projects that it has" in the first sentence of paragraph (2), inserted "or more frequently as may be necessary" in the introductory language of the second sentence of paragraph (2), substituted "power project" for "power projects" in subparagraph (2)(A) and (2)(B)(iii), and substituted the present provisions of subparagraph (2)(B)(ii) for the former provisions, which read: "debt service of power projects by the authority and." In subsection (c), the amendment substituted "under (a) of this section" for "under (b) of this section" and "money it has pledged to secure bonds in accordance with contracts with bondholders" for "the money it receives under (b)(1)(A) and (B) and (b)(2)(B)(i) and (ii), or the money it would have received under (b)(1)(A) and (B) and (b)(2)(B)(i) and (ii) of this section if those items had been used in part to establish the wholesale power rate in effect at the time the money is received by the authority." In subsection (e), the amendment substituted "a wholesale" for "the wholesale" and "or (f)" in the first sentence and added the second sentence. The amendment also added subsections (f) — (h).

The 1983 amendment, substituted "July 1, 1991" for "July 1, 1986" near the beginning of paragraph (2) of subsection (b), substituted "or otherwise covenanted

ction. The addi-

The first 1984 amendment made a technical change in the last sentence in subsection (f).

The second 1984 amendment added subsection (i), repealed former paragraph (2) of subsection (b), relating to a separate wholesale power rate beginning July 1, 1991, and repealed former subsection (d), relating to industrial consumer rates. The 1984 amendment also, in subsection (a), deleted former paragraphs (1) and (2) and the former last sentence in the introductory paragraph, relating to a utility that purchases power produced by a power project of the authority, and, in the remaining language, added the last two sentences; in subsection (b), substituted "the customers" for "its customers at the busbar" in the introductory language, inserted the second sentence in the introductory paragraph of paragraph (1), and added paragraph (3); in subsection (e), added the second sentence and substituted "energy program" for "Energy Program" in the first sentence; and changed the internal reference in the first sentence in the introductory paragraph of subsection (g).

Sec. 44.83.400. Energy conservation. The authority shall ensure

(1) that communities that benefit from the energy program for Alaska implement cost-effective energy conservation measures for residences, commercial and public buildings, and industries; and

(2) that communities shall fulfill their responsibilities under (1) of this section by cooperating with state agencies concerned with development and conservation of energy, including but not limited to

(A) the Alaska Public Utilities Commission;

(B) the Department of Community and Regional Affairs; and

(C) the division of business loans, Department of Commerce and Economic Development. (§ 1 ch 118 SLA 1981; am § 5 ch 79 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.500. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, substituted "Department of Community and Regional Affairs" for "division of energy and power development, Department of Commerce and Economic Development" in paragraph (2)(B).

Sec. 44.83.410. Continuing appropriation for Susitna River Hydroelectric project. [Repealed effective June 30, 1991] The sum of $100,000,000 is appropriated on July 1, 1984 and the sum of $200,000,000 is appropriated on July 1 of each subsequent fiscal year from the general fund to the authority for deposit in the power development fund (AS 44.83.382) for the purpose of equity investment in, and rate stabilization for, the Susitna River hydroelectric project. (§ 314 ch 171 SLA 1984; r § 317 ch 171 SLA 1984)

Postponed repeal. — This section is repealed effective June 30, 1991.

Editor's notes. — Section 316, ch. 171, SLA 1984, provides that the appropriations made in §§ 313—315 and 319 of ch. 171, SLA 1984, which enacted this section, are not one-year appropriations and do not lapse under AS 37.25.010.

Sec. 44.83.420. Continuing appropriation for Bradley Lake hydroelectric project. [Repealed effective June 30, 1988.] The sum

of $50,000,000 is appropriated on July 1, of each fiscal year from the general fund to the authority for deposit in the power development fund (AS 44.83.382) for the purpose of equity investment in, and rate stabilization for, the Bradley Lake hydroelectric project. (§ 314 ch 171 SLA 1984; r § 318 ch 171 SLA 1984)

Postponed repeal. — This section is repealed effective June 30, 1988.

Editor's notes. — Section 316, ch. 171, SLA 1984, provides that the appropriations made in §§ 313—315 and 319 of ch. 171, SLA 1984, which enacted this section, are not one-year appropriations and do not lapse under AS 37.25.010.

Sec. 44.83.425. Definitions. In AS 44.83.380 — 44.83.425,

(1) "bus bar" means the substation that serves as the delivery point from the generation and transmission system of the authority to the transmission and distribution system of the utility;

(2) "debt service" means the amounts covenanted with respect to, or pledged to pay, bonds under a trust agreement securing bonds;

(3) "fund" means the power development fund established by AS 44.83.382;

(4) "industrial consumer" means a customer of a utility which customer has a peak power demand in excess of 500 kilowatts and uses the power principally for

(A) manufacturing;

(B) pipeline transportation;

(C) the recovery or processing of minerals;

(D) the processing of timber, agricultural, or seafood products or their by-products; or

(E) the operation of facilities owned by the federal government;

(5) "qualified utility" means an electric utility that is certified by the Alaska Public Utilities Commission to serve all or part of a market area that is served or will be served by the power project, and that the authority determines is capable of operating and maintaining the power project. (§ 1 ch 118 SLA 1981; am § 24 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.510. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, rewrote the definition of "debt service" in paragraph (2).

Article 9. Power Development Revolving Loan Fund.

Section	Section
600. Creation of fund	620. Loan terms
610. Powers and duties of department in administering the fund	630. Definitions

Sec. 44.33.600. Creation of fund. (a) There is established in the Department of Commerce and Economic Development the power development revolving loan fund to carry out the purpose of AS 44.33.600 — 44.33.630. The fund may be used for no other purpose.

(b) The fund consists of

(1) appropriations to the fund by the legislature;

(2) repayments of principal to the fund; and

(3) income from investment of money in the fund and from loans made from the fund. (§ 1 ch 169 SLA 1984)

Sec. 44.33.610. Powers and duties of department in administering the fund. (a) The department may make a loan from the power development revolving loan fund to the Alaska Power Authority for the purpose of financing a power project acquired or constructed by the authority under the energy program for Alaska (AS 44.83.380 — 44.83.425). Repayment of a loan from the fund must be made with the proceeds from the sale of power from projects in the energy program for Alaska. Except as provided in AS 44.83.398(i), the payments required to be made by the authority on a loan from the fund constitute debt service for the purpose of calculating the wholesale power rate in AS 44.83.398(b)(1).

(b) After completion of a final plan of finance and approval of a project under AS 44.83.185(c), a loan may be made from the fund for

(1) the cost or a portion of the cost of final design, acquisition, and construction of a power project;

(2) defeasance or payment of bonds or notes of the authority issued for a power project;

(3) the establishment of a reserve fund for renewals and replacements for the operation of a completed power project; and

(4) any other project related expenses including those described in AS 44.83.398(i). (§ 1 ch 169 SLA 1984)

Sec. 44.33.620. Loan terms. (a) A loan from the fund must be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) the market rate of interest for a loan of comparable size and duration at the time the loan is made; and

rable size and

(2) the estimated costs of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund.

(b) The department may agree with the authority to defer repayment of a loan. However, the loan must be repaid in full during the period of the loan agreement.

(c) A loan to the authority from the fund may not exceed 50 years. (§ 1 ch 169 SLA 1984)

Sec. 44.33.630. Definitions. In AS 44.33.600 — 44.33.630

(1) "authority" means the Alaska Power Authority;

(2) "department" means the Department of Commerce and Economic Development;

(3) "fund" means the power development revolving loan fund;

(4) "power project" means a project acquired or constructed under the energy program for Alaska, AS 44.83.380 — 44.83.425. (§ 1 ch 169 SLA 1984)

Chapter 35. Department of Military and Veterans' Affairs.

Section	Section
10. Adjutant general	30. Construction of memorials to Alaska veterans
20. Duties of department	

Sec. 44.35.010. Adjutant general. The principal executive officer of the Department of Military and Veterans' Affairs is the adjutant general. (§ 15 ch 64 SLA 1959; am E.O. No. 58, § 20 (1984))

Effect of amendments. — The 1984 amendment inserted "and Veterans'."

Collateral references. — 53 Am. Jur. 2d, Military, and Civil Defense, §§ 4, 30, 33, 37.

57 C.J.S., Militia, § 11.

Sec. 44.35.020. Duties of department. The Department of Military and Veterans' Affairs shall

(1) conduct the military affairs of the state as prescribed by the Military Code; and

(2) cooperate with the federal government in matters of mutual concern pertaining to the welfare of Alaskan veterans, including establishing, extending, or strengthening services for veterans in Alaska. (§ 15 ch 64 SLA 1959; am E.O. No. 58, § 21 (1984))

Effect of amendments. — The 1984 amendment rewrote and restructured this section, which formerly read "The Department of Military Affairs shall conduct the military affairs of the state as prescribed by the Military Code."

Editor's notes. — For the Military Code of Alaska, see AS 26.05.

Collateral references. — 53 Am. Jur. 2d, Military, and Civil Defense, § 1 et seq.

(d) In this section, "record" means a report, file, book, account, paper, or application, and the facts and information contained in it. (§ 6 ch 113 SLA 1970; am § 8 ch 110 SLA 1981)

Effect of amendments. — The 1981 amendment rewrote this section.

NOTES TO DECISIONS

Narrow construction. — The privilege reflected by this section should be construed narrowly so that it does not conflict with the constitutional requirements of due process. City of Fairbanks v. Alaska Pub. Utils. Comm'n & Wire Communications, Inc., Sup. Ct. Op. No. 2079 (File No. 3977), 611 P.2d 493 (1980).

Due process controls over section. — The requirement of this section that information not be withheld if "required in the interests of the public" will normally prevent a conflict with due process requirements. If a conflict nevertheless occurs, due process must control. City of Fairbanks v. Alaska Pub. Utils. Comm'n & Wire Communications, Inc., Sup. Ct. Op. No. 2079 (File No. 3977), 611 P.2d 493 (1980).

Sec. 42.05.681. Validity of certain certificates. A certificate issued before July 29, 1968, to a public utility for the generation, transmission, or distribution of electric energy and power, or for the furnishing of telecommunications may not be considered as terminated, or voided, for the sole reason that the utility did not or would not produce an annual gross income in excess of $25,000. (§ 6 ch 113 SLA 1970)

Sec. 42.05.691. Utility classes. The commission may by regulation provide for the classification of public utilities based upon differences in annual revenue, assets, nature of ownership and other appropriate distinctions and as between these classifications, by regulation, provide for different reporting, accounting and other regulatory requirements. (§ 6 ch 113 SLA 1970)

Article 10. General Provisions.

Section	Section
711. Exemptions	720. Definitions
712. Deregulation ballot	721. Short title

Sec. 42.05.701. [Renumbered as AS 42.05.720.]

Sec. 42.05.711. Exemptions. (a) The provisions of this chapter do not apply to a person who furnishes water, gas or petroleum or petroleum products by tank, wagon, or similar conveyance, unless the person is thereby supplying water, gas, petroleum or petroleum products to a public utility in which the person has an "affiliated interest."

(b) Public utilities owned and operated by a political subdivision of the state and none of whose utilities is in competition with any other utility are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 — 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

(c) The ownership in whole or part, of the corporate stock of a public utility does not make the owner a public utility.

(d) The commission, on a finding that no legitimate public interest will be served, may exempt a utility from all or any portion of this chapter.

(e) Notwithstanding any other provisions of this chapter, any electric or telephone utility that does not gross $50,000 annually is exempt from regulation under this chapter unless 25 percent of the subscribers petition the commission for regulation.

(f) Notwithstanding any other provisions of this chapter, an electric or telephone utility that does not gross $325,000 annually may elect to be exempt from the provisions of this chapter other than AS 42.05.221 — 42.05.281 under the procedure described in AS 42.05.712.

(g) A utility, other than a telephone or electric utility, that does not gross $100,000 annually may elect to be exempt from the provisions of this chapter other than AS 42.05.221 — 42.05.281 under the procedure described in AS 42.05.712.

(h) A cooperative organized under AS 10.25 may elect to be exempt from the provisions of this chapter, other than AS 42.05.221 — 42.05.281, under the procedure described in AS 42.05.712.

(i) A utility which furnishes collection and disposal service of garbage, refuse, trash, or other waste material and has annual gross revenues of $200,000 or less is exempt from the provisions of this chapter, other than the certification provisions of AS 42.05.221 — 42.05.281, unless 25 percent of the subscribers or subscribers representing 25 percent of the gross revenue of the utility petition the commission for regulation.

(j) The provisions of this chapter do not apply to sales, exchanges or gifts of energy to an electric utility certificated under this chapter when the energy which is the subject of the sale, exchange or gift is waste heat, electricity, or other energy which is surplus or the by-product of an industrial process. In an area in which no electric utility is certificated for service, energy provided by sale, exchange or gift may be provided to any utility which is certificated for service to that area. A contract for the sale, exchange or gift of energy exempt under this subsection does not make the supplier a public utility, and does not transfer the responsibility to provide utility services from a certificated utility to any other person.

(k) A utility which furnishes cable television service is exempt from the provisions of this chapter other than AS 42.05.221 — 42.05.281 unless 25 percent of the subscribers petition the commission for regulation.

(*l*) A person, utility, or cooperative that is exempt from regulation under AS 42.05.711(a) or (d) — (k) is not subject to regulation by a municipality under AS 29.48.060 — 29.48.090. (§ 6 ch 113 SLA 1970; am § 3 ch 76 SLA 1973; am § 8 ch 83 SLA 1980; am §§ 7-9 ch 136 SLA 1980; am § 89 ch 59 SLA 1982; am § 1 ch 30 SLA 1983)

Cross references. — For limitations on these exemptions, see AS 42.05.321(b) and AS 42.05.381(c).

Effect of amendments. — The first 1980 amendment added subsection (j).

The second 1980 amendment deleted "excepting the furnishing of collection and disposal service of garbage, refuse, trash or other waste material" following "none of whose utilities" near the beginning of subsection (b), deleted the former second sentence in subsection (b), which read: "Notwithstanding any other provisions of this chapter, municipalities providing collection and disposal service of garbage, refuse, trash or other waste material within their corporate boundaries are not subject to regulation by the Alaska Public Utilities Commission unless the municipality elects to be subject to the provisions of this chapter," substituted "$50,000" for "$25,000" following "does not gross" near the middle of subsection (e), substituted "under this chapter" for "hereunder" following "exempt from regulat..." near the middle of subsection (e), and added subsections (f) through (i).

The 1982 amendment, effective May 28, 1982, deleted "on June 30, 1980" preceding "a utility," and inserted "annual" preceding "gross revenue" in subsection (i).

The 1983 amendment added subsections (k) and (l).

Opinions of attorney general. — An electrical utility owned and operated by a regional electrical authority would continue to qualify for the broad exemption from this chapter, available to political subdivisions under subsection (b) of this section once the regional electrical authority had completed its proposed organization as a nonprofit corporation pursuant to AS 10.20.005 et seq. June 7, 1976, Op. Att'y Gen.

NOTES TO DECISIONS

Municipally owned utilities in competition with other utilities subjected to full gamut of regulation pertaining to other utilities, with exception relating to bond covenants. — See Alaska Pub. Utils. Comm'n v. Municipality of Anchorage, Sup. Ct. Op. No. 1326 (File No. 2940), 555 P.2d 262 (1976).

Sec. 42.05.712. Deregulation ballot. (a) A utility or cooperative which may elect to be exempt from the provisions of this chapter shall poll its subscribers or members in the manner described in this section.

(b) The votes of a majority of those voting in an election in which at least 15 percent of the eligible subscribers or members return ballots are required for a utility or cooperative to elect exemption under (a) of this section.

(c) Each subscriber or member of the utility or cooperative shall receive notice of an election under this section with the subscriber's or member's regular bill for service at least 60 days before the date set for the election. The notice shall contain impartial language informing the subscribers or members that an election on the option of deregulation or regulation by the Alaska Public Utilities Commission will be held within 60 days and that a ballot to participate in that election will be mailed or delivered to each subscriber or member of the utility or cooperative with the regular bill for service. The notice shall also state

Article 9. Power Development Revolving Loan Fund.

Section	Section
600. Creation of fund	620. Loan terms
610. Powers and duties of department in administering the fund	630. Definitions

Sec. 44.33.600. Creation of fund. (a) There is established in the Department of Commerce and Economic Development the power development revolving loan fund to carry out the purpose of AS 44.33.600 — 44.33.630. The fund may be used for no other purpose.

(b) The fund consists of

(1) appropriations to the fund by the legislature;

(2) repayments of principal to the fund; and

(3) income from investment of money in the fund and from loans made from the fund. (§ 1 ch 169 SLA 1984)

Sec. 44.33.610. Powers and duties of department in administering the fund. (a) The department may make a loan from the power development revolving loan fund to the Alaska Power Authority for the purpose of financing a power project acquired or constructed by the authority under the energy program for Alaska (AS 44.83.380 — 44.83.425). Repayment of a loan from the fund must be made with the proceeds from the sale of power from projects in the energy program for Alaska. Except as provided in AS 44.83.398(i), the payments required to be made by the authority on a loan from the fund constitute debt service for the purpose of calculating the wholesale power rate in AS 44.83.398(b)(1).

(b) After completion of a final plan of finance and approval of a project under AS 44.83.185(c), a loan may be made from the fund for

(1) the cost or a portion of the cost of final design, acquisition, and construction of a power project;

(2) defeasance or payment of bonds or notes of the authority issued for a power project;

(3) the establishment of a reserve fund for renewals and replacements for the operation of a completed power project; and

(4) any other project related expenses including those described in AS 44.83.398(i). (§ 1 ch 169 SLA 1984)

Sec. 44.33.620. Loan terms. (a) A loan from the fund must be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) the market rate of interest for a loan of comparable size and duration at the time the loan is made; and

(2) the estimated costs of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund.

(b) The department may agree with the authority to defer repayment of a loan. However, the loan must be repaid in full during the period of the loan agreement.

(c) A loan to the authority from the fund may not exceed 50 years. (§ 1 ch 169 SLA 1984)

Sec. 44.33.630. Definitions. In AS 44.33.600 — 44.33.630

(1) "authority" means the Alaska Power Authority;

(2) "department" means the Department of Commerce and Economic Development;

(3) "fund" means the power development revolving loan fund;

(4) "power project" means a project acquired or constructed under the energy program for Alaska, AS 44.83.380 — 44.83.425. (§ 1 ch 169 SLA 1984)

Chapter 35. Department of Military and Veterans' Affairs.

Section	Section
10. Adjutant general	30. Construction of memorials to Alaska veterans
20. Duties of department	

Sec. 44.35.010. Adjutant general. The principal executive officer of the Department of Military and Veterans' Affairs is the adjutant general. (§ 15 ch 64 SLA 1959; am E.O. No. 58, § 20 (1984))

Effect of amendments. — The 1984 amendment inserted "and Veterans'."

Collateral references. — 53 Am. Jur. 2d, Military, and Civil Defense, §§ 4, 30, 33, 37.

57 C.J.S., Militia, § 11.

Sec. 44.35.020. Duties of department. The Department of Military and Veterans' Affairs shall

(1) conduct the military affairs of the state as prescribed by the Military Code; and

(2) cooperate with the federal government in matters of mutual concern pertaining to the welfare of Alaskan veterans, including establishing, extending, or strengthening services for veterans in Alaska. (§ 15 ch 64 SLA 1959; am E.O. No. 58, § 21 (1984))

Effect of amendments. — The 1984 amendment rewrote and restructured this section, which formerly read "The Department of Military Affairs shall conduct the military affairs of the state as prescribed by the Military Code."

Editor's notes. — For the Military Code of Alaska, see AS 26.05.

Collateral references. — 53 Am. Jur. 2d, Military, and Civil Defense, § 1 et seq.

Sec. 44.83.398. Sale of power from power project. (a) The authority shall sell power produced from power projects acquired or constructed under the energy program for Alaska. For purposes of this section, Lake Tyee, Swan Lake, Solomon Gulch, and Terror Lake hydroelectric facilities are considered to be one power project. This power project is referred to as the initial project

(b) The authority shall establish a wholesale power rate structure applicable to sales of power to the customers of a power project as follows:

(1) The authority shall establish and maintain a separate wholesale power rate applicable to each power project that it has acquired or constructed under the energy program for Alaska, other than a project described in (f) of this section. The wholesale power rate established by the authority for the initial project shall be a rate calculated under this paragraph except that the portion of the rate applicable to (A) and (C) of this paragraph shall be adjusted for the hydroelectric facilities in the initial project as set out in (3) of this subsection. The wholesale power rate shall be computed by the authority annually, or more frequently as may be necessary, and shall equal the rate that the authority estimates is necessary to produce revenue that is sufficient to pay

(A) operation, maintenance, and equipment replacement costs of the power project;

(B) the power project's proportionate share of the debt service on state loans and bonds for all power projects in the energy program for Alaska, determined in accordance with (g) of this section;

(C) safety inspections and investigations of the power project by the authority.

(2) *[Repealed, § 7 ch 169 SLA 1984.]*

(3) For the purposes of determining amounts to be allocated to each hydroelectric facility in the initial project under (1)(A) and (1)(C) of this subsection, the authority shall determine for each hydroelectric facility its individual operation, maintenance, equipment replacement, safety inspection, and investigation costs.

(c) The authority shall transmit all the money that it receives under (a) of this section to the commissioner of revenue for deposit in the state general fund except for money it has pledged or otherwise covenanted to secure bonds.

(d) *[Repealed, § 8 ch 169 SLA 1984.]*

(e) After determining the wholesale power rate for a power project under the provisions of this section, the authority may adjust the rate or change the rate provisions to insure that the revenue derived from that power project and the aggregate revenues of the authority will be adequate to comply with the rate covenants and other agreements contained in any trust indenture or trust agreement entered into by the authority for the security of the holders of bonds issued to finance power projects in the energy program for Alaska. The authority may agree with a purchaser of power to limit rate increases caused by debt service payable by the authority on subsequent projects.

(f) The provisions of (b) of this section do not apply to an intertie that is authorized as a separate project under AS 44.83.380. The authority shall establish and maintain separate power rate schedules applicable to each intertie that it has acquired or constructed as a separate power project under the energy program for Alaska. The power rate schedules shall produce sufficient revenue from utilities connected by the intertie to pay (1) operation, maintenance, and equipment replacement costs of the intertie; (2) debt service of the intertie; and (3) safety inspections and investigations of the intertie by the authority. If the authority determines that an intertie has ceased to function as a separate project and has become a part of one or more other power projects and has become a part of one or more other power projects as a transmission line, the power rate schedules established under this subsection shall be terminated and a wholesale power rate applicable to the former intertie shall be calculated under (b) of this section for the project or projects of which it has become a part.

(g) For the purposes of (b)(1)(B) of this section, a power project's proportionate share of debt service on state loans and bonds for all power projects in the energy program for Alaska is equal to the state's investment in the power project divided by the state's investment in all power projects in the energy program for Alaska and multiplied by the debt service on state loans and bonds for all power projects in the energy program for Alaska. In this subsection

(1) "state's investment in the power project" includes all state money invested in a power project, including loans, grants, and proceeds from bonds, less the principal repayments on the project's proportionate share of debt service on state loans and bonds;

(2) "state's investment in all power projects in the energy program for Alaska" includes all state money invested in the power projects, other than interties, in the energy program for Alaska, including loans, grants, and proceeds from bonds, less the principal repayments on bonds and state loans issued for the power projects.

(h) Notwithstanding (g) of this section, in the 1983 state fiscal year the proportionate share of debt service under (b) of this section, expressed as a rate, for a power project for which a construction contract has been awarded before June 25, 1982 may not exceed the average debt service component of the wholesale power rate for all power projects in the energy program for Alaska. The limit imposed by this subsection shall be increased in the 1984 state fiscal year to four percent above the average debt service component of the wholesale power rate for all power projects in the energy program for Alaska and by an additional four percent above that average in each succeeding state fiscal year. If application of this subsection results in the production of insufficient revenue to pay the total debt service for all projects in the energy program for Alaska, a project that does not have its share of debt service limited under this subsection shall be subject to a rate

in addition to the rate established under (b) of this section. The additional rate is the rate that the authority estimates is necessary to produce revenue that is sufficient to pay the difference between the total debt service for all projects in the energy program for Alaska and the revenue actually produced to pay that debt service, multiplied by a fraction whose numerator is the total cost of the project and whose denominator is the total cost of all of the projects that are subject to the additional rate. In this subsection, "projects in the energy program for Alaska" does not include an interfie that is authorized as a separate project as described in (f) of this section.

(i) The authority may place in a separate interest bearing account money appropriated to the authority as a loan for the purpose of meeting the operating expenses of a facility in the initial project. The money may be used to replace amounts which were expected to be paid by a utility potentially served by a facility in the initial project, which has not entered into a power sales agreement with the authority. Repayment of the amount loaned must be made from revenues attributable to power sales from that facility, as limited by the terms of power sales agreements with power purchasers from that facility. A loan made in accordance with this subsection is not a state loan for purposes of calculating the wholesale power rate under (b)(1) of this section. (§ 1 ch 118 SLA 1981; am §§ 13 — 16 ch 133 SLA 1982; am §§ 20 — 23 ch 89 SLA 1983; am § 125 ch 6 SLA 1984; am §§ 2-8 ch 169 SLA 1984)

Revisor's notes. — Enacted as AS 44.83.490. Renumbered in 1981.

Effect of amendments. — The 1982 amendment, in subsection (b), substituted "a power project" for "the power project" in the introductory language, substituted "separate" for "single" and "each power project" for "all power projects" in the first sentence of paragraph (1), added "other than a project described in (f) of this section" to the end of the first sentence of paragraph (1), inserted "or more frequently as may be necessary" in the introductory language of the second sentence of paragraph (1), substituted "power project" for "power projects" in subparagraph (1)(A) and (C), added "the power project's proportionate share of the" to the beginning of subparagraph (1)(B), substituted the language beginning "on state loans and bonds" for "of the power projects" in subparagraph (1)(B), substituted "separate" for "single" and "each power project that is" for "all power projects that it has" in the first sentence of paragraph (2), inserted "or more frequently as may be necessary" in the introductory language of the second sentence of paragraph (2), substituted "power project" for "power projects" in subparagraph (2)(A) and (2)(B)(iii), and substituted the present provisions of subparagraph (2)(B)(ii) for the former provisions, which read: "debt service of power projects by the authority; and." In subsection (c), the amendment substituted "under (a) of this section" for "under (b) of this section" and "money it has pledged to secure bonds in accordance with contracts with bondholders" for "the money it receives under (b)(1)(A) and (B) and (b)(2)(B)(i) and (ii), or the money it would have received under (b)(1)(A) and (B) and (b)(2)(B)(i) and (ii) of this section if those items had been used in part to establish the wholesale power rate in effect at the time the money is received by the authority." In subsection (e), the amendment substituted "a wholesale" for "the wholesale" and "or (f)" in the first sentence and added the second sentence. The amendment also added subsections (f) — (h).

The 1983 amendment, substituted "July 1, 1991" for "July 1, 1986" near the beginning of paragraph (2) of subsection (b), substituted "or otherwise covenanted

ction. The addi-
is necessary to

The first 1984 amendment made a technical change in the last sentence in subsection (f).

The second 1984 amendment added subsection (i), repealed former paragraph (2) of subsection (b), relating to a separate wholesale power rate beginning July 1, 1991, and repealed former subsection (d), relating to industrial consumer rates. The 1984 amendment also, in subsection (a), deleted former paragraphs (1) and (2) and the former last sentence in the introductory paragraph, relating to a utility that purchases power produced by a power project of the authority, and, in the remaining language, added the last two sentences; in subsection (b), substituted "the customers" for "its customers at the busbar" in the introductory language, inserted the second sentence in the introductory paragraph of paragraph (1), and added paragraph (3); in subsection (e), added the second sentence and substituted "energy program" for "Energy Program" in the first sentence; and changed the internal reference in the first sentence in the introductory paragraph of subsection (g).

Sec. 44.83.400. Energy conservation. The authority shall ensure

(1) that communities that benefit from the energy program for Alaska implement cost-effective energy conservation measures for residences, commercial and public buildings, and industries; and

(2) that communities shall fulfill their responsibilities under (1) of this section by cooperating with state agencies concerned with development and conservation of energy, including but not limited to

(A) the Alaska Public Utilities Commission;

(B) the Department of Community and Regional Affairs; and

(C) the division of business loans, Department of Commerce and Economic Development. (§ 1 ch 118 SLA 1981; am § 5 ch 79 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.500. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, substituted "Department of Community and Regional Affairs" for "division of energy and power development, Department of Commerce and Economic Development" in paragraph (2)(B).

Sec. 44.83.410. Continuing appropriation for Susitna River Hydroelectric project. [Repealed effective June 30, 1991] The sum of $100,000,000 is appropriated on July 1, 1984 and the sum of $200,000,000 is appropriated on July 1 of each subsequent fiscal year from the general fund to the authority for deposit in the power development fund (AS 44.83.382) for the purpose of equity investment in, and rate stabilization for, the Susitna River hydroelectric project. (§ 314 ch 171 SLA 1984; r § 317 ch 171 SLA 1984)

Postponed repeal. — This section is repealed effective June 30, 1991.

Editor's notes. — Section 316, ch. 171, SLA 1984, provides that the appropriations made in §§ 313—315 and 319 of ch. 171, SLA 1984, which enacted this section, are not one-year appropriations and do not lapse under AS 37.25.010.

Sec. 44.83.420. Continuing appropriation for Bradley Lake hydroelectric project. [Repealed effective June 30, 1988.] The sum

of $50,000,000 is appropriated on July 1, of each fiscal year from the general fund to the authority for deposit in the power development fund (AS 44.83.382) for the purpose of equity investment in, and rate stabilization for, the Bradley Lake hydroelectric project. (§ 314 ch 171 SLA 1984; r § 318 ch 171 SLA 1984)

Postponed repeal. — This section is repealed effective June 30, 1988.

Editor's notes. — Section 316, ch. 171, SLA 1984, provides that the appropriations made in §§ 313—315 and 319 of ch. 171, SLA 1984, which enacted this section, are not one-year appropriations and do not lapse under AS 37.25.010.

Sec. 44.83.425. Definitions. In AS 44.83.380 — 44.83.425,

(1) "bus bar" means the substation that serves as the delivery point from the generation and transmission system of the authority to the transmission and distribution system of the utility;

(2) "debt service" means the amounts covenanted with respect to, or pledged to pay, bonds under a trust agreement securing bonds;

(3) "fund" means the power development fund established by AS 44.83.382;

(4) "industrial consumer" means a customer of a utility which customer has a peak power demand in excess of 500 kilowatts and uses the power principally for

(A) manufacturing;

(B) pipeline transportation;

(C) the recovery or processing of minerals;

(D) the processing of timber, agricultural, or seafood products or their by-products; or

(E) the operation of facilities owned by the federal government;

(5) "qualified utility" means an electric utility that is certified by the Alaska Public Utilities Commission to serve all or part of a market area that is served or will be served by the power project, and that the authority determines is capable of operating and maintaining the power project. (§ 1 ch 118 SLA 1981; am § 24 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.510. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, rewrote the definition of "debt service" in paragraph (2).

Chapter 85. Alaska Municipal Bond Bank Authority.

Section	Section
05. Legislative findings	70. Staff
10. Legislative policy	80. Powers of bond bank authority
20. Municipal Bond Bank Authority	90. Limitations
30. Membership and vacancies	95. Regulations
40. Officers, quorum, and meetings	100. Annual report and audit
50. Bonding of members	110. Annual budget
60. Compensation and expenses	120. Care and custody of bonds

(3) access for the line that would be installed with loan proceeds;

(4) availability of other utility service in the area; and

(5) the economic feasibility of the extension of electric service with the proceeds of the loan. (§ 1 ch 118 SLA 1981)

Article 9. Energy Program for Alaska.

Section	Section
380. Program established	400. Energy conservation
382. Power development fund established	410. Continuing appropriation for Susitna River hydroelectric project [Repealed effective June 30, 1991]
384. Use of fund balance	420. Continuing appropriation for Bradley Lake hydroelectric project [Repealed effective June 30, 1988]
386. Investment of fund	425. Definitions
388. Allotment to projects	
390. Reappropriation of fund balance	
392. Lapse of excess appropriations	
396. Operation of power project	
398. Sale of power from power project	

Sec. 44.83.380. Program established. (a) The energy program for Alaska is established. The program shall be administered by the Alaska Power Authority.

(b) The energy program for Alaska is a program by which the authority may acquire or construct power projects with money appropriated by the legislature to the power development fund established in AS 44.83.382. A power project may be acquired or constructed as part of the energy program for Alaska only if the project is submitted to and approved by the legislature in accordance with procedures set out in AS 44.83.177 — 44.83.187.

(c) The provisions of AS 36.10.010 — 36.10.125 apply to power projects constructed by the authority under AS 44.83.380 — 44.83.425. (§ 1 ch 118 SLA 1981)

Revisor's notes. — Enacted as AS 44.83.400. Renumbered in 1981.

Sec. 44.83.382. Power development fund established. (a) A power development fund is established in the Alaska Power Authority to carry out the purposes of the energy program for Alaska (AS 44.83.380 — 44.83.425).

(b) The fund includes

(1) money appropriated to it by the legislature; and

(2) *[Repealed, § 27 ch 89 SLA 1983.]* (§ 1 ch 118 SLA 1981; am § 27 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.410. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, repealed paragraph (2) of subsection (b).

lished. (a) A
wer Authority
r Alaska (AS

1981; am § 27

ragraph (2) of

Sec. 44.83.384. Use of fund balance. (a) The fund may be used by the authority to provide money for

(1) reconnaissance and feasibility studies and power project finance plans prepared under AS 44.83.177 — 44.83.181;

(2) the cost of a power project, including but not limited to costs of acquiring necessary licenses, preparing engineering designs, obtaining land, and constructing the power project;

(3) the defeasance of bonds, or the payment of debt service on loans for or on an issue of bonds sold in connection with a power project;

(4) the cost of operating and maintaining power projects; and

(5) debt service on power projects.

(b) Money in the fund may be used under (a) of this section only for a power project that

(1) is economically feasible; and

(2) provides the lowest reasonable power cost to utility customers in the market area for the estimated life of the power project, whether operated by itself or in conjunction with other power projects in the market area, and that operates or will operate on one or more of the following:

(A) renewable energy resources, including but not limited to hydroelectric power, wind, biomass, geothermal, tidal or solar energy, or a method that uses temperature differentials or other physical properties of the ocean;

(B) coal or peat;

(C) energy derived from waste heat; or

(D) fossil fuel, including oil or natural gas.

(c) Notwithstanding (b)(1) of this section and AS 44.83.396 — 44.83.398, the fund may be used by the authority to provide money for the cost of a power project that is or was either constructed or owned by the United States government if the requirements of this subsection are met. The provisions of AS 44.83.177 — 44.83.187 do not apply to a power project financed under this subsection. The authority may use money in the fund for the cost of a power project under this subsection if

(1) the legislature enacts a law approving the project;

(2) the office of management and budget in the Office of the Governor reviews a feasibility study and a plan of finance for the project and determines that the feasibility study complies with the requirements for a feasibility study submitted under AS 44.83.181(b) and that the plan of finance complies with the requirements for a plan of finance submitted under AS 44.83.181(c); and

(3) the project meets the other requirements of this chapter. (§ 1 ch 118 SLA 1981; am § 12 ch 133 SLA 1982; am § 28 ch 63 SLA 1983; am §§ 14, 15 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.420. Renumbered in 1981.

Effect of amendments. — The 1982 amendment added subsection (c).

The first 1983 amendment, substituted "office of management and budget" for "division of budget and management" in paragraph (c)(2).

The second 1983 amendment, rewrote paragraph (1) of subsection (b) and substituted "AS 44.83.396 — 44.83.398" for "AS 44.83.394 — 44.83.398" and "or was either constructed or owned" for "constructed and owned" in the first sentence of subsection (c).

Sec. 44.83.386. Investment of fund. The Department of Revenue shall invest the money in the fund in accordance with AS 37.10.070 and 37.10.075. The Department of Revenue shall provide money in the fund to the authority only after costs have been incurred or amounts in the fund have been otherwise obligated under contracts for the acquisition and construction of a project. Amounts that have been obligated, but for which costs have not yet been incurred, may be segregated by the Department of Revenue or transferred to the authority only with the prior approval or agreement of the commissioner of revenue. Interest received on money that is segregated or transferred under this section must be deposited in the general fund. (§ 1 ch 118 SLA 1981; am § 16 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.430. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, substituted the language beginning "costs have been incurred" for "a cost for a project is incurred" at the end of the second sentence and added the third and fourth sentences.

Sec. 44.83.388. Allotment to projects. (a) The authority shall maintain records of power project allocations from the fund for each power project

(1) approved in accordance with AS 44.83.185; and

(2) for which an allocation is made from an appropriation made by the legislature without specifying an appropriation to a project.

(b) Income earned from investment of money appropriated to the fund shall be deposited in the general fund and may be appropriated to the fund by the legislature. (§ 1 ch 118 SLA 1981)

Revisor's notes. — Enacted as AS 44.83.440. Renumbered in 1981.

Sec. 44.83.390. Reappropriation of fund balance. (a) If a power project designated by the legislature by law is not constructed, the amount appropriated to it may be reappropriated to other power projects by the legislature.

(b) The legislature may reappropriate money under (a) of this section only for a power project that is economically feasible under AS 44.83.181(b) and only if the project will serve the market area that would have been served by the power project designated by the legislature and not constructed. (§ 1 ch 118 SLA 1981)

Revisor's notes. — Enacted as AS 44.83.450. Renumbered in 1981.

Sec. 44.83.392. Lapse of excess appropriations. If at the end of construction of a power project appropriations for the power project exceed the amount required for construction of it, the excess lapses into the general fund. (§ 1 ch 118 SLA 1981)

Revisor's notes. — Enacted as AS 44.83.460. Renumbered in 1981.

Sec. 44.83.394. Revenue requirements. [Repealed, § 27 ch 89 SLA 1983.]

Sec. 44.83.396. Operation of power project. (a) A power project that is acquired or constructed as part of the energy program for Alaska is owned, and shall be administered, by the authority.

(b) When a power project has been acquired or constructed by the authority, the project may be operated for the authority under a contract or lease entered into by a qualified utility and the authority.

(c) The authority shall enter into a contract or lease under reasonable terms and conditions to permit the applicant utility to operate the power project when the applicant utility is the only wholesale power customer to be served directly by the power project unless the authority determines a utility making application for a contract or lease to operate a power project is not a qualified utility or is not capable of operating that power project efficiently and in a manner that is consistent with national standards for the industry and with agreements with bondholders.

(d) The authority shall adopt regulations to determine the manner of selecting a qualified utility to operate a power project under a contract or lease when there is more than one wholesale power customer to be served directly by the power project.

(e) When the authority permits a power project to be operated by a qualified utility under a contract or lease, the authority shall

(1) review and approve the annual budget for the operation and maintenance of the power project; and

(2) assure that the project is being operated efficiently and in a manner that is consistent with national standards for the industry and agreements with bondholders. (§ 1 ch 118 SLA 1981; am §§ 17 — 19 ch 89 SLA 1983)

Revisor's notes. — Enacted as AS 44.83.480. Renumbered in 1981.

Effect of amendments. — The 1983 amendment, deleted "by the state" following "is owned" in subsection (a), inserted "a qualified utility or is not" near the end of subsection (c), added the language beginning "efficiently and in a manner that is consistent" to the end of subsection (c), added "and" to the end of paragraph (1) of subsection (e), and added "and agreements with bondholders" to the end of paragraph (2) of subsection (e).

Article 9. Power Development Revolving Loan Fund.

Section	Section
600. Creation of fund	620. Loan terms
610. Powers and duties of department in administering the fund	630. Definitions

Sec. 44.33.600. Creation of fund. (a) There is established in the Department of Commerce and Economic Development the power development revolving loan fund to carry out the purpose of AS 44.33.600 — 44.33.630. The fund may be used for no other purpose.

(b) The fund consists of

(1) appropriations to the fund by the legislature;

(2) repayments of principal to the fund; and

(3) income from investment of money in the fund and from loans made from the fund. (§ 1 ch 169 SLA 1984)

Sec. 44.33.610. Powers and duties of department in administering the fund. (a) The department may make a loan from the power development revolving loan fund to the Alaska Power Authority for the purpose of financing a power project acquired or constructed by the authority under the energy program for Alaska (AS 44.83.380 — 44.83.425). Repayment of a loan from the fund must be made with the proceeds from the sale of power from projects in the energy program for Alaska. Except as provided in AS 44.83.398(i), the payments required to be made by the authority on a loan from the fund constitute debt service for the purpose of calculating the wholesale power rate in AS 44.83.398(b)(1).

(b) After completion of a final plan of finance and approval of a project under AS 44.83.185(c), a loan may be made from the fund for

(1) the cost or a portion of the cost of final design, acquisition, and construction of a power project;

(2) defeasance or payment of bonds or notes of the authority issued for a power project;

(3) the establishment of a reserve fund for renewals and replacements for the operation of a completed power project; and

(4) any other project related expenses including those described in AS 44.83.398(i). (§ 1 ch 169 SLA 1984)

Sec. 44.33.620. Loan terms. (a) A loan from the fund must be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) the market rate of interest for a loan of comparable size and duration at the time the loan is made; and

(2) the estimated costs of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund.

(b) The department may agree with the authority to defer repayment of a loan. However, the loan must be repaid in full during the period of the loan agreement.

(c) A loan to the authority from the fund may not exceed 50 years. (§ 1 ch 169 SLA 1984)

Sec. 44.33.630. Definitions. In AS 44.33.600 — 44.33.630

(1) "authority" means the Alaska Power Authority;

(2) "department" means the Department of Commerce and Economic Development;

(3) "fund" means the power development revolving loan fund;

(4) "power project" means a project acquired or constructed under the energy program for Alaska, AS 44.83.380 — 44.83.425. (§ 1 ch 169 SLA 1984)

Chapter 35. Department of Military and Veterans' Affairs.

Section		Section	
10.	Adjutant general	30.	Construction of memorials to Alaska veterans
20.	Duties of department		

Sec. 44.35.010. Adjutant general. The principal executive officer of the Department of Military and Veterans' Affairs is the adjutant general. (§ 15 ch 64 SLA 1959; am E.O. No. 58, § 20 (1984))

Effect of amendments. — The 1984 amendment inserted "and Veterans'."

Collateral references. — 53 Am. Jur. 2d, Military, and Civil Defense, §§ 4, 30, 33, 37.

57 C.J.S., Militia, § 11.

Sec. 44.35.020. Duties of department. The Department of Military and Veterans' Affairs shall

(1) conduct the military affairs of the state as prescribed by the Military Code; and

(2) cooperate with the federal government in matters of mutual concern pertaining to the welfare of Alaskan veterans, including establishing, extending, or strengthening services for veterans in Alaska. (§ 15 ch 64 SLA 1959; am E.O. No. 58, § 21 (1984))

Effect of amendments. — The 1984 amendment rewrote and restructured this section, which formerly read "The Department of Military Affairs shall conduct the military affairs of the state as prescribed by the Military Code."

Editor's notes. — For the Military Code of Alaska, see AS 26.05.

Collateral references. — 53 Am. Jur. 2d, Military, and Civil Defense, § 1 et seq.

CS FOR HOUSE BILL NO. 219 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and <u>electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state,</u> none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) A loan from the fund <u>shall</u> [MUST] be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) [THE MARKET RATE OF INTEREST FOR A LOAN OF COMPARABLE SIZE AND DURATION AT THE TIME THE LOAN IS MADE; AND

(2)] the [ESTIMATED] costs, <u>at the time the power sales</u>

agreement is initially negotiated or renegotiated, of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund;

(2) the effect of the loan terms on the wholesale power costs to all utilities purchasing power from the initial project;

(3) the long-term benefits to consumers and communities of stable wholesale power costs;

(4) the affordability of initial wholesale power costs that result from the loan terms with utilities purchasing power from the initial project;

(5) increasing repayment, not to exceed five years, of debt service payment per kilowatt hour gradually over the initial period of a loan repayment schedule to the extent necessary to avoid significant rate increases to the consumer;

(6) the existing excess capacity of power projects; and

(7) the effects of increased capacity utilization, inflation, and alternative energy production costs over the life of the initial project.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) In (a) of this section "initial project" means the project described in AS 44.83.398(a).

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. PRICE REOPENERS. A power sales agreement for the sale of power from a power project financed with a loan under AS 44.33.610 must include a provision for periodic price reopeners.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or an electric operating entity established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public

Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

For Sen. Finance

HB219

THE COMMUNITIES OF PETERSBURG, WRANGELL AND KETCHIKAN, ALONG WITH THE COPPER VALLEY AND KODIAK ELECTRIC COOPERATIVES, HAVE BEEN WORKING WITH THE STATE FOR THREE YEARS TO SECURE WORKABLE LONG TERM POWER SALES AGREEMENTS FOR THE STATE'S FIRST FOUR HYDROELECTRIC PROJECTS. TODAY YOU HAVE BEFORE YOU A BILL AND A MEMORANDUM OF UNDERSTANDING THAT REPRESENT A SOLUTION TO THIS PROBLEM.

NEGOTIATORS REPRESENTING FOUR OF THE COMMUNITIES HAVE SIGNED A MEMORANDUM OF UNDERSTANDING WHICH YOU SEE BEFORE YOU TODAY. THE CITY COUNCIL OF PETERSBURG HAS ALSO AUTHORIZED THE SIGNING OF THIS DOCUMENT THRU CONSULTATION WITH THEIR REPRESENTATIVE, PETERSBURG CITY COUNCILMAN, JIM FRENZELL. THE MEMORANDUM OF UNDERSTANDING PROVIDES THE FRAMEWORK ABOUT WHICH LONG TERM POWER SALES AGREEMENTS CAN BE CONSTRUCTED.

THE FOUR DAM POOL REPRESENTATIVES REPORT TO ME THAT AN EXCELLENT WORKING RELATIONSHIP WITH BOB HEATH HAS DEVELOPED SINCE HIS RECENT APPOINTMENT TO THE APA'S TOP POST. THIS RELATIONSHIP WILL ASSIST IN BRINGING THESE NEGOTIATIONS TO A CLOSE WITH A MUTUALLY ACCEPTABLE AND MUTUALLY BENEFICIAL CONTRACT FOR THE SALE OF HYDROELECTRIC POWER IN THESE SOUTH CENTRAL AND SOUTHEASTERN COMMUNITIES.

HB219 REPRESENTS GUIDING AND ENABLING LEGISLATION THAT MAKES IT POSSIBLE TO NEGOTIATE A CONTRACT USING THE GUIDELINES FOUND IN THE MEMORANDUM OF UNDERSTANDING. HB219 ALLOWS FOR THE ARBITRATION OF THE PRINCIPALS OF REASONABLE AND PREDICTABLE RATES TO THE COMMUNITIES AND A FAIR RETURN TO THE STATE. WITHOUT PASSAGE OF HB219 IT IS VERY UNLIKELY THAT LONG TERM POWER SALES AGREEMENTS CAN BE NEGOTIATED.

WITHOUT LONG TERM CONTRACTS IT IS CERTAIN THAT SIGNIFICANT POWER SALES TO THE COMMUNITIES' COMMERCIAL AND INDUSTRIAL CUSTOMERS WILL BE LOST TO THE DETRIMENT OF THE STATE, THE CUSTOMERS AND THE COMMUNITIES. IF THIS ISSUE IS NOT SETTLED THIS SESSION, IT IS ALSO LIKELY THAT THE PRICE THE COMMUNITIES ARE WILLING TO PAY FOR POWER WILL DROP WITH FALLING OIL PRICES AND MAKE THE NEGOTIATION OF POWER SALES CONTRACTS EVEN MORE DIFFICULT.

THE UNDERSTANDING BOB HEATH AND THE COMMUNITIES HAVE AGREED TO IN THE MEMORANDUM OF UNDERSTANDING HAS THE VIRTUE OF SIMPLICITY. EACH COMMUNITY WOULD PAY FOR OPERATIONS AND MAINTENANCE AT THE ACTUAL POOLED AVERAGE RATE FOR ALL FOUR PROJECTS, AND THUS BEAR MUCH OF THE RISK AND BENEFIT OF FLUCTUATIONS IN LOAD AND COST. AN AMOUNT FOR DEBT SERVICE WOULD BE CHARGED AT 2.6¢ PER KWH IN 1986, RISING TO 4.0¢ PER KWH BY 1990 FOR ALL SALES UP TO A PARTICULAR COMBINED FORECAST LOAD. THESE AMOUNTS FOR DEBT SERVICE WOULD BE IN ADDITION TO OPERATIONS AND MAINTENANCE COSTS. SALES ABOVE THE FORECAST WOULD BE DEEMED "INCENTIVE SALES" AND WOULD BE CHARGED AT 1.0¢ PER KWH LESS THAN THE REGULAR DEBT SERVICE AMOUNT. THIS LOWER RATE WOULD MAKE IT POSSIBLE TO ATTRACT LARGE INDUSTRIAL LOADS, AND WOULD GIVE THE COMMUNITIES AN ADDITIONAL INCENTIVE TO INCREASE PROJECT UTILIZATION. FINALLY, THE COMMUNITIES WOULD CONTRIBUTE A TOTAL OF $500,000 PER YEAR IN ADDITION TO OPERATIONS AND MAINTENANCE TO BUILD A FUND FOR RENEWALS AND REPLACEMENTS.

BECAUSE BOTH OPERATIONS AND MAINTENANCE AND DEBT SERVICE WOULD BE POOLED, THE WHOLESALE POWER RATE WOULD BE IDENTICAL FOR ALL COMMUNITIES. THIS MAKES IT POSSIBLE TO MARKET THE POWER FROM PROJECTS WITH HIGH UNIT COSTS OF OPERATIONS AND MAINTENANCE. THE POOLING OF OPERATIONS AND MAINTENANCE IS ONE REASON THAT A STATUTORY CHANGE IS REQUIRED IN ORDER TO IMPLEMENT THIS PROPOSAL. BY PASSING ON THE BENEFITS OF AN INCENTIVE RATE, THE COMMUNITIES CAN MARKET SUBSTANTIAL AMOUNTS OF POWER TO LARGE COMMERCIAL AND INDUSTRIAL LOADS THAT WOULD OTHERWISE DEVELOP THEIR OWN DIESEL GENERATION. THE INCENTIVE SALES INCREASE THE RATE OF RETURN TO THE STATE FROM 5+% TO OVER 6%. INCENTIVE SALES ALSO LOWER THE EFFECTIVE MELDED WHOLESALE POWER RATE TO THE COMMUNITIES. WITHOUT INCENTIVE SALES, THE FORECAST WHOLESALE POWER RATE WOULD FACE STIFF COMPETITION FROM ALTERNATIVE FORMS OF GENERATION , AND THE RETURN TO THE STATE WOULD BE SUBSTANTIALLY LOWER.

THEREFORE, I REQUEST THE FINANCE COMMITTEE GIVE THIS BILL FAVORABLE CONSIDERATION TODAY AND SUPPORT IT ON THE FLOOR IN THE NEXT FEW DAYS. IF YOU HAVE ANY TECHNICAL QUESTIONS BOB HEATH AND REPRESENTATIVES FROM THE COMMUNITIES ARE HERE TO ANSWER THEM.

SENATE FINANCE COMMITTEE
MAY 26, 1984
9:20 A.M.

CALL TO ORDER

CO-CHAIRMAN DON BENNETT CONVENED THE MEETING AT APPROXIMATELY 9:20 A.M.

PRESENT MEMBERS PRESENT: SENATORS BENNETT, FERGUSON, MULCAHY, SACKETT, AND V. FISCHER. SENATORS JOSEPHSON AND FAIKS CAME IN LATER.
OTHERS PRESENT: MIKE GREANY, DIRECTOR, LEGISLATIVE FINANCE; P.S. DHILLON, REVENUE ANALYST, LEGISLATIVE FINANCE; MILT BARKER, DEPUTY COMMISSIONER, DEPARTMENT OF REVENUE; COMMISSIONER HEATH, DEPARTMENT OF REVENUE; COMMISSIONER LYON, DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT; REPRESENTATIVE HURLBERT; SENATOR KERTTULA; RICH UNDERKOFLER, CITY MANAGER, CITY OF PETERSBURG; DON KOENIGS, MAYOR, CITY OF PETERSBURG; KURT DZINICH, SENIOR ADVISOR, SENATOR ADVISORY COUNCIL; SUSAN WHITE, EXECUTIVE ASSISTANT, ALASKA POWER AUTHORITY; MARTHA FOX, ASSISTANT ATTORNEY GENERAL, DEPARTMENT OF LAW; TERRY ELDER, DEPUTY COMMISSIONER, DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT; AND STAFF FROM STATE OFFICES AND LEGISLATIVE OFFICES.

SUMMARY INFO

CSHB 684(FIN) AM AN ACT MAKING SPECIAL APPROPRIATIONS TO THE ALASKA POWER AUTHORITY; AND PROVIDING FOR AN EFFECTIVE DATE. DISCUSSION AND HELD IN COMMITTEE.

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THE PROPOSED SCS FOR CS FOR HB 684(FINANCE). HE THEN ASKED MR. LARRY CRAWFORD AND BILL BATT TO COME FORWARD AND DISCUSS THE PROPOSAL WITH THE COMMITTEE.

LARRY CRAWFORD

MR. LARRY CRAWFORD, EXECUTIVE DIRECTOR OF THE ALASKA POWER AUTHORITY CAME FORWARD TO TESTIFY AND INTRODUCED MR. BILL BATT, DIRECTOR OF FINANCE. SENATOR MULCAHY ASKED WHAT THE INTENT WAS OF THE ALASKA POWER AUTHORITY WITH REGARD TO SECTION 1, THE $210,000,000 AND THE POWER CONTRACTS. MR. CRAWFORD SAID THE INTENT OF THE POWER AUTHORITY WAS TO USE THE RENEGOTIATED AGREEMENTS AS THE BASIS FOR THE LOAN AND THE COMMUNITIES WOULD HAVE RATES BASED ON THOSE RENEGOTIATED AGREEMENTS. HE SAID THE ONLY TIME THEY WOULD ENFORCE THE EXISTING AGREEMENT WOULD BE WHERE THEY DID NOT HAVE A NEW RENEGOTIATED AGREEMENT.

SENATOR MULCAHY ASKED ABOUT CLARIFICATION ON SECTION 1. HE FELT THE APPROACH BEING TAKEN WOULD DO AWAY WITH THE RATE STABILIZATION APPROPRIATION THAT HAD BEEN LOOKED AT BEFORE WHEN GOING OUT TO THE BOND MARKET. HE SAID IT WAS HIS UNDERSTANDING THAT THE RATE STABILIZATION APPROPRIATION WOULD NOT BE NEEDED BECAUSE OF THE USE OF GENERAL FUNDS AND BECAUSE THE LANGUAGE IN THE AUTHORIZING BILL IS SUCH THAT THE INTEREST RATE CAN BE "BACKED IN."

MR. CRAWFORD SAID THIS WAS CORRECT, THAT THEY ARE LOOKING AT WHAT THE DEBT SERVICE PAYMENTS WOULD HAVE BEEN UNDER THE RENEGOTIATED AGREEMENT AND THEN THEY WILL BE RETURNING THE MONEY TO THE STATE IN ACCORDANCE WITH THOSE DEBT SERVICE PAYMENTS. THE INTEREST RATE IS THE DERIVED NUMBER AND LOOKS TO BE ABOUT AN 8% YIELD TO THE STATE ON THE $210,000,000 OVER THE LIFE OF THE LOAN. HE SAID THE PAYMENTS IN THE EARLY YEARS WILL BE LESS THAN IN THE LATER YEARS AND THEY CAN DO AWAY WITH THE RATE STABILIZATION FUND.

SCS FOR CSHB 539(FINANCE)

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THIS LEGISLATION. SECTIONS 1 THROUGH 3, CREATE THE POWER DEVELOPMENT REVOLVING FUND FOR THE PURPOSE OF IMPLEMENTING THE $210,000,000 LOAN FOR THE FOUR-DAM POOL PAY OUT. SECTION 4 ALLOWS THE CREATION FOR THE FOUR-DAM POOL.

SENATE FINANCE COMMITTEE

MR. CRAWFORD SAID THIS WAS CORRECT, THAT THEY ARE LOOKING AT WHAT THE DEBT SERVICE PAYMENTS WOULD HAVE BEEN UNDER THE RENEGOTIATED AGREEMENT AND THEN THEY WILL BE RETURNING THE MONEY TO THE STATE IN ACCORDANCE WITH THOSE DEBT SERVICE PAYMENTS. THE INTEREST RATE IS THE DERIVED NUMBER AND LOOKS TO BE ABOUT AN 8% YIELD TO THE STATE ON THE $210,000,000 OVER THE LIFE OF THE LOAN. HE SAID THE PAYMENTS IN THE EARLY YEARS WILL BE LESS THAN IN THE LATER YEARS AND THEY CAN DO AWAY WITH THE RATE STABILIZATION FUND.

SCS FOR CSHB 589(FINANCE)

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THIS LEGISLATION. SECTIONS 1 THROUGH 3, CREATE THE POWER DEVELOPMENT REVOLVING FUND FOR THE PURPOSE OF IMPLEMENTING THE $210,000,000 LOAN FOR THE FOUR-DAM POOL PAY OUT. SECTION 4 ALLOWS THE CREATION FOR THE FOUR-DAM POOL.

SENATE FINANCE COMMITTEE
MAY 26, 1984
9:20 A.M.

CALL TO ORDER

CO-CHAIRMAN DON BENNETT CONVENED THE MEETING AT APPROXIMATELY 9:20 A.M.

PRESENT MEMBERS PRESENT: SENATORS BENNETT, FERGUSON, MULCAHY, SACKETT, AND V. FISCHER. SENATORS JOSEPHSON AND FAIKS CAME IN LATER.
OTHERS PRESENT: MIKE GREANY, DIRECTOR, LEGISLATIVE FINANCE; P.S. DHILLON, REVENUE ANALYST, LEGISLATIVE FINANCE; MILT BARKER, DEPUTY COMMISSIONER, DEPARTMENT OF REVENUE; COMMISSIONER HEATH, DEPARTMENT OF REVENUE; COMMISSIONER LYON, DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT; REPRESENTATIVE HURLBERT; SENATOR KERTTULA; RICH UNDERKOFLER, CITY MANAGER, CITY OF PETERSBURG; DON KOENIGS, MAYOR, CITY OF PETERSBURG; KURT DZINICH, SENIOR ADVISOR, SENATOR ADVISORY COUNCIL; SUSAN WHITE, EXECUTIVE ASSISTANT, ALASKA POWER AUTHORITY; MARTHA FOX, ASSISTANT ATTORNEY GENERAL, DEPARTMENT OF LAW; TERRY ELDER, DEPUTY COMMISSIONER, DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT; AND STAFF FROM STATE OFFICES AND LEGISLATIVE OFFICES.

SUMMARY INFO

CSHB 684(FIN) AM AN ACT MAKING SPECIAL APPROPRIATIONS TO THE ALASKA POWER AUTHORITY; AND PROVIDING FOR AN EFFECTIVE DATE. DISCUSSION AND HELD IN COMMITTEE.

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THE PROPOSED SCS FOR CS FOR HB 684(FINANCE). HE THEN ASKED MR. LARRY CRAWFORD AND BILL BATT TO COME FORWARD AND DISCUSS THE PROPOSAL WITH THE COMMITTEE.

LARRY CRAWFORD

MR. LARRY CRAWFORD, EXECUTIVE DIRECTOR OF THE ALASKA POWER AUTHORITY CAME FORWARD TO TESTIFY AND INTRODUCED MR. BILL BATT, DIRECTOR OF FINANCE. SENATOR MULCAHY ASKED WHAT THE INTENT WAS OF THE ALASKA POWER AUTHORITY WITH REGARD TO SECTION 1, THE $210,000,000 AND THE POWER CONTRACTS. MR. CRAWFORD SAID THE INTENT OF THE POWER AUTHORITY WAS TO USE THE RENEGOTIATED AGREEMENTS AS THE BASIS FOR THE LOAN AND THE COMMUNITIES WOULD HAVE RATES BASED ON THOSE RENEGOTIATED AGREEMENTS. HE SAID THE ONLY TIME THEY WOULD ENFORCE THE EXISTING AGREEMENT WOULD BE WHERE THEY DID NOT HAVE A NEW RENEGOTIATED AGREEMENT.

SENATOR MULCAHY ASKED ABOUT CLARIFICATION ON SECTION 1. HE FELT THE APPROACH BEING TAKEN WOULD DO AWAY WITH THE RATE STABILIZATION APPROPRIATION THAT HAD BEEN LOOKED AT BEFORE WHEN GOING OUT TO THE BOND MARKET. HE SAID IT WAS HIS UNDERSTANDING THAT THE RATE STABILIZATION APPROPRIATION WOULD NOT BE NEEDED BECAUSE OF THE USE OF GENERAL FUNDS AND BECAUSE THE LANGUAGE IN THE AUTHORIZING BILL IS SUCH THAT THE INTEREST RATE CAN BE "BACKED IN."

MR. CRAWFORD SAID THIS WAS CORRECT, THAT THEY ARE LOOKING AT WHAT THE DEBT SERVICE PAYMENTS WOULD HAVE BEEN UNDER THE RENEGOTIATED AGREEMENT AND THEN THEY WILL BE RETURNING THE MONEY TO THE STATE IN ACCORDANCE WITH THOSE DEBT SERVICE PAYMENTS. THE INTEREST RATE IS THE DERIVED NUMBER AND LOOKS TO BE ABOUT AN 8% YIELD TO THE STATE ON THE $210,000,000 OVER THE LIFE OF THE LOAN. HE SAID THE PAYMENTS IN THE EARLY YEARS WILL BE LESS THAN IN THE LATER YEARS AND THEY CAN DO AWAY WITH THE RATE STABILIZATION FUND.

SCS FOR CSHB 589(FINANCE)

SENATOR FERGUSON WALKED THE COMMITTEE THROUGH THIS LEGISLATION. SECTIONS 1 THROUGH 3, CREATE THE POWER DEVELOPMENT REVOLVING FUND FOR THE PURPOSE OF IMPLEMENTING THE $210,000,000 LOAN FOR THE FOUR-DAM POOL PAY OUT. SECTION 4 ALLOWS THE CREATION FOR THE FOUR-DAM POOL.

MEMORANDUM State of Alaska

TO: Jay Hogan, Associate Director
Division of Budget Review
Office of Management and Budget

DATE: May 1, 1985

FILE NO:

THRU: Lois Cook, Director
Division of Administrative Services

TELEPHONE NO:

XXXXFROM: Department of Commerce and Economic Development

SUBJECT: CSHB 195 (Fin.) Section 120 (page 29) Power Development Revolving Loan Fund

FROM: Margaret I. Hamley, Director
Division of Accounting and Collections
Department of Commerce and Economic Development

The Alaska Power Authority (APA) has identified $9,036,000 in reserves for claims as available for lapse in the Power Development RLF; See CSHB 195 (Fin.) Section 120.

The $9,036,000 identified by the APA is not currently on deposit in the PDRLF, nor does the APA have control over the entire sum. I am told that up to $7,194,803 will be available to the APA on May 15, 1985 when the variable rate demand notes mature for Terror Lake. That amount less any claims or expenses incurred from March 29, 1985 through May 15, 1985 is to be transferred back to the PDRLF by the APA and then would be available for reappropriation to the General Fund.

However, $1,841,197 in reserves for claims is on deposit with the Ketchikan Power Utility (KPU) as agent for the APA on the Swan Lake Project. The APA has requested those funds be returned and KPU has refused to do so.

I am not at all confident that this $9,036,000 will be available for reappropriation to the General Fund by July 1, 1985.

We understand that the Governor can veto a portion of the line item reappropriation, if necessary, but he would have to veto a corresponding project then as well to balance this bill. This could be avoided by correcting CSHB 195 before it is sent to the Governor.

Telecopied to John Hartle,
Legislative Aide to
Representative Sund and
also mailed

Representative John L. Sund
Room 411-C
Juneau, AK 99802

Dear Representative Sund:

The purpose of this letter is to explain the status of the unappropriated funds for the Solomon Gulch Project. These funds were appropriated to complete the acquisition and construction for the Solomon Gulch Hydroelectric Project. I understand that as of March 31, 1985, there is $1,153,594 committed for expenditures remaining yet to be expended. A justification on an item-by-item basis for this money is as indicated below:

(nearest $100)

1. ASC (Contractors) claim by Powerhouse Contractor including consultants fees, costs, attorneys fees: $ 200,000
This claim and related costs are expected to be settled at or under this amount. Both CVEA and APA have committed to a settlement in the amount of $205,000; the remaining funds are for completion of the settlement agreement, necessary close-out documents, final payment of consultants costs and attorney's fees. $50,000 of the claim will be reimbursed to APA by other parties to the litigation. This reimbursement is included in the above figure.

2. Claim for access to mine: $ 50,000
There is presently pending a lawsuit regarding alleged denial of access to mine. The claim involves the use of an old trail or road which has, as far as we can tell, not been used for several years. Since it is unknown what, if any claim claimant has, we have set this figure as an estimate for litigation and related expenses.

3. Condemnation action: $ 5,000
As part of the completion of the transmission line between the Solomon Gulch Power House and

Glennallen, Alaska, there needs to be removed, certain "danger trees". In one area, two persons have been unwilling to allow us to cut these trees and thus a condemnation action has been necessitated before those trees can be cut.

4. Miscellaneous attorneys fees and costs: $ 10,000
From time to time APA and/or CVEA must meet various regulatory requirements on the project. This is an estimate for legal fees associated with those requirements.

5. Reactor installation: $ 245,300
As part of the original construction project there remains a reactor to be installed at a location near Pumpstation No. 12 of the Trans-Alaska Pipeline. This reactor will improve the efficiency and produce more net useable generation from the Solomon Gulch Hydroelectric Project. The reactor has been ordered and paid for, except for $15,300 retainage included above, however, these funds are needed to install the reactor which is planned for this summer.

6. SCADA-System for remote operation: $ 10,000
In order to efficiently operate the project a SCADA system was contemplated. This figure represents the study funds needed for this years operation and it is part of the original construction. Once a final system has been selected, a request will be made for an appropriate capital expenditure.

7. Feeder relocation design: $ 4,000
This is the estimated remaining design cost needed to pay the outstanding feeder relocation design bill.

8. Reactor design: $ 10,000
This is the estimated design cost for the reactor (see item 5 above).

9. Penstock flow monitoring, final dam inspection, final drawings and studies necessary to close project: $ 150,000
As you are probably aware, the Federal Energy Regulatory Commission (FERC) project, requires a board of consultants to review the construction and then completion of each dam. We have reached the point now where the final completion meeting should occur. Additionally, it has been

determined that there are a number of studies and projects that need to be completed to finally close out the project.

10. APA administration costs: $ 70,000
Most of this amount is for APA administration costs relating to the projects listed in this letter and it has been estimated to be $70,000.

11. As-built survey and right-of-way for transmission line: $ 240,000
The transmission line needs an as-built survey completion of some minor right-of-way items. This estimate was received from Landfield Services who has been retained to do this work since they were involved with the original land acquisition on the project. An additional $2,000 has been added for other costs that may be incurred with regard to this work.

12. Transmission line and generator spare parts: $ 20,000
Most of the spare parts needed to operate the project have been acquired, however, it is estimated by CVEA and APA that in order to finally complete the necessary spare parts inventory, funds in this amount will have to be expended within the next year.

13. Metering: $ 10,000
To coordinate all metering on the project, a new meter needs to be installed which is considered part of the original construction; which is estimated to cost $10,000.

14. Pumpstation 11 reactor: $ 10,000
This represents the deductible on the insurance proceeds necessary to repair the Pumpstation 11 reactor. Repair is presently taking place.

15. Pumpstation 11 reactor protection scheme: $ 50,000
This upgrades the protection system for the Pumpstation 11 reactor which helps prevent future damage similar to what was experienced.

16. Oil for Pumpstation 11 reactor: $ 16,000
Oil is needed for the repaired reactor.

17. Miscellaneous: $ 1,200
Snow survey equipment.

18. Other Items

Study to raise level of dam and spillway: $ 50,000

Various studies were done by consultants regarding construction claims and studies contemplated during the acquisition phase regarding the efficiency of the project. It has been determined that it is possible to raise the level of the spillway, thus creating a greater impoundment of water for a longer period of time resulting in more useable energy from the project. Initial studies indicated that an additional one million kwh per year of sellable energy could be obtained for what is believed to be a relatively small investment. The amount requested is an amount for study in order to determine how best to accomplish this. If the study proves that the initial reviews of this project were as indicated, it could well be the most economical investment by the state for additional generation. This item is not directly part of the correct original acquisition and construction cost, however, it is an outgrowth of studies done to close out the acquisition and completion of the construction of the project and is accordingly related thereto.

Total Expenditures: $1,151,500

I wish to stress that despite the controversy surrounding the Four Dam Pool Power Sale Agreement and Negotiations, both APA and CVEA have tried to operate, maintain and complete both the acquisition and construction phase of the project in the most economical means possible.

Both APA and CVEA believe the hydroelectric projects should be operated and maintained in the best possible manner so that the maximum energy, with due regard for safety and efficiency are realized. At least from the standpoint of CVEA when the project was acquired by APA, these items generally were recognized as items that needed to be completed or finalized to bring the project in compliance with FERC standards and obtain the maximum energy and efficiency out of this project. CVEA had loan funds committed to perform this work. When the APA acquired these projects, it was understood this work would be completed by APA.

Accordingly, CVEA relinquished these loan commitments. Both CVEA and I believe APA have relied upon these appropriations

and made commitments in one form or another for each of the items noted above.

I have tried to coordinate our budget with the State budget's format. Unfortunately, that is not possible because of the manner in which the state classifies its amounts. However, this letter should clearly indicate the requirements necessary to complete the budget, based on the best information available to me today. Thank you for your attention to this very important matter. Please call me if you have any questions.

Very truly yours,

David L Highers /jy

CS FOR HOUSE BILL NO. 219 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and <u>electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state,</u> none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) A loan from the fund <u>shall</u> [MUST] be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) [THE MARKET RATE OF INTEREST FOR A LOAN OF COMPARABLE

agreement is initially negotiated or renegotiated, of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund;

(2) the effect of the loan terms on the wholesale power costs to all utilities purchasing power from the initial project;

(3) the long-term benefits to consumers and communities of stable wholesale power costs;

(4) the affordability of initial wholesale power costs that result from the loan terms with utilities purchasing power from the initial project;

(5) increasing repayment, not to exceed five years, of debt service payment per kilowatt hour gradually over the initial period of a loan repayment schedule to the extent necessary to avoid significant rate increases to the consumer;

(6) the existing excess capacity of power projects; and

(7) the effects of increased capacity utilization, inflation, and alternative energy production costs over the life of the initial project.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) In (a) of this section "initial project" means the project described in AS 44.83.398(a).

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. PRICE REOPENERS. A power sales agreement for the sale of power from a power project financed with a loan under AS 44.33.610 must include a provision for periodic price reopeners.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or an

Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

CS FOR HOUSE BILL NO. 219 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and <u>electric operating entities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state,</u> none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) <u>Except as provided in (d) of this section, a</u> [A] loan from the fund must be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(2) the estimated costs of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) A loan from the fund to finance the initial project, as described in AS 44.83.398(a), shall be subject to the following terms:

(1) the loan must be amortized based on an annual interest rate not to exceed four percent, a term not to exceed 50 years, and a 40-year amortization period;

(2) the annual debt service payment per kilowatt hour for energy purchased by utilities from the initial project equals the total annual payment needed to amortize the loan on the terms set out in (1) of this subsection divided by the long-term average annual kilowatt hour capability of the initial project;

(3) repayment may be adjusted so that the debt service payment per kilowatt hour, as determined under (2) of this subsection, increases gradually over the first five years of the loan and remains fixed over the next 35 years; and

(4) deferred principal shall be repaid with interest in equal annual installments during the last 10 years of the loan.

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. PRICE REOPENERS. A power sales agreement for the sale of power from a power project financed with a loan under AS 44.33.610 must include a provision for a price opener after 15 years.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility <u>or an</u>

Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

DISCUSSION DRAFT

IN THE HOUSE

CS FOR HOUSE BILL NO. 219 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 42.05.711(b) is amended to read:

(b) Public utilities owned and operated by a political subdivision of the state and regional electric authorities established as an instrumentality of two or more public utilities owned and operated by a political subdivision of the state, none of whose utilities is in competition with any other utility, are exempt from the provisions of this chapter, other than the provisions of AS 42.05.221 - 42.05.281, unless the owner and operator elects to be subject to all provisions of this chapter.

* Sec. 2. AS 44.33.620(a) is amended to read:

(a) A loan from the fund shall [MUST] be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

(1) [THE MARKET RATE OF INTEREST FOR A LOAN OF COMPARABLE SIZE AND DURATION AT THE TIME THE LOAN IS MADE; AND

(2)] the [ESTIMATED] costs, at the time the power sales agreement ~~loan~~ is ini-

or

tially negotiated [~~and at the time it~~] is renegotiated, of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund;

(2) the effect of the loan terms on the wholesale power costs to all utilities purchasing power from the initial project;

(3) the long-term benefits to consumers and communities of stable wholesale power costs;

(4) the affordability of initial wholesale power costs that result from the loan terms with utilities purchasing power from the initial project;

(5) increasing repayment, not to exceed five years, of debt service payment per kilowatt hour gradually over the initial period of a loan repayment schedule to the extent necessary to avoid significant rate increases to the consumer;

(6) the existing excess capacity of power projects; and

(7) the effects of increased capacity utilization, inflation, and alternative energy production costs over the life of the initial project.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) In (a) of this section "initial project" means the project described in AS 44.83.398(a).

* Sec. 4. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.625. PRICE REOPENERS. A power sales agreement for the sale of power from a power project financed with a loan under AS 44.33.610 must include a provision for periodic price reopeners. after the first 15 years.

* Sec. 5. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or a regional electric authority established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public

Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project.

The initial project offers a unique opportunity to share the infrastructure development in a sensible and equitable manner. the state or Federal Government has traditionally taken the responsibility for the infrastructure necessary to encourage statewide and/or regional economic development. The initial project has an excess capacity of approximately 59% at the present time. Of that 59% excess, approximately 49% is to be found in the Tyee project. The Tyee project, as an example, was built with excess capability because it is geographically well placed to aid regional and statewide energy and economic development. However, the interest on the excess capacity should be carried at state expense until such time as it is needed.

The current situation offers a unique opportunity for the communities and the state to share the burden of infrastructure development in a sensible and equitable manner. The provisions of HB 219 provide for the complete repayment of the principal and the maximum affordable interest rate which can be repaid under current conditions.

Repayment of the APA loan is computed at a fixed interest rate over a set term in order to yield a levelized debt service payment per kilowatt hour. Actual debt service is, in each year, the result of the payment of that portion of the levelized debt service amount corresponding to the fraction of the initial project's total capability which is actually sold in that year. The portion of the debt service amount not paid that year would have a principal component and an interest component. The principal component would be deferred to the end of the amortization period, to be repaid over the contract term remaining thereafter. The interest component is cancelled or treated as simply

unearned. The effect of this structure would be to establish a debt service rate which assumes the initial project is fully utilized and which remains level throughout the period of the loan.

ESSENTIAL LOAN CONDITIONS:

1. Interest rate of 4% on the fraction of the principal which corresponds to the fraction of initial project which is utilized in each contract year.
2. Principal amount of approximately $196 million.
3. Term of the loan is 50 years with a 40 year amortization period.
4. Annual debt service during the amortization period to be computed payment amount multiplied by a fraction, the numerator of which is the actual amount of energy sold that year, and the denominator of which is the total 378,607,000 kwh capability of the initial project.
5. Principal amounts of the loan not paid during the amortization period because of unsold capability shall be deferred until the fortieth year, and then repaid in equal installments without interest over the remaining ten years.

Pourchot

Section 1. AS 42.05.711(b) is amended to read: ...(same)

Sec. 2. AS 44.33.620(a) is amended to read:

(a) A loan from the fund must be repaid in accordance with the terms that the department determines to be appropriate. In establishing the terms, including provision for a return to the state of an amount in excess of the principal amount of the loan, the department shall consider the revenue that the authority could reasonably derive from the sale of power from the projects based upon

at the time of entering into a contract + renegotiations

[(1) the market rate of interest for loan of comparable size and duration at the time the loan is made; and]

Change to mean current at time of making loan

(1) the ~~current~~ [estimated] costs of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund . ;

(2) the effect of the loan terms on the wholesale power costs to all utilities purchasing power from the initial project;

(3) the affordability of initial wholesale power costs resulting from the loan terms on utilities purchasing power from the initial project;

(4) the benefits to consumers and communities of stable, certain wholesale power costs;

(5) existing or anticipated wholesale power prices for other state hydroelectric projects;

(6) increasing ~~repayment~~ of debt service payment per kilowatt hour gradually over the ~~initial period of~~ a loan repayment schedule to avoid significant rates increases to consumers ~~above existing levels~~;

5 yrs

(7) the current existing excess capacity of projects;

* (8) the long-term benefits to utilities and consumers of stable hydroelectric power costs;

* (9) the effects of increased capacity utilization, inflation, and alternative energy production costs over the life of the initial project.

* (10) power sale contracts no more than 35 years in duration with periodic price reopeners;

Sec. 3. AS 44.83.425(5) is amended to read: ....(same)

AMENDMENT

OFFERED IN THE HOUSE: BY: SUND

TO: _____ HOUSE BILL No. 219

SENATE BILL No. _____

PAGE: _____ LINE: _____

Page 1, line 13
Delete "regional electric authorities"
Replace with "electric operating entities"

Page 2, line 22, 23
Delete "a regional electric authority"
Replace with "an electric operating entity"

****

Purpose of amendment:

A term of art "regional electric authority" was inadvertantly used; the effect of using this term would be to deregulate an existing electric authority. The amendment would clarify the legislative intent and leave unchanged existing APUC regulation.

****

(2) the estimated costs of alternative sources of energy generation for utilities purchasing power from a project financed with a loan from the fund.

* Sec. 3. AS 44.33.620 is amended by adding a new subsection to read:

(d) A loan from the fund to finance the initial project, as described in AS 44.83.398(a), shall be subject to the following terms:

(1) the loan must be amortized based on an annual interest rate not to exceed four percent, a term not to exceed 50 years, and a 40-year amortization period;

(2) the annual debt service payment per kilowatt hour for energy purchased by utilities from the initial project equals the total annual payment needed to amortize the loan on the terms set out in (1) of this subsection divided by the long-term average annual kilowatt hour capability of the initial project;

(3) repayment may be adjusted so that the debt service payment per kilowatt hour as determined under (2) of this subsection, increases gradually over the first five years of the loan and remains fixed over the next 35 years; and

(4) deferred principal shall be repaid with interest in equal annual installments during the last 10 years of the loan.

* Sec. 4. AS 44.83.425(5) is amended to read:

(5) "qualified utility" means an electric utility or a regional electric authority established as an instrumentality of two or more electric utilities [THAT IS] certified by the Alaska Public Utilities Commission to serve all or part of a market area that is served or will be served by the power project, [AND] that the authority determines is capable of operating and maintaining the power project; [AND]

Juneau, Alaska 99811

Subject: HB219

Dear John:

I just wanted to take this opportunity to formally thank you for efforts in creating a solution to the long term contract problems on the Swan Lake Project. Without the hard work of you and your staff in creating HB219, it is my firm conviction that we would not have progressed to the point where we can see the end of this overlong process.

If I can be of any assistance to you in the future you know you have only to contact me.

Thank you again to you and your staff.

Sincerely,

Charles E. Freeman

to the Department of Community and Regional Affairs for payment as a grant under AS 37.05.317 to the unincorporated community of Portage Creek for completion of the electrification and bulk fuel project.

* Sec. 118. The sum of $89,325,584 is appropriated to the general fund from the following enterprise funds:

Historical District Loan Fund (AS 45.98)	$ 500,000
Residential Energy Conservation Loan Fund (AS 45.89)	7,312,533
Power Development Revolving Loan Fund (AS 44.33.600)	14,000,000
World War II Veterans' Revolving Loan Fund (AS 26.15)	8,824,933
Mining Revolving Loan Fund (AS 27.09)	19,931,080
Fishery Product Revolving Loan Guarantee Account (AS 45.92)	38,757,118

* Sec. 119. Section 4, ch. 24, SLA 1984, page 70, line 25 is amended to read:

	APPROPRIATION ITEMS	GENERAL FUND
Shared Resource Computer/ Word Processing Application (ED 99)	345,000	345,000

* Sec. 120. The sum of $9,026,000 in reserves for claims is appropriated from the Power Development Revolving Loan Fund (AS 44.33.600) to the general fund.

* Sec. 121. Section 301, ch. 171, SLA 1984 (Alaska Housing Finance Corp. - $16,000,000) is repealed.

* Sec. 122. Section 28, ch. 82, SLA 1981, page 106, line 7 as amended by sec. 17, ch. 101, SLA 1982, is amended to read:

Proposed loan program lapse. These cash balances have been identified by the agencies as amounts over and above the FY 86 requirement.

Sec. ____ The sum of $102,325,664 is appropriated to the general fund from the following enterprise funds:

Historical District Loan Fund (AS 45.98)	$ 500,000
Mining Revolving Loan Fund (AS 27.09)	$19,931,080
Residential Energy Conservation Loan Fund (AS 45.89)	$ 7,312,533
Power Development Revolving Loan Fund (AS 44.33)	$14,000,000
Power Development Revolving Loan Fund (AS 44.33) Alaska Power Authority Estimated Reserve for Claims	$13,000,000 -*
Word War II Veterans Revolving Loan Fund (AS 26.10)	$ 8,824,933
Fishery Product Revolving Loan Guarantee Fund (AS 45.92)	$38,757,118

Sec. ____ The appropriation of $16,000,000 to the Alaska Housing Finance Corporation made in Section 301, Chapter 171, SLA 1984 is repealed.

* Per a phone conversation on April 1, 1985, the Alaska Power Authority staff has indicated that the amount available for lapse from Reserves for Claims should be reduced to $9,093,300. A written explanation will be provided this week.

Gov

Proposed appropriation bill for State loan programs. Net general fund effect is $11,910,653.

Sec. ____ The sum of $87,068,546 is appropriated to the general fund from the following enterprise funds:

Historical District Loan Fund (AS 45.98)	$ 500,000
Mining Revolving Loan Fund (AS 27.09)	$19,931,080
Residential Energy Conservation Loan Fund (AS 45.89)	$ 7,312,533
Power Development Revolving Loan Fund (AS 44.33)	$12,000,000
Word War II Veterans Revolving Loan Fund (AS 26.10)	$ 8,824,933
Fishery Product Revolving Loan Guarantee Fund (AS 45.92)	$38,500,000

Sec. ____ The unexpended and unobligated portion of the $4,000,000 appropriation made to the power project fund in the Alaska Power Authority (AS 44.83.170) in Sec. 16, Ch. 90, SLA 1981 is repealed.

Sec. ____ The sum of $102,979,199 is appropriated from the general fund for State loan programs to be allocated as follows:

DEPARTMENT OF EDUCATION

Commission on Postsecondary Education

Scholarship Revolving Loan Fund	$60,000,000

DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT

Division of Investments

Commercial Fishing Loan Program	$ 4,822,150
Alternative Technology and Energy Loan Program	$ 845,120
Fisheries Enhancement Loan Program	$ 811,929

De Long Mountains Regional Transportation Project

Alaska Industrial Development Authority Authority Economic Development Fund (AS 44.88.172)	$18,000,000

DEPARTMENT OF NATURAL RESOURCES

Division of Agriculture

Agricultural Revolving Loan Fund	$ 2,500,000
Grain Reserve Loan Fund	$ 1,000,000

DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

Division of Housing Assistance

Housing Assistance Loan Fund	$15,000,000

Sec. ____ The sum of $225,000 in federal receipts for student loans and scholarships is appropriated to the scholarship revolving loan fund for the student loan program.

MEMORANDUM State of Alaska

TO: Jay Hogan
Associate Director
Division of Budget Review
Office of Management and Budget

DATE: February 22, 1985
FILE NO: 2735
TELEPHONE NO: 465-3568

FROM: Guy Bell
Budget Analyst
Division of Budget Review
Office of Management and Budget

SUBJECT: Housing Assistance Loan Fund

Proposal: Reduction of the Governor's FY 86 general fund budget for the Housing Assistance Loan Fund (HALF) from $37 million to $15 million.

HALF was originated in the Department of Community and Regional Affairs' (DCRA) Housing Assistance Division to provide loans for nonconforming housing in both urban and rural areas. Because nonconforming housing does not meet minimum building standards, it cannot meet the minimum standards for financing through the Alaska Housing Finance Corporation's bonding programs.

In 1983, the Legislature expanded HALF to include all rural housing. This expansion was apparently the result of a perceived lack of service from AHFC to rural areas. It was felt that the rural public would be better served by DCRA's regional offices and direct lending authority. However, of the total HALF portfolio on June 30, 1984, only 1.8 percent represented direct loans from the Housing Assistance Division. The remaining 98.2 percent had been made by financial institutions.

Due to the minimal number of direct HALF loans to the rural areas, it can be argued that HALF has not accomplished a higher level of service than had AHFC, and that a shift of the conforming loan program back to AHFC would have little or no impact on the rural housing market.

Given the current level of pressure on the budget, the Governor could propose converting the HALF program to its original form, and to shift all lending for conforming housing back to AHFC. My estimates show that this would reduce the HALF general fund requirement in FY 86 from $37 million to $15 million, as nonconforming housing accounts for only 39 percent of the Housing Assistance Division's portfolio.

I have not confirmed my analysis with the Department of Community and Regional Affairs or AHFC. Furthermore, whether this would require a statutory change would need to be discussed with the Department of Law.

If you would like me to proceed further with this proposal, I will contact DCRA, AHFC and the Department of Law to verify my analysis.

MEMORANDUM

State of Alaska

CONFIDENTIAL

TO: John Shively, Chief of Staff
Office of the Governor

DATE: February 15, 1985

FILE NO:

TELEPHONE NO:

FROM: Franklin T. Elder, Deputy Commissioner
Department of Commerce and Economic Development

SUBJECT: Potential Loan Fund Lapses

An analysis of loan fund requirements and projected balances has revealed funds that could be reappropriated and one program that needs additional funds.

	Governor's FY '86 Budget	Recommended Changes	Possible Governor's Amended FY '86 Budget
Commercial Fisning	3,710,000	+ 1,112,150	4,822,150
Child Care	-	-	
Historical District	-	[500,000]	
Mining	-	[19,931,080]	
Alternative Energy	1,060,000	[214,880]	845,120
Res. Energy Consv.	-	[7,312,533]	
Bulk Fuel	-	-	
Fish Enhancement	2,071,700	[1,259,771]	811,929
Rural Electrifi-cation R.L.F.	2,000,000	[2,000,000]	
Power Dev. R.L.F.	-	[12,000,000]	
Power Project L.F.	-	[4,000,000]	
Small Business	Balance already goes to G.F.		
Tourism	Balance already goes to G.F.		
Water Resources	Balance already goes to G.F.		
Fishermen's Mortgage & Note	Balance goes to Comm. Fish. R.L.F.		
World War II Vets	-	[8,824,933]	
Net Available for Reappropriation		[54,931,047]	

We have reviewed current loan fund balances and estimated cash flow through FY '86, and we have refined the expected loan demand by fund. We believe that the above outlined reappropriation (and an addition to the Commerical Fishing Loan Program) could be done without closing any of the current programs.

The Power Authority projects an FY '85 requirement of $1.1 million for Rural Electrification Revolving Loan Fund (RERLF). This would leave a balance of $2.5 million currently authorized funding available for FY '86. Proposed revised RERLF regulations are expected to increase demand for RERLF funding, but there is much uncertainty as to the amount of increase. The $2.5 million estimated available funding for FY '86 represents a 127% increase over the estimated FY '85 RERLF demand.

The FY '86 request for $2 million additional RERLF funding could be deleted. If loan requests for FY '86 do, in fact, exceed the $2.5 million expected to be available, the loans could be postponed until FY '87.

If Petersburg joins the Four-Dam Pool program, then the $12.0 million won't be needed in the Power Development R.L.F., but we will not know for several months. If we reappropriate the funds and Petersburg doesn't join, we may have to renegotiate the 8% loan to the APA.

CH 90, SLA 81 appropriated $4.0 million to the APA for a Power Project Loan Fund loan to the city of Fairbanks. Nearly four years after the appropriation, Fairbanks has not applied for the loan. The APA understands that Fairbanks now wants a grant rather than a loan. Perhaps you should discuss this with Senator Fahrenkamp.

I believe the announcement of any reappropriation in the WWII Vets program could be tied to a discussion of the proposed linked deposit program which will offer an additional interest rate break to veterans and rural residents. I will continue to treat this information as confidential until I receive further word from you.

February 28, 1985

The Honorable Jan Faiks
Co-Chair, Senate Finance Committee
Pouch V
Juneau, Alaska 99811

Dear Senator Faiks:

Subsequent to the Senate Finance Committee meeting on February 18, 1985, the Alaska Power Authority has performed an in-depth review of the status of currently authorized capital projects. The enclosed analysis is the result of this review. In certain cases the material previously provided to the Senate Finance Committee on the CP-3 forms has been modified.

The analysis provides the funding status for each project. It describes the December 31, 1984 encumbrances for each project, including the amount of the encumbrance earned as of February 15, 1985, and the amount anticipated to be earned as of June 30, 1985, and shows where applicable the cancellation costs if the project is cancelled. Recommendations regarding lapse/cancellation of encumbrances are provided. Remaining unencumbered costs are also identified.

The analysis does not include the Bradley Lake Hydroelectric Project or the Susitna Hydroelectric Project due to the early stages of development of those projects.

Attachment A is a summary of projected potential fund lapses in capital and other continuing appropriations.

Also in accordance with the request from the Senate Finance Committee, Attachments B and C describe the expenditures through December 31, 1984 for the Solomon Gulch Hydroelectric Project and the Anchorage-Fairbanks Intertie Project.

We are prepared to discuss the enclosed material at the meeting scheduled for March 7, 1985.

Sincerely,

Larry D. Crawford

(a) Although funding for this Power Project Loan Fund loan was appropraited in 1981, the City of Fairbanks has not yet applied for this loan. Until recently the City of Fairbanks desired a grant rather than a loan. However, an election has now been scheduled for April 2, 1985 to obtain voter ratification of a bond package and this loan. Depending on the outcome of the election, this funding may be available for lapse.

(b) In addition to this continuing appropriation for the Power Cost Assistance Program (PCAP), the Power Authority projects a lapse of $676,100 from the Ch. 122, SLA 1984 appropriation for PCAP.

(c) Projected FY85 surplus of $1,669,600 less $319,700 carry-over to FY86 to fund projected shortfall.

(d) Amount shown as requested by the Senate Finance Committee. However, much if not all of this funding (or potentially even a larger amount) is anticipated to be required for settlement of claims. If this amount is lapsed, future supplemental appropriations will be required.

MEMORANDUM State of Alaska

TO: Jay Hogan, Associate Director
Office of Management and Budget

DATE: April 19, 1985

FILE NO:

TELEPHONE NO:

FROM: Robert D. Heath, Executive Director
Alaska Power Authority

SUBJECT: Reserves for Claims Lapse

In February 1985 the Alaska Power Authority performed a review of the status of currently authorized capital projects to determine the amount of funding that was available for lapse. Attachment A is the summary of the projected potential lapses prepared at that time.

As requested by the Senate Finance Committee, the projected potential lapses included the "reserve for claims" for each energy program for Alaska project. The caution was added that much if not all of this funding (or potentially even a larger amount) was anticipated to be required for settlement of claims; and if the amount were lapsed, future supplemental appropriations would be required. The total reserves for claims included in Attachment A is $16.3 million. At the March 7, 1985 Senate Finance Committee, members were informed that the $16.3 million available for lapse would have to be reduced by $3.4 million plus interest for a claim on the Terror Lake project which was awarded after the February projected potential lapses report had been submitted (with interest, the amount of the awarded claim is now estimated to be $3.5 million).

The reserve for claims for each project was simply the difference between the appropriation for that project, expenditures to date, and the estimated expenditures required to complete the project.

In retrospect, the February estimates of expenditures required to complete the projects were too conservative. Not enough of an allowance was provided for unforeseen expenditures; and, in a few instances, items of future expenditure were not included through oversight.

After a more thorough review of the energy program for Alaska projects, the Power Authority now estimates that a net $3.7 million additional expenditures will be required to complete the projects than estimated in February. This will reduce the amount available for lapse by a corresponding amount. Attachment B identifies the increases and decreases to the February report and describes each increase and why the item was not included in the February report.

Attachment C summaries the above and other changes, including a reserve for legislative reappropriations, in the reserve for claims lapse amounts from the February report. The revised reserve for claims lapse projection is $8.1 million.

It should be noted that the above decrease in the amount of funding available for lapse as identified in Attachment A will be partially offset by a $2 million increase in the amount available for lapse in the Power Development Revolving Loan Fund (Ch. 171, SLA 1984). The lapse will be $14 million rather than the $12 million reported in Attachment A (see Attachment D).

Attachments as stated.

ATTACHMENT A

ALASKA POWER AUTHORITY
INCREASES (DECREASES) TO ESTIMATED COSTS REQUIRED TO COMPLETE
PROJECTS FROM FEBRUARY 1985 REPORT TO LEGISLATURE

TYEE LAKE

$ [275,000]	Insurance Settlement
[150,000]	Interest Revenue
[128,276]	Contractual Commitments Reduction
$ [553,276]	

ANCHORAGE - FAIRBANKS INTERTIE

$ 450,000	SVS Modifications
150,000	Storage Yard Operations
500,000	Interim Maintenance and Operation
75,000	Cantwell Substation Oil Containment
135,600	Reserve for Construction, O&M, and Admin.
$1,310,600	Total

SVS Modification

The Intertie participating utilities have identified several operating concerns regarding the Static Var Systems (SVS) which are presently being reviewed. The cost identified is to perform additional system studies and accomplish any necessary modifications to reduce the potentially harmful start-up characteristics of the SVS on the existing utility system. The requirement was identified subsequent to the February 1985 report.

Storage Yard Operations

This item is for the continued operation and maintenance of the Eklutna storage yard for storage of spare parts, equipment and materials from the Intertie project. The budget request to establish an APA central storage facility was again deleted from the APA capital budget and the central yard is therefore not available to store and maintain this equipment. This cost was inadvertantly omitted in the February 1985 report.

Interim Maintenance and Operation

As a result of a major transformer failure at Goldhill Substation, the Intertie can only be placed in limited service until the transformer is repaired. During this interim period, because the full benefits of the Intertie are not available to offset the cost

of operation and maintenance the utilities do not consider the Intertie to be in commercial operation and are unwilling to absorb the cost of interim O & M. This interim cost must therefore be absorbed as a part of the project construction. This item was not identified until after the February report.

Cantwell Substation Oil Containment

This item provides for the addition of an oil containment structure at the Cantwell Substation to prevent any possible transformer oil leakage form entering the nearby stream. This item was previously identified however by oversight was not included in the February report.

Reserve for Construction, O & M and Administration

This item is a reserve for unidentified potential changes and costs for remaining construction, and O & M and administration of the project through it's completion. While it is probable that certain currently unanticipated costs will be encountered prior to the completion of the project, the exact amount of those costs are unknown at this time. The amount conservatively estimated here is the remaining balance of the unencumbered balance.

TERROR LAKE

$ 1,000,000	Land Acquisition
518,000	ADF&G Continuing Studies
403,000	Ebasco Contract Modification
100,000	"As-Built" Survey
141,000	Power Line Communications
409,000	Additional KEA Costs
300,000	Reserve for Interest
500,000	Reserve for Construction
$ 3,371,000	
[467,000]	Savings on Quantities
$ 2,904,000	

Land Acquisition

Allowance for obtaining indefinite rights to all project lands as required by Article 5 of the FERC license. Amount is estimated top exposure and could be much lower as a result of final negotiation. Item was not included in February 1985 report in error. FERC representative had verbally advised in September 1984 that land rights in perpetuity were required.

ADF&G Continuing Studies

Studies required are salmon monitoring studies through 1990, bear and goat and raptor studies through 1986. Amount does not include cost escalation or possible mitigative measures. Studies are required by Articles 40 and 42 of the FERC license. This item was not included in the February 1985 report as a construction cost since it will occur after construction is complete. An opinion on the legality of charging this cost to Operating and Maintenance of the project is pending. However, the item is not included in the O & M component of the operating budget and provision should be made for the costs in the existing capital appropriation.

Ebasco Contract Modification

This item included additional work by engineering and construction management contractor. Major portion of work is additional construction management due to delays in completion of the project and therefore need to extend project management and inspection personnel. Work also required consists of engineering support for arbitration and litigation, additional engineering support, review of vendor submittals, study of frequency control and contract administration and close out for general construction and owner procurement contracts. Item was included in February 1985 report although figure used was not current at that time.

As-Built Survey

This is a requirement of two existing property leases. This item was not included in the February 1985 report due to oversight.

Power Line Communication

This is a request for change order from SDADA contractor due to third party delays precluding contractor to complete his work. This was not included in February 28, 1985 report as the extent of the problem was not known until early April 1985.

Addition KEA Costs

This item included operator training and eight minor items of construction necessary to provide complete and operable facility. The extent and costs of these items were not known until a final inspection meeting of the project was held on March 28, 1985.

Reserve for Interest

This is a reserve for interest due contractors due to late payments and particularly due to shortage of funds with which to pay invoices. This item was not included in the February 1985 report due to oversight.

Reserve for Construction

This is a simple allowance to pay for unforeseen conditions (contingencies) and allow contracts to be closed out. Omission of the item from February 1985 report was an oversight.

ALASKA POWER AUTHORITY
RECONCILIATION OF "RESERVE FOR CLAIMS" LAPSE PROJECTIONS

	Tyee Lake	Swan Lake	Terror Lake	A-F Intertie	Total
LAPSE-FEBRUARY 1985 REPORT	$ 2,822,500	$ 1,870,800	$ 10,323,100	$ 1,310,600	$16,327,000
Corrections		-29,603	-100,000(b)		-129,603
CORRECTED LAPSE	$ 2,822,500	$ 1,841,197	$ 10,223,100	$ 1,310,600	$16,197,397
Claims Awarded Subsequent to February 1985 Report			-3,500,000(c)		-3,500,000
	$ 2,822,500	$ 1,841,197	$ 6,723,100	$ 1,310,600	$12,697,397
Expenditure Increases (-)/Decreases (+)	+553,276		-2,904,000	-1,310,600	-3,661,324
	$ 3,375,776	$ 1,841,197	$ 3,819,100	$ 0	$ 9,036,073
Legislative Reappropriations(d)	-900,000				-900,000
REVISED LAPSE PROJECTIONS	$ 2,475,776	$ 1,841,197	$ 3,819,100	$ 0	$ 8,136,073

(a) Projected lapse in Attachment A should have been $1,841,197 (see Exhibit E) rather than $1,870,800

(b) Projected lapse reflected in Attachment A was not calculated accurately in backup material (see Exhibit F)

(c) Award of claim to Kiewit-Groves through binding arbitration involving problem with excess water in the Terror Lake Tunnel.

(d) Reserve for reappropriation for the following projects:

$750,000	Transformer to provide electrical energy for Wrangell
150,000	Grant to the City of Cordova to reduce effective interest rate on Cooperative Financing Corporation loan from 11.5% to 8.5% for one year.
$900,000	

ACCOUNTING OF THE $198 MILLION DEPARTMENT OF COMMERCE AND DEVELOPMENT (DCED) LOAN (BY PROJECT)

Swan Lake Note	$ 26,165,000
Lake Tyee Note	50,000,000
Terror Lake Note	115,000,000
Total	$191,165,000
Working Capital and Renewals and Replacements	4,576,000
Total Loan	$195,741,000

NOTE: Previous projections calling for a funding requirement of $198 million included a contingency reserve of $2 million. Upon reevaluation, this reserve is no longer deemed appropriate. Therefore, $14 million of the $210 million appropriation is available for lapse.

ANALYSIS OF UNENCUMBERED BALANCE REQUIREMENTS

Project Title Swan Lake Hydroelectric Project

CP-3 Project Codes(s) 610, 611, 612, 613

Requirement Description	Amount	If Cost is ESSENTIAL to Project Completion, Explain Why
Reserved for litigation	$ 350,000	Ongoing legal costs associated with the settlement of claims.
Reserved for litigation (Solomon Gulch)	722,000	Ongoing legal costs associated with the settlement of Solomon Gulch claims. (The Solomon reserve for litigation is insufficient to meet anticipated costs.)
Reserve for claims	1,841,197*	
Construction reserve for minor modifications/adjustments of final inspection of dam	300,000	Final inspection of the dam will pinpoint which minor modifications need to be made to bring the plant to the Federal Energy Regulatory Commission license standard..
Equipment rescue for small tools, rolling equipment	450,000	Final inspection of the dam will pinpoint equipment - expenditures are necessary to bring the plant to the Federal Energy regulatory Commission license standard.
Reserve for microwave relocation aerial ball markers, stride lite, storage building, fencing	515,000	
Alaska Power Authority Administrative Costs	300,000	Personnel and travel expenses associated with the final stages of construction and the negotiations of power sales agreements inclusive of legal, financial analysis, and risk management costs.
	$4,478,197	

* Although this reserve is considered nonessential for project completion, the Alaska Power Authority does anticipate that this amount may be necessary for final resolution of claims and litigation for Swan Lake and other "Four Dam Pool" projects (Terror Lake, Solomon Gulch and Tyee Lake).

ANALYSIS OF UNENCUMBERED BALANCE REQUIREMENTS

Project Title Terror Lake Hydroelectric Project CP-3 Project Codes(s) 631, 632, 633

Requirement Description	Amount	If Cost is ESSENTIAL to Project Completion, Explain Why
Reserve for litigation	(a) 1,150,000	Ongoing legal costs associated with settlement of claims.
Reserve for Claims	10,223,100 ~~10,323,100~~*	
APA Administrative Expenses	200,000	Personnel and travel expenses associated with the final stages of construction and the negotiation of power sales agreements, inclusive of legal fees, financial analysis, and risk management costs.
Cost of Financing	200,000	Cost of short-term financing (interest expense loss in interest revenue)
Start-Up Costs	200,000	Cost required during testing period after completion of construction and prior to commercial operation.
	~~$11,973,100~~	

* Although this reserve is considered nonessential for project completion, the APA does anticipate that this amount may be necessary for final settlement of claims and litigation for Terror Lake and the other "Four Dam Pool" projects (Tyee Lake, Swan Lake, and Solomon Gulch).

(a) amount needs to be $10,223,100 rather than $10,323,100 to add-up to the $11,973,100 total

MEMORANDUM State of Alaska

TO: Guy Bell
Office of Management & Budget

DATE: March 29, 1985

FILE NO:

TELEPHONE NO:

FROM: Gloria Manni
Director/Accounting & Audit

SUBJECT: FY85 General Fund Lapse
Projects Reserve for Claims

This is to confirm today's phone conversation regarding the availability for lapse of the referenced funds.

Swan Lake Project:
The original source of these funds was the issuance of General Obligation Bonds on May 28, 1981 (interim financing). The bonds were redeemed at maturity on September 28, 1984, with proceeds from the Power Development Loan entered into by the Department of Commerce and Economic Development (DCED) and the Alaska Power Authority, Promissory Note No. 1 in the amount of $26,165,000. The monies intended for lapse are in the "Construction Fund" and "Construction Reserve Account" established by the City of Ketchikan. To date, the City has not complied to the Power Authority's request to transfer those funds to the Authority. 1820.8

Tyee Lake Project:
The original source of these funds was the issuance of Variable Rate Demand Notes (VRDN) on February 17, 1982 (interim financing). The VRDN were redeemed at maturity on January 2, 1985 with proceeds from the Power Development Loan entered into by the DCED and the Power Authority (Promissory Note No. 2 in the amount of $50,000,000). The monies intended for lapse are in the "Construction Fund" trust account established with Morgan Guaranty Trust Company of New York (MGT Co.). 28225

Terror Lake Project:
The source of these funds is the issuance of VRDN on June 22, 1982 (interim financing). The monies intended for lapse are in the "Construction Fund" and "Capitalized Interest Fund", irrevocable trust funds established with MGT Co. at the issuance of the notes. The maturity of the notes is on May 15, 1985, and funds will be available for lapse after such date upon redemption of the notes, in accordance with the terms of the authorizing resolution. Proceeds from the Power Development loan entered into by the DCED and the Power Authority, Promissory Note No. 3 in the amount of $115,000,000 have been deposited in the "Redemption Fund" at MGT Co. for the redemption of the notes. 10323.0

Before a journal voucher can be prepared for lapsing funds in these three projects the promissory notes in the Power Development Loan must be reduced by corresponding amounts, funds must be returned to the Power Development Loan Fund and, from there lapsed to the General Fund.

8880/083

02(01A)Rev. 10/79

The Power Authority recommends that action to lapse funds from these projects is targeted after the maturity of Terror Lake VRDN on May 15, 1985, to allow for concurrent modification of the promissory notes and the repayment schedule of the Power Development Loan.

The amounts to be lapsed at the time will be reduced by the claims in the interim period.

Anchorage-Fairbanks Intertie: Lapse $1,310,600.
Funds are available in Ch. 171, SLA 1984, S319, p. 53., A/C 08-73-4-135.
Attached is pertinent journal voucher.

Please call me if you have any questions.

April 30, 1985

Representative John Sund
Alaska State Legislature
Pouch B (MS 3100)
Juneau, Alaska 99811

Dear Representative Sund:

Attached is a computer analysis that forms the most promising basis for agreement in our current discussions with the Alaska Power Authority. As we mentioned to John Hartle, this model was proposed by Bob Heath and Gordon Harrison, and grew out of certain reservations expressed by the Power Authority staff in response to a prior proposal that was also made by Gordon Harrison. The model appears to offer an affordable wholesale power rate to the communities and a fair return to the state.

For purposes of comparison, we have also included a printout of the first Harrison proposal. As you can see, that proposal featured an agreed wholesale power rate schedule that was to cover both debt service and operations and maintenance (O & M). Debt service would be funded out of any revenues remaining after O & M was paid. A floor and ceiling rate of return on the state's investment would trigger either increased payments by the communities or an early retirement of principal debt.

The Power Authority staff felt that this type of agreement might be difficult to administer because it would make debt service revenues highly dependent on O & M costs over which they would exercise little control. They were also concerned that it placed the risks of inflation, low loads, and excessive O & M costs squarely on the state, without sufficient incentives to the communities to assure the state of a fair return. Of course the benefits of high loads and lower-than-projected O & M costs would also be enjoyed by the state.

The new proposal has the virtue of simplicity. Each community would pay for O & M at the actual pooled average rate for all four projects, and thus bear much of the risk and benefit of fluctuations in load and cost. In this example, "debt service", or an amount above O & M, would be charged at 2.6 cents/kWh in 1986, rising to 4 cents/kWh by 1990, for all sales up to a particular combined forecast load. Sales above the

forecast would be deemed "incentive sales" and would be charged at 1 cent/kWh less than the regular debt service amount. This lower rate would make it possible to attract large industrial loads, and would give the communities an additional incentive to increase project utilization. Finally, the communities would contribute a total of $500,000 per year in addition to O & M to build a fund for renewals and replacements.

Because both O & M and debt service would be pooled, the wholesale power rate would be identical for all communities. This makes it possible to market the power from projects with high unit costs of O & M. The pooling of O & M is one reason that a statutory change is required in order to implement this proposal.

The rate of return to the state in this model is primarily sensitive to changes in load. By passing on the benefits of an incentive rate, we believe the communities can market substantial amounts of additional power to potential large loads that would otherwise develop their own diesel generation. The incentive sales increase the rate of return to the state to over 6%. They also lower the effective melded wholesale power rate to the communities. Without incentive sales, the forecast wholesale power rate would face stiff competition from alternative forms of generation, and the return to the state would be substantially lower.

The rate of return to the state is based upon revenues which include interest on reserves and the communities' contribution to the renewal and replacement fund. These are capital costs paid in consideration of the state's risk, and dedicated to the long-term preservation of the state's investment in the projects. The benefit of these funds will extend well beyond the period for which rate certainty will be guaranteed to the communities. We have not attempted to estimate the extent to which these reserves would be drawn down to pay for claims or improvements, or when such costs would be incurred.

The models provided are as follows:

1. Case H1-1 is the original proposal without any large loads.
2. Case H1-2 is the original proposal with large loads added.
3. Case H2-1 is the new proposal without any large loads.
4. Case H2-2 is the new proposal with large loads added.

I hope you will find this information useful evaluating the legislation necessary to implement the proposal. Please let me know if I can provide anything further.

Very truly yours,

CITY OF WRANGELL, ALASKA

April 8, 1985

AGENDA
4-9-85
City Mgr Report

TO: WRANGELL CITY COUNCIL

FROM: JOYCE RASLER, CITY MANAGER

RE: 1985-86 BUDGET

I have prepared the Light Fund tentative budget for the 1985-86 fiscal year for continued Tyee purchases. I have also computed the generation with the diesel alternative based on the declining cost of diesel. We assume we will continue to purchase from Tyee under the same terms as the current agreement, however, even assuming we cannot reach an agreement and we generate our power by diesel, a rate reduction to the consumers is possible. Because of the fall in diesel costs and for the reasons set forth below, I recommend a ten percent (10%) rate reduction in the electrical rates effective with the July, 1985 billing.

The last rate increase was in December, 1979. Our rates were based on an average diesel cost of ninety five cents ($0.95) per gallon. The rates were also set sufficient to pay back to the General Fund all monies loaned through the years. The loan from General Fund has been reduced annually as shown in the following schedule:

Due to General Fund June 30,	1978	$540,970
	1979	689,561
	1980	602,340
	1981	285,294
	1982	108,203
	1983	160,939
	1984	-0-

In five years with our existing rates, we retired $689,561 to the General Fund. Our rates, with the contributions from the Federal Revenue Sharing have also been sufficient to rebuild most of our distribution system, with $138,000 budgeted in 1986 to complete the construction.

As stated, this proposed rate reduction <u>is not</u> a result of the Tyee rate we are now under, <u>it is</u> a result of the declining diesel costs. We would not have to increase rates if we return to diesel operation through a failure to reach an agreement with APA beyond June 30, 1985.

fv

Draft: April 23, 1985

SHORTCOMINGS OF PRICING APA POWER AS A PERCENTAGE OF AVOIDED COST

A. Problems for the purchasing utility (in the Alaskan context)*/

1. Loss of potential loads: Some or all potential large new loads that could increase project utilization will be lost, because such loads demand a higher degree of certainty over longer periods. Many such loads will either be met with private generation or cogeneration (e.g., Wrangell Forest Products) or will be lost entirely (e.g., Phillips). In the cogeneration case, the utility may be required by law to purchase excess cogenerated power from the private party, thus reducing the utility's own purchases from the APA project. In the case of loads lost because the economic activity is relocated (e.g., to the Lower 48), the community loses not only employment and taxes, but also the "induced" loads, i.e., increases in other community loads resulting from the economic activity represented by the primary load.

2. Ratemaking and billing problems: The utility must make its retail rates prospectively, yet its power costs will become known only retrospectively. Matching costs to rates during each rate period (and keeping rates fairly predictable for consumers), always a chore, becomes significantly more difficult.

3. Added administrative costs: A fairly sophisticated formula is needed to calculate true avoided cost, and the values for each variable in the formula must be recalculated at frequent (e.g., monthly) intervals. This would create some administrative burden even if (a) diesel were the only alternative, and (b) disputes with APA over the proper value for each variable never arose. (It is also difficult to continue getting realistic quotes for a large volume of diesel once the utility begins buying reduced volumes.) In practice, the difficulties are even greater because (a) the formula must accommodate other alternatives (e.g., cogeneration) as such alternatives become available, and (b) disputes with the APA over the value of individual variables are likely.

---

*/ Such pricing works well in power "pools" in which a sophisticated computer controls the generators of many producers on an instantaneous central-dispatch basis. The computer is programed to minimize total generation costs at all times, based on each generator's fuel cost, efficiency, and maximum/minimum operating guides. Cost savings made possible by using Utility A's generator rather than Utility B's to serve a portion of Utility B's load are "split" (usually on a 50/50 basis) through use of a share-the-savings rate the computer charges to Utility B and credits to Utility A. The actual rate for each transaction, and each utility's costs and savings for any given period, are known at once, facilitating utility ratemaking and billing. Nothing similar exists in Alaska, nor could it exist in the Four Dam Pool context where (a) the communities are not electrically interconnected, and (b) APA power is intended to displace thermal generation completely for most days of the year.

4. Regulatory costs: For the cooperatives (Kodiak and Copper Valley), whose retail rates are regulated by the Alaska PUC, rate filings and rate cases will become more frequent, more complex, and more costly. If the past is a guide, the APUC may also require the co-ops to raise/lower retail rates to "track" the fluctuating wholesale cost of power to the co-op, thus producing fluctuating retail rates.

5. Planning problems: The search for alternative sources of power supply with more predictable long-term costs would be intensified and simultaneously complicated. Presumably the planning process would be biased (rationally) toward predictability, even if the price of predictability were that somewhat higher retail rates might result from the more predictable alternatives.

6. Uncertain impact on utility financing: It is not clear that a utility would be able to finance additions to its distribution system and/or its generating plant as easily or inexpensively as would otherwise be the case, since the utility's revenue stream and its ability to maintain required coverage ratios and reserves would be somewhat unpredictable.

B. Problems for the State of Alaska as the seller of power

1. Reduced revenue: Compared with long-term contracts under the terms of HB 219 pricing method, power sold on a percentage-of-avoided-cost basis is likely to produce less total revenue for the State, even if one assumes that loads are equal in both cases. But loads will actually be less (see ¶ A.1. above). The loss of potential large new loads that would have produced more revenue for the State would make the comparative revenue disadvantage to the State worse.

2. Increased revenue risk: This would take two forms. First, the State would take the entire risk of further downward movement in the price of diesel and the cost of alternative resources, whereas under HB 219 the communities would bear that risk entirely. Second, because the utilities would be free, over time, to switch wholly or partially to other sources of supply, and because the utilities would have an incentive to investigate and pursue such other sources, the State would face some risk of losing even the existing loads of the utilities, as well as utility load growth.

3. Risk of negative rate of return (failure to cover current costs): This simply indicates the extreme to which the State's additional risk could take it. Under HB 219, the State is assured that (a) O&M costs will be completely paid by the utilities, and (b) some positive return, in addition to return of the principal, will be earned on the State's loan. If wholesale rates are tied to actual avoided costs of the utilities, however, a sufficiently great drop in actual avoided costs would result in the APA failing to cover even its O&M costs. In less extreme cases, APA might cover its O&M costs but fail to earn sufficient revenue to repay the principal and/or interest on the loan.

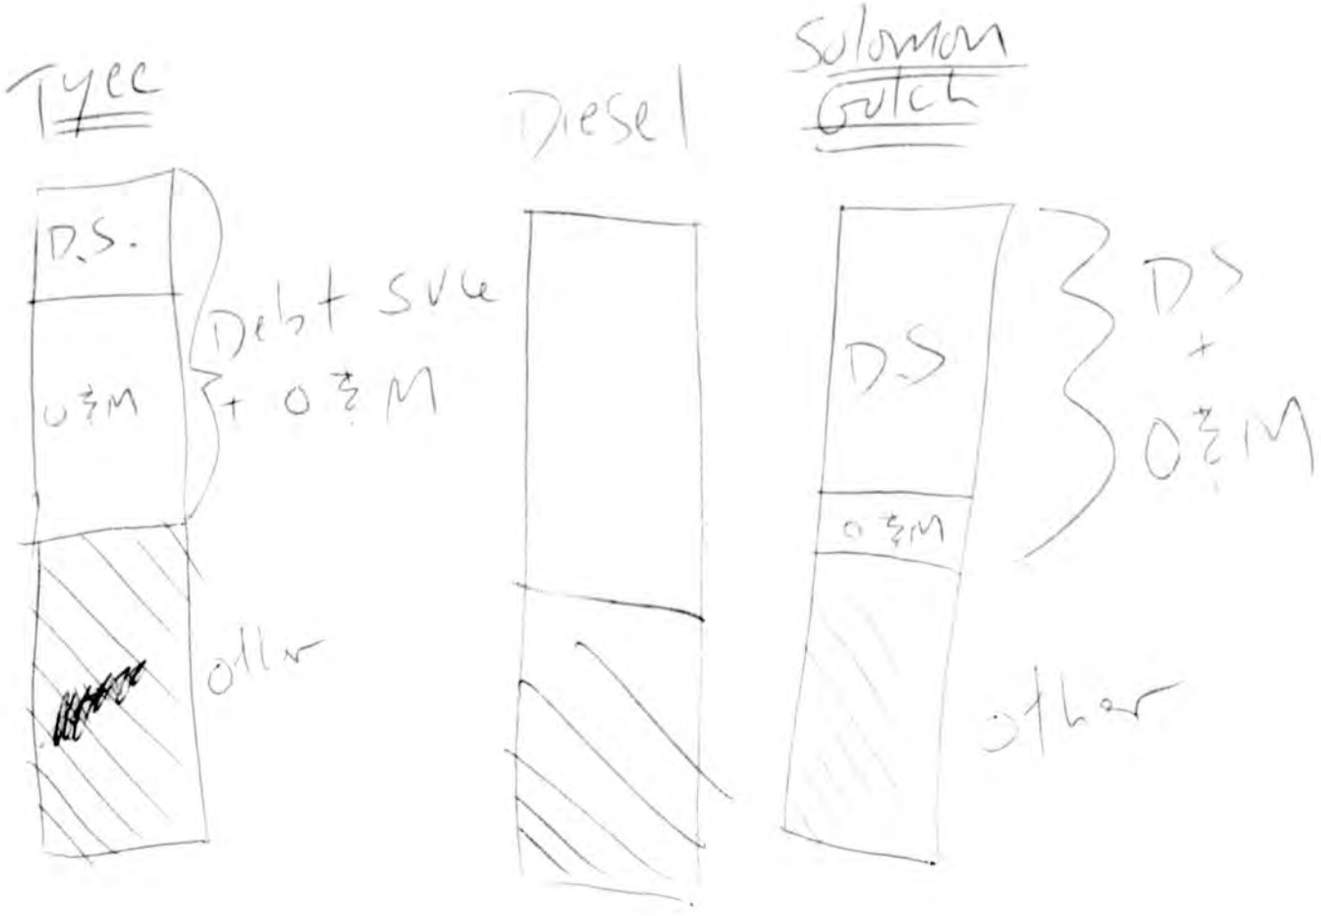
4. Added administrative costs: Administering such a pricing system would be just as complex and labor-intensive for the APA as it would be for the utilities.

4/22/85

MEMORANDUM

TO: Sen. Arliss Sturgulewski, Chair,
Senate Resources Committee

FROM: Rep. John Sund



RE: HB 219 "An act relating to the applicability of the Alaska Public Utilities Commission Act to certain electric utilities; power development loans; and the energy program for Alaska."

The purpose of this bill is to settle the four-dam-pool financing problem. The Alaska Power Authority and the six four-dam-pool communities have been negotiating for 2½ years to try to reach power sales agreements acceptable to all parties. The issue is one of establishing a power sales rate that provides a reasonable return on the state's investment and also provides affordable electricity for the four-dam-pool communities.

Specifically, the problem is one of establishing terms for the $196 million loan appropriated last session ($210 million was appropriated; $196 million has been spent). This appropriation was used to pay off short-term bonds issued by the APA to complete construction on the four dams. The appropriation was structured as an unsecured loan from the

The Historic Sites Advisory Committee, chaired by the State Historic Preservation Officer within the DNR Division of Parks and Outdoor Recreation, reviews plans for projects that are under consideration for historic district loans. If the loans become available to properties that are not within historic districts, the number of loans and therefore the number of plans to review could increase to as many as 20 or 30 a year from the current 1 or 2. Approximately 2 months of an

historical architect's time would be required for each fiscal year to review the plans for proposed projects. Travel money would be used by the architect to travel to the site of the historic propoerty for any necessary pre-loan examinations and to travel to the property after the work is completed to inspect results. A small amount of contractual and supplies money is needed for the purchase of film and film processing, for use in photographing historic property projects.

HB 283
Analysis

An increased fiscal expenditure will be needed to handle the additional loans applied for and processed by the department, for the associated staff required to expeditiously and properly provide this service to the public. It is estimated that between 20 to 30 applications will be processed each year. The division's existing loan examiners will assume the burden of these extra loans.

Consideration of these applications would also require more meetings of the division's loan committees, additional management and clerical responsibilities, and extra work for the loan closers. This fiscal note assumes that these additional burdens will be absorbed.

Fiscal costs:

Travel to inspect collateral, interview applicants, and inform public	$2,000
$2,000 is included for modification and reprinting of the existing loan application packets, the State Loan Pamphlet.	$2,000

Department of Commerce & Economic Development / POSITION PAPER

House Bill 283 "An Act relating to historical property loans."

Legislation would expand the Historical District Loan Program by: (1) allowing structures, buildings, sites, or objects identified as important in State or national history to be considered for loans without being in a Historical District as is currently required, and (2) the removal of first lien requirement.

Currently the Department of Commerce and Economic Development is averaging about one loan per year under the existing Historical District Loan Act. With the passage of this bill, additional properties will qualify for these loans across the State, including properties not in the Historical Districts. The actual number of increased applications for loans will depend on the approval criteria of the Historic Sites Advisory Committee, as their approval is required before a loan may be processed. This bill opens up the historical property loan money to the rural areas of the State. This bill is anticipated to increase the number of applications processed, and will impact upon the Historical District Loan Fund.

After careful review of the changes to the Historical District Loan Act, as proposed by the Alaska Association for Historic Preservation, the Alaska State Historic Preservation Officer and the City and Borough of Juneau, the Department of Commerce and Economic Development recommends the following:

AS 45.98.020 should be rewritten to clarify its purpose

1. to incorporate the changes recommended in SB 78;

2. to merge proposed new subsection (b) into section 020; and

3. to clarify what is meant by "identified as important in state or national history" by limiting eligibility to structures on the National Register of Historic Places, as was proposed by the State Historic Preservation Officer.

AS 45.98.020 as proposed would then read:

Sec. 45.98.020 HISTORICAL <u>PROPERTY</u> [DISTRICT] LOANS. Upon endorsement and plan approval by a local historical <u>landmark or</u> district commission established under AS 29.48.108 <u>, if the property is within its jurisdiction,</u> and the <u>approval</u> [RECOMMENDATION] of a majority of the members of the Historic Sites Advisory Committee, the Department of Commerce and Economic Development may make loans to a person, firm, business or municipality subject to applicable laws for the restoration, improvement, rehabilitation, or maintenance of <u>a historic</u> [A] structure <u>, building, site, or object that</u> [WHICH] is

(1) [WITHIN THE BOUNDARIES OF A HISTORICAL DISTRICT ESTABLISHED UNDER AS 29.48.110;

(2)] listed in the National Register of Historic Places [IDENTIFIED AS IMPORTANT IN STATE OR NATIONAL HISTORY AS PROVIDED FOR IN AS 29.48.110(b)]; or [AND]

(2)a [(3) ANOTHER] building or structure within a historical district, that is [AND] suitable for superficial modification so that it can conform to the period or motif of the surrounding buildings or structures that are the reason for the areas designation as a historical district;

The result of these amendments would be to expand the Historic Property Loans to include over 200 places on the National Register of Historic Places, and still provide loans to properties in Historic Districts. They also allow for an orderly administrative process for dealing with loans. Since there is currently only about $913,000 in the loan fund, appropriations to the fund should be considered or the current balance will be easily expended.

If 10% of the 200 places on the National Register of Historic Places apply for loans each year, at an average loan value of $150,000, then an additional $2 million will be needed in the loan budget.

IN THE SENATE

BY THE LABOR AND COMMERCE COMMITTEE

CS FOR SENATE BILL NO. 78 (L&C)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making miscellaneous amendments to state loan programs administered by the Department of Commerce and Economic Development; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.10.310(a) is amended to read:

(a) The department may

(1) make loans to

(A) individual commercial fishermen who have been state residents for a continuous period of two years immediately preceding the date of application for a loan under AS 16.10.300 - 16.10.370 and have had a crewmember or commercial fishing license under AS 16.05.480 or a permit under AS 16.43 for the year immediately preceding the date of application and any other two of the past five years, and who actively participated in the fishery during those periods, for the purchase of entry permits;

(B) <u>an individual for the repair, restoration, or upgrading of existing vessels and gear, for the purchase of entry permits and gear, and for the construction and purchase of vessels, if the individual</u> [AN INDIVIDUAL WHO] has been a state resident for a continuous period of two years immediately preceding the date of application for a loan under AS 16.10.300 - 16.10.370, <u>and either</u> [WHO]

(i) because of lack of training or lack of

employment opportunities in the area of residence does not have occupational opportunities available other than commercial fishing; or

(ii) is economically dependent on commercial fishing for a livelihood and for whom commercial fishing has been a traditional way of life [FOR THE INDIVIDUAL] in Alaska [, FOR THE REPAIR, RESTORATION OR UPGRADING OF EXISTING VESSELS AND GEAR, FOR THE PURCHASE OF ENTRY PERMITS AND GEAR, AND FOR THE CONSTRUCTION AND PURCHASE OF VESSELS;

(C) CORPORATIONS, PARTNERSHIPS, OR JOINT VENTURES, 100 PERCENT OF WHICH ARE OWNED BY INDIVIDUAL COMMERCIAL FISHERMEN WHO HAVE BEEN STATE RESIDENTS FOR A CONTINUOUS PERIOD OF TWO YEARS IMMEDIATELY PRECEDING THE DATE OF APPLICATION FOR A LOAN UNDER AS 16.10.310(a)(1)(B) AND HAVE HAD A CREWMEMBER OR COMMERCIAL FISHING LICENSE UNDER AS 16.05.480 OR A PERMIT UNDER AS 16.43 FOR THE YEAR IMMEDIATELY PRECEDING THE DATE OF APPLICATION AND ANY OTHER TWO OF THE PAST FIVE YEARS, AND WHO ACTIVELY PARTICIPATED IN THE FISHERY DURING THAT PERIOD, FOR THE REPAIR, RESTORATION OR UPGRADING OF EXISTING VESSELS AND GEAR, FOR THE PURCHASE OF GEAR, AND FOR THE CONSTRUCTION AND PURCHASE OF VESSELS];

(2) designate agents and delegate its powers to them as necessary;

(3) adopt regulations necessary to carry out its functions;

(4) establish amortization plans for repayment of loans, which may include extensions for poor fishing seasons or for adverse market conditions for Alaskan products;

(5) enter into agreements with private lending intuitions, other state agencies, or agencies of the federal government, to carry out the purposes of AS 16.10.300 - 16.10.370;

(6) enter into agreements with other agencies or organizations to create an outreach program to make loans under AS 16.10.300 - 16.10.370 in rural areas of the state;

(7) allow an assumption of a loan if

(A) the applicant has been a state resident for a continuous period of two years immediately preceding the date of the request for an assumption; and

(B) approval of the assumption would be consistent with the purposes of AS 16.10.300 - 16.10.370; it is not necessarily inconsistent with the purposes of AS 16.10.300 - 16.10.370 to approve an assumption by an applicant who does not meet the loan eligibility requirements as they exist at the time of the application;

(8) prequalify loan applicants and charge a fee not to exceed $100 for prequalification.

* Sec. 2. AS 16.10.310 is amended by adding a new subsection to read:

(c) In determining whether an individual commercial fisherman is reasonably likely to be able to repay a loan made under AS 16.10.300 - 16.10.370, the commissioner shall consider the individual commercial fisherman's income from commercial fishing and from all other sources.

* Sec. 3. AS 16.10.315 is amended to read:

Sec. 16.10.315. ALLOCATION OF LOANS. The department shall allocate at least 10 percent of the money that is appropriated for a state fiscal year to make loans under AS 16.10.310 for loans of $35,000 or less made under AS 16.10.310(a)(1)(B) [AND (C)]. An allocation made under this section terminates on April 15 of the state fiscal year for which the allocation is made.

* Sec. 4. AS 16.10.320(a) is amended to read:

(a) Except as permitted in (h) of this section, a [A] loan

under AS 16.10.300 - 16.10.370 [16.10.310 - 16.10.370]

(1) may not exceed a term of 15 years, except for extensions under AS 16.10.310(a)(4);

(2) may not bear interest exceeding 10-1/2 percent;

(3) must [SHALL] be secured by a first priority lien and appropriate security agreement; and

(4) may not exceed 90 percent of the appraised value of the collateral used to secure the loan[, EXCEPT THAT A LOAN GRANTED UNDER AS 16.10.333 FOR THE PURCHASE OF AN ALASKA LIMITED ENTRY PERMIT MAY NOT EXCEED AN AMOUNT DETERMINED IN ACCORDANCE WITH (f) OR (h) OF THIS SECTION].

* Sec. 5. AS 16.10.320(d) is amended to read:

(d) The total of balances outstanding on loans [LOANS] made to a borrower under AS 16.10.310(a)(1)(A) may not exceed [A TOTAL OF] $300,000. The total of balances outstanding on loans [LOANS] made to a borrower under AS 16.10.310(a)(1)(B) [OR (C)] may not exceed [A TOTAL OF] $100,000. [A LOAN TO AN ASSOCIATE OF THE BORROWER IS CONSIDERED TO BE A LOAN TO THE BORROWER. FOR THE PURPOSES OF THIS SECTION, "ASSOCIATE OF THE BORROWER" MEANS

(1) A CORPORATION OR OTHER ORGANIZATION OF WHICH THE BORROWER IS AN OFFICER, DIRECTOR OR PARTNER, OR IS, DIRECTLY OR INDIRECTLY, THE BENEFICIAL OWNER OF 10 PERCENT OR MORE ON ANY CLASS OF EQUITY SECURITIES;

(2) A PERSON WHO IS, DIRECTLY OR INDIRECTLY, THE BENEFICIAL OWNER OF 10 PERCENT OR MORE OF ANY CLASS OF EQUITY SECURITIES OF THE BORROWER;

(3) A TRUST OR OTHER ESTATE IN WHICH THE BORROWER HAS A SUBSTANTIAL BENEFICIAL INTEREST OR AS TO WHICH THE BORROWER SERVES AS TRUSTEE OR IN A SIMILAR FIDUCIARY CAPACITY.]

* Sec. 6. AS 16.10.320(e) is amended to read:

(e) Two or more individual commercial fishermen who each satisfy the requirements specified in AS 16.10.310(a)(1)(B) may jointly, whether operating as a corporation, partnership, joint venture, or otherwise, obtain a commercial fishing loan for the repair, restoration, or upgrading of an existing vessel and gear, for the purchase of gear, and for the construction [OF A FISHING VESSEL] or the purchase of a [AN EXISTING] fishing vessel. Loans granted under this subsection

[(1)] may not exceed the amount specified in (d) of this section multiplied by the number of qualified commercial fishermen applying for the loan [;

(2) MAY NOT EXCEED A TERM OF 15 YEARS;

(3) SHALL BE SECURED BY A FIRST PRIORITY LIEN AND APPROPRIATE SECURITY AGREEMENT;

(4) MAY NOT BEAR INTEREST EXCEEDING 10-1/2 PERCENT; AND

(5) MAY NOT EXCEED 90 PERCENT OF THE APPRAISED VALUE OF THE COLLATERAL USED TO SECURE THE LOAN].

* Sec. 7. AS 16.10.320(i) is amended to read:

(i) If a loan is made to a borrower under AS 16.10.310(a)(1)(A), a subsequent loan may not be made to the borrower [OR AN ASSOCIATE OF THE BORROWER] under AS 16.10.310(a)(1)(B) [OR (C)]. If a loan is made to a borrower under AS 16.10.310(a)(1)(B) [OR (C)], a subsequent loan may be made to the borrower [OR AN ASSOCIATE OF THE BORROWER] under AS 16.10.310(a)(1)(A) if the total of the balances outstanding on loans received by the borrower [OR THE ASSOCIATE] under AS 16.10.310 does not exceed $300,000.

* Sec. 8. AS 16.10.333(a) is amended to read:

(a) Loans under AS 16.10.310(a) [AS 16.10.320(a)] may be made to an individual commercial fisherman for the purchase of a limited entry permit upon certification by the commission that the fisherman is a person who qualifies as a transferee for the permit under AS 16.43 and the regulations adopted by the commission.

* Sec. 9. AS 16.10.335 is amended to read:

Sec. 16.10.335. DEFAULT AND FORECLOSURE. (a) If the debtor defaults upon a note for which a limited entry permit has been pledged as security under AS 16.10.333 or [UNDER AS] 16.10.338, the commissioner shall provide the debtor, by both [REGISTERED OR] certified and first class mail sent to the debtor's last known address on file with the commissioner, with a notice of default that [WHICH] includes

(1) a description of the security given for the note including the number assigned to the pledged permit by the commission;

(2) the date upon which the default occurred;

(3) the amount of arrearages as of the date of the notice, the total amount remaining on the note less unearned interest, and the amount of daily interest;

(4) a statement that the debtor may, within 15 days after [OF] the postmark date of the notice, request a hearing to submit evidence showing the debtor has not defaulted;

(5) a statement that the note may be reinstated if brought current within 60 days after [FROM] the postmark date of the notice;

(6) a statement that the note may be paid in full less unearned interest within 120 days after [FROM] the postmark date of the notice;

(7) the place where reinstatement or payment in full may be made; and

(8) a notice in at least 10-point bold type stating:

"IMPORTANT: YOUR FAILURE TO REINSTATE OR PAY THIS NOTE IN FULL BY THE DATE SPECIFIED WILL RESULT IN A FORFEITURE OF ALL RIGHTS TO THE PERMIT AND THE POSSIBILITY OF LEGAL ACTION BEING INSTITUTED AGAINST YOU."

(b) In each case of a limited entry permit being pledged as security under AS 16.10.333 or 16.10.338, the debtor shall maintain on file with the department an address where notice of default is to be sent, if necessary, and where that notice will be timely received by the debtor.

(c) Upon presentation of evidence of mailing in accordance with (a) of this section, the receipt of the notice of default by the debtor will be presumed for all purposes. This presumption is rebuttable by presentation of evidence sufficient to demonstrate lack of receipt of notice through no fault of the debtor. Upon presentation of evidence sufficient to prove lack of receipt of notice through no fault of the debtor, the notice is a nullity.

(d) Upon good cause shown, the commissioner may waive any of the time limits in (a) of this section, if the department receives from the debtor or the debtor's representative a request for the waiver before the expiration of the time limit for which the waiver is sought.

(e) Except as otherwise provided in (c) and (d) of this section, upon [UPON] the debtor's failure to satisfy the note within the time specified in (a)(6) of this section, the debtor's interest in the permit is terminated by operation of law without further notice. Any entry permit cards issued to the debtor under the permit must [SHALL] be cancelled immediately upon receipt by the commission of a certificate of termination containing a copy of the notice required by (a) of this section issued by the commissioner.

* Sec. 10. AS 16.10.339 is amended to read:

Sec. 16.10.339. REGULATIONS. The [COMMISSION, WITH THE APPROVAL OF THE] department[,] shall adopt regulations to implement AS 16.10.-333 - 16.10.337.

* Sec. 11. AS 16.10 is amended by adding a new section to read:

Sec. 16.10.355. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The department shall dispose of property acquired through default or foreclosure of a loan made under AS 16.10.300 - 16.10.370 or former AS 16.10.650 - 16.10.720. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years, but may not be by lease.

* Sec. 12. AS 16.10 is amended by adding a new section to read:

Sec. 16.10.507. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the fisheries enhancement revolving loan fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under AS 16.10.520 or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 13. AS 16.10 is amended by adding a new section to read:

Sec. 16.10.555. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The Department of Commerce and Economic Development shall dispose of property acquired through default or foreclosure of a loan made under AS 16.10.500 - 16.10.620. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

* Sec. 14. AS 26.15 is amended by adding a new section to read:

Sec. 26.15.085. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The Department of Commerce and Economic Development shall dispose of property acquired through default or foreclosure of a loan made under this chapter. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

* Sec. 15. AS 26.15 is amended by adding a new section to read:

Sec. 26.15.095. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the Alaska World War II veterans' revolving fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner of commerce and economic development may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under AS 26.15.040 or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 16. AS 27.09 is amended by adding a new section to read:

Sec. 27.09.015. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the mining loan fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner of commerce and economic development may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under AS 27.09.010 or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 17. AS 27.09 is amended by adding a new section to read:

Sec. 27.09.055. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The department shall dispose of property acquired

through default or foreclosure of a loan made under this chapter. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

* Sec. 18. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.242. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the child care facility revolving loan fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner of commerce and economic development may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under AS 44.33.245 or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 19. AS 44.33 is amended by adding a new section to read:

Sec. 44.33.272. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The department shall dispose of property acquired through default or foreclosure of a loan made under AS 44.33.240 - 44.33.275. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

* Sec. 20. AS 45.87 is amended by adding a new section to read:

Sec. 45.87.015. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the bulk fuel revolving loan fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner of commerce and economic development may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans

made under this chapter or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 21. AS 45.87 is amended by adding new sections to read:

Sec. 45.87.040. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The department shall dispose of property acquired through default or foreclosure of a loan made under this chapter. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

Sec. 45.87.060. REGULATIONS. The department shall adopt regulations to implement this chapter.

* Sec. 22. AS 45.88 is amended by adding a new section to read:

Sec. 45.88.015. SPECIAL ACCOUNT ESTABLISHED. (a) There is established, as a special account within the revolving loan fund established under AS 45.88.010, the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner of commerce and economic development may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under AS 45.88.020 or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 23. AS 45.88 is amended by adding a new section to read:

Sec. 45.88.050. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The Department of Commerce and Economic Development shall dispose of property acquired through default or foreclosure of a loan made under this chapter. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

* Sec. 24. AS 45.89 is amended by adding a new section to read:

Sec. 45.89.015. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the residential energy conservation fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under AS 45.89.030 or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 25. AS 45.89 is amended by adding new sections to read:

Sec. 45.89.050. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The department shall dispose of property acquired through default or foreclosure of a loan made under this chapter. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

Sec. 45.89.070. REGULATIONS. The department shall adopt regulations to implement this chapter.

* Sec. 26. AS 45.90 is amended by adding a new section to read:

Sec. 45.90.015. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the tourism revolving fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner of commerce and economic development may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under AS 45.90.020 or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 27. AS 45.90 is amended by adding a new section to read:

Sec. 45.90.050. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The Department of Commerce and Economic Development shall dispose of property acquired through default or foreclosure of a loan made under this chapter. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

* Sec. 28. AS 45.95 is amended by adding a new section to read:

Sec. 45.95.055. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The Department of Commerce and Economic Development shall dispose of property acquired through default or foreclosure of a loan made under this chapter. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

* Sec. 29. AS 45.95 is amended by adding a new section to read:

Sec. 45.95.065. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the small business revolving loan fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner may expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under AS 45.95.020 or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 30. AS 45.98 is amended by adding a new section to read:

Sec. 45.98.015. SPECIAL ACCOUNT ESTABLISHED. (a) There is established as a special account within the historical district revolving loan fund the foreclosure expense account. This account is established as a reserve from fund equity.

(b) The commissioner of commerce and economic development may

expend money credited to the foreclosure expense account when necessary to protect the state's security interest in collateral on loans made under this chapter, or to defray expenses incurred during foreclosure proceedings after a default by an obligor.

* Sec. 31. AS 45.98.020 is amended to read:

Sec. 45.98.020. HISTORICAL DISTRICT LOANS. Upon endorsement and plan approval by a local historical district commission established under AS 29.48.108 and the recommendation of a majority of the members of the Historic Sites Advisory Committee, the Department of Commerce and Economic Development may make loans to a person, firm, business or municipality subject to applicable laws for the restoration, improvement, rehabilitation, or maintenance of

(1) a structure which is [(1)] within the boundaries of a historical district established under AS 29.48.110 and [;]

[(2)] identified as important in state or national history as provided for in AS 29.48.110(b); or [AND]

(2) a [(3) ANOTHER] building or structure within a historical district, that is [AND] suitable for superficial modification so that it can conform to the period or motif of the surrounding buildings or structures that are the reason for the area's designation as a historical district.

* Sec. 32. AS 45.98 is amended by adding a new section to read:

Sec. 45.98.055. DISPOSAL OF PROPERTY ACQUIRED BY DEFAULT OR FORECLOSURE. The Department of Commerce and Economic Development shall dispose of property acquired through default or foreclosure of a loan made under this chapter. Disposal shall be made in a manner that serves the best interests of the state, and may include the amortization of payments over a period of years.

* Sec. 33. AS 16.10.310(b), 16.10.320(f), and 16.10.333(f) are

repealed.

* Sec. 34. This Act takes effect July 1, 1985.

MEMO: March 13, 1985

TO: Rep. John Sund
Chairman, House Committee on Loans

FROM: Rep. M. Mike Miller

RE: HB 283/Historical properties loans

This bill was introduced today's date, and would revise the eligibility for loans under the existing historical district loan program. Attached is a letter of explanation from Ms. Janet McCabe explaining the reasons for introducing the bill.

I would appreciate your scheduling of this bill at your committee's convenience, understanding that more pressing issues may occupy your committee as the session deadline approaches.

At such time as you may schedule a hearing on this bill, the following people should be notified:

Janet McCabe (Anchorage): 272-2119
Alaska Association for Historic Preservation

Steve Peterson (Anchorage): 272-3567 (days)
Chairman, Anchorage Landmarks Commission
1835 Northwestern, Anch.

Judy Bittner (Anchorage): 265-4140 (days)
State historical preservation officer
Office of History and Archaeology

Laurie Bender (Anchorage):
Planner
Municipality of Anchorage

Greg Winegar (Juneau): 465-2510
Juneau Regional Office
Division of investments/Commerce & Ec. Development

Bob Speed of my office will be dealing with this bill for me, if you or your staff have any questions. Please feel free to discuss this with me about the bill at any time.

Honorable Mike Miller (Juneau)
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Mike:

As follow-up to our discussion about amending the historic properties loan legislation I'm enclosing a suggested draft which could be used by Legislative Affairs as they develop a bill for your introduction.

Basically, AAHP would like to see the following accomplished:

1. Amend the AS 45.98 so that historic structures outside of districts can also qualify for state loans. Eligibility should be based on the recommendation of the local landmarks commission and the State Historic Sites Advisory Commission or, where there is no local commission, on the recommendation of the State Historic Sites Advisory Commission alone. We feel that this last provision is important because a number of Alaska's historic structures, particularly roadhouses and churches, are outside the jurisdiction of a municipality with an historic landmarks commission.

2. Delete Sec. 45.98.040(6) which requires that the state loan be in first lien position and amend Sec. 45.98.040(3) so that the total of all loans may not exceed 85 percent of the appraised value. This change would be consistent with other state loan programs which do not require a first lien position. The first lien requirement has been a major obstacle to use of the program.

We have discussed these changes with staff in the Department of Commerce and Economic Development. They have not identified any problem with the changes and have indicated that they would give the program a wider useability.

I understand from them that the amount currently available in the loan fund is about $950,000. We recommend that this level be sustained annually.

Your interest and support is much appreciated. Please let me know if AAHP can be of assistance after the bill is introduced. I'll be in Juneau March 7 and 8 and will stop by to see you at that time.

Sincerely,

Janet

DRAFT: HISTORICAL PROPERTIES AND DISTRICT LOANS
AMENDMENTS PROPOSED BY AAHP

Underlining indicates new language or other changes.

Section. 45.98.110. Creation of historical properties and historical district revolving loan fund. There is created in the Department of Commerce and Economic Development a historical properties and historical district revolving loan fund (Sec. 3 ch139 SLA 1977).

Sec. 45.98.020. Historical properties and historical district loans. Upon endorsement and plan approval by a local historical landmark or district commission established under AS 29.48.108 and the recommendation of a majority of the Historic Sites Advisory Committee, or, in the absence of a local historic landmark or district commission, upon the recommendation of the Historic Sites Advisory Committee, the Department of Commerce and Economic Development may make loans to a person, firm, business or municipality subject to applicable laws for the restoration, improvement, rehabilitation, or maintenance of an historic building, structure, site, or object ~~which is~~. Properties in historic districts shall be:

(Continue with (1), (2), (3) as written.)

Sec. 45.98.040. Limitation on Loans

(3) the loans shall be secured by acceptable collateral and the total of all loans may not exceed 85 percent of the appraised value of the collateral offered as security;

(6) The state has a lien on the property accepted as collateral to the extent of its portion of the loan. DELETE REMAINDER OF (6).

Presented by: The Manager
Introduced: 01/07/85
Drafted by: G.L.

RESOLUTION OF THE CITY AND BOROUGH OF JUNEAU, ALASKA

Serial No. 1079

A RESOLUTION URGING THE LEGISLATURE TO EXPAND THE HISTORIC DISTRICT LOAN PROGRAM TO STRUCTURES THAT ARE ON THE NATIONAL REGISTER OF HISTORIC PLACES.

WHEREAS, AS 45.98.010 through .070 establishes the Historical District Revolving Loan Fund, and

WHEREAS, said fund may be used to make loans for the purpose of restoration, improvement, rehabilitation, or maintenance of structures within a historical district established by a municipality, and

WHEREAS, no structure outside such a district qualifies for a loan from the fund, and

WHEREAS, there are structures on the National Register of Historic Places outside such districts that should also quality for loans from the fund;

NOW, THEREFORE, BE IT RESOLVED BY THE ASSEMBLY OF CITY AND BOROUGH OF JUNEAU, ALASKA:

1. That the city urges the introduction and adoption by the legislature of legislation that would amend the Alaska Historical District Loan Act (AS 45.98.010-070) to permit loans to be made to owners of structures on the National Register of Historic Places without regard to whether such structures are within the boundaries of a historical district established by a municipality.

2. That copies of this resolution shall be sent Governor Sheffield, Senator Bill Ray, Representative Mike Miller, Representative Jim Duncan, and Esther Wunnicke, Commissioner of the Alaska Department of Natural Resources.

Adopted this 7th day of January, 1985.

DEPARTMENT OF PLANNING

January 30, 1985

Representative Mike M. Miller
P.O. Box 1494
Juneau, Alaska 99802

Dear Mr. Miller:

The Historic District Revolving Loan Fund was legislated into being in 1977 as a result of your efforts. It is a program with great potential, especially today with declining federal assistance to historic preservation. The record will show however that the program has been largely underutilized for several reasons, including the difficulties in establishing historic districts and the relatively low level of loan funds for projects. The Anchorage Historic Landmarks Preservation Commission would like to see an amendment to the loan program. Consequently, we are now writing to you as the original co-sponsor of the bill and as persons concerned about our state's heritage resources, and asking for your assistance in amending of the loan provisions.

Specifically we would like to see five points changed:

1. The loan program should be made available for single historic structures/buildings which are not necessarily located in Historic Districts.

   Nationwide historic districts have often evolved as a response to individual preservation efforts. Exemplative rehabilitation of one or two buildings can initiate an awaking of public awareness and cu'tural appreciation resulting in the restoration of ther properties. Thus, if funds are made available r single structures there is a wider possibility of us and potential spin-off effects whereby other property owners become inclined to restore their buildings.

2. Any building which is on the National Register of Historic Places or is declared historically significant

by the State Historic Site Advisory Commission should qualify for the state loan funds. The existing requirement that a local historic society or commission approve the property is not feasible in some remote and isolated communities.

3. Loan ceilings should be increased for Historic Districts to $2,500,000. The $250,000 limit as now amended is adequate for individual structures.

4. A set amount of dollars (for example $750,000 to 1,000,000) should be kept in the Historic Loan Fund. This will avoid the depletion of the short-term future restoration funds before funds begin to flow back via loan payments. By subsidizing the loan fund for a few years, future projects will be insured.

5. Unlike other state loan programs, the Historic Loan Fund requires that the State be in a 1st lien position on any project using loans. We find this encumbering and prefer to see the State take a 2nd lien position in keeping with other state programs.

Your support in facilitating these changes is much appreciated. We are most willing to assist you in any way we can to see this fine program go forward.

Sincerely,

Steven M. Peterson
Co-Chairman, Anchorage Historic
Landmark Preservation Commission

jbl/hll

2001 Turnagain Parkway
Anchorage, Alaska 99503
April 7, 1985

Representative John Sund
Chairman, House Loans
Pouch V
Juneau, Alaska 99811

Dear Representative Sund:

I am writing to urge your support of House Bill 283 on historic preservation loans. HB 283 will make preservation loans available for historic properties not within the boundaries of an historic district with the approval of a majority of the members of the Historic Sites Advisory Council. It will also delete the present requirement that a state loan be in first position, a requirement that had made the loans unusable for many. Passage of HB 283 would be an aid to historic preservation in Alaska by making available the $950,000 in the preservation loan fund to more people throughout the state.

Sincerely,

Wilda Marston

Dear Mrs. Campbell:

Thank you for your letter regarding House Bill 283. I am happy to hear that you are putting such effort into preserving Ketchikan's history.

HB 283 went through two hearings in my Loans Committee. It was passed out with excellent recommendations. It is now in the Finance Committee awaiting a hearing. The bill will have my support every step of the way.

Your comments on the bill are appreciated. It is efforts such as yours that deserve support and assistance.

Sincerely,

24 April 1985

Dear John,

I am writing to express my support of HB 283. My husband, Doug Campbell and I own a house built by Mrs. Evelyn Valentine's father in 1924. We have lovingly worked on it for 4 years and it has been time consuming because we are conscientously ~~been~~ striving to maintain the historic integrity of the house. We intend to nominate it to the National Register of Historic Places.

One thing we need to do is to re-roof the house. Originally it had a cedar shake roof, and we would like to put on fire treated cedar shakes as did our neighbor, Fran Broderick. This will be a very expensive endeavor, and we understand that matching Federal Historic Preservation funds for these types of projects are unavailable. Hence, it would be terrific if we could apply for a lower interest loan as described in HB 283, which I learned about through The Alaska Association for Historic Preservation newsletter.

I am sure you are aware of the citizens' of Ketchikan interest in historic preservation. There is an active Historic Commission, of which my husband is a member, and the Creek Street Review Board, of which my husband is chairperson. The objectives of both groups include maintaining the historic integrity of our lovely community. Unfortunately, niether group was informed about HB 283 until I received my newsletter. If they had, I am sure you would have heard from both entities by now.

Our house, visible from the junction of Bawden and Park, is virtually one of Ketchikan's landmarks. Several oldtimers, like Bob Young, have expressed to us their pleasure in the fact that we are fixing up our home. On numerous occasions we have spotted tourists photographing or drawing our home. We love it, and cordially invite you to drop by any time to see what we're up to and how we would apply loans from HB 283.

In closing, there has been a massive effort in recent years to inventory historic properties in specific Alaskan communities. This has generated a great deal of interest on the part of members of these communities in the history of their towns and the historical integrity of their homes. I believe that HB 283 is a logical extension of this effort. It is only natural that homeowners, after learning how neat their places are, will want to fix them up to maintain the historic integrity--and you can bet that these same people will be looking for funding sources (for example, a fire treated cedar shake roof is far more expensive and labor intensive than a baked enamel roof). I hope that you and other representives recognize and support the kind of economic incentive that HB 283 offers.

Sincerely,

Chris Rabich Campbell

October 11, 1985

Representative John Sund
Chairman
House Committee on State Loans
Pouch V
Juneau, AK 99811

Dear Representative Sund:

The Kootznoowoo Heritage Foundation urges you to support the passage of House Bill 283, introduced by Representative Mike Miller, of Juneau last Session. The bill is presently in House Finance and will need your support to move through the House this coming session, and then through the Senate.

This legislation is critical for the survival of the Historical District Revolving Loan Fund, under AS 45.98.010.

This program enables Alaskans to hold onto their heritage at the same time that we improve the historic districts of our communities, many of which are in disrepair. Our historic buildings are living testimony to the rich heritage we share as Alaskans. When restored these historic monuments provide a source of civic pride and a viable tourist attraction for the many Alaskan communities seeking to develop tourism as a source of economic stability.

We urge you to support this critical program and to work towards the passage of House Bill 283.

Sincerely,

Sarah Robinson
Executive Director

Dear Representative Sund:

Upon reading about House Bill 283 in the July-September 1985 issue of "Heritage" (published by the Alaska Division of Parks and Outdoor Recreation, Office of History and Archaeology), I am writing to you in support of this bill and the three amendments proposed by Representative Mike M. Miller, to wit: (1) loans may be made to projects that are not within the boundaries of an historic district with the approval of the majority of the members of the Historic Sites Advisory Committee; (2) deletion of the requirement that the state be able to take a first lien on the loan, rather than a secondary lien; and (3) owners of structures listed on or eligible for the National Register will be able to apply for State of Alaska Historical District Revolving Loan Fund loans.

Thank you for supporting this bill, which I consider to be very worthwhile legislation.

Sincerely,

Virginia E. Heiner

Pat-file

March 1, 1985

The Honorable Al Adams
House of Representatives
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Al:

In a joint effort, the City, the Chamber of Commerce, the area realtors and financial institutions in the City of Homer have been working hard to develop an equitable program for the entire State on the DCRA owner-occupied rural housing loan program.

We know that several bills have been filed recently concerning this issue; however, we feel that no action taken to date addresses the problems, such as economic base, lack of services, etc., that apply to all the areas of our State.

The restrictions in the previously-filed bills which apply to mileage factors and population factors eliminate this rural home-loan program from many of the truly rural areas of the State such as the communities of Hope, Cordova, Seward, Ninilchik and so on.

We feel that we have come up with a good, workable solution! If the program were rewritten so that this rural-home-loan program could only be used for single-family/duplex, owner-occupied dwellings and only applicable in any area of the State that has sixty-five (65%) percent or less of its residential structures connected to a public water and sewer system, we think it would come very close to addressing the original intent of the program.

Your consideration of this input will be much appreciated.

Sincerely,

Gail Phillips
Chairman
Homer Chamber of Commerce Legislative Committee

April 5, 1985

The Honorable Representative John Sund
Chairman, House Special Committee on Loans
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Representative Sund:

As Chairman of the House Special Committee on Loans, we urge you to consider and work for the passage of House Bill 303 concerning the DCRA rural home loan program.

In previous correspondence to the Legislature (copy attached), the Homer Chamber of Commerce suggested language that would make this program an equitable one across the State. That language stated: "that DCRA home loans would apply only to single family/duplex, owner-occupied dwellings located in an area of the State that has 65% or less of its residential structures connected to a public water and sewer system."

We note that Bill #303 is in your Committee and cannot move on to House CRA or House Finance until your committee acts on it. We would urge you and your committee to consider the overall benefit to the State of this program, and to move on it this session.

Your assistance in getting this bill passed through your committee will be very much appreciated.

Sincerely,

Gail Phillips

BY THE HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the use of student loans to pay child care expenses."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.120(a) is amended to read:

(a) Proceeds from scholarship loans may only be used for books, tuition and required fees, child care expenses, and for room and board, however the maximum loan award may not exceed the cost of books, tuition and required fees, and room and board.

* Sec. 2. AS 14.43.640(d) is amended to read:

(d) Proceeds from a teacher scholarship loan may be used only for undergraduate expenses of books, tuition, required fees, room and board, child care expenses, and the transportation expense for two round trips between the loan recipient's home and school, however the maximum loan award may not exceed the cost of books, tuition and required fees, and room and board & transportation.

HB 357 - STUDENT LOANS FOR CHILD CARE EXPENSES

I HAD NO INTENTION OF INCREASING THE AMOUNT OF MONEY FOR THE STUDENT LOAN PROGRAM WHEN I CONTEMPLATED INTRODUCING HB 357.

RATHER, I ENVISIONED IT AS A VEHICLE TO ALLOW STUDENTS TO USE THEIR EXISTING STUDENT LOAN FUNDS FOR THE PURPOSES OF CHILD CARE.

ALLOWING STUDENT LOANS TO BE USED TO PAY CHILD CARE EXPENSES WOULD GRANT THE STUDENT A FEDERAL INCOME TAX DEDUCTION AND A STATE OF ALASKA CHILD CARE CREDIT.

A VERY SMALL NUMBER OF STUDENTS RECEIVE DAY CARE ASSISTANCE (5% OF 2100 PERSONS ARE FULL TIME STUDENTS/2.9% ARE PART TIME STUDENTS). LESS THAN 200 STUDENTS RECEIVED DAY CARE ASSISTANCE IN THE HIGHEST USE MONTH IN 1984: DR. ROMESBURG CLAIMS ON HIS FISCAL NOTE THAT OVER 500 LOAN APPLICANTS (31.5%) WOULD CLAIM CHILD CARE CREDIT, ALTHOUGH THERE ARE ALMOST 9,000 STUDENTS GOING TO SCHOOL IN-STATE RECEIVING STUDENT LOANS. THIS MUST INDICATE THAT THE MAJORITY OF STUDENTS WHO ARE PARENTS HAVE THEIR CHILDREN IN UNLICENSED CHILD CARE (ASSUMING IT IS LESS EXPENSIVE), ARE ON THE WAITING LIST FOR DAY CARE ASSISTANCE, CAN ONLY AFFORD TO ATTEND SCHOOL PART-TIME OR HAVE NON-FINANCIAL CHILD CARE ARRANGEMENTS (FAMILY, FRIENDS ETC.).

THE BENEFIT TO THE STATE OF ALASKA IS THAT THE MONEY USED FOR CHILD CARE WOULD BE A LOAN, TO BE PAID BACK, AND MAY LESSEN THE DEMAND FOR DAY CARE ASSISTANCE.

FISCAL NOTE FOR HB 357

(a) Assumptions:

1. Child care expenses are an add-on expense in addition to those eligible expenses currently in statute, i.e., there is no trade-off, only additional program cost.

2. Child care expenses may be claimed by both male and female applicants.

3. 53.6% of current FY85 Alaska Student Loan recipients indicate dependents on their loan applications. Of these, 60.0% will have at least one dependent under the age of six, and of these, 98.0% will claim child care expenses. Therefore, approximately 31.5% of all applicants will claim child care expenses.

4. University of Alaska, Fairbanks standard student budget provides $268 per month for child care expense per eligible dependent ($2,400 per academic year).

5. Approximately 75% of those eligible would receive the additional $2,400. Others would not--due to loan maximums.

(b) Comment:

1. This cost will either be a new program cost, in General Fund appropriation, or will result in loans to fewer persons.

MEMORANDUM

TO: ALL REPRESENTATIVES
FROM: MAX GRUENBERG
RE: HB 357 - USE OF STUDENT LOANS TO PAY CHILD CARE EXPENSES
DATE: APRIL 22, 1985

HB 357 HAS TWO PROVISIONS:

1. AS 14.43.120 (a) applies to the student loan program, and would allow the proceeds from student loans to be used to pay child care expenses.

2. AS 14.43.640 (d) applies to the teacher scholarship loan fund, and would allow the proceeds from those student loans to be used for child care expenses.

Effect of amendments. — The 1984 amendment, effective July 6, 1984, in subsection (a), added "and to pay the costs of collecting student loans that are in default if those costs are not recovered from the student" at the end of the first sentence and substituted "loan fund" for "fund shall be used to make new scholarship loans" in the second sentence and "money estimated to be" for "funds" and "is" for "are" in the third sentence.

Sec. 14.43.095. Financial aid committee. (a) The student financial aid committee is composed of the members of the Alaska Commission on Postsecondary Education. The commission may delegate its functions under AS 14.43.090 — 14.43.160 to a committee of its members, with augmented membership as the commission considers appropriate. The executive officer of the commission is the executive secretary of the committee. The Alaska Commission on Postsecondary Education shall administer the program established by AS 14.43.090 — 14.43.160.

(b) Members of the committee serve without compensation but are entitled to per diem and travel expenses authorized by law for boards and commissions.

(c) The committee shall make an annual report reviewing the work of the committee to the governor and the legislature.

(d) The committee shall meet at least once a year. The meetings shall be held at the call of the chairman or upon petition by two members. (§ 1 ch 98 SLA 1971; am § 2 ch 156 SLA 1972; am § 5 ch 78 SLA 1974; am § 3 ch 136 SLA 1974; AS 14.40.753; am § 57 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment, effective February 14, 1984, substituted "and the legislature" for "the legislature and the private colleges and universities where students receiving tuition grants are enrolled" in subsection (c).

Sec. 14.43.100. Applications. (a) Applications shall be submitted to the executive secretary of the committee.

(b) A person whose loan application is not recommended or presented to the committee by the executive secretary may appeal to the committee through the chairman of the committee and the committee shall consider the application. (§ 1 ch 98 SLA 1971; am § 3 ch 156 SLA 1972; am § 4 ch 136 SLA 1974; AS 14.40.755; am § 58 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment, effective February 14, 1984, deleted "or grant" following "loan" in subsection (b).

Sec. 14.43.120. Conditions of loans. (a) Proceeds from scholarship loans may only be used for books, tuition and required fees, and for room and board.

(b) The loans may only be used to attend a career education program or a college or university approved by the commission, and, if the loans are federally insured, by the United States Commissioner of Education.

(b) The legislature further finds that existing programs have failed to increase the proportion of Natives teaching in rural schools. Therefore, it is the intent of the legislature to establish the teacher scholarship loan program to encourage rural high school graduates to return to rural schools as teachers and relieve the conditions described in this section. (§ 1 ch 121 SLA 1984)

Sec. 14.43.610. Program established. There is established the teacher scholarship loan program to provide an incentive for rural high school graduates to pursue teaching careers in rural elementary and secondary schools in the state. (§ 1 ch 121 SLA 1984)

Sec. 14.43.620. Teacher scholarship revolving loan fund. There is created a teacher scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.43.600 — 14.43.700. All repayments of principal and interest on teacher scholarship loans shall be paid into the teacher scholarship revolving loan fund and shall be used to make new teacher scholarship loans. If estimated funds available from teacher scholarship loan repayments are inadequate to fully fund estimated teacher scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year. (§ 1 ch 121 SLA 1984)

Sec. 14.43.630. Administration. (a) The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall

(1) allocate the loan awards available for teacher scholarship loans annually to local school boards giving a preference to rural school districts; and

(2) develop and distribute to the local school boards an application form for teacher scholarship loans; the form shall include a requirement that the applicant supply a high school academic transcript and a statement of intent to enter a teaching career at the elementary or secondary school level in the state.

(b) The local school boards shall select the recipients of the teacher scholarship loans according to the criteria in AS 14.43.650. (§ 1 ch 121 SLA 1984)

Sec. 14.43.640. Conditions of loans. (a) The conditions provided in AS 14.43.120 apply to teacher scholarship loans except as otherwise provided in this section.

(b) If a borrower meets the conditions provided in (a) of this section and is employed as a teacher in a rural elementary or secondary school, the portion of the loan that shall be paid by the state, notwithstanding AS 14.43.120(j), is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(1) one year employment, 15 percent;
(2) two years employment, an additional 15 percent;
(3) three years employment, an additional 15 percent;
(4) four years employment, an additional 25 percent;
(5) over four years employment, an additional 30 percent.

(c) A loan may not exceed $7,500 in a school year.

(d) Proceeds from a teacher scholarship loan may be used only for undergraduate expenses of books, tuition, required fees, room and board, and the transportation expense for two round trips between the loan recipient's home and school. (§ 1 ch 121 SLA 1984)

Sec. 14.43.650. Selection criteria. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of a public or private high school in the state, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level;

(3) meet the conditions set by the student's local school board with respect to the district's requirements for teachers in particular subject areas; and

(4) submit to the local school board an application provided by the student financial aid committee under AS 14.43.630(a)(3); an application may be submitted six months before graduation from high school.

(b) A local school board shall award teacher scholarship loans giving a preference to applicants from rural schools who meet the qualifications for a loan and taking into account the applicants' academic records.

(c) A student may not be awarded a scholarship loan under AS 14.43.090 — 14.43.160 and a teacher scholarship loan under AS 14.43.600 — 14.43.700 for the same school year. (§ 1 ch 121 SLA 1984)

Legislative history reports. — For legislative letter of intent, see 1984 Senate Journal at p. 3117.

Sec. 14.43.700. Definition. In AS 14.43.600 — 14.43.700, "rural" means

(1) a community in the second, third, or fourth judicial district of the state with a population of 4,500 or less that is not connected by road or rail to Anchorage or Fairbanks; or

(2) a community in the first judicial district of the state with a population of 4,500 or less. (§ 1 ch 121 SLA 1984)

HOUSE BILL NO. 378

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the interest rate on state loan programs; and providing for an effecti. date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.05.035 is amended by adding a new subsection to read:

(b) Notwithstanding any other provision of law, the interest rate for loan programs administered by the state or an instrumentality of the state shall increase by one-half percent October 1 of each year until the interest rate is equal to

(1) the prevailing market rate for each type of loan; or

(2) the cost of funds, if the loan program is financed by the sale of bonds or other indebtedness.

* Sec 2. This Act takes effect October 1, 1985.

Alaska HOUSING FINANCE CORPORATION

— RESEARCH / QUESTION / WHAT SEE

April 24, 1985

The Honorable Rick Halford
Alaska State Senate
Pouch V
Juneau, AK 99811

Dear Senator Halford:

The enclosed packet, Exhibit I, is presented in response to your request that the effect of modifications to the current level of subsidy be reviewed. The two alternatives chosen to be analyzed were as follows:

Case A: Subsidy reduced to 2-1/2% effective October 1, 1985.

Case B: Subsidy initially reduced to 2-1/2% effective October 1, 1985 and further reduced to 2% beginning October 1, 1986.

The summary on Page 1 of Exhibit I demonstrates the estimated effect of the changes on subsidy requirements and Revolving Fund balances.

You made a second request related to ways the program might be modified to assist the Corporation in being able to accommodate future loan financing activity with existing resources of the Revolving Fund. One proposal would be to provide a substitute for the existing subsidy structure used in the taxable bond funded program. Currently the mortgage note rate is written based upon a 3% rate reduction from the "cost of funds" for the first $90,000 of a loan. This results in a 3% subsidy for the life of the loan. The proposal calls for the same effective initial note rate with payments increased annually until they are at a level sufficient to pay the principal and interest due on the loan at the unsubsidized rate. This type of a loan is generally referred to in the mortgage lending industry as a "buy-down loan".

The stated note rate would be "bought down" to a subsidized effective rate through an allocation of funds in a pledged account. As the borrower's payments are increased, the required subsidy draws out of the pledged account are reduced until eventually no further draws are required. The borrower would be signing up for a 30 year fixed rate loan with gradually reducing payment assistance provided by AHFC.

Telephone (907) 276-5599
235 East 8th Avenue
Third Floor
P.O. Box 101020
Anchorage, Alaska 99510

This type of a loan would be similar to loans assisted under our Home Ownership Assistance ("HOF") Program. Under the HOF program, the borrower signs a note at the standard AHFC interest rate with additional monthly payment assistance provided to reduce the effective rate to as low as 6%. The HOF assistance is reduced as the borrower's income increases. The buy-down mortgage will have annual increases in the monthly payments beginning in the second year and continuing until the borrower's payments equal those required on an unsubsidized basis.

The following compares the buy-down mortgage with the current ABE structure. Also enclosed are two graphs which demonstrate the difference in payments and subsidies:

	ABE Mortgage	Buy-Down Mortgage Proposal
Effective mortgage rate	10% for life of loan.	10% first year increasing to 13%.
Stated note rate	10%	13%
Borrower's mortgage payment terms	Initial payments based upon 30 yr. fixed rate loan with annual monthly payment increases of 5% beginning in years 4 through 9.	Initial payments based upon 30 yr. fixed rate loan with annual monthly payment increases of 5% beginning in years 2 through 5*.
Gross AHFC subsidy (assuming loan goes to term)	$32,246	$7,320
Present value of subsidy discounted at 10%	$17,992	$6,092

* Period of increasing payments may vary depending upon loan amounts and interest rate levels.

Standard underwriting guidelines allow for qualification of the borrower at the initial bought-down rate provided that the annual increases in mortgage payments do not exceed 7-1/2%. In our examples we have assumed only 5% annual increases.

The buy-down mortgage has the advantage of reducing the amount of subsidy for loans purchased under the taxable program by approximately two-thirds. This would be accomplished without precluding anyone from the benefits of home ownership who is currently qualified under the existing program.

In connection with the implementation of the buy-down program, consideration may be given to relaxing the Corporation's requirements of continued owner occupancy. Since the loan will be unsubsidized in approximately 5 years, it is possible the program could look at initial owner occupancy and the "one loan per resident" criteria as being sufficient. Since conventional long term fixed rate financing now imposes a "due on sale" clause, the buy-down loans would have to remain non-assumable.

I hope the above is useful in your review of AHFC's mortgage loan financing program. If I can be of further assistance, please let me know.

Sincerely,

Mark K. Cameron

Mark K. Cameron
Acting Executive Director

Alaska HOUSING FINANCE CORPORATION

April 16, 1985

The Honorable Jan Faiks
Alaska State Senate
Pouch V
Juneau, AK 99811

Dear Senator Faiks:

Enclosed please find a booklet containing lending and financing activity projections along with an analysis of Revolving Fund activity and balance estimates. The first section of the booklet contains projections based upon existing programs, while the second section presents the same information adjusted to reflect the changes expected should legislation in the form of that contained in SB 281 be implemented.

The projections are extremely sensitive to fluctuations in mortgage demand. Fairly low levels of mortgage activity are reflected in the analysis. Recent activity which has been at record lows provided the base for the estimates.

Total mortgage demand for FY 89 is projected to be reduced from $870 to $480 million under the provisions of SB 281. Subsequent to FY 89, the only program which would continue would be the tax-exempt financed Veterans Mortgage Program with annual activity of $175 to $225 million per year. These bonds would be issued on a non-subsidized basis.

The effect of SB 281 on Revolving Fund balances is dramatic. At the end of FY 89 without changing the program, $27 million in liquid assets would be in the General Account of the Revolving Fund after receiving an additional appropriation of $100 million. This compares to a projected liquid asset balance without any future appropriations of $287 million if SB 281 is effected, representing a net difference of $360 million.

You have asked whether the Corporation would need future legislative appropriations were SB 281 to become law and $50 million reappropriated to the State General Fund. As demonstrated in the summary of Exhibit A, projected liquid assets of the Revolving Fund are substantially in excess of $50 million. Accordingly, such a reappropriation in connection with a phasing out of the Corporation's loan programs is not expected to result in future appropriation requests.

If I can be of further assistance in any way, please let me know.

Sincerely,

Mark K. Cameron

Mark K. Cameron
Acting Executive Director

ALASKA HOUSING FINANCE CORPORATION

Testimony Regarding SB 281

"An Act Relating to the Interest Rate on State Loan Programs; and Providing for an Effective Date"

General Comments

The Alaska Housing Finance Revolving Fund is doing what it was intended to accomplish. Projections based upon recent lending activity indicate that additional appropriations will not be necessary until FY 89. While the request in FY 89 could be approximately $100 million, the return of assets pledged to initial taxable bond offerings could fund FY 90, 91, 92 and a portion of FY 93's activity. The $100 million needed in FY 89 would represent an annual average of less than $17 million for the six years ending in FY 92.

The Corporation maximizes the utilization of State capital through leveraging. The annual subsidy transfers from the Revolving Fund average 12% to 15% of the actual amount of mortgages purchased.

The leveraging effect is even greater when consideration is given to the multiple benefits of the program. Residents are afforded the opportunity to purchase a home who would not have the benefits of homeownership without AHFC and those who find themselves in need of a larger home to accommodate a growing family have reasonable rate financing available in both the sale of their smaller home and the acquisition of the new home. In addition to these benefits to the homebuyer and seller, the economic base of the State is diversified through stimulation of the housing market. Over half the loans the Corporation purchases are for newly constructed residences.

Effects of SB 281 on AHFC

On October 1, 1988 the level of subsidy will be reduced to 1% and the Corporation will in all likelihood cease operating all but the tax-exempt bond funded Veterans Mortgage Program with annual activity in the range of $175 to $225 million. The federal authorization for the tax-exempt bond funded first time homebuyers program ceases in 1987. With only a 1% difference in rates on the first $90,000 of a loan, it is questionable whether the Corporation would be able to compete with the conventional markets which have much more flexibility in accessing the capital markets and arranging financing facilities than a public corporation. The Corporation is probably the only provider of secondary mortgage financing which makes commitments to purchase individual loans from lending institutions. These commitments are binding only upon AHFC and are valid for an initial 4 month period. Should conventional mortgage rates fall below AHFC's at any time during that commitment period, borrowers may opt to cancel their commitment. The applicant's exposure is limited to the 1/2 of 1% commitment fee charged by AHFC. The risk to the Corporation is that it will not be able to acquire mortgage loans necessary to pledge to the bonds. With only a 1% difference between AHFC rates and conventional sources of financing, the risk to the Corporation and the bondholders that loans will not be originated and the bonds required to be retired ("called") early is fairly high. Accordingly, it is extremely questionable whether the Corporation will determine the issuance of the bonds at a 1% subsidy level is worth the risks.

The Revolving Fund is expected to have liquid assets of $287 million at the end of FY 89 if the programs are phased out pursuant to SB 281. This projection is based upon receipt of the $16 million FY 85 appropriation and no reappropriation of current assets.

The bill could have a significant impact on housing activity. Uncertainty over continuity of loan programs has historically resulted in stimulation of the housing market accompanied by rising values. The flurry of activity to obtain the last of the subsidized loans could be followed by a major depression in both activity and residential values. The situation could be further aggravated by zero or negative economic growth in the State, resulting in part from a diminishing level of local government and capital project support from the State and reduction in oil related activity as increasing exploration costs face off against lower oil prices.

To protect the security for future loan originations, imposition of a 10% or 15% minimum down payment may be required. This would replace the current terms of 0% down veterans financing and 5% down conventional program loan terms.

To protect the security for bonds previously issued which are collateralized by residential loans, a restriction against financing of new construction may be necessary. Fewer homes would be constructed, thereby reducing the inventory of homes on the market. This would assist in maintaining the value of the existing residential housing stock, a large portion of which are financed with loans pledged as security to in excess of $4 billion in Corporation bonds outstanding.

The hardest hit by increasing interest rates will be the low to moderate income resident. Those of modest means generally do not have the same number of financing alternatives available as those who are doing fairly well and desiring to trade up to a larger house, often extracting equity in the process.

Questions Related to SB 281

The bill is unclear whether the 1/2% increase is to apply to the entire loan amount or just the subsidized portion. AHFC statutes provide for a "blended" mortgage rate with only the first $90,000 of a mortgage loan subsidized. The borrower is charged the Corporation's "cost of funds" on the excess of the loan over $90,000. If the 1/2% increase is to apply to the entire loan amount, we will be charging more than our cost of funds on the portion of a loan in excess of $90,000.

Is it possible to have the 1/2% annual increase spread out such that each quarter the rate would rise 1/8 of 1%? The October 1 effective date for the increases comes at the down cycle of the housing market. While this may be beneficial for the construction industry, the mortgage lenders and AHFC will be faced with a rush of activity each summer followed by several months with virtually no mortgage demand. While the 1/2% increases may mean only $30 to $35 more in payments each month, the buyer psychology will be such that all of

the activity which would have normally occurred in October, November and December will be accelerated into the months of August and September. This will have two adverse consequences. It will be extremely difficult for AHFC and the mortgage lenders to provide timely service to the borrowers. The potential for a boom/bust situation will also be aggravated as each January we wait to see if buyers will go back to the real estate market after the last 1/2% rate increase.

More legislative direction is necessary in determining the desired effect of the changes on the Home Ownership Assistance (HOF) Program. On October 1, 1988 when AHFC shuts down all but the tax-exempt Veterans Mortgage Program, the rate to a HOF recipient will have been increased from its current effective rate of 6% to only 8%. While the non-HOF home purchaser will only have a 1% difference in rates, those who would have otherwise qualified for 8% financing will have to obtain conventional financing which is currently in the area of 13-1/4% to 13-1/2%. The low-end of the housing market will be devastated since the number of those qualifying to purchase homes in that price range will be drastically reduced. The buy versus rent equation now generally comes up with an answer that buying is more advantageous. If the financing is at 13.5%, the answer will not be the same unless rents also escalate by the same degree.

Summary

The funds are in place to allow the Corporation to continue to leverage the financing of residential real estate at below market rates several years into the future.

SB 281 will effectively kill all but the tax-exempt Veterans Mortgage Program by October 1, 1988. In the process of increasing interest rates, low to moderate income families who are either desiring to purchase a home or sell one will be adversely impacted. The Corporation has a lengthy history of assisting low to moderate income residents. This assistance, provided since 1973, would also be phased out.

The impact of SB 281 on the housing market could be severe. This would particularly be the case if the State economy is also struggling and conventional interest rates rising. Program changes would be considered to assist in reducing the Corporation's exposure to increased foreclosures and delinquencies.

Data was provided by the Division of Investments for current market interest rates for the various loan programs and the resulting decreased loan demand.

The fiscal impact to revenue is the net interest rate increase of .5 percent per year, as proposed in HB 378. All active loan programs administered by DCED have been included.

ANALYSIS: Attach a separate page if necessary

$10,000 is requested for a one-time charge to prepare and distribute copies of regulations for public comment relating to determination of the existing market rate for each program, and revision and reprinting of the State loan applications and pamphlets. A continuing cost of $10,000 is required for a contractor to determine market rates for each program on a yearly basis in a manner that would be defensible in court.

POSITION PAPER

RE: HOUSE BILL 378

SPONSOR: REPRESENTATIVES ADAMS AND BINKLEY

Program Effects of the Bill:

This bill seeks to raise the interest rates on loan programs administered by the state or an instrumentality of the state by one half percent annually until the rate charged equals the prevailing market rate. Neither this bill nor the other sections of this statute really define "prevailing market rate," although AS 37.05.035(a) gives each loan program agency the right to determine prevailing market rate if none exists.

For the purpose of determining the effects of this bill on our rural loan programs, we used the current FHA/VA rate of 13 percent, and tried to determine what effect this rate would have on our loan program activity if that rate were in effect today. Our average loan amount on our Rural Owner-Occupied Loan Program for FY 84 and FY 85 year to date is $89,929. Using this figure and our current interest rate of 9.875 percent, a borrower must have a monthly income of at least $2,3[illegible] to qualify for this loan amount. This is assuming the house payment is their only monthly obligation, which is often the case in rural Alaska. In FY 84 and year to date FY 85, 88.6 percent of our borrowers had incomes greater than or equal to this amount. Using the same loan amount and a 13 percent interest rate and the same assumption about the house payment being the sole monthly obligation of the borrower, it would require a monthly income of $2,985 to qualify. Only 74 percent of our current borrowers could have met this monthly income amount.

We realize that this bill would not increase the interest rate overnight, however, with construction costs increasing approximately three percent per year, the eventual effects of this legislation on the Rural Housing Loan Program would be more devastating than even the current year figures demonstrated, since we assumed construction costs would remain constant and a larger loan amount would not be required to buy the same house in the future.

The intent and purpose of this loan program, to upgrade and improve the housing stock in rural Alaska and make homeownership a reality for more rural Alaskans, would be seriously compromised.

The effects on the Rural Nonowner-Occupied Loan Program would virtually put the program out of business. Most of the projects we are financing today are just breaking even with a 10.5 percent interest rate and the high operating costs incurred in the rural areas. An interest rate any higher than this would make the vast majority of the projects economically nonviable.

To summarize, the increase in interest rates proposed by this bill would put homeownership out of the reach of most rural residents once again. We would see a run on the loan programs during the first few years by those seeking to own homes before the ideal is out of their reach. We would see people buying or building homes before they are financially stable or emotionally ready for homeownership. This will result in higher delinquency rates and more foreclosures.

One last item to be addressed is the effect of this bill on the Homeownership Assistance Fund. The demand on the fund would be significantly increased with the greater differential between the current program interest rate and the six percent rate to which we can subsidize the payments. A portion of any savings the state may realize by eliminating the subsidy in interest rates in whole would be consumed by the greater subsidies used by individual borrowers under the Homeownership Assistance Program.

Comments:

Another aspect that should be examined is the overall effect this bill would have on the state economy. The construction business and service industries constitute a large part of this state's economy. It is estimated that 20 people are employed by every real estate sales transaction that takes place on an existing structure. These would be people at the lending institutions, mortgage companies, credit unions, title insurance firms, real estate brokerage firms, appraisal firms, surveyors, mortgage insurance firms, tax service firms and firms dealing in fire, hazard, flood or homeowners insurance.

The numbers can grow to as much as 60 - 75 jobs when you are dealing with new construction, depending on the size of the project and whether it is a contractor or an owner builder doing the construction. These figures were supplied to the Housing Assistance Division by Dave Ribachi, an Anchorage realtor at a HAD training workshop.

With the slowdown that would be brought about in the market due to the higher interest rates - and based on most economic projections, that is the direction interest rates are expected to go - the unemployment rates will probably increase, or at least not decrease. The state will incur greater costs in welfare and unemployment compensation as a result of this increase. The communities relying upon property taxes will see their tax base growth diminished due to the slowdown in development and market values.

If the intent of HB 378 is to take the State out of the lending business, the State should face this directly by not appropriating money for those loan programs. An across the board increase of interest rates, however, is not an equitable solution to phase out these programs. By increasing interest rates, the income level criteria is raised for loan recipients, making loans less accessible to lower income families. If the goal of HB 378 is to affect interest rates in themselves, we recommend that the committee defer to the Governor's bill HB 109--which establishes a fixed, market-tied interest rate that is based on the U.S. Treasury rate plus adjustments for administration and risk.

Emil Notti, Commissioner

HB 378 - Attachment

Please refer to Exhibit A prepared for SB 281 for a hearing before the Senate Finance Committee for an analysis of the fiscal impact of this bill. If HB 378/SB 281 were to pass in the present form AHFC would not expect to be in for a loans appropriation request in FY 1989 of $100 million.

Exhibit B is a program overview of the Corporation's current acitvities.

Exhibit I contains alternatives that the Corporation was requested to look at by the Senate Finance Committee. Included is a letter to Senator Halford outlining a proposed mortgage "buy down" program which could reduce the amount of subsidy for the taxable mortgage program by as much as two-thirds.

April 22, 1985

Representative John Sund, Chairman
House Special Committee on Loans
Pouch V
Juneau, Alaska 99811

Attention: John Hartle, Administrative Assistant

Re: HB 378

Dear Mr. Hartle,

The Anchorage Woman's Club FREE Committee is pleased to write this letter in support of HB 378. We understand that this bill is the companion to SB 281 and will raise interest rates on all State loan programs by one-half percent per year until they reach the going market rate or cost of funds.

I am enclosing for the House Special Committee on Loans members a copy of our written testimony presented to the Senate Finance Committee's hearing on SB 281, copies of our position paper on Alaska State Loan Programs and an announcement concerning our recently produced video on the loan programs.

Please feel free to contact me (349-6531) or my co-chairman Sarah Schierhorn (279-5305) if we can be or further assistance.

Sincerely,

Pamela Lambe, Co-Chairman
Tax & Economic Development Subcommittee
AWC FREE Committee

P.O. Box 4-2955 • Anchorage, Alaska 99509
A committee of the GFWC Anchorage Woman's Club

TESTIMONY REGARDING SB 281

A BILL RAISING INTEREST RATES ON STATE LOAN PROGRAMS
BY 1/2 PERCENT PER YEAR UNTIL THEY REACH MARKET RATES
OR COST OF FUNDS

TESTIMONY BY PAM LAMBE AND SARAH SCHIERHORN
AWC FREE COMMITTEE

The FREE Committee recommends passage of SB 281. We applaud the sponsors for recognizing the need for this legislation and for filing the bill. The action demonstrates to us the sponsors awareness of the gravity of the revenue decline and their desire to take action to bring State expenditures in line with current revenues.

To summarize the State's investment in loan programs as of June 30, 1984:

1 - The combined outstanding balance of State loan programs was approximately $5 billion.

2 - Of that $5 billion, $3.8 billion has been funded by bonded indebtedness and the balance by State appropriation.

3 - Of the $3.8 billion in bonded indebtedness, $3.5 billion funds AHFC debt.

There are more than 40 loan programs and funds administered by various State agencies and State chartered public corporations.

From FY 81 to FY 85, the State appropriated $2.6 billion to these programs.

Most programs were originated in response to a real need. You will remember market interest rates peaking in the 20% range not too long ago. Today we are experiencing lower, stable interest rates.

Three studies of loan programs published since 1981 generally conclude that government subsidy and competition with private enterprise is not wise. The most recent study by the FREE Committee specifically recommends that the State reduce and eventually eliminate dollar contributions to loan programs by making programs self-supporting and revolving and by eliminating interest subsidies.

SB 281 would accomplish this recommendation in a fair way by treating all programs equally and by using the stair-step mechanism of a one-half percent per year interest increase.

This approach enables consumers to plan financing. If the rules are set now, consumers can assess various finance options. As program interest rates approach market rates, competition among the various sources of financing should result in lower market interest rates.

SB 281 will assure a gradual phase out of interest subsidies providing for a soft landing for the consumer.

Representative John Sund
Chairman
Special House Committee on Loans
Alaska State Legislature
Room 411
Capitol Building
Juneau, Alaska 99811

Dear Representative Sund:

To assist in your deliberation on HB477 please find enclosed Anchorage Assembly Resolution No. AR 85-267, a Resolution relating to the Power Development Fund, passed and approved by the Anchorage Municipal Assembly on December 17, 1985.

Also enclosed is a copy of a letter from Mayor Knowles of Anchorage to Governor Sheffield expressing the need for an improved transmission line between Anchorage and the Kenai so that Bradley Lake power and power displaced by Bradley Lake can be transmitted to Anchorage and points north. Legislative action may be necessary to insure the availability of Bradley Lake power to all railbelt utilities and consumers.

Very truly yours,

Thomas R. Stahr
General Manager
Municipal Light & Power

ANCHORAGE, ALASKA
AR NO. 85- 767

A RESOLUTION RELATING TO THE POWER DEVELOPMENT FUND

WHEREAS the Assembly has expressed its commitment to the development of energy programs for Alaska as established in AS 44.83.380; and

WHEREAS an integral part of these programs include meeting the long-term energy needs of Alaska's railbelt citizens; and

WHEREAS the Power Development Fund provides Alaskans with a savings account to meet these energy needs; and

WHEREAS the Assembly continues its commitment to power projects previously approved as part of the state's energy programs, including the Railbelt power projects; and

WHEREAS the Alaska State Legislature expressed its continued support for the state to proceed with the licensing procedures for the Susitna projects through its expression of Legislative Intent which accompanied the project's $200 million appropriation for Fiscal Year 1986 in chapter 96 SLA 84; and

WHEREAS a recent court decision invalidated the appropriation to the Susitna project in Fiscal Year 1986;

BE IT RESOLVED the Assembly encourages the Legislature to reaffirm its commitment to meeting the Railbelt's energy needs through appropriations to the Power Development Fund for this purpose.

PASSED AND APPROVED by the Anchorage Municipal Assembly this 17th day of December, 1985

Chairman

ATTEST:

Municipal Clerk

Municipality of Anchorage

OFFICE OF THE MAYOR

November 13, 1985

Honorable Bill Sheffield
Governor of the State of Alaska
Third Floor, State Capitol
Pouch A
Juneau, Alaska 99811

Dear Governor Sheffield:

Anchorage has supported the construction of the Bradley Lake Hydroelectric project because we believe it constitutes a critical element in the long term power supply for Anchorage and the surrounding areas. With the Alaska Intertie operational, Bradley Lake should logically become an integral part of the Railbelt's power supply and should be so constituted.

Over the past several years Anchorage has repeatedly requested of the Alaska Power Authority that provisions be made so that Anchorage can contract for and receive Bradley Lake power. To meet our requirements it is necessary to have an improved transmission line connection with Bradley Lake, or in the interim, to have contractual arrangements such that Anchorage would be entitled to its share of Bradley power when the necessary transmission circuits are built. Since our latest request, which was for the interim accomodation only, has been summarily dismissed, we have no further recourse but to appeal to you.

It is not only the customers of Anchorage's municipal electric utility that are being deprived of Bradley power, but all consumers in Anchorage and north to Fairbanks. Even though Chugach Electric Association has contracted for a large increment of Bradley power this power cannot reach their customers in Anchorage but can only be used to meet wholesale commitiments on the Kenai. Therefore as presently constituted Bradley Lake is of no benefit to Alaskans outside the Kenai and even the displaced generation cannot be effectively used elsewhere. The deficiencies of the existing transmission will also militate against reliability on the Kenai because to a great extent they will remain electrically isolated from the remainder of the Railbelt's interconnected

system. The improved Kenai to Anchorage transmission link will result in a strong electrical connection from Homer to Fairbanks thus maximizing reliability and insuring that the rate and rate stabilizing benefits of the Bradley Lake Project will become available to nearly three-quarters of all Alaskans.

Considering that the Bradley Lake Hydroelectric project will cost nearly as much as the Four Dam Pool combined, it is incumbent that it be configured to benefit the maximum number of Alaskans as possible. Certainly to restrict for all time these benefits just to consumers whose utilities can take delivery of Bradley Lake power at the time the power comes on line is discriminatory. And at the same time to delay initial studies on the transmission facilities necessary to provide the wider benefit is shortsighted.

We request that you ask the Alaska Power Authority to immediately commence preliminary studies on a Kenai-Anchorage tie line of adequate capacity and reliability at a minimum to transmit to Anchorage the power displaced by Bradley Lake and to modify the conditional sales contracts for Bradley power to allow other utilities to opt in on equal terms; i.e., post card rates, at such time as adequate transmission becomes available.

Very truly yours,

Tony Knowles
Mayor

IN THE HOUSE

BY THE LABOR AND COMMERCE COMMITTEE

CS FOR HOUSE BILL NO. 479 (L&C)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to biomass fuel systems."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 45.88.500(a) is amended to read:

(a) In this chapter, "alternative energy system"

(1) means a source of thermal, mechanical, or electrical energy which is not dependent on oil or gas or a nuclear fuel for the supply of energy for space heating and cooling, refrigeration and cold storage, electrical power, mechanical power, or the heating of water;

(2) includes

(A) an alternative energy property as defined by 26 U.S.C. 48 (1)(3)(A), (Sec. 301, P.L. 95-618, Internal Revenue Code);

(B) a method of architectural design and construction which provides for the collection, storage, and use of direct radiation from the sun;

(C) a woodstove with a catalytic converter, [OR] a catalytic converter for a wood stove, or a catalytic fireplace insert; [AND]

(D) a steam, hot water, or ducted hot air central heating system that uses wood or coal for fuel; and

(E) a stove or furnace that uses biomass fuel produced from any organic matter that is available on a renewable basis, including agricultural crops and agricultural waste and residue, wood waste residue, animal waste, municipal waste, and aquatic

plants;

(3) does not include, unless described in (2)(C) of this subsection,

(A) a stove that uses only firewood [WOOD], coal, or oil for fuel; or

(B) a fireplace or fireplace insert.

HB 475, cont'd

Introduced Jan. 15, and referred to the State Affairs and Finance Committee.

Insurance Rate Hike (notice)

HOUSE BILL 476, by Rep. M.M. Miller by request. Requires an insurer who increases premium or adds a surcharge to an auto insurance policy because of an accident in which the insured or a person covered by the policy was at fault to give written notice of the increase or surcharge at least 15 days before it takes effect, stating the reason for the change and the right of appeal.

Introduced Jan. 15, and referred to the Community and Regional Affairs and Judiciary Committees.

Energy Funding

HOUSE BILL NO. 477, by the Rules Committee by request of the Governor. See SENATE BILL 347, page 14, identical.

Introduced Jan. 15, and referred to the House Special Loans and Finance Committees.

Moose Hunting (stamp)

HOUSE BILL NO. 478, by Martin. Requires the Dept. of Revenue to establish a moose habitat conservation stamp program similar to the one established for waterfowl, and to set aside receipts in the fish and game fund to be used for enhancement and maintenance of moose habitat in the state.

Introduced Jan. 15 and referred to the Resources and Finance Committees.

Energy Loans

HOUSE BILL NO. 479, by Rep. Duncan. Adds to those alternative energy and heating systems which are eligible for alternative energy loans systems which use biomass fuel produced from any organic matter that is available on a renewable basis, such as agricultural crops, waste and residue, animal waste, municipal waste and acquatic plants.

Introduced Jan. 16 and referred to the Labor and Commerce, Loans and Finance Committees.

Corporal Punishment (prohibited)

HOUSE BILL NO. 480, by Reps. Koponen and Davis. Prohibits anyone employed by a private or public school from inflicting corporal punishment or bodily pain on a student; permits the use of reasonable and necessary restraint on a student to protect the student or others from physical harm, to obtain possession of a dangerous weapon or object, or to protect property from serious harm.

Introduced Jan. 16, and referred to Health, Education & Social Services and State Affairs Committees.

led police to several
sting caps and containers
dynamite stored in the
d Windred. Other explo-
sive material was found following a search of a suspect's bedroom, he said.

According to Windred, the stolen blasting caps may be linked to a series of unexplained explosions in recent months. On Dec. 29, a door at Floyd Dryden Middle School was blown open with blasting caps. Several area mail boxes may also have been blown up with the stolen material, he said.

Police are investigating possible violations of laws regulating storage of explosives at the suspect contractor's work site. Police will not release the name of the contractor under investigation until charges are filed, Windred said.

Meanwhile, two Juneau teenagers are expected to be charged with misconduct involving a weapon in the first degree following the investigation into last Friday's bomb threat at the high school.

According to police, a 14-year-old student allegedly brought the explosive materials to the school to sell or give to a 17-year-old male student. Police have not identified the person who made the threat.

"Quite a few kids knew this transaction was going to take place," said Windred.

The threat resulted in the closure of the high school and adjoining Marie Drake Middle School. Students were sent home after a search located a bag containing four blasting caps and a two-and-a-half pound container of gelatine dynamite in an unassigned high school locker.

The material was removed from the school without incident.

New law allows use of some wood stoves during air alert

Ordinance changes how burning bans are called

By BETSY LONGENBAUGH
THE JUNEAU EMPIRE

There's new hope on the horizon for local residents who want to keep their wood stoves burning all winter.

Beginning Wednesday, local residents who own stoves that meet Juneau City-Borough emission standards may keep their fires burning during wood smoke alerts.

In the belief that the approved stoves won't let smoke get in your eyes, the Juneau City-Borough Assembly recently approved an ordinance that allows the stoves to burn and sets up new criteria for declaring wood smoke bans.

That new criteria calls for two types of wood smoke bans – a wood smoke alert and a wood smoke emergency. Under an alert, owners of approved wood stoves who have municipal permits may continue to burn. Under an emergency, no wood stoves are allowed to burn.

Steve Gilbertson, the municipal lands and resources manager, is in charge of monitoring the air quality of Mendenhall Valley and enforcing the new ordinance. He said Friday he hopes that only air alerts will occur in the future, with air emergencies necessary in the event of extreme pollution in the valley.

"I think people have to realize this is at an experimental stage," he added.

Gilbertson also said his office now has applications for people who own approved wood stoves. In order to use those stoves during alerts, they must have permits

Please turn to Page 14

Lemon Creek vicinity to be monitored for wood smoke

THE JUNEAU EMPIRE

Lemon Creek residents may want to buy warm slippers for next winter, as their neighborhood will probably end up being subject to its own wood stove bans.

The Lemon Creek area is one place that will feel the impact of a comprehensive ordinance regulating wood stove use that was approved by the Juneau City-Borough Assembly several weeks ago.

At the urging of some assembly members, municipal staff agreed to begin monitoring the Lemon Creek area with an eye to regulating wood stove use. This winter, however, there isn't the necessary equipment in the area to effectively measure wood smoke pollution.

In next year's municipal budget, staff will be seeking $25,000 to buy a wood smoke monitor for the area. Once installed, the device will allow municipal officials to call for wood smoke bans in Lemon Creek, as well as the Mendenhall Valley.

Steve Gilbertson, lands and resources manager, said he expects the municipality may call separate wood smoke bans in each area, depending on weather conditions. He said it is now impossible to predict how often bans may be necessary in Lemon Creek.

"We do not have a lot of data for the area," said Gilbertson.

He added, however, that his office has received a lot of calls from Lemon Creek area residents who complained of wood smoke pollution.

The new proposed smoke alert area in Lemon Creek extends from the Juneau Christian School, including

Woodsmoke...

Continued from Page 1

from the city. The free permits are good for two years.

Gilbertson said the approved wood stoves have two things in common – very low emission standards and certification from Oregon.

Because the municipality is basing its new ordinance on a similar law in Oregon, it is accepting that state's testing procedures for wood stoves.

Many of the approved stoves – there are now 10 on the list – have catalytic converters. Others use pellet fuel to reach the low emission standards.

Gilbertson said at least four other stoves, some of which are for sale locally, have gone through the tests, but are not yet certified. He said he expects a new list from Oregon by the end of this month.

Until then, he said he can only recommend the 10 stoves on the approved list. They are:

- Blaze King "King," a catalytic converter stove.
- Earth Stove 1000-C, a catalytic converter stove.
- Turbo 10, a catalytic converter stove.
- Fisher Tech IV, a catalytic fireplace insert.
- Timber Eze 477, a catalytic wood stove.
- Vista 640, a non-catalytic wood stove.
- Pellefier FS-1, a non-catalytic stove that burns pellet fuel.
- Whitfield, a non-catalytic stove that burns pellet fuel.
- Collins Hopper, an add-on devise that burns pellet fuel.

Those wood stoves that are on this list and sell locally cost about $1,000, not including installation.

The assembly hopes to eventually have all stoves in the city-borough meet the emission standards. To meet this goal, the new ordinance calls for all wood stoves installed and sold in Juneau to meet the Oregon emission standards beginning Aug. 1.

Gilbertson expects the most successful enforcement of this new regulation to come from the building department, which issues permits for wood stove installations.

Steve Shows, who assigns building inspections, said a building permit is required for any new installation, including replacement of an existing stove. The permits and their accompanying inspections are free and are designed to make sure wood stoves are safely installed, he said.

"Home owners are sometimes not getting a building permit and installing a stove, sometimes properly, sometimes not," he said.

During the past year, the municipality has been aided in its inspection effort by some insurance companies who now require proof of wood stove inspections before offering insurance, said Shows.

"This is the greatest plus we have seen," he said.

Shows said that "nine times out of 10," wood stoves that are inspected were installed incorrectly.

He said that currently he is able to schedule inspections with a day's notice. Those who want inspections should call a 24-hour recording phone 586-1703, before 7:30 a.m. on the day they want an inspection.

To receive a permit, they should come into the municipal building department and fill out a form. They will also receive a brochure on proper stove installation.

Lemon Creek...

Continued from Page 1

Sunny Point, back to Lemon Creek basin and to Vanderbilt Hill.

Gilbertson also said many Juneau residents remain unclear about where the boundaries are for the Mendenhall Valley wood smoke alert area.

They could be described as having a southern boundary of the airport area, an north boundary of the glacier recreational area, an east boundary running along the base of Thunder Mountain and a west boundary that bisects the Mendenhall Peninsula.

Not included in the ban are the Auke Lake area and Fritz Cove Road.

Shuttle...

Continued from Page 1

The flight plan today was devoted mainly to astronomy, and Steve Hawley spent the morning pointing two ultraviolet telescopes at star targets in a search for luminous clouds of ultraviolet radiation.

Mission Control awakened the astronauts today with the theme song from the movie "Animal House." The control center said several of the astronauts were fans of the movie, and commander Robert Gibson responded, "It sounds like our secret is out."

Columbia shed its postponement jinx with a spectacular predawn liftoff Sunday, and 9½ hours later the crew launched the world's most powerful commercial communications satellite, RCA's $50 million Satcom KU-1.

"It's on its way," Mission Control radioed after a rocket engine ignited to propel the satellite toward stationary orbit 22,300 miles above the Earth.

RCA, which paid the National Aeronautics and Space Administration $14.2 million for the delivery, said Satcom will be capable of providing video and audio communications for all of the United States except Alaska, transmitting a signal powerful enough to be received by dish antennas as small as three feet.

Nelson and Hawley will have an exclusive view of the comet as it nears the sun on its once-every-76-years swing through this part of the solar system.

"You can't observe Halley's from the ground as it makes its closest approach to the sun in January because of the sun's brightness," explained S. Alan Stern of the University of Colorado, who is principal investiga-

Nelson, who will operate the CHAMP cameras, said in an interview before the flight, "We'll be taking some photographs and spectral measurements for the purpose of documenting the comet, and we'll be doing it from above the atmosphere where we can get a real clear look at it. We're going to use the apparatus over the course of three flights, so we should be able to get a good consistent set of data on Halley's."

Stern said the instruments "primarily will be looking at water. The comet is basically an ice ball, and when the sun melts the ice, it breaks the water down into constituents. We'll study these to learn about the comet's atmosphere."

Hawley will use two telescopes to search the universe for sources of luminous clouds of ultraviolet radiation.

"Only in the last 10 years have we begun to look at the universe in the ultraviolet wavelength," he said before the mission. "The reason for that is that the observatories on Earth being beneath the atmosphere are not able to observe these wavelengths because the atmosphere is opaque to UV radiation. So we'll be getting some very fundamental data and will be dealing with questions as to where the UV emission comes from."

He said the knowledge would help astronomers mask out the UV background and thus improve the data from the $1.2 billion Hubble Space Telescope, which will be launched from a shuttle next October.

One of the telescopes also will be trained on the comet.

Re: State of Alaska
Alternative energy Loans

Dear Senator and Representatives:

We are soon providing an alternative to wood burning stoves in the Juneau area and I understand that this is presently available in Anchorage.

Our product is a pelletized wood and other fuel which burns in specially constructed stoves and burns smoke free.

I am enclosing a couple of articles for your further information.

To meet new ordinances in Juneau, many people will have to replace their wood burning stoves.

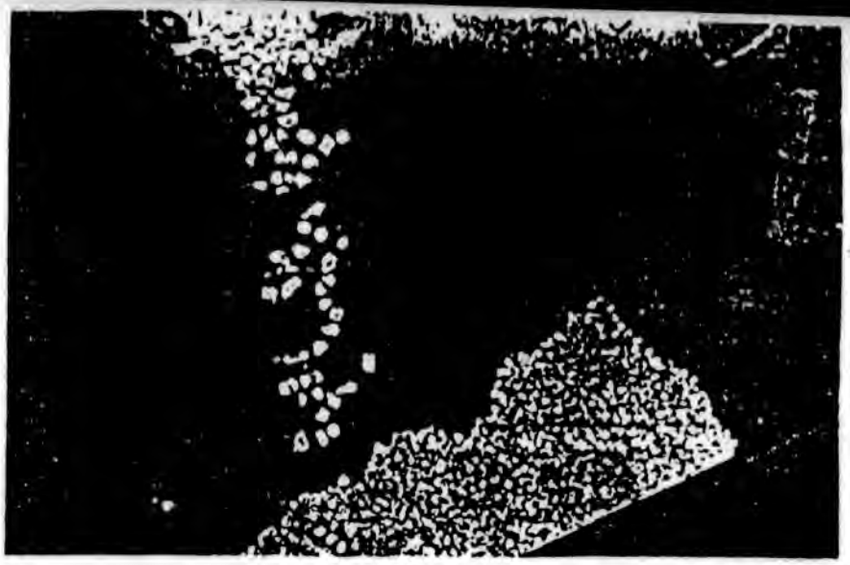
I understand that under present law, Alternative Energy Loans are available for catalytic equipped wood stoves, or catalytic converters.

Therefore it would be appreciated if the present law could be amended to authorize loans for biomass pellet fuel burning stoves or furnaces.

Steve Gilbertson, Juneau's Air Quality Control Officer, advised me that he and D.E.C. officials are in favor of this amendment.

I believe the law in question is included in A.S.45.88.010:500.

If you would like further information regarding this, I will be happy to discuss what I have with you.



Thanking you in advance for your consideration.

Very truly yours,

Larry Traeger

Heating homes with pellets

Mount Angel manufacturer designs and sells innovative, affordable furnaces

By DALE STOWELL
Of the Independent

MOUNT ANGEL — Randy Traeger shrugs as he considers the complexity of his pelletized wood burning furnace designs.

"To me, it don't look like nothing super," he says. "Once you've horsed around with it for 15 years, it doesn't seem like that much."

But he seems to know he's on to something as he cites statistics that indicate his wood furnaces burn cleaner than do natural gas or oil furnaces for as little as half the cost for fuel.

Traeger, owner and president of Traeger Industries, has been designing woodstoves and furnaces for more than 20 years and is optimistic that his latest design will catch on.

The fuel source is the most novel aspect of the new furnaces, which have been on the market since fall. Biomass pellets, produced from waste products such as pine shavings or rye stubble, are what the newly designed heating devices consume.

One ton of pellets, which costs about $100, produces as much heat as two cords of wood but leaves substantially less waste. About .6 of one percent of the pellets remain as ash — approximately two gallons of ash per ton of fuel.

During cold weather, the average home requires about one 50 pound bag per day, Traeger estimated. Average yearly consumption would be in the neighborhood of four tons, he added.

Traeger's thermostatically-controlled stove and furnace designs also attempt to transfer all of the heat produced in the units to the space in the home to be heated.

And Traeger points out another advantage to the pellet-burning systems. "They burn clean. There isn't any smoke. You can stick your nose right in the (smoke) stack."

The major drawback is availability of fuel. Traeger has several hundred tons of it stockpiled to meet the needs of customers who have purchased pellet-burning equipment. It isn't readily available anywhere else in the area.

The fuel, which resembles rabbit food pellets, has existed for several decades, Traeger said. But companies producing it have come and gone due to a lack of demand.

Randy Traeger (above) has designed and is marketing heating systems which burn pine pellets (top photo). Traeger says the new heating units burn cleaner than gas or oil at nearly half the cost for fuel. (Photos by Dale Stowell)

"There's been several plants that have been around and gone broke," he said. "There's the concept of making pelletized fuel. That's fine. But you've got to have something to burn it in. Most of them are looking at commercial applications, but a commercial application can dry up on you very quickly — just a little change in price and they'll switch from one (fuel) to the other."

Before Traeger's design, availability of fuel wasn't the only problem in home-heating pellet applications. In earlier designs, the pellets didn't burn completely, and the furnace fire would sometimes burn back into the fuel supply.

Traeger cured the problems without knowing what caused them in other furnaces. "I really didn't look at anybody's design," he said. "I never paid any attention to them. There's no use in reinventing the wheel over again. It was a matter of taking it apart and putting it together again, taking it apart and putting it together again."

After Traeger put it together again and it worked to his satisfaction, he began developing different home heating uses. His designs range from an indoor furnace that produces nothing but home heat, to an outdoor pellet pump that will provide heat for home, hot water and even clothes drying. All of the Traeger Industries products are built at the company shop in Mount Angel.

The furnaces are also outside of Department of Environmental Quality regulations that apply to woodstoves. Traeger predicts that many wood stove manufacturers will be forced out of business by continued tightening of regulations for testing and emissions. However, he added, pellet-burning furnaces would pass even the most stringent DEQ requirements.

Traeger knows of only five other pelletized-fuel furnace manufacturers in the country, but believes that the heat producing devices will increase in popularity in time.

He points to the state of Minnesota as an example of forward thinking about the new heating concept. Traeger, as well as other pelletized-fuel furnace manufacturers, recently donated equipment to the state as part of a Minnesota low-income heating assistance program. The state will pay for installation of the furnaces.

"The concept is, if they give people pelletized fuel, they can heat twice as many homes for the same cost as supplying them money to buy natural gas or oil," Traeger said.

According to Traeger, Minnesota also has state funds available for research and development of pelletized-fuel manufacturing and use. "They're just out after it," he said. "They're way ahead of everyone else."

Back home, Traeger said sales of the new furnaces have been good — almost better than he's wanted them to be. "I really want to go through the winter just testing it, getting a few out," he said. "It's kind of run away from us. It's been super good."

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M January 13, 1986

SUBJECT: Alternative energy loans for biomass fuel stoves (Work Order 14-1546)

TO: Representative Jim Duncan

FROM: George Utermohle
Legislative Counsel

I.

The draft bill that you requested is attached. The bill amends the definition of "alternative energy system" to expressly include stoves and furnaces that use biomass fuels. The effect of this amendment is to allow the Alternative Energy Revolving Loan Fund to make loans for the purchase of biomass fuel stoves and furnaces.

II.

You also asked whether the Alaska Industrial Development Authority (A.I.D.A.) can aid processors of biomass fuels.

In brief, A.I.D.A. does have the power to make loans, to insure loans, and to assist private lenders to make loans to processors of biomass fuels.

A.I.D.A. was created to provide means of financing and means of facilitating financing for

> the establishment, operation, and development of industrial, manufacturing, and business enterprises, including, without limitation, facilities for transportation, facilities for pollution control and waste disposal, facilities for the local furnishing of gas, facilities for water, facilities for industrial parks, mass commuting vehicles, facilities for local district heating or cooling, parking facilities, or a storage or training facility relating to a plant or facility. (AS 44.88.010(a)(5))

The list of facilities eligible for assistance is only illustrative and in no way restricts the kinds of projects that A.I.D.A. can support.

Provided that a project is located in Alaska and will generate additional employment, A.I.D.A. has the authority to insure loans, to make loans, or to assist private lenders in making loans for the project (AS 44.88.080(12),(13), and (15)). A.I.D.A. defines "project" to include

> (A) a plant or facility used or intended for use
>
> (i) in connection with making, processing, preparing, or producing in any manner, goods, products or substances of any kind or nature or in connection with developing or utilizing a natural resource, or extracting, smelting, transporting, converting, assembling or producing in any manner, minerals, raw materials, chemicals, compounds, alloys, fibers, commodities and materials, products or substances of any kind or nature;
>
> (ii) as an industrial park; in connection with transportation; for the prevention, limitation or control of pollution; for the disposal of sewage or solid waste; for the local furnishing of gas; for the furnishing of water; as or in connection with mass commuting vehicles; for local district heating or cooling; as a parking facility; or as a storage or training facility directly related to a plant or facility described in this paragraph;
>
> (B) a plant or facility used or intended for use in connection with a business enterprise;
>
> (C) commercial activity by a small enterprise;
> (AS 44.88.220(8))

This definition is broad enough to cover the facilities and equipment necessary to manufacture or produce any form of biomass fuel.

Therefore, processors of biomass fuels are eligible to apply for loans from A.I.D.A. No amendment of the Alaska Industrial Development Authority statutes is necessary.

APPENDIX 1

OREGON DEPARTMENT OF ENVIRONMENTAL QUALITY

STANDARD METHOD FOR MEASURING THE EMISSIONS AND EFFICIENCIES OF RESIDENTIAL WOODSTOVES

June 8, 1984

TABLE OF CONTENTS

		Page
SECTION 1:	SCOPE AND PURPOSE	1
SECTION 2:	TEST FACILITY AND APPLIANCE INSTALLATION	1
SECTION 3:	TEST EQUIPMENT AND INSTRUMENTATION	3
SECTION 4:	TEST FUEL REQUIREMENTS	7
SECTION 5:	APPLIANCE OPERATING PROCEDURE	10
SECTION 6:	TEST METHODOLOGY AND CALCULATIONS	14
SECTION 7:	TEST DATA	23
SECTION 8:	CATALYTIC COMPONENT CERTIFICATION REQUIREMENTS	25

SECTION 1: SCOPE AND PURPOSE

1.1 SCOPE

1.1.1 This document prescribes a standard method of testing woodstoves to obtain particulate emission factors based on useful heat output for appliances that produce less than 1.5×10^5 Btu/hr.

1.1.2 A woodstove is defined as a woodfired appliance with a closed fire chamber which maintains an air/fuel ratio of less than 30 during the burning of 90 percent or more of the fuel mass consumed in the low firing cycle. The low firing cycle means less than or equal to 25 percent of the maximum burn rate achieved with doors closed or the minimum burn achievable, whichever is greater.

1.2 PURPOSE

1.2.1 The purpose of this document is to:

a. Establish a uniform procedure for appliance operation to be used in conjunction with a standardized test method for obtaining woodstove emission and efficiency performance data.

b. Specify the types of test equipment and establish standard performance requirements for the equipment used for performing such tests.

c. Specify data required and calculations to be used.

1.3 METHOD FOR USING THIS STANDARD

1.3.1 Determine from Section 1.1.1 and 1.1.2 whether this standard is applicable for the appliance to be tested.

1.3.2 Verify that the test facility and equipment is in accordance with Sections 2 and 3.

1.3.3 Test and calculate results in accordance with Sections 5, 6, and 7.

SECTION 2: TEST FACILITY AND APPLIANCE INSTALLATION

2.1 DESCRIPTION OF TEST FACILITY

2.1.1 The testing will be conducted in an area with a height for atmospheric discharge of flue effluent at 15 ± 1 foot (4.6 ± 0.3m) above the top surface of the scale.

2.1.2 The flue exit shall freely communicate with the laboratory, that is, the area shall have essentially the same pressure such that no artificial draft is imposed on the appliance.

2.1.3 The test chamber room temperature shall be maintained between 65° F and 90° F (18° C and 32° C) during the course of any test.

2.1.4 Air velocities within 2 feet (0.6m) of the test appliance and exhaust system shall be less than 50 feet/minute (0.25 m/s) without a fire in the unit.

2.1.5 All calorimeter rooms must meet the specific criteria in the June, 1982 Wood Heating Alliance document, Standard for Testing the Heating Performance of Wood-Fired Closed Combustion Chamber Heating Appliances, for accuracy verification and calibration procedures before conducting appliance performance testing.

2.2 APPLIANCE INSTALLATION FOR FREE STANDING STOVES

2.2.1 Unless specified differently by the manufacturers, the flue pipe shall be made of No. 24 gauge black steel and shall have an insulated metal solid pack type chimney above the particulate and combustion gas sample probe port locations with a minimum 1 inch (2.5 cm) solid pack material.

2.2.2 The flue shall extend to 15 ± 1 feet (4.6 ± 0.3m) above the platform scale on which the appliance is located. All flue pipe cracks or joints shall be sealed.

2.2.3 The appliance and parts shall be assembled and installed in conformance with the manufacturer's published installation instructions.

2.3 APPLIANCE INSTALLATION FOR FIREPLACE INSERTS

2.3.1 Fireplace inserts shall be installed on the platform scale with R 12 insulation applied to all surfaces not normally exposed to the room to be heated. The appliance parts and exhaust system shall be assembled and installed in conformance with the manufacturer's published installation instructions.

2.3.2 The flue pipe shall consist of an insulated metal solid pack type chimney positively connected from the appliance flue outlet, extending to the particulate and combustion gas sample probe port locations with a minimum 1 inch (2.5 cm) solid pack material.

SECTION 3: TEST EQUIPMENT AND INSTRUMENTATION

3.1 TEST EQUIPMENT SET-UP

3.1.1 The equipment to be used for emissions and efficiency testing is illustrated in Figure 3.1 and described below.

3.2 TEST FUEL WEIGHT

3.2.1 The balance used to weigh the fuel shall be accurate to ± 0.1 pound (0.05 kg).

3.2.2 The appliance to be tested shall be centrally placed on a platform scale. The scale shall have a monitor or other feature such that the weight change of the fuel loads may be continuously displayed. The scale shall be capable of reading weights to 0.1 pound (0.05 kg) and shall have a tare feature.

3.3 FLUE GAS TEMPERATURES

3.3.1 Flue gas temperatures shall be determined with a thermocouple or other temperature sensing device at a height of 8 to 9 feet (2.4 - 2.7 m) from the top surface of the scale. The temperature sensing device shall be located in the center of the flue gas stream.

3.3.2 The temperature sensor and associated display and recording equipment shall have a resolution of 1°F (0.5°C).

3.4 STOVE SURFACE TEMPERATURES

3.4.1 Stove surface temperatures shall be determined with a shielded temperature sensing device placed at 5 locations on the appliance's exterior surfaces. Temperature locations shall be centrally positioned on the top, two sidewall, bottom and back combustion chamber surfaces (not on heat shields) if these surfaces are exposed while testing. Surface temperature locations for unusual design shapes (spherical, etc.) shall be positioned to conform to the intent of the locations described.

3.4.2 The temperature sensing device and associated display shall have a resolution of 1°F (0.5°C).

3.5 STOVE COMBUSTION TEMPERATURES

3.5.1 Radiation shielded thermocouple(s) or other equivalent temperature sensing device(s) shall be located in the primary and secondary (if applicable) combustion chambers to measure gas temperatures at a location where direct flame impingement on the sensing device does not normally occur. If a catalytic

combustor is part of the stove's combustion features, an additional thermocouple must be located in the permanent temperature monitoring port required in Section 8.4.1.

3.5.2 The temperature sensing devices and associated display shall have a resolution of 1°F (0.5°C).

3.6 FLUE GAS COMPOSITION

3.6.1 Dry flue gas composition shall be measured with continuous combustion gas analyzers to include percent by volume (dry basis) carbon monoxide, carbon dioxide, and oxygen. Samples shall be extracted at the same height as flue gas temperature measurements and withdrawn through a probe and tubing made of inert materials. The probe shall be bent into the flow of the flue gases.

3.6.2 A gas stream sample conditioner using a glass fiber filter is required in line before the analyzer. The sample conditioner shall include two impingers encased in an ice bath, one water trap and a silica gel trap in sequence.

3.6.3 Minimum performance specifications for accuracy and precision for the combustion gas analyzers and recorders include:

Drift $\leq \pm$ 1% of full scale per 8 hours
Repeatability $\pm$ 1% of full scale
Resolution: 0.1% for CO_2 and O_2; 0.01% for CO by volume
Accuracy: $\pm$ 1% of scale

3.7 TRACER GAS DETECTOR

3.7.1 Minimum performance specifications for accuracy and precision for the tracer gas analyzer include:

Drift $\leq \pm$5% of full scale per 8 hours
Repeatability $\pm$ 2 percent of full scale
Accuracy $\pm$ 3% of scale

3.8 FLUE MOISTURE CONTENT DETERMINATION

3.8.1 A wet bulb-dry bulb technique shall be used to determine the water vapor present in the flue gases for on-line sampling purposes to maintain proportional sampling and appropriate weighting of enthalpy losses during burn cycle. A wet bulb temperature sensor shall be placed at the same location as the flue gas dry bulb temperature sensor. The wet bul sensor shall consist of a thermocouple or other temperature sensing device with a cloth sock placed at the sensor end and saturated with water. The wet bulb sensor shall be placed in the center of the flue gas stream until the temperature

reaches a steady state. The wet bulb temperature must be taken while the sock is saturated with water. The appropriate water vapor content is determined using psychometric charts (See Oregon Source Sampling Method 4, Appendix 1).

3.9 DRAFT

3.9.1 The draft or static pressure (in inches of water) shall be measured in the flue at a location no greater than 1 foot (30.5 cm) above the flue connector at the stove outlet.

3.10 RELATIVE HUMIDITY

3.10.1 The test facilities ambient relative humidity shall be measured and recorded prior to and at the completion of each test cycle.

3.11 DATA RECORDING INTERVALS

3.11.1 Data recording shall commence upon charging of the test fuel load and all measurements shall be recorded either manually or automatically at least at every 5 minute interval for the entire test period. In addition, appliance surface and combustion chamber temperatures are also required at every five minute interval one hour prior to the test cycle.

3.12 INSTRUMENT CALIBRATION

3.12.1 Notwithstanding any standard calibration procedures designed to assure and maintain the accuracy of standard source testing equipment, the following calibration and testing methods must be utilized on the auxiliary equipment when testing woodstoves for air emissions.

3.12.2 Continuous gas analyzer(s) calibration

Upon receipt of equipment or any time the single point audit described below fails, a multipoint calibration of the analyzer must be completed before the instrument is put into service.

a) Set up the instrument and allow it to operate for a sufficient time to stabilize as recommended by the manufacturer's published operating procedure.

b) Introduce zero gas into the instrument at the normal sample flow being careful not to pressurize the sample stream. Normally, this will be accomplished by allowing the zero gas to flow into a three port vessel at a rate of at least twice the instrument sample rate and withdrawing sample from another port on the vessel while the third port is allowed to vent to the atmosphere.

c) Introduce consecutively in the same manner as b) three certified calibration gases in artificial air noting the instrument response of each. The gases should represent approximately 20%, 50% and 80% of the instruments' full scale concentration.

d) Construct a calibration curve using the data collected in b) and c).

3.12.3 Continuous gas analyzer(s) audit

Before and after each test, conduct a single point audit of the instrument as described below. It is highly recommended that a single point audit of the instrument be conducted at intervals not to exceed 2 hours during the test periods.

a) Disconnect the instrument sample line from the sample source at a point upstream of all sample conditioning equipment (dryers, scrubbers, etc.).

b) Being certain to avoid pressurizing the system, introduce a certified reference gas into the analyzer through all sample conditioning equipment. The sample gas should be in the range of 20% to 80% of full scale of the instrument.

c) If the instrument response to the audit gas differs by more than 5% from the calibration curve, disregard all data collected with the instrument since the last successful audit and perform a multipoint calibration.

d) Before and after each test, leak check the system by plugging the inlet and watching the sample flow rotometer.

3.12.4 Platform scale auditing

a) Upon installation of the scale, a multipoint calibration must be performed using NBS traceable weights. This function will normally be performed by the scale manufacturer. As soon as practicable after the calibration, one or more weights may be weighed for use as a calibration traceable standard weight for audit purposes. The weight should be constructed from a weight stable (non-oxidizable and non-hydroscopic) material and maintained in such a way that its weight integrity is assured.

b) Before and after each series of tests, the scale must be audited by first zeroing and then weighing at least one calibration traceable weight that corresponds to 20% to 80% of the expected charge load of the stove to be

tested. If the scale does not reproduce the value of traceable weight within ± 0.4 lbs, the scale shall be recalibrated before use and void previous results.

3.12.5 Tracer gas flow measurement

a) All rotometers used in conjunction with tracer gas injection flow measurement techniques must be calibrated with the intended gas using either a calibrated volume measurement device such as a dry or wet gas meter or an accurate volume (displacement).

b) The tracer gas detector must be calibrated at the beginning and end of each set of tests by introduction of a certified reference gas. The gas must be introduced through all normal gas conditioning devices and in such a way as to prevent system pressurization.

SECTION 4: TEST FUEL REQUIREMENTS

4.1 FUEL PROPERTIES

4.1.1 The test fuel shall be untreated, air dried Douglas fir lumber. Kiln dried lumber is not allowed. To insure positive identification of Douglas fir, species type is stamped D.F. on the lumber by the certified lumber grader at the mills. The oven-dried density range shall be 28.7-37.4 pounds per cubic foot (.46-0.60 gm/cm^3). The density shall be determined and reported for certification purposes.

4.1.2 The test fuel shall have a moisture content range between 16% and 20% on the wet basis (19-25% dry basis). Moisture content shall be determined by measurements made with a calibrated electrical resistance type moisture meter or other equivalent performance type meter. Note: To convert moisture meter readings from the dry basis to the wet basis: (100)(% dry reading) ÷ (100 + % dry reading).

4.1.3 Minimum performance specifications for accuracy of the moisture meter shall be ± 3% of reading.

4.1.4 Moisture content determination per load shall be an average of a minimum of three readings for each fuel piece measured parallel to the grain of the wood on three sides (end readings excluded). If an electrical resistance type meter is used, electrode penetration shall be to a one inch depth using insulated pins. Moisture content measurements shall be made within a four hour period prior to testing, and the test fuel shall be at room temperature.

4.1.5 No wetting of previously dried wood is allowed. It is recommended that the test fuel be stored in a temperature and humidity controlled room.

4.1.6 The test fuel shall be essentially free of knots, and free of any rotted or molded areas or other defects such as pitch seams.

4.1.7 The higher heat value of the fuel shall be determined by bomb calorimetry using ASTM Method D 3286-77 or D 2015-77. A composite sample from each piece of the test charge shall be analyzed and reported for each test fuel load.

4.2 TEST FUEL PIECES

4.2.1 The dimension of each piece of fuel (flanged lumber) shall conform to the nominal measurements of 2x4 and 4x4 lumber (1-1/2 x 3-1/2 and 3-1/2 x 3-1/2 in).

4.2.2 The flanged lumber dimensions will vary according to the appliance's firebox volume as indicated below:

Usable firebox volume (ft^3)	Flanged lumber piece size (nominal inches)
≤ 1.5	2x4
$1.5 \leq 3$	2x4 approximately 1/2 weight of test fuel load 4x4 approximately 1/2 weight of test fuel load
>3	4 x 4

4.2.3 Each flanged piece shall be constructed in a configuration to conform to the following requirement for spacer dimensions and spacing intervals: Spacers will be constructed from air dried Douglas fir lumber (meeting the fuel specifications in Section 4.1) 5 inches in length, 1-1/2 inches in width, and 3/4 inches in height (12.7 x 3.8 x 1.9 cm). The spacers are to be attached by uncoated ungalvanized nails or staples to the lumber flush with the ends of each piece such that a 3/4 inch (1.9 cm) extension of the spacer occurs at the width of each end of the log as illustrated in Figure 4.2-A.

4.2.4 An optional acceptable flanged fuel configuration has identical spacing intervals as indicated in 4.2.3, but with a greater spacer dimension in height as depicted in Figure 4.2-A. The optional spacer configuration must conform to the conditions specified in 4.2.3 and meet the 5 inches in length, 1-1/2 inches in width and 1-1/2 inches in height (12.7 x 3.8 x 3.8 cm).

4.2.5 The length of each piece of test fuel shall be of equal length and shall closely approximate 5/6 the length of the longest usable dimension of the firebox. (See 4.3.2)

4.2.6 Test fuel pieces shall be arranged in the firebox in conformance with the manufacturers published written instructions and in a configuration which maintains air space intervals between the logs. The fuel shall be positioned so that the flanges are flat (parallel) to the floor of the firebox, with the flanged edges in contact (abutting each other). If loading difficulties result, some fuel pieces may be placed on edge. If the usable firebox volume is between 1.5 and 3.0 ft^3, alternating the piece sizes in vertical stacking layers is required to the extent possible. For example, 2x4's shall be placed on the bottom layer in direct contact with the coal bed and 4x4's on the next layer, etc. (See Figure 4.2-B). Photo documentation of the loading configuration for each test cycle shall be provided to the DEQ for certification purposes.

4.2.7 Appliances of unusual or unconventional firebox design shall load the fuel in a configuration which maintains air space intervals between the flanged lumber and is in conformance with the manufacturers published written instructions. Any appliance that will not accommodate the loading configuration specified in 4.2.6, must obtain DEQ loading configuration approval prior to testing for certification purposes.

4.2.8 Appliances that are designed to provide continuous feed pelletized or chipped fuel must prearrange an equivalent test criteria agreement with the DEQ prior to testing for certification purposes.

4.3 LOAD SIZE

4.3.1 The initial fuel load and the test fuel charge shall be based on weight per usable firebox volume. The fuel loads shall be equivalent to seven pounds of fuel as fired per cubic foot (112 kg/m^3) of usable firebox volume $\pm$ 10 %.

4.3.2 To avoid stacking difficulties, or when a whole number of fuel pieces does not result, all piece lengths may be adjusted uniformly to remain within the specified loading density.

4.3.3 Usable firebox volume means the entire volume of the (primary) combustion chamber less any volume where firewood could not reasonably be placed, such as areas restricted by baffles or firebrick. (see Figure 4.3)

SECTION 5: APPLIANCE OPERATING PROCEDURE

5.1 PRETEST START UP

5.1.1 The pretest startup phase is designed to bring the stove up to a stabilized operating temperature that is reflective of the heat output range required for the following test cycle.

5.1.2 Pretest start up will begin with ignition of kindling from a cold start with no charcoal residue in the firebox. A layer of cold wood ashes spread to a uniform depth of up to one inch in depth (2.54 cm) on the floor of the firebox or ash pan is optional. The kindling load shall consist of between 4-8 pounds (1.8 - 3.6 kg) of finely split Douglas fir with a moisture content range up to 20% on the wet basis. Crumpled newspaper balls loaded with the kindling shall be used to help attain ignition. The air supply controls may be adjusted per the manufacturer's published instructions for the kindling start up phase.

5.1.3 After 50 - 75% of the kindling by weight has been consumed, a pretest fuel load shall be added. The pretest fuel load shall meet the same fuel species and moisture content specifications as the test load. The pretest fuel load shall consist of whole 2x4 lumber pieces, without flanges, that are no less than 1/3 the length of the test fuel. Additional fuel may be added provided it meets the above requirements and that uniform charcoalization and weight specifications are adhered to before the test cycle begins.

5.1.4 The air inlet supply setting may be set at any position desired which will maintain combustion of the pretest fuel load. It is recommended that the air inlet supply setting be set at the position necessary to achieve the lowest heat output level of the following test cycle and be set at least one hour prior to addition of the test fuel load.

5.1.5 To document stabilized appliance heat storage effects and to control heat output levels, surface temperatures shall be recorded at each 5 minute interval during the one hour period prior to charging the test fuel.

5.1.6 No emissions or efficiency measurements are required during this pretest startup phase.

5.2 TEST CYCLE OPERATION

5.2.1 All stove surface temperatures shall be averaged and compared to those recorded at the beginning and the end of each test

cycle. To approximate thermal equilibrium, the averaged beginning and ending test cycle stove surface temperatures must be within 125°F (51.7°C) of each other. For all appliances, a correction factor shall be made to correct for heat storage effects. The correction factor shall be 0.12 Btu/lb °F multiplied by the averaged surface temperature difference in °F obtained from the beginning and ending temperatures of each test cycle. Some stoves (e.g., high mass stoves) may require more than one pretest fuel load to stay within the required averaged temperature range at the beginning and at the end of the test cycle.

5.2.2 An appliance may be tested in one continuous testing period that encompasses discrete test cycles for each of the four specified heat output levels (see 5.8) provided that a one hour minimum interval between each discrete test cycle occurs. The interval between test cycles provides time to reposition the air supply adjustment to the appropriate setting, re-establish and maintain the required coal bed, and meet the surface temperature requirements for the next desired heat output level.

5.3 TEST FUEL LOADING

5.3.1 When the kindling and pretest fuel load has been consumed to leave a weight equal to 20-25 percent of the test fuel load, the test fuel load shall be charged. Manipulation of the hot coal bed prior to charging the test fuel load shall conform to the manufacturer's published written instructions. In the absence of written instructions, breaking up, raking and uniform spreading of the embers or hot coal bed is required prior to addition of the test fuel load. No manipulation or rearrangement of the test fuel load configuration is allowed during any portion of the test cycle.

5.3.2 Additional fuel may be added between the test cycle intervals, provided it meets the fuel species and moisture content specifications. Whole 2x4 lumber pieces, without flanges, no less than 1/3 the length of the test fuel may be used, provided proper re-establishment of the hot ember bed is controlled to the specified weight criteria and uniform charcoalization of the ember bed is adhered to.

5.4 AIR SUPPLY CONTROL

5.4.1 Adjustment of the primary air supply controls or holding the fuel loading door open up to the first 5 minute phase of the test cycle is allowed to insure good ignition of the test charge and catalyst if so equipped. Adjustments should be conducted per the manufacturer's published written instructions. Immediately thereafter, the primary inlet air supply control(s),

either manual or automatic, shall be set to the position necessary to achieve the required heat output level. No additional adjustments of the air supply controls or opening the loading door will be allowed during the remainder of each test cycle.

5.4.2 Maximum heat output shall be achieved by operating the appliance with the primary air supply inlet controls fully open during the entire fuel load cycle unless the manufacturer's published written instructions specify that maximum heat output occurs at another setting.

5.4.3 All other heat output levels shall be achieved by operating the appliance with the primary air supply inlet control or other mechanical control device set in a predetermined position necessary to obtain average heat output levels specified in 5.8 during the entire test cycle.

5.4.4 If the primary air supply inlet control(s) cannot be adjusted to obtain variable burn rates or variable heat output levels, the appliance shall be tested at the fixed air supply setting.

5.4.5 Secondary or tertiary air supply may be adjusted one time only during each test cycle following the manufacturer's publisned written instructions.

5.5 TEST CYCLE COMPLETION

5.5.1 A test cycle ends when the entire weight ± 0.1 lb (.045 kg) of the test fuel load has been consumed, (i.e., when a bed of coals equal to the beginning coal bed weight remains).

5.6 BLOWERS, FANS

5.6.1 The use of blowers for heat exchange is optional. Beginning with the start of the test cycle, blower speed may be positioned at a recommended setting but no changes in setting will be allowed throughout the entire test period and the position setting shall be recorded at the time positioning occurs.

5.7 OTHER APPURTENANCES

5.7.1 Shaker grates, by-pass handles, or other appurtenances (not primary air supply controls) may be adjusted one time only during each test cycle in accordance with the manufacturer's written published instructions, and all adjustments shall be recorded.

5.8 NUMBER OF TESTS REQUIRED

5.8.1 Simultaneous emissions and efficiency tests are required during an entire test cycle within each of four discrete heat output ranges as indicated below.

Test Cycle Heat Output

(Average Btu/hr)

Category 1.	Category 2.	Category 3.	Category 4.
< 10,000	10-15,000	15-25,000	Maximum heat output

5.8.2 If the lowest sustainable burn rate produces an average heat output greater than the first category, then two tests must be conducted near the low and high end of the second category plus tests at the remaining categories. A total of four test cycles are required.

5.8.3 If the lowest sustainable burn rate produces an average heat output greater than the second category, then two tests must be conducted near the low and high end of the third category plus a test at the remaining category. A total of three test cycles are required.

5.8.4 If the lowest sustainable burn rate produces an average heat output greater than the third category, three tests must be conducted, one at the lowest sustainable burn rate, one at the maximum heat output level and one at an intermediate level between the lowest and maximum level. A total of three test cycles are required.

5.8.5 If lowest sustainable burn rate is greater than 10,000 Btu/hr then documentation shall be submitted to demonstrate the actual burn rate is the lowest sustainable. This documentation can be in the form of proof that the appliance was run at its lowest permanent air supply setting or test data that demonstrates the burn rate approaches zero (less than 0.1 kg/hr) within the area of 1 to 1.1 times the lowest sustainable burn time and when greater than 90% of the test charge has been consumed. Such test data shall be collected by following all the stove operating procedures specified in this document.

5.8.6 If an appliance has a fixed air supply setting, two replicate tests shall be conducted at the "on" firing mode setting. A total of two test cycles are required.

5.8.7 If an appliance is unable to achieve an average heat output level of 25,000 Btu/hr at its maximum heat output, four tests must be conducted. One test must be conducted at the first category, one at the second category and two tests at the third category, one conducted near the low end of the range and one at the maximum heat output. A total of four test cycles are required.

SECTION 6: TEST METHODOLOGY AND CALCULATIONS

6.1 EMISSION TESTING

6.1.1 Particulate emission testing shall be conducted in conformance with Oregon Source Sampling Methods 5 and 7 (Attachments 2 and 3) with the following exceptions: 1) no traverse of the flue is necessary, 2) sample extraction shall occur in the center of the flue at a height of eight to nine feet above the top surface of the scale, 3) on-line stack gas velocity and volumetric flow rate determination will be made using an alternate method (Section 6.3). Total volume and average flow rates for the test period will be calculated using a simultaneous stoichiometric carbon, hydrogen and oxygen balance method (Section 6.2.1). Sample extraction rates shall be maintained at or proportional to the flue gas velocity as determined by the measured concentration of a tracer gas injected into the stack gases to determine dilution rate and thus, total flow. Adjustments to the sampling rate will be made at each five minute interval during the entire test period.

6.2 PROCEDURES FOR DETERMINING EQUIVALENCE BETWEEN CANDIDATE METHODS AND THE REFERENCE METHOD FOR WOODSTOVE EMISSION TESTING

6.2.1 Determination of Equivalence

The test procedures outlined in this section shall be used to determine if a candidate method is equivalent to the reference method when both methods measure particulate emissions from woodstoves. Equivalence is shown for the methods when the differences between the measurements made by a candidate method and the measurements made simultaneously by the reference method are less than or equal to the precision and consistency values specified below.

5.8.6 If an appliance has a fixed air supply setting, two replicate tests shall be conducted at the "on" firing mode setting. A total of two test cycles are required.

5.8.7 If an appliance is unable to achieve an average heat output level of 25,000 Btu/hr at its maximum heat output, four tests must be conducted. One test must be conducted at the first category, one at the second category and two tests at the third category, one conducted near the low end of the range and one at the maximum heat output. A total of four test cycles are required.

SECTION 6: TEST METHODOLOGY AND CALCULATIONS

6.1 EMISSION TESTING

6.1.1 Particulate emission testing shall be conducted in conformance with Oregon Source Sampling Methods 5 and 7 (Attachments 2 and 3) with the following exceptions: 1) no traverse of the flue is necessary, 2) sample extraction shall occur in the center of the flue at a height of eight to nine feet above the top surface of the scale, 3) on-line stack gas velocity and volumetric flow rate determination will be made using an alternate method (Section 6.3). Total volume and average flow rates for the test period will be calculated using a simultaneous stoichiometric carbon, hydrogen and oxygen balance method (Section 6.2.1). Sample extraction rates shall be maintained at or proportional to the flue gas velocity as determined by the measured concentration of a tracer gas injected into the stack gases to determine dilution rate and thus, total flow. Adjustments to the sampling rate will be made at each five minute interval during the entire test period.

6.2 PROCEDURES FOR DETERMINING EQUIVALENCE BETWEEN CANDIDATE METHODS AND THE REFERENCE METHOD FOR WOODSTOVE EMISSION TESTING

6.2.1 Determination of Equivalence

The test procedures outlined in this section shall be used to determine if a candidate method is equivalent to the reference method when both methods measure particulate emissions from woodstoves. Equivalence is shown for the methods when the differences between the measurements made by a candidate method and the measurements made simultaneously by the reference method are less than or equal to the precision and consistency values specified below.

Specifications For Woodstove Emission Test Methods

Parameter	Units	Limits
Emission rate range	g/hr	1.0-45.0
Minimum number of test runs		16
Minimum number of simultaneous samples per test run		4
(Candidate method)		(2)
(Reference method)		(2)
Maximum analytical precision (individual test runs)	%	18
Maximum analytical precision (standard deviation)	%	10
Maximum difference in consistent relationship (weighted averages)	%	20

6.2.2 Test Conditions

The woodstove burn rate and operating cycle shall be in accordance with procedures specified by DEQ. Testing procedures and schedules shall be approved by DEQ at least 60 days prior to testing. All test measurements or samples shall be taken in such a way that both the candidate method and the reference method receive stack gas samples that are homogenous or as nearly identical as practical.

Collect simultaneous and duplicate samples of woodstove emissions with both the reference and candidate methods until at least 16 quadruple samples (duplicate pairs of both candidate and reference methods) have been obtained. The 16 quadruple samples should represent 16 full test runs, four test runs on each of four stoves. The tests on each stove shall be in each of the four heat output ranges specified in the certification procedures and 5.8.1 of this document. Calculate the emission rates as determined by the candidate and reference methods for each test run. For the reference method, calculate the average particulate emissions for each test run by averaging the results calculated from the duplicate analyses (A and B):

$$R_{i\ ave} = \frac{R_{iA} + R_{iB}}{2} \qquad 6.2.2.a$$

where R denotes results from the reference method and where i is the sample number. Disregard all quadruple samples for which the particulate emission rate as determined by the average of the duplicate reference method analyses falls out-

side the range of 1.0 to 45.0 grams per hour (g/hr). All remaining quadruple samples must be subjected to the following test for precision (in 6.2.3).

Calculate the weighted emission rates, using the procedures specified in OAR 340-21-120(5), as determined by the candidate and reference methods for each of the four woodstoves tested. For the reference method, calculate the average weighted emission rate for each woodstove tested by averaging the results calculated from the duplicate analysis (A and B). One woodstove weighted emission rate (average of duplicate reference method analysis) must be within each of the following ranges for the procedure to be valid: Less than 5.0 g/hr, 5.0 to 10.0 g/hr, 10.0 to 15.0 g/hr, and greater than 15.0 g/hr. All weighted emission rates must be subjected to the consistent relationship test (in 6.2.4 following).

6.2.3 Test For Precision

Calculate the precision (P) of the analysis (in percent) for each duplicate sample and for each method, as the maximum minus the minimum divided by the average of the duplicate analyses, as follows:

$$P_{Ri} = \frac{R_i \text{ max} - R_i \text{ min}}{R_i \text{ ave}} \times 100\% \qquad 6.2.2.b$$

$$P_{Ci} = \frac{C_i \text{ max} - C_i \text{ min}}{C_i \text{ ave}} \times 100\% \qquad 6.2.2.c$$

where C denotes results from the candidate method, R denotes results from the reference method, and i indicates the sample number.

Calculate the standard deviation (SD) of the reference and candidate precision analyses as follows:

$$SD_R = 1.77 \times P_{R \text{ ave}} \qquad 6.2.2.d$$
$$SD_C = 1.77 \times P_{C \text{ ave}} \qquad 6.2.2.e$$

where $P_{r \text{ ave}}$ is the average of the absolute values of P_{Ri}; and $P_{C \text{ ave}}$ is the average of the absolute values of P_{Ci}.

If any reference method precision value (P_{Ri}) exceeds 18 percent or if the standard deviation (SD_R) exceeds 10 percent, the precision of the reference method analytical procedure is out of control. Corrective action must be taken to determine the source(s) of imprecision and the reference method determinations must be repeated, or the entire test procedure must be repeated.

The candidate method passes this test if the precision values of the candidate method (P_{Ci}) are less than or equal to 18 percent and the standard deviation (SD_C) is less than or equal to 10 percent.

6.2.4 Test For Consistent Relationship

For each of the four woodstoves tested, calculate the weighted average emission using DEQ procedure specified in OAR 340-21-120(5).

For each quadruple sample, calculate all four possible percent differences (D) between the reference and candidate methods, using all four possible combinations of the duplicate determinations (A and B) for each method, as:

$$D_{in} = \frac{C_{ij} - R_{ik}}{R_{ik}} \times 100\% \qquad 6.2.2.f$$

where i is the woodstove model tested and n numbers from 1 to 4 for the four possible difference combinations for the duplicate determinations for each method (j = A, B, candidate; k = A, B, reference).

If the candidate method is to include dual units and averaging of test results, then calculate the differences (D) between the reference and candidate methods as follows:

$$D_i = \frac{C_i - R_i}{R_i} \times 100\% \qquad 6.2.2.g$$

where i is the woodstove model tested, C is the average of the dual candidate results, and R is the average of the dual reference results.

The candidate method passes this test if the absolute values of all of the applicable differences (D) are less than or equal to 20 percent.

6.2.5 Test For Equivalence

The candidate method must pass both the precision test and the consistent relationship test to qualify for designation by DEQ as an equivalent method. DEQ may require dual units and precision criteria between dual units, or other conditions in the designation as an equivalent method.

6.2.6 Verification Testing

DEQ may conduct verification testing of the candidate method. If DEQ testing does not verify the precision and consistent

relationship of the candidate method then the candidate method will not be approved as an equivalent method.

6.3 TRACER GAS DILUTION METHOD

6.3.1 This method is used for on-line measurement of stack gas flows during the test period. Other techniques that can provide equivalent results may be accepted, provided prior approval by DEQ has been made before testing for certification purposes commences.

a) Tracer Gas Dilution Method

A pure tracer gas (sulfur dioxide or equivalent, or approved performance gas) is metered through a calibrated rotometer for injection into the flue pipe. Injection shall be made through a stainless steel multi-perforated tube loop located inside the stack at four flue diameters downstream from the particulate and gas sampling port. A downstream diluted sample extraction probe shall be located 8 flue diameters downstream from the injection loop. The dilution sample gas stream shall be processed through a sample conditioner consisting of a combustion tube furnace, and in series, a glass fiber filter and three impingers encased in an ice bath. Impingers one and two shall be empty for water collection and the third shall contain silica gel.

The tracer gas content of the diluted gas sample stream shall be determined with an appropriate calibrated analyzer. Downstream tracer gas concentrations should not exceed 0.5% of the total flue gas volume. The tracer gas shall be as non-reactive with other flue gas constituents as possible and measurable by instrumentation capable of obtaining an accuracy of ± 1% of the instrument scale reading. Instrument calibrations shall be performed and recorded before and after each test run.

Stack gas volumetric flow rates shall be calculated using the following equations:

$$\text{Flow (cfm)} = \frac{Ir}{Dc} \times \frac{1}{60} \times \frac{Tr}{Pr \times 17.65^{\circ}} \qquad 6.3.1.a$$

Where: Ir = Tracer gas injection rate (ft^3/hour)

Dc = Downstream tracer gas concentration (ppm x 10^{-6})

Tr = Injection gas temperature ($^{\circ}R$) at the rotometer

Pr = Injection gas pressure (inches Hg)
* = Density specific for SO_2

Other tracer gases such as helium may be substituted for sulfur dioxide provided prior written agreement has been made with the DEQ.

6.4 STOICHIOMETRIC CARBON, HYDROGEN AND OXYGEN BALANCE METHOD

6.4.1 A carbon, hydrogen and oxygen mass balance will be used for determining overall flue gas volume--not for on-line measurements during the test period.

a) The carbon, hydrogen and oxygen balance method for volumetric flow rates is based on the following basic combustion equation and will be determined and reported for every five minute interval.

$$@[C_xH_yO_z + pH_2O] + Tsg(1-k)(a)\,[O_2 + 3.785N_2 + mH_2O] \quad 6.4.1.a$$
$$Tsg[(1-k)(dCO_2 + eCO + gO_2 + hN_2) + jH_2O + kCH_4]$$

Where @ = Dry weight of fuel burned (lbs)
x = Moles of carbon per lb of dry fuel (assumed 0.0425)
y = Moles of hydrogen per lb of dry fuel (assumed 0.073)
z = Moles of oxygen per lb of dry fuel (assumed 0.0256)
p = Moles of H_2O per lb of dry fuel
= Dry basis moisture (free and combined) ÷ 1800
a = Mole fraction of oxygen in air supply
= Moles O_2 supplied per mole of stack gas
d = Mole fraction of CO_2 in stack gas
e = Mole fraction of CO in stack gas
g = Mole fraction of O_2 in stack gas
h = Mole fraction of N_2 in stack gas
j = Mole fraction of H_2O in stack gas
k = Mole fraction of unburned hydrocarbon in stack gas (as CH_4).
m = Mole fraction of H_2O in supply air (mole H_2O per mole of supply oxygen)
Tsg = Total moles of stack gas (dry)

b) Mass balance equations for the combustion of @ lbs of wood are as follows:

Carbon: $x@ = Tsg\,[(1-k)(d+e)+k]$ 6.4.1.b

Hydrogen: $@(2p + y) + Tsg(1-k)(a)(2m) = Tsg(2j + 4k)$ 6.4.1.c

Oxygen: $@(p+z) + Tsg(1-k)(a)[2+m] = Tsg[(1-k)(2d + e + 2g) + j]$ 6.4.1.d

Nitrogen: $3.785\,(a) = h$ 6.4.1.e

Stack gas total as measured by combustion gas analyzers:

$$1 = (d + e + g + h) \qquad 6.4.1.f$$

The stack gas composition equation can be solved for "h" which will then provide a solution for "a" in the nitrogen balance equation. The remaining unknown values for "@", "p", and "k" are determined by simultaneously solving the carbon, hydrogen, and oxygen balance equations.

c) Two calculation runs of the simultaneous equation set are performed for each set (5 minute test segment) of data collected. The first run is performed to determine an average weighted "@" for the test burn. This first run "@" is then used to determine a corrected Tsg for the second run as follows:

$$\text{Tsg'(corrected)} = \text{Tsg (tracer gas)} \frac{@\ \text{(actual)}}{@\ \text{(calculated first run)}} \qquad 6.4.1.g$$

Where: @(actual) = Dry weight burn rate for test burn (lb/hour)

d) "Tsg" is converted to a flow rate by the following equation:

$$\text{Flow (cubic feet per minute)} = \frac{\text{Tsg} \times 386.2}{60} \qquad 6.4.1.h$$

This calculation procedure is necessary for each five minute test period segment, therefore a computer program is recommended.

6.5 EFFICIENCY TESTING AND CALCULATIONS

6.5.1 If a calorimeter room is used to measure appliance efficiency, combustion gas analyzers must be included to determine and report appliance combustion and heat transfer efficiencies for each heat output level required.

6.5.2 Efficiency values shall be determined based on the following stack loss method. The approach shall include determination for each heat output level for combustion, heat transfer, and overall efficiency.

a) Combustion Efficiency

Combustion efficiencies are calculated as the percentage represented by the actual heat produced in the firebox

relative to the total heat production potential for the fuel consumed. Actual heat production in the firebox is calculated as the difference between the heat of combustion of the incompletely combusted stack gas constituents (carbon monoxide and unburned hydrocarbon equivalents) and the gross caloric content of the fuel burned. The basic equation used for combustion efficiency is as follows:

$$\text{Combustion Efficiency} = \frac{\text{Thi} - \text{Clo}}{\text{Thi}} \quad (\times 100) \qquad 6.5.2.a$$

Where: Thi = Total heat content of the fuel consumed
Clo = Combustible losses out stack

b) The total heat content of the fuel consumed shall be calculated using the following equation:

$$\text{Thi} = \text{Gcvf} \times \text{Wfc} \qquad 6.5.2.b$$

Where : Gcvf = Gross caloric value of the fuel (use HHV determined from bomb calorimetry analysis)
Wfc = Weight of fuel consumed (lbs) dry weight

c) The heat content of the combustible losses are calculated using the following equation:

$$\text{Clo} = \text{Tsg}\,[(e \times \text{Hco}) + (k \times \text{Huh})] \qquad 6.5.2.c$$

Where: Hco = Heat of combustion for carbon monoxide
= 128,000 Btu/mole
Huh = Heat of combustion for unburned hydrocarbons
= 181,000 Btu/mole (estimated)

This calculation procedure is necessary for each five minute test period segment.

d) Heat Transfer Efficiency

Heat transfer efficiencies are calculated as the percentage represented by the useful heat released to the room relative to the actual heat produced in the firebox. The useful heat released to the room (Uhr) is calculated as the difference between the actual heat produced in the firebox (Ahf or Thi-Clo), and the sensible and latent heat losses out the stack (Sllo). The basic equation for heat transfer efficiency is as follows:

Heat Transfer Efficiency $= \frac{Uhr}{Ahf} = \frac{Ahf-Sllo}{Ahf} = \frac{(Thi-Clo)-Sllo}{(Thi-Clo)}$ (x 100) 6.5.2.d

Where: Sllo = Sensible and latent heat losses
$= (To - Ti)\ [Tsg(dCpCO_2 + eCpCO + gCpO_2 + hCpN_2 + jC_pH_2O)] + (j-m)LH_2O$

Where: To = Temperature of stack gases out
Ti = Temperature of inlet air and fuel

C_pCO_2 = Specific heat of CO_2 = 9.3 Btu/mole
C_pCO = Specific heat of CO = 7.0 Btu/mole
C_pO_2 = Specific heat of O_2 = 7.1 Btu/mole
C_pN_2 = Specific heat of N_2 = 7.0 Btu/mole
C_pH_2O = Specific heat of water = 8.3 Btu/mole
LH_2O = Latent heat of evaporation of water
= 18,810 Btu/mole

This calculation procedure is necessary for each five minute test period segment.

e) Overall Efficiency

Overall average efficiency is calculated as the percentage represented by the heat released to the room relative to the total heat production potential of the fuel consumed. The overall efficiency is calculated as the product of the combustion efficiency and the heat transfer efficiency as follows:

Overall Efficiency = Combustion Efficiency x Heat Transfer Efficiency

$= \frac{Ahf}{Thi} \times \frac{Uhr}{Ahf} = \frac{Uhr}{Thi}$ 6.5.2.e

6.5.3 A corrected flue gas moisture content for each five minute interval must be determined as follows:

Final flue moisture determination shall be made by calculating a corrected flue gas moisture content for each data interval taken during the test cycle. The average wet bulb-dry bulb moisture measurement must be weighted by the volumetric flow rate for that 5 minute interval. The correction factor which is applied to each 5 minute moisture determination is calculated as the ratio between the average wet bulb-dry bulb measurement and the Oregon Source Sampling Method 4 (Attachment 1) measurement (condensate catch) for the entire burn cycle.

6.6 EQUIVALENCE BETWEEN CANDIDATE METHODS AND THE REFERENCE METHOD FOR WOODSTOVE EFFICIENCY TESTING

6.6.1 Candidate methods for woodstove efficiency testing must demonstrate consistent relationship to the reference method (stack loss) comparable to the consistent relationship between the reference method (stack loss) and the calorimeter room method as described in the DEQ's Confirmation Testing Summary, Section 18, Part C, Table 1: Comparison of Calorimeter Room Method vs. Stack Loss Method, 1984.

6.6.2 DEQ may conduct verification testing of the candidate method. If DEQ testing does not verify equivalence of the candidate method to the reference method (stack loss), then the candidate method will not be approved as an equivalent method.

SECTION 7: TEST DATA

7.1 DATA TO BE REPORTED

7.1.1 All raw and reduced test data must be included in the material sent to DEQ for appliance certification. Reduced test data shall be tabulated as indicated in Sections 7.1.2 through 7.1.10.

7.1.2 Particulate Emissions For Each Test Cycle

a) Concentration: total grains/dscf, total grams/m^3
b) Emission rate: grams/hr
c) Emission factor: grams/kg (dry fuel weight basis)
d) Emission process rate: grams/10^6 joule useful heat output
e) Front half catch: % of total
f) Total mass captured: front and back catch, mg

7.1.3 Average Efficiency Values For Each Test Cycle

a) Overall appliance efficiency %
b) Combustion efficiency %
c) Heat transfer efficiency %

7.1.4 Heat Output For Each Test Cycle

a) Btu/hr average over entire test

7.1.5 Burn Rate For Each Test Cycle

The average values (kg/hr wet and dry basis) over the entire test cycle and an hourly average over the entire test cycle at each heat output level.

7.1.6 Average Fuel Moisture Content For Each Test Cycle

a) Kindling (wet basis) %
b) Test fuel (wet basis) %

7.1.7 Air/Fuel Ratio

Mass of combustion air to the mass of fuel over 90% or more of each test cycle (lbs air/lbs fuel).

7.1.8 Average Stack Gas Composition For Each Test Cycle

a) Carbon dioxide %
b) Carbon monoxide %
c) Oxygen %
d) Excess air %
e) Moisture %

7.1.9 Average Stack Gas Flow and Draft For Each Test Cycle

a) Average flow rate cfm
b) Stack flow rate dscf/min (tracer gas and CHO balance)
c) Draft, inches H_2O

7.1.10 Average Stack Gas Emission Factors and Process Rates For Each Test Cycle

a) Carbon monoxide: grams/kg, and grams/10^6 joule (measured)
b) Hydrocarbons: grams/kg, and grams/10^6 joule (calculated)

7.1.11 Average Temperatures For Each Test Cycle

a) Stack gas ^oF
b) Primary combustion chamber gas ^oF
c) Secondary combustion chamber gas (if applicable) ^oF
d) Above catalyst gas (if applicable) ^oF
e) Stove top surface ^oF
f) Stove sidewall surfaces ^oF
g) Stove back surface ^oF
h) Stove bottom surface ^oF

7.1.12 Fuel Load Weight and Burn Cycle Period For Each Test Cycle

a) Coal bed weight, lbs

b) Test fuel load weight, lbs

c) Total burn cycle time period, minutes

SECTION 8: CATALYTIC COMPONENT CERTIFICATION REQUIREMENTS

8.1 CATALYTIC COMBUSTOR DESIGN CRITERIA

8.1.1 To insure equivalent performance of catalytic combustors used in testing versus production model stoves, a combustor model number for every catalytically equipped stove evaluated for certification shall be supplied. The model number will serve to identify catalytic combustor types by brand (manufacturer), dimensions, and design (substrate and coating material). The model number must be imprinted or inscribed on a readily visible surface (such as a metal sleeve or canned surface). This will allow DEQ field verification monitoring. Any change in combustor brand, size and design type will require retesting of the appliance with the new combustor model for performance change unless test data or sufficient information can be provided demonstrating equivalent or improved performance.

8.2 CATALYTIC COMBUSTOR AGING CRITERIA

8.2.1 Any appliance that contains a catalytic combustor must use a pre-aged combustor when testing for certifiation purposes. The combustor aging process will consist of burning Douglas fir dimensional lumber or cordwood with a moisture content range on the wet basis of 15-25% in a woodstove specifically designed for an internal catalytic combustor. The stove must be operated at its medium burn rate with a new catalytic combustor in place and in operation for a period of 50 hours. The accredited testing laboratory must document and provide combustor temperature data, hours of aging operation and certify to the DEQ that each catalytic appliance tested for certification purposes has met this provision.

8.3 CATALYTIC COMBUSTOR LONGEVITY CRITERIA

8.3.1 All catalytic combustor manufacturers must submit to the DEQ evidence in the form of test data that each combustor design type, identified by model number, has been longevity tested for 5000 hours and document that the percent reduction in particulate emissions from the new state is no less than 70%. Three test conditions are required: 1) unused (0 hours), 2) 250 hours, and 3) 5000 hours. Testing must be performed by a DEQ accredited laboratory. In lieu of this requirement, the manufacturer may substitute a 24 month non pro-rated combustor replacement warranty.

8.4 CATALYTIC COMBUSTOR TEMPERATURE MONITORING PROVISION

8.4.1 In order to qualify for DEQ certification, catalytically equipped woodstoves must be equipped with a permanent provision to accommodate a commercially available temperature sensor which can monitor combustor gas stream temperatures within or immediately downstream (within 1.0 inch or 2.5 cm) of the combustor surface.

STATE OF OREGON

DEPARTMENT OF ENVIRONMENTAL QUALITY

Source Sampling Method 4

Determination of Moisture Content of Stack Gases

1. Principle and Applicability

1.1 Principle. A gas sample is extracted from the flowing gas stream and its moisture removed and measured either volumetrically or gravimetrically. Alternately, the moisture can be estimated by less accurate techniques for the purpose of setting the nomograph for isokinetic sampling. A wet bulb-dry bulb technique is discussed.

1.2 Applicability. The reference method is applicable for the determination of moisture in exhaust gases from stationary sources. The alternate method is to be used only for estimating the moisture content for the purpose of setting the nomograph unless otherwise specified.

2. Reference method

2.1 The method employed is essentially the same as used in the particulate determination source sampling method 5 and will not be discussed here.

3. Alternate method

3.1 Theory. The water vapor in a non-saturated gas stream causes a depression of the wet bulb temperature which is proportional to the fraction of moisture present.

3.2 Procedure

3.2.1 Measure the dry bulb temperature in the conventional way using either a thermometer or thermocouple.

3.2.2 Insert the end of the temperature measuring device in a cloth sock and saturate the sock with water. Inset the sock into the flowing gas stream and allow the temperature to reach a steady state. Caution: after the water on the sock has evaporated, the temperature will rise to the dry bulb temperature. (Figure 4-1). The wet bulb temperature must be taken while the sock is saturated with moisture.

3.2.3 Apply the wet bulb and dry bulb readings to the appropriate graph (Figure 4-2, 4-3, or 4-4) and determine the approximate water vapor content if the barometric pressure is near 29.92 in. Hg.

3.2.4 Alternately apply the wet bulb and dry bulb readings to equation 4-1 in Figure 4-3.

4. Interferences

4.1 The following conditions may drastically change the wet bulb reading causing erroneous results:

4.1.1 The presence of acid gases in the gas stream, i.e. SO_2, SO_3, HCl.

4.1.2 The presence of hydrocarbons in the gas stream.

4.1.3 Marked differences from atmospheric pressure (29.9 in. Hg) of the gas stream (if the graphs are used).

4.2 Should any of the above interferences be present, the tester should consider another approach to determining moisture content.

4.3 Additionally, the following conditions can lead to difficulties.

4.3.1 Very high dry bulb temperature (in excess of 500°F).

4.3.2 Very high or very low gas velocities.

4.3.3 High concentration of particulate matter which may adhere to the wet sock.

*Methods for Determination of Velocity, Volume, Dust, and Mist Content of Gases, Bulletin WP-50, Western Precipitation Corp., Los Angeles, Calif.

Figure 4-5

STATE OF OREGON

DEPARTMENT OF ENVIRONMENTAL QUALITY

Source Sampling Method 5

Sampling Particulate Emissions From Stationary Sources

1. Principle and Applicability

1.1 Principle. Particulate matter including condensible gases are withdrawn isokinetically from a flowing gas stream. The particulate matter is determined gravimetrically after removal of combined water.

1.2 Applicability. This method is applicable to the determination of particulate emissions from stationary sources except those sources for which specified sampling methods have been devised and are on file with the Department.

2. Acceptability. Results of this method will be accepted as demonstration of compliance (or non-compliance) provided that the methods included or referenced in this procedure are strictly adhered to and a report containing at least the minimum amount of information regarding the source is included as described in Sections 15 & 16. Deviations from the procedures described herein will be permitted only if permission from the Department is obtained in writing in advance of the tests.

3. Sampling Apparatus (Figure 5-1)

3.1 Probe - With heating system capable of maintaining sample gas temperature at 250° F at its exit end during sampling. Probes which are to be used at temperatures of 600° F or less may have liners constructed of seamless 316 stainless steel, Pyrex Glass or Incoloy 825[1]. Probes for temperatures in excess of 600° F may be constructed of Borosilicate glass (limit 900° F) or Quartz glass (limit 1650° F). Probes for temperatures in excess of 1650° F must be approved by the Department before use. Testing in corrosive atmospheres may require a special probe liner to prevent contamination of the sample.

3.2 Probe Nozzle - Constructed of stainless steel (316) with an external taper 30° or less to a sharp leading edge. The inside diameter of the nozzle shall be constant throughout the length of the nozzle. The wall thickness of the nozzle shall be less than or equal to 0.065 in. and a straight run of at least two times the internal diameter shall be provided between the leading edge and the first bend or point of disturbance. The nozzle shall be connected to the probe liner in such a way as to provide an airtight seal with no exposed threads or gaps to collect particulate matter. Calibration of the nozzle is covered in Section 13.3.

[1] Trade Name

3.3 Pitot tube - Type S or equivalent attached to the probe. The probe nozzle and face openings of the pitot tube shall be adjacent and parallel to each other (not necessarily in the same plane) and the free space between the nozzle and the pitot tube shall be at least 0.5 in. Calibration of the pitot tube is covered in Section 3, Source Sampling Method 2 .

3.4 Differential pressure gauges - Inclined or vertical fluid manometer capable of measuring the pressure differential to within 10% of the minimum measured value. Below 0.1 in. H_2O gauge, micromanometers with sufficient sensitivities shall be used. Other differential pressure measuring devices may be used provided they are calibrated against a fluid manometer and are adequately sensitive.

3.5 Cyclone (optional) - Miniature glass cyclone used when heavy concentrations of particulate are expected. The cyclone will extend the time a filter can be used before plugging.

3.6 Filter holder - Pyrex [1] glass with a glass frit filter support and silicone rubber gasket. The holder shall provide a positive seal against leakage from the outside or around the filter.

3.7 Filter heating system - Capable of maintaining a temperature of 250° F around the filter holder. A temperature gauge shall be provided to monitor this temperature.

3.8 Impingers - Greenburg-Smith design. The first, third and fourth may be modified by replacing the tip with a 1/2 inch ID glass tube extending to withint 1/2 inch of the bottom of the flask. The second impinger shall have the standard tip installed.

Note: All connections between the probe and last impinger shall be made with glass ball joints.

3.9 Metering system - Vacuum gauge, leak-free pump, thermometers capable of measuring temperature to within 5° F dry gas meter accurate to within ± 1% and flow measuring device (orifice or rotometer) enabling isokinetic sampling to be maintained.

3.10 Barometer - Mercury, aneroid or other type capable of measuring atmospheric pressure to within 0.1 in. Hg. If the barometric pressure is to be obtained from a nearby weather bureau station, the true station pressure (not corrected for elevation) must be obtained and an adjustment for elevation differences between the station and sampling site must be applied.

3.11 Temperature and pressure measurement equipment - As described in Source Sampling Method 2.

3.12 Gas analyzer - As described in Source Sampling Method 3.

3.13 Nomograph

3.14 Timer - Integrating type, accurate, readable to the nearest 5 seconds per hour.

[1] Trade Name

4. Sample Recovery Apparatus

4.1 Probe brush and nozzle brush - nylon bristle or equivalent at least as long as the probe liner and the nozzle respectively.

4.2 Wash bottles - inert to the solvent used in them (usually acetone).

4.3 Sample storage containers - glass with glass or Teflon[1] lined cap or other material which is leak tight, resistant to chemical attack from acetone and allows complete recovery of particulate matter.

4.4 Petri dishes - for filter samples, glass or plastic. Alternately, individual paper envlopes with waxed paper liners may be used, but tare and final weights should not be included in the weight of the envelope or liner.

4.5 Graduated cyliner and/or balance - to measure condensed moisture to within 1 ml or 1 g. Graduate cylinders shall have subdivisions of 2 ml or less and balances shall be sensitive to 1 g.

4.6 Plastic storage containers - air tight containers to store silica gel unless it is weighed at the sampling site or transported to the laboratory in the impinger.

4.7 Rubber policeman - to aid in recovering sample from the train previous to the filter.

4.8 Dessicator - laboratory type using Drierite [1], indicating dessicant or equivalent.

4.9 Analytical balance - accurate and sensitive to ± 0.1 mg.

5. Reagents

5.0 Separating funnel - 500-1000 ml with Teflon [1] stopcock and plug.

5.1 Beakers - 250 ml & 400 ml Pyrex[1] or equivalent.

5.2 Filters - glass fiber filters, without organic binder, of near neutral pH, free of pinhole leaks, and exhibiting at least 99.95% efficiency on 0.3 micron DOP smoke particles. MSA-1160BH or equivalent, individually numbered for identification and pre-weighed as described in Section 6.1.

5.3 Silica gel - indicating type 6-16 mesh, dried at 175°C (350°F) for 2 hours if previously used.

5.4 Water - distilled, with a maximum total residue content of 0.001%. (0.01 mg/ml).

5.5 Acetone - reagents grade with a maximum total residue content of 0.001%. (0.01 mg/ml)

5.6 Crushed ice - any grade, crushed fine enough to provide efficient cooling for the impingers.

5.7 Stopcock grease - acetone resistant, heat stable, silicone grease.

5.8 Diethyl ether - reagent grade with a maximum total residue content of 0.001%. (0.01 mg/ml)

5.9 Chloroform - reagent grade with a maximum residue content of 0.001%. (0.01 mg/ml)

6. Sampling Train Preparation

6.1 Weigh numbered glass fiber filter paper to the nearest 0.1 mg on an analytical balance after dessication over Drierite for 24 hours or more.

6.2 Insert the filter into the filter holder and assemble taking care not to tear or bend the filter. Tighten the filter holder sufficiently to prevent leaks.

6.3 Add 100 ± 1 ml of distilled water to each of the first two impingers.

6.4 Add approximately 200 g of accurately weighed silica gel (± 1 g) to the fourth impinger.

6.5 Alternately after charging each of the impingers with the appropriate material, weigh the impinger and contents on balance to the nearest 1 g.

6.6 Assemble the train as shown in Figure 5-1 and check for leaks as in Section 8.

6.7 Seal the train with aluminum foil, a blanked connector or some other means to prevent contamination.

7. Pretest Preparations

7.1 Select a sampling site and the minimum number of traverse points as described in Source Sampling Method 1.

7.2 Determine the approximate moisture content as described in Source Sampling Method 4.

7.3 Make a preliminary pitot traverse to determine the maximum, minimum, and average pitot reading, duct temperature, and static pressure as described in Source Sampling Method 2.

7.4 Choose a nozzle size based on the range of pitot readings as described in Section 12 such that it is not necessary to change the nozzle size in order to maintain the isokinetic sampling rates for all traverse points.

7.5 Clean the chosen nozzle and probe (the shortest available which will reach all the traverse points), assemble and seal each end with aluminum foil to prevent contamination.

7.6 Attach the probe to the sample case, attach the electrical and hose

connections, and turn on the probe and filter heating system. Adjust the heater controls to maintain the appropriate temperatures.

8. Leak Check

8.1 Plug the inlet to the filter.

8.2 With the fine flow adjustment (bypass) completely open, open the coarse flow adjustment completely and adjust to a vacuum of 15 in. Hg by closing the fine flow adjustment.

8.3 After sufficient time has elapsed for stabilization, measure the leakage rate for 1 minute or more and record. A leakage rate of less than 0.02 cfm at 15 in. Hg is acceptable. Use acetone resistant stopcock grease on impingers and ball joints if necessary to seal against leaks.

8.4 Slowly remove the plug from the filter inlet and immediately close the coarse flow adjustment.

9. Particulate Train Operation

9.1 Each point should be sampled a minimum of 2 minutes and a complete set of data readings should be taken at every point. If each point is sampled more than 5 minutes, a complete set of data readings should be taken at equal intervals during the sampling of every point but not less frequent than every five minutes.

9.2 Pack crushed ice around the impingers, turn on the probe heater and adjust so that the gases leaving the probe are 250°F. Add ice occasionally during the test in order to keep the temperature of the gas leaving the train at 70°F or less.

9.3 Position the probe nozzle at the first traverse point (taking care not to allow the nozzle to touch the stack walls) and block off the openings around the probe. Record the initial gas meter reading, temperatures, static pressure and pitot reading on the Particulate Field Data Sheet (Figure 5-5).

> Note: The probe should never be left in the stack when not sampling as particulate will be collected in the nozzle.

9.4 Calculate (as described in Section 12) and record the desired orifice setting, open the coarse flow adjustment and immediately start the timer.

9.5 As rapidly as possible, adjust the orifice reading using the coarse and fine flow adjustments to the desired reading.

9.6 At the end of the first sampling point (or not more than 30 seconds before) reposition the probe nozzle at the next sampling point.

Note the gas meter reading exactly at the end of the first time interval.

9.7 After the pitot readings have stablized, note the pitot reading, calculate the desired orifice setting, and adjust with the fine and coarse flow adjustments to the new setting. This should be done as rapidly as possible to avoid anisokinetic sampling.

9.8 Continue the above steps until all traverse points have been sampled an equal interval of time (except adjusted traverse points as described in Source Sampling Method 1.)

9.9 At the conclusion of the run, close the coarse flow adjustment, note the final gas meter reading and temperatures and withdraw the probe completely.

9.10 Seal the nozzle with aluminum foil as soon as it cools sufficiently to do so, disconnect the probe from the sample case, seal all other openings and transport to the cleanup (or storage) area.

9.11 Throughout the sample run, collect an integrated gas sample for composite analysis as described in Source Sampling Method 3.

9.12 Under no circumstances disconnect or loosen any part of the airtight train until the probe has been completely removed from the stack.

10. Particulate Train Cleanup

10.1 Cleanup should be performed in an area free of wind and airborne dust which may contaminate the sample or cause sample loss. If possible, the train should be cleaned in a laboratory.

10.2 After the probe and nozzle have cooled, remove the end seals and brush while rinsing with acetone into a suitable container (labelled).

Note: Exercise caution so that none of the rinse is lost and no extraneous material enters the rinse (such as from the pitot tubes).

10.3 Should it be necessary to clean the train in the field, use the following procedure:

10.3.1 Rinse all sample exposed surfaces prior to the filter (including the front half of the filter holder) with acetone. Remove any adhering particles with the aid of a rubber policeman. Place the rinsings in the probe rinse bottle.

10.3.2 Remove the filter without disturbing the particulate cake, place in a petri dish and seal.

10.3.3 Measure and record the volume (or weight) increase of the first three impingers and transfer their contents into a labelled container. Rinse the impingers and interconnects with distilled water and add to the container.

10.3.4 Rinse all sample exposed glassware between the filter (excluding the glass frit filter support) and the fourth impinger with acetone and store in a suitable marked container.

10.3.5 Determine the weight gain of the silica gel in the fourth impinger and record. Alternately transfer the silica gel quantitatively to an airtight container to be weighed in the laboratory.

10.3.6 Collected samples should be analyzed within one week of collection in order to prevent any possibility of biological or chemical degeneration.

11. Analysis

11.1 Dessicate the filter (in the field container) for 24 hours and weigh to constant weight.

11.2 Transfer the acetone rinse (Section 10.3.1) into a tared beaker or evaporating dish. Be sure all particulate is removed from the container. Evaporate the solvent at laboratory temperature and pressure, dessicate for 24 hours and weigh to constant weight ($\pm$ 0.5 mg change in 6 hours or more).

11.3 Transfer the acetone rinse from the back-half (Section 10.3.4) to a tared beaker or weighing dish. Evaporate as in 11.2 and weigh to constant weight.

11.4 Transfer the water in the impingers to a separatory funnel (Teflon[1] stoppered). Rinse the container with distilled water and add to the separatory funnel. Stopper and vigorously shake the separatory funnel 1 minute, let separate and transfer the chloroform (lower layer) into a tared beaker or evaporating dish. Repeat twice more. Repeat the above procedure using three 25 ml portions of diethyl ether in place of the chloroform.

11.5 Transfer the remaining water in the separatory funnel to a tared beaker or evaporating dish and evaporate at 105° C. Dessicate for 24 hours and weigh to constant weight.

11.6 Evaporate the combined impinger water extracts from Section 11.4 at laboratory temperature and pressure, dessicate for 24 hours and weigh to constant weight.

11.7 Evaporate portions of the solvents used in a manner similar to the sample evaporation to determine the solvent blanks.

11.8 Record all laboratory data on the Laboratory Data Reporting Sheet, Figure 5-9.

12. Nomograph Operation

12.1 Correction factor

12.1.1 Determine $\Delta H@$ for the orifice as described in the calibration Section 13.1

12.1.2 Estimate the probable meter temperature, Tm, often 20° F above ambient temperature, H_2O in stack gas, and Ps/Pm (ratio of absolute stack pressure to absolute meter pressure) as described in Section 7.

12.1.3 Determine the correction factor "C" using the correction factor nomograph, Figure 5-2a, as described on the nomograph. Correction of the factor "C" for a pitot Cp other than 0.85 can be made using the following equation:

$$C(\text{corrected}) = C \frac{C_p^2}{(0.85)^2}$$

12.2 Operating Nomograph

12.2.1 Adjust the sliding scale on the operating nomograph, Figure 5-2b, such that the "C" factor determined in Section 12.1.3 is opposite Reference Point A.

12.2.2 Using the preliminary pitot traverse data and duct temperature determined in Section 7, draw a line from T_s to the values of ΔP and select a suitable D (nozzle diameter) from the probe tip diameter scale.

12.2.3 Draw a line from T_s through D (actual diameter of nozzle to be used) and note where the line crosses the ΔP scale.

12.2.4 Draw a line from the ΔP obtained in 12.2.3 to Reference Point B on the ΔH scale and note where the line crosses the K factor scale. This point should be marked for future reference.

12.2.5 During sampling, align the pitot reading, ΔP, with the K factor setting, Section 12.2.4, to obtain the desired ΔH.

12.2.6 If T_s (absolute) changes by more than 50° F the K factor should be recalculated starting with 12.2.3.

13. Calibration

13.1 Orifice and dry gas meter

13.1.1 Connect the components as shown in Figure 5-3. The wet test meter is a 1 cf per revolution with ± 1% accuracy and capable of operating at a rate comparable to the expected sampling rate.

13.1.2 Run the pump about 15 minutes at an orifice reading of about 0.5 in. H_2O to allow the dry gas meter and pump to warm up and to wet all interior surfaces of the wet test meter.

13.1.3 Gather the information as required in Figure 5-4.

13.1.4 Calculate γ and $\Delta H@$ as described in Figure 5-4. If an average γ of 1.00 ± 0.01 is not obtained, the dry gas meter must be adjusted. If an average $\Delta H@$ of 1.34 ± 0.25 is not obtained, the orifice opening should be enlarged or replaced. Additionally the $\Delta H@$ should not vary more than ± 0.15 over the range of operation of 0.5 to 2 inches of H_2O.

13.1.5 Calibrate the orifice and dry gas meter every month or after every 5 tests whichever occurs first.

13.2 Temperature gauges

13.2.1 Check temperature gauges against mercury-in glass thermometers of certified accuracy or against suitable temperature standards (boiling or freezing points) at least yearly.

13.3 Probe Nozzle

13.3.1 Measure the inside nozzle diameter on at least 10 different diameters to the nearest 0.001 inch using a micrometer or caliper. The nozzle diameter is the average of these readings to the nearest 0.001 inches.

13.3.2 The largest deviation from the average should not exceed ± 1% of the average diameter.

13.3.3 Calibrate the nozzle at least before every test.

14. Calculations

14.1 Gas velocity

14.1.1 Calculate the average gas velocity, V_s, from the pitot tube readings and gas temperatures using equation 5-2

$$(V_s)_{avg} = \frac{K_p C_p}{\sqrt{P_s M_s}} \sqrt{(\Delta P_s T_s)_{avg}} \qquad (5\text{-}2)$$

Where the symbols and units are the same for equation 2-2 in Source Sampling Method 2.

14.2 Gas volumetric flow rate

14.2.1 Calculate the volumetric flow rate of the gas from the duct area and the average gas velocity using equation 5-3

$$q_s = \frac{0.123 A_s (V_s)_{avg} (1-B_{wo}) P_s}{T_s} \qquad (5\text{-}3)$$

where the symbols and units are the same as equation (2-3) in Source Sampling Method 2.

14.3 Dry gas volume

14.3.1 Calculate the volume of gas sampled using equation 5-4

$$Q_d = \frac{17.65 Q_m \left(P_o + \frac{\Delta H}{13.6}\right)}{T_m} \qquad (5\text{-}4)$$

where Q_d = volume of gas sample, SDCF

Q_m = volume of gas through meter (meter conditions), CF

P_o = barometric pressure, absolute, in. Hg.

ΔH = average pressure drop across the orifice, in. H_2O

T_m = average dry gas meter temperature, ^oR

14.3.2 In the event the gas passing through the dry gas meter was not dry, the above equation must be multiplied by $(1-B_{wm})$ where B_{wm} is the volume fraction of water in the metered gas (assume saturation at the temperature of the last impinger).

14.4 Moisture content of duct gas

14.4.1 Calculate the moisture content of the duct gas from the total volume of water vapor condensed using equations (5-5), (5-6), and (5-7).

$$Q_v = 0.0474\ V_v \qquad (5\text{-}5)$$

where Q_v = volume occupied by water vapor, SCF

V_v = volume of water condensed in impingers and on silica gel, g or ml.

$$m_v = \frac{100\ Q_v}{Q_d + Q_v} \qquad (5\text{-}6)$$

where mv = volume percent of moisture in the sampled gas.

$$m_d = \frac{Q_d}{Q_d+Q_v} = \frac{1-m_v}{100} \qquad (5\text{-}7)$$

where m_d = volume fraction of dry gas in the sampled gas

14.5 Calculate the molecular weight of the wet gas using the volume fraction of dry gas and the dry molecular weight using equation 5-8.

$$M_s = m_d M_d + 18\ (1-m_d) \qquad (5\text{-}8)$$

where M_s = molecular weight of the wet stack gas, lb/lb mole

M_d = molecular weight of the dry stack gas as defined in Source Sampling Method 3, equation (3-2)

14.6 Calculate the total particulate grain loading and correct to 12% carbon dioxide (when necessary) from the volume of gas sampled, the total weight of particulate sample and the % CO_2 using equation 5-9, and 5-10.

$$C_g = \frac{0.0154\ W}{Q_d} \qquad (5\text{-}9)$$

where C_g = total particulate grain loading, gr/sdcf

W = weight of particulate sample, mg

$$C'_g = \frac{12\ C_g}{\%\ CO_2} \qquad (5\text{-}10)$$

where C'_g = total particulate grain loading corrected to 12% CO_2, gr/sdcf @ 12 % CO_2

$\%CO_2$ = percent by volume carbon dioxide as determined in Source Sampling Method 3.

14.7 Calculate the total particulate emission rate from the total particulate grain loading and the volumetric flow rate using equation 5-11

$$C_t = 0.00857 \; C_g q_s \qquad (5\text{-}11)$$

where C_t = total particulate emission rate, lbs/hr

q_s = Volumetric flow rate in duct, DSCFM as determined in Source Sampling Method 2.

14.8 Calculate the percent of isokinetic sampling rate from equation 5-12.

$$I = \frac{1039 \; T_s Q_d}{V_s P_s m_d D_n^4 t} \qquad (5\text{-}12)$$

where I = Percent of isokinetic sampling rate

T_s = Average stack temperature, °R

P_s = Average stack absolute pressure, in. Hg

D_n = Average nozzle inside diameter, in.

t = Total sampling time, min.

Q_d = Volume of gas sampled, SDCF

V_s = Average gas velocity, FPM

m_d = Volume fraction of dry gas

15. Minimum Acceptable Test Requirements

15.1 In order for a source test by this method to be acceptable as sufficiently accurate, the following requirements must be met unless otherwise indicated by the Department in writing:

15.1.1 A minimum sample volume of 60 SDCF of gas per run must be sampled.

15.1.2 A minimum run time of 60 minutes on continuous operations or one complete cycle covering at least 60 minutes on cyclic operations. A minimum of two runs per test is required.

15.1.3 The Department is notified in advance of all source tests so that it may have an observer present if desired.

15.1.4 All equipment used in the test shall be as specified in Section 3,4, and 5.

15.1.5 All equipment used in the test shall be calibrated at the specified

interval or more often and the calibration data and results included in the test report.

15.1.6 Accurate description of the sampling site including photographs.

15.1.7 Sufficient data to confirm that the sampling rate was within ± 10% of isokinetic.

16. Minimum Test Report Information - the following information concerning the source shall be included in the source test report.

16.1 Boilers

16.1.1 Name of manufacturer, nameplate capacity, and installation date of boiler and associated control equipment.

16.1.2 Control equipment on boiler (including cinder reinjection equipment).

16.1.3 Steam production rate, steam pressure and range of steam flow where possible. Use of a steam flow integrater is desirable.

16.1.4 Fuel composition (including estimated moisture content where applicable).

16.1.5 Opacity readings during or immediately after test by a certified reader.

16.2 Asphalt Plants (See Note 1)

16.2.1 Type, location and capacity of plant.

16.2.2 Control Equipment present.

16.2.3 Pressure drop across control equipment, water pressure on scrubber nozzles when present.

16.2.4 Production rate and type of mix during test.

16.2.5 Dryer fuel and firing rate.

16.2.6 Mix temperature (on drum mix plants)

16.2.7 Fines content of total aggregate feed.

16.2.8 Opacity readings during or immediately after test by a certified observer.

16.2.9 Photographs of plant in operation including plume after steam dissipation.

16.2.10 Special testing or production problems encountered.

NOTE 1: The source test requirements for asphalt plants constructed or modified after June 11, 1973 differ from this method in that only the particulate collected in the front half of the train (from the probe to the filter inclusive) is used for compliance evaluation. The impinger catch, however, must still be reported.

16.3 Incinerators

16.3.1 Manufacturer and capacity of incinerator.

16.3.2 Control equipment present.

16.3.3 Type and quantity of material incinerated.

16.3.4 Charging and stoking times.

16.3.5 Auxiliary fuel used and quantity consumed during test (measured).

16.3.6 Opacity readings during test by a certified observer.

16.3.7 Photographs of incinerator in operation including plume.

Q-606

STATE OF OREGON

DEPARTMENT OF ENVIRONMENTAL QUALITY

Source Sampling Method 7

Sampling Condensible Emissions From Stationary Sources

1. Principle and Applicability

1.1 Principle: Particulate matter including condensible gases is withdrawn isokinetically from a flowing gas stream. The particulate matter is determined gravimetrically after extraction with organic solvents and evaporation.

1.2 Applicability: This method is applicable to stationary sources whose primary emissions are condensible gases. It should be considered a modification of Source Sampling Method 5 and applied only when directed to do so by the Department.

2. Sampling Apparatus (Figure 7-1)

2.1 The probe, sampling train, and metering system are the same as outlined in 3. Sampling Apparatus of Source Sampling Method 5 with the following exceptions:

2.1.1 The heated filter and cyclone are optional, but should be used if significant quantities of solid particulate are present.

2.1.2 An unheated glass fiber filter is placed between the third and fourth impingers.

3. Sample Recovery Apparatus

3.1 The sample recovery apparatus is the same as outlined in 4. Sample Recovery Apparatus of Source Sampling Method 5.

4. Reagents

4.1 The reagents are the same as outlined in 5. Reagents of Source Sampling Method 5.

5. Sampling Train Preparation

5.1 The sampling train preparation is the same as outlined in 6. Sampling Train Preparation of Source Sampling Method 5 with the following exception:

5.1.1 Insert numbered and weighed filters into each of the front (if used) and rear filter holders.

6. Pretest Preparations and Lead Check

6.1 The pretest preparations and leak check are the same as outlined in Sections 7 and 8 of Source Sampling Method 5.

7. Condensible Particulate Train Operations

7.1 The train operation is the same as outlined in Section 9 of Source Sampling Method 5. It is important to note that the gas temperature leaving the last impinger must not exceed 70°F as temperatures above this may cause loss of condensible material by revolatilization.

8. Condensible Particulate Train Cleanup

8.1 Cleanup should be performed in an area free of wind and airborne dust which may contaminate the sample or cause sample loss. If possible, the train should be cleaned in a laboratory.

8.2 After the probe and nozzle have cooled, remove the end seals and brush while rinsing with acetone into a suitable marked container.

Note: Exercise caution so that none of the rinse is lost and no extraneous material enters the rinse (such as from the pitot tubes or condensed material from the outside of the nozzle).

8.3 Should it be necessary to clean the train in the field, use the following procedure:

8.3.1 Thoroughly rinse all sample exposed surfaces prior to the front filter support, with acetone. Remove any adhering particles with the aid of a rubber policeman. Place the rinsings in the probe rinse bottle. If the front filter is not used, all sample exposed surfaces prior to the first impinger should be included in this rinse.

8.3.2 Remove the front (if used) and rear filters, place in a petri dish and seal. Since a heavy loading of condensible material on the rear filter may leave a residue in the filter container which would necessitate removal with solvent, glass petri dishes are preferred.

8.3.3 Measure and record the volume (or weight) increase of the first three impingers to the nearest 1 ml (or 1 g) and transfer their contents to a labeled container. Rinse the impingers and interconnects with distilled water and add to the container.

8.3.4 Rinse all sample exposed glassware between the front filter (if used) or the first impinger (if the front filter is not used) and the fourth impinger (including glass filter frits) with acetone and place in a suitable marked container. If the moisture condensate in Section 8.3.3 was determined by use of a graduated container, it should also be rinsed with acetone and the rinse added to the impinger rinse container.

8.3.5 Determine the weight gain of the silica gel in the fourth impinger and record. Alternately transfer the silica gel quantatively to an air tight container to be weighed in the laboratory.

8.3.6 Collected samples should be analyzed within one week of collection in order to prevent any possibility of biological or chemical degradation.

9. Analysis

9.1 Desiccate the filter(s) at 70°F or less in the field container for 24 hours and weigh .

Note: In some cases, desiccation may give rise to a slow vaporization of the condensible material. Therefore it is not recommended that an attempt to weigh to constant weight be made.

9.2 Transfer the acetone rinse (Section 8.3.1) into a tared beaker or evaporating dish. Rinse the container with acetone (police to remove particulate) and add the rinse to the beaker. Evaporate the solvent at 70°F or less and laboratory pressure, desiccate 24 hours and weigh . See note in Section 9.1.

9.3 Transfer the acetone rinse from the impingers (Section 8.3.4) to a tared beaker or evaporating dish and treat as in Section 9.2.

9.4 Transfer the water (Section 8.3.3) to a separatory funnel. Rinse the container with distilled water and add to the separatory funnel. Add 25 ml of chloroform to the separatory funnel, stopper and vigorously shake 1 minute, let separate and transfer the chloroform (lower layer) into a tared beaker or evaporating dish. Repeat twice more. Repeat the above extraction using three 25 ml portions of diethyl ether in place of the chloroform. Transfer the ether (upper layer) to the same container as used to contain the chloroform.

Note: It is necessary to rinse the field container for water (if used) with solvent. This rinse may be made using the extracting reagents in which case it is added to the impinger extract container or with acetone in which case it is added to the container in Section 9.3.

9.5 Transfer the remaining water from the separatory funnel to a tared beaker or evaporating dish and evaporate at 105°C . Desiccate for 24 hours and weight.

9.6 Evaporate the combined impinger water extracts from Section 9.4 at 70°F or less and laboratory pressure, desiccate for 24 hours and weigh . See note in Section 9.1.

9.7 Evaporate portions of the solvents used in a manner similar to the sample evaporations to determine the solvent blanks.

9.8 Record all laboratory data in the Laboratory Data Reporting Sheet, Figure 5-9, Source Sampling Method 5.

10. Calculations

10.1 The calculations are the same as outlined in 14. Calculations of Source Sampling Method 5.

11. Minimum Acceptable Test Requirements

11.1 The minimum acceptable test requirements are the same as outlined in 15. Minimum Acceptable Test Requirements of Source Sampling Method 5.

12. Minimum Test Report Information

12.1 The test report should contain sufficient information about the source to accurately define its operation during the test. Also sufficient data and calculations shall be included to document the source test results.

Appendix 1 - Errata (12-12-84)

1. Subsection 3.4.1, page 3; delete "shielded" in first sentence.

2. Subsection 3.10.1, page 5; replace "relative humidity" with "wet and dry bulb temperatures and barometric pressure."

3. Subsection 3.12.5(a), page 7; "rotometer" is misspelled in the first sentence. The correct spelling is "rotameter."

4. Subsection 3.12.5(a), page 7; replace "such as a dry or wet gas meter or an accurate volume (displacement)" with "(dry gas meter) or an accurate volume displacement device (wet test meter)."

5. Subsection 6.3.1(a), page 18: "rotometer" is misspelled in the first sentence.

6. Subsection 6.3.1(a), page 18; the third impinger should not contain silica gel, therefore, the last sentence in the first paragraph, should read "Impingers one, two and three shall be empty for water collection."

7. Equation 6.3.1(a), page 18;

$$\text{"Flow(cfm)} = \frac{Ir}{Dc} \times \frac{1}{60} \times \frac{Tr}{Pr \times 17.65^{a}}\text{"}$$

should read:

$$\text{"Flow(dscfm)} = \frac{Ir}{Dc} \times \frac{1}{60} \times \frac{Pr \times 17.65}{Tr}\text{"}$$

8. Equation 6.3.1(a), page 18; "rotometer" is misspelled on the last line.

9. Footnotes to equation 6.3.1(a), page 19; "[a]=Density specific for SO_2" should be deleted.

10. Equation 6.4.1(a), page 19; "= % Dry basis moisture (free and combined) -1800" should read "= % Dry basis moisture (free and combined) - 1800."

11. Equation 6.4.1(a), page 19; "a = Mole fraction of oxygen in air supply" is replaced by "a = Moles O_2 supplied per mole of stack gas."

12. Equation 6.4.1(h), page 20;

$$\frac{\text{"TSG} \times 386.2\text{"}}{60} \quad \text{should read} \quad \frac{\text{"TSG'} \times 386.2\text{"}}{60}$$

13. Equation 6.5.2(c), page 21; the heat of combustion for carbon monoxide should read "= 121,716 Btu/mole."

14. Equation 6.5.2(d), page 22; all expressions for specific heat appearing as "Btu/mole" where the definition starts with C_pCO_2 should read "Btu/mole^oF."

15. Subsection 7.1.5, page 23; delete "and an hourly average over the entire test cycle at each heat output level."

16. Subsection 7.1.9(a), page 24, "Average flow rate cfm" is deleted.

17. Subsection 7.1.10(b), page 24, "Hydrocarbon: grams/kg, and grams/10^6 joule (calculated)" is deleted.

18. Subsection 8.2.1, page 25; "certifiation" is mispelled in the first sentence. The correct spelling is "certification."

19. Dicholoromethane should be substituted for chloroform or diethyl ether for the Method 7 analysis.

Note for Clarification only: All catalytic combustor aging procedures must be conducted by a DEQ accredited test laboratory for stove certification purposes.

Scheduled Maintenance

340-21-070 (1) In the case of shutdown of air pollution control equipment for necessary scheduled maintenance, the intent to shutdown such equipment shall be reported to the Department at least twenty-four (24) hours prior to the planned shutdown. Such prior notice shall include, but is not limited to the following:

(a) Identification of the specific facility to be taken out of service;

(b) The expected length of time that the air pollution control equipment will be put out of service;

(c) The nature and quantity of emissions of air contaminants likely to occur during the shutdown period;

(d) Measures, such as the use of offshift labor and equipment, that will be taken to minimize the length of the shutdown period, and where practical, minimize air contaminant emissions;

(e) The reasons that it would be impractical to shut down the source operation during the maintenance period.

(2) Additionally, in the case of maintenance scheduled more frequently than one time in a 90-day period, requiring shutdown of air pollution control equipment, or for any maintenance requiring shutdown of air pollution control equipment for a time period longer than 48 hours, prior approval of the maintenance program may be required by the Department. Application for approval shall be submitted in writing within 30 days after a request by the Department and shall include, in addition to subsections (a) through (e) in section (1) of this rule, specific information as to the frequency and the necessity of the scheduled maintenance. Approval of the program by the Department shall be based upon a determination that the proposed maintenance schedule is necessary and that all reasonable precautions have been taken to minimize the extent and frequency of air contaminant emissions in excess of applicable standards.

(3) No scheduled maintenance resulting in the emission of air contaminants in violation of applicable standards shall be performed during any period in which Air Pollution Alert, Air Pollution Warning, or Air Pollution Emergency has been declared.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 37, f. 2-15-72, ef. 3-1-72

Malfunction of Equipment

340-21-075 In the event that any emission source, air pollution control equipment or related facility malfunctions or breaks down in such a manner as to cause the emission of air contaminants in violation of applicable standards, the person responsible for such equipment shall:

(1) Notify the Department, by telephone or in person, of such failure or breakdown within one (1) hour of the occurrence, or as soon as is reasonably possible, giving all pertinent facts including the estimated duration of the breakdown.

(2) With all practicable speed, initiate and complete appropriate action to correct the conditions, and to reduce the frequency of such occurrences.

(3) Cease or discontinue operation of the equipment or facility no later than 48 hours after the beginning of the breakdown or upset period if the malfunction is not corrected within that time. The Director may, for good cause shown, which shall include but not be limited to, equipment availability, difficulty of repair or installation, and nature and amount of the emission, authorize the extension of the operation period beyond 48 hours under this section for a reasonable period of time as determined by him to be necessary to correct the malfunction or breakdown.

(4) In the event an Air Pollution Alert, Air Pollution Warning, or Air Pollution Emergency is declared, or in the event the nature or magnitude of emissions from malfunctioning equipment is deemed by the Department to present an imminent and substantial endangerment to health, immediately proceed to cease or discontinue operation of the equipment or facility.

(5) Notify the Department when the condition causing the failure or breakdown has been corrected, and upon request, submit a written statement of the causes and the action taken to prevent future similar upset or breakdown conditions.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 37, f. 2-15-72, ef. 3-1-72

Woodstove Certification

Definitions

340-21-100 Unless otherwise required by context, as used in this Division:

(1) "Accredited" means a woodstove testing laboratory holds a valid certificate of accreditation issued by the Department.

(2) "Audit test" means a test conducted by the Department to verify a laboratory's certification test results.

(3) "Catalyst-equipped" means a woodstove with a catalytic combustor that is an integral component of the design and manufacture of a woodstove.

(4) "Certify" means the Department has acknowledged in writing that a woodstove meets Department emission standards when tested by an independent laboratory according to Department test procedures.

(5) "Consumer" means any person who buys a woodstove for personal use.

(6) "Dealer" means any person engaged in selling woodstoves to retailers or other dealers for resale. A dealer which is also an Oregon retailer shall be considered to be only a retailer for purposes of these rules.

(7) "Fixed air supply" means an air supply system on a woodstove which has no adjustable or controllable air inlets.

(8) "Heat output" means the heat output (Btu/hour) of a woodstove during one test run, measured under test conditions prescribed by OAR 340-21-120.

(9) "Informal Departmental conference" means a meeting of a manufacturer, dealer, retailer, or laboratory representative and a representative of the Department to discuss certification or accreditation denial or revocation, or civil penalties. An informal Departmental conference is not part of a judicial process or the formal hearing process as described in Oregon Administrative Rules Chapter 340, Division 11.

(10) "Manufacturer" means any person who constructs a woodstove or parts for woodstoves.

(11) "New Woodstove" means any woodstove that has not been sold, bargained, exchanged, given away or has not had its ownership transferred from the person who first acquired the woodstove from the manufacturer's dealer or

agency, and has not been so used to have become what is commonly known as "second hand" within the ordinary meaning of that term.

(12) "Overall efficiency (%) over the range of heat outputs tested" means the weighted average combustion efficiency (%) multiplied by the weighted average heat transfer efficiency (%) measured under test conditions (range of heat outputs) and calculated according to specific procedures prescribed by OAR 340-21-115(5). This definition is applicable to the Stack Loss Methodology. For the Calorimeter Room Method, the weighted average overall efficiency means the useful heat output released to the room, divided by the total heat potential of the fuel consumed.

(13) "Retailer" means any person engaged in the sale of woodstoves directly to consumers.

(14) "Smoke emission rate (grams/hour) over the range of heat outputs tested" means the weighted average particulate emissions (grams/hour) that are produced by a woodstove under test conditions (range of heat outputs) specified in OAR 340-21-120 and calculated according to procedures specified in OAR 340-21-115(5).

(15) "Weighted average" means the weighted average of the test results to the distribution of home heating needs in Oregon. (Refer to OAR 340-21-115(5)).

(16) "Woodstove" means a wood fired appliance with a closed fire chamber which maintains an air-to-fuel ratio of less than 30 during the burning of 90 percent or more of the fuel mass consumed in the low firing cycle. The low firing cycle means less than or equal to 25 percent of the maximum burn rate achieved with doors closed or the minimum burn achievable, whichever is greater.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Requirements for Sale of New Woodstoves in Oregon

340-21-105 (1) On and after July 1, 1986, a person shall not advertise to sell, offer to sell, or sell a new woodstove in Oregon unless:

(a) The woodstove has been tested to determine its emission performance and heating efficiency in accordance with criteria and procedures specified in OAR 340-21-120; and

(b) The woodstove is certified by the Department in accordance with procedures in OAR 340-21-125 as meeting the emission performance standards specified in OAR 340-21-115; and

(c) The woodstove is labelled for emission performance and heating efficiency as specified in OAR 340-21-135; provided, however, that section (1) of this rule shall not apply to any sale from any manufacturer or dealer to any Oregon manufacturer or dealer; or to any out-of-state manufacturer, dealer or retailer; or to any offer or advertisement for such sale directed only to such a manufacturer, dealer or out-of-state retailer.

(2) No manufacturer, dealer or retailer shall alter either the permanent or removable label in any way from the label approved by the Department pursuant to OAR 340-21-155.

(3) Violators of any of the above rules may be subject to civil penalties pursuant to OAR Chapter 340, Divisions 11 and 12 or other remedies prescribed by rule or statute.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Exemptions

340-21-110 (1) Wood-fired appliances that are not suitable for heating equipment in or used in connection with residences or commercial installations are excluded from 340-21-105. For example, portable camping stoves.

(2) Wood-fired forced air furnaces that primarily heat living space or water through indirect heat transfer using forced air duct work or pressurized water systems are excluded from 340-21-105.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Emissions Performance Standards and Certification

340-21-115 (1) New woodstoves with minimum "heat output" of less than 40,000 Btu/hr advertised for sale, offered for sale, or sold in Oregon within the period July 1, 1986 to June 30, 1988, shall not exceed the following weighted average particulate emission standards when tested to procedures in OAR 340-21-120:

(a) 15 grams per hour for a non-catalytic woodstove; or

(b) 6 grams per hour for a catalyst-equipped woodstove.

(2) New woodstoves with minimum "heat output" of less than 40,000 Btu per hour advertised for sale, offered for sale, or sold in Oregon on or after July 1, 1988 shall not exceed the following weighted average particulate emission standard when tested and measured according to test procedures in OAR 340-21-120:

(a) 9 grams per hour for a non-catalytic woodstove; or

(b) 4 grams per hour for a catalyst-equipped woodstove.

(3) New woodstoves with a minimum "heat output" of greater than 40,000 Btu per hour, advertised for sale, offered for sale, or sold in Oregon after July 1, 1986 shall not exceed an average particulate emission standard equal to the sum of 8.0 grams per hour plus 0.2 grams per hour for each thousand Btu per hour heat output when tested to procedures in OAR 340-21-120.

(4) The Department will certify a woodstove as meeting the applicable woodstove emission standard after July 1, 1984 in accordance with procedures in OAR 340-21-125.

(5) The weighted average particulate emission shall be calculated as set out in Exhibit 1.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Testing Criteria and Procedures

340-21-120 (1) To be considered eligible for certification, a woodstove must be tested in strict conformance with criteria and procedures contained in the document **Standard Method for Measuring the Emissions and Efficiencies of Residential Woodstoves** dated June 8, 1984, and incorporated herein by reference and on file at the Department.

(2) Testing for certification purposes shall be conducted by a woodstove testing laboratory accredited by the Department in accordance with procedures specified in OAR 340-21-160.

(3) The Department may permit minor changes in the testing criteria and procedures which the Department believes does not affect its accuracy with respect to compliance with the emission standard providing such changes are approved in writing by the Department prior to the actual conducting of such tests.

[Publications: The publication(s) referred to or incorporated by reference in this rule are available from the office of the Department of Environmental Quality.]

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

General Certification Procedures

340-21-125 (1) Any woodstove manufacturer, or dealer, wishing to obtain certification of a woodstove shall file an application with the Department.

(2) An application for certification must include:

(a) An appliance description which includes the woodstove model name and design number, a copy of the appliance's operating manual and a photograph of the stove.

(b) Design plans of the woodstove, identified by design number, which include overall dimensions of the appliance and all dimensions and specifications of components critical to emission control and heating efficiency performance. These components shall include combustion chamber configurations, all air inlet controls, heat exchanger design and make and model numbers of applicable purchased parts.

(c) All test data and support documentation showing that the woodstove has been tested in accordance with OAR 340-21-120 and that it meets the emission performance standard specified in OAR 340-21-115.

(d) A non-refundable certification fee, payable to the Department at the time the application is submitted to the Department, is required for each stove model seeking certification. The fee is:

(A) $1600 for a manufacturer's first model seeking certification; and

(B) $ 800 for each additional model submitted by the manufacturer.

(3) The Department will promptly review an application for certification and:

(a) Notify the applicant in writing within 30 days of receipt of the application, of any deficiencies in the application that cause the application to be incomplete.

(b) Notify the applicant within 60 days of receipt of a completed application whether certification is granted or denied pursuant to sections (4) and (7) of this rule.

(4) When all the preceeding requirements have been met, the Department will issue or deny a certification document to the manufacturer or dealer for the specified woodstove.

(5) If the Department grants certification, the certification status shall be effective for no longer that five years unless extended or terminated by rule or order.

(6) An application for a new document of certification shall be made by submitting a completed application including retests and fees at least 60 days prior to expiration of certification. The Department may waive the retest and fees if the applicant demonstrates the previous evidence used to certify the woodstove has not changed and remains reliable and applicable.

(7) If the Department denies certification of a woodstove, the Department will notify the manufacturer or dealer in writing of the opportunity for a hearing pursuant to OAR Chapter 340, Division 11.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Changes in Woodstove Design

340-21-130 Certification of woodstoves shall be valid for only the specific model, design, plans and specifications which were originally submitted, tested and approved for certification. Any modification to the model, design, plans or specifications shall cause the certification to be ineffective and any so modified woodstoves to be uncertified, unless prior to making such modification the certification holder submits the proposed modification to the Department for approval, and the Department approves it. The Department may approve the proposed modification if the holder demonstrates and the Department finds that the proposed modification would not affect emission performance or heating efficiency.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Labelling Requirements

340-21-135 Woodstoves which must be labelled pursuant to OAR 340-21-105 and shall have affixed to them:

(1) A permanent label, that has been previously approved by the Department in writing as to form, content and location, that shows the test emissions and heating efficiency for the range of heat outputs tested.

(2) A point-of-sale removable label that verifies certification and shows how the appliance's emission test results compare with the Oregon emission performance standard; and shows the heating efficiency and heat output range of the appliance. The label shall be affixed to the appliance at the point-of-sale near the front and top of the stove and remain affixed until sold and delivered to the consumer.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Permanent Label

340-21-140 All woodstoves certified by the Department from July 1, 1984 on, shall be labelled with a permanent and a removable label.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Contents of Permanent Label

340-21-145 (1) The permanent label, or "Certified Test Performance" label, shall contain the following information:

(a) Testing laboratory;

(b) Date tested;

(c) Test procedure used;

(d) Manufacturer of appliance;

(e) Model;

(f) Design number;

(g) The statement: "Performance may vary from test values depending on actual home operating conditions";

(h) A graph showing:

(A) Smoke emission rates, in grams/hour, over the range of heat outputs tested.

(B) Overall efficiency over the range of heat outputs tested.

(2) The axis of the graph shall be identified as follows:

(a) Vertical axis, left side: "Smoke - grams/hour", with a scale of 0 to a maximum of 20, bottom to top.

(b) Vertical axis, right side: "Efficiency - %", with a scale of a minimum of 50 to a maximum of 90, bottom to top.

(c) Horizontal axis, bottom: "Heat Output - Btu/hour", with a scale from 0 to a maximum of 5,000 Btu/hour higher than the highest tested heat output.

(3) Curves describing emissions and efficiency at various heat outputs shall be printed on the graph, and will be developed by the Department as follows:

(a) The emissions curve will be developed by the Department by fitting the emission test data to the quadratic equation:

$$y = a_0 + a_1x + a_2x^2$$

where:

(A) y = particulate emissions (grams/hour).

(B) x = heat output (Btu/hour).

(C) a_0, a_1, a_2 = regression coefficients.

(b) The overall efficiency curve shall be developed by the Department by fitting the efficiency test data to the quadratic equation:

$$y = a_0 + a_1x + a_2x^2$$

where:

(A) y = overall efficiency (%).

(B) x = heat output (Btu/hour).

(C) a_0, a_1, a_2 = regression coefficients.

(4) For woodstoves with a fixed air supply which have only two data points for emissions and two data points for overall efficiency the Department will:

(a) Develop the emission performance description by averaging the two emission data points and describe the performance on the graph with a single point representing the average.

(b) Develop the overall efficiency performance description by averaging the two efficiency data points and describe the performance on the graph with a single point representing the average.

(5) The curves or single points will be developed and fit on the graph by the Department and transmitted to the appliance manufacturer for printing on the label. Changes from the above criteria may be made by the Department as necessary to insure readability. Approval of the label design, layout, and location on the woodstove will be made by the Department and shall be obtained pursuant to OAR 340-21-155.

(6) The label shall be permanently secured or fixed to the appliance so that it is visibly located on the appliance and legible, and meets the following criteria:

(a) A permanent label shall be a label that cannot be removed from the appliance without damage to the label. The label shall remain legible for the maximum expected useful life of the appliance in normal operation.

(b) A label shall be readily visible after installation. Approval of the location of the label on a woodstove will be made by the Department and shall be obtained pursuant to OAR 340-21-155. The label may be located on:

(A) Any visible exterior surface except the bottom of the appliance; or on

(B) Any interior surface of the appliance, within stove compartments, or under overlapping covers or doors, or at another interior location, if the label can be seen after installation and will remain legible for the life of the stove.

(c) A legible label shall be quickly and easily read.

(d) It shall be acceptable to combine the permanent label with another label, such as a safety label, if the design and integrity of the permanent label is not compromised, and if the combination label meets the approval of the Department.

(7) Physical and Material Specifications:

(a) The minimum dimensions of the label shall be at least 3-1/2" long by 2" wide.

(b) The graph on the label shall be at least 3" long by 1-1/2" wide; and any enlargement of the graph shall maintain a proportion represented by the length to width ratio of 2:1.

(c) The label must be made of a material that will satisfy the permanency rule (340-21-145(6)(a)). For instance, it may be made of aluminum, brass, galvanized steel, or another metal, and of a thickness that will ensure permanence of the label.

(d) The information on the label shall be applied to the label in a way that will satisfy the permanency and legibility rules (340-21-145(6)(a) and (c)). For instance, the information may be etched, silk-screened, or die-stamped onto the label.

(e) The label shall be secured to the appliance in a way that it will satisfy the permanency and visibility rules (340-21-145(6)(a) and (b)). For instance, the label may be riveted, screwed, or bolted onto the appliance.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Removable Label

340-21-150 (1) The point-of-sale removable label, or "Emissions and Efficiency Performance" label, shall contain the following information:

(a) **"Smoke (Ave.) _____grams/hour"**, weighted average of tested values.

(b) **"Efficiency (Ave.) _____%"**, weighted average of tested values.

(c) Summary of the applicable emissions standard.

(d) Heat output range, tested values.

(e) Manufacturer of appliance.

(f) Model of appliance.

(g) Design number of model.

(h) A statement verifying certification.

(i) The statement "Performance may vary from test values depending on actual home operating conditions".

(2) The label shall be visibly located on the appliance when the appliance is available for inspection by consumers.

(3) This label may not be combined with any other label or with other information.

(4) The label shall be attached to the appliance in such a way that it can be easily removed by the consumer upon purchase. For instance, the label may be attached by adhesive, wire, or string.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Label Approval

340-21-155 (1) Permanent label:

(a) The Department will provide guidance on the design of labels by supplying information that shall be placed on the label at the time certification is granted.

(b) The manufacturer or dealer shall submit to the Department:

(A) The name, phone number and address of the label manufacturer.

(B) A proof copy of the label, printed on a representative sample of the label stock, shall be submitted to the Department, if practical; if not, a sample of the label stock shall be submitted for review with a proof copy of the label. The copy shall be as representative of the intended final printed label as practical. The copy shall be actual size; and shall show the proposed label design; layout; artwork; print size, style and color; and shall show all the information required on the label, including curves or points.

(C) A drawing, diagram, or photograph that identifies the location of the permanent label on the woodstove.

(D) Information that describes or shows how the permanent label will be affixed to the woodstove. For instance, it may be a description of an adhesive type, adhesive manufacturer, and performance characteristics; or rivet type, rivet manufacturer, and performance characteristics.

(c) Within 14 days of receipt of all information required in subsection (b) of this section, the Department will approve or deny use of the proposed label.

(2) Removable label:

(a) The Department will provide the manufacturer or dealer, at the time of certification with:

(A) A copy of the standardized printed removable label, with all printing specifications; and

(B) The specific information that shall be printed in the spaces on the label by the manufacturer.

(b) The manufacturer or dealer shall submit to the Department for review:

(A) A proof copy of the proposed label with the required information printed on the labels.

(B) The method of attaching the removable label to the woodstove.

(C) The name, telephone number, and address of the label printer.

(c) Within 14 days of receipt of all the information required in subsection (b) of this section, the Department will approve or deny use of the proposed label.

(3) The manufacturer shall submit to the Department three final printed permanent, and three final printed removable labels within one month of receiving the labels from the printer.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Laboratory Accreditation Requirements

340-21-160 A laboratory submitting test data pursuant to requirements in this rule shall have a valid certificate of accreditation issued by the Department. A laboratory may initiate application for an accreditation certificate by submitting written documentation to the Department that accreditation criteria contained in OAR 340-21-165 are met. In addition, the laboratory must demonstrate stove testing proficiency pursuant to OAR 340-21-170, in order to qualify for accreditation.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Accreditation Criteria

340-21-165 (1) All laboratories shall meet the following criteria and standards at the time of application and shall continue to meet these criteria as a condition of maintaining accreditation:

(a) The laboratory shall be an independent third-party testing organization with no organizational, managerial, or financial affiliation with any manufacturer, supplier or vendor of any woodstove covered under its testing programs. For example:

(A) The laboratory shall not be owned by any manufacturer or vendor, or own any manufacturer or vendor of woodstoves.

(B) The management of the laboratory shall not control or be controlled by any manufacturer or vendor.

(C) The laboratory shall not be engaged in the promotion or design of the woodstove being evaluated or tested.

(D) The laboratory shall have sufficient diversity of clients or activity so that the loss or award of a specific contract regarding testing would not be a determinative factor in the financial well being of the laboratory.

(E) The employment security status of the personnel of the laboratory shall be free of influence or control of any one or more manufacturers or vendors of woodstoves tested.

(b) The laboratory shall be operated in accordance with generally accepted professional and ethical business practices. For example:

(A) The laboratory shall accurately report values that reflect measured data.

(B) The laboratory shall limit certification program test work to that for which it can perform competently.

(C) The laboratory shall immediately respond and attempt to resolve every complaint contesting test results.

(c) The laboratory shall be staffed by personnel competent to perform the test procedures for which accreditation is sought, for example:

(A) The laboratory shall assure the competency of its staff through the observation or examination or both of each relevant staff member in the performance of tests, examinations, and inspections that each member is assigned to perform. The observations must be conducted at intervals not exceeding one year by one or more individuals judged qualified by the person who has technical responsibility for the operation.

(B) The laboratory shall make available the description of its training program for assuring that new or untrained staff will be able to perform tests and inspections properly and uniformly to the requisite degree of precision and accuracy.

(C) The laboratory shall maintain records, including dates of the observation or examination of performance of all personnel.

(d) The laboratory shall be equipped with the necessary instrumentation and equipment to test all appliances in accordance with the Department's test procedures.

(e) The laboratory must have in place and maintain a viable record keeping system. This means that records must be easily accessible, in some logical order and contain complete information on the subject. Records covering the following items are required and will be physically reviewed during the on-site assessment either in total or by selected sampling:

(A) Measuring equipment: each instrument name and description, name of manufacturer, model, style and serial number. Specifications on range or level of precision, date

and documentation of calibration, record of maintenance and frequency of calibration.

(B) Data systems: samples of raw and reduced data sheets, test report format, method (manual or automated) of data recording, analysis and reporting.

(C) Staff training dates and results.

(D) Staff competency review dates and results.

(E) Equipment calibration (or verification) records shall include the following: equipment name or description; model, style, serial number; manufacturer; notation of all equipment variables requiring calibration or verification; the range of calibration/verification; the resolution of the instrument and allowable error tolerances; calibration/verification date and schedule; date and result of last calibration; identity of the laboratory individual or external service responsible for calibration; source of reference standard and traceability.

(F) Test data and reports, including emissions and efficiency calculations fully documented and all other items required by the specific test method.

(G) Sample tracking and logging records shall trace the movement of each stove through the laboratory from its receipt through all the tests performed to the final test report. Dates, condition of sample, and laboratory personnel involved should be included.

(f) The laboratory shall maintain a quality control system to help assure the accuracy and technical integrity of its work consisting of the following:

(A) The laboratory's quality control system must include a quality control manual containing written procedures and information in response to the applicable requirements of the test procedures. The procedures and information may be explicitly contained in the manual or may be referenced so that their location in the laboratory is clearly identified. The written procedures and information must be adequate to guide a testing technician and inspector in conducting the tests and inspections in accordance with the test methods and procedures required for the stove testing for which accreditation is sought.

(B) The laboratory shall have a current copy of its quality control manual or laboratory operations control manual available in the laboratory for use by laboratory personnel and shall make the manual available to the Department for review and audit.

(C) The quality control manual shall consist of general guidelines for the quality control of the laboratory's method of operation. Specific information shall be provided for portions of individual test methods whenever specifics are needed to comply with the criteria or otherwise support the laboratory's operations.

(g) The laboratory shall maintain an emissions and efficiency computer program that produces reasonably the same results to the Department's, using a standard data set provided by the Department.

(h) Neither the laboratory owners or business affiliates shall discriminate in management or business practices against any person or business because of race, creed, color, religion, sex, age, or national origin. In addition, neither the laboratory nor its owners or operators shall be certified by any association or are members of any association that discriminates by business or managmeent practices against any person or business because of race, creed, color, religion, sex, age, or national origin.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Application for Laboratory Accreditation

340-21-170 (1) A laboratory applying for accreditation shall state in writing and demonstrate by providing documentation, that they comply with the criteria and standards in OAR 340-21-165 at the time of application, and how they will continue to meet the criteria and standards on an ongoing basis.

(2) The laboratory shall notify the Department in writing within 30 calendar days should it become unable to conform to any of the criteria and standards in OAR 340-21-165.

(3) The laboratory shall demonstrate to the Department that the laboratory's emission and efficiency computer program produces reasonably the same results to the Department's, using a standard data set provided by the Department.

(4) Deficiency in the application will be identified by the Department in writing, and must be resolved by the laboratory before further processing occurs.

(5) The application will not be considered complete for further processing until the laboratory certifies in writing that the deficiencies have been resolved. The application will be considered withdrawn if the applicant fails to certify resolution within 90 days of postmark of notification by the Department.

(6) When the application is approvable, the Department will inform the laboratory in writing and schedule an on-site laboratory inspection.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

On-Site Laboratory Inspection and Stove Testing Proficiency Demonstration

340-21-175 (1) An on-site inspection will be conducted by a Department representative after all laboratory information required by OAR 340-21-165, has been provided by the laboratory, reviewed and approved by the Department. The on-site visit will be conducted when a laboratory initially applies for accreditation and when the laboratory reapplies for a new certificate of accreditation.

(2) During the on-site inspection, the Department representative will:

(a) Observe the Stove Testing Proficiency Demonstration specified in OAR 340-21-170(3).

(b) Meet with management and supervisory personnel responsible for the testing activities for which the laboratory is seeking accreditation.

(c) Review representative samples of laboratory records. To facilitate examination of personnel competency records, the laboratory should prepare a list of names of staff members who perform the tests.

(d) Observe test demonstrations and talk with laboratory personnel to assure their understanding of the test procedures. Refer to OAR 340-21-120 and 340-21-170(3).

(e) Physically examine selected equipment and apparatus.

(f) At the conclusion of the on-site visit, the Department will discuss observations with responsible members of the

laboratory management pointing out any deficiencies uncovered.

(3) In order to be accredited and as a part of each on-site laboratory inspection, each laboratory must demonstrate to the Department's representative its ability to successfully and proficiently conduct and report a woodstove emission and efficiency test. Each laboratory will:

(a) Be required to test one woodstove provided by the Department. Costs for all stove shipping, catalytic combustors, or other necessary parts will be paid by the laboratory.

(b) Be required to test the stove in accordance with testing criteria and procedures specified in OAR 340-21-120.

(c) Conduct the actual emission and efficiency testing in the presence of a Department observer.

(d) Submit all test data, observations and test results to the Department for technical evaluations.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Accreditation Application Deficiency, Notification and Resolution

340-21-180 (1) Any deficiencies noted during the on-site inspection and/or in the test data and test results submitted from the stove testing proficiency demonstration will be specifically identified in writing and mailed to the laboratory within 30 days of the on-site visit.

(2) The laboratory must respond in writing within 30 days of the date of postmark of the notification by the Department and provide documentation that the specified deficiencies have been corrected. All deficiencies must be corrected prior to accreditation being granted.

(3) Deficiencies noted for corrective action will be subject to thorough review and verification during subsequent on-site visits and technical evaluations.

(4) Any deficiences in the test data and/or results may result in subsequent proficiency tests being required at the laboratory with a Department representative present.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Final Department Administrative Review and Certificate of Accreditation

340-21-185 (1) When all application material has been received, including the on-site inspection and the stove testing proficiency evaluation, and there has been time for all deficiencies to be resolved, the Department will grant or deny accreditation.

(2) Accreditation can be denied for failure to comply with or fulfill any of the criteria in OAR 340-21-165, -170, and -175.

(3) When accreditation is approved, a certificate of accreditation will be issued to the laboratory. Accreditation will be granted for a period of three years (36 months) subject to rule change or revocation for cause, pursuant to OAR 340, Division 11.

(4) A certificate of accreditation is not renewable. A holder may obtain a new certificate of accreditation by completing the application procedure in OAR Chapter 340-21-170, and demonstrating compliance with OAR 340-21-165 and 340-21-175.

(5) The Department may select and audit test one stove tested by the laboratory during its accredited status to verify certification test results. Any discrepancies noted will be communicated to the laboratory by certified or registered mail. The laboratory must respond in writing within 30 days of postmark of notification and provide documentation or certification by an authorized member of the laboratory management that the specified discrepancies have been corrected or the laboratory may be subject to civil penalties or revocation of accreditation.

(6) A laboratory may voluntarily terminate its accreditation by written request at any time. The certificate of accreditation must be returned with the request.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

Civil Penalties, Revocation, and Appeals

340-21-190 (1) Violation of any of these rules shall constitute cause to revoke the manufacturer or dealer's woodstove certification or laboratory's certificate of laboratory accreditation, and also may be subject to civil penalties and other remedies pursuant to rule or statute.

(2) Certification of a woodstove may be revoked if the woodstove was tested at a laboratory that was found to be in violation of accreditation criteria and rules at the time the woodstove was tested for certification.

(3) When certification or accreditation has been revoked, the holder shall return the certification or accreditation document to the Department and cease to use mention of Department certification or accreditation of the stove model or laboratory on any of its test reports, correspondence or advertising.

(4) Stove certification and lab accreditation revocation shall be handled as contested cases pursuant to OAR Chapter 340, Division 11.

Stat. Auth.: ORS Ch. 468
Hist.: DEQ 11-1984, f. & ef. 6-26-84

EXHIBIT 1
(340-21-115)

Calculating Weighted Average
Particulate Emission

$$\bar{E} = \frac{K_1E_1 + K_2E_2 + K_3E_3 \ldots + K_nE_n}{K_1 + K_2 + K_3 \ldots + K_n}$$

where: $\bar{E}$ is the weighted average particulate emission rate in grams per hour; E_1, E_2, $E_3 \ldots E_n$ are the particulate emission rates in grams per hour from test runs 1 through n in order of increasing heat output; and K_1, K_2, $K_3 \ldots K_n$ are the weighting factors for test runs 1 through n. The weighting factors (K_i) are calculated as follows:

$$K_i = P_{i+1} - P_{i-1}$$

where P_i is the cumulative probability from Table 2 for the heat output measured during each test run, $P_o = 0$, and $P_{n+1} = 1$.

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

IN THE HOUSE

HOUSE BILL NO. 293

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to municipal default on bonded indebtedness; establishing the Municipal Financial Emergency Commission; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS. The legislature finds that

(1) while the power of municipalities to contract debt for capital improvements is granted by the Alaska Constitution, revenues that may be raised to repay the debt are limited by the extent to which the state has delegated taxing authority to the municipalities under art. X, sec. 2 of the Alaska Constitution;

(2) the state has a strong interest in debt issuance by municipalities because of the impact on state revenue as a result of municipal assessment to repay debt and because of the effect on the marketability of bonds issued by the state and its agencies, by public corporations of the state, by other municipalities, and by the Alaska Municipal Bond Bank Authority;

(3) bonds issued by municipalities are not legal obligations of the state, nor are the bonds supported by the moral obligation of the state; and

(4) it is in the public interest, and is declared to be a public purpose, to promote the prosperity and general welfare of all the people of the state by assisting in the development and implementation of refinancing plans for municipalities that have defaulted on outstanding debt.

* Sec. 2. AS 29.58 is amended by adding new sections to read:

ARTICLE 7. DEFAULT ON BONDED INDEBTEDNESS.

Sec. 29.58.400. MUNICIPAL FINANCIAL EMERGENCY COMMISSION. (a) The Municipal Financial Emergency Commission is established in the Department of Community and Regional Affairs.

(b) The members of the commission consist of the commissioner of the Department of Community and Regional Affairs, the commissioner of the Department of Revenue, and the commissioner of the Department of Administration. Members of the commission may appoint a designee to serve on the commission.

(c) The commissioner of the Department of Community and Regional Affairs shall chair the commission. A quorum of the commission consists of two members.

(d) The commission may employ staff as is necessary to accomplish the purposes of the commission.

Sec. 29.58.410. DUTIES AND POWERS OF THE COMMISSION. (a) Upon receipt of a written notice of a default by a municipality, as provided in AS 29.58.420, the Municipal Financial Emergency Commission may

(1) investigate the defaulting municipality's fiscal affairs, consult with the assembly or council of the defaulting municipality, and negotiate with creditors in order to assist the municipality in developing a plan for satisfaction of the outstanding debt;

(2) direct a state agency holding money on behalf of or payable to the defaulting municipality to pay the money either to the commission for payment to creditors, or to the defaulting municipality for disposition as required under an adopted plan;

(3) determine whether a proposed plan is fair and equitable and within the ability of the defaulting municipality to meet, and, if so, enter an order finding that it is fair, equitable, and within the

ability of the municipality to meet;

(4) advise the defaulting municipality to take the necessary steps to implement the plan;

(5) order the defaulting municipality to take the necessary steps to implement the plan if the municipality fails to implement the plan within 30 days after receiving the advice of the commission to implement the plan;

(6) require periodic reports on the defaulting municipality's financial affairs during the period in which the plan is implemented;

(7) approve or reject the defaulting municipality's annual budget ordinance during the period in which the plan is implemented;

(8) approve or reject the issuance of additional bonds, notes, or other debt, whether short- or long-term, during the period in which the plan is implemented;

(9) impound the books and records of a defaulting municipality and assume full control of its financial affairs, including the levying of taxes, expenditure of money, and adoption of budgets, if the municipality fails to implement a plan, or if, in the opinion of the commission, the defaulting municipality will default on a future debt service payment under the plan if the financial policies and practices of the municipality are not improved; and

(10) order a defaulting municipality to pay for the cost of developing and implementing a plan.

(b) The power and authority granted to the commission continues, with respect to a defaulting municipality, until the commission is satisfied that the defaulting municipality has performed or will perform the duties required of it in the plan, and until agreements made with the defaulting municipality's creditors have been performed

in accordance with the plan.

(c) The commission is authorized to take all actions necessary to accomplish the purposes of AS 29.58.400 -- 29.58.490, including, but not restricted to, the authority to issue subpoenas necessary for the production of documents and the authority to issue orders. A superior court may, upon application of the commission, compel obedience with a subpoena or order issued by the commission.

Sec. 29.58.420. NOTICE OF DEFAULT. (a) A municipality shall give notice of default to the commissioner of community and regional affairs within 10 calendar days after actual knowledge of the default.

(b) A creditor may give notice to the commissioner of community and regional affairs any time after a default by a municipality.

(c) A municipality may request the assistance of the commission at any time before default if, in the judgment of the municipality, assistance from the commission will assist the municipality in relieving financial distress.

Sec. 29.58.430. ACTION UPON RECEIVING NOTICE OF DEFAULT. The commissioner of community and regional affairs shall convene a meeting of the commission within 15 days after the receipt of a notice of default, or of a request for assistance, under AS 29.58.420. The defaulting municipality must be given notice of the meeting, and shall send an authorized representative to the meeting to represent the defaulting municipality during the development of a plan under AS 29.58.410.

Sec. 29.58.440. STAY OF COURT PROCEEDING. (a) A proceeding initiated in court by a creditor must be stayed until 90 days after the first meeting of the commission following the receipt of the notice of default by the commissioner of community and regional affairs.

(b) The court may grant one or more 30-day extensions of the

stay, at the request of the commission, unless the court finds that the defaulting municipality or the commission has not made a good faith effort to negotiate a plan under AS 29.58.410.

Sec. 29.58.450. BANKRUPTCY PETITION. AS 29.58.400 -- 29.58.490 do not limit or otherwise affect the authority of a municipality to file a petition in bankruptcy under 11 U.S.C. secs. 901 -- 946.

Sec. 29.58.460. PENALTY. A municipal official, employee, or agent who knowingly violates a provision of a plan developed under AS 29.58.410 is guilty of a class C felony.

Sec. 29.58.490. DEFINITIONS. In AS 29.58.400 -- 29.58.490,

(1) "commission" means the Municipal Financial Emergency Commission;

(2) "creditor" means a person having standing to bring an action for default on outstanding debt against the defaulting municipality;

(3) "default" means the failure by a municipality to pay an installment of principal or interest on its outstanding debt, on or before the due date;

(4) "defaulting municipality" means a municipality that has defaulted, or which continues to be subject to the jurisdiction of the commission after the implementation of a plan under AS 29.58.410;

(5) "outstanding debt" means revenue anticipation notes, bond anticipation notes, general obligation bonds, revenue bonds, or refunding bonds issued under this chapter.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

Cape May County, New Jersey

$19 million general improvement bonds due 1987-1996
Competitive, March 5
Rated 'A-'

Rationale: S&P affirms Cape May County, N.J.'s 'A-' rating on outstanding general obligation general improvement bonds and assigns an 'A-' rating to the current $19 million offering. The rating reflects strong financial performance and rapid bond retirement, coupled with the tourist-based economy and below-average wealth and income levels. Because of the developments in the casino industry in nearby Atlantic City, building permit activity is very strong. The casino industry also benefits from the county's commercial fishing industry because of increased tourism and year-round populations.

Economy: Cape May County forms the southernmost tip of New Jersey. The county is a peninsula, 454 square miles in total area, and has had steady population growth since the 1960s. The county's major industry is tourism, with the summer tourist industry the strongest economic factor for over 50 years. Population in the summer months increases to 593,856 from 95,724. Unemployment rates are seasonal in nature; during the summer of 1985, unemployment dropped to a low of 6% and reached 15% during the winter. Recent developments in the casino industry in nearby Atlantic City have significantly impacted the county's economy. Building permit activity has been very strong over the past few years with the construction of new hotels and motels, townhouses, and condominiums. The commercial fishing industry continues to be influenced favorably by Atlantic City as the larger tourist and permanent populations create greater seafood consumption.

Debt: Proceeds from this issue will be used for various municipal buildings, road, bridge, and storm sewer construction. With this issue, the county will have outstanding net debt of $29.8 million. Per capita debt is high at $1,007, but low as a percent of true value at 3.9%. Bond retirement is rapid, retiring 87% of the debt in 10 years. The S&P index, measure of per capita debt to per capita effective buying income, is moderate at 9.1%. The county's capital improvement program for the next five years amounts to approximately $16.2 million, with 68% expected to be funded from bond proceeds.

Finances: Financial operations are sound. Revenues are derived primarily from property taxes, which account for approximately 70% of current fund revenues. The largest expenditures item is health and welfare, accounting for 24% of operating expenses. Debt service expense will increase with this sale to approximately 10% of budget. Unaudited results for year ended Dec. 31, 1985 show an ending fund balance net of deferred charges of $6.1 million, or 14% of current fund revenues, a slight decrease from year-end 1984's $6.4 million fund balance. The budget outlook for fiscal 1986 is expected to continue on a favorable basis, with revenues projected to be in line with budget expectations.

Dominick J. Truglio
(212) 208-1769

Alaska

Reviewed: rating affirmed

Rationale: S&P affirms Alaska's 'AA-' rating on all outstanding general obligation bonds. With the continued "softening" of the world oil market, a new approach to revenue forecasting known as the "30th percentile" has been implemented. The 30th percentile method means that, in the estimation of the state financial forecasters, there is a 70% chance that revenues will actually be greater than the amounts forecasted, and only a 30% chance that they will be less. Current projections reflect an average annual decline in petroleum revenues of approximately 10% for 1986-1988. Indications are that at current levels the projected decline will not adversely affect state revenues in the short run. However, in the long run, an absence of sustained exploratory activity, smaller discoveries, enhanced recovery, and production of heavy oil, at least at current levels, can adversely affect state revenues. Financially, the state continues to perform in a manner commensurate with its rating, as evidenced by a good cash and fund balance position, and a strong permanent fund. The fishing and timber industries, important contributors to the Alaskan economy, are still somewhat depressed, but continue to show signs of gains. Debt remains manageable and is declining as the state continues to meet some of its capital needs through pay-as-you-go financing. Overall, the state's economy continued to show growth in population, employment and personal income, and maturation in the trade and services sectors.

Economy: The state's economic base is primarily extractive, with major dependence upon oil and gas production, and to a somewhat lesser extent, the supportive industries of fishing, timber, minerals, and tourism. Approximately 86% of state revenues are derived from royalties and taxes paid on state-owned oil and gas leases. Indications are that the production level of several Cook Inlet fields is declining and production from the Prudhoe Bay field will substantially decline in the 1990s. As of Jan. 1, 1986, the Alaska Oil and Gas Conservation Commission estimated the state's remaining recoverable reserves to be 7.995 billion barrels of oil and 34.23 trillion cubic feet of gas. Approximately one-third of Prudhoe Bay's estimated 9.6 billion barrels had been produced by year-end 1984. Some encouragement may be gained from the fact that there have been varied successes in oil and gas exploration in North Slope, totaling an estimated 2.5 billion barrels of recoverable oil. This new exploration bolstered a relatively strong employment picture. Arco Alaska and Standard Oil Co. of Ohio, two major petroleum operators, are cutting their construction budgets by 43% and 17%, respectively. The combined exploration spending still represents a large sum for 1986 at $1.25 billion. State revenue forecasters believe that in the short run, the current decline in world oil prices will be offset at the wellhead by the reduction in the Trans Alaska Pipeline System tariffs, by approximately $1.20 per barrel. A partial settlement was reached in a long outstanding tariff litigation between the state and pipeline owners. The state will receive a total of $285 million, including refunds from 1982-1985, as a result of this settlement. However, the settlement will have an adverse effect on local communities who depend on the pipeline for a portion of their property taxes. North Slope Borough will lose approximately $2.0 million annually, while Valdez and Fairbanks North Star will lose approximately $1.8 million and $500,000 annually, respectively. In fiscal 1986, the state will receive an added $227 million from this settlement.

The fishing and timber industries continue to be important contributors to the state's economy. Total revenues to fishermen from fish catch sold in Alaska for fiscal 1985 was $700 million, compared to $602.3 million in 1984. Since 1977, salmon catches have been improving, however, the shell fish industry, which includes king crab and shrimp, the major revenue contrib-

(continued on next page)

utors, remains somewhat depressed. However, it is anticipated that harvests will continue to improve, and the future of the industry enhanced by the priority given to U.S. fisheries over foreign fleets to harvest within the 200-mile fisheries conservation zone. Alaska forests are expected to remain a major source of timber, despite restrictions imposed by the Alaska National Interest Lands Conservation Act of 1979. As part of the settlement act passed by Congress, the industry has been guaranteed 450 million board feet per year, a quantity capable of sustaining traditional harvest levels. The industry has been declining since 1980, as export of forest products have declined at an average annual rate of 10% due to competition and a strong U.S. dollar. In 1984, forest product exports totaled $219 million, or 21% of all Alaska exports.

Anticipated depletion of oil reserves in the future resulted in attention to minerals and mineral deposits. Shipments of coal to Korea from the Usibelli Mine, which began in 1984 and now totals 560,000 tons yearly, may be increased to 800,000 tons in 1986. Development of a world-class molybdenum mine by U.S. Borax & Chemical Co. is continuing with expectations of 900 new jobs on completion. Also under development are the Red Dog and Greens Creek zinc and lead mines. The Red Dog deposit is estimated at 29% of U.S. deposits and is the second largest zinc deposit in the world. Tourism continues to contribute significantly to the economy. Its importance is underlined by the size of the marketing budget of $8.1 million in 1985, and a projected $7.2 million in 1986. In 1984, 700,000 visitors spent a total of $620 million. Approximately 715,000 visited in 1985.

Following completion of Trans Alaska Pipeline System construction in mid-1977, population which totaled 411,000 in 1978, declined to 402,000 in 1980. Since this decline, major gains have been realized, particularly in the early 1980s resulting in an approximate total increase of 25% for 1980-1984. Current estimated 1985 population is 566,600. For 1980-1984, all sectors of employment continued to experience growth with the exception of mining and manufacturing which had 11% and 1% declines, respectively. Government employment, historically high in Alaska, accounts for 29% of total employment for 1980-1984. Per capital money income experienced modest gains, with the 1981 level at $11,722. This represents 134.8% of the U.S. average; at $12,900 in 1983, it was the equivalent of 135.8% of the U.S. average. Total personal income for 1980-1984 increased from $5,238 million to $8,739 million, or 66.8%.

Finances: The state continues to portray a strong financial posture. Fiscal 1985 unrestricted revenues for the general fund totaled approximately $3.2 billion, excluding amounts which go directly to the permanent fund. Petroleum revenues accounted for approximately 85% of total unrestricted revenues, down from a peak of 90% in 1980. Projected unrestricted general fund revenue for fiscal 1986 is $3.1 billion, of which $2.1 billion, or 66%, will be from petroleum revenues. As of Dec. 31, 1985 the permanent fund balance was $7.0 billion. The fund is expected to total $8.5 billion by 1990 and $16.6 billion by 2000. The amount of fund income available for dividends in 1985 was $217.3 million, with 521,323 eligible applicants receiving $404.

An amendment to limit state appropriations to $2.5 billion, approved by voters at the November 1982 general elections, will be placed on the ballot for reconsideration in the 1986 general election. Under the amendment, state appropriations cannot exceed $2.5 billion for any fiscal year by more than the cumulative change, based on federal indices in population and inflation after July 1, 1981. If rejected, it will be repealed. If approved, the amendment would become permanent, and appropriations may be subjected to impoundment powers of the governor, who may withhold or reduce appropriations during a budget year if revenues are less than appropriations. The amendment has not been operative, and has exceeded any revenues or accrued surpluses available for appropriation.

Debt: Historically, the issuance of state debt has been significant due to the state's commitment to capital improvement programs. The state is currently studying the implementation of a debt management policy, which may have been influenced by declining oil revenues and the need to meet unfilled infrastructure requirements while maintaining a conservative debt position. The policy will include all debt that relies on state general fund appropriations, in particular all nonself-supporting state debt, including G.O. debt, lease revenue debt, and similar obligations paid by the state. The state's last debt issuance was in fiscal 1983. Maximum annual debt service on all bonds is $175.7 million, due in 1986. As currently structured, debt service requirements will decrease substantially through 2000.

Alaska Municipal Bond Bank

Reviewed; ratings affirmed

Rationale: S&P affirms the 'A' rating on all outstanding Alaska Municipal Bond Bank's general obligation bonds and the 'A-' rating on all outstanding bond bank revenue bonds. About $168.5 million of debt is affected. The basis of the rating is the moral obligation of the state. S&P policy establishes this rating at one full category below the existing rating of the state. In this case, the rating would be 'A-' based upon the state's 'AA-' rating. However, the G.O.s of the bond bank where the state has the authority to withhold aid to participating units, in lieu of debt service payments upon the request of the bank, are rated 'A'. The revenue bonds remain at 'A-', where no withholding provisions exist.

The bank: The Municipal Bond Bank Act established the bank as a public corporation and instrumentality of the state of Alaska within the department of revenue, but separate from and independent of the state. The bank, which began operations in August 1975, was created for the purpose of lending money to government units within the state of Alaska by purchasing municipal bonds issued by such governmental units. Under the act and the bank's general resolution, the bank initially was authorized to purchase only G.O. bonds. Effective May 16, 1978, the Alaska state legislature authorized the bank to purchase municipal revenue bonds, and provided that the bank shall be called the Alaska Municipal Bond Bank Authority when issuing revenue bonds, and the Alaska Municipal Bond Bank when issuing G.O. bonds. The purchase of bonds is dependent upon bond counsel's opinion, stating that the bonds are valid obligations of the governmental unit as required by the act and that a loan agreement has been authorized and executed between the bank and the governmental unit, which constitutes a valid and binding obligation of the governmental unit. The powers of the bank are vested in a five-member board of directors, three of whom are public members appointed by the governor and confirmed by the state legislature. The three appointees serve four-year staggered terms. The remaining two members, the Commissioner of Revenue and the Commissioner of Community and Regional Affairs, are permanent.

Finances: Ongoing operations of the bank are not funded by the state's general fund appropriations, but by fees and charges and interest earned on investments. The bank is not allowed to carry surpluses, which must be returned to the state. Since its inception, the bank has returned $7.6 million. In fiscal 1985, $1.8 million was returned. The reserve fund, which receives capital appropriations from the state's general fund for

funds leveraging, is maintained at an amount equal to the maximum annual debt service requirement. As of June 30, 1985, the Alaska legislature has appropriated $17.9 million to the bank for the statutory reserve fund, of which approximately $5.4 million is available to meet statutory reserve fund requirements for future bank bond issues. The bank is annually required to deliver a statement to the governor and state legislature, stating the sum, if any, necessary to restore the reserve fund to the required debt service reserve level. The state is not legally obligated to make such an appropriation and, to date, it has never been necessary.

Debt: The bank has issued $192.8 million in bonds with $166.5 million currently outstanding. The outstanding debt is comprised of G.O., revenue, coastal energy reserve, and coastal energy loan program bonds. There is a statutory debt limit of $300 million, of which $131.5 million remains available. During 1982-1985, the bank's debt issuance has been $48.5 million, $30.6 million, $7.0 million, and $25.8 million, respectively. Due to declining state petroleum revenues, it is anticipated that local units will be turning to the bank on a regular basis for the financing of their capital needs.

North Slope Borough, Alaska

Reviewed: ratings affirmed

Rationale: S&P affirms North Slope Borough, Alaska's outstanding 'BBB+' rating on approximately $794.9 million general obligation bonds. The rating on $52.8 million series D bond anticipation notes due Nov. 18, 1986 is also affirmed at 'SP-1+'. An additional $428.5 million of G.O. debt is outstanding but secured separately by various credit enhancements. The long-term debt rating reflects the narrowness of the borough's economic base, the large amount of debt supported by that base, debt carrying charges that represent 67% of general fund expenditures, balanced by good financial operations and a strong financial position. The borough's economic viability entirely depends on the oil and gas industry, and the outlook for any significant diversification is poor. Due to remoteness and harsh environmental conditions, development of the limited infrastructure that supports the small community required the issuance of large amounts of debt. Total G.O. debt currently outstanding is approximately $1.3 billion. The pace of debt issuance slowed over the past two years and is not expected to exceed $107.4 million over the next three years. As a result, maturing debt should exceed new debt issuance over the period. The debt matures rapidly, with 48% rolling off in five years, and 95% in 10 years. The borough derives 60% of its revenues from a tax on oil- and gas-related real property improvements. Therefore, its main revenue stream is unaffected by fluctuations in oil prices. A small effect is expected from the recently settled pipeline tariff agreements which includes owners' income in the property assessment formula. The borough could lose up to $2 million annually as a result of the settlement (0.6% of total revenues). An additional 27% of revenues is derived from interest earnings. The very large debt burden appears adequately supported by an increasing but very narrow tax base.

Issuer: North Slope Borough is a vast, geographically isolated, sparsely populated area located entirely north of the Arctic Circle. Barrow, located almost 2,000 miles northwest of Seattle, is the borough seat and its largest city (population of 2,647). The virtually impassable Brooks Range forms the borough's southern boundary. A wide range of services is provided by the borough, including health, safety, sanitation, utilities, education, housing, and transportation systems. The borough is analogous to the county form of government in the lower 48 states, but has greater governmental powers. Remoteness, the absence of a modern infrastructure, and severe climatic conditions make the cost of development enormous.

Debt: Debt issuance increased sharply in 1983 and 1984 as infrastructure improvements were made to provide services to residents and to accommodate increased oil-related economic activity. The borough currently has outstanding $1.3 billion G.O. bonds and bond anticipation notes (net of refunded debt). Debt on a per capita basis is extremely high at $121,704, but is a more moderate 7.5% of true value ($13 billion in 1986). Carrying charges are very high as a percent of expenditures. The primary source of payment for the debt is a property tax assessed on capital improvements made at the oil and gas fields at Prudhoe Bay and Kuparuk. These properties represent 95% of the tax base. Capital financing of $107.4 million is planned for the next three years. These funds will be raised principally through issuance of G.O. bonds. An emergency debt service reserve fund was established during fiscal 1984 and is funded at 15% of outstanding debt. At July 1, 1985, a balance of $184 million was available in this fund. Debt service requirements for 1985 totaled $189 million.

Economy: Oil and gas production, transportation, and exploration form the base of the borough's economy. Before the discovery of oil and gas at Prudhoe Bay in 1968, and the construction of the Alyeska Pipeline, economic activity was limited to subsistence hunting, fishing, and military activities (DEW LINE maintenance and research). Further diversification of the economy is not expected due to extreme geographic and climatic problems. The lack of a highway system within the borough makes commercial air service and limited water transportation the only available means of mass transportation.

Within the next 25 years, no basic industry is projected to supplement the oil and gas industry. Maintenance or expansion of the oil industry depends on competitive lease offerings by the state and federal governments. The lead time from lease to production is approximately 10 years. The present production level at Prudhoe Bay of 1.5 million barrels of oil per day represents roughly 18% of total U.S. domestic production. Proven, extractable reserves at Prudhoe Bay are currently projected to last 11 years. Production at Kuparuk has begun and is expected to be 250,000 barrels of oil per day during 1986. An industry investment in Kuparuk is expected to total $8 billion and the economic life of the field is projected at 20-30 years. The two major North Slope operating companies are Atlantic Richfield Co. (Arco) and Standard Oil Co. of Ohio (Sohio). Although Arco's 1986 North Slope construction budget was reduced from $715 million to approximately $500 million as a result of reduced oil prices, work on the Prudhoe Bay Gas Plant and the Kuparuk Lisburne production facility will continue. Sohio has indicated it will proceed with its 1986 construction program as planned.

Finances: General fund financial operations remain strong. Significant operating surpluses were generated in each of the past five years which were transferred to the reserve for capital outlay fund, the emergency debt service reserve fund, or the recently created permanent fund. At July 1, 1985, balances available in these funds were $72 million, $184 million, and $117 million, respectively. As a result of these transfers, the general fund balance was reduced from $56 million in 1983 to $4 million in 1985. The three primary revenue sources of the general fund are property taxes (60%), interest earnings (27%), and state aid (10%). Tax collections are excellent, reaching roughly 99% on a current basis in each of the last five years. Debt service of $189 million represented 67% of general fund expenditures in 1985. As of July 1, 1985, a balance of $184 million was available in

(continued on next page)

the emergency debt service reserve fund. Monies in excess of the 15% requirement in this fund will be transferred to the permanent fund. As of June 1985, $4 million was transferred from the emergency debt service reserve fund to the permanent fund. An additional $79 million transfer from the general fund left a balance of $117.4 million available in the permanent fund to be held in perpetuity. Interest earnings on permanent fund balances will be used for general fund operations. Although financial management is sound, large debt service carrying charges, the range of services provided, and the high cost of service provision will continue to absorb the borough's large financial resources.

MUNICIPAL REVENUE

Alaska Industrial Development Authority

$11 million variable demand/fixed rate bond due 2004
Sold, February 25, Goldman, Sachs & Co.
Rated 'A–'

Rationale: S&P assigns an 'A–' rating to the Alaska Industrial Development Authority's conversion of its variable demand/fixed rate bonds, series 1984 A and B to a fixed rate. The 'A–' rating on the outstanding economic development bonds, the consolidated bonds, and the umbrella bonds is affirmed. The rating is based upon the moral obligation pledge of the state of Alaska, whose rating is affirmed at 'AA–'. The bonds are additionally secured by the general obligation of the authority.

Issuer and security: The state legislature established the Alaska Industrial Development Authority in 1967 to aid in economic development. The authority was originally created to administer the enterprise development fund. This fund was capitalized in 1981 with $166 million in state-originated loans. In addition, the state contributed $23 million to fund the capital reserve funds. In 1982 and 1984, the enabling act was amended to expand the authority's powers. In 1982, the multifamily housing loan security fund was set up and in 1984 the economic development fund. All three programs are legally separate and distinct. All economic development activities are channeled through the enterprise development fund. This fund holds the authority's general assets from which all of the authority's general obligation indebtness is payable. The enterprise development fund as of Dec. 31, 1985 had general assets of $525 million. The multifamily housing fund, which is not an asset of the authority, provides additional security to any of the authority's G.O. bonds issued for multifamily housing projects. This fund at Dec. 31, 1985 held $8 million in assets. The economic development fund empowers the authority to own and operate certain types of facilities when it is in the public interest to do so. This fund was capitalized with an appropriation of $12 million in cash and $132 million in loans held by the state. Financial obligations or liability incurred will be secured solely by the economic development fund and there is no general obligation pledge of the authority.

The authority has four types of bond issues outstanding: economic development bonds, consolidated bonds, umbrella bonds, and variable demand/fixed rate bonds. All issues except the variable demand/fixed rate bonds are secured by a general obligation pledge from the authority. Variable demand bonds are special obligations of the authority which become G.O.s upon conversion to a fixed rate. All bonds are further secured by the state's moral obligation pledge, if necessary, the state's legislature can, but is not obligated to, appropriate funds to the bonds through their capital reserve funds pursuant to notice under state statutes, if these reserves fall below required levels. The authority's total outstanding G.O. debt at June 30, 1985 is $213 million. This issue will increase debt by $11 million to $224 million. Total variable rate/fixed rate debt at Dec. 31, 1985 excluding this conversion is $40 million. The total $40 million is expected to be converted to fixed rate by the end of 1986 for $254 million in G.O. debt of the authority.

The economic development bonds provide funds for participations in loans for industrial and commercial projects up to $1 million. All revenues from these loan participations are pledged first to the payment of economic development bonds and then to the other G.O. debt of the authority. As of June 30, 1985, the total outstanding economic development bond debt was $126 million. Consolidated bonds provide funds for participations in loans for industrial, commercial, and multifamily housing projects from $1–$10 million. Revenues from these participations are not specifically pledged to the repayment of consolidated bonds. However, this is not a credit concern because both economic development and consolidated bonds are secured by the authority's general obligation and the state's moral obligation pledges. As of Dec. 31, 1985, outstanding consolidated bonds totaled $59 million.

The new umbrella bond program is intended to replace both the economic development and consolidated bonds. These new bonds do not have claim to the economic development, consolidated, and variable rate bonds' existing capital reserve funds. A separate reserve fund for the umbrella bonds was established with similar provisions to the previously issued bonds. At Dec. 31, 1985, the balances in all the capital reserve funds for the authority's G.O. debt is $26 million. This balance reflects the average annual debt service payments of the bonds.

Loan portfolio: The authority's portfolio of loans falls into three categories: bond loans, appropriation loans, and federal guaranteed loans. Bond loans derive their funds from bond proceeds, appropriated loans from state appropriated money, and federal guaranteed loans from the authority's funds on hand. These three sources of funds are used to buy loan participations from Alaska financial institutions. The fiscal 1985 composition of the portfolio is 22% appropriated loans, 61% bond loans, and 17% Small Business Administration (SBA) guaranteed loans. Appropriated loans are expected to decline to an insignificant percentage of the portfolio by 1991. Funds from the paid-off appropriation loans are used to buy SBA loans or investments. However, no SBA loans have been purchased in the last year due to remittance procedure problems with the new SBA servicer FIDATA. Until this situation is eliminated, no future investments in the SBA program will be maintained. The authority's purchase of loan participations is limited to completed projects that satisfy all terms of the authority's loan underwriting criteria. The authority's capital participation rate in loans under $1 million is 90% and 80% for those between $1–$10 million. Loans are disbursed geographically in proportion to the state's population distribution. As a result, the Anchorage area has the highest percentage of bonded loans at 55.5%. The portfolio's investment in projects is concentrated mainly in commercial space, approximately 78% in fiscal 1985. Bond loans delinquency rates on 90 days and over are still below 1%, even given the slump in the Alaska economy. This low rate is attributed to stringent underwriting criteria. In addition, each participating financial institution must provide servicing on all loans and maintain a 90-day delinquency rate below 2% or be suspended from selling new participations until the rate is controlled. The authority has a loan loss reserve fund of $2.6 million. This was created in 1991 and to date, the only charge offs are $1.1 million in defaulted appropriated loans. The reserve is

returned to its original level from earnings. The authority reviews the adequacy of this reserve fund annually with its accountants.

Finances: The authority's assets have grown from $218 million in 1981 to $524 million in 1985. Liabilities total $220 million in fiscal 1985, of which $213 million are bonds payable. All operating expenses are paid from commitment and finance fees. In fiscal 1985, this totaled $1.4 million to cover expenses of $1.1 million. Net earnings have risen from $16 million in fiscal 1981 to $30 million in fiscal 1985. The authority has unrestricted investments, capital reserve funds, cash, and interest earnings totaling $157 million at June 30, 1985 to meet shortfalls in debt service of approximately $28 million. Unrestricted surplus at June 30, 1985 is $264 million.

During fiscal 1986, the authority will convert all of its remaining $40 million variable rate debt to fixed. In addition, during 1986's first half it intends to issue its first taxable financing of $15 million. For fiscal 1987 and beyond, approximately $65 million in debt will be issued a year. It is impossible to determine how H.R. 3838 will affect future issuances other than to assume the program will continue with additional volume constraints.

Andrea M. Esposito
(212) 208-1834

Alaska Housing Finance Corp.

Reviewed: ratings affirmed

Rationale: S&P affirms Alaska Housing Finance Corp. (AHFC) ratings on $4.27 billion in outstanding taxable and tax-exempt debt. The bonds, issued under 59 resolutions, are secured by over 52,000 level-paying mortgage and growing equity mortgage (GEM) loans. The loans are originated throughout the state by private lenders and subsequently purchased by the AHFC with bond proceeds. Direct state appropriations (in cash and in mortgages) permit the purchase of mortgage loans which bear interest at legislatively prescribed "below market" rates. To enhance the security of its bonds, the AHFC has entered into various credit arrangements. They include: Federal Housing Administration (FHA) Title I insurance, Federal National Mortgage Association (FNMA) and Government National Mortgage Association (GNMA) collateralization, bank letters of credit, and surety bonds. Additionally, the issuer enjoys strong support from the state of Alaska; 13 issues are guaranteed by a pledge of the state's full faith and credit. The affirmed bond ratings reflect the strength of the credit enhancements (*see list at right*).

Issuer: To date, AHFC has received $563 million in state appropriations. Fiscal year ending Jun[illegible] 1985 witnessed no requests for additional funding. Such funding will not be sought in the foreseeable future. Fund balances of $1,458 million (fiscal 1985) reflect the healthy, well managed performance of the issuer to date. The corporation has a staff of 43 with experience in administration, mortgage underwriting, and finance. AHFC is governed by a five-member board consisting of two ex-officio and three governor-appointed members.

Programs: Since its inception in 1971, AHFC has adopted many innovative programs and financing techniques. The principal activities include:

—*Mortgage loan subsidization.* All of the corporation's programs provide an interest rate subsidy on the first $90,000 of a mortgage loan to Alaskan borrowers. The state currently subsidizes the mortgage loans to a maximum of 3% (4% for eligible veterans) below the cost of taxable funds to the corporation. However, loan rates may not be less than 10% (9% for veterans) unless the corporation's related cost of funds is less than 10%.

—*Taxable bonds.* To overcome the constraints of tax-exempt issuance caps ($200 million per annum), the corporation began issuing taxable bonds in 1981. It currently has approximately $1.3 billion in taxable debt outstanding, $100 million of which was issued in 1985.

—*Alaska Building Equity loan program.* In 1983, AHFC introduced its own version of the GEM loan. Titled the Alaska Building Equity (ABE) loan, it requires an increase in the borrower's monthly payments to provide for an accelerated amortization of principal. Thus, it can take advantage of shorter-term, lower interest taxable bonds.

—*FNMA collateralization.* In 1983, AHFC signed a $530 million pool purchase contract with FNMA enabling Alaskan mortgages to be swapped for FNMA mortgage-backed securities.

Collateralized 1984 first series	100.0	AAA
Collateralized 1984 second series	302.5	AAA
Collateralized 1985 first series	150.0	AAA
Second mortgage bonds	9.3	AA
Fairbanks North Star Borough res. mtge. bonds	26.1	A–
AHFC Overseas Finance N.V. gtd. bonds	98.1	AAA

*Guaranteed by full faith and credit of the state of Alaska.

(continued on next page)

(WBSs). These WBSs are then, in effect, purchased with bond proceeds and used as collateral for the bonds. Such collateralization has enabled the issuer to obtain 'AAA' ratings on 10 tax-exempt and taxable issues to date.

—*Recycling.* AHFC relies heavily on recycling, wherein prepayments are used to make new mortgages, in many of its bond structures. This technique has reduced the need for future bond financings and state appropriations.

Platte River Power Authority, Colorado

$113 million electric revenue bonds due 2018
Sold, February 20, Salomon Brothers Inc.
Rated 'A+'

Rationale: The $113 million issue of Platte River Power Authority electric revenue bonds is rated 'A+', along with $618 million of outstanding parity debt. The 'A' rating of the Loveland, Colo. electric revenue bonds was reviewed in connection with this sale and is affirmed. The ratings reflect the strength of the participant cities' economic bases and good financial performances. The authority's rates to the cities are low because capacity charges to Public Service Co. of Colorado are sufficient to pay debt service. Bond proceeds will be used to retire all outstanding commercial paper. The authority has refunded the commercial paper program instead of retiring it from revenues as was planned to avoid potential tax problems and to take advantage of current long-term interest rates.

Security: The bonds are secured by take-or-pay contracts with the cities of Fort Collins (45.7% of the project), Longmont (28.1%), Loveland (21.5%), and Estes Park (6.1%). The authority's rate covenant is net revenues 1.25 times (x) adjusted aggregated debt service. Debt service is adjusted to levelize payments of term bonds in 2000 and 2002. The additional bonds test requires net revenues in 12 of the preceding 24 months prior to issuance to meet the rate covenant. Additional security is provided by a debt service reserve fully funded to maximum debt service at the time of bond issuance.

Operations: Platte River's resources include energy and capacity under contract with the Western Area Power Administration (WAPA) through 1989. The authority receives 156mw in the winter and 238mw in the summer. The authority owns the 255mw coal-fired Rawhide Energy Station and an 18% share of the Yampa Project coal-fired Craig units, totaling 154mw. Excess capacity in the Craig and Rawhide units is sold to Public Service under a contract through 1994, which is less than the life of the bonds. Public Service is obligated to take-or-pay for capacity and energy made available in accordance with the schedule in the contract. If the contract schedules are not met, Public Service has the option to terminate the contract. Therefore, these bonds are not rated on the basis of the Public Service contract. Revenue derived from these sales is sufficient to pay all Platte River debt service at this time. In 1985, Platte River sold 340.5mw of capacity per month and 2,380gwh to Public Service.

Platte River expects peak demand to grow at a compound rate of 5.4% per year in the future and for energy sales to grow 5.9% per year. Since 1980, annual growth rates ranged from −3.8% to 16.4% for peak demand and from 3.3% to 11.8% for energy sales. The average growth rates of 5.9% and 5.7%, respectively, were strong despite this volatility. Based on this growth, Platte River expects to sell power from Yampa and Rawhide to participants when sales to Public Service end.

Rates: The authority is currently charging the participants 35 mills per kwh. Retail rates in all cities except Loveland are below those of Public Service and the Poudre Valley cooperative supplied by Tri-state generation and transmission cooperative. Loveland's rates are only marginally above Public Service's rates. The authority does not anticipate raising rates to the participants until 1991 when it begins taking back its Rawhide capacity. Between 1991 and 1998, rates are expected to rise from 35.2 mills per kwh to 55.2 mills per kwh.

Finances: During the last two years, Platte River changed from a construction-oriented organization to an operating power supplier. The effect of this change is clearer when the operating statements for 1983 and 1984 are compared. Revenues grew 105% in that year and operating expenses grew 107%, primarily due to a 195% increase in depreciation with the start-up of Rawhide. During 1985, only 29.5% of revenues came from sales to the participants, the remainder of the revenues came from sales to Public Service. Annual debt service coverage was 1.48x in 1984 and 1.53x in 1985, including commercial paper interest. The balance sheet continued to improve in 1985. The current ratio was 4.39:1 and the quick ratio was 1.69:1. Leverage declined as the ratio of debt to plant declined to 1.14:1 from 1.20:1.

Participants: Fort Collins, Loveland, and Estes Park are in Larimer County, north of Denver, and Longmont is in Boulder County, west of Denver. The key economic sectors in this area are manufacturing, services, retail trade, and government. High technology electronics are a major source of employment, with manufacturing facilities of Hewlett-Packard Co., Storage Technology Inc., and NCR Inc. located in the participant cities. Colorado State University is another major employer in Fort Collins. The average unemployment rates for 1985 are below the national average in both counties, but rose slightly toward the end of the year to 7.1% in Larimer County and 6.7% in Boulder County. Total numbers employed remained stable.

Participants	Fort Collins	Longmont	Loveland	Estes Park
% Platte River	45.7	28.1	22.5	6.1
Peak demand 1985	110	69	48	14
gwh sold 1985	582	332	256	72
Population est. 1985	83,000	49,600	35,300	7,600
1984 revenue (000)	30,487	17,981	15,529	4,572
Debt serv. cov. (x)	*	*	5.60	*
Current ratio**	5.17:1	3.15:1	6.43:1	N.A.

*No electric revenue bonds outstanding
**Current assets/current liabilities
N.A.—Not available.

The financial performance of the participants is good. Each has had a positive trend in revenues and controlled growth of expenses in recent years. Off-balance sheet debt service coverage is less than 1.00x for all participants because Platte River debt service payments are subsidized through the Public Service contract.

CS HB 519

CSHB 519 makes the following changes with respect to the original bill:

1. deletes the requirement for State Bond Committee approval of ASHA debt issuance before lease-financing agreements may be entered into (sections 2, 6, 7, and 10 of CS HB 519); however, the State Bond Committee still must approve ASHA debt before it can be issued (section 4 of CS HB 519);

2. requires approval of public buildings by law before lease-financing agreements may be entered into (sections 2, 6, 7, and 10 of CS HB 519);

3. includes construction or acquisition cost in addition to lease payment and bond amount, in notice to legislature and bond committee (sections 2, 6, 7, and 10);

4. makes new subsection (b) in Sec. 8 of the bill into a separate section so that it is not repealed in the event SB 341, the procurement bill, passes; amendments have been prepared for SB 341 which would delete all authority in that bill for lease-purchase financing, so that the subject is dealt with only in HB 519; this is to avoid enactment of conflicting provisions;

5. amends international airports and toll facilities statutes to permit negotiated bond sales in addition to public bid (sections 17, 18, 19, and 20).

IN THE HOUSE BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

CS FOR HOUSE BILL NO. 519 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to public finance; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.40.040 is amended to read:

Sec. 14.40.040. GENERAL POWERS OF THE UNIVERSITY. There is created and established a corporation to be called the University of Alaska. It may in that name

(1) sue and be sued;

(2) receive and hold real and personal property;

(3) contract and be contracted with;

(4) adopt, use and alter a corporate seal;

(5) borrow money, issue debt, or enter into long-term obligations for the purchase of facilities, goods, or services, which obligations secure, in whole or in part, debt issued by another party, as approved by the state bond committee under AS 37.15.770 and approved by law; an appropriation does not constitute approval by law for purposes of this paragraph;

(6) do and have done all matters necessary for the purpose of any function set out [FORTH] in this chapter.

* Sec. 2. AS 14.40 is amended by adding a new section to read:

Sec. 14.40.255. LEASE-FINANCING. The Board of Regents may enter into lease-financing agreements only with the Alaska State Housing Authority acting as the Alaska State Building Authority. A lease-financing agreement must provide that

annual appropriation. If the board intends to enter into an agreement under this subsection, the board shall provide notice to the legislature and to the state bond committee. The notice must include the anticipated annual lease payment, the anticipated principal amount of the debt to be issued by the Alaska State Housing Authority acting as the Alaska State Building Authority, and the anticipated total construction or acquisition cost of the project. The board may not enter into an agreement under this section unless the public building to be provided has been approved by law. An appropriation for the project does not constitute approval by law for purposes of this section.

* Sec. 3. AS 18.55.100(a)(15) is amended to read:

(15) acting as the Alaska State Building Authority arrange or contract for the financing or [, DESIGN, CONSTRUCTION AND] acquisition of public buildings designed by, constructed by, or whose acquisition has been approved by the Department of Transportation and Public Facilities for lease to the state in accordance with AS 18.55.-010 - 18.55.290 and AS 37.15.770.

* Sec. 4. AS 18.55.140 is amended to read:

Sec. 18.55.140. ISSUANCE OF BONDS, NOTES, AND REFUNDING BONDS. The authority may issue bonds and notes from time to time in its discretion for any of its corporate purposes and may issue refunding bonds for the purpose of paying or retiring bonds previously issued by it. The authority may not issue bonds for public buildings until the state bond committee has approved the proposal for the issuance of debt under AS 37.15.770 and the building has been approved by law. An appropriation for the building does not constitute approval by law for purposes of this section.

* Sec. 5. AS 18.55.140 is amended by adding a new subsection to read:

(b) Bonds issued by the authority for public buildings must

issued in the name of the Alaska State Building Authority and are subject to AS 18.55.010 - 18.55.290.

* Sec. 6. AS 18.55.288 is amended by adding a new paragraph to read:

(4) "bond" means any bond, note, interim certificate, debenture, or other obligation issued by the authority or the authority acting as the Alaska State Building Authority under AS 18.55.010 - 18.55.290;

* Sec. 7. AS 22.05.025 is amended by adding a new subsection to read:

(c) The supreme court may enter into lease-financing agreements only with the Alaska State Housing Authority acting as the Alaska State Building Authority. A lease-financing agreement must provide that lease payments are subject to annual appropriation. If the supreme court intends to enter into an agreement under this subsection, the supreme court shall provide notice to the legislature and to the state bond committee. The notice must include the anticipated annual lease payment, the anticipated principal amount of the debt to be issued by the Alaska State Housing Authority acting as the Alaska State Building Authority, and the anticipated total construction or acquisition cost of the project. The supreme court may not enter into an agreement under this subsection unless the public building to be provided has been approved by law. An appropriation for the project does not constitute approval by law for purposes of this section.

* Sec. 8. AS 24.23 is amended by adding new sections to read:

ARTICLE 2. LEASE AGREEMENTS.

Sec. 24.23.100. LEASE OF SPACE. The Legislative Affairs Agency may lease necessary office space, and contract for the lease of space, for the use of the Alaska legislature and its employees.

Sec. 24.23.110. The Legislative Affairs Agency may enter into lease-financing agreements only with the Alaska State Housing

Authority acting as the Alaska State Building Authority. A lease-financing agreement must provide that lease payments are subject to annual appropriation. If the agency intends to enter into an agreement under this subsection, the agency shall provide notice to the legislature and to the state bond committee. The notice must include the anticipated annual lease payment, the anticipated principal amount of the debt to be issued by the Alaska State Housing Authority acting as the Alaska State Building Authority, and the anticipated total construction or acquisition cost of the project. The agency may not enter into an agreement under this section unless the public building to be provided has been approved by law. An appropriation for the project does not constitute approval by law for purposes of this section.

* Sec. 9. AS 37.05.280 is amended to read:

Sec. 37.05.280. LEASES. The department shall lease necessary space, and contract for the lease of space, for the use of the state or an agency of the state, wherever it is necessary and feasible, subject to compliance with the requirements of AS 37.05.220 - 37.05.-280. A [NO] lease or contract for a lease may not provide for a period of occupancy greater than 40 years. A lease agreement must provide that lease payments are subject to annual appropriation. An agency of the state requiring office, warehouse, or other space shall lease the space through the department. [NO CONTRACT OR LEASE EXECUTED AFTER JANUARY 1, 1966, WHICH PROVIDES FOR A PAYMENT OR PAYMENTS BY THE STATE IN EXCESS OF $12,000 ANNUALLY IS VALID UNLESS THE USE OF THE SPACE TO BE PROVIDED FOR BY SUCH CONTRACT OR LEASE HAS BEEN EXPRESSLY APPROVED BY THE LEGISLATURE BY CONCURRENT RESOLUTION.]

* Sec. 10. AS 37.05 is amended by adding a new section to read:

Sec. 37.05.285. LEASE FINANCING. The department may enter into

lease-financing agreements only with the Alaska State Housing Authority acting as the Alaska State Building Authority. A lease-financing agreement must provide that lease payments are subject to annual appropriation. If the department intends to enter into an agreement under this subsection, the department shall provide notice to the legislature and to the state bond committee. The notice must include the anticipated annual lease payment, the anticipated principal amount of the debt to be issued by the Alaska State Housing Authority acting as the Alaska State Building Authority, and the anticipated total construction or acquisition cost of the project. The department may not enter into an agreement under this subsection unless the public building to be provided has been approved by law. An appropriation for the project does not constitute approval by law for purposes of this section.

* Sec. 11. AS 37.15.040 is amended to read:

Sec. 37.15.040. SALE OF BONDS. Before selling an issue or series of bonds, the state bond committee shall give notice inviting sealed bids in <u>the</u> [SUCH] manner [AS] it may prescribe. If satisfactory bids are received, the bonds offered for sale shall be awarded to the highest responsible bidder <u>or bidders</u>. If the state bond committee determines that the bids received are not satisfactory as to price or responsibility of the bidders, it may reject all bids received.

* Sec. 12. AS 37.15.110 is amended to read:

Sec. 37.15.110. CREATION AND MEMBERSHIP OF STATE BOND COMMITTEE. There is created <u>within the Department of Revenue</u> a committee known as the "state bond committee," the members of which are the commissioner of commerce and economic development, the commissioner of administration, and the commissioner of revenue. If a member of the committee is absent or otherwise unable to act, the member's designee [IN THE

DEPARTMENT] shall act as a member of the committee in the member's place.

* Sec. 13. AS 37.15.130 is amended to read:

Sec. 37.15.130. OFFICERS, RECORDS AND PROCEEDINGS. The commissioner of commerce and economic development is the chairman of the state bond committee and the commissioner of revenue is the secretary. A majority of the members of the committee constitute a quorum. The committee shall keep a full, complete, and permanent record of its proceedings. All records and correspondence of the committee shall be kept in the office of the commissioner of revenue. For the purpose of this chapter and AS 44.62.310, public notice of 24 hours or more is adequate notice of a meeting of the committee at which the issuance of bonds is authorized.

* Sec. 14. AS 37.15.140 is amended to read:

Sec. 37.15.140. DUTIES OF STATE BOND COMMITTEE. (a) The state bond committee shall adopt the resolution and prepare the documents necessary for the issuance, sale, and delivery of state general obligation bonds.

* Sec. 15. AS 37.15.140 is amended by adding new subsections to read:

(b) The state bond committee shall prepare an annual report to be submitted to the governor and legislature before March 31 of each year. The report must show

(1) all outstanding debt of debt-issuing entities of the state;

(2) the anticipated effect on the finances and credit of the state, including the effect on long-term debt capacity and creditworthiness, resulting from that debt;

(3) which long-term debt is state supported and which is supported only by revenue attributable to the project being financed

by the debt;

(4) all long-term capital lease obligations of the state;

(5) the volume of short-term debt issued and retired during the year by debt-issuing entities of the state;

(6) specific identification of each issue for which the state has pledged some form of indirect support for the debt, including any moral obligation of the state to support the debt;

(7) future bonding and debt capacity implications of legislation enacted in the previous legislative session; and

(8) the recommended debt issuance capacity of the state for the next two years following the year of the report.

(c) The state bond committee may develop written policies concerning debt of the state.

* Sec. 16. AS 37.15.150 is amended to read:

Sec. 37.15.150. STAFF AND [COMMITTEE MAY EMPLOY] SPECIAL SERVICES. The state bond committee may appoint an executive director who may, with approval of the committee, select and employ additional staff as necessary. Employees of the committee are in the partially exempt service under AS 39.25.120. If the [STATE BOND] committee considers it necessary and advisable, it may procure architectural or engineering, fiscal agent or municipal investment, legal, and other expert or specialized services at reasonable and customary fees to assist it in accomplishing the most advantageous sale of the bonds. The fees may be paid from the proceeds of the sale or advanced from the contingency fund in the Office [OFFICE] of the Governor [GOVERNOR] or otherwise.

* Sec. 17. AS 37.15.450(a) is amended to read:

(a) The bonds shall be sold in the manner, price or prices, [SUCH] amounts or series, and at the [SUCH] time or times [AS]

determined by the committee at either public or private sale. [BEFORE SELLING A SERIES OF BONDS, THE COMMITTEE SHALL GIVE NOTICE INVITING SEALED BIDS IN SUCH MANNER AS IT MAY PRESCRIBE. IF SATISFACTORY BIDS ARE RECEIVED, THE BONDS OFFERED FOR SALE SHALL BE AWARDED TO THE HIGHEST RESPONSIBLE BIDDER. IF THE COMMITTEE DETERMINES THAT THE BIDS RECEIVED ARE NOT SATISFACTORY AS TO PRICE OR RESPONSIBILITY OF THE BIDDERS, IT MAY REJECT ALL BIDS RECEIVED.] The bonds, or each series of them, shall be sold at such a price so that the effective interest rate over the life of the bonds does not exceed 11 percent per year or that rate of interest which is 125 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. Interest shall be payable annually or semiannually.

* Sec. 18. AS 37.15.460 is amended to read:

Sec. 37.15.460. BOND RESOLUTION. The committee is authorized and directed to adopt the bond resolution and prepare all other documents and proceedings necessary for the issuance, sale and delivery of the bonds or any part or series of them. The bond resolution shall fix the principal amount, denomination, date, maturities, place or places of payment, rights of redemption, if any, terms, form, conditions and covenants of the bonds or each series of them. The committee shall also determine and provide for the date and manner of sale of the bonds, and shall provide where a [WHETHER THE] notice of sale, if any, is to be published [ELSEWHERE IN ADDITION TO THE PUBLICATION REQUIRED BY AS 37.15.450].

* Sec. 19. AS 37.15.650(a) is amended to read:

(a) The toll facilities bonds are sold in the manner, price or prices, amounts or series, and at the time as determined by the committee, at either public or private sale. [BEFORE SELLING A SERIES OF

BONDS, THE COMMITTEE SHALL GIVE NOTICE INVITING SEALED BIDS. IF SATISFACTORY BIDS ARE RECEIVED, THE BONDS OFFERED FOR SALE ARE AWARDED TO THE HIGHEST RESPONSIBLE BIDDER. IF THE COMMITTEE DETERMINES THAT A BID RECEIVED IS NOT SATISFACTORY AS TO PRICE OR RESPONSIBILITY OF THE BIDDER, THE COMMITTEE MAY REJECT THE BID RECEIVED.] Bonds, or a series of bonds, may not be sold if the effective interest rate over the life of the bonds exceeds 11 percent per year or that rate of interest that is 125 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. Interest is payable annually or semiannually.

* Sec. 20. AS 37.15.660 is amended to read:

Sec. 37.15.660. BOND RESOLUTION. The committee is authorized and directed to adopt the bond resolution and prepare all other documents and proceedings necessary for the issuance, sale, and delivery of the bonds or any part or series of them. The bond resolution shall fix the principal amount, denomination, date, maturities, place or places of payment, rights of redemption, if any, terms, form, conditions, and covenants of the bonds or each series of them. The committee shall also determine and provide for the date and manner of sale of the bonds, and shall provide <u>where a</u> [WHETHER THE] notice of sale<u>, if any,</u> is to be published [ELSEWHERE IN ADDITION TO THE PUBLICATION REQUIRED BY AS 37.15.650].

* Sec. 21. AS 37.15 is amended by adding new sections to read:

ARTICLE 5. STATE-SUPPORTED DEBT.

Sec. 37.15.770. STATE AGENCY DEBT. (a) The state bond committee shall review proposals for the issuance of debt by or on behalf of

(1) the Alaska State Housing Authority acting as the Alaska State Building Authority for the purpose of providing public

buildings; and

(2) the University of Alaska.

(b) The committee may review the general programs and financing plans of the agency that proposes to issue the debt as well as the specific aspects of the proposed debt issue, including

(1) amounts;

(2) times;

(3) maturities;

(4) debt structure and security features;

(5) credit enhancements;

(6) use of proceeds;

(7) official documents;

(8) planned rating agency presentations; and

(9) selection, retention, or compensation of financial advisors, bond counsel, trustees, underwriters, and other professionals.

(c) The state bond committee shall consider approval of the amount and time of sale of the debt. The committee shall approve the issuance of the debt if, in its judgment, issuance of the debt is in the best interests of the state. The committee may limit approval of the issuance of debt upon compliance with terms established by the committee.

(d) At the time of sale of the debt, the state bond committee shall review the bids or pricing of the debt, including discounts, underwriting spreads, and interest rates. If the committee determines that the bids or prices are not satisfactory or that the bidders are not responsible, the agency may not sell the debt.

Sec. 37.15.790. MUNICIPAL SCHOOL DEBT. If, at any time, the state bond committee, in its judgment, determines that the amount or

retirement of debt issued by municipalities and subject to reimbursement by the state under AS 14.11.100 is not in the best interest of the state, the committee may

(1) establish an amount or amounts, for any or all years before the maturity of all of that municipal debt, that may not be exceeded by the Department of Education in approving requests under AS 14.11.103; or

(2) establish, under AS 14.11.100(j)(3), a term required for the maturities of municipal debt authorized by local voters after March 31, 1986.

* Sec. 22. AS 39.25.120(c) is amended by adding a new paragraph to read:

(19) employees of the state bond committee.

* Sec. 23. This Act takes effect immediately in accordance with AS 01.-10.070(c).

PROPOSED DRAFT LANGUAGE
FOR MUNICIPAL SCHOOL DEBT SECTION OF
ALASKA PUBLIC DEBT 1986

As of June 30, 1985, $738 million of municipal school debt was outstanding. Under a program enacted in 1970 (Alaska Statutes 14.11.100) the State will reimburse the municipalities for debt service on certain portions of that debt. On June 30, 1985, the aggregate total percentage of municipal school debt to be reimbursed by the State was 93%. The State share of municipal school debt was thus $687 million.

Because the statute which provides for reimbursement of a portion (100, 90 or 80 percent) of debt service on municipal school debt specifies a two year lag between payment by the municipality and reimbursement by the State for debt incurred prior to January 1, 1982, some principal and interest paid during the fiscal years ending June 30, 1984 and June 30, 1985 has not yet been reimbursed. The State share of municipal school debt outstanding on June 30, 1985 plus the State share of municipal school debt principal payments made by the municipalities during prior years but not yet reimbursed by the State amounted to a total of $754 million. If added to the total of State and State supported debt, the amount of the State's principal outstanding on that debt would have been $1,686 million.

On October 1, 1985 voters in six municipalities approved the issuance of an additional $303 million of general obligation school debt. Most of that debt will have been issued by June 30, 1986. Voters in the City of Sitka approved the issuance of $22.6 million of general obligation school debt in a special election on January 27, 1986. Voters in the Kodiak Island Borough will decide on the issuance of almost $10 million of general obligation school debt in a special election on March 25, 1986. If issued, current statute provides for State reimbursement of up to eighty percent of the debt service on that debt during the year in which the payments are made.

IN THE HOUSE

BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

CS FOR HOUSE BILL NO. 521 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the issuance of municipal general obligation bonds; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.10.200 is amended by adding a new paragraph to read:

(47) AS 29.47.190 - 29.47.195 (notice of and limitation on debt).

* Sec. 2. AS 29.47.190(b) is amended to read:

(b) Before a general obligation bond issue election, the governing body shall have published a notice of the total existing bond indebtedness at least once a week for three consecutive weeks. The first notice shall be published at least 20 days before the date of the election. A notice must [SHALL] include

(1) the current total general obligation bonded indebtedness, including authorized but unsold bonds, of the municipality;

(2) the cost of the debt service on the current indebtedness;

(3) the total assessed value of taxable property in the municipality;

(4) the full value of taxable property in the municipality as determined by the department; and

(5) for a city in a borough, the current total general obligation bonded indebtness of the borough, including authorized but unsold bonds.

new

* Sec. 3. AS 29.47.190 is amended by adding a new subsection to read:

(c) This section applies to home rule and general law municipalities.

* Sec. 4. AS 29.47 is amended by adding a new section to read:

Sec. 29.47.195. LIMITATION ON MUNICIPAL DEBT. (a) A governing body may not authorize issuance of general obligation bonds unless

(1) the general obligation bonded indebtedness of the municipality outstanding at the time of the authorization by the governing body does not exceed seven percent of the average assessed value of taxable property of the municipality for the last two years; and

(2) upon issuance of the authorized bonds the total general obligation bonded indebtedness of the municipality will not exceed seven percent of the average assessed value of taxable property of the municipality for the last two years.

(b) For purposes of calculating current general obligation bonded indebtedness under (a) of this section for a borough, the general obligation bonded indebtedness of each city in the borough shall be included. For purposes of determining the current general obligation bonded indebtness for a city in a borough, a proportional share of the borough's general obligation bonded indebtedness shall be included based on the value of taxable property in the city compared to the total value of taxable property in the borough.

(c) The limitation under (a) of this section does not apply to

(1) general obligation bonds necessary because of a natural disaster;

(2) general obligation bonds necessary to protect the public health;

(3) general obligation bonds for which, without expenditure

of tax revenue, cash receipts from fees, rents, or other charges pledged to pay the debt have been sufficient each fiscal year after issuance of the bonds to meet interest and redemption payments on the bonds and costs of operating and maintaining the capital project financed with the bonds;

(4) bond anticipation notes;

(5) revenue anticipation notes issued in accordance with article IX, sec. 10, Constitution of the State of Alaska; or

(6) debt for which there are sinking funds or other funds on hand pledged to the payment of the debt, including the proceeds of refunding bonds or refunding notes.

* ~~Sec. 5. This Act takes effect immediately in accordance with AS 01.-10.070(c).~~

105 MUNICIPAL WAY, SUITE 301
JUNEAU, ALASKA 99801

To: Representative John Sund, Chairman
House Special Committee on Loans

From: Scott A. Burgess, Executive Director

Date: February 25, 1986

Subject: HB 521 - Municipal Debt Limit

You asked me to look into the historical picture for municipal G.O. debt/full assessed value ratio, and how the 7% limit might have applied.

Attached is the information from "Alaska Taxable" for the years, 1979 - 1985. Unfortunately, the information for prior years was not readily available except in aggregate for all municipalities (last page).

Several municipalities have approached or exceeded the 7% limit over the years, e.g. Palmer, Bristol Bay Borough and Unalaska; however, the only indication that pre-oil revenues and capital budgets have kept the percentage down might be the total 5.2% municipal debt to valuation in 1975, compared to 4.3% in 1985.

I hope this information is useful.

TABLE I

VALUATION, POPULATION, AND G. O. BONDED DEBT

Per capita valuation, per capita general obligation bonded debt, and debt as a percent of valuation are reported in Table I. Included are organized boroughs and home rule and general law municipalities. Excluded are cities of the second class without debt or for which no valuation data is available. Data reported below for debt and population is as of July 1.

Introduced: 1/27/86
Referred: House Special Committee on State Loans, Community & Regional Affairs and Finance

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 521

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the issuance of municipal general obligation bonds; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.47.190(b) is amended to read:

(b) Before a general obligation bond issue election, the governing body shall have published a notice of the total existing bond indebtedness at least once a week for three consecutive weeks. The first notice must [SHALL] be published at least 20 days before the date of the election. A notice must [SHALL] include

(1) the current total general obligation bonded indebtedness, including authorized but unsold bonds of the municipality;

(2) the cost of the debt service on the current indebtedness;

(3) the total assessed value of taxable property in the municipality;

(4) the full property value, as determined by the Department of Community and Regional Affairs under AS 14.17.140.

* Sec. 2. AS 29.47 is amended by adding a new section to read:

Sec. 29.47.195. LIMITATION ON MUNICIPAL DEBT. (a) A municipality may not incur additional general obligation bond debt if current bonded indebtedness exceeds, or will exceed upon issuance of the debt issue, seven percent of the full property value, as determined by the Department of Community and Regional Affairs under AS 14.17.140.

overlapping indebtedness structure

(b) For purposes of the debt limitation established in (a) of this section, "municipality" includes a municipality or a combination of municipalities that occupy, in whole or in part, the same geographic area.

(c) For purposes of the debt limitation established in (a) of this section, "general obligation bond debt" does not include

(1) refunding bonds; or

(2) self-supporting debt even though such debt may also be general obligation debt of the municipality.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

* Yield is estimated because of thin secondary market supply. Estimate is based on previous trading characteristics.

** Arizona, Arkansas, Colorado, Idano, Indiana, Iowa, Kansas, Nebraska, South Dakota, and Wyoming have little or no outstanding state general obligation debt.

*** NR = not rated.

**** State comparative trading relationships are suoject to change at any moment due to extreme market volatility and heavy supply of new issue state general obligation debt in the primary market.

PRELIMINARY DRAFT

(1) December 1985 Department of Revenue revenue estimates.
(2) Includes debt service on general obligation bonds, Alaska State Housing Authority lease revenue bonds, University of Alaska revenue bonds, Seward Student Service Center Lease Certificates of Participation and Spring Creek Correctional Center Certificates of Participation.
(3) Assumes ten-year bonds at 8.0% -- amortization factor .149.
(4) The absence of revenue estimates beyond FY 2005 and the need to ascertain the availability of funds for debt service over a ten-year term prevents the estimation of debt capacity beyond FY 1996.

Anchorage Times 1/27/86

Debt

Continued from page A-1

But that doesn't include the state's share of repaying school construction bonds sold by local school districts. Because that debt is growing dramatically, Wall Street analysts are taking a closer look at Alaska's borrowing power, said Rep. John Sund, a Ketchikan Democrat who chairs the House Special Committee on Loans.

The state owed $750 million in school repayment costs as of last June, Sund said. Voters in November approved another $300 million in school bond sales across the state.

For the first time, bond experts are beginning to lump school debts in Alaska with general obligation debts. That dramatically increases Alaska's bond debt.

Sund said the projected decline of North Slope oil production — and the general reduction in oil prices — also could affect Alaska's bond rating.

Sheffield said the state bond committee should have more control over the design and construction of state buildings. He also is proposing new limits on the amount of bonds a municipality can sell.

But the governor said the most important part of his package would allow the state more say in the design and construction of local schools.

Sheffield introduces debt plan

Hopes to protect state's bond rating

by Bruce Scandling
Associated Press

JUNEAU — Gov. Bill Sheffield is pushing a debt management plan he says will protect Alaska's credit rating on Wall Street.

A package of bond legislation was scheduled to be introduced in the legislature today, said John Hilliard, the governor's deputy press secretary.

"If you run a business or own a home, you know how important it is to keep your financial affairs in order," Sheffield said in a prepared statement. "You keep careful track of how much money you borrow, and you maintain a solid credit rating."

When a state or municipality sells bonds to finance construction projects, it is borrowing money at set interest rates. That rate rises if the state's credit rating drops.

Sheffield said he wants to tighten the reins on local school construction to make sure Alaska's borrowing power stays under control. School debt has grown so significantly that bond analysts are becoming concerned, he said.

Right now, the state's overall debt on general obligation bonds — which pay for building roads, sewers and facilities other than schools — is about $975 million.

See Debt, page A-6

Amendments to SB 341

1. Page 8, lines 2 - 6: delete Sec. 36.30.080(b) which reads as follows:

> (b) The department may enter into lease-financing agreements, including lease-purchase agreements and agreements related to the issuance of certificates of participation. A lease-financing agreement must provide that lease payments are subject to annual appropriation.

2. Page 8, lines 7 - 15: delete

on lines 7 - 8:

"or lease-financing agreement"

on lines 11 - 12:

"and the anticipated total construction, acquisition, or other costs of project"

on lines 13 - 14:

"the legislature"

so that Sec. 36.30.080(c) would read:

> (c) If the department intends to enter into a lease with an annual rent to the state anticipated to exceed $1,000,000, the department shall provide notice to the legislature. The notice must include the anticipated annual lease obligation amount. The department may not enter into an agreement under this subsection unless the lease has been approved by law. An appropriation for the lease does not constitute approval by law for purposes of this section.

Opinion

The governor makes a good point that something should be done about managing public debt statewide — but his idea of what to do goes too far. Gov. Bill Sheffield has proposed four bills under the name "Debt Management Plan" that add up to this: Let the state tell you what to do.

It shouldn't take measures so far-reaching as that to control the situation, especially in regard to the bill, HB 520, that proposes major changes in financing public school construction. The administration is right in saying that the ratio of debt to revenue is too high, and in calling for "reasonableness" to protect bond ratings.

Schools deserve better

The rating in the bond market is important and municipal bond ratings cleave closely to the state's. Ratings affect not only the ease of sale, or marketability, but also the cost of bonds, the interest rate government must pay to pay back the borrowed money.

Here's a sampling of what the governor considers reasonable:

- Require school condition surveys, which would analyze the conditions of a building in a community or school district relative to the need for a new building elsewhere.
- Shift the state's share of construction costs from 80 percent a year on all payments made on school bond debts to 100 percent payment of the principal only, effectively reducing the state's overall share to about 50 percent.
- Vest in the State Bonds Committee — a trio of the state's departmental commissioners, all gubernatorial appointees — the authority to determine the number of years and payment schedule for which bonds can be sold.
- Create a two-year lag between bond sales and the time the state would start paying its share.
- Limit new state obligations for school bonds to an additional $10 million a year, leaving uncovered districts to either play politics for direct capital grants from the Legislature or foot the full cost of construction with local taxes.

The Governor's Office has argued earnestly for its plan, and has circulated a brief explaining it, but it has not made its case on HB 520.

The bill would create reams and rolls of bureaucratic paper and red tape, and take pivotal options out of the hands of local government.

Alaska's oil wealth places the state in an unusual position as the holder of the primary resource wealth of the people. This reality and the state constitution put the burden of school financing on the state of Alaska. Yet this administration's solution is to attempt to cram its idea of a solution down the throats of its citizens, rather than undertake a cooperative resolution.

Better ways can be found to deal with the problem of public debt, and the Legislature should undertake no action on these bills until some positive, inter-governmental process is begun.

Quotable

☐ In that the state is essentially backing out of its significant commitment to school construction, then it should also back out of its apparent significant intent to regulate what munici-

December 29, 1983

RECEIVED
JAN 03 1984
ALASKA DEPARTMENT OF REVENUE
TREASURY DIVISION
JUNEAU

Mr. Milt Barker
Deputy Commissioner
Department of Revenue
11th Floor State Office Bldg.
Pouch, SB
Juneau, Alaska 99811

Dear Mr. Barker:

I would like to respond to your letter of December 13, regarding our views on lease obligations.

Lease Payments are viewed in essentially the same light as debt service on general obligation bonds, regardless of whether the obligation is cancellable due to non-appropriation. In fact, debt obligations secured by lease payments are included in our computations for overall debt burden.

Many states do not consider lease rental debt under debt limitation laws, primarily because legal interpretations view the obligations to pay rent as an annual budget item, and not a long term debt with a continuing appropriation. The fact remains, however, that the debt is still outstanding, and payable for as long as the property is being used by the lessee. While many leases permit non-payment of rent and cancellation of lease obligations, Standard & Poor's would be very concerned about an issuer's general obligation rating, in those cases where leases were cancelled as a ploy to avoid paying debt obligations.

I've enclosed some information regarding our approach to rating lease-rental debt obligations. If you have any further questions, feel free to contact Vladimir Stadnyk or myself at (212) 201-1767.

Very Truly Yours,

Richard P. Larkin
Managing Vice President
Municipal Finance Department

Municipal Finance Department
Standard & Poor's Corporation
25 Broadway
New York, NY 10004

Dear Sirs:

I would appreciate any information you could provide me regarding your agency's view of municipal lease financing as it relates to an issuer's debt capacity.

More specifically, could you comment on whether lease payments on a municipal lease-purchase obligation which is cancellable subject to a non-appropriation clause are considered in the same light as debt service on general obligation bonds?

Sincerely,

Milt Barker

Milt Barker
Deputy Commissioner

Municipal Credit Report

STATE OF ALASKA

September 26, 1983
GC

SALE: $78,000,000 bonds for bids September 27. Please see last page for details.

RATING: Aa

Final information on this sale was received September 22.

OPINION: Alaska's large debt has been comfortably supported by petroleum revenues which provide a basis for high quality security. Changing demand patterns for oil as well as management of Alaska's expenditures, revenues and reserves will continue to be important in credit evaluation.

SUMMARY: The state's economy, while still developing, is centered around petroleum and other natural resource development. The predominance of U.S. defense installations is also important to the state's economy. Alaska's economy and financial position has been dramatically affected by North Slope oil production and to oil price increases following decontrol. The state has undertaken a program to manage these resources and to shelter its extraordinary revenue growth through the creation of a Permanent Fund. Dedicated revenue along with special General Fund appropriations have resulted in extraordinary Permanent Fund asset growth now totaling $4.5 billion. Although revenue to the state remains at a high level, falling oil revenues will require expenditure adjustment. General Fund preliminary reports a deficit at year end as a result of an encumbrance owed to the Permanent Fund, aggrevated by lower oil prices resulting in declines in unrestricted revenues. The state is dependent on oil related revenues as it neither levies a sale or individual-income tax. Debt service claim on unrestricted revenues is expected to increase. Management of state resource revenues against significant demands for infrastructure and the volatility of oil markets will be important elements affecting future evaluations.

DEBT FACTORS: Heavy debt loads partly offset by rapid rate of debt retirement in-line with life of recoverable oil reserves. Debt service claim on unrestricted revenues to increase to approximately 5.9% from 4.0% in 1982-83. Additional authorization for state guaranteed $500 million veterans bonds to be voted on November 1983.

Tax-Supported Debt	Per Cap.	St. Med.	% E.F.V.	St. Med.	Pers. Inc.	St. Med.
1983 $1,104,359,000	$2,753	$250	3.1%	1.1%	19.2%	2.4%
1975 505,309,000	1,564	126	10.5	1.4	26.0	3.3
1965 65,705,000	240	56	5.6	1.2	9.3	2.6

THIS REPORT MAY NOT BE REPRODUCED IN WHOLE OR IN PART IN ANY FORM OR MANNER WHATEVER.

It is furnished by Moody's Investors Service, Inc. at your request under your subscription agreement for your exclusive use. The information herein has been obtained from sources believed to be accurate and reliable, but because of the possibility of human and mechanical error its accuracy or completeness is not guaranteed.

Moody's ratings are opinions, not recommendations to buy or sell, and their accuracy is not guaranteed. A rating should be weighed solely as one factor in an investment decision and you should make your own study and evaluation of any issuer whose securities or debt obligations you consider buying or selling.

Most issuers of corporate bonds, municipal bonds and notes, preferred stock and commercial paper which are rated by Moody's Investors Service, have, prior to receiving the rating, agreed to pay a fee to Moody's for the appraisal and rating services. The fee ranges from $850 to $45,000.

FINANCIAL FACTORS: Sharp declines in oil and gas related revenues are evident resulting in sizeable deficits. Reliance upon oil revenues against sizeable appropriation demands bear close monitoring.

GOVERNMENTAL FACTORS: Legislature meets annually, newly elected governor serving four year term. Appointed bond committee responsible for financing state capital improvements; the election of such members currently being challenged, but in opinion of counsel and attorney general would not affect bond authorization and sale.

ECONOMIC AND SOCIAL FACTORS: A developing economy with major emphasis on development of natural resources. Discovery of oil in Prudoe Bay has had profound affect on the state's development, although weakness in oil markets have moderated significantly the growth experienced previously.

DEBT FACTORS: The state's constitution provides that the state shall not contract debt unless authorized by law for capital improvements and ratified by a majority of the qualified voters voting thereon. The state may, as provided by law and without ratification contract debt for the purpose of repelling invasion, suppressing insurrection, defending the state in war, meeting natural disasters, or redeeming indebtedness outstanding at the time the constitution became effective. The constitutional restrictions do not apply to revenue bond indebtedness to be paid from special assessments on the benefitted property, or to refunding indebtedness.

Debt Statement as of July 1, 1983, including new bonds ($ 000):

General obligation bonds - outstanding	$ 946,183
General obligation bonds - offered	78,000
Gross direct debt	$1,024,183
Alaska State Housing Authority - lease rental	60,985
University of Alaska - Heating Corporation	6,425
University of Alaska - Anchorage Energy Util. System	460
University of Alaska - campus housing and st. ctr.	12,306
Alaska Housing Finance Corporation (9/10/83), incl. st. gtd.*	3,404,860
Gross debt	$4,509,219
Less: Alaska Housing Finance Corporation	3,404,860
Net tax-supported debt**	$1,104,359

*Include AHFC bond sold since July 1, 1983; state-guaranteed bonds included.
**Excludes Alaska Industrial Development Authority, Alaska Municipal Bond Bank and Medical Facility Authority not debts of the state.

Annual Principal Maturities, G.O. Bonds ($ 000):

F. Yr.		F. Yr.		F. Yr.	
1984	$100,175	1990	$95,560	1996	$18,610
1985	107,860	1991	77,499	1997	14,865
1986	109,265	1992	56,149	1998	13,380
1987	109,360	1993	51,363	1999	8,640
1988	109,655	1994	28,395	2000	2,531
1989	103,727	1995	19,096		

Debt Structure: Bonds are scheduled for rapid payout in line with life of proven oil reserves in Alaska. Debt policies have shortened maturities of new bonds to 10 years and rate of retirement has been accelerated; 52% principal due within five years and 94% due in 10 years. New bonds are structured for level principal, with overall debt service declining steadily through 2000.

Moody's **Municipal** Department

1985 Medians

Selected Indicators of Municipal Performance

State Indicators and Rankings

City and County Debt Medians

Enterprise Performance Medians

As a measure of a government's burden of debt, a ratio is calculated between its net debt and the estimated full value of taxable property. The estimated full value serves as a direct measure of local government wealth and, therefore, is reflective of the government's capacity to service public debt. Taxable valuation is utilized as a wealth measure because it tends to be up-to-date and readily available for all sizes of municipal government.

Ratio of Net Debt to E.F.V. (%) [2]

Population Range [1]	Direct Net Debt	Overall Net Debt		
	Median	Low	Median	High
500,000 and over	1.6	0.9	4.2	8.9
500,000 to 499,999	2.3	1.1	3.1	10.4
200,000 to 299,999	2.2	1.6	2.6	9.0
100,000 to 199,999	1.6	0.3	2.5	9.3
50,000 to 99,999	1.7	1.0	2.8	16.1
25,000 to 49,999	1.8	0.1	2.9	15.0
10,000 to 24,999	2.1	0.2	3.3	24.5
Under 10,000	2.4	0.1	3.6	20.0

Ratio of Net Debt to E.F.V. (%) [2]

Population Range [1]	Direct Net Debt	Overall Net Debt		
	Median	Low	Median	High
1,000,000 and over	0.4	0.03	4.2	4.1
250,000 to 999,999	0.6	0.7	2.5	5.2
100,000 to 249,999	0.4	0.5	2.5	5.5
Under 100,000	0.7	0.4	2.1	12.2

[1] Cities and counties included in these observations have been grouped according to 1980 U.S. Census population.

[2] Estimated full value (E.F.V.) refers to the "true" or "fair" market value of all taxable property within the boundaries of the unit of government. Users of this data must be aware of the significant variations that exist in methods and quality of property assessment from state to state and even among municipal governments within a given state. Definitions of "taxable property" also vary across the country as does the dependability of equalization ratios.

January 29, 1986

To: Mike Davis, Chairman House Committee on Oil & Gas
From: Andre Marrou, Representative

Subject: CS for SSHB339

This committee substitute is a re-write of the sponsor substitute which corrects the citations in title 29, changes the effective date clause, and offers a slightly different approach to achieve the same objective. That objective is to more equitably distribute the revenue generated by AS 43.56, a 20 mill oil and gas property tax.

The current state law has promulgated a lopsided distribution of these revenues in favor of local municipalities at the expense of hundreds of millions of dollars of lost revenue to the State. It was the intent of the legislature that the revenues of the 20 mill oil and gas property tax belong to all residents of the State, not just to a few in a privileged location. The current law also implements this inequity by encouraging some municipalities to purchase large amounts of debt and possibly jeopardize the State's bond rating. The debt payments in questions are adjusted dangerously close to the price of oil.

CS for SSHB 339 proposes to eliminate the exemption for tax limitations if those taxes are to pay for bonds (AS 29.45.100). This would automatically activate some tax limitations that have been on the books for years (AS 29.45.080). It also proposes a new tax limitation.

The most important sections of this bill are sections 5 and 6, the effective date clauses. A municipality's taxing authority to pay off current debt obligations will not be impaired! HB 339 deals only with a municipality's authority to tax for bonded debtness after the effective date.

IN THE HOUSE BY THE COMMITTEE

CS FOR SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 339 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act establishing limitations relating to municipal general obligation bonds and taxes; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.45.080(a) is amended to read:

(a) A municipality may levy and collect taxes <u>in an amount not to exceed 10 mills</u> on taxable property taxable under AS 43.56 only by using one of the methods set out in (b) or (c) of this section.

* Sec. 2. AS 29.47.200(a) is amended to read:

(a) The full faith and credit of a municipality are pledged for the payment of principal and interest on general obligation bonds. <u>Subject to AS 29.45.080 and 29.45.090, the</u> [THE] municipality may levy ad valorem taxes for payment [WITHOUT LIMITATION OF RATE OR AMOUNT TO PAY OR SECURE THE PAYMENT] of the principal and interest on <u>the</u> bonds [, REGARDLESS OF WHETHER THE BONDS ARE IN DEFAULT OR IN DANGER OF DEFAULT].

* Sec. 3. AS 43.56.010(b) is amended to read:

(b) A municipality may levy and collect a tax under AS 29.45.080 [AT THE RATE OF TAXATION THAT APPLIES TO OTHER PROPERTY TAXED BY THE MUNICIPALITY]. The tax shall be levied at a rate no higher than the rate applicable to other property taxable by the municipality. <u>A</u> [NO] municipality may <u>not</u> exempt from taxation property authorized to be taxed under this chapter. Exemptions shall be limited to those in AS 29.45.030, 29.45.050, and AS 43.56.020.

* Sec. 4. AS 29.45.100 is repealed.

* Sec. 5. The amendment to AS 29.47.200(a) made by sec. 2 of this Act applies only to taxes levied or pledged to pay general obligation bonds sold by a municipality on or after the effective date of this Act. Notwithstanding the repeal of AS 29.45.100 in sec. 4 of this Act, the limitations provided for in AS 29.45.080 - 29.45.090 do not apply to taxes levied or pledged to pay or secure the payment of the principal and interest on general obligation bonds sold by a municipality before the effective date of this Act. Taxes to pay or secure the payment of principal and interest on general obligation bonds sold before the effective date of this Act may be levied without limitation as to rate or amount, regardless of whether the bonds are in default or in danger of default.

* Sec. 6. This Act takes effect July 1, 1986.

SECTIONAL ANALYSIS FOR CS SSHB 339

*Section 1.

This section is a new tax limitation that will be implemented once AS 29.45.100 is repealed (Sec. 4)

*Section 2.

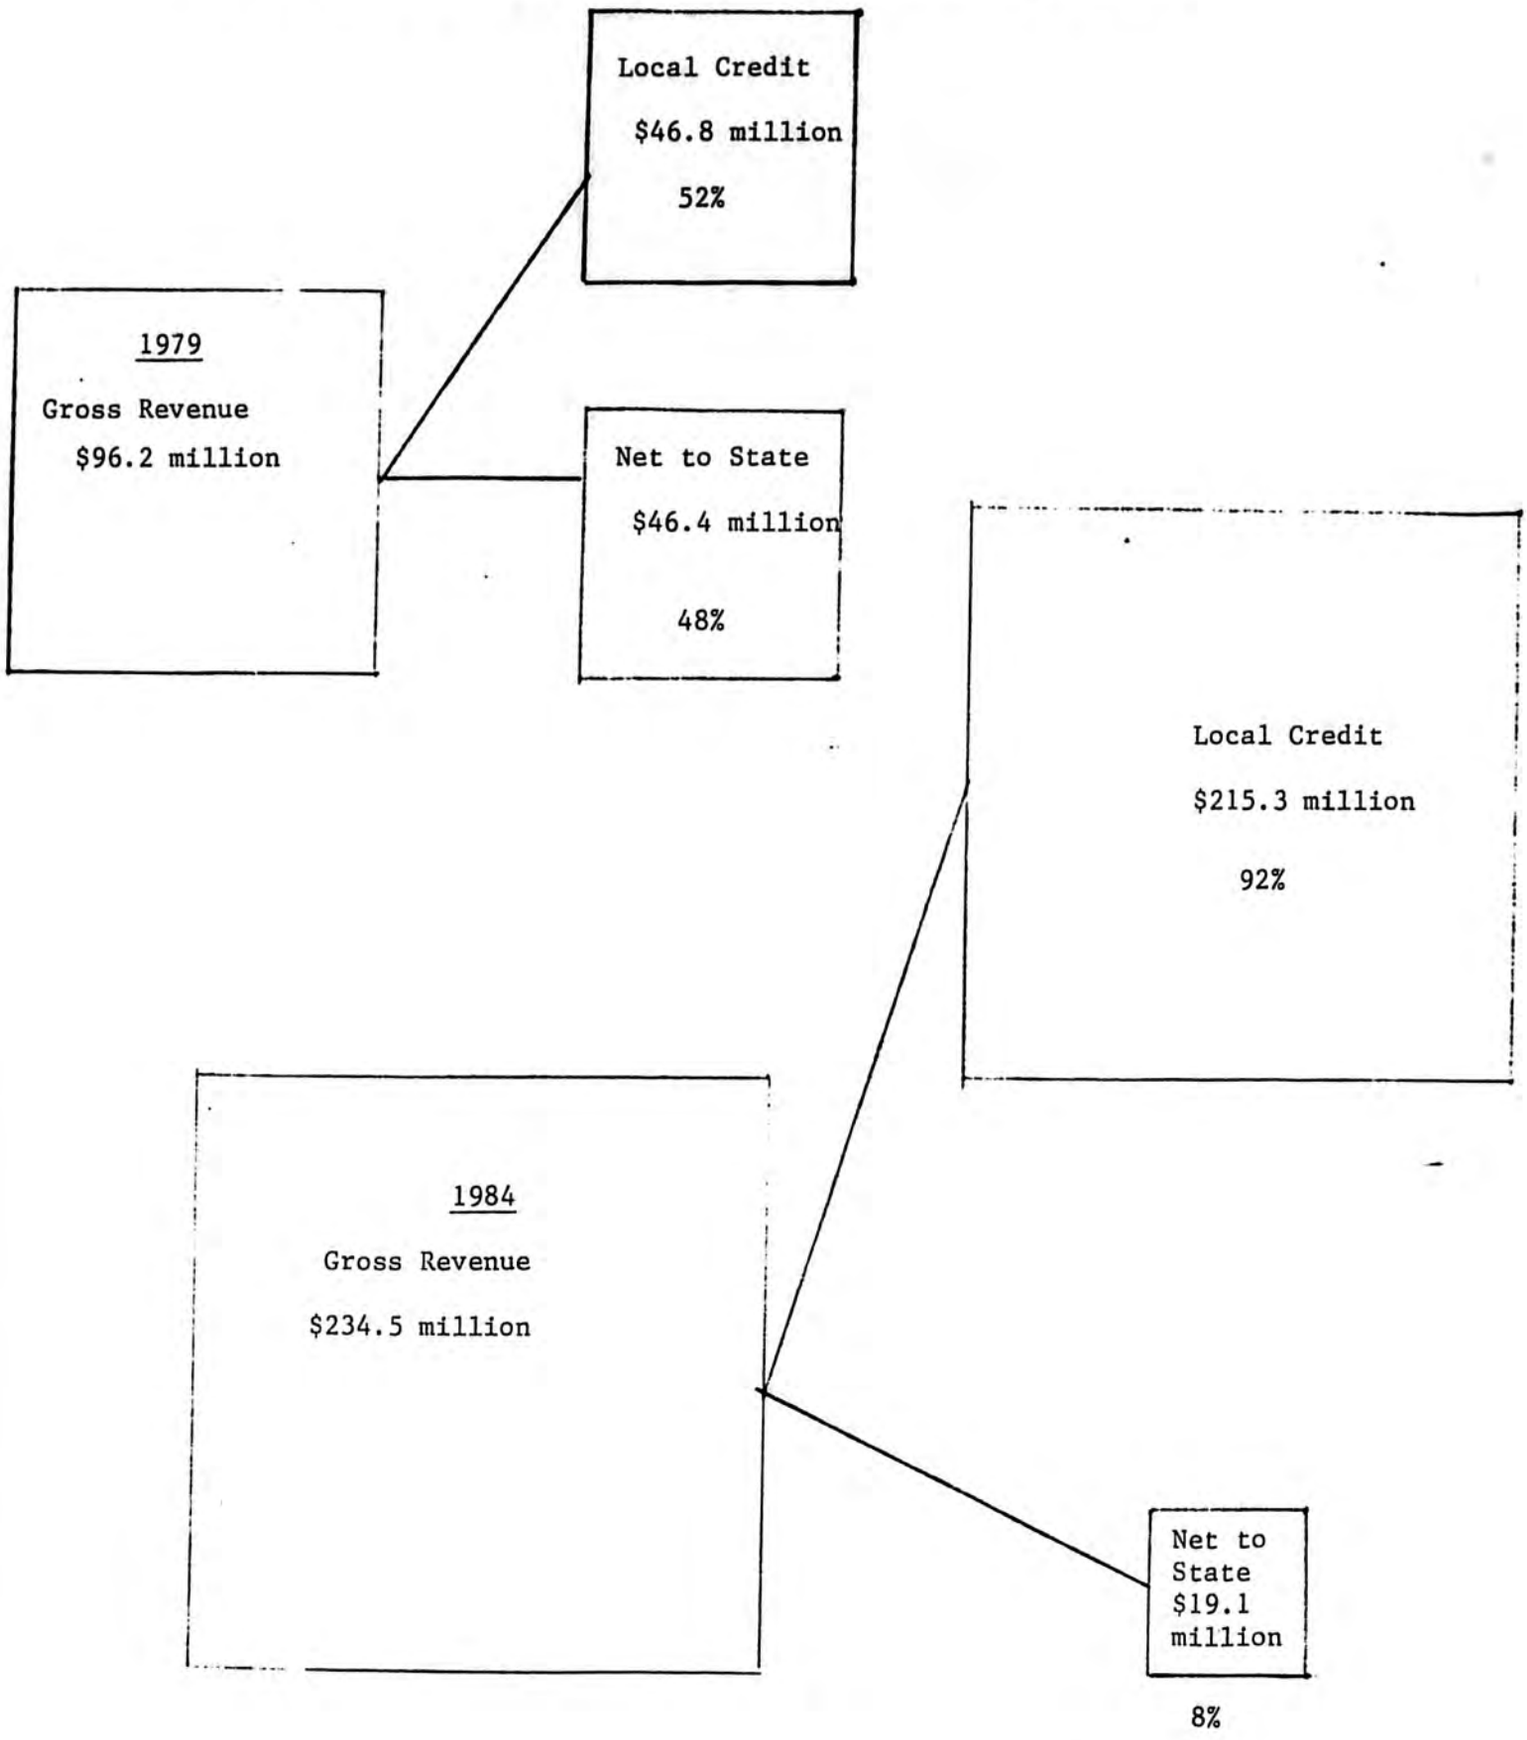
This section allows a municipality to tax only to the permissible limits for the payment of principal and interest on general obligation bonds. A municipality cannot violate section 1 of this bill in order to pay for bonds.

*Section 3.

This section is a housekeeping measure that insures that a municipality not exceed the 10 mill cap placed on the taxation under section 1, even if it taxes other property at a higher rate.

*Section 4.

This statute is to be repealed. It reads as follows.



> AS 29.45.100 No Limitations on taxes to pay bonds. The limitations provided for in AS 29.45.080 - 29.45.090 do not apply to taxes levied or pledged to pay or secure the payment of the principal and interest on bonds. Taxes to pay or secure the payment of principal and interest on bonds may be levied without limitation as to rate or amount, regardless of whether the bonds are in default or in danger of default. (12 ch 74 SLA).

This is the statute that has allowed some municipalities to over extend themselves and divert state revenues into municipal coffers.

*Sections 5 & 6.

These sections provide that current municipal debt, and a municipality's ability to pay that debt, will not be impaired. This bill concerns future property tax policy, not past.

Distribution of State Property Tax for the North Slope Borough

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 519

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to public finance; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.40.040 is amended to read:

Sec. 14.40.040. GENERAL POWERS OF THE UNIVERSITY. There is created and established a corporation to be called the University of Alaska. It may in that name

(1) sue and be sued;

(2) receive and hold real and personal property;

(3) contract and be contracted with;

(4) adopt, use and alter a corporate seal;

(5) borrow money, issue debt, or enter into long-term obligations for the purchase of facilities, goods, or services, which obligations secure, in whole or in part, debt issued by another party, as approved by the state bond committee under AS 37.15.770;

(6) do and have done all matters necessary for the purpose of any functions set forth in this chapter.

* Sec. 2. AS 14.40 is amended by adding a new section to read:

Sec. 14.40.255. LEASE-FINANCING. The Board of Regents may enter into lease-financing agreements only with the Alaska State Housing Authority acting as the Alaska State Building Authority. A lease-financing agreement must provide that lease payments are subject to annual appropriation. If the board intends to enter into an agreement under this subsection, the board shall provide notice to the

legislature and to the state bond committee. The notice must include the anticipated annual lease payment and the anticipated principal amount of the debt to be issued by the Alaska State Housing Authority acting as the Alaska State Building Authority. The board may not enter into an agreement under this section until the state bond committee has approved the proposal for the issuance of debt under AS 37.15.770.

* Sec. 3. AS 18.55.100(a)(15) is amended to read:

(15) acting as the Alaska State Building Authority arrange or contract for the financing or [, DESIGN, CONSTRUCTION AND] acquisition of public buildings designed by, constructed by, or whose acquisition has been approved by [the Department of Transportation and Public Facilities] for lease to the state in accordance with AS 18.55.010 -- 18.55.290 and AS 37.15.770.

* Sec. 4. AS 18.55.140 is amended to read:

Sec. 18.55.140. ISSUANCE OF BONDS, NOTES, AND REFUNDING BONDS. (a) The authority may issue bonds and notes from time to time in its discretion for any of its corporate purposes and may issue refunding bonds for the purpose of paying or retiring bonds previously issued by it. The authority may not issue bonds for public buildings until the state bond committee has approved the proposal for the issuance of debt under AS 37.15.770.

(b) Bonds issued by the authority for public buildings must be issued in the name of the Alaska State Building Authority and are subject to AS 18.55.010 -- 18.55.290.

* Sec. 5. AS 18.55.288 is amended to read:

Sec. 18.55.288. DEFINITIONS. In AS 18.55.010 -- 18.55.290[:]

(1) "authority" means the Alaska State Housing Authority;

(2) "bond" means any bond, note, interim certificate,

debenture, or other obligation issued by the authority or the authority acting as the Alaska State Building Authority under AS 18.55.-010 -- 18.55.290 ["PUBLIC BUILDINGS" MEANS A PUBLICLY OWNED STRUCTURE LEASED TO THE STATE FOR GOVERNMENTAL, PUBLIC OR EDUCATIONAL USE];

(3) "project site" means area devoted for a public housing project;

(4) "public buildings" means a publicly owned structure leased to the state for governmental, public, or educational use.

* Sec. 6. AS 22.05.025 is amended to read:

Sec. 22.05.025. COURT FACILITIES. (a) The supreme court has authority over all matters relating to the planning, design, construction, maintenance, occupancy, leasing, and operation of all court facilities and shall cooperate and coordinate with the Department of Transportation and Public Facilities so that court facility construction projects are carried out in accordance with the statutes and regulations applicable to state public works projects.

(b) The supreme court may enter into lease-financing agreements only with the Alaska State Housing Authority acting as the Alaska State Building Authority. A lease-financing agreement must provide that lease payments are subject to annual appropriation. If the supreme court intends to enter into an agreement under this subsection, the supreme court shall provide notice to the legislature and to the state bond committee. The notice must include the anticipated annual lease payment and the anticipated principal amount of the debt to be issued by the Alaska State Housing Authority acting as the Alaska State Building Authority. The supreme court may not enter into an agreement under this subsection until the state bond committee has approved the proposal for the issuance of debt under AS 37.15.770.

(c) In this section, "court facility" means a state facility in

which 75 percent or more of the net usable space is occupied by the court system and other justice-related agencies.

* Sec. 7. AS 24.23 is amended by adding a new article to read:

ARTICLE 2. LEASE AGREEMENTS.

Sec. 24.23.100. LEASE OF SPACE. The Legislative Affairs Agency may lease necessary office space, and contract for the lease of space, for the use of the Alaska legislature and its employees. The Legislative Affairs Agency shall adopt regulations that establish procedures for the lease of space which are substantially comparable to the procedures under AS 37.05.280 governing the lease of space for state agencies.

Sec. 24.23.110. The Legislative Affairs Agency may enter into lease-financing agreements only with the Alaska State Housing Authority acting as the Alaska State Building Authority. A lease-financing agreement must provide that lease payments are subject to annual appropriation. If the agency intends to enter into an agreement under this subsection, the agency must provide notice to the legislature and to the state bond committee. The notice must include the anticipated annual lease payment and the anticipated principal amount of the debt to be issued by the Alaska State Housing Authority acting as the Alaska State Building Authority. [The agency may not enter into an agreement under this section until the state bond committee has approved the proposal for the issuance of debt under AS 37.15.770.]

* Sec. 8. AS 37.05.280 is amended to read:

Sec. 37.05.280. LEASES. (a) The department shall lease necessary space, and contract for the lease of space, for the use of the state or an agency of the state, wherever it is necessary and feasible, subject to compliance with the requirements of AS 37.05.220 -- 37.05.280. No lease or contract for a lease may provide for a period

of occupancy greater than 40 years. An agency of the state requiring office, warehouse, or other space shall lease the space through the department. [NO CONTRACT OR LEASE EXECUTED AFTER JANUARY 1, 1966, WHICH PROVIDES FOR A PAYMENT OR PAYMENTS BY THE STATE IN EXCESS OF $12,000 ANNUALLY IS VALID UNLESS THE USE OF THE SPACE TO BE PROVIDED FOR BY SUCH CONTRACT OR LEASE HAS BEEN EXPRESSLY APPROVED BY THE LEGISLATURE BY CONCURRENT RESOLUTION.]

(b) The department may enter into lease-financing agreements only with the Alaska State Housing Authority acting as the Alaska State Building Authority. A lease-financing agreement must provide that lease payments are subject to annual appropriation. If the department intends to enter into an agreement under this subsection, the department shall provide notice to the legislature and to the state bond committee. The notice must include the anticipated annual lease payment and the anticipated principal amount of the debt to be issued by the Alaska State Housing Authority acting as the Alaska State Building Authority. The department may not enter into an agreement under this subsection until the state bond committee has approved the proposal for the issuance of debt under AS 37.15.770.

* Sec. 9. AS 37.15.040 is amended to read:

Sec. 37.15.040. SALE OF BONDS. Before selling an issue or series of bonds, the state bond committee shall give notice inviting sealed bids in such manner as it may prescribe. If satisfactory bids are received, the bonds offered for sale shall be awarded to the highest responsible bidder or bidders. If the state bond committee determines that the bids received are not satisfactory as to price or responsibility of the bidders, it may reject all bids received.

* Sec. 10. AS 37.15.110 is amended to read:

Sec. 37.15.110. CREATION AND MEMBERSHIP OF STATE BOND COMMITTEE.

WAS this IN HB4 NO

There is created within the Department of Revenue a committee known as the "state bond committee," the members of which are the commissioner of commerce and economic development, the commissioner of administration, and the commissioner of revenue. If a member of the committee is absent or otherwise unable to act, the member's designee [IN THE DEPARTMENT] shall act as a member of the committee in the member's place.

* Sec. 11. AS 37.15.130 is amended to read:

Sec. 37.15.130. OFFICERS, RECORDS AND PROCEEDINGS. The commissioner of commerce and economic development is the chairman of the state bond committee and the commissioner of revenue is the secretary. A majority of the members of the committee constitute a quorum. The committee shall keep a full, complete, and permanent record of its proceedings. All records and correspondence of the committee must [SHALL] be kept in the office of the commissioner of revenue. For the purpose of this chapter and AS 44.62.310, public notice of 24 hours or more is adequate notice of a meeting of the committee at which the issuance of bonds is authorized. SAME LANGUAGE AS AHFC.

* Sec. 12. AS 37.15.140 is amended to read:

Sec. 37.15.140. DUTIES OF STATE BOND COMMITTEE. (a) The state bond committee shall adopt the resolution and prepare ~~the documents necessary for the~~ issuance, sale, and delivery of state general obligation bonds.

~~(b)~~ The state bond committee shall prepare an annual report to be submitted to the governor and legislature before March 31 of each year. The report must show (1) all outstanding debt of debt-issuing entities of the state; (2) the anticipated effect on the finances and credit of the state, including the effect on long-term debt capacity and creditworthiness, resulting from that debt; (3) which long-term

debt is state supported and which is supported only by revenue attributable to the project being financed by the debt; (4) all long-term capital lease obligations of the state; (5) the volume of short-term debt issued and retired during the year by debt-issuing entities of the state; (6) specific identification of each issue for which the state has pledged some form of indirect support for the debt, including any moral obligation of the state to support the debt; (7) future bonding and debt capacity implications of legislation enacted in the previous legislative session; and (8) the recommended debt issuance capacity of the state for the next two years following the year of the report.

(c) The state bond committee may develop written policies concerning debt of the state.

* Sec. 13. AS 37.15.150 is amended to read:

Sec. 37.15.150. STAFF AND [COMMITTEE MAY EMPLOY] SPECIAL SERVICES. The state bond committee may appoint an executive director who may, with approval of the committee, select and employ additional staff as necessary. Employees of the committee are in the partially exempt service under AS 39.25.120. If the [STATE BOND] committee considers it necessary and advisable, it may procure architectural or engineering, fiscal agent or municipal investment, legal, and other expert or specialized services at reasonable and customary fees to assist it in accomplishing the most advantageous sale of the bonds. The fees may be paid from the proceeds of the sale or advanced from the contingency fund in the Office [OFFICE] of the Governor [GOVERNOR] or otherwise.

* Sec. 14. AS 37.15.450(a) is amended to read:

(a) The bonds shall be sold in such amounts or series and at such time or times as determined by the committee. Before selling a

series of bonds, the committee shall give notice inviting sealed bids in such manner as it may prescribe. If satisfactory bids are received, the bonds offered ~~for sale~~ must [SHALL] be awarded to the highest responsible bidder or bidders. If the committee determines that the bids received are not satisfactory as to price or responsibility of the bidders, it may reject all bids received. The bonds, or each series of them, must [SHALL] be sold at such a price so that the effective interest rate over the life of the bonds does not exceed 11 percent per year or that rate of interest which is 125 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. Interest must [SHALL] be payable annually or semiannually.

* Sec. 15. AS 37.15 is amended by adding a new article to read:

ARTICLE 5. STATE-SUPPORTED DEBT.

Sec. 37.15.770. STATE AGENCY DEBT. (a) The state bond committee shall review proposals for the issuance of debt by or on behalf of

(1) the Alaska State Housing Authority acting as the Alaska State Building Authority for the purpose of providing public buildings; and

(2) the University of Alaska.

(b) The committee may review the general programs and financing plans of the agency that proposes to issue the debt as well as the specific aspects of the proposed debt issue, including

(1) amounts;

(2) times;

(3) maturities;

(4) debt structure and security features;

(5) credit enhancements;

(6) use of proceeds;

(7) official documents;

(8) planned rating agency presentations; and

(9) selection, retention, or compensation of financial advisors, bond counsel, trustees, underwriters, and other professionals.

(c) The state bond committee shall consider approval of the amount and time of sale of the debt. The committee shall approve the issuance of the debt if, in its judgment, issuance of the debt is in the best interests of the state. The committee may limit approval of the issuance of debt upon compliance with terms established by the committee.

(d) At the time of sale of the debt, the state bond committee shall review the bids or pricing of the debt, including discounts, underwriting spreads, and interest rates. If the committee determines that the bids or prices are not satisfactory or that the bidders are not responsible, the agency may not sell the debt.

Sec. 37.15.790. MUNICIPAL SCHOOL DEBT. If, at any time, the state bond committee, in its judgment, determines that the amount or retirement of debt issued by municipalities and subject to reimbursement by the state under AS 14.11.100 is not in the best interests of the state, the committee may

(1) establish an amount or amounts, for any or all years before the maturity of all of that municipal debt, which may not be exceeded by the Department of Education in approving requests under AS 14.11.103; or

(2) establish, under AS 14.11.100(j)(3), a term required for the maturities of municipal debt authorized by local voters after March 31, 1986.

* Sec. 16. AS 39.25.120(c) is amended by adding a new paragraph to

read:

(19) employees of the state bond committee.

* Sec. 17. This Act takes effect immediately in accordance with AS 01.-10.070(c).

STATE OF ALASKA

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER

BILL SHEFFIELD, GOVERNOR

POUCH S
JUNEAU, ALASKA 99811
PHONE: (907) 465-2300

February 20, 1986

The Honorable John Sund
Chairman
House Loans Committee
P.O. Box V
Juneau, AK 99811

Dear Chairman Sund:

Lease purchase financing was contemplated by the delegates to the constitutional convention when they incorporated Section 11 in Article IX. Statutory authority to do this type of financing was given to the Alaska State Housing Authority in 1966 where Chapter 60, SLA 1966, was enacted. A copy of that Act is enclosed for your ready reference.

Also enclosed are memoranda of the Attorney General, dated October 14, 1983, Wohlforth & Flint, dated January 17, 1984, and Birch, Horton, Bittner, Pestinger and Anderson, dated April 4, 1984. These memoranda deal with different questions arising out of lease purchase or, as it is frequently termed, lease revenue financing. As is pointed out in footnote 3 of the Birch, Horton et al., memorandum, between 1966 and 1974 ASHA financed 11 projects under the grant of authority contained in Chapter 60, SLA 1966.

In the context of this substantial history of activity in the area of lease revenue financing, I should like to reiterate that the purpose of HB 519 is 1) to establish a single landlord agency for the leasing by the state of buildings financed by lease revenue bonds and, 2) to provide the authority in the State Bond Committee to manage debt so acquired in a logical manner.

The bill merely seeks to order a potentially chaotic situation with regard to this type of financing. It does not mandate lease revenue financing any more than Section 11, Article IX, mandates such financing. Indeed, nothing in either the constitution or in statute compels the usage of such financing or, for that matter, compels the usage of any type of term financing. All public works projects could be financed through construction appropriations. All could be financed through general obligation bonds. Many, but not all, could be financed through revenue bonds. The method of financing should be chosen to accord with the best interests of the State after careful analysis of the short- and long-term implications of the financing.

As pointed out by Governor Sheffield in his transmittal letter, rating agencies have begun to take into account all state supported debt

when measuring the creditworthiness of a state or a particular financing. It is the informed belief of the members of the State Bond Committee that to fail to enact HB 519 as applicable to all branches of government is to fail to bring order and control to the management of the state's debt.

Some concern has been expressed that the State Bond Committee would, under the terms of HB 519, be vested with the ability to thwart the will of the Legislature by refusing to issue debt or allow the issuance of debt on a whim. The State Bond Committee has been in existence since 1960 and has managed the issuance of general obligation and revenue debt sold since that time. This debt has financed a substantial number of public works for the judicial branch and the executive branch. The management of that debt in a sound manner has resulted in the state's present rating of AA by Standard & Poors and a comparable rating from Moody's, the foremost rating agencies in the United States. I know of no instance when the State Bond Committee has made a judgment as to the value of the project itself. The judgments made by the Committee have been those solely relating to the debt, and the project itself has only been of interest for the role it plays in structuring the debt.

One difficulty could be presented and that would be when the dollar value of several projects, all ready for financing, exceeded the calculated capacity for new debt. Obviously, if all projects arose within one branch of government, that branch would have to establish financing priorities. If the projects arose in more than one branch, negotiations or consultations between or among those branches, conducted by the heads of those branches, would be required to establish financing priorities. The State Bond Committee would render to the negotiators what assistance it could, but since it has no authority to make selections of projects, it could not establish the priorities.

I call your attention to Section 12 of HB 519 which would require the State Bond Committee to report to the Legislature before March 31 of each year, not only as to existing debt, but also future debt and debt capacity. This is a new requirement and is sought as an additional element in the ordering and management of state debt. Such a report would enable the Legislature to make the discrete judgments it must make in authorizing or approving the projects presented during the budget process by each agency of government requiring the construction of public works projects.

Such centralization of management and reporting will greatly assist the state in maintaining creditworthiness in the nation's financial markets and, more importantly, fulfill on an orderly basis the needs of the public for sound and balanced development of public facilities.

Sincerely,

Mary A. Nordale
Commissioner of Revenue

LAWS OF ALASKA

1966

Source:

SB 198 am by Conference Committee

Chapter No.

60

AN ACT

To provide public buildings for the use of the state and its political subdivisions.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 18.55.010 is amended to read:

Sec. 18.55.010. PURPOSE OF SECS. 10 - 290 OF THIS CHAPTER. The purpose of secs. 10 - 290 of this chapter is to remedy the acute housing shortage that exists in certain localities of the state by undertaking slum clearance, low-cost housing projects, housing for persons and their families engaged in national defense activities in the state, and housing projects and housing for veterans of World War II and other citizens of the state and to remedy the short supply of necessary public buildings by providing for the financing, construction and acquisition of public buildings for lease to the state and its political subdivisions.

* Sec. 2. AS 18.55.100(a)(15) is amended to read:

(15) arrange or contract for the financing, design, construction and acquisition of public buildings

for lease to the state or a political subdivision of the state in accordance with secs. 10 - 290 of this chapter.

* Sec. 3. AS 18.55 is amended by adding a new section to read:

Sec. 18.55.105. LEASE OF AUTHORITY'S PUBLIC BUILDINGS TO POLITICAL SUBDIVISIONS. (a) A public building owned by the authority may not be leased to a political subdivision of the state except upon execution of a prior agreement of lease of the premises between the state and the authority. An agreement of lease shall grant an option to the state to apply rental payments made under the lease towards purchase of the premises and receive conveyance of title upon satisfaction of the purchase price. The purchase price shall be a sum equal to all costs of the authority in financing, designing, constructing and acquiring the premises leased and shall include the cost of amortizing indebtedness incurred for those purposes. Total rental payments required under the lease shall equal the purchase price of the premises leased. Upon execution of an agreement of lease between the state and the authority, the state may sublease or assign its interest in the lease to a political subdivision which satisfies the requirements of (b) of this section. A sublease or lease assignment shall include the same option of purchase and right to conveyance of title upon satisfaction of the purchase price as is afforded the state in its agreement of lease with the authority. In case of a sublease to a political subdivision, the state shall covenant with the sublessee that it will not exercise its option to purchase the premises subleased during the term of the sublease.

r a political subdivision
secs. 10 - 290 of this chapter.
ed by adding a new section to
OF AUTHORITY'S PUBLIC BUT
a) A publ

(b) A political subdivision may qualify for a sublease or assignment of the state's interest in a lease with the authority as authorized by (a) of this section only if

(1) the premises which are the subject of the sublease or lease assignment are sought as a replacement for a local facility which is condemned, destroyed by fire or other calamity, or is certified by a state official to be inadequate, unsafe, or otherwise unsatisfactory under the laws of the state for its intended use;

(2) the purchase price of the premises does not exceed $2,500,000;

(3) the amount of total indebtedness outstanding on all premises subleased or assigned by the state under this section does not exceed $7,500,000;

(4) the political subdivision agrees to assign to the state, as security for payments required under the proposed sublease or lease assignment, receipts of state taxes shared with the political subdivision, to the extent of the amount of any default in payments required under the proposed sublease or lease assignment;

(5) the Department of Commerce investigates and certifies to the governor the feasibility of a proposed sublease or lease assignment, including but not limited to certification of the fiscal capacity of the political subdivision to meet payments required under the proposed sublease or lease assignment;

(6) the proposed sublease or lease assignment is ratified by referendum vote of a majority of the qualified voters voting in a regular or special local election

provided that the voters are apprised specifically on the ballot of

(A) the term of years of the proposed sublease or lease assignment;

(B) the amount of required payments;

(C) the security required under (4) of this subsection;

(D) the option to purchase and right of conveyance; and

(E) other terms and conditions of the proposed sublease or lease assignment, as determined by the governing body of the political subdivision;

(7) the proposed sublease or lease assignment is ratified by the legislature by concurrent resolution.

(c) If a political subdivision party to a sublease or lease assignment authorized by this section fails to make timely payment of sums due to be paid under the sublease or lease assignment, the state, upon not less than 90 days' notice to the governing body of the political subdivision, may assess, levy and collect taxes within the political subdivision in an amount equal to the payments due and limited to those taxes which the political subdivision is authorized to assess, levy and collect under other provisions of law. Assessment, levy, collection and enforcement of collection shall be at the time and in the manner authorized the political subdivision under other provisions of law.

* Sec. 4. AS 18.55.288(2) is amended to read:

(2) "public buildings" means a publicly owned structure leased to the state or a political subdivision of

the state for governmental, public or educational use;

Approved by Governor April 7, 1966
Actual effective date: July 6, 1966

MEMORANDUM State of Alaska

TO: Hon. Daniel A. Casey, Commissioner
Department of Transportation &
Public Facilities
AND
Hon. Lisa Rudd, Commissioner
Department of Administration

DATE: October 14, 1983

FILE NO: 366-101-84

TELEPHONE NO: 465-3600

SUBJECT: Construction financing of a public facility by lease agreement

FROM:
Norman C. Gorsuch
Attorney General

By: William F. Cummings
Assistant Attorney General
Transportation Section-Juneau

James L. Baldwin
Assistant Attorney General
Governmental Affairs-Juneau

The Department of Administration (DOA) and Department of Transportation and Public Facilities (DOT/PF) have requested our advice whetner there is sufficient authority granted by law to permit a state agency to finance the construction of a public facility on state land under a lease agreement with a developer and owner of the facility other than the state. Briefly, the lease agreement consists of a conveyance of a leasehold interest in state land to a developer who constructs a facility on the land which is leased back to the state. Upon expiration of the lease agreement, the facility either reverts to the state or the state has an option to purchase it.

Using this financing technique, DOA proposes to centralize state offices in Anchorage and DOT/PF proposes to construct a legislative hall in Juneau. Under both proposals, facilities owned by others would be located on state land. 1/ The answers to your questions involve consideration of the issues set out below.

1. Does financing a public facility through a lease agreement violate provisions of the Alaska Constitution governing the creation of state debt?

We believe that the financing of construction by lease is valid only if terms and conditions are imposed which provide sufficient evidence that future legislatures are not bound to ap-

1/ We believe that other public facilities are being studied for financing by lease agreement including facilities for the Alaska Vocational Technical Training Center in Seward and a maximum security prison.

propriate money for the rental. 2/ Article IX, section 8 of the Alaska Constitution prohibits the creation of public debt except for capital improvements and then only after authorization by the legislature and a vote of the people. The lease transactions proposed are a means to finance the construction of public facilities without directly appropriating from the general fund for the cost of construction or authorizing the creation of debt by selling general obligation bonds. This makes it imperative that the state's right to possess and use the facility is contingent on annual appropriations from revenue anticipated for the fiscal year in which the lease obligation is incurred. Traditionally, appropriations for lease payments are considered operating appropriations which lapse on June 30 of the fiscal year. A lease agreement which provides for termination of the leasehold if sufficient appropriations to pay rent are not enacted will negate the conclusion that a debt is created. A one-year lease with automatic annual renewal for a maximum number of years upon enactment of an appropriation to finance the annual rent has been approved as a term which negates any possibility that a debt is created. Gude v. City of Lakewood, 636 P.2d 691 (Colo. 1981). See also Glennon Heights, Inc. v. Central Bank and Trust, 658 P.2d 872 (Colo. 1983).

2. Does existing law prevent a state agency from entering into a lease agreement for the construction of a public facility?

The lease of state office space is governed by AS 37.-05.220 -- 37.05.280. These statutes require a competitive bidding process with award of the contract by DOA to the lowest responsible bidder for the lease. However, the statutes provide one further requirement for office space leases which is lacking in other state contracts for the purchase of goods or services. AS 37.05.280 provides in relevant part that "no contract or lease executed after January 1, 1966, which provides for a payment or payments by the state in excess of $12,000 annually is valid unless the use of the space to be provided for by such contract or lease has been expressly approved by the legislature by concurrent resolution." This provision requires legislative approval of virtually all leases which the state executes to procure office and other space. However, we believe that this part of the

2/ The advice given in this memorandum is consistent with the majority of state courts which have considered the question. E.g., Bulman v. McCrane, 312 A.2d 857 (N.J. 1973); State ex rel. Thomson v. Gisel, 72 N.W.2d 577 (Wisc. 1958); but see Opinion of the Justices, 79 A.2d 753 (Me. 1951).

statute is invalid for two reasons.

Article II of the Alaska Constitution requires that the legislature exercise the law-making power by the passage of a bill not by the adoption of a concurrent resolution. State v. A.L.I.V.E. Voluntary, 606 P.2d 769 (Alaska 1980). Furthermore, the requirement for legislative approval of a lease is a violation of the doctrine of the separation of powers. Governmental power is allocated among the three branches of government by the Alaska Constitution. Some powers are logically allocated to the executive and others to the legislature. The power to execute the law on behalf of the state is one which falls to the executive. Alaska Const. art. III, § 16. It is the role of the legislature to enact laws which establish the conditions under which the executive may enter into leases. Alaska Const. art. II, § 1. However, it is not appropriate for the legislature to reserve a veto power over the enforcement decisions made by the executive. The legislature may amend or repeal the leasing authority for DOA. However, the legislature may not usurp the executive function to lease facilities without destroying the system of checks and balances inherent in our tripartite system of government. 3/ Bradner v. Hammond, 553 P.2d 1 (Alaska 1976).

DOT/PF has limited authority to dispose of land acquired for public works other than highways. 4/ DOT/PF may "vacate land or part of it, or rights in land acquired for public work purposes" by executing and filing a deed in the appropriate recording district upon vacating. AS 35.20.070. "Title reverts to the persons, heirs, successors, or assigns in whom it was vested at the time of the taking." Id. All other disposals of land acquired for public works are conducted by the Department of Natural Resources (DNR).

Before DNR may lease state land, the public must be informed of the nature and terms of the conveyance. Alaska Const. art. VIII, § 10; AS 38.05.035(a)(14), 38.05.345. DNR, acting in

---

3/ The cited portion of AS 37.05.280 was held invalid on the basis of separation of powers and improper exercise of the law making power by the superior court in Marine View Tenants' Association v. ASHA, No. 1JU-80-1037 CIV (Nov. 1, 1981). That case was not appealed. However, this decision has limited precedential value until a final decision is rendered by the Alaska Supreme Court.

4/ AS 19.05.070 grants broader discretion to dispose of land acquired for highway purposes.

concert with DOA, must prescribe a disposal procedure for state land which provides the safeguards required by law and permits the construction of a facility which the state will lease from the developer. That procedure may include the grant of a lease under AS 38.05.315 to the state agency responsible for the facility. The lease granted by DNR will allow the lessee agency to sublease the land for development of a leased public facility under specified terms which will include prior DNR review and selection of the sublessee according to AS 37.05.230. The sublease of the land will continue in effect long enough to secure financing for the facility. The payment of rent under the lease to the state agency for the facility would be contingent on the enactment of annual appropriations. If the lease is terminated by the failure to appropriate, the lessor would be the successor to the state agency's right to possess the building until reversion or exercise of the option to purchase.

3. Does existing law prevent a state agency from obtaining financing from a municipality to design and construct a state-occupied facility on state-owned property and then enter into an agreement with the municipality for payback without competitive bidding?

DOT/PF is proposing to finance the construction of the legislative hall by lease agreement. The City and Borough of Juneau (city) would sell tax exempt municipal revenue bonds, secured by the lease payments to be paid by the state. The state would then supervise the design and construction of the facilities and be the contracting authority.

As a general proposition, DOT/PF has the authority to make contracts with municipalities for public works. AS 35.05.-040(7). The purpose of this form of contract is further defined by AS 35.15.080(c), which provides in relevant part, "[a] municipality may request joint assumption of responsibilities with the department relating to the planning, design, and construction of a public works project." The term "public works" is very broad and includes public buildings. A public building is one which is "owned or controlled and held by the state for government or public use." AS 35.25.020(5) and (6).

We believe that DOT/PF may contract with the city for the planning, design and construction of the legislative hall. We reach this conclusion because under the provisions of the lease agreement, the state will have control over the building which it will hold for government or public use. Additionally, the state will have significant ownership interests in the facility because it holds fee title to the land upon which the build-

ing will be constructed and at the expiration of the lease agreement, will own the building free of the interest of the city. However, a contract may not alter the city's responsibility for repaying the long term debt established to finance the cost of construction of the facility.

Our memorandum of May 9, 1983 indicated that AS 37.05.-230 generally required competitive bidding to award a lease agreement which provides for the construction of a public facility. However, competitive bidding is not required in all instances of public contracting. McKinnon v. Alpetco, 633 P.2d 281 (Alaska 1981). The lease transaction under consideration may present an instance where it is in the best interests of the state to negotiate directly with a municipality rather than offer the contract to the lowest bidder. See AS 37.05.230(2). A decision to negotiate directly requires a detailed finding of fact in writing by DOA. In the finding of fact, the commissioner must justify the conclusion that negotiation is in the best interests of the state. A municipality enjoys a preferred status when dealing with the state. Intergovernmental contracts are not governed by the same considerations applicable to the state when it is participating in the open market place. It is probable that a facility can be financed cheaper with municipal revenue bonds than by private means. It may be futile to obtain any advantage from the competitive bid process. If DOA sets out ultimate facts in the finding which supports the conclusion that negotiation furthers the public's interest, then competitive bidding is not required. Libby v. City of Dillingham, 612 P.2d 33, 45 (Alaska 1980)(Rabinowitz, J. concurring). However, the award without competitive bidding would be subject to judicial review to determine whether the decision was arbitrary, capricious or an abuse of discretion. McKinnon, 633 P.2d at 287; Hertz Drive-Ur-Self Systems, Inc. v. Tucson Airport Authority, 299 P.2d 1071 (Ariz. 1956); Volume Services Division or Interstate United Corp. v. Canteen Corp., 369 So. 2d 391 (Fla. App. 1979).

4. Does the appropriation to finance the site acquisition and planning for a legislative hall contain defects which prevent DOT/PF from proceeding with the project?

Section 95, ch. 106, SLA 1983 appropriates $4,500,000 to DOT/PF plus other money received for land acquisition and facilities planning in Juneau. The land acquisition, planning, and preliminary design efforts for the legislative hall will be paid from this appropriation.

This section makes an appropriation from two sources: $4,500,000 from the general fund and an unspecified amount from

an unspecified source. 5/ This appropriation is for land acquisition and facility planning in Juneau.

The appropriation contains a unambiguous statement of purpose that DOT/PF is appropriated at least $4,500,000 for land acquisition and facilities planning in Juneau. There is no specification of the public facility upon which the appropriation may be expended. The use of the $4,500,000 appropriated for site acquisition, planning, and preliminary design for the legislative hall is within the purpose set out in the appropriation. However, the appropriation of money which may be received from other sources presents a serious legal issue. Because no amount is stated for the appropriation, sufficient authorization may not exist to expend the money beyond the $4,500,000. 6/ Nonetheless, the unspecified source of the appropriation is presumably severable from the general fund part of the appropriation which is stated with specificity in the amount of $4,500,000. AS 01.10.-030. Consequently, until you begin receiving amounts from "other sources," whatever they may be, the expenditure of general fund money authorized by the appropriation is not a problem.

CONCLUSION

We believe there is sufficient authority under existing law to finance the construction of a public facility by lease. However, because this financing technique is not specifically authorized by law, we cannot with absolute certainty advise you that a court would agree with our opinion. You should make allowance for this risk when you plan further development of each project to be financed by the lease purchase method.

cc: Hon. Harold J. Raynolds, Jr.
Commissioner
Department of Education

5/ We presume "the other money received" was intended to include money to be provided under a lease agreement with the city as discussed in section 3, supra.

6/ Each appropriation must state an amount. AS 24.30.030. It is not necessary for the appropriation Act to set out the amount in dollars and cents if the appropriation contains provisions which make the amount capable of mathematical calculation. Orbison v. Welsh, 179 N.E.2d 727 (Ind. 1962).

MEMORANDUM

Constitutional Debt Limitation/State and Municipal Leaseback Transactions

This memorandum reviews cases relating to state and municipal leaseback transactions, focusing on the viability of such transactions under constitutional debt limitations. For purposes of clarity, it may help to begin by defining some of the terms used in this paragraph.

Our concept of "leaseback transaction" generally includes the following basic elements:

(1) one party is a state or local government which cannot or will not directly finance a capital project (with "capital project" here generally limited to those capital projects which do not generate user income other than in the form of rent from the state or local government users);

(2) a second party to the transaction is the financing entity, which may be either a public or private corporation;

(3) the financing mechanism generally involves the issuance of bonds; and

(4) the relationship between the state or local government and the corporation is established by a lease agreement under which the state or local government agrees to lease from the corporation the capital project financed with the corporation's bonds; there may also be a preceding lease or sale of land from the state or local government to the corporation for use as the site of the capital project.

By "consitutional debt limitations" we refer to those provisions in the various state constitutions which inhibit the ability of a state or local government to incur debt. These limitations generally fall into one of two categories: (1) those which prohibit debt absent voter approval except for certain

enumerated purposes; and (2) those which limit permissible debt to a particular amount, usually expressed as a percentage of revenues. Alaska's debt limitation falls into the former category, and, because of their relevance to proposed leaseback transactions in Alaska, we present here in full the four pertinent sections from the Constitution of the State of Alaska, Article IX:

> SECTION 8. STATE DEBT. No state debt shall be contracted unless authorized by law for capital improvements or unless authorized by law for housing loans for veterans, and ratified by a majority of the qualified voters of the State who vote on the question.The State may, as provided by law ratification, contract debt for the purpose of repelling invasion, suppressing insurrection, defending the State in war, meeting natural disasters, or redeeming indebtedness outstanding at the time this constitution becomes effective.
>
> SECTION 9. LOCAL DEBTS. No debt shall be contracted by any political subdivision of the State, unless authorized for capital improvement by its governing body and ratified by a majority vote of those qualified to vote and voting on the question.
>
> SECTION 10. INTERIM BORROWING. The State and its political subdivisions may borrow money to meet appropriations for any fiscal year in anticipation of the collection of the revenues for that year, but all debt so contracted shall be paid before the end of the next fiscal year.
>
> SECTION 11. EXCEPTIONS. The restrictions on contracting debt do not apply to debt incurred through the issuance of revenue bonds by a public enterprise or public corporation of the State or a political subdivision, when the only security is the revenues of the enterprise or corporation. The restrictions do not apply to indebtedness to be paid from special assessments on the benefited property, nor do they apply to refunding indebtedness of the State or its political subdivisions.

We note also the presence of Article IX, Section 16, of the Alaska Constitution, which establishes a ceiling on permissible annual appropriations by the State. While this section is not per se a limitation on debt (the section expressly exempts from its provisions appropriations of bond proceeds), it may have some effect on the feasibility of a proposed leaseback transaction to the extent that it limits the state's ability to make appropriations.

Finally, among our list of defined terms is "lease participation certificate." By this, we refer to the financing instrument used in a lease participation transaction. A "lease participation transaction" has the same basic elements described for a "leaseback transaction" with one exception: instead of or in addition to issuing bonds to finance the capital project, the corporation, as lessor of the project, issues lease participation certificateswhich entitle their holders to a share of the lease revenues generated by the project.

With these preliminary matters established, we proceed now to an overview of the research we have completed with regard to leaseback transactions and constitutional debt limitations.

OVERVIEW

In preparing this memorandum, we have reviewed some 47 cases decided in 26 states. The earliest case was decided in 1939, the most recent in 1982. There are earlier cases which we declined to include in this survey, primarily because of the existence of more recent cases in their jurisdictions. For ease of reference, we will refer to those cases which have invalidated leaseback transactions as invalidating cases and to those cases which have upheld leaseback transactions as validating cases.

While legal research can seldom, if ever, be satisfactorily reduced to figures and statistics, some of the numbers revealed by our research may be of interest. Of the 47 cases we reviewed, 21 were invalidating cases and 26 validating. Among the 26 states in which these 47 cases were decided, 16 states can be considered validating states in the sense that the most recent decisions in those states are validating decisions. The remaining 10 states have only invalidating decisions, but only two of those states -- Ohio and New Mexico -- have considered the question more than once. Of the 16 validating states, 10 have considered the question more than once. Six of the validating states had early invalidating decisions followed later by validating decisions. In no state has an invalidating decision followed a validating decision.

On the following pages of this memorandum, we will generally follow a chronological order in presenting the cases reviewed; however, three states -- New Jersey, Wisconsin, and Missouri -- have had such extensive judicial review of leaseback transactions that their cases are most instructive if viewed apart from the others. Therefore, the following pages will begin with cases decided in New Jersey, Wisconsin, and Missouri and will then proceed with a chronological review of the cases from the other states.

NEW JERSEY

New Jersey's supreme court has decided four leaseback transaction cases. Its first decision, McCutcheon v. State Building Authority, 97 A.2d 663 (N.J. 1953), became the most cited of the leaseback transaction cases of all the states. McCutcheon has been cited approvingly or for support in the invalidating cases of Arizona, Iowa, Massachusetts, Ohio, Oregon, Washington, West Virginia, and Wisconsin. It has also been cited and then ignored, distinguished, or dismissed by many of the validating cases.

In 1968, the New Jersey court expressed some clear misgivings about its McCutcheon decision, though it did not expressly overrule the decision at that time. In 1973, the court fortified the impression created in the 1968 case that it no longer endorsed McCutcheon. Again, however, the court did not expressly overrule the decision at that time. A New Jersey Appellate Court summed up the status of McCutcheon in 1981 with the following comment: "it is apparent that as precedent the case is dead; it simply has not as yet been interred." Enourato v. New Jersey Building Authority, 440 A.2d 42, 48 (N.J. Appel. 1981). Final interment arrived in 1982 when Enourato was appealed to the New Jersey Supreme Court, which expressly overruled McCutcheon.

The effect of McCutcheon on other state courts which have reached invalidating decisions should be noted. We listed above eight states whose courts have reached such invalidating decisions. Three of these states -- Arizona, West Virginia, and Wisconsin -- have since had validating cases decided in their supreme courts. The remaining five states have not had any other post-McCutcheon cases. It will be interesting to note the effect, if any, which the overruling of McCutcheon has on those states as future cases come before their courts.

McCutcheon involved a statutorily created public corporation known as the State Building Authority. The sole business of the Authority was to provide for the construction and acquisition of buildings through the issuance of its bonds. The source of income to the Authority from which the bonds were to be

repaid was the leasing of the buildings to the state and its various departments and agencies. Under the Authority's enabling statutes, the lease contracts would be "valid and binding upon the department, agency, or instrumentality of the State, notwithstanding that no appropriation was made or provided to cover the cost or estimated cost of the contract." 97 A.2d at 665.

Neither the statutory nor the lease provisions set forth by the court in its opinion indicate whether or under what circumstances title to the property would be transferred to the State; however, the statute did authorize the Authority to convey property it acquired. In any event, the most significant concern to the court, as reflected in the following passage from the opinion, was whether the lease contracts were actually purchase contracts:

> While in form a way of providing the State with leasehold interests in building facilities for public use, in reality the design of the act is to enable the State by contracts of purchase to acquire for state use buildings possessed and constructed by the Authority by means of bond issues sustained by the State's promise to supply in the guise of rentals sufficient money to liquidate the bonds, available only through the medium of annual appropriations. And this in disregard of the constitutional debt limitation and the restraints laid by the organic law upon the appropriations process. There is no pretense of conformance with the debt limitation provision; there was no submission of the project to the electorate .... The legislation proceeds upon the hypothesis that the fulfillment of the project will not burden the State with a debt or liability within the constitutional sense. But in this the accent is on the external appearance rather than the substance. The label is unimportant; it is the essence that controls. It is an obvious truism that constitutional limitations may not be set at naught by indirection.

97 A.2d at 668. It was this piercing of the lease contract to unveil an underlying purchase agreement which primarily led the court to conclude that the transaction was governed by, and invalid under, the State's constitutional debt limitations.

Another important factor to the court was the nature of the Authority. Regarding this factor, the court stated:

> There is for the reasons stated, a radical difference in the relationship between the State and the Authority and the State and a private corporate lessor....The Authority is not an independent autonomous public corporation. It may lease its building faciltities only to the State, its departments, agencies, and instrumentalities....And, quite apart from the other considerations heretofore adverted to, the State's taxing power is the sole source of its revenue.

97.A.2d at 671. The court's apparent perception of the Authority as, in essence, the alter ego of the State involved in a transaction which the court viewed as, in essence, a purchase agreement created the situation necessary for the court to reach its conclusion. From the court's perspective, it was reviewing, in essence, a capital construction contract entered into by the State without the required voter approval. The result was inevitable.

As noted above, the statute made the lease payments valid and binding against the state agencies entering into the lease contracts even if the legislature failed to make appropriations for such payments. While the meaning of the statute is not clear, one might have expected the court to use the statute to conclude that any lease entered into under it would be prohibited debt by virtue of its apparent attempt to avoid the appropriation process. Instead, the court virtually ignored the statute. In fact, the following passage, which should most likely be considered as dicta, reflects the opposite situation -- one in which there is no obligation to make payments except to the extent that appropriations so provide:

> The constitutional debt-limitation provision is not limited in quality and scope to debts enforceable by action. It has in view the temptation or inducement and incentive to make appropriations for "debts" beyond the prescribed amount, unless approved by the people in the manner ordained. Moral and ethical compulsions are not to be allowed to override the constitutional safeguard against improvidence and the integrity of the State's economy.

97 A.2d at 671

By the court's own account, McCutcheon stood as a rigid enforcement of the state's debt limitation provisions. Any leaseback transaction plan which reflected any indicia of a purchase -- whether by transfer of title at termination of the lease, or by the holding of title by a public corporation, or by lease payments fashioned to pay for debt service on the bonds -- would likely have failed before that court, at least to the extent that one party to the plan was a public corporation whose only customer was the State.

Fifteen years after McCutcheon, the New Jersey Supreme Court again considered a leaseback transaction case, this time with a markedly different result. The second of the New Jersey cases was Clayton v. Kervick, 244 A.2d 281 (N.J. 1968). The opinion was written by Justice Jacobs, the only remaining member of the McCutcheon court and a dissenter in that case (along with Justice, later to become Mr. Justice, Brennan).

The statute in Clayton established the New Jersey Educational Facilities Authority. The Authority was empowered to borrow money and issue bonds to construct projects to be leased to public and private colleges. The projects were anticipated to be revenue producing projects (such as dormitories), and the revenues they produced were primarily the source from which lease payments were to be derived. To this extent the transaction in Clayton was not a "leaseback transaction" as we have defined the term for purposes of this memorandum, and, indeed, it was the revenue-producing character of the projects upon which the court ultimately distinguished the Clayton situation from the McCutcheon situation.

Nevertheless, before distinguishing McCutcheon, the court referred approvingly for nearly two full pages in its opinion to the dissent in McCutcheon and to cases from other states which had rejected the majority opinion in McCutcheon. As to the McCutcheon dissent and the cases from the other states, the court stated:

> these decisions, along with the dissent in McCutcheon, appear to us to be clearly the more persuasive....

244 A.2d at 281. Although the court was able to find a way to distinguish, rather than expressly overrule, McCutcheon its disenchantment with the earlier case was apparent.

Thus, while Clayton, is not, strictly speaking, a leaseback transaction case under our definition, its use by the court as the vehicle to undercut McCutcheon, to warmly embrace

the McCutcheon dissent, and to cite approvingly the leaseback transaction cases from other states rejecting the McCutcheon thesis makes the case important for our purposes. Fifteen years after writing his dissent in McCutcheon, Justice Jacobs was finally able to incorporate into a majority opinion his thoughts about the McCutcheon case. Taking full advantage of the opportunity, he recorded the following pertinent comments, among others:

> In their separate opinion, the dissenting justices [in McCutcheon] referred to the fact that the generally accepted accounting practice thoughout the country does not encompass future rents as debts or liabilities and that corporate balance sheets would be examined in vain for references to lease rentals payable in future years....
>
> The majority in McCutcheon apparently viewed the rental plan as a purchase rather than a lease and as evasion rather than avoidance of the debt limitation....But, as the dissent pointed out, leases between affiliated governmental bodies are common and unquestioned in our society and there was no plausible basis for dishonoring the carefully formulated leasing arrangement between the independent Building Authority and the non-autonomous agencies of the State.

244 A.2d at 288.

Although the Clayton court chose to distinguish rather than overrule McCutcheon, and though much of what the Clayton opinion had to say about McCutcheon was, therefore, simply dicta, it should have been reasonably clear that Clayton marked the deathknell for the earlier case. Still, five years later, a New Jersey Superior Court apparently had not yet clearly received the message.

Bulman v. McCrane, 302 A.2d 163 (N.J. Super. 1973), involved the following issue as explained by the court:

> Put concisely, the problem presented is whether a lease-purchase arrangement whereby a state agency contracts with a builder to erect a facility on state-owned land and lease the same to the State for a term of

> years at stipulated annual rentals, with an option to purchase at intervals during the term, title to revert to the State at the expiration thereof, violates the debt limitation clause of the State Constitution.

302 A.2d at 164. After reviewing McCutcheon and Clayton, the Superior Court concluded that neither provided guidance for a situation involving a lease to the State of a non-income producing facility by a private corporation. While it avoided using either case as authority for its decision, the court nevertheless reached the McCutcheonesque conclusion that, while the arrangement was cast in the form of a lease, it was, in essence, a purchase agreement. As such, the court determined that the arrangement created prohibited debt. The reason for the court's perception of the arrangement as a purchase agreement basically rested upon the fact that the lease provided for reversion of the building (which was built on state-owned land) to the State at the expiration of the lease.

Nine months later, the New Jersey Supreme Court reversed. Bulman v. McCrane, 312 A.2d 857 (N.J. 1973). The court stated:

> The fact that the State may be advantaged by ultimately acquiring title to a potentially useful building as the residue of a transaction otherwise faithful to the theory of a lease...represents no good reason for judicial assiduity in laying hold of that circumstance to destroy the transaction as an unconstitutional debt. The sole obligation of the State here is for future installments of rent. They will presumably be paid out of current revenues as annually appropriated for the purpose. Under settled principles, there is no present debt in the constitutional sense.

312 A.2d at 863--864 (footnote omitted).

The most recent of the New Jersey leaseback transaction cases is Enourato v. New Jersey Building Authority, 448 A.2d 449 (N.J. 1982). The statute in this case, very much like that in McCutcheon, created a state building authority the sole function of which was to construct buildings for lease to the State. Rental payments, made subject to annual appropriations, were the sole source of repayment of the bonds issued by the Authority to finance the construction of the buildings. The bonds, of course,

expressly stated on their face that they were the obligations of the Authority and not the State. In a relatively brief review of the question, the court rejected the claim that the Authority's bonds would create a state debt. The court noted:

> The Authority's creditors have notice that their only remedy lies against the Authority.
>
> Nor does the liability of the State on its lease agreements with the Authority create any debt of the State. Both the statute and the lease make clear that all rent payments from the State are subject to legislative appropriations....
>
> Since the Building Authority Act does not authorize the creation of any debts by the State, the debt limitations clause...does not apply to the Authority's debts or any obligations of the State on its lease agreements with the Authority. We have already disapproved the contrary result reached by a sharply divided Court in McCutcheon...and now expressly overrule that case.

448 A.2d at 456.

These New Jersey cases, from McCutcheon to Enourato, demonstrate an evolution in judicial thinking with regard to leaseback financing. Several of the early cases took the view expressed in McCutcheon of rigid adherence to debt limitation provisions. Under that view, the enforceability of an obligation claimed to exist against a state was not determinative. Any arrangement which appeared to be or could plausibly be said to be a purchase agreement was equated with debt. If there were any moral obligation to make payments or even if the court surmised that, because of practical considerations, the legislature would most likely make the appropriation for the payments regardless of the existence of any moral or legal compulsion, that, too, could be equated with debt. We believe the modern trend and certainly the majority position is more closely attuned to the Enourato view. As long as the obligation of the state under the lease agreement is clearly subject to annual appropriation by the legislature, as long as the bonds issued to finance the project clearly identify the foregoing and clearly indicate that they are not the obligations of the state, as long as state property is not encumbered (a factor extensively discussed in the Wisconsin cases reviewed below), and as long as the enabling statutes

authorizing the transaction reflect all of the foregoing, the likelihood is that the transaction will be upheld.

WISCONSIN

Like New Jersey, Wisconsin's supreme court has reviewed four cases concerning leaseback transactions. Unlike New Jersey, however, all of Wisconsin's cases were decided in a two-year period (1953 -- 1954), and, in its four decisions, the Wisconsin court has not experienced the dramatic change in attitude reflected in New Jersey's cases.

The first Wisconsin case was State v. Giessel, 65 N.W.2d 529 (Wisc. 1954) (herein "Giessel I"). The plan in Giessel I called for the incorporation of a non-profit corporation by the State Building Commisssion. The Commission would lease state land to the corporation. The corporation would construct a building on the land and lease both land and building back to the Commission for the use of state agencies. As security for its loans, the corporation would have the ability to mortgage its lease of the land and of any buildings on the land. One project of the corporation was to construct an addition to an existing state office building. To secure financing for the project, the corporation intended to mortgage the lease to the corporation of the land and existing building.

The court found no fault with the financing plan except with regard to the mortgaging of an interest in state property. As to such mortgaging, the court declared the plan unconstitutional and void, stating:

> Logically there would seem to be just as much coercion on the part of the state to pay an indebtedness, for the payment of which existing state property, or an interest therein, had been pledged as security but the state had not otherwise agreed to pay the debt, as
>
> the state had made itself directly liable for the payment thereof.

65 N.W.2d at 540.

Three months later, the court decided State ex rel. Rogers v. Milligan, 66 N.W.2d 325 (Wisc. 1954) (herein "Milligan I"). This case involved virtually the same facts as in Giessel I and was decided in accordance with that case.

Early in 1955, the court had before it State ex rel. Rogers v. Milligan, 69 N.W.2d 485 (Wisc. 1955) (herein Milligan II"). Once again, the facts were virtually identical to Giessel I and Milligan I except that here the building company as lessor of the land (which was owned by the city and leased to the building company) and building, instead of mortgaging its leasehold interest in the land, would be able to re-enter and take possession of the land and building if the city failed to pay its rent. The court saw no distinction in this feature of the lease and ruled the plan unconstitutional, noting, however, that if the building company were also the owner of the land "this objection to the lease would be eliminated." 69 N.W.2d at 487.

Finally, toward the end of 1955, the Wisconsin court considered State ex rel. Thomson v. Giessel, 72 N.W.2d 577 (Wisc. 1955) (herein "Giessel II"). Decided only two years after McCutcheon, Giessel II became the second most prominent case on leaseback transactions (after McCutcheon). In a lengthy analysis of the leaseback transaction before it, the court considered McCutcheon and rejected the conclusions of that case, stating:

> That case is distinguishable from the present situation in that it rests on legal premises which this court has not adopted....This court....has heretofore held that no debt is created unless the state itself is under a legally enforceable obligation.

72 N.W.2d at 589. The Wisconsin court indicated various distinguishing factors between the two cases and between the constitutions of the two states. Whether it was a result of those distinguising factors or, more likely, a result of a plain disagreement between the two courts, the Winsconsin court reached conclusions opposite to those of the New Jersey court with respect to two significant legal issues: first, as noted above, the Wisconsin court found no constitutional debt in the absence of a legally enforceable obligation; and second, the Wisconsin court, though it did not find an installment purchase contract to exist in the plan before it, indicated that even if such contract did exist it would not necessarily create state debt (this second conclusion being no more than a corollary to the first in that a purchase contract, to the same extent as a lease, creates no debt in the absence of a legally enforceable obligation).

The plan before the court in Giessel II was a typical leaseback transaction involving a private, nonprofit corporation as the financing entity. The corporation was empowered to either purchase or lease land from the state for the purpose of constructing buildings on the land and either leasing or subleasing,

depending upon the interest initially conveyed to the corporation, the land and building to the state. There were three causes of action presented to the court in Giessel II.

The first cause of action related to a lease and sublease. Rent on the sublease was calculated to enable the corporation to retire the indebtedness to be created in the construction of the building. The sublease provided that "it is mutually agreed by the parties hereto that the corporation, its successors or assigns, hereby waive, relinquish and release any and all rights of re-entry, or to re-take possession of the herein demised premises, and hereby agree not to exercise any such rights, in the event of nonpayment of rent or of other defaults hereunder by the University, its successors or assigns." 72 N.W.2d at 580. The second cause of action involved the same type of arrangement with the same re-entry waiver.

The third cause of action related to a sale of land by the state to the corporation. The corporation was to build an office building on the land and lease it to the state building commission. The loan by the corporation to finance the construction was to be secured by a mortgage on the land. The lease provided that if the legislature failed to appropriate money for rental or for any other breach of the lease, the corporation would be entitled to "enter on, and expel, the commission from said premises forthwith, and without notice, and the corporation may from time to time apply all monies held by the corporation as security for faithful performance by the commission of its covenants and undertakings hereunder, to the payment of all damages sustained by the corporation by reason of any such default, which damages shall include, without limiting the generality of the foregoing thereby, the cost of decorating, altering and improving the premises and brokers' commission incurred in reletting the same, and also the difference between the net income actually received by the corporation from said demised premises upon reletting and the rent limited herein." 72 N.W.2d at 581. The lease further provided that it was made subject to a mortgage made by the corporation to its lender. Under the mortgage, rents to be paid by the commission were pledged to the lender.

With regard to these causes of action it should further be noted that (1) the state consented to a pledge or assignment of the state's obligation to pay rent by the corporation to its lender; (2) the state purchased equity in the building projects described in the first two causes of action in amounts greater than fifty percent of the cost of the projects; and (3) the state was authorized to use income derived from existing state buildings to pay the rent on the building described in the first cause of action.

The court first considered whether the state's consent to the assignment of its rental payments to the corporation's lender created debt. The court ruled that it did not and referred to the principle enunciated in Giessel I that the payment of future rent is not a presently existing debt. 72 N.W.2d at 584. The court noted that the assignment of the rents simply changed the party entitled to receive the rents if paid and did not obligate the state to pay the corporation's obligations.

The court next considered whether the state's investment in the projects led to prohibited debt. The court rejected the contention, stating that the investment did not obligate the state to pay all or any portion of the sums borrowed by the corporation to construct the buildings "even though good judgment may dictate that it do so voluntarily". 72 N.W.2d at 586.

The court next encountered the old McCutcheon argument that the leases and subleases were, in effect, contracts of purchase which created impermissible state debt. As noted above, the court chose not to follow McCutcheon and adhered to its general principle that where there is no obligation against the state to make payments, whether under a lease or under a purchase contract, there can be no debt.

Finally, the court considered whether the state's agreement to use income from existing state buildings to pay the rent on the building leased from the corporation created a state debt. The court noted that the nature of the fund from which the rental payments were to come had no bearing on the nonenforceable and contingent nature of the state's obligation and, therefore, did not affect the court's determination that no debt had been created.

To the degree that McCutcheon was rigid, Giessel II can be said to be flexible in considering its constitution's debt limitation provisions. Giessel II represents the position that as long as the state's obligation is nonenforceable and contingent and as long as there can be no loss of state-owned property there is no state debt.

MISSOURI

The first of the Missouri cases is Board of Public Buildings v. Crowe, 363 S.W.2d 598 (Mo. 1962). The financing entity in that case was a public corporation which had authority, once it constructed a building in a city, to require any state agency which occupied rental quarters in such city to rent space from the corporation's building and to contribute from funds

appropriated for such agency's support a proportion of the rentals of the building. It was argued in the case that the payment of rentals from funds appropriated to the state agencies and taken from revenue raised by taxation would create a "liability" of the state. The court noted that no rents could be paid by any agency unless the legislature appropriated money to that agency. Once such an appropriation was made, the money lost its character as general state revenue. The court rejected the contention and sustained the transaction.

Crowe was followed in 1971 by New Liberty Medical and Hospital Corporation v. E. F. Hutton and Company, 474 S.W.2d 1 (Mo. 1971). In this case the Missouri court did find constitutionally prohibited indebtedness arising from the provisions of the lease agreement used in the leaseback transaction. Under the agreement, the hospital district (which was subject to the state's constitutional debt limitations) was obligated unconditionally to pay rentals "without abatement, deduction, set-off, counterclaim, recoupment or defense or any right of termination or cancellation arising from any circumstances whatsoever." 474 S.W.2d at 6. The court noted that

> This is more than the usual obligation of lessee to pay rent for premises furnished. It is an unconditional undertaking to pay a sum total which will equal the principal and interest on the debentures plus taxes, costs and certain other items over a 30-year period, even if for some reason the premises become unavailable for use of lessee. This is assuming indebtedness which must be paid in all events.

474 S.W.2d at 6. Not surprisingly, the court invalidated this leaseback transaction. A similar lease agreement was used in the third Missouri case, Scroggs v. Kansas City, 499 S.W.2d 500 (Mo. 1973), and it, too, was invalidated by the court.

The last of the Missouri cases was St. Charles City-County Library District v. St. Charles Library Building Corporation, 627 S.W.2d 64 (Mo. 1981). Like the lease agreement in the Colorado Gude decision, discussed later in this memorandum, the district here was able to avail itself of annual options to renew. Because of this feature, the court distinguished Scroggs and held that there were no long-term repayment obligations created on the part of the district and, hence, no violation of the constitutional debt limitations of Missouri.

OTHER STATES

Having reviewed the cases of three of the most active courts in the leaseback transaction area, we proceed in this part to review the remaining cases from the other states. As noted earlier, this review will proceed in chronological order.

The earliest case in our survey is State v. Griffith, 22 N.E.2d 200 (Ohio 1939). The leaseback transaction in this case involved a public corporation which constructed additions to state mental hospitals and subleased the buildings back to the state Department of Public Welfare. Under their contract, the department pledged "all and every part of its available source of income" to pay the rent on and to maintain the buildings. There were a number of elements to the transaction to which the court took exception in invalidating the arrangement.

While the court accepted the concept that pure revenue bonds (that is, those payable solely from the revenues generated from the project financed with the bonds) were acceptable under constitutional debt limitations, the court could not accept a general obligation bond of a public corporation. This was particularly so in a situation, as in this case, where the public corporation was joined in its obligation by the Department of Public Welfare

The court noted that

> the obligation of the Department of Public Welfare of the state of Ohio under its contract with the authority to pay as rental for the state property turned over to the authority the sum of $421,500 per annum for twenty-five years, plus other expenses of the authity is an absolute and outright obligation of the department, an arm of the state, on account of such bonds. In addition the department obligates itself to liquidate the indebtedness to the authority by pledging "all and every part of its available sources of income" and "to fix the amount or amounts to be charged and collected for the support of patients and inmates of the hospitals under [its] control...so as to be sufficient in the aggregate to provide available funds to pay the maintenance costs of said buildings-...and to pay the Public Institutional Building Authority the sums" promised....

22 N.E.2d at 205. The court additionally disapproved of the pledging of income derived from existing buildings in addition to the income to be derived from the buildings financed with the bonds. The court reasoned that "to the extent that the income from the use of these buildings is diverted to the payment of rental to the authority for the purpose of servicing these bonds, the general revenues from taxation to support these institutions must necessarily be increased to the same extent. The income from the institutions ought to be increased, by reason of the new structures, but there will also be greater expense in administration and upkeep." 22 N.E.2d at 205.

Plainly, the most serious problem in the Griffith situation was the outright pledge by a department of the state to pay a sum certain annually under contract with the corporation. Because of the number of concerns expressed by the court, it is difficult to surmise how a provision making all payments subject to annual appropriation by the legislature might have changed the court's conclusion, but such provision could only have helped the situation.

In 1941, New Mexico's supreme court rendered the first of its two leaseback transaction cases, State Office Building Commission v. Trujillo, 120 P.2d 434 (N.M. 1941). Trujillo presented a lengthy and considered analysis of leaseback transactions in the light of constitutional debt limitations and became another oft-cited and significant case in the area.

As much as any other case in the field, Trujillo clearly pointed out the dual considerations inherent in any leaseback transaction involving a public corporation. The court carefully considered the relationship of the public corporation in Trujillo to the state and then considered the nature of the obligation entered into by the state itself.

The statute creating the corporation in Trujillo designated it "a public body corporate as an agency of the State." The court immediately seized upon this language and noted that "it is through such agency that the State is to act, and being an agency, its acts are the acts of the State." 120 P.2d at 440. The conclusion that the bonds of the corporation are then debts of the State itself could hardly be avoided from that point. It may not be likely that the same difficulty would be encountered in Alaska considering the Alaska Consitution's express reference to obligations of public corporations as exceptions to this state's debt limitation provisions. (Constitution of the State of Alaska, Article IX, Section 11); however, it is certainly advisable in any event to give the courts a clearer indication that a separate and independent legal entity is intended to be

created as has generally been done in the statutes creating Alaska's present public corporations.

From the perspective of the obligation created by the other state agencies in entering into the lease contracts, it was urged upon the court that the rental payments should not be considered debt for the reason that they amounted to current administrative expenses. This, of course, was the argument accepted by the Wisconsin court in Giessel II; however, the facts in this case did not permit such a conclusion. There was no provision in the agreement or in the statute making the payment of rent by the state agencies contingent upon appropriation for the purpose; in fact, once the agencies entered into the lease agreement, both the statute and the agreement prevented them from terminating the lease except under narrowly specified circumstances. As the court noted:

> Subject only to the one condition set out in said section, the state would be obligated to continue payment of rentals until the indebtedness of the Commission was satisfied. This would mean, so long as the agencies did not recede from the lease agreements under the one specified condition, that future legislatures would be bound to provide appropriations for payment of rentals.

120 P.2d at 448 (emphasis in original). The lesson from this aspect of the case is the now familiar refrain: the obligation of the state agency to pay rent must be contingent upon the legislature's decision to appropriate for that purpose. Such a provision might not have saved the case before a court such as that in McCutcheon, but it could have made a difference in many of the cases.

The next leaseback transaction case was Opinion of the Justices, 79 A.2d 753 (Maine 1951). In this lone entry into the leaseback transaction arena by the Supreme Court of Maine, the state senate presented to the Justices a proposed leaseback transaction the only significant feature of which was a statutory provision which appeared to make it mandatory upon the state and the public corporation to enter into a lease agreement upon completion of construction of the building by the corporation. The lease agreement was to provide rents sufficient to retire the corporation's bonds. There is no provision indicating that rental payments by the state were subject to appropriations.

The court foreshadowed the McCutcheon analysis by finding the "so-called" lease to be a contract of purchase.

> The so-called rental is not true rent, to wit, payment for the use of property. The total amount of so-called rental is the purchase price the State is to pay for the property....Being a contract of purchase, obligating the State to pay the purchase price, unless the entire amount thereof is to be paid pursuant to appropriation presently made from funds or revenues currently available therefor, such contract of purchase would in the consitutional sense be a liability created by the Legislature on behalf of the State.

79 A.2d at 756 (emphasis in original).

In 1955, two leaseback cases from two states emerged. In McArthur v. Smallwood, 281 S.W.2d 428 (Ark. 1955), the rental payments from the state to the public corporation were to come first from legislative appropriations and, if such appropriations were not forthcoming, then from a special levy to be assessed by various county treasurers. Noting particularly that there was no obligation on the legislature to make the appropriations, the court upheld the transaction. The special levy was upheld on the basis of the "special fund doctrine", which was also a significant consideration in the Trujillo case. The "special fund doctrine" provides, in essence, that the repayment of bonds from a special tax or levy does not violate state debt limitations because the general taxing power of the state is not involved. Any reliance upon such a doctrine in Alaska, of course, would require serious consideration of the dedicated fund prohibition in the Alaska Constitution (Article IX, Section 7).

The other 1955 case was State v. Yelle, 289 P.2d 355 (Wash. 1955). Yelle relied extensively on McCutcheon, employed the same analysis, determined that the lease was actually a purchase, and invalidated the arrangement. The opinion does not clearly indicate whether there was any compunction on the legislature to make the appropriations to pay for the rents, nor is it clear that the rental payments were contingent upon such appropriations. In any event, such considerations probably do not make much difference with regard to the McCutcheon progeny. We have discovered no Washington case subsequent to the crumble or demise of McCutcheon.

Illinois' court considered a municipal leaseback transaction in People v. Public Building Commission of Chicago, 142 N.E.2d 67 (Ill. 1957). Of particular importance to that case was a provision in the statute which required municipalities entering into leases with the public corporation to "enact an ordinance or

resolution providing for the levy or a direct annual tax sufficient to pay the annual rental under the lease when it becomes due and payable." 142 N.E.2d at 72. The Illinois court noted that its definition of "indebtedness" was "not as liberal as that indulged in by a majority of jurisdictions." 142 N.E.2d at 75. Nevertheles, even in the more liberal jurisdictions, a provision such as that embodied in the statute quoted above would have been likely to lead to a finding of debt. The Illinois court had no trouble reaching such conclusion.

In 1958, the Indiana Supreme Court was presented with a leaseback transaction involving a public corporation. In Book v. State Office Building Commission, 149 N.E.2d 273 (Ind. 1958), the lease agreement between the public corporation and its state agency lessees contained a provision, much like that in Trujillo, which permitted the lessees to terminate their agreement only under specified conditions. Nevertheless, the court upheld the agreement.

In Book, the court was presented with a series of assertions reflecting a McCutcheon-like analysis of the situation. The court repudiated each assertion as it was presented. Thus, the court, looking to the statute creating the public corporation and to previous Indiana cases, denied that the public corporation was "in reality" the State of Indiana. It followed that since the corporation was a corporate body separate from the state, the holders of its bonds would have to rely upon the corporation's revenues derived from rental income and would not have any recourse against the state. For these reasons, the court concluded that the bonds of the corporation were not debt of the state. In response to the assertion that the lease agreements were "in reality" contracts to pay the corporation's bonds, the court stated the general rule that

> a municipal corporation may lawfully contract for necessary services over a period of years and agree to pay therefor in periodic installments as the services are furnished. In such cases the aggregate of the amounts to be paid as the services are rendered under such contracts are not considered as an indebtedness of the corporation, and such contracts are not rendered invalid by the fact that the aggregate of the installments exceeds the debt limitation.

149 N.E.2d at 284 -- 285. In any event, the fact that the state agencies might obtain title to the buildings they rented at the expiration of their lease would not be sufficient to convert the

lease into a purchase agreement. The court further stated, reminiscent of Giessel II, that the Indiana debt limitation provisions applied only to legally enforceable obligations. Since the court found no language binding any future legislature to make appropriations for the rent under the lease agreement and since the rentals could be paid only by appropriations made by the legislature, the court concluded that the lease agreement created no constitutionally prohibited debt.

Giessel II and Book are located on the more liberal end of the leaseback transaction spectrum, with Book perhaps a bit more liberal because of the court's willingness to overlook the lease provision apparently limiting the state agencies' ability to terminate the lease.

It is worthwhile at this point to temporarily abandon our chronological order to briefly review a later Indiana case -- Teperich v. North Judson-San Pierre High School Building Corporation, 275, N.E.2d 814 (Ind. 1971). We note the case only for its reaffirmation of the Book principle that rent payments "cannot be considered debt until the payments become due." 275 N.E.2d at 817.

In 1960, the Massachusetts court issued its solitary opinion relating to leaseback transactions. Ayer v. Commissioner of Administration, 165 N.E.2d 885 (Mass. 1960), involved, as the financing entity, a nonprofit corporation created by statute. The sole purpose of the corporation was to construct a building to be leased, and ultimately transferred, to the state. Citing McCutcheon, Trujillo, and Yelle, among others, the court embarked upon its analysis by "looking through form to substance". 165 N.E.2d at 892. The court first considered the nature of the corporation and then considered the nature of the lease agreement.

Although the court agreed that the corporation was an entity separate from the state, it nevertheless concluded that the corporation was "nothing more than a mere intermediary to carry out only one purpose." The following factors were pertinent to the court's analysis: (1) the corporation's sole purpose was to construct and lease to the state a building to be used only by the state; (2) the corporation was given powers of eminent domain; (3) the building, at the expiration of the lease, would become the absolute property of the state and the corporation would fade from existence; and (4) the corporation had virtually no power to deal with its property except as provided in the lease agreement. Reflecting upon these factors, the court then considered the statutory provision that the bonds of the corporation would not constitute a debt of the state or a pledge

of its faith and credit. The court's opinion as to this was as follows:

> This disclaimer is ineffective if, contrary to the disclaimer, such be the natural and reasonable effect of the statute.

165 N.E.2d at 889.

With regard to the lease agreement, the court noted:

> Viewing realities, we consider that the so-called "rentals" are not really rentals at all, but in practical effect are installment payments on account of a purchase by the Commonwealth of an office building, with full title to be acquired at an indefinite future date.

165 N.E.2d at 890. One of the important characteristics of the lease agreement leading the court to this conclusion was the requirement in the agreement that the state continue to make rental payments even if the building was not completed on time or was damaged or destroyed.

This 1960 case, which to the best of our knowledge has not been followed by any other Massachusetts leaseback transaction case, employed the McCutcheon-like analysis of piercing through form to arrive at the court's impression of substance. In this regard, the presence of a provision making the state's rental payments contingent upon legislative appropriations may not have changed the result, particularly if the Massachusetts court adopted the McCutcheon view that a mere moral imperative or even a practical likelihood for making the appropriations would suffice to create debt. However, the absence of such a provision allowed the court to reach its conclusion without the necessity of taking that position, and the presence of the affirmative duty of the state to make the rental payments even in the absence of a completed or inhabitable building for the state to occupy doubtless provided a strong incentive to the court to find a prohibited debt.

Another 1960 case, which was also the only decision on the subject we have found for its jurisdiction, was Application of the Oklahoma Capitol Improvement Authority, 355 P.2d 1028 (Ok. 1960). While Ayer emulated McCutcheon and Yelle, the Oklahoma court closely followed the pattern of Giessel II and Book.
