The maximum grade of 4% was adopted to accommodate movement of plant modules and to permit possible future reuse of the grade for a railroad. In general, grades will be easier than the maximum, particularly on the Kruz route where maximum grades only exceed 1-1/2% for short distances. The maximum 4% grade will be adopted in areas of more difficult terrain on the Asikpak route and on both routes locally at stream crossings.

The use of 4% grades for a railroad will generate operating difficulties and high operating costs. Industry practice for a railroad of this type would be to limit grades to 1-1/2% which will significantly reduce operating costs but at the expense of increased capital cost. Studies indicate that 1-1/2% grades will offer economic benefit where profile improvements are required in the vicinity of stream crossings only. The easier terrain of the Kruz route option would permit cheaper conversion to a railroad.

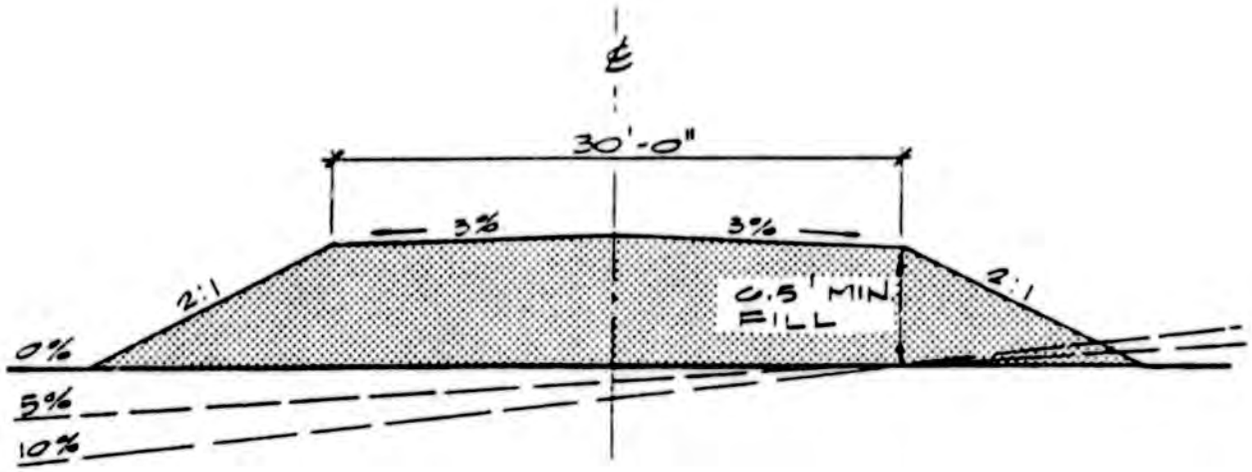
Both routes lie within the zone of continuous permafrost and all soils and bedrock are expected to be permanently frozen. Available thermistor data shows temperatures from 32°F to 27°F indicating a relatively warm permafrost. The active layer is expected to range from 1-2 feet thick on poorly drained soils to a maximum of 4-5 feet on well-drained upper slopes.

CONCENTRATE HAULER - 150 tons

MODULE TRANSPORTER

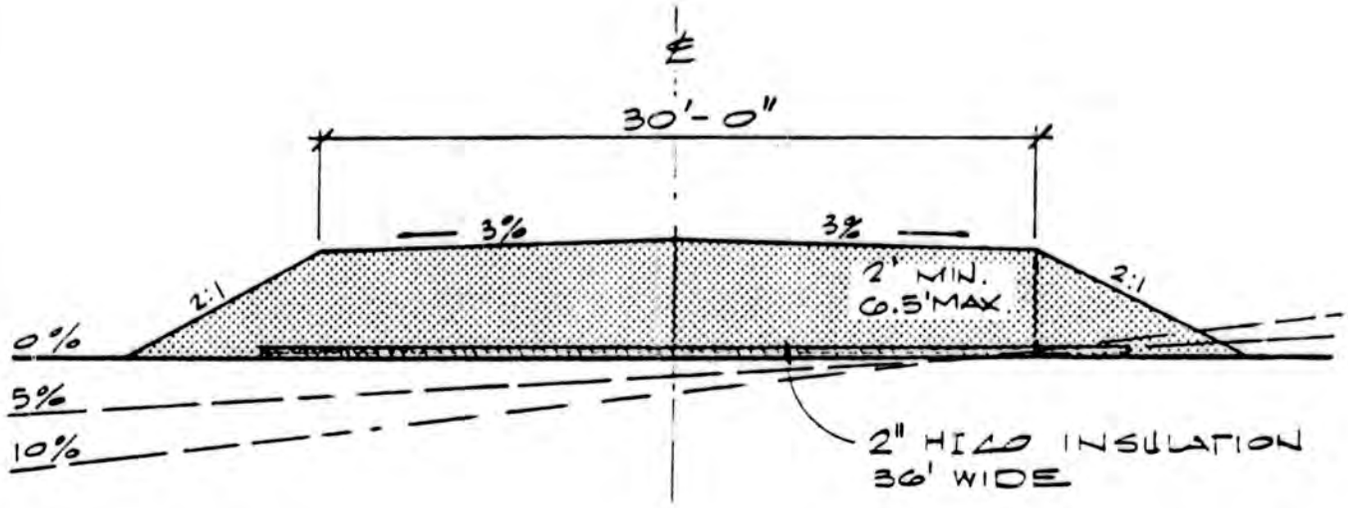
FIGURE 6

II. DESCRIPTION OF PROPOSED ROAD ALTERNATIVES (continued)



From an engineering point of view, the most acceptable thermal regime is expected to occur on well drained, gently sloping north facing slopes.

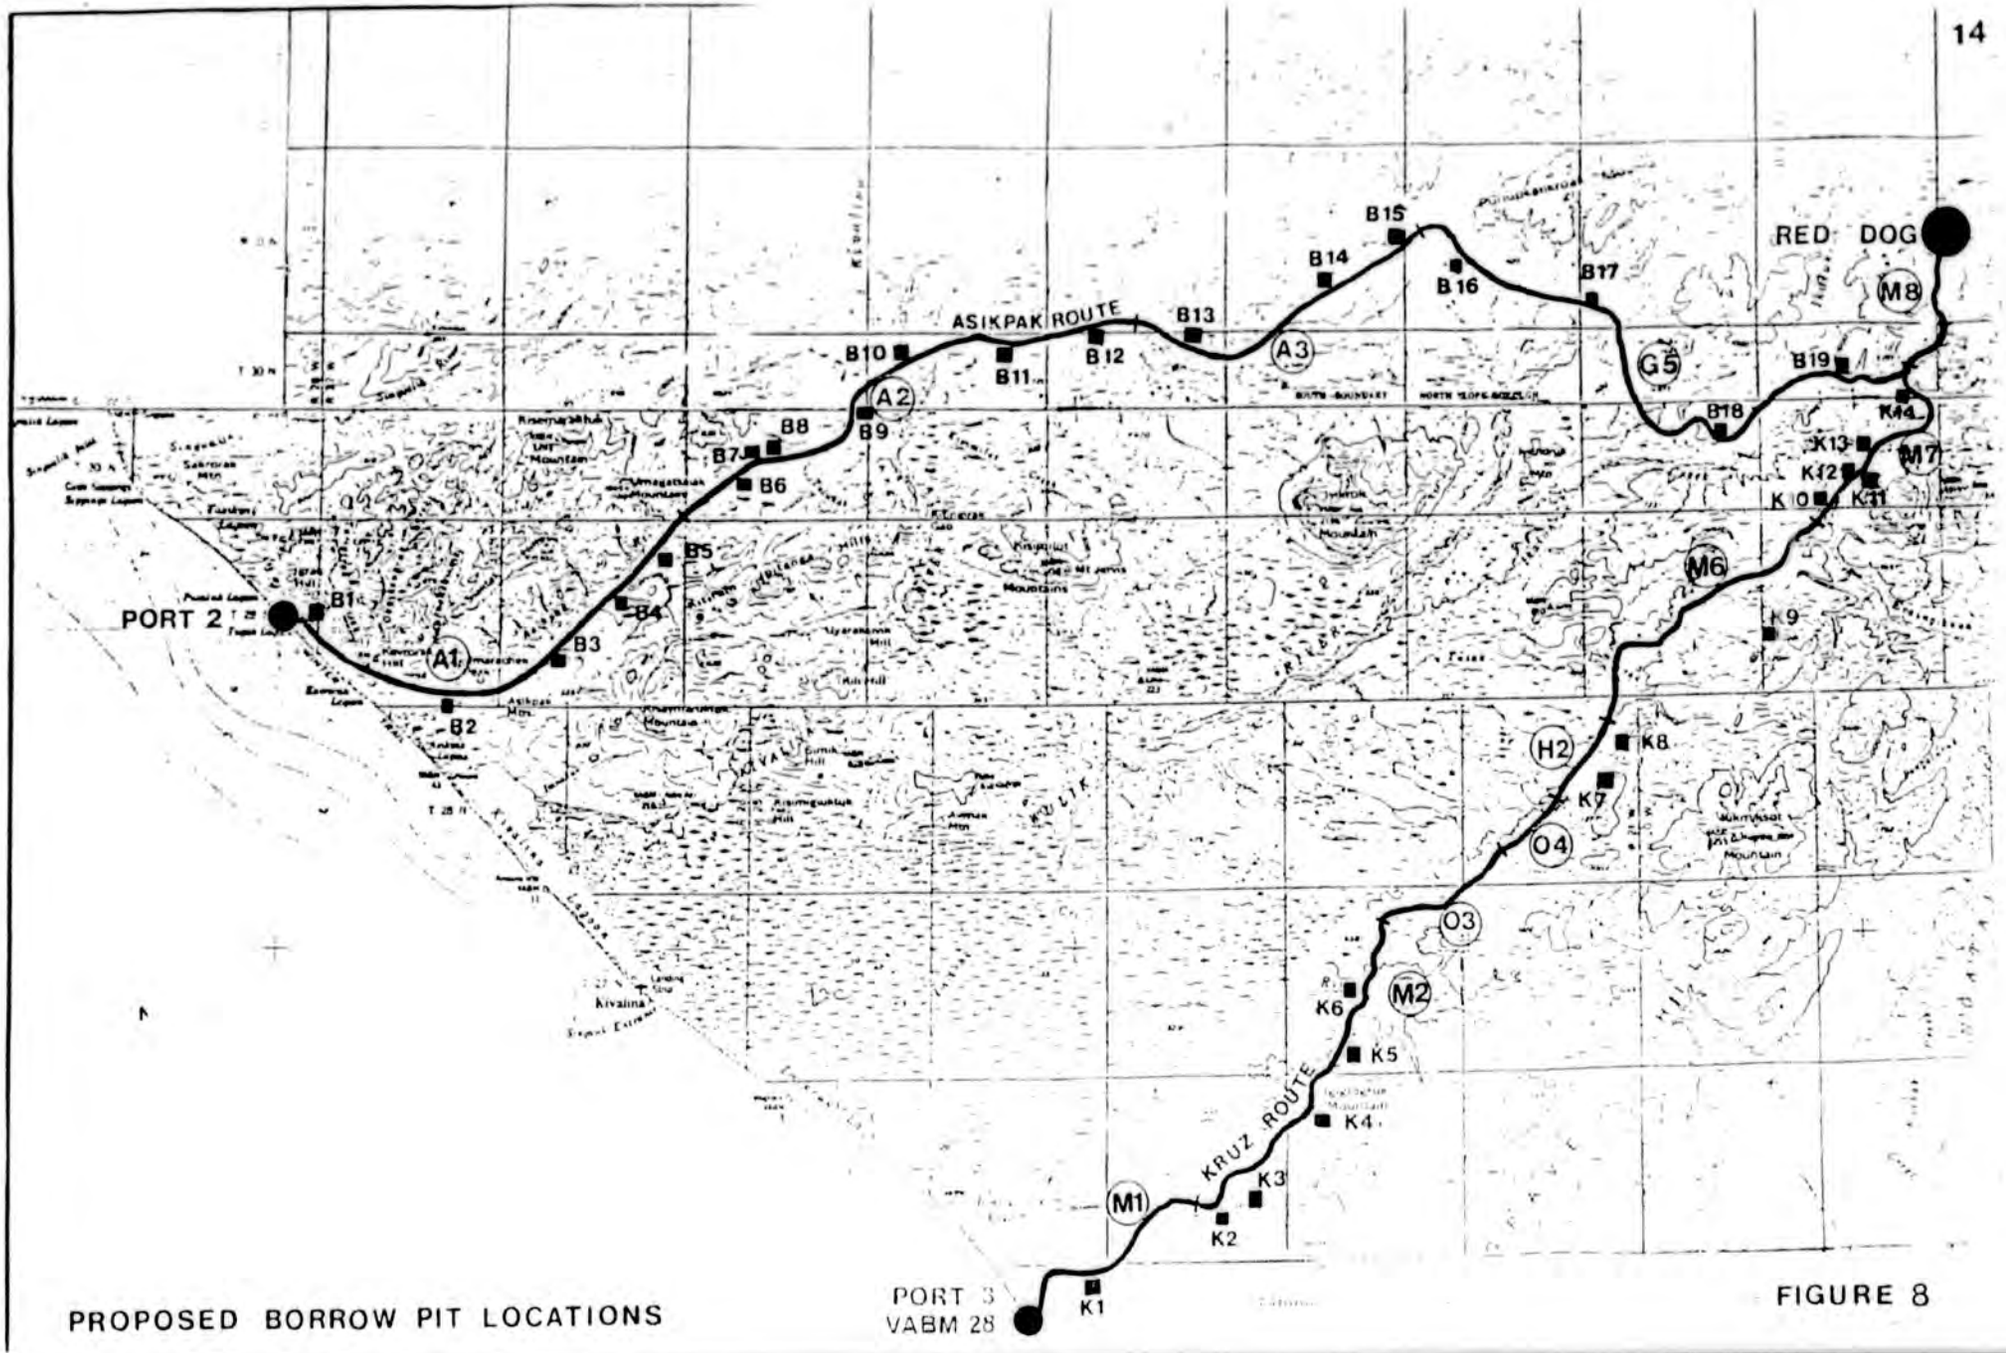
Preliminary thermal analyses have been carried out which indicate that a minimum fill depth of from 5 feet to 6.5 feet will be required to limit thaw settlement to 6 inches. Determination of minimum fill depth for detailed road design will be based on the results of the Geotechnical Investigation which will define terrain, underlying soils, ground thermal regime and micro-climate variations. It is anticipated that minimum fill depth will vary along the length of the road.



The estimates have been based on a minimum fill depth of 6.5 feet with an alternative composite construction comprising 2 inches of rigid insulation with a 2 feet minimum thickness of granular fill topping. Thermal characteristics of both Asikpak and Kruz routes are expected to be similar and so these sections have been adopted for both routes (Figure 8). The composite section will be utilized only where haul distances from borrow sources are long enough for it to offer a cost advantage.

On the Asikpak and Kruz routes it is anticipated that cut and fill construction will only be possible within the final 8 miles approaching Red Dog.

Proposed borrow pit locations have been determined by reference to U.S. Geological Survey mapping, aerial photography at 1:12000, reports and terrain unit mapping based on field work carried out for Cominco by Dames and Moore and supported by field reconnaissance (Figure 9).



FILL CROSS SECTION

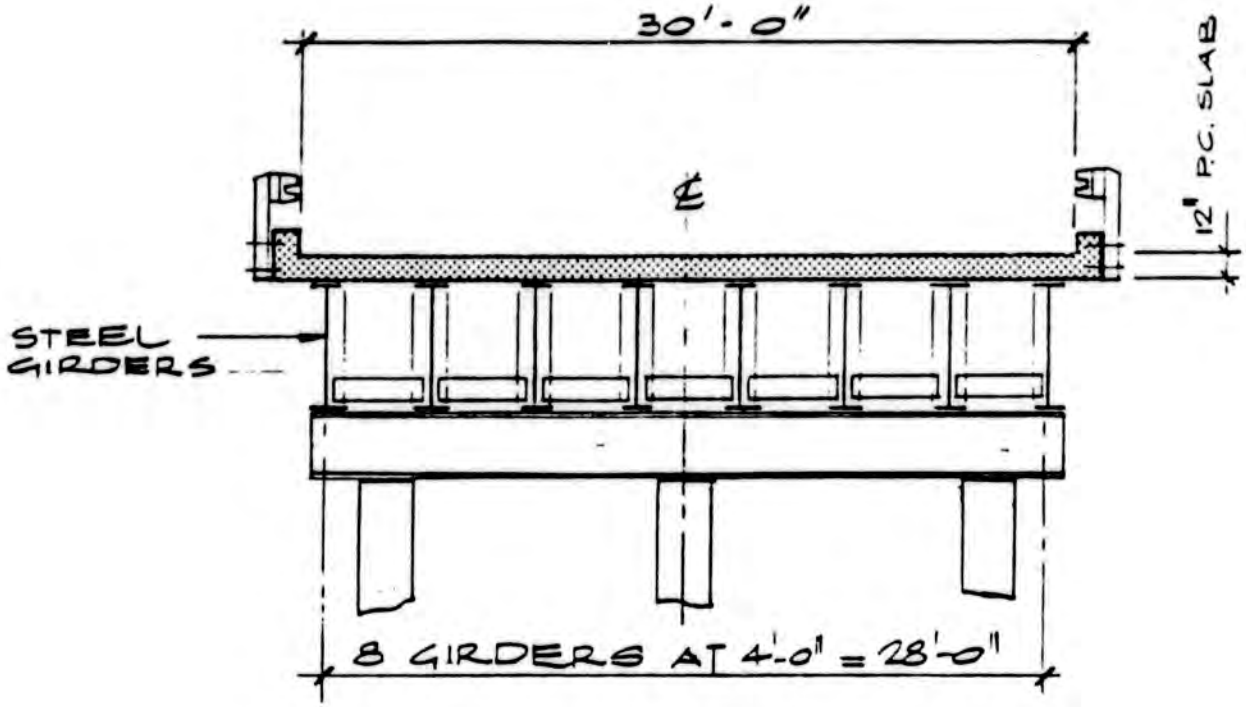
COMPOSITE CROSS SECTION

TYPICAL ROAD SECTIONS

FIGURE 7

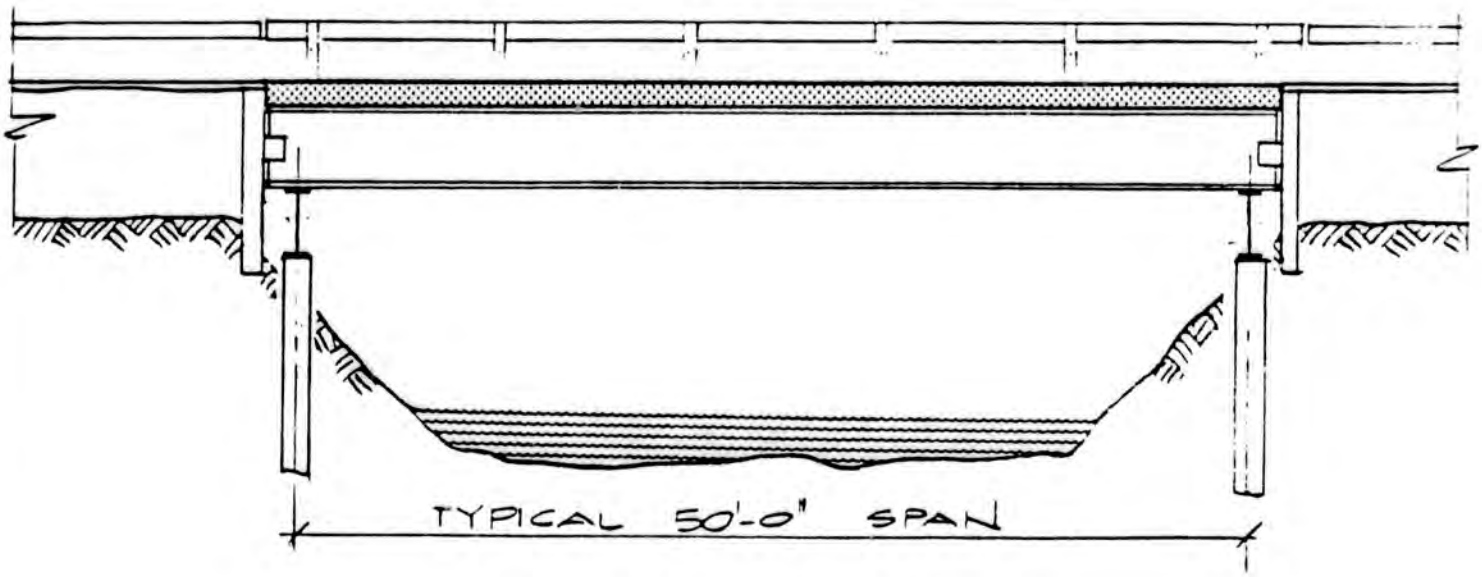
PROPOSED BORROW PIT LOCATIONS

FIGURE 8



II. DESCRIPTION OF PROPOSED ROAD ALTERNATIVES (continued)

All water courses crossed by the selected routes have been identified, their drainage basins defined and areas measured. Peak flows at each crossing were calculated using peak unit flows of 80 cfs/sq. mile for drainage basins smaller than 10 sq. miles and 55 cfs/sq. mile for drainage bains exceeding 10 sq. miles. Lengths of bridges were calculated using a peak flow of 5 fps and an average water depth of 4 to 5 feet. Bridges have been used wherever peak flow exceeds 800 cfs. Culvert sizes are based on capacities ranging from 10 cfs for 24-inch diameter to 710 cfs for 120-inch diameter.



Bridges are designed using standardized decks suitable for spans of 50 to 60 feet with a width of 30 feet face to face of guardrails. These units would be utilized wherever possible. Construction would consist of steel beams supporting composite precast concrete deck slab units with abutments and piers of steel adfreeze piles into permafrost (Figure 10). Pier design would be modified wherever a significant thaw bulb exists.

Culverts would be galvanized corrugated steel pipe with rip-rap or similar protection to side slopes adjacent to the crossing. Culverts (48-inch diameter) would be provided at all well-defined dry swales and in addition 24 and 30-inch diameter culverts are allowed for at a nominal spacing to handle sheet flow and roadway runoff (Figure 11).

Preliminary engineering studies and all engineering for the Southern Route options were carried out for Cominco by R&M Consultants of Anchorage. Engineering for the Northern and Noatak Route options has been carried out by Cominco Engineering Services Ltd. A consistent methodology has been used throughout.

FIGURE 10

III. COST ESTIMATES

Estimated road costs are developed as "Direct Costs" to which are added "Indirect Costs" to obtain a "Net Total Cost". A contingency allowance is added to this Net Total Cost to give the "Total Estimated Capital Cost" for road construction.

Direct costs are developed under five headings:

- Road Fill
- Turnouts
- Culverts
- Bridges
- Royalty on Fill

Road fill cost is generated as two elements: first, the fill which includes all extraction and placement costs and, second, the haulage cost. The base costs used in this estimate are $9.20 per cubic yard for fill and $1.30 per cubic yard mile for haulage. These prices also allow for all costs associated with cut and fill construction and insulation costs where composite construction is utilized.

Turnout cost is generated in a similar manner to road fill cost.

Culverts are estimated assuming all culverts are of the average 80 feet length and are priced according to size. Prices used range from $6,400 for a 24-inch diameter up to $61,200 for a 120-inch diameter culvert. These costs include all installation costs, provision for the side slope protection and allowance for mitered end treatment on culverts of 66-inch diameter or larger.

Bridge costs are based on nominal deck area which is defined as net width times span. The base cost used in this estimate is $400 per sq. foot of nominal deck area. This price includes allowance for deck, substructures, piling, watercourse training work, side slope protection and provides for all field construction and deck placement. Actual costs for major bridges on the Asikpak route may well be higher than the base case, if hydraulic or other considerations dictate longer spans than those provided for with the standard deck.

III. COST ESTIMATES (continued)

Royalty on fill is estimated at a rate of $0.45 per cubic yard of fill extracted. This item also includes a provision for reclamation work at the borrow sites.

Indirect costs are estimated as 7.3% of direct costs. Indirect costs cover the costs of engineering design and project management.

The Contingency allowance is estimated at 5.7% of net total costs and is an allowance to cover a portion of the anticipated risk in carrying out the road construction element of the project.

All direct costs included in the estimate include an allowance for construction support, construction supervision, taxes and insurance.

Costs for the Kruz route option have been developed on two bases:

- Alternative 1 assumes that fill will be drawn from borrow sources dispersed throughout the route as defined (Figure 9).

- Alternative 2 assumes that fill will be drawn only from borrow sources located outside the Krusenstern National Monument. This alternative includes the cost of constructing an ice road from close to the port to borrow sources 7 and 8. This ice road will permit construction equipment access to these borrow sources which would provide fill for construction in the northern part of the monument. (Figure 9).

  Another approach to constructing this alternative has also been estimated. This approach allows for flying construction equipment into the Red Dog airstrip and building the road from two fronts only. There was no significant difference between estimated costs for these two approaches. The estimate for the ice road approach is used in this report.

Costs for the Asikpak route option have been developed on the basis that fill will be drawn from borrow sources dispersed throughout the route.

III. COST ESTIMATES (continued)

A control has been applied to ensure a uniform approach to road fill costs for both route options. This involves making direct comparison of costs for Asikpak route segments with those for a route segment with similar terrain characteristics estimated for one of the Southern routes.

For instance, Asikpak route segment A5 is compared with Southern route segment M5. Both segments are on gently graded lower slopes on the fringe of wetland areas and have average borrow availability.

Operating costs consist of all items for which costs will vary dependent on road route mileage. These include concentrate haulage, personnel movement, haulage of inbound supplies and road maintenance.

Cominco, as part of their normal estimating procedure, frequently make use of a suitably experienced third party to carry out an audit of their estimates. If a reasonable correlation is achieved, confidence in the validity of the estimate is enhanced and estimate credability improved.

The estimate for the Kruz route option has been audited by Morrison-Knudsen of Boise, Idaho. This company is a large and reputable civil engineering contractor with extensive experience of construction in remote areas. They have been involved in Alaskan construction for 40 years.

This audit was completed in May 1984 and the road element took the form of an independent estimate carried out in accordance with Morrison-Knudsen's usual in-house methods for preparing construction bids. Their estimate is based on a reduced nominal fill thickness of 5 feet compared with the 6-1/2 feet designed depth used in the Cominco estimate.

III. COST ESTIMATES (continued)

Morrison-Knudsen's estimate of total net cost is $68.2 million to which they added a contingency allowance of $4.4 million for an estimated total cost of $72.6 million. This provides an unusually close correlation with Cominco's estimate of $74.7 million. For construction work of this type at a remote site, it is very unusual for independent estimates to agree so closely.

Loren Lounsbury, Commissioner,
Department of Commerce and Economic Development
Pouch
Juneau, AK 99811

Dear Commissioner Lounsbury:

I appreciate your efforts in providing so much information on the Delong Mountains Regional Transportation Project for consideration by the House Special Committee on Loans. Before recommending legislative action on any appropriation or bond authorization measures, however, I would like to request your providing further backup on the proposal.

We have taken extensive testimony on the Red Dog project in three hearings and I would appreciate your help in coordinating the administration response to the few issues yet to be resolved.

The remaining issues fall into the following categories:

Finance Plan
State support in cash and appropriated loans
Route
Where we go from here

legislative consideration and as the actual
I know that many of the questions I have cannot be resolved until the plan of finance is completed by SRI. However as the SRI plan will aparently be drafted too late for legislative consideration and as the actual financing will be approved by the AIDA board, which you chair, I am hoping you will attempt to be as specific as possible. I also realize that some of these questions are still to be resolved in negotiations between the state and Cominco/Nana.

The first question is the quantification of the state contribution to the project. What will be the state contribution, including the general fund cash to ba appropriated, the earnings on the loan portfolio to be appropriated and the interest earned on the funds in the Economic Development fund of AIDA?

The second question is what will be the cash flow for the entire state contribution - from the General Fund throung the Economic Development Fund and back to the General Fund. The Committee has already requested information on the reason for the need for appropriating $18 million this session.

I have understood that under consideration [redacted] for financing the project is a combination of of tax-exempt bonds and a letter of credit from a bank and that these may

come in stages. What is the proposed timing for bond and letter of credit authorizations?

Cominco Ltd. has assured us that a firm guarantee will be forthcoming for the user fees on the road in the form of a 'take-or-pay' contract. What will be the outline of this contract and have any letters of understnding been signed? How will toll fees be assessed and what will be provided for future road users?

3/28/85

(Dept. of Commerce + Economic Development)

SUGGESTED DRAFT OF LETTER OF INTENT ATTACHED TO THE APPROPRIATION BILL WHICH INCLUDES THE APPROPRIATION OF $18.0 MILLION AND REVENUE'S LOANS TO AIDA:

It is the intent of the Legislature that, before the appropriation of $18.0 million and loans to the Economic Development Fund may be expended, obligated, or encumbered, the Alaska Industrial Development Authority must enter into a binding contractual agreement(s) with Cominco, Ltd. and with Nana Regional Corporation to execute substantially the assurances and guarantees represented by the parties to the Legislature.

Specifically, those assurances and guarantees are as follows:

1. Cominco, Ltd. will guarantee to pay toll fees that will repay State expenditures.

2. Cominco, Ltd. will guarantee to pay the operation and maintenance costs of the road and port facilities.

3. Cominco, Ltd. will guarantee minimum toll payments and other payments necessary to repay the State's investment if the mine is delayed or if production is suspended after operation commences.

4. Cominco, Ltd. will agree that, to the extent that the price of zinc should rise above a level presently contemplated to yield a reasonable profit, the State's investment will be repaid at an accelerated rate.

5. Nana Regional Corporation will guarantee to provide necessary land to accomodate reasonable expansion requirements for future users at the port site.

Law

IN THE _____ BY THE _____ COMMITTEE

_____ BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes for the DeLong Mountain transportation project; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175 million to provide financing for the development of the DeLong Mountain transportation project.

* Sec. 2. The authority may pledge the moral obligation of the state in support of the issuance of bonds or notes authorized under sec. 1. If the moral obligation of the state is pledged, the authority shall establish appropriate capital reserve funds, and the chairman of the authority shall, no later than January 2 of each year, certify in writing to the governor and the legislature the amount, if any, required to restore a capital reserve fund to the capital reserve fund requirements. The legislature may appropriate to the authority the amount certified by the chairman of the authority. Nothing in this section creates a debt or liability of the state.

* Sec. 3. The authority may not issue bonds or notes authorized under this Act unless any limitations imposed by law with respect to the expenditure of money appropriated for the fiscal year ending June 30, 1986 to the authority as loans or grants for the purpose of the DeLong Mountain transportation project have been satisfied.

* Sec. 4. This Act takes effect immediately in accordance with AS 01.-10.070(c).

DRAFT
Law

Agrp
LPSD #4
3/28/85

"PROPOSED SECTION TO BUDGET BILL"

* Sec. __. (a) All right, title, and interest in loans of the type described in (b) of this section, in an amount not to exceed $142,000,000 in unpaid principal as of July 1, 1985, and all right, title, and interest in all mortgages, notes, and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated to the Alaska Industrial Development Authority for the purposes of its economic development fund (AS 44.88.172).

(b) This section transfers and appropriates

(1) veterans loans acquired or made under AS 26.15;

(2) commercial fishing loans acquired or made under AS 16.10.300 -- 16.10.360;

(3) small business loans acquired or made under AS 45.95;

(4) tourism loans acquired or made under AS 45.90;

(5) fisheries enhancement loans acquired or made under AS 16.10;

(6) child care loans acquired or made under AS 44.33; and

(7) historical district loans acquired or made under AS 45.98.

(c) In an amount not to exceed $30 million in unpaid principal as of July 1, 1985, all right, title, and interest in commercial fishing loans acquired or made under AS 16.10.300 -- 16.10.360 and secured by a limited entry permit, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated from the general fund to the commercial fishing revolving loan fund (AS 16.10.340) for the purposes of AS 16.10.300 -- 16.10.370.

(d) In an amount equal to the principal balance of loans appropriated under (c) of this section, all right, title, and interest in commercial

fishing loans, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, are transferred from the commercial fishing revolving loan fund to the Alaska Industrial Development Authority for the purposes of its economic development fund (AS 44.88.172). However, only loans which are not secured by a limited entry permit may be transferred or appropriated under this subsection.

Draft 2

4/8/85

It is the intention of the Legislature that, before the appropriation of $18.0 million and the loans of the Department of Revenue to the Economic Development Fund may be expended, obligated, or encumbered, the Alaska Industrial Development Authority must enter into a binding contractual agreement with Cominco, Ltd. and with NANA Regional Corporation to execute substantially the following assurances and guarantees:

1. Cominco, Ltd. will guarantee to pay minimum toll and other payments necessary to repay the State's investment if the mine is delayed or if production is suspended after operation commences.

2. Cominco, Ltd. will guarantee the operation and maintenance costs of the road and port facilities, proportianate to its use of those facilities.

3. Cominco, Ltd. and AIDA will agree on a written plan for the use of the port facilities by regional shippers and which will include provision for access by those shippers to the backhaul capacity available on Cominco owned or chartered vessels.

4. NANA will make available at no cost to AIDA the land necessary to meet the expansion needs of the port to accommodate future regional and industrial users.

5. AIDA will establish a toll schedule for the use of the road and port facilities which maximizes the return to the state on its investment throughout the useful life of the facilities and which guarantees eqitable access to the facilities by all users.

_____ BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes for the DeLong Mountain transportation project; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175 million to provide financing for the development of the DeLong Mountain transportation project.

* Sec. 2. The authority may pledge the moral obligation of the state in support of the issuance of bonds or notes authorized under sec. 1. If the moral obligation of the state is pledged, the authority shall establish appropriate capital reserve funds, and the chairman of the authority shall, no later than January 2 of each year, certify in writing to the governor and the legislature the amount, if any, required to restore a capital reserve fund to the capital reserve fund requirements. The legislature may appropriate to the authority the amount certified by the chairman of the authority. Nothing in this section creates a debt or liability of the state.

* Sec. 3. The authority may not issue bonds or notes authorized under this Act unless any limitations imposed by law with respect to the expenditure of money appropriated for the fiscal year ending June 30, 1986 to the authority as loans or grants for the purpose of the DeLong Mountain transportation project have been satisfied.

* Sec. 4. This Act takes effect immediately in accordance with AS 01.-10.070(c).

IN THE SENATE BY THE RESOURCES COMMITTEE

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the economic development fund of the Alaska Industrial Development Authority, transferring and appropriating certain loans to the economic development fund and the commercial fishing revolving loan fund; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $18,000,000 is appropriated from the general fund to the economic development fund (AS 44.88.172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project.

* Sec. 2. (a) All right, title, and interest in loans of the type described in (b) of this section, and all right, title, and interest in all mortgages, notes, and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated to the economic development fund (AS 44.88.172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project. However, if the amount in unpaid principal of the loans exceeds $112,000,000 as of July 1, 1985, only loans and instruments of security totaling $112,000,000 in unpaid principal are transferred and appropriated under this section.

(b) This section transfers and appropriates

(1) veterans loans acquired or made under AS 26.15;

(2) small business loans acquired or made under AS 45.95;

(3) tourism loans acquired or made under AS 45.90;

(4) fisheries enhancement loans acquired or made under AS 16.10;

(5) child care loans acquired or made under AS 44.33; and

(6) historical district loans acquired or made under AS 45.98.

* Sec. 3. All right, title, and interest in commercial fishing loans acquired or made under AS 16.10.300 - 16.10.370 that are secured by limited entry permits, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, purchased or acquired by the Department of Revenue and held in the general fund on July 1, 1985, are transferred and appropriated from the general fund to the commercial fishing revolving loan fund (AS 16.10.340) for the purposes of AS 16.10.300 - 16.10.370. However, if the amount in unpaid principal of the loans exceeds $30,000,000 as of July 1, 1985, only loans and instruments of security totaling $30,000,000 in unpaid principal are transferred and appropriated under this section.

* Sec. 4. All right, title, and interest in commercial fishing loans that are not secured by limited entry permits, in an amount equal to the principal balance of loans appropriated under sec. 3 of this Act, and all right, title, and interest in all mortgages, notes and other instruments of security made in connection with those loans, are transferred and appropriated from the commercial fishing revolving loan fund (AS 16.10.340) to the economic development fund (AS 44.88.172) of the Alaska Industrial Development Authority for the DeLong Mountain transportation project.

* Sec. 5. The appropriation made by sec. 3 of this Act is for capitalization of a loan fund and does not lapse in accordance with AS 37.25.010.

* Sec. 6. The appropriations made by secs. 1, 2 and 4 of this Act are for a capital project and are subject to AS 37.25.020.

* Sec. 7. This Act takes effect July 1, 1985.

14-1052

IN THE SENATE BY THE RESOURCES COMMITTEE

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes for the DeLong Mountain transportation project, establishing conditions under which the bonds or notes may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project. Bonds or notes may not be issued under this section until

(1) Cominco, Ltd. agrees in writing to terms and conditions under which

(A) adequate access to the road and port constructed as part of the DeLong Mountain project is guaranteed to other users;

(B) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project based on the use Cominco, Ltd. makes of the facilities compared to the use made by others;

(C) Cominco, Ltd. will repay all expenditures by the state for the project through toll fees for the use of facilities constructed as part of the project and other payments;

(D) payments by Cominco, Ltd. to the state will be accelerated if the price of zinc rises above a level determined by the Alaska Industrial Development Authority to yield a reasonable profit;

(2) the United States Congress approves the Cape Krusenstern National Monument land exchange between NANA Regional Corporation and the United States Department of the Interior;

(3) NANA Regional Corporation agrees in writing to convey to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the DeLong Mountain transportation project and land needed for future expansion of the road and port;

(4) NANA Regional Corporation agrees in writing to lease land for the Red Dog Mine to Cominco, Ltd. and to provide easements and right-of-ways needed to operate the mine to Cominco, Ltd.;

(5) the Alaska Industrial Development Authority obtains a ruling from the Internal Revenue Service that bonds or notes issued under this section will qualify for tax exempt status; and

(6) the Alaska Industrial Development Authority establishes a toll schedule for use of facilities constructed as part of the DeLong Mountain transportation project that ensures the greatest return on the state's investment in the project and guarantees equitable access to the facilities by all users; the toll schedule may be periodically adjusted.

* Sec. 2. Notwithstanding limitations on the establishment of a capital reserve fund under AS 44.88.105, the authority may covenant and agree with the trustee or holders of the bonds or notes authorized under sec. 1 of this Act that the authority will establish a capital reserve fund for the purpose of securing the bonds or notes, that the chairman of the authority will, by January 2 of each year, certify in writing to the governor and the legislature the amount required to restore the capital reserve fund to the capital reserve fund requirement, and that the legislature may appropriate to the authority the amount certified by the chairman. Nothing in this section creates a debt or liability of the state.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

ALASKA MINERS ASSOCIATION, INC.

April 8, 1985

Alaska State Legislature
Pouch V(MS 3100)
Juneau, Alaska 99811

Dear Legislator:

During this time of drastic reductions in oil revenues it is essential that Alaska aggressively seek means of diversifying its economic base. At this point in time, Alaska's most immediate promise for economic diversity is development of its resources.

As you well know, Alaska is blessed with a wealth and diversity of resources that is unequaled by any other states or by many sovereign nations. Yet, resource rich as we are , we are almost totally dependent on a single resource for our state's economy. Even the most superficial knowledge of history and economics makes it obvious that to attempt to maintain such a dependence is sheer folly!

The Alaska minerals industry has long known that the mineral resources of Alaska have great potential for providing long term alternative economic development for our state. We are firmly convinced that Alaska's most immediate hope for economic diversity is the creation of new wealth by mining of our vast mineral deposits.

Alaska now has an opportunity, by developing the Noatak area deposits, to quickly achieve much needed economic diversification. Time, however, is of the essence. If we do not avail ourselves of this opportunity now, we will have foreclosed much of the economic future for this generation and for those to follow.

Red Dog in the Noatak area is one of the most well known and closely watched mineral activities in the world. As such, it is an almost absolute barometer to the world of whether it is possible to develop Alaska's minerals. If the largest and richest mineral deposit of its kind cannot be mined, it is the belief of many that none can.

ALASKA MINERS ASSOCIATION, INC.

The Alaska Miners Association and the mineral industry has long encouraged the State's participation in developing the transportation infrastructure needed for development of the Noatak deposits.

Enclosed is a resolution by the Alaska Miners Association which expresses our strong support of the State's participation in the DeLong Mountain Transportation System. We trust it will be of assistance to you in supporting the project.

Sincerely,

ALASKA MINERS ASSOCIATION

James R. Jinks
Executive Director

RESOLUTION SUPPORTING THE DELONG MOUNTAINS TRANSPORTATION SYSTEM

WHEREAS, the people of Alaska support the diversification and expansion of the State of Alaska's economic base through the development of mineral resources; and

WHEREAS, the lack of transportation facilities, particularly in Northwest Alaska, has created economic barriers to development, including mineral development; and

WHEREAS, Cominco Alaska and the NANA Regional Corporation are considering the development of the Red Dog mineral deposit in the Delong Mountains area; and

WHEREAS, the development of the Red Dog deposit will provide the people and the State of Alaska with employment, income, tax revenues, and economic diversification; and

WHEREAS, other mineral resources have been identified in the area near the Red Dog deposit; and

WHEREAS, the lack available transportation facilities near the mineral deposit may substantially delay the development of the Red Dog deposit and other mineral deposits; and

WHEREAS, Cominco Alaska has requested the State of Alaska to assist in financing the transportation infrastructure, also known as the DeLong Mountains Transportation System; and

WHEREAS, Cominco Alaska has guaranteed to repay the State of Alaska, through equitable user fees, in an amount to enable the State to repay amounts loaned; and

WHEREAS, Cominco Alaska has further guaranteed to bring the mine into production within a specified timeframe, to pay for the operation and maintenance of the transportation facilities, and, if there were to be significant delays, to still repay the State of Alaska the amount loaned to develop the transportation facilities, and

WHEREAS, the State of Alaska in its involvement in the DeLong Mountains Transportation System will provide a positive image to the resource development industry and international markets,

NOW, THEREFORE BE IT RESOLVED that the Alaska Miners Association supports the State of Alaska assisting in financing of the DeLong Mountains Transportation System; and

University of Alaska-Fairbanks

John Alfonsi-Chairman
S. A. A. D.
415-E MODS- UAF
Fairbanks, AK. 99701

Dear Rep. Sund

The Red Dog Mine project has had a negative cost/benefit analysis since 1981. However, the recent developements concerning Cominco's activity in South Africa deserve special consideration.

Economically speaking, big companies would not exist in South Africa without the present apartheid form of government. Regretably, the money made by Cominco is shared primarily with white South African supremacists and used to maintain minority rule.

It seems Cominco is tacitly supporting the present South African government by negotiating mining contracts with racists thus contributing to South Africa's very selective wealth re-distribution scheme. Obviously, the vast majority of South Africas' people are neither as financially secure or politically powerful as the racist minority. The product of apartheid is racial violence, with Cominco providing indirect monetary support for the immoral government that exists in South Africa today.

It is our belief that Alaskan dollars should not be appropriated by any elected offical to tacitly support Cominco Ltd. while the company indirectly condones a racial, oppressive, supremacist government.

We hope Alaska's people will realize that the Red Dog Mine project only generates dollars, for NANA Inc. cash dependant shareholders. In addition, the project would generate money for Cominco consequently, for the white minority rulers in South Africa.

Sincerely,

John Alfonsi- Chairman
Students Against Alaska's Destruction (S.A.A.D.)

CS FOR HOUSE BILL NO. 105 (Finance)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes, establishing conditions under which the bonds or notes for the DeLong Mountain transportation project may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15.410 is amended to read:

Sec. 37.15.410. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money that [WHICH] may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $86,525,000 [$62,825,000] is authorized to acquire, equip, construct, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.510. The principal of and interest on these bonds shall be paid out of and secured by the gross revenues derived by the state from the ownership, lease, use, and operation of the airports, and of all the facilities of them and out of any other revenues or money that [WHICH] the state legislature may provide exclusive of any state tax or license.

* Sec. 2. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project.

* Sec. 3. Before bonds or notes authorized under sec. 2 of this Act may be issued the Alaska Industrial Development Authority shall comply with

AS 44.88.173 and shall incorporate into the final finance plan for the DeLong Mountain transportation project the following terms and conditions:

(1) Cominco, Ltd. is required to agree in writing that

(A) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project based on the use Cominco Alaska makes of the facilities compared to the use made by others;

(B) if Cominco Alaska ceases to develop the Red Dog Mine after costs or debts have been incurred by the Alaska Industrial Development Authority for the project, Cominco, Ltd. will repay the authority for those costs and debts;

[Alaska Ind. Development]

(C) toll fees paid by Cominco Alaska for the use of facilities constructed as part of the project to the Alaska Industrial Development Authority may be periodically adjusted if the price of zinc rises above a level that yields a return on investment commensurate with risk;

(2) the United States government makes available land in the Cape Krusenstern National Monument that is included in the proposed land exchange with NANA Regional Corporation to the corporation for construction of a transportation system; [is conveyed to by the U.S. Department of the Interior]

(3) NANA Regional Corporation is required to agree in writing to make available to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the project and land needed for future expansion of the road and port;

(4) tax exempt financing for the project is used to the maximum extent possible;

(5) a toll schedule, that may be periodically adjusted, is established for use of facilities constructed as part of the project that

(A) ensures a reasonable return on the state's investment in the project; and

(B) guarantees equitable access to the facilities by all users;

(6) contracts for the construction, operation, and maintenance of the port and road are subject to AS 36;

(7) reasonable access to the port and road is guaranteed to all users. and equitable

* Sec. 4. Before bonds or notes authorized under sec. 2 of this Act may be issued the Alaska Industrial Development Authority shall

(1) report in writing to the legislative budget and audit committee that the conditions under sec. 3 of this Act have been met; and

(2) agree with the Department of Revenue in writing to deliver all money generated by the DeLong Mountain transportation project to the Department of Revenue for deposit in the general fund, other than money necessary for payment of the principal and interest on bonds or notes issued under sec. 2 of this Act and except as may otherwise be provided in the bond or note covenants. [to the Dept. of Rev. for deposit in the general fund]

* Sec. 5. This Act takes effect immediately in accordance with AS 01.-10.070(c).

I. Introduction

II. Executive Summary

A. Summary of Findings

B. Recommendations

I. Introduction

The Red Dog zinc, lead and silver deposit was discovered in the mid 1970's. Located in the Noatak River drainage 55 miles from the Chukchi Sea, the deposit was included in a 1976 NANA land selection. In February 1982, the NANA Regional Corporation signed an agreement with Cominco American Ltd. to develop the deposit.

In late 1984, the Board of Directors of Cominco will decide whether or not to proceed with the project according to the present proposed schedule. If the decision is positive, construction would begin in mid 1985, with initial production starting at a rate of one million tons per year. The capacity of the mine would be expanded to 2 million tons of ore per year in 1993.

The development of the mine will require the construction of a port facility on the Chukchi Sea and a 55 mile road inland to the mine. Cominco estimates the cost of port construction to be $57 million and the cost of the road to be $75 million. Total development costs for the mine, including the port and the road are estimated to be $390 million. NANA and Cominco have jointly indicated that they will seek State funding assistance for construction of the road and the port.

This report was commissioned by the Governor to provide his office with the information necessary to formulate the State's role in the development of Red Dog. The lead agency in the preparation of the report is the Office of Mineral Development, Department of Commerce and Economic Development. Other State agencies contributing to the report are the Division of Finance and Economics, Office of Management and Budget, Department of Community and Regional Affairs, Department of Transportation and Public Facilities, the Division of Land and Water Management, and the Department of Revenue. Guidance in the handling of confidential information was provided by the Department of Law.

The following section is an executive summary which includes a summary of findings and recommendations. Following the Executive Summary, the contributions of each agency are included in their entirety. Minor inconsistencies inevitably occur in a report of this type which incorporates contributions from originating agencies.

The information used in the writing of this report represents independent research by the agencies involved as well as confidential and non-confidential information provided by NANA and Cominco.

II. Executive Summary

- This section of the report was prepared by the Office of Mineral Development. The contributing agencies have reviewed the Executive Summary for consistency.

A. Summary of Findings

Project Feasibility

- The enormous tonnage and high combined grade of zinc, lead and silver make Red Dog the worlds largest, undeveloped zinc/lead deposit.

- Development costs will be high. However, the deposit can be mined as an open pit with a very low ratio of waste material to ore. Therefore, actual mining costs will be low compared with the majority of world zinc/lead mines. This will give the Red Dog mine competitive advantage and result in reducing the possibility of temporary mine shutdowns in times of world economic recession.

- For the foreseeable future, 70%-80% of mine revenues will be from the sale of zinc concentrates. Zinc is the fourth most widely used industrial metal, and compared with the other base metals (copper and lead), zinc has the greatest potential for growth in terms of world demand and the least potential for being over-produced.

- Without State investment, an average long term zinc price of 63¢ per pound is estimated to provide Cominco a 15% return on investment. A return on investment of 15% is cited for comparison purposes only and should not be interpreted as a decision threshold for Cominco. A 2.5% change in the return on investment is estimated for each 5¢ change in the long-term average zinc price.

- In the long term, much of Red Dog's concentrate production can be refined at Cominco's smelter and refiner in Trail, British Columbia, and will replace concentrates from other depleting Cominco zinc mines. In the near and long term, concentrates from Red Dog will be attractive to Japanese and European processors because of the reliability of the supplier, the longevity of the mine, and the political stability of the United States. The development of Red Dog and other base metal deposits may eventually make the construction of an in-State smelter and refiner feasible.

Permitting and Access

- Conditions at Red Dog will allow the operators to meet the most stringent environmental regulations and environmental permitting should not pose any problems.

- Gaining an access right-of-way from a Chukchi Sea port, across the Krusenstern National Monument to the mine site, poses the single greatest hurdle to mine development.

NANA

- The NANA Regional Corporation is solvent and is strongly oriented towards projects which offer long-term employment benefits to its shareholders, principally in the form of joint ventures within the region.

Cominco

- Cominco is a sound corporation, has good overall prospects, is backed by a large, reputable parent corporation, and appears able to provide a solid corporate base for support and development of the Red Dog mine project.

- Cominco is presently the free worlds largest producer of zinc and lead and has been successfully mining, processing and marketing zinc and lead for over 70 years.

- Cominco has developed and successfully operates four major mines in the North American arctic. Three of these are zinc/lead mines and have been developed within the last 20 years. The senior management for the Red Dog project will include many of the same personnel responsible for building and operating these arctic mines.

State Impacts

- The project will create between 350 and 400 direct, permanent jobs within the State with an annual gross payroll of between $11.2 and $12.9 million. Additionally, approximately 225 secondary and indirect jobs will be created. Construction employment will total 143 full time equivalent jobs between 1986 and 1988 with an annual gross payroll of $8.8 million during those years.

- Revenues to the State from the mine will be derived from the mining license tax and the corporate income tax. As both taxes are based on net profits, annual State revenues range from $9 to $20 million in current dollars subject to how repayment of infrastructure costs are treated. The net present value of revenues to the State over 30 years, including estimated reductions in

transfer payments, is from $200 million to $300 million based on a zinc price range between 55¢ and 65¢ per pound. Additionally, earnings derived by NANA from the mine will provide revenue to the State. At present, there is no personal income tax so no revenues from employee income can be projected.

- No estimates have been made for the potential demands on State programs from the migration of out-of-state job seekers attracted by the project. Because of the NANA/Cominco agreement requiring preferential local hire, the remoteness of the project, and the lessening of national unemployment, the problem of out-of-state job seekers may not be significant.

- Recent dramatic decreases in the total of state transfer payments to the NANA region have been tentatively linked with permanent fund distributions. This indicates that income derived from mine wages may also have a positive effect on reducing regional transfer payments by the State.

- If State ownership and future control of the transportation corridor and infrastructure facilities are not considered and assuming a 60¢ lb. zinc price an examination of project finances estimates that a direct State subsidy of $40.1 million towards project development costs would assure a 15% rate on investment. This would provide a six-fold net present return on the State's subsidy in the form of tax revenues and transfer payment reductions totaling $270 million. If the State were to completely finance construction of the road and port for an estimated cost of $135 million, the cost/benefit ratio would be reduced to 2:1.

- Industrial development bond financing of the project infrastructure would not adversely affect the State's bonding capacity.

Regional Impacts

- Red Dog will provide approximately 260 full-time jobs for regional residents at mine start-up in 1988, increasing to 400 in 1993. The total regional payroll will total approximately $7.0 million initially and will increase constantly as local employees move into professional and technical positions. Additionally, some 75 secondary jobs will be created after start-up and would mostly be filled by regional residents. At present, 88% of the regional economy is supported by Federal and State revenues, and the existing 1200 full-time equivalent jobs in the region are heavily dependent upon Federal, State and local government employment.

- If the local hire objectives are met, the net effect of the mine on increasing the regional population will not be significant. Some increase in the population of Kotzebue is expected as regional residents relocate to be closer to their jobs. Kotzebue's population increase attributable to the mine represents about 6% of the total increase in Kotzebue's population over the next 20 years. With the possible exception of the water system, existing municipal facilities should not be significantly stressed by population growth attributable to development of the mine.

- Because Red Dog is an enclaved development, no substantial additional demands will be placed upon the region's service delivery. However, an increase in regional affluence is likely to require some increased social service delivery, at least temporarily. Service delivery in Kotzebue will be impacted to some degree if mine workers commute regularly through the city. That impact will depend on the frequency and duration of transient visits.

- The NANA/Cominco agreement requires Cominco, contingent upon the availability of skilled labor, to preferentially hire regional

residents, state residents and out-of-state residents in that order. While there is no guarantee of the percentage of local hire, NANA has stated it will assume the responsibility to train regional residents for these jobs.

- The region could benefit from the use of the project's port facilities and backhaul capabilities. Savings on freight costs are estimated by Cominco to be between $1 million and $3 million annually assuming port user fees are not assessed to incoming regional freight.

- NANA is presently seeking to detach Red Dog and other mineral deposits in the area from the North Slope Borough. Successful detachment is seen as a factor in the decision to proceed with the Red Dog project (due to uncertain future taxation policies of the North Slope Borough), and in the creation of a Northwest Alaska Borough.

Infrastructure Costs

- Cominco's route selection and road design are based on sound engineering criteria and the cost estimate of $80 to $90 million for the preferred road through the Krusenstern National Monument is realistic for this stage of the evaluation.

- Cominco's estimates for port costs of $50 to $60 million, based on the proposed, ballasted-tanker design, appear reasonable.

B. Recommendations

Red Dog will become one of the premier zinc/lead mines in the world. While the mine would eventually be developed without assistance, there are several reasons why the State may want to consider participating in the funding of all or part of the costs of building a road and regional port.

- There is little risk that the project will not generate sufficient revenues to amortize infrastructure costs at a modest interest rate.

- In addition to being able to repay any State funding, the project will generate over 400 year-round, permanent jobs; provide direct tax revenues to the State and local governments; and may significantly reduce the amount of regional transfer payments.

- The port facility, tidelands, uplands and right-of-way will service the region as well as the mine, and both the road and the port may stimulate future development of additional mineral deposits in the Noatak area. The road could eventually become part of an integrated transportation system that could link other more distant mineral developments such as the Northern Alaska Coal Field.

- The development of Red Dog will signal Alaska's firm intention to become a world supplier of mineral resources. This will have the effect of establishing Alaska's credibility with international consumers and attracting investment capital for other resource development projects.

If the State is to participate in the funding of the road and port facilities, the following recommendations are suggested.

- Any major State investment in the road and port facilities which will initially service the Red Dog mine should be conditional upon

firm agreements with NANA and Cominco which will provide for State interests in the facilities and right-of-way, as well as further guarantee the use of the road and the port to other potential users. This requires that State tidelands, privately owned uplands and the right-of-way be available for expanded development and use, in a reciprocal use agreement among affected landowners and users.

- The maintenance and operating costs of the road and the port should be borne by the users.

- If State funding were to take the form of a loan or appropriation, repayment of the funds should be required and should be spread over a period of 20 years or longer to begin with mine production. Whether repayment is to be made in the form of annual installments, tied to a tonnage user fee or some combination of both, the interest rate attached to the repayment should reflect the State's willingness to share in the project risk and should recognize the total benefits the project will provide, including State interests in the road and port.

- Any agreement between the State and NANA/Cominco should include an equitable mechanism to accommodate other future users into a fee schedule which would incorporate a pro rated share of debt amortization as well as operating and maintenance costs.

A. Technical Description of the Project and Permitting Requirements

1. Project Description

The Red Dog deposit has indicated reserves of 85 million tons of ore with an average grade of 17.1% zinc, 5.0% lead (22.1% combined) and 2.4 ounces per ton silver. Red Dog's reserves and grades compare extremely favorably on a worldwide basis with other primary zinc/lead mines. These would include the Brunswick Mining Company's (64% Noranda) No. 12 mine in Eastern Canada with reserves of 100 million tons of 13% combined zinc and lead; the Mount Isa Mine in Australia with 93 million tons of 14% combined zinc and lead; and the Tara Mine in Ireland with 59 million tons of 12.7% combined zinc and lead.

On a regional comparison, the open pit Cyprus Anvil zinc/lead mine in the neighboring Yukon Territory has reserves of about 37 million tons with a combined zinc/lead grade of only 7.8%. On a world basis, according the U. S. Bureau of Mines, the average zinc grade of primary zinc mines is between 6% and 9%, spotlighting Red Dog's 17% zinc grade.

While the Red Dog grades and reserve tonnage compare favorably with major world producers, Red Dog will also enjoy the advantage of being an open pit mine, while most major zinc mines operate underground. U. S. Bureau of Mines statistics indicate less than 20% of the world's present primary zinc producers are surface mines. The cost of mining a ton of ore from an open pit is significantly less than the cost from an underground operation. This will enhance Red Dog's ability to operate during periods of market weakness and low prices. Cominco officials believe that Red Dog's actual cost to produce a ton of zinc, excluding development costs, will be lower than production costs of the majority of world zinc mines.

The mine site is located about 55 miles inland from the Chukchi seacoast and about 100 miles north of Kotzebue. A port site is proposed south of the village of Kivalina on the Chukchi Sea. The port will include either offshore or shore-connected docking facilities to accommodate 25,000-35,000 ton ore carriers which will ship mine concentrates to smelters and backhaul mine supplies during the ice-free shipping season from early July to mid October.

A 55 mile road will be constructed between the port and the mine site for the supply of the mine and for the transport of mine concentrates to port. At the proposed initial start-up production rate, 9 to 12 truckloads of concentrate will be hauled over the road daily. The road grade will be engineered for possible modification to a railbed when the production rate doubles and the economics of rail haulage become beneficial.

The mine site facilities will include an accommodation building for housing workers on a rotational basis, a mill complex for concentrating the mine ore, and other buildings for housing a vehicle maintenance shop, a primary ore crusher, an ore storage shed and other facilities. To the greatest extent possible, these buildings will be prefabricated in modules at Pacific port sites, shipped on barges to the port, and transported overland to Red Dog for siting on bedrock foundations.

The mine and mill will require 18 MW of power and the port facilities an additional 1.5 MW. The power will probably be supplied by diesel generators. While the cost of buying and transporting coal to the mine is significantly cheaper on a per Btu basis, Cominco has indicated the capital costs of a coal-fired power plant may not be competitive. A 50 MW power requirement is reported as being the minimum that would allow for the economies of scale necessary for coal fired generation to be considered cost effective.

The mine itself will be an open pit that may eventually reach a depth of 700 feet and cover 65 acres. Associated with the pit is the waste tailing pile area and the mill tailings pond. The tailings pond is located to allow treatment of all discharge water draining from the mine area including the pit, the waste tailings and the mill complex. Water naturally draining into the tailings pond basin will be diverted to an adjacent drainage to minimize the volume of water that must be treated. Once the tailings pond and drainage ditches are in place, the water quality in Red Dog Creek will be improved and the periodic fish kills in Ikalukrok Creek (caused by natural ground water leaching metals out of the orebody) will be eliminated.

The pit will require removal of only 1.3 million tons (less than 1 million yards) of material to prepare the mine site for production. Much of the waste material will be used in the construction of the tailings pond dam and access road. A portion of this preproduction material is mineralized and will be stockpiled in the tailings pond drainage area for possible future processing. The overall ratio of waste stripping to ore production is 0.8:1, which represents an extremely favorable situation compared with most open pit mines and will contribute significantly to the long term viability of the mine. Additionally, the first five years of ore to come from the pit will grade 21% zinc and 6% lead, 5% above the average mine ore grade, enhancing revenues from the initial production.

Initial ore production will be 1.1 million tons per year on a basis of 3000 tons per day. The ore will be crushed and concentrated using selective flotation. The final products shipped to smelters will be a lead sulfide concentrate with an approximate lead content of 62%, and a zinc sulfide concentrate with an approximate zinc content of 59%.

Forecast production at the initial mining rate is 350,000 tons of zinc concentrate and 79,000 tons of lead concentrate. The silver will be equally contained by weight in the lead and zinc concentrates,

resulting in a silver grade in the lead concentrate of 4-5 times than that of the silver grade in the zinc concentrate due to the smaller tonnage of the lead concentrate.

The chemicals and technology required to treat and concentrate the raw ore is well developed and the equipment and chemicals needed are readily available. The only departure from an "average" treatment scheme is the need for finer grinding of the ore to effectively liberate the ore minerals from the waste minerals.

Under the expanded scenario beginning in the sixth year of operation, production will nearly double increasing the daily mill throughput from 3000 tons to 5,600 tons. Annual ore tonnage will be 2.0 million tons with annual zinc concentrate shipments of 585,000 tons and lead concentrate shipments of 119,000 tons.

Two Appendices are attached to this report which provide further details on the design, construction and operation of the Red Dog project. Appendix A is from the Preliminary Draft Environmental Impact Statement. Appendix B is a "Red Dog Fact Sheet" generated and distributed by Cominco.

2. Permitting Requirements

Permitting activity to date for the Red Dog project has included the initiation of applications for those permits requiring long lead times. Cominco employs a full time environmental coordinator to manage this aspect of the project. This position is staffed by Mr. Harry Noah who formerly filled a similar position with the Noranda Mining Company during which the Federal EIS for the Greens Creek project was being prepared.

Environmental baseline data collection for the Red Dog project began in the winter of 1981 and continued through the summer of 1983.

The Environmental Impact Statement (EIS) process was begun in January of 1983 and the formal Draft EIS will be distributed to the public in March 1984. The final EIS could be issued by July of 1984. Other major permits applications which have been filed to date include a National Pollution Discharge Elimination System permit, a Section 10(404) Army Corps of Engineers wetlands permit, a State of Alaska right-of-way permit, and a Title 11 right-of-way permit with the U.S. Department of Interior.

The following is an itemization of major permits needed before the construction and operation of Red Dog can begin.

Federal Permits

U. S. Environmental Protection Agency
- National Pollutant Discharge Elimination System Permit
- Review of U. S. Army Corps of Engineers Section 404 Permit for conformance with Section 404(b)(1) guidelines

U. S. Army Corps of Engineers
- Section 404 Permit (wetlands)
- Section 10 Permit (navigable waters dredge and fill)

U. S. National Park Service
- Right-of-way for transportation system

U. S. Fish and Wildlife
- Possible Section 7 Consultation (for endangered species)

National Marine Fisheries Service
- Possible Section 7 Consultation (for endangered marine mammals)

State Permits

Department of Environmental Conservation

- Air Quality Permit to Operate
- Certificate of Reasonable Assurance (Water Quality)
- Wastewater Disposal Permit
- Solid Waste Disposal Permit

Department of Fish and Game

- Title 16 Anadramous Fish Stream Permit

Department of Natural Resources

- Right-of-way Permit
- Water Rights Permit
- Tidelands Use Permit
- Tidelands Lease
- Materials Sale Contract

State Historic Preservation Office

- Archaeological Clearance

Office of Management and Budget

- Coastal Zone Management Consistency Determination

Local Permits

North Slope Borough

- Land Use Permit

Little problem is foreseen by Cominco in obtaining permits for the environmental aspects of the project. However, special interest litigation challenging procedural matters or other aspects of the issuance of federal permits may be possible as the project is large and represents the development of a remote area of Alaska.

In general the project should be able to meet the most stringent environmental standards. A water treatment plant will be installed to process the limited mine and mill discharge water. The naturally contaminated drainage from the mineral zone will also be treated. Ultimately the project will have permanently improved the quality of Red Dog Creek, even after the mine and water treatment facilities have been removed.

It is of interest to note that the present EPA regulations mandating zero-discharge of mill process water (which were developed on the basis of mill tailings ponds in the arid and evaporative climate of Southwest America) will be met at Red Dog by constructing a dam large enough to impound the cumulative volume of mill discharge water over the life of the mine. This regulation is attainable at Red Dog because the topography and the availability of stripped overburden material allow the construction of a mine tailings pond large enough to satisfy this requirement. The Quartz Hill mine, in the rainforest of Southeastern Alaska, will not have to comply with the regulation because a sole variance was granted to the project in the language of the regulations. However, this regulation has the potential to preclude the development of other Alaskan and U. S. mines which have neither a variance nor the favorable conditions found at Red Dog.

A possible major environmental permit that is not listed, but that may be in effect and needed for the permitting of Red Dog is a State Hazardous Waste permit which will be necessary if the proposed hazardous waste regulations are adopted. It is the contention of Cominco's staff that all the applicable provisions of these proposed regulations will have been addressed by the federal permitting process and that the State's permit requirements for Red Dog will be redundant. The State's proposed Hazardous Waste permitting process, however, would present an additional opportunity for project delay through litigation of permitting procedures.

At present, the most critical aspect of permitting for the project is the road access from the Chukchi coast to the mine site. Of two possible routes, a northern route across State lands and southern route through the Cape Krusenstern National Monument, the southern route has been identified in the Draft EIS as the preferred access option as it will have the least environmental impact and is the most cost-effective alternative for the project.

Use of the southern route requires either securing land from the Krusenstern National Monument or gaining a right-of-way across it. Both of these avenues are being pursued. The NANA Corporation is presently seeking a land exchange with the National Park Service for the four, corner townships in the monument through which the road would pass. Cominco has also begun a right-of-way application to the Park Service under the process outlined in Title 11 of ANILCA. The land swap is seen as the preferred method for gaining access as the alternative Title 11 right-of-way process is lengthy, complex, untried and would ultimately require approval of both the U. S. Congress and the President.

At present, government approval for access to the project is seen to be the only major permitting hurdle to the development of the mine. Appendix C contains a permit schedule time-line, and Appendix D is the basic flow chart for the Red Dog permitting process.

B. Cominco Profile: History; Metal Mining and Processing Operations; and Arctic Mining Experience

1. History

The development and operation of Red Dog will be carried out by Cominco Alaska Incorporated, a wholly owned subsidiary of Cominco Ltd. of Canada. Cominco Ltd. was originally formed in 1906 as the Consolidated Mining and Smelting Company of Canada by the Canadian Pacific Railway (CPR), which remains the majority stockholder (53%) of Cominco Ltd.

The CPR entered the smelting business indirectly in 1898 when they purchased a government-granted railroad franchise from Augustus Heinze. Heinze's railroad franchise threatened the viability of the CPR's own rail expansion plans, but as a condition of the sale, Heinze required the CPR to purchase his smelter located at Trail, British Columbia. In 1906, to secure ore concentrates for the smelter, CPR merged its smelting interests with three mining companies and a local power company to form the Consolidated Mining and Smelting Company of Canada.

In 1913, the company purchased the Sullivan Mine in Kimberly, British Columbia (150 miles from Trail) at a sheriff's auction. The ore at the mine was extremely complex for the existing technology, but shortly after acquiring the mine, the company's research division discovered a new recovery technique called selective flotation which allowed the processing of the complex sulphide ore. The actual size of the Sullivan Mine turned out to be larger than anyone had imagined. Still operating in 1983 with an additional mine life of 20 years, the Sullivan Mine is the flagship of the company.

At present, Cominco is one of the largest mining, smelting and refining enterprises in the world. It is the leading producer of zinc

and lead, accounting for 10% and 11% of the world's supply, respectively. Additionally, the company operates fertilizer plants in the U.S. and Canada and operates a potash mine in Saskatchewan and a phosphate mine in Montana. Cominco supplies 22% of Canada's fertilizer demand and 12% of the U.S. demand.

2. Metal Mining and Processing Operations

Smelters and Refineries

Trail, British Columbia - The smelting and refining complex at Trail, British Columbia has an annual production capacity of 300,000 tons of refined zinc, 150,000 tons of refined lead and 12 million ounces of silver. Other products include gold, bismuth, cadmium, antimonial lead, sulphuric acid, ammonia, and fertilizers. The operation includes two hydro-electric plants which supply Cominco's power needs and sell the surplus locally. The Trail metallurgical operations represent Cominco's largest single source of revenue. Trail processes concentrates from the Sullivan Mine (100% Cominco) in British Columbia and from the Pine Point Mine (69% Cominco) in the Northwest Territories. Additional Trail capacity is met by purchasing concentrates from other sources including South America.

In 1977 Cominco began a modernization program at Trail which included $210 million for a new zinc refinery. Of the 300,000 ton annual production capacity at the recently completed zinc facility, 70,000 tons is produced in a "state of the art" hydrometallurgical plant which uses a pressure leaching process to produce zinc. Elemental sulfur is a by-product of this process instead of sulfuric acid. An additional $200 million investment is planned to rebuild the lead smelting segment of the complex.

Mitsubishi Cominco Smelting Company - Cominco holds a 45% interest in a lead smelter located on Naoshima Island, Japan. The

smelter has a 40,000 ton annual refined lead production annual capacity and purchases lead concentrates from the Pine Point mine.

Cominco Binani Zinc Ltd. - Cominco Ltd. and Metal Distributors Ltd. in joint venture operate an electrolytic zinc plant in India with a capacity of 32,000 tons refined zinc, and by-product cadmium and sulphuric acid.

Metal Mines

Sullivan Mine, Kimberly, B.C. - In its 74th year of production, the Sullivan Mine is wholly owned by Cominco and is the principal supplier of lead and zinc concentrates to the Trail smelter. In 1982 the Sullivan Mine milled 2.4 million tons of ore grading 3.2% zinc, 5.0% lead, and 1.9 ounces per ton silver and shipped 131,000 tons of zinc concentrate and 171,000 tons of lead concentrate to Trail. The Sullivan Mine has published ore reserves of 49 million tons grading 6.1% zinc 4.4% lead, and 1.0 ounces per ton silver, giving it an indicated mine life of an additional 20 years at the present production rate.

Pine Point Mine, Pine Point, Northwest Territory - Cominco is a 69% owner of the Pine Point Mine. In 1982 Pine Point milled 2.4 million tons of ore grading of 7.3% zinc and 3.0% lead. Almost all of the 287,000 tons of zinc concentrates were shipped to the Trail, British Columbia smelter while most of the 85,000 tons of lead concentrate were shipped to the Mitsubishi Cominco lead smelter in Japan. Published reserves are 25 million tons at 6.1% zinc and 2.4% lead. Full mine production capacity is four million tons of ore per year indicating an assured mine life of 7 years.

The Pine Point Mine began production in 1964 after a joint development effort with the Canadian government which provided infrastructure to the remote location consisting of a 400 mile railroad, and a hydroelectric power plant.

Polaris Mine, Little Cornwallis Island, Northwest Territory - The recently developed Polaris Mine commenced operation in 1982 at an annual production rate of 800,000 to 900,000 tons per year. Proven reserves are 11 million tons of 15.2% zinc and 4.4% lead while an additional 13 million tons of ore are inferred, indicating a mine life of 25-30 years. The concentrate production from Polaris is shipped to European smelters.

The Polaris Mine is located on Little Cornwallis Island only 75 miles from the magnetic North Pole. The shipping season from Polaris is restricted to a few months in the summer, as will be the shipping season at Red Dog, and a year's production of concentrate is shipped during the brief ice-free season. The mine's mill complex was constructed as a module at a Quebec port site and barged to Little Cornwallis Island for installation. This is the same method that will be used for construction of facilities at Red Dog.

Black Angel Mine, Maarmorilik, Greenland - Cominco is a 63% owner of the Black Angel Mine which milled 744,000 tons of ore in 1982, grading 12.6% zinc, 4.5% lead and 1.0 ounce per ton silver. Zinc and lead concentrates are shipped from Black Angel to European smelters during the summer shipping season. Black Angel reserves are 2.2 million tons grading 13.4% zinc, 4.0% lead and 1.0 ounces per ton silver. A mine life of 3 years is indicated unless additional reserves are discovered.

Magmont Mine, Bixby, Missouri - Cominco owns 50% of the Magmont Mine which milled 1.1 million tons of ore in 1982 at grades of 1.0% zinc and 6.5% lead. Concentrates from the mine are sold to U.S. smelters. The mine has 9.1 million tons of proven and inferred reserves indicating a mine life of 8-9 years.

Con Mine, Yellowknife, Northwest Territory - The Con Mine is located on the shores of Great Slave Lake and has been in production

since 1938. In 1982, 234,000 tons of ore were milled with an average grade of 0.36 ounces per ton gold. The ore is milled and the gold refined locally in Yellowknife. The mine has reserves of 2.1 million tons grading 0.47 ounces of gold per ton for an indicated mine life of 8-10 years.

Jersey Mine and Valley Mine, Logan, B.C. - These two open pit mines have reserves of over 500 million tons of copper ore. The Valley Mine is the largest known copper deposit of its type in Canada. The Valley Mine began production in January 1983 at a rate of 23,000 tons per day.

Warm Springs Mine, Garrison, Montana - Cominco owns and operates the Warm Springs Mine, a major underground producer of phosphate which employs 114 people.

Other Metal Mining and Exploration Interests - Cominco has interests in several other metal mines worldwide including a 47% interest in Aberfoyle Ltd. which operates two tin mines, a zinc/lead mine and other properties in Australia; a 17% interest in Tara Exploration which operates an underground zinc/lead mine in Ireland; and a 47% interest in Exploracion Minera Internacional Espana S.A. which operates a zinc/lead mine in Spain. Cominco also operates wholly owned subsidiaries for exploration in America, Australia, Belgium, France, Italy and the United Kingdom.

Research - Cominco operates a Product Research Center in Ontario which works towards developing uses for lead and zinc, including developing, marketing and licensing new products and processes.

3. Arctic Mining Experience

Cominco has major and minor interests in eight zinc/lead mines in the world of which five are in North America. Of these five, three are

located in the arctic and were developed and are being operated by Cominco. The Pine Point Mine in Northern Canada is located at latitude 62°, the Black Angel in Greenland at latitude 71° and the Polaris on Little Cornwallis at latitude 77°N. The Red Dog deposit is located at latitude 68°.

The development and operation of each of these mines has presented special challenges which have been successfully met.

The Pine Point Mine located in Northern Canada required the construction of the Great Slave Lake Railway between the closest existing rail link in Alberta, to the mine site on the south shore of Great Slave Lake, 423 miles to the north. Much of the railroad was built over permafrost. Construction was financed by the Canadian Government under the northern "Roads to Resources" program and construction and operating costs were recovered from the mine through a schedule of user fees based on a guaranteed volume of 215,000 tons of concentrate shipped annually and special fees based upon the value of the concentrate as determined by smelter returns. When the agreement was negotiated, infrastructure costs were to be recovered in 10 years as there were only 10 years of proven ore reserves known at that time. Due to higher than forecast shipping tonnages, the mine ultimately repaid the railroad capital costs in about seven years.

Cominco underwrote the costs of developing a hydro-electric generating plant for use by the Pine Point mine and the developing region. Also a complete townsite was constructed which is today a chartered village with a population of 2200 and presently enjoys the second highest per capita income in the Northwest Territories. 640 residents are employed by the mine. Pine Point is an open pit, as will be Red Dog, with production coming from several pits. The ore is concentrated at the mine site and shipped to smelters at Trail, B.C. and Naoshima, Japan.

The Black Angel Mine was developed in 1972 with production beginning in 1973. The mine's entrance is located in a cliff wall of Maarmorilik Fjord on the west coast of Greenland. The mill and concentrator are located on the opposite side of the fjord and ore is transported from the mine portal, by aerial tramway, across the fjord to the mill site. The mine ships its concentrates by ocean transport to various European smelters, and as will be true at Red Dog, is limited to a shipping season determined by the winter ice pack.

The decision to develop the Polaris Mine was made by Cominco in November of 1979 and the first ore was processed in the mill on November 4, 1981, just two years later and 10 weeks ahead of schedule. Located on Little Cornwallis Island only 1,000 miles from the North Pole, the severe climactic conditions and short ice-free season required innovative development. As at Black Angel, the mine was located virtually at tide water. The mill and administrative offices were constructed as a single barge-mounted module at a port in Quebec and towed to the mine site. This is the same scenario Cominco will use to develop the Red Dog facilities. For Red Dog the modules will be constructed and shipped from Pacific ports and will then be transported overland approximately 55 miles.

Polaris is an underground mine, and mining techniques take into account the underground permafrost conditions which extend to a depth of about 1200 feet. While Red Dog will be and open pit mine and will therefore not have the mining problems as at Polaris, similar arctic conditions will be experienced at Red Dog. During the ice free season at Polaris, eight shiploads of concentrate, representing 12 months of mine and mill production, are shipped to European smelters.

The Polaris Mine maintains a personnel program targeted at maximizing regional employment of the area's Inuit natives. A training program for Northern Canadians is utilized and work schedules have

been tailored to accommodate the subsistence lifestyle of the northern residents.

The Con Mine in Yellowknife, Northwest Territories is a gold mine and as such does not handle the same large quantities of ore that a basemetal producer must mine, mill, concentrate and transport. The mine has been in operation since 1938, was one of the first of Canada's northern mines, and has given Cominco 45 years of practical experience operating in the arctic.

Cominco's success has been attributed to its strong management. Locally, the President and General Manager of Cominco Alaska is Hank Giegerich, who is responsible for Cominco's statewide activities and for the development of Red Dog.

Mr. Giegerich is a 30 year Cominco employee and was formerly Vice President of Cominco's northern operations, headquartered in Yellowknife. In that position Mr. Giegerich was responsible for the operation of the Con and Pine Point mines was responsible for the development of the Polaris Mine. Prior to that assignment he was Project Engineer for the development of the Black Angel Mine in Greenland. Mr. Giegerich recently received awards from the Canadian Institute of Mining and Metallurgy and the Alberta Chamber of Commerce for the success of the development of the Polaris Mine and is undoubtedly one of the most qualified individuals in North America (and quite probably in the world) to manage the development of the Red Dog Mine.

The project manager for the Red Dog development is James "Bud" Rae. Mr. Rae is a long time Cominco employee and participated in the construction of the Pine Point Mine and later served as the mine's production superintendent. Mr. Rae managed the rehabilitation and development of Cominco's Pinchi Lake mercury mine in Northern B.C. which operated until the mid 1970's, and has been involved in the

development of Cominco's Valley Copper Mine, the operation of the Trail smelter and the construction of hydroelectric dams in British Columbia.

More generally, as the world's largest miner, smelter, refiner and marketer of zinc and lead, Cominco's profitable history is the result of its success in assessing market demand and timing the development of carefully planned and efficiently operated mines. This record is more impressive when it is taken into consideration that four of Cominco's major mines operate in remote regions of the arctic. These mines are successful despite the high development costs of infrastructure creation, and high operating and labor costs.

C. Commodity Profile of Mine Products and Marketing Considerations

1. Introduction

The average grade of the Red Dog Mine is 17.1% zinc, 5.0% lead and 2.4 ounces per ton silver. The importance of zinc to the economics of the mine is understated as the actual zinc grades will be closer to 21% in the first five years and average 19% for the following 15 years. It is in this initial period of the mine's life when capital costs are amortized and therefore the higher ore grade is important to the ultimate return on investment.

Using an average grade of 19.0% zinc, 5.0% lead and 2.4 ounces per ton silver (conservatively representing the first 20 years of operation), an appreciation can be gained for the relative contribution each commodity will make to the total mine revenues by figuring the gross value of a ton of ore and the relative percentage each metal contributes.

Commodity prices published for November 4, 1983 were 49¢ per pound for zinc, 25¢ per pound for lead and $9.00 per ounce for silver. Though the price a smelter pays for contained metals is discounted to reflect smelting charges and other considerations, applying these basic prices will give a relative comparison of the importance of each commodity.

At a grade of 19.0% zinc, one ton of ore will contain 380 pounds of zinc with a gross value of $186.20 at 49¢ per pound. At a 5% grade, one ton of ore will contain 100 pounds of lead with a gross value of $25.00 at 25¢ per pound. And at 2.4 ounces per ton silver, one ton of ore contains 2.4 ounces of silver with a gross value of $21.60 at $9.00 per ounce. The total gross value of a ton of ore at these prices is therefore $232.80. Gross value, as used here, simply states the value

of the contained metals and does not account for the costs and losses that occur during mining, milling and refining. Zinc value represents 80% of this total while lead and silver contribute 11% and 9% respectively. It is obvious that zinc is the critical commodity in the economics of the Red Dog mine.

To further highlight the importance of zinc, the same calculations can be done holding the price of zinc at its present level of 49¢ while doubling both the price of lead (to 50¢ per pound) and silver (to $18.00 per ounce.) The recalculated percentage contributions to revenues are 67% zinc, 18% lead and 15% silver. Thus Red Dog is primarily a zinc mine and unless there are extraordinary increases in lead and silver prices, the critical commodity is, and in the foreseeable future will remain, zinc.

2. Zinc

Uses and Substitutes

Zinc is the fourth most widely used industrial metal, surpassed only by iron, aluminum and copper. Its importance, however, often goes unnoticed as the metal loses its identity in most end product forms. There are four primary areas of zinc use.

1) Protective coatings. The greatest use of zinc is for coating (galvanizing) steel and iron products. This use accounted for about 44% of all zinc consumed in 1982. Zinc coating protects steel in two ways; by providing a long-lived barrier between the steel base and the corrosive environment; and by protecting the steel through galvanic action due to zinc's high electrochemical activity. Common applications for zinc coating are steel sheet, fencing, storage tanks, fasteners, wire rope, towers, industrial plants, culverts, bridges, ships and structural shapes. As a second method of protecting steel, sacrificial zinc anodes are used

to inhibit electrolytic corrosion of ship hulls, offshore drilling rigs, submerged or buried steel including tanks, pipes or other works.

2) Brass. Brass is an alloy of copper and zinc containing up to 40% zinc. Brass tubes, valves, radiators, and fittings are extensively used in vehicles, motors, refrigeration equipment, heat exchangers, communication and electronic devices. Brass accounts for about 20% of the world's zinc consumption.

3) Die casting. Zinc's low melting point allows problem-free gravity casting. Zinc used in die casting is often combined with small percentages of aluminum to impart strength and wear resistance, and copper to improve tensile strength, hardness and other properties. Zinc die cast parts, such as handles, grills, brackets, carburetors, gauges, pumps, and housings are extensively used in automobiles, machinery, business machines, appliances, scientific and electronic equipment. Die casting accounts for about 16% of the world's zinc consumption.

4) Rolled Zinc. Products manufactured from rolled zinc include engraving plate, coinage and zinc foil. These uses account for about 8% of consumption.

5) Zinc compounds. Zinc dust, zinc oxide, and other zinc compounds are used in a variety of industrial applications as corrosion inhibitors, activators in vulcanizing rubber, chemical catalysts, fluxing agents, fungicides, pharmaceuticals, TV screen phosphors, and additives in lubricants. Zinc ferrite is used in electrical motors, transformers, coils, amplifiers, timers, and in radios, television and computers.

It also should be noted that zinc is an essential element in the growth of human beings and animals. An animal with a zinc deficient

diet will require 50% more food to achieve the same weight-gain as an animal supplied with sufficient zinc. While inhalation of freshly formed zinc oxide can result in the temporary disorder known as "zinc chills" or "oxide shakes," zinc is not considered to be a toxic substance.

The primary substitutes for zinc, (and therefore its economic competition) are aluminum, plastic and magnesium.

In protective coatings there is no substitute for zinc galvanizing in large-tonnage applications and therefore, zinc's largest use has an assured base level demand. In steel sheet coating a recently marketed product, Galvalume, has made significant inroads on traditional zinc-coated steel sheet. Galvalume is comprised of 55% aluminum and 43% zinc. Because the coating is less dense and offers greater corrosive resistance, much less zinc is used than when steel sheet is hot-dipped in zinc to form conventional galvanized sheet. However, Galvalume is not easily molded, nor can it be welded, so there are presently limitations on its ability to substitute for zinc coated sheet. A competitive sheeting product, Galfan (95% zinc, 5% aluminum), has also been developed and may be competitive with Galvalume in some applications. Aluminum sheet also competes with galvanized steel sheet for such applications as roofing and siding.

Aluminum alloys, stainless steels and plastics have replaced many traditional uses of brass and will continue to compete for those applications.

In die casting, aluminum and magnesium are competitive materials where weight limitations, temperature tolerances, and surface finishes are important. Plastics have also made inroads in this field. However the recent development of thinwall zinc die casting and improved zinc alloys and finishing techniques has allowed zinc die casting to retain many of its challenged applications. It is also possible that the recent

MAJOR WORLD ZINC MINES

developments in thinwall zinc die casting may find new applications, further limiting any erosion of zinc demand.

In chemical uses, aluminum and magnesium replace zinc to some extent in chemical reactions, and titanium oxide can replace zinc oxide in paints.

In general, economic and other considerations favor the continued wide use of zinc and limit inroads of substitutes. Magnesium substitution is limited by the low capacity of magnesium production facilities, and while aluminum and plastics are widely available, the price of zinc is favorable. As aluminum production is energy intensive and as plastics are petrochemical products, both are sensitive to energy price increases.

The energy requirement for producing 1 ton of aluminum from ore is 244 million Btu's while the equivalent process for zinc requires only 65 million Btu's. Additionally, where durability is a factor, plastic will never be an acceptable substitute for metals. Cominco's Product Research Center has developed a super plastic zinc (SPZ) consisting of 78% zinc and 22% aluminum with a low forming temperature which would allow use of the same low cost thermoforming technology utilized by plastics and would possibly result in zinc becoming a substitute for plastic in certain applications.

World Supply and Demand

The U.S. consumes one sixth of the world's zinc supply, but presently produces only a third of its own demand. U.S. zinc smelter capacity has decreased from self-sufficiency in 1968, to 60% dependency on foreign sources at present. In the absence of a repeal of the Jones Act, which penalizes the shipment of commodities between U. S. ports, Red Dog Mine concentrates will be processed by foreign smelters as a matter of economic reality. U.S. consumers will enjoy no inherent

domestic supply advantage despite the nationality of the mine. Therefore discussions of supply and demand for zinc and other commodities will be examined from primarily a global perspective.

World mine production in 1982 from non-socialist countries was 4.8 million tons of contained zinc. Production of refined metal was 4.3 million tons while metal consumption was 4.1 million tons. Consumption was 6% below the 1981 level and primarily reflected a 17% decline in U.S. consumption due to the general economic recession, and a lesser decline in Europe for the same reasons. Japan showed no consumption change in 1982.

The decline in world demand reflected general worldwide economic recession. As zinc consumption is tied to automobile production, residential and commercial construction and general industrial output, zinc consumption will parallel general economic trends.

A demand increase in U.S. consumption is forecast as a nationwide program to restore or replace highway structures such as bridges, guardrails and culverts will increase the need for galvanized steel. Additionally the change from a 95% copper penny to a 98% zinc penny will increase the annual U.S. base demand by about 40,000 tons per year, which represents about 1% of the 1982 world demand. Similar changes in coinage elsewhere in the world could add significantly to zinc demand.

In world automotive production, zinc may increasingly be used to coat exterior sheet metal surfaces as well as interior surfaces due to improvements in the ability of zinc coatings to accept high quality paint finishes. A survey of the four major U.S. auto makers found that zinc consumption in sheet metal materials had increased 2% per vehicle for 1983 models. This new demand may begin to offset reductions in zinc die castings used in automobiles which declined in total weight from about 45 pounds per car to 23 pounds per car between 1975 and 1982.

In general, demand for zinc has grown faster in developing industrialized countries such as Brazil, Mexico and South East Asian countries than in the older industrial nations. In 1982 increased export of zinc concentrates and record export levels of refined metal to socialist countries were recorded. Much of this tonnage was shipped to China which may represent a growing zinc consumer.

The U.S. Bureau of Mines estimates a probable annual world growth rate in zinc consumption through the year 2000 of 2.5%. This compares with an annual growth rate of 4.8% between 1960-73. Using the 1981 free world zinc consumption of 4.3 million tons as a base level for demand (this assumes the recessionary 1982 consumption level is not representative of the present base level) a growth rate of 2.5% would indicate an increase in world consumption to 5.1 million tons in 1988. Using the three year mine production high of 4.8 million tons in 1982 as representing present annual capacity, a need for an additional 0.3 million tons of production will be required in 1988. The new production from Red Dog will produce 0.2 million tons of zinc metal in 1988. In 1993 when Red Dog's zinc metal production has increased to 0.3 million tons, the free world demand forecast would be 5.8 million tons or 1.0 million tons greater than 1982 mine production levels. Several sources also suggest the socialist bloc will become a significant importer of zinc, supporting the demand growth forecast.

An important factor in forecasting the need for new mine's is the possibility of new supply coming from recycling or secondary sources. Unlike lead, in which a significant component of supply comes from recycled batteries and other products, the largest uses of zinc are sacrificial. Zinc used for coatings is dissipated and therefore recycle will never become a major supply source.

Marketing Considerations

At the initial production levels, the Red Dog Mine will produce 350,000 tons of zinc concentrate. Assuming a concentrate grade of about 59%, this represents 207,000 tons of contained metal. Cominco has indicated its intention to sell concentrates to Japanese and European smelters and to its own smelter at Trail, B.C. In 1982 Trail produced 226,000 tons of zinc, representing the zinc concentrate output of both the Sullivan and Pine Point Mines. The total zinc capacity at Trail is 300,000 tons so that the smelter has an additional unused capacity of 75,000 tons, representing about a third of Red Dog's initial production.

The reserves at the Sullivan Mine indicate it will continue to produce for about 20 years if no additional reserves are discovered, while reserves at Pine Point indicate the mine may be exhausted in about 10 years. In 1993 Red Dog is scheduled to increase its zinc production to 585,000 tons of concentrate or about 345,000 tons of contained zinc which will exceed the total present capacity of Trail, B.C. However, the new zinc smelter at Trail was designed with space available for installing an additional zinc refining capacity of 150,000 tons. Cominco could exercise the option to expand the zinc smelter prior to Red Dog expansion (or earlier) and thereby have the capability to smelt all Sullivan and Pine Point concentrates (at their present production rate), as well as over 60% of Red Dog's expanded production. When the Pine Point Mine is exhausted the expanded Trail zinc refinery could handle 100% of Red Dog's maximum production, plus all production from the Sullivan Mine.

Japanese zinc refineries at present have a a combined capacity of in excess of 800 thousand tons refined metal. In recent years Japanese refineries have had problems securing adequate supplies of zinc concentrates and may view Red Dog as a desirable long-term, stable source. European smelters, not counting communist countries, have a combined capacity of about 2.0 million tons. At present there is an over capacity

of zinc smelters in Europe. Red Dog will be attractive to both Japanese and European refineries as a long term zinc concentrate source (more than 40 years) and, with a competitive climate among smelters to secure adequate concentrate supplies, Red Dog should receive favorable rates and terms from smelters.

A final marketing consideration is the ownership of the zinc mining and processing industry. At present the zinc industry, compared with the copper industry, is being operated more in line with free enterprise concepts. Better balance of zinc metal stocks with demand will result in stronger and more predictable long term prices. This contrasts with metal industries in which gross overproduction for the sake of generating foreign exchange results in depressed or even below cost metal prices - very much a factor in the copper industry for example.

3. Lead

Uses and Substitutes

Lead ranks as the fifth most widely used metal behind iron, aluminum, copper and zinc. At present the two major uses of lead are for lead-acid batteries and as an anti-knock gasoline additive. Other uses include construction materials, ammunition, solders, protective coatings and paints, radiation shielding and electrical cable sheathing.

Over 50% of present lead consumption is used in lead-acid batteries, primarily vehicle starting-lighting-ignition (SLI) batteries. In transportation applications, weight is a primary consideration, and as average car size and "cranking" requirements have diminished, so has the average lead content from about 30 pounds per car in 1977 to 20 pounds per car in 1983. Severe winters shorten battery life and increase demand for replacement batteries.

Research to find alternate combinations of metals and non-metals for batteries has been extensive, and while most substitutes can match or exceed the performance of the lead-acid battery, problems include cost of components, economics of material recycling, toxicity, and operating limitations and difficulties. The U.S. Bureau of Mines indicates no large scale substitution for lead-acid batteries is forthcoming.

Domestically the use of lead additives in gasoline is gradually declining due to environmental restrictions on lead emissions. Consumption of lead in the U.S. for gasoline additives has dropped by 50% since the early 1970's. However, while the use of lead additives has declined in the U.S. and future use may be strictly limited to certain types of engines, consumption in developing countries may continue to increase.

Lead coatings are used on materials exposed to corrosive agents and lead lined containers and tanks are used for the storage of corrosive chemicals and hazardous wastes. Lead coatings are also used as shields against radiation. While demand for these applications may increase, the use of lead in paints and other chemical applications where lead is likely to enter the environment has declined in recent years.

The large scale use of massive, stationery, lead-acid storage batteries for leveling power loads in electrical generating plants may represent a significant future use.

Supply and Demand

With only a few exceptions, primary lead is produced as a by- or co-product of zinc, copper and silver mining. Recovery of lead from batteries and other sources results in a large component of recycled metal. In 1982 free-world mine production totaled 2.6 million tons.

Refined lead production, including recycled lead, totaled 3.9 million tons while lead consumption totaled 3.8 million tons.

The forecast demand for lead varies. The U.S. Bureau of Mines forecasts a probable average annual world growth rate of 2.8%, which is larger than the agency's forecast of 2.5% growth for zinc. Other sources indicate the lead growth rate will be significantly less, possibly approaching 1.0%.

At present, 75% of lead use is in transportation. If the use of lead in gasoline declines on a world wide basis, the importance of lead-acid batteries as a percentage of total lead consumption will increase. Battery demand for vehicles is a function of the total number of vehicles in use as replacement batteries constitute some 80% of sales. Any increased long term demand for lead-acid batteries will ultimately depend upon increasing automobile use in developing countries.

Marketing Considerations

Markets for lead concentrates from Red Dog would be found either at Cominco's Trail, B.C. smelter, at the Cominco Mitsubishi Lead Smelter in Japan or at other Japanese lead smelters. Lead concentrate production from Red Dog could replace Pine Point concentrates at the Cominco Mitsubishi smelter when the mine is exhausted. Present Trail lead capacity is 150,000 tons refined metal. Actual utilized capacity in 1982 was 126,000 tons. Plans to modernize and expand the lead smelter, as was done with the zinc refinery, could assure an in-house market for lead concentrates.

At present with Pine Point lead concentrates being shipped to Japan, concentrates from Cominco's Sullivan Mine represent about 100,000 tons of the Trail's refined capacity, leaving 50,000 tons available. At Red Dog's initial production rate, mine out put in terms of refined lead would just match this capacity.

4. Silver

Uses and Substitutes

The largest use of silver is in the production of photographic materials. Despite intensive research, no substitutes have been found to replace light sensitive silver-halides used in photographic films. Other industrial uses of silver include electrical switches, silver solders and batteries. Medicinal uses include antiseptics for certain types of infections, and as an amalgam in dental fillings. Silver coinage, jewelry, tableware, and investment bars are also major uses.

No viable substitute has been found for silver in photographic uses. Gold or platinum-group metals may be substituted for silver in electrical applications but only where the more oxidation resistant qualities of these precious metals overcomes the cost disparity. Copper, nickel, zinc and aluminum in various combinations have replaced silver coinage in many countries.

Supply and Demand

About two-thirds of the world's future supply of silver is contained in copper, lead and zinc deposits. Therefore the supply of silver will be determined more by the production of these base metals than by actual silver demand. The long term growth of silver demand, as with zinc and lead, is seen to be tied to the prosperity of developing nations. Increasing industrial and photographic demands, attendant upon an increased standard of living in these countries, will contribute to a strong demand growth.

The U.S. Bureau of Mines forecasts a probable annual world growth rate of 2.5% through 2000. Complicating the supply, demand, and price structure are the large quantities of silver held by investors. Silver holdings of private investors are large compared with annual

industrial consumption and these investors can respond to price fluctuations as either a source of supply or a source of demand. Also, despite the large industrial base, the silver price, to a certain extent, is influenced by gold prices. Rarely do the prices of the two metals move in opposite directions, a factor which underlines price linkage.

5. Barite

Uses

Over 90% of the world barite demand, and over 98% of the U.S. barite demand, is for use in oil and gas well drilling fluids. Barite is finely ground and slurried with water and other agents to produce a heavy fluid which is circulated in the drill hole as it is being drilled. In 1982 an average of 47 tons were used per well.

Supply and Demand

Barite has a low per unit cost and high bulk. The reported average value of primary barite in the United States was about $40 per ton in 1982. The delivered price of drilling grade barite to Alaska's North Slope drill rigs is said to be close to $600 per ton, however this cost incorporates a wide range of services carried out at the drill site. If barite must be shipped a significant distance, the transportation costs can easily exceed the cost of the barite itself. Therefore a relatively local market for barite must be available before the commodity is saleable.

Potential markets for Red Dog barite are the North Slope oil fields, and possibly the Norton Sound and Chukchi Sea fields if oil is discovered at either of these locations. Currently restrictive trade practices would inhibit the sale of Red Dog barite to Canadian Arctic oil and gas operations in the Beaufort Sea. At present, Cominco is examining possible processes to recover barite concentrates from the zinc/lead

ore. Also, high grade zones of barite are found apart from the metal rich zones of the ore deposit and barite could be selectively mined from these zones. One possible problem with barite from either of these sources is the presence of heavy metal or silica contamination which could result in the barite being unacceptable as a drill mud. The financial analyses of the project have not included any revenues from the possible sale of barite.

6. Zinc, Lead and Silver Price Forecast

The following price projections which were estimated by the Office of Mineral Development are for a 20 year period and represent the average commodity price in 1983 U.S. dollars.

RED DOG METAL PRICES

	Zinc (¢/lb.)	Lead (¢/lb.)	Silver ($ /tr.oz.)
Base Level	55	30	10
Probable	60	35	18
High	65	40	25

The demand for all three of these metals is dependent upon the growth of the world economy. The North American and European economies may be described as maturing and major increases in the consumption of base metals is in these economies unlikely. However, expansion and growth of economies in the developing countries will increase world demand for these metals. The present prices for zinc and lead (49¢/lb. and 25¢/lb. respectively) are below what could be considered base level prices due to the low recessionary demand and present high levels of metal stocks. As the world economy recovers, base level prices will be reached.

Discussion:

Zinc

Zinc is the most important commodity to the Red Dog Mine and will contribute up to 4 times the revenue generated by lead and silver combined.

World demand for zinc will grow commensurate with the growth of the world economy and the increasing industrialization of developing nations. The U. S. Bureau of Mines forecasts a probable growth of world demand at 2.5% annually. The increase in world demand coupled with the following factors indicates a stable market characterized by real price increases is likely for primary zinc producers (mines) over the long term.

1) Zinc is the fourth most widely used industrial metal surpassed only by iron, aluminum and copper.

2) The largest use of zinc (galvanizing) results in its dissipation. Therefore recycling and secondary production will always remain a less important supply factor than is the case for other metals.

3) There are no environmental problems associated with the use of zinc.

4) While known world zinc reserves, including Red Dog, appear adequate to satisfy medium and long term demand, the market is not over-shadowed by enormous undeveloped deposits as is the case with copper.

5) Reserves at several major zinc mines will be exhausted over the medium term, and as most existing zinc mines are underground producers, actual costs will increase as mining depths increase .

6) Unlike the copper industry, the Free World's primary zinc production is largely in private sector hands, eliminating the danger that government operated mines, for the sake of generating foreign exchange, will overproduce and undermine metal prices.

7) It is possible that the socialist countries and China in particular could become significant zinc importers.

8) In addition to increased demand due to an expanding world economy, the potential exists for further increases in zinc consumption as the use of protective zinc coatings becomes more widespread, substitution of zinc for silver or copper in coinage becomes common, and new applications, such as thermoforming zinc alloys, are developed.

A base level zinc price is forecast at 55¢ per pound with probable and high levels forecast at 60¢ and 65¢ respectively.

Lead

Lead is the fifth most widely used industrial metal behind zinc. The two major uses are in automotive batteries and as a gasoline additive.

Consumption as a gasoline additive has declined in North America and Europe due to lead emission restrictions. However demand for lead additives in developing nations has not decreased at present and it is not clear whether or when such restrictions will begin to be imposed.

The trend towards smaller, lighter automobiles, and a concurrent reduction in needed "cranking" power has reduced the amount of lead in the average automobile battery from 30 pounds in the 1970's to about 20 pounds at present. Eighty percent of all automotive batteries sold are for replacement, and therefore lead battery demand is more a function of total number of vehicles in use than annual new car production.

Long term demand for lead, as with zinc, will depend upon the world economy and the economic growth of developing nations. The U.S. Bureau of Mines estimates a probable world growth of 2.8%. However other sources feel it may be as low as 1%.

The present price of 25¢ per pound is unrealistically low, possibly being lower than the cost of even secondary production. This is the result of record inventories of lead stocks. A realistic minimum base level is the price at which secondary production (recycled lead) is viable. That price is felt to be 30¢ per pound. A 35¢ price is felt to be a probable 20 year price average, with a 40¢ per pound high average.

Silver

Silver is an industrial metal used in photographic film and processing and in electronic and electrical components and solders. It is also an investment precious metal and as a "poor man's" gold, its price is influenced by gold prices. As an industrial metal there is little likelihood of significant substitution and with an expanding world economy and rising standard of living, consumption of industrial silver will increase. The U. S. Bureau of Mines estimates an annual growth of 2.5%.

A base price level of $10 is realistic, with a probable average 20 year price of $18, and a high of $25.

Summary

In general these price forecasts are conservative, in that they are predicated on a moderate growth in the world's economy. Stability of world energy prices, resolution of debt crises and general political stability could initiate a period of prosperity for developing nations and create a much higher growth rate for the demand of these metals.

D. Zinc Resources of Alaska and Northwestern Canada

Zinc mineralization is found almost ubiquitously in association with lead and silver. Throughout extensive areas of Alaska and Northwest Canada zinc-lead-silver mineralization occurs in two broad geological associations

i) as disseminated and massive sulfide in shales and other fine grained sediments;
ii) as massive sulfide in volcanic sequences which accumulated in submarine depositional environments.

1. Alaska

Red Dog, though unique in its combined attributes of size and high grade, is but one of a large number of deposits which contain zinc as the main metal or more usually as a significant co-product. Because of the extensive distribution of favorable host rocks, future exploration is certain to discover new major deposits.

Red Dog with its presently defined reserve of 85 million tons grading 22.1% combined zinc-lead and 2.4 oz. silver per ton is the largest and best known deposit of its type in an arcuate trend which could become known as the Noatak Zinc Belt. Within this belt, which extends for several tens of miles, at least 15 significant prospects are known. There is a high probability that this region could become one of the world's major supply sources of zinc, with lead and silver as major co-products.

The Lik and Su prospects appear to be segments of a contiguous deposit located some ten miles from Red Dog. GCO Minerals, owners of Lik, has released a reserve estimate of 25 million tons of 8.8% zinc 3.0% lead and 1.2 oz/ton of silver. This reserve, which is based upon 75 ore sections from 103 diamond drill holes, appears to be well defined.

The orebody itself is open along strike to the north, and southwards it extends into a Cominco owned claim block where it forms the Su deposit for which no tonnage or grade figures have been released. A developed infrastructure for Red Dog should, in time, favorably influence the development schedule for Lik and possibly other reserves in the area. Although GCO Minerals has proposed a northerly access road to the coast as a component of a possible development scenario for Lik, no firm development commitments have been made.

The regional significance of metal associations within a certain rock assemblage is emphasized by the fact that some 90 miles from the heart of the Noatak region, the Drenchwater deposit occurs in similar sedimentary units. This discovery has not been intensively prospected as it was included within the National Petroleum Reserve - Alaska (NPRA) and is off limits for mineral entry. Sampling of surface exposures returned grades of 17.4% zinc 3.0% lead and 3.3 oz/ton silver - very similar tenors to those of Red Dog. However no reserve tonnage has been estimated. Still other impressive surface showings of mineralization have been included within the Noatak National Monument and are off limits to further exploration.

Zinc and lead are significant potential co-products of the Ambler Schist Belt which extends over a trend of more than 100 miles across the south flank of the Brooks Range, north of the broad Kobuk River Valley. Exploration over a period of more than 20 years has identified a large tonnage of polymetallic ore contained in at least four major prospects and the potential for significantly more ore exists in many known but not intensively prospected occurrences. Given the large established reserve base, there is little to encourage further high-cost exploration until some progress is made towards solving access and transportation problems. Although copper appears to be the major metal found in this belt, zinc and lead grades are significant and concentrates containing both metals would be produced from all potential

operations in the area with the possible exception of the Bornite deposit which is geologically different.

Substantial production of zinc and lead concentrates from the Ambler District in the future (beyond 1995) would fall far short of the projected production of concentrates from Red Dog.

Another newly discovered base metal trend in Alaska extends across the north flank of the Alaska Range from the Bonnifield area, south of Fairbanks to Tok-Big Delta region in East Central Alaska. Exploration work has been continuous since 1978 to evaluate the potential of the extensive belt within which dozens of individual massive sulfide occurrences have been located. The company most actively involved in evaluating this potentially important belt is Resource Associates of Alaska (RAA), a company within the NERCO Group. Potential tonnage and grade figures supplied by RAA are cited below.

Name		Reserve*	%Cu	%Zn	%Pb	Oz/Ag	Oz/Au	Remarks
Delta System	1) Valley	1.0	.26	3.45	.46	0.7	0.018	Offset segments of one massive sulfide body with overall potential of +40 MT
	2) DW	3.65	.93	1.74	1.15	0.72	0.012	
	3) Middle	5.2	.46	3.34	1.36	1.49	0.038	
	4) LP	1.2	.40	3.69	1.54	1.80	0.061	
DD South		1.60	1.09	5.66	2.27	2.03	0.061	Expectations are to double the reserve base
Dry Creek		1.2 MT	No specific grade figures released					Tenors believed to be significantly better than Delta

* Reserves in millions of tons

In Southeastern Alaska numerous mineral deposits containing zinc are known. However, with the exception of Greens Creek, no development plans for properties capable of producing zinc concentrates have been announced.

Greens Creek is expected to be the first major new metal mine into production in Alaska for many years, and it will produce silver, gold, zinc, lead and copper from an underground mining operation on Admiralty Island. The deposit has not been fully defined by exploration work to date and substantial additions to the reserve base are assured in the future. The latest published ore reserve cites 4 million tons grading 13 oz/ton silver, 0.1 oz/ton gold, 7.5% zinc, 2.5% lead and 0.4% copper. Once in production at a planned milling rate of +800 tons per day, the mine will ship approximately 30,000 tons of lead concentrate and 48,000 tons of zinc concentrate annually. Though significant, these volumes are small compared with the planned production from Red Dog.

2. Northwestern Canada (Yukon, Northern British Columbia and Western NWT)

Excluded from consideration here are the producing properties such as Pine Point and Sullivan in which Cominco has a major interest.

The Yukon has two mining properties which have produced and shipped zinc and lead concentrates. United Keno Hill, which first and foremost is a silver mine, maintains a relatively small proven reserve base and is unlikely, given the geologic characteristics of the deposit, to greatly expand concentrate production. Cyprus Anvil, with its operations centered near the town of Faro, is a major producer of zinc and lead concentrates from a large open pit operation. Future plans may involve underground mining on at least one of the orebodies in Anvil Range.

The Selwyn Basin is rimmed by zinc-lead prospects which occur in rocks equivalent in age to those which host the mineralization in the Anvil Range. Undeveloped reserves in the Anvil District plus other major known deposits in the Selwyn Basin will likely form the next generation of major zinc-lead base metal properties which may be developed in the Yukon Territory between now and the year 2000. The following table lists the announced reserves and grades of major properties in Northwest Canada.

An eastward extension of the Alaska Railroad into the Yukon Territory could "capture" the large volume of mineral traffic which future mines, especially in the Selwyn Basin, are likely to generate. Concentrates would be transported through Alaska to a major bulk materials handling port situated in Cook Inlet. There would be more than enough feed from Interior Alaska and Canadian mines to justify the development of smelter-refinery facilities at tidewater utilizing clean state-of-the-art technology. Two advantages Alaska has which could make this industrial development possible are 1) the abundance of energy in Southcentral Alaska, available in the form of gas, coal, and if the Susitna Dams are built, hydroelectric power; and 2) tidewater access to major Pacific Rim markets. As the value of refined metal products is much greater than the value of the equivalent metal content of ore concentrates, the economic benefits of in-state processing of Canadian and Alaskan minerals far exceeds the benefits to be derived from exporting these resources in raw form.

E. Potential Alaskan Mineral Projects Requiring Public Sector Infrastructure

Given the extraordinary potential within Alaska for the discovery of major new mineral deposits, additional calls for infrastructure support will be made in the future. However some major discoveries will be made as a consequence of the intensification of exploration efforts along arterial transportation corridors constructed to serve the new generation of mining activity between now and 2000. This is an intangible economic benefit of transportation development. However these benefits are not considered in a financial analysis when the initial end user are required to guarantee total capital debt retirement. Without an appreciation of this factor, development of transportation to serve remote areas, such as the Ambler District, will be nearly impossible and public policy will continue to focus on the ability of the initial end-user to totally repay any public sector financing.

Mining projects in Alaska can be divided into two categories in relation to their transportation infrastructure needs.

1) Stand alone projects - Those projects which involve high value, low bulk commodities such as precious metals and those which are located close to a deep water port site which can be developed for exclusive use of the proposed mining operation as are Quartz Hill and Greens Creek.

2) Contingent projects - These are projects which like Red Dog will require significant transportation development.

The following tabulation lists known projects and estimates transportation infrastructure costs and the possible timing of projects.

Lik, Su and Other Deposits. The Lik deposit is located approximately 10 miles from Red Dog and in the same mineralized terrain. The Lik claims are held by GCO Minerals in association with Tenneco. Lik has been intensively prospected and a diamond drill program has identified a reserve of 25 million tons grading approximately 12% combined lead and zinc with 1.3 oz/ton silver. The ore grade is about half of the Red Dog average and mining conditions are such that a much greater ratio of waste stripping to ore would characterize the operation at Lik. These factors notwithstanding, Lik appears to be a very good deposit when compared, in terms of tonnage and grade, with potential lead-zinc properties in northwestern Canada and elsewhere.

The announced reserve for the Lik deposit does not take into account the open-ended character of the orebody or the unannounced reserves which have been proven by diamond drilling on the extension of the Lik orebody on claims held by Cominco. In the Cominco claim block the deposit is known as the Su and a substantial reserve is known to be present.

A number of other zinc occurrences have been staked in the region and it may be reasonable to refer to this area as the "Noatak Zinc Belt." Major additional discoveries will be made as the geology and the ore controls become better understood.

Greens Creek. The Greens Creek project is a "stand alone" mining development on Admiralty Island. No public sector involvement in transportation infrastructure components is foreseen. Impacts on public sector spending which relate to the workforce and their families being housed in Juneau focus upon community service needs - schooling, police protection, emergency services, etc. A power intertie would be a highly desirable component of the project if this satisfied basic beneficial economic parameters. The anticipated workforce to be directly employed at Green Creek is 315.

Quartz Hill. Similarly this is a "stand alone" project which will proceed largely independent of public sector involvement in infrastructure. The 850 employees and their families will be permanently housed in Ketchikan where community service costs will be incurred in the public sector. A power intertie to Quartz Hill is under consideration as part of a Southern S.E. Alaska integrated electric distribution grid. A formula for capital and operational costs of such a system could provide a total user benefit throughout the region.

Bering River Coal. This is a project aimed at developing a large, high quality coal resource for export to Korea. Three years of exploration work have been completed and the feasibility and cost parameters associated with overland transportation and port site alternatives are currently under examination. The project is a joint venture of the Bering Development Company involving Chugach Natives Incorporated, a Native regional corporation, and KADCO, a consortium of Korean companies including the large Hyundai Corporation.

A possible scenario may involve the of an underground mining operation capable of producing 2 million tons per year; an overland transportation system which would link the mine development by service road to Cordova and also provide for a delivery system, probably an overhead tramway, to the coast near Katalla; and the construction of a port-loading terminal possibly on Kanak Island. Transportation infrastructure costs associated with the development of an access-service road, overhead coal transportation tram, and a port loading facility capable of handling 3 million tons per year could approximate $180 million.

The Bering River Project could create a permanent employment base of more than 500 Cordova based jobs, and annual revenues from coal shipments on a 2 million tons per annum basis may approximate $120 million.

An interesting feature of the project is the captive market represented by the involved Korean business participation at all stages of the project.

Alaska Asbestos Project. This is a joint venture project involving the Doyon Native Corporation and GCO Minerals. Progress to bring the project on line will depend largely upon market interest and the extent to which any mining and milling operation will be able to satisfy stringent regulations.

Transportation infrastructure needs center on the construction of a 40 mile haul road from the mine site to join the Taylor Highway near Chicken, Alaska. From Chicken to its junction with the Alaska Highway some 60 miles of major upgrade of the Taylor Highway would be needed. Total cost is estimated to be $100 million. At a production rate of 150,000 tons per year of processed fiber grades, the mining project will generate approximately 500 permanent year round jobs and revenues of $90 million a year.

An eastwards extension of the Alaska Railroad could favorably influence the economics of this project.

Beluga Coal Terminal. Development of coal resources located on State leases and Cook Inlet Regional Corporation (CIRI) land within the Beluga Coalfield will require the construction of a large coal export loading facility near Granite Point on Cook Inlet. Efforts to develop the leases in the near term hinge upon market interest from the Pacific Rim, especially by Japan and Korea. Recent gluts in international markets of oil, natural gas and coal have detracted from the short term development potential for this enormous resource. Diamond Alaska and Placer Amax could supply major Pacific Rim markets with the cheapest delivered energy source in the future. Advantages this resource has over other coal suppliers are the favorable location of coalfield close to tidewater and shorter ocean freight distance.

The major leaseholders at Beluga have not approached the State for infrastructure assistance and in fact, when Beluga coal development potential was brighter, the major leaseholders expressed a willingness to construct and operate a port facility without any assistance. However, as Granite Point may be the only good port site on the west side of Cook Inlet, any port development should require provision for future expansion to handle bulk resources such as coal from Yentna and Nenana and metal concentrates and industrial minerals from the Interior.

A world scale deep water port facility in Cook Inlet would also act as a catalyst for the location of other facilities which may include in-state metals smelting and refining and agricultural product export handling capability.

A major mineral export facility for Beluga Coal having an initial capacity of 15 million tons per year would cost an estimated $250 million, exclusive of any additional rail spurs which could link to the existing railroad or access the Mobil leases in the Yentna area. Full development of the Beluga coal properties could create as many as 1,000 year round jobs.

Yentna Spur Line A 50 mile long rail spur would be needed to deliver coal from the Yentna leases of Mobil into the feeder system and on to a Beluga coal terminal. The estimated cost of this spur could amount to $75-100 million.

Matanuska Spur Line. Future production of high quality coal from the Matanuska Coalfield would require rehabilitation of the former rail bed extending beyond Palmer to Sutton. The right-of-way is still owned by the Alaska Railroad. Cost of rehabilitation and engineering improvements to the line may total $25 million based upon $750,000 per mile for ballast, ties and track.

Depending upon the scale of operations a coal mine in the Matanuska field could support as many as 250 year round jobs.

Interior Rail Extension to Canadian Border. Serious justification for this long promoted rail extension may hinge upon potential mineral traffic. The line could capture bulk mineral traffic from a variety of potential mine properties, including Alaska Asbestos (150,000 tpy), Tok-Big Delta massive sulfide base metal district (125,000 tpy), Jarvis Creek coal (up to 500,000 tpy) and perhaps most importantly the next generation of major base metal mines to be developed in Yukon's Selwyn Basin which could have a potential for 1 million tpy. This latter opportunity would make good economic sense if a metal smelting and refining complex was built at Cook Inlet, a logical export gateway to expanding Pacific Rim markets. Agricultural resources from Interior Alaska would also be served by such a route.

The total aggregate of possible annual mineral tonnage could exceed 2 million tons well above the threshold required to justify a rail extension. Capital cost of extending the railroad eastward to the Canadian border would be high. The least tangible cost of railroad construction relates to the primary grading (cuttings, embankments, bridges, etc. across difficult terrains). Such costs could lie in the $1 to $2 million per mile range to which the known cost of ballasting, ties and rail amounting to $750,000 per mile needs to be added. A ballpark figure for total rail construction cost would lie somewhere between $1.75 and $2.75 million per mile. The proposed rail extension to the Canadian border, which is approximately 300 miles, could cost anywhere between $600 and $900 million.

Ambler Mining District. For more than two decades the issue of how best to access the mineral wealth of the Kobuk Valley, represented by the Bornite deposit and those of the Ambler Schist Belt characterized by Arctic, Smucker and Sun-Picnic Creek, has challenged the resolve and ingenuity of Alaskans anxious to see the development of

this mineral rich province. The issue was successively examined by the Federal Field Committee in its 1968 report, "Transportation and Economic Development in Alaska," the North Commission in the "Alaska Corridor Study (1970-1972)" and the Corps of Engineers in a study commissioned through the University of Alaska titled, "Northwest Alaska Port Study." More recently the issue has been reexamined by the DOT/PF commissioned "Western Arctic Alaska Transportation Study-1982" (WAATS), and a proprietary 1983 report for Bear Creek Mining Company by Parker Associates, Inc. titled "An Analysis of the Transportation of Ore Concentrates from the Ambler Mining District to Ports in North America and Japan."

The potential aggregate concentrate production from Arctic, Smucker, Sun and Bornite (980,000 tons per year according to an Alaska Miners Association study 1982) exceeds the threshold level of 400,000 tons per year which would favor rail over road haulage. The combined reserve base in known deposits exceeds 100 million tons; a figure which possibly represents a fraction of the gross potential of this mineral province. Future additions to the proven reserve of known deposits and new discoveries will add greatly to the resource value of the District. However until the deadlock over access is resolved and tangible progress made towards opening up the region, there is little or no incentive to add to the proven reserve base.

Besides the question of who would pay for a transportation system serving the Ambler District, there are other concerns which focus on:

1) the most cost effective and long term utilitarian system;
2) the best interests of the regional peoples whose traditions, values and customs differ from those of metropolitan Alaskans.

A recent report prepared by Parker Associates for Bear Creek Mining identifies a railroad from Ambler to a port site near Cape

Krusenstern in Western Alaska as the best choice for a projected 1 million tons per year load. This route seems to satisfy both concerns expressed above. In the WAATS study three transportation modes rail, haulroad and slurry pipeline were compared for four basic routes:

1) Interior Alaska Railbelt link
2) Cape Krusenstern
3) Cape Nome
4) Golovnin Bay

Using cost parameters generated by the WAATS report, a haul road system could cost from a low of $214 million (link to the Dalton Highway at Prospect Creek) to $502 million for a road and related facilities at Golovnin Bay. Projected freight volumes and the preferences of area residents appear to rule out the road in favor of a rail link. Rail costs were estimated by WAATS to be in the range $1037 million for the Krusenstern route up to $1896 million for the Cape Nome scenario; both cases include port construction costs. The Nenana route linking to the existing Railbelt would cost an estimated $1117 million. WAATS revealed that for a traffic volume in excess of 1.5 million tons per year, certainly achievable within a short time of the system going into operation, the Railbelt link through Nenana would have a cost per ton advantage over the other alternatives.

In the Parker Associates 1983 study for Bear Creek, a range of four alternative road and rail routes were. Three western routes for both road and rail provided links to Cape Krusenstern, Cape Darby and Cape Nome. Two other routes were considered; a road to Fairbanks and a railroad to Nenana.

Parker considered two scenarios - one of 400,000 tons per year, the other 1,000,000 tons per year in calculating total delivered costs of concentrates to Vancouver, B.C. Both appear to fall short of the true potential freight tonnage which could move over a regional system.

Major departures between the WAATS and Parker Associates findings focus on capital costs of rail construction. These differences are highlighted in the following tabulation.

		CAPITAL ESTIMATES ($ Millions) WAATS	PARKER
ROAD	Cape Krusenstern	398.7	261.4
	Cape Darby		360.0
	Golovnin Bay	502.3	
	Cape Nome	479.0	365.4
	Interior (Prospect C Fbks)	214.0	227.2
RAIL	Cape Krusenstern	1037.3	368.0
	Cape Darby		518.0
	Golovnin Bay	1589.1	
	Cape Nome	1896.1	653.5
	Interior (Nenana)	1117.0	668.8

Major capital cost disparities are most evident in comparing the capital estimates of rail construction. The lower costs cited by Parker are based on using a single construction heading over a longer time period as opposed to using multiple construction headings of several years (essentially reverting to construction practices used in the heyday of railroad development). Under the Parker approach a rail link to C. Krusenstern or Nenana would take 5 years to complete from mobilization. Other major differences relate to contingency and engineering overheads which total 40% in the WAATS and and 15% in the Parker analysis. On a per mile basis a comparison of the C. Krusenstern and Nenana rail alternatives is as follows:

	WAATS/Mile	Parker/Mile	Parker as a Rate % of WAATS
Ambler-C. Krusenstern	$3,427 M	$1,640 M	48%
Ambler-Nenana	$3,243 M	$1,715 M	53%

Some costs such as major and minor bridging estimates are not significantly different.

Using accelerated construction schedules and considering current cost figures estimated by the ARR, a realistic capital construction cost per mile appears to lie somewhere between the two extremes represented by WAATS and PARKER. The ARR states that once basic grading costs (which are the real intangibles) have been met, the current cost of laying ballast, ties and rail is $750,000 per mile.

The basic findings of the Parker Associates study which focuses specifically on Ambler are as follows:

1) Cape Krusenstern is cheapest route irrespective of mode up to 1 million tons per year.

2) Shipment to Southcentral Alaska through the existing Railbelt is the most expensive irrespective of mode, tonnage or capital amortization schedule (but does not consider a total system volume greater than 1 million tons per year).

3) As tonnages increase so do advantages of a railroad to Cape Nome or Cape Darby.

4) Capital amortization costs for a 1 million tons per year freight volume exceed working costs by more than 100%.

5) Concentrate storage costs, imposed by limited shipping windows for three of the options, do not significantly affect rankings between the four port site alternatives.

Very little consideration is given to the following:

i) the benefits the operation of a year round port site at Cook Inlet or Seward could provide.

ii) the benefits of operating one integrated rail system rather than two unconnected rail lines.

iii) the catalytic effect an integrated transportation system could have in stimulating the creation of a value-added industry along the Railbelt or at Cook Inlet.

The major recommendation contained in the Parker Associates study urges the creation of a Transportation Authority for Northwest Alaska with the prime purposes of:

1) acquiring a right-of-way to the Ambler District and

2) arranging financing for a rail link.

In making this recommendation it is acknowledged that eminent domain has not been tested for public acquisition of reconveyed native lands.

Western NPRA Coal. This is a really long term scenario which if it ever materializes might commence at some time well into the next century. Enormous reserves of good quality coal on the North Slope may eventually be mined on a large scale to help satisfy future domestic and foreign energy needs. Practicalities may require on site processing to liquid phase products which would be moved by pipeline, however bulk transportation of coal by rail may also be viable.

Before development of NPRA coal deposits commences, several major components of a transportation system could already be in place in the form of

1) a western arctic railway to Ambler from C. Krusenstern

or

a completed rail extension from Nenana to the Ambler District;

2) a world scale minerals export facility at Cook Inlet for year round shipments;

3) a seasonal port facility in the Western Arctic for summer shipment.

If these components were already in place, the capital cost of completing an integrated rail system to haul large volumes of coal might not be too intimidating. An estimate in 1983 dollars would be $1.5 billion for completion of the additional 500 to 625 miles of track.

Economic benefits which might flow from a rail link between the existing Railbelt and Northwest Alaska would include:

i) year round servicing of the Ambler Mining District

ii) year round servicing of the Noatak Zinc Belt

iii) year round servicing of coalfields on the NPRA and adjacent lands.

iv) overland servicing for oil and gas related activities

v) intangible benefits stemming from major new mineral discoveries proximal to the arterial transportation route.

Nome Regional Port. Future expansion of the Nome port beyond the planned initial phase may be justified by hardrock mining production from the Seward Peninsula and the servicing needs of offshore oil and gas activity in Norton Sound. Two sites which appear to offer the

best potential for mineral development are the Lost River and Kougarok Mountain tin deposits. At Lost River development plans for a major mining project which received considerable prominence in the early 1970's were shelved and the project status became mired in litigation. A large tonnage of ore containing tin, tungsten, fluorite and beryllium has been outlined by drilling and underground development on the property. The Lost River deposit represents the nation's largest known proven tin reserves and therefore assumes a significant strategic importance. Kougarok Mountain, some 40 miles to the east, is a more recent discovery which reportedly has major potential for tin and related mineralization.

Besides port expansion, an estimated 80 miles of new road construction would be needed to tie these properties into the Nome port through an extension of the existing Nome-Teller Road via Brevig Mission. DOT/PF estimated the cost of constructing a road to Lost River and Tin City at $30.9 million, however this figure would increase substantially in order to access Kougarok.

DOT/PF in an analysis of other projects which may need or request infrastructure assistance from the State drew attention to several potential mine sites in addition to those already described. Brief descriptions of these follow.

Dry Creek. This is a deposit undergoing active exploration of similar type to the Greens Creek orebody in S.E. Alaska. It is a polymetallic deposit containing precious metals and zinc, lead and copper. No tonnage or actual grade estimates have been announced. A possible development scenario would include plans to widen 21 miles of existing road, and build an extension for approximately 15 miles. The current access point of is through Ferry which is on the Alaska Railroad between Nenana and Healy.

Twin Mountain. Houston Oil and Minerals has for several years conducted exploration on a tungsten-rich district northeast of Fairbanks. Access to the area would require construction of a 62 mile extension of the Chena Hot Springs Road. No development schedule has been announced by the company. The proposed road extension would serve a broad spectrum of need including access to a potentially valuable mineral deposit, recreation and tourism as well as improve access for placer mining.

Bonanza Creek. This is another tungsten property on land owned by Doyon Ltd. No details relating to grade or tonnage have been released. Construction of a 24 mile gravel road would provide adequate access to the property.

Lignite Creek-Kantishna. This is another proposed road which would serve multiple user needs while providing access into a known mineral-rich district. Of prime importance is the access that would be provided to antimony deposits in Kantishna District. This district is also important for precious metals. The proposed access is from a point on the Parks Highway at Lignite Creek and would involve the construction of 75 miles of road which would link up with the seasonally congested Wonder Lake Road which serves Denali National Park. Opposition for such a road may be expected from the National Park Service and conservation groups although it would serve a broad public need.

Chandalar Mining District. Increased activity in the Chandalar area in recent years, with focus upon hardrock as well as placer deposits, highlights the excellent potential for expansion of mining activity. Current access during the mining season is by air using a 4500 foot runway. Construction of a 65 mile road from the Dalton Highway would provide access and enhance the prospect for more mining in the district.

Point-Lay Cape Lisbourne Coal Deposits. These coal fields would be included in the discussions of transportation to the North Slope coalfields. Major development is some years away and would be contingent upon an adequate transportation system. The Arctic Slope Regional Corporation has examined the possibility of mining 100,000-200,000 tons of coal from the Cape Beaufort area to serve local needs of communities within range of barge transport. Suggestions that this could also satisfy the energy needs of mining development in the Noatak region have not enjoyed support from Cominco officials who feel the capital costs for coal-fired generating equipment for their power requirements overshadow any savings to be realized by purchasing coal rather than fuel oil.

Another scenario for exploiting coal for local Northwest Alaska needs focuses on the Chicago Creek deposits on the north side of the Seward Peninsula. This development would require a 170 mile road to link the Chicago Creek mine site to Kotzebue, however the route would cross terrain with a high mineral potential for placer gold, uranium and a range of base metals.

There is little merit in further cataloging the hundreds of known mineral occurrences in Alaska and speculating on possible access needs. In remote regions of Alaska it is not the lack of minerals that is inhibiting industry, but the lack of transportation to allow development. Any expansion of Alaska's ground transportation system to serve major, economically viable, mining centers will enhance access to other known deposits as well as stimulate exploration for undiscovered ore deposits.

The development of transportation infrastructure is the key to the creation of an Alaskan mineral industry that will strengthen and diversify Alaska's economic base.

IV. Report of the Division of Finance and Economics: Department of Commerce and Economic Development

Red Dog Economic Analysis

Red Dog Mine Analysis

Division of Finance and Economics
Department of Commerce
and Economic Development

This report will identify the direct benefits to the State of Alaska that result from subsidization of the Red Dog Mine. The report will also identify the maximum level of expenditure the State can make on the project and still retain a positive rate of return.

The following analysis is based on a 60¢ per pound price of zinc, the most important metal produced from the mine in terms of the mine's economic viability. Sixty cents (60¢) per pound, in 1984 dollars, represents the "best estimate" in terms of expected real future zinc prices. This estimate was made by the Office of Mineral Development. A low estimate of 55¢ per pound and a high estimate of 65¢ per pound were also considered.

All quantifiable benefits are given in terms of their present value for purposes of consistency and in order to protect the confidential nature of the data supplied by Cominco Corporation. All present values are based on 30 years of mine operation regardless of when mine development begins. A 15% return on investment (ROI) was assumed to be the threshhold level needed to induce mine development and production. (This implies a capital recovery period of approximately 5 years.)

At a price level of 60¢ per pound for zinc and assuming mine development beginning in 1985, the present value to the State of taxes is $205.69 million. In addition to the tax estimate, "transfer payment" reductions have a present value of $41.61 million, for a total direct benefit of $246.85 million. The corresponding values to the State for zinc prices of 55¢ per pound and 65¢ per pound can be found in Table I.

Table I

Returns* to the State from
Red Dog Mine Development
(Millions of Dollars)

	Price of Zinc		
	55¢	60¢	65¢
Taxes	157.50	205.69	262.52
Transfers	41.16	41.16	41.16
Total	198.66	246.85	303.68

* All returns are given in terms of their present value. Only direct returns to State Government are considered.

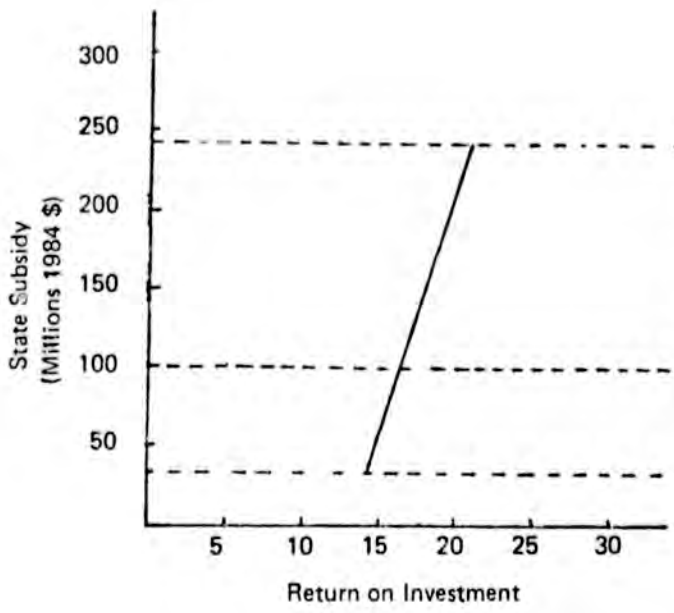
In order to get the requisite 15% return on investment with no State involvement the price must reach a real price of 63¢ per pound.

Based on the above assumptions, to obtain a 15% return on investment at a real price of 60¢ per pound for zinc, the State would have to subsidize the capital costs of Cominco by $40.1 million. For this $40.1 million investment the State will directly benefit by $246.85 million which is a positive benefit/cost ratio to the State of 6.2:1. The ratio is high because it appears the project would not be viable without State support. Under the foregoing assumptions, the minimum level of investment the State can make in the project and have any expectation

of immediate development is estimated to be $40.1 million. Higher involvement by the State through larger amounts of subsidy will increase expected rates of return to Cominco, and increase the likelihood of immediate project development. At a price of 60¢ per pound for zinc the State could subsidize the project up to $245.0 million and still have a benefit/cost ratio greater than 1, i.e., the State investment becomes increasingly marginal as it approaches $245 million.

The relationship between the return on investment and State subsidy is show in Chart I and the relationship between State subsidy and benefit/cost is shown in Chart II.

CHART I



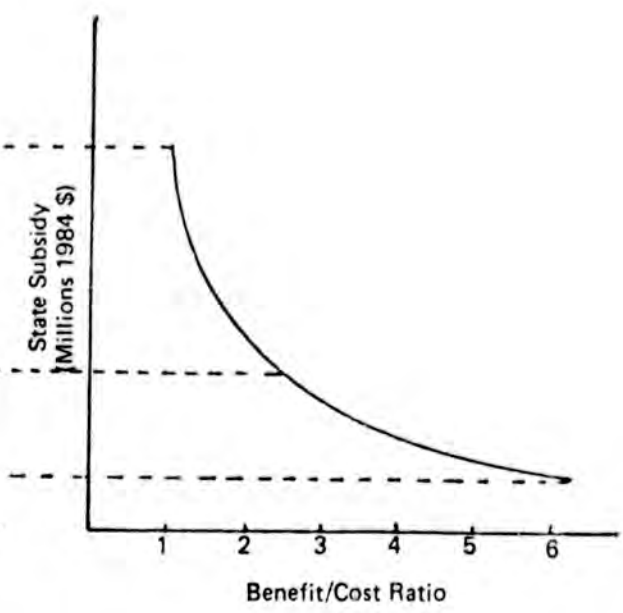


CHART II

[* Assumes a real price of zinc of 60¢ per pound.]

While the above analysis is based on what appear to be reasonable assumptions, changes in these assumptions produce different results. For example, the development of the mine is sensitive to changes in the price of zinc. If the zinc price is lowered from 60¢ to 55¢ per pound (the low side of our estimated future price), the rate of return to Cominco would also fall. At the 55¢ price, to get the return to Cominco up to 15% the State might have to put a subsidy of $158.0 million in the project. Because of the lower price, the taxes are also lower; this, coupled with the higher level of subsidy, reduces the benefit cost ratio to 1.25 in comparison to the 6.2 figure generated by a 60¢ price. On the other side, if the higher price level of 65¢ per pound of zinc is attained, the return is estimated to be in excess of the requisite 15% ROI with no State subsidy and the State benefits directly by $303.48 million even with no contribution.

In addition to direct benefits to the State in the form of tax revenues and reduced transfer payments, there are gains to the public in the form of wages, reduction in freight costs and the implicit benefits of having a road and port where previously there was none. The present value of direct wage gains, freight cost reductions, and royalties to NANA are set forth below. The present value was calculated for a period of 30 years, however, the Red Dog Mine and road is anticipated to be active for at least 50 years. The benefits for the additional years are so far in the future that their present value is not included, but should be considered from a social point of view. Implied infrastructure benefits are not quantified though the existence of a State road and port offers opportunities for future expansion at Red Dog and for other mining opportunities in the region.

Table II

Private Sector Benefits* from
Red Dog Mine Development
(Million $)

Benefit	Amount
Wages	$365.25
Freight Cost Reduction	50.96
Infrastructure Gains	Not Quantified
Royalty payments to NANA**	658.56

* Present value over 30 year period.

** These monies are subject to the revenue sharing provisions of the Alaska Native Claims Settlement Act, 7(i) Clause, and could also be taxed by the State and Federal Governments.

The wages and salaries generated are a result of average annual employment increase of 500.

OFFICE OF MANAGEMENT AND BUDGET
OFFICE OF THE GOVERNOR
STATE OF ALASKA

RED DOG PROJECT

Report Prepared for Part IV of the Interagency Task Force on
State Participation in Infrastructure Development
February 21, 1984

INTRODUCTION

The Office of Management and Budget participated in the State's interagency task force on the Red Dog Mine project during the period September-December, 1983. The purpose of the task force was to evaluate whether and how the State of Alaska might participate in the infrastructure development necessary for the Red Dog mine, which is located in the northwest region near Kotzebue. The Office of Management and Budget was responsible for completing the following six tasks:

(A) preparation of a detailed corporate profile of Cominco Ltd., with reference to its financial structure, operational spread and market participation;

(B) preparation of a similar corporate profile of NANA Regional Corporation, Inc.;

(C) evaluation of the direct and indirect economic impacts of the Red Dog Mine project within Alaska;

(D) evaluation of the taxation impacts of the Red Dog Mine project, utilizing Alaska's current taxation framework;

(E) examination of the contractual relationship between Cominco-Alaska, Inc. (the Alaska subsidiary of Cominco Ltd.), and NANA Regional Corporation, Inc.; and,

(F) assessment of the possible effects of various risk-sharing scenarios for total project development on the State of Alaska's bonding capacity.

The sections below present the Office of Management and Budget's findings and conclusions regarding these six tasks.

A. CORPORATE PROFILE OF COMINCO, LTD. (CANADA)

Cominco Ltd. of Canada is the parent company of Cominco-American, Inc., and its branch, Cominco-Alaska Inc., which has joined with NANA Development Corporation, Inc., to develop the Red Dog Mine near Kotzebue. This corporate profile describes the operations and relationships of Cominco Ltd.

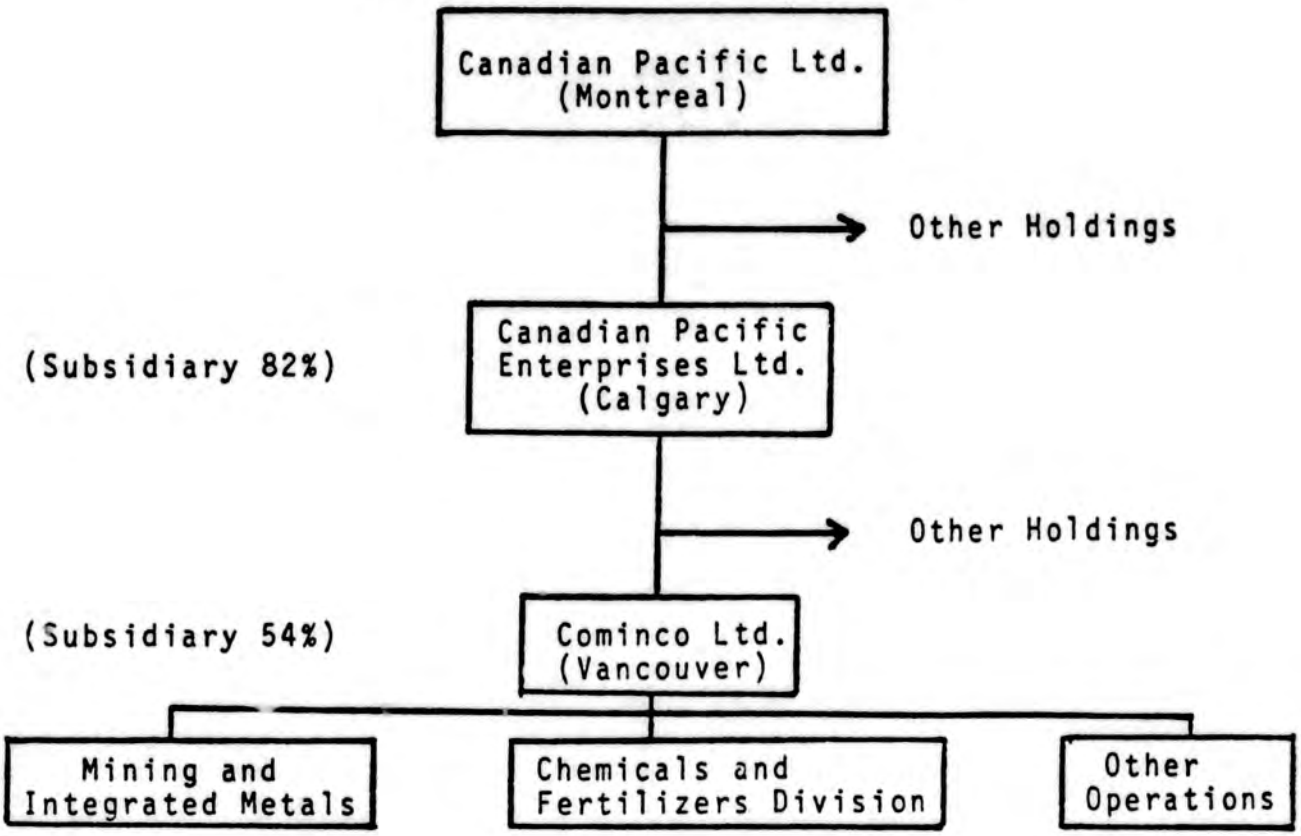
1. BACKGROUND

Cominco Ltd. is an integrated natural resources company whose principal activities are in minerals exploration, mining, smelting and refining. Headquartered in Vancouver, British Columbia (Canada), the company with its subsidiaries constitutes one of the world's largest mining and metallurgical concerns. Cominco Ltd. employees numbered approximately 10,500 as of August, 1983, with union representation encompassing some 70% of the total. [1]

The Cominco enterprise was first incorporated in Canada in 1906 as Canadian Consolidated Mines Ltd., as a means of amalgamating the mining interests of the Canadian Pacific Railway. (The name was changed a month later to Consolidated Mining and Smelting Company of Canada Ltd.) The company was acquired and re-chartered in 1962 by Canadian Investments Ltd. (now Canadian Pacific Enterprises Ltd.), which is an investment holding corporation for Canadian Pacific Ltd., a private Canadian company. Under this arrangement, the company's name was changed to Cominco Ltd. in 1966. Finally, in 1970, Cominco Ltd. moved its executive offices from Montreal to Vancouver.

The range of Cominco Ltd. business operations is extensive. Its participation in mining and minerals industries includes exploration and mining operations (chiefly for zinc, lead, silver, copper and gold) in North America, South America, Europe, Asia, Africa and Australia, as well as the operation of major smelting and refining facilities in Canada, Japan and India. Worldwide, Cominco Ltd. and its subsidiaries operate some 14 major mines and 4 major smelting and refining complexes. Cominco Ltd. was the world's largest producer of zinc and lead in 1982, accounting for approximately 10% and 11% of the western world's mine production of those metals, respectively. [2]

Beyond its mining and metals operations, Cominco Ltd. also is one of Canada's largest producers of phosphates and chemical fertilizers, and is a major supplier of these commodities for the upper American Midwest. Additional Cominco Ltd. operations include the production of high purity metals, steel products, fabricated metals products, compound semiconductors and electronic components, and hardware specialties, as well as the distribution of electrical power in western Canada. Its Project Research Center at Sheridan Park, Ontario, is the world's largest research center for new and improved uses of lead and zinc.[3] The company also is a holding and investment concern with a relatively large number of corporate subsidiaries and affiliates.



2. CORPORATE STRUCTURE AND MARKET PARTICIPATION

Diverse and large as its holdings are, Cominco Ltd. occupies a position within a yet larger corporate structure. (See Figure A-1.) Principally, it is 54% owned by Canadian Pacific Enterprises Ltd. (Calgary, Alberta), which is a large investment company with interests in oil and gas, mines and minerals, iron and steel, forest products, real estate, hotels and food services. Canadian Pacific Enterprises Ltd. is itself 82% held by Canadian Pacific Ltd. (Montreal, Quebec), a private Canadian company directly involved in various transportation services.

The corporate structure of Cominco Ltd., including its subsidiaries and affiliates, reveals a high degree of both vertical and horizontal

FIGURE A-1

COMINCO LTD. CORPORATE STRUCTURE

integration. It encompasses vertically linked operations that include exploration and reconnaissance, mining, smelting and refining, fabrication, product development and research, direct specialty hardware supply and sales. Its horizontal dimension is revealed by its many associated mining and smelting operations (including, beyond metals, the mining of coal, diamonds, potash, et al.), chemical and fertilizer production facilities, steel plants, electronics plants and network of hydroelectric power plants.

Overall, the associated companies of Cominco Ltd. participate in three broad industry segments or markets. These include mining and integrated metals, chemicals and fertilizers, and a range of "other operations" which includes the previously mentioned steel, electronics and hydroelectric plants, etc. (See Table A-1.) Among these three corporate segments, mining and integrated metals consistently has been the greatest contributor to Cominco Ltd's total revenues. It has consistently also been the greatest contributor to the company's operating profits, except during 1982, when low base metal prices and softening demand produced the company's first overall loss in fifty years. (See Table A-2.) However, it appears that mining and integrated metals operations will once again be the major contributor to its profits in the coming years, due to the potential of the Red Dog Mine, and the expected future improvement in world metal market conditions. (See Table A-3.)

3. MINING HOLDINGS AND OPERATIONS

a. Amalgamated Divisions and Operating Subsidiaries

Cominco Ltd. amalgamated (i.e., merged) in late 1982 with Bethlehem Copper Corporation and Copper Valley Mines Ltd., previously two wholly owned subsidiaries, under the name of Cominco Ltd.[4] The operations of these companies and Green Valley Mines continue as divisions of Cominco Ltd. Figure A-2 depicts the corporate linkage of these divisions and Cominco Ltd.'s operating subsidiaries, in which Cominco Ltd. ownership is greater than 50%. (See Figure A-2.)

TABLE A-1

COMINCO LTD.
SCOPE OF OPERATIONS AND MARKET PARTICIPATION

INDUSTRY SEGMENT	PRINCIPAL INVOLVEMENTS	MAJOR FACILITIES
1. Mining & Integrated Metals	Mining, processing smelting and refining of zinc, lead, copper, silver, gold, tin, et al.	*14 major mines *4 major smelting facilities
2. Chemicals & Fertilizers	Production of sulphuric acid, sulphur dioxide, potash, ammonia, urea, phosphates and nitrates	*3 mines *5 processing plants (all in Canada and USA)
3. Other Operations	Fabrication of metal products, steel, high purity metals, semiconductors and electronic components, electrical power distribution.	*3 steel plants *1 metal fabricating plant *2 electronics plants *4 hydroelectric plants (all in Canada and USA)

b. Affiliates

The corporate affiliates of Cominco Ltd., in which a 50% or less ownership interest is held, include the following: (percentages indicate the extent of Cominco Ltd. ownership)

* Canada Metals Co. Ltd. (50%)
  Toronto: lead refining and metals products

* Mitsubishi Cominco Smelting Co. Ltd. (45%)
  Tokyo: smelter products, refined lead, concentrates from Pine Point Mines Ltd.

* Cominco Binani Zinc Ltd. (40%)
  Calcutta: electrolytic zinc smelting and refining

* Fording Coal Ltd. (40%)
  Calgary: coal mine

* Aberfoyle Ltd. (47%)
  Melbourne: minerals exploration in Australia and Tasmania, 6 tin and lead/zinc mines, metals production

* EXMINESA S/A (48%)
  Madrid: minerals exploration, zinc/lead mine

*Panarctic Oils Ltd. (7.4%)
  Undetermined: oil and gas exploration

c. Other Holdings (Unidentified)

References to a number of additional Cominco Ltd. holdings in the mining and integrated metals area have been located, but could not be

investigated due to time constraints. These include the following: (percentage figures indicate the extent of Cominco Ltd. ownership)

* Vol Mines Ltd (66.7%)
* Baffinland Iron Mines Ltd. (4.5%)
* Stikine Copper Ltd. (5%)
* Sunloch Mines Ltd. (84%)
* Sunro Mines (77%)
* Cominco Holdings, N.V. (-?-)
* Cominco GmbH, Germany (100%)
* Mayak Ltd., U.K. (50%)
* Arvik Mines Ltd., Canada (100%)
* Abminco NL (38%)

d. Principal Mining Facilities

The principal mining facilities of Cominco Ltd. include 9 major mines in North America and Greenland, and the giant integrated smelting and refining complex at Trail, British Columbia, which also includes part of Cominco Ltd.'s fertilizer and chemical processing operations. These facilities, along with their approximate levels of employment as of December 31, 1982, are described below: (percentage figures indicate the extent of Cominco Ltd. ownership)

* Trail Complex (100%)
  Trail, B.C.: integrated smelting and refining complex for lead, zinc, silver, et al.; chemical and fertilizer plant; 4,036 employees

* Sullivan Mine (100%)
  Kimberly, B.C.: lead/zinc/silver mine; pig iron plant; chemical and fertilizer plant; 959 employees

* Valley Mine and Jersey Mine (100%)

Logan Lake, B.C.: Copper mines; 360 employees

* Polaris Mine (100%)
  Little Cornwallis Island NWT: Zinc/lead mine; 244 employees

* Con Mine (100%) and Rycon Mine (76%)
  Yellowknife, NWT: gold mines; arsenic recovery plant; 309 employees

* Pine Point Mine (69%)
  Great Slave Lake, NWT: Lead/zinc mine; 583 employees

* Black Angel Mine (63%)
  Maarmorilik, Greenland: Lead/zinc/silver mine; 324 employees

* Magmont Mine (50%)
  Bixby, Missouri: Lead/zinc mine and concentrator; 186 employees

4. FINANCIAL STRUCTURE

Unless otherwise specified, all figures presented below are based on the 1980-1983 annual reports of Cominco Ltd. All dollar amounts shown are in Canadian dollars for 1982. (For purposes of conversion or comparison, the average conversion rate during 1982 was: $1.234 CAN=$1.00 USA.)

a. Assets and Net Worth

As of year end 1982, the consolidated assets of Cominco Ltd. totalled approximately $2.1 billion. The larger portion (65%) was in fixed assets such as land, buildings, equipment and developed mineral properties, with

a total book value of some $1.36 billion. Investments in affiliated and unaffiliated companies totalled nearly $128 million, while current assets stood at more than $575 million (over 27% of total assets). Net worth for the company as of December 31, 1982, was approximately $834.9 million. This comprise some $145 million in preferred shares, $136 million in common shares and approximately $554 million in earnings reinvested in the company. (See Table A-4.)

b. Capitalization

Capitalization for Cominco Ltd. as of the end of 1982 was approximately $1.52 billion. This comprised long-term debt of some $688 million, reinvested earnings of approximately $554 million, $145 million in preferred stock, and $136 million in common stock. (Some 5.8 million shares of preferred stock and 18.8 million shares of common stock were outstanding at the end of 1982, approximately 54% of the total value of which was held by Canadian Pacific Enterprises Ltd.) If $38 million in minority interests and $175 million in deferred income taxes are included as representing long-term debt, total capitalization for the company was actually approximately $1.74 billion.

The company's financial leverage ratio (long-term debt to total long-term capital), was 0.52 at the end of 1982, and its debt-equity ratio was 1.08, down from 1.44 earlier in the year.

The capital structure underlying Cominco's $688 million in long-term debt for 1982 included $46.8 million in notes, $101 million in debentures, $533.4 million in bank loans (approximately three-quarters of which are at variable rates, with the remainder at fixed rates of 5-3/4% to 10-3/8%), $5.4 million in bonds, and $1.4 million in other debt. The company has moved recently to reduce its reliance on bank debt through the application of some $100 million raised from a 2.2 million common share offering in April of 1983. (Canadian Pacific Enterprises Ltd. purchased 1.2 million shares of this offering, to preserve its 54% interest in the company). This was in addition to an earlier issue of 2 million preferred redeemable shares, which brought proceeds of approximately $50 million in 1982. A

Source: Levesque, Beaubian, Inc., Investment Research Report, July, 1983

major factor in Cominco Ltd.'s decision to issue more stock, presumably, was the 44% rise in the company's overall interest expense during 1982 to $90.4 million, up from $62.6 million at the end of 1981. (A more recent snapshot of Cominco Ltd.'s capitalization, as of March, 1983, is shown in Table A-5.)

c. Liquidity and Credit Rating

The company's current ratio (current assets to current liabilities) was 1.62 at the end of 1982. Its acid-test ratio (current assets less inventory to current liabilities) was 0.63. However, its cash ratio (cash plus short-term investments to current liabilities) was 0.09. The company had to sell off over 27,000 tons of its lead and zinc concentrate inventories in 1982 due to cash flow problems.[5]

During the first half of 1983, however, the company appears to have improved its liquidity position. Independent assessment of the company's operations in May of 1983 showed net working capital (current assets minus current liabilities) centered in accounts receivable and inventory, with satisfactory inventory turn-over, and adequate cash deposits and short-term investments for financing operations.[6] Analysis of the sources and uses of Cominco Ltd.'s funds during 1981 and 1982 also indicates that the company instituted an aggressive collections policy regarding receivables during 1982 (see subsection 5, below, "Sources and Uses of Funds"), helping to improve cash flow and liquidity.

Cominco Ltd.'s overall credit rating was very good as of mid-1983. Independent credit assessment of the company showed a high composite credit appraisal, a consolidated line of credit available without security to the high eight-figure range, excellent relations, and good conditions.[7] The same sources and uses analysis referred to above also shows that Cominco Ltd. started paying its own bills more promptly in 1982, which is undoubtedly responsible in part for the company's current good credit rating.

d. Earnings

Cominco Ltd. president W.G. Wilson told stockholders in April of 1983 that 1982 was "one of the worst years in the company's history." [8] 1982 was indeed not a good year for Cominco Ltd., as the company suffered an overall net loss of approximately $31.2 million (a loss of $2.20 per share). This was a dramatic slump from net earnings of $70.3 million (a gain of $3.35 per share) in 1981, and is attributed to sagging metal markets and softening world demand over the past two years, resulting in falling metal prices. The loss of $31.2 million was on sales of products and services totalling approximately $1.24 billion, down almost 14% from 1981 sales. Earnings before interest and taxes for the company reflect the same decline, dropping to a loss of approximately $7.2 million in 1982 from earnings of over $189 million in 1981. (Actually, Cominco Ltd.'s net loss in 1982 would have been much larger than $32.1 million, but the company took some $49.9 million tax in credits during the year and its Cominco-American, Inc., subsidiary sold off its oil and gas properties for an after-tax gain of approximately $18.1 million).

The 1982 net loss was something of an exception for Cominco Ltd., however, representing the company's first overall loss in the past fifty years. It should not be taken as indicative of the company's solidity or prospects. Cominco Ltd. has extensive ore reserves, is already in 1983 nearly breaking even on its mining and integrated metals operations (with an operating loss of only $800,000 in the second quarter of 1983, down from $7.5 million in 1982), [9] and is in a position to improve its earnings performance in view of forecasts of an economic upturn. (For a summary of recent years' earnings, though with a slightly different data base than that used here, see Table A-6.)

e. Sources and Uses of Funds

A funds flow analysis was conducted for this report by examining the company's annual balance sheets. The major findings of this analysis include the following: (as of year-end 1982)

(1) the company was still relying on long-term debt, but was cutting that reliance back (i.e., increases in annual long-term debt outstanding slowed from 1980 to 1982);

(2) the company was still raising new capital through share issues, but at a slower rate than in the past (e.g., the share issues totaling $48.3 million in 1982 were only half of 1981's issues of $97.5 million);

(3) the company was still acquiring new land, buildings and equipment ($166 million in 1982), but less than in 1981 ($225 million);

(4) acquisition of mineral properties dropped dramatically during 1982 ($15.6 million) compared to the year before ($166 million);

(5) the company introduced a strong collections policy during 1982, cutting accounts receivable by $61 million as opposed to a $1 million increase during 1981 (this has been offset somewhat, however, by another new policy introduced during 1982 of paying off the company's own debts more quickly); and,

(6) the company has sharply cut back its payment of dividends to shareholders (e.g., from $83 million during both 1980 and 1981 to less than $35 million during 1982).

This pattern of retrenchment also is reflected in recent announcements by the company that : (1) capital investment spending was reduced by $710 million during 1981-82, after the company spent more than $1 billion on new projects over the preceding five years; (2) modernization of the Trail, B.C., smelting complex was being delayed; (3) completion of mechanization for the complex at Kimberly, B.C., was being delayed; (4) sustaining capital was being reduced throughout the company to low but acceptable levels; (5) exploration expenditures were being reduced; and, (6) some 2,200 company employees had been laid off during the 15 months prior to June, 1983.[10]

5. CONCLUSION

Its 1982 set-back notwithstanding, Cominco Ltd. appears to be a sound company with a firm economic footing and good overall prospects. The company is backed by a large reputable parent (Canadian Pacific Ltd.), has a strong mining and metals position worldwide, and is well diversified across several broad markets. It also reportedly has excellent managers who evidently are orienting the company towards more conservative spending policies and stronger earnings performance. In these respects, Cominco Ltd. appears able to provide a solid corporate base for development and support of the Red Dog Mine project.

B. CORPORATE PROFILE OF NANA REGIONAL CORPORATION, INC.

This corporate profile describes the operations and relationships of NANA Regional Corporation, Inc., which has joined with Cominco-American, Inc., to develop the Red Dog Mine near Kotzebue.

1. BACKGROUND

NANA Regional Corporation, Inc. (NANA), is one of twelve Alaska Native regional corporations which were formed under the Alaska Native Claims Settlement Act of 1971. (A thirteenth corporation was also formed for Alaska Natives no longer residing in the State.) Company records indicate that NANA represents some 4,800 Inupiaq shareholders, [1] of whom some 4,000 or more reside in the NANA Region.[2]

The Alaska Native Claims Settlement Act of 1971 (ANCSA) provides that the regional corporations formed under it are to share jointly a settlement comprising $962.5 million in cash and 40 million acres of land; the former is distributed through the Alaska Native Fund, and the latter through federal government land conveyances. As of June of 1983, NANA had received approximately $46.3 million as its cash settlement, and interim conveyance of 945,469 acres of surface estate and 766,816 acres of subsurface estate. NANA's total land entitlement under the terms of ANCSA is approximately 1.9 million acres of land including both surface and subsurface estates, and title to subsurface estate rights only on approximately 365,000 additional acres. [3]

ANCSA provisions also govern the division of NANA's stockholders into two groups, based on village or regional affiliation. The corporation's stockholders accordingly are divided into those enrolled as residents of one of the eleven NANA Region villages (Class A common stockholders), and those enrolled as NANA Region residents but not as residents of any particular village (Class B common stockholders). Under the Act's terms, NANA is required to issue 100 shares of the appropriate class of stock to

each Native enrolled in the Region.[4] The Corporation's stock generally cannot be sold or otherwise transferred except by death beneficiary until 1991, also under ANCSA provisions.

A final major ANCSA requirement[5] is that a part of NANA's resource earnings must be pooled with those of the other regional corporations similarly created and then redistributed among all twelve corporations serving resident shareholders. Under this requirement, 70% of the net revenues received by NANA from development of its timber resources and subsurface estate (notably, mineral resources) enter the pool. These are then distributed proportionally to the twelve corporations, including NANA, based on the number of shareholders enrolled in each corporation. Of the amount that NANA receives from this distribution, 50% is required under ANCSA to be distributed proportionally to nonvillage stockholders and the village corporations within NANA's designated boundaries.[6]

2. CORPORATE STRUCTURE AND BUSINESS OPERATIONS

The corporate activities of NANA comprise both non-profit and profit-oriented operations. Non-profit activities include a variety of Native culture, education, and vocational development programs. The profit-oriented side of NANA is centered in the company's single, wholly owned operating subsidiary, NANA Development Corporation, Inc.

NANA Development Corporation, Inc., is the focus for NANA's several joint venture projects and has six separately incorporated subsidiaries. These include NANA Oil Field Services (provides housing for oil field personnel at Prudhoe Bay), Arctic Utilities (supplies electrical power generation for Prudhoe Bay operations and camps), and Purcell Services (provides industrial security systems for Sohio at Prudhoe Bay). A fourth division, NANA Construction Company, Inc., was discontinued during 1982 due to losses.

NANA's operating divisions and joint ventures, as described in the company's financial report for the year ending June 30, 1983 (YE1983),

included the following: (percentage figures indicate extent of NANA ownership, where given)

* 2 Reindeer Breeding Companies (100%, 20%)

* Bank Holding Company (11% in YE1983, 17% in YE 1982)

* Oil drilling and lease partnership with Sohio and four other Native regional corporations, Beaufort Sea

* Jade Mining and Exploration

* Surveying and Engineering Services, with Bell Herring Associates of Anchorage

* NANA Mannings (food service and camp operations)

* NANA Coates (minerals exploration and drilling)

* Lease for oil exploration on NANA lands

* Vehicle maintenance venture

* Nul-Luk-Vik Hotel (Kotzebue)

* Construction joint venture at Prudhoe Bay, with Morrison-Knudsen, Inc. (on a job-by-job basis)

* Red Dog Mine development project

NANA's published annual reports for prior years (i.e., the years ending at June 30 for 1980-1982) provide little additional information regarding the company's holdings, investments and joint ventures. The only reasonable conclusions which can be formed on the basis of these documents are: (a) many different ventures have been undertaken in the past four years, most of which were generally similar in nature to those

listed above; and, (b) most of the ventures suggest a placement of company resources intended to achieve long-term employment benefits to NANA shareholders and other regional residents.

It is not possible to provide an accurate summary of the performance or contributions of NANA's business operations (or joint ventures) over the past few years, as the amounts shown in the company's financial statements have been reclassified in each of the two most recent years (YE1983 and YE1982). NANA's financial report for YE1983, however, does allow comparison by broad line of business for the past two corporate fiscal years. This comparison indicates that NANA's oil field and support services have by far contributed most to NANA's earnings from joint ventures (99% of all joint venture earnings in YE1983, and 73% of all joint venture earnings over the past two fiscal years). (See Table B-1) Among NANA's continuing operations, the greatest contributors to overall operating revenues both in YE1983 and over the past two fiscal years have been NANA's camp and hotels (23.7% in YE1983 and 23.3% over the past two years) and the company's contracted services operations (23.6% in YE1983 and 21.0% over the past two years).

3 FINANCIAL STRUCTURE

a. Assets and Net Worth

As of June 30, 1983, the consolidated assets of NANA totaled approximately $68.7 million. The greatest portion (36.9%) of these assets were investments and marketable securities, with more than two-thirds of the latter (approximately$8.0 million of a total $11.7 million) representing the purchase costs of common and preferred stocks. NANA's combined property and equipment holdings represented another 24.1% of total assets, while its current assets stood at approximately $17.4 million, or 25.2% of total assets. NANA's joint ventures had a combined asset value to the company of some $9.06 million (13.2% of total assets), representing the combined equity allocable to NANA from those ventures. (See Table B-2)

	$68,721,063	$67,604,133

Source : NANA Regional Corporation, Inc. Consolidated Financial Statements: June 30, 1983 and 1982.

It is not currently possible to estimate NANA's actual net worth, because the company has not ascribed a value to its land rights (surface and subsurface). Also, neither its Class A common stock nor its Class B common stock can be assigned market value until at least 1991 (the earliest time when NANA's shares can be generally sold or transferred, under the terms of ANCSA). NANA's common stock is currently assigned a par value of $0.01 per share, with a total of 734,100 shares outstanding from a total of 2.5 million shares authorized. The company did report some $5.3 million in retained earnings during YE1983 (up 135% from the previous year), however, and showed a total of approximately $43.6 million in paid-in capital from Alaska Native Fund distributions.

b. Capitalization

A true statement of value of NANA's overall capitalization cannot be made, again due the fact that the company's outstanding common stock will not have a meaningful market value until at least 1991. Excluding NANA's shareholder equity and the value of NANA's overall minerals holdings, however, it can be said that NANA's reported capitalization as of YE1983 totaled approximately $7.8 million. This total comprised approximately $2.4 million in long-term debt outstanding (current portion excluded), retained earnings of approximately $5.3 million, and some $60,000 in deferred income taxes.

It would be difficult at best to say whether NANA's YE1983 debt level represents a large or small amount of debt for the company to be carrying. The current artificial value of NANA's shares, and the absence of a meaningful basis for comparing NANA with other corporate entities, combine to make any such assessment necessarily speculative at the present time.

Given NANA's current inability to raise additional share capital before 1991, it is to be expected that the company's capital structure should consist primarily of long-term notes payable. NANA's non-current long-term debt outstanding of approximately $2.4 million at YE1983, in fact, consisted entirely of such notes, carrying interest rates ranging

from 7-1/2% to 18% and payable primarily to financial institutions. Approximately 77% of NANA's total long-term debt (including the current portion) was secured by property and equipment holdings with a combined depreciated cost (sic) of approximately $6.3 million.

c. Liquidity

The company's current ratio (current assets to current liabilities) at YE1983 was 1.003, while its quick ratio (current assets less inventory to current liabilities) was 0.897. The company's YE1983 statements also show a cash ratio (cash plus short-term investments to current liabilities) of 0.137. NANA did, however, have an unused line of credit at YE1983 for approximately $4.9 million.

The financial ratios for NANA indicated above are correct as taken from NANA's financial statements. It should be noted, however, that the company is currently in the process of converting some of its short-term debt (notes payable) into longterm debt. This should improve the company's liquidity in the future, particularly over the short run.

d. Earnings

Two conclusions regarding earnings are immediately clear from NANA's consolidated earning statements. One is that the company's overall net income and earnings per share have risen steadily over the last eight corporate years (and ahead of overall revenue increases), particularly since YE1981. The second is that the most recent year, YE1983, was NANA's most profitable year ever, showing corporate net income up by 147% over the company's previous best year in YE1981. (See Table B-3.)

TABLE B-3

NANA REGIONAL CORPORATION, INC.
EARNINGS SUMMARY
YEAR ENDING AT JUNE 30, 1976-1983

	1983	1982	1981	1980	1979	1978	1977	1976
Revenues [1]	30.69 [2]	54.38	43.47	19.72	31.44	27.69	30.34	26.77
Net Income [1]	3.95	1.32	1.60	0.21	0.64	0.48	0.38	0.16
Assets [1]	68.72	67.60	64.94	66.77	59.14	61.84	58.31	26.94
Stockholders' Equity	48.87	44.67	44.75	43.97	45.20	44.93	44.57	12.08

[1] Figures shown are in $ millions.

[2] Revenues from continuing operations only.

Source: Compiled from NANA Regional Corporation, Inc. published Annual Reports.

Overall net earnings for NANA during YE1983 were approximately $3.95 million, based on operating revenues totaling some $30.68 million. The company's major sources of income beyond operating revenues included approximately $2.25 million in interest income, $988 thousand in resource revenues received from other regions under ANCSA, and a $380 thousand tax benefit representing a net operating loss carry forward from the year before.

Regarding NANA's joint venture operations, the company earned a total of $1.79 million on revenues of $117 million in YE 1983. This represents NANA's total allocable share of earnings across all of its joint ventures, based on the company's combined equity investments of approximately $9.06 million.

e. Sources and Uses of Funds

Analysis of the sources and uses of NANA corporate funds over the past four years, based on the company's balance sheets for the period YE1980-YE1983, primarily shows two general trends. One, already described, is the steady expansion of NANA's overall base of operations (including assets, revenues and profits) as company activities increased. The second, which appears to indicate an emerging priority of the corporation, is the increasing proportion of corporate resources devoted to the sponsorship of joint ventures. Specifically, from YE1979 through YE1983, NANA increased its commitment to joint ventures from approximately $2.6 million to $9.06 million, representing an increase in the proportion of total corporate assets pledged to such ventures from some 4.4% in YE1979 to over 13% during YE1983. (See Table B-4)

TABLE B-4

NANA REGIONAL CORPORATION, INC.
JOINT VENTURE INVESTMENTS, 1979-1983

Year Ending June 30:	Joint Venture Investments	Total Assets	Per cent of Total Assets
1979	$2,[illegible]24,354	$59,139,664	4.4%

Source: Office of Management and Budget, State of Alaska
(based on NANA Regional Corporation, Inc.,
Annual Reports, 1980-1983.)

CONCLUSION

Overall, NANA appears to be a solvent and increasingly profitable corporation. Its growing involvement in joint business ventures within the northwest Alaska area indicates a marked attempt to provide both general economic and long-term employment benefits to residents of the region. NANA's participation with Cominco-American, Inc., to develop the Red Dog Mine appears in these respects consistent with the purposes and past activities of the corporation.

C. DIRECT AND INDIRECT ECONOMIC IMPACTS WITHIN THE STATE OF ALASKA

INTRODUCTION

This analysis estimates the direct and indirect economic impacts which are likely to occur within Alaska due to the development of the Red Dog Mine, located in northwest Alaska near Kotzebue.

1. PRINCIPAL ASSUMPTIONS

The principal characteristic of the Red Dog Mine project is that its scope and scale, as a whole, depend on the successful merging of the joint goals of Cominco-American, Inc. (Cominco), and the NANA Regional Corporation, Inc. (NANA). It is important to note in this regard that these parameters, the project's ultimate scope and scale, are not fixed at the present time. According to the project sponsors, these items will be fixed only after a joint agreement is reached between Cominco and NANA regarding the project's feasibility. The sponsors expect this agreement to be reached within the next several months.

Until agreement is reached, it appears that NANA will have a greater influence than Cominco in determining the ultimate size of the mining operation and its attendant work force.[1] NANA specifically sought this provision in its contractual agreement with Cominco, for two reasons.[2] One was to guarantee that the project could not become so large that its work force requirements might result in the employment of an excessive number of people from outside of the NANA region. The other reason was to allow NANA to attain its primary goal in supporting the project, which is to extend the project's employment benefits over the longest time possible by avoiding rapid depletion of the Red Dog Mine resources.[3]

In view of this arrangement, it seems reasonable to assume that the pace and scale at which Red Dog Mine development is set (in the future feasibility agreement) will be highly subject to NANA's perceptions

between now and then as to how well the project appears to be meeting NANA's expectations and long-term objectives. It is worth noting that this is quite different from a conventional business arrangement, where market and profit considerations normally are paramount. In the present case, however, the determining factors for NANA would appear to be considerations such as: (a) the extent to which vocational training efforts are likely to be successful in increasing regional residents' participation in the mine work force, both in terms of the number of NANA-region residents employed at the mine, as well as in terms of the number and type of higher-paying positions obtained; (b) the extent to which regional residents' employment at the mine appears likely to mesh acceptably with established regional subsistence patterns and lifestyles; (c) the extent to which adverse social and economic impacts deriving from the project are likely to be mitigated or avoided within the region; and, (d) the extent to which NANA's general long-term goals are likely to be accommodated by an agreement on project scope and scale which, once set, will become binding.

If NANA perceives that these concerns are likely to be met, it would seem reasonable to assume that the feasibility agreement between NANA and Cominco will set Red Dog Mine operations generally at the scale and along the timeframes projected currently by Cominco. Should there be any perception, however, that these concerns may be addressed in anything but the most successful fashion, it would seem equally reasonable to assume that development of the project may entail both a smaller scale and a more elongated timeframe than is currently projected. It is thus worth emphasizing that, at the present time, there is no firm basis for assuming that everything will go exactly as planned or hoped by NANA and Cominco--i.e., that the <u>most</u> successful scenario should be assumed.

In view of this, prudence would seem to require taking a somewhat conservative view of the project's scale over the long term. This analysis, consequently, assumes that Cominco's projection of total mine employment at 420 full-time equivalent (FTE) jobs is optimistic, and that a

range of 350-400 FTE jobs over the life of the mine incorporates more reasonably the uncertainties described above.

A similar prudence would also seem to require acknowledging that, because there are no employment guarantees in the sponsors' contractual agreement, no adequate basis is available at present for assuming a maximum participation rate for NANA regional residents in the project's long-term work force. On this basis, therefore, the analysis assumes that regional residents are unlikely to obtain less than 50% of the total FTE mine jobs available over the life of the mine, and are likely to obtain a reasonable maximum of approximately 75% (with an indeterminate but limited probability that their participation rate might become higher over the years.

2. EMPLOYMENT

Direct employment associated with the Red Dog project will comprise the total number of jobs at the mine site, as well as eight company jobs available at the project's accounting and data processing office in Anchorage. Additional jobs will be created through the indirect employment effects of company expenditures for services and supplies, and of mine employees' spending when off site. Secondary employment, in turn, will be created through the expenditures of the employees (and their families) who take these indirectly created new jobs, the mine jobs, and the mine office jobs in Anchorage.

a. Direct Employment (Annual)

Employment at the Red Dog Mine site is planned to occur in three phases. The construction phase (including related pre-construction activities) is scheduled for the period July 1, 1985, to December 31, 1987. The initial production phase begins at start-up of the mine's operations on or about January 1, 1988, and is planned to continue through December 31, 1992. A full production phase starting on or about January 1, 1993,

is thereafter planned as a steady-state operation continuing throughout the mine's estimated life of forty years.

In view of the preponderance of the full production phase (35 of the 40 years) in determining the economic benefits of the mine, this analysis focuses only on the Construction Phase (CP) and the Full Production Phase (FPP). (The fact that the weighted average for total employment over the forty years is within five jobs of Cominco's estimate of the full production phase total employment level confirms that this approach is reasonable.)

Cominco estimates that construction of the mine will provide 10-250 jobs at varying points within the Construction Phase. Inspection of Cominco's project charts shows that the manpower projections and timeframes underlying this range represent 143 full time equivalent (FTE) jobs for the period. Since this appears reasonable, and as no other estimates have been made, 143 jobs has been accepted as the total employment during this phase.

Three estimates have been used for the likely NANA-region resident participation rate in the Construction Phase work force: 33%, 43% and 45%.[4] Since two of them appear to be Cominco estimates, and the third an extrapolation therefrom, none is viewed as superior. Consequently, this analysis assumes that the average of the three estimates, or approximately 40%, represents the proportion of the Construction Phase jobs that will be obtained by NANA-region residents.

Cominco estimates that the mine's accounting and data processing office in Anchorage will employ eight people during the Full Production Phase of the mine's life. These include a controller, paymaster-senior accounting clerk, accountant, purchasing agent, buyer-expediter, data processing supervisor, data entry clerk, and clerk typist. This estimate of eight employees has been accepted in the analysis.

The following assumptions govern the annual direct employment estimates made in this report:

(1) total mine employment during the Construction Phase (CP) of the project will be 143 jobs (FTE);

(2) approximately 40% of those jobs will go to NANA-region residents;

(3) total mine employment during the Full Production Phase (FPP) of the project will be between 350 and 400 jobs (FTE);

(4) approximately 50% to 75% of these jobs will go to NANA-region residents;

(5) NANA-region residents will receive mine jobs in direct proportion to their populational distribution within the region; i.e., 46% will be residents of Kotzebue and 54% will be residents of the other ten communities within the region, distributed on a pro rata basis;[5] and,

(6) during both phases of the mine operation, mine employees who are not NANA-region residents will comprise the following: 40% of them will be from the Anchorage area, 40% of them will be from other parts of Alaska, and 20% of them will be from outside Alaska. (Thus, during both phases, 10%-20% of the total mine work force will be from the Anchorage area, another 10%-20% of the total mine work force will be from other parts of Alaska, and 5%-10% of the total mine work force will be from outside of Alaska.) It is assumed that all of these out-of-state mine employees will move to the Anchorage area.

Based on these assumptions, the estimated direct annual employment from the Red Dog Mine project is shown in Table C-1, below. (See Table C-1.)

TABLE C-1
RED DOG MINE
ESTIMATED DIRECT ANNUAL EMPLOYMENT

	Participation Rate		Number of Jobs Per Phase (FTE)			
	CP%	FPP%	CP	FPP@350	FPP@400	Average of FPP Range Mid-Points

Source: Office of Management and Budget, State of Alaska

11/1368

Direct annual employment estimates for the Red Dog project during the Construction Phase (CP) can therefore be summarized as follows:

- total mine employment will be approximately 143 employees;
- approximately 57 NANA-region residents will be employed, 26 (46%) of whom probably will be from Kotzebue and 31 (54%) of whom probably will be village residents;
- approximately 69 residents of other locations in Alaska will be employed, 35 of whom probably will be from the Anchorage area; and,
- approximately 17 mine employees will be hired from outside of Alaska.

Direct annual employment estimates for the Red Dog project during the Full Production Phase (FPP) can therefore similarly be summarized as follows:

- total mine employment probably will range between 350-400 employees;
- approximately 235 NANA-region residents will be employed, 108 (46%) of whom probably will be from Kotzebue and 127 (54%) of whom probably will be village residents;
- approximately 112 residents of other locations in Alaska will be employed, 56 of whom probably will be from the Anchorage area;
- additionally, 8 employees will be hired at the project's financial office in Anchorage; and,
- approximately 28 mine employees will be hired from outside of Alaska.

b. Indirect and Secondary Employment (Annual)

Indirect and secondary employment will be generated in several different locations by the direct employment at the Red Dog Mine. The locations and causes of these additional jobs are summarized in Figure C-1 below. (See Figure C-1.)

Certain assumptions were used to estimate the magnitude and distribution of indirect and secondary employment from the mine. These assumptions include the following:

(1) mine employees who are not residents of the NANA Region will commute directly between the mine and Anchorage (as stipulated in the Cominco/NANA agreement), and therefore will not impact Kotzebue or the regional villages;

(2) regional-resident mine employees will be hired proportionately from locations within the NANA Region; i.e., 46% from Kotzebue, and 54% from the region's villages;

(3) 50% of the village-resident mine employees will each spend an average of $500 per month in Kotzebue for purchases and recreation;

(4) local residents will take 50% of all new jobs created locally by the mine's effects, except in NANA-Region villages where the percentage will be 75%;

(5) 50% of local residents hired for newly created local jobs will have been unemployed prior to hiring;

(6) within the NANA Region, residents hired for local jobs who were previously unemployed probably will not be replaced by unemployed in-migrants (i.e., there will be a tangible effect on local unemployment rates in the region);

FIGURE C-1

RED DOG MINE
INDIRECT AND SECONDARY EMPLOYMENT
SOURCES AND DISTRIBUTION

	Jobs		
Location	Indirect	Secondary	Cause of Jobs
Kotzebue	X		spending of village-resident mine employees in Kotzebue during two weeks off from mine
		X	spending of employees (and their families) who take new indirect jobs, above
		X	spending of Kotzebue-resident mine employees (and their families)
Villages		X	spending of village-resident mine employees and their families), adjusted for Kotzebue spending
Anchorage	X		Cominco expenditures for mine resupply
		X	spending of employees (and their families) who take new indirect jobs, above
		X	spending of 8 Cominco-office employees (and their families)
		X	spending of Anchorage-resident mine employees (and their families) including those hired from outside of Alaska who relocate to the Anchorage area
Other Alaska		X	spending of other Alaska mine employees (and their families) across the State
Out of State		X	spending of out of State employees (and their families) outside of Alaska

(7) outside the NANA Region, residents hired for local jobs who were previously unemployed probably will be replaced by unemployed in-migrants (i.e., there will be little or no effect on local unemployment rates);

(8) during both phases of the project, mine employees hired from outside of Alaska will move to the Anchorage area; only during the Full Production Phase, however, will their families accompany them.

(9) 25% of local residents' spending will go toward wages and salaries in generating new indirect jobs; for Cominco expenditures the percentage will be 50%; every $25,000 so generated will create one additional indirect job.

(10) job multipliers for the Construction Phase (CP) and the Full Production Phase (FPP) are assumed as follows:[6]

	CP	FPP
NANA Region	0.4	0.45
Anchorage	1.0	1.0
Other Alaska	0.5	0.5

(11) the statewide population multiplier is assumed to be 2.1 new residents per new employee hired.

On the basis of these assumptions, the number and distribution of jobs likely to be created by the project through indirect and secondary employment effects is estimated as shown in Table C-2, below. (See Table C-2.)

It should be noted that Table C-2 does not include any indirect or secondary employment effects resulting from Cominco annual supply

(7) outside the NANA Region, residents hired for local jobs who were previously unemployed probably will be replaced by unemployed in-migrants (i.e., there will be little or no effect on local unemployment rates);

(8) during both phases of the project, mine employees hired from outside of Alaska will move to the Anchorage area; only during the Full Production Phase, however, will their families accompany them.

(9) 25% of local residents' spending will go toward wages and salaries in generating new indirect jobs; for Cominco expenditures the percentage will be 50%; every $25,000 so generated will create one additional indirect job.

(10) job multipliers for the Construction Phase (CP) and the Full Production Phase (FPP) are assumed as follows:[6]

	CP	FPP
NANA Region	0.4	0.45
Anchorage	1.0	1.0
Other Alaska	0.5	0.5

(11) the statewide population multiplier is assumed to be 2.1 new residents per new employee hired.

On the basis of these assumptions, the number and distribution of jobs likely to be created by the project through indirect and secondary employment effects is estimated as shown in Table C-2, below. (See Table C-2.)

It should be noted that Table C-2 does not include any indirect or secondary employment effects resulting from Cominco annual supply

Source: Office of Management and Budget, State of Alaska

expenditures, as those expenditures have not been estimated by the company. (Under the NANA/Cominco agreement, long-term resupply for the mine will occur via the proposed port facility and short-term supplies will be purchased in Anchorage.) Under the assumptions made here, however, it can be estimated that every $1 million (1983 dollars) of annual Cominco expenditures made in Anchorage will create 20 indirect jobs and 20 secondary jobs, or a total of 40 new jobs in the Anchorage area.

Indirect and secondary employment effects within Alaska of the Red Dog Mine operation during the Construction Phase (CP) of the project can therefore be summarized as follows:

- total indirect and secondary employment generated in Alaska by the project will be approximately 92 jobs;
- approximately 23 (25%) of those jobs will be in the NANA Region, divided almost equally between Kotzebue and the other regional communities; and,
- approximately 69 (75%) of those jobs will be in other communities in Alaska, including 52 (57%) in the Anchorage area and 17 (18%) distributed among other Alaskan communities.

The indirect and secondary employment effects of the mine during the Full Production Phase (FPP) can therefore similarly be summarized as follows:

- total indirect and secondary employment generated in Alaska by the project will be approximately 226 jobs;
- approximately 106 (47%) of those jobs will be in the NANA Region, divided almost equally between Kotzebue and other regional communities;

- approximately 120 (53%) of those jobs will be in other communities in Alaska, including 92 (41%) in the Anchorage area and 28 (12%) distributed among other Alaskan communities; and,
- for every $1 million (in 1983 dollars) that Cominco spends in Anchorage to resupply the mine, approximately 40 additional indirect and secondary jobs will be created in the Anchorage area.

3. INCOME

Direct income will be generated by the Red Dog Mine in the form of wages and salaries paid by Cominco to the mine employees. The indirect and secondary jobs created by the project also will generate new income, in the form of wages and salaries received by the employees who take those new jobs. This section of the report estimates the magnitude and distribution of these new income gains within the State of Alaska.

a. Direct Income (Annual)

Cominco originally estimated that it would pay mine employees through annual gross payrolls of approximately $23 million in 1983 dollars during the mine's Construction Phase (CP) and $13.5 million in 1983 dollars during the Full Production Phase (FPP). Later, Cominco apparently revised its total work force estimate for the project; no revision was available, however, for the company's annual gross payroll estimate.

This analysis, consequently, estimates annual direct income on the basis of pro rata adjustments to Cominco's earlier payroll estimates, using the following assumptions:

(1) the average annual gross payroll for mine employees during the Construction Phase (CP) will be less than $23 million by an amount proportional to Cominco's revised (FTE) estimate of total

work force employment for this phase; therefore, average annual gross payroll for the phase will be approximately (143/372 X $23 million =) $8.84 million; and,

(2) the average annual gross payroll for mine employees during the Full Production Phase (FPP) will similarly be less than $13.5 million by an amount proportional to this analysis' estimate of total work force employment for this phase; therefore, average annual gross payroll for the phase will be approximately (350/420 X $13.5 million =) $11.25 million if the total work force is 350 employees, or approximately (400/420 X $13.5 million =) $12.86 million if the total work force is 400 employees.

Based on these assumptions, the direct annual income from the Red Dog Mine project (excluding the eight employees at the Company's financial office in Anchorage) is estimated as shown in Table C-3. (See Table C-3.)

Direct annual income estimates for the Red Dog project during the Construction Phase (CP) can therefore be summarized as follows:

- total annual direct income will be approximately $8.84 million in 1983 dollars;

- NANA-Region residents will receive approximately $3.54 million (40%) of this total, with approximately 46% ($1.63 million) of that going to Kotzebue residents and 54% ($1.91 million) to residents of other NANA Region communities;

- residents of other Alaskan communities will receive approximately $4.24 million (48%) of the $8.84 million, divided nearly equally between residents of the Anchorage area and residents of other communities in the State; and,

- mine employees hired from outside of Alaska will receive approximately $1.06 million (12%) of the total $8.84 million.

Direct annual income estimates for the mine's Full Production Phase (FPP) can therefore be similarly summarized as follows:

- total annual direct income will range between $11.25 million and $12.86 million in 1983 dollars (with a mid-point of $12.06 million);

  NANA-region residents will receive approximately $7.54 million (62.5%) of this total, with approximately 46% ($3.47 million) of that going to Kotzebue residents and 54% ($4.07 million) to residents of other NANA-Region communities;

- residents of other Alaskan communities will receive approximately $3.62 million (30%) of this total, divided nearly equally between residents of the Anchorage area and residents of other communities in the State;

- if the 8 employees at the mine's Anchorage office receive $35,000 per year, this would represent an additional $280,000 in direct annual income for residents of the Anchorage area; and,

- mine employees hired from outside of Alaska will receive approximately $900,000 (7.5%) of the total annual direct income generated by the mine.

b. Indirect and Secondary Employment Income (Annual)

There is no convenient way to estimate the different wage levels and salaries received by Alaska employees in the various service and support industries. The annual income from the indirect and secondary jobs created in Alaska by the Red Dog Project has therefore been estimated on the basis of a fixed $25,000 per year for each such job created. The magnitude and distribution of these estimated income gains is shown in Table C-4. (See table C-4.)

TABLE C-4

4. UNEMPLOYMENT IMPACTS

The Red Dog Mine project is expected to have a substantial effect on unemployment within the NANA region, due to the jobs made available through employment at the mine site. While the number of jobs likely to be obtained by regional residents can be estimated, however,it is not so clear what the effects of those jobs may mean in terms of regional unemployment levels. Many unemployed regional residents may be available for work, for example, but do not appear on the State's unemployment rolls. Also, some unemployed regional residents simply do not seek conventional forms of employment, preferring instead a traditional subsistence lifestyle. Identifying an overall regional "unemployment level" which would be "reduced" by the direct employment at the mine site, consequently, is complicated by the existence of these two groups of people. For this reason, and because of the time constraints surrounding preparation of this report, no estimate has been made of the unemployment impacts likely to be caused by the project's direct employment effects, other than to acknowledge that those impacts will likely be important. Given the assumptions made earlier, however, it is possible to estimate the unemployment impacts likely to occur because of the project's indirect and secondary employment effects.

Based on the assumptions made in Section "b." of this part of the report ("Indirect and Secondary Employment"), estimates have been made of the number and distribution of net unemployment reductions caused within Alaska by the indirect and secondary employment effects of Red Dog Project hiring. These estimates, representing numbers of local residents hired who previously were unemployed, are shown in Table C-5. (See Table C-5.)

TABLE C-5

RED DOG MINE
NET UNEMPLOYMENT REDUCTIONS
THROUGH INDIRECT AND SECONDARY EMPLOYMENT

Number of Previously Unemployed Residents Hired During:

	CP	FPP@350	FPP@400	Average FPP Range Mid-Points
Kotzebue	5	14-21	17-25	19
Villages	7	24-35	28-41	32

CP = Construction Phase
FPP = Full Production Phase (@ total work force level indicated)

* Includes 8 personnel at Anchorage Office.

Source: Office of Management and Budget, State of Alaska

11/1368

It should be noted that every $1 million spent by Cominco in Anchorage for short-term resupply of the mine is estimated to result in the hiring of an additional 14 Anchorage area residents (net) who previously were unemployed.

5. POPULATION IMPACTS

Because of the "enclave" nature of the Red Dog Mine project, population increases within the NANA region currently are expected to be limited to approximately 5%. The project sponsors also intend to emphasize the project's local hire aspect in their recruiting advertisements, which should further help to contain regional population growth. If regional population gains due to the project's direct employment effects were only 5%, however, this still would represent approximately 275 new residents in the region (5,500 population x .05), with roughly half of that growth likely to occur in Kotzebue and half in the region's other community.

Based on the assumptions made in Section "b." of this part of the report ("Indirect and Secondary Employment"), estimates have been made of the net increases in local populations caused within Alaska by the indirect and secondary employment effects of the Red Dog project. These estimates, which include net population increases due to new employees and their families, are shown in Table C-6. (See Table C-6.)

It should be noted that every $1 million spent by Cominco in Anchorage for short-term resupply of the mine is estimated to increase the Anchorage area population by an additional 55 people (net).

6. REGIONAL SAVINGS IN SHIPPING COSTS

The sponsors of the Red Dog Mine project propose to use their ore-concentrate vessels to back-haul supplies of fuel and cargo to the NANA Region. These supplies would be lightered from the proposed port facility West of Noatak to Kotzebue, and then distributed to Kotzebue residents and to residents of other communities in the region. Execution of this operation would entail supplanting the shipping operation which currently provides this service to Kotzebue and regional residents, according to the project sponsors.

Cominco has estimated that this use of the port facility will save regional residents approximately $2.6 - $3.5 million a year in shipping costs, compared with the current method of shipping bulk cargo and fuel into the region. Such a level of savings would represent an annual savings of approximately $630 per regional resident, according to the estimate, or about 9% of the average regional resident's annual income.

Analysis shows this estimate to be reasonably made, although it does rest on several assumptions which are subject to change. One is that tax-exempt financing for the port facility can be obtained at 8% annual interest. A second is that no overtime expenses are incurred regarding labor costs. A third is that land for the port facility can be leased or purchased for no cost, other than an estimated $7,000 per year for land disturbance expenses. A fourth is that cycle times for the port's operations will be maximally efficient and thus minimally expensive. A fifth is that shipping costs for bulk cargo and fuel will remain constant at present levels. A sixth is that the capital costs of the port facility itself will turn out to be as currently estimated.

Of these assumptions, only two could be assessed within the report's timeframe. These were the cost of tax-exempt financing, and the overtime cost for labor. After adjusting for these factors, however, and after correcting calculation errors in the estimate, only a slight difference from

the original estimate was found. As an "outside" case, for example, the estimate was tested using the following assumptions: a 12% annual interest rate for financing, an overtime labor expense equalling 30% of payroll (for those labor categories likely to be affected), and imposition of a 5% import duty on bulk fuel delivered from Canada. Under these assumptions, the total annual savings in regional shipping costs would be approximately $2.3 million per year. This would represent an annual savings of approximately $418 per resident, or roughly 6% of the average regional resident's annual income.

Allowing for the other assumptions made in the Cominco estimate, therefore, an estimate of roughly $2 - $3 million saved annually would seem to be reasonable at this point.

7. SUMMARY OF FINDINGS

The principal findings of this analysis address the economic impacts which can be expected during the projected 40-year life of the proposed Red Dog Mine. These findings, based on the assumptions made, have resulted in the following overall estimates:

- total long-term mine employment probably will range between 350 and 400 full-time jobs;
- NANA-Region residents probably will obtain 50%-75% of those jobs, or approximately 220-250 jobs, with the total divided evenly between Kotzebue residents and residents of other communities in the region;
- the project probably will generate approximately 225 indirect and secondary jobs, of which approximately half (106 jobs) will be obtained by NANA-Region residents;

- approximately 92 of the indirect and secondary jobs generated by the project will be obtained by Anchorage area residents, with another 28 such jobs distributed among other Alaskan communities;

- for every $1 million that Cominco spends on supplies in Anchorage, approximately 40 additional new jobs will be created in the Anchorage area;

- total direct income generated by the mine probably will range between $11-$13 million per year in 1983 dollars, with NANA-Region residents obtaining between $7-$8 million of the total;

- residents of other parts of Alaska probably will receive approximately a third (30%) of the $11-$13 million in total annual income, divided approximately evenly between Anchorage area residents and those of other Alaskan communities;

- indirect and secondary employment deriving from the mine's effects probably will produce some $5.7 million in total annual income, of which approximately half ($2.65 million) will be received by NANA-Region residents;

- the project's indirect and secondary employment effects will cause a modest drop in local unemployment levels, causing approximately 50 previously unemployed persons to be hired within the NANA Region and an additional 30-60 persons across the rest of the State; and,

- local population increases due to the mine project's indirect and secondary employment effects probably also will be modest, totaling approximately 280 new residents and dependents across the State, but may have significant local consequences within the NANA Region (e.g., approximately 70 new residents in Kotzebue).

D. FISCAL IMPACTS

INTRODUCTION

This analysis estimates the major fiscal impacts which the State of Alaska may experience as a result of the proposed Red Dog Mine project. The fiscal impacts estimated include the magnitude of tax revenues likely to be received by the State from the earnings and operations of the project, and the potential State expenditures for the project's infrastructure (an access road and a port facility). Other potential impacts noted include the effects of the project on the State's programming costs, and the effects of the project on local unemployment costs.

1. TAX IMPACTS

The principal State taxes applicable to the Red Dog operation, and therefore the greatest potential source of tax revenues to the State, are the mining license tax (MLT) and the corporate income tax (CIT). A third tax applicable to the project is the State's motor fuel tax (MFT), though it is not a major source of tax revenues for this particular project.

For an operation the size of the Red Dog project, the applicable mining license tax rate is $4,000 plus 7% of the taxpayer's net income in excess of $100,000. An exemption from tax payments is permitted for the first three and one-half years of a new mine's operation, as is a specific depletion allowance, depending on the particular resource being extracted. In the case of the Red Dog mine, which is primarily a zinc and lead mine with associated silver ore, the applicable depletion allowance appears to be 15% (AS 43.650.010(e)(2)).

The applicable corporate income tax rate for the Red Dog mine operation is $4,500 plus 9.4% of the taxpayer's taxable income over $90,000. While calculation of this tax appears straightforward enough,

however, a substantial complication arises in estimating corporate income tax payments because of the prolixities and uncertainties regarding the State's unitary tax formulas. (Alaska uses the traditional three-factor approach, which apportions a multi-state or multi-national corporation's sales, property values and salaries, and levys the tax on the proportion of those elements which are directly relatable to Alaska.) This is a particularly difficult constraint in the case of the Red Dog mine analysis, as the project sponsors have provided the only available estimate of their potential tax liability in Alaska, and this estimate has not been based on the unitary approach.

The State's motor fuel tax entails a levy of 2¢ per gallon for internal-combustion equipment which is used off-highway, and a levy of 8¢ per gallon for such equipment when used on roads. Because both the mining license tax and the corporate income tax are both net profits taxes, and therefore sensitive to taxpayers' reported earnings, a certain amount of uncertainty is involved in estimating future tax payments based on these instruments. In the case of the Red Dog operation, this necessitates a significant reliance on forecasts of future metals prices. This analysis, therefore, has used a range of 20-year average price forecasts for the Red Dog mine metals which has been provided by the Office of Minerals Development, Alaska Department of Commerce and Economic Development. These price forecasts, along with recent market prices for the Red Dog metals, are shown in Table D-1. (See Table D-1.)

Based on these forecasts, Cominco-American, Inc., has estimated that its annual tax amounts due to the State from the Red Dog Mine operation will be approximately as shown in Table D-2, below. (See Table D-2.)

Source: Cominco-American, Inc. (Spokane, Washington)

As can be seen from Table D-2, Cominco-American, Inc., estimates that its tax payments to the State will average approximately $8 - $13 million per year (in 1983 dollars). Analysis of this estimate shows that the company's estimation procedure is consistent with current Alaska statutes and provisions therein. Several factors should be kept in mind, however, as they will ultimately determine the actual amount of State taxes paid by Cominco-American. These include: (1) the State has not yet promulgated regulations regarding implementation of the mining license tax; (2) Cominco-American's tax estimates are based on a separate accounting method, whereas the method actually used could turn out to be the unitary tax basis; and (3) Cominco's corporate income tax liability was calculated without provision for any debt or interest costs in the base that are unrelated to a possible State loan.

A similar situation arises in attempting to assess the potential tax revenues which the State may receive from NANA Development Corporation (NANA) because of the project. Based on Cominco's projections of the royalties to be paid to NANA for the project, NANA's average annual tax payments to the State are estimated as shown in Table D-3, below. (See Table D-3.)

Table D-3 indicates that NANA may have a total State tax liability of approximately $1.4 - $3.2 million per year prior to 1991 (i.e., until its projected conversion from advance royalty payments from Cominco to net proceeds payments), and approximately $4 - $7 million per year thereafter, in 1983 dollars. In fact, NANA itself will pay a considerably lower amount of annual State taxes, as NANA representatives estimate that approximately 66% of NANA's total proceeds from the mine will be distributed to the other regional Native corporations in Alaska under section 7(i) and 7(j) of the Alaska Native Claims Settlement Act. The total amount of annual taxes received by the State should remain relatively unchanged, however, as State taxes on the distributed portion of NANA's proceeds should be recouped through tax payments from the other Native corporations.

Several factors thus make assessment of the potential Red Dog Mine tax revenues somewhat uncertain at this point. The most important among these are the profit-based orientation of the two major tax instruments involved, the current absence of mining license tax regulations, and the as yet indeterminate effects of any unitary tax applications yet to come.

2. STATE INFRASTRUCTURE EXPENDITURES

Three financing scenarios have been discussed regarding possible State participation in the infrastructure costs for the Red Dog mine. One is the case where the State simply offers a flat grant in the amount of $135 million (1983 dollars) to build both the road ($83 million) and the port facility ($52 million). A second is the case where industrial development bond financing is provided for the project infrastructure, either through the Alaska Industrial Development Authority or through a regional resource development authority. A third is the case where the State extends a $135 million no-interest loan to Cominco for construction of the road and the port.

The first two cases require little elaboration, because the costs to the State are fairly clear. In the case of a direct grant, the cost to the State would be the full $135 million. In the case of revenue bonding, assuming the project would withstand the scrutiny of investors, the costs to the State would be limited to relatively small administrative costs incurred as handling costs for the bond issue.

The implications of a $135 million no-interest loan to Cominco, however, are not so clear. On the one hand, Cominco proposes to pay off the loan, yet still leave ownership of the road and port in the hands of the State. On the other hand, however, Cominco proposes that payback occur over a 20-year period which begins after a 10-year period

of deferred payments. The potential cost implications of this scenario for the State should not be overlooked. Specifically, depending on how the State chooses to define its opportunity cost of capital (e.g., between 8% and 12%), and assuming overnight construction costs, the payback to the State from such a loan could be worth approximately $16-$30 million in present value. This would represent a direct State cost of approximately $105-$119 million dollars.

Table D-4, below, shows the present value to the State of a $135 million no-interest loan offered with varying periods of deferred payments. Also shown are the related direct State costs involved. As can be seen from Table D-4, State costs are not sensitive to varying deferment periods, as even with no deferment the direct State cost ($68 million in 1983 dollars) is still approximately half the cost of the original loan, or more. (See Table D-4.)

Table D-5, below, shows a broader range of options for State lending assistance to the Red dog project, and the associated direct costs to the State. It can be seen from the table that various combinations of shortening the $135 million loan's deferment period, and charging Cominco an interest rate commensurate with the State's own cost of capital, could significantly reduce the State's cost. Additionally, it might be possible to equate annual loan repayment amounts with the sum of the annual direct benefits received from the project. This latter approach might at least provide a basis for determining the loan level (or terms) which the State would be willing to offer to Cominco and NANA. (See Table D-5.)

3. STATEWIDE PROGRAM COSTS

Time constraints have prevented analysis of the potential increases in State program costs which might result from the effects of the Red Dog Mine project. However, it is possible to estimate broadly the likely magnitude and distribution of net local population increases due to the project's indirect and secondary employment effects. These estimated local population gains have been estimated as follows:

* approximately 70 new people will move into the Kotzebue area;

* approximately 40 new people (total) will move into the other ten NANA region villages.

* approximately 125-130 new people will move into the Anchorage area;

* Cominco supply expenditures could cause additional population gains in the Anchorage area, at the rate of approximately 55 new residents per $1 million spent locally; and

* approximately 40 new people (total) will move into other communities across the State.

4. STATEWIDE UNEMPLOYMENT COSTS

Time constraints have prevented analysis of the potential decreases in State unemployment costs which might result from the effects of the Red Dog Mine project. However, it is possible to estimate broadly the magnitude and distribution of net local unemployment reductions due to the project's indirect and secondary employment effects. These reductions have been estimated as follows:

* approximately 20 previously unemployed residents of Kotzebue will gain employment;

* approximately 30 previously unemployed residents (total) of the NANA region's other communities will gain employment;

* approximately 30 such individuals in Anchorage will gain employment;

- **Cominco supply expenditures could cause additional employment of previously unemployed persons in the Anchorage area, at the rate of approximately 14 unemployed persons hired per $1 million spent locally; and,**

- **Approximately 10 such individuals (total) will gain employment in other Alaska communities.**

E. COMINCO/NANA CONTRACTUAL AGREEMENT

The agreement appears to contain no provisions which would alter this report's assessment of the fiscal and economic impacts of the project.

F. EFFECTS ON STATE BONDING CAPACITY

Industrial development bonding, either through the Alaska Industrial Development Authority or through a yet-to-be structured regional resource development authority, is the only bonding option which has been discussed seriously to date for financing the Red Dog Mine infrastructure (the access road or the port facility). This approach, if undertaken, would essentially require the project sponsors to pledge Red Dog Project revenues toward repayment of any revenue bond financing obtained. As such, this financing method would not be "affordable" to the State only to the extent that it:

(1) increased the State's borrowing costs on other bond issues;
(2) saturated the national market for Alaska bonds; or,
(3) diluted the strength of the State's so-called "moral obligation pledge". None of these outcomes are regarded as likely.

Assuming that the Red Dog Project will be viewed as economically feasible by market investors, therefore, industrial development bonding for the project infrastructure should not in itself adversely affect the State of Alaska's overall bonding capacity.

G. SYNOPSIS

This synopsis presents the major findings of the Office of Management and Budget on the Red Dog Mine project.

Task 1 - Cominco Corporate Profile

- Cominco Ltd. is an established and sound company, with good overall prospects, and is backed by a large and reputable parent corporation.

- The company appears able to provide a solid corporate base for support and development of the Red Dog Mine project.

Task 2 - NANA Corporate Profile

- NANA Regional Corporation appears to be solvent and strongly oriented towards projects which offer long-term employment benefits to its shareholders (principally joint business ventures within northwest Alaska).

- The corporation's participation in the Red Dog Mine project appears consistent with its corporate purposes and past activities.

Task 3 - Direct and Indirect Economic Impacts

- No guarantee exists that the project sponsors' projected employment goals or local hire goals will be achieved.

- The project appears likely to create 350-400 permanent jobs at the mine site, constituting approximately $11-$13 million per year (1983 dollars) in total direct income.

- NANA region residents may obtain an estimated 220-250 (50%-75%) of the mine jobs, constituting approximately $7-$8 million per year (1983 dollars) in direct income for regional residents.

- The project may generate an estimated 225 additional jobs within the State due to indirect and secondary employment effects, constituting an estimated $5.7 million per year (1983 dollars) in additional income.

- NANA region residents may obtain an estimated 100-110 (47%) of these additional jobs, constituting approximately $2.7 million per year (1983 dollars) in additional income for regional residents.

- The project's indirect and secondary employment effects may cause approximately 50 previously unemployed persons to be hired within the NANA region, plus an additional 30-60 such persons elsewhere in the State (chiefly, in the Anchorage area).

- No basis is available at present for estimating the number of job-seeking in-migrants which the project might attract into the State, though the project sponsors will attempt to minimize such effects through advertising.

- Local population increases due to the project itself probably will be moderate, totaling an estimated 280 new residents (including dependents) across the State, exclusive of in-migration. These increases could have significant local consequences within the NANA region, however, (e.g., an estimated 70-75 new residents in Kotzebue, exclusive of in-migrants).

Task 4 - Fiscal Impacts

- The total amount of tax revenues that the State is likely to receive for the Red Dog Mine project has been estimated to be approximately $9 to $16 million per year during the years 1988 to 1991, and approximately $12 to $20 million per year after 1991 (in 1983 dollars). This estimate is reasonably made and is consistent with current Alaska tax statutes. It is necessarily speculative, however, due to the profits based nature of the taxes involved, the current absence of mining license tax regulations in Alaska and the possibility that the project sponsors' actual tax liability may be based on unitary taxation principles in the future.

- An interest-free loan to Cominco of $135 million (with a 10-year deferment of payments, to be followed by a 20-year repayment period), for construction of the mine access road and port facility, could represent a direct net cost to the State of approximately $100-$120 million (1983 dollars).

- Increases in State and local program costs due to project-caused population increases could be moderate, though not insignificant at the local level. Such costs would depend largely on the extent to which the project induced speculative in-migration into the State and into the NANA region.

Task 5 - Cominco/NANA Contractual Agreement

- The agreement appears to contain no provisions which would alter this report's assessment of the fiscal and economic impacts of the project.

Task 6 - Effects on State Bonding Capacity

- Industrial development bond (revenue bond) financing of the project infrastructure, including the access road and the port facility, would not, in itself, adversely affect the State's bonding capacity.

Department of Community and Regional Affairs
Municipal and Regional Assistance Division

February 21, 1984

I. TASK C-1: Examine the present and future relationship between the North Slope and project participants.

TASK C-2: Evaluate potential separation of mine properties from the North Slope Borough.

II. TASK C-3: Evaluate impact of the project on the region of influence with regard to labor, transfer payments, taxation, etc.

III. TASK C-4: Review the extent to which the economy of the region (NANA area of influence) is financed by State and federal appropriations.

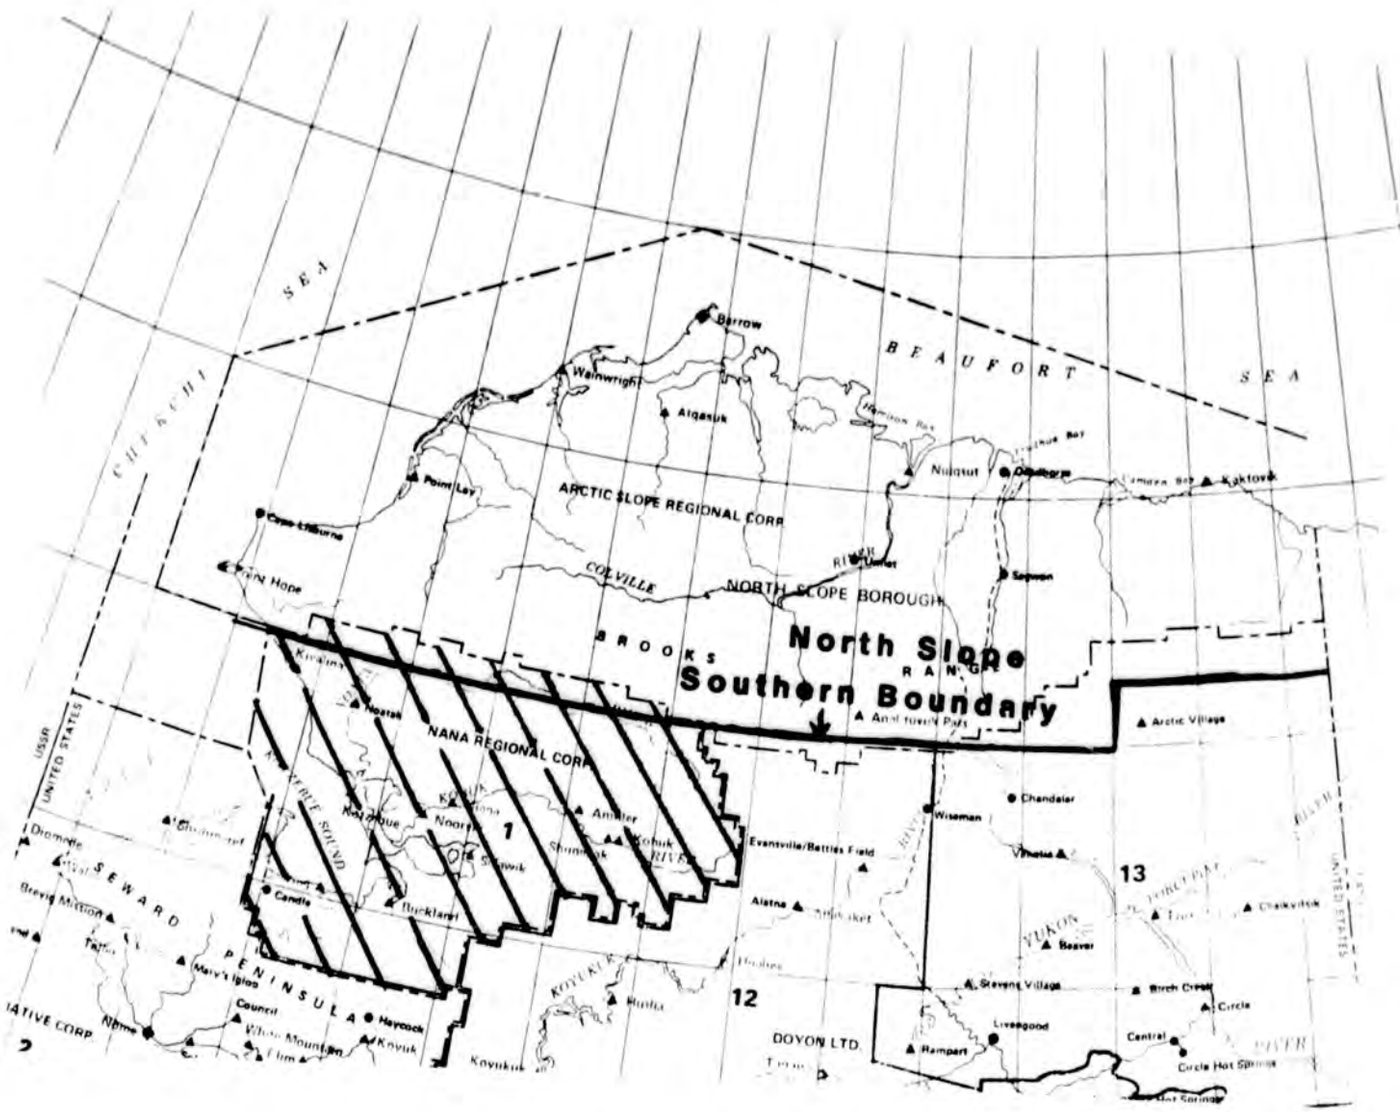
IV. General Comments and Recommendations

Appendix A: list of analysis assumptions

Appendix B: results of Department of Community and Regional Affairs Developments Assessment Model (CRADAM) as applied to the Red Dog Mine and the community of Kotzebue.

Appendix C: Bibliography

I. TASK C-1 and 2: 1.) Examine the present and future relationship between the North Slope Borough and project participants (Cominco and NANA. 2.) Evaluate potential separation of mine properties from the North Slope Borough.



INTRODUCTION

The North Slope Borough encompasses the vast majority of the Arctic Slope Regional Corporation boundaries, and portions of the NANA and Doyon Ltd. regional corporation boundaries (see map 1). The NANA region is investigating the possibility of initiating the procedures for the incorporation of a borough coterminous with its corporation boundaries.

The section of the NANA region which is within the North Slope Borough boundaries contains a highly mineralized area. This mineralized territory includes the Red Dog Mine. It is essential to the formation of the NANA borough that it have the Red Dog Mine within its boundaries so as to provide an adequate economic base for the borough.

The Red Dog Mine and the surrounding NANA territory lying within the North Slope Borough has no population nor has it been assessed for Borough property taxes. The Borough Assessor visited the area this fall, but has not arrived at a tax assessment. This territory has not received any Borough services.

For the past year, representatives of the NANA Corporation have been discussing with the North Slope Borough the matter of detaching the portion of the NANA corporation territory remaining within the North Slope Borough. Up to this time a resolution of this issue has not been achieved between the two entities. It is the intention of the NANA Corporation to formally request that the North Slope Borough initiate detachment procedures for the territory in question at a November 30th meeting in Kotzebue.

MAP 1

The following narrative has two purposes. The first section gives a historical perspective on the creation of the North Slope Borough and the formation of the Arctic Slope Corporation and NANA boundaries. The second section explains the alternative procedures for the detachment of that portion of the NANA region remaining within the North Slope Borough.

HISTORICAL PERSPECTIVE

In Inupiat people of the Arctic Slope and NANA Region have inhabited Alaska for thousands of years. Throughout this vast homeland, Inupiat language and lifestyles are remarkably similar. Flexibility and adaptability have been the keystones to the Inupiat success in this harsh region. Their social organization promoted cooperative effort and community sharing, and this, combined with mobility, adaptability regarding diet, and sophisticated techniques of travel, hunting, and survival, produced enduring cultural traits that persist in modified form to the present day. It is this sense of cooperation that has fostered the current negotiations between the NANA region and the North Slope Borough over the detachment of the Red Dog Mine area from the North Slope Borough.

North Slope Borough

A petition proposing the incorporation of a first class North Slope Borough was received by the Local Affairs Agency on April 4, 1971. On May 7, 1971, the agency notified the representative of the petitioners - the Arctic Slope Native Association - that the petition was accepted. The Commission conducted a public hearing on the petition in Barrow on December 2, 1971. The Commission approved the petition on February 25, 1972. Following the Commission's decision, an election was conducted, resulting in the incorporation of the North Slope Borough on July 1, 1972.

In arriving at the decision to approve the petition to incorporate the North Slope Borough, the Local Boundary Commission identified the

territory which would meet the standards for borough formation. The Commission found that the boundaries of the proposed organized borough conformed generally to the natural geography of the area proposed for incorporation.

The North Slope Borough petitioners proposed the incorporation of the entirety of a geographically distinct area of the State approximately bounded on the north and west by the Arctic Ocean, Beaufort and Chukchi Seas, on the south by the mountains cresting the Brooks Range. The most easterly boundary observes the State of Alaska-United States of American/Yukon Territory-Canada border.

The southerly boundary more precisely follows latitude 68°00'N from the State of Alaska Chukchi Sea boundary in an easterly direction to the point of intersection with longitude 146°00'W. At this point, the proposed boundary is extended northerly to its intersection with latitude 68°30'N from which point it follows latitude 68°30'N in an easterly direction to the State of Alaska/Canada border.

In rendering its decision, the Commission was further aware that the Congress of the United States, in the Alaska Native Claims Settlement Act of 1971 (Public Law 92-203), had required the Secretary of the Interior to form Regional Corporation in Alaska whose boundaries conformed to those of the existing Native Associations, that Congress had designated the Arctic Slope Native Association, and had characterized it as "Point Hope-Barrow," and that, in fact, the Arctic Slope Native Association did embrace the area comprehended by the petition, with the relevant provision of the Act, providing as follows:

> "For purposes of this Act, the State of Alaska shall be divided by the Secretary within one year after the date of enactment at this Act into twelve geographic region, which each region composed as far as practicable of Natives having a common heritage and sharing common interests. In the absence of good cause shown to the contrary, such regions shall approximate the areas covered by the operations of the following existing Native Associations."

On July 1, 1972, the North Slope Borough became the regional government for the entire Alaska Arctic region, with an elected mayor (three year term), a seven member assembly, and a seven member school board. As home rule borough it has assumed all legislative powers not prohibited by State law and allowed by its charter. Mandatory powers are: taxation, education; and planning, platting and zoning. The following powers were transferred to the Borough in an April 1974 election; 1) streets and sidewalks; 2) sewers and sewage treatment; 3) water course and flood control facilities; 4) health services and hospital facilities; 5) telephone systems; 6) light, power and heating utilities; 7) transportation systems; 8) water; 9) libraries; 10) garbage and solid waste collection and disposal services and facilities; 11) housing and urban renewal, rehabilitation, and development; 12) preservation, protection and maintenance of historical sites, buildings and monuments. Areawide police powers were transferred to the Borough in a July 1976 election.

Regional Corporation Boundaries

As previously noted, Sec. 7(a) of the Alaska Native Claims Settlement Act states that within one year of the date of enactment of the act, that the Secretary of the Interior would divide the State of Alaska into twelve geographic regions. Each region was to be composed of Natives having a common heritage and sharing common interests. This section of the Act continues to identify the twelve regional Native associations the geographic regions are to follow. The Arctic Slope Native Association (Barrow, Point Hope) and the Northwest Alaska Native Association (Kotzebue) regions are specifically identified.

The formation of the regional corporation's boundaries was not completed until the end of 1972. During the time that the regional boundaries were being defined, the North Slope Borough was incorporated. Consequently, the incorporation of the Borough prior to the establishing of the corporation boundaries resulted in the inclusion of the Red Dog Mine territory within the North Slope Borough boundaries.

It was not clear until the creation of the regional boundaries was completed whether the community of Point Hope and the lands in the vicinity of Point Hope would be in the NANA or Arctic Slope regions. An election conducted in Point Hope settled the issue, as residents voted to be part of the Arctic Slope Region.

DETACHMENT PROCESS

As previously stated, the northern portion of the NANA region is within the North Slope Borough. Unless this territory is detached from the Borough, it is doubtful that the NANA region will have a sufficient economic base from which to finance the management of a borough government. The following section examines the process by which the territory can be detached from the North Slope Borough.

Detachment Process

There are two alternative approaches to initiating a detachment petition. The first approach (local action) initiates a petition that would be presented, if approved by the Local Boundary Commission (Commission), for a vote by the residents of the territory proposed for detachment. A simple majority would effect the detachment. As there are no residents in the northern section of the NANA region to be detached from the North Slope Borough, the local action process is not an alternative.

The second approach (legislative review) requires the petition to be presented, if approved by the Commission, to the Alaska Legislature for its final approval. However, both types of petition have a limited number of ways in which they can be initiated. In 19 AAC 10.470, it stated that a petition may be initiated by:

1. The governing body of a municipality whose boundaries are to be changed;

2. The governing body of an organized borough in which the territory is located;

3. At least 10 percent of the registered voters residing in the territory to be annexed or detached, in the municipality to be dissolved, or in each municipality emerged or consolidated;

4. The Commissioner.

The first and second means of initiating a detachment petition are both applicable to the North Slope Borough as it is the municipality whose boundaries are to be changed. The third means of initiating a detachment petition is not applicable in the detachment of the Red Dog Mine territory as there are no residents in the territory proposed for detachment. Consequently, the detachment process must be initiated either by the North Slope Borough or the Commissioner of the Department of Community and Regional Affairs.

Legislative Review Process

The legislative review process has established procedures for initiating and conducting a detachment (19 AAC 10.450-.620). The following describes the process:

Department Review

In accordance with 19 AAC 10.520, the Department must review the petition and brief to determine that they are substantially in proper form and contain the factual information required. If the Department determines that the petition and brief are sufficient, the petition will be submitted to the Local Boundary Commission. In addition, the Department prepares a report to the Commission on the proposed action.

Commission Review

Upon receipt of the petition from the Department, the Commission will establish a time and place for public hearing(s) concerning the

proposed boundary change. The public hearing would be held in or near the territory proposed for detachment. In this instance, public hearings might be held in both the North Slope Borough and the NANA region. In accordance with 19 AAC 10.225-.250, the Commission will review the detachment petition through the application of the established standards for detachment of territory from organized boroughs.

Commission's Recommendation

Following the public hearing, the Commission will either deny or approve the petition. The Commission does have the authority to amend the boundaries proposed for detachment. If the Commission approves the petition, with or without amendments, it will forward its recommendation to the Legislature.

Legislative Review

The Commission's recommendation must be submitted to the Legislature within the first ten days of legislative session. After 45 days from the date of the Commission's recommendations submittal to the Legislature, the proposed boundary change becomes effective unless there is a concurrent resolution passed by both houses of the Legislature in opposition to the proposed boundary change.

Borough Incorporation

It should be noted that 19 AAC 10.170(c) and 19 AAC 10.240(b) state that the Commission will not consider a petition for incorporation of an area located partially or wholly within an organized borough until the petitioners have submitted, and the Commission has approved, a petition for detachment of the area from the borough.

If it is the intention of the NANA region to petition for the formation of a borough, which will include the area to be detached from the North Slope Borough, the timing of the sequence of events is crucial.

SUMMARY

A quick review of the sequences of events identifies why the Red Dog Mine is within the North Slope Borough. The 1972 incorporation of the North Slope Borough was completed several months prior to the establishing of regional Native corporation boundaries. The final land selections for the Arctic Slope Regional Corporation and the NANA Corporation were made during the 1975-76 period.

It is unclear at this time, if the area containing the Red Dog mining project will be detached from the North Slope Borough. However, it is obvious that the detachment will be a factor in the decision to proceed with the development of the project given the uncertain future taxation policies of the North Slope Borough.

The formation of the NANA Borough is dependent upon the detachment of this property from the North Slope Borough. Various organizations and leaders have supported the concept of borough formation in this area, given a tax base of this nature.

I. TASK C-3: Evaluate impact of the project on the region of influence with regard to labor, transfer payments, taxation, etc.

For the purposes of this analysis, the region of influence was taken to be the incorporated boundaries of the NANA Regional Native Corporation. Where relevant, the region was further divided into two major components: Kotzebue and the outlying villages (ten). Some further focus was placed on the communities of Kivalina and Noatak which are most closely located to the project.

The impacts here discussed include:

- regional employment (direct/secondary; resident/nonresident)
- population (resident/nonresident; Kotzebue/outlying villages)
- per capita (household) income
- area service needs (schools, medical, public safety, governmental, etc.)
- transfer payments (state, federal, etc.)
- cultural

EMPLOYMENT (AND UNEMPLOYMENT)

Existing employment patterns. A baseline description of existing employment patterns will first be presented, followed by an assessment of the likely affects of employment resulting from development of the Red Dog Mine.

It is important to note that the existing regional economy is, to a large degree, a reflection of the continuing subsistence relationship to

the land maintained by a large number of the region's residents. Consequently, a number of accepted measures of "employment" or "occupation" are simply not valid when applied to the activities pursued by the NANA resident population. In particular, the use of U.S. Census measures of employment, and unemployment, is limited primarily to providing some indication of the proportion of residents who participate more directly in the region's "wage earning" economy.

Another measure of unemployment, the State's unemployment roles, reflect only those numbers of individuals who are actively seeking "wage earning" employment and are subsequently picked up by the tracking system provided by the State's job service programs. A rough calculation based on the 1980 U.S. Census information available for the outlying villages in the region indicated generally that less than 3-5% of the population were employed in "full-time" wage-earning jobs. Another 5-10% held "half-time" jobs and another 25-40% found some "part-time" employment during the year.

It should be noted that a large number of the above full and half-time jobs were teaching jobs; often occupied by non-Native persons. There are about 300-500 full-time-equivalent jobs in the outlying villages and about 250 of these jobs are education/profession related (including librarians, teacher aides, etc.). The next largest providers of employment are local government and federal programs.

In Kotzebue, based on the 1980 Census, there are about 500 full-time jobs, about 150 half-time jobs, and about 400 part-time jobs. It is estimated that there are about 600-800 full-time-equivalent jobs in the Kotzebue area. Of the full-time jobs, about 250 positions are connected with the administration and provision of services (i.e., NANA; Maniilaq, State, federal and local agencies). Another 150 jobs are connected with School District operations (both administration and teaching).

Combining the above employment estimates for Kotzebue and the outlying villages indicates a regional full-time-equivalent employment of

approximately 1,200. A recent labor market study performed by Darbyshire and Associates for NANA estimated a total of 1,400 full-time-equivalent jobs in the region. That report also projected that, in the absence of the Red Dog project, there would be essentially no growth in the regional employment opportunities over the next ten years. Our review of available materials substantiates that assumption.

Estimated Red Dog Mine Employment. Figures 1 and 2 present employment estimates for the Red Dog project (onsite), including estimates of NANA resident employment. Figure 1 breaks out the employment for each of the construction and production phases, while Figure 2 combines the workers associated with these two phases to indicate the total number of jobs for a given period of time. Figure 2 includes some employment information for the early exploratory drilling activities which have already taken place (1982).

During the construction phase, it is estimated that the NANA resident workforce will rise from 35% of the total workforce at the beginning of actual construction (25 residents), to a figure of more than 50% (100 residents) during the peak of construction. Two other studies of resident employment (Darbyshire, 1982; Waring, 1983) are less optimistic and project a resident employment of 33% throughout the construction phase. The higher employment estimates proposed in this report result from a consideration of the construction phase job descriptions as provided by Cominco; the aggressive approach being taken by various training/placement agencies; the positive attitude of the residents (Berger and Associates, 1983; Cultural Dynamics, Ltd., 1983); and previous resident employment experience with the Alaskan Pipeline Project (Naylor and Gooding, 1978).

Two years before actual production begins, Cominco will begin to employ a number of managerial/technical personnel for the Red Dog Project. Many of these positions will simply transfer from other Cominco operations. At any rate, NANA residents are not likely to participate directly in this "pre-production" labor force until about a year before startup, at which time a number of entry level professions

FIGURE 1

ESTIMATED RED DOG MINE EMPLOYMENT
CONSTRUCTION AND PRODUCTION PHASES

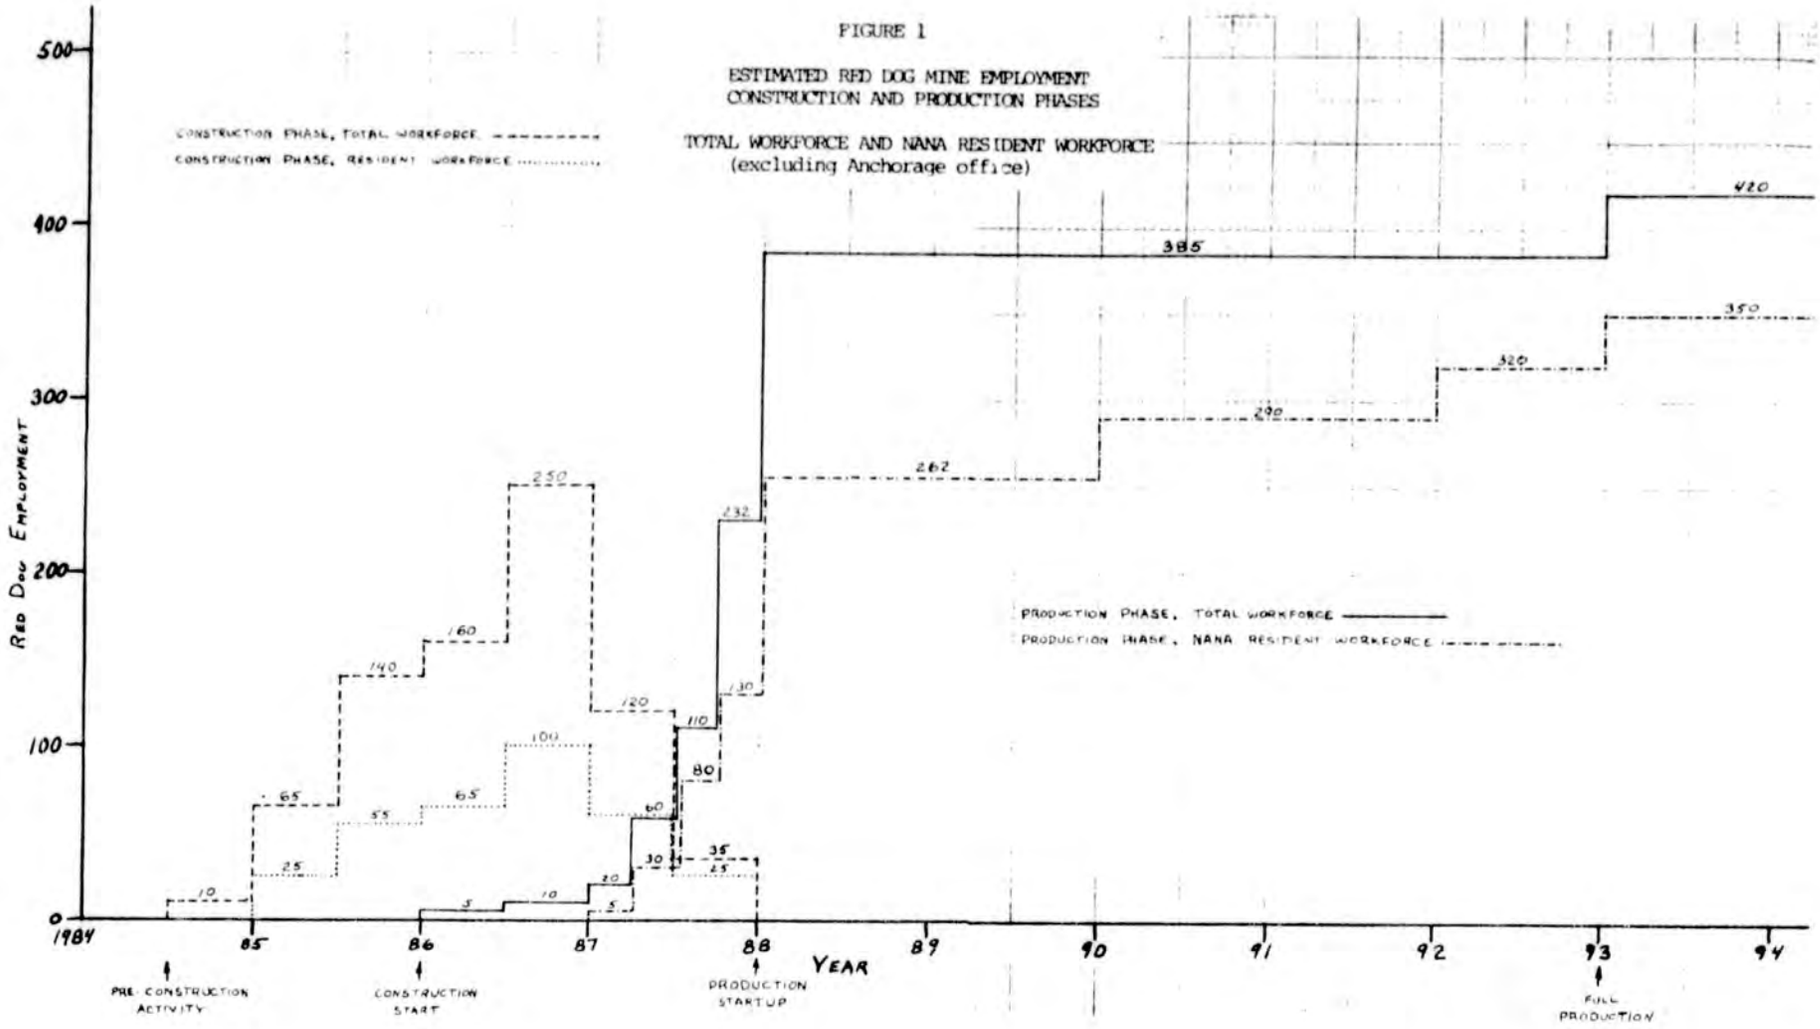
(excluding Anchorage office)



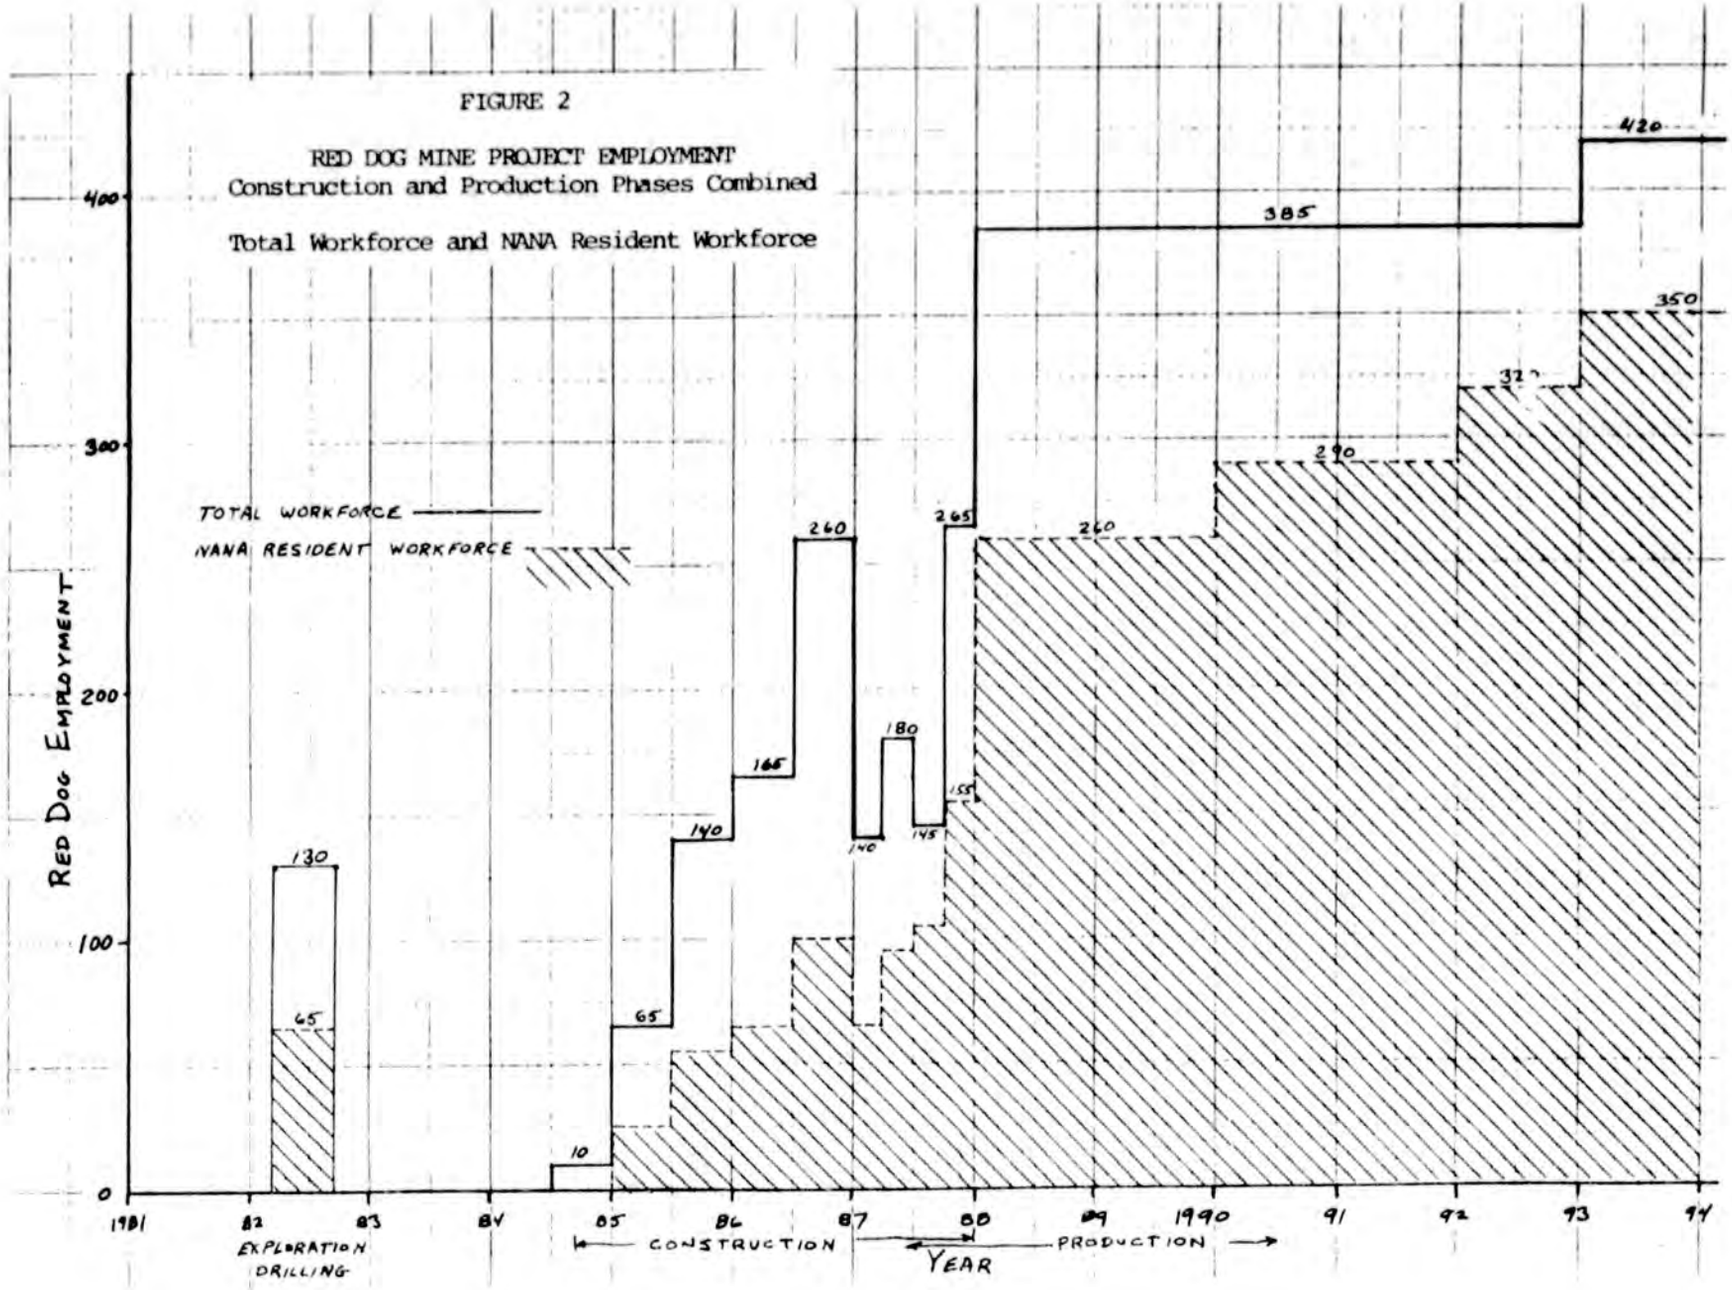


FIGURE 2

RED DOG MINE PROJECT EMPLOYMENT
Construction and Production Phases Combined

Total Workforce and NANA Resident Workforce

will be required to assist in the mobilization of the plant (assistant operators, administrative assistance, etc.). At that time, NANA residents in the slowly growing production workforce should represent about 25% (5 residents) of the total production mobilization workforce. However, that number should quickly grow over the course of the last preproduction year, reaching a value of about 66% (262 NANA residents) at the time of production startup.

This number for resident employment at startup was again derived by an inspection of the individual job descriptions provided by Cominco, considering the available labor force and assuming the successful implementation of planned vocational training programs. This estimate is higher than the value of 42% assumed in the Draft EIS for the project (Waring, 1983), which was reportedly provided by Cominco. It is most likely that actual resident employment at startup (1988) will fall somewhere between these two values.

As a rough guess, 80 of the above 262 residents in the startup workforce would come from the villages of Kivalina and Noatak (40 from each community), with the remainder of jobs evenly distributed throughout the region by population (Kotzebue, 90; outlying villages, 90).

It is assumed that the proportion of resident employment will continue to increase slowly over the course of mining operations. Notable increases in resident employment should occur at about two years into production as resident graduates from trade and vocational schools come into the labor force. Again, after four to five years from startup, another increase in local employment should take place as residents obtain advanced degrees in technical fields, assisted by Cominco scholarship funds (up to $30,000 per year). A final jump in resident employment should occur when the mine steps up to full operation in year six. Most of the new jobs at that time should be obtainable by NANA residents. At that time, NANA residents should represent over 80% of the total workforce.

Further increases in the proportion of resident hire should occur slowly over the life of the mine. It is possible that NANA could achieve its stated goal of 100% resident employment; however, no time frame is here assumed.

Secondary Employment Estimates: Because of the fully enclaved nature of the proposed project, there should be virtually no direct employment away from the site (other than in Anchorage). However, there should be a substantial number of support service jobs generated as a result of the mine operations and the generally increased affluence of the population. Most of these secondary jobs will occur in Kotzebue, although there should be some small increases in service and construction employment in the outlying villages.

As many as 150 secondary jobs should occur during the transition from project construction to project operation. This number will quickly diminish to 100 within a year or two of startup, finally stabilizing between 50 and 100 jobs as the local economy absorbs the transient activity of the new development. NANA residents should capture most of the secondary employment resulting from the mine, although there are certain to be at least a small number of nonresidents who find work in Kotzebue, particularly during the construction/early production phases.

POPULATION

The current population of the NANA region is approximately 5,200. Of these, approximately 4,500 are Native (86%). The population of Kotzebue is estimated to be 2,400, of which 1,800 (79%) are Native.

Table B.1, Appendix B, presents a projection of the population of Kotzebue as it would be expected to grow without the Red Dog development, and as it would grow as a result of developing the mine. The variance between the "base case" and the "operations" case is the estimation of the effect of the mine's presence. According to this scenario, Kotzebue's population would jump by about 125 people (5%)

during the construction phase, and increase another 125 (10% total) during initial production phases. Many of these people would be current NANA residents that will have moved into Kotzebue, perhaps as many as 75% of the total number of inmigrants. Therefore, the net effect of the mine on the population within the region as a whole should not be significant.

INCOME

According to the 1980 Census, the mean average household income in the region varies from $8,000 to $20,000 between the outlying villages, and is about $30,000 in Kotzebue.

On the basis of earlier (Summer 1983) Cominco employment estimates, annual gross payroll was initially estimated at about $23 million (372 employees) during the construction phase, $13 million during operating years one through five, and about $13.4 million dollars from year six onwards (424 employees).

Since that time, employment estimates for the construction phase have been revised considerably downwards; however, revised payroll estimates were not included with the updated information. To provide a rough estimate of direct income during the construction phase, it is assumed that actual construction payroll will be reduced in proportion to the revised reduction in construction workforce. On this basis, it is assumed that the construction phase payroll will peak at about $15.5 million (250 employees), averaging about $9 million a year for the overall construction phase (143 full-time-equivalent employees). On this same basis, the payroll during the first five project years is estimated to be about #12 million (385 employees), and would increase to about $13.4 million for years six onwards (420 employees).

It is difficult to assess what portion of these wages will go to NANA residents, who will first tend to occupy lower paying positions, particularly during the construction stage. It is here estimated that

during construction an average of approximately $4 million dollars a year will be paid in gross wages to residents.

Again, during the initial phases of production, NANA residents will largely be occupied at the lower end of the wage scale. Of the $12 million annual Cominco gross salary, it is estimated that initially about $7 million will go to about 260 NANA residents. This number would increase constantly over time as NANA residents moved into professional and technical positions with the mine.

AREA SERVICE/FACILITIES IMPACTS

Because of the stringent requirement that the Red Dog be a fully enclaved development, there are not expected to be substantial additional demands placed upon the regions service delivery.

The Department's development impact model (CRADAM, Appendix B) was applied to the Kotzebue/Red Dog development. The facility needs component is driven by the Demographic component already discussed above. In brief summary, the additional 100 jobs which will occur in Kotzebue, and accompanying overall population increase of some 10%, should not stress existing facilities (i.e., schools, public safety, fire, electrical, etc.) in the near future, and do not represent a significant planning component in comparison to the increase in population which would occur with or without the project. One possible exception is the present water system which is reported to be operating at near to full capacity.

It is likely that many mine workers from the outlying villages would wish to pass through Kotzebue while traveling between home and the mine. Depending upon the policy that NANA/Cominco develop concerning the air chartering of mine workers, this could result in a significant impact to several service delivery sectors. However, it is not possible to predict at this time the level of increased service delivery.

The outlying villages are also likely to require some increased social service delivery, at least transiently, in the wake of a degree of social disruption that will accompany the region's sudden increase in affluence (about 30% in regional income; Waring, EIS) and the introduction of an absentee-parent lifestyle that will occur in many village homes with workers at the mine. No attempt is made here to place a dollar value on the increase in social service delivery.

TRANSFER PAYMENTS

It was not possible in the time permitted for this study to link in a logical manner the potential increase in regional affluence to a possible decrease in State, federal and private transfer payments going into the region. Even before considering the possible effects of the mine's wages within the economy, there is a phenomenon presently occurring in program use which remains unexplained by the servicing agencies. Interviews with the State's Department of Health and Social Services indicated that the Department's two main transfer payment programs (i.e., AFDC, food stamps) have shown an unexplained dramatic 50% decrease in use the last two years.

The total transfer payments into the NANA region in 1980 amounted to $11,517,363, or $6,274,254 federal; $4,203,609 State; and $679,500 in private funds (Darbyshire, 1982). It was reported that the two distributions of the Permanent Fund Dividend were followed by periods of marked decrease in State program use. It is certainly likely that the continued incomes derived from mine wages in the extended family will have some positive effect on reducing transfer payments.

III. TASK C-4: **Review of the extent to which the economy of the region (NANA area of influence) is financed by State and federal appropriations.**

The primary source of information relevant to this task has been the documentation prepared by Darbyshire and Associates (1982) for the NANA Coastal Resource Service Area - Coastal Management Plan (CMP) in conjunction with follow-up interviews with Darbyshire staff responsible for producing these documents.

Figures presented in the CMP were cross-checked with a recent House Research Agency document (DeVries and Pomeroy, 1982) which examined the distribution of State appropriations by Election District. Since the Kotzebue Election District also includes the communities within the North Slope Borough, the Borough's annual financial reports were used to subtract out the bulk of State appropriations to the Arctic Slope Region, leaving an approximation of State appropriations going into the NANA region.

The CMP figure for State Appropriations (1980) were $31,482,815. The alternative method produced a figure of $32,500,000. This figure does not include the State's capital budget which varies radically from year to year for a given region. The capital budget appropriations for the Kotzebue Election District for FY '81 and FY '82 were respectively 20 and 50 million dollars.

Federal funds going to the NANA region in 1980 totaled about 24 million dollars - private transfer payments totaled about $700,000.

Important findings reported in the CMP documents included:

"The combined federal and State revenues are, by far, the most imports important source of demand on all three levels of the regional economy. Of the $63 million earned in the total NANA region, State and federal revenue sources support (i.e., directly

and indirectly) approximately $55.5 million (88%), while private sources support the remaining $7.8 million;"

- "State revenues to education, construction, social services and so on alone support 31.5 million (50%) of the total income earned throughout the NANA region;"

- "Mining and exploration activities are the largest private contributors to the economic base of the outlying villages (8%);" and

- "The largest single contributing source to the regional economy are the State revenues supporting schools and local government throughout the NANA region."

III. General Comments and Recommendations

With regard to the fulfillment of the NANA/Cominco agreement, there are several unstated policies, or potential policies, which could have significant effects on the distribution of the impacts of the Red Dog Mine development:

- One possible policy that may need to be clarified is the air charter transfer of residents from outlying communities (or other Northwest Alaska communities) to the mine site and back. The frequency of visit and duration of stay of these transients through the City of Kotzebue will play a determining factor in the total impact of the project upon the service delivery provided by the city, including transient housing, police and containment facilities, the recreational/entertainment economy, etc.

- Another policy, which will probably become highly sensitive, is the actual distribution of jobs among and within the communities throughout the region. NANA could develop a formula that would provide increased economic leverage for the more economically depressed villages, or a policy could be established strictly on a per capita basis, or the policy could be one of laissez faire. At any rate, existence or lack of existence of such a policy will be a determining factor in the ultimate distribution of the economic product of the Red Dog Mine in the NANA region.

- It might be advisable for some of the smaller communities to establish rotating labor pools through which all eligible residents could participate directly in the Red Dog's workforce. This would also provide increased flexibility in relation to subsistence lifestyles.

- Beyond training and placement, the various critical agencies in Kotzebue should be preparing for an extended service of counseling in support of residents who will be experiencing industrial employment for the first time.

Appendix A

Analysis Assumptions

A. The Red Dog mine construction and production schedules, as provided by Cominco in its engineering reports, will be essentially adhered to with regard to time and labor force requirements.

B. The goals of the NANA/Cominco operating agreement (N/C Agreement) of October 1982 will be aggressively pursued with regard to hiring and operating policies (goal = 100% local employment within 12 years of mine startup). That is, the several agencies and committees responsible for the training and placement of NANA residents will have a substantial effect (within several years) on the skills available in the local labor force and the placement of those skills at the minesite. Within five years of startup, resident skills will include increasing numbers of "professional occupations" as residents matriculate through the proposed scholarship program (up to $30,000 per year).

C. More specifically, regarding the phasing of local hire, it is assumed that, within two years, an additional 30-40 residents would become eligible for placement at the mine as a result of trade school/vocational training offered in Kotzebue. These people would probably move into positions vacated by residents moving up the scale of positions at the mine site, as they progress through on-the-job experience. Another 15-30 local residents would become eligible for professional range jobs (geology, lab technicians, etc.) at the completion of university level education. Finally, it is assumed that the jobs resulting from the planned increase in production at year six will be taken almost entirely by residents, that is, 30 more jobs.

D. In accordance with the N/C agreement, the Red Dog development will be as strictly isolated in its effects as possible; that is, fully enclaved.

E. NANA/Cominco will make special efforts to "broadly advertise" both the enclave and resident hire aspects of the Red Dog operation, thereby discouraging speculative inmigration into the region, and into Kotzebue in particular. However, it is assumed that a certain degree of speculative inmigration will still occur in anticipation of employment in secondary (mine support and service sector industries) and in anticipation of filling job vacancies which will occur as presently employed residents take positions with the mine. In particular, this will probably result in a temporary acceleration of intraregional migration, as people gravitate into the regional service center of Kotzebue; however, no estimate as to the degree of this movement has been assumed for the purposes of this analysis.

F. It is assumed that there will be some impact on service provision in Kotzebue as a result of resident mine employees preferring to travel through Kotzebue on the way to their home villages after their two-week stint at the mine.

G. The actual secondary employment multiplier applied to Kotzebue as a result of the Red Dog operations is assumed to be 0.5 for both the construction and production phases.

H. There will be a very small increase in secondary employment in the outlying villages as a result of the generally increasing affluence of the population. It is assumed that all such employment opportunities will be absorbed by the resident populations.

I. On the basis of several recent regional attitude surveys, and the precedent of NANA resident employment on the Alaskan pipeline project, it is assumed that there is a strong desire amongst NANA residents to get a job at the mine and keep it.

J. The residents of Kivalina and Noatak may be offered some degree of preference in hiring in compensation for the disruptive physical presence of a mine and road in their proximity. Otherwise, it is

assumed that attempts will be made to distribute employment opportunities evenly throughout the region.

K. Lacking more direct information, the anticipated annual gross payrolls during construction and production were taken from the draft Environmental Impact Statement (EIS) for the project (Socioeconomic section; Kevin Waring).

L. Levels of annual State financing of the regional and local economies were derived through a cross referencing of the NANA region draft Coastal Management Program document; a House Research Agency document of Appropriation by Election District (which includes the North Slope Borough); and the Annual Reports of the North Slope Borough.

M. The 1983 population of Kotzebue is assumed to be 2,400 which is the number arrived at after extended discussion between the City and the Census Bureau (which had placed the number at 2,054). The present City Planner has initiated a statistical survey of the community and preliminary results indicate a community population possibly as large as 2,900. The NANA region population is assumed to be approximately 5,200, reflecting the increased number in Kotzebue.

N. A number of specific baseline assumptions have been made in order to run the Department's CRADAM development assessment computer model (facilities needs component). These values, which are listed in Appendix B, were determined on the basis of information provided by the City of Kotzebue.

APPENDIX B

Community and Regional Affairs Development Assessment Model
Kotzebue/Red Dog Project

CRADAM is an interactive computer model which projects community response to specific development projects over a 20-year period. The model is community oriented and, therefore, is not directly applicable to projections for the NANA region as a whole. It has been applied in this case to the community of Kotzebue in its relationship to the prospective Cominco/Red Dog Mine development. Two components of the model have been run in this case: a demographic projection, and a facilities needs projection (which is driven by the demographic component's output). Tables B.1 and B.2 present the results of two elements of the demographic components: population and school age population. The results of the facilities needs component are extensive and are not reproduced here.

Specific assumptions for the demographic run included:

- Fully enclaved development project
- Construction start: January 1986
- Production start: February 1988
- Current annual rate of population increase: Kotzebue, 0.2%
- Construction phase, total workforce: 250
- % of these skilled labor: 62%
- Production phase, total workforce: 384 (onsite)
- % of these skilled labor: 67%
- Secondary employment multiplier: 0.5
- Average household size: 4.7
- Current population, by age cohorts: 0-4, 275; 5-9, 286; 10-14, 235; 15-19, 262; 20-24, 224; 25-29, 274; 30-34, 190; 35-39, 127; 40-44, 117; 45-49, 117; 50-54, 76; 55-59, 37; 60-64, 53; 65 and over, 123; total: 2,396
- Current effective unemployment: 50%

Specific assumptions for the facilities needs computer run include:

- Municipal acreage: 3,200
- Industrial acreage: 20
- Residential acreage: 200
- Elementary school (square feet): 50,000
- High School (square feet): 55,000
- Police department (square feet): 20,000
- Police vehicles: 6
- Fire department (square feet): 22,000
- Fire vehicles: 4
- Medical facilities (square feet): 40,000
- Residential buildings: 570
- Remaining Municipal buildings (square feet): 250,000
- Electrical demand (kwh/capita/day): 18
- Water demand (gallons/capita/day): 100
- Proposed residential density (units/acre): 8

Outputs from the computer run include:

- Total population estimates for the 20-year period (base case, development and production phases (table B.1)
- Number of school aged children for the 20-year period (table B.2)
- Number of high school students for the 20-year period
- Number of elementary students for the 20-year period

- Elementary school floor space demand
- High school floor space demand
- High school floor space surplus/deficit
- Police department floor space demand
- Police vehicle demand, surplus, deficit
- Fire department floor space demand, surplus, deficit
- Fire department vehicle demand, surplus, deficit
- Medical facility floor space demand, surplus, deficit
- Hospital beds required

- Municipal space requirement
- Average daily water demand
- Average daily electrical demand
- Residential housing demand
- Residential acreage demand

Table B.1

Demographic Projections
Kotzebue Population (base case, construction, operation)

A. Review of Cominco's Road Design and Cost Estimates

At your request, I have reviewed preliminary conceptual engineering data and cost estimates furnished by Cominco Alaska, Inc. for various roadway alternates from proposed port facilities north of Kotzebue to the Red Dog Mine. Data reviewed included the following:

REPORT	AUTHOR
Red Dog Mine Access Ground Transportation Study	R & M Consultants, Inc.
Preliminary Hydrology Report (Appendix 1)	R & M Consultants, Inc.
Geotechnical Report (Appendix 2)	R & M Consultants, Inc.
Preliminary EIS Red Dog Mining Site U.S.	EPA Region 10
Engineering Report on the Red Dog Project Vol 1 & Vol 2	Cominco Engineering Services
Engineering Estimate for the Red Dog Project Vol 1 and Vol 2	Cominco Engineering Services

ENGINEERING ANALYSIS

I. ROUTE SELECTION

From an engineering perspective, major items which should be considered in route selection for this region are as follows:

o Minimize alignment length

o Consider material site availability and haul

o Consideration of future maintenance, including drifting snow

o Consideration of construction problems and scheduling

- o Maintain fill section to the extend possible, avoiding problems associated with cuts in permafrost areas, especially on side hills

- o Minimize environmental disturbance

- o Minimize potential problems with drainage, ground water flow and and aufeis

- o Minimize roadway alignment on ice rich, high moisture content silts, organics, and poor route soils conditions

- o Avoid known areas of soil instabilities and/or movement

- o Efficient use of fill, especially in areas of mineral material shortage

- o Bridge siting

- o Future or proposed route expansion

- o Land ownership

Analysis of data furnished by Cominco Alaska, Inc. indicate that routes were selected and evaluated based on criteria similar to that mentioned above. The data utilized is preliminary in nature, however, with limited field verification and must be viewed as such. Alternate routes were delineated utilizing on U.S.G.S. mapping expanded to a 1" = 2000' scale for the plan portion of plan-profile sheets. Route alignments and profiles were plotted on these sheets utilizing the above mentioned criteria and engineering geometrics developed for the proposed routes.

II. Design Geometrics

Design criteria developed for the proposed roadway are as follows:

Design speed	30 mph
Road width	30 feet
Maximum grade	4%
Minimum radius	400 feet
Passing turnouts	2 mile intervals
Fill depth	6.5 feet based on thermal considerations
Alternate fill	2 feet minimum on 3 inches rigid insulation
Design vehicle	GVW 443,000 lbs
Maximum tandem axle loading	109,500 lbs

Roadway width and maximum grades are conservative due to the size of the design vehicle. Under normal usage conditions, a roadway width of 28 feet or even less may be adequate, with maximum desirable roadway grades up to 5% on rolling or 7% in mountainous terrain.

The fill depth of 6.5 feet assumes some thaw into the existing terrain, thus some settlement will result depending on soil type. This method is consistent with existing practice, with the final depth/depths selected being dependent on soil groupings or 'terrain units" and foundation conditions. The final typical sections developed for the roadway design would be a major engineering decision for the project with the governing factor being allowable thaw into the subgrade. The 6.5 foot fill depth is considered adequate for preliminary engineering purposes. In reality, it could be expected that depths would vary, with lesser depths being utilized should actual soil conditions warrant or deeper sections utilized should more protection be required in other locations. The alternate insulated fill section consisting of 2 foot of fill placed on 3 inches of rigid insulation board was utilized to a very limited extent in the preliminary analysis (approximately 1.3 miles total length in the preferred route) and appeared to be utilized primarily through vertical curve areas where it was desired to reduce the depth of fill for short stretches of roadway. This method of construction has been tested and utilized for heavy haul vehicles on the Trans Alaska Pipeline System with some success. Final design should consider carefully the exact placement and bedding methods for insulation.

III. Quantities

Fill quantities were computed utilizing the 6.5 foot of fill, or alternate section and providing for addition fill material for those sections going into and out of vertical curve locations and cross slope areas, utilizing factors developed for that purpose. Haul distance was determined by plotting material sites, selected by limited field examination and aerial photo interpretation. Drainage structures, types and sizes were developed based on drainage size and other hydraulic considerations. All data furnished by Cominco Alaska, Inc. was examined and appeared to be adequate for preliminary quantity determination.

IV. Cost

Cost figures for the proposed roadway were initially developed by R & M Consultants and provide the basis for those cost figures presented by Cominco Alaska, Inc. Base-line cost figures developed for major bid items are as follows:

Item	Estimated Cost
Embankment (c.y.)	$9.20 c.y.
Cubic Yard-mile (c.y.m.)	$1.30 c.y.m.
Drainage culverts (ea)	
24"-120" dia.	$6,400 - 61,200 ea.
Bridge (l.f.)	$1,800 - 5,760 l.f.
Insulation	$0.80 bd. ft.
Turnouts	Approx. $5000/mile

Cost estimates prepared for the state for the proposed 170 mile route from Kotzebue to Chicago Creek indicate estimated embankment costs of $10.00 c.y. with haul being estimated at $1.00 per c.y.m. after the first two miles. At a much smaller scale, embankment costs for the current Kotzebue Airport Improvements Project was bid at $6.74 c.y. Embankment costs at the new Buckland Airport was bid at $13.50 c.y., with similar type embankments running $4.00 c.y. in Fairbanks.

Culverts were estimated to be 80 l.f. in length with sizes from 24" to 120" in diameter being estimated. Estimated costs appear reasonable based on review of available bid tabs.

Bridge costs were checked with the DOT/PF bridge design section in Juneau and also appear to be reasonable estimates.

Costs not included in the original base line cost estimates by R & M consultants were additional costs for processing surfacing material, mobilization and de-mobilization costs, royalties on borrow material, engineering and contingencies. I have attached sheets summarizing the estimated costs for all the proposed routes. The preferred route estimated costs prepared by Cominco appear to be reasonable estimated roadway construction costs.

V. Comments and Conclusions

Methodology utilized for preliminary route selection and cost estimates appear to be reasonable and consistent with other state preliminary route selection efforts. The data presented by Cominco is based on very limited field efforts. It would be expected that substantial refinement would be made to the selected alignment and design assumptions after centerline drilling, material site exploration and evaluation and other design level field work is completed.

MEMORANDUM State of Alaska

TO: Robert Venusti
Deputy Director
Design and Construction

SUBJECT: Red Dog Mine Project

B. Review of Cominco's Port Design and Cost Estimates

At your request, I have reviewed preliminary conceptual engineering data and cost estimates furnished by Cominco Alaska, Inc. for proposed port facilities north of Kotzebue. Data reviewed included the following:

REPORT	AUTHOR
Preliminary EIS Red Dog Mining Site U.S.A.	EPA Region 10
Engineering Report on the Red Dog Project Vol. 1 & Vol. 2	Cominco Engineering Services
Engineering Estimate for the Red Dog Project Vol. 1 & Vol. 2	Cominco Engineering Services

The proposed recommended port facility for the Red Dog Mine is composed of 3 major component parts:

1. Deep Water Dock Facility (off shore)
2. Shallow Water Dock (on shore)
3. Concentrate Storage Facility at Mile 2.5 (Roadway Borrow Site)

My review consisted primarily of listing major items/quantities taken from the Cominco Alaska, Inc. reports and "backing into" the engineers estimate as independently as I could to confirm the estimated costs. My comments for each major division are as follows:

I. SITE DEVELOPMENT

Cost figures utilized for the port site development are the same as those utilized for the roadway portion of the project. Using Cominco's estimated quantities of 63,500 c.y. of fill for the pad on shore and a 7 foot fill height works out to approximately a 5.5 acre site.

02-001A(Rev. 10/79)

It was assumed by Cominco that the concentrate storage site at 2.5 mile would be graded during borrow operations from construction of the roadway.

II. BUILDINGS

Estimated costs for the concentrate storage building were taken from the 1983 Means estimating guide and projected for Anchorage, then the remote siting as shown on the attached sheets. The median unit price given was utilized. The smaller buildings were estimated at $250.00 s.f. which may be slightly high but are currently being utilized by our staff, for estimating purposes

III. SHALLOW WATER DOCK

The Means estimating guide was utilized for the sheet piling. The remaining estimated costs were judgement calls.

IV. CONCENTRATE HANDLING (SHORE BASED)

Equipment costs were obtained from N.C. Machinery, FOB the factory, with exception of the lightering barge, and loading equipment which were estimated, along with miscellaneous costs shown.

V. DEEP WATER DOCK

Per ton costs for modification of a used tanker were obtained from Todd Shipyards in Seattle. I was unable to obtain a figure for a used tanker, however a review of costs supplied for new steel modifications make the tanker costs estimated, seem not unreasonable. The remaining costs were estimated by judgement.

VI. CONCENTRATE HANDLING (DEEP WATER DOCK)

Equipment costs were obtained from N.C. Machinery, FOB the factory. The remaining costs were estimated.

VII. SUPPLIES HANDLING EQUIPMENT

Some equipment costs were obtained from N.C. Machinery, others were estimated. The fuel pipeline costs were taken from in house bid tabs from Galena. The pipeline consists of two lines, one nestled inside the other.

VIII. SERVICES

The estimated costs for generator sets were obtained from N.C. Machinery. It was estimated that the cost of the units in place and operating would be approximately twice the costs of the bare bones units at the factory.

IX. ACCOMODATIONS

It was assumed that the construction camp utilized during construction of the road would be utilized, thus some costs were allotted to refurbish it, by Cominco.

X. COMMENTS AND CONCLUSIONS

Estimated costs for the proposed scheme appear reasonable. They are somewhat less than those proposed for the proposed facility at Port Blossom. Port Blossom costs were estimated at approximately $34,861,000 for Phase I and $51,458,000 for Phase II for a total of $86,319,000. In addition, facilites on shore were estimated at $14,932,000. Concepts between the two are substantially different, with Port Blossum having a structural dock to deep water vs. an island with lightering required. Depending on the states involvement, it is recommended that thorough conceptual review be performed. Other items that may need additional consideration depending on overall use of the facility are:

1. Air Port Facilities
2. CFR Vehicles/Facilities
3. Land Requirements
4. Storage Facilities
5. Security

C. Alaskan Extractive Resource Projects

Lost River Mine: The U.S. Bureau of Mines estimates the size of the Lost River flourspar-tin deposit near the community of Lost River on the Seward Peninsula, to be in excess of 10 million tons. The current market value per ton of tin ore is $9,660. The mine has the potential of exporting 304,000 tons of tin, flourite, and tungsten annually. Transportation infrastructure required to mine development is a 60 mile extension of the Nome-Teller Road that will tie into the proposed Nome port for exporting the ore out of the region.

Slate Creek Asbestos: Asbestos reserves at Slate Creek are believed to range from 50 to 100 million tons. Doyon Corporation is actively pursuing development of this deposit and have estimated that the most likely level of production would be 150,000 tons per year. The current market value per ton of asbestos is $600. Transportation requirements for development of a mine is a 43 mile road to connect to the Taylor Highway near Chicken.

Delta Belt: Large high grade copper deposits have been located near the Robertson River, southeast of Delta Junction. Anaconda Copper, Resource Associates of Alaska and Cook Inlet Native Corporation have done exploratory drilling. Production estimates vary from 250,000 to 1,000,000 tons annually with an estimated project life of 50 years. The current market value per ton of copper is $482. A 90 mile extension of the Alaska Railroad would provide access to the copper deposits as well as providing service to the Delta Agriculture Project.

Dry Creek Deposit: Dry Creek has been identified as being a large lead deposit with lesser amounts of copper, zinc, silver and gold. Production potential is estimated to be approximately 68,000 tons of lead ore annually, which would provide an annual revenue of approximately $11 million. Widening the existing 21 mile road to 18 feet and a 15 mile extension of the road would provide adequate access to the deposit.

Lignite-Kantishna: The Kantishna antimony deposit has an estimated production potential of 33,000 tons per year. In addition, 1981 production of placer gold deposits was 3,000 oz. The estimated annual revenue resulting from development of the antimony deposits is $12.5 million. Access to the mine area would consist of a 75 mile road from the Parks Highway near Lignite. It has been proposed that this access road could also serve as an alternative route for Denali National Park visitors.

Bonanza Creek: Tungsten deposits of unknown quality and quantity at Bonanza Creek are owned by Doyon Ltd. Based on the limited information, it is assumed that yearly concentrate production could be 6,540 tons, with an estimated annual revenue of $1.3 million. Construction of a 24 mile gravel road from the Dalton Highway would provide access to the deposit.

Ambler Mining District: There are two major copper mine areas that have been identified in the Ambler Mining District. The Kennecott Area consists of two large deposits, the Arctic Mine with deposits of approximately 37 million tons and the Ruby Mine with deposits of approximately 4 million tons. The Anaconda Area consists of two deposits, the Sun Mine with deposits of approximately 25 million tons and the Smucker Mine with deposits of approximately 10 million tons. Bear Creek Mining Company has estimated that the Arctic Mine alone has the capability of producing 400-500,000 tons per year with an estimated mine life of 20 years. The best estimate of the value of the known resources in the ground is $18 billion. Long-term jobs, as a result of development, are estimated to be 1,350 by the year 2000 and 2900 in the post 2000 time frame.

In addition to the copper deposits, NANA Development Corporation currently has a jade mine in operation which has a limited production rate because of the lack of an adequate transportation system. Several alternative access routes have been examined for both rail and road. In addition to the necessary road or rail construction, a port on the

coast would be required in either the Krusenstern area or along the coast of the Seward Peninsula.

Chandalar Mining District: Extensive gold and silver deposits are present in the Chandalar Mining District; 100 placer lode claims, 2 operating mines and one ore processing mill currently exist in this area. Estimated gold production of known deposits is 3,000 oz. per year, with potential annual revenues of $1.2 million. Construction of a 65 mile road would provide access to supplement the existing 4,500 foot runway.

Chicago Creek Coal: Coal in this area is known at four locations. These include the Chicago Creek Mine, Kugruk (Wallin) Mine, Superior Mine, and an 1.5 million tons of fairly low quality coal. Coal development at site has been considered as a means of reducing heating costs in the villages of Kotzebue, Buckland, Deering, and the mining and reindeer herding activities at Candle. The cost of heating by coal would equate to a $.51 per gallon fuel oil price. The current price per gallon of fuel oil (in the NANA Region) is $2.40. Therefore, development of the resources at Chicago Creek is viewed as being economically justified. The transportation infrastructure required is a 170 mile road from Chicago Creek to Kotzebue. This road would also facilitate access to several other mineral resources that are located in close proximity to the route (uranium, placer gold, lead, zinc, silver, molybdenum).

Pt. Lay-Cape Lisburne Coal: There are several occurrences of coal deposits throughout the northwestern section of the State. On-shore sources for the Cape Beaufort area, 55 miles south of Pt. Lay, are calculated to be 35 million tons of inferred resources. Within a 50 mile radius of Pt. Lay, there are several deposits that appear to be of the best quality. Total indicated resources are 236 million tons and 2,769 million tons of inferred resources. The Corwin-Thetis mines, 80 miles from Pt. Lay, have indicated deposits of 49 million tons and 848 million tons of inferred deposits.

The Arctic Slope Regional Corporation has indicated that a mine in the Cape Beaufort Area could produce approximately 100,000 to 200,000 tons per year and be in production in 3 years. The use of coal is forecasted to reduced heating costs in Northwest Alaska by about $10 million per year. The Alaska Power Authority has determined that the quality and quantity of the coal resources make it economically feasible to barge coal as far south as Unalakleet. To facilitate development of the resources, the preferred transportation needs would be the development of a resource export and coal loading port capable of handling 500 ton coal barges. In addition, a road transportation network to link various coal deposit sites to a common corridor to the coast should be considered.

Lik Deposits: The Lik lead and zinc deposits are located 12 miles north of Red Dog and owned by GCO Minerals. If a transportation corridor was established, it would take 6 years to bring a mine into production. Estimated annual production would be 150,000 tons. Transportation infrastructure requirements are a road to the coast and a port facility to deliver the ore to market. The most likely scenario is linkage to the access developments at Red Dog.

Twin Mountain: There are significant tungsten deposits located in the Twin Mountain Area. additionally, several placer gold mines are in operation at Van Curlers Bar. Houston Oil and Minerals, Inc. has been conducting exploration work in the area and, to date, ore grades and tonnages are unavailable. The current market value per ton of tungsten is $200. Access to the Twin Mountain area would require construction of a 62 mile extension of the Chena Hot Springs road.

ALASKAN EXTRACTIVE RESOURCE PROJECTS

NAME	RESOURCE TYPE	LOCATION	POSSIBLE TIME	COST ESTIMATE
Lost River Mine Extension of the Nome-Teller Road from Teller-Wales (60 miles), via Brevig Mission, Lost River Mine and Tin City	Flourspar, Tin	Seward Peninsula	* 2000	$30.9 million

Facility open to public	Yes, no charge	Yes, but only for commerce	Yes, with tolls or fees	Yes, but only for commerce with tolls or fees	Not open to public
Ground work: EIS, permits, ROW	Yes, all permits etc. in hand no state work required	Commitment to obtain permits, no state work required	Asking for partial state involvement	All work must be done by state	No cooperation

RED DOG PROJECT: Relationship of the Jones Act

The Jones Act, established in 1920 as an amendment to the Shipping Act of 1916, restricts the shipment of American goods between U.S. ports to vessels built in the U.S. and operated by U.S. crewmembers.

Cominco/NANA intends to use foreign-built, owned and operated ships to transport the ore to destinations in Canada, Japan, and Europe. They have proposed using the port at Red Dog as a public port and backhauling fuel and cargo for the NANA region on their ships that have off-loaded the ore in Vancouver. However, goods destined for the NANA Region are now normally purchased in the Pacific Northwest, U.S.A. and the Jones Act would preclude routing of ships from the U.S. west coast ports to Vancouver. There are two options available to circumvent the shipping restrictions.

One alternative is for goods normally purchased in the Lower 48 for shipment out of Seattle to Northwest Alaska, to be purchased instead in Canada and shipped direct to the Red Dog port from Canadian ports. This option, therefore, creates an incentive for Alaskans to spend their money on Canadian goods rather than U.S. goods. The goods may actually be cheaper in Canada. In fact, Cominco's evaluation of the use of the Red Dog port as a regional port indicates that the transportation costs of fuel purchased and shipped from Vancouver are $30 cheaper per ton than fuel purchased and shipped from Seattle. However, there is a potential political issue regarding the expenditures of Alaskan dollars in a foreign country, for goods readily available in the U.S.

The second alternative is to make use of a provision of the Jones Act (known as the Third Proviso), which allows for intermodal transporting of American goods into foreign countries. This option would allow for rail shipments from the U.S. to Vancouver where the goods would be transferred onto the Cominco ships and backhauled to

the Red Dog port. There currently is a bill in Congress that will eliminate the Third Proviso which would, therefore, eliminate this alternative.

Another shipping aspect that relates to the Red Dog project is Senate Bill 1624, Cargo Preference Legislation. This bill is currently being discussed in Congress and is backed by Senator Stevens. SB 1624 proposed to require that 50% of all U.S. bulk exports be transported on U.S. flag carriers. The State of Alaska DOT&PF has expressed to Senator Stevens their opposition to the cargo preference requirements. DOT&PF contends that the high costs of using U.S. flag carriers would severely impact potential exports and place Alaska at a competitive disadvantage relative to other Pacific Rim exporters.

If Senate Bill 1624 is enacted into law, Cominco/NANA would be required to ship their ore on U.S. flag carriers and the transportation costs of freight for both the Red Dog Project and NANA Regional goods that are backhauled on the ships serving the Red Dog Project, are forecasted to increase.

F. Synopses of Two Canadian Mining Projects with Joint Public / Private Sector Participation

Two resource development projects that evolved through joint public/private sector participation are summarized in this report:

1. Northeast Coal Development

2. Pine Point Mines Ltd.

Three companies, Societe Quebecois d' Exploration Miniere (SOQUEM), Elf Aquitane and the Potash Company of Saskatchewan (PCS), were also looked at. However, though they represent cases of investment by the public sector in mineral developments, the nature of this investment was viewed as being far removed from the Red Dog proposal and, therefore, not applicable to the purpose of this report.

1. NORTHEAST COAL DEVELOPMENT

Located at the Peace River coal field in British Columbia. The size of the northeast coal deposit is estimated to be 8 billion tons. The center of the deposit is located approximately 78 miles southwest of Dawson Creek (the nearest highway and railway lines) and 400 miles from the Port of Vancouver.

In 1975, the Provincial Government of British Columbia, which owned substantial coal reserves, decided that development of these resources was the economic priority of the government. Approximately $15 million was spent by the government on 77 studies relating to the mine and its potential impact.

Three main parties have participated and have an interest in the development of the mine. They are the Provincial Government who owns the resources; the Federal Government which has an interest in the regional economic policy, is owner of the national railway (CN Rail), has jurisdiction over ports and their development, and has

constitutional responsibility for international trade; and private industry that has expertise in mine development.

In June 1980, the Provincial Government informed major coal producers that the Province would develop the rail and highway systems, organize a town at the site, provide power transmission facilities, and negotiate with the Federal Government for construction of a terminal facility if the producers would develop the mine. No tax or royalty concessions were offered, freight rates would be commercially negotiated with a special rate prevailing until 1989, and complex cost recovery techniques would be developed to meet a sales contract and then the necessary infrastructure would be put in place.

In January 1981, two companies, Quintette Coal Ltd. and Teck Corporation, negotiated contracts with the Japanese steel industry for an annual supply of 7.7 million tons of coal. The price was negotiated at $76.00 and $76.50 per ton, plus escalation, with deliveries commencing in December, 1983.

The development responsibilities among the three parties consisted of the following tasks:

Private Industry

1. Quintette Coal Ltd. would develop an open pit coal mine capable of producing 6.3 million tons per year.

2. Teck Corporation would reestablish operations at their Bullmoose Mine to be capable of shipping 1.7 million tons per year.

Provincial Government

1. The Highway Department would build a new 57 mile road and upgrade other area roads.

2. The Provincial railroad would build 80 miles of new track with two major tunnels (3.7 miles and 5.5 miles).

3. A new substation for electrical power would be constructed and 79 miles of new power lines installed.

4. The Province would establish a new community near the mine site to accommodate a population of 6,000 people.

Federal Government

1. The federally owned railway would upgrade 677 miles of its system.

Federal Government and Private Industry

1. A new coal terminal would be constructed, funded jointly by the Federal Government and private industry. The facility would be capable of handling 12 million tons of coal per year and berthing vessels up to 250,000 dwt.

Total capital expenditures for the project are estimated to be $3 billion. Approximately 10,000 permanent jobs have been created. The estimated present value of taxes and other government revenues resulting from this project is $1.7 billion over a 20 year project life. These revenues, which are shared by the Provincial and Federal Governments, consist of income taxes, mining taxes and coal royalties paid by the mining companies, as well as sales taxes on goods and services and the personal income taxes paid by construction and operating employees.

2. PINE POINT MINES

The Pine Point lead and ore deposit is located near the Great Slave Lake in the Mackenzie District of the Northwest Territory, Canada. Cominco Ltd. began staking the property in 1928 and in 1951 Pine Point

Mines Ltd. was formed with Cominco owning a 78% interest. In 1955, the estimate of the size of the deposit was 5 million tons or ore averaging 4% lead and 7% zinc. At that time, the company determined that it was impractical to develop a mine until adequate transportation facilities were established.

In 1955, The Deputy Minister of Northern Affairs advocated the construction of a railway, 438 miles long, from Grimshaw, Alberta, to the Great Slave Lake as a project of national interest and to serve the Pine Point Mine. In 1961 an agreement was reached between the Federal Government, Pine Point Mines Ltd., and the Canadian National Railway Company (CNRC). The agreement called for the Federal Government to construct the railway, the Northern Canada Power Commission to build a hyro plant for supplying power to the mining area, and for Pine Point Mines Ltd. to bring the mine into production. The mining company guaranteed shipments of 215,000 tons per year for 10 years to CNRC, and the cost of the hydro plant construction was underwritten by Pine Point Mines Ltd.

Mining operations began in 1963 with a planned production capacity of 5,000 tons/day. The railroad reached Pine Point in 1964 and ore shipments began in 1965. Additional mineral leases were acquired and in 1968 the company increased its concentrating capacity to 10,000 tons per day.

Following are the key points outlined in the agreement between the Federal Government, CNRC, Pine Point Mines, and Cominco:

1. CNRC agreed to complete construction of the 438 mile rail line by December 31, 1966.

2. Pine Point Mines Ltd. agreed to ship exclusively on the rail for 10 years at least 215,000 short tons per year at a rate of $7.75 per short ton (subject to any increase or decrease in rates). If more than 215,000 short tons were shipped in a

particular year, CNRC will credit the surplus to the mining company, and vice versa.

3. All rates that apply to the Point Point Mines Ltd. shall apply evenly to any new operations established along the rail route.

4. No mineral rights will be transferred to CNRC for lands leased by Cominco that are crossed by the railway.

5. All income taxes paid by Pine Point Mines Ltd. are subject to the "Income Tax Act" and all royalties paid to the government are established according to the Canada Mining Regulations.

As a result of the payment schedule established in the agreement, the capital costs for the new railroad line ($79 million) were paid off after 7 years of the mines' operation. Power costs were subject to an agreed surcharge. Public investment in the hydroelectric power plant has long since been amortized. The current production rate is 11,000 tons per day and the mine operation and production is expected to continue for at least another 10 years. There are a total of 640 employees at Pine Point Mines with Pine Point community members having the second highest per capita income rate in the Northwest Territory.

VIII. Report of the Division on Land and Water Management Department of Natural Resources

A. Summary of DLWM Involvement in Red Dog Project

B. Outline of Topics to be Considered in a Right-of-Way Agreement

C. Commissioner's Response to Cominco and GCO Minerals Right-of-Way Applications

MEMORANDUM State of Alaska

TO: John Sims, Director
Office of Minerals Development
Department of Commerce and
Economic Development

DATE: February 23, 1984

FILE NO:

TELEPHONE NO: 465-2400

FROM: Esther C. Wunnicke
Commissioner
Department of Natural Resources

SUBJECT: Red Dog Project

I am responding to your recent request for comments from the Department of Natural Resources on the proposed Red Dog project. I am strongly supportive of the proposed development and offer the Department's resources in your review.

To encourage optimum eventual development in the area, all landowners and users must cooperate in providing for multiple industrial use of rights-of-way, development areas, and tidelands. We have proposed a reciprocal use agreement that would cover tidelands, the port and uplands, rights-of-way, material uses, and other matters of public concern. The attached memoranda to you from the Northcentral District staff of the Division of Land and Water Management indicate our concerns about the right-of-way and other development areas.

I strongly urge that affected landowners and users be brought together soon to discuss reciprocal use. The Department will be prepared for preliminary discussions within two weeks and has so informed NANA. We have been assisted by the Attorney General's Office in drafting a reciprocal use agreement.

In the executive summary I have noted a few points that I would recommend rewording. I am sending my suggestions under separate cover.

Thank you for requesting the Department's involvement. My staff and I are available if you have any further questions.

MEMORANDUM State of Alaska

DEPARTMENT OF NATURAL RESOURCES - DIVISION OF LAND AND WATER MANAGEMENT
NORTHCENTRAL DISTRICT - 4420 AIRPORT WAY, FAIRBANKS, ALASKA 99701

TO: John Sims
Director, Office of Minerals Dev.
Dept. of Commerce & Economic Dev.

DATE: November 18, 1983

FILE NO:

THRU: Jerry L. Brossia
District Manager

TELEPHONE NO: 479-2243

FROM: Michael E. Vediner
Natural Resource Officer
Classification & Coordination

SUBJECT: Summary of DLWM Involvement in Red Dog Project

Initial involvement of this division in the Red Dog project dates to August, 1982 with receipt of a ROW application from GCO Minerals to develop their Lik deposit. In January, 1983 Cominco applied for a different ROW to develop Red Dog.

In response to this potential for multiple facilities and in support of CZM mandates Commissioner Wunnicke issued the following general policy statements to both GCO and Cominco:

1. The State of Alaska will authorize the development of a single transportation corridor. The route will be public and available to multiple use by other future resource developments in the region. As a public route, reciprocal right-of-way agreements must be acquired wherever private or corporate ownership is encountered.

2. Tideland (and associated upland) port development will also be available to support multiple users such as oil and gas, coal exploration, or support services development.

3. Local concerns, particularly subsistence use must be accommodated to the maximum extent possible.

4. One EIS should be produced that considers all potential options. To this end, the research data collected by both companies should be available to all participating agencies.

For the project proposed by Cominco the division anticipates issuance of tideland lease(s), tideland permit(s), right-of-way permit, material sales, water appropriation certificates, dam safety permits, and possibly, instream flow reservation. To date only the right-of-way application has been received and at the request of the other state reviewing agencies further action is awaiting completion of the EIS.

We will be working closely with OMB on permit coordination regarding the CZM consistency determination. OMB has indicated that a single determination to cover all permits may be possible.

02-001A(Rev. 10/79)

Several issues have been identified by this division that through the EIS process remain unresolved, particularly with respect to your task force objectives and possible direct state involvement. These are summarized below.

1. Land ownership status was not considered in assessing the regional, multiple use perspective, during the EIS process. As a result the preferred (southern) alternative crosses a variety of land owners and terminates at tidewater on native corporate land. Since the applicant is in partnership with the native corporation they obviously have no objections.

   From the Department of Natural Resources' stated objective of one, multiple use, public road however the ownership status is of greater concern. Certainly we can insist on reciprocal rights-of-way for the primary road but upland facility land needs for possible future developments are not readily obvious. By comparison the northern (GCO) alternative crosses and terminates on public owned land. In fact the northern port site location is within the only stretch of accessible, unencumbered, public land along the northwest coast.

   If the state builds the road we may well consider a route that traverses a national monument and ends on private land as a greater barrier to public, multiple use than the number of bridge crossings, particularly since the environmental concerns of river crossings can be mitigated by appropriate construction techniques.

2. Both Cominco and GCO have investigated the preliminary engineering and costs associated with road construction. Their costs per mile vary from $1.5M to $800K, respectively, even though both roads are designed to support 222,000 pound loads. These cost differences are significant when considering state funded construction. The shorter southern route costs less to build for any given set of standards. Yet in absolute costs GCO could build their northern route for less than Cominco could build their southern route. Two questions that arise are: would state construction follow state highway standards and are the cost factors more important than land availability?

3. Design of port facilities should emphasize availability to other users. Items such as location of artifical islands and upland facilities should allow easy access to multiple users.

B. Outline of Topics to be Considered in a Right-of-Way Agreement

MEMORANDUM State of Alaska

DEPARTMENT OF NATURAL RESOURCES - DIVISION OF LAND AND WATER MANAGEMENT
NORTHCENTRAL DISTRICT - 4420 AIRPORT WAY, FAIRBANKS, ALASKA 99707

TO: John Sims, Director
Department of Commerce
Office of Minerals Development
Fairbanks

DATE: December 20, 1983

FILE NO: Red Dog

TELEPHONE NO: 479-2243

FROM: Jerry Brossia
District Manager

SUBJECT: Red Dog R/W

This memorandum outlines topics that should be considered in a Rightof-Way agreement for the Red Dog project. This information has not been reviewed by the Commissioner's office; therefore, these topics are considered as a draft. This information will also need to be reviewed by the Department of Law prior to meeting with NanaCominco.

We have been actively meeting with the Attorney General in Fairbanks and hope to receive further policy guidance from him and the task force in the near future.

In order to complete a Right-of-Way agreement it is necessary to determine land ownership for the entire route. There may be a variety of land owners along the proposed road (ie. National Park Service, Nana, Kivalina, Native Allotments, or mining claims). This review is currently underway and should be complete by late January 1984.

The RightofWay with Nana should include the following sections:

1. General discussion of grant
   a. Purpose
   b. Definitions
   c. Location
   d. Third parties interests.

C. Commissioner's Response to Cominco and GCO Minerals Right-of-Way Applications

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

POUCH M
JUNEAU, ALASKA 99811
PHONE: (907)465-2400

March 9, 1983

Mr. W. D. Tonking
Executive Vice President
GCO Minerals Company
P. O. Box 4258
Houston, TX 77210

Mr. H. M. Giegerich
President and General Manager
Cominco Alaska
5660 "B" Street
Anchorage, AK 99502

Dear Mr. Tonking:

The Department of Natural Resources has now received applications and supporting documentation for rights-of-way from both Cominco Alaska and GCO Minerals Company to connect mineral deposits in the Western Delong Mountains with tidewater. We are pleased to see the significant effort that is underway to develop these mineral resources with due regard for engineering and environmental concerns. As the Department's involvement in this project gets underway, it is appropriate to provide both companies with our position on several key issues.

1. The State of Alaska will authorize the development of a single transportation corridor. The route will be public and available to multiple use by other future resource developments in the region. As a public route, reciprocal right-of-way agreements must be acquired wherever private or corporate ownership is encountered.

2. Tideland (and associated upland) port development will also be available to support multiple users such as oil and gas, coal exploration, or support services development.

0-J9 LH

3. Local concerns, particularly subsistence use must be accommodated to the maximum extent possible.

4. One EIS should be produced that considers all potential options. To this end, the research data collected by both companies should be available to all participating agencies.

In consideration of these points and as an aid to the various agencies that will participate in this project a unified industry position is desirable. Since the primary objective of both companies is to ship mineral commodities, and consolidation of support facilities in the coastal zone is required under State law, you should strive to resolve any differences you may have and mutually support a common right-of-way and port site development.

The Department will be an active review agency during the EIS process and will be prepared to provide the requested permits and/or leases within six months of EIS adoption.

I am hopeful that these points provide better direction at the outset of this project and I look forward to a successful venture. We also will be available to meet with all involved parties in Anchorage at your earliest convenience.

Sincerely,

Esther C Wunnicke

Esther C. Wunnicke
Commissioner

Appendix D: Permit Flow Chart

Appendix E: Base Metal Markets (Cu, Pb, Zn): Alaskan Opportunities (Paper by Gordon H. Laurie, Cominco, Ltd.)

Appendix A: Project Description from Preliminary Draft Enviromnental Impact Statement

INTRODUCTION

Development of the Red Dog mining project would involve an open pit lead/zinc mine located 131 km (82 mi) north of Kotzebue. The ore would be crushed and the metallic sulfides concentrated in a mill near the mine site, with the concentrates transported to the coast for shipment to market. While the deposit has not yet been fully defined by geologists, at least 77 million Mg (85 million tons) of ore exist. The ore contains approximately 5.6 percent lead, 17.1 percent zinc, 75 g/Mg (2.4 oz/ton) silver and measurable levels of barite. The project has a potential life of at least 40 years under expected production rates, with the possibility of extension if additional ore is found. The mine would be developed in two phases. The "initial" phase of production would extend five years and produce approximately 434,450 Mg/yr (479,000 tons/yr) of combined concentrates (Table II-1). The "expanded" phase of production would extend from the sixth year of development through the life of the project. Approximately 683,878 Mg/yr (754,000 tons/yr) of combined concentrates would be produced during this phase (Table II-1).

The mine, tailings pond, mill, power plant, worker housing and water reservoir would all be located within a 8,975 ha (22,176 ac) parcel of private land in Red Dog Valley. The port site would also be on private land if located at VABM 28, but on public land if located at Tugak Lagoon. The transportation corridor would be almost totally on public land.

PROJECT COMPONENTS AND OPTIONS

In reviewing this document, it is important that the reader understand the relationship among the terms "component", "option" and "alternative". The project has several components, each one a necessary part of an entire viable mining project (e.g., the mine, mill site, tailings pond*, transportation system, port site, etc.). For each component there may be one or more options (e.g., a northern or a southern transportation corridor option). An alternative is a combination of options (one for each component) that constitutes an entire functioning project.

Table II-1

CONCENTRATE PRODUCTION SCHEDULE

Daily Production (Average Amount/Day)	Initial Production Rate		Expanded Production Rate	
	Mg[1]	Tons	Mg[1]	Tons
Ore	2,721	3,000	5,079	5,600
Lead Concentrate	204	225	308	340
Zinc Concentrate	907	1,000	1,515	1,670
Barite Concentrate	127	140	127	140
Tailings*	1,678	1,850	2,766	3,050
Annual Production				
Ore	958,700	1,057,000	1,779,534	1,962,000
Lead Concentrate	71,650	79,000	107,933	119,000
Zinc Concentrate	317,450	350,000	530,595	585,000
Barite Concentrate	45,350	50,000	45,350	50,000
Tailings	524,250	578,000	1,095,656	1,208,000

[1] 1 Mg (megagram) = 1.102 tons
1 ton = 0.907 Mg

Source: Cominco Alaska, Inc.

* Defined in Glossary.

The EIS scoping process initially identified at least two, and often several, options for each component. The process by which this large number of options was screened to reduce the number to a manageable level, and the ultimate project alternatives were selected, is described in detail in Chapter III. The following description of each project component, therefore, addresses only those component options which were ultimately retained and are specifically addressed in at least one of the three action alternatives.

Mine

The Red Dog deposit is located on a side hill on the main fork of Red Dog Creek. The immediate topography generally consists of rolling hills with wide valleys. The zone of mining influence would impact the main stem of Red Dog Creek (Fig. II-1).

The outcropping ore body and its geological configuration dictate that a conventional underground mine would not be feasible. Open pit mining would require overburden (waste rock) removal from the surface of the ore body, followed by drilling and blasting of the ore in benches within an open pit. Overburden material not suitable for mill processing would be stockpiled near the tailings pond.

The mine pit would be developed in two stages: preproduction followed by production mining. During preproduction, overburden would be removed from the pit, and access roads, pit ramps and the initial benches would be established. Unmineralized waste would be used for road and tailings dam construction. Mineralized waste would be stockpiled in a catchment area above the tailings pond. During preproduction, it is estimated that a total of 1,242,000 Mg (1,365,000 tons) of material would be removed.

Ore production rates are an important economic factor and are normally based on the extent of services and the estimated quantities of concentrates that would be accepted in the markets. Initial production mining would involve the annual extraction of 958,700 Mg (1,057,000 tons) of ore. On an initial operating basis, an average of 2,721 Mg (3,000 tons) of ore would be

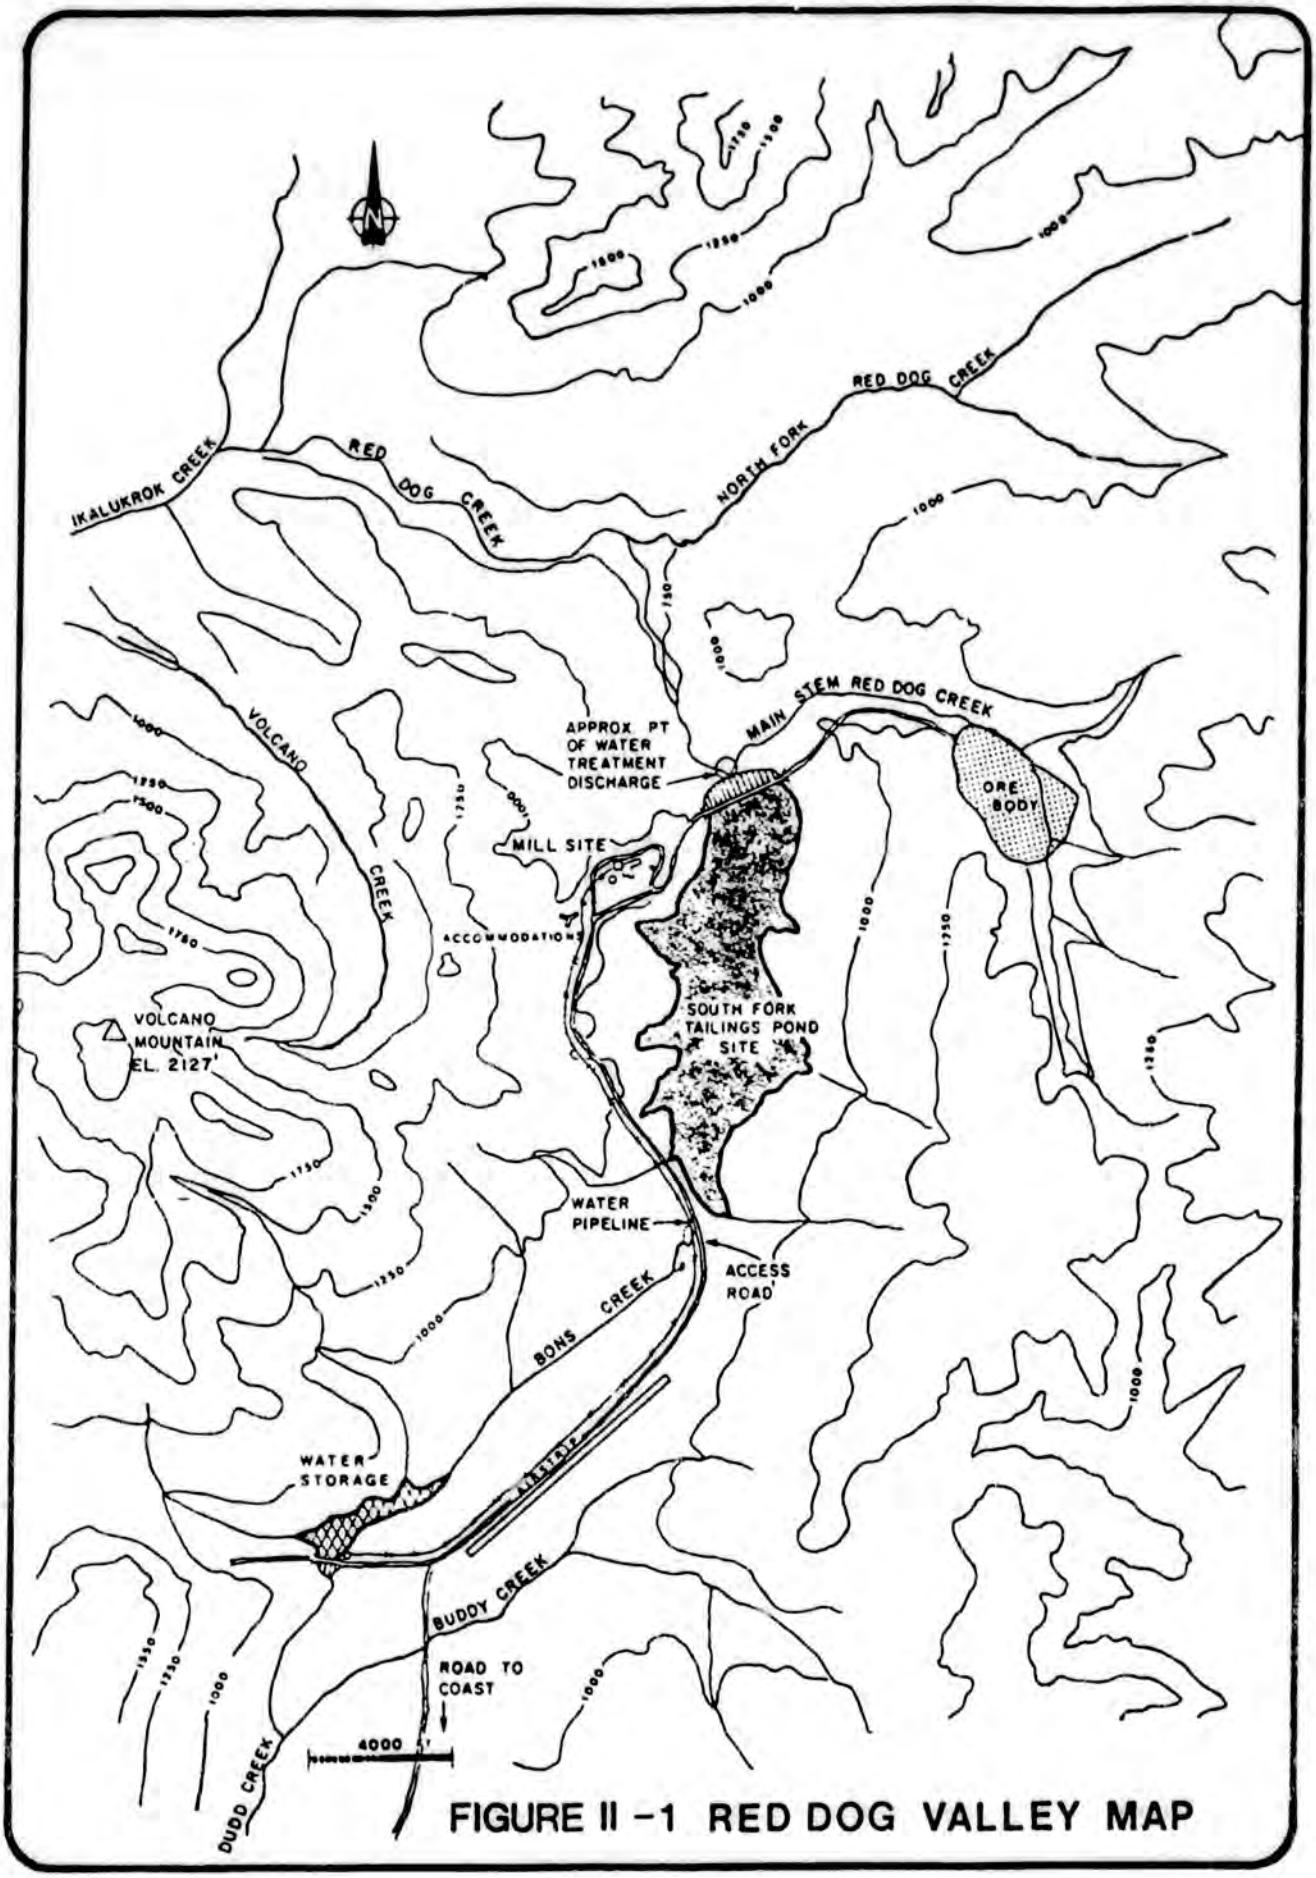

FIGURE II -1 RED DOG VALLEY MAP

sent each day to the concentrator (mill) for upgrading (Table II-1). Drilled and blasted ore would be loaded into mine type trucks using front-end loaders. The mine trucks would transport the ore to a crushing facility adjacent to the mill. The same loaders and trucks would be used to transport low grade ore and waste materials to stockpiles at the tailings pond.

The open pit would be designed to optimize ore recovery with due consideration given to protection of the Red Dog Creek watershed adjacent to the pit area (Fig. II-2). Pit slopes would be designed at 35 degrees and would be confirmed by rock mechanics design. Benches would be 7.6 m (25 ft) high and access ramps 18.3 m (60 ft) wide at an eight percent grade. The initial pit would be approximately 244 m (800 ft) in diameter and would contain seven benches down to the 297 m (975 ft) elevation. The final pit could be 853 m x 305 m (2,800 ft x 1,000 ft) in area and contain up to 28 benches to the 152 m (500 ft) elevation.

A diversion ditch would be constructed between Red Dog Creek and the open pit to collect runoff from the mine area. The ditch would initially intercept runoff from an approximate area of 0.65 km^2 (0.25 mi^2). The depth of the ditch would be sufficient to ensure that it would collect most of the ore zone runoff from the south side of the creek. If significant subsurface inflow from the creek occurred, a seepage cutoff wall would be added where necessary to block this inflow.

The drainage ditch would also collect surface erosion sediment originating from the open pit and the associated ore haul road to the mill. A pump station would route runoff from the open pit to the tailings pond. The ditch, collection sump and pump to the tailings pond would be sized for a 10-year recurrence 24-hour storm event. Adequate capacity would be allowed for winter icings and snow accumulation. The ditch would be cleaned of ice and erosion debris, if necessary, in late winter or spring to retain capacity for spring breakup and summer storm runoff.

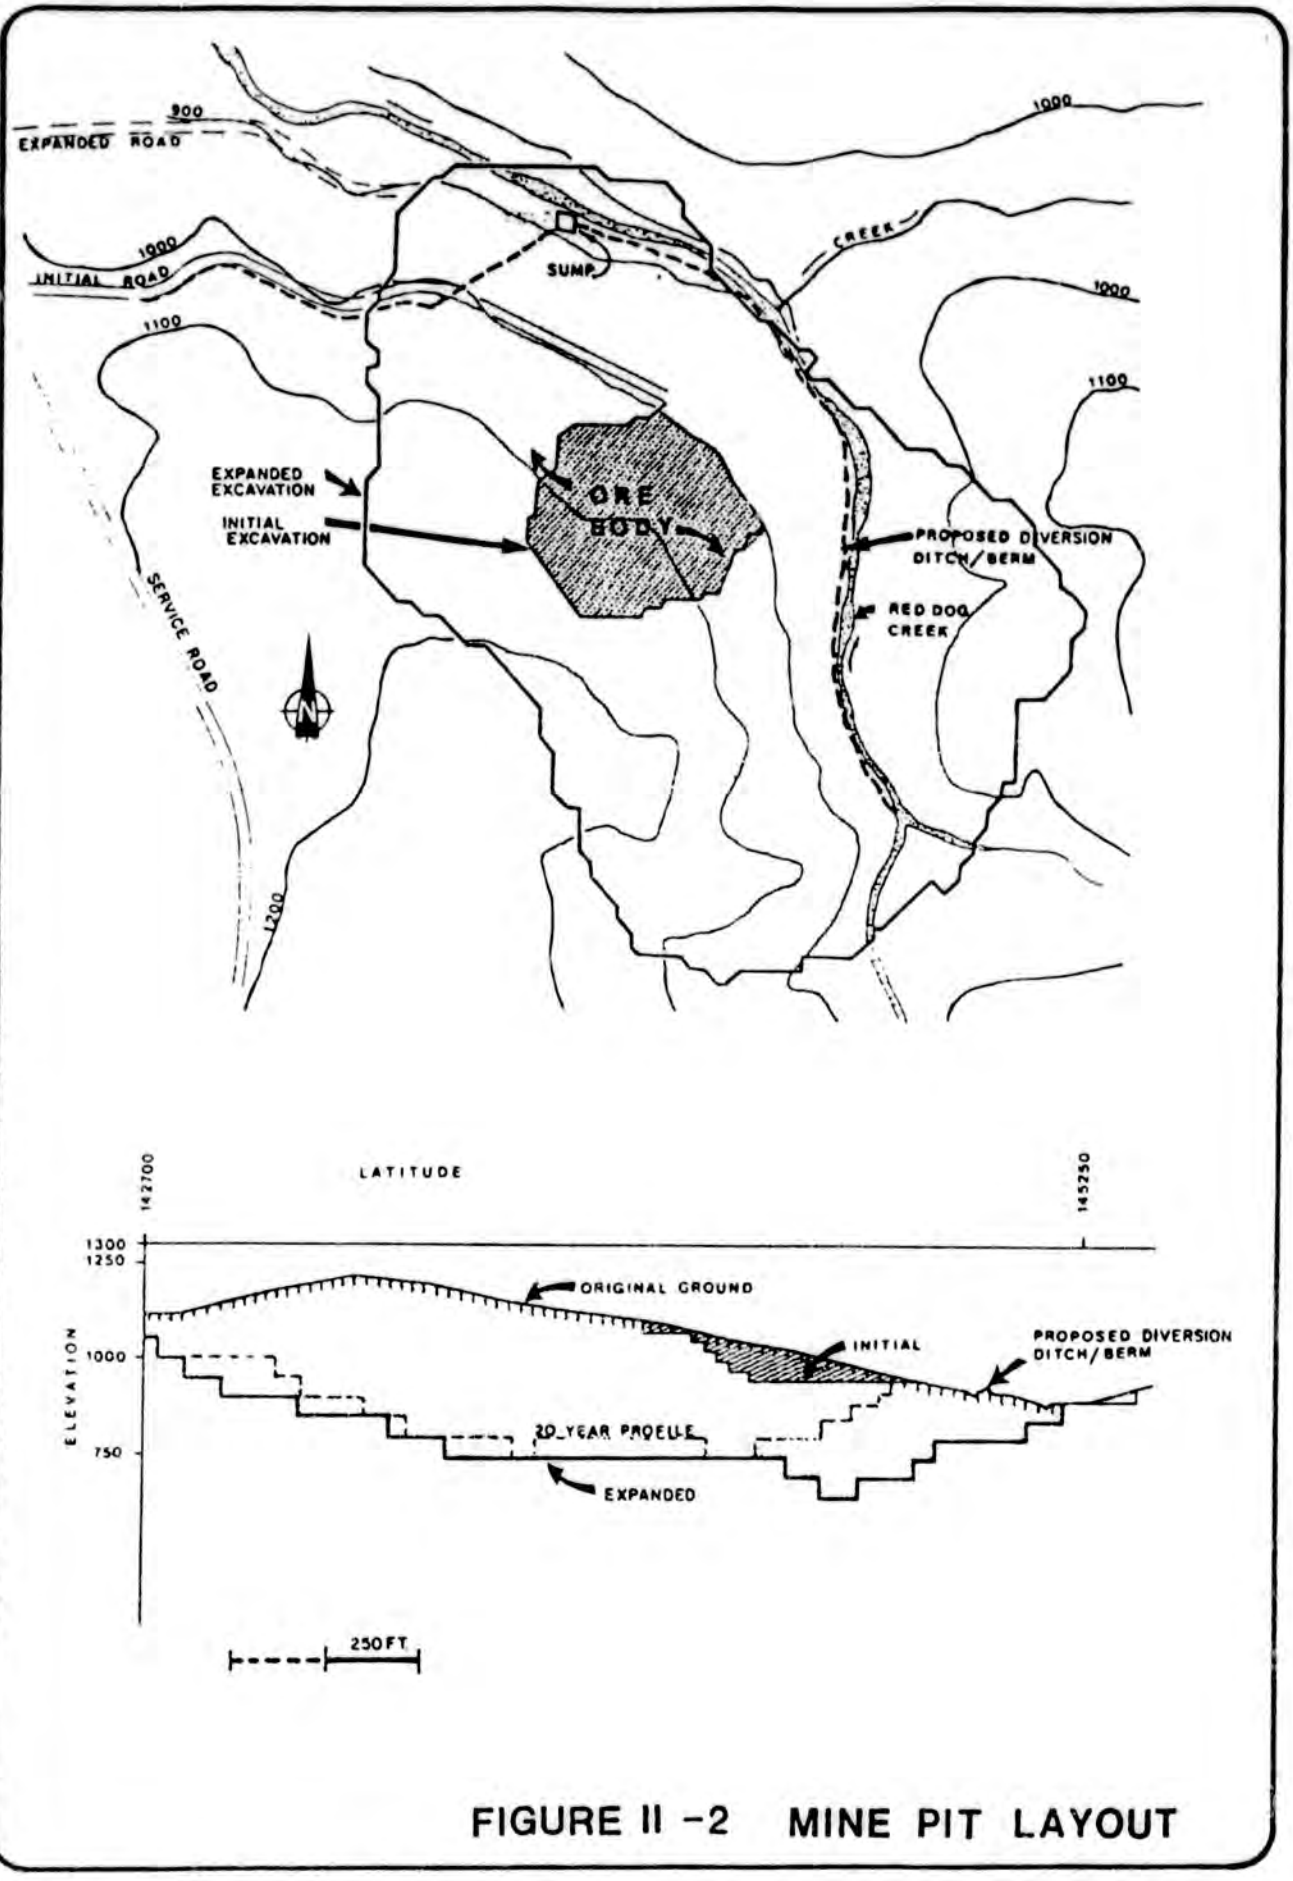

FIGURE II -2 MINE PIT LAYOUT

Tailings Pond

The location of the South Fork tailings pond in Red Dog Valley is shown on Figure II-1. A detailed diagram of the approximately 237 ha (585 ac) tailings pond facility is shown on Figure II-3. The tailings pond dam would be in the form of an impervious earth-filled structure with a spillway designed to maintain structural competency in the event of an overflow. The earth-filled dam would be constructed in stages. Prior to full production, the dam would be constructed to contain five years of production tailings. The dam would then be raised to its final elevation in stages which may take 15 years to complete. The top of the dam would be used as a road to haul ore from the pit to the mill complex.

Thickened tailings slurry from the mill concentrating process would contain about 60 percent solids by weight, with the liquid portion consisting of excess process water, dissolved minerals and residual reagents. The slurry would flow by gravity from the mill into the tailings pond. An internal process using a thickener would be used to return water directly to the mill process circuit as a step in minimizing process water loss. It is estimated that approximately 64 percent of mill process water could be recirculated directly in the mill in this way. Additional mill process water would be recycled from the tailings pond (25 percent) or from the freshwater source (11 percent). These recycle estimates are based upon water balance flowsheet data (Cominco Engineering Services, Ltd., 1983). Tailings in the form of a sand slurry would be deposited behind the dam.

Red Dog Creek tributaries with known metal content of toxic concentrations would continue to drain into the tailings pond for treatment, as would precipitation-related runoff. Diversion structures and ditches would be built to control or prevent excess surface drainage of uncontaminated water into the tailings pond. The surface water would be routed into the Bons Creek drainage, thus reducing the amount of water accumulating in the tailings pond. Chemical treatment and metals removal of tailings pond water would take place in a treatment plant prior to discharge to the presently minerals-contaminated Red Dog Creek. A seepage contingency dam would be con-

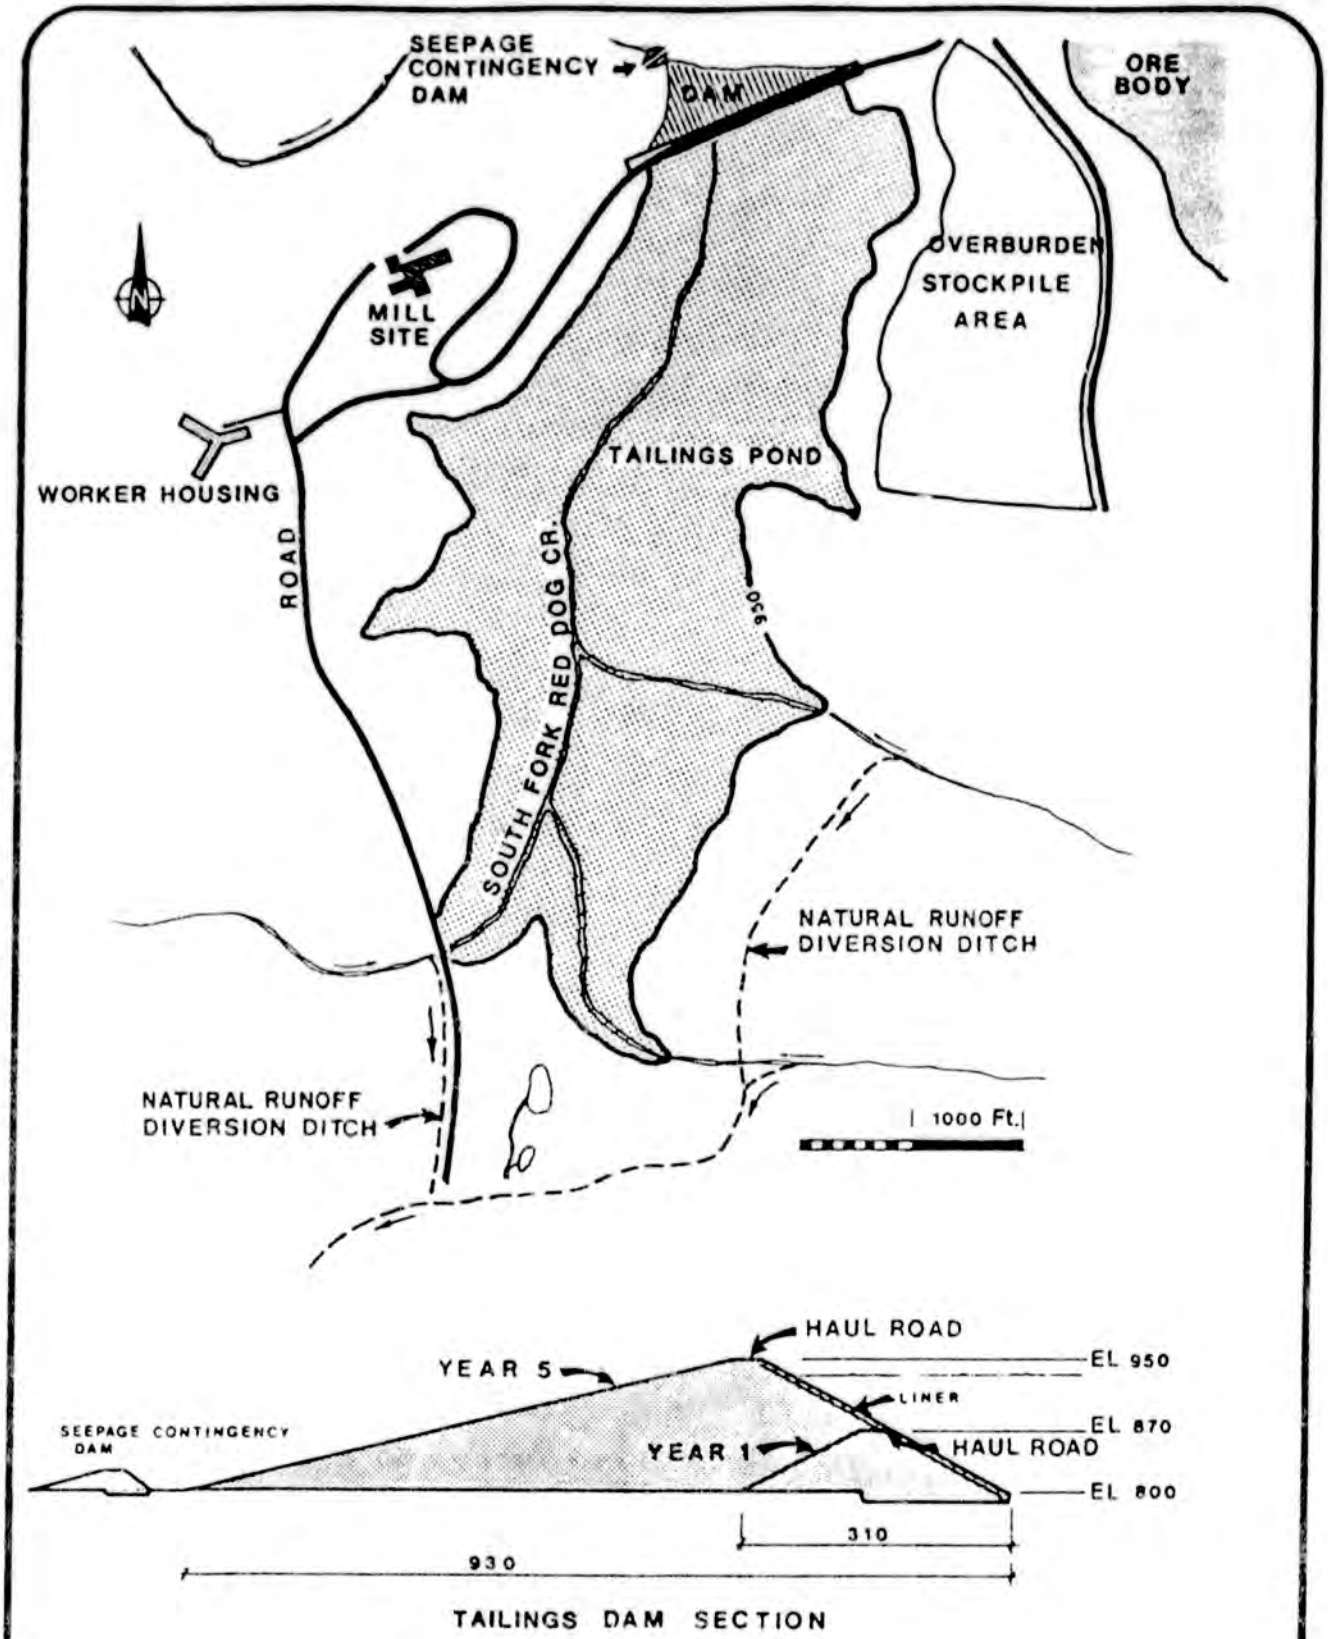

FIGURE II -3 SOUTH FORK TAILINGS POND

structed downstream of the main tailings pond dam to collect any seepage and return it to the tailings pond.

Mill

Proximity to the mine and tailings pond were determining factors in mill location. The proposed mill site would be on a small hill of bedrock outcrop located opposite the ore body on the northwest side of the South Fork tailings pond (Fig. II-1). This site would be located within the pond catchment area so that tailings slurry could flow by gravity from the concentrator complex to the tailings pond. In addition, worker housing facilities would be located within a reasonable distance of the mill site so that waste heat produced in the power generation process could be used to heat the accommodations.

The proposed mill complex is shown on Figure II-4. The approximately 14 ha (35 ac) complex would include a water treatment plant, a diesel-based power plant, fuel storage and distribution facilities, and a vehicle maintenance/warehouse structure in addition to facilities integral to the milling process.

The project would use a selective flotation milling process to concentrate valuable minerals. The flotation process would consist of three major steps: size reduction, selective mineral concentration and moisture reduction of the concentrates. During the milling process, lead, zinc and barite minerals would be separated and concentrated, while the residual tailings slurry containing waste rock would be directed to the tailings pond. Silver complexes with the lead and zinc concentrates in the milling process, and would be separated out later during smelting.

After grinding, the ore would be suspended in a water slurry and transported to flotation cells (tanks) where the valuable minerals would be separated from waste materials in a froth flotation process. In this process, valuable minerals adhere to air bubbles that rise to the surface of the tanks and are removed. To make the process work efficiently, it is necessary to

FIGURE II – 4 MILL SITE FACILITIES

add air and various reagents. The reagents either aid flotation of valuable components or suppress flotation of waste material. This allows the bubbling and frothing action to float different ore minerals selectively so that metal concentrates can be produced. The ore minerals would be separated as sulfide concentrates of lead and zinc, with barite recovered in the last stage of the process as barium sulfate. Waste would include silicate minerals and small concentrations of sulfides.

Following separation of the ore minerals from waste rock, dewatering of the concentrates would take place using lead and zinc thickeners, followed by filtration and thermal drying. Wherever possible, waste heat from the diesel-based power generation would be used for drying the concentrates.

No reduction of sulfides to base metals or other changes in the chemical composition of ore minerals would take place in the concentrator or at the project site. The upgraded lead and zinc concentrates (which would also contain silver) would be shipped to smelters outside of Alaska for processing to refined metals. Barite concentrate would be dried and bagged locally for possible use in formulating oil well drilling mud.

The mill would be a major consumer of water and, as such, recirculation of process water would be used to the fullest extent possible. In addition to concentrate thickeners, a tailings thickener would be used to recycle water, thus decreasing the volume of tailings slurry produced. This would decrease the amount of water that would have to be treated, and would reduce annual water demand by approximately 49 million ℓ (13 million gal).

Reagents are an integral part of mill operation and sufficient quantities for a year's operation would be stored at the mill site. Reagents to be used for the Red Dog project are shown in Table II-2. These materials would be supplied in annual shipments and stored in a secure area at the port site.

The zinc ($ZnSO_4$) and copper ($CuSO_4$) sulfates used as conditioners in flotation would be handled in polylined and sealed palletized cartons of approximately 0.9 Mg (1 ton) capacity. These materials could be compatibly stored together and their toxic environmental hazards are well known.

Table II-2

RED DOG CONCENTRATOR REAGENTS

	Initial Production		Expanded Production	
	Mg/yr	tons/yr	Mg/yr	tons/yr
Zinc sulfate ($ZnSO_4$)	480	529	1,401	1,544
Copper sulfate ($CuSO_4$)	480	529	2,505	2,761
Sodium cyanide (NaCn)	96	106	299	330
Methylisobutyl carbinol (MIBC)	48	53	199	220
Sodium isopropyl xanthate	480	529	1,766	1,947
Sodium cetylsulfonate (EC-111)	72	79	148	163
Sulfuric acid (H_2SO_4)	959	1,057	3,002	3,309
Hydrated lime [$Ca(OH)_2$]*	2,396	2,642	9,018	9,941
Polyacrylamide flocculant* (Percol 730)	5	6	5	6

* Note: Part of the lime and all of the flocculant supply would be used in the wastewater treatment process.

Sodium cyanide (NaCn) is a toxic reagent and must, at all times, be stored and handled in isolation from other chemicals, particularly those which are acidic in nature, including the sulfate salts. This material would be shipped in 102 kg (225 lb) sealed drums on pallets. The reagent is essential to the metallurgical process as a depressant of iron minerals.

Methylisobutyl carbinol (MIBC) is an aliphatic liquid alcohol which has only a moderate solubility in water. It is moderately toxic to aquatic life and com-

parable in this respect to most intermediate molecular weight liquid alcohols. This chemical would be shipped in 181 kg (400 lb) steel drums and could be safely stored with the other chemicals.

Sodium isopropyl xanthate is an essential sulfide mineral collector in the flotation process, and is very toxic in the environment. It would be shipped in approximately 0.9 Mg (1 ton) sealed, palletized containers which preferably would be stored apart from acidic materials. A potential problem with xanthate is that it may deteriorate from prolonged contact with moisture and then would require disposal as it would be unusable as a reagent.

Sodium cetylsulfonate (EC-111) is a paste-like surface active agent used for barite flotation that has only a moderate solubility in water. It is essentially non-toxic and has been approved for use in food applications. This material would be shipped in 181 kg (400 lb) steel drums on pallets and would be compatible with all other reagents.

Sulfuric acid (H_2SO_4) is a hazard to aquatic life by virtue of pH reduction effects. Because of its liquid nature, spills would be difficult to contain and the chemical could have long lasting impacts on vegetation recovery unless lime were applied as a neutralizing agent. Sulfuric acid would be stored at the port in an isolated, berm-protected bulk tank and hauled to the mine in acid standard tank trailers of 24,227 ℓ (6,400 gal) capacity.

Lime would be used as a pH modifier in the mill flotation process and in the wastewater treatment plant. It is only toxic in concentrations which result in high alkalinity and would be relatively safe to manage in the hydrated form. It would be shipped and stored in heavy-wall plastic bags of about 1.8 Mg (2 tons) capacity. There would be no constraints on its storage with other reagents.

Polyacrylamide flocculant (Percol 730) is a slowly water soluble, high molecular weight, acrylamide-based polymer that would be used as a solids settling aid in the wastewater treatment plant. This material is relatively non-toxic. It would be shipped in 23 kg (50 lb) sacks on pallets and must be

protected from temperature extremes in storage or its effectiveness might deteriorate.

The mill would produce lead, zinc and barite concentrates. Lead and zinc concentrates would be shipped to the port site in covered gondola-type trailers while barite would be moved in sealed containers on flat bed units.

The mill would operate on a continuous, round-the-clock basis for an estimated 350 days per year. Initial and final mill production rates are shown in Table II-1. Concentrates would be transported from the mill site to the main storage terminal at the port site in truck/trailer units. Approximately nine to 12 daily truck trips to the seaport would be required to handle the estimated daily production rate. Six weeks' production of concentrates could be stored at the mill to allow for transportation delays during periods of bad weather, when the roads were unsafe for travel, or if transportation activities were temporarily suspended to protect subsistence activities or animal migrations.

Worker Housing

A campsite or hotel-style facility would be constructed a reasonable distance from the mill site complex. The actual location of the accommodations would be more specifically defined during the detailed design stage of the project in accordance with Mining Safety and Health Administration (MSHA) regulations that mandate specific criteria for worker safety and comfort.

Approximately 225 to 250 full-time employees would comprise the project site workforce at any given time. Workers would be scheduled on a rotation of approximately two weeks on and two weeks off so the total project workforce would be twice that figure. The projected mine/mill workforce breakdown would be as follows:

Miners/Mill Operators	50 percent
Mechanics/Electricians	15 percent
Support	15 percent
Supervisory/Management	20 percent

Water Supply

The mill would be a major consumer of water so a guaranteed year-round water source would be essential to the project. Wells would not be feasible since the permanently frozen ground prohibits free-flowing water aquifers. An approximately 25 ha (63 ac) water storage reservoir located on Bons Creek at the south end of Red Dog Valley would serve as the water supply (Fig. II-5). A rock-filled dam would be constructed on bedrock foundation near the existing airstrip, and a pipeline would follow the existing road system to the mill site. The reservoir would also serve as a domestic water supply. It would have a capacity of 1,462 dam^3 (1,185 ac-ft) of water to meet an expected total daily consumption rate of 1,136 ℓ/min (300 gal/min) for all the mine area facilities.

Power Generation

For the concentration of minerals to take place, a large amount of power would be expended in grinding to achieve a fineness which allows adequate liberation of lead sulfide, zinc sulfide and barite particles from waste particles. On an average basis, electric power at a rate of 19.3 kWh/Mg (17.5 kWh/ton) of mill feed would be required for the grinding process. In order to meet this and other support facility demands, a dedicated power plant would be necessary. The Red Dog project would consume approximately 10.2 MW, and an 18 MW diesel-based power plant would be installed to allow for down time of some generators.

It was desirable to minimize both the loss of waste heat and air pollutant discharge by designing a system whereby waste heat would be used for concentrate drying, with the dryer exhaust treated in a scrubber or other type of pollutant control device. Diesel fuel storage and distribution facilities would be provided at the mill site. Fuel storage units (capacity of 4,800 bbls) would periodically be replenished from the main fuel depot at the coast by tanker trucks or by ore trucks specially fitted with tanker units.

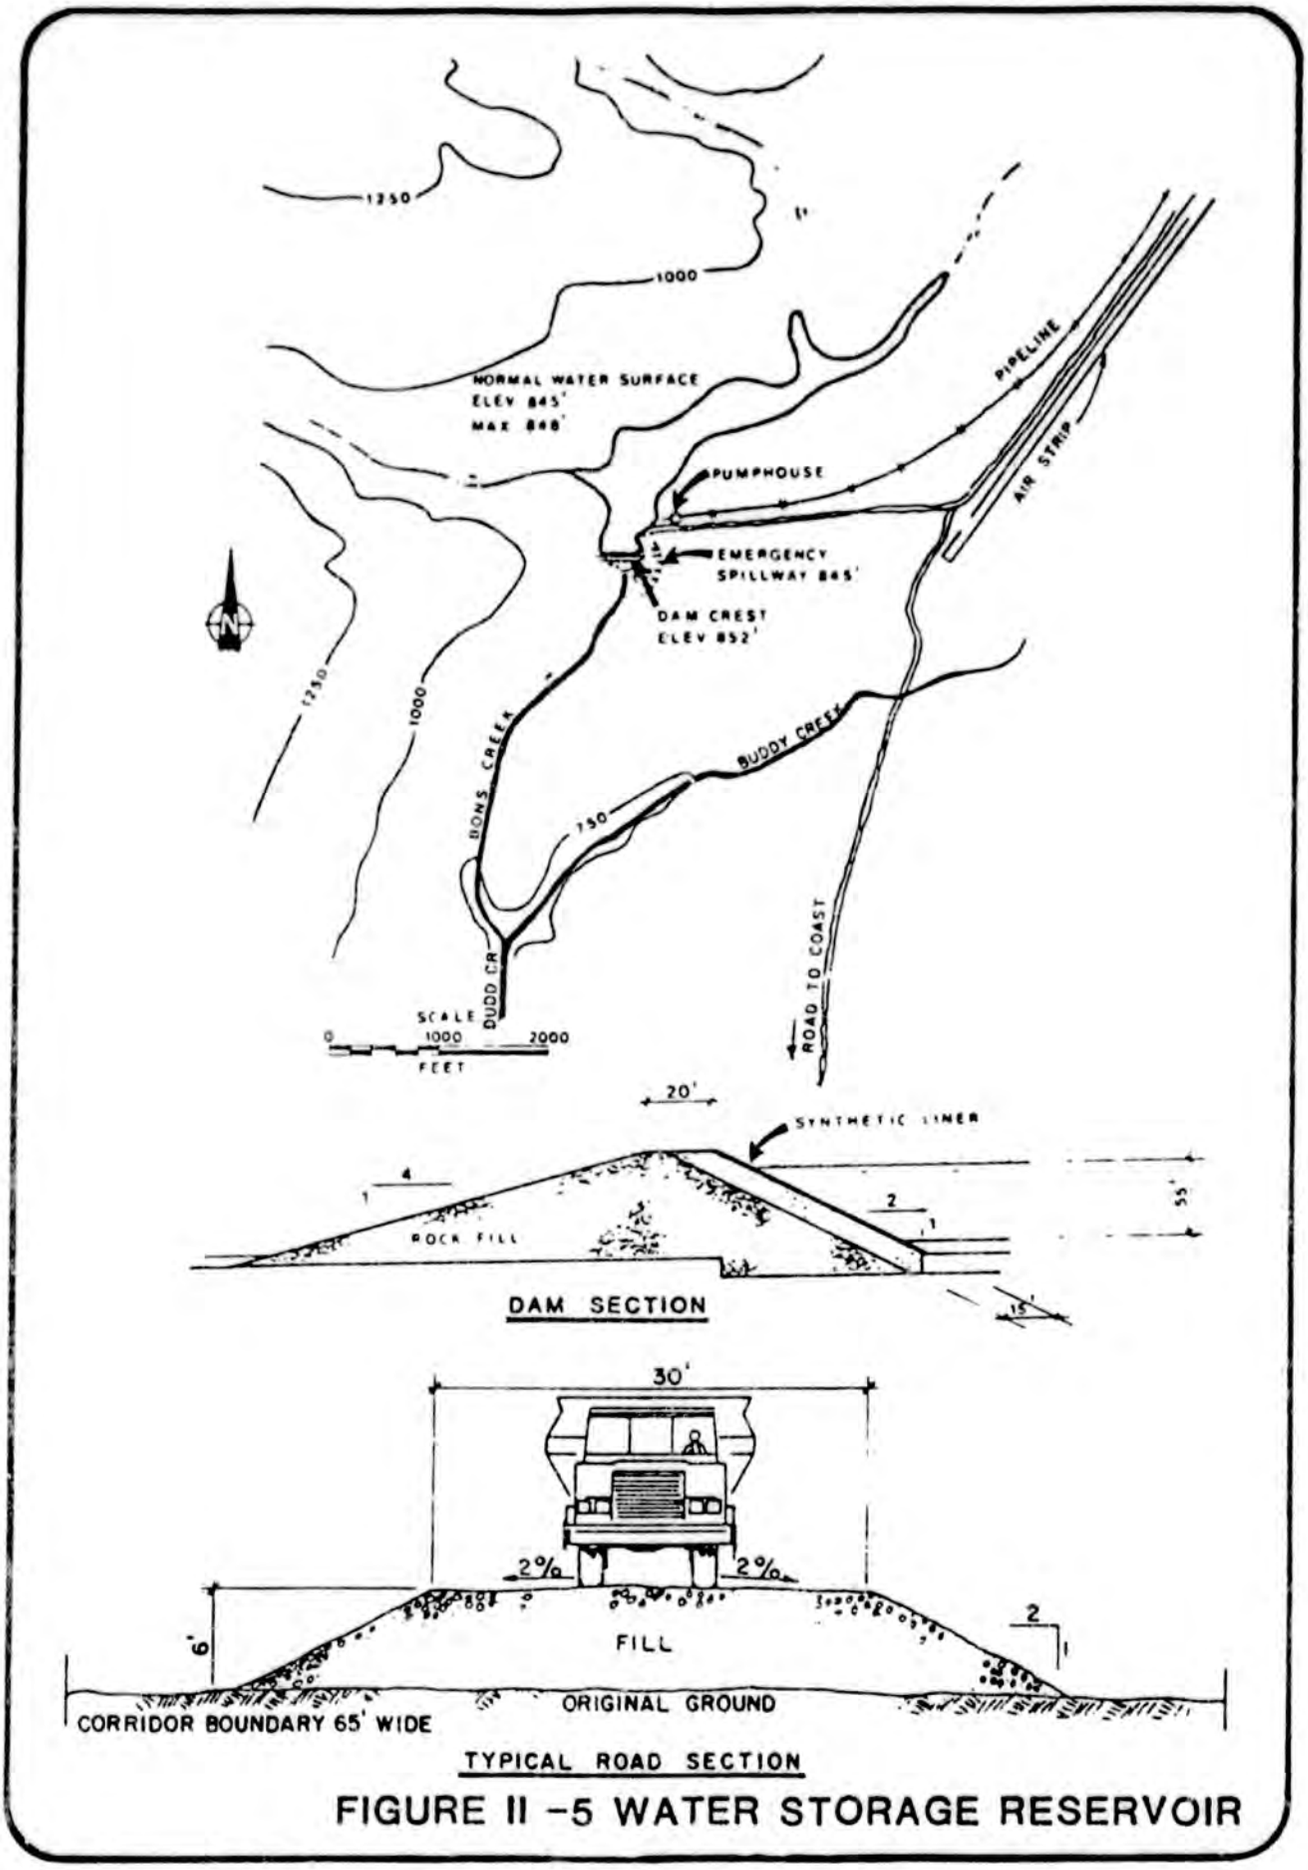

FIGURE II -5 WATER STORAGE RESERVOIR

Transportation Corridor

A transportation corridor would link the Red Dog Valley mine facilities with the Chukchi Sea coast. Two corridor options are included in the alternatives: a northern and a southern corridor (Fig. II-6). For the first 11.8 km (7.4 mi) the two corridors follow a common alignment. At a point near Dudd Creek, the northern corridor swings westward across the Wulik, Kivalina and Asikpak River drainages to a port site near Tugak Lagoon 24 km (15 mi) northwest of Kivalina. At Dudd Creek the southern corridor continues southwest along the flanks of the Mulgrave Hills to a port site near VABM 28, approximately 25.6 km (16 mi) southeast of Kivalina. The topography of both corridors would be gentle enough to handle railroad grades. Both corridors have therefore been laid out to accommodate a railroad at some future time.

Northern Corridor

The northern transportation corridor would be approximately 117.0 km (73.1 mi) long and would require the construction of six major (greater than 30.5 m [100 ft]) multiple-span bridges, seven minor bridges and approximately 300 culverts. The route would traverse the main stems of Ikalukrok Creek, and the Kivalina, Wulik and Asikpak Rivers (Fig. II-6). It would cross approximately 12 streams which contain fish.

Southern Corridor

The southern transportation corridor would be 89.9 km (56.2 mi) long and would require the construction of one major bridge, four minor bridges and approximately 182 culverts. The corridor would cross tributaries of the Wulik, Noatak and Omikviorok Rivers near their headwaters, and would generally stay at a higher elevation than the northern corridor until its terminus at the VABM 28 port site (Fig. II-6). It would cross approximately 11 streams which contain fish.

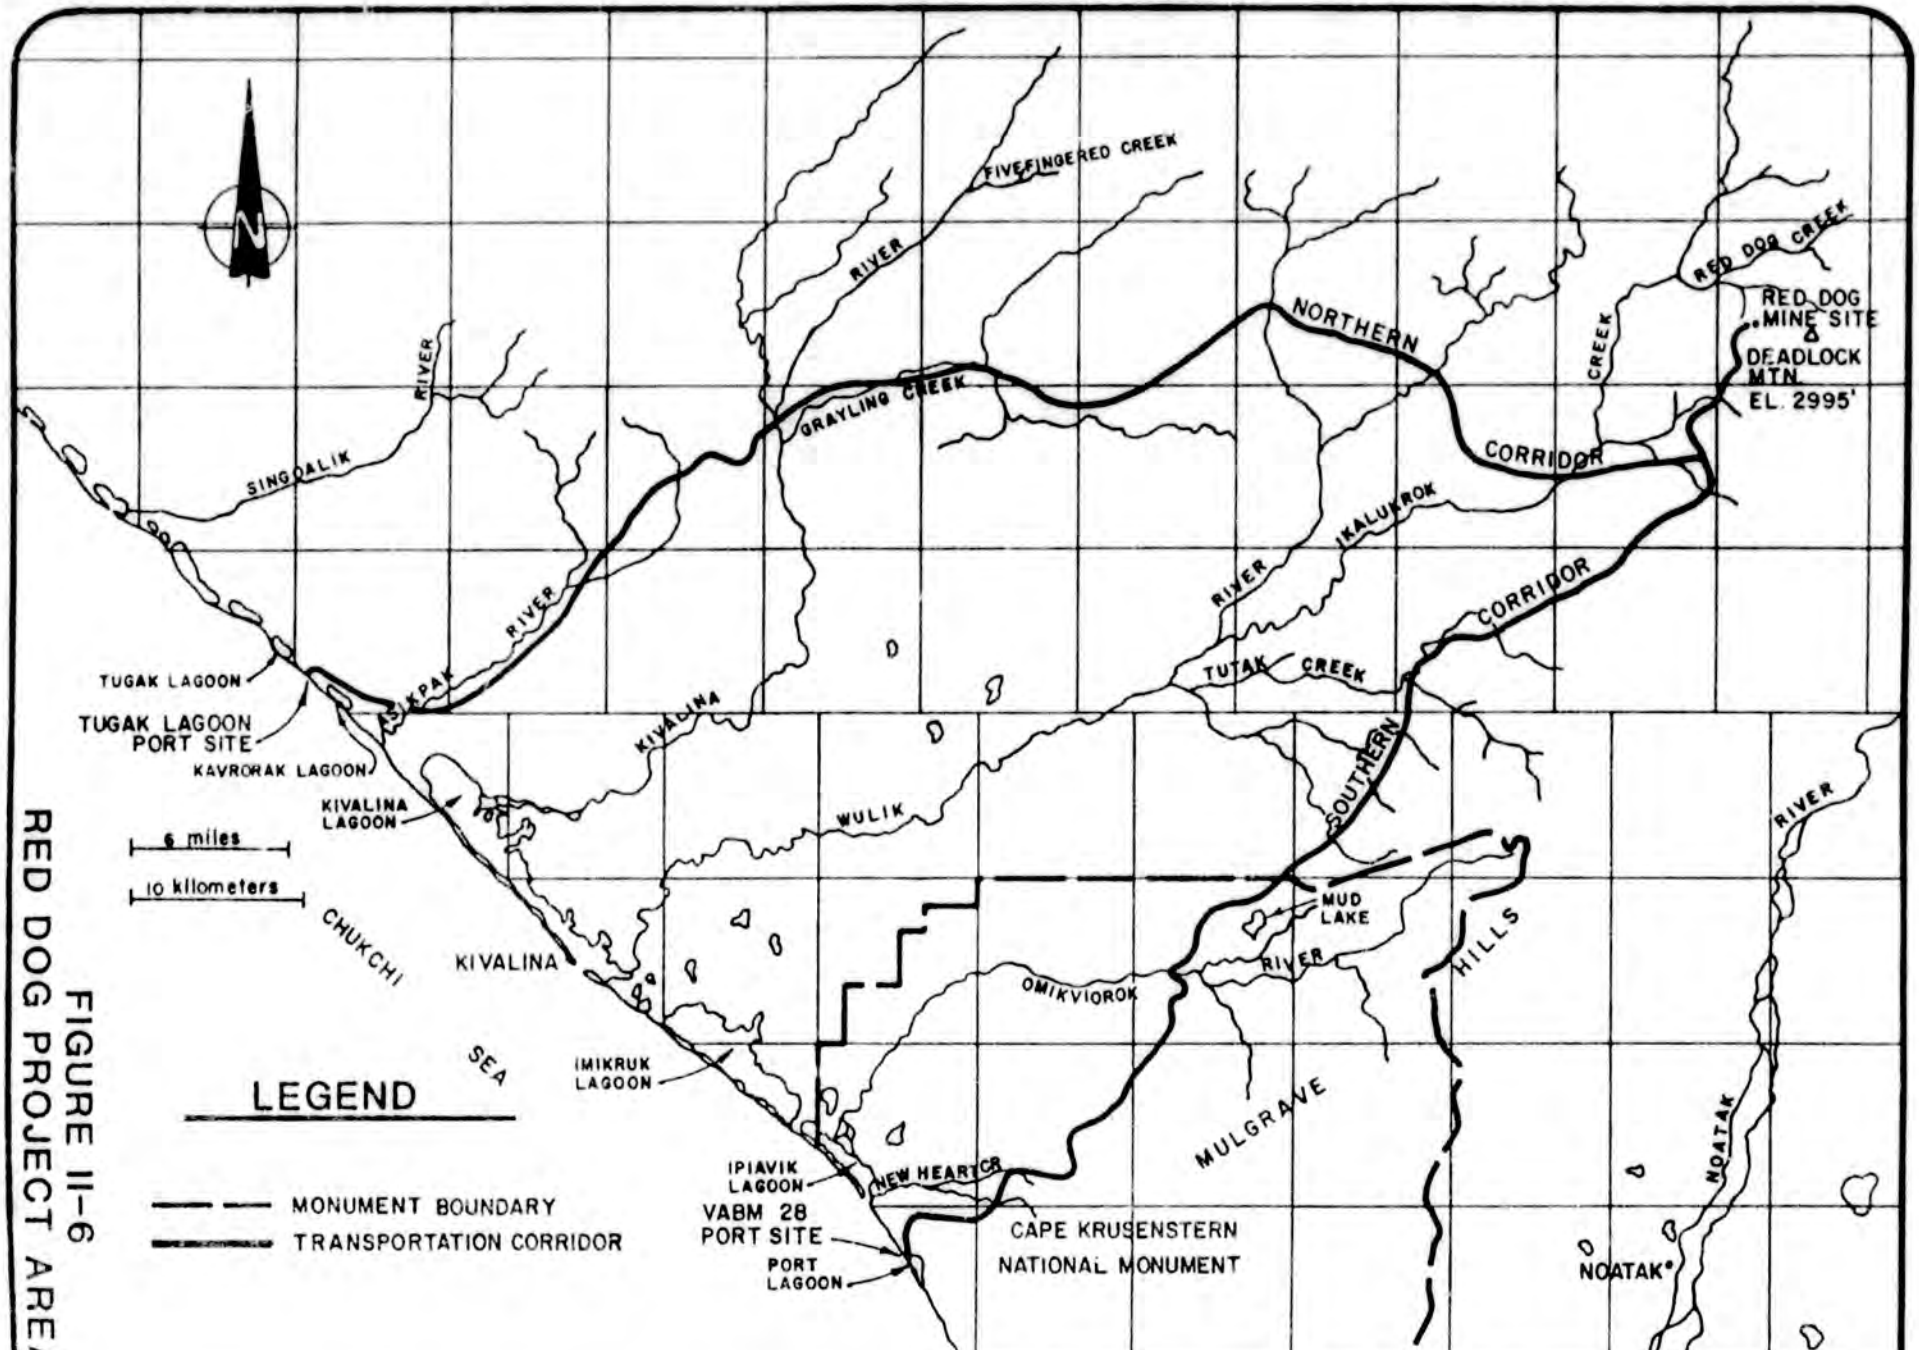

FIGURE II-6
RED DOG PROJECT AREA

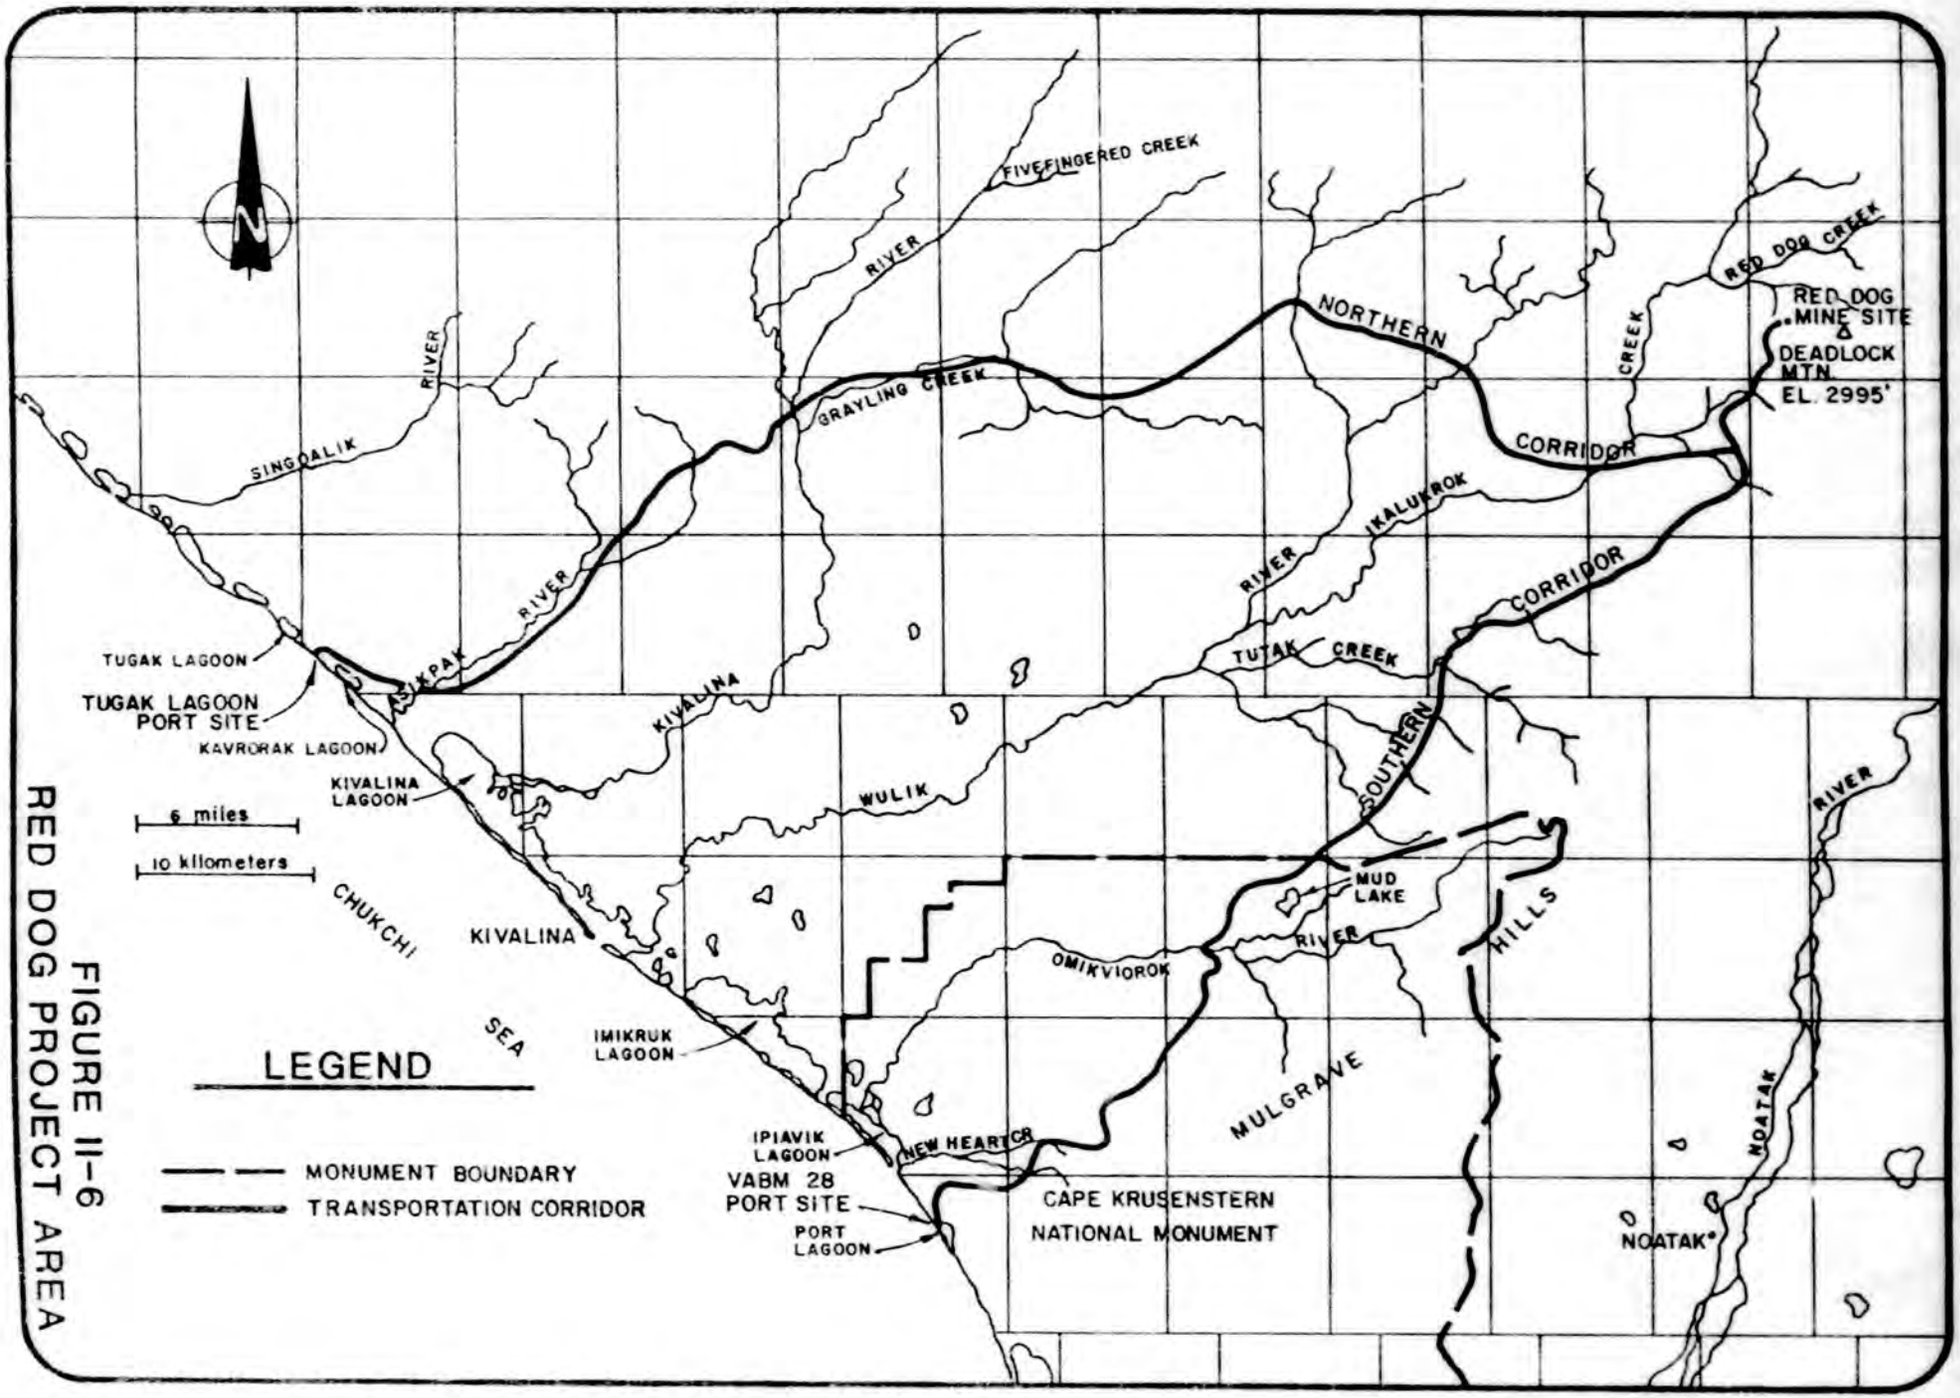

FIGURE II-6
RED DOG PROJECT AREA

Road Transportation System

The road haulage system would be comprised of a gravel surfaced road and double truck/trailer haulage units similar to normal highway vehicles, but over-sized. The roadbed or subbase would be composed of granular fill 2.0 m (6.5 ft) thick to prevent degradation of permafrost. The majority of the fill needed for construction would come from quarry sources as few gravel sources have been located along the corridors.

The top surface of the road would be 9 m (30 ft) in width as shown in Figure II-5. Turnouts and passing places would be provided along the route. Curvature and grade would generally be limited to 10 degrees and three percent, respectively, to permit eventual construction of a railroad. Bridge structures and culverts would be designed to accommodate year-round concentrate haulage by combined truck/trailer units. A truck and a trailer would weigh approximately 103 Mg (114 ton) and 90 Mg (108 ton), respectively, or 201 Mg (222 tons) for one combined truck and trailer unit. Nine to 12 daily truck/trailer round trips to carry concentrates to the port site would be required for the first five years at initial production rates. Following proposed expansion of production after five years, daily trips would average between 16 and 20.

Inbound freight would likely be containerized, though some specialized trailers such as tanker units (to haul fuel oil to the mill site) would be required. Periodic maintenance of the roadway would be necessary, thus requiring a full complement of road maintenance and repair equipment.

Port Site

Though operations at the mine would continue year-round, activity at the deep-draft port site would be limited to the receipt of supplies and fuel during the summer sealift, and the shipment of concentrates from late June until early October. Climatic constraints on shipping activities thus require that adequate storage facilities for concentrates, fuel and other supplies exist at the port site. Using an all-weather road, it is estimated that eight

and a half months of concentrate storage capacity would be required at the port site.

Schematics of the approximately 20 ha (50 ac) proposed port site facilities are shown on Figures II-7 and II-8. Depending upon the type of transfer facility (described below), fuel would be stored either onboard the "offshore island" or in tanks on land at the port site. In either case, a year's supply would be kept there to serve as the main fuel depot for the project. Fuel would be periodically hauled to the mine site as required. A short causeway/dock structure would be required to receive incoming freight and supplies, and for transfer of the concentrates for shipment.

Only emergency and temporary ship loading crews would be housed at the port site. A small accommodation complex would be provided to support activities during the summer shipping season. Domestic sewage would be collected and treated using a package treatment facility before discharge into the sea. A small diesel-based 1.5 MW power plant would be required to operate conveyor equipment and life support facilities. In addition to the facilities located immediately at the coast, the main concentrate storage building would be located approximately 4.0 km (2.5 mi) inland, adjacent to the transportation corridor. This structure would be constructed on an excavated borrow site* to minimize habitat destruction, and to take advantage of foundation materials and protection from the wind.

Transfer Facility

Two methods to transfer concentrates from the port site storage facility to ocean going vessels are included in the alternatives: a short causeway/lightering* transfer system and a short causeway/offshore island transfer system. Both systems would use a 122 m (400 ft) causeway/dock structure as an interface between the shore and the concentrate loading vessels or offshore island. The causeway/dock structure would extend to the 4.6 m (15 ft) water depth. Concentrates would be transferred by conveyor belt

* Defined in Glossary.

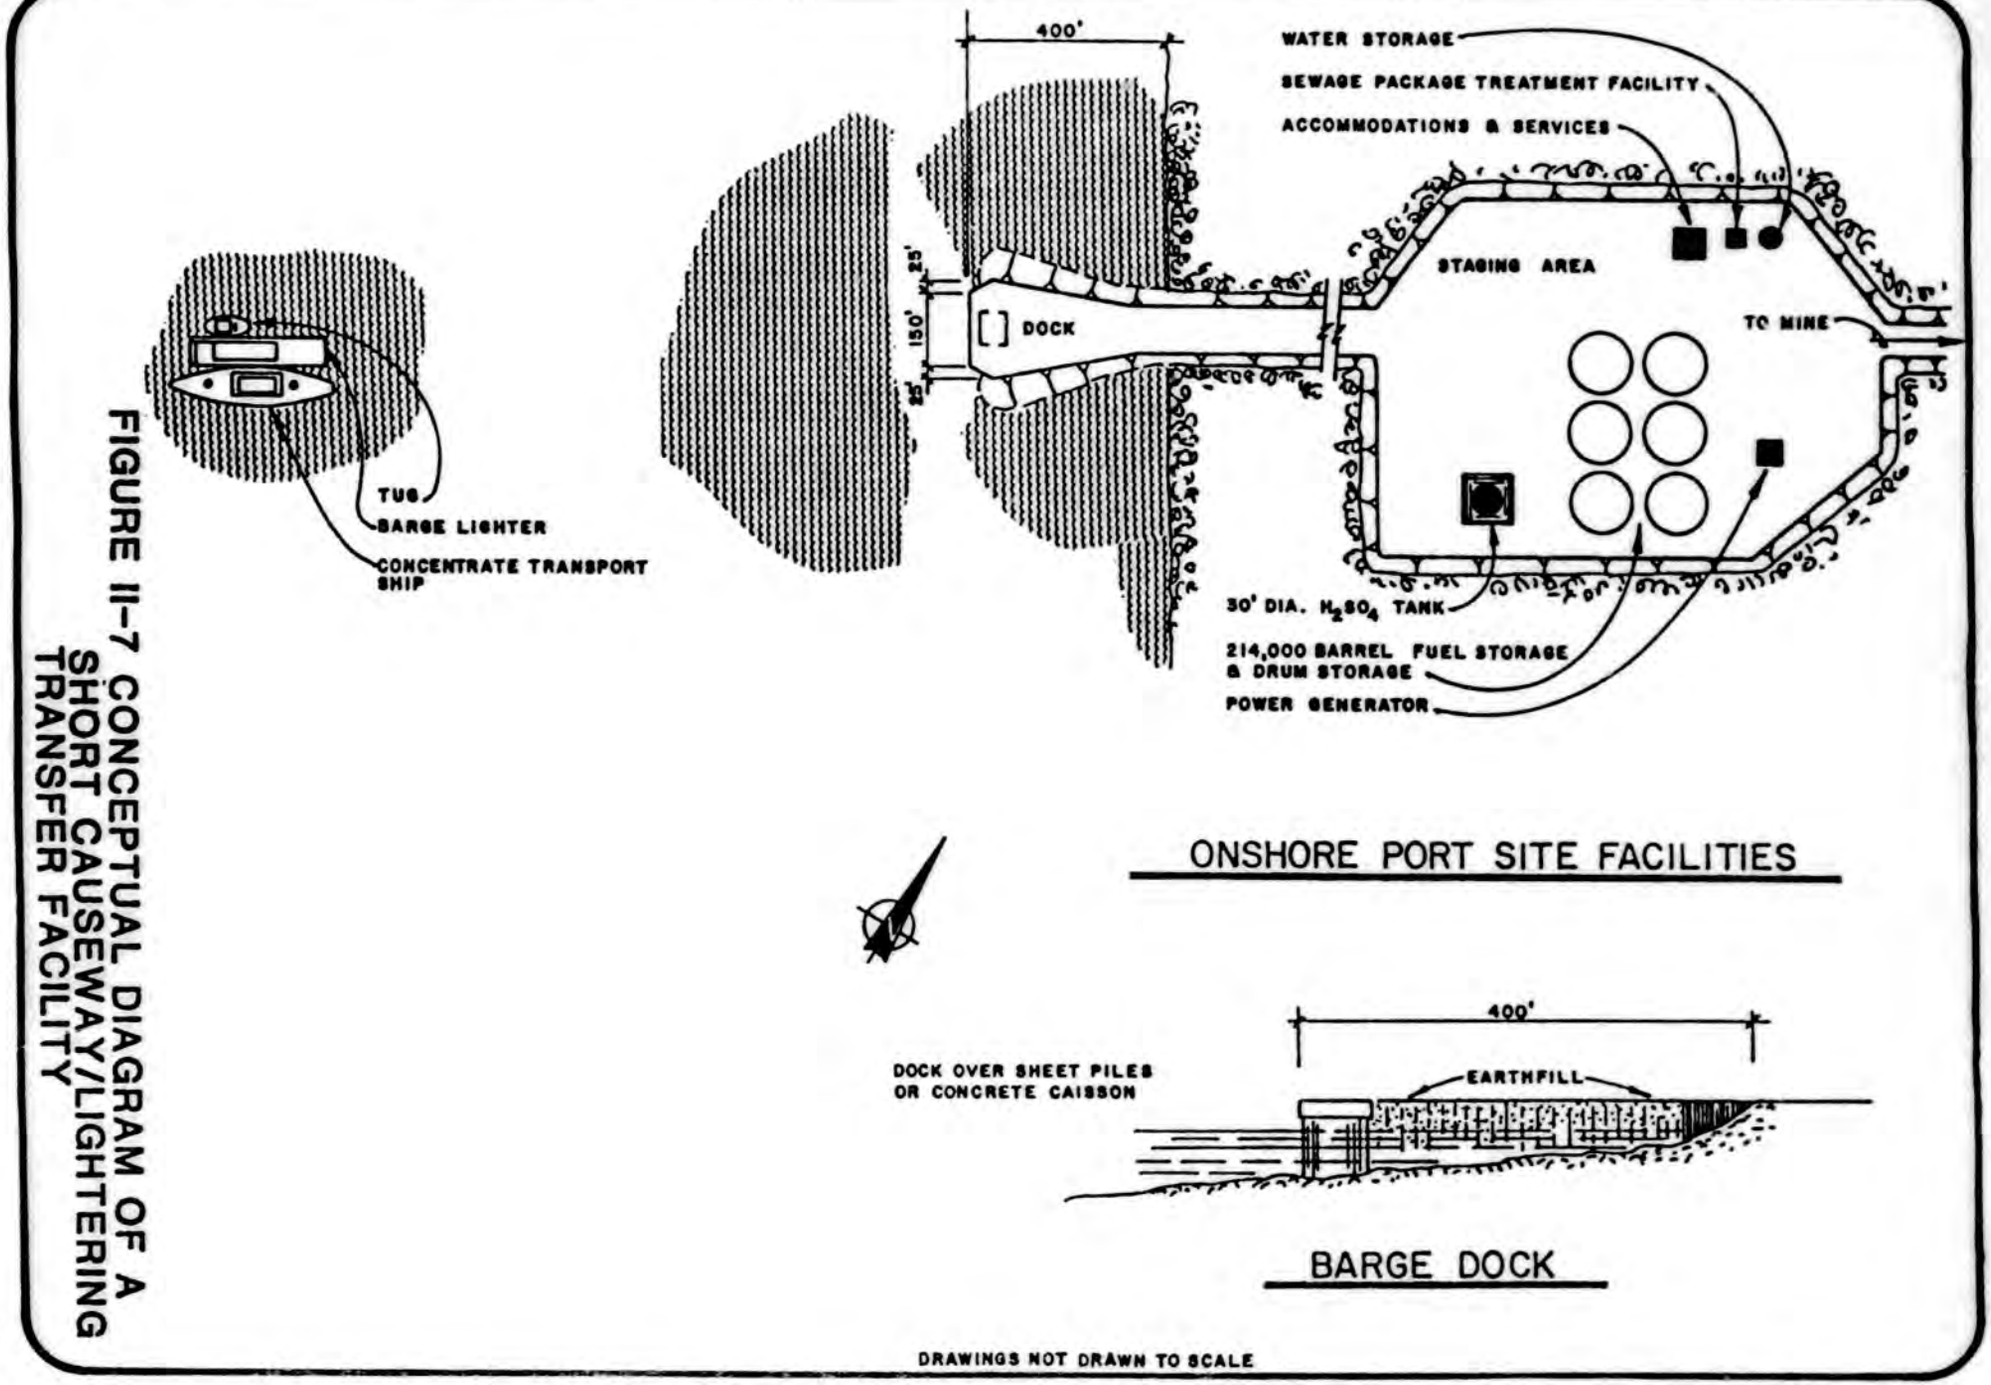

FIGURE II-7 CONCEPTUAL DIAGRAM OF A SHORT CAUSEWAY/LIGHTERING TRANSFER FACILITY

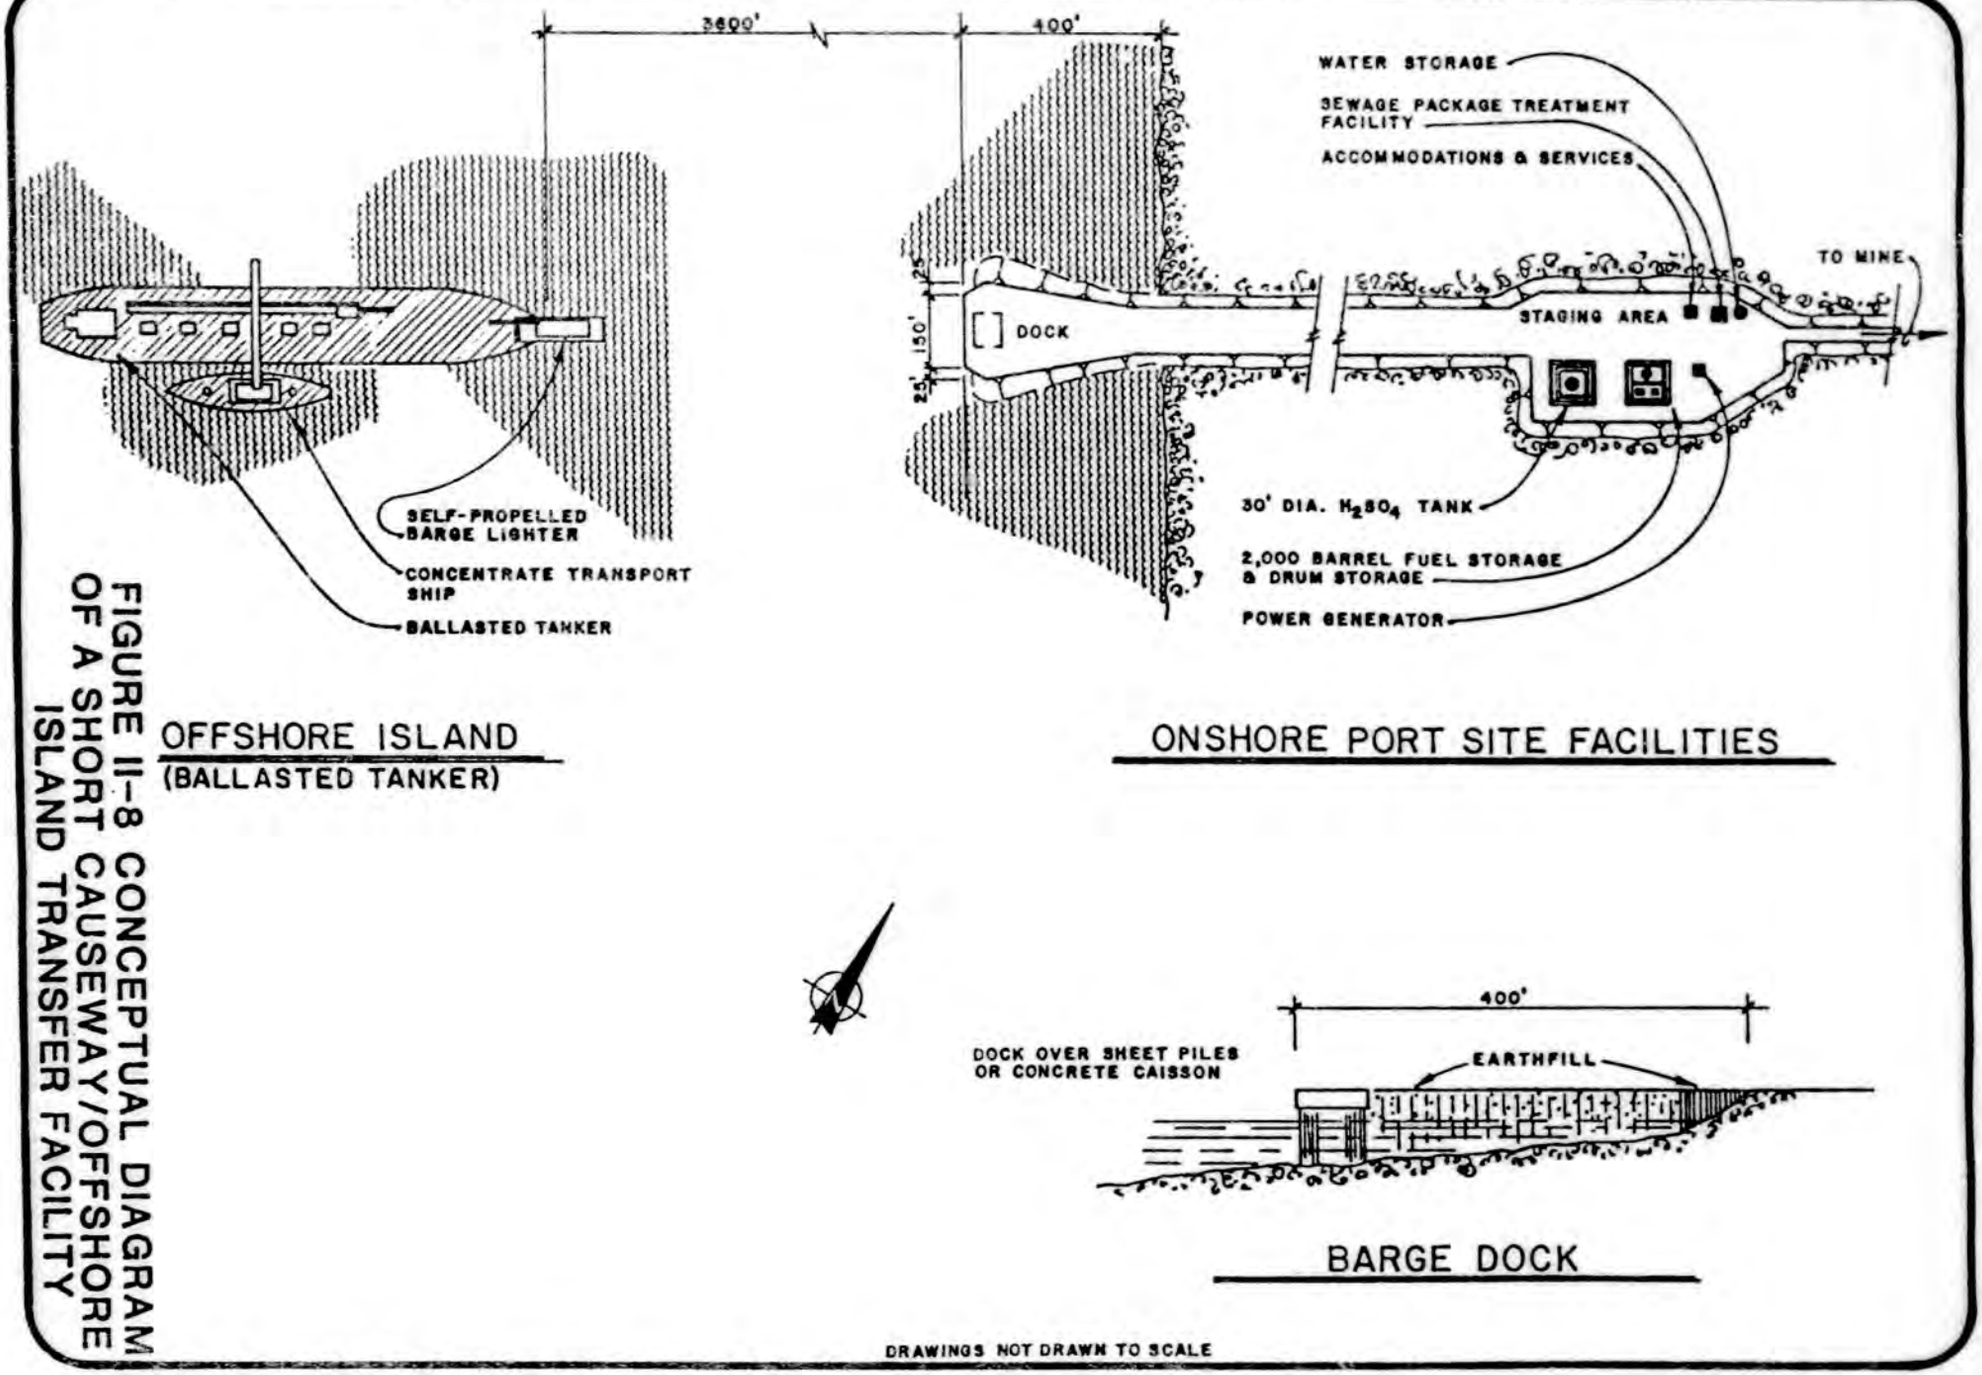

FIGURE II-8 CONCEPTUAL DIAGRAM OF A SHORT CAUSEWAY/OFFSHORE ISLAND TRANSFER FACILITY

from a storage building, along the causeway, to a barge loader structure mounted on the dock face.

The causeway structure would be constructed of sheet pilings with solid earth fill (Fig. II-7). It would be suitably capped and faced to allow lighter* barges to tie up at its seaward face. Depending on the transfer facility option selected, lighter barges ranging from 907 to 4,535 Mg (1,000 to 5,000 tons) would be used.

Short Causeway/Lightering System

This transfer method would use two 4,535 Mg (5,000 ton) lighters and two support tugs to transfer concentrates from the dock directly to the side of a moored ocean going bulk-handling ship. The ocean going vessel would load concentrates with clam shell cranes, though rough sea conditions might make this transfer method unreliable. Winter shelter for the two large-capacity lighters and their tugs would be provided in a coastal lagoon located adjacent to the port facilities.

Short Causeway/Offshore Island

This transfer method would use a 226,750 Mg (250,000 ton) surplus oil tanker with an ice-strengthened hull which would be ballasted to the bottom perpendicular to shore (Fig. II-8). The landward end of the tanker would be in approximately 7.6 to 8.5 m (25 to 28 ft) of water and the seaward end in 10.6 to 12.1 m (35 to 40 ft) of water. Depending upon the port site selected, the landward end of the tanker would be approximately 1,213 m (4,000 ft) from shore. This 305 m (1,000 ft) tanker "island" would serve as an offshore dock for the smaller, ocean going bulk carriers. The tanker would be large enough to accommodate storage of concentrates, fuel and supplies. Onboard concentrate storage capacity would be sufficient to load three to five ocean going bulk carriers.

---

* Defined in Glossary.

The bow of the ship would be modified to accommodate a 907 Mg (1,000 ton), self-unloading lighter which would discharge directly by conveyor belt into the ship (Fig. II-8). Only one self-propelled lighter would be needed to transport concentrates because of the storage capacity onboard the tanker. Shelter for the single, smaller lighter could be provided in the lee of the tanker if necessary during bad weather. Winter shelter would be provided in a coastal lagoon adjacent to the port site. If ice conditions were suitable, winter transfer of concentrates to the tanker island might be accomplished by trucks driven directly over the ice.

Transfer of concentrates from the ballasted tanker to bulk carriers would be accomplished using moveable conveyors between ships which would be loaded from storage by a clam shell bucket. Similar to the shore-based system, conveyors would be covered, and the end of the loader would be fitted with a telescoping spout or "elephant's trunk", to direct the concentrate into the receiving ship's hold below deck level. Conveyor return belts would be brushed in an enclosure to prevent losses to the sea. Sealed barite containers would be loaded by crane.

Fuel Storage

Location of the major fuel storage depot for the project would depend upon the transfer facility selected. For the short causeway/lightering option a full year's supply of fuel for the project, as well as fuel to meet the annual needs of the region's villages, would be stored in tanks on land at the port site. The fuel would be lightered to the dock from ships moored offshore. Storage capacity would be approximately 214,000 bbls with about 56 percent of that (120,000 bbls) being for the project. Fuel would be hauled to the mine area facilities by tanker truck as needed during the year. It would be distributed to the villages from the port site using the same smaller barges as used presently by local barge services to navigate the rivers.

For the offshore island option, the same amount of fuel would be transferred directly into the ballasted tanker and stored in tanks aboard the ship. It would be moved to shore year-round through a buried 10 to 15 cm (4 to

6 in) pipeline designed to withstand wave and ice forces and scour in the surf zone. The pipeline would be pressure tested for leaks prior to fuel transfers. Fuel would be stored at the port site to a capacity of approximately 2,000 bbls. It would then be transported to the mine area facilities by tanker truck as needed. Regional village fuel would be distributed by barges directly from the tankers.

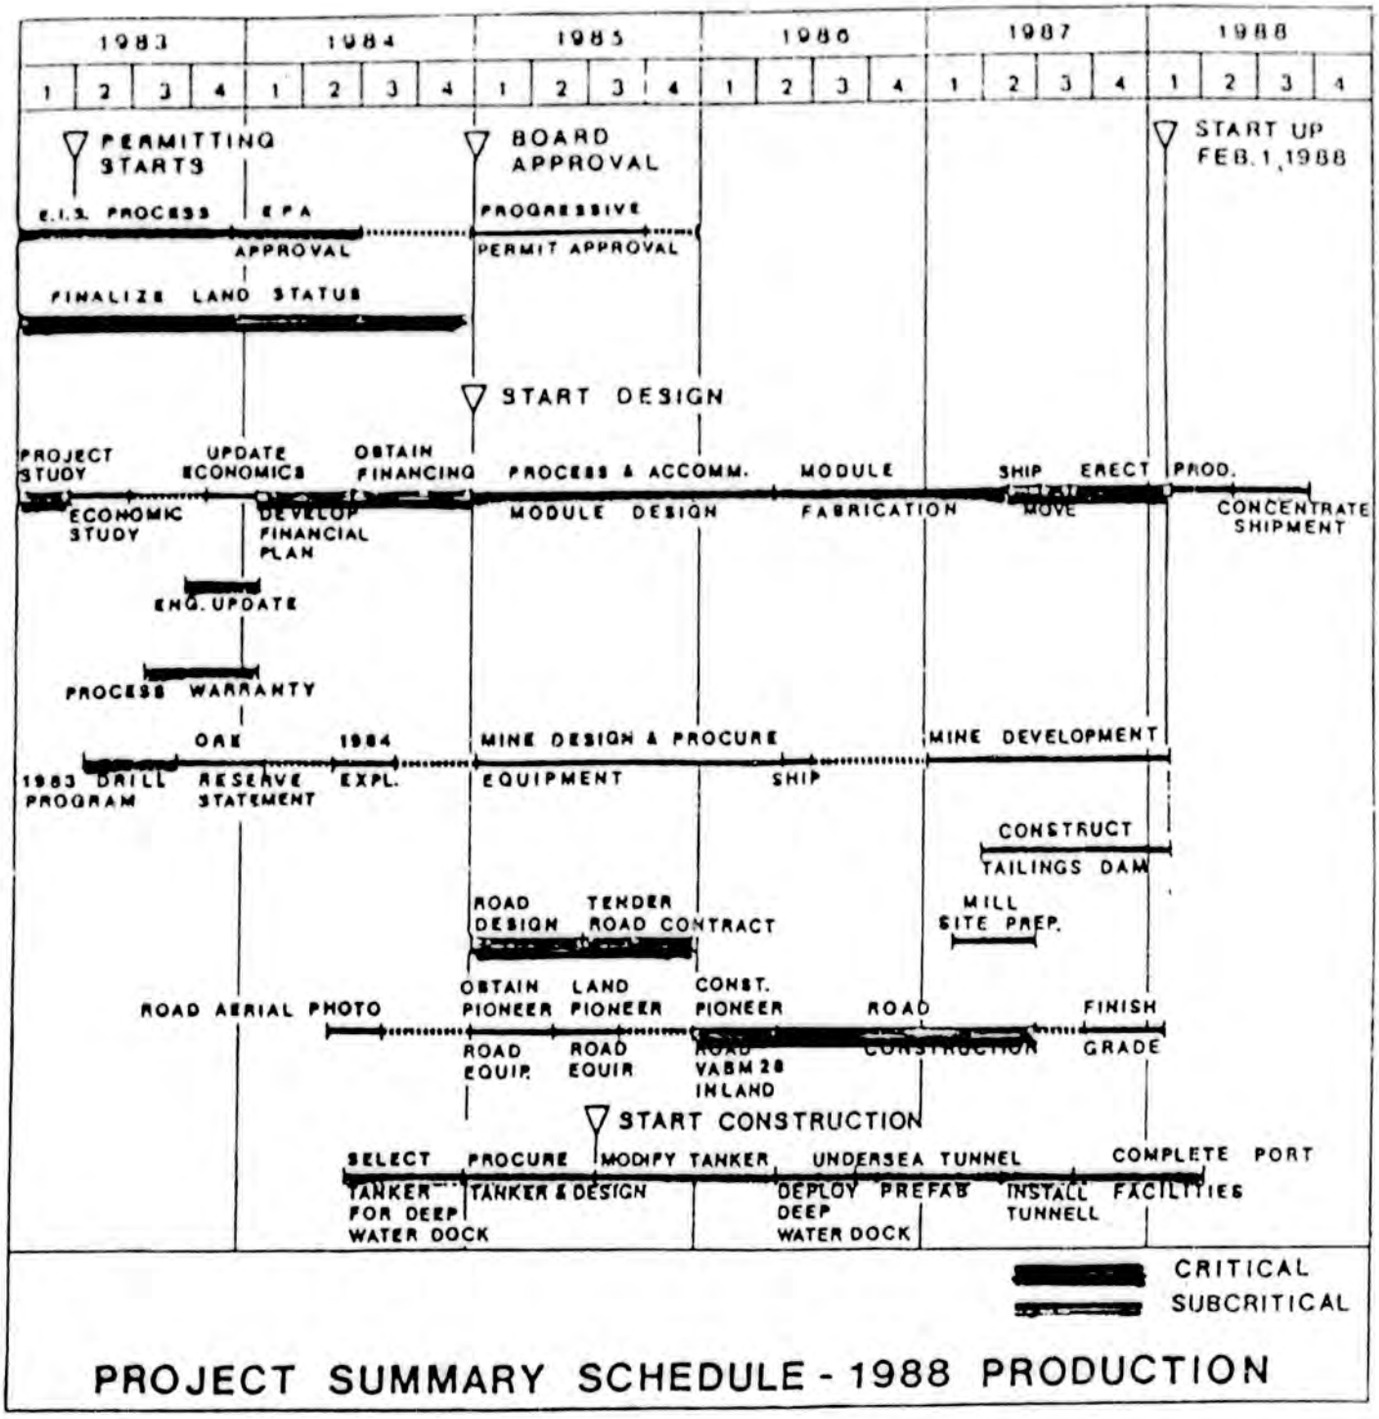
DEVELOPMENT SCHEDULE

As is the case with any endeavor in the Arctic, the critical factor affecting the development schedule is the limited shipping season (generally July through September). Within these confines and assuming a project start-up date of January 1985, key periods in the development schedule are discussed below.

Construction equipment for road building activities would be landed at the port site during the summer of 1985. This equipment would be idled until freeze-up occurred prior to moving inland to the first borrow site. From January to July of 1986, a road would be built inland from the first borrow site, as well as back to the port site.

The first major construction sealift of equipment and materials would be made in the 1986 shipping season. The equipment for constructing the main road, as well as the mining equipment, would be brought in at that time. A 100-person barge-mounted camp would be located in a lagoon at the port site to support construction activity during the same sealift. A small 20-person "fly-in" construction camp would be set up at the Red Dog mine site.

In January of 1987 the main road would be completed from the port site to Red Dog Valley. Construction equipment to prepare the mill site, as well as mining equipment to begin development work, would then be moved to the site. Additional camp facilities (for 50 people) would also be moved over the road to the Red Dog site at that time. Mine development would continue through 1987 to the time of production mining start-up in early 1988. Suit-



able mine waste would be used to construct the tailings pond dam during this period. To the extent that schedule constraints would allow, initial mine work would be carried out by permanent crews so that fully trained personnel would be available by the commencement of full operation.

A permanent dockface (in 3 m [10 ft] of water) and short causeway would be constructed prior to the 1987 sealift. This facility would be used to offload ore concentrator and worker housing modules, as well as other mine equipment. During the 1987 sealift the worker housing modules would be the first to be moved to the mine site. These living quarters would be commissioned as quickly as possible for use by construction crews, and later by operating personnel during the project start-up period. In this manner, the additional expense of a larger construction camp would be avoided.

During the summer and early fall of 1987, the concentrate storage building and other port site facilities would be constructed. If the offshore island transfer facility were approved, the modified tanker would be towed to the site and ballasted to the bottom during the 1987 shipping season.

During the period September to December 1987, the concentrator complex modules at the mine site would be joined and services installed. The facilities would be ready for commissioning (start-up) in December. Once commissioned, operations would commence in February 1988. Construction activities would be completed prior to the 1988 sealift. Construction surplus and equipment would be shipped out at that time.

The first movements of concentrates to market would probably be during the 1988 shipping season, though this would depend on project financing and the status of world-wide lead and zinc markets.

PROJECT SUMMARY SCHEDULE - 1988 PRODUCTION

RED DOG FACT SHEET

November 1983

1.0 LOCATION

A. Orebody/Mill Complex

The orebody is located 55 miles from the Chukchi Sea, east-northeast of Kivalina at the based of Deadlock Mountain; and 90 miles north of Kotzebue. Red Dog is approximately 440 air miles northwest of Fairbanks.

B. Seaport

The proposed location of the seaport is in the vicinity of VABM-28 about 17 miles southeast of Kivalina on the Chukchi Sea.

2.0 CLIMATIC DATA

Temperature (°F):	Summer -- mean daily	maximum	66
		minimum	35
	Winter -- mean daily	maximum	3
		minimum	-21
	Extremes		75 to -60

Precipitation* -- 11 inches.

NOTE: The above information has been extracted from the Climatic Atlas for Noatak.

* Recent measurements at the site indicates precipitation in the order of 18 inches per year.

3.0 EXPLORATION HISTORY

The first report of mineralization in the Red Dog area was in a 1970 U.S. Geological Survey open file report. Further exploration done by the U.S. Bureau of Mines provided a more detailed description of mineralization significance in a press announcement in the fall of 1975. Cominco American geologists explored the area and staked claims on adjoining areas soon after the USBM announcement.

4.0 EXPLORATION CAMP

Cominco American has operated temporary camps on land adjoining the Red Dog deposit every summer since 1976 with 25-50 employees.

5.0 OWNERSHIP

At different times there have been numerous federal, state, regional, and corporate claims to land adjoining the Red Dog deposit. As of February 5, 1982, Cominco American Incorporated and the NANA Regional Corporation reached agreement for evaluation and potential development of the deposit by Cominco American, with NANA retaining a carried interest.

6.0 GEOLOGY AND ORE RESERVES

A program of core drilling in 1981 defined a deposit estimated to contain, as calculated in place without mining dilution, 85 million tons of 17.1% zinc, 5.0% lead and 2.4 ounces/ton silver. The tons and grade are inferred from 14,700 feet of drilling in 39 holes, generally located on grid spacings of 400 feet in north-south and east-west directions, and are calculated to include contiguous mineralization averaging more than 3% zinc/lead. In 1982 CAI drilled an additional 14,600 feet in 32 holes to further define the orebody on a 200 foot grid spacing. This work confirmed the 1981 results. The 1983 drill program includes additional infill drilling for metallurgical testwork as well as diamond drilling in the Hilltop deposit one-half mile to the south of the main deposit.

The deposit is nearly flat-lying and suitable for open-pit mining, with upper portions exposed at the surface. The deposit in a north-northwesterly direction is approximately 4,400 feet long, varying in width from 200 feet up to 1,400 feet and is commonly 100 feet in thickness.

Current information ranks the Red Dog zinc-lead-silver deposit among the largest deposits of its type in the world. Although the orebody has not been completely defined, current reserves and mining plans gives a mine life of 50 years.

7.0 ENVIRONMENTAL ISSUES AND PERMITTING

In anticipation of the regulatory requirements applicable to the project development, environmental baseline studies were initiated in 1981 and continued through to the end of 1982. This comprehensive program of work included an evaluation of water quality and hydrology, fresh water and marine biology with emphasis on fish resources, archaeology and cultural values, terrestrial biology, socioeconomics and subsistence uses in all areas potentially affected by project components. In addition, metereological monitoring at the mine site commenced in 1982 and will continue as the project progresses.

7.0 ENVIRONMENTAL ISSUES AND PERMITTING (continued)

The findings from these studies have played an important role in regulatory planning, the development of a the project, and the designing of facilities and operating plans which are consistent with the social and economic objectives of NANA and the communities of the region. Therefore, the project as currently envisioned satisfies engineering, economic and environmental criteria to ensure its acceptance by the regulatory agencies and the NANA people.

Since the project is classed as a "major federal action" under criteria of the National Environmental Policy Act (NEPA), an Environmental Impact Statement (EIS) is necessary and work on its preparation was initiated in January, 1983 under the Environmental Protection Agency (EPA). This is expected to be completed in the spring of 1984. It will contain an overall impact assessment of the project alternatives with specific endorsement of the facilities to be constructed. Simultaneous with the development of the EIS, applications will be made for key permits requiring substantial lead times to obtain. Once the EIS is complete, the way is cleared for the issuance of the various federal and state permits required for both construction and operation according to the present project schedule.

8.0 PROJECT COSTS AND SCHEDULE

Project costs through to the end of 1983 are estimated to be $19 million. Capital outlays for constructing the project are expected to be in the $300 to $500 million range.

Construction could take 2 to 2-1/2 years with operation beginning in 1988. The actual beginning of construction will depend on world economic conditions, ability to complete detailed engineering design, and the completion of the environmental permit process.

9.0 CONSTRUCTION TECHNIQUES

Early engineering studies established that the cost of conventional on-site construction of the concentrator and related facilities at Red Dog would be expensive. Current engineering studies are based on the concept of modularization wherein completed building blocks are fabricated away from the site where access to a large and relatively inexpensive work force is possible. The success of modular projects for Alaskan North Slope Oil and elsewhere in the world clearly indicate cost and schedule advantages to this construction technique. For Red Dog, portions of the process plant and accommodations would be built outside of Alaska (where the constraints of Arctic construction would not apply), be barged to the Red Dog port, transported

9.0 CONSTRUCTION TECHNIQUES (continued)

inland to the mine on specialized transporter vehicles and then placed on their respective foundations. Buildings or service facilities that are not equipment intensive, such as warehouse and repair shops, will be site erected using conventional construction techniques.

10.0 EMPLOYMENT

The operation is expected to generate approximately 400 jobs involving a cross-section of mining, milling, maintenance, managerial and administrative skills. In keeping with NANA's desire to avoid the establishment of a townsite near the mine, a hotel-type accommodation complex will be used to serve a rotational work force which will transport from the local villages or Kotzebue to the site.

11.0 MARKETS

There are zinc and lead smelters in several Pacific Rim countries where concentrates from Red Dog could be sent. Cominco Ltd.'s Trail, B.C. smelter is one consideration, while Japanese smelters present other possibilities. European smelters are also being considered.

12.0 PRODUCT USES

a) Zinc is a shiny, bluish-white metal with two major industrial uses: galvanizing and die-casting. Galvanizing is a zinc coating which is a very effective rust prevention agent for use in products such as chain-link fencing, steel siding, household products, automobile bodies, structural steel coatings, and marine hardware. In the die-casting process, molten zinc is injected or poured into a metal mold where it hardens. Products such as plumbing fixtures, power tools, carburetors, and electrical appliances are typical applications.

b) Lead is a metal with many industrial uses, the largest one being storage batteries for all types of vehicles. Other uses include an anti-knock additive to gasoline, lead shielding, and cable coverings. Lead is also mixed with other metals to make various products such as solder, munitions and for use in making fine crystal tableware and glaze for pottery.

c) Silver is used in various industries and in many products, the largest user being photographic industry where it is employed to coat film as well as in the development of film. As a precious metal, it is used for jewelry, silverware, tableware, and ornaments. It is also used in surgery and dentistry.

13.0 PRODUCTION SCHEDULE

Years	FEED TONS Day	FEED TONS Year	FEED GRADE % Pb	FEED GRADE % Zn	CONCENTRATE TONS/YR Pb	CONCENTRATE TONS/YR Zn	CONCENTRATE TONS/YR Total	DESIGN Tons/Day
1 to 5	3,000	1,057,000	6	21	79,000	350,000	429,000	3,400
6 +	5,600	1,962,000	5	19	119,000	585,000	704,000	6,300

14.0 WORK SCHEDULES -- OPERATIONS

a) All employees:

-- 7 days per week

b) Mine:

-- 10 hours per shift, 2 shifts per day, 700 shifts/year

c) Concentrator:

-- 12 hours per shift, 2 shifts per day, 700 shifts/year

d) Power Plant:

-- 12 hours per shift, 2 shifts per day, 730 shifts/year

e) Seaport:

-- 12 hours per shift, 2 shifts per day, 240 shifts/year
Summer operation.
-- 12 hours per shift, 1 shift per day, 60 shifts/year
Winter operation.

15.0 MINE FACILITIES

Library	400
Radio/Communications	400
Post Office	140
Janitors' Rooms	420
TOTAL AREA	145,460

22.0 LAND TRANSPORTATON

a) Route from mine to VABM 28 through Cape Krusenstern National Monument:

Distance 57 miles
Elevation @ Mine + 1030 ft.
Elevation @ Port + 10 ft.
Maximum grade 4%
Road Width 30 ft.
No. of bridges -- 5
Passing lanes @ 2 mile intervals

b) Concentrate Haulage Trucks

Years 1 to 5 -- 4 - 700 HP tractors each with 2 side-dump or end dump Trailers each with a 36 cu.yd. capacity.

Years 6 + -- 6 units as per above.

23.0 PORT

a) Shallow Water Dock

Sheetpile dock face in 10' water depth
Earthfill causeway 400' long

b) Deepwater Dock

(i) Ship ballasted to seabed in 35' water depth with storage capacity for: 71,000 tons of Zn concentrate
38,000 tons of Pb concentrate
9,400,000 USG of Fuel
Deck storage for 400 - 8'x8'x20' containers

(ii) 1000 ton self-propelled lighter barge -- summer operation

c) Shore Facilities

(i) Truck dump pad and barge loading facility.

(ii) Sulphuric acid storage tank (155,000 USG) and truck loading facility.

(iii) Fuel transfer tank (50,000 USG) and truck loading facility.

(iv) Accommodations for 20 - left over construction camp.

23.0 PORT (continued)

c) Shore Facilities

(v) Small 250 kW power plant.

(vi) Small storage building: 40' x 40'.

d) Facilities at Mile 2.5

(i) A-frame structure 180' x 912' x 80' high to store 55,900 tons of Pb concentrate and 247,900 tons of zinc concentrate.

(ii) Small 250 kW plant.

24.0 WATER SYSTEM

Fresh Water Consumption

- Process -- Avg. = 328,320 USGPD
- Process -- Max. = 864,000 USGPD
- Domestic -- Avg. = 34,560 USGPD
- Domestic -- Max. = 208,800 USGPD

Recycled Water Consumption = 2,645,280 USGPD

Fresh Water Supply

- Bons Creek Reservoir
- Drainage area -- 3.7 sq.mi.
- Daily usage -- 362,880 USGPD
- Dependable yield (based on 3 consecutive drought year @ 25% annual mean) -- 481,000 USGPD
- Dam height -- 37 ft. (30' for minimum storage)
- Dam crest length -- 280 ft.
- Total storage -- 630 ac.-ft.
- Live storage -- 246 ac.-ft.
- Dam crest elev. -- 852 ft.
- Normal water surface elev. -- 845 ft.

Fresh Water Facility Specs.

- Floating raft -- 16 ft. x 9 ft.
- Pumps: Type -- Vertical turbine
  No. -- 2 operating and 1 standby
  HP -- 75 each pump

24.0 WATER SYSTEM (continued)

Fresh Water Facility Specs. (continued)

- Pipeline: Material -- high density polyethelene (SCLAIR)
  Length -- 18,000 ft.
  Diameter -- 10 in. to main storage tank
  Heat Tracing -- 110 volt
  Insulation -- 2 inch styrofoam

Fresh Water Tank

- Elevation -- 1,030 ft.
- Dimension: Diameter -- 46 ft.
  Height -- 30 ft.
- Volume -- 350,000 USG

25.0 TAILING SYSTEM

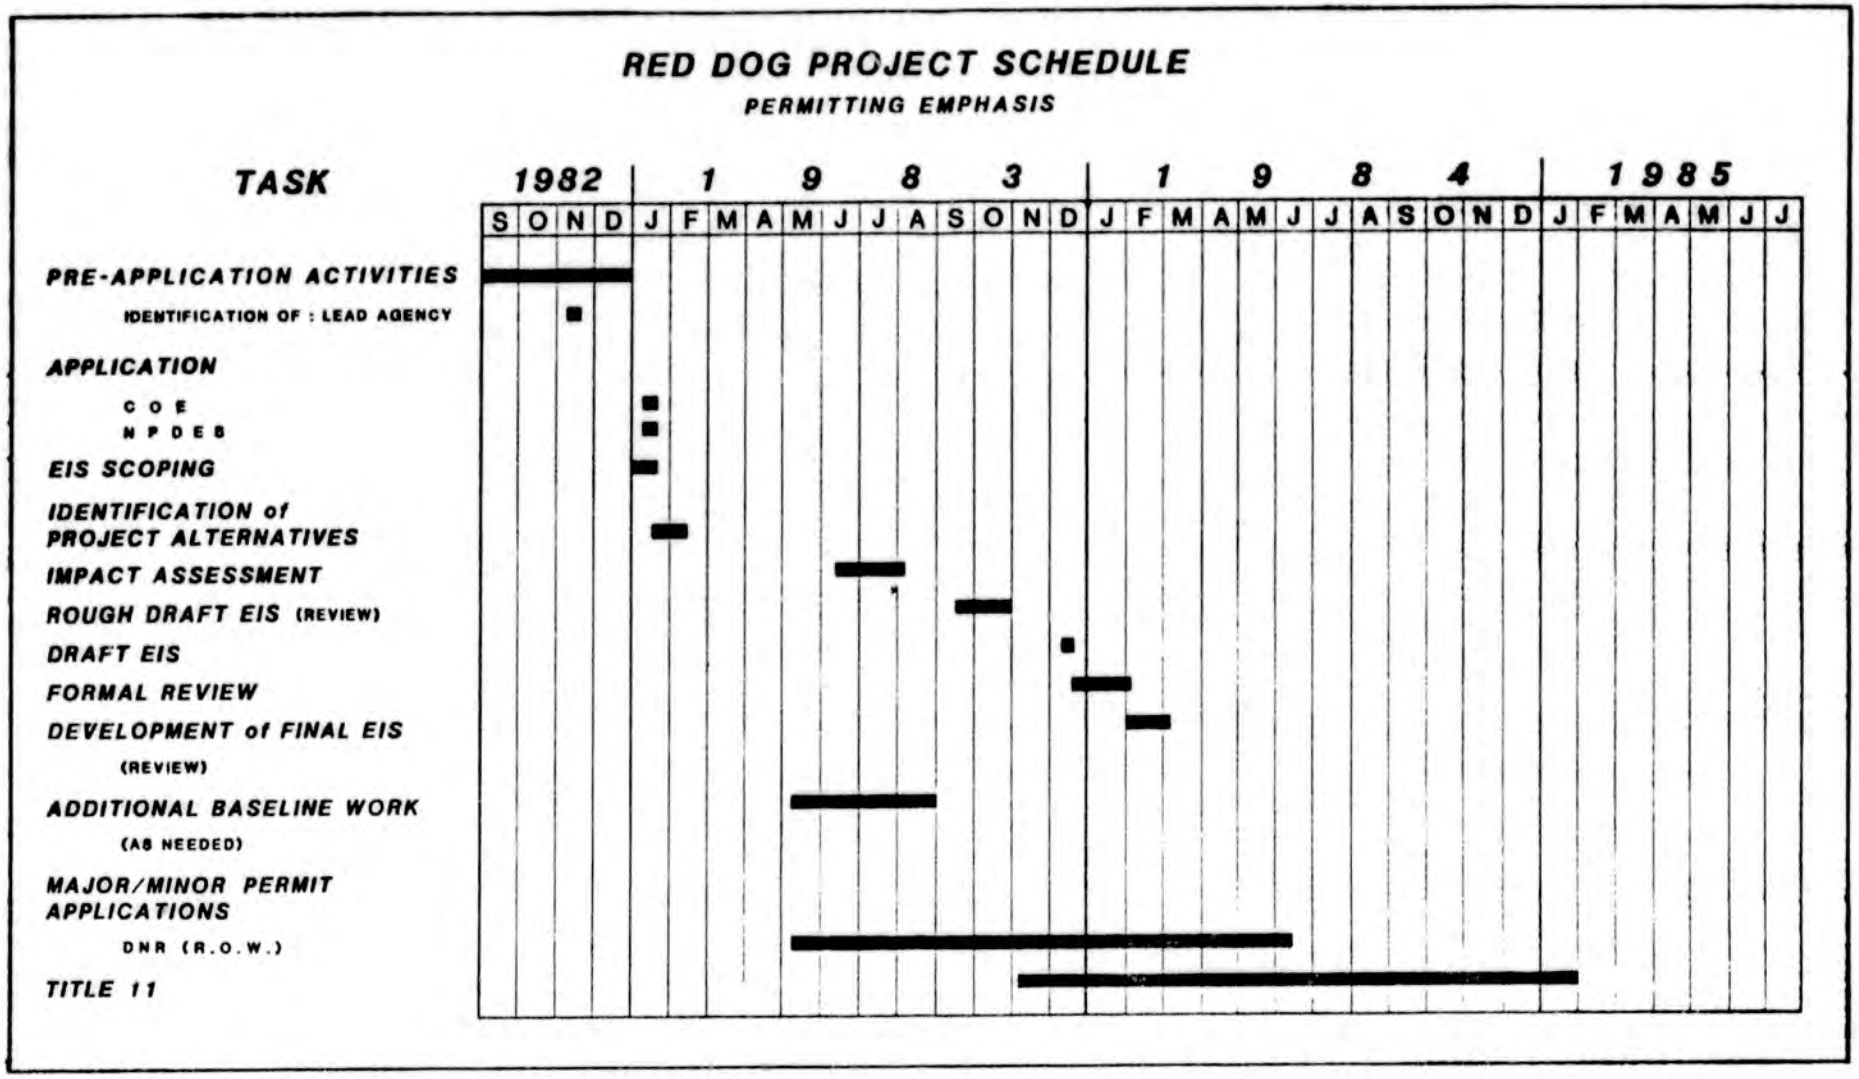
	% Solids	Volume
Tailing -- from process to thickener	17	2,203,000 USGPD
-- from thickener to pond	60	298,000 USGPD
-- recycle - thickener overflow	0	1,905,000 USGPD

Tailing Embankment:

- Height -- 150 ft.
- Length -- 2,200 ft.
- Fill Volume -- 255,000 cu.yd. starter dam (2 million cu.yd. to Elev. 950)

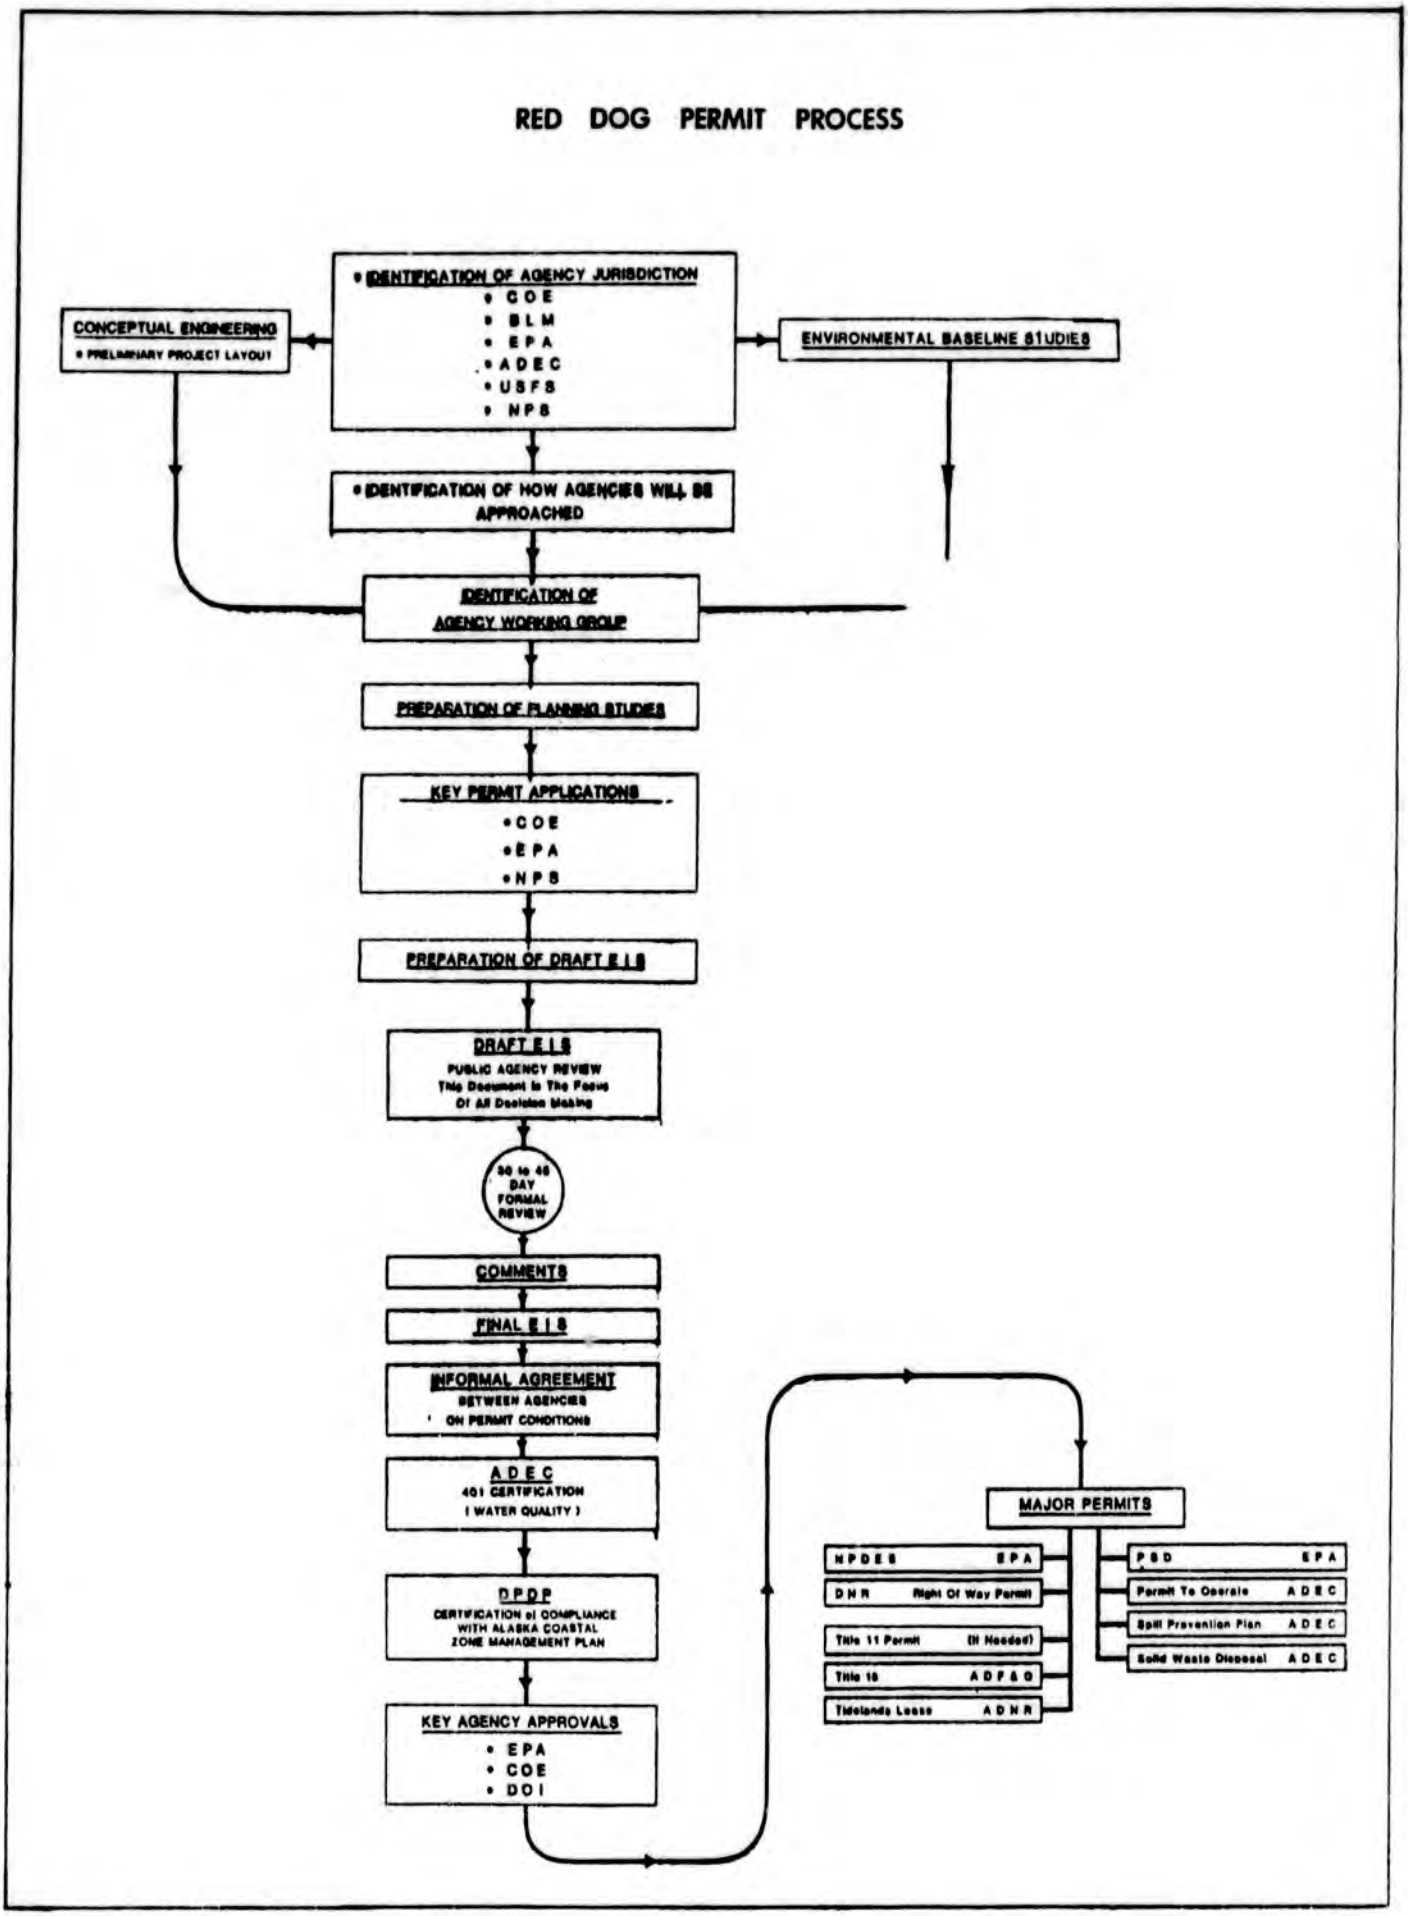
Tailing Impoundments @ 950 Elev.

- Area -- 25,472,000 ft^2
- Volume -- 29,860 ac.-ft.



Tailing Thickener -- 125 ft. dia.

Tailing Facility Specs.



- Tailing line: Material -- H.D.P.E. (SCLAIR series 80)
  Length -- 3,500 ft.
  Diameter -- 6 inches
  Insulation -- 2 inches styrofoam
  Heat tracing -- 110 volt

BASE METAL MARKETS (Cu, Pb, Zn), :ALASKAN OPPORTUNITIES

(Long Abstract)

Metals Market Research

By: G.H. Laurie/Cominco Ltd.

Alaska appears to be on the verge of becoming one of the world's important mineral suppliers. In the case of base metals, Cominco's Red Dog discovery is already recognized as being a very major future zinc and lead producer. Geologists have high expectations for other discoveries of commercially viable copper, lead, and zinc mines. The question addressed in this paper is how do these Alaskan opportunities match the world's future needs for copper, lead, and zinc.

Examination of the historical demand in the Western World for these three base metals brings us to the conclusion that all are in a state of maturity with saturation of use occurring in the developed nations. Growth in consumption will more and more depend upon the increases in the living standards of the newly industrializing countries. Fortunately for the Alaskan resources, the economies in the Pacific Rim have shown substantial growth. Long-term prospects in this area of the world look promising.

Copper consumption in the Western World grew at a rate of about 4½% per year from 1960 to the energy disruption of the mid 1970's. We expect that the resumption of demand growth will be in the order of 1½% once the economies of the world recover but that this will mean the 1979 consumption peak will not be regained until the mid 1980's. After the mid 1980's we expect increasing Western World consumption and mine exhaustion to create a demand of over 150,000 tonnes/year of new mine production. Copper prices have weakened since 1979/80 and we, along with most forecasters, have revised our long-term expectations. World-wide distribution of copper concentrates will be influenced as some of the LDC's establish smelter/refinery facilities and consume their domestic mine production.

Lead consumption in the Western World grew at about 3½% per year from 1960 to 1973 but is expected to show a resumed growth of only about 1% in the future. The peak consumption of 4.2 million tonnes in 1979 is not expected to be reached again until near the end of this decade. Mine production of lead has continued at approximately 2.5 million tonnes since 1973 whereas lead metal from secondary sources increased from near 1.0 million tonnes in 1973 to close to 1.9 million tonnes in 1979 and since then has dropped back to approximately 1.5 million tonnes during the current recession. It is difficult to predict the need for new lead mine production due to the uncertainties of secondary lead. However, it is safe to say that without the introduction of any new significant

end-uses for lead the mines which are brought into production to satisfy zinc and silver requirements will provide enough new lead as a co-or by-product to satisfy needs. In this regard, the Red Dog property, which has a zinc to lead ratio of 3½ to 1, better matches the expected new mine zinc and lead needs than higher ratio lead properties.

Zinc consumption in the Western World grew at approximately 4.8% per year from 1960 to 1973 where it peaked at about 4.8 million tonnes. With economic recovery, a growth rate of near 2% per year should see the 73 and 79 peaks in consumption re-established in the mid to late 1980's starting from the current level of near 4.2 million tonnes. Future new mine demand, to satisfy consumption growth and mine exhaustions, is estimated to be somewhat less than 150,000 tonnes per year after about 1985. Zinc prices have weakened since the 1973/74 bullish period and the 1979/80 highs but, with expected reasonable balance between demand and supply, longer term strengthening is expected. World-wide demand for concentrates should result in the need for future supplies from Alaska.

BASE METAL MARKETS (Cu, Pb, Zn)

: Alaskan Opportunity

By: G.H. Laurie/Cominco Ltd.

Market Overview

The world shall continue to need base metals and from our analysis there is an opportunity for Alaska to become an important supplier of copper, lead and zinc concentrates. Markets for these materials will depend upon the overall growth of the world's economy, the specific requirements for capital and consumer goods, and the availability of competitive concentrate supplies.

Slides

- OECD IPI
2. • Growth in IP & Major Metal Consumption
3. • Metal Prices & Ind. Bus. Cycle

Note: The slides marked (MMRS) are taken from "Metals Analysis and Outlook" published by Metals & Minerals Publication Ltd.

Metals consumption growth has often been related to various industrial production indexes rather than to overall GNP-type of economic growth measurements[1,2,3]. As our western world's growth has progressed an increasing proportion of the GNP has been from the service sectors with corresponding less growth from the basic industrial sectors. Therefore, as our industrial societies have matured the rate of new capital investment for plants has tended to decline. Furthermore, various measures show a declining relationship between metals consumption and overall industrial production as substitute materials are used and as end uses make more efficient use of the materials of construction. Another factor which negatively affects the need for mined metal is the increased recycling of scrap. This movement towards

more secondary metal has been supported by both the conservation and environmental priorities of the last number of years.

Offsetting the above trend to a state of maturity for the basic industries in the developed nations of the world, is the exciting prospects for the emerging developing nations[4]. Many of these are the markets that can be served by suppliers adjacent to the Pacific. I recently reviewed economic growth forecasts made by a major USA research group. Their data pointed out the following differences for the period up until year 2000.

Slide

4. • Zinc Consumption by Region

Area	GNP Growth
Western Europe	2.3%
Eastern Europe	2.3%
North America	2.8%
Latin America	4.3%
Africa	4.2%
Asia and Far East	3.9%
Total World	3.0%

Other forecasts will be different depending on the respective views of economic opportunities or problems. However, I don't know of one forecast that doesn't indicate the maturing of the current industrial countries with lower basic materials consumption growth rates and considerably higher rates for the newly developing countries - despite their balance of

payments and other economic problems.

Our company, like most in the mining business, assesses the current concentrate supply and also makes judgements on future supply requirements due to consumption growth and mine exhaustions. This expected demand on the mines will be met by some expansions and by new mines. The main interest in this meeting is obviously what new mines can be found and opened in Alaska. Cominco has one we feel will be economically viable, other companies are equally optomistic and still others are no doubt going to find suitable economic deposits.

	Demand on the Mines		
	Consumption (Growth)	+ Closures	= Total
Cu	100	60	160
Pb	nil	10/15	10/15
Zn	60	70	130

A major consideration we have in assessing our opportunities is where do we believe our potential mine is on an estimated cost-curve of the Western Worlds' mines for any particular metal[5]. With the current and expected future economic growth we firmly believe any proposed operation should be in the lower half and preferably the lower third of the cost-curve. To some extent new mines which open may act in a predatory manner and hasten the death of marginal producers.

Slide

5. • Cost-curve

To rank the opportunities for future mines for copper, lead and zinc one's crystal ball must assess the consumption demand, the competitive mines (both existing and those known to be likely new entrants and those expected to be near reserve or economic exhaustion),

and the competition from secondary supplies. I personally have no difficulty in ranking the three metals based on what I know and what my crystal ball tells me. All other factors being equal I would first want to find a good zinc mine, next a quality copper mine would be attractive, and finally if I felt I had a really low cost producer I would deal with a lead mine.

The factors which lead me to my choice are:

1) Known ore bodies - I feel there are a good number of copper deposits in the world that have a good chance to be reasonably low-cost producers. There are fewer zinc ore bodies in the same category as far as I can see. Lead is rapidly becoming a by-product of zinc and will come to market as zinc requirements are met.

2) Depletions/exhaustions - It is difficult to get a definitive picture of this factor but it appears there may be more of the existing large zinc bodies coming closer to exhaustion over the next 20 years than is the case for copper - time will tell.

3) Consumption - The growth rates we predict for all three metals are very modest and we all hope we are proven to be overly conservative. However, I

believe our forecasts of zinc at 2%, copper at 1.5% and lead at 1% are in the right order. Of the above base metals, zinc is expected to continue to have the smallest part of its supply as secondary metal.

4) Ownership - The zinc industry currently is, and is expected to remain, more in the hands of free enterprisers than is the case for copper. We believe this supports a better long-term pricing structure - in particular, as metal stock levels can be kept in better balance [6].

Slide

6 Metal Stocks & Metal Prices

Despite my preferences as outlined above it goes without saying that any mine, whether a copper, lead or zinc mine, that is determined to be a low-cost producer is likely to be brought into production.

Copper Markets

The recognition that copper is a mature metal should not be taken too negatively. It can be said it is our oldest mature metal but one which continues to fulfill mans' needs with renewed bursts of consumption as new technologies such as electricity implant new life. The slides I have gathered for you today give you some idea of the consumption patterns, mined production and prices for copper.

Slides on Copper - here [7-11]

The events which are likely to affect the opportunities for any future copper properly in Alaska are:

- the cost influences of remote locations with or without state infrasturucture support;
- overall supply needs for United States demands;
- new smelters built by previous suppliers of concentrates; and
- the expansion of the copper industry in Chile and other known regions possessing good copper properties.

Any new domestic world-class copper operation that may be developed in Alaska would help offset the decline of the USA copper industry. The reduction of concentrate shipments from the Phillipines to Japan with the start-up of the Phillipine smelter creates an opportunity for new concentrate suppliers - especially as there seems to be a relatively over capacity of copper smelters in the world. The expansion of Chile's copper industry which some claim has a goal of nearly 2 million tonnes capacity will, on the other hand, have a negative overall effect on the copper industry and in particular if world over-capacity is the result.

The copper concentrate suppliers and the smelter customers as outlined by the World Bureau of Metal Statistics are more or less as follows:

- Africa supplies to Western Europe and Japan
- Canada supplies to Western Europe, South Korea, Taiwan, and Japan

- South America supplies to Western Europe, South Korea, Taiwan and Japan
- Australia supplies to Japan
- South East Asia supplies to Western Europe, South Korea, Taiwan and Japan
- USA supplies to Japan

Lead Markets

Lead is also a very old metal which has benefitted by easy extraction and fabrication. Again we have an example of a mature metal which regained vigour with technological break-throughs such as the lead-acid battery and the internal combustion engine and its ignition system with the use of high octane fuels. Currently this metal is in a stable stage with some uses actually in decline. The most significant changes have been the growth of the recycled lead supply and, somewhat related, the tendency for lead to have become a by-product of zinc and silver production. The slides shown of lead's historical supply, demand and prices give you some insight into leads future.

Slides

14. • Pb Prices
15. • Pb Prices with Highs/Lows
16. • Prices & Stocks

Slides on Lead - here[12-16]

The shipment of lead concentrates as outlined by the WMBS shows significant movements as follows:

- Africa supplies to Western Europe, North America, and Japan
- Canada supplies to Western Europe and Japan
- South America supplies to Western Europe, North America and Japan

- Australia supplies to Western Europe and Japan.

Zinc Markets

Compared to both copper and lead, zinc is a much younger metal. The significant role zinc plays in protecting steel in a sacrifical manner ensures the continuing need for a large part of the metal supply being new mined metal, as scrap recovery from this use is minimal. The market discipline of zinc suppliers coupled with somewhat better market support is emphasised by the relatively low level of metal stocks. This fact and other trends are shown in the following slides:

Slides

17.• Zinc Mine Production
18.• WW Zinc Consumption
19.• Zn Price
20.• Zn Price & Highs/Lows
21.• Prices & Stocks

Slides of Zinc - here[17-21]

The most significant fact about the zinc market has been the rapid decline of the USA zinc industry over the 1970's and since the economic downturn of 1979/80. Since it's heyday in the late 1960's/early 1970's the US zinc industry has been reduced to about 1/4 to 1/3 of its maximum. Although consumption has also declined it still remains the largest market in the Western World. Cominco Alaska's planned entry into the world's zinc markets will help reverse the domestic supply situation.

Zinc concentrate movements as reported by the WBMS are as follows:

- Africa supplies to Western Europe
- Canada supplies to Western Europe, USA and Japan
- South America supplies to Western Europe, USA and Japan
- Australia supplies to Western Europe and Japan

Prices

The presentation today is not focused on prices for metal. Cominco's long-range price forecasts are confidential and furthermore my group are currently deeply involved in our annual up-date forecast so I am without firm numbers in any case.

Of greater value I believe, are some qualitative comments about the mine returns realized for concentrates. The treatment charges negotiated for metal concentrates are quite variable as each concentrate is in fact an unique product with different advantages and disadvantages. The location of the concentrate is also a factor in its price (via differing treatment charges as well as different transportation etc. costs). I am told by our concentrate sales people that the factors that enter into the determination of treatment charges are as follows:

- Concentrate quality
  - low quality concentrate will result in higher treatment charges.
- Smelter customer location
  - if far away and without alternate near-by concentrate this will normally result in lower treatment charges (i.e. the smelters have to compete).
  - close by smelters will use their location to obtain somewhat higher treatment charges.
- Smelter capacity
  - if the world's smelter capacity is in surplus (i.e. concentrates in relative shortage) this will result in lower treatment charges.
  - if the world's smelter capacity is in shortage this will result in higher treatment charges.
- Mine location
  - for northern mines or any others that have restricted shipping seasons the extra costs involved in storage by the receiving smelter will either be reflected by higher treatment charges or the seller would tend to have to cover the financing charges directly.

Conclusions

- From what I have been told Alaska is proving to be a valuable storehouse of needed mineral resources
- Despite high infrastructure costs it appears various deposits will become economic mines. This may be positively assisted by the development of the state's transportation system.

- Being located on the Pacific Rim will be beneficial as larger growth of metal consumption is forecast for many countries bounding the Pacific.
- World-class deposits of the base metals copper, lead and zinc will become viable mines if they are able to establish low operating costs.
- It appears the opportunities to supply can be ranked zinc, first; copper, second; and lead, third.

IN THE HOUSE

BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

CS FOR HOUSE BILL NO. 4 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to debt of the state, its agencies, and municipalities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15.110 is amended to read:

Sec. 37.15.110. CREATION AND MEMBERSHIP OF STATE BOND COMMITTEE. There is created <u>within the Department of Revenue</u> a committee known as the "state bond committee," the members of which are the commissioner of commerce and economic development, the commissioner of administration, and the commissioner of revenue. If a member of the committee is absent or otherwise unable to act, the member's designee [IN THE DEPARTMENT] shall act as a member of the committee in the member's place.

* Sec. 2. AS 37.15.130 is amended to read:

Sec. 37.15.130. OFFICERS, RECORDS AND PROCEEDINGS. <u>(a)</u> The commissioner of <u>revenue</u> [COMMERCE AND ECONOMIC DEVELOPMENT] is the chairman of the state bond committee [AND THE COMMISSIONER OF REVENUE IS THE SECRETARY]. A majority of the members of the committee constitute a quorum. The committee shall keep a full, complete, and permanent record of its proceedings. All records and correspondence of the committee shall be kept in the office of the commissioner of revenue.

<u>(b) The committee may meet and transact business by electronic media if</u>

<u>(1) public notice of the time and locations where the</u>

meeting will be held by electronic media has been given in the same manner as if the meeting were held in a single location;

(2) participants and members of the public in attendance can hear and have the same right to participate in the meeting as if the meeting were conducted in person; and

(3) copies of pertinent reference materials, statutes, regulations, and audio-visual materials are reasonably available to participants and to the public.

(c) A meeting by electronic media as provided in this section has the same legal effect as a meeting in person.

(d) For the purposes of this chapter public notice of 24 hours or more is adequate notice of a meeting of the committee at which the issuance of bonds is authorized.

* Sec. 3. AS 37.15.140 is amended to read:

Sec. 37.15.140. DUTIES OF STATE BOND COMMITTEE. (a) The state bond committee shall adopt the resolution and prepare the documents necessary for the issuance, sale, and delivery of bonds issued on behalf of the state.

(b) The state bond committee shall prepare an annual report to be submitted to the governor and legislature before January 31 of each year. The report must show (1) all outstanding debt of debt issuing entities of the state; (2) the anticipated impact on the finances and credit of the state, including the effect on long-term debt capacity and creditworthiness resulting from that debt; (3) which long-term debt is tax supported and which is supported only by revenues attributable to the project being financed by the debt; (4) all long-term capital lease obligations of the state; (5) the volume of short-term debt issued and retired during the year by debt issuing entities of the state; (6) specific identification of each issue for which the

state has pledged some form of indirect support for the debt including any moral obligation of the state to support the debt; (7) future bonding and debt capacity implications of legislation enacted in the previous legislative session; and (8) the recommended debt issuance capacity of the state for the next two years following the year of the report. The committee may require that any information needed to prepare the report be furnished by debt issuing entities of the state at a time determined by the committee. The state bond committee shall publicize the existence of the report submitted under this section and shall make the report available to the public upon request.

(c) The state bond committee may develop written policies concerning debt of the state.

(d) The committee may develop written informational guidelines for management of debt of municipalities of the state and debt of instrumentalities of the state authorized to issue tax exempt obligations.

(e) The policies and guidelines developed under (c) and (d) of this section shall include bidding procedures, and bid awards and compensation for financial service.

(f) The state bond committee shall request the debt issuing entities of the state to (1) prepare and submit to the committee by January 31 of each year a calendar of all debt proposed to be issued during the calendar year showing the amount and type of the debt and the month in which issuance is proposed, and (2) prepare and submit monthly a report showing all proposed changes to the calendar submitted.

(g) In this section the term "debt issuing entities of the state" includes the state, each agency or instrumentality of the state authorized to issue tax exempt obligations, and each municipality of

the state.

(h) In this section the term "debt" means (1) long-term bonded indebtedness secured by the full faith and credit of the government unit, (2) long-term bonded indebtedness secured by a mortgage or lien on specific properties or receivables, (3) short-term notes, (4) warrants, and (5) capital lease obligations; but "debt" does not include debt owed within the debt issuing entity or to another debt issuing entity.

* Sec. 4. AS 37.15.150 is amended to read:

Sec. 37.15.150. STAFF AND [COMMITTEE MAY EMPLOY] SPECIAL SERVICES. The state bond committee may appoint an executive director who may with approval of the committee select and employ additional staff as necessary. Employees of the committee are in the partially exempt service under AS 39.25.120. If the [STATE BOND] committee considers it necessary and advisable, it may procure architectural or engineering, fiscal agent or municipal investment, legal and other expert or specialized services at reasonable and customary fees to assist it in accomplishing the most advantageous sale of the state bonds. The fees may be paid from the proceeds of the sale or advanced from the contingency fund in the office of the governor or otherwise.

* Sec. 5. AS 39.25.120(c) is amended by adding a new paragraph to read:

(19) employees of the state bond committee.

* Sec. 6. This Act takes effect immediately in accordance with AS 01.-10.070(c).

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM March 1[illegible], 1985

SUBJECT: Sectional Analysis of HB 4
State debt

TO: Representative John Sund

FROM: Billy G. Berrier
Director
Division of Legal Services

You have requested a sectional analysis of House Bill 4 relating to state, agency and municipal debt.

Section 1 amends AS 37.15.110 to locate the state bond committee within the Department of Revenue. Current law does not have a specific provision on this.

Section 2 amends AS 37.15.130 to make the commissioner of revenue instead of the commissioner of commerce and economic development chair of the state bond committee. It also allows meetings by electronic media if there is at least 24 hours public notice, if the public may participate as if the meeting were conducted in person and if copies of relevant materials are available to the public. This meeting has the same legal effect as a meeting in person.

Section 3 amends AS 37.15.140 relating to the duties of the state bond committee.

(a) the amendment clearly specifies the duty to adopt the authorizing resolution and prepare the documents needed for a bond sale applies only to state bonds.

(b) requires the committee to prepare an annual report to the governor and legislature and sets out a nonexclusive list of matters the report must contain. The committee may require information needed for the report from all debt issuing agencies of the state. (Debt issuing agencies are defined in subsection (g)). It also requires publishing

existence of the report and that the report itself must be available to the public on request.

(c) requires the state bond committee to develop written policies concerning debt of the state itself. This requirement does not include agency or municipal debt.

(d) requires that for agency and municipal debt the committee must develop written informational guidelines.

(e) requires that both the policies under (c) and the guidelines under (d) include recommended level of debt, debt management, bidding procedure and awards and compensation for financial services.

(f) requires the committee to request municipalities and agencies which issue debt to submit a calendar of debt proposed to be issued during the calendar year showing amount and type and to submit a monthly report of changes to the calendar.

(g) defines debt issuing entities of the state to include the state, the agencies and municipalities.

(h) defines debt as long term general obligation bonds, long term lien bonds, short term notes, warrants and capital lease obligations. The term does not include inter-agency or municipal-state debt.

Section 4 amends AS 37.15.150 to allow the committee to have employees who are in the partially exempt service under AS 39.25.120.

Section 5 amends AS 39.25.120 to add employees of the state bond to the list of partially exempt employees.

Section 6 provides an immediate effective date.

HOUSE FINANCE SUBCOMMITTEE ON
ADMINISTRATION, REVENUE
AND THE GOVERNOR'S OFFICE

MEMORANDUM

Date: March 9, 1985

To: Representative Sund, Chair
House Special Committee on State Loans

From: Representative Rick Uehling

Subject: House Bill 4 ," An Act relating to the debt of the State, its agencies, and municipalities; and providing for an effective date."

The following is an outline of the background and provisions of HB 4:

The Background

As a part of the work of the House Special Committee on State Loans of the 13th Legislature, the Committee examined a recent report to the Legislative Budget and Audit Committee by the Government Finance Research Center entitled "A review of the Debt Management and Debt Capacity of the State of Alaska." The House Special Committee on State Loans held a major hearing in Anchorage, at which Wesley Hough, Manager of the Government Finance Research Center and the author of the report, presented it to the Committee.

The report makes a series of recommendations concerning the State's Debt Management practices. In addition, the report speaks specifically to the General Obligation Debt capacity of the State. HB 4 is an attempt to institute many of the report's recommendations for managing State Debt.

During the last Session a similar bill passed the House 40-0 but died in Senate Rules in the last days of the Session.

There has been a growing concern on the part of both the Legislature and the public with the amount of debt that is being incurred by the State of Alaska. As the State looks to financing many large projects that are important to the State, the capacity of the State to issue General Obligation bonds becomes an increasingly important factor. Additionally, a great deal of attention has focused on the

1526 K STREET • ANCHORAGE, ALASKA 99501 • (907) 274-4256
POUCH V • JUNEAU, ALASKA 99811 • (907) 465-4821

"debt issuing entities" of the State, the municipalities and agencies which are authorized to incur debt.

This attention has focused on the Alaska Housing Finance Corporation and the North Slope Borough which together have issued almost four times the amount of State General Obligation debt.

While the debt that is incurred by the Alaska Housing Finance Corporation (AHFC) is supported by mortgage revenues, and the debt of the North Slope Borough is supported by the property tax revenues of the borough, there remain concerns about the State's ultimate moral obligation. Furthermore there is the overriding question of at what point the growing debt issuance of the AHFC and the North Slope Borough will negatively impact the overall capacity of the State to issue debt.

HB 4 contains four major provisions:

1. The Chair of the State Bond Committee would be changed from the Commissioner of Commerce and Economic Development to the Commissioner of Revenue.

2. The State Bond Committee would be responsible for a yearly report to the Legislature and the Public on the State's bonded indebtedness. HB 4 states very specifically what the report will contain.

3. The State Bond Committee would be required to issue written policies and guidelines for the management of State debt and local debt.

4. The State Bond Committee would be responsible for coordinating a calendar of State-wide debt issuance.

While HB 4 contains many of the provisions called for by the GFRC report, it does not provide for some of more controversial recommendations such as a ceiling on municipal debt or new provisions controlling the School Debt Retirement Program. It is a first step towards the Legislature recognizing the need to maintain an active role in the management of the debt issuance of the State, its municipalities and agencies.

The Provisions.

Section 1 AS 37.15.110

The State Bond Committee is placed for Administrative purposes within the Department of Revenue. It currently does not exist within a Department. The State Bond Committee would retain its current three members: The Commissioner of Revenue, the Commissioner of Commerce & Economic Development and the Commissioner of Administration.

Section 2 AS 37.15.130

The Commissioner of Revenue replaces the Commissioner of Commerce & Economic Development as the Chair of the State Bond Committee.

This section also provides at the request of the Department of Revenue, provisions allowing for meetings to be held by electronic means and a special provision allowing 24 hour notice of a meeting for the purpose of authorizing the issuance of bonds. These provisions are substantially the same as those concerning meetings of the Board of Directors of AHFC.

Section 3 AS 37.15.140

a) The words "issued on behalf of the State" have been added to existing statute in order to clarify that the statute relates only to bonds issued on behalf of the State and does not pertain to municipalities.

b) The State Bond Committee is required to prepare an annual report to the Legislature and the Governor outlining the current status of outstanding State Debt before January 31st of each year. Material to be included in the report is very specific in accordance with the recommendations of Wesley Hough of the Government Finance Research Center.

The report must show:

1) All outstanding debt of the debt issuing entities of the State including the municipalities and those entities authorized to issue tax exempt bonds such as AHFC.

2) The anticipated impact of that debt on the finances and credit of the State including the effect on the State's long term debt capacity and credit worthiness.

3) Which long term debt is tax supported and which long term debt is supported by revenues attributable to the project being financed.

4) All long term capital lease obligations of the State.

5) The volume of short term debt issued and retired by the debt issuing entities of the State.

6) Specific identification of each debt issuance for which the State has pledged some form of indirect support for the debt including any moral obligation of the State.

7) Future bonding and debt capacity implications of legislation enacted in the previous legislative session.

8) The recommended debt capacity of the State for the two years following the year of the report.

Additionally, the State Bond Committee is required to publicize the existence of the report and that copies be made available to the public.

c) The State Bond Committee shall develop written policies concerning the debt of the State.

d) The State Bond Committee shall develop written informational guidelines for the management of debt for the municipalities and the debt issuing entities of the State authorized to issue tax exempt obligations.

e) These policies and guidelines shall include recommended level of debt, debt management practices, bidding procedures and awards, and compensation for financial service.

f) The State Bond Committee will develop a statewide debt issuance calendar by January 31st of each year. The Bond Committee will require the debt issuing entities of the State to submit a calendar of all debt proposed to be issued including the amount and type of debt, and the month in which it is to be issued. The calendar will be updated on a monthly basis.

g) For drafting purposes "Debt issuing entities of the State" is defined as the State, each agency or instrumentality of the State authorized to issue tax exempt obligations and each municipality of the State.

h) For the purposes of this section, "Debt" is defined as:

1) Long-term bonded indebtedness secured by the full faith and credit of the government unit (general obligation bonds).

2) Long-term bonded indebtedness secured by a mortgage or lien on specific properties or revenues (revenue supported bonds).

3) Short term notes.

4) Warrants.

5) Capital lease obligations.

Debt does not include inter-agency debt or debt owed from one debt issuing entity to another. This definition has been provided to us by Wesley Hough of the Government Finance Research Center.

Section 4 AS 37.15.150

The State Bond Committee is given the authority to appoint an executive director and hire staff as necessary.

Section 5 AS 39.25.120

Employees of the State Bond Committee are in the partially exempt service.

Section 6

HB 4 has an immediate effective date.

(b) The commissioner of revenue may

(1) invest and reinvest the principal of the funds;

(2) sell, exchange, convey, transfer, or otherwise dispose of investments of the funds by private contract or at public auction;

(3) vote upon a stock, bond, or other security; give a general or special proxy or power of attorney with or without power of substitution; exercise a conversion privilege, subscription right, or other option and make payments incidental to it; consent to or participate in a corporate reorganization or other change affecting corporate securities, delegate discretionary power, pay an assessment or charge in connection with the delegation; and generally exercise any of the powers of an owner with respect to stocks, bonds, securities, or other investments held in the funds;

(4) make, execute, acknowledge, and deliver documents of transfer and conveyance and instruments necessary or appropriate to carry out the powers granted;

(5) register investments held in a fund in the name of the board having the power to approve investments for a fund;

(6) do all acts whether or not expressly authorized which are considered proper for the protection of the investments held in the funds. (§ 4 ch 182 SLA 1978)

Chapter 15. State Bonding Act.

Article

1. General Obligation Bonds (§§ 37.15.010 — 37.15.220)
2. Bond Anticipation Notes (§§ 37.15.300 — 37.15.390)
3. International Airports Revenue Bonds (§§ 37.15.410 — 37.15.550)

Article 1. General Obligation Bonds.

Section

10. Full faith and credit for general obligation bonds
12. Continuing debt service appropriation
15. Committee shall publish notice of existing state indebtedness before election
20. Manner and amounts of sale
30. Interest rate and maturity
40. Sale of bonds
50. Redemption
60. Form and registration of bonds
70. Place of payment
80. Signatures and seal
90. Terms and conditions
100. Trustee
110. Creation and membership of state bond committee
120. Regulations
130. Officers, records and proceedings
140. Duties of state bond committee
150. Committee may employ special services
155. Prohibited bidding on bonds and anticipation notes
160. Contents of resolution
170. State bond committee to certify annual principal, interest, and reserve requirements
180. Remedies of bondholders
190. Negotiability
200. Bonds as legal investments
210. Refunding bonds
215. Official statements
220. Short title

Sec. 37.15.010. Full faith and credit for general obligation bonds. The full faith, credit and resources of the state are hereby pledged to the payment of the principal of and interest and redemption premium, if any, on all general obligation bonds of the state authorized pursuant to art. IX, § 8 of the constitution. (§ 1 ch 175 SLA 1960; am § 1 ch 104 SLA 1967)

Collateral references. — 63 Am.Jur.2d, Public Funds, §§ 23-32. 64 Am.Jur.2d, Public Securities and Obligations, § 1 et seq.

81A C.J.S., States, §§ 250-262.

Funding or refunding obligations as subject to conditions respecting approval by voters, 97 ALR 442.

Validity of bond issue in excess of amount permitted by law within authorized debt, tax or voted limit, 175 ALR 823.

Sec. 37.15.012. Continuing debt service appropriation. The amounts required annually to pay the principal, interest, and redemption premium on all issued and outstanding general obligation bonds of the state are appropriated on July 1 of each year from the general fund to the state bond committee to make all required payments of principal, interest, and redemption premium. (§ 1 ch 100 SLA 1981)

Opinions of attorney general. — This section does not represent an unconstitutional dedication of public funds under § 7, art. IX, of the state constitution, as that section of the constitution contains an implied exception for bond obligations. November 30, 1982, Op. Att'y Gen.

Sec. 37.15.015. Committee shall publish notice of existing state indebtedness before election. (a) Before a general or special election in which a bond issue is offered for ratification, the state bond committee shall publish a notice of existing state bonded indebtedness at least once a week for three consecutive weeks in a newspaper of general circulation in each of the four judicial districts of the state. The first notice shall be published at least 20 days before the date of the election. A notice shall contain

(1) the current total bonded indebtedness of the state,

(2) the cost of the debt service on the current indebtedness.

(b) Neither the failure to publish the notice of existing state bonded indebtedness nor a defect in the publication affects the validity of the bond issue offered for ratification or of a general or special election in which a bond issue is offered for ratification. (§ 2 ch 50 SLA 1964; am § 1 ch 8 SLA 1969)

Collateral references. — Effect of inclusion in call for election, or in proposal for bond issue submitted to people, of unauthorized method of payment or retirement, 93 ALR 362.

Bonds issued by state officer or board payable solely out of proceeds of obligations of political subdivisions pledged as within constitutional or statutory provisions which impose a limit on state indebtedness or require consent of electors, 100 ALR 1114.

Mistake, ambiguity, or omission in statement as to indebtedness, in call for

election or proposal for bond issue, as affecting validity of election or bonds issued pursuant thereto, 116 ALR 1258.

Effect of delay after authorization by voters on power of governmental unit to issue bonds, 135 ALR 768.

Validity, within authorized debt, tax, or voted limit, of bond issue in excess of amount permitted by law, 175 ALR 823.

Sec. 37.15.020. Manner and amounts of sale. The state bond committee shall sell the bonds of each authorization in the amounts or series and at the times which it finds are for the best interests of the state and its inhabitants. (§ 1 ch 175 SLA 1960)

Sec. 37.15.030. Interest rate and maturity. Each issue or series of bonds shall bear interest at an effective rate over the life of the bonds not to exceed 11 percent a year or that rate of interest which is 110 percent of the rate of the Bond Buyer Index of 20 Municipal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. The bonds shall mature in not more than 30 years from date of issue, unless a longer period is specifically authorized by statute. (§ 1 ch 175 SLA 1960; am § 2 ch 104 SLA 1967; am § 1 ch 92 SLA 1970; am § 1 ch 29 SLA 1976; am § 1 ch 85 SLA 1980; am § 1 ch 110 SLA 1982)

Effect of amendments. — The 1980 amendment substituted "10" for "eight" preceding "percent a year" at the end of the first sentence.

The 1982 amendment substituted the language beginning "11 percent a year" for "10 percent a year" at the end of the first sentence.

Collateral references. — Right to call governmental bonds in advance of their maturity, 109 ALR 988.

Sec. 37.15.040. Sale of bonds. Before selling an issue or series of bonds, the state bond committee shall give notice inviting sealed bids in such manner as it may prescribe. If satisfactory bids are received, the bonds offered for sale shall be awarded to the highest responsible bidder. If the state bond committee determines that the bids received are not satisfactory as to price or responsibility of the bidders, it may reject all bids received. (§ 1 ch 175 SLA 1960; am § 3 ch 104 SLA 1967; am § 1 ch 43 SLA 1969)

Sec. 37.15.050. Redemption. The state bond committee may determine whether the bonds are subject to redemption before their fixed maturities and may fix the premium for and all other terms of the redemption. No bond may be subject to redemption before its fixed maturity date unless the right to so redeem the bond is expressly mentioned on the face of the bond. (§ 1 ch 175 SLA 1960; am § 4 ch 104 SLA 1967; am § 1 ch 26 SLA 1968; am § 7 ch 143 SLA 1968)

Collateral references. — 81A C.J.S., ...tes, § 261.

Funding or refunding obligations as subject to conditions respecting limitation

of indebtedness, 97 ALR 442.

Validity of bond issue in excess of amount permitted by law within authorized debt, tax or voted limit, 175 ALR 823.

Sec. 37.15.060. Form and registration of bonds. An issue or series of bonds may be issued in coupon form payable to bearer or in fully registered form, and bonds in coupon form may be made registrable as to principal or principal and interest, as determined by the state bond committee. (§ 1 ch 175 SLA 1960; am § 2 ch 26 SLA 1968)

Sec. 37.15.070. Place of payment. The state bond committee may fix the place or places of payment of the principal, interest and redemption premium, if any. (§ 1 ch 175 SLA 1960; am § 5 ch 104 SLA 1967)

Sec. 37.15.080. Signatures and seal. (a) Each bond shall be signed on behalf of the state by the governor and attested by the lieutenant governor, which signatures may be facsimile signatures. The seal of the state shall be impressed, imprinted or otherwise reproduced on each bond. Each interest coupon attached to the bond shall be signed by the facsimile signatures of the governor and lieutenant governor. If an officer whose signature appears on the bonds or coupons ceases to be an officer before delivery of the bonds, the signature is, nevertheless, valid and sufficient for all purposes, as if the officer had remained in office until delivery.

(b) A signature required on a bond issued by a political subdivision of the state may be a facsimile signature. (§ 1 ch 175 SLA 1960; am § 6 ch 104 SLA 1967)

Collateral references. — Printing, lithographing, or other mechanical signature on public bonds, coupons, or other pecuniary obligation, 94 ALR 768.

Sec. 37.15.090. Terms and conditions. Each issue or series of bonds shall be issued under and subject to the terms, conditions, and covenants providing for the payment of the principal and the interest and other terms, conditions, covenants, and protective provisions safeguarding the payment as found reasonably necessary by the state bond committee for the most advantageous sale. The terms, conditions, and covenants may include the setting aside and maintaining of certain reserves to secure the payment of principal and interest. (§ 1 ch 175 SLA 1960)

Collateral references. — Effect of inclusion in call for election, or in proposal for bond issue submitted to people, of unauthorized method of payment or retirement, 93 ALR 362.

Power of legislature to add to or make more onerous the conditions or limitations prescribed by Constitution upon incurring public debts, 106 ALR 231.

Power and discretion of officer or board authorized to issue bonds of governmental unit as regards terms or conditions to be included therein, 119 ALR 190.

Sec. 37.15.100. Trustee. If the state bond committee finds it necessary to accomplish the most advantageous sale of the bonds, the committee shall select a trustee for the owners and holders of the bonds or for the safeguarding and disbursement of the proceeds of the sale of the bonds for the use and purpose for which issued, and shall fix the rights, duties, powers, and obligations of the trustee. (§ 1 ch 175 SLA 1960)

Sec. 37.15.110. Creation and membership of state bond committee. There is created a committee known as the "state bond committee," the members of which are the commissioner of commerce and economic development, the commissioner of administration, and the commissioner of revenue. If a member of the committee is absent or otherwise unable to act, the member's designee in the department shall act as a member of the committee in the member's place. (§ 2 ch 175 SLA 1960; am § 7 ch 104 SLA 1967; am § 81 ch 218 SLA 1976)

Sec. 37.15.120. Regulations. The state bond committee may adopt regulations for the performance of its duties and may designate by resolution one of its members to perform any act necessary to effectuate its duties not required by statute to be performed by the state bond committee in meeting or by resolution, or by another officer of the state. (§ 2 ch 175 SLA 1960; am § 8 ch 104 SLA 1967)

Sec. 37.15.130. Officers, records and proceedings. The commissioner of commerce and economic development is the chairman of the state bond committee and the commissioner of revenue is the secretary. A majority of the members of the committee constitute a quorum. The committee shall keep a full, complete, and permanent record of its proceedings. All records and correspondence of the committee shall be kept in the office of the commissioner of revenue. (§ 2 ch 175 SLA 1960; am § 82 ch 218 SLA 1976)

Collateral references. — Personal liability of officers to holders of invalid public money obligations, 87 ALR 273.

Sec. 37.15.140. Duties of state bond committee. The state bond committee shall adopt the resolution and prepare the documents necessary for the issuance, sale, and delivery of bonds. (§ 3 ch 175 SLA 1960)

Sec. 37.15.150. Committee may employ special services. If the state bond committee considers it necessary and advisable, it may procure architectural or engineering, fiscal agent or municipal investment, legal and other expert or specialized services at reasonable and customary fees to assist it in accomplishing the most advantageous sale of the bonds. The fees may be paid from the proceeds of the sale or advanced from the contingency fund in the office of the governor or otherwise. (§ 3 ch 175 SLA 1960)

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF REVENUE

TREASURY DIVISION

ELEVENTH FLOOR
STATE OFFICE BUILDING
POUCH SB
JUNEAU, ALASKA 99811
PHONE:

March 12, 1985

The Honorable John Sund
Chairman
House Special Committee on Loans
Pouch V
Juneau, AK 99811

Dear Representative Sund:

At the request of your staff, I would like to offer the Department of Revenue's comments on HB 4, "An Act relating to debt of the state, its agencies, and municipalities."

The bill addresses an important subject -- the issuance, management, and oversight of state and municipal debt. A strong point of the legislation is its assurance of a focal point for the accumulation of information regarding State and local debt.

I would like to point out that the Department of Revenue is now providing the two main informational items required by the bill. The Treasury Division now disseminates a monthly debt calendar to all issuers of public debt in the state. Within weeks, executive, legislative, and municipal officials will receive an annual report on State, State agency, and municipal debt.

It also may be of interest that the provisions for electronic meetings of the State Bond Committee effectively are contained in HB 140, which provides blanket authorization for State agencies to engage in such meetings.

The Department does have reservations about certain provisions of HB 4. One is a degree of ambiguity about what constitutes "debt of the state."

More importantly, the Department is concerned about the issuance of debt guidelines by the State Bond Committee. While the desire for guidelines is understandable, the Department believes they may raise certain problems, to wit:

1. with respect to municipalities, the State may not have constitutional authority to sanction debt issuance,

albeit in a manner lacking any legal compulsion;

2. such sanctions might imply some degree of State responsibility for the debt; with municipal and agency debt levels so high, the State should be very careful that the State does not project to bondholders any responsibility for debt beyond whatever legal liability it has;

3. issuers might place great confidence or reliance on the State and guidelines might be adhered to ritualistically by some less sophisticated borrowers or for political reasons; public determination of municipal agendas for capital improvements could be unduly impaired; with some communities experiencing rapid growth, guidelines could be a relatively inflexible and, for the State Bond Committee, politically untenable manner of addressing rapidly growing infrastructure needs;

4. if an issuer should issue bonds in defiance of guidelines, the bonds could suffer at the hands of the rating agencies or markets; and

5. State Bond Committee sanction of bond issuance might give the impression that the State is obliged to fully fund certain municipal aid programs, particularly school debt payments.

The Department wonders if it might be more useful to disseminate debt information to issuers rather than issue guidelines. An example would be Credit Overview, a publication of Standard & Poor's that describes in detail the methods and criteria that agency uses in rating debt. To a large extent, these are the "guidelines" that matter. Such dissemination would avoid greater entanglement of the State in the responsibility for municipal debt.

Sincerely,

Milt Barker

AND THE GOVERNOR'S OFFICE

The Honorable John Sund
Chairman
House Special Committee on State Loans
Pouch V
Juneau, Alaska 99811

Dear Representative Sund,

At the request of your staff I would like to comment on the March 12th letter by Deputy Commissioner of Revenue , Milt Barker, regarding HB 4 " An Act regarding the debt of the State, its agencies and its municipalities ".

I would like to begin by stating that the Department of Revenue has changed its position regarding this Legislation. As the previous chair of the House Special Committee on State Loans I worked each step of the way with former Commissioner Heath to develop legislation that would be responsible public policy. It has come as a shock that the new Commissioner of Revenue has taken the position that the Dept. of Revenue does not support HB 4.

In reviewing the Commissioner's letter I am forced to question whether the Commissioner fully understands the the provisions of HB 4.

The Commissioner begins by stating that, the Department does have reservations about HB 4. "One is a degree of ambiguity about what constitutes 'debt of the State'". This is my point exactly. There is currently a great deal of concern about the debt issuances of agencies and municipalities within the State of Alaska. Ambiguity about what constitutes "debt of the State" exists currently. HB 4 attempts to place additional information in the hands of the Legislature and the public regarding "the State's debt issuance."

The Commissioner goes on to state that "The Department is concerned about the issuance of debt guidelines by the State Bond Committee," and raises five specific points.

I would like to begin in responding to the Commissioner's five points by stating that HB 4 does not require the issuance of vague "debt guidelines," but instead, requires " informational guidelines for the management of debt of municipalities of the State." These informational guidelines would include "recommended level of debt, debt management, bidding procedures, and bid awards, and compensation for financial service."

1526 K STREET • ANCHORAGE, ALASKA 99501 • (907) 274-4256
POUCH V • JUNEAU, ALASKA 99811 • (907) 465-4821

With regard to point number one, no where in HB 4 is the State Bond Committee given the authority to sanction or not sanction the debt issuance of the municipalities. I am well aware of the constitutional questions which would surround such a requirement.

With regard to point number two, the Commissioner believes that "such sanctions might imply some degree of State responsibility for the debt." If HB 4 provided for State Bond Committee sanctioning of municipal debt, this argument might have some merit. However, HB 4 does not provide such sanctions. Furthermore, although it may be the Commissioner's belief that the State now has no moral obligation for the debt issuances of the municipalities, this is a matter of some discussion and debate.

With regard to point number three, first, the existence of "less sophisticated borrowers" is evidence of the need for informational guidelines. Secondly, no where in HB 4 are "municipal agendas for Capital Improvements" addressed. Third, the State Bond Committee would have full authority to write the informational guidelines as flexibly as it pleased.

With regard to point number four, the question of bonds issued in defiance of State Bond Committee guidelines and their fate in the market, is one of what constitutes good public policy.

With regard to point number five, once again I would like to reiterate that no where in HB 4 is the State Bond Committee given the authority to sanction or not sanction the issuance of municipal debt.

In closing I would like to state that HB 4 is, I believe, a necessary step the Legislature must take in order to protect the State's interest in the bonded indebtedness of its agencies and municipalities.

Cordially,

Rick

"A Review of Debt Management and Debt Capacity for the State of Alaska"

Presentation of report written for the Legislative Budget and Audit Committee to the House Special Committee on State Loans.

October 19, 1983

Wesley C. Hough, Manager
Government Finance Research Center (GFRC)
Municipal Finance Officers Assoication (MFOA)

I. Overview of GFRC Report's Scope

II. Alaska State-level Debt
- o classification of long-term debt by type:
  - tax-supported general obligation
  - revenue-supported
  - moral obligation
- o market performance of State general obligation bonds
- o investor perceptions of the State's creditworthiness

III. Recommended Changes in State Debt Management
- o expanded role for State Bond Committee
- o supervision of moral obligation bonds
- o capital financing plan
- o use of generally accepted accounting principals

IV. Local Government Debt
- o profile of local borrowers, market performance
- o State reimbursement of school construction costs
- o state oil production property tax policy
- o municipal bond bank

V. Local Government Debt Management
- o alternative programs for state involvement
- o ceiling on locally issued debt
- o expanded role for municipal bond bank

VI. State Debt Capacity
- o determinants of debt capacity
- o methodology for assessing debt capacity

CFRC Debt Study Recommendations

1. State Bond Committee

a) Oversight responsibilities of the State Bond Committee should include all State-level debt.

b) Committee Chairman should be Commissioner of Revenue or Director of O.M.B., as they are actually involved in the State's Debt Management.

c) Membership of State Bond Committee should be expanded to include the Commissioner of Community and Regional Affairs and the head of a debt issuing agency (AHFC, AIDA, etc.).

d) State Bond Committee should have a full time professional staff person who is an expert in public finance.

e) State Bond Committee should require annual financing plans from each authorized issuer of bonds.

f) The State Bond Committee should prepare an annual profile of outstanding debt and monitor its impact on the State's fiscal condition.

g) State Bond Committee should develop written debt management guidelines.

2. Debt Capacity:

To preserve State's credit worthiness the State should keep its debt service-to-revenue ratio to 5%, and the State should keep maturities within the known and predictable range of State revenues (we could go to as high as 10%, but we would face tradeoffs against other spending priorities and it could result in a lowering of the State's AA rating).

3. Moral Obligation Bonds:

a) Where possible, use of the moral obligation should be avoided. The moral obligation should be a privilege not a right. State Bond Committee should make the determination.

b) Existence of the Permanent Fund provides comfort to bondholders that the State would be able to meet its moral obligation (even though not presently permitted by the Constitution), so any attempt to erode the principal of the Fund should be avoided.

4. Capital Financing Plan:

a) A plan linking a capital financing plan to our long range capital improvement plan is necessary.

b) The State should consider bringing its accounting system into conformance with Generally Accepted Accounting Principles (GAAP).

5. Local Government Debt Management

a) The State should take the lead in implementing programs that encourage the prudent use, and guard against the misuse, of local debt issuance.

b) The State should take steps to improve the market performance of the Municipal Bond Bank and use of the Bond Bank by all localities should be encouraged.

c) The State should develop a two-tiered ceiling on local debt issuance, based on per capita amounts of debt and as a percentage of property values.

d) The current State program to subsidize school construction should be replaced.

6. General Debt Management:

a) Financial advisors and bond counsel should be paid on a flat fee basis rather than as a percentage of the bond issue to avoid any conflicts between the advice and payment for advice.

b) Greater use of competitive bidding versus negotiated sales should be used when possible. For example: AHFC issues.

c) Bonds should be bid on the basis of true interest cost, not net interest cost, as is presently done.

CHAPTER 1

EXECUTIVE SUMMARY

The changing nature of tax-exempt borrowing, including the shift from traditional tax-supported government bonds to revenue-backed bonds, the rise and volatility in interest rates, the reliance upon individual investors in contrast to institutional lenders, and changes in federal law concerning various aspects of tax-exempt financing, has resulted in states generally being more attentive to debt management and debt policy. This study of State debt management comes at a propitious time. While the past growth of tax-exempt borrowing by issuers bearing the Alaska name has been rapid and sizeable, new programs and proposals before the legislature indicate that the demand for new spending and borrowing is far from sated. At the same time, recent reductions in the market price for petroleum and the unpredictability of its future supply and price raise uncertainties about the level and viability of the principal source of governmental revenues that directly or indirectly supports many of Alaska's borrowing and spending programs.

The interdependence of the Alaskan economy and its oil wealth creates a paradox for assessing the State's debt management and debt capacity. Oil revenues have enabled the State and local governments to borrow at unusually high levels -- in terms of per capita amounts of debt -- and have provided the financial security required by investors in the State's bonds. It is the reliance on these same oil revenues, however, that is the principal weakness of the Alaska credit as a long-term issuer of tax-exempt bonds and that makes assessment of the State's future debt capacity very difficult.

To be effective, debt management must join the capital needs of the State and its constituent governmental units with the ability to achieve bond market access on affordable terms. Market access is a function of debt capacity, debt burden, and perceived ability to pay; it is also conditioned importantly by the overall forces that shape borrowing needs nationally and the willingness of investors to supply funds. The private credit market, where public debts are sold, decides what borrowers will be accommodated and at what cost -- from a fluctuating but always limited pool of lendable funds. While Alaska is concerned first and foremost with the cost and availability of credit for its own needs, Alaska bonds compete with other governmental obligations from all parts of the country. The terms offered Alaska borrowers by the marketplace are strongly influenced by the volume and quality of competing claims from other borrowers. Hence, it is in Alaska's interest to offer a well-structured, high-quality security in order to obtain funds, and to obtain them at acceptable interest rates.

Effective debt management must also provide State and local issuers and the State's debt managers with the flexibility to react quickly and responsibly to changes in the financial markets. That the tax-exempt bond market is highly

sensitive to changes in the federal tax code was obvious in late 1982 as the pendency of the bond registration requirement brought a flood of issues to market. Now, as a result of this legislation, the primary and secondary market acceptance of an issuer's securities will in part depend on a timely, accurate and efficient transfer process (discussed on pages 35-36). Changes in other federal tax provisions can also sharply affect the demand for tax-exempt bonds. Chapter Two includes a survey of the tax acts of 1981 and 1982, and their impacts on the municipal bond market. These changes, like volatility in interest rates, are factors over which the State has little control. However, a responsible and flexible debt management program places the State in the best position to respond effectively to events that may affect the State's borrowing.

State-Level Debt

The evidence presented in this study shows that Alaska debt has grown from 0.7 to 1.8 percent of annual national tax-exempt bond market volume since 1970. The rising market share accorded Alaska bonds has been the result of an increase in the State's annual volume of new debt issues from $134 million to $1.4 billion between 1970 and 1982. Chapter Three documents the increase in borrowing and includes a profile of the major State debt issuers. Of all State-level issuers in Alaska, the Alaska Housing Finance Corporation has issued the largest amount of public debt -- over 62 percent of State-level debt and and over 44 percent of all State-wide debt (including local government obligations) outstanding -- and is the State's most frequent and best-known borrower.

At a time when we have seen the national credit rating agencies downgrade the credit rating of many states, Alaska can be proud of its rating upgrade over the past 10 years from a Baa to an AA credit. Credit analysts and the market itself have recognized the quality of Alaska's bonds as an investment. The evidence shows that Alaska now trades on par with such strong AA credits as Connecticut and Ohio. Chapter Four presents the results of our study of the State's past market experience. The data show that Alaska has consistently experienced lower borrowing costs than other states with similar ratings. Evidence to support this comes from the lower underwriting spreads, larger number of bids, and the lower interest rates on Alaska bonds as compared to those of other states of similar high quality.

State Bond Committee

In spite of the strong past performance of the State's bonds, the mid-1980s is a good time for the State of Alaska to broaden and strengthen the role of the State in debt management and oversight, particularly through the State Bond Committee (see pages 157 to 160). Recent fluctuations in the worldwide price of oil and the decline of Prudhoe Bay oil production within the ten-year range have alerted investors to the "boom and bust" nature of the Alaskan economy. These two events will be important factors behind the ability of the State to issue further debt in the coming years. One major role for a newly

reconstituted State Bond Committee would be oversight of the State's total indebtedness. It is not intended that the State Bond Committee supplant the activities or authority of independent agencies and corporations; however, it is vital that the State annually review and assess its debt position -- including within that review all State-level debt -- relative to the State's debt capacity and priorities for future public investment.

In order to carry out its expanded scope of activity, the State Bond Committee should be restructured. The chairmanship should reside in a senior-level fiscal official -- such as the Commissioner of Revenue or the Director of the Office of Management and Budget -- who is actively involved in the State's debt management. The Commissioner of Commerce and Economic Development is the Committee's present chair. Expanding the membership to include a representative from the governing board of a State corporation, and the Commissioner of Community and Regional Affairs would emphasize the interrelationship of the State, its agencies, and local government in the debt management area. To assist in fulfilling its expanded duties, the Committee should be staffed full-time by a professional in the field of public finance.

The Committee should be given the responsibility to take a global view of the State's debt-related activities in a formal manner, not in the loose, informal way that is presently said to exist. The State may wish to require that each entity of the State which is authorized to issue bonds annually file a debt financing plan with the State Bond Committee. From these plans a master debt issuance schedule may be compiled to inform and assist all debt issuers in the State. The schedule could be updated monthly or on an "as-needed" basis as financing plans change. The State Bond Committee should also annually prepare a comprehensive profile of outstanding debt and monitor its impact on the State's fiscal condition. Special attention in this review should be paid to the level of the State's contingent liabilities, such as moral obligation debt, and changes in the growth and composition of local debt.

It is advised that the State develop written debt management guidelines that include several criteria for evaluating the desired and affordable level of debt issuance in lieu of a legislative ceiling on debt issuance. The State Bond Committee should be responsible for implementing these guidelines by reviewing each State-level bond issue before it is brought to market. The Committee's only power in this regard would be to defer or veto an issuance because the security structure or sources of repayment are inadequate or the issue jeopardizes the financing plans or creditworthiness of the State. Likewise, if the State wishes to maintain its present interest rate ceiling on the issuance of bonds, it is preferable to set such a ceiling administratively rather than legislatively.

Debt Capacity and Affordability

The analysis of debt capacity is addressed in Chapter Seven. Comparisons of State debt with that of other states indicates that Alaska is an "outlyer" with extremely high ratios of debt per capita and debt per $1,000 of personal

income. Therefore, it is necessary to look in-depth at the State's revenue sources to assess its capacity for further debt issuance. Determination of the affordable level of general obligation debt essentially depends upon the State's ability and willingness to pay debt service now and in the future on any amounts borrowed. For the immediate future, Alaska's debt capacity will be determined by the amount of general fund revenues that the State wishes to allocate to the payment of debt service and the preservation of the permanent fund. Thus, short-term affordability depends exclusively on the fluctuating level and uncertain future of oil revenues as long as the State's source of funds to repay debt is tied to this single source. In the longer term, when the State's oil wealth has subsided, the ability of Alaska to issue debt will depend upon the stability and breadth of the State's economy. Without its extensive petroleum resource base Alaska will become much more like other states and analysis of its debt capacity will follow the traditional steps outlined in pages 196 to 206.

The methodology for evaluating Alaska's short-term debt affordability is presented on pages 218 to 222. If the State maintains its current ratio of debt service to revenues at the five percent level and continues to issue debt with maturities within the known and predictable range of State revenues, the State's creditworthiness will be preserved. If the State wishes to have debt service comprise a larger share of the State budget (to a maximum of 10 percent), debt capacity would be increased -- although this would force trade-offs against other State spending priorities and possibly result in a decline in the State's AA credit rating. Through 1990, the State's general obligation debt capacity is estimated to range from $252 million to $1.2 billion, depending upon the level of current revenues the State decides to commit to the payment of debt service.

Because of the frequent changes in petroleum prices and their impact on State revenues, the affordability analysis along the lines presented in this report must be continually updated. Revisions should take place at least quarterly when the Department of Revenue releases long-range revenue forecasts and whenever the State issues general obligation debt. Such analysis will provide the State Bond Committee with important information to be used in formulating future debt issuance plans.

Even though the affordability of revenue bonds is principally determined by the adequacy of the revenue stream pledged to repayment of the bonds, along with the market's acceptance of the securtiy structure behind the bonds, revenue bonds indirectly affect the State's debt capacity. To the extent that revenue bonds are supported by a pledge of the State's moral obligation, or their issuance creates an oversupply of bonds bearing the Alaska name in the marketplace, the State's ability and willingness to carry debt will be affected.

Use of Moral Obligation Bonds

We do not see the possibility of entirely eliminating the use of the State's moral obligation pledge in the case of all Alaska financings. Where it is possible to avoid its use, such as in the case of Alaska Housing Finance Corporation

bonds, it should be avoided. The moral obligation pledge should not be treated as a right, available to most State issuers, as it is at present. Rather, it should be considered a privilege, an indication to the bond market that, after close scrutiny, the State believes the project meets public policy objectives and is financially sound. The State Bond Committee should have the responsibility for determining the necessity of the moral obligation to an agency's borrowing program, and its potential impact on the State's creditworthiness.

If moral obligation debt increases at a time when overall State revenues are stable, are growing at a rate less than the growth in contingent liabilities, or are declining, the moral obligation burden may encumber the State's credit capacity. Such an occurance would make general obligation debt more costly and, therefore, less affordable due to weaker credit quality. Hence, the importance for including contingent debt in the State Bond Committee's annual review of the State's outstanding debt.

If it were not for the Permanent Fund, the limited sources of State revenue would cause investors to discount the moral obligation pledge heavily. The mere existance of the Permanent Fund provides comfort to bondholders that the State would be able to meet its moral obligations, if necessary, even though such action is not constitutionally permitted and would require a change in law. Any attempt to erode the principal of the Fund, or to otherwise weaken its position should, therefore, be avoided.

Capital Financing Plan

Demonstrating keen fiscal management and attention to capital financing and debt management is especially important to Alaska because of the uncertainties surrounding State revenues. The State must wisely allocate scarce resources to its developing economy in a manner that balances capital investment with the return on that investment yielding a diverse and broadened economy that will be able to maintain the public infrastructure put in place. Accordingly, the need for a capital financing plan linked to a comprehensive capital improvement plan is evident. (see pages 165 to 174)

The quality of financial reporting is an important element in a capital financing plan and to the complete debt management picture. While Alaska's financial reporting is complete, it does not conform to generally accepted accounting principles (GAAP). States that use an accounting system that conforms to, and is consistent with, GAAP benefit in several ways (see pages 174-175). It is recommended that the State consider converting its annual financial reports to GAAP. Such action will provide the State with vital information on its financial condition, encourage the State to take a global view of outstanding debt, improve financial management, and will be looked upon favorably by investors in the State's bonds.

General Debt Management

Specific debt management practices being used in the State could be improved. The State and its agencies recognize the importance of securing professional advice on debt issuance. However, financial advisors and bond counsel are typically compensated based on a percentage of the amount of bonds sold. Tying the advisor's compensation to the amount of bonds sold or the successful delivery of the bonds builds in an unnecessary risk of conflict of interest. The State should review its method of compensation for financial advisory services and seek arrangements that do not encourage conflicts between the advice and the payment for the advice. In this regard, a flat fee -- such as a base retainer and hourly rates -- is to be preferred over a fee based upon the amount of bonds issued. (see pages 185 to 190).

There is a place for both negotiated and competitive techniques for selling bonds in a debt management and debt marketing strategy. The approach which is judged to provide the greatest market reception and lowest interest cost should be followed. While each bond issue is unique, it appears that some bond issues presently being sold by negotiation by the State, for example, those of the Alaska Housing Finance Corporation, would be candidates for a competitive sale. (see pages 182 to 184).

Neither the State Bonding Act nor the State statutes regarding municipal debt specify the method by which effective interest rate on a competitive bond sale must be determined. However, the State and most municipalities have chosen to use the net interest cost (NIC) method to compare alternative bids at competitive sale. This method may not be in the best interests of the State because the winning bid on a NIC basis does not necessarily result in the lowest true interest cost (TIC) -- a measure of the "true" cost of borrowing money that takes into account the time value of money. We recommend that the State Bond Committee review the current rules that govern the award of the State's competitive general obligation bond issues, and that municipalities be encouraged to do so as well, with a view toward awarding bond issues on the basis of TIC. (see pages 179 to 181).

Local Government Debt

Local governments in Alaska have issued approximately 29 percent of all State-wide debt. The analysis of local government borrowing in Chapter Five indicates that the bonds of Alaska's localities sell at yields significantly above the average for the overall market. Furthermore, the evidence indicates that yields on the North Slope Borough's debt are vastly higher than the average for other Alaska municipalities. The most significant comparison of local and State bond issuance is the markedly higher underwriting cost on local issues. Compared to other states, local governments in the Alaska rely on general obligation bond financing at twice the national rate. Given the high levels of debt that have been issued by the State's localities, the much higher than average interest costs of Alaska's local debt, and the loss to the State of revenues from taxes levied by certain localities to pay the annual debt service on their debt, the State may wish to analyze further local bond market experience and State policies regarding local debt management. The State

should take the lead in implementing programs that encourage the prudent use and guard against the misuse of local debt issuance.

Currently the State is being short-changed by those localities that levy a high amount of taxes on oil production property in order to finance debt service. Because taxes paid to the locality are credited towards State property tax liability, this represents a direct revenue loss to the State. It is, therefore, in the State's interest to address the absolute level of debt issuance by its localities. It is recommended that the State develop a two-tiered ceiling on local debt issuance, based on per capita amounts of debt and a percentage of property value.

Specific State-level programs which can assist local borrowers and improve local debt management are covered in pages 136 to 141. In evaluating alternative State policies, the State must consider both the direct budgetary costs of the programs and the indirect effects on the State's own credit worthiness, and the amount of autonomy the State wishes its localities to enjoy. A resonable compromise between encumbering the State's debt capacity and providing greater financial assistance to local governments would be to expand the role of the Municipal Bond Bank. Our review of the Bank's market performance indicated that, compared with other state bond banks, the Alaska Bond Bank has the potential for saving as many as 50 basis points in borrowing cost by undertaking an active national marketing effort. The State should review the present security structure behind the Bank's bonds with the view toward improving their market reception by taking advantage of the State's high creditworthiness.

The State's present program to subsidize the cost of school construction is an expensive undertaking; however, its cost could be minimized through attention to the cost of the project and to the means of financing during the Department of Education's approval process. Further alternatives include the issuance of State general obligation bonds in lieu of local school construction bonds, and requiring the Municipal Bond Bank to issue all school construction debt.

a. Debt data from the U.S. Department of Commerce, Bureau of the Census, State Government Finances (series GF), various years. State general obligation debt is defined as all state-guaranteed debt for which states pledge their full faith and credit. Debt data measured as of June 30 of each fiscal year shown. Figures exclude debt issued by local governments, and debt issued by the District of Columbia.

220. Short title

Sec. 37.15.010. Full faith and credit for general obligation bonds. The full faith, credit and resources of the state are hereby pledged to the payment of the principal of and interest and redemption premium, if any, on all general obligation bonds of the state authorized pursuant to art. IX, § 8 of the constitution. (§ 1 ch 175 SLA 1960; am § ch 104 SLA 1967)

Revisor's note. — The following laws relate to issuance of general obligation bonds under the provisions of this chapter.

Ch. 170, SLA 1960, and ch. 50, SLA 1961, provide for the issuance of bonds in the amount of $23,000,000 for ferries and ferry facilities and roads and highways.

Ch. 171, SLA 1960, and ch. 54, SLA 1961, provide for the issuance of bonds in the amount of $1,500,000 for vocational education schools.

Ch. 172, SLA 1960, and ch. 64, SLA 1961, provide for the issuance of bonds in the amount of $2,000,000 for gymnasium and general utility facilities for the University of Alaska.

Ch. 173, SLA 1960, ch. 66, SLA 1961, and ch. 100, SLA 1962, provide for the issuance

of bonds in the amount of $2,500,000 for hospital construction and equipment matching funds.

Ch. 174, SLA 1960, and ch. 65, SLA 1961, provide for the issuance of bonds in the amount of $1,500,000 for state bush airfields.

Ch. 121, SLA 1962, provides for the issuance of bonds in the amount of $5,950,000 for construction of academic and related facilities at the University of Alaska.

Ch. 122, SLA 1962, provides for the issuance of bonds in the amount of $5,000,000 for certain elementary and secondary public schools.

Ch. 123, SLA 1962, provides for the issuance of bonds in the amount of $4,175,000 for trunk airports.

Ch. 157, SLA 1962, provides for the issuance of bonds in the amount of $2,200,000 for a vocational education school.

Ch. 57, SLA 1963, providing for the issuance of bonds in the amount of $2,200,000 for a vocational education school, affects ch. 157, SLA 1962, relating to the issuance of bonds for a vocational education school.

Ch. 48, SLA 1964, as amended by ch. 68, SLA 1966, and ch. 28, SLA 1967, provide for the issuance of bonds in the amount of $8,185,000 to meet the effects of the March 27, 1964, earthquake.

Ch. 94, SLA 1964, provides for the issuance of bonds in the amount of $2,000,000 for a branch of the Alaska Pioneers' Home at Fairbanks.

Ch. 118, SLA 1964, and ch. 96, SLA 1965, provide for the issuance of bonds in the amount of $5,000,000 for state buildings for use by the Department of Health and Welfare.

Ch. 86, SLA 1966, provides for the issuance of bonds in the amount of $900,000 to provide outdoor recreation facilities.

Ch. 121, SLA 1966, provides for the issuance of bonds in the amount of $2,285,000 for elementary and secondary public schools throughout the state.

Ch. 134, SLA 1966, provides for the issuance of bonds in the amount of $15,500,000 for state ferries and ferry facilities.

Ch. 165, SLA 1966, provides for the issuance of bonds in the amount of $16,900,000 for buildings for the University of Alaska throughout the state.

Ch. 166, SLA 1966, provides for the issuance of bonds in the amount of $10,500,000 for highways and roads in the state.

Ch. 167, SLA 1966, provides for the issuance of bonds in the amount of $11,500,000 for trunk, secondary and bush airports owned or operated by the state or its political subdivisions.

Ch. 168, SLA 1966, provides for the issuance of bonds in the amount of $5,000,000 for regional high schools throughout the state.

Ch. 73, SLA 1967, and ch. 142, SLA 1968, provide for the issuance of bonds in the amount of $5,000,000 and $11,200,000, respectively, for highways and roads in the state.

Ch. 91, SLA 1968, provides for the issuance of bonds in the amount of $2,000,000 for a branch of the Alaska Pioneers' Home in the Southcentral area.

Ch. 146, SLA 1968, provides for the issuance of bonds in the amount of $1,200,000 for public or other nonprofit community hospitals and other medical facilities at various locations in the state.

Ch. 167, SLA 1968, provides for the issuance of bonds in the amount of $8,800,000 for trunk, secondary and bush airports owned or operated by the state or its political subdivisions.

Ch. 207, SLA 1968, provides for the issuance of bonds in the amount of $10,000,000 for elementary and secondary public schools at various locations in the state.

Ch. 224, SLA 1968, provides for the issuance of bonds in the amount of $8,500,000 for buildings, facilities and utilities at the University of Alaska.

Ch. 226, SLA 1968, provides for the issuance of bonds in the amount of $18,000,000 for state ferries. This bond issue was not approved by the voters.

Ch. 227, SLA 1968, provides for the issuance of bonds in the amount of $3,000,000 for fish hatcheries in the state.

Ch. 147, SLA 1970, as amended by ch. 220, SLA 1970, provides for the issuance of bonds in the amount of $11,000,000 for capital improvements for water supply and sewerage systems.

Ch. 170, SLA 1970, provides for the issuance of bonds in the amount of $20,300,000 for certain elementary and secondary public schools within the state.

Ch. 173, SLA 1970, provides for the issuance of bonds for facilities at Anchorage and Fairbanks International Airports.

Ch. 180, SLA 1970, provides for the issuance of bonds in the amount of $3,000,000 for making capital improvements to Alaska Remote Housing Program.

Ch. 181, SLA 1970, provides for the issuance of bonds in the amount of $2,300,000 for making capital improvements to state recreational facilities.

Ch. 182, SLA 1970, provides for the issuance of bonds in the amount of $29,200,000 for making capital improvements to highways and roads in the state.

Ch. 183, SLA 1970, provides for the issuance of bonds in the amount of $8,600,000 for making capital improvements to state correctional buildings for use by the Department of Health and Welfare.

Ch. 190, SLA 1970, provides for the issuance of bonds in the amount of $5,600,000 for making capital improvements to mental health facilities, health and child care centers.

Ch. 221, SLA 1970, provides for the issuance of bonds in the amount of $5,500,000 for making capital improvements to highway maintenance facilities.

Ch. 222, SLA 1970, provides for the issuance of bonds in the amount of $10,000,000 for making capital improvements to certain airports in the state.

Ch. 223, SLA 1970, provides for the issuance of bonds in the amount of $21,000,000 for making capital improvements to the state ferry system.

Ch. 224, SLA 1970, provides for the issuance of bonds in the amount of $29,700,000 for making capital improvements to buildings, facilities, and utilities at the University of Alaska and community colleges.

Ch. 97, SLA 1972, provides for the issuance of bonds in the amount of $3,500,000 for the purpose of matching federal funds under the Hill-Burton hospital construction program.

Ch. 99, SLA 1972, provides for the issuance of bonds in the amount of $10,000,000 for paying the cost of capital improvements for highway construction.

Ch. 150, SLA 1972, provides for the issuance of bonds in the amount of $11,500,000 for paying the cost of capital improvements for civic, convention and community recreation centers and all-weather sports facilities. This bond issue was not approved by the voters.

Ch. 177, SLA 1972, provides for the issuance of bonds in the amount of $18,000,000 for paying the cost of capital improvements for the University of Alaska.

Ch. 194, SLA 1972, provides for the issuance of bonds in the amount of $24,000,000 for paying the cost of capital improvements for airports.

Ch. 195, SLA 1972, provides for the issuance of bonds in the amount of $16,000,000 for paying the cost of acquiring, constructing and equipping state-operated schools.

Ch. 201, SLA 1972, provides for the issuance of bonds in the amount of $20,000,000 for paying the cost of capital improvements for flood control and small boat harbor projects.

Ch. 202, SLA 1972, provides for the issuance of bonds in the amount of $33,000,000 for paying the cost of capital improvements for water supply and sewerage systems.

Ch. 2, SLA 1973, provides for the issuance of bonds in the amount of $11,500,000 for paying the cost of capital improvements for civic, convention and community recreation centers. This bond issue was rejected by the voters at the special election held March 6, 1973.

Ch. 62, SLA 1974, provides for the issuance of bonds in the amount of $2,700,000 for paying the cost of fire protection facilities.

Ch. 86, SLA 1974, provides for the issuance of bonds in the amount of $22,500,000 to fund port facilities development grants under ch. 85, SLA 1974.

Ch. 116, SLA 1974, provides for the issuance of bonds in the amount of $7,900,000 to pay the cost of library resource centers and community libraries.

Ch. 118, SLA 1974, provides for the issuance of bonds in the amount of $10,400,000 to pay the cost of trunk and secondary airport construction.

Ch. 122, SLA 1974, provides for the issuance of bonds in the amount of $37,300,000 to pay for highway, ferry and local service road and trail construction.

Ch. 132, SLA 1974, provides for the issuance of bonds in the amount of $10,900,000 to pay the state share under the Hill-Burton Act hospital construction program and for nursing homes.

Ch. 133, SLA 1974, provides for the issuance of bonds in the amount of $10,500,000 to pay the cost of fish and game management, development and enforcement facilities.

Ch. 135, SLA 1974, provides for the issuance of bonds in the amount of $7,515,000 to pay the cost of constructing and equipping Pioneers' Homes.

Ch. 142, SLA 1974, provides for the issuance of bonds in the amount of $40,337,000 to pay the cost of rural school construction.

Ch. 144, SLA 1974, provides for the issuance of bonds in the amount of $39,523,000 to pay the cost of capital improvements for the University of Alaska.

Ch. 124, SLA 1976, provides for the issuance of bonds in the amount of $7,100,000 for paying the cost of regional fire fighter training centers.

Ch. 131, SLA 1976, provides for the issuance of bonds in the amount of $59,290,000 for paying the cost of constructing, repairing, equipping and upgrading school facilities.

Ch. 168, SLA 1976, provides for the issuance of bonds in the amount of $6,660,000 for paying the cost of capital improvements to parks and recreation areas, and outdoor recreational, open space and historic properties projects.

Ch. 214, SLA 1976, provides for the issuance of bonds in the amount of $29,205,000 for paying the cost of capital improvements to fish and game management and development facilities.

Ch. 239, SLA 1976, provides for the issuance of bonds in the amount of $7,500,000 for paying the cost of construction and development of senior citizen housing.

Ch. 243, SLA 1976, provided for the issuance of bonds in the amount of $26,960,000 for paying the cost of capital improvements for the University of Alaska. This bond issue was rejected at the general election held November 2, 1976.

Ch. 247, SLA 1976, provides for the issuance of bonds in the amount of $53,360,000 for paying the cost of highway, ferry and local service road and trails construction.

Ch. 248, SLA 1976, provides for the issuance of bonds in the amount of $6,866,000 for paying the cost of airport construction and facilities.

Ch. 270, SLA 1976, provided for the issuance of bonds in the amount of $10,630,000 for paying the cost of constructing and major remodeling of justice facilities. This bond issue was rejected by the voters at the general election held November 2, 1976.

Ch. 271, SLA 1976, provides for the issuance of bonds in the amount of $31,000,000 for paying the cost of water supply and sewerage systems construction.

Two other major bonding laws which have been passed since statehood but which do not come under the provisions of this chapter are mentioned here for completeness:

Ch. 56, SLA 1961, provides for the issuance of negotiable revenue bonds of the University of Alaska in the amount of $6,750,000 for certain University of Alaska buildings.

Ch. 88, SLA 1961, as referred to in ch. 108, SLA 1962, and amended in ch. 80, SLA 1968, and ch. 173, SLA 1970, provide for the issuance of negotiable revenue bonds of the state in the amount of $19,925,000 for international airports.

In addition, the following session laws provide for negotiable revenue bonds: Ch. 43 SLA 1963 — $2,020,000 for acquiring, constructing and equipping a student dormitory and dining complex for the University of Alaska; ch. 109 SLA 1965 — $4,590,000 for acquiring, constructing and equipping two student dormitories, a dining facility and a food warehouse and preparation center; ch. 111 SLA 1969 — $4,000,000 for acquiring, constructing, etc., a campus activities center at the University of Alaska.

For legislative committee reports on (1) ch. 50, SLA 1961, relating to ferry bonds, see 1961 House Journal, pp. 223-224; (2) ch. 66, SLA 1961, relating to hospital bond standards, see 1961 House Journal, pp. 263-264; (3) ch. 65, SLA 1961, relating to bush airfield bonds, see 1961 House Journal, pp. 280-281; (4) ch. 183, SLA 1970 (SB 442 am FCC), relating to capital improvements to state correctional buildings, see 1970 Senate Journal, p. 574; (5) ch. 222, SLA 1970 (FCCS SB 431), relating to capital improvements to certain airports in the state, see 1970 House Journal, p. 1529; 1970 Senate Journal, p. 1276. For legislative committee report on capital improvement program, see 1960 House Journal, pp. 231-234, 253.

Am. Jur., ALR and C.J.S. references. — 43 Am. Jur., Public Securities and Obligations, §§ 151, 156 to 160.

Funding or refunding obligations as subject to conditions respecting approval by voters, 97 ALR 442.

Validity of bond issue in excess of amount permitted by law within authorized debt, tax or voted limit, 175 ALR 823.

81 C.J.S. States §§ 179 to 190.

Sec. 37.15.015. Committee shall publish notice of existing state indebtedness before election. (a) Before a general or special election in which a bond issue is offered for ratification, the state bond committee shall publish a notice of existing state bonded indebtedness at least once a week for three consecutive weeks in a newspaper of general circulation in each of the four judicial districts of the state. The first notice shall be published at least 20 days before the date of the election. A notice shall contain

(1) the current total bonded indebtedness of the state,

(2) the cost of the debt service on the current indebtedness.

(b) Neither the failure to publish the notice of existing state bonded indebtedness nor a defect in the publication affects the validity of the bond issue offered for ratification or of a general or special election in which a bond issue is offered for ratification. (§ 2 ch 50 SLA 1964; am § 1 ch 8 SLA 1969)

Editor's note. — Section 2, ch. 8, SLA 1969, provides: "This Act may not be construed as having changed the effect of AS 37.15.015 since this Act merely makes explicit that which was already intended before its enactment."

Legislative committee report. — For report on ch. 8, SLA 1969 (HB 79 am S), see 1969 House Journal, p. 186.

Sec. 37.15.020. Manner and amounts of sale. The state bond committee shall sell the bonds of each authorization in the amounts or series and at the times which it finds are for the best interests of the state and its inhabitants. (§ 1 ch 175 SLA 1960)

Am. Jur. reference. — 43 Am. Jur., Public Securities and Obligations, §§ 126 to 150.

Sec. 37.15.030. Interest rate and maturity. Each issue or series of bonds shall bear interest at an effective rate over the life of the bonds not to exceed eight per cent a year. The bonds shall mature in not more than 30 years from date of issue, unless a longer period is specifically authorized by statute. (§ 1 ch 175 SLA 1960; am § 2 ch 104 SLA 1967; am § 1 ch 92 SLA 1970; am § 1 ch 29 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "eight per cent" for "seven per cent" in the first sentence.

Sec. 37.15.040. Sale of bonds. Before selling an issue or series of bonds, the state bond committee shall give notice inviting sealed bids in such manner as it may prescribe. If satisfactory bids are received, the bonds offered for sale shall be awarded to the highest responsible bidder. If the state bond committee determines that the bids received are not satisfactory as to price or responsibility of the bidders, it may

reject all bids received. (§ 1 ch 175 SLA 1960; am § 3 ch 104 SLA 1967; am § 1 ch 43 SLA 1969)

Sec. 37.15.050. Redemption. The state bond committee may determine whether the bonds are subject to redemption before their fixed maturities and may fix the premium for and all other terms of the redemption. No bond may be subject to redemption before its fixed maturity date unless the right to so redeem the bond is expressly mentioned on the face of the bond. (§ 1 ch 175 SLA 1960; am § 4 ch 104 SLA 1967; am § 1 ch 26 SLA 1968; am § 7 ch 143 SLA 1968)

Legislative committee report. — For legislative committee report on ch. 143, SLA 1968 (HB 707), see House Journal (1968), p. 836.

Am. Jur., ALR and C.J.S. references. — 38 Am. Jur., Municipal Corporations, §§ 408 to 482; 42 Am. Jur., Public Funds, § 1 et seq.; 43 Am. Jur., Public Securities and Obligations, §§ 24, 25, 260 to 270; 49 Am. Jur., States, Territories and Dependencies, §§ 66 to 71.

Funding or refunding obligations as subject to conditions respecting limitation of indebtedness, 97 ALR 442.

Validity of bond issue in excess of amount permitted by law within authorized debt, tax or voted limit, 175 ALR 823.

81 C.J.S. States § 189.

Sec. 37.15.060. Form and registration of bonds. An issue or series of bonds may be issued in coupon form payable to bearer or in fully registered form, and bonds in coupon form may be made registrable as to principal or principal and interest, as determined by the state bond committee. (§ 1 ch 175 SLA 1960; am § 2 ch 26 SLA 1968)

Am. Jur. reference. — 43 Am. Jur., Public Securities and Obligations, §§ 106 to 116.

Sec. 37.15.070. Place of payment. The state bond committee may fix the place or places of payment of the principal, interest and redemption premium, if any. (§ 1 ch 175 SLA 1960; am § 5 ch 104 SLA 1967)

Sec. 37.15.080. Signatures and seal. (a) Each bond shall be signed on behalf of the state by the governor and attested by the lieutenant governor, which signatures may be facsimile signatures. The seal of the state shall be impressed, imprinted or otherwise reproduced on each bond. Each interest coupon attached to the bond shall be signed by the facsimile signatures of the governor and lieutenant governor. If an officer whose signature appears on the bonds or coupons ceases to be an officer before delivery of the bonds, the signature is, nevertheless, valid and sufficient for all purposes, as if the officer had remained in office until delivery.

(b) A signature required on a bond issued by a political subdivision of the state may be a facsimile signature. (§ 1 ch 175 SLA 1960; am § 6 ch 104 SLA 1967)

Revisor's note (1971). — In this section "secretary of state" has been changed to "lieutenant governor" in conformity with the 1970 Alaska constitutional amendment

(SJR 2) changing the designation of that office.

Am. Jur. reference. — 43 Am. Jur., Public Securities and Obligations, § 108.

Sec. 37.15.090. Terms and conditions. Each issue or series of bonds shall be issued under and subject to the terms, conditions, and covenants providing for the payment of the principal and the interest and other terms, conditions, covenants, and protective provisions safeguarding the payment as found reasonably necessary by the state bond committee for the most advantageous sale. The terms, conditions, and covenants may include the setting aside and maintaining of certain reserves to secure the payment of principal and interest. (§ 1 ch 175 SLA 1960)

Am. Jur. reference. — 43 Am. Jur., Public Securities and Obligations, §§ 106 to 116.

Sec. 37.15.100. Trustee. If the state bond committee finds it necessary to accomplish the most advantageous sale of the bonds, the committee shall select a trustee for the owners and holders of the bonds or for the safeguarding and disbursement of the proceeds of the sale of the bonds for the use and purpose for which issued, and shall fix the rights, duties, powers, and obligations of the trustee. (§ 1 ch 175 SLA 1960)

Sec. 37.15.110. Creation and membership of state bond committee. There is created a committee known as the "state bond committee," the members of which are the commissioner of commerce and economic development, the commissioner of administration, and the commissioner of revenue. If a member of the committee is absent or otherwise unable to act, his designee in the department shall act as a member of the committee in his place. (§ 2 ch 175 SLA 1960; am § 7 ch 104 SLA 1967; am § 81 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "commissioner of commerce and economic development" for "commissioner of commerce" in the first sentence.

Sec. 37.15.120. Regulations. The state bond committee may adopt rules and regulations for the performance of its duties and may designate by resolution one of its members to perform any act necessary to effectuate its duties not required by statute to be performed by the state bond committee in meeting or by resolution, or by another officer of the state. (§ 2 ch 175 SLA 1960; am § 8 ch 104 SLA 1967)

Sec. 37.15.130. Officers, records and proceedings. The commissioner of commerce and economic development is the chairman of the state bond committee and the commissioner of revenue is the secretary. A majority of the members of the committee constitute a quorum. The committee shall keep a full, complete, and permanent

record of its proceedings. All records and correspondence of the committee shall be kept in the office of the commissioner of revenue. (§ 2 ch 175 SLA 1960; am § 82 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "commissioner of commerce and economic development" for "commissioner of commerce" in the first sentence.

Sec. 37.15.140. Duties of state bond committee. The state bond committee shall adopt the resolution and prepare the documents necessary for the issuance, sale, and delivery of bonds. (§ 3 ch 175 SLA 1960)

Sec. 37.15.150. Committee may employ special services. If the state bond committee considers it necessary and advisable, it may procure architectural or engineering, fiscal agent or municipal investment, legal and other expert or specialized services at reasonable and customary fees to assist it in accomplishing the most advantageous sale of the bonds. The fees may be paid from the proceeds of the sale or advanced from the contingency fund in the office of the governor or otherwise. (§ 3 ch 175 SLA 1960)

Sec. 37.15.155. Prohibited bidding on bonds and anticipation notes. (a) No person who provides financial programming or marketing assistance to the state bond committee in connection with the issuance or sale of general obligation bonds, revenue bonds or bond anticipation notes of the state may bid on the bonds.

(b) The sale of general obligation bonds, revenue bonds or bond anticipation notes of the state to a person who is prohibited from bidding on the bonds or notes under (a) of this section is against public policy and the sale is void.

(c) In this section "person" means an individual, firm, agent, factor, intermediary, partnership, corporation, association, bond house, stockbroker or bond broker. (§ 1 ch 102 SLA 1974)

Sec. 37.15.160. Contents of resolution. The resolution adopted by the state bond committee shall

(1) fix the principal amount, denominations, date, maturities, place of payment, terms, right of redemption if any, form, conditions and covenants of the bonds;

(2) fix the date of sale and the form of the notice of sale; and

(3) provide if the notice is to be published elsewhere in addition to the publication required by § 40 of this chapter. (§ 3 ch 175 SLA 1960; am § 3 ch 26 SLA 1968)

Sec. 37.15.170. State bond committee to certify annual principal, interest, and reserve requirements. (a) Before January 1 of each year after bonds are issued, the state bond committee shall certify to the commissioner of administration the amount needed for the following

calendar year to meet principal, interest, and reserve requirements on all bonds or issues or series of bonds then outstanding.

(b) The commissioner of administration shall set aside these amounts or make the necessary provisions for the setting aside of these amounts so that there will be sufficient money to pay the principal and interest on the due date and to meet reserve requirements. (§ 4 ch 175 SLA 1960)

Sec. 37.15.180. Remedies of bondholders. The owner and holder of each bond or the trustee may by appropriate proceeding require and compel the transfer and payment of money as directed by this chapter. (§ 4 ch 175 SLA 1960)

Sec. 37.15.190. Negotiability. General obligation bonds of the state and the coupons attached to the bonds are negotiable instruments. (§ 5 ch 175 SLA 1960)

Am. Jur. and ALR references. — 43 Am. Jur., Public Securities and Obligations, §§ 161 to 165.

Negotiability of state warrants, 36 ALR 949.

Sec. 37.15.200. Bonds as legal investments. General obligation bonds of the state are legal investments for all state funds, or for funds under state control, and for all funds of a political subdivision of the state. (§ 5 ch 175 SLA 1960)

Sec. 37.15.210. Refunding bonds. (a) All or a part of the general obligation bonds of the state, or all or a part of each outstanding issue or series of bonds, may be refunded at or before maturity by the issuance of general obligation refunding bonds of the state if, in the opinion of the state bond committee, refunding is advantageous to and in the best interest of the state and its inhabitants. Money set aside as reserve to secure the payment of the principal and interest of bonds being refunded may be used to pay the principal and interest on these bonds or may be retained by the state to secure the payment of the principal and interest on the refunding bonds to be issued.

(b) Refunding bonds and the coupons attached to them are negotiable instruments. The effective rate of interest over the life of refunding bonds may not exceed seven per cent a year and the amount of premium which is paid to effect the redemption of outstanding bonds may not be considered in determining the effective rate of interest.

(c) Refunding bonds may be exchanged for the bonds being refunded or refunding bonds may be sold in the manner and at the prices which the state bond committee determines to be for the best interest of the state and its inhabitants either at public or private sale.

(d) The issuance of refunding bonds need not be authorized by the qualified voters of the state. The state bond committee shall adopt the resolution and prepare the documents necessary for the issuance, exchange or sale, and delivery of refunding bonds. The provisions of this

chapter relating to the terms, conditions, covenants, issuance, and sale of general obligation bonds of the state apply to refunding bonds except as otherwise specifically provided in this section. (§ 6 ch 175 SLA 1960; am § 2 ch 92 SLA 1970)

Am. Jur. reference. — 43 Am. Jur., Public Securities and Obligations, §§ 156 to 160.

Sec. 37.15.215. Official statements. To the extent practicable the official statements and other documentation issued in connection with an offering of state or local government securities shall comply with the guidelines of the Municipal Finance Officers Association or other nationally recognized guidelines. (§ 12 ch 168 SLA 1978)

Sec. 37.15.220. Short title. Sections 10 — 220 of this chapter may be cited as the State Bonding Act. (§ 7 ch 175 SLA 1960; am § 54 ch 127 SLA 1974)

Effect of amendment. — The 1974 amendment added "Sections 10 — 220 of" to the beginning of this section.

Legislative committee report. — For report on ch. 127, SLA 1974 (SCSHB 817 am S), see 1974 House Journal, p. 657.

Article 2. Bond Anticipation Notes.

Section		Section	
300.	Borrowing in anticipation of sale of bonds permitted	350.	Security for repayment of revenue bonds
310.	Issuance of notes	360.	Limitation on issuance of notes
320.	[Repealed]	370.	Use of proceeds from sale of notes
330.	Repayment of notes	380.	Sale of notes
340.	Security for repayment of general obligation bonds	390.	Execution of notes

Sec. 37.15.300. Borrowing in anticipation of sale of bonds permitted. When the state bond committee considers it in the best interests of the state, it may borrow money in anticipation of the sale of general obligation and revenue bonds, if

(1) the general obligation bonds to be sold have been authorized by law and ratified by a majority vote of the qualified voters of the state who vote on the question; or

(2) the general obligation bonds to be sold have been authorized by law for the purpose of meeting natural disasters, repelling invasion, suppressing insurrection, or defending the state in war; or

(3) the revenue bonds to be sold have been authorized by law; and

(4) money to be derived from the sale of general obligation and revenue bonds have been appropriated by the legislature. (§ 1 ch 42 SLA 1964; am § 1 ch 74 SLA 1964)

Sec. 37.15.310. Issuance of notes. The state bond committee shall issue notes for the amounts borrowed with a maturity date not to exceed

one year from the date of issue. All the notes are payable at a fixed place, on or before a fixed time, or at a fixed time, from the proceeds of the sale of bonds, in anticipation of which the original note or notes were issued, unless the bonds have not been sold by the maturity date of the notes. Interest on the notes is payable at a fixed place, on or before a fixed time, out of appropriations made for the payment of interest on general obligation notes or bonds of the state. (§ 1 ch 42 SLA 1964; am § 1 ch 127 SLA 1976)

Effect of amendment. — The 1976 amendment deleted "and the interest thereon" following "All the notes" near the beginning of the second sentence and added the third sentence.

Sec. 37.15.320. Issuance of new notes.
Repealed by § 3 ch 41 SLA 1967.

Editor's note. — The repealed section derived from § 1, ch. 42, SLA 1964; § 1, ch. 41, SLA 1967.

Sec. 37.15.330. Repayment of notes. Every note shall be payable from the proceeds of the next succeeding sale of bonds or from the proceeds of the sale of new bond anticipation notes. (§ 1 ch 42 SLA 1964)

Sec. 37.15.340. Security for repayment of general obligation bonds. Notes issued in anticipation of the sale of general obligation bonds and the interest thereon are secured by the full faith, credit, and resources of the state. (§ 1 ch 42 SLA 1964)

Sec. 37.15.350. Security for repayment of revenue bonds. Notes issued in anticipation of the sale of revenue bonds and the interest thereon are secured in the same manner as are the revenue bonds in anticipation of which the notes are issued. (§ 1 ch 42 SLA 1964)

Sec. 37.15.360. Limitation on issuance of notes. The total amount of such notes issued and outstanding shall at no time exceed the total amount of bonds authorized to be issued. (§ 1 ch 42 SLA 1964)

Sec. 37.15.370. Use of proceeds from sale of notes. The proceeds from the sale of the notes shall be used only for the purposes for which the proceeds from the sale of bonds may be used or to meet payment of outstanding bond anticipation notes. (§ 1 ch 42 SLA 1964)

Sec. 37.15.380. Sale of notes. Notes issued under this chapter shall be sold by the state bond committee in such manner and at such price or prices as it shall determine, at either public or private sale; however, no such note shall be sold for less than par and accrued interest or at an interest rate exceeding seven per cent a year. (§ 1 ch 42 SLA 1964; am § 3 ch 92 SLA 1970)

Sec. 37.15.390. Execution of notes. Notes for money borrowed in anticipation of receipts from the sale of bonds shall be signed by the governor and countersigned by the lieutenant governor. The governor's signature may be a facsimile signature. (§ 1 ch 42 SLA 1964)

Revisor's note (1971). — In this section "secretary of state" has been changed to "lieutenant governor" in conformity with the 1970 Alaska constitutional amendment (SJR 2) changing the designation of that office.

Article 3. International Airports Revenue Bonds.

Section
410. Bond authorization
420. Construction fund
430. Revenue fund
440. Redemption fund
450. Bond terms
460. Bond resolution
470. Enforcement by holder
480. Amounts required for payments
490. Bond negotiability
500. Airport charges
510. State improvements to airports
520. Refunding
530. Bonds as legal investments
540. Statutory construction
550. Definitions

Editor's note. — Section 2, ch. 149, SLA 1972, provides: "For the purpose of carrying out the provisions of AS 37.15.410 — 37.15.550, there is appropriated from the International Airports Construction Fund the sum of

"(1) $9,225,000, together with the amounts of any grant or other money paid into the fund for the same purpose, for acquisition, construction and equipping of facilities previously funded through revenue bond issues dated June 1, 1968 and June 1, 1969 (authorized by ch. 80, SLA 1968);

"(2) $8,700,000 for the acquisition, construction and equipping of airport facilities as authorized in AS 37.15.510 at Anchorage International Airport (authorized by ch. 173, SLA 1970);

"(3) $2,000,000 for the acquisition, construction and equipping of airport facilities as authorized in AS 37.15.510 at Fairbanks International Airport (authorized by ch. 173, SLA 1970); and

"(4) $11,300,000 for the acquisition, construction and equipping of airport facilities as authorized in AS 37.15.510 at Anchorage and Fairbanks International Airports (authorized by ch. 149, SLA 1972)."

Section 4, ch. 149, SLA 1972, provides: "This Act codifies the 'temporary' law pertaining to the international airport revenue bonds. The repeal of statutes by sec. 3 of this Act does not affect existing bonds or actions that have been taken under the repealed provisions."

Legislative committee report. — For report on ch. 149, SLA 1972 (CSHB 531), see 1972 House Journal, p. 1233.

Sec. 37.15.410. Bond authorization. For the purpose of providing part or all of the money to be used, with or without any grants or other money which may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $34,825,000 is authorized to acquire, equip, construct and install the additions, improvements, extensions and facilities authorized in § 510 of this chapter. The principal of and interest on these bonds shall be paid out of and secured by the gross revenues derived by the state from the

Chapter 58. Municipal Debt.

2. Bond Anticipation Notes (§§ 29.58.070—29.58.140)
3. General Obligation Bonds (§§ 29.58.150—29.58.180)
4. Revenue Bonds (§§ 29.58.200—29.58.220)
5. Refunding Bonds (§§ 29.58.240—29.58.280)
6. Miscellaneous Provisions (§§ 29.58.300—29.58.340)

Article 1. Revenue Anticipation Notes.

Section
10. Borrowing in anticipation of revenue
20. Issuance of notes
30. Limitation on issuance of notes
40. Issuance of notes in anticipation of state, federal grants
50. Priority of repayment
60. Sale of notes

Sec. 29.58.010. Borrowing in anticipation of revenue. A municipality of the state which is authorized to incur indebtedness may borrow money in a fiscal year to meet appropriations for that fiscal year in anticipation of the collection of taxes and estimated revenues for the fiscal year and may issue its revenue anticipation notes as evidence of the borrowing. (§ 2 ch 118 SLA 1972)

Sec. 29.58.020. Issuance of notes. The governing body of a municipality may, by ordinance or resolution, authorize the issuance of revenue anticipation notes and prescribe the form and details of the notes and the manner of their execution. The governing body of the municipality may delegate to its chief fiscal officer the power to issue the notes from time to time under the terms and conditions of the ordinance or resolution which provides for the manner of their sale. Revenue anticipation notes and notes issued to renew notes previously issued mature not later than the end of the fiscal year in which they are issued. (§ 2 ch 118 SLA 1972)

Sec. 29.58.030. Limitation on issuance of notes. The aggregate amount of revenue anticipation notes at any time outstanding may not exceed 50 per cent of the amount of revenues estimated to be collected in the fiscal year in which the notes are issued, less the amount of estimated revenues actually collected in the fiscal year before the issuance of the notes. (§ 2 ch 118 SLA 1972)

Sec. 29.58.040. Issuance of notes in anticipation of state, federal grants. (a) The governing body of a municipality, upon adoption of a long-range capital improvement budget by ordinance or resolution, may by resolution provide for revenue anticipation notes in an amount not to exceed the total amount of any state or federal grants finally committed for these projects. The notes mature no later than the end of the next fiscal year. The notes may be for

single or multiple projects outlined in the adopted capital improvement budget.

(b) If the state or federal grants for capital improvement projects have not been paid to the municipality before maturity of the notes issued in anticipation of the receipt of the revenue, the governing body of the municipality may issue new notes in order to meet payment of the notes then maturing or may renew the outstanding revenue anticipation notes. New notes issued or renewals of outstanding revenue anticipation notes shall mature not later than the end of the next fiscal year. (§ 2 ch 118 SLA 1972)

Sec. 29.58.050. Priority of repayment. The payment of the principal and interest on revenue anticipation notes shall be payable from revenues, and their payment additionally shall be secured by a pledge of the full faith, credit and unlimited taxing power of the municipality issuing them. (§ 2 ch 118 SLA 1972)

Sec. 29.58.060. Sale of notes. The municipality may sell revenue anticipation notes in the manner and at the price it determines, at either public or private sale. (§ 2 ch 118 SLA 1972)

Article 2. Bond Anticipation Notes.

Section		Section	
70.	Bond anticipation borrowing	110.	Security
80.	Issuance of notes	120.	Limitation
90.	Issuance of new notes	130.	Use of proceeds
100.	Repayment of notes	140.	Sale of notes

Sec. 29.58.070. Bond anticipation borrowing. A municipality may borrow money in anticipation of the sale of general obligation and revenue bonds if

(1) the general obligation bonds to be sold have been authorized by the assembly or council and ratified by a majority vote at a regular or special election;

(2) the revenue bonds to be sold have been authorized by ordinance. (§ 2 ch 118 SLA 1972)

Sec. 29.58.080. Issuance of notes. The assembly or council shall issue negotiable or nonnegotiable notes for the amounts borrowed with a maturity date not to exceed one year from the date of issue. All notes and the interest on them are payable at fixed places on or before a fixed time, from the proceeds of the sale of bonds in anticipation of which the original note or notes were issued, unless the bonds have not been sold by the maturity date of the notes. (§ 2 ch 118 SLA 1972)

Sec. 29.58.090. Issuance of new notes. If the sale of the bonds has not occurred before the maturity of the notes issued in anticipation of the sale, the assembly or council shall issue new notes in

order to meet payment of the notes then maturing or shall renew the outstanding bond anticipation notes. New notes issued or renewals of outstanding bond anticipation notes shall bear a maturity date not to exceed one year from the date of issue. Notes, new notes, and renewals of notes shall not be outstanding for a total elapsed time of more than three years. (§ 2 ch 118 SLA 1972)

Sec. 29.58.100. Repayment of notes. Every note is payable from the proceeds of the sale of bonds which the notes anticipated or from the proceeds of the sale of new bond anticipation notes. (§ 2 ch 118 SLA 1972)

Sec. 29.58.110. Security. (a) Notwithstanding any other provisions of this chapter as to payment of notes, notes issued in anticipation of the sale of general obligation bonds and the interest on them are secured by the full faith, credit, taxing power and resources of the municipality. The municipality may levy ad valorem taxes for payment without limitation of rate or amount.

(b) Notes issued in anticipation of the sale of revenue bonds and the interest on them are secured in the same manner as are the revenue bonds in anticipation of which the notes are issued. (§ 2 ch 118 SLA 1972)

Sec. 29.58.120. Limitation. The total amount of notes issued and outstanding shall at no time exceed the total amount of bonds authorized to be issued. (§ 2 ch 118 SLA 1972)

Sec. 29.58.130. Use of proceeds. The proceeds from the sale of notes shall be used only for the purposes for which the proceeds from the sale of bonds may be used or to meet payment of outstanding bond anticipation notes. (§ 2 ch 118 SLA 1972)

Sec. 29.58.140. Sale of notes. Notes issued under this chapter shall be sold by the municipality in the manner and at the price it determines, at either public or private sale, but no note may be sold for less than par and accrued interest. (§ 2 ch 118 SLA 1972)

Article 3. General Obligation Bonds.

Section
150. General obligation bonds
160. Vote and notice of existing indebtedness required
170. Form and terms of sale
180. Payment

Sec. 29.58.150. General obligation bonds. A municipality may acquire, construct, improve and equip capital improvements and issue negotiable or nonnegotiable general obligation bonds for these purposes. (§ 2 ch 118 SLA 1972)

Section supplements Alaska Constitution. — The legislature enacted this section to supplement Alaska Constitution, art. IX, § 9, and did not intend to attempt to substitute a different purpose than that established by "capital improvements" in the constitution. City of Juneau v. Hix-

son, Sup. Ct. Op. No. 93 (File No. 201), 373 P.2d 743 (1962).

"Improvement" in its broad sense means betterment. City of Juneau v. Hixson, Sup. Ct. Op. No. 93 (File No. 201), 373 P.2d 743 (1962).

Off-street parking facilities constitute public improvements or public works and this section is sufficiently broad to cover such facilities. Kissane v. City of Anchorage, 17 Alaska 514, 159 F. Supp. 733 (D. Alas. 1958).

Section assumes city will acquire right of occupancy before building improvement.—This section assumes that a city will acquire the rights of occupancy necessary to construct wharves, as a preliminary to their construction. Berger v. Ohlson, 10 Alaska 84, 120 F.2d 56 (9th Cir. 1941).

It does not authorize building on federal land.—This section would not authorize a city to build and maintain a wharf in a reserve already set apart by the federal government for the use of its railroad. Berger v. Ohlson, 10 Alaska 84, 120 F.2d 56 (9th Cir. 1941).

And improvement built on federal land belongs to the United States.—A city dock built upon land belonging to the United States must in legal contemplation have become a part of it in the absence of special circumstances leading to a contrary conclusion where no specific authority for the erection of the wharf as property of the city of Anchorage can be found. Berger v. Ohlson, 10 Alaska 84, 120 F.2d 56 (9th Cir. 1941).

At best the public of the city of Anchorage had a mere license to use a city dock built and maintained within the Alaska railroad terminal reserve, and the United States had a right to terminate the use of the dock. Berger v. Ohlson, 10 Alaska 84, 120 F.2d 56 (9th Cir. 1941).

Am. Jur. references.—38 Am. Jur., Municipal Corporations, § 559 et seq., 43 Am. Jur., Public Works and Contracts, § 1 et seq.

Sec. 29.58.160. Vote and notice of existing indebtedness required. (a) A municipality may incur general obligation bond debt only after a bond authorization ordinance is approved by a majority of those voting on the question at a regular or special election. Any municipal voter may vote in the bond election, except as otherwise provided by charter or law.

(b) Before a general obligation bond issue election, the assembly or council shall have published a notice of the municipality's total existing bond indebtedness at least once a week for three consecutive weeks. The first notice shall be published at least 20 days before the date of the election. A notice shall include

(1) the current total general obligation bonded indebtedness, including authorized but unsold bonds of the municipality;

(2) the cost of the debt service on the current indebtedness;

(3) the total assessed valuation within the municipality. (§ 2 ch 118 SLA 1972)

Sec. 29.58.170. Form and terms of sale. The assembly or council shall fix the date of the bonds, denominations, maturities, rate of interest, place and manner of payment, redemption terms, registration privileges, manner of execution, and signatures required. If an officer whose signature appears on the bonds or coupons ceases to be an officer before delivery of the bonds, his signature is valid as if he had remained in office until delivery. (§ 2 ch 118 SLA 1972)

Sec. 29.58.180. Payment. (a) The full faith and credit of a municipality are pledged for the payment of principal and interest on general obligation bonds. The municipality may levy ad valorem taxes for payment without limitation of rate or amount.

(b) General obligation bonds issued for acquiring, constructing, improving and equipping a municipally-owned utility or other revenue-generating enterprise may be additionally secured by a pledge of the revenue derived from operation. Bonds so secured are not subject to a debt limitation imposed by a borough or city home rule charter. (§ 2 ch 118 SLA 1972)

Article 4. Revenue bonds.

Section
200. Revenue bonds
205. No election required
210. Forms and terms
220. Payment

Sec. 29.58.200. Revenue bonds. A municipality may acquire, construct, improve and equip capital improvements to be operated upon a revenue-producing basis, and bonds for these purposes are payable solely from unpledged revenue of the public facilities for which the bonds are issued. (§ 2 ch 118 SLA 1972)

Sec. 29.58.205. No election required. No election is required to authorize the issuance and sale of revenue bonds, unless otherwise provided by ordinance. (§ 2 ch 118 SLA 1972)

Sec. 29.58.210. Forms and terms. The assembly or council shall fix the date of the bonds, denominations, maturities, rate of interest, place and manner of payment, redemption terms, registration privileges, manner of execution and signatures required. If an officer whose signature appears on the bonds or coupons ceases to be an officer before delivery of the bonds, his signature is valid as if he had remained in office until delivery. (§ 2 ch 118 SLA 1972)

Sec. 29.58.220. Payment. Bonds issued under §§ 200—220 of this chapter or the proceedings of the assembly or council authorizing their issuance may contain the covenants which the assembly or council considers advisable concerning

(1) the rates or fees to be charged for services rendered by the public facilities, the revenue of which is pledged to the payment of the bonds;

(2) the deposit and use of the revenue of the public facilities;

(3) the issuance of additional bonds payable from revenue of the public facilities;

(4) the rights of the bondholders in case of default in the payment of the principal or interest on the bonds, including the appointment of a receiver to operate the public facilities;

(5) other covenants as the assembly determines. (§ 2 ch 118 SLA 1972)

Article 5. Refunding Bonds.

Section	Section
240. Authorization	270. Payment of refunding bonds
250. Effect of bonds	280. Sale
260. No election required	

Sec. 29.58.240. Authorization. If a municipality has outstanding general obligation or revenue bonds and the assembly or council determines that it would be financially advantageous to refund the bonds, the assembly or council may provide by ordinance for the issuance of general obligation or revenue refunding bonds. (§ 2 ch 118 SLA 1972)

Sec. 29.58.250. Effect of bonds. The refunding bonds may take up and refund all or any part of outstanding bonds at or before their maturity or redemption date. The assembly or council may include various series and issues of bonds in a single issue of refunding bonds. (§ 2 ch 118 SLA 1972)

Sec. 29.58.260. No election required. No election is required to authorize the issuance and sale of refunding bonds. Their issuance may be authorized and all proceedings with reference to them prescribed by ordinance of the assembly or council. However, when it is desirable to use general obligation bonds to refund a revenue bond issue, the governing body shall call an election on the question. (§ 2 ch 118 SLA 1972)

Sec. 29.58.270. Payment of refunding bonds. General obligation refunding bonds are payable according to § 180 of this chapter. Revenue refunding bonds are payable according to § 220 of this chapter. (§ 2 ch 118 SLA 1972)

Sec. 29.58.280. Sale. General obligation or revenue refunding bonds may, in the discretion of the assembly or council, be exchanged at par for the bonds being refunded, or may be sold at public or private sale for an amount not less than par and accrued interest. They may be issued and delivered at any time before the date of maturity or redemption of the refunded bonds. (§ 2 ch 118 SLA 1972)

Article 6. Miscellaneous Provisions.

Section	Section
300. Public sale	320. Redemption before maturity
310. Interest rate	340. Borough indebtedness
315. Bond attorneys, bond and financial consultants	

Sec. 29.58.300. Public sale. The municipality shall sell all bonds at a public or private sale as provided by ordinance. No bonds may be sold at less than par value. (§ 2 ch 118 SLA 1972)

Sec. 29.58.310. Interest rate. No municipal bond or note may bear an interest rate exceeding the contract usury rate of interest provided by law. (§ 2 ch 118 SLA 1972)

Sec. 29.58.315. Bond attorneys, bond and financial consultants. The governing body or its designee of a home rule or general law municipality shall be the sole contracting authority for bond attorneys, bond consultants and financial consultants engaged in long-range financial planning of the municipality which leads to sale of bonds. (§ 2 ch 118 SLA 1972)

Sec. 29.58.320. Redemption before maturity. A bond or note may be made subject to redemption before maturity as stated in the authorization or in the bond or note. (§ 2 ch 118 SLA 1972)

Sec. 29.58.340. Borough indebtedness. (a) Boroughs may incur indebtedness

(1) on an areawide basis for areawide functions; or

(2) on a noncity basis for functions performed in the area outside cities only; or

(3) on a service area basis for functions performed in a service area only.

(b) Payment of debt principal and interest as well as other costs shall be limited to the area incurring the debt under (a) (2) or (a) (3) of this section, except that the full faith and credit of the entire borough may be pledged to guarantee payment of principal and interest.

(c) If the bonded debt to be incurred by a borough is an areawide debt, the vote is areawide; if the full faith and credit of the entire borough is pledged for the payment of the debt of the area outside cities or of a service area, an areawide election is held and the proposition must pass both areawide and in the area which will benefit from the improvement; if the bonded indebtedness to be incurred is limited to areas outside cities only or to service areas, the vote is limited to voters in those areas. The Honorable Robert H. Bettisworth
Chairman
Legislative Budget and Audit
Committee
State of Alaska
Capitol Building, Room 508
Pouch V
Juneau, AK 99811

Dear Chairman Bettisworth:

The Government Finance Research Center is pleased to transmit our "Review of Debt Capacity and Debt Management for the State of Alaska" to the Legislative Budget and Audit Committee. The report was written by Wesley C. Hough and Lawrence D. Shubnell, with contributions from Ronald C. Forbes, State University of New York at Albany, and Kenneth J. Kirkland of the National Conference of State Legislatures.

I would also like to acknowledge the guidance and direction of Senator Arliss Sturgulewski, Chair of the Legislative Budget and Audit Committee when this report was commissioned in October, 1982. In addition, the perceptions and comments of those persons interviewed in the course of writing this report, a list of whom appears in the appendix, were extremely helpful.

Finally, we have appreciated the cooperation and assistance provided by Stephen Frank, Staff Assistant, Legislative Budget and Audit Committee.

Sincerely,

John E. Petersen
Director

CHAPTER I

EXECUTIVE SUMMARY

The changing nature of tax-exempt borrowing, including the shift from traditional tax-supported government bonds to revenue-backed bonds, the rise and volatility in interest rates, the reliance upon individual investors in contrast to institutional lenders, and changes in federal law concerning various aspects of tax-exempt financing, has resulted in states generally being more attentive to debt management and debt policy. This study of State debt management comes at a propitious time. While the past growth of tax-exempt borrowing by issuers bearing the Alaska name has been rapid and sizeable, new programs and proposals before the legislature indicate that the demand for new spending and borrowing is far from sated. At the same time, recent reductions in the market price for petroleum and the unpredictability of its future supply and price raise uncertainties about the level and viability of the principal source of governmental revenues that directly or indirectly supports many of Alaska's borrowing and spending programs.

The interdependence of the Alaskan economy and its oil wealth creates a paradox for assessing the State's debt management and debt capacity. Oil revenues have enabled the State and local governments to borrow at unusually high levels -- in terms of per capita amounts of debt -- and have provided the financial security required by investors in the State's bonds. It is the reliance on these same oil revenues, however, that is the principal weakness of the Alaska credit as a long-term issuer of tax-exempt bonds and that makes assessment of the State's future debt capacity very difficult.

To be effective, debt management must join the capital needs of the State and its constituent governmental units with the ability to achieve bond market access on affordable terms. Market access is a function of debt capacity, debt burden, and perceived ability to pay; it is also conditioned importantly by the overall forces that shape borrowing needs nationally and the willingness of investors to supply funds. The private credit market, where public debts are sold, decides what borrowers will be accommodated and at what cost -- from a fluctuating but always limited pool of lendable funds. While Alaska is concerned first and foremost with the cost and availability of credit for its own needs, Alaska bonds compete with other governmental obligations from all parts of the country. The terms offered Alaska borrowers by the marketplace are strongly influenced by the volume and quality of competing claims from other borrowers. Hence, it is in Alaska's interest to offer a well-structured, high-quality security in order to obtain funds, and to obtain them at acceptable interest rates.

Effective debt management must also provide State and local issuers and the State's debt managers with the flexibility to react quickly and responsibly to changes in the financial markets. That the tax-exempt bond market is highly

sensitive to changes in the federal tax code was obvious in late 1982 as the pendency of the bond registration requirement brought a flood of issues to market. Now, as a result of this legislation, the primary and secondary market acceptance of an issuer's securities will in part depend on a timely, accurate and efficient transfer process (discussed on pages 35-36). Changes in other federal tax provisions can also sharply affect the demand for tax-exempt bonds. Chapter Two includes a survey of the tax acts of 1981 and 1982, and their impacts on the municipal bond market. These changes, like volitility in interest rates, are factors over which the State has little control. However, a responsible and flexible debt management program places the State in the best position to respond effectively to events that may effect the State's borrowing.

State-Level Debt

The evidence presented in this study shows that Alaska debt has grown from 0.7 to 1.8 percent of annual national tax-exempt bond market volume since 1970. The rising market share accorded Alaska bonds has been the result of an increase in the State's annual volume of new debt issues from $134 million to $1.4 billion between 1970 and 1982. Chapter Three documents the increase in borrowing and includes a profile of the major State debt issuers. Of all State-level issuers in Alaska, the Alaska Housing Finance Corporation has issued the largest amount of public debt -- over 62 percent of State-level debt and and over 44 percent of all State-wide debt (including local government obligations) outstanding -- and is the State's most frequent and best-known borrower.

At a time when we have seen the national credit rating agencies downgrade the credit rating of many states, Alaska can be proud of its rating upgrade over the past 10 years from a Baa to an AA credit. Credit analysts and the market itself have recognized the quality of Alaska's bonds as an investment. The evidence shows that Alaska now trades on par with such strong AA credits as Connecticut and Ohio. Chapter Four presents the results of our study of the State's past market experience. The data show that Alaska has consistently experienced lower borrowing costs than other states with similar ratings. Evidence to support this comes from the lower underwriting spreads, larger number of bids, and the lower interest rates on Alaska bonds as compared to those of other states of similar high quality.

State Bond Committee

In spite of the strong past performance of the State's bonds, the mid-1980s is a good time for the State of Alaska to broaden and strengthen the role of the State in debt management and oversight, particularly through the State Bond Committee (see pages 157 to 160). Recent fluctuations in the worldwide price of oil and the decline of Prudhoe Bay oil production within the ten-year range have alerted investors to the "boom and bust" nature of the Alaskan economy. These two events will be important factors behind the ability of the State to issue further debt in the coming years. One major role for a newly

reconstituted State Bond Committee would be oversight of the State's total indebtedness. It is not intended that the State Bond Committee supplant the activities or authority of independent agencies and corporations; however, it is vital that the State annually review and assess its debt position -- including within that review all State-level debt -- relative to the State's debt capacity and priorities for future public investment.

In order to carry out its expanded scope of activity, the State Bond Committee should be restructured. The chairmanship should reside in a senior-level fiscal official -- such as the Commissioner of Revenue or the Director of the Office of Management and Budget -- who is actively involved in the State's debt management. The Commissioner of Commerce and Economic Development is the Committee's present chair. Expanding the membership to include a representative from the governing board of a State corporation, and the Commissioner of Community and Regional Affairs would emphacize the interrelationship of the State, its agencies, and local government in the debt management area. To assist in fulfilling its expanded duties, the Committee should be staffed full-time by a professional in the field of public finance.

The Committee should be given the responsibility to take a global view of the State's debt-related activities in a formal manner, not in the loose, informal way that is presently said to exist. The State may wish to require that each entity of the State which is authorized to issue bonds annually file a debt financing plan with the State Bond Committee. From these plans a master debt issuance schedule may be compiled to inform and assist all debt issuers in the State. The schedule could be updated monthly or on an "as-needed" basis as financing plans change. The State Bond Committee should also annually prepare a comprehensive profile of outstanding debt and monitor its impact on the State's fiscal condition. Special attention in this review should be paid to the level of the State's contingent liabilities, such as moral obligation debt, and changes in the growth and composition of local debt.

It is advised that the State develop written debt management guidelines that include several criteria for evaluating the desired and affordable level of debt issuance in lieu of a legislative ceiling on debt issuance. The State Bond Committee should be responsible for implementing these guidelines by reviewing each State-level bond issue before it is brought to market. The Committee's only power in this regard would be to defer or veto an issuance because the security structure or sources of repayment are inadequate or the issue jepordizes the financing plans or creditworthiness of the State. Likewise, if the State wishes to maintain its present interest rate ceiling on the issuance of bonds, it is preferable to set such a ceiling administratively rather than legislatively.

Debt Capacity and Affordability

The analysis of debt capacity is addressed in Chapter Seven. Comparisons of State debt with that of other states indicates that Alaska is an "outlyer" with extremely high ratios of debt per capita and debt per $1,000 of personal

income. Therefore, it is necessary to look in-depth at the State's revenue sources to assess its capacity for further debt issuance. Determination of the affordable level of general obligation debt essentially depends upon the State's ability and willingness to pay debt service now and in the future on any amounts borrowed. For the immediate future, Alaska's debt capacity will be determined by the amount of general fund revenues that the State wishes to allocate to the payment of debt service and the preservation of the permanent fund. Thus, short-term affordability depends exclusively on the fluctuating level and uncertain future of oil revenues as long as the State's source of funds to repay debt is tied to this single source. In the longer term, when the State's oil wealth has subsided, the ability of Alaska to issue debt will depend upon the stability and breadth of the State's economy. Without its extensive petroleum resource base Alaska will become much more like other states and analysis of its debt capacity will follow the traditional steps outlined in pages 196 to 206.

The methodology for evaluating Alaska's short-term debt affordability is presented on pages 218 to 222. If the State maintains its current ratio of debt service to revenues at the five percent level and continues to issue debt with maturities within the known and predictable range of State revenues, the State's creditworthiness will be preserved. If the State wishes to have debt service comprise a larger share of the State budget (to a maximum of 10 percent), debt capacity would be increased -- although this would force trade-offs against other State spending priorities and possibly result in a decline in the State's AA credit rating. Through 1990, the State's general obligation debt capacity is estimated to range from $252 million to $1.2 billion, depending upon the level of current revenues the State decides to commit to the payment of debt service.

Because of the frequent changes in petroleum prices and their impact on State revenues, the affordability analysis along the lines presented in this report must be continually updated. Revisions should take place at least quarterly when the Department of Revenue releases long-range revenue forecasts and when ever the State issues general obligation debt. Such analysis will provide the State Bond Committee with important information to be used in formulating future debt issuance plans.

Even though the affordability of revenue bonds is principally determined by the adequacy of the revenue stream pledged to repayment of the bonds, along with the market's acceptance of the securtiy structure behind the bonds, revenue bonds indirectly affect the State's debt capacity. To the extent that revenue bonds are supported by a pledge of the State's moral obligation, or their issuance creates an oversupply of bonds bearing the Alaska name in the marketplace, the State's ability and willingness to carry debt will be affected.

Use of Moral Obligation Bonds

We do not see the possibility of entirely eliminating the use of the State's moral obligation pledge in the case of all Alaska financings. Where it is possible to avoid its use, such as in the case of Alaska Housing Finance Corporation

bonds, it should be avoided. The moral obligation pledge should not be treated as a right, available to most State issuers, as it is at present. Rather, it should be considered a privilege, an indication to the bond market that, after close scrutiny, the State believes the project meets public policy objectives and is financially sound. The State Bond Committee should have the responsibility for determining the necessity of the moral obligation to an agency's borrowing program, and its potential impact on the State's creditworthiness.

If moral obligation debt increases at a time when overall State revenues are stable, are growing at a rate less than the growth in contingent liabilities, or are declining, the moral obligation burden may encumber the State's credit capacity. Such an occurance would make general obligation debt more costly and, therefore, less affordable due to weaker credit quality. Hence, the importance for including contingent debt in the State Bond Committee's annual review of the State's outstanding debt.

If it were not for the Permanent Fund, the limited sources of State revenue would cause investors to discount the moral obligation pledge heavily. The mere existance of the Permanent Fund provides comfort to bondholders that the State would be able to meet its moral obligations, if necessary, even though such action is not constitutionally permitted and would require a change in law. Any attempt to erode the principal of the Fund, or to otherwise weaken its position should, therefore, be avoided.

Capital Financing Plan

Demonstrating keen fiscal management and attention to capital financing and debt management is especially important to Alaska because of the uncertainties surrounding State revenues. The State must wisely allocate scarce resources to its developing economy in a manner that balances capital investment with the return on that investment yielding a diverse and broadened economy that will be able to maintain the public infrastructure put in place. Accordingly, the need for a capital financing plan linked to a comprehensive capital improvement plan is evident. (see pages 165 to 174)

The quality of financial reporting is an important element in a capital financing plan and to the complete debt management picture. While Alaska's financial reporting is complete, it does not conform to generally accepted accounting principles (GAAP). States that use an accounting system that conforms to, and is consistent with, GAAP benefit in several ways (see pages 174-175). It is recommended that the State consider converting its annual financial reports to GAAP. Such action will provide the State with vital information on its financial condition, encourage the State to take a global view of outstanding debt, improve financial management, and will be looked upon favorably by investors in the State's bonds.

General Debt Management

Specific debt management practices being used in the State could be improved. The State and its agencies recognize the importance of securing professional advice on debt issuance. However, financial advisors and bond counsel are typically compensated based on a percentage of the amount of bonds sold. Tying the advisor's compensation to the amount of bonds sold or the successful delivery of the bonds builds in an unnecessary risk of conflict of interest. The State should review its method of compensation for financial advisory services and seek arrangements that do not encourage conflicts between the advice and the payment for the advice. In this regard, a flat fee -- such as a base retainer and hourly rates -- is to be preferred over a fee based upon the amount of bonds issued. (see pages 185 to 190).

There is a place for both negotiated and competitive techniques for selling bonds in a debt management and debt marketing strategy. The approach which is judged to provide the greatest market reception and lowest interest cost should be followed. While each bond issue is unique, it appears that some bond issues presently being sold by negotiation by the State, for example, those of the Alaska Housing Finance Corporation, would be candidates for a competitive sale. (see pages 182 to 184).

Neither the State Bonding Act nor the State statutes regarding municipal debt specify the method by which effective interest rate on a competitive bond sale must be determined. However, the State and most municipalities have chosen to use the net interest cost (NIC) method to compare alternative bids at competitive sale. This method may not be in the best interests of the State because the winning bid on a NIC basis does not necessarily result in the lowest true interest cost (TIC) -- a measure of the "true" cost of borrowing money that takes into account the time value of money. We recommend that the State Bond Committee review the current rules that govern the award of the State's competitive general obligation bond issues, and that municipalities be encouraged to do so as well, with a view toward awarding bond issues on the basis of TIC. (see pages 179 to 181).

Local Government Debt

Local governments in Alaska have issued approximately 29 percent of all State-wide debt. The analysis of local government borrowing in Chapter Five indicates that the bonds of Alaska's localities sell at yields significantly above the average for the overall market. Furthermore, the evidence indicates that yields on the North Slope Borough's debt are vastly higher than the average for other Alaska municipalities. The most significant comparison of local and State bond issuance is the markedly higher underwriting cost on local issues. Compared to other states, local governments in the Alaska rely on general obligation bond financing at twice the national rate. Given the high levels of debt that have been issued by the State's localities, the much higher than average interest costs of Alaska's local debt, and the loss to the State of revenues from taxes levied by certain localities to pay the annual debt service on their debt, the State may wish to analyze further local bond market experience and State policies regarding local debt management. The State

should take the lead in implementing programs that encourage the prudent use and guard against the misuse of local debt issuance.

Currently the State is being short-changed by those localities that levy a high amount of taxes on oil production property in order to finance debt service. Because taxes paid to the locality are credited towards State property tax liability, this represents a direct revenue loss to the State. It is, therefore, in the State's interest to address the absolute level of debt issuance by its localities. It is recommended that the State develop a two-tiered ceiling on local debt issuance, based on per capita amounts of debt and a percentage of property value.

Specific State-level programs which can assist local borrowers and improve local debt management are covered in pages 136 to 141. In evaluating alternative State policies, the State must consider both the direct budgetary costs of the programs and the indirect effects on the State's own credit worthiness, and the amount of autonomy the State wishes its localities to enjoy. A resonable compromise between encumbering the State's debt capacity and providing greater financial assistance to local governments would be to expand the role of the Municipal Bond Bank. Our review of the Bank's market performance indicated that, compared with other state bond banks, the Alaska Bond Bank has the potential for saving as many as 50 basis points in borrowing cost by undertaking an active national marketing effort. The State should review the present security structure behind the Bank's bonds with the view toward improving their market reception by taking advantage of the State's high creditworthiness.

The State's present program to subsidize the cost of school construction is an expensive undertaking; however, its cost could be minimized through attention to the cost of the project and to the means of financing during the Department of Education's approval process. Further alternatives include the issuance of State general obligation bonds in lieu of local school construction bonds, and requiring the Municipal Bond Bank to issue all school construction debt.

CHAPTER II

OVERVIEW OF THE NATIONAL TAX-EXEMPT "MUNICIPAL" BOND MARKET AND THE BOND ISSUANCE PROCESS

Characteristics of the Marketplace

Most, but not all, borrowing of bonds by state and local governments is in the form of securities representing written promises to repay a sum of money with interest at a specified future date. Such obligations form one of the most important subsets of the financial markets, that of "tax-exempt" securities, frequently referred to as "munis" or "municipal" bonds. The term municipal is a generic one and applies to issues sold by all forms of state and local government, including agencies, cities, boroughs and special districts.

The distinguishing feature of the municipal security is its tax-exempt status. Interest income earned by investors who purchase these securities is not subject to federal or, frequently, to various state and local income taxes. This tax exemption permits state and local governments to borrow at lower rates of interest, because investors will accept a lower return since none of the interest is lost to the federal income tax levy. These securities have appealed to a special market composed of high tax-bracket individual and institutional investors seeking non-taxable income.

The tax-exempt nature of state and local debt obligations is interpreted by some as a constitutionally guaranteed right, and by others as a federal subsidy to state and local governments. The constitutional argument is based upon the doctrine of the separation of powers and its implication that the sovereignty of state and local units of government requires that they be protected from the federal government's tax power.[1] Regardless of one's view on the legal basis of tax-exemption, it is generally not believed to be an efficient federal subsidy of state and local government borrowing costs. Many studies have shown that the cost to the federal government from lost tax revenues is greater than the benefit received by state and local governments from reduced borrowing costs.[2]

Traditionally, municipal securities are debt obligations having fixed maturities and fixed rates of interest. They may be backed by many different pledges of security which, in this sense of the word, means the nature of the resources that the governments pledge to meet the payments of principal and interest (debt service). Municipal bonds coventionally are divided into two broad categories when classified by type of security: (1) general obligations, secured by the full faith and credit--the taxing power--of a government, and (2) revenue or special-fund obligations, secured by the revenues or receipts of a project or special fund rather then by the full taxing power of a borrower.

Source: Public Securities Association

Most governmental securities are debentures. That is, they are secured on the general creditworthiness of the borrower's promises rather than on the real or financial assets to which the lender has rights of possession in the case of default. Bondholders cannot be paid off with fire hydrants or classrooms if their governmental debtor defaults. As a result, primary emphasis in municipal credit analysis is placed on the flow of revenues generated through taxation or the operation of a specific public enterprise and the ability of the investor (lender) to get first claim on them.

State and local governmental debt issuers, the uses of bond proceeds, and the controlling legislation under which governments undertake capital projects and sell securities are extremely diverse. One of the outstanding features of the tax-exempt market has been the growth in new financings even under volatile and sometimes hostile market conditions. Table 2.1 points out that in 1982, the total volume of long-term and short-term tax-exempt new issues exceeded $120 billion, a 44 percent increase over 1981. This increase contrasts with the average annual rate of growth in new issues since 1966 which has been 12.9 percent.

Market convention generally distinguishes between short-term tax-exempt securities, which carry a final maturity of 13 months or less, and long-term debt issues with final maturities beyond 13 months. As noted in Table 2.1 the volume of newly issued short-term tax-exempts (often called notes) increased rapidly between 1968 and 1971, from $6.3 billion to $26.3 billion. Since 1971, new note issues have generally increased during periods of high or rapidly rising interest rates and have declined during periods of low or falling interest rates. In 1982, note issues reached an all time high of $44.7 billion, when long-term bond interest rates were at some of the highest levels ever recorded. This is due to the fact that the shorter maturities bring lower interest rates. Therefore, short-term notes are a useful interim financing device to use in anticipation of falling long-term interest rates in the near future.

Long-term issues, referred to as bonds, have recorded an upward trend in dollar volume since 1966. In 1982, 6,104 new bond issues were marketed, raising $77.3 billion in funds. The $77.3 billion in bond sales is more than double the volume just 6 years earlier--in 1976--and more than six times the volume in 1969. The record of the past decade points out that new issues of tax-exempt bonds have doubled approximately every 5 years.

Accompanying the growth in dollar volume has been an increase in the average size of each sale. In 1966, 4,964 separate bond issues were marketed with a total dollar volume of $17.3 billion. In 1982, 6,164 issues were sold, raising $77.3 billion in funds. Thus, the average size of new bond issues increased from $2.2 million in 1966 to $12.5 million in 1982. Even more significant, the number of individual new issues over $25 million in par value has increased from 60 in 1966 to 753 issues in 1982. While these large issues accounted for only 12.3% of the number of new issues in 1982, they accounted for 70% of the total dollar volume of funds raised in the tax-exempt bond market. Short-term note issues have also increased in size. In 1966, the average note issue amounted to $3.4 million; by 1982, the average note sale amounted to $13.8 million.

1976	35,415,683	18,200,098	17,215,585
1977	46,705,886	18,118,339	28,587,547
1978	48,189,731	17,789,591	30,400,140
1979	43,335,851	12,082,583	31,252,268
1980	48,367,802	14,102,312	34,265,490
1981	47,724,616	12,392,648	35,331,968
1982	77,294,539	20,879,301	56,415,238

Another fundamental change in tax-exempt bond issues during the past decade has been in the type of securities sold. Table 2.2 records the trend towards a decline in the relative importance of general obligation or tax-supported bonds issued by a general unit of government. In 1970, general obligation bonds amounted to $12.0 billion and accounted for 66 percent of the dollar volume of all new issues. But since 1970, the proportion of new issues sold as general obligations has fallen markedly, accounting for only 27 percent of dollar volume in 1982.

In contrast to the decline of the tax-supported bond, revenue bonds have grown markedly in both dollar volume and share of the market. In 1970, revenue bonds amounted to $6.2 billion, or 34 percent of the market; by 1982, revenue bonds amounted to $56.4 billion and accounted for 73 percent of all bond sales. A central message emerging from this trend is that the traditional purposes of government borrowing are changing and the traditional general obligation security is being supplanted by new bond types and borrowing devices. In the process, the landscape of the tax-exempt market has and continues to undergo radical change.

The shared characteristic among most revenue-supported issues across the marketplace is that while they are tax-exempt governmental obligations, they are designed to attenuate or completely sever the link between a government's ability to incur debt and its general power to levy taxes to repay such debt. In other words, the debt of the government issuer no longer is to be considered that of a taxpayer, rather, it is considered to be that of the public enterprise or borrowing program on whose behalf the tax-exempt debt is issued.

The rapid waxing of the revenue bond and the relative waning of the general obligation bond are not independent phenomena. They are the results of several forces, including:

1. An expanding definition of what constitutes public purposes to encompass activities and types of projects that were historically financed in the private sector using taxable securities.

2. Bond referenda results showing that although the number of areas where governments may have responsibility has expanded, voters have been increasingly unwilling to approve new bond issues or otherwise directly pledge the public's taxes or credit to new endeavors. The new generation of state and local fiscal constraints reinforces these trends.

3. Various legal barriers at the state and local level, such as debt and tax limits, interest rate ceilings, bond design requirements, and legally allowable purposes for expenditure, which have from time to time and place to place constrained the use of conventional financing techniques and promoted the creation of new, non tax-supported borrowing vehicles.

4. Certain fiscal limitations and uncertainties aside from legal hurdles, which have eroded general tax-supported creditworthiness and fostered the supplanting of its use with alternative borrowings that employ "special" authorities and funds that stand free of (and conserve) the general obligation taxing power of the governmental borrower.

5. A trend toward conducting certain activities in a businesslike (enterprise) manner with greater stability and professionalism than might be possible in the political arena of general government, has led to the establishment of special entities (and debt instruments) detached from general government and its taxing power. This can be particularly important for projects that involve large areas and overlap many units of government, such as regional transit or water and sewer authorities, or for projects where certain activities are placed on a self-supporting basis. In these instances users (rather than the public at large) pay for benefits through user charges and fees, encouraging the use of debt secured on such payments.

6. The realities of competiton among areas and regions for economic development and efforts applied by special interests to provide a conduit into the tax-exempt market, has resulted in permitting private firms and individuals to enjoy the benefits of lower interest costs through the use of tax-exempt industrial development or revenue bonds.

The Changing Role of Public Borrowing

Long-term financing by governments through the bond market is a response to demand for capital needs perceived as necessary by governmental units and their constituents. Capital expenditures and sales of debt reflect the interactions of several fundamental forces. Population growth carries with it the need for additional governmental services of a basic nature: education, public safety, transportation, and general administration. Rising standards of living also tend to raise expectations of the role of government in fulfilling certain social welfare goals such as adequate housing, improved facilities and opportunities for health treatment and higher education, and other amenities such as parks and forest preserves. At some point, older capital facilities become obsolete and worn-out and need to be replaced, so that an ever-increasing public capital base generates a continuing need for replacement capital.

Trends in public capital spending mirror the changing forces at work in the overall economy. In recent years, the traditional link between capital spending on public works by state and local governments and their borrowing has been greatly attenuated. The bricks-and-mortar rationale for public capital investment has given way to new motivations as governments have found their blueprint of activities altered, have found new sources of capital funds, and, especially, have found new missions as suppliers of capital funds to those outside of the public sector.

The above developments are symptomatic rather than explanatory of the rise of the revenue bond as a security form; but they carry the seeds of explanation in that state and local governments, through a combination of political, legal, and technical circumstances, have increasingly found it desirable and necessary to reach beyond their traditional functions and financial arrangements to meet an enlarged version of public purpose. The enlarged scope, which often involves

private sector participants and emulates private sector financing arrangements has been both accommodated and stimulated by access to the tax-exempt market through the use of the revenue bond.

The results of the above forces are reflected in the shifting purposes for which state and local debt is issued. The dollar volume of new bonds issued for the "traditional" purposes of education, highways, and water and sewage facilities has declined from 51 percent of total sales between 1966 and 1970 to between 11 and 12 percent of 1982 sales. New areas for growth have more than taken up any slack in traditional capital demands. Among these new areas, bonds sold to meet social welfare purposes have dominated. Housing, hospital and health facilities, and recreation facilities accounted for over 32 percent of all new issues in 1982, up from 7.2 percent of the 1966-70 market.

Table 2.3 presents the use of bond proceeds for recent years, and shows that other than traditional uses of public credit have increased in volume and proportion compared to general obligation financing. Utility financing has more than doubled in the decade and accounted for over 11 percent of the market in 1982. These utility bond issues are among the most complex and specialized financings ever devised in the tax-exempt market, and include those of the State of Washington Public Power Supply System. Many, for example, involve joint undertakings between one public entity or a collection of municipalities and one or more private firms. Several projects involve the construction of entirely new utility systems, including ancillary capital facilities such as railroad cars and other features of a vertically-integrated system.

Table 2.3 also points out that industrial aid bonds, including pollution control facilities, accounted for more than $7 billion in 1976-79. These issues, which primarily benefit private corporations, accounted for 10 percent of the market in 1982, which is double the 4.9 percent market share recorded in the 1966-70 period.

Many of these new financings were formerly conducted in the taxable market from conventional lending sources; but these trends demonstrate that the concept of a public purpose has been expanded, even to the point that such well-known corporations as the United States Steel and McDonald's Restaurants and such diverse projects as shopping centers, branch banks, and catfish farms, have been included in the tax-exempt market. Indeed, a portion of the funds to finance construction of the TransAlaskan Pipeline's Terminus in Valdez came from such tax-exempt industrial development bonds.

Emerging Concerns for Traditional Capital Spending and Financing

The problems of the unmet capital needs and deteriorating condition of public capital stock have received widespread attention. The causes are complicated, but may be distilled to the following: because of changed political priorities that have put emphasis on current spending, persistent fiscal restraint at all levels of government, and disruptive bond market conditions, states and localities have not been spending enough on the repair and replacement of public facilities. State

and local capital spending, which grew during the decades of the fifties and sixties, declined in real terms throughout the seventies and has been particularly depressed in the early 1980s.

Since 1968, state and local government capital investment in constant 1972 dollars has fallen by one-third, from a high of $35.9 billion to $23.6 billion in 1981. Measured in per capita constant dollars, state and local public works investment declined from $179 per person in 1968 to $103 per person 13 years later. Capital expenditures make up a diminishing share of total outlays of state and local governments: in 1960, state and local governments spent 27.1 percent of their budgets on infrastructure; by 1980, they were spending only 15.4 percent on capital items. Judging by the most recent construction data, state and local spending has sunk even further over the first two years of the 1980s, with spending levels in current-dollar terms running more than 10 percent lower in 1982 than in 1980.

Examining the means of financing of capital facilities provides insights into the current difficulties. The last 20 years have marked a trend away from the use of own-sources by states and localities and, in particular, that of debt financing, and towards greater reliance on the federal government. As budget priorities shifted to meet current service and transfer payment program needs, grants to states and localities for capital purposes—while nominally growing—failed to keep pace with the explosive growth in grants for non-capital purposes. Moreover, capital grants were typically episodic and "single-shot" efforts, providing for initial investments in major new projects and not oriented toward providing a financial or institutional base for the subsequent problems of operating and preserving the capital infrastructure once in place.

Table 2.4 provides a broad perspective on the sources of funds used to finance state and local capital outlays and reflects a general ebbing in the importance of long-term debt and its replacement by federal grants. By the last half of the 1970s, states and localities depended on federal grants to finance an estimated 35 to 40 percent of their capital spending, rendering this component of their spending highly vulnerable to changes in federal grants policy.

The recurring budgetary cutbacks at the federal level are now withdrawing a major source of capital funds. While this process takes time to materialize in terms of reduced aid flows and spending, it seems clear that state and local governments will be increasingly forced to rely more heavily on their own sources of financing. Such a reliance on their own sources boils down to greater use of current revenues or more debt financing. On the current revenues side of the equation, prolonged fiscal pressures have brought on a wave of home-grown tax and expenditure limitations that have tainted and made difficult increasing any resource allocations to government. Moreover, several years of sluggish economic growth further depressed current revenues and rendered them of very limited help in meeting capital needs. In fact, the demands on current budgets to keep governmental operations going in the face of insufficient and erratic revenues have further restricted capital spending by reallocating to current uses funds that otherwise might have gone to capital purposes.

This leaves the remaining alternative: state and local governments must rely increasingly upon borrowing to finance their capital needs. Unfortunately, many of the same economic circumstances that have led to the deteriorating support for capital spending from federal grants and out of current revenues are reflected in very unstable bond market conditions, making borrowing a volatile and expensive means of raising funds for capital projects. It is the adverse conditions in the financial market--against the background of unmet capital needs, both public and private, and scarce resources on the current accounts—that form the primary basis for the surge of creative and non-traditional activity in the realm of state and local capital finance.

Changes in The Cost Of Borrowing

A combination of cyclical and secular factors have brought rapid and radical changes to the tax-exempt market over the past few years. State and local governments have shared the difficulties of high interest rates and recessionary conditions that now burden all sectors of our economy. But governments have come in for some special problems over the past two years. These difficulties arose in large part from simultaneous changes in the federal tax code, reductions in the federal budget, and the impacts of recession on revenues. To these changes, which reduced investor demand for tax-exempt bonds while making access to that market even more important, must be added the pressures brought by restrictive monetary policy and continuing growth in private-purpose tax-exempt borrowing. The latter occurance has swelled the supply of tax-exempt securities in the midst of weak demand for such securities, particularly in the long maturities and created additional upward pressure on interest rates.

The pressures in the tax-exempt market can probably best be measured by comparing its cost of capital to that in the taxable market. Over the past two years, the value of tax exemption as a means of reducing interest rates has been severely eroded. As a consequence, borrowing costs for state and local governments have risen faster than the general rise in interest rates. As Table 2.5 shows, tax-exempt rates shifted from a historic range of 65 to 70 percent of comparable taxable bond yields up to 80 to 85 percent in the long end of the market in late 1981 and early 1982. (The second half of 1982 brought a substantial decrease in rates but the ratio of comparable taxable to tax-exempt rates remained close to 75 percent).

Changes enacted in the Economic Recovery Tax Act of 1981 (ERTA) contributed to systematically higher interest rates for municipal bonds. Several provisions of ERTA relating to individual taxpayers had adverse consequences for tax-exempt interest rates relative to those on taxable securities. Among these were the following:

- Reduction of personal income tax marginal rates, especially the lowering of the top-bracket rate from 70 percent (on unearned income) to 50 percent for all income. The rate reductions are scheduled to continue at a rate of 10 percent a year, with indexation commencing in 1985. Thus, starting in late 1981, the long-term prospects were for progressively lower income tax rates into the future.

1/ All-Savers Certificates became available in October, 1981.

- Reduction in the capital gains rate, which dropped from a maximum of 28 percent to 20 percent Over the long haul; this change should accent the attractiveness of holding equities in comparison to fixed-income securities, such as municipal bonds — a particularly important trade-off in the case of wealthy investors.

- Expansion of various competing income-sheltering opportunities in individual retirement savings plans (IRA and Keogh), the partial exemption of interest income, the Utility Dividend Reinvestment Program, and the creation of the All Savers Certificate. The latter wrinkle represented a widely available tax-exempt, short-term instrument that was federally guaranteed.

On the corporate tax side of the ledger, the following provisions in ERTA appeared to have adverse impacts on tax-exempt issuers:

- Rapid expansion under ERTA of leasing tax shelters (the Safe Harbor provisions). This change permitted firms to sell tax benefits to the highest bidder, thus creating billions of dollars of tax-shelter investment opportunities to compete with tax-exempt securities.

- Increase in the Investment Tax Credit (ITC) and Accelerated Cost Recovery Schedules (ACRS). These steps generally enhanced the after tax economic rate of return on private investments, thus lessening the need for tax shelter provided by municipal securities because less income would be subject to taxation. However, these provisions may also help governments that take advantage of public-private joint ventures.

Reducing the need for shelters and expansion of income sheltering opportunities available to individuals and corporations proved to be especially ill-timed for the municipal market. In further reducing investor demand for municipal securities, the 1981 tax laws compounded several longer-term problems caused by generally poor economic conditions--recession and high interest rates--and changing investment objectives. Demand for tax-exempt bonds by the two major institutional investors, namely commercial banks and property and casualty insurance companies, practically evaporated after 1979 due to poor profitability and the availablity of competing tax shelters. Since the early 1970s, commercial banks have been shifting portfolios away from tax-exempt bonds. Through much of the decade this shift was offset as property and casualty insurance companies increased demands and kept the long-term tax-exempt market buoyant. Banks and insurance companies together in the late 1970s acquired 80 to 90 percent of net increases in municipal bonds. However, these institutions have shown only minimal interest in tax-exempt income since 1980 largely because of their reduced profitability from business operations.

The withdrawal of the institutional investors from the tax-exempt market has resulted in a heavy reliance on individual investors to absorb the supply of new tax-exempt securities. As Table 2.6 demonstrates, the percentage of outstanding tax-exempt debt held by individuals and mutual funds shot up in 1981 and 1982. According to flow-of-funds figures for 1982, the household (individual) sector and mutual funds absorbed 96 percent of the new supply of tax-exempt debt last year.

The shifting mix of investors coupled with the rising levels of all capital market borrowing costs has dramatically increased the volatility of the tax-exempt market in particular. Table 2.7 provides a measure of the volatility by tallying the variation between high and low yields on top quality municipal bonds each year since 1968. In 1982, the spread between the high yield in January and low yield in October on 30-year prime grade municipals reached 440 basis points (4.40 percent) exceeding the range in yields on U.S. Treasury securities for the first time.

At the same time, the structure of tax-exempt yields by maturity continued to be upward-sloping, indicating both the high, even prohibitive, cost of long-term financing and the lure of lower cost, but more variable cost, short-term financing. Table 2.8 traces the tax-exempt yield-to-maturity relationship at the high point in yields, in January, and at year-end 1982.

Impacts of the Tax Act of 1982

Starting in late summer of 1982, the bond markets enjoyed a rally as interest rates began to decline under twin influences of an increasingly depressed economy and a relaxation of monetary policy on the part of the Federal Reserve Board. Despite a flood of new issues, the tax-exempt bonds followed the general trend, with especially good recovery in the short-term area. However, the longer term prospects for the market continued to be, at best, complicated. Complicating factors are the implications of once-again altered tax treatments and, the continuing weakness on the part of institutional demand and, hence, continued heavy reliance on the household-oriented "retail" market.

The 1982 Federal Tax Equity and Fiscal Responsibility Act (TEFRA) further changed the status of municipal securities (and that of alternative investments) in a variety of ways. Two of the changes in the tax code most likely will spell higher costs for municipals over the intermediate to longer haul: the partial removal of the deductibility of bank interest costs used to finance tax-exempt securities and the requirement that all municipal bonds issued after July 1, 1983, be in registered form.

The change in the corporate minimum tax provisions which required that interest on indebtedness used to purchase or carry tax-exempt securities be included in calculation of liability for the minimum tax was estimated to increase municipal borrowing rates by as much as 160 basis points (1.60 percent).[3] Before the 1982 law was enacted, commercial banks were able to deduct from operating income interest paid on deposits or other borrowed funds that were applied to the purchase of tax-exempt bonds. The new tax provision is expected to decrease the demand for tax-exempt bonds by commercial banks, leading to increased borrowing costs.

The registered bond requirement changes the form of the municipal bond from a readily negotiable instrument where ownership resides with its bearer, to a registered-form security requiring transfer of ownership to be recorded. This change may increase the costs of borrowing for two major reasons. In the short-term, interest rates on registered securities may be slightly higher than those on traditional bearer bonds before investors become familiar with the new security.

YIELD-MATURITY RELATIONSHIPS

PRIME MUNICIPALS AND TREASURIES

1982

	January 1982		December 1982	
Maturity	Prime Municipals	U.S. Treasury	Prime Municipals	U.S. Treasury
6 Months	7.70%	13.70%	4.90%	8.61%
1 Year	8.25	14.40	5.25	8.82
5 Years	9.75	14.37	6.50	10.21
10 Years	11.25	14.56	7.75	10.46
30 Years	13.00	14.21	9.00	10.51

In the long run, the potential for improving the efficiency of the municipal market provided by the registered-form bond may actually increase the attractiveness to investors of these securities and result in lower interest rates. The cost of implementing the registered bond requirement, regardless of which alternatives are selected, will increase the fixed costs of borrowing to some degree. The actual costs of registering municipal bonds will depend upon whether the issuer, a state agency or a private firm provides registrar and transfer agent services.

In several other areas affect by TEFRA -- the changes in the restrictions on the use of industrial revenue and municipal mortgage bonds, the new taxation rules for life insurance companies, curbing of the leasing provisions, and the tightening-up of the use of certain competing tax shelters and their subjugation to a revised minimum income tax (that excludes tax-exempt interest income) — the ultimate impacts constitute a mixed, but most likely negative, picture. Overall, there appears to be little reason to believe that the tax-exempt market's position relative to the other markets has improved or that its more volatile, credit sensitive behavior will be materially altered.

Perhaps one of the more critical developments over the past few years is the extent to which the entire municipal securities market has become ultrasensitive to changes -- real or potential -- in the federal tax code. For example, the pendency of the bond registration requirement and the year-end effective date for the new interset deduction requirements for banks greatly accelerated tax-exempt issues at the end of 1982.

Credit Concerns

No discussion of the municipal bond market and its ability to raise capital for state and local government needs would be complete without a discussion of the credit concerns that continue to pervade the market. The financial condition of the state and local sector has deteriorated over the past few years; and, yet, there remains a huge backlog of unfunded capital spending needs. The national credit rating agencies are aware of the financial problems and have been lowering ratings to reflect the more perilous prospects for governmental issuers. Moody's Investors Service, Inc. reduced the credit ratings of nearly twice as many tax-exempt bond issuers as had their rating raised during the first eight months of 1982. The 384 downgradings during this period were more than four times as many as were reported for all of 1981. The outlook for ratings appears to be no better, and a default or two by a major issuer(s) could intensify a "flight to quality" (purchase of only high-grade municipals) by investors. With the ongoing concerns as to creditworthiness and the reliance on individual investors to purchase municipal bonds, marketing considerations have been instrumental in requiring municipal bond insurance and other forms of guarantees to back up weaker or unusual credits.

These "back-stopping" security features have included letters of credit issued by domestic and foreign banks, insurance companies, and other private firms, and bond insurance policies issued by three private insurance organizations. States have also expressed growing interest in developing state-assisted programs for

improving the terms of borrowing available to their local governments. Various programs of state credit assistance, including state bond banks, full faith and credit state guarantees of local issuers, moral obligation pledges, and state debt subsidy programs have been implemented.

The new forms of financing discussed below and the growing use of credit backstops share a common and fundamental trait with significant policy implications for all participants -- issuers, intermediaries and investors -- in the tax-exempt market. That trait is best summarized as a transfer of risks. Most new financing vehicles such as variable rate securities and insurance-backed bonds have as a unifying feature the shift of interest rate risk or credit risk from investors to issuers. Most state credit assistance programs spread the losses associated with defaults to third parties, including other governmental units. Collectively, transfers of risk have been substantial. It is vital, therefore, to emphasize that the risks have not disappeared — the locus of risk-bearing has shifted. For states especially, this means that even more careful attention must be focused on the monitoring of state and local debt capacity.

Innovative Bond Financing Alternatives

In response to varying market demands and economic factors -- many of which were discussed in Section Two — issuers of municipal debt have become "creative." What is "creative" in capital financing is a highly judgmental consideration. Most of the new techniques have historical antecedents in the taxable capital markets, but typically had not been put to use in financing public capital expenditures. Thus, what is novel can be either the introduction of new loan instruments into the tax-exempt bond market or the creation of some new source of funds that had not previously existed as an alternative to loans in the raising of capital by state and local government.

The definition is a "catch-all," one of exception from standard practices: creative financing techniques are those that differ from the traditional means of raising capital through the sale of standard instruments in the tax-exempt securities market.

Creative financing techniques have dealt with rearranging the borrowing transaction by shifting the risk of interest rate changes and, in some cases, of creditworthiness from the lender to the borrower. In addition, they have increased the types of returns available to the investor beyond simply the receipt of regular tax-exempt interest payments. An important aspect of the latter development has been the design of transactions in which governments are able to transfer certain tax benefits of owernship from themselves to tax-paying entities that can use them for tax-shelter purposes. Correspondingly, another related aspect of creative financing has been to devise ways by which governments themselves can take maximum advantage of financial investment opportunities through the temporary use of borrowed funds as a means of lowering costs. For both private investors and public borrowers, these aspects of creative financing are intimately connected to the peculiarities of the treatment of tax-exempt securities and depreciable assets in the federal tax code.

Innovative and creative financing techniques open up new potential arrangements for raising capital for public borrowers, but may present pitfalls as well. Many of the new devices are creating a backlog of short-term debt that will need refinancing in the near future. The more stockpiling of such debt, the more difficult it will be to refinance as every issuer comes to market at once. Also, creative financing is often associated with off-balance sheet debt. Not only can this impair an unit's fiscal flexibility by tying up monies otherwise available for general purposes, it also makes understanding an unit's financial condition more difficult. Creative financing, if used simply as an expedient, can be a prescription for trouble, especially in times of financial and economic contraction; however, if used wisely, these techniques may save hundreds of thousand dollars in borrowing costs.

Creative Financing Innovations

The high level of long bond rates has spawned a variety of innovative financing vehicles designed to move borrowing costs down the yield curve.

Short-term financing vehicles include tax-exempt commercial paper ("TECP"), Bond Anticipation Notes ("BANS"), secured BANS, direct bank loans and variable rate demand ("VRD") notes. Although these alternatives generally provide lower borrowing costs (presently up to 650 basis points, or 6.5%, lower than long-term bonds), there are important risks to consider, particularly for construction projects. First, the financial markets may "move against" the issuer, and subsequent long-term borrowing costs could ultimately be higher than if long-term financing were selected initially. Secondly, in the case TECP and VRD notes, the lower cost depends on the volatility of investor demand in the short-term market. These risks, as well as those described below, must be carefully weighted by the issuers. The primary short-term alternatives are as follows:

TECP is a very short-term method of financing. The volume of outstanding commercial paper has increased from $300 million only two years ago to over $3 billion at present. It is used for a variety of short-term assets, such as fuel financing or during construction to allow an issuer to select a better market before issuing long-term bonds. Most commercial paper matures between 15 and 45 days because the most favorable rate is obtained by extremely short maturities.

Although the interest rate on commercial paper is low, several additional factors must be added to determine the total cost. First there is the fee for standby letter of credit; second is the fee of 1/8 to 1/4 of 1 percent or more for the dealer-agent who places the commercial paper. In addition there is the procedural cost of rolling over commercial paper notes at each maturity. Given the very short maturities, there can be as many as 20 or 30 closings a year.

At each rollover, the dealer-agent determines the amount of commercial paper to be placed and solicits enough interest among investors to sell all of the commercial paper. Thus, the cost of commercial paper varies with the market. In the event the paper cannot be placed, the issuer must draw upon a letter of credit to refinance the matured notes and the debt converts to a bank loan.

BANS provide a flexible financing instrument, maturing in one to three years and typically payable solely from the proceeds of a long-term bond issue. The interest on BANS, prior to their refunding, may be capitalized from the proceeds of the notes or paid from operating revenues. The principal is payable in one lump sum.

Since repayment of BANS depends on issuing refunding BANS or long-term bonds, regardless of market conditions, this method of financing involves some risk if interest rates are higher or if the structure and terms of the new debt issued to refund the BANS will not be satisfactory. Investors will be concerned with the issuer's market access -- its ability to refinance. To reduce these risks, investors must know if refunding bonds are authorized, if there is an interest rate limitation that could prohibit issuing additional bond tests.

SECURED BANS alleviate some of the market and credit risk associated with unsecured BANS by providing investors an additional level of security. This additional level of security can be in the form of federal grants (in which case the security is a grant anticipation note, or "GAN"), or in the form of a commercial bank letter of credit to guarentee the take-out of the note at maturity. The nature of the security mechanism can vary from assured take-out (as in the case of GANS) to a conditional irrevocable letter of credit to be use only if take-out bonds could not be sold. This in effect shifts liquidity risk to the commercial bank.

For assuming this risk, the bank charges a commitment and/or standby fee. These fees have escalated recently. Today, an annual commitment fee of approximately 1 to 1.5 percent based on the undrawn balance (i.e., the amount of the notes then outstanding) is typical. If the letter of credit is used to repay BANS, the issuer's obligation converts into a direct bank loan. The bank then charges interest on the borrowed amount at a floating rate, usually a fixed percentage of the bank's prime lending rate. These fees also have escalated. Previously, a typical interest rate formula might have been 60-70 percent of the prime rate; recently some banks are charging a rate equal to their prime lending rate for this type of obligation. The bank may also require that a compensating balance be maintained, increasing the effective borrowing cost to the issuer.

Under a DIRECT BANK LOAN, an issuer negotiates a loan at tax-exempt rates, and places the security for the loan directly with a bank or group of banks. The interest typically is computed on a floating or variable rate defined at a percentage of the bank's prime lending rate. The terms range from 60 to 85 percent of prime. The lending bank may or may not require a compensating balance or commitment fee.

It is increasingly difficult to negotiate an interest rate ceiling, unless a statutory rate limit applies under state law. However, during periods in which the formula would result in a rate higher than an agreed upon target ceiling, the additional interest accrues and is recouped by the bank when the rate formula drops below the limit. The additional interest is deferred but not avoided. This type of security is usually applied to weaker credits.

VARIABLE RATE DEMAND NOTES - VRD Notes are in many way similar to TECP in that they are both a variation on secured BANS. VRD Notes usually have a maturity of two or three years. The interest rate on the notes fluctuates weekly with a prescribed municipal bond market index or an alternative index based on a major bank's prime lending rate. The unique feature of a demand note is that the investor can either hold the note to maturity or put (tender) the note to the issuer for redemption at the original par value upon several days notice. Because of the tender provision, the investor regards a demand note as a very short-term investment with immediate liquidity and thus will accept a lower interest rate.

The issuer, on the other hand, must add the cost of the letter of credit and placement fees.

Long-term financing alternatives have proliferated recently in response to market volatility and changing investor needs. These innovative alternatives are designed to enhance security and marketability, provide investors with market price protection, provide for shorter maturities and/or average lives, and in some cases enable renegotiation of interest rate. While each of these new techniques has valid application, they often require the issuer to assume more market risk than with traditional fixed rate, fixed term revenues bond financing. The primary long-term alternatives include:

TENDER OPTION BONDS ("PUT" BONDS) - The Put bond combines some aspects of long-term and short-term financing. These bonds have a stated maturity of 25 to 30 years but give the holder the option to tender (literally "put") bonds back to the issuer for repayment at par at the end of a specified period, usually at least three to five years. Thereafter, the option can be exercised periodically at either one-year or three-year intervals.

Because of the option, a bondholder considers the next available option date the equivalent of a maturity date. Thus purchasers will accept yields as much 250 basis points (2.5 percentage points) lower than for 30-year bonds without the option. After the first option date, the bonds trade or are priced in the secondary market at yields comparable to securities with a final maturity of one year. Accordingly, as long as one-year rates do not exceed the stated coupon rate of bonds, an investor should be inclined to hold the bonds or to trade them in the market at a premium rather than tender them for redemption at par.

From the issuer's perspective, the interest rate savings is attractive because of the wide differential between short-term and long-term rates. However, for a 30-year financing, the savings is assured only for five years. Subsequent savings are promised on the expectation that all or a major portion of the bonds will not be tendered. In exchange for this possible benefit, the issuer assumes the market risk, i.e., that the portion of the bonds tendered may have to be financed at the then-prevailing (and possible higher) market rates.

Although the use of tender option bonds has been widespread, issuers have used this innovation judiciously and have limited the amount of put bonds sold to a minor portion of the total issue, usually between 10 and 25 percent. From the viewpoint of investors and rating agencies, this makes the refinancing risk more manageable.

FLOATING RATE BONDS ("FLOATER") - Floaters do not bear a fixed interest rate; they vary or float with the tides of the marketplace. The floater appeals to the issuer who expect rates to decline in the near future. Conversely, it appeals to the investor who believes that interest rates may rise and is looking for a means of protecting investment principal.

In structuring a floating rate issue, there are several criteria. First, the floating interest rate must be pegged or tied to an accepted market index. Second, the derived or computed market rate usually stated as a fraction or multiple of the market index, should produce a yield or a return to the investor that is at any given time sufficient to compensate for the credit risk associated with the investment. There is the question of whether the investor and issuer can agree on high-low caps, i.e., on maximum and minimum limits on potential future variations in the interest rate.

To illustrate: a floating rate issue may be calculated to equal 95 percent of the 20-year Bond Buyer Index, with high-low limits of 15 percent and 8 percent. For example, the rate would be 95 percent x's 9.00 or 8.55 percent if the BBI was at 9.0%. For an A-rated utility whose 30-year bonds would sell at 10.375 percent, the floater would save more than 1 percent in the current market. If the market declines, the issuer's savings will increase, conversely the floating rate may move to 15 percent and remain there.

The first generation of floating rate bonds was sold with a comparatively narrow spread between maximum and minimum limits. Currently, however, investors demand wider spread, or maximum limitation.

ADJUSTABLE FLOATING RATE BONDS "AFRB's" are a recent innovation which combines the option bond with the floating rate bond. The objective is to provide a means of managing refinancing risk and reducing or eliminating the cost of issuing new debt in the event the market conditions deteriorate. This hybrid functions exactly like the tender option bond. For example, if prior to any option date, the interest rates for short-term bonds are higher than the coupon rate on put bonds, an issuer can anticipate that a sizeable portion of the outstanding put bonds will be tendered. The authorizing bond ordinance provides that, at that time, a repricing committee will propose adjusting the rate on the put bonds to a level deemed sufficient so that the tendered bonds can be remarketed to a new group of investors. The firm underwriting the original issue serves as remarketing agent. The bonds remain outstanding. They are not refinanced although the coupon rate is adjusted to accomodate the change in markets. At the next option date, the issuer can consult again with the repricing committee; if market conditions improve, the committee will recommend a new lower interest rate but not so low that it will result in the bonds being tendered back to the issuer. Thus, the risk of rates going up and coming down again is shared between the issuer and the bondholder.

FLOATING/FIXED RATE BONDS "F/FRB's" are a means of arranging long-term floating rate financing with the option of fixing the rate under more favorable market conditions without incurring the expense of refunding. The F/FRB can be issued for a stated maturity of up to 30-40 years. During the floating rate period (which can be the entire term of the bond issue) the interest

rate floats relative to a predetermined index. The F/FRB during the floating rate period gives the holder a seven-day put and, if the "put" is exercised, the bonds are purchased by drawing on a bank line of credit. The bonds are then either converted into a bank loan or else remarketed on a best efforts basis to other investors.

While F/FRB's transfer the market risk from the investor to the issuer, they do provide tremendous financing flexibility to th issuer.

ZERO COUPON BONDS (Deep Discount) - Zeroes are a unique form of bond in that they pay no current coupon or interest rate. The investor foregoes current income in exchange for appreciation in the value of the bonds at maturity or when the bonds are called. The rate of return realized by an investor can be compared to a savings account in which there are no withdrawals of compounded interest or principal over a long period.

Investors have accepted a lower yield on zeroes, relative to traditional current coupon bonds. There are several theories which attempt to explain this situation but generally it is felt that: the pricing of such bonds has ranged from 20 percent of par value to as low as 3 percent because an investor can purchase a bond with a maturity value of $5,000 for as little as $150, or at a deep discount. This greatly expands the potential market, thus increasing demand for the bonds but is attractive to investors because the reinvestment yield is guaranteed.

Another important factor is that the supply of zero coupon bonds has been quite limited. As the volume increases, most market observers expect that the interest cost benefit will diminish. For issuers, zero coupon bond offerings can be structured so that the reduced capital yield results immediately in lower average annual debt service costs. More sophisticated investors accept the idea that bonds purchased at deep discounts can not be called at par if the issuer chooses to refund the debt.

BONDS WITH WARRANTS ATTACHED ("WARRANTS") - When an issuer uses this financing vehicle, he simultaneously sells a warrant entitling the purchaser of the bond to buy an additional bond bearing the same coupon rate at any given time within a one-year period. If interest rates decline substantially, the investor can exercise this option. If interest rates increase substantially, the privileges of the warrant expire since investors have an opportunity to purchase other bonds at higher rates. Since the warrant gives the option to the investor, the presumption is that the investor will accept a lower yield on the original bond sale.

INCREMENTAL COUPON BONDS ("IC" or STEPPED COUPON BONDS - The IC, stepped or graduated coupon bonds are serial coupon bonds in which all outstanding principal, regardless of maturity, bears the same rate of interest in any one year. As each year passes from the date of issue to final maturity (e.g., from 1983 through 2000), the coupon rate for all the remaining bonds increases gradually. The coupon rate never decreases. For example, a bond issue can be structured so that the interest rate is 8 percent on all bonds the first year, 8.5 percent the second year, 9 percent the following year, and increases thereafter to 20 percent or more on the remaining bonds in the final year of maturity. Since

the interest rate is lower in the early years of the financing, there can be substantial savings on projects for which interest is capitalized during the construction period because the capitalized interest is based on the lowest coupon rate (8 percent in the hypothetical example) instead of the average coupon rate for conventional offerings that would be substantially higher. However, the call premiums are unusually high to offset the investor's loss of coupon income in the early years. This makes it difficult to refund the debt.

The recent popularity of many of these innovations may fade with a return of interest rates to lower levels, but the experience of the past several years has provided ample evidence that financing is a dynamic process. The creative methods of attracting funds have provided market access on reasonable terms under very hostile market conditions for traditional borrowing instruments.

Bond Issuance Process

The bond issuance process should be part of a comprehensive debt management policy that includes an evaluation of capital facility needs, a thorough analysis of financing alternatives, and assessment of the ability and willingness to repay debt issued. Once a government has decided to finance a given capital project through the issuance of tax-exempt bonds, the bond issuance process begins. The issuance process is comprised of four major steps:

- obtaining the bond resolution (which may require voter approval);
- securing specialized services;
- marketing of the bonds; and
- selling the bonds.

Bond Resolution

Among the first steps in issuing municipal bonds is obtaining the proper bond resolution which authorizes state or local officials to proceed with the issuance of debt. For general obligation debt, this frequently requires, as it does in Alaska, voter aproval of a bond referendum. For revenue-supported debt, generally only legislative or another governing board's approval is required.

The bond resolution specifies the purposes for which the bond proceeds are to be used, and it can constitute the appropriation for the projects in the amounts specified or it may leave appropriation to a subsequent action. The content of the bond resolution is important and should provide public finance officials with flexibility in administering the use of bond proceeds.[4] Restrictions in the resolution that require bond proceeds to be segregated in a separate bank account, or that do not allow the temporary investment of proceeds, impede effective investment management and raise borrowing costs.

Specialized Services

Successful bond issues require the involvement of competent professionals in a variety of specializations. It is unusual for any but the largest and most frequent borrowers to have such professionals on their staffs. Rather, legal and marketing

considerations dictate that outside advice and assistance be secured from the following professionals:

Bond Counsel - Bond counsel essentially serves as the legal advisor to the ultimate bond investor although such counsel is retained by the issuer. The use of bond counsel was one of several reforms taken in reaction to widespread defaults in the 1870s and early 1880s on bonds to finance railways when many bonds were discovered to have been illegally issued. As a result, investors required assurances as to the validity of the bonds from the inception to final delivery. Prior to World War I, bond counsel was employed by the purchaser of the bonds. This practice was abandoned when local governments found it advantageous to use the bond counsel's services prior to the issuance of the bonds.

Bond counsel will be required to offer an opinion that the particular bond issues conforms to all pertinent legal requirements. Such requirements may include certification:

- that the issuer is legally consituted and authorized to issue tax-exempt obligations;
- that the bond resolutions is validly authorized;
- that proper issuance procedures were adhered to; and
- that the interest paid on the bonds will be exempt from federal income tax.

In addition, the bond counsel will generally assist in preparation of the official statement, but does not offer an opinion regarding the completeness nor the correctness of information disclosed within the document.

Financial Advisor - The planning and sale of a bond issue may appear on the surface to be a fairly straight-forward and routine undertaking. However the complexity and sophistication of the tax-exempt market, and the severe budgetary impact of current interest rates in the 8 to 12 percent range, place a premium on competent professional assistance in the planning, structuring and marketing of debt issuance. To proceed without the benefit of professional financial assistance may result in unnecessarily high-interest and other costs to the issuer.

The services performed by a financial advisor can vary depending on the issuer's needs. Certain governments may only require assistance in the timing and marketing of the bonds, others may need the full services of structuring the issue and preparing the official statement. A description of the basic services a financial advisor can perform and a discussion of the manner of selection and compensation of those providing financial advice is provided in Chapter Six.

Trustee - The trustee acts as custodian of the bond proceeds and supervises their investment, use for the purposes specified in the bond resolution, and payment of debt service to investors. The trustee may also oversee any debt service reserve funds, construction accounts, and maintenance of certain coverage ratios required in

the bond contract with investors. In the use of revenue bonds, the trustee may also be required to see that the enterprise is operated optimally and that all revenues are administered in accordance with the terms of the bond indenture and official statement.

Paying Agent - This service facilitates transactions with investors, such as the timely payment of interest and redeeming of matured bonds. Normally, the paying agent function is performed by banks located in established financial centers.

Registrar/Transfer Agent - To satisfy the federal requirement that most municipal bonds be issued in registered or book-entry form after June 30, 1983, many issuers may choose to use the services of a professional registrar and transfer agent, rather than develop the necessary expertise in-house. Generally, a transfer agent is responsible for:

- issuing the initial set of registered certificates;
- formulating and maintaining an accurate list of registered owners, and
- making transfers and updating the ownership records

The chief duties of the registrar are to prevent the issuance of more bonds than are authorized, and to verify the cancellation and issuance of certificates by the transfer agent. In most cases, the transfer agent also serves as the registrar, unless these functions are separated for purposes of fiscal control. In addition, the transfer agent may also serve as the issuer's paying agent.

The types of organizations which offer transfer agent services can be divided into two groups: major financial institutions; and local banks and trust companies. The first are located in financial center cities and serve as transfer agents for corporate securities. The second group are local banks and trust companies which serve as paying agents for municipal securities issued in bearer form.

Acceptance of an issuer's registered municipal bonds in the primary and secondary markets is largely dependent on a timely, accurate and efficient transfer process. The liquidity and attractiveness of a particular municipal security are adversely affected by delays in the transfer of ownership and the crediting of interest payments to the correct owners. Poor transfer agent performance will result in the issuer incurring higher borrowing costs the next time it returns to market.

In selecting transfer agents, issuers should consider the following:

- the ability of the transfer agent to meet the market requirement of a 72 hour turnaround on transfers;

- experience of the organization with other issuers
- qualifications of the transfer agent's management;
- adequacy of financial controls and protection against loss;
- the transfer agent's location; and
- the costs of services provision.

Additional factors to consider include the selection of the transfer agent through competitive or negotiated bidding procedures, the use of standard record dates to facilitate interest payments, the length of the service contract and renewal provisions, transfer agent performance measures, and confidentiality of records. In selecting a transfer agent, the issuer should work closely with its financial advisor and underwriter(s).

Depositories. As an alternative to issuing registered certificates in physical form, issuers may wish to consider the various certificate immobilization and pure book-entry programs being offered by the nation's four securities depositories. A depository operates as a not-for-profit clearing agency registered with the Securities and Exchange Commission. It specializes in the immobilization of securities issues and book-entry delivery on behalf of its members (called "participants") who generally are securities brokers-dealers and large financial institutions. The costs of operation are assumed by the members of the depository rather than by the issuers of the bonds. The four securities depositories are independent organizations but are electronically linked to a national depository system.

The chief function of a depository is to reduce its participants' processing costs associated with the transfer and safekeeping of securities. A depository holds large blocks of securities (securities which are owned or safekept and deposited at the depository by its participants) and, upon their instructions, transfers ownership of securities among its participants through bookkeeping entry without having to move or re-register certificates. Except for full book-entry issues, the depository can arrange for delivery of physical certificates to non-participants and to customers of participants who want to keep certificates registered in their own names.

Under a pure book-entry system, the entire issue is held by the depository for members shown on its books. The only bond certificates issued are limited to one or more "jumbo" certificates which are used solely to satisfy legal requirements to provide evidence of ownership of an issue. No certificates are available to investors. The records of ownership are maintained by the depository, and all transfers are made through computer entry, based upon instructions from its participants.

Marketing of Municipal Bonds

Once the above services have been secured, and the specific features of the bond issue determined -- such as maturity structure and type of security (general obligation or revenue bonds) — the bonds are ready for marketing. Bonds may be

OFFICIAL NOTICE OF SALE

$185,000,000

State of Alaska

1982 Bonds, Series B

NOTICE IS HEREBY GIVEN that sealed proposals will be received by the State Bond Committee of the State of Alaska at Chemical Bank, Room 618, South Building, 55 Water Street, New York, New York, on WEDNESDAY,

OCTOBER 20, 1982

at 1:00 p.m., for the purchase of $185,000,000 principal amount of general obligation bonds of the State of Alaska designated "State of Alaska 1982 Bonds, Series B," more particularly described below.

ISSUE: $185,000,000 consisting of 37,000 coupon bonds in the denomination of $5,000, numbered B1 to B37,000 inclusive (or fully registered bonds in the denomination of $5,000 or multiples thereof), all dated November 1, 1982.

MATURITIES: The bonds will mature serially, as set forth in the following schedule:

Maturity Date November 1	Principal Amount	Maturity Date November 1	Principal Amount
1983	$18,500,000	1988	$18,500,000
1984	18,500,000	1989	18,500,000
1985	18,500,000	1990	18,500,000
1986	18,500,000	1991	18,500,000
1987	18,500,000	1992	18,500,000

INTEREST RATE: Maximum not to exceed eleven percent (11%) per annum or that rate or interest which is 110 percent of the rate of the Bond Buyer Index of 20 Municpal Bond Average Yields for the week previous to the date of sale of the bonds, whichever is higher. Interest is payable semiannually on May 1 and November 1 of each year commencing May 1, 1983. Bidders must specify the rate or rates of interest which the bonds hereby offered of sale shall bear. Bidders will be permitted to bid different rates of interest; but (i) the highest rate specified may not exceed the lowest rate by more than two percent (2%) per annum; (ii) each interest rate specified in any bid must be a multiple of one-eighth or one-twentieth of one percent (⅛ or 1/20 of 1%) per annum; (iii) no bond shall bear more than one rate of interest, no interest payments shall be evidenced by more than one coupon and supplemental coupons will not be permitted; (iv) each bond shall bear interest from its date to its stated maturity date at the interest rate specified in the bid; and (v) all bonds maturing at any one time shall bear the same rate of interest. Any premium must be paid in federal funds as part of the purchase price.

PURPOSE: The bonds were authorized to finance various capital improvements for the State of Alaska, including transportation facilities, recreational facilities, fisheries mangement and development facilities, water supply and sewerage systems, flood control facilities and small boat harbors, port facilities, health facilities, educational facilities and correctional and public safety facilities. In elections held on November 7, 1972, November 5, 1975, November 2, 1976, November 7, 1978 and November 4, 1980, the issuance of the bonds for each of said purposes was ratified by a majority of the voters of the State voting on the question.

SECURITY: The bonds are general obligations of the State of Alaska, and full faith, credit and resources of the State are pledged to the payment of the principal of and interest on the bonds.

DATED: September 23, 1982

STATE BOND COMMITTEE OF THE STATE OF ALASKA

By: THOMAS K. WILLIAMS, Commissioner of Revenue, Secretary

sold through either a public, competitive sale or a private, negotiated sale. Most states require state and local general obligation bonds to be sold competitively; however, revenue bonds are often negotiated. In Alaska, state law (AS 37.15.040) requires that only State general obligation bonds be sold competitively, the sale of all types of local debt may be negotiated (see Appendix). In a competitive sale, the bonds are generally sold at auction to the underwriting firm whose bid produces the lowest interest cost to the issuer. The issuer advertises the sale, usually well in advance, and specifies the amount and maturity range of the bonds and other structural features of the issue. A notice of sale inviting competitive bids on the most recent State obligation bond issue is presented in Exhibit 2.1. In a negotiated sale, one or several underwriters are preselected, and the terms of sale (interest rates, maturity structure, and security pledges) are a matter for negotiation.

Over the years, finance professionals on both sides of the transaction have debated the relative merits of competitive versus negotiated sales. Competitive sales generally will result in a lower average interest cost to the issuer. However, under certain market conditions and with certain types of bonds, a negotiated sale may be preferred. The considerations that must be taken into account indeciding between competitive and negotiated sales are discussed in Chapter Six.

Official Statement- The official statement, or prospectus, presents the terms on which the bonds are to be offered and the information necessary to evaluate the investment quality of the bonds. It includes general descriptive information on the bond issue itself, the financial condition of the issuer, and the economic and demographic characteristics of the government. The quality and quantity of information disclosed to investors in the official statement varies widely among issuers. However, it is in the issuers best interest that the official statement be as comprehensive as possible in order to inform investors fully of the nature of the security they are purchasing. Incomplete disclosure is a source of insecurity to investors, who, being risk-adverse, will reward full disclosure and a comprehensive official statement with improved market reception.

Since the principal use of the official statement is as an information (disclosure) document, it should be organized in an order that appeals to the interests of its primary audiences. Underwriters who buy, sell, and market bonds as middlemen are a primary audience. Hence, the first substantive section that should appear is the "Description of the Issue (Bonds)". This will give bond traders a complete run-down of the type of bond being offered, its security structure, and its terms and conditions.

Credit analysts at the national rating services and analysts within the institutional investor firms are also a primary audience. Persons in this field need technical data that is complete and presented in easily understandable format. Their principal interest is in examining where the new debt offering fits into the existing debt structure of the issuer and, the issuer's capacity to manage and repay its debt. Accordingly, a detailed "Debt Summary" should follow the Description of the Issue in order that the issuer's complete debt profile is readily available in a consolidated format. This, then, will be followed by a "Description of the Issuer" and the

"Financial Statements" both of which contain information that, will enable a review of and judgment upon the governmental units debt capacity

Given the importance the official statement plays in providing a debt issue with the broader market reception, its preparation generally involves several parties. The description of the bond issue and other financial information may be provided by the financial advisor or the issuer's finance staff. The economic and demographic information may also come from the financial advisor, or from the planning and economic development staffs of the issuer. The financial statements will be prepared by the issuer's auditor, (regardless of whether the audit is conducted by public agency or a private firm) or the finance department. Finally bond counsel will ensure that the description of the issue, the bond indenture, and other legal matters are handled properly in the official statement.

Credit Rating- Once the official statement for the bond offering has been prepared, the creditworthiness of the bond issue can be rated by potential investors and the national credit rating agencies. In order for financial markets to operate efficiently, investors must have reliable information on the credit quality of the various investment opportunities available. Because of the large number of governmental debt issuers and the variety of security structures behind each debt issuance, the analysis and comparison of credit quality is fairly complex. To assist individual investors and the investment community, several private corporations provide a credit rating service to investors. For a fee, the rating agencies express an opinion as to the credit quality of individual bond issues, or, in the case of general obligation issues, of the borrower itself. The two largest, nationally recognized, firms are Moody's Investors Services, Inc., and Standard & Poor's Corporation. In order for a bond issuance to be sold on a national basis, it is virtually necessary to obtain a rating from at least one of these firms. The cost of the rating must be borne by the borrower.

The rating symbols used by the two agencies to denote relative credit quality are presented in Exhibit 2.2. The most important feature of the credit rating is its impact on interest costs. Although differences in interest costs among the various security grades will fluctuate depending upon market conditions, the very highest grade bonds (Aaa or AAA) often sell at interest rates a full percentage point (100 basis points) or more below those of the lowest investment grade securities (Baa or BBB). Bonds rated lower than Baa are considered predominantly speculative investsments and carry much higher interest rates.

Table 2.9 shows that the average spread between Aaa-and Baa-rated 10-year bonds in 1982 was 102 basis points (1.02 percent). This spread can vary at any given time; in December 1982, the average spread was nearly 200 basis points (2.00 percent). Translated into increased borrowing costs, a Baa-rated 10-year bond issue of $10 million would cost nearly $700,000 more, on average, over its 10-year life than a bond rated Aaa. Table 2.9 provides similar cost comparisons between bonds rated Aa or A and Aaa bonds.

Exhibit 2.2

Moody's and Standard and Poor's Bond Rating Classifications[a]

General Quality Characteristic	Rating Symbol	
	Moody's[b]	Standard and Poor's
Prime Quality	Aaa	AAA
Excellent Quality	Aa	AA
Upper Medium Quality	A, A-1	A
Lower Medium Quality	Baa, Baa-1	BBB
Marginally Speculative Quality	Ba	BB
Very Speculative Quality	B, Caa	B, CCC, CC
Default Quality	Ca, C	C[c], D
Other	Con. (---)[d]	NR[e]

(a) Source: John E. Petersen, The Rating Game, Twentieth Century Fund, 1974, as appearing in State Level Bonding in Wisconsin: Procedures, Policies, and Issues, Legislative Fiscal Bureau, State of Wisconsin, February 1978, p. 13; and State of Oregon's Bonded Debt: A Review of Borrowing Practices for General Obligation and Direct Revenue Bonds, Governor's Bonded Debt Advisory Panel, March 1981, pp. 18-19.

(b) Bonds rated A-1 and Baa-1 by Moody's have stronger investment attributes than bonds rated A and Baa, respectively.

(c) Standard and Poor's uses the "C" rating for income bonds on which no interest is being paid.

(d) The rating "Con. (---)" by Moody's is for bonds whose security depends upon the completion of some act or the fulfillment of some condition. The parenthetical rating [for example, Con. (Aa)] denotes the probable credit rating stature upon completion of the specified conditions.

(e) No rating, either due to lack of request for a rating, lack of enough information to develop a rating, or a policy by Standard and Poor's of not rating a particular type of obligation.

General Obligation Bonds

Moody's Credit Rating	Average Yield on 10-year Maturity	Interest Cost over 10 years[1]	Difference Between AAA
AAA	9.54	$5,737,037	0
Aa	9.69	5,838,278	$101,241
A	10.01	6,055,322	318,285
Baa	10.56	6,431,723	694,686

[1] $10 million borrowing.

The general guidelines used by the rating agencies in evaluating governmental credit quality are presented in Exhibit 2.3. The factors taken into account by the rating agency analysts include the operations of the issuer; the economy upon which the issuer relies for support of the debt being considered; and the pertinent social and management factors. High in the list of factors considered are trends in population, employment, wealth, and income; the organization and management of the government; and the performance of governmental enterprises in relation to projections previously made. Any other matters likely to influence the ability of the issuer to continue to meet the financial obligations undertaken with respect to the debt being rated are also taken into account to the extent feasible.

While the rating is a simple, easily understood classification of the credit risks of a municipal bond it is the product of the objective and subjective factors discussed above. The credit ratings of Alaska issuers are presented in Exhibit 2.4. The majority of the State's credits fall into the lower end of the range of credit quality. This is largely due to the relatively untested nature of Alaska's credits, the small size of many of the State's local government issuers, and the limited, readily accessible, resource base against which taxes may be levied.

Investor Relations- Aside from a comprehensive official statement and an investment-quality credit rating, the other crucial determinant of bond marketabilty is investor relations. It is important that the issuer be known to the investment community and that its past record of meeting debt service requirements on time is flawless.. The most important players in this regard are the bond underwriters.

Underwriters are the financial "middlemen" who purchase — either by competitive bid or negotiation — the bond issue directly from the governmental entity and resell the individual bonds to the final investors. Underwriters generally are either commercial banks or investment banking firms. Normally, a group of underwriters, from two to twenty (or more), form an underwriting syndicate to purchase the bonds. This technique divides the risk among all participants in the syndicate and generally enables larger amounts of capital to be raised. Underwriters are compensated by the underwriting spread, which is the difference between the price they pay a government for an entire bond issue and the total price at which they are able to resell the individual bonds to investors. The components of the underwriters spread are described in Chapter Six.

One method used to attract investors is for the underwriters to advertise the availability of a government's bonds in the financial press. An example of such an advertisement is presented in Exhibit 2.5, wherein the coupon interest rates and reoffering yield (price to investors for that particular interest rate) of each maturity on a recent state bond issue are listed. Bonds are generally sold in increments of $5,000, with a "coupon" attached for each date (generally twice annually) that interest on the bonds is payable to bondholders. The coupon specifies the interest rate and dollar amount of interest payable for that installment. For example, each of the 20 coupons on a $5,000 1992 Alaska 1982 Series B bond would carry an interest rate of 4 percent and entitle the bond holder to a semi-annual payment of $200 (see Exhibit 2.5). Now that all municipal bonds must be issued in registered form, "coupons" will no longer be attached to bonds since the owner will be recorded with the issuer's transfer/registrar or agent. Interest payments will be made directly to the owner of record without the need for the investor to submit interest coupons for payment.

Exhibit 2.3

Major Variables Considered in Determining Municipal Bond Ratings by Moody's and/or Standard and Poor's

A. Debt Analysis
- Nature of security pledged for a bond issue
- Debt burden--the amount of debt relative to income and resources
- Overlapping debt
- Debt structure, including plans for debt retirement
- Debt history
- Capital improvement programs
- Debt limitations and unused margins

B. Financial Analysis
- Pension fund requirements
- Use of short-term debt
- Assessed value of property (primarily for local entities)
- Tax rates
- Tax structure--balance among types of taxes
- Mandated expenditures
- Debt service as percent of total expenditures
- Taxes collected as a percent of revenues
- Balance between revenue trends and expenditure trends
- Budget growth relative to trends in population and the tax base

C. Governmental Analysis (administrative factors)
- Potential and/or pending litigation
- Form of government
- Degree of professionalism
- Intergovernmental factors, including shared responsibilities
- Availability of documents necessary to evaluate fiscal conditions
- Constitutional limitations on tax rates, tax bases, etc.

D. Economic Analysis
- Growth trends in income
- Geographic and locational advantages
- Size and land-use characteristics
- Population size, composition, and shifts over time
- Family, household, and per capita income
- Age and composition of the housing stock
- Value of owner-occupied housing
- New construction values
- Employment mix between industries
- Relationship of community to its S.M.S.A. (for local entities only)
- Type of transportation facilities
- Industrial shifts
- Forecasts of future economic performance
- Labor force growth and unemployment
- Leading employers
- Leading taxpayers
- Mix of building activity
- Retail sales activity
- Bank deposits

Reproduced from John David Vasche, The Use of Tax-Exempt Bonds in California: Policy Issues and Recommendations, Legislative Analyst, State of California, 1982.

The price which the investor has to pay the underwriting syndicate for a particular bond is determined by the figure in the reoffering yield column, in the case of the 1992 4 percent bond, 8.20 percent. Bonds in the 1992 maturity were priced so that the return to investors was higher than the 8 percent coupon on the bonds. This is achieved through selling the bonds at a price less than the $5,000 face (or par) value which will be payable at maturity. In this case the price would be approximately $4,933 for a $5,000 par value bond. The value of the $67 "discount" from par plus the 20 semi-annual payments of $200 over the bond's 10-year life equal an effective annual yield to the investors of 8.20 percent.

Bonds in the 1992 maturity were priced so that the return to investors was higher than 8 percent coupon on the bonds. This is achieved through selling the bonds at a price less than the $5,000 face (or par) value which will be payable at maturity. In this case the price would be approximately $4,933 for $5,000 par value bond. The value of the $67 "discount" from par plus the 20 semi-annual payments of $200 over the bond's 10-year life equal an effective annual yield to the investors of 8.20 percent.

Sale to Investors

The final step in the bond issuance process is the purchase of an entity's securities by investors. Bonds may be purchased as new issues directly from the underwriter, or on the secondary municipal bond market from other investors. There are three major groups of investors in tax-exempt securities. They are:

- Individuals or "Households",
- Commercial Banks, and
- Fire and Casualty Insurance Companies.

Together, these three classes of investors held over 90 percent of the outstanding state and local debt in 1981. The relative importance of individuals, banks, or insurance companies to the municipal bond market fluctuates with changes in the economy and other financial markets. At the end of December, 1981, state and local debt was held by the following sectors:

Sector	Billions held	Percent of total
Commercial Banks	$155.1	42.9%
Household	96.8	26.8
Fire and Casualty Insurance Co.	83.0	23.0
Other Investors	26.4	7.3
TOTAL	$361.3	100.0%

CHAPTER III

PROFILE OF OUTSTANDING ALASKAN DEBT[1]

Overview

With its first bond issue occuring in 1958, the State of Alaska is a relative newcomer to the national tax-exempt bond market. Its recent appearence is primarily the result of two factors: 1) the relatively recent incorporation of Alaska as a state; and 2) the increase in State resources available to repay debt. Although territories of the United States are able to issue tax-exempt bonds if given specific authorization by the U.S. Congress, debt issuance is facilitated if the entity is a state of the Union. As a territory, however, Alaska was able to issue $2.9 million of bonds to finance construction at the University of Alaska. These bonds constituted the entire debt of the Territory when Alaska became a state, and are now general obligations of the State, payable out of general revenues.

The dramatic increase in State revenues following completion of the Trans-Alaska Pipeline in 1975 has fueled development in the State, generating revenue to the State Treasury that can support the State's own issuance of debt. In addition, growth of the Alaskan economy has created demand for State industrial and housing loan programs and has provided the revenue streams which can be pledged to repayment of debt obligations. Expansion of the economy also creates demand for municipal services, and municipal-type State services in unincorporated areas of the State. Such demands have fueled the increase in State and local government debt to finance roads, schools, water and sewer systems, and public utilities.

Since becoming a state in 1959, Alaska has been a steady issuer of debt, either in the form of direct general obligations of the State (tax-supported), obligations of State public corporations (revenue-supported), or its municipalities (both tax and revenue supported). Table 3.1 compares the volume of new debt issues from Alaska to national market volume over the 1970-82 period. Setting aside the unusually heavy volume of "pipeline" bonds in 1977 (which is discussed below), the data indicate that the volume of new Alaska bonds has been growing in relation to the national market. In 1970, new Alaska issues accounted for 0.7 percent of national volume; by 1982, Alaska's market share had more than doubled, to 1.8 percent of aggregate new issue volume.

The dramatic increase in borrowing, both in absolute amount and relative volume, provokes the need for an assessment of who the issuers are, the types of debt being issued, and its market acceptance. While Alaska's borrowing commands far less market share than many other states -- New York State issues, for example, accounted for more than 10 percent of national market volume over the last decade -- its rate of growth has been noted.

Before turning to the individual issuers of public debt in Alaska, it is useful to trace the general trend in volume of new tax-exempt bond issues sold

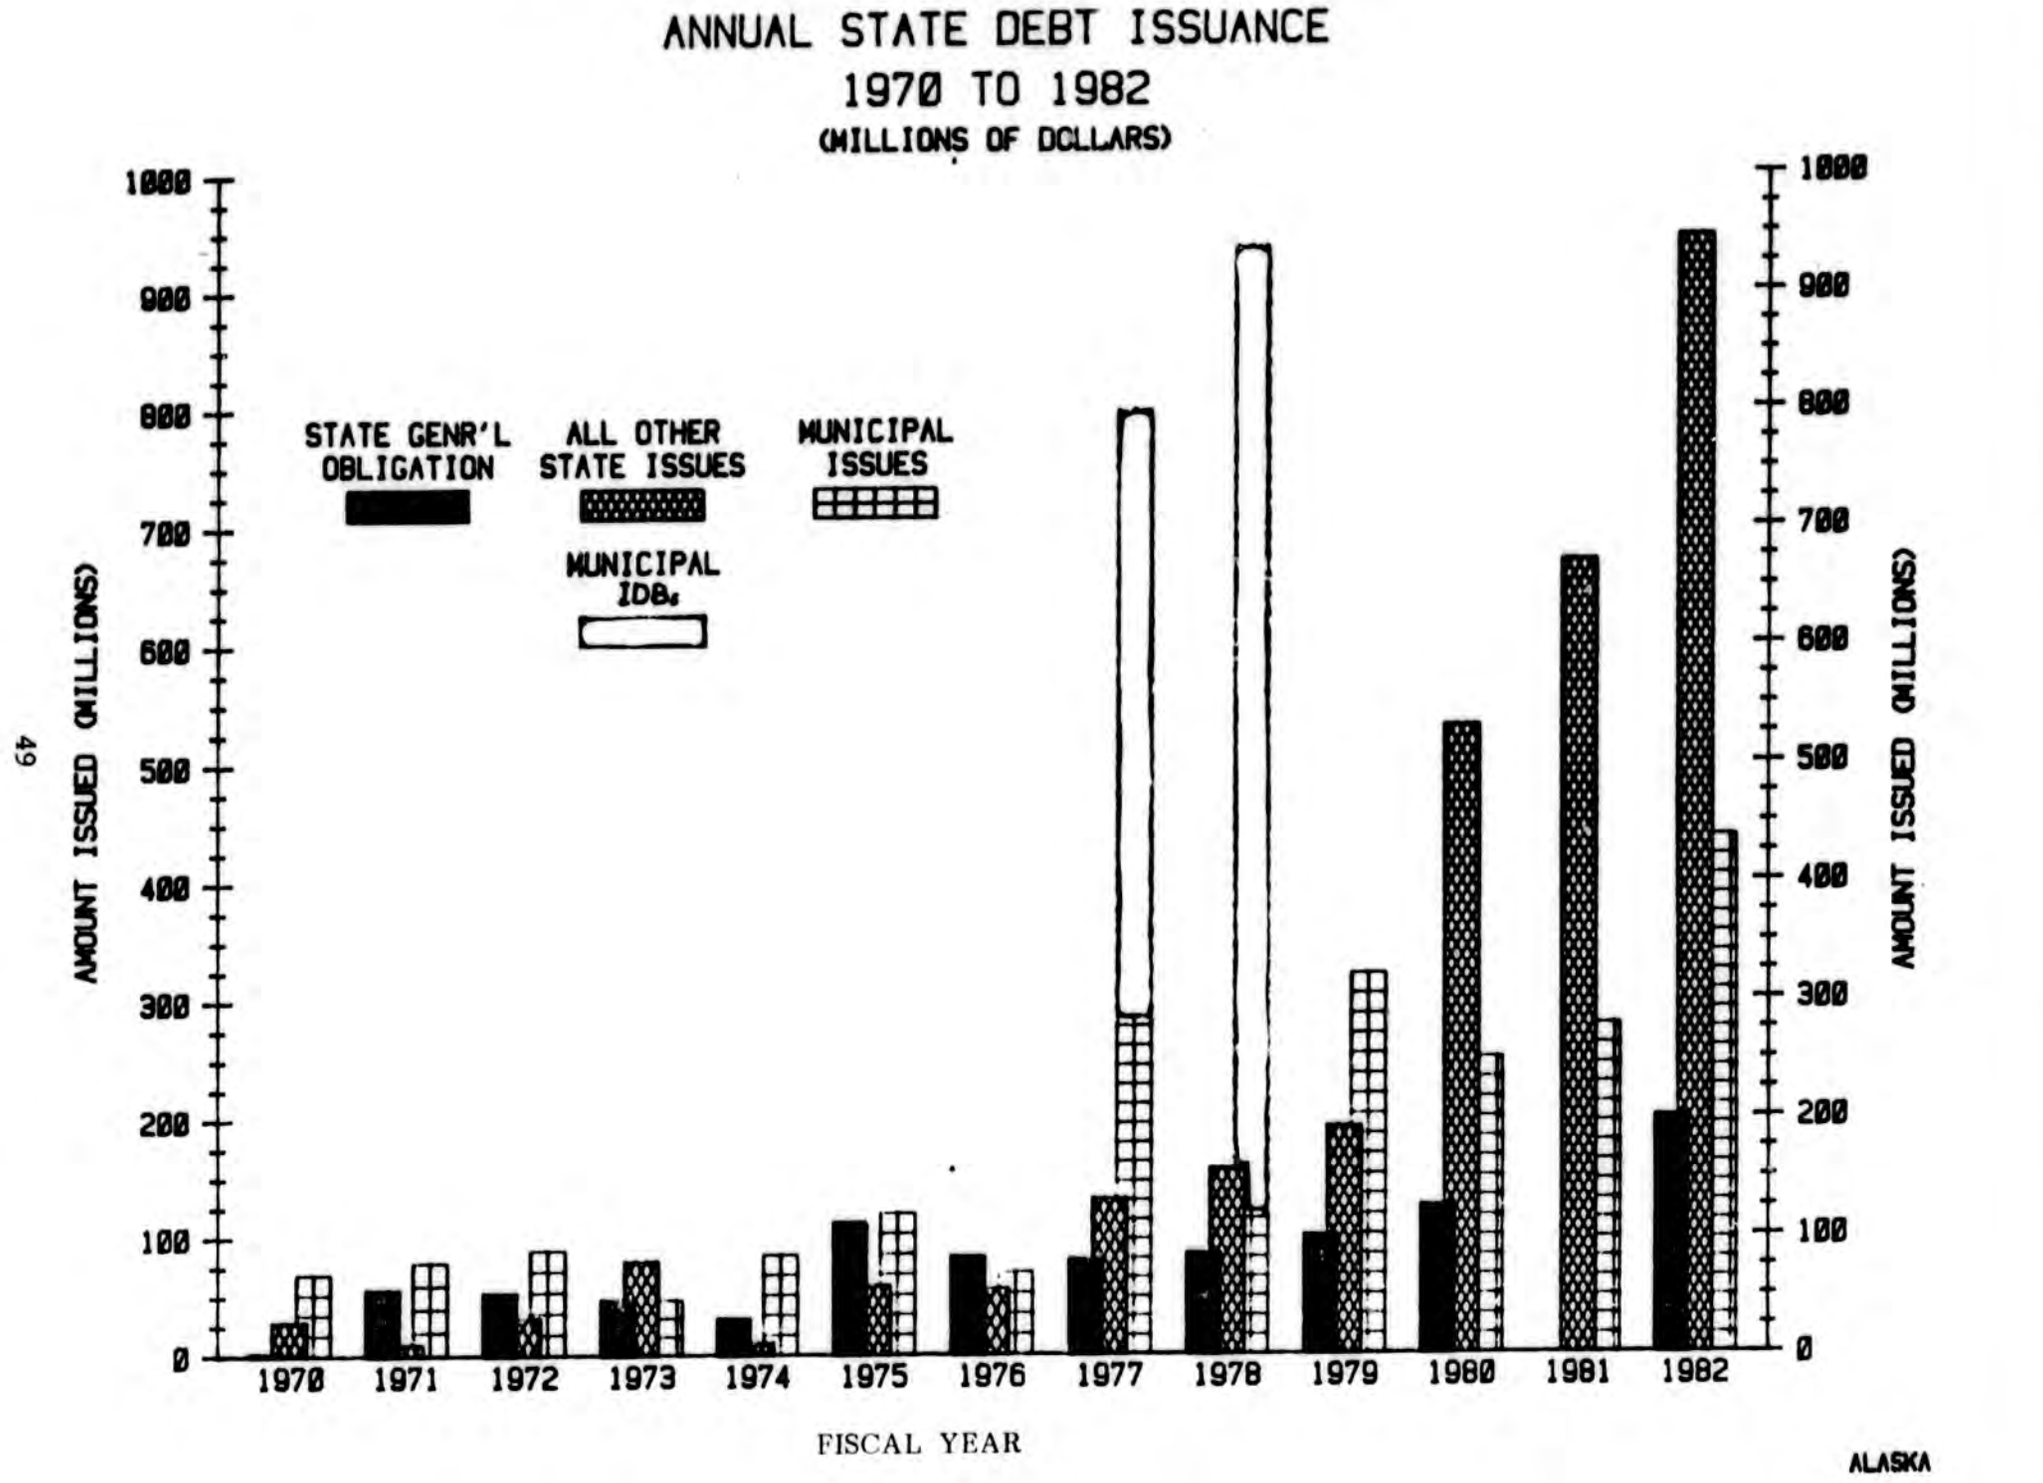

Table 3.1

by governmental units in the State over the 1970-82 period. Table 3.2 documents the steadily rising volume of new borrowings. Bonds sold by all governmental units or agencies in 1982 amounted to nearly $1.4 billion, or more than ten times the volume of new issues in 1970 of $134 million.

Exhibit 3.1 disaggregates total issuance over the 1970-82 period by class of issuer. The three classes of debt issuers being the State itself (general obligation), its agencies and public corporations (other State issuers), and municipalities. It is obvious that the year 1977 marked a dramatic increase in the amounts of debt issued from Alaska. In this year the municipality of Valdez issued tax-exempt industrial revenue bonds to finance the construction of port facilities in conjunction with the Trans Alaskan Pipeline. These bonds were issued on behalf of the oil companies involved, are payable and guaranteed solely by these companies, and are not direct obligations of the municipality. Therefore, this type of debt is generally not considered as municipal debt, but rather as corporate debt. The magnitude of these debt issues, however, introduced the "Alaska name" to investors in tax-exempt securities and marked a turning point in the State's access to the national bond market.

Although unique for size and purpose, the so-called "pipeline bonds" are characteristic of other trends in borrowing practices — namely the growing use of revenue bonds. As noted in Table 3.2, the volume of revenue bond financing in Alaska has exceeded the volume of tax-supported issues in 5 of the last 6 years (1982 being the exception). From 1978 through 1982, the average annual volume of revenue bonds, $402 million, accounted for 52 percent of total Alaska debt sales, while tax-supported volume amounted, on average, to $368 million or 48 percent of annual average sales. By contrast, over the 1970-74 period, tax-supported general obligation bonds of the State and its municipalities accounted for 64 percent of total Alaska debt volume.

Exhibit 3.1 and Tables 3.3 and 3.4 trace other related developments in the changing character of new debt issues from Alaska. The dollar volume of State general obligation debt has increased substantially from an average annual volume of $64 million in the 1970-76 period to $123 million in the 1977-82 period as indicated in Table 3.3. As a proportion of total Alaska new borrowings, however, State general obligation debt has declined from 32 percent of aggregate Statewide volume over 1970-76 to 12 percent over the last six years as indicated in Table 3.4.

The tremendous increase in State agency borrowing since 1977 has dwarfted the State's general obligation borrowing and that of its municipalities. Annual State issuance other than general obligation debt has risen from approximately $130 million in fiscal year 1977 to over $900 million in 1982. The vast majority of agency borrowing is revenue-supported, contributing to the trend towards increased reliance on revenue bonds indicated in Table 3.2. Over the 1978-82 period, aggregate State agency issues amounted to $1.7 billion and 44 percent of new issues. By contrast, over the entire 1970-77 period, State agency borrowings amounted to only $409 million and accounted for only 13.5 percent of total borrowings.

FISCAL YEAR
ALASKA

Exhibit 3.2

Exhibit 3.2 demonstrates the changing composition of outstanding Alaskan debt over the period encompased by fiscal years 1972 and 1982. Over this time period, State general obligation debt fell from 67% of all debt outstanding in the State in 1972 to 31% in 1982. The increase in non-general obligation debt of the State's public corporations was led by the Alaskan Housing Finance Corporation (AHFC) which has become the largest supplier of mortgage funds and the heaviest issuer of debt in the State. AHFC alone accounted for 31.2 percent of all Alaska "paper" to enter the bond market in the past five years. As indicated in Table 3.4, however, the market share of AHFC dropped substantially between 1981 and 1982. The drop to 14 percent of all Statewide issues from 40 percent in the prior year occurred simultaneously with the onset of major new borrowing programs of the Alaska Power Authority and the Alaska Industrial Development Authority.

Exhibit 3.3 and Table 3.5 present the composition of outstanding State-level debt by individual issuer as of April 1, 1983. Of the approximately $4 billion in State level debt outstanding, AHFC comprises nearly 61% ($2.4 billion), State general obligation debt 26% ($1 billion), and other issuers 13%.

When bonds are issued, the issuer commits itself to the payment of interest on the money borrowed from bondholders in addition to the repayment of principal. At the end of fiscal year 1982, the amount of interest payable over the term of all outstanding State-level debt ammounted to $4.1 billion, 117% of the principal amount outstanding. Table 3.6 presents the amount of principal outstanding and interest due over the term of the outstanding principal on each State-level issuers' bonds at the end of fiscal year 1982. A more detailed breakdown of these amounts is provided in the debt service schedules of each State-level issuer in Table 3.7.

The remainder of this section briefly describes each of the public issuers of debt within the State, the purposes for which they issue bonds, and the historical trend of debt issuance. In so doing, it provides a current profile of long-term debt in Alaska. Because of their sizeable share of the public debt market, the State's corporations and agencies will be the primary focus of the profile. At present there are eight State agencies or corporations that have at one time received legislative authorization to issue bonds. These are:

Alaska Housing Finance Corporation (AHFC)
Alaska Industrial Development Authority (AIDA)
Alaska State Housing Authority (ASHA)
Alaska Power Authority (APA)
Alaska Municipal Bond Bank
University of Alaska
Alaska Medical Facilities Authority
Alaska State Development Corporation

For the purpose of profiling debt issuance in Alaska, debt in the State is categorized in the following manner:

Table 3.4

Notes: (1) Includes State General Obligation Debt, University of Alaska Revenue Bonds, Alaska State Housing Authority Lease Revenue Bonds.
(2) Includes all other State Level Debt.

I. Direct Tax-Supported Debt
   A. State General Obligation Bonds
   B. Revenue Debt Dependent on State Appropriations (ASHA/University debt)

II. Indirect Debt
   A. General Obligation Vetrans Housing
   B. Moral Obligation Bonds of State public corporations (AIDA, APA, Bond Bank, certain AHFC bonds)
   C. Other obligations of public corporations (Airport Revenue Bonds)

III. Municipal Debt

IV. Other Long-Term Obligations
   A. Public Pension Liabilities
   B. Local School Construction Expenditures

Direct Tax-Supported Debt

Tax-supported debt is debt that is supported by the State's general fund. It includes only that debt which is payable from State appropriations, and not debt for which a specific revenue stream that is independent of the State budget has been pledged (such as the State's International Airport Bonds). This is also the aggregate outstanding debt amount used by Moodys Investor's Service, a major credit rating institution, in evaluating and comparing the State's debt posture with respect to other States and in assigning a credit rating to the State's own obligations. Tax-supported debt includes State General Obligation debt, lease-revenue debt of the Alaska State Housing Authority, and University of Alaska debt.

State General Obligation Debt

General obligation (G.O.) bonds are backed by the full faith and credit and general taxing authority of the State of Alaska. Bonds which carry Alaska's G.O. pledge represent the State's most direct form of indebtedness. If future State revenues are ever insufficient to make the required interest payments to bondholders or repay principal, the State is legally required by its contract with bondholders to raise taxes in order to meet these obligations.

G.O. debt is issued to provide funds for a variety of State activities. Among these are the construction of State marine and surface highway systems, water supply and sewerage systems, educational facilities, airports, and other public buildings. Table 3.8 and Exhibit 3.4 provide a breakdown of the amounts of State G.O. debt issued since 1972 by the purposes for which it was issued. In addition, the purposes for which future debt may be issued, within the remaining voter-authorized amount of $81.5 million, are presented.

ALASKA GENERAL OBLIGATION DEBT SINCE 1972

(THOUSANDS OF DOLLARS)

AMOUNT ISSUED BY PURPOSE

AUTHORIZED BUT UNISSUED DEBT

G.O. bonds are issued under provisions of the Alaska Constitution that require advance approval of the State electorate. In addition, the authorization of the State legislature and approval of the State Bond Committee are required. The legal provisions concerning State G.O. bonds are primarily contained in Article IX, Section 8 of the Alaska Constitution and the State Bonding Act in Chapter 37, Section 15 of the Alaska Statutes.

The State has gone to the bond market 37 times since statehood, to raise over $1 billion in general obligation debt. In addition, the State assumed as general obligation bonds of the State the outstanding debt of the Territory of Alaska. In 1959 the Territorial debt amounted to $2,932,000. In contrast, as of December 1982, the State had $1,027,413,000 in G.O. debt outstanding. Table 3.9 provides details of each of the State's past bond issues and the amounts outstanding at the end of fiscal year 1982. A graphic presentation of State debt issuance is provided in Exhibit 3.5. The amount of State general obligation debt issuance dramatically increased after 1974 when the prospects of large increases in State revenues became more certain with the completion of the Trans Alaskan Pipeline. Indeed, over 75% of State general obligation debt issuance occured since 1975.

The debt service schedule presented in Table 3.7 gives the future payments of principal and interest that will be required to repay the $1 billion in general obligation debt presently outstanding. Debt service requirements begin to drop rapidly after 1990. This is the result of a conscious effort of the State and its financial advisors to shorten the maturities of State debt to conform with projected oil revenues generated from the Prudhoe Bay field. Table 3.10 shows that the average life of State bond issues has dropped since 1975 from 12.5 years to 5 years on the State's most recent G.O. bond issue.

Table 3.10 also shows that the interest cost per dollar borrowed on State general obligation debt has fallen sharply over the past 10 years. The interest cost on State bond issues is determined by several factors, the major factor being the general level of interest rates in the economy. However, the credit rating assigned to an issuer and investor perception of creditworthiness are also considerable factors. Table 3.10 indicates that the decrease in borrowing costs since 1973 generally corresponds to improvement in the State's credit rating from Baa 1/A in 1973 to Aa/AA- at present. A significant factor behind the improved credit rating is the tailoring of new debt issuance to the expected life of Prudhoe Bay and the State's oil-based revenues. In addition, average interest rates on a bond issue generally are lower the shorter the average maturity.

Revenue Debt Dependent on State Appropriations

The majority of State revenue-supported bonds is secured primarily by the revenues generated by the project for which the bonds are issued (e.g., Alaska Industrial Development bonds). In most instances they are not general obligations of the State and bondholders have no legal recourse to State tax revenues (the exception is the AHFC veterans housing mortgage revenue bonds, described below). However, certain revenue-supported debt is considered to be

---

1 Salomon Brothers Monthly Average is for "Good Grade" bonds of similar average maturity.

tax-supported debt when the project's revenue stream is dependent upon State appropriations. This occurs with two non-State debt issuers in Alaska; the University of Alaska and the lease-revenue bonds of the Alaska State Housing Authority. The issuance of revenue bonds does not require voter approval; however, both houses of the legislature determine the annual bonding authorization for each issuer through the budget approval process.

The tax-supported revenue bond borrowing programs are described below.

University of Alaska Revenue Bonds - In addition to issuing general obligation bonds to finance university-related projects, the State issues revenue bonds for specific university purposes that can be secured by project revenues. The facilities which have been financed using revenue bonds include the Anchorage student center, the Anchorage campus utility system, and university dormatories. The student center, utility system, and campus housing bonds, are all secured by student fees and user charges. The University of Alaska Heating Corporation bonds are secured by lease payments made by the university from general fund appropriations.

Following is the amount of debt outstanding (as of June 30, 1982) on university projects financed using revenue bonds:

Anchorage Energy Utility System	$665,000
Anchorage Campus Student Center	4,680,000
University of Alaska Heating Corp.	6,950,000
Fairbanks Campus Housing	8,010,000
TOTAL	$20,305,000

These bonds are not general obligations of the State; however, because the debt may be payable from State appropriations to the University for general operating purposes, the bonds are considered to be direct, tax-supported, obligations of the State.

Moody's Investors Service has assigned a credit rating of Baal to the university revenue bonds. This rating is lower than the State's due to the lower security of student fees and the tentative and discretionary nature of State appropriations that are pledged to retire the debt.

Alaska State Housing Authority - The Alaska State Housing Authority (ASHA) is a public corporation of the State authorized to:

- construct, operate, and manage low income housing projects;
- finance rental housing projects;
- engage in urban renewal programs; and
- construct and acquire public buildings for lease to the State.

Most of the debt that has been issued by ASHA to date has been for the latter purpose. These bonds are refered to as lease-revenue bonds because they

are secured by long-term leases with the State for the public buildings. All structures leased to the State are operated and maintained by the State. The bonds are not general obligations of the State; however, the State makes annual lease payments to ASHA which are of an amount sufficient to cover the necessary debt service. Therefore, the lease-revenue bonds are considered to be direct, tax-supported, obligations of the State.

In spite of the security of the State's lease payments behind ASHA lease-revenue bonds, the bonds are rated A by Moodys Investor's Service, a full notch below the State's AA credit rating. This is because the State's (appropriation) pledge to make lease payments is not as strong as its general obligation (full faith and credit) pledge. The State's leases with ASHA are subject to the legislature annually appropriating the lease payments. If the legislature should fail to do so, ASHA would have difficulty making the required debt service payments.

ASHA is starting to become active in the Section 8 housing program and to act as a financing source for local housing authorities. To date, the only bond issue for this purpose occured in August 1982 in the amount of $2.39 million. This debt is not considered to be a direct obligation of the State because the revenue pledged to retire the bonds does not rely on State appropriations. As of December 31, 1982, ASHA had the following debt outstanding:

State Lease-Revenue Bonds	$67,125,000
Low-Income Housing Bonds	2,390,000
Total	$69,515,000

Indirect State Debt

AHFC Veterans Housing (General Obligation) Bonds - In the 1982 general election, voters approved an ammendment to Article IX, Section 8 of the Alaska Constitution that permits the State to guarantee unconditionally as a general obligation of the State the payment of principal and interest on certain revenue bonds issued by the AHFC for the purpose of purchasing mortgages made for residences of qualifying veterans. The ammendment provided that the maximum amount of State G.O. bonds that may be issued for this purpose is $400 million.

These bonds are known to investors as "doublebarrelled" because there are two distinct forms of security behind the bonds. Their first lein is on the revenue stream generated by the mortgages made from bond sale proceeds. Additional security to bondholders is provided by the general obligation pledge of the State to make the required debt service payments in the event that revenues are insufficient. These are the only AHFC bonds (and the only State revenue bonds) which carry the State's direct G.O. pledge. The constitutional ammendement permitting AHFC to issue such debt was necessary in order for the AHFC to continue issuing tax-exempt mortgage revenue bonds. The U.S. Mortgage Subsidy Bond Tax Act passed by Congress in 1980 restricted the ability of states or public corporations to sell tax-exempt housing bonds above specified ceilings unless they were also general obligations of the issuing state.

As a consequence of the 1980 legislation, the AHFC had been raising capital by issuing the more expensive taxable bonds because the Alaska Constitution prohibited the issuance of State G.O. bonds for other than State capital improvements.

It is important to note that the State's general obligation pledge was not needed in order to make the bonds attractive to investors, or to improve their security structure. The "double-barrell" bonds are being issued solely to circumvent the federal restrictions on the issuance of tax-exempt mortgage revenue bonds mentioned above. In recognition of the independent creditworthiness of the Vetrans bonds, the bonds are rated higher than the State itself. Whereas the State's rating on its general obligation bonds is Aa/AA-, the AHFC veteran's housing bonds are rated Aa/AA. Although the difference between a Standard & Poor's rating of AA and AA- is a fine distinction, it is a sign that the veterans bonds are not being rated on the strength of the State's general obligation pledge, but on their own merit.

Because of the strong support behind the bonds, independent of the State's general obligation pledge, this debt is not considered to be direct tax-supported debt as is other general obligation debt. However, if problems in the administration of the vetrans program were to arise, the bonds would be treated as general obligation debt. These bonds are still indirect obligations of the State, just as are AHFC moral obligation-backed bonds. Since the November 1982 election which authorized their issuance, there have been two issues of AHFC State Guaranteed Bonds, totaling $175 million. Because the bonds are general obligations of the State, their issuance must be approved by the State Bond Committee.

Moral Obligation Bonds of State Public Corporations

Moral obligation (M.O.) bonds, as issued by Alaska's public corporations, are secured primarily by revenues generated by the purpose for which the bonds are issued and are not direct tax-supported obligations of the State. Neither State tax revenues nor State appropriations are pledged to retire the revenue bonds. However, such debt is an indirect, contingent obligation of the State because in the event that revenues of the corporation which issues the debt are insufficient to meet debt service commitments, the State has a "moral obligation" to appropriate the required funds.

The State has declared its moral obligation backing of State corporate debt in the original enabling legislation of the public entity. For example, the State's M.O. pledge behind bonds issued by the Alaska Industrial Development Authority reads as follows: (Alaska Statutes Sec. 44.88.105)

> (d) The chairman of the authority shall annually, no later than January 2, certify in writing to the governor and the legislature the amount, if any, required to restore a capital reserve fund to the capital reserve fund requirement. The legislature may appropriate to the authority the amount

certified by the chairman of the authority. ...Nothing in this section creates a debt or liability of the state.

The capital reserve fund mentioned in the statute is generally equal in size to the minimum amount of debt service required in any year. It is common for issuers of revenue bonds to include a capital reserve or debt service reserve fund in the structure of the bond offering for it lends additional security to the bondholders and helps ensure the highest possible credit rating for the bonds. Alaska's moral obligation provision means that if the debt service reserve fund should fall below its required level, the State legislature may, but is not legally required to, appropriate the funds sufficient to restore the captial reserve fund to its required level. The most likely reason that such a reserve fund would fall short of the required level is if agency revenues were insufficient to meet a given debt service payment and the reserve fund had to be used to make the payment.

Similar clauses were included in the enabling legislation of each of the other State corporations. Consequently, the State's M.O. stands behind the debt issued by the Alaska Municipal Bond Bank, the Alaska Power Authority, the Alaska Medical Facility Authority, and certain bonds issued by the Alaska Housing Finance Corporation.

Alaska Municipal Bond Bank - The Alaska Municipal Bond Bank is a public corporation administratively located within the Department of Revenue but with a separate and independent legal existance. It was established in 1975 in order to loan funds for capital construction to cities and boroughs in the State. The Bank raises the money it loans to the municipalities through the issuance of tax-exempt bonds. The Municipal Bond Bank bonds are general obligations of the Bank alone, and are not obligations of the State of Alaska. The State has pledged its moral obligation to the maintenance of the debt service reserve fund, however.

The Bank loans funds to local governmental units through the purchase of general obligation and revenue bonds of the localities. Instead of directly selling a bond issue in the national bond market, a city may sell its bonds to the Municipal Bond Bank. The Bank collects several such bond issues and consolidates them into a single bond issue which it sells on the national market. The interest rate bid on the Bank's bonds becomes the rate the localities must pay to the bank. The Bank is, therefore, a middleman -- facilitating the debt issuance of smaller units of government.

The advantages to Alaska's localtities are several. First, interest rates tend to be more competitive (i.e., lower) because of the additional security local bonds enjoy through the structure of the Bond Bank. Also, by pooling the bond issuances of localities the Bank's bond issue is larger than the individual offerings would be and the lower administrative costs can be shared by the localities which comprise the Bank's issue. The Bank's bonds are rated A by Moodys Investors Service. This is a higher rating than many of Alaska's smaller, lesser known, municipalities could acheive on their own. Purchasers of the

SOURCE: Alaska Municipal Bond Bank, Official Statement, March, 1983.

Bank's bonds have additional security that would not be available from purchasing, for example, the City of Ketchikan's bonds directly (the City of Ketchikan is rated Baa). The increase in bond rating translates into lower interest costs. Finally, the Bond Bank, carrying the Alaska State name, is better known than many of Alaska's smaller units of government. This enhances the marketability of the bonds to investors in the "lower 48".

A listing of the debt outstanding to the Bond Bank by each municipality that has issued bonds through the Bank is provided in Table 3.11. With the exception of MatanuskaSusitna Borough and the City of Fairbanks, the municipalities that have used the Bank are rated Baal or lower (or are unrated). The A rating of the Bank's bonds, therefore, has resulted in significant savings in interest costs especially to these communities.

The security behind the bonds issued by the bank, which is multi-layered, is as follows:

1. First, the pledge and assignment of the individual general obligation municipal bonds which the Bond Bank's bond proceeds will be used to purchase.

2. Second, a debt service reserve fund must be maintained at a level equal to 15% of the principal amount of the Bank's bonds outstanding. The reserve account is funded through two sources. State appropriations to the Bank make up 10% of the principal amount. The remaining 5% is borrowed along with each bond issuance.

3. Third, the Bank has a first claim on State aid payments to localities (including school aid payments, the local share of various taxes collected by the State, and State aid to local governments) if the local government defaults on its obligation.

4. Finally, the State has pledged its moral obligation to maintain the debt service reserve fund at its proper level.

Upon creation of the Bond Bank by the State in 1975, it was authorized to have a maximum of $150 million in debt outstanding. The State appropriated to the Bank an amount equal to 10% of the maximum authorization ($15 million) partially to fund the debt service reserve account. As of the Bank's most recent issuance (March 1983) $ 123,540,000 in general obligation bonds had been issued. In addition to general obligation bonds, the Bank has issued a limited amount of revenue-supported debt and federally guaranteed bonds under the Costal Energy Improvement Program (CEIP). Out of a total amount of $160,097,300 issued since 1976, the following debt remains outstanding:

Table 3.12

Alaska Municipal Bond Bank Issues
1976 - 1983

GENERAL OBLIGATION BONDS Date	Purchased From	Amount Issued By Bank[1]	Amount Outstanding as of 4/1/83	Interest Range
June 1976	Kodiak, Seward	$3,150,000	2,720,000	N/A

July 1980	Ketchikan Airport	$ 410,000	$ 410,000	6.2-8.5%
April 1982	Fairbanks Utility	4,440,000	4,440,000	10.25-11.4%
TOTAL REVENUE		$ 4,850,000	$4,850,000	
Coastal Energy Improvement Program Bonds[3]		$31,707,300	$31,467,300	
TOTAL BOND BANK		$160,097,300	$149,997,300	

SOURCE: Alaska Municipal Bond Bank, Official Statement, March, 1983.

1/ Amount issued by the Bank is approximately equal to the amount of bonds purchased by the Bank plus 5 percent for the debt service reserve fund contribution.
2/ Bonds issued under 1980 Resolution.
3/ Federally guaranteed.

Total Municipal Bond Bank Bonds Outstanding

General Obligation Bonds	$113,680,000
Revenue-Supported Bonds	4,850,000
CEIP Bonds	31,467,300
TOTAL	$149,997,300

An itemization of these amounts is provided in Table 3.12. Of the $149.9 million currently outstanding, only the general obligation and revenue bonds are indirect obligations of the State, carrying its moral obligation. The CEIP bonds are securred by the federal government and do not have a claim on the the reserve fund established for the general obligation bond series. At the end of fiscal year 1983 the Bond Bank had exhausted all but $2,700 of its original authorization of $150 million. During the 1983 legislative session, however, the State Legislature appropriated an additional $20 million to the Bond Bank, increasing its borrowing capacity by $200 million.

Alaska Medical Facility Authority - The Alaska Medical Facility Authority is a public authority administratively located in the Department of Revenue with a separate and independent legal existence. The Authority was created by the legislature in 1978 to finance construction and improvements to medical facilities in the State. As of April 1983, the Authority had sold one bond bond issue in October 1979, of $12 million to finance improvements to a Fairbanks hospital. The bonds, rated Baa1 are securred by hospital lease payments and are not a direct obligation of the State; however, the State has pledged its moral obligation to the maintenance of the debt service reserve fund. The outstanding debt of the Authority at the end of fiscal year 1982 was $11,410,000.

Alaska Housing Finance Corporation - The Alaska Housing Finance Corporation (AHFC) is a public corporation administratively located within the Department of Revenue but has a separate and independent legal existance. AHFC was chartered in 1971 to provide financing for low- and moderate-income housing and housing located in remote, underdeveloped, or blighted areas of the State. Since 1980, when the AHFC's powers were expanded by removing mortagagor income restrictions, the Corporation has emerged as the largest supplier of mortgage funds in the State, in addition to being the largest issuer of debt (taxable and tax-exempt). Table 3.13 indicates the amounts of AHFC borrowing since 1972, and that 76 percent of this borrowing has occurred since 1980.

The bonds issued by the AHFC are securred by the mortgages purchased with bond proceeds, including federal and private mortgage insurance, state appropriations, a reserve fund, and in certain instances, the State's moral obligation pledge. In addition, the AHFC has issued certain veterans housing bonds which carry the full faith and credit pledge of the State (discussed above).

(000s)

1972	$ 13,500
1973	49,000
1975	52,000
1976	45,000
1977	123,000
1978	146,225
1979	170,600
1980	503,800
1981	650,000
1982	652,000
1983 (to 5/30/83)	175,000
Total	$2,580,125

Source: Alaska Housing Finance Corporation, Selected Corporation and Program Information, December 1982, revised with 1983 data.

The AHFC operates many other loan programs aside from the State guaranteed Veterans Housing bonds. The amounts issued under each program and the amounts outstanding are presented in Table 3.14. The largest program is the Insured Mortgage Program which issued approximately $984 million from 1975 to 1980. Borrowing was curtailed in 1980 due to federal restrictions on tax-exempt housing mortgage revenue bond issuance. The bonds are securred by the mortgages and a 10% capital reserve fund which the State has pledged its moral obligation to replenish if mortgage income is insufficient to meet debt service. Approximately $953 million is presently outstanding.

The second largest program is the State Assisted Mortgage Program, with $875 million issued and currently outstanding. Bonds issued under this program are taxable, because of federal restrictions enacted in 1980 on the use and amount of state tax-exempt housing bonds that may be issued. This program is not subject to the State's moral obligation. The only other program carrying the State's moral obligation is the one issue of $15 million home improvement loan bonds.

As Table 3.14 indicates, AHFC has $2.4 billion in taxable and tax-exempt debt outstanding. Of this amount, slightly less than $970 million (38 percent) is backed by the State's moral obligation. The moral obligation bonds, plus the State fully guaranteed bonds issued to date of $175 million, are included as indirect debt of the State. Indirect AHFC debt therefore amounts to $1.14 billion or 45 percent of total AHFC debt outstanding as indicated below.

AHFC Debt Outstanding

State Back-Up	Amount (millions)	Percent
General Obligation	$ 175.00	7
Moral Obligation	967.60	38
No Liability	1,390.90	55
TOTAL	$2,533.50	100

Alaska Industrial Development Authority - The Alaska Industrial Development Authority (AIDA) is a public corporation administratively located in the Department of Commerce and Economic Development but with a separate and independent legal existence. AIDA was created in 1980 as the successor to the Alaska State Development Authority. AIDA promotes economic development within the State by providing lowinterest loans to industrial and commercial projects. None of the tax-exempt bonds issued to finance the loan programs are direct obligations of the State; however, the State's moral obligation stands behind the debt service reserve fund which securs certain bonds issued by AIDA.

AIDA has three major loan programs. The Economic Development "Umbrella" Bond Program issues tax-exempt industrial development bonds to finance projects of $1 million or less. Because of their small size, the projects financed under this program are grouped together when AIDA issues bonds, hence the title "umbrella". AIDA does not directly loan bond proceeds. Proceeds of the Authority's bond sales are used to purchase eligible loans from financial

* Backed by State Moral Obligation
** Taxable Bonds
*** Backed by State General Obligation

institutions in the State. Security for AIDA's bonds comes from the financed projects, a capital reserve fund established by the State for the Authority, and the full faith and credit of the Authority. This program's debt is considered to be an indirect obligation of the State.

The second program, the Consolidated "Umbrella" Bond Program, is similar to the Economic Development "Umbrella" Bond program except the projects financed are of amounts larger than $1 million. The bonds are secured by the Authority's general obligation and the moral obligation of the State. As of December 1982, $101,325,000 of umbrella bonds from both the economic development and consolodated loan programs were outstanding.

The following amounts of umbrella bonds have been issued:

1981	$17,640,000
1982	60,480,000
1983	23,205,000

In its third and largest loan program, the Revenue Bond Program, AIDA acts as a conduit in the sale and issuance of certain industrial development bonds on behalf of private borrowers who secure the bonds entirely. AIDA does not participate financially in the projects nor is the Authority's full faith and credit pledged as security for the bonds. Bonds issued under this program are not considered to be obligations of the Authority or the State. Furthermore, the State's M.O. does not stand behind bonds issued through the revenue bond program. At the end of December 1982, $310,690,185 was outstanding under this program.

Alaska Power Authority - The Alaska Power Authority (APA) is a public corporation of the State situated for administrative purposes in the the Department of Commerce and Economic Development but with separate and independent legal existence. The APA was created to finance, construct, and operate power production and transmission facilities. The Authority is subject to the Executive Budget Act (Alaska Statutes 37.07) and must receive legislative authorization for the financing of any project which involves the appropriation of state funds or that exceeds 1.5 million megawatts of installed electrical generating capacity.

To date, the APA has issued only short-term bond anticipation notes with maturities of three years or less. Presently, $200 million is outstanding with the first maturity of $35 million in May 1984. Of the remaining shortterm notes, $50 million matures in October 1984 and $115 million in May 1985. The notes are rated MIG-1 by Standard & Poor's. MIG-1 is the rating assigned to the highest quality borrower enjoying strong credit protection with adequate cash flows for servicing the debt. The APA short-term notes are so-rated because of a letter of credit backing from various AAA-rated banking institutions. For an annual fee, certain banks will provide issuers with a letter of credit that acts as an external credit support, much like municipal bond insurance. Because the short-term notes are "variablerate" notes -- meaning the interest rate paid to

noteholders is not fixed but changes monthly according to a predetermined index -- a letter of credit was necessary in order to market the bonds. This is true of virtually all variable or floating rate notes.

Other Obligations of Public Corporations

International Airport Revenue Bonds - These bonds have been issued to finance improvements to the State's two international airports and are secured by a first lien on gross revenues derived from airport operations; however, they are also "special" obligations of the State. If airport revenues were ever insufficient to meet debt service requirements, it is likely that the State would be called upon to make up the difference.

The bonds are issued by the State Bond Committee with the approval of the Commissioner of Transportation and Public Facilities. The Commissioner is required by each bond resolution to fix and collect fees, charges and rentals for the use of facilities of the International Airports sufficient each year to provide net revenues at least equal to 130 percent of debt service requirements during that year. Table 3.15 indicates that over that past seven fiscal years, net revenues have far exceeded the amount required to pay debt service.

The State is authorized by statute (A.S. 37.15.410) to issue a maximum of $43.325 million in international airport revenue bonds. Of this amount, $34.825 million (80 percent) had been issued as of April 30, 1983. The February 1975 issue (the most recent) was defeased (retired early) in July of 1975 because the bond proceeds were no longer required upon cancellation of the Anchorage Terminal Expansion Project. Therefore, these bonds are no longer considered to be outstanding. The net amount of International airports revenue bonds outstanding as of June 30, 1982 was $18,285,000.

Municipal Debt

In addition to Municipal Bond Bank debt issuance on behalf of Alaskan municipalities, local governments in the State issue debt independently in the tax-exempt bond market. At the end of fiscal year 1982, approximately $1.3 billion in general obligation debt and $347.4 million revenuesupported debt was outstanding at the local government level. The debt of Alaska's localities, therefore, comprises approximately 43 percent of the total amount of public debt outstanding in the State. The debt position of local governments in the State is described at length in Section Five of this Report.

Other Long-Term Obligations

Public Pension System Liabilities - The State administers two major retirement systems: the Public Employees Retirement System (for State employees and employees of political subdivisions who elect elect to join the system), and the Teachers Retirement System (for teachers and school

Table 3.15

International Airports Revenue Bonds
Coverage Ratios
1975 - 1982

Fiscal Year	Net Revenues (millions)	Debt Service (millions)	Coverage of Net Revenues Over Debt Service[1/]
1975	$ 5.6	$ 2.1	266%
1976	5.6	1.9	294
1977	7.4	1.9	389
1978	10.0	1.9	526
1979	12.6	1.9	663
1980	13.6	1.9	775
1981	15.9	1.9	836
1982	14.6	1.9	768

SOURCE: Department of Administration, Bonded Debt and Debt Service, Fiscal Years ended 1982.

1/ required coverage 130%.

administrators). The difference between the present value of accrued benefits for employees who are covered by the pension system and the value of the particular pension system's assets is the amount of the State's unfunded liability. The unfunded pension liability is not generally treated by the rating agencies or investors as "debt" unless it is judged to constitute a significant burden on the State; however, it is an long-term obligation of the State.

Acording to William M. Mercer, Inc., the unfunded current liability for each of the State's public pension systems at the end of fiscal year 1982 was as follows:

Public Employees Retirement System
(dollars in millions)

Present Value of Accrued Benefits	$775,115
Value of Assets	613,653
Unfunded Liability for Accrued Benefits	161,462
Unfunded Liability as Percent of Benefits	20.8%

Teachers Retirement System

Present Value of Accrued Benefits	$587,016
Value of Assets	451,650
Unfunded Liability for Accrued Benefits	135,366
Unfunded Liability as Percent of Benefits	23.1%

Both of these systems are considered to be "fully funded" since the ratio of assets to accrued benefits, (i.e., the unfunded pension liabilities) is 77 to 80 percent for both of the retirement systems. Unfunded pension liabilities are generally not considered to be a contingent liability until this ratio drops below 60 percent. The State's pension liability, therefore, does not need to be included in calculation of the indirect debt of the State.

Local School Construction Debt - A portion of the State's education assistance program to independent school districts consists of the partial reimbursement for cash expenditures on school construction and debt service on bonds issued to finance school construction. As described in Section Five, approximately $641 million in school construction debt was outstanding at the local level at the end of fiscal year 1982. The State's legal commitment to repay this debt is restricted to the annual appropriation allocated to this purpose by the legislature; however, because the bonds were issued with the expectation of some level of State assistance, a de facto moral obligation to provide assistance with debt service on school construction debt exists at the State level.

Conclusion

From a territory that had slightly less than $3 million in debt outstanding when it received statehood to today, with nearly $6 billion outstanding from a variety of public issuers, long-term debt has played an important role in Alaska's development. The borrowing programs profiled above have served the public by financing service provision, education, housing and industrial development. However, because of the large amounts of debt that have been issued from within the State, the interrelationship of the different types of debt, issuers, and the State is an important concept that must be incorporated into State's financial managerment.

Classification of outstanding State-level debt using the criteria presented in this section will improve the ability of State officials to manage outstanding debt and plan future debt issuance. Table 3.16 presents such a classification of Alaska's debt position as it nears the end of fiscal year 1983. The two most important points that this exercise illuminates are: 1) general obligation debt is not the only State-level debt supported by tax revenues; and 2) indirect (moral and special obligation) State debt comprises a significant share of total State-level debt. According to Table 3.16, over 65 percent ($2.6 billion) of State-level debt is either direct tax-supported or indirect moral or special obligation debt while only 23 percent ($946 million) is general obligation debt. Therefore, the use of general obligation debt as the sole measure of State indebtedness understates Alaska's contingent debt position.

It is recommended that the State Bond Committee make use of the concepts of direct tax-supported debt and indirect moral and special olbigation debt when assessing the State's curreint debt position. Such a categorization is more accurate for analytical purposes and more proper for improving debt management than G.O. debt alone. The information from this exercise should also be included in the State's official statements for future debt offerings presented in a format similar to Table 3.16.

CHAPTER IV

MARKET PERFORMANCE AND RECEPTION OF STATE GENERAL OBLIGATION BONDS AND THE ALASKA HOUSING FINANCE CORPORATION

Investors in tax-exempts continually segment the myriad of different issues and issuers into classes of approximately similar standing. Distinctions between general obligation and revenue bonds serve as one example. Institutional investors often refine the market segments to separate housing revenue bonds from public power bonds and many institutions will have portfolio-balancing policies or rules to enforce the perceived benefits from portfolio diversification, on both a type-of-bond and geographic basis. Another method of categorization is the credit quality of an issuer. Exhibit 4.1 lists state credits by their June 1982 Moody's rating. One important and well-defined market segment is the high-grade state general obligation (GO) credit, which can be broadly-defined to include triple-A (Aaa) and well-regarded double-A (Aa) rated states. Alaska, with its June 1980 upgrading by Moody's Investors Service, can now be regarded as a member of this peer group. For comparative purposes the subsequent analysis will compare Alaska State GO market performance with four defined segments of the high-grade state market:

- States that have consistently maintained a Moody's Aaa rating over the 1978-82 period;
- States that have consistently maintained a Moody's Aa rating;
- States that have been downgraded to Aa over the period; and
- States that have been upgraded to Aa or Aa1 over the 1978-82 period.

The states comprising each group are listed in Exhibit 4.2.

Table 4.1 compares the volume of Alaska GO State new issues with these sample groups. New Alaska debt issuance has risen consistently over the 1977-82 period, except in the difficult period of high interest rates, (calendar year 1981), when Alaska issued no bonds. During the 1977-82 period, State debt commanded a four-fold increase in its market share amoung all high-grade states. In 1977, Alaska's $80 million in new financings accounted for only 2.1% of the $3.7 billion in Aaa or Aa-rated state new issues; by 1982, Alaska's $385 million accounted for 8.2% of this market segment.

Selected Sample States

States Consistently Maintaining Aaa Ratings	States Consistently Maintaining Aa Ratings
Georgia	Alabama
Illinois	Connecticut
Maryland	Florida
Missouri	Idaho
New Jersey	Kentucky
North Carolina	Louisiana
Oklahoma	Mississippi
South Carolina	Nevada
Tennessee	Ohio
Texas	Rhode Island
Utah	Vermont
Virginia	

States Downgraded to Aa Ratings	States Upgraded to Aa Ratings
California	Delaware
Minnesota	Maine (to Aa1)
Wisconsin	Montana (to Aa1)
	New Mexico (to Aa1)

Two other points are worth noting from the data in Table 4.1. The volume of new debt commitments from states that were rated Aaa at the outset of this period but subsequently downgraded to Aa (California, Wisconsin and Minnesota) stands out as one example. For these states, average new issue volume per state was more than twice the average for states that maintained a triple-A rating over the period, and this markedly higher volume (especially in the 1977-80 period) serves as one precursor of the negative rating change.

By marked contrast, states that were upgraded over this same period (including Alaska, until the large increase in 1982) stand out for the very modest volume of new obligations. Average borrowings from these states were only 20-30 percent of the new commitments issued by other Aa-rated states.

The lessons embodied in these data are clear: regardless of the level of other resources that are important in determining debt capacity, the pace at which new claims on State resources are added through the debt issuance process can have a measurable impact on perceived credit quality.

Market Performance of GO Bond Issues

One measure of market demand for Alaska GO debt is the number of competitive bids received from underwriters — investment bankers and commercial banks. Underwriters serve as important intermediaries in governmental finance, purchasing bond issues from borrowers and then distributing bonds to investors. Underwriters bear risks in this distribution effort because the purchase price to the issuer is fixed at the time of sale but investor demands may change during the distribution period. In a manner similar to other goods and services, the stronger the demand for the product (e.g. the bond issue), the less uncertainty faced by underwriters and the greater the number of potential underwriters. Exhibit 4.3 lists the managing underwriters for recent State bond sales and highlights the broad appeal of Alaska bonds to underwriters. This data also suggests indirectly that Alaska debt must be designed to appeal to the national market: the absence of underwriters domiciled in Alaska attests to a relatively weak "domestic" market.

Table 4.2 presents statistics on the average number of bids received on selected Stat GO bonds. Of particular interest, Alaska bonds have received fewer bids since 1980 than in prior years, even though the upgrading of Alaska debt in 1980 could be expected to broaden the appeal of State bonds to investors.

Two factors have contributed to the decline in bid activity. First, as reference to the other state statistics points out, there has been a general trend towards fewer bids since 1980. Exhibit 4.3 points up a corollary — namely, that the number of firms combining to form a syndicate has been increasing. These events — fewer bids and larger syndicates — are responses dictated by the risks of underwriting in markets with high and volatile interest rates.

States Downgraded To Aa	3.0	3.0	3.3	3.0	3.3	3.1
States Consistently Rated Aaa	4.8	4.2	4.4	3.7	3.7	3.5

A second factor at work is the vastly increased size of new Alaska debt issues. Larger issues add to the distribution risks faced by underwriters and the typical response is, again, the formation of fewer but larger bidding syndicates. A parallel observation supporting this is the consistently lower number of bids received on the large volume of issues from states subsequently downgraded to double-A.

Table 4.3 provides a direct measure of the relationship between issue size and number of bids received for all state GO bonds issued in 1982. Bond issues less than $20 million received, on average, 8.7 bids, while issues between $50 and $100 million received 3.5 bids and bonds of $100 million or more received only 2.8 bids on average.

These comparisons suggest that Alaska's recent increases in bond issue size have been unfortunately timed to place underwriters with the "double jeopardy" of marketing significantly larger issues in an increasingly hostile and volatile market.

Underwriting Spreads

Underwriters specialize in bearing the risks of distributing securities at fixed prices and they are compensated for these risk-bearing services through the gross underwriting spread. The underwriting spread is the difference between the price paid to the issuer for the bonds and the prices at which they are reoffered (and hopefully sold) to investors. The amount of the spread is determined partially by the anticipated degree of effort required to sell the bonds. Generally the more difficult it is to sell or issue, the spread will be higher. Table 4.4 provides statistics on these underwriting spreads for sample state GO bonds since 1977.

These data indicate that the costs of underwriting Alaska GO bonds have risen dramatically since 1977, from $6.71 per $1000 par value in 1977 to $10.30 per $1000 par value in 1982. The rising costs of underwriting are not unique to Alaska. Table 4.4 points out that the costs of underwriting other state bonds has risen as well. States maintaining Aa-ratings over the period have witnessed underwriting spread increases from $8.32 per $1000 in 1977 to $12.73 per $1000 in 1982, a 53 percent increase. Again, the rising risks of entering the volatile credit markets of the past three years account for the increased returns demanded by underwriters for bearing these risks.

Of particular importance, however, is the noticeably lower cost of underwriting for Alaska bonds relative to other states that maintained double-A bond ratings over this period. In 1980, the difference amounted to $5.79 per $1000 par value. As an indication of the magnitude of this lower underwriting spread, this savings translates into $723,750 in lower underwriting charges on the $125 million in Alaska bonds issued in 1980. In 1982, the lower spread of $2.43 per $1000 translates into savings of $935,000 on the $385 million in new Alaska bonds.

Total Number Of Issues	11	6	11	21
Average Number Of Bids Per Issue	8.7	3.8	3.5	2.8

Table 4.5 points to the principal factor explaining the significantly lower underwriting spreads on Alaska GO bonds. Alaska has consistently issued new debt with relatively short average maturities. In 1982, for example, the average maturity on Alaska bonds was 5.5 years, compared with 8.7 years for states recently upgraded and with more than 11 years for all sample states.

The shorter average maturity reduces interest costs at the time of sale since the tax-exempt yield curve is upward sloping. Interest rates for bonds maturing in, say, 3 years are less than rates for bonds maturing in 10 years. Short maturities also translate into reduced underwriting risks as well. Price changes, which affect underwriter revenues, are less on short-dated securities and demand by banks is concentrated among securities with 10 years or less to maturity.

Interest Rates on Alaska State Bonds

Comparing interest rates on new bond issues is difficult because each new issue differs in several important ways. Most bond issues are sold as serial bonds, with varying amounts of principal maturing each year over the life of the issue. And, as just noted, Alaska bond issues carry significantly shorter maturities than most other comparable state bonds. Moreover, borrowing costs on any given maturity on any given bond issue can be closely associated with the then current market conditions.

Most generally, three broad and interrelated determinants combine to explain the interest rate on a specific bond issue:

1. Issuer characteristics: Credit quality and the risk of default; name recognition, and

2. Issue characteristics: the issue's average maturity, its size, its type, and the method of sale; and

3. Market characteristics: the overall level and trend of interest rates and aggregate investor demand for tax-exempt securities.

Therefore, evaluating the relative market performance of Alaska State GO debt requires a careful matching of these characteristics with other comparable bond issues.

As a first stage of comparison, Table 4.6 compares interest rates on Alaska bonds with other double-A rated state bonds sold within two weeks of the Alaska sale. The combined requirements of double-A rating and an approximately coincident sale date permit comparisons with 5 of the 6 Alaska bond sales since 1978. Based on the net interest cost (NIC)[1] of the entire bond issue, Alaska has consistently carried lower borrowing costs than other comparable states, but these differences are based largely on the far shorter average maturities on Alaska bonds.

Table 4.4

States Consistently Rated Aaa	11.9	11.9	12.4	12.9	11.2	11.1

More revealing is the comparison of reoffering yields to investors on selected bond maturities. These reoffering yields are measures of the returns required by investors to purchase specific bonds, therefore this measure avoids the problems associated with different average bond issue maturities and comparisons using NIC.

Table 4.6 points out that prior to the June 1980 upgrading of Alaska's bond rating, Alaska GO bonds carried yields above states with double-A bond ratings. Although the June 1980 issue carried an Aa rating, yields on Alaska debt remained well above yields on Louisiana State bonds.

By October 1982, however, new Alaska issues were carrying demonstrably lower yields than comparable maturities on California and Connecticut bond issues. Although these data are somewhat sparse, the matched comparisons suggest that the marketplace, in consent with the opinion of Moody's analysts, has upgraded the performance of Alaska GO debt in the past 5 years. The technical appendix to this section reports the results of a statistical analysis that has been developed as an alternative approach to the evaluation of relative state bond interest costs. This procedure — multiple regression analysis — permits valid comparisons of relative costs on bonds sold with differing characteristics over distinct time periods. This statistical analysis has been applied to a sample of 254 state bonds to develop predictive measures of interest cost on Alaska bonds. By comparing the actual NIC on Alaska bonds with the predicted costs, this analysis can provide a measure of relative market standing.

The results, summarized in Table 4.7, suggest that the NIC on Alaska debt is lower than would be predicted for the average double-A rated state bond sold over this period. The statistical approach indicates that since June 1980, Alaska bond issues have carried NICs that are on average, 51 basis points lower than would be predicted. Prior to 1980, this difference averaged only 20.5 basis points. Expressed in different terms, the 51 basis points in lower NIC translates into $14.3 million in interest savings over the approximate 5 1/2 year average life of the $510 million in new Alaska bonds issued since 1980.

Secondary Market Yields

The prior analysis of relative borrowing costs has focused on new issue interest rates. Borrowing costs at the time of sale are generally of most concern to governments since these rates directly affect future budgets. But, investors have a broader perspective and they are continually revising their portfolio holdings through transactions in the secondary market. Underwriters, broker/dealers and investors follow closely the relationships among securities in daily secondary market trading to detect important clues to supply and demand conditions for individual securities as well as broad market trends. These constantly shifting secondary market yield relationships often provide early indicators of market sentiment prior to the offering of a new bond issue.

4-10-79	5.592	5.493	9.9
6-24-80	5.767	6.347	-58.0
3-10-82	9.985	10.621	-63.6
10-20-82	7.728	8.042	-31.4

Note : See technical appendix to this section for an explanation of the technique used to predict NIC.

To provide a secondary market perspective on Alaska State debt, selected national traders were polled on May 5, 1983 to get the secondary market yields on a 10-year bond for selected states. The results of this poll are tabulated in Table 4.8.

These data show a fairly narrow band of yield differentials ranging from 7.60% on 10-year maturities for Maine and Minnesota bonds to 7.90% on 10-year Nevada bonds. Alaska falls exactly midway in this range with an estimated yield of 7.75 percent. These comparisons suggest that, at present, Alaska has a well-defined status as a high-grade state credit, solidly entrenched among the broad range of states carrying similar bond ratings.

Investor Perceptions of State General Obligation Bonds

Interest rates and underwriting spreads established in the marketplace represent an amalgam of the investment choices of many different individuals and institutions. The market reception and performance of Alaska's bonds can, therefore, be viewed as a summary expression of investor perceptions of the relative value of the State's creditworthiness. As part of this study, further and more detailed expressions of investor sentiment were elicited from key participants in the municipal bond market.

As its market performance indicates, Alaska is viewed by most investors as a high-grade AA credit. However, many investors expressed concerns over the future security of state revenues that some believe are too dependent on oil and, therefore, overly exposed to fluctuations in world oil prices. Indeed, one professional market observer quipped, "Alaska is a giant industrial development bond, tied to the fortunes of the oil companies". This sentiment is mirrored in the credit analyses of Alaska general obligation debt by two major participants in the municipal bond market excerpted below:

Continental Illinois National Bank:

> Alaska currently enjoys a very strong financial position and has an impressive natural resource base; however, its economy depends heavily upon oil and gas production and defense expenditures. In addition, Alaska's debt load is high, and income growth in the State has slowed considerably. Alaska ranks near the bottom of "Aa" rated states.

E.F. Hutton:

> The mineral-rich State of Alaska may have to adjust to the current period of softening oil prices, during which its revenue stream may grown more slowly than has been the case during recent years. Although the balance of the Permanent Fund may approach $4 billion by the end of fiscal year 1982, the uses of the Fund are restricted by State legislation. We are maintaining our Mid-A rating, but revising the trend from improving to stable in view of the reduced surplus margins in the general fund.

Table 4.8

Estimate of Secondary Market Yields On 10-Year Maturities

Of Selected State GO Bonds

May 5, 1983

State	Yield
Maine	7.60%
Minnesota	7.60
California	7.70
Connecticut	7.70
Florida	7.70
Louisiana	7.70
Ohio	7.70
Alaska	7.75
Alabama	7.75
Mississippi	7.75
New Mexico	7.75
Wisconsin	7.75
Hawaii	7.80
Vermont	7.80
Nevada	7.90

Alaska is seen by some market participants and credit analysts as a classic "boom or bust" economy. Such beliefs did not prevent them from purchasing Alaska bonds at the height of its "boom" in the late 1970s, but the sensitivity of Alaska to a "bust" as demonstrated by the effects of 1982-83 oil price revisions on Alaska revenues is likely to make these investors more cautious in the future. Such concerns will increase investor scrutiny of the State's oil revenue projections and the demands for those revenues in addition to paying debt service. In line with the "boom and bust" attitude, one investor put forth that Alaska may have certain appeal to the speculative investor, and could capitalize on that appeal by selling "equity shares" in the State with both an "up and a downside" potential rather than fixed-income bonds.

The mention of the State's Permanent Fund in the E.F. Hutton credit report deserves comment. The Alaska Permanent Fund was established by a constitutional amendment effective February 21, 1977. The amendment stated that contributions to the fund must consist of at least 25 percent of mineral lease rentals, royalties, royalty sale proceeds, Federal mineral revenue sharing payments, and bonuses received by the State. Enacted legislation (Ch. 18 SLA 1980) has modified this contribution rate to the Permanent Fund from 25 percent to 50 percent on new discoveries.

Because of its massive size, The Permanent Fund is viewed by certain investors as a potential source of repayment for Alaska debt, regardless of the fact that it is constitutionally unavailable for that purpose. The Permanent Fund has other indirect benefits on credit perceptions; establishment of the permanent fund is recognized as a sign of prudent financial management, which is looked upon favorably by investors. This contrasts with the abolishment of the State's individual income tax in 1980 that is considered by some to be a sign of fiscal irresponsibility. Alaska particularly must go out of its way to demonstrate competent responsible fiscal management because of its uniqueness. Such actions as following through on its appropriation commitment to the Permanent Fund and conservatively controlling legislation which erodes the principal or redirects the earnings of the Permanent Fund are necessary to reassure investors that the State is acting responsibly.

Market Performance Of The AHFC

The significance of the borrowing programs of the Alaska Housing Finance Corporation (AHFC) has been discussed in Section Four. AHFC tax-exempt bond sales have accounted for more than 30 percent of all Alaska debt issues since 1978 and constitute more than 60 percent of all state-level debt currently outstanding. In addition, many bonds are backed by the state's credit indirectly through the pledge of the State's moral obligation.

This section provides a brief review of the market performance of AHFC bond issues at the time of sale. Following the approach utilized in analyzing State GO bond sales, the analysis is based on matched comparisons of AHFC bond terms with bonds of comparably rated state housing agencies sold during a similar period. Table 4.9 presents the results of this analysis for those issues of AHFC for which comparisons were possible.

Housing bond issues are structured with long average maturities designed to match expected repayments of mortgage principal. The comparisons of reoffer yields, therefore, focus on 10-year and 15-year maturities. The comparisons on 10-and 15-year maturities indicate that, on average, AHFC bonds have carried yields that are 28.3 and 21.8 basis points higher than other state HFA bonds sold under approximately similar conditions.

AHFC bonds are sold through negotiation as are most mortgage revenue bonds. Table 4.10 summarizes yearly average underwriting spreads for the AHFC issues and other state housing agency issues included in Table 4.9. Based on these comparisons, average costs of underwriting appear to have been higher on AHFC issues in all years but 1981 with an apparent widening of this gap in 1982.

As noted in Section Four, AHFC issues taxable bonds in addition to the tax-exempt issues discussed above. The taxable bond market is different from the municipal market because competition comes not from other governmental borrowers, but, primarily from private corporations. Similarly, the investors and therefore the underwriting process for taxable bonds is different from that of municipals. Table 4.11 presents details on $775 million of the $875 million in taxable bonds issued since 1980. The Table does not compare AHFC taxable bonds with other taxable bonds; rather, it compares past AHFC taxable issues with U.S. Treasury Bonds sold during the same week with similar maturities.

Since 1981, the spread has narrowed dramatically from over 300 basis points (3 percent) to 87 basis points (0.87 percent) in 1983. Treasury bonds represent the benchmark security against which all taxable yields are measured because they are the most secure form of fixed-income investment. The narrowing of the difference between AHFC and Treasury yields indicates broad market acceptance and greater investor familiarity with the AHFC name.

Most all of the taxable and tax-exempt AHFC bond issues have been sold through a negotiated sale process of the type described in Section Six. The exception are the 1983 issues of State Guaranteed Veterans Housing Bonds which must be sold at a competitive sale because the State requirements that general obligaion bonds be sold competitively. Taxable AHFC issues must be sold in a negotiated sale because of market norms; however, future tax-exempt AHFC issues may profit from a competitive sale if the trend towards improved market acceptance of Taxable AHFC bonds holds true for its tax-exempt offerings.

Technical Appendix
A Statistical Analysis of Interest Costs On State General Obligation Bonds

The purpose of this study is to determine how investors perceive State of Alaska issues relative to other states' general obligation bonds. The method of analysis is to first determine what factors are significant in explaining the variations in Net Interest Costs (NICs) for a sample of 254 state general obligation bonds sold between 1970 and 1982. These estimates will be obtained by using the statistical technique of ordinary least squares regression. The estimates of how each factor affects NIC will then be used to predict the interest costs on State of Alaska general obligation bonds. If investors perceive State of Alaska issues as comparable to other states' issues, then the actual and predicted interest costs will be the same. On the other hand, if investors consider State of Alaska issues to be more desirable, then the actual NICs will be less than the predicted NICs.

The sample of bonds used to estimate the influence of the explanatory variable on NIC consists of 254 general obligation bonds sold by states other than Alaska between 1970 and 1982. The sample is restricted to those issues having an average maturity of 10 years or less; this selection criterion was used because of the relatively short average maturity of State of Alaska issues.

Table 4.12 presents summary statistics for the sample. Borrowing costs, as measured by NIC, range from 2.979% to 11.794% and averaged 5.894%. The mean average maturity was 8.2 years with a range from 2 to 10 years. The average issue size was $50.018 million with a range from $370,000 to $450 million. Over 80% of the bonds were rated Aaa or Aa and virtually all were sold by competitive bid.

The distribution of bonds by Moody's rating and issue size is presented in Table 4.13. There appears to be some relationship between size and rating. Over one-half of the issues above $50 million were rated Aaa while only 7 percent of the issues under $10 million were rated Aaa.

The following explanatory variables have been included in the regression equation:

1. Issue Size ($ thousands) in logarithm. Size is specified in logarithmic form to reflect the diminishing impact that increases in size have on NIC.

2. Average Maturity (years).

3. Negotiated Dummy Variable (equal to 1 if the issue was sold through negotiation). This variable measures the difference in NIC, if any, due to method of sale. The variable coefficient reflects the differences in NIC on negotiated issues relative to competitive issues.

4. Bond Buyer Index of 11 bonds. This index is a measure of average 20-year reoffer yields for the week of each issue. The index variable is designed to control for the effects of variations over time in the overall levels of interest rates.

5. Moody's Bond Rating in Dummy Variable Form:
   Aa = 1 is the issue is rated Aa, 0 otherwise;
   A-1 = 1 is the issue is rated A-1, 0 otherwise;
   A = 1 if the issue is rated A, 0 otherwise.

Table 4.12

Summary Statistics For 254 State General Obligation Bonds

	Mean	Minimum	Maximum	Standard Deviation
Net Interest Cost (%)	5.894	2.979	11.794	1.937
Average Maturity (years)	8.193	2.000	10.000	2.201
Size ($ millions)	50.018	0.370	450.000	50.015
Negotiated	0.1%			
Competitive	99.9%			
Moody's Rating (%)				
Aaa	39.4%			
Aa	45.7%			
A-1	7.9%			
A	7.0%			

These variables are specified to capture the effects of differences in Moody's ratings on NIC. Moody's ratings are used as surrogate measures of credit risk. The omitted class is bonds rated Aaa. Therefore, the coefficients on these variables represent the average differences in borrowing costs for bonds of a given rating relative to Aaa rated bonds.

The regression results are presented in Table 4.14. The explanatory variable coefficients have the expected sign and most are statistically different from zero. A t-value greater than two indicates that a coefficient is statistically significant at the 5% level. The regression equation explains approximately 95% of the inter-issue variation in NIC.

The coefficients indicate that extending the maturity of issues by 1 year increases borrowing costs by 11.3 basis points. The rating variable coefficients reflect the difference in NIC between Aaa rated bonds and the indicated rating. For the sample of state GO bonds, Aa rated bonds had NICs that were 32.1 basis points higher, on average, than Aaa rated bonds. The differential was 70.7 basis points and 114.6 basis points for A-1 and A rated bonds, respectively.

The Bond Buyer Index coefficient indicates that for a 100 basis point increase in the index, NIC increases, on average, 85.5 basis points. The issue size variable coefficient indicates that larger issues have higher borrowing costs, but the effect on NIC diminishes as issue size is increased. For instance, increasing size from $5 to $10 million increases NIC by 4.8 basis points, while the impact on NIC is only 0.4 basis points for an increase from $95 to $100 million. The method of sale variable coefficient was not statistically significant.

These estimates of the influence each factor has on NIC can be used to predict the borrowing cost on State of Alaska issues. This calculation is illustrated below for the State GO issue sold February 17, 1976:

Variable	Coefficient	Issue Feature	Product
Average Maturity	0.1128	10	1.1280
Issue Size	0.0695	10.597*	.7365
Aa	0.3208	0	0
A-1	0.7066	1	.7066
A	1.1459	0	0
Bond Buyer 11	0.8552	6.43	5.4989
Negotiated	-0.1161	0	0
Constant Term	-1.7778	1	-1.7778
		Predicted NIC	6.2922

* Natural logarithm of $40,000 is 10.597

Table 4.15 shows predicted NIC values for all State of Alaska general obligation issues that were rated A-1 or better and had an average maturity of 10 years or less. Exhibit 4 also shows the actual NIC for each issue and the difference between the actual and predicted NIC; this difference is referred to as the residual.

A positive residual indicates that the actual borrowing cost paid by the State of Alaska was greater than comparable issues sold by other states. A negative residual indicates that the State of Alaska paid less than comparable issues. The data in Table 4.15 indicate that

Table 4.13

Distribution of Bonds by Moody's Rating and Issue Size

Issue Size ($ million)	Aaa	Aa	A-1	A	Total

SEE	.455	

Alaska has consistently experienced lower borrowing costs than other states with the same rating. Between 1976 and 1979, when State of Alaska general obligation bonds were rated A-1, the average interest cost advantage averaged 20 basis points and exceeded 40 basis points on several occasions.

The borrowing cost advantage enjoyed by the State of Alaska increased somewhat after 1980 when the State's GO bonds were upgraded to Aa by Moodys. After controlling the effects of issue size, average maturity, method of sale, and the general level of interest rates, the State of Alaska paid average interest costs that were 31 to 646 basis points lower than the costs on other Aa rated state GOs.

In summary, the results of the regression analysis indicate that investors perceive State of Alaska issues more favorably than general obligation bonds sold by other states. This result holds even after differences in issue and issuer characteristics and market conditions are held constant.

Table 4.15

CHAPTER V

ANALYSIS OF THE MARKET PERFORMANCE AND MANAGEMENT OF LOCAL GOVERNMENT DEBT

Profile of Local Borrowing

Local governmental units in Alaska have been active issuers of debt. Alaskan localities had approximately $1.3 billion in general obligation debt outstanding at the end of June 1982, for a Statewide average of $4,648 per capita. This level contrasts with the State's own general obligation indebtedness at the end of fiscal year 1982 of $842 million. In addition to general obligation debt that is supported by local taxes, cities and boroughs also issue debt that is supported by the revenues generated by the project financed through the issuance of debt. At the end of June 1981 (the latest fiscal year for which data are available), approximately $347.4 million in revenue bonds was outstanding (see Table 5.1). The general obligation and revenue bonds of local governments comprise approximately 43 percent of the total amount of public debt outstanding in the State.

Revenue-supported debt is not appropriate to finance all local governmental capital investment. The construction of schools, roads, and most public buildings generally must be financed through general obligation bonds if debt is raised to finance these capital improvements. Water and sewer systems, waste treatment facilities, municipal utilities and other services for which a user charge can be levied may be financed through the use of revenue bonds. If operation of the project is expected to generate sufficient revenues to provide adequate "coverage" of debt service (excess of net revenues over debt service usually by 1.25 times), revenue bonds are a possibility for the financing instrument.

Revenue bonds account for approximately 25 percent of all local debt outstanding in Alaska, compared with the national average of 54 percent. This comparison indicates that Alaska's muninicipalities rely on general obligation borrowing at twice the national rate. This is to be expected because of the lack of a concentration of population and resources and the resulting greater efficiency of taxation as a revenue source. The amounts of general obligation and reveue-supported debt outstanding in each city and borough in the State are presented in Table 5.2. The majority of communities that have issued debt have a mix of revenue and general obligation bonds outstanding. The most notable exceptions are the North Slope Borough, Kenai Peninsula Borough, and Matanuska-Susitna Borough, none of which have revenue bonds outstanding. Not suprisingly, these three communities also have ratios of general obligation debt to assessed property value among the highest in the State (see Table 5.3). Table 5.3 also presents the debt per capita ratios for local governments in the State, and the national medians as computed by Moody's Investors Service. Because of the relatively sparce population in the State, these ratios are above the national median in the majority of Alaskan localities.

Source: Department of Community and Regional Affairs, Alaska Taxable, Fiscal year 1982.

A major use for local general obligation debt has been to finance school construction. As of April 1, 1983, school districts in the State had approximately $644 million in school construction debt outstanding (see Table 5.4). Under existing programs this debt will be retired, in part, through State aid. Thus, school construction debt comprises approximately 49 percent of all local general obligation debt. Because there are no State restrictions on how school debt must be issued, localities may issue bonds on their own or may make use of the Municipal Bond Bank. Table 5.4 indicates that approximately $76 million or 12 percent of outstanding school debt has been issued through the Bond Bank.

The State of Alaska's education assistance program to local governments, in part, reimburses boroughs and cities for cash expenditures on school construction and debt service on bonds issued to finance school construction. Under a program created by the State legislature in 1970, and contained in provisions of Alaska Statutues 43.18.100, the State allocates the following amounts to municipalities which are also school districts, subject to annual appropriation by the legislature:

> 100 percent of payments made in the fiscal year two years prior for debt service on bonds issued prior to July 1, 1977 for school construction;
>
> 90 percent of payments made in the fiscal year two years prior for debt service on bonds issued after June 30, 1977 and cash payments for school construction; and
>
> 90 percent of payments made in the current fiscal year for debt service on bonds issued after December 31, 1981.

Legislation enacted in 1982 (HB279) raised the State share of construction expenditures from its earlier level of 80 percent to the 90 percent figure. This legislation also eliminated the two-year lag between local payment of school construction costs and receipt of State aid on bonds issued after December 31, 1981.

To qualify for State reimbursement of debt service expenditures, school construction projects must be approved by the State's Department of Education prior to construction. The local school district must submit the school design, schematics, and contract documents for approval. Approval is given once the two parties agree on design, school enrollment, and distribution of space in the school to various required uses. Neither the cost of the project, nor the intended means of financing, are significant factors considered during the approval process.

Once approval is received, the locality may begin construction; using any mix of current revenues or borrowed funds to finance the project. There are no State restrictions on the sources of financing, in spite of the fact that nearly

	$ 75,790,000	
Total School Debt Outstanding	$644,383,000	

NOTES: 1) Data through fiscal year 1981 from Moody's Municipal and Government Manual 1983, Moody's Investors Service. Fiscal Year 1981 to date from Public Securities Association data base.

2) Data from Mary J. Hughes, Foster & Marshall/American Express, Inc., Seattle, WA.

90 percent of the cost will be borne by the State. To be reimbursed for debt service and current construction expenditures, the school district must file an annual report with the State Commissioner of Education, certifying the amounts which are eligible for reimbursement in the current year.

Although the statute provides that the State will reimburse school districts for 90 to 100 percent of construction costs, the actual funding for the program is dependent on annual legislative appropriations to the school construction account. Historically, appropriations have not been sufficient to fund the level of payments authorized by statute fully. When amounts in the account are insufficient, the available funds are allocated pro rata among the eligible school districts. Over the fiscal years 1981 to 1984 the program has been or will be funded at the following percent of entitlement due:

Fiscal Year	Amount of Payments	Percent of Entitlement
1981	$38,380,174	100%
1982	38,262,156	100
1983	36,203,300	79
1984	85,373,459	63

The declining percentage of entitlement paid to school districts since 1982 indicates that the legislature is unwilling to appropriate full funding to this program. Unwillingness to fund this program at statutorily authorized levels could cause concern amoung investors and credit analysts over the State's willingness to fund other indirect or moral obligations. Eventually this might lead to an erosion of State and local credit quality.

Other concerns that have been raised over the reimbursement program were addressed by emergency regulations promulgated by the State board of Education early in 1983. As a result of the Board's actions, localities must issue debt with a maximum maturity not less than 10 years, cannot refinance othstanding debt if the necessary annual debt service on the refinancing bonds would be greater than on existing bonds, and cannot incur school debt through locans from the general fund. These regulations were necessary to prevent school districts from shortening the maturities on their debt, thereby freeing up local debt capacity, but increasing the burden for State reimbursement.

Local Government Bond Sales and Market Performance

Alaska's local government bond issues are viewed by market participants as attracting an investor of different characteristics from those investing in the State's general obligation bonds. For the most part, interviews with bond analysts have suggested that the market outlet for Alaska's local government debt is the retail market, comprised largely of mutual funds, unit investment trusts, and individual investors. Investors in the State's obligations, on the other hand, include primarily institutional investors such as commercial banks, insurance companies, and other corporations. In part, this market segmentation

is based on structural differences between local bonds and the State's obligations; local bonds are issued in lesser amounts, longer in average maturity, and lower in credit rating. These differences, and the attendent market distinctions, are captured in Table 5.5, which presents paired comparisons of State and local issues sold at approximately similar dates since 1970.

Table 5.6 presents summary statistics on the methods of sale, the average number of bids received on competitive issues, and the average underwriting spreads on local issues. By comparison with Table 5.5, and the statistics in Section Four on State general obligation issues, these data indicate that local bonds which are sold competitively attract more bids on average than State issues. This is to be expected since the local issues are smaller in size. In addition, many local issues are sold through negotiation, making the competitive issues more attractive and aggressively sought. The most significant comparison of local and State bond issuance, however, is the markedly higher underwriting cost on local issues. In 1982, the average gross underwriting spread on all local bonds was in excess of $21 per $1,000 par value, more than double the underwriting spread on State general obligation issues.

Table 5.7 presents a detailed market analysis of reoffering yields on selected local government bonds sold since 1978. As described in Section Four, reoffering yield is a measure of the return that investors require in order to purchase the bonds. While the reoffering yields are not the coupon interest rate on the bonds, high reoffering yields generally mean that the interest paid by the issuer (coupon rate) on the bonds are also high. Therefore, comparisons of reoffering yields give a resonable indication of interest cost and market reception of a government's bonds.

Comparing local government issues with issues from other states is impractical and subject to more than the usual ambiguities mentioned in Section Four. The vast number of local issues from other states, and the vastly different local market conditions hinder the selection of matched pairs. As an alternative, the analysis in Table 5.7 compares reoffering yields on Alaska local issues with the monthly average reoffering yield of all bonds with similar ratings and security features. (e.g., general obligation bonds are not matched with revenue bonds).

The results of these comparisons indicate that local government bonds from Alaska carry yields at all maturities significantly above the average for the overall market. On 5-year maturities, the average yield differential is 39 basis points; 35 basis points on 10-year maturities; and 34 basis points on 15-year maturities. These higher interest rates translate to an additional cost to Alaskan municipalities of approximately $135,000 over the life of a 15-year, $5 million bond, than would be paid by the average similarly rated locality in the "lower 48".

Perhaps in recognition of the relatively poor market reception accorded local bond issues, a growing number of issuers and their underwriters have opted to purchase municipal bond insurance from private bond insurers. To qualify for insurance, an issuer must be investment-grade rated, apart from credit

Average Yield Differential				0.39%		0.35%		0.34%	

* The Average Reoffer Yields are the average reoffer yields on all like-rated GO or revenue bonds sold during the month of the Alaska issue as reported by the Public Securities Association.

enhancements or external supports (such as a bank letter of credit). Prior to marketing the bonds, an issuer secures an insurance policy commitment from either the American Municipal Bond Assurance Corporation (AMBAC) or Municipal Bond Insurance Association (MBIA), the two leading municipal bond insurers. Bond insurance guarantees investors timely payment of principal and interest on the bonds, and results in a AAA rating on the bonds by Standard & Poor's Corporation. Moody's Investors Service does not recognize the insurance feature in its rating. The issuer pays a one-time premium for the insurance policy, based upon the apraised credit risk and the aggregate liability for principal and interest that is covered by the policy. As a rule of thumb, an issuer can expect to pay between 0.5 and 1.5 percent of aggregate principal and interest due on the bonds for insurance. In return, of course, it is hoped that interest savings on the higher rated bonds will be greater than the insurance premium.

Table 5.8 presents an analysis of reoffering yields on insured local bonds since 1978, comparing these yields with monthly average yields on AAA rated bonds and on bonds with ratings similar to the issuer's uninsured rating. The data in Table 5.8 raise important questions concerning the practice of purchasing bond insurance by Alaska's localities. Yields on Alaska insured bonds generally are much higher than yields on other AAA rated bonds. For 5-year maturities, Alaska insured bonds carried yields that were 85.6 basis points higher on average than AAA rated bonds; for 10-year maturities, Alaska bond yields were 86.9 basis points higher.

Compared with unsured bonds with similar ratings, Alaska insured bonds carried measurably higher yields. On 5-year maturities, Alaska bond yields were 25.9 basis points higher; on 10-year bonds, the differential was 5.6 basis points higher on average. This indicates that even with bond insurance, yields on Alaska's insured bonds were higher than the average yield for similarly rated bonds without insurance.

Combined with the comparisons derived in Table 5.7, the value of bond insurance appears to be approximately 13.1 basis points on 5-year maturities and 29.4 basis points on 10-year maturities. Although these estimates of yield savings from bond insurance are only approximate, they do suggest that the price Alaska's municipalities are paying for bond insurance may not be worth the slight savings in interest cost they are receiving. These preliminary findings suggest the need for a more thorough analysis that is beyond the scope of this study. Such an analysis should compare the present value of the annual savings in interest cost on insured bonds with the cost of the insurance premium.

A further observation based on Tables 5.6 and 5.7 is that while reoffering yields on the debt of Alaska's localities are higher, on average, than the national average, yields on the North Slope Borough's debt are vastly higher. Until February 1982, the 10-year reoffering yields on North Slope Borough debt were consistently at least 100 basis points (one percent) higher than the monthly average on similarly rated municipal bonds. On an April 1980 bond sale this difference rose to nearly 250 basis points (2.5 percent). Such a large discrepency in reoffering yields indicates that investors required a higher than

* Means an insured bond.

Notes: (1) C= Competitive
N= Negotiated

(2) The first rating is the Moody's Rating; the second rating is the Standard & Poor's Rating.

(3) The first yield is the reoffer yield on the bond bank issue; the second yield is the monthly average yield on general obligation bonds with similar Moody's ratings.

average return on their investment in order to lend to the North Slope Borough. This observation is preliminary; an analysis of the market performance of any single locality is beyond the scope of this report. However, given the high levels of debt that have been issued from this and other localities, the much higher than average interest costs of Alaska's local debt, and the loss of State revenues from taxes levied by this Borough and others to pay the annual debt service on their debt, the State may wish to analyze further local market experience and State policies regarding local debt management.

The Market Performance of the Alaska Municipal Bond Bank

The State has established the Alaska Municipal Bond bank for the express purpose of assisting local communities in the financing of capital improvement projects. The Bank issues its securities and relends the proceeds to participating municipalities. As discussed in Section Three, Bond Bank bonds are secured by several tiers of protection, including pledges of the securities of participating municipalities, a State "pay-over" provision, a reserve fund, and the State's moral obligation to replenish the reserve fund. The "pay-over" provision requires the State to pay to the Bond Bank all State aid funds owed a municipality in the event of a municipal default on its Bond Bank debt obligations. As a result of these layers of security, the Bank's general resolution general obligation bonds carry an A rating.

Table 5.9 reviews selected information on recent Alaska Bond Bank sales and compares the results with bond bank issues form other states. In each case, 5-year and 10-year reoffering yields are compared with the monthly market average yield for general obligation bonds with similar ratings. Alaska Bond Bank issues carried yields that were, on average, 70 basis points (0.70 percent) higher for 5-year bonds and 74.5 basis points (0.745 percent) higher for 10-year bonds than the monthly market yields for like-rated bonds. By contrast, New Hampshire Bond Bank issues carried yields that exceeded the avearges by 12.2 and 12.5 basis points respectively; for Maine, these differences were 26.6 and 26.7 basis points.

The discrepency between the market reception of other state bond banks and that of Alaska's is most likely the result of investor unfamiliarity with the Alaska Bank. This comparison indicates that the Alaska Bank has the potential for saving as many as 50 basis points by undertaking an active national marketing effort. The relatively poor reception given the Bank's bonds also indicates that investors are probably not buying these bonds on the basis of the State's moral obligation pledge. If the bonds were purchased solely on the merits of the State's moral obligation, they would be expected to trade closer to the national average for A-rated bonds.

Table 5.10 summarizes gross underwriting spreads on state bond bank issues. While these data indicate that spreads on Alaska Bond Bank issues are alternately above and below other bond bank issues, most of these differences may be due simply to market timing. Since bond banks are not frequent issuers,

Table 5.10

Average Gross Underwriting Spreads*
State Bond Bank Issues

State	1978	1979	1980	1981	1982
Alaska	$11.50	$20.00	$12.27	$15.00	$19.75
Maine	14.70	11.50	17.17	15.21	15.00
New Hampshire	15.90	15.46	17.83	—	16.00
Vermont	14.40	—	—	—	—
Average-All Local Issues in Alaska	NA	$16.85	$16.75	$19.60	$20.47

* Expressed in dollars per $1,000 par value of bonds issued.

these comparisons do not appear to be particularly important. It is important, however, to note that one purpose of the Bank -- acheiving economies in marketing costs -- has been partially accomplished. The average underwriting spread on Alaska Bond Bank issues in the past three years has consistently been less than the average spread for the State's local bonds sold directly in the market. Underwriting spreads continue to remain well above the costs of State general obligation issues, however, as summarized in Table 4.3.

Local Debt Management

Effective management of long-term debt by local governments is important to the localities and the State in order to preserve the overall long-term fiscal health of each. Abuses of the power to borrow funds reflects poorly on the locality and can have costly repurcussions on the State. For example, improper debt management could cause credit ratings to worsen, forcing higher interest rates. In extreme cases, the local unit may be barred from access to the national credit markets altogether. The taxpayers of the municipality, and the entire State, are the ultimate losers when and if Alaska's local governments abuse their borrowing authority.

There are specific guidelines and practices that local governments can follow to assess their debt management procedures. Many of the conditions that signal potential debt-related problems are listed in Exhibit 5.1. Local government finance officers and financial officials should continually assess their debt position and debt management practices using such a checklist. The Department of Community and Regional Affairs currently receives the annual budgets and financial reports of the State's local governments. These reports are the primary sources of data on local fiscal management. Information contained in these reports could easily be compiled into a computer program that would monitor financial condition along the guidelines presented below. A positive response to any one item may be cause for concern and appropriate measures should be taken first to identify and then to rectify the problem.

In order to evaluate the debt management of individual localities, assessment of the debt position of each Alaskan municipality along the lines suggested by the checklist is necessary. This analysis would highlight those localities which have a problem with their debt management practices. Such an evaluation should be performed by both State officials and by the localities themselves.

The Role of the State in Local Government Borrowing

Analysis of the market experience of Alaska's local governments indicated that these units are paying a premium over similarly rated municipalities to borrow in the national market. In an attempt to lower the cost of borrowing, many localities in the State have taken out municipal bond insurance as was

Exhibit 5.1

Debt Management Checklist

____ an increasing amount of bonded debt per capita.

____ the percentage increase in debt per capita exceeding the percentage increase in taxable wealth per capita.

____ an increasing percentage of annual expenditures for debt service.

____ an increasing ratio of debt to assessed value.

____ current year operating deficit.

____ two consecutive years of operating fund deficit.

____ current general fund deficit (two or more years in last five).

____ short-term debt (other than bond anticipation notes) at end of year greater than 5 percent of main operating fund revenues.

____ short-term interest and current year debt service greater than 20 percent of total revenues.

____ total property tax collections less than 92 percent of total levy.

____ declining market valuations - two consecutive years on a three year trend.

____ overall net debt ratio 50 percent higher than four years ago.

____ current year operating deficit larger than previous year's deficit.

____ two-year trend of increasing short-term debt outstanding at end of fiscal year.

____ property taxes greater than 90 percent of tax limit.

____ a trend of decreasing tax collections.

____ overall net debt ratio 20 percent greater than previous year.

indicated in Table 5.8. However, the savings achieved by Alaskan municipalities apprear to be slight, especially given the high initial premium required to insure bonds.

In addition to paying higher than average interest rates, the State's localities have debt ratios far higher than the national medians for similarly sized local governments. Most localities are unable to tap the vast oil-based revenue sources available to the State. Therefore, the high debt ratios which for the State's own debt do not cause immediate concern, are not as acceptable at the local level. The high levels of local debt, and its relatively high expense, are in themselves reasons for the State to re-assess its current role in local debt management.

Local borrowing costs and debt management practices should be of particular concern to the State for three major reasons. First, is the desire for its localities to be fiscally responsible and able to borrow on as near an equal footing with communities in the "lower 48" as possible. Second, is the State program to reimburse localities for a portion of the annual debt service on school construction bonds. High general obligation borrowing costs on local debt are passed on to the State directly through this program. Third, is the current interelationship between the State and local property taxes as described in the Appendix to this report on the legal framework for debt issuance in Alaska. Because local governments are able to levy unlimited property taxes for the payment of debt service, and property taxes paid on oil production and transportion facilities to local governments are credited towards the State property tax liability, the State looses revenue to those three jurisdictions (Fairbanks North Star Borough, North Slope Borough, and Valdez) that have high tax rates in order to support high levels of debt issuance.

A high cost of borrowing, however, is not the only reason that the State should be concerned about local debt issuance. Another concern of the State should be the question of what would happen if a municipality were unable to repay its debt obligations. Although the State is not legally obligated to provide relief to localities in default, were this to occur there would likely be pressure on the State to arrange for some sort of "workout". For the above financial reasons, and to promote sound financial management practices at the local level, the State may wish to take the lead in implementing programs that encourage the prudent use, and guard against the misuse of local debt issuance.

The State has demonstrated its concerns over local borrowing costs by creating and administering the Municipal Bond Bank. The Bank helps smaller lesser known municipalities borrow at lower interest rates and issuance costs than they could acheive on their own through pooling the smaller local issues into one, relatively large, bond issue. The security behind the Bank's bonds is greater than that of the individual local governments because of the reserve fund requirements and the State's moral obligation pledge. Although the market performance of the Bond Bank has not been up to that of other state bond banks, it is still better, on balance, than that of separate local units. Our review of the Bond Bank's performance, however, indicated that only $108 million of the $1.3 billion in local general obligation debt outstanding, or 8

percent, has been issued through the Bond Bank. Therefore, a State policy to encourage wider use of the Bond Bank by local governmental units should result in lower aggregate borrowing costs.

There are several steps the State could take to improve the market performance of the Bond Bank. Our analysis concluded that, on average, the Alaska Bond Bank is paying a higher cost of borrowing both in terms of interest cost and underwriting spread than are other state bond banks. Although the Alaska Bond Bank is rated one notch below the Maine and New Hampshire bond Banks, the composition of its municipal borrowers is relatively the same as in the other states. According to Table 3.11, 78 percent of the Bond Bank's outstanding general obligation debt is payable from communities rated Baa or below. The similar percentage for the Maine bond bank is 72 percent.[1] The relatively weak market performance of the Bond Bank would be improved if the State undertook an active promotional effort aimed at potential investors. Futhermore, the State could restructure the security behind the Bond Bank, to include a stronger moral obligation pledge or a pledge of the State's full faith and credit. The strengthening of security could be selective, applying only to bonds issued for certain purposes, or valid for all Bank Bonds. The State of New Hampshire Bond Bank issues two types of bonds; one backed by the State's general obligation and the other backed by a moral obligation pledge of the State.

Alternative Programs for Further State Involvement

There are several programs in use in other states which provide a model for Alaska to consider in determining the appropriate level of State involvement in local debt managment. These state oversight and assistance activities range from state guarantees and approval of local debt issuance, through statutory limits on the amount of debt that may be issued, to the provision of technical assistance to localities in the debt issuance process. The decision as to the correct role for the State in local debt management is a complicated one, and involves a myriad of factors including the system of intergovernmental fiscal policy, the desired degree of local government autonomy, and cost to the State. In evaluating Alaska's role, the State should keep in mind the following factors:

- the cost of alternative programs to the State both in terms of direct budgetary impact and indirect effects on the State's own borrowing costs.

- the degree of assistance must be balanced against the amount of autonomy the State wishes its localities to enjoy. It is generally in the State's interest to place some constraints and conditions on recipients of its aid.

- while the State may wish to improve local financial managment practices, it must be careful that over depen-

dence on the State does not result from its assistance.

State Restrictions on Local Debt Issuance

The State of Alaska places few constraints on the issuance of debt by its local units of government. Except for the voter approval requirement for general obligation bonds, there are few limits on local borrowing. This is in contrast to most states where a limit is placed on the amount of debt that may be issued (generally expressed as a fixed percentage of the assessed value of property). Such debt limits typically apply to general obligation debt only, and it is debatable whether such limits are actually effective in limiting the total amount of debt issued. In those states with the most restrictive limits on local debt issuance, localities have typically issued larger than average amounts of revenue-supported debt in place of tax-supported debt.[2]

Limits on local governmental debt issuance may improve the market reception of their debt, because investors place a value on scarcity and certainty. Debt limits ensure investors that localities will not issue bonds in amounts considered by the state to be excessive. The imposition of a local debt limit would also give the State more control over the revenue loss from localities that have oil production or transportation property within their boundries, such as the North Slope Borough. Currently the State is being short-changed by those localities that levy a high amount of taxes on oil production property in order to finance debt service. Because taxes paid to the locality are credited towards State property tax liability, this represents a direct revenue loss to the State. Therefore, the State needs to address the absolute level of debt issuance by its localities.

The most common form of state limitation on the level of local debt issuance is a maximum ratio of outstanding debt to the assessed (or true) value of property. Because property taxes generally comprise the largest share of local government revenues, this form of limit ties the amount of debt issuance to the resources available to repay the debt. In states with large disparities in assessed value among jurisdictions, such as Alaska, a debt ceiling defined solely by property values may not be appropriate. An alternative would be to limit the ratio of outstanding debt per capita; however, the resident population of Alaska's jurisdictions and its distribution may not directly correspond to the need for public capital investment. Therefore, it is recommended that the State develope a two-tiered ceiling on local debt issuance that will meet the combined objectives of 1) treating all localities fairly, 2) providing the State with a degree of control over local debt issuance, and 3) encouraging prodent debt management by localities.

Direct State Involvement in Local Debt Issuance

A more effective alternative to debt restrictions is to become directly involved in the debt issuance process of local governments. It must be

recognized, however, that such involvement infringes upon local autonomy. Through the Alaska Municipal Bond Bank, the State has been active in this area for those municipalities that use the Bank. Other forms of direct State involvement could include the approval of local debt issuance, expanding the role of the Bond Bank to assist in the marketing of all local debt, the supervision of local debt management and financial planning, subsidizing local debt service costs, and State guarantee of local debt.

Of greatest assistance, in terms of savings in interest and issuance costs, would be the State guarantee of local debt. Such a program could involve the issuance of State general obligation bonds in lieu of Bond Bank bonds and loaning the proceeds to local governments for approved projects. According to the results of the market analysis of the State's general obligation debt in Table 4.6, the State trades at interest rates slightly better than the average AA issuer. Comparison of the market experience of Alaska's localities provided in Table 5.7 and the AA yields a State guarantee would be likely to bring, indicates that such a program could save localities as much as 100 basis points (one percent) in interest costs. This translates into a total savings of approximately $395,000 on a 15-year, $5 million borrowing. However, a State guarantee would encumber State debt issuance capacity for other purposes.

Active participation in debt issuance can include advisory review by the State of the legal provisions of local debt issuance and the fiscal soundness of the borrowing; providing detailed technical assistance in the structuring of the bond issue and in preparing the necessary documents for debt issuance as a surrogate financial advisor; or assisting in the marketing process itself by coordinating bond issues within the State or actually selling the local bonds.

State programs that provide varying degrees of technical assistance to local borrowers are in place in California, Oregon, Florida, New Jersey, Michigan, and Virginia.[3] In Alaska, the scope of the Municipal Bond Bank could be expanded to assist all localities regardless of whether the Bond Bank's debt-raising services were used. Another State office which could provide financial management services is the Department of Community and Regional Affairs which already collects the annual budgets and financial reports of local governments.

The State could require that all local debt be approved before sale. Such approval could be based solely on legal and technical grounds, or on a review of the fiscal capability of the government to undertake the project given its existing levels of debt, the revenues generated by the project, if any, and the general financial condition of the borrower. The North Carolina Local Government Commission in the Department of the State Treasurer must approve all local debt issues. In addition, the Commission provides localities with technical assistance and actually markets the bonds; performing such functions as preparation of the official statement, presentations before bond rating agencies, evaluating bids and delivery of the bonds to underwriters.

Financial assistance to support local debt service costs would be similar to the program currently in use for school construction debt. The major problem

with this program, as indicated earlier, is the extra cost borne by the State because debt service on bonds issued directly by localities is higher than debt service on the State's own general obligation bonds would be. Alaskan localities have lower credit ratings and, therefore, higher borrowing costs than the State's own general obligation debt.

It is beyond the scope of this report to address the proper relationship between the State and its local governments. However, a more active State role in local financial management would enhance the creditworthiness of Alaskan localities and result in lower borrowing costs. According to a recent credit analysis of local borrowers in the State of New Jersey, "due to the close scrutiny of budgetary operations and debt management by the State, New Jersey tax-exempt local bond issues enjoy a high degree of market appeal for underwriters and investors."[4]

A resonable compromise between encumbering the State's debt capacity and providing greater financial assistance to local governments would be to expand the role of the Municipal Bond Bank. Such expansion could entail 1) Strengthening the security structure of the Bond Bank's bonds to take better advantage of the State's high creditworthiness, 2) action to increase the Bank's use by localities, and 3) the provision of financial management assistance to all localities.

Alternatives to the School Construction Assistance Program

Subsidation of school construction is an expensive undertaking; however, its cost could be minimized through attention to the cost of the project and to the means of financing during the approval process. Alternatives to the present programs which the State may wish to consider are given at the end of this Section. Education differs from other locally provided services because it is basically a state responsibility that is provided at the local level. Alaska's program to subsidize school construction evolves form this responsibility. However, because education is a state-level responsibility, the state subsidy should be as equitable and efficient as possible. An equitable subsidy would treat all localities alike in providing school construction assistance; an efficient subsidy would give the State control over its cost.

The present program is not equitable because each locality raises construction funds on its own; the ultimate cost of borrowed money depends upon the locality's credit rating (or the Bond Bank's), and the timing of the bond issuance. Therefore, Community X may spend several hundred thousand dollars more in debt service to build a $10 million school than Community Y just because it entered the bond market later, or has a lower credit rating than that of Community Y.

From the standpoint of an efficient subsidy, none of the local governments in the State has a credit rating equal to or higher than the AA rating of the State. As a result, the State is paying a penalty on debt service reimbursements

through the construction aid program to local school districts. The additional interest costs over what the State would have to pay if it issued its own general obligation bonds increase as the gap between the credit quality of the locality and the State widens. Table 5.4 indicated that of the 13 school districts that have issued school construction bonds, six are A-rated, five are rated Baa1 and two are unrated. Juneau, Kodiak, Wrangell and Unalaska (all rated Baa1 or lower) have lessened the impact of their poorer credit quality by issuing school construction bonds through the Bond Bank. The issuance of school construction bonds, independent of the Bond Bank, by Petersburg, Sitka, Kodiak, Ketchikan, and Juneau (with one exception) occured before the Bank was established in 1976. Since that time, all school debt from Baa1 or lower rated communities has been issued through the Bond Bank.

If the State were to issue general obligation bonds to lower its cost of financing school construction, the bonds would encumber the debt capacity of the State for other public purposes. The $641 million of local school construction bonds currently outstanding represents 63 percent of the $1.03 billion in State general obligation debt outstanding. Had the State issued 63 percent more debt over the past 10 years than it actually has, it is doubtful whether its credit rating would have improved from Baa to AA.

The additional cost the State is currently incurring may be worth the price if 1) it permits the State itself to borrow at a lower cost, 2) it enables the State to maintain its strong credit rating, and 3) it doesn't encumber capacity to pay debt service for other public purposes. Therefore, State issuance of its own general obligation bonds in lieu of local school bonds or other alternatives to the present system must be assessed against the chances that State borrowing costs would rise and the reduced availability of debt capacity for other State needs.

From a debt management standpoint, the choices available to the State are several:

1) The State could begin issuance of school construction bonds for independent school districts, realizing that this may limit its future bonding capacity and raise future State borrowing costs; however, the cost of the State subsidy would be lower than it is at present;

2) The State could require that the Municipal Bond Bank issue all school debt on behalf of the school district and that the Department of Education work with the Bank to establish guidelines for the debt structure and financing plan of each project. Such guidelines could establish maturity structure, issuance provisions, and maximum amount of debt issuance;

3) The State could establish an independent school building authority that would raise funds for school construction through the issuance of its own bonds. These bonds could be securred by local lease payments on the schools and a pledge of State education aid. A program such as this is an alternative to use of the Bond Bank and must be evaluated against the costs/benefits of using the Bank alone; or

4) The State could continue to reimburse localities for a portion of their debt service costs on school construction bonds. However, the Department of Education should have approval authority of school debt issuance based upon some State and local affordability criteria.

CHAPTER VI

STATE DEBT MANAGEMENT

Introduction

Conservative management of Alaska's outstanding debt and future debt issuance will ensure adequate debt capacity and retention of the State's strong creditworthiness. Our review of the State's debt management practices showed that while past practices have not been imprudent, there are areas where changes are recommended. Generally, we have found that: the scope of the State Bond Committee should be expanded to include oversight of all State-level debt issuance; the State should incorporate a capital financing plan into its budget process; and several debt issuance procedures such as the calculation of interest cost on competitively awarded bond issues and compensation of financial advisors should be reviewed.

These issues and others are addressed in the following chapter which surveys different aspects of State debt management. The specific subjects and the order in which they are covered are:

1. Origins of State Concerns and Actions Regarding Debt Management (pages 143-156)
2. Role of the Alaska State Bond Committee (157-160)
3. Alaska's Use of the Moral Obligation Pledge (161-164)
4. Capital Planning and Capital Financing (165-175)
5. Debt Ceilings and Limits (176-178)
6. Alternative Methods to Determine Lowest Bid: True Interest Cost vs. Net Interest Cost (179-181)
7. Differences Between Competitive and Negotiated Bond Sales (182-184)
8. Selection, Use, and Compensation of Financial Advisors and Underwriters (185-190)
9. Advance Refunding and Debt Defeasance (191-192)

Origins of State Concerns and Actions Regarding Debt Management

Historically, debt management has not been an area of primary concern to state elected officials such as legislators and governors. With the enactment of tight controls over the issuance of general obligation debt -- a product of the excesses of the nineteenth century and of the problems of the depression era -- state elected leaders tended to leave the actual management and issuance of debt to the treasurer, assuming that their function had been fulfilled with the designation of the project and size of the issue, as well as the authorization of the bond or the submission of it to the electorate. Because prior to 1970, most bonds issued were general obligation bonds which required legislative authorization and/or voter approval, there seemed to be plenty of checks to prevent unwise issues, and numerous opportunities for oversight.

In recent years, however, changes in both attitudes of elected officials and the bond market itself have led to a heightened awareness of the need for improved oversight of debt issuance, and the establishment of a variety of state activities to oversee debt issuance. This section provides background to these changes, examines selected state responses to their perceived problems, and discusses some of the strengths and weaknesses of these approaches.

Debt Issuance and Debt Markets

As discussed in Chapter Two, one of the most significant changes in the last decade or so has been the pattern of state debt issuance. While in the late 1960's and early 1970's general obligation debt issuance outpaced revenue and moral obligation debt by a nearly three to one margin, in recent years the pattern has been completely reversed, to where general obligation state debt makes up only about a third of all state debt, and general obligation debt represents only about thirty percent of all tax-exempt debt available in the market place.[1]

Revenue debt is generally less subject to oversight and approval than general obligation debt; indeed, one reason for its growth has been a desire to find a way around constraints on general obligation debt, such as constitutional limits or requirements for voter approval. The use of revenue debt, then, represents an increasing transformation of debt from just a financing technique into an instrument of fiscal policy.

Long-term general obligation debt has historically been used to finance traditional capital outlays for states, such as roads or schools. As a rule of thumb, about half of all capital outlays were paid for with debt, and the balance financed on a pay-as-you-go basis. The choice was dictated by current interest costs, the number of projects to be financed in any one year, expected useful life of the facility to be financed, and the availability of general revenues of the government.

Departure from this tradition came with the creation of special purpose authorities given the power to issue debt payable out of fees imposed for services. These authorities were able to build bridges, ports, airports, tollroads, and other forms of infrastructure and generally avoid constitutional debt limitations or restrictions. By design, the authorities were frequently far removed from the purview of elected officials. Still other authorities were set up as building corporations, who issued debt to construct state offices and other facilities and repaid the debt from leases to the states. They function exactly as private landlords, but -- because of their access to tax-exempt borrowing and their freedom from property and income tax -- are able to provide much cheaper rentals to the state. Building authorities also offered states a way around debt limitations and increased the distance between elected officials and debt issuers.[2] While the creation of special authorities for capital construction meant a decrease in the frequency and quality of state oversight, the purposes of borrowing remained the same as general obligation debt -- that of matching

long-lived facilities with long-term financing, so that no one budget year was unfairly burdened with payment for a structure whose useful life lasted decades.

A second form of borrowing -- special purpose authorities whose goal was to channel tax-exempt financing to private users -- also changed borrowing into an element of fiscal policy. Beginning in the New Deal and proliferating up to the present, a new group of authorities was created to provide an interest subsidy to private borrowers whose activity was defined as being in the public interest. The recipients of these subsidies included homeowners and renters (through Housing Finance Agencies), hospitals, nursing homes, students (through loan authorities and dormitory construction -- at both private and public universities), utilities, private corporations (industrial development and pollution control bonds), professional sports teams, and a myriad of similar groups.

Like special tax treatment for certain groups, these borrowings were meant as a form of fiscal policy, another tool beyond direct appropriation to subsidize a politically worthy activity. And -- also like tax preferences -- they received far less scrutiny than would a direct expenditure of the same amount of money. The increasing recognition of the changed character of authorities was one important factor in a changed perception of them on the part of state officials. Since they were no longer financial technicians, but rather more like operating agencies of a state program, legislators in some states came to feel that they deserved the same scrutiny as any other operating program.

This changed perception was accentuated by the growth in revenue debt detailed in Chapter Two. Not only were the non-traditional borrowers changing the nature of borrowing, but the sheer size of their borrowing was making the change more obvious. Total new issues increased from $7.1 billion in 1960 to $76.0 billion in 1980, a more than ten-fold increase in two decades. Revenue-supported debt rose from 36 percent of outstanding tax-exempt debt in 1960 to over 50 percent in 1980.

A third factor which entered into the change was the long-term rise in interest rates, coupled with the volatility of the market. Since the end of World War II, tax-exempt interest rates have been about 30 percent lower than taxable ones. When interest rates were low, this difference amounted to only one and a fraction percentage points, but the difference became more striking in the eighties. As corporate rates ran up into double digits, the difference between taxable and tax-exempt rates amounted to as much as four or five percentage points. This differential made tax-exempt borrowing obviously more attractive; coming at a time of fiscal austerity in the state and local government sector, the opportunity to provide a subsidy at relatively little cost was very appealing to state policy makers.

All of these factors -- the changing nature of borrowing, the growth of revenue debt, and the rise in interest rates with a concomitant growth in debt service costs -- made states more attentive to debt policy and management. The major catalyst to action, however, was the temporary default of the Urban Development Corporation (UDC), a moral obligation authority of New York State, in 1975. With over $2 billion in authorized bonding levels, UDC was one

of the largest authorities in the country. When it was unable to pay some short-term notes coming due, the State stepped in and created a new agency to loan money to UDC, as well as to purchase UDC-owned mortgages in order to provide extra cash. The State also appropriated funds directly to UDC to bring the debt service reserve fund up to required levels. As the first major "near-default" by a public authority in modern times, the plight of the UDC dramatically demonstrated both the commitment of "moral obligation" bonds, and the degree to which the State was inextricably intertwined with the actions taken by an ostensibly autonomous authority. "Even if the State is not obligated to underwrite every authority's specific bonds, the refusal of the State to support poor investment decisions by any independent authority would have a negative impact upon the entire public credit structure," said the Chairman of New York's Assembly Ways and Means Committee.[3]

When the UDC default was followed by fiscal crisis in New York City and Yonkers, public attention was drawn to the need for more effective oversight of local bond issuance -- an issue which was dramatically heightened by subsequent fiscal crises in Cleveland and Detroit. While there was a flurry of interest in state oversight of local debt practices, oversight of state debt became an increasingly recurrent issue. In recent years, New York, California, Oregon, Vermont, Maryland, New Hampshire, Michigan, Kentucky, Illinois, and Wisconsin have all undertaken significant reviews and reforms of their debt issuance practices. Such interest can be expected to continue. Public awareness of the deteriorating capital infrastructure has meant that states are paying increasing attention to the problems of capital planning and budgeting; debt policy review is a natural concomitant to the review of capital outlay procedures. Just as states became more interested in overall policy review, rather than reviewing individual projects or bond authorizations, they have also shown increasing interest in reviewing debt policy as a whole rather than considering each bond authorization without reference to the others.

Principal Concerns

We reviewed recent state actions in debt management and debt policy to discover what problem areas states were addressing, what their specific concerns were, what approaches they were adopting or considering to deal with these concerns. While selective, this review provides a representative sample of state activities from across the country; in addition, we use examples from other states as necessary to illustrate programs undertaken.

Generally, states have undertaken reviews of debt management and implemented new practices because of concerns over the size of debt and debt service commitments, and the quality of state credit ratings. States have also shown a growing interest in oversight of authorities and coordination of issues among various agencies. Nationally, state debt has risen dramatically in the last decade, but it has not risen faster than state spending; and although high, it has not grown as fast as either local debt or federal debt.

Those states that undertake analysis of their debt have generally concentrated on three distinct, but interrelated, areas. First, they have analyzed overall debt levels and debt service requirements. Such analysis generally focuses upon general obligation debt, and has been less concerned with revenue and authority debt. For example, the Maryland Debt Affordability Committee makes annual recommendations on general obligation debt authorization levels with the aim of adjusting debt authorizations so as to reduce steadily outstanding debt to 3.2 percent of Maryland personal income, and debt service to 8 percent of general fund and state property tax revenues. While no one guideline can serve each state, it is useful for a state to develop such guidelines to measure the need for debt. Unlike budgets, which must be weighed against available revenues, debt issuances frequently lack an explicit yardstick against which they must be measured; consequently, there is little incentive for competing projects to be measured against each other or to establish a debt authorization ceiling. Such a ceiling, however, is useful as an analytical tool where general obligation bonds are concerned.

Legislators and other state officials generally -- and rightfully -- separate out those projects which have a defined revenue stream to liquidate their obligations, and have been concerned not so much with total size of revenue-supported obligations as they have with process reforms, which give them some assurance that revenue bonds will not be issued unwisely. Therefore, the second area of emphasis has been the creation of oversight bodies for the issuers, which monitor issues to ensure that each one is prudent, and the creation of standard formats for issuance, bidding, measurement of interest costs, and other concerns. Finally, and perhaps less common, are the creation of bodies to recommend total debt authorizations, such as the Maryland Committee, and the creation of standing legislative committees or subcommittees to provide a single reference point in the legislature for all debt related legislation and oversight.

All of these policies can serve a state well; while no one state has enacted all of them, their record suggests that any state looking to reform its procedures and policies could usefully benefit from an analysis of other state actions.

Debt Ceilings

While revenue bonds have certain built-in ceilings, constrained by the amount of revenue available to liquidate their obligations, there is no such obvious measure for general obligation bonds. Some states have chosen (or have had thrust upon them) limits to the amount of general obligation debt outstanding, the amount that can be issued in any one year, or the amount of debt service. A summary of selected state debt limits and their calculation is provided in Exhibit 6.1. A debt limitations which is tied to an economic indicator, rather than a flat amount, makes intuitive sense. Like a spending limitation, it provides a baseline for evaluating whether debt is too large for a state to handle. The choice of a debt limitation need not be arbitrary, but there is no magic formula which a state must adopt either. In Vermont, for example, the Governor argued that the State should set as its goal that certain standard

Exhibit 6.1

Selected State Debt Limits

1) Aggregate Debt Levels

Wisconsin. The lesser of a) 3/4 of 1% of the aggregate value of all taxable property or b) 5% of the aggregate value of all taxable property less net indebtedness as of January 1.

Vermont. New debt issuance cannot exceed 90% of amount retired during previous year (statutory); maintain debt as a percentage of personal income to average for AAA states (governor's proposal).

Maryland. Maintain general obligation debt at 3.2% of state personal income.

2) Debt Service Levels

Maryland	8% of general fund and state property tax revenues
South Carolina	7% of general fund revenues
Tennessee	15% of general fund receipts
Connecticut	4.5% of previous year's tax receipts

ratios used by Moody's and Standard & Poors -- debt service as a percentage of general fund and highway revenues, debt as a percentage of state personal income, and debt as a percentage of assessed property valuation -- be held to the average for all other states enjoying AAA credit ratings. In other words, Vermont's "debt limit" would be to ensure that debt burden did not make Vermont stand out from other AAA rated states.

Similarly, as noted above, the Maryland Debt Affordability Committee adopted as its goal that general obligation debt be no more than 3.2 percent of State personal income, and that debt service be no more than 8 percent of State general fund and property tax revenues. In this case, the goals were to be met by gradually decreasing new authorizations until debt was lowered to the target levels. Wisconsin uses a different approach, which limits annual debt authorizations to the lesser of (1) 3/4 of 1 percent of the aggregate value of all taxable property in the State, or (2) 5 percent of the aggregate value of all taxable property in the State less the State's net indebtedness as of January 1 of the current year. The Wisconsin limit was modeled on local government limits, where aggregate taxable property is an excellent measure of potential tax capacity of a jurisdiction; however, at the state level, where less than 2 percent of all tax revenues are from property taxes, its usefulness as a proxy for state capacity to pay is limited. South Carolina law limits debt service payments to 7 percent of its general fund revenues. Debt service in Tennessee may not exceed 15 percent of its general fund receipts. Connecticut limits debt service to 4.5 percent of the previous year's State tax receipts. Like Maryland, these three states tie their debt limitation to some measure of state income.

In reviewing indebtedness for their states, both the California Legislative Analyst and the Committee on Program Review and Investigation in Kentucky recommended that debt limitations, if adopted, should be tied to some flexible measure of either state revenues or the state economy.[4] By holding debt to a percentage of state personal income, or debt service (for non-self-liquidating bonds) to a certain percentage of general fund revenues or expenditures, it is possible to manage debt and still retain flexibility. Such a limit may be adopted as a statute or as a written managerial policy, in order to provide the opportunity for later adjustment should there be a significant change in the mix of state revenues. For example, growth in dedicated revenues at the expense of general funds, or state assumption or shedding of significant service responsibilities could make the limit too generous or too constraining. It is important to note that a debt service limitation is only a management tool; the wide variety in such limits suggests that states have designed them to be rough measures of affordability, even when there was no present danger of being overbonded. The California report states: "There is always the possibility that excessive bonding might become a problem at some point in the future in which case a debt limit of some sort could provide a means for detecting problems at an early state. Even if debt limits are revised over time, their very presence increases the ability of the Legislature to oversee borrowing activities and consider the trade-offs between differing bond-supported activities."[5]

Oversight and Controls

If there is no magic formula for deciding how much general obligation debt a state can afford, the optimum amount of revenue bonding is even more elusive to determine. Bonds which are financed out of user fees are, in a sense, self-determining. Toll roads, airports, sewerage plants, water supply systems, and the like have detailed feasibility plans accompanying them, and -- assuming there is no gross miscalculation in the amount of future revenues available for debt service -- the size of the issue and its composition are relatively straightforward. In the case of "on behalf of" financing -- such as mortgage loans, health facilities loans, pollution control and industrial development financing, and the like -- evaluation is usually on a caseby-case basis. The state's interest is not primarily in the size of the issue, since that is determined by demand, nor in its legal permissibility, since that is effectively determined by Congress and the Internal Revenue Service. Instead, a state must be concerned with the local social or economic usefulness of the financing and that its own credit and debt service costs will not be adversely affected by the quality and quantity of bond issues outstanding. It must also be concerned that financings are prudently planned and executed, and that the state is not left "holding the bag" on a contingent financing. Even where there is no legal or moral obligation for the debt of a particular authority or public corporation, nor any investment of state funds (since the interest subsidy provided is from the federal treasury rather than the state), the failure or threat of failure to make timely payment on debt is a default, and any default can create a political obligation for a state. The current controversy over the repayment of bonds for the Washington Public Power Supply System is testimony to that fact.

Because of the potential liabilities created by their actions, states seem generally to be concerned about the activity of public authorities and corporations. Yet, because of the specialized nature of their work, and because of the difficulty in ascertaining what an appropriate level of bonding should be, some states have concentrated on reviewing the process of bond issuance, rather than its size or fiscal impact. Few states have been as harsh in their judgment as Oregon, where the review panel stated:

> ...general agreement that the industrial development revenue bond program in Oregon, as it is presently constituted, is an ineffective public policy instrument. The state legislature should develop a clear statement of program goals and objectives against which public benefit can be evaluated...If the state legislature is unable to develop...(such) guidelines...the Panel would support discontinuation of such financings in Oregon.[6]

Most states, accepting the legitimacy of revenue bond programs, have been more concerned with the quality of their administration. This creates a dilemma, since the purpose of creating an independent authority is to distance it from the political process. Moreover, it is neither practical nor appropriate for a legislature or governor to involve themselves too directly in the day-to-day administration of an agency. At the same time, states have expressed concern at the thought of agencies proceeding to unchecked issuance of debt and unsupervised distribution of proceeds.

The result has been a series of controls established to ensure that the process runs smoothly. For example, a number of states have established interest rate ceilings, hoping thereby to avoid the sale of bonds at excessive costs. The ceilings were originally set at fixed levels, but the rapid run-up in interest rates and the volatility of interest rate levels made such ceilings obsolete. Florida responded by creating a floating interest rate ceiling, which is set monthly at 150 basis points (1.5 percent) over the most recent Bond Buyer 20-Bond Index level. Florida also exempted bonds having the three highest credit ratings from the ceiling. The goal was to set up a screening mechanism: bonds that were highly rated, or issued at market rates, were allowed to go through without review. Bonds which could not meet this test (both State and local) were required to appeal to the State Board of Administration (composed of the Governor, Treasurer, and Comptroller). This Board is empowered to allow exceptions provided that the issuer can demonstrate that similarly situated projects pay similar rates, and that the project is financially feasible. "The State's principal objective has been to restrict the issuance of exceptionally risky debt."[7] Minnesota has adopted a similar floating ceiling for interest rates.

This kind of ceiling can serve as an early warning system; unusually expensive issues will be called to the attention of whatever oversight body has authority to set ceilings, and bonds which are reviewed and found acceptable may move ahead. The use of such a ceiling is an example of the need to balance debt issuance accountability against the impetus to finance high cost or marginal projects.

State interest in several other areas of the issuance process is noteworthy. States have often imposed requirements for competitive sale of bonds, specified the form in which bids can be made, and proscribed discounts. The California Legislative Analyst's study looked at these issues in more depth than any other state review, and its conclusions are worth reviewing.

The California study suggested that bonds should be allowed to sell at a reasonable discount, roughly equivalent to the normal underwriting spread; that technical constraints (such as maximum interest rates, discounts and maturities, as well as restrictions on refunding and bond anticipation notes) be made uniform for all bonds; that negotiated sales be allowed as well as competitive bidding; and that bids be evaluated by the True Interest Cost (TIC) method.

There has been considerable technical and analytical discussion about discounting over the years. The general consensus seems to be that investors prefer to buy bonds at par value. Since underwriters cannot afford to buy bonds at par and reoffer them at the same price, an allowance for a discount of 1 1/2 to 2 percent of the issue value would seem to allow for underwriters to be more competitive on interest rates. Such bidding makes it easier to evaluate both competitive and negotiated bids, since the underwriters' profit is more clearly expressed rather than hidden in a complex interest rate structure.

A number of states have moved to the use of True Interest Cost (TIC) rather than Net Interest Cost (NIC) to measure the interest rate on bonds. The differences between the two methods of computing effective interest costs are discussed later in this chapter (page 179). TIC is more complex to calculate, but it is probably a superior method of measuring both competitive and negotiated offerings. Its complexities are no obstacle to a computerized world, and discounting to present value is an appropriate method of measuring the long-term cost of money.

There has been extensive discussion over the years as to the comparative costs of competitive versus negotiated bidding, and the major points of this argument are covered later in this chapter (page 179). Advocates of competitive bidding insist that it is the only way to force competition among underwriters; negotiated bidding supporters point to the fact that increasing complexity of issues requires that they be custom tailored, and that such tailoring saves money in the long run. Whatever merits may be, there is no doubt that negotiated sales are becoming increasingly more common. The continuing growth in negotiated sales, combined with the popularity of creative finance instruments, which almost always require a negotiated sale, suggest that states will do well to allow issuers a choice, rather than requiring only competitive sales. The key to improved debt policy seems to be flexibility, rather than an a priori assumption that competitive or negotiated sales are superior to the opposite approach.

Two related concerns which emerged in most state reviews were the overall level of debt which a state and its authorities had outstanding, and the maintenance or improvement of a state credit rating. Many states seemed to feel that even though individual issues were prudent, a total level of debt which was excessive by some measure could lead to a decline in the credit rating, and thus an increase in interest costs. In addition, there was some concern that overall debt levels might push interest cost up even where credit ratings were steady because of an oversupply of that state's debt in the market. Such an oversupply could lead to an interest penalty for both the state and its local governments.

The Oregon Bonded Debt Advisory Panel, for example, expressed concern that the frequency and size of borrowings under its Veterans Farm and Home Loan program had created an oversupply of Oregon debt in the market. They found that there was an interest penalty of 25 to 75 basis points on every issue for both State and local bonds. The penalty results from investor preferences for geographic diversity in their portfolios, with no one state being overrepresented. This is particularly a problem in recent years with a major shift to individuals as the primary purchasers of bonds, most of whom buy through mutual funds. These funds are managed with an eye toward geographic diversity, and a state which has what these managers perceive as an excess of bonds on the market will find that yields will have to increase to compensate for that perceived excess.[8] Both the Maryland and Wisconsin Reviews noted the same concern for their states.

Oregon and Maryland both recommended the creation of a group to determine an overall state debt level, and suggest what new issues should be allowed. In Maryland's case, this group is the Capital Debt Affordability Committee, composed of the Treasurer, State Comptroller, and Secretaries of the State Planning and Budget and Fiscal Planning Departments and an appointee of the Governor. (See Exhibit 5.2) Aside from setting targets for general obligation debt (as discussed above), the committee recommended the creation of controls over the timing and amount of special authority debt, in order to avoid an oversupply of Maryland debt on the market, although this is not yet implemented. The Committee also recommended a cancellation of authorized but unissued debt, in order to reassure potential investors that their purchase of Maryland debt would not be diluted by large issuances of new debt. Oregon also recommended the creation of an authoritative planning committee chaired by the Treasurer to develop long-term capital outlay plans, recommend overall debt limitations, and assist in the coordination of sales. Oregon also urged the cancellation of outstanding unissued debt authorizations.

In California, a slightly different approach has been taken. While there has been no attempt to create a central oversight mechanism, the Treasurer has that authority de facto through his membership on, and chairmanship of, virtually every State agency or authority which issues debt in the State. While some observers think this is testimony more to the personal ascendancy of Jesse Unruh, the former Speaker of the Assembly who is the current Treasurer, it serves the same function as the Debt Affordability Committee in Maryland. Indeed, through the Creation of the California Municipal Debt Advisory Commission, which has review (although no veto) over virtually every local bond issuance in the State, the Treasurer's purview touches all State and local debt policy.[9]

These actions reflect not only a state-level concern over potential investor reactions, but an active attempt to communicate more effectively with rating agencies, underwriters, and investors. The importance of effective communication was highlighted by the public finance director for Kidder, Peabody and Company when he identified improved and regularized communications between issuers and investment bankers as a key to a continued healthy market for state debt; he argues that a regular program of meetings and information can improve both working relationships and investor perceptions.[10] The Oregon review explicitly argued for a program of improved investor relations.

There is some empirical evidence to suggest that the total amount of debt outstanding can contribute to the cost of debt issuance. Aside from the Oregon evidence -- which looks primarily at the value of Oregon bonds on the secondary market — one study has suggested that for many states, the market for local debt is primarily state-wide and regional, rather than national. As a consequence, the conclusion is therefore that an appropriate state role is to monitor credit markets and local debt issuance in order to be aware of such problems and to ensure an orderly market for tax-exempt debt of all types.[11]

Exhibit 6.2

Oversight Committees for State Debt

State	Title	Composition
Maryland	Capitol Debt Affordability Committee	Treasurer, Controller Planning Director, Budget Director
New York	Public Authorities Control Board	Budget Director, Senate Finance Chair Assembly Ways and Means Chairman
California	No formal mechanism, but treasurer chairs oversight bodies for all debt issues.	
Louisiana	State Bond Commission	Treasurer (chairman), Governor, Lieutenant Governor, Commissioner of Administration Secretary of State Attorney General, Senate Finance Committee Chairman, Senate Revenue and Fiscal Affairs Chairman, Speaker of the House, House Ways and Means Chairman, House Appropriations Chairman.

Several states have moved in this area, with the most famous effort being the North Carolina Local Government Commission. This group actually markets the bonds on behalf of the local governments. No other state has such sweeping powers of control, although the Louisiana Bond Commission holds veto power over all local and State bond issues. In Michigan, the Municipal Finance Commission reviews all local debt issues before they go to market, as does the California Municipal Debt Advisory Commission. Numerous other states have informational systems, review processes, or assistance programs. These range the gamut from merely collecting information to actively assisting local governments with access to the market.[12]

If a state is going to develop a comprehensive debt policy, then there must be some mechanisms for overseeing the implementation of that policy. Two approaches have been developed so far that show promise; one is to ensure that both governors and legislatures have a body to articulate and monitor ongoing debt policy. This is the function which groups like the Capital Debt Affordability Committee play in Maryland, or the State Treasurer in California. Virtually every state which has reviewed their policy has suggested that there be a legislative body with specific authority for debt policy as well. In New York, this is exercised by the Assembly Ways and Means Committee and the Senate Finance Committee, who already have jurisdiction over all bills with fiscal impact, whether they deal with taxes or spending. Oregon suggested a subcommittee of Ways and Means be created; in California, the Analyst argued for a joint subcommittee of the fiscal committees (Oregon's Ways and Means Committee is already joint). In Wisconsin, the Joint Finance Committee has jurisdiction; in Michigan, it is the Joint Subcommittee on Capital Outlay. Illinois uses a slightly different approach; here the legislature has a joint Economic and Fiscal Commission, which has responsiblity for preparing revenue estimates and fiscal notes on tax bills. This commission also has a permanent charge to study the long-term debt position of the State, prepare debt impact notes on bills, assess capital plans and the State's ability to market bonds, and make special studies. Almost unique among the states, it even publishes a quarterly journal, The Illinois Bond Watcher. The intent is to ensure that there is informed observation of the debt issuance process.

New York State has two innovations which deserve further discussion: the Public Authorities Control Board (PACB) and the Securities Coordinating Committee (SCC). The PACB consists of three members, appointed by the Governor, the Senate Majority Leader, and the Speaker of the Assembly. Since its creation in 1976, it has consisted of the State Budget Director, the Chairman of the Senate Finance Committee, and the Chairman of the Assembly Ways and Means Committee. All major State authorities must have prior PACB approval before entering into any agreement or incurring any indebtedness for the purposes of acquiring, constructing, or financing any project. The PACB reviews all projects for feasibility, affordability, and coordination with the State's capital program as defined under New York's "Accounting, Financial Reporting, and Budget Accountability Act of 1981". Only the Louisiana Bond Commission, among state agencies, matches the PACB in its power to review and coordinate authority financing.

The SCC adds to the PACB review a scheduling mechanism for debt. The SCC is chaired by the State Comptroller, and includes the State Budget Director and the chairmen or chief operating officers of the ten largest authorities. It produces a quarterly schedule of proposed borrowings which ensures that the State and its authorities do not jostle each other in the market, and that the approach to the market is orderly.

Although these approaches provide New York with controls that only Louisiana and California -- to some extent -- can match, there are further reforms to be made. Both the Assembly Speaker and the Ways and Means chairman have suggested merging the PACB and SCC to broaden their coverage to all authorities, including interstate ones, and to include local borrowings in the scheduling process in order to coordinate better the marketing of New York securities.

These bodies provide a useful approach for other states to consider as well. As one observer of the markets has noted, all control mechanisms rest on trust; if elected officials trust authority boards and staff, no further oversight is needed. But even with oversight, trust must repose somewhere: with the Treasurer, the Governor, a legislative body, or some group. If it is true that debt issuance is an instrument of public policy and not just the technical translation of public fiscal decisions -- as this chapter has earlier argued -- it follows that trust should be reposed in those same elected officials whose function it is to make public policy decisions. Trust may be one part of the issue, but so is accountability; debt policy, like tax policy and spending decisions, is ultimately the responsiblity of legislatures and governors, and their constituents as well as the marketplace will hold them accountable for the results of that policy. The preceeding overview of state activities suggests that states have begun to recognize and act upon that responsibility.

Role of the State Bond Committee

The Alaska State Bond Committee was established by the State Bonding Act (AS 37.15.110). The statute requires that the Committee be composed of three members, as follows:

Commissioner of Commerce and Economic Development
(as permanent Chairman),

Commissioner of Revenue,
(as Secretary), and the

Commissioner of Administration

The principal role for the Committee is to authorize the sale of Alaska's general obligation bonds. The Committee also approves the allocation of funding to capital projects, authorizes the prefinancing of projects to be bonded (i.e., the use of general fund loans in anticipation of bond sale receipts), and is responsible for International Airport Revenue Bond sales. In the past, the Governor has supplemented the membership of the State Bond Committee with ex officio members. During Governor Hammond's administration the ex officio members were the Commissioner of Transportation and Public Facilities and the Director of the Office of Management and Budget.

Based largely upon interviews with individuals who have been members of the Committee over the past ten years, there appears to be a concensus that the Committee's present role is limited and that it is not substantively active in the State's debt management. We believe this to be the result of several factors, chiefly: 1) legislative design of a routine, perfunctory board rather than an active management- and oversight-oriented board, and 2) lack of staff to the Committee.

Each corporate-type entity of the State that is authorized to issue debt has virtual autonomous power of self-governance over its debt issuance and debt management. The autonomy enjoyed by these issuers is, however, subject to review and oversight by the Legislature through its approval of upset or maximum debt authorization levels. In addition, through appointment privileges, the Governor of the State has effective control over the governing boards of most State government corporations and authorities. Yet, each of these levels of legislative and executive oversight is subject to the dynamics of the political process, and, as a practical matter, the Executive Board positions are frequently more ceremonial than substantive. This is due to the inherent remoteness of Board members from day-to-day involvement in the State corporations and the practical limitations on the commitment of time to a wide array of corporate-type activities.

It is important that some body at the State level take responsibility for monitoring, analyzing, and reporting on the total amount of debt outstanding in the State and State debt management practices. As pointed out elsewhere in this report, the size and scope of State debt in Alaska is significant, and on a

per capita basis greater than anywhere else in the United States. The rate of growth in overall public debt is among the highest in the nation, due principally to the debt issued under the auspices of the State through its public authorities and corporations. Unlike the State's full faith and credit bonds, this debt does not require approval by vote of the people at public referendum. In addition, nearly 40 percent of the State's revenue-supported debt is backed by a pledge of the State's moral obligation and, therefore, represents a contingent liability of the State (see Table 3.16).

The experience of New York State with its Urban Development Corporation is the most graphic example of the consequence of inadequate control of public authority debt issuance. In fact, New York only regained financial credibility after what had been very limited control over the borrowings of its vast and diverse public corporations was tightened through several oversight mechanisms. Of course, Alaska is not in a comparable position, nor is the State threatened in any similar way to the fiscal crisis of New York State and City in the early to mid-1970's. Yet, it is the uncontrolled growth of enormous amounts of debt that brought New York State to the brink of bankruptcy. A revamping of the role and responsibility of the State Bond Committee in Alaska, at this time, would be a positive sign to the financial markets that the State is sensitive to its fiscal posture and in control of its financial destiny.

Considering the role and impact of both direct (tax-supported) and indirect (contingent or moral obligation) debt upon the State's fiscal condition and economic well-being, and considering recent developments in oil prices that alerted the rest of the nation to the volatility of the State's basic revenue source, we believe that the mid-1980's is a good time for the State to broaden and strengthen the role of the State Bond Committee. Revising both the membership and its scope of responsibility would be a timely signal to the investment, underwriting, and credit analyst communities that the State is on top of its overall debt management program and that the State's debt issuance is being controlled so as to prevent getting in "over-its-head". A departure from business-as-usual is appropriate at this time as a sign of fiscal responsibility, especially regarding debt management.

In order to carry out its expanded scope of activity, the Committee should be reconstituted. The chairmanship should reside in a senior-level fiscal official, such as the Commissioner of Revenue or the Director of the Office of Management and Budget who is close to and familiar with the State's debt management practices. Voting membership should also include the Commissioners of Commerce and Economic Development, Administration, Transportation and Public Facilities, and Community and Regional Affairs, and a representative from the governing board of a State corporation who does not hold any other official State position. In addition, a State legislator, such as the Chair of the Legislative Budget and Audit Committee or the Senate Finance Committee, could be informally added to the committee in an ex-officio capacity. This would constitute a seven member voting board. To assist in fullfilling its expanded duties, the State Bond Committee should be staffed by a professional in the field of public finance who, as Executive Secretary to the Committee, sits ex-officio on the Committee itself as a member.

One major role for the newly reconstituted State Bond Committee would be continual oversight of the State's total indebtedness -- including all State-level debt -- as a final check on debt issues before going to market. The impact of the magnitude of both direct and indirect debt upon the State's creditworthiness is a matter of balanced fiscal judgment. Neither Standard & Poor's nor Moody's, the two predominant national credit rating agencies, has a quantifiable parameter for signaling dangerously high contingent liability levels (due to large amounts of moral obligation debt, for example). The amount of State guaranteed debt will effect the credit rating of all guaranteed debt, and, depending upon the degree of the guaranteed bonds' self-sufficiency, the amount and type of moral obligation bonds may affect the credit rating and market access of State debt of any description, including general obligation bonds.

The Committee should be required to take a global view of debt-related activities in a formal way, not in the loose, informal manner that presently exists. Determining the level where aggregate indebtedness adversely affects credit quality and market access is a matter of judgment. Those closest to the scene are in the best position to make such judgment. An active and involved State Bond Committee, with the advice and counsel of bond market experts, would be in a position to oversee all State debt activities and serve as an effective mechanism to promote fiscal management and avert fiscal misfortune. Several persons who are close to the Bond Committee noted that the overlapping membership of Bond Commmittee appointees as appointees to the governing boards of other State level issuers, such as AIDA, AHFC, and the Bond Bank, provided for an informal linkage of information among and between most all State debt issuers. Such high-level officials, however, do not have the time to follow and analyze the trends in State-level debt issuance necessary to make informed decisions about financing methods and the structuring and timing of bond issues. Hence, it is important that the responsibility for overseeing coordinative, and analyzing state debt issuance be given to one central body.

We believe that the oversight exercised by the State Bond Committee should be passive in nature. The State Bond Committee should not supplant the activities or authority of independent agencies and corporations. The Committee should serve both as an information center and as a final check-off point for debt issues. In order to carry out this role, the Committee should receive annually a financing plan from each entity of the State authorized to issue bonds. The plan would identify the amounts to be borrowed, the approximate time of bond sale, describe the projects or programs to be financed, explain the basic security structure supporting the proposed debt, and otherwise provide an explanation of the purpose of the financing along with the key features to the extent then known. The Committee should annually compile a master debt issuance schedule from the individual financing plans and inform all State and local local issuers of announced plans in order to facilitate coordination of bond issue timing.

The overview of proposed bond sales could become the basis for analyzing the aggregate impact of debt issues upon the financial condition of the State. In this connection, as described in the chapter on debt affordability, the

Committee should annually prepare a comprehensive profile of outstanding debt and monitor its impact on the State's fiscal condition. Analysis and categorization of outstanding debt in a manner similar to that presented in Table 3.16 should be an element of this comprehensive profile. The inclusion of such a report in the State's official statement would improve its disclosure and usefulness to investors.

Closely related to this activity would be responsibility on behalf of the Committee to review each financing before it is brought to market. When bond or note issues are formulated and near completion, approximately thirty days in advance of the scheduled sale date, the Bond Committee would receive all pertinent project documents for review. The Committee's only power would be to defer or veto the issue because, in the judgment of the Committee, the security structure or sources of repayment are inadequate or the issue jeopardizes the credit of the State. The committee would not be responsible for approving all State-level debt issuance.

It should be noted that the Municipal Bond Bank should be included within the scope of authority of the State Bond Committee. Likewise, any local unit of government expecting to sell instruments of indebtedness outside the State Bond Bank would be expected to file with the Committee its annual financing plan, but the Committee would have no responsibility other than including such local government issues in the master debt issuance schedule as an information item. The primarly purpose of the master debt issuance schedule is to alert all issuers of bonds and notes as to the timing of what are potentially competing issues in the marketplace. This allows for coordination of bond issue timing among and between the issuers themselves, facilitates market access, may tend to increase the number of bids when issues are sold competitively, and may allow for rearranging the size (amount) and frequency of certain issues in order to more effectively attract buyers. All of the Committee's procedures and policies should be implemented by rule and regulation, and failure to comply should subject the negligent agency or local unit to loss of, or withholding of, State financial assistance.

The Moral Obligation Pledge

The State itself does not issue moral obligation bonds. Such bonds are issued by public authorities and corporations under statutory authorization that provides for the creation out of funds raised by the bonds, or otherwise, of a reserve fund equal to the maximum annual debt service on the bonds. Typically, the moral obligation language states that if an issuer (public authority or corporation), because it does not have sufficient revenues, is obliged to draw on its reserve fund to meet debt service payments, the governor must be notified and shall inform the legislature of the deficiency in the debt service reserve fund. The legislature must then consider whether it will or will not appropriate the amount needed to make up the deficiency in the reserve fund. An example of the State's moral obligation is given on page 71.

Customarily and traditionally, public corporations and authorities issue revenue bonds which are backed-up by revenues generated by the projects financed by the bonds. The projects are considered self-liquidating, and the public authority is thus considered self-supporting. The moral obligation pledge is a useful and sometimes necessary supplement to the guaranteed pledge of revenues when the issuing corporation or authority is a relatively new enterprise; when there is an insufficient track record of repayment capacity for the type of projects being financed; or when there are other unusual elements of risk involved for the investors. Unusual elements of risk in the State of Alaska might, for example, be considered to be reliance on a single industry (oil production) for a substantial portion of statewide economic productivity, the State's geographic isolation, climate, and susceptibility to natural disaster or acts of terrorism against the pipeline. Hence, we do not see the possibility of entirely eliminating the use of the moral obligation bond in the case of all Alaska financings.

The term "moral obligation" is a phrase which takes on different meanings depending upon the perspective of the interpreter. The language surrounding moral obligation bonds may mislead those not trained in public finance words-of-art. To bond counsel, and others experienced in structuring programs of public indebtedness, the moral obligation pledge means that if the primary source of revenues guaranteed to repay a particular debt is insufficient, the legislative intent is to examine the situation and determine if supplemental revenues will be made available to meet debt repayment requirements. The moral obligation pledge is a contingent liability -- a potential call -- upon State resources. It is not a legal liability. It does not, as a matter of law, mandate that the legislature or the governor provide any funds to repay bonded indebtedness.

To legislators and many public officials, the moral obligation pledge is removed from any linkage to direct fiscal responsibility because the projects and programs to which the moral obligation pledge has been given are understood to be self-supporting. Public officials view the moral obligation as merely a device which helps to sell revenue bonds at a lower interest rate, and at no cost to the State. They generally assume that those persons responsible

for the financing have thoroughly analyzed and approved two financial assumptions supporting the debt issue.

To investors, the moral obligation is viewed just one step below the credit quality of the State's general obligation pledge. Although investors know that the moral obligation is not a legal obligation, they nonetheless tend to treat it close to the equivalent of a guarantee by the state. The popular perception is that Alaska, or any other state, will never let its moral obligation bonds go into default. The practical reality is that if a state moral obligation bond were to enter default the fiscal credibility of the state would be impaired, and the state would be at least temporarily barred from access to the bond market. Perhaps even more troublesome is the fact that the value of the moral obligation as a financing security device would be eroded which would make certain future revenue financings more costly and more difficult.

Although most legislators approve moral obligation debt issuance on the premise that the projects or programs being financed are self-sufficient, the perception on the part of investors and the investment banking community is quite different. We discovered through interviews with members of the banking and underwriting communities that the moral obligation of the State and the concomitant strength of State revenues was the basis for securing a letter of credit which backs-ups the Alaska Power Authority's bond anticipation notes, and not the fiscal merits of the projects being financed. This interpretation of the moral obligation is widely held among bond market participants. Many investors and underwriters look through the projects being financed to the moral obligation backing. If a moral obligation pledge is present, they may not be concerned with the financial feasibility of the project, rather, they will assume that State officials have thoroughly assessed the project before granting the moral obligation.

A careful look at the procedure for implementing a call upon the moral obligation pledge reveals that the legislature must appropriate monies from available revenues. In light of the structuree of the State revenue system, the value of Alaska's moral obligation pledge has several limitations. The limited sources of State revenue, and the unstable nature of oil prices may make it difficult for the State to allocate substantial amounts to meet moral obligation debt service requirements, especially in the face of other budgetary commitments and obligations. This fact has not gone unnoticed among bankers and underwriters of State moral obligation bonds. For this reason, the existence of the Permanent Fund provides comfort to bond holders. In spite of the State's current financial stability, investors believe that the State would be able to meet its moral obligations, if necessary, through the assets of the Permanent Fund. This is true even though such action could not be taken automatically nor without a change in law.

The State's moral obligation pledge has facilitated the borrowing activities of APA, AIDA, AHFC, and the Municipal Bond Bank. When these public corporations were in their infancy, it is unlikely that they would have been able to borrow form the national credit markets without the State's moral obligation backing due to the absence of a mature, diversified and stable State economy.

For certain programs, such as the APA and the Municipal Bond Bank, the presence of the moral obligation may be necessary for continued borrowing at reasonable interest rates. Other issuers, such as the AHFC, may have established themselves among investors through frequent and sizeable borrowings to the point where the moral obligation is no longer necessary as a marketing tool, nor to obtain lower interest rates. Where it is possible to borrow funds without use of the State's moral obigation pledge, its use should be avoided. When it is necessary to enhance the credit quality of a revenue bond with the moral obligation, it should be applied with discretion and sensitivity to the fact that it will encumber, albeit to an indeterminate degree, the State's overall creditworthiness and may in the future be a burden on the Permanent Fund or other State revenues.

It should be the responsibility of the State Bond Committee to determine the importance of the State's moral obligation to the success of the agency's (or public corporation) borrowing program and its potential impact on the State's creditworthiness. Based upon this analysis, the Committee should recommend whether or not the State should grant its moral obligation. The moral obligation pledge should not be treated as a right, available to most State debt issuers, as it is at present. Rather, it should be an indication to the bond market that, after close scrutiny, the State believes the project meets State objectives and is financially sound.

Moody's Investor Service does not consider the presence of a moral obligation pledge in the assignment of credit ratings to revenue bonds because they believe that the moral obligation itself is fraught with many risks and considerable speculation. Standard & Poor's acknowledges the moral obligation as a component of the security behind a revenue bond, but also acknowledges that it is impossible to determine at what point and under what set of political and economic circumstances meeting the State's moral commitments would be too large a burden to bear. These factors considered, it is evident that the strength or utility of the moral obligation commitment varies in inverse proportion to the frequency or amount of its use. The more heavily it is used, the more diluted it becomes.

Some may suggest that because the moral obligation is interpreted by many investors as tantamount to the State's general obligation pledge, the State should abandon the use of the moral obligation and substitute its full faith and credit pledge. The supposed objective would be the lowest possible borrowing costs which the general obligation pledge would bring. Such a policy change would not be in the best interests of the State. This is due to the fact that the State has specifically identifiable revenues and budgetary allocations which support its general obligation bonds, and the repayment of these bonds has a reasonable sense of predictability since the debt retirement schedule is tailored to the flow of receipts from known oil resources. Burdening the general obligation pledge with what would otherwise have been moral obligation commitments would quickly erode the State's credit rating and drive the cost of borrowing for general public purposes upward. This would occur without a concommitant decrease in the cost of borrowing for the revenue-type bonds because of the imbalance that this type of borrowing would place on the

creditworthiness of the State as a result of adding a large direct obligation to a limited source of revenue.

Capital Planning and Capital Financing

The effectiveness of the State's capital planning process will have very important implications for its future financial condition, since adequate physical facilities and public infrastructure have a major impact on the State's future tax base and its economic development, and, as well, important implications for its credit rating.

For many years, tax-exempt credit analysts have emphasized the significant relationship between a government's financing plan and the creditworthiness of the government's bonds. The importance of this relationship has been reflected in credit ratings assigned to the debt obligations, and in the reception afforded the bonds in the markets. It is especially informative to review comments offered by Moody's Investors Service, Inc., the national credit rating agency, on this subject:

> Most governments, however, have recurring needs for (capital) improvements, and consequently must plan for those needs. Even having no plan is, in a sense, planning -- to a municipal bond analyst, it is a plan to meet the problem hit or miss, instead of systematically. The annual preparation of such programs, comprising appropriations for the next year and estimates or projections for the five years following, has been standard practice for well-run (local) governments for nearly a generation now...It (capital improvement program) should be comprehensive in scope of projects covered and should show not only the amount to be spent but also the source of funds -- how much from current budget contributions (taxes, etc.), how much from Federal and State grants, how much from Capital Fund balances carried forward, how much from the sale of new bonds.[13]

Many other credit market analysts have also stressed that careful capital planning and orderly debt execution are essential for meeting the physical needs of a government. The development of a coordinated approach toward the capital budget and debt management programs can improve the credit posture and marketability of debt obligations for issuers of tax-exempt securities. Indeed, a comprehensive capital improvement program and an associated financing plan are important priority-setting devices which indicate to the investment community an astute sense of managerial awareness. Demonstrating keen managerial attention to capital financing is important in Alaska's case because of the developing nature of its economy and the need to allocate scarce resources to projects producing the greatest return on investment. It is important that the State promote capital projects that will encourage the development of a diverse economy that will be able to support the investment in public infrastructure. A comprehensive capital investment program and financing plan will help the State achieve these goals. In formulating such a plan one key element will be the decision to use current revenues, as opposed to bonded indebtedness, to pay for capital investments.

Pay-as-You-Go Vs. Debt Financing

Capital financing decisions typically involve a trade-off between paying for the project through otherwise available current revenues or through the issuance of bonds. Many factors influence this decision, including other demands for current revenues, the type of project to be financed, and the financial costs of either approach. When revenues are tight, there often is little choice between bonding and paying from current revenues: capital projects must be bond-financed unless the government chooses to raise taxes.

If the capital project is expected to generate revenues sufficient to service bonds, it may be fiscally responsible to finance construction through project revenue bonds even if current general revenues are available to cover project costs. Revenue-supported debt does not increase the direct (general obligation) debt burden of a government, and may encourage sound financial management of the particular public enterprise.

One of the final decision-making criteria in the choice between long-term debt and current revenue financing is the anticipated costs of either financing alternative. Other important criteria include the affordability of future debt, as discussed in Chapter Seven. The ultimate financing decision must be based upon a careful assessment of all financial and economic costs. Certain economic conditions tend to favor the use of one or the other technique. Below, we develop a framework for choosing between bond and current revenue financing from an economic and financial perspective. At one extreme will be the "pay-as-you-go" approach, wherein all capital investments are paid for out of current revenues. At the other extreme is the debt financing approach where all long-term investment is financed over a long time period through the issuance of debt. Realistically, most capital improvement budgets will be financed using a combination of the two financing strategies. However, in order to appreciate the trade-offs involved in both approaches, it is useful to look at them as two distinct alternatives.

Arguments for and against "pay-as-you-go" versus borrowing are not based solely on the external economic climate. Other reasons why one or the other method may be preferred are to promote intergeneratonal equity, i.e., to share the financing burden among current and future taxpayers, or to smooth out the peak cash needs of major capital outlays. The approach taken in this section is to apply a valuation of the savings or costs to individual taxpayers of using either current revenues or borrowing under varying assumptions regarding the probable future course of prices and interest rates versus their current levels.

In periods of prosperity when prices are rising, current-dollar costs are growing, and real demands for investment seem endless, the propensity has been to use the debt market. As the economy slows down, however, and inflation abates, there tends to be a greater reliance on financing fewer projects and doing so through current revenues or taxation. "Taxation" will refer to the "pay-as-you-go" school of thought -- financing investment throught current

revenues raised from a government's own sources. It will use the economic and financial consequences to individual taxpayers of the two alternatives as the basis for deciding between the two. Likewise, "debt" will refer to the issuance of a long-term security on which the local government is obligated to make annual debt service payments. The general arguments for each approach will first be presented, followed by a model illustrating the net cost of either approach.

The fundamental characteristic of taxation is the compulsory reduction in income (or wealth) imposed on the individual in order that the government may finance some service or capital investment which, in turn, will yield in the future some addition to real income. Residents of a particular community have little choice (aside from moving) but to pay their annually assessed taxes. In order to finance a capital improvement plan solely through current revenues a government must choose between:

1. undertaking fewer capital projects than if debt were issued because the current budget does not have a sufficient amount of "excess" funds to finance the needed amount of investment; or

2. raising taxes in each year of the construction period by an amount that will cover construction cost.

It is likely that, given a slate of necessary capital investments, deciding to use pay-as-you-go financing from current revenues rather than debt issuance will most frequently entail taking the second alternative of raising taxes.

Borrowing, on the other hand, enables governments to finance public investments without much reduction in the purchasing power of private taxpayers during the period in which the funds are required. Debt service is paid over a period of years, and the effect on the annual budget is minimized in any given period. Thus, current taxes have to be raised only slightly to support higher levels of debt service resulting from a given capital project. But, because of interest payments, a much larger total amount is paid out overall.

From an individual taxpayer's standpoint, the difference between the two alternatives is important. Paying the increased tax to finance the construction forces individuals to forgo using relatively large amounts of their income for alternative purposes for the years that the tax is levied. For states which tax mineral resources rather than incomes, the opportunity cost of not using current revenues for other purposes is borne by its citizens, and also can be viewed as a reduction in real income. The "cost" of this forced reduction in income, what may be viewed as an individual's "time value of money", is short-term interest rates. This assumes that the alternative use for the income paid out in taxes is investment in short-term, highly-liquid, non-risk securities. This is essentially the current-period cost of the use of money devoid of any credit or liquidity risk. For lower-income individuals with no excess income to invest, the time value of money may be higher. Conversely, for individuals who keep their excess income in non-interest-bearing checking accounts, the time-value of money may be lower.

The total cost to the government of the two financing alternatives also varies considerably. This is especially true in times of high tax-exempt interest rates when the sum of required annual debt service payments over the life of an issue may exceed the actual proceeds of an issue by as much as two and one-half times. However, when inflation is expected to be at high levels or productivity is growing, the future dollars paying the debt service will be worth less (or easier to come by) than the dollars when they were borrowed. High growth, therefore, may largely offset the effect of high interest rates by lowering the true cost of borrowing. This ability to repay in cheaper dollars is a major supporting argument for borrowing to finance long-term capital investment. But when inflation or growth are slowing, perhaps to a level half that of the cost of borrowing, the financial arguments for borrowing will require reconsideration.

In order to illustrate a comparison of the two alternatives, a hypothetical project and two financing schemes are presented in Table One. The project under consideration is estimated to cost $30 million and take three years to complete. The two financing options available are:

-- Taxation -- The government raises taxes on a per-capita basis for each of the three years in the construction period. The model assumes that taxes are levied to cover one-third of the total project cost each year. It is further assumed that there are one million residents for whom taxes will be raised. This alternative results in a per capita burden of $10 for each of three years.

-- Borrowing -- The government issues 20-year bonds with equal annual debt service payments. The costs of this alternative are presented at interest rates of 8, 9, 10, 11, and 12 percent. To comport with reality, it is also assumed that during the three-year construction period, unused proceeds from the bond sale are invested in securities paying the same rate as on the long-term borrowing. Such investment earnings are used to reduce the debt service payments.

Table 6.1 presents the annual costs of the taxation alternative and the five borrowing alternatives. The annual figures are on a per capita basis. In order to compare the total costs of either alternative, it is necessary to look at the discounted or present value of the annual pay-as-you-go tax payment and annual debt service under the five borrowing assumptions. These present value figures are presented in Table 6.2.

It should be noted that the per capita figures assume a constant population base of one million persons throughout the 20 years of the example. If population over this time period grows or, indeed, shrinks, the per capita figures would also decline or grow.

For evaluation purposes, the rate at which the two streams of payments are discounted will not necessarily be the same. In the taxation case, the

19		3.06	3.29	3.52	3.77	4.02
20		3.06	3.29	3.52	3.77	4.02
TOTAL COST:	30.00	57.51	61.68	65.98	70.40	74.93
Cost without Arbitrage Earnings:		61.11	65.73	70.48	75.35	80.33

Debt service calculation for years 1,2,3 assumes arbitrage earnings at a rate equal to the bond interest rate. Drawdown of the construction fund takesplace at a rate of 33.3%, 33.3% & 33.3% of the total bond issue.

Government Finance Research Center

TABLE 6.2: Present Value of Financing Alternatives on a Per Capita Basis

		LONG-TERM FINANCING ALTERNATIVE				
	3-YEAR TAX	8 % Coupon	9 % Coupon	10 % Coupon	11 % Coupon	12 % Coupon
Dollar Cost:	30	58	62	66	70	75
Discount Rate:						
2	29	46	50	53	57	60
4	28	38	41	44	47	50
6	27	32	34	36	39	41
8	26	27	29	31	33	35
10	25	23	24	26	28	30
12	24	20	21	23	24	25

timeframe is much shorter (3 years) than in the borrowing alternative (20 years), and it is assumed that income or short-term savings will actually be reduced in order to pay the tax. As was discussed above, the proxy for the near-term time value of money in this case is risk-free short-term interest rates.

For long-term debt, however, there is little annual reduction in income, and it occurs over a long period of time. A more appropriate discount rate would appear to be the expected average rate of nominal growth in the economy over the 20 years. For example, 3 percent growth in GNP coupled with a 9 percent of inflation yields a nominal growth rate of slightly over 12 percent. Looking at the discounted or present values (P.V.) in Table 6.2 for the five long-term financing alternatives, it is clear that as the nominal growth rate (in the column headed "Discount Rate") rises from zero (total dollar cost) to 12 percent, the P.V. cost of borrowing drops dramatically. Under the 12 percent coupon-rate hypothesis, the P.V. cost drops from $75 (at a zero discount) to $25 (at a 12 percent discount) on a per capita basis.

Assuming a short-term time value of money equal to 8 percent (close to current levels of low-risk money market interest rates), the P.V. cost per capita of raising taxes over three years for the project is $26 (see Table 6.2). The long-term borrowing alternatives that result in a lower P.V. cost than $26 can be depicted using the graph shown in Exhibit 6.3. Each line of the graph shows the present value of various short- and long-term financing alternatives under varying discount rate assumptions.

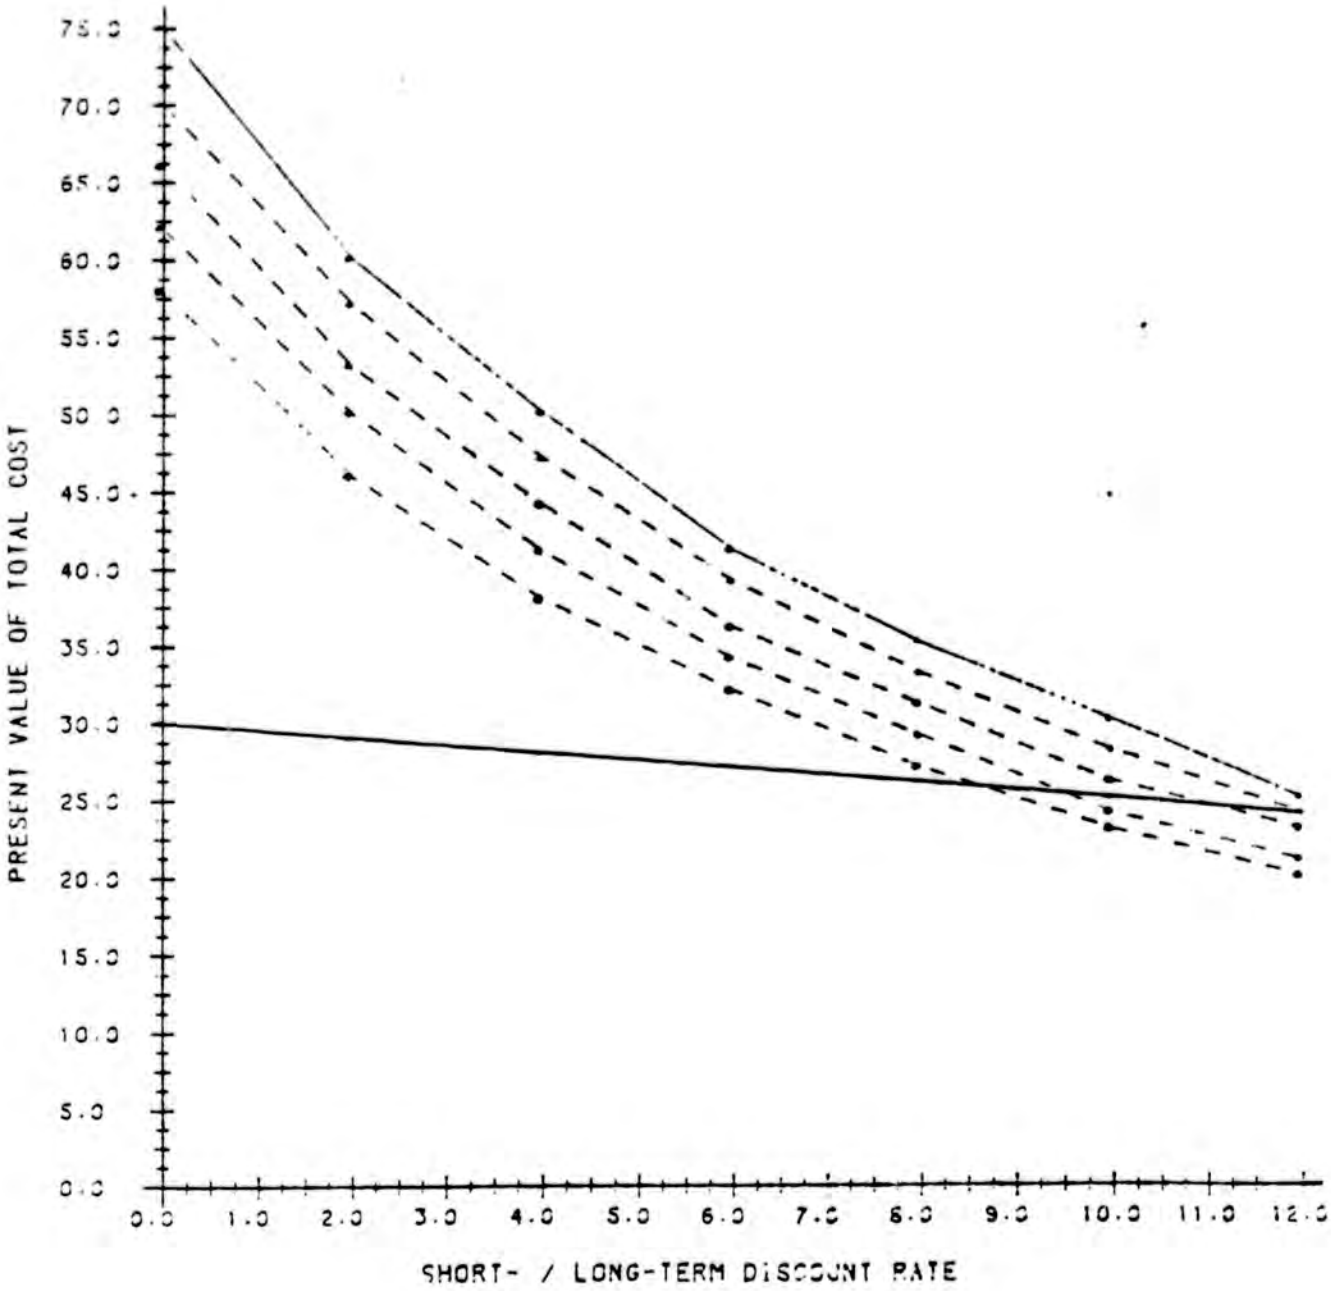
The graph facilitates comparison of the total P.V. cost of the financing alternatives. For example, at an 8 percent short-term discount rate, the combinations of long-term discount rates and coupon rates that yield a lower P.V. fall in the shaded area shown in Exhibit 6.4. Generally, the long-term discount rate must exceed the borrowing coupon rate to produce a lower P.V. For example, if the long-term discount rate is 12 percent and the coupon rate is 11 percent, the P.V. per capita is $24 -- it is cheaper to borrow than it is to use pay-as-you-go financing.

Using the discounted values as a guide, it can be seen that long-term borrowing is a more competitive alternative to current taxation when expected inflation and/or real growth in the economy are relatively high. Borrowing is, however, always relatively more attractive at lower interest rates, whatever the expected rate of growth in the economy. However, the figures show that changing assumptions on the nominal growth rate has a greater impact on the P.V. cost of borrowing than does the coupon interest rate on the bonds. As the level of future expected inflation plus growth in GNP falls toward 5 percent, the borrowing alternative becomes much more expensive in present value terms, whatever the level of short-term discount rates.

It might be noted that if the project were to be paid for in one year (rather than over three), the short-term P.V. line in Exhibit 6.4 would shift to become horizontal at $30 per capita. At this point borrowing becomes more attractive at higher coupon rates and lower discount rates than before. If, however, one attempts to extend the pay-as-you-go payment period beyond a

Exhibit 6.3

PRESENT VALUE OF DEBT AND TAX FINANCING ALTERNATIVES



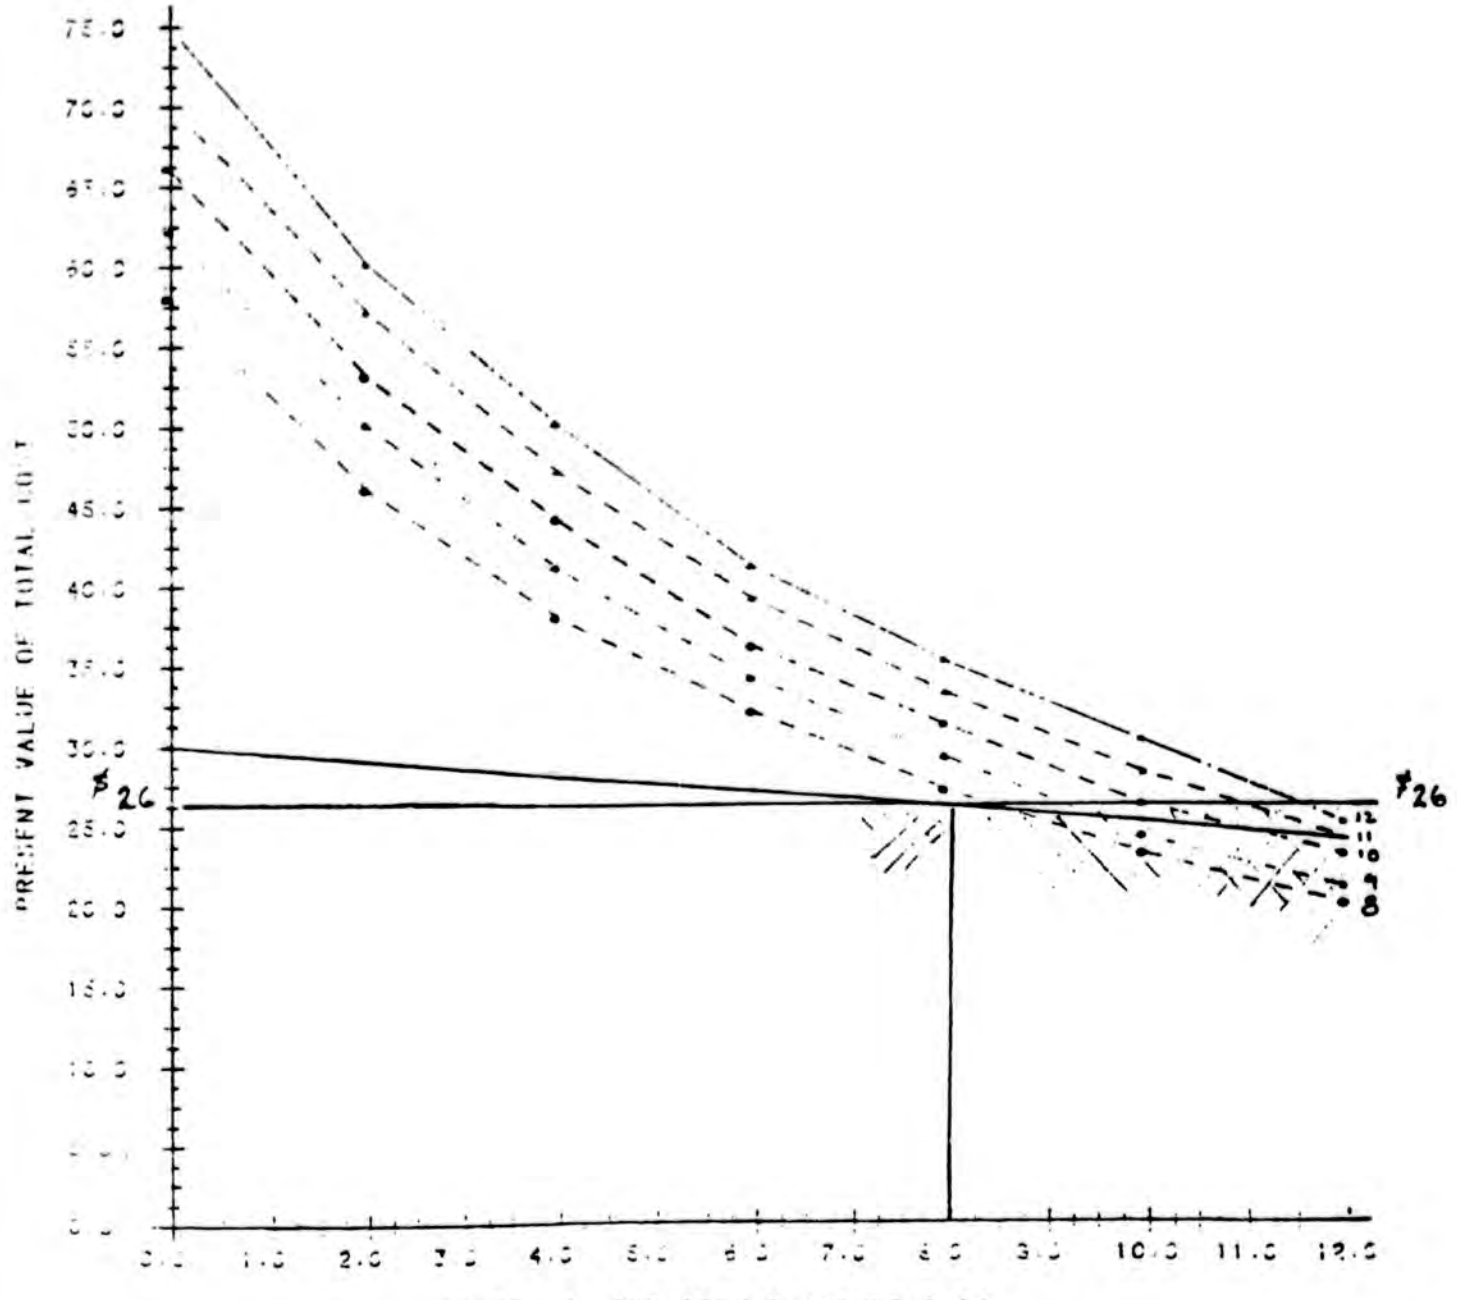


Exhibit 6.4

PRESENT VALUE OF DEBT AND TAX FINANCING ALTERNATIVES

relatively short period (for example, to five years), the above cost differentials become much less significant. This is because the community would delay having the use of the facility (which it is assumed to enjoy within 3 years in the above exercise and such things as prices and interest rate risks transform the short-term "consumption" choice into a long-term "investment" phenomenon. It would no longer be valid to differentiate between long- and short-term discount rates.

It is important to note that the examples given are dependent on the particular assumptions regarding project build-out, structure of principal repayments, growth in population, and so forth, and the trade-offs depicted will be somewhat altered under differing assumptions.

In summary, the lower the interest coupon on long-term bonds in relation to the expected rate of long-term nominal growth in the economy, the more desirable it is to borrow.

The lower the interest coupon on long-term bonds in relation to short-term discount rates used for the taxation alternative, the more desirable it is to borrow.

The higher the long-term discount rate in relation to the short-term discount rate, the more desirable it is to borrow for any given coupon rate.

Generally, the use of long-term borrowing will be more desirable if the long-term coupon rate is equal to or less than the short-term rate and/or less than the long-term expected nominal growth rate.

Financial Reporting

In addition to capital planning and capital financing, financial reporting is an important element in the total debt managment picture. States that use an accounting system that conforms to, and is consistent with, generally accepted accounting principles (GAAP) benefit in several ways. Because GAAP financial reports require that the accounts and the annual reports reflect the unified accounting entity — which in Alaska's case would be likely to include all of its public corporate borrowers -- in addition to the State itself, preparation of GAAP would force the State to take the global view that is necessary to manage debt and the State's entire finances effectively. The footnotes to a GAAP-based financial report regarding governmental debt would alone result in a much more comprehensive picture of the State's indebtedness than is currently provided in the State's Annual Financial Report or the other fine publications of the Departments of Administration and Revenue.

Investors and the credit rating agencies also prefer to see GAAP financial statements when assessing credit quality. Standard & Poor's requests that financial statements submitted for review conform to GAAP, and they estimate that governmental borrowers who do not conform to GAAP pay a penalty of between 0.125 and 0.25 percentage points in ultimate interest rates[14].

According to the Maryland State Comptroller, the conversion to GAAP by the State in 1975 has been a contributing factor to the State's ability to maintain a very strong AAA credit rating[15]. The States of New York, Deleware, Iowa, and Tennessee are among those using or in the stages of conversion into GAAP accounting.

Last year, Standard & Poor's placed the State of Florida's general obligation bonds on CreditWatch -- an early warning system alerting investors to changes in credit quality -- because of several factors including a decline in financial position and weak accounting practices. Because the State's records were not kept on a GAAP basis, there was no way, without a site visit, for Standard & Poor's to ascertain the State's true financial position. Florida, whose debt has been removed from CreditWatch, is now working toward a GAAP-based financial report for Statewide financial operations.[16]

It is recommended that the State consider converting its annual financial reports to generally accepted accounting principles. Such action will provide the State with vital information on its financial condition, improve financial management, and will be looked upon favorably by investors in the State's bonds.

Debt Ceilings and Limits

A legislatively mandated limit on state debt issuance is often suggested as the simple solution to over-indebtedness. The most convincing argument for a debt ceiling is that it would serve as a device which forces public policy makers to assess the level of outstanding debt on a regular basis in a formalized manner. In the absence of this type of limitation, some fear, bonded debt will grow at uncontrolled paces. This certainly is something to be fearful of since it implies unlimited spending for capital projects with little serious evaluation of need or the necessity for deciding priorities among alternative projects.
In order for debt ceilings to be affective in controling debt issuance they must be linked in some manner to resources and ability to pay. Obviously, both resources and ability to pay are constantly changing and, accordingly, any debt ceiling must be flexible. One need only observe the apparent ineffectiveness of the federal debt limit to grasp the futility of using an absolute debt ceiling to control the amount of debt. At the federal level, it has become necessary for the Congress to change the ceiling at frequent intervals in order to provide funds for financing of the huge budgetary deficit. This inherent contradiction, raising a debt ceiling to finance going further into debt, suggests that an absolute ceiling on debt issuance is of little usefulness.

This is not to say that debt limits or ceilings are always inappropriate. They are most appropriate for smaller units of government that have relatively simple revenue and expenditure structures. At the state level of government, where the revenue structure is usually more complex and the expenditure pattern is quite diversified, the application of a single debt ceiling would be futile. When one considers the scope of Alaska's State government, including its general budgetary operations, local assistance programs, and the various independent agencies and corporations, it becomes impractical to establish a debt limit that will have widespread applicability.

The standards and ceiling-setting methodology that would applt to general obligation debt are unrelated to the criteria that would be appropriate in setting a debt limit for AHFC mortgage revenue bonds, or the borrowings of AIDA, APA, the Bond Bank and others. Thus, if ceilings were to be used it would be necessary to establish a discrete limit for each category of debt. Even if this could be accomplished, and such an exercise would entail considerable technical analyses and require complex fiscal judgments, the ceiling, in order to be on any value, would have to be reexamined periodically and changed as appropriate to reflect the changing character of resources and ability to pay.

Furthermore, a debt limit or ceiling is a second-best alternative to control the impact of debt on governmental budgets. Bonded indebtedness works its way into the State's fiscal structure not as an aggregate sum but rather through semi-annual payments of debt service. Hence, the length of the term of the debt, the timing of the maturity of principal, and the annual interest rate all combine to reflect the true "debt burden". An absolute ceiling on outstanding debt does not reflect the terms of the bonds outstanding, the principal retirement schedule, or the interest rate. Debt ceilings are, therefore, only approximations of debt burden.

Exhibit 6.5
Debt Ceilings

Pro	Con
-- Fiscally conservative: puts constraints on changing political environment.	-- Ceiling standards are set in today's economy whereas future economy will be source of repayment.
-- Brings debt management closer to the legislators lators because laws must be changed to change ceiling.	-- Encourages debt manipulation to get around ceiling.
-- Sets a measurable standard so that debt managers know where they stand in relation to debt issues.	-- State debt ceilings do not reflect margins for overlapping debt or "participation" debt.
-- Apparent political accountability and fiscal responsibility: visible affordability limit.	-- Ceilings are usually arbitrary; i.e., the standard of measurement is difficult to define (income, assessable base, percent of revenue, per capita, etc.) and determine.
-- Device to force policy makers to come to grips with priority setting for projects to be debt financed.	-- Ceiling is an "illusion" because it only reflects principal portion of debt and the interest impact may vary from 25% to 150% of the debt itself.
-- Ceilings force elected officials to a day of reckoning with the amount of total debt on a periodic basis.	-- Ceilings usually inflexible and difficult to change when circumstances vary.
	-- Ceilings for one debt category are usually different from those for another (general obligation vs. revenue bonds).
	-- Ceilings usually bear no relationship to capital requirements; ceiling may cause legitimate needs for capital facilities to go unmet because peak has been reached.

In discussion with officials from the credit rating agencies concerning the imposition of debt limits for states, it was determined that they believe debt limits may have a more negative than positive effect on debt management and should be avoided or be of such a flexible nature that they are virtually meaningless. This interpretation is due to the nature of debt limits; they are usually set at some arbitrary level, based on easily measurable criteria, and do not reflect the actual capital "needs" of the state. Too much emphasis, therefore, may be placed on the size of the debt, which is only one of the criteria for a favorable debt posture, and too little emphasis may be placed on the reasons for debt -- the actual capital needs of the state as perceived by the executive and legislative bodies. It is for this reason -- important capital needs may be postponed indefinitely -- that the credit rating agencies believe limitations on the absolute level of state debt issuance should be avoided. The amount of State debt issuance should not be determined artificially or based solely upon the desire for favorable interest rates or high credit ratings. Rather, debt issuance should be based on a thorough assessment of capital needs and the ability to pay for them.

A summary of the positive and negative attributes of debt ceilings discussed above is presented in Exhibit 6.5. While we do not believe that Alaska should institute a ceiling on the amount of State debt issuance, it is essential that the State exercise some degree of oversight and control of debt issuance by the State and its public corporations. The responsibility for oversight should be given to the State Bond Committee, and be part of its effort to follow and analyze the impact of debt issuance on the State. The State Bond Committee should develop guidelines for assessing debt capacity and affordability of general obligation debt and for contingent liabilities such as moral obligation debt. Using fiscal standards and criteria as outlined in the chapter on affordability, and as refined over time, the Committee should evaluate each debt issuance proposal in light of current trends and circumstances and determine the impact of each debt financing upon the State's ability to repay, its ability to meet contingent liabilities in the future, and the effect on the overall financial condition of the State and its agencies and corporations. These guidelines will serve the purposes of a legislatively mandated limit on debt issuance.

Interest Rate Ceilings

Although not directly related to a ceiling on debt issuance, a ceiling on the interest rate that State obligations may carry can also impair a debt management program. The State's current interest rate ceiling is a floating rate equal to the higher of 110 percent of the Bond Buyer 20-bond index for the week preceeding the bond sale or 11 percent. While this type of ceiling allows for greater flexability that the fixed-rate of 10 percent that it replaced, the State may wish to consider removal of the legislative interest rate ceiling altogether. To improve the flexibility of the the State's debt managment, an administratively established ceiling -- determined by the State Bond Committee -- is preferred to the more rigid, legislatively established ceiling.

True Interest Cost vs. Net Interest Cost: Alternative Methods to Determine Lowest Bid

In both negotiated and competitive bond sales, accurate determination of the cost of borrowing is essential. In a negotiated sale this is important as the basis for an informed decision and for debt management purposes. In a competitive sale the determination of interest costs on competing bids is crutial because the bid producing the lowest interest cost -- as defined in the notice of sale -- will be selected. Although this important task appears on the surface to be relatively straightforward, in practice it is one are of debt management in which significant and costly errors are often made.

The two methods currently in use to determine the lowest bid on a competitive municipal bond sale and the total interest cost of a negotiated bond sale are Net Interest Cost (NIC) and True Interest Cost (TIC). NIC is the traditional way of computing the average interest cost of an enture issue, largely due to the simplicity of its calculation; NIC can be calculated by hand without the assistance of a computer. The computation of TIC is more difficult, requiring the use of a sophisticated computer program. However, the two methods do not produce identical results. The limitations of the NIC method have caused some states and municipalities to use TIC to award a bond sale instead of NIC.

The two methods differ in the way the coupon interest payments on a serial bond are valued. The NIC calculation gives equal weight to each interest payment regardless of the time period in which it is paid. One dollar paid in year one is valued the same as one dollar paid in the twentieth year. In contrast, TIC takes account of the time value of money by treating interest payments in present value terms. Because a dollar paid out in five years is worth more than a dollar paid out in fifteen years. TIC gives greater weight to earlier payments than to later payments of equal dollar magnitude.

The formula for computing NIC is as follows:

$$\text{NIC} = \frac{\text{Total interest payments + discount (or - premium)}}{\text{Bond year dollars (amount of bonds X years they are outstanding)}}$$

It is obvious that total interest payments are lumped together with no attention to the time period in which they are paid. TIC, on the other hand, is found by computing the interest rate that will discount all future debt service payments by the issuer (principal and interest) to a present value equal to the bond proceeds received by the issuer. TIC is analogous to the internal rate of return calculation used in private-sector financial decisions to analyze the effective cost or benefit from a certain investment.

Besides being a more accurate indicator of the true costs of a bond issue, awarding bids on a TIC-basis has other advantages. Investors generally prefer to receive a dollar interest payment sooner rather than later and are willing to pay more for the higher early coupon payment. Underwriters have an incentive, therefore, to place high coupons at the front (in the early maturities) of an issue in order to improve their spread and the marketability of the bonds. This

Exhibit 6.6

Alternative Methods to Compute Effective Interest Costs
Net Interest Cost vs. True Interest Cost

		BID A		BID B	
Years to Maturity	Par Value	Coupon Rate	Annual Debt Service	Coupon Rate	Annual Debt Service
1	1,000	12.0%	1,190	2.0%	1,130
2	1,000	3.0%	1,070	5.0%	1,110
3	1,000	4.0%	1,040	6.0%	1,060
TOTAL	3,000		3,300		3,300
		NIC (Bid A): 5.00%		NIC (Bid B): 5.00%	
		TIC (Bid A): 5.04%		TIC (Bid B): 4.98%	

practice is known as "frontloading". At the same time, governments prefer to pay debt service later rather than sooner and would favor the largest coupon rates on later maturities. TIC helps the government issuer because under TIC computation there is no incentive to front-load interest coupons as TIC would be higher than NIC.

The following example illustrates the difference between TIC and NIC computation of two hypothetical bids on a three-year serial issue of $3,000. As can be seen in Figure 6.6, both Bid A and Bid B resulted in identical NIC to the issuer. If bids were awarded on a NIC basis, it would be impossible to choose between the two. This is because the calculation of NIC tool into consideration only the aggregate amount of debt service which is the same under both bids ($3,000). Upon closer examination it can be seen that Bid A is front-loaded for it contains an interest coupon of 12 percent in year one. While this may help the underwriter, it forces the government to make unnecessarily high debt service payments in the first year. This bid compensates for the high initial coupon by placing unusually low coupons on bonds maturing in years two and three. This brings NIC down to a competitive level (5 percent in this case), however, the true cost of payments in the later years is less than in year one.

If TIC were used as the basis for awarding the bids, the time value of the respective payments would be recognized and the high coupon of Bid A would result in a TIC higher than NIC. Similarly, the more "efficient" Bid B, with a gradual increase in coupon rates, would result in a TIC lower than NIC. Using TIC as the criterion, the winning bid would be Bid B resulting in lower tru interest cost to the government over the life of the issue.

Neither the Alaska State Bonding Act (AS 37.15) nor the State statutes regarding municipal debt (AS 29.58) specify the method by which the effective interest rate must be calculated. However, the State, and most municipalities, have shosen to use the NIC method to compare alternative bids at competitive sale. This method may not be in the best interests of the State because, as shown above, the winning bid on a NIC basis does not necessarily produce the lowest TIC. For this reason, we recommend that the State Bond Committee review the current procedures for awarding the State's general obligation bond issues, and that municipalities be encouraged to do so as well, with a view toward awarding future bond sales on a TIC basis.

The only true constraint which the State places on bidding is that the spread between the highest and lowest interest coupon not exceed two percentage points. This does not prevent the front-loading of interest coupons as is evident from the winning bid presented in Exhibit 2.5 (page 46). Here, the winning bid was front-loaded because the highest coupon rates, 8 3/4 percent, were placed on bonds maturing in the earliest years, with descending coupon rates towards the later years where the time value of money is lower. This can be prevented by the use of a non-descending order constraint on underwriter bidding which requires the submission of bids that increase with maturity. A non-descending order constraint used in conjuction with the TIC method of computing the lowest cost bid assures that coupons will not be front-loaded, and that the winning bid truely results in the lowest cost to the State.

Differences Between Competitive and Negotiated Bond Sales

Alaska's State Bonding Act requires that the State sell its general obligation debt in a competitive manner (see Appendix). As described in Chapter Two, the sale of bonds at competitive bid means that the bond sale is completely structured as to its terms and conditions by the time the notice of sale inviting prospective purchasers to come forward and submit a bid to buy the bonds is published. The award of purchase is made to that underwriting firm, or syndicate of firms, offering the lowest interest cost. Because the winning underwriter is not known until the bids are opened, there is no opportunity for the underwriter to "pre-sell" the bond issue. All sales activity and structuring of the reoffering yields occurs after the sale is awarded.

State-level revenue bond issuers, and Alaska's localities are able to choose between the competitive and the negotiated sale approach in determining the proper method of sale. The sale of bonds through negotiation means that the bond sale itself, the terms, conditions, and interest rate is negotiated by the issuer of the bonds and an underwriting firm, or syndicate of firms, that is preselected to buy the bonds. A competitive procedure involving a formal request for proposals is often used in the selection of the negotiating underwriter as described later in this chapter (page 188). The underwriter or syndicate is generally chosen based upon prior experience in selling the particular entity's bonds and the ability to reach the broadest base of investors. Before the final terms of the sale are decided, the negotiating underwriter will test the market by soliciting investor interest during pre-sale trading. This procedure is described on page 190. Once the final interest rates are determined, the last element of the negotiation process is the gross underwriting spread. The spread represents the underwriter's compensation. Its composition is described on page 190.

Customarily, about 80 percent of the volume of general obligation bonds is sold using competitive bidding, and 70 percent of the volume of revenue bonds is sold using negotiated sales. The reason for this relationship between type of bond and method of sale is that general obligation bonds are usually issued by a general purpose governmental entity for a traditional public purpose, which is a relatively straightforward means of raising money. It is important to the firm or syndicate winning a competitive bid to have an easily understood product that can be quickly and readily reoffered to the ultimate investor.

On the other hand, revenue bonds are usually characterized by a repayment pledge consisting of a complex revenue stream formula, they frequently cary a unique set of terms and conditions as to their maturity and security structure, and they are usually issued by a special entity of a government for an often novel purpose. Due to their complexity they are not easily understood, nor are they easily marketed without their special-story being pre-sold through the firm negotiating to buy the bonds.

Accordingly, there is a place for both techniques of selling bonds in a prudent debt management strategy. Indeed, there may exist special conditions which would necessitate or justify even the sale of general obligation bonds

through a negotiated sale, although there are thirty-seven states, including Alaska, that require the sale of state general obligation bonds at competitive bid. For example, if the credit quality of a general obligation issuer is severely impaired, such as in the case of New York, Detroit, Cleveland, or Camden, then the negotiated sale of full faith and credit bonds would be appropriate in order to assure that the purchase can be executed successfully, that the "special-story" is properly told, and that the money is raised.

As a general rule, the costs of borrowing (underwriting spread and the interest cost) are less when the competitive approach is used for general obligation bond sales. Various studies have determined that savings in the range of 10 to 25 basis points (.10 to .25 percent) are achieved, overall, and on balance, when general obligation bonds are sold competitively.[17] It must be kept in mind, however, that some bonds are not possible to offer for sale competitively because their uniqueness preempts easy market access. The interest rates obtained from a competitive sale could be less favorable than those from a negotiated sale.

There are several general principles that can be looked to in determining whether a particular bond sale might best be sold by either competitive bid or negotiation. These guidelines are discussed below:

1. Condition of the market -- in a strong market where interest rates are stable and there is substantial investor demand for tax-exempt bonds, the tendency should be toward competitive sales. A weak market where interest rates are fluctuating daily and/or investor interest is unknown may result in the most effective sale through negotiation. If market conditions are erratic and the timing ; if market conditions are reasonably stable and the fluctuation in interest rates is expected to be within an acceptable ban between the announcement and the sale, then competitive bidding is appropriate.

2. Novelty of the financing approach -- if the issuer is an established "name" in the marketplace, then a competitive sale is possible; if the issuer is an infrequent name in the market, or has not previously sold debt at all, then a negotiated sale is appropriate. Generally, if there are precedents for the financing approach, use competitive; if not, use negotiated.

3. Transaction characteristics -- if the structure of the terms and conditions and the security backing up the bonds is reasonably straightforward, the bonds can be sold competitively; if the bond characteristics are complex, then a negotiated sale is proper. If the type or purpose of the bond is not especially unique, then it can be sold competitively; if substantial market or investor education is necessary, then a negotiated sale would be best.

4. Perceived creditworthiness -- if either the issue or the issuer offers a widely understood credit structure, there are no problems with the credit quality, and the disclosures are routine, then the bond can be sold competitively; if investor concerns must be dealt with or if the credit quality is subject to considerable economic uncertainty, then it is preferable to negotiate the sale.

5. Depth of technical participation -- if a large amount of pre-sale documentation is necessary, such as complex covenants or financial analyses, and outside expertise is necessary, then a negotiated sale is appropriate. Likewise if internal staff capacity is lacking, a negotiated sale may be preferable since pre-sale particulars would be handled by the firm selected to carry out the negotiation. On the other hand, if pre-sale activity is routine, or if staff capacity is available and experienced, a competitive sale may be entirely feasible. A negotiated sale is most likely in cases where there is direct participation by the ultimate investor, such as in the case of a private placement of the bond.

6. Cost effectiveness -- the sensitivity of the bond to interest rates may necessitate a negotiated sale because the timing of bringing the bond to market can be controlled, and this minimizes the risk of random entry which is characteristic of a competitive sale. A competitive sale, on the other hand, usually results in a lower spread or fee which is paid to the firm buying and marketing the bonds.

The decision between the use of competitive or negotiated sales is one of the most important in debt management; however, there are no right answers. The final decision on bringing a bond sale to market by competitive bid or through negotiation must take into account the general principles described above. Each sale warrants an independent decision based upon the characteristics of the bond sale. In instances where a negotiated sale is used, the assistance of a financial advisor is important to represent the issuer during the negotiation process.

It appears that the tax-exempt bonds of the AHFC issued for its well-established programs during periods of favorable market conditions are likely candidates for sale by competitive bid. This observation is based upon the demonstrable market access the AHFC has acheived, its well-known, important role as the dominant mortgage lender in the State, the strength of its security structure and credit rating, and its frequent, sizeable borrowings. Only the most recent sales of State guaranteed veterans housing bonds have been sold competitively, due to the competitive sale requirement on State general obligation bonds.

Selection, Use, and Compensation of Financial Advisors and Underwriters

When bonded indebtedness is sold, a fixed-cost contract is established that will be valid for many future years. It is important, therefore, that the interest rate payable on the bonds and any bond covenants result in the lowest possible cost to the issuer. Because of the dynamics and volitility of interest rates, the shifting objectives of bond buyers, and the variety of funding sources and methods that are available it is essential that issuers obtain the most current expert advice when structuring and marketing a bond sale. A financial advisor is a specialist who is able to assist issuers with knowledge of current trends and market conditions, and the bond issuance process in general. An underwriter is a representative of an investment or commercial banking firm that acts as the intermediary between the issuer and the ultimate purchaser of the bonds.

The Use of a Financial Advisor

The services of a financial advisor will vary, depending upon such factors as the nature and size of the bond issuer, the frequency with which bonds are issued, and the competence level of the government's own staff in the debt field. Services commonly provided may include: developing a financial plan, assisting in securing voter approval, designing the features of the bond issue, and assisting in marketing the bonds. Other areas in which a financial advisor can be of assistance are:

- o choosing the type of security to pledge and the credit market position to be accorded the debt;
- o presentation to the rating agencies;
- o deciding upon the timing of the sale;
- o preparing the official statement;
- o selecting and evaluating bond counsel services;
- o assessing the probable range of interest costs for alternative means of financing;
- o analysing pay-as-you-go vs. bond financing;
- o commenting on the reasonableness of fees for other specialized services;
- o assessing the suitability of fees for the underwriters;
- o designing call provisions appropriate for the issue;
- o assuring conformance to bidding requirements and other terms of sale are met;
- o conducting negotiated sales;
- o evaluating bids on a competitive sale; and
- o evaluating the performance of members of the syndicate in negotiated financings.

Professional assistance in each of these phases can improve an issuer's chances of securing a favorable credit rating and obtaining lower interest costs.

State governments, which frequently issue debt, can do most of the preparation for the sale of general obligation bonds with their own in-house staff. Thus, Alaska may use the financial advisor only in technical areas, such as timing the issuance of the bonds, constructing the maturity schedule, and presenting the State's credit to the rating agencies. Other governments benefit most from the services of a financial advisor if they are infrequent users of debt or if a limited liability or revenue bond is being issued. A limited liability or revenue bond is more complex than a general obligation issue and, as such, requires special assistance. Financial advisors are also important in a negotiated sale to represent the issuer in the transaction.

There are three types of firms which provide financial advisory services:

1. investment banking firms;

2. commercial banking firms; and

3. independent consultants who do not trade in municipal bonds.

The first two sources, investment banking firms and the municipal departments of commercial banks trading in bonds, may provide financial advice for a fee or, as is often the case, they will not directly charge for services in exchange for the exclusive right to purchase the bonds without competitive bidding through a negotiated sale. These advisor's services are often paid for out of its profit (a component of the underwriting spread, described below) made in reselling the bonds. Alternatively, the public finance department of one of these firms may be hired to provide financial advice independent of underwriting the bonds. The State of Alaska currently follows this approach because its financial advisor is also an investment banking firm and is not paid from the underwriter's spread. In the later case, compensation should be based upon the services provided.

The third source of assistance is the independent consultant who does not trade in municipal bonds but, for a fee, agrees to help plan, design, and market the issue. The issue can be sold at a public sale to the lowest bidder, to a third party in a privately negotiated sale, or through a negotiated underwriting with investment bankers. Independent advisors typically provide technical assistance only; they do not buy, sell, or trade tax-exempt securities nor do their fees derive from such activity. Since a conflict of interest may arise when the same firm provides advice on the structuring of tax-exempt bond issue, on the one hand, and then markets the same bond issue, some governments as a matter of policy elect to separate the advisory function from the underwriting function. This can be accomplished either by contractually prohibiting the advisor from an active role or participation in the buying or trading of the government's securities in the primary market during such period as the firm acts as advisor, or by utilizing the services of an independent financial advisor. The Alaska State Bond Act (AS 37.15) prohibits firms which provide financial advice under contract to the State from bidding on or otherwise participating in an underwriting syndicate which purchases the bonds. Furthermore, AHFC and the Municipal Bond Bank preclude their advisors, because they currently are

investment banking firms, from an underwriting role on bond issues for which the firms serve as advisor. These are responsible practices and should be continued.

Selection of Financial Advisors

The generally preferred method of selecting firms to provide financial advice is to solicit proposals from as diverse a body of potential firms as possible. A Request for Proposals (RFP) should be written and sent to those advisors who have the general qualifications to do the work. Several sources of assistance are available in identifying financial advisors to whom the RFP can be sent are:

1. state and national associations of governmental units or public officials;

2. governments in the region which have had extensive experience with fiscal advisors; and

3. Directory of Municipal Bond Dealers of the U.S., which lists both dealers and municipal finance consultants. This is prepared annually by the Bond Buyer. Note that this directory does not include all financial advisors and should only be used as a supplement to firms otherwise identified. Advisors are listed by state locations, but generally serve a national clientele.

The RFP for consulting services should cover all the particular job requirements. On the basis of the proposals received, the state government can then decide on the most qualified fiscal advisor and write a contract for the work. Alaska has generally used the RFP approach in selecting advisors and appears to evaluate responses and make contract awards in a manner that is consistent with sound business practices.[18]

Compensation of Financial Advisors

The fee paid an independent advisor can be structured as fixed, hourly compensation, a minimum guarantee (or retainer) plus an hourly amount, or a flat fee based upon an estimate of necessary services. The compensation for financial advice should be based upon the services provided, regardless of whether an underwriting firm or an independent firm is providing these services, and not upon the size of the bond sale (amount of issue) or the successful delivery of the bonds. Tying the advisor's compensation to the amount of bonds sold or to the successful delivery of the bonds builds in an unnecessary risk of conflict of interest. Obviously, the quality, motivation, and impartiality of advice might be questioned if the advisor's compensation is directly related to either the amount of bonds or to the completion of the sale. For example, it may not be in the issuer's best interests to finance a certain project through the sale of bonds, or to enter the market at a period of high interest rates; however, a financial advisor whose compensation depends upon the successful

completion of bond sales may not recommend alternative financing techniques, such as using current revenues, or postponement of the bond sale.

The industry standard, however, has been to calculate compensation as a certain percentage of the amount of bonds sold (for example, $1 per $1,000 of bonds sold or .1 percent). This standard is due to the preponderance of commercial and investment banking firms that also act as financial advisors. These firms are accustomed to payment through the underwriting spread and the charge per bond for financial advice is similar to this method. However, independent financial advisory firms, and certain investment banks, often charge hourly rates, just as do many bond counsels and other professionals, regardless of the amount of bonds sold. Although the work required to advise on a $100 million bond sale is generally greater than on a $10 million sale, the level of effort required can be estimated in advance, making it unnecessary to compensate advisors on a percentage basis.

In our review of selected financial advisory (and bond counsel) contracts, we noted that compensation of advisors to the State and its agencies has historically been tied to a rate per bond or a fixed percentage of the principal amount sold. Such a method of compensating those providing financial and other advice may not be in the State's best interest. The State should review its existing financial advisory contracts to determine the method of compensation used and seek to provide for compensation arrangements that do not encourage situations where conflicts may arise between advisory services and the payment thereof. Flat fee on hourly compensation is most appropriate for professional and impartial financial advice.

Compensation and Use of Negotiating Underwriter

In a competitive bond sale the underwriting firm which purchases the issuer's bonds is the firm whose bid results in the lowest overall borrowing cost to the State. If for whatever reason (as discussed above) the sale is to be negotiated, the underwriting firms or syndicate of firms must be selected in advance of the sale by criteria different from a competitive sale. One method of selection is to solicit proposals from underwriting firms detailing their expertise in selling and structuring the type of bonds to be sold. Factors to consider when evaluating negotiating underwriters are described above on page xxx.

Underwriters are compensated by the "spread" between what they pay the issuing government for its bonds and the price at which they are able to re-sell the bonds to investors. This is true of both competitive and negotiated underwritings. However, in a negotiated sale, the spread is negotiated along with the terms of sale (maturity structure, coupon rates). In a competitive sale, the spread is included in the price and interest rates bid for the bonds.

The syndicate divides the spread among four purposes. First, a provision will be made for expenses which are incurred by the syndicate in the form of

bills from other parties. Second, the managing underwriters will receive a management fee for putting the bond issue together and bringing it to market. These two components compensate the underwriter for any financial advice provided in conjunction with the issue; however, if a firm independent from the transaction provides this advice, its fee will not be isncluded in the spread. Third, a selling concession (often called a "take-down allowance") will be paid to syndicate members in proportion to the amount of bonds sold by each. The selling concession is the source of funds from which the individual salesmen are compensated for their efforts. Fourth, the underwriting profit will be divided among members of the syndicate in proportion to the underwriting participation taken by each firm at the time of the purchase of the bonds.

The expenses customarily incurred by the underwriting syndicate, which will be passed on to the issuer in the spread are:

- Legal fees of underwriter's counsel;
- Certain printing costs for syndicate documents such as the agreement among underwriters, bond purchase agreement, institutional lists, blue sky survey, and legal investment memorandum, letter of instructions, etc.;
- Expenses of advertising for the bond issue, both presale ads and the final "tombstone" ad;
- Costs of securing a day loan and/or Federal funds to pay for the bonds at the closing;
- Reasonable computer costs for computation of debt service schedules, performing cash flow analysis, and calculating net interest cost for the bond issue;
- Out-of-pocket expenses for travel, lodging and meals incurred by the managing underwriters;
- Communications expenses such as telegraphic notice to syndicate members of pricing information; and
- Certain other minor expenses relating to the marketing and delivery of the bonds.

Normally, neither the syndicate nor the managing underwriters undertake to pay the following expenses. These costs must generally be covered by the issuer.

- Fees of bond counsel;

- o Costs of printing of the bond resolution, final official statements, and other legal documentation for the transaction;
- o Fees of auditors of the issuer; or
- o Fees of independent financial advisors.

The procedure in a negotiated bond sale normally follows along the following lines. When the bond issue is ready for sale, the underwriter will present a preliminary bond purchase proposal to the issuer. The proposal will be made after careful assessment of the acceptability of the bonds through "pre-marketing" feedback from prospective purchasers. The proposal will state the interest rate or rates to be borne by the bonds, the re-offering prices, the purchase price, and the spread. It will also state the division of the spread among the four purposes. Detailed information about interest rates and spreads on other comparable bond issues sold under similar bond market conditions should be made available.

The issuer will then consider the preliminary proposal, ask questions and respond with approval, comments, or suggested changes. Negotiations on the preliminary terms of the bond issue ensue until the underwriting syndicate is comfortable that the bonds can be successfully marketed, and the issuer is convinced that it is receiving an equitable and competitive pricing.

After the preliminary terms have been negotiated, the underwriter will release the terms to all members of the underwriting syndicate. After a day or two of promoting the sale, the managing underwriters will review the investors' reactions. This "test marketing" will be discussed with the issuer, and adjustments to the bond issue's terms which fit actual market conditions will be negotiated. For example, if the entire issue is "oversubscribed" (i.e., pre-sale orders exceed the amount of bonds to be sold), then the underwriting profit should be reduced to reflect the syndicate's low risk of being left with unsold bonds.

Since bond market conditions change rapidly, the spread necessary to place a bond issue is not finally determined until the pricing is complete. Depending upon the size of the issue and prevailing market conditions, a representative revenue bond spread (or "underwriters' discount") and its components are as follows:

Item	Per $1,000
Expenses	$ 2.50
Management Fee	4.50
Selling Concession or Takedown	12.50
Underwriting Profit or Risk Factor	1.50
TOTAL	$21.00

Advance Refunding and Defeasance

If interest rates continue to decline from their historic high levels of 1980-81, it is likely that the State, its public corporations, and localities may find it financially advantageous to "advance refund" debt issued at high rates of interest. Refunding is a financing device intended to reduce annual debt service payments and lower the effective cost of borrowing. The technique involves the issuance of new debt to replace outstanding bonds in advance of the bonds' maturity. The issuance of refunding bonds by the State and its localities is permitted under AS 37.15.210 and AS 29.58.240 respectively. The bonds do not require the approval of voters.

Advance refunding can be a financially attractive arrangement for several reasons:

- it can reduce interest costs if market interest rates have fallen significantly (by approximately 300 basis points or 3 percent) or if the issuer's credit standing has improved;

- it can reduce future annual debt service costs by restructuring or "stretching out" outstanding debt; or

- it can remove restrictive bond convenants under which the earlier bonds may have been issued.

In a "direct refunding", the refunding bonds are issued concurrent with the call date on the bonds to be refunded. The proceeds of the refunding bonds are used to retire or call the older debt. The debt generated through the refunding issue replaces the previously outstanding debt so that the net effect on the total amount of outstanding debt on the books of the issuer or in circulation is minimal.

In contrast, "advance refunding" requires the sale of the refunding bonds before the first call or maturity date of the original obligation. The proceeds of the refunding issue are deposited in escrow and invested until the old obligation can be retired. The escrow securities are special U.S. Treasury obligations with maturities designed to provide the cash flow necessary to pay the debt service and eventually retire the old issue. The refunding bonds defease the previously outstanding bonds. Therefore, under advance refunding there are two bond issues outstanding concurrently, sometimes for a long period of time.

An advance refunding will generate net savings if the present value of the stream of payments for debt service on the refunding bonds is less than the present value of the debt service on the refunded bonds, including the expense of issuing the refunding bonds and the payment of the call premium on the refunded bond, if any. The direct expenses of a refunding are the same as with other bond issues (legal, financial, and administrative expenses) as well as any call premium on the refunded bonds. However, there are certain unquantifiable costs and benefits from advance refunding that policy makers must consider before undertaking a financing of this type.

For example, by refunding a bond issue prior to the first call date, advance refunding provides governments with greater flexibility with respect to the timing of the refunding process. The risk of future interest rate fluctuations can be reduced by locking in a known interest rate prior to the call date. This benefit, albeit unquantifiable, may enhance financial planning and improve management of outstanding debt.

A negative attribute of advance refunding is that the refunding bonds cause an increase in the overall supply of outstanding municipal debt because there are two outstanding bond issues concurrently; one is comprised of the original bonds, issued for a specific capital project and the second is the "financing bonds" which are not related to a particular project, but are issued eventually to replace the original bonds. This doubling -- or in some cases tripling -- of debt outstanding may result in higher borrowing costs for all issuers of tax-exempt bonds if the market becomes saturated with debt.

Empirical studies have shown that advance refunding bond issues increase municipal bond interest rates because of the additional supply generated by their issuance[19]. The increase in borrowing costs to all issuers in the State is not easy to isolate or identify, but, as a mater of policy, must be considered against the savings that accrue to the individual unit which issues the refunding bonds. Because the potential volume of refunding bonds is large, and could raise the borrowing costs of all issuers in the State if the market became saturated with bonds from Alaska, we believe that the State should establish criteria for judging when the issuance of refunding bonds by the State and local governments is appropriate. In addition the State Bond Committee should be required to review and approve all proposed refunding issues. This action would give the State control over the volume of refunding debt bearing the Alaska name, aid in the coordination and timing of refunding issues, and would force issuers to analyze thoroughly the financial feasibility of the refunding. Criteria to determine financial feasibility should include a minimum net present value savings in debt service payments of 10 to 15 percent, including issuance costs. Below this level of savings, it is questionable whether the dollars saved by the individual issuing jurisdiction are worth the uncertain affect the increased volume of tax-exempt debt has on the general level of interest rates for all borrowers.

Cash defeasance is similar to advance refunding because it involves paying off outstanding debt. However, instead of issuing bonds, a cash appropriation is made in an amount equal to what the advance refunding bond proceeds would be. Defeasance may be a more attractive option than refunding because it does not increase the amount of Statewide debt outstanding, which is the major disadvantage of refunding bonds. If the State wishes to pay off a portion of its outstanding debt, the choice between the use of cash or bond proceeds should follow, in part, the guidelines outlined on pages xxx to xxx on pay-as-you-go versus debt financing.

CHAPTER VII
DEBT AFFORDABILITY AND FUTURE DEBT CAPACITY

Introduction

One of the most important concerns to the State of Alaska in the area of debt management is the question of how much debt the State can afford to issue today and repay in the future. Although the State's taxable-base is substantial relative to the amounts of debt it presently has outstanding, the national bond market and investors are likely to become more cautious with respect to Alaska securities in the future. Recent fluctuations in the price of oil and the decline in the Prudhoe Bay curve within the 10-year range have alerted investors to the "boom and bust" nature of the Alaskan economy. Investor concerns over the coming decade will focus on both general obligation and revenue-supported debt because of the interdependence of all components of the Alaskan economy on oil-related activities.

Simply stated, the affordability of debt is determined by two elements: 1) the ability and 2) the willingness to repay the long-term obligation. Ability and willingness are influenced by the interaction of several factors, including: State financial resources available to repay the debt; impact of debt repayment on budgetary priorities; severity of capital investment needs; political preferences regarding long-term vs. current spending; and the market impact (on credit rating and future interest cost) of future debt issuance. These factors are largely judgmental; future debt issuance must be weighed against the State's willingness and ability to apply future resources to finance current capital spending. There are certain guidelines, however, that State officials can employ in making these important decisions.

Theoretically, the State can afford to issue debt up to an amount where the debt service payments required to support the debt place an intolerable strain on available revenues. The affordable level of debt thus becomes that point where trade-off decisions must be made in the allocation of resources between appropriations for debt service and spending on other public programs. Once bonds are issued, the payment of debt service becomes a mandetory budgetary item, not subject to cost-cutting in the budget process. The strain of debt service on the State's budget is one measure of affordability that can be measured by the ratio of annual debt service to current appropriations and general fund revenues as discussed below.

Another consideration in determining debt capacity is the degree to which capital projects are financed from current revenues instead of from the proceeds of the sale of long-term bonds. It is frequently argued that financing through current revenues places a burden on current taxpayers, whereas debt financing spreads the burden over a period of years that more closely approximates the useful life of the capital project. Debt financing is, therefore, said to promote "intergenerational equity" for taxpayers because facilities are

paid for as they are used. Alaska is somewhat different in this regard, because its greatest tax burden falls on a natural resource, and not on its citizens. However, Alaskans pay an opportunity cost if the decision to finance capital projects through current revenues precludes spending on other public priorities. The pay-as-you-go vs. current spending trade-offs are outlined further in the debt management portion of this report (see pages 166 to 175).

The above framework for assessing affordability is concerned primarily with current resources and priorities, however, and does not directly take into account the long-term impact of debt issuance. One such impact is upon the ability of future taxpayers to repay debt; if debt issuance occurs at too high a level, future state resources may be strained to meet both debt service and current budget needs. For this reason, current debt issuance and affordability must be judged based on an assessment of future ability and willingness to repay in addition to the State's present situation.

Other long-term affordability factors include the impact of large amounts of debt issuance on the State's credit rating, and the reception accorded the State's debt in the marketplace. If too much debt bearing the Alaska name enters the market, investor's portfolios could become overloaded, forcing the State and other issuers in the State to pay higher interest rates in order to attract investors. In addition, excessive debt issuance relative to economic and financial resources is likely to result in a downgrading of the State's AA credit rating which would also raise future borrowing costs for all issuers in the State.

The question of affordable debt levels must be considered separately for general obligation and revenue-supported debt, since different standards of ability to repay apply to the two types of debt. For instance, where the full faith and credit of the State is pledged, such as in the case of general obligation debt, affordability considerations involve tax rate levels; available revenues; personal income levels; tax sources used and unused; and overall budgetary priorities.

In the case of revenue-supported debt, however, affordability considerations revolve more around the revenue-raising potential of the project being financed; the bondholder trust guarantees for debt service sinking fund protection; the revenue coverage relative to present and future debt issues; the authority of the issuer to levy fees and charges; and the protection accorded the investors in the event of default. Because of the more business-like determinents of affordability with revenue-supported debt, investors as much determine the affordable level of debt issues through the standards required for the purchase of bonds as does the issuing authority through the determination of financing requirements. In the case of general obligation debt, however, investors play a much more passive role in the assessment of affordability. This means that the State must take the lead in assessing its own debt affordability.

The distinction between the affordability criteria for general obligation and revenue debt is significant. For general obligation debt, selected measures of debt capacity can be evaluated in a "macro" sense, with the result being a general assessment of affordable debt levels based upon a reasonable estimate

of overall future State resources. For revenue-supported debt, each bond issue and each project being financed must be evaluated separately and meet the test of self-sufficiency on its own merits. This requires that State officials formulate programs or projects with substantial economic soundness, a dependable underlying security structure, adequate reserve funds, and strong cash flows which generate monies in excess of operating costs that more than cover the debt service requirements.

Considering this distinction between measuring debt affordability for general government (general obligation) purposes in contrast to special agency (revenue supported) purposes it is practical in this report to address only affordability levels on overall State general obligation debt. An analysis of special purpose revenue debt is beyond the scope of this project because it is not practical to identify and evaluate future and yet to be defined revenue-supported projects. However, because revenue-supported debt affects the State's own debt affordability indirectly, a framework for assessing revenue debt is presented below. Following the discussion of revenue debt, the affordability of the State's own general obligation is addressed.

Revenue-Supported Debt

Revenue bonds influence the affordability of State general obligation debt in two principal ways. First, when bonds of this type carry a moral obligation pledge of the State there is an indirect encroachment upon the creditworthiness of the State itself since they represent a contingent liability to the State. As the volume of moral obligation bonds outstanding increases, the amount of the State's contingent liability also increases. If moral obligation debt increases at a time when overall State revenues are stable, are experiencing a rate of growth lower than the rate of growth in contingent liabilties, or are declining, the moral obligation burden may encumber the State's credit capacity. Such an occurance would make general obligation debt more costly, and therefore, less affordable due to weaker credit quality.

Second, the volume of revenue bonds may affect the cost of borrowing paid by all tax-exempt debt issuers in the State. Prices (interest rates) in the tax-exempt bond market are affected by many forces; one of which is the supply of tax-exempt bonds of the same type (revenue or general obligation), with a certain maturity, or from a particular region of the country. Institutional investors and bond portfolio managers generally try to diversify geographically their bond holdings. Therefore, excess supply of Alaska debt may saturate the market and cause interest rates for all borrowers in the State to rise, making any debt less affordable than before.

Although it is difficult to measure emperically the impact of revenue and moral obligation debt on the affordability of general obligation debt, it is worthwhile to develop a framework for analysis of the affordable levels of revenue-supported debt that covers both the financial feasibilty of the project being financed and any indirect impact on the State's creditworthiness. Assessment and monitoring of the affordable level of revenue debt should be a

concern to Alaska particulary because extensive use has been made of both moral obligation debt and revenue-supported debt.

The first phase in monitoring revenue bonds is to ensure that only fiscally sound programs or projects are financed. This entails (a) ensuring that no program or project is brought to financing unless its need and usefulness is well established, (b) ensuring that every program or project to be financed meets the test of self-sufficiency, and (c) ensuring that no project is brought to market with the State's moral obligation backing if the project's financial feasibility itself is marginal. The first phase review will protect against a program or project being financed "before its time". This is especially important because if the State is ever called upon to "bail out" a revenue bond project where the moral obligation has been pledged, and the State fails to act on its "moral" commitment, the State itself could effectively be barred from the marketplace until the problem was resolved. Hence, the State must satisfy itself that each individual revenue bond is creditworthy itself. This is the first step in ensuring not only revenue bond affordability but protecting this type of bond from negatively affecting the affordability of general State debt.

The second phase should monitor the aggregate impact of revenue-type bonds on the perception of the Alaska name as a credit in the national municipal bond market. In order to protect and preserve the quality of the Alaska bond as a trading instrument it is important that Alaska-based bonds do not proliferate to a point of saturation. Market saturation occurs when the total volume of bonds entering the marketplace (supply) out paces the demand for the bond. Determining the point at which saturation occurs is more a matter of judgment than of measurement. The dynamics of market interaction and the multiple number of participants in the market necessitates that this kind of assessment be.made by consulting periodically with a diversified arrav of municipal bond experts. Although this exercise can not produce concrete results, its usefulness as a tool in the assessment of the affordability of revenue-supported debt is important.

Measures Of General Obligation Debt Capacity

Credit analysts and investors have developed certain summary statistics which measure debt burden and debt capacity. These statistics generally take the form of debt ratios that measure the amount of debt outstanding relative to a certain economic or demographic indicator (such as outstanding debt per dollar of state personal income or debt per capita). The ratios are used not because of their comprehensive nature, but because the data are readily available and provide a uniform base against which the relative indebtedness of states can be compared. While a state should be aware of how it stands against these ratios, and its relative position to other states, individual assessment of debt capacity should be based not only upon these ratios but also upon comprehensive data covering the economic resources available to the state to repay the debt; the state's managerial and organizational characteristics; and the uniqueness of the state's debt structure in relation to its fiscal position and taxing capacity.

Before calculation of debt-related ratios can take place, however, the types of State debt that should be included in the numerator must be determined. As discussed in the Debt Profile, there are three classifications that can be considered. General obligation debt, tax-supported debt (comprised of general obligation debt and revenue debt dependent on State appropriations), and total State-level debt (general obligation and all revenue-supported debt). Finding comparable data in these three categories for all states is difficult because of the different methods used in each state to structure debt issues.

Perhaps the most reliable and consistent data are those compiled by the U.S. Department of Commerce, Bureau of the Census. However, the annual data published in the Census publication, Governmental Finances, recognizes only the distinction between general obligation debt and nonguaranteed debt (revenue-supported debt that does not have a pledge of the jurisdiction's taxing power). This distinction does not take account of all "tax-supported" debt which in Alaska's case includes ASHA lease-revenue debt, and University of Alaska debt in addition to the State's general obligation debt. The most recent Census data available are for fiscal year 1980-81. The alternative to the Census figures are the Net Tax-Supported Debt calculations of Moody's Investors Service which take account of all debt that is directly supported by state spending. However, this data is only available from Moody's begining with 1978. Both Census and Moody's data, where appropriate, will be used in the following discussion of debt ratios.

Traditional Measures of Debt Capacity

State Debt Per Capita: A frequently used measure of debt burden is the ratio of outstanding debt to population. This statistic measures the dollar amount of debt outstanding for each state resident. This ratio, however, has many shortcomings, most noticibly that it provides no information about the resources of the individuals who in the aggreagate are to pay the debt. For low-population states such as Alaska, the absolute value of this statistic is far higher than that for more populous states. In 1981, the national average for state general obligation debt per capita was $229.31 (see Table 7.1), whereas this ratio for Alaska was $1,700.97, the highest in the country. Next highest was the State of Hawaii with $1,357.08 general obligation debt per capita, which, like Alaska, is sparsely populated. Oregon's large amount of general obligation debt is comprised largely of State-guaranteed veterans mortgage bonds and is ignored for these purposes because it is primarily revenue-supported.

Alaska also has the highest per capita amount of total state-level debt (general obligation and revenue) of all states. Table 7.2 indicates that total debt amounted to $5,824 in fiscal year 1981 compared with a national average of $588. Although Alaska's per capita figures are distorted, the rate of change in per capita debt does provide comparable information on the relationship of the growth in debt issuance to population growth. A comparison of the absolute level of per capita debt, and the annual rate of change from fiscal year 1973 to

a. Debt data from the U.S. Department of Commerce, Bureau of the Census, State Government Finances (series GF), various years. State general obligation debt is defined as all state-guaranteed debt for which states pledge their full faith and credit. Debt data measured as of June 30 of each fiscal year shown. Figures exclude debt issued by local governments, and debt issued by the District of Columbia.

Source : U.S. Department of Commerce, Bureau of the Census, State Government Finances, various years.

1981 is provided in Table 7.3. The rate of growth of both Alaska general obligation debt and total State debt has exceeded the national average in seven of the eight fiscal years indicated. Moreover, the average rate of growth nationwide in total state debt was 10 percent over the 1973-81 period whereas in Alaska the average rate of growth was over 21 percent. Two factors must be noted, however, one is that Alaska did not begin to issue debt until 1958, so the base amount of debt outstanding was much less at the start of this period than for most other states. Second, Alaska's needs for basic capital infrastructure were greater during this period than for other states, so debt issuance would be expected to occur at a faster pace. Therefore, comparison of the rates of growth in Alaska and the nation does not provide a fair basis for assessment of the State's relative debt position.

State Debt per $1,000 of Personal Income: Personal income is a better measure than population of ability to repay debt, because, as a rough approximation for the level of economic activity and growth in the economy of most states, it provides information on the amount of resources available to repay the debt. In addition, many states rely on the personal income tax or sales tax for a large share of state revenue, and personal income has traditionally been the most readily available measure of the base for each of these taxes.

Personal income may be the most readily available and comparable proxy for economic growth; however, it is not necesarily the best measure of tax-generating capacity for all states, and especially those states (such as Alaska) which do not rely on a personal income tax. There are two fundamental problems with the personal income statistic; one pertaining to the definition of income, and the other to its use as a realistic measurement of a state's tax base. Such problems may cause personal income to overstate or understate tax capacity.

The definitional problem occurs in the double counting of certain types of income. Personal income figures include transfer payment income to individuals. However, taxes paid by the residents of a state to finance those transfers are not deducted (except for the employee share of social insurance contributions). This treatment results in a doublecounting and a systematic overstatement of the real income of those states in which government transfer programs, as well as taxes, are relatively large. Furthermore, personal income is generally much higher than adjusted gross income as defined by the Internal Revenue Service and which would likely form the tax base for a personal income tax if Alaska were to re-institute this tax. For example, comparison of Alaska personal income for 1979-1980 of $5.136 billion with the 1979 I.R.S. adjusted gross income of State residents of $4.097 billion demonstrates that personal income overstated the personal income tax base in that year by 25%.

As mentioned above, a critical problem with personal income is that it does not directly correspond to the broad menu of taxes which generate revenue for the State. In fiscal year 1981-82, State revenues were derived from the following sources:

Sales Taxes and User Fees	4%
Oil and Gas Based Taxes	95%
Corporate Income Tax	1%

Because Alaska no longer relies on the personal income tax, an income-based estimate of debt capacity does not address the State's true revenue-raising ability. This is true of other states which derive a large portion of state revenue from taxes on a natural resource. Under these circumstances, personal income may understate the tax capacity of a given state.

Another reason State personal income is not an accurate indicator of debt affordability in Alaska is the significant contribution that State spending makes to the Alaska economy and, therefore, to State personal income. Eight percent of the State labor force[1] and nearly 5 percent of the State's population[2] are State employees. However, the importance of State spending to State personal income extends beyond the large proportion of State employees. Though difficult to measure, the multiplier effects of State expenditures on aid to local governments, capital projects, and procurement are obviously considerable. Therefore, Alaska's total personal income would likely be severely affected by a change in State spending due to declining oil revenues, for instance. In other states, personal income is generally not as subject to spending from one or two sectors of the economy — the State and oil porduction, in Alaska's case — and is a better indicator of the economic base of the State than in Alaska.

Regardless of the deficiencies in using personal income to assess relative debt capacity, it is still a measurement that is widely used. In comparison with the general obligation debt of other states as a share of total personal income, Alaska's general obligation debt ranked highest in fiscal year 1981 (excluding Oregon), at $124 per $1,000 of State personal income, closely ahead of Hawaii (Table 7.4). Similarly, total state-level debt in Alaska comprises a far larger share of state personal income than it does in other states. This figure for Alaska is $423 per $1,000 whereas the national average is $56 (Table 7.5).

The rate of increase in outstanding debt compared with the rate of increase in personal income also serves as an interesting comparison. Table 7.6 indicates that the national averages of both general obligation debt and total state debt outstanding per $1,000 of personal income have trended gradually downward over the last 6 years, whereas similar figures for the State of Alaska have been erratic. The rate of change in State general obligation debt as a share of personal income has fluctuated from an increase of nearly 12 percent in 1978 to a drop of over 16 percent in 1980.

Ratio of Debt to Assessed Full Value: The ratio of debt to the true value of taxable property is a frequent measure of local govermental debt burden. The logic behind this is two-fold: 1) property is an indication of wealth, and 2) the property tax is an important revenue base for many types of local government. However, taxable property is not a very pertinent measure for state revenue systems. Although many states levy a nominal property tax, it does not comprise

as large a share of total revenues as it does at the local level. In fiscal year 1983, for example, property tax revenue accounted for just over four percent of Alaska's general fund unrestricted revenue. Data on assessed value is not collected annually by the Census Bureau, however the state debt medians as calculated by Moody's Investors Service for calendar year 1982 indicate that Alaska's taxsupported debt as a percent of assessed full value was 3.7 percent or 3.3 times the national median of 1.1 percent.

Comparison of other Moody's figures for net tax-supported debt at the end of 1982 indicate that Alaska had the highest per capita debt and debt as a percentage of total personal income according to this measure as well. Table 7.7 indicates that Alaska's tax-supported debt per capita is 11 times the national median, whereas taxsupported debt per dollar of personal income is 8 times the national median.

The preceeding discussion of national debt ratios demonstrated that Alaska is an "outlyer" regardless of the standard used to compare amounts of general obligation debt outstanding. Debt ratios such as these are useful when comparing states with an established and familiar record of debt issuance and a degree of certainty about their future economic prospects; however, Alaska does not fit into either of these categories. The State has been able to issue debt in amounts that exceed otherwise prudent guidelines because of its vast wealth in oil reserves and the proven ability to tax these resources. None of the above statistics measures the oil or other natural resource wealth of a state. Therefore, assessment of the affordable levels of debt in Alaska, and comparison of the State's position with other states, must be based on criteria that tailor the analysis to Alaska. As long as Alaska exhibits strong revenue generating potential from its oil reserves, traditional measures of debt capacity will be relatively meaningless; however, as the State's oil wealth contracts, the State will have to broaden its base of taxes and pay attention to traditional debt ratios.

Alaska-Specific Measures of Debt Capacity

Representative Tax Capacity: As mentioned above, neither population, personal income, nor assessed value correspond to the tax base available to the State to repay its indebtedness. A more comprehensive measure of tax capacity for all states, the representative tax system, has been developed by the U.S. Advisory Commission on Intergovernmental Relations (ACIR)[3]. The representative tax system calculates tax capacity by estimating the amount of revenue that each state would raise were an identical set of tax rates used across all states. The rates that are used are the national averages for each of the 24 tax bases that make up the index.

By combining a a wide variety of taxable resources -- such as income, property, retail sales, motor fuel, and the value of natural resources -- the ACIR method generates a broad measure of a state's tax capacity. As a measure of debt capacity, the system has the major advantage that, for each

source of tax revenue that in total will actually be used to pay-off debt, it measures the economic activity subject to the tax. In so doing, it provides a measure of the multiple resources claimable by state governments through a variety of taxes.

Computation of the ACIR's representative tax capacity figures is complicated, and certainly more difficult than using personal income alone; however, it can be done using readily available statistics. The most current figures available from the ACIR are for fiscal year 1980-81. Using the ACIR data for 1979 through 1981, and the ratio of tax capacity to unrestricted general fund revenues in each year, projections of Alaska's tax capacity under the representative tax system for 1982 and 1983 were made by the GFRC and are presented below.

Fiscal Year	Representative Tax Capacity	Rate of Change
1979	773	
1980	990	28.1%
1981	1373	38.7%
1982	1474	7.4%
1983	1324	- 10.2%

This chart indicates that tax capacity expanded rapidly between 1979 and 1981 as State severance tax revenues rose; however, the rate of change in tax capacity slowed and even declined in 1983 in line with the drop in oil-based revenues to the State.

The ratio of general obligation debt outstanding to the representative tax capacity index provides another measure of debt capacity against which Alaska can compare its relative position to that of other states. Table 7.8 presents such comparative ratios for general obligation debt in selected years between 1975 and 1981. Whereas the ratio for the majority of states has been fairly level, Alaska's debt as a share of tax capacity dropped from 1977 to 1981. Data on general obligation debt outstanding for all states is not yet available for 1982; however the ratio can be computed for Alaska itself. As indicated in the table below, the debt capacity index reached a low of 51 percent in 1981, however, the positive trend towards a lower index reversed in 1982 and climbed sharply in 1983.

Fiscal Year	General Obl. Debt	Tax Capacity	Debt Capacity Index
1975	392	411	95.5
1977	530	490	108.0
1979	671	773	86.7

The debt capacity index shown in Table 7.8 provides the best measure against which to compare the amounts of debt issued by Alaska to that of other states. It is the only nationally available statistic that attempts to measure all revenue sources available to a state to repay its debt obligations. Alaska does not top the list by this measure of debt capacity, but ranks sixth (excluding Oregon) out of the 41 states with general obligation debt outstanding.

Although the tax-capacity measure shows Alaska to be in a more favorable position relative to other states than the earlier measures of debt burden, the volatility of this ratio demonstrates the sensitivity of the State's debt capacity to fluctuations in oil revenues. Therefore, any criteria used to assess the State's debt capacity must rely heavily on forecasts of future oil prices and their impact on tax revenues because of the preponderant role this revenue source plays in the State's ability to repay debt.

State Expenditures and Revenues: Another good measure of debt capacity which accurately measures ability to repay debt is the share of general fund unrestricted revenues that is committed to pay debt service each year. Since the state treasury must ultimately pay the debt service on general obligation and other tax-supported debt, it is the level of state tax revenues and other demands for those revenues that determine ability to repay debt. This can be measured in two ways; first by comparing the amount of debt service payments to the level of other general expenditures; and second, by comparing annual debt service requirements to unrestricted general fund revenues. These ratios provide an indication of the importance of debt service to the state budget. Because debt service is not a discretionary item once the debt has been issued, the ratios indicate whether such payments are placing a strain on the budget relative to other state spending priorities and permit a comparison with other states.

The ratio of debt service to general revenue illustrates the ability of the state to make required debt service payments in any particular year. As long as revenues are sufficient to cover debt service and other demands for state spending, high per capita or other standard debt ratios need not be of grave concern.

The ratios of debt service to general state expenditures and revenues are computed in Table 7.9 for fiscal years 1970, 1975, and 1980. The states are grouped by their Moody's Investors Service May 1982 bond rating. The ratios were computed for total state debt (revenue and general obligation) because statistics covering interest on general obligation debt alone are not available from the Census Bureau. This comparison indicates that Alaska's ratios were close to those of other states in each of these years, with the exception of 1975.

Similar figures on Alaska general obligation debt are available from the Department of Revenue. The ratios of debt service to general fund appropriations and to general unrestricted revenues for the past five years are

Source: U.S. Bureau of the Census, Governmental Finances, various years.
Data are for all state level debt

presented in Tables 7.10 and 7.11 respectively. The share of general fund appropriations accounted for by debt service over this time has averaged 5 percent. This is a manageable level and does not indicate that trade-offs between spending on current programs and debt service are being forced on the State during the annual appropriation process.

Furthermore, over this same period debt service as a percent of general fund unrestricted revenues declined from 9.03 percent in fiscal year 197[illegible] to 2.37 percent in 1982, indicating sufficient revenue coverage of debt service. However, the ratio rose to 4.05 percent in fiscal year 1983 due to of the combined effects of a sharp increase in debt service payable and a drop in general fund revenues.

Rapidity of Principal Repayment: Ratios based on debt service and debt outstanding do not account for the length of time over which payments must be made or that the debt will be outstanding. Debt which matures in five years will have the same effect on a debt per $1,000 of personal income ratio, for example, as debt which matures in 15 years. However, the maturity structure of outstanding debt affects a state's ability to repay the debt and the ability to incur additional debt and, therefore, should be considered in assessing future affordable levels of debt issuance. The average life of a bond issue is a measure of the length of time that the bonds will be outstanding. A 20-year serial bond, with equal principal maturities in each year, will have an average life of approximately 10 years. Bonds with short average lives place a heavier current strain on the issuer because debt service payments are higher than on bonds with longer average lives due to the rapid repayment of principal. However, short average lives and rapid principal repayment mean that future debt capacity will be greater, because the early retirement of debt usually creates additional later year capacity for debt issuance, other things being equal.

The credit rating agencies have developed a guideline for high-quality general obligation issuers to follow in structuring the maturities of their obligations. The maturity structure they encourage would result in 25 percent of the debt retired within 5 years, 50 percent within 10 years, and 75 percent within 15 years. This guideline is not appropriate for revenue-supported debt issuance where debt maturities should be tailored to cash flows. For example, AHFC debt should be structured to mature coincidently with the repayment schedules of its mortgages.

The general obligation guideline is also not appropriate for Alaska's general obligation debt because of the uncertainty over the level of State revenues 20 years hence. For this reason, as mentioned in the Debt Profile of the State's general obligation bonds (Chapter Two), Alaska has developed a strategy to market the State's debt that involves shortening the average maturities of bond issues to conform with the Prudhoe Bay oil curve. Table 3.10 indicates that the decrease in average life of the State's debt corresponds to an improvement in its credit rating, because maturities now correspond to more predictable State revenue streams.

Looking at the rapidity of principal repayment of the State's general obligation debt and that of all State issuers demonstrates that the extremely short average life is particular to the State's tax-supported debt, and not other State agency issuers. Table 7.12 lists the cummulative percentage of debt that will be retired by the end of each fiscal year indicated for all State-level issuers. For example, by 1987, the State will have retired 47 percent of its general obligation bonds. However, by the same year, the AHFC will have retired only 10 percent of its debt. Table 7.13 condenses the rapidity of principal repayment information for all issuers in the State. Within ten years, 85 percent of tax-supported debt, and 42 percent of indirect debt will have been retired.

Future Debt Capacity

As discussed above, the affordable level of general obligation debt is determined by a state's ability and willingness to pay debt service on the amounts borrowed. It was shown that traditional measures of debt capacity do not adequately measure Alaska's immediate ability to repay debt, and are, therefore, not appropriate for assessing the State's debt capacity for the near future. Over the next six years State tax revenues in current dollars are projected to increase due largely to Prudhoe Bay production. Although the rate of increase in State revenues will depend upon fluctuating petroleum prices worldwide, the size of the Prudhoe oil field virtually assures a reasonably strong revenue stream for the short-term. However, after the Prudhoe Curve reaches its peak around the year 1989, oil revenues as forecasted by the Department of Revenue, begin to decline. Furthermore, if expressed in real, 1983 dollars (a measure of purchasing power), total petroleum revenues are projected to decline beginning in 1983[8]. It will become necessary for the State to diversify its economy and its tax-revenue base, and, assuming it is able to broaden its tax base, the more traditional measures of ability to pay will be more appropriate for assessing debt capacity and will be of greater concern to investors.

Assessment of Alaska's capacity for future debt issuance must be based upon 1) known and predictable resources that the State is legally able to tap through currently available taxes, and 2) other unrestricted revenue streams. The State must not issue debt today with the intention of repaying the debt through the proceeds of an individual income tax, for example, if those tax revenues are not presently available. Furthermore, although the State's Permanent Fund is a valuable resource, and is expected to grow to nearly $10 billion by 1990, it must not be treated as an asset in determining debt capacity (except to the extent that interest earnings flow to the general fund) because by law the principal of the fund is untouchable.

Projections of future unrestricted general fund revenues are made quarterly by the Department of Revenue. Because these revenues are the ultimate source of repayment of the State's debt, they are the best available measure of the State's "ability to pay" in assessing debt capacity. The ratio of debt service payable in a given year to unrestricted general fund revenues is

relatively straightforward and can be computed for many years into the future (currently, the Department of Revenue projects revenues until the year 2000). The reliability of these projections weakens as one gets futher into the future; however, for the immediate term, they meet the aforementioned criteria of "known and predictable".

A good starting point for assessing future debt capacity is to compare future debt service payments to which the State is currently committed to the projected levels of unrestricted general fund revenues. This comparison (shown in Table 7.14) indicates the trend in this ratio if the State does not issue further general obligation debt. Table 7.14 shows that according to the March 1983 Department of Revenue projections of unrestricted general fund revenues, debt service on general obligation debt will account for nearly 6 percent of these revenues in 1984. This figure exceeds 5 percent until 1988. Thereafter, as presently committed debt service gradually declines, the ratio falls to below 1 percent after 1994.

In assessing the State's future debt capacity, it is important to define the type of debt that should be considered in such an exercise. Because of the different considerations that suround the affordability analysis of revenue-supported debt (see page xxx), the choice is essentially between general obligation debt and tax-supported debt. In Alaska, tax-supported debt includes the lease-revenue debt of ASHA and the University of Alaska debt in addition to general obligation debt. Generally, states that have a low ratio of general obligation debt to total tax-supported debt should use the broader concept of tax-supported debt in analysing debt capacity. In Alaska this ratio is relatively high at 92 percent ($946 million general obligation debt out of $1.028 billion tax-supported debt, see Table 3.16). Because very little non-general obligation tax-supported debt has been issued from Alaska, the following analysis concentrates on general obligation debt only. However, if the ratio of general obligation debt to total tax-supported debt should drop below approximately 85 percent, the analysis of debt capacity should be broadened to include all tax-supported debt.

Short-term Guidelines

In order to plan future debt issuance, the State should establish a maximum target ratio of debt service to unrestricted general fund revenues. Such action will not only assist the State in deciding how to finance capital projects over the coming decade, it will also be favorably viewed by investors and the credit rating agencies. Deciding upon the proper level of this target ratio is not a simple task. There is no one target ratio that is recommended by credit analysts as fiscally responsible, the proper level depends on each individual state's circumstances.

As mentioned above, debt will continue to be affordable if, in the judgement of State officials, the payment of debt service does not prevent the State from attaining other objectives. The level of five to six percent of State revenues at which the most recent projections indicate the State will be until

Table 7.14

(1) March, 1983, 30th percentile projections of The Department of Revenue.

1987, is a "safe" level. If the State maintains this ratio of debt service to unrestricted general fund revenues and continues to issue debt with maximum maturities within the "known and predictable" revenue range, it is likely that the State's creditworthiness will be preserved. Therefore, five percent is a conservative estimate of the affordable ratio of debt service to revenues.

Table 7.15 demonstrates the use of a 5 percent target ratio of debt service to projections of unrestricted general fund revenues in determining future general obligation debt capacity. Column 1 contains the March 1983, 30th percentile projections of unrestricted general fund revenues made by the Department of Revenue. Column 2 lists the 5 percent target ratio. Column 3 contains annual (by fiscal year) debt service to which the State has previously committed itself. Column 4 is the debt service payable on debt that is assumed to have been issued in the future (Column 6). Column 5 lists the additional capacity for debt service created in each fiscal year. This figure is derived by subtracting previously committed debt service (columns 3 and 4) from the 5 percent target. Column 6 lists the amount of debt that can be supported by the amount of revenues available for debt service at the 5 percent level, assuming 10-year bonds, level amortization, and an 8.0 percent average interest rate (AA-rated bonds were trading at approximately 8.4 percent at the end of May 1983, and Alaska trades slightly below the AA rates). The example in Table 7.15 assumes that an amount of bonds equal to the total debt capacity as identified in Column 5 is issued when the capacity becomes available. Alternatively, capacity could accumulate but remain unused in order to spread debt issuance over several years.

According to this framework for assessing future debt capacity, the State may issue approximately $252 million in general obligation debt through 1990 commencing in 1987; an additional $349 million between 1990 and 1995; and, if known and predictable revenues are available after 2005 at the same level as in the year 2000, an additional $401 could be issued. Total future debt capacity using this criteria is slightly over $1 billion; however, it is dependent upon the reliability of the revenue projections in Table 7.15, and the assumption that revenues beyond 2000 will continue at the same level as in 2000. If revenues beyond 2000 are lower, debt issuance as early as 1990 may have to be cut back. Uncertainty over future revenues requires that continual monitoring and revising of this kind of capacity analysis must occur as new projections become available from the Department of Revenue. Similarly, the analysis should be performed periodically when tax-exempt interest rates are fluctuating.

If the State made a conscious decision, as part of a long-term capital investment strategy, to spend a larger share of unrestricted general fund revenues on debt service, additional debt capacity would be created. Such a decision would likely require trade-offs between paying debt service and spending on other priorities. As long as the payment of debt service does not prevent the State from providing "essential" services, an increase in debt service to as much as 10 percent of revenues would not significantly erode the State's creditworthiness or access to the bond market. However, committing ten percent of revenues to the payment of debt service may cause the national

credit rating agencies to reevaluate the State and result in a rating change from an AA to an A.

Using the framework described for Table 7.15, Table 7.16 presents a calculation of future debt capacity using a debt service target ratio of 10 percent. If the State allocated 10 percent of revenues to debt service, we have conservatively assumed that the credit rating would drop to an A, increasing average interest costs from 8 percent to 8.7 percent (A-rated bonds were trading at this level at the end of May 1983). Table 7.16 indicates that debt capacity rises over the 16 years until 2000 by $1.672 billion (from $1.002 billion to $2.674 billion) as a result of the increase from 5 percent to 10 percent. The timing of debt capacity also differs between the two scenarios, using the 10 percent guideline, $1.215 billion could be issued by the year 1990 rather than $252 million, and debt issuance could commence in fiscal year 1984 instead of 1987.

The decision to increase debt issuance beyond the 5 percent target level would require the State to commit a substantial portion of its budget to the payment of debt service. Maintaining the 5 percent ratio over the 27-year period from 1983 to 2010 (for debt issued between 1983 and 2000) will require the appropriation of nearly $1.4 billion more than currently committed debt service (of $1.47 billion). Raising the share of debt service to 10 percent would result in additional appropriations of $2.6 billion above the 5 percent level (a total of over $4 billion) over the 27 years.

Because debt capacity depends upon a government's willingness to repay, in addition to its ability to repay, no precise level of future debt capacity can be recommended by this study. Rather, it is recommended that the State determine an acceptable range of annual debt issuance, the low point of which (e.g., 5 percent ratio of debt service to revenues) adequately meets public service demands and the high point of which (e.g., 10 percent) results in debt service not placing a strain on resources to the extent that other public priorities must suffer. The debt affordability question, therefore, is calculated in reverse. First the affordable level of debt service must be established and from this a calculation of the level of debt that this amount of debt service can support. Once the affordable range for debt issuance has been determined, the actual amount of debt issued within this range will depend upon the costs and priorities of capital projects.

Long-term Guidelines

As long as the State continues to demonstrate an ability to tax its vast oil resources at a level that can support the payment of debt service and the provision of essential services, attention to traditional measures of ability to pay are not suitable for assessing Alaska's debt capacity. However, if there comes a time when the State's tax revenues are more broadly based, with income, sales and use, and property taxes comprising a significant share of State revenues, traditional debt capacity analysis will become applicable. As Alaska becomes more similar to other states in terms of its resources available

Personal Income:	5667000
Assessed Value:	3.523E10

to repay debt, its relative debt position among all states will play a greater role in determining its cost of borrowing and market access. It is recommended, therefore, that the State continually assess the impact of future debt issuance on its "external" debt statistics, and its position relative to other states.

The external debt analysis includes the types of statistics mentioned in the first half of this section. Among these are:

- tax-supported debt measured against personal income;
- net State and local debt measured against personal income;
- general obligation debt and tax-supported debt measured against the ACIR tax-capacity index;
- net State and local debt measured against market value of taxable property;
- incremental revenues measured against incremental debt service;
- Overall economic and demographic trends, such as employment, population, industrial base, bank deposits, consumer installment credit, and retail sales.

Table 7.17 demonstrates projection of the ratio of current tax-supported debt to population, assessed value, and personal income for the period 1983 to 2001 (when all currently outstanding State general obligation bonds will have been retired). The growth rates assumed for each of the variables are based on their 1978-1982 average, and are listed at the head of each column. Because of the rapid retirement of State debt, these ratios approach the current Moody's medians by 1988 (debt to assessed value), 1991 (debt to personal income), and 1994 (debt per capita). As the State issues further tax-supported debt, this type of analysis should be conducted to assess the impact of the debt on the future levels of these external debt statistics.

APPENDIX ONE

The Basis for Incurring and Repaying Debt at the State and Local Levels

The Consitution of the State of Alaska and State law as established by the Alaska Legislature and embodied in the Alaska Statutes determine the legal framework within which the State and its political subdivisions must conduct their fiscal affairs. State laws govern the types of debt that may be incurred, the structuring and proceedures for debt issuance, and the level and types of taxes or other revenues available to repay that debt.

State Debt

Article IX, "Finance and Taxation", of the Alaska Constitution addresses the taxing authority and ability to incur debt at both State and local levels. Section 8 of Article IX, "State Debt", requires that general obligation debt be incurred only for capital improvements or to provide housing assistance to qualified veterans. This section also requires that State general obligation debt be approved by a majority of voters, except for the purposes of repelling invasion, supressing insurrection, defending the State in war, or meeting natural disasters. Section 10, "Interim Borrowing", permits the State to issue short-term notes in anticipation of the collection of revenues for that year (called tax or revenue anticipation notes) provided that such notes are repaid before the end of the following fiscal year.

Section 11, "Exceptions", exempts the revenue-supported debt of the State, its public corporations, and local governments from the voter referendum requirement, and other constitutional restrictions on contracting debt. The restrictions do not apply to any debt that securred solely by the revenues of the public enterprise or corporation. Refunding bonds and special assessment bonds are also exempted.

Section 37, Chapter 15, the "State Bonding Act", of the Alaska Statutes sets forth the specific issuance procedure and bond structure requirements for State general obligation bonds, bond anticipation notes, and International Airport revenue bonds. This act requires selling general obligation bonds to the highest responsible bidder (i.e., the bid resulting in the lowest interest cost) at an interst rate not to exceed 11 percent a year or 110 percent of the Bond Buyer 20-Bond Index for the preceeding week. The maturity structure may be set by the State Bond Committee, with a maximum maturity of 30 years unless a longer period is authorized by Statute. Bonds may be issued in either coupon or registered form, with the place of payment determined by the State Bond Committee. Facsimile signatures of the Governor and Lieutenant Governor may be used.

The State Bonding Act also creates, and establishes the composition and duties of the State Bond Committee. The required members of the Committee are the Commissioner of Commerce and Economic Development (chairman), the Commissioner of Administration, and the Commissioner of Revenue (secretary). The statutorily defined responsibilities of the Committee are to adopt the resolution and prepare the documents necessary for the issuance, sale, and delivery of State general obligation and international airport revenue bonds. The Committee must certify annually to the Department of Administration the amount of debt service which must be paid during the following year. The State

Bond Committee may secure professional legal and financial advisory services; however, firms providing financial advice may not bid on State bond issues for which they provide such assistance.

The general authority to levy taxes and charges in order to repay debt and provide for general governmental operation is contained in Article IX, Section 1 of the State Constitution. The specific taxes, their tax base and rate, that the legislature has decided to levy are identified in several State statutues. The major sources of revenue are the oil and gas production tax (AS 43.55) and the oil and gas property tax (AS 43.56). Other sales, use, and licenses taxes and charges are also levied, however their contribution to State revenues is minimal. The State does not presently levy a personal income tax.
The oil and gas property tax is a 20 mill ad valorem tax on oil and gas transportation facilities and on facilities used in oil and gas exploration or production. Most notable of the properties subject to this tax are the Trans-Alaska Pipeline System (including the terminal at Valdez) and the field production system at Prudhoe Bay. State revenues from this tax are limited, however, because the State also permits local governments to tax this property and allows the oil companies to credit local taxes paid on this property against their State property tax liability.

Debt of State Public Corporations

The ability of State public corporations such as the Alaska Housing Finance Corporation to incur debt is established in the enabling legislation for each corporation. The basic requirement is that bonds must be securred by the revenues generated by the project being financed or by revenues from other projects of the corporation, but not by State taxing authority. The Alaska Housing Finance Corporation, Alaska Industrial Development Authority, and the Municipal Bond Bank must receive annual authorization for a maximum (unspecified) level of debt issuance. The Alaska Power Authority must notify the Governor and the Legislative Budget and Audit Committee 60 days before the issuance of debt. If the Alaska State Housing Agency issues bonds through a negotiated sale, it must hire a financial advisor that is independent of the negotiating underwriter to assist in the sale.

Local Governmental Units

Article IX, Section 9, "Local Debts", of the Alaska Constitution grants local governments the authority to issue general obligation debt for capital improvements upon approval of qualified voters without limit as to amount. This section also permits local governments to issue short-term notes to be repaid from anticipated tax collections within the following fiscal year. Section 29, Chapter 58, "Municipal Debt", of the Alaska Statutes regulates local debt issuance in greater detail. General obligation bonds may be sold through negotiation or a competitive sale, with interest rates not to exceed the contract usury rate of interest provided by law. Bonds may not be sold at a price less than their par value.

Bonds issued for the construction of school facilities are eligible for State assistance in the payment of debt service (AS 43.18.100). The dollar amount of this program varies each year depending on legislative authorization. There are

no limits placed on the amount of debt that that can be issued under this program.

Other sources of repayment for municipal indebtedness are general tax revenues and specific utility or other project revenues. Article X, Section 2, "Local Government Powers", of the Constitution states that the power to tax may be delegated only to organized boroughs and cities. Alaska Statutes Chapter 29 Section 53 permits these units to levy a general property tax, subject to certain limits, and a sales tax not to exceed 6 percent on sales, rents, or services. Property taxes levied in order to pay debt service on general obligation bonds are not subject to limitation.

APPENDIX THREE

GLOSSARY OF

BASIC PUBLIC FINANCE TERMINOLOGY

ACCRUED INTEREST: In an original governmental bond sale, accrued interest is the amount which has accumulated on the bonds from the dated date of issue up to, but not including, the date of delivery. Where a bond is purchased by a governmental unit, accrued interest is the amount which has accumulated on the bond from the last interest date up to, but not including, the date of purchase.

AD VALOREM TAX: A tax based on value, such as the assessed value of real (land and improvements) and personal property.

ADVANCE REFUNDING BONDS: Bonds issued to refund an outstanding bond issue prior to the date on which the outstanding bonds become due or callable. Proceeds of the advance refunding bonds are deposited in escrow with a fidiciary, invested in U.S. Treasury Bonds or other authorized securities, and used to redeem the underlying bonds at maturity or call date and to pay interest on the bonds being refunded or the advance refunding bonds.

Since the investments in which the proceeds of the advance refunding issue are invested will frequently earn a higher rate of interest than that paid on the outstanding bond issue and the advance refunding issue, the issuing agency may realize a net interest gain from the refunding operation, depending upon arbitrage restrictions.

AMORTIZATION: A straight-line reduction of debt by means of periodic payment sufficient to meet current interest and liquidate the debt at maturity.

AMORTIZATION OF PREMIUM: The periodic charges made against the interest received on bonds in order to offset any premium paid for the bonds above their par value or call price.

ARBITRAGE: The practice of investing bond proceeds at a yield greater than the coupon rate being paid on the bonds. This "profit" is strictly limited by the Internal Revenue Service.

ASSESSED VALUATION: The valuation placed on real estate or other property by a government for the purpose of levying taxes.

ASSESSMENT RATIO: The ratio of the assessed value of property to the full or true market value. Full value may be defined as fair market value at the bid side of the market less a reasonable allowance for sales and other expenses.

ASSETS: Property owned by a government which has monetary value.

AUTHORITY: A governmental unit or public agency created to perform a single function or restricted group of related activities. Usually such units are financed from service charges, fees and tolls, but in some instances they also have taxing powers. An authority may be completely independent of other governmental units, or in some cases it may be partially dependent upon other governments for its creation, its financing or the existence of certain powers.

AUTHORITY BONDS: Bonds payable from the earnings or other revenues of a specific authority created by a governmental action for a public purpose. Since such authorities usually have no revenue other than charges for services, their bonds are ordinarily revenue bonds.

AUTHORIZATION: Permission to issue the bonds. In addition to the Constitution, Statute or Charter enabling language, an election is often also required.

AVERAGE NET INTEREST COSTS: This is the expression of the average annual interest rate payable semiannually in respect to an issue or other group of bonds. There are a number of methods by which average net interest costs may be computed.

BALANCE SHEET: A statement purporting to present the financial position of an entity by disclosing the value of its assets, liabilities, and equities as of a specified date.

BALLOON MATURITY: The last bonds of an issue maturing in a substantially larger amount than those of earlier maturities. Very often a provision is made for the redemption of a part of all of these bonds by a purchase or call prior to maturity.

BASIS BOOK: A book of mathematical tables used to convert yield to maturity to equivalent dollar prices at various rates of interest.

BASIS POINT: One one-hundreth of one percent (0.01). One hundreth basis points equals one percent.

BEARER BOND: A bond which does not have the owner's name registered on the books of the Issuer. It is presumed to be owned by the bearer or the person who holds it.

BID: A statement of what a bank or syndicate of banks will pay for an entire bond issue, implying an offer to purchase the bonds. The lowest bid, i.e., the bid with lowest net or true cost, is the winning bid.

BOND: A certificate representing a promise to pay a specified sum of money, called the face value or principal sum of money, called the face value or principal amount, at a specified date or dates in the future, called the maturity date(s), together with periodic interest at a specified rate. The difference between a note and a bond is that the latter usually runs for a longer period of time and is usually a permanent financing tool while a note is typically an interim device.

BOND AND INTEREST RECORD (Also called Bond Register): The permanent and complete record maintained by a government for each bond issue. It shows the amount of interest and principal coming due each date, the bond and coupon numbers, and all other pertinent information concerning the bond issue.

BOND ANTICIPATION NOTE (BAN): Short-term interest bearing notes issued by a government unit in anticipation of bonds to be issued at a later date. The notes are retired from proceeds of the bond issue to which they are related.

BOND BUYER: A daily trade paper of the municipal bond market. It also publishes The Weekly Bond Buyer which is devoted to capital market news and provides a summary of the week's municipal news.

BOND COUNSEL: Legal firm hired to advise the issuer regarding the legal and tax aspects of the sale.

BOND ORDINANCE OR RESOLUTION: A legal order approved by the appropriate body of government unit authorizing a bond issue. The rights of the bond holders and the obligations of the issuer are carefully detailed in this formal document. State laws and municipal charters prescribe whether a bond issue may be authorized by resolution, or must be made by ordinance. The latter is a more formal act of the governing body.

BONDED DEBT: That portion of indebtedness represented by outstanding bonds.

BONDS AUTHORIZED AND UNISSUED: Bonds which have been legally authorized but not issued and which can be offered and sold without further authorization. This term should not be confused with the term "margin of borrowing power" or "legal debt margin" either one of which represents the difference between the debt limit of a governmental unit and the debt outstanding against it.

BOND ISSUED: Bonds sold.

BONDS PAYABLE: The face value of bonds issued and unpaid.

CALL DATE: The date on which a bond may be redeemed before maturity at the option of the Issuer.

CALL FEATURE ("Redemption Feature"): Enables the Issuer to pay off ("redeem") a bond prior to its maturity date. The "call date" is the earliest date the bond may be redeemed ("called"). Usually a premium is paid for the earliest call dates.

CALLABLE BOND: A type of bond which permits the issuer to pay the obligation before the stated maturity date by giving notice of redemption in a mnner specified in the bond contract. Synonym: OPTIONAL BOND.

CALL PRICE: The price at which callable bonds will be redeemed if called.

CAPITAL ASSETS: Assets of significant value and having a useful life of several years. Capital Assets are also called FIXED ASSETS.

CAPITAL BUDGET: A plan of proposed capital expenditures and the means of financing them. The capital budget is usually adopted as part of the complete annual budget which includes both operations and capital outlays. The capital budget should be based on capital improvement program (CIP).

CAPITAL IMPROVEMENT PROGRAM: A plan for capital expenditures to be incurred each year over a fixed period, setting forth each capital project, identifying the expected beginning and ending date for each project, the amount to be expended in each year, and the method of financing those expenditures.

CAPITAL OUTLAYS: Expenditures for the acquisition of capital assets.

CAPITAL PROJECTS: Projects which purchase or construct capital assets. Typically, a capital project encompasses a purchase of land and/or the construction of a building or facility.

CAPITALIZED INTEREST: The issuer pays the first few interest payments from bond proceeds, usually until construction of the project if completed and the project can begin to generate revenues with which to make debt service payments.

CASH FLOW BUDGET (Cash Budget): A projection of the cash receipts and disbursements anticipated during a given period. Typically, this projection covers a year and is broken down into separate prjections for each month, week and/or day during the year.

CLOSING (Also called Delivery): After the sale, the bonds must be printed and signed by the Issuer; the transcript prepared by the bond counsel; and the funds drawn and prepared for transmission by the Underwriter. On the day of closing, the bonds are "delivered" to the Underwriter the bond counsel delivers the "legal opinion" to the Underwriter; and the Issuer receives the funds.

Note Regarding Dates - The sale date and the closing date have no further relevence. The bonds are assigned an arbitrary "issue date" or "date of the bonds," usually the beginning of a month, upon which interest begins to accrue. The bonds have this date printed upon them and often are referred to by that date (e.g. "the December 1, 1982 bonds"). Any interest which is owed between the issue date and the closing date ("accrued interest") is paid by the Underwriter to the Issuer at the closing.

COMPETITIVE BIDDING: (Also called Public Bidding): Sale of a bond issue by public advertisement in which any bidder may submit an offer to purchase the bonds and the bonds are sold to the bid with lowest interest cost.

CONCESSION: The allowance (or profit) that an Underwriter allows a non-member of the account; sometimes referred to as dealer's reallowance.

COUPON: That detachable part of a bond which serves as proof of interest due. Bondholders detach coupons from bonds, usually at semiannual intervals, and present them for payment to the Issuer's paying agent or to the bondholder's own bank for collection.

COUPON RATE (Also called Nominal Interest Rate): The interest coupons attached to a bond. In the case of registered bonds, it is the rate payable by the Issuer's automatic check to the holder.

CONVENANT: A binding agreement in the bond contract. Most are found in revenue bonds. For example, they can stipulate that the rates charged for use of the facilities are sufficient to maintain coverage of maximum annual debt service at a given level.

COVER: The spread between the winning bid and the next highest bidder. It is useful as a basis for evaluation of the bids.

COVERAGE: This term is usually connected with revenue and corporate bonds. It is usually the ratio of net revenue available for debt service to the average annual debt service requirements for an issue of revenue bonds. This ratio indicates the margin of safety for payment of debt service, reflecting the number of times by which earnings for a period of time exceed debt service payable in such periods, e.g., 1.20, referred to as "one-twenty"

CURRENT YIELD: A relation stated as a percent of the annual interest to the actual market price of the bond -- same procedure as computing a stock yield.

DEBENTURES OR MUNICIPAL DEBENTURES: A term used in Canada or other countries for municipal bonds or a corporate security other than an equity security.

DEBT: An obligation resulting from the borrowing of money or from the purchase of goods and services. Debt of governmental units include bonds, time warrants, notes, and floating debt.

Bonds: An interest-bearing promise to pay with a specific maturity.

Notes: In general, an unconditional written promise signed by the maker to pay a certain sum of money on demand or at a fixed or determinable time either to the bearer or to the order of a person therein.

Time Warrant: A negotiable obligation of a governmental unit having a term shorter than bonds and frequently tendered to individuals and firms in exchange for contractual services, capital acquisitions, or equipment purchases.

Floating Debt: Liabilities other than bonded debt and time warrants which are payable on demand or at an early date. Examples are accounts payable, notes and bank loans.

DEBT LIMIT: The maximum amount of debt which a govenrmental unit may incur under constitutional, statutory, or charter authorizations. The limitation is usually a percentage of assessed valuation and may be fixed upon either gross or net debt. If the latter is the case, the legal provision will ususally specify what deductions from gross debt are allowed in order to determine net debt.

DEBT RATIO: The ratio of the Issuer's debt to a measure of value such as assessed valuation or real value.

DEBT SERVICE: Interest requirements plus the stipulated payment of principal on outstanding debt, usually reported on an annual basis.

DEBT SERVICE FUND: A fund established to account for the payment of interest and principal on all general obligation debt, both serial and term. Usually separate funds are created for special assessment and revenue debt issued for and serviced by a governmental enterprise.

DEBT SERVICE REQUIREMENT: The amount of money required to pay the interest on outstanding debt, serial maturities of principal for serial bonds, required contributions to a debt service fund for term bonds and reserve fund payments.

DEFAULT: Failure to pay principal or interest promptly when due. If caused by a minor omission which is remedied promptly, it is known as a TECHNICAL DEFAULT.

DEFERRED SERIAL BONDS: Serial Bonds in which the first installment does not fall due for two or more years from the date of issue.

DENOMINATION: The face amount or par value of a bond which the issuer promises to pay on the bond's maturity date.

DEPRECIATION: (1) Expiration of the service life of capital assets attributable to wear and tear, deterioration, action of the physical elements, inadequacy or obsolescense. (2) That portion of the cost of a capital asset which is charged as an expense during a particular period.

DIRECT DEBT: The debt for which the issuing unit has sole responsibility. Direct debt is usually in the name of the unit, but occasionally one government assumes the debt of another. When adjoining lands are annexed to a school district, for example, there may be some assumed debt.

DIRECT OR PRIVATE PLACEMENT: The direct sale of a new security by the issuer to investors, bypassing the underwriter or middleman.

DISCOUNT: The difference between the cost of a security and its value at maturity when quoted at lower than face value. A security selling below original offering price shortly after sale also is considered to be at a discount. Note that the price does not include accrued interest at the date of acquisition or sale.

DISCOUNT BOOK: A book of mathematical tables used to determine the rate of return on a dollar bond for a specified dicounted rate at a specified maturity.

DOLLAR BOND: A bond which is quoted and traded in terms of dollars rather than yield. For example a quotation of 97-1/2 means $97.50 per $100 of par value or $975 per $1000 par value of bonds.

DOUBLE-BARRELED BOND (Also called Dually-Secured Bond): A bond secured by a pledge of two or more sources of payment such as the unlimited taxing power of the issuer plus a special assessment of revenue pledge.

DOUBLE EXEMPTION: A municipal term applied to bonds which pay interest that is exempt from both state and federal income taxes.

EFFECTIVE INTEREST RATE: The rate of earning on a bond investment based on the actual price paid for the bond, the coupon rate, the maturity date, and the length of time between interest dates in contrast with the nominal interest rate or "coupon" rate.

ENTERPRISE DEBT: Debt which is to be retired primarily from the earnings of publicly owned and operated enterprises. (see REVENUE BOND).

ESCROWED FUND: A fund put in the hands of a third party who administers the money according to a written agreement.

FACE VALUE: The par value of a bond that appears on the face. This is the amount that the Issuer promises to pay at maturity and also the amount on which interest is computed.

FINANCIAL CONSULTANT OR ADVISOR: Consulting firm or individual hired to advise the Issuer regarding the financial and market aspects of the sale.

FISCAL AGENT: An Agent (usually an incorporated bank or trust company) designated by a government to act for it in any of several capacities in the sale, administration and payment of bonds and coupons.

FULL FAITH AND CREDIT: A pledge of the general taxing power for the payment of debt obligation. Bonds carrying such pledges are usually referred to as general obligation bonds or full faith and credit bonds.

FUND: An independent fiscal and accounting entity with a self-balancing set of accounts recording cash and/or other resources together with all related liabilities, obligations, reserves, and equities which are segregated for the purpose of carrying on specific activities or attaining certain objectives.

FUNDED DEBT (Also called Bonded Debt): That portion of the indebtedness of a municipality represented by outstanding bonds.

GENERAL LONG-TERM DEBT: Long-term debt legally payable from general revenues and backed by the full faith and credit of a governmental unit.

GENERAL OBLIGATION BONDS: A bond for whose payment the full faith and credit of the issuer is usually pledged. Most commonly general obligation bonds are payable from ad valorem property taxes.

GENERAL PROPERTY TAX: The tax usually levied on real and personal property. This tax is typically levied locally. In many emergencies it is the tax which is increased to balance the budget.

GOOD FAITH CHECK: The check which must be included with a bid on a bond sale. The bidding notice ordinarily provides that if the bonds are awarded to a syndicate that does not pick them up as agreed, the good faith check will be held as liquidated damages. The good faith checks of the unsuccessful bidders are promptly returned.

GRANT: A contribution of assets (usually cash) by one governmental unit or other organization to another. Typically, these contributions are made to local governments from the state and federal governments. Grants are usually made for specified purposes.

GROSS DEBT: The sum total of a debtor's obligations; however, in reporting gross debt, the amount of unfunded obligations of pension and retirement funds is ordinarily not included.

GROSS YIELD: The percentage return on a security which is determined by dividing the dollar price into the annual interest payment and calculating the return to maturity.

INDENTURE: A written agreement used in connection with a bond issue setting forth maturity date, interest rate, security and other terms.

INDUSTRIAL DEVELOPMENT REVENUE BONDS (IDSs, IDRBs, IRBs): Bonds issued by governmental units, the proceeds of which are used to construct plan facilities for private industrial concerns. Lease payment is made by the industrial concern to the governmental unit are used to service the bonds. Such bonds may be in the form of general obligation bonds, revenue bonds, or a combination thereof.

INTEREST: Compensation paid or to be paid for the use of money, including amounts payable at periodic intervals or as discount at the time a loan is made.

INTEREST RATE: The interest payable, expressed as a percentage of the principal available for use during a specified period of time.

INTERIM BORROWING: (1) Short-term loans to be repaid from general revenues during the course of a fiscal year. (2) Short-term loans in anticipation of tax collections or bond issuance. (See BOND ANTICIPATION NOTES and TAX ANTICIPATION NOTES)

INVERTED SCALE: When the yield is higher on the shorter maturities than on the longer ones.

INVESTMENT: Securities and real estate purchased and held for the production of income in the form of interest, dividends, rentals or base payments.

INVESTMENT BANKING (Also known as Underwriting): It is the for-profit business of financing corporations or governmental units by marketing their new securities.

INVESTMENT INSTRUMENT: The specific type of security which a government purchases and holds.

INVESTOR: ("Bondholder"): Ultimate buyer of any number of bonds from an issuer who intends to hold the bonds for investment purposes.

ISSUER: A municipal unit which borrows money through the sale of bonds, notes, or other evidence of indebtedness.

LEASE or LEASE-PURCHASE REVENUE BONDS: Revenue bonds paid from lease pyaments made on projects financed by bonds.

LEGAL OPINION: The opinion of a specialized bond attorney as to the legality of a municipal bond issue. A preliminary legal opinion is made in advance of the original sale of the bonds; the final opinion, after the bonds have been sold and issued.

LEGAL DEBT SERVICE: An arrangement of serial maturities in which the volume of maturing bonds increases at approximately the same rate as the interest declines

LEVY: (verb) To impose taxes, special assessments, or service charges for the support of government activities. (noun) The total amount of taxes, special assessments or service charges imposed by a governmental unit.

LIABILITY: Debt or other legal obligations arising out of transactions in the past which must be liquidated, renewed or refunded at some future date.

LIMITED LIABILITY BONDS: When a government issues bonds which do not pledge the full faith and credit of the jurisdiction, it issues limited liability bonds. typically pledges are made to dedicate one specific revenue source to repay these bonds, or osme other special repayment arrangements are made.

LIMITED TAX BOND: A bond secured by the pledge of a special tax, a group of taxes, or specified portion of the real estate tax which is limited as to rate or amount.

LIQUIDITY: (of investments) The ability to convert an investment to cash promptly with minimum risk to principal or accrued interest.

LONG-TERM DEBT: Debt with a maturity of more than oneyear after date of issuance.

MARKET PRICE: The price of an issued bond varies continuously as new bond issues come to market and previously issued bonds are re-traded. Thus the market price that an Investor will pay for a ten percent ten year bond today may be different tomorrow. Therefore the total market value of a portfolio changes daily.

MARKETABILITY: A measure of the ease with which a security can be sold in the secondary market.

MATURITY: The date upon which the principal or stated value of a bond becomes due and payable.

MATURITY SCHEDULE: A listing of the total principal amount of bonds maturing in each year.

MORTGAGE BONDS: Bonds secured by a mortgage against specified properties of a governmental unit, usually its public utilities or other enterprises. If primarily payable from enterprise revenues, they are also classed as revenue bonds.

MORTGAGE REVENUE BONDS ("Housing Bonds"): Revenue bonds paid from mortgage payments or rental payments from housing projects financed by bonds. (e.g. State Housing Division Low-Income Housing Bonds.) Note: State of Oregon bonds issued for the elderly are General Obligation Housing bonds.

MUNICIPAL: In its broadest sense, an adjective which denotes the state and all subordinate units of government. In a more restricted sense, an adjective which denotes a city or town as opposed to other units of local government.

MUNICIPALS: Municipal bonds. As used in the bond trade, this term includes not only the bonds of all local subdivisions such as cities, town, villages, coutnies and schools, park, sanitary and other special taxing districts, but also bonds of states and agencies of the state.

NEGOTIATED SALE: The private arrangment between two or more parties to purchase the securities of an issuer without competetive public bidding.

NET DEBT: The gross debt of a state or political subdivision less sinking fund accumulations and all self-supporting debt.

NET INTEREST COST (NIC): The average rate of interest over the life of a bond issue.

NET REVENUE AVAILABLE FOR DEBT SERVICE: Gross operating revenues of an enterprise less operating and maintenance expenses, but exclusive of depreciation and bond interest. "Net Revenue," thus defined, is used to compute "coverage" on revenue bond issues. Under the laws of some states and the provisions of some revenue bond indentures, net revenues used for computation of coverage are required to be on a cash basis rather than an accrual basis.

NEW ISSUE: The first offering of an issued security. The proceeds may be used to retire outstanding debt or for capital purposes.

NON-LITIGATION CERTIFICATE: A statement issued by the bond attorney that there are no legal suits pending (and as far as he knows none is being planned) which might result in an impairment of the validity of the bonds.

NOMINAL INTEREST RATE: The contractural interest rate shown on the face and in the body of the bond and representing the amount of interest to be paid, in contrast to the effective interest rate. This term is synonymous with COUPON RATE.

NOTICE OF SALE: Legal notice announcing the terms and conditions of the bond sale. Its content and timing for publication is prescribed by Statute. Official Statements must be available for distribution on the first day ("first publication date") the notice of sale is published.

OFFICIAL STATEMENT ("O.S."; also called Prospectus): The legal disclosure document prepared by a municipal bond issuer or its chosen representative, which sets forth all material facts necessary to fully describe the financial condition of the issuer and clarify the offering, as prescribed by law.

ORDER PERIOD: For one or two hours after the sale, the winning syndicate takes orders for the bonds from all dealers.

OVERLAPPING DEBT: That portion of the debt of other governmental units or which residents of a particular municipality are responsible. Except or special assessment debt, the amount of debt of each unit applicable to the reporting unit is arrived at by (1) determining what percentage of the total assessed value of the overlapping jurisdiction lies within the limits of the reporting unit, and (2) applying this percentage to the total debt of the overlapping jurisdiction. Special assessment debt is allocated on the basis of the ratio of assessments receivable in each jurisdiction which will be used wholly or in part to pay off the debt to total assessments receivable which will be used wholly or in part for this purpose.

OVER-THE-COUNTER SALES: Direct sales by governments to the investor public without the marketing facilities of bond dealers.

PAR VALUE: The value of a security as expressed on its face without consideration to any premium or discount; it is the amount that must be paid at maturity. It also signifies the dollar value on which bond interest is figured. Although bonds are usually issued in denominations of $5000 a quotation of 100 means "at par." Bonds quoted at 98 are selling at a discount. That is, they cost $980 for a $1000 bond. Bonds quoted at 102 are selling at a premium, that is, $1020 for a $1000 bond.

PAY-AS-YOU-GO-BASIS: A term used to describe the financial policy of a governmental unit which finances all of its capital outlays from current reveneus rather than by borrowing. A governmental unit which pays for some improvements from current revenues and others by borrowing is said to be on a partial or modified pay-as-you-go basis.

PAYDOWN: The net reduction in debt when the amount of a new issue is less than the maturing issue.

PAYING AGENT: The agency, practically always a commercial bank, where the maturing interest coupons and principal of an issue will be paid. Municipal bonds usually are payable also at the office of a public treasurer.

PRELIMINARY OFFICIAL STATEMENT: The disclosure document used by the underwriting community to assess the credit and investment value of a forthcoming bond issue and used as the basis of establishing bids (in addition to market conditions). The Preliminary Official Statement is updated after the bond sale results and any other material facts necessary for full and accurate disclosure of the financial condition of the issuer, as prescribed by law.

PREMIUM: The excess of the price at which a bond is acquired or sold over its face value or maturity value. Note that the price does not include accrued interest at the date of acquisition or sale. Also, the premium is the amount payable to the holder of a callable bond by the issuer, if and when the bond is called and assuming there is provision for a call premium.

PREMIUM CALL PRICE: Price above par at which a municipality, according to the bond contract, may call optional bonds for retirement or sinking fund purposes.

PRIMARY MARKET (the "New Issue Market"): The market for bonds, notes, or other evidences of indebtedness. Purchasers in this market are usually banks or investment banking firms.

PRINCIPAL: The face or par value of a bond, exclusive of accrued interest.

PRIVATE BIDDING: A method of issuing a bond in which the bond is not advertised in a financial journal. Within this category there are two subcategories, negotiated and competitive.

Negotiated Bids: Offers in which both parties sit down and discuss the interest rate schedule and price.

Competitive Private Bidding: Occurs when a unit solicits bids from a few selected investors and underwriters.

PRIVATE PLACEMENT: The purchase of a bond issue to be included in the portfolio of a private investor (such as a bank) rather than to be reoffered for resale to the public.

PROSPECTUS: A detailed statement issued by a company or municipality prior to the sale of new or additional securities, giving a full description of facts and information as required by the Securities and Exchange Commission or other authority.

PUBLIC BIDDING: A method of issuing debt in which the issue is advertised in a financial journal and any investor is welcome to submit an offer to purchase.

PURCHASE PRICE: Price paid by the Underwriter to the Issuer for the entire bond issue. The price may include a premium or discount from the full par value of the issue.

QUALIFIED LEGAL OPINION: Conditional affirmation of the legality of bonds, before or after they are sold. An UNQUALIFIED LEGAL OPINION, on the other hand, is an unconditional affirmation of the legality of the bonds.

RATE OF RETURN: The yield obtainable on a security based on its purchase price or its current market price. This may be the amortized yield to maturity on a bond or the current income return.

RATING: The designation used by investors' services to give relative indications of quality. Moody's ratings from the highest Aaa, down to C, while Standard & Poor's ratings range from the highest, AAA down to D.

REDEMPTION: The liquidation of indebtedness by retiring an outstanding obligation, usually at the issuer's option and prior to a stated final maturity.

REDEMPTION FUND: A fund created for the purpose of retiring a callable obligation maturing serially, or for purchasing such obligation as funds became available.

REDEMPTION PRICE: The price at which a bond may be redeemed prior to maturity, at the option of the issuer.

REFINANCING: Retiring existing securities by the sale of new issues. The object may be to save interest costs or to extend the maturity of the loan. (See REFUNDING)

REFUNDING: The redemption of existing debt on or before its first call date n order to reduce the fixed interest charge, to reduce the amount of fixed payment or to restructure the obligation. The REFUNDING BONDS may be sold for cash and outstanding bonds redeemed in cash, or the refunding bonds may be exchanged with holders of outstanding bonds.

REFUNDING BOND: A bond issued to retire a bond already outstanding. Refunding bonds may be sold for cash and outstanding bonds redeemed in cash, or the refunding bonds may be exchanged with holders of outstanding bonds.

REGISTERED BOND: A bond whose owner is registered with the issuing governmental unit and which cannot be sold or exchanged without a change of registration. When fully registered there are no coupons attached and the interest is paid to the owner by check by the paying agent.

RESERVE: An account used to indicate that a portion of fund equity is legally restricted for a specific purpose or not available for appropriation and subsequent spending.

RESERVE FOR RETIREMENT OF SINKING FUND BONDS: A reserve representing the amount of cash and other resources which should have been accumulated in the sinking fund at a certain date, according to actuarial computation, in order that the bonds outstanding may be redeemed at maturity.

REVENUE BONDS: Bonds whose principal and interest are payable exclusively from earnings of a public enterprise, such as bridges, toll roads, or utility systems. Such bonds have no claim on the borrower's taxable resources unless otherwise specified in the bond indenture. In addition to a pledge of revenues, such bonds sometimes contain a mortgage on the enterprises's property and are then known as MORTGAGE REVENUE BONDS.

SCALE: Re-offering terms to the public of a serial bond issue showing prices or yields offered on each maturity. May also refer to the coupon rates on each maturity proposed by underwriters at the time of sale

SECONDARY MARKET: The selling and trading of bonds after the underwriting account has dissolved and the bonds are distributed. Some dealers may hold a portion of the bonds in inventory for future sale.

NOTE: Any Investor may buy either bonds of a new issue or bonds previously issued and available for sale in the secondary market. A bond issue's trading success in the secondary market can thus affect future bond issues' success in the primary market. Also, the supply of an Issuer's bonds in the secondary market can affect the demand for its new issues in the primary market.

SECURITIES: Bonds, notes, mortgages, or other forms of negotiable or non-negotiable instruments.

SELF-SUPPORTING or SELF-LIQUIDATING DEBT: Debt obligtions whose principal and interest are payable solely from the earnings of the given municipal utility or enterprise. The earnings must be sufficient to cover the debt service with a reasonable margin of protection if the bonds are to be marketable as entirely self-liquidating (See REVENUE BONDS).

SERIAL BONDS: Bonds the principal of which is repaid in periodic installments over the life of the issue.

Serial Annuity Bonds: Serial bonds in which the annual installments of bond principal are so arranged that the combined payments for principal and interest are approximately the same each year.

Deferred Serial Bonds: Serial bonds in which the first principal installments does not fall due for two or more years for the date of issue.

SHORT-TERM DEBT: Debt with a maturity of one year or less after the date of issuance. Short-term debt usually includes floating debt bond anticipation notes, tax anticipation notes, and interim warrants.

SINKING FUND: A fund of earning assets and cash to which additions are made periodically so that future contributions plus interest earned will accumulate to the par value of the bonds at maturity and can thus be used to redeem them. Difficulties of administration have made this practice rare today, but the term is sometimes used to cover any retirement of principal other than by serial maturities. Thus, a call of a part of a bond issue in order to retire debt may be called "for sinking fund purposes."

SPECIAL ASSESSMENT: A compulsory levy made by a local government against certain properties to defray part or all of the cost of a specific improvement or service which is presumed to be of general benefit to the public and of special benefit to such properties. The term should not be used without a modifier (e.g. "special assessments for street pavings," or "special assessments for street sprinkling") unless the intention is to have it cover both improvements and services or unless the particular use is apparent from the context.

SPECIAL TAX BOND: A bond secured by a special tax, such as a gasoline tax.

SYNDICATE: A group of investment bankers who buy (that is, underwrite) a new bond issue. The syndicate is headed by a manager who submits the bid for the purchase of the securities as a lot. The syndicate members agree to distribute a specified amount of the securities to them on a pro rata or other agreed basis. Upon final distribution of all securities, the syndicate is closed and the obligation of all members is terminated. The securities are reoffered to the general public at a profit (usually) for the syndicate members.

TAKE-DOWN (Also called Take-Down Concession): The discount from the list price allowed to a member of an underwriting account on any bonds he sells.

TAX ANTICIPATION NOTES (TANs; also called Warrants): Notes issued in anticipation of collection of taxes usually retirable only from tax collections, and frequently only from the proceeds of the tax levy whose collection they anticipate.

TAX-EXEMPT BOND: Bonds exempt from federal income, state income, or state or local personal property taxes. "Municipals" are exempt from federal income taxation at present and may or may not be exempt from the state income or personal property taxation in the state where originally issued or held. Most state do not tax "municipals" issued by their own state or local jurisdictions.

TAX-INCREMENT REVENUE BOND (Also called Tax Allocation Bond, or Urban Renewal Bond): Revenue bonds paid from monies derived from "tax increment financing," a special application of taxes levied in urban renewal districts on the growth in taxable value.

TAX LIMIT: The maximum rate or amount of tax which a local government may levy. It may apply to taxes raised for a particular purpose, to taxes raised for all purposes, to a single government or class of governments, or to all governments operating in a particular area.

TAX RATE: The amount of tax stated in terms of a unit of the tax base; for example, 25 mills per thousand of assessed valuation of taxable property.

TAX RATE LIMIT: The maximum legal rate at which a municipality may levy a tax. The limit may apply to taxes raised for a particular purpose or for general purposes.

TAXES: Compulsory charges levied by a governmental unit for the purpose of financing services performed for the common benefit. The term does not include specific charges made against particular persons or property for current or permanent benefits such as special assessments. Neither does the term include charges for services rendered only to those paying such charges as, for example sewer service charges.

TERM BONDS: Bonds the entire principal of which maures on one date. Also called SINKING FUND BONDS.

TRADER or Dealer: Persons in securities firms or banks who buy, sell, or trade individual bonds but do not hold the scurities as investments. Certain dealers hold inventories ("take a position") in certain types of issues of bonds.

TRUSTEE: A bank designated as the custodian of funds and official representative of bondholders.

UNDERLYING DEBT: The debt of smaller geo-political units within a given government s jurisdiction.

UNDERWRITER: The investment house or houses that purchase a bond offering from the issuing government. A joint venture account of a number of underwriters is called the UNDERWRITING SYNDICATE or SYNDICATE.

UNLIMITED TAX BOND: A bond secured by pledge of taxes which may be levied in unlimited rate or amount.

UTILITY DEBT: Debt which has been created to provide or acquire certain utility assets, such as hydro-electric, gas or water works, street, railways etc. Utility debt may be incurred through the issuance of either general obligation bonds or revenue bonds.

WARRANT: An order drawn by the legislative body or an officer of a governmental unit upon its treasurer directing the latter to pay a specified amount to the person name or to the bearer.

YIELD: The rate earned on an investment based on the price paid for the investment, the interest earned during the period held and the selling price or redemption value of the investment.

POSITION PAPER

RE: HB 16

SPONSOR: Representatives Rick Uehling and Roger Jenkins

Program Effects of Bill

This bill would provide a new loan/grant program within the Department to fund the relocation of mobile homes displaced by the closure of mobile home parks. It would require the creation of five new positions and their related costs.

Comments

These comments on HB 16 have been prepared to consider the agency impact of a new loan/grant program within the Department of Community and Regional Affairs. The purpose of this program is to assist individuals with mobile home relocation when mobile home park closure dictates an eviction. Increased administration, liabilities, and accountability of a loan/grant program for this purpose is reflected in this document.

With between 16,000 and 23,000 mobile homes in the state, and approximately 82% of them located in existing parks, the Department anticipates an unprecedented increase in park closures and relocation impacts resulting from available funds. Alaska Housing Finance Corporation (AHFC) records 133 approved parks statewide. In addition, there are estimated to be another 25-35 parks, not AHFC approved, which could be subject to closure. Approximate park size is assumed to be 110 mobile homes.

The Department analyzed its current active loans on December 31, 1984. The Department accounts for 1546 loans outstanding, which have accumulated over a four year period. The Department's existing computer accounting system could accommodate new loans, in addition to the existing loans.

Underwriting standards, however, are not so easily absorbed. Such standards include debt-to-income calculations, credit checks, employment verifications, appraisal reviews and seller/servicer cor- respondence. Each activity takes as much time to process as a major mortgage loan. Smaller loan amounts will require less detailed documents for purposes such as credit review. However, calculations and review for file completeness will remain unchanged. Appraisal review, due to the fragile nature of the real estate involved, would take longer to prccess than would non-mobile home construction. The total processing time is presumed to equal or exceed that of a normal Division file.

After underwriting is completed, closing document preparation, closings, purchasing and portfolioing of a loan are performed in identical fashion to regular mortgage loans, regardless of loan amount, term, or duration of a loan.

The Department requests that an effective date of January 1, 1986 for program implementation be added to the legislation to minimize first year impact on the loan agency and to allow time for application development and regulation review. Estimated subsequent year impact could exceed 1,000 loans per year, depending on available capital funds. This volume translates into 34% portfolio increase with a second year increase of 66%.

The hidden factor of new Home Ownership Assistance Fund demand is not calculable at this writing. It is predicted, however, to have a noticeable effect of turnaround time, processing, and overall portfolio success rate beginning in the spring of 1985 and continuing in 1986.

Present processing times vary, depending on the condition of the file when it reaches the Department for review. An incomplete or hastily packaged submission requires additional staff time to complete and review. A properly packaged file will require from two to 30 days to underwrite and from 11 to 40 days to purchase. The time required for underwriting and purchasing will depend on the seasonal backlog. The new HOAF program files' computations would increase the processing time.

A final factor to consider in loan program success is insuring adequate review to maintain acceptable delinquency and default ratios. There is a disproportionate amount of expense and activity required to correct a bad loan regardless of the loan amount. Prudent management can prevent this problem from occurring only through complete and proper underwriting of the file.

The Department has attempted to calculate a service fee factor that would attract local governments' participation in the originating, underwriting, and servicing processes of mobile home relocation loans. After several factors were calculated, it was determined that insufficient incentives for local government participation were available. To minimize accounting impacts, loans will have to be offered through existing seller-/servicers.

In order for the Department to fully comply with legislative intent in this area, the Legislature needs to further define the areas of loan term and loan rates.

Note: Statistical sources include the 1980 census, AHFC, and the Municipality of Anchorage and the City and Borough of Juneau.

Alaska State Legislature
House

Official Business

Pouch V
State Capitol
Juneau, Alaska 99811

MEMORANDUM

To: Rep. John Sund, Chair
House Special Committee on State Loans

From: Rep. Rick Uehling

Subject: HB 16 "An act relating to loans or grants for mobile home relocation; and providing for an effective date."

Date: January 22, 1985

I have asked my staff to prepare the following background information for you.

During the last year, there has been increasing concern about the closure of Mobile Home Parks and the effects of these closures on mobile home owners.

As Mike Lynch, Executive Director of AHFC, wrote in a letter to former Commissioner Robert Heath,

> "Mobile home owners can be faced with several problems (when their mobile home park closes.)
>
> 1. They are forced to move their mobile home with little notice.
>
> 2. There are few vacancies in other existing mobile home parks.
>
> 3. Available lots are usually too costly or too distant for home owners to utilize.
>
> 4. Some of the mobile homes are too old and/or deteriorated to be moved.
>
> 5. Many of these home owners do not have enough funds to move the mobile home."

In addition to the points brought out by Mike Lynch, there are several other factors which should be taken into consideration. These are as follows:

1. Many mobile home owners are young families of low to moderate income starting out.

2. Many mobile home owners are Senior Citizens on fixed incomes who had planned to retire in their mobile home and are unprepared for a park closure.

3. Local governments (especially Anchorage) have not been responsive to the needs of mobile home owners and have only recently become interested in long term planning which could help alleviate problems caused by mobile home park closures.

4. While no extensive study has been done. It is thought that the closure of mobile home parks, and the shortage of available spaces has an effect on the overall market for mobile homes. With the shortage of mobile home space, mobile home prices fall and defaults begin to rise. With the large amount of direct State investment in mobile home loans, now totaling 145,410,451 million dollars, the State clearly has an interest in promoting stability in the market place.

There are perhaps four steps which should be taken to help alleviate the problem.

1. State involvement in either 'State-owned mobile home parks' or 'a public/private partnership' in which the State would provide land to a developer.

2. Creation of a loan or grant program to help residents of mobile home parks which close.

3. Passage of legislation which would allow the 'common interest ownership' of mobile home parks.' Members of the industry believe that this would help alleviate space problems.

4. A position should be created either through the Dept. of C&RA, AHFC, or the Municipality of Anchorage to help displaced residents of mobile home parks with specific relocation problems.

While the first step has several policy questions to be answered, it is also a step which is best undertaken by the Administration.

The second step is addressed in HB 16. The third step is addressed in SB 44, which is a complete rewrite of the Horizontal Property Regime. The fourth step is yet to be undertaken, and may best be done at the Municipal level.

HB 70, as introduced, would set up a grant and loan program for displaced mobile home owners. The program would be administered through the Dept. of Community and Regional Affairs. One facet of the program is that the Dept. would be allowed to contract with local governments to administer the program. HB 70 also gives the Dept. of Community & Regional Affairs the authority to promulgate regulations in order to set up and run the program.

Determining the amount of necessary funding for the program, is extremely difficult. At the present time, the Municipality of Anchorage has begun preliminary work in order to determine the number of parks which will close and the total number of spaces involved.

Park closures are functions of the marketplace, therefore, it is difficult to say which specific park will close and when. It is only possible to know that as land becomes more valuable and mobile home park land attains a higher and better use, mobile home parks will close. Preliminary funding could be set arbitrarily at $500,000 enough to fund 200 mobile home relocation loans or grants.

In 1984 and projecting through 1985 approximately 405 mobile home spaces have been closed or will be closed. However, it is difficult to use these numbers as the basis for program funding projections.

Introduced: 1/14/85
Referred: 1/16/85 House Special Committee on
State Loans and Finance

IN THE HOUSE BY UEHLING AND JENKINS

HOUSE BILL NO. 16

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to loans or grants for mobile home relocation; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS. The legislature finds that the closure of mobile home parks imposes a substantial burden on owners of mobile homes who are forced to relocate their mobile homes due to the limited availability of sites on which to relocate the mobile homes.

* Sec. 2. AS 44.47 is amended by adding a new section to read:

ARTICLE 11A. MOBILE HOME RELOCATION LOANS OR GRANTS.

Sec. 44.47.650. MOBILE HOME RELOCATION LOANS OR GRANTS. (a) The commissioner may provide a loan or a grant in an amount not to exceed $2,500 for each owner of a mobile home who uses the mobile home as the primary residence and who is forced to relocate the mobile home because of the permanent closure of the mobile home park in which the mobile home is located.

(b) An applicant is not eligible for a loan or a grant under this section unless the applicant demonstrates to the satisfaction of the commissioner that the applicant was the owner of the mobile home used as the primary residence before notification of the closure of the mobile home park.

(c) The commissioner shall establish by regulation standards for the determination whether an applicant is eligible for a loan or grant under this section. In establishing the standards, the commissioner shall consider the value of the mobile home, the family income of the

applicant, and other factors considered appropriate by the commissioner.

(d) The commissioner may not grant owners of a single mobile home used as the primary residence more than $2,500, whether in a loan or in a grant, for the relocation of the mobile home.

(e) An applicant shall apply for a grant or a loan under this section on a form approved by the commissioner.

(f) The commissioner may contract with a municipality for the implementation of the authority granted under this section for the residents of the municipality. The commissioner may contract with a nonprofit corporation for the implementation of the authority granted under this section.

(g) The commissioner may adopt regulations necessary to implement this section.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

May 2, 1984

The Honorable Robert Heath
Commissioner
Deptartment of Revenue
Pouch S
Juneau, AK 99811

SUBJECT: MOBILE HOME PARK CLOSURES

Dear Commissioner Heath:

Recently AHFC has become concerned with the number of mobile home parks being sold or closed. If the land usage is changed the result is displacement of both the homeowner and the security for our loan. In some areas of Alaska there are few or no convenient lots to which these homeowners can move their mobile homes. Areas with very limited vacant lots include Anchorage, Juneau and Kodiak. Attached is a list of parks that have closed or are anticipated to close in the near future. Mobile homeowners in these areas can be faced with several problems:

1. They are forced to move their mobile home with little notice.
2. There are few vacancies in other existing mobile home parks.
3. Available lots are usually too costly or too distant for homeowners to utilize.
4. Some of the mobile homes are too old and/or deteriorated to be moved.
5. Many of these homeowners do not have enough funds to move the mobile home.

When faced with all of these problems, it is AHFC's concern that these mobile homeowners may be forced to default on their mobile home loan. Since this type of action would result in groups of foreclosures on properties that may not be salable at the amount owed, AHFC needs more assurance that the security for our loans will not suffer serious reduction in value through the sale or closure of mobile home parks. This could best be accomplished with a guarantee from the park owners that the parks will not be sold or closed during the

terms of AHFC's loans. Such a guarantee could contain the following provisions:

1. A sale could take place if the basic integrity and use of the park remains the same. The new owner must be bound by the guarantees of the previous owner.

2. The park owner would guarantee that if a sale or closure takes place (with a change of use planned), the owner must find or provide acceptable space to which the mobile homes could be moved and pay all moving expenses.

This guarantee would be included and recorded with each loan file purchased by AHFC. We believe, that if the term of the guarantee were for at least 75% of the term of AHFC's loan, we would be protected to a level that assured collateral coverage. Obviously, if the park owner would not give the guarantee, we would not make loans in that park.

Sincerely,

Michael S. Lynch
Executive Director

MEMORANDUM

DATE: April 24, 1984

TO: Senator Pat Rodey

FROM: Jim Kelly

RE: Mobile Homes

There is a problem. A growing number of existing trailer parks are closing as the owners of that property choose to convert their land to uses with higher economic returns, and simultaneously, the number of spaces available for units forced to relocate is rapidly being depleted

In Juneau, for example, there are two trailer parks which have already given mass eviction notices to their tenants. Valley Court, with 118 spaces, is scheduled to close June 1, 1985. It will become a gravel pit. Mobile II, with 27 spaces, is closing 11 spaces this September, and the remainder in the Spring of 1985. This property will become apartment houses. Another Juneau trailer park, Mobile Haven, with 87 spaces, is allegedly for sale.

In Anchorage, Vagabond Trailer Park, with 122 spaces, is scheduled to close April 1, 1985, although that may be affected by the decision whether or not to approve a rezoning of the property to allow higher density multi-family housing, which is to be made June 18th of this year. Additionally, the owners of Mayflower Circle Park, with 392 spaces, and Penland Park, with in excess of 250 spaces, have publicly stated recently that their tenants eventually will be looking for new homes, as their parks are "only an interim use of property".

It is quite likely that these closures are only the tip of the iceberg. Statewide, mobile homes comprise 10.5 percent of all available housing stock, and approximately three-quarters of these homes are located on rented spaces in trailer parks. In Anchorage, there are an estimated 6,500 mobile homes in this situation, and about half of them are AHFC-financed. In addition, there are another 2,000 or so mobile homes located on private lots throughout the Municipality.

As stated, the problem occurs when the owners of the mobile homes are required to relocate because of park closures, but can find no vacant land on which to place their units. In Anchorage, which has the majority of mobile homes statewide, a new trailer park has not even been proposed

since 1978. This is not hard to understand when you consider that today's developer would be looking at land and development costs of between $50,000 and $60,000 per space, and for that investment, he or she would be earning a paltry space rent of $250 per month.

So, there are no new trailer parks to move to, virtually no vacant spaces in existing parks, and according to the tenants of Vagabond, only a total of 14 private lots still available in all of Anchorage that are suitably zoned for mobile homes. These lots are priced in excess of $50,000. This is a tough set of facts for the people who are faced with relocation.

This is also a tough set of facts for AHFC, which as of April 17th has a mobile homes portfolio of 4,228 loans with an outstanding unpaid principal balance of $131 million. This total includes:

* Valley Court	10 loans	$186,400
* Mobile II	2 loans	43,500
* Vagabond	19 loans	433,700
* Mayflower Circle	238 loans	8,657,400
* Penland Park	222 loans	6,645,900
* Mobile Haven	24 loans	455,000
TOTAL:	515 loans	$16,421,000

What is to be done?

Let's look first at the plight of the tenants of the closing trailer parks. Each individual tenant has a different problem depending on his own situation. For example, some people who live in these parks don't own their trailers; they are renting them. Their problems are less than those who own their trailers outright, whose problems are in turn less than those who are still paying on their trailers. So, extent of ownership is one factor. Another is the age of the mobile home. This is significant because sometimes a park owner will allow another trailer to be moved into his or her park, if it is of a certain age or quality. Another factor, of course, is the income of the tenant. The more money a person has in this situation, the more options.

From conversations with a number of tenants, it appears that the persons who are struggling the most are those who still owe money on their mobile homes, whose mobile homes are so old that they are not welcome in other trailer parks (if there were vacancies, which there are not), and whose incomes are such that they cannot afford to borrow any additional money for another housing opportunity. Realistically, a person in this situation would be fortunate to be able to sell his or her trailer even at a significant discount.

The consequences of this problem for the tenants will range from:

* bankruptcy
* default
* destruction of the trailer
* loss of "equity"
* sale of trailer at a discount
* placement of trailer on lot far from original location, e.g. moving to Wasilla from Anchorage;
* increase in housing expenses.

What is the exposure for AHFC? Undoubtedly, AHFC will experience an increase in mobile home repossessions. How many and how quickly depends on how many parks close, and how soon. And on what changes the corporation makes between now and then to protect itself. For example, according to AHFC documents, AHFC is purchasing from $4 million to $6 million of new mobile home loans each month. Should this financing program be continued? This is really a central question.

Short of ending the program, are there any alternatives?

* Alternative #1: Continue the status quo. This is inviting disaster.

* Alternative #2: Limit new mobile home loans to borrowers who will locate their units on private lots, or in trailer parks the owners of which have guaranteed that the land will continue as a park for the life of the loan.

* Alternative #3: Require park owners to give 2-year eviction notices, if they intend to close the park.

* Alternative #4: Allow assumption of AHFC mobile home loans by persons who will not be the owner-occupiers, only in situations where the park in which the units are located is closing.

* Alternative #5: Allow borrowers who presently have an AHFC mobile home loan, and are forced to relocate because of a park closure, but can find no place to move their unit after a good faith search, to obtain another AHFC loan, and combine the payments from the two loans as a wraparound or a refinance. AHFC would take posession of the mobile home, and the borrower - if his credit and his debt ratios were OK - would be able to continue home ownership, for example in a condo.

* Alternative #6: Make financing available for the purchase of non-conforming lots in existing trailer parks, to encourage park owners to convert their rental parks to "condominiumized mobile home parks".

* Alternative #7: Encourage the development of mobile home subdivisions as planned unit developments.

* Alternative #8: Attempt to encourage private development of new trailer parks by providing public subsidies for development. For example, making public land available at less than market rate, or directing the Department of Community and Regional Affairs to make a portion of its State Assisted Rental Housing Construction Development grant money available for this purpose.

* Alternative #9: Enact legislation similar to HB 699 which would provide Mobile Home Relocation Grants or Loans.

* Alternative #10: Put into place a moratorium on the AHFC mobile home program, and have the Legislature study the problem over the interim.

M E M O R A N D U M

DATE: May 16, 1984

TO: Senator John Sackett

FROM: Senator Pat Rodey

RE: Suggested Changes to AHFC Mobile Home Financing Program

1) The legislature should amend AHFC law, specifically AS 18.56.088 to increase the corporation's flexibility in insuring the continued security of the mobile home loan portfolio. Suggested language, which should be added to HB 663, is as follows:

AS 18.56.088 is amended by adding a new subsection to read:

(i) The board may adopt regulations under (a) - (f) of this section that establish conditions and terms for mobile home loans that are not in accordance with the provisions of this chapter, including conditions and terms relating to owner-occupancy, the number of loans that may be assumed by a single borrower, loan guidelines, and borrower eligibility requirements, if the board first determines that the regulations are necessary to insure the continued security of the mobile home loan portfolio.

2)A letter of intent should be prepared at accompany HB 663. Suggested language is as follows:

The legislature is concerned about the number of trailer parks being sold or closed, and the increased risk this causes to portions of AHFC's mobile home loan portfolio and to certain borrowers under this program.

It is the intent of the legislature that AHFC act immediately to make changes in its mobile home financing program through the adoption of emergency regulations as provided by AS 18.56.088(e). The emergency regulations shall require that new mobile home loans will not be made unless the borrowers own the land on which the mobile homes are to be placed, or if the mobile homes are to placed in mobile home parks, the owners of the parks guarantee that there will be no change in the land use of the parks for a specified period of time.

Additionally, as part of its annual trailer park approval process, AHFC shall require owners of approved trailer parks to provide at least

six months eviction notice to their tenants prior to implementing a change in the land use of the property.

Finally, after implementing emergency regulations, AHFC shall establish a Mobile Home Task Force to make recommendations to its board of directors regarding permanent changes to the mobile home program regulations. The task force shall include representatives from the legislature, trailer park tenants, mobile home dealers, trailer park owners, real estate brokers, seller-servicers, and local government.

Prepared by Staff of House Finance — La Ann

SUGGESTED CHANGES TO AHFC MOBILE HOME FINANCING PLAN

The Problem

The present AHFC mobile home financing program provides loans to individuals to buy mobile homes to be placed on land that they do not own. (The program also provides financing for mobile homes that will be placed on land owned by the borrower, but this is not a problem.) Typically, these mobile homes are placed in mobile home parks where the land is owned by the park owner. Because mobile home park land is often more valuable if converted to another use, many park owners plan to evict tenants in the near future and sell their land for another use. The evicted tenants generally have no place to put their mobile home since there is generally no land available to put the home on and/or they cannot afford to buy available land. Since there is so little land zoned for mobile homes, the price of that land has risen dramatically.

This is a serious problem for AHFC for the following reasons:
(1) As of 4/17/84, approximately $16.5M of AHFC's $131M mobile home loan portfolio is in jeopardy. The $16.5M represents loans that are in the predicament described above. If these borrowers are forced to move, it is possible that they will not be able to continue making payments, since they will have the added financial burden of moving and associated costs. Potentially, AHFC could have a substantial number of mobile home loans in default --- most knowledgable people think the $16.5M is just the tip of the iceberg.
(2) The question of how to protect the present portfolio is further complicated by the need to make changes in the financing program as soon as possible that assure the protection of any future loans.

In sum, there is a serious problem with both the present and future portfolio of AHFC mobile home loans.

AHFC's Proposed Solution

In a letter to Commissioner Heath dated 5/2/84, Mr. Lynch proposes that AHFC address the future problem by not making any more mobile home loans unless AHFC is guaranteed that the park owner will not change the use of the land for a specified period. If the term of the guarantee is at least 75% of the loan term, AHFC believes it will be adequately secured.

Although this suggestion has merit, it is not a total solution to the problem. Although it would not be advisable to rush into changes without adequately thinking through their ramifications, there is more that can be done than what Mr. Lynch has proposed. Therefore, a more complete set of suggestions is proposed below.

Staff Suggestions

These suggestions would resolve as much as can be resolved immediately, and at the same time, give AHFC the necessary direction to find longer term solutions.
Before listing the suggestions, a discussion of AHFC's regulatory

authority is in order. The statute allows AHFC to adopt emergency regulations for 120 days or for longer if the appropriate public notice and hearing requirements are met during the 120 day period. Permanent regulations can be adopted to determine borrower eligibility, loan guidelines and terms, "characteristics" of eligible housing, qualifications of originators and servicers, and commitments. (A copy of AHFC's regulatory authority is attached.) Though this authority is broad, other language in the statute provides for owner occupancy and other requirements that may no longer be suitable for mobile home loans. Thus, in addition to making some changes through regulation, AHFC will need statutory guidance from the legislature in order to make additional changes that may not conform with the present language of the statute.

1. AHFC should adopt emergency regulations as follows: (a) No more mobile home loans unless park owner provides a guarantee not to change the use of the property for a set period of time or the mobile home is placed on land owned by the borrower. (b) For both current and future loans, if the loan is for a mobile home on land not owned by the borrower, the land owner must provide at least one year notice to tenants before eviction. Under the terms of the statute, these emergency regulations can become permanent regulations as long as the notice and public hearing requirements are met during the 120 day period.

2. AS 18.56.088 should be amended to allow AHFC the necessary flexibility to insure the security of present and future mobile home loans. The necessary language could allow for cooperatives, condominiums, wrap arounds, non-owner occupancy, and/or other creative financing mechanisms if they are deemed appropriate. The actual language should include legislative findings regarding the severity of the current situation and the need to address it in order to secure AHFC's present and future portfolio. The language must be broad enough to give AHFC the necessary time to study the problem and propose solutions. These solutions can then be incorporated into the program through the regulatory structure. To insure participation on the part of the legislature and other interested parties in the development of the new financing schemes, the language should also mandate a task force to develop the solutions that includes a least one representative of the legislature, trailer park tenants, mobile home dealers, trailer park owners, real estate brokers, seller-servicers, local government and AHFC. (The importance of the local government representative is to insure that the subject of availability of mobile home land is discussed and possibly resolved. If more land can be made available for people to buy to put mobile homes on, by changing local zoning requirements or by local disposals, then the problem will be less severe. Obviously any proposed solutions on this issue would have to be implemented by local governments, not through the AHFC regulatory structure.)

A DRAFT of the proposed language is as follows:
"AS 18.56.088 is amended by adding a new subsection to read:

The legislature is concerned about the number of trailer parks being sold or closed, and the increased risk this causes to portions of AHFC's mobile home loan portfolio and to certain borrowers under this program. AHFC shall act immediately to make changes in its mobile home loan financing program through the adoption of emergency regulations. These emergency regulations shall require that mobile home loans will not be made unless borrowers own the land that the mobile home will be placed on or the mobile home park owner guarantees that the land will not be sold during a specified time frame. Additionally, the emergency regulations shall require, for both current and future loans, that park owners give at least 1 year notice before eviction. After adopting emergency regulations, AHFC shall establish the Mobile Home Task Force to make recommendations to the board regarding permanent changes to its regulations. The task force shall include representatives from the legislature, trailer park tenants, trailer park owners, mobile home dealers, real estate brokers, seller-servicers, local government, and AHFC. In order to implement these permanent regulations, the board may adopt regulations that are not in accord with the provisions of AS 18.56, including conditions and terms relating to owner-occupancy, the number of loans that may be assumed by a single borrower, loan guidelines, and borrower eligibility requirements, if the board determines that such regulations are necessary to insure the continued security of the AHFC mobile home loan portfolio."

(NOTE: Some of this language may more properly be placed in temporary law.)

3. After refinement, SB 464 should be enacted. Although this bill is mainly concerned with rewriting the condominium statutes, it would also allow for mobile home parks to be condominiumized. If it turns out that this would be a viable option to better secure AHFC's mobile home loan portfolio, the condo law should be changed to allow for it.

4. SB 524 can also be enacted. This would provide for $2500 grants to mobile home owners who are forced to relocate. Apparently, this is more needed in Juneau than any other area of the state, so it can not be viewed as necessary from a statewide perspective.

5. HB 666 should not be enacted. This is the bill that authorizes an additional $100M in bond sales for FY84 in order to finance mobile home loans. Since we are so close to the end of the fiscal year, it is hard to believe that the $1.5B authorization for FY85 (contained in HB 663) will not allow AHFC to do the same thing they would have done with HB 666. Even though AHFC says they must do the bond issue before the end of this fiscal year, the viability of the entire sale rests on an IRS ruling of the tax status of the bonds, and this has not come through yet, according to our information.

6. It seems reasonable to get AHFC reaction to these suggestions before they are the subject of final decisions on your part. This is particularly true in the case of suggestion #5.

corporations established under this section or with other persons. In exercising a power under this section, the corporation may not subject its assets to risk of loss through foreign currency exchange. A guarantee under this section constitutes a bond of the corporation as defined in AS 18.56.210(13). (§ 16 ch 113 SLA 1982)

Sec. 18.56.088. Administrative procedure. (a) Except for AS 44.62.310 and 44.62.312, regarding public meetings, and AS 44.62.320(a) regarding legislative review of regulations, the Administrative Procedure Act (AS 44.62) does not apply to AS 18.56.010 — 18.56.210. The corporation shall make available to members of the public copies of the regulations adopted under (b) — (e) of this section. Within 45 days after adoption, the chairman of the board shall submit a regulation adopted under (b) — (e) of this section to the chairman of the Administrative Regulation Review Committee under AS 24.20.400 — 24.20.460. The provisions of AS 44.62.320(a) apply to regulations adopted under (b) — (e) of this section.

(b) The board may adopt regulations by motion or by resolution or in any other manner permitted by its bylaws.

(c) The board may adopt regulations to carry out the purposes of this chapter, and shall adopt regulations necessary for the following purposes:

(1) determination of borrower eligibility including, but not limited to, income limitations and the determination of remote, underdeveloped or blighted areas of the state;

(2) loan guidelines and terms including but not limited to maximum loan amounts and required loan-to-value ratios, but excluding mortgage loan interest rates;

(3) characteristics of housing eligible for loans or purchase of loans; and

(4) the qualifications of loan originators and servicers and the method of allocating amounts available for the purchase of loans.

(5) establishment of a procedure, including a fee schedule, for the commitment for one year or less of money for the purchase of an individual mortgage loan at a specific interest rate.

(d) Except as provided in (e) of this section, at least 15 days before the adoption, amendment, or repeal of a regulation on a subject specified in (c) (1) — (4) of this section, the board shall give public notice of the proposed action by publishing the notice in at least three newspapers of general circulation in the state and by mailing a copy of the notice to every person who has filed a request for notice of proposed regulations with the board or the corporation. The public notice must include a statement of the time, place, and nature of the proceedings for the adoption, amendment, or repeal of the regulation and must include an informative summary of the proposed subject of the regulation. On the date and at the time and place designated in the notice, the board shall give each interested person or his authorized rep-

resentative, or both, the opportunity to present statements, arguments, or contentions in writing, and shall give members of the public an opportunity to present oral statements, arguments, or contentions for a total period of at least one hour. The board shall consider all relevant matter presented to it before adopting, amending, or repealing a regulation. At a hearing under this subsection, the board may continue or postpone the hearing to a time and place which it determines. A regulation which is adopted, or its amendment or repeal, may vary in content from the informative summary specified in this subsection if the subject matter of the regulation, or its amendment or repeal, remains the same and the original notice was written so as to assure that members of the public are reasonably notified of the proposed subject of the board's action in order for them to determine whether their interests could be affected by the board's action on that subject.

(e) A regulation or order of repeal on a subject specified in (c) of this section may be adopted as an emergency regulation or order of repeal if the board makes a finding in its order of adoption or repeal, including a statement of the facts which constitute the emergency, that the adoption of the regulation or order of repeal is necessary for the immediate preservation of the orderly operation of the corporation's loan and bonding programs. The requirements of (d) of this section do not apply to the initial adoption of an emergency regulation covering a subject specified in (c) (1) — (4) of this section; however, upon adoption of an emergency regulation, the board shall, within 10 days after adoption, give notice of the adoption in accordance with (d) of this section. No emergency regulation adopted under this subsection remains in effect more than 120 days unless the board complies with (d) of this section during the 120-day period.

(f) A regulation adopted under (b) — (e) of this section becomes effective immediately upon its adoption by the board, unless otherwise specifically provided by the order of adoption.

(g) The provisions of (b) — (e) of this section do not apply to regulations governing interest rates on the corporation's mortgage loan programs.

(h) The board shall adopt regulations in accordance with (a)—(f) of this section which establish a procedure by which a seller of mortgage loans may appeal a decision of the corporation not to purchase mortgage loans offered by the seller. (§ 5 ch 167 SLA 1978; am § 19 ch 106 SLA 1980; am § 17 ch 113 SLA 1982)

Effect of amendments. — The 1982 amendment added paragraph (5) to subsection (c).

Sec. 18.56.089. Executive Budget Act. The operating budget of the corporation is subject to the Executive Budget Act (AS 37.07). To further ensure effective budgetary decision making by the legislature,

Alaska HOUSING FINANCE CORPORATION

May 22, 1984

The Honorable John Sackett
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator:

The following are the positions of AHFC on various items presently under consideration before the Senate Finance Committee:

Mobile Home Park Closures

The closure of mobile home parks and the impact of the closures on the security of AHFC's mobile home loan portfolio has been the subject of hearings. In addition to the hearings many short-term recommendations for reducing the risks of loss have been put forward in the following correspondence:

a) a letter from AHFC to Commissioner Heath regarding Mobile Home Park Closures.

b) a memorandum from Senator Pat Rodey regarding Mobile Home Park Closures.

c) a memorandum prepared by House Finance Committee staff regarding suggested changes in Alaska Housing Finance Corporation's Mobile Home financing.

These recommendations should be consolidated to the following steps.

a) As part of AHFC's park approval process AHFC will require park owners to give tenants one years notice of eviction when the reason for eviction is closure of the park. This will give present park occupants increased notice (present requirement is 90 days) and failure by a park owner to agree to the extended notice, while not conclusive evidence of an intent to close the park, should at least alert tenants to the possibility. This change can be made to the program through regulation.

b) As part of AHFC's mobile home loan underwriting criteria AHFC will require that all mobile homes be located on land owned by the borrower, land leased to the borrower for a period that exceeds the term of the loan or if located on land on a short-term rental, then the owner of the land must guarantee to allow the mobile home to remain on the land for a time period equal to 75% of the loan term. This would not affect the assumability of existing loans on units in parks but would stop the increase of exposure to AHFC. This step could be accomplished by regulation.

Long term, if mobile homes are to remain as a low cost housing alternative, other solutions must be found. The steps recommended above may substantially reduce the number of mobile homes that will qualify for AHFC financing. These solutions should be developed by a task force composed of members drawn from the

Telephone (907) 276-5539
235 East 9th Avenue
Third Floor
P.O. Box 101020
Anchorage, Alaska 99510

Legislature, mobile home park tenants, mobile home park owners, mobile home dealers, real estate brokers, AHFC seller/servicers, municipal government and AHFC. The task force should be formed immediately with instructions to research the problem, develope alternatives or solutions and make recommendations to the Legislature by January 1, 1985.

To facilitate the above recommendations AS 18.56.088 should be amended by adding:

18.56.088 Administrative Proceedure
(c)(5) insure the security of existing and future mobile home loans,

In addition a new section should be enacted which specifically authorizes the Corporation to adopt emergency regulations for the purposes of 18.56.088(c)(5) and which further authorizes the Corporation to waive or otherwise modify the statutory criteria set out in AS 18.56 to the extent necessry to meet the objectives of AS 18.56.088(c)(5). This section, of course, would constitute non-codified law but would allow the Corporaton flexibility necessary to assure the security of the mobile home loan portfolio. The statutory amendment and temporary law have been recommended by Jonathan Rubini of the Attorney General's office.

CS SB 464 "An Act revising the laws relating to horizontal property regimes and permitting the establishment of condominiums for mobile homes."

This bill expands the horizontal regime act to allow the condominiumizing of various facilities including mobile home parks. Clearly, the bill will provide owners of present mobile home parks a vehicle for selling their parks at a high value without changing the use and displacing present park residents. There are however, several results of the condominiumizing of a mobile home park which must be considered:

a) When a park is condominiumized present park residents who either cannot afford to acquire their space or do not wish to make the additional investment will be forced out of the park. This has been estimated to be 25% of the residents in a park.

b) The fact that a park is condominiumized does not guarantee that AHFC will finance acquisition of the space by residents. Just as AHFC now has standards for residential condominiums, AHFC will have to develop standards for condominium mobile home parks. These standards should be relatively easy for a newly constructed park to meet but may be difficult if not impossible for a conversion of an existing park as is the case with many existing multi-family buildings.

c) Many present mobile home parks were approved as Temporary Land uses and do not meet present mobile home zoning requirements such as area per mobile home and spacing of the mobile homes. Passage of the bill could allow park owners to make permanent situations that do not meet present zoning codes.

Recognizing these potential problems which cannot be addressed in this bill, AHFC supports the concept of condominium mobile home parks.

CS HB 663 "An Act relating to certain state housing loan programs; and providing for an effective date."

HB 663, introduced by the Governor, corrects drafting errors contained in the 1983 Legislation, incorporates clarifying amendments to AHFC statutes recommended by the Attorney General's Office, and amendments recommended by members of the Board and Staff which would allow the Corporation to maximize savings to the State and homebuyers and to respond to the anticipated funding level of mortgage demand for FY 1985.

Section 1

- Clarifies the statutory basis for the Home Ownership Assistance Program.

Section 2

- Clarifies the statute allowing one first mortgage loan per person from AHFC or HAD loan programs. Present statutes [AS 18.56.098(f)(4)] requires that a residence for which the Corporation purchases a loan must be owner-occupied. Allowing only one State loan at a time to a person would more clearly state what is implied.

- Corrects statutory language to allow 100 percent financing for loans which are federally insured or guaranteed. 1983 Legislation unintentionally excluded federally insured loans and 95 percent financing for mobile homes. AHFC has always allowed both and it is felt they were excluded due to a drafting error.

Section 3

- Sets the rate on the first $90,000 for mortgages financed with tax-exempt bond proceeds at the same rate as the taxable program. The tax-exempt rate on the first $90,000 remains at 10 percent unless the [redacted]. The intent of this legislation is for the rates on the Veterans Mortgage Program, the Taxable Program, the Tax-Exempt Program, and Mobile Home Program to be set so they are the same for the first $90,000, the amount of the loan subsidized by the State.

Section 4

- Clarifies the ability of the Corporation to incur a general obligation.

Section 5

- Changes the definition of rural as it applies to the Division of Housing Assistance. Rural would now mean a community in the First or Second Judicial Districts of less than 4,500; a community of less than 4,500 that is 100 nautical miles from Anchorage in the Third Judicial District; or community of less than 4,500 that is 35 nautical miles from Fairbanks in the Fourth Judicial District.

Section 6

- Raises AHFC's 12-month bonding authority from $980 million to $1.5 billion. AHFC is estimating for FY 1985 budget purposes that mortgage demand will be $1.316 billion of which $1.150 billion will need to be funded by bond proceeds. The present twelve-month bond authorization level is $980 million. A level of $1.5 billion would cover all contingencies.

The FY '85 capitol budget request of $16 million is based on Sections 2, 3, and 6.

CS HB 664 "An Act making appropriations to the Alaska Housing Finance Corporation; and providing for an effective date."

Section 1 of this bill responds to a question which has been raised by the Attorney General's Office concerning the possibility that retention of some revenues and receipts of the Corporation may be in conflict with the "dedicated funds" provisions of the State Constitution. The bill removes any doubt as to the proper retention of revenues and receipts of the Corporation.

Section 2 of this bill transfers all assets of the Home Ownership Fund to the Alaska Housing Finance revolving fund which was established by the Legislature in 1983 to alleviate some of the "dedicated funds" questions and to provide legal certainty for the Corporation's mobile home program.

The FY '85 Capitol Budget request of the Corporation of $16 million is based on retention of these funds.

CS HB 665 "An Act relating to the issuance of tax-exempt, state-guaranteed revenue bonds by the Alaska Housing Finance Corporation to finance mortgages for qualifying veterans under AS 18.56; and providing for an effective date."

This bill authorizes placement on the November, 1984 ballot of a $700 million bond proposition for the Veterans Mortgage Program. Prompt legislative consideration is considered important because of pending Congressional action.

The FY '85 Capital Budget request of the Corporation of $16 million is based on Legislative and voter approval of this bond proposition.

CS HB 666 "An Act increasing the Alaska Housing Finance Corporation's bond authorization level; and providing for and effective date."

Because of a revised bond schedule there is no longer a need for this bill.

I believe this addresses all of the AHFC related issues presently before the Senate Finance committee.

Very truly yours,

Michael S. Lynch
Executive Director

Jim Kelly
c/o Senator Rodey
Pouch V
Juneau, Alaska 99811

Dear Mr. Kelly:

Enclosed please find the listing of mobile home park owner/managers and addresses that you have requested. I apologize for the delay in forwarding this information to you, however, it has taken longer than I anticipated to compile the data.

According to the information contained in our files, there is an indication that 9,324 spaces are available with 8,269 of these spaces occupied. Please note, however, that the majority of these numbers are based on 1982, or prior, applications and is not accurate as of this date. In addition, a substantial number of these vacancies are in areas like Kenai, Valdez and Fairbanks. At this time, the number of vacancies in these areas may have decreased somewhat due to the age of the information.

In reference to your request to have the Anchorage area mobile home parks designated from those shown on the printout previously submitted, enclosed please find another copy of that printout with the parks in question highlighted.

Again, I apologize for the delay in submitting this information. Please feel free to call with any questions you may have on this data.

Sincerely,

Kathy Jones

Kathy Jones

Alaska State Legislature

Senate

Committee on Finance

Pouch V
State Capitol
Juneau, Alaska 99811

Official Business

Friday, May 25 1984

Letter of Intent to accompany SCSCSHB-663 (Fin.):

The Legislature is concerned about the number of trailer parks being sold or closed, and the increased risk this causes to portions of AHFC's mobile home loan portfolio and to certain borrowers under this program.

It is the intent of the Legislature that AHFC act immediately to make changes in its mobile home financing program through the adoption of emergency regulations as provided by AS 18.56.088(e). The emergency regulations will require that all mobile homes for which new mobile home loans are made be located on property owned by the borrower, property leased to the borrower for a period of time that exceeds the term of the loan, or if located on rented property, then the owner of the property must guarantee to allow the mobile home to remain on the property for a time period equal at least 75% of the loan term. As used here, the term "new mobile home loan" means a loan secured by collateral which is not already securing an existing AHFC mobile home loan.

AHFC shall continue to allow assumptions of existing mobile home loans, and shall use the flexibility authorized by section 1 of this bill to minimize undue hardship for owners of mobile homes under this program.

Additionally, as part of its annual trailer park approval process, AHFC shall require owners of approved trailer parks to provide at least one years eviction notice to their tenants prior to implementing a change in the land use of the property.

It is further the intent of the legislature that during the period the emergency regulations are in effect, the House and Senate Finance Committees, and the House Special Committee on State loans, in conjunction with the Commissioner of the Department of Revenue, and the Board and Executive Director of the Alaska Housing Finance Corporation, will develop proposed regulations for AHFC to consider regarding permanent changes to its mobile home loan financing program. In developing these proposed regulations, public hearings and other means will be utilized to gather input from all parties affected by the AHFC mobile home loan financing program.

Signed: _____

JOHN C. SACKETT
Co-Chairman, SFC

Dear Carol:

I appreciated the opportunity to meet with you, Sandra Wicks, and our Architect, Bob Herndon last Friday, May 18. As you recall, we intend to develop the Vagabond Trailer Court into an Apartment Project.

I will restate for you the various points of the offers we have made to help mitigate the dislocation of the existing trailer park residents:

1. We have offered to rebate the trailer park residents $.50 of each dollar paid for space rental from the time that we obtain our approved rezoning application through March of 1985. Current rentals are approximately $220.00 per space. We anticipate receiving approval from the Municipal Assembly July 31, 1984. Therefore, the amount of the offer is currently $880.00 per space. This is an effort to help the residents with relocation expenses for their trailers or help towards down payment of requirements for purchase of other housing.

2. We have offered to provide a lease from the time of approval of such rezoning until March 31, 1985, that would not be terminable by the landlord, but would be terminable by the residents upon 30 days notice. This is to provide flexibility for the residents in finding alternate housing while giving them the ability to seize such alternate housing when it is obtained. It is interesting to note that to the best of the knowledge of the sellers of this property, none of the residents have asked for anything greater than a month-to-month period.

3. We have offered to those residents who have school-age children attending Northwood Elementary to provide rental housing in the immediate area, in which to live until the 1984 school year is complete.

4. We have offered to be responsible for the demolition and removal of any personal property left by the residents. Further, the rental abatement offer stated in Item #1 on the first page is not conditioned upon removal of or demolition of personal property.

5. We have offered to hire a relocation counselor who is skilled and knowledgable in Anchorage Housing Alternatives to assist residents in finding and negotiating for alternate housing. The services to be provided would be locating apartments and other urban locations, alternate mobile home parks, either planned or existing, assistance in preparing financial statements and personal resumes to obtain financing for home ownership or new mobile homes in other parks, and an explanation of State or Municipal programs for aid and assistance in relocation matters.

6. We have offered to discuss any specific and unique hardships of elderly residents of the park on a one-to-one basis. Our intent is to identify those residents who are particularly burdened in relocation due to their age.

With the exception, of course, of some of the more voiceful residents at Vagabond, the conversations and meetings that we have conducted with various neighbors and neighborhood groups have given us the impression that their feeling is that we are offering responsive solutions to the dislocation concern in an amount much greater than we are both required to and have heretofore been considered by redevelopers of Anchorage's Mobile Home Parks.

Again, thank you for extending the courtesy of visiting with us last week. As I mentioned, we sincerely wish to be a good neighbor and a responsible provider of quality housing.

Sincerely,

BOETTCHER PROPERTIES LTD.

ubject: Case No. 84-56, Vagabond Trailer Court Rezoning

ar Anchorage Plannning & Zoning Commission Members:

Thank you very much for according my client, Boettcher and mpany, the opportunity to have a work session with you on its equest to rezone the Vagabond Trailer Court. I hope you felt that ou gained worthwhile information for the extra time you put in uring the noon hour. As Alicia Iden, Toni Jones and I discussed fter the session, I think where there are complex land use and ocial issues in a case, some opportunity for the proponent of a roject to do more than a 10 minute presentation is really neces- ary -- particularly where citizens who are properly organized, hough perhaps ill-informed, may manage to testify for hours on a roposal.

On reflection, I thought perhaps it would be useful to the embers who were not at the work session, as well as to those who ere, to have me review for you some of the points the developer wanted to make. I have also attached copies of some of the materials that were referred to in the presentation. I think it is particularly important to review the comprehensive plan pages I have attached and highlighted. They are important for a proper balance in applying the comprehensive plan to rezoning requests. Not just the land use and residential intensity maps should be considered. Equally important are the goals and policies and the narrative sections that explain that you should look at the gross density for the area and not go below the minimum densities shown for the various geographic areas. Too often, I believe, people have looked at the density range for a particular parcel and stopped the analysis at that point without considering whether the plan for the area is being met.

As I explained in the work session, using the maps we provided (and I hope those of you who were not at the work session were provided the maps we left for you) several conclusions emerge about the part of Spenard around Vagabond Trailer Court:

1. Single-family and multi-family dwellings co-exist side by side through much of the area;

2. The zoning is not an accurate indicator of the actual development;

3. There is almost no vacant residential land remaining in the area;

4. The area is divided into small lots making unified redevelopment with urban amenities unlikely or at least difficult, and finally,

5. There is so much single-family development in the area that the comprehensive plan density ranges are not being met -- thus Spenard is not providing the share of housing allocated to it by the comprehensive plan.

The comprehensive plan guidelines, goals and policies indicate that Spenard is an area where higher density multi-family should be encouraged and higher density multi-family should be encouraged near arterials (Spenard Road) and open space (Northwood Park). Under the circumstances depicted above, higher density development should be permitted with the focus on design to mitigate impacts.

As you saw at the work session, after much interaction with the community, Boettcher and Company has produced a conceptual design that mitigates many of the impacts of higher density development. Copies of the conceptual site plan and elevation are attached to this letter, too. The conceptual design includes a wide buffer around the perimeter and three-story buildings clustered in the center of the property. Much more of the site is in usable open space than the 30% figure in the PUD provisions. The traffic circulation follows the recommendations of the traffic study performed for the developers. It lines up the ingress and the egress with Barbara Street and 45th Avenue. Forty-fourth Avenue will not be used and could be vacated as a right-of-way. Depending on the exact postioning of the buildings and parking, a vegetative strip 20 to 30 feet wide along Fish Creek could be included in the design.

Because of the front-end costs involved with PUD's and the delay before approval would be certain, the developer seeks to use the alternate approach of rezoning to R-3 with special limitations to provide the same type of assurances to the community that a PUD provides.

The developer would like to volunteer the following special limitations establishing design standards for the property.

1. The number of dwelling units permitted shall be limited to 300.

2. There shall be ingress and egress to both Spenard Road and Northwood with the intersections aligned with Barbara Street and West 45th Avenue.

3. There shall be a minimum of 40% usable open space.

4. There shall be a site plan review by the Planning and Zoning Commission to include ingress/egress, parking, building footprint, open space and landscaping on the appearance request of the petitioner.

5. Before the petitioner may obtain an appearance request review of its site plan, it must provide the Spenard Community Council an opportunity to review and comment on the site plan.

6. Construction on the project shall not commence before April 1, 1985.

The developer is also willing to discuss other limitations or variations on the above limitations in an effort to produce a product that meets the community's needs. The important thing is to provide certainty at this time to the developer and to the trailer court residents who will be displaced.

With regard to the issue of displacement of the trailer court tenants, it is my legal opinion that the commitments made in the letter to Carol Rion of the Mayor's office (additional copies of which are attached to this letter) are not appropriate special limitations on a rezoning request, although they are nonetheless, commitments representing an expenditure of approximately $150,000 to which the developer intends to adhere. Special limitations should only deal with the land use issues.

In summary, because of the shortage of vacant residential land in all of the Northwest area of Anchorage and because the rezoning request conforms to the narrative policies in the comprehensive plan, the density of development requested by Boettcher and Company should be approved with special limitations to protect the surrounding areas from impacts of the increased density. This project has the possibility of providing needed housing, a buffer for Fish Creek and a shot in the arm for the revitalization of the Spenard Road area while minimizing the impact on the adjacent residential neighborhoods through appropriate design.

While there has been a lot of community discussion on the project and there is not unanimous agreement on it, there is considerable community support for it. Attached to this letter are petitions and letters signed by people supporting the project. The two attached letters are from property owners in Lakeway Subdivision, the subdivision on the northeast corner. They are neighbors of Mr. Beck, an outspoken critic of the project, and they hold diametrically opposed views to his. They do not see the project as a threat to their lifestyle or their property values. They feel the project will enhance their neighborhood and help stabilize its residential character.

Thank you for taking the time to read this lengthy letter and for allowing the developer to address you in the work session.

Sincerely,

Sandra J. Wicks

SCOMM
#50:14

ALASKA MORTGAGE BANKERS ASSOCIATION
P.O. BOX 4-2691/ANCHORAGE, ALASKA 99503

January 25, 1985

Mr. Willis Kirkpatrick
Director of Banking, Securities and Corporations
Department of Commerce and Economic Development
Pouch D
Juneau, Alaska 99811

Dear Mr. Kirkpatrick:

The Alaska Mortgage Bankers Association has reviewed House Bill 51 and Senate Bill 6, relating to Interest on Escrows.

Banks, of their own volition, do not require funds held in escrow on mortgage loans. This is only one requirement of the investors purchasing the mortgages, with which banks must comply in order to originate and sell mortgage loans.

The bills are discriminatory, in that they would affect banks only; escrows on mortgage loans are held not only by banks, but by Credit Unions, Savings and Loan Associations, Savings Banks and Mortgage Companies. Requiring only banks to pay interest on escrows would give non-bank institutions an unfair advantage and a disadvantage to non-bank borrowers.

The bills also would require banks to pay interest at the rate of interest charged to the borrower on a mortgage loan. Since Alaska lenders sell the majority of loans to investors, such as Alaska Housing Finance Corporation, and service the loans for the investors for a set fee, the rate of interest paid on the loan is not relevant to the escrow. This requirement would create a real computer nightmare if it is even possible, adding to the cost of performing escrow functions.

Banks have never wanted to collect reserves (escrows) on mortgage loans. During the Depression in the 1930s, many borrowers lost their homes due to inability to pay taxes. The federal government and lending institutions determined there should be a better way, and collection of reserves on a monthly basis evolved, in great part as a result of the Housing Act of 1934, which created FHA. Reserve accounts have helped standardize mortgage loans, which has resulted in loans requiring minimal down payments and lower interest rates than would otherwise be available, thus making homeownership available to more people.

AHFC, which purchases some 75-80% of all mortgage loans in Alaska, requires collection of reserves. Without the assurance that funds are available to pay taxes and insurance, we question whether AHFC could sell their bonds, and if so, at what price. The cost to Alaska homebuyers would definitely increase.

The bills would exempt those loans where escrows are required by federal law or regulation; this would exempt FHA and VA loans, and possibly loans sold to Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (FHLMC). As AHFC now sells its' loans to FNMA, these could possibly also be exempted. The majority of loans in Alaska could therefore come under exemption.

Lenders holding escrow funds in connection with mortgage loans perform significant services which accrue to the benefit of the borrowers, local tax authorities, insurers and mortgage investors.

1) Collection of taxes and insurance monthly.
2) Collection of assessments in certain instances.
3) Obtaining tax bills and paying in a timely manner.
4) Payment of assessments in a timely manner.
5) Payment of insurance premiums to assure coverage.
6) Analyzing sufficiency of escrow accounts and adjusting payments as necessary due to changes in taxes, insurance and assessments.
7) Answering questions and complaints including those regarding increases in taxes which should more properly be directed to taxing authorities.
8) Distributing an annual statement of account.
9) Advancing lenders' own funds when necessary to insure timely payment of taxes and insurance. Repayment of these advances are often spread over a period of time, without charge, to ease the financial burden to the borrower.

The cost of administering escrow accounts is significant. Lenders currently absorb this cost because it is partially offset by non-interest bearing deposits. Should lenders be required to continue the escrow function and to pay interest on the escrows, the full cost of performing the services required would necessarily be passed on to the borrowers.

The Alaska Mortgage Bankers Association urges thoughtful consideration of these bills prior to any action. At this time, we urge these bills be rejected.

Please keep us advised of any hearings.

Sincerely,

Paula Cranmer
President
Alaska Mortgage Bankers Association

Introduced: 1/14/85
Referred: 1/16/85 House Special Committee on
State Loans and Finance

IN THE HOUSE BY DUNCAN, SUND AND MARROU

HOUSE BILL NO. 51

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

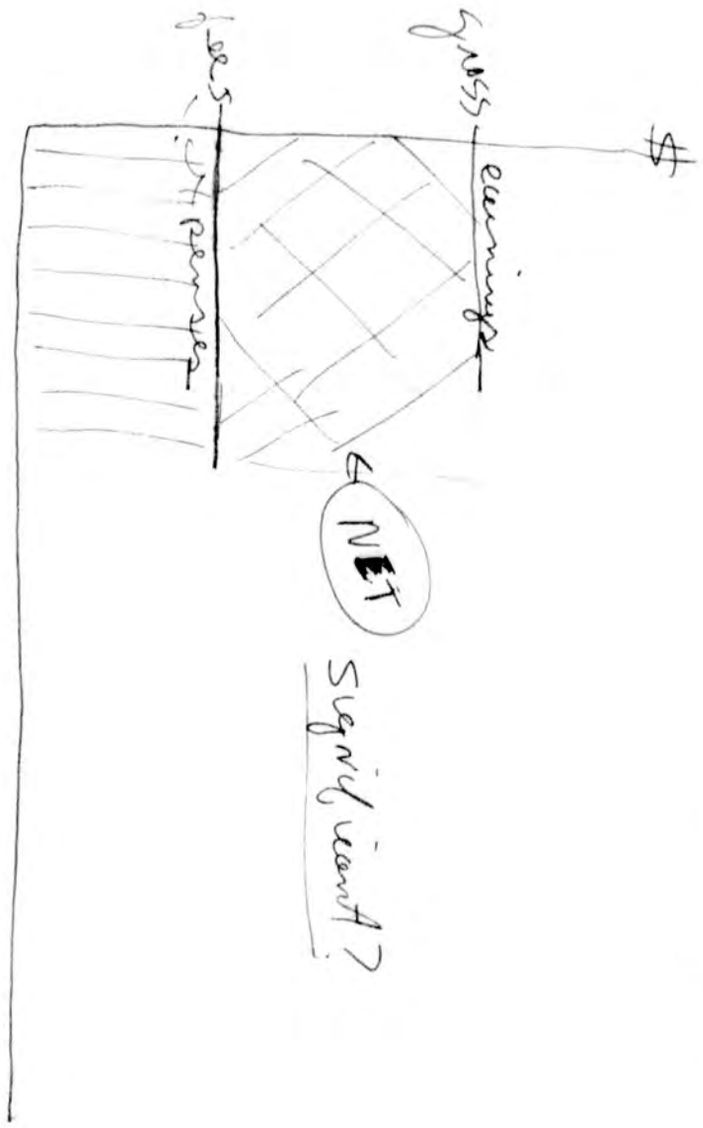
A BILL

For an Act entitled: "An Act requiring banks to pay interest on money in reserve accounts held in connection with mortgage loans."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 06.05 is amended by adding a new section to read:

Sec. 06.05.285. INTEREST ON RESERVE ACCOUNTS. (a) A bank that requires the payment of money by a borrower into an escrow or similar reserve account for the payment of taxes, insurance premiums, or home owner's association dues in connection with a mortgage loan shall pay interest on the money in that account unless the account is required by federal law or regulation. The rate of interest paid on money in a reserve account shall equal the rate of interest charged to the borrower for the mortgage loan and shall be computed on the average monthly balance in that account on the first of each month.



(b) Interest earned on money in a reserve account shall be annually credited to the remaining principal balance on the mortgage loan, or at the election of the borrower, shall be paid to the borrower.

* Sec. 2. AS 06.05.285 enacted in sec. 1 of this Act applies to escrow and similar reserve accounts established before the effective date of this Act, as well as to accounts established after the effective date of this Act, with interest to be paid beginning on the effective date of this Act on money in those accounts.

sec 3 + allow fees to be collected

Question -

How much net income do the Banks recieve from interest rate on the "float".

MORTGAGE ESCROW ACCOUNTS

(States which require the payment of interest on escrow accounts are marked with an asterisk.)

ARKANSAS, Stat. Ann. Secs. 67-2217 and 2218

Requires escrow funds be held separate from company accts.

All monies paid to a mortgage loan company (required to be licensed under state law) for the payment of taxes or insurance premiums on property secured by a loan made by the company shall be deposited in an insured account and kept separate, distinct and apart from funds belonging to the mortgage loan company. The company shall, upon reasonable notice, account to the mortgagor and to the Commissioner for all funds in the account. Such funds are not subject to execution or attachment on any claim against the company.

***CALIFORNIA,** Civil Code, Secs. 2954 - 2955

Impound accounts maintained in connection with mortgages secured by single-family, owner-occupied dwellings are optional unless: (1) required by state or federal regulatory authority; (2) the state or federal government makes, guarantees or insures the loan; (3) the borrower or purchaser is delinquent in paying two consecutive tax installments; (4) the original principal amount of the loan is 90 percent or more of the appraised value of the property; or (5) whenever the combined principal balance of all loans secured by the real property exceeds 80 percent of the appraised value of the property securing the loans.

Every mortgagor is entitled to receive one itemized accounting of the impound account per year and may request additional similar accountings for one or more months upon written request and advance payment of a set fee. Any increase in monthly payments must be preceded by an itemized accounting, a statement of the new monthly rate and an explanation of the cause of the increase. Violation of these provisions is punishable by a fine of not less than $25 nor more than $100. Lenders are responsible for making timely payments of property taxes and insurance premiums.

Requires 2% min. interest

Every bank, savings and loan association, credit union or any other person or organization making loans secured by real property containing a 1-4 family residence shall pay a minimum 2 percent simple interest charge on impound account funds collected in connection with such loans. Interest is payable annually or upon termination of the account, whichever is earlier. Lenders may not impose any fee in connection with the maintenance or disbursement of an account that will reduce the effective interest rate below 2 percent per annum. Exempted from the interest requirement are monies <u>required</u> by a state or federal regulatory authority to be placed by a financial institution other than a bank in a non-interest-bearing demand trust fund account at a bank.

Home policies?

All monies held in impound accounts for the payment of taxes or insurance premiums shall be retained in the state and, if invested, may only be invested within the state. (62 Op. Att'y Gen. 351 ruled that this provision is constitutional.)

Special Note:

For several years Section 2954.8 of the Civil Code has required the payment of 2 percent interest on impounds unless the impounds were kept in non-interest bearing accounts. Most mortgage bankers were required by the Real Estate Commissioner's Regulations to keep the money in "demand" accounts which do not pay interest. Therefore they were not required to pay interest on impound accounts.

A. B. 575, effective January 1, 1980, changed Section 2954.8 to provide that interest must be paid unless the funds are required to be kept in non-interest bearing accounts. Effective February 16, 1980, the California Real Estate Commissioner's regulations were changed to permit impounds to be placed in interest-bearing accounts. The Commissioner has adopted a new Section 2830.1 to read:

Section 2830.1, Interest on Impounds. A real estate broker who receives funds in trust from or on behalf of an obligor for the payment of property taxes, assessments, insurance or other purposes relating to real property containing only a one to four family residence shall not be precluded by provisions of Section 2830 from depositing and maintaining said fund in an interest-bearing account in a bank, savings and loan association or other financial institution provided that the account is insured by an agency of the federal government.

This, in effect, removed the exemption that had applied to mortgage bankers.

COLORADO, Rev. Stat. 39-1-119

?? Escrow account balances may not exceed three months' total escrow charges.

•CONNECTICUT, Gen. Stat. Sec. 49-2a et. seq.

4% Minimum

Credited to insurance - Better than Compound Alaska Title

Requires each bank, trust company, savings and loan association, mutual savings bank, insurance company and other mortgagee or mortgage servicing company holding funds of a mortgagor in an escrow account to pay interest on such funds at a rate not less than 4 percent per annum. These provisions apply to mortgages secured by 1-4 unit, owner-occupied residences and housing cooperatives occupied solely by the shareholders. Interest payments shall be annually credited towards the payment of taxes and insurance premiums in the ensuing year. If the debt is paid prior to the end of the year, the interest to the date of payment shall be paid to the mortgagor. Violation of these provisions by a mortgagee or mortgage servicing company shall result in a fine not to exceed $100 for each offense.

Interest may not be required to be paid on escrow accounts where (1) there is a contract between the parties, entered into before October 1, 1975, which contains an express disclaimer on the part of the mortgagee to pay such interest; (2) the payment of such interest would violate a federal law or regulation, or (3) the account is maintained with a mortgage servicing company, neither affiliated with nor owned in whole or in part by the mortgagee, under a written contract or any mortgage agreement, entered into before October 1, 1975, that does not permit the company to earn or receive a return from the investment of such accounts; or (4) the account is maintained in connection with a loan entered into on and after October 1, 1977, which is serviced or held for sale for not more than one year by a

mortgage servicing company, neither affiliated with nor owned in whole or in part by the purchaser of the mortgage loan.

A rate of 2 percent per annum applies where a contract that contained an express provision to pay 2 percent was entered into prior to October 1, 1977.

DISTRICT OF COLUMBIA, Code Ann. Sec. 28-3301 (b)(4)

Any loan which is secured by a mortgage or deed of trust on residential real property shall be subject to the following provision... (4) any borrower who has made a down payment equaling 20 percent or more of the total purchase price of the property is not required by the lender to make advance payments of real estate taxes or casualty insurance premiums to enable the lender to have funds on hand for disbursement for payment of such taxes or insurance premiums. Lenders are required to inform borrowers, in writing, of this right to pay such taxes and insurance premiums directly.

Requires borrower consent to collect escrow on 80% or less loan/value

FLORIDA, Stat. Ann. Sec. 501.137

All lenders of money whose loans are secured by mortgages on real estate located in the State and who maintain escrow accounts for the payment of property taxes shall promptly pay taxes when they become due and adequate escrow funds are deposited so that the maximum tax discount available may be obtained. If the escrow account is deficient, the lender must notify the depositor within fifteen days after receipt of the tax notification. Each mortgagee must issue an annual statement of the escrow account to the mortgagor at the expiration of the annual accounting period.

***GUAM,** Laws 1980, Bill No. 419

Requires interest to be paid on home mortgage escrow accounts at a rate not less than that paid on regular passbook savings accounts by a Guam bank or savings and loan association. The law applies to mortgage escrow accounts established pursuant to mortgages executed both before and after the effective date of the law, September 1, 1980.

HAWAII, Rev. Stat. Sec. 449-16.5

In all escrow agreements involving the sale of real property . . . in which an escrow depository acts as a fiduciary party holding the funds in escrow, any interest earned on such funds shall accrue to the credit of the purchaser unless otherwise instructed in writing by the purchaser and seller in the escrow agreement. (This section does not apply to banks, trust companies, building and loans, savings and loans or insurance companies, when acting as escrow depositories.)

IDAHO, Code Sec. 26-1931(8)

Limits the collection of escrow to one-half of the estimated annual requirement. If funds are placed in a savings account, interest must be paid on those funds.

ILLINOIS, Ann. Stat. Ch. 17 Secs. 4901-5001

Mortgage lenders may, in lieu of establishing an escrow account, permit a borrower to pledge an interest-bearing savings account with the lender in an amount sufficient to secure the payment of anticipated taxes. "Mortgage Lender" - banks, savings and loan associations, building and loan associations, or other institution, association, partnership, corporation or person who extends the loan of monies for the purpose of enabling another to purchase a residence.

When a mortgage loan is reduced to 65 percent of its original amount by timely payments of the borrower, a mortgage lender must notify the borrower that he may terminate the escrow account or elect to continue the account until he requests a termination, or until the loan is paid in full, whichever occurs first. Borrowers shall not have this right of termination in conjunction with mortgages insured, guaranteed, supplemented or assisted by the state or the federal government that require an escrow arrangement for their continuation.

If, after terminating an escrow account, the borrower does not furnish to the lender sufficient evidence of timely payment of taxes, the lender, after verifying the nonpayment, may reestablish an escrow arrangement with the borrower within thirty days after the payment due date.

All lenders must furnish to borrowers written notice of the requirements of this act at the date of closing. Failure of any lender operating within the state to comply with the provisions of this act shall entitle the borrower to actual damages in a court action.

Mortgage lenders using the capitalization method of accounting (crediting tax payments directly to the loan principal upon receipt and increasing the loan balance when the taxes are paid) are exempted from the provisions of this act.

ILLINOIS, Ann. Stat. Ch. 17 Sec. 2301

Mortgage bankers, licensed to do business in Illinois, are required to place all monies received during the course of business: (1) in escrow with an escrow agent located and doing business in Illinois, or (2) deposit the funds in a trust or escrow bank account maintained by the mortgage banker with a bank located and doing business in Illinois. Violation of this requirement will result in suspension or revocation of the mortgage bankers' license and a fine of up to $10,000.

***IOWA**, Code Ann. Sec. 524.822

Effective July 1, 1982, banks, savings and loan associations and credit unions that maintain escrow accounts in connection with loans secured by one- to two-family, owner-occupied dwellings, must pay interest to the borrower on those funds at the rate the institution pays to depositors of funds in ordinary savings accounts. Interest must be calculated on a daily basis and a written annual accounting of all account transactions must be delivered to each mortgagor.

A state bank may act as an escrow agent with respect to real property and shall act as a fiduciary for all such funds. A bank maintaining such an account, whether or not the mortgage has been assigned to a third person, shall deliver to the

mortgagor a written summary of all transactions made during each calendar year. Credit unions and savings and loan associations are also authorized to act as escrow agents, but only in connection with real property loans made by the institution.

KANSAS, Stat. Ann. Sec. 2.02(4)(b)(iv)

Limits the collection of escrow funds by savings and loan associations to one-half of the estimated annual taxes and insurance premiums.

KENTUCKY, Rev. Stat. Sec. 294.130

If escrow funds placed in interest-bearing acct, borrower receives interest.

All monies paid to a mortgage loan company (required to be licensed under Chapter 294) for the payment of taxes or insurance premiums on property secured by a loan made or serviced by the company shall be deposited in an insured account and kept separate, distinct and apart from funds belonging to the mortgage loan company. Any interest earned on the funds shall belong to the borrower and will be applied to the expenses that will be paid from such account. The mortgage company must, upon reasonable notice, account for all funds deposited by a borrower and, upon reasonable notice, account to the Commissioner of Banking and Securities for all funds deposited. Escrow account funds are not subject to execution or attachment on any claim against the mortgage company.

LOUISIANA, Rev. Stat. Sec. 6:828

Savings and loan associations are permitted to require borrowers to pay monthly, in advance, the equivalent of one-twelfth of the estimated annual taxes, insurance premiums and other expenses upon real estate securing a loan so as to enable the association to pay such charges as they become due from the funds so received. The funds are to be held, without interest, for the credit of the borrower.

***MAINE**, Rev. Stat. Ann. Art. 9-B Sec. 429

Where a financial institution (trust company, savings bank, savings and loan, industrial bank or credit union) maintains an escrow account for the payment of taxes in connection with a first purchase money mortgage on a 1-4 family dwelling located in the state, the institution must: (1) pay the mortgagor quarterly dividends or interest at a rate at least 1/2 of the highest annual interest rate paid by that institution on regular savings accounts. Such interest may not be reduced by any service or maintenance charge on the account; or (2) to the extent of the account, pay the appropriate taxing authority when the taxes are due.

Interest shall be computed on the daily balances in the account from the date of receipt to the date of disbursement and be credited to the account as of the last business day of each calendar quarter or fiscal year. Mortgagors must be given an annual statement showing interest credited on the account during that period.

***MARYLAND, Comm. Law, Secs. 12-109, 12-109.1**

Requires any bank, savings bank or savings and loan association doing business in Maryland that lends money secured by a first mortgage or first deed of trust on any interest in residential real property and creates or is the assignee of an escrow account in connection with such a loan, to pay interest on the funds at a rate which is the greater of: (a) 3 percent per annum simple interest or; (b) the rate regularly paid by the lending institution on regular passbook saving accounts. All interest shall be computed on the average monthly balance and credited annually to the borrower's account. The lending institution must provide an annual statement of the account balance. This section applies only to loans made after May 31, 1974.

These provisions do not apply to institutions which provide for the payment of taxes, insurance or other expenses under the direct reduction method by which these expenses when paid by the lender, are added to the outstanding principal balance of the loan.

? Loans purchased by an out-of-state lender through FNMA, GNMA or the FHLMC are exempted if the purchasing lender elects to service the loan.

Funds held in escrow accounts may not be used to reduce the loan principal or to pay interest or other loan charges except upon foreclosure or release unless there is periodically an overage in the account. In these cases, the borrower shall be given, at least annually, the option of receiving a refund, applying the overage to the payment of principal and interest or leaving the excess amount in the account. If the borrower does not reply to the lender's notice of these options within sixty days, the lender must return the overage to the borrower.

***MASSACHUSETTS,** Ann. Laws, Ch. 183, Sec. 61

Requires a mortgagee doing business in the commonwealth and holding a first mortgage or lien on a 1-4 unit, owner-occupied dwelling who requires advance payments for the payment of real estate taxes to pay interest on such funds. Interest shall be paid at least annually at a rate and in a manner to be determined by the mortgagee. Mortgagees must file an annual statement with the commissioner of banks showing the amount of profit or loss from the investment of the escrow funds. If the lender shows a net loss from these investments, the commissioner may grant an exemption from the interest requirement. These provisions apply only to advance deposits for the payment of taxes on mortgaged property made after July 1, 1975.

MICHIGAN, Comp. Laws Sec. 565.161

Any mortgagee or agent receiving escrow funds from a mortgagor for the payment of taxes, insurance premiums or improvements to the property, must furnish the mortgagor with an annual statement of the escrow account within sixty days of the close of the calendar year.

The annual statement is not required where the mortgagor is provided with a monthly billing form or mortgage passbook that lists the account balance and records tax expenditures. Mortgagees will be liable for any fees or penalties

incurred by the mortgagor as a result of failure to make timely payments of taxes when due.

Sec. 438.31(c)(12) - An interest bearing deposit account held in a depository institution may be established as a condition of the making of a mortgage or land contract where the primary security is an owner-occupied dwelling. The account shall be pledged to the lender as additional security for the mortgage or land contract. The lender may make withdrawals as agreed upon in the mortgage and such withdrawals will be applied against the periodic payments otherwise due from the borrower pursuant to the terms of the mortgage. All interest earned on the pledged deposit amount shall be credited to the account. Lenders who make five or more mortgages in any one calendar year may not require the establishment of such an escrow account on more than 20 percent of mortgages made during the year. (This provision expires on April 1, 1985.)

•MINNESOTA, Stat. Ann. Sec. 47.20 (9)

Requires all banks, trust companies, savings and loan associations, mortgage banks, mutual savings banks, insurance companies, credit unions or assignees of the above that require a mortgagors' funds to be paid into an escrow or similar account for payment of taxes or insurance in connection with a mortgage on a 1-4 family, owner-occupied residence in the state to pay interest on the funds at a rate not less than 5 percent per annum. Interest shall be computed on the average monthly balance on the first of each month and be annually credited to the remaining balance on the mortgage or, at the election of the mortgagee, be paid to the mortgagor, or credited to the escrow account. If the interest exceeds the remaining balance, the excess shall be paid to the mortgagor. The payment of interest is not required if the escrow is mandatory under federal law, is maintained in connection with a conventional loan in an original principal amount in excess of 80 percent of the lender's appraised value at the time the loan is made, or if the loan is insured or guaranteed by HUD, the VA or the FmHA.

Lenders not requiring the maintenance of an escrow account may permit a mortgagor to elect to maintain a non-interest bearing escrow account to be serviced by the mortgagee at no extra charge if the mortgagor is also offered the option of managing the payment of insurance and taxes himself or opening a passbook savings account for that purpose. A mortgagee that is not a depository institution offering passbook savings accounts shall notify its mortgagors, (1) that they may open accounts at a depository institution and (2) of the current maximum legal interest rate on such accounts. These options do not apply to escrow accounts which are specifically exempted from the interest paying requirements.

Lenders are specifically prohibited from charging a direct fee for the administration of escrow accounts and are required to make timely payments of tax and insurance bills provided that there are sufficient funds in the account. Failure to make such payments shall subject the mortgagee to liability for all damages caused.

Mortgagors must be promptly notified of any account shortages.

MONTANA, Code Ann. Secs. 71-1-113 through 71-1-115

Limits escrow accounts to no more than 110 percent of the projected amount needed unless parties agree in writing to a larger amount.

Lending institutions that maintain reserve accounts for the payment of taxes and insurance premiums in connection with a mortgage on real property must keep itemized records of such accounts and annually mail a statement of total receipts and disbursements to each borrower.

NEBRASKA, Rev. Stat. Sec. 8-330

Building and loan associations may pay interest on funds held in an escrow account for the payment of taxes, insurance and similar payments, if agreed to in writing by the borrower and association.

Sec. 45-101.05 - Lenders are prohibited from requiring a borrower to deposit, in any one month, an amount larger than one-twelfth of the total yearly amount of estimated taxes and insurance premiums.

NEVADA, Rev. Stat. Secs. 645B.165, 645B.170, 645B.180

All money paid to a mortgage company (licensed under Chapter 645B) for the payment of taxes and insurance shall be deposited in a bank and kept separate, distinct and apart from funds belonging to the company and shall be designated as an "impound trust account". The company shall, upon reasonable notice account for any funds paid by a mortgagor and, upon reasonable notice, account to the commissioner of savings associations for all funds held in the impound trust account. Such funds are not subject to execution or attachment on any claim against the mortgage company.

***NEW HAMPSHIRE**, Rev. Stat. Secs. 384.16c - 384.16e

Any bank which requires or accepts monies for deposit in escrow accounts maintained for the payment of taxes, insurance premiums or other expenses related to loans on property secured by a real estate mortgage shall credit each account with interest at a rate of not less than 2 percent below the rate paid on regular savings deposits in said bank. (Effective January 1, 1974.)

Any company that is in the business of making loans for the purpose of financing the acquisition of single-family homes and which requires or accepts money for deposit in escrow accounts maintained for the payment of taxes, insurance premiums or other related expenses must credit each such escrow account with interest at a rate of not less than 4 percent per annum. (Effective January 1, 1984.)

NEW MEXICO, Stat, Ann. Sec. 48-7-8

Mortgagees may impose a monthly charge to be held in escrow for the payment of taxes, insurance premiums and other charges under the terms of a mortgage. Any

balance exceeding two months' total escrow charges shall, upon the demand of the mortgagor but not more than once each year, be credited to the principal amount of the mortgage within sixty days of the demand. Failure of mortgagee to credit such excess shall cause a penalty at the rate of 6 percent per year, payable to the mortgagor.

*NEW YORK, McKinneys Banking Law, Section 14-b, General Obligation Law, Section 5-601

Requires any mortgage investing institution (bank, trust company, savings bank, savings and loan association, private bank, investment company, insurance company or other entity which makes, extends or hold mortgage loans) that maintains an escrow account in connection with a loan secured by a 1-6 family, owner-occupied residence or on any property owned by a cooperative apartment corporation to pay interest at a rate not less than 2 percent per annum or a rate prescribed by the banking board, whichever is higher. The banking board shall prescribe the method or basis of computing interest and and the minimum rate paid shall be a net rate over and above any service charges imposed. Interest shall be computed on daily balances and credited to the account as of the last business day of each quarter of the calendar year or the bank's fiscal year. Service charges in connection with the maintenance of an escrow account are prohibited unless expressly authorized in a loan contract executed prior to this act's effective date (1974).

Interest is not required where: (1) there is a contract between the mortgagor and the mortgage investing institution entered into before the effective date of the act (1974) which contains an express disclaimer of an obligation on the part of the mortgage investing institution to pay interest on such accounts; (2) the payment of such interest would violate any federal law or regulation or (3) such accounts are maintained with a mortgage servicing company, neither affiliated with nor owned in whole or in part by the mortgage investing institution, under a written contract, entered into before the effective date of this act, which contract does not permit the mortgage investing institution to earn or receive a return from the investment of such accounts.

Earnest Money or Purchase

Lien Law, Section 71-a(3)-Requires that any initial advance pursuant to a residential real estate sale or construction contract on a residential condominium on not more than a two-family residence be placed in an interest-bearing escrow account in a bank, trust company or savings and loan association. Alternatively, the recipient of the advance may post a bond guaranteeing the return of the money otherwise required to be held in escrow. A boldface statement of the purchaser's right to demand an escrow or bond must be contained in the contract of sale.

*OREGON, Rev. Stat. Secs. 86.205 - 86.275

Lenders (any person who makes, extends or holds a real estate loan agreement including, but not limited to, mortgagees, beneficiaries under trust deeds and vendors under conditional land sale contracts) who require a lender's security provision in connection with a real estate loan agreement shall require either a direct reduction provision, an escrow account or a pledge of an interest-bearing savings account in an amount not to exceed the maximum amount which a lender may require a borrower to deposit in an escrow account and bearing interest at a rate not less than the rate required on an escrow account.

Interest on escrow accounts shall be paid quarterly at a rate not less than 3/4's of 1 percent less than the normal passbook rate and in no event less than 4½ *percent. If a lender does not offer an open passbook, the rate of interest shall be 4½ percent. Interest shall be computed on the average monthly balance of the account. This requirement does not apply to loan agreements entered into prior to September 1, 1975.

Lenders are prohibited from imposing a service charge in connection with an interest-bearing escrow account. Escrow accounts may be terminated when the principal balance of a mortgage loan falls below 85 percent of the purchase price or original appraised value, whichever is less.

If a lender fails to pay the borrower's taxes in time to take advantage of any authorized discounts, the lender shall credit to the account an amount equal to the discount plus any accrued interest on the unpaid property taxes to the date the taxes are paid. If the lender's failure to make the timely payments is willful or if the lender fails to credit the borrower's account with the correct amount, the borrower shall have a cause of action against the lender to recover an amount equal to fifteen times the amount of discount that the borrower should have received, plus any interest that would have accrued. Borrowers recovering damages shall be entitled to attorney fees as determined by the court in addition to costs and necessary disbursements. Violation by the lender of any of these provisions shall render the lender's security provision voidable at the option of the borrower, and make the lender liable to the borrower in an amount equal to actual damages or $100, whichever is greater, and court costs and attorney fees in the case of a successful action by the borrower.

These provisions do <u>not</u> apply to a loan agreement which is serviced or held for sale within one year by a mortgage servicing company neither affiliated with nor owned in whole or in part by the purchaser and which is made or held by a purchaser whose principal place of business is outside of the state.

*Prior to October 25, 1983, the minimum rate of interest that must be paid was 4 percent per annum.

*RHODE ISLAND, Gen. Laws Ann. Sec. 19-5-22

Requires all banks, trust companies, savings and loan associations, mutual savings banks, insurance companies and other mortgagees holding funds of a mortgagor in escrow for the payment of taxes and insurance premiums to pay or credit interest on such funds at a rate not less than 2 percent per annum. This requirement is effective July 1, 1979, and applies to escrows maintained in connection with mortgage loans secured by 1-4 unit, owner-occupied residential properties located in the state. Interest shall be credited annually toward the payment of taxes and insurance premiums in the ensuing year. If the mortgage debt is paid prior to June 30th in any year, the interest to the date of payment shall be paid to the mortgagor. These provisions may not be waived and violation of this act by a mortgagee will result in a fine not to exceed $100. FmHA, HUD, VA or privately insured mortgages are exempt. The bank commissioner is empowered to make rules and regulations necessary to carry out these provisions and shall furnish forms to mortgagees for the purpose of reporting to mortgagors the interest due.

Exempts most loans

***UTAH, Code Ann. Secs. 7-17-1 et. seq.**

Applies to any person who regularly makes, extends or holds real estate loans and includes, but is not limited to, mortgagees, beneficiaries under trust deeds and vendors under conditional land sales contracts who regularly require or maintain reserve accounts. (Effective June 30, 1979)

Each lender is required to pay at least 5.25 percent interest per annum on mandatory reserve accounts maintained in connection with a mortgage secured by a 1-4 unit owner-occupied residence. Interest shall be computed on the average of the month end balances at the end of the calendar year. Within sixty days after the end of each calendar year, the interest shall be credited to the remaining principal balance on the loan, paid to the borrower or credited to the account, at the election of the lender. In the event of payoff of the loan, the interest must be paid or credited to the borrower within thirty days after the payoff date. Lenders may not require or impose a service charge for the administration of the account. Payment of interest is <u>not</u> required: (1) if the account is required by a governmental insurer or guarantor; (2) the original principal amount of the loan exceeded 80 percent of the appraised value of the property at the time the loan was made (when the principal balance of the loan is paid down to 80 percent, this exception shall not apply) or (3) if such payment of interest is prohibited by federal law. Lenders not requiring the establishment of reserve accounts shall offer the following options to the borrower: (1) borrower may maintain a non-interest-bearing account to be serviced by the lender at no charge to the borrower, or (2) borrower may manage the payment of insurance premiums and taxes from his own account. If the borrower selects option (2) and is delinquent more than once in the payment of the taxes or insurance premiums, the lender may require a reserve account without interest or other compensation for the use of the funds.

Lenders must furnish an itemized statement to the borrower, within sixty days after the end of each calendar year, showing monies received for interest and principal repayment and received and held in or disbursed from a reserve account. Negligent failure by the lender to make timely payments for taxes and insurance premiums shall subject the lender to liability for all damages directly resulting from the failure. Failure of the borrower to promptly deliver all notices of tax assessments or assigns shall relieve the lender from such liability. A lender who violates this act is liable to the borrower for actual damages suffered or $100, whichever is greater. If an action is commenced, the prevailing party may be awarded reasonable attorney's fees. No action may be brought more than one year after the date of the violation.

Sec. 7-7-33(6) - A savings and loan association may require (subject to the above provisions) a borrower to pay monthly, in advance, equivalent of one-twelfth of the estimated annual taxes, assessments, insurance premiums, and other charges upon the real estate securing the loan. If the association advances its own funds, that amount shall be secured by the mortgage or trust deed with the same priority as the original amount advanced under the mortgage or trust deed.

VERMONT, Stat, Ann. T.9 Sec. 44

Agreements to maintain with the lender non-interest bearing reserves or deposits with which to pay when due taxes and insurance premiums shall not be construed to be interest or a prohibited charge.

VIRGINIA, Code Sec. 6.1-2.8

Any bank or lender maintaining escrow accounts for the payment of taxes and insurance which, upon receipt of a notice thereof, fails to make timely payment and incurs a penalty or late charge or a cancellation for nonpayment if there are sufficient funds in the account at least five days before the payment due date, shall be liable for the penalty or late charge assessed and for any loss as a result of the property being uninsured for nonpayment. Lenders must give written notice to any obligor of the payment of such penalty or late charge within five days after payment is made.

***WISCONSIN**, Stat. Ann. Sec. 138.051(5)

Requires a bank, credit union or mutual savings bank which originates a loan and which requires an escrow to assure the payment of taxes or insurance premiums to pay interest on the outstanding principal balance of the escrow of not less than 5.25 percent per annum.

Sec. 138.052(5), effective January 1, 1983, requires a bank, credit union, mutual savings bank, savings and loan association or mortgage banker which originates a loan and requires an escrow to assume the payment of taxes or insurance premiums to pay interest on the outstanding principal balance of the escrow of not less than 5.25 percent unless the escrow funds are held by a third party in a non-interest-bearing account (effectively exempting mortgage bankers from this requirement.)

Parties may agree to waive payment of all or part of the interest if more than 75 percent of the lender's interest in the loan is sold to a third party who is not a person related to the lender and the escrow funds are held by a third party.

HOUSE BILL NO. 51

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act requiring banks to pay interest on money in reserve accounts held in connection with mortgage loans."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 06.05 is amended by adding a new section to read:

Sec. 06.05.285. INTEREST ON RESERVE ACCOUNTS. (a) A bank that requires the payment of money by a borrower into an escrow or similar reserve account for the payment of taxes, insurance premiums, or home owner's association dues in connection with a mortgage loan shall pay interest on the money in that account unless the account is required by federal law or regulation. The rate of interest paid on money in a reserve account shall equal the rate of interest charged to the borrower for the mortgage loan and shall be computed on the average monthly balance in that account on the first of each month.

(b) Interest earned on money in a reserve account shall be annually credited to the remaining principal balance on the mortgage loan, or at the election of the borrower, shall be paid to the borrower.

* Sec. 2. AS 06.05.285 enacted in sec. 1 of this Act applies to escrow and similar reserve accounts established before the effective date of this Act, as well as to accounts established after the effective date of this Act, with interest to be paid beginning on the effective date of this Act on money in those accounts.

The Honorable Arliss Sturgulewski
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Senator Sturgulewski:

House Bill 51, an Act requiring banks to pay interest on money on reserve accounts, is of considerable interest to me, and I solicit your support for this bill.

I would, however, suggest that it be applied equally to all types of loans and would therefore recommend that the phrase starting on line 15... "unless the account is required by federal law or reputation" be deleted.

As an attachment I have provided a simple example of the magnitude of the problem using my own situation, which can be considered modest at best. It is readily apparent that lending institutions have the use of a very significant amount of "free" money.

Sincerely yours,

A. B. Bruck

YOUR NEW PAYMENTS CONSIST OF THE ITEMS SHOWN ABOVE.

You are hereby notified that the property described on the face of this notice has been reappraised for the current year.

Alaska Statutes require that a person receiving an assessment notice shall advise the Assessor of errors or omissions in the assessment of his/her property. Failure to so advise will not negate the tax.

If, after reveiwing the current values, you feel that the appraisal is in excess of fair market value, you may contact the Assessor's office for an appraisal review. If, after the review, you still feel that your property has been over appraised, **you may request a petition of appeal to the Board of Equalization.** Either a letter requesting a petition, or a completed petition, must be received by the Assessor's office prior to the date shown on the face of this notice. Alaska law requires that the written appeal be in the form which the Board may require, otherwise the right of appeal ceases, unless the Board finds that the taxpayer was unable to comply.

The Board of Equalization will begin meeting in April. You will be notified as to the place and date of the hearing for your appeal. If you are unable to attend the meeting, the Board will proceed in your absence.

Statements for the first one half tax payments are mailed prior to May 15th and become delinquent and subject to penalty on June 15th, Statements for the second one half tax payments are mailed prior to July 15th and become delinquent and subject to penalty on August 15th.

It is your responsibility to notify the Assessor's office in writing if there is an error in your name or address. Do not notify the Collector's office.

THIS IS A VALUATION NOTICE – NOT A TAX STATEMENT.

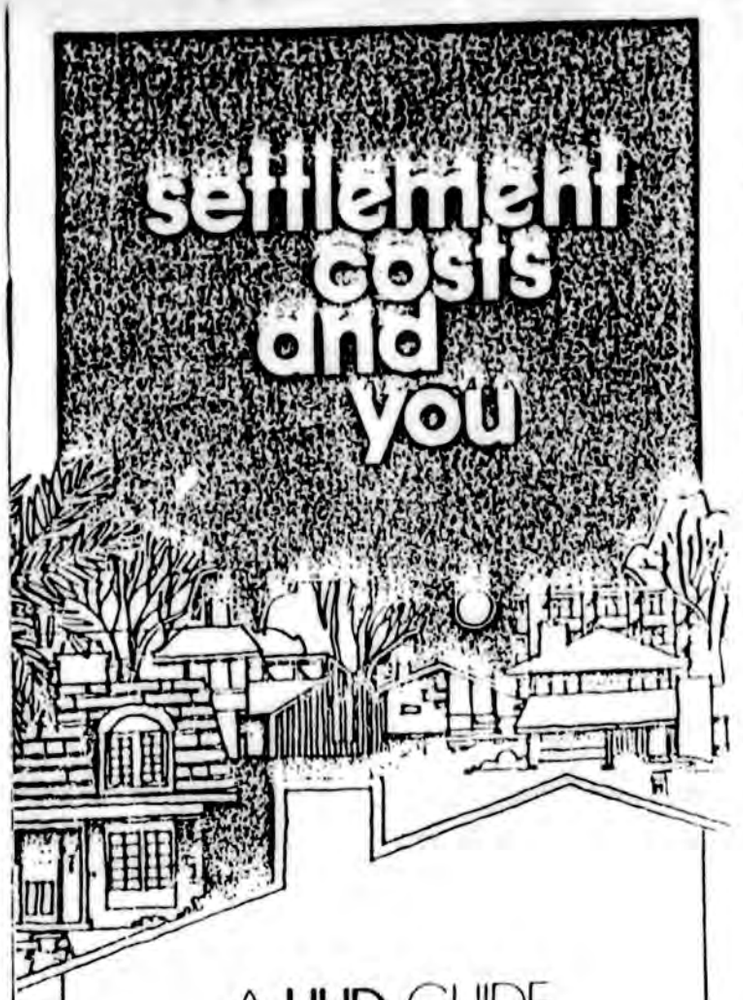
HOUSE BILL NO. 51

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act requiring banks to pay interest on money in reserve accounts held in connection with mortgage loans."



BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 06.05 is amended by adding a new section to read:

Sec. 06.05.285. INTEREST ON RESERVE ACCOUNTS. (a) A bank that requires the payment of money by a borrower into an escrow or similar reserve account for the payment of taxes, insurance premiums, or home owner's association dues in connection with a mortgage loan shall pay interest on the money in that account unless the account is required by federal law or regulation. The rate of interest paid on money in a reserve account shall equal the rate of interest charged to the borrower for the mortgage loan and shall be computed on the average monthly balance in that account on the first of each month.

(b) Interest earned on money in a reserve account shall be annually credited to the remaining principal balance on the mortgage loan, or at the election of the borrower, shall be paid to the borrower.

* Sec. 2. AS 06.05.285 enacted in sec. 1 of this Act applies to escrow and similar reserve accounts established before the effective date of this Act, as well as to accounts established after the effective date of this Act, with interest to be paid beginning on the effective date of this Act on money in those accounts.

A HUD GUIDE

HOME BUYERS

Alaska Mutual Bank
POUCH 4-9003
ANCHORAGE, ALASKA 99509

300. CASH AT SETTLEMENT FROM/TO BUYER

Remaining are the summary lines which are 301-303 for the borrower (and 601-603 for the seller). Subtracting line 302 (gross amount paid by or for the borrower) from line 301 (gross amount due from the borrower) results in the net cash the borrower must pay at settlement.

RESERVE ACCOUNTS

In most instances, a monthly mortgage payment is made up of a payment on the principal amount of the mortgage debt which reduces the balance due on the loan, an interest payment which is the charge for use of the borrowed funds, and a reserve payment (also known as an escrow or impound payment) which represents approximately one-twelfth of the estimated annual insurance premiums, property taxes, assessments and other recurring charges.

When settlement occurs you may need to make an initial deposit into the reserve account; otherwise, your regular monthly deposits to it will not accumulate enough to pay the taxes, insurance or other charges when they fall due. Under RESPA, the maximum amount the lender can require borrowers or prospective borrowers to deposit into a reserve account at settlement is a total gross amount not to exceed the sum of: (a) an amount that would have been sufficient to pay taxes, insurance premiums, or other charges which would have been paid under normal lending practices, and *ending* on the *due date* of the first full monthly mortgage installment payment, plus (b) an additional amount not in excess of one-sixth (2 months) of the estimated total amount of taxes, insurance premiums and other charges to be paid on the dates indicated above during any twelve month period to follow.

An illustration will help clarify this calculation. Assume the following set of facts on a loan, and that taxes are paid at the end of the period against which taxes are assessed.

Example:

Settlement date	April 30, 1977
Due Date of first mortgage loan repayment	June 1, 1977
Taxes due yearly	$360.00
Monthly tax accrual	$ 30.00
Due date for taxes	December 1st for the calendar year

The reserve amount for category (a) is $180.00. This represents the amount of taxes accruing between December 1, 1976 (the last tax due date) and May 30, 1977 ($30.00 x 6 months). Reserve amounts chargeable under category (b) could be up to two months advance payment times $30.00 or a total of $60.00. Therefore, total reserve deposits for taxes at settlement would be a maximum of $240.00. Changing the due date for taxes and/or the first mortgage payment results in a different reserve amount for the same illustration.

The same procedure is used to determine the maximum amounts that can be collected by the lender for insurance premiums or other charges. You need to know the charges and due dates in order to compute the amounts.

Once you begin your monthly mortgage payments, you cannot be required to pay more than one-twelfth of the annual taxes and other charges each month, unless a larger payment is necessary to make up for a deficit in your account or to maintain the cushion of the one-sixth of annual charges mentioned in (b) above. A deficit may be caused, for example, if your taxes or insurance premiums are raised.

You should note that the above monthly mortgage payments reserve limitations apply to all RESPA covered mortgage loans whether they were originated before or after the implementation of RESPA.

ADJUSTMENTS BETWEEN BUYER AND SELLER

The previous section dealt with setting up and maintaining your reserve account with the lender. At settlement it is also

Department of Commerce & Economic Development / POSITION PAPER

HB 51 "An Act requiring banks to pay interest on money in reserve accounts held in connection with mortgage loans."

The safety and soundness of state-chartered financial institutions is not affected by provisions of HB 51. There would be only minor review time involved in examinations to determine compliance.

The committee may wish to consider having these types of interest rate provisions under AS 45.45 and include all mortgage lenders except the State housing programs.

PART 1 GENERAL REQUIREMENTS FOR 1ST MORTGAGES

In general, all 1st mortgages sold to us must be acceptable to other institutional investors and informed buyers in the community where the mortgaged property is located.

In addition, mortgages must meet certain requirements before we will purchase them. Our general eligibility requirements for FHA, VA and conventional 1st mortgages follow in this Part. The specific eligibility requirements for certain types of mortgages—including 2nd mortgages—are described in Parts 2 through 9 of this Chapter.

Sec 101 Origination and Ownership of Mortgage

A Lender may deliver a mortgage that has been originated by another Lender. However, the selling Lender is responsible for meeting all of our requirements, and must own the mortgage on the date it is delivered to us.

Sec 102 "Open-End" Advances

We will purchase a mortgage that includes an "open-end" advance provision only if the provision gives us the option not to make any advances. If the Lender has already made an advance, the mortgage is eligible for purchase.

Sec 103 Monthly Payments (also see Sec 209, 309, 509 and 705)

Generally, the mortgage must fully amortize over its term, through level monthly installments of principal and interest, payable the 1st day of each month. However, mortgages, and growing equity mortgages—that do not provide for level monthly payments over the full mortgage term.

Since we will not decline submissions for purchase because of slight differences in payment calculations, the Lender may use any widely-accepted amortization tables or formulas. We include in our Servicing Guide the formulas that we use to calculate fixed installments and to amortize a mortgage.

Sec 104 Escrow Deposit Accounts (also see Sec 205, 412 and 905)

Mortgages must provide for the monthly deposit of escrow funds to pay taxes, ground rents, special assessments, mortgage insurance premiums and hazard insurance premiums as they come due. For VA and conventional mortgages, the Lender may waive this requirement, but the standard escrow provision must remain in the mortgage documents.

Whenever the Lender waives the right to collect escrows, it must retain our right to enforce the requirement if the borrower fails to act responsibly.

We do not require escrow deposits to cover hazard insurance premiums for individual condominium or PUD units when the project containing the unit is covered by a blanket hazard insurance policy purchased by the owners' association.

Sec 105 Payment Status (also see Sec 906)

Payments on the mortgage must be current at the time of delivery. The 1st payment made to us must be a full installment of principal and interest.

We will accept delivery of a 1- to 4-family mortgage up to 45 days from the due date of the last paid installment. For example, if the due date of the last paid installment was April 1, we will accept the mortgage at any time through May 15. If the mortgage is delivered on May 16, it will not be acceptable until the May 1 payment is applied.

If the mortgage is new and no installment has been applied when the mortgage is delivered, the Lender should report the 1st day of the month preceding the due date of the 1st full installment as the "interest paid-to" date. The 45-day limit will then be clocked from this date.

Sec 106 Lien Requirements (also see Sec 205, 409, 514, 806 and 907)

The lien of the security instrument must be a 1st and paramount lien on the mortgagor's estate in the real property and on any personal property identified in the instrument. It may be subject only to liens for taxes and special assessments that are not in arrears and to conditions, restrictions and encumbrances that we do not consider as material. The Lender must provide documentation to show that the current installments of taxes and assessments (which may have been attached as prior liens but are not now in arrears) have been paid or that sufficient deposits are being collected to pay them.

106.01 Borrower's Estate. In most cases, the borrower must own the property in fee simple. However, we will purchase mortgages secured by leasehold estates in areas where they have received market acceptance.

Generally, leasehold estates must have a remaining term that equals or exceeds the remaining term of the mortgage. In most cases, the term of the estate should run, or be renewable at the borrower's option, for at least 10 years beyond the maturity date of the mortgage, unless fee simple title will vest in the borrower (or the owners' association if the mortgage is on a PUD unit) at an earlier date. However, the term may vary for different types of mortgages. When the term of the leasehold estate differs from those normally used in the area, the Lender should contact the local regional office to determine if it is acceptable.

Sec 412 Special Assessments

If special assessments are not paid at the time of closing, the maximum mortgage otherwise available must be reduced by the principal amount of the unpaid special assessment.

In addition, any improvement to the premises that results from the assessment must be included in the appraised value of the property. The mortgagor's monthly payment should include 1/12th of the estimated annual payment toward the assessments.

Sec 413 Payment of Settlement Costs

Certain prepaid settlement costs must be paid by the purchaser of the property in order for the mortgage to be eligible for purchase. They are

- **interest charges covering any period after the settlement date;**
- **real estate taxes covering any period after the settlement date;**
- **hazard insurance premiums; and**
- **escrow accruals required for renewal of mortgage insurance premium.**

Other costs may be paid by the property seller or purchaser. However, if any costs normally the responsibility of the purchaser are paid by the seller, the Lender must advise the appraiser.

Sec 414 Trade Equities

The property seller may take the borrower's existing property in trade as all or part of the down payment, as long as the borrower's equity contribution is a true value consideration. This contribution is usually determined by subtracting the outstanding mortgage balance of the property being traded, plus any transfer costs, from the lesser of the property's appraised value or the trade-in value agreed to by both parties.

Sec 415 Subordinate Financing

We will consider purchasing mortgages subject to subordinate financing as long as that lien is clearly subordinate to our 1st mortgage lien. Lenders must disclose subordinate financing repayment terms when applying for a mortgage insurance commitment.

When the subordinate financing repayment terms provide for regular monthly payments, they must remain constant for each 12-month period over the term of the mortgage. In addition, the change in the monthly payment at the end of each 12-month period cannot exceed 7½%.

If the subordinate financing will not fully amortize under a level monthly payment plan, it may not have a maturity or call option date of less than 5 years.

We will not permit subordinate financing on a cooperative share loan.

FNMA

PART 2 DEPOSIT ACCOUNTS, TAXES AND INSURANCE

Generally, the mortgages we purchase require that a portion of the mortgagor's monthly payment be put into an escrow deposit account so that funds will be available to pay taxes, special assessments, hazard insurance premiums, mortgage insurance premiums, ground rents and similar items when they come due.

The Servicer may waive the escrow deposit account requirement on individual cases. The waiver should be in writing and should clearly state that it may be revoked at the Servicer's option. Even when the escrow deposit account requirement has been waived, the Servicer remains responsible for the timely payment of the taxes and insurance premiums. If the mortgagor fails to pay the taxes or does not keep the insurance in force, the Servicer should revoke the waiver and begin collecting monthly deposits for the escrow deposit account.

We do not require the Servicer of a 2nd mortgage to maintain an escrow account. However, to assure that the expenses for the 2nd mortgage are paid promptly—particularly when the Servicer of the 1st mortgage does not collect escrow funds—the Servicer may establish an escrow account if it wishes.

Sec 201 Administration of Escrow Deposit Accounts

The Servicer must assume full responsibility for administering the mortgagor's escrow deposit account. It must estimate the monthly deposit required to assure that funds will be available to pay each expense as it comes due. Each year, it should analyze the account to determine that the balance is adequate and, if necessary, make any adjustments required to meet the estimated future charges.

201.01 Additional Deposits. The Servicer may collect deposits for items that we do not require (such as disability or credit life insurance). If it does, the Servicer must

- identify in its records the purpose and the recipient of the additional deposits;
- accept the monthly payment even if it does not include these additional deposits;
- collect any shortages in these deposits from the mortgagor. The regular deposit account funds may not be used to cover these shortages; and
- separate the amount of the additional deposits from the installment we require on the mortgagor's monthly billing or payment coupon.

201.02 Advances. When the borrower's deposit account does not have enough funds to cover a particular expense, the Servicer should request the mortgagor to pay the additional amount. If the borrower's payment cannot be received in time to avoid a penalty, the Servicer should advance its own funds.

When the Servicer has to advance its own funds, the mortgagor should be billed for that amount. If the mortgagor does not repay the advance, his or her subsequent

mortgage payments may be used to repay the Servicer if local law does not prohibit it. If the advance involves $500 or more and was necessary to protect our interest in the property, the Servicer of a whole mortgage may submit a Cash Disbursement Request (Form 571) to request us to reimburse it for the advance. In that case, any repayments subsequently made by the mortgagor would be sent to us.

201.03 Annual Analysis. The Servicer must analyze the account each year to determine its status and to estimate the funds needed for the coming year. After analyzing the account, the Servicer can adjust the monthly deposits to the account according to different situations.

- If there is a shortage in the account, the Servicer may either request the mortgagor to pay it in full, or take the shortage into account when it establishes the monthly escrow deposits for the next year.
- If there is an overage, the Servicer may refund it to the mortgagor if the mortgage is current or take it into account when the monthly escrow deposits for the next year are established. If the mortgage is delinquent, the Servicer should request the mortgagor to apply the overage toward the delinquency.

When the monthly payment changes as a result of the escrow analysis, the Servicer should give the mortgagor reasonable notice of the new payment.

201.04 Interest on Escrow. Some jurisdictions require that interest be paid on the funds in the mortgagor's escrow deposit account. When these requirements apply to mortgages that we own, the Servicer must pay the interest. The Servicer may also voluntarily pay the interest.

Normally, we will not reimburse the Servicer for required or voluntary interest payments. However, if we are holding a portion of the escrow deposit funds, we will reimburse the Servicer for our share of any required interest payments. In that case, the Servicer should submit a Request for Disbursement of Excess Escrow Funds or Interest on Escrow Accounts (Form 843) within 30 days after it pays the interest.

201.05 Annual Statement. At the beginning of each year, the Servicer must send the mortgagor a statement of activity in his or her mortgage account during the past year. The statement should include

- the escrow deposit account balance at the beginning of the year, any deposits to or withdrawals from the account during the year, and the account balance at year-end;
- the amount of interest that the mortgagor paid during the year;
- the amount of real estate taxes paid during the year;
- the unpaid principal balance of the mortgage at the end of the year;

- the amount by which the mortgage balance increased during the year as a result of negative amortization (when applicable); and
- the amount of interest paid (or credited) to the mortgagor as "interest on escrow".

In addition, the Servicer must provide a detailed analysis of all transactions relating to a mortgagor's monthly payments and escrow deposit account whenever the mortgagor requests it. The Servicer cannot charge the mortgagor for the annual statement or the detailed analysis.

Sec 202 Taxes and Assessments

The Servicer must maintain accurate records on the status of real estate taxes, ground rents or any other assessments that could become a lien against the property. The Servicer should always pay these expenses before any penalty date. Whenever funds are available, the Servicer should pay these expenses early enough to take advantage of the maximum discounts allowed. If a penalty is incurred for late payments of taxes—and the mortgagor was a factor in delaying the payment—the Servicer may collect the penalty from the mortgagor. Otherwise, the Servicer must pay the penalty from its own funds.

When the owners' association of a PUD or condominium project in which the Servicer services mortgages notifies the Servicer that a mortgagor is 60 days delinquent in the payment of assessments or charges levied by the association, the Servicer should advance the funds to pay the charges if necessary to protect our interest in the mortgage.

Sec 203 FHA and Conventional Mortgage Insurance

The Servicer must keep in effect the FHA or conventional mortgage insurance that existed when we purchased the mortgage. However, there are special situations that may affect the continuation of mortgage insurance coverage.

203.01 FHA Mortgage Insurance. The Servicer may consider a mortgagor's written request to cancel the FHA mortgage insurance if the borrower has a satisfactory payment record and our interests will continue to be adequately protected.

Before agreeing to cancel the insurance, the Servicer should obtain a current appraisal of the property. Then, if the property clearly meets the standards that we would require for a new conventional mortgage and the unpaid balance of the mortgage is not greater than 80% of the property's value, the Servicer may cancel the insurance.

The appraisal is not necessary if the Servicer believes that the mortgage balance is substantially less than 80% of the current property value.

203.02 FHA Coinsured Mortgages. If the mortgage is current, FHA coinsured mortgages are automatically converted to full insurance when the 60th monthly

payment is made. The Servicer does not have to notify us of this automatic change, but should contact us in cases where the conversion is not automatic. For example, when a mortgage is under a special relief provision on the date the 60th monthly payment is scheduled to occur, the Servicer should request HUD to convert it to full insurance if the mortgage is current under the terms of the relief provision. If HUD agrees to the conversion, the Servicer should then notify us.

If the Servicer cannot continue its coinsurance obligations because of its dissolution or bankruptcy, it should notify HUD and provide a list of all coinsured mortgages in its FNMA portfolio. When HUD acknowledges that the mortgages will be converted to full insurance, the Servicer should send us the list of mortgages and a copy of HUD's acknowledgement.

203.03 Conventional Mortgage Insurance. Servicers may cancel insurance coverage on a 1st mortgage when the balance has been paid down to 80% of the original value of the property. Coverage on a 2nd mortgage can be cancelled when the combined loan amount for the 1st and 2nd mortgages has been paid down to 65% of the property's original value. If the Servicer thinks that the property may have depreciated in value since the original appraisal, it may require the mortgagor to submit a current appraisal for the property before it cancels the coverage. If a mortgagor whose payments are current requests cancellation of coverage and the property has retained its value, the Servicer must cancel the coverage.

The Servicer may also approve a mortgagor's request to cancel the conventional mortgage insurance on a 1st mortgage if the mortgagor has a satisfactory payment record and a new appraisal indicates tha the mortgage balance is below 80% of the current value of the property. Requests to cancel coverage on a 2nd mortgage—based on a new appraised value—may be approved only if the borrower has had an acceptable payment record for at least 1 year. In either case, the new appraisal should be made a part of the permanent mortgage records.

At any time, the mortgagor can replace the original policy with equivalent mortgage insurance from another acceptable mortgage insurer. The Servicer must promptly send our local regional office the new original insurance policy or certificate. When the coverage expires or is cancelled, we will return the original insurance policy or certificate if the mortgage insurer requires us to do so.

Sec 204 Hazard and Flood Insurance

The Servicer must make sure that the hazard and flood insurance coverages that were required when we purchased the mortgage are maintained. Those requirements are described in Chapter One, Part 1, of our Lending Guide. If the mortgage covers a PUD, cooperative or condominium unit, the Servicer should also verify that the coverages required of the owners' association or cooperative corporation—hazard, flood, liability and fidelity—are being maintained. These requirements are discussed in

Chapter Three of the Lending Guide. In addition, the insurance that HUD requires for FHA-insured home improvement loans must be kept in force.

A Servicer may act as an insurance broker or agent to sell insurance to the mortgagor. Any activities relating to this role are outside the scope of the Servicer's authority to act on our behalf. As a result, we will not reimburse the Servicer for any fees or costs resulting from claims on coverages that exceed our requirements. In addition, the Servicer must reimburse us for any fees or costs that we incur in response to any action or defense the mortgagor might bring in connection with this coverage.

204.01 Replacement Policies. The mortgagor can modify the existing insurance coverage or replace it with a policy from another acceptable company. If the mortgagor allows the insurance coverage to lapse, the Servicer should immediately obtain new coverage that meets our basic requirements. If necessary, the Servicer should advance its own funds to pay the premium.

The owners' association of a PUD or condominium project or the cooperative corporation of a cooperative project may also have its existing insurance coverage modified or replaced with a policy from another insurance company. In this case, the owners' association or cooperative corporation must give the Servicer notice of the change so that the Servicer can determine if the coverage adequately protects our interests.

204.02 Changes in Coverage. Certain things may happen to make the existing insurance coverage inadequate to protect our interests or to cause us to be over-insured in some cases. When either situation occurs, the coverage should be changed.

When a property becomes vacant, the Servicer should add the proper endorsement to change a homeowner's policy to a fire and extended coverage policy.

The mortgagor may discontinue flood insurance coverage if the property is no longer included in a flood zone because the flood plain has been redefined. On the other hand, if the redefinition of a flood plain will result in the property being included in a flood zone, the Servicer must notify the mortgagor to obtain coverage to protect against possible damage. If the mortgagor refuses to obtain the required coverage, the Servicer should contact the regional office for further instructions.

204.03 Evidence of Insurance. Unless the Servicer is covered by mortgage impairment insurance or mortgagee interest insurance, it must keep the original insurance policy in its custody. Instead of holding the complete policy, the Servicer may accept a short form certificate of insurance if it shows all of the necessary information and is signed by the insurer. A complete text of the full policy must be available in the Servicer's office.

Many condominium or cooperative units are covered by "master" or "blanket" policies instead of individual policies. This is also true for some PUD units. In these cases, the Servicer may maintain a copy of the current "master" or "blanket" policy and a certificate of insurance showing that the individual unit is covered under the policy.

Regardless of the form used as evidence of insurance, the Servicer must be able to give us copies of the individual insurance policies if we need them.

204.04 Notice of Loss. When we purchase the mortgage on a condominium, cooperative or PUD unit, the owners' association or cooperative corporation of the project agrees to give the Servicer prompt notice of any change in its insurance coverage or of any condemnation or casualty loss that may have a material effect on the project or on our security. Therefore, the Servicer should send a notice, identifying the units it is servicing, to the owners' association of each condominium or PUD project and the cooperative corporation of each cooperative project in which it services mortgages.

Sec 205 Insurance Loss Settlements

As soon as the Servicer of a whole mortgage learns of a casualty loss, it should contact the mortgagor to get complete details on the damage and discuss plans for having the property repaired. If the Servicer is unable to contact the mortgagor, it should determine the extent of the damage and the required repairs, and submit to our local regional office a recommendation regarding the restoration of the damaged property.

When a property is damaged, the Servicer must closely monitor the filing of the claim with the insurance carrier, the repairs to the property and the disbursement of the insurance proceeds. The Servicer's responsibilities include

- helping the mortgagor to determine the nature of the needed repairs and to get the necessary bids;
- reviewing and approving the final plans for repair;
- submitting a Report of Hazard Insurance Loss (Form 176) to our local regional office for approval if
  - —the mortgage is in foreclosure or the property has been acquired through foreclosure or a deed in lieu of foreclosure,
  - —the insured improvements have suffered a total or near-total loss,
  - —the insurance proceeds are greater than the cost of restoring the property to its original condition, or
  - —the Servicer believes that the insurance proceeds should be applied to the mortgage debt instead of being used to repair the property;
- inspecting the repairs to see that they comply with the final plans;
- getting the proper lien releases; and
- disbursing the proceeds.

If the Servicer of a 2nd mortgage can determine that the repairs were made in a satisfactory manner, it does not have to inspect the property. However, it should include in the individual mortgage file documentation describing the quality of the workmanship.

In cases involving extensive repairs, the Servicer should consider making progress payments as portions of the work are completed.

Sec 206 Uninsured Losses

When a disaster (such as an earthquake, flood or tornado) results in an uninsured loss to the property, the Servicer should

- determine the extent of the damage;
- secure the property, if it is abandoned;
- develop plans for repairing the property; and
- send a complete report of the damage to our local regional office.

The Servicer should help the mortgagor file for any disaster relief aid that may be available. If the damage is extensive, the Servicer should agree to any reasonable forbearance plans or modification agreements that the mortgagor proposes.

a different office in special instructions to the Servicer. When used in connection with accounting transactions, the applicable Freddie Mac regional office is the Freddie Mac regional office serving the state where the Seller's principal office is located.

6103

Borrower

The borrower is the party obligated to repay the indebtedness secured by the mortgaged premises. For a home mortgage or HIL, the borrower must be an individual or individuals.

6104

Condominium unit; condominium project

A condominium unit is a single family dwelling located in a condominium project.

A condominium project is real estate that includes the separate ownership in fee (or on an acceptable leasehold estate) of a specified residential unit with an undivided interest in the real estate designated for common ownership solely by unit owners.

6105

Date of the Seller's offer

The date of the Seller's offer is the date the Seller telephones Freddie Mac offering to sell mortgages to Freddie Mac. Freddie Mac will insert this date on the purchase contract in the applicable space for each offer Freddie Mac accepts.

6106

Delinquency

Delinquency occurs when any part of the borrower's monthly payment of principal, interest, and escrow under the mortgage is past due and unpaid after the due date.

6107

Delivery date

The delivery date is the date Freddie Mac receives a Contract Delivery Summary (Form 381) and either a Mortgage Submission Voucher (Form 13SF or 13 Multi) completed for each mortgage or a Mortgage Loan Submission Schedule (Form 11), together with any other documentation required to be delivered to Freddie Mac before payment by Freddie Mac. Delivery to Freddie Mac occurs when the applicable Freddie Mac regional office takes possession of all documentation required to be submitted. The posting of such documentation with the U.S. Postal Service or any other mail service does not constitute delivery to Freddie Mac.

6108

Due date

The due date is the date on which the borrower's monthly payment is due, as stated in the mortgage documents.

6109

Escrow

Escrow includes all funds collected to cover expenses to be paid

under the mortgage, including, but not limited to, taxes, special assessments, ground rents, and other charges that are or may become first liens on the mortgaged premises, as well as hazard insurance premiums and mortgage insurance premiums.

6110

FHA; FHA mortgage

FHA is the Federal Housing Administration. An FHA mortgage is a mortgage insured by the FHA.

6111

Home improvement loan

A home improvement loan is a home mortgage to finance permanent improvements for energy conservation, solar installation, rehabilitation, modernization, or addition.

6112

Home mortgage

A home mortgage is a mortgage on real estate on which there is located a structure designed principally for residential use by no more than four families.

6113

MI

An MI is a mortgage insurer approved by Freddie Mac.

6114

Minimum gross yield

The minimum gross yield is the sum of the Freddie Mac required net yield plus the Freddie Mac required minimum servicing spread.

6115

Minimum servicing spread

The minimum servicing spread is the minimum amount of the interest income retained by the Servicer as compensation for servicing mortgages purchased in whole by Freddie Mac.

6116

Mortgage

A mortgage is a loan secured by a lien on real estate held in fee simple or on an acceptable leasehold estate; when used alone, and unless the context indicates otherwise, the term "mortgage" includes home mortgages, multifamily mortgages, and home improvement loans.

6117

Mortgaged premises

The mortgaged premises are the land and improvements thereon subject to the lien of a mortgage.

6118

Mortgages purchased in whole or in part

Mortgages purchased in whole have been purchased in their entirety by Freddie Mac. Mortgages purchased in part are mortgages in which Freddie Mac has purchased or retained a participation interest.

separate agreement, incorporating this guide by reference. In such a case, the term "purchase documents" means the separate agreement and this guide.

6124

Real estate owned (REO)

Real estate owned (REO) is property acquired through foreclosure or deed in lieu of foreclosure.

6125

Required net yield

The required net yield is the amount of interest Freddie Mac receives from each mortgage purchased as stated in the purchase contract.

6126

Seller

A Seller is a mortgage lender approved to sell mortgages to Freddie Mac.

6127

Servicer

A Servicer is a mortgage lender approved to service mortgages purchased by Freddie Mac. The Servicer may be the Seller, a wholly owned subsidiary of the Seller, a subsidiary of the Seller and other Sellers, a servicing agent of the Seller (under section 6201), or a transferee of the Seller (under section 6311).

6128

Servicing

Servicing is the performance of applicable obligations described in the purchase documents, including tasks necessary to maintain mortgages sold to Freddie Mac in a manner that protects Freddie Mac's interests.

6129

Servicing agent

A servicing agent is a Servicer unaffiliated with the Seller that has received Freddie Mac's authorization to act on the Seller's behalf in servicing mortgages purchased by Freddie Mac.

6130

Transfer of ownership

For the purposes of chapters 69 and 73, transfer of ownership means, but is not limited to mean, the conveyance of the mortgaged premises or any right, title, or interest in the mortgaged premises, whether legal or equitable, voluntary or involuntary, by any of the following methods:

- outright sale
- deed
- installment sale contract
- land contract
- contract for deed
- leasehold interest with a term greater than three years
- lease-option contract
- land trust

relieve the Seller of its responsibilities to Freddie Mac under the purchase documents.

6202

Servicing facilities and duties

The Servicer must maintain servicing facilities with staff trained to adequately service mortgages according to the requirements in the purchase documents. The Servicer's staff must be familiar with all regulations and requirements affecting mortgages serviced for Freddie Mac. These regulations and requirements include, but are not limited to, those issued by Freddie Mac, FHA, VA, MIs, and local or federal agencies having jurisdiction. The Servicer must perform all duties of the mortgagee under the security instrument, FHA insurance, VA guaranty, and mortgage insurance policy.

6203

Borrower inquiries

If asked by the borrower, the Servicer must inform the borrower whether Freddie Mac has purchased the borrower's mortgage. If Freddie Mac has purchased the mortgage, the Servicer must explain to the borrower that it services the mortgage for Freddie Mac. The Servicer must answer the borrower's inquiries and not refer or advise the borrower to contact Freddie Mac directly concerning the mortgage. Borrowers must be given prompt, clear, and accurate information about whether their mortgages are assumable, and if they are, on what terms the assumption will be allowed and how long those terms will apply.

6204

Mortgage file

(a) Contents. The Servicer must maintain an individual file for each mortgage. The file must contain all documents required to be held by the Seller, as stated in the *Sellers' Guide FHA/VA*, Section 3.302 or in section 2415 of this guide, as well as all legal notices, correspondence, forms, and reports concerning the mortgage. The file must contain the originals of all documents submitted to Freddie Mac (except when the original documents are retained by Freddie Mac). When the Servicer possesses the original note, the note may be segregated from the file if it is maintained in a fireproof storage area. The Servicer must also maintain adequate records of collection efforts and make the records available for Freddie Mac's inspection on request. At a minimum, the records must show:

- the dates that letters and notices were mailed;
- results of conversations with the borrower;
- dates of personal contacts;
- dates and results of property inspections; and
- reasons for prior and current defaults.

Where applicable law or local custom requires the original security instrument to secure its release, the Servicer agrees to maintain a certified copy of the original security instrument, complete with recordation notation.

(b) Maintenance. The Servicer must prudently maintain all mortgage files, related documents, and records held pursuant to this section and the purchase documents. Each file must be clearly marked to indicate Freddie Mac's percentage of interest in the mortgage and the Freddie Mac loan number assigned to it.

The Servicer agrees to maintain the entire mortgage file while Freddie Mac retains any interest in the mortgage and for at least three years from the date Freddie Mac's interest in the mortgage is satisfied. If the mortgage is accelerated, the Servicer must maintain the entire file at least six years from the date Freddie Mac's interest in the mortgage is satisfied.

(c) Microfilm copies. Instead of maintaining the original documents required by this section, all documents (except the security instrument and the note) may be maintained in the form of microfilm or microfiche provided that

- the copies were made in the regular course of business pursuant to a written policy of the Servicer applying to all its mortgage files;
- the copies were made by a process that accurately reproduces or forms a durable medium for reproducing the original;
- the copies are satisfactorily identified;
- the Servicer maintains the copies in a manner that permits ready transfer to legible hard copies of the material relating to the mortgages serviced for Freddie Mac;
- reader/copiers that can be used by Freddie Mac representatives are kept in the same offices where the copies are kept.

(d) Damage or loss. The Servicer must bear the entire cost of restoring mortgage files and related documents and records damaged or lost for any reason.

(e) Inspection by Freddie Mac. When Freddie Mac requests, either before or after termination of servicing, the Servicer must permit Freddie Mac at any time during normal business hours to inspect the mortgage files and all of the Servicer's records pertaining to mortgage operations related to Freddie Mac.

6205

Reports

The Servicer must submit all servicing reports for any mortgage to the applicable Freddie Mac regional office at the time and in the form requested by Freddie Mac.

Whether there is any delinquency in the mortgage serviced for Freddie Mac or not, the Servicer must provide Freddie Mac with a monthly Summary of Delinquencies and Foreclosures (Form 100, exhibit 80) for each state where mortgaged premises are located. The report must be received by Freddie Mac within eight business days after the last day of each month.

Mortgage impairment or mortgagee interest insurance is acceptable if it provides errors and omissions coverage on substantially the same terms as stated above. Deductibles may not exceed the higher of $10,000 or 2.5 percent of the liability per occurrence.

(b) Reports. In connection with its fidelity and mortgage errors and omissions coverage, the Servicer must

- obtain evidence of the insurer's agreement to notify Freddie Mac 30 days or more before canceling, reducing, not renewing, or restrictively modifying any coverage for any reason;
- promptly advise Freddie Mac of any embezzlement, fraud, dishonesty, errors, or omissions within its organization, whether Freddie Mac's funds are involved or a claim is filed with the insurer, if the ensuing loss exceeds the deductible amounts allowed in sections 6402-6403.

6404

General property insurance requirements

The Servicer must ensure that the mortgaged premises are covered by insurance meeting the requirements in this and subsequent sections.

(a) Licensing of insurer. All insurers and reinsurers must be licensed, or otherwise authorized by law, to conduct business in the jurisdictions where the mortgaged premises are located.

(b) Assessments. Insurance contracts must provide that no assessment may be made against the Servicer or Freddie Mac and that any assessment made against others may not become a lien on the mortgaged premises superior to the outstanding liens.

(c) Rating of insurer. The required insurance must be underwritten by an insurer currently rated B/VI or better in Best's Insurance Reports. The following alternatives are acceptable:

- the insurer has a rating of A/V or better;
- the insurer is reinsured by a company rated B/VI or better. In this case, both the insurer and reinsurer must execute an Assumption of Liability Agreement or a similar endorsement providing for 100 percent reinsurance of the insurer's policy and requiring the reinsurer to give the borrower, Servicer, and insurer 90-day written notice before cancelling or otherwise terminating the reinsurance (this agreement must be attached to the insurance policy); or
- the coverage is underwritten by Lloyd's of London or by a Fair Access to Insurance Requirements (FAIR) or beach and windstorm plan.

6405

Hazard insurance

(a) 1–4 family properties. At a minimum, the mortgaged premises must be protected against loss or damage from fire and other perils covered within the scope of standard extended coverage. Insurance must at least equal the lesser of 100 percent of the insurable value of the improvements or the unpaid balance of the mortgage. For a HIL, insurance must be at least equal to the

lesser of 100 percent of the insurable value of the improvements or the aggregate unpaid balance of the HIL and all outstanding superior liens on the mortgaged premises. The insurance may not be less, however, than the minimum amount required under the terms of coverage to fully compensate for any damage or loss on a replacement cost basis. The Servicer must ensure that the mortgaged premises are adequately covered even when vacant and, where necessary and available, must obtain a vacancy permit endorsement.

Deductibles may not exceed the lower of $1,000 or 1 percent of the applicable amount of coverage.

(b) Planned unit developments. Requirements for 1–4 family and multifamily properties apply to similar residential properties within a planned unit development (PUD).

If the individual units are covered by insurance purchased by their respective owners, the PUD homeowners' association must maintain "all risk" coverage for common areas and property for 100 percent of their insurable value and providing for loss or damage settlement on a replacement cost basis. The association must also obtain any additional coverage commonly required by private mortgage investors for developments similar in construction, location, and use, including the following where applicable and available:

- agreed amount
- demolition cost
- increased cost of construction
- boiler and machinery

The insurer's minimum liability per accident under boiler and machinery coverage must equal the insurable value of the building housing such boiler or machinery or $2 million, whichever is less.

Deductibles may not exceed the lower of $10,000 or 1 percent of the applicable amount of coverage. Funds for such deductibles must be included in the association's reserves and be so designated.

Freddie Mac will also accept blanket insurance covering all units in the PUD as well as insurable common areas and property, if called for in the PUD's constituent documents. Such coverage must meet the requirements applicable to each PUD unit and those applicable to insurable common areas and property. Deductibles are allowed under this blanket coverage provided that the deductible for losses to an individual unit does not exceed the lower of $1,000 or 1 percent of the unit's insurable value. Funds for any deductibles must be included in the association's reserves and be so designated.

The PUD's insurance policy must name the insured in substantially the same language indicated below:

"Association of Owners of the ... Planned Unit Development for the use and benefit of the individual owners (designated by name, if required by law or the constituent documents)."

(c) Condominiums. The condominium owners' association must maintain blanket "all risk" coverage for the following:

- general and limited common elements within the condominium;
- fixtures, machinery, equipment, and supplies maintained for the service of the condominium;
- fixtures, improvements, alterations, and equipment within the individual units.

Coverage must be for 100 percent of the insurable value of the common elements or property described above and provide for loss or damage settlement on a replacement cost basis.

The additional coverages required of PUD homeowners' associations are also required of condominium owners' associations where applicable and available.

Deductibles may not exceed the lower of $10,000 or 1 percent of the applicable amount of coverage. Funds for such deductibles must be included in the association's reserves and be so designated.

The insurance policy of the condominium owners' association must name the insured in substantially the same language indicated below:

"Association of Owners of the ... Condominium for the use and benefit of the individual owners (designated by name, if required by law or the constituent documents)."

(d) Multifamily properties. At a minimum, the mortgaged premises must be protected against loss or damage from fire and other perils covered within the scope of standard extended coverage. Insurance must at least equal the lesser of 100 percent of the insurable value of the improvements or the unpaid balance of the mortgage. The insurance may not be less, however, than the minimum amount required under the terms of coverage to fully compensate for any damage or loss on a replacement cost basis.

Deductibles may not exceed the lower of $10,000 or 1 percent of the applicable amount of coverage.

The additional coverages required of PUD and condominium owners' associations are also required for multifamily properties.

Further, rent loss coverage must be in force, providing for insurer's liability in an amount equal to the gross rentals for at least 6 months for buildings not more than three stories high and at least 12 months for buildings higher than three stories.

6405

Flood Insurance

If the area where the mortgaged premises are located has been identified by the Secretary of Housing and Urban Development (HUD) or the Director of the Federal Emergency Management Agency (FEMA) as a Special Flood Hazard Area, the Servicer must ensure that flood insurance is maintained and that it provides coverage at least equivalent to that provided under the National Flood Insurance Program (NFIP) in the amount specified later in this section.

The Servicer may waive the flood insurance requirement if

- the land or a portion of it is in a Special Flood Hazard Area but the dwelling is not; or
- the borrower has provided the Servicer with a Letter of Map Amendment from FEMA excluding the dwelling or the entire property from a Special Flood Hazard Area.

(a) 1–4 family properties. Building coverage must be maintained in an amount at least equal to the least of the following:

- the maximum available under the NFIP's regular program;
- the maximum available under the NFIP's emergency program if the regular program is not yet in effect in the area where the mortgaged premises are located;
- the minimum amount required under the terms of coverage to compensate for any damage or loss on a replacement cost basis, or the unpaid balance of the mortgage (in the case of a HIL, the aggregate unpaid principal balance of the HIL and all outstanding superior liens on the mortgaged premises) if replacement cost compensation is not available for the type of building insured.

Deductibles may not exceed the lower of $1,000 or 1 percent of the amount of coverage.

(b) Individual PUD units. Flood insurance requirements for 1–4 family and multifamily properties apply to similar residential properties within a PUD.

(c) PUD homeowners' associations. The PUD homeowners' association must maintain coverage on common areas and property for 100 percent of their insurable value. Deductibles may not exceed the lower of $5,000 or 1 percent of the applicable amount of coverage. Funds for such deductibles must be included in the association's reserves and must be so designated.

(d) Individual condominium units. Flood insurance requirements for townhouses and rowhouses are those applicable to 1–4 family properties. Flood insurance is not required for individual units within a high-rise or vertical condominium.

(e) Condominium owners' associations. The condominium owners' association must maintain coverage for detached common elements and property for 100 percent of their insurable value.

If the condominium consists of high-rise or other vertical dwelling units, the condominium association must maintain coverage that meets the following requirements:

- The amount of buildings coverage must equal 100 percent of the insurable value of the common elements and property, including any machinery and equipment that are part of the buildings.
- The contents coverage must equal 100 percent of the insurable value of all contents, including machinery and equipment not part of the buildings, that are owned in common by the association members.
- Deductibles may not exceed the lower of $5,000 or 1 percent of the applicable amount of coverage.
- Funds for such deductibles must be included in the association's reserves and be so designated.
- A separate condominium association endorsement is required if not already a part of the policy.

(f) Multifamily properties. If the entire property is in a Special Flood Hazard Area, the aggregate amount of flood insurance must equal, at a minimum, the lesser of the insurable value of all buildings or the unpaid balance of the mortgage.

If only part of the property is in a Special Flood Hazard Area, insurable buildings exposed to flood hazards must be covered by flood insurance in an aggregate amount equal, at a minimum, to the lesser of the insurable value of the exposed buildings or that prorated portion of the unpaid balance of the mortgage on the entire property determined by the ratio of the square foot area of the exposed buildings to the total square footage of all buildings comprising the property.

Deductibles may not exceed the lower of $5,000 or 1 percent of the applicable amount of coverage.

6407

Liability Insurance requirements

(a) Planned unit developments and condominiums. The PUD or condominium owners' association must carry comprehensive general liability (CGL) insurance covering all common areas, common elements, commercial spaces, and public ways in the PUD or condominium.

If not already included in the terms of the CGL coverage, there must be a "severability of interest" endorsement precluding the insurer's denial of a unit owner's claim because of negligent acts by the association or other unit owners.

The association must also carry any additional coverage commonly required by private mortgage investors for developments similar in construction, location, and use, including the following where applicable and available:

- contingent liability from operation of building laws
- comprehensive automobile liability

- bailee's liability
- elevator collision liability
- garage keeper's liability
- host liquor liability
- workers' compensation and employer's liability
- contractual liability

The insurer's limit of liability per occurrence for personal injury, bodily injury, or property damage under the terms of the above coverages must be at least $1 million.

(b) Multifamily properties. A multifamily rental property must be covered by liability insurance to the extent required of a PUD or condominium owners' association.

6408

Fidelity insurance requirements for planned unit developments and condominiums

The PUD or condominium owners' association must carry fidelity insurance covering losses resulting from dishonest or fraudulent acts committed by the association's directors, managers, trustees, employees, or volunteers who manage the funds collected and held for the benefit of the PUD or condominium unit owners. This coverage must have the following characteristics:

- the coverage must equal the maximum amount of funds in the association's custody at any one time but must be no less than the sum of three months of assessments on the entire project plus reserves;
- the PUD or condominium owners' association must be named as the insured;
- a professional management firm must be insured to the same extent as a PUD or condominium owners' association managing its own operation and must submit evidence of such coverage to the association.

6409

Mortgage clause

All insurance policies must have the standard mortgage clause commonly used by private institutional mortgage investors. Such clause must provide that the insurer will notify the named mortgagee at least 10 days before any reduction in coverage or cancellation of the policy.

If the mortgage is owned in whole by Freddie Mac, "(name of Servicer), its successors and assigns" should be named as mortgagee instead of Federal Home Loan Mortgage Corporation. In deed-of-trust jurisdictions, the mortgagee should be designated as "(name of Servicer), its successors and assigns, beneficiary."

The mortgage clause of insurance policies obtained by PUD or condominium owners' associations must be endorsed to fully protect Freddie Mac's interest or the interests of Freddie Mac and the Servicer where applicable.

Regardless of how the mortgage clause is endorsed, the Servicer must arrange for all insurance drafts, notices, policies, invoices, etc., to be delivered directly to the Servicer. If the Federal Home Loan Mortgage Corporation must be named as mortgagee, the endorsement must show the Servicer's address in lieu of Freddie Mac's, as shown in the example below:

Federal Home Loan Mortgage Corporation
c/o ABC Savings and Loan Association
100 Main Street
Hometown, USA 12345

When a mortgage clause is not applicable (e.g., in a separate policy of comprehensive general liability), a certificate of insurance must be provided to the Servicer. This certificate must contain the information required for certificates or other evidence of insurance in section 6410, with the Servicer named as certificate holder instead of the mortgagee.

6410

Evidence of Insurance

For each property securing a mortgage owned by Freddie Mac, the Servicer must maintain the following documentation:

- for 1–4 family properties, an original of the hazard insurance policy, flood insurance policy (if applicable), and any related endorsement;
- for properties covered under a blanket PUD or condominium association policy, an original of the blanket policy, any flood insurance policy, and any related endorsement;
- for multifamily properties, an original of the blanket policy, any flood insurance policy, and any related endorsement.

Microfilm or microfiche copies of the required policies are acceptable if they meet the requirements of section 6204.

In lieu of a policy, the Servicer may maintain a certificate or other evidence of insurance showing at least the following information:

- named insured and mortgagee (named insured association, unit owner, and unit owner mortgagee if a PUD or condominium unit);
- property address;
- type, amount, and effective dates of coverage;
- deductible amount;
- any endorsement or optional coverage obtained and made part of the original policy;
- insurer's agreement to provide at least 10 days' notice to the mortgagee (or applicable unit owner mortgagee if for a PUD or condominium unit) before any reduction in coverage or cancellation of the policy; and
- signature of an authorized representative of the insurer, if required by law.

The Policy Declarations page of an NFIP policy is acceptable evidence of flood insurance.

The Servicer must possess a specimen of each policy and endorsement for which a certificate or other evidence of insurance is maintained in lieu of the policy or endorsement.

The Servicer must carry mortgage impairment or mortgagee interest insurance if it elects not to maintain the documentation described above. The mortgage impairment or mortgagee interest policy must meet the following requirements:

- be underwritten by an insurer currently rated B/IX or better in Best's Insurance Reports (policies issued by Lloyd's of London are also acceptable) and licensed or otherwise authorized by law to conduct business in the jurisdictions where the properties are located;
- provide coverage for the Servicer and/or Freddie Mac;
- provide coverage in scope and amounts at least equal to those required under section 6403;
- provide for at least 180 days' written notice to the Servicer and, if applicable, Freddie Mac before canceling or terminating the coverage;
- be approved by any regulatory authority to which the Servicer is subject, if such approval is required.

In addition to all other remedies of Freddie Mac provided for in the purchase documents, the Servicer will indemnify Freddie Mac for any loss Freddie Mac sustains due to the Servicer's failure to verify that the required insurance is in force on the mortgaged premises. The Servicer's obligation shall in no way be limited to the amount of coverage in force under a mortgage impairment or mortgagee interest policy.

6411

Insurance charges

Premiums for insurance covering the mortgaged premises will be paid when due by borrowers or the Servicer if the Servicer collects escrows for such purposes.

Premiums for insurance obtained by a PUD or condominium owners' association for the benefit of the PUD or condominium project will be paid by the association as a common expense assessable to all unit owners.

6412

Changes in insurance requirements

The Servicer must require the borrower to obtain appropriate insurance coverage in accordance with the terms of the security instrument when the following conditions exist:

- the Servicer becomes aware that existing coverage does not adequately protect the mortgaged premises;
- the area where the mortgaged premises are located was not subject to flood insurance requirements at inception of the

mortgage or when Freddie Mac purchased the mortgage, but has now been classified as a Special Flood Hazard Area and the Servicer has become aware of such classification.

The Servicer will follow up to verify that adequate coverage has been obtained and remains in force. If the borrower does not obtain such coverage, the Servicer must do so. The Servicer will then adjust the borrower's escrow payments accordingly or bill the borrower to recover the advance if the Servicer does not maintain an escrow account for the borrower. If the borrower refuses to reimburse the Servicer, the Servicer may recommend acceleration to Freddie Mac for the borrower's default under the terms of the security instrument.

If the additional coverage cannot be obtained, the Servicer will immediately make appropriate recommendations to Freddie Mac.

The Servicer may authorize the borrower to discontinue flood insurance coverage upon verification of map revision or receipt of a Letter of Map Amendment from FEMA.

6413

Insurance loss settlements

Upon notification of loss or damage to the mortgaged premises, the Servicer will monitor and coordinate the claim process with the borrower and the insurer. The Servicer must take appropriate action to

- verify the extent of the loss or damage;
- ensure judicious disbursement of insurance proceeds for the necessary repairs;
- protect the priority of the mortgage by obtaining waivers of materialman's or mechanic's liens; and
- document completion of the repairs.

The Servicer may be named as loss payee on insurance drafts and must comply with any applicable law and, where applicable, any requirement of the FHA, VA, or MI. Details concerning the loss or damage and disposition of the insurance proceeds must be recorded in the loan file.

The Servicer need not submit a report and related recommendations to Freddie Mac unless

- the mortgage is in foreclosure or the mortgaged premises have been acquired by the Servicer through foreclosure or deed in lieu of foreclosure;
- the insured improvements have suffered a total or near total loss;
- the Servicer wishes to apply insurance proceeds to the mortgage debt instead of repairing the property; or
- insurance proceeds exceed the amounts required to restore the property to its original condition.

6414

Natural disaster losses

When a natural disaster (earthquake, flood, tornado, etc.) results in losses or damages to the mortgaged premises, the Servicer must promptly

- ascertain the number of such mortgaged premises;
- determine the extent of the losses or damages;
- secure any abandoned mortgaged premises;
- assist the affected borrower in filing for any disaster relief aid available;
- assist the affected borrower through counseling and any appropriate repayment plan as provided under sections 6510-6513;
- notify the applicable Freddie Mac regional office with appropriate recommendations.

6415

Mortgage insurance requirements

†The mortgage insurance required under sections 1406 and 1601 may be canceled at the Servicer's option and the collection of mortgage insurance premiums discontinued when the conditions below are met.

(a) Owner-occupied properties. Mortgage insurance coverage may be canceled when the unpaid balance of the mortgage is reduced to 80 percent or less of the original purchase price or original appraised value, whichever is less, and the borrower has a history of timely payments.

Mortgage insurance coverage may also be canceled upon transfer of ownership, if the unpaid balance of the mortgage is reduced to 80 percent or less of the current purchase price or current appraised value, whichever is less. This appraised value must be based on an appraisal made within 60 days by an appraiser acceptable to the Servicer, using the applicable Freddie Mac appraisal report form.

(b) Nonowner-occupied properties. Mortgage insurance coverage may be canceled when the unpaid balance of the mortgage is reduced to 65 percent or less of the original purchase price or original appraised value, whichever is less, and the borrower has a history of timely payments.

Mortgage insurance coverage may also be canceled upon transfer of ownership, if the unpaid balance of the mortgage is reduced to 65 percent or less of the current purchase price or current appraised value as explained above, whichever is less.

discontinued, all fees and costs incurred are to be collected from the borrower unless prohibited by law, in which case Freddie Mac will share the expenses with the Servicer in proportion to Freddie Mac's interest in the mortgage.

(e) Foreclosure instruments. The Servicer must prepare and forward with the foreclosure recommendation any necessary papers for execution by Freddie Mac. When appropriate, the Servicer will request the note from Freddie Mac. If the note is sent to the Servicer, the Servicer will be responsible for its safe storage and must return it to Freddie Mac promptly should the foreclosure proceedings be discontinued.

(f) Servicing. Freddie Mac reserves the right to direct the Servicer to relinquish servicing of a mortgage in default and resume servicing when appropriate.

6603

Action during foreclosure

(a) Protection of the mortgaged premises. The Servicer must take appropriate action during the foreclosure process to protect the mortgaged premises. The Servicer must obtain Freddie Mac's prior approval for any expenditure over $500 to protect the property. When delaying protective action might result in impairment of the mortgaged premises, the Servicer should call the applicable Freddie Mac regional office for immediate approval. Freddie Mac will send the Servicer a confirmation of the cost and nature of the protective action approved.

(b) Escrow funds. The Servicer must retain the borrower's escrow funds and unapplied funds, if any. The Servicer must obtain bills for and effect payment of all expenses to be paid under the security instrument. Such expenses include taxes, special assessments, ground rents, and other charges that are or may become first liens on the mortgaged premises. If the borrower's escrow funds are insufficient to pay these items as they become due during foreclosure, the Servicer must advance funds to pay these expenses when and to the extent necessary to protect Freddie Mac's interest.

(c) Buydown account. Any funds remaining in the buydown account of a mortgage in foreclosure must be disposed of according to the terms of the buydown agreement. The funds must not be automatically applied to reduce the principal balance of the borrower's mortgage or to reduce any other of the borrower's obligations under the mortgage. The funds may be so applied with the borrower's consent when the application of funds is sought.

(d) Inspection. The Servicer must inspect the mortgaged premises at least monthly and more frequently when circumstances warrant.

68

Home mortgage and HIL servicing: partial prepayment (curtailment); escrow; adverse matters

6801

Partial prepayments (curtailments)

Partial prepayments of principal in any amount may be accepted by the Servicer according to the terms of the note. Upon request by the borrower, the monthly principal and interest installments may be reduced provided that

- the monthly payments (including payments to superior lienholders, for a HIL) are current;
- there is no extension of the maturity date of the note;
- FHA, VA, or MI approval is obtained, if applicable;
- the rate of interest stated in the note remains unchanged.

If the monthly payments are reduced, a modification agreement must be prepared and executed by or consented to in writing by all necessary parties, such as the holder of the note, the borrower and any comaker, guarantor, surety, or other obligor. Freddie Mac need not approve any modification meeting these requirements.

Freddie Mac's execution of any document submitted by the Servicer does not imply that it has reviewed the document for legal adequacy. This is the Servicer's responsibility. When required by local law or practice, the Servicer must obtain the consent of any statutory or contractual lienholder and binding confirmation by the title insurer that no loss in the dignity of the lien is incurred. The Servicer must make any necessary recordation. To the extent of local law and practice, the Servicer may require the borrower to reimburse the Servicer's costs and pay expenses incurred in preparing or recording the modification agreement. For mortgages purchased in whole by Freddie Mac, the Servicer must send the original modification agreement to Freddie Mac for its records. See section 8011 for Freddie Mac's accounting requirements regarding this subject.

6802

Escrow for taxes, ground rents, assessments, and other charges

The FNMA/FHLMC uniform security instruments provide for the collection of escrow, subject to applicable law, unless waived by the lender. If escrow is being collected when the mortgage is

purchased by Freddie Mac, the Servicer must continue to collect one-twelfth of the yearly charge for escrow with each monthly installment of principal and interest. The Servicer may, if requested by the borrower, also collect and administer funds to pay expenses not provided for in the mortgage, such as life insurance on the borrower. The escrow must be held in an account insured by an agency of the United States.

The Servicer must obtain bills for and pay all escrow items before the applicable penalty or termination date. The Servicer must maintain adequate records to prove payment of all taxes, ground rents, assessments, and other charges that are or may become first liens on the mortgaged premises.

At least annually, the Servicer must compute the required escrow payment based on reasonable estimates of assessments and bills to determine that sufficient funds are being collected to meet all escrow payments. If the amount held in escrow by the Servicer, together with the future monthly installments of escrow, exceeds the amount required to pay charges as they fall due, the Servicer must either repay the excess promptly to the borrower (if there is no default under the terms of the security instrument) or credit the excess to the borrower by a reduction in monthly escrow installments. Any interest payable to the borrower for escrow or any other funds held by the Servicer, whether due to contractual agreement or operation of law, must be paid by the Servicer at its own expense.

If the amount held in escrow by the Servicer is deemed insufficient to pay charges when due, the Servicer should obtain the necessary additional funds from the borrower before the latest date on which the charges may be paid prior to penalty, lapse of insurance policies, etc. If the borrower fails to remit the deficient amount, or if there is insufficient time to obtain the amount, the Servicer must pay any charges due and reflect a shortage in the borrower's escrow account.

The Servicer may, without Freddie Mac's approval, start collecting escrow not previously required. The Servicer may discontinue collecting escrow if

- the mortgage has not been delinquent for 30 days or more at any time during the previous 6 months;
- the Servicer retains the right to resume collection of escrow if there is any nonpayment of the items for which escrow had previously been collected.

If the Servicer chooses not to collect escrow or if the terms of the security instrument or applicable law do not provide for collection of escrow, the Servicer must require proof of payment of all taxes, ground rents, assessments, and other charges or use other means commonly employed by private institutional mortgage investors to satisfy itself that those items are promptly paid. The Servicer must notify Freddie Mac immediately of any

charge not promptly paid and recommend to Freddie Mac a course of action to be followed in this event.

6803

Adverse matters: notice of liens, vacancy, waste, etc.

It is the Servicer's responsibility to act in the most timely, efficient, and responsible manner to protect the interests of Freddie Mac, or the respective interests of the Servicer and Freddie Mac. The Servicer must exercise diligence to prevent any losses, and must immediately advise and make appropriate recommendations to the applicable Freddie Mac regional office, on notification or discovery of any of the following conditions:

- attachment of prior liens to the mortgaged premises (for a HIL, prior liens other than those on record at the origination of the HIL);
- vacancy of the mortgaged premises;
- deterioration of, waste of, or lack of repair to the mortgaged premises;
- default under the terms of the security instrument, note, superior lien obligations (HILs only), condominium or PUD constituent documents, or similar borrower's obligations;
- sale or transfer of the mortgaged premises not approved by the Servicer;
- litigation involving the mortgaged premises that may adversely affect the secured position of Freddie Mac or the Servicer and Freddie Mac; or
- any other situation that may have an adverse impact on the mortgage.

For each case, the Servicer must maintain accurate records of any of these conditions, detailing its actions to prevent losses.

6804

Adverse matters: bankruptcies

The Servicer must take appropriate action to best protect Freddie Mac's interest in the mortgaged premises during state insolvency or federal bankruptcy proceedings in which the borrower is the "debtor." The Servicer is responsible to effectively handle such mortgages. The Servicer should act with the advice of competent legal counsel well-versed in the Bankruptcy Reform Act of 1978 and other relevant areas of law.

(a) Attorney's fees. The amount of the attorney's fees incurred in connection with the proceedings must be consistent with fees commonly charged for similar services in the area where the mortgaged premises are located. The Servicer should attempt to obtain payment of the attorney's fees and costs resulting from the proceedings directly from the borrower or from the bankruptcy court.

(b) Notification to Freddie Mac. The Servicer is not required to submit to Freddie Mac any special notice regarding such proceedings involving a mortgage purchased by Freddie Mac. However, if a mortgage involved in such proceedings is delin-

quent, the Servicer must report to Freddie Mac according to section 6205 by submitting Form 102. The following additional items should be included in the Servicer's comments on Form 102 when a delinquent borrower is involved in such proceedings:

- the date the petition was filed;
- the Chapter of the Bankruptcy Act or citation to relevant law cited in the petition;
- the date the Servicer received notification of the proceedings;
- a copy of the proof of claim, including the date it was filed;
- a list of all lienholders and any unpaid taxes or assessments;
- a copy of the Chapter 11 or 13 Plan, if accepted.

Follow-up reports should be submitted monthly to update the status of the case. If a Freddie Mac mortgage is current when the bankruptcy petition is filed and the mortgage remains current, no notification need be submitted to Freddie Mac.

6805

Adverse matters: reimbursement of expenses

In any situation described in sections 6803-6804, expenses incurred by the Servicer to comply with Freddie Mac's instructions will be reimbursed to the Servicer in proportion to Freddie Mac's interest in the mortgage, unless collection from the borrower is allowed under applicable law. Freddie Mac's prior written approval of these expenses is required under the same circumstances as described in chapters 66-67. Any reimbursement will not prejudice any rights Freddie Mac may have against a Seller or Servicer with respect to the sale or servicing of the mortgage.

When delaying protective action might result in impairment of the mortgaged premises, the Servicer should call the applicable Freddie Mac regional office for immediate approval. Freddie Mac will send the Servicer a confirmation of the cost and nature of the protective action approved.

70

Multifamily mortgage servicing

7001

Inspection of property; financial statements

A periodic inspection of the mortgaged premises and a review of the profit and loss statements for the mortgaged premises are important tools in preventing default of a multifamily mortgage. Annually, the Servicer must inspect the mortgaged premises and, when permitted by the mortgage documents, obtain a rent roll and a signed profit-and-loss statement for the mortgaged premises. The Servicer must forward copies of the inspection report, rent roll, and profit-and-loss statement to Freddie Mac for any mortgage with an original amount of $250,000 or more. Any inspection report or profit-and-loss statement that indicates deferred maintenance, an operating loss, or any other potential servicing problem must be forwarded to the applicable Freddie Mac regional office, regardless of loan balance.

Freddie Mac reserves the right to require more frequent inspections when loans are delinquent or when Freddie Mac deems necessary. Where commonly required by private institutional mortgage investors, profit-and-loss statements must be prepared by a certified public accountant.

7002

Reserves for replacements and other escrows

The Servicer must hold and administer in accordance with the applicable documents all funds or bonds that constitute the reserve for replacements, working capital deposits, escrow for latent defects, operational deficiency deposits, or other escrow required by the mortgage, the security instrument, and other related documents.

If the applicable documents provide that a fund shall be in cash, or obligations of, or securities fully guaranteed as to principal and interest by the United States, Freddie Mac authorizes the Servicer to accept monthly deposits in either cash or bonds, provided such bonds are in bearer form. If the borrower proposes to substitute bonds for cash already deposited in such a

fund, the Servicer may approve the substitution, provided the amount of cash disbursement to the borrower from the fund does not exceed the market value of the bonds, as computed on the basis of the price quoted for such bonds on the date they are received by the Servicer. Before the bonds are deposited in the fund, the Servicer must obtain written general authority from the borrower to permit the Servicer, acting for Freddie Mac, to sell or redeem such bonds at any time and deposit the cash proceeds, less brokerage fees, in the fund. The Servicer must require additional deposits in the event of a decrease of more than 5 percent in the market value of the bonds, if permissible under the applicable agreement.

The Servicer may not purchase bonds or disburse cash from the fund to the borrower to purchase bonds. The Servicer must collect interest on the bonds as it becomes due and, if the borrower is not in default, must promptly pay the interest to the borrower. In addition, the Servicer must collect the principal of the bonds as they mature. Only to collect the interest and proceeds of the bonds may the Servicer release the bonds. If it becomes necessary to convert the bonds into cash to carry out the purpose of a fund, the Servicer must request, in writing, Freddie Mac's written approval. After obtaining the written approval and notifying the borrower, the Servicer may effect the conversion.

7003

General requirements for dealing with delinquencies

The Servicer should treat each delinquency individually, based on its knowledge of the borrower, the location and type of mortgaged premises, and the extent of the delinquency. Generally, the Servicer may assume that it is dealing with a knowledgeable real estate investor. If it becomes apparent that this is not so, the Servicer must emphasize to the borrower the seriousness of not promptly paying all mortgage installments when due.

The Servicer must contact the borrower on or before the 10th day after a payment is due and remains unpaid to ascertain the reason for the late payment and the borrower's intentions for curing the delinquency. Any promise for payment must be followed closely, and the borrower must be contacted immediately if payment is not received when promised. When contacting a delinquent borrower, the Servicer must try to obtain a current rent roll with the names of all tenants, the amount of rent for each unit, the date to which rent has been paid, and the details of all leases.

Before the 20th day after the payment due date, the Servicer must inspect the mortgaged premises unless it has received a promise of payment. An immediate inspection is required when a payment promise has been broken. The mortgaged premises must be inspected monthly after the loan becomes more than one month delinquent. Inspection reports must accompany the monthly servicing reports that the Servicer sends to Freddie

FED VA

b. **Interest on Advances.** Interest on advances made pursuant to VA Regulation 4313 may not be in excess of the rate reported by the lender when requesting evidence of guaranty or insurance.

c. **Late Charge.** A late charge, not to exceed 4 percent of any installment paid more than 15 days after due date, is permitted, if the loan instruments so provided. If a payment is due on the first day of the month, a late charge cannot be claimed unless the payment is first received after the 16th day of the month; i.e., the 17th or later. Late charges must not be deducted from regular installment payments and are collectible only on installments actually paid. **(Also see sec. F, par. 7.)**

7. **FEES AND CHARGES**

a. **Allowable Fees And Charges.** In making a guaranteed or insured loan, no charge may be made against, or paid by the borrower except those expressly permitted under schedules established in advance by VA. The approved schedule for a particular area is available at the VA regional office serving the specific area involved and lenders should obtain this particular schedule prior to the closing of any loans. In general, however, the veteran may pay reasonable and customary amounts for any of the following items:

(1) Fee of VA appraiser and compliance inspector if designated by VA, except appraisal fees incurred for the predetermination of reasonable value requested by other than veteran or lender.

(2) Recording fees or recording taxes or other charges incident to recordation.

(3) Credit report.

(4) That portion of taxes, assessments, and other similar items for the current year chargeable to the borrower and an initial deposit (lump-sum payment) for the tax and insurance escrow account.

(5) Hazard insurance as required by VA Regulation 4326.

(6) Survey, if required by lender or veteran; except that any charge for a survey in connection with a loan under VA Regulation 4358 (Condominium Loans) must have the prior approval of VA.

(7) Title examination and title insurance, if any.

(8) Such other items authorized in advance by VA as proper in a particular local situation.

(9) A lender may also charge and the veteran may pay a flat charge not exceeding 1 percent of the loan amount provided that this flat charge shall be in lieu of all other charges relating to costs of origination not expressly specified and allowed in this schedule.

(10) If the lender makes advances to a veteran during the progress of construction, alteration, improvement or repair (either under a commitment of the VA to issue a guaranty certificate or insurance credit upon completion, or if the lender would be entitled to guaranty or insurance on such advances when reported under automatic procedure) the lender may make a charge against the veteran of not exceeding 2 percent of the amount of the loan for its services in supervising the making of advances and the progress of construction notwithstanding that the holdback or final advance is not actually paid out until after the construction, alteration, improvement, or repair is fully completed; provided that the major portion (51 percent or more) of the loan proceeds is paid out during the actual progress of the construction, alterations, improvement or repair. Such charge may be in addition to the 1 percent charge described in subparagraph (9) above.

(11) In construction, alteration, improvement or repair loans, including supplemental loans made pursuant to VA Regulation 4355, when no charge is permissible under provisions of subparagraph (10) above, the lender may charge and the veteran may pay a flat sum not exceeding 1 percent of the loan amount. Such charge may be in addition to the 1 percent allowed under subparagraph (9) above.

(12) **Allowable Discounts**

(a) The veteran-borrower, subject to the limitations below, may pay a discount required by a lender when the loan proceeds will be used as follows:

(b) The letter of credit is assigned to a third-party escrow agent or trustee. Ordinarily, this will be the mortgagee who must be either a supervised lender or an FHA approved mortgagee. However, if there is an identity of interest between the builder and the mortgagee, it is necessary to obtain an independent third party as trustee. The trustee is obligated to complete all delayed work in a manner acceptable to VA if the builder fails to do so.

(c) A trust agreement setting forth the duties, obligation and responsibilities of the trustee is required. For this purpose, VA Form 26-1849 or VA Form 26-6378, as appropriate, may be used. The trust agreements and the letters of credit are reviewed by the VA District Counsel.

(d) A letter of credit, to be acceptable, must be irrevocable and must be a valid and binding obligation of the issuing bank. It must be for a term extending at least 6 months beyond the final date for completion of the improvements specified in the escrow agreement. It should be clearly understood that if the builder fails to perform and it is intended that the issuer of the letter of credit be called upon to pay, the holder of the letter must make demand prior to expiration of the term of the letter of credit. The issuer has no liability after that date. Approval by VA of any request for an extension will be conditioned upon receipt of written assurance that the supporting letter of credit is likewise extended for a term ending not less than 90 days after the new date for performance by the builder. However, no extension will be granted except for the most cogent reasons.

(e) The builder will be required to furnish a copy of the letter of credit and trust agreement for the regional office files. A letter of credit file will be established for each subdivision covered thereby and a control will be maintained on the balance of credit available. A VA Form 26-1847 must be executed by the veteran to reflect that the property is included in the section or subdivision covered by the letter of credit and trust agreement which has been accepted by the VA.

(f) A letter of credit accepted by FHA conforming to the standards set forth here will also be acceptable for VA purposes, provided the escrow agent or trustee agrees to keep the VA apprised of all sums charged against the letter of credit for VA and FHA loans so that control may be maintained on the balance of credit available.

g. **Relation to FHA.** If funds for the completion of postponed improvements exterior to the dwelling units are withheld in an escrow account established under FHA procedure, the amount may be considered for VA purposes as available for completion of the improvements provided. When an agreement assuring completion of offsite improvements has been entered into between the FHA and a local governmental authority, such an agreement will be acceptable provided the VA has approved it.

13. **COLLECTION FOR TAXES, INSURANCE AND ASSESSMENTS.** The loan instrument may provide that a proportion of the annual taxes, ground rents, special assessments, and fire and other hazard insurance premiums shall be paid with each regular amortization payment and that failure to make such payments will constitute a default.

14. **HAZARD INSURANCE**

a. **General.** Hazard insurance must be procured and maintained in an amount sufficient to protect the property which is the security for a loan against the risks or hazards to which it may be subjected to the extent customary in the locality. Ordinarily, this requirement would be met by maintaining insurance for fire protection and such extended coverage as is customary in the area where the property is located, in an amount at least equal to the outstanding loan balance or the insurable value of the improvements, whichever is less. Insurance value generally is defined as the reproduction cost of the improvements less physical depreciation.

b. **Flood Insurance.** Effective July 1, 1975, or within 1 year after formal identification, whichever is later, no loan may be guaranteed or insured when the security is located in an identified flood-prone area, unless the community has qualified for the National Flood Insurance Program by adopting effective land use and land management controls, and the individual security for the loan is covered by flood insurance. Flood insurance will be required in an amount equal to the outstanding loan balance or the maximum limit of coverage available through the National Flood Insurance Program, whichever is less.

c. If insurance becomes unavailable, the fact should be reported to the VA for determination as to a waiver or declaration of the loan to be in default.

d. All moneys received under such policies covering payment for insured losses must be applied to the restoration of the security or to the loan balance.

e. **Insurance Less Than Mortgage.** If a mortgagee wishes to obtain hazard insurance for an amount less than the mortgage balance, the lender may request information about the land value from the appropriate VA office. Such lender must request this on its own form which will be endorsed by VA to show the land value and then will be returned to the lender. In prior approval cases, the request should be made with the loan application package. In automatic cases, the request can be made at any time after the issuance of the CRV.

15. **SECURITY FOR LOANS**

a. Any loan for the purchase of real property or a leasehold estate as limited in the regulations must be secured by a first lien on the property.

b. Any loan for the alteration, repair or improvement of real property and for more than $1,000 and more than 40 percent of the reasonable value of the property or estate before alteration, repair or improvement, must be secured by a first lien, except a lien of lesser dignity will suffice if it is immediately junior to the lien securing the original guaranteed or insured loan.

c. Any loan for the alteration, repair or improvement of real property and for more than $1,000, but 40 percent or less of the prior reasonable value of the property, shall be secured by a first or second lien.

d. Any loan for $1,000 or less for the alteration, repair or improvement of real property need not be secured and, in lieu of a title examination, the lender may obtain a statement from the borrower that he or she has an interest in the property not less than prescribed in VA Regulation 4350(A).

16. **INTEREST IN REAL ESTATE.** Any loan for the purchase of any interest in residential realty, or for the cost of any construction, alteration, repair or improvement of realty owned by the veteran will be eligible for guaranty or insurance only if the veteran has or will become vested with an estate in the property no less than a fee simple estate, legal or equitable; a leasehold estate running or renewable at the option of the lessee for a period of not less than 14 years from the maturity of the loan, or to any earlier date at which the fee simple title will vest in the lessee, which is assignable or transferable, if the same be subjected to the lien; or a life estate, provided that the remainder and reversionary interests are subjected to the lien. In rare instances a leasehold which is not freely assignable may, on a prior approval basis, be accepted by the VA.

17. **JOINT OBLIGORS**

a. **Prior Approval.** The prior approval of the VA is necessary in respect to the guaranty or insurance of any loan made to an eligible veteran, whether made solely to the veteran, or to the veteran and another and the veteran is to acquire only an undivided interest in the property; i.e., when title to the property is to be vested in the names of the veteran and a person other than his or her spouse.

b. **Effect of Spouse.** The prior approval of the VA is not required in respect to the guaranty or insurance of a loan when there is a joinder of a veteran and spouse in the ownership of residential property. In such cases, the full amount of the loan may be the basis for guaranty or insurance. If both spouses are eligible veterans, either or both may utilize available entitlement within the limitations on the maximum proportion of a loan which may be guaranteed or insured and on the maximum entitlement available to each.

c. **Computation of Entitlement.** In respect to a joint loan to two or more persons (other than when a veteran and spouse are to join in the ownership of residential property), one or more of whom, but not necessarily all, are eligible veterans, the guaranty or insurance will be computed on and will relate to only that portion of the loan allocable to the veteran which represents the proper contribution of that veteran to the transaction. The amount of the loan shown on the evidence of guaranty will be only the veteran's portion of the loan.

lender determines that such declaration will impair or limit any rights of the lender under any mortgage insurance policy.

8. Additional Security Rider (Pledged Account Mortgage).

This rider must be a part of the deed of trust for any Pledged Account Mortgage (PAM) loan. The rider specifies the savings/share account pledged as additional security for the loan.

(b) Appraisal Reports. AHFC accepts appraisal reports completed on the current FNMA/FHLMC Residential Appraisal Report, AHFC Appraisal Reports, VA Certificates of Reasonable Value, or FHA Conditional Commitments, as applicable.

Please refer to various sections of this guide for detailed descriptions of required appraisal reports.

.02 Amortization and Deposit Requirements.

AHFC requires full amortization of the mortgage amount over the term of the loan by level installment of principal and interest payable the first day of each month. Loans structured with the Alaskan Building Equity (ABE) will have periodic increases in monthly payments with the entire increase applied to principal reduction.

AHFC will usually require that deposits for taxes, ground rents, special assessments, fire and other hazard insurance premiums, and mortgage insurance premiums, if applicable, be paid with the regular monthly payments.

Part 1. Custodial Accounting.

6001.1 General.

The Servicer must establish appropriate custodial accounts for the deposit of funds collected in connection with AHFC mortgages. All accounts and related records will be maintained in accordance with sound and generally accepted accounting practices and in such a manner as will permit representatives of AHFC, at any time, to examine and audit such accounts and records.

The Servicer must establish and maintain separate custodial accounts for each mortgage payment reporting system. The two systems currently in effect are:

1) Aggregate Exception System (AES)

2) Actual Loan Collection System (ALCS)

The Servicer may elect to combine the custodial accounts provided the Servicer maintains detailed records sufficient to identify each payment reporting system's contribution to the combined account. Mortgage reserve payments should be maintained in an account separate from principal and interest.

6001.2 Custodial Account Requirements.

The following conditions apply to the establishment and maintenance of custodial accounts:

1) The accounts must be established with a depository institution (commercial bank, mutual savings bank, savings and loan association or credit union), the

deposits of which are insured by FDIC, FSLIC, or NCUA. A Servicer whose accounts are insured by FSLIC or FDIC may establish and maintain custodial accounts within its own internal operating account.

2) The accounts are to be denominated in the name of the Servicer acting as agent for borrower payments in order to show that the accounts are custodial in nature. The Lender must maintain records identifying each borrower, the amount of each borrower's payment and the account into which each payment is deposited.

3) AHFC must be notified each time there is a change in account number or depository. The notification should include account title, account number, depository name and address, and effective date of change.

4) The Servicer must establish a reasonable daily cutoff of its work to ensure that collections are credited to the appropriate custodial account no later than the business day following their receipt; and,

5) Upon sale of a mortgage to AHFC by the Servicer, the Servicer must transfer any funds on hand related to mortgages to the appropriate custodial accounts.

6001.3 Clearing Accounts

Where the systems and procedures of the Servicer necessitate the use of clearing accounts, all such clearing accounts will be governed by the following conditions:

1) The titles of such accounts must reflect that they are custodial in nature and the depository in which the accounts are maintained must be informed, in writing, that they are custodial accounts;

2) A check drawn on a custodial account and its deposit to a disbursement clearing account must be concurrent with or prior to the issuance of any checks on the clearing account;

3) A single clearing account must not be utilized as both a collection and disbursement clearing account;

4) The accounts must be established with depository institutions, the accounts of which are insured by FDIC, FSLIC, or NCUA; and

5) The Servicer must maintain adequate records and audit trails to support all credits to, and charges from, the mortgagors' payment records and accounts.

S.O.A. - CSRA
HOUSING ASST DIV

Use Of Loan

Home mortgage loans approved under the Housing Loan Program can be used to purchase, construct, improve or renovate a year-round residence designed for use as a single family or duplex residence. The structure must serve as the borrower's principal residence. **Vacation homes, fishing cabins, similar seasonal properties, condominiums, and mobile homes are not eligible.**

Borrowers who receive a home mortgage loan under this program will not be eligible to receive another loan under the program unless the original loan has been paid off or assumed by another purchaser with the Division's approval.

Borrowers with an owner-occupied home mortgage under Alaska Housing Finance Corporation will not be eligible to receive another loan under this program unless the AHFC loan is paid off.

Assumption

updated 8-3-84

(AT END OF MANUAL - AFTER PAGE 64)

Loans made under the Housing Loan Program may not be assumed unless the subsequent purchaser of the property meets borrower eligibility requirements and **the assumption is approved by the Division.**

If the subsequent purchaser is not eligible to receive a veteran's interest rate reduction, the regular interest rate in effect at the time the original loan was made will be charged.

The Division must determine that the assumptor(s) is not currently obligated for a Division or AHFC loan.

Fees/Costs

Direct Loans - Construction/Purchase

- Loan Origination Fee - One (1) percent of the principal loan amount approved by the Division **may** be charged to the borrowers.
- Extension Fee - on request, a construction commitment contract may be extended for 30 days. A fee of one-eighth (1/8) of one (1) percent **may** be charged to the borrower for this service.

- Tax Service Registration Fee - $30.00 on the first $100,000, plus $2.50 for each additional $50,000.00.
- Recording Fees.
- Deed Preparation (Attorney's Fees).
- Homeowners Dues (Subdivision, etc.).
- Survey.
- Appraisal.
- Reserve For Hazard Insurance - Flood Insurance.
- Reserve for Taxes.
- Tax Pro-Ration.
- Title Insurance (ALTA policy or standard policy).
- Credit Report.

Insurance

The housing for which the loans are made under this program must be insured against loss equal to or exceeding the unpaid principal balance of the loan less the value of the land, but not less than the replacement cost of the residential structure. **The Division shall be named loss payee on the insurance policy.** Insurance coverage must include:

- Extended coverage.
- Loss by fire.
- Loss by flood, if the structure is located in a federally designated, 100-year flood plain.

For homes which are located in areas where fire and/or hazard insurance are not normally available, the borrower may be assisted by the Division's Field Office Staff in securing other sources of insurance. Also, the Director of the Division has the authority to waive, in full or in part, any insurance requirements if the borrower can show the cost is unreasonably high.

Health/Safety

The Division may not originate or purchase a loan for any property that poses a health or safety threat to occupants unless the threat will be eliminated as a result of the application of loan proceeds. Such a threat is considered to exist if:

- Exterior walls, roof, floor, foundation, or other weight bearing members are structurally unsound.
- Any on-site water supply system is contaminated or in danger of becoming contaminated by sewage, refuse, excessive micro-organisms, or other pollutants.
- Any on-site sewage system does not provide adequate sanitary disposal of waste and/or poses an on-site or off-site contamination threat to water supplies.

11.
Closing - Direct Loans

The closing for any Direct Loan will be conducted by the Housing Assistance Division closing staff utilizing the Division-approved closing documents for the program.

The borrower must be present to execute the closing documents. In cases where the borrower cannot be present because of inclement weather, distance, or other factors, an alternative arrangement will be made for closing.

A Division representative who is authorized to execute Note purchase documents on behalf of the Division also must be present.

Closing Documents

At the loan closing, the following documents will be executed by the borrower:

- Mortgage note in favor of the lender (Form **DCRA-HA-17**).
- Deed of trust in favor of the lender (Form **DCRA-HA-18**).
- Warranty deed (Form **DCRA-HA-20**).
- Waiver and release of liability of the Division (Form **DCRA-HA-20A**).
- Monthly payment estimate (Form **DCRA-HA-21**).
- Loan Settlement Form (Form **DCRA-HA-22**).

Additional Documents

Other exhibits to the closing will include, when required:

- Fire insurance policy with the lender as mortgagee (Loss Payee).
- Hazard insurance policy.
- Flood insurance policy.
- Construction insurance (covering builder's risk) policy or binder.

Key Documents

At the closing, an authorized representative of the Division will execute the closing documents:

- Note.
- Deed of Trust.

Closing Costs

At the time of closing, the borrower will pay closing costs, including the following:

- Fire, hazard and flood insurance premiums, if required.
- First installment on tax reserve.
- First installment on insurance reserve.
- Down payment.
- Other applicable charges for appraisal, filing, recording, or the survey.
- Real estate commission, if applicable.
- Title insurance fee.
- Other charges related to the loan, as outlined on the Loan Settlement Form (Form **DCRA-HA-22**).

Disbursements

The disbursements may include items such as:

- Origination fee.
- Interest adjustment.
- Alaska realty tax.
- Recording fees.
- Hazard/flood insurance reserves.
- Tax pro-ration.
- Survey.
- Appraisal.
- Title insurance.
- Deed preparation.
- Credit report.

A state certified warrant (check) for the loan principal along with the cashier's check from the borrower for the total closing costs will be deposited into a bank controlled checking account. Funds from this account will be disbursed according to the instructions in the closing documents.

Actions After Closing

When the Direct Loan is closed, the Division will:

- Secure title clearance.
- Record the closing documents with the title company.

The closing documents will be recorded simultaneously.

Construction Loans

An interim loan can be executed while construction is

taking place on residential units financed as new construction. At the completion of the construction phase, the permanent mortgage loan for new construction will be closed.

The interest rate for the interim loan during the construction phase will be the same as that established for the permanent loan.

12.
Closing - Indirect Loans

Closing

The closing for any Indirect Loan will be conducted by the participating private financial institution.

The borrower must be present to execute the closing documents. In cases where the borrower cannot be present because of inclement weather, distance, or other factors, an alternative arrangement will be made for closing.

Action After Closing

When the Indirect Loan is closed, the participating lender will:

- Secure title clearance.
- Record the closing documents with the title company and assign them to the Division.
- Prepare the loan package for submission to the Division for loan purchase.

13.
Loan Purchase Procedures - Indirect Loans

The Loan Purchase Agreement is an agreement between the Division and the lender in which the Division agrees to purchase Notes originated by the lender. Every Note purchased by the Division will be closed with a commitment contract executed by the Division in accordance with this program handbook, and fully executed Note Purchase Folder.

Non-Recourse Purchase. The Division will purchase Notes evidencing loans approved under the Housing Assistance Loan Program on a non-recourse basis, subject to the conditions of the Note Purchase Agreement.

Commitment Date. The commitment date to purchase the loan is the date which the completed loan file must be delivered to the Division's Anchorage office.

Purchase Date. The purchase date shall be that date upon which the participating private financial institution receives the funds after the Division approves the Note Purchase Folder. The Division will purchase only closed loans with fully completed documentation.

Purchase Price. The price paid by the Division for the mortgage loan Note will be equal to the face amount of the Note.

Loan Purchase Checklist

The Loan Purchase Checklist (Form **DCRA-HA-23A**) is used to assist lenders and the Division staff in making sure all necessary documents are executed for a loan purchase. Included on the checklist are the following documents:

- Promissory Note, which must bear the endorsement "Pay to the order of State of Alaska, Department of Community and Regional Affairs, Housing Assistance Division, Without Recourse." The Note must be an original.

- Waiver and Release of Liability of the Department, properly executed.

- Deed of Trust, along with the additional standard form rider when the security instrument covers property located in a planned unit development project.

- Assignment of Deed of Trust to "State of Alaska, Department of Community Affairs, Housing Assistance Division" -- duly recorded.

- Title Insurance Policy copy, including 100 and 116 endorsements to an ALTA policy.

- Survey, certified by a licensed surveyor or engineer if not included in the title policy.

- Inspection certificates by the seller, or other evidence of compliance with any condition on the appraisal report or the Division's commitment contract.

- Certification by the appraiser, in cases of recently completed property, that the improvements to the property have been completed in substantial compliance with the plans and specifications reviewed by the appraiser for the preparation of the appraisal report. Deviation from the plans and specifications must be explained in detail and the effect of such noncompliance on the original estimate of value must be reported. If the original appraiser is unavailable, the certification must be made by another appraiser acceptable to the Division. Minor items not affecting livability, whether on or off site, may be incomplete on delivery provided that the seller assumes the responsibility for establishing an escrow to guarantee timely completion.

- Photographs of completed property, if the property has been approved as proposed construction. Include

front and rear views, and a street scene with the property indicated with an arrow.

- Settlement sheets (copies).
- Hazard insurance policy or binder (copies).
- Flood insurance policy or binder (copies), if applicable.
- Security agreement (nonowner-occupied).
- Uniform Commercial Code financing statements (nonowner occupied).
- Certification that funds were used only for building materials and/or contract labor for new construction, renovation, and building materials loans (Form **DCRA-HA-35C**).

Loan Purchase

Participating lenders must submit a completed Note Purchase Folder (Form **DCRA-HA-23**) to the Housing Assistance Division for review and approval before an Indirect Loan is accepted. The following steps can occur:

Loan Purchase Rejection. If the Division finds the loan unacceptable, it will so advise the participating lender in writing of the reasons for the rejection.

Loan Purchase Approval. If the Division accepts the loan, it will:

- Issue a loan purchase approval letter indicating that funds for the purchase have been ordered and when they can be expected.
- Complete and execute a **Loan Purchase Voucher** (Form **DCRA-HA-16**) and forward it to the Administrative Services Division of the Department of Community and Regional Affairs for transmittal to the Department of Revenue, Housing Assistance Loan Account.

IX. PURCHASE PROCEDURES

Requests for funds must be accompanied by the documents listed on the appropriate checklist based on loan type (Exhibits F, G, H and I) in the order shown.

A. Standard documents for all loan types:

1. Original Note and one copy.

2. Verification that Assignment of Deed of Trust to Seafirst has been recorded or sent for recording (must be obtained prior to release of funds). Certified copy of documents going for recording (with copies of signatures) should be in file.

3. All taxes due, prior to or within 15 days after assignment of the loan to Seafirst, shall be paid by the broker/closer in closing, thereby holding Seafirst harmless against any and all liability, cost, damage or expense that may be suffered or incurred by reason of any failure to pay such taxes.

4. Any impound advances and/or prepaid interest buydown fees shall be net funded at the time the loan is purchased. Impounds must be collected in an amount sufficient to pay the taxes and insurance when they are next due.

5. Tax Service must be ordered and paid for by closing agent. Use Transamerica Tax Service in California, Colorado and Utah; Realty Tax (Ticor) in all other states. On Seconds, and nonreserve loans, request type "B" Service (delinquency), on all others request type "C" (tax reserve).

   See Exhibit F (pg. 1) attached for Tax Schedule by state and Exhibit F (pg. 2 & 3) for examples of the contracts with Ticor and Transamerica.

6. HUD-1 or estimated costs (original within three days).

7. Truth-in-Lending Disclosure with signatures and an Itemization of the Prepaid Finance Charge. Notice of Right to Cancel and Acknowledgement of Non-Rescission, if appropriate.

8. Binder or original hazard policy with first year premium paid and Lender's Loss Payable Endorsement. Hazard policy must have coverage equal to loan amount or have 100% replacement cost coverage for the structure. The mortgagor's last name must be correct, and if possible, the whole names should read the same as the Deed of Trust. Property address must read the same as Deed of Trust. Loss Payee may read Seafirst Mortgage Corporation and/or assigns, or originating lender with copy of change to agent.

9. Flood insurance determination and policy, if flood insurance is required. (Policy may follow in 15 days if copy of application for insurance is in file).

10. Preliminary Title Report: Check the property address if shown on the sketch and legal against the Deed of Trust for accuracy.

11. Purchase Agreement/Deposit Receipt: If the loan is not insured, check to see that any special agreements between buyer and seller regarding payment of closing costs agree with final closing statement.

12. Appraisal: Applicable appraisal must be in file, with evidence that any conditions set by the appraiser have been met. Conventional appraisal (or completion certification) must be no more than 90 days old at time of closing.

13. Letter to Borrower advising them of sale of the loan. Not required on concurrent fundings.

14. All forms required for compliance with state and federal regulations, i.e., good faith, fair lending, truth-in-lending, Initial ARM Disclosure, etc.

15. Original, signed, handwritten application.

B. Government Loans:

1. The credit package must be included in the file consisting of the same documents listed in Section C, 2 (A-E) except the Underwriters Loan Analysis Form.

2. A copy of the LGC/MIC request must be in file.

3. Certificate of Loan Disbursement (VA-1876) or (VA 1820) Report of Home Loan Processed on Automatic Basis.

4. Firm Commitment - Check percent of entitlement on VA loans to be sure it is sufficient for FNMA/GNMA requirements. File must contain documentation to satisfy any conditions indicated on the commitment.

5. Photos are not required.

6. FHA 92080 - only on warehouse purchases.

C. Conventional Loans:

1. PMI Certificate if required.

2. Credit Package Accompanied by Completed Underwriter's Loan Analysis Form.

A. Application: The employment and deposit information is checked against the verifications of employment and deposit to make sure they are all in the file. Mortgage Ratings should be in the file for any other real estate indicated on the application. Application must be signed by Lender's representative above typed name on line provided. On balloon loans, the Comptroller's Notice must be attached (Balloon Info. Form GS6954).

B. Credit Report: Employment information and debts are checked against the application. All slow accounts, judgements and bankruptcies must have a written explanation in the file. If mortgage ratings on other property indicate late payments, obtain an explanation for this also. The Credit Report may be no more than 90 days old at time of closing.

C. Employment Verification: Verifications are checked against application to ensure they are all in the file. At least two years of employment must be verified and lapses of employment must have a letter of explanation. Tax returns must be signed by Borrower. Employment Verification must be no more than 90 days old at time of closing.

D. Deposit Verification: Verifications are checked against application to ensure that we have one for each account listed. Must be signed by depository, and no more than 90 days old at closing.

E. The file is checked to make sure that any miscellaneous items such as divorce finals, rental agreements, etc., are in the file when applicable.

F. If the loan is an ARM, the file should contain evidence that the Initial ARM disclosure appropriate for the particular ARM loan was provided to the borrower with the application or earlier. Acknowledgement from the borrower of the form will suffice, or a copy of the form used with an indication of date provided must be in the file.

DEED OF TRUST

AHFC
H.O.

THIS DEED OF TRUST is made this 19 ,

among the Trustor (herein "Borrower"),

(herein "Trustee"), and the Beneficiary

a corporation organized and existing under the laws of , whose address is (herein "Lender").

BORROWER, in consideration of the indebtedness herein recited and the trust herein created, irrevocably grants and conveys to Trustee, in trust, with power of sale, the following described property located in the

Recording District Judicial District,

State of Alaska.

which has the address of

[Street] [Borrower's Post Office Address, if Different] (herein "Property

[City] [State and Zip Code]
Address");

TOGETHER with all the improvements now or hereafter erected on the property, and all easements, rights, appurtenances, rents (subject however to the rights and authorities given herein to Lender to collect and apply such rents), royalties, mineral, oil and gas rights and profits, water, water rights, and water stock, and all fixtures now or hereafter attached to the property, all of which, including replacements and additions thereto, shall be deemed to be and remain a part of the property covered by this Deed of Trust; and all of the foregoing, together with said property (or the leasehold estate if this Deed of Trust is on a leasehold) are herein referred to as the "Property";

TO SECURE to Lender (a) the repayment of the indebtedness evidenced by Borrower's note dated (herein "Note"), in the principal sum of Dollars, with interest thereon, providing for monthly installments of principal and interest, with the balance of the indebtedness, if not sooner paid, due and payable on ; the payment of all other sums, with interest thereon, advanced in accordance herewith to protect the security of this Deed of Trust; and the performance of the covenants and agreements of Borrower herein contained; (b) the repayment of any future advances, with interest thereon, made to Borrower by Lender pursuant to paragraph 21 hereof (herein "Future Advances"); and (c) any amounts declared

owing under an Assistance Agreement dated 19 , and any successor agreements thereto.

Borrower covenants that Borrower is lawfully seised of the estate hereby conveyed and has the right to grant and convey the Property, that the Property is unencumbered, and that Borrower will warrant and defend generally the title to the Property against all claims and demands, subject to any declarations, easements or restrictions listed in a schedule of exceptions to coverage in any title insurance policy insuring Lender's interest in the Property.

UNIFORM COVENANTS. Borrower and Lender covenant and agree as follows:

1. **Payment of Principal and Interest.** Borrower shall promptly pay when due the principal of and interest on the indebtedness evidenced by the Note, prepayment and late charges as provided in the Note, and the principal of and interest on any Future Advances secured by this Deed of Trust.

2. **Funds for Taxes and Insurance.** Subject to applicable law or to a written waiver by Lender, Borrower shall pay to Lender on the day monthly installments of principal and interest are payable under the Note, until the Note is paid in full, a sum (herein "Funds") equal to one-twelfth of the yearly taxes and assessments which may attain priority over this Deed of Trust, and ground rents on the Property, if any, plus one-twelfth of yearly premium installments for hazard insurance, plus one-twelfth of yearly premium installments for mortgage insurance, if any, all as reasonably estimated initially and from time to time by Lender on the basis of assessments and bills and reasonable estimates thereof.

The Funds shall be held in an institution the deposits or accounts of which are insured or guaranteed by a Federal or state agency (including Lender if Lender is such an institution). Lender shall apply the Funds to pay said taxes, assessments, insurance premiums and ground rents. Lender may not charge for so holding and applying the Funds, analyzing said account or verifying and compiling said assessments and bills, unless Lender pays Borrower interest on the Funds, and applicable law permits Lender to make such a charge. Borrower and Lender may agree in writing at the time of execution of this Deed of Trust that interest on the Funds shall be paid to Borrower, and unless such agreement is made or applicable law requires such interest to be paid, Lender shall not be required to pay Borrower any interest or earnings on the Funds. Lender shall give to Borrower, without charge, an annual accounting of the Funds showing credits and debits to the Funds and the purpose for which each debit to the Funds was made. The Funds are pledged as additional security for the sums secured by this Deed of Trust.

If the amount of the Funds held by Lender, together with the future monthly installments of Funds payable prior to the due dates of taxes, assessments, insurance premiums and ground rents, shall exceed the amount required to pay said taxes, assessments, insurance premiums and ground rents as they fall due, such excess shall be, at the Borrower's option, either promptly repaid to Borrower or credited to Borrower on monthly installments of Funds. If the amount of the Funds held by Lender shall not be sufficient to pay taxes, assessments, insurance premiums and ground rents as they fall due, Borrower shall pay to Lender any amount necessary to make up the deficiency within 30 days from the date notice is mailed by Lender to Borrower requesting payment thereof.

Upon payment in full of all sums secured by this Deed of Trust, Lender shall promptly refund to Borrower any Funds held by Lender. If under paragraph 18 hereof the Property is sold or the Property is otherwise acquired by Lender, Lender shall apply, no later than immediately prior to the sale of the Property or its acquisition by Lender, any Funds held by Lender at the time of application as a credit against the sums secured by this Deed of Trust.

3. **Application of Payments.** Unless applicable law provides otherwise, all payments received by Lender under the Note and paragraphs 1 and 2 hereof shall by applied by Lender first in payment of amounts payable to Lender by Borrower under paragraph 2 hereof, then to interest payable on the Note, then to the principal of the Note, and then to interest and principal on any Future Advances.

4. **Charges; Liens.** Borrower shall pay all taxes, assessments and other charges, fines and impositions attributable to the Property which may attain a priority over this Deed of Trust, and leasehold payments or ground rents, if any, in the manner provided under paragraph 2 hereof or, if not paid in such manner, by Borrower making payment, when due, directly to the payee thereof. Borrower shall promptly furnish to Lender all notices of amounts due under this paragraph, and in the event Borrower shall make payment directly, Borrower shall promptly furnish to Lender receipts evidencing such payments. Borrower shall promptly discharge any lien which has priority over this Deed of Trust; provided, that Borrower shall not be required to discharge any such lien so long as Borrower shall agree in writing to the payment of the obligation secured by such lien in a manner acceptable to Lender, or shall in good faith contest such lien by, or defend enforcement of such lien in legal proceedings which operate to prevent the enforcement of the lien or forfeiture of the Property or any part thereof.

5. **Hazard Insurance.** Borrower shall keep the improvements now existing or hereafter erected on the Property insured against loss by fire, hazards included within the term "extended coverage", and such other hazards as Lender may require and in such amounts and for such periods as Lender may require; provided, that Lender shall not require that the amount of such coverage exceed that amount of coverage required to pay the sums secured by this Deed of Trust.

The insurance carrier providing the insurance shall be chosen by Borrower subject to approval by Lender; provided, that such approval shall not be unreasonably withheld. All premiums on insurance policies shall be paid in the manner provided under paragraph 2 hereof or, if not paid in such manner, by Borrower making payment, when due, directly to the insurance carrier.

All insurance policies and renewals thereof shall be in form acceptable to Lender and shall include a standard mortgage clause in favor of and in form acceptable to Lender. Lender shall have the right to hold the policies and renewals thereof, and Borrower shall promptly furnish to Lender all renewal notices and all receipts of paid premiums. In the event of loss, Borrower shall give prompt notice to the insurance carrier and Lender. Lender may make proof of loss if not made promptly by Borrower.

Unless Lender and Borrower otherwise agree in writing, insurance proceeds shall be applied to restoration or repair of the Property damaged, provided such restoration or repair is economically feasible and the security of this Deed of Trust is not thereby impaired. If such restoration or repair is not economically feasible or if the security of this Deed of Trust would be impaired, the insurance proceeds shall be applied to the sums secured by this Deed of Trust, with the excess, if any, paid to Borrower. If the Property is abandoned by Borrower, or if Borrower fails to respond to Lender within 30 days from the date notice is mailed by Lender to Borrower that the insurance carrier offers to settle a claim for insurance benefits, Lender is authorized to collect and apply the insurance proceeds at Lender's option either to restoration or repair of the Property or to the sums secured by this Deed of Trust.

Unless Lender and Borrower otherwise agree in writing, any such application of proceeds to principal shall not extend or postpone the due date of the monthly installments referred to in paragraphs 1 and 2 hereof or change the amount of such installments. If under paragraph 18 hereof the Property is acquired by Lender, all right, title and interest of Borrower in and to any insurance policies and in and to the proceeds thereof resulting from damage to the Property prior to the sale or acquisition shall pass to Lender to the extent of the sums secured by this Deed of Trust immediately prior to such sale or acquisition.

6. **Preservation and Maintenance of Property; Leaseholds; Condominiums; Planned Unit Developments.** Borrower shall keep the Property in good repair and shall not commit waste or permit impairment or deterioration of the Property and shall comply with the provisions of any lease if this Deed of Trust is on a leasehold. If this Deed of Trust is on a unit in a condominium or a planned unit development, Borrower shall perform all of Borrower's obligations under the declaration or covenants creating or governing the condominium or planned unit development, the by-laws and regulations of the condominium or planned unit development, and constituent documents. If a condominium or planned unit development rider is executed by Borrower and recorded together with this Deed of Trust, the covenants and agreements of such rider shall be incorporated into and shall amend and supplement the covenants and agreements of this Deed of Trust as if the rider were a part hereof.

7. **Protection of Lender's Security.** If Borrower fails to perform the covenants and agreements contained in this Deed of Trust, or if any action or proceeding is commenced which materially affects Lender's interest in the Property, including, but not limited to, eminent domain, insolvency, code enforcement, or arrangements or proceedings involving a bankrupt or decedent, then Lender at Lender's option, upon notice to Borrower, may make such appearances, disburse such sums and take such action as is necessary to protect Lender's interest, including, but not limited to, disbursement of reasonable attorney's fees and entry upon the Property to make repairs. If Lender required mortgage insurance as a condition of making the loan secured by this Deed of Trust, Borrower shall pay the premiums required to maintain such insurance in effect until such time as the requirements for such insurance terminates in accordance with Borrower's and Lender's written agreement or applicable law. Borrower shall pay the amount of all mortgage insurance premiums in the manner provided under paragraph 2 hereof.

Any amounts disbursed by Lender pursuant to this paragraph 7, with interest thereon, shall become additional indebtedness of Borrower secured by this Deed of Trust. Unless Borrower and Lender agree to other terms of payment, such amounts shall be payable upon notice from Lender to Borrower requesting payment thereof, and shall bear interest from the date of disbursement at the rate payable from time to time on outstanding principal under the Note unless payment of interest at such rate would be contrary to applicable law, in which event such amounts shall bear interest at the highest rate permissible under applicable law. Nothing contained in this paragraph 7 shall require Lender to incur any expense or take any action hereunder.

8. **Inspection.** Lender may make or cause to be made reasonable entries upon and inspections

of the Property, provided that Lender shall give Borrower notice prior to any such inspection specifying reasonable cause therefore related to Lender's interest in the Property.

9. **Condemnation.** The proceeds of any award or claim for damages, direct or consequential, in connection with any condemnation or other taking of the Property, or part thereof, or for conveyance in lieu of condemnation, are hereby assigned and shall be paid to Lender.

In the event of a total taking of the Property, the proceeds shall be applied to the sums secured by this Deed of Trust, with the excess, if any, paid to Borrower. In the event of a partial taking of the Property, unless Borrower and Lender otherwise agree in writing, there shall be applied to the sums secured by this Deed of Trust such proportion of the proceeds as is equal to that proportion which the amount of the sums secured by this Deed of Trust immediately prior to the date of taking bears to the fair market value of the Property immediately prior to the date of taking, with the balance of the proceeds paid to Borrower.

If the Property is abandoned by Borrower, or if, after notice by Lender to Borrower that the condemnor offers to make an award or settle a claim for damages, Borrower fails to respond to Lender within 30 days after the date such notice is mailed, Lender is authorized to collect and apply the proceeds, at Lender's option, either to restoration or repair of the Property or to the sums secured by this Deed of Trust.

Unless Lender and Borrower otherwise agree in writing, any such application of proceeds to principal shall not extend or postpone the due date of the monthly installments referred to in paragraphs 1 and 2 hereof or change the amount of such installments.

10. **Borrower Not Released.** Extension of the time for payment or modification of amortization of the sums secured by this Deed of Trust granted by Lender to any successor in interest of Borrower shall not operate to release, in any manner, the liability of the original Borrower and Borrower's successors in interest. Lender shall not be required to commence proceedings against such successor or refuse to extend time for payment or otherwise modify amortization of the sums secured by this Deed of Trust by reason of any demand made by the original Borrower and Borrower's successors in interest.

11. **Forbearance by Lender Not a Waiver.** Any forbearance by Lender in exercising any right or remedy hereunder, or otherwise afforded by applicable law, shall not be a waiver of or preclude the exercise of any such right or remedy. The procurement of insurance or the payment of taxes or other liens or charges by Lender shall not be a waiver of Lender's right to accelerate the maturity of the indebtedness secured by this Deed of Trust.

12. **Remedies Cumulative.** All remedies provided in this Deed of Trust are distinct and cumulative to any other right or remedy under this Deed of Trust or afforded by law or equity, and may be exercised concurrently, independently or successively.

13. **Successors and Assigns Bound; Joint and Several Liability; Captions.** The covenants and agreements herein contained shall bind, and the rights hereunder shall inure to, the respective successors and assigns of Lender and Borrower, subject to the provisions of paragraph 17 hereof. All covenants and agreements of Borrower shall be joint and several. The captions and headings of the paragraphs of this Deed of Trust are for convenience only and are not be be used to interpret or define the provisions hereof.

14. **Notice.** Except for any notice required under applicable law to be given in another manner, (a) any notice to Borrower provided for in this Deed of Trust shall be given by mailing such notice by certified mail addressed to Borrower at the Property Address or at such other address as Borrower may designate by notice to Lender as provided herein, and (b) any notice to Lender shall be given by certified mail, return receipt requested, to Lender's address stated herein or to such other address as Lender may designate by notice to Borrower as provided herein. Any notice provided for in this Deed of Trust shall be deemed to have been given to Borrower or Lender when given in the manner designated herein.

15. **Uniform Deed of Trust; Governing Law; Severability.** This form of deed of trust combines uniform covenants for national use and non-uniform covenants with limited variations by jurisdiction to constitute a uniform security instrument covering real property. This Deed of Trust shall be governed by the law of the jurisdiction in which the Property is located. In the event that any provision or clause of this Deed of Trust or the Note conflicts with applicable law, such conflict shall not affect other provisions of this Deed of Trust or the Note which can be given effect without the conflicting provision, and to this end the provisions of the Deed of Trust and the Note are declared to be severable.

16. **Borrower's Copy.** Borrower shall be furnished a conformed copy of the Note and of this Deed of Trust at the time of execution or after recordation hereof.

17. **Transfer of the Property.** Lender may, at Lender's option, declare all the sums secured by this Deed of Trust to be immediately due and payable if either (1) the property ceases to be

the principal residence of the Borrower, or (2) if all or any part of the Property or an interest therein is sold or transferred by Borrower without Lender's prior written consent excluding (a) the creation of a lien or encumbrance subordinate to this Deed of Trust, (b) the creation of a purchase money security interest for household appliances, (c) a transfer by devise, descent or by operation of law upon the death of a joint tenant or (d) the grant of any leasehold interest of three years or less not containing an option to purchase.

If Lender exercises such option to accelerate, Lender shall mail Borrower notice of acceleration in accordance with paragraph 12 hereof. Such notice shall provide a period of not less than

30 days from the date the notice is mailed within which Borrower may pay the sums declared due. If Borrower fails to pay such sums prior to the expiration of such period, Lender may without further notice or demand on Borrower, invoke any remedies permitted by paragraph 18 hereof.

NON-UNIFORM COVENANTS. Borrower and Lender further covenant and agree as follows:

18. **Acceleration; Remedies.** Except as provided in paragraph 17 hereof, upon Borrower's breach of any covenant or agreement of Borrower in this Deed of Trust, including the covenants to pay when due any sums secured by this Deed of Trust, Lender prior to acceleration shall mail notice to Borrower as provided in paragraph 14 hereof specifying: (1) the breach; (2) the action required to cure such breach; (3) a date, not less than 30 days from the date the notice is mailed to Borrower, by which such breach must be cured; and (4) that failure to cure such breach on or before the date specified in the notice may result in acceleration of the sums secured by this Deed of Trust and sale of the Property. The notice shall further inform Borrower of the right to reinstate after acceleration and the right to bring a court action to assert the non-existence of a default or any other defense of Borrower to acceleration and sale. If the breach is not cured on or before the date specified in the notice, Lender at Lender's option may declare all of the sums secured by this Deed of Trust to be immediately due and payable without further demand, and those remedies permitted by applicable law may be invoked. Lender shall be entitled to collect all reasonable costs and expenses incurred in pursuing the remedies provided in this paragraph 18, including, but not limited to, reasonable attorney's fees.

If the power of sale is invoked, Trustee shall execute a written notice of the occurrence of an event of default and of the election to cause the Property to be sold and shall record such notice in each Recording District in which the Property or some part thereof is located. Lender or Trustee shall mail copies of such notice to the persons and in the manner prescribed by applicable law. Trustee shall give public notice of sale to the persons and in the manner prescribed by applicable law. After the lapse of such time as may be required by applicable law, Trustee, without demand on Borrower, shall sell the Property at public auction to the highest bidder at the time and place and under the terms designated in the notice of sale in one or more parcels and in such order as Trustee may determine. Trustee may postpone sale of all or any parcel of the Property by public announcement at the time and place of any previously scheduled sale. Lender or Lender's designee may purchase the Property at any sale.

Trustee shall deliver to the purchaser Trustee's deed conveying the Property so sold without any covenant or warranty, expressed or implied. The recitals in the Trustee's deed shall be prima facie evidence of the truth of the statements made therein. Trustee shall apply the proceeds of the sale in the following order: (a) to all reasonable costs and expenses of the sale, including but not limited to, reasonable Trustee's and attorney's fees and costs of title evidence; (b) to all sums secured by this Deed of Trust; and (c) the excess, if any, to the person or persons legally entitled thereto.

19. **Borrower's Right to Reinstate.** Notwithstanding Lender's acceleration of the sums secured by this Deed of Trust, Borrower shall have the right to have any proceedings begun by Lender to enforce this Deed of Trust discontinued at any time prior to the earlier to occur of (I) the sale of the Property pursuant to the power of sale contained in this Deed of Trust or (II) entry of a judgment enforcing this Deed of Trust if: (a) Borrower pays Lender all sums which would be then due under this Deed of Trust, the Note and notes securing Future Advances, if any, had no acceleration occurred; (b) Borrower cures all breaches of any other covenants or agreements of Borrower contained in this Deed of Trust; (c) Borrower pays all reasonable expenses incurred by Trustee in enforcing the covenants and agreements of Borrower contained in this Deed of Trust and in enforcing Trustee's remedies as provided in paragraph 18 hereof, including, but not limited to, reasonable attorney's fees; and (d) Borrower takes such action as Lender may reasonably require to assure that the lien of this Deed of Trust, Lender's interest in the Property and Borrower's obligation to pay the sums secured by this Deed of Trust shall continue unimpaired. Upon such payment and cure by Borrower, this Deed of Trust and the obligations secured hereby shall remain in full force and effect as if no acceleration had occurred.

20. **Assignment of Rents; Appointment of Receiver; Lender in Possession.** As additional security hereunder, Borrower hereby assigns to Lender the rents of the Property, provided that Borrower shall, prior to acceleration under paragraph 18 hereof or abandonment of the Property, have the right to collect and retain such rents as they become due and payable.

Upon acceleration under paragraph 18 hereof or abandonment of the Property, Lender, in person, by agent or by judicially appointed receiver, shall be entitled to enter upon, take possession of and manage the Property and to collect the rents of the Property including those past due. All rents collected by Lender or the receiver shall be applied first to payment of the costs of management of the Property and collection of rents, including, but not limited to, receiver's fees, premiums on receiver's bonds and reasonable attorney's fees, and then to the sums secured by this Deed of Trust. Lender and the receiver shall be liable to account only for those rents actually received.

21. **Future Advances.** Upon request of Borrower, Lender, at Lender's option prior to full reconveyance of the Property by Trustee to Borrower, may make Future Advances to Borrower. Such Future Advances, with interest thereon, shall be secured by this Deed of Trust when evidenced by promissory notes saying that said notes are secured hereby.

22. **Reconveyance.** Upon payment of all sums secured by this Deed of Trust, Lender shall request Trustee to reconvey the Property and shall surrender this Deed of Trust and all notes evidencing indebtedness secured by this Deed of Trust to Trustee. Trustee shall reconvey the Property without warranty and without charge to the person or persons legally entitled thereto. Such person or persons shall pay all costs of recordation, if any.

23. **Substitute Trustee.** Lender, at Lender's option, may from time to time remove Trustee and appoint a successor trustee to any Trustee appointed hereunder. Without conveyance of the Property, the successor trustee shall succeed to all the title, power and duties conferred upon the Trustee herein and by applicable law.

IN WITNESS WHEREOF, Borrower has executed this Deed of Trust.

AMB LOAN NO._____

DEED OF TRUST

THIS DEED OF TRUST ("Security Instrument") is made on ....., 19..... The Trustor is ..... ("Borrower"). The trustee is ..... ("Trustee"). The beneficiary is **ALASKA MUTUAL BANK,** which is organized and existing under the laws of **STATE OF ALASKA,** and whose address is **601 West Fifth Avenue, Anchorage, Alaska 99501** ("Lender"). Borrower owes Lender the principal sum of ..... Dollars (U.S. $.....). This debt is evidenced by Borrower's note dated the same date as this Security Instrument ("Note"), which provides for monthly payments, with the full debt, if not paid earlier, due and payable on ..... This Security Instrument secures to Lender: (a) the repayment of the debt evidenced by the Note, with interest, and all renewals, extensions and modifications; (b) the payment of all other sums, with interest, advanced under paragraph 7 to protect the security of this Security Instrument; and (c) the performance of Borrower's covenants and agreements under this Security Instrument and the Note. For this purpose, Borrower irrevocably grants and conveys to Trustee, in trust, with power of sale, the following described property located in the ..... Recording District, ... Judicial District, Alaska:

which has the address of ....., ...
[Street] [Borrower's Post Office Address, if Different]

....., Alaska ..... ("Property Address");
[City] [Zip Code]

TOGETHER WITH all the improvements now or hereafter erected on the property, and all easements, rights, appurtenances, rents, royalties, mineral, oil and gas rights and profits, water rights and stock and all fixtures now or hereafter a part of the property. All replacements and additions shall also be covered by this Security Instrument. All of the foregoing is referred to in this Security Instrument as the "Property."

BORROWER COVENANTS that Borrower is lawfully seised of the estate hereby conveyed and has the right to grant and convey the Property and that the Property is unencumbered, except for encumbrances of record. Borrower warrants and will defend generally the title to the Property against all claims and demands, subject to any encumbrances of record.

THIS SECURITY INSTRUMENT combines uniform covenants for national use and non-uniform covenants with limited variations by jurisdiction to constitute a uniform security instrument covering real property.

UNIFORM COVENANTS. Borrower and Lender covenant and agree as follows:

1. Payment of Principal and Interest; Prepayment and Late Charges. Borrower shall promptly pay when due the principal of and interest on the debt evidenced by the Note and any prepayment and late charges due under the Note.

2. Funds for Taxes and Insurance. Subject to applicable law or to a written waiver by Lender, Borrower shall pay to Lender on the day monthly payments are due under the Note, until the Note is paid in full, a sum ("Funds") equal to one-twelfth of: (a) yearly taxes and assessments which may attain priority over this Security Instrument; (b) yearly leasehold payments or ground rents on the Property, if any; (c) yearly hazard insurance premiums; and (d) yearly mortgage insurance premiums, if any. These items are called "escrow items." Lender may estimate the Funds due on the basis of current data and reasonable estimates of future escrow items.

The Funds shall be held in an institution the deposits or accounts of which are insured or guaranteed by a federal or state agency (including Lender if Lender is such an institution). Lender shall apply the Funds to pay the escrow items. Lender may not charge for holding and applying the Funds, analyzing the account or verifying the escrow items, unless Lender pays Borrower interest on the Funds and applicable law permits Lender to make such a charge. Borrower and Lender may agree in writing that interest shall be paid on the Funds. Unless an agreement is made or applicable law requires interest to be paid, Lender shall not be required to pay Borrower any interest or earnings on the Funds. Lender shall give to Borrower, without charge, an annual accounting of the Funds showing credits and debits to the Funds and the purpose for which each debit to the Funds was made. The Funds are pledged as additional security for the sums secured by this Security Instrument.

If the amount of the Funds held by Lender, together with the future monthly payments of Funds payable prior to the due dates of the escrow items, shall exceed the amount required to pay the escrow items when due, the excess shall be, at Borrower's option, either promptly repaid to Borrower or credited to Borrower on monthly payments of Funds. If the amount of the Funds held by Lender is not sufficient to pay the escrow items when due, Borrower shall pay to Lender any amount necessary to make up the deficiency in one or more payments as required by Lender.

Upon payment in full of all sums secured by this Security Instrument, Lender shall promptly refund to Borrower any Funds held by Lender. If under paragraph 19 the Property is sold or acquired by Lender, Lender shall apply, no later than immediately prior to the sale of the Property or its acquisition by Lender, any Funds held by Lender at the time of application as a credit against the sums secured by this Security Instrument.

3. Application of Payments. Unless applicable law provides otherwise, all payments received by Lender under paragraphs 1 and 2 shall be applied: first, to late charges due under the Note; second, to prepayment charges due under the Note; third, to amounts payable under paragraph 2; fourth, to interest due; and last, to principal due.

4. Charges; Liens. Borrower shall pay all taxes, assessments, charges, fines and impositions attributable to the Property which may attain priority over this Security Instrument, and leasehold payments or ground rents, if any. Borrower shall pay these obligations in the manner provided in paragraph 2, or if not paid in that manner, Borrower shall pay them on time directly to the person owed payment. Borrower shall promptly furnish to Lender all notices of amounts to be paid under this paragraph. If Borrower makes these payments directly, Borrower shall promptly furnish to Lender receipts evidencing the payments.

Borrower shall promptly discharge any lien which has priority over this Security Instrument unless Borrower: (a) agrees in writing to the payment of the obligation secured by the lien in a manner acceptable to Lender; (b) contests in good faith the lien by, or defends against enforcement of the lien in, legal proceedings which in the Lender's opinion operate to prevent the enforcement of the lien or forfeiture of any part of the Property; or (c) secures from the holder of the lien an agreement satisfactory to Lender subordinating the lien to this Security Instrument. If Lender determines that any part of the Property is subject to a lien which may attain priority over this Security Instrument, Lender may give Borrower a notice identifying the lien. Borrower shall satisfy the lien or take one or more of the actions set forth above within 10 days of the giving of notice.

5. Hazard Insurance. Borrower shall keep the improvements now existing or hereafter erected on the Property insured against loss by fire, hazards included within the term "extended coverage" and any other hazards for which Lender requires insurance. This insurance shall be maintained in the amounts and for the periods that Lender requires. The insurance carrier providing the insurance shall be chosen by Borrower subject to Lender's approval which shall not be unreasonably withheld.

All insurance policies and renewals shall be acceptable to Lender and shall include a standard mortgage clause. Lender shall have the right to hold the policies and renewals. If Lender requires, Borrower shall promptly give to Lender all receipts of paid premiums and renewal notices. In the event of loss, Borrower shall give prompt notice to the insurance carrier and Lender. Lender may make proof of loss if not made promptly by Borrower.

Unless Lender and Borrower otherwise agree in writing, insurance proceeds shall be applied to restoration or repair of the Property damaged, if the restoration or repair is economically feasible and Lender's security is not lessened. If the restoration or repair is not economically feasible or Lender's security would be lessened, the insurance proceeds shall be applied to the sums secured by this Security Instrument, whether or not then due, with any excess paid to Borrower. If Borrower abandons the Property, or does not answer within 30 days a notice from Lender that the insurance carrier has offered to settle a claim, then Lender may collect the insurance proceeds. Lender may use the proceeds to repair or restore the Property or to pay sums secured by this Security Instrument, whether or not then due. The 30-day period will begin when the notice is given.

Unless Lender and Borrower otherwise agree in writing, any application of proceeds to principal shall not extend or postpone the due date of the monthly payments referred to in paragraphs 1 and 2 or change the amount of the payments. If under paragraph 19 the Property is acquired by Lender, Borrower's right to any insurance policies and proceeds resulting from damage to the Property prior to the acquisition shall pass to Lender to the extent of the sums secured by this Security Instrument immediately prior to the acquisition.

6. Preservation and Maintenance of Property; Leaseholds. Borrower shall not destroy, damage or substantially change the Property, allow the Property to deteriorate or commit waste. If this Security Instrument is on a leasehold, Borrower shall comply with the provisions of the lease, and if Borrower acquires fee title to the Property, the leasehold and fee title shall not merge unless Lender agrees to the merger in writing.

7. Protection of Lender's Rights in the Property; Mortgage Insurance. If Borrower fails to perform the covenants and agreements contained in this Security Instrument, or there is a legal proceeding that may significantly affect Lender's rights in the Property (such as a proceeding in bankruptcy, probate, for condemnation or to enforce laws or regulations), then Lender may do and pay for whatever is necessary to protect the value of the Property and Lender's rights in the Property. Lender's actions may include paying any sums secured by a lien which has priority over this Security Instrument, appearing in court, paying reasonable attorneys' fees and entering on the Property to make repairs. Although Lender may take action under this paragraph 7, Lender does not have to do so.

Any amounts disbursed by Lender under this paragraph 7 shall become additional debt of Borrower secured by this Security Instrument. Unless Borrower and Lender agree to other terms of payment, these amounts shall bear interest from the date of disbursement at the Note rate and shall be payable, with interest, upon notice from Lender to Borrower requesting payment.

(Space Above This Line For Recording Data)

AMB LOAN NO._____

DEED OF TRUST

THIS DEED OF TRUST ("Security Instrument") is made on ....., 19..... The Trustor is ..... ("Borrower"). The trustee is ..... ("Trustee"). The beneficiary is **ALASKA MUTUAL BANK,** which is organized and existing under the laws of **STATE OF ALASKA,** and whose address is **601 West Fifth Avenue, Anchorage, Alaska 99501** ("Lender"). Borrower owes Lender the principal sum of ..... Dollars (U.S. $.....). This debt is evidenced by Borrower's note dated the same date as this Security Instrument ("Note"), which provides for monthly payments, with the full debt, if not paid earlier, due and payable on ..... This Security Instrument secures to Lender: (a) the repayment of the debt evidenced by the Note, with interest, and all renewals, extensions and modifications; (b) the payment of all other sums, with interest, advanced under paragraph 7 to protect the security of this Security Instrument; and (c) the performance of Borrower's covenants and agreements under this Security Instrument and the Note. For this purpose, Borrower irrevocably grants and conveys to Trustee, in trust, with power of sale, the following described property located in the ..... Recording District, ... Judicial District, Alaska:

which has the address of ....., ...
[Street] [Borrower's Post Office Address, if Different]

....., Alaska ..... ("Property Address");
[City] [Zip Code]

TOGETHER WITH all the improvements now or hereafter erected on the property, and all easements, rights, appurtenances, rents, royalties, mineral, oil and gas rights and profits, water rights and stock and all fixtures now or hereafter a part of the property. All replacements and additions shall also be covered by this Security Instrument. All of the foregoing is referred to in this Security Instrument as the "Property."

BORROWER COVENANTS that Borrower is lawfully seised of the estate hereby conveyed and has the right to grant and convey the Property and that the Property is unencumbered, except for encumbrances of record. Borrower warrants and will defend generally the title to the Property against all claims and demands, subject to any encumbrances of record.

THIS SECURITY INSTRUMENT combines uniform covenants for national use and non-uniform covenants with limited variations by jurisdiction to constitute a uniform security instrument covering real property.

UNIFORM COVENANTS. Borrower and Lender covenant and agree as follows:

1. Payment of Principal and Interest; Prepayment and Late Charges. Borrower shall promptly pay when due the principal of and interest on the debt evidenced by the Note and any prepayment and late charges due under the Note.

2. Funds for Taxes and Insurance. Subject to applicable law or to a written waiver by Lender, Borrower shall pay to Lender on the day monthly payments are due under the Note, until the Note is paid in full, a sum ("Funds") equal to one-twelfth of: (a) yearly taxes and assessments which may attain priority over this Security Instrument; (b) yearly leasehold payments or ground rents on the Property, if any; (c) yearly hazard insurance premiums; and (d) yearly mortgage insurance premiums, if any. These items are called "escrow items." Lender may estimate the Funds due on the basis of current data and reasonable estimates of future escrow items.

The Funds shall be held in an institution the deposits or accounts of which are insured or guaranteed by a federal or state agency (including Lender if Lender is such an institution). Lender shall apply the Funds to pay the escrow items. Lender may not charge for holding and applying the Funds, analyzing the account or verifying the escrow items, unless Lender pays Borrower interest on the Funds and applicable law permits Lender to make such a charge. Borrower and Lender may agree in writing that interest shall be paid on the Funds. Unless an agreement is made or applicable law requires interest to be paid, Lender shall not be required to pay Borrower any interest or earnings on the Funds. Lender shall give to Borrower, without charge, an annual accounting of the Funds showing credits and debits to the Funds and the purpose for which each debit to the Funds was made. The Funds are pledged as additional security for the sums secured by this Security Instrument.

If the amount of the Funds held by Lender, together with the future monthly payments of Funds payable prior to the due dates of the escrow items, shall exceed the amount required to pay the escrow items when due, the excess shall be, at Borrower's option, either promptly repaid to Borrower or credited to Borrower on monthly payments of Funds. If the amount of the Funds held by Lender is not sufficient to pay the escrow items when due, Borrower shall pay to Lender any amount necessary to make up the deficiency in one or more payments as required by Lender.

Upon payment in full of all sums secured by this Security Instrument, Lender shall promptly refund to Borrower any Funds held by Lender. If under paragraph 19 the Property is sold or acquired by Lender, Lender shall apply, no later than immediately prior to the sale of the Property or its acquisition by Lender, any Funds held by Lender at the time of application as a credit against the sums secured by this Security Instrument.

3. Application of Payments. Unless applicable law provides otherwise, all payments received by Lender under paragraphs 1 and 2 shall be applied: first, to late charges due under the Note; second, to prepayment charges due under the Note; third, to amounts payable under paragraph 2; fourth, to interest due; and last, to principal due.

4. Charges; Liens. Borrower shall pay all taxes, assessments, charges, fines and impositions attributable to the Property which may attain priority over this Security Instrument, and leasehold payments or ground rents, if any. Borrower shall pay these obligations in the manner provided in paragraph 2, or if not paid in that manner, Borrower shall pay them on time directly to the person owed payment. Borrower shall promptly furnish to Lender all notices of amounts to be paid under this paragraph. If Borrower makes these payments directly, Borrower shall promptly furnish to Lender receipts evidencing the payments.

Borrower shall promptly discharge any lien which has priority over this Security Instrument unless Borrower: (a) agrees in writing to the payment of the obligation secured by the lien in a manner acceptable to Lender; (b) contests in good faith the lien by, or defends against enforcement of the lien in, legal proceedings which in the Lender's opinion operate to prevent the enforcement of the lien or forfeiture of any part of the Property; or (c) secures from the holder of the lien an agreement satisfactory to Lender subordinating the lien to this Security Instrument. If Lender determines that any part of the Property is subject to a lien which may attain priority over this Security Instrument, Lender may give Borrower a notice identifying the lien. Borrower shall satisfy the lien or take one or more of the actions set forth above within 10 days of the giving of notice.

5. Hazard Insurance. Borrower shall keep the improvements now existing or hereafter erected on the Property insured against loss by fire, hazards included within the term "extended coverage" and any other hazards for which Lender requires insurance. This insurance shall be maintained in the amounts and for the periods that Lender requires. The insurance carrier providing the insurance shall be chosen by Borrower subject to Lender's approval which shall not be unreasonably withheld.

All insurance policies and renewals shall be acceptable to Lender and shall include a standard mortgage clause. Lender shall have the right to hold the policies and renewals. If Lender requires, Borrower shall promptly give to Lender all receipts of paid premiums and renewal notices. In the event of loss, Borrower shall give prompt notice to the insurance carrier and Lender. Lender may make proof of loss if not made promptly by Borrower.

Unless Lender and Borrower otherwise agree in writing, insurance proceeds shall be applied to restoration or repair of the Property damaged, if the restoration or repair is economically feasible and Lender's security is not lessened. If the restoration or repair is not economically feasible or Lender's security would be lessened, the insurance proceeds shall be applied to the sums secured by this Security Instrument, whether or not then due, with any excess paid to Borrower. If Borrower abandons the Property, or does not answer within 30 days a notice from Lender that the insurance carrier has offered to settle a claim, then Lender may collect the insurance proceeds. Lender may use the proceeds to repair or restore the Property or to pay sums secured by this Security Instrument, whether or not then due. The 30-day period will begin when the notice is given.

Unless Lender and Borrower otherwise agree in writing, any application of proceeds to principal shall not extend or postpone the due date of the monthly payments referred to in paragraphs 1 and 2 or change the amount of the payments. If under paragraph 19 the Property is acquired by Lender, Borrower's right to any insurance policies and proceeds resulting from damage to the Property prior to the acquisition shall pass to Lender to the extent of the sums secured by this Security Instrument immediately prior to the acquisition.

6. Preservation and Maintenance of Property; Leaseholds. Borrower shall not destroy, damage or substantially change the Property, allow the Property to deteriorate or commit waste. If this Security Instrument is on a leasehold, Borrower shall comply with the provisions of the lease, and if Borrower acquires fee title to the Property, the leasehold and fee title shall not merge unless Lender agrees to the merger in writing.

7. Protection of Lender's Rights in the Property; Mortgage Insurance. If Borrower fails to perform the covenants and agreements contained in this Security Instrument, or there is a legal proceeding that may significantly affect Lender's rights in the Property (such as a proceeding in bankruptcy, probate, for condemnation or to enforce laws or regulations), then Lender may do and pay for whatever is necessary to protect the value of the Property and Lender's rights in the Property. Lender's actions may include paying any sums secured by a lien which has priority over this Security Instrument, appearing in court, paying reasonable attorneys' fees and entering on the Property to make repairs. Although Lender may take action under this paragraph 7, Lender does not have to do so.

Any amounts disbursed by Lender under this paragraph 7 shall become additional debt of Borrower secured by this Security Instrument. Unless Borrower and Lender agree to other terms of payment, these amounts shall bear interest from the date of disbursement at the Note rate and shall be payable, with interest, upon notice from Lender to Borrower requesting payment.

HB51

STATE OF ALASKA

SALES AND SERVICING AGREEMENT

I. THIS AGREEMENT is made and entered into as of June 2, 1983 in the State of Alaska between Alaska Mutual Bank (employer identification number 92-00283-15) herein called "Seller-servicer", and STATE OF ALASKA DEPARTMENT OF REVENUE, herein called "Buyer", for mutual consideration herein evidenced.

II. This agreement under which the Buyer, having conditions of purchase, may offer to buy and the Seller-servicer, having met the conditions of purchase may offer to sell first mortgage loans on residential or commercial real estate, herinafter called collectively "mortgages" and individually "the mortgage", shall govern the sale and transfer of such mortgages by Seller-servicer to Buyer, and the servicing and other incidents thereof, and each such mortgage shall be subject to warranties, representations and agreements herein. The Buyer's conditions to purchase are set forth in the document transmitted concurrently with the mortgage funds from the Buyer to the Seller-servicer. Basic conditions to purchase are established at the time of each commitment in an attachment called "Commitment Requirements". In addition, the Seller-servicer shall underwrite all loans for the Buyer using standard industry practices as given by either FNMA or FHLMC guidelines. Approval prior to closing will be required. These standards will be amended only upon written notice from the Seller-servicer with justification and the acceptance in writing from the Buyer of the amendment(s).

III. Seller-servicer represents and warrants as to each such mortgage offered for sale under this Agreement that:

A. The mortgage has been duly executed by the mortgagor, acknowledged and recorded, is valid, and is a first lien on the real property held in fee simple.

B. The Seller-servicer is the sole owner of the mortgage and has authority to sell, transfer, and assign the same on the terms herein set forth; and there has been no assignment, sale, hypothecation thereof by Seller-servicer except the usual past hypothecation of the papers in connection with Seller-servicer's normal banking transactions in the conduct of its business; and that the sale is free and clear of claims or encumbrances of any type.

C. The full principal amount of the mortgages has been advanced to the mortgagor, either by payment direct to him or by payment made on his request or approval; the unpaid principal balance is as stated; all costs, fees and expenses incurred in making, closing, and recording the mortgage have been paid, no part of the mortgage property has been released from the lien of the mortgage; the terms of the mortgage have in no way been changed or modified, and the mortgage is current and there has not been any prior default.

D. Each mortgage which the Seller-servicer represents to be insured by the Federal Housing Administration (FHA), or by a private mortgage insurance company, or to be guaranteed by the Veterans Administration (VA) or Small Business Administration (SBA) guaranteed portion is so insured or guaranteed.

E. The mortgage was originated and has been serviced since the date of its origination by the Seller-servicer or the mortgage in a new loan package submitted for commitment to purchase before the loan is closed.

F. The security for the mortgage is real property located in the State of Alaska.

G. All applicable State and Federal rules and regulations have been complied with, and all conditions within the control of the Seller-servicer as to the validity of the insurance or guaranty as requir . by the National Housing Act of 1934, as amended, and the rules and regulations thereunder, or as required by the Servicemen's Readjustment Act of 1944, or the Small Business Act of 1953, as amended, and the rules and regulations thereunder, or by the private mortgage insurance companies, have been properly satisfied, and said insurance or guaranty is valid and enforceable.

H. Each mortgage which shall have qualified for mortgage assistance or rent assistance program of the National Housing Act of 1934, the Housing and Urban Development Act of 1965 or the United States Housing Act, shall contain such provisions as shall be required in order to establish and maintain the qualification of the mortgage for such assistance or subsidy payments, and all such assistance or subsidy payments shall be current and there shall not have been any prior default in the payment thereof.

I. There is in force a paid-up title insurance policy on the mortgage issued by an accredited title company in an amount at least equal to the outstanding principal balance of the mortgage.

J. There is in force for each such loan, hazard insurance policies meeting the specification of Clause VIII.

K. The assignment, if any, of the mortgage from the Seller-servicer to the Buyer is valid and sufficient.

L. All documents submitted in connection with obtaining the mortgage, any insurance thereon or any assistance or subsidy payments in respect thereof and the purchase by the Buyer hereunder are genuine, and all other representations as to each such mortgage are true and correct and meet the requirements and specifications of all parts of this Agreement.

IV. The Seller-servicer agrees to perform all acts necessary to perfect title to the mortgages in the Buyer, and shall sell, assign and deliver to the Buyer with respect to the purchase of each such mortgage the following supporting documents where applicable, all subject to the approval of the Buyer and its legal counsel as to the proper form and execution:

A. Mortgage note properly endorsed by the Seller-servicer without recourse, and if an FHA or a mortgage insurance company insured mortgage, duly endorsed by Federal Housing Commissioner or the mortgage insurance company, and if a VA or SBA guaranteed mortgage, accompanied by the Loan Guaranty Certificate duly executed by the Veterans' Administration or Small Business Administration.

B. Mortgage, accompanied by those documents and instruments necessary to record and perfect ownership thereof in the Buyer.

C. Appraisal report of an appraiser whose qualifications are acceptable to the Buyer with pictures and when applicable a completion certificate.

D. Mortgagee title insurance policy, with any exceptions therein subject to approval of Buyer's legal counsel, and proper assignment thereof if required in event a mortgage assignment is being placed of record.

E. Survey of premises identifying property by address and legal description, this being required only if title policy contains an exception as to boundary and building line restrictions.

F. If an FHA mortgage, application, commitment, amortization schedule, notice of transfer and all required documents of a similar nature; if a VA or SBA mortgage, all such required documents of a similar nature.

G. Hazard insurance certificates that meet the specifications of Clause VIII.

H. Statement showing unpaid principal balance on mortgage, amount of periodic installments and date to which interest is paid.

I. Certified copy of resolution of Seller-servicer authorizing sale of the mortgage.

J. Evidence of authority of Seller-servicer to act as a servicer of FHA, VA and SBA mortgages.

K. Individual Participation Certificates are required on all participation loans.

L. Original private mortgage insurance certificate endorsed to Buyer.

V. The Seller-servicer shall comply with, and shall use its best efforts to cause each mortgagor to comply with all applicable state and federal rules and regulations or requirements of the mortgage insurance companies, including those requiring the giving of notice. Where applicable, the Seller-servicer shall comply with the National Housing Act of 1934, as from time to time amended, the Housing and Urban Development Act of 1965, the United States Housing Act and with the Servicemen's Readjustment Act of 1944 and Small Business Act of 1953, as amended, and with all rules and regulations issued under either, and with the requirements of mortgage insurance companies, including the giving of all notices and submitting of all claims required to be given or submitted to the Federal Housing

Administration, the Veterans Administration, the Small Business Administration, or to the mortgage insurance companies to the end that the full benefit of either the Federal Housing Administration insurance, the guaranty of the Veterans Administration, or Small Business Administration, or the mortgage insurance will insure to the Buyer. The seller-servicer will forward copies of all such notices or claims to the Buyer.

VI. The Seller-servicer agrees to repurchase any mortgage covered by this agreement within one year after date of the Buyer's remittance if any misstatement of material fact is disclosed by actual inspections by the Buyer or its representative, or otherwise, for an amount equal to its then unpaid principal based on the same percentage rate at which it originally was purchased, plus accrued interest and costs incurred by the Buyer for action taken, but this provision shall not apply to FHA insured, VA guaranteed, SBA guaranteed, or mortgage insurance company insured mortgages. In the case of insured or guaranteed mortgages, if the FHA insurance, the VA guaranty, SBA guaranty, or the insurance of a mortgage insurance company with respect to any of the mortgages lapses as a result of the Seller-servicer's act or omission, the Seller-servicer upon the Buyer's request shall repurchase such mortgage for an amount equal to its then unpaid principal based on the same percentage rate at which it originally was purchased, plus accrued interest and costs incurred by the Buyer for action taken, and remit the aggregate of said amounts to the Buyer.

VII. The Seller-servicer, at its own expense, shall keep in force during the term of this agreement or any extension thereof, a Fidelity Bond and a policy or policies of insurance, covering errors and omissions on the part of any and all of their employees involved with the mortgages bought, sold, serviced or assigned under this contract. The Bond or Bonds shall insure the Buyer against loss arising from dishonest, criminal or fraudulent acts of any above referenced employee of the Seller-servicer.

VIII. The Seller-servicer shall see that the improvements on the premises, securing each mortgage, are kept insured by hazard insurance policies issued by a company acceptable to the Buyer in an amount at least equal to the outstanding principal of the mortgage or the full insurable value of the improvements, whichever is less, and of a type at least as protective as fire and extended coverage, containing a mortgagee clause naming the Buyer as an insured, substantially in the form of the standard New York mortgagee clause, and containing suitable provisions for payment on all present and future mortgages on such premises in order of precedence. Seller-servicer shall hold for the Buyer's account such policies and renewals thereof.

IX. The Seller-servicer shall furnish a detailed statement of its financial condition, not later than ninety days after the close of the Seller-servicer's fiscal year, and give the Buyer or its authorized representative opportunity at any time during business hours to examine the Seller-servicer's books and records. The Seller-servicer agrees to keep records satisfactory to the Buyer pertaining to each mortgage, and such records shall be the property of the Buyer and upon termination of this Agreement, shall be delivered to the Buyer.

X. Until the principal and interest of each such mortgage is paid in full the Seller-servicer shall:

A. Proceed diligently to collect all payments due under the terms of each mortgage as they become due.

B. Keep a complete and accurate account of and properly apply all sums collected by it from the mortgagor on account of each such mortgage for principal and interest, taxes, assessments, and other public charges, hazard insurance premiums and FHA insurance or private mortgage

insurance premiums, and upon request to furnish Buyer with evidence acceptable to the Buyer of all expenditures for taxes, assessments and other public charges, hazard insurance premiums and FHA insurance or private mortgage insurance premiums. In the event any mortgagor fails to make a payment to said Seller-servicer required to be made under the terms of said mortgage, Seller-servicer agrees to notify the Buyer of such fact within thirty days after the same shall have become due and payable.

C. Deposit all funds received in respect of such mortgage, subject to withdrawal on demand, in a segregated trust or custodial account in a state or national bank, the deposits of which are insured by the Federal Deposit Insurance Corporation. Such account shall be held by Seller-servicer as trustee or custodian and the Seller-servicer shall maintain detailed records to show the respective interests of each individual mortgagor in the account. Each such account shall be established and maintained in a manner which complies with the applicable rules and regulations of the Federal Deposit Insurance Corporations.

D. From the funds so deposited, (1) pay promptly to the proper parties when and if due FHA, VA, SBA and private mortgage insurance premiums, taxes, special assessments, ground rents, and premiums on hazard insurance, and (2) pay and report, within five working days of the established cut off, to the Buyer all amounts of principal and interest due to it under its participation in the mortgage, and (3) on loan payoffs pay and report to the Buyer within five working days of the payoff all amounts of principal and interest due to it under the mortgage. Any amount not timely remitted, shall bear interest payable to the Buyer at the interest rate of the note(s) per day times the balance from the date that such remittance was actually postmarked. (4) Submit monthly reports which consist

of a Summary of Remittance, Principal Trial Balance, and Delinquency Reports for all loans over thirty days delinquent.

(5) Retain as full compensation for all services performed hereunder, the earned portion of the servicing fee per annum agreed to in the commitment for each specific loan or block of loans, plus "late charges", if any collected, from the mortgagor pursuant to the terms of the mortgage.

E. Have prior written approval from the buyer to modify any Notes or Deeds of Trust.

F. Upon request submit to the Buyer an audit of the balance in each such trust account, together with a certificate that all disbursements were made for proper purposes, and that all payments required to be made hereunder have been made, with exceptions, if any.

G. Perform such other customary duties, furnish such other reports and execute such other documents in connection with its duties hereunder as the Buyer from time to time reasonably may require.

XI. The Seller-servicer shall use due diligence to ascertain, and shall forthwith notify the Buyer of the failure of any mortgagor to perform any obligations under the mortgage, and also of any of the following which might come to the attention of the Seller-servicer;

A. The vacating of or any change in the occupancy of any premises securing a mortgage.

B. The sale or transfer of any such premises, to the degree of liability of original mortgagor. If original mortgagor has been released from liability a credit package on new mortgagor must be furnished buyer.

C. The death, bankruptcy or insolvency of a mortgagor.

D. Any loss or damage to any such premises, in which event, in addition to notifying the Buyer, the Seller-servicer shall also promptly notify the insurance companies concerned.

E. Any lack of repair or any other deterioration or waste suffered or committed in respect of the premises covered by the mortgage. It is understood, however, that the Seller-servicer shall not be obligated to give notice to the Buyer of any facts other than those of which the Seller-servicer shall have actual notice, and those of which it would, except for its negligence, have had notice.

F. Any loss of eligibility of the mortgagor, either in whole or in part, for any mortgage assistance or rent subsidy payments under any programs providing therefore and for which the mortgage has qualified.

XII. The Seller-servicer shall not accept any prepayment of mortgage principal, except as permitted by the terms of the mortgage, nor waive, modify, release or consent to postponement on the part of the mortgagor of any term or provision of the mortgage without the written consent of the Buyer.

XIII. The Seller-servicer shall be required to reinspect only those properties on which the mortgage becomes sixty or more days delinquent. The Seller-servicer must notify the Buyer in writing of all action taken to collect the delinquencies and list methods and recommendations to bring the loans current or for foreclosure.

XIV. The Seller-servicer shall upon the request and under the direction of the Buyer assist in the foreclosure or other acquisition of the property securing any mortgage, the transfer of such property to the FHA or VA and the collection of any applicable mortgage insurance, and pending completion of these steps, protect such property from waste and strip. At

the option of the Buyer, Buyer may assign such mortgage to the Seller-servicer which shall then conduct all such proceedings in its own name, promptly thereafter assigning or conveying to the Buyer any title, equity, or other property or right acquired by such proceedings. Seller-servicer will take title to the property in the name designated by the Buyer. Buyer agrees to reimburse the Seller-servicer for its reasonable out-of-pocket expenses so incurred, including attorney's fees mutually agreed upon in advance at the percentage of Buyers participation in the mortgage. All property foreclosed in the name of the Buyer will be managed by the Seller-servicer or an approved management firm. The Buyer will be advised of all management efforts monthly. The Seller-servicer will be required to interpret all legal requirements and financial obligations for each loan foreclosed on.

XV. In the event the Buyer shall assign its interest under the terms of this contract and in the mortgages to a third party, the assignee shall accede to all of the rights and obligations hereunder of the Buyer and this Agreement shall remain in full force and effect, and the Seller-servicer shall remit all principal and interest installments payable under the mortgages so assigned directly to such third party after deduction of the service fee as herein provided. The obligation to make direct remittances to such third party shall arise upon thirty days written notice of such assignment given by the Buyer to the Seller-servicer.

XVI. Compensation of the Seller-servicer shall be as agreed at the time each mortgage is accepted and as evidenced by each commitment to purchase made by the Buyer. Such compensation shall be earned, computed and payable as of the time interest on each

individual mortgage is paid to Buyer, except that the compensation represented by late charges, if any, shall be retained as paid by the mortgagor. Compensation shall be earned and computed only upon mortgages on which payment of principal and interest actually occurs. No additional compensation shall be payable to the Seller-servicer in the event of termination of this Agreement, except as provided in Clause XVII.

XVII. The Buyer may, by notice to the Seller-servicer, terminate this Agreement as to mortgages being serviced if:

A. The Seller-servicer becomes insolvent or bankrupt or is placed under conservatorship or receivership.

B. The Seller-servicer assigns or attempts to assign the rights and obligations hereunder, or there is a transfer of a controlling interest in Seller-servicer, without written consent of the Buyer.

C. The Seller-servicer fails to take positive action to correct any deficiency in the performance of its obligations hereunder within sixty days after the Buyer has given Seller-servicer written notice of such deficiency.

D. In any event, and without cause, upon sixty days written notice and payment to the Seller-servicer of a sum equal to 1/2 of 1 percent of the aggregate principal amounts then outstanding of all of the mortgages subject to this Agreement.

XVIII. This Agreement may be terminated as to the future acceptance of mortgages by either party at any time upon giving thirty days written notice of termination to the other party, but such termination shall not in any respect change or modify the obligation of the Seller-servicer to service mortgages then already accepted, and the Seller-servicer shall continue to service such mortgages unless the Buyer shall act pursuant to Clause XVII hereof.

XIX. Upon any termination of this Agreement under Clause XVII the Seller-servicer shall account for and turn over to the Buyer all funds collected under each mortgage, less only the compensation then due the Seller-servicer, and deliver to the Buyer or its representative all records and documents relating to each such mortgage described in Clauses IV and VIII that it may have in its possession.

XX. The words "mortgage" and "mortgages" as used herein shall include mortgages, security deeds, trust deeds, and deeds of trust, and the words "mortgagor" and "mortgagors" shall be deemed to mean mortgagors, trustors of trust deeds and deeds of trust, and the grantors of any security deeds, it being agreed that the appointment of any trustees under any trust deeds or deeds of trust shall be subject to the approval of the Buyer.

XXI. In the event of a dispute between the Buyer and the Seller-servicer or any of their assigns, said dispute will initially be reviewed and if possible settled by reference to this contract, and its addendum(s), and if this contract or its addendum(s) are ambiguous or silent on the point or points in question, the prevailing conditions in the industry as set forth in a current updated copy of the Servicer's Guide, issued by the Federal National Mortgage Association, shall apply.

XXII. This document contains the entire agreement between the parties hereto and cannot be modified in any respect except by an amendment in riting signed by both parties. The invalidity of any portion of this Agreement shall in no way affect the

balance thereof. This Agreement shall remain in effect until the Buyer's interests in all of the mortgages referred to, including the underlying security, are liquidated completely.

XXIII. From the effective date of this agreement all other agreements and its addendums are superseded by this agreement. All State of Alaska statutes and amendments to statutes effecting mortgage investments will automatically be an integral part of this Agreement and will, when applicable, replace any phraseology in this Agreement. Outstanding commitments to purchase effected by amendments will be honored. (State of Alaska Statutes, Exhibit A -PERS, Exhibit B - TRS)

IN WITNESS WHEREOF, each party has caused its seal to be affixed hereto and this instrument to be signed in its name on its behalf by its proper officials duly authorized.

Effective this 2nd day of June, 1983.

PUBLIC EMPLOYEES RETIREMENT SYSTEM

Effect of amendments. — The 1977 amendment in subsection (b), substituted "record" for "[illegible]" in the first sentences of paragraphs (1) and (2), deleted "shall be credited as of the date of deduction or payment, as the case may be" from the end of the first sentences of paragraphs (1) and (2), substituted "retirement" for "granting a pension" near the beginning of the third sentence of paragraph (1), deleted "an employee's" preceding "retirement, the amount," in the fourth sentence of paragraph (2), substituted "savings account" for "contribution account" in two places in the fourth sentence of paragraph (2), and deleted an exception from the end of the second sentence of paragraph (3). The amendment also, in paragraph (4) of subsection (b), deleted "credited with all contributions of employers for the purposes of meeting their respective proportion of the total administrative expenses of the system during each fiscal year, and it shall be" following "This account shall be" near the beginning of the second sentence and rewrote the third sentence.

Sec. 39.35.110. Investments. (a) When, in the opinion of the commissioner of administration, there is on hand in the pension fund a surplus over and above a reasonably safe amount to take care of current demands upon the fund, the surplus, or so much of it as in the judgment of the commissioner of administration is considered proper, may be invested at competitive national market rates by the commissioner of revenue in

(1) Repealed by § 15 ch 122 SLA 1980.

(2) Repealed by § 15 ch 122 SLA 1980.

(3) Repealed by § 15 ch 122 SLA 1980.

(4) Repealed by § 15 ch 122 SLA 1980.

(5) shares of federally chartered savings and loan associations in Alaska, to the extent that the investment is insured by the federal government or an agency of the federal government;

(6) deposits with mutual savings banks in Alaska, to the extent that the investment is insured by the federal government or an agency of the federal government;

(7) deposits with state and national banks in Alaska to the extent that the investment is insured by the federal government or an agency of the federal government;

(8) Repealed by § 15 ch 122 SLA 1980.

(9) the guaranteed portion of Small Business Administration loans;

(10) first lien real estate mortgages guaranteed by the federal Veterans Administration;

(11) notes secured by mortgages of commercial or residential buildings if the mortgages are insured by a private mortgage insurance corporation which is authorized to do business in Alaska and has combined capital, surplus and reserves aggregating at least $20,000,000; however,

(A) no mortgage insurance is necessary for commercial loans having loan-to-value ratios of less than 50 percent and the minimum coverage of other commercial loans shall be 10 percent for those having a loan-to-value ratio of 50-60 percent and 15 percent for those having a loan-to-value ratio greater than 60 percent but no more than 75 percent, and

(B) no mortgage insurance is necessary for residential loans having a loan-to-value ratio of less than 70 percent and the minimum coverage of other residential loans shall be 10 percent for those having a loan-to-value ratio greater than 70 percent but less than 90 percent and 20 percent for those having a loan-to-value ratio of 90 percent;

(12) conventional residential mortgages if the originating financial institution retains at least 25 percent of the mortgage for a minimum of two years;

(13) notes secured by mortgages of commercial buildings if the originating financial institution retains at least 25 percent of the mortgage until maturity;

(14) FHA guaranteed portion of business and industrial loans made under the Rural Development Act of 1972;

(15) Repealed by § 15 ch 122 SLA 1980.

(16) Repealed by § 15 ch 122 SLA 1980.

(17) bankers' acceptances which are eligible for discount at the Federal Reserve Bank and certificates of deposit issued by United States domestic banks which are members of the Federal Deposit Insurance Corporation if a generally recognized secondary market exists for the certificates of deposit;

(18) obligations of, or obligations insured by or guaranteed by, the United States or agencies or instrumentalities of the United States;

(19) obligations secured by reserves paid in by the United States or agencies or instrumentalities of the United States or obligations of corporations in which the United States is a shareholder or member;

(20) corporate debt securities with a minimum rating of "A" or an equivalent rating by a nationally recognized rating organization;

(21) preferred and common stock of companies which have paid dividends in each of the three years immediately preceding the investment;

(22) commercial paper bearing the highest rating of a nationally recognized rating organization;

(23) securities of foreign governments, foreign governmental agencies, and foreign corporations the principal, interest or dividends on which are payable in either United States dollars or foreign currencies; however, investments under this paragraph may not exceed 10 percent of the total investments of the pension fund;

(24) foreign time deposits of both United States-owned and foreign-owned banks and trust companies denominated in either United States dollars or foreign currencies; however, investments under this paragraph may not exceed 20 percent of the total investments of the pension fund;

(25) gold bullion certified as to fineness of at least 9½ percent; however, investments under this paragraph may not exceed 10 percent of the total investments of the pension fund; the commissioner of revenue shall purchase gold bullion produced in Alaska to the extent

T39 Alaska TO-4-32-1239

that Alaska gold bullion is available if it can be obtained at a price comparable to out-of-state sources.

(b) Repealed by § 15 ch 122 SLA 1980.

(c) In making investments the commissioner of revenue shall exercise the judgment and care under the circumstances then prevailing which an institutional investor of ordinary prudence, discretion, and intelligence exercises in the management of large investments entrusted to it not in regard to speculation but in regard to the permanent disposition of funds, considering probable safety of capital as well as probable income. However, no more than 50 percent of the pension fund may be invested at a given time in corporate stocks and debt securities, nor may more than five percent of the voting stock of one corporation be owned. Stocks eligible for purchase are restricted to stocks which, except for bank stocks and insurance stocks, are listed upon an exchange registered with the Federal Securities and Exchange Commission.

(d) Except as provided in this section, the commissioner of revenue may

(1) invest and reinvest the principal and income of the pension fund without distinction between principal and income;

(2) sell, exchange, convey, transfer, or otherwise dispose of an investment of the pension fund held in the name of the system by private contract or at public auction;

(3) vote upon a stock, bond, or other security; give a general or special proxy or power of attorney with or without power of substitution; exercise a conversion privilege, subscription right, or other option and make payments incidental to it; consent to or participate in a corporate reorganization or other change affecting corporate securities, delegate discretionary power, pay an assessment or charge in connection with the delegation; and generally exercise any of the powers of an owner with respect to stocks, bonds, securities, or other investments held in the pension fund;

(4) make, execute, acknowledge, and deliver documents of transfer and conveyance and instruments necessary or appropriate to carry out the powers granted;

(5) register investments held in the pension fund in the name of the system;

(6) do all acts whether or not expressly authorized which are considered necessary or proper for the protection of the investments held in the pension fund.

(e) To qualify as a mortgage which may be purchased under (a)(11), (12), or (1. of this section,

(1) the originating financial institution must certify that the mortgage being sold has been made in compliar e with law and that liens supporting the mortgage have been perfected;

(2) the mortgage may not have been held by the originating financial institution for a period greater than 90 days.

(f) When more than one-half of one per cent of the aggregate of all loans purchased from a financial institution becomes delinquent for 60 days, the pension fund shall discontinue purchasing loans from that financial institution until the delinquency is reduced to less than one-half of one per cent.

(g) Repealed by § 15 ch 122 SLA 1980.

(h) The commissioner of revenue may enter into futures contracts for the sale of investments purchased under (a) of this section only for the purpose of hedging an existing equivalent ownership position in the investments.

(i) The commissioner of revenue may transfer at any time a portion of the assets of the pension fund to a trust which is qualified under sec. 401(a) of the Internal Revenue Code (26 U.S.C. sec. 401(a)) and exempt from taxation under sec. 501(a) of the Internal Revenue Code (26 U.S.C. sec. 501(a)) and which is maintained as a medium for pooling a portion of the funds of pension and profit-sharing trusts for diversifying investments in real estate and interests in real estate.

(j) The commissioner of revenue may enter into a contract or trust agreement necessary to effectuate the transfer of assets of the pension fund or to maintain the assets of the pension fund to be transferred to a trust under (i) of this section. (§ 37 ch 143 SLA 1960; am § 1 ch 129 SLA 1961; am § 1 ch 150 SLA 1962; am § 2 ch 4 SLA 1964; am §§ 1 — 3 ch 80 SLA 1964; am § 1 ch 111 SLA 1964; am § 1 ch 56 SLA 1967; am § 4 ch 73 SLA 1969; am §§ 3, 4 ch 17 SLA 1970; am § 2 ch 112 SLA 1972; am §§ 3, 4 ch 25 SLA 1974; am §§ 3, 4 ch 59 SLA 1977; am §§ 7 — 10, 15 ch 122 SLA 1980)

Cross references. — As to custody and investment of the teachers retirement fund, see AS 14.25.180. As to investment of surplus funds of the state, see AS 37.10.070.

Effect of amendments. — The 1977 amendment, in subsection (a), inserted "private mortgage insurance" in paragraph (11), added the language beginning "however, (A) no mortgage insurance is necessary" to the end of that paragraph, and added paragraphs (16) and (17).

The 1980 amendment, in subsection (a), inserted "at competitive national market rates" near the end of the introductory paragraph, repealed former paragraphs (1) — (4), (8), and (15) and (16), substituted "the" for "such" preceding "investment" in paragraphs (5) and (6), substituted "of the federal government" for "thereof" at the end of paragraphs (5) and (6), substituted "buildings" for "real estate or other security" near the beginning of the introductory paragraph of paragraph (11), substituted "buildings" for "real estate" and added "until maturity" in paragraph (13), and "negotiable time" preceding "certificates of deposit" in paragraph (17), substituted "United States domestic" for "commercial" near the middle of paragraph (17), added the material at the end of paragraph (17), which begins: "which are members of" and ends: "certificates of deposit," and added paragraphs (18) — (25). The amendment, in subsection (c), substituted "an institutional investor" for "a man," and "large investments entrusted to it" for "his own affairs" near the beginning of the subsection, deleted "his" following "permanent disposition of" and "the" preceding "probable safety of capital" near the middle of the subsection, inserted "safety of capital as well as probable" preceding "income" and deleted "from

them as well as the probable safety of his capital" at the end of the first sentence, deleted "mutual funds and" preceding "corporate stocks" near the beginning of the second sentence, substituted "debt securities" for "bonds," and "may" for "any" near the middle of the second sentence, substituted "and" for a comma following "bank stocks," and deleted "and shares in mutual funds" following "insurance stocks" near the middle of the third sentence; rewrote subsection (e); added subsections (h) — (j); and repealed subsections (b) and (g).

Article 2. Membership.

Section
120. Commencement of participation
125. Participation of elected officials
130. [Repealed]
140. [Repealed]
150. Reemployment of retired employees
153. Army and air national guard employees
154. North Pacific Fishery Management Council employees
155. [Obsolete]
157. [Obsolete]
158. Administrative director of courts

Sec. 39.35.120. Commencement of participation. (a) An employee of the state shall be included in this system upon commencement of his employment with the state, or on January 1, 1961, whichever is later. An employee of a political subdivision or public organization which becomes an employer shall be included in the system on the effective date of the employer's participation or the date of the employee's commencement of employment with the employer, whichever is later.

(b) **[Effective until January 1, 1981]** Inclusion in the system is a condition of employment for an employee except an elected official.

[Effective January 1, 1981] Inclusion in the system is a condition of employment for an employee except as otherwise provided for an elected official. (§ 4 ch 143 SLA 1960; am § 1 ch 155 SLA 1966; am § 28 ch 13 SLA 1980; am § 27 ch 146 SLA 1980)

Effect of amendments. — The first 1980 amendment deleted "or quasi-public" preceding "organization" near the beginning of the second sentence in subsection (a).

The second 1980 amendment, effective January 1, 1981, inserted "as otherwise provided for" preceding "an elected official" near the end of subsection (b).

Negotiability of retirement system benefits. — Given subsection (b) of this section and AS 39.35.170, which make inclusion in the public employees retirement system (AS 39.35) a condition of employment for state employees and contributions to it mandatory, the conclusion is that the legislature intended the statutory provisions of the public employees retirement system to apply to all state employees, and benefits under the public employees retirement system may not be negotiated under the Public Employment Relations Act (AS 23.40.070 — 23.40.260). January 23, 1978, Op. Att'y Gen.

Sec. 39.35.125. Participation of elected officials. [Effective until January 1, 1981] (a) An elected official, other than a state legislator who is an active member of the teachers' retirement system, may be included in the system if, within 60 days after taking the oath of his office or within 60 days after May 12, 1966

Exhibit B

TEACHERS RETIREMENT SYSTEM

(d) The board may impose conditions on granting a waiver which it considers equitable. These conditions may include requiring the member or beneficiary to make additional contributions to the system.

(e) The board may reconsider a ruling under this section upon request of the member or beneficiary or the administrator if the request is received within 30 days after the initial ruling. Any modification of the initial ruling must be made within 30 days after receipt of a request for reconsideration.

(f) Rulings and modifications of rulings under this section must be by a majority of a quorum of the board.

(g) Rulings on appeals and requests for reconsideration under this section may be appealed by an aggrieved member or beneficiary to the superior court for abuse of discretion. (§ 1 ch 81 SLA 1979)

Sec. 14.25.177. Effect of amendments. (a) An amendment to this chapter is not retroactive unless its retroactivity is expressly stated in the amendment.

(b) The monthly amount of a benefit payable under this chapter shall be determined in accordance with the provisions of this chapter in effect on the date of termination of the member's last segment of employment. (§ 4 ch 169 SLA 1976; am § 21 ch 13 SLA 1980)

Effect of amendment. — The 1980 amendment, effective July 1, 1980, [illegible]

Sec. 14.25.180. Custody and investment.

(b) When, in the opinion of the commissioner of administration, there is on hand in the retirement fund a surplus over and above a reasonably safe amount to take care of current demands upon the fund, the surplus or so much of it as in the judgment of the commissioner of administration is considered proper may be invested at competitive national market rates by the commissioner of revenue in

(1) (repealed);

(2) (repealed);

(3) (repealed);

(4) shares of federally chartered savings and loan associations in Alaska, to the extent that the investment is insured by the federal government or by an agency of the federal government;

(5) deposits with mutual savings banks in Alaska, to the extent that the investment is insured by the federal government or an agency of the federal government;

(6) deposits with state and national banks in Alaska to the extent that the investment is insured by the federal government or an agency of the federal government;

(7) (repealed);

(8) (deleted);

(9) the guaranteed portion of Small Business Administration loans;

(10) first lien real estate mortgages guaranteed by the federal Veterans Administration;

(11) notes secured by mortgages of commercial or residential buildings if the mortgages are insured by a private mortgage insurance corporation which is authorized to do business in Alaska and has combined capital, surplus and reserves aggregating at least $20,000,000; however,

(A) no mortgage insurance is necessary for commercial loans having loan-to-value ratios of less than 50 percent and the minimum coverage of other commercial loans shall be 10 percent for those having a loan-to-value ratio of 50-60 percent and 15 percent for those having a loan-to-value ratio greater than 60 percent but no more than 75 percent, and

(B) no mortgage insurance is necessary for residential loans having a loan-to-value ratio of less than 70 percent and the minimum coverage of other residential loans shall be 10 percent for those having a loan-to-value ratio greater than 70 percent but less than 90 percent and 20 percent for those having a loan-to-value ratio of 90 percent;

(12) conventional residential mortgages if the originating financial institution retains at least 25 percent of the mortgage for a minimum of two years;

(13) notes secured by mortgages of commercial buildings if the originating financial institution retains at least 25 percent of the mortgage until maturity;

(14) FHA guaranteed portion of business and industrial loans made under the Rural Development Act of 1972;

(15) (repealed);

(16) (repealed);

(17) bankers' acceptances which are eligible for discount at the Federal Reserve Bank and certificates of deposit issued by United States domestic banks which are members of the Federal Deposit Insurance Corporation if a generally recognized secondary market exists for the certificates of deposit;

(18) obligations of, or obligations insured by or guaranteed by, the United States or agencies or instrumentalities of the United States;

(19) obligations secured by reserves paid in by the United States or agencies or instrumentalities of the United States or obligations of corporations in which the United States is a shareholder or member;

(20) corporate debt securities with a minimum rating of "A" or an equivalent rating by a nationally recognized rating organization;

(21) preferred and common stock of companies which have paid dividends in each of the three years immediately preceding the investment;

(22) commercial paper bearing the highest rating of a nationally recognized rating organization;

(23) securities of foreign governments, foreign governmental agencies, and foreign corporations the principal, interest or dividends on which are payable in either United States dollars or foreign currencies; however, investments under this paragraph may not exceed 10 percent of the total investments of the retirement fund;

(24) foreign time deposits of both United States-owned and foreign-owned banks and trust companies denominated in either United States dollars or foreign currencies; however, investments under this paragraph may not exceed 20 percent of the total investments of the retirement fund;

(25) gold bullion certified as to fineness of at least 99-½ percent; however, investments under this paragraph may not exceed 10 percent of the total investments of the retirement fund; the commissioner of revenue shall purchase gold bullion produced in Alaska to the extent that Alaska gold bullion is available if it can be obtained at a price comparable to out-of-state sources.

(c) In making investments the commissioner of revenue shall exercise the judgment and care under the circumstances then prevailing which an institutional investor of ordinary prudence, discretion, and intelligence exercises in the management of large investments entrusted to it not in regard to speculation but in regard to the permanent disposition of funds, considering probable safety of capital as well as probable income. However, no more than 50 percent of the retirement fund may be invested at any given time in corporate stocks and debt securities, nor may more than five percent of the voting stock of a corporation be owned. Stocks eligible for purchase are restricted to stocks which, except for bank stocks and insurance stocks, are listed upon an exchange registered with the Federal Securities and Exchange Commission.

(d) Except as provided above, the commissioner of revenue may:

(1) invest and reinvest the principal and income of the retirement fund without distinction between principal and income;

(2) sell, exchange, convey, transfer or otherwise dispose of any investment of the retirement fund held in the name of the system by private contract or at public auction;

(3) vote stocks, bonds or other securities; give general or special proxies or powers of attorney with or without power of substitution; exercise conversion privileges, subscription rights or other options and make payments incidental thereto; consent to or otherwise participate in corporate reorganizations or other changes affecting corporate securities and delegate discretionary powers and pay assessments or charges in connection therewith; and generally exercise the powers of an owner with respect to stocks, bonds, securities or other investments held in the retirement fund;

(4) make, execute, acknowledge and deliver documents of transfer and conveyance and other instruments necessary or appropriate to carry out the powers granted by this subsection;

(5) register investments held in the retirement fund in the name of the system;

(6) do all acts whether or not expressly authorized which he considers necessary or proper for the protection of the investments held in the retirement fund.

(e) To qualify as a mortgage which may be purchased under (b)(11), (12) or (13) of this section,

(1) the originating financial institution must certify that the mortgage has been made in compliance with law and that liens supporting the mortgage have been perfected;

(2) the mortgage may not have been held by the originating financial institution for a period greater than 90 days.

(g) The commissioner of revenue may enter into futures contracts for the sale of investments purchased under (b) of this section only for the purpose of hedging an existing equivalent ownership position in the investments.

(h) The commissioner of revenue may transfer at any time a portion of the assets of the retirement fund to a trust which is qualified under sec. 401(a) of the Internal Revenue Code (26 U.S.C. sec. 401(a)) and exempt from taxation under sec. 501(a) of the Internal Revenue Code (26 U.S.C. sec. 501(a)) and which is maintained as a medium for pooling a portion of the funds of pension and profit-sharing trusts for diversifying investments in real estate and interests in real estate.

(i) The commissioner of revenue may enter into a contract or trust agreement necessary to effectuate the transfer of assets of the retirement fund or to maintain the assets of the retirement fund to be transferred to a trust under (h) of this section.

(am §§ 1, 2 ch 59 SLA 1977; am §§ 1 — 5 ch 122 SLA 1980)

Cross references. — As to investment of surplus funds, see AS 37.10.070. As to investments, see AS 39.35.110.

Effect of amendments.

The 1977 amendment, in subsection (b), inserted "private mortgage insurance" in paragraph (11), added the language beginning "however, (A) no mortgage insurance is necessary" to the end of that paragraph, and added paragraphs (16) and (17).

The 1980 amendment, effective July 1, 1980, in subsection (b), inserted "at competitive national market rates" in the introductory language; deleted paragraphs (1) — (3), (7), and (15) and (16), relating to certain governmental bonds or other interest-bearing obligations and securities, certain first lien real estate mortgage securities, corporation bonds and preferred and common stocks, loans guaranteed by the division of veteran's affairs, guaranteed portion of loans made under the Federal Ship Financing Act of 1972, and certain Canadian bonds, debentures, notes or other obligations, respectively; substituted "buildings" for "real estate or other security" in the introductory language of paragraph (11); substituted "buildings" for "real estate" and inserted "until maturity" in paragraph (13); deleted "negotiable time" preceding "certificates" and substituted the language beginning "United States domestic banks" for "commercial banks" in paragraph (17); and added paragraphs (18) — (25). In subsection (c), the amendment substituted "an institutional

investor" for "men," "exercises" for "exercise," "large investments entrusted to it" for "their own affairs" and "probable safety of capital as well as probable income" for "the probable income therefrom as well as the probable safety of their capital" in the first sentence, deleted "their" preceding "funds" in the first sentence, and substituted "debt securities" for "bonds" and "a corporation" for "any corporation" in the second sentence. In addition, the amendment inserted "held in the retirement fund" in paragraph (5) of subsection (d), rewrote subsection (e), and added subsections (g) — (i).

Sec. 14.25.200. Exemption from taxation and process. Benefits and other amounts held in the retirement fund on behalf of the members are exempt from Alaska state and municipal taxes and are not subject to anticipation, alienation, sale, transfer, assignment, pledge, encumbrance, charge, garnishment, execution or levy of any kind, either voluntary or involuntary before they are received by the person entitled to the amount under the terms of the system, and any attempt to anticipate, alienate, sell, transfer, assign, pledge, encumber, charge, or otherwise dispose of any right to amounts accrued in the retirement fund is void. (§ 22 ch 145 SLA 1955; am § 17 ch 89 SLA 1960; am § 13 ch 84 SLA 1969; am § 22 ch 13 SLA 1980)

Effect of amendment. — The 1980 amendment, effective July 1, 1980, substituted "Benefits" for "Teachers' retirement salaries" at the beginning of the section, substituted "members" for "teachers" following "on behalf of the" near the beginning of the section, inserted "Alaska" preceding "state and municipal taxes" near the beginning of the section, and substituted "is void" for "shall be void" at the end of the section.

As the rest of the section was not affected by the amendment, it is not set out.

Cited in Gutterman v. First Nat'l Bank, Sup. Ct. Op. No. 1876 (File No. 3996), 597 P.2d 969 (1979).

Sec. 14.25.205. Time limit for application. If no application for benefits or for refund has been filed with the administrator by July 1 following the date on which an inactive member (except a member on leave of absence without pay) would attain age 75, or if no application for benefits or for refund has been filed with the administrator within the 50 years following the most recent date on which the person was an active member, no benefits or refunds may be paid under this chapter and the member's records may be destroyed. (§ 14 ch 84 SLA 1969; am § 23 ch 13 SLA 1980)

Effect of amendment. — The 1980 amendment, effective July 1, 1980, rewrote the section.

Sec. 14.25.220. Definitions. In this chapter, unless the context requires otherwise,

(1) "active member" means a member who is employed by an employer, is receiving compensation on a full-time or part-time basis and is making contributions to the system, or a member making contributions under AS 14.20.330 or 14.20.345;

STATE OF ALASKA

SALES AND SERVICING AGREEMENT ADDENDUM

In conjunction with and as an addendum to the Agreement between Alaska Mutual Bank, (employer identification number 92-00283-15) herein called "Seller-servicer", and the State of Alaska Department of Revenue, herein called "Buyer", and dated June 2, 1983, the following uniform guidelines regarding the submission, purchase, and servicing of mortgages are hereby established and made part of said Agreement. Because it addresses specific procedures and the format of reports, this addendum should be distributed to all sections of the Seller-servicer mortgage department. All correspondence and inquiries should be directed to the attention of the Mortgage Section at:

Alaska Department of Revenue
Treasury Division
Pouch SB
Juneau, Alaska 99811
907/465-2354 - 907/465-2353

All correspondence to Buyer must bear the loan name, fund name (PERS-TRS-SPFM-MOP-BLIP), loan type (FHA-VA-SBA-CONV), interest rate, percent of participation, brief legal description of property, if available, and all previous owners (if applicable).

GENERAL REQUIREMENTS

All loans submitted for purchase must have private mortgage insurance, 25% bank participation, FHA insurance, VA guarantee or SBA guarantee, if required. No take-out refinances will be purchased. Loan to value ratios will be established by investment program in a separate requirement letter. All loans will be purchased at par unless advised otherwise. Usury rate applies on loans under $100,000. Specific conditions to purchase will be detailed in a "Commitment Requirement" attachment sent out at the time of each general commitment. Standard industry underwriting criteria will apply as detailed by FNMA or FHLMC.

REQUIREMENTS FOR COMMITMENT TO PURCHASE

Commitment fee requirements will be established by investment program and when applicable must accompany the original loan submission package. This fee is non-refundable, except as noted below, and no loan substitutions may be made. Deposit of commitment check does not mean the loan is approved. Official notification will be sent regarding commitment. Commitment fee will only be returned or credit given on loans refused. Buyer will not commit to purchase and/or honor existing commitments to purchase mortgages from any Seller-servicer when they exceed the delinquency ratio established by individual Alaska statutes. Buyer will commit to purchase and/or honor existing commitments to purchase mortgages when the delinquency is reduced to these requirements.

Requests for commitments and/or purchase must include, but is not necessarily limited to, copies of the following documents:

RESIDENTIAL

1. Loan application (including gross interest rate and service rate) (Must be a standard industry form such as FNMA #1003)
2. Copy of Private Mortgage Insurance application (if applicable)
3. Original appraisal (with plat layout and original pictures)
4. Credit report and credit letters
5. Earnest money agreement
6. Verification of all bank accounts
7. Employment verification
8. Tax returns (if self-employed)
9. Financial statements (if applicable)
10. Other pertinent information

COMMERCIAL

1. Offering sheet - containing but not necessarily limited to the following information:
   a. Borrower(s)
   b. Loan amount
   c. Purpose of loan
   d. Gross interest rate and service rate

e. Fee

f. Terms

g. Account relationship with Bank

h. Financial data (Assets - Liabilities - Net Worth)

i. Security (Land - Improvements)

j. Income statement - projected

k. Analysis:

- Loan to value ratio
- Debt service
- Debt service coverage
- Default ratio
- Loan per square foot
- Gross rent multiple
- Mortgage multiple
- Other ratios if applicable

l. Participants

m. Recommendations

n. Other pertinent information

2. Loan application

3. Maps/plats

4. Original photos

5. Plans and specifications

6. Appraisal

7. Financial statement for 3 years - Balance Sheets, Profit and Loss Statements

8. Credit report and credit letters

9. Bank balance verifications

10. Federal tax returns for 3 years if applicable

11. Private Mortgage Insurance application if applicable

12. Earnest Money Agreement if applicable

REQUIREMENTS FOR PURCHASE

The following documents must be delivered to Buyer by the 10th of the month for purchase by the end of that month.

In the event questions arise as to settlement date Buyer must be contacted before the delivery schedule is prepared.

DELIVERY SCHEDULE

The Delivery Schedule must be completed by the Seller-servicer for each mortgage sale to Buyer using the form supplied by Buyer (sample A & B). The Delivery Schedule will be audited by the Buyer before purchased, and in the event it is not prepared timely purchase will be delayed until the following month. All requested information must be supplied. Numbered columns are explained as follows:

1. Price column is used to indicate the percentage of participation.
2. Service rate will be established by each investment program.
3. Per diem interest rate is computed on a 360 or 365 day basis. Please indicate which when the delivery schedule is prepared.
4. The amount in column (3) times the days in the next column equal the amount in this column. Accrued or prepaid interest must be computed in order to eliminate adjustments to the first payment.
5. Service fees are computed according to the information in column (2). Each interest group (ie. 9.625% @ 100% @ 3/8 of 1%) must be totaled with a grand total at the end of the schedule to verify the amount of the total sale.
6. Columns (A), (B), (C), and (D) must foot and cross foot.

FINAL LOAN DOCUMENTS

Final loan documents must be delivered to Buyer at time of purchase or within 60 days of closing and endorsed when applicable:

1. Note

   (a) Endorsed as follows:

   Pay to the order of the State of Alaska
   Department of Revenue _____
   _____
   without recourse this _____day of
   _____, 19___.
   Bank_____
   Name_____
   Title_____

2. Deed of Trust -recorded
3. Assignment of Deed of Trust - recorded (one for each mortgage)

4. Title Insurance (conformed copy) ALTA policy whenever possible.

5. Certificate of Hazard Insurance Coverage

6. Mortgage Insurance or Guarantee Certificate (if required)

   a. Private Mortgage Insurance

   b. FHA or VA certificate

7. When applicable original completion certificate from the appraiser with pictures

8. Participation Certificate (one for each participation loan)

Original documents are required on items 1 through 7 for all 100% loans. Copies of all documents of items 1 through 7 are required for participation loans plus original pictures and Participation Certificate.

REQUIREMENTS FOR SERVICING

All mortgages will be serviced by Seller-servicer from one office, unless special arrangements are made at the time of purchase or commitment.

REPORTING

A. SETTLEMENT REMITTANCE SUMMARY:

The Settlement Remittance Summary is required with each remittance and must include the following information that pertains to the % of Buyer participation:

1. Loan type
2. Percent of participation
3. Interest rate
4. Service rate
5. Interest collected
6. Service fee withheld
7. Net interest
8. Principal collected
9. Net principal and interest (sum of 7 and 8, above)
10. All columns must foot and crossfoot.

Normal monthly remittance must be received by the Buyer within five working days of cutoff using the Settlement Remittance Summary form designed by Buyer (sample C). List all 100% participation loan groups

first with lowest rate on top. Then list participation percentages in declining order. Columns must foot and crossfoot and must balance with the Principal Trial Balance report attached. All "adjustments" must be explained giving at least the same amount of detail listed in the upper part of the form. (Use space provided)

B. PRINCIPAL TRIAL BALANCE

A monthly Principal Trial Balance report is required that includes the following information that pertains only to the % of Buyer participation:

1. Loan type
2. Gross Interest Rate
3. Service Rate (eg. 3/8 of 1% or .375)
4. Loan number
5. Names of borrowers
6. Beginning principal balances on manual reports
7. Ending principal balances
8. Interest paid through or to date
9. Amount of interest collected
10. Amount of principal collected

The Principal Trial Balance form designed by the Buyer (sample D) or an appropriate computerized report with at least the same type of information provided may be used at the option of the Seller-servicer.

The Principal Trial Balance report must include a balance on all mortgages with the last interest paid to date whether or not a payment has been made that month. These trial balances must be prepared on an individual group basis. (see definition of group page 9) The percentage of participation must be listed (across from the words "State Participation only" on manual reports). The interest rate shown must be the gross paid before deduction of service charge; the service rate must also be noted. Columns must foot and crossfoot and page totals must agree with the figures brought forward to the Settlement Remittance Summary which serves as the cover page to the remittance package.

The information required in the Principal Trial Balance can be provided by computerized reports with such titles as "Serviced Loan

Report", "Monthly Remittance Report", and "Investor Remittance Report" in conjunction with a simple Principal Trial Balance. However, all information listed above must be provided. Loan names must appear on one of these reports. Loan numbers alone are not acceptable. The loan names may be added by hand or typed in.

C. DELINQUENCY REPORTS

The Seller-servicer must submit monthly a separate Delinquency Report for each Loan Type and Fund which contains at a minimum certain standard information (sample E). Other formats are acceptable provided that the information described below is included.

In the event that no loans are delinquent at the end of any reporting period, the Seller-servicer must submit a Delinquency Report indicating "-0- loans delinquent."

Each report must be self contained and show the following type of information:

1. Fund name (PERS, TRS, SPFM, BLIP, MOP)
2. Type of loan (FHA-VA, SBA, CONV)
3. Loan number
4. Loan name
5. Gross interest rate
6. % of participation
7. Service fee rate
8. Interest date: (one or the other, never both)
   a. Paid to date
   b. Paid through date
9. Principal balance outstanding (NOT the amount of P & I delinquent) on % of Buyer participation only.
10. Total number of days delinquent - list number of days delinquent in their respective columns
    a. 30 - 60 days
    b. 61 - 90 days
    c. Over 90 days

11. Collection efforts and comments - if any loan exceeds 60 days delinquent then a separate explanation is required detailing why the loan is delinquent and the method your institution is using to bring the loan current. On those loans over 90 days delinquent a separate letter must also be sent to the Mortgage Investment Officer stating cause to proceed or not to proceed with foreclosure.

D. PAYOFFS AND PARTIAL PAYOFFS

All payoffs must be received by the Buyer within five working days of the date of the payoff and must be remitted <u>separate</u> from the normal monthly remittances. The information required on each payoff is as follows: (See Sample G)

1. Current loan name
2. All previous owners
3. Bank loan number
4. SBA, VA or FHA loan number
5. Fund (PERS, TRS, SPFM, BLIP, MOP)
6. Type (CONV, FHA-VA, SBA)
7. Gross interest rate
8. Service fee rate
9. Percentage of participation
10. Short legal description (when available)
11. Interest paid from and to dates
12. Total principal paid on % of Buyer participation
13. Total interest paid on % of Buyer participation
14. Service fee charged
15. A detailed name and address to return the paid off loan file along with signed request for full reconveyance when applicable.

If those payoffs and partial payoffs are not received by the Buyer within five working days a late charge at the "interest rate of the loan times the balance" will be charged the Seller-servicer for the excess days it took to remit the money to Buyer.

Payoffs in the form of Seller-servicer repurchases or buy-backs require prior written authorization from Buyer.

E. NOTICE OF ASSUMPTION

Notice of assumptions must be sent timely for all loans the Buyer owns. This notice must detail old owner, new owner, type of liability, new mailing address, fund and type of loan. If original mortgagor has a release of liability a credit package for the new mortgagor must be furnished Buyer. The Buyer reserves the right to increase the interest rate. Each investment program will designate when the Buyer must give prior written approval for each assumption.

F. HAZARD INSURANCE

A Certificate of Hazard Insurance Coverage (Sample F) must be sent to Buyer at closing and in the event of a reduction in coverage that is not at least equal to the unpaid principal balance of the mortgage.

G. LOAN MODIFICATIONS

All loan modifications must have prior written approval from the Buyer. A loan modification, recast, reamortization or extention requires a change in one or more of the provisions of the mortgage. These changes may require a new document to be executed and recorded and an updated title policy. Delinquent interest will be capitalized and considered as collected. All recast worksheets and, when applicable, financial statements must be provided to the Buyer along with a written justification from a bank officer. Modifications must not extend beyond the life of the original mortgage. A reamortization of monthly payments and/or a balloon payment at maturity will be required

Loan modifications due to substantial curtailments will be reviewed on an individual basis and must be approved by the Buyer.

Modifications effecting FHA, VA and SBA loans must also meet the minimum requirements of that agency.

H. FORECLOSURES AND FORECLOSED LOANS

All loans over 90 days delinquent are subject to foreclosure proceedings with the prior written approval of the Buyer. Justification to proceed or not to proceed with the foreclosure along with detailed alternate collections methods must be in writing to the Buyer monthly. These requests will be reviewed by the Buyer and the Seller-servicer will be notified in writing of the results.

Foreclosure proceedings and interpretation of legal requirements are the responsibility of the Seller-servicer as well as notifying the Buyer of all their legal obligations for satisfaction of tax and other liens against the property.

Bankruptcy filing must be brought to the attention of the Buyer immediately. Filing to have property set aside from the bankruptcy will be an automatic process by the Seller-servicer.

Buyers title policy will be required at the end of litigation if the Buyer is the successful bidder in the foreclosure proceedings.

An accounting statement for expenses incurred during and immediately after the foreclosure (ie. attorney, property taxes, insurance, reserve balances, lock-up and other security precautions, etc.) is required by the Buyer within thirty (30) days. A copy of the private mortgage insurance claim is also required by the Buyer from the Seller-servicer within sixty (60) days of the date of the foreclosure. Filing extentions for private mortgage insurance claims must have written approval of the insurance company.

Management of foreclosed property is the responsibility of the Seller-servicer. The property must be secured from strip and waste and hazard insurance must be maintained. If the private mortgage insurance company pays the claim, the property must be listed for sale and a diligent effort made to sell the property as soon as possible. Monthly status reports wil' be required on all foreclosed loans.

DEFINITIONS

FUNDS:	PERS - Public Employees Retirement System
	TRS - Teachers Retirements System
TYPE:	CONV - Conventional Loans
	FHA-VA - Federal Housing Administration - Veterans Administration
	SBA - Small Business Administration
% of PARTICIPATION:	That portion of the mortgage that the State of Alaska owns for one of the above funds, e.g., 100%; 90%; 75%; etc.
GROUP:	A loan group is a Fund, Type, Interest Rate, @ Service Rate and % of Participation, e.g., PERS-CONV-9.50% @ 3/8 of 1%, 100 Part.

From the effective date of this agreement all other agreements and its addendums are superseded by this agreement. All State of Alaska statutes and amendments to statutes effecting mortgage investments will automatically be an integral part of this Agreement and will, when applicable, replace any phraseology in this Agreement. Outstanding commitments to purchase effected by amendments will be honored. (State of Alaska Statutes, Exhibit A--PERS, Exhibit B--TRS)

IN WITNESS WHEREOF, each party has caused its seal to be affixed hereto and this instrument to be signed in its name on its behalf by its proper officials duly authorized.

Effective this 2nd day of June, 19 83.

04-803 (NEW 11/80)

Exhibit A

PUBLIC EMPLOYEES RETIREMENT SYSTEM

Effect of amendments. — The 1977 amendment in subsection (b), substituted "record" for "[illegible]" in the first sentences of paragraphs (1) and (2), deleted "shall be credited as of the date of deduction or payment, as the case may be" from the end of the first sentences of paragraphs (1) and (2), substituted "retirement" for "granting a pension" near the beginning of the third sentence of paragraph (1), deleted "an employee's" preceding "retirement, the amount," in the fourth sentence of paragraph (2), substituted "savings account" for "contribution account" in two places in the fourth sentence of paragraph (2), and deleted an exception from the end of the second sentence of paragraph (3). The amendment also, in paragraph (4) of subsection (b), deleted "credited with all contributions of employers for the purposes of meeting their respective proportion of the total administrative expenses of the system during each fiscal year, and it shall be" following "This account shall be" near the beginning of the second sentence and rewrote the third sentence.

Sec. 39.35.110. Investments. (a) When, in the opinion of the commissioner of administration, there is on hand in the pension fund a surplus over and above a reasonably safe amount to take care of current demands upon the fund, the surplus, or so much of it as in the judgment of the commissioner of administration is considered proper, may be invested at competitive national market rates by the commissioner of revenue in

(1) Repealed by § 15 ch 122 SLA 1980.

(2) Repealed by § 15 ch 122 SLA 1980.

(3) Repealed by § 15 ch 122 SLA 1980.

(4) Repealed by § 15 ch 122 SLA 1980.

(5) shares of federally chartered savings and loan associations in Alaska, to the extent that the investment is insured by the federal government or an agency of the federal government;

(6) deposits with mutual savings banks in Alaska, to the extent that the investment is insured by the federal government or an agency of the federal government;

(7) deposits with state and national banks in Alaska to the extent that the investment is insured by the federal government or an agency of the federal government;

(8) Repealed by § 15 ch 122 SLA 1980.

(9) the guaranteed portion of Small Business Administration loans;

(10) first lien real estate mortgages guaranteed by the federal Veterans Administration;

(11) notes secured by mortgages of commercial or residential buildings if the mortgages are insured by a private mortgage insurance corporation which is authorized to do business in Alaska and has combined capital, surplus and reserves aggregating at least $20,000,000; however,

(A) no mortgage insurance is necessary for commercial loans having loan-to-value ratios of less than 50 percent and the minimum coverage of other commercial loans shall be 10 percent for those having a loan-to-value ratio of 50-60 percent and 15 percent for those having a loan-to-value ratio greater than 60 percent but no more than 75 percent, and

(B) no mortgage insurance is necessary for residential loans having a loan-to-value ratio of less than 70 percent and the minimum coverage of other residential loans shall be 10 percent for those having a loan-to-value ratio greater than 70 percent but less than 90 percent and 20 percent for those having a loan-to-value ratio of 90 percent;

(12) conventional residential mortgages if the originating financial institution retains at least 25 percent of the mortgage for a minimum of two years;

(13) notes secured by mortgages of commercial buildings if the originating financial institution retains at least 25 percent of the mortgage until maturity;

(14) FHA guaranteed portion of business and industrial loans made under the Rural Development Act of 1972;

(15) Repealed by § 15 ch 122 SLA 1980.

(16) Repealed by § 15 ch 122 SLA 1980.

(17) bankers' acceptances which are eligible for discount at the Federal Reserve Bank and certificates of deposit issued by United States domestic banks which are members of the Federal Deposit Insurance Corporation if a generally recognized secondary market exists for the certificates of deposit;

(18) obligations of, or obligations insured by or guaranteed by, the United States or agencies or instrumentalities of the United States;

(19) obligations secured by reserves paid in by the United States or agencies or instrumentalities of the United States or obligations of corporations in which the United States is a shareholder or member;

(20) corporate debt securities with a minimum rating of "A" or an equivalent rating by a nationally recognized rating organization;

(21) preferred and common stock of companies which have paid dividends in each of the three years immediately preceding the investment;

(22) commercial paper bearing the highest rating of a nationally recognized rating organization;

(23) securities of foreign governments, foreign governmental agencies, and foreign corporations the principal, interest or dividends on which are payable in either United States dollars or foreign currencies; however, investments under this paragraph may not exceed 10 percent of the total investments of the pension fund;

(24) foreign time deposits of both United States-owned and foreign-owned banks and trust companies denominated in either United States dollars or foreign currencies; however, investments under this paragraph may not exceed 20 percent of the total investments of the pension fund;

(25) gold bullion certified as to fineness of at least 9½ percent; however, investments under this paragraph may not exceed 10 percent of the total investments of the pension fund; the commissioner of revenue shall purchase gold bullion produced in Alaska to the extent

T39 Alaska, TO-4-32-1239

that Alaska gold bullion is available if it can be obtained at a price comparable to out-of-state sources.

(b) Repealed by § 15 ch 122 SLA 1980.

(c) In making investments the commissioner of revenue shall exercise the judgment and care under the circumstances then prevailing which an institutional investor of ordinary prudence, discretion, and intelligence exercises in the management of large investments entrusted to it not in regard to speculation but in regard to the permanent disposition of funds, considering probable safety of capital as well as probable income. However, no more than 50 percent of the pension fund may be invested at a given time in corporate stocks and debt securities, nor may more than five percent of the voting stock of one corporation be owned. Stocks eligible for purchase are restricted to stocks which, except for bank stocks and insurance stocks, are listed upon an exchange registered with the Federal Securities and Exchange Commission.

(d) Except as provided in this section, the commissioner of revenue may

(1) invest and reinvest the principal and income of the pension fund without distinction between principal and income;

(2) sell, exchange, convey, transfer, or otherwise dispose of an investment of the pension fund held in the name of the system by private contract or at public auction;

(3) vote upon a stock, bond, or other security; give a general or special proxy or power of attorney with or without power of substitution; exercise a conversion privilege, subscription right, or other option and make payments incidental to it; consent to or participate in a corporate reorganization or other change affecting corporate securities, delegate discretionary power, pay an assessment or charge in connection with the delegation; and generally exercise any of the powers of an owner with respect to stocks, bonds, securities, or other investments held in the pension fund;

(4) make, execute, acknowledge, and deliver documents of transfer and conveyance and instruments necessary or appropriate to carry out the powers granted;

(5) register investments held in the pension fund in the name of the system;

(6) do all acts whether or not expressly authorized which are considered necessary or proper for the protection of the investments held in the pension fund.

(e) To qualify as a mortgage which may be purchased under (a)(11), (12), or (13) of this section,

(1) the originating financial institution must certify that the mortgage being sold has been made in compliance with law and that liens supporting the mortgage have been perfected;

(2) the mortgage may not have been held by the originating financial institution for a period greater than 90 days.

(f) When more than one-half of one per cent of the aggregate of all loans purchased from a financial institution becomes delinquent for 60 days, the pension fund shall discontinue purchasing loans from that financial institution until the delinquency is reduced to less than one-half of one per cent.

(g) Repealed by § 15 ch 122 SLA 1980.

(h) The commissioner of revenue may enter into futures contracts for the sale of investments purchased under (a) of this section only for the purpose of hedging an existing equivalent ownership position in the investments.

(i) The commissioner of revenue may transfer at any time a portion of the assets of the pension fund to a trust which is qualified under sec. 401(a) of the Internal Revenue Code (26 U.S.C. sec. 401(a)) and exempt from taxation under sec. 501(a) of the Internal Revenue Code (26 U.S.C. sec. 501(a)) and which is maintained as a medium for pooling a portion of the funds of pension and profit-sharing trusts for diversifying investments in real estate and interests in real estate.

(j) The commissioner of revenue may enter into a contract or trust agreement necessary to effectuate the transfer of assets of the pension fund or to maintain the assets of the pension fund to be transferred to a trust under (i) of this section. (§ 37 ch 143 SLA 1960; am § 1 ch 129 SLA 1961; am § 1 ch 150 SLA 1962; am § 2 ch 4 SLA 1964; am §§ 1 — 3 ch 80 SLA 1964; am § 1 ch 111 SLA 1964; am § 1 ch 56 SLA 1967; am § 4 ch 73 SLA 1969; am §§ 3, 4 ch 17 SLA 1970; am § 2 ch 112 SLA 1972; am §§ 3, 4 ch 25 SLA 1974; am §§ 3, 4 ch 59 SLA 1977; am §§ 7 — 10, 15 ch 122 SLA 1980)

Cross references. — As to custody and investment of the teachers retirement fund, see AS 14.25.180. As to investment of surplus funds of the state, see AS 37.10.070.

Effect of amendments. — The 1977 amendment, in subsection (a), inserted "private mortgage insurance" in paragraph (11), added the language beginning "however, (A) no mortgage insurance is necessary" to the end of that paragraph, and added paragraphs (16) and (17).

The 1980 amendment, in subsection (a), inserted "at competitive national market rates" near the end of the introductory paragraph, repealed former paragraphs (1) — (4), (8), and (15) and (16), substituted "the" for "such" preceding "investment" in paragraphs (5) and (6), substituted "of the federal government" for "thereof" at the end of paragraphs (5) and (6), substituted "buildings" for "real estate or other security" near the beginning of the introductory paragraph of paragraph (11), substituted "buildings" for "real estate" and added "until maturity" in paragraph (13), and "negotiable time" preceding "certificates of deposit" in paragraph (17), substituted "United States domestic" for "commercial" near the middle of paragraph (17), added the material at the end of paragraph (17), which begins: "which are members of" and ends: "certificates of deposit," and added paragraphs (18) — (25). The amendment, in subsection (c), substituted "an institutional investor" for "a man," and "large investments entrusted to it" for "his own affairs" near the beginning of the subsection, deleted "his" following "permanent disposition of" and "the" preceding "probable safety of capital" near the middle of the subsection, inserted "safety of capital as well as probable" preceding "income" and deleted "from

them as well as the probable safety of his capital" at the end of the first senten... deleted "mutual funds and" preceding "corporate stocks" near the beginning of the second sentence, substituted "debt securities" for "bonds," and "may" for "any" near the middle of the second sentence, substituted "and" for a comma following "bank stocks," and deleted "and shares in mutual funds" following "insurance stocks" near the middle of the third sentence; rewrote subsection (e); added subsections (h) — (j); and repealed subsections (b) and (g).

Article 2. Membership.

154. North Pacific Fishery Management Council employees
155. [Obsolete]
157. [Obsolete]
158. Administrative director of courts

Sec. 39.3...120. Commencement of participation. (a) An employee of ...e state shall be included in this system upon commencement ...f his employment with the state, or on January 1, 1961, whichever is later. An employee of a political subdivision or public organization ...hich becomes an employer shall be included in the system on the effe...e date of the employer's participation or the date of the employee's ...ommencement of employment with the employer, whichever is late...

(b) **[Effective until Janua... 1, 1981]** Inclusion in the system is a condition of employment for an ...ployee except an elected official.

[Effective January 1, 1981] I...lusion in the system is a condition of employment for an employee exce...t as otherwise provided for an elected official. (§ 4 ch 143 SLA 1960; ...m § 1 ch 155 SLA 1966; am § 28 ch 13 SLA 1980; am § 27 ch 146 SL... 1980)

Effect of amendments. — The first 1980 amendment deleted "or quasi-public" preceding "organization" near the beginning of the second sentence in subsection (a).

The second 1980 amendment, effective January 1, 1981, inserted "as otherwise provided for" preceding "an elected official" near the end of subsection (b).

Negotiability of retirement system benefits. — Given subsection (b) of this section and AS 39.35.170, which make inclusion in the public employees retirement s...tem (AS 39.35) a condition of employment for state employees and contributions t... it mandatory, the conclusion is that t... legislature intended the statutory provi...ns of the public employees retirement s...tem to apply to all state employees, and b...efits under the public employees retiremen...system may not be negotiated under ...e Public Employment Relations Act (AS ...40.070 — 23.40.260). January 23, 1978, ... Att'y Gen.

Sec. 39.35.125. Participation of elected officials. [Effective until January 1, 1981] (a) An elected official, other than a state legislator who is an active member of the teachers' retirement system, may be included in the system if, within 60 days after taking the oath of his office or within 60 days after May 12, 1966

Exhibit B

TEACHERS RETIREMENT SYSTEM

(d) The board may impose conditions on granting a waiver which it considers equitable. These conditions may include requiring the member or beneficiary to make additional contributions to the system.

(e) The board may reconsider a ruling under this section upon request of the member or beneficiary or the administrator if the request is received within 30 days after the initial ruling. Any modification of the initial ruling must be made within 30 days after receipt of a request for reconsideration.

(f) Rulings and modifications of rulings under this section must be by a majority of a quorum of the board.

(g) Rulings on appeals and requests for reconsideration under this section may be appealed by an aggrieved member or beneficiary to the superior court for abuse of discretion. (§ 1 ch 81 SLA 1979)

Sec. 14.25.177. Effect of amendments. (a) An amendment to this chapter is not retroactive unless its retroactivity is expressly stated in the amendment.

(b) The monthly amount of a benefit payable under this chapter shall be determined in accordance with the provisions of this chapter in effect on the date of termination of the member's last segment of employment. (§ 4 ch 169 SLA 1976; am § 21 ch 13 SLA 1980)

Effect of amendment. — The 1980 amendment, effective July 1, 1980, rewrote the section.

Sec. 14.25.180. Custody and investment.

(b) When, in the opinion of the commissioner of administration, there is on hand in the retirement fund a surplus over and above a reasonably safe amount to take care of current demands upon the fund, the surplus or so much of it as in the judgment of the commissioner of administration is considered proper may be invested at competitive national market rates by the commissioner of revenue in

(1) (repealed);

(3) (repealed);

(4) shares of federally chartered savings and loan associations in Alaska, to the extent that the investment is insured by the federal government or by an agency of the federal government;

(5) deposits with mutual savings banks in Alaska, to the extent that the investment is insured by the federal government or an agency of the federal government;

(6) deposits with state and national banks in Alaska to the extent that the investment is insured by the federal government or an agency of the federal government;

(7) (repealed);

(8) (deleted);

(9) the guaranteed portion of Small Business Administration loans;

(10) first lien real estate mortgages guaranteed by the federal Veterans Administration;

(11) notes secured by mortgages of commercial or residential buildings if the mortgages are insured by a private mortgage insurance corporation which is authorized to do business in Alaska and has combined capital, surplus and reserves aggregating at least $20,000,000; however,

(A) no mortgage insurance is necessary for commercial loans having loan-to-value ratios of less than 50 percent and the minimum coverage of other commercial loans shall be 10 percent for those having a loan-to-value ratio of 50-60 percent and 15 percent for those having a loan-to-value ratio greater than 60 percent but no more than 75 percent, and

(B) no mortgage insurance is necessary for residential loans having a loan-to-value ratio of less than 70 percent and the minimum coverage of other residential loans shall be 10 percent for those having a loan-to-value ratio greater than 70 percent but less than 90 percent and 20 percent for those having a loan-to-value ratio of 90 percent;

(12) conventional residential mortgages if the originating financial institution retains at least 25 percent of the mortgage for a minimum of two years;

(13) notes secured by mortgages of commercial buildings if the originating financial institution retains at least 25 percent of the mortgage until maturity;

(14) FHA guaranteed portion of business and industrial loans made under the Rural Development Act of 1972;

(15) (repealed);

(16) (repealed);

(17) bankers' acceptances which are eligible for discount at the Federal Reserve Bank and certificates of deposit issued by United States domestic banks which are members of the Federal Deposit Insurance Corporation if a generally recognized secondary market exists for the certificates of deposit;

(18) obligations of, or obligations insured by or guaranteed by, the United States or agencies or instrumentalities of the United States;

(19) obligations secured by reserves paid in by the United States or agencies or instrumentalities of the United States or obligations of corporations in which the United States is a shareholder or member;

(20) corporate debt securities with a minimum rating of "A" or an equivalent rating by a nationally recognized rating organization;

(21) preferred and common stock of companies which have paid dividends in each of the three years immediately preceding the investment;

(22) commercial paper bearing the highest rating of a nationally recognized rating organization;

(23) securities of foreign governments, foreign governmental agencies, and foreign corporations the principal, interest or dividends on which are payable in either United States dollars or foreign currencies; however, investments under this paragraph may not exceed 10 percent of the total investments of the retirement fund;

(24) foreign time deposits of both United States-owned and foreign-owned banks and trust companies denominated in either United States dollars or foreign currencies; however, investments under this paragraph may not exceed 20 percent of the total investments of the retirement fund;

(25) gold bullion certified as to fineness of at least 99-½ percent; however, investments under this paragraph may not exceed 10 percent of the total investments of the retirement fund; the commissioner of revenue shall purchase gold bullion produced in Alaska to the extent that Alaska gold bullion is available if it can be obtained at a price comparable to out-of-state sources.

(c) In making investments the commissioner of revenue shall exercise the judgment and care under the circumstances then prevailing which an institutional investor of ordinary prudence, discretion, and intelligence exercises in the management of large investments entrusted to it not in regard to speculation but in regard to the permanent disposition of funds, considering probable safety of capital as well as probable income. However, no more than 50 percent of the retirement fund may be invested at any given time in corporate stocks and debt securities, nor may more than five percent of the voting stock of a corporation be owned. Stocks eligible for purchase are restricted to stocks which, except for bank stocks and insurance stocks, are listed upon an exchange registered with the Federal Securities and Exchange Commission.

(d) Except as provided above, the commissioner of revenue may:

(1) invest and reinvest the principal and income of the retirement fund without distinction between principal and income;

(2) sell, exchange, convey, transfer or otherwise dispose of any investment of the retirement fund held in the name of the system by private contract or at public auction;

(3) vote stocks, bonds or other securities; give general or special proxies or powers of attorney with or without power of substitution; exercise conversion privileges, subscription rights or other options and make payments incidental thereto; consent to or otherwise participate in corporate reorganizations or other changes affecting corporate securities and delegate discretionary powers and pay assessments or charges in connection therewith; and generally exercise the powers of an owner with respect to stocks, bonds, securities or other investments held in the retirement fund;

(4) make, execute, acknowledge and deliver documents of transfer and conveyance and other instruments necessary or appropriate to carry out the powers granted by this subsection;

(5) register investments held in the retirement fund in the name of the system;

(6) do all acts whether or not expressly authorized which he considers necessary or proper for the protection of the investments held in the retirement fund.

(e) To qualify as a mortgage which may be purchased under (b)(11), (12) or (13) of this section,

(1) the originating financial institution must certify that the mortgage has been made in compliance with law and that liens supporting the mortgage have been perfected;

(2) the mortgage may not have been held by the originating financial institution for a period greater than 90 days.

(g) The commissioner of revenue may enter into futures contracts for the sale of investments purchased under (b) of this section only for the purpose of hedging an existing equivalent ownership position in the investments.

(h) The commissioner of revenue may transfer at any time a portion of the assets of the retirement fund to a trust which is qualified under sec. 401(a) of the Internal Revenue Code (26 U.S.C. sec. 401(a)) and exempt from taxation under sec. 501(a) of the Internal Revenue Code (26 U.S.C. sec. 501(a)) and which is maintained as a medium for pooling a portion of the funds of pension and profit-sharing trusts for diversifying investments in real estate and interests in real estate.

(i) The commissioner of revenue may enter into a contract or trust agreement necessary to effectuate the transfer of assets of the retirement fund or to maintain the assets of the retirement fund to be transferred to a trust under (h) of this section.

(am §§ 1, 2 ch 59 SLA 1977; am §§ 1 — 5 ch 122 SLA 1980)

Cross references. — As to investment of surplus funds, see AS 37.10.070. As to investments, see AS 39.35.110.

Effect of amendments.

The 1977 amendment, in subsection (b), inserted "private mortgage insurance" in paragraph (11), added the language beginning "however, (A) no mortgage insurance is necessary" to the end of that paragraph, and added paragraphs (16) and (17).

The 1980 amendment, effective July 1, 1980, in subsection (b), inserted "at competitive national market rates" in the introductory language; deleted paragraphs (1) — (3), (7), and (15) and (16), relating to certain governmental bonds or other interest-bearing obligations and securities, certain first lien real estate mortgage securities, corporation bonds and preferred and common stocks, loans guaranteed by the division of veterans affairs, guaranteed portion of loans made under the Federal Ship Financing Act of 1972, and certain Canadian bonds, debentures, notes or other obligations, respectively; substituted "buildings" for "real estate or other security" in the introductory language of paragraph (11); substituted "buildings" for "real estate" and inserted "until maturity" in paragraph (13); deleted "negotiable time" preceding "certificates" and substituted the language beginning "United States domestic banks" for "commercial banks" in paragraph (17); and added paragraphs (18) — (25). In subsection (c), the amendment substituted "an institutional

investor" for "men," "exercises" for "exercise," "large investments entrusted to it" for "their own affairs" and "probable safety of capital as well as probable income" for "the probable income therefrom as well as the probable safety of their capital" in the first sentence, deleted "their" preceding "funds" in the first sentence, and substituted "debt securities" for "bonds" and "a corporation" for "any corporation" in the second sentence. In addition, the amendment inserted "held in the retirement fund" in paragraph (5) of subsection (d), rewrote subsection (e), and added subsections (g) — (i).

Sec. 14.25.200. Exemption from taxation and process. Benefits and other amounts held in the retirement fund on behalf of the members are exempt from Alaska state and municipal taxes and are not subject to anticipation, alienation, sale, transfer, assignment, pledge, encumbrance, charge, garnishment, execution or levy of any kind, either voluntary or involuntary before they are received by the person entitled to the amount under the terms of the system, and any attempt to anticipate, alienate, sell, transfer, assign, pledge, encumber, charge, or otherwise dispose of any right to amounts accrued in the retirement fund is void. (§ 22 ch 145 SLA 1955; am § 17 ch 89 SLA 1960; am § 13 ch 84 SLA 1969; am § 22 ch 13 SLA 1980)

Effect of amendment. — The 1980 amendment, effective July 1, 1980, substituted "Benefits" for "Teachers' retirement salaries" at the beginning of the section, substituted "members" for "teachers" following "on behalf of the" near the beginning of the section, inserted "Alaska" preceding "state and municipal taxes" near the beginning of the section, and substituted "is void" for "shall be void" at the end of the section.

As the rest of the section was not affected by the amendment, it is not set out.

Cited in Gutterman v. First Nat'l Bank, Sup. Ct. Op. No. 1873 (File No. 3996), 597 P.2d 969 (1979).

Sec. 14.25.205. Time limit for application. If no application for benefits or for refund has been filed with the administrator by July 1 following the date on which an inactive member (except a member on leave of absence without pay) would attain age 75, or if no application for benefits or for refund has been filed with the administrator within the 50 years following the most recent date on which the person was an active member, no benefits or refunds may be paid under this chapter and the member's records may be destroyed. (§ 14 ch 84 SLA 1969; am § 23 ch 13 SLA 1980)

Effect of amendment. — The 1980 amendment, effective July 1, 1980, rewrote the section.

Sec. 14.25.220. Definitions. In this chapter, unless the context requires otherwise,

(1) "active member" means a member who is employed by an employer, is receiving compensation on a full-time or part-time basis, and is making contributions to the system, or a member making contributions under AS 14.20.330 or 14.20.345;

ALASKA PERMANENT FUND CORPORATION

SALES AND SERVICING AGREEMENT ADDENDUM

In conjunction with and as an addendum to the Agreement between ALASKA MUTUAL BANK, (employer identification number 92 00283-15) herein called "Seller-servicer", and the Alaska Permanent Fund Corporation, herein called "Buyer", and dated OCTOBER 29, 1982, the following uniform guidelines regarding the submission, purchase, and servicing of mortgages are hereby established and made part of said Agreement. Because it addresses specific procedures and the format of reports, this addendum should be distributed to all sections of the Seller-servicer mortgage department. All correspondence and inquiries should be directed to the attention of the Mortgage Section at:

Alaska Department of Revenue
Treasury Division
Pouch SB
Juneau, Alaska 99811
(907) 465-2354 - (907) 465-2353

All correspondence to Buyer must bear the loan name, fund name (Alaska Permanent Fund Corporation), loan type (FHA-VA, SBA, FmHA, CONV, CONV-ARM), interest rate, anniversary group, percent of participation, brief legal description of property, if available, and all previous owners, if applicable.

GENERAL REQUIREMENTS

All loans submitted for purchase must have private mortgage insurance, 25% bank participation, FHA insurance, FmHA insurance, VA guarantee or SBA guarantee, if required. No take-out refinances will be purchased. Loan to value ratios will be established by investment program in a separate requirement letter or regulations. All loans will be purchased at par unless advised otherwise. Usury rate applies on loans under $25,000. Specific conditions to purchase will be detailed in a "Commitment Requirement" or "Regulations" sent out at the time of each general commitment. Standard industry underwriting criteria for each type of loan will apply as detailed by FNMA or FHLMC.

REQUIREMENTS FOR COMMITMENT TO PURCHASE

Commitment fee requirements will be established by investment program and when applicable must accompany the original loan submission package.

This fee is non-refundable, except as noted below, and no loan substitutions may be made. Deposit of commitment check does not mean the loan is approved. Official notification will be sent regarding commitment. Commitment fee will only be returned or credit given on loans refused. Buyer will not commit to purchase and/or honor existing commitments to purchase mortgages from any Seller-servicer when they exceed the delinquency ratio established by Alaska Statutes §37.13.120 (Exhibit A) and Buyer Regulations (Exhibit B) Buyer will commit to purchase and/or honor existing commitments to purchase mortgages when the delinquency is reduced to these requirements.

LOAN SUBMISSION FOR COMMITMENT

Requests for commitments and/or purchase must include, but is not necessarily limited to, copies of the following documents:

A. RESIDENTIAL

1. Loan application (including gross interest rate and service rate) (Must be a standard industry form such as FNMA #1003)
2. Conventional Mortgage type must be indicated at time of submission depending on investment program available:

   CONV - fixed rate mortgages

   CONV-ARM - Adjustable Rate Mortgages or Variable Rate Mortgages
3. Copy of Private Mortgage Insurance application (if applicable)
4. Original appraisal (with plat layout, original pictures and signature)
5. Credit report and credit letters
6. Earnest money agreement
7. Verification of all bank accounts
8. Employment verification
9. Tax returns (if self-employed)
10. Financial statements (if applicable)
11. Other pertinent information

B. COMMERCIAL

1. Offering sheet - containing but not necessarily limited to the following information:
   a. Borrower(s)
   b. Loan amount

c. Purpose of loan

d. Gross interest rate and service rate

e. Fee

f. Terms

g. Account relationship with Bank

h. Financial data (Assets - Liabilities - Net Worth)

i. Security (Land - Improvements)

j. Income statement - projected

k. Analysis:

- Loan to value ratio
- Debt service
- Debt service coverage
- Default ratio
- Loan per square foot
- Gross rent multiple
- Mortgage multiple
- Other ratios if applicable

l. Participants

m. Recommendations

n. Other pertinent information

2. Loan application

3. Maps/plats

4. Original photos

5. Plans and specifications

6. Appraisal

7. Financial statement for 3 years - Balance Sheets, Profit and Loss Statements

8. Credit report and credit letters

9. Bank balance verifications

10. Federal tax returns for 3 years (if applicable)

11. Private Mortgage Insurance application (if applicable)

12. Earnest Money Agreement (if applicable)

REQUIREMENTS FOR PURCHASE

The following documents must be delivered to Buyer by the 10th of the month for purchase on the last working day of the month.

In the event questions arise as to settlement date Buyer must be contacted before the delivery schedule is prepared.

SUBMISSION FOR PURCHASE

A. DELIVERY SCHEDULE

The Delivery Schedule must be completed by the Seller-servicer for each mortgage sale to Buyer using the form supplied by Buyer (Exhibit C & D). The Delivery Schedule will be audited by the Buyer before purchased, and in the event it is not prepared timely purchase will be delayed until the following month. The Seller-servicer will provide a name and phone number of a contact in the lower left hand corner on the TOTAL page of the Delivery Schedule in case of questions arising during the audit of the Delivery Schedule. All requested information must be supplied. Do not put CONV-ARM and regular CONV mortgages on the same Delivery Schedule.

Numbered columns are explained as follows:

1. Price column is used to indicate the percentage of participation.
2. Service rate will be established by each investment program.
3. Per diem interest rate is computed on a 360 or 365 day basis. Please indicate which when the delivery schedule is prepared.
4. The amount in column (3) times the days in the next column equal the amount in column (4). Accrued or prepaid interest must be computed in order to eliminate adjustments to the first payment.
5. Service fees are computed according to the information in column (2). Each interest group (ie. 9.625% @ 100% @ 3/8 of 1%) must be totaled with a grand total at the end of the schedule to verify the amount of the total sale.
6. Columns (A), (B), (C), and (D) must foot and cross foot.
7. In the case of Adjustable Rate Mortgages the Anniversary Group "A" or "B" must be indicated along with the interest rate.

B. FINAL LOAN DOCUMENTS

Final loan documents must be delivered to Buyer at time of purchase or within 60 days of closing and endorsed to the "Alaska Permanent Fund Corporation":

1. Note

(a) Endorsed as follows:

Pay to the order of the Alaska Permanent Fund Corporation without recourse this _____ day of _____, 19__.
Bank _____
Name _____
Title _____

2. Deed of Trust - recorded

3. Assignment of Deed of Trust - assigned (one for each mortgage) to the Alaska Permanent Fund Corporation and recorded

4. Title Insurance (conformed copy) ALTA policy whenever possible (endorsed)

5. Certificate of Hazard Insurance Coverage (endorsed) (Exhibit E)

6. Mortgage Insurance or Guarantee Certificate (if required) (endorsed)

   a. Private Mortgage Insurance

   b. FHA, VA, or FmHA certificate

   c. SBA guarantee

7. When applicable original completion certificate from the appraiser with pictures and signature

8. Participation Certificate (one for each participation loan) (Exhibit F)

Original documents are required on items 1 through 7 for all 100% loans. Copies of all documents of items 1 through 7 are required for participation loans plus original pictures and Participation Certificate.

REQUIREMENTS FOR SERVICING

All mortgages will be serviced by Seller-servicer from one office, unless special arrangements are made at the time of purchase or commitment.

REPORTING

A. SETTLEMENT REMITTANCE SUMMARY:

The Settlement Remittance Summary is required with each remittance and must include the followng information that pertains to the percent of the Buyer participation:

1. Loan type

2. Percent of participation

3. Interest rate and Anniversary Group "A" or "B" on ARM loans

4. Service rate

5. Interest collected

6. Service fee withheld

7. Net interest

8. Principal collected

9. Net principal and interest (sum of 7 and 8, above)

10. All columns must foot and crossfoot.

The normal monthly cutoff will be @ close of business 18th of each month and remittance must be received by Buyer within five working days of cutoff using the Settlement Remittance Summary form designed by Buyer (Exhibit G). A penalty will be assessed on late remittances by taking "the amount of the remittance times the average interest rate available for that remittance." Holidays, weekends, weather delays and postmark's will be taken into consideration. List all 100% participation loan groups first with lowest rate on top. Then list participation percentages in declining order. Columns must foot and crossfoot and must balance with the Principal Trial Balance report attached. All "adjustments" must be explained giving at least the same amount of detailed information listed in the upper part of the form. (Use space provided)

B. PRINCIPAL TRIAL BALANCE

A monthly Principal Trial Balance report is required that includes the following information that pertains only to the percent of Buyer participation:

1. Loan type and fund
2. Gross Interest Rate and Anniversary Group "A" or "B" on ARM loans
3. Service Rate (eg. 3/8 of 1% or .375)
4. Participation percent (other than 100% on computerized reports)
5. Loan number
6. Names of borrowers
7. Beginning principal balances (on manual reports)
8. Ending principal balances
9. Interest paid through or to date
10. Amount of interest collected
11. Amount of principal collected
12. Seller-servicer name and report date

The Principal Trial Balance form is required (Exhibit H) designed by the Buyer or an appropriate computerized report, with at least the same type of information provided, may be used at the option of the Seller-servicer.

The Principal Trial Balance report must include a balance on all

mortgages with the last interest paid to date whether or not a payment has been made that month. These trial balances must be prepared on an individual group basis. (see definition of group page 14) The percentage of participation must be listed (across from the words "Participation only" on manual reports). The interest rate shown must be the gross paid before deduction of service charge; the service rate must also be noted. Columns must foot and crossfoot and page totals must agree with the figures brought forward to the Settlement Remittance Summary which serves as the cover page to the remittance package.

The information required on the Principal Trial Balance can be provided by a computerized report or group of reports with such titles as "Serviced Loan Report", "Monthly Remittance Report", "Investor Trial Balance", "Investor Group Reconciliation", "Payment Journals", "Monthly Statement of Mortgage Accounts", and "Investor Remittance Report" in conjunction with a simple Principal Trial Balance. However, all information listed above must be provided. Loan names must appear on one of these reports. Loan numbers alone are not acceptable. The loan names must be added by hand or typed in if not on computerized reports.

C. DELINQUENCY REPORTS

The Seller-servicer must submit monthly a separate Delinquency Report for each loan Type and Fund which contains at a minimum certain standard information (Exhibit I). Other computerized formats such as "Investor Delinquency Service Loan Report", and "Investor Statement of Arrears" are acceptable provided that the information described below is included.

In the event that no loans are delinquent at the end of any reporting period, the Seller-servicer must submit a Delinquency Report indicating "-0- loans delinquent."

Each report must be self contained and show the following type of information:

1. Fund name (Alaska Permanent Fund Corporation)
2. Type of loan (FHA-VA, FmHA, SBA, CONV, CONV-ARM)
3. Loan number
4. Loan name
5. Gross interest rate and Anniversary Group "A" or "B" on ARM loans (ie 16.00% B)
6. Percent of participation

7. Service fee rate

8. Last interest paid to date

   a. 30 - 60 days

   b. 61 - 90 days

   c. Over 90 days

9. Principal balance outstanding (NOT the amount of P & I delinquent) on percent of Buyer participation only.

10. Total number of days delinquent - list number of days delinquent in their respective columns

   a. 30 - 60 days

   b. 61 - 90 days

   c. Over 90 days

11. Collection efforts and comments - if any loan exceeds 60 days delinquent then a separate explanation is required detailing why the loan is delinquent and the method, as Seller-servicer, you are using to bring the loan current. On those loans over 90 days delinquent a separate letter must also be sent to the Buyer stating cause to proceed or not to proceed with foreclosure. If computerized report are utilized then these comments must be added by hand. A separate report to the Buyer with this information is required if hand edits are not made.

D. PAYOFFS

All payoffs must be received by the Buyer within five working days of the date of the payoff and must be remitted separate from the normal monthly remittances. The information required on each payoff is as follows: (Exhibit J)

1. Current loan name

2. All previous owners

3. Bank loan number

4. SBA, FmHA, VA or FHA loan number

5. Fund (Alaska Permanent Fund Corporation)

6. Type (CONV, CONV-ARM, FHA-VA, FmHA, SBA)

7. Gross interest rate and Anniversary Group "A" or "B" if ARM loans

8. Service fee rate

9. Percentage of participation

10. Short legal description (when available)

11. Interest paid from and to dates

12. Total principal paid on percent of Buyer participation

13. Total interest paid on percent of Buyer participation

14. Service fee charged

15. A detailed name and address to return the paid off loan file along with signed request for full reconveyance when applicable.

If these payoffs are not received by the Buyer within five working days of the date of the payoff a late charge at the "interest rate of the loan times the balance" will be charged the Seller-servicer for the excess days it took to remit the money to Buyer.

Payoffs in the form of Seller-servicer repurchase, subsitution or buy-backs require prior written authorization from Buyer. (See Section J FORECLOSURE for details)

E. CURTAILMENTS AND PARTIAL PAYOFFS

Curtailments and Partial Payoffs of $5,000 or more must be received by the Buyer within five working days of the date of the curtailment and remitted separate from the normal monthly remittances. The information required on each curtailment is the same as for payoffs.

Requests for partial release of collateral must have prior written approval of Buyer and must contain pertinent documentation that establishes the value of the remaining collateral that meets loan to value ratio and PMI and other insurance requirements of each program.

When applicable documentation to perfect proper title in the collateral must accompany transmittal of funds to Buyer. A penalty will be assesed on late remittances in the same manner as payoffs.

F. NOTICE OF ASSUMPTION

Notice of Assumptions must be sent timely for all loans the Buyer owns. This notice must detail old owner, new owner, degree of liability, new mailing address, fund, type of loan, when applicable interest rate change (from and to) and effective date. Assumptions of FHA, VA and SBA loans and mortgages must follow federal regulations when in contradiction to the following requirements. All other assumptions will require credit work ups held by the Seller-servicer. The original mortgagor will not be released from liability. Owner occupied loans are only assumable on an owner occupied basis. The Buyer reserves the right to increase the

interest rate or deny assumptions per the "Due on Sale Clause" (CONV and CONV-ARM). In addition, regulations will govern policy for each program.

G. HAZARD INSURANCE

A Certificate of Hazard Insurance Coverage (Exhibit E) must be sent to Buyer at closing and in the event of a reduction in coverage. Coverage must be at least equal to the unpaid principal balance of the mortgage. The Buyer must be notified in writing of all damage claims for $10,000 or more.

H. LOAN MODIFICATION

All loan modifications must have prior written approval from the Buyer. A loan modification, recast, reamortization or extension requires a change in one or more of the provisions of the mortgage. These changes may require a new document to be executed and recorded and an updated title policy. Delinquent interest may be capitalized and considered as collected. All recast worksheets and, when applicable, financial statements must be provided to the Buyer along with a written justification from a bank officer. Modifications must not extend beyond the life of the original mortgage. A reamortization of monthly payments and/or a balloon payment at maturity will be required.

Loan modifications due to substantial curtailments will be reviewed on an individual basis and must be approved by the Buyer.

Modifications effecting FHA, VA, FmHA and SBA loans must also meet the minimum requirements of that agency. Modifications of loans with private mortgage insurance coverage must also have the approval of the private mortgage insurance company.

I. MANAGEMENT OF DELINQUENT LOANS

Seller-servicer will be held accountable for management of delinquent loans within Alaska Statute and adopted Regulation limits in order to continue to sell loans to Buyer. (See Alaska Statute §37.13.120 and Buyer Regulations for ratio details) (Exhibits A & B)

Seller-servicer may utilize with prior approval of Buyer, these management options to rectify delinquency problems inorder to continue to sell loans to Buyer:

1. Repurchase of delinquent principal, interest and expenses paid by Buyer on a given date each month
2. Substitution or Swap of loans with equal or greater interest rate within $10,000 of total of delinquent loan(s)

3. Deed in Lieu of Foreclosure may facilitate foreclosure time but will only be acceptable to the Buyer after extensive title search

4. Loan modification (See Section H MODIFICATIONS for details)

J. FORECLOSURES AND FORECLOSED LOANS

All loans over 90 days delinquent are subject to foreclosure proceedings with the prior written approval of the Buyer. Justification to proceed or not to proceed with the foreclosure along with detailed alternate collections methods and forebearance recommendations must be in writing to the Buyer monthly. (See Section C DELINQUENCY for details) These requests will be reviewed by the Buyer and the Seller-servicer will be notified in writing of the Buyers opinion and concurrence with recommendations.

Foreclosure proceedings and interpretation of legal requirements are the responsibility of the Seller-servicer as well as notifying the Buyer of all their legal obligations for satisfaction of tax and other liens against the property.

Bankruptcy filing must be brought to the attention of the Buyer immediately. Filing to have property set aside from the bankruptcy will be an automatic process of the Seller-servicer, unless Seller-servicer recommends another course of action that is acceptable to the Buyer. Buyer must be notified by Seller-servicer of Bankruptcy hearings and result of hearing.

Buyers title policy will be required at the end of litigation if the Buyer is the successful bidder in the foreclosure proceedings.

An accounting statement with receipts for expenses incurred during and immediately after the foreclosure (ie. attorney, property taxes, insurance, reserve balances, lock-up and other security precautions, etc.) is required by the Buyer within thirty (30) days. A copy of the private mortgage insurance claim is also required by the Buyer from the Seller-servicer within sixty (60) days of the date of the foreclosure. Filing extensions for private mortgage insurance claims must have written approval of the insurance company.

Management of foreclosed property is the responsibility of the Seller-servicer. The property must be secured from strip and waste and hazard insurance must be maintained. If the private mortgage insurance company pays the claim, then the property must be appraised and listed

for sale by Seller-servicer or listing agent, with the approval of Buyer and a diligent effort made to sell the property as soon as possible. Monthly status reports will be required on all foreclosed loans. The Buyer will be available to consult with the Seller-servicer on management of the foreclosed property and has the final authority for disposition of the property. Buyer will sign all property management contracts, listing agreements, earnest money agreements, counter offers, agreement to occupy and loan closing papers on 100% participation loans. Documents for Participation Loans will be singed by Seller-servicer with concurrence of Buyer.

SPECIAL REQUIREMENTS SERVICING

CONVENTIONAL ADJUSTABLE RATE MORTGAGES

The Seller-servicer will service Adjustable Rate Mortgages (ARM) or Variable Rate Mortgages (VRM), from Federal Savings and Loan Associations, for the Buyer by utilizing regulations issued by the Office of the Comptroller of the Currency (OCC) and rulings by Federal Home Loan Bank Board (FHLBB), when applicable, if those regulations are not in conflict with the Sales and Service Agreement, Addendum or Regulations issued by the Buyer.

DISCLOSURES

Applicants for ARM mortgages must be given an information sheet on characteristics of ARM mortgages, potential interest rate changes, index used and its history, maximum yearly increases and decreases, carryover, frequency of rate change and due-on-sale clause. The Seller-servicer is held responsible for meeting disclosure requirements per Federal and State regulations.

ANNIVERSARY DATE AND GROUP

Initial adjustment period must be for a minimum of twelve months and for those mortgages closed during the months of March thru August must be scheduled to adjust on the first day of September (Group B) of the following year, and mortgages closed during the months of September thru February must be scheduled to adjust on the first day of March (Group A) of the following year.

RATE AND PAYMENT CHANGE NOTIFICATION

Seller-servicer must send Notice of regular interest rate change, and effective rate change either increase or decrease, to the borrower at

least 30 days but not more than 45 days before the change is to take effect. All areas of disclosure as addressed by FNMA or FHLMA guidelines must be included in this notice. The Seller-servicer must also notify the Buyer of interest rate changes and effective gross interest rate changes so that the Buyer can also make necessary adjustment to its individual loan files and accounting records.

NEGATIVE AMORTIZATION - LOAN TERM

The Buyer will not allow negative amortization or extension of loan term for this ARM program.

DEFINITIONS

FUND:	APFC	- Alaska Permanent Fund Corporation
TYPE:	CONV	- Conventional Loan
	CONV-ARM	- Conventional - Adjustable Rate Mortgage includes Variable Rate Mortgage - VRM program with Federal Savings and Loan Associations
	FHA	- Federal Housing Administration

made with money lent to the Commercial Fishing and Agriculture Bank under this subsection may not be guaranteed under (a)(4) of this section.

(e) In this section, "commercial bank" means a bank chartered by the United States or by a state of the United States."

Section 3, ch. 32, SLA 1980, effective May 14, 1980, provides: "The legislature finds that the Alaska Renewable Resources Corporation has complied with all requirements for an investment of $3,500,000 in Ball Brothers, Inc., an Alaska corporation, except for the requirement in AS 37.12.080(b) that no financial assistance of more than $1,500,000 may be provided to a single project or applicant unless the legislature has approved the investment by concurrent resolution. The legislature further finds that approval of the investment is in the public interest. Notwithstanding the provisions of AS 37.12.080(b) requiring approval by concurrent resolution, the investment in the amount of $3,500,000 is approved and the corporation is authorized to make the proposed investment in Ball Brothers, Inc., an Alaska corporation."

Effective date of chapter. — Section 11, ch. 18, SLA 1980, makes this chapter effective April 9, 1980, in accordance with AS 01.10.070(c).

Sec. 37.13.010. Alaska permanent fund. (a) Under art. IX, § 15 of the state constitution, there is established as a separate fund the Alaska permanent fund. The Alaska permanent fund consists of

(1) 25 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares under AS 38.05.180(f) and (g), and federal mineral revenue sharing payments received by the state from mineral leases issued on or before December 1, 1979, and 25 percent of all bonuses received by the state from mineral leases issued on or before February 15, 1980;

(2) 50 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares under AS 38.05.180(f) and (g), and federal mineral revenue sharing payments received by the state from mineral leases issued after December 1, 1979, and 50 percent of all bonuses received by the state from mineral leases issued after February 15, 1980;

(3) any other money appropriated to or otherwise allocated by law to the Alaska permanent fund.

(b) Payments due the Alaska permanent fund under (a) of this section shall be made to the fund once each month.

(c) The Alaska permanent fund shall be managed by the Alaska Permanent Fund Corporation established in this chapter. (§ 5 ch 18 SLA 1980)

Legislative history report. — For the Free Conference Committee Report on ch. 18, SLA 1980 (FCCSSB 161), see 1980 House Journal, Supplement No. 7, April 2, 1980.

Sec. 37.13.020. Findings. The people of the state, by constitutional amendment, have required the placement of at least 25 percent of all mineral lease rentals, royalties, royalty sale proceeds, and federal mineral revenue sharing payments and bonuses received by the state into a permanent fund. The legislature finds with respect to the Alaska Permanent Fund Corporation that

(1) the corporation should provide a means of conserving a portion of the state's revenues from mineral resources to benefit all generations of Alaskans;

(2) the corporation's goal should be to maintain safety of principal while maximizing total return;

(3) the corporation should be used as a savings device managed to allow the maximum use of disposable income from the corporation for purposes designated by law. (§ 5 ch 18 SLA 1980)

Sec. 37.13.030. Purpose. It is the purpose of this chapter to provide a mechanism for the management and investment of those permanent fund assets allocated to the Alaska Permanent Fund Corporation in a manner consistent with the findings in AS 37.13.020. (§ 5 ch 13 SLA 1980)

Sec. 37.13.040. Alaska Permanent Fund Corporation. There is established the Alaska Permanent Fund Corporation. The corporation is a public corporation and government instrumentality in the Department of Revenue managed by the board of trustees. The purpose of the board is to manage and invest the assets of the corporation in accordance with this chapter. (§ 5 ch 18 SLA 1980)

Sec. 37.13.050. Composition and qualifications of board of trustees. (a) The Board of Trustees of the Alaska Permanent Fund Corporation consists of six members appointed by the governor. Three of the members shall be heads of principal departments of state government, one of whom shall be the commissioner of revenue. Three members shall be appointed by the governor from the public and may not hold any other state or federal office, position or employment, either elective or appointive, except as a member of the armed forces

of either the United States or of this state. Members other than the commissioner of revenue shall be separately confirmed by a majority of the members of the legislature in joint session.

(b) The three public members of the board shall have recognized competence and wide experience in finance, investments, or other business management-related fields.

(c) The board shall annually elect a chairman from among its members. (§ 5 ch 18 SLA 1980)

Sec. 37.13.060. Term of office. The members of the board shall be appointed for terms of three years, and they may be reappointed subject to confirmation by a majority of the members of the legislature in joint session. Terms shall be staggered. Initial terms for members other than the commissioner of revenue shall be two members serving for one year, two members serving for two years, and one member serving for three years. (§ 5 ch 18 SLA 1980)

Sec. 37.13.070. Removal and vacancies. (a) The governor may remove a member of the board from office. However, the removal of a member of the board is subject to disapproval by a vote of a majority of the members of the legislature at the first joint session held 10 or more days after the legislature receives notice of the removal from the governor. A removal by the governor shall be in writing and shall state the reason for the removal. A member who is removed by the governor may not participate in board business and may not be counted for purposes of establishing a quorum between the time he receives written notice of his removal from the governor and the time that the legislature's power to disapprove the removal under this subsection expires. If the legislature disapproves the removal of a board member, the board member shall be reinstated.

(b) A vacancy on the board shall be promptly filled by appointment by the governor and confirmation by a majority of the members of the legislature in joint session. An appointee to a vacancy shall hold office for the balance of the term for which his predecessor on the board was appointed. If a vacancy arises on the board while the legislature is not in session, the governor may appoint an interim board member who shall exercise the powers of a board member until the legislature fails to confirm the appointment of the interim board member.

(c) A vacancy on the board does not impair the authority of a quorum of the board to exercise all the powers and perform all the duties of the board. (§ 5 ch 18 SLA 1980)

Sec. 37.13.080. Quorum. Four members of the board constitute a quorum for the transaction of business and the exercise of the powers and duties of the board. (§ 5 ch 18 SLA 1980)

Sec. 37.13.090. Compensation of board members. Public members of the board receive an honorarium of $400 for each meeting

day if they attend the meeting. All members of the board are entitled to per diem and travel allowances as provided by law for members of state boards and commissions. (§ 5 ch 18 SLA 1980)

Sec. 37.13.100. Corporation staff. The board may employ and determine the salary of an executive director. The executive director may, with the approval of the board, select and employ additional staff as necessary. No employee of the corporation, including the executive director, may be a member of the board. The executive director and the other employees of the board are in the exempt service under AS 39.25. (§ 5 ch 18 SLA 1980)

Sec. 37.13.110. Conflicts of interest. (a) Members of the board and the executive director are subject to the provisions of AS 39.50.

(b) If a member of the board or an employee of the corporation acquires, owns or controls an interest, direct or indirect, in an entity or project in which corporation assets are invested, he shall immediately disclose the interest to the board. The disclosure is a matter of public record and shall be included in the minutes of the board meeting next following the disclosure. (§ 5 ch 18 SLA 1980)

Sec. 37.13.120. Investment responsibilities of the board. (a) The prudent-man rule shall be applied by the board in the management and investment of Alaska permanent fund assets. The prudent-man rule as applied to investments of the corporation means that in making investments the board shall exercise the judgment and care under the circumstances then prevailing which an institutional investor of ordinary prudence, discretion, and intelligence exercises in the management of large investments entrusted to it not in regard to speculation but in regard to the permanent disposition of funds, considering probable safety of capital as well as probable income.

(b) The corporation assets shall only be used for income-producing investments.

(c) The board shall maintain a reasonable diversification among investments unless under the circumstances it is clearly prudent not to do so.

(d) The board shall submit long-range and quarterly investment reports to the Legislative Budget and Audit Committee.

(e) The corporation may not borrow funds or guarantee from principal of the Alaska permanent fund the obligations of others.

(f) The board may enter into and enforce all contracts necessary, convenient or desirable for purposes of the corporation.

(g) Subject to the limitations in (h) and (i) of this section, the board may invest corporation assets in

(1) obligations of, or obligations insured by or guaranteed by, the United States or agencies or instrumentalities of the United States;

(2) obligations secured by reserves paid in by the United States or agencies or instrumentalities of the United States or obligations of

less than 90 percent, and the minimum coverage shall be 20 percent for loans having a loan-to-value ratio of 90 percent or more.

(h) The board may enter into future contracts for the sale of investments purchased under (g) of this section only for the purpose of hedging an existing equivalent ownership position in these securities.

(i) Investments under (g)(8) of this section may not exceed 25 percent of the total investments of the Alaska permanent fund. Investments under (g)(16) of this section may not exceed in the aggregate 15 percent of the total investments of the Alaska permanent fund.

(j) The assets of the Alaska permanent fund may not be used for the purchase of bonds of a corporation, upon which any regular interest payment has been defaulted within five years before purchase, except bonds never in default but which have been outstanding for less than five years.

(k) The board shall establish and from time to time as necessary modify guidelines for the investment of the assets of the corporation. Before adoption of any guidelines the guidelines shall be reported to the Legislative Budget and Audit Committee for review and comment.

(l) The board shall invest the assets of the corporation in in-state investments to the extent in-state investments are available if the in-state investments

(1) have a risk level and expected yield comparable to alternate investment opportunities; and

(2) are included in the list of permissible investments in (g) of this section. (§ 5 ch 18 SLA 1980)

Editor's note. — Section 9, ch. 18, SLA 1980, effective April 9, 1980, provides: "TRANSITION. The commissioner of revenue shall transfer the Alaska permanent fund to the Alaska Permanent Fund Corporation established by this act after request for transfer is made by the board of trustees of the corporation. Notwithstanding AS 37.10.065(a), the commissioner of revenue may invest the money in the Alaska permanent fund in the investments described in AS 37.13.120(g) subject to the limitations of AS 37.13.120(h) and (i)."

Sec. 37.13.130. Gains and losses. At the end of each fiscal year, the total amount of losses on the sales of securities, not offset by gains on the sales of securities during that year, shall be computed, with a portion of these losses to be deducted each fiscal year from the income and the resulting amount of income added to the principal of the Alaska permanent fund. Losses taken on the sales of securities shall be accumulated over a period equal to the average remaining life of the securities sold, unless these losses are offset by gains on future sales of securities. In any fiscal year in which the gains on the sales of securities exceed the losses on the sales of securities, the excess shall be added to the principal of the Alaska permanent fund. (§ 5 ch 18 SLA 1980)

corporations in which the United States is a shareholder or member;

(3) certificates of deposit issued by United States domestic banks which are members of the Federal Deposit Insurance Corporation for which a generally recognized secondary market exists or which are fully secured at all times as to payment of principal and interest by investments described in (1), (2), (8) or (12) — (16) of this subsection; the security pledged under this paragraph shall be at least equal to the face value of the deposit and the board may require substitution of collateral;

(4) shares of federally chartered savings and loans associations in Alaska which are fully secured at all times as to payments of principal and interest by investments described in (1), (2) of this subsection;

(5) savings certificates issued by state chartered savings and loan associations in Alaska which are fully secured at all times as to payments of principal and interest by investments described in (1), (2) of this subsection;

(6) deposits with mutual savings banks in Alaska which are fully secured at all times as to payments of principal and interest by investments described in (1), (2) of this subsection;

(7) fixed-term certificates of indebtedness of federally insured credit unions which are fully secured at all times as to payments of principal and interest by investments described in (1), (2) of this subsection;

(8) corporate debt securities which are rated AA or better by a nationally recognized rating service;

(9) short-term corporate promissory notes of the highest ratings assigned by a nationally recognized rating service;

(10) bankers' acceptances drawn on and accepted by United States banks each of which have a combined capital and surplus aggregating at least $200,000,000;

(11) repurchase agreements, the securities underlying the agreements being any of the items in (1) — (3) and (8) — (10) of this subsection;

(12) the guaranteed portion of Federal Small Business Administration loans;

(13) the portion of first lien real estate mortgages guaranteed by the Federal Veterans Association;

(14) the portions of business and industrial loans made under the Rural Development Act of 1972 which are guaranteed by the Farmer's Home Administration;

(15) the guaranteed portion of Farmer's Home Administration loans;

(16) notes secured by mortgages of residential real estate if the mortgages are insured by a private mortgage insurance corporation which is authorized to do business in Alaska and has combined capital, surplus and reserves aggregating at least $20,000,000; the minimum coverage shall be 10 percent for loans having a loan-to-value ratio of

Sec. 37.13.140. Income. The interest received in a year is the income of the corporation for that year. The income available for disbursement shall be determined on an averaging basis. For the first five years, income will be the simple averaging of the annual current return at cost. Subsequently, there will be a moving average current return, in which the latest fiscal year will replace the oldest year. The income available for disbursement will be the lesser of the latest fiscal year's income, or the average annual current income for the past five fiscal years of the Alaska permanent fund at cost, and after adjustment for capital losses charged to that fiscal year. (§ 5 ch 18 SLA 1980)

Sec. 37.13.150. Board budget. The operating budget of the board is from the general fund and is subject to the Executive Budget Act (AS 37.07). (§ 5 ch 18 SLA 1980)

Sec. 37.13.160. Audits. The Legislative Budget and Audit Committee shall provide for an annual post audit and annual operational and performance evaluations of the corporation's investments and investment programs. (§ 5 ch 18 SLA 1980)

Cross reference. — For the responsibilities of the Legislative Budget and Audit Committee, see AS 24.20.206.

Sec. 37.13.170. Reports and publications. By September 30 of each year, the board shall publish a report of the corporation for distribution to the governor, legislature, and the public. The report shall be written in easily understandable language. The report must include financial statements audited by independent outside auditors, a statement of the amount of money received by the Alaska permanent fund from each investment during the period covered, a statement of investments of the corporation including an appraisal at market value, a description of corporation investment activity during the period covered by the report, a comparison of the corporation performance with the intended goals contained in AS 37.13.020, an examination of the impact of the investment criteria of this chapter on the corporation portfolio with recommendations of any needed changes, and any other information the board believes would be of interest to the governor, the legislature, and the public. The annual income statement and balance sheet of the corporation shall be published in at least one newspaper in each judicial district. The income statement and balance sheet for the two fiscal years preceding the publication of the election pamphlet under AS 15.58 shall be included in that pamphlet. (§ 5 ch 18 SLA 1980)

Sec. 37.13.180. Tax exemption. The corporation is exempt from all taxes and assessments in the state. All security instruments issued by the corporation, their transfer, and their income are exempt from all taxes and assessments in the state. (§ 5 ch 18 SLA 1980)

Sec. 37.13.190. Political activities. The resources of the corporation may not be used to finance or influence political activities. (§ 5 ch 18 SLA 1980)

Sec. 37.13.200. Public access to information. Information in the possession of the corporation is a public record, except that information which discloses the particulars of the business or affairs of a private enterprise or investor is confidential and is not a public record. Confidential information may be disclosed only for the purposes of an official law enforcement investigation or when its production is required in a court proceeding. These restrictions do not prohibit the publication of statistics presented in a manner that prevents the identification of particular reports, items, persons, or enterprises. (§ 5 ch 18 SLA 1980)

Sec. 37.13.210. Definitions. In this chapter,

(1) "board" means the Board of Trustees of the Alaska Permanent Fund Corporation;

(2) "corporation" means the Alaska Permanent Fund Corporation. (§ 5 ch 18 SLA 1980)

Chapter 15. State Bonding Act.

Article 1. General Obligation Bonds.

Section

30. Interest rate and maturity
210. Refunding bonds

Sec. 37.15.010. Full faith and credit for general obligation bonds.

Revisor's note.

The following laws relate to issuance of general obligation bonds under the provisions of this chapter.

Chapter 95, SLA 1978 provides for the issuance of bonds in the amount of $33,290,000 for erosion and flood control, port facilities development, and small boat landing and harbor projects.

Chapter 122, SLA 1978 provides for the issuance of bonds in the amount of $25,000,000 for health facilities, senior citizens centers and pioneers homes.

Chapter 137, SLA 1978 provides for the issuance of bonds in the amount of $33,666,000 for educational facilities, vocational education and the University of Alaska.

Chapter 138, SLA 1978 provides for the issuance of bonds in the amount of $88,450,000 for highways, ferries, airports, local service roads and trails construction, transportation project planning and construction of maintenance facilities.

Chapter 139, SLA 1978 provides for the issuance of bonds in the amount of $30,504,000 for correctional and public safety facilities.

Chapter 140, SLA 1978 provides for the issuance of bonds in the amount of $26,965,000 for fisheries management and development facilities.

Chapter 145, SLA 1978 provides for the issuance of bonds in the amount of $27,640,000 for water supply and sewerage systems.

Chapter 91, SLA 1980 provides for the issuance of bonds in the amount of $7,718,800 for fisheries facilities.

Chapter 97, SLA 1980 provides for the issuance of bonds in the amount of

AN ACT

Relating to the investment and management of the Alaska permanent fund and to the computation of the income of the fund available for distribution; and providing for an effective date.

---

* Section 1. AS 37.13.050 is amended to read:

Sec. 37.13.050. COMPOSITION AND QUALIFICATIONS OF BOARD OF TRUSTEES. (a) The Board of Trustees of the Alaska Permanent Fund Corporation consists of six members appointed by the governor. Two [THREE] of the members shall be heads of principal departments of state government, one of whom shall be the commissioner of revenue. Four [THREE] members shall be appointed by the governor from the public and may not hold any other state or federal office, position or employment, either elective or appointive, except as a member of the armed forces of either the United States or of this state. [MEMBERS OTHER THAN THE COMMISSIONER OF REVENUE SHALL BE SEPARATELY CONFIRMED BY A MAJORITY OF THE MEMBERS OF THE LEGISLATURE IN JOINT SESSION.]

(b) The four [THREE] public members of the board shall have recognized competence and wide experience in finance, investments, or other business management-related fields.

(c) The board shall annually elect a chairman from among its members.

* Sec. 2. AS 37.13.060 is amended to read:

Sec. 37.13.060. TERM OF OFFICE. The public members of the

board shall be appointed for terms of four [THREE] years, and they may be reappointed [SUBJECT TO CONFIRMATION BY A MAJORITY OF THE MEMBERS OF THE LEGISLATURE IN JOINT SESSION]. The terms of the public members [TERMS] shall be staggered so that no more than one term of a public member expires each year. [INITIAL TERMS FOR MEMBERS OTHER THAN THE COMMISSIONER OF REVENUE SHALL BE TWO MEMBERS SERVING FOR ONE YEAR, TWO MEMBERS SERVING FOR TWO YEARS, AND ONE MEMBER SERVING FOR THREE YEARS.]

* Sec. 3. AS 37.13.070 is amended to read:

Sec. 37.13.070. REMOVAL AND VACANCIES. (a) The governor may remove a member of the board from office. [HOWEVER, THE REMOVAL OF A MEMBER OF THE BOARD IS SUBJECT TO DISAPPROVAL BY A VOTE OF A MAJORITY OF THE MEMBERS OF THE LEGISLATURE AT THE FIRST JOINT SESSION HELD 10 OR MORE DAYS AFTER THE LEGISLATURE RECEIVES NOTICE OF THE REMOVAL FROM THE GOVERNOR.] A removal by the governor shall be in writing and shall state the reason for the removal. A member who is removed by the governor may not participate in board business and may not be counted for purposes of establishing a quorum after [BETWEEN THE TIME] he receives written notice of his removal from the governor [AND THE TIME THAT THE LEGISLATURE'S POWER TO DISAPPROVE THE REMOVAL UNDER THIS SUBSECTION EXPIRES. IF THE LEGISLATURE DISAPPROVES THE REMOVAL OF A BOARD MEMBER, THE BOARD MEMBER SHALL BE REINSTATED].

(b) A vacancy on the board shall be promptly filled by appointment by the governor [AND CONFIRMATION BY A MAJORITY OF THE MEMBERS OF THE LEGISLATURE IN JOINT SESSION]. An appointee to a vacancy shall hold office for the balance of the term for which his predecessor on the board was appointed. [IF A VACANCY ARISES ON THE BOARD WHILE THE LEGISLATURE IS NOT IN SESSION, THE GOVERNOR MAY APPOINT AN INTERIM BOARD MEMBER WHO SHALL EXERCISE THE POWERS OF A BOARD MEMBER UNTIL THE LEGISLATURE FAILS TO CONFIRM THE APPOINTMENT OF THE INTERIM BOARD MEMBER.]

(c) A vacancy on the board does not impair the authority of a quorum of the board to exercise all the powers and perform all the duties of the board.

* Sec. 4. AS 37.13.090 is amended to read:

Sec. 37.13.090. COMPENSATION OF BOARD MEMBERS. Public members of the board receive an honorarium of $400 for each day spent at a meeting of the board or at a meeting of a subcommittee of the board or at a public meeting as a representative of the board. Members [MEETING DAY IF THEY ATTEND THE MEETING. ALL MEMBERS] of the board are entitled to per diem and travel allowances as provided by law for members of state boards and commissions.

* Sec. 5. AS 37.13.120(g) is amended to read:

(g) Subject to the limitations contained in [(h) AND (i) OF] this section, the board may invest corporation assets at such competitive national market rates or prices as are applicable to each investment only in

(1) obligations of, or obligations insured by or guaranteed by, the United States or agencies or instrumentalities of the United States;

(2) obligations secured by reserves paid in by the United States or agencies or instrumentalities of the United States or obligations of corporations in which the United States is a shareholder or member;

(3) certificates of deposit and term deposits of [ISSUED BY] United States domestic banks which are members of the Federal Deposit Insurance Corporation and [FOR] which may be readily sold in a [GENERALLY RECOGNIZED] secondary market at prices reflecting fair value [EXISTS] or which are fully secured at all times as to payment of principal and interest as [BY INVESTMENTS] described in (m) [(1), (2), (8) OR (10) -

(16)] of this section [SUBSECTION; THE SECURITY PLEDGED UNDER THIS PARAGRAPH SHALL BE AT LEAST EQUAL TO THE FACE VALUE OF THE DEPOSIT AND THE BOARD MAY REQUIRE SUBSTITUTION OF COLLATERAL];

(4) certificates of deposit and term deposits [SHARES] of federally chartered savings and loan [LOANS] associations in Alaska which may be readily sold in a secondary market at prices reflecting fair value or which are fully secured at all times as to payments of principal and interest as [BY INVESTMENTS] described in (m) [(1), (2)] of this section [SUBSECTION];

(5) [SAVINGS] certificates of deposit and term deposits of [ISSUED BY] state chartered savings and loan associations in Alaska which may be readily sold in a secondary market at prices reflecting fair value or which are fully secured at all times as to payments of principal and interest as [BY INVESTMENTS] described in (m) [(1), (2)] of this section [SUBSECTION];

(6) certificates of deposit and term deposits of [DEPOSITS WITH] mutual savings banks in Alaska which may be readily sold in a secondary market at prices reflecting fair value or which are fully secured at all times as to payments of principal and interest as [BY INVESTMENTS] described in (m) [(1), (2)] of this section [SUBSECTION];

(7) fixed-term certificates of indebtedness of federally insured credit unions in Alaska which may be readily sold in a secondary market at prices reflecting fair value or which are fully secured at all times as to payments of principal and interest as [BY INVESTMENTS] described in (m) [(1), (2)] of this section [SUBSECTION];

(8) corporate debt securities which are rated AA or better by a nationally recognized rating service;

(9) short-term corporate promissory notes of the highest ratings assigned by a nationally recognized rating service;

(10) bankers' acceptances drawn on and accepted by United States banks each of which have a combined capital and surplus aggregating at least $200,000,000;

(11) repurchase agreements, the securities underlying the agreements being any of the items in (1) - (3) and (8) - (10) of this subsection;

(12) the guaranteed portion of Federal Small Business Administration loans;

(13) the portion of first lien real estate mortgages guaranteed by the Federal Veterans Administration [ASSOCIATION];

(14) the portions of business and industrial loans made under the Rural Development Act of 1972 which are guaranteed by the Farmers Home Administration;

(15) the guaranteed portion of Farmers Home Administration loans;

(16) notes secured by mortgages granting a first lien on commercial or [OF] residential real estate improved by completed buildings if the mortgages are insured by a private mortgage insurance corporation which is authorized to do business in Alaska and has combined capital and [,] surplus [AND RESERVES] aggregating at least $20,000,000, and if loan-to-value ratios do not exceed 75 percent for commercial mortgages and 90 percent for residential mortgages; however, [THE MINIMUM COVERAGE SHALL BE 10 PERCENT FOR LOANS HAVING A LOAN-TO-VALUE RATIO OF LESS THAN 90 PERCENT, AND THE MINIMUM COVERAGE SHALL BE 20 PERCENT FOR LOANS HAVING A LOAN-TO-VALUE RATIO OF 90 PERCENT OR MORE.]

(A) no mortgage insurance is necessary for commercial loans having loan-to-value ratios of less than 50 percent and the minimum coverage of other commercial loans shall be 10 percent for those having a loan-to-value ratio of 50 - 60 percent and 15 percent

for those having a loan-to-value ratio greater than 60 percent but no more than 75 percent, and

(B) no mortgage insurance is necessary for residential loans having a loan-to-value ratio of less than 70 percent and the minimum coverage of other residential loans shall be 10 percent for those having a loan-to-value ratio greater than 70 percent but less than 90 percent and 20 percent for those having a loan-to-value ratio of 90 percent;

(17) notes secured by mortgages granting a first lien on commercial real estate improved by completed buildings if the originating financial institution retains at least 25 percent of the mortgage until maturity;

(18) preferred and common stock of corporations incorporated in the United States;

(19) certificates of deposit, term deposits, or bankers' acceptances, which are issued by a United States bank or trust company located in a foreign country and are denominated in United States currency, if either (A) they may be readily sold in a secondary market at prices reflecting fair value, or (B) the issuing bank or trust company has capital and surplus at the date of issue equaling at least $500,000,000; investments made under this paragraph are not subject to the collateral requirements for domestic certificates under (m) of this section;

(20) equity interests in, and debt obligations secured by mortgages granting a first lien on, real estate improved by completed and substantially rented buildings and located in the United States, if these investments are made

(A) in a corporation, partnership, trust, or other entity in which, at the conclusion of each investment transaction,

at least 60 percent of the beneficial ownership interests are held by other institutional investors, and which is organized and operated for the purpose of making real estate investments by a bank, insurance company, or other manager of institutional funds which has had at least five years of experience in the management of real estate investments of institutional investors; or

(B) in conjunction with and on substantially the same terms as an entity described in (A) of this paragraph.

* Sec. 6. AS 37.13.120(1) is repealed and reenacted to read:

(1) At the time of each investment, the aggregate investment of the Alaska permanent fund in each stated category of investment may not exceed the following stated percentage of the total investments of the fund: mortgages under (g)(16) of this section, 15 percent; real estate investments under (g)(20) of this section, 15 percent; foreign certificates of deposit or the equivalent under (g)(19) of this section, 20 percent; corporate stocks and debt securities under (g)(8), (9), and (18) of this section, 50 percent. The Alaska permanent fund may at no time own more than five percent of the voting stock of a corporation. Domestic stocks, except for bank and insurance company stocks, must be listed at the date of purchase on an exchange registered with the Securities and Exchange Commission.

* Sec. 7. AS 37.13.120 is amended by adding a new subsection to read:

(m) Certificates of deposit or the equivalent instruments which are not of a quality that may be readily sold in a secondary market at prices reflecting fair value must be secured by a pledge as collateral of investments authorized for the Alaska permanent fund under (g)(1), (2), (8), or (12) - (17) of this section, which investments have value at least equal to the face value of the certificate of deposit. The board may require substitution of collateral in order to ensure continued

satisfaction of the requirements set out in this subsection.

* Sec. 8. AS 37.13.140 is repealed and reenacted to read:

Sec. 37.13.140. INCOME. Net income of the corporation must be computed annually as of the last day of the fiscal year in accordance with generally accepted accounting principles, excluding any unrealized gains or losses. Income available for distribution equals the average net income of the corporation for the last five fiscal years, including the fiscal year just ended, but may not exceed net income of the corporation for the fiscal year just ended plus the balance in the undistributed income account described in AS 37.13.145.

* Sec. 9. AS 37.13 is amended by adding a new section to read:

Sec. 37.13.145. DISPOSITION OF INCOME. At the end of each fiscal year, an amount sufficient to offset the effect of inflation on principal of the Alaska permanent fund during that year, as measured by a nationally recognized index, shall be transferred from net income as defined in AS 37.13.140, excluding income on the undistributed income account in the Alaska permanent fund, to the principal of the Alaska permanent fund for reinvestment. The balance of the net income as defined in AS 37.13.140 shall be transferred to the undistributed income account in the Alaska permanent fund. Money in the undistributed income account shall be invested in investments authorized under AS 37.13.120. Income from the investment of the undistributed income account shall be treated as an addition to that account.

* Sec. 10. AS 37.13.150 is amended to read:

Sec. 37.13.150. CORPORATION [BOARD] BUDGET. The revenues generated by the corporation's investments must be identified as the source of the operating budget of the corporation in the state's operating budget under [BOARD IS FROM THE GENERAL FUND AND IS SUBJECT TO] the Executive Budget Act (AS 37.07). The unexpended balance of the corpora-

tion's annual operating budget does not lapse at the end of the fiscal year but shall be treated as income under AS 37.13.140.

* Sec. 11. AS 37.13.160 is amended to read:

Sec. 37.13.160. AUDITS. The Legislative Budget and Audit Committee may [SHALL] provide for an annual post audit and annual operational and performance evaluations of the corporation's investments and investment programs.

* Sec. 12. AS 37.13 is amended by adding a new section to read:

Sec. 37.13.205. REGULATIONS. The board may adopt regulations under the Administrative Procedure Act (AS 44.62) to interpret and implement this chapter.

* Sec. 13. AS 37.13.130 is repealed.

* Sec. 14. Transition to four-year terms for members of the board of trustees of the Alaska Permanent Fund Corporation as provided in AS 37.13.060 as amended in sec. 2 of this Act shall be implemented as follows: at the expiration of the present term of each public member, the governor shall appoint a replacement, or reappoint the present member, for a term of four years. Within 90 days after the effective date of this Act, the governor shall appoint a public member to replace one of the two present heads of principal departments other than the commissioner of revenue, to serve for a term of four years or less, which term expires in a year when no other public member's term expires. The head of a principal department who is to be replaced shall continue to serve on the board until the appointment of a replacement.

* Sec. 15. TRANSITION. (a) All income earned by the Alaska permanent fund before the effective date of this Act that is not income available for disbursement shall be transferred to the undistributed income account established in AS 37.13.145 added by sec. 9 of this Act. However, the amount transferred under this section shall be reduced by an amount equal to one-

half of the income available for disbursement for fiscal year 1983.

(b) The amount equal to the reduction in income under (a) of this section shall be transferred to the general fund.

(c) In this section "income available for disbursement" shall be determined as set out in AS 37.13.140 before amendment by this Act.

* Sec. 16. This Act takes effect July 1, 1982.

RESOLUTION OF THE BOARD OF TRUSTEES OF
THE ALASKA PERMANENT FUND CORPORATION
TO ADOPT AN EMERGENCY REGULATION

Resolution No. 82-3

WHEREAS, the terms of adjustable rate mortgages authorized to be purchased by the corporation and set out in 15 AAC 137.030 do not match the terms provided under any existing program for making adjustable rate mortgage loans; and

WHEREAS, many mortgage lenders are regulated by federal agencies or officials, including the Comptroller of Currency and the Federal Home Loan Bank Board, and these federal agencies must review and approve the form of deeds of trust, promissory notes, and other documents related to a mortgage loan before regulated mortgage lenders can make a mortgage loan; and

WHEREAS, the corporation has committed to purchase the mortgage loans to be made to several specific prospective borrowers, and the deeds of trust, promissory notes, and other documents conforming to the terms of 15 AAC 137.030 are not available; and

WHEREAS, there are several existing programs for adjustable rate mortgages for which the necessary forms are available and have been reviewed and approved by the appropriate regulatory agencies; and

WHEREAS, the purchase of the adjustable rate mortgages as to which the corporation has made a commitment may be completed using existing forms if the regulations adopted by the Board of Trustees are amended; and

WHEREAS, the Board of Trustees has discussed this issue and approved a proposed draft regulation; and

WHEREAS, the adoption of this regulation will avoid a lengthy delay in the purchase of mortgages as to which the corporation has made a commitment and is therefore necessary for the immediate preservation of the general welfare;

BE IT RESOLVED that the Acting Executive Director is authorized and directed to adopt the draft regulations as emergency regulations in accordance with the Administrative Procedure Act (AS 44.62), and to take any steps necessary for their adoption as permanent regulations.

PASSED AND APPROVED by the Board of Trustees of the Alaska Permanent Fund Corporation this 5th day of August, 1982.

TITLE 15. REVENUE

CHAPTER 137. RECEIPT, CUSTODY, INVESTMENT AND MANAGEMENT OF STATE FUNDS

ARTICLE 1. ALASKA PERMANENT FUND CORPORATION

Section
010. Scope of 15 AAC 137.010 - 15 AAC 137.200
020. Repealed
030. Conventional Residential mortgages
040. General terms and conditions for loans and mortgages
200. Definitions

15 AAC 137.010. SCOPE OF 15 AAC 137.010 - 15 AAC 137.200. 15 AAC 137.010 - 15 AAC 137.200 apply to investments of the corporation in federally guaranteed and insured loans and mortgages and conventional residential mortgages and in certificates of deposit. (Eff. 02/05/81, Reg. 77; am. / / , Reg.)

Authority: AS 37.13.120

15 AAC 137.020. FEDERALLY GUARANTEED LOANS & MORTGAGES. Repealed / /

15 AAC 137.030. CONVENTIONAL RESIDENTIAL MORTGAGES. Under AS 37.13.120 (g) (16) and (17) the corporation may purchase adjustable rate conventional residential mortgages which meet the following requirements:

(1) a mortgage must be for an owner-occupied one-to-four unit dwelling;

(2) a loan-to value ratio must be no more than 90 percent for a single-family dwelling up to $150,000, 80 percent for single-family dwelling over $150,000, and 80 percent for a two-to-four unit dwelling; and

(3) a mortgage must be covered by insurance which meets the requirements of AS 37.13.120 (g) and which the corporation finds to be adequate to assure marketability of the mortgage. (Eff. 02/05/81, Register 77; am. / / , Reg. ; am. / / , Register)

Authority: AS 37.13.120

15 AAC 137.040. GENERAL TERMS AND CONDITIONS FOR LOANS AND MORTGAGES.

(a) The selection of any loan or mortgage will be made on the basis of its individual merits and its overall suitability as part of the investment portfolio.

(b) The net interest rate received by the corporation on a loan or mortgage must satisfy the applicable requirement among the following:

(1) on a loan or mortgage which is guaranteed or insured by the Fm.H.A., F.H.A., S.B.A., or V.A., and is authorized for purchase by the corporation under AS 37.13.120 (g) (12) - (15), the minimum interest rate is the rate set by Fm.H.A., F.H.A., S.B.A., or V.A., respectively, and in effect at the time the corporation makes a final commitment to purchase the loan or mortgage; and

(2) on an adjustable rate conventional residential mortgage the minimum initial interest rate is the rate of the FHLBB Series of Loans Recently Closed on Existing Homes prevailing at the time the corporation makes a final commitment to purchase the mortgage.

(c) The interest rate on a conventional adjustable rate mortgage purchased by the corporation must be adjusted once each year as of March 1 or September 1, whichever is nearer the anniversary of the loan closing date, on the basis of annual change of the FHLBB Series for Loans Recentaly Closed on Existing Homes; however, no change may increase or decrease the interest rate by more than 2.00%. When the annual change in the FHLBB index would result in a change of more than 2.00% in the interest rate, the excess change in the index will be carried over and used as a basis for a subsequent adjustment during any year when the adjustment to that interest rate would otherwise be less than 2.00%.

(d) A commitment by the corporation to purchase a loan or mortgage is contingent on payment to the corporation of a commitment fee of not less than 1.0 percent of the par value of the loan or mortgage proposed for purchase within six months, plus an additional fee of not less than .1667 percent for each additional month of commitment up to a maximum total commitment period of one year. Payment of a commitment fee guarantees that

the initial interest rate on a loan or mortgage if purchased by the corporation will be the rate quoted by the corporation on the date of commitment, and that money will be available to purchase the loan on a regular loan purchase date during the period of commitment.

(e) All loans or mortgages purchased by the corporation from a single seller must be serviced by the seller from one office. The seller's service fees may not exceed the following:

(1) for federally insured or guaranteed loans or mortgages:

(A) under $300,000: .375 percent;

(B) $300,000 and above: .25 percent;

(2) for adjustable rate conventional residential mortgages:

Any loan amount: .50 percent.

(f) A conventional residential mortgage purchased by the corporation must be payable in full immediately upon transfer of ownership of the property securing the mortgage.

(g) Loans or mortgages will be pruchased no more often than once a month at a time set by the corporation.

(h) The seller of a loan or mortgage offered to the corporation must provide the following:

(1) the original loan application;

(2) original appraisal with photographs;

(3) credit report;

(4) deposit verfications;

(5) employment verifications;
(6) earnest money agreement;

(7) credit verifications;

(8) tax returns (three years), if self-employed;

(9) financial statement, if self-employed;

(10) a copy of any audited financial statement if one was required by the S.B.A. or any other public or private entity to make, insure, or guarantee the loan or mortgage; and

(11) any other documents requested by the corporation.

(i) Except for construction loan take-outs, no refinancing loans or mortgages will be purchased by the corporation.

(j) No loans or mortgages will be purchased from an institution which has a current, over 60-day delinquency status for more than .5 percent of all loans purchased from it by the corporation until that delinquency status is reduced to .5 percent or less.

(k) Any loan or mortgage which was an authorized investment under this chapter as it existed at the date of final commitment to purchase the loan or mortgage may be held by the corporation for the full term of the loan or mortgage. (Eff. 02/05/81, Register 77; am. / / , Reg. ; am. / / , Reg.)

Authority: AS 37.13.120

15 AAC 137.200 DEFINITIONS. In 15 AAC 137.010 - 15 AAC 137.200,

(1) "certificate of deposit" includes:

(A) certificates of deposit;

(B) shares of federally-chartered savings and loan associations in the form of time certificates;

(C) savings certificates issued by state-chartered savings and loan associations;

(D) deposits with mutual savings banks in Alaska in the form of time certificates;

(E) fixed-term certificates of indebtedness,

as those terms are used in AS 37.13.120 (g) (3) - (7);

(2) "corporation" means the Alaska Permanent Fund Corporation;

(3) "Fm.H.A." means the federal Farmers' Home Administration;

(4) "F.H.A." means the Federal Housing Administration;

(5) "loan" means lending of money secured by collateral;

(6) "mortgage" means a loan secured by a first lien security interest in real property improved by one or more completed buildings;

(7) "FHLBB" means the Federal Home Loan Bank Board;

(8) "S.B.A." means the federal Small Business Administration;

(9) "V.A." means the federal Veterans Administration;

(10) "average remaining life" means the figure obtained as follows: for each investment sold at a loss during the fiscal year, the loss is multiplied by the remaining life; the sum of these products is divided by the total loss for that fiscal year;

(11) "gain" means the amount by which the principal proceeds of the sale of an investment exceed the cost of the investment;

(12) "investment" means any transfer or expenditure of money or other assets made for the purpose of obtaining an income or profit;

(13) "loss" means the amount by which the cost of an investment exceeds the principal proceeds of the sale of the investment; and

(14) "remaining life" means the number of years remaining until the maturity date of an investment.

(Eff. 02/05/81, Register 77; am. 05/31/81, Reg. 78;
am. / / , Reg. ; am. / / , Reg.)

(Title)

Dep. Rev. 7-13-82

LOAN PARTICIPATION AND SERVICING AGREEMENT

THIS AGREEMENT is made and entered into as of _____, 1981 by and between _____, (hereinafter called "Lender") and the Alaska Industrial Development Authority (hereinafter called "Purchaser").

W I T N E S S E T H:

WHEREAS, the Alaska Industrial Development Authority is a public corporation and a public body corporate and politic constituting an instrumentality of the State of Alaska within the Department of Commerce and Economic Development, but with a separate and independent legal existence created under and pursuant to Chapter 88, Title 44 of the Alaska Statutes, as amended (the "Act"); and

WHEREAS, Purchaser is authorized pursuant to the Act to enter into this Agreement; and

WHEREAS, _____ ("Lender") is a _____ duly organized and existing under the laws of the _____ with its principal office at _____; and

WHEREAS, Lender has offered to Purchaser an opportunity to participate in certain loans secured by liens on real property and/or liens on tangible personal property and the Purchaser has evidenced an interest in acquiring a participating interest in these loans and the collateral securing said loans; and

WHEREAS, the Lender has provided to the Purchaser evidence of bonding required pursuant to 3 AAC 99.300 (b) and that such a bond is in full force and effect;

NOW, THEREFORE, in consideration of the foregoing, the mutual covenants and conditions contained herein and for other good and valuable consideration, receipt of which is hereby acknowledged, the parties hereto agree as follows:

ARTICLE I
General

Section 101. General. This Agreement shall govern the sale and transfer by Lender to Purchaser of an undivided participating interest and an undivided participation ownership in each and every loan, as to which such participating interest is offered for sale by Lender and accepted by Purchaser, except insofar as the terms hereof shall be modified, amplified or amended by the terms of any written amendment hereto or by the terms of a written offer and acceptance signed by both parties in connection with any particular loan, such written offer and acceptance to be in the form of a Commitment or a Participation Certificate, the form of which is attached hereto, marked Exhibit "A", and incorporated herein by this reference, and that Purchaser has not, nor shall in any event take part, be active in, or be responsible for the negotiations and preliminary steps leading to the consummation of loans which now or may hereafter become the subject of participation purchases by Purchaser hereunder. In addition, this Agreement governs the servicing by Lender of the loans described above.

ARTICLE II
Definitions

Section 201. Definitions. The following terms as used herein shall be construed in accordance with and controlled by the following definitions:

ARTICLE VII
Interests of the Parties

Section 701. Payment of Interest to Purchaser. Purchaser's share of interest to be remitted by Lender shall be originally computed from the date of receipt by Lender from Purchaser of the purchase price for such participation interest, and Purchaser's share of interest shall thereafter be computed by Lender as of the first day of each calendar month and be remitted by Lender to Purchaser, together with the Participation Report, not later than the twentieth (20th) of each calendar month. All interest shall be computed on a 365 day factor basis. In the event of default in the payment of principal or interest to Lender on any participation loan, then as to such loan Lender shall not be required to remit principal or interest until collected from the loan debtor.

Section 702. Payment of Principal. Purchaser shall receive its proportionate share of all payments made by mortgagor as principal payments. Said payments shall not be included in determinng Purchaser's net return as set forth on the Participation Certificate and shall be paid to Purchaser in addition thereto.

In the event of default on any mortgage loan covered by this Agreement, Purchaser and Lender shall share ratably on a Participation Basis any expenditures necessary to maintain and preserve the position of the parties hereto with regard to such loan, including, without limitation, expenditures for taxes, insurance premiums, prevention of waste, repairs, maintenance, and attorney's fees. Reimbursement of such expenditures from the Purchaser will not be due until final liquidation of the loan, except where such liquidation takes more than 6 months, Purchaser will make payment of its prorata share of costs to Lender on a semiannual basis.

ARTICLE VIII
Compensation for Lender

Section 801. Fees. As compensation for its administration of loans under this Agreement, Lender shall retain a servicing fee of three eights of one percent (.375%) of the unpaid balance, from the interest collected.

Fees for changes of ownership, late charges, modifications, or other supplemental services rendered and any other fees and charges received by Lender in connection with loans under this Agreement not specifically reserved to the Purchaser hereunder or committed to be paid to Purchaser by the terms of the Participation Certificate negotiated with reference to the particular loan involved shall be retained by Lender. Prepayment penalties shall be shared pro rata by the parties.

Section 802. Retention of Reserves. All funds received from the borrower or from any other source, or retained as part of the loan proceeds for the purpose of paying taxes, insurance premiums to maintain the insurance coverage as set forth above, installments on bonds and other improvement assessments or for the purpose of guaranteeing their repair or completion of improvements to the subject real property, shall be retained by Lender and disbursed by Lender at such time, and from time to time, as Lender in its discretion shall deem necessary.

ARTICLE IX
Insurance/Taxes

Section 901. General. Unless waived in writing by the Purchaser, the Lender shall require that the Mortgaged Premises (excluding land) are, at all times relevant herein, adequately and properly insured and all taxes and assessments are paid promptly. Such insurance shall be evidenced by an insurance policy:

(b) Certificate of Completion: Prior to disbursement of loan proceeds, Lender shall provide certification from the appraiser that the project was substantially completed according to the plans and specifications relied on by the appraiser and a certification from a registered architect or professional engineer that the property offered as security for the loan is structurally sound, if local construction inspections and an occupancy certificate are not available.

(c) Cost of Construction and Use of Proceeds: Prior to disbursement, Lender will make proper showing satisfactory to Authority that all costs of construction have been paid in full and that the amount of bond proceeds does not exceed costs of construction as determined by the Authority after examination of relevant documentation (certification of costs as a specific dollar amount).

(d) Insurance: Prior to closing, Borrower shall deliver to the Lender at Borrower's expense and in a form and issued by a company satisfactory to the Authority, with premiums thereof fully prepaid, the following insurance which will be maintained throughout the term of the loan as applicable:

1) An ALTA Title Insurance policy insuring that the Lender has a valid first lien on the real property described, free of encumbrances or other exceptions to title, other than those approved and accepted in writing by the Authority. In the event that the secured property described herein is located in special flood hazard areas, Borrower shall provide the Lender with a flood insurance policy as required by the Flood Protection Act.

2) A physical hazard insurance policy covering the perils of fire, extended coverage, vandalism and optional perils.

3) A public liability insurance policy covering Borrower and the property taken as security herein.

4) A full Marine and/or Aircraft insurance policy including breach of warranty.

The amount of insurance shall be in an amount equal to ninety percent (90%) of the full replacement value of all buildings, building improvements, contents, aircraft, vessels or equipment. Lender shall be named a loss payee with a loss payable endorsement. Such an endorsement shall be issued to the Lender and provide thirty (30) days written notice to be sent to Lender of any cancellation or material change in policy.

(e) Survey: Prior to the closing of this loan, Lender shall be provided a survey prepared by a registered surveyor delineating lot lines, locating improvements including water, gas, electric and sewer lines, easements and parking areas and showing other physical matters affecting the title and use of the premises, including the existence of any encroachments and recorded or visible easements. The survey should also contain a certificate setting forth the building number of square feet within said description. The legal description in the survey shall be indentical with the description in the security instruments and title policy.

(f) Laws: The Borrower will construct improvements of a first class quality in compliance with all applicable ordinances, building codes and zoning, environmental, ecological and any other applicable laws and regulations and provide Lender with a certificate of occupancy upon completion.

DEED OF TRUST NOTE

Anchorage, Alaska

$_____ _____, 19___

_____ (the "Maker"), a _____ duly organized under the laws of the State of _____, FOR VALUE RECEIVED, hereby PROMISES TO PAY TO THE ORDER OF _____ (the "Holder"), a lending institution duly organized and existing under the laws of _____ and having offices in the State of Alaska, the principal sum of _____ DOLLARS, or so much as may be advanced hereunder, together with interest on the unpaid principal balance owing hereunder at the rate provided for herein. All payments shall be in lawful money of the United States and shall be paid at the office of the Holder in _____, Alaska, or at such other place as the Holder hereof may designate in writing.

The indebtedness evidenced hereby, together with interest thereon at the rate set forth herein, shall be paid as follows:

Rate and Payment of Interest

General Terms and Conditions

This Note is subject to mandatory prepayment without any premium but with accrued interest on the amount prepaid to the date of prepayment in whole or in part with insurance or condemnation proceeds as provided in the Deed of Trust, hereinafter mentioned, and in whole, at any time, upon the acceleration hereof pursuant to the Deed of Trust.

If default is made in the payment of any installment of the principal of or interest on this Note and the same is placed in the hands of an attorney for collection, or if suit is filed hereon, or proceedings are had in bankruptcy, probate, receivership, reorganization, arrangement or other judicial proceedings for the establishment or collection of any amount called for hereunder, or any amount payable or to be payable hereunder is collected through any such proceedings, the Maker agrees to pay to the Holder hereof all reasonable costs of collection, including attorney's fees.

In the event that any payment of principal and/or interest or portion thereof is not paid within fifteen (15) days of the date it is due, the Holder hereof may collect, and the Maker agrees to pay with such payment, a "late charge" of 4 cents ($0.4) for each dollar so overdue as liquidated damages for the additional expense of handling such delinquent payments.

The Maker and all endorsers or guarantors hereof expressly waive demand and presentation for payment, notice of nonpayment, protest, notice of protest, notice of dishonor, bringing of suit, and diligence in taking any action to collect any amounts called for hereunder and in the handling of properties, rights or collateral at any time existing in connection herewith.

Default in payment of any installment of principal or interest or in the performance of any of the covenants or conditions of the hereinafter described Deed of Trust or any other agreements securing this Note shall, at the option of the Holder of this Note, without notice or demand, render the whole amount of principal and interest then unpaid immediately due and payable. Failure to exercise this option shall not constitute a waiver of the right to exercise the same at any other time. A prepayment fee shall also be payable in the event of a default hereunder, or under the Deed of Trust or other documents securing this Note occurring on or after the Purchase Date, which default results in a foreclosure and sale of the property secured by such Deed of Trust in the same manner as if the Maker had elected to prepay this Note. In the event that such foreclosure and sale occur prior to the date upon which prepayment has been reserved as otherwise provided in this Note, the Maker agrees to pay a prepayment fee equal to seven percent (7%).

In the event the payee consults an attorney regarding the enforcement of any of its rights under this Note or the Deed of Trust or if this Note is placed in the hands of an attorney for collection or if suit be brought to enforce this Note or the Deed of Trust, the Maker promises to pay all costs thereof, including attorney's fees. Said cost and attorney's fees shall include, without limitation, costs and attorney's fees incurred in any appeal or in any proceedings under any present or future federal Bankruptcy Act or state receivership. The Maker and endorser severally waive presentment, protest and demand, notice of protest, demand of dishonor, and nonpayment of this Note, and expressly agree that this Note, or any payment thereunder, may be extended from time to time without in any way affecting the liability of the Maker and endorser thereof.

The Deed of Trust contains certain provisions restricting the conveyance, transfer or further encumbrance of the property encumbered by the Deed of Trust without the prior written consent of the Holder hereof.

This Note is to be governed by and construed in accordance with the laws of the State of Alaska. In the event of any action hereon or for the enforcement hereof or in event of the referring of this Note for collecton, the Maker promises to pay all costs pertaining to the security herefor and all sums required to be paid under any security instrument securing indebtedness hereunder.

FEDERAL GUARANTY UNDERWRITING

If the prescribed date of payment of any of the principal of or interest hereon is a Saturday or Sunday or legal holiday at the location of the principal office of Holder or place of payment of this Note, such payment shall be due on the next succeeding business day.

This Note has been issued, executed and delivered in connection with the financing of a multi-family rental residential project located on the real property described in that certain Deed of Trust, as of the date hereof made from the Maker to the Trustee thereunder, for the benefit of the _____ _____, and is entitled to the benefit and security of said Deed of Trust, which is a lien upon the property therein described.

Reference is hereby made to the Deed of Trust and the Tax Exempt Compliance Agreement, dated as of the date hereof by and among _____, the Trustee and the Maker for the provisions relating to the acceleration of the indebtedness evidenced hereby upon the occurrence of certain events stated therein, and for all other relevant purposes.

If for any reason whatsoever the interest contracted for, paid or received on this Note shall exceed the maximum nonusurious amount (if any) prescribed by law, the Holder hereof shall refund to the Maker, or, at the Holder's option, credit against the principal hereof, such portion of said interest as shall be necessary to cause the interest contracted for, paid and received hereon to equal the maximum nonusurious amount permitted by law. All sums paid or agreed to be paid to the Holder hereof for the use, forbearance or detention of the indebtedness evidenced hereby, to the extent permitted by law, shall be amortized, prorated, allocated and spread throughout the full term hereof.

This Note has been issued, executed and delivered in the State of Alaska and shall be governed by and construed in accordance with the laws of the State of Alaska.

DEED OF TRUST
SECURITY AGREEMENT
AND ASSIGNMENT OF LEASES AND RENTS

THIS DEED OF TRUST, SECURITY AGREEMENT AND ASSIGNMENT OF LEASES AND RENTS (hereinafter called "Deed of Trust") is made this ___ day of _____, 19___, between _____ _____ whose address is _____ (the "Grantor"); _____ whose address is _____ (the "Trustee") and _____(the "Beneficiary"). whose address is _____ _____.

NOW, THEREFORE, in order to secure the repayment of all amounts due and payable by the Grantor under the Deed of Trust Note, described herein as the same shall become due and payable according to its tenor, and to secure the performance and observance of all the provisions therein and herein contained, and for and in consideration of the indebtedness herein recited, the Grantor by these presents does irrevocably grant, bargain, sell, and convey to the Trustee in trust, with power of sale, all of the following contained in Granting Clauses I to VI inclusive (all of which are hereinafter sometimes collectively called the "Premises"):

GRANTING CLAUSE I

Land. The *[leasehold estate pursuant to a lease (herein "ground lease") dated _____, between _____ and _____ recorded in _____] following described real property and all right, title and interest now owned or hereafter acquired by the Grantor in and on the same, located in the _____ Recording District: _____ Judicial District, State of Alaska:

GRANTING CLAUSE II

Additional Bargained Property. All and singular the lands, tenements, privileges, water rights, hereditaments and appurtenances thereto belonging or in anywise appertaining, and the reversion and reversions, remainder and remainders, rents, issues and profits thereof, and all the estate, right, title, claim, interest and demand whatsoever of the Grantor, either in law or equity, of, in and to the bargained property; TO HAVE AND TO HOLD said property bargained and described, together with all and singular the lands, tenements, privileges, water rights, hereditaments and appurtenances thereto belonging or in anywise appertaining, and the reversion and reversions, remainder and remainders, rents, issues and profits thereof, and all of the estate, right, title, claim and demands whatsoever of the Gran-

*For ground lease only

tor, either in law or in equity, of, in and to the above bargained property, forever as security for the faithful performance of the promissory note secured hereby and as security for the faithful performance of each and all of the covenants, agreements, terms and conditions of this Deed of Trust, SUBJECT, HOWEVER, to the right, power, and authority hereinafter given to and conferred upon Beneficiary to collect and apply such rents, issues and profits; and

GRANTING CLAUSE III

Access Rights. All the estate and rights of Grantor in and to said property and in and to land lying in streets and roads adjoining said property, and all access rights and easements appertaining thereto; and

GRANTING CLAUSE IV

Fixtures. All buildings, structures, improvements, fixtures and articles of property now or hereafter attached to, or used or adapted for use in the operation of, the said property, including but without being limited to, all heating and incinerating apparatus and equipment, piping and plumbing fixtures, and ~~shrubbery~~ and plants; and including also all interest of any owner of the said property in any of such items hereafter at any time acquired under conditional sale contract, chattel mortgage or other title retaining or security instrument, all of which property mentioned in this paragraph shall be deemed part of the realty and not severable wholly or in part without material injury to the freehold; and

GRANTING CLAUSE V

Encumbrances. All of Grantor's rights further to encumber said property for debt except with the prior written consent of Beneficiary; Grantor hereby (i) representing as a special inducement to the Beneficiary to make this loan that as of the date hereof there are no encumbrances to secure debt junior to this Deed of Trust and (ii) covenanting that there are to be none as of the date when this Deed of Trust becomes of record, except in either case encumbrances having the prior written approval of Beneficiary.

GRANTING CLAUSE VI

Assignment of Rents and Other Rights and Interests of Trustor in or Appurtenant to the Land and the Fixtures and Properties. All right, title and interest of Grantor now owned or hereafter acquired, in and to all the singular and tenements, hereditaments, privileges, easements, franchises, leases and subleases, licenses, and appurtenances belonging or in any way appertaining to the property described in the preceding Granting Clauses, and the reversions, remainders, rents, issues and profits thereof, including all interest of the Grantor as landlord in and to all present and future licenses, leases, tenancies and occupancies of space in the Improvements and in each and every sublease of the entire or any part of the Land, and all the estate, right, title and interest, claim and demand whatsoever in law or in equity, which the Grantor now has or may hereafter acquire in and to such property, including, without limiting the generality of the foregoing, any award in condemnation and the proceeds of any policy of insurance relating to the Premises.

All of the above-described property and interest therein are hereinafter referred to as the "Premises."

THIS DEED IS GIVEN FOR THE PURPOSE OF SECURING PERFORMANCE of each agreement of Grantor incorporated by reference or contained herein and payment *[of the sum of _____ DOLLARS with interest thereon] according to the terms of a Deed of Trust Note (hereinafter called "Note") of even date herewith, payable to Beneficiary or order and made by Grantor; all renewals, modifications or extensions thereof; and also such further sums as may be advanced or loaned by Beneficiary to Grantor, or any of their successors or assigns, together with interest thereon at such rate as shall be agreed upon; and also any amounts outstanding under any other securing instruments now or hereafter executed by the Grantor in favor of the Beneficiary.

THIS CONVEYANCE is made in trust, and these presents are upon this express condition, that if the Grantor, or its successors or assigns, pays the sum of money and the interest thereon stated in the Note and secured by this Deed of Trust, and otherwise performs all of its obligations as provided hereunder, and under the Security Documents and other documents evidencing or securing the Note, then this Deed of Trust and the estate hereby granted shall cease, determine and be void, and the Trustee shall reconvey without warranty the property then held hereunder. The grantee in such reconveyance may be described as "the person or persons legally entitled thereto." Neither the Beneficiary nor the Trustee shall be required to bear any expense or cost in connection with such reconveyance or the recording thereof.

THE GRANTOR WARRANTS that (i) it is lawfully possessed and is the lawful owner of the Land; (ii) the real property is free and clear of any deed of trust, mortgage, lien, charge or encumbrance thereon or affecting the title thereto prior to this Deed of Trust (other than as are specifically set forth in this Deed of Trust and Permitted Encumbrances); (iii) it is well and truly seized of the property described in Granting Clauses I, II, III, IV, V and VI hereof, free and clear of any liens and encumbrances except as expressly set forth in this Deed of Trust; (iv) except for the assignment contained herein, there is no present assignment of the rents and payments described under Granting Clause VI hereof; (v) it will maintain and preserve the lien of this Deed of Trust until the indebtedness secured hereby has been paid in full; (vi) it has good right and lawful authority to mortgage and pledge the Mortgaged Property, as provided in and by this Deed of Trust and the execution, delivery and performance of the Deed of Trust will not violate, conflict with, breach or constitute a default under any Legal Requirement; and (vii) that it will forever warrant and defend the same against any and all claims and demands whatsoever, except as are specifically set forth in this Deed of Trust.

DEFINITIONS. In addition to all other words defined herein, and unless a different meaning or intent clearly appears from the context, the following terms have the following defined meanings:

Beneficiary means the above defined Beneficiary, and the subsequent holder or holders, from time to time, of the Note.

Buildings means any and all buildings, open parking areas and other improvements, and any and all additions, alterations or appurtenances thereto, now or at any time hereafter situated, placed or constructed upon the above described real estate or any part thereof.

*For 1st Deed of Trust only

Deed Restrictions means that certain deed and Deed Restrictions of even date herewith by and between the Owner, pertaining to the site of the Project and the Project.

Event of Default means any happening or occurrence described in paragraph 26.

Fixtures means all materials, supplies, equipment, apparatus and other items now or hereafter attached to, installed in or used, whether temporarily or permanently, in connection with any of the Improvements, as hereinafter defined, or the Land, as hereafter defined, and all renewals, replacements, substitutions thereof and additions thereto, including, but not limited to, any and all partitions, ducts, shafts, pipes, radiators, conduit, wiring, window screens and shades, drapes, carpeting and other floor coverings, awnings, motors, engines, boilers, pumps, transformers, generators, fans, blowers, vents, switchboards, elevators, escalators, compressors, furnaces, cleaning, alarm and sprinkler systems, fire extinguishing apparatus, water tanks, swimming pools, heating, ventilating, pumping, laundry, incinerating, air conditioning and other cooling systems, water, gas and electrical equipment, disposals, dishwashers, refrigerators and ranges, cafeteria equipment, recreational equipment and facilities of all kinds, all of which property and things, to the extent permitted by law, are hereby declared to be permitted accessions to the Land.

Governmental Authority means any and all governmental or quasi-governmental entities of any nature whatsoever, whether federal, state, county, district, city or otherwise, and whether now or hereafter in existence.

Guaranty (individually and/or collectively, as the context may require) means that or those instructions of Guaranty of even date herewith, if any from the Guarantor to the Beneficiary guaranteeing the repaying of the indebtedness and the satisfaction of, or continued compliance with, the Obligations.

Impositions means all rates, charges and penalties, including deposits, insurance, taxes and fines, including regular and special assessments, both as to realty and as to personalty, water, gas, sewer, garbage, electricity, telephone and other utilities, any easement, license or agreement payments maintained for the benefit of the Premises, and all other charges or taxes and any interest, costs or penalties with respect thereto of any nature whatsoever which may now or hereafter be assessed, levied or imposed upon the Premises or the ownership, use, occupancy and enjoyment thereof.

Improvements means any and all buildings, structures, sidewalks, parking areas, ~~fixtures~~, and other improvements, and any and all additions, alterations or appurtenances thereto, and any and all plans, specifications, feasibility studies, cost estimates, permits, licenses and certificates now or at any time hereafter placed or constructed upon the Land or any part thereof.

Indebtedness means the principal of, interest on and all other amounts, payments, penalties and premiums due under or secured by the Note and the other Security Documents.

Land means the real estate and all improvements and fixtures and all rights, titles and interests appurtenant thereto, any and all surveys, engineering studies, appraisal reports, permits, licenses and certificates now or hereafter acquired, situated as more particularly described in Granting Clause I hereof, hereditaments, prescriptions, profits and advantages thereto in any way belonging.

Leases means all leases, including oil, gas and other mineral leases, subleases, licenses, concessions, contracts or other agreements, whether written or oral, now or hereafter in effect, which grant a possessory interest in and to or the rights to use any portion of the Premises or which relate to the use or construction of the Improvements.

Legal Requirements means any and all of the following that may now or hereafter be applicable to the Trustor or the Premises:

(1) Judicial decisions, statutes, rulings, rules, regulations, permits, certificates or ordinances of any Governmental Authority;

(2) Grantor's Articles of Incorporation, Bylaws and any other agreements pertaining to the form of the Grantor's business entity;

(3) Leases;

(4) Easements, privileges, restrictions and any other incorporeal rights of record; and

(5) Other written agreement or promises of any nature.

Note means the promissory note of even date herewith executed by the Grantor and payable to the order of the Beneficiary as provided therein.

Obligations means any and all of the covenants, warranties, representations and other obligations (other than to repay the Indebtedness) made or undertaken by the Grantor, a Guarantor or others to the Beneficiary, the Trustee or others as set forth in the Security Documents, the Deed Restrictions and the Tax-Exempt Compliance Agreement or any lease, sublease or other agreement pursuant to which, Grantor is granted a possessory interest in the Land.

Obligated Party means any maker, co-maker, guarantor, surety, endorser, or other party, other than the Trustor, directly or indirectly obligated or primarily or secondarily liable for any part of the Indebtedness or the performance of any of the Obligations.

Permitted Encumbrances means the outstanding liens, easements, building lines, restrictions, security interest and other matters (if any) as may be reflected on any Exhibit attached hereto and the lien and security interest created by the Security Documents.

Personalty means all of the right, title and interest of Grantor in and to all furniture, furnishings, equipment, machinery, goods, general intangibles, money, accounts, contract rights, inventory and all other personal property (other than the Fixtures) of any kind or character as defined in and subject to the provisions of [AS 45.09.101 et. seq.], now or hereafter located upon, within or about the Land and the Buildings, together with all accessories, replacements and substitutions thereto or therefor and the proceeds thereof.

Premises means the Land, Improvements, Fixtures, Leases and Rents, as herein defined, together with all or any part of and any interest in the following:

(1) Rights, privileges, tenemants, hereditaments, rights-of-way, easements, appendages and appurtenances in any way pertaining thereto, and rights, titles and interests of the Grantor in and to any streets, alleys, driveways and strips of land adjoining the Land or any part thereof;

(2) Additions, substitutions, replacements and revisions thereof and thereto and all remainders therein; and

(3) All of the Grantor's right, title and interest in and to any award, remuneration, settlement or compensation heretofore made or hereafter to be made by any Governmental Authority to the present or any subsequent owner of the Land, Buildings, Fixtures or Personalty, including those for any vacation of, or change of grade in, any streets affecting the Land or Buildings; and

(4) Other security and collateral of any nature whatsoever, now or hereafter given for the repayment of the Indebtedness or the performance and discharge of the Obligations.

As used in this Deed of Trust, the term Premises shall be expressly defined as meaning all, or where the context permits or requires, any portion of the above and all or, where the context permits or requires, any interest therein.

Tax-Exempt Compliance Agreement means that certain Agreement so-entitled of even date herewith by and among the Grantor, the Beneficiary and Alaska Industrial Development Authority, relating to the Land and the Buildings.

Rents means all of the rents, revenues, income, proceeds, profits and other benefits paid or payable by parties to the Leases other than the Grantor for using, leasing, licensing, possessing, operating from, residing in, or otherwise enjoying the Property.

Security Documents means any construction loan agreement and any permanent loan takeout agreement, by and between the Grantor and the Beneficiary, relating to the Land and the Buildings; the Note; this Deed of Trust; any other Security Agreement and any other Financing Statement; the Guaranty; and any and all other documents now or hereafter executed by the Grantor, a Guarantor or any other person or party to evidence or secure the payment of the Indebtedness or the performance and discharge of the Obligations.

The Grantor represents, warrants, covenants and agrees as follows:

1. Validity of Loan Instruments. The execution, delivery and performance by the Grantor of the Security Documents (other than the Guaranty), and the borrowing evidenced by the Note, (a) are within the Grantor's powers and have been duly authorized by the Grantor, (b) have received all (if any) requisite prior governmental approval in order to be legally binding and enforceable in accordance with the terms thereof, (c) will not violate, be in conflict with, result in a breach of or constitute (with due notice or lapse of time, or both) a default under, any Legal Requirement or result in the creation or imposition of any lien, charge or encumbrance of any nature whatsoever upon any of the Grantor's or the Guarantor's property or assets,

except as contemplated by the provisions of the Security Documents. The Security Documents constitute the legal, valid and binding obligations of the Grantor, any Guarantor and others obligated under the terms of the Security Documents, in accordance with their respective terms.

2. Deed of Trust/Security Agreement. When and if a Grantor and Beneficiary shall respectively become the debtor and secured party in any Uniform Commercial Code Financing Statement affecting property either referred to or described herein, or in any way connected with the use and enjoyment of these Premises, this Deed of Trust shall be deemed a Security Agreement as defined in said Uniform Commercial Code and the remedies for any violation of the covenants, terms and conditions of the agreements herein contained shall be (i) as prescribed herein, or (ii) by general law, or (iii) as to such part of the security which is also reflected in said Financing Statement by the specific statutory consequences now or hereafter enacted and specified in the Uniform Commercial Code, all at Beneficiary's sole election. Grantor and Beneficiary agree that the filing of such a Financing Statement in the records normally having to do with personal property shall never be construed as in anywise derogating from or impairing this declaration and hereby stated intention of the parties hereto, that everything used in connection with the production of income from the Premises and/or adapted for use therein and/or which is described or reflected in this Deed of Trust is, and at all times and for all purposes and in all proceedings both legal or equitable shall be, regarded as part of the real estate irrespective of whether (i) any such item is physically attached to the improvements, (ii) serial numbers are used for the better identification of certain equipment items capable of being thus identified in a recital contained in this Deed of Trust or in any list filed with the Beneficiary, or (iii) any such item is referred to or reflected in any such Financing Statement so filed at any time.

3. Payment of Debts, Secured Assessments and Liens. The Grantor shall pay all debts and money secured hereby, when from any cause the same shall become due to keep the Premises free from statutory and governmental liens of any kind, except those liens which are payable in installments as provided in paragraph 5. There are no liens or encumbrances against or upon the premises and none superior to this Deed of Trust will be created or suffered to be created by the Grantor during the life of this Deed of Trust. The Grantor has good right to make this Deed of Trust and will forever warrant and defend said Premises unto the Beneficiary, its successors and assigns, against every person whomsoever lawfully claiming or to claim the same or any part thereof. The Grantor upon request by mail will furnish a written statement duly acknowledged of the amount due on this Deed of Trust and whether any offsets or defenses exist against the debt secured hereby.

4. Tax-Exempt Compliance Agreement. The Grantor will comply fully with and perform each and all of its covenants, obligations and agreements set forth in the Tax-Exempt Compliance Agreement after its execution and delivery.

5. Reserves for Taxes, Insurance and Special Assessments. The Grantor shall pay together with and in addition to the monthly payments of principal and interest payable under the terms of the said Note, on the date set forth therein for the making of monthly payments each month, until said Note is fully paid, a sum, as estimated by the Beneficiary, equal to one-twelfth (1/12th) of the yearly ground rents, taxes, special assessments, and insurance premiums affecting the Premises,

Grantor agreeing to deliver promptly to Beneficiary all bills and notices thereof, such sums to be held by the Beneficiary to pay said ground rents, premiums, taxes and special assessments. All payments mentioned in this paragraph and all payments to be made under said Note shall be added together and the aggregate amount thereof shall be paid by the Grantor each month in a single payment to be applied by Beneficiary to the following items in the order set forth: (a) ground rents, if any, taxes, special assessments, fire and other hazard insurance premiums; (b) interest on the Note secured hereby; and, (c) amortization of the principal of said Note. Upon demand of Beneficiary, Grantor shall promptly pay such additional sums as are necessary to make up deficiency in the amount necessary to pay such ground rents, taxes, assessments, insurance premiums, and other similar charges in a timely manner, and any deficiency in such amounts shall constitute an event of default under this Deed of Trust. The arrangement provided for in this paragraph 5 is solely for the added protection of the Beneficiary and entails no responsibility on the Beneficiary's part beyond the allowing of due credit, without payment of interest or income to the Grantor, for the sums actually received by it. Those sums received, but not immediately required for payment of the items set forth above, may be invested or otherwise used by the Beneficiary without payment to the Grantor until such time as payment of the items set forth above is required. Upon assignment of this Deed of Trust by the Beneficiary, any funds on hand shall be turned over to the assignee and any responsibility of the assignor with respect thereto shall terminate. Each transfer of the Premises shall automatically transfer to the grantee all rights of the Grantor with respect to any funds accumulated hereunder.

6. Excess or Insufficient Reserves for Taxes, Insurance and Special Assessments. If the total of the payments (herein called "Reserves") made under paragraph 5 hereof relating to reserves for ground rents, taxes, special assessments, and premiums on insurance policies, shall exceed the amount of payments actually made by Beneficiary for the purposes set forth in paragraph 5, plus such amounts as have been reasonably accumulated in such Reserves toward payments therefrom next to become due, such excess may, provided no default then exists under the terms of this instrument nor under the terms of the Note hereby secured, but not otherwise, be credited by Beneficiary in payment of subsequent aggregate, but not partial, payments required to be made under paragraph 5 hereof, or, at the option of the Beneficiary, refunded to the Grantor or his successor in interest as may appear upon the records of the Beneficiary. If, however, at any time in Beneficiary's judgment, the amount of the reserves shall be insufficient to pay at least 30 days before due all ground rents, insurance premiums, taxes and assessments, then the Grantor shall pay to Beneficiary any amount necessary to make up the deficiency within thirty (30) days after written notice to Grantor stating the amount of the deficiency. In the event there is a default under any of the provisions of the Note or this Deed of Trust and thereafter a sale of the Premises in accordance with the provisions hereof, or if the Beneficiary at his option acquires the Premises otherwise after default, the Beneficiary may, at its option, at the time of acceleration of the indebtedness or at the time of commencement of such proceedings or at the time the Premises are otherwise acquired, apply the balance then remaining in the funds accumulated under paragraph 5, less such sums as will become due and payable during the pendency of the proceedings, as a credit against the amounts secured hereby.

7. Reserves for Repair and Replacement. Grantor shall pay each month at the same time as, but in addition to, the required payments of interest and principal, one-twelfth of one

percent (1/12 of 1%) of original cost of all improvements as a reserve for replacement and maintenance of said amounts. Disbursements, withdrawals, investments and termination of the requirement shall be as fixed in an agreement between Grantor and Beneficiary.

8. Direct Payment of Taxes. At the Beneficiary's option, the Grantor shall pay all ground rents, insurance premiums, taxes, assessments and other charges, fines and impositions attributable to the Premises in the manner provided in paragraph 5 hereof, or by the Grantor making payment, when, due, directly to the party entitled thereto. The Grantor shall furnish promptly to the Beneficiary all notices of amounts due under this paragraph, and in the event the Grantor shall make payment directly, the Grantor shall promptly (but in no event less than fifteen (15) days prior to delinquency) furnish to the Beneficiary receipts evidencing such payments.

9. Late Charges. In the event that any payment or portion thereof is not paid within fifteen (15 days commencing with the date it is due, the Beneficiary may collect, and the Grantor agrees to pay with such payment, a "late charge" of four cents ($.04) for each dollar so overdue as liquidated damages for the additional expenses of handling such delinquent payments.

10. Maintenance and Preservation of Premises. The Grantor agrees to maintain the buildings and other improvements on the Premises in a rentable and tenantable condition and state of repair, to neither commit nor suffer any waste, to promptly comply with all Legal Requirements and covenants, conditions and restrictions respecting said Premises or the use thereof, and to pay all fees or charges of any kind in connection therewith. The Beneficiary may recover as damages for any breach of this covenant the amount it would cost to put the Premises in the condition called for herein. In the event of breach of any requirement of this paragraph, the Beneficiary may, in addition to any other rights or remedies, at any time thereafter declare the whole of said principal sum immediately due and payable. Proof of impairment of security shall be unnecessary in any suit or proceeding under this paragraph. Grantor shall permit Beneficiary or its agents the opportunity to inspect the Premises, including the interior of any structures, at reasonable times and after reasonable notice.

11. Restoration. The Grantor shall restore promptly and in good workmanlike manner any building or improvement which may be damaged or destroyed thereon, and pay when due all costs incurred therefor.

12. Alteration or Removal of Property. No building or other improvement on the Premises shall be structurally altered, removed or demolished, without the Beneficiary's prior written consent, nor shall any fixture or chattel covered by this Deed of Trust and adapted to the proper use and enjoyment of the Premises be removed at any time without like consent unless actually replaced by an article of equal suitability, owned by the Grantor, free and clear of any lien or security interest except such as may be approved in writing by the Beneficiary.

13. Insurance. Grantor will at all times provide, maintain and keep in force:

(a) Policies of insurance insuring the Premises against loss or damage by fire and lightning; against loss or damage by other risks embraced by coverage of the type now known as the broad form of extended coverage, including, but not limited to,

riot and civil commotion, vandalism and malicious mischief; and against such other risks or hazards as Beneficiary from time to time reasonably may designate in an amount sufficient to prevent Beneficiary or Grantor from becoming a co-insurer under the terms of the applicable policies, but in any event in an amount not less than 100% of the then full replacement costs of the Improvements (exclusive of the cost of excavations, foundations and footings below the lowest basement floor) without deduction for physical depreciation, and each such policy shall contain a Replacement Cost Endorsement, if ava able;

(b) Flood insurance upon the Premises in the event that such insurance is available pursuant to the provisions of the Flood Disaster Protection Act of 1973 or other applicable legislation. Beneficiary shall reserve the right to require that Grantor secure flood insurance in excess of the amount provided by the Flood Disaster Protection Act of 1973 if such insurance is commercially available up to the amount provided in paragraph (a) hereof;

(c) Boiler and pressure vessel insurance, including air ta..., pressure piping and major air conditioning equipment, provided the building which constitutes a part of the Property contains equipment of the nature ordinarily covered by such insurance, in such an amount as Beneficiary may require;

(d) War risk insurance upon the Premises as and when such insurance is obtainable from the United States of America or any agency or instrumentality thereof at a reasonable premium, in an amount not less than 100% of the then full replacement cost of the Improvements (exclusive of the cost of excavations, foundations and footings below the lowest basement floor) without deduction for physical depreciation, to the extent obtainable, and if not so obtainable, in the maximum amount obtainable; and

(e) Such other insurance (including earthquake insurance) in such amounts as may from time to time be reasonably required by Beneficiary against the same or other insurable hazards which at the time are commonly insured against in the case of premises similarly situated, due regard being given to the height and type of buildings thereon and their construction, use and occupancy.

All policies for such insurance shall be issued by companies approved by Beneficiary, shall be subject to the approval of Beneficiary as to amount, content and forms of policies and expiration dates, shall contain a Non-Contributory Standard Mortgagee Clause and the Loss Payment Endorsement or their equivalents, in favor of Beneficiary, and and shall provide that the proceeds thereof shall be payable to Beneficiary (to the extent of its interest). Grantor hereby assigns to Beneficiary all insurance proceeds which it may be entitled to receive, and such proceeds shall be delivered to and held by Beneficiary to be applied, at the sole discretion and option of Beneficiary, (i) to the reduction of the unpaid principal of the indebtedness secured by this Deed of Trust; or (ii) so long as Grantor is not in default hereunder (except as set forth in paragraph 18 hereof) to the restoration of the Premises or any portion of the Premises that has been damaged or destroyed to the same condition, character and value as nearly as may be to that as existed prior to such damage or destruction. In the event that Beneficiary has elected to allow the proceeds to be used for restoration and, in Beneficiary's sole judgment, the insurance proceeds are not sufficient to fully accomplish such restoration (unless Grantor promptly on demand deposits with Beneficiary the additional amounts necessary to accomplish such restoration), Beneficiary

shall apply the insurance proceeds upon any indebtedness secured hereby. Such application or release shall not cure or waive any default or notice of default hereunder or invalidate any act done pursuant to such notice. If Beneficiary agrees to utilize the proceeds for the restoration of the Premises, and if the Premises is restored at a cost less than the available insurance proceeds, then such excess proceeds shall, if Grantor is not then in default hereunder, be paid over to Grantor. In the event of the foreclosure of this Deed of Trust or other transfer of the title to the Premises in extinguishment, in whole or in part, of the indebtedness secured hereby, all right, title and interest of Grantor in and to any insurance policy or premiums or payment in satisfaction of claims or any other rights thereunder then in force shall pass to the purchaser or grantee notwithstanding the amount of any bid at such foreclosure sale.

Nothing contained herein shall prevent accrual of interest as provided in the Note and on any portion of the proceeds to be applied to the principal balance due under the Note until such proceeds are actually received and applied.

After the happening of any casualty, whether or not required to be insured against under the policies to be provided by Grantor hereunder, Grantor shall give prompt written notice thereof to Beneficiary.

At least thirty (30) days prior to expiration of any policy required to be provided by Grantor hereunder, Grantor shall furnish Beneficiary with appropriate proof of issuance of a policy continuing in force the insurance covered with the original of each policy required to be provided by Grantor hereunder, which policy shall provide that it shall not be modified or canceled without thirty (30) days' written receipt for the payment of premiums on such insurance policies or other evidence of such payment reasonably satisfactory to Beneficiary in the event that such premiums have not been paid to Beneficiary or Beneficiary's agent pursuant to paragraph 6 hereof. In the event that Grantor does not deposit with Beneficiary a new policy of insurance with evidence of payment of premium thereon at least thirty (30) days prior to the expiration of any expiring policy, then Beneficiary may, but shall not be obligated to, procure such insurance and pay the premium therefor, and Grantor agrees to repay to Beneficiary the premiums thereon promptly on demand.

14. Defense of Actions and Indemnification and Attorney's Fees and Costs. Should Beneficiary or Trustee elect to appear in or defend any suit, action or proceeding that might affect the value of this security instrument or the security itself or the rights and powers of Beneficiary or Trustee; or be made a party to such by reason of this Deed of Trust, or elect to prosecute such action as appears necessary to preserve said value, the Grantor will, at all times, indemnify from, and, or reimburse Beneficiary or Trustee for any and all loss, damage, expense or cost, including cost of evidence of title and attorney's fees, arising out of or incurred in connection with any such suit, action or proceeding, and the sum of such expenditures shall be secured hereby and shall be due and payable on demand to pay costs of suit, cost of evidence of title and a reasonable attorney's fee in any proceeding or suit brought by Beneficiary to enforce this Deed of Trust or any portion hereof.

15. Payment of Taxes, Assessments, Liens and Encumbrances. The Grantor shall pay in full at least thirty (30) days before delinquent all rents, taxes, assessments and encumbrances, charges or liens with interest, that may now or hereafter be levied, assessed or claimed upon the Premises or any part there-

of, which at any time appear to be prior or superior thereto for which provision has not been made heretofore, and upon request will exhibit to Beneficiary official receipts therefor, and to pay all taxes imposed upon, reasonable costs, fees and expenses of this Deed of Trust. On default under this paragraph Beneficiary may, at its option, pay, or pay out of Reserves accumulated under paragraph 5, any such sums, without waiver of any other right of Beneficiary by reason of such default of Grantor, and Beneficiary shall not be liable to Grantor for a failure to exercise any such option.

16. Repayment of Advances. The Grantor shall repay immediately on written notice to Grantor all sums expended or advanced hereunder by or on behalf of Beneficiary or Trustee, with interest from the date of such advance or expenditure at the rate of twelve percent (12%) per annum until paid, and the repayment thereof shall be secured hereby. Failure to repay such expenditure or advance and interest thereon within ten (10) days of the mailing of such notice will, at Beneficiary's option, constitute an event of default hereunder; or, Beneficiary may, at its option, commence an action against Grantor for the recovery of such expenditure or advance and interest thereon, and in such event Grantor agrees to pay, in addition to the amount of such expenditure or advance, all costs and expenses incurred in such action together with a reasonable attorney's fee.

17. Beneficiary's Right to Defend Action and Cure of Certain Defaults. The Beneficiary may appear in and defend any action or proceeding at law or in equity or in bankruptcy purporting to affect the Premises or the security hereof and in such event (except where the purported defect affecting the security hereof arises or results from any act or omission of the Beneficiary), the Beneficiary shall be allowed and paid all the Beneficiary's costs, charges and expenses, including cost of evidence of title and attorney's fees in a reasonable amount, incurred in such action or proceeding in which the Beneficiary may appear.

Should Grantor fail to make any payment or to do any act as herein provided, then Beneficiary or Trustee, but without obligation so to do and without notice to or demand upon Grantor and without releasing Grantor from any obligation hereof, may: make or do the same in such manner and to such extent as either may deem necessary to protect the security hereof, Beneficiary or Trustee being authorized to enter upon the Premises for such purposes; commence, appear in and defend any action or proceeding purporting to affect the security hereof or the rights or powers of Beneficiary or Trustee; pay, purchase, contest, or compromise any encumbrance, charge or lien which in the judgment of either appears to be prior or superior hereto; and in exercising any such power, incur any liability, expend whatever amounts in its absolute discretion it may deem necessary therefor including cost of evidence of title, comply counsel, and pay his reasonable fees.

The Grantor hereby agrees to pay on demand all of the Beneficiary's costs, charges, expenses and amounts referred to above in this paragraph, including cost of evidence of title and attorney's fees in a reasonable amount incurred in such action or which the Beneficiary may appear. All costs, charges and expenses so incurred, together with interest thereon as aforesaid, shall be secured by the lien of this Deed of Trust.

18. Leases.

(a) The Grantor shall fully comply with all of the terms, conditions and provisions of all leases on said Premises

MULTIFAMILY DEED OF TRUST,
ASSIGNMENT OF RENTS AND SECURITY AGREEMENT
(Security for Construction Loan Agreement)

THIS DEED OF TRUST (herein "Instrument") is made this ..... day of ....., 19....., among the Trustor/Grantor, ...
.....,
whose address is .....
(herein "Borrower"), ...
..... (herein "Trustee"), and
the Beneficiary, ...
.....,
a ..... organized and existing under the laws of .....,
whose address is .....
..... (herein "Lender").

BORROWER, in consideration of the indebtedness herein recited and the trust herein created, irrevocably grants, conveys and assigns to Trustee, in trust, with power of sale, [the leasehold estate pursuant to a lease (herein "ground lease") dated ....., between .....
.....and .....,
recorded in .....
..... in and to*] the following described property located in the
..... Recording District, ...
Judicial District, State of Alaska:

** Delete bracketed material if not completed.*

TOGETHER with all buildings, improvements and tenements now or hereafter erected on the property, and all heretofore or hereafter vacated alleys and streets abutting the property, and all easements, rights, appurtenances, rents (subject however to the assignment of rents to Lender herein), royalties, mineral, oil and gas rights and profits, water, water rights, and water stock appurtenant to the property, and all fixtures, machinery, equipment, engines, boilers, incinerators, building materials, appliances and goods of every nature whatsoever now or hereafter located in, or on, or used, or intended to be used in connection with the property, including, but not limited to, those for the purposes of supplying or distributing heating, cooling, electricity, gas, water, air and light; and all elevators, and related machinery and equipment, fire prevention and extinguishing apparatus, security and access control apparatus, plumbing, bath tubs, water heaters, water closets, sinks, ranges, stoves, refrigerators, dishwashers, disposals, washers, dryers, awnings, storm windows, storm doors, screens, blinds, shades, curtains and curtain rods, mirrors, cabinets, panelling, rugs, attached floor coverings, furniture, pictures, antennas, trees and plants, and .....
.....
.....; all of which, including replacements and additions thereto, shall be deemed to be and remain a part of the real property covered by this Instrument; and all of the foregoing, together with said property (or the leasehold estate in the event this Instrument is on a leasehold) are herein referred to as the "Property".

TO SECURE TO LENDER (a) the repayment of the indebtedness evidenced by Borrower's note dated ..... (herein "Note") in the principal sum of .....
..... Dollars, with interest thereon, with the balance of the indebtedness, if not sooner paid, due and payable on ....., and all renewals, extensions and modifications thereof; (b) the repayment of any future advances, with interest thereon, made by Lender to Borrower pursuant to paragraph 30 hereof (herein "Future Advances"); (c) the performance of the covenants and agreements of Borrower contained in a Construction Loan Agreement between Lender and Borrower dated ....., 19....., if any, as provided in paragraph 25 hereof; (d) the payment of all other sums, with interest thereon, advanced in accordance herewith to protect the security of this Instrument; and (e) the performance of the covenants and agreements of Borrower herein contained.

Borrower covenants that Borrower is lawfully seised of the estate hereby conveyed and has the right to grant, convey and assign the Property (and, if this Instrument is on a leasehold, that the ground lease is in full force and effect without modification except as noted above and without default on the part of either lessor or lessee thereunder), that the Property is unencumbered, and that Borrower will warrant and defend generally the title to the Property against all claims and demands, subject to any easements and restrictions listed in a schedule of exceptions to coverage in any title insurance policy insuring Lender's interest in the Property.

Uniform Covenants. Borrower and Lender covenant and agree as follows:

1. PAYMENT OF PRINCIPAL AND INTEREST. Borrower shall promptly pay when due the principal of and interest on the indebtedness evidenced by the Note, any prepayment and late charges provided in the Note and all other sums secured by this Instrument.

2. FUNDS FOR TAXES, INSURANCE AND OTHER CHARGES. Subject to applicable law or to a written waiver by Lender, Borrower shall pay to Lender on the day monthly installments of principal or interest are payable under the Note (or on another day designated in writing by Lender), until the Note is paid in full, a sum (herein "Funds") equal to one-twelfth of (a) the yearly water and sewer rates and taxes and assessments which may be levied on the Property, (b) the yearly ground rents, if any, (c) the yearly premium installments for fire and other hazard insurance, rent loss insurance and such other insurance covering the Property as Lender may require pursuant to paragraph 5 hereof, (d) the yearly premium installments for mortgage insurance, if any, and (e) if this Instrument is on a leasehold, the yearly fixed rents, if any, under the ground lease, all as reasonably estimated initially and from time to time by Lender on the basis of assessments and bills and reasonable estimates thereof. Any waiver by Lender of a requirement that Borrower pay such Funds may be revoked by Lender, in Lender's sole discretion, at any time upon notice in writing to Borrower. Lender may require Borrower to pay to Lender, in advance, such other Funds for other taxes, charges, premiums, assessments and impositions in connection with Borrower or the Property which Lender shall reasonably deem necessary to protect Lender's interests (herein "Other Impositions"). Unless otherwise provided by applicable law, Lender may require Funds for Other Impositions to be paid by Borrower in a lump sum or in periodic installments, at Lender's option.

The Funds shall be held in an institution(s) the deposits or accounts of which are insured or guaranteed by a Federal or state agency (including Lender if Lender is such an institution). Lender shall apply the Funds to pay said rates, rents, taxes, assessments, insurance premiums and Other Impositions so long as Borrower is not in breach of any covenant or agreement of Borrower in this Instrument. Lender shall make no charge for so holding and applying the Funds, analyzing said account or for verifying and compiling said assessments and bills, unless Lender pays Borrower interest, earnings or profits on the Funds and applicable law permits Lender to make such a charge. Borrower and Lender may agree in writing at the time of execution of this Instrument that interest on the Funds shall be paid to Borrower, and unless such agreement is made or applicable law requires interest, earnings or profits to be paid, Lender shall not be required to pay Borrower any interest, earnings or profits on the Funds. Lender shall give to Borrower, without charge, an annual accounting of the Funds in Lender's normal format showing credits and debits to the Funds and the purpose for which each debit to the Funds was made. The Funds are pledged as additional security for the sums secured by this Instrument.

If the amount of the Funds held by Lender at the time of the annual accounting thereof shall exceed the amount deemed necessary by Lender to provide for the payment of water and sewer rates, taxes, assessments, insurance premiums, rents and Other Impositions, as they fall due, such excess shall be credited to Borrower on the next monthly installment or installments of Funds due. If at any time the amount of the Funds held by Lender shall be less than the amount deemed necessary by Lender to pay water and sewer rates, taxes, assessments, insurance premiums, rents and Other Impositions, as they fall due, Borrower shall pay to Lender any amount necessary to make up the deficiency within thirty days after notice from Lender to Borrower requesting payment thereof.

Upon Borrower's breach of any covenant or agreement of Borrower in this Instrument, Lender may apply, in any amount and in any order as Lender shall determine in Lender's sole discretion, any Funds held by Lender at the time of application (i) to pay rates, rents, taxes, assessments, insurance premiums and Other Impositions which are now or will hereafter become due, or (ii) as a credit against sums secured by this Instrument. Upon payment in full of all sums secured by this Instrument, Lender shall promptly refund to Borrower any Funds held by Lender.

3. APPLICATION OF PAYMENTS. Unless applicable law provides otherwise, all payments received by Lender from Borrower under the Note or this Instrument shall be applied by Lender in the following order of priority: (i) amounts payable to Lender by Borrower under paragraph 2 hereof; (ii) interest payable on the Note; (iii) principal of the Note; (iv) interest payable on advances made pursuant to paragraph 8 hereof; (v) principal of advances made pursuant to paragraph 8 hereof; (vi) interest payable on any Future Advance, provided that if more than one Future Advance is outstanding, Lender may apply payments received among the amounts of interest payable on the Future Advances in such order as Lender, in Lender's sole discretion, may determine; (vii) principal of any Future Advance, provided that if more than one Future Advance is outstanding, Lender may apply payments received among the principal balances of the Future Advances in such order as Lender, in Lender's sole discretion, may determine; and (viii) any other sums secured by this Instrument in such order as Lender, at Lender's option, may determine; provided, however, that Lender may, at Lender's option, apply any sums payable pursuant to paragraph 8 hereof prior to interest on and principal of the Note, but such application shall not otherwise affect the order of priority of application specified in this paragraph 3.

4. CHARGES; LIENS. Borrower shall pay all water and sewer rates, rents, taxes, assessments, premiums, and Other Impositions attributable to the Property at Lender's option in the manner provided under paragraph 2 hereof or, if not paid in such manner, by Borrower making payment, when due, directly to the payee thereof, or in such other manner as Lender may designate in writing. Borrower shall promptly furnish to Lender all notices of amounts due under this paragraph 4, and in the event Borrower shall make payment directly, Borrower shall promptly furnish to Lender receipts evidencing such payments. Borrower shall promptly discharge any lien which has, or may have, priority over or equality with, the lien of this Instrument, and Borrower shall pay, when due, the claims of all persons supplying labor or materials to or in connection with the Property. Without Lender's prior written permission, Borrower shall not allow any lien inferior to this Instrument to be perfected against the Property.

5. HAZARD INSURANCE. Borrower shall keep the improvements now existing or hereafter erected on the Property insured by carriers at all times satisfactory to Lender against loss by fire, hazards included within the term "extended coverage", rent loss and such other hazards, casualties, liabilities and contingencies as Lender (and, if this Instrument is on a leasehold, the ground lease) shall require and in such amounts and for such periods as Lender shall require. All premiums on insurance policies shall be paid, at Lender's option, in the manner provided under paragraph 2 hereof, or by Borrower making payment, when due, directly to the carrier, or in such other manner as Lender may designate in writing.

All insurance policies and renewals thereof shall be in a form acceptable to Lender and shall include a standard mortgage clause in favor of and in form acceptable to Lender. Lender shall have the right to hold the policies, and Borrower shall promptly furnish to Lender all renewal notices and all receipts of paid premiums. At least thirty days prior to the expiration date of a policy, Borrower shall deliver to Lender a renewal policy in form satisfactory to Lender. If this Instrument is on a leasehold, Borrower shall furnish Lender a duplicate of all policies, renewal notices, renewal policies and receipts of paid premiums if, by virtue of the ground lease, the originals thereof may not be supplied by Borrower to Lender.

In the event of loss, Borrower shall give immediate written notice to the insurance carrier and to Lender. Borrower hereby authorizes and empowers Lender as attorney-in-fact for Borrower to make proof of loss, to adjust and compromise any claim under insurance policies, to appear in and prosecute any action arising from such insurance policies, to collect and receive insurance proceeds, and to deduct therefrom Lender's expenses incurred in the collection of such proceeds; provided however, that nothing contained in this paragraph 5 shall require Lender to incur any expense or take any action hereunder. Borrower further authorizes Lender, at Lender's option, (a) to hold the balance of such proceeds to be used to reimburse Borrower for the cost of reconstruction or repair of the Property or (b) to apply the balance of such proceeds to the payment of the sums secured by this Instrument, whether or not then due, in the order of application set forth in paragraph 3 hereof (subject, however, to the rights of the lessor under the ground lease if this Instrument is on a leasehold).

If the insurance proceeds are held by Lender to reimburse Borrower for the cost of restoration and repair of the Property, the Property shall be restored to the equivalent of its original condition or such other condition as Lender may approve in writing. Lender may, at Lender's option, condition disbursement of said proceeds on Lender's approval of such plans and specifications of an architect satisfactory to Lender, contractor's cost estimates, architect's certificates, waivers of liens, sworn statements of mechanics and materialmen and such other evidence of costs, percentage completion of construction, application of payments, and satisfaction of liens as Lender may reasonably require. If the insurance proceeds are applied to the payment of the sums secured by this Instrument, any such application of proceeds to principal shall not extend or postpone the due dates of the monthly installments referred to in paragraphs 1 and 2 hereof or change the amounts of such installments. If the Property is sold pursuant to paragraph 27 hereof or if Lender acquires title to the Property, Lender shall have all of the right, title and interest of Borrower in and to any insurance policies and unearned premiums thereon and in and to the proceeds resulting from any damage to the Property prior to such sale or acquisition.

6. PRESERVATION AND MAINTENANCE OF PROPERTY; LEASEHOLDS. Borrower (a) shall not commit waste or permit impairment or deterioration of the Property, (b) shall not abandon the Property, (c) shall restore or repair promptly and in a good and workmanlike manner all

or any part of the Property to the equivalent of its original condition, or such other condition as Lender may approve in writing, in the event of any damage, injury or loss thereto, whether or not insurance proceeds are available to cover in whole or in part the costs of such restoration or repair, (d) shall keep the Property, including improvements, fixtures, equipment, machinery and appliances thereon in good repair and shall replace fixtures, equipment, machinery and appliances on the Property when necessary to keep such items in good repair, (e) shall comply with all laws, ordinances, regulations and requirements of any governmental body applicable to the Property, (f) shall provide for professional management of the Property by a residential rental property manager satisfactory to Lender pursuant to a contract approved by Lender in writing, unless such requirement shall be waived by Lender in writing, (g) shall generally operate and maintain the Property in a manner to ensure maximum rentals, and (h) shall give notice in writing to Lender of and, unless otherwise directed in writing by Lender, appear in and defend any action or proceeding purporting to affect the Property, the security of this Instrument or the rights or powers of Lender. Neither Borrower nor any tenant or other person shall remove, demolish or alter any improvement now existing or hereafter erected on the Property or any fixture, equipment, machinery or appliance in or on the Property except when incident to the replacement of fixtures, equipment, machinery and appliances with items of like kind.

If this Instrument is on a leasehold, Borrower (i) shall comply with the provisions of the ground lease, (ii) shall give immediate written notice to Lender of any default by lessor under the ground lease or of any notice received by Borrower from such lessor of any default under the ground lease by Borrower, (iii) shall exercise any option to renew or extend the ground lease and give written confirmation thereof to Lender within thirty days after such option becomes exercisable, (iv) shall give immediate written notice to Lender of the commencement of any remedial proceedings under the ground lease by any party thereto and, if required by Lender, shall permit Lender as Borrower's attorney-in-fact to control and act for Borrower in any such remedial proceedings and (v) shall within thirty days after request by Lender obtain from the lessor under the ground lease and deliver to Lender the lessor's estoppel certificate required thereunder, if any. Borrower hereby expressly transfers and assigns to Lender the benefit of all covenants contained in the ground lease, whether or not such covenants run with the land, but Lender shall have no liability with respect to such covenants nor any other covenants contained in the ground lease.

Borrower shall not surrender the leasehold estate and interests herein conveyed nor terminate or cancel the ground lease creating said estate and interests, and Borrower shall not, without the express written consent of Lender, alter or amend said ground lease. Borrower covenants and agrees that there shall not be a merger of the ground lease, or of the leasehold estate created thereby, with the fee estate covered by the ground lease by reason of said leasehold estate or said fee estate, or any part of either, coming into common ownership, unless Lender shall consent in writing to such merger; if Borrower shall acquire such fee estate, then this Instrument shall simultaneously and without further action be spread so as to become a lien on such fee estate.

7. USE OF PROPERTY. Unless required by applicable law or unless Lender has otherwise agreed in writing, Borrower shall not allow changes in the use for which all or any part of the Property was intended at the time this Instrument was executed. Borrower shall not initiate or acquiesce in a change in the zoning classification of the Property without Lender's prior written consent.

8. PROTECTION OF LENDER'S SECURITY. If Borrower fails to perform the covenants and agreements contained in this Instrument, or if any action or proceeding is commenced which affects the Property or title thereto or the interest of Lender therein, including, but not limited to, eminent domain, insolvency, code enforcement, or arrangements or proceedings involving a bankrupt or decedent, then Lender at Lender's option may make such appearances, disburse such sums and take such action as Lender deems necessary, in its sole discretion, to protect Lender's interest, including, but not limited to, (i) disbursement of attorney's fees, (ii) entry upon the Property to make repairs, (iii) procurement of satisfactory insurance as provided in paragraph 5 hereof, and (iv) if this Instrument is on a leasehold, exercise of any option to renew or extend the ground lease on behalf of Borrower and the curing of any default of Borrower in the terms and conditions of the ground lease.

Any amounts disbursed by Lender pursuant to this paragraph 8, with interest thereon, shall become additional indebtedness of Borrower secured by this Instrument. Unless Borrower and Lender agree to other terms of payment, such amounts shall be immediately due and payable and shall bear interest from the date of disbursement at the rate stated in the Note unless collection from Borrower of interest at such rate would be contrary to applicable law, in which event such amounts shall bear interest at the highest rate which may be collected from Borrower under applicable law. Borrower hereby covenants and agrees that Lender shall be subrogated to the lien of any mortgage or other lien discharged, in whole or in part, by the indebtedness secured hereby. Nothing contained in this paragraph 8 shall require Lender to incur any expense or take any action hereunder.

9. INSPECTION. Lender may make or cause to be made reasonable entries upon and inspections of the Property.

10. BOOKS AND RECORDS. Borrower shall keep and maintain at all times at Borrower's address stated below, or such other place as Lender may approve in writing, complete and accurate books of accounts and records adequate to reflect correctly the results of the operation of the Property and copies of all written contracts, leases and other instruments which affect the Property. Such books, records, contracts, leases and other instruments shall be subject to examination and inspection at any reasonable time by Lender. Upon Lender's request, Borrower shall furnish to Lender, within one hundred and twenty days after the end of each fiscal year of Borrower, a balance sheet, a statement of income and expenses of the Property and a statement of changes in financial position, each in reasonable detail and certified by Borrower and, if Lender shall require, by an independent certified public accountant. Borrower shall furnish, together with the foregoing financial statements and at any other time upon Lender's request, a rent schedule for the Property, certified by Borrower, showing the name of each tenant, and for each tenant, the space occupied, the lease expiration date, the rent payable and the rent paid.

11. CONDEMNATION. Borrower shall promptly notify Lender of any action or proceeding relating to any condemnation or other taking, whether direct or indirect, of the Property, or part thereof, and Borrower shall appear in and prosecute any such action or proceeding unless otherwise directed by Lender in writing. Borrower authorizes Lender, at Lender's option, as attorney-in-fact for Borrower, to commence, appear in and prosecute, in Lender's or Borrower's name, any action or proceeding relating to any condemnation or other taking of the Property, whether direct or indirect, and to settle or compromise any claim in connection with such condemnation or other taking. The proceeds of any award, payment or claim for damages, direct or consequential, in connection with any condemnation or other taking, whether direct or indirect, of the Property, or part thereof, or for conveyances in lieu of condemnation, are hereby assigned to and shall be paid to Lender subject, if this Instrument is on a leasehold, to the rights of lessor under the ground lease.

Borrower authorizes Lender to apply such awards, payments, proceeds or damages, after the deduction of Lender's expenses incurred in the collection of such amounts, at Lender's option, to restoration or repair of the Property or to payment of the sums secured by this Instrument, whether or not then due, in the order of application set forth in paragraph 3 hereof, with the balance, if any, to Borrower. Unless Borrower and Lender otherwise agree in writing, any application of proceeds to principal shall not extend or postpone the due date of the monthly installments referred to in paragraphs 1 and 2 hereof or change the amount of such installments. Borrower agrees to execute such further evidence of assignment of any awards, proceeds, damages or claims arising in connection with such condemnation or taking as Lender may require.

12. BORROWER AND LIEN NOT RELEASED. From time to time, Lender may, at Lender's option, without giving notice to or obtaining the consent of Borrower, Borrower's successors or assigns or of any junior lienholder or guarantors, without liability on Lender's part and notwithstanding Borrower's breach of any covenant or agreement of Borrower in this Instrument, extend the time for payment of said indebtedness or any part thereof, reduce the payments thereon, release anyone liable on any of said indebtedness, accept a renewal note or notes therefor, modify the terms and time of payment of said indebtedness, release from the lien of this Instrument any part of the Property, take or release other or additional security, reconvey any part of the Property, consent to any map or plan of the Property, consent to the granting of any easement, join in any extension or subordination agreement, and agree in writing with Borrower to modify the rate of interest or period of amortization of the Note or change the amount of the monthly installments payable thereunder. Any actions taken by Lender pursuant to the terms of this paragraph 12 shall not affect the obligation of Borrower or Borrower's successors or assigns to pay the sums secured by this Instrument and to observe the covenants of Borrower contained herein, shall not affect the guaranty of any person, corporation, partnership or other entity for payment of the indebtedness secured hereby, and shall not affect the lien or priority of lien hereof on the Property. Borrower shall pay Lender a reasonable service charge, together with such title insurance premiums and attorney's fees as may be incurred at Lender's option, for any such action if taken at Borrower's request.

13. FORBEARANCE BY LENDER NOT A WAIVER. Any forbearance by Lender in exercising any right or remedy hereunder, or otherwise afforded by applicable law, shall not be a waiver of or preclude the exercise of any right or remedy. The acceptance by Lender of payment of any sum secured by this Instrument after the due date of such payment shall not be a waiver of Lender's right to either require prompt payment when due of all other sums so secured or to declare a default for failure to make prompt payment. The procurement of insurance or the payment of taxes or other liens or charges by Lender shall not be a waiver of Lender's right to accelerate the maturity of the indebtedess secured by this Instrument, nor shall Lender's receipt of any awards, proceeds or damages under paragraphs 5 and 11 hereof operate to cure or waive Borrower's default in payment of sums secured by this Instrument.

14. ESTOPPEL CERTIFICATE. Borrower shall within ten days of a written request from Lender furnish Lender with a written statement, duly acknowledged, setting forth the sums secured by this Instrument and any right of set-off, counterclaim or other defense which exists against such sums and the obligations of this Instrument.

15. UNIFORM COMMERCIAL CODE SECURITY AGREEMENT. This Instrument is intended to be a security agreement pursuant to the Uniform Commercial Code for any of the items specified above as part of the Property which, under applicable law, may be subject to a security interest pursuant to the Uniform Commercial Code, and Borrower hereby grants Lender a security interest in said items. Borrower agrees that Lender may file this Instrument, or a reproduction thereof, in the real estate records or other appropriate index, as a financing statement for any of the items specified above as part of the Property. Any reproduction of this Instrument or of any other security agreement or financing statement shall be sufficient as a financing statement. In addition, Borrower agrees to execute and deliver to Lender, upon Lender's request, any financing statements, as well as extensions, renewals and amendments thereof, and reproductions of this Instrument in such form as Lender may require to perfect a security interest with respect to said items. Borrower shall pay all costs of filing such financing statements and any extensions, renewals, amendments and releases thereof, and shall pay all reasonable costs and expenses of any record searches for financing statements Lender may reasonably require. Without the prior written consent of Lender, Borrower shall not create or suffer to be created pursuant to the Uniform Commercial Code any other security interest in said items, including replacements and additions thereto. Upon Borrower's breach of any covenant or agreement of Borrower contained in this Instrument, including the covenants to pay when due all sums secured by this Instrument, Lender shall have the remedies of a secured party under the Uniform Commercial Code and, at Lender's option, may also invoke the remedies provided in paragraph 27 of this Instrument as to such items. In exercising any of said remedies, Lender may proceed against the items of real property and any items of personal property specified above as part of the Property separately or together and in any order whatsoever, without in any way affecting the availability of Lender's remedies under the Uniform Commercial Code or of the remedies provided in paragraph 27 of this Instrument.

16. LEASES OF THE PROPERTY. As used in this paragraph 16, the word "lease" shall mean "sublease" if this Instrument is on a leasehold. Borrower shall comply with and observe Borrower's obligations as landlord under all leases of the Property or any part thereof. Borrower will not lease any portion of the Property for non-residential use except with the prior written approval of Lender. Borrower, at Lender's request, shall furnish Lender with executed copies of all leases now existing or hereafter made of all or any part of the Property, and all leases now or hereafter entered into will be in form and substance subject to the approval of Lender. All leases of the Property shall specifically provide that such leases are subordinate to this Instrument; that the tenant attorns to Lender, such attornment to be effective upon Lender's acquisition of title to the Property; that the tenant agrees to execute such further evidences of attornment as Lender may from time to time request; that the attornment of the tenant shall not be terminated by foreclosure; and that Lender may, at Lender's option, accept or reject such attornments. Borrower shall not, without Lender's written consent, execute, modify, surrender or terminate, either orally or in writing, any lease now existing or hereafter made of all or any part of the Property providing for a term of three years or more, permit an assignment or sublease of such a lease without Lender's written consent, or request or consent to the subordination of any lease of all or any part of the Property to any lien subordinate to this Instrument. If Borrower becomes aware that any tenant proposes to do, or is doing, any act or thing which may give rise to any right of set-off against rent, Borrower shall (i) take such steps as shall be reasonably calculated to prevent the accrual of any right to a set-off against rent, (ii) notify Lender thereof and of the amount of said set-offs, and (iii) within ten days after such accrual, reimburse the tenant who shall have acquired such right to set-off or take such other steps as shall effectively discharge such set-off and as shall assure that rents thereafter due shall continue to be payable without set-off or deduction.

Upon Lender's request, Borrower shall assign to Lender, by written instrument satisfactory to Lender, all leases now existing or hereafter made of all or any part of the Property and all security deposits made by tenants in connection with such leases of the Property. Upon assignment by Borrower to Lender of any leases of the Property, Lender shall have all of the rights and powers possessed by Borrower prior to such assignment and Lender shall have the right to modify, extend or terminate such existing leases and to execute new leases, in Lender's sole discretion.

17. REMEDIES CUMULATIVE. Each remedy provided in this Instrument is distinct and cumulative to all other rights or remedies under this Instrument or afforded by law or equity, and may be exercised concurrently, independently, or successively, in any order whatsoever.

18. ACCELERATION IN CASE OF BORROWER'S INSOLVENCY. If Borrower shall voluntarily file a petition under the Federal Bankruptcy Act, as such Act may from time to time be amended, or under any similar or successor Federal statute relating to bankruptcy, insolvency, arrangements or reorganizations, or under any state bankruptcy or insolvency act, or file an answer in an involuntary proceeding admitting insolvency or inability to pay debts, or if Borrower shall fail to obtain a vacation or stay of involuntary proceedings brought for the reorganization, dissolution or liquidation of Borrower, or if Borrower shall be adjudged a bankrupt, or if a trustee or receiver shall be appointed for Borrower or Borrower's property, or if the Property shall become subject to the jurisdiction of a Federal bankruptcy court or similar state court, or if Borrower shall make an assignment for the benefit of Borrower's creditors, or if there is an attachment, execution or other judicial seizure of any portion of Borrower's assets and such seizure is not discharged within ten days, then Lender may, at Lender's option, declare all of the sums secured by this Instrument to be immediately due and payable without prior notice to Borrower, and Lender may invoke any remedies permitted by paragraph 27 of this Instrument. Any attorney's fees and other expenses incurred by Lender in connection with Borrower's bankruptcy or any of the other aforesaid events shall be additional indebtedness of Borrower secured by this Instrument pursuant to paragraph 8 hereof.

19. TRANSFERS OF THE PROPERTY OR BENEFICIAL INTERESTS IN BORROWER; ASSUMPTION. On sale or transfer of (i) all or any part of the Property, or any interest therein, or (ii) beneficial interests in Borrower (if Borrower is not a natural person or persons but is a corporation, partnership, trust or other legal entity), Lender may, at Lender's option, declare all of the sums secured by this Instrument to be immediately due and payable, and Lender may invoke any remedies permitted by paragraph 27 of this Instrument. This option shall not apply in case of

(a) transfers by devise or descent or by operation of law upon the death of a joint tenant or a partner;

(b) sales or transfers when the transferee's creditworthiness and management ability are satisfactory to Lender and the transferee has executed, prior to the sale or transfer, a written assumption agreement containing such terms as Lender may require, including, if required by Lender, an increase in the rate of interest payable under the Note;

(c) the grant of a leasehold interest in a part of the Property of three years or less (or such longer lease term as Lender may permit by prior written approval) not containing an option to purchase (except any interest in the ground lease, if this Instrument is on a leasehold);

(d) sales or transfers of beneficial interests in Borrower provided that such sales or transfers, together with any prior sales or transfers of beneficial interests in Borrower, but excluding sales or transfers under subparagraphs (a) and (b) above, do not result in more than 49% of the beneficial interests in Borrower having been sold or transferred since commencement of amortization of the Note; and

(e) sales or transfers of fixtures or any personal property pursuant to the first paragraph of paragraph 6 hereof.

20. NOTICE. Except for any notice required under applicable law to be given in another manner, (a) any notice to Borrower provided for in this Instrument or in the Note shall be given by mailing such notice by certified mail addressed to Borrower at Borrower's address stated below or at such other address as Borrower may designate by notice to Lender as provided herein, and (b) any notice to Lender shall be given by certified mail, return receipt requested, to Lender's address stated herein or to such other address as Lender may designate by notice to Borrower as provided herein. Any notice provided for in this Instrument or in the Note shall be deemed to have been given to Borrower or Lender when given in the manner designated herein.

21. SUCCESSORS AND ASSIGNS BOUND; JOINT AND SEVERAL LIABILITY; AGENTS; CAPTIONS. The covenants and agreements herein contained shall bind, and the rights hereunder shall inure to, the respective successors and assigns of Lender and Borrower, subject to the provisions of paragraph 19 hereof. All covenants and agreements of Borrower shall be joint and several. In exercising any rights hereunder or taking any actions provided for herein, Lender may act through its employees, agents or independent contractors as authorized by Lender. The captions and headings of the paragraphs of this Instrument are for convenience only and are not to be used to interpret or define the provisions hereof.

22. UNIFORM MULTIFAMILY INSTRUMENT; GOVERNING LAW; SEVERABILITY. This form of multifamily instrument combines uniform covenants for national use and non-uniform covenants with limited variations by jurisdiction to constitute a uniform security instrument covering real property and related fixtures and personal property. This Instrument shall be governed by the law of the jurisdiction in which the Property is located. In the event that any provision of this Instrument or the Note conflicts with applicable law, such conflict shall not affect other provisions of this Instrument or the Note which can be given effect without the conflicting provisions, and to this end the provisions of this

Instrument and the Note are declared to be severable. In the event that any applicable law limiting the amount of interest or other charges permitted to be collected from Borrower is interpreted so that any charge provided for in this Instrument or in the Note, whether considered separately or together with other charges levied in connection with this Instrument and the Note, violates such law, and Borrower is entitled to the benefit of such law, such charge is hereby reduced to the extent necessary to eliminate such violation. The amounts, if any, previously paid to Lender in excess of the amounts payable to Lender pursuant to such charges as reduced shall be applied by Lender to reduce the principal of the indebtedness evidenced by the Note. For the purpose of determining whether any applicable law limiting the amount of interest or other charges permitted to be collected from Borrower has been violated, all indebtedness which is secured by this Instrument or evidenced by the Note and which constitutes interest, as well as all other charges levied in connection with such indebtedness which constitute interest, shall be deemed to be allocated and spread over the stated term of the Note. Unless otherwise required by applicable law, such allocation and spreading shall be effected in such a manner that the rate of interest computed thereby is uniform throughout the stated term of the Note.

23. WAIVER OF STATUTE OF LIMITATIONS. Borrower hereby waives the right to assert any statute of limitations as a bar to the enforcement of the lien of this Instrument or to any action brought to enforce the Note or any other obligation secured by this Instrument.

24. WAIVER OF MARSHALLING. Notwithstanding the existence of any other security interests in the Property held by Lender or by any other party, Lender shall have the right to determine the order in which any or all of the Property shall be subjected to the remedies provided herein. Lender shall have the right to determine the order in which any or all portions of the indebtedness secured hereby are satisfied from the proceeds realized upon the exercise of the remedies provided herein. Borrower, any party who consents to this Instrument and any party who now or hereafter acquires a security interest in the Property and who has actual or constructive notice hereof hereby waives any and all right to require the marshalling of assets in connection with the exercise of any of the remedies permitted by applicable law or provided herein.

25. CONSTRUCTION LOAN PROVISIONS. Borrower agrees to comply with the covenants and conditions of the Construction Loan Agreement, if any, which is hereby incorporated by reference in and made a part of this Instrument. All advances made by Lender pursuant to the Construction Loan Agreement shall be indebtedness of Borrower secured by this Instrument, and such advances may be obligatory as provided in the Construction Loan Agreement. All sums disbursed by Lender prior to completion of the improvements to protect the security of this Instrument up to the principal amount of the Note shall be treated as disbursements pursuant to the Construction Loan Agreement. All such sums shall bear interest from the date of disbursement at the rate stated in the Note, unless collection from Borrower of interest at such rate would be contrary to applicable law in which event such amounts shall bear interest at the highest rate which may be collected from Borrower under applicable law and shall be payable upon notice from Lender to Borrower requesting payment therefor.

From time to time as Lender deems necessary to protect Lender's interests, Borrower shall, upon request of Lender, execute and deliver to Lender, in such form as Lender shall direct, assignments of any and all rights or claims which relate to the construction of the Property and which Borrower may have against any party supplying or who has supplied labor, materials or services in connection with construction of the Property. In case of breach by Borrower of the covenants and conditions of the Construction Loan Agreement, Lender, at Lender's option, with or without entry upon the Property, (i) may invoke any of the rights or remedies provided in the Construction Loan Agreement, (ii) may accelerate the sums secured by this Instrument and invoke those remedies provided in paragraph 27 hereof, or (iii) may do both. If, after the commencement of amortization of the Note, the Note and this Instrument are sold by Lender, from and after such sale the Construction Loan Agreement shall cease to be a part of this Instrument and Borrower shall not assert any right of set-off, counterclaim or other claim or defense arising out of or in connection with the Construction Loan Agreement against the obligations of the Note and this Instrument.

26. ASSIGNMENT OF RENTS; APPOINTMENT OF RECEIVER; LENDER IN POSSESSION. As part of the consideration for the indebtedness evidenced by the Note, Borrower hereby absolutely and unconditionally assigns and transfers to Lender all the rents and revenues of the Property, including those now due, past due, or to become due by virtue of any lease or other agreement for the occupancy or use of all or any part of the Property, regardless of to whom the rents and revenues of the Property are payable. Borrower hereby authorizes Lender or Lender's agents to collect the aforesaid rents and revenues and hereby directs each tenant of the Property to pay such rents to Lender or Lender's agents; provided, however, that prior to written notice given by Lender to Borrower of the breach by Borrower of any covenant or agreement of Borrower in this Instrument, Borrower shall collect and receive all rents and revenues of the Property as trustee for the benefit of Lender and Borrower, to apply the rents and revenues so collected to the sums secured by this Instrument in the order provided in paragraph 3 hereof with the balance, so long as no such breach has occurred, to the account of Borrower, it being intended by Borrower and Lender that this assignment of rents constitutes an absolute assignment and not an assignment for additional security only. Upon delivery of written notice by Lender to Borrower of the breach by Borrower of any covenant or agreement of Borrower in this Instrument, and without the necessity of Lender entering upon and taking and maintaining full control of the Property in person, by agent or by a court-appointed receiver, Lender shall immediately be entitled to possession of all rents and revenues of the Property as specified in this paragraph 26 as the same become due and payable, including but not limited to rents then due and unpaid, and all such rents shall immediately upon delivery of such notice be held by Borrower as trustee for the benefit of Lender only; provided, however, that the written notice by Lender to Borrower of the breach by Borrower shall contain a statement that Lender exercises its rights to such rents. Borrower agrees that commencing upon delivery of such written notice of Borrower's breach by Lender to Borrower, each tenant of the Property shall make such rents payable to and pay such rents to Lender or Lender's agents on Lender's written demand to each tenant therefor, delivered to each tenant personally, by mail or by delivering such demand to each rental unit, without any liability on the part of said tenant to inquire further as to the existence of a default by Borrower.

Borrower hereby covenants that Borrower has not executed any prior assignment of said rents, that Borrower has not performed, and will not perform, any acts or has not executed, and will not execute, any instrument which would prevent Lender from exercising its rights under this paragraph 26, and that at the time of execution of this Instrument there has been no anticipation or prepayment of any of the rents of the Property for more than two months prior to the due dates of such rents. Borrower covenants that Borrower will not hereafter collect or accept payment of any rents of the Property more than two months prior to the due dates of such rents. Borrower further covenants that Borrower will execute and deliver to Lender such further assignments of rents and revenues of the Property as Lender may from time to time request.

Upon Borrower's breach of any covenant or agreement of Borrower in this Instrument, Lender may in person, by agent or by a court-appointed receiver, regardless of the adequacy of Lender's security, enter upon and take and maintain full control of the Property in order to perform all acts necessary and appropriate for the operation and maintenance thereof including, but not limited to, the execution, cancellation or modification of leases, the collection of all rents and revenues of the Property, the making of repairs to the Property and the execution or termination of contracts providing for the management or maintenance of the Property, all on such terms as are deemed best to protect the security of this Instrument. In the event Lender elects to seek the appointment of a receiver for the Property upon Borrower's breach of any covenant or agreement of Borrower in this Instrument, Borrower hereby expressly consents to the appointment of such receiver. Lender or the receiver shall be entitled to receive a reasonable fee for so managing the Property.

All rents and revenues collected subsequent to delivery of written notice by Lender to Borrower of the breach by Borrower of any covenant or agreement of Borrower in this Instrument shall be applied first to the costs, if any, of taking control of and managing the Property and collecting the rents, including, but not limited to, attorney's fees, receiver's fees, premiums on receiver's bonds, costs of repairs to the Property, premiums on insurance policies, taxes, assessments and other charges on the Property, and the costs of discharging any obligation or liability of Borrower as lessor or landlord of the Property and then to the sums secured by this Instrument. Lender or the receiver shall have access to the books and records used in the operation and maintenance of the Property and shall be liable to account only for those rents actually received. Lender shall not be liable to Borrower, anyone claiming under or through Borrower or anyone having an interest in the Property by reason of anything done or left undone by Lender under this paragraph 26.

If the rents of the Property are not sufficient to meet the costs, if any, of taking control of and managing the Property and collecting the rents, any funds expended by Lender for such purposes shall become indebtedness of Borrower to Lender secured by this Instrument pursuant to paragraph 8 hereof. Unless Lender and Borrower agree in writing to other terms of payment, such amounts shall be payable upon notice from Lender to Borrower requesting payment thereof and shall bear interest from the date of disbursement at the rate stated in the Note unless payment of interest at such rate would be contrary to applicable law, in which event such amounts shall bear interest at the highest rate which may be collected from Borrower under applicable law.

Any entering upon and taking and maintaining of control of the Property by Lender or the receiver and any application of rents as provided herein shall not cure or waive any default hereunder or invalidate any other right or remedy of Lender under applicable law or provided herein. This assignment of rents of the Property shall terminate at such time as this Instrument ceases to secure indebtedness held by Lender.

Non-Uniform Covenants. Borrower and Lender further covenant and agree as follows:

27. ACCELERATION; REMEDIES. Upon Borrower's breach of any covenant or agreement of Borrower in this Instrument, including, but not limited to, the covenants to pay when due any sums secured by this Instrument, Lender at Lender's option may declare all of the sums secured by this Instrument to be immediately due and payable without further demand, and may invoke the power of sale and any other remedies permitted by applicable law or provided herein. Borrower acknowledges that the power of sale herein granted may be exercised by Lender without prior judicial hearing. Borrower has the right to bring an action to assert the non-existence of a breach or any other defense of Borrower to acceleration and sale. Lender shall be entitled to collect all costs and expenses incurred in pursuing such remedies, including, but not limited to, attorney's fees and costs of documentary evidence, abstracts and title reports.

If the power of sale is invoked, Trustee shall execute a written notice of the occurrence of an event of default and of the election to cause the Property to be sold and shall record such notice in each Recording District in which the Property or some part thereof is located. Trustee shall mail copies of such notice in the manner provided by the laws of Alaska to Borrower and to such other persons as the laws of Alaska prescribe. Trustee shall give notice of sale and shall sell the Property according to the laws of Alaska. Trustee may sell the Property at the time and place and under the terms designated in the notice of sale in one or more parcels and in such order as Trustee may determine. Trustee may postpone sale of all or any parcel of the Property by public announcement at the time and place of any previously scheduled sale. Lender or Lender's designee may purchase the Property at any sale.

Trustee shall deliver to the purchaser Trustee's deed conveying the Property so sold without any covenant or warranty, expressed or implied. The recitals in the Trustee's deed shall be prima facie evidence of the truth of the statements made therein. Trustee shall apply the proceeds of the sale in the following order: (a) to all costs and expenses of the sale, including, but not limited to, Trustee's and attorney's fees and costs of title evidence; (b) to all sums secured by this Instrument in such order as Lender, in Lender's sole discretion, directs; and (c) the excess, if any, to the person or persons legally entitled thereto.

28. RECONVEYANCE. Upon payment of all sums secured by this Instrument, Lender shall request Trustee to reconvey the Property and shall surrender this Instrument and all notes evidencing indebtedness secured by this Instrument to Trustee. Trustee shall reconvey the Property without warranty to the person or persons legally entitled thereto. Such person or persons shall pay Trustee's reasonable costs incurred in so reconveying the Property.

29. SUBSTITUTE TRUSTEE. Lender at Lender's option may from time to time remove Trustee and appoint a successor trustee to any Trustee appointed hereunder. Without conveyance of the Property, the successor trustee shall succeed to all the title, power and duties conferred upon the Trustee herein and by applicable law.

30. FUTURE ADVANCES. Upon request of Borrower, Lender, at Lender's option so long as this Instrument secures indebtedness held by Lender, may make Future Advances to Borrower. Such Future Advances, with interest thereon, shall be secured by this Instrument when evidenced by promissory notes stating that said notes are secured hereby. At no time shall the principal amount of the indebtedness secured by this Instrument, not including sums advanced in accordance herewith to protect the security of this Instrument, exceed the original amount of the Note (US $.....) plus the additional sum of US $.....

IN WITNESS WHEREOF, Borrower has executed this Instrument or has caused the same to be executed by its representatives thereunto duly authorized.

ADJUSTABLE RATE NOTE
(WITH LIMIT ON INTEREST RATE CHANGES)

This Document Contains Provisions Allowing for Changes in the Interest Rate. Increases in the Interest Rate will Result in Higher Payments. Decreases in the Interest Rate will Result in Lower Payments.

....., Alaska

....., 19.....

.....

(Property Address)
[Add Borrower's Post Office Address, if Different]

1. BORROWER'S PROMISE TO PAY

In return for a loan that I have received, I promise to pay U.S. $..... (this amount is called "principal"), plus interest, to the order of the Lender. The Lender is .....
..... I understand that the Lender may transfer this Note. The Lender or anyone who takes this Note by transfer and who is entitled to receive payments under this Note is called the "Note Holder."

2. INTEREST

Interest will be charged on that part of principal which has not been paid. Interest will be charged beginning on the date of this Note and continuing until the full amount of principal has been paid.

Beginning on the date of this Note, I will pay interest at a yearly rate of .....%. This rate is called the "Initial Rate of Interest." The rate of interest I will pay will change in accordance with Section 4 of this Note.

The rate of interest required by this Section and Section 4 of this Note is the rate I will pay both before and after any default described in Section 7(B) of this Note.

3. PAYMENTS

(A) Time and Place of Payments

I will pay principal and interest by making payments every month.

I will make my monthly payments on the ..... day of each month beginning on ....., 19..... I will make these payments every month until I have paid all of the principal and interest and any other charges described below that I may owe under this Note. If, on ....., 20....., I still owe amounts under this Note, I will pay those amounts in full on that date, which is called the "maturity date."

I will make my monthly payments at .....
..... or at a different place if required by the Note Holder.

(B) Amount of Monthly Payments

My monthly payment will be in the amount of U.S. $..... This amount will change if the rate of interest that I must pay changes. The Note Holder will determine my new rate of interest and the changed amount of my monthly payment in accordance with Section 4 of this Note.

4. INTEREST RATE AND MONTHLY PAYMENT CHANGES

(A) Change Dates

Beginning in 19....., the rate of interest I will pay may change on the ..... day of the month of ..... and on that day every ☐ **12th** ☐ **30th** *[Check only one box]* month thereafter. Each date on which the rate of interest could change is called a "Change Date."

(B) The Index

Any changes in the rate of interest will be based on changes in the Index. The "Index" is ☐ the "Contract Interest Rate, Purchase of Previously Occupied Homes, National Average for all Major Types of Lenders" as made available by the Federal Home Loan Bank Board, or ☐ the monthly average yield on United States Treasury securities adjusted to a constant maturity of 3 years as made available by the Federal Reserve Board.

[Check only one box]

If the Index is no longer available, the Note Holder will choose a new index which is based upon comparable information. The Note Holder will give me notice of this choice.

The first Index figure for this Note is .....%. It is called the "Original Index."

The most recently available Index figure as of the date ..... days before each Change Date is called the "Current Index."

(C) Calculation of Changes

Before each Change Date, the Note Holder will determine any change in my rate of interest. The Note Holder will calculate the amount of the difference, if any, between the Current Index and the Original Index. If the Current Index is higher than the Original Index, the Note Holder will add the difference to the Initial Rate of Interest. If the Current Index is lower than the Original Index, the Note Holder will subtract the difference from the Initial Rate of Interest. The Note Holder will then round the result of this addition or subtraction to the nearest one-eighth of one percentage point (0.125%). Subject to the limit stated in Section 4(D) below, this rounded amount will be the new rate of interest I am required to pay.

The Note Holder will then determine the new amount of my monthly payment that would be sufficient to repay the outstanding principal balance in full on the maturity date at my new rate of interest in substantially equal payments. The result of this calculation will be the new amount of my monthly payment.

(D) Limit on Interest Rate Changes

The rate of interest I am required to pay shall never be increased or decreased on any single Change Date by more than ☐ two percentage points (2.0%) ☐ five percentage points (5.0%) ***[Check only one box]*** from the rate of interest I have been paying.

(E) Effective Date of Changes

The new rate of interest will become effective on each Change Date. I will pay the new amount of my monthly payment each month beginning on the first monthly payment date after the Change Date until the amount of my monthly payment is again changed or I have fully repaid the loan.

(F) Notice of Changes

The Note Holder will mail or deliver to me a notice of any changes in the amount of my monthly payment before the effective date of any change. The notice will include information required by law to be given me and also the title and telephone number of a person who will answer any question I may have regarding the notice.

5. BORROWER'S RIGHT TO PREPAY

I have the right to make payments of principal at any time before they are due. A payment of principal only is known as a "prepayment." When I make a prepayment, I will tell the Note Holder in a letter that I am doing so.

I may make a full prepayment or a partial prepayment without paying any penalty. The Note Holder will use all of my prepayments to reduce the amount of principal that I owe under this Note. If I make a partial prepayment, there will be no delays in the due dates of my monthly payments unless the Note Holder agrees in writing to those delays. My partial prepayment will reduce the amount of my monthly payments only after the first Change Date following my partial prepayment. However, any reduction due to my partial prepayment may be offset by an interest rate increase.

6. LOAN CHARGES

If a law, which applies to this loan and which sets maximum loan charges, is finally interpreted so that the interest or other loan charges collected or to be collected in connection with this loan exceed the permitted limits, then: (i) any such loan charge shall be reduced by the amount necessary to reduce the charge to the permitted limit; and (ii) any sums already collected from me which exceeded permitted limits will be refunded to me. The Note Holder may choose to make this refund by reducing the principal I owe under this Note or by making a direct payment to me. If a refund reduces principal, the reduction will be treated as a partial prepayment.

7. BORROWER'S FAILURE TO PAY AS REQUIRED

(A) Late Charge for Overdue Payments

If the Note Holder has not received the full amount of any of my monthly payments by the end of ..... calendar days after the date it is due, I will pay a late charge to the Note Holder. The amount of the charge will be .....% of my overdue payment of principal and interest. I will pay this late charge only once on any late payment.

(B) Default

If I do not pay the full amount of each monthly payment on time, I will be in default.

(C) Notice of Default

If I am in default, the Note Holder may send me a written notice telling me that if I do not pay the overdue amount by a certain date, the Note Holder may require me to pay immediately the full amount of principal which has not been paid and all the interest that I owe on that amount. That date must be at least 30 days after the date on which the notice is mailed to me or if it is not mailed, 30 days after the date on which it is delivered to me.

(D) Payment of Note Holder's Costs and Expenses

If the Note Holder has required me to pay immediately in full as described above, the Note Holder will have the right to be paid back for all of its costs and expenses in enforcing this Note to the extent not prohibited by applicable law. Those expenses include, for example, reasonable attorneys' fees.

8. GIVING OF NOTICES

Unless applicable law requires a different method of giving notice, any notice that must be given to me under this Note will be given by delivering it or by mailing it by first class mail addressed to me at the Property Address above or at a different address if I give the Note Holder a notice of my different address.

Any notice that must be given to the Note Holder under this Note will be given by mailing it by first class mail to the Note Holder at the address stated in Section 3(A) above or at a different address if I am given a notice of that different address.

9. OBLIGATIONS OF PERSONS UNDER THIS NOTE

If more than one person signs this Note, each person is fully and personally obligated to keep all of the promises made in this Note, including the promise to pay the full amount owed. Any person who is a guarantor, surety, or endorser of this Note is also obligated to do these things. Any person who takes over the obligations under this Note or any person who takes over the obligations of a guarantor, surety, or endorser of this Note is also obligated to keep all of the promises made in this Note. The Note Holder may enforce its rights under this Note against each person individually or against all of us together. This means that any one of us may be required to pay all of the amounts owed under this Note.

10. WAIVERS

I and any other person who has obligations under this Note waive the rights of presentment and notice of dishonor. "Presentment" means the right to require the Note Holder to demand payment of amounts due. "Notice of dishonor" means the right to require the Note Holder to give notice that amounts due have not been paid.

11. THIS NOTE SECURED BY A DEED OF TRUST

In addition to the protections given to the Note Holder under this Note, a Deed of Trust, dated the same as this Note, protects the Note Holder from possible losses which might result if I do not keep the promises which I make in this Note. That Deed of Trust describes how and under what conditions I may be required to make immediate payment in full of all amounts I owe under this Note. Some of those conditions are described in Uniform Covenant 17 of that Deed of Trust, which provides as follows:

> **"Transfer of the Property; Assumption.** If all or any part of the Property or an interest therein is sold or transferred by Borrower without Lender's prior written consent, excluding (a) the creation of a lien or encumbrance subordinate to this Deed of Trust, (b) the creation of a purchase money security interest for household appliances, (c) a transfer by devise, descent or by operation of law upon the death of a joint tenant or (d) the grant of any leasehold interest of three years or less not containing an option to purchase, Lender may, at Lender's option, declare all the sums secured by this Deed of Trust to be immediately due and payable. Lender shall have waived such option to accelerate if, prior to the sale or transfer, Lender and the person to whom the Property is to be sold or transferred reach agreement in writing that the credit of such person is satisfactory to Lender and that the interest payable on the sums secured by this Deed of Trust shall be at such rate as Lender shall request. If Lender has waived the option to accelerate provided in this paragraph 17, and if Borrower's successor in interest has executed a written assumption agreement accepted in writing by Lender, Lender shall release Borrower from all obligations under this Deed of Trust and the Note. If Lender exercises such option to accelerate, Lender shall mail Borrower notice of acceleration in accordance with paragraph 14 hereof. Such notice shall provide a period of not less than 30 days from the date the notice is mailed within which Borrower may pay the sums declared due. If Borrower fails to pay such sums prior to the expiration of such period, Lender may, without further notice or demand on Borrower, invoke any remedies permitted by paragraph 18 hereof."

ADJUSTABLE RATE RIDER

(LIMIT ON INTEREST RATE CHANGES)

THIS ADJUSTABLE RATE RIDER is made this ..... day of ..... 19..... and is incorporated into and shall be deemed to amend and supplement the Mortgage, Deed of Trust, or Deed to Secure Debt (the "Security Instrument") of the same date given by the undersigned (the "Borrower") to secure Borrower's Adjustable Rate Note to ..... (the "Lender") of the same date (the "Note") and covering the property described in the Security Instrument and located at:

.....

(Property Address)

The Note Contains Provisions Allowing for Changes in the Interest Rate. Increases in the Interest Rate will Result in Higher Payments. Decreases in the Interest Rate will Result in Lower Payments.

ADDITIONAL COVENANTS. In addition to the covenants and agreements made in the Security Instrument, Borrower and Lender further covenant and agree as follows:

A. INTEREST RATE AND MONTHLY PAYMENT CHANGES

The Note provides for an Initial Rate of Interest of .....%. Section 4 of the Note provides for changes in the interest rate and the monthly payments, as follows:

"(A) **Change Dates**

Beginning in 19....., the rate of interest I will pay may change on the ..... day of the month of ..... and on that day every ☐ **12th** ☐ **30th** *[Check only one box]* month thereafter. Each date on which the rate of interest could change is called a "Change Date."

(B) **The Index**

Any changes in the rate of interest will be based on changes in the Index. The "Index" is ☐ the "Contract Interest Rate, Purchase of Previously Occupied Homes, National Average for all Major Types of Lenders" as made available by the Federal Home Loan Bank Board, or ☐ the monthly average yield on United States Treasury securities adjusted to a constant maturity of 3 years as made available by the Federal Reserve Board.

[Check only one box]

If the Index is no longer available, the Note Holder will choose a new index which is based upon comparable information. The Note Holder will give me notice of this choice.

The first Index figure for this Note is .....%. It is called the "Original Index."

The most recently available Index figure as of the date ..... days before each Change Date is called the "Current Index."

(C) **Calculation of Changes**

Before each Change Date, the Note Holder will determine any change in my rate of interest. The Note Holder will calculate the amount of the difference, if any, between the Current Index and the Original Index. If the Current Index is higher than the Original Index, the Note Holder will add the difference to the Initial Rate of Interest. If the Current Index is lower than the Original Index, the Note Holder will subtract the difference from the Initial Rate of Interest. The Note Holder will then round the result of this addition or subtraction to the nearest one-eighth of one percentage point (0.125%). Subject to the limit stated in Section 4(D) below, this rounded amount will be the new rate of interest I am required to pay.

The Note Holder will then determine the new amount of my monthly payment that would be sufficient to repay the outstanding principal balance in full on the maturity date at my new rate of interest in substantially equal payments. The result of this calculation will be the new amount of my monthly payment.

(D) **Limit on Interest Rate Changes**

The rate of interest I am required to pay shall never be increased or decreased on any single Change Date by more than ☐ two percentage points (2.0%) ☐ five percentage points (5.0%) *[Check only one box]* from the rate of interest I have been paying.

(E) **Effective Date of Changes**

The new rate of interest will become effective on each Change Date. I will pay the new amount of my monthly payment each month beginning on the first monthly payment date after the Change Date until the amount of my monthly payment is again changed or I have fully repaid the loan.

(F) **Notice of Changes**

The Note Holder will mail or deliver to me a notice of any changes in the amount of my monthly payment before the effective date of any change. The notice will include information required by law to be given me and also the title and telephone number of a person who will answer any question I may have regarding the notice."

B. CHARGES; LIENS

Uniform Covenant 4 of the Security Instrument is amended to read as follows:

4. Charges; Liens. Borrower shall pay all taxes, assessments, and other charges, fines and impositions attributable to the Property which may attain a priority over this Security Instrument, and leasehold payments or ground rents, if any, in the manner provided under paragraph 2 hereof or, if not paid in such manner, by Borrower making payment, when due, directly to the payee thereof. Borrower shall promptly furnish to Lender all notices of amounts due under this paragraph, and in the event Borrower shall make payment directly, Borrower shall promptly furnish to Lender receipts evidencing such payments. Borrower shall promptly discharge any lien which has priority over this Security Instrument; provided, that Borrower shall not be required to discharge any such lien so long as Borrower: (a) shall agree in writing to the payment of the obligation secured by such lien in a manner acceptable to Lender; (b) shall in good faith contest such lien

STATE OF ALASKA

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

BILL SHEFFIELD, GOVERNOR

POUCH M
JUNEAU, ALASKA 99811
PHONE: 907-465-2400

February 12, 1985

The Honorable John Sund
Chairman
House Loans, Special Committee
Pouch V
Juneau, AK 99811

Dear Representative Sund:

The Department of Natural Resources supports the concept of offering loans for youth hostel development, as described in Section 1 of House Bill 61. The addition of loans to the current grant program administered by the Division of Parks and Outdoor Recreation would allow for repayment of funds to the state, increase the flexibility of the program, and continue the development of hostels in Alaska.

The youth hostel program in Alaska is a largely volunteer program that receives minimal funding and staff support from the department. Hostels are established by local groups to foster opportunities for inexpensive educational travel and recreation. They provide safe and inexpensive overnight accomodations that are supervised by houseparents.

The department is unable to support the loan terms and conditions described in Section 2 of this bill because of the current fiscal forecast for declining state revenues. Loan terms and conditions should be compatible with those of other state loan funds, and should provide for equitable payments of loan interest to the state.

The department is also unable to support the appropriation to the youth hostel loan fund authorized by House Bill 59.

If we may provide additional information about the youth hostel program or our comments on these bills, please let me know.

Sincerely,

Esther C. Wunnicke
Commissioner

MINUTES OF THE ANNUAL MEETING

ALASKA COUNCIL, AMERICAN YOUTH HOSTELS

OCTOBER 19 - 21, 1984
Homer, Alaska

The meeting was called to order by President Brian Bennett at 8:20 a.m. on October 20, 1984. Board members present included Pat McGee (Anchorage), Robert Butts (Juneau), Ray Girves (Soldotna), Denton Pearson (Sitka), Dave Thomson (Juneau), Sandra Ensley (Ketchikan), Walt Morgan (Alyeska), Amythe Strobell (Fairbanks), Margaret Synan (Anchorage), Wayne Stout (Tok), and John Shaffer (Anchorage). Other participants included Michael Lee and Shirley Howe of Alaska State Parks and Outdoor Recreation, Barbara Shaffer (Accountant), Michelle McDowell (Tok Alternate) and guests Mary Dillion, Michael Zens and Bill Sullivan.

It was MOVED and SECONDED that the minutes of the previous two meetings be approved. The motion PASSED.

A discussion was then held on the agenda and meeting format. Several additions were made and the agenda was MOVED, SECONDED and PASSED.

A Nominating Committee was then appointed that was charged with preparing a slate of new officers. Walt was selected as Chairperson. Other members included Denton, Margaret, and Sandra.

PRESIDENT'S REPORT

Brian noted that the Council's Charter from the National Council was approved in February 1984 and will be valid through December 1986. He also pointed out the benefits of the National Extended Trips Program. A general discussion of a number of items then followed, including the upcoming National Meeting in Seattle, a need to organize a grass roots movement to increase membership, a need to revise the operations manual, the possibility of using the Learn Alaska Network for teleconferences, the grant application to the Alaska Seafood Marketing Institute for seafood at the National Meeting, what a fine job had been done with the two Hostel Posters, and a request to the Council from National to be paid $1000 to fund a Field Representative.

VICE-PRESIDENT'S REPORT

Pat discussed the problems she had encountered in getting the Newsletters out over the previous year, her travels to the Aleutian Chain, her efforts to get the President of AYH on the Anchorage Chamber of Commerce's agenda, and her many discussions with people asking questions about AYH.

TREASURER'S REPORT

A summary was presented of the expenses, revenues, and assets of the Council for Fiscal Year 1984. They were:

Net Income	$ 16,337.09
Expenses	4,791.95
Total Assets	33,122.94

The Council's Balance Sheet and Statement of Income and Expenses for 1984 is attached.

The balance in the State Park account is approximately $17,000.

CORRESPONDING SECRETARY'S REPORT

Ray read a letter form Cliff Mettler explaining why he was not able to attend the meeting and a letter from Gene Rehfield announcing his resignation from the Board because of other commitments and the apparent lack of activity of the Council over the last year. Ray also stated that there was a need for a brochure or other type of information packet that would explain what activities and sights are available near the Hostels.

RECORDING SECRETARY'S REPORT

Bob reported that he had faithfully done the minutes and has been active in the Juneau Committee's efforts to develop a year-round Hostel.

BUSINESS ITEMS

A. NEWSLETTERS

A brief discussion was held on why the newsletters were not produced the previous year and what steps were necessary to ensure that they would be completed next year. Deadlines for the submission of articles and press dates were agreed to, which are:

Submission Date	Press Dates
Nov. 15	Nov. 30
Feb. 1	Feb. 15
May 1	May 15
Sep. 1	Sep. 15

B. STAFF PERSON

A lengthy discussion was held regarding the advantages of hiring a staff person, how he or she would be funded, and what the person would do. It was decided that the topic should be referred to the Organizational Committee.

C. NATIONAL MEETING

The meeting was discussed and Barbara handed out an agenda. It was MOVED, SECONDED, and PASSED to have the representatives attending the meeting select Alaska's delegate. Final decisions on who should go would be determined after the election of new officers, however, it was MOVED, SECONDED and PASSED to have the Council pay Amythe's registration since she will be in the Seattle area.

D. PASS SALES

Barbara passed out a summary of pass sales during Fiscal Year 84 and a brief discussion on Pass Sales ensued. The information is attached.

E. BOARD MEETINGS

A lengthy discussion was then held concerning when Board Meetings should be held during the coming year. After considerable chaos, it was MOVED, SECONDED and PASSED that there will be four board meeting teleconferences, which will occur on January 15, May 14, July 9, and September 10. The motion was then amended to have the teleconference on January 15 be for Executive Committee members only. See the attached calendar.

The meeting was then recessed for LUNCH.

The group reconvened after lunch and the meeting continued.

F. EXTENDED TRIPS

The Extended Trips Program, which is sponsored by National, was discussed and it was generally agreed that it would be a good idea for the Council to sponsor one this year. However, staffing was seen as a problem. The issue was referred to committee for further analyses.

G. GRANTS TO HOSTELS

The Council's grant program was then discussed and the fact that few grants have been made recently. It was MOVED, SECONDED, and PASSED that the Fund Raising Committee explore the idea of making large grants (greater than

$2000) to Hostels in Juneau, Anchorage and Fairbanks. A discussion of the $2000 and $400 grants was referred to the Finance Committee.

H. PROMOTIONS

Denny suggested that a central reservation system be made available for use throughout the State. A general discussion of reservations then ensued and it was MOVED and SECONDED to require all Hostels in the State to accept reservations. After a discussion of the motion, it was withdrawn from consideration. It was then MOVED, SECONDED, and PASSED to have Denny explore the potential of a statewide reservation system.

Ray then suggested that a event be held quarterly for all AYH members in Alaska. He also showed the group the Christmas card he is planning to send to Hostelers who had visited his Hostel and suggested that the Council also send out a Christmas Card with a membership renewal form. Both ideas were referred to the Promotion Committee.

Pat then suggested that the Council develop short (30 second or so) spots for television. No action was taken on the proposal.

Margaret then volunteered to update and improve the Council's brochure.

I. COMMENT CARDS

Brian received about 100 comment cards. The response to the Anchorage Hostel was "leaning toward the positive," Homer's was a bit better, Haines was good, and Soldotna was very good. Brian will ensure that comment cards are available at all the Hostels and will do what he can to ensure that they are used.

J. INTRODUCTORY PASSES

A discussion was then conducted on recent National initiatives concerning the use of Introductory Passes, which will likely be a hot topic at the National meeting. After a protracted debate on the subject, it was MOVED, SECONDED, and PASSED that all the Hostels in Alaska charge $3.00 per night for the pass and that after three nights the person will be required to purchase a regular membership.

K. RESOLUTIONS AT THE NATIONAL MEETING

It was MOVED and SECONDED that the Alaska go on record in supporting a move to have National increase the duration of the Charters that it provides to State Councils from the current two years to ten years, or thereabouts. If it was found that standards were not being met or fees not being paid, then the Charter could be revoked. The motion was PASSED.

It was then MOVED and SECONDED that the name of the organization be changed from American Youth Hostels, Inc. to American Hosteling Association. The motion was then AMENDED to have the name be American International Hostels,

Inc. After further debate, the amended motion was PASSED with the caveat that the resolution would be introduced only if no one else introduced a similar motion.

A motion was then MOVED and SECONDED that the Alaska Council go on record as being opposed to changes that are currently being discussed in the relationship between National and Hostels. The motion was then amended to have the delegates explore the issue and report back to the Council. The amended motion was then PASSED.

Amythe proposed that the Alaska Council request funds for Hostel Development in Alaska. It was decided to have Margaret explore the process for applying for the funds.

It was then MOVED, SECONDED and apparently PASSED (my notes are not clear) that National be mandated to work with Federal outdoor recreational agencies in the development of Cooperative Agreements regarding the development of Hostels.

L. GRANTWRITING

Brian reported that the Seafood Grant from the Alaska Seafood Marketing Institute had not been approved, but pointed out that there is money out there for people who put together well supported grant proposals.

K. TELECONFERENCES

There was a general discussion of the use of teleconferences for Board meetings and the desire of non-Board members to participate. It was then MOVED, SECONDED and PASSED to allow other interested parties to participate in the teleconferences.

M. TO INCORPORATE OR NOT TO INCORPORATE, THAT WAS THE QUESTION

The pros and cons of Hostel Committees incorporating was discussed, including the various ways it could be done. Many questions arose, but after a lengthy discussion, it was decided that the subject was best dealt with elsewhere.

N. BOB TARBUSKOVICH'S PAYMENT

Barbara noted that she had checked her records and found the canceled check for the National Meeting that Bob had attended. Barbara has sent Bob a letter regarding the matter.

O. BUDGET

Ideas for the budget were brought-up and referred to the Finance Committee for its consideration.

The meeting was then recessed for the evening to allow the Committees to meet.

The meeting was called back to order at 8:40 a.m., October 21, at the Kopper Kettle after the participants had gorged themselves on eggs, hash browns, pancakes and bacon. Local reports were first on the agenda.

LOCAL REPORTS

A. Fairbanks
Amythe reported that it was a good summer and that they made a little money. A location for next summer remains uncertain.

B. Sitka
The visitor count was down (about 435), although overall "it was a great, successful summer," according to Denny. There were, however, several problems with houseparents.

C. Homer
Brian reported that he was hopeful that the Homer Committee would get back together. Rent payments remain troublesome. The Hostel had about 650 visitors and will likely close January through March. He also told the group of the very successful "Fun runs" that the Hostel had sponsored.

D. Alyeska Guest House
Walt plans to open in November with six beds, a sauna, wood heat, and propane lights. Water and sewer are on their way. He advised the group to make sure that sleeping areas have adequate ventilation as a room can get mighty rank when you have it full of smelly, sleeping men. No comments were made about smelly women. Cost will be $5.00 night.

E. Juneau
Dave Thomson reported on Juneau's efforts to get a year-round Hostel built in Cope Park and that the summer had gone quite well except for a houseparent who was taken quite ill and had to head south earlier than expected.

F. Soldotna International Youth Hostel
Ray reported that he had used the grant money received from the Council to build new sleeping quarters that will house 24 people. Overall, things are going well.

G. Ketchikan
Sandra reported that they had about 900 people and "the most wonderful houseparents." The Hostel has moved to the basement of the church, which took lots of work, but turned out to be a great improvement. Some cooking was also available and the houseparents were paid $100 a month.

H. Nome
Barbara gave a quick summary of past history of the Hostel in Nome.

I. Anchorage

Margaret reported that the season started earlier this year (April) and that they had more Americans than in previous years (1800 out of 2200). They also raised their rates ($10.75 without a Pass) and have new houseparents and a new business manager. The Hostel has been painted, a storage area is now available, and a load of new plants have been installed. They have also been active with slide shows, movies, and weekend excursions.

J. Haines

According to Brian, the number of Hostelers staying at the Haines Hostel is climbing and that comments have been good. Unfortunately, funds are tight.

K. Susitna

Mike Lee reported that they now have several cabins and a mobile trailer. The Hostel is located at Mile 101 and is "a growing concern."

COMMITTEE REPORTS were then begun.

A. Operations Committee

Two recommendations of the Committee were MOVED and PASSED:

1. That houseparents be given about 1/2 hour of air time after the teleconference in July; and
2. That an Operations Manual be sent to all local Committees for their review and comment.

B. Organization Committee

It was MOVED that a staff person be hired to assist the Council in its work. After some discussion, the motion was TABLED until the Budget discussion.

C. Nominating Committee

Walt presented the recommendations of the Nominating Committee for next year's officers, which were:

President	Brian Bennett
Vice-President	Pat McGee
Recording Secretary	Bob Butts
Corresponding Secretary	Dave Thomson
Treasurer	Denton Pearson

Ray Girves indicated that he was still interested in being the Recording Secretary and threw his hat into the ring. It was then MOVED and SECONDED that all the unopposed candidates be elected. The motion PASSED. An election was then held for Corresponding Secretary, which was won by Ray.

D. Pass Sales

Barbara provided some instruction on how to fill out the AYH Pass and general procedures for pass sales. The attached information was distributed.

E. Promotion Committee

The Committee:

1. recommended that the VP, new staff person, and Mike Lee be in charge of promotional efforts;
2. encouraged the use of posters, brochures, and public service spots;
3. suggested that the November Newsletter contain a Christmas card and a membership renewal form; and
4. agreed to put together a new brochure. Ray will explore the idea further.

F. Finance Committee

The committee MOVED that the T Shirts that are still around be written off as an advertising expense. The motion PASSED. It was also noted that promotional efforts in the future need to be treated in the same manner as pass sales.

The $2000 grant to Homer was discussed. It had been included in the Parks grant when it was transferred to the Council, thus it was paid. It was MOVED and PASSED to correct the books.

It was then MOVED that Hostels be limited to one $2000 grant with the exception of those that are in the highest priority category in the Council's Development Plan. After some discussion, the motion was PASSED.

The proposed budget was then MOVED and discussed. After several amendments were made, it was PASSED. The budget is attached.

Three $2000 grant applications were then MOVED and discussed. They included:

Juneau -- For design work on a new Hostel
Sitka -- For showers
Tok -- For showers

The motion was PASSED.

G. Development Committee

It was MOVED and PASSED that Juneau, Anchorage, and Fairbanks be given the highest priority for developing year-round Hostels and that the Development Plan be amended to reflect the this.

It was also agreed to send letters to all Legislative candidates to inform them of the Youth Hostel Program.

H. Fundraising Committee

It was reported that the fundraising committee discussed several options for obtaining large sums of money, including direct appropriations from the Legislature, a revolving loan program, bonding, and a matching grant program. The Committee will continue to explore these ideas.

I. Organization Committee

A motion was MOVED, SECONDED and PASSED to have Brian hire a staff person to work with the Council.

At 1:25 p.m. on Sunday, October 21, the Annual Meeting was officially ADJOURNED by President Brian Bennett.

Respectfully Submitted:

Notes about Pass Sales 10/84

Be sure all copies are legible. Rewrite the carbon copies if necessary.

Fill in the birthdate in this sequence: year - month - day

Write the pass type on the pass itself in addition to checking in the right column.

On International passes, type/write in the number from the sticker under the pass type.

Give the entire original copy to the new member, including the biographical data. Keep the three carbon copies.

Remind the member to sign their new card.

Give each member an American Handbook at no additional cost.

The effective dates of the membership are from the date of purchase until December 31 of the year on the sticker.

Life memberships - if both parents have life memberships, children under age 18 traveling with both parents do not have to have memberships.

Organization passes - the deadline for application for the free memberships (50th Anniversary give-away) is extended to 9-30-85.

International passes are for persons from outside the U.S. Use their permanent address to determine. All foreign residents are issued international passes.

U.S. persons expecting to travel internationally are issued regular passes. The regular passes are valid for international travel/usage.

Lost cards - see separate instructions for issuing duplicate cards.

Address changes for members - send to national office, including membership number.

The membership cards are 'generic'. They are used for all type of passes except the introductory pass and the organization pass. They are used in any year.

Void or spoiled cards - return to the Council office, especially if a sticker is affixed.

Reports - submit monthly to the Council, on first of the month. Report even if there were no sales during the month.

Year stickers which are not accounted for will be considered as sold and will be charged for.

Order pass cards, year stickers and U.S. handbooks from the Council office.

Order introductory cards from the national office.
Order International handbooks from the national office. Pay $3.50 each and retail sell for $6.00.

U.S. Handbooks for 1985 will be available in late December, 1984.
International Handbooks for 1985 will be available in late February, 1985.

Accountant for the Council is Barbara M. Shaffer, 333-5605.

Mailing address for the Council is: P. O. Box 4-1461
Anchorage, Alaska 99509

Address for the national office is: American Youth Hostels, Inc.
1332 I Street, N.W., Suite 800
Washington, D.C. 20005

Special rules for International passes:
Prices: $ 5.00 Junior
$ 10.00 Senior
$ 15.00 Family
Junior are for ages 16 and 17 only
Senior are for age 18 and over
Family are for parents and their children under age 16
Age 16 and over need their own separate pass
If both parents have senior passes and children are under age 16, no additional pass is required.
Agency (hostel) selling the pass gets 10% commission on the sale

MEMO: Feb. 12, 1985

TO: House Loans Committee
Hon. John Sund, Chairman

FROM: Rep. M. Mike Miller

RE: HB 59, HB 61/re: Youth Hostels

These two bills, one an implementation bill and the other an appropriation bill, would help expand Alaska's network of youth hostels around the state, at very little ultimate cost. The resulting benefits would accrue both to state residents and to out-of-state visitors.

HB 61 amends existing statutes having to do with grants for youth hostels, administered through the state division of parks in the Department of Natural Resources, so that in addition to grants now available, the division could provide loans for creation of youth hostels. Recipients could be non-profit corporations, municipalities and appropriate organizations. The money could be used for construction, purchase or renovation of buildings used for youth hostels. To qualify, organizations must agree to maintain the specific guidelines established by the American Youth Hostel Association. These guidelines may be obtained from the division of parks, and will be made available to the Loans Committee.

Although most of the non-resident use of youth hostel facilities occurs during summer months when more people travel to Alaska on vacation, use by resident Alaskans can be assumed to be year-round. Such uses would be for room and board during interscholastic competition, youth group travel and other appropriate uses which bring Alaskans to travel from one community to another. In fact, it is my expectation that resident Alaskans would make as much or greater use of youth hostel facilities during the year than nonresidents.

Under the proposed loan fund, loan recipients could borrow up to $100,000 with payback at 2.5 percent per year, with a term of 25 years. Payment of interest only would be allowed for the first five years of a loan to allow for time for the hostel to become self-supporting.

HB 59 is an appropriation bill capitalizing the loan fund at a figure of $200,000.

I will testify in behalf of the two bills, and I also expect testimony from the division of parks and youth hostel organizations. I will be happy to try to answer any questions the committee may have regarding the legislation.

604-4th Street, Suite 1
Juneau AK 99801
February 12, 1985

Honorable John Sund
Representative
Alaska State Legislature
Pouch V
Juneau AK 99811

Dear Representative Sund:

I am writing in support of HB 59 and HB 61, which would establish a Youth Hostel Loan fund. I feel this is a very worthwhile cause which could benefit not only travelers to Alaska, but also people in the entire State of Alaska.

As a former Juneau Youth Hostel houseparent, I feel that the loan fund established by these acts would go a long way in bringing the Alaska Youth Hostel system up to par. Due to the nature of the Youth Hostel system, revenues are small and large capital outlays are virtually impossible to obtain from operating expenses only. With this fund it will be possible to buy appropriate facilities and/or renovate current ones.

Currently the cities of Fairbanks and Juneau are desperately looking for facilities for use as year-round hostels. These cities receive large numbers of visitors who can not afford to pay the high cost of motels and hotels.

Anchorage currently operates a year-round hostel with very good results. But there too, the facility could be larger and better suited for the ever growing numbers of travelers in Alaska's largest city.

The Alaska Youth Hostel system is not confined to the three large cities. A total of twelve hostels operate currently in Alaska. They are as follows; Ketchikan, Sitka, Haines, Tok, Sutton, Alyeska, Soldotna, Homer, and Mat-Su. This loan fund will benefit these hostels as well.

I urge you to continue to support this legislation and I thank you for your time and consideration.

Sincerely,

David F. Thomson

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Natural Resources, division of parks, for the youth hostel loan fund; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $200,000 is appropriated from the general fund to the Department of Natural Resources, division of parks, for the youth hostel loan fund for purchase, OR construction and renovation of youth hostels.

* Sec. 2. The unexpended and unobligated portion of the appropriation made by this Act lapses into the general fund June 30, 1986.

* Sec. 3. This Act takes effect on the effective date of an Act that establishes a youth hostel loan fund.

IN THE HOUSE BY M.M.MILLER

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to loans for youth hostels."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 41.21.912 is amended to read:

Sec. 41.21.912. DUTIES OF DIVISION. The division shall

(1) after consultation with community organizations or individuals and after maximum utilization of existing local effort, plan and facilitate the implementation of a statewide system of youth hostel facilities;

(2) administer a program of grants and loans to eligible nonprofit corporations, municipalities, and organizations for construction, maintenance, and operation of youth hostels;

(3) cooperate and consult with national or international organizations established for the purpose of establishing or regulating youth hostel facilities and follow, where appropriate, the specific guidelines established by the American Youth Hostel Association and the International Youth Hostel Association;

(4) adopt, in accordance with the Administrative Procedure Act (AS 44.62), regulations governing the establishment and administration of youth hostel facilities.

* Sec. 2. AS 41.21 is amended by adding a new section to read:

Sec. 41.21.913. YOUTH HOSTEL LOANS. The youth hostel loan fund is established. The director of the division of parks may make loans from the fund to qualified organizations for the purchase, construction or renovation of youth hostels if the organization agrees to maintain the

specific guidelines established by the American Youth Hostel Association. A loan may not exceed $100,000, shall be made at an interest rate of 2.5 percent, and shall be repaid within a period of 25 years. During the first five years of a loan, the director may allow payment of interest only.

Juneau Youth Hostel, Inc.

Post Office Box 1543 Juneau, Alaska 99802 USA

January 6, 1984

Mr. Jerry Miller, Chairman
Board of Finance and Property Management
Northern Light United Church
15795 Glacier Highway
Juneau, Alaska 99801

Dear Jerry:

As a result of the Church Council meeting of December 17 and recent discussions with you, the Board of Directors of the Juneau Youth Hostel, Inc., would like to revise its offer to purchase the Whitehead House of November 25, 1984.

The major elements of the revised offer include:

-- Sale price to be determined by the soon-to-be-completed appraisal, assuming the appraisal does not exceed $200,000.

-- Downpayment of $10,000.

-- Twenty-year mortgage at 10% interest.

-- Mortgage payments through September 1, 1986, shall be $1350 per month. Payments thereafter shall be increased to cover the remaining equity and interest payments (approximately $2100 per month).

-- Payments can be accelerated by the purchaser without penalty.

-- Extraordinary payments shall lead to a corresponding reduction in monthly mortgage payments.

-- The contract may be terminated within the first 24 months with the mortgage payments treated as lease payments and the down payment treated as a loan to the Church. Improvements that increase the value of the building will be credited to Juneau Youth Hostel, Inc.

-- Juneau Youth Hostel, Inc. shall insure the building at a level that will cover the Church's equity interest.

We are confident that this new proposal will allow the Youth Hostel to pay its operating costs and also will enable the Church to receive a fair market price for the building.

We look forward to discussing our proposal with the Church Council on

January 7. If you have any questions, please do not hesitate to call Judith Maier at 789-9229 or me at 465-2400 during working hours or 586-9408 during the evening.

Once again, thank you for your time and consideration.

Sincerely yours,

Bob

Robert Butts
President

House Bill 96

February 4, 1985

A student must be enrolled full-time in order to be eligible for a student loan. A student may attend more than one institution and aggregate the credit hours in order to attain full-time status, but under existing law this aggregation of credits can occur only if there is a consortium agreement between the institutions. House Bill 96 would remove this consortium requirement.

The need for such legislation came to my attention two years ago, when I received a letter from a woman who was taking an aggregate of 14 credits at the University of Alaska and Tanana Valley Community College. Although the woman was an Alaskan resident and in good academic standing, she was unable to qualify for a student loan because a consortium agreement did not exist between the two institutions at that time.

Although consortium agreements do presently exist between neighboring universities and colleges throughout Alaska, the passage of HB 96 would preclude students from not being able to aggregate credits in the event that a consortium agreement is rescinded, or a new institution is created which does not wish to sign such an agreement.

ALASKA COMMISSION ON POSTSECONDARY EDUCATION

POSITION STATEMENT ON SB 17

Summary: To qualify for a student loan, a student must enroll full time, that is at least 12 credit hours each term for undergraduate students, and at least nine credit hours each term for graduate students. If a student wishes to enroll in more than one institution and aggregate the credit hours to be full time, the current statute requires that there be a consortium agreement between the institutions.

SB 17 removes the requirement for a formal consortium agreement.

Impact: The result would be negligible. The bill was introduced a year ago in response to problems student loan applicants were incurring when they tried to enroll in both the University of Alaska, Anchorage and Matanuska-Susitna Community College. Since there was no formal consortial agreement, UAA officials would not release loans for these students.

As of January 11, 1985, Matanuska-Susitna Community College and UAA have a consortium agreement. Hence, the problem at which this bill was directed, has been solved.

The bill will not result in students enrolling in a wide variety of institutions and, in effect, getting around program good-standing requirements, because program regulations already exist to address such a situation. (20 AAC 15.040(n) and 20 AAC 15.045(c)). Therefore, the bill successfully removes some unnecessary language in the current statutes and has little program effect.

There is no fiscal impact of the bill.

Position: The Alaska Commission on Postsecondary Education endorses the passage of SB 17.

SB 17

In defining 'fulltime student' for the purposes of student loan eligibility, present statute necessitates that if the required minimum number of credits earned in one semester come from more than one institution, the schools must have a "consortium" agreement. The original intention of this stipulation was to protect the integrity of degree programs.

According to Kerry Romesberg, the consortium requirement has allowed some institutions to deny credit and credit transfers to students, inspite of their legitimacy toward a degree program, and by doing so discourage the use of their institution for those not earning a degree with the school.

The Postsecondary Commission recently adopted the federal "75%" standard, [20 AAC 15.040], which requires that "before a borrower may be enrolled in more than one institution, [he/she] must be enrolled for at least 75% of the full-time student requirement in the degree-granting institution for which the loan is obtained." A minimum of 12 credits per semester must be earned, 75% of which must come from the primary institution. As point of clarification, student loan warrants are made payable to the institution, in the student's name.

With the regulation in effect, the student is guaranteed access to acquiring credits in other institutions without the threat of losing loan eligibility status. Benefits to the institution are in knowing that the integrity of their degree program is protected and in being assured of who is responsible for maintaining the student's academic records.

Since students will know beforehand whether or not credits earned elsewhere will be accepted as part of their degree program, the "consortium" requirement is moot.

Similar legislation was introduced last year, passed the Senate and was incorporated in the House version. It died at the end of session.

The Postsecondary Commission on Education; the University of Alaska; Anchorage, Fairbanks and Juneau; and, the Community Colleges support the legislation.

IN THE SENATE BY KERTTULA

SENATE BILL NO. 17

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the scholarship loan program to students attending more than one postsecondary educational institution; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.160(2) is amended to read:

(2) "full-time student" means an undergraduate or career education student who is enrolled and is in regular attendance at classes for at least 12 semester hours of credit or the equivalent during the semester or a graduate student who is enrolled and is in regular attendance at classes for at least nine semester hours of credit or the equivalent; any combination of semester hours of credit, or the equivalent, aggregating to the requisite number of semester hours and undertaken during a semester at two or more public or private institutions of higher education [OPERATING UNDER A CONSORTIUM] constitutes full-time student status;

* Sec. 2. This Act takes effect immediately in accordance with AS 01.-10.070(c).

20 AAC 15.040 is amended by adding new subsections to read:

(m) A borrower in a flight school program must hold, as a prerequisite for eligibility, a valid private pilot's certificate.

(n) A borrower may be enrolled in more than one institution, but must be enrolled for at least 75% of the full-time student requirement in the degree-granting institution for which the loan is obtained. The combined total of these multiple enrollments must be equivalent to at least full-time enrollment. (Eff. 2/3/77, Register 61; am 5/10/78, Register 66; am 12/7/80, Register 76; am 7/9/82, Register 83; am 11/19/83, Register 88; am / / , Register).

Authority: AS 14.43.105
AS 14.43.120
AS 14.43.140

20 AAC 15.045 (c) i ided to read:

(c) Before delivering the warrant to the borrower, the financial aid officer shall certify, on a form to be provided by the commission, that the borrower is a full-time student in good standing at the institution. If the full-time status is the result of attendance at more than one institution, the certifying institution must certify full-time and good standing status for the multiple enrollments. (Eff. 2/3/77, Register 61; am 12/7/80, Register 76; am 7/9/82, Register 83; am 11/19/83, Register 88; am / / , Register).

Authority: AS 14.43.105

20 AAC 15.060 (a), (b) (c) and (g) is amended to read:

20 AAC 15.060. STATE FORGIVENESS PAYMENTS. (a) Under AS 14.43.120(j), a recipient of a loan is eligible to have up to 50 percent of the total loan and accrued interest paid by the state if the borrower continues Alaskan residency after the successful completion of the course of study for which the loan was granted, and is awarded an appropriate degree, diploma or certificate, and remains, except for brief periods, in the state during the period for which forgiveness is claimed.

20 AAC 15.040 is amended by adding new subsections to read:

(m) A borrower in a flight school program must hold, as a prerequisite for eligibility, a valid private pilot's certificate.

(n) A borrower may be enrolled in more than one institution, but must be enrolled for at least 75% of the full-time student requirement in the degree-granting institution for which the loan is obtained. The combined total of these multiple enrollments must be equivalent to at least full-time enrollment. (Eff. 2/3/77, Register 61; am 5/10/78, Register 66; am 12/7/80, Register 76; am 7/9/82, Register 83; am 11/19/83, Register 88; am / / , Register).

Authority: AS 14.43.101
AS 14.43.120
AS 14.43.140

20 AAC 15.045 (c) i ided to read:

(c) Before delivering the warrant to the borrower, the financial aid officer shall certify, on a form to be provided by the commission, that the borrower is a full-time student in good standing at the institution. If the full-time status is the result of attendance at more than one institution, the certifying institution must certify full-time and good standing status for the multiple enrollments. (Eff. 2/3/77, Register 61; am 12/7/80, Register 76; am 7/9/82, Register 83; am 11/19/83, Register 88; am / / , Register).

Authority: AS 14.43.105

20 AAC 15.060 (a) (b) (c) and (g) is amended to read:

20 AAC 15.060. STATE FORGIVENESS PAYMENTS. (a) Under AS 14.43.120(j), a recipient of a loan is eligible to have up to 50 percent of the total loan and accrued interest paid by the state if the borrower continues Alaskan residency after the successful completion of the course of study for which the loan was granted, and is awarded an appropriate degree, diploma or certificate, and remains, except for brief periods, in the state during the period for which forgiveness is claimed.

Sec. 14.42.045. Compensation and per diem. Members of the commission serve without compensation but are entitled to per diem and travel expenses as may be authorized by law for boards and commissions. (§ 4 ch 78 SLA 1974; AS 14.40.915)

Sec. 14.42.050. Legal counsel. (a) The attorney general is legal counsel for the commission. The attorney general shall advise the commission in legal matters arising in the discharge of its duties and represent the commission in actions to which it is a party. If, in the opinion of the commission, the public interest is not adequately represented by counsel in a proceeding, the attorney general, upon request of the commission, shall represent the public interest.

(b) The commission may employ temporary legal counsel from time to time in matters in which the commission is involved. (§ 3 ch 25 SLA 1976; AS 14.40.917)

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.05.031(c) and § 4, Chapter 58, SLA 1982.

Sec. 14.42.055. Consortia. All parties that are signatory to a consortium agreement between the University of Alaska and a private university or college must abide by a decision rendered by the commission when disagreements arise or exist between the parties. For purposes of this section and AS 14.42.030(b)(6), "consortium" means a cooperative arrangement between two or more public or private institutions of higher education specified in agreements or memoranda of understanding to permit sharing of facilities, instructional opportunities, and other educational services in such a way that the integrity of each institution party to the consortium is preserved while at the same time the institutions cooperatively plan the academic calendar, scheduling, use of personnel and facilities, and educational programs and offerings to the maximum advantage of the students and faculties of the institutions that are parties to a consortium. (§ 8 ch 246 SLA 1976; AS 14.40.919)

Revisor's notes. — AS 14.42.030(b)(6) was substituted for AS 14.40.909(b)(6) to conform to the renumbering of that section by the revisor of statutes under AS 01.05.031.

Chapter 43. Scholarship, Loan, and Grant Programs for Postsecondary Students.

Article

1. University of Alaska Scholarships for High School Graduates (§§ 14.43.010 — 14.43.030)
2. University of Alaska Scholarships for Natives (§§ 14.43.050 — 14.43.075)
3. Free Tuition and Fees for Dependents (§ 14.43.080)
4. Scholarship Loan Program (§§ 14.43.090 — 14.43.160)

student loan program for residents of Alaska to attend colleges and universities in Alaska as compared with colleges and universities outside Alaska;

"(2) the result of this lack of incentives is that 64.9 per cent of all undergraduate student loans and 92.9 percent of graduate student loans go to students attending colleges and universities outside Alaska;

"(3) the amount of the average loan to undergraduate students attending colleges and universities in Alaska is lower than the average of similar loans in all but one of the 10 western states and the amount of the average loan for graduate students is the lowest in the West;

"(4) the funds spent on education in Alaskan colleges and universities go further than when the funds are spent out of state; and

"(5) it would be an aid to the Alaskan economy if the funds in the student loan program were spent for education in Alaskan colleges and universities."

Sec. 14.43.135. Discrimination prohibited. The student loan program shall be carried out without regard to the race, creed, sex, color, ancestry, national origin, or membership in fraternal or political organizations of the student applying for the loan. (§ 1 ch 98 SLA 1971; AS 14.40.769)

Sec. 14.43.140. Enforceability of certain contracts with minors. A written obligation entered into by a minor at least 16 years of age, evidencing a loan or other assistance received by the minor from any person for the purpose of furthering the minor's education in a career education program or an institution of higher learning, is enforceable against the minor with the same effect as if the minor were, at the time of its execution, 19 years of age, if the person making the loan has before making the loan a certification from the institution that the minor is enrolled in the institution or has been accepted for enrollment. (§ 1 ch 98 SLA 1971; AS 14.40.771)

Editor's notes — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.05.031(c) and § 4, ch. 58, SLA 1982.

Sec. 14.43.160. Definitions. In AS 14.43.090 — 14.43.160

(1) "career education" means a course or program in vocational-technical training or education approved by the commission;

(2) "full-time student" means an undergraduate or career education student who is enrolled and is in regular attendance at classes for at least 12 semester hours of credit or the equivalent during the semester or a graduate student who is enrolled and is in regular attendance at classes for at least nine semester hours of credit or the equivalent; any combination of semester hours of credit, or the equivalent, aggregating to the requisite number of semester hours and undertaken during a semester at two or more public or private institutions of higher education operating under a consortium constitutes full-time student status;

SB 17

by Kertulla

For the purpose of student loan eligibility, this bill would redefine " full-time student " to include any student taking at least 12 hours of credit regardless of how many schools they attend.

QUESTIONS:

1) Does each school have to be an approved institution?

20 AAC 15.040 is amended by adding new subsections to read:

(m) A borrower in a flight school program must hold, as a prerequisite for eligibility, a valid private pilot's certificate.

(n) A borrower may be enrolled in more than one institution, but must be enrolled for at least 75% of the full-time student requirement in the degree-granting institution for which the loan is obtained. The combined total of these multiple enrollments must be equivalent to at least full-time enrollment. (Eff. 2/3/77, Register 61; am 5/10/78, Register 66; am 12/7/80, Register 76; am 7/9/82, Register 83; am 11/19/83, Register 88; am / / , Register).

Authority: AS 14.43.105
AS 14.43.120
AS 14.43.140

20 AAC 15.045 (c) i ıded to read:

(c) Before delivering the warrant to the borrower, the financial aid officer shall certify, on a form to be provided by the commission, that the borrower is a full-time student in good standing at the institution. If the full-time status is the result of attendance at more than one institution, the certifying institution must certify full-time and good standing status for the multiple enrollments. (Eff. 2/3/77, Register 61; am 12/7/80, Register 76; am 7/9/82, Register 83; am 11/19/83, Register 88; am / / , Register).

Authority: AS 14.43.105

20 AAC 15.060 (a), (b) (c) and (g) is amended to read:

20 AAC 15.060. STATE FORGIVENESS PAYMENTS. (a) Under AS 14.43.120(j), a recipient of a loan is eligible to have up to 50 percent of the total loan and accrued interest paid by the state if the borrower continues Alaskan residency after the successful completion of the course of study for which the loan was granted, and is awarded an appropriate degree, diploma or certificate, and remains, except for brief periods, in the state during the period for which forgiveness is claimed.

HOUSE BILL 174

The purpose of House Bill 174 is to allow students to combine credits from the postsecondary schools which they are concurrently attending in order to be eligible for student loans.

This bill primarily addresses a problem in Fairbanks, in which students attending either the University of Alaska or Tanana Valley Community College cannot combine their total number of credits in order to reach the number of credits necessary to achieve full-time student status.

The greater purpose of this bill is to allow students more flexibility in determining which courses they will take while attending college. This legislation in effect acknowledges the close interrelationship between community colleges and universities, and the healthy diversity of programs and courses in both of these institutions. In all cases, a student must be enrolled full-time in a degree program from an accredited school in order to be eligible for a student loan.

The provisions of HB 174 are already partially in effect in both Anchorage and Juneau. In Anchorage, a consortium agreement exists between the University of Alaska and Anchorage Community College in which an undergraduate student taking a total of 12 credits between both schools is eligible for a student loan. In Juneau, the relationship between the University of Alaska and Juneau-Douglas Community College is such that there is again no difficulty in a student being able to receive a loan while taking a combined full-time credit load.

No opposition to this dual enrollment was voiced by the administration at UAA, ACC, UAF, or JDCC. Indeed, the feelings from these schools are extremely positive toward such a program. Verification of student grades is facilitated in these university-community college arrangements in that each school is able to directly access the student records of the companion school.

Dean Roger Worsley of ACC suggested that a student take 75 percent of the course load, or nine credits, from the parent institution in order to clarify which school is ultimately responsible for maintaining a student's complete academic records and for issuing student loan checks. According to Dr. Kerry Romesberg, a regulation within the Postsecondary Commission is expected to be enacted soon which will stipulate that this condition be followed. This regulation will also limit the amount of paperwork that financial aid officers will have to deal with for dual enrollment students.

A question has been posed several times as to whether or not credits from correspondence courses could be applied toward student loan eligibility under provisions of this bill. Under present regulations, students are allowed to apply these courses toward loan eligibility requirements at the discretion of the parent institution. These courses must be approved by the parent institution, and they must be administered by an accredited school.

The language of this bill differs slightly from the wording in Senate Bill 197 in that HB 174 refers to applying only credits, not credits or hours, toward student loan eligibility requirements. By accepting only credits, financial aid officers would not be subject to the time-consuming procedure of converting hours to credits.

The purpose of this bill, again, is simply to allow those students who are in financial need the opportunity to take full advantage of the academic programs offered at the schools in their area.

Introduced: 2/8/83
Referred: Health, Education & Social Services, House Special Committee on State Loans and Finance

IN THE HOUSE

BY DAVIS, DUNCAN, KOPONEN, MALONE, SZYMANSKI AND ZHAROFF

HOUSE BILL NO. 174

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to student loan eligibility."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.120(c) is amended to read:

(c) To maintain a loan the student must continue to be enrolled as a full-time student in good standing <u>or as a part-time student in good standing in more than one institution for a total number of credits equivalent to a full-time student</u> in a career education program, college or university designated under (b) of this section. The commission shall adopt regulations defining "good standing" for purposes of this subsection.

Analysis (HB174):

Allowing multiple enrollments should enable additional people to apply, but we have no way of determining what that number would be. We also have indication that some schools will require such cross-documentation that those students will face weeks and months of delays in receiving funds. Therefore, we have left the fiscal impact at zero.

Kathleen Smoyer
PO Box 2652
Fairbanks, AK 99707

Dear Ms. Smoyer,

Thank you for your recent letter.

I spoke with people at the Commission on Postsecondary Education regarding your application for a student loan, and I also referred to the Alaska statutes specifying those conditions which must be met for a loan. Unfortunately, as the law is presently written, a person must earn 12 credits at a single institution in order to be eligible for a student loan the following semester.

This situation needs to be remedied for cases such as yours, in which you received a total of 14 credits from the University of Alaska, Fairbanks and the Tanana Valley Community College during the Fall, 1982 semester. The university and the community college in Fairbanks not only complement each other in providing education services for the community but, as you note, both institutions are so closely tied that its only necessary to write one check in order to pay tuition for both schools.

I am supportive of allowing a person to be eligible for a student loan by taking a combination of 12 credits at two postsecondary schools. I am presently working with people at Legislative Legal Services in studying possible revisions which might be made to the existing laws.

Sincerely,

Mike

Alaska Student Loan Program
Pouch FP, 400 Willoughby
Juneau, Alaska 99811
ATTN: Director

January 19, 1983

This is to appeal the loss of my Alaska Student Loan for spring semester, 1983. It was denied on the grounds that I no longer meet the eligibility requirements. Fall semester, 1982 I took 12 credits at the University of Alaska-Fairbanks, earned 10 of those credits, for a semester GPA of 3.0. I also took 4 credits at T.V.C.C., earned those 4 credits, for a semester GPA of 4.0. I therefore, earned a total of 14 credits for the fall semester of 1982, with my total GPA being somewhere between 3.0 and 4.0

When I went to see the UAF Financial Aid officer, the explanation was I did not complete 12 credits to be classified as a full time student and therefore, could not receive my A.S.L.P. loan this semester. They stated UAF and T.V.C.C. are different and the credit I earn at T.V.C.C. does not count. It is true that I registered at two different places and received two seperate grade reports. However, I paid only one tuition (that at UAF). This implies to me they are part of the same system.

With some research, I found that this division between UAF and T.V.C.C. is fairly recent and was told that notices of this were sent to all students, though I never received one. When I called the A.S.L.P. office in Juneau, I was told that they could do nothing unless the UAF Financial Aid office authorized me to receive the check. But when I went to Financial Aid they told me

they (UAF) didn't have the power to change the decision but that A.S.L.P. did. All I have encountered so far is this type of beaurocratic run-around and it is most confusing to me as a student. So I went to see George Winford (advisor and head of UAF Journalism department) who, by the way, supports my appeal. He informed me I could have my T.V.C.C. classes transfered to my UAF transcript, which I have done. It will now show that I have completed 14 credits for the fall semester of 1982.

Under Borrower's Responsibilities on my promissory note it states:

> I must maintain good standing, as defined for this program, in order to receive disbursement of my loan under the Alaska Student Loan Program. Good standing is defined as enrolling and completing at least a full-time student load while maintaining a grade-point-average of at least a "C" for an undergraduate or "B" for a graduate student.

It is my interpretation that I did comply with this regulation as worded in Item #8 of promissory note signed 9/7/82, and as my transcript will show.

I have had to borrow the money to pay my fees for this semester but must pay that person back and have no money on which to live. I am an earnest college student and I need my A.S.L.P. loan to continue my education. Therefore, I request that you reinstate my Alaska Student Loan for the spring semester of 1983 on the grounds that I <u>did</u> meet the requirements: completion of 14 credits at a 3.0+ GPA in fall of 1982.

Please review my appeal and let me know immediately of your decision.

Thank you very much for your consideration...

RE: LEGISLATION REGARDING THE ALASKA STUDENT LOAN PROGRAM

Senate Bill # 118 reduces the time a student must be in the state before applying for a loan, but also limits loans to students who apply before graduation from high school. The one year residency requirement (reduced from two years) will put a stop to litigation in that area. However, the requirement for all loan applicants to apply while still in high school will be a detriment to the spirit of the loan program and establish a new justification for litigation.

As the UAJ Financial Aid Officer, I must oppose this bill for several reasons. 1) It is sometimes difficult for high school students to decide if they want to go to college. I know there will be many young people who will neglect to fill out the application before high school graduation and later decide to go to college. This bill is asking all seventeen year old students in Alaska to decide their life goal without experiencing life beyond the academic setting. 2) Many students do not consciously choose a career path until several years after high school and after many life experiences. This bill would not afford this type of student the same opportunity as that provided for students who begin college shortly after high school. 3) Many students wait several years after graduation from a baccalaureate program before persuing graduate study. This bill does not mention graduate study; therefore, I am assuming that it could also be interpreted to eliminate loans for post-baccalaureate students.

House Bill # 56 asks for the loan interest rate to be raised to 7% and for the loan to be limited to the cost of tuition, room and board. This bill is acceptable.

House Bill # 174 says that a student may attend classes at two institutions to accumulate the 12 credits required for the loan program. This bill is acceptable and also beneficial to many of the students in Southeast Alaska.

April 13, 1983

Representative Mike Davis
Pouch V
Juneau, Alaska 99811

Dear Representative Davis:

I am writing at the request of Kerry Howard to indicate my support of HB174 in concept. I believe that students should be allowed to count credits from more than one institution toward fulfilling the requirement for eligibility for the state student loan program.

However, I believe that there should be in place a consortium agreement between the two institutions as is now in existence between ACC/UAA. This agreement should require that 75 percent of the credits required for qualification should be taken at the parent institution. The parent institution is the institution which is disbursing the aid.

In the past, we have had problems in federal programs with students receiving aid from more than one institution. This is not the problem with the state loan, as there is only one check in this case. However, there is a lot of paperwork and staff time required in handling the state loan program. If a student were required to take 75 percent or nine credits from the parent institution, there would be an inherent commitment on the part of that student to attend that particular institution.

Another reason for this requirement is the necessity to certify academic eligibility between semesters. If a student is taking credits from more than one institution, a parent institution is required to obtain grade reports from all other institutions prior to certifying eligibility. This is simpler if consortium agreements are in effect. The time between semesters is short and the grade reporting process is lengthy. Reciprocal agreements between institutions for the release of grades is a complicated process covered by the privacy acts.

In summary, consortium agreements between cooperating institutions, with a parent institution requirement of 75 percent of the credits required for eligibility, would be a good addition to your bill in my view. Another desired addition would be for the parent institution to receive some support costs for facilitating the state loan program. Federal aid programs provide a percentage of dollars distributed to be used to administer their funds. The Alaska State Loan Program requires a lot of work on the part of our staff, but no funds are appropriated for this purpose. Our success in acquiring additional staff

Alaska Statewide Student Association
P.O. BOX 548
DOUGLAS, ALASKA 99824
REPRESENTING STUDENTS OF THE UNIVERSITY OF ALASKA STATEWIDE SYSTEM

ASSA requests that the following section be added to SPONSOR SUBSTITUTE FOR HOUSE BILL 56:

AS 14.43.120(c) is amended to read:

(c) To maintain a loan the student must continue to be enrolled as a full-time student in good standing or as a part-time student in good standing in more than one institution for a total number of credits equivalent to a full-time student in a career education program, college, or university designated under (b) of this section. The commission shall adopt regulations defining "good standing" for purposes of this subsection.

At present, students enrolled at both UAF and TVCC, UAA and ACC, or Sitka CC and Sheldon Jackson may not receive scholarship loans unless they have a total of twelve credit hours at one or the other institution. This amendment would allow these perfectly legitimate, full-time students to be eligible for the loans.

Thank you.

Fairbanks, Alaska 99701

1982-83 ALASKA STUDENT LOAN INFORMATION

As a result of recent action by the Alaska Commission on Postsecondary Education, schools are no longer required to complete Part B of the Alaska Student Loan Application.

You may submit your application (two white copies) directly to the State Loan Office, retaining the yellow student copy, the cover sheets and this letter.

BE SURE THAT YOUR APPLICATION IS COMPLETELY FILLED OUT -- over 50% of the Alaska Student Loan applications are returned to the student because of omissions. When your application is received in Juneau, you will receive a blue post card with the date received indicated. This does not mean your application is complete; only that it has been received. You will next receive a promissory note in triplicate. Sign and date the note, list the dates of disbursement (8-20-82 for Fall 1982 semester and 1-1-83 for Spring 1983 semester), keep the marigold copy, and return the white and pink copies to Juneau.

Normally, the Financial Aid Office receives Alaska Student Loan checks in time to release funds at Registration. Before releasing checks, we must determine academic eligibility for each recipient. If you are currently enrolled at the University of Alaska-Fairbanks, you must be in good standing (2.0 semester and cumulative grade point average for undergraduates and 3.0 semester and cumulative grade point average for graduate students) to be eligible for your Fall 1982 check. Entering and transfer students must be admitted IN GOOD STANDING to a program leading toward a degree or certificate. Recipients must be full-time (12 credits for undergraduate, 9 credits for graduate students) and must complete 12 and 9 respectively each semester they receive a loan to be eligible for the following term.

Courses in the following areas cannot be counted toward the full-time financial aid requirement: Tanana Valley Community College, correspondence, extension, or television.

The eligibility requirements listed above reflect current Alaska State laws and regulations. NO EXCEPTIONS CAN BE MADE BY THE UNIVERSITY OF ALASKA-FAIRBANKS FINANCIAL AID OFFICE.

Any questions regarding the status of your application should be directed to the Alaska Student Loan Office in Juneau, since the Financial Aid Office acts only as a disbursing and certifying agency.

through the University budget process has not been good. A five or ten percent overhead distribution to institutions handling a large volume of state loan checks would certainly be beneficial.

Sincerely,

Roger L. Worsley, Dean
Educational Services 263-1200

RLW:cb

Clay Walker, ACCSA

UNIVERSITY OF ALASKA, FAIRBANKS
Fairbanks, Alaska 99701

March 9, 1983

Representative Mike Davis
Alaska State Office Building
Pouch V
Juneau, AK 99811

Dear Representative Davis:

This letter is in response to your request that I provide information regarding any administrative problems that colleges and universities might encounter should House Bill 174 be enacted.

As you probably know, the loan regulations already permit schools to combine credits provided a consortium or formal transfer agreement exists between the schools involved. This permits schools to voluntarily combine credits for loan recipients. However, it is my impression that HB 174 would require that schools accept concurrent enrollment from other schools in addition to their own for the purposes of establishing academic eligibility for the Alaska Student Loan.

Our primary concern at UAF is that the collection of the information needed to certify good academic standing and satisfactory progress would be so cumbersome and time consuming that our students would experience a considerable delay in actually receiving their state loan checks. I am attaching a sample copy of the "Record of Disbursement and Receipt" form which accompanies each state loan check and which the school's Financial Aid Officer must sign before disbursing the check to the student. Please note that the school must certify that the student is/was enrolled in a degree or diploma or certificate program as a full time student and is maintaining satisfactory progress as determined by school policy. HB 174 would put schools in the position of making this certification only after a lengthy and cumbersome administrative process of 1.) collecting certification of enrollment and fee statements from each school the student is attending, 2.) collecting official transcripts at the end of each term from each school the student is attending, 3.) official evaluation of transfer credits at the end of each term by the home institution's registrar, and 4.) a combining of credits earned together with a revision of the semester and cumulative g.p.a. Even large schools with sophisticated computer capability would have to do most of this work by hand and on a student by student basis. We expect that the enactment of this bill would cause a delay in delivering ASL checks to all students of at least three to four weeks after registration. In addition, all of the certification activity would take place at the time of registration when we are most heavily involved with getting students registered for classes and assisting students with various financial aid problems.

I would also like to mention that under HB 174, our students would not be limited to a TVCC/UAF dual enrollment. We would also be required to include UA correspondence work and any other accredited school's correspondence study. There is even the possibility that an out-of-state school would offer a special extension course in Fairbanks. Chapman College did just that a few years ago when it offered MBA coursework in the Fairbanks area.

A student attending school out of state in a large metropolitan area could easily enroll in a three credit course at each of four schools. It would be very time consuming to combine those credits at one school if all of the schools had a different starting and ending date. There is also the very real possibility that there could be a combination of quarter and semester credits to evaluate. There are some schools outside that have discussed the possibility of withdrawing themselves from eligibility for the Alaska Student Loan because the regulations are so different then accepted financial aid standards for the aid their school offers. I believe there is a real risk that other schools may simply choose to not accept another state's imposition of academic regulation on their institution and opt out of participation in the Alaska Student Loan program. It is extremely difficult to serve student's needs in a timely manner when faced with a variety of conflicting financial aid standards.

Finally, I would like to confirm that UAF Financial Aid applicants for the current academic year were advised well ahead of time that they would be required to carry a minimum of 12 UAF credits per semester (undergraduates) in order to be eligible for the loan at this school. We accomplished this by publishing news releases in the student newspaper, and by attaching an instruction sheet to each Alaska Student Loan application form that was given out from this office. Because ASL regulations require a minimum of 12 credits to maintain eligibility, we suggest to students that they carry those 12 credits with UAF, then take any desired coursework from other schools in addition to that minimum course load. This gives them the flexibility of exploring other schools and subjects while maintaining their eligibility for the loan at UAF.

I hope this information is useful to you. Please call us if you have further questions. Our office phone number is 474-7256. We appreciate this opportunity to express our views and we look forward to working with you.

Sincerely,

Carol M. Thomson
Financial Aid Advisor

/ct
enclosure

From Carol Thompson and Ida Griener, UAF

Re: House Bill 56

I think this bill would penalize the in-state student who is seeking a college education at the lowest possible cost. If enacted, this bill could encourage students to attend more expensive schools out- of-state. With no ceiling on the loan maximum, the student could conceivably request 10-15,000 dollars for a single academic year. (For example, the tuition plus room and board at Harvard is some 12-14,000 per academic year while similar costs at UAF are only 3200.)

I also note that there is no provision for an allowance for books and supplies as has been allowed before. I do agree that the loan amount should be no greater than the combined costs of tuition and required fees, room and board and books, but I believe that books are an important and necessary cost of education.

Because of declining revenues, I realize that the state must do something to change the scale of the student loan program. My suggestions would be to reduce the maximum of the loan from 6,000 to perhaps, 4500, for undergraduates,* and reduce the maximum for graduates from 7000 to perhaps, 6000; reduce or totally eliminate the generous forgiveness provisions; and to increase the interest rate. (I'm not sure that a student seeking an education has a right to a more attractive rate of interest than, say, a couple seeking to buy their first home or a young businessperson trying to get started in a business.)

*Note: Current GSL maximums are 2500 for undergrads and 5000 for graduates.

Re: House Bill 174

Legislation currently in effect already allows the student to combine credits at more than one school provided a consortium agreement or transfer agreement exists between the schools involved. To mandate that a school be forced to combine credits, collect academic transcripts from all other schools, and to recalculate separate g.p.a.'s into a composite g.p.a would be an administrative nightmare. I doubt that schools outside of Alaska would be willing to participate in the Alaska Student Loan program under such conditions. A student attending college in a Metropolitan area--Seattle, perhaps--could conceivably take four 3-credit classes at four different colleges in the area for a combined total of 12 credits. What school would be willing to call itself the student's home institution and say that the student was in good academic standing and making satisfactory progress toward a degree goal at that institution? From an administrative point of view, this bill, if enacted, would be possible only if an agency of the State of Alaska would serve as a central collection point for enrollment forms and for transcripts in order to determine a student's eligibility before releasing the loan check. If saving money is the object, this bill would certainly not meet that criteria.

Re: Senate Bill no. 118

This bill has two major considerations for schools and/or the State Loan Office. 1.) It's difficult to imagine how this would be handled administratively; it seems to be completely unmanageable, and 2.) Could requiring students to be Alaskan High School graduates in order to be eligible be constitutional? It distresses me to see the state provide more fodder for the likes of the Zobels. It seems to me that this bill is saying that Alaskan High School graduates have more commitment to the State than those persons who grew up elsewhere but moved to Alaska because of choice.

sity, two nominees from Sheldon Jackson College, and two nominees from each campus of the University of Alaska. The nominees shall be selected by the students at Alaska Pacific University, Sheldon Jackson College, and each campus of the University of Alaska. Selections shall be made at elections conducted under rules established by the Office of the Governor. The term of office of the student member of the commission is two years. Membership on the commission is immediately forfeited by a student member who ceases to be a full-time student. Within 60 days after a vacancy occurs, the governor shall appoint a successor from those students appearing on the list of nominees to serve for the unexpired term of the original appointee. The term "campus" used in this subsection means a portion of the University of Alaska designated as a "campus" by the Board of Regents. (§ 4 ch 78 SLA 1974; am §§ 1 — 3 ch 64 SLA 1982; AS 14.40.903; am § 56 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment, effective February 14, 1984, substituted "Pacific" for "Methodist" in paragraph (2) of subsection (a).

Chapter 43. Scholarship, Loan, and Grant Programs for Postsecondary Students.

Article

4. Scholarship Loan Program (§§ 14.43.090, 14.43.095, 14.43.100, 14.43.120, 14.42.125, 14.43.130, 14.43.160)
7. Teacher Scholarship Loan Program (§§ 14.43.600 — 14.43.700)

Article 4. Scholarship Loan Program.

Section

90. Scholarship revolving loan fund
95. Financial aid committee
100. Applications
120. Conditions of loans
125. Eligibility of students
130. [Repealed]
160. Definitions

Sec. 14.43.090. Scholarship revolving loan fund. (a) There is created a scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.43.090 — 14.43.160 and to pay the costs of collecting student loans that are in default if those costs are not recovered from the student. All repayments of principal and interest on scholarship loans shall be paid into the scholarship revolving loan fund. If money estimated to be available from scholarship loan repayments is inadequate to fully fund estimated scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.

(b) *[Repealed, § 31 ch 59 SLA 1982.]*

(c) *[Repealed, § 31 ch 59 SLA 1982.]* (§ 1 ch 98 SLA 1971; am § 1 ch 156 SLA 1972; am §§ 1, 2 ch 136 SLA 1974; am § 1 ch 136 SLA 1975; am § 31 ch 59 SLA 1982; AS 14.40.751; am § 1 ch 158 SLA 1984)

Effect of amendments. — The 1984 amendment, effective July 6, 1984, in subsection (a), added 'and to pay the costs of collecting student loans that are in default if those costs are not recovered from the student" at the end of the first sentence and substituted "loan fund" for "fund shall be used to make new scholarship loans" in the second sentence and "money estimated to be" for "funds" and "is" for "are" in the third sentence.

Sec. 14.43.095. Financial aid committee. (a) The student financial aid committee is composed of the members of the Alaska Commission on Postsecondary Education. The commission may delegate its functions under AS 14.43.090 — 14.43.160 to a committee of its members, with augmented membership as the commission considers appropriate. The executive officer of the commission is the executive secretary of the committee. The Alaska Commission on Postsecondary Education shall administer the program established by AS 14.43.090 — 14.43.160.

(b) Members of the committee serve without compensation but are entitled to per diem and travel expenses authorized by law for boards and commissions.

(c) The committee shall make an annual report reviewing the work of the committee to the governor and the legislature.

(d) The committee shall meet at least once a year. The meetings shall be held at the call of the chairman or upon petition by two members. (§ 1 ch 98 SLA 1971; am § 2 ch 156 SLA 1972; am § 5 ch 78 SLA 1974; am § 3 ch 136 SLA 1974; AS 14.40.753; am § 57 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment, effective February 14, 1984, substituted "and the legislature" for "the legislature and the private colleges and universities where students receiving tuition grants are enrolled" in subsection (c).

Sec. 14.43.100. Applications. (a) Applications shall be submitted to the executive secretary of the committee.

(b) A person whose loan application is not recommended or presented to the committee by the executive secretary may appeal to the committee through the chairman of the committee and the committee shall consider the application. (§ 1 ch 98 SLA 1971; am § 3 ch 156 SLA 1972; am § 4 ch 136 SLA 1974; AS 14.40.755; am § 58 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment, effective February 14, 1984, deleted "or grant" following "loan" in subsection (b).

Sec. 14.43.120. Conditions of loans. (a) Proceeds from scholarship loans may only be used for books, tuition and required fees, and for room and board.

(b) The loans may only be used to attend a career education program or a college or university approved by the commission, and, if the loans are federally insured, by the United States Commissioner of Education.

(c) To maintain a loan the student must continue to be enrolled as a full-time student in good standing in a career education program, college or university designated under (b) of this section. The commission shall adopt regulations defining "good standing" for purposes of this subsection.

(d) Scholarship loans may not be made to a student

(1) for more than five years of undergraduate study;

(2) for more than five years of graduate study;

(3) for more than a total of eight years of undergraduate and graduate study.

(e) Loans are interest bearing while a student is enrolled under (c) of this section or is receiving a deferment of payments under (k) of this section; however, a student is entitled to have a portion of the interest paid in accordance with (*l*) of this section.

(f) Interest on a loan given under AS 14.43.090 — 14.43.160 is at the rate of five percent a year unless the loan is in default. Interest on a loan that is in default is 10 percent a year for the period the loan is in default.

(g) Repayment of the principal and interest on the loan begins no later than one year after the borrower's studies are terminated. The loan shall provide for repayment of the total amount owed in periodic installments in not more than 10 years from the commencement of repayment, except as provided in (k) and (m) of this section. If the commission and the borrower agree to a different repayment schedule, the borrower shall repay the loan in accordance with the agreement. A borrower may make payments earlier than required by this subsection.

(h) Security may not be required for the loans; however, provision shall be made for payment of attorney fees and costs of court if either or both are incurred in collection of the amount owed on the loan.

(i) If a loan is in default, the commission shall notify the borrower that repayment of the remaining balance is accelerated and due by sending the borrower a notice by registered or certified mail.

(j) A portion of a loan shall be paid on behalf of the borrower by the state if, upon completion of the course of study for which the loan was granted, the borrower is a resident of the state for at least two years. The portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 50 percent of the total loan:

(1) two — three years residence in the state, 10 percent;

(2) three — four years residence in the state, an additional 10 percent;

(3) four — five years residence in the state, an additional 10 percent;

(4) five — six years residence in the state, an additional 10 percent;

(5) over six years residence in the state, an additional 10 percent.

(k) Periodic installments of principal shall be deferred, but interest shall accrue and be paid unless the student is eligible for interest payment benefits under (*l*) of this section during any of the following:

(1) return to student status as provided in (c) of this section;

(2) serving on active duty as a member of the armed forces of the United States;

(3) serving, for up to three years, as a full-time volunteer under the Peace Corps Act;

(4) serving, for up to three years, as a full-time volunteer under the Domestic Volunteer Service Act of 1973;

(5) for a one-time period up to 12 months in which the borrower is seeking and unable to find employment in the United States; or

(6) if the borrower becomes 50 percent or more disabled as certified by competent medical authority.

(*l*) The state will pay the interest on that portion of a loan that is not federally insured during

(1) the period before the beginning of the repayment period of the loan; and

(2) deferments under (k) of this section.

(m) In case of hardship, the committee may extend repayment of a loan for an additional period of up to five years in increments no longer than 12 months each.

(n) *[Repealed by § 11 ch 89 SLA 1981.]*

(o) The provisions of (j) of this section do not apply to a loan that is in default.

(p) For purposes of this section, a person qualifies as a resident if the person is physically present in the state with the intent to remain permanently in the state or, if not physically present in the state, the person intends to return to the state and is absent due to military service.

(q) For the purposes of this section a loan is in default if a loan payment is 120 or more days past due. (§ 1 ch 98 SLA 1971; am § 4 ch 156 SLA 1972; am § 6 ch 78 SLA 1974; am § 8 ch 136 SLA 1974; am §§ 1 — 4 ch 99 SLA 1977; am §§ 3 — 8 ch 87 SLA 1979; am §§ 3 — 9, 11 ch 89 SLA 1981; am §§ 2 — 4 ch 158 SLA 1984)

Effect of amendments. — The 1984 amendment, effective July 6, 1984, added subsection (q) and, in subsection (f), added the second sentence and added "unless the loan is in default" at the end of the first sentence; and, in subsection (o), substituted "that is in default" for "to a borrower named in a complaint as a defendant in an action by the state or by the commission to secure payment of the unpaid balance of a loan made under AS 14.43.110 or 14.43.115."

Editor's notes. — This section is set out above to correct errors in the main pamphlet.

Sec. 14.43.125. Eligibility of students. (a) A person may apply for and obtain a scholarship loan if the person

(1) is a resident of the state at the time of application for a scholarship loan;

(2) meets the requirements of (b) of this section; and

(3) is

(A) enrolled as a full-time student in a career education or associate or baccalaureate or graduate degree program; or

(B) a graduate of a high school, or scheduled for graduation from a high school within six months, with sufficient credits to be admitted to a career education program or to an accredited college or university.

(b) In addition to the requirements of (a) of this section, to obtain a scholarship loan a person must have been a resident of the state for at least two years at the time of application for the loan. For purposes of this subsection, a person qualifies as a resident of the state if at the time of application for the loan the person

(1) has been present in the state for at least two years unless an absence from the state during any part of the two years was due to military service; or

(2) is a person who is dependent on a parent or guardian for care, the parent or guardian has been present in the state for at least two years, and the person has been present in the state for at least one year of the immediately preceding five years. (§ 1 ch 98 SLA 1971; am § 10 ch 89 SLA 1981; am § 9 ch 67 SLA 1983)

Effect of amendments. — The 1983 amendment, in paragraph (2) of subsection (b) deleted "and" following "guardian for care" and added the language beginning "and the person has been present" at the end of the paragraph.

Editor's notes. — Section 18, ch. 67, SLA 1983 provided: "If the two-year residency requirement for scholarship loans provided by AS 14.43.125 is declared unconstitutional or otherwise invalid by a court of competent jurisdiction, the Commission on Postsecondary Education shall adopt regulations to impose the most stringent residency requirement allowable under the Constitution of the State of Alaska and the United States Constitution on scholarship loan applicants."

Sec. 14.43.130. Selection criteria. [Repealed, § 19 ch 67 SLA 1983.]

Sec. 14.43.160. Definitions. In AS 14.43.090 — 14.43.160

(1) "career education" means a course or program in vocational-technical training or education approved by the commission;

(2) "full-time student" means an undergraduate or career education student who is enrolled and is in regular attendance at classes for at least 12 semester hours of credit or the equivalent during the semester or a graduate student who is enrolled and is in regular attendance at classes for at least nine semester hours of credit or the equivalent; any combination of semester hours of credit, or the equivalent, aggregating to the requisite number of semester hours and undertaken during a semester at two or more public or private institutions of higher education operating under a consortium constitutes full-time student status;

(3) *[Repealed, § 59 ch 6 SLA 1984.]*

(4) *[Repealed, § 11 ch 89 SLA 1981.]*

(5) "school year" means the period from September 1 of one year through August 31 of the following year;

(6) "commission" means the Alaska Commission on Postsecondary Education;

(7) *[Repealed, § 7 ch 246 SLA 1976.]*

(8) "federally insured" means a loan covered by the provisions of the Guaranteed Student Loan Program of Title IV, Part B, of the Higher Education Act of 1965 (P.L. 89-329), as amended. (§ 5 ch 156 SLA 1972; am § 8 ch 78 SLA 1974; am §§ 18 — 20 ch 136 SLA 1974; am § 5 ch 136 SLA 1975; am § 7 ch 246 SLA 1976; am §§ 5 — 7 ch 99 SLA 1977; am § 9 ch 87 SLA 1979; am § 11 ch 89 SLA 1981; am § 59 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment, effective February 14, 1984, repealed former paragraph (3), which defined "part-time student."

Article 7. Teacher Scholarship Loan Program.

Section	Section
600. Findings and intent	630. Administration
610. Program established	640. Conditions of loans
620. Teacher scholarship revolving loan fund	650. Selection criteria
	700. Definition

Effective date of article. — Section 2, ch. 121, SLA 1984, makes this article effective June 21, 1984, in accordance with AS 01.10.070(c).

Sec. 14.43.600. Findings and intent. (a) The legislature finds that there is a wide and unacceptable disparity between the distribution of Native teachers and Native students in rural elementary and secondary schools in the state. Many rural schools have virtually no Native teachers and no non-Native students. The undesirable effects of this disparity include the following:

(1) there is a serious weakness in the ability of teaching staffs in rural schools to foster a sense of Native traditions and cultures in the Native students;

(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes, and the essentially modern atmosphere of the classroom;

(3) almost no Native students return to rural schools to teach, continuing the imbalance and exacerbating its effects; and

(4) there is an annual turnover of 40 percent among teachers in rural educational attendance areas in the state.

(b) The legislature further finds that existing programs have failed to increase the proportion of Natives teaching in rural schools. Therefore, it is the intent of the legislature to establish the teacher scholarship loan program to encourage rural high school graduates to return to rural schools as teachers and relieve the conditions described in this section. (§ 1 ch 121 SLA 1984)

Sec. 14.43.610. Program established. There is established the teacher scholarship loan program to provide an incentive for rural high school graduates to pursue teaching careers in rural elementary and secondary schools in the state. (§ 1 ch 121 SLA 1984)

Sec. 14.43.620. Teacher scholarship revolving loan fund. There is created a teacher scholarship revolving loan fund. The fund shall be used to make scholarship loans to students selected under AS 14.43.600 — 14.43.700. All repayments of principal and interest on teacher scholarship loans shall be paid into the teacher scholarship revolving loan fund and shall be used to make new teacher scholarship loans. If estimated funds available from teacher scholarship loan repayments are inadequate to fully fund estimated teacher scholarship loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year. (§ 1 ch 121 SLA 1984)

Sec. 14.43.630. Administration. (a) The teacher scholarship loan program shall be administered by the student financial aid committee (AS 14.43.095) in accordance with regulations adopted by the committee. The committee shall

(1) allocate the loan awards available for teacher scholarship loans annually to local school boards giving a preference to rural school districts; and

(2) develop and distribute to the local school boards an application form for teacher scholarship loans; the form shall include a requirement that the applicant supply a high school academic transcript and a statement of intent to enter a teaching career at the elementary or secondary school level in the state.

(b) The local school boards shall select the recipients of the teacher scholarship loans according to the criteria in AS 14.43.650. (§ 1 ch 121 SLA 1984)

Sec. 14.43.640. Conditions of loans. (a) The conditions provided in AS 14.43.120 apply to teacher scholarship loans except as otherwise provided in this section.

(b) If a borrower meets the conditions provided in (a) of this section and is employed as a teacher in a rural elementary or secondary school, the portion of the loan that shall be paid by the state, notwithstanding AS 14.43.120(j), is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(1) one year employment, 15 percent;
(2) two years employment, an additional 15 percent;
(3) three years employment, an additional 15 percent;
(4) four years employment, an additional 25 percent;
(5) over four years employment, an additional 30 percent.

(c) A loan may not exceed $7,500 in a school year.

(d) Proceeds from a teacher scholarship loan may be used only for undergraduate expenses of books, tuition, required fees, room and board, and the transportation expense for two round trips between the loan recipient's home and school. (§ 1 ch 121 SLA 1984)

Sec. 14.43.650. Selection criteria. (a) To be eligible for a teacher scholarship loan, a student must

(1) be a graduate of a public or private high school in the state, with sufficient credits to be admitted to an accredited college or university;

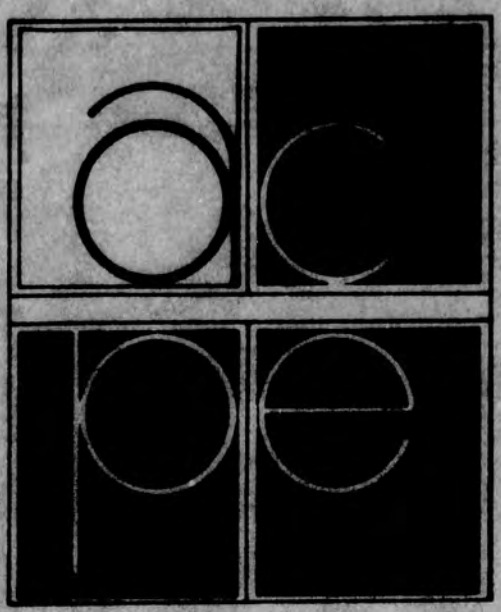
(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level;

(3) meet the conditions set by the student's local school board with respect to the district's requirements for teachers in particular subject areas; and

(4) submit to the local school board an application provided by the student financial aid committee under AS 14.43.630(a)(3); an application may be submitted six months before graduation from high school.

(b) A local school board shall award teacher scholarship loans giving a preference to applicants from rural schools who meet the qualifications for a loan and taking into account the applicants' academic records.

(c) A student may not be awarded a scholarship loan under AS 14.43.090 — 14.43.160 and a teacher scholarship loan under AS 14.43.600 — 14.43.700 for the same school year. (§ 1 ch 121 SLA 1984)



Legislative history reports. — For legislative letter of intent, see 1984 Senate Journal at p. 3117.

Sec. 14.43.700. Definition. In AS 14.43.600 — 14.43.700, "rural" means

(1) a community in the second, third, or fourth judicial district of the state with a population of 4,500 or less that is not connected by road or rail to Anchorage or Fairbanks; or

(2) a community in the first judicial district of the state with a population of 4,500 or less. (§ 1 ch 121 SLA 1984)

[redacted]

Alaska Commission on Postsecondary Education

ALASKA STUDENT LOAN

Background and Discussion Materials

February 1985

PROGRAM DESCRIPTION

PURPOSES

1. To provide Alaskans with access to postsecondary educational resources through low-interest loans to students.
2. To encourage an educated citizenry through initial access to education and training and through inducements to utilize that education and training in Alaska.

TERMS

1. Undergraduates and vocational students may borrow up to $6,000 per year of full-time study.
2. Graduate students may borrow up to $7,000 per year of full-time study.
3. Students may borrow for up to 5 years of undergraduate study, or up to 5 years of graduate study, but for not more than 8 years combined.
4. A student must be a two-year Alaska resident to borrow and must maintain full-time study in good standing to continue borrowing Alaska student loans.
5. Loans may be used for attendance at any approved institution.
6. Proceeds from loans may only be used for the costs of tuition and fees, room and board, and books and supplies.
7. Loan repayment begins one year after the student ceases to be a full-time student (except for approved periods of deferment).
8. Repayment is over a 10-year period with provision for extending to 15 years if necessary.
9. Interest charged on the loans is 5%.

FORGIVENESS

If, upon completion of the program of study for which the loan was granted, the borrower resides in Alaska, a portion of the loan, plus interest, shall be forgiven by the State. That portion, for up to a total of 50%, shall accrue as follows:

1. 2-3 years residence in the state, 10%
2. 3-4 years residence in the state, an additional 10%
3. 4-5 years residence in the state, an additional 10%
4. 5-6 years residence in the state, an additional 10%
5. Over 6 years residence in the state, a final 10%.

This residence must be continuous and must begin within one year of completion of program.

REPAYMENT SCHEDULE

IF YOUR STUDENT LOANS TOTAL:	YOUR MONTHLY PAYMENT FOR 120 MONTHS (10 YRS.) WOULD BE:	TOTAL TO BE REPAID:

SURVEY OF 1983-84 ALASKA STUDENT LOAN RECIPIENTS

Alaska Commission on Postsecondary Education
March, 1984

INTRODUCTION

The Alaska Student Loan program, established in 1971, is the most generous loan program in the nation, and has provided student financial aid, in the form of low interest loans, to over 50,000 Alaskan residents. For a number of years the vast majority of borrowers used their Alaska loans to attend postsecondary educational institutions outside the State of Alaska, but from 1975 to 1982 there was a steadily increasing trend toward in-state attendance, culminating in over fifty percent of the 1982-83 borrowers attending school in Alaska. Then, in 1983-84, the trend broke. As of November 1, 1983, 53.4 percent of the student loan borrowers were attending school out-of-state.

In an effort to better understand this break in an eight-year pattern, all 1983-84 loan recipients were surveyed. This was the first attempt to survey current borrowers in the thirteen-year history of the loan program, so the opportunity was taken to solicit opinions on a number of issues related to Alaska student loans.

PROCEDURE

During the last week of October 1983, questionnaires (see Appendix A) were mailed to all (13,026) 1983-84 student loan recipients. The questionnaires were mailed to the permanent home address of each borrower in the hope that it would be forwarded to school addresses when necessary. No follow-up was conducted, since not all files contain accurate current address data.

FINDINGS

Of the 13,026 loan recipients surveyed, 7,476 (57.4%) returned completed questionnaires. For a census-type survey with no follow-up, this is an acceptable response rate as long as the respondents seem to be distributed in a pattern similar to the borrowing population. As can be seen in Table 1, the response rate by student level was quite evenly spread, when compared to the borrowing population, and therefore should serve as a good indicator for inference to the population. Similarly, the in-state/out-of-state mix is not disproportionate.

The only group which may be over-represented is graduate students attending in Alaska, since the response rate was a very high 94.4%. However, since this class of borrowers is relatively small, it should not lessen the reliability of the findings.

TABLE 1

Distribution Of Respondents By
Student Level

Student Level	Alaska Attendance			Out-of-State			Total		
	No.	%	% of Borrowers	No.	%	% of Borrowers	No.	%	% of Borrowers
Freshman	856	25.6	43.7	974	23.6	51.5	1,830	24.5	47.5
Sophomore	743	22.2	57.6	829	20.1	58.4	1,572	21.0	58.1
Junior	596	17.8	64.4	745	18.0	64.4	1,341	17.9	64.4
Senior	516	15.4	64.2	648	15.7	63.8	1,164	15.6	64.0
Graduate	255	7.6	94.4	695	16.8	71.1	950	12.7	76.2
Vocational	378	11.4	46.4	241	5.8	47.9	619	8.3	47.0
Total	3,344	100.0	55.1	4,132	100.0	59.4	7,476	100.0	57.4

Type of Institution Attended. The loan borrowers were asked to indicate what type of school they were attending and whether it is located in Alaska or out-of-state. Over three-fourths (78.0%) of the respondents indicated they were attending a four-year college or university, either public or private, with out-of-state enrollees more heavily represented in this type of school, than Alaska enrollees. (See Table 2.) Not surprisingly, community college and vocational students tend to attend in Alaska, rather than traveling outside for schooling.

TABLE 2

Distribution Of Respondents By
Type Of Institution

Type of Institution	Alaska		Out-of-State		Total	
	Number	%	Number	%	Number	%
Vocational	445	13.3	287	6.9	732	9.8
Community Colleges	766	22.9	231	5.6	997	13.3
Private Coll/Univ.	182	5.4	1,628	39.4	1,810	24.2
Public Coll/Univ.	1,951	58.4	1,986	48.1	3,937	52.7
Total	3,344	100.0	4,132	100.0	7,476	100.0
% of Respondents	44.7		55.3		100.0	
% of Borrowers	55.1		59.4		57.4	

Student Loan Interest Rate. The current interest rate on Alaska student loans is 5%. This is the lowest student loan interest for any state comprehensive student loan program in the nation, and there is nearly always debate over the level during each legislative session. When the borrowers were asked, they strongly endorsed retaining the 5% loan rate. Nearly three-fourths (74.9%) of the borrowers felt that 5% is the appropriate interest rate for these loans. Only 18.6% of the borrowers felt the rate should be increased, and even then, most felt only a small increase was in order. (See Table 3.)

TABLE 3

What Rate Of Interest Should Be
Set For Student Loans?

Interest Rate	Number	Percentage
5%	5,603	74.9
6%	640	8.6
7%	441	5.9
8%	164	2.2
9%	145	1.9
No Opinion	483	6.5
Total	7,476	100.0

Student Loan Borrowing Maximums. The Alaska Student Loan program permits students to borrow up to $6,000 per year for undergraduate study and up to $7,000 per year for graduate study. Once again, Alaska's program is distinguished from other state-level comprehensive student loan programs in the nation. There is no other comparable loan program with borrowing maximums as high as Alaska's. Current borrowers were asked what maximums they believed to be appropriate for Alaska Student Loans. As indicated in Table 4, the majority (78.4%) by more than three-to-one, believed the current maximums are appropriate. Few, less than 5%, felt the maximums should be lowered, and 16.1% felt the maximums should be raised.

TABLE 4

Should The Loan Borrowing
Maximum Be Changed?

Response	Number	Percent
Retains Current Level	5,863	78.4
Reduce Maximum	306	4.1
Revise Maximum Upward	1,201	16.1
No Opinion	106	1.4
Total	7,476	100.0

An interesting pattern develops when one looks at which students believe higher maximums are appropriate. These data are presented in Table 5, and indicate that freshman borrowers, both in-state and out-of-state, and graduate borrowers attending out-of-state are disproportionately represented in the 1,201 persons desiring higher borrowing limits. One might guess that the out-of-state graduate borrowers are reacting to actual costs incurred by such attendance when they want limits raised, but the fact that freshman, when compared to sophomores, juniors, and seniors, are disproportionately represented in those wishing higher limits, may simply mean that they do not know the true costs of attendance in this--their first semester of school.

TABLE 5

Distribution Of Respondents Favoring
Raising The Loan Maximum

Type of Institution	Alaska		Out-of-State		Total	
	Number	%	Number	%	Number	%
Freshman	144	28.7	141	20.2	285	23.7
Sophomore	95	18.9	134	19.2	229	19.1
Junior	83	16.5	97	13.9	180	15.0
Senior	44	8.7	94	13.5	138	11.5
Graduate	42	8.3	184	26.4	226	18.8
Vocational	95	18.9	48	6.8	143	11.9
Total	503	100.0	698	100.0	1,201	100.0

Student Loan Forgiveness Benefits. One of the more controversial aspects of the Alaska Student Loan program is the provision of forgiveness benefits. This too, distinguishes Alaska's program as the most generous in the country. If Alaska borrowers complete the program of study for which they borrow and then live in Alaska, they can have up to 50% of their total indebtedness, including interest, forgiven by the State. Periodic discussion in Alaska's Legislature centers on whether this forgiveness provision should be retained. When asked, the current borrowers overwhelmingly indicated their belief that forgiveness should be retained at the current level. (See Table 6.)

TABLE 6

Should The Loan Forgiveness
Benefits Be Changed?

Response	Number	Percent
Retain Current Level	6,864	91.8
Reduce Forgiveness	358	4.8
Discontinue Forgiveness	166	2.2
No Opinion	88	1.2
Total	7,476	100.0

This rather straightforward result was not unexpected, but does not get at the heart of the debate on forgiveness. In order to better understand the effects of forgiveness, borrowers were asked if forgiveness influenced their decisions regarding how much they borrowed and where they would live after schooling. The results, found in Table 7, are somewhat mixed. For students attending in Alaska, forgiveness influenced borrowing in nearly as many cases as it did not, but for out-of-state attendees, forgiveness was said not to be a factor by nearly two-to-one. In terms of residence after schooling, forgiveness did not seem to be a big factor one way or the other for those attending in-state, but was said to influence the decisions of out-of-state attendees, again by nearly two-to-one.

TABLE 7

Influence Of Loan Forgiveness
Benefits On Student Decisions

Do Loan Forgiveness Benefits Influence Decisions Regarding:	Alaska Attendance		Out-of-State	
	Yes	No	Yes	No
How much you borrow?	1,516	1,789	1,812	2,255
Where you live after schooling?	1,538	1,780	2,684	1,396

Change From In-State to Out-of-State Attendance. Borrowers were asked if they had attended a postsecondary school last year, and if so, where. The pattern toward continued attendance was evident for both Alaska attendees and out-of-state attendees. Of the 2,117 respondents currently attending school in Alaska who also attended a postsecondary school last year, 90.4% had attended school in Alaska last year too; and of the 2,942 respondents currently attending school out-of-state who also attended a postsecondary school last year, 78.8% had attended school out-of-state last year, too. Looking only at those students who switched from Alaska to out-of-state attendance, or the reverse, one finds that only 9.6% of the students currently attending in Alaska, attended out-of-state last year; and 21.2% of the students currently attending out-of-state, attended in Alaska last year. (See Table 8.)

TABLE 8

Attendance In-State Versus Out-Of-State This Year
Versus Last, By Type Of Institution

Type Of Institution	Current Attendance in Alaska					Current Attendance Out-of-State				
	Alaska Last Year		Out-of-State Last Year		Total	Alaska Last Year		Out-of-State Last Year		Total
	No.	%	No.	%	No.	No.	%	No.	%	No.
Vocational	39	90.7	4	9.3	43	-0-	0.0	77	100.0	77
Community Coll.	478	87.2	70	12.8	548	44	19.7	179	80.3	223
Private Coll/Univ.	97	85.1	17	14.9	114	204	16.7	1,018	83.3	1,222
Public Coll/Univ.	1,300	92.1	112	7.9	1,412	376	26.5	1,044	73.5	1,420
Total	1,914	90.4	203	9.6	2,117	624	21.2	2,318	78.8	2,942

In order to try to determine why a person would switch from attending in Alaska to attending out-of-state, the 624 respondents who did so were asked to list the top factors (up to four) influencing that decision. The results (based upon a weighted average giving more value to each person's primary reason for switching and correspondingly less for other reasons) are listed in Table 9. Program Availability was the most influential factor in the decision to switch to out-of-state attendance, followed by Closeness to Home and Low Tuition and Expenses. The high ranking of Closeness to Home is difficult to understand, unless persons were trying to indicate they were attending out-of-state so as not to be close to home.

TABLE 9

Reasons For Attending Out-Of-State After Attending In Alaska Last Year

Reason (Descending Order)	Weighted Average
Availability of Program	442.3
Closeness to Home	333.7
Low Tuition and Expenses	321.0
Availability of Financial Aid	239.2
Geographic Location/Weather/Climate	176.5
School Reputation/Prestige	159.0
Ability to Work While Attending	137.3
Encouragement of Parents/Friend	83.1
Availability of Campus Housing	57.0
Encouragement of Teachers/Counselors	41.3
Friends Are There	36.3
Athletics/Recreational Activities	32.4
Religious Atmosphere	26.2
Sororities/Fraternities/Organizations	5.4

Next, those 624 persons switching from Alaska attendance to out-of-state were asked what factor could have encouraged them to continue their Alaska attendance rather than switching. The top factor was again Program Availability, and it was the top factor regardless of what type of institution was being attended out-of-state. The other factors which seemed to have a strong influence on the decision to switch to out-of-state attendance were: Quality, Campus Housing, Lower Costs, and Better Weather. (See Table 10.)

TABLE 10

For Those Attending Out-Of-State After Attending In Alaska Last Year, What Would Have Kept Them In Alaska? By Type Of Institution

Vocational School	Community College	Private Coll/Univ.	Public Coll/Univ.
Program Availability	Program Availability	Program Availability	Program Availability
Better Quality	Campus Housing	Better Quality	Better Quality
Lower Costs	Better Quality	Campus Housing	Campus Housing
	Better Weather	Religious Atomosphere	Better Weather
	Lower Costs	Lower Costs	Lower Costs

Reasons For Selecting Current Institution. All respondents were asked why they chose their particular institution for pursuing their education, and as can be seen in Table 11, Program Availability was a very important factor for all students regardless of whether they were attending in Alaska or out-of-state and regardless of the type of school attended. The top three factors for each classification are presented in Table 11, and there is a difference between the responses of those attending in Alaska compared to those attending out-of-state. While the most important factor for out-of-state attendance at community colleges and public colleges or universities is Program Availability, the most important factor for Alaskan attendance at community colleges and public colleges and universities is Closeness to Home. It should also be noted that School Reputation, while an important factor for persons attending out-of-state, was not one of the top three factors for those attending in Alaska.

TABLE 11

Top Three Reasons For Selecting Current
Institution Of Attendance,
By Type Of Institution

Type of Institution	Most Important Factor	Second Factor	Third Factor
Vocational			
(Alaska)	Program Availability	Ability to Work	Financial Aid
(Out-of-State)	Program Availability	School Reputation	Finanical Aid
Community College			
(Alaska)	Closeness to Home	Program Availability	Low Cost
(Out-of-State)	Program Availability	Low Cost	School Reputation
Private College/University			
(Alaska)	Program Availability	Ability to Work	Financial Aid
(Out-of-State)	Program Availability	School Reputation	Religious Atmosphere
Public College/University			
(Alaska)	Closeness to Home	Program Availability	Low Cost
(Out-of-State)	Program Availability	School Reputation	Climate/Weather

For Those Attending Out-of-State, What Could Have Encouraged Alaska Attendance? The 4,132 respondents attending school out-of-state were asked what factor could have encouraged them to attend in Alaska. As with those students who switched attendance from in-state to out-of-state, the single most important factor which could have encouraged Alaska attendance was Program Availability. When the respondents were classified by type of institution (Table 12), the results were surprisingly homogenous. Program Availability and Better Quality were the two top factors for all students, regardless of institutional type. For collegiate students, Campus Housing was also an important factor.

TABLE 12

For Those Attending Out-Of-State, What Could Have Encouraged Alaska Attendance? (By Type Of Institution)

Vocational School	Community College	Private Coll/Univ.	Public Coll/Univ.
Program Availability	Program Availability	Program Availability	Program Availability
Better Quality	Better Quality	Better Quality	Better Quality
Nothing	Campus Housing	Campus Housing	Campus Housing
Lower Costs	Nothing	Nothing	Better Weather
Better Weather	Better Weather	Religious Atmosphere	Nothing

Similarly, when the respondents were classified by student level, the same pattern emerged (Table 13). The top five factors for all undergraduate out-of-state borrowers were Program Availability, Better Quality, Campus Housing, Better Reputation, and Nothing (meaning nothing could have encouraged them to attend in Alaska).

TABLE 13

For Those Attending Out-Of-State, What Could Have Encouraged Alaska Attendance? (By Student Level)

Freshman	Sophomore	Junior	Senior	Graduate
Program Avail.	Program Avail.	Program Avail.	Program Avail.	Program Avail.
Better Quality	Better Quality	Better Quality	Better Quality	Better Quality
Campus Housing	Campus Housing	Campus Housing	Campus Housing	Nothing
Nothing	Better Reputation	Better Reputation	Better Reputation	Better Reputation
Better Reputation	Nothing	Nothing	Nothing	Lower Costs

Major Course of Study of Borrowers. All loan recipients were asked to indicate the degree being sought and their major course of study. The top ten majors are summarized by degree level and by in-state or out-of-state attendance in Table 14. Once again, one sees a surprising similarity in responses, particularly at the bachelor's and master's levels, regardless of whether the student is attending in Alaska or out-of-state. Out-of-state doctoral students are largely representative of persons pursuing degrees unavailable in Alaska.

TABLE 14

Top Ten Majors By Degree Level

Associate		Bachelors	
Alaska	Out-of-State	Alaska	Out-of-State
Business	Business	Business	Business
Health Care	Computer Science	Education	Education

Residency Plans After Graduation. Once these Alaskan students complete their programs of study, where do they plan to live? The vast majority (97.0%) say Alaska. Regardless of whether or not they are attending school in-state, nearly all respondents indicate plans of residing in Alaska after schooling. (See Table 15.)

TABLE 15

Location Plans After Completion
Of Program Of Study

Plans After Program Completion	Attending in Alaska		Attending Out-of-State		Total	
	Number	Percent	Number	Percent	Number	Percent
Reside in Alaska	3,274	97.9	3,976	96.2	7,250	97.0
Reside Out-of-State	70	2.1	156	3.8	226	3.0
Total	3,344	100.0	4,132	100.0	7,476	100.0

Why these students plan to return to Alaska is another question asked of the respondents. As can be seen in Table 16, the top reason for those students planning to live in Alaska after degree completion, regardless of whether or not they are currently attending in Alaska or out-of-state, is "Alaska is my home." The second most important reason for those planning Alaska residence is the top reason for those planning out-of-state residence, and that is "Job Availability." Other factors influencing location decisions include loan forgiveness, geographic location/weather/climate, availability of continuing education, and location of friends.

TABLE 16

Friends	Friends	Friends	Friends
Geog/Weather/Clim.	Parents/Relatives	Geog/Weath./Clim.	Recreation Avail.

SUMMARY/CONCLUSIONS

1. One of the principal reasons for conducting this survey was to discover if there was an explanation for the reversal of the eight-year trend toward in-state attendance. From the data collected it is a little difficult to single out exactly what caused this phenomena. However, when coupled with knowledge of the Alaska system a hypothesis may be offered.

   Three factors probably have impacted the in-state/out-of-state attendance pattern. First, the state loan program imposed new "good standing" requirements. These were enforced for the first time in 1982-83 and resulted in a large number of students becoming ineligible for continued borrowing. The majority of these ineligible students were students attending in-state, so the pool of in-state students for the current year, 1983-84, was reduced.

   Second, the only public university in the state with campus housing is the University of Alaska, Fairbanks (UAF). Over six months before the current school year began, UAF had filled all its campus housing. More than 300 students who wished campus housing for the 1984-84 year had to be denied.

   Third, the University of Alaska, Anchorage (UAA) has been heavily over-subscribed in a number of classes both this year and last. Many students have indicated that they simply could not get into all the UAA classes they wished for pursuit of their programs.

2. Students believe 5% is an appropriate interest rate for the student loan program.

3. Students believe the $6,000 and $7,000 borrowing maximums are appropriate for the student loan program. However, there is some evidence that graduate students, particularly those attending out-of-state, may be requesting a higher maximum in the near future.

4. Students believe loan forgiveness should be retained at 50%. When asked directly if loan forgiveness influences their decision on where to reside after graduation, only 5.1% indicate that it is. Also, when asked which factors are most important in this determination of where to live after graduation, loan forgiveness falls far behind "Alaska is My Home" and "Job Availability." The argument that forgiveness seems to reward students for what they would do anyway seems to be supported by this survey.

APPENDIX A

Student Loan Questionnaire

ALASKA STUDENT LOAN QUESTIONNAIRE

The Alaska Commission on Postsecondary Education has not surveyed loan recipients in the past, but due to the increased level of proposed program changes, we feel some information from you, the recipients of this program, would be most useful as we enter a new Legislative Session. Please complete this brief questionnaire and return it to us in the envelope provided. All responses are completely anonymous.

1. Check those school years in which you received an Alaska Student Loan

1975-76 _____	1978-79 _____	1981-82 _____
1976-77 _____	1979-80 _____	1982-83 _____
1977-78 _____	1980-81 _____	1983-84 _____

2. Current student level (please check)

Freshman _____	Junior _____	Graduate _____
Sophomore _____	Senior _____	Vocational _____

3. Current attendance (please check)

	In Alaska	Out-of-State
Vocational School	_____	_____
Community College	_____	_____
Private College/University	_____	_____
Public College/University	_____	_____

4. What interest level do you feel is appropriate for these loans?

5% _____	7% _____	9% _____
6% _____	8% _____	Other _____ (indicate)

5. What loan level do you feel is appropriate for these loans?

$6,000 and $7,000 loan levels should be retained	_____
Loan levels should be reduced	_____
Loan levels should be raised	_____

6. Why did you decide to attend your current institution? (Please number your reasons, with "1" being most important, and limit your choices to no more than four.)

Athletics/recreational activities	____	Availability of program	____
Sororities/fraternities/campus organization	____	Availability of financial aid	____
Geographic location/weather/climate	____	Closeness to home	____
Encouragement of parents/relatives	____	Religious atmosphere	____
Encouragement of teachers/counselors	____	Friends are there	____
Ability to work while attending school	____	School reputation/prestige	____
Availability of campus housing	____	Low tuition/expenses	____

7. If you are attending out-of-state, what single factor could encourage you to attend in-state (what could be changed, if anything)?_____

_____

(Please continue on reverse side)

8. Did you attend a postsecondary education institution in Alaska last year (1982-83)?

Yes _____ No _____

9. What degree or certificate are you seeking and what is your major program of study?

Associate Degree (Major?) _____
Bachelors Degree (Major?) _____
Masters Degree (Major?) _____
Specialist Degree (Major?) _____
Doctorate Degree (Major?) _____
Diploma (Course of Study?) _____
Certificate (Course of Study?) _____

10. Do you plan to live in Alaska when your education is finished?

Yes _____ No _____

11. What factors influenced your response in question 10? (Please number your reasons with "1" being most important, and limit your choices to no more than four.)

Availability of jobs	_____	Encouragement of parents/relatives	_____
Alaska is my home	_____	Availability of continuing education	_____
Friends are there	_____	Recreational activity availability	_____
Student loan forgiveness	_____	Geographic location/weather/climate	_____

12. Does the student loan forgiveness feature influence your decisions on:

a. Whether or not you live in Alaska after schooling? Yes _____ No _____

b. How much you borrow? Yes _____ No _____

13. Should the student loan forgiveness feature be:

a. Discontinued? Yes _____ No _____
b. Reduced? Yes _____ No _____
c. Retained as is? Yes _____ No _____

14. If there were no Alaska State Student Loan Program, would you (check as many as applicable)?

a. Delay your education _____

b. Not attend school at all _____

c. Borrow under a federal loan program _____

d. None of the above _____

HOUSE BILL NO. 96

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the applicability of the scholarship loan program to students attending more than one postsecondary educational institution; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.43.160(2) is amended to read:

(2) "full-time student" means an undergraduate or career education student who is enrolled and is in regular attendance at classes for at least 12 semester hours of credit or the equivalent during the semester or a graduate student who is enrolled and is in regular attendance at classes for at least nine semester hours of credit or the equivalent; any combination of semester hours of credit, or the equivalent, aggregating to the requisite number of semester hours and undertaken during a semester at two or more public or private institutions of higher education [OPERATING UNDER A CONSORTIUM] constitutes full-time student status;

* Sec. 2. This Act takes effect immediately in accordance with AS 01.-10.070(c).

PREVIOUS ACTION

Please refer to House Special Committee on State Loans minutes of February 12, 1985.

ACTION NARRATIVE

TAPE #7, SIDE ONE

Recording Number	
001	The meeting was called to order at 3:35 p.m.by Chairman Sund. In attendance were Representatives Cotten, Fuller, and Frank. Representatives Duncan and Uehling arrived at 3:40 p.m.
020	Chairman Sund said that he would prefer to amend HB 59 to be a grant instead of loan program for youth hostels, and hold HB 61 in committee.
062	Representative M.M. Miller testified that he favors the idea of an amendment or committee substitute, as long as it would not jeopardize the bill's chances in Finance Committee.
083	There was discussion and general agreement among committee members that a grant appropriation would be preferable to administering a special low-interest loan program.
127	Keith Levy, of Legal Services, explained changes in the language of the bill to allow for an appropriation to DNR, Division of Parks, for youth hostel grants.
175	Representative Duncan moved to report out a CS, encorporating the change from a loan to a grant, with an effective date of July 1, 1985.
191	The motion was passed with unanimous

consent, and HB 59 was passed out of committee with individual recommendations.

Number 210 — Chairman Sund opened the meeting for DCED testimony on HB 109.

Number 216 — Mr. Terry Elder, Deputy Commissioner for DCED, explained the philosophy behind HB 109. He said that the bill does 2 things:

(1) eliminates statutorily fixed rates of interest on DCED loans and replaces them with a formula; and

(2) returns the income generated by the loans to the general fund.

He explained that the U.S. treasury yield curve is used to establish the base rate, to which is added administrative fees and a risk adjustment, minus the subsidy. He added that DCED is more concerned with the formula than with the specific numbers. DCED used 125 basis points for the risk adjustment, 75 basis points for the administrative fee and 300 basis points for the subsidy, but that these numbers can be changed according to what the legislature feels is appropriate. He said that the U.S. treasury yield curve is a standard of comparison within the financial community, published monthly, and that interest rates vary depending on the term of the loan.

Number 340 — Representative Cotten asked why the risk component is in the formula, if there is a different risk for each of the programs.

Number 346 — Mr. Elder answered that most programs are created by the legislature and that the legislature should determine the risk factor for each program. He emphasized that DCED is more concerned with getting the formula itself in place. He went on to say that the philosophy behind the administrative fee is that the beneficiaries of a subsidized loan program should pay for the administration of the program. 75 basis points covers both the origination and the servicing of the loans, whereas most lending institutions have a separate loan origination fee.

Number 407 — Chairman Sund asked if DCED would consider classifying loans according to their level

of subsidy.

Number 415 — Mr. Elder answered that it would be better to deal with the loan programs one at a time, and decide what subsidy that particular program should have.

Number 440 — Representative Uehling asked if it wouldn't be simpler to standardize across all loan programs, instead of working it out separately for each program.

Number 453 — Mr. Elder expressed the view that the formula isn't complicated, and that it allows the legislature to decide the level of subsidy based on the social value of the program. He went on to say that putting the interest, administrative fees and the risk factor back into the general fund would require DCED to come back to the legislature more often for funding the loan programs, which is a positive thing.

Number 543 — There was some discussion regarding DCED loans with other loan programs, which are tied either to the market or to the cost of funds.

Number 564 — There was some discussion regarding which loan programs are still active.

CHANGE TAPE #7, SIDE TWO

Number 001 — Representative Uehling asked if DCED has considered repealing or consolidating some of the loan programs.

Number 019 — Mr. Elder responded that most of the loan programs are created by the legislature, and that DCED just administers them. He said that DCED does not usually make recommendations unless a program is inactive.

Number 068 — Representative Duncan suggested that some loan programs will no longer be in demand if the interest rates go up. He used as an example the child care revolving loan fund. He said that child care is a low-profit business, and would not be possible if borrowers had to pay high interest.

Number 088 — Mr. Elder responded the legislature could choose to have a larger subsidy for such a

program.

Number 190 — Chairman Sund announced his intention to introduce a bill concerning the Alaska Power Authority and hydro loan issues and made further announcements regarding the next week's meetings dealing with student loan bills.

Number 240 — The meeting was adjourned at 4:32 p.m.

HOUSE BILL NO. 102

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the Alaska Resources Corporation; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.12.071 is amended to read:

Sec. 37.12.071. ADDITIONAL POWERS. Notwithstanding other provisions of law governing disposal of state property, the board may, at either public or private sale, dispose of the assets of the corporation as required in AS 37.12.075. Disposal must be made in a manner that serves the best interests of the state, and may include amortization of payments over a period of years, but may not be by lease. In addition, the corporation may spend money to protect the assets of the corporation.

* Sec. 2. AS 37.12.075 is amended to read:

Sec. 37.12.075. DUTIES. (a) In carrying out the purposes of this chapter the board shall

(1) contract with the Department of Revenue to manage the assets of the corporation;

(2) divest the corporation of all equity investments by July 1, 1989; and

(3) divest the corporation of all other remaining assets, with the exception of the outstanding loan portfolio, by July 1, 1989.

(b) In divesting the corporation of equity investments, the board may convert the equity investment of the corporation in a particular enterprise to debt, if the governing board of the enterprise

approves the conversion. The debt created by the conversion must become part of the outstanding loan portfolio of the corporation.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 23, 1985

The Honorable Ben Grussendorf
Speaker of the House
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Grussendorf:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to the divestiture of assets and equity investments of the Alaska Resources Corporation (ARC).

Section 1 of the bill permits the board to dispose of assets, including those acquired through default or foreclosure, in any manner that serves the best interests of the state, including extended payments over time.

Section 2 of the bill permits the board to convert its equity investments into debt, which will then be treated in the same manner as the corporation's current outstanding loan portfolio.

This bill is necessary to permit the ARC board the flexibility necessary to wind up the corporation's affairs by 1989, in accordance with ch. 161, SLA 1984.

Sincerely,

Bill Sheffield
Governor

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF REVENUE

TREASURY DIVISION

ELEVENTH FLOOR
STATE OFFICE BUILDING
POUCH SB
JUNEAU, ALASKA 99811
PHONE:

January 29, 1985

The Honorable John Sund
Chairman
House Special Committee on Loans
Pouch V
Juneau, AK 99811

Dear Mr. Sund:

Ch. 161, SLA 1984 directs the Alaska Resources Corporation (ARC) to divest all its assets, except its loan portfolio, by July 1, 1989. ARC's assets to be divested include equity in various corporations and assets acquired in foreclosure of ARC loans. Several of the enterprises in which ARC has invested are in bankruptcy proceedings. Several of the foreclosed properties are not currently operating as businesses and their prospect of doing so is uncertain.

Under these circumstances, bank or other outside financing for a potential buyer to purchase ARC equity or foreclosed properties may not be available or available on reasonable terms. The only means of financing the purchase may be for ARC to take a promissory note for all or part of the purchase price. In some cases, the only interested buyer of ARC equity may be the corporation in which ARC has invested. In this case, conversion of equity to debt is tantamount to taking a note on sale.

HB 102 would authorize ARC to take a note on sale or enter into an installment sale contract as well as to convert equity to debt. This is a necessary tool which will be used only when a cash buyout for ARC cannot be negotiated.

The ARC board of directors has endorsed this legislation.

Enclosed is a summary of ARC's various investments. Detailed information on credit status of investments is not provided because of confidentiality requirements.

Sincerely yours,

Milt Barker

MEMORANDUM

TO:
FROM: Representative John Sund

RE: HB 197

Sectional analysis of proposed Student Loans legislation:

The purpose of this bill is to give undergraduate and graduate students the opportunity to apply loan money, promised to them for the upcoming school year, toward their summer quarter tuition.

The present Alaska Statutes will not allow students to attend more than three quarters or two semesters at full loan funding.($2,000 quarter/$3,000 semester) As a result, students who require more than four years to graduate must travel home for the summer and re-register in the fall for their remaining units. For a student going out of state and living off campus, the cost or travel and the trouble of relocating an apartment can be overwhelming.

This bill amends AS 14.43.110 - the statute setting loan terms in the Dept. of Education.

Section 1
This section provides that the committee may make a loan to a student for a summer term even if the total loan for the school year exceeds the $6,000 maximum. The loan for the summer term will be counted against the $6,000 maximum for the following school year.

To do this a student would present his loan promissory note to the school financial aid office and they would allow him to register for the summer and pay tuition with his first loan disbursement in September.

Section 2
This section provides that the committee may make a loan to a graduate student for a summer term, even if the loan for the school year exceeds the $7,000 maximum, if the loan for the summer term is counted against the $7,000 maximum for the following school year.

Section 3
This section amends AS 14.43.160 by adding a new paragraph that defines "summer term". The period from June 1, to August 31 is used, as it includes the dates that a school would provide for a summer term.

This bill would directly save undergraduate and graduate students time and money while creating no new cost for the state.

Background Materials on the Dedication Clause

Prepared by

Philip S. Barnett, Law Associate, Sierra Club
Legal Defense Fund, Inc.

April 16, 1985

Article IX, § 7, of the Alaska Constitution, the dedicated funds clause, provides as follows:

> The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

In State v. Alex, 646 P.2d 203 (Alaska 1982), the Alaska Supreme Court held that the application of the clause should not be limited to taxes and licenses. The Court observed that in a draft at the Constitutional Convention, the prohibition against dedication was applied to "all revenues." After a review of the history of the Convention, the Court held that the change from the draft to the final version was not intended to have significant consequences. Rather, "the purpose of the proposed amendment was to allow for the setting up of certain special funds." Id. at 210. All other dedications were intended to be prohibited.

The "certain special funds" mentioned in Alex are easily identified, for they were expressly referred to during the Constitutional Convention. Specifically, they are pension contributions, proceeds from bond issues, sinking fund receipts, revolving fund receipts, contributions from local government units for state-local cooperative programs, and tax receipts which the state might collect on behalf of local government units. See 1982 Alaska Op. Atty. Gen. No. 13 at 10-11.

The loans that will be used to capitalize the road and port do not fit within one of the exempt "certain special funds." Therefore, they cannot be dedicated.

Sunday, April 14, 1985, The Anchorage Times I-3

Red Dog: an ideal investment

By Robert R. Richards

THE ALASKA legislature has before it a dandy project that is an absolutely ideal opportunity for meaningful investment by the State of Alaska to foster economic development.

This project is ideal for severeal reasons.

It is a perfect size: $150 million.

It is self-liquidating through user fees.

It is perfectly timed: 1987-1988 when a downturn in state capital construction projects is anticipated.

It is perfectly located: in a rural area where the citizens have expreased a strong desire for new jobs.

IT REPRESENTS further diversification of the Alaska economy and of an economic region where 88 percent of personal income is dependent on state and federal government.

It involves a prudent degree of risk with the return on the investment being guaranteed by a strong multinational private company.

It presents the potential for significam downstream benefits by stimulating subsequent resource development projects by the private sector.

It presents substantial ancillary benefits through reducing the costs of fuels and supplies to the citizens of the area.

It represents a significant boost to the prosperity of Alaska's native corporations.

It represents a major thrust forward of Alaska's role as an exporter.

Most important, it generates a strong financial return on the investment: in excess of 14 percent.

IN SHORT, this investment opportunity — from virtually every vantage point — is about as perfect as you can get. It represents an ideal prototype investment by the public sector to stimulate investment by the private sector.

I am referring to the port and road associated with the Cominco/NANA Red Dog project.

This resource development package, representing a viable, cooperative effort by the public sector and the private sector, is precisely what we Alaskans have been looking for.

The Cominco/NANA Red Dog project involves a zinc, lead and silver mine 90 miles northeast of Kotzebue which would be the largest zinc mine in the world. It will create 630 full-time jobs for the duration of its 30 years of operations. It will inject $100 million annually into the Alaska economy in the form of payroll and benefits, local purchases, transportation, taxes, and royalties to native corporations.

ON-SITE construction work is expected to commence in 1987, and production is scheduled to begin in 1989.

The total cost of the project is estimated to be $400 million, including $150 million for the port and road. Cominco will guarantee to pay the toll fees and the cost of operation and maintenance of the facilities. Cominco further guarantees that, if it is necessary to postpone develop-

ment of the mine, it will repay the state the money which the state has invested in the port and road.

There are two very important dinstinctions to keep in mind when analyzing this project. The first is the definition of return on investment. The second is our understanding of whether or not Alaska is facing a buyer's market or a seller's market.

First the definition of return on investment. As any financial analyst knows, return on investment embodies the full array of incremental returns — all of the primary, secondary, tertiary and further financial benefits of an investment — including not only revenue generation but cost reductions. Cominco's calculations show that the return generated from the toll fee and the direct taxes to the state from operation of the mine generates a return on investment of 12.8 percent.

Secondly, existence of the mine would in turn reduce transfer payments (welfare, unemployment, etc.) to the region, estimated by the governor's task force to generate another 0.9 percent return, increasing the total return to 13.7 percent.

Additionally, when the multiplier effect is added in (that is, the taxes paid by all of the firms which sell goods and services to the mine and to the workers at the mine) the return increases to over 14 percent.

The second critical element is timing. Alaska is not the sole possessor of huge rich zinc deposits. There are many other potential places for investment in lead and zinc mines by the private sector, and there is not room in the forecasted gap between world demand and supply to accommodate all of the potential mines. Indeed, Alaska is a seller in a buyer's market, and in order for us to pre-empt other potential producers, we must move now to take advantage of this window of opportunity.

It is in Alaska's self-interest to move ahead vigorously with this ideal opportunity for a significant thrust forward in our critical striving for a more diversified and expanded economic base.

Robert R. Richards, an economist, is vice chairman of Alaska Pacific Bancorporation.

IN THE HOUSE

BY THE HOUSE SPECIAL COMMITTEE ON STATE LOANS

CS FOR HOUSE BILL NO. 105 (Loans)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FOURTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the authorization of bonds or notes, establishing conditions under which the bonds or notes for the DeLong Mountain transportation project may be issued; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 37.15.410 is amended to read:

Sec. 37.15.410. BOND AUTHORIZATION. For the purpose of providing part or all of the money to be used, with or without any grants or other money that [WHICH] may become available, the issuance and sale of revenue bonds of the state in the total principal sum of not to exceed $86,525,000 [$62,825,000] is authorized to acquire, equip, construct, and install the additions, improvements, extensions, and facilities authorized in AS 37.15.510. The principal of and interest on these bonds shall be paid out of and secured by the gross revenues derived by the state from the ownership, lease, use, and operation of the airports, and of all the facilities of them and out of any other revenues or money that [WHICH] the state legislature may provide exclusive of any state tax or license.

* Sec. 2. The Alaska Industrial Development Authority is authorized to issue bonds or notes in a principal amount not to exceed $175,000,000 to provide financing for the DeLong Mountain transportation project.

* Sec. 3. Before bonds or notes authorized under sec. 2 of this Act may be issued the Alaska Industrial Development Authority shall comply with

AS 44.88.173 and, to the extent feasible, shall incorporate into the final finance plan for the DeLong Mountain transportation project the following terms and conditions:

(1) Cominco, Ltd. is required to agree in writing that

(A) Cominco, Ltd. will pay for all or a portion of the operation and maintenance of facilities constructed as part of the project based on the use Cominco Alaska makes of the facilities compared to the use made by others;

(B) if Cominco Alaska ceases to develop the Red Dog Mine after costs or debts have been incurred for the project, Cominco, Ltd. will repay the Alaska Industrial Development Authority for those costs and debts;

(C) toll fees paid by Cominco Alaska for the use of facilities constructed as part of the project to the Alaska Industrial Development Authority may be periodically adjusted if the price of zinc rises above a level that yields a return on investment commensurate with risk;

(2) land in the Cape Krusenstern National Monument is conveyed to NANA Regional Corporation by the United States Department of the Interior;

(3) NANA Regional Corporation is required to agree in writing to make available to the Alaska Industrial Development Authority, at no more than fair market value, land needed for the port and road constructed as part of the project and land needed for future expansion of the road and port;

(4) tax exempt financing for the project is used to the maximum extent possible;

(5) a toll schedule, that may be periodically adjusted, is established for use of facilities constructed as part of the project that

(A) ensures a reasonable return on the state's investment in the project; and

(B) guarantees equitable access to the facilities by all users.

* Sec. 4. Before bonds or notes authorized under sec. 2 of this Act may be issued the Alaska Industrial Development Authority shall

(1) report in writing to the legislative budget and audit committee that the conditions under sec. 3 of this Act have been met; and

(2) agree with the Department of Revenue in writing to deliver all money generated by the DeLong Mountain transportation project, other than money necessary for payment of the principal and interest on bonds or notes issued under sec. 2 of this Act, to the Department of Revenue for deposit in the general fund.

* Sec. 5. This Act takes effect immediately in accordance with AS 01.-10.070(c).

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF REVENUE

TREASURY DIVISION

ELEVENTH FLOOR
STATE OFFICE BUILDING
POUCH SB
JUNEAU, ALASKA 99811
PHONE:

April 15, 1985

The Honorable Arliss Sturgulewski
Chairman
Resources Committee
Alaska Senate
Pouch V
Juneau, AK 99811

Dear Senator Sturgulewski:

This letter is in response to the requests contained in your April 1 letter on state loans that may be used in financing the DeLong Mountain Transportation project. The responses are in as much detail as is available at this time.

1. It has been suggested that $142 million in state loans held by the Department of Revenue be transferred to AIDA bonds. I would like to know the make up of those loans. What is the amount of each category (such as veterans, commercial fishing, small business, tourism, fisheries enhancement, child care and historical districts), the interest rates by category and the maturity dates? What is the amount of money by category that returns to a revolving loan fund pool and what amount returns to the general fund? If any revolving loan funds are transferred to AIDA, how does that affect the future ability of those revolving funds to meet the public demand for loans?

   The following amounts of loans are held in the general fund and serviced by the Department of Commerce and Economic Development as of February 28, 1985:

Type	Amount ($ 000)	Average Interest Rate 1/	Average Maturity
Veterans	82,291.4	6.92%	2003
Small Business	18,573.5	8.49	1993
Commercial Fish	29,809.3	7.81	1991
Tourism	2,575.2	8.07	1996
Child Care	18.0	5.83	1989
Historical District	123.7	6.67	1993
Fisheries Enhancement	6,804.2	7.96	N/A
Total	140,195.3	7.39	

1/ Net of .5% service fee on loans serviced by Commerce and an estimated .125% Commerce service fee on loans serviced by banks. The bank services fees are also netted out.

These loans would be transferred to AIDA with the exception of an estimated $19,873,000 of commercial fish loans which are secured by permits. Only the state is authorized to hold permits as collateral.

To make up for this deficiency, AIDA would take up to $19,873,000 in loans held by the Department of Commerce and Economic Development. Commerce had $48,402,500 of commercial fish loans as of January 31, 1985 of which an estimated $16,118,000 were not backed by permits and would be taken by AIDA.

All of the payments on the general fund loans, both principal and interest, return to the general fund. Transfer of these loans to AIDA will reduce the amount of general funds available for appropriation in FY 86 and future years. It will not affect the ability of the revolving loan funds to meet loan demand.
