### M E M O R A N D U M

TO: The Honorable Jay S. Hammond  
Governor

FROM: Avrum M. Gross *by [signature]*  
Attorney General

RE: Proposed joint resolution calling for a  
constitutional amendment establishing a  
permanent fund.

Attached is the proposed joint resolution calling for a constitutional amendment to establish a permanent fund to which mineral leasing revenues would be dedicated.

In contrast to HJR 39 which you introduced last year, the attached resolution would establish a constitutional permanent fund into which 10 percent of all mineral leasing revenue and mineral production taxes would automatically be dedicated without further legislative action. Last year's resolution would simply have given the legislature the authority to establish a permanent fund by law which could be changed or repealed by subsequent legislatures.

The revenues that would be dedicated include mineral leasing rentals, royalties and bonuses. Questions do arise, however, as to some special circumstances. For example, what is to occur when the state takes its royalty in kind? Should 10 percent of the proceeds from the sale of royalties taken in kind be dedicated to the fund? I have assumed that this would be the case and have included language in the draft transmittal letter to clarify our intent in this respect.

Also, what is to occur if the state changes its leasing policy from the traditional bonus bidding with a 1/8 or 1/6 royalty to a royalty bidding arrangement with a nominal cash bonus with the state instead receiving a larger royalty share such as 50 percent? Again I have assumed that you have intended that a full 10% of this larger royalty

The Honorable Jay S. Hammond  
Governor

January 3, 1976

- 2 -

share would be dedicated to the fund, and I have included language in the transmittal letter to state your position on this.

Also, what is to occur with respect to the revenue sharing which the state receives from federal mineral leasing? If this revenue is to be included, we should add some appropriate language in the resolution and in the transmittal letter to accomplish it.

Other revenue that would be dedicated to the fund would include mineral production taxes. I have assumed that this would only include the state's oil and gas properties production tax ("severance tax"), the oil and gas conservation tax (conservation tax), and the mining license tax regardless what form they may take in the future. Taxes that have not been included are the oil and gas exploration, production and pipeline property tax (20-mil property tax) and the oil and gas reserves ad valorem tax (reserve tax). If it is intended that these taxes should also be dedicated then the resolution and draft transmittal letter should be changed accordingly.

A question can be raised as to what amount of tax should be dedicated. For example, what is to occur with respect to any production taxes which the state must transmit to the Native Fund? Should 10 percent of taxes which the state receives and then transmits to the Native Fund be dedicated? I have assumed not and have so stated in the draft transmittal letter.

Also, what is to occur with respect to the production taxes which the state does not receive in cash but in effect receives through the application of accumulated "reserve tax" credits? For example, a taxpayer having a production tax liability of \$100,000 may credit his accumulated reserve tax against the production tax up to \$50,000 and only pay the remaining amount. Again, I have assumed that the production tax paid by the reserve tax credit would not be dedicated. If it is intended that more than just the net amount of cash tax revenue received by the state should be dedicated, then some additional changes should be made to the transmittal letter.

The resolution specifies that the fund will be used for investment only, with the legislature specifying the types of investment. A question has arisen whether the

OFFICE OF THE ATTORNEY GENERAL

#123  
JAY S. HAMMOND, GOVERNOR

POUCH K - STATE CAPITOL  
JUNEAU 99811

August 16, 1977

Representative Clark Gruening  
Chairman  
House Special Committee on  
the Permanent Fund  
528 West Fifth, Suite 270  
Anchorage, Alaska 99501

Dear Representative Gruening:

This responds to that part of your request of July 11, 1977, for advice on making appropriations (or otherwise funding) the permanent fund at more than 25 percent of mineral revenues by joint or concurrent resolution.

The law making power of the State is vested in the legislature and is exercised by the passage of bills which are subject to a veto. Alaska Const., art. II, §§ 1, 13, 14 and 15. A veto may be overridden by two-thirds majority (three-fourths for revenue or appropriation bills) of the entire membership. Id., § 16. Appropriations are made by law. Id., § 13, art. IX, § 13. Whether the appropriation is continuous or annual would appear to make no difference; either or both would require passage of a law. Items in appropriation bills may be stricken or reduced by a veto and a three-fourths majority is required to override. A resolution is not subject to a veto.

We are of the opinion that, under our constitution, the legislature may not appropriate money to the Permanent Fund (or otherwise place money in that fund) by a joint or concurrent resolution. First, the constitutional safeguards for enacting legislation, i.e., for exercising the law-making power, do not apply to resolutions and are not observed in adopting resolutions. Second, the governor plays an integral part in the exercise of the law-making power, i.e., by approving or disapproving bills passed by the legislature. The governor plays no role whatever in the adoption of resolutions. Accordingly, except where its use is provided for by the constitution, e.g., art. III, § 23 (disapproving executive orders) and art. X, § 12 (disapproving boundary changes), a resolution may not be used in lieu of a bill to exercise law-making power.

Representative Clark Gruening  
August 16, 1977

Anchorage, Alaska 99501

Re: Permanent fund, accounting  
for inflation; our file J-66-107-78

Dear Representative Gruening:

You have asked whether there is any legal requirement that the statutory guidelines for administering the permanent fund take inflation into consideration.

We believe that the answer is no.

The answer to your question requires an inquiry into the legal nature of the permanent fund and, there being no law on the precise subject, involves some speculation.

First, we believe that, despite the absence of an actual transfer of legal and equitable interests to a trustee and beneficiary respectively, the Alaska Supreme Court will treat the permanent fund as a trust or quasi-trust, and as a general rule, apply trust concepts in determining its administrators' duties. We make this assumption (1) because of the tendency of the court, exemplified by such cases as Moore v. State, 553 P.2d 8 (Alaska 1976), to impose trust-like duties upon the State's management of its patrimony, and (2) because the constitutional amendment which created the permanent

fund is extremely similar to the classic spendthrift trust both in its roots or causes and in its establishment, i.e., the owner of the State's capital, the people, dissatisfied with the state government's spending of the royalty bonus from the Prudhoe Bay leases, has resolved to remove a portion of that capital from the spending power of the government and to place it in trust, with only the income from its investment available to the government for expenditure.

Because the people established the trust, we believe that the state government will be deemed to be the trustee, not the trustor. This means that, despite the power vested in it by the constitutional amendment to designate by law the kinds of investments to be made, the legislature--as the appropriating arm of the government--will not be deemed to be the trustor or settlor, and that therefore, its power to designate eligible investments is not plenary but rather is limited by the express terms of the amendment on the one hand and by implied trust concepts on the other. In other words, the legislature may designate only income-producing investments and may not designate imprudent, income-producing investments or provide for imprudent administration of the fund principal. To the extent, if any, that it did, the managers of the fund would nevertheless remain under a duty to make only prudent income-producing investments and to provide a prudent administration.

Finally, we believe that the Alaska Supreme Court

will rule that--absent exceptional circumstances involving the very existence of the State or its citizens--the preservation of the fund principal is of primary import, i.e., that investment policies cannot endanger the principal. This belief rests on what we perceive to be the essential character of this trust or quasi-trust, i.e., a conservative, cautionary nest egg. \*/

Of course, the Alaska Supreme Court could rule that no trust or quasi-trust exists and that the law of trusts does not, therefore, govern the fund's administration. That would remove the administration of the fund from the operation of the prudent-man rule. There would then be no duty to limit investments to those which are prudent. That would pretty much give the legislature the power to authorize the expenditure of the fund's principal on any income-producing investment even though it would not be a prudent, i.e., an investment which a trustee could not properly make. This result would allow the fund principal to be frittered away and thereby frustrate the basic purpose of the constitutional amendment. Principally for that reason, we believe the Alaska Supreme Court will impose trust concepts to avoid that result and to give the amendment its full effect.

---

\*/ While the permanent fund is essentially a conservative device, the constitutional amendment was not overly conservative. It did not apply to taxes on minerals at all and it still leaves 75 percent of other mineral revenues available for expenditure.

There can be no question that a trustee must take into consideration the trend of prices and the cost of living, the prospect of inflation or deflation. RESTATEMENT (SECOND) OF TRUSTS 2d § 227, Comment e (1959). To do otherwise would hardly be the conduct of a man of prudence. Accordingly, the fund managers will have to take inflation (or deflation) into account in making and changing investments, if--as we believe--the fund constitutes a trust.

It does not follow, however, that the legislature has a duty to provide specific guidelines on the matter. If the court rules that there is a trust, the prudent-man rule applies. If it rules otherwise, the rule does not apply. Unless the legislature itself resolves the question by making the fund a trust, the matter is entirely up to the court. Whichever way it rules, the court would not, and could not, order the legislature to adopt any particular guidelines. It would merely order the fund managers to follow the prudent-man rule.

Nor does the legislature have any duty to increase the amount of the fund principal because of inflation. The constitutional amendment, which sets forth the principal terms of the trust, makes it mandatory to deposit 25 percent of the designated mineral revenues in the fund. That is the trust property which must be administered, we believe, under the prudent-man rule. While the legislature qua legislature clearly has the power to increase that amount, nothing in

Hon. Clark Gruening  
September 16, 1977  
Page 5

---

trust law places a duty on it to do so. It could also provide for all or a portion of the income from the principal to be deposited in the fund, i.e., added to the principal. But under the terms of the trust, i.e., the constitutional amendment, it has no duty to do so.

We hope that this answers your question. We remind you that we are making an educated guess as to the trust or quasi-trust nature of the permanent fund. We believe it is a trust or quasi-trust and that trust law applies. We are constrained to add that we could be wrong. The legislature may wish to treat the fund as a trust. That would resolve the issue. It should feel free, however, to experiment and treat it otherwise insofar as it determines the public interest warrants doing so, and let the court resolve the issue.

Sincerely yours,

AVRUM M. GROSS  
ATTORNEY GENERAL

PLEASE NOTE: THE FOLLOWING PAGES WERE TREATED  
AS A UNIT IN THE ORIGINAL DOCUMENT.

State of Pennsylvania  
Financing Programs

- 1) Industrial and Commercial Development Authority Law  
The law empowers counties, town, cities, etc. to establish industrial and commercial development authorities to finance industrial and commercial development projects including financing for modern buildings, plant facilities, modern machinery and equipment and to encourage commercial enterprise in meeting pollution standards. The Authority may exist for a maximum 50 year period at which time all it's holdings are turned over to the municipality, city, town or county.

The Authority is empowered to issue revenue bonds, which are exempt from state tax, with a maximum maturation length of 40 years (less depending on the the life of the Authority as all bonds must be paid off by the expiration of said Authority). Payment of principal, interest and other charges are payable solely from: a. the income, revenues and property of the project financed, in whole or in part, with the proceeds of such bonds, b. the income and revenues of certain designated projects whether or not they are financed, in whole or in part, with the proceeds of such bonds, and c. from its (the Authority) revenues generally.

- 2) Pennsylvania Industrial Development Authority (PIDA)  
PIDA was established to stimulate economic activity in counties with high unemployment by making low-cost business loans, particularly to industrial and manufacturing firms for acquisition or construction of buildings. Loans have also been made to other job-creating enterprises. County unemployment must be 4% or greater to qualify for a loan.

PIDA participates in the necessary financing with the local industrial development corporation (IDC) and local financial institutions. The local bank takes the first mortgage and puts up 50% of the financing. PIDA takes a second mortgage and, depending on the extent of the county's unemployment, puts up 30 - 50%. The local IDC takes a third mortgage and supplies the balance of the financing.

There are no specified loan terms or amounts but the following roughly conveys PIDA's average figures.

|               |                                                       |
|---------------|-------------------------------------------------------|
| Loan Amount   | \$4,000 - \$5 million<br>(cannot exceed 50% of costs) |
| Terms         | Up to 20 years                                        |
| Interest Rate | Roughly 4%                                            |

- 3) Pennsylvania Redevelopment Area Economic Cooperation and Implementation Act  
This act authorized the Department of Commerce and PIDA to implement the Federal program established by Federal Area Redevelopment and, secondly, to allow PIDA to make loans to industrial development agencies for 60% of the cost for industrial parks with the industrial development agency contributing not less than 10% of the costs. Loans will be secured by a first mortgage except in the case of Federal participation in which case PIDA will accept a lien junior to that of the Federal agency involved.

State of South Carolina  
Financing Programs

1) IRB's

State of Vermont  
Financing Programs

1) Vermont Industrial Development Authority

The VIDA was created to coordinate the state's activities in encouraging the orderly growth of industrial development.

a. Assistance to local development corporations

The VIDA provides loans for purchase of land, industrial park planning and erection of speculative shell buildings. Funds made available to the Authority by issuance of notes to the State Treasurer. There is \$5,000,000. available to local development corporations at low interest rates. Loans will be payable not later than 5 years (may be extended by approval of Treasurer) and secured by assignment of a first mortgage to VIDA.

b. Insurance of mortgage loans

This includes loans from lending institutions for purchase of land, building, and equipment. Loans are insured by VIDA under these terms:

- a) lender willing to make funds available for manufacturer if VIDA will insure loans
- b) Guarantees up to \$10 million for each project
- c) VIDA will insure up to 90% project and local development corp. participates at 10% of cost
- d) Working capital loans insured through refinancing of capital assets.
- e) Not more than \$35,000,000 in loan guarantees may be outstanding at any one time.

c. Direct mortgage loans

VIDA loans for purchase of industrial land, buildings and equipment may be made under the following conditions:

- a) VIDA will loan at low interest up to 40% of project not to exceed \$300,000 for land and buildings and \$100,000 for equipment
- b) Loan will be made by local development corporation up to 10% and other banks or lenders supply the balance
- c) VIDA will take second mortgage on project with first mortgage being assigned to principal lender.

d. Industrial Revenue Bonds

State of Virginia  
Financing Programs

1) IRB's

2) LDC's

3) Virginia Industrial Development Corporation (VIDC)

VIDC is a privately capitalized and financed lending agency chartered by a special act of the General Assembly to assist in the State's industrial development. It cannot make a loan unless the loan has been offered to and refused by a conventional lender legally able to make the loan. It participates in term loans to credit-worthy borrowers and extends participations to conventional lenders. VIDC prefers local participation in loans through local development organizations or banks at the following terms:

Loan term

Not to exceed 15 to 20 yrs

Loan amt.

Prefer \$150,000 to \$350,000

(May not exceed \$500,000.)

Interest rate

2% plus, above the prime rate

prevalent among Virginia banks

State of Wisconsin  
Financing Programs

1) IRB's

State of Wyoming  
Financing Programs

- 1) IRB's
- 2) Wyoming Industrial Development Corporation

The WIDC is a privately capitalized and financed corporation designed to assist in the economic development of the State of Wyoming by providing management advisory services and financing to small businesses. Consultant services are frequently supplied in conjunction with financial assistance. Payment for these services is usually by direct fee or additions to the loan granted. They are not precluded, however, from taking an equity position.

- 3) Local Development Companies

Providing financial assistance, acquire sites and sell or lease land, buildings, equipment or other capital goods to firms.

- 4) Wyoming Farm Loan Board

a. Water Development Loan

The farm loan board is authorized to issue its nonnegotiable debenture bonds for a sum not in excess of 33 1/3% or \$60 million, whichever is less, of the permanent funds of Wyoming which shall be available for water development loans (construction of water development projects). The treasurer of Wyoming is directed to invest and keep invested a sum not to exceed 33 1/2% or \$60 million, whichever is less, of the permanent funds of Wyoming in the bonds of the Wyoming farm loan board; 1/2 of this sum shall be used for loans to small water development projects.

|               |                      |
|---------------|----------------------|
| Securities    | 1st Mortgage on land |

|              | Loans not to exceed the aggregate amount of \$300,000.00 |
| Maximum Term | 40 Yrs                                                   |
| Interest     | Reasonable Amount                                        |

State of Wyoming  
Financing Programs

4) Wyoming Farm Loan Board (continued)

c. Joint Powers Loans

The farm loan board is authorized to negotiate and make loans to one or more agencies, or joint powers boards presently existing (permitted or created pursuant to the statutes) from the permanent funds of Wyoming not otherwise obligated and not to exceed \$40 million including all loans previously made and outstanding.

|               |                                                      |
|---------------|------------------------------------------------------|
| Securities    | Title of land on which facility is to be constructed |
| Maximum Amt   | Not stated                                           |
| Interest Rate | 4% - 8% depending on current commercial rates        |

d. Farm Loans

The purpose of the Farm Loan system is to foster and encourage agriculture, dairying, livestock raising and the development and improvement of farm land.

|               |                                                                                   |
|---------------|-----------------------------------------------------------------------------------|
| Securities    | 1st mortgage                                                                      |
| Maximum Amt   | Not in excess of 50% of appraised value of mortgaged land<br>\$1,000 - \$150,000. |
| Interest Rate | 4% - 8%                                                                           |

e. Coal Excise Tax Loans and Grants

Funds may be used for impact related projects to replace, repair or maintain an existing so long as same is required due to coal impact.

State of Kentucky  
Financing Programs

1) IRB's

2) Kentucky Business Development Corporation (BDC)

The BDC consists of privat pooled capital to finance industrial building projects that are high risk requiring large amounts of capital where no other financing is available. Terms and amounts are determined by the director of BDC but roughly fall into the following:

|                |                                                 |
|----------------|-------------------------------------------------|
| Maximum Term   | 20 Yrs.                                         |
| Maximum Amount | \$1,000,000.                                    |
| Interest Rate  | 2-3% above prime rates                          |
| Security       | 1st or 2nd mortgages on real estate or chattels |

3) Kentucky Industrial Development Finance Authority

KIDFA is an agency of the government separate from the executive branch or any administrative department created to promote and aid the development of industrial and manufacturing enterprises in the Commonwealth through loans for industrial building projects or industrial subdivisions. Monies are appropriated by the General Assembly to the Industrial Development Fund which also includes grants, gifts and repayments.

- a. Loans are primarily made through Local Development Agencies (non-profit) where the LDA provides 10% of the financing and a firm commitment exists from other sources for 40-50% of the funds. The KIDFA supplies:

|           |                       |
|-----------|-----------------------|
| 40% costs | building projects     |
| 50% costs | sub-division projects |

- b. Direct loans are given to industry with participation of a business development corporation or federal agencies

There are no set rates or terms for KIDFA loans but they roughly fall into the following:

|               |                                          |
|---------------|------------------------------------------|
| Maximum Term  | 25 Yrs.                                  |
| Amount        | \$50,000 - \$500,000.                    |
| Interest Rate | Generally 8% (as determined by director) |

4) Capital Funds for Area Development Districts(New Law)

Funds are allocated by General Assembly to a special fund for reclamation and industrial site development projects. Funds may be used for construction, property acquisition, engineering and design, maintenance, and equipment. The law allocates specific amounts available to each district. Administered by Dept. for Finance and Administration.

5) Coal Severance Economic Aid Fund (New Fund - 1976)

This fund will be used to finance capital improvement projects in the coal producing counties of the State for industrial development and reclamation. A formula has been established for allocation of funds based on the amount of tax collected and the income of the county.

6) Local Industrial Development Foundations

Most communities have an active non-profit industrial development foundation

State of Maryland  
Financing Programs

1) Maryland Housing Insurance Program

Maryland's Housing Fund (MHF) received initial monies from issue of G.O. bonds and must be self-supporting from premiums and fees.

The program was established to meet the housing needs of those from all levels of income by insuring mortgages which removes the risk to the private lender. The key criteria is the ability of the individual to meet mortgage obligation from a qualified lender. This tends to eliminate people in the low income bracket from receiving the insurance from the State.

The housing insurance program is presently limited to 1 - 4 family residential units. When there has been adequate default ratio experience and the reserve fund is solid, it is likely they will expand to multi-family insurance.

The MHF has established four insurance plans which apply to both existing and proposed structures. The significant difference is the initial loan ratios. The following chart indicates the initial loan ratios, MHF upper coverage and appropriate premium plans.

| Premium Plans      |              |               |               |               |
|--------------------|--------------|---------------|---------------|---------------|
| Initial Loan-Ratio | 80%          | 90%           | 95%           | 100%          |
| MHF upper coverage | 20%          | 20%           | 25%           | 25%           |

\* Coverage on loans insured through a term premium plan may be continued after expiration of the term by requesting continued coverage on an annual renewal basis.

State of Maryland  
Financing Programs  
(page 2)

2) Maryland Industrial Development Authority (MIDFA)

MIDFA was established to provide state insurance for industrial mortgage loans and to assist going businesses which are financially solid but not of sufficient size or credit to obtain funds through the (uninsured) industrial revenue bond market. MIDFA insures mortgage loans for financing acquisition, construction, rehabilitation and/or improvements of industrial plants and equipment thereby allowing financing through: a. IRB's, or b. mortgage loans arranged directly through the financial institutions. When evaluating loans considerable weight is placed on the socio-economic impact of each project. Additionally sound credit practices, such as are commonplace in commercial banks, are followed by the Authority

|                                                       | Mortgage loan amt. | Term   | MIDFA insurance/MIDFA premium |      |

| Lands & buildings                                     | 100%               | 25 yrs | 90% of cost                   | 0.5% |
| Maximum Amt. MIDFA insurance per project: \$5 million |                    |        |                               |      |

3) Industrial Development Corporations

When a county declares an acute state of unemployment exists, they are authorized to raise, contribute and deliver sums of money to individual development corporations operating with said county to encourage and assist new and existing business and individuals. In order to provide adequate funding to the development corporations, the county may issue bonds not to exceed 0.2% of the total assessed valuation of all property within the county subject to taxation of full county tax rate. These industrial development bonds shall have interest not exceeding 5.5% for 30 year maximum term and become the obligation of the county. Certificates of indebtedness may also be issued for terms not exceeding 5 years.

State of Massachusetts  
Financing Programs

- 1) Massachusetts Community Development Finance Corporation (CDFC)  
The CDFC was created to provide equity and venture capital to finance businesses and create jobs. They are targeted only to those areas where economic conditions are severe.

Initially \$10 million was invested in CDFC through issue of G.O. bonds. In time, a modest return on investment will allow the organization to be self-sustaining. CDFC is also authorized to accept grants, gifts, and loans from any federal or state agency. Project by project capital investments are made to non-profit community development corporations (CDC's), local development corporations (LDC's), and local industrial authorities. Financing can be provided in the form of debt, preferred or common stock, or other capital participation instruments. If equity is used, CDFC is prohibited from owning more than 49% of the stock of any enterprise.

CDFC is also authorized to establish a limited small business investment corporations (SBIC) which, in turn, may provide equity capital or loans to small businesses meeting CDFC criteria.

Wherever possible, CDFC will co-venture with other financial intermediaries in making loans. CDFC takes the high, front-end risk and the financial institution assumes the reasonable market risk.

- 2) Massachusetts Industrial Mortgage Insurance Agency (MIMIA)  
Under this plan, an eligible borrower is an industrial, recreational, research and development enterprise when there is reasonable assurance of the ability to make payments on the loan. In conjunction with the above, eligible borrowers could include realty holding companies, private developers, CDC's, community foundations holding title to industrial realty. Any payments required to be paid by MIMIA are derived solely from the mortgage insurance reserve fund.

3) Massachusetts Business Development Corporation (BDC)

The BDC was created by private enterprise to provide funds for industrial growth and expansion of employment in the Commonwealth. It does not compete with banks or other conventional lenders since it makes loans only to borrowers who are not able to obtain financing, and the loans are normally medium or long term and in secondary position to other financing.

The company obtains funds from the sale of its stock and from loans from financial institutions such as banks and insurance companies which, by becoming Members of the Company, agree to lend money to it upon call, under conditions and limits as set forth in the Company's charter.

4) IRB's

State of Michigan  
Financing Programs

1) IRB's

2) Michigan Industrial Development Corporations (IDC)

An IDC is an organization formed by local firms and individuals interested in promoting the local economy by offering incentives to commercial and industrial firms to locate within their community. The IDC can acquire or build plants and other facilities for sale or lease to firms to locate within their community. Initial capital comes from sale of stock or memberships. Additional funds can be raised by sale of debentures, borrowing from financial institutions, revenues from sales and rentals, or loans from the SBA under "502" loan program.

3) Economic Development Corporations

An EDC can acquire, develop, and maintain all lands, buildings, machinery, furnishings, and equipment necessary to complete a project plan. The potential uses of the EDC are diverse and EDC's primarily complement state and local economic development efforts through the issuance of tax exempt revenue bonds. They also participate in federal programs such as EDA, SBA "502" program.

State of Mississippi  
Financing Programs

1) Small Businessman's Loan Guaranty Program

This program received its funds through state appropriation and is empowered and authorized to accept federal and private grant funds for additional guarantee authority so long as the Small Businessman's Loan Fund and Guaranty Fee Fund do not exceed \$1 million liability. The fund was created to provide guarantees expansion and development of business. In order to be eligible, the applicant must be unable to obtain financing elsewhere. The amount of outstanding guarantees may not exceed four times the combined total amount in the Small Businessman's and Guaranty Fee Funds.

|                  |                                                                          |
|------------------|--------------------------------------------------------------------------|
| Maximum Loan     | \$50,000.00                                                              |
| Maximum Term     | 10 Yrs.                                                                  |
| Maximum Interest | Current Legal Rate                                                       |
| Maximum Guaranty | 75% - not to exceed \$37,500.00                                          |
| Guaranty Fee     | 1% per annum of the guaranteed<br>portion to be remitted to the<br>state |

## NORTH CAROLINA

The North Carolina Business Development Corporation is privately owned and managed but works closely with the State government. Financed by sale of stock, and loans are also obtained from member financial institutions.

Manufacturing and processing corporations are eligible for NCBDC loans ranging from \$50,000. to \$1,000,000. for a 5 - 20 year term at 6% interest (possible more depending on condition of the market). On occasion member financial institutions (banks) participate in the loan. NCBDC is also authorized to participate in a bank loan.

State of Oklahoma  
Financing Programs

- 1) The Oklahoma Industrial Finance Authority  
This Authority was established by law and permitted to sell general obligation bonds (in an amount not to exceed \$20 million outstanding at any one time) to initiate its activities. Its purpose is to aid in financing new or expanding industry by making loans to local incorporated industrial development agencies, including public trust authorities, for specific industrial projects.

Method of Financing

|                              |                     |
|------------------------------|---------------------|
| Maximum amt. of project cost | 25%                 |
| Maximum loan amt.            | \$1 million         |
| Interest rate                | 8%                  |
| Security                     | 1st or 2nd mortgage |

Local participation is favored with local agencies and other sources contributing 75% of the project cost. The only restriction on OIFA loans is that they must be applied to manufacturing projects only.

- 2) IRB's

- 3) SBIC's

- 4) Oklahoma Business Development Corporation (BDC)  
The BDC is a privately owned development company. The membership is composed of shareholders and members which are financial institutions, mostly banks. BDC provides intermediate and long term industrial loans to small businesses, locally owned firms and local branches of out-of-state firms provided they have first applied for funds through conventional lending sources.

Loans are made for the purchase of land, construction of buildings, the purchase of machinery and equipment, and for working capital.

State of Kansas  
Financing Programs

1) IRB's

2) Kansas Development Credit Corporation (KDCC)

The KDCC was created to meet the long and short term financial needs of businesses and industry. It supplements existing sources of credit to foster new and expanding business and industry.

KDCC was established by the Kansas State Chamber of Commerce and the Kansas Bankers' Association and operates by borrowing money from more than 400 members banks lending it to manufacturers and processors in Kansas.

These loans can range up to \$250,000 and are available to companies unable to find financial assistance from conventional lenders.

Under the "Kansas Funds Promote Kansas Jobs" program, KDCC can purchase the Small Business Administration (SBA) guaranteed portion of new loans or those already held by Kansas banks thus releasing their funds committed to SBA guaranteed loans and allowing them to make new SBA guaranteed loans which would not normally be made.

State of Indiana  
Financing Programs

- 1) IRB's
- 2) Indiana Economic Development  
(mortgage, equipment and small business loan guaranties)

The General Assembly appropriates funds to the Mortgage Insurance Fund. 40% of these funds available for guaranteeing mortgages in rural areas and small municipalities. 60% are available for same activities in the rest of the state. The amount of principal obligations of all mortgages so insured outstanding at any one time shall not exceed ten times the amount of money in the fund.

Mortgage and Equipment Guaranty Fund

|                         |              |
|-------------------------|--------------|
| Maximum Guaranty Amount | \$1,000,000. |
| Maximum Maturity        | 25 Yrs.      |

The General Assembly also appropriates funds to the small business commercial and industrial fund which is used for encouraging and assisting small business enterprises.

|                         |             |
|-------------------------|-------------|
| Maximum Guaranty Amount | \$ 100,000. |
| Maximum Maturity        | 10 Yrs.     |

- 3) Industrial Development Loans  
(Direct loans to municipalities)

The law established a \$3,000,000. loan fund enabling Indiana communities to borrow up to \$200,000. for a) construction, extension of sewer lines; b) water lines; 3) sidewalks/streets; 4) purchase of real property. Loans exceeding \$50,000 shall be matched on a one to one basis by the community.

Interest rate is established by the State Board of Finance at the time of approving the loan. Maximum term is ten years.

State of Illinois  
Financing Programs

1) Illinois Industrial Development Authority

The IIDA received \$1 million appropriation in 1969 (inception) to help create the greatest number of permanent new jobs possible in labor surplus areas. Assistance is concentrated in the area of industrial and manufacturing projects and priority is given to projects partially financed from other sources.

The Authority may make loans up to 25 years in length with interest rates consistent with the standard bank prime rates operable in the project area on the effective date of the loan.

State of Delaware  
Financing Programs

Delaware Industrial Financing Plan

- 1) The DIFP was established to aid small businesses in expanding or commencing in agricultural and urban areas through:
  - a. IRB's - annual service fee: \$400.00
  - b. G.O. Bonds  
Issue of G.O. bonds is limited to \$3 million per project. The minimum project cost is \$200,000. The total amount of G.O. bonds outstanding is limited to \$50 million as provided in the revolving fund authorization. The annual service on each project is 1 1/4% of the annual payment of interest plus principal

Ronald D. Lehr, Deputy Director  
Division of Budget and Management  
Office of the Governor

DATE : October 11, 1976

FROM: James Stey, Budget Analyst  
Division of Budget and Management  
Office of the Governor

SUBJECT: State Loan Programs

*J. Stey*

In FY 76 the State of Alaska loaned \$56.8 million dollars to its residents. Farmers, fishermen, and businessmen used twenty percent of this sum to develop their respective industries. Veterans borrowed seventy three percent of this total to finance personal expenditures and to build or buy new homes. Students used the remaining seven percent of the funds to attend vocational schools and universities. During the next ten to twenty years, the state shall receive roughly \$4.1 million dollars in annual interest payments on the value of loans issued in FY 76. Excluding the costs of delinquent notes, defaults and administrative expenses, this represents approximately a seven and a third percent return on the original investment. Some financial analysts estimate that the state could obtain a higher return on their reserve revenue by investing it in first class bonds and federal securities. This suggests that the State's loan programs are more than just another investment portfolio. The purpose of this memo is to provide a brief examination of these loan programs. Specific attention is given to the legislative intent administrative goals and the organization of these programs. Information concerning the value of outstanding loans, statutory loan limitations and program accomplishments is available in the attachments at the end of this memo.

The state maintained six revolving loan funds in FY 76: Small Business Development, Tourism, Commercial Fishing, Veteran's Affairs, Agriculture, and Student Financial Aid. In addition to these programs, four new loan funds (Water Resources, Fisheries Enhancement, Senior Citizen Housing Development, Child Care Facilities) were established and funded for operations in FY 77. The Alaska State Development Corporation, and the Small Business Development Corporation maintain revolving loan funds. However, today these loan funds are inactive. The Power Project Development Loan Fund is also a new loan fund in FY 77. It is administered by the Power Development Authority. However, those loan funds whose operations are outside the control of line agencies are not a subject of this memo. Attachment A lists the goals and objectives, as defined by program managers, of these ten loan fund programs. In several instances these goals and objectives are quite broad and fail to identify the ultimate aims (end products) of the given program. Generally, program managers are more concerned about the manner and not the reasons for operating their loan programs. The legislative intent pertinent to each loan fund underscores the significance of function over purpose. Only five of the ten loan fund legislative acts state the intentions (goals) of the established fund. (see Attachment B) However, each act precisely

defines the duties and powers of the commissioner relative to each loan fund. Thus it is not unusual for program managers to confuse program activities (making loans) with what would seem to be the real program objectives, social or economic development. For example, some program managers argue that their objective is to make as many good loans as possible simply because the law compels them to do so. This is demonstrated on attachment C, which delineates the performance measures of the loan fund programs that were active in FY 76. These workload measures provide very little information with which to evaluate the extent to which each fund contributes to the development of Alaska or its citizens.

As an alternative measure of importance, it might seem that a review of the capitalization limits (total appropriated dollars) of each revolving fund would suggest the priority of each loan fund. However this is not the case with our revolving loan funds because they do not genuinely revolve, i.e., they are not self-supporting. Each revolving fund contains a basic appropriation. In addition to this, most funds have a "back door" financial agreement with the Department of Revenue. Through this arrangement, loan fund managers may sell virtually all of their loans (mortgages) to this Department. Hence loan fund managers and loan fund committee members in effect set the state's loan policy by deciding on the type, quality, and value of loans that are issued. The bar graph on the following page summarizes the result of loan fund activity in FY 76. Note that the value of housing loans made to veterans is roughly two and a half times the value of loans made to the tourist, fishing and small business industries.

The size and value of the loan programs have increased steadily since 1970. Still, there does not appear to be any legislative or administrative checks on the quality and/or volume of loans administered by the revolving funds. Attachment D contains a list of the value of outstanding loans and the holders of these loans, i.e., the revolving funds and the Treasury Department. It also identifies the capitalization limits (general appropriations made to each revolving fund) and the statutory limits placed on the value of loans sold to the state Treasury. At the present time only 4 out of 10 loan funds have limits placed on the total value of loans which could be sold to the Treasury.

Although the State does receive interest on these loans, these programs are not primarily intended to be income-producing assets. A good deal of these loans have been made to what banks would rate as high risk industries, e.g., commercial fishing and agriculture. Furthermore the rate of interest which the state charges its borrowers tends to be significantly lower than the interest rates of commercial banks for similar loans (see attachment E). It is generally argued that the state operates loan programs to enhance economic development through the provision of goods and services which otherwise would not be available in the private sector. Yet, there is virtually no concrete information to confirm that these programs have influenced development.

# LOAN FUND ACTIVITY IN FY 76

In 1973 the consolidation of the various loan programs was a subject of issue analysis. It was thought that; "consolidation would lead to more uniform procedures, decision criteria, and result in clearer public understanding and less arbitrariness in granting loans." Managers of the loan programs resisted the consolidation, maintaining that it would: (1) raise operating costs without producing commensurate savings, and (2) undermine the unique services provided by each loan program. It appears that the bulk of the information presented to the Budget Review Committee was simply a compilation of memos from loan fund managers. Evidently, this information was persuasive enough to cause the BRC to recommend against merger at that time.

Some of the factors which precipitated this examination in 1973 are germane to issue analysis today. For instance there are 10 active loan programs which often share common objectives, i.e., economic development, personal financial assistance, and education and social service developments. These programs are controlled by 5 independent management units. For example, the Developmental Loans budget request unit (BRU) envelopes six loan funds while each of the remaining four loan funds; Senior Citizen Housing Development, Student Aid, Veterans' Affairs, Agriculture, is a separate BRU.

Furthermore, there are very few uniform procedures, standard decision criteria, output measures etc. for each loan program. For example several loan funds have different definitions for the rate of delinquency, or for the factors which constitute a "good" or "bad" loan. Consequently it is extremely difficult to compare even the most basic loan fund activity.

The purpose of this memo has been to provide background on our loan fund programs. As the state continues to expand its loan programs, it would seem appropriate that the state do the following things:

1. devote some of its resources to the development of a solid policy concerning the objectives and the administration of loan fund programs.
2. develop a mechanism for evaluating the effectiveness (impact) of each loan fund program on the overall economic and social development in Alaska.
3. study the administrative efficiency of our loan fund programs.

TOTAL LOAN FUND PROGRAM FY 1976-----\$1,385,609\*\*

\*. This is a deferred loan program whereby the payment of interest and principal may be postponed up to 5 years.

\*\* It should be noted that if the state employed commercial rates of interest, it could increase its annual revenues by as much as \$1.39 million dollars. This figure is based on the assumption that there would not be a significant decline in the demand for state loans at commercial rates of interest.

\*\*\* These interest rates were obtained from the loan department of Behrends Bank.

## House of Representatives

October 3, 1977

Dear Mike,

Enclosed are all of the materials I have concerning the State's loan programs. Sorting out the relevant policy considerations from this jumble is not easy. I spoke with Terry over the weekend and we feel that as of now the RRDF should not seek to "fold in" the renewable resource-related loan programs. We will be able to fund them if our planning and evaluation process shows them to be desirable investment of the Fund, however. Nevertheless, the political, bureaucratic, strategic etc. realities lead us to feel that the RRDF will have enough on its hands to manage its funds wisely. Grand reorganization schemes over the Departments or the loan programs should be part of a "phase II," once we get what is spelled out in our interim report through the legislature. Of course, we remain open to House or Senate Permanent Fund Committee recommendations regarding the loan programs.

Yours,

A handwritten signature in cursive script, appearing to read "Tom".

Tom Singer

Agricultural Revolving Loan Fund

Statutory Authority: AS 03.10.020

Administrative Regulations: 11 AAC 39.010  
11 AAC 39.030

Objective: "...to promote the more rapid development of agriculture as an industry throughout the State by means of long-term, low interest loans."

Eligibility: Alaskan resident farmers, homesteaders, or like partnerships and corporations. Prior experience in type of operation loan sought for; at least 2 years experience in Alaska for chattel loans, 3 years experience in Alaska for farm development loans.

Terms: No other financing available to borrower.

Loan Types: Short term: maximum \$25,000/max. 1 year term/  
max. 6% interest.  
Farm development: maximum \$200,000/ max. 30  
year term/max. 6% interest.  
Chattel: maximum \$100,000/max. 7 year term/  
max. 6% interest.  
Irrigation: no maximum stated/max. 10 year  
term/max. 4% interest..

Board shall fix terms of repayment and set interest rates not to exceed those listed above.

Implementation: Money usually given directly to borrower. If bank work involved, bank disperses funds at no additional cost to borrower.

Fund limited to \$5,000,000. The Department of Revenue is required to purchase all loans.

Commercial Fishing Revolving Loan Fund

Statutory Authority: AS 16.10.300

Administrative Regulations: 3 AAC 80.100

Objective: *...to promote the development of a predominantly resident fishery and continued maintenance of commercial fishing gear and vessels throughout the State by means of long-term low interest loans.*

Eligibility: Loans may be made for repair, upgrading or restoration of existing vessels and gear; purchase of entry permits, gear, and the construction and purchase of vessels. Applicant must be commercial fisherman; Alaskan resident for continuous 5 year period; holder of commercial fishing license for 3 year period.

Terms: Maximum \$150,000/max. 15 year term/max. 7% interest.  
Loans secured by first lien and appropriate security agreements (except lien in favor of state is not required for loans guaranteed fully by federal government under Federal Shipping Financing Act). Loans may not exceed 75% of appraised value of collateral used to secure loans.

*Fund limited to \$1,000,000*

Fisheries Enhancement Loan Program

Statutory Authority: AS 16.10.500 - 550

Administrative Regulations: None

Objective: "...to promote the enhancement of the state's fisheries by means of long-term low interest loan for hatchery planning and construction."

Eligibility: Loans made to non-profit salmon hatchery permit holders; or qualified non-profit corporation or local non-profit corporation approved by qualified regional association for preconstruction activities necessary to obtain permit.

Terms: Maximum loan is 75% of total cost not to exceed \$300,000. for private non-profit corporation and \$3,000,000. for non-profit corporation established or approved by qualified regional association.  
25 year term/max 8% interest  
Loans secured by acceptable collateral.

Fund limited to \$200,000,000, total loanable each year set by legislature: \$3,000,000 in FY '77, \$10,000,000 in FY '78.  
The Department of Revenue is required to purchase these amounts, and the ceiling goes to \$200,000,000 in FY '79.

Tourism Revolving Loan Fund

Statutory Authority: AS 45.090

Administrative Regulations: 3 AAC 84.010  
3 AAC 84.080

*Objective: None stated*

**Eligibility:** Funds to be used for construction of new facilities. Applicants may be any business involved in tourist industry in Alaska which shows potential for growth of business, increase in employment, or increase in services available to tourists.

**Terms:** State participation in loan not to exceed \$3 million and, if loan in excess of \$150,000, private financial institution must participate in not less than 20% of total loan amount. Loans made for up to 20 years at 8% interest on state's share. The participating financial institution shall administer the loan for a fee not to exceed one half of 1%.  
Loan secured by acceptable collateral is not to exceed 75% of appraised value of collateral.  
*\$1,000,000 available at 2 1/2% from the sale of commercial paper.*

*Dept. of Revenue must purchase all ~~small~~ tourism loans.*

Water Resources Revolving Loan Fund

Statutory Authority: AS 45.86.019 - .050

Administrative Regulations: None

Objective: *"to develop and conserve in the public interest the water resources of Alaska."*

Eligibility: Public utilities that can demonstrate economic and technical feasibility of project. Emphasis on hydroelectric projects.

Terms: Loans at 6% interest and limited to 7 years or start of project construction, whichever is sooner.

Management: *Commissioners of CRA, Commerce, Administration, and Revenue constitute the decision-making committee.*  
*\$2,500,000 was appropriated last year.*

Economic

In FY 76 the State of Alaska loaned \$56.8 million dollars to its residents. Farmers, fishermen, and businessmen used twenty percent of this sum to develop their respective industries. Veterans borrowed seventy three percent of this total to finance personal expenditures and to build or buy new homes. Students used the remaining seven percent of the funds to attend vocational schools and universities. During the next ten to twenty years, the state shall receive roughly \$4.1 million dollars in annual interest payments on the value of loans issued in FY 76. Excluding the costs of delinquent notes, defaults and administrative expenses, this represents approximately a seven and a third percent return on the original investment. Some financial analysts estimate that the state could obtain a higher return on their reserve revenue by investing it in first class bonds and federal securities. This suggests that the State's loan programs are more than just another investment portfolio. The purpose of this memo is to provide a brief examination of these loan programs. Specific attention is given to the legislative intent administrative goals and the organization of these programs. Information concerning the value of outstanding loans, statutory loan limitations and program accomplishments is available in the attachments at the end of this memo.

The state maintained six revolving loan funds in FY 76: Small Business Development, Tourism, Commercial Fishing, Veteran's Affairs, Agriculture, and Student Financial Aid. In addition to these programs, four new loan funds (Water Resources, Fisheries Enhancement, Senior Citizen Housing Development, Child Care Facilities) were established and funded for operations in FY 77. The Alaska State Development Corporation, and the Small Business Development Corporation maintain revolving loan funds. However, today these loan funds are inactive. The Power Project Development Loan Fund is also a new loan fund in FY 77. It is administered by the Power Development Authority. However, those loan funds whose operations are outside the control of line agencies are not a subject of this memo. Attachment A lists the goals and objectives, as defined by program managers, of these ten loan fund programs. In several instances these goals and objectives are quite broad and fail to identify the ultimate aims (end products) of the given program. Generally, program managers are more concerned about the manner and not the reasons for operating their loan programs. The legislative intent pertinent to each loan fund underscores the significance of function over purpose. Only five of the ten loan fund legislative acts state the intentions (goals) of the established fund. (see Attachment B) However, each act precisely

72

defines the duties and powers of the commissioner relative to each loan fund. Thus it is not unusual for program managers to confuse program activities (making loans) with what would seem to be the real program objectives, social or economic development. For example, some program managers argue that their objective is to make as many good loans as possible simply because the law compels them to do so. This is demonstrated on attachment C, which delineates the performance measures of the loan fund programs that were active in FY 76. These workload measures provide very little information with which to evaluate the extent to which each fund contributes to the development of Alaska or its citizens.

As an alternative measure of importance, it might seem that a review of the capitalization limits (total appropriated dollars) of each revolving fund would suggest the priority of each loan fund. However this is not the case with our revolving loan funds because they do not genuinely revolve, i.e., they are not self-supporting. Each revolving fund contains a basic appropriation. In addition to this, most funds have a "back door" financial agreement with the Department of Revenue. Through this arrangement, loan fund managers may sell virtually all of their loans (mortgages) to this Department. Hence loan fund managers and loan fund committee members in effect set the state's loan policy by deciding on the type, quality, and value of loans that are issued. The bar graph on the following page summarizes the result of loan fund activity in FY 76. Note that the value of housing loans made to veterans is roughly two and a half times the value of loans made to the tourist, fishing and small business industries.

The size and value of the loan programs have increased steadily since 1970. Still, there does not appear to be any legislative or administrative checks on the quality and/or volume of loans administered by the revolving funds. Attachment D contains a list of the value of outstanding loans and the holders of these loans, i.e., the revolving funds and the Treasury Department. It also identifies the capitalization limits (general appropriations made to each revolving fund) and the statutory limits placed on the value of loans sold to the state Treasury. At the present time only 4 out of 10 loan funds have limits placed on the total value of loans which could be sold to the Treasury.

Although the State does receive interest on these loans, these programs are not primarily intended to be income-producing assets. A good deal of these loans have been made to what banks would rate as high risk industries, e.g., commercial fishing and agriculture. Furthermore the rate of interest which the state charges its borrowers tends to be significantly lower than the interest rates of commercial banks for similar loans (see attachment E). It is generally argued that the state operates loan programs to enhance economic development through the provision of goods and services which otherwise would not be available in the private sector. Yet, there is virtually no concrete information to confirm that these programs have influenced development.

# LOAN FUND ACTIVITY IN FY 76

In 1973 the consolidation of the various loan programs was a subject of issue analysis. It was thought that; "consolidation would lead to more uniform procedures, decision criteria, and result in clearer public understanding and less arbitrariness in granting loans." Managers of the loan programs resisted the consolidation, maintaining that it would: (1) raise operating costs without producing commensurate savings, and (2) undermine the unique services provided by each loan program. It appears that the bulk of the information presented to the Budget Review Committee was simply a compilation of memos from loan fund managers. Evidently, this information was persuasive enough to cause the BRC to recommend against merger at that time.

Some of the factors which precipitated this examination in 1973 are germane to issue analysis today. For instance there are 10 active loan programs which often share common objectives, i.e., economic development, personal financial assistance, and education and social service developments. These programs are controlled by 5 independent management units. For example, the Developmental Loans budget request unit (BRU) envelopes six loan funds while each of the remaining four loan funds; Senior Citizen Housing Development, Student Aid, Veterans' Affairs, Agriculture, is a separate BRU.

Furthermore, there are very few uniform procedures, standard decision criteria, output measures etc. for each loan program. For example several loan funds have different definitions for the rate of delinquency, or for the factors which constitute a "good" or "bad" loan. Consequently it is extremely difficult to compare even the most basic loan fund activity.

The purpose of this memo has been to provide background on our loan fund programs. As the state continues to expand its loan programs, it would seem appropriate that the state do the following things:

1. devote some of its resources to the development of a solid policy concerning the objectives and the administration of loan fund programs.
2. develop a mechanism for evaluating the effectiveness (impact) of each loan fund program on the overall economic and social development in Alaska.
3. study the administrative efficiency of our loan fund programs.

TOTAL LOAN FUND PROGRAM FY 1976-----\$1,385,609\*\*

\* This is a deferred loan program whereby the payment of interest and principal may be postponed up to 5 years.

\*\* It should be noted that if the state employed commercial rates of interest, it could increase its annual revenues by as much as \$1.39 million dollars. This figure is based on the assumption that there would not be a significant decline in the demand for state loans at commercial rates of interest.

\*\*\* These interest rates were obtained from the loan department of Behrends Bank.

Loans Approved Since 1972  
(as of March 15, 1977)

Re: An Act to the water resources  
revolving loan fund *corresp*

Dear Representative Gruening:

We feel that the utilization of state revenues available from non-renewable resource development and placed in the "permanent fund" can be used by public utilities to the benefit of the Alaska population. The existing bill makes loan funds available for electric and water utilities only. Our recommendation would be that all public utilities as defined in AS 42.05.701(2)(A) and (C) be eligible to obtain financing under this proposal.

Of paramount importance is that the legislature recognize utilities for what they really are--cost plus contractors. If the state can assist in making funds available at reasonable rates, the ratepayer who is also the Alaska taxpayer will be the one who ultimately benefits.

We find that the interest range being offered in the bill (not less than 3% or more than 5%) is extremely generous. The utilities are familiar with having to pay the market interest rate for their money and are prepared to continue to do so, if this low rate of return on state money is object to.

In summary, we feel a bill offering state monies to certain types of utilities should be expanded to all state regulated utilities. The money made available under a revolving loan concept would enable the rapidly expanding utilities in the state to finance their needed expansion and upgrading with a loan whose term approximate the life of the assets being equipped. The money is obtained in Alaska and spent in Alaska for Alaskans. Any reduction in the interest rate over that currently being paid by the utilities will reduce their revenue requirements, thereby providing for lower rates which impact the Alaskan ratepayer.

If you desire further information, please feel free to contact me.

Sincerely,

Robert B. Smith  
President

1 IN THE HOUSE

2 HOUSE BILL NO. 356

3 IN THE LEGISLATURE OF THE STATE OF ALASKA

4 TENTH LEGISLATURE - FIRST SESSION

5 A BILL

6 For an Act entitled: "An Act relating to the water resources revolving loan  
7 fund."

8 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

9 \* Section 1. AS 45.36.010 is amended to read:

10 Sec. 45.36.010. FUND ESTABLISHED. There is established as a  
11 separate fund the water resources revolving loan fund. Loans from this  
12 fund are to be used to develop and conserve in the public interest the  
13 water resources of Alaska, using state revenues from nonrenewable re-  
14 source [MINERAL] development.

15 \* Sec. 2. AS 45.36.020 is repealed and re-enacted to read:

16 Sec. 45.36.020. FUND UTILIZATION. (a) Loans from the fund shall  
17 be for a term not to exceed 50 years, and the rate of interest shall be  
18 not less than three nor more than five per cent per year on the unpaid  
19 balance. The repayment schedule shall be as determined by the depart-  
20 ment. Repayment of a loan shall commence at the date of commercial  
21 operation of the project or 10 years from the date the loan is granted,  
22 whichever is sooner.

23 (b) The loans may be used for capital construction projects, for  
24 hydroelectric generation and potable water supply including surface  
25 storage and groundwater sources and transmission of water from surface  
26 storage to the existing distribution system, and development of hydro-  
27 electric generating facilities including transmission of power to the  
28 load center. Loans may be made to applicants for new or existing pro-  
29 jects including feasibility and preconstruction engineering studies,

1 expenses incurred in securing necessary permits and licenses, design of  
2 the project and construction of capital improvements. Existing hydro-  
3 electric and water supply projects may be expanded or rehabilitated with  
4 loan funds under this chapter if the rehabilitation and expansion is a  
5 capital improvement project.

6 (c) Loans shall be repaid to the fund by the borrower from revenue  
7 derived from the sale of electric power or water.

8 \* Sec. 3. AS 45.36.040(b) and (c) are repealed and re-enacted to read:

9 (b) There is created within the department the Water Resources  
10 Revolving Loan Fund Committee chaired by the commissioner or his deputy,  
11 and including as members the director of the division of energy and  
12 power development and the director of the division of business loans.  
13 The committee shall review all applications referred to it for approval  
14 by the department.

15 (c) The department shall establish a priority list for the ap-  
16 proval of project applications based upon a determination of which  
17 projects will better serve the interests of the state. An applicant may  
18 appeal the level of priority assigned to his application by requesting a  
19 review of the list of priorities by the committee. The committee, upon  
20 sufficient notice and a public hearing, may change an assigned priority.  
21 Applications not approved due to a lack of funds will retain the  
22 priority assigned and may be held for reconsideration.

23 \* Sec. 4. AS 45.36.040 is amended by adding a new subsection to read:

24 (d) If the committee finds that preconstruction feasibility and  
25 engineering studies establish that a project is not feasible from either  
26 a technical, economic or financial viewpoint, the department may waive  
27 repayment of loans granted to conduct the studies.

28 \* Sec. 5. AS 45.36.050 is amended to read:

29 Sec. 45.36.050. ELIGIBILITY FOR PROJECT LOANS. A public utility  
HB 356

1 is an eligible borrower for a project loan under this chapter if

2 (1) it is a public utility as defined in AS 42.05.701(2)(A),  
3 and (C);

4 (2) the utility can demonstrate in its loan application that  
5 the project is economically and technically [AND] feasible and, taking  
6 into account the low interest on loans under this chapter, is the most  
7 economical means of furnishing the proposed service.

8 \* Sec. 6. AS 45.86 is amended by adding a new section to read:

9 Sec. 45.86.060. DEFINITIONS. In this chapter,

10 (1) "commissioner" means the commissioner of the Department  
11 of Commerce and Economic Development;

12 (2) "department" means the Department of Commerce and Econo-  
13 mic Development.

Division of Budget and Management  
Office of the Governor

SUBJECT: State Loan Programs

In FY 76 the State of Alaska loaned \$56.8 million dollars to its residents. Farmers, fishermen, and businessmen used twenty percent of this sum to develop their respective industries. Veterans borrowed seventy three percent of this total to finance personal expenditures and to build or buy new homes. Students used the remaining seven percent of the funds to attend vocational schools and universities. During the next ten to twenty years, the state shall receive roughly \$4.1 million dollars in annual interest payments on the value of loans issued in FY 76. Excluding the costs of delinquent notes, defaults and administrative expenses, this represents approximately a seven and a third percent return on the original investment. Some financial analysts estimate that the state could obtain a higher return on their reserve revenue by investing it in first class bonds and federal securities. This suggests that the State's loan programs are more than just another investment portfolio. The purpose of this memo is to provide a brief examination of these loan programs. Specific attention is given to the legislative intent administrative goals and the organization of these programs. Information concerning the value of outstanding loans, statutory loan limitations and program accomplishments is available in the attachments at the end of this memo.

The state maintained six revolving loan funds in FY 76: Small Business Development, Tourism, Commercial Fishing, Veteran's Affairs, Agriculture, and Student Financial Aid. In addition to these programs, four new loan funds (Water Resources, Fisheries Enhancement, Senior Citizen Housing Development, Child Care Facilities) were established and funded for operations in FY 77. The Alaska State Development Corporation, and the Small Business Development Corporation maintain revolving loan funds. However, today these loan funds are inactive. The Power Project Development Loan Fund is also a new loan fund in FY 77. It is administered by the Power Development Authority. However, those loan funds whose operations are outside the control of line agencies are not a subject of this memo. Attachment A lists the goals and objectives, as defined by program managers, of these ten loan fund programs. In several instances these goals and objectives are quite broad and fail to identify the ultimate aims (end products) of the given program. Generally, program managers are more concerned about the manner and not the reasons for operating their loan programs. The legislative intent pertinent to each loan fund underscores the significance of function over purpose. Only five of the ten loan fund legislative acts state the intentions (goals) of the established fund. (see Attachment B) However, each act precisely

defines the duties and powers of the commissioner relative to each loan fund. Thus it is not unusual for program managers to confuse program activities (making loans) with what would seem to be the real program objectives, social or economic development. For example, some program managers argue that their objective is to make as many good loans as possible simply because the law compels them to do so. This is demonstrated on attachment C, which delineates the performance measures of the loan fund programs that were active in FY 76. These workload measures provide very little information with which to evaluate the extent to which each fund contributes to the development of Alaska or its citizens.

As an alternative measure of importance, it might seem that a review of the capitalization limits (total appropriated dollars) of each revolving fund would suggest the priority of each loan fund. However this is not the case with our revolving loan funds because they do not genuinely revolve, i.e., they are not self-supporting. Each revolving fund contains a basic appropriation. In addition to this, most funds have a "back door" financial agreement with the Department of Revenue. Through this arrangement, loan fund managers may sell virtually all of their loans (mortgages) to this Department. Hence loan fund managers and loan fund committee members in effect set the state's loan policy by deciding on the type, quality, and value of loans that are issued. The bar graph on the following page summarizes the result of loan fund activity in FY 76. Note that the value of housing loans made to veterans is roughly two and a half times the value of loans made to the tourist, fishing and small business industries.

The size and value of the loan programs have increased steadily since 1970. Still, there does not appear to be any legislative or administrative checks on the quality and/or volume of loans administered by the revolving funds. Attachment D contains a list of the value of outstanding loans and the holders of these loans, i.e., the revolving funds and the Treasury Department. It also identifies the capitalization limits (general appropriations made to each revolving fund) and the statutory limits placed on the value of loans sold to the state Treasury. At the present time only 4 out of 10 loan funds have limits placed on the total value of loans which could be sold to the Treasury.

Although the State does receive interest on these loans, these programs are not primarily intended to be income-producing assets. A good deal of these loans have been made to what banks would rate as high risk industries, e.g., commercial fishing and agriculture. Furthermore the rate of interest which the state charges its borrowers tends to be significantly lower than the interest rates of commercial banks for similar loans (see attachment E). It is generally argued that the state operates loan programs to enhance economic development through the provision of goods and services which otherwise would not be available in the private sector. Yet, there is virtually no concrete information to confirm that these programs have influenced development.

# LOAN FUND ACTIVITY IN FY 76

In 1973 the consolidation of the various loan programs was a subject of issue analysis. It was thought that; "consolidation would lead to more uniform procedures, decision criteria, and result in clearer public understanding and less arbitrariness in granting loans." Managers of the loan programs resisted the consolidation, maintaining that it would: (1) raise operating costs without producing commensurate savings, and (2) undermine the unique services provided by each loan program. It appears that the bulk of the information presented to the Budget Review Committee was simply a compilation of memos from loan fund managers. Evidently, this information was persuasive enough to cause the BRC to recommend against merger at that time.

Some of the factors which precipitated this examination in 1973 are germane to issue analysis today. For instance there are 10 active loan programs which often share common objectives, i.e., economic development, personal financial assistance, and education and social service developments. These programs are controlled by 5 independent management units. For example, the Developmental Loans budget request unit (BRU) envelopes six loan funds while each of the remaining four loan funds; Senior Citizen Housing Development, Student Aid, Veterans' Affairs, Agriculture, is a separate BRU.

Furthermore, there are very few uniform procedures, standard decision criteria, output measures etc. for each loan program. For example several loan funds have different definitions for the rate of delinquency, or for the factors which constitute a "good" or "bad" loan. Consequently it is extremely difficult to compare even the most basic loan fund activity.

The purpose of this memo has been to provide background on our loan fund programs. As the state continues to expand its loan programs, it would seem appropriate that the state do the following things:

1. devote some of its resources to the development of a solid policy concerning the objectives and the administration of loan fund programs.
2. develop a mechanism for evaluating the effectiveness (impact) of each loan fund program on the overall economic and social development in Alaska.
3. study the administrative efficiency of our loan fund programs.

TOTAL LOAN FUND PROGRAM FY 1976-----\$1,385,609\*\*

\* This is a deferred loan program whereby the payment of interest and principal may be postponed up to 5 years.

\*\* It should be noted that if the state employed commercial rates of interest, it could increase its annual revenues by as much as \$1.39 million dollars. This figure is based on the assumption that there would not be a significant decline in the demand for state loans at commercial rates of interest.

\*\*\* These interest rates were obtained from the loan department of Behrends Bank.

## DEPARTMENT OF COMMERCE &amp; ECONOMIC DEVELOPMENT

FROM: H. Philip Hubbard  
Commissioner

SUBJECT: State Loan Programs

The following is in reply to your request for information on the State loan programs administered by this department.

Purposes: The purpose of each loan program varies with the specific applicable statute. With a possible exception of the Veterans' program, most loan programs were conceived to fill a void in the private money market where the private financial structure of the State would not, or could not, meet the needs of the people. Most of the programs were directed to the enhancement of small entrepreneurs and/or expansion of certain developmental industries or business. A couple of them had the enhancement of social benefits as their goal. Generally, the interest rate charged is lower than that rate charged by banks, and loans are usually considered to be a "higher risk" nature than that normally undertaken by private banks.

Division of Veterans' Affairs

The division administers the World War II Veterans Revolving Loan Fund, providing eligible veterans with home, multiple dwelling, business and personal loans.

| <u>Loan Type</u>     | <u>Interest Rate</u> | <u>Maximum Dollar<br/>Amount</u> | <u>Participation<br/>Requirement</u> | <u>Maximum<br/>Term</u> |
|----------------------|----------------------|----------------------------------|--------------------------------------|-------------------------|
| 1. Farm & Home       | 7.5%                 | \$55,000                         | 10%                                  | 30 years                |
| 2. Multiple Dwelling | 7.5%                 | \$80,000                         | 25%                                  | 25 years                |
| 3. Business Loans    | 7.5%                 | \$100,000                        | 25%                                  | 15 years                |
| 4. Personal Loan     | 7.5%                 | \$10,000                         |                                      | 5 years                 |

Qualified veterans may apply for more than one type of loan, but the aggregate amount may not exceed a total of \$100,000 at any one time.

The program has been in existence since the early part of 1946. As of January 20, 1977, the loan portfolio consisted of 3500 loans at a dollar figure of \$130 million. These figures do not include 100 approved construction loans in the amount of \$5,126,200.00.

| <u>Year</u>    | <u>Loans Made</u> | <u>No. of Loans</u> | <u>Amount</u>    |

| 7/1/63-7/1/64  | 149               | 869                 | 6,519,411.00     |
| 7/1/62-7/1/63  | 208               | 900                 | 6,440,093.00     |
| 7/1/61-7/1/62  | 173               | 851                 | 5,671,835.00     |
| 7/1/60-7/1/61  | 197               | 858                 | 5,422,954.00     |
| 7/1/59-7/1/60  | 215               | 840                 | 4,983,995.00     |

The above figures do not include 100 approved construction loans in the amount of \$5,126,200.00.

Funding for the program is via a revolving loan account whereby the Department of Revenue is required to purchase the mortgages. Administrative costs are offset by a service fee of .5% on each loan.

#### Division of Business Loans

The primary goal of the Division of Business Loans is to provide Alaskans with the goods and service necessary to maintain a reasonable standard of living through long-term, low-interest loans to the local small businesses and commercial fishermen providing the goods and services.

#### Types of Loans:

- (1) The Small Business Revolving Loan Fund enables the division to make loans to small businesses in order to acquire, finance or refinance, or equip businesses, including mining, fishing, and farming equipment. Loans under this program must be secured by acceptable collateral and may not exceed \$100,000 per borrower.
- (2) The Commercial Fishing Revolving Loan Fund enables the division to make loans to individual commercial fishermen for the repair, restoration or upgrading of existing vessels and gear, the purchase of limited entry permits, and the construction or purchase of fishing vessels. Loans must be secured by a first lien and are limited to \$100,000 per borrower.
- (3) The Tourism Revolving Loan Fund enables the division to make loans for the development of tourist related facilities. Under this program the division is authorized to make direct loans up to \$150,000 and participation loans up to \$1,000,000.

- (4) Fisheries Enhancement Loan Program, providing loans up to \$3 million for construction of hatcheries.
- (5) Child Care Revolving Loan Fund, providing loans of up to \$10,000 to enable child care centers to comply with licensing standards.
- (6) Water Resources Revolving Loan Fund, providing loans for seven community hydroelectric projects, specified by legislative intent. They are Petersburg, Petersburg/Wrangell, Sitka, Ketchikan, Kodiak, Anchorage, and Cordova.
- (7) Alaska State Development Corporation's activities have been limited to portfolio maintenance due to available funds being too limited to allow for further lending. Federal rulings make it unlikely that a new bond issue will be made. The corporation will dissolve in 1983.
- (8) The Small Business Development Corporation grants loans in participation with the Federal Small Business Administration under "502" program. These are high risk development loans and the S.B.D.C. portion is five percent of the total loan.

Loans Approved Since 1972  
(as of March 15, 1977)

| <u>Loan Program</u>   | <u>Number of Loans</u> | <u>Amount</u> |
|-----------------------|------------------------|---------------|
| Small Business        | 192                    | \$11,695,575  |

| TOTALS                           | 374                    | \$26,846,449  |

Commitment for \$1,000,000 funds are not disbursed.

Funding: Department of Revenue is required to purchase all small business and tourism loans and \$9 million in commercial fishing loans. After July 1, 1977, Revenue will be required to purchase all commercial fishing loans.

Revenue is required to purchase \$3 million in fisheries enhancement loans this fiscal year and \$9 million the following fiscal year. The ceiling will go up to \$200 million in FY 79.

Fifty thousand dollars (\$50,000) was appropriated for the child care program. Revenue is required to purchase \$200,000.

A \$2,500,000 appropriation was passed last year for the water resources loan fund.

#### Alaska Housing Finance Corporation

The Alaska Housing Finance Corporation is a tax-exempt public corporation and governmental instrumentality created by the Alaska Legislature to assist in the financing, development, sale and rental of dwelling units for persons of lower and moderate income and for persons in remote, underdeveloped or blighted areas of the State.

The Corporation's activities principally involve the purchase of mortgage loans on single family dwellings.

AHFC's principal funds are derived from the sale of tax-exempt bonds to private investors. Most of these funds are used to purchase FHA and VA insured mortgages from commercial banks, savings and loan associations, and mortgage bankers.

All operating costs of the agency are derived from revenue of portfolio investments.

The attached charts show graphic comparisons between the various programs and years. Please note, however, that the figures for Business Loans only include small business, tourism and commercial fishing loans.
