FLOOR COMMENTS FOR

CSSJR 29 (Res)

The essence of the resolution is to urge the EPA to grant the two pulp mills a variance from the national effluent discharge standards for the type and volume of pulp they produce.

They currently discharge 75 lbs of effluent per ton of pulp manufactured, and are operating under a variance from the required standard of 60 lbs/ton. The new "guideline best practical technology" standard is 46 lbs/ton, for which the mills have requested a variance.

To comply with the new standards would require that the mills burn a sludge produced by further processing of the effluent, which according to DEC, would foul the air beyond acceptable levels. On the other hand, the effluent level being discharged into the bays on which the mills are located has not adversely affected water quality, and would not be appreciably improved by the further treatment.

The question involves not merely the mills inability or unwillingness to meet an EPA standard of treatment for treatment's sake, but should be examined in economic terms. These include not only the cost to the mills of complying, and the devastating cost to the communities, the region and the state if they close rather than comply, but also the economics of the international dissolving pulp market. The EPA and the Alaska mills have gotten an enormous amount of pressure to comply from representatives of the three competing mills in Washington state, as well as the public officials of that state. It is important to bear in mind the connection between ITT Rayonier and the competing pulp mills in Port Alice, BC, where EPA standards are not in effect.

Forest Service Presentation to the House Resources Committee,
Alaska Legislature, Regarding
HJR 54 -- "Supporting Variance Requests
by Pulp Mills in Southeast Alaska"

3:00 p.m., January 23, 1984, Room 118, Alaska Capitol Building
Konrad B. Reinke, Director, Office of Information

The Forest Service is pleased to provide testimony on House Joint Resolution 54 relating to EPA's decision to deny the Fundamentally Different Factor Variance for secondary treatment of effluent from Alaskan pulpmills. James S. Watson, former Ketchikan Area Forest Supervisor, presented testimony on this matter to the EPA at a hearing in Ketchikan on May 11, 1976, concerning secondary treatment for the Ketchikan Pulp Company. Forest Service Supervisors Gee and Green also provided testimony to EPA on the subject at two hearings in November, 1983.

The significance of the timber industry to the economy of Alaska is fully recognized by the Forest Service. At the same time, the Forest Service is in full agreement with objectives of the Clean Water Act. We believe that a healthy timber-based economy can exist within the framework of this Act.

The value of the pulp industry to the economy of Southeast Alaska has been recognized since near the turn of the century. The efforts of many Alaskans during the first half of the century were instrumental in the development of the pulp industry in Alaska during the early 1950's. Some of the original and still valid objectives are: (1) encouraging the development of Alaska, (2) the establishment of new industry with a commercially sound and permanently economical basis while providing due regard for the protection of the natural resources of Alaska, and (3) specifically for the establishment of the pulpmill industry for the efficient utilization of forest products.

The nature and composition of the commercial forests of Southeast Alaska along with Pacific Rim markets dictate the type of industry needed to efficiently utilize the timber. Most of the timber stands are mature and overmature western hemlock with considerable defect. The optimal market for these stands is pulpwood. Without the pulp market, less than one-half of these stands would be marketable. There is no feasible economical opportunity to harvest saw logs only with such operations being silviculturally or environmentally acceptable. Integrated and balanced markets for both pulpwood and saw logs are key to sustaining the timber base economy of Southeast Alaska.

The Sitka and Ketchikan pulpmills provide the only economic outlet for pulpwood in Southeast Alaska. The plants have a total capacity of 392,000 short tons of pulp annually. Approximately 334 MMBF of logs are required each year for this production level. The material comes from National Forest, State of Alaska, and Alaska Native Corporation lands.

Closure of one or both mills will have a significant impact on Southeast Alaska and reverse decades of effort on the part of many to strengthen and diversify the economy. Well over 2,500 jobs could be lost to the Regional economy with the closure of these pulpmills.

We have recently evaluated the effects of closure of both pulp mills upon the economy of Alaska. A conservative estimate of the direct and indirect reduction in income as a result of the closure of both mills is \$147.6 million annually. This estimate assumes no alternative market for pulp logs and hemlock cant production can continue independent of pulp production.

This was derived by using the Alaska Interactive Policy Analysis Simulation System developed by the Forest Service (Pacific Northwest Forest and Range Experiment Station) in cooperation with the University of Minnesota.

Indirectly, the pulp industry has also provided benefits to Alaska and the country as a whole that exceeded the original objectives. These benefits relate to the continuing development of a critically needed ground transportation network in Southeast Alaska and the balance of payments through heavy export of timber products from Alaska.

An example of the benefits to the transportation network is the approximately 70 miles of State highway system on Prince of Wales Island which links several island communities to the Alaska Marine Highway system. These State highways were developed by improving existing roads that were originally constructed for the harvest of timber. Currently there are about 300 miles of State highways in Alaska that were developed in this fashion, and more are planned.

Since most of Alaska's wood products are exported, indirect benefits may be more significant than the direct contribution to the Nation's economy. Alaska has historically exported many of its resource-based products in raw or semi-processed form. Logs, lumber, dissolving pulp, minerals, fish, and natural gas are the primary exports. Alaska major trading area is the Pacific Rim, accounting for nearly two-thirds of Alaska's domestic and foreign trade. Japan is Alaska's principal trading partner, representing more than 90 percent of Alaska's foreign import/export trade. The value of forest products exported has increased roughly 65 percent since 1976, with the greatest growth in round log and pulp exports. Forest exports represent approximately one-quarter of the total value of exports from Alaska, or about \$190 million dollars in 1983.

However, Alaska is supplying less than 1 percent of the total volume of wood being used in Japan, South Korea, the Peoples Republic of China, and Taiwan. Competition from Canada and other exporting countries is keen. Purchasers of National Forest timber in Alaska must meet much higher utilization, environmental practices, and primary manufacturing requirements than those required by these competing countries. These requirements add to the cost of production, and with the current poor market situation both the long-term pulp

timber sales are at or near "base rates" with little room to absorb additional production costs. Under present markets, these two pulpmills may not be able to operate if these requirements are to be imposed at this time.

Although we foresee some improvement in markets for the next rate redeterminations on the long-term sales, there is little chance that markets will improve to the point of absorbing the construction and operating costs of the additional secondary treatment requirements being considered. To date the mills have spent approximately \$49 million for environmental protection measures.

In our statement we have avoided making judgments on the impacts of effluent discharge on water quality. We recognize that the law simply does not provide for consideration of effects on receiving waters as the criterion for granting a variance. However, requiring sizeable expenditures if there is no improvement in water quality would seem inconsistent with the objective of environmental protection as well as the efforts to improve the competitive position of the United States in world markets.

STATEMENT
OF
W. E. FISHER
MANAGER
WARD COVE OPERATIONS
ON BEHALF OF
KPC EMPLOYEES
ESOT STUDY
COMMITTEE
AND
LOUISIANA-PACIFIC CORPORATION
IN SUPPORT OF
HOUSE JOINT RESOLUTION NO. 54

JANUARY 23, 1984
Before the Alaska
State Legislature
House of Representatives
Resources Committee

Honorable Members of the House Resources Committee:

My name is Ed Fisher and I am manager of the Ward Cove operations of Louisiana-Pacific Corporation, Ketchikan Division. I am here not only on behalf of Louisiana-Pacific Corporation but also on behalf of the approximately 800 employees who have been offered the opportunity to purchase the Ketchikan Division which includes a pulp mill, three sawmills and various logging facilities. On behalf of those employees, I would like to thank this committee for the opportunity to be here today.

As you are aware, the Environmental Protection Agency is presently considering the requests of Louisiana-Pacific in Ketchikan and Alaska Lumber and Pulp in Sitka for a Fundamentally Different Factors Variance from the Clean Water Act guideline limitations on waste stream effluents applicable to the Pulp and Paper Industry. Many of the criteria in assessing the applicability of the variance provisions are quite technical and perhaps boring in nature, however this procedure was provided as a mechanism to enable the Agency to tailor the requirements of the Clean Water Act to individual mills which exhibit significant differences from those contemplated by the agency in establishing National Water Effluent Guidelines.

Both Alaskan Mills qualify for this tailoring under the FDF variance procedures. The mills requests have been before the Agency since the Carter Administration over 3 1/2 years ago. It is clear that the Agency has the power to grant the variances and the legal basis to exercise that power. The constraints placed

on the Alaskan mills compared to the mills in the Lower 48 are fundamentally more adverse than those considered in the guideline development documents. These constraints are common to Southeast Alaska. The mills are faced with geographical limitations preventing landfilling of waste materials. They are also required to generate their own power. There is limited space for plant expansion and construction costs are significantly greater. At the same time the dilution and buffering effects of twenty foot tides even further reduce the minimal effects of the present effluent levels on receiving waters.

LPK has spent \$52.5 million in 1980 dollars on pollution control projects to date which has reduced BOD₅ pollutants to a discharge level of 75 lb of pollutant/ton of pulp produced thus eliminating 93% of the total discharge. The total annual cost to operate this equipment amounts to \$55,000/day. If the mills were required to go to BPT or Best Practicable Treatment Levels of 46.8 lb of pollutant/ton of pulp produced, this would be an incremental reduction of 3.0% and has been estimated to cost \$35 million.

It should be noted that in reaching our present level, we have used up much of our margin of safety in our energy system and must therefore replace that energy by burning greater quantities of oil. These additional costs in energy restoration if required to go to BPT are included in the \$35 million dollar figure. The total annual operating cost associated with this 3% reduction is an additional \$28,000/day. This represents a 50% increase over present environmental operating costs for a very

insignificant improvement in total mill discharges and according to our Department of Environmental Conservation will result in no perceptible improvement in Ward Cove water quality.

LPK produces specialty dissolving pulp marketed world wide. 85% of our production over the last 3 years was sold in the Export Market bringing \$50 million a year into the United States and thus improving the United States balance of payments. The industry also has a major impact on Southeast Alaska as indicated by the USFS testimony at a Senate Resources Committee hearing on January 17. The United States Forest Service indicated that the two mills were responsible for injecting \$147.6 million into the Southeast Economy each year. There is a need for an integrated Forest Products Industry in Alaska. Without a Pulp Mill to consume the 30 to 40% of the Tongass which is too low in quality to saw, the Timber industry will cease to exist as we know it now. If the Ketchikan Division were to close, the impacts would be devastating. LPK's annual payroll is \$23 million and benefits are \$7 million. LPK injects additional money into the economy of Southern Southeast Alaska through Towing (\$3 million), Local purchases (\$25 million including contracts with loggers), and Road Building (\$15 million).

Although the markets have suffered through the last 3 years recession, LPK has managed to aggressively maintain sales volumes. Volume was maintained at great costs to the company's profitability, with the expectation that when markets returned to more normal levels, LPK would have managed to develop a steady long term customer base and thus ensure that the company would be

able to take full advantage of an economic recovery. In spite of extensive cost savings and attempts to reduce the average delivered cost of logs to our manufacturing facilities, LPK has continued to lose money. LP has in fact decided to leave Alaska. After attempting unsuccessfully to market the Alaskan operations worldwide, Louisiana-Pacific offered to sell the facilities to the Employees.

The KPC Employees ESOT Study Committee was formed as a representative employee group to study the feasibility of continued operations under Employee ownership. Although it may seem presumptuous for an Employee owned company to believe that it can do what LP and ALP have failed to do over the last 3 years, ie., show a profit, the group presently feels it is possible if certain events occur. Our present plans if we are successful in purchasing the operations include cost savings through modernization of the equipment, decreasing labor costs, increasing productivity and decreasing the cost of raw materials by working with the United States Forest Service.

If an additional capital investment which has no return is forced upon the company for pollution control then the result would be that much more savings which necessarily must be found elsewhere. The task is extremely difficult and risky at best and would be almost impossible if an extra layer of cost were added by the EPA. Please support the attempt to make our company an All Alaskan year round industry to provide jobs in Alaska and money for further investment in Alaska's Future. Thank you on behalf of all the Employees and their families.

FISCAL NOTE ANALYSIS
House Joint Resolution No. 54

Supporting Variance Request by
Pulp Mills in Southeastern Alaska

Passage of this resolution will not impact state capital funds or federal grant funds.

If the U.S. Environmental Protection Agency denies the pulp mills' variance request, an estimated 6,000 jobs will be directly or indirectly impacted (Department of Commerce and Economic Development estimate). The projected fiscal impact of this on the state's future capital budget in terms of increased unemployment benefits, lost loans, et.al. cannot now be accurately estimated.

COMMENTS
HOUSE JOINT RESOLUTION NO. 54

Supporting Variance Request By
Pulp Mills In Southeastern Alaska

The department does not support EPA's tentative decision to deny the pulp mill's request for a variance. In an effort to protect the environment EPA has an equal responsibility to realize and consider the effects these regulations will have on other parts of the environment and on the people for whom the environment was created. We do not advocate relaxation of state water quality standards. Based on our review of water quality surveys, it is our opinion that the existing discharges are not causing an adverse impact on the receiving water. We recognize EPA's difficulty in properly applying their requirements to Southeastern Alaska's unique environment. It is important that the federal government find ways to allow Alaska's pulp mill industry to continue while doing so.

19 We are asking EPA to avoid a needless threat to
20 the viability of the two pulp mills and to thousands of
21 primary and associated jobs in our State. We are not
22 asking EPA to avoid this threat at the risk of degrading
23 the environment or abandoning their official responsi-
24 bilities.

25 In EPA's effort to develop our nation's water

1 quality program, it has an obligation to consider the
2 effects of its controls on specific geographical areas
3 and in light of other environmental impacts. In the case
4 of Alaska's two pulp mills, EPA must consider this.

5 The two mills, in Sitka and Ketchikan, are
6 still reeling from the effects of a nation-wide depres-
7 sion, as is the nation's entire timber and pulp industry.
8 The mills are being told to spend millions of dollars for
9 an environmental improvement that cannot be measured in
10 terms of appreciable or significantly improved water
11 quality, and which may result in discernible air quality
12 degradation.

13 In the past, when we faced the question of how
14 to achieve the mutually-shared goal of cost effective
15 environmental protection, the Federal EPA and the State
16 Department of Environmental Conservation have always
17 worked closely together to obtain a satisfactory resolu-
18 tion. Usually, everyone has engaged in some give-and-
19 take and then concluded an agreement. In order to con-
20 tinue this history of cooperation, I hope these hearings
21 do not serve to start a confrontation. They must be the
22 beginning of a new attempt at dialogue. A fresh effort
23 focused on reaching an agreement acceptable to the State
24 and to EPA is of crucial importance to me. I commit
25 myself and my Administration to this goal and ask that

2 At my request, Commissioner Nevé has developed
3 options available to the State to deal with EPA's tenta-
4 tive decision, including a review of the State's respon-
5 sibilities and obligations under Section 401 of the Clean
6 Water Act, and the Coastal Zone Management Act. They
7 have been provided to me and we are assessing these op-
8 tions carefully. To allow time to work together with EPA
9 and to explore collectively these options, I would like
10 to request that EPA extend the public comment period on
11 the proposed water discharge permits.

12 To be sure that the public docket is complete,
13 I would also like to submit as written testimony the
14 letter I sent last month with attachments to EPA Adminis-
15 trator Ruckelshaus. The attachments include the Alaska
16 Department of Environmental Conservation's testimony at
17 the previous hearing on the issues being discussed today,
18 and various letters from Alaska residents which discuss
19 these issues.

20 JUDGE YOST: You've got about a minute, Gover-
21 nor.

22 GOVERNOR SHEFFIELD: And in conclusion, I would
23 simply like to reiterate that denial of these waivers, if
24 it were to occur, will have a significant adverse impact
25 on my State, both economically and environmentally.

FROM: Senate Resources Committee Staff

RE: Hearing on SJR 29, Supporting variance requests by pulp mills in Southeast Alaska.

DATE: January 13, 1984

On Monday, January 16, 1984 at 2:30 pm in the Beltz Room, the Senate Resources Committee will hear SJR 29, Supporting variance requests by pulp mills in Southeast Alaska.

The Alaska Lumber and Pulp Company (ALP), near Sitka, and Louisiana-Pacific/Ketchikan (LP/K), near Ketchikan, both engaged in the production of dissolving sulfite pulp, have requested a waiver from the national water pollution standards. These standards are to be met by all point source dischargers pursuant to the Clean Water Act.

In 1972, standards were established to limit the effluent discharge from pulp mills nationwide. Because of the "peculiar land, energy, and logistic constraints" which the Environmental Protection Agency (EPA) associated with ALP and LP/K, in 1974 they applied for and were granted permits allowing greater effluent discharge than pulp mills nationwide. [75 lbs./ton daily average, as compared to 60 lbs./ton nationwide.] In 1977, national standards were changed to limit discharge to 46.8 lbs./ton.

When the ALP and LP/K permits expired in 1979, the pulp mills requested a continued variance from EPA to allow discharge at the level determined in 1974 (75 lbs./ton). EPA regulations provide that upon finding factors relating to a particular discharge that are "fundamentally different" from the factors considered by EPA in establishing the national standards, alternative effluent limitations may be established for that discharge. The basis of ALP and LP/K's variance request centered around four factors:

SJR 29
1/13/84
page 2

- 1) Lack of land for disposal of wastewater solids.
- 2) Non-water quality environmental impacts, particularly the unavailability of external power sources.
- 3) The cost of compliance with the standards.
- 4) The lack of effect compliance would have on water quality.

In August, 1983, EPA made a tentative decision to deny the Fundamentally Different Factors variance request, based on the following findings:

- 1) The wastewater solids can be incinerated rather than landfilled.
- 2) ALP and LP/K have the capability of generating sufficient electricity.
- 3) Costs of compliance would not be disproportionate to the costs used in the guidelines.
- 4) According to EPA regulation, water quality is not a factor on which a variance can be granted.

Public comment was accepted on the tentative decision through December; a final decision by EPA is pending.

SJR 29 urges EPA to grant the variances requested by the mills, citing the economic impact of compliance with the national standard, the air pollution problem that would be created if the wastewater solids were burned, and the finding by the Alaska Department of Environmental Conservation that continued discharge will not violate state water quality standards.

GOOD AFTERNOON. MY NAME IS BILL SHEFFIELD, AND I AM THE GOVERNOR OF THE STATE OF ALASKA. I AM HERE TO DISCUSS THE STATE'S POSITION IN REGARD TO THE ENVIRONMENTAL PROTECTION AGENCY'S PROPOSED DENIAL OF WAIVERS TO CERTAIN WATER POLLUTION CONTROL REQUIREMENTS REQUESTED BY TWO PULP AND PAPER MILLS IN SOUTHEAST ALASKA.

I HAVE RECEIVED MANY, MANY LETTERS OF CONCERN LATELY FROM CITIZENS OF MY STATE ABOUT EPA'S TENTATIVE DECISION. THEREFORE I AM PRESENTING IN MY TESTIMONY THE STATE'S SENTIMENTS -- WHICH ARE SHARED BY MY CONSTITUENTS -- ABOUT THE SOLID REASONS WHICH WE BELIEVE SHOULD BE CAUSE FOR EPA TO REVIEW AND HOPEFULLY GRANT THE REQUEST FOR WAIVERS.

I SHOULD ADD THAT DUE TO THE IMPORTANCE OF THIS ISSUE TO THE STATE, I HAVE REQUESTED COMMISSIONER NEVE' OF THE STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION AND COMMISSIONER LYON OF THE STATE DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT TO WORK WITH EPA AND OTHER RELEVANT PARTIES TO ACHIEVE A RESOLUTION OF THIS ISSUE THAT WILL BE REASONABLE, FAIR AND JUST.

THEY WILL BE TESTIFYING SEPARATELY ABOUT THE DETAILS OF THE MILLS' SITUATION, SO I WILL CONFINE MY REMARKS TO THE BROADER POLICY ISSUES. MY HOPE TODAY IS TO MAKE A CONVINCING CASE FOR EPA TO ACCEPT OUR OFFER OF TAKING ANOTHER LOOK AT THE PULP MILLS' REQUEST, AND TO WORK WITH THE STATE TO DEVELOP A EQUITABLE DECISION FOR THE MILLS.

THE CRUX OF OUR CONCERNS IS THAT EPA'S PROPOSED ACTION WILL HAVE SIGNIFICANT NEGATIVE ECONOMIC EFFECTS ON THE MILLS. EPA'S ACTION WILL BE TAKEN MERELY TO ACHIEVE WASTE DISCHARGE REDUCTIONS WHICH ARE NOT NECESSARY IN TERMS OF ENVIRONMENTAL PROTECTION.

I RECOGNIZE THAT THE ENVIRONMENTAL PROTECTION AGENCY AND THE TWO PULP MILLS HAVE BEEN IN DISCUSSIONS OVER THIS ISSUE FOR A LONG TIME. I ALSO UNDERSTAND THAT THE THRUST OF EPA'S CASE SUPPORTING ITS PROPOSED ACTION DOES NOT FUNDAMENTALLY HAVE TO DO WITH THE EFFECT OF THE MILLS' DISCHARGE ON LOCAL WATER QUALITY. RATHER, IT CENTERS AROUND THE CONCLUSION THAT THE COSTS OF INSTALLING ADDITIONAL POLLUTION CONTROL EQUIPMENT ARE NOT EXCESSIVE, ACCORDING TO EPA'S CURRENT INTERPRETATION OF LAW.

OUR DEPARTMENT OF ENVIRONMENTAL CONSERVATION HAS MONITORED THE TWO SITES IN QUESTION EXTENSIVELY FOR A NUMBER OF YEARS. WE CONCLUDE, CATEGORICALLY, THAT THERE IS NO APPRECIABLE ADVERSE EFFECT ON WATER QUALITY BY THE MILLS AT THE CURRENT LEVEL OF DISCHARGE. THEREFORE THE EPA DECISION, IF SUSTAINED, MAY WELL BE A CLASSIC EXAMPLE OF IMPOSING ADDITIONAL POLLUTION CONTROL REQUIREMENTS FOR THEIR OWN SAKE, AND NOT FOR ANY IDENTIFIABLE AND NEEDED ENVIRONMENTAL PROTECTION.

I AM SURE EPA IS SUBJECT TO LEGAL AND POLICY CONSTRAINTS WHICH HAVE CONTRIBUTED TO THE TENTATIVE DECISION. BUT I MUST BELIEVE THERE IS FLEXIBILITY TO ENABLE THE AGENCY TO REACH A DIFFERENT CONCLUSION BASED ON ALASKA ENVIRONMENTAL CONDITIONS OR ON THE RESULTANT COSTS TO THE MILLS.

AS GOVERNOR, I CANNOT STAND BY WHILE UNNECESSARY COSTS AND SEVERE ECONOMIC HARDSHIP TO MANY OF OUR CITIZENS IN SOUTHEAST ALASKA ARE LOOMING AS A RESULT OF WHAT APPEARS TO BE EPA'S DETERMINATION TO PREVAIL IN THIS MATTER, DESPITE THE MERITS.

WE ARE ASKING EPA TO AVOID A NEEDLESS THREAT TO THE VIABILITY OF THE TWO PULP MILLS AND TO THOUSANDS OF PRIMARY AND ASSOCIATED JOBS IN OUR STATE. WE ARE NOT ASKING EPA TO

AND THE COASTAL ZONE MANAGEMENT ACT. THEY HAVE BEEN PROVIDED TO ME, AND WE ARE ASSESSING THESE OPTIONS CAREFULLY. TO ALLOW TIME TO WORK TOGETHER WITH EPA AND TO EXPLORE COLLECTIVELY THESE OPTIONS, I WOULD LIKE TO REQUEST THAT EPA EXTEND THE PUBLIC COMMENT PERIOD ON THE PROPOSED WATER DISCHARGE PERMITS.

TO BE SURE THAT THE PUBLIC DOCKET IS COMPLETE, I WOULD ALSO LIKE TO SUBMIT AS WRITTEN TESTIMONY THE LETTER I SENT LAST MONTH WITH ATTACHMENTS TO EPA ADMINISTRATOR RUCKELSHAUS. THE ATTACHMENTS INCLUDE THE ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION'S TESTIMONY AT THE PREVIOUS HEARING ON THE ISSUES BEING DISCUSSED TONIGHT AND VARIOUS LETTERS FROM ALASKA RESIDENTS WHICH DISCUSS THESE ISSUES.

IN CONCLUSION, I WOULD SIMPLY LIKE TO REITERATE THAT DENIAL OF THESE WAIVERS, IF IT WERE TO OCCUR, WILL HAVE A SIGNIFICANT ADVERSE IMPACT ON MY STATE -- BOTH ECONOMICALLY AND ENVIRONMENTALLY. THUS, I URGE EPA TO RE-EXAMINE ITS POSITION AND ASK WHETHER THESE IMPACTS ARE REALLY NECESSARY -- ON GROUNDS OF ENVIRONMENTAL BENEFITS, ECONOMIC CONSEQUENCES, OR AS A MATTER OF SOUND PUBLIC POLICY. THE STATE OF ALASKA REMAINS HOPEFUL THAT EPA WILL CONCLUDE THAT A DIFFERENT COURSE OF ACTION SHOULD BE TAKEN.

THANK YOU.

TESTIMONY OF
THE ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION
BEFORE
THE U. S. ENVIRONMENTAL PROTECTION AGENCY
CONCERNING EPA'S PROPOSED DECISIONS
REGARDING
THE TWO ALASKA PULP MILLS

MY NAME IS DOCTOR RICHARD A. NEVE', COMMISSIONER OF THE ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION. I AM HERE TODAY TO TESTIFY ON THE ENVIRONMENTAL PROTECTION AGENCY'S PROPOSED DENIAL OF THE FUNDAMENTALLY DIFFERENT FACTORS VARIANCE REQUEST FROM THE ALASKA LUMBER AND PULP COMPANY, INCORPORATED, FOR THEIR SITKA MILL, AND THE LOUISIANA PACIFIC CORPORATION, KETCHIKAN DIVISION, FOR THEIR KETCHIKAN MILL.

THE EPA'S TENTATIVE DECISION TO DENY THE MILLS' REQUEST FOR A VARIANCE IS THE RESULT OF YEARS OF COMPLEX STUDY AND TECHNICAL WORK BY BOTH THE MILLS AND THE EPA. THE EPA'S FINAL DECISION WILL SUBSTANTIALLY CHANGE OUR VIEW OF BOTH MILLS' DRAFT NPDES PERMITS AND THE STATE OF ALASKA'S CLEAN WATER ACT SECTION 401 CERTIFICATION. BOTH THE PUBLIC AND THE STATE OF ALASKA NEED ADEQUATE TIME TO EVALUATE THE RELEVANT VERBAL AND WRITTEN COMMENTS PRESENTED AT THESE HEARINGS BEFORE PROVIDING MEANINGFUL INPUT ON THE EPA'S DRAFT NPDES PERMIT FOR THE MILLS. THEREFORE, I PETITION THE EPA TO EXTEND THE PUBLIC HEARING COMMENT PERIOD ON THE DRAFT NPDES PERMIT UNTIL IT HAS REACHED A FINAL DECISION ON THE VARIANCE REQUEST AND THE PROPOSAL FOR A SEPARATE SUB-CATEGORY FOR ALASKA.

OUR COMMENTS ON THE ESTABLISHMENT OF A SEPARATE ALASKA SUBCATEGORY OF THE PULP, PAPER, AND PAPERBOARD INDUSTRY WILL BE SENT TO ROBERT W. DELLINGER AS REQUESTED IN THE EPA'S PUBLIC NOTICE OF SEPTEMBER 23, 1983. I WILL MAIL YOU A COPY OF THAT LETTER FOR INCLUSION AS PART OF MY TESTIMONY HERE TODAY.

MY TESTIMONY, WITH THE ATTACHED WRITTEN DOCUMENTS, IS INTENDED TO HELP THE EPA AND THE ALASKAN MILLS SATISFACTORILY RESOLVE QUESTIONS SURROUNDING THE VARIANCE REQUEST. THESE WRITTEN DOCUMENTS IDENTIFY THE ITEMS WHICH MY DEPARTMENT BELIEVES NEED ADDITIONAL ATTENTION BEFORE THE EPA REACHES ITS FINAL DETERMINATION. THEY INCLUDE THE DEPARTMENT'S ANALYSIS OF THE EPA'S DECISION ON RESTORATION OF EXISTING COSTS THAT CONTRIBUTE TO ACHIEVING BEST PRACTICABLE TECHNOLOGY EFFLUENT LIMITATIONS AND A DISCUSSION OF COST ESTIMATES OF EXPANDED TREATMENT SYSTEMS THAT MAY BE NEEDED TO ACHIEVE BPT EFFLUENT LIMITATIONS.

THE EPA'S DECISION DOCUMENT DATED AUGUST 24, 1983, INDICATED THE NEED FOR BETTER QUANTIFICATION OF ADVERSE IMPACTS ON AIR QUALITY THAT WOULD RESULT FROM THE BURNING OF ADDITIONAL WASTEWATER SLUDGE. THE DOCUMENT ALSO POINTED OUT A LACK OF SUFFICIENT DATA TO IDENTIFY THE NON-WATER QUALITY ENVIRONMENTAL IMPACTS WHICH MAY RESULT IF THE VARIANCE REQUEST IS DENIED. MY STAFF HAS REVIEWED THE DECISION DOCUMENT WHICH SET THE STAGE FOR THE EPA'S PRELIMINARY DECISION TO DENY THE VARIANCE. OUR REVIEW OF THE EPA'S ANALYSIS REVEALED SOME AREAS THAT NEED FURTHER EXAMINATION BEFORE A FINAL DECISION IS MADE.

A PORTION OF THE COSTS INCURRED BY THE INITIAL EXPANSION OF THE WASTEWATER TREATMENT SYSTEMS IN THE LATE SEVENTIES HAS BEEN ESTIMATED BY THE INSTALLATION OF AN OIL BOILER. WHILE THIS MAY BE VALID TO ACCOUNT FOR THE POWER REQUIRED TO OPERATE THE WASTEWATER TREATMENT SYSTEM, THERE IS NO CREDIT ALLOWED FOR AN INCINERATOR TO BURN THE SLUDGE, THE POWER LOST IN EVAPORATING THE SLUDGE, AND, MOST IMPORTANTLY, THE COST OF CONTROLLING THE AIR POLLUTION FOR THE EMISSIONS FROM SLUDGE BURNING.

INCINERATION OF THE SLUDGE GENERATED BY OPERATION OF EXISTING SECONDARY WASTE-WATER TREATMENT CONTROLS HAS DELAYED BOTH MILLS' PROGRESS TOWARD COMPLIANCE WITH AIR QUALITY REGULATIONS. EXTENSIVE STUDIES AND THE INSTALLATION OF ADDITIONAL PROCESS CONTROLS HAVE BEEN NEEDED TO MINIMIZE THE SIGNIFICANT INCREASE IN AIR POLLUTANT EMISSIONS. ADDITIONAL CONTROLS ARE STILL NEEDED AT BOTH MILLS TO COMPLETELY CONTROL THE INCREASED AIR POLLUTION CREATED SINCE THE WASTEWATER TREATMENT PLANT SYSTEMS WERE INSTALLED IN THE LATE SEVENTIES.

THE COSTS OF THESE CONTROLS MUST BE CONSIDERED IN THE ANALYSIS OF WHETHER THE MILLS ARE BEING ASKED TO SPEND CONSIDERABLY MORE DOLLARS THAN EPA'S MODEL MILL.

A SECOND AREA THAT IS UNCLEAR IS THE ELIMINATION OF A LARGE PORTION OF CREDIT FOR THE REVISED SOLIDS HANDLING FACILITIES AT BOTH MILLS. THE REVISIONS PERFORMED AFTER THE INSTALLATION OF THE SECONDARY TREATMENT FACILITY ARE A RESULT OF THE WATER DISCHARGE REQUIREMENTS, AND SHOULD BE ALLOWED.

FINALLY, IN THE EVALUATION FOR THE COSTS OF WHAT WILL BE NEEDED TO BE INSTALLED TO MEET THE GUIDELINES TREATMENT, IT IS NOT CLEAR HOW THE ADDITIONAL SLUDGE GENERATED WILL BE HANDLED AND BURNED. IT IS POSSIBLE, HOWEVER, THAT THE ONLY VIABLE OPTION IS THE REPLACEMENT OF A POWER BOILER. IF THIS PROVES TO BE THE CASE, THEN THE COSTS TO MEET GUIDELINE LIMITS WILL NEED TO REFLECT THIS POSSIBILITY.

ALSO, THE COSTS OF ANY NEW PERMITS REQUIRED BY THE INSTALLATION OF A NEW BOILER OR SLUDGE INCINERATOR OR BY THE MODIFICATION OF AN EXISTING WOODWASTE BOILER MUST BE INCLUDED. ADDITIONAL SLUDGE BURNING WILL PROBABLY FALL INTO THE REQUIREMENTS OF A PREVENTION OF SIGNIFICANT DETERIORATION AIR QUALITY

PERMIT. THESE PERMITS CAN REQUIRE UP TO ONE YEAR OF BACKGROUND METEOROLOGICAL AND AIR QUALITY MONITORING DATA AND EXTENSIVE COMPUTER MODELING TO SHOW VIOLATIONS OF AIR QUALITY REGULATIONS WILL NOT OCCUR ON THE NEARBY HILLSIDES. THIS ANALYSIS CAN BE VERY EXPENSIVE.

OTHER PORTIONS OF THE DECISION DOCUMENT ARE UNCLEAR BUT IT IS MORE APPROPRIATELY DISCUSSED BY THE PULP MILLS. I REQUEST THE PULP MILL REPRESENTATIVES PROVIDE SPECIFIC INFORMATION REGARDING THE ADDITIONAL COSTS IN THESE AREAS ALONG WITH PROOF OF NON-WATER QUALITY ENVIRONMENTAL IMPACTS AS REQUESTED BY THE EPA.

SINCE THE EXPANSION OF THE SLUDGE HANDLING AND DISPOSAL SYSTEM IS A DIRECT RESULT OF THE EPA'S PROPOSED DENIAL OF THE VARIANCE, PROOF THAT THE PROPOSED SOLUTION TO SLUDGE DISPOSAL WILL NOT IMPACT AIR QUALITY IS NEEDED BEFORE THE VARIANCE REQUEST IS RESCINDED. WE DO NOT WANT TO BE IN THE POSITION WE WERE IN, IN 1980, OF COPING WITH AN AIR POLLUTION PROBLEM CAUSED BY WATER DISCHARGE CONTROLS. IN FACT, THAT PROBLEM STILL EXISTS TODAY.

MY DEPARTMENT IS COMMITTED TO REQUIRING THAT BOTH ALASKA LUMBER & PULP AND LOUISIANA-PACIFIC, KETCHIKAN DIVISION, MEET THE AIR QUALITY REGULATIONS FOR THEIR PULP MILLS. WERE THERE NO WASTEWATER SLUDGE TO INCINERATE IT IS PROBABLE THE MILLS WOULD ALREADY BE MEETING AIR QUALITY REQUIREMENTS. MY DEPARTMENT IS ALSO ON RECORD AS STATING THAT WATER QUALITY NEAR THE PULP MILLS, SIGNIFICANTLY IMPROVED OVER EARLIER YEARS, WOULD NOT BE MEASURABLY BETTER AS A RESULT OF EPA'S REQUIREMENTS. THE ADDITIONAL END-OF-PIPE TREATMENT TO REMOVE BIOLOGICAL OXYGEN DEMAND BY 28 POUNDS PER TON OF PULP PRODUCED WOULD NOT RESULT IN A MARKED IMPROVEMENT OF THE WATERS NEAR THE PULP MILLS.

THE PROPOSED VARIANCE WOULD ALLOW THE PULP MILLS TO MAINTAIN A WASTEWATER DISCHARGE WITH A BOD₅ LEVEL OF 75 POUNDS PER TON OF PULP PRODUCED. BASED ON OUR WATER QUALITY SURVEY IN 1980, IT IS OUR OPINION THAT THE EXISTING LEVEL OF BOD₅ CONTROL IS NOT CAUSING AN ADVERSE IMPACT ON THE RECEIVING WATERS.

EVEN THE AMOUNT OF CONTROL REALIZED BY THE DENIAL OF THE VARIANCE IS MISLEADING. UNDER THE PROPOSED GUIDELINES FOR BOD₅ CONTROL THE MILLS WOULD LOWER THEIR BOD₅ DISCHARGE BY ABOUT 28 POUNDS PER TON OF PULP PRODUCED. THE GUIDELINES, HOWEVER, WOULD ALSO ALLOW THE MILLS TO RAISE THEIR WASTEWATER EMISSIONS OF TOTAL SUSPENDED SOLIDS IN THE WASTEWATER DISCHARGE BY ABOUT 12 POUNDS PER TON OF PULP PRODUCED. THIS OCCURS BECAUSE THE VERY ACT OF TREATMENT TO REMOVE BOD₅ FROM THE WASTEWATER STREAM CREATES SLUDGE AND SUSPENDED SOLIDS.

PREVIOUS COMMISSIONERS OF THE DEPARTMENT OF ENVIRONMENTAL CONSERVATION HAVE VOICED THIS SAME CONCERN, THAT THE REDUCTION OF BOD FROM THE EFFLUENT RESULTS IN SLUDGE TO BE BURNED AND ADDITIONAL SUSPENDED SOLIDS TO BE DISCHARGED. OUR OBJECTIONS TO PERMITS PROPOSED IN 1973 AND 1980 WERE BASED ON THAT VERY SAME POINT.

WE AS REGULATORS IN AN EFFORT TO PROTECT THE ENVIRONMENT HAVE AN EQUAL RESPONSIBILITY TO REALIZE AND CONSIDER THE EFFECTS THESE REGULATIONS WILL HAVE IN OTHER PARTS OF THE ENVIRONMENT AND ON THE PEOPLE FOR WHOM THE ENVIRONMENT WAS CREATED. IN THIS CASE, IT APPEARS TO BE A MATTER OF MINIMAL GAIN IN ONE AREA FOR AGGRAVATED LOSSES IN OTHERS. IF THE PULP MILLS WERE PROVEN TO BE DESTROYING THE WATER QUALITY NEAR THE MILLS AND IF THE SECONDARY TREATMENT HAD NOT AND WILL NOT IMPACT THE AIR QUALITY OF THE AREA, YOUR DECISION WOULD MORE THAN LIKELY BE EASIER.

IN CONCLUSION, I WOULD LIKE TO STATE THAT THE DEPARTMENT DOES NOT PRESENTLY SUPPORT THE EPA'S TENTATIVE DECISION TO DENY THE PULP MILLS' REQUEST FOR A VARIANCE. IT APPEARS TO US THAT RECENT, UPDATED INFORMATION ON THE ECONOMIC FACTORS AFFECTING THE MILLS' VARIANCE REQUESTS IS VITAL TO THE FINAL DECISION AND MUST BE GIVEN SERIOUS ATTENTION. I URGE THE EPA TO CAREFULLY CONSIDER THE TESTIMONY BEING PRESENTED HERE, AND I LOOK FORWARD TO CONTINUING OUR COOPERATIVE EFFORT TO ACHIEVE A REALISTIC RESOLUTION OF THE ISSUE OF WASTEWATER CONTROL FOR THE PULP MILLS.

THANK YOU FOR THIS OPPORTUNITY TO PRESENT MY DEPARTMENT'S VIEWS.

Luke Popovich is contributing editor-national affairs for Pulp & Paper.

Treatment for its own sake

Press reports last month confirmed our doubts about the future of the Administration's dwindling effort to deregulate business. Officials at the Office of Management & Budget (OMB) told reporters the effort for now was dead—"ended," as they delicately put it. Since OMB was the *locus maximus* of the deregulation effort, sadly we must take these officials at their word that little will be done to discourage environmental regulation until after the 1984 election, assuming the home team wins.

Vice President Bush chaired the President's Task Force on Regulatory Relief, which closed down this summer, leaving to OMB the day-to-day vigilance over unnecessary rules. In signaling an end to the much-touted deregulatory effort, the Administration has borrowed liberally from the Vietnam antiwar strategy propounded by former Vermont Senator George Aiken: simply declare a victory, allow a self-satisfied smile, and withdraw. But if a thumping victory has been won against environmental regulation, the paper industry has yet to be informed.

AN ALASKAN CASE. Battlefield conditions still suggest that the war against treatment for treatment's sake is far from over. A story from Alaska illustrates the enemy's tenacity. Ketchikan Paper Co. and Alaska Lumber & Pulp Co. of Sitka applied to the Environmental Protection Agency for variances from secondary-treatment requirements under the Clean Water Act in December 1981. The companies had good reasons for asking a waiver from compliance with costly best practicable technology (BPT) requirements beyond the secondary treatment they had already employed.

First, the companies cited insufficient sites for installing sludge disposal facilities. Second, alternative power sources were not available to run generators during installation of control technology. Third, the additional treatment would harm other, nonwater values. Together, they said, additional requirements to treat then-nonhazardous wastes would cost more than EPA's model for similar reductions in the lower 48 states had suggested was proper. Nor would the treatment result in cleaner water.

Their case looked persuasive. The state's Department of Environmental Conservation and congressional delegation okayed the variance. So too did EPA's then-Region X administrator John Spencer on Dec. 28, 1981 recommend that the variance be approved. Again on May 10, he wrote to his EPA superiors in Washington for a variance, citing EPA's own view, dating back to 1974, that "the Alaska

mills are entitled to different treatment . . . because of peculiar land, energy, and logistical constraints." Not only were the companies entitled to a variance, he said, but since EPA staff thought the BPT rule for the sulfite pulp category was "too stringent," the rule ought to be reviewed for immediate suspension.

So it was somewhat surprising that on Aug. 29, EPA announced it had tentatively decided to deny the variance, citing the absence of "fundamentally different factors" in the Alaskan case that would justify suspension of the additional secondary treatment requirements. "We did a thorough economic test and didn't find that their costs were out of line" with those facilities in the lower 48, said one EPA official in Washington.

INSIDE EPA. But an internal EPA memo from the Washington staff to EPA's acting water chief dated Feb. 3, 1982 suggests a different motivation for the denial. "A variance based on these problems does not appear to be entirely foreclosed," conceded EPA staff. "Nevertheless," the memo continued, "this [approval] could present a legal problem" because the "Natural Resource Defense Council has been closely following" the case. Worse, the memo alluded to the many other variance applications EPA would be forced to answer if it granted this one, thus upsetting its priorities for approving industrial permits.

Instead of granting the variance, EPA staff suggested the agency grant the two firms a temporary suspension of the BPT rules for the pulp category. And what of the quality of receiving water in all this decision making? It seems that consideration was irrelevant; water quality per se is expressly forbidden to bear on the issue of BPT compliance, and so it is irrelevant to the approval or disapproval of a variance. "If what these companies must do doesn't affect water quality one bit, they still have to install [BPT technology]," said EPA water effluent expert Bob Dellinger in Washington, D.C.

Treatment for treatment's sake is not only pointless but expensive. If the tentative decision isn't overturned after the Nov. 15 comment period expires, officials of Alaska Lumber & Pulp claim they'll be forced to spend \$53 million to achieve mandated reductions of 28 lb/ton. That's in addition to the \$45 million they've already spent to get from 275 lb to 75 lb/ton. "We don't have \$51 million to dump into this project," complained one company spokesman. Too bad money, like environmental quality, has nothing to do with the issue.

DATE DEC 28 1981

SUBJECT Alaska Pulp Mill Variance Request

FROM John R. Spencer
Regional Administrator 

TO Anne M. Gorsuch A100
Administrator

Thru: John E. Daniel A100
Chief of Staff

Consider this a request for the Administrator's concurrence with my recommendation that Alaska Lumber and Pulp Company and Louisiana - Pacific Corporation be granted variances from wastewater effluent guideline limits (BPT) for mills located at Sitka, Alaska and Ketchikan, Alaska respectively.

Both companies have requested variances under EPA regulations pertaining to fundamentally different factors (FDF). The most basic issue raised by the companies in support of their variance requests is that the cost of compliance with national effluent guidelines would result in waste treatment and operation costs significantly greater than costs for the model mill described in EPA effluent limitations development documents. Other issues raised in support of the variance requests include the lack of land for waste treatment sludge disposal and the lack of external sources of electricity.

Background Both Alaska Lumber and Pulp (ALP) and Louisiana - Pacific (LPK) are currently operating secondary waste treatment facilities at their southeast Alaska mills. The EPA issued permits controlling their wastewater discharges, were originally issued in 1973 and later amended in 1974. In 1977, EPA promulgated BPT guidelines for the dissolving grade sulfite subcategory which the two Alaska mills fall under. ALP and LPK are requesting variances from the biochemical oxygen demand (BOD) effluent limitation and variances from the total suspended solids (TSS) limitation specified in their present permits. These are summarized below:

Variance Requests

	<u>Present Permit Limits</u>	<u>BPT</u>	<u>Variance Request</u>
1. ALP & LPK			
* BOD, Lbs/T	75	46.8	75
* TSS, Lbs/T	60	76.3	76.3
* (Lbs per ton of mill production)			

Region 10 staff have thoroughly analyzed the variance requests, and in particular, the water pollution control costs. The cost figures incorporate incurred costs for existing water pollution control facilities plus the future costs to meet BPT. They include capital and O&M costs expressed in March 1980 dollars. A comparison of the model mill costs with the two Alaskan mills is as follows:

	<u>Capital Cost</u>	<u>Total Annual Cost</u>	<u>Total Annual Cost/T</u>
A. Model mill (scaled up to 700 T/day production)	\$49.34 mm	\$15.2 mm	\$63.9 mm
LPK (700 T/day)	\$68.9 mm	\$21.9 mm	\$92.0 mm

The ratios of the costs (LPK: Model mill) are therefore: 1.40, 1.44, and 1.44.

	<u>Capital Cost</u>	<u>Total Annual Cost</u>	<u>Total Annual Cost/T</u>
B. Model mill (scaled up to 621 T/day production)	\$42.7 mm	\$14.4 mm	\$ 69.9 mm
ALP (621 T/day)	\$84.4 mm	\$26.9 mm	\$123.5 mm

The ratios of the costs (ALP: Model mill) are therefore: 2.0, 1.9, and 1.8.

In summary, my recommendation that variances be approved is principally based on LPK's costs being 40 to 50 percent greater than the model mill and ALP's cost being essentially double the model mill costs.

Finally, attached is a letter from the State of Alaska certifying there will be no known water quality impacts resulting from granting a variance to either mill. Further support for a variance based on solids disposal is provided in that letter: "Of the possible alternatives disposal to the air and land are precluded by unique local conditions or may have substantial adverse effects on the environment". Also, attached is a staff analysis of the variance request. As indicated, some of the material is confidential and should not be released outside the agency.

Concurrence _____

Non-Concurrence _____

SAICCOR's production performance is one of which the Group is justifiably proud, showing a ten-fold increase since 1956. In the first year, the mill manufactured 38,000 tons compared to 386,000 tons in 1982. The Group's on-going research programme has made a material contribution to this expansion which has been achieved over the years. Three major areas of concentration have been responsible for SAICCOR's regular growth: progressive refinements in the process, modernisation of plant and equipment and regular capital investment. Without exception, every one of the intervening twenty six years has seen a boost in production capacity.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

WASHINGTON, D.C. 20460

February 16, 1982

OFFICE OF THE
ADMINISTRATOR

MEMORANDUM FOR BRUCE BARRETT

I have read the papers relating to the FDF variances for the Alaska pulp mills. I'm not persuaded by the writers' views that we should proceed by suspending the applicable regulations rather than issuing FDF variances.

For instance, the argument that these "fundamental differences" were taken into account in impact analyses may be correct, but the differences were not accounted for in the most important measure - effluent limits themselves. A FDF variance is the mechanism for doing this. The "resource requirement" argument is also the best argument for relying on states to handle variances. Also, I think it is disingenuous to say that these mills' problems were "dealt with" when in the next paragraph it is stated that the problems were "considered. . . in a general way." That a mill was "considered" in guidelines development should not be the sole determinative of ineligibility for a FDF variance. As for NRDC's interest in this matter, it seems to me that issuance of the "Tentative Decision" should smoke them out. Additionally, the FDF route is more judicially economical since only one court challenge would result; suspension of guidelines and issuance of BPJ permits would open us to two largely duplicative lawsuits.

Unless your view is widely at variance from mine, let's ask John Spencer to publish the Tentative Decision, receive comments, and make the appropriate decision.

ENVIRONMENTAL PROTECTION AGENCY

NOTICE OF (1) TENTATIVE DECISION TO DENY FUNDAMENTALLY DIFFERENT FACTORS VARIANCE REQUESTS OF ALASKA LUMBER AND PULP CO., INC., SITKA, ALASKA AND LOUISIANA-PACIFIC CORPORATION, KETCHIKAN, ALASKA, (2) PROPOSED REISSUANCE OF NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMITS TO DISCHARGES TO WATERS OF THE UNITED STATES, (3) PUBLIC HEARING ON THE TENTATIVE DECISION AND THE PROPOSED REISSUANCE OF NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMITS, (4) STATE CERTIFICATION, AND (5) TENTATIVE DECISION TO DENY PETITION TO ESTABLISH AN ALASKA SUBCATEGORY IN THE PULP, PAPER, AND PAPERBOARD POINT SOURCE CATEGORY.

AGENCY: Environmental Protection Agency.

ACTION: Notice of Tentative NPDES Permit Decisions and Tentative Decision to Deny Petition to Establish an Alaska Subcategory.

SUMMARY: The Environmental Protection Agency (EPA), Region X and the Assistant Administrator for Water, are today providing notice of (1) a Tentative Decision to deny fundamentally different factors (FDF) variance requests submitted by Alaska Lumber and Pulp Co., Inc., Sitka, Alaska (ALP) and Louisiana-Pacific Corporation, Ketchikan, Alaska (LPK), (2) proposed reissuance of National Pollutant Discharge Elimination System (NPDES) permits to discharges of ALP and

LPK to waters of the United States, (3) public hearings on the Tentative Decision and the proposed reissuance of NPDES permits, and (4) request for certification of the NPDES permits by the Alaska Department of Environmental Conservation (ADEC).

At this time, EPA is also notifying ALP and LPK that EPA is tentatively denying their petition for establishment of a new Alaska subcategory in the pulp, paper, and paperboard point source category.

DATES:

Comment Period - Interested persons may submit written comments on the Tentative Decision to deny the FDF variance requests, the proposed reissuance of NPDES permits, and the administrative record to the Region X Administrator at the address below no later than (60 days after publication). Persons wishing to comment on the Tentative Decision to deny the request for establishment of an Alaska subcategory should submit written comments to the Effluent Guidelines Division at the address below no later than (60 days after publication). Persons wishing to comment on the State Certification should submit written comments to the Alaska Department of Environmental Conservation at the address below no later than (60 days after publication).

Public Hearing - The Hearing Officer designated by the Regional Administrator will conduct a public hearing on the Tentative Decision to deny the FDF variance requests and the proposed reissuance of the NPDES permits on November 8, 1983 at 7:00 pm in Sitka, Alaska and on November 9, 1983 at 7:00 pm in Saxman, Alaska at the addresses indicated below.

ADDRESSES:

Public Comments - Send comments on the Tentative Decision to deny the FDF variance requests and the proposed reissuance of NPDES permits to: Region X Administrator, Environmental Protection Agency, 1200 Sixth Avenue, Seattle, Washington 98101.

Send comments on the Tentative Decision to deny the request for establishing a new Alaska subcategory to: Robert W. Dellinger, Effluent Guidelines Division (WH-552), Environmental Protection Agency, 401 M Street, SW, Washington, D. C. 20460.

Send comments on State Certification to: Commissioner, Alaska Department of Environmental Conservation, Pouch O, Juneau, Alaska 99801.

Public Hearings - EPA will conduct public hearings on November 8, 1983 at 7:00 pm in Sitka, Alaska at Centennial Building, 330 Harbor Drive, Sitka, Alaska 99835 and on November 9, 1983 at 7:00 pm in Saxman, Alaska (which is near Ketchikan, Alaska) at Saxman Community Hall, Saxman, Alaska 99901.

Administrative Record - These actions are based on the administrative record available for public review during normal prevailing business hours at the offices of the Environmental Protection Agency described below. The major documents are the Tentative Decision and the Tentative Decision Support Document, which may be obtained free of charge from Messrs. Danforth Bodien and Robert W. Dellinger at the addresses indicated below in "FOR MORE INFORMATION CONTACT".

Dellinger, Environmental Protection Agency (WH-552), 401 M Street, SW, Washington, D.C. 20460 (Telephone No. (202) 382-7137).

SUPPLEMENTARY INFORMATION

Background

The following companies applied for reissuance of their NPDES permit to discharge pollutants to waters of the United States in March 1980.

Alaska Lumber and Pulp Co., Inc.
Post Office Box 1050
Sitka, Alaska 99835
NPDES Permit No. AK000053-1

Louisiana-Pacific Corporation
Post Office Box 6600
Ketchikan, Alaska 99901
NPDES Permit Number AK000092-2

ALP is engaged in the production of dissolving sulfite pulp at their facility near Sitka, Alaska. ALP discharges from two outfalls into Sawmill Creek and Silver Bay which are presently protected for the following uses according to the State's federally approved water quality standards: water supply; water recreation; growth and propagation of fish, shellfish and other aquatic life; and harvesting for consumption of raw mollusks.

LPK is engaged in the production of dissolving sulfite pulp at their facility near Ketchikan, Alaska. LPK discharges from three outfalls into Ward Cove which is presently protected for the following uses according to the State's federally approved water quality standards: water supply; water recreation; growth and propagation of fish, shellfish and other aquatic life; and harvesting for consumption of raw mollusks.

At the same time that ALP and LPK applied for reissued permits, they requested variances from EPA's best practicable control technology currently available (BPT) effluent limitations guidelines for biochemical oxygen demand (BOD₅) for the Dissolving Sulfite Pulp Subcategory of the Pulp,

Paper, and Paperboard Point Source Category (40 CFR 430, Subpart K). These EPA regulations are national standards which are to be met by all point source dischargers pursuant to Sections 301(b)(1)(A) and 304(b)(1)(A) of the Clean Water Act unless the discharger obtains a FDF variance. EPA regulations provide that, upon finding factors relating to a particular discharger that are "fundamentally different" from the factors considered by EPA in establishing the national guidelines regulations, alternative effluent limitations may be established for that discharger. The criteria to qualify for such a FDF variance are contained in EPA regulations at 40 CFR Part 125, Subpart D. The procedures for handling FDF variance requests are contained in EPA regulations at 40 CFR §§124.62 - 124.63.

Today's action announces EPA's tentative decision to deny the variance requests. After the public comment period, EPA Region X will make its Final Decision. If the decision of Region X is to approve the FDF variance requests, that decision must be submitted to the Director, Office of Water Enforcement and Permits, EPA Headquarters in Washington, D.C. for concurrence. Appeals of variance decisions are governed by EPA regulations at 40 CFR §124.64.

The basis of both ALP's and LPK's FDF variance requests can be reduced to four factors claimed to be fundamentally different:

1. the lack of land and the unavailability of external power sources and the resulting necessity to produce all power requirements,
2. non-water quality environmental impacts, particularly energy requirements,
3. costs of compliance, and
4. lack of effect on receiving water quality.

Both ALP and LPK have requested, in their FDF variance requests, that the HOD₅ be set at 75 pounds/ton (daily average) instead of the 46.8 pounds/ton (daily average) required by the BPT effluent limitations guideline. In addition, both have requested that their new total suspended solids (TSS) limitations be relaxed from their current TSS permit limitation and instead be based on the BPT effluent limitations guideline for TSS which is 76.3 pound/ton (daily average). The FDF regulations are not applicable to the companies' requests concerning TSS, as discussed subsequently.

Finally, ALP and LPK also requested that EPA create a separate subcategory within the pulp, paper, and paperboard industry for pulp production in the State of Alaska. Both facilities are currently within the dissolving sulfite pulp subcategory (40 CFR Part 430, Subpart K). They cited non-water quality environmental impacts relating to energy and solid waste disposal as factors that would justify establishing a separate Alaska subcategory.

Tentative Decision

A. Requests for Alternative Limitations

1. BOD₅ FDF Variance Requests

ALP and LPK have claimed that the lack of land and the unavailability of external power sources and the resulting necessity to produce all power requirements; certain non-water quality environmental impacts, particularly energy requirements; the costs of compliance with the guidelines; and the lack of effect on receiving water quality are individually, and in combination, factors that are fundamentally different from those considered by EPA in establishing the guidelines.

EPA has tentatively decided to deny ALP's and LPK's FDF variance requests from the BOD₅ effluent limitations guidelines. Detailed examination of all available information indicates that factors related to the ALP and LPK facilities are not fundamentally different from those considered in developing the national guidelines. ALP and LPK have provided data to support their claims of fundamental difference; the detailed analysis of this data is reflected in the Tentative Decision, the Tentative Decision Support Document and the administrative record.

EPA has determined that the unavailability of land for disposal of excess wastewater sludge at ALP and LPK is not fundamentally different from factors considered in the

guidelines development. When developing the national guidelines, EPA considered that some mills would have to incinerate, rather than landfill, excess wastewater solids. This technology is available to both ALP and LPK. In addition, EPA has determined that special site preparation claimed to be necessary at ALP to expand their treatment system is not fundamentally different from factors considered in guidelines development. When developing BPT effluent limitations, EPA included an engineering contingency factor to account for such situations. Second, EPA has determined that both ALP and LPK have the capability of generating sufficient electricity to enable compliance with the effluent limitations guidelines and, therefore, finds that the unavailability of external power sources, by itself, is not fundamentally different from factors considered in guidelines development. EPA has determined that, taken together or alone, none of the non-water quality environmental impacts, including energy impacts, discussed by ALP and LPK are fundamentally different from those factors considered in guidelines development.

EPA also has evaluated whether ALP's and LPK's energy, solid waste disposal and site preparation costs would result in compliance costs that are fundamentally different from and wholly disproportionate to those considered in guidelines development. EPA evaluated the costs that ALP and LPK have already expended for wastewater treatment now in place, plus the costs of any additional treatment claimed to be necessary

to attain the appropriate guidelines limitations. EPA has also factored in costs necessary to compensate for the necessity to burn excess sludge in a power boiler and the unavailability of external power sources. EPA disallowed those costs claimed by ALP and LPK that EPA found were not properly attributable to the attainment of BPT established by the guidelines. A summary of cost data appears below.

	<u>ALP</u>		<u>LPK</u>	
	<u>Capital</u>	<u>Total Annual</u>	<u>Capital</u>	<u>Total Annual</u>
	(In \$ Millions, March 1980)			
In-Place Allowed (EPA) Wastewater Pollution Control Costs to Meet Guidelines BPT	44.1	18.2	37.3	16.2
Additional Allowed (EPA) Wastewater Pollution Control Costs Necessary to Meet Guidelines BPT	<u>16.3</u>	<u>5.5</u>	<u>17.9</u>	<u>5.0</u>
Total Allowed (EPA) Wastewater Pollution Control Costs Necessary to Meet Guidelines BPT	60.4	23.7	55.2	21.2
EPA Model Mill Wastewater Pollution Control Costs Necessary to Meet Guidelines BPT	57.0	21.2	62.3	23.3

The estimated capital and total annual costs at ALP to attain the national BPT limitations are 6.0 and 11.9 percent, respectively, higher than the model mill costs developed by EPA, while the capital and total annual costs at LPK to attain the national BPT limitations are lower than the model mill costs developed by EPA. EPA has determined that the

cost of compliance with the national BPT effluent limitations guidelines at ALP and LPK is neither fundamentally different from nor wholly disproportionate to those costs used by EPA in guidelines development. Thus, EPA has not identified any factor that makes ALP and LPK fundamentally different from other dissolving sulfite pulp mills. Further, the lack of effect on receiving water quality is not a factor upon which a FDF variance may be granted. 40 CFR §125.31(e)(4). EPA is, therefore, proposing to deny the FDF variance requests and to reissue the NPDES permits for ALP and LPK based upon the effluent limitations contained in the dissolving sulfite pulp subcategory effluent guidelines.

The detailed justification of this decision may be found in the Tentative Decision, the Tentative Decision Support Document and the administrative record.

2. Request for Guidelines TSS Limitations

ALP and LPK have requested that their reissued permits reflect the TSS limitation in the national BPT guidelines (76.3 pounds/ton, daily average) instead of the TSS limitations in their current permits (60 pounds/ton, daily average). At various times, the companies have characterized this request as one for a FDF variance. That characterization is incorrect; FDF variances are available only from promulgated effluent limitations guidelines, not from previous permit limitations imposed under Section 402(a)(1) of the Clean Water Act.

The companies have made a special request to have the national TSS limitations incorporated into their reissued permits, apparently in the belief that 40 CFR §122.44(1) would require that the lower TSS limitation in their current permits be incorporated into their new permits instead of the higher national TSS limitation. As discussed further in the Tentative Decision, we have determined that the national TSS and BOD₅ limitations are not less stringent than those included in the current permits. Therefore, the prohibition in 40 CFR §122.44(1) against establishing less stringent permit limitations in reissued permits is inapplicable in this situation and the TSS limitation in the draft permits is based on the promulgated effluent limitations guidelines.

B. Resubcategorization

EPA is also tentatively denying ALP's and LPK's petition to establish a separate Alaska subcategory of the pulp, paper, and paperboard industry. Both facilities are currently in the dissolving sulfite pulp subcategory of the pulp, paper, and paperboard point source category (40 CFR Part 430, Subpart K). After examining the factors specified in Section 304(b) of the Clean Water Act which EPA considers when developing the subcategorization scheme for an industrial category, we have found that the factors that exist at the Alaska mills are very similar to the factors that exist at other mills in the dissolving sulfite pulp subcategory.

ALP and LPK are two of the newer mills in the dissolving sulfite pulp subcategory. Their raw wastewater flows and pollutant loadings are lower than those which formed the basis of the national BPT effluent limitations applicable to viscose grade production in the dissolving sulfite pulp subcategory. Both ALP and LPK are capable of meeting the national BPT effluent limitations through the installation and operation of biological treatment, the technology identified by EPA as the best practicable control technology currently available for the dissolving sulfite pulp subcategory. The total costs of meeting BPT at ALP and LPK are not significantly different from costs projected for similarly sized model viscose grade dissolving sulfite pulp mills. Additionally, we determined that installation and operation of available wastewater treatment technologies, including solid waste disposal and energy generating facilities, have not been shown to lead to non-water quality environmental impacts that differ significantly from those that EPA anticipated when issuing the national BPT limitations. For the above reasons, we have tentatively concluded that there is no basis for establishing a new Alaska subcategory.

Draft NPDES Permits

EPA has developed draft NPDES permits for ALP and LPK that require compliance with the national BPT, best available technology economically achievable (BAT) and best conventional pollutant control technology (BCT) effluent

limitations. The permits continue to require compliance with the mills' current BPT limitations, as required by the Clean Water Act. A July 1, 1984 compliance deadline will be established for the national BPT and BCT effluent limitations. (As explained in the fact sheets for the draft permits, EPA has determined that BCT will be equal to the national BPT limitations.) Finally, an immediate BAT compliance deadline will be established since the mills are already meeting the BAT limitations.

Neither ALP nor LPK are expected to be able to comply by July 1, 1984 with the national BPT/BCT effluent limitations. Consequently, through administrative orders, an amendment to the existing consent decrees, or some other enforcement mechanism, both ALP and LPK will be placed on the following compliance schedule to meet the national BPT effluent limitations. EPA specifically invites comment as to the appropriateness of this compliance schedule.

April 1, 1984 - Completion and submittal of final engineering plans.

June 1, 1984 - Commencement of construction.

December 1, 1984 - Report on construction progress.

June 1, 1985 - Completion of construction.

July 1, 1985 - Attainment of operational level.

State Certification

This notice will also serve as public notice of the intent of the Alaska Department of Environmental Conservation to consider certifying that the subject discharges will comply with the applicable provisions of Sections 208(e), 301, 302, 303, 306 and 307 of the Clean Water Act. The NPDES permits will not be issued until the certification requirements of Section 401 have been met.

Public Comments and Public Hearing

Persons wishing to comment on the tentative decisions relative to the FDF variance requests and the proposed re-issuance of the NPDES permits may do so in writing, within 60 days of the date of this public notice. Written comments must be received within this 60 day period to be considered in the formulation of final determinations regarding the applications. All written comments should include the name, address, and telephone number of the commenter and a concise statement of the exact basis of any comment and the relevant facts upon which it is based. All written comments should be submitted to the Region X Administrator as indicated above.

Public hearings will be held in both Sitka, Alaska and ~~Ketchikan~~^{Saxman}, Alaska, at the times and locations as indicated earlier in this notice, to receive both oral and written testimony on the tentative decisions and the proposed reissuance of the NPDES permits.

Persons wishing to comment on the Tentative Decision relative to establishing a new Alaska subcategory should submit written comments within this 60 day period to the Effluent Guidelines Division as indicated above.

Persons wishing to comment on State Certification should submit written comments within this 60 day period to the Alaska Department of Environmental Conservation as indicated above.

It is important to note that this will be the only opportunity to comment on these matters prior to EPA's final decisions on these matters.

November 10, 1983

The Honorable William Ruckelshaus
Administrator
Environmental Protection Agency
401 M Street, SW
Washington, D.C. 20640

Dear Mr. Ruckelshaus:

I am writing to urge you to grant the variance requested by Alaska Lumber & Pulp Co. The variance would allow this pulp mill, located at Silver Bay in Southeast Alaska, to continue to operate in a productive manner. Without the variance, the mill will most likely be forced to shut down.

Currently, the mill flushes its waste into Silver Bay. EPA regulations say the mill waste should be treated and disposed. The problem is that to treat and dispose the waste is extremely expensive, not to mention that the burning of the treated waste creates air pollution.

I am a commercial fisherman. Water quality is a concern to me because it affects the fish I catch. I can assure you there is no water quality problem in Silver Bay. In fact, you can catch fish right up to the mill!

As the state senator for Sitka, the town near Silver Bay, I must urge you to grant this variance. The mill provides many jobs for the people of Sitka. Fishing and the pulp mill are our economic base. For years the two have been compatible. The variance will allow this harmonious economy to continue.

Sincerely,

Sen. Dick Eliason

Senate Committee on Resources

TO: Billy Berrier, Director
Legal Services Division

FROM: Senator Fahrenkamp, Chairman
Senate Resources Committee

RE: SJR 29, Supporting variance requests by pulp mills
in Southeast Alaska.

DATE: January 16, 1984

Please prepare a Resources Committee Substitute
for the above referenced bill as specified on the attached
copy of the bill.

Introduced: 1/9/84
Referred: Resources

Original sponsors: Eliason, Ziegler,
Ray and Fahrenkamp

BY THE RESOURCES
COMMITTEE

1 IN THE SENATE

2

CS FOR SENATE JOINT RESOLUTION NO. 29.

3

IN THE LEGISLATURE OF THE STATE OF ALASKA

4

THIRTEENTH LEGISLATURE - SECOND SESSION

5

Supporting variance requests by pulp

6

mills in Southeast Alaska.

7 BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

8

WHEREAS the Environmental Protection Agency is now considering vari-

9

ance requests from the pulp mills in Southeast Alaska; and

10

WHEREAS the pulp mills in Sitka and Ketchikan provide an economic base

11

by employing many residents of Southeast Alaska; and

12

WHEREAS the quality of water and marine life ^{is} not ~~been~~ adversely

13

affected by the current effluent discharge from the pulp mills; and

14

WHEREAS the Alaska Department of Environmental Conservation has found

15

that continued discharge will not ^{impact} ~~violate~~ state water quality standards and

16

supports the issuance of the variance; and

17

WHEREAS the former Environmental Protection Agency Regional Adminis-

18

trator issued a tentative decision on December 23, 1981, that would have

19

granted the variance; and

20

WHEREAS the variance being considered would enable the pulp mills to

21

continue to treat their waste products in a more efficient and economical

22

manner; and

23

WHEREAS the denial of the variance would constitute treatment for

24

treatment's sake, would create an air pollution problem if the mills did

25

comply and would most likely cause the pulp mills and related facilities to

26

cease operating because the cost of additional waste treatment is prohibi-

27

tive; and

28

WHEREAS the United States Forest Service has determined that the

29

closure of the pulp mills would cause a ^(\$143) ~~\$147.6~~ million per year loss of

1 income in Southeast Alaska;

2 BE IT RESOLVED that the Alaska State Legislature urges that the vari-
3 ances requested by the mills be granted; and be it

4 FURTHER RESOLVED that the Alaska State Legislature urges the Environ-
5 mental Protection Agency to consider the loss of income in the event of the
6 mills' closure as part of the cost of achieving guideline best practical
7 technology; in determining whether the cost of compliance is wholly out of
8 proportion to the model mill.

9 COPIES of this resolution shall be sent to the Honorable Ronald
10 Reagan, President of the United States; the Honorable William Ruckelshaus,
11 Administrator of the Environmental Protection Agency; Ernesta Barnes,
12 Regional Administrator of the Environmental Protection Agency; and to the
13 Honorable Ted Stevens and the Honorable Frank Murkowski, U.S. Senators, and
14 the Honorable Don Young, U.S. Representative, members of the Alaska delega-
15 tion in Congress.

SJR 29 Supporting variance requests by pulp mills in
Southeast Alaska

Frank Roppel, Executive Vice President, Alaska Lumber and Pulp Company, ALP, Sitka, testified against the Environmental Protection Agency (EPA) decision to deny the Fundamentally Different Factor Variance for secondary treatment of effluent from Alaskan pulp mills. Compliance with EPA's environmental standards would cause the shut down of ALP's Sitka pulp mill, severely impacting the economic base of several Southeast communities. Over 3,000 loggers and millworkers would be affected.

Michael A. Barton, Deputy Regional Forester, U.S. Forest Service submitted written testimony. He asked to amend the Resolution, page 1, line 29, changing the figure \$143 million to \$147.6 million. The amendment was adopted without objection.

Senator Eliason stated for the record that at recent EPA hearings in Seattle, Governor Sheffield and Commissioner Neve' testified in support of the variance. He moved to adopt the Committee Substitute and report it out with individual recommendations. There was no objection.

The meeting adjourned at 2:50 pm

000000

SJR 42 requests the Administrator of the U.S. Environmental Protection Agency to establish an EPA regional office in Alaska. Senator Murkowski proposed this idea to the Legislature during his address to the Joint Session in mid-February. Two newspaper articles are attached for your additional information.

Fairbanks Daily News-Miner

NEED FOR THE EPA

Inviting a federal agency to find a sort of new home in Alaska at first glance seems contrary to the state's desire to get out from under the enduring federal yoke.

But Sen. Frank Murkowski's proposal to the federal government that it make Alaska a separate region for the Environmental Protection Agency—though it would increase the federal presence here—makes sense.

Working out of its Region 10 office in Seattle, the EPA has been making plenty of trouble for Alaskans lately.

In Fairbanks, we're struggling to come up with a plan that will clean up our air in an efficient way and satisfy the EPA too; in Anchorage, they've knuckled under to EPA threats and drawn up an air clean up plan. Throughout Alaska—including the Interior—miners are struggling to convince the EPA that wastewater discharge rules are technically impossible to comply with. If the EPA enforces them almost all miners will be forced out of business.

In Southeast Alaska, the pulp mills are having the same trouble over water discharge regulations. They'll be forced to shut down unless variances are granted.

In a speech to the Legislature last week, Sen. Murkowski urged Alaskans to "continue to struggle against outside domination—particularly from the federal government."

One way to do that, he believes, is to urge the federal officials with whom we must deal to make their headquarters in our state.

"I propose that we create a special EPA Alaska regional headquarters here in Alaska, not Seattle," the senator said. "Our new EPA region must be headed by an administrator who is vested with the knowledge and authority to create standards specifically tailored to meet Alaska's unique requirements while protecting our environment, and to insure that the beauty of our state and the lifestyle of our people is maintained."

Sen. Murkowski has been meeting with the EPA to pursue this idea. If necessary, he says, he'll introduce federal legislation to accomplish it.

Though it might make Alaskans a bit uncomfortable to invite the EPA to, in a sense, increase its presence here, we believe our state would gain from it. As it is now, EPA is well on the way to hamstringing several of our basic industries. If the officials lived and worked in the affected communities, they would be working from a different sort of background—a background of knowledge of Alaska, instead of somewhere else.

We think it's worth a try.

Murkowski seeks Alaskan EPA office

Associated Press

Juneau — The Alaska legislature should back a proposal to create an Alaska regional office of the Environmental Protection Agency, Sen. Frank Murkowski, R-Alaska told state lawmakers Thursday.

Murkowski berated the EPA for requiring two Southeast Alaska pulp mills to meet national water quality standards. The senator urged the legislature to back his proposal to create an Alaska region of EPA, forcing the agency to establish headquarters in the state.

Alaska is now part of EPA's Region X, which encompasses the Pacific Northwest.

On the subject of exporting North Slope oil, Murkowski said Congress is likely to extend the ban on overseas sales, but efforts to

overturn the Export Administration Act could pay off in the long run, Murkowski said.

"If Alaskans were to simply roll over and give up on the issue, we would fail to show Congress how important it is to us," Murkowski told a joint legislative session.

"We must continue to fight for our right to sell our natural resources in the market of our choice," Alaska's junior senator said in his fourth address to lawmakers since his 1980 election.

Murkowski explained to legislators why he thinks the odds are long on stopping Congress from extending the oil export ban, which expires at the end of the month.

"The deck is stacked, and the politics may override the merits of the export legisla-

tion," Murkowski said.

The maritime lobby has generously contributed Congressional campaign funds in order to block efforts at ending the ban, he said. Shippers oppose the export of North Slope oil because it would reduce the shipping distances for the oil, he said.

Apprehension about the pace of the federal leasing of Alaska's Outer Continental Shelf for oil and gas leasing should be balanced with the recognition that oil provides most of the state's revenues, he said.

"Before we initiate too many delays in the OCS sale process, we must remind ourselves that these sales are really only rights to look for oil," he said, and there's no guarantee fossil fuels will be found.
