

Predation as a limiting factor

In much of Alaska, predation by wolves and bears holds moose and caribou populations lower than what their habitats can support.

Winter weather and high predation rates can keep prey populations in a low density dynamic equilibrium (LDDE), meaning both predator and prey numbers may remain low indefinitely.

In most of the U.S., where large predators are absent, wild moose are limited by habitat and commonly experience nutritional stress. In Alaska, prey populations commonly persist at low population densities, even in productive habitats. Where nutrition is good and calf production is high, survivorship may be low because of predation. If deaths are reduced, these populations will grow and more animals will be available for reproduction and harvest.

High mortality during early life reduces the number of calves that are "recruited" into the population, surviving to adulthood. Low recruitment reduces the number of moose and caribou available

Winter weather and high predation rates can keep prey populations in a low density dynamic equilibrium (LDDE), meaning both predator and prey numbers may remain low indefinitely.

for harvest, restricts the population from growing larger, and may even cause it to decline.

When populations do not reach carrying capacity despite abundant habitat, good physical condition, and high calf production, biologists investigate causes of mortality. If disease is not evident, they assess the survival of different age groups of animals to determine which predators - wolves or bears - are the primary sources of predation.

Predator control as a management tool

Reducing predation can improve survival of both calves and adults. When conventional hunting and trapping cannot keep predator populations within management objectives, predator control may be the only practical option.

The goals of predator control are to increase prey densities and harvests, and establish stable but decreased predator densities. Biologists determine the level of predator removal needed to accomplish these goals, and determine predator population objectives for various areas and circumstances.

There is no indication from available scientific data that state sponsored wolf or bear control programs have created conservation concerns for wolf or bear populations in Alaska. Wolf and bear populations maintain their ability to increase after control programs end, even with the continuation of public hunting and trapping.

Can predator control work?

Used appropriately, predator control has reversed or stabilized declining moose and caribou populations, increased the numbers and/or densities of prey animals, and allowed for increased harvests of moose and caribou. Habitat quality, weather conditions, the mix and movement of predators, human access, management costs, land ownership, and duration of effort can all influence the impact of control programs and the responses of prey.

Predator control programs can be effective when:

- **Predation is limiting prey abundance and productivity,**
- **Significant predation is controlled,**
- **Predators are reduced for a sufficient time,**
- **Habitat will support more prey,**
- **Control is conducted in a sufficiently large area,**
- **Harvest of prey by hunters is limited.**

Historical data can sometimes provide insights about wolf population levels that will allow prey populations to increase, but the number of predators that must be removed to achieve program objectives is unique to each area. Several published studies report increases in prey numbers after wolf control reduced wolves to 55% or less of their pre-control numbers for at least four years. Each situation is carefully reviewed before intensive management programs are implemented.

Alternatives to lethal predator control

Non-lethal methods such as surgical sterilization can reduce predation, but are usually prohibitively expensive or logistically impractical, except in relatively small areas.

The following methods have been applied and continue to be considered in Alaska:

- Surgical sterilization and relocation of wolves
- Diversionary feeding
- Bear relocation

A non-lethal (sterilization) predator control program was implemented in 1997 to address predation on the Fortymile caribou herd. Fifteen pairs of wolves were sterilized. They maintained their home territories but killed far fewer caribou because they had no pups to feed.

Sedated bears await relocation. In 2003 and 2004, 115 black bears and 10 grizzly bears were relocated away from a 528 mi² area surrounding McGrath.

Federal parks and refuges and state predator control areas (2007)

Status of active state predator control programs

Predator control is not implemented on national monuments, wildlife refuges, and parks, shown in green on the map. Predator control programs, shown in red, are presently active on about 9% of Alaska's total land mass. These areas include the upper Susitna, Tanlkeetna, Nelchina and Copper Basins; the McGrath area; the upper Yukon and Tanana Basins; and part of the Cook Inlet area. Results to date show trends similar to results experienced in previous programs that successfully increased prey numbers or hunter harvests. Public participation in bear control has been low to date and no conclusions have yet been reached. The amount of information provided here varies by area depending on the status and longevity of existing programs.

Upper Susitna, Talkeetna, Nelchina, and Copper basins (GMUs 13A, 13B, 13C, and 13E)

This control project is part of a multi-year research program to measure effects of brown bear and wolf predation on moose calves.

1976 – 1978: control efforts reduced wolves 40-60%.

Afterward, a large proportion of brown bears were relocated. Calf survival increased immediately, then dropped as bears returned. Diversionary feeding had similar, but less dramatic results.

1970

1980

1971: Aerial shooting of wolves prohibited without a permit.

©Steve Dubois

1977 – 1987: Moose increased 9% annually, almost doubling in number in this ten-year period (within long-term trend count areas).

1977 – 1987: Spring estimates averaged 147 wolves during this period.

1988: Land-and-shoot hunting and trapping made illegal.

Intensive, short-term predator control will not initiate a sustainable, long-term increase in harvest of prey. Calves must be protected for at least three to four years until they are old enough to produce calves of their own.

2000 – 2006: Wolf population reduced:
 (includes 50% from trapping and hunting
 and 50% from Same-Day-Airborne shoot-
 ing; SDA averages 71 wolves annually).

Moose numbers up 14%
 (about 2% per year) within long-term
 trend count areas.

Calf numbers increased 110%.
Yearling bulls increased 176%.
Total bulls increased 45%.

1988 - 2000: Moose declined nearly
 4% annually to nearly half of their
 former numbers (within long-term
 trend count areas).

©Randy Rogers

1990 **2000**

1988 – 2000:
 Wolf population
 reaches all-time
 high.

2000: Spring estimate
 = 270 wolves; fall
 estimate = 520).

2000:
 Intensive wolf
 management
 plan adopted.

2004:
 Same-Day-Air-
 borne (SDA)
 taking of wolves

1999: Spring estimate = 300
 wolves; fall estimate = 520.

2007: Spring wolf population objec-
 tive is 135-165 wolves. No intensive
 bear management program is
 implemented, but brown bears are
 significant predators of moose calves.
 Bear hunting regulations are
 increasingly liberalized.

Upper Yukon/Tanana Basin (GMUs 12, 20B, 20D, 20E and 25C)

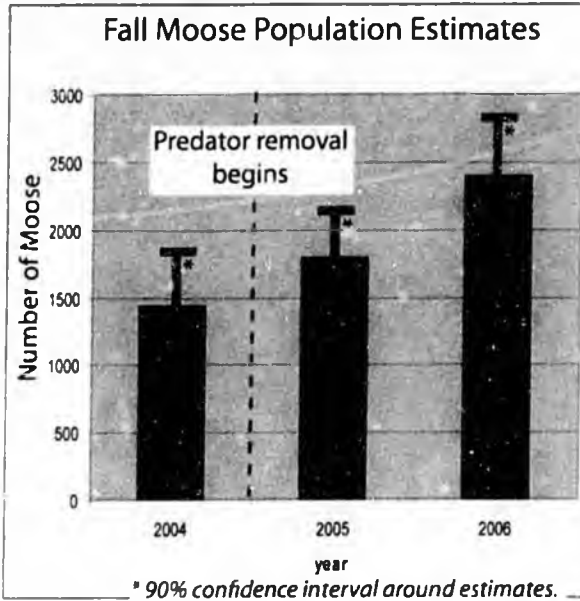

1981 – 1984: GMU 20E wolf numbers reduced by 30-60%; no discernible effect on moose calf survival (grizzly bears killed 50% of moose calves born in 1984).

2005 – 2007: Control programs remove 100 wolves and 6 brown bears.

Late winters 2004 – 2005 and 2005 – 2006: Wolf population in survey area is less than 50% of pre-control estimate.

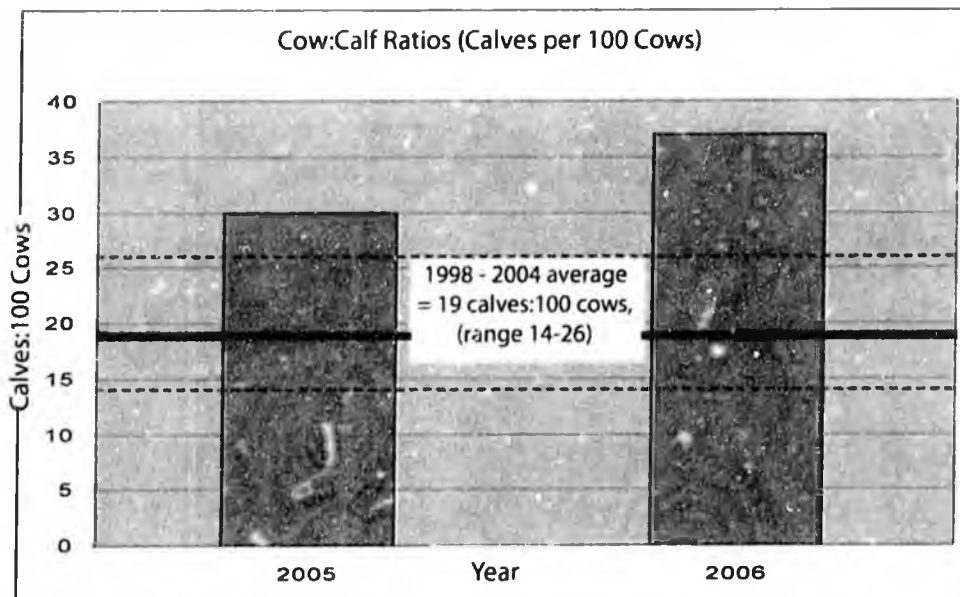

2006: Survey indicates fewer brown bears than reported in the 1980s.

Initial survey data indicated increased numbers of moose and a higher cow:calf ratio in the central part of the control area. These data are preliminary and it will be

Numbers of Moose increased between 2004 and 2006 in the survey area.

necessary to continue the control program and continue data collection efforts in order to evaluate the effectiveness of the program.

McGrath (GMU 19A)

July 2004: Five-year control plan implemented.

2004 – 2005: 42 wolves taken Same-Day-Airborne (SDA) and 29 by other allowed methods.

2005 – 2006: 46 wolves taken SDA and 30 by other allowed methods.

2006 – 2007: 7 wolves taken SDA and 3 by other allowed methods (poor snow conditions limited take).

Winter and spring 2006: Surveys indicate 114 – 120 wolves.

May 2006: Alaska Board of Game reduces post-control wolf population objective from 40 – 53, to no fewer than 30 wolves.

2005 – 2006: 65% of the wolf population taken by allowed methods; distribution of the take is not uniform throughout the area.

2004 – 2005 and 2005 – 2006: Over 70% of wolves in the lower Holitna, Hoholitna, and Stony River drainages were removed; removal rates elsewhere much lower.

Spring 2007: Holitna and Hoholitna River drainage moose surveys suggest beginnings of population growth:

- 64% twinning rate,
- 31% yearlings,
- 62 calves:100 cows,
- 26 bulls:100 cows.

Moose density estimates south of the Kuskokwim River:

Fall 2004: 0.19 moose/mi².

Spring 2006: 0.38 moose/ mi².

Winter 2006 – 2007: No estimate due to poor survey conditions.

Cook Inlet (GMUs 16A and 16B)

In 2004, when aerial control began, the Unit 16 wolf population was about 200. The spring 2007 wolf population was estimated at 45 – 95, for a total reduction of 50 – 80%.

Overwinter moose calf survival was high, but spring-to-fall survival was low (about 18%), so brown bear hunting was

liberalized from one bear every four years to one per year in 2004, and to two bears per year in 2005. Black bears remain abundant; in 2007 a control program allowed participants to take unlimited numbers of black bears.

Biologists use a variety of tools, including radio collars, to help track and monitor wolf populations.

McGrath (GMU 19D)

Spring 2001: Research concludes both bears and wolves are significant predators of moose in the McGrath area.

2000

2006

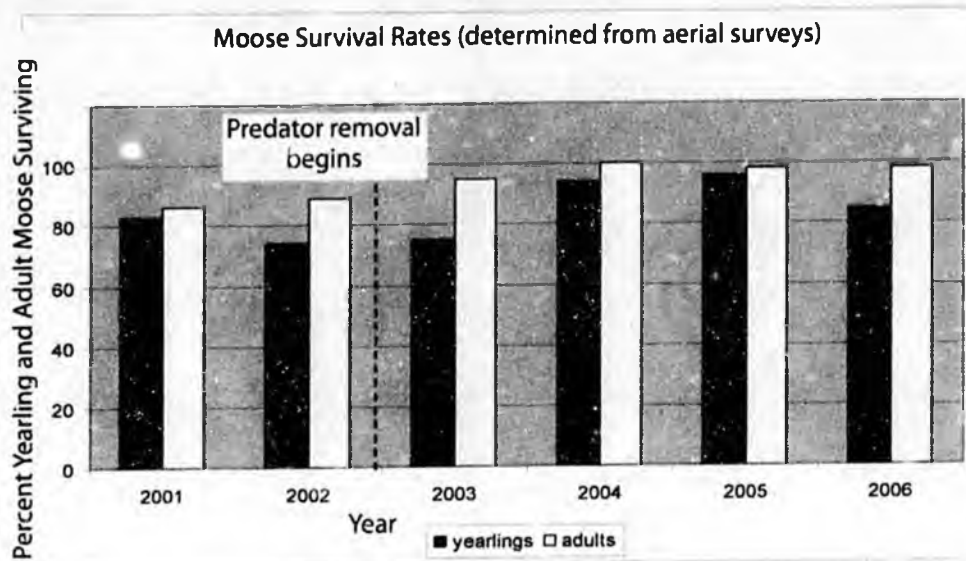

Spring 2003 and 2004: 115 black bears and 10 grizzly bears (at least a 70% reduction) relocated out of a 528 mi² area surrounding McGrath – the “Experimental Micromanagement Area” (EMMA).

Late winter 2004 – 2006: Aerial shooting wolf control effort initiated in EMMA; surveys indicate wolf population 75% lower than 2001.

Moose calf survival increased in GMU 19D after predator control was implemented

Moose survival increased following implementation of predator control

The moose population in the "Experimental Micromanagement Area" (a 528 mi² area surrounding McGrath) was 524 in 2001. In 2006 it was 691, about a 30% increase.

Conclusions

- Wild game is important food for many Alaskans.
- Moose and caribou populations across Alaska frequently persist at low numbers, often kept that way by predation. Predators kill more moose and caribou than do hunters.
- The Alaska Board of Game and ADF&G are required by Alaska's Constitution and state law to manage predators and prey for all user groups in Alaska.
- Intensive management statutes require the Alaska Board of Game to adopt regulations for certain moose and caribou populations to implement programs that provide higher harvests for hunters. Citizen views range from rejecting manipulation of wildlife populations for human benefit, to demanding management practices allowing hunters to harvest higher percentages of prey populations annually. Because of these opposing public values, predator control will always be controversial.
- Predator control programs are designed to reduce wolf or bear populations as a way to increase numbers or harvests of moose or caribou. Each situation is approached systematically and individually.
- When properly designed and carried out, predator control programs have a high likelihood of meeting population and harvest objectives for moose and caribou.
- When members of the public are involved in predator control, the state limits participation to qualified applicants through the issuance of special permits and closely monitors participants' actions.

- ADF&G continues to collect data to monitor the effectiveness of bear and wolf control programs. There is still more to learn.
- Predator control programs are active on about 9% of Alaska's land mass.
- There is no indication from available scientific data that state-sponsored wolf or bear control programs have created conservation concerns for wolf or bear populations on either a statewide or local basis.
- Data from each of the five active predator control areas are preliminary, but indicate the beginning of increased moose calf survival and population growth.
- Current bear control programs in GMUs 16, 19A, and 20E are new and thus far inconclusive; results continue to be evaluated.
- Wolf and bear populations maintain their ability to increase after control programs end, even with continued public hunting and trapping.
- No single management approach can satisfy everyone; ADF&G uses different management strategies in different parts of the state to provide for diverse values, interests, and demands.
- ADF&G is committed to maintaining viable predator and prey populations, and manages Alaska's wildlife populations with long-term health, sustainable harvests, and conservation as guiding principles.

The Alaska Department of Fish and Game (ADF&G) administers all programs and activities free from discrimination based on race, color, national origin, age, sex, religion, marital status, pregnancy, parenthood, or disability. Research and Management of Wolves in Alaska

Wolf Control in Alaska

- › Wolf Home
- › Wolf Control
- › Alexander Wolves
- › Wolf Management
- › Lice

Wolves and bears are very effective and efficient predators on caribou, moose, deer and other wildlife. In most of Alaska, humans also rely on the same species for food. In Alaska's Interior, predators kill more than 80 percent of the moose and caribou that die during an average year, while humans kill less than 10 percent. In most of the state, predation holds prey populations at levels far below what could be supported by the habitat in the area. Predation is an important part of the ecosystem, and all ADF&G wolf management programs, including control programs, are designed to sustain wolf populations in the future.

The Alaska Board of Game approves wildlife regulations through a public participation process. When the Board determines that people need more moose and/or caribou in a particular area, and restrictions on hunting aren't enough to allow prey populations to increase, predator control programs may be needed. Wolf hunting and trapping rarely reduces wolf numbers enough to increase prey numbers or harvests.

Currently, five wolf control programs are underway that comprises about 9.4% of Alaska's land area. The programs use a closely controlled permit system allowing aerial or same day airborne methods to remove wolves in designated areas. In these areas, wolf numbers will be temporarily reduced, but wolves will not be permanently eliminated from any area. Successful programs allow humans to take more moose, and healthy populations of wolves to continue to thrive in Alaska.

Overview of Relationships Between Bears, Wolves, and Moose in Alaska

Relationships between large predators and their prey in Alaska are complex, and no one model fits all situations. It is possible to generalize about some situations, particularly in Interior Alaska. This information on the biology of moose, bears, and wolves, represents highlights from 25 years of research and management programs conducted by universities and state, provincial and federal governments in Alaska and Canada. In 1997, the National Academy of Sciences published a summary and review of predator/prey interactions in Alaska (National Research Council, 1997). More research has been conducted since that review. The published references listed below can be found in most university or large municipal libraries.

In the boreal forest of northern Canada and interior Alaska, where bears (either black bears, grizzly bears, or both) and wolves are lightly harvested and are major predators on moose, moose densities typically remain well below levels that their habitat can support. Under these circumstances, moose density fluctuates between about 0.1 and 1.0 moose/mi² over large areas; most commonly densities are 0.4 to 0.6 moose/mi². Biologists refer to this situation as the Low Density Dynamic Equilibrium or LDDE because moose density fluctuates yet remains low. This occurs primarily because, together, bears and wolves are efficient predators on moose calves, and kill most of the calves born each year. The highest densities reached in these systems (about 1 moose/mi²) tend to occur in very large burns where habitat is excellent and moose apparently are more successful at avoiding predators.

Although the LDDE prevails in much of remote interior Alaska, differences occur between areas. In most areas, bears are the major predator on moose calves. An exception occurs in Game Management Unit 20A where wolf control has been shown to be effective at maintaining high numbers of moose and high long-term harvests of moose. In Unit 20A, initial reductions in wolves increased moose population density, wolves also quickly increased after wolf control because, ultimately, the number of wolves in an area depends mostly on the number of prey animals in the area. Number of moose harvested also remained high after wolves increased. An abundance of trappers in Unit 20A has kept wolves from increasing to the point where they could cause declines in the moose population. A similar situation likely occurs in portions of Units 20B and 20D South.

Grizzly bears have been shown to be particularly effective predators of moose calves from birth to about 2 months of age and often kill adult moose in the spring. In this regard, one grizzly bear is equivalent to many black bears. Not all bears are equal, however, and some bears seem to become specialists at killing both adult and calf moose.

Black bears have been found to be the most important predator of moose calves in some areas of Alaska where grizzly bears are uncommon. In these areas, black bears killed about 40% of all moose calves that were born. Most predation was by adult males.

Biologists expect that significant reductions in bear numbers (either black or grizzly or both) will also lead to higher numbers of moose for harvest. For example, in areas of Canada and the northern states where moose coexist only with wolves, moose are often found at high densities that fluctuate with weather

and habitat (e.g. Isle Royale).

Numbers of grizzly bears have probably increased in Interior Alaska since the 1950s. We base this on incidental observations by older hunters, local residents, cabin owners, and Native elders, who all indicate that grizzly bear numbers have increased. This is corroborated to some degree by modern studies. For example, grizzly bears were recently found to be significant predators of moose calves on the Yukon Flats and are commonly seen by local residents, whereas 20-30 years ago, observations of grizzly bears were rare.

In the Anchorage and Fairbanks areas, where wolves and bears are not common, moose are abundant.

Grizzly bear populations appear to be much more resilient to harvest than previously believed. During the last 10 years, the Alaska Board of Game has made a deliberate effort to reduce numbers of grizzly bears in a few important hunting areas (e.g. Game Management Unit 13-the Nelchina Basin) by increasing the bag limit and extending hunting seasons. So far, these new regulations have had no noticeable effect on grizzly bear populations even though hunters have taken an increased number of bears.

Wolves have been found to be very adaptable and they recover from low numbers within a few years. Despite relatively heavy hunting and trapping over the last century in Alaska, wolves occur on nearly all of their traditional habitat throughout mainland Alaska. Historically, wolf numbers were greatly depressed. Specifically, wolves were rare in Interior Alaska between about 1910 and 1925, and during the 1950s. During 1910-1925 wolves may have succumbed to diseases brought in by sled dogs or to widespread poisoning. During the 1950s, federal predator control agents reduced wolves by poisoning and aerial shooting. Wolves have been abundant and have occurred in all of their historic ranges in Alaska since state management began in about 1960 (except for the Anchorage and Fairbanks areas, and the western Seward Peninsula).

Wolves are social animals that live in large family groups. Usually, only a single female per pack successfully raises pups, but depending upon the relationship of adult males and females in a wolf pack, multiple litters may occur in a single pack in a single year. Most pups born into a pack stay in the pack for at least one year, but virtually all have dispersed away from their natal pack by the age of 3. Large packs of 20 or more wolves may occur in areas where food is abundant and pup survival is high. Wolf populations in North America commonly sustain annual harvests or natural mortality rates of 20-40% without experiencing a year-to-year decline in numbers. High reproductive rates, high mortality rates and long distance dispersal behavior results in extensive gene flow within wolf populations and between wolf packs.

In Alaska and other areas, if wolves are not hunted or trapped, most mortality is from intraspecific aggression (fighting with other wolves). In trapped wolf populations, natural mortality rates are often lower than in untrapped populations.

In coastal areas of Alaska, where fox rabies is endemic, wolves are periodically reduced to low levels by rabies.

Practical Aspects of managing moose in areas where the LDDE exists

Usually, without predator control, hunters can take about 5% of a low-density moose population each year – almost all of the harvest must be bulls or the population will decline.

LDDE does not present a biological problem – moose are not likely to become threatened, endangered or extinct due to predation.

The fact that the LDDE prevails in large areas does not usually present a management problem either. Interior Alaska is sparsely populated and access to moose populations is often poor. This means that hunting pressure is

relatively light in many areas anyway.

The LDDE can cause a management problem around villages, or in areas that have become important hunting areas for Alaskans near the road system. In these areas, people need or want to harvest more moose than the system can support. In Alaska, moose are valuable to people as a source of food and income (i.e. guiding and transporting hunters), particularly in rural areas. This is why people often express the desire for predator control.

In some areas, where there is a demand to increase moose harvests, it might be possible to harvest more moose by reducing bear predation. Although this idea is reasonable, it is a relatively new idea, has not been adequately tested in Alaska, and programs of this nature need to be viewed as experiments.

To: Rep. Craig Johnson
Subject: Oppose HB 256!

Jan 24, 2008

Representative Craig Johnson
120 4th Street
Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

Wildlife should not be aerially hunted! Myself and many other Alaskans have twice voted AGAINST this practice. It is wrong.

Thank you for considering my comments on this important wildlife matter.

Sincerely,

Ms. Amy Morgan

Jan 24, 2008

Representative Craig Johnson
120 4th Street
Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

I object to the fact that HB 256 would put leave too many decisions about predator control in the hands of the Board of Game, and I have no say in who is on that board. Predator control has never worked to

balance wildlife and I cannot understand why we here in Alaska have to make the same mistakes that have been made elsewhere. The general population does not agree with many of the board decisions, as

evidenced by the results whenever their decisions are put to the vote.

Are the relatively few pro-control people really that powerful that

elected officials are afraid to object? Please consider how this will take even more power from the people.

Thank you for considering my comments on this important wildlife matter.

Sincerely,

Ms. Gwen Turner

Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

Resource management should be based on scientific analysis, not conducted by political appointees on the basis of which vested interests have the most pull. Alaskan voters are sick of political

corruption in the Alaska legislature. We have already voted this down, twice; why is it coming back around again if there is not lobbyist money involved? Oppose HB 256 (and while you are at it, please also

tell John Cowdery to resign instead of further disgracing himself, the Alaska GOP, and my state senate district).

Thank you for considering my comments on this important wildlife matter.

Sincerely,

Mr. Steven Jacquier

Subject: Oppose HB 256!

Jan 24, 2008

Representative Craig Johnson
120 4th Street
Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

I know how much Alaskans love to eat moose, but with the human population continuing to grow and the moose brouse continuing to decrease, moose numbers will always be less than the number of people who want to hunt them. This is not a reason to kill wolves and baby predators (wolf cubs, bear cubs). The predator population, especially of wolves, can decrease to the point that it will not recover. And predator control methods of shooting from airplanes are not humane.

People are extremely smart, such that we do not have to eat moose when their populations are low. There are many other things we can eat.

Wolves and bears, on the other hand, do not have as many choices. Also remember, most moose calves are eaten by bears, NOT wolves

Thank you for considering my comments on this important wildlife matter.

Sincerely,

Ms. Victoria Faeo

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

Alaskan voters have already voted twice against aerial wolf hunting, and this bill would circumvent public input. I'm okay with killing wolves when the biologists support the fact that it is necessary, but this bill would allow Board of Game to do whatever it wants without

listening to biologists. Please carefully consider both sides of this bill before voting on it. Without the bill aerial hunting can still occur, but in a regulated manner. With the bill the rules on aerial hunting are slackened, paving the way for hunters to do as they please.

Thank you for considering my comments on this important wildlife matter.

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

HB 256 would...

Make a bad law worse.

Expand Alaska's already excessive, expensive, and often ineffective predator control programs and pave the way for the Board of Game to increase this unnecessary killing.

Gut the intention of the voter-enacted ban on the same-day airborne shooting of wolves, grizzly bears and wolverines and make it much easier to increase the aerial killing of these animals.

Allow for the aerial gunning of carnivores to reduce predator populations in order to artificially and unsustainably boost game populations -- a practice that will primarily benefit urban and out-of-state hunters, not rural hunters with demonstrated needs.

Add brown bears and wolverines to the list of species that may be shot by state-licensed aerial gunners.

Permit the use of airplanes to track and shoot down wolves, grizzly bears and wolverines without requiring a comprehensive "game management plan" to be in place beforehand.

Bad, bad, bad idea!

Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HIB 256.

Please educate yourselves on the other side of this issue. If you only listen to special interest groups or those who do not understand the laws of nature you will upset the natural balance of the ways

things should occur in the wilderness. Why would you want one animal to die an unnatural death so that others can live just so they can be killed also. We need wolves for population control or the moose will eat themselves out of their habitat. Everything has a purpose and it is not for man to decide how this cycle should work.

Thank you for considering my comments on this important wildlife matter.

Jan 24, 2008

Representative Craig Johnson
120 4th Street
Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

I oppose this bill for the following reasons:

It takes away the rights of all Alaskans to have a say about the management of our game and wildlife. To let the Board of Game have complete control of the situation without any public input is unfair because this board is politically appointed and stacked in favor of only game hunters. We did vote twice to stop the aerial shooting of wolves..didn't we? The voters were ignored.

What about the opinions of those of us who do not hunt, but enjoy the

wildlife in other ways? I am not anti-hunting. I think it is a great sport if done for the right reasons....fair chase, getting outside, good exercise, and finding meat for the table.

Thank you for considering my comments on this important wildlife matter.

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

It is time that you ,who were elected to your job, start doing it.

This State has twice before voted to NOT allow gunning of wolves from planes. Now they want to add more animals. What is wrong with this picture?

Tell the Board of Game that enough is enough. That you will not go

along with business as usual. Tell them that the People of Alaska have said NO, not once, but twice. If they demand the bill be passed, tell them, there are more people who would love a job on the Board, and that those on it now CAN be REPLACED!

The Governor should listen to the voice of the people who helped elect her. Tell her that to push this bill though is the wrong thing to do. Tell her to put a leash on the Board of Game. They do not even have anyone who knows the difference between a dog and a wolf.

Example: one of their biologist shot a womans pet dog, thinking it was a wolf,even though it was wearing a harness. This is the best the State of Alaska can do? I KNOW we can do

better. I am NOT aginsty hunting at all. But how Macho its it to hunt an animal from a plane. Or is that the NEW macho?

Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

HB 256 is one of the worse bills that I have ever seen in Alaska.

First off, it is not 'active management'; it is intensive management and the Board of Game should not have a monopoly over controls. The

people of AK should have their say, too. Scientific data must be what controls the decisions and aerial shooting of wolves, bears, or wolverines should not occur no matter what. Alaskans have made it

perfectly clear that we do not want same-day aerial hunting. Is anyone in Juneau, including the governor, listening? A scientifically based

game plan must be in place before any type of hunting on wolves, brown bear, or wolverine should take place. This bill is against our Alaskan ecosystems and needs to be flushed like the toilet paper that it is written on!

Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

I am very opposed to HB 256 . The voice of the people will not be heard. Many Alaskans are opposed to some of the forms of predator control now. If this bill passes, the Board of Game will NOT be representing the people of this state and they would then have full control over predator issues! You do represent the people of this

state and do not expect me to vote for you in the future if you do not oppose this bill. You and those who are representatives of our people

need to support scientifically -sound wildlife management in Alaska by opposing House Bill 256. I will anxiously await your decision.

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

State authorized hunters have NO business simply killing wild animals to regulate their numbers, not when there are better system to manage

the predator-prey ratios, and we as predators, need to be included in the ratios. The only legitimate reason to kill animals is for food and other necessities, or if the animals are a direct threat to the lives of human beings. Nature has it's own rules and humans should heed them better. No biologist on the planet knows EVERYTHING there is to know about predator-prey ratios.

Jan 24, 2008

Representative Craig Johnson
120 4th Street
Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

It is irresponsible to propose that airplanes be used to track and shoot down wolves, grizzly bears and wolverines without requiring a comprehensive game management plan beforehand.

Alaskans have spoken out before and voted against such legislation. HB 256 would gut the intention of the voter-enacted ban on the same-day airborne shooting of wolves, grizzly bears and wolverines and make it much easier to increase the aerial killing of these animals.

Thank you for considering my comments on this important wildlife matter.

Sincerely,

Mrs. Nelle Jurgeleit-Greene

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

I strongly object to giving authority to a politically appointed Board of Game to determine which culling policies will be implemented in Alaska. There seems to be no consideration to the advice given by F & G or F & W or scientific research. It is sad to think that Alaska, blessed with regal and beautiful species, would even consider ill-considered methods to maintain populations at a desirable and sustainable level. I thought the "people" (remember us) had spoken loud and clear some years ago about aerie hunting. Please do not pursue this course without input from citizens. Thank you.

How very typical of a Republican governor to cave into special interests at the cost of unique and keystone species for a healthy game ecosystem in Alaska. When you recover from your power hangover, perhaps you will think about the destruction of these beautiful animals, and your choice to support a nonsustainable increase in game animals just so a few fat and lazy hunters and fish and game officers can get their rocks off. This isn't management; it's wholesale slaughter.

Thank you for considering my comments on this important wildlife matter.

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

Governor Palin has misrepresented the residents of Juneau and the

state of Alaska the entire time she has been in office. Politics were designed by our country's founding fathers to protect and serve THE PEOPLE. Not the politician's wallet or home city (as Palin has done on many occasions). It is time she and other representatives look at themselves and clean up their act. It is time our representatives stand up and speak the word OF the PEOPLE FOR the PEOPLE.

Please do what you know in your heart is right and true and speak the word of the people. Stand up for our rights and the rights of our

beautiful state's wildlife. Why should we waste time on bills that do not reflect the beliefs of the population? You and the other representatives are busy and should not have to defend the people on bills that should never have been written. How much time and money has already been wasted on bills that are not wanted by the residents of Alaska? How much of your time has been wasted? Too much! Speak up for the people and yourself! Bury this bill and know you did the right thing!

Thank you!

Thank you for considering my comments on this important wildlife matter.

Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

Perhaps this is the price wildlife is paying for not having strong biology-based educated humans holding top governmental positions. It appears wildlife interests are moot at all costs regardless of the years of evolution it took for wildlife to adapt.. By not

understanding the impacts of climate change which affects environmental changes and challenges for wildlife, it appears Gov. Palin is forging ahead without the understanding that it is more than wild carnivores impacting moose and caribou populations. Would you please consult

with the dedicated Alaskans who work within the governmental community who study air and soil contaminants, water quality, habitats needs, etc? There are environmental considerations that are not being taken that contribute to changes, distributions, stresses and mortality of

moose and caribou. Wolves and bears are the scapegoats used by humans when humans over-harvest, cater to trophy hunts, alter environments (habitats), etc. When the largest of large males are killed for trophy racks and or bawn, they are permanently removed from the breeding population which in essence removes prime breeders from the genetic pool which leaves those that remain unable to keep a herd strong. Without strong and knowledgeable adults, each subsequent generation becomes weaker and less able to maintain a strong, healthy population. And let's not forget poaching which takes it's toll on our wildlife populations. We all know people kill wildlife out-of-season or over-limit when it's legal to kill them.

If you really believe in government by the people, for the people and of the people then you cannot possibly support Governor Palin's end around proposal as outlined in HB256. We have told you more than once that "we the people" do not approve of the aerial gunning of

carnivores to reduce predator populations in order to artificially and

unsustainably boost game populations -- a practice that will primarily benefit urban and out-of-state hunters, not rural hunters with demonstrated needs.

Alaska's Board of Game is out of touch with science and the public. They need to be reined in not given free rein.

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

As an American voter, I have been taught that public involvement matters to this country. Yet here in Alaska, it has been made

repeatedly clear that some elements of the state government, including in particular the Board of Game, are content to completely ignore public interests, and these latest attempts at legislation only confirm this apathetic attitude again.

In addition to this issue of dubious legality, "predator control" programs are unscientific (they have repeatedly been

demonstrated to not work), biased (blaming wild predators for declines in prey availability when humans are actually responsible for such drops is unfair and speciesist), and immoral (there is no such thing as a perfect balance in the natural world, and attacking predators in this manner is cowardly).

Thank you for giving my comments the appropriate attention.

Edwin Wollert

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

It would expand Alaska's already excessive, expensive, and often ineffective predator control programs and pave the way for the Board of Game to increase this unnecessary killing by leaving all decisions

about using plans to manage Alaska's wildlife up to the Board of Game without requiring scientific data or an analysis by Fish and Game biologists.

It would also allow for the aerial gunning of carnivores to reduce predator populations in order to artificially and unsustainably boost game populations -- a practice that will primarily benefit urban and out-of-state hunters, not rural hunters with demonstrated needs.

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

HB 256 is nothing more than a waste of Alaskas money. It is extremely costly and ineffective to attempt to artificially inflate prey populations by killing predators. Science has proven time and time

again that nature has a cycle which keeps predators and prey in check.

This keeps wildlife populations strong and healthy and keeps our ecosystems in tact. Alaska's current Board of Game does not have the credentials to make decisions about this issue and we should not let them waste our money by choosing where they want to artificially

inflate moose populations. As is often the case, the environment will not support a greater moose population and the moose will die regardless of whether the predator population is destroyed.

In the end, Alaskan's will not have more moose. Instead, Alaska will have spent millions (billions?) of dollars to provide trophy heads on the walls of out of state trophy hunters. This bill is clearly a lose, lose proposition for Alaskans. Plk se stop this costly, ineffective, joke of a bill from becoming a reality.

Subject: Oppose HB 256!

Jan 25, 2008

Representative Craig Johnson
120 4th Street
Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

My wife and I are 40 year Alaska residents, having lived 30 of those years in rural Alaska and made our living by providing quality wilderness adventure experiences throughout Alaska to both Alaskans and out-of-state visitors. We are very knowledgeable about Alaska game issues and can state categorically that this is a bad piece of legislation.

HB 256 would:

Make a bad law worse. HB 256 would make our "intensive management" law worse by renaming it "active management" and giving the Board of Game a completely free hand to control predators -- the Board would merely need to think that airborne or same-day airborne shooting would be "conductive" to meeting a prey objective.

Expand Alaska's already excessive, expensive, and often ineffective predator control programs and pave the way for the Board of Game to

increase this unnecessary killing by leaving all decisions about using planes to manage Alaska's wildlife up to the Board of Game without requiring scientific data or an analysis by Fish and Game biologists.

Gut the intention of the voter-enacted ban on the same-day airborne shooting of wolves, grizzly bears and wolverines and make it much easier to increase the aerial killing of these animals.

Allow for the aerial gunning of carnivores to reduce predator populations in order to artificially and unsustainably boost game populations -- a practice that will primarily benefit urban and out-of-state hunters, not rural hunters with demonstrated needs.

Add brown bears and wolverines to the list of species that may be shot by state-licensed aerial gunners.

Permit the use of airplanes to track and shoot down wolves, grizzly bears and wolverines without requiring a comprehensive "game management plan" to be in place beforehand.

Thank you for considering my comments on this important wildlife matter.

Sincerely,

Mr. Hayden and Bonnie Kaden

Please stop the aerial hunting of bears, wolves and wolverines. It is a horrible practice of management, let the animals live that will thrive. Who cares about revenue for Fish & Game from Outside interests? I certainly would rather see people collect their foodstamps in McGrath then see them kill a moose. We know this is for the state revenue.

Thank you for considering my comments on this important wildlife matter.

Dear House of Resource Committee,

Please do not support this bill, we are already in danger of losing so much of our precious wildlife in Alaska. Our species has done so much damage already. I was born and raised here in Alaska and it breaks my heart to see this, please do NOT support this bill.

Thank You,
Debbie Dillivan

How many more time do we have to tell you people no hunting from airplanes. True sportsmen actually " HUNT " for game. Hunting any animal from an airplane is dispicable, and I think citizens should have the right to shoot the plane down and mount the killers heads on the wall.

Thank you for considering my comments on this important wildlife matter.

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

Since the Board of Game members are "appointed" by our

Governor and she is in favor of predator control and aerial wolf, bear

and now wolverines (what animal will be next??? polar bears???) I find this HB just a way for her and whoever else in favor of it to control and get what she wants because the people haven't voted (TWO TIMES) the way you want us to. I thought this was a democratic country?

Doesn't sound like a democracy to me. Do you feel you know what's best for us Alaskans like Frank Murkowski did because you feel we aren't educated about this subject? And now you're going to allow shooting of these animals WITHOUT REQUIRING A COMPREHENSIVE GAME MANAGEMENT PLAN??? We're not stupid...it's because the science based studies do not support your plan so you don't want to know. We aren't stupid...this practice will primarily benefit out of state hunters, not the subsistence hunters. We will be looking closely who supports this bill and keep it in mind when the next election comes.

Thank you for considering my comments on this important wildlife matter.

Sincerely,

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

We have interfered with nature too much and it is time to allow nature to do what it has been doing for millenia and that is controlling itself. We have encroached on their territory and now lawmakers want to obliterate them in the name of what...?! Progress? Too much

progress is going to send us back to the dark ages. Please do NOT pass this hideous legislation. I follow the news and I pay attention to what the legislators in my state do, and I VOTE.

Thank you for considering my comments on this important wildlife matter.

Sincerely,

Representative Craig Johnson
120 4th Street
Juneau, AK 99801-1182

Dear Representative Johnson,

As an Alaskan who is concerned about the long-term conservation of wildlife species and maintaining healthy, diverse ecosystems, I am writing to urge you to oppose HB 256.

Please: Most Alaskans do NOT want wolves and bears killed in order to make more ungulates available for human consumption. And aerial hunting is particularly obnoxious. The Board of Game does not represent the majority of Alaskans, and does not use the best science. Please do not let this bad bill become law.

Thank you for considering my comments on this important wildlife matter.

Sincerely,
